Many of the difficulties so magnified, on being reported to the house, unfortunately are taken up, and without being given that calm, deliberate analysis essential to the intelligent management of a business, are accepted as absolutely true, and acted upon in a manner that results in much disturbance, whereas a little patient investigation would often save trouble and loss.

The character and position of a seller in relation to his trade, is determined largely by his method of doing business. His success is, in a great measure, dependent upon his reputation for uprightness and reliability, yet the very foundation of his commercial strength, the basis of his success, is being sapped continually by some of those who, though demanding a rigid integrity of the house of which they buy, yet seemingly with an utter disregard for equity, insist upon subjecting it to impositions altogether out of harmony with justice and right.

The most humiliating feature of the situation lies in a bad custom; the abject, slavish yielding to those exactions on the part of the seller. How can this be remedied? How many conditions can be altered for the better?

Great reforms are not achieved in a day, and we cannot overthrow a pernicious custom without an earnest, combined effort.

The only release from a mistake is to cease to make it, and for the purpose of this paper we may consider that trade abuses are mistakes, simply errors of judgment on the part of either buyer or seller. There is a right way to do things, but there is only one right way, and our difficulties have arisen through the conflict of many different opinions of what is right. Believing every one to be inclined to do justice to his fellows, as he sees it, it only remains to establish a correct view, a uniform standard of procedure that will be recognized as in harmony with justice, one which will receive the endorsement of business men generally.

I suggest the publication of a work which shall em-

*Portion of a paper read before the National Confectioners' Association at Niagara Falls. From the proceedings in Confectioners' Journal.

brace in a clear readable form, preferably in the form of question and answer, all the points of difference.

It should make plain the rights of the buyer, of the salesman and of the house, in their relations with each other, and I believe this can be done by citing particular instances in which the case is stated, and a decision on the equity of the point at issue, given in answer to the question.

The cases to be covered should show wherein discourtesy on the part of the buyer, toward a salesman, is unfair, and wherein certain conduct of a salesman toward a buyer is to be condemned.

Erroneous beliefs on the part of some buyers as to the profits of the seller, which lead them to think that the seller is in a position to sustain every burden of loss, should be given a thorough airing, and the error corrected.

Mistakes of the seller who considers that the buyer is simply managing a dumping ground, and will be pleased with anything sent him requires full treatment.

There is the very delicate question of "who pays for the telegram," the problems of discount, when a bill is due, and where, the payment of bills by local checks where banks charge for collection, the payment of drafts promptly, or the reverse, etc. There are many other details of settlement which demand attention and adjustment along right lines.

The manner of claiming rebates, allowances, freight, shortages, the right to countermand the contract, and its obligations, the responsibilities of the buyer, the salesman, the house and the common carrier. The proper method of establishing credit, the value of a good credit, the injury resulting to credit through lack of promptness, through asking extensions and some other points of interest on the question of credit.

To illustrate more fully the manner in which I believe we can best demonstrate the intricate details of adjustment, I will take the following instances:

Question.—Deductions from a bill are sometimes made on the ground that the price billed by the seller is greater than asked by others. How would you proceed in a case of this nature?

Answer.—It is the inalienable right of the seller to make his own price on his own goods, as it is also the right of the buyer to make his purchases where the greatest advantages are offered, but on the ground stated, the buyer who arbitrarily deducts an amount from the face of a bill can by no argument sustain his position. He should correspond with the seller if dissatisfied, and before making deductions, secure the sanction of the seller. If it is not given and the seller insists that the price be paid, then, provided no agreement on the part of the seller has been violated, it is the duty of the buyer to pay the bill in full.

A publication in the form of questions and answers covering nearly all the experiences of the seller, the salesman and the buyer, in adjustments, covering the relations of seller to seller, salesman to salesman, the courtesies due from one to the other, could be made decidedly interesting and have a strong tendency to remove the causes of misunderstandings.

Other matter could be added, with information on general points of law, railroads, credits, and many points of value to a business man.

Business men acquire methods, as we acquire all knowledge, through observation. The young man is likely to adopt the systems of his employer and we often find that there is a great sameness of method among establishments located in the same city, especially where the younger houses are what we might term offsprings of the older ones.

The methods of the older houses are then the basis of knowledge, the source of the business education of the younger. If the systems are good, all is well, but they are not always so, and by the general distribution among our customers, and others, of a work which possesses educational features which will indicate the importance of fairness and right dealing in business, not merely in general terms, but specifically, clearly and emphatically, in the manner suggested, we may overcome the ill effects of bad example and im-

proper training, for, as I believe, there is a strong desire to do right in every man, and we certainly are justified in the endeavor to bring to bear the best judgment of the members of this association, on the question "what is right."

INDUSTRIES IN THE TROPICS.

Dr. W. M. Wilson, in an address before the recent meeting of Weather Bureau officials at Milwaukee, predicted that the time was coming when it would be possible to colonize the jungles of the tropics and establish industries such as now exist in the temperate zone. He said in part: Practically all the great industries are centered within the limits of the world's great workshop—the temperate zone. Thus far every effort to plant a great nation outside of this narrow belt has failed. Gigantic schemes with elaborate and refined preparations for the colonization of the tropics have always been met by the insurmountable barrier of death and disease, until the West Indies have become known as the graveyard of Europe.

One cannot, however, fail to be impressed by the absence of attempt to classify or analyze the characteristics of the various maladies that have produced the disastrous results of the past. The way in which the responsibility has been placed upon climatic conditions is little less than perfunctory. It is a matter of common knowledge that certain infectious diseases exist only within certain limited areas. This has given rise to the belief that the cause for their origin and propagation must be found in the prevailing climatic conditions. The tropics are deemed absolutely unfit for habitation of the white man, while other sections of the earth are believed to be endowed with healing qualities.

During the past twenty-five years experimentation has revealed some startling truths, showing that diseases formerly ascribed to climatic conditions are actually the result of the presence within the body of a specific germ or living organism. It is known that by the proper hygienic precaution, which will exclude the germ, one may live in its very presence with safety.

This discovery has had an important bearing upon the subject of medical climatology, for, while the climate conditions may in a measure favor the development and activity of the germs of disease, the responsibility for their invasion of the human body is thus shifted from impersonal, irresponsible climate to a responsible individual. And thinkers of to-day are rapidly reaching the conclusion that the healthfulness of any locality is not so much a matter of climate as of hygiene.

When medical science shall have studied the diseases indigenous to the tropics with the same zeal and success that have attended the investigations into the ailments of the temperate zone one will be able to live in a tropical country, perhaps with less personal comfort, but certain in no more danger than in the most favored spot in our country. The graveyard of Europe will become the garden spot of the world. The jungles of Africa will become the scene of immense cities as well as England, France, Russia or North America, and the dread barrier of "climate" will no longer exist as a hindrance to the development of India and China to commercial industries like those of our immense shipbuilding, iron and steel furnaces and other manufacturing works.

EPISTAXIS.—One is occasionally called to stop an alarming epistaxis, and finds himself without any instruments or drugs with which he may go to work. Some of the following expedients will stop any ordinary nosebleed: 1. Have the patient chew a large wad of paper or rag vigorously. 2. Cut a cylinder from a sponge; moisten well, press out all the water, tie a string to the end, and pack firmly as far back in the nostril as possible. 3. If tannic acid is at hand, it may be blown into nostril from any tube; a pipe stem, a quill, a catheter, or even a roll of paper. 4. Ice to the back of the neck, and to the forehead. 5. Inject very warm water, if syringe be available. For internal use, the best drugs are gallic acid, iron, hydrastis, ergot and calcium chloride.—(Med. Brief).

BUSINESS PHARMACY.

The Experience of Druggists with Profit-Bringing Methods. Hints and Suggestions. Original Papers from Practical Business Druggists. The Various Phases of Drug-Store Management and Economy.

PROFITABLE SIDE LINES.

By "ACTINIC."

The idea of carrying cameras and photographic supplies as a side line for pharmacists is not new, but I found the following original idea made the goods sell. Several merchants in our city had put in cameras (and kept them also). I put in half a dozen and made nothing over my advertising expenses till I hit on this expedient. I had one of my clerks build a dark room in the cellar with a few dry goods boxes and covered it, inside and out, with heavy builders' paper to make it light tight. On one side I cut a hole 8x10 inches, set in a pane of glass and put four thicknesses of orange tissue paper and four thicknesses of red tissue to make a source for light, put a shelf in front of the window and used a hand-lamp, thus obtaining non-actinic light, which could be easily and cheaply furnished. I built the shelf for developing on the inside so that the light illuminated the work. Then I inserted the following "ad" in our local papers and had 1,000 struck off for enclosing in camera catalogues and to wrap in packages:

A Generous Offer

To persons who would like to own a camera but hesitate about buying one because of the fear that they could not operate it correctly or get satisfactory results, we make this offer. We will load a camera and assist the prospective buyer in its operation and also in developing and finishing the picture free of charge. Prospective buyers will be given all the advantages of a business experience in cameras for several years.

**BLANK'S
DRUG STORE.**

I made a sample print from the first attempt of every amateur whom I taught to use a camera and wrote "First picture taken by John Doe" in a prominent place on the card. I kept these on my show cases and customers who are waiting for packages take pleasure in looking them over and they serve as an introduction to the subject of photography.

When making a window display I always paste the slips on the glass on a level with the eye of a person of average height.

In a book kept for the purpose I keep a list of all people who have taken any interest in photography and mail them new catalogues as frequently as they are received and the camera manufacturers—especially the Eastman Kodaks—are very liberal with attractive catalogues. At the county fair, every fall for the past three years, I have had control of the amateur photograph exhibit and give prizes. My annual sales jumped from forty-two dollars, covering cameras and supplies, to over five hundred dollars after this advertising, and now I supply the local professional photographers with their supplies. More people will stop to look in a window at pictures than at anything else, and by using new ones they will stop regularly. You have noticed probably that if one or two stop to look in a window others will stop out of curiosity.

Don't be afraid to furnish a little free developer and urge all amateurs to use your dark room freely. I find the following formula very satisfactory for developer:

Metal	3 grains.
Hydroquinone	10 grains.
Dried Sulphite of Soda	80 grains.
Carbonate of Potash	60 grains.

TO THE DRUG CLERK.

By H. G. SCHULTZ, Philadelphia, Pa.

How often do we hear and what common expressions are these: "Oh, the drug business has gone to the dogs;" "If I had to do over again I would never go into the drug business;" "Nothing to do all day long but to sell postage stamps and answer questions;" "Work sixteen and eighteen hours a day for small pay and less glory," and a thousand and one similar complaints.

Now just let us stop a few minutes and reflect upon these, the most common ones, and perhaps in analyzing ourselves and our environments we may be able to detect a ray of hope that will carry us over and above that multitude of minor ones.

In the first place the drug business has its ups and downs—so has every other business—but it has not "gone to the dogs," as the common expression goes, to one who has his heart and soul in it, bound to overcome every obstacle in his journey for success, and that is only an essential to success in any vocation.

It is true we have some seeming difficulties. The department stores are selling our brushes and perfumes and other sundries. I say "ours" because before the advent of the department store the people demanded such articles of the druggist; mainly, I presume, because he made their hair tonic and other toilet requisites. He never made any special effort to get this trade, and apparently thought he had the exclusive privilege of selling them. But the department store man saw here a good opportunity and made a special bid for that trade and got it, and is making still greater efforts to hold it. Why not make

a special effort on your own part to get back for the proprietor this part of the business, which has been lost only on account of a lack of attention to it.

Keep your mind occupied considering ways to sell more sundries; how you can display the stock to the best advantage, for this is a secret of the department store sales; keep the stock clean and polished, and you will not have time to wish that you had never gone into the drug business, but will be so interested that each effort to beat the department store out of a sale will, if you work conscientiously, help you with the next one.

Don't be afraid to tell your customers that you carry all the articles they usually go to the big stores for.

Instead of bewailing the fact that you have to answer questions and sell postage stamps, make use of it. The department stores spend thousands of dollars a year to get people into their stores and tell them that they have an information bureau and sell postage stamps. Why not take a lesson from them? If it's worth all the money they spend to let the people know that they can be accommodated at their stores, it is surely worth the little extra trouble it makes you, if by so doing you can get the name for being accommodating and thereby get the people into your store.

How glad the big store manager would be if he could get his customers with a pleasant word and a smile instead of spending so much money! That's what you can do, though. Getting the people into your store is half the battle. It is an easy matter to go from postage stamps to your pretty line of writing paper; from telling some one where Dr. So-and-So lives to the excellence of your prescription department.

Don't think any one will be offended if you show them your goods. All of the ladies who come into your store like to see new goods, and it's usually the ladies who buy stamps and ask questions.

Don't wait for the proprietor to do these things, or think that just because he don't always do them that it's not necessary for you to do so; that is what you are there for. The proprietor is usually a busy man, and has become busy only because when he was in your position he did those very things which you are now expected to do.

You probably see twice as many customers in a day as he does, and so the responsibility of keeping his old ones and making news ones rests largely with you. Take this responsibility, make his business your business, his customers your customers. But don't get the idea after you have been at a place for some time and worked conscientiously and hard that it cannot get along without you; don't assume a lordly air, and you will find that the sixteen and eighteen hours a day which you spend in the store will be the source of pleasure instead of drudgery.

Don't think that because the proprietor is not always at your side and does not see just what you do and how hard you try to make customers and draw trade, that he does not know you are working in his interest.

He counts the cash and pays the bills, and knows what the balance is at the end of each month or year, and instead of small pay you will receive your full share of that balance which you have worked so hard to increase, and for glory you have the self-satisfaction of work earnestly done, and knowing that you will not have to look soon for a new position.

PROFITABLE FIVE AND TEN CENT TRADE.

By GEORGE W. HAGUE, PH. G., Hempstead, L. I.

Many druggists think the rich people who run large bills are the best class of trade. My experience has taught me that the cash trade is the best trade, rich or poor. After having much success with a five and ten cent line of my own preparations, I thought the idea would be of benefit to some brother druggist. These preparations are all sold loose, and they do not interfere with regular preparations of my own.

Liver Capsules for Adults.

These are also called "Saturday Nights," as we sell so many on this night.

Powdered rhubarb.....	24 grains.
Calomel	24 grains.
Podophyllin	3 grains.
Aloin	2 grains.
Extract cascara sagrada.....	24 grains.
Sodium bicarbonate.....	60 grains.
Extract nux vomica.....	3 grains.
Sugar of milk.....	40 grains.

Mix well and divide into capsules No. 12. Take one at bed-time. Charge five cents each.

The above capsules have been winners from the start. Patrons rarely get more than one at a time.

Laxative Syrup

For children.

Powdered senna leaves.....	2½ ounces av.
Powdered buckthorn bark.....	128 grains.
Powdered jalap.....	384 grains.
Powdered rhubarb.....	256 grains.
Powdered cinnamon.....	30 grains.
Powdered cloves.....	30 grains.
Powdered nutmeg	15 grains.
Oil of peppermint.....	10 minims.
Sugar	10 ounces av.
Alcohol, 40%, enough to make.....	16 fl. ounces.

Make by percolation, and dissolve the sugar in the percolate; lastly strain.

Charge ten cents an ounce.

Tooth Powder.

Precipitated chalk.....	4 ounces.
Powdered castile soap.....	2 grams.
Powdered cuttlefish.....	4 grams.
Oil of cloves.....	4 drops.
Solution of carmine, N. F., sufficient to color.	
Listerine or any similar preparation, 1 fl. dram.	

Mix well. Sell for ten cents an ounce.

There is a good profit in all the above preparations, and no special bottles or containers are needed for their sale.

THE PHARMACY GIRL FROM A GIRL'S POINT OF VIEW.*

By EDITH BUCHANAN, Rising Sun, Ind.

Nearly all of the leading journals and magazines of the day have something to say of the American girl in respect to her choosing an occupation or profession, but seldom do they mention pharmacy in this connection.

Why should pharmacy not be just as important a topic to discuss in the ladies' journals as such subjects as school teaching, music, art, etc? Probably because some think that a drug store is the last place in which a woman should be employed.

But if people would only stop to consider how important a factor the women in pharmacy may yet become. I think more employers would consider what a boon to their business a competent lady pharmacist would prove herself.

Of course, there are many men whom we might call "old fogies," who would not trust a most thorough lady druggist to wait on them under any circumstances. As, for instance, the other day a gentleman from the country came in and asked if the "boss" was in. When I replied that he was in, but busy, he said: "Well, can you sell me five cents' worth of paregoric?" I assured him that I could, and proceeded to wrap it up; but he interrupted me, saying: "Just let me take this to the boss and ask him if you've given me the right thing." The proprietor assured him it was all right, but the farmer shook his head and groaned a groan. However, I noticed he came back again and let me wait on him without a word.

Now, if it is the duty of the housewife to know how to keep the home in perfect order and see that all household supplies are kept up, how necessary it should be that the same be done in the pharmacy of to-day! Of all places to be kept clean and neat, I

* Western Druggist.

think the drug store should be that place. By all means see to it that utensils for making the various galenic preparations are kept perfectly clean. Never put aside a graduate without thoroughly washing and drying it with a small towel kept for that purpose, so that when a customer comes in and wants to take a scidnitz powder you will not have to stop and clean the graduates.

The prescription case is to be kept in such order that one would not be ashamed for anyone to see it; for, if a customer finds disorder reigning supreme, he is very apt to think the druggist is slovenly and perhaps not careful in compounding his medicines and would rather go where things present a better appearance.

"cleanliness is next to godliness," then it would be well for every drug store to be kept clean.

The drug store is known to be a place where ladies like to wait for friends they expect to meet, and, while waiting, if there is a lady clerk in the store she can entertain the ladies in different ways; and if she is a wide-awake clerk she will endeavor to lead to the subject of various toilet accessories found in drug stores and which all ladies like to discuss. She will also keep well posted as to the latest stationery, and in this way probably make sales where the customer had not thought of purchasing anything at all.

Again, lady customers often experience more or less timidity in regard to inquiring about syringes and such other articles that are necessary to a lady's toilet, but would rather do without them than go into the drug store and have a gentleman to wait on them.

Let the lady clerk thoroughly understand the use of all these articles and know which is the best grade; then sell none but the best. In all this she can, without a doubt, gain the friendship of many, and they will have full confidence in her, and she will attract the trade of people in every sphere of life.

She should always be willing to serve one customer as well as another, and never slight any, however humble their station in life might be.

That the lady pharmacist takes more interest in the general appearance of the drug store than does the average drug clerk is no longer is doubted by those who employ lady clerks, especially in regard to window decoration. As to the latter I may add that I think a very pretty idea for a window decoration is that of having a nice display of perfumes, artistically arranged. A few beautiful flowering plants, as they may be in season, would add materially to the attractiveness of the display.

A Good Prescription.

I herewith submit a formula for a hand preparation, which is almost a positive cure for tetter, as I have found out by experience:

Pinus Canadensis light	oz. 2
Glycerin	oz. 1
Ext. hamamelis	oz. 2
Bay rum	oz. 2

I also give a formula for a good tooth powder:

Tooth Powder.

Prepared chalk	oz. 1
Castile soap, powdered	dr. 3
Orisil root, powdered	oz. 1
Fumice, powdered	dr. 2
Oil wintergreen	m. 15

Now, while I may not have said anything in this article that will benefit men and women who have had more experience and a greater knowledge of drugs and business than myself, yet I feel confident that pharmacy will yet be taken up by many more women as a profession and that druggists generally will see that the lady pharmacist will be indispensable to the trade.

FOR A BLACK EYE.—Nothing is better than a solution of ammonium chloride 1 oz., in glycerin 1 oz. and water 1 pint. Bathe frequently. If you direct the patient to take little pieces of soft linen four inches square and folded twice; dip in this solution kept hot—not just warm, but hot—the swelling and extravasation will be quickly relieved. Boiling water acts well, but the above conditions add to its efficacy. —(Med. Summary).

POISONOUS PLANTS WHICH GROW WITHIN OUR BODIES AND HOW TO CON-TEND AGAINST THEM.*

By DR. H. H. RUSBY.

It has now become a matter of common knowledge that many of our most dreaded diseases are caused by bacteria, or "germs," as they are popularly designated. It is the object of this lecture to direct attention to these bodies as plants, to consider their poisonous action and our methods of defense against them.

As plants, they agree fairly well with various members of the Fungi, with which they are commonly associated in classification. They obtain their food for the most part in the same general manner, by tearing down organic compounds, and making use of the simpler chemical substances thus produced, which they take in by a simple process of absorption over the entire body-surface. They are, like other plants, of cellular structure, though of but a single cell. They are noted for their small size, the united length of many thousands being required to measure an inch. A great many of them, like other lowly organized plants, possess the power of locomotion, and travel about by means of cilia. They show the same variation in healthfulness and luxuriance, according to the special suitability of their growing medium or environment, that other plants do in regard to their soil, climate and exposure.

Though certain forms are grown for utility, those which cause consumption, diphtheria, typhoid and kindred diseases, are studied chiefly to discover what conditions will destroy them, or at least tend to inhibit their development or physiological activity, or counteract the injurious effects of the latter.

Their dependence upon special conditions, or upon certain soils, as we might well express it, is evident in the ability of certain bacteria to grow, at least with their customary form and vigor, only in certain organs of the body. Even this power is limited to certain individuals, for we often find them in healthy persons, alive, but unable to grow or to cause the appearance of their particular diseases. It is even more significant, and far more important, that in the same body the germs will be able to thrive at one time but not at another. It is also notable that in the case of some disease-producing bacteria, the luxuriance with which they develop, and even more particularly the violence of the diseases which they produce, depend in a high degree upon their association with other species. Thus, the species which produces tetanus, or lock-jaw, cannot live where there is a free access of fresh air or oxygen; but if it can associate with itself another species, which does consume oxygen, the two can thrive together.

Upon the other hand, there are cases in which such association is adverse to the welfare of the germs. This fact has been utilized by introducing the plants of erysipelas to the systems of those suffering from sarcoma, a disease presenting many similarities to cancer. The latter has been entirely cured in some cases, greatly benefited in many others.

It should be noted also that to a greater extent than any other class of plants, perhaps, bacteria possesses the power of adapting themselves to adverse conditions. After fully accustoming themselves to a new order of things, they may even grow and develop with all the vigor natural to their previous condition, though usually they do not thus learn to thrive, but gradually lose their vitality or virulence, which may sometimes be again restored by transplanting them to a favorite soil. Thus the lock-jaw bacillus, much as it dislikes oxygen, can come to live in the lungs themselves, though none of its characteristic poison can be produced there.

These peculiar properties of bacteria have, of course, to be seriously reckoned with in the selection of all methods for combating them and their effects. They often increase greatly the difficulties under which such action is pursued, though modern science

*Journal of Pharmacology.

has sometimes found it possible to utilize these very peculiarities in devising protective measures.

In reproduction, bacteria depend chiefly upon the method of simple body-division, and have thus come to be generally known as "fission" plants. The new individuals may at once separate to lead independent lives, or they may remain in the pair, or many concentrated pairs, resulting from the dividing process. They differ from other plants in the enormous rapidity with which this process is performed. A few minutes usually suffices for the perfect development and maturity of the progeny. It thus becomes apparent how in such diseases as anthrax, where these plants develop freely in the blood, the latter can in some places become within a few days almost a solid mass, the blood vessels completely dammed and circulation in that part entirely suspended.

Many species reproduce also by spores. Not only are such species enabled to retain their powers of reproduction, and, therefore, of disease distribution, for very prolonged periods, but they are much better enabled to resist adverse conditions.

The production of poisons by these plants is most easily demonstrated. It has already been shown that if the germs taken directly from the body of one suffering from a given disease be introduced to the body of another, the disease may be communicated to him; also that the germs can be propagated in some extraneous medium, as bouillon, for an indefinite period, and then be similarly used to inoculate another with their disease. In both cases, the party to whom the disease is communicated can become the source for another inoculation, and so on, showing the successive reproduction and development of the plants in the bodies of the different persons. If now a portion of the liquid containing these germs be heated to a temperature known to be fatal to the latter, this power for the continued transmission of the disease is lost, as is clearly proven by inoculating an animal with the substance and failing to secure any further transmission of the disease from the substance of his body. No living germs, therefore, were conveyed to him in the inoculated substance. Yet, under these circumstances, we find that he will exhibit the subjective symptoms of the disease, so severely sometimes as to promptly cause his death. From this observation there is but one rational conclusion, namely, that the germs while growing in the liquid, gave out to it their produced poison, which poison, injected in solution into the animal's body, poisoned it, just as it would have done had it been produced within that animal's body by germs existing there. So strong, it is said, will this poison solution sometimes become, where diphtheria germs are cultivated, that a single drop of it will kill a large and healthy horse.

The extent to which the poison is produced under different conditions, or the "virulence" of the germs, is extremely variable. This variation is manifest in different epidemics and in different cases of the same epidemic.

Two quite distinct methods exist for the production of the poisons. One is the same as that followed by ordinary poisonous plants, like the toad-stool, or the aconite, belladonna or strychnine plants. In each of these, the poison results as a waste-product from the nutritive process going on within the plant-body, so that the substance of the poison has previously belonged to the substance of the plant-body. While this poison can be of service to the plant as a protection, yet it cannot be allowed to accumulate indefinitely. The aconite plant gets rid of it by storage in its tuber, which then decays in the soil after producing the plant of the following year. The belladonna plant stores most of it in the leaves, which fall and decay, while the strychnine plant does the same with its seeds. In the case of bacterial plants growing within our bodies, these poisons can be discarded from the plant-bodies only by excretion directly into our blood, and this, we have already seen, is proved by observed effects.

The other method of poison-production is that by which the bacteria tear apart the organic substances of the tissues or fluids which surround them, extract-

ing the very small portion which they can use, and leaving the residue, or part of it, in the form of a poisonous body. So far as the result is concerned, this method does not differ from the other, though it explains the extremely destructive nature of these organisms in disease.

Bearing in mind the facts and conditions here discussed in relation to the development, reproduction and poison-production of disease-producing bacteria, we are prepared to understand our methods of contending against them. Some of the deductions are sufficiently plain, while others are most occult.

It is of prime importance to know the methods by which the different germs are ordinarily introduced into the system. Some, as those of typhoid and cholera, are practically incapable of introduction except by the medium of the mouth. This does not mean at all that they must be present in our food or drink, as it is perfectly easy, and indeed common, for children, after handling their shoes or other polluted objects, to place the fingers in the mouth. Some, like the dreaded anthrax, are practically unable to inoculate us by the bodies of their germs except by direct contact, though it is possible for their spores to gain entrance through the lungs, by inhalation. Those of pneumonia and influenza must get into the air passages, in most cases, presumably, by inhalation. Diphtheria germs can grow readily in the eye and upon abraded parts of the body-surface, where contact is easy. Tetanus must enter the system by a bruised or incised surface. Tubercular germs can be lodged by inhalation, but, in spite of a tendency to become destroyed by the action of the stomach juices, they very frequently find entrance in our food and drink.

Our first and simplest method of defense against these diseases is manifestly the avoidance of infection and contagion. A perfect accomplishment of this result is well-nigh impossible, but since the outcome of an attack depends largely upon the number of germs making it, careful protection is at all times to be recommended.

Successful protection involves special methods in the case of each germ, as their habits and offensive and defensive powers differ among themselves. Some require oxygen, others are destroyed by it, while others are similarly sensitive to sunlight, and again certain temperatures are fatal to certain species.

Closely connected with this subject, and constituting one of the most important departments of hygiene, is that of methods of disinfection or sterilization, a process by which all germs and spores capable of producing inoculation are destroyed in or upon objects which must be handled or consumed. The details of these processes are discussed in simple manner in many works, where they should be sought by everyone interested in the welfare of the community, as well as in personal safety. Cold, even so low a temperature as 300 degrees below zero, does little more than temporarily check their activity, while a degree of heat, readily secured by ordinary methods, and definitely fixed for each species, is fatal.

By far the most important precaution in our power is the preservation of good general health and a high state of vitality. The foreign germs are never left by our body-cells to make an uncontested invasion. The battles between our cells and the foreigners have been actually photographed, showing defeat now upon one side, then upon the other. Manifestly, increased vitality means increased safety, and, of more importance to most of us, increased vitality and higher powers of resistance for our posterity.

Assuming that all these precautions fail, and that we are either stricken by disease or ready to become so if exposed, what shall we do to avoid infection, or if infected, to produce a cure? Success in answering this question has been only partially attained, yet this measure of success represents, perhaps, the most remarkable of all achievements in applied science.

Up to the present, we are practically without mineral or vegetable drugs capable of destroying these disease-producing plants within the body. Many sub-

stances are fatal to them, but only when concentrated to a degree dangerous to our own tissues. But this problem, too difficult for the chemist or the medical botanist, is solved by natural forces working within us. The existence of such a power is proven by the fact that we recover from these diseases, even after being weakened by them, and although we were unable to resist them at first, when we were stronger. It is further proved by our immunity against another attack, at least for a long period, after recovery. These well-known facts are understood when we learn that our own body-cells possess the power, under the stimulus of the germ's presence, and of its poison, to manufacture and add to the blood substances antidotal to the germ poison, or fatal to the germ itself, or both. To these substances, because we call the germ poison toxins, the term antitoxins has been applied. The gradual change thus effected in the composition of the blood is indicated by the gradual disappearance of the germs from the system as the disease progresses. It is also seen in the effects of mixing some of a convalescent's blood with a solution containing living and healthy germs, which are at once killed. Again, it is seen in the effects upon the disease of introducing into the body of a patient blood taken from one who has recovered, when there is more or less of an immediate tendency to counteract the poison of the disease. Or, if the individual has not yet contracted the disease, he can be prevented from doing so upon inoculation of the poisonous germs, if this blood from a convalescent be at the same time introduced. We, therefore, say that the convalescent has parted to his body fluid, and that by the injection of this fluid a similar immunity can be conferred upon another.

It being manifestly impracticable to secure a sufficient quantity of such immunizing fluid from the bodies of convalescent human beings, recourse has been had to the lower animals, the horse being chiefly employed. The methods, now that they have been successfully worked out, appear simple enough. We dare not inoculate the animal with the disease germs, lest the disease thus imparted to him become uncontrollable, but we can inject into his blood the poison imparted by the living germs to a solution in which they have grown, but in which they have destroyed, or from which they have been filtered out. Only a very small amount can be safely introduced at first, but as the system of the animal manufactures and stores its antidotal quantity of the anti-toxin, larger and larger amounts of the poison are introduced, until sufficient to have killed many untreated horses can be safely injected at one time. At length, the animal becomes proof against any ordinary amount of the poison. His blood is now drawn and its watery portion separated to be sold as commercial antitoxin. It is, in fact, a mere solution of the antitoxic substance, and its strength can be readily fixed by testing its power to counteract solutions of toxin of known strength.

Although diphtheria is the disease to which attention has been chiefly directed, its average mortality having been reduced more than fifty per cent. by this treatment, moderate success has also been attained in lockjaw and some other diseases.

Prevention against smallpox illustrates quite a different principle in defense, namely, that of attenuation. This method depends upon the known facts that certain types of disease are milder than others, and that this mildness can be artificially produced by pursuing certain methods. Under the application of these methods a mild form of the disease is created, and this disease is then imparted to those whom it is desired to immunize. Under this stimulus, their systems manufacture the required antitoxin, which at once becomes effective in protecting them against a new infection. By this method smallpox, once the most dreaded of diseases, may now be almost called unusual, considering its rarity among our vast populations.

PHARMACOPOEIAL REQUIREMENTS FOR JALAP.*

By JOHN C. UMNEY, F. C. S.

So much has been written during the past generation on the subject of this drug that it seems hardly necessary to review in detail past literature relating to it. Opinions, however, appear to be unanimous that jalap tubers may vary enormously in the percentage of resin that they contain. Pharmacographia (edition 1874) records an examination of jalap tuber by Charles Umney, containing 21.5 per cent. of resin, and also one by Widemann on the root cultivated at Munich containing 22 per cent. of resin. These percentages are higher probably than those met with in commerce and higher than any examinations recorded in the papers by Squibb, Barclay and Warden.

Two of the most recent examinations of trade samples of jalap are those recorded by C. E. Robinson, who found that the ten samples he examined varied between 7.5 and 17.7 per cent. of resin (averaging 12 per cent.), and Cripps, who examined 34 samples, varying from 5.8 to 15.6 per cent. of resin, and averaging 9.8 per cent.

It must not be overlooked, however, that the samples examined by Robinson were from open pharmacies, and had, therefore, presumably passed through the hands of wholesale druggists, who, doubtless, in the exercise of their judgment, had rejected many samples of the drug having a low assay of resin. Nationalities seem to have adopted widely-varying standards, the standard proportion of resin required in the recently published Pharmacopœias being as under:

	Percentage of resin.
British Pharmacopœia, 1885.....	10
British Pharmacopœia, 1898.....	9 to 11
U. S. Pharmacopœia, 1880.....	12
U. S. Pharmacopœia, 1890.....	12
German Pharmacopœia, 1890.....	7
German Pharmacopœia, 1900.....	9
French Codex, 1884.....	16 to 18

Whilst there can be no question that the standard of the German Pharmacopœia (1890) was too low, that of the French Codex is exceptionally high, and so high, indeed, that a jalap of such a resinous assay is only rarely obtainable.

In his report to the British Medical Council for the year 1888, Dr. Attfield says: "Clearly the proportion of resin yielded by jalap has for the past twenty years been gradually diminishing."

Whether that be entirely true or not, at any rate during the last few months it has been extremely difficult to find any jalap on the London market containing a high percentage of resin, or, for the matter of that, a portion even up to the minimum of the British Pharmacopœia. In consequence I have thought it desirable to collect such samples as may be practically said to represent the bulk in trade in this country with a view to determining how far the drug falls short of pharmacopœial requirements, and, if possible, to account for the circumstance.

Flückiger has suggested that the resin is partially extracted from the jalap tubers in Mexico. I understand from one of the oldest drug brokers in London who has handled jalap very largely for the last half century or more that the tubers are collected at practically any time during the dry seasons, from the middle of November to March. Very little care appears to be taken either in the cultivation or in the selection of tubers for collection.

David Hooper recorded most interesting results regarding the cultivation of jalap in the Government cinchona plantations at Dodabetta, Nilgiris, India, and the effect of phosphatic manures on the resin percentage. It might be inferred from Hooper's investigations that the percentage of resin may be increased

* Abstract of paper read before the British Pharmaceutical Conference (Br. & Col. Drug.).

by one half, by special attention to the question of maturing and careful cultivation.

Out of thirteen samples that I have recently had the opportunity of examining, the results of which are subjoined, it will be seen that only two samples are in excess of the maximum pharmacopoeial requirements, whilst the lowest recorded only contains 5.4 per cent. of resin:

	Percentage of washed resin.
	Per cent.
No. 1	6.0
" 2	8.2
" 3	8.0
" 4	6.7
" 5	8.7
" 6	5.4
" 7	11.3
" 8	6.2
" 9	18.4
" 10	9.6
" 11	7.3
" 12	6.4
" 13	6.5
Average	8.3

How, then, is the deterioration to be accounted for? By one of two theories—either by supposing that maturity, period of collection and soil materially affect the percentage of resin, or that the root has been subjected to the treatment suggested by Flückiger referred to.

I have been able to obtain supply of tubers that only yielded 5.4 per cent. of resin, but examination of these fails to show that they have been treated by any solvent. They are exceedingly small, with pale exterior, starchy and obviously immature; the tubers yielding 18.4 per cent. of resins are large, have dark exterior and in many instances have been sliced for drying and are much shrivelled.

I have not been able to determine that there is any considerable difference, or any direct ratio, inverse or otherwise, between the proportion of starch, saccharine matter and resin contained in the various powders examined.

Tincture.—The tincture is in very little demand, but it will be obvious that for the tincture to contain the proportion of resin required by the British Pharmacopœia, 1898, namely, 1.5 grammes of resin per 100 Cc., it will differ enormously in extractive according as it has been prepared from root strong or deficient in resin.

In my experience the average yield of total extractive of jalap root to 90 per cent. alcohol is about 16 per cent., although in the case of the root yielding 18.4 per cent. the percentage yielded to 90 per cent. alcohol was as high as 25.3, and to 70 per cent. alcohol 30.9.

Tinctures prepared with 70 per cent. alcohol from jalap containing approximately the quantity of resin required by the British Pharmacopœia contained about 2.3 to 2.7 grammes of extractive per 100 Cc.

I have examined samples obtained from various sources, and the following yields of extractive have been obtained:

2.9 grammes from 100 cc.
3.4 " "
3.5 " "
3.8 " "
3.7 " "
2.8 " "

In conclusion, I hope that efforts will be made to improve the conditions under which the cultivation and collection of jalap is carried on so that the standard of the British Pharmacopœia, 1898, which does not appear to be unreasonably high, may be, if possible, maintained.

BOTANICAL SOURCE OF COMMERCIAL RHUBARB.—It would appear that botanists have not yet definitely determined the botanical source of this drug. The origin of the true Chinese rhubarb has for many years been taken to be *Rheum officinale* and *Rheum palmatum*—two rhubarb plants which are found in the upper Asiatic regions, whose root stocks, after repeated examinations, resemble the Chinese drug so much in formation and appearance that we can almost accept its derivation from those plants as certain. According to accounts of explorers and of natives, a large number of rhubarb plants which are progenitors of this drug are said to exist, so that we may quite expect to become acquainted with still more *Rheum* species which produce the true drug. Formerly the only plant taken into consideration in this respect was that which came from the upper Asiatic district—i. e., the mountain district of Mongolia lying northwest of the province of Shensi—and this is the *Rheum Franzenbachii*. This plant differs from *R. officinale* and *R. palmatum* chiefly in having undivided leaves, which more closely resemble those of *R. undulatum*. It is the only one of the large group of *Rheum* species with undivided leaves which, originating from the Chinese districts, is found south of the Gobi desert. Through the courtesy of Consul Lueder two of these plants were planted in Mongolian milk-vessels by the interpreter to the German embassy, Franzenbach, when he was traveling in the above mentioned district, and brought with the seeds and roots to Peking and sent to Europe. Early in 1874 the two plants still living reached Greifswald; the seed sent at the same time germinated. It may be to the purpose to add here what Munter mentions of the roots in his description of *Rheum Franzenbachii*: "At different ages of the plants the roots are exceedingly different. They have a more spindle-shape form during the early years, through the dying off of the old axes which are above the earth which have ceased blooming, and through side sprouts a rhizome (properly a caudex) is gradually formed of them, which is furnished with more or less numerous side roots of a fleshy nature more or less ringed on the outside and of a pale-yellow color. At a later period, however, the roots as well as the rhizome itself possess a brown-colored corky layer, which may be regarded as the dead outer layer of the cork formation of the rind. The subterranean axis has a root 4-6 inches (10-16 centimeters) in length, in which may be distinguished the central pith, about five millimeters in diameter, then clear ring-shaped woody cells with pith veins and glands of a peculiar kind, and, finally, a ring-shaped rind with pith veins and corky tissue.—(Ch. and Dr.)."

STERILIZATION OF THE HANDS.—A very effectual means of treating the hands before operation is as follows: In running sterile water at about 40° C. with common yellow soap and sterile nail brushes, the hands and forearms are scrubbed hard and systematically in four sittings of a few minutes each. After the second scrubbing the nails are cleansed and trimmed. Next there comes for four minutes immersion in a one-to-one-thousand solution of bichlorid of mercury in ninety-five per cent alcohol, followed by washing in a one-to-one-thousand or one-to-two-thousand watery solution of the same, until the alcohol is washed off. Finally, after the gown is put on a rapid rinsing in the alcoholic solution is done, which may be followed by a superficial drying with a sterile towel, or, better, the hands may be left moist and the operation begun.—(Medical News).

GINGER POP.—Slice three lemons with three ounces of ginger root, add three pints of water, and boil thirty-five minutes. Stir in two pounds of sugar and boil fifteen minutes longer. Add three ounces of cream of tartar before removing from the stove; set off and pour in enough heated water to make two and one-half gallons of luke-warm mixture. Stir in half a cupful of compressed yeast dissolved in a little water. Set aside in a cool place; let it stand over night, and in the morning, after straining, the pop will be ready to bottle and use.—(Table Talk).

SHOP TALK.

"No wonder the drug business is going to the dogs nowadays" remarked the apothecary of one of Philadelphia's big hospitals, "the number of people who come to the dispensaries to get free medicine under one pretence or another must certainly be making big inroads in the prescription business. Why! when I was clerking in a drug store nearby we used to get from forty to sixty prescriptions a day, now the boss tells me that twenty is a big day's average. And the kind of people who 'sponge' on the dispensaries, folks well able to pay for any prescriptions they may need, it's a shame that nothing is being done! One day not so long ago a man came in to get a prescription filled that had been given him by the house surgeon and I declare, he had at least \$600 worth of diamonds on him; another man who handed in his order for a bottle of cod liver oil in a sort of shamefaced way I found out later was a police lieutenant in a down-town district; another man gave me a pressing invitation to visit his summer home in the suburbs after I had been putting up medicine for him for a week or so, and so it goes. I know of one woman who drives up in her carriage to the corner and then gets out and walks around to the "Outdoor Department" and sits in line to wait for free treatment and medicine, and her husband is rich! People who do this don't seem to think that they are swindling the poor people for whom the free dispensaries are conducted, the doctors who should be called in to attend them and the druggists who ought to supply their medicines, and I am glad to see that the State Associations are going to take up this abuse seriously. If they do, I can tell them some very interesting stories and I guess it's the same in all big cities. So long, I've got to put a bottle of cough syrup for the child of the man who owns the house my family lives in—he's too poor to pay the druggist at the corner for it or too mean, which?"

* * *

Said a New York druggist the other day, a member of the German Apothecaries' Society, "In theory these buying-clubs, which we hear so much about in later-day pharmacy, may look well, but for the practical druggist they are of no use whatever. Besides being liable to overstock himself because he must make up an order of a certain quantity, thereby often carrying dead stock, the druggist finds that a number of other faults combine to make them even more costly than if he bought direct from the jobber. The few cents off which buying-clubs can offer less than can the jobber are of no advantage if the druggist must buy more than he really needs at the moment. And where is the advantage, as another instance, to be gained when a druggist ties up quite a lump sum of cash in the form of a deposit as a guaranty of good faith, that he could easily turn over many times in the course of a year. Moreover, if he should decide to withdraw from the club at any time, he can get his deposit returned to him, not in cash as he gave it, but only in goods. A buying-club was started by the druggists of this neighborhood, which fell to pieces shortly after its inception for want of confidence between members and because of everlasting quibbling; and my experience as a member has taught me that I can be better pleased in more ways than one by going to a jobber for the goods I want."

* * *

It's the little things that count in drug stores as well as elsewhere, and it's the attention to little details that makes or mars business. All of which trite remark is inspired by a little story heard the other day in a Philadelphia street car. "I thought you used to deal with Blank, the druggist, Jennie," said one lady to another on the seat ahead, "it's a block out of your way to go to Jones' store." "Yes, I know it is" was the reply, "but I lost faith in Blank, they were too careless there and I got afraid to let them put up Willie's medicine when he was taken sick." "Why, did they make a mistake in your medicine?" asked the first speaker. "No, it was not that. I may be funny, but the reason I quit dealing with Blank was the way

he and his clerks used to wrap up the packages I would get there, they would be slovenly folded and tied with string so carelessly that half the time the wrapper would come off before I would get home, so I just made up my mind that people who were so careless in sending out things would be careless in putting up prescriptions, and I went to Jones, where the clerks all look so neat and tidy and wrap up things so nice!" "Well, I declare," said the other, "I don't blame you, and I am going to Jones, too, it's such a comfort to be able to trust your druggist to do things right and I never did like the way Blank used to send me dirty bottles of witch hazel and such stuff."

* * *

For the past two years a city ordinance has prohibited the distribution of circulars and "dodgers" in Philadelphia, the custom of sending out circulars by every little grocery store having become such a nuisance and disfigurement of streets that it was stopped by law. Nowadays the large grocers get out a "newspaper," which they distribute from house to house, putting it under the door, thus evading this law. These "newspapers" have the three first pages printed with stories, anecdotes, etc., somewhat on the order of the patent insides of country papers, and usually the selection is of enough merit to cause the circular to be kept and read, with the price lists and advertisement on the fourth page. Recently a few Philadelphia druggists have been using these "newspapers" for local advertising and say that it affords good results and is quite cheap. The grocery man is usually only too glad to have some one share the cost of the circulars and gives the front or inside to the druggist for a small price, and as the distribution is generally once or twice a week and to about every house in the neighborhood the druggist is sure of reaching a large number of people in a way that will attract their attention. This matter is printed in a very cheap form, though, and cannot be used for any first-class advertising, indeed, the originators of the scheme confine themselves to a simple price list of seasonable articles for each issue.

* * *

Will some druggist kindly explain why men acquire habits that hold good in one place and not in others? If he can it may put dollars in his pocket. For instance, no man ever accompanied another man into a saloon that he didn't, having been the recipient of one drink, say "Have another on me"? Usually the invitation is accepted, often it is repeated several times, but what a difference on the rare times when two men enter a drug store to get a glass of soda apiece! After going carefully over the flavors and finally selecting and imbibing their soda water, did any one ever hear any one say "Drink up and let's have another"? No one. It seems to be a breach of soda water etiquette to ask a man to drink more than one glass at a sitting, so many times has the response popular in the saloon been passed by in silence, or, is it that one glass of soda water is the capacity of the average man? Here's a nice problem for the druggist, and a society should be formed on the lines of the "Anti Treating League" to introduce the custom of the saloon in "have another on me" at the soda fountain.

* * *

Things are getting down to hard pan indeed when a drug store on Washington street, in the South End in Boston, advertises "delicious ice cream soda, three cents a glass." Competition must be at a white heat in that locality. Heretofore seven cents has been the "cut price" on this strictly American concoction, with ten cents as the usual, or regular price. A few candy stores have sold ice cream soda at five cents, and now a druggist goes them a bit better—or worse.

* * *

The death in Boston of a man who had previously taken a dose of ipecac recalls an actual occurrence in one of the public schools in the "Hub". A teacher had been giving a lesson in spelling and definitions and the word "ipecac" was among others brought up. One child, so the teacher relates, after spelling the word correctly, defined it "One who loves a good dinner."

SYSTEMATIC EXTERMINATION OF MOSQUITOES.

Now that the mosquitoes has been shown to be not only obnoxious but also a positive source of disease, active measures are being taken in various places to diminish its number by systematic methods. It is certainly desirable that boards of health should take an active interest in what promises to be a more and more important means of prophylaxis.

In New York, Health Officer of the Port Doty has given a detailed report of his recent investigations in regard to malarial disease on Staten Island, which is of much interest. He states that he selected a district known by the physicians of the borough to contain many cases of malaria, both in the acute and chronic form. This section, consisting of a basin less than a square mile in extent, within whose boundaries were some twenty-five stagnant pools varying from five feet in diameter to an acre or more in area, contained not more than a hundred small wooden houses, some distance apart. A house-to-house inspection showed that at least 30 per cent. of the inhabitants were suffering from the acute or chronic form of malarial fever. In almost every house or yard were found typical breeding places for mosquitoes, either in the shape of rain barrels, cisterns and cesspools or of abandoned receptacles thrown about the premises. Samples of water from these, as well as all stagnant pools, were examined, and larvæ in large quantities were found. Large tubes were distributed among the houses for the purpose of collecting some of the mosquitoes infecting the neighborhood, and among the latter the anopheles was found. On two evenings live mosquitoes were secured from one of the bedrooms of a house in which there were five malarial subjects. On the first night five were taken, and all but one were of the anopheles species. On the second night twenty-two were collected, and of these more than one-half were the malarial insect. In a drop of blood taken from a child seven years old suffering from acute malaria, who lived in a house of the opposite corner, a bacteriological examination showed the presence of the malarial parasite.

The mosquitoes referred to were placed in large glass jars for observation. Many eggs have already been laid, and the laboratory work in regard to the mosquitoes, when completed, will be published in the medical journals. Many tests have been made in the laboratory to ascertain the value of different agents in the destruction of mosquito larvæ. It was a surprise to find that a solution of bichloride of mercury (1-2000) sufficiently strong to kill all micro-organisms affected the larvæ slowly, some being alive at the expiration of twenty-four hours. In weaker solutions they lived indefinitely. It would be unsafe to use this dangerous agent in ponds, etc., and the same may be said of carbolic acid and other agents experimented with. Permanganate of potassium, which has been strongly recommended for the destruction of larvæ, produced but little effect except in very strong solutions. During these tests the marked superiority of petroleum oil soon became manifest, and there seemed to be no special advantage of one petroleum product over another. The Lima oil, which was used in petrolizing the stagnant pools and rain barrels, etc., is a crude petroleum with a minimum amount of naphtha. One cubic centimeter of this added to 3,500 cubic centimeters of water containing larvæ killed them in three or four hours. This is equivalent to about twenty drops of oil to a gallon of water; and, as a matter of fact, this result was usually obtained by less than this amount of oil. Dr. Doty is inclined to believe that the death of the larvæ is due to obstruction of respiration, and also that emanation from the oil or its odor, or both, is particularly repugnant, if not dangerous, to the full-grown mosquito.

There is no doubt, he says, that the best effect of the oil is gained by introducing it to a considerable depth under the water. In this way it is more surely brought in direct contact with the larvæ, particularly if the water is agitated. Having given a description of the apparatus employed in his practical

work, he states that in petrolizing the stagnant pools it soon became evident that the long grass and weeds, particularly in the immediate vicinity of these places, were the abiding places of the mosquito during the day. Therefore, special attention was given to the removal of this growth and afterward petrolizing the ground with an ordinary sprinkling pot. The cisterns, rain barrels and other such breeding places were treated by sprinkling the inside of the wood-work and the surface of the water with oil. If the boundaries of the section experimented upon included all the breeding places in this part of Staten Island, there is no doubt that a marked diminution in the number of mosquitoes would have been apparent at once, but, unfortunately, many breeding places exist in the territory surrounding this place. Nevertheless, the opinion expressed by the inhabitants of the section indicates that there has been a positive change for the better. Dr. Doty thinks that this investigation has been of scientific value, because it has shown (1) the intimate relation between the mosquito and malarial fever; (2) the true breeding places of the mosquito; and (3) that petroleum oil will surely and promptly destroy mosquito larvæ, and, so far as careful experiments indicate, it is the only agent which can be depended upon for this purpose. The suggestion that birds, dragon flies, etc., should be propagated for the purpose of destroying mosquitoes is, in his opinion, not entitled to serious consideration. In conclusion, he feels justified in saying that the continued presence of mosquitoes in large numbers as a rule indicates defective drainage, or in some other way an unsanitary condition of the infested section, and that the radical and scientific treatment of this condition is proper drainage and a compliance with modern sanitary regulations. Any other treatment is proper only when these measures cannot be enforced, and it is under the latter conditions that the use of petroleum is indicated. The responsibility of carrying out this important work must rest with the municipal, state and federal authorities. Municipal sanitary codes should include strict regulations not only against the existence of stagnant pools, but all forms of breeding places, and should empower sanitary officers to employ such means as are necessary to protect the public against these insects, and, when required, the application of oil should be made under their direction. In order to make this work uniform and effective, the co-operation of the state and federal authorities is absolutely necessary, and such action would be followed by the most gratifying results.—(Boston Med. and Surg. Journ.).

REPORT ON THE EXAMINATION OF FOUR BRANDS OF COCOA.*

By FRANCIS HEMM.

With the view of determining the average constituents and relative value and other desirable points of the general run of commercial powdered cocoas offered druggists in St. Louis I have partially completed the work undertaken and take pleasure in submitting my results thus far attained. By the way of preface I would state I had intended an examination of all obtainable brands in St. Louis, but on account of lack of time I could complete but four different ones. These four represent popular and well-known brands.

These cocoas are chiefly used by druggists for the preparation of chocolate syrup for the soda fountain. Those of us who make it a pride to prepare our own syrups will, I believe, find some interest and profit in noting the results of this investigation.

What is Powdered Cocoa?

Powdered cocoa should be a preparation in pulverent form representing fairly the nutritious and aromatic properties of the cocoa bean. When Linnaeus christened the genus of plants which produces the cocoa bean, "Theobroma" (Food of the Gods), because of the excellent drink and food he obtained from

* Read at the recent annual meeting of the Missouri Pharmaceutical Association.

the chocolate he prepared from the bean, he undoubtedly manipulated the Simon pure article.

The average composition of the cocoa bean (chocolate nut) as given us by chemists who critically examined the same is about as follows:

1. Shell.....	12 per cent.
2. Kernel.....	88 per cent.
	100

Analysis of Raw Bean.

(Weigmann.)

Water.....	7.93
Nitrogenous matter.....	14.19
Theobromine alkaloid.....	1.49
Fat (cacao butter).....	45.57
Starch and other carbohydrates.....	22.92
Crude fibre.....	4.73
Pure ash.....	3.99
Sand.....	0.62

The shells are reported to contain one per cent theobromine.

In conducting my examination for ascertaining the facts I wanted to know, viz.: The quality of flavor, strength and relative value, I confined myself to the following data:

Per cent of fat; per cent of water soluble matters; per cent of insoluble dry residue.

Table of Results.

Brand.	Fat.	Water Sol. Matter.	Dry Residue.
1.....	25	41	30
2.....	29	50	50
3.....	25	45	30
4.....	25	15	60

Comparative Prices Per Pound.

One brand sells for seventy-two cents, and each of the other three brands for fifty cents a single pound. Naturally one would be desirous of knowing whether their flavoring power differs. This might appear easily answered by referring to the table showing the relative amount of fat, soluble matter and inert dry residue obtained from them. The novice might reason thus, but those more experienced will not let this fact alone determine the matter. The one containing the most insoluble matter may have been more carefully made and may be the most aromatic.

Without prejudice, then, I will let you apply your taste and smell test to the four different syrups which I have prepared in the same proportion, i. e., four ounces to the gallon of the different brands, and let you decide for yourselves, whether there is any difference in quality.

I have also prepared a sample of fluid extract of each of the four brands representing the soluble constituents—one cubic centimeter is the equivalent of one gram of the powdered cocoa. I find a variation in color, flavor and consistency between them. I will mix one-fourth of a fluid ounce of each with enough simple syrup to make in each case two fluid ounces of syrup and will let you also compare these.

As to the amount of soluble matter, I would remind you that some may contain sugar or other carbohydrates, either of which will not strengthen the flavor.

Now, as to the fat. We read that this is not always cacao butter as it should be, but may be tallow, coconut oil or some other spurious fat. The quality of fat must, therefore, also be taken into consideration. I submit to you the different samples of fat which I extracted. It is claimed that the one thing wanted by the people at the soda counter is the flavor in chocolate. A careful comparison of the different samples of chocolate syrups I submit here will no doubt enable you to decide whether one is better than the other in point of rich flavor.

—In a recent decision, Commissioner J. W. Yerkes, of Internal Revenue, declares that according to sections 3248, 3251 and 3254 of the Revised Statutes bay rum is to be considered as distilled spirits, and, therefore, taxable as such.

PROGRESS IN PHARMACY.

By JOHN A. LEVERTY.

In order to more fully appreciate the advancement and progress made in pharmacy as a whole during the decade, one has but to consider the fact that during the fifty years from 1829 to 1879 there were only four drug journals published in the United States, while from 1880 to 1900 there were about thirty-five new ones. Since 1880 thirty-nine states have enacted laws keeping the ignorant out of pharmacy, as against five states having such laws prior to that date. In 1840 there were three colleges of pharmacy in this country, while there are now over fifty.

This advancement in the literary and educational side of pharmacy is due almost wholly to the efforts of the retail pharmacists, and yet we find conditions are such as to discourage this advancement, everything tending toward commercialism and reduced profits. Through the efforts of the N. A. R. D. during the past two years the unwholesome conditions under which the commercial side of pharmacy has been carried on have been greatly improved. This marked improvement should act as an object lesson and make apparent to even the most sceptical the advantages accruing from the concentration of effort.

But how has the mainstay of pharmacy, the pharmaceutical side, fared? Can it be said that there has been the same marked improvement in that direction? Taken from the standpoint of the retailer, we fear not. No more convincing proof of this can be found than in the lack of interest taken by pharmacists in general in the National Formulary. Some effort should be made to restore the waning interest in the preparations of this work or its effective value will be neutralized.

It is not of itself sufficient that the pharmacist should use this work merely for the purpose of supplying preparations which can be used when the physicians order non-official preparations without specifying any particular one, but an effort should be made, either individually or collectively, to keep the preparations contained in this work constantly before the physicians. There are many preparations that were prescribed before the advent of the National Formulary and which were prepared in a multitude of ways. The preparations supplied in the different stores varied widely in appearance, and the apparent lack of uniformity has to a great extent been the cause of physicians prescribing the preparations of various manufacturers, the only apparent difference being in the label and name of manufacturer.

The subject of the National Formulary is one worthy of agitation. Every pharmacist should become thoroughly acquainted with the preparations therein contained by making the preparations themselves. New improvements in its contents should be proposed, and ways and means suggested for keeping it before the physicians and by sending delegates to the medical meetings to take up the subject. It is needless to outline even in the briefest way the many advantages to be attained by giving to this work the attention and consideration due it. Suffice to say that when the pharmacists can be brought to a full realization of the true value of the National Formulary and give their best efforts toward a general standardization of its contents, assisting its committee by presenting to them formulas for various preparations that have through their compositions become popular in the different sections of the country, the first step will have been taken toward bettering pharmaceutical wise the existing unhealthy conditions, placing the progressive pharmacist in the sphere to which he rightfully belongs, and showing due appreciation to the able committee through whose untiring efforts the pharmacists of this country have been enabled to have placed within their reach so valuable an adjunct as the National Formulary.

With the Pharmacopœia as a standard for crude drugs and regular products, and the National Formulary recognized as a standard for the later day phar-

*Read before the Connecticut Pharmaceutical Association.

maceuticals, which are within the scope of manufacture by the retail pharmacist, the cause for the complaint so often made, relative to the lack of uniformity in the strength, dosage and appearance of these preparations will have been removed and the necessity of keeping on hand various brands of duplicates be lessened. Thus can the pharmaceutical side of the pharmacy be made productive of a greater percentage of profit.

WINDOW DISPLAYS.

For local advertising there is nothing so profitable and sale making as your windows; use them to advantage and judiciously. Display seasonable goods, let us take for example the races: Liniments, witch hazel, rub down for the jockeys as well as for the horses; sponges, towels and brushes; suspensories and jock straps neatly displayed and calling attention to the fact that you are catering for their trade is to your advantage.

This display for one week—next week you show a composite window: Shaving outfits, perfumery and toilet articles for ladies and gentlemen; cutlery, brushes, pocketbooks, a few of each harmoniously displayed, will call attention to the many ignored needs and your window will bring customers for many of these articles.

Experience has taught the writer that there is no mistake about his composite shows.

Hot weather, flies and mosquitoes suggest other displays.

After the hot spell is over people take rambles in the surrounding country and this is a good time for your photographic goods display. This line makes an attractive display by itself and can be repeated at intervals.

Hot water bottles and chest protectors are out of the question in these hot days, as they are out of season. A display of hair brushes, combs, hair and scalp remedies is always desirable and pays well, as does a display of razors, shaving mugs, lather brushes, strops, safety razors, shaving soaps, barber combs, cosmetic, bay rum, talcum powder, face lotion, etc.

A display of articles for the hygiene of the mouth is always in season. We show here tooth brushes, tooth soaps, pastes and powders, dentifrices, tooth picks, breath perfumes, etc.

Always in line and timely are displays of catarrh remedies with the necessary douches and atomizers; blood medicines of every description, corn cures, foot powders, nervines and the like. Neat displays of the goods on hand pay, as the public is looking for such articles.

Distinct displays of stationery, perfumery, cigars and candies; sponges and chamouis skins, electric goods, trusses and bandages can be made any time of the year. As for syringes, crutches, bed pans, toilet paper and the like they do not make good displays. They do not stimulate the sales and the public always looks to the druggist for such articles anyhow.

Splendid, gorgeous holiday displays as a rule leave a lasting impression on the public at large; for this reason devote time and care to such. Thanksgiving, Christmas, Easter, Decoration Day and Fourth of July are the days for the extraordinary efforts. They are red letter days for advertising. Do not leave your displays too long in your windows. Do not let the flies make too much of a show. Do not try to save on your light bills when it comes to your windows.

A window brilliantly lighted is a display in itself. In winter, when flies and dust are gone, window displays can be brought to perfection. Keep windows from frosting by good circulation of air behind the plate glass. Different good schemes have been devised toward this end.

Cough, lung and throat medicines, hot water bottles and chest protectors are in season. Repeat such displays.

Displays with an electric motor, displays with living matter, for example—chickens, hares, etc., at Eastertide, or a negro boy with a nice set of teeth,

grinning at the public, showing your dentifrices, tooth powders, brushes, etc., etc. These last named displays generally make a hit with the crowds that gather around your window to see what is going on. We are a curious nation, and anything out of the ordinary will attract attention and leave an impression.—(Condensed from the Montana Filter Paper).

NEW SUGAR REACTION.—A new method of applying the phenylhydrazin test for sugar is described by Riegel in a German medical journal. The pure white hydrochloride of phenylhydrazin, 0.1 gram, is put into a large size test tube and 0.5 gram crystallized sodium acetate with 1 Cc. of the sugar solution and 2 Cc. are added. The test-tube is heated to boiling over a spirit lamp and to Cc. of a 10 per cent. solution of soda are immediately run in and the mixture is then shaken five or six times and left at rest. Either immediately or after the lapse of some minutes the whole solution assumes a fine red-violet color. Exactly the same method is followed in testing for sugar in the urine. Into a large test-tube are put 1 Cc. of urine, 0.1 gram pure white hydrochloride of phenylhydrazin, 0.5 gram crystallized sodium acetate, and about 2 Cc. of water. The whole is then heated to boiling over a spirit lamp. Ten Cc. of a 10 per cent. solution of soda are immediately run in, the test-tube is shaken five or six times and left to rest. If the amount of sugar present exceeds 0.1 per cent. the fluid will in a few seconds assume a red-violet color. In testing for sugar in the urine it is essential that the color should be viewed by transmitted light, that the fluid should be colored throughout, not merely the precipitated phosphates, and that not more than five minutes at the most should be allowed for the red-violet color to make its appearance, for after a longer period even normal urines and such as do not contain a pathological amount of sugar become colored. The delicacy of the reaction may be considerably increased by proceeding in the following way: The above quantity (0.1 gram) of pure white hydrochloride of phenylhydrazin is put into a shallow porcelain basin about 3 Cc. in diameter; to this are added 0.5 gram of crystallized sodium acetate and 1 Cc. of the sugar solution; the basin is then held in crucible tongs over a spirit lamp until everything is dissolved, and the fluid boils; it is then laid on the table and from 20 to 30 drops of a 10 per cent. solution of soda are added—best out of a dropping glass—without shaking the basin. Either in a few seconds or after about five minutes the fluid becomes red-violet, even when the solution of sugar contains no more than 0.006 per cent. of it. If the solution examined contains no sugar a slight pink tint makes its appearance in from 15 to 30 minutes as the result of atmospheric oxidation. Sugar in urine may be tested for in exactly the same way, but not more than one minute must be allowed for the development of the red-violet color. Aldehydes give the same reaction as sugar and must therefore not be present.

HOME MADE SPLINTS.—Dissolve one pound of gum shellac in one pint and a half of ninety-five per cent. alcohol, with one drachm borax. Let the mixture stand until all of the shellac has been dissolved; then it is ready to be applied. Old cloth makes the best splints. I generally use an old pair of trousers. Apply the solution to one side of the woolen cloth with a brush and dry thoroughly before a hot fire. It takes about one hour to dry properly. Then apply a second coat on the same side and dry as before. You will then have a single piece, but if you wish a stronger piece, apply the solution on one side of two pieces that have already been prepared, dry them, place them together and press with a hot iron, and they will unite and become as one piece. Always be sure to dry out all of the alcohol. To temper the cloth for use, hold before a hot fire until soft, then apply. It will adapt itself to the shape of the limb at once. To make it set quickly, hold in cold atmosphere or dip in cold water.—(Red Cross Notes).

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Boiler Compound.

(J. J. H.) G. E. Davis, an English authority, in discussing this subject in Workshop Receipts, says that the incrustation of the inner surface of a boiler is frequently caused by the use of water which would not be suspected of any such power, and points out the danger of using water which has been condensed from the boiling down of organic substances. Many nostrums have been brought forward, and claims made on their behalf that they would prevent incrustation, but most are absolutely worthless, if not injurious. Boiler "scales" nearly everywhere are principally composed of sulphate of lime, and he made a number of experiments to find some substance which would neutralize the action of that lime on the boiler plates. After many trials he came to the conclusion that tribasic phosphate of soda, known to commerce as "tripsa," is the best of all preparations. It absorbs the free carbonic acid in the water, and, acting upon the sulphate of lime, precipitates it with the mud to the bottom of the boiler. In one case where this precipitation was used, the boiler was worked for five months without being cleaned, and only the very slightest deposit, which could be easily displaced by a touch, was formed.

The Scientific American Cyclopaedia of Receipts gives these:

Anti-Incrustators.—M. E. Asselin, of Paris, recommends the use of glycerine to prevent incrustation in steam boilers. It increases the solubility of combinations of lime, and especially of the sulphate. It forms with these combinations soluble compounds. When the quantity of lime becomes so great that it can no longer be dissolved, nor form soluble combinations, it is deposited in a gelatinous substance, which never adheres to the surface of the iron plates. The gelatinous substances thus formed are not carried with the steam into the cylinder of the engine. M. Asselin advises the employment of 1 pound of glycerine for every 300 or 400 pounds of coal burnt.

To Prevent Boiler Incrustation.—For a five-horse power boiler, fed with water, which contains calcic sulphate, take: Catechu, 2 pounds; dextrine, 1 pound; crystallized soda, 2 pounds; potash, $\frac{1}{2}$ pound; cane sugar, $\frac{1}{2}$ pound; alum, $\frac{1}{2}$ pound; gum arabic, $\frac{1}{2}$ pound.

Sodium fluoride has also been used to considerable extent for the removal of scale or incrustation from boilers, and many claim it to be superior to alum and other compounds. Its action is based on the fact that it precipitates the alkaline earths in the form of an innocuous soft mud, which does not adhere to the boiler. For this purpose the amount varies with the composition of the water, from an ounce to each 1,000 gallons upward being necessary.

Violet Toilet Preparations.

(H. T. Co.)

Violet Water.

(1) Spirit ionone, 10 per cent.....	$\frac{1}{2}$ dram
Distilled water.....	5 fl. ounces
Orange flower water.....	1 fl. ounce
Rose water.....	1 fl. ounce
Cologne spirit.....	8 fl. ounces

Add the spirit of ionone to the alcohol and then add the waters. Let stand and filter.

(2) Violet extract.....	2 ounces
Cassie extract.....	1 ounce
Spirit of rose.....	$\frac{1}{2}$ ounce
Tincture of orris.....	$\frac{1}{2}$ ounce
Green coloring, a sufficiency.....	$\frac{20}{100}$ ounces
Alcohol, to.....	20 ounces
(3) Tincture of orris.....	54 ounces
Tincture of vanillin.....	16 ounces
Oil Sandalwood.....	$\frac{1}{4}$ ounce
Oil bergamot.....	1 ounce
Oil rose geranium.....	$\frac{1}{2}$ ounce
Cologne spirit.....	80 ounces
Rose water.....	96 ounces

Dissolve the oils in the spirit; add the tinctures, and set aside for three days; then add the water slowly, stirring well, and let stand for two weeks before filtering. Color with chlorophyl or aniline green to the tint required.

Violet Ammonia.

Most preparations of this character consist of either coarsely powdered ammonium carbonate, with or without the addition of ammonia water, or of a coarsely powdered mixture, which slowly evolves the odor of ammonia, the whole being perfumed by the addition of volatile oil, pomade essences or handkerchief extract. The following are typical formulas:

(1) Moisten coarsely powdered ammonium carbonate, contained in a suitable bottle, with a mixture of concentrated tincture of orris root, $2\frac{1}{2}$ ounces; aromatic spirit of ammonia, 1 dram; violet extract, 3 drams. (2) Fill suitable bottles with coarsely powdered ammonium carbonate and add to the salt as much of the following solution as it will absorb: Oil of orris, 5 minims; oil of lavender flowers, 10 minims; violet extract, 30 minims; stronger water of ammonia, 2 fl. ounces. (3) The following is a formula for a liquid preparation: Extract violet, 8 fl. drams; extract cassie, 8 fl. drams; spirit of rose, 4 fl. drams; tincture of orris, 4 fl. drams; cologne spirit, 1 pint; spirit of ammonia, 1 ounce. Spirit of ionone may be used instead of extract of violet.

Violet Witch Hazel.

Spirit of ionone.....	$\frac{1}{2}$ dram
Rose water.....	6 ounces
Distilled extract of witch hazel, enough to make.....	16 ounces

We do not answer queries by mail.

Stains for Wood.

(S. F. B.) Rich Purple.—Boil 2 ounces of fresh logwood powder in two pints of rain-water until the hulk has lost about 8 ounces by evaporation; then add, a little at a time, sufficient sulphate of indigo to give the shade required.

Yellow.—Make a solution of aniline yellow in alcohol of the requisite depth, and apply with a soft brush. By first applying a weak mahogany stain and then following it with an aniline yellow, a fine orange is secured.

Mahogany.—First rub the surface of the wood with a solution of nitrous acid, and then apply, with a soft brush, the following:

Dragon's blood.....	1 ounce
Sodium carbonate.....	6 drams
Alcohol.....	20 ounces

The foregoing should be filtered before use.

Blue.—Place the following ingredients in a clean glass jar:

Sulphuric acid.....	4 ounces
Indigo (powdered).....	1 ounce

and stand the jar in an earthenware pan lest they boil over. When the effervescence has ceased, add sufficient of the mixture to clean rain-water as will give the requisite shade on a trial slip of wood. Then apply to the work, using a clean bristle brush. The color is much improved by keeping before use.

Green.—In order to secure diversity of shades, make two solutions, as follows, and mix in any proportion preferred, remembering that the indigo darkens the tint. The most generally used combination will be six parts of A to one part of B:

A. Verdigris.....	4 ounces
Sulphur.....	40 ounces
B. Indigo.....	6 drams
Vinegar.....	20 ounces

Both A and B will be better if boiled for ten minutes during solution.

Cherry.—Place the following substances in a tightly corked bottle for some days:

Aikanet root.....	15 parts
Aloes.....	30 parts
Powdered dragon's blood.....	30 parts
Alcohol (85 per cent.).....	500 parts

Before applying go over the wood with dilute nitric acid. The resulting stain is pretty dark. To lighten the shade, use more alcohol. After the stain is dry apply copal or some fine pale, hard varnish.

Calomel Tablets.

(W. S. B.) Coblentz gives the following formula for the preparation of tablets of calomel and soda:

Calomel.....	50 grains
Sodium bicarbonate.....	50 grains
Powdered acacia.....	5 grains
Powdered sugar.....	5 grains

Make 100 tablets.

In order to avoid partial reduction of the calomel, which occurs if it is triturated with the sodium bicarbonate in the presence of water, the calomel is triturated with the sugar, moistened (not wet) with water, granulated and dried. The acacia and sodium bicarbonate are treated likewise; then both are mixed, triturated to a fine powder and granulated by moistening with alcohol (spray); after sifting (about No. 20 sieve), dry and compress.

Tablets which contain such agents as calomel, corrosive sublimate, etc., should be spread by means of a rubber or horn spatula, as the slightest contact with metal will cause discolorations. You may be able to trace the dark color of the tablets you have made to the use of a metal spatula.

Tincture of Iodine and Carbolic Acid.

(F. G. S.) "Can a prescription calling for equal parts of tincture of iodine and carbolic acid be compounded so as to make a clear solution?" No; the water of the liquefied carbolic acid, which we assume is the preparation employed, precipitates the iodine in the tincture. There is no chemical action between iodine and liquid carbolic acid, although some authorities have stated that under certain circumstances carbolic acid does decolorize tincture of iodine. Iodine is much more soluble in glycerin than in water, and if you wish to employ a solution containing the substances named we suggest you call the attention of the prescriber to the formula for iodized carbolic acid in the National Formulary. In this mixture glycerin is used as the solvent and solution is effected by means of a gentle heat and frequent agitation.

Oil of Anlie.

((H. P.) "Can you inform me what 'oil of anlie' is?" No; a systematic search through various works of reference fails to reveal any information which would lead to the identity of a substance by this name. Of course, one might suggest "aniline oil" from the similarity in the sound of the names, but we have no reason for believing that aniline oil is meant. As our correspondent does not give any information regarding the possible use of the "oil" we have no clue to help us in further investigation.

Iodine Stains on Marble.

(H. L. S.) Make a paste with sodium hyposulphite and ammonia water and apply to the stains. Allow the paste to remain a short time, then remove and polish the marble with a mixture in the form of a paste made with water, 2 parts of sodium bicarbonate and 1 part chlorinated lime. Wash off with water and dry rapidly.

Peruna.

(W. E. M.) We cannot give the formula for this proprietary preparation, nor do we remember of having ever seen an analysis of it reported in any journal.

(H. G. Co.) What is "Sphinx Gum"?

CAUSE OF BALDNESS.

It is generally supposed that baldness, like gray hair, is a necessary accompaniment of advancing age, but this is only because the older a man is, the more time he has to neglect and abuse his hair, and the more likely he is to have lost it.

Some men are more prone to baldness than others because of the thinness of the scalp, which interferes with the proper blood supply to the hair follicles; This is often a family failing; but in such cases baldness might be prevented, or postponed for many years, by care. In a few instances the hair falls out as the result of some special disease, but in the great majority of instances there is absolutely no reason why, if properly treated, the hair should not last as long as its possessor.

The chief cause of baldness is pressure by the hat which constricts the blood-vessels and so interferes with the nutrition of the hair bulbs. It is probable, also, that the shutting off of light and air by the hat helps the mischief. An unhealthy condition of the scalp results, the sign of which is an abundant amount of dandruff.

There are many facts which go to prove the truth of this: First, women rarely become bald; they wear hats it is true, but their hats are not air-tight casings, nor do they make pressure round the head like the head-gear affected by man; Second, baldness is almost unknown among savages, who wear no hats; neither is it common among men in the tropics, where very light hats are worn.

Laborers are less prone to baldness than professional and business men. This has led to the belief that brain-work favors a smooth and shiny scalp by withdrawing blood therefrom; but this is only self-complimentary on the part of those who advance the theory. Laborers generally wear soft, felt hats or caps, which are apt to be pushed to the back of the head, so that the head obtains plenty of the light and air. As further proof, we find that the baldest men usually have sufficient hair at the back and on the sides of the head below the hat line.

The inference is plain—wear a soft hat or none at all. If custom forbids this, then the best a city man can do is to wear his hat as little as possible, and never to keep it on in the house or office.—(Youth's Companion).

TREATMENT FOR IVY POISONING.

To the Editor:—I read a short time ago an article on poison ivy in a newspaper, which said that the juice of the common jewel weed, *Impatiens fulva*, was an effective antidote. I have suffered with poisoning for the past five years, in fact, almost every time I go botanizing in the woods. This season I had an opportunity to investigate the subject. As soon as the symptoms were noticed I immediately rubbed the parts affected with some of this juice, fresh from the plant. The irritation ceased at once and the poison spots gradually faded away, instead of ripening into sore, festering pustules, which would otherwise have formed. During the next few days the spots appeared on different parts of the body and they were simply rubbed with juice each time. In short, I have found this to be a perfect antidote, and the most effective remedy I have ever used. The jewel weed abounds all over the country, especially in the vicinity of *Rhus toxicodendron*. I do not know who deserves the credit for first noting its properties, still I think it quite recent, as I have talked to several pharmacists and botanists, and though familiar with the plant as a wild flower, they never heard of this property. I would suggest that the active ingredient be investigated so as to enable an extract to be made, that would have the unimpaired virtues of the fresh juice. The pharmacist, especially in rural districts, is often called upon to treat cases of ivy poisoning, and I think an extract of jewel weed would be most serviceable for him to use.

J. C. ARTHUR ST. JAMES.

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

CUTTING THE CUTTER.

Incorporated Company to Fill Prescriptions at the Uniform Rate of Twenty Cents.

The "Provident Medical Company" is the title of a new corporation with headquarters in the Transit Building on East Forty-second street, the purpose of which, as stated in the prospectus by the company, is to supply the entire city with first-class medical service and pure drugs at "rates the people can pay". With this object in view, the company has gone about the establishment of a number of drug stations where the prescriptions of its physicians are filled at the uniform rate of twenty cents. Four of these "drug parlors" have already been established and a promise is made that others will be opened shortly. Those now in operation are located at No. 238 West Twenty-sixth street, No. 317 West Thirty-seventh street, No. 464 West Forty-third street and No. 402 West Fifty-fourth street. These parlors are open from 9 a. m. to 9 p. m., and are in charge of lady attendants. The company claims to keep the best drugs in the world, dispensed only by registered graduates.

The charges for medical attendance are made upon a graduated scale of weekly assessments, levied according to the number of persons in the family subscribing. The doctor's services are furnished to two persons at ten cents a week, three or four persons, fifteen cents a week and five or more, without limit, at twenty cents a week. The only additional charges are a contract fee of twenty-five cents and the twenty cent prescriptions, "which is much less than is charged by regular druggists". The happy jingle,

"A dime or two
Each week you pay;
Our doctor drives
Your ills away."

devised by the company's bard, does not seem to take into consideration the ills of the retail druggist should this twenty cent prescription rate become as general as is presently.

The Provident Medical Company is incorporated with a capital of a quarter of a million dollars. It has been in operation for about four months. The officers are Richard Wightman, president; Josiah Strong, vice-president; G. C. Smith, secretary; Alexander R. Nicol, treasurer; and G. A. Mortland, superintendent of agencies.

NONE INVITED BUT ALL CAME.

Jolly Party of American Proprietors Met By Chance at "Round Table" in London.

"One of the most pleasant incidents of my trip abroad," said H. B. Harding of the Humphreys' Homeopathic Medicine Company, who recently returned from Europe "occurred at the Holburn Viaduct Luncheon Club in London where the famous 'American Round Table' brings together the good fellows and convivial spirits, who happen to be visiting in the British metropolises. I was sitting at the table with an eye out for a familiar face when Brent Good of the Carter Medicine Company floated in and sat down at the round table. It was not long before John W. Cox of the Antikamnia Chemical Company contributed himself and made a crowd. He had no sooner settled down at the table than Senator Fulford of Williams' P. P. P. Company showed up. It began to look

as if a consultation had been called. But the crowd was not complete. We were joined by Commodore Isaac Emerson of the Emerson Drug Company, Mr. Johnson of Fassett & Johnson and Mr. Gordon of the C. I. Hood & Company. To cap the climax John Morgan Richards, who acts in the capacity of home agent for the majority of the companies represented around the board, appeared on the scene. It was over a good dinner and one of the most thoroughly enjoyable occasions I have ever had the fortune to witness. A more congenial or better crowd of good fellows could not have been collected among the Americans in London".

YOUNG DRUGGIST LOSES LICENSE.

The eastern branch of the New York State Board of Pharmacy was called into special session August 27 to sit as a Board of Civil Procedure for the trial of the case of John Nisselson, a young drug clerk 23 years of age employed until last May in the store of his brother-in-law, Louis Lurie, No. 276 Broome street. Nisselson was charged with having obtained a license by swearing to false statements as to his experience in his application for examination. In this application, Nisselson states that he has served over four years in stores and gives the dates and names of the two parties in whose stores he claims to have been employed. His statements are borne out by the affidavits of his employers. But it transpires that during this same period of time the defendant was employed by a firm of manufacturing jewellers. He explains matters by saying that he worked in the jewelry store in the day time and in the drug stores at night, taking all the time he could possibly get from the former place to study pharmacy and gain experience. The board is of the opinion that he could not possibly have crowded 70 hours a week into his study in the drug store as is stated in one employer's affidavit. Upon close examination, the experience of Nisselson appeared to the board to be of too questionable a character to satisfy the standard, and his license will be revoked at a second special meeting. It is not likely that he will be held for perjury. Those present at the meeting of the board were Chairman C. O. Bigelow, George C. Diekman, and Sidney Faber, Joseph Steiner, the attorney for the board participated in the examination.

HUDSON GETS SIX MONTHS.

Paul B. Hudson, drug swindler and trunk thief, was sentenced Friday afternoon by Recorder Goff to serve a term of six months in prison upon a conviction for grand larceny in the second degree, committed in the stealing of a trunk valued at \$300, the property of engineer Butterworth, from the Park Avenue Hotel on July 19. Hudson's operations as president of the Mount Vernon Chemical Company and under the name of William Annear are parts of his record fresh in the minds of Era readers. He is the son of John A. Hudson, Justice of the Peace at Sherwood, Tioga County. Hudson has always been fortunate in getting light sentences when caught and convicted of crimes. In view of his past record and the fact that he has always escaped with minimum punishment, it was thought that his conviction upon a clear case of grand larceny would place him behind the bars for years. He is no doubt well pleased with the sentence, and the expiration of six months will doubtless again see him concocting frauds or eloping with trunks.

EDWIN H. BURR RESIGNS.

Because of the steadily increasing burden of official duties, which during the past year or two have seriously threatened his health, Edwin H. Burr has resigned his position as general manager and secretary of Lazell, Dalley & Co., manufacturing perfumers, No. 12 Duane street. Mr. Burr has been connected with the company for the past ten years and the place of his firm at the head of American perfumers has been largely due to his constant application, business insight and managerial ability as buyer, superintendent of manufacturing and general manager. The present quarters and plant on Duane street were fitted up under his personal supervision and the perfect equipment and organization, together with a number of the company's most popular specialties are the results of Mr. Burr's efforts and management. He also severs his connection with the Dalley Manufacturing Company, of which he was vice-president and treasurer.

The resignation took effect on September 1. Mr. Burr does not retire from active business, having accepted a position as American agent for the French firm of Roure-Bertrand Fils, with offices at No. 18 Cedar street. Mr. Dalley will take charge of the business of Lazell, Dalley & Co.

DEATH OF THEODORE LOUIS.

On Thursday, August 22, Theodore Louis, in his 64th year, prominent for many years in New York pharmacy, died at the Home for Incurables in Fordham, where for several years past he has lived a permanent invalid as a result of an apoplectic stroke. He was buried on Monday, August 26. He was a one-time trustee of the New York College of Pharmacy, was one of the building committee that superintended the erection of the present college building, and had entire charge of the purchase of the laboratory apparatus. For a number of years he was treasurer of the German Apothecaries' Society of this city, and was always in the van of any movement for the betterment of pharmacy. He was formerly proprietor of the pharmacy at No. 112 Avenue A, but age and its resulting infirmities led him to sell the business to its present owner.

NOTES.

—Chas. Finch, of Stamford, one of the foremost druggists of the state of Connecticut and an ex-president of the State Pharmaceutical Association, was in the city on business August 26. Mr. Finch says that there is no local organization of druggists at present in Stamford, there being one cutter who will not come into a schedule arrangement. There has been no recent attempt at organizing although there has been some talk of it. He says that the Connecticut Pharmaceutical Association will send a full delegation to the A. Ph. A. Convention in St. Louis.

—T. P. Hefley, of Hefley Bros., whose pharmacy was one of the most widely-known retail houses in Jacksonville, Florida, until it was destroyed in the recent disastrous fire in the Southern city, has been in New York the past week buying fixtures and stock for a new store. He has ordered the latest in fixtures and estimates that these alone will cost him nearly \$10,000, including a handsome soda fountain. Mr. Hefley claims that his new store will be on a par with the finest in the South.

—President Smith of the Greater New York Pharmaceutical Association has called a meeting for to-morrow night. The association has not yet decided whether or not it will send a delegate to the N. A. R. D. Convention at Buffalo and this matter may come up for consideration at this meeting. Of the forty-four druggists in the district, forty are members of the association.

—A splendid prospectus has been issued by The Fraser Tablet Company. The idea of co-operation between the physician and manufacturing chemist is emphasized by an offer to physicians enabling them to become stockholders in the corporation and take a certain amount of interest in the great dispensing establishment which is managed for their service and benefit.

—Mr. and Mrs. Thomas P. Haley, of St. Louis, who have been spending the summer in New Jersey, are stopping at the Waldorf on their way home. They were entertained at the Drug Club, August 28 by J. L. Hopkins.

Mr. Haley is interested in the Peacock Chemical Company of St. Louis.

—W. G. Ungerer, Jr., of Ungerer & Co., No. 18 Cedar street sailed for Europe August 29. He will tour France and Switzerland, combining business and pleasure on the trip. He will be accompanied by Mrs. Ungerer. They will be gone about two months.

—The Omega Chemical Company has secured an injunction against the Alpha Soap Company, restraining the latter from using the designation of "Omega Oil" or the word "Omega", applied to any soap or other product manufactured or sold by them.

—Hazard & Hazard, who are at present located at No. 1159 Broadway, will shortly move into more commodious quarters across the street at No. 1123, where one of the most elaborate and scientifically arranged pharmacies in New York will be established.

—Correspondence from St. Louis is to the effect that all of the space for the exhibit at the A. Ph. A. has been taken up, the hotel rooms are rapidly being engaged and there are other indications of a large attendance and a successful meeting.

—Lord & Ely is the new firm designation of the drug store at No. 482 Seventh avenue. The proprietors of the business are Frank E. Ely and Charles F. Lord, but the store has heretofore been conducted under the name of F. E. Ely.

—C. H. Van Buren, Lehn & Fink's Connecticut representative, will spend two weeks at Buffalo and in Canada. C. G. Kling, the firm's eastern Pennsylvania man has returned to his territory after a short stay at headquarters.

—W. B. Rowles, manager of the Chicago branch of Parke, Davis & Co., and wife, have returned from an enjoyable two months' tour in Europe. Mr. Rowles visited for several days at the New York branch of his house.

—A branch office and warehouses have been established in Chicago, at No. 42 River street, by the Porsch Chemical Company, No. 62 Malden Lane. B. A. C. Hoelzler, formerly of this city will act as resident manager.

—H. B. Gilpin, of the firm of Gilpin & Langdon, wholesale druggists of Baltimore, stopped over in the city on his way home from Manchester, Maine, where he has located his family for the autumn season.

—The proceedings in General Sessions against the president and one of the directors of Tarrant & Company in the fire cases, in which indictments were found, will not come up until early in October.

—Theodore Madsen, the well-known Hoboken pharmacist at Fifth and Garden streets, has sold his Weehawken store, 1826 William avenue, to Charles L. Van Nuis who takes immediate possession.

—The Rio Chemical Company, formerly of St. Louis has removed to this city and established headquarters at No. 5 Thomas street in the building formerly occupied by the H. B. Claffin Co.

—J. F. Christian, general manager of the middle West traveling division of Sharp & Dolme and Frank N. Pike, the firm's Ohio man, visited the New York office two days, Thursday and Friday.

—Martin H. Smith, president of the Martin H. Smith Co., pharmacists, No. 68 Murray street, is away on a fishing and yachting excursion to his old home in Annapolis, Md.

—The pharmacy at the corner of Lexington and Franklin avenues, Brooklyn, formerly owned by G. D. Frueh, has been purchased by Michael Metz, who has been with C. G. Bigelow.

—A new store has been opened at the corner of Ninety-ninth street and Park avenue by Isaac Schlossberg, who has another place of business at Grand and Suffolk streets.

—William Weis, the well-known druggist of Thirty-fourth street and Seventh avenue has returned with his wife from a pleasant two weeks' vacation, spent at Lake George.

—Joseph Jacobs, a pharmacist of Atlanta, Ga., was in the city for a few hours August 28. He was on his way to the White Mountains, where he will enjoy a vacation outing.

IN AND ABOUT BOSTON.

DRUGGISTS BESIEGHT TO REMOVE A PEST.

Boston, August 31.—Druggists of Brookline and in some other places near Boston are being sought for aid in putting down a pest of red ants, which seem to have appeared this season in immense hordes and which are doing considerable damage. One New York banker having a superb summer mansion at Hamilton-Wenham, in Essex County, is facing a most serious trouble, just now, because the tiny red ants seem to be undermining his house, so great has been their ravages. The druggists in the vicinity of Coolidge's Corner, Brookline, are experimenting, in co-operation with the residents, to become rid of this epidemic of red ants. In the district principally afflicted it is said that the peculiar quality of the soil, which is mostly sand and gravel, is largely responsible for the invasion of the pests. The local druggists are recommending oil of sassafras diluted with alcohol. Where the ants prefer to make mischief on the lawns, is in their habit to undermine some special area, so that when one steps upon it the ground sinks an inch or more.

DRUGGISTS EXPECTANT OF COMING TRADE.

Boston, August 31.—This has been a week of rather good conditions, for business has been satisfactory for this time of the year and the druggists, moreover, are feeling a bit expectant of coming trade soon, when the returning summer vacationists are at home again. Nearly all druggists speak along this line, showing that they are simply in a state of waiting, for the "good time coming." As it is there has been a fair demand this week for the things which may be found at pharmacies, to say nothing of the business done at the prescription desks and soda fountains. In the general market special activity is reported, although trade conditions seem gradually to be shaping themselves where improvement is noted. The call for chemical drugs appear to be increasing, slowly yet surely, so it is stated. Alcohols keep in fair demand, that is, the grain, more especially. Dyestuffs and tanning materials if without notable feature, still are not as sluggish as recently.

CANDIDATES FOR THE MASSACHUSETTS BOARD OF PHARMACY.

Boston, August 31.—On October 1, the term of John H. Rice, of North Adams, a member of the Massachusetts Board of Registration in Pharmacy, will expire, and among those felt to be eligible for this membership, to succeed Mr. Rice, is Charles E. Bardwell, of Holyoke. Already a committee of the Connecticut Valley Massachusetts' Association has been appointed to promote the candidacy of Mr. Bardwell for the place as a member of the board. The committee is to confer with Governor Crane, and, as there is no one else prominently mentioned for the place, Mr. Bardwell will probably be appointed without question. The term of service is five years for members of the board cannot succeed themselves, hence Mr. Rice's departure. Mr. Bardwell, besides having the indorsement of the Connecticut Valley Association, is also supported by the Massachusetts Pharmaceutical Association.

NOTES.

—A clerk in a Malden drug store had a queer customer one night recently. The man came into the pharmacy and asked for some pills that would kill him quick. The clerk looked him over and sized up the situation. He handed out two little sugar-coated, harmless pills and the man looked at them carefully and concluded he had better have two more, so as to make the job complete. Then he looked to see how much money he had to pay for them. "Why I've got three million dollars here," said he. "What's the use of dying with all that money. I'll go out spend it first," and he went, leaving his pills behind him.

—Through its treasurer, A. P. Martin, the Pearl Hill Lithia Spring Co., Boston, makes the following statement of its financial affairs: Real estate and buildings, \$21,

—E. V. Elliott, vice-president of the Hutchinson-Elliott Drug Company of Paris, Texas, is in the city with a view of making extensive purchases for the fall trade.

—The Compressed Gas Capsule Company, No. 1 Madison avenue has issued a very artistic and attractive prospectus containing the illustrated "Story of Sparklets".

—No less than twenty drug, chemical and proprietary men, are seen on the Sandy Hook boat every evening going to their homes on the North Jersey coast.

—H. N. Good, general salesman for the Grape Capsule Company, No. 133 William street, returned from Philadelphia on Monday to resume work in this city.

—F. C. Schramm, a prominent pharmacist of Salt Lake City, Utah, was in New York two days last week. He made several business calls in the drug section.

—W. L. Strauss, of W. L. Strauss & Co., 27 Warren street, is detained in Europe on account of the death of a friend. He is at Frankfort-on-the-Main.

—Twelve of Schieffelin & Co.'s working force returned from vacations the same day early last week, taking up their work in the various departments.

—O. H. Scheffer, has sold his store at No. 1341 Fulton street, Brooklyn, to Francis J. Murphy, who will continue to conduct a general drug business.

—Lehn & Pink have secured the services of E. H. Powell, formerly with S. H. Whitmore. He will travel in his old territory in his new capacity.

—A. G. Burgdorf, with Whitall, Tatum Co., has returned from his vacation, which was spent at Delaware River points. He reports good bass fishing.

—F. D. Rollins of Rollins & Rice, proprietors of three stores in Aurora, Ill., is in the city with a view to buying for the fall and winter trade.

—E. S. Hughes, buyer for Barnes & Hall the well-known Lexington, Ky., druggists, is in New York on business connected with his firm.

—Mrs. J. A. Griffing, who owns the Edgewater Pharmacy at Edgewater, N. J., has suffered a severe bereavement in the death of her father.

—Mr. Emmert, the senior partner of the firm of Emmert & Burrell, well-known druggists of Freeport, Ill., is in the city August 29 on business.

—A. J. Cramp, with Schieffelin & Co., in the sundries department has returned from a pleasant two weeks' outing at Deposit, N. Y.

—Samuel Bennett and William Churchill, with Parke, Davis & Co., are away on a two weeks' leave of absence, enjoying a vacation.

—C. D. Rosengarten, of Rosengarten & Sons, manufacturing chemists of Philadelphia, was a visitor at the Drug Club August 30.

—Karl F. Behrens, a prominent pharmacist of Brooklyn, has returned from a vacation of two weeks, spent in the Catskills.

—C. A. Milford, a pharmacist of Abbeville, S. C., has been in the city several days buying for the fall and winter trade.

—C. Liersch, who is the owner of several large drug stores in Kansas City, was in the city the early part of the week.

—Mr. Nelson Frye, who is the proprietor of a large store in Philadelphia, has been in town the past week.

—J. N. Ruffin, pharmacist, of Assuncion, Paraguay, South America, is registered at the Drug Trade Club.

—J. C. Spratt, of Detroit, manager of the Parke, Davis & Co., traveling force was in the city September 1.

—W. P. Huckle, a Kansas City druggist was in the city August 27. He is buying for the holiday trade.

—J. E. Rodgers, secretary of the Hyde Drug Company of Malone, N. Y., was in the city August 29.

—S. M. Allen, New England salesman of R. W. Robinson & Son, visited the home office last week.

—K. G. Rosahn has opened a new pharmacy at the corner of Stanton and Goerck streets.

—A. L. Phillips, one of the foremost druggists of Warren, Pa., was in the city August 27.

—A. Oedebracht, with H. Braun & Sons, Columbus, Ohio, was in New York August 31.

—T. Edwin Brown of Franklin, Pa., was a visitor at the Drug Club August 27.

664; machinery, \$3,800; cash and debts receivable, \$1,592; manufacturers and merchandise, \$2,046; miscellaneous, \$1,169; profit and loss, \$16,528, a total of \$46,494. Against this there is a capital stock \$30,000 and debts, \$16,494; total \$46,494.

—Friction from some of the chemicals at the factory of the Boston Chrome Company, on Grove street, Arlington, caused a lively fire one evening this week. The chemicals were being ground and set fire to the wood-work. The fire was soon under control, but it did damage estimated at \$6,000, on which there was a partial insurance.

—For the purpose of making and dealing in flavoring extracts, and druggists' supplies, with \$10,000 capital stock, of which \$2,500 is paid in, the Royal Worcester Extract Company has been organized, under the laws of Maine, with these officers: President, W. B. Bragger, of Worcester; treasurer, H. J. Woodward, of Worcester.

—Among those to enter the Massachusetts College of Pharmacy at Boston, this fall, is Louis A. Webber, of Easthampton, who has been serving as clerk at C. J. Smith's drug store in that town. Before entering college, he is to work in a drug store in Roxbury for a few weeks.

—Congratulations are being given Dr. P. J. Cuddyer, a well-known South Boston druggist, on event of a fine little girl who is already the queen of the household. Incidentally, it has cost the genial doctor of pharmacy many cigars and free drinks of soda to square himself with those proffering their good wishes.

—Benjamin F. Smith, a druggist of Weymouth Centre, has been a member of the board of registrars of voters in Weymouth ever since the board was established, nearly 20 years ago. Only the town clerk equals him in serving in that capacity.

—The death is announced, at his home in Jamaica Plain, of Arlie B. Toward, a druggist forty-two years old. He was well known in the drug trade. As a younger man he was a clerk in Chaffee's pharmacy in Somerville.

—John Conners, who is employer at Desmond's pharmacy on Broadway, in Lawrence, has returned to his duties after three weeks' stay with his friends in Boston.

—Fred. E. Chapman, a clerk at Paddelford's Gilman-Square Pharmacy in Somerville, is spending two-weeks' vacation in visiting the shore resorts of Massachusetts.

—W. J. Duffy, the Cross street druggist in Lawrence, has been sojourning for a short time in Gloucester, accompanied by friends.

—Edward Arnold, a clerk at J. J. Estes's pharmacy at Rockland, is now enjoying his annual vacation.

The Growing Demand for "New-Skin".

North Yakima, Washington, July 22, 1901.

Douglas Mfg. Co.,
107 Fulton Street,
Gentlemen:—

Sample package of "NEW-SKIN" sent me arrived some days ago, and find it works admirably. I have frequent use of something of this kind, as in my work of Candy making, get many cuts and burns and with it all have continually to wash hands, and your preparation is the best I have found. Kindly send me a large bottle for the enclosed 50c.

Very Truly,
John E. Diels.
Care, Ditter & Mechtel,
North Yakima, Wash.

This is the only one of the many orders the Douglas Mfg. Co. are receiving direct from consumers. Druggist should see that they get their share of the rapidly increasing demand for "NEW-SKIN" by carrying the three sizes in stock.

PHILADELPHIA.

BUSINESS QUIET WITH OUTLOOK FAVORABLE FOR FALL TRADE.

Philadelphia, Aug. 31.—The past week has shown a noticeable falling off in business, trade being very dull and quiet up to Thursday last when matters improved a little. From Friday last up to this time there was a smaller prescription business done by druggists in general than for any week of the year. Two causes are responsible for this condition, one the absence of so many people from the city, and the other the generally healthy state of Philadelphia for the past month. Even the usual "hay fever" epidemic that comes about this time of the year has not amounted to much, probably owing to the excessive dampness of the month, and sickness in general is very little. One physician in a good residential section who is attending to the calls of three other doctors besides his own, remarked that he had had only eight calls from the four lists as a daily average for the week. So, while the good health of the community is a blessing to all, the poor druggist has to put up with more or less loss and see his prescription trade dwindle down to the vanishing point. There has, however, been a decided improvement in trade this last day or so, and the outlook for the next few weeks is quite good. People will be returning to the city then and a brisk business is looked for by most of the retail trade. There has been little activity in wholesale and manufacturing circles this week, orders have fallen to the lowest amount of the year, soda accessories being the only ones holding their own. Drug sundries are in fair demand.

Narrow Escape for Druggist's Wife.

Philadelphia, Aug. 31.—Mrs. B. Grant Clapham, wife of the well-known Germantown druggist at Haines and Morton streets, had a very narrow escape from a horrible death in the wreck of the steamboat "Trenton" last Wednesday. With her two little daughters, Mrs. Clapham was a passenger on the "Trenton" Wednesday afternoon, the trip being a birthday celebration for the youngest, little Amanda. Mrs. Clapham was sitting by a piano on the middle deck when the explosion of the boiler occurred and she was hurled up in the air and descended alongside of what was left of the upper deck. When she was being placed in a boat by a rescuing party she recollected her children and began a search for them, to find the youngest wedged fast beneath a pile of wreckage visible only by the blue ribbons on her dress. The frantic mother at once tore away the obstructions and succeeded in freeing the little one before the wreckage there caught on fire. The mother was badly burned on the right leg, the children escaped with slight injuries. This terrible accident will long be remembered in Philadelphia because of its suddenness and unexpected happening and for the great loss of life that occurred. The general verdict is that the boat was racing and carried too much steam and the sudden filling up of the boiler with cold water caused it to explode.

A SCARCITY OF DRUG CLERKS.

Philadelphia, Aug. 31.—One of the seeming anomalies of the summer is the scarcity of drug clerks. One would think that during the dull season that drug clerks would be found in plenty and only too glad to take a "job", but for the past month there has been from all over the city a continual cry for "a good clerk" and the supply has not near begun to fill the demand. The reason for this, according to a prominent Market street druggist, is that numbers of local clerks put in two or three months clerking at summer resorts where they can get good pay in the busy season and at the same time, manage to secure an outing by seashore or mountain. There is a demand for good drug clerks all the year round, however, that seems not to be met; there are plenty of second and third rate men, but the really good ones who can be depended on to run a store properly and to relieve the proprietor of routine work can get their own price almost any time and stay idle but a short time.

NOTES.

—Some very interesting stories are being told of the fishing trip indulged in by several prominent druggists of this city at Ocean City last week, it even being hinted that tribute was paid to Neptune by a gentleman high up in local circles. Anyhow, the palm was taken by Chas. Leedom, who caught eighteen of the twenty-three fish caught and any amount of crabs and "bites", the others of the party not knowing just how to "spit on their bait" it seems.

—The usual monthly meeting of the Philadelphia Association of Retail Druggists will be held at the College of Pharmacy, 145 North Tenth street, September 6 at 2:30 p. m. It is understood that the telephone question, i. e., the securing of a 25 per cent. commission from the Keystone Telephone Company, will be brought up for settlement and that there will be important steps taken in the matter of apportioning ward work among the various ward chairmen.

—While riding in an express wagon with his seven-year-old son, Louis Genois, late owner of the drug store at Twelfth and Chestnut streets, was slightly injured by an accident caused by overturning of the wagon by a trolley car. Mr. Genois was returning home from Atlantic City with his son and was riding home in a wagon hired to carry up baggage when the accident occurred. Fortunately, the party escaped with slight scratches.

—D. E. Bransome, city representative of Johnson & Johnson, is reported to be having great fishing luck at Wildwood, a little settlement on the Jersey coast below Ocean City, where they have mosquitoes as big as sparrows. One can always be sure of getting bites there, says a drug man who was inveigled down, "but you don't need a hook and line to catch the mosquitoes that give 'em to you."

—H. H. Headley, a well-known Bristol druggist, met with a painful accident lately which kept him in bed for two weeks. While superintending the cleaning of the gutter in front of his store, a heavy iron plate fell on his foot, rupturing and bruising the tendons and blood vessels, laming him for a long time. He is now able to get around with the help of a crutch.

—One of the most popular men at Ocean City is W. W. Chalfant, the "up-to-date druggist" of Fifteenth and Tasker streets. Mr. Chalfant has been appointed advertising manager of the Casino there and has become quite prominent in Ocean City affairs, his store being the Mecca of visitors in search of cooling summer beverages.

—W. A. Rumsey, president of the local retail druggists' association, expects to have extensive alterations and improvements made in his store in the near future. His store, 920 North Forty-first street, is splendidly adapted for showing up fine fixtures and it will be the handsomest in that section when completed.

—The firm of Rosengarten & Sons, well-known manufacturing chemists of this city, was dissolved August 31, and immediately reorganized under the laws of Pennsylvania as a corporation to be known as "Rosengarten & Sons, Incorporated". The business was established in 1822.

—J. C. Whiteley, head clerk for Perry's Lancaster avenue store, is away on a vacation trip to Buffalo and the Pan-American Exposition, where he is expected to "jolly" the Buffalo belles in his usual style.

—Geo. W. Harris, Twentieth and Christian streets, is spending his vacation at Atlantic City, where he owns one of the largest and handsomest drug stores on its main thoroughfare—Atlantic avenue.

—E. M. Boring whose store at 933 Fairmount avenue is one of the landmarks there, has just returned from a visit to York Furnace, Pa., where he attended a reunion of civil war veterans.

—Mr. Scott, of the firm of Scott & Smyser, who recently bought Ridenour's drug store, Germantown, has taken a cottage at Ocean City for the summer for his family.

—Chas. Leedom, the Philadelphia sponsor for the "Worcester Plan", expects to take a week's fishing trip up the Neshaminy River early next month for black bass.

—Frank Groff, of Funk & Groff, Lancaster avenue, will spend his vacation in a trip "down South" visiting friends and relatives there.

BALTIMORE.

A WEDGEWOOD CLUB DISAGREEMENT.

Baltimore, Aug. 30.—Much food for gossip and speculation is being furnished by a tangle in the Wedgewood Club, which took the form of a disagreement between two prominent members of that sprightly organization relative to the respective rights of the secretary and the secretary pro tem. Last week members of the club were surprised to receive a postal card announcing that "after a lapse of two months we will meet at Electric Park, Thursday, Aug. 23, 1901, at 8 P. M., sharp." The recipients of these notices were further urged to "be on time, as we will take in the entertainment, 'Pauline Hall.' Immediately after the entertainment we will have our regular dinner at the Electric Park Cafe." These notices bore the name of Owen C. Smith, secretary pro tem.

Several days later, or, to be precise, under the date of Aug. 26, the Wedgewoodites were surprised to get another postal card. This missive showed at the top of the reading matter side the word "Official," printed in bold type, and read as follows:

Members, nearly all, think it unwise

In August meeting to devise,

Please take notice and remember

There will be no meeting till September.

The members of the Wedgewood Club, being under the impression that there will be no meeting in August the called meeting for this month is hereby declared off. The next regular meeting of the Wedgewood Club, of which due notice will be given, will take place Thursday, Sept. 20th.

J. WEBB FOSTER, SECRETARY.

Diligent inquiry failed to locate any Wedgewood Club member who answered the invitation sent out by "Owen C. Smith, secretary pro tem." An attendance of eleven or twelve, it is said, had been counted on, but the "official" notice evidently served to keep intending diners at home. The "postal" mailed by J. Webb Foster, secretary," it will be observed, is very diplomatically worded and gives no intimation of a disagreement. It is likely, therefore that the entente will remain undisturbed and that it will not be necessary for one side or the other to recall its ambassador from the opposition court as a sign of extreme displeasure.

DR. DOHME ILL.

Baltimore, Aug. 30.—Numerous expression of sympathy are heard in the drug trade for Dr. A. R. L. Dohme, of Sharp & Dohme, who is lying seriously ill at his residence in Roland Park, near Baltimore, of typhoid fever. He was stricken by the malady on Friday of last week and has since been under constant medical attention. While his condition is not alarming, the disease taking a normal course, yet considerable apprehension is nevertheless felt, and the trade is unanimous in its expression of hope that his recovery may be speedy. Should he be incapacitated for active work for many weeks or months, the movement in favor of state pharmacy law and in behalf of pure food and drug legislation, of which he has special charge as chairman of the Maryland Pharmaceutical Association committee on legislation, will suffer. His illness will also lessen the attendance of Baltimoreans at the annual meeting of the American Pharmaceutical Association in St. Louis next month. It was the intention of Charles E. Dohme and Dr. Dohme to go, but if the patient's condition is at all critical, Charles E. Dohme will remain at home. In this event the Baltimore delegation is likely to consist of only two members—Prof. Charles Caspari, Jr., and H. P. Hynson. There is a possibility that several others may make the trip.

BUSINESS ABOUT THE SAME.

Baltimore, Sept. 1.—While no pronounced changes are to be reported in the drug trade, it remains to be said that the volume of jobbers' transactions last week showed an appreciable increase. Both the domestic and the out-of-town movements were strong and nearly all

houses were kept busy. The manufacturers of pharmaceuticals received a gratifying large number of orders and the laboratories were kept busy. The trade in heavy chemicals is about normal, while the market for botanicals continues to show a lack of stability in some directions. The retailers generally are doing a satisfactory amount of business.

NOTES.

—Among other returned travelers is George L. Muth, senior partner of Muth Bros. & Co., East Fayette street, who extended his explorations far west of Minnesota and also took in the Buffalo show and Niagara Falls. He was absent from home nearly a month and derived great benefit physically and otherwise from his outing.

—Dr. William Simon, professor of chemistry at the Maryland College of Pharmacy, is performing some climbing feats in the White Mountains, in which pastime several medical friends accompany him. In a message received from him last week he sent greetings from the summit of Mount Washington.

—Miss Adele Dohme and Ouida L. Dohme, daughters of Mr. Charles E. Dohme, of Sharp & Dohme, sailed last Friday from New York on the North German Lloyd steamer Grosser Kurfuerst for Bremen. They will meet their uncle Mr. Louis Dohme, who has been traveling abroad since last year.

—H. C. Spetzler, of Druid Hill avenue and Oxford street, and C. W. De Frehn, proprietor of the Altamont Hotel drug store, arrived home last week from a trip to the Pan-American Exposition, which was also extended to other points. They had an enjoyable time.

—William H. Booth, who recently made an assignment after having conducted the pharmacy at the corner of Druid Hill avenue and North avenue for some time past, has accepted a clerkship with J. A. Wager, at Highlandtown.

—Dr. Isaac Kramer will open a new pharmacy within the next few days at the corner of High and Lombard streets.

—Among the visiting druggists here last week was Dr. J. A. Mann, of Fairfield, N. C.

—Dr. Roy E. Goodman, a prominent druggist of Cape Charles, Va., has been visiting friends in this city.

Pink Tops.

Substitution by druggists has been so frequently condemned, that it would seem to be almost unnecessary at present for manufacturers of standard medicinal products to take extraordinary precautions to prevent substitution of drugs or chemicals when regularly prescribed or called for by their customers. We regret to say, however, that there are yet certain druggists who will substitute in their prescription department something which they may or may not consider to be just as good as the article called for by the physician. Various means have been adopted by manufacturers for the purpose of preventing as far as possible the act of substitution.

Among the most recent and apparently the most original ideas yet suggested, is one devised by Allen H. Still, Manager of the Etna Chemical Co., the manufacturers of Phenalgin. His idea is to put up Phenalgin in 5gr. capsules, designated as "Pink Top Capsules". These capsules are of two colors, the lower or container is transparent and shows the color of the powder, being white; the cap is of a pink color, thus making a striking combination and identifying Phenalgin capsules beyond any question. Then, too, physicians are requested to write for "Phenalgin Capsulae Rubrae et Albae". These capsules are sold in one ounce bottles. The Etna Chemical Co. have obtained a trade-mark for the "Pink Tops", which are sold to the trade in one ounce bottles, and the wholesale drug trade is fully supplied with them. Over two million "Pink Tops" were recently sent out by the Etna Chemical Co.

The Etna Chemical Co. announce that it is not their intention to discontinue putting up Phenalgin in its usual form, i. e., powder and 2½gr. tablets; but, that the pink top capsules are being thoroughly advertised to the medical profession, as a method of identifying the genuine product.

PITTSBURG AND VICINITY.

WOE OF THE JOBBERS.

Pittsburg, Sept. 2.—The recent action taken by the wholesale dealers of St. Louis and other cities, accounts of which have been appearing in The Era, have occasioned some interest among local retailers who keep posted on current events concerning the trade. It is hard to get a fairly representative expression on the part of the retailers, as to how such action on the part of the jobbers of Pittsburg would be received. It is, however, a fact that some such move is contemplated, the jobbers claiming such action being necessary for their protection and arguing it will eventually rebound to the benefit of the retailer. The greatest grievance seems to be in the matter of the return of unsalable goods purchased from agents of manufacturing houses. It frequently happens such orders are given. The agent turns them over to the wholesaler, who, finding them properly signed, places his order for a quantity sufficient only to fill the orders given. The goods are shipped in due time, and for some reason no demand has been created. The retailer packs the goods and returns them to his jobber without so much as a thought as to his right to do so. Of course the jobber has no demand for the goods, and now he must either accept them, to be added to his junk pile, or risk offending a customer. In one instance, to which the attention of the writer was drawn, a retailer returned his goods with a note saying a mistake had occurred, as he had never ordered such goods. His original order was mailed him for the verification of his signature, and even then he said he had made no demand for them, and as the original seller had not fulfilled his contract he would not keep the goods.

1851-1901.

Pittsburg, Sept. 2.—Linford B. Hughes, a prominent druggist of this city, was married last week to Miss Wilhelmina Gerdes, daughter of W. H. Gerdes of Winebiddle street, by the Rev. J. L. Lawson of the East Liberty Lutheran church. The young couple left at once for Punxsutawney, Pa., where the parents of Mr. Hughes, Mr. and Mrs. Alexander Gilson Hughes on the following day celebrated their golden wedding anniversary, and received the congratulations of friends, many of them being neighbors of their youth in the pioneer days of Pennsylvania. After the celebration the younger Mr. Hughes and his bride left for Buffalo for a tour of the lakes and Canada.

Drug Store Burns.

Pittsburg, Sept. 2.—A fire which started in the drug store of Dr. J. L. Kelly completely destroyed the building and stock, and nearly wiped out the business section of Bolivar, Pa. The total loss before the flames were extinguished being \$17,000, of which Dr. Kelly's loss is \$1,600, with small insurance. The fire is supposed to have been caused by a spark from a passing locomotive.

CASH REGISTERS.

Druggists who are in need of a cash register, or who want to change the one they now have, or who want to buy cash register paper, should send for the price list of the Standard Cash Register Co., Wabash, Ind.

The attention of the druggist is called to the reliable house of THE SURGICAL FABRIC CO., 528 N. 10th St., Philadelphia, Pa., manufacturers of Elastic Stockings, Supporters etc.; their prices are reasonable and each article is listed, making it a very convenient form for the trade; they request druggists who supply the goods to send for a descriptive list."

CLEVELAND.

N. O. D. A. OUTING.

Cleveland, Aug. 31.—The annual outing of the Northern Ohio Druggists' Association was held at Avon Beach on Thursday, August 29. A large number of those interested, together with their wives and children, and the clerks with their best girls were in attendance. The programme was carefully carried out and the list of prizes was all that could be desired. Almost everyone on the grounds was rewarded in one way or another, from a \$5 gold piece down to a box of chewing gum. At the close of the day's contests all participated in a grand drawing; seventy prizes were distributed.

NOTES.

—A display in the window of Strong, Cobb & Co.'s retail store on Superior street has attracted a great deal of attention during the past few days. The virtues of a proprietary dandruff cure are put forth by an oil well in full operation, the wonderful "cure" being pumped on the bald pate of an old gentleman seated in an arm chair, an attendant behind the chair rubbing the oil briskly in with his hands. A few moments of rubbing, and presto! a new crop of hair appears. The display is surrounded by a liberal supply of the remedy advertised.

—The quiet in drug circles continues. Jobbing houses report orders unusually slim for even the slow month of August. A repetition of last Spring's good business is looked for this Fall, however, and indications are that the orders will be plentiful and of the right kind.

—P. Shirley, city salesman for Strong, Cobb & Co., spent a pleasant two weeks with his family at Stag Island. The trade was looked after during his absence by Harry Morse.

—The numerous friends of Thomas V. Sords are commenting freely on his bright looks and happy disposition since making his recent matrimonial venture.

—Alois Jilek, the Quincy street druggist, spent a week's vacation at the Pan-American and Niagara Falls.

—J. J. Schmidt has purchased the branch store of F. A. Reynolds & Son at No. 3419 Euclid avenue.

CINCINNATI.

FOOD AND DAIRY COMMISSION WILL PROSECUTE DRUGGISTS.

Cincinnati, Aug. 31.—It is rumored that the State Food and Dairy Commission will wage war against the druggists of this city. It is said that agents of the department visited here several months ago and took samples of soda water syrups from some of the leading drug stores. Similar action was taken throughout the State. It is also stated that many of the samples contained aniline and salicylic acid and other foreign substances. Deputy State Food Commissioner Kinney of this district is out of the city at present, and it is believed that he is preparing for the prosecution of the cases. The various dealers in food products and drugs, it is understood, have combined with merchants generally all over the State, and a fight will be made to resist the prosecution by the food commissioners. The plan of the proposed combine is to employ chemists in this city, Cleveland, Columbus and Toledo, also an attorney in each city, and to take the cases to the highest court. Each member of this new combine will be taxed according to the expenses incurred. Some of the druggists say they favor the plan, as they are not responsible to any extent for the syrups, as they purchase them, and believe that the prosecution should be against the manufacturers.

NOTES.

—An old landmark was removed this week when John Keeshan, the pioneer druggist, at the northwest corner of Sixth and Walnut streets, removed his pharmacy three doors north to 611 Walnut street. Mr. Keeshan has one of the oldest pharmacies in Cincinnati, and for forty-three years has been located at Sixth and Walnut streets.

—Emil Zorn and Otto Groenland have been appointed by President A. O. Zwick of the Ohio Valley Druggists' Association as delegates to the convention of the National Association of Retail Druggists at Buffalo, October 10-12. C. H. Jones, local organizer, will also attend.

—A surprise in drug circles was the sale at public auction of the Koehnken Pharmacy, on Walnut Hills, for \$2,550 to A. W. Frankman of Versailles, Ohio. Mr. Frankman will refurbish the store and it will be one of the finest drug stores on the hill.

—The many friends of E. F. Hollenbeck will regret to learn that he was compelled to part with his elegant drug store in Avondale on account of ill health. Alfred DeLang, ex-president of the Ohio Pharmaceutical Association, is the purchaser.

—Dr. John C. Otis, the popular druggist at Sixth and Vine streets, will open a new store at Fourth and Vine streets, opposite the Chamber of Commerce. This is one of the most desirable locations for a drug store in the city.

—Dr. Lausance of Liberty and Central avenues has sold his drug store to Oscar Hoffman of Wade and Baymiller streets. Mr. Hoffman will conduct both stores.

CHICAGO.

TRADE IN CHICAGO ACTIVE.

Chicago, Aug. 29.—Business during the week has shown satisfactory signs of the coming of a good fall trade. Not only are inquiries from the country on the increase, but orders are coming now in better numbers and more satisfactory volume. A numbers of buyers have been in the last two weeks and the outlook for the trade in the country districts seems to be much brighter than it was anticipated it would be early in the summer. The crop failure at most is only partial and applies in some sections to corn, but the wheat crop is quite generally good. The very high prices prevailing for corn and potatoes will help to keep up the general average. Chicago merchants are not repining over the prospects, for the outlook is for a good year. The demand is good for all the staple drugs and pharmaceutical products, and both manufacturers and jobbers are busy.

NOTES.

—Numerous requests for prices recently have set on foot an inquiry as to the firm styling itself F. S. Baker & Co., wholesale druggists, 252-260 Clark street. Inquiry developed the fact that the firm had small offices in the building at that number, but these who have gone there have had much difficulty in finding any member of the firm in. Your correspondent was informed this afternoon that the company had moved to West Randolph and Halsted streets. The stationery of the company would incline one to believe that it occupied a considerable portion of a large building, but in the language of the late lamented Daniel Webster, the reality, if one may believe all reports, "does not quite come up to the phrases of the manifesto." However, we heartily wish the new firm success if they deserve it, and we hope they do. Competition is the life of trade.

—W. J. Tarpenney, of St. Louis, is another gentleman of whom inquiries have been passing freely of late. Mr. Tarpenney is, it appears, ordering drugs quite extensively. Inquiry develops the fact that his connection with the trade has been as a salesman to druggists of a penny-in-the-slot machine. It is reported that he recently sent inquiries for prices on a carload of a kind of medicine that is little used, which fact would indicate a newly discovered market, perhaps for a line of goods not hitherto supposed to be a great sellers.

—South Bend, Ind., will make a vigorous effort to secure the meeting of the American Pharmaceutical Association in 1903. The South Benders are an active and energetic race, and when they come with their joints girded up and their weapons whetted for the fray they are adversaries worthy of the prowess of citizens of more pretentious communities. They are the kind of men whom, if they don't always get what they go after, make it very interesting during the contest for the fellow who does get the prize.

W. L. CAMPBELL, Vice-President,
Economical Drug Company, Chicago.

—Oscar Leistner, Western representative of the drug importing firm of William L. Strauss & Co., of New York, returned yast week from his Western trip. He states that the crougnt in the West is not so bad as reported, and that it will have less effect on business than was at first thought when the reports began to come in.

—G. W. St. Clair, Western representative of Johnson & Johnson, has just returned from the East where he visited the company's factory in New Brunswick. On his way home he stopped a day in Buffalo to view some of the more interesting features of the Exposition.

—Frank J. Ellis, a well-known druggist of Homan avenue and Madison street, was married last week to Miss Margaret Davis of this city. Mr. and Mrs. Ellis have gone East on their wedding trip and will return about Oct. 1.

—D. S. Sattler, one of the best known druggists on the West Side, was married to Miss Mary Hines of Chicago on Aug. 15. Mr. and Mrs. Sattler are spending a few weeks at the Dells, Wis., but will return to Chicago early in the fall.

—E. A. Renick, manager of the Western house of William R. Warner & Co., is spending his vacation in Northern Wisconsin. Friends who desire a mess of fish should send in a request as early as possible to avoid the rush.

—W. F. Eggert, Fifty-third and Halsted streets, accompanied by his wife, has spent the past two weeks at Paw-Paw lake, Mich., enjoying the summer advantages of that well known resort.

—John F. Matthes, Western representative of Whitall Tatum Co., has just returned from a trip to the factory and the home offices of the company in Philadelphia.

—W. Bently, of the Green & Bently Drug Co., of Oskaloosa, Ia., spent a few days in Chicago this week laying in supplies for the fall trade.

—It is reported that Richard Brothers of Des Moines, Ia., druggists and confectioners, will discontinue.

—Miss Alta M. Hosier has succeeded Mary C. Hosier in the drug business at Spring Valley, Ill.

—Dr. L. A. Le Mieux, druggist and optician of Semour, Wis., was in Chicago this week calling upon the trade.

—P. M. Nichols, a well known druggist of Pana, Ill., died this week.

—The drug stock of A. H. Kerth at Evansville, Ind., has been sold.

ST. LOUIS.

A. PH. A. ENTERTAINMENT PROGRAMME ABOUT COMPLETED.

St. Louis, Aug. 29.—The finishing touches are being put on all the arrangements for the A. Ph. A. meeting here next month. The interest and enthusiasm extends all over the city and through all branches of the trade. The East St. Louis druggists are active and have a reception committee appointed which consists of the following local druggists: Thos. Knoebel, chairman; H. F. Bader, W. B. Harris, M. Sondag, A. G. Schluter, A. O. Kring, Albert Trauble and C. F. Merker. They are posting up on all places of interest so they will be able to show any visitors who desire to visit their city the most interesting things in the shortest possible time. At the regular weekly meeting of the Committee on Arrangements at the Southern Hotel last Wednesday, C. H. West, C. P. Wallbridge, F. L. Seeley, Dr. O. F. Claus, T. F. Hagenow and R. C. Reilly, were present as visitors. They came to report on what they had done as members of various committees, and to ask for further work. At this meeting it was decided to employ Weil's Band, consisting of twenty pieces, to furnish music on the boat excursion. The local ladies' committee is especially active. There is considerable mystery about the Twentieth Century Auction they are arranging and they have just insinuated enough to arouse the curiosity of the gentlemen; but their lips are sealed to all questions. The only information given out is that none of the sterner sex will be allowed to come anywhere within hearing distance of the auction room.

NOTES.

—Frank Koeneke, the good-natured city desk man at the Moffitt-West Drug Company, organized a fishing and squirrel party among the employes of the firm and started last Saturday evening for Big River down among the Ozarks. The members of the party intended to drive out about fifty miles where they were told that fish and game were in abundance. They reached a small town by the name of Fenton about dark, and found out there was to be a big country dance there that night. They attended and danced until morning and resumed their journey. None of them knew the road and every person they inquired of told them a different story. It is a section of the country remote from railroads and the grangers out there do not have much use for city people, so the boys say. They would take one road a few miles, then some one would tell them they were wrong and direct them to another road, thus keeping them traveling all day. About sundown Sunday night they were directed to take a certain Jane which would lead them to a creek where they would find an ideal camping place. After following it three miles they drove up to a farmer's barnyard and the end of the road. When the farmer came out, found out who they were and what they wanted, he ordered them off his premises. They drove until nearly midnight and the next morning struck a road for St. Louis. They camped Monday night on the Meramec River and reached St. Louis Tuesday forenoon. It was a sad experience for some of the boys who were taking their week's vacation and they justly feel that half of that time has been purely wasted.

—Mrs. Dr. Rosa Liebig of Marshalltown, Ia., recently passed through this city on her way home from Hot Springs, Ark. She was at one time secretary of the Iowa Pharmaceutical Association. She has attended several meetings of the A. Ph. A., and promises to be on hand at the St. Louis meeting next month.

—C. R. Judge, president of the Judge & Dolph Pharmaceutical Company, with his manager, A. J. Davenport, are spending a few days in Chicago inspecting some of the leading drug stores of that city with a view of getting some pointers in regard to opening their big store at 515 Olive street.

—The drug store located at 518 Olive street for the past ten years, and formerly owned by M. W. Alexander, is being moved to-day to Sixth and Olive streets. In future it will be known as the Cosmopolitan Drug Store. R. Gregg will be manager of the stand.

A. BRANDENBERGER, Jefferson City,
Member of the Missouri Board of Pharmacy.

—Invitations are out to the wedding of Mr. C. Frick and Miss Anna Meise. The prospective groom is prescription clerk at the Wolff-Wilson Drug Store, Sixth street and Washington avenue.

—H. H. Heard of Arkadelphia, Ark., has been in the city this week purchasing stock and fixtures for a new drug store which he will open in his native town.

—J. Johnson, city salesman for the Moffitt-West Drug Company, is back from his vacation spent up among the northern lakes.

NEW ORLEANS.

New Orleans, Aug. 31.

—New Orleans boasts of a woman pharmacist who has successfully conducted an excellent drug business for almost twenty years. She is Mrs. L. Shelley, and although seventy-five years of age, is her own prescription clerk and attends to all the details of the business. When Mr. Shelley died in 1885 his widow was left with a good business, but with no one to take care of it. She had, in years of companionship with her husband, learned a great deal of pharmacy, and applying a naturally active mind to the studies attendant upon the duties, she was shortly admitted into the ranks as a registered pharmacist. The business has flourished and Mrs. Shelley promises several more years of usefulness in the trade.

—With September there is every promise that local trade will in a measure awake from its summer lethargy. It is the general opening of the commercial season in all New Orleans branches of trade, and with the return of citizens from the summer resorts and the general livening of business the drug trade expects its share in the awakening.

—The local agency of Parke, Davis & Co. is moving into more commodious quarters. The new agency will be at Lafayette and Camp streets, in one of the modern and handsome buildings of the city.

—The William S. Merrill Chemical Company's agency in this city will shortly occupy new quarters in Camp, between Foydras street and Natchez alley.

—F. Adams, proprietor of the People's Drug Store, at Milan street and St. Charles avenue, is touring Central America.

Why not sell patent medicines you can make a profit on. Four-fold Liniment, for instance.

THE NORTHWEST.

St. Paul, Minn., Aug. 30.

—C. E. Chilstrom, a Minneapolis druggist, was given an antiseptic yesterday by the officials at the quarantine hospital, and then brought into the municipal court and fined \$5 for entering a quarantine house. Judge Holt had refused to receive offenders of this character at the municipal court, because they had been exposed to an infectious disease, and Dr. Hall decided that the only way to secure the conviction of Chilstrom was to see that he was thoroughly disinfected before having him arraigned.

—A fire occurred yesterday in the wholesale drug house of T. H. Spence Drug Company at La Crosse, Wis. The blaze caught from a lighted match in the hand of Bert Spence, who was seriously burned about the head and face. The match came in contact with a barrel of alcohol, which exploded and shattered windows in the immediate neighborhood. The fire was confined to the upper floor and roof. The loss by water and smoke is heavy.

—Successions: E. F. Bishop, Melbourne, Ia., by Hunt & Co.; Paul W. Jones & Co., Peterson, Ia., by G. J. Johnson & Co.; Maiben & Aldrich, Mt. Pleasant, Utah, by Maiben & Erickson; H. Arsenau, Minneapolis, Minn., by Martin Aune; N. F. Reed & Co., Eldon, Ia., by J. A. Bundy & Co.; Julia A. Scheu, Troy, Ia., by Scheu Bros.; Anton E. Wanek, Miligan, Neb., by Joseph Simceck.

—D. R. Noyes, of Noyes Bros. & Cutler, St. Paul, has gone to Saratoga to attend the meeting of the creed revision committee of the Presbyterian general assembly, of which committee he is a member.

—J. F. Connolly is sick at Missoula, Mont., and J. P. F. Agthe has gone from Little Falls, Minn., to take his place in the Northern Pacific Hospital.

—E. A. Edelman is back here on a visit—the first time for some years. He is now a prominent pioneer druggist at Sheridan, Wyo.

—By a fire at Elma, Ia., this week, the establishment of the Richmond Drug Company and Leo C. Wachtel were destroyed.

—G. A. Presley has gone to Fergus Falls, Minn., to help out Barker & Reiff for a little while during Mr. Reiff's absence.

—New: Ed S. Lovely, Palmyra, Neb.; R. H. Murphy, Badger, Minn.; F. A. Lyman, Montpelier, Idaho.

—Dr. J. A. Van Camp, Johnson, Neb., has bought out the Tecumseh Drug Company, of Tecumseh.

—Aug. E. Jensen, of Baldwin, Wis., has gone to Robinson's drug store, Great Falls, Mont.

—R. R. Jones and G. L. Baker were burned out at Eriton, S. D., a few days ago.

—Fred J. Peherenson, Salt Lake City, Utah, will move to Pleasant Grove.

—F. W. Collier & Co., La Crosse, Wis., have given a bill of sale.

—Chester O. Rouse, Mt. Pleasant, Ia., has sold his stock.

—Richard Bros., Des Moines, Ia., will discontinue.

—W. O. Floden is now working in Minneapolis.

—C. A. Hoover, Montpelier, Idaho, has sold.

Corrugated Paper Cartons.

The problem of how best to wrap fragile articles for shipment is one that daily presents itself to druggists. Corrugated paper wrappers of various kinds are now very popularly used for this purpose. No matter how valuable, fragile or delicate the articles you want to ship, if you desire a safe wrapper, it will pay you to communicate with the Hinde & Dauche Paper Co., Sandusky, Ohio, or 171 Duane street, New York. They make a specialty of corrugated paper cartons, partitions, mailing envelopes, etc. Write to them for catalogue and prices.

These Goods Will Bear Investigation.

If you have never handled any of the lines of cigars manufactured by Chas. Jacobs & Co., it will pay you to investigate regarding the quality and prices of these goods. They are sold on a positive guarantee to be the best goods in this line ever sold at so low a price. Have you seen the numerous letters from druggists regarding these cigars published in recent issues of the Era? Samples furnished liberally to responsible dealers. Write to Chas. Jacobs & Co., 353 E. 78th street, New York.

MONTREAL.

—What was considered the most important event connected with the drug trade in the province this year occurred this week in the shape of the annual meeting and banquet of the Proprietary Articles Trade Association of Canada. The banquet was held at the Windsor and was the most elaborate held in the annals of the trade. The president Henry Miles, occupied the chair and seated on his right and left were: J. A. McKinnon, of Northop & Lyman; Henry Lyman, of Lyman Sons & Co.; Chas. Lyman, of Lyman, Knox & Co.; and Judge Archibald. Among those present were: Henry Willis, Quebec; L. G. Levee, Slocum Chemical Co.; Alex B. J. Moore, Evans & Son, Ltd.; J. J. Gibbons, Vapo Cresolene Co., New York; J. N. Finlay, Bovril, Ltd.; A. P. Reid, Czone Co.; C. S. Underhill, Leeming, Miles & Co.; J. A. McKee, Dodds Medicine Co.; T. Reid, Wingate Chemical Co.; W. J. Edmonson, Edmonson, Bates Co. At the meeting of the association which was held in the afternoon, the following officers were elected for the ensuing year: Hon. president, Senator G. F. Fulford; president, Henry Hills; vice-president, E. D. Howe; secretary-treasurer, L. S. Levee; Board of Control, David Watson, W. J. Edmonson, E. H. Wooley and F. S. Warren.

—What is called a war of pharmacists is now going on in Canada, but fortunately it does not effect us in the Province of Quebec. It appears that the Ontario College of Pharmacy, has received notice from the Manitoba Pharmaceutical Association, that in the future the latter will not recognize any Ontario diplomas which means that Ontario graduates (and they are many) cannot practice in Manitoba. The Ontario men feel it as a snub and will in the natural course of events retaliate; the Ontario Association some time ago endeavoured to reciprocate diplomas with the Quebec Association, but the latter would not listen to the proposal.

—The Druggists and Chemists Rifle Association is now happy after a great deal of work on the part of the officials of the club, it has been managed to get the rifles from the Government, also the stipulated number of rounds of free ammunition. Everything is now in readiness for the series of shooting matches which will come off next month. Good score is expected from the Knights of the pestle and mortar as over fifty per cent. of the members are past members of the Militia and about twenty-five per cent. are active members.

—The long drawn out and celebrated case of the Pharmaceutical Association of the Province of Quebec versus J. Livernois, Quebec, has at last come to an end and is a victory for the association. It has just been decided by the Privy Council of England, which refused Livernois leave to appeal his case before that body. His case has just been fought before nearly every court in Canada with various results and the end which has now come will be hailed with delight by all the pharmacists of the province.

—Davis & Lawrence Co., Ltd., had a very close call from being wiped out by fire this week; three box factories which were in close proximity were burned to the ground and it was due to the extensive precautions against fire that the D. & L. building was not consumed. The damage which occurred was due principally to water. Wm. Bates of the New York firm has been in town for the past week adjusting the insurance and is the guest of his nephew Arch MacParlane, Chestnut street.

—T. H. Robinson has returned from a trip by water to the lower ports. He had quite a thrilling experience as the vessel he travelled by had to put back to Quebec for repairs after having been in collision with a schooner in the river. The journey to sea was resumed and ere the vessel arrived at its destination had to put in shore owing to the stress of weather.

—The provincial revenue department has made a seizure of the stock of Geo. Wood, Notre Dame street, and is prosecuting him for selling medicine without a license. The stock consist of herbs and patent medicines.

—A. B. Evans, managing director of Evans & Sons, Limited, has returned by the steamer Oceanic from England, and on his arrival on this side spent a week with his family at the Seaside near Portland.

—H. Guerin, M. C. P. 99, for the past ten years clerk with J. H. Nault, has opened a pharmacy at the corner of Versailles and Notre Dame streets.

—Alex B. J. Moore has gone on a trip by water to Sidney and Louisburg, C. B. and Boston Mass. He expects to return about Sept. 10.

—John Lewis, St. Catherine street, has returned from his summer holidays spent on the Maine Coast.

—H. H. Scharff has gone on a tour West and intends taking in the Pan-American ere he returns.

—A. W. Moffatt is at the present spending his holidays fishing in the streams around Rimonski.

—R. H. Bryson returns next from his summer island home near Brockville.

N. A. R. D. NOTES.

Chicago, Aug. 28, 1901.

As an illustration of what the N. A. R. D. is accomplishing in its quiet and unostentatious way for the less populous as well as the more densely populated communities, the case of the Nicolet county, Minn., may be cited. There are only six druggists in that county, but in conformity with the present methods of N. A. R. D. organization work this county received the attention in its regular order. Mr. Post, an organizer for the N. A. R. D., formed an association of the Nicolet county druggists at St. Peter, Aug. 25th, the entire six being present. Finding that the prices on counter goods in the county were lower than in any other county in Southeastern Minnesota, he advised the local association to advance the prices on these articles and establish uniformity, which plan was agreed upon at the meeting, and has since been carried out to the great satisfaction of all concerned. P. W. Satory, of St. Peter, was elected president; C. W. Ray, of Nicolet, vice-president; J. O. Poetz, of St. Peter, secretary; and C. H. Clark, also of St. Peter, treasurer. Resolutions were passed, condemning the action of certain manufacturers in keeping up prices of their goods after the internal revenue tax was repealed.

Many letters are being received at N. A. R. D. headquarters similar to the following from President Head G. Stone, of the Racine county, Wis., Retail Druggists Association:

"Allow me for our association to accept your kind words of welcome to the fellowship of the N. A. R. D. We are very much pleased with what has been accomplished so far, and hope that in the future our lot will be less oppressive and more justly remunerative than in the past. All thanks to the N. A. R. D."

The other officers of the association are Mr. Prasch, Burlington, vice-president; A. Holmberg, Racine, secretary; W. L. Spencer, Racine, treasurer. The organization includes the proprietors of nineteen out of the twenty drug stores in the county and was organized by Geo. W. Schoedde, a representative of the N. A. R. D.

A SYLLABUS OF NEW REMEDIES AND THERAPEUTIC MEASURES, WITH CHEMISTRY, PHYSICAL APPEARANCE AND THERAPEUTIC APPLICATION.—By J. W. Wainwright, M. D., member of the American Medical Association, etc. 16 Mo., cloth, \$1.00, Chicago, G. P. Engelhard & Company, 1901.

The title explains the scope of this book. Pharmacology, not being contained in the medical school curriculum, the author maintains with truth is too little understood by physicians at large. The knowledge of the science of medicines, perhaps more than any branch of the profession, bears directly upon the success of a physician while for that very important knowledge he has, as a rule, to rely upon biased literature. Though this volume is especially designed to meet what the author believes to be the need of the physician, it is applicable equally to the pharmacist. The subject is ably treated and the book should find a place in the library of every member of both professions.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued August 27, 1901.

- 681,178.—William V. K. Ayers, Newark, N. J. Non-refillable bottle.
- 691,333.—Charles Nelson, St. Louis, Mo. Cover for ice-cream cabinet.
- 681,338.—Gustave Otto, Jersey City, N. J. Ether inhaler.
- 681,387.—Martin Bohlig, St. Paul, Minn. Combined speculum and medicine distributor.
- 681,433.—Albert L. Baron, Brooklyn, N. Y. Filter.
- 681,436.—Charles Bellamy, Philadelphia, Pa. Manufacture of casein and casein glue.
- 681,488.—Henry C. Lovis, New York, N. Y. Sterilized surgical dressing.
- 681,505.—Max Meyer, New York, N. Y. Quinin methyldihydrazin perchlorate and process of making same.
- 681,526.—William J. Young, Cleveland, Ohio. Liquid-carbonating apparatus.
- 681,556.—William Kinghorne, Westport, Md. Bottle sprinkler.
- 681,568.—Andrew C. McLaughlin, Austin Tex. Process of making ammonium ichthyol sulfonate.
- 681,586.—George C. Stebbins, Watertown, N. Y. Apparatus for producing bisulfite liqore.

- 36,966.—Medicine for Certain Named Diseases. Afco Chemical Co., Jacksonville, Fla. Representation of a palm-leaf with the word "Comfort" thereon.
- 36,967.—Preparation for the Treatment of Certain Named Diseases. Cook Remedy Co., Chicago, Ill. A facsimile of the name "Cook Remedy Co." in the handwriting of George A. Joslyn, president of said corporation.
- 36,968.—Remedy for Certain Named Diseases. The Eucalyptine Medicine Co., Dallas, Tex. The representation of a leaf, branch flower, and seed-pod of the Eucalyptus tree. The leaf being arranged at the left in a vertical position and curved to the right.
- 36,969.—Sticky Fly Paper. Grand Rapids Sticky Fly Paper Company, Grand Rapids, Mich. The words "Sticky Oweo" and the central character which represents a large script "O" with a stick passing through it.
- 8,625.—Title: "Bourdon's Liniment" (For Liniment.) David A. Bourdon, Worcester, Mass.
- 8,626.—Title: "Tar Heel Chill Cure." (For a Medicine.) Charles D. Higgins, Greensboro, N. C.

DESIGNS.

- 34,994.—Moriz Bauer, Vienna, Austria Hungary, Inhaler.
- 34,995.—Christian William Meinecke, Jersey City, N. J., assignor to Meinecke & Co., New York, N. Y. Bag for ice or water.

TRADE-MARKS.

Registered August 27, 1901.

- 36,961.—Certain Named Medical Preparation and Soap, Benjamin J. Bruns, San Francisco, Cal. The words "Bro. Benjamin's" and the best representation of a longhaired elderly quaker.
- 36,962.—Anti-malarial Remedies. Levi W. Perdue, Wilmoth, Ark. The representation of a swamp with trees rear and foreground and an owl on the limb of a dead tree.
- 36,963.—Blood Purifier. Charles H. Lucas, Walnut Springs, Tex. An arrow pierced Indian holding a bush.
- 36,964.—Remedy for Lung and Throat Diseases. Maximilian Hrnjak, Alleghany, Pa. The letters "C. T. B." with a star arranged centrally of a square field having radially extending lines and a fac-simile of registrant's signature on the field.
- 36,965.—Certain Named Medical Compounds. Joseph H. Schenck, Philadelphia, Pa. Fac-simile of the name "J. H. Schenck," being a fac-simile of the signature of registrant's father.

ADAM

was a very popular man in his day. All the women in the Garden of Eden were very much taken with him. This is not surprising because nearly all men who rise Cain acquire popularity with the gentler sex, but he should have been more careful in going about after Eve. He ought to have staid around and kept her out of mischief or dalled by the way-side until she had made up her full mind about the chap with the crazy hair. He might have been compelled to enter a monastery before she could have accomplished this, however, so perhaps we shouldn't find fault, although all's well seems to have ended ill in his case. It was a cold day for the garden party when the fruit scandal leaked out. As soon as they realized the change in the weather they were up against the questions of styles and materials for glothes. Adam objected to flower-like similitude and Eve kicked off the traces on what she called "divided skirts." Then there were domestic troubles. The first white baby born at Eden's gate was said to get on without "Imperial" Nipples, but his descendants find them in aid to comfortable existence.

MARKET REPORT.

NEW YORK MARKET.

Outlook Favorable to Improved Conditions.

New York, Sept. 3.—The volume of business does not show any material increase, but there is rather more inquiry, and the outlook is favorable to improved conditions, with the advent of more seasonable weather. Price changes during the past week have been few, and with one or two exceptions, of no special importance, but the general market has a fairly steady undertone.

OPIMUM.—A continued tame market is reported, with business wholly of a light retail character, but jobbing quotations remain nominally unchanged at \$3.25@3.50 for 9 per cent., and \$3.45@3.60 for 11 per cent. Powdered continues to move fairly in small lots at \$4.50@4.75 for 13 per cent., and \$5.00@5.25 for 16 per cent., as to quantity, the inside figures for single points.

MORPHINE.—Market conditions are practically as noted for several weeks past, any tendency toward improvement being checked by continued competition among manufacturers. Jobbers continue to quote on the basis of \$2.20@2.40 for eighths, as to brand, less the usual rebate of 10c per oz. on lots of 10 ozs. or over.

QUININE.—Manufacturers have reduced their quotations 2c per oz. under the influence of a 15 per cent. decline in prices of bark at the last Amsterdam sale. The revised jobbing prices are 29@30c in 100 oz. tins, 29½@30½c in 50-oz. tins, 30@31c in 25-oz. tins, and 30½@31c in ounce vials.

THYMOL.—Prices have reacted to the extent of 25c per lb., owing to more or less keen competition among importers, and jobbers have reduced their quotations to \$3.55@3.75. The ounce prices are unchanged at 35@40c.

SPERMACEYL.—Manufacturers' prices are lower, and in a jobbing way quotations show a decline to 34@38c for lump and 35@40c for cakes.

BISMUTH PREPARATIONS.—Manufacturers have reduced their prices, owing to the recent decline in values of the metal, and the revised jobbing quotations are \$1.65 @ \$1.90 for subnitrate, \$2.05@2.35 for subcarbonate, \$1.80 @ 2.05 for subgallate in pounds and 17@21c in ounces. Ammonio-citrate is quoted at \$20.40@2.30 per lb. and 19@23c per oz. Oxide hydrate, \$2.80@3.30 per lb. and 24@27c per oz. Salicylate, \$2.05@2.30 per lb. and 17@21c per oz. Subiodide \$3.60@3.80 per lb. and 29@34c per oz.

GAMBOGE.—Ordinary pipe is cabled firmer abroad and spot quotations for jobbing parcels have been advanced to 60@65c for whole and 65@70c for powdered.

ANISE SEED.—Italian is decidedly stronger, owing to unfavorable crop news, and jobbers have advanced their quotations to 15@18c for whole and 18@21c for powdered.

FLAXSEED.—Primary markets are easier and spot quotations show a corresponding decline. Whole cleaned is quoted \$7.25@7.75 per bbl. and 50@6c per lb. for less. Ground by the barrel, 3½@4c, and for smaller parcels 5@7c.

CARAWAY SEED.—Dutch is lower, owing to arrivals of new crop and consequent increase of available supplies, and jobbers have reduced quotations to 9@11c for whole and 14@16c for powdered.

SUNFLOWER SEED.—The tone of the market is firmer, owing to reports of crop shortage, but jobbing parcels are still obtainable at the old range of 7@10c as to quality and quantity.

OIL, PENNYROYAL.—New crop has begun to arrive, and the market is easier, with jobbing quotations reduced to \$1.50@1.70.

During the current month the space occupied by the Goodyear Tire & Rubber Company, Akron, Ohio, makers of "Imperial" Rubber Goods, will be devoted to brief biographies of famous ancients. Careful perusal will be amply repaid.

—The Georgia Board of Pharmacy held a meeting for the examination of applicants for registration at the Kimball House, Atlanta, Aug. 20. There were nineteen applicants of which number eight failed to pass. Those who passed were as follows: A. J. Clayton, Dawson, druggist; Herman M. Hicks, Ph. G., Columbus, pharmacist; J. W. Johnson, Columbus, apothecary; E. Ross Jordan, Waycross, druggist; Milton Harter King, Pelham, druggist; Morris O. Lee, colored, Albany, apothecary; Chas. S. Miller, Ph. C., Shellman, apothecary; David E. Morgan, Ph. G., LaGrange, pharmacist; C. M. Shelton, Atlanta, druggist; C. T. Whipple, Ph. C., Cochran, pharmacist; Seals L. Whiteley, Atlanta, druggist. George F. Payne, secretary.

VETERINARY KNOWLEDGE FOR THE PHARMACIST.

This journal, like many others, has frequent calls from pharmacists for information and lists of books relating to veterinary medicine, and while these serve not only to emphasize the widely diversified character of American pharmacy, they also give rise to a few thoughts concerning the possibilities and financial remuneration for the pharmacist along the lines of veterinary science. No one is more often called upon to enter its domain. With the country druggist this statement is especially true. He is not only requested to compound certain remedies whose formulas may be given to him, but his opinion and advice are also not infrequently sought in connection with the remedy and its application, the treatment and other pertinent suggestions. It is imperative that every druggist who desires to achieve a modicum of success should keep in touch with the various needs of his trade. To do this he must be able to grasp the opportunity as it is presented, and he should therefore have some knowledge of what medicines are employed by veterinarians; knowledge that is best gained from standard books on the subject, some good formulas and a keen sense of being able to determine his customers' wants. There is probably no field in the practice of pharmacy to-day which can be made to produce greater results for the money invested, the labor involved, or the skill and knowledge necessary.

It is not intended by these remarks to convey the idea that the pharmacist is to usurp the prerogatives of the character of the skilled veterinarian, and become

a "horse doctor"; the profession of the latter demands special study and training for its prosecution. It is a branch of medicine, the successful practice of which depends upon a most careful observation of facts and an accurate knowledge of the basic principles of comparative anatomy. But there is, as we have indicated, a field unoccupied by the professional veterinary practitioner. In his absence the community naturally looks to the druggist for information regarding the disease and injuries of domesticated animals, veterinary remedies and their administration, besides a general knowledge of treatment. To make an earnest effort in this direction is worthy of careful consideration.

TWO TO ONE ON MAN.

If it takes nine tailors to make one man, it takes but four and a half tailors to make one woman. At least so say, in effect, two learned judges, one of Maine, the other of New Jersey. Time was when woman was at par, but now it seems she is a great many points below. Also, time was when she ruled the world in moulding the young generation, but that too is apparently gone—that government she has resigned to whomsoever will tend it, hoping to attain a more concrete power in the world. But, alas for her hopes!—and therefore the reason that the odds are two to one against her.

These two judges, so widely separated, except for the telephathy called forth by a common foe, acted with a perfect unanimity of purpose in declaring that while the maximum amount of damages for which judgment can be obtained for the death of a man is \$5,000, the maximum of a woman is but half, \$2,500. With great erudition, and by a process of reasoning of which he is the inventor—let us not say the discoverer—the judge of the Supreme Judicial Court of Maine holds that, though she was the mother of a healthy son of five years of age, the wife of a man in poor health, herself in splendid health and but thirty-five years of age, almost the sole support, as a milliner, of her husband and child, prudent, industrious, affectionate as wife and mother, fairly well educated, with a strong likelihood of becoming the sole support of her son before he attained a self-supporting age—though this new Daniel come to judgment actually admits that a mother's training of her child is better than an orphan can receive—still he feels it incumbent upon him to uphold the uses of his office by interpreting the statutes to mean that damages in the case at hand could not be punitive on the defendant, and that \$2,500 was a sufficient amount. The name of this judge will go down to posterity—though we confess to not knowing it—beside that of Bacon. True

genius is sure at some time to assert itself.

But behold! out in New Jersey a judge of the Supreme Court also decrees a woman's life worth but \$2,500, likewise advising that amount to be established as the maximum, thereby declaring himself to be a disciple of the former learned jurist.

What do Susan B. Anthony and her learned compatriots say about these Solomons and judicature in general of the States of Maine and New Jersey? Marvel that the wraith of Mrs. Bloomer does not resurrect itself to wreak vengeance! Will the living cohorts of woman's rights, so lately routed in battle forensic, swoop down as "the Assyrian came down like a wolf on the fold," and massacre the fortified power of usurping man? Or will the idea of Tennyson's Princess be finally resorted to with perfect success?

CATALOGUES OF UNIFORM SIZE.

The catalogues of to-day, with especial reference to those issued to the retail druggist, fail of their intended utility because of their too varying sizes. It is next to impossible to classify alphabetically a number of price lists of such inequality. The thickness, of course, must be governed entirely by the quantity of the material to be listed, but the length and breadth should be made to conform to a certain standard. Catalogues form an important part in the trade library of every druggist, and contain much useful trade information which every manufacturer is desirous of seeing disseminated. But in the absence of any uniformity in their size, they will not, in all likelihood, be kept by the druggist with any kind of system; moreover, in most drug stores they will be found thrown promiscuously into a drawer—catalogues ranging from a vest-pocket size to a large quarto. As a matter of fact, in every such case these lists would be kept on the shelf beside the Pharmacopœia if it were not for the impossibility of arranging them in some kind of order.

The National Association of Manufacturers, which includes manufacturers of all lines, have the matter, we are advised, under consideration. The association will do wisely if it takes definite action by establishing a standard of size for catalogues, and its members will find a material advantage in pleasing their respective trades.

DRUG CLERKS WANTED.

From Philadelphia, Pittsburg, Chicago and two or three other cities comes the information that drug clerks are wanted, good, practical, well educated men. If we may believe the letters that have come to hand, there is a general dearth of good clerks, and the question naturally arises, What is the cause? A Pittsburg correspondent says the country's "prosperity" is responsible for the situation, while a prominent Philadelphia druggist says that numbers of clerks are engaged at summer resorts, where they get good pay in the busy season, and at the same time manage to secure an outing; they, therefore, leave the cities. Both of these observers undoubtedly accurately reflect the conditions obtaining in their respective localities. But these conditions cannot be general, notwithstanding the fact that the state of business is dependent upon the country's prosperity. Does not the

enforcement of the pharmacy laws have something to do with the dearth of good clerks? Clearly it does, and while the law manifestly protects the public, its proper enforcement protects the pharmacist from irregular competition, and it helps the clerk who can come up to the requirements. Salaries for competent drug clerks have largely increased within the past few years, and good men are in no danger of being compelled to go long without a situation.

OHIO PURE FOOD PROSECUTIONS.

In our issue of last week was reported the information that the Ohio State Food and Dairy Commission would wage war against the druggists of Cincinnati and other cities in that State for violation of the pure food and drug laws. It was also stated that the various dealers in food products and drugs had combined to resist prosecution by the Food Commission, holding that they, the dealers, were not responsible for the character of the products condemned by the commission's inspectors, namely, soda water syrups found to contain aniline, salicylic acid and other foreign substances, and that they believed the prosecution should be against the manufacturers of these products. How the court will pass upon this contention remains to be seen. We have always believed the druggists of Cincinnati and Ohio were and are in favor of pure drugs, and prosecutions in the past have always shown them to be in favor of any reasonable law which would attain this end.

THE A. P. H. A.

Before another issue of this journal reaches the subscriber, the forty-ninth annual meeting of the American Pharmaceutical Association will have begun. The various deliberations will follow the traditional rules of procedure, but we cannot help but feel that they will be of more than usual interest to the members. The "old guard," so long identified with the interests of the association, is growing less in numbers as the years go by. It is safe to say that some of them will be present and perhaps talk of things not of this day. There are others who will attend their first meeting. All will have a good time, and each, we are sure, will resolve to be present next year to help celebrate the jubilee of the organization of the association.

A committee to prepare a new Pharmacopœia has been organized by the pharmaceutical and medical societies of Switzerland. As in this country the committee is made up of physicians and pharmacists and in addition a pharmacologist and an official member of the State Department of Health.

STRAMONIUM FOR HORSE FLIES.—According to the Chasseur Illustré, a decoction of one part of stramonium leaves to three parts of water, boiled for twenty minutes and applied, when cool, to the face, about the ears, inside the legs, about the belly and croup, is sufficient to keep a horse free from its tormentors during a whole day. Stramonium is said to be much more efficacious when thus used than tobacco.—(Bull. Gen. de Therap.; Pharm. Journ.)

CONCERNING CASCARA SAGRADA.*

By BRIDGET ROSE CLINTON.

The fundamental law of ethics, says Herbert Spencer, is that lie-preserving acts should be pleasure-giving acts. The preliminary principle of pharmacy, I mean the neo-pharmacy of the twentieth century, is that health-giving drugs should be pleasure-giving draughts; and the application of this principle to a concrete case—that of cascara—is the purport of this paper.

Probably one million pounds of cascara are now used per annum to stimulate the sluggish excretory apparatus of citizens of the world. No other bark, except cinchona, can compare with this, and yet a quarter of a century ago an analogous species, *Rhamnus frangula*, although well known as a cathartic, was the only kind used in medicine, and of that probably not one thousand pounds per annum. It was universally considered so drastic a cathartic as only to be fit for dyspeptic dogs and constipated curs. Now, everybody loves a laxative but loathes a cathartic, and that *Rhamnus* should be raised from the lowest and most despised to the highest and most prized of splanchnic stimulants is a triumph for pharmacy. The irritant principle of *Rhamnus frangula*, which produced the intense griping pain and the sanguinous exudate from the intestines was discovered to be a kind of ferment. Now an allied species of *Rhamnus*, distinguished as *purshiana*, was ascertained to be almost free from this ferment, and it has been further discovered that the ferment disappears, or rather is changed into a harmless substance, when the cascara is stored for a couple of years. The credit of introducing *Rhamnus purshiana* to modern medicine seems to be largely due to that American firm whose name is associated inseparably with the drug, and the kudos of demonstrating the importance of keeping the bark a couple of years before use, as well as of demonstrating the utility of cold extraction, appear mostly to be the researches of John Moss, whose work has by no means been sufficiently recognized, although with his conclusions I cannot always agree.

Although the preparation of the American firm inspired the introduction of extractum cascara sagrada into the British Pharmacopoeia, the official extract has always been confessedly different and less potent. It is a notable fact that in the classical monograph published by that firm cascara is held to yield its virtues only to alcoholic solution. It has been since demonstrated that, although these active principles may not be soluble in water, per se, they certainly are in water containing other constituents of the bark in solution. This fact is the justification of the B. P. process. The purport of this paper is to devise a satisfactory formula for syrupus cascara aromaticus. Now, any fool can write a formula. The trouble is that, like the famous constitutions of the Abbe Sieyes, they don't work. Every addition to a formula which is not distinctly useful is injurious. Even sugar disagrees with very many dyspeptics, and every aromatic oil has its enemies, a peculiar idiosyncrasy exists in patients which makes certain flavors distasteful to many of them, and hence the aim of the pharmacist must be to devise a flavoring which will disguise the nauseous taste of the drug, make it more active if possible, and supply a carminative property which is confessedly lacking in cascara. Important though the question of flavoring may be, it does not rest as yet on any well ascertained physiological basis, and hence much of our experimenting must be merely empirical.

If there be any physiological foundation it is this: Pure bitters are perceived by means of filaments of the gustatory nerve: resins and characteristically odorous substances depend for their perception on the glossopharyngeal filaments. Excitants of the former never give rise to nausea, and for a like reason pungent substances like capsicum, which act mostly on the gustatory nerve, are of comparatively feeble use in correcting the nausea excited by princi-

ples like the resinoid and extractive constituents of cascara, which operate in filaments of the glossopharyngeal. On the other hand, certain of the volatile oils, as coriander, angelica, anise, etc., appear to have a selective action on the glossopharyngeal nerve, and hence these may be expected to relieve the acidity of substances which irritate it. The aim of the British Pharmacopoeia has always been to present the drugs in the forms of greatest potency and convenience. The elegancies of taste have been ostentatiously flouted, except in a very few instances, and of these the syrupus cascara aromaticus is a sorry example. I had thought that the Conference was mainly responsible for the formula, but its genesis is to be found in a passing reference in a third-rate American text-book, where it is stated that the taste of cascara can be effectually disguised by aromatic syrup. The formula, anyhow, is a failure. There is a potential demand for tens of thousands of gallons of it, yet it is seldom asked for. But now to reform it.

(1) Keeping to the orthodox proportion of cascara, I substitute glycerin for syrup. This keeps better, will be more active, and the flavor has a happy lack of the sugary bitterness of the official syrup.

(2) All the fluid extracts of commerce found in the shelves of the pharmacies are of an acid reaction and acetous in character. Most of all is this the case with that of cascara. Moreover, there is a certain amount of ammonia found in the bark, and it seems to keep the active principle in solution when the extract is fresh, whereas the sour extract deposits solid but active matter. Hence I try a formula with sal volatile.

Liq. ext. cascarae.....	℥xvi
Tr. aurantii.....	℥iv
Alcohol.....	℥ij
Spt. am. ar.....	℥i
Aq. cinnam.....	℥vi
Syrupus.....	℥xvi

This I consider an improvement. It is clear, keeps well, and has a decided aromatic taste, but it is yet rather bitter.

(3) There are obvious objections to the use of an alkali, should the aromatic cascara be prescribed in combination, and here a neutral syrup would be preferable. Now, the carminative tincture of the B. P. covers a multitude of unsavoriness, and I tried it as follows:

Liq. carcarae sagradae.....	℥viij
Tr. aurantii.....	℥ij
Tr. carminativae.....	℥i
Glycerin.....	℥viij

Now I look on this as quite a delicious formula, but I am reminded of Bentley's criticism of Pope's "Homer": "It is a very pretty poem, Mr. Pope; but you mustn't call it Homer." This is a palatable elixir, but one can hardly call it a syrup. For a modification one may try:

Liq. carcarae sagradae.....	℥xvi
Tr. carminativae.....	℥iv
Alcohol.....	℥ij
Aq. cinnam.....	℥vi
Syrupus.....	℥xvi

which at least is better than the B. P.

(4) Everybody knows that liquorice disguises the taste of cascara fairly well, but the bitter after-taste persists, and requires an aromatic to modify it. The following modification does so:

Liq. carcarae sagradae.....	℥xvi
Aq. cinnam.....	℥ij
Liq. ext. glycyrrh.....	℥ij
Alcohol.....	℥ij
Syr. zingiberis.....	℥xij
Tr. aurant.....	℥iv

(5) Questioned as to the sense of retaining saffron in decoctum aloes co., the Pharmacopoeia revisers asserted it was the sovereignest thing on earth to disguise the taste of aloes. Saffron, of late, has been publicly denounced as inert, but it certainly covers the taste of cascara in the following formula:

Liq. cascarae.....	℥viij
Liq. ext. glycyrrh.....	℥ij
Tr. aurantii.....	℥ij
Ol. cassia.....	℥m. ij
Syrupus croc. (1 ad. viij).....	ad. ℥xx

(6) Next I proceed to plagiarize. The American cascara cordials are by far the most popular in the

*Read before the British Pharmaceutical Conference.

market, and it becomes necessary to try a variant of the published recipes, such as one finds in the "Pharmaceutical Formulas":

Liq. cascarae sagradae.....	5i
Liq. ext. berberis aquifoliae.....	5iv
Alcohol.....	5iv
Ol. coriandri.....	m. v
Ol. anisi.....	m. ij
Ol. aurantii.....	m. ij
Ol. cassia.....	m. i
Syrupus.....	ad. 5jss

This does not keep well, is somewhat muddy, and obviously is much overcharged with volatile oils. Many might like the flavor, but de gustibus non disputandum est.

(7) Berberis aquifolia is rather an innovation in these countries, so we must try a formula without it. This I rather like:

Liq. ext. cascarae sagradae.....	5i
Alcohol.....	5iv
Ol. coriandri.....	m. v
Ol. anisi.....	m. ij
Ol. aurantii.....	m. ij
Ol. cassia.....	m. i
Ext. glycyrrhizae liq.....	5ij
Syrupus.....	ad. 5jss

Now, if there be any fruit from this little series of experiments it is this: The proper aromatics to flavor cascara are orange, coriander, anise, and cassia, while liquorice is an almost essential constituent. If I had to select one special formula, it would be this:

Liq. cascarae sagradae.....	5i
Liq. ext. glycyrrhizae.....	5ij
Ol. coriandri.....	m. ij
Ol. anisi.....	m. ij
Ol. cassia.....	m. i
Tr. aurantii.....	5iv
Ol. aurantii.....	m. i
Syrupus.....	ad. 5jss

Finally, if the subject be trivial, blame the Blue List; and if the formulas be commonplace, they will be improved by your criticism.

ADVICE TO BOYS AND YOUNG MEN ENTERING BUSINESS.

By JAMES A. SHAW.

The average boy starting out into business life does not appreciate the importance and seriousness of the step he is taking; the failure of many may be due to that fact. If they are fortunate or unfortunate enough to be situated where attention to business and accuracy make no difference, they may drift along until they commence to think for themselves and realize that their success depends entirely upon their own efforts. A boy's future should not depend upon luck or chance, however, but upon the solid foundation of a proper start and a thorough realization of his position; what is expected of him and the reward in store for him for the successful accomplishment of his work.

Too many start out blindly. They haven't any idea as to what they want or are aiming for, but drift along in a haphazard way, thinking more of their salary at the end of the week than the success of their work.

If a boy could commence business life with even a small portion of the judgment and common sense he enjoys later on, how differently he would act. As he cannot start that way, however, with his own knowledge, why not profit by that of others and benefit by the observation of those who have learned by experience and can give such advice as will do much good, and perhaps assist in his success. In the first place, too many boys in entering into business fail to realize the dignity of their new life, but cling to their boyishness and schoolboy pranks, which seriously interfere with their work and are a handicap to their own success. Such foolishness will not be tolerated in business, and the sooner a boy learns it the better for himself and employer. It isn't necessary for him to assume the air of an old man; but that he attend to his work during business hours and forget the time-wasting and useless nonsense so many boys are guilty of.

Business men want people around them that will attend strictly to business, and if a boy cannot start out on that basis he had better not commence until he knows he can. A boy starting at the bottom, as he should in order to secure a good foundation, is

liable to think that he does not cut much of a figure in the success of the business, and so allows those duties for which he is responsible to remain undone or drag along in a slipshod manner. He could not make a greater mistake; he must do all that is given him to do in the most accurate, prompt and gentlemanly way possible. If in doubt he should ask for information rather than make an error, but for the development of his own mind he should not ask assistance unless he is sure he cannot figure out the work correctly. Not only should he perform his own duties promptly and well, but he should not be afraid to do a little more than is expected of him. Employers notice all these things, though the boys sometimes think they do not, and if one shirks his own work or seems unwilling to do more than his own, he retards promotion if he does not lose his position. His responsibilities may seem small and unimportant at the start, but they must be done to the best of his ability, for unless he proves himself competent to master the little things he will not be trusted with the more important positions and work. Every boy should aim to do all his work at least a little better than any one else can. He should give it thought, figure out how he can save time and money for the firm, and yet improve the character of the work done, thereby making himself necessary to his employers and his service invaluable. He should study economy in the transaction of that part of the firm's business he is looking after, and try to find short-cut methods of doing certain work that will serve the purpose, but save time and money. Suggestions are always in order. He must always be in his place of business on or before the time expected, and if sickness or anything makes him late he should immediately explain it to his employer. During the day he should not watch the clock. It is time enough to go home or think of it when his work is all done. If he runs out of duties he should look for more. The more he can do and do well, just so much more does he increase his knowledge of the business, responsibility and value to the employer, as well as fit himself for larger and more important duties.

Do not think, my boy, that if you do that and thereby prove your ambition and interest in the welfare of your employer that it will not be noticed and rewarded when a better position occurs, for it will. We want bright, ambitious boys around us, prepared by their experience in the humbler positions to fill higher ones as they become vacant. If you have been doing your work well and shown your desire to advance by learning all you can about the work higher up, you are just the one we want to step into the shoes of the fellow who is leaving to better himself or has not done his best and so compels us to give you the position, which you have shown you deserve by hard work, attention and accuracy. We would greatly prefer having you take the place, for we know you and you have demonstrated your value, while at the same time it saves us the annoyance of bringing in an entire stranger and teaching him many of the things you should know about if you have kept your eyes open. We do not want boys who are not ambitious and capable of filling the better positions after proper training and development; but we do want and insist upon having in the lower places bright, wide-awake boys to fill better places in case of necessity.

ANTISEPTIC CASTOR OIL.—Although castor oil is the best aperient for children, it has in itself no antiseptic action. F. Blowski recommends that benzonaphthol and resorcin should be dissolved in the oil. The formula employed is resorcin and benzonaphthol of each 20, castor oil, 260, or resorcin and benzonaphthol of each 10, castor oil, 280. The doses are the same as for castor oil. Salol is not suitable for use as an intestinal antiseptic in this way, on account of the large amount of phenol it liberates. In the above formula the resorcin disinfects the stomach, and the benzonaphthol the intestines, by splitting up into benzoic acid and beta-naphthol.—Pharm. Zeit.; Pharm. Journ.)

BUSINESS PHARMACY.

The Experience of Druggists with Profit-Bringing Methods. Hints and Suggestions. Original Papers from Practical Business Druggists. The Various Phases of Drug-Store Management and Economy.

WHAT IS THE COST?

By J. T. PEPPER, Woodstock, Ont.

It is surprising how many good business druggists there are who deceive themselves regarding the amount of their profits, or, in other words, they do not calculate closely how much it costs them to conduct business. Of course, we agree with the people that drug profits are large, and in cases where profits are in such a satisfactory condition it can make little difference if the druggist does not figure closely, but if the profits are small, the neglect of careful estimation may be disastrous.

We sometimes hear druggists say that it only costs 10 or 12 per cent. to run their business, but I think that if the matter was more closely investigated it would probably be found that several items of expense had been omitted, and that the actual cost was nearer 20 to 25 per cent.

Interest on the capital invested should be considered an item of expense at a fair rate, say 5 per cent. A salary for the druggist himself should be figured as part of the expense. All money paid to assistants, whether clerks or apprentices, rents, taxes, insurance, heating, lighting, advertising, postage, freight, express, cartage, as well as all materials used in the store, such as paper, twine, sealing wax, elastic bands, etc., should be included. In fact, the expense of doing business includes every cent paid out, except the invoice cost of goods, and no drug business will last long unless enough profit is added to the invoice cost of goods to cover all expense of every description. Any druggist can make a very fair estimate of how much the expenses of his drug business amount to, and I am sure that if he considers all the different items of expense he will find the cost of doing business is somewhere in close proximity to 20 or 25 per cent.

I have frequently heard druggists remark, when referring to some closely made sale, that so long as they obtained cost they were satisfied, and by cost they meant invoice cost. Sales made in this way close to invoice cost are made at a loss. If the invoice cost of a hot water bottle is \$1.00 and it is sold for \$1.25, it is easy for the druggist to deceive himself and say that he had made 25 per cent., but if the cost of doing business is 25 per cent of the sales, the hot water bottle has been sold at a loss of about 6 per cent., instead of at a profit of 25 per cent. It is necessary to remember that 33 1-3 per cent. should be added to the invoice cost to cover the expense of 25 per cent of the sales. You can easily figure this out. Add 33 1-3 per cent. to \$1.00 and you have practically \$1.33; then deduct 25 per cent. and you are back to the invoice cost of \$1.00. So you see that in order to have any profits accrue to the drug business you must add more than 33 1-3 per cent. to invoice cost; that is, providing the cost of doing business is 25 per cent. of the sales. Perhaps 20 per cent. would be a nearer average of expense for a greater number of drug stores than 25 per cent. It is easy to add this rate of expense to invoice cost. Twenty per cent. is one-fifth. If the invoice cost of a hair brush is \$1.00, add one-fifth of \$1.00 and you have \$1.20 as the actual cost. It must then be sold for some amount above \$1.20 in order to have any profit accrue to the business.

This fact being established that actual cost to the druggist is invoice price plus one-fifth. I fear that all

druggists frequently sell to physicians at a loss. If a pharmaceutical preparation costs the druggist \$1.00 a pound or pint, and he adds one-fifth to obtain actual cost, which would be \$1.20 a pound, and then sells it to a physician at \$1.10 a pound, he certainly is selling it at a loss. Thus, if \$10.00 worth of goods are sold at an advance of 5 or 10 per cent. over invoice cost, it will be necessary to sell another \$10.00 worth of goods at an advance of 40 or 50 per cent. above invoice cost, in order to keep the business on a paying basis. Of course, this is done in the drug business, and on account of other profits being larger, the druggist comes out all right at the end of the year with a good average. But if he sold no goods at less than actual cost, his total profits would show an increase.

The patent medicine man comes along and wants to sell us his prescriptions at \$8.00 a dozen, and tells us that we sell it at retail for \$1.00 each, thus making a total of \$12.00 for what cost us only \$8.00, and he says that we make 50 per cent. by pushing his remedy. Do we? Only apparently, not practically. Where druggists cut prices and sell patents for 67 cents that cost them \$8.00 per dozen they make a loss every time they make a sale.

A SMALL LABORATORY IN A SMALL TOWN.

By OLIVE GREEN, Whiting, Kas.

Of course a small laboratory in a drug store in a large town pays, but can we not have a small laboratory in a small drug store in a small town that will bring us a nice profit.

It will be seen that the most of things that are needed in the laboratory are also needed and used at the prescription case, so that the expense of fitting up a laboratory is not great. By beginning on a small scale and gradually adding more apparatus as it is needed it will not take long before you can have a nice laboratory. Above all things, try at the very first to make the laboratory pay for itself. If it does not, the best thing is not to have one.

So often in a country town there are boys who would like to stay in a drug store. If you are so fortunate as to have a good apprentice you can do him a great service and also turn his time into money by having him put in his free moments in the laboratory, thus preparing him for some good school of pharmacy.

In the first place, care should be taken in selecting the apparatus. Do not try to buy the largest articles in the market, but select the very best that is made in medium size. About the first thing needed is a one-burner gasoline stove. This is really needed in a drug store, where there is any pretense of a laboratory. Hot water is needed nearly every day in the year. An alcohol lamp is very convenient, but it cannot take the place of a gasoline stove. The next thing needed is a nest of beakers, also one of test-tubes.

If you are in the habit of using the metric system in prescription work, use it also in the laboratory. It is more convenient than the old system, but at the same time do not use one in the laboratory and another in your prescription work.

Of mortars we need three sizes to begin with—a four-ounce, an eight-ounce, and a sixteen-ounce. We should have five glass graduates—sixteen-ounce, an eight-ounce, a three-ounce, a one-ounce, and a dram. We can get along nicely with two glass funnels—one a four-ounce and one a sixteen-ounce. Always get

good white filter paper. Never use the gray just because it is cheaper. A copper water bath with a steam escape tube in it is oftentimes needed. If you need a sand bath, an old iron teakettle cover can be very nicely converted into one. A retort I came near forgetting, and we could do nothing at the laboratory table without one. Any old counter or table will make a good laboratory table by the expenditure of a few hours in making shelves, one drawer and a board that can be pushed in when not needed.

It is almost useless to say what you can make in a laboratory like this one is supposed to be. All the official waters, powders, syrups, etc., can be made nicely. Most of your solutions, mixtures, everything, in fact, that is easy to make. Don't at first try to make some complex preparations, but begin with something that is very simple. There is nothing that counts so much as one's own experiments. Make your own seidlitz powders. Of course it takes time, and time is money, but in a little town a druggist is supposed to have so much time that he becomes dusty with the outside world—yes, even dusty as to the contents and proportion of each of the ingredients in the seidlitz powder. This is only one article that a druggist may make himself; there are many more. Find out what elixirs your doctor uses, and what combinations he likes; then make them yourself and have him try them. Take him into your laboratory and tell him when he wants any particular thing in your line just call on you, even if it is only to make a poultice for some poor unfortunate being.

I think that many druggists who have not a laboratory will find one of great assistance, and also a money maker.

SOME POINTERS.

By DIOGENES.

With the many points which the pharmacist of the present day has to look for in the conduct of a successful business, there is one which, I fear, has been somewhat overlooked; and that is, the sizing up of his customers and knowing just how to treat each one. And to be able to rightly size up a person is no small task either, as will be proven if one takes the trouble to give the matter a little study. The old chestnut of "fine weather we are having just now, Mrs. B.—," invariably sprung on the waiting customer, is not, of course, out of the way, but the church woman would much rather have you inquire how the last social turned out, or the sport as to the probable winner of the next handicap, and they are lead to think that you have taken some distinct recognition of them and will be very apt to drop into your store the next time anything in your line is wanted by them. This method of winning and holding customers has been impressed upon me several times during my experience in the country stores, and I recall one place in which it was the habit of the proprietor to let his clerks go forward to wait on the customer and, while waiting for their purchases, he would engage them in conversation on the special subjects in which he knew them to be interested, concluding usually with some joke, no matter how aged or antique it might be. This leaves a good impression on the minds of the customers, and they do not hesitate to tell their friends of the fine treatment which was accorded them down at A's or B's pharmacy the other day.

Another thing which conduces to a successful carrying on of a business is advertising; and by this is not meant the running of an entire newspaper, but there are various other and less costly ways of keeping one's name before the public. Among these may be mentioned keeping the store bright and clean, thus showing a desire to be up to date, for the dark, dingy, dirty store reminds one of ages past and gone. Courtesy and affability on the part of the clerks is likewise a great factor in advertising a store, for the old adage that "molasses will catch more flies than vinegar" proves just as true in the drug business as any other place. A good window display also adds to the

appearance of the place; and by this I do not mean that it should look like a junk shop, as some that are seen closely resemble, nor should it be packed with goods marked down from nine dollars to ninety-nine cents, for the public may become sceptical as to their quality; but good, reasonable goods which the passer-by is on the lookout for at that particular season of the year. Remember that the public can be humbugged some of the time, but not all of the time.

In conclusion we are reminded of the thought that a good name is rather to be chosen than great riches, but in our line of business if one can get that good name well before the public there is little doubt that the "great riches" will follow as a natural consequence.

SHORT NOTES AND PHARMACEUTICAL SUGGESTIONS.

By A. B. BURROWS, Takoma Park, D. C.

At the next meeting of the committee for the revision of the Pharmacopoeia the subject should be discussed relating to the necessity of placing tincture of iodine in the class where it belongs, with the spirits. The official spirits are described as being alcoholic solutions of volatile substances, and if iodine is not more volatile than camphor we are much mistaken.

For numbering prescriptions the handiest thing we have yet found is one of those small, cheap, rotating rubber machines which can be bought for the trifling sum of twenty-five cents, and which can be universally used on small pill boxes, powder boxes and labels. How many druggists make mistakes in numbering prescriptions, when for this trifling sum they can preserve accuracy in their numbers. For writing prescription labels, or copies of prescriptions, or lengthy directions, druggists will find it will pay them to use a typewriter. Now it is not every typewriter that is adapted to the druggist's needs, but we find that the "Blickensderfer" fills the bill. If, however, druggists will stick to the pen, why not save a great deal of annoyance by using fountain pens? Have three or four arranged in convenient holders like the illustration, and writing will be a pleasure. (Fig. 1.)

Fig. 1.—A. is a bored cork or piece of wood secured to the edge of a shelf or to wall.
B. is the cap or cover to a Waterman's Ideal fountain pen.
C. is the bowl or reservoir of same. The cover fits tightly into cork or wood that the other part may be withdrawn when to be used.

A New Use for Hunt's Bottle Caps.—Reverse and place them on the inside of round pill boxes. This makes a neat lining to the boxes and is much appreciated by the customer. (Fig. 2.)

Fig. 2.—Hunt's bottle cap arranged on the interior of pill box.

Why will druggists fume and sweat over making suppositories in warm weather, when they can make them cold and shape them with the hand or spatula by mixing powdered cacao butter with 25 per cent. of wheat flour and very little vaseline. A finish can be put on them after shaping by pressing gently into a mold.

Improved Zinc Ointment.—Make a paste of the oxide with water. Rub down fine and mix with the base either benzoated lard or petrolatum. During the process of mixing, if petrolatum is used, the water will be forced out, and should be poured off. To facilitate incorporation of the watery paste, add a little lanoline. If warm water is used, it will form a hydrated oxide of zinc which is smooth and makes a superior ointment without much labor involved. This formula has been criticised because petrolatum has been recommended and is not absorbed. The desirability of having a 20 per cent. oxide of zinc ointment absorbed by the pores of the skin does not strike us forcibly. It is not intended to be absorbed, being merely a protective and external antiseptic.

SHOP TALK.

The Era man was shown a very good thing in the way of an emergency case by the owner of a Philadelphia drug store located in the neighborhood of several large mills and workshops. It is a box with a wide drawer in the bottom and about two feet long, a foot wide and about a foot and a half in depth, made of pine wood and kept under the sundry counter in a space made for it, closing with two doors. In the box are bottles containing Carron oil, lime water, solutions of carbolic acid, mercury bichloride, sodium bicarbonate, etc., emergency remedies like aromatic spirit of ammonia, whisky, ipecac, etc., which are kept in place by strips of wood dividing the space into little squares, while the drawer contains medicated gauze, absorbent cotton, lint, bandages, plaster, oiled muslin, pins, needles and thread, etc., etc., articles that are needed for dressing wounds, cuts and so on. "The reason I keep this emergency case" said the druggist, "is that hardly a day passes but that I have some one come in from the nearby mills with more or less serious injuries and generally the serious ones would come in at the most inopportune times, so after wasting lots of time one day getting things out to dress a man who had had his foot crushed, I decided to fit up a box that would hold everything likely to be needed in such cases and to put it in a handy place. Of course, in serious cases I do not try to do anything more than to control the flow of blood and to cleanse the wounds and put on first aid dressings until the ambulance comes, for I have learned that a thorough cleansing and such dressings are the best help the surgeon can have. Minor cases either I or my clerks dress and we have a fixed scale of prices for such services based on the value of the materials used; we do not charge for the service, that would bring us up against the law and the doctors, only for the dressings used and we often sell quite a goodly amount of dressings for use after the first one is removed. I find this practice pays me well, so well that I and both of my clerks have taken a course in "first aid help".

What would be to many a novel sight may be seen at a drug store located near Philadelphia's "Chinatown" nightly, Chinamen in blouse and baggy trousers sitting at the soda fountain sipping soda water through a straw or scraping up ice cream from a glass with a spoon. The Chinese seem to be partial to strong flavors like sarsaparilla, ginger, lemon, raspberry and orange, not going in much for the more delicate and lighter kinds and have taken to ice cream soda with great delight. The owner of this drug store says that he often has the same Chinamen in four or five times a day for soda water and that they come in groups of three or four almost as often, one of their greatest pleasures seeming to be the bringing in of a novice who gags and splutters at the unaccustomed beverage

to the great delight of the others. Quite a number of Chinamen scattered over the city at the various laundries have taken to sending over to the nearest drug store for a "growler" of soda.

A South End drug store in Boston has a clever arrangement whereby the attention of all passers-by is called to the place. On the outside of the large show window at the top, a small pipe is placed, running way across the width of the window. It is not unlike a curtain roller, in its appearance and position. It is well perforated with small holes and is connected with an inside pipe supplying it with water and by its use it is possible to have a continuous shower, in small jets, streaming down the window glass with charming effect. This is especially so in the evening, when the colored globes from the window reflect their rays through the water-covered glass. As an attraction it proves a great success, for it arrests the attention of everyone who passes the place. Moreover, on a warm evening it seems to freshen the atmosphere wonderfully. By the way, it is a curious fact, little known, probably, that Moorish druggists of Arabia were the first to display colored globes in their windows.

The Columbia Drug Company, Monroe street, Lynn, recently has had a window exhibition which, although strong in drawing power, was certainly rather greswome. The window contained a large wire-covered box filled with many snakes of various kinds, including several ugly-looking rattlers. There also were water moccasins and other reptiles, all twisted and squirming and never still a minute, to all appearances. There must have been several dozens in all in the big box. Then all around the box were skins or serpents of all varieties, including the mosaic-like skin of large boa constrictors, anacondas, pythons and serpents of lesser size, and there were belts and purses and many other articles made from all these skins, the whole making a varied exhibition which attracted a crowd at all times. It was all done to call attention to the virtue of a snake oil liniment of some kind, guaranteed to cure all manner of aches and pains.

It is a good deal of a knack to dispose of "dead" stock, but one of the leading St. Paul druggists has the science done pretty fine. John Jones will drop in with: "Mr. Powders, my horse has a stiff knee. What's good for it?" Mr. Powders promptly produces a bottle of liniment that nobody has called for for years and sells it to Mr. Jones at standard price. And so it goes. Whenever some ailment is reported by a customer and no particular medicine is called for, Mr. Powders works off "dead" stock and does this to such an extent that it really is far from "dead", though it sleepeth. This kind of stock is kept in as conspicuous a place in the store as any other and Mr. Powders hasn't lost a dollar on it yet, nor does he propose to.

The placard has always been a valuable medium in keeping before the public the features and qualities of the tradesman's stock, but its use has been extended in an effective manner by a large number of enterprising up-town pharmacists. The cards are gotten up in funny colors and designs in large quantities of a uniform size, containing different announcements and are neatly framed. They are then hung around the top of the shelving case, forming a striking fresco that always attracts attention. The cards are changed about once a week, the same frames being used. This style of bringing goods before the public and announcing special preparations has been introduced into about ten prominent up-town stores.

EUCALIN HYDROCHLORATE may be combined with 2 per cent. sodium sulphate for subcutaneous injection. For application to mucous membranes when local ischaemia is desired it should be followed by or combined with suprarenal extract.—(Medical Record.)

THE COMMERCIAL SIDE OF PHARMACY.*

By W. LAMOND HOWIE.

After spending a long time at college, where the scientific studies have more than filled the days, after hard-earned congratulations, one cannot wonder that the student is apt to be imbued with the idea that pharmacy is a profession, and that the commercial element, that business, will play but a subordinate part in merit, that business, will play but a subordinate part in merit. Nothing could be further from the truth. Most of you have heard the growl of the "old chemist and druggist," who holds that as an assistant the college man, the brilliant student, if you will, is of little use. Laboratory and book work have spoilt him. Who will deny that our ranks have furnished many justifying examples? There are those who, on leaving college, seem to think that there is now no more to be learned. This attitude is that of the artisan. Mr. Druce's bricklayer, for example, who, when he becomes a journeyman, by mere length of service and independent of ability or the want of it, claims and is paid journeyman's wages. It must be neither more nor less; his trades union wills it so. Surely, the man of education does not set up the artisan as his model. No, gentlemen, your college life, instead of turning you out a finished article, will have furnished you with axiomatic principles, and taught you how to apply principles, so that with this golden key you may be enabled throughout life to unlock chamber after chamber of the storehouse of knowledge. Leaving his school in this mind, the wise man continues to add to his information, picking up bits of scientific as well as practical and business detail, and if he is observant he soon discovers how very largely the business element begins to bulk in his life. He will find that the pursuit of knowledge for its own sake has called no college of pharmacy into existence. Men have not studied our essential departments of science for pleasure. It is impossible to practice pharmacy as a profession. In order to earn a livelihood by pharmacy—I use the word in its widest sense—we have to go into the market place; we have to buy and sell.

In a word, it is found that pharmacy is essentially a business, and that college training is over, the acquisition of the commercial and the practical must now engage all the student's energies. At this point of his career he may show to a disadvantage alongside of the unqualified assistant who has uninterruptedly been extending his practical experience. It is now that the growl of the old-time chemist and druggist is justified. But who shall say that the relative inferiority of the educated to the uneducated can be permanent? It ought not to be; other things being equal, it cannot be. Once a student, always a student; I mean the true student, the man of open mind and observant eye; and so our student, the major man even, whom the old chemist and druggist distrusts most of all, will continue to investigate and study carefully all that makes for progress. He will find that in pharmacy business which he must not neglect is not limited to the mere arithmetical acts of buying and selling; but that science, morals, energy, all the arts and graces may be rungs on his ladder of success. He may say truthfully that science is business, that morality is business, that energy is business. His college training will be found to be the chief factor in making him in the end a successful business man. Now, it is not my purpose in an after-dinner address to teach; I leave the details to others. I only hope my words may inspire. Remember that science without business will avail you little. They must go hand in hand. As well could an omnibus go without wheels as a mere scientist be a pharmaceutical success. Pardon the crude simile suggested by the noise of the streets. You may have your wheelless omnibus packed with all the sciences, the minor degrees inside and the higher flights of the minor filling the garden seats on top. This load of science will not compel progress.

Mount your omnibus on wheels and see that for team you have capital, then your well-laden vehicle can be easily driven on to fortune.

Had the great Napoleon lived at this end of the century, his famous sneer that we are a "nation of shop-keepers" would have been pointless. It would nowadays merely indicate that we held a pre-eminent position of which other nations are showing themselves to be covetous. These nations now do too much of the selling, we English do the buying. Germany and America are giving all attention to business training. The Philadelphia College of Pharmacy and other American colleges have added commercial classes to their curricula. We must look to our laurels—never forget that commerce has made Britain powerful among the nations of the earth. It was not her arts and science, nor her literature, nor her military genius, although these are no mean qualities; she has been excelled in all. The supreme attribute exhibited during the past century has been the commercial genius of Britain's sons. Their untiring energy, their business tact, their pluck and resource have carried her flag far beyond the sound of her guns. You whom Ibsen calls "the younger generation knocking at the door," this is your heritage; each has his share of his country's credit, and each will be answerable for it. Aequit yourselves, therefore, of the honorable duty incumbent upon each one of you. You now have your opportunity.

Time was when a college-bred pharmacist was one of a thousand. The chemical laboratories of my early days were meager and simple beyond modern belief. The equipment of the best of them might have been purchased for less than your principal has thought fit to expend on one of his balance rooms. The ordinary pharmacist was then content with small things. The world demanded little of him. His pharmaceutical knowledge was obtained from a meager, unchanging library of standard works. Our leaders, however, were awakening; waves of suggestion were following each other from the Continent, and even from America. In 1868 the Pharmacy Act was passed. This was followed by a scientific awakening, and that again by a wave of cram which squeezed crowds of men, many without professional pride or feeling, through the ever-stiffening examinations. This transition stage has been a sad one for pharmacy, alongside the manufacture of what I might call the artisan pharmacist—the sort of man who leaves all scientific interest behind him when he finally steps out of the examination room—we had the rise of what has been called the socialistic great limited companies. To these our weak brethren turned, lured by the high salaries offered to qualified poison venders. Whether an early enforced curriculum would have modified this movement—who can tell? It is, I think, undoubted that in such service many have found a business and a scientific grave. I may be wrong—correct me, if I am—but I think with only one or two exceptions we look in vain for advancement or help from that great army of qualified men who make the practice of pharmacy by grocers, brewers, and half-pay officers limited, possible. You know that were it not for pharmacists, company store trading would be impossible, dispensing departments could not remain open for a single day; no poison can be sold without our personal aid. What a future for pharmacy, handing ourselves over, body and brain! All that is professional in us farmed for the payment of dividends to outside capitalists. The educated pharmacist brought to the level of the publican in the tied house belonging to the millionaire brewer! But is that business? Certainly not for the pharmacist whatever it may be for his Masters, Limited. Be ware, therefore, of any unprofessional conception of your calling; be careful how you help the further growth of this hydra, which is already, perhaps, too strong for subjugation. Remember your business interest is to retain your independence. In that independence alone can true advancement be possible. Some say that cheapness is everything. Receive that statement with a critical skepticism. The world is not entirely peopled with bargain hunters. Offer it

*Address delivered to the students of the Metropolitan College of Pharmacy (London). (Journal of Pharmacy National Druggist).

of the best. All of us like to be well served, and most are willing to pay for such service. In all departments of work there are they who have set themselves to produce the high class. They have their just reward. It is well known that the higher you go, it you carry your skill with you, competition becomes less strenuous. "There is always room at the top." It is among the producers of the cheap that competition is keenest.

With such a training, therefore, as you have had, do not play to the gallery. Perfect yourselves. The world is calling for the best, but there are few who offer it. Excelsior is a grand watchword. It is the most inspiring motto for a business man. By the exercise of ability, aided by insight and foresight, business knowledge and determination, not forgetting those more amiable qualities which shall carry you serenely above the "rude banter of the market place," business or profession, whichever you like, there can be but one issue, and that an abounding success. In my mind's eye I can see your mathematics bearing fruit, and as in the laboratory you found that a molecule of a monobasic acid would but neutralize a molecule of a univalent alkali, so in business you will find that a sovereign will only pay a twenty-shilling bill. And to carry the simile further, just as you may add your acid uselessly beyond saturation point, so you may, by going into a bad market, wastefully pay twenty-five shillings for a sovereign's worth. I hope your analytical experiences will enable you to precipitate the precious metals into your till, and who shall say whether, when you are worried by the gaseous vapourings of some irate customer, what your knowledge of the uses of the fume cupboard may not serve you? The grace and beauty of botanical forms may live again in your well selected labels and decorations, and the sweet odors and color of the wayside blossoms in your creams and unguents. Natural science will make the mechanics of photography and optics easy. You must never allow your scientific attainments to rust. There are now technical schools and polytechnics for all classes, and we find the modern brewer and baker, even the butcher and milkman, call in help from science; and you who propose to occupy a higher plane than they must not forget the necessities of modern competition. Keep before you the great principle—the only law by which your existence can be justified—that you are fitter than others for your position. Always keep abreast of current trade literature.

Finally, and in a word, I ask you all to attain if possible the major qualification. If you cannot see an immediate occasion for its use, it will keep, and cost nothing in the keeping. Its day will assuredly come. This is good business. Then do not forget your duty to your craft. Have a voice in the management of your own affairs; this can best be done by being a member of the Pharmaceutical Society. All is then open to you. This also is business. Then there is the "Benevolent Fund." Every man of you should make it a point of his pass year, whether he joins the society or not, to put his name down for at least the one vote—half-crown. The sacrifice of a single evening yearly at the theatre will do it. Do not, therefore, let our unfortunate brethren languish while we enjoy the feasts of fat things. Even this is business. I am reminded that should the evil day come to ourselves, all the votes we have given will be counted again to us. What magnificent business!

Pray do not misunderstand my eulogium. I do not preach that business is supreme. I do not ask you to believe that we have had too much of science, but rather that of late in pharmacy we have had too little of the practical—too little of business, which is, after all, subordinate. The discoverer of the least part of our knowledge is the scientist, the maker of empires is the scientist. The mere practical man is his hewer of wood and drawer of water. Science conquers all. Who that has seen the evolutions of an army in the field but has been struck with the magnificent display of apparently irresistible physical life? You may remember the fearless horsemen of the

Mahdi, who at the battle of Omdurman, despite their dauntless courage, were swept in their thousands out of existence by the cold, calculating science of Hiram Maxim. The Maxim gun, you know, saved Upper Egypt for England. What I wish in these last words to emphasize is that, while making the most of the business side of life, and, despite insularity, Englishmen are yet the best business men in the world; we must bear in mind that, whether conducting a national war, running an ocean liner, or a pharmacy, the victory is ultimately with science.

SOLUBILITY OF CAOUTCHOUC AND GUTTA-PERCHA.*

Diluted acids and concentrated alkalis do not attack caoutchouc, either at ordinary or at raised temperatures. Concentrated sulphuric acid decomposes it, likewise concentrated nitric acid. Six parts of fuming nitric acid give, with one part of caoutchouc, a solution, with effervescence, which is precipitated in a flocculent state by water. When caoutchouc is digested for some time with spirit of sal-ammoniac, it passes into an emulsion-like condition, and gives a liquid with it, which leaves pure caoutchouc upon evaporation. Neither cold nor hot water dissolves caoutchouc, though boiling water extracts from several varieties some resinous substance. In warm water it becomes very soft, and swells considerably, making the whole mass more accessible to solvents, but prolonged exposure to the air restores it to the former state.

Payen found that a thin disk of caoutchouc upon lying in water for thirty days absorbed 18 to 26 per cent. of water, and that in case of an absorption of 18 per cent. its volume increased 15.75 per cent. and its length 5 per cent. Absolute spirit of wine penetrates caoutchouc still more rapidly, especially when it is repeatedly heated with it to ebullition. The weight of the piece increased 18.6 per cent., the volume 9.4 per cent., the length 4.6 per cent., the spirit even dissolving 2 per cent. of the caoutchouc besides. In ether, turpentine oil, and a mixture of 100 parts of carbon disulphide and 4 parts of absolute spirit of wine, it swells up to 27 times its volume; in a mixture of 6 volumes of anhydrous ether and 1 volume of absolute spirit of wine, to 4 times its volume; in rectified coal-tar oil up to 30 times its volume. Ether, benzene, carbon disulphide and turpentine oil permeate caoutchouc and cause it to swell up strongly, a portion being dissolved, but tenaciously held back by the insoluble one, so that for extracting it large quantities of the solvent are required. According to Payen, caoutchouc soaked in carbon disulphide dissolves rather quickly in spirit of wine. In 6 to 8 parts per 100 parts of carbon disulphide it is again precipitated from this solution by admixture of double the quantity of spirit of wine, but it encloses much carbon disulphide and spirit of wine, so that it subsequently dissolves again. By repeated precipitation and re-dissolution it can be obtained in a transparent solution free from dyestuff, and the other substances occurring with it. Parkes recommends as dissolvent the liquid, which is obtained when sulphurous gas is conducted over camphor until the latter has deliquesced entirely. In fats, volatile and unctuous oils, it also swells up considerably, dissolving in many; it dissolves very well and easily in caoutchouc oil obtained by the dry distillation of caoutchouc.

As a rule caoutchouc is dissolved by lavender oil as well as by turpentine, but by linseed oil only when warm. Bouchardat has made the observation that turpentine oil, by repeated distillation at a higher temperature, alone or over bricks, undergoes a change which renders it far more suitable for the dissolution of caoutchouc. With all dissolvents attention should be paid to an absolute freedom from water; it is also advisable to dry the caoutchouc for some time before

*Translated for the India Rubber World from Neuste Erfindungen und Erfahrungen.

the dissolving, and very commendable are a previous boiling with soda solution or caustic soda lye and careful washing and drying. Most solvents do not dissolve the caoutchouc completely. If a complete dissolution of the caoutchouc is effected at a higher temperature it suffers a decomposition, the solutions do not contain unchanged caoutchouc and on evaporating leave behind a mass of softer consistency and absolutely different qualities, so that it dries only with difficulty, even in thin layers.

According to Hanausek, oil of turpentine and coal benzene are especially good solvents for caoutchouc; 100 parts of oil turpentine or coal benzene dissolve about 4 to 5 Ceara rubber, 5 parts of negroheads, 47 of Sierra Leone rubber.

The most suitable solvents are ether (free from alcohol), chloroform, carbon disulphide, coal benzene, and purified turpentine oil. For industrial purposes solutions in ether are useless. Turpentine oil only dissolves when very pure and used hot. To prevent the viscousness of the solution, 2 parts of turpentine oil have to be worked together with 1 part of caoutchouc into a thin paste and $\frac{1}{2}$ part of a hot, concentrated solution of potassium sulphide added. When the yellow liquid has thickened, the caoutchouc remains perfectly elastic and is not viscous. If it is desired to unite pieces of caoutchouc, the best solvent is coal benzene, but the odor remains perceptible for a long time. Chloroform being too expensive for ordinary use, carbon disulphide is the best dissolvent. The solution dries quickly, owing to the volatility of the solvent. When alcohol is mixed with the carbon disulphide it does not exercise any dissolving action, but only renders the caoutchouc softer and more fit for vulcanization.

The preparation of a caoutchouc solution is performed as follows: Fill pure caoutchouc, cut in small pieces, in a spacious linen bag and suspend the latter by means of a thread, in a bottle containing one liter of benzene, in such a manner as to completely immerse it. After six or eight days the soluble part of the caoutchouc (40 to 60 per cent.) has been extracted and the insoluble residue has swelled up to an enormous size. The clear, slimy solution containing 1.2 to 1.5 per cent. of dissolved caoutchouc solution is subsequently kept in the dark. In the light the caoutchouc solution decomposes, becoming quite thinly liquid; even in the dark a change takes place, but much more slowly.

In order to bring the total of the caoutchouc mass to a solution, Hoffer causes caoutchouc to swell up in carbon disulphide (the swelling will take place quicker if the well closed flask is allowed to stand in a moderately warm place) and adds, after this end has been attained, 10 per cent. of absolute alcohol for every 100 parts of carbon disulphide. After a few days a complete solution will have formed in the flask, from which, after prolonged rest, all foreign admixtures will settle to the bottom. If the solution is mixed with a large quantity of alcohol, the latter will precipitate the caoutchouc again in a swelled state, while the foreign bodies remain dissolved. By pouring off the brownish solution from the precipitate, dissolving the latter again and repeating the precipitation several times, the caoutchouc is obtained free from dyestuff as a perfectly white or only faintly yellowish mass.

It being desired to employ turpentine oil for the preparation of caoutchouc solutions, the same must be free from water (the caoutchouc itself may be kept anhydrous by drying it for a week previous over sulphuric acid).

The dehydration of the oil of turpentine is conducted in the simplest manner by shaking the oil with about 10 per cent. of its weight of English sulphuric acid in a well closed flask and leaving stand until required for use. The sulphuric acid will form a layer on the bottom of the vessel, from which the turpentine oil may be drawn off. In place of the sulphuric acid melted calcium chloride may be employed with equal success. If large quantities of turpentine oil are to be treated it is advisable to rectify it over burnt lime and to pass the vapors of the oil, before condensa-

tion, through an almost red-hot iron pipe. This changes the character of the oil, rendering it still more suitable for dissolving caoutchouc.

Gutta-percha is insoluble in water, dilute acids, and alkalis; it gives off 22 per cent. of soluble substances to alcohol and ether, and swells up in ether and essential oils to a tough paste. It is readily soluble in chloroform, carbon disulphide, benzene, and turpentine oil upon heating. It is little soluble in hot unctuous oils and separates out again after cooling. From the solution in chloroform, gutta-percha can easily be obtained colorless.

SCIENTIFIC TRAINING FOR PHARMACEUTICAL STUDENTS.

By AN OLD STUDENT.

At this time of year it is customary for many would-be pharmacists to give up for a time the practical study of pharmacy in the shop, and supplement it by a course of scientific training at a school or college. For the especial benefit of such, the following notes have been penned, in the hope that the hints on study embodied therein may prove as useful to the many as they have to the writer.

It is fortunate that under the new conditions of registration as students of the Pharmaceutical Society, the student has to go through a course of study that renders him fairly well equipped for the study of chemistry and physics. Of the different examination certificates accepted by the Society, that which will generally prove most useful to the student, and is here recommended for its own value, is the Matriculation of the University of London.

It is a great loss to the student when, in the course of his work, he finds that, before he can continue, he must retrace his steps to make himself acquainted with things that must be properly grasped in order to understand the matter with which he is dealing, and for this reason he should begin to prepare himself for his curriculum a year before it commences.

To learn by heart the dry and bare facts of a science is not only an excessive tax on the memory and mental power, but furnishes an unutilizable knowledge even when well remembered; yet, just as one has to learn arithmetic, so the student of chemistry and physics ought to begin by committing a number of facts to memory. In chemistry he should know the symbols and atomic weights of the elements and the formulæ of commonly occurring compounds. He should also gather what knowledge he can of their most evident properties, such as their solubilities, and whether they are rapidly or slowly volatile at common temperature. The experience of the pharmacist's apprentice gives him greater opportunities to do this than that of most other beginners. For example, he becomes acquainted with the fact that a sugar solution dissolves more lime than water does, and he knows nearly how much chloroform a pint of water will dissolve.

The Importance of Mathematical Knowledge.

In physics he must begin by directing his attention to mathematics. There is no need for him to enter into all the theorems that one will study who wishes to become a pure mathematician—indeed, it is hardly necessary to say he has no time for this, but he is to know certain theorems, the truth of which has been proved by others, that he may use them as an instrument for his own work. A knowledge of algebra extending to quadratic equations is important, but it would also be helpful to know how to use the binomial theorem.

Geometry is equally important; the student should be so familiar with his subject that he knows without waiting to think about it what is meant when he is told that a certain quantity is proportional to the sine or tangent of a given angle.

Knowing the binomial theorem and how to determine the functions of an angle (sine, cosine, etc.) from those of its parts, it is but an easy step to an ele-

mentary knowledge of the differential and integral calculus, the importance of which in physical science cannot be overestimated.

Thus knowing that the variable diminution of pressure of the atmosphere per foot, as one ascends, is proportional to any height, one is enabled by means of the calculus to write down at once the law by which the pressure can be determined at any height.

If he has not studied elementary statics and dynamics, he ought to learn the composition of vectors by the parallelogram law, in order to be able to determine velocities and forces.

Being equipped with these things, the student will find his work easy and attractive. He will be able to read the text-books fluently and with little fatigue.

The Study of Chemistry and Physics.

Unless there is an opportunity to attend a course of elementary lectures, such as are given by the Science and Art Department at various centers, it would be well to do as much elementary reading as possible before attending the lectures designed for the Minor and Major examinations. For this purpose Atfield's "Chemistry," supplemented by Newth's "Inorganic Chemistry," will serve very well. It is inadvisable to read from more than one author, since one is otherwise apt to fall into a narrow method of treatment of the subject. One could hardly do better in physics than to begin with the little work written by Belfour Stewart. A useful book on magnetism and electricity is that of Silvanus Thompson, but for more advanced study Joubert's "Magnetism and Electricity," which has been rewritten by Carey Foster, is more complete. Deschanel's "Natural Philosophy" is a useful book for general physics. After a certain amount of progress the student will find it desirable to read parts, at least, of several different books which he can obtain from libraries. For a thorough study of physical chemistry, it is necessary to be well acquainted with thermodynamics, and this subject will be treated in Maxwell's "Heat." It may be best not to go too far into organic chemistry before doing practical experiments under the supervision of demonstrators, and obtaining the aid of lectures. A few of the commoner organic reactions can be carried out by the unaided student, and will prove instructive. Such are the preparation of iodoform, and ethyl ether, and the hydrolysis of alkyl salts.

After a certain stage of his progress, the student will be led to consult the standard dictionaries, such as Watts, on inorganic chemistry, and Beilstein on organic chemistry in place of the ordinary text-books. Beilstein is, of course, written in German, and here it may be remarked, that whoever wishes to study organic chemistry thoroughly, will find it necessary to be able to read German. It is not, however, so difficult for the English chemist to read a German treatise on chemistry as it would be for him to read other German literature. The names of substances correspond closely with their English names, so that a knowledge of the grammar and of a small vocabulary is sufficient.

There are two classes of students to whom a few hints of advice may be of service. There are those whose imaginations magnify the difficulty of understanding a problem and there are others who with only a superficial insight believe that they thoroughly understand a law and all its consequences. Both facts are the result of giving an insufficient consideration to the matter. As an example, some men will learn the rules for finding a specific gravity without ever understanding that the numerical result obtained only means the number of the grammes a cubic centimeter of the stuff weighs, or the number of ounces a fluid ounce weighs. Tell such a one the price of a truck of coal, the total weight, and the tare of the truck, and he will tell you at once the price per hundredweight, yet he does not understand the purpose of each of the weighings necessary to find a density. In a certain examination, a candidate was given some pure arsenous anhydride, a solution of iodine, and a sample of arsenous anhydride to be tested by the

iodine after its strength had been determined by means of the pure substance. The unknown sample was pure, and it so happened that the candidate took the same quantity of it for determination as he had taken of the pure arsenous anhydride for testing the iodine.

Both quantities of course required for oxidation the same measure of iodine solution, and this fact should have at once convinced the candidate that his unknown sample was pure, yet by misapplying his ill-understood rules for calculating its strength, he arrived at the conclusion that the unknown sample contained 84 per cent of arsenous anhydride. It is but fair to say that this fault was not due to the lack of intelligence in the candidate, as the writer can vouch, but it was due to the system of cram to which he had been subjected. The occurrence of such cases, it is to be feared are too frequent among pharmaceutical students, and it would be far preferable for men to learn and understand a certain amount with common sense than to learn double the amount parrot-wise. All the considerations belong to such matters as these, when regarded from the point of view of common sense, become very simple, and yet it should be the aim of the student, whether he be brilliant or not, to gain a clear view of his subject by comparing it, as is almost always possible, to simple, everyday analogies. Great help is often afforded in the study of physical science by plotting curves to represent any given changes, such as the change of specific gravity, with increase of temperature or the change of the intensity of light with increase of distance from its source. Such curves need not be more appalling to the student than the curves of barometer readings published in some of the daily papers, and when he becomes familiar with their use he will find that they clearly illustrate and fix on his memory properties that might otherwise have even escaped his notice.

On the other hand, those who readily grasp the principles of a subject must distinguish carefully the attendant conditions under which those principles remain true, and must not draw conclusions rashly, or they may have many things to unlearn before they are out of the danger of committing great faults.

Thus, in dealing with Boyle's law—namely, that the pressure and volume of a gas, however they may be altered, when multiplied together, always give the same result—care must be taken to note that this is only true of a chosen quantity of gas, that the temperature must remain the same, and that if the pressure rises beyond a certain limit the rule no longer holds.

Again, there is a tendency among beginners to assume that because barium sulphate is insoluble in water it would be unaffected in a solution of sodium carbonate. This, as will be learned after some progress, is by no means the case.

Hints on Practical Work.

Practical chemistry includes three different kinds of work: the making of chemical preparations, qualitative analysis, and quantitative determination. They are distinguished by each requiring a peculiar experience for its proper performance, but are alike in requiring careful manipulation. The secret of success in this branch, as in most other things, is diligent practice. Often an experiment or operation appears at first sight too simple to be worth performing, or sometimes the thought, "I have done it before, or something very much like it," is the student's excuse to himself for neglecting it. This is a great mistake: the observant student will generally learn something from the simplest experiment, and something more from repeating it. In fact, up to a certain limit the value of the experience gained is proportional to the time diligently spent at the work.

The treatment of qualitative analysis must be thoroughly systematic. A student was given a substance which he thought looked like potassium bichromate. He proceeded with his examination as far as passing into an acid solution of it some hydrogen sulphide, and, on finding that the liquid became green,

and contained a yellow precipitate, he at once reported it to be potassium bichromate. It happened to be ammonium bichromate.

If a student finds a substance to be, let us say, either cane sugar or milk sugar, and if the distinguishing test of these two is not quite conclusive, he is at first tempted to write down the one he guesses it most probably is, and feel content if he has guessed aright. This he is strongly urged to avoid doing. He should convince himself in all possible ways of the identity of the substance before leaving it, otherwise he will never possess the confidence in results which is essential to successful work of any kind.

Quantitative work requires great application. Only by repetition is it possible to assign errors to their proper causes and to know where to expect an error.

It is hardly possible for a staff of tutors to teach a class of students every little detail that they have to learn, and, indeed, it is better for the student that he should cultivate for himself the habit of close application. He who does so will soon notice that after running about twenty cubic centimetres out of a burette a very different reading is obtained immediately, from that obtained after waiting a minute for the liquid to run down from the burette sides. Similarly, a thermometer rapidly heated to a high temperature gives a lower reading when the mercury first appears stationary than it does five minutes after, when the mercury column standing outside the source of heat has itself become heated by conduction. In all cases one should investigate for himself what is the maximum limit of error connected with any operation. When one has done this, and finds that the error of a burette reading comes into the third figure, he will at once know that in weighing a substance to be titrated it is useless to carry the weighing as far as the fifth figure.

Results should always be calculated with the aid of logarithms. For the sake of those who have not learnt to use them, it may be stated that one can learn the method in five minutes; calculations can usually be done by means of them in about one-tenth of the time required by the ordinary method, and when one is accustomed to their use there is far less risk of an arithmetical error. (*Pharmaceutical Journal*.)

FORMALDEHYD IN MILK.

The adulteration of milk by the use of formaldehyde is probably becoming much more common than is generally suspected. For a time its use was a "trade secret," but it has been so thoroughly advertised that every obscure individual who has a milk route is now familiar with the preservative qualities of formaldehyd. In our large cities the health officers are on the watch, and hence in these its use is being curtailed, but in the smaller towns and villages the people have not this protection. It would be well, therefore, for physicians to guard against this and keep it in mind when mysterious illness develops in milk-users. They should also be prepared to make an analysis of milk at any time as to its freedom from the drug. This is a simple procedure, and yet one that requires considerable technical skill in the use of some of the tests. We copy from the *Lancet-Clinic* (*Jour. Am. Med. Assoc.*), the various methods for testing formaldehyd as laid down by Herman Harms, some of which are quite simple:

Rimini Test.—A—Phenyl-hydrazine muriate, 0.5 gm.; distilled water, 100 c.c.; dissolve. B—Sodium nitroprussid, 0.5 gram; distilled water, 30 c.c.; dissolve. C—Soda U. S. P., 15 gm.; distilled water, 60 c.c.; dissolve. To 15 c.c. of the suspected milk in a test-tube add 10 drops of A. mixture; add 3 drops of B; mix and let 5 drops of C run in slowly on the side of the test-tube. In the presence of formaldehyde a blue color is instantly produced, changing, on standing, to red. On adding to the mixture of milk and solution A 2 drops of ferric chlorid solution, and then about 2 c.c. of concentrated hydrochloric acid, a red color is produced, which later changes to orange yellow. In sour milk the above-mentioned blue is supplanted

by green. The Rimini test is easily applied, and readily detects formaldehyd when present to the extent even of 1 part in 25,000 or 30,000.

Phloroglucin Test.—Dissolve 1 gram of phloroglucin in 100 c.c. of distilled water. Put to c.c. of the suspected milk in a test-tube and add 5 c.c. of the phloroglucin solution; shake and add 1 c.c. of solution of potassa, U. S. P. If formaldehyd is present a red color is developed at once, fading, usually, within ten or fifteen minutes; hence, the color must be observed at once. One part in 20,000 gives a decided reaction.

Hehner's Test.—To 15 c.c. of concentrated sulphuric acid in a test-tube add 1 or 2 drops of ferric chlorid test solution, U. S. P., and mix. Then pour upon this, in such manner as not to mix the layers, the suspected milk. A violet color indicates the presence of formaldehyd. In the case of cream, dilute the cream with an equal volume of water, and then apply the test as above described. The violet color is sometimes produced at once, but oftener not for five or ten minutes, and sometimes not for an hour or so, depending upon the amount of formaldehyd present. By this test a part in 10,000 or 15,000 is readily detected.

Liebermann Phenol Test.—In the presence of small traces of formaldehyd, distill off from the milk a few cubic centimeters and add to this one drop of very dilute aqueous phenol solution. Then pour this mixture slowly upon concentrated sulphuric acid in a test-tube solution so as to form a layer. A bright crimson color appears at the zone of contact. This is easily seen in as little as 1 part in 200,000, and in greater proportion in 1 to 100,000. There is a milky zone above the red color, and, if more concentrated, there will be a whitish or pinkish precipitate. Sometimes the zone will appear in about one hour, one-tenth of an inch below the line of contact.

Hydrochloric Test.—Fifteen or 20 c.c. of suspected milk, together with 2 or 3 c.c. of strong hydrochloric acid, are boiled for a few minutes in a test-tube. A red color indicates formaldehyd. Other tests are known, but they are more complicated and require apparatus or reagents not kept by the average pharmacist. The above tests are all simple in their application and afford a ready means of detecting formaldehyd in milk and cream.

Remarks on the Foregoing Tests.—The Rimini test is highly recommendable. The reaction in sweet milk appears rapidly and with certainty. *Hehner's* test, as well as the phloroglucin and phenol tests, are very reliable and are all extremely sensitive. The hydrochloric acid test is very simple, but is not to be depended upon. It may show formaldehyd in most instances; however, cases have come under our observation when it has utterly failed to show the reaction, probably because of the milk having undergone some unknown changes. The *Liebermann* test is simple, delicate, and shows formaldehyd very readily.

As corroborative evidence, it is well, after the tests are finished, to let the suspected milk or cream stand in a warm place for twenty-four hours. A pure sample will invariably turn sour and separate. A sample which has been "doctored" with formaldehyd, however, will show, at the end of twenty-four hours, but a very slight separation, if indeed any at all, and will have but a slight odor.

A Word of Caution.—It is desirable that all test solutions be freshly prepared, especially the nitroprussid of sodium solution in the Rimini test; and that the suspected sample be as fresh as possible. Sour samples are difficult to test, and may yield variable results, because in these the formaldehyd has been oxidized, and is no longer present as formaldehyd. In carrying out the tests for formaldehyd, it is advisable to work side by side the suspected sample and the one known to be pure. Finally, do not expose your tests or have your milk placed where a bottle of formaldehyd is being opened, for the vapor is very penetrating, and you may thus be easily led to misleading results. When formaldehyd has been found to be present by at least three of the aforementioned tests, it may be considered that its presence has been shown.

CHEMICAL STANDARDIZATION OF GALENICAL PREPARATIONS.*

By N. H. MARTIN, F.C.S., F.L.S.

Since the publication of the last edition of the British Pharmacopœia and the valuation for the first time of the galenical preparations of belladonna and ipecacuanha by a quantitative estimation of the alkaloids contained in them, a considerable amount of criticism has appeared in the pharmaceutical journals; and, in consequence of the success which, it is assumed, has attended the standardization of these substances by chemical analysis, it is suggested that the method may be serviceably extended to the valuation of other substances such as aconite, stramonium, etc. I have no intention in this paper of offering any criticism or suggestion as to the minutiae of the processes adopted in the Pharmacopœia, but I think the time is opportune for an inquiry as to whether the methods which have been adopted are certain to secure not only constancy in the strength of one particular principle, but also those most important factors—the identity of the preparation with its nominal source, and the full therapeutical value of all the constituents of the crude drug.

In reading the papers and remarks of the various authors who have published their experiences in connection with this subject, one is struck by the lack of uniformity in the results obtained, and this is in all probability due to what Merck in his "Annual Report" for 1900 calls the "incalculable factor" of the varying individual interpretations of the pharmacopœial directions. Another point which must strike us in the pharmacopœial instructions is that whereas in opium and cinchona chemical tests are given for the crude drugs as well as for their preparations, and in these, as also in *nuxvomica*, the alkaloids are required to be identified as morphine, quinine and cinchonidine and strychnine, respectively, in the case of belladonna and ipecacuanha; and the other hand, the advisability of identifying the substances obtained by the processes described is not even suggested. Further, in the case of ipecacuanha, although the physical characters of the root as given would distinctly exclude the Carthagena variety, yet a preparation from the Carthagena variety alone, or the Rio and Carthagena mixed, might easily respond to the tests for the liquid extract. With regard to the belladonna, an entirely fictitious substance might easily be made to answer the chemical test as it is stated in the Pharmacopœia. Merck, in the Report to which I have alluded, says, in reference to the German Pharmacopœia tests for the extracts of henbane, belladonna, etc.: "Certain it is that it is quite as easy to adulterate an extract and yet to satisfy the requirements of the Pharmacopœia, as it is difficult, in many cases even impossible, to demonstrate the fact of adulteration." This statement, as well as the whole paper on the subject, coming as it does from a firm possessing such an extensive experience, not only in the assay of drugs of vegetable origin, but in the manufacture of a wide range of alkaloids and of active principles, is worthy of the careful and thoughtful consideration of all who have to do with galenical preparations.

The assumption underlying chemical standardization is that there is in other drugs besides opium, *nuxvomica*, and cinchona some substance or substances which can be isolated, identified and estimated with the same certainty that we can separate morphine, strychnine, and quinine, and that the therapeutic activity of such drugs is due to and identical with such substances. It takes no account of the precise condition in which these substances exist or of other valuable constituents which may, and probably do, take part in the pharmacological activity of the whole. If we study the history of all vegetable drugs, we shall find that their reputation for the relief of pain or for the cure of disease preceded any knowledge of their chemical constituents, and was built up by an

accumulated consensus of experience to the effect that certain results invariably followed the administration of such drugs in their crude form, or in the form of the simplest preparations—for example, extracts, infusions, etc. Cinchona bark had an established reputation long before the discovery of quinine, and even now preparations of cinchona bark have a wide field of usefulness which cannot be limited to the quinine factor alone. Digitalis and ergot are as much used to-day as ever they were, and, owing to their value and importance, no drugs have been submitted to more prolonged or capable chemical investigation, but we look in vain for an accumulation of united opinion as to the value of any of the glucosides or principles which from time to time have been announced as the active substances which would represent digitalis or ergot. Another assumption requiring close examination is that the variations which have been observed in the activity of certain preparations is due to the natural variation of the crude drugs, and that this can be controlled by chemical assay, but in this no account has been taken of the use of drugs collected at improper times and under improper conditions, and of those which have been damaged by age and improper keeping, and have been used in the manufacture of galenical preparations because they were no longer fit for sale as crude drugs, under which circumstances changes affecting the clinical value of the drug may have occurred which could not be detected by the methods of chemical analysis. It is unfair to assume that a manufacturing chemist who would use such samples of crude drugs would also manipulate any preparation of the drug up to the titration standard required in the Pharmacopœia by the addition, if need be, of innocuous alkaloids, or even of organic bases totally innocent in their origin of any connection with the drug whose name was attached to the finished product.

What, then, should be the aim of the compilers of the Pharmacopœia with reference to galenical preparations of crude drugs? I think it should be, in the first instance, to enable every pharmacist to guarantee from his own knowledge the absolute identity of the finished product with its supposed source. If processes of manufacture which can only be worked economically on the large scale are introduced, and if assay methods which admit of sophisticated preparations being made to respond to the standards are adopted; and, again, if such methods of valuation are relatively costly in time and material, this initial factor of identification is of necessity taken out of the hands of the pharmacist, who should be responsible.

In the next place, I think simplicity in the processes for galenical preparations should be adopted and resolutions should be made which will present to medicine fluid or solid preparations of the crude drugs, with the least possible splitting up and interfering with the activities of the substances in the precise combinations in which nature has elaborated them in the plant. To accomplish this I would avoid making preparations which are concentrated almost to saturation point with organic matter and the application to them of heat, to which many alkaloid substances are so sensitive, and by which they are very liable to become altered. I would further suggest that crude organic drugs be described in the Pharmacopœia with much greater care and fulness than at present. In addition to the botanical source, the time of collection and the external characters of the drugs, and—whenever it will conduce to greater certainty and uniformity—the microscopical characters and percentages of ash and extractive should be given. Where it is possible to indicate the activity of the drug through an investigation as to the presence of a known chemical principle, instructions for testing the crude drug should be given; where we have accumulated knowledge enough to be able to fix a certain percentage of this principle as the minimum standard of quality, it should be stated.

I think that in every case the chemical assay should be carried out on the crude drug, and, if in addition, there are certain preparations of such drug which admit of being standardized, this should be done by a

*Read before the British Pharmaceutical Conference.

process which would render the identification of the separated alkaloid a certainty. Starting with such carefully identified and assayed crude drugs, if precise instructions are given as to fineness of powder and general treatment, the preparations of tinctures, extracts, wines, etc., will not vary within limits which will interfere with their usefulness. I hope I may not be understood to undervalue or to wish to discourage the researches and discoveries of chemistry in connection with vegetable drugs, but in the present state of our knowledge most galenical preparations are more complex than can be expressed in the terms of a chemical principle and it is not wise or fair to the medical men who still use them to introduce misleading valuations into the pharmacopoeial texts.

The Pharmacopoeia might contain a very much wider range of alkaloids and of definite proximate principles than it does now, so that medical men may have their choice, and doubtless when these principles are proved by experience to fulfill all the pharmacological conditions of the crude drugs and galenical preparations, the latter will disappear by natural selection. There need be no theory about the matter, and no attempt should be made artificially to hasten the process, lest in so doing medicine lose some of its most valuable remedies.

I hope by means of this paper and the suggestions I have made, to stimulate discussion, not only in this meeting, but among all those who are interested in galenical preparations. It will require the intelligent co-operation of a large number of practical men who may have special opportunities for observing the effects of climate, soil, seasons, age of plants, times and conditions of collections, etc., to make comprehensive experiments and investigations in the assay of crude products and especially as to the identification of isolated principles. In this way we shall accumulate the knowledge and be able to decide whether it is wise to continue and extend the present plan of assaying the finished preparation, or whether it may not be better to apply all the tests possible—including the assay—to the crude drugs which can be identified, and to trust to careful directions and manipulation to produce preparations which, although they may vary as to strength within small limits, will, to the certain knowledge of the individual pharmacist, be free from adulteration or substitution.

SANITARY RULES TO GOVERN BARBER SHOPS.—The Health Board of San Francisco, Cal., recently sent the following rules to the supervisors to be adopted as an ordinance, and they will also be submitted to the State Barber Examiners for approval:

Mugs and shaving brushes shall be sterilized by immersion in boiling water after every separate use thereof.

Razors shall be wiped with alcohol before and after being used.

Hair brushes known as "sanitary brushes" must be used after first being sterilized.

Razor strops must be kept clean and never wiped off with the hand or blown upon with the breath.

A separate clean towel shall be used for each person.

Barbers shall keep their finger nails cut and clean. Alun or other material used to stop the flow of blood shall be used only in powder form and applied on a towel.

The use of powder puff, finger bowls and sponges is prohibited.

No person shall be allowed to use any barber shop as a dormitory.

All barbers' instruments must be disinfected after using.

These rules shall be placed in a conspicuous place in the shops.—(Am. Med.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Stamping Liquid.

(C. L. B.) You are, of course, aware that in the majority of cases a stamping powder is employed, and the Era has several times published formulas of this nature. For a liquid we are told that the following serves well: Dissolve 1 dram each of rosin and copal in 4 fluid ounces of benzine and with a little of this liquid triturate ½ dram of Prussian blue and finally mix thoroughly with the remainder.

Here is another, somewhat of the nature of an oil paint: Zinc oxide is to be ground in oil and then thinned with lard oil to the consistency of cream. If desired colored, Prussian blue, also ground in oil, may be admixed with it. Such a paint is to be applied through a stencil, preferably with the use of a spatula. If it is desired to remove this afterward from the fabric, benzine may be employed. This method, it seems to us, is hardly satisfactory one, and doubtless the first suggested you will prefer.

The Era Formulary gives the following information concerning stamping powder for embroidery patters: Ultramarine, to which has been added a small proportion of powdered resin, is generally used for stamping embroidery patters on white goods. The powder is dusted through the perforated pattern which is then covered with a paper and a hot iron passed over it to melt the resin and cause the powder to adhere to the cloth. The following are said to be excellent powders:

(1) White.—One part each of resin, copal, damar, mastic, sandarac, borax and bronze powder, and two parts white lead.

(2) Black.—Equal parts resin, damar, copal sandarac, Prussian blue, ivory black and bronze powder.

(3) Blue.—Equal parts resin, damar, copal, sandarac, Prussian blue, ultramarine and bronze powder.

In all these powders the gums are first to be thoroughly triturated and mixed by passing through a sieve, and the other ingredients carefully added. Other colors may be made by using chrome yellow, burnt or raw sienna, raw or burnt umber, vandyke brown, etc. For stamping fabrics liable to be injured by heat, the stamping is done by moistening a suitable powder with alcohol and using it like a stencil ink.

Powdered Flavoring Extracts.

(W. H. B.) By "powdered flavoring extracts" is generally meant the preparations obtained by triturating the various volatile oils with sugar, after the general formula given in the National Formulary for "oil sugars." Under the title of "oleo-sacchara" the work named directs the following, which is practically identical with the formula under "Eloeo-sacchara" in the German Pharmacopoeia:

Volatile oil	1 drop
Sugar	2 grams

Triturate the sugar with the volatile oil to a fine powder.

The oleosaccharates are intended as a pleasant aromatic vehicle for administering medicinal substances in powder form. Those prepared from volatile oils should be freshly made when wanted for use. Only the best quality of fresh volatile oil should be employed, as old resinified oils impart a bitter, unpleasant taste, as well as terebinthinate odor, to the sugar.

Vanilla Flavoring.—In confectionery pure crystallized vanilla may be used, according to Schimmel, in the form of a 2½ per cent. vanilla sugar which, weight for weight, equals in aroma the best vanilla and should be used in precisely the same manner. To prepare it take of crystallized vanilla 25 grams, dissolve it in 100 grams deodorized alcohol, pour this solution upon 975 grams of sugar, and mix it thoroughly. After having evaporated the alcohol in a warm place, and when the sugar has become thoroughly dry, it should be powdered in an earthenware mortar and sifted. It is then ready for use and may be kept an indefinite time without losing aroma. The yellow spots which occur on the sugar after drying are caused by the vanilla. This vanilla-sugar should not be confounded with the vanilla-sugar used by confectioners. The latter may be prepared by adding the necessary amount of sugar to the above 2½ per cent. vanilla-sugar.

Tuberculin.

(J. L. J.) Coblenz ("Newer Remedies") states that "Prof. R. Koch has produced three new tuberculins: Tuberculin A, Tuberculin O, and Tuberculin R. The latter alone is of therapeutic value, and is decidedly active in immunizing against tubercle bacilli. Patients suffering from pulmonary tuberculosis were decidedly benefited in the early stages, and so was every case of lupus. Prepared by extraction of pure cultures of tubercle bacilli with 40 to 50 per cent. glycerin, and repeated precipitation with alcohol. The pure preparation is a snow-white mass, which becomes light gray upon drying at 100 degrees. It is easily soluble in water, but the aqueous solution is unstable; its solution in 50 per cent. glycerin remains unchanged. The preparation is administered subcutaneously in the muscles of the back between the shoulder-blades, after cleaning the parts with an antiseptic solution. After injection the spot is covered with iodoform collodion and bandaged with iodoform gauze." Dose, ¼ to 1 Mg. (1-250 to 1-65 gr.), subcutaneously.

Coblenz also states that "Behring reported at the Congress of Madrid that the tubercle antitoxin obtained by him from mammalia is very injurious to the human system, which precludes its employment. Further investigations of the subject showed that the fault did not lie with the antitoxin as such, but with the serum per se, as also serum of healthy animals and diphtheria serum produced the same disturbances with tuberculous patients. On the other hand, he succeeded in obtaining a suitable serum by the immunization of certain birds. This new antitoxin does not differ in its essential character from Koch's tuberculin, but principally in strength."

Asbestos Cement.

(C. A. M.) Ground asbestos may be made into a cement which will stand a high degree of heat by simply mixing it with a solution of sodium silicate. By subsequent treatment with a solution of calcium chloride the mass may be made insoluble, silicate of calcium being formed.

A cement said to stand a high degree of heat and to be suitable for cementing glass, porcelain, or other vessels intended to hold corrosive acids, is this one:

(1) Asbestos	2 parts
Barium sulphate	3 parts
Sodium silicate	2 parts

By mixing these ingredients a cement strong enough to resist the strongest nitric acid will be obtained. If hot acids are dealt with, the following mixture will be found to possess still more resistant powers:

(2) Sodium silicate	2 parts
Fine sand	1 part
Asbestos powder	1 part

Both these cements take a few hours to set. If the cement is wanted to set at once, use potassium silicate instead of sodium silicate. This mixture will be instantly effective, and possesses the same power of resistance as the other.

Rouge for Bull Wheels.

(J. J. C.) The rouge employed by machinists, watchmakers and jewellers is obtained by directly subjecting crystals of sulphate of iron or coppers to a high heat by which the sulphuric acid is expelled and the oxide of iron remains. Those portions least calcined, when ground, are used for polishing gold and silver. These are of bright crimson color. The darker and more calcined portions are known as "crocus", and are used for polishing brass and steel. Others prefer for the production of rouge the peroxide of iron precipitated by ammonia from a dilute solution of sulphate of iron, which is washed, compressed until dry, then exposed to a low red heat and ground to powder. Of course, there are other substances besides rouge which are employed in polishing, as powdered emery, kieselguhr, carborundum, rotten stone, etc.

Borated Talcum.

(Talcum.)

Purified talcum, N. F.	2 pounds
Powdered boric acid	1 ounce

To perfume, add the following:

Powdered orris root	1½ ounce
Extract jasmine	2 drams
Extract musk	1 dram

A powder sometimes dispensed under this name is the salicylated powder of talcum of the National Formulary which contains in every 1,000 grams 30 grams of salicylic acid and 100 grams of boric acid.

Here is a formula which contains zinc oleate:

Zinc oleate	1½ ounces
Boric acid	2½ ounces
Talcum	4 ounces

Mix and perfume if desired.

Amieisen Eier Oil.

(W. B.) German importing houses and wholesale druggists of this city inform us that there is no "amieisen eier oil" (oil of ants' eggs) on the market at the present time. All of them, however, quote spirit of ants, the ruling price being \$1.25 per pound. A formula for the latter preparation may be found in the National Formulary.

PERSIAN TRAGACANTH.—The British Consul-General at Bushire, in a report on the trade of the Persian Gulf, states that the gum-tragacanth industry is making rapid progress, and may eventually become an important item in the export trade of the gulf. The industry, however, does not appear to be conducted with any foresight or method, and may suddenly die if the operations for collecting the exudations are not manipulated scientifically. A few years ago tragacanth was quite unknown in Persia, and only the Kermanshah district contributed toward the exportation of that item via Bagdad. It is now only three or four years since both Shiraz and Ispahan have come forward to contribute toward this trade. The industry in the province of Fars is said to be capable of great improvement, and vast tracts of land full of the tragacanth-producing plant which were lying untouched before, are being much utilized. From the reports which have been received it appears that the peasantry employed in the collection of tragacanth work in a reckless manner, causing much damage to the plants, which are burnt down, after incision, to such an extent as to render the same field unproductive for some years to come. Though the tragacanth fields are numerous and extensive, they will not be able to withstand the wholesale depletions which are now being perpetrated on them unless the Persian Government undertakes their supervision with a view to maintaining and improving the industry. As it is, this nascent industry brings into the country nearly £40,000 annually, and is capable of extensive development if properly conducted. (Chem. & Dr.)

TYRATOL is a carbonate of thymol, and is recommended as a powerful vermifuge. It is a tasteless white powder.—(Ch. & Dr.)

ERA COURSE IN PHARMACY.

Graduates, Class for August, 1901.

	Grade on Final Ex- amination.
	Per cent.
2505 Samuel E. Massey, Fort Mill, S. C.	88
2530 Cecil L. Beach, 502 Canal St., New York City	90
2568 Clarence Voshell, 604 E. 7th St., Wilmington, Del.	90
2557 Sylvester L. Brown, Eckerty, Ind.	95
2650 Chas. W. Jackson, 387 Congress St., Portland, Me.	98
2600 Philo Soles, Portland, Mich.	90
2592 Laura B. Heemans, South Lyons, Mich.	95
2655 J. W. Shaw, Box 494, Ada, O.	95
2762 Leon V. Officer, Atoka, Ind.	90
2665 John W. Bowdoin, Kennebank, Me.	95
2717 J. H. Bailey, Keene Valley, N. Y.	96
2752 Francis T. Lay, 1203 Wash. St., Columbus, Ind.	95
2583 J. T. Loyd, Winona, Mo.	95
2818 R. L. Windsor, Birch Tree, Mo.	95
2671 W. B. Palamontain, 1881 Vallejo St., San Fran- cisco, Cal.	98
2879 F. J. Crandall, Athens, Pa.	95
2618 Al. E. Orton, 738 Adams Ave., Evansville, Ind.	96
2611 Samuel Thomas, Palestine, Texas.	96
2698 Martin Wuggazer, 249 Grand Ave., Grand Rapids, Mich.	95
2786 E. E. Williams, Newberry, S. C.	98
2679 Ernest B. Jenkins, Gamallel, Ky.	95
2663 John W. McDonald, Dubuque, Ia.	96
3029 Charles Hauk, Waynetown, Ind.	90
2629 Richard G. Raymond, Cumberland Mills, Maine.	93
2509 J. C. Arthur St. James, 407 E. 11st St., N. Y. City.	95
2643 Fanny G. Hutt, Waverly, O.	95
2581 Fred M. Smith, 49 St. Lawrence St., Portland, Me.	95
2793 George Siegrist, 159 Schuyler St., Utica, N. Y.	95
2572 Harry F. Morrow, Paris, Ontario, Canada.	98
2771 William H. Ruf, Manassquan, N. J.	96
2531 D. R. Osborn, Nadean, Kans.	98
2625 Miss Hildore A. Bloomstine, 42 S. Center St., Youngstown, O.	98

The above graduates will receive diplomas within a few weeks. A large and very handsome engraved diploma, printed on parchment paper, with the graduate's name engrossed, especially suited for framing, will be furnished to all who request it for the sum of \$2.00. Those who desire the latter should forward the necessary fee at once, to The Pharmaceutical Era.

THE INCOMPATIBLES OF ANTIPYRIN.—Fischer, in Die Neuen Arzneimitel, (Nat. Dr.) gives the following list of incompatibles of antipyrin:

1. Substances which contain nitric acid (amyl nitrite, ethyl nitrite, etc.), yield with antipyrin, a green colored product, isonitro-antipyrin. This substance being toxic, either by itself or through products of decomposition, antipyrin should never be given along with substances containing nitric acid.
2. Bichloride of mercury and antipyrin produce a powerfully toxic combination.
3. Phenol, which precipitates antipyrin from its solutions.
4. Sodium salicylate mixed with antipyrin, partially liquefies, and makes a pasty mass.
5. Chloral hydrate and antipyrin mixed, unite to form an oil-like liquid, the reactions of which are not the same as those of its constituents.
6. Beta-Naphthol and antipyrin mixed, make a mass that soon liquefies.
7. Tannin precipitates antipyrin from its solutions.
8. Antipyrin increases the co-efficient of solubility of caffeine and the salts of quinine.

PANCREONE is the more or less indefinite compound produced when tannic acid is allowed to react with pancreatine. It is a greyish powder, quite odorless, and possesses great peptonizing-power. It is difficult to see, however, how it can give any greater action than that which corresponds with the amount of actual pancreatin it contains, and, therefore, why it should be regarded as a new remedy at all.—(Ch. & Dr.)

THE VALUATION OF DRUGS.*

By JOHN URI LLOYD.

Just now much thoughtful attention is being directed toward the valuation of drugs. We of the eclectic school are disposed to be liberal, patient, considerate in all things toward the betterment of conditions and the elevation of humanity. Ostracism because of our believing in things we think proper, oppression because of our unbelief in things we think improper, tends to liberalize us toward both parties in a controversy in which both parties are honorably earnest in a cause when, seemingly, but one party can be right. But to this controversy.

Some years ago pharmacists, dominated by chemistry, became involved in the idea that standardization of drugs could be done by means of test-tube experiments in the laboratory. The idea ran wild with a few of our friends, who, in my opinion at the time—and I yet hold the same opinion—were partly right and partly wrong.

I maintained the intermediate view. I believed that to a certain degree assay testing of drugs for certain dominating constituents could be made of use in establishing the quality of those drugs as to their carrying powers regarding those constituents, but I maintained that a drug, as such, is as much outside and beyond a simple proximate principle as that of a group of alkaloids. I also believed then, and do still, that while a test-tube reaction could show volume as compared with volume, could show weight as compared with weight, it did not necessarily follow that drug energy followed in accordance with chemical valuations, and in these directions I cited aconite, ergot, and the great mass of valuable remedies for which no chemical reaction is known, in which no definite chemical constituents are established as in any way connecting drug action with chemical touch.

For maintaining these conservative views I was sometimes berated as one lost to scientific advancement; criticized for being irregular in my thought; and, again, sympathized with as not being awake to opportunities. But my experience in eclecticism had taught me to accept both scoldings and criticisms kindly, and to feel that in the end I would be no less thought of for resisting what I felt to be an ultra-enthusiastic stand by men who did not see things as I saw them. I did not believe, outside of a few remedies, that chemical experimentation in dead test-tubes could determine the physiological action of a drug, much less its therapeutical value; and I hold yet the same opinion, stronger, if anything.

Then came the recent idea of establishing the drug valuation of remedies by physiological experimentation on creatures such as frogs, dogs, rabbits, etc.

That I was not ignorant of the scheme, that I gave the matter fair thought from my side, is evidenced from the fact that twenty years ago Professor Roberts Bartholow and myself were concerned in this very subject, as is evidenced in part by the reports made years ago in our "Drugs and Medicines of North America." But in this direction, too, I became confronted with what seemed to me to be facts that led me to avoid ultra-enthusiasm in valuations based on such physiological methods, and for reasons that need not be stated I relinquished prosecution of the scheme.

As with chemical determinations, so with these persons involved in the work are apt to become over-enthusiastic—more than optimists. But, nevertheless, in such directions we find advancement, and uplifting of thought. Progress must follow when finally the enthusiasm of the investigation is rewarded by establishing just how much and how little is of value.

Then it is that if my words can be taken kindly I would say to both parties to this controversy: "You are both right; you are both wrong; but out of the combined right and the combined wrong will come much that will profit science and the professions."

*Eclectic Medical Gleaner.

NEWS DEPARTMENT.

N. A. R. D. NOTES.

Copies of a 32-page schedule of prices on country goods, surgical dressings, mineral waters, proprietaries, pharmaceuticals and everything upon which druggists are likely to disagree as to prices, may be secured of Thos. V. Wooten, 153 LaSalle street, Chicago, at 10 cents per copy. The list is very complete and contains blank pages for additions, changes suitable to the particular locality, etc. Every member of every druggists' association should have one of these with the prices changed to suit the members of his local association. It is a pronounced success wherever used and has been extremely valuable in correcting the bad trade conditions of many communities.

The following letter from Thos. Voegeli of Minneapolis is self-explanatory and voices the need of the hour—organization.

"Jos. R. Noel, M. D.,
General Organizer, N. A. R. D.,
Chicago.

Dear Sir:—

Yours of the 8th to hand and noted. Organization and affiliation with the N. A. R. D. should be the rallying cry of the executive officers of the N. A. R. D. until every one of the 50,000 druggists in the United States has identified himself some way with the N. A. R. D., and I am much pleased to learn that efforts are being made to interest the druggists in the smaller towns and country districts in this great work, which, if carried to its logical conclusion will again give to the druggist the station in life to which he is entitled. Let no man delude himself that we ever can win the victory by allowing the few leaders to do the fighting if the balance do not only refuse to give their financial and moral assistance to the cause, but deliberately find fault with everything that is done by the leaders in the fight. Victory can only come by an overwhelming majority of druggists pulling together and all in the same direction. It is only then that the manufacturer and the jobber will listen to us and will be honest in carrying out their agreements with us. The Minneapolis Association is an outcome of the N. A. R. D. as we had no association up to that time. All price difficulties have since been adjusted between the department stores and druggists and our list has been in force with entirely satisfactory results since June 1st, 1901. Druggists are doing better than in years and the department stores are much pleased at the profits which their drug departments now show. I am a firm believer in the ability of every local association, settling the price difficulties prevailing in their respective locality, and in proof of that assertion I cite to you Minneapolis where up to a year ago price demoralization was equal to that of any city in the country."

Since the above letter was written a price schedule has been adopted in St. Paul and so far excellent results have been experienced.

At a meeting of the Retail Druggists' Association of Marion County, Mo., held in the city of Hannibal, on the 20th day of May, 1901, the following was unanimously adopted:

RESOLVED, that it is the desire of this association of proprietary medicines on account of the stamp tax, shall be promptly deleted and the original price restored upon the repeal of the internal revenue law.
Signed: J. B. Brown, President.
A. R. Ayres, Secretary.

An enthusiastic meeting of the druggists of Carroll County, Ill., occurred on Aug. 22nd at Savanna, when they were organized into an association and became affiliated with the N. A. R. D., which was represented by Geo. R. Quarles. The Secretary, Wm. G. Law of Savanna, writes as follows:

"My hope has been at last realized and the Carroll County druggists' association is a 'real living thing', and I hope will continue to be as healthy as it now appears. We have cutting at but one place in the county and the cutters are both in. I have asked the president to call a meeting at once, and I think everything can be adjusted readily. We thank you for your kindly interest."

Every druggist in the county joined the association, and they chose as their officers: F. G. Edwards, M. D., Carroll, president; Wm. G. Law, Savanna, secretary; John C. Meyer, Shannon, treasurer.

The following resolution was passed:

"RESOLVED that this association through its proper officers requests through the N. A. R. D. that all manufacturers of proprietary preparations, who have not done so, shall reduce the price on all goods to the prices in vogue prior to the stamp tax."

The Chautauqua Co., (N. Y.), Retail Druggists' Association was organized and became affiliated with the N. A. R. D. through organizer E. C. Bottume, on August 8, at Jamestown. Forty druggists in the county became members.

The following officers were elected to serve until the second Tuesday in September, 1902. Fred E. Hatch, Jamestown, president; H. P. Monroe, Dunkirk, first vice-president; A. G. Saxon, Sherman, second vice-president; C. A. Swanson, Jamestown, secretary; Harold Le P. Brown, Jamestown, treasurer.

A. A. Broodie of Waverly, Ia., whom delegates to the last N. A. R. D. convention will remember, was elected president of the Bremer County, Ia., Druggists' Association, which was organized by W. W. Weeks of the N. A. R. D., August 28. G. A. Shores was elected vice-president; E. E. Farrand of Sumner, secretary, and A. Stevenson of Tripoli, treasurer. The ten druggists of the county joined the association.

Eleven druggists of Dearborn County, Ind., formed an association and affiliated with the N. A. R. D. on August 9th. W. W. Weeks, an organizer of the N. A. R. D., was instrumental in getting them together. The officers elected were as follows: J. A. Riddle, Aurora, president; C. W. Fitch, Lawrenceburg, vice-president; John Ulrich, Aurora, secretary; A. H. Dietrich, Lawrenceburg, treasurer.

Several previous attempts at organization had been made but the plans fell through for one reason or another. It was voted to sell proprietaries at full prices beginning with August 12. Prices have been seventy-five and eighty cents on the dollar articles for some time. The proximity of this place to Cincinnati makes the action all the more interesting, and it is exceedingly gratifying to learn that the very centers of the cut-rate movements are feeling the effect of the N. A. R. D. tidal wave. The following resolution was passed by unanimous vote:

"BE IT RESOLVED by the Dearborn County Retail Druggists' Association that the officers be instructed to use their influence through the N. A. R. D. for a reduction in the price of those proprietaries that were advanced under the stamp act."

August 12th the druggists of Clinton County, Mich., were organized into an association with thirteen members by Fred C. Vincent, an organizer for the N. A. R. D. The following officers were elected: President, A. S. Fildew, St. Johns, first vice-president, J. E. Gerow, Ovid; second vice-president, J. P. Berrann, Westphalia; secretary, Chas. P. Baker, St. Johns; treasurer, C. E. VanSickel, St. Johns. The following resolution was adopted:

RESOLVED by the druggists of Clinton County, in convention assembled,

THAT whereas the N. A. R. D. was the chief instrument in securing the repeal of the war tax stamp and whereas this association is a component part of the N. A. R. D. we hereby demand that such manufacturers as have not already done so, restore the prices that existed upon the respective articles prior to the Spanish-American war, and the secretary of this association is hereby instructed to forward to Thos. V. Wooten, secretary of the N. A. R. D., a copy of these resolutions immediately, and is further instructed to inscribe the same upon the minutes of this county association. Carried unanimously."

On August 23rd, thirteen out of the fourteen druggists in Putnam County, Ohio, were organized into an association by N. W. Hoffman of the N. A. R. D. It is believed the other druggist would have joined except for his absence in Buffalo. The following officers were elected: W. W. Kelley, of Ottawa, president; T. C. Lee, of Ottawa, vice-president; W. E. Huckleby, of Ottawa, secretary; C. E. Anglemire, of Ottawa, treasurer.

After organization the question of formulating a schedule of prices was discussed, and a committee of five was

appointed to meet the week following to arrange said schedule, to be adopted by the association at its next regular meeting. The following was unanimously adopted:

RESOLVED, that it is the desire of this association that all manufacturers of proprietary medicines who raised the price on their goods at the time the stamp tax went into effect, and who have not yet reduced prices to what they were before said stamp tax was imposed, are urged to do so promptly.

NEW YORK AND VICINITY.

AN IDEAL STORE.

Valuable Suggestions for the Progressive Druggist in a New Fifth Avenue Pharmacy.

One of the few pharmacies which have taken advantage of the latest suggestions in the organization and equipment of a model, scientific store of the twentieth century is seen in that of D. T. Larimore & Co., No. 537 Fifth avenue, recently opened under the direction of Dudley J. Larimore with Jonathan Morris as manager. A description of the store should be of benefit to the druggist, who is wide awake, enterprising and progressive. In the first place one is struck with the unconventional arrangement of the store upon entering. It bears none of the earmarks of the old orthodox pharmacy, but is rather modeled upon the style of the modern department store with plenty of open floor space and counters running through the center of the room. The drugs are displayed on glass front shelves which cover the four walls of the room. The supplies are kept in closed lockers in outside rooms, arranged with admirable system, the medicines of each manufacturer being kept in a separate compartment, closed and locked so as to keep out the dust.

A feature of this store is the open prescription laboratory where the compounding is done in full view of the patient. The peephole, and all the alchemic mystery are done away with here. This is a departure that has recently been strongly urged by the most progressive pharmacists. In the compounding of prescriptions, internal remedies are dispensed in clear white bottles; while external remedies are given to the customer in blue glass. A second feature of this store is an emergency room, fitted up with all the convenience and supplies of a hospital out-clinic. In the room are an operating chair and table combined, apparatus for administering oxygen, bandages anaesthetics, antiseptics and instruments and all other necessities for emergency work. Behind the main room of the store is a small laboratory for the manufacture of the special preparations of the store. There is also an analytical laboratory where an expert chemist furnishes analyses of water, sputum, blood, articles of food etc. In the basement of the store, are kept bottles arranged in tiers in a systematic order and other of the crude supplies.

Mr. Larimore thinks that most of the features of his store will be seen in the majority of leading pharmacies of the country within a few years. More especially, he says, will the open prescription laboratory become general?

Kept Fence for Stolen Drugs.

Samuel Flauman, a young druggist, whose store is at No. 20 Second avenue, has been arrested on the charge of maintaining a "fence" for stolen drug goods, which he induced boys in the employ of wholesale druggists to filch and bring to him. One of the boys whom Flauman corrupted has been arrested. He is Edward Lang, aged seventeen, who was in the employ of Max Zeller, wholesale druggist, No. 37 Bowery. Lang admits having stolen over \$400 worth of drugs from his employer during the month of August. Flauman has approached young men

in the employ of almost all the wholesale druggists in the city, urging them to steal goods and turn them over to him upon a 50 per cent. commission basis. None of the dealers know of any losses of goods with the exception of Zeller, but several have suspected crooked work and are keeping a sharp lookout.

An honest boy, Edward Jaworsky, a runner in the sundry department of Schieffelin & Co., was the cause of Flauman's arrest by Detective Sergeant Burns. When he made his proposition to Jaworsky, telling him of the easy money to be made and laying his schemes before the lad, the latter went to his employers and gave them all that he had heard. The matter was put in the hands of the police, and an investigation led to the arrest of Flauman. Other wholesalers are keeping a sharp lookout, and other arrests may follow. A search warrant has been issued for the store at No. 20 Second avenue, and an effort will be made by different dealers to identify their goods. Flauman as a rule urged the boys to steal the more expensive drugs, making a specialty of cocaine. He was also partial to perfumes. The "fence" is a neat little store in appearance, as one will see anywhere in the city. It has been closed.

OFF FOR THE A. PH. A. CONVENTION.

Thomas P. Cook, the New York member of the Committee on exhibition of the American Pharmaceutical Association Convention has gone to St. Louis to assist in the allotment of space and the placing of exhibits so that this feature of the meeting will be in readiness when the convention opens on next Monday. He was accompanied by Prof. Joseph P. Remington, of Philadelphia. The New York delegation to the meeting will be one of the largest that has ever gone from here to a convention of the A. Ph. A. The New York member of the Committee on Transportation has estimated the attendance from here at twenty-five. A number go from Brooklyn. A special party will leave by the Barclay street ferry in this city Sunday morning at 9 o'clock A. M., taking the Lackawanna and Wabash railroads and arriving in St. Louis at 2 o'clock on Monday afternoon, one hour before the opening of the first general session of the meeting. The Philadelphia delegation will go by way of Buffalo Special arrangements have been made for stop-over privileges at Buffalo. The New England delegation has not as yet made any special arrangements.

A special program has been arranged by the St. Louis local committee of ladies for during the time that the gentlemen are occupied in the sessions of the meeting. This program is as follows:

Sunday, September 15—Reception of incoming visitors; Monday forenoon, informal reception at Southern hotel; Monday afternoon, shopping party; Tuesday forenoon, visit to St. Louis museum of fine arts and the Missouri Historical Society Museum; Monday afternoon, Twentieth Century Auction; Wednesday forenoon, visit to public buildings and other points of interest; Thursday forenoon, carriage ride with luncheon at the Glen Echo Club House; Thursday afternoon, carriage ride; Thursday evening, theatre party; Friday forenoon, visit to public buildings and other places of interest; Friday afternoon, trolley ride; Friday evening, euchre party; Saturday forenoon, program not completed. In addition to the above special program the ladies will take part in all the general program of the entertainment.

"President" Smith Gives Himself Up.

John W. Norton-Smith, who was wanted on a charge of selling diplomas and degrees at \$10 each, as president of the so-called "Central University of Medicine and Science" of Jersey City, and who disappeared about two weeks ago, when his university was exposed, has surrendered himself to the police. No charge has been made against him as yet, but he will be detained. The institution of which he was posing as president was regularly incorporated, and there is some question as to whether or not J. W. Norton-Smith has been guilty of any violation of the law.

NOTES.

—Smith Kline, French & Co., the well-known Philadelphia jobbers announce their annual sponge exhibit in New York for September 16th to the 20th, inclusive at the Broadway Central Hotel. Something striking and original is their card of invitation to inspect their exhibit. It is a neat print on a fancy aluminum card. A similar exhibit will be made on the same dates in Boston at the United States Hotel.

—B. A. C. Hoelzer, resident manager of the branch office and warehouses recently established by the O. Porsch Chemical Company of this city, is not a New Yorker, as was stated in these columns last week. Mr. Hoelzer is a native of Chicago, a well-known druggist, and a member of the various Illinois pharmaceutical associations.

—"I never had such a good time in my life," said Col. J. W. George, of Schieffelin & Co., who has returned from a three weeks' outing on the North Coast of Nova Scotia, and then the nut-brown Colonel proceeds with a string of moon-light trout-fishing stories that discounts anything that has been brought back so far.

—A movement has been set on foot to have the Wholesale Drug Trade Bowling Association open its season earlier than has been the custom in former years. The association may begin play this month instead of waiting until the middle of October, as heretofore.

—The Chair of Pharmacy at Notre Dame, which was made vacant by the resignation of I. V. S. Stanislous, to take a position with the Osborn-Colwell Company, has been filled by the appointment of Leo. Ellel, of South Bend, Ind., a member of the committee of revision the United States Pharmacopoeia.

—W. J. Bush & Co., 5 Jones Lane, New York, have recently completed a fully equipped plant at Linden, N. J., where they will manufacture for trade their well-known specialties. In addition to this plant, they have factories in London and Mitcham, England; Messina, Sicily, and Grasse, France.

—The delegates to the Mississippi Valley Medical Association Convention, which is to be held at Put-In-Bay, Lake Erie, this week, having been invited to make an excursion to Detroit for the purpose of visiting the laboratories of Park, Davis & Co. The excursion will be made next Monday.

—Among the retail dealers who have given up the joys of single blessedness to become benedicts during the past week are Morris Brodick, Allen & Delancey streets, 1. Mishkin, No. 214 Rivington street and the senior partner of Davidson Bros., Eighty-ninth street and Third avenue.

—William B. Dick, of the New York publishing firm of Dick & Fitzgerald, better known to the drug trade as the author of Dick's Encyclopedia of Receipts and Processes, died September 5th, at Pittfield, Mass., where he was spending the summer.

—Cuba must be a splendid country to trade with if conclusions are to be drawn from an order and remittance received by the Evergreen Chemical Company from L. A. Cuesta. He encloses \$4 to pay for an order of perfumery that calls for but \$1.50.

—H. L. Berger, the President of the 4th District Pharmaceutical Association, No. 1833 Second avenue, leaves to-day or an extended western trip. After a visit to the Pan-American, he will spend some time at his old home in Covington, Ky.

—One of the most successful of the young travelers on the road is M. J. Osborn, who is covering Northern Indiana for Parke, Davis & Co. He is a brother of President Osborn of Osborn-Colwell Co., No. 4 Cliff street.

—Geo. W. Jarchow, pharmacist, No. 445 Second avenue, has just completed a trip to Buffalo in his steam yacht, going by the way of the Erie Canal. He was gone three weeks. He was accompanied by his wife.

—The opening of the season of the Retail Dealers' Bowling Association, will probably be postponed one week from October 2, on account of the jubilee celebration of the Deutscher Apotheker Verein.

—Russell & Lawrie, proprietors of pharmacies in Tarrytown, Pleasantville and White Plains, have sold their store in the latter place to Hyatt & Wiggins, who will continue in the general drug business.

—A. R. Beardsley, president of the Miles Medical Company, of Elkhart, Ind., has just returned with his family from a trip abroad. Dr. Franklin Miles of Chicago is also a recent arrival from Europe.

—James Conover, a pharmacist of Jacksonville, Florida, made a business trip to this city early in the week. He reports the trade in his section of the South to be in a flourishing, healthy condition.

—Joseph Fields, with McKesson & Robbins, was married on Sunday September 1, and with his wife has gone on a two weeks' wedding tour. They will visit Buffalo and the Pan-American.

—B. Reimus of the Paterson Chemical Company, Paterson, N. J., made several calls in the drug section September 9. He was on his way home from Buffalo, where he has been taking in the Exposition.

—A number of New York proprietors have sent congratulations to A. H. Beardsley, secretary and manager of the Miles Medicine Co., Elkhart, Ind., who has recently been blessed with a male heir.

—Sidney Faber, No. 1102 Second avenue, was badly shaken up by a fall from his wheel at Bayonne, N. J., during the last ride of the Apothecaries Bicycle Club, to Grant City, Staten Island.

—The services of Irbv S. Blue, who has been with William Weis, Thirty-fourth street and Seventh avenue, have been engaged by the Knickerbocker pharmacy Thirty-eight and Broadway.

—Dr. W. H. Knevlit, well-known pharmacist of Rutherford, N. J., will entertain the members of the Passaic Retail Druggists' Association at his residence in that town to-morrow (Friday) evening.

—Gyorgy Kantrowitz, of the Apotheker Zeitung, who was married in Philadelphia, twenty-five years ago on September 6th, spent his silver wedding anniversary quietly at his home last Friday.

—Word has been received in this city of the death of Theodore Budine, one of the most prominent druggists and chemist of Danbury, Conn. His death was due to nervous prostration.

—W. L. Strauss, of W. L. Strauss & Co., No. 27 Warren street, sailed from Germany September 3d, and will arrive on the 11th, after a six months' stay in Europe, most of which time was spent at Frankfort-on-the-Main.

—Meyer Friend, of the Evergreen Chemical Company, is making a Western business trip through Ohio. He will return by way of Buffalo, taking in the Pan-American.

—Dr. J. Takamine, with Parke, Davis & Co., will deliver an address before the meeting of the Mississippi Valley Medical Association, at Put-In-Bay this week.

—Edwin H. Thur, formerly general manager for Lazell, Dalley & Co., is established at No. 18 Cedar street as the American agent for Roure-Bertrand, Fils, of Paris.

—E. Bradford, a prominent druggist of Cedartown, Ga., made several calls in the drug section this week. He will see the Pan-American before returning home.

—J. B. Pyne, who has been with J. N. Hegeman, at No. 738 Broadway, has accepted a position as representative of the H. K. Mulford Company of Philadelphia.

—The number of candidates for admission to the Brooklyn College of Pharmacy is twice as great as it has ever been in the history of the institution.

—Dr. C. J. Lincoln, President of Lincoln & Co., the pharmaceutical chemists, of Arkansas, accompanied by his wife, is visiting in New York.

—Geo. E. Evans, No. 3 East Fourteenth street, has returned from a trip through the East and reports a good trade for holiday goods.

—W. E. Grace, a leading druggist of Baker City, Ore., is in New York on a buying tour. He made several visits in the drug section Sept. 7.

IN AND ABOUT BOSTON.

THE MISFORTUNES OF A CLINTON DRUGGIST.

Boston, Sept. 7.—It will be recalled by some readers that Thomas D. Tate, a Clinton druggist, had his certificate of registration revoked by the Massachusetts Board of Registration in Pharmacy, some months ago, because he had been convicted in the courts (lower and superior) of the charge of illegal liquor selling in his store at Clinton. The case was of more than passing interest, because the board revoked the certificate for a period of ten years, something never before done. One year, perhaps, might have been expected by the defendant in this case, if he had lost his right to be considered a druggist; but ten year. It was like a thunderbolt, but the board of pharmacy knew that the exigencies of the case demand severe penalty. This decision on their part was arrived at after a full hearing last spring in the board's department at the State House, at which Tate and a number of witnesses gave testimony. The Era at the time had a full account of the affair, which had its humorous side, inasmuch as the defendant's own witnesses did no little toward fastening his guilt upon the man, in their eagerness to defend him. Just before this hearing took place, a week or so previous, Tate's store had been raided by officers for a second time, and he had been convicted in the court, of illegal selling and was fined \$150 and given thirty days in the House of Correction. This case, however, played no part whatever in the hearing before the board, which based its charge wholly on a raid made last March when Tate was fined \$75 in the lower court and had this fine raised to \$100, as the final result of his appeal to the Superior Court. As the result of this second raid and consequent appearance in court, he appealed from the \$150 fine and sentence to imprisonment, and his case has just come up in the Superior Court, sitting at Fitchburg. There he retracted his former plea of "not guilty" and pleaded "guilty." He always seems to be in trouble of some sort. He formerly was located in Boston, with a drug store in Bowdoin street, but there he had considerable trouble with the board of pharmacy, for one reason or another. He had at that time presented a certificate of registration made out in England and was much upset because the board demanded a new examination here, in lieu of letting him do business as the holder of an English certificate. However, the man passed the Massachusetts examination, as required by law.

TRADE CONDITIONS SATISFACTORY.

Boston, Sept. 7.—Taken all in all, the week is felt to have been one of rather good conditions in the matter of trade. There has been a little brisker demand for the hundreds of things found in all drug stores, and people who are just back are finding that they need this or that article, more frequently something along the line of toilet goods than other things, and renewal of acquaintanceship with their customary druggist has been quite common in the last week or so. Soda trade continues to keep good, with warm summer days still found. From now on the druggists expect to find conditions more normal, with more or less impetus given to trade from time to time as more people return from their summer haunts. In the general market no one drug seems to take prominence over others, the sales and trading being only of moderate proportions, commensurate with the needs of the hour. Chemicals seem to be a bit more active, in comparison, yet without notable change in prices. The more prominent commodities of the tanning materials and dyestuffs keep rather firm on a moderate market. The alcohols are in moderate demand only. Hops are quiet, as far as trading is concerned. Waxes show no features or changes of importance.

NOTES.

—C. A. Frees, No. 845 Broadway, is in Buffalo looking after his exhibit of artificial limbs, trusses etc., at the Pan-American Exposition.

—Names registered at the Drug Club on Sunday were Mr. and Mrs. C. B. Miller of Galesboro, N. C., and Dr. Geo. D. Scott of Boston.

—William Muir, member of the State Board of Pharmacy, who has spent the summer in the Catskills, has returned to the city.

—H. E. C. Kuehn, has succeeded the firm of Kuehn & Lubbers, the Brooklyn druggists, the partnership having been dissolved.

—A. V. Hennicke, western representative of McKesson & Robbins, has returned to his territory after a short visit to New York.

—Max Marlmann has moved his branch store at 165th and Caldwell streets to a new location at 156th street and Union avenue.

—Colonel E. W. Fitch, of Parke, Davis & Co., has returned from a delightful vacation of two weeks at Digby, Nova Scotia.

—Dr. Louis Dohme, president of Sharp & Dohme, No. 41 John street, who has been seriously ill, is reported to be much improved.

—A. L. Page, of the Vapo-Cresolene Co., No. 180 Fulton street, has returned from a month's vacation spent at Block Island.

—The September number of the Century Magazine contains an interesting, illustrated description of the Drug Trade Club.

—J. A. Jamison, who has charge of the shipping department of Schieffelin & Co., is away on a vacation of two weeks.

—W. J. Robinson, of Trenton, N. J., and O. P. Boland, of Scranton, Pa., registered at the Drug Club, September 5th.

—J. D. Vint, of London and C. Langspecht, were the guests of Thomas M. Curtius, at the Drug Club, September 2d.

—Among the out-of-town pharmacists who visited the drug trade this week was, F. A. Seaman, of Perth Amboy, N. J.

—Henry Beck, Chicago manager for Dodge & Olcott, is spending his two weeks leave of absence at the home office.

—M. Beebe, of the Vilar Cork Co., Hoboken, N. J., has been visiting at his former home in Rochester, N. Y.

—Reid, Yeomans & Cubit have secured the services of Perry Robertson as a clerk in their Nassau street store.

—A. H. Kennedy, of Charles N. Crittenton & Co., spent several days last week down East on an outing.

—A. S. Marney, treasurer of Schieffelin & Co., has returned from a two weeks' vacation at Nantucket.

—Charles Weis, with McKesson & Robbins, who has been ill for several days, has returned to his work.

—Nelson Fry, who is the proprietor of several pharmacies in Philadelphia, was in the city last week.

—William L. Haas, with W. L. Strauss & Co., has left for a month's outing at Thousand Islands.

—The Segal Drug Co., has opened a new store at the corner of Eleventh street and 6th avenue.

—After a vacation of two weeks, J. H. Gerathy, with McKesson & Robbins, has returned.

—The Board of Directors of the Drug Club had their regular monthly meeting yesterday.

—Geo. H. Hardy, a prominent druggist of Derby, Conn., was in New York September 7.

D. & S. Licorice and Dean's Patent Ardent Mustard are two old staples made and advertised by W. G. Dean & Son, 361 Washington street, New York. The licorice season will soon be here, and druggists should bear in mind the excellent quality of goods which this concern offers.

—Frank A. Davidson, president of the Theodore Metcalf Co., retail druggists with stores in Tremont street, also in Boylston street, Boston, as well as a third store at Brookline, will spend a fortnight or more at Mr. Wauschuset, Princeton, Mass., getting there the benefit of needed rest from business cares. Mr. Davidson was

born in Clinton, ten or twelve miles from Wauchusett, and the mountain is in sight of his boyhood home. F. M. Lyons, head of the prescription department of the Tremont street, or down-town, store of the Metcalf Company, is expected soon home from Europe where he has been all summer on a vacation trip. Edwin M. Shedd, of this house spent his vacation at Raymond, N. H., his family accompanying him. Bertram E. Hall, a bookkeeper of the company, passed his vacation at his old home in Fitchburg.

—David Palmer Peckham, otherwise known as David Edward Peckham, who recently was arrested in Philadelphia charged with polygamy, is known in Boston where he was a drug clerk. Peckham hails from Old Lyme, Ct. His parents are most respectable people, and he is a distinguished looking man himself, about twenty-nine years of age. He claims to have been a drug clerk, a barber and a manufacturer of barbers' supplies. He worked as drug clerk in Boston at the time of one of his marriages and appears to have been devoted to several other women at the same time. It was partly through his connection with the drug business that his polygamous escapades were traced.

—The first examinations this fall by the Massachusetts Board of Registration in Pharmacy will take place on September 17-19-22-24-30, and one will be held on the first Tuesday in October. These two have been planned especially to accommodate the large number of applicants who have filed their names for examination since the last previous examination, which took place June 20th. There are now sixty applicants and these are to be set apart in squads of ten candidates, as many as the board can conveniently examine at one time. Curiously enough, not a woman is numbered among those who have entered their names for these early fall examinations.

—It is a curious fact that fifty years ago, or to be exact, according to the record, fifty years from September 5, the late Dr. Theodore Metcalf placed in the cellar of his pharmacy, at 39 Tremont street, a barrel of New England (or Mefford) rum. This has remained intact without disturbance all the time since then, and still has a resting place in the cellar of the store of Theo. Metcalf Company. It is just possible that now, after a half a century has slipped by, the barrel may be opened and its contents distributed, although it is stated emphatically that the rum is not for sale. "Don't all speak at once."

—Because a leading druggist in Salem named an original popular drink in honor of a well-known citizen who enjoys creature comforts, and who felt honored because his name had been used to immortalize the drink, a complication of troubles has resulted. There is another gentleman of the same name in Salem, who is prominent in church work and who does not enjoy the notoriety that comes with the association of his name with a thirst quencher and he is trying to urge the druggist to abandon it. Salem people are having the laugh, and the drink is becoming popularized.

—President Charles F. Nixon, of the Massachusetts State Board of Registration in Pharmacy, has just returned from an extended tour through Europe, coming over from Liverpool in the steamship Servia. President Nixon, whose home is in Leominster, went through the principal cities of France, Switzerland, Italy, and then went to Vienna, Berlin, Dresden and other North German places. Before returning, he visited the English cities, including London. His trip has done him much good.

—Fire has destroyed the boat-houses on the summer estate of Dr. Green, of Boston, of "Nervura" fame. The estate on Long Island in Lake Winnepesaukee. The steam launch Mohawk and naphtha launch and other contents of the boat-houses were destroyed, involving a loss which will amount to several thousands of dollars. This was partly covered by insurance. The origin of the fire is unknown.

—The death, on Sept. 4, is announced of Hon. Frank H. Chapman, former representative to Congress and for more than a quarter of a century a druggist at Franklin Falls, N. H. He was a native of Lawrence, Mass. At Franklin he was one of the trustees of the Frank-

lin Savings Bank. He was a Mason and had attained the thirty-third degree in the order.

—W. C. Roycroft, a Cambridge druggist having a store on Massachusetts avenue in that city, has gone to Northport, Me., where his family has been spending the summer. They will return together. Fred. Higgins, who was formerly a clerk at the Roycroft Pharmacy, now becomes head clerk for S. H. Talbot, another Cambridge pharmacist.

—A new clerk who has joined the pharmaceutical staff of the Theo. Metcalf Company, this city, is Lewis Graves, who for some time has been employed as prescription clerk at Dickinson's pharmacy in Baldwinville. Fred. Cushing of that town has been engaged to succeed Mr. Graves at the Dickinson store.

—After a month's respite from business, passed pleasantly in Vermont, Walter A. Claffin, a Cambridge druggist, has just returned to business. While away he visited his father at Holliston, Mass.

—E. A. Webster, one of the oldest established druggists in Springfield, Mass., has sold his business in the Masonic Building. He is largely interested in copper and will devote his attention to his mining interests.

—George S. Laporte, a clerk in the employ of Charles Rundlett, a druggist at Worcester, has just finished a vacation, spent at Chapinville.

—J. J. Murphy, a Pittsfield druggist, has added J. J. Carrody, to his staff of clerks at his pharmacy.

PHILADELPHIA.

THE TELEPHONE SITUATION.

Philadelphia, Sept. 7.—The most important happening of the week to the retail trade is the decision of the local association to accept the statements of the Keystone Telephone Company that it cannot afford the 25 per cent. commission demanded by the druggists, and to temporarily give up this demand for the purpose of securing a straight 20 per cent. commission on all service. By the proposals of the telephone company a distinction was to be made between automatic telephones and "booth" telephones the former paying only half of the commission of the latter, so if the straight 20 per cent. commission can be secured from the company it will be more profitable in the end to druggists than 25 per cent. on "booth" phones. One stipulation of the Keystone Company, that telephones must do \$100 worth of business a year to get this commission, has caused some little figuring on the part of druggists who want some idea as to how many calls a day they must average to do this amount. At five cents a call, \$100 a year will mean 2,000 calls, about six a day, less than the average of all but a very few stores. One concession granted by the Keystone Company to druggists may prove of much profit to them, the insertion in their "Book of Rules" of a paragraph fixing a charge of five cents for each square of distance for messenger service in delivering telephone messages. This too will go to the druggist maintaining the pay station. Recent statements by officials of the Keystone Telephone Company seem to indicate that they are very anxious to secure the good will of retail druggists and will be quite liberal in their concessions.

A NOTICEABLE IMPROVEMENT IN TRADE.

Philadelphia, Sept. 7.—With the close of the vacation season and the return of summer tourists to the city, the retail drug trade here has experienced quite a noticeable improvement during the week past. Business is brisker and sales livelier, and both are steadily increasing as the month grows older. At yesterday's meeting of the P. A. R. D., where all sections of the city were represented by bright business men, there was a general expression of opinion that the outlook for a good fall trade was quite favorable, and that business is showing a steady increase, with the summer dullness now a thing of the past. The jobbing district is beginning to take on a livelier appearance, and heavily loaded wagons and busy forces of delivery clerks and porters give evidence

of a quickening of trade. The big houses along Arch street all seem to be busy, and say that orders are coming in very satisfactorily. It is said that one firm contemplates making extensive enlargements of working space in the near future to cope with their increasing trade. The market shows little speculative tendency, trade being confined to the actual purchases of stock and raw materials, and prices of the leading staples keep close to market quotations.

NOTES.

—In spite of the recent enactment of stringent "poison laws," a druggist located near the so-called "Tenderloin" sold morphine to a young woman last week with which she committed suicide in a house of ill-repute. The druggist was strongly censured by the coroner at the inquest for having sold such a quantity of morphine without requiring the purchaser to register her name, and he further hinted that more than one druggist in this section was carrying on an illegitimate trade in supplying abandoned women and their male companions with morphine and cocaine. It is hoped for the good name of Philadelphia druggists that this practice is not as common or extended as the coroner suggested.

—Fire in the drug store of C. W. Farrington, at Seventeenth and Mount Vernon streets, destroyed several hundred dollars' worth of stock, consisting chiefly of drugs and medicines, early this week. A clerk was tapping a barrel of alcohol in the cellar, when the fumes became ignited by contact with the flame of a candle he was holding, and burst into a fierce blaze, which rapidly extended to other stock nearby. The clerk escaped with a few painful burns by running upstairs, where he gave the alarm of fire. The fire was extinguished before it had done much damage to the building, but much stock was destroyed.

—A heavy rain storm swept over the city last Saturday night and did much damage, particularly in the northern sections. Several druggists along the line of the old Coochekink sewer suffered loss from flooded cellars, and others in the neighborhood of Girard avenue east of Ninth street also had similar experiences. Broad street below Allegheny avenue was for a time like a river, and the cellar of Crumble Brothers' drug store at Broad and Allegheny avenue was flooded with water, a large quantity of drugs and stock being ruined and destroyed by the water.

—Not fewer than five deaths caused by persons drinking carbolic acid by mistake for some other liquid were reported in the papers this week. In one case the carbolic acid had been bought in a half-pint whisky flask, and the victim took a drink of it in the dark, thinking from its shape that it contained whisky. The moral is that druggists should never sell poisons in bottles commonly used for holding liquors or harmless beverages.

—By the explosion of a chemical tank in room 417, Odd Fellows' Temple, Monday night, Joseph Humphries, a well-known local electrician and chemist, was seriously injured, his skull being slightly fractured from a flying piece of metal. Mr. Humphries and an assistant were conducting some experiments at the time, and the explosion was entirely unexpected.

—Jos. C. Perry has sold his Haverford avenue store to W. C. E. Kraus, a recent graduate of the Philadelphia College of Pharmacy. Mr. Perry's family are not living at 34 North Forty-first street, having formerly occupied the dwelling part over the store.

—Two other business changes are noted for the week: J. L. Smart has opened a new drug store at Twentieth and Wharton streets, and B. Lutz has purchased O. Sprissler's drug store at Eighth and Oxford streets.

Pabst Malt Extract, the "Best" Tonic, is advertised very extensively to the public. Unquestionably it is one of the best malt extracts on the market. The advertisements to the consumer state: "Your druggist sells it." If there are any druggists who have not yet stocked it, they can obtain Pabst's Malt Extract from the jobber. For counter advertising matter address Pabst Brewing Co., the "Best" Tonic Dept., Milwaukee, Wis.

PITTSBURG AND VICINITY.

PITTSBURG NEEDS MORE CLERKS.

Pittsburg, Sept. 5.—Secretary A. F. Judd, of the Western Pennsylvania Pittsburg Clerks' Association, says that there is an unprecedented demand in the trade for good drug clerks. A part of the shortage of competent help he says:

"The question which most concern the pharmacists of Pittsburg and surrounding towns in Western Pennsylvania is where to obtain drug clerks. The demand for first class clerks is greater than it ever has been. This is a reflection of the remarkably prosperous condition of the trade in this part of the country. A careful investigation of the causes of the shortage in help has led to this conclusion. This state of business is of as great benefit to the clerks as to the proprietors, the scale of wages paid to clerks being higher here than in any other part of the State. This, again, is explained by the fact that our pharmacists want none but the best talent and are willing to pay for it. There is a fine opportunity here for reliable young men of experience or graduates in pharmacy. Some druggists are willing to give positions with college privileges. The association has filled a large number of places, and will continue in its effort to supply clerks for the trade here."

BALTIMORE.

A PHARMACEUTICAL LOCHINVAR.

Baltimore, Sept. 5.—Not all the Lochinvars come out of the West. Some of them hall from behind the soda water fountain. This, at least, was the case recently in Baltimore, when a distracted mother called upon the city detective force to arrest Merton L. Seitz on the charge of abduction. This modern cavalier, though only eighteen years old, had eloped with Miss Ella B. Gleitner, of Brunswick, Md., aged sweet sixteen. The attention of the detectives was directed to the case by a letter from the mother of Miss Gleitner, stating that her daughter had run away with Seitz, and that she was under age, and requesting the department to find her. The couple were soon located, Seitz being employed as clerk in a drug store here. When the stern minions of the law pounced upon the youthful lovers the latter had not yet pronounced the words that bind, but both emphatically declared their purpose to marry and were hustled off to the headquarters, where the young lady's mother awaited them. Acting Captain Hogan talked the matter over with the irate maternal parent and persuaded her under the circumstances it would be best to let Cupid have his way. A license was soon procured and the ceremony which united the two for better or for worse was soon performed. Seitz formerly lived at Brunswick and he became acquainted with Miss Gleitner there. The groom spent his honeymoon behind the soda water fountain in the North Baltimore store where he is employed, waiting on customers.

SOCIAL WEDGEWOODITES.

Baltimore, Sept. 4.—That disagreement between two prominent members of the Wedgewood Club, mention of which was made in the last issue of the Pharmaceutical Era, appears to have been more trifling and insignificant than it was represented in the report. It seems that Owen C. Smith, in his earnest desire to promote the amiability and sociability, inadvertently fell into the error of signing the "postal" which invited the members of the organization to participate in certain festivities at Electric Park as temporary secretary, when the notice should have gone out as the decision of the executive committee. Its purport and significance, however, were fully understood and the second "postal" is not in any sense to be regarded as suggestive of friction. As a matter of fact, some eight or ten Wedgewoodites assembled at Electric Park on the evening in question, and had a very enjoyable time. The regular dinner this month is expected to bring out the full membership.

ALUMNI NEWS-LETTER.

Baltimore, Sept. 3.—The Alumni News-Letter, published by the Alumni Association of the Maryland College of Pharmacy, twice a year, has just been issued and presents a most attractive appearance. It is in the form of a neat pamphlet of twenty pages with a cover, and constitutes a fine sample of the printer's art. The pages are embellished with a number of half-tone engravings, portraits of members of the faculty and prominent alumni. The present number shows, on the second page of the cover, a group picture of this year's graduating class. A conspicuous feature of the first page proper is a portrait of Owen C. Smith, the new association president, together with a short biographical sketch. Included in the text is an account of the commencement, of the alumni meeting, and the banquet which followed the transaction of business, the several addresses delivered in full, and various other matters of interest connected with the annual event and the college.

DRUGGISTS MODERATELY ACTIVE.

Baltimore, Sept. 8.—As has been observed often before, the first week in the new month was signalized by exceptional activity in the jobbing drug trade. Numerous orders from retailers were received by the several houses, and the aggregate of transactions assumed very impressive proportions. The manufacturers are pursuing the even tenor of their way and get their share of business. Already it is apparent that they will be able to show a considerable excess in business for the current year over 1900, while prices are certainly as good and, in many instances, better. The movement in heavy chemicals continues uninterrupted, while the market for botanicals reflects in the main the conditions prevalent elsewhere. Not a few of the retailers are fairly busy.

NOTES.

—Frederick W. Schanze, the leading retail druggist at the corner of Pennsylvania and North avenues, who has not only built up a fine trade, but is the proprietor of one of the most attractive pharmacies in the city, is contemplating matrimony. He will marry Miss Josephine Abbott, of 2017 North Fulton avenue, on the evening of the 18th inst. Cards are sent out for the wedding.

—Representatives of the Fraser Tablet Triturate Co., have been working in Baltimore during the past week to put into operation the new financial arrangement adopted by the company, of distributing stock among physicians and thereby making them directly interested in the products turned out by the company.

—Dr. D. M. R. Cubreth, of the Maryland College of Pharmacy, returned last week from a vacation trip to Spring Lake, N. J. He had a very enjoyable time and will resume his college duties much benefited by the outing.

—The Cafe Cafeeno Drug Co., was incorporated last week with capital stock of \$50,000. John Waters, Edward M. Parrish, Charles B. Parrish and Edward P. Murray, of Baltimore county, are the incorporators.

CINCINNATI.**O. S. P. A. WILL ORGANIZE AN AUXILIARY.**

Cincinnati, Sept. 7.—The Ohio State Pharmaceutical Association is making an effort to organize an auxiliary in Cincinnati. Circular letters setting forth the aims of the association are being sent to local druggists. The principal object is to protect the trade from unwarranted law-suits and legislation. The headquarters of the association are at Columbus, and Cincinnati is the only important city in the state that has no auxiliary. Organizers will be sent here in a few days. The association is distinct from the Ohio Valley Drug Association, the present local organization, whose chief aim is to prevent cut-rating.

NOTES.

—The drug store operated for the past twenty-five years by the Rendigs Bros., at the corner of Gilbert avenue

and McMillan street, has been purchased by Herman Serodino, the druggist at Fifth and Walnut streets. Mr. Serodino will remodel and double the capacity of the store, having secured a lease on the building adjoining.

—Chas. C. Rickert, who has been identified with the wholesale drug business in Cincinnati for the past fifty years, died at his residence, 2521 Auburn avenue, at the advanced age of seventy-five years. His son will continue the business under the old firm name of J. & C. Rickert.

—The Ohio Valley Drug Association has taken in the druggists of Covington, Newport, Bellevue, Dayton and Ludlow, Ky., and Lawrenceburg and Aurora, Ind., as members, and will shortly send their organizer to Hamilton.

—The druggists at Xenia, Yellow Springs, Cedarville and Jamestown have formed an organization to be known as the Green County Drug Association and will affiliate themselves with the N. A. R. D.

—Frank Socim, formerly clerk with J. W. Vester, has purchased the drug store at the corner of Central avenue and Richmond street of E. W. Gray.

—C. R. Hans, the popular druggist of Western avenue, is spending his vacation with his family at Buffalo, and the lakes.

—C. W. Montgomery, of Bethel, Ohio, was in the city this week purchasing fixtures for his new store.

LOUISVILLE.**Passes Ordinance Against Sale of Cocaine.**

Louisville, Sept. 5.—Lancaster, one of the most prosperous cities in Kentucky, is all wrought up over the crimes which have lately been committed, and its citizens claim that about all of the law breaking can be traced directly to the cocaine habit. Accordingly, when the members of the town council got together on Monday night they decided to take action. A delegation of prominent citizens were on hand to see that no lobbying was done, and that the cocaine trade was dealt a death blow. After considerable wrangling, for the druggists were not without friends, a cocaine bill was passed. The ordinance prohibits the sale of cocaine except on a physician's prescription. The fine was made large enough to assure respect for the new law. The members of the council say that the law was not passed to be simply spread upon the records, but that it will be enforced and enforced rigidly.

NOTES.

—Last week was the best week that the Louisville druggists ever had, and it would be difficult to find one who is not in good humor as a result. The Triennial Conclave came up to expectations, and the city was crowded by visitors anxious to be separated from their money. Druggists from all over the country were in the city, and when not parading or attending social functions, were visiting the local drug stores and finding out how business was conducted in the metropolis of Kentucky. One of the most conspicuous of the visiting pill rollers was Henry Davis of Des Moines, Iowa. He is a member of the Grand Commandery of the State. He was the guest of honor at several dinners and was the most feted man in the largest of the Falls Cities last week. The New Albany druggists also entertained many of the visiting brethren. Only one druggist, William Wilson of Chicago, was injured. He was knocked down by a fire engine and seriously hurt. He was unable to leave the city with his commandery, but was compelled to remain over until yesterday.

—Benjamin F. Alford, one of the best known pharmacists of the South, was recently injured by a grocery wagon. Although his condition shows great improvement, he is not yet out of danger. Mr. Alford was standing on the corner of Twenty-sixth and Alford avenue, waiting for a street car, when a horse attached to a delivery wagon became frightened and ran into him. The druggist was knocked down and trampled upon by the animal. When assistance reached him he was unconscious and he was removed to his home. Mr. Alford was formerly surveyor of customs.

—Louisville pharmacists have been notified by letter that South Bend, Ind., would be a contender for the 1903 meeting of the American Pharmaceutical Association, and that the votes and the influence of the Louisville delegates would be appreciated. The South Bend druggists are after it strong and will not rest until they have the promise of the delegates to visit their city in 1904. The formal invitation, which will be extended at the St. Paul meeting, will set forth all of the city's advantages.

—Louis H. Schulmeier, the chemist and druggist, who claims he has at last found a method of manufacturing diamonds which cannot be told from the genuine, is a native of Louisville. He is now living in Indianapolis, and is associated with the Daniel Stewart Drug Company, wholesale druggists.

CHICAGO.

Chicago Business Active.

Chicago, Sept. 7.—The manufacturers report business as improving. Fall orders are coming in their accustomed volume, considering the earliness of the season. Jobbers are uniformly well satisfied, and state that the outlook for fall is more than usually good. The volume of individual orders is improving, and the number of orders is beginning to show a substantial increase. Local trade is moderately active, and collections are good all along the line.

NOTES.

—George C. Scheidig, formerly west side salesman for Peter Van Schaack & Sons, has bought the drug store of J. J. Boehm at Twentieth street and Blue Island avenue. Mr. Kaplanski, a former owner of the same store, takes Mr. Scheidig's place with Messrs. Van Schaack & Sons.

—James H. Wells, proprietor of the Medinah Temple Pharmacy at Jackson boulevard and Fifth avenue, recently bought the N. A. Williams drug store in Evanston, and will operate both stores.

—A. E. Zuber, a well-known druggist at 5105 Wentworth avenue, has just returned from an extended trip to Buffalo, Niagara Falls and the Thousand Islands.

—John P. Hopkins recently foreclosed a mortgage on the fixtures in the drug store at 8224 Cottage Grove avenue. The sale occurred Saturday.

—George V. Haering, a druggist at Madison and Des Plaines street, has just returned from a month's vacation at Niagara Falls and Buffalo.

—Albert B. Hunt, city manager of the Fuller & Fuller Company, has returned from a three weeks' vacation in Michigan.

—H. Giddings has succeeded Schroeder & Valbracht at 1451 West Van Buren street.

—C. S. Tirrell has succeeded A. N. Lincoln at 1375 West Van Buren street.

—E. V. Klöcknerstroem has succeeded A. Aronson at 405 Lawrence avenue.

SPECIAL TERMS ON CASTORIA.

Castoria—"the kind you have always handled"—is made by the Centaur Co., 77 Murray street, New York, of which Charles H. Fletcher is president. Mr. Fletcher thinks that almost any druggist ought to be able to sell a dozen bottles of his specialty a month, or one gross a year, and to induce effort in that direction he authorizes the jobbers to allow a special discount of 5 and 2½ per cent. on gross lots.

Druggists are invited to send for counter wrappers, cartons and other advertising matter.

A LARGE BOTTLE CONTRACT.

The Welch Grape Co., of Westfield, N. Y., is asking for quotations on their 1902 contract for bottles and agree to take 8,000 gross. To fill these there will be needed over 1,000 tons of grapes and some one will have a contract for 8000 gross of corks, another for 1,100,000 caps, another for 1,100,000 labels, another for 90,000 boxes. The Excelsior Wrapper Co., will furnish 1,100,000 wrappers.

THE NORTHWEST.

ARRAY OF VISITING DRUGGISTS.

St. Paul, Sept. 6.—Among the many druggists of Minnesota and other northwestern states who came to St. Paul this (State fair) week and enjoyed the courtesies of Noyes Bros. & Cutler were these:

Charalou Bros., Logan; O. A. Strom, Kerkhoven; H. G. Gronberg, Hoffman; Wm. Story, Buffalo, N. D.; A. M. Camachan, Bruce, Wis.; P. W. Story, St. Peter; N. F. Nelson, Milbank, S. D.; A. Fiddes, Jackson; B. White, Maiden Rock, Wis.; S. B. Weiser, St. James; L. McKechnie, Cottonwood; C. K. J. Kellam, Heron Lake; A. P. Brobeck, Kenyon; J. C. Thro, Mankato; A. Olson, Blooming Prairie; A. Ellbison, Canby; L. O. Bothen, Fulda; J. A. Prim, Ceylon; L. L. Benedict, Wadena; Dr. C. Peterson, Owatonna; Bottom Bros., Bilder, Northwood, N. D.; C. F. Towne, Albert Lea; A. L. Hillman, Arlington, J. E. Fladland, Portland, N. D.; E. A. Biehl, Fairfax; Holson & Fisher, Grandon, N. D.; P. A. Walling, Park Rapids; J. G. Sieben, Hastings; A. S. James, Ely; F. F. James, Two Harbors; E. B. Doolittle, Laverne, Ia.; Dr. P. Follman, Mankato; J. G. Dahl, New Centerville, Wis.; N. Sutton, Kimball; C. A. Haugan, Durand, Wis.; A. M. Hitchcock, Redwood Falls; L. A. Christianson, Baldwin, Wis.; L. S. Waller, Belgrade; W. W. Sallsburg, Marshall; W. L. Hoover, Truman.

NOTES.

—Successions: Greiner & Co., Ringsted, Ia., by M. P. Madsen; Spalding & Nimmo, Brainerd, by C. Bruce Nimmo; Watson & Murgulthoyd, Spokane, Wash., by Stone & Sutherland; H. C. Becker & Co., Olvina, Minn., by H. C. Becker; J. H. Guthrie, Defiance, Ia., by Richard W. Yeaman.

—Emil Falty, Burrese, Neb., is to sell, J. N. Gaynor, Grove City, Minn.; W. S. Ranney, Elkton, S. D., and G. I. Smart, Blue Earth, Minn., have already done so.

—Bernard Katzky, who has been for years in business at Staples, having sold his business there, has gone to St. Louis to enter the drug business there.

—New: D. C. Flanagan, Bancroft, Neb.; Ford & Copnus, Gardner, Idaho; A. J. Peterson, Kathryn, N. D. —E. W. Cummings is taking charge of W. C. Hancey's stock at Marshall while he takes a vacation.

—G. V. Williams has left Minneapolis and gone to work for E. C. Krueger at Forest River, N. D.

—Harry Filbert was in the city from Heron Lake this week visiting old friends.

—Otto Zuecher has returned to St. Cloud, his home, for a time.

—L. L. Stewart has resumed business at Wheaton, Minn.

Over 100 Per Cent. Profit.

Those who desire to sell a headache and neuralgia cure which can be relied upon to do its work effectively and will pay the dealer over 100 per cent. profit, should sell the well-known remedy, Flag Salt. It makes friends wherever sold. The manufacturers have an attractive proposition for druggists. They will send one dozen 25-cent boxes, one dozen 10-cent packages, and 100 samples, all by express, prepaid, on receipt of \$2. The samples sell the goods, and the druggist more than doubles his money. Address The Flag Salt Remedy Co., Savannah, N. Y.

A Guaranteed Preparation Which Pays a Big Profit.

The manufacturers of McGee's Corn Cure, an improved plaster, absolutely guarantee that it will do all that they claim for it. They claim that it is easy to apply, gives immediate relief, and will not leave the feet sore. It pays the dealer 100 per cent. profit, and the manufacturers furnish liberal supplies of samples and advertising matter. For complete particulars address The Star Chemical Co., Mfrs., Louisville, Ky.

ST. LOUIS.

St. Louis, Sept. 7.—The St. Louis Retail Druggists' Association held its regular monthly meeting at the College of Pharmacy Building last Wednesday afternoon. There was a very small attendance as no special business had been announced for the occasion. The president announced that the written requests framed at the last meeting to be presented to the local jobbers were in the hands of C. W. Wall, treasurer of the Meyer Bros. Drug Company, and that a few days after receiving them he had departed on his annual vacation and promised before he left that a reply would be given soon after his return. Mr. Wall is expected in the city within a few days and shortly afterwards the retailers may expect their reply from the wholesalers. After adjournment a majority of the members went down to the Southern Hotel where the weekly meeting of the Arrangement Committee of the A. Ph. A. was being held. Here they spent the remainder of the afternoon.

NOTES.

—The Missouri Board of Pharmacy held its first business meeting of the year at Jefferson City on last Monday. W. B. Kearns of Bunceion was elected president, Paul L. Hess, of Kansas City, vice-president, and A. Brandenberger, of Jefferson City, was chosen secretary. It was decided to send a special invitation to the members of all other boards of pharmacy to be present at a conference at the Southern Hotel on Friday of A. Ph. A. Convention week.

—Mr. Louis Lehmann, druggist at Jefferson and Washington avenues, has received the contract for the dispensaries at the O'Fallon and Polyclinics, which are departments of the Medical Department of the Washington University.

THE SOUTH.

THE CREDIT EVIL.

Memphis, Sept. 6.—Up to the time of the invasion of cut prices the credit evil was the greatest evil the druggists of the South had to contend with. It has now reached such proportions that stringent measures are necessary in order to stop it. The pharmacists of Jackson, Tenn., have taken the initiative in making an improvement, inasmuch as they have gotten together and agreed to do business on a strictly cash basis in future. The agreement is to go into effect Oct. 1, and the people will be apprised of the change through the newspapers. In order that those without funds may not suffer, an emergency fund has been created and placed in the hands of a committee. This committee consists of the mayor, city recorder and chief of police. Any person who is not able to buy medicine may secure free of all cost by taking to any druggist an order signed by a member of the committee. Jackson is one of the most progressive towns in the South, and the druggists there have already accomplished one herculean task, that of restoring prices. J. L. Nelson, one of the town's most progressive pharmacists, sums the situation up in this terse language: "Jackson is a city of 18,000 people, with seven exclusive drug stores, all of which are members of a local drug association, prior to which we had one of the worst cut rate towns in the South. We organized and restored prices, joined the N. A. R. D., and to that body we are indebted for our strong co-operation. We regard the credit evil as the greatest evil among us, and after a number of meetings and mature deliberations we have made arrangements to begin a strictly cash business the first of October. We do not expect the least difficulty in this. We will not make any cut on patents, but expect to have an understanding among ourselves to make closer prices on prescriptions."

NOTES.

—Henry Schilling, a clerk in the employ of the Lamar-Rankin Drug Company, Atlanta, Ga., narrowly escaped death last week. As it is the young man lies in the Grady Hospital with his throat cut as the result of being

struck on the back of the head by the heavy weight that helps to run the elevator in the store. Saturday was going up on the elevator, and in looking over the shaft he was struck on the back of the head by the heavy descending weight with such force that he was seriously injured. The ambulance was hastily summoned and he was taken to the hospital. It is hoped that he will recover.

—Jake Adams, a clerk at the Hammack & Lutz Pharmacy, Atlanta, Ga., and a young woman who told the police her name was Simmons, almost met death on Aug. 29. The couple were in a boat on a lake near the city when the boat was upset and they were thrown into shallow water, under which was quicksand. The struggles of the pair attracted the notice of a passer-by, who rescued them from their perilous position just in time to save their lives.

—J. Ben. Davis, who has been traveling in Kentucky in the interests of Seabury & Johnson, will quit the road and go in business for himself. He has purchased an interest in the drug store of T. E. Glass, Brownsville, Tenn. The new firm will be Glass & Davis.

—Sam. A. Williams, a young and successful druggist of Troy, Ala., is a candidate for the mayor's office of that enterprising little city. The young men of the place are working hard for his election, which seems to be assured, as he is very popular.

—S. Colwell, for a number of years clerk for T. E. Glass, Brownsville, Tenn., has gone to Trenton, Tenn., where he is in charge of the Turner Drug Company's store. W. A. Scott of Brownsville, Tenn., was a visitor in the city last week.

—The Chickasaw Pharmacy, corner Rayburn avenue and Broadway, has again changed hands. W. H. Neinstedt, the late proprietor, has reassumed his old position with George Battier, and is succeeded by J. N. Thompson.

—J. C. Steger, Arkansas representative for the Wm. S. Merrill Chemical Company, is on the road again after several weeks' rest at his home near Huntsville, Ala.

—The drug store of R. L. Jenkins, Ripley, Tenn., was entirely destroyed by fire on the 2d instant. Mr. Jenkins' loss was \$5,000, on which he had \$3,500 insurance.

—W. W. Curtis, representative for Sharp & Dohme in the South, has returned from an extended trip North and East. He reports having had a good time.

—W. A. Dampier, of the firm of Dampier & Dampier, Crystal Springs, Miss., was in the city recently.

—Ed. Collins, accompanied by his wife and baby, is visiting his old home, Louisville, Ky.

—Dr. R. N. Bond of Brownsville, Tenn., was in the city last week.

—The Washington State Pharmaceutical Association held its annual meeting at Tacoma last week. At the opening session an address of welcome was delivered by S. A. Perkins and responded to by J. M. McArthur of Spokane. S. M. LeCrone, the retiring president, delivered his annual address. Of the 225 members of the association over half were in attendance. Officers for the ensuing year were elected as follows: President, J. W. McArthur, Spokane; vice-presidents, David Wall, Vancouver, Mrs. Alice L. Summers, Friday Harbor; and H. P. Kennedy, Seattle; secretary, W. P. Bonney, Tacoma; treasurer, William V. Skillman, Spokane. Executive Committee: A. Davidson, Tacoma; P. Jensen, Tacoma; J. H. Day, Dayton; C. I. Carr, Seattle; Mrs. Alice L. Summers, Friday Harbor; H. P. Kennedy, Seattle; I. Korn, Tacoma; Fred P. Offerman, Fairhaven; Joseph Schlumpf, Seattle. The president, secretary and treasurer are ex-officio members of the committee. The association selected the following druggists from whom Gov. Rogers will select one for appointment on the State Board of Pharmacy to succeed J. H. Day, whose term expires this year: J. H. Day, Dayton; L. I. Tallman, Walla Walla; W. J. Roof, North Yakima; W. J. Hamilton, Colfax; H. S. Elwood, Ellensburg. An invitation was extended by the Seattle delegates to hold the next meeting of the association in that city, and it was unanimously accepted.

NEW ORLEANS.

NEW ORLEANS RETAILERS MEAN BUSINESS.

New Orleans, Sept. 6.—Members of the Orleans Pharmaceutical Association have declared war on the local cut-rate concerns, and about one hundred and thirty of the retail men have signed an agreement looking to the establishment of better prices. The action was taken at a recent association meeting held at the College of Pharmacy. At the same meeting four delegates were selected to represent the trade at the convention of the National Association of Retail Druggists, to be held in Buffalo, October 10, 11 and 12. The delegates chosen are M. T. Breslin, president of the Orleans Pharmaceutical Association; F. C. Godbold, its treasurer; George D. Feldner and Ed. Jurglewicz. It was the original intention to send at most two delegates, but the question of prices has so thoroughly stirred up the trade that it was thought advisable to make the delegation as large as possible. These delegates have been instructed to aid in any legislation looking to a raise of prices from ten to fifteen per cent.

Locally, it is complained that for ten years several New Orleans druggists have established cut-rate prices where goods are sometimes sold below cost, and the trade generally was forced into an adoption of the same prices.

It was pointed out at the meeting that the National Association of Jobbers had agreed to sell no druggist who cuts rates, if seventy-five per cent. of the others in his locality came into the movement for better prices. This has been done in New Orleans, for with about one hundred and fifty local proprietors, signatures of one hundred and thirty have been secured.

This being the case, the cut-rate druggists, the members of the association say, will be unable to purchase supplies from the jobbers, nor will the jobber who sells to the cut-rate retailer, be able to buy goods from the manufacturer.

The programme for the local fight is that prices of the cut-rate establishments will be met until the outsiders have exhausted their stock. Then when their purchasing avenues are cut off the new list of prices will go into effect. The standard of new prices, a prominent association man said, will be a compromise between the old prices and the present cut-rate figures, with a fair margin of profit.

An evidence of the co-operation of local jobbers and manufacturers in the fight against the cut-rate methods was had in liberal contributions towards the expenses of the delegation to attend Buffalo. Contributions came from L. N. Brunswick & Co.; I. L. Lyons; Finlay, Dieks & Co.; Parke, Davis & Co.; E. J. Hart, and others.

A prominent local retailer, in speaking of the situation said:

"It has become absolutely necessary to stop the practice of rate-cutting. It has led to many evil results, chief among which is our inability to continue handling patent medicines at a profit. On many of them we actually lose money, while on others there is a bare margin of profit. The condition has become such that in self-defence the druggist must try and even things up by making up his own medicines and inducing patrons to buy them rather than the medicines bought from jobbers at close prices. While many of the proprietary medicines are as good, and some better, than those manufactured by the big concerns, there are others which are injurious imitations. There is surely a patent medicine on the market that is not imitated and the imitation is sold as 'just as good.'"

The New Orleans cut-rate prices are led by the American Drug Company. Dr. Sauvage, the local manager, appears to have little concern over the fight, and when seen professed an ignorance of what the retailers proposed doing. Other cut-rate dealers argue the fight a thoroughly unpopular one from the association view point, and predict that it can never win for the reason that it was simply a movement in restraint of trade, and an effort to oppress the sick and needy.

Future developments are of vital importance to the trade, and the local drug world will go into the fight with a vengeance.

DRUG TRADE EXPANDING IN NEW ORLEANS.

New Orleans, Sept. 6.—With the September opening of the commercial year in New Orleans there is no branch of trade that boasts of more prosperity than of drugs and chemicals, despite the cut rate and its "evils." It is estimated that since September, 1900, the several large wholesale houses have done a combined business of over \$5,500,000. Chemicals, proprietary medicines and toilet articles have been shipped to all the new possessions, and recently an excellent foothold has been secured by local concerns in the Far East.

Every drug concern in New Orleans has its representatives in Cuba, Porto Rico, Central and South America, the West Indies, and Mexico, and there has been a most gratifying trade with these tropical markets. Recently several large houses have established agencies at Shanghai, Canton, Hong Kong, and other important Chinese cities, and American made goods will be pushed in the land of the heathen Chinese. The foothold in China was made secure by the interesting of prominent Chinese merchants in importing goods, and through bills of lading from New Orleans to the destination in China are given. New Orleans merchants have been also looking for trade in India and the prospects have warranted the establishment of agencies at Bombay and Calcutta.

With the many trade improvements under way locally it is confidently expected that the commercial year of 1901-1902 will show a becoming increase over the successful year just closed.

PHILADELPHIA RETAIL DRUGGISTS.

In spite of the warm weather and the absence from the city of a number of active members, the meeting of the P. A. D. R. for September was very well attended and much important business transacted.

The recording secretary read several letters from both Eisner & Mendelson and A. Saxlehner in connection with the suits brought against several local druggists for selling Hunyadi Matyas water with a blue label; much dissatisfaction was expressed at the tone of the letter from A. Saxlehner. Resolutions of sympathy on the death of E. J. Finery were read.

In the report of the Executive Committee, presented by Chairman J. C. Perry, the "Hunyadi cases" were gone over in full. Letters were read from Eisner & Mendelson in which they pledged themselves to take up the cases of all the druggists who had been sued for selling their brand of Hunyadi water and assurances were given that they would pay all the costs and expenses of the suits. In making this communication to the association, Eisner & Mendelson corrected an impression that had become current that they would not do their promised part in defending the men who had got in trouble through selling their goods, as they declared that they had all along promised protection to their customers and if any druggist had not got it it was because he had not forwarded his case-papers to them. This action of Eisner & Mendelson was warmly applauded by the members present, and several of those who were involved in the suits expressed their appreciation of so honorable a manner of fulfilling a promise.

In the report of the Telephone Committee, presented by Chairman S. W. Strunk, the decision of the Keystone Company that they could not pay 25 per cent. commission was reported on authority of their general manager. The decision of legal counsel on several points connected with the contracts issued by the Keystone Company were reported as follows: The contracts are perfectly legal and binding for the full term; while it cannot be altered except by consent in writing of both parties, the clause granting 10 per cent. and 20 per cent. commission put on the contract with a rubber stamp will probably hold good if it was put on before it was signed, druggists owning the house in which their store is located cannot refuse permission to string wires, but if they are only tenants, the landlord can. Mr. Strunk also said that unless a copy of the contract signed by both parties was given to the druggist within a reasonable time that the contract which has already been signed by a number of druggists might legally be held to be simply an application for tel-

ophone service and not binding until signed by the company and a copy delivered. This report brought on an animated discussion in which the sentiment of the meeting was to get evenly divided as whether to fight the company or to get the best possible terms. Finally it was voted to reconsider the motion of June meeting demanding 20 per cent. commission on all service of the Keystone Company, booth and automatic 'phones, investigation having shown that this was the best terms that the company could afford and which would pay druggists best in the end. This action practically finished the business of the meeting.

KINGS COUNTY SOCIETY BEGINS WORK.

Announcements were sent out early in the week by President O. C. Klein and Secretary F. P. Tuthill for a meeting of the Kings County Pharmaceutical Association to be held on Tuesday afternoon. Each member received a card urging attendance at the first meeting after the summer season of rest, and stating that plans will be formulated for a successful winter. Attention is also called to the N. A. R. D. plan and the necessity of active support. This meeting also considers delegates to be sent to the Buffalo convention next month. The Kings County society will shortly print a full list of its members for distribution, after the manner of that of the Manhattan Association recently issued.

The South Brooklyn Pharmaceutical Association held a meeting on the evening of September 5. The meeting was called for the purpose of getting the members together for the work of the fall and winter. A majority of the members answered the announcement, and the result was a well-attended, enthusiastic meeting.

The enthusiasm in the re-union meeting of the Rushwick Pharmaceutical Association speaks well for the future of this live organization. Another meeting will be held soon to discuss the matter of representation at the N. A. R. D. convention in October.

THE MICHIGAN PHARMACEUTICAL ASSOCIATION.

The Michigan Pharmaceutical Association held its nineteenth annual meeting at Detroit on the 13th and 14th of August. While the gathering was not largely attended it had plenty of enthusiasm. President C. F. Mann, of Detroit, in his annual address very strongly endorsed the N. A. R. D. and was roundly applauded for his sentiments. Henry Helm, of Saginaw, secretary of the Michigan Board of Pharmacy, in his report said that there had been six convictions for violation of the pharmacy laws, and that there were 3,147 registered pharmacists and 1,866 assistants in the State. Regarding the bill which purposes to restrict the sale of liquor by druggists, but which, though passing the Senate, was defeated by the House, Arthur A. Webber, of Cadillac, chairman of the committee in charge of the bill, said that its defeat was mainly due to the opposition of druggists themselves, and he did not take a very optimistic view of the matter. Several papers relating to business and professional pharmacy were presented.

In the election of officers for the ensuing year, the following were chosen: president, John D. Muir, of Grand Rapids; vice-presidents, W. H. Burke, of Detroit; E. T. Bower, of Petoskey, and C. F. Huber, of Port Huron; secretary, James W. Seelye, of Detroit, who was re-elected; and treasury, D. A. Hagans, of Monroe. The twentieth annual meeting will be held at Saginaw.

—At the last meeting of the Maine Commission of Pharmacy, held in Augusta, Aug. 11, sixteen candidates presented themselves for examination, and a certificate as registered apothecary was granted to W. W. Parmalee of Rockland, Me., and a certificate as qualified assistant was issued to R. H. Berry of Montville, Me. The next meeting will be held in October. D. W. Heseltine, Secretary.

A WONDERFUL WELL OF SULPHURIC ACID IN "JERSEY."

Philadelphia, Sept. 7.—Local chemical circles were greatly excited this week over the news of the discovery of a well at Vineland, N. J., that would pour sulphuric acid, and there would have been a sudden drop in the stock of the General Chemical Company but for the discovery of a Jersey druggist that "things are seldom what they seem." A few weeks ago a violent thunder storm passed over Vineland, accompanied by a heavy rainfall. This started the chain of circumstances, and the discovery by the owner of a well located there that the water had suddenly become very sour was part two. After satisfying himself that it was not imagination, he sent a sample of the water to a local chemist, who pronounced it to be pure dilute sulphuric acid,—and then the excitement began. News of the wonderful well soon spread, and people came for miles to see and taste the wonder, even chemists from Philadelphia coming down to verify the truth of the rumor and to secure opinions on the output if it proved to be true, and several very handsome offers were made to the owner, which he refused. Then some one discovered that the water had changed and was now delivering a solution of aluminum sulphate, and forthwith a prominent geologist came down, viewed the grounds, and pronounced his verdict that a bed of cryolite lay beneath the soil. His explanation was that this bed of cryolite, a mineral containing aluminum, lay alongside of a bed of sulphur or pyrites, and that the thunder storm had broken the strata separating them, and that that the water in the soil had formed sulphuric acid with the sulphur bed, and that had dissolved the aluminum out of the cryolite. More excitement, and a company was at once formed to mine and exploit the hidden riches, and Vineland put on an air becoming the owner of the newest wonder of the world. Al might have gone well (no joke meant), had not a Jersey druggist come along with the crowds to view the marvel—just a common, ordinary druggist whose name cannot even be remembered. He, too, tasted the water and agreed with the great chemists that it certainly was an acid solution of aluminum, if not something else "just as good," and started away, impressed with the luck of people not in the retail drug trade. As he was passing a shed about a hundred feet away from the well he saw through the open door a lot of familiar looking carboys, such as he used to buy when he made his own soda water, and, moved by old recollections, went up closer to look at them. Just inside the door he saw that one had been broken in such a way that the acid had oozed out through the bottom and left a dark stain on the dirt floor. Then he thought some thoughts and went back to the well to see the owner. He was just refusing an offer of \$10,000 for a year's output of his well, so the druggist had to wait until this business was over; then he managed to attract the proud owner's attention and asked him what was in the shed and how long he had been storing sulphuric acid there. The answer was that sulphuric acid had been kept there for the past two years for use in the dye works near by. Then the druggist took the owner over to the shed and showed him the broken carboy and suggested that it had been broken during the storm and that the rain had washed the acid into the soil and it had thus found its way into the well—and then left hurriedly, not caring to be a witness of the man's great grief. Alas for the sake of a good story and the fame of Vineland, N. J., as the possessor of a wonder of nature; the druggist was right! The last seen of the owner of the well he was running after the capitalist who was returning to Philadelphia with his \$10,000 in a vain attempt to get him to make the offer over again. Learned chemists and geologists are not wanted in Vineland any more; indeed, it is not safe to even mention such topics just at present.

—The State board of control of Minnesota has awarded the contract for the drug supplies for nine of the twelve state institutions to the Leithead Drug Co., of Duluth. Most of the contracts heretofore have gone to Minneapolis and St. Paul firms.

THE LABORATORIES OF PARKE, DAVIS & CO. AT DETROIT.

In the great establishment illustrated in the accompanying half-tone cut, things are constantly "on the move." The buildings that give shelter to the industry are also expanding and multiplying, and at such a rapid rate that it has become necessary even to "make ground" to hold them.

The plant occupies four city blocks and fronts directly upon the Detroit river. The ornamental structure in the center of the main block is the general office building of the company. It contains the order and shipping department, on the first floor; the offices of the general manager, the treasurer, the department of travelling service, the financial department, the purchasing department, and the reception room on the second floor; the correspondence and literary departments are on the third floor; and the publication and advertising departments on the fourth.

Stretching away from either side of the office building and extending entirely around the four sides of the block, are the main laboratory buildings. These are occupied at present by the biological and analytical departments, which will soon be transferred to their new quarters in the handsome fireproof building shown in the foreground of the picture; the tablet and pill departments; the general pharmaceutical and bulk stock departments, the drug and chemical department; the employees' library and reading room; the finishing department; the box manufacturing and departments for the manufacture of granular effervescent salts, effervescent tablets, hypodermic tablets, etc.

In the rear of the main laboratories is the immense new annex, erected only about two years ago, and over 500 feet long. It is occupied by the fluid extract department, with its great crude drug lofts, milling room, percolating room, and still room through which hundreds of tons of roots, barks and leaves and many carloads of

alcohol make their way, every year, emerging as standardized fluid, solid and powdered extracts. The eastern half of the annex is devoted to the work of the mechanical department, which embraces a large and complete machine shop, a carpenter shop, an electric shop, and shops for tin-smiths, pattern makers and supplies. Adjoining the mechanical department is the chemical manufacturing department, which is rapidly outgrowing its present quarters and will ere long require a large building of its own. The digestive ferment department, the printing and binding departments complete the list of occupants of the annex.

To the east of the annex are the vast twin stables of the biological department, where more than 5,000 animals of all kinds are hygienically housed and fed. These animals, which range in size from mice to horses, are utilized in the testing of drugs and the preparation of serums, or antitoxins, and vaccines.

The picture includes a prospective building, three stories high, which will be erected on a lot east of the main laboratories and south of the stables, the plans for which have already been drawn. On newly made ground directly upon the river front, and in the immediate foreground of the picture, is the science laboratory, now in course of erection, which is of modern, fireproof construction throughout. This building will be devoted exclusively to scientific research in the fields of inorganic and organic chemistry, biology and bacteriology, physiology and pharmacology. This is a unique feature in manufacturing pharmacy, but is thoroughly characteristic of the progressive course of Parke, Davis & Co.

A photograph of the plant may be seen at the New York office of the company, 90 Maiden lane, where visitors are always accorded a hearty welcome.

A New Preparation.

A new preparation on the market for the cure of hay fever, coryza, asthma, etc., is Ellixir Ambrosia Comp. (Erb). It is stated to be a very effective remedy, and is becoming a favorite prescription with physicians. Chas. S. Erb, the manufacturer, has begun a campaign of education among physicians regarding the merits of this preparation. Druggists should learn all about it, so as to be able to talk intelligently to physicians who may speak of it to them, and should be prepared to fill prescriptions for the preparation. For circular information address C. S. Erb, 121 Amsterdam avenue, New York.

Homeopathic Vials.

It will be to the interest of druggists to obtain the prices of the Chesapeake Glass Co. on homeopathic vials. They make a specialty of this line and claim to supply the best goods at lowest possible prices. They also manufacture glass syringes, medicine droppers and tubes, eye-pipettes, etc., and are jobbers of druggists' sundries, corks and bottles. They will gladly send price list, also a free millimetre scale, to any dealer who will write to them at 117 Mercer street, Baltimore, Md.

Four-Fold Liniment, 25-cent size, is \$1.75 a dozen. There is also a 50-cent size at \$3.50 per dozen, and a dollar size at \$7.00 a dozen.

A Liberal Proposition.

The Mercer Chemical Co., Omaha, Neb., make a special proposition to druggists. In addition to the customary 40 per cent. discount on pharmaceuticals, they offer to allow 20 per cent. for cash with mail orders amounting to \$30 net. Their idea is in this way to give to the retailer the usual expense of salesmen, bookkeeping and collections. Write for their catalogue.

The American Soda Fountain Co., Philadelphia, manufacturers of the Lippincott Soda Water Apparatus, make special inducements in their advertisement in this issue to reduce surplus stock of second-hand and shop worn apparatus, resulting from the demand for their Tilting Jar Syrup System. These second-hand apparatus are in good condition, and will be guaranteed as to service and appearance. They will be sold at moderate prices and upon easy terms.

We advertise in this issue a line of Medical Batteries constructed from the best of material by expert mechanics offered to the trade by P. G. Williams, 12 Vesey street, New York. Williams' Batteries are operated by dry cells, no acids or liquids being required. These batteries give the druggist a liberal profit, and full information in regard to them may be obtained simply by writing a postal card to the manufacturer.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Sept. 3, 1901.

- 681,690.—Charles E. Esterly, Lawrence, Kas. Blowpipe.
- 681,808.—Wilhelm Hasenbach, assignor to Verein Chemischer Fabriken, Mannheim, Germany. Making sulfuric anhydrid.
- 681,741.—Gustav Schirmer, Chicago, Ill. Medicament device.
- 681,758.—Charles L. Turner, Malden, assignor to R. Lockwood, Boston, Mass. Atomizer.
- 681,774.—Leonard C. Bailey, Florence, Colo. Bottle.
- 681,806.—Armand Mignault, Salem, Mass. Lung protector.
- 681,949.—Joseph and J. A. Butkus, Baltimore, Md. Bottle-stopping machine.
- 681,900.—Howard Spence, Manchester, England. Producing titanium compounds.
- 682,050.—Walter Erben, Philadelphia, Pa. Apparatus for separating solvent vapor from air.
- 682,080.—Orville L. Leach, Providence, R. I. Medicinal electrode.
- 682,103.—John Meyenberg, Kent, Wash. Making substitutes for mother's milk.
- 682,129.—William Walsh, assignor to F. F. Dow, J. Kilburn, J. McConnell, J. Palmer and A. J. Gregory, Fredericton, Canada. Cork-extractor.
- 682,145.—William J. Jones, Denver, Colo. Apparatus for carbonating liquids.

PRINTS.

Registered Sept. 3, 1901.

- 397.—Title: "Dr. H. W. Davenport's Combined Local and Systemic Tissue Treatment for Pyorrhoea Alveolaris." (For a Medicine.) Harry W. Davenport, Chicago, Ill. Filed July 31, 1901.

—The Michigan Board of Pharmacy held a meeting at Marquette, Aug. 28 and 29. Following is a list of those receiving certificates—Registered Pharmacists: J. A. Cameron, Pickford; Chas. D. Church, Ypsilanti; Wm. H. Fouch, Allegan; J. J. Gorilla, Ironwood; W. C. Gates, Rockland; Gustave Johnson, Marquette; J. J. U. Renaud, Chicago; H. H. Rounavaara, Calumet; O. E. Thibault, Hancock;—Assistant pharmacists: Alex. Brunner, Howard City; L. H. Smith, Deekerville; E. D. Wilson, Newberry. The members of the Board are: A. C. Schumacher, president; Henry Hein, secretary; W. P. Doty, treasurer; L. E. Reynolds, John D. Muir. The next meeting will be held at Lansing, November, 5 and 6.

TRADE-MARKS.

Registered Sept. 3, 1901.

- 37,007.—Perfumery. Frederick Stearns & Co., Detroit, Mich. The word "Suprema."
- 37,008.—Remedy for Certain Named Diseases. C. John Sharp & Co., El Paso, Texas. The letters "J. de T."
- 37,006.—Remedy for Certain Named Diseases. Tincture Amal Mfg. Co., Ltd., Baltimore, Md. The word "Amal" and the representation of a keystone.
- 37,010.—Respiratory Sedative and Tonic. Henry S. Clark, New York, N. Y. The word "Heromal."
- 37,011.—Antipyretic and Antiperiodic. Farbenfabriken, of Elberfeld Co., New York, N. Y. The word "Aristochin."
- 37,012.—Medicinal Preparation for Sheep and Cattle. Stephen Pettifer & Sons, Malmesbury, England. The word "Santovin."

LABELS.

Registered Sept. 3, 1901.

- 8,644.—Title: "Liver-Ro." (For Liver-Tablets.) Irwin McGregor Adams, New York, N. Y. Filed August 7, 1901.
- 8,645.—Title: "Vin Vigorans." (For a Medicine.) Le Compte & Gayle Co., Frankfort, Ky. Filed August 8, 1901.
- 8,646.—Title: "Chalgonia." (For a Medicine.) Le Compte & Gayle Co., Frankfort, Ky. Filed August 8, 1901.

RAMESIS I

was brought up on the bottle but, as rubber nipples were unknown at the time of his birth, feeding was a precarious process and his was a sore mouth. Colic, sour stomach, and infantum choleraetis were his portion, and there is a rumor to the effect that his French nurse was in the habit of quieting him with "a drop of the cruther." He acquired a resentful nature very early in life, and as he grew up this developed into a predilection for politics. His precinct recognized him as boss, he went to congress, engineered a big deal with the Assyrians and was soon afterward elected Past Grand Master of the Egyptians for whom he made it exceedingly hot. All this trouble might have been avoided if "Imperial" Nipples had been known in the days of his up-bringing.

MARKET REPORT.

INDEX TO THIS NUMBER.

PAGE

NEW YORK MARKET.

A General Improvement.

New York, Sept. 10.—Business in a general way is showing gradual improvement and the market has a fairly steady undertone, but there is no special activity in any direction, and the movement is limited mainly to current requirements of consumers.

OPIUM.—No interest is manifested by either buyers or sellers of round lots, and the market retains a decidedly tame appearance with jobbing quotations nominally unchanged at \$3.25@3.50 for 9 percent, and \$3.55@3.60 for 11 percent. Powdered is meeting with a fair consuming inquiry, and small lots are selling at \$4.50@4.75 for 15 percent, and \$5.00@5.25 for 16 percent, as to quantity, the inside figures for single pounds.

MORPHINE.—Nothing has transpired to change the condition of affairs, and competition among manufacturers continues to give the market an unsettled appearance, but jobbing quotations remain unchanged on the basis of \$2.20@2.40 for eighth, 28 to brand, and the usual rebate of 10c per oz. on lots of 10-ozs. or over.

QUININE.—There is no further change in manufacturers' prices, but jobbers have again revised their quotations and now quote 2½@2½c in 100-oz. tins, 28½@29½c in 50-oz. tins, and 29@30c in 25-oz. tins, and 35½@36c in ounce-vials.

OIL ANISE.—Foreign markets are stronger and spot quotations for jobbing quantities have been advanced to \$1.70@1.85.

SALOL.—Manufacturers have reduced their quotations and the revised figures for jobbing quotations are \$1.50 for pounds, \$1.55 for halves, \$1.65 for quarters, and 16c for ounces. Per 25-lb. lot \$1.20 in bulk, \$1.30 in pound packages, \$1.55 in halves, and \$1.45 in quarters.

ICHTHYOL.—Manufacturers have cabled their local representatives to reduce quotations 2½c per lb., and jobbers now quote \$4.00 for pounds, \$4.15 for halves, \$4.40 for quarters and 32c for ounces. For 10-lb. lots the prices are \$3.60 in pounds, \$3.70 in halves, \$3.85 in quarters and 27c in ounces.

CELERY SEED.—Primary markets are firmer on account of unfavorable crop prospects and jobbing prices show an advance to 12½@16c for whole and 17@21c for powdered.

PULSATILLA HERB.—With the market better supplied an easier feeling has developed and quotations for small parcels have been reduced to 30@40c, as to quantity.

SUGAR OF MILK.—Manufacturers have advanced their prices and the revised jobbing range for powdered is 14@24c, according to size of order.

BALSAM FIR.—Canada is very scarce, both here and in primary markets, and the undertone is decidedly stronger, with jobbing quotations advanced to 3.5@4.50.

FRICKLY ASH BERRIES.—Holders are firmer in their views, owing to reduced stocks, and prices have been marked up to 75@85c, as to quantity.

LICORICE ROOT.—Powdered Russian has been advanced to 27@32c, but there is no quotable change in other varieties.

FLANSEED.—The market continues easy in sympathy with corresponding conditions at primary sources of supply, and whole cleaned is obtainable by the barrel at \$7.00@7.25. Ground by the barrel is held at 28@44c, and for less than a barrel of either variety the quoted range is 5@6c.

LINSEED OIL.—Values continue to shrink, owing to reduced cost of raw material, and jobbing quotations show a decline to 55@63c in barrels and 65@71c for less for raw, and 2c per gallon additional for boiled.

METHODS OF AWARD AT PAN-AMERICAN.

The Jury of Awards at the Pan-American Exposition was made up of about one hundred and fifty specialists from all parts of the country. The immense number of exhibits was arranged in divisions, groups and classes and the sub-jury system of examination and award was used, each of the seventeen divisions being assigned to a sub-jury with a chairman. In this systematic manner of working it required but two weeks to complete the great task of examination and award. Sub-jury A of the manufacturers' division passed upon the drug and chemical exhibits of group 95. Dr. Marcus Benjamin of the United States National Museum was chairman of this sub-jury.

Other members were: Prof. Frank W. Clark, Chemist of the United States Geological Survey; Frank H. Peabody, Dr. I. Wyman Drummond, of this city, and Señor Carlos Sellerier, Inspector of Mines of the Republic of Mexico. With the exception of Mr. Peabody, all of these men have had experience in this kind of work.

—Secretary Judson B. Todd announces that the next or twenty-fourth annual meeting of the New York State Pharmaceutical Association will be held at Elmira, (presumably the third week) in June, 1902. The Entertainment Committee is composed of the following: W. P. Co. Vin, chairman; J. F. Van Nort, local secretary; C. H. Calkins, treasurer; E. L. Mayo and A. S. Hamilton.

The Buckeye Paint & Varnish Co., Toledo, O., make a line of decorative home paints which should be in the hands of every druggist who carries paints and oils, and to those who do not we suggest that ready mixed paints and paint specialties are as profitable and desirable side line as any druggist can handle.

ASSOCIATION EXHIBITS.

The scheme of the American Pharmaceutical Association to have an exhibit in St. Louis this year is not a new one. There is hardly a state pharmaceutical association in the country that has not in some period of its history been confronted with the question, "Shall we have an exhibit, and if yes, what shall be its character?" Some associations have decided against any exhibits whatever; others have determined to confine them strictly to pharmacy, and a third class have placed no restriction whatever upon exhibits, leaving their character and management entirely to the exhibitors themselves.

We are thorough believers in the value to an association gathering of this annual exhibition of articles of the drug trade. This feature is one of the objects of the meeting as truly as is the reading of scientific papers, or the transaction of the usual dull routine business. It can be made educational in a true and broad sense, and often proves of large financial benefit to the visitor. Carefully collected and attractively displayed drugs and the many products manufactured therefrom, fine chemicals, pharmaceutical and chemical apparatus, and various lines of elegant pharmaceuticals, are altogether beneficial and profitable to the inspecting druggist or doctor. Nor are sundries, toilet articles and various other kinds of stock out of place in such a display. They are more or less of the pharmacist's stock in trade, and it is well that he be fully informed respecting these lines.

But there is a feature of the exhibition question which is almost entirely disregarded, yet is worthy

of first and most thoughtful consideration. This is the matter of the exhibition of goods of the pharmacist's own manufacture, illustrating his skill and proficiency in the manipulation of daily store practice, as well as his scientific professional attainments. So far as we know, this feature has characterized but very few exhibits at the meetings of pharmaceutical associations, and in these instances to but a very limited extent. At the meeting of the American Pharmaceutical Association in Detroit in 1888, a prize was offered for the best display of pharmaceuticals of retail pharmacists' manufacture; there were but two or three competitors. In a few states students of schools of pharmacy have made very creditable displays. On the whole, however, there has been but very little accomplished in this direction.

We are glad to note that the American Pharmaceutical Association has again determined to make the "exhibition" a feature of its annual meetings. The line of work indicated in the remarks we have made, if properly carried out, would add immensely to the interest of the association's annual gathering, by stimulating healthy and friendly rivalry between the members, adding largely to one's knowledge of pharmaceutical methods and manipulations, and contributing materially to the advancement and elevation of the arts of manufacturing and dispensing. We earnestly hope the experiment of the A. Ph. A. will be pre-eminently successful, and we have no doubt that other associations will be led thereby to adopt a similar procedure themselves, demonstrating and emphasizing what we all know, that the retail pharmacist is not altogether dependent upon the manufacturer for his pharmaceutical preparations, and that he possesses the knowledge and skill necessary for the production of first class articles.

PROGRESS IN PHARMACEUTICAL EDUCATION.

"The sun do move," is an assertion made within the past fifty years, and it remains uncontroverted. Just as positive may we predicate progress in other particulars, not alone the progress governed by natural laws, but that dependent upon the highest and best activity in human affairs. Progress of a character and of a rapidity which before the world had never witnessed has attended and has made the history of the last half century. Nothing further introductory is required to preface the statement that the same degree and character of progress has also characterized the development in that field in which we are specially interested, pharmacy as a science and pharmaceutical education.

The history of American pharmacy is of absorbing interest. Change has followed so rapidly that but

a very few years have been required to entirely alter the complexion of affairs, and it is a source of deep congratulation that these changes have uniformly been progressive and retrogressive. In educational affairs this has been emphatically noticeable. From the preceptor and the apprentice of half a century back, wearily and unsystematically, threshing out that mysterious lore which is the pharmacist's own, down through the evolution which has brought to-day, with cutive and teaching force, the best representatives of ucational establishments, is but a step as time is measured, but a tremendous journey as milestones are passed and counted.

The result: To-day our country can honestly and without any eagle-screaming, claim the distinction of possessing the best facilities for the practical education of the pharmacist that the whole world can exhibit. In science perhaps the old world can claim precedence, in particular adaptation to its own necessities every country can point to its own colleges, but that practical, everyday, business equipment which the druggist of to-day must possess, the colleges of pharmacy of the United States are best prepared to supply.

There are several of these institutions which have seen the whole development of American pharmacy, and have themselves been a factor of strongest power in effecting this development. Their history has been repeatedly written, and it is hardly necessary to call attention to it, save for the opportunity afforded for a few remarks upon the standard which pharmaceutical education has attained, and of which they are the exponent.

These colleges have ever been actuated by the desire to give and do the best they can, and in this is to be found the secret of their success. Always holding out for higher and better things they have often suffered temporary material loss, only to be made up by increased prosperity and recognition of the vital and inherent correctness of their guiding principles. Wisdom has been shown in the selection of their executive and teaching force, the best representatives of pharmacy of the times being selected to serve them. The roll call of teachers and officers during fifty or sixty years past would speak the names of many whose lives and works will always stand identified with and as integral parts of American pharmacy. The rank and file of the drug trade, retailers and jobbers, have always stood by these institutions and cooperated nobly with them.

THE CHEMISTS' EXHIBIT IN LONDON.

From August 26 to 30, under the auspices of The British and Colonial Druggist, was held the Seventh Chemists' Exhibition at Covent Garden Theater, London. While not so largely attended as on previous occasions—in fact several of the largest British firms were conspicuously absent—because at present the British business world is out of joint, owing to the prolongation of the war in South Africa, the exhibit on the whole was still significant of the progress of pharmacy throughout the world and particularly of the fact that our cousins realize fully that they have "got to get a move on" to keep in the van.

What was sincerely flattering to this country was the large increase of American exhibitors, and the deep impression they and their wares, combined with

their enterprise, made upon fellow exhibitors and spectators. It is safe to say that the soda fountain as a consequence of some most striking displays—one in particular of a fountain valued at £1,000 (\$5,000)—will be foremost among American goods to gain very rapidly in prominence in England from now on. Other products will make equally important, though perhaps not such material gains.

But the inspiration attending this exhibition will be more momentous to all concerned than ever heretofore, because the American manufacturer sees in Great Britain a profitable market for his goods, owing to the tardiness of her manufacturers to take up new ideas and methods, and the British manufacturer, seeing him coming, realizing his own weakness, promises an affair of Greek meets Greek.

U. S. P. TOO COMPLETE.

A paper recently read before the Missouri Pharmaceutical Association is a sour complaint against the United States Pharmacopœia because it is too complete. "Our pharmacopœias have been expanding too rapidly;" better make the collateral assertion that this country is prospering to fast. Our Pharmacopœia of 1870 was equal to any in the world; since then it has gone the world several better; and the author of the paper decries the success. Patriotic man!

"Can the American druggist afford to be proportionally smarter and more learned than his German brothers, to stand so much more of law than they find it hard enough to get along with?" is a question propounded in this paper, and left unanswered, it evidently being deemed obvious. Of course it is obvious! But what is not so equally plain is that while the United States Pharmacopœia is two and a half times that of Great Britain and four times that of Germany, and therefore completer, proven in a very elaborate table, the first—our own—paradoxically, is nevertheless too complete, and, according to the simplest rules of logic, inferior to the others. As if anything could be too complete! The author made a very bad guess for a premise which he evidently followed up with still worse guesses.

THE N. A. R. D.

Judging from reports which have come to hand the annual meeting of the National Association of Retail Druggists, to be held in Buffalo next month, promises to be most interesting. Nearly every pharmaceutical association of any consequence in the country will be represented by full delegations who come to the meeting pledged to do their best to carry along the work of the organization in the best possible manner. What the N. A. R. D. has done thus far is a matter of history. Its "plan" has been remarkably successful during its brief existence, and it simply needs the continued interest of the drug trade to make it eventually and soon result in the abolition of the cutter and his trade demoralizing practices.

GUACAMPHOL is, as its name would imply, a combination of gualiacol and camphoric acid. It is a white powder, insoluble in water and in most other solvents. It is said to be very efficacious in dealing with night-sweats.

BUSINESS PHARMACY.

Phases of Drug-Store Management and Economy.

HOW TO CONDUCT A FIRST CLASS PHARMACY.

By OSCAR H. WILSON, Philadelphia, Pa.

A great deal has been written by various writers in the pharmaceutical journals of the country on this subject, but, sad to say, a great many of the pharmacists have not profited by the good advice, for in looking at a great many of our stores I have seen how they may be improved in a hundred ways, so a few words at this time will not be out of place. First, the pharmacist must make his store attractive, for this is one of the main things that is appreciated by the public, and they will always find the store that has the nicest appearance; especially is this the case with strangers.

One of the first things in making a store attractive is cleanliness, both inside and out. The floors should be swept and scrubbed every morning, and the cases, bottles and fixtures should be thoroughly dusted. About once a week the windows should be cleaned, and in the Summer, when fly specks are abundant, a little water of ammonia should be added to the water to assist in removing them. A great lot of work and time can be saved by a little device which we have in our store at present, which consists of fine white netting hung over the back of the window, thus keeping all the flies out. In regard to dressing the windows, this is one of the most important things, for there is nothing that looks nicer and attracts more attention than a prettily dressed window. White paper I think is preferable for the floor of the window, as it looks clean and neat; colored paper looks too much like grocery store style. The arrangement of the goods depends largely on the material at hand. In the case of malt extracts and similar goods a beautiful display can be made by arranging the bottles in the centre of the window in the form of a pyramid upon boxes which are neatly covered with white paper, and then arranging some of the bottles lying on their sides around each side of the pyramid. In the summer time in the height of the soda season, a beautiful display can be made by placing a couple of neatly painted soda tanks in the window and then arranging soda straws and fruits such as strawberries, raspberries, pine apples, lemons, oranges, etc., around the base of the tanks. In all cases the price should be marked on the goods by means of a neatly printed card. But do not use window strips, for they certainly spoil the appearance of a store, looking more like a cut rate grocery store than anything I know of.

The soda fountain store is not the most profitable lines this has come to be one of the most profitable lines handled by the pharmacist. The fountain should be cleaned and polished every day, and the syrup containers cleaned and filled. Nothing but the best materials should be used in the preparation of the syrups, for it will be found more profitable in the end by the increased demand for your soda. The charging of the soda can be done by yourself, by means of the gas tubes that are now supplied by the manufacturers, at a cost of about twenty-five cents a tank. This is quite reasonable, and then there is not the same danger as attended by the use of generators. The soda dispenser should be neat in appearance, and there is nothing looks nicer than a clean white coat. The customers should be served neatly and promptly.

The druggist should prepare as many of his own

preparations as possible, and sell them whenever the opportunity arises; but he should be careful not to in any way step upon the domain of the physician, as it is always best for the most amicable relation to exist between physician and pharmacist. These preparations should not be sold when some patent medicine or other preparation is called for, under the plea that they are better, but if the patient is dissatisfied with what he is using, or asks for something for a cough, cold, or any other ailment, then is the time to recommend your own preparations, which you can do conscientiously. Sell them when asked for, and there your responsibility ends.

The druggist should never have occasion to say "we are just out" of an article, for there is nothing more detrimental to business than this. There is only one way to prevent it and that is to have a small book always at hand, and mark all articles down of which your stock is low, and do not wait until they are quite gone. Do not buy too much at once, except in case of articles which by buying large quantities a special discount may be obtained, provided such goods are not perishable.

Now we come to the most important part of the drug store, namely the prescription department, and this should be complete in every particular. It should be provided with at least two counters; one to be used solely for compounding prescriptions, the other for various operations that are carried on about the store, such as percolating and filtering. To this last named counter should be attached an iron rod, provided with rings for the purpose of percolating. There should be at least two sets of scales, one to be used for the heavy weighing, the other for more delicate operations, as weighing large quantities on delicate scales causes them to soon lose their sensitiveness. All the bottles commonly used in compounding prescriptions should be conveniently arranged around the room, so the dispenser will have little or no occasion to use bottles in the front of the store, as I have noticed people to study closely the bottles from which the dispenser has taken material in compounding their prescriptions. This often leads to suspicion in their minds, by misconstruing the names.

All corks and bottles should be arranged in drawers beneath the prescription counter, where they are easy of access, separate drawers being provided for different sized bottles and so marked. All poisons should be kept by themselves in a closet provided for that purpose, which should be easy of access to the prescription counter. A good water supply, handy to the prescription counter, is one of the most important conveniences for the purpose of washing bottles, graduates, etc.; not for putting in the medicine, however, as is the prevailing idea of the public. Perhaps they are not far wrong, but I don't think it is used as freely as they imagine.

A good desk is also a necessary adjunct to the prescription department, and should contain space for the various books used in the store, drawers for bills and other purposes. We have in our prescription department a neat device for getting rid of old paper, etc., which consists of a small wooden box with a lid, built in the floor. This is connected with a chute which leads to the cellar, and into a large bin provided for that purpose. This does away with the trash boxes which are such a nuisance about the prescription room.

One of the recent and most important additions to the prescription department is an analytical de-

partment for the purpose of carrying on urinalysis and bacteriological work. This is something I know most of our drug stores do not contain, but the time is coming when it will be necessary for them all to do so, because pharmacists will have to rely on their professional ability, on account of encroachments made on certain lines of their business by department stores and others, and they will have to fall back on the professional side of their business. Indeed, too much cannot be said upon this subject, for this is the mainstay of the pharmacist of to-day. All prescriptions should be filled neatly and promptly; all bottles should be capped with paper caps, which give a finish to the bottle; the prescriptions should be numbered in regular order, preferably by a machine, and then the chance for error is reduced to a minimum. They are preserved by placing on file, or as preferred by some, placing in book form. The prescriptions should be handed out in the order they are received, so as to give no one an opportunity to think he is ill-treated.

The cellar should receive its share of attention, and be cleaned at least once a week, and the goods stored there should be kept in order, so they can be used at a moment's notice.

Last, but not least, comes the question of clerks. The proprietor cannot afford to employ any but the very best clerks, those who thoroughly understand their business, preferably college graduates, who are ambitious, honest and reliable. The proprietor should not employ a clerk who offers to work too cheap, because he will often be found dishonest or incompetent.

THE VALUE OF A SPECIALTY.

By STYLUS.

In this day and time when the wily competitor across the way advertises Dr. Cure-me-Quick's dollar remedies at the very low price of 65 or 75 cents, which is just about the wholesale cost plus the freight, it behooves the enterprising druggist who doesn't want to go to the wall or turn his keys over to the obliging sheriff, to cast about for a life-preserver. Of course he knows full well that the anæmic drug bargain hunters who will travel from Dan to Beersheba in order to take advantage of the cut rate on Dr. C-m-Q's standard decoction of salts and rainwater will get "bit" on something else before they get out of the store, but that doesn't really alter matters with him. It will not prevent the rush towards his competitor's house or turn the silver tide of dollars towards his own till. So to meet this new difficulty he must either go and do likewise, or invent some new legitimate scheme to counteract the ill-effects of his neighbor's advertising.

Besides having a first-class preparation of his own to match the popular proprietary medicines and shove in their stead, let him lay hold on something special of extra merit which he can advertise and guarantee. By a specialty I mean in the sense of exclusiveness, something with a name that no other druggist in his place has or can get. For instance I learned that by meeting my competitor's prices on patent preparations, without deviating from my usual prices on prescriptions or trying to "bleed" the unsuspecting customer on other articles, I was "losing out," and honesty was proving the worst policy, so far as profits were concerned. But not surrendering supinely to my neighbor, and determining to stay with him on the "home stretch," I began to "lay for him."

"Plots have I laid, inductions dangerous."

Through a retired physician I learned of a very effective and cheap remedy for rheumatism, which of late had been tried and tested thoroughly with almost miraculous results, but as yet had not been introduced either in regular practice or by the charlatan methods of the patent proprietors. To make sure of the matter the M. D. gave a demonstration of its potency in my presence, which not only assured me, but convinced and delighted the numerous persons who acted as "the horrible example." I lost no time in ordering from my jobber a 5-pound can of the liquid, and

with a little coloring of alkanet and some camphor, sure to throw my competitor and all inquiring friends off the scent, I began business, dispensing 2 ounces for twenty-five cents, making a small profit of only 1,000 per cent. or thereabouts. I advertised this instantaneous cure for rheumatism, neuralgia, incipient paralysis and kindred ailments, and by free clinics to sufferers at the rear of my prescription department I soon had a rush.

Following are the ads. I used:

**Cured while you
Wait!**

~~~~~

**Pain Banished,  
No more Limp!  
X-RAY LINIMENT  
Does it Instantly!  
Sounds Miraculous,  
But a Fact!  
25c.**

Try it.

**Got a Back?**

**Does it Ache?  
Or a Game Leg?  
Pain in Head?  
X-RAY LINIMENT  
Will make you Sound.  
Does it Quick?  
25c.  
Will do the Work.**

Ere long my Roman-nosed neighbor began to inquire through others the nature, pedigree, etc., of my lightning liniment or Balm of Gilead. Nobody could tell him anything, except that it did the work "quicker'n a cat could wink her eye." A fellow would come in broken down in the back, or hobbling along on a crutch, and I would send him out looking like a new man. This begun to tell on my neighbor, and

I could almost see the gray hairs sprouting on his cranium. Finally, through a confederate he purchased a sample to see if he couldn't get on to my "little game," but he couldn't. The alkanet root and the odorous camphor stumped him and he had to give it up. The receipts from the liniment sales amounted to \$100 the first month, and I thought it nothing more than right to do something for the keen-eyed Esculapius who had helped me to a "good thing." I am now putting it up under the name of X-Ray liniment, a happy thought of my own, which I purpose to protect, and the sphere of its influence is rapidly widening. So I have the satisfaction of distancing my cut-rate friend, performing remarkable cures and swelling my bank account beyond all former expectations. If any of my brother druggists want to get on the inside and dispense as I am doing this par excellence specialty, I will inform them privately how to obtain the formula, but do not wish to publish it. Anyway, get a specialty that you can control, and push it for all it is worth.

For formula address M. Chemist, Box 74, Sturgis, Ky.

## ADVERTISING.

By FRANK B. STYLES, Hempstead, L. I.

The term advertising covers a vast number of business methods which are used as a means to sell merchandise. To enumerate a few schemes for advertising would be quite an easy matter. On the other hand, to tell all would be quite beyond man's power. Advertising as a "business" has come to be a profession within a few years. To be a successful business man one must be able to display his goods, or write his ads., or decorate his windows—either one, or all three—or he must have some one else to do it for him. There is scarcely an issue of a journal to-day that does not have something to say about advertising. This is evidently a very prominent subject and an exhaustless one. Newspaper ads. are looked upon as a profitable investment in the small cities, towns and villages. But when the pharmacist with the average capital is located in the large cities he finds that he cannot afford to hire space in the great dailies of the present day. He, therefore, of circumstances, must use some other method and the first convenient ad. he can get is his store window. Here he can display his goods and use appropriate signs for explanations.

Suppose you have just received a consignment of sponges, for example. There are very few people outside of a pharmacy who know the difference in appearance or wearing qualities of the various sponges, furthermore they cannot tell the name of a single variety. Take a fair sample of each variety and label it accordingly, then place them side by side in the window with one well worded sign calling the attention to comparison of quality, briefly, and price, incidentally. Without doubt you have stocked a nice quantity of bath sponges which you feel are well worth more than you ask for them. Certainly your window display will sell some sponges.

You have a few friends whose patronage you specially appreciate. Perhaps these number a hundred. You probably have two or three hundred more whom you consider as good customers. In your spare moments, (excuse me—pharmacists never have spare moments), when you are making plans and are making memoranda in your little vest pocket book, jot down the names and addresses of such persons as you wish to put on your mailing list. This will get your mailing list in shape in an easy manner. If you have not done so, now is the time to write a short ad. that will occupy about two-thirds of a page. A page in width, folded in three sections, should fit a No. 6½ Government envelope. If you have adopted a special style of paper and envelope for your business it will be as well to use that; otherwise get a good quality of paper and have it printed in imitation of a typewritten letter. This style of printing has very often appealed to a person's curiosity to know the contents of an ad., when otherwise the circular would have been ruthlessly consigned to the waste-basket unread,

Be particular as to composition. A short well-worded article which is to the point carries weight with it. If your first circular is read you may rest assured that the next one will be. On the contrary, if your first is given the go-bye it is quite likely that your next will receive but little attention. There are a great many people who read ads., and some of these people will be sure to read yours. I find that much is learned by comparing ads., and this will help you in the preparation of your circular.

I have used the typewritten circular, and believe it to be an excellent method. If you have a large mailing list you can divide it up if you want to make an easier task of sending out circulars. For example, make a list of one thousand names. You might find it burdensome to send this number out each month, and you might think it too expensive. Divide the list in four parts, and every two weeks send by mail two hundred and fifty. You can have one thousand circulars printed and send these out during the two months' time it requires to finish your list.

A cheaper method will be to use postal cards. It is one which would be very convenient when you have some specialty on hand. A short paragraph mentioning a single article and price could be printed, as if on a typewriter, and would give the appearance of being more like a "personal." Suppose you have a special preparation you are pushing. It is necessary to tell the public all about it. If you will write a semi-confidential letter and send this at the beginning of the season, and which should be followed by several of similar character, you will reap some benefit from your ad.

Perhaps you are fully aware of the fact that there is something in a type-written circular which immediately appeals to you. You have an immediate desire to read and learn. I had some experience with sending out such a circular and found it stimulated trade wonderfully. Judging from the general method of advertising by the large department stores, the idea is to send a catalogue of some size whether large or small, to those people who may become customers. This, certainly must pay the merchant. I know that very often opportunities to purchase good value for little money are offered. If this general plan helps the large dealer, why can't it help the small dealer? It is not necessary to get out a large catalogue of complete stock. Just make an effort to show up a specialty in that way and you certainly must reap good returns. We are not yet entered into Winter, but as "in time of peace prepare for war" is an old saying, one in which the principle involved means much, take it to yourself and start a good cough mixture on the market. Lay out an advertising campaign. First send out a circular as soon as your first bottles are ready for sale, telling of your excellent cough cure. During the first month's sale collect several testimonials to use in the second circular. Continue putting out circulars once a month till April 1, and you will have a very creditable showing for your work. You may think that all of this talk looks very nice on paper, or sounds very well to talk about for pastime, but you say "when applied to business it does not pay." I know such methods have been successful, and if advertising does not pay, why is it that successful business men are advertisers?

---

THE CLEANSING OF FLOORS.—Owen recommends a finish of hospital floors of wax, linseed oil, turpentine, floor finish and benzine in the following proportion: Wax, 5 pounds; linseed oil and turpentine, 2 gallons each; floor finish (permanere), 1 gallon, and benzine, 10 gallons. This is applied once a week and laid on with a piece of cotton, brushed and polished with a cotton mop. He believes that too much floor scrubbing is responsible for some of the sickening odors which are due to decomposition taking place both in and on the floors. The danger of fire from the use of this material is very slight if only a small quantity is kept on hand to use at a time.—(Journ. Am. Med. Assn.)

## GREATER UNIFORMITY IN PHARMACY LAWS

By H. G. WEBSTER, Minneapolis.

As it is generally understood that it is not within the power of Congress under the Constitution to enact a national pharmacy law, for the reason that in all matters of purely domestic concern and relating to the everyday life of the citizen, as the exercise of police power and the administration of justice, the control of the state is supreme, Congress only having power over matters of national and interstate concern. A rather interesting decision in this line has just been handed down by the United States Supreme court in case under the Minnesota barber law appealed from our state Supreme court. Defendant shaved a man on Sunday in violation of the law. The United States court practically said to the appellant: This is not a matter for this court; if the Minnesota law forbids a barber shaving a customer on Sunday, you must abide by it; your Supreme court is the court of last resort in such matters.

It, therefore, devolves upon the pharmacists of the country to attempt the unification of the laws of the several states and methods of the various boards of pharmacy in such a way as to furnish ample protection to the public, further elevate the standard of pharmacy, and at the same time remove some of the objectionable features of our present laws; particularly that which restricts a pharmacist to the state in which he was originally registered, or subjects him to the annoyance of another examination, which, however reasonable and fair, is sometimes a hardship.

As pharmaceutical legislation has been entirely experimental, I am inclined to think we have made greater progress under our system of state laws than we would have done under any national law we could have secured were a national law possible. It is much easier to change a state law than it is a national law, and as each state is watching the experiment going on in the others, we have the benefit of a greater amount of experience in the same length of time.

The subject of pharmaceutical legislation was taken up by the American Pharmaceutical Association at an early day, the late Professor Maisch reporting on it each year for a number of years. Up to 1880, however, only three or four state laws had been passed. Since that time the seed sown by him has fully taken root, and nearly fifty states have now enacted laws regulating the practice of pharmacy. It is interesting to look back over these twenty years of active effort, and note the successes and failures which have taken place in the different parts of our great country. We had everything to learn; all classes to deal with, and, perhaps, the hardest of all the difference in opinion among pharmacists themselves. That so much progress has been made in the face of so many discouragements seems to me quite remarkable.

In order to meet the requirements of these laws, pharmaceutical education has advanced by leaps and bounds. Colleges of pharmacy have been started all over the country and are well patronized, so we may truly say that pharmaceutical legislation, with all its merits and demerits, is fairly launched upon the country, and that it has come to stay is certain, for none of these laws, however poor, have been repealed, and without a question the sentiment of legislators and the public is yearly becoming stronger in favor of more effective laws.

The experimental legislation has taken a variety of forms with a variety of objects in view. Schemes to create a monopoly of the drug trade have failed, and there can be but little excuse for the druggists of any state to attempt to smuggle anything into the law against the interests of the public and which the courts will not sustain. The problem now before us is the improvement and unification of these laws.

In 1887 The American Pharmaceutical Association

organized the section on education and legislation, which has since become one of the most important sections of the association. Many bright men have devoted a great deal of time to the study of these subjects; have gathered a vast amount of data, and have written out in papers and addresses their views. Professor J. H. Beal of Ohio has been particularly active in this direction. Conservative and practical in his views, he never fails to contribute valuable ideas at each meeting. A number of drafts of a so-called model pharmacy law have been prepared and submitted to the association. The one submitted by Professor Beal was finally adopted, after some amendments, and it is proposed to submit copies of it to state boards and associations. In this way only is it possible to get the views and experiences of those best qualified to pass on the various features of this proposed law.

The section of education and legislation is the proper battle ground to fight out proposed reforms in the laws, and every member who is informed on this subject should contribute to these discussions, giving the association the benefit of his views from experience gained in his particular locality. The question of a better general education for apprentices and students entering colleges of pharmacy, and of longer and more thorough courses in pharmacy, should enter into the discussion.

While it may not be possible to enact an entirely new law in all of the states for some years, yet, by keeping the subject before the pharmacists and the public, sentiment will gradually crystallize in favor of more ideal laws. In the meantime, a great deal will depend upon the boards of pharmacy executing such laws as we have, with wisdom, faithfulness and an honest purpose to get out of them all the good possible, ever turning a deaf ear to mischievous influences, but with a breadth of purpose which will tend to bring about this unity of action and still maintain that high standard we all desire.

### THE PROFESSIONAL SHOPPER.

The average consumer is never satisfied when he finds out that his neighbor is purchasing goods at a lower price than he is paying. Discrimination is foreign to the professional shopper, and when you meet a professional shopper you are right there and then in contact with a mischief-maker who takes delight in assuring her friends that they have been overcharged. The stomach and palate of the professional shopper is ready to masticate and digest anything that is cheap, and that assists him or her in demonstrating to their friends what a clever buyer he is. A demand for cheap goods at cheap prices is created by this class of customers, who usually trade at half a dozen stores, and whose trade is financially detrimental to the interests of every store they trade at. The decided and widespread interest taken by grocers throughout the country in the passage of pure food laws, and the placing of stringent laws on the statute books of many States in this Union is a decided and exemplary move in the direction of educating consumers to use the best goods, and to discontinue the use of cheap goods, or goods which are sold cheap, which, in ninety-nine cases out of one hundred, are inferior in quality. No merchant has ever made a success of his business by selling cheap goods at cheap prices. On the other hand, the most progressive and successful merchants in this country are those who sell goods of merit, of unquestioned purity at moderate prices. We should endeavor to educate the public to purchase their goods straight, without premiums, gifts or coupons. Merchants all know, and the general public ought to know, that the stores which give gifts extra with purchases are, to a large extent, distributors of cheap trashy goods which they sell at prices away above their value. In many cases this is done to the detriment of the honest merchant who makes quality his leading feature, and honest values his trademark.—(Commercial Bulletin and Northwest Trade).

\*Read before the Minnesota Pharmaceutical Association.—(West. Dr.)

## SHOP TALK.

A number of Philadelphia druggists have made a good profit on spices this Summer through their sales to housekeepers putting up pickles and preserves, and while the season is almost over, still a relation of the method of one of the most successful may carry a hint or so to others in time to catch the Fall preserving. This druggist begins by selecting his spices himself in the whole condition, being particular to get the best and purest in the market, then he buys a quantity suitable to his trade and sends it to his drug miller to be ground according to certain specifications of his own—course and fine, and some is left whole. When his stock arrives he sets his clerks to work to putting up neat little packages, pasteboard cartons, holding about a dram of each kind, inside of which is a printed slip describing the spice, its origin, etc., and quoting prices on various quantities, laying particular stress on the freshness and purity of the stock the sample represents. These samples he sends to the houses of his customers and also to every family within four blocks of his store, taking up one street at a time for distribution. This requires on an average about two or three hundred samples. With the sample of spice he sends a little booklet giving old fashioned recipes for making pickles and preserves, the quantities being figured so that the sample is just enough for one batch, and which also contains description of the various spices, their adulterations, etc. and their uses. With this is an invitation to visit his store and select the stock of spices, etc., needed for the Summer's preserving. Black pepper, cinnamon, cloves, allspice, ginger, mace, nutmegs, red pepper, celery seed, cassia buds and coriander are the principal items of his stock, and he generally sends out four different kinds of spices as a sample. The cost of sampling three hundred houses he figured out this year to be about \$20, booklets and all, and his sales of spices has amounted to over \$150 already, with the gaining of a goodly number of steady customers. In Winter the same druggist pursues a similar plan with flavoring extracts, sending out samples of the favorite kinds and a similar booklet on their nature and manufacture. He uses cologne spirits and the best raw materials and turns out a very fine line of extracts, which, so he says, he can hardly make fast enough now to meet the demand. When he started in this campaign he had to compete with four or five grocery stores and one spice house, now he has the best trade of not only his neighborhood but also of several large bakeries and confectioners as well, and even sells good bills to several nearby apartment houses and restaurants. . . .

Boston is experiencing a new danger and trouble which has been designated the "third rail sparks," the tiny little particles of hot metal which are the result of the new elevated railway system, with a heavily-charged third rail as the motive power. The sparks seem to reach the eye with almost magnetic attraction. The difference between the "third-rail eye" and the more ordinary case is this, the steel chip enters the eye while at heat nearly white. It burns its way into the delicate tissues of the cornea, and has to be dug out with the most delicate instruments known to surgery. It leaves its mark in the shape of an almost invisible scar, that always inflames and may cause permanent injury. An eye once seared in this manner is always weaker than before. Ordinary foreign particles are easily removed, but the steel always sticks, as does any substance that burns its way into the flesh. A prominent oculist says that victims should go to the nearest druggist at once and have a few drops of 2 per cent. solution of cocaine put in the eye. This will deaden the acute pain. Then, by the shortest route, go to the hospital. Dr. Myles Standish, a noted Boston specialist, advises taking cab to the nearest oculist or hospital. "The sufferer must have skilful treatment immediately, otherwise bad things may happen."

"On Sundays" said a Chestnut street drug clerk, "we are besieged with demands for alcohol, as the saloons are all closed and everybody can't find a speak-easy, and the old soaks come in here with bottles for alcohol by dozens. They give all sorts of answers when we ask what they want with it as we do not care to sell it for a drink, and it's hard to keep from laughing lots of times. One old fellow who had probably begged a dime on the street came in for 10 cents worth 'for a chafing dish', another said he was an artist and wanted to clean brushes, and so on, but most of them declare they want it for 'burning purposes', and I guess they do, but the burning is in their stomachs. I am told they mix it with a little sugar and water and lemon juice, and that it makes a good drink—I don't want any in mine. Did you say you wanted a pint 'for burning purposes'? Well, be sure you scratch off our label if it burns you too much".

\*\*\*

H. W. Reitzke, the St. Paul druggist, has an exhibit in his windows, which is so simple as to be rare. It consists of little piles of drugs and minerals all labeled, comprising copper sulphate, oxalic acid, sugar of lead, corrosive sublimate, iron sulphate, potassium nitrate, citric acid, etc. The layout attracts considerable attention, being of much interest to laymen, who remark the difficulty of distinguishing between deadly and harmless drugs, so identical are they in appearance. Mr. Reitzke, who is prominent in the N. A. R. D., is full of original ideas as to how a drug store should be run.

### IN THE CORNER DRUG STORE.

Good evening, Doctor! I have been trying to get you for the past three hours. You know that Hennessy family over in the east end? Well, I have an idea that some of them are very sick.

What makes you think so, Johnson?

Well, one of the children, that little boy about eight, was in here and wanted some medicine for a cough. From what he said I judge the whole family are sick, and that they have no doctor. You know Hennessy has been in hard luck for some time, and they are so devilish proud, I just thought that I would ask you to drop in and see what is the matter.

Yes, I just came from there.

Is that so? And how did you find them?

Well, Hennessy, you know, has weak lungs. He is down with a bad case of pneumonia. His wife was confined about three weeks ago—she is hardly able to be on her feet, and I found the twin girls very sick with the measles. That boy and the baby seem to be about the only well ones.

You don't mean it!

Yes—and there is practically no food in the house, and the place is as cold as a barn.

For Heaven's sakes, Doc, we must do something for them.

Yes, I telephoned Jackson to send them around some coal, and I stopped in Watkins' store and had him send up some groceries, and I thought perhaps your wife would run up awhile; no women folks about, you know.

Certainly. I am sure she will be glad to; but don't they need some medicines?

Well, yes. You had better fix up a box of those fever powders for him, and some mustard and flax seed for poultices—and a bottle of that port wine of yours with plenty of iron in it, would brace up the woman.

And what for the twin girls?

They are beyond any help from us, Sam!

You don't mean it!

Yes!

Both?

Yes!

## PHOTOGRAPHIC SUPPLIES.\*

By D. A. TAYLOR, Stevens Point, Wis.

In treating this subject, I will not confine myself wholly to the text, but will attempt to set forth some of the reasons which urge one to take up this line of goods, and the results accomplished. I shall state these matters as clearly and briefly as possible, rather in the way of a discourse than in the manner of a formal paper.

The first question which naturally suggests itself is this, "Is the selling of photographic supplies a legitimate line for one engaged in the business?" If we will give the matter a little consideration, an affirmative answer will result without much hesitation.

In the first place, it is an established fact that the scientific, the artistic side of photography, lies in the toning and the developing of the negative; pushing the button is an unimportant feature of amateur photography; the sun and the lens do the work. The after work, the developing, is the feature requiring the skill, and the skill displayed rests entirely with the purchase and the knowledge of certain chemicals and their uses.

Who is better fitted to deal in these chemicals, who is better equipped to give information, than the druggist? No one. It lies entirely within the scope of his professional ability, as much so as the compounding of prescriptions—it is the business of the druggist, and the druggist alone. All druggists deal in toilet articles, in stationery; some carry a stock of candies; and many deal in numerous other side lines bearing no relation whatever to the drug business. Why, then, shouldn't they deal in a line of goods whose proper use requires their professional skill and technical knowledge? The selling of cameras may be regarded as simply a side line, an accessory in the selling of certain developing and toning mixtures necessary for their use.

In all cities, except the largest ones, you will be unable to find houses dealing exclusively in photographic supplies; the demand is not large enough; it would not be sufficiently profitable. It is to the druggists who already have in stock the greater part of the chemicals used that the business of supplying the demand comes. The great strides in amateur photography have created an immense demand—it is then a question of who will supply the demand, yourself or your neighbor, who, perhaps, is engaged in some line of business entirely remote from photography.

The dealing in photographic supplies, besides being profitable in itself, draws to the druggist a desirable and high class trade. Amateur photographers are as a rule, people of some means, of good taste and artistic appreciations—their trade in the general drug line is to be sought after. If the druggist can supply their wants intelligently and satisfactorily in the matter of photographic supplies, he will, without doubt, secure the balance of their business in all lines in which he deals. The instruction and advice which he is capable of giving them brings him into closer relation with them.

It may have occurred to you in furnishing the amateur with supplies, you have antagonized the professional photographer—not so. It has only been the means of increasing his business, thereby creating a larger demand for chemicals—a demand which you can supply as cheaply as the regular supply houses, and at the same time make a fair profit.

So far I have not given any of my experiences in handling the line, but have merely discussed the advisability of druggists catering to the trade. It would require too much time and would be tedious, were I to go into details and figure out the profits resulting from the sale and the manufacture of the different solutions, etc. Perhaps it will suffice if I state, as a result of my experience, the following conclusions:

1. That it is a much more profitable side line for the druggist to handle than either toilet articles or

stationery.

2. That it is a line which is a legitimate one for the druggist to engage in.

3. That it has a tendency to bring to your shop a class of people of means, and in all a very desirable trade, a trade which, if satisfied with your photographic supplies, will purchase other necessities.

4. That amateur photography is not a fad which will soon cease to exist, but has surely come to stay, and if you do not make an effort to gain the trade, your neighbor, who is not so well equipped to furnish the supplies, will get the business.

5. That it is advisable to place in stock a large number of cameras—simply a few as an advertising medium—but be able to supply on short notice, all chemicals, printing papers, and the different requisites for amateur work.

## PRODUCTION OF COD-LIVER OIL.

The yield of oil is not proportional to the number fish captured. Thus, in certain years, 1,000 cod are required to produce a barrel of about 100 litres of oil, while at no other time from 1,500 to 2,000 are necessary. This depends partially upon the weather, for if extreme cold be experienced during the earlier part of the expedition, the livers freeze, and are then less suitable for the production of oil.

Certain traders assert that each vessel should obtain 40 barrels of oil, but in the author's opinion this estimate is too high, as regards the medicinal oil at least.

A long series of tabular statistics are given, and from these it appears that the cod fishery in Newfoundland has slightly increased during the last few years, this increase corresponding to the increase in the number of vessels. In 1868, 171 vessels captured 26,082,866 kilos of codfish, probably yielding 3,835 barrels of medicinal oil.

Since 1895 the fisheries of Iceland and Dogger's Bank have decreased considerably, although the number of vessels has increased. Thus in 1890, 96 vessels captured 9,275,492 kilos of codfish off the east and west coasts of Iceland, while in 1898, 186 vessels captured only 9,230,470 kilos.

In the Norwegian fishery there appears to be a similar disappearance of the codfish. In 1869, only 37,584,000 fish were caught, as against 79,338,000 in 1894. This decrease, however, is to be attributed to the falling off in the Lofoden Islands fishery. On the other hand, while the mean annual yield of oil from the Lofoden Islands from 1887 to 1893 was 14,300 barrels, and from 1893 to 1896, 13,168 barrels, its value has steadily risen, and within the last decade its price has been doubled or even trebled.

The yield of oil from the French fisheries has remained almost stationary for 10 years. In 1868, 483 vessels captured 36,102,086 kilos of codfish, producing 5,310 barrels of oil.

In Japan about 330,000 vessels are engaged in sea-fishing. The codfishery is of considerable importance, and can be greatly developed. The codfish is found notably off the coasts of the island of Hokkaido and the provinces to the north of the island of Nippon and Hokouyetsou. In 1897 the value of the codfish captured was 1,099,425 francs. The oil amounted to 67,123 kilos, and was worth 8,930 francs, or 0.35 franc per kilo. in Japan.—(J. Pharm. Chim.; Jour. Soc. Chem Ind.)

THE INTRODUCTION OF VACCINATION INTO DENMARK will be observed this year by a jubilee in Copenhagen, this being the hundredth anniversary of that event. Denmark claims to be one of the few countries to adopt this procedure without opposition to it. It is stated that during the eighteenth century that country suffered severely from smallpox. The city of Copenhagen during the last half of that century (with 100,000 inhabitants) lost 12,000 citizens from that disease, while Greenland and Iceland were half depopulated. The first cases were vaccinated July 6, 1801, with lymph received from Jenner himself, and it was at once widely used, so that the disease was at once checked.—(Am. Med.)

\*Read before the Wisconsin Pharmaceutical Association.

## THE NEW GASES IN THE ATMOSPHERE.\*

By J. NORMAN COLLIE, F. R. S.

Professor Collie first alluded briefly to the early history of chemistry, mentioning the work of the French doctor, Jean Rey, who published a paper, in 1630, on the action of heat on certain metals. He found that tin and lead increased in weight when heated in the air. In 1674, Mayo—an Englishman—discovered that there were two gases in the atmosphere; one which supported life, the particles of which he called "nitro-aerial particles," because they were present also in nitre, and another gas which did not support life. In 1772 Rutherford obtained nitrogen in a moderately pure state, from the atmosphere; he called it "mephitic air." A little later in 1776, Priestley discovered oxygen, which he obtained by heating mercuric oxide; he applied the name "dephlogisticated air" to this gas. Later, Lavoisier called it oxygen—acid forming—because he supposed it to be essential for the formation of acids, a supposition which has since been proved to be erroneous. Scheele—the great Swedish pharmacist—had independently discovered oxygen a year previous to Priestley's discovery, but he did not publish his results until after Priestley had done so. To Cavendish is due the discovery that at least one other gas was present in the atmosphere. Besides using the ordinary method of analysis, absorbing one gas and leaving the other, he sparked the air with excess of oxygen and absorbed the product—oxides of nitrogen—by means of potash lye. His task was a very laborious one, as he only had a frictional electric machine at his disposal, which he kept working almost night and day for many weeks; at the end of this time he found there was still something left which would not absorb, which he stated to be about the one hundred and twentieth part of the original volume of air. This has proved to be very nearly accurate, but no further notice was taken of his results for over a century. In 1882 Lord Rayleigh announced his intention of accurately determining the density of oxygen and nitrogen.

He published his first results in 1888, and more results in 1892. The latter paper contained the germ which led to the discovery of argon. He found certain peculiarities in the so-called "atmospheric nitrogen." The specimens of nitrogen which he prepared chemically all had the same density, but that which he obtained from the atmosphere was too heavy, the error amounting to about one in two hundred. He reported his experiments on "atmospheric nitrogen," and every time it was wrong compared with nitrogen chemically prepared. Being a physicist, Lord Rayleigh handed the matter over to the chemists for investigation. Professor Ramsay then took the matter up. He absorbed the nitrogen, using a different method from that previously employed by Cavendish; he passed the "atmospheric nitrogen" over magnesium turnings heated to dull redness, passing the gas repeatedly over the magnesium for a considerable time; after about three months the gas which remained unabsorbed had a density of 10 instead of 14, the density of the original gas. A vacuum tube was filled with the gas under reduced pressure, and the spectrum examined; new lines, belonging to no known element, were observed; this was at first considered to be due possibly to an allotropic form of nitrogen. Lord Rayleigh and Professor Ramsay were working in conjunction; but Lord Rayleigh used Cavendish's method, with great improvements; he removed the nitrogen by sparking with excess of oxygen by means of a powerful alternating current, and by this process was able to absorb three or four litres of nitrogen in less than an hour. This yielded the same results as has been obtained by the magnesium method, and is always used for small quantities of gas. The excess of oxygen is removed by burning a small piece of phosphorus in the gas. Great care has to be exercised in doing this in order that no air or other im-

urity may be introduced into the gas. It was owing to an impurity—carbon—in the phosphorus, which gave rise to a complex spectrum, which misled Professor Ramsay into the belief that another gas, which he called metargon, was also present. This he afterwards proved to be incorrect. Shortly after this Professor Ramsay's attention was called to the fact that a certain mineral—cleveite—was said to yield about 1 per cent. of nitrogen when heated in vacuo. He immediately procured some of the mineral, and the gas obtained from it was sparked with oxygen, and the residual gas introduced into a vacuum tube and the spectrum examined. A brilliant yellow was observed, which at first appeared to resemble the sodium line; the slit of the spectroscopic was divided by means of a prism, and the spectrum of sodium examined at the same time, when it was seen to be totally different. In 1868 Professor Frankland and Sir Norman Lockyer had noticed this line in the spectrum of the corona of the sun; they called it helium. The line in the spectrum of the gas obtained from cleveite was then measured by Professor Crookes, and he found it to be identical with that seen in the solar spectrum. Some minerals give off helium in an almost pure state, but cleveite gives off nitrogen as well, which fact probably prevented Hildebrandt—the first observer—from discovering the presence of helium. Most of the minerals which contain helium contain uranium. One gramme of cleveite yields about 1 c. c. of helium. Nearly all the apparatus used in connection with this work had to be invented by Professor Ramsay. When liquid air was first produced Professor Ramsay had about one litre to experiment on; he allowed the first portion to boil off and collected the remainder in gasometers. He then absorbed the oxygen by passing the gas over red-hot copper, and the nitrogen by passing over red-hot magnesium. The spectrum of the residue was examined as before, when the lines of argon, and in addition some new lines—yellow and green—were observed. From this he obtained another new elementary gas, to which the name krypton (hidden) was given. A further supply of liquid air was obtained, and a large quantity allowed to evaporate quietly; the residue was freed from oxygen and nitrogen, and then consisted chiefly of argon, with krypton, and another new gas, which was called xenon. The mixture of these gases was liquefied by causing it to flow into a bulb immersed in liquid air; when the temperature rose the bulk of the argon was removed, the heavier gases, krypton and xenon, being left behind; and by repeating the process several times the three gases were ultimately separated from each other. Professor Ramsay had by this time obtained a Hampson apparatus for the production of liquid air in quantity at University College. Liquid air is richer in oxygen than the atmosphere, because oxygen is more readily liquefied. The gas escaping from the liquefier consists largely of nitrogen, with some argon, and in this was found another new gas—neon (new). This mixture of gases was then liquefied in a bulb immersed in liquid air; a current of air was then blown through the liquid until some of the gas had evaporated, which was collected separately; the oxygen and nitrogen were then removed, and the residue liquefied. This was then fractionally distilled, when the greater part of the neon distilled first, leaving the argon behind. The neon thus obtained showed the spectrum of helium, and for a long time they were unable to separate these two gases. Ultimately, however, an apparatus for the production of liquid hydrogen was designed and built at University College, and by means of the low temperatures obtained by liquid hydrogen the neon was finally obtained free from helium. The lecturer said that a remarkable fact about these gases was that they possessed no chemical properties whatever, and therefore the atomic weight was difficult to obtain. The molecular weight is easily obtained, as according to Avogadro's hypothesis, the density is equal to half the molecular weight. He then explained the reasons for stating them to be monatomic. If they were not, the atomic weights would be so small, and there

\*Lecture delivered before the Chemists' Assistants' Association, London, and reported in the Pharm. Jour.; (Nat. Dr.)

would be no place for them in the periodic arrangement of elements, whereas if they are monatomic they fit in exactly. Again, the ratio of the specific heat under constant pressure to the specific heat under constant volume is 1 to 1.6; while in ordinary diatomic gases the ratio is 1 to 1.4. Professor Collie then showed the spectra of the various gases—helium, nitrogen, argon, krypton, neon, and xenon; the tube containing xenon, he pointed out, was very peculiar, for, as only 3 c. c. of the pure gas had been obtained, "he was not allowed to take very much!" All the tubes exhibited were filled by Professor Collie, and are of considerable historic interest. Krypton shows very brilliant green and yellow lines, one of which is seen in the Aurora Borealis. The following physical properties of the gases are interesting:

Helium.—Refractivity=0.1238. Density, 1.98. Its boiling point is not known, as it has not been liquefied, but has the lowest boiling point of all gases below  $-250^{\circ}\text{C}$ . Its critical temperature is not known.

Neon.—Refractivity=0.2345. Density, 9.97. Its boiling point is not known, but is between  $-250^{\circ}$  and  $-204^{\circ}\text{C}$ . Critical temperature is below  $68^{\circ}$  absolute temperature.

Argon.—Refractivity=0.068. Density, 19.06. Its boiling point is  $86.9^{\circ}$  absolute, and the critical temperature  $155.6^{\circ}$  absolute.

Krypton.—Refractivity=1.449. Density, 40.78. b. p.,  $121.33^{\circ}$  absolute, and the critical temperature is  $210.5^{\circ}$  absolute.

Xenon.—Refractivity=2.364. Density, 64. b. p.,  $163.9^{\circ}$  absolute, and critical temperature is  $287.7^{\circ}$  absolute, and it can therefore be liquefied by pressure alone.

The chairman, in the course of his remarks at the conclusion of the lecture, said he was proud to know that all this great work had been done by Englishmen; he was sure they had all enjoyed the lecture very much and had learned a good deal. He had very great pleasure in thanking Professor Collie for coming to lecture to them, and proposed a very hearty vote of thanks, which was carried unanimously.

Professor Collie said it was always a pleasure to him to speak on chemistry, and a double pleasure to speak about these new gases, as he had been "in at the death" with all of them, and had the pleasure of "following the hounds" with two of them.

#### DETANNATED TINCTURE OF CINCHONA.

W. H. Blome and A. B. Stevens of the Department of Pharmacy of the University of Michigan presented a short paper on this subject at last month's meeting of the Michigan Pharmaceutical Association, held in Detroit. The work outlined in the paper was carried out some time ago with a view to ascertaining the relative value of the tincture made by the National Formulary method and the so-called lime method. A sample of cinchona was assayed in duplicate and found to contain 4.58 per cent. of total alkaloids. A quantity of tincture was prepared from the same sample of cinchona by the lime method of E. Fisher (Proc. A. Ph. A., 1894, p. 581): A quantity of the tincture representing 10 grams of the bark was assayed and yielded 4.45 per cent. of total alkaloids. Therefore it was evident that 1.13 per cent. of alkaloids had been lost during the manufacture of the tincture. From another lot of drug assaying 3.91 per cent. of total alkaloids, fluid extract was prepared by the U. S. P. method and was assayed in duplicate, yielding 2.88 per cent. of total alkaloids, or 1.03 per cent. less than the drug from which it was made. From this fluid extract a quantity of detannated tincture was made according to the National Formulary method, which was assayed in duplicate using enough of the tincture to represent 10 grams of the drug; a yield was obtained of 1.6 per cent. less than that contained in the fluid extract, and 2.31 per cent. less than that contained in the drug from which these preparations had been made. "These preparations," declared the authors, "were made as carefully and as accurately

as any first class pharmacist would make them, our object being to find out which method would give the more satisfactory results in the hands of the average pharmacist." The experiments showed, in the first place, that the lime method requires much less time, attention and manipulation than that of the National Formulary. In the second place there was a loss of but 1.03 per cent. of alkaloids in the manufacture of the tincture direct from the drug by the lime method, while the corresponding loss in the National Formulary tincture was 2.31 per cent., or more than twice as great as that by the lime methods. Each manipulation evidently occasions a loss of alkaloids.—(Bulletin of Pharmacy).

**SMALLPOX REMEDY.**—In a recently published article on the treatment of small-pox Laws (Cal. Med. Jour.) states that he does not consider the disease any more contagious than measles, and that with the same precautions he can cure and limit the disease. He recommends the "French Academy of Science" remedy, which has the following formula:

|                           |                    |
|---------------------------|--------------------|
| Zinc sulphate.....        | 1 grain            |
| Digitalis, powdered ..... | 1 grain            |
| Sugar .....               | $\frac{1}{2}$ dram |
| Water .....               | 2 drams            |

Mix and rub well together; then add water to make 4 ounces, and shake well at every dose. To one already sick he gives a teaspoonful of the mixture every hour day and night for 24 hours. Also give freely pleasant solutions of bitartrate of potash, lemon juice or cider vinegar. But little food should be given in the first 24 hours, after that any light, digestible diet is in order. For those simply exposed the zinc mixture given every 2 hours in the daytime is a sure prophylactic.

**VASELINE.**—Hochnel gives the following as the properties of vaseline. The melting point is between  $37^{\circ}$  and  $50^{\circ}$ , odor should be absent, heated in a water bath with an equal volume of permanganate solution (1 in 1,000), white vaseline ought not to decolorize this solution in less than fifteen minutes, the yellow in less than ten minutes. The viscosity is determined at  $60^{\circ}$  and  $75^{\circ}$  by Engler's process. It is generally between 1.30 and 1.60; a lower figure indicates a mixture of solid and liquid paraffin. For good vaselines the proportion of carbides distilling below  $200^{\circ}$  should not exceed 2 to 8 per cent. They ought not to blacken when heated on a water-bath with an ammoniacal solution of silver nitrate. The iodine index is variable (7 to 12); the index of refraction taken at  $55^{\circ}$  is between 1.459 and 1.478. If the saponification figure is not 0, there is mixture with a vegetable or animal fat.—(Pharm. Post; Br. & Col. Dr.)

**THE BOTTLING AND SHIPPING OF MINERAL WATERS** is a new industry which has been established in Mexico within the past two years. Many varieties of these waters exist throughout the country, the best known being those from the springs at Topo Chico, near the town of Monterey, in the State of Nuevo Leon, and those of Tehuacan, about ninety miles from the City of Puebla. At both places accommodation has been provided for such persons as desire or are ordered to take the waters at the springs. Thermal springs of varying temperatures are found in many parts of the Republic. Some are quite tepid, while others, in the States of Aguascalientes and Jalisco, the water is so hot that it is only used for bathing purposes, under medical advice. The composition of the waters is said to vary a great deal, but in the majority of cases sulphur is found to a more or less degree.

**SULPHUR CREAM.**—The following formula for an ointment used extensively in the treatment of dandruff is going the rounds of the medical journals: White wax  $\frac{3}{4}$  drams; petrolatum  $\frac{2}{4}$  ounces; rose water 1 ounce; sodium borate 15 grains; precipitated sulphur  $\frac{3}{4}$  drams. The resulting preparation is said to be a smooth white ointment without sulphur odor, does not separate and keeps perfectly.

# QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

## Whitewash.

(S. T. E.) Whitewash that answers best for inside work is rarely fit for exposure to weather, and the same may be said as regards wood and brick, plaster and stone. For the latter (brick, plaster, etc.) where exposed to weather, there is nothing better than a wash made of to parts of freshly slacked lime and 1 part of hydraulic cement, with the addition of five or six ounces of glue and the same amount of salt to each gallon of wash. This is the whitewash used by the United States Government on its light houses, etc., and none is more lasting or brilliant.

For inside work, lime is not to be compared to whitening. To prepare the latter, first make an estimate of the amount required, by measuring the surface to be whitened. Four gallons of wash will whiten to yards square (100 square yards) of surface, providing, of course, there is no wasting in attempts to whiten the floor and furniture while daubing the walls. To make this will require 12 pounds of whitening, 2 pounds of carpenter's glue and 1 ounce of ultramarine blue. Prepare as follows:

Soak the whitening over night in an abundance of water, thoroughly stirring the washing, and let settle till morning. Then pour off the extra water, leaving the whitening just wet enough to work up well. It should then be put through a strainer to get rid of the lumps and render it homogeneous.

The glue should also be prepared over night, so as to be "jellied" in the morning. To make it, use 8 ounces of good, clear glue to each gallon of water. Heat lightly, but do not allow the water to come to a boil, as this destroys its adhesiveness. Stir the solution frequently, and as soon as the glue is dissolved, remove the pot from the fire.

Having your whitening ready, stir in the coloring matter, add the jelly and pour in sufficient hot water to make four gallons. This will answer capitably for ceilings; but walls or parts of the indoor work coming in contact with lathing, or likely to be fingered much, should have considerable more sizing, from one-quarter to one-half more, according to circumstances. If well done, this method of treatment is preferable to painting.

For fine outside work the following is better. Slack a bushel of fresh quicklime with boiling water, and cover while the process is going on. Strain and add 2 pecks of salt dissolved in hot water; 6 pounds of rice flour made into a paste with hot water; 4 pounds of Spanish whitening, and 2 pounds of good, clear glue, dissolved in hot water. Stir well until mixed. Keep in a kettle and apply hot. This wash is better if preserved several days before applying. When used it should be put on as hot as possible, using paint or whitewash brushes. This covering is a durable as paint and far cheaper.

## Furniture Polish.

(P. E. L.)

### Red.

Oil of turpentine ..... 16 ounces  
 Alkanet ..... 4 drams  
 Beeswax ..... 4 ounces  
 Digest the alkanet in the oil until sufficiently colored; then scrape the beeswax fine and form a homogeneous mixture by digestion over a water bath.  
 For a pale polish omit the alkanet.

### White.

White wax ..... 1 pound  
 Solution of potash ..... 32 ounces  
 Boil to proper consistency.

Polish for fine carved wood.—Take 8 ozs. of linseed oil, 8 ozs. of old ale, the white of an egg, 1 oz. of spirit, 1 oz. of spirits of salt. To be well shaken before using. A little is to be applied to the face of a soft linen pad and lightly rubbed for a minute or two over the article to be restored, which must afterward be polished off with an old silk handkerchief. This will keep any length of time if well corked up.

For Delicate Cabinet and Papier Mache Work.

Linseed oil ..... 16 ounces  
 Spirit ..... 8 ounces  
 Vinegar ..... 8 ounces  
 Euter of antimony ..... 2 ounces  
 Oil of turpentine ..... 8 ounces

Shake well before using and apply with a wooden rubber.

Oil of turpentine ..... 16 ounces  
 Rectified oil of amber ..... 16 ounces  
 Olive oil ..... 16 ounces  
 Oil of lavender ..... 1 ounce  
 Tincture of alkanet ..... 4 grams

Mix.

A cotton rubber is saturated with this polish, which is thus applied to the wood. The latter is then well rubbed with soft dry cotton rags and wiped dry.

Other formulas may be found in previous volumes of the Era. Consult the indexes.

## Harness Dressing.

(S. O. M.) Harness Dressing is sold ready made at a very reasonable price. Still if you desire to prepare your own there are plenty of formulas in existence. The following is among the more satisfactory.

Myrtle wax ..... 2 pounds  
 Beeswax ..... 2 pounds  
 Tallow ..... 2 pounds  
 Lamp black ..... 1 ounce  
 Castor oil ..... 2 pints  
 Neatsfoot oil ..... 1 gallon

Mix well by the aid of a gentle heat and always mix thoroughly before using. The harness should be well cleaned before applying any kind of a dressing. It is best to wash the leather with soap suds and then dry with a cloth before using the dressing.

The Era Formulary gives the following formula for—

### Harness Jet.

Best glue ..... 4 ounces  
 Good vinegar ..... 1½ pints  
 Best gum arabic ..... 2 ounces  
 Good black ink ..... ¼ pint  
 Best isinglass ..... 2 drams

Dissolve the gum in the ink, and melt the isinglass in another vessel in as much hot water as will cover it. Having first steeped the glue in the vinegar until soft, dissolve it completely by the aid of heat, stirring to prevent burning. The heat should not exceed 180° F. Add the ink and gum and allow the mixture to again rise to the same temperature. Lastly mix the solution in isinglass, and remove from the fire. When used, a small portion must be heated until fluid, and then applied with a sponge, and allowed to dry on.

## Sealing Wax.

(P. E. L.)

### Red.

Orange shellac ..... 4 parts  
 Venice turpentine ..... 2 parts  
 Vermilion ..... 1 part

Melt the former two together, and stir in the latter for a clear fire.

### Black.

Shellac ..... 4 parts  
 Venice turpentine ..... 2 parts  
 Lamp Black ..... a sufficiency  
 Oil of turpentine ..... a sufficiency

Mix the lamp black into a paste with the turpentine, and add q. s to the melted wax and turpentine to color required.

|                             |       |         |
|-----------------------------|-------|---------|
|                             | Blue. |         |
| Shellac                     | ..... | 2 parts |
| Gum damar                   | ..... | 2 parts |
| Burgundy pitch              | ..... | 3 part  |
| Venice turpentine           | ..... | 1 part  |
| Artificial ultramarine      | ..... | 3 parts |
| Manipulate as with the red. |       |         |

## Yellow.

|                        |       |          |
|------------------------|-------|----------|
| Shellac                | ..... | 16 parts |
| Venice turpentine      | ..... | 8 parts  |
| Burgundy pitch         | ..... | 4 parts  |
| Chromic yellow         | ..... | 3 parts  |
| Carbonate of magnesium | ..... | 1 part   |
| Oil of turpentine      | ..... | 4. s.    |

Moisten the magnesia with the turpentine, and add to the other ingredients mixed together.

**Night Blooming Cereus in Alcohol.**

(X. Y. Z.) The night blooming cereus in alcohol, quoted in the Era Price List Supplement of July 25 (page 27), is simply the crushed stems and flowers covered with alcohol, this preparation being diluted when required for use with a definite proportion of alcohol to form the tincture. As the flower is stated to contain twice as much alkaloid as the stem, this preparation of flowers and leaves is said to be made only once a year, in the month during which the flower is produced. The American Homeopathic Pharmacopoeia gives the following method for preparing the tincture:

The fresh flowers, together with the youngest and tenderest stems, gathered from plants growing in their native country, are chopped and pounded to a pulp and weighed. Then two parts by weight of alcohol are taken, the pulp mixed with one-sixth part of it, and the rest of the alcohol added. After stirring the whole well and pouring it into a well-stoppered bottle, it is allowed to stand eight days in a dark, cool place. The tincture is then separated by decanting, straining and filtering.

Wholesalers and jobbers in this city inform us that there is scarcely any demand for this preparation, some of them reporting that they have not sold a pound bottle of it in a year or more.

**Antiseptic Solution.**

(Dr. S.)

|                                                |       |            |
|------------------------------------------------|-------|------------|
| (1) Benzoic acid                               | ..... | 64 grains  |
| Boric acid                                     | ..... | 128 grains |

| Distilled water, a sufficient quantity to make | ..... | 1,000 Cc   |

Dissolve the sodium bicarbonate and the boric acid in 300 Cc. of water. Dissolve the remaining ingredients in the alcohol. Add the first solution to the second, and then add sufficient distilled water to make 1,000 Cc. Filter if necessary.

See also paper by Prof. W. L. Scoville, this journal August 29, 1901 p. 252.

**Removing Glass Bottle Stoppers.**

(Clerk) To remove fixed bottle stoppers is sometimes a very difficult operation. Occasionally it is simply impossible, especially when the glass stopper has become fixed by means of the corrosive action of alkali, or other substances capable of practically forming the stopper and neck of the bottle into one piece. Under such circumstances it is best to carefully break off the entire neck by a carefully directed blow with a wooden mallet or a stick. In the case of bromine bottles it is essential to guard against spilling the contents on the hands or clothing which in addition to the loss causes severe injuries.

As a rule a stopper that can be removed at all will yield to continued and careful manipulations with the hands, especially if it is hit with a piece of wood, first on one side than on the other to start it. The use of heat should be a last resort and always carefully applied and draughts of air avoided. Heat from friction or a match, or hot water can be used, but a heated temper never assists in such cases.

**Burnt Cork.**

(W. J. B.) Here is a preparation used by ministers:

|                |       |          |
|----------------|-------|----------|
| Best lampblack | ..... | 1.1 gram |
| Cacao butter   | ..... | 6 grams  |
| Oil of neroli  | ..... | 5 drops  |

Melt the cacao butter, add the lampblack, and while cooling make an intimate mixture, adding the perfume toward the last.

Here are two formulas from the Era Formulary.

(1)—Beat the finest lampblack into a stiff paste with glycerine and apply with a sponge; if necessary mix a little water with it when using. Easily removed.

(2)—Drop black (made by burning camphor and washing the soot with spirit) 2 drams; oil almond, 2drams; coccoanut oil, 6 drams. Mix, perfume and cast into sticks.

**Flavoring for Wine of Pepsin.**

(J. B. D.) We cannot give the formula for the flavoring employed in the proprietary preparation you name. Many manufacturers undoubtedly rely on the kind of wine they employ to supply the characteristic flavor, and the sherry, sweet angelica, sweet muscatel and other wines have been used for the purpose. An English formula for wine of pepsin in the following:

|                          |       |             |
|--------------------------|-------|-------------|
| Soluble scale pepsin     | ..... | 5 1-3 drams |
| Distilled water          | ..... | .3 ounces   |
| Glycerine                | ..... | .2 ounces   |
| Strong hydrochloric acid | ..... | 2 drams     |
| Detannated sherry, to    | ..... | 20 ounces   |

Mix together the acid and the water, and dissolve the pepsin in the mixture; then add the glycerine and the sherry, and after three days filter.

**Elixir of Terpin Hydrate, Compound.**

(H. B. M.) We have had no practical experience with a formula containing all of the substances you name. However the following is suggested:

|                               |       |               |
|-------------------------------|-------|---------------|
| Terpin hydrate                | ..... | 28 grains     |
| Cocain sulphate               | ..... | 16 grains     |
| Saccharin                     | ..... | 1 grain       |
| Glycerine                     | ..... | 4 fl. ounces  |
| Refined oil of tar            | ..... | 26 minims     |
| Tincture of lobelia           | ..... | 128 minims    |
| Tincture of gelsemium         | ..... | 128 minims    |
| Alcohol                       | ..... | 6 fl. ounces  |
| Simple elixir, enough to make | ..... | 16 fl. ounces |

Dissolve the terpin hydrate and saccharin in the alcohol with the aid of gentle heat; add the oil of tar and the tinctures, and shake. Then add the glycerin, and finally, the simple elixir, in which the cocain sulphate has previously been dissolved. Let stand over night and filter through paper.

**Test for Formaldehyde in Milk.**

(H. B. M.) See last week's Era, page 308.

**Elixir Heroin and Terpin Hydrate.**

(L.) See Aug. 15, 1901, Era, page 204.

TO TEST KOCH'S THEORY.—The question of whether or not animal tuberculosis can be communicated to human beings has led T. L. Monson, state dairy commissioner of Colorado, to agree to submit a thorough test of the matter, provided a suitable annuity for his family is guaranteed in case the experiment should prove fatal to him. Mr. Monson has given a great deal of study to tuberculosis and the peculiarities of the disease in cattle and human beings and is a firm believer in the theory recently promulgated by Professor Koch, that animal tuberculosis is not transmissible to man.

### KINGS COUNTY SOCIETY.

#### First Fall Meeting Discusses Worcester Plan and Passes Resolutions of Sympathy for President McKinley—President Anderson Talks Convention.

If the attendance and the spirit of the first meeting of the Kings County Pharmaceutical Society after the Summer vacation can be taken as a criterion of what may be expected in future meetings, the outlook for the year's work is most flattering. The meeting was held at the Brooklyn College of Pharmacy, No. 329 Franklin avenue with President O. C. Klein in the chair. The most important matter that came up for consideration was the Worcester plan, which was endorsed by the society and the two delegates, William Muir and Professor W. C. Anderson, were instructed to work and vote for its adoption as the working plan of the N. A. R. D. A large part of the time of the meeting was taken up in the discussion and exact definition of the plan by Prof. Anderson and J. Leyden White, the representative of the Phenyo-Caffein Company of Worcester, Mass. Mr. White has been urging the plan wherever he has gone and reports a general disposition on the part of associations to favor it, because, where tried, it has proven effective as a price restrictive system that the courts have uniformly held good when suits have come up for breach of contract in violating the agreement which it contains for the support of prices. Under the Worcester plan the intention is to make an attempt to have the contract price and agreement labeled on the proprietor's goods so that there can be no mistake or pleading of mistake in dealing with the article. Although the proprietors have not as yet been approached on this matter, Mr. White says that so far as he has investigated, they are willing to support any scheme which they have an assurance will stick.

President W. C. Anderson of the N. A. R. D. said that he would go to Buffalo and act in his capacity as president from a national point of view in the same manner and spirit that he had shown locally. He pointed out the weakness and utter inadequacy of the tri-partite plan on account of its simply advisory nature, which could be broken by one dishonest man in the circle, and showed the strength of the Worcester plan with a binding agreement enforceable at law behind it. He said that the outlook was most encouraging and from what he had heard the delegates were coming to Buffalo prepared for a great step in progress and determined to take it. That a uniform, binding plan effective for every affiliated association would be formulated and put through without sectional feeling is the firm belief of the president of the national association.

A resolution, presented by William Muir, referring to the attempted assassination of President McKinley and extending the sympathy of the society to the members of his family, was passed by a rising vote.

The committee on by-laws, appointed to revise and reprint the constitution, list of members, etc., reported progress. This committee will hold a meeting on the 19th to complete its labors. Two new members were elected to the society. They are Philip Shappiro, No. 212 Hoyt street and George Lindner, No. 1263 Myrtle avenue. Application for membership was received from Curtis Classen. The report of Treasurer P. W. Ray

showed the society to be in a flourishing condition, with \$356.35 in the treasury.

President C. F. Schlusner of the Deutscher-Apotheker-Verein was present to invite the society to attend the celebration of the Golden Jubilee of his society on October 1. The invitation was accepted.

### HELD FOR PERJURY.

#### Joseph Cadot Presented Forged Affidavits from Montreal in His Application to the Board of Pharmacy.

Joseph Cadot, No. 284 Henry street, Brooklyn, was arrested on September 6, on a warrant issued by Magistrate Deuel, upon the charge of perjury made by the Board of Pharmacy of the State of New York. His case came up for a hearing before the same Magistrate on September 9, when upon waving examination he was placed under \$1,000 bail to await the action of the Grand Jury. Cadot applied to the Board for examination on May 22, 1901. He then stated under oath on his application for examination that he had been employed by P. O. Giroux in Montreal, Canada, from 1896 to 1899, and also presented an affidavit purporting to have been sworn to by Giroux before a commissioner of the Superior Court of the Province of Quebec, bearing out Cadot's assertion. Investigation proved that Cadot had never been employed by Giroux and that some person, presumed to be a confederate of Cadot, had impersonated Giroux before the Canadian commissioner and sent or given the false affidavit to Cadot, who then presented it to the Board with his application for examination. Mr. Giroux appeared before Magistrate Deuel and testified he never had Cadot in his employ and that the affidavit purporting to bear his signature, was, a forgery. E. Muir, the Secretary-Registrar of the Pharmaceutical Society of the Province of Quebec also appeared with the official Registrar of the Pharmaceutical Council and proved that Cadot was never registered as an apprentice or employee in Montreal and also proved that only one Giroux, P. O. Giroux, had ever been engaged as proprietor of a pharmacy in Montreal.

The Board is convinced that there is a certain amount of perjury practiced both by candidates for examination and by persons claiming to have been employers of candidates, and will devote all its energies toward ferretting out such cases and bringing them to trial, in order to put a wholesome check on such practices. Cadot, it appears, was formerly in the clothing business.

### THE CANADIAN SYSTEM.

#### Secretary-Registrar Muir of Montreal Will Furnish State Board With Required Preparatory Scheme in Quebec.

One of the distinguished visitors to New York last week was Ebenezer Muir, of Montreal, Canada, who is the Secretary-Registrar of the Pharmaceutical Society of the Province of Quebec. Mr. Muir was called to the city by the State Board of Pharmacy to testify in the perjury case against Joseph Cadot, Mr. Muir gives an interesting account of the amount of preparatory work which is necessary for a person to take in Canada in order to become a registered pharmacist. Sidney Faber, Secretary of the New York

State Board has asked Mr. Muir to draft for him a statement of this scheme of preparation of candidates for use in drawing up legislation and prescribing apprentice work for druggists and clerks. Briefly Mr. Muir said:

"Although we have not the advantage of your splendid pharmaceutical colleges our system of preparation is a most thorough one, is rigidly applied in all cases and has given most satisfactory results. Before a person can become an apprentice we require a pretty stiff preliminary examination covering the common branches and some scientific subjects. We then require an apprenticeship of three years and this is uniform. After this term, the candidate is considered competent for all purposes except managing or owning a store. In order to fit himself further, he must serve one more year. Upon satisfactory examination he is then registered as a licensed pharmacist."

#### Complaints Must Be Specific.

Almost all of the complaints which are presented by retailers to the secretary of the State Board of Pharmacy contain no definite statement of facts but deal only in generalities, which can afford no base for procedure on the part of the officers, however anxious they are to get at violators of the law. The officers of the board express themselves as delighted with the interest of the trade in upholding legitimate pharmacy, but urge that in making complaints, those who appeal to the board should wait until they have sufficient evidence to warrant an investigation and upon which to base an action. The following is a sample of the general letter:

Brooklyn, Sept. 3, 1901.

Secretary of the Board of Pharmacy,

Dear Sir:

Kindly call your attention that Mr. Blank of number Blank, Blank street, applied for the examination of the Board of Pharmacy without having any practice at all. I think it is your duty to find out all particulars about him. This case will not be attended, I will apply to a higher member of the board. It is time to stop manufacturing those great pharmacists.

Yours, etc.,

DRUGGIST."

#### SPONGE EXHIBIT.

Albert Hart, representing the house of the Smith, Kline & French Co., of Philadelphia, has opened a display of sponges at the Broadway Central Hotel, rooms, 416-418, to continue throughout the week. The exhibit fills two large rooms, the walls being banked with cases of sponges of the finest varieties, of the total value of \$15,000. It is arranged in an effective manner. The sponges are packed in uniform sizes in the cases and are carefully graded. The feature of the display is a corner full of the rare and valuable Mandruka cup sponges, of the most perfect specimens in the market. Another part of his exhibit in which Mr. Hart takes especial pride is his splendid samples of large sponges which are perfect in shape and texture. The exhibit will be photographed on Wednesday. A series of cards have been issued to the trade inviting an inspection of the exhibit. A similar display is being made in Boston this week.

#### Police After a Green Tie—Annoy a Druggist.

C. L. Stevens of the William Quencer Pharmacy, Fifty-seventh street and 9th avenue says that he will never again wear a green tie except on St. Patrick's Day. During his recent trip to Niagara and the Pan-American, he came very nearly to being arrested a number of times, all on account of an emerald scarf of brilliant hue. It is needless to say that it was the other home ruler for whom the police and detectives were looking. He wore a green tie when last seen, and Mr. Steven's neckwear certainly answered the description. It was only after several long winded explanations to policemen and plain clothes men that he escaped a ride and arrived at the hotel where he could retire his new creation in green to the rag bag.

#### NEW REBATE LIST.

C. F. Shoemaker, chairman of the Committee on Proprietary Goods of the National Wholesale Druggists Association has made an announcement to the trade that the revised edition of the Rebate List is now in the printer's hands and will be ready for delivery in about two weeks. The books will be bound in leather and the prices to members of the N. W. D. A. have been fixed at 25 cents per copy; non-members 60 cents per copy. Those wishing to obtain copies of the book should address their orders with remittance to the chairman of the committee, C. F. Shoemaker, Philadelphia, Pa.

#### N. A. R. D. A. Holds First Meeting.

The New York Retail Druggists' Association held a meeting Friday evening, September 13. President J. Weinstein presiding. This was the first fall meeting after two months vacation and was called for the purpose of selecting a delegate to the N. A. R. D. convention. Mr. Weinstein was chosen to represent the association. The powers of the Committee on Ways and Means were enlarged and one of its chief duties in the future will be to enlist new members in the organization. A determined effort is being made to bring every retailer of the district into the association.

#### Brooklyn College Alumni Outing.

The Alumni Association of the Brooklyn College of Pharmacy will hold its annual outing at Distler's West End Park, Jamaica, L. I., on Wednesday, October 2. The committee has made out a splendid programme of sports including baseball, bowling and other games. There will also be dancing and a dinner will be served at 7 o'clock p. m.

#### NOTES.

—Nearly 100 applications for admission have been received at the Brooklyn College of Pharmacy. Dr. William Muir in his report to the King's County Society said that the college would not be able to accommodate all of the applicants. He thinks there will be over 200 before the time for opening. Action will be taken at once looking toward the construction of new buildings this Winter. The building committee which has been appointed by President Kleinle of the society will hold a meeting in a few days and lay definite plans for action. The college has in the treasury \$3,200 according to the report of Treasurer Ray.

—W. W. Tamlyn, with Whitall, Tatum & Co., entertained a number of friends on the steam yacht "Margenta" last week. Mr. Tamlyn's reputation as a genial host was upheld on this occasion. Among the guests were Geo. Leach, E. Settling, J. M. Manion, W. J. Vorbach, Thos. Mulligan, Horace Redding, Norman W. Drescher and Emil Nielson. Liquid and solid refreshments were served and all report a thoroughly enjoyable cruise, despite the fact that there were several bad sailors aboard.

—Dr. Isaac Saylin, a Buffalo druggist at No 1322 Broadway, has been arrested in Chicago on the charge of being one of the conspirators in the anarchists' plot, which resulted in the assassination of President McKinley. He is known to be a friend and confidant of Emma Goldman having held conversations with her over the long distance telephone when she was in Rochester and having sent her money. His store is near the Nowak Hotel, where Czolgosz stopped in Buffalo.

—Among the out-of-town druggists who have called on the local trade the past week with a view to buying are A. W. Twiss of Bethel, Conn.; W. L. Briener of Princeton, N. J.; W. E. Durke of Marsh & Burke of the same place, E. T. McIlwain of Aspen, Col.; W. E. Pinkis of the Meriden Drug Co., Meriden, Conn., and W. W. Mosher of the same place, who has been visiting the Buffalo Exposition with his son.

—Notices have been sent out by the committee of the Retail Druggists' Bowling Association that the opening night has been postponed until October 8 on account of the conflict of the original date with the celebration of

the 50th anniversary of the Deutscher Apotheker Verein. The alleys, however, will be open to members who wish to bowl October 1.

—John T. Cotingham and Miss Lottie Moore, two of the most popular of the business staff of R. W. Robinson & Son, No 228 Fulton street, were married on the 9th. Both have been connected with the firm for several years. The ceremony was performed at the home of the bride's parents at Hasbrouck Heights. The bride and groom have gone to Buffalo on a wedding tour.

—James Carty, Fifteenth street and Avenue A, against whom the Hostetter Co., proprietors of Hostetter's Stomach Bitters, have brought suit for damage and injunction for refilling the Company's labelled bottles with another preparation, is not a pharmacist, as stated in the morning papers, but a retail liquor dealer.

—S. V. B. Swann, secretary of the Manhattan Pharmaceutical Association, formerly with Kellogg & Co., but lately representing the Fischer Chemical Importing Co., has resigned his position and purchased the pharmacy of Alfred Beley, at Fifty-second street and 6th avenue. Extensive improvements will be made in the store.

—W. F. Pflueger, of the Manitowoc Aluminum Co. Manitowoc, Wis., formerly of the Corporation of Jermain, Pflueger & Kuehnsteadt, wholesale druggists of Milwaukee, Wis., was in the city during the past week, but was called home suddenly by a telegram announcing the death of his brother-in-law.

—Max Mariamson, President of the Bronx Pharmaceutical Association, No 2, is removing his store at the northwest corner of Union avenue and 156th street to the opposite corner, where he has secured more commodious quarters which will be newly furnished and opened the latter part of the month.

—David Costello, manager of Caswell, Massey & Co.'s store at Twenty-fifth and Broadway, has gone on a European tour. He will visit London, Paris, Berlin and Italian cities, being absent about two months. Mr. Costello has been manager for this company for 22 years. Brevard Culp acts in his absence.

—E. A. Sayre, of Seabury & Johnson, has left the city for a Western trip in company with Mrs. Sayre. He will attend the sessions of the American Pharmaceutical Association in St. Louis. Three other New York representatives from Seabury & Johnson will be present at the meeting.

—The members of the Apothecaries' Bicycle Club and a number of their friends made a trip a wheel to Valley Stream, L. I., September 12. The enjoyment of the ride was slightly marred by the heavy afternoon rain. The next ride comes off to-day when the club goes to Somerville, N. J.

—N. Patross, who has a drug store at No. 146 Avenue C, near Ninth street is opening a branch in the same block on Avenue D. The population is very dense in this quarter of the city and will doubtless make possible the successful operation of two stores so near together.

—At a meeting of the Board of Directors of the Drug Club, held September 11, R. R. Lampa and Jacob Plaut of Lehn & Fink, and J. A. McGean of the American Linsced Company, were elected to membership. There are now but seven names on the waiting list.

—The examination of the Eastern Branch of the State Board of Pharmacy was held at the Brooklyn College of Pharmacy yesterday. Sixty-five candidates were examined. Of these 62 took the examination for pharmacists and three took that for druggists.

—Joseph Plaut, of Lehn & Fink, has been enjoying a pleasant vacation, going to Niagara, Buffalo and the Catskills with his family. A. P. Plaut of the same firm is away for a ten days' outing to Niagara, Buffalo and the Thousand Islands.

—J. Tetsch, the representative of the perfumery concern of R. H. Wolf, Sohn-Karlsruhe, Germany, called at the offices of W. L. Strauss & Co., No. 27 Warren street last week. He is on his way to Cuba and South America in the interest of his firm.

—A new drug store has been opened at No. 693 Third avenue by Mr. Coghlan, the pharmacist who has invented a powder measuring machine. The device is one which can be graduated to any weight of powder and insures absolute accuracy.

—Thomas W. Hogan, president of the Hogan-Johnson Drug Company of Lafayette, Ind., has been in Buffalo and New York the past week and goes from here to Boston with his daughter who will enter Wellesley College.

—Thomas A. Monroe of the Eastern Drug Co., Boston, made a business trip to New York September 12. Another Boston man who called on the local trade was J. A. Gilman of the house of Gilman Brothers, wholesale druggists.

—P. A. Giroux, one of the leading druggists of Montreal, was in the city several days the past week to testify before the Grand Jury in the Cadore perjury case, which is the subject of a news story in another column of this issue.

—Fifty-three nurses from the Blackwell's Island training school visited and inspected the establishment of Parke, Davis & Co., September 10. This inspection is considered of great education value and is held annually.

—Contrary to report, R. Mathewson, pharmacist, of Middletown, Conn., has not sold his store. The negotiations for the sale have fallen through and the store will continue under the present proprietor.

—M. G. Breitenbach and E. G. Wells, of the Pepto-Mangan Co., Samuel Owens, of the Glyco-Thymoloin Co., and Martin H. Smith, of M. H. Smith & Co., made up a theatre party last Friday night.

—J. A. McInery, the druggist of Ansonia, Conn., who was badly injured in a runaway about a month ago, has written to friends in this city that he is now able to return to his duties.

—Two pharmacists from "way down South," who were buyers here the past week were C. F. Harrison, a manufacturing druggist of Citra, Fla., and William Atwood of Daytona, Fla.

—F. M. Robinson, Secretary of the Coca-Cola Co., is spending three weeks with the New York manager of the company, H. T. Applewhite, No 63 South Washington street.

—The Manhattan Pharmaceutical Association held a meeting on Monday night. A large amount of work was outlined by the several committees for the fall and winter.

—Henry Woodward, a pharmacist of Middletown, Conn., is taking a Western trip to Chicago, Milwaukee and other points. He will stop over at the Pan-American on his return.

—George W. Hurleban, owner of two of the largest pharmacies in Washington, D. C., was seen in the drug section on the 10th. He is laying in his Fall and holiday stock.

—E. Ensign, formerly a pharmacist in New York City but now the proprietor of a store in Bridgeport, Conn., made several calls on friends of the local trade last week.

—Henry B. Crosher has sent out a new batch of orders, most of which have fallen into the hands of wise men, so that the shady dealer will doubtless have a light harvest.

—James J. Battier, prominent in both drug and political circles of Memphis, Tenn., is in New York visiting the trade with a view to buying for the holiday trade.

—William Schoelers of Sea Cliffe and T. T. Rushmore of Garden City, both well-known pharmacists of Long Island were in the city on a buying trip on the 10th.

—Charles F. Harper has opened a new drug store at No. 290 Hamburg avenue, Brooklyn. He is also proprietor of a store on Avenue A, this city.

—Among the out-of-town pharmacists who visited the New York trade September 10 were: Dr. I. P. Klingensmith and Milton G. Miller of Blairsville, Pa.

—Dr. Herbert F. Palmer, chief veterinarian for Parke, Davis & Co. at Detroit, has been visiting at the home office for several days.

—E. S. Noonan, a prominent druggist of Lewisburg, W. Va., visited in New York September 10. He is laying in his holiday stock.

—E. A. Talbot, with F. W. Braun & Co., wholesale druggists of Los Angeles, Cal., has been in the city for several days.

—Gilbert R. Potts, of Morristown, N. J. and George L. Hubbel registered at the Drug Club September 13.

## IN AND ABOUT BOSTON.

### Tragic Death of a Druggist.

Boston, Sept. 14.—As the result of drinking a glass of "soda" water which he drew himself from the fountain, Edmund P. Duval, one of the prominent druggists at Leominster, has died suddenly. Two days ago two men entered his pharmacy and called for pineapple soda, and the druggist obligingly said "This is one on me," and he added something to the soda water, possibly a syrup of some kind other than pineapple and it is presumed he further wished to give some life to the drink by adding a dash of bitters. As tinctures of various kinds are kept together in one section of the drug store, by themselves, it is probable that, in reaching for perhaps gentian, he by mistake took belladonna. They all soon became sick and afterward violently ill, and had to be carried home in carriages. Physicians were called, for all of the three men had become delirious and finally sank into a comatose state. The two customers got through the night all right and were able to move around the next day. The druggist seemed the worst affected of any of them and continued semiconscious until his death, yesterday, September 13. He never recovered sufficiently to tell what he mixed with the soda, but the physicians are satisfied that it was belladonna. There was every indication of poisoning, with dryness in the throat, desire for water, strange look about the eyes and apparent intoxication. Duval was a registered pharmacist and it is difficult to understand how he could have made the mistake. He was 28 years old and born in Webster. He was married to Miss Josephine L. Moge in June 15, 1897. He formerly lived in Fitchburg.

### Trade Uniformly Good.

Boston, Sept. 14.—The week has been marked by fairly good trade conditions and there seems to be a feeling of satisfaction on the part of druggists that they may well be satisfied with the present state of trade. It seems to keep rather uniformly good without being especially brisk, nor by any means tending toward dullness. Although the hottest weather is probably over, there still keeps up a brisk demand for all kinds of drinks of soda fountains, and one leading druggist says that it would seem as if many who have been away all through the summer are now making up for lost opportunities for getting all the soda they want, and now are having their fill. Now and then customers have remarked something along this line which has led to the supposition that many others may feel the same. There are no special features among the general lists of drugs and the market on them partakes of the character of a jobbing business. Quotations therefore show no notable changes. With a fair call for chemicals the market has kept fairly active and steady, upon moderate dealings. Practically the same may be said of the dyes, for which the demand has been only commensurate with needs. Cologne spirits and grain alcohol are steady and are sought in fair quantities.

### Two Fatalities in Drug Stores.

Boston, Sept. 14.—Two sudden deaths almost exactly alike in character have taken place in this city this week. Each fatality occurred in a drug store and was startling to those in the stores at the time. Early on Wednesday evening a man entered Burwell's Pharmacy at the corner of Boylston street and Park square and stated that he had not been feeling well for a week, and as he reached out his hand to receive a prescription which had been put up for him by the clerk, the man suddenly fell to the floor, and died before the arrival of a physician. He was a negro, 45 years of age.

About two hours later a man called at Epstein's Tremont Row drug store saying that he had been seized with sudden pains while on the street, and visited the pharmacy in hope of obtaining relief. He died soon after entering the place. He proved to be Henry Neimer,

40 years old, of New York, employed by the Battle Creek Food Company, and was staying at the Hotel Rexford. In both cases death was caused by heart disease.

### NOTES.

—Some of the druggists of Fall River recently had a little "tilt" with the members of the police force in a friendly game alleged to be baseball. Four innings were played, which proved the greatest possible fun for all the onlookers. The pill dispensers m all and the knights of the badge and cub scored 27 runs. Everyone had a great time and geyed the players freely, while "rooting" for them. The drug nine was made up of Manning, catcher; O'Brien, pitcher; Davis, first base; Dennis, second, Lough, third; Strong, short-stop; French, left field; Murphy, center field and Grandfield, right field.

—Adolphus Holton, of Norwood, where he is prominent as a druggist, has had many family troubles which have just culminated in securing an absolute divorce from his wife, on the ground of infidelity. Their case has excited wide-spread notice, partly because of the abduction by the druggist of his four-year-old child, the absolute custody of which the court has given to the father. Mr. Holton married in 1894 to Annie Viola Boyden. The couple lived together somewhat unhappily for five years. Mrs. Holton did not make a contest of the divorce proceedings, allowed the evidence to go in undisputed.

—From the annual statement of the Minard's Liniment Manufacturing Company, which is made by its treasurer, O. W. Nelson, it is learned that there is real estate and buildings, \$5,097; machinery, \$150; cash and debts receivable, \$7,884; manufactures and merchandise, \$3,409; patent rights, \$44,000; a total of \$60,630. On the opposite is the capital stock, \$50,000; debts, \$8,347; profit and loss, \$2,283; a total of \$60,630.

—W. F. Sawyer, an old-time druggist of this city having a pharmacy on Tremont street, South End district, and who is treasurer of the New England Pharmaceutical Company, has filed this statement regarding the company's condition: Cash and debts receivable, \$224; manufactures and merchandise, \$280; profit and loss \$9,496; a total of \$10,000. Against which there is capital stock, \$10,000.

—Through its treasurer, F. H. Lincoln, the Newton Chemical Company makes the following annual statement regarding its financial condition: Real estate and buildings, \$4,000; cash and debts receivable, \$3,454; a total of \$7,454. Against which, there is in liquidation capital stock distributed to stockholders as profit and loss, \$7,454.

—John F. McCarthy, who for several years was employed at the pharmacy of John P. Merrill at Springfield, and who later has been a travelling salesman for a New York business house, is to go into hotel life as day clerk at Hotel North, in Augusta, Me.

—John R. Parlington, who for some time has been one of the clerks at J. C. E. Panneton's pharmacy in the Flint District at Fall River, where he has made himself most popular, severs his connection with this store in order to continue his medical studies in Baltimore.

—In the Suffolk Court, this week, David P. Peckham, the druggist arrested on the charge of bigamy, as already related in the Era, was found guilty and sentenced to two years in the House of Correction.

—Among visitors enjoying the early autumn at Salisbury Beach is Wallace Brackett, a clerk at C. H. Beedle's drug store on Broadway, Lawrence.

—After a visit with friends in Boston, Walter Keating, a popular clerk at Desmond's pharmacy in Lawrence, has returned to his usual duties.

—In a fire this week in Chelsea, the drug store owned by James McGilvery on Broadway, that city, was slightly damaged by water.

## PHILADELPHIA.

### COUNTY ASSOCIATION WORK.

Philadelphia, Sept. 14.—With the near approach of the N. A. R. D. Convention of Buffalo, renewed activity in county association work is seen on all sides. Practically all the county associations of Pennsylvania have elected their delegates and many of them have instructed these to support the "Worcester Plan" when it comes before the Convention. Interest in the Worcester Plan seems to be general, and the retail druggists of this part of the State have declared themselves in favor of its methods, giving practical evidence of their support in the contributions to the fund being raised for bringing test cases to trial in this State. From recent resolutions passed, and from declarations of the various county associations, it is clearly shown that the Pennsylvania delegates will go to the National Convention with two purposes in view, one to endorse the "Worcester Plan," the other to demand that the proprietors give better evidence than in the past of loyalty to the retailers and the "Tripartite Plan". There is also an undercurrent of resentment against the jobbers, who, it is claimed, are not proving loyal to their agreements and that some of them are supplying 'cutters' in underhand ways. For the credit of Philadelphia be it said not one of the jobbers here on the N. A. R. D. list has even been suspected of disloyalty; a close watch has been kept on them and there has not been a single case of violation of the agreement.

An enthusiastic meeting of the Luzerne County Retail Druggists Association was held at Wilkesbarre this week, much business being transacted and several papers on local conditions were read. A "salesman's card" system was adopted and the "Pharmacy Law Committee" reported certain stores in the county are not being legally conducted, a report of which will be made to the State Board. The postage stamp question was also discussed, members claiming that they sold more stamps to consumers than did the post offices, and that this practice was becoming a great annoyance without adequate return. The resignation of B. F. Maxey was accepted and W. T. Colburn, of Ashley was elected president. F. S. Nagle, secretary, was elected as delegate to the National Convention. A feature of the Luzerne Association's work is the issuance of periodical bulletins; No 3 (just out) gives a list of powerful arguments in favor of organization and appeals to all druggists in the county to join. This Association now has a membership of over 100 per cent of all druggists in Luzerne County although only recently organized.

### Business Quiet and Steady.

Philadelphia, Sept 14.—Business has been rather quiet during the past week and has shown a slight falling off in volume from that of the earlier part of the month. There is a steady demand for the usual staple articles of sale but with little briskness, prescriptions are coming in fairly well, the tendency seeming to be for an increase as out-of-town people come in. The opening of the public schools this week has brought quite a profitable trade in stationery and school supplies to drug stores located near schools and in spite of competition from corner shops this has been held pretty well by the druggists. The article most in demand just now seems to be insect powder; quantities of it are being sold. Jobbers report a satisfactory week and a fairly good business. Orders are steady and of good quantities, and the outlook is very favorable.

### NOTES.

—One of the handsomest drug stores in the city is now that of J. B. Bailey, at Eighteenth and Mifflin streets, the extensive alterations having been completed. All the fixtures are hand carved mahogany, counters, wall cases, etc., and the show cases are entirely of metal and plate glass with French mirrors in the rear, these being arranged so that every bit of stock is in full view

of the customer. The ceiling is of metal, embossed, the flooring of handsome mosaic tiles and the prescription case is flanked by full length plate glass mirrors. The soda fountain is one of the finest and most original seen for some time, it is of beautiful onyx with a mahogany top supported by carved mahogany pillars in which ornamental panels of contrasting onyx are set, massive silver trimmings and beveled plate glass. When lit up at night the store seems to be a blaze of brightness.

—Plans are being made to secure special quarters for the Pennsylvania delegates to the N. A. R. D. Convention at Buffalo, and if sufficient names can be secured to warrant the proceeding, a house will be engaged at Buffalo large enough to hold all the delegates comfortably near Convention Hall. This plan will not only add to the convenience of delegates but will also lessen their expenses at Buffalo; Pennsylvania delegates from county associations are requested to send their names to J. C. Perry, 4154 Lancaster avenue, Philadelphia, if they wish to secure quarters with the Philadelphia delegation as above outlined.

—The question of whether Ocean City druggists shall be allowed to sell other articles than drugs on Sunday was argued before Vice-Chancellor Reed in the Chancery Court, Camden, this week. The Ocean City Association applied for an injunction to prevent W. W. Chalfant from selling anything but drugs on Sunday, claiming that a provision in the town deeds prohibits such sale. A rule was allowed to show cause and made returnable September 25. The case is the outcome of the prosecution this summer of Mr. Chalfant by certain 'reformers'.

—The death of President McKinley has shown the patriotism of Philadelphia druggists well, many drug stores already having their windows draped with crape and some have out flags at half mast. During the past week many druggists posted bulletins in their windows at frequent intervals, having made special arrangements to have news sent to them over the telephone, a bit of enterprise greatly appreciated in suburban sections.

—An esteemed western contemporary is authority for the following item, which will be news(?) to Pennsylvania druggists:—"Governor Stone of Ohio has appointed Mr. Minnick, of Pittsburg as a member of the Ohio Board of Pharmacy to succeed Louis Emanuel, whose term recently expired". Druggists here thought that Mr. Minnick had been appointed a member of the Pennsylvania Board of Pharmacy.

—Information has reached the local representative of the N. A. R. D. that a certain local dealer in drug sundries has been buying up a lot of patent medicines and shipping them to "cutters" in nearby cities, and, if this business is not stopped an example will be made of the offender.

—The application of the Philadelphia Association of Retail Druggists for a charter was favorably reported to Court No. 4, this week by the master in the petition. The further steps necessary will probably be completed some time this month, and the charter granted by the Court.

—A new drug store will be soon opened at Thirteenth and Federal streets by John J. Bender, manager of the Preston Pharmacy, Broad and Ellsworth streets, for the past five years, the store now being in process of alteration.

—J. E. Kennedy, city salesman for Smith, Kline & French, has been confined to his home for the past two weeks with quite a serious illness. It is learned, however, that Mr. Kennedy is now well on the way to recovery.

—E. E. Wyckoff, of Rock Island, Ill., has been appointed an assistant in the chemical laboratory of the Philadelphia College of Pharmacy under Prof. F. C. Moerk and will assist in preparing for the coming session.

—D. E. Bransome, Johnson & Johnson's city representative, is back at his desk from a fishing excursion down the Jersey coast with a good assortment of fish stories for the boys and a healthy coat of tan.

—Victor Michelotti is making alterations and enlarging his store at Eighth and Fitzwater streets. This is in the heart of the Italian quarter of the city and is an evidence of the general prosperity there too.

—President W. A. Rumsey, of the P. A. R. D., has brought his family home from Cape May where they have been spending the summer in time for the opening of the schools.

—W. A. Musson, of Broad and Dickinson streets, one of the most esteemed of the older druggists of the State, has returned from a vacation trip much benefitted in health.

—J. K. Wittel has removed from the southwest to the northwest corner of Seventh and Morris streets, his old location having become inadequate for his growing trade.

—J. G. Howard, proprietor of the "Lorraine Pharmacy", Broad and Fairmont avenue, has returned from a vacation at Stratford, New Jersey.

## BALTIMORE.

### OFF for the A. Ph. A.

Baltimore, Sept. 16.—This city will not be largely represented at the annual meeting of the American Pharmaceutical Association, which convenes this week at St. Louis. As far as can be ascertained, only two delegates will be present from here—Prof. Charles Caspari, Jr., and H. P. Hynson. The latter left Baltimore today unattended by any one. Though naturally of sociable disposition, he concluded this time to make the trip alone, being actuated by a strong sense of duty and devotion to the Monumental City. A much bigger representation had been hoped for, but almost at the last moment circumstances prevented some of those who had intended to go from leaving. Charles E. Dohme, who was to have made one of the party, is kept at home by the illness of his son, which has not only caused him grave anxiety, but also imposed business cares that otherwise would have fallen on the young man's shoulders. In the two representatives, however, who will be present, Baltimore has especially capable and alert spokesmen, and her prestige will be adequately maintained.

### The Emerson Company Complains.

Baltimore, Sept. 13.—The Emerson Company, manufacturers of bromo-seltzer and other preparations, applied in the Circuit Court here on the 8th inst. for an injunction against the Read Drug and Chemical Company, southwest corner of Lexington and Howard streets, to restrain the latter from certain practices alleged to be inimical to the interests of the plaintiff. The bill of complaint, which was sworn by Mrs. Isaac E. Emerson, acting president of the Emerson Company, alleges that the Read Company has refilled bromo-seltzer bottles with an imitation of that compound, particularly at the Read soda water fountain, and has in this way injured the business of the complainant. An order signed by Judge Stockbridge required cause to be shown by September 21 why the injunction should not be granted.

### Business Moderately Active.

Baltimore, Sept. 16.—Business during the past week has not been especially active. The twelfth of September, being a legal holiday kept down the volume of transactions, and the activity on other days failed to compensate for the deficiency due to Old Defenders' day. This applies to local as well as out-of-town trade. The demand for medicinal preparations is rather restricted, a condition due to the good hygienic conditions which prevail. The manufacturers are of course running uninterruptedly. The laboratories are not affected by the fluctuations in business, except when there is a pronounced deficiency in the distribution. Heavy chemicals are moving in moderate quantities and the market for botanicals is without special features. The retailers manage to do fairly well, all things considered.

LOUIS SCHULZE,  
631 S. Patterson Park Ave., Baltimore Md.

### Mrs. Emerson's Tour Abroad.

Baltimore, Sept. 13.—Mrs. Isaac E. Emerson will sail from New York on September 24, in the steamship Kaiser Wilhelm der Grosse for Cherbourg, France, where she will join Mr. Emerson on his yacht, the Margaret. Accompanying Mrs. Emerson as her guest will be Mrs. Edmund Jenkins, whose daughter, Miss Martha Lee Jenkins, is touring in Europe as the guest of Mrs. Emerson's daughter.

### NOTES.

—The condition of Dr. A. R. L. Dohme, of Sharp & Dohme, who was stricken several weeks ago with typhoid fever, continues to improve. Though the patient is not yet out of danger, his progress has been entirely satisfactory; and should no complications set in his recovery will be assured.

—Druggist J. B. Scott, of Cantonsville, a suburb of Baltimore, has furnished and restocked his pharmacy almost completely. New fixtures, and furniture, a handsome front and other changes comprise the extent of the improvement, which makes the store one of the most attractive in the vicinity of the city.

—The pharmacy formerly conducted by C. R. Yohn, on the corner of Third street and North avenue, West-brook, and which was afterward sold to Farrow Bros., has undergone another change in the proprietorship, having been purchased last week by Dr. Frank Glantz.

—Druggist J. O. Harrison, of this city, has gone to the Pan-American Exposition by the way of Boston, taking one of the Merchants and Miners' Transportation Company steamers. He will be absent about ten days or two weeks.

—Among the visiting druggists in Baltimore last week were Mr. Steele and wife, of Stephens City, Va., and D. C. Aughinbaugh, of Hagerstown, Md. The former was on the way to Atlantic City, to spend a brief vacation.

—An amendment of the charter of the Formaldehyde Manufacturing Company, of Alexandria, Va., has been granted, increasing the capital stock of the concern from \$25,000 to \$50,000.

—A new pharmacy has been opened by Isaac Kramer, on the corner of High and Lombard streets, a section largely inhabited by Hebrews.

—Nicholas Hess has accepted a clerkship in the drug store of E. A. Bowman, at the corner of Greenmount avenue and Preston street.

## CINCINNATI.

Cincinnati, Sept. 14, 1901.

—The officers of the new Green County Drug Association are as follows: W. D. Lazier, president; E. L. Davidson vice-president; E. C. Fleming, Treasurer and W. H. Douges, secretary, all of Xenia, Ohio.

—The next session of the Cincinnati College of Pharmacy opens September 16. Already the enrollment has been larger than any previous year and the outlook is very promising for a large class.

—The Koehnken Pharmacy, purchased by A. W. Frankman last week, will be removed to Versailles, Ohio, to replace his pharmacy, which was destroyed by fire last month.

—G. R. Kemper, of Osgood, Ind., and his bride (nee Miss Stella Glasgow) were in this city this week enjoying their honeymoon.

## CHICAGO.

### DRUG STORE BURGLARIZED.

Chicago, Sept. 14.—According to a local paper B. S. Cooban, a well-known druggist at 559 west Sixty-Third street, has three ways of protecting his store from burglars. He has a dog, a cash register and a collection of tin pans. On the morning of Sept. 8, however, burglars pried open the front door of the store and got away with about five dollars before the noise producing apparatus got in its work. But pandemonium came just the same, for when the bell of the cash register rang the dog, which was sleeping on the balcony awoke and began hostilities, causing their hasty departure. They "stood not upon their manner of their going, but went at once" and left a trail of pennies and other small change from the cash register to the door. The dog did the best he could at collecting samples of trousers' cloth and was severely beaten in the struggle.

On a previous occasion Mr. Cooban escaped being robbed by reason of a pile of tin pans underneath a basement window. The burglar got tangled up in the tinware and aroused the same dog. Ever since that time Mr. Cooban has kept tins piled under every window and depended upon the dog to get into action whenever the alarm sounded. Needless to say he sets a high value on the dog.

### Chicago Trade Good.

Chicago, Sept. 14.—Manufacturers and jobbers report an increasing business with the advent of Fall. Orders are more numerous and larger. Collections are good and the tone of the trade gives every possible encouragement for the future.

### NOTES.

—The C. R. D. A. Auxiliary is the name of a new monthly magazine just issued under the auspices of the Chicago Retail Druggists' Association. It is a neat sixteen page pamphlet giving the news of the main and auxiliary organizations and such other matters of interest as may be apropos of its object. The publication committee consists of Messrs. George A. Graves, Herman Fry, John I. Straw, Walter H. Gale and G. H. Weckler. The cover designs for September are very attractive and the contents are useful, pertinent and suggestive. It is a healthy infant and will secure its share of recognition in the field. It will not actively compete with other journals, but will limit its field of usefulness to the work being done by the Chicago Retail Druggists' Association.

—Among those who have passed through Chicago on their way to the A. Ph. A. meeting in St. Louis this week are Profs. Frank G. Ryan, formerly of Philadelphia, but now with Parke, Davis & Company, Detroit; E. G. Eberle, Dallas, Tex.; Leo, Eliel, South Bend, Ind.; and L. E. Sayre of the University of Kansas, Lawrence, Kas.

—M. R. Zaegel of the drug firm of M. R. Zaegel & Co., of Sheboygan, Wis., has purchased the interest of Dr. Carl Muth in the firm. This is one of the oldest business establishments in that city, having been established in

SODA FOUNTAIN & COUNTER,  
Pharmacy of Fred A. Thayer, 572 West Madison St.,  
Chicago, Illinois.

1882 by Mr. Zaegel, who is a graduate of the Philadelphia College of Pharmacy.

—Prof. John Uri Lloyd of Cincinnati, author of "Eti-dorpha," was here this week on business. While here he visited the Crerar Library and the Public Library.

—Joseph G. Peters, vice-president of the Fuller & Fuller Company, with his family, returned last week from Georgian Bay via Mackinac and the Sault Ste Marie.

—Robert H. Van Schaack, wife and family have just returned from a four weeks' vacation in the White Mountains.

—Oscar Leistner, Western representative of William L. Strauss & Company of New York, leaves to-night for Buffalo.

—Yeomans & Klone have bought Boyd's Pharmacy at Sixty-Third street and Wentworth avenue.

—C. J. Hinckley & Company of Battle Creek, Ia., have been succeeded by Iddings & Iddings.

—Louis Lange has bought out his brother Charles Lange at 675 West Lake street.

—J. N. Dilly, a well-known druggist of Brazil, Ind., died this week.

—C. A. Davidson and wife left this afternoon for Buffalo.

## THE NORTHWEST.

### RED SHOE STRINGS AND BROKEN BOTTLES.

St. Paul, Minn., Sept. 13.—An Omaha drug store was the scene of a tragic occurrence quite out of the ordinary this week. The overture, or prologue was the following advertisement that appeared in one of the city papers:

"Wanted—A registered drug clerk who does not wear red shoe strings or part his hair in the middle. Apply at 1401 Park avenue.

John Ebersole, the present clerk, had given notice that he would end his connection with the store on Oct. 1. He says he is about to marry a young woman whose social and financial standing is such as to render it unfit that he should any longer draw soda water. Ebersole announced his purpose to his employer, A. M. Westbrook, according to a local scribe, and the advertisement followed. It was read before a table full of people at the young clerk's boarding-house, and Ebersole says he was made the subject of many rude jests. He admits that he wears scarlet shoe-strings, but holds that such is one of his privileges as a citizen.

As the clerk thought of the incident at the breakfast table it grew upon him that the advertisement was a direct personal insult. He hurried to the drug store and demanded his check to the present minute. The proprietor claimed that Ebersole should finish up his month by the term of the agreement. He refused otherwise to pay the clerk for the portion of September already completed.

This cross was too heavy for the young man's endurance. He kicked in a show case and swept a row of bottles to the floor. The proprietor interfered and the place bore a bull-in-china-shop effect when the officers arrived. The proprietor now wears a white apron and several strips of court plaster. He is drawing his own soda water.

## NOTES.

—Successions: Walter Miller, Sewal, Ia., by Walter Miller & Co.; George A. Williams, Brookings, S. D., by Williams & Hart; B. H. Stoner, Masengo, Ia., by Cleveland & Loyn; Nelson & Brehaut, Cottage Grove, Or., by Morgan & Brehaut; Charles H. Dack, Platte Center, Neb., by Amel Schane; R. R. Rogers, East Peru, Ia., by J. N. Muihner; William Olinger, Thayer, Ia., by A. L. Druet; B. Anderson, Tacoma, Wash., by Lien & Selvig.

—Among the druggists who have sold during the past week are: W. C. Stillwell & Co., Des Moines, Ia.; O. G. Leuhars, Remsen, Ia., and C. H. Dyer, Chokio, Minn. —Ed Ihle, who has lately worked in the wholesale store of Noyes Bros. & Cutler, has gone to Alexandria to work for G. S. Spaulding.

—Among the visitors from outside towns this week were Max Wirth, of Duluth, and W. C. Haney and wife, of Marshall.

—Ryan & Co. and George Swallow were burned out at Dougherty, Ia., this week.

—Mr. Aronson has left Staples to go to a medical college this fall.

—Joseph Lyons, a Drain, Or., druggist, is going to start a bank.

—Blair & Merving, Mound City, S. D., have removed to Herreid.

—The Brand-Becker Chemical Co., Milwaukee, has incorporated.

—G. S. Spaulding was in the City this week for a day or two.

—O. A. Brown has started for Walters, Minn.

## ST. LOUIS.

## The A. Ph. A. Meeting.

St. Louis, Sept. 14.—Everything is ready now for the opening of the A. Ph. A. convention next Monday. The members of the local committee on arrangements are elated over the success which they see certain to crown their efforts. When the committee was first organized and suggestions and plans were called for by the chairman, it was very plain that very few had a correct conception of the magnitude of the responsibility they had assumed. Only the few who had been attending the annual meetings realized "what they were up against." The druggists throughout the city, with very few exceptions, did not realize what it meant to entertain the American Pharmaceutical Association. We have a number of organizations here among the pharmacists and they are noted for their entertainment features which are very appropriately confined to an evening boat excursion or an annual ball or perhaps an afternoon and evening picnic, to which all the pharmacists and their friends are welcomed guests, at little or no expense to themselves. When it devolved upon the local fraternity to uphold their honor in entertaining the national association on a parity with what other cities and places have done, they found it meant that they had to get a great big stir on themselves. They have wished that they had some of the advantages for entertaining the guests which nature and destiny have afforded the committee on arrangements for some previous meetings. But as one member said: "We have done our best; I am sure we will show up well and I hope it will not be thirty years again before the visitors consent to be our guests again."

One thing very gratifying to the committee on arrangements is the large number of paid up applications for membership from local pharmacists. Over forty are now in the hands of the chairman. The local fraternity will devote next week to the A. Ph. A. convention.

## NOTES.

—The Druggists' Cocked Hat League held a meeting on Thursday night, September 5, and decided to organize six teams. As captains and choosers for the teams they selected six highest average men in last year's Druggists' League. They elected Wm. Graham, president, Wm. F. Kahre, vice-president, E. J. Habegger,

secretary and treasurer and Chas Neu, sergeant-at-arms. The teams chosen are as follows: The Searle & Hereth Co., Dr. A. J. Enderle, Capt., Dr. E. C. Reisse, W. A. Biltz, H. Temm, and Dr. F. A. Parish. Meyer Bros. Drug Co.: H. C. Brenner, Capt., F. Decker, F. Bruen, F. Nies, and Wm. Graham. Herf & Frierichs Chemical Co.: Wm. Kunz, Capt., E. F. Helbig, E. J. Ernst, J. Hocken and Wm. Scheele. J. S. Merrell Drug Co.: L. B. David, Capt., L. Pauge, A. Nay, F. Deikeskamp, E. A. Woehrin, and E. J. Itabegger. St. Louis Paints: Wm. F. Kahre, Capt., Col. Chas Neu, C. Wetzel, H. E. Hobbs and H. A. Zahn. The regular bowling season will open Sept. 19.

—F. R. Scharlach, for ten years travelling salesman in Central Missouri for the J. S. Merrell Drug Co., has been called to a position in the house. He is now arranging to move to the city from Moberly, Mo. Mr. Scharlach is one of the most popular salesmen in the State, a graduate in pharmacy and has spent his life since twelve years of age in the business. It is reported by good authority that he will have charge of the traveling salesmen for the firm with which he is connected. His former place will be filled by Tillery Duncan, formerly with Kelly & Williams, of Kansas City.

—The First Texas Drug Manufacturing Co., of Paris, Texas, has just started a plant for the manufacture of pharmaceuticals. It is the first firm in Texas to make non-secrets.

—E. A. Medler, Twentieth and Ferry street, has purchased the drug store at John and Florissant avenues, formerly owned by F. W. Luecky.

—G. B. Self, in charge of the Kansas City office for Ell Lilly & Co., is spending a few days in this city.

—J. C. Haffner, Manchester and Ewing avenues, has returned from his vacation spent in Chicago.

—Relief clerks are at a very high premium for next week on account of the A. Ph. A. meeting.

—G. B. Miller, of Salsbury, Mo., has sold out to J. B. McKon, formerly of Versailles, Mo.

—Wm. H. Hienstead has gone to Jefferson City to clerk for A. Brandenberger.

—Otto Sassenman is chief clerk for A. J. Henny at the Fair Grounds Pharmacy.

## The Matthews Hot Soda Apparatus.

There has been an unusual demand for soda water this summer and many druggists have doubled their trade of last year. It will soon be time for hot soda and undoubtedly there will be a corresponding increase in that trade. One of the essentials to an increasing trade is an up to date apparatus, and as hot soda season is not far off it would be well for druggists to look after their equipments. The Matthews fountain is up to date and a business bringer, and can be bought on easy terms. Write for illustrated catalogue and colored pictures, to John Matthews, 449-451 First avenue, New York.

## A Corn File That Cures.

A corn file that was designed to cure corns quickly and easily without the use of knife or strong caustics, is manufactured by the Antiseptic File Co., Springfield, Mass. This file has only been on the market a short time and is meeting with a ready sale. It retails for 10 cents and a sample dozen on neat display card is sent for 75 cents to any druggist who writes the manufacturers. Sales men are wanted to handle the S. & H. Antiseptic and Medicated Corn File, as a side line. It is easy carried, and has merit. Liberal commissions are offered by the manufacturers.

## Graves' Tooth Powder.

Many druggists have taken advantage of the liberal offer of the Graves' Tooth Powder Co., and now have a good trade in this article. The offer is still open and the company will send express prepaid, samples for free distribution and some free powder to pay for same. If a druggist sends the names of customers a sample will be sent by mail with his imprint on the circular. The tooth powder is sold in three sizes, 25c, 50c and 75c and allows a liberal profit. Mention your jobber's name when writing to the Graves' Tooth Powder Co., Chicago, Ill.

## NEW ORLEANS.

### NEW ORLEANS COLLEGE OF PHARMACY WILL REMOVE TO NEW QUARTERS.

New Orleans, Sept. 13.—The New Orleans College of Pharmacy has chosen new quarters and on October 1 will be installed in a commodious building at 725 and 727 Camp street. The move will bring the college much closer to the drug center of the city and with the many improvements planned it will give pharmaceutical education a new impetus in the city. The building, which is a commodious one will also be used for a closer baning together of pharmaceutical interests. On the ground floor will be the main laboratory of the college. The second floor will be devoted to a lecture room; while on the third floor quarters are being prepared for the Pharmaceutical Association, and the recently organized Drug Clerks' Association. With the removal of the college to its new site it is proposed to inaugurate special night classes and lectures for the benefit of working clerks. This innovation promises to be successful in every particular as a large number of clerks have long desired to extend their technical knowledge but have been unable to do so by reason of their duties, and the lack of facilities.

### NOTES.

—The wholesale drug house of L. N. Brunswick & Co., narrowly escaped destruction by fire this week. A disastrous fire completely destroyed the big establishment of J. H. Merge & Sons, ship chandlers the night of September 8. This building directly adjoins the Brunswick company and was ruined completely to the dividing wall. The damage to drug stock from water and slight scorching was hardly more than \$1,000, fully covered by insurance.

—Finlay, Dicks & Co., Limited, among the largest of southern wholesale drug concerns, has recently greatly added to its property in New Orleans. A warehouse at Magazine and Common street, has been leased with a floor space of 70,000 square feet. This building is rapidly being thoroughly fitted up in a modern manner to handle the various branches of the firm's trade.

—Ed Hanson, a young druggist, of Pass Christian, Miss., a coast resort of New Orleans, has recently re-fitted his place of business.

### KANSAS BOARD OF PHARMACY.

At a called meeting of the Kansas Board of Pharmacy at Manhattan, July 15, held on account of the death of President W. C. Johnston, the following resolution was adopted:

Whereas, the death of W. C. Johnston, president, has deprived the Board of Pharmacy of its most active and valued member,

Resolved, That the Board herewith testifies to and places on record its appreciation of his ten years honored service. The increasing practical usefulness of the Board during these ten years has been marked and can be attributed to the wise counsel of W. C. Johnston.

That the members of the Board tender to the family of the late W. C. Johnston, kindest sympathy. Their keen regret is best expressed in saying that their relations with him have been truly fraternal and continuously harmonious.

The Board elected from its members, John T. Moore of Lawrence, president to succeed W. C. Johnston, deceased.

At the quarterly meeting of the Kansas Board of Pharmacy held at Ellsworth, September 4, 1901, the following applicants were present and passed the examination: Registered Pharmacists—Thomas Vick Roy, Kansas City; Clifford N. Wallack, Emporia; Schuyler Nichols, Liberal; John Dowd, Veir; J. W. Montee, Girard; W. L. Crabb, Iola; Joe J. Sharpe, Axtell; Robert A. Harris, Jr., Salina; Winnfred A. McCoy, Beattie; A. L. Harrison, Bern; Henry C. Kandt, Herington; Jas. G. B. Pinney, Sylvan Grove; Richard Lee Irion, Galena; Penrose M. Leonard, Leona; W. D. Lacy, North Topeka; R. W. Fairchild, Kensington; Alfred Hultner, Lincoln; John D. Hunter, Fort Scott; W. A. Munson, Jr., Clay Center; Alvah C. Hough, Republic; Fred A. Haines, Clay Center, Meade. Registered Assistant Pharmacists—James

S. Sheldon, Council Grove; Arch C. Waller, Chanute.

Since the last meeting of the Board there were registered without examination, by virtue of being graduates of recognized schools of pharmacy, the following named persons: Maud A. Gregg, Altica; Wm. J. Briggs, Burlington; Edward P. Miller, Hutchinson; R. M. Rath, Dodge City; John L. Bogy, Atchison; Edwin R. Cartmell, Kansas City; J. M. Hooker, Burden; Herman Cain, Olathe; Earle Bowles, Horton; Rollie D. Combs, Blue Mound; J. B. Anderson, Coffeyville; Adolph C. Graf, Salina; C. E. Buttin, Fredonia; Thomas McCampbell, Kansas City; Wm. R. Engler, Ottawa; C. E. Branstetter, Kansas City; Fred C. Oehler, Lincoln. Registered Assistants: E. E. Bloom, Topeka; John A. Cramer, Independence; Frank W. Fogwell, Topeka.

The next meeting will be held at Leavenworth, December 4, at 9 o'clock, a. m. Those who desire to take the examination should notify the secretary at least five days before the date of the meeting. W. E. Sherriff, Ellsworth, Secretary.

### A Liberal Special Offer.

In their advertisement this week, Chas. Jacobs & Co., proprietors of the Las Palmas cigar factory, offer to give free to every dealer who sends in his first order for 1,000 Havana Specials, 100 additional cigars for distribution as samples to the retailer's cigar customers. This is a very liberal offer, especially in consideration of the fact that Chas. Jacobs & Co., ship all cigars on approval, and guarantee their Havana Specials to be absolutely the best goods in this line ever offered at so low a price. This offer is open for only a short time. Druggists should take advantage of it, but those who prefer to order less than 1,000 cigars may do so. Chas. Jacobs & Co., will ship goods in any quantity to suit the convenience of their customers. Address the manufacturers at 553 E. Seventy-eight street, New York, and mention the Era.

It will soon be time to announce the winner in the show window contest for the handsomest display of John Lucas & Co.'s Ready Mixed Paints. Eleven druggists will receive prizes, from \$50.00 down. Any druggist could have competed for this prize, if he had carried a stock of Lucas' Home Helps, and had he won the first prize, \$50.00, he would have made a pretty good profit on his season's work.

McKesson & Robbins have secured the agency for this country of Delectez perfumes and toilet preparations. These are well known to the trade, particularly Amaryllis Du Japon, Chypre Royal, Le Menuet, and Lilies of France, and the demand for these orders is increasing every year. All druggists who are particular about their stock should carry them.

An illustrated catalogue of high class manicure instruments will be sent to druggists who write to the Emil Forquignon Mfg. Co., 835 Broadway, New York. The pocket manicuring outfit made by the company cleans, scrapes, files and shapes the nails. All jobbers have the outfit for sale, one dozen on a handsome display case.

Proprietary preparations that give the druggist a good profit and are reliable, are manufactured by the P. L. Abbey Co., Kalamazoo, Mich. The increased sales of the company's goods and the numerous repeat orders speak well for the popularity with customers. Every druggist can have a complete price list free by writing for it.

Oil of sandalwood as sold to-day is so frequently adulterated with oil of cedar that it is well for druggists to specify D. & O. brand when ordering. Dodge & Olcott put up oil of sandalwood in original 4-ounce bottles. It is stronger and better than others and can be procured through your wholesaler.

Most druggists know that Merz Santal capsules and pearls have an established reputation for reliability. They are recommended by physicians and can be bought of any jobber at \$3.00 a dozen.

## BUTTE DRUGGISTS MAINTAIN PRICES.

W. G. Tuttle Discusses Spirit of Good Feeling and Co-operation in the Montana City.

"It is my opinion that in no other city in the Union is there is such a friendly feeling and spirit of co-operation among druggists as there is in Butte and the surrounding country," said W. G. Tuttle of the Philen, Medin Drug Co., Butte, Mont., who is in the city buying for the holiday trade of his firm.

"In Silver Bow County, the conditions prevail that the N. A. R. D. is spending so much time and effort to make general for the best welfare of pharmacists all over the country. We are a practical example of what harmony, and concerted and honest action can do. The Silver Bow Retail Druggists' Association has in its membership every pharmacist in the county. We have a price schedule kept by agreement and never since our organization began has there been a known departure from this schedule. There is not a cutter in the county. Even the department stores, which carry lines of fancy goods have come into our arrangement and have stood by it. The result has been a most happy condition of affairs both from a good business standpoint and on the social side. We pay our clerks as good salaries or better than they get in other parts of the country. Business has naturally been sluggish during the Summer, but the trade is looking forward to a splendid Fall and Winter business. Yes, we will send delegates to the Buffalo Convention next month.

### GREAT DISPLAY OF GOLD.

Gold is the most precious of metals, and from the time of its first discovery it has possessed a peculiar interest for the human race and been the figure of the acme of purity. It is the most ductile and malleable of metals and is largely used for coinage and for jewelry. That we should regard this choice treasure of mother earth with interest and admiration is quite natural. The annual production of gold is now very heavy. The aggregate in the United States during the calendar year of 1900 is estimated by the director of the mint as 3,837,213 fine ounces, valued at \$79,322,285. During the calendar year 1899 the gold production of the United States was \$71,053,500.

The gold belt of the United States is extensive, including in its great length and breadth the west, north-west, southwest and a portion of the south. The purest gold in existence is found in this belt. Some of the possessions of the United States are also liberal producers of gold. In some other parts of Pan-America the yellow metal is mined extensively.

In view of the importance of the mining industry and deep interest of the people in the precious metal, the officials in charge of the exhibits for the Pan-American Exposition at Buffalo make a very complete display of the finest specimens of gold extant, in the Division of Mines. For months Dr. David T. Day, of the United States Geological Survey, and a corps of assistants were engaged hunting specimens to add to the exhibit. Their efforts has been well repaid, and the display is the most complete ever made by the United States Government. It includes the pick of the specimens shown by Uncle Sam at the Paris Exposition, together with the most beautiful facades and show cases. Many of the best features of the government collection were not taken to Paris because they would not admit of exportation, but all are to be seen at the Pan-American.

The gold exhibits from California are very fine. The purest specimens come from Grass Valley in the Golden State. The exhibits from Oregon and Washington are somewhat of a surprise to a great many people. Many large nuggets have recently been found in both of those states. They are the size and shape of lady's hand.

The striking feature of Colorado's gold exhibit is telluride of gold. It has the appearance of white sulphide of iron, and only shows the sheen and glitter of gold when heated. A slab of this metal a foot square is a feature of the exhibit. The owner has, with the aid of a blow-pipe flame, burned along the surface the form of a cross of gold.

Gold exhibits from North Carolina, South Carolina

and Georgia surprise the average visitor to the Mines Building. Some of the largest nuggets found were picked up in North Carolina, some weighing over ten pounds. One mine in South Carolina, the Halle, produced the bulk of the gold found in the east in recent years. The output of the mines in the last three years has a value of \$3,000,000. Gilded plaster casts of every bar ever taken out are to be seen at the Exposition. The ore taken from this mine is low grade, not worth more than \$2.00 or \$3.00 per ton, but it is easily mined and the property is profitable.

Georgia has produced some of the most beautiful specimens of gold ever found in this country, and its representation in the Government Exhibit at the Pan-American Exposition is an important one.

The center case of gold nuggets and gems is, perhaps, the finest collection of the kind ever exhibited.

There is a large display of specimens of gold brought from Klondike and Cape Nome.

It is not generally known, but is the fact, that Klondike gold is the basest known, often selling for only \$14 an ounce, whereas the price for an ounce of the pure metal is \$20.67.

New Mexico sends her best specimens of gold. The display of gold at the Pan-American is the most extensive ever made at an Exposition. It is of absorbing interest to all visitors.

### THE ARSENIC HABIT.

In certain parts of Australia, despite the stringent laws against the sale of the drug without a physician's prescription, the arsenic eating habit is rapidly increasing. From investigation scientists discover that hunters and wood-cutters are among its slaves, and by its use are enabled to withstand more fatigue than the average. White arsenic is that form of the drug which the peasants of the Tyrol use, and after beginning with minute doses the consumption is gradually increased until the enormous dose of twelve to fifteen grains is absorbed daily. One of the peculiarities of the habit is that the users are generally long lived, though disposed to sudden death. The drug seems to grant immunity from infectious diseases and as a consequence of its use, arsenic eaters maintain a very fresh and youthful appearance. A manager of one of the arsenic factories in Salzburg advises the workmen to eat the drug before taking up their positions to prevent them from succumbing to the fumes. Between the ages of twelve and thirty these arsenic eaters do not appear to suffer any deleterious influences, and by gradually reducing the daily dose after the age of thirty, men of fifty are often able to abstain from its use. An investigation of the graveyards in Upper Styria revealed the presence of many bodies in an almost perfect state of preservation, which is attributed to the gradual accumulation of arsenic.

### Druggists Metal Goods.

The Cooper Pill Machine with reversible plates is an article which recommends itself to all druggists, as it is clean and convenient. A. H. Wirtz, Nos. 913, 915 and 917 Chestnut street, Philadelphia, is the sole manufacturer. He also makes a general line of metal goods for the trade, including metal syringes, breast pumps, moulds of all kinds, collapsible tubes, bottle stoppers with caps that need not be removed, etc. Write for catalogue and prices to the manufacturers or the New York representative, Frank P. Wismer, 101 Beekman street.

### Thycolol.

Thycolol, the standard mouth wash antiseptic, is having a ready sale with druggists in different parts of the country. The manufacturers state that it is used and prescribed by dentists, physicians and trained nurses everywhere. It can be had from all jobbers, and advertising literature is supplied free by the makers, the Elwin Laboratory, Poughkeepsie, N. Y.

Four-Fold Liniment is always sold at full prices; no cutting.

These qualities ought to have given him a high niche in the hall of pharmaceutical fame, had not his erratic life and lack of definiteness counteracted what would otherwise have been a brilliant career. I refer to Hans M. Wilder.

#### Removal of the Stamp Tax.

During the past months, a more buoyant feeling, as of increased prosperity, has seemed to pervade all branches of the drug trade, while the general increase of business interests throughout the country makes it doubly responsible for this, yet an important factor in it was the removal of the exacting, vexatious and burdensome stamp tax. For valuable work in this direction we are indebted to our Committee on National Legislation, and by means of whose efforts, in conjunction with those of similar Committees of allied interests, what we so earnestly sought was finally accomplished. We would extend to them our hearty and sincere thanks for their share in the accomplishment of a result so beneficial and so general in its application.

That this Committee might wield more influence in National legislation affecting our interests, we would recommend that it be made a permanent one, and that it consist of three members, the chairman to reside at the seat of the General Government, and the other two to represent respectively, a large Eastern and Western city.

#### Methods of Teaching in Colleges.

Much criticism has been indulged in recently as to the attitude and methods of teaching of our colleges of pharmacy. We naturally look to these institutions as the haven which is to permeate the whole lump and elevate the standard of quality.

A growing suspicion that the colleges are not fulfilling their task in the highest degree prompts this amid-aversion and criticism. We are to judge of a tree by its fruits we can determine the quality of an educational institution by the quality of its graduates. The possibility of any of our colleges having diamonds given as material to work upon may be remote, but the teacher who is set to polishing pebbles is to be deplored and commiserated. By average, five at least of our pharmaceutical schools have been existence a half a century. Are we to infer that during all this period they may have given only pebbles to polish. Surely not. Yet we are told that only through the curriculum of the schools as a pharmaceutical education possible and a practical knowledge of the art to be secured and that there are in the shops competent and educated pharmacists competent to instruct apprentices. Is this to be accepted as the result of fifty years of systematic collegiate instruction? If so, certainly it is not flattering testimony to the efficiency of the schools.

It is generally acknowledged among members of the profession, that no single cause has operated among members of the profession, that no single cause has operated more powerfully in the status quo in a scientific aspect than the insatiable business rivalry of the colleges, creating the impression and fostering the fallacy that the practice of pharmacy affords an open and easy way to the speedy acquisition of wealth, making a surer and larger return on a smaller investment than that of any other profession or occupation.

#### Colleges of Pharmacy Should Be Controlled by Pharmacists.

The true sentiment in regard to pharmaceutical education found expression in a resolution passed by this Association in 1871, declaring that "Colleges of Pharmacy should be controlled by Pharmacists" and that "a practical experience in the shop" should be a sine qua non among the requirements for graduation. The force and reasonableness of this is as apparent to-day as when first expressed, and has become an easier and shorter way by demanding that this term of "practical experience" shall not be less than four years.

The growth of our Country, in extent and population, has, however, afforded ample opportunity for the establishment of pharmaceutical schools on a purely business basis. In these the pecuniary interest is held paramount to all others. Seeking to share the patronage of the older colleges, they have been named an easier and shorter cut into the realms of pharmaceutical science and practice, promised to make, under a newer method of instruction, better qualified pharmacists than the tutelage of the shop and its smaller institutions could possibly supply, and even claimed that it was not an essential requirement that the student, either before or during his term of tuition, should be familiar with the inside of a drug store.

This swift and superficial method of training is to be substituted for four years of continuous exercise in the manipulation of an art which the limits of an average life, filled with uninterrupted labor and study, cannot compass.

Such teaching bore its legitimate fruit in increasing the number and decreasing the qualifications of those engaged in pharmacy, making necessary the movement of laws and the establishment of Boards to protect the profession against a great incoming tide of incompetency. A course of commercial instruction, now adopted by some of our colleges, is but a substitute for the training the youth would naturally receive in the daily business transactions of the store.

No better illustration can be presented of the invaluable resources of drug store training to the earnest

youth wishing to acquire an intimate knowledge of the practice and science of Pharmacy than is found in the histories of Scheele in the old world, and of Procter in the new. All honor to the earnest, diligent teachers who are conscientiously striving to do their duty by those committed to their charge. Pharmacy owes to such a debt of gratitude.

#### Demand for Better Training.

A move in the right direction towards raising the standard of quality, and demanding better training on the part of those who enter of acquisition, but, on the other hand, would seem to be indicated by the formation of the Conference of Pharmaceutical Faculties whose influence in this direction will no doubt be felt in the future. The hope of a more complete and thorough education in bettering the individual. Any scheme short of this cannot be permanent or effective. The joy of success, or the chagrin of failure, will be measured by the qualities of earnestness, ambition and industry, or the lack of them in the individual. The whole matter rests with the man.

One would think that an organization such as the American Pharmaceutical Association, whose aim is to aid and increase the general good of acquisition, but, on the other hand, would seem to be interested in matters relating closely to their material prosperity, intellectual growth and progress. Such, however, does not seem to be the case. The backwardness of the pharmacist, and the disadvantage of the means provided to aid him must be due to that apathy which is now so pronounced in contradistinction to the spirit of intense strenuousness manifested in so many directions.

#### An Age of Contrasts.

This is an age of sharp contrasts. A characteristic of human nature much commented on and denounced is the selfish and grasping greed of acquisition, but, on the other hand, we have the spirit of altruism discussed, debated, and never more largely practised than at present. Each of these principles has its limitation and uses. The selfishness and money getting profits that does not mean rivalry which means progress. Altruism would make all men equal, but that can never be until human nature is radically changed. Some men will achieve success under the most adverse circumstances; others fail when all the conditions are highly favorable.

This emphasizes the fact that all are not born equal, so far as mental endowments are concerned. The finest concept of brotherhood, and the most ardent zeal and enthusiasm, animated the early Christian church, but the effort to have all things in common proved a dismal failure. It will always be true that "Some men are born great, some achieve greatness, and some have greatness thrust upon them," but, alas, for the other "Some"—and their name is legion—whose lives are never signaled by even the effort to achieve. From this class even Pharmacy is not exempt. Content in a narrow sphere, they take no advantage of any of the advantages or contention with which would tend to better their condition by aiding them to qualify for higher service.

#### Organization.

Organization is now esteemed the panacea for the various ills afflicting the body politic. Many of the things desirable to possess are only to be attained by concerted effort. This is especially the case in securing the enactment of just laws, in providing means for men's intellectual and spiritual welfare, and in the distribution of charity and works of philanthropy.

Organizations, however, that have for their object the improvement of man's material condition, are beset by many obstacles. To insure success along this line, limitations and restrictions are imposed on the individual, his liberty is abridged, his freedom of action restrained, and his individuality ignored. The higher you raise man in the plane of intelligence, the less willing he is to submit to conditions that organizations seem to make necessary, even when the promise of prosperity seems likely of realization. The American Pharmaceutical Association claims the fealty of its members, on the ground that it is for the benefit of the public. It abridges no man's liberty, and imposes no unnecessary restrictions, but aims to benefit and uplift the pharmacist by qualifying him for higher usefulness in the service of his fellow men. This obligation is laid upon us all to do the best we can, and in the fulfillment of that obligation is the hope and promise of civilization. Let us then endeavor to perfect ourselves in our calling, by employing all the means within our reach, and let us realize that our prosperity will be commensurate with our efforts, and that our compensation is to be gauged by the service we render.

#### Section of Practical Pharmacy and Dispensing.

One of the most important moves this association has made in recent years is the establishment of the department of practical pharmacy and dispensing. It has in it the potency and promise of great benefit to the members of the association. Let us strive that it may fulfill in the highest degree our expectations.

#### Relations With American Medical Association.

The delegates appointed to attend the section of Materia Medica, Pharmacy and Therapeutics of the annual Medical Association, worthily represented this body,

and were honorably recognized in the selection of one of our delegates, C. S. N. Hallberg, as Secretary of that section. The American Medical Association is a large body and wields an amount of influence proportionate to its size. The affiliation of the dentists with this association has gained for them official recognition by the general government in the creation of a corps of dental surgeons for the United States Army. This is quick recognition for a profession of recent development, and leads to a query why pharmacy has not come to its own by taking a position as equally a profession. It is co-equal with medicine in antiquity and importance. Possibly its devotees have been too modest in pushing its claims, for, up to the present time, it has received but scant recognition from the government. We cannot do better than to send to each annual meeting of the American Medical Association a delegation of our strongest and best men to represent us in the section of that body in which we are especially interested.

While on the subject of representative delegations to allied bodies. It would not be amiss to suggest the propriety of exchanging representatives with our brethren across the water. Now that the trip across the Atlantic can be made safely, quickly, and cheaply, there seems to be no reason why we should not exchange delegates with the British Pharmaceutical Conference.

#### The Procter Memorial.

Our thoughts at the present time naturally turn to commemorating next year the fiftieth anniversary of our existence, and preparing some fitting testimonial to the memory of the Father of American Pharmacy, William Procter, Jr. Considerable discussion has been had to the particular form of this testimonial. A monument, scholarship, and research laboratory, have been in turn suggested. The last would certainly be the most worthy our consideration, but it would involve an expenditure far beyond our means, and cannot be entertained. Besides, the ground in this direction is already somewhat covered in the fine equipment of research departments in some of our pharmaceutical manufacturing establishments. Much has already been accomplished, and many important discoveries made in new remedies.

The public press announces the promise from one of our multimillionaires, of a contribution to establish such a laboratory and an endowment sufficient to support it. Given ample means and thorough equipment, research might at the beginning be confined to biological lines, but would surely take in not only the investigation of diseases, but remedies as well.

Pending the fulfillment of such a promise, the next fitting memorial to commemorate an event and perpetuate a memory, would be a medal bestowed by this Association, for meritorious work along the lines laid down in awarding the Hanbury and Fluckiger medals. A prize so valuable as this would be to the recipient, would afford an ample incentive to the best work in the field of pharmacy. This medal, known as the Procter Medal, would serve to keep alive the memory of him whom we, as pharmacists, delight to honor.

The keynote of the coming years, as that of the past, must be progress, for, no matter what has been attained, yet, as it has been truly remarked, "The wisest man may be wiser to-day than yesterday, and to-morrow, than to-day." The future waves alluringly its unwon laurels and invites to fields yet unexplored, fruitful with the promise of rich rewards.

And now, in conclusion, permit me to express my grateful appreciation of the high honor you have conferred upon me, and to ask your consideration and assistance while presiding over your deliberations.

The address was referred for action.

The first meeting was largely taken up with routine business. Congratulatory messages were received from the British Pharmaceutical Conference, and delegates present from the Ontario College of Pharmacy extended the good wishes of pharmaceutical organizations in the Canadian provinces.

By vote the Association decided to hold a special session Thursday for memorial exercises in honor of the late President Wm. McKinley. Dr. Frederick Hoffmann of Berlin, Germany, now an honorary member of the Association, was invited to be present to preside and to deliver an address at the fiftieth anniversary of the Association to be held next year in Philadelphia.

Secretary Chas. Caspari, Jr. of Baltimore, reported one thousand two hundred and thirty-nine members in good standing. Over one hundred new applications for membership were received.

#### Officers Elected.

The following officers were elected for the ensuing year:

President: Henry M. Whippley, St. Louis, Mo.

First vice-president: Wm. M. Searby, San Francisco, Cal.

Second vice-president: Geo. F. Payne, Atlanta, Ga.

Third vice-president: Wm. S. Thompson, Washington, D. C.

Members of Council: J. H. Beal, Scio, O.; Clement B. Lowe, Philadelphia, Pa.; C. A. Rapelye, Hartford, Conn.

Reporter on the Progress of Pharmacy: C. Lewis Diehl, Louisville, Ky.

Secretary: Chas. Caspari, Jr., Baltimore, Md.

Treasurer: Samuel A. D. Sheppard, Boston, Mass.

An elaborate plan of entertainment for the delegates has been provided by local pharmacists and extends throughout the week. The programme includes a reception and dance, visits to the Museum of Fine Arts and the St. Louis Exposition, a carriage ride and luncheon at Glen Echo Club House, a trolley ride, and visit to the Missouri Botanical Garden (Shaw's Garden), entertainment at the Union Club, a steamboat excursion on the Mississippi River, train excursion to the Iron Mountain region and many other interesting features. The committee of ladies also has a programme, and its members are taking special pains to appropriately entertain the visitors placed in their care. The last general session of the Association will be held at ten o'clock Saturday morning. [A detailed account of the meeting will appear in the Era next week.]

#### LONDON'S FAVORITE SUMMER DRINKS.

Has anyone really found the perfect summer drink? asks the London Telegraph. Going through the degrees of good, better, best, one has still to find the perfect brew, but there are many which are most agreeable and efficacious. It is imperative that to please the palate and the whole hot, limp body that a summer drink should be cold, but an abuse of ice at once destroys the effect desired besides being dangerous. A liquid set on ice and slowly chilled is far more to be recommended than the drink in which ice floats.

Londoners show marked favor to plain lemon quash, made from the juice of the lemon, sweetened sparsely with sugar and diluted with water, and finally cooled on ice. There is no drink more acceptable and cooling in the heat of the day, and it ranks far in the lead of artificial, acidulated decoctions, but falls, too, into disrepute when too liberally imbibed.

Taking the average, it would seem the plainer drinks have the larger share of popularity, and soda and milk is one of the very first favorites. To be perfect, it requires that a can of ice be placed in the milk, and that the soda should have lain for some time on the ice block. These are the simplest, perhaps best, and certainly cheapest of the drinks Londoners are patronizing to assuage their thirst, and men folk find consolation in shandygaff, of which no one can deny the cooling qualities, mixtures of lime juice and ginger beer, bitter and lemonade, and iced wines of every sort. The mysteries and the delights of the soda fountain are still to be better learned.

In the home the thoughtful house-keeper meets the want of the summer days by the concoction of refreshing wine cups, in which, as everyone knows, it is not necessary to mix the very best wine. A good recipe for claret cup will be found to consist of one bottle of claret, another of soda water one liqueur glass of curacao, another of brandy, a small lump of ice, two tablespoonfuls of castor sugar, and a sprig of borage. Set on ice for a few moments this cup—to which fruit, strawberries, grapes, or sliced bananas, can with advantage be added—is distinctly good. Another variation of claret cup can be achieved in the mixture of one bottle of claret, three of lemonade, and one of soda, two ounces of powdered sugar, two lemons, sliced, and one-third of a gill of noyau.

Cider cannot fail to please, and cider cup properly blended is an ideal luncheon drink. It requires one quart bottle of cider, one of soda water, one liqueur glass of brandy and maraschino, a small piece of ice, and the

addition of any seasonable fruit. The same ingredients, in the same proportions only differing in the substitution of champagne for cider, and with the addition of one tablespoonful of castor sugar and some cucumber rind and borage, would compound an excellent champagne cup, or, if preferred, moselle or still hock. Vermouth cup is achieved by the addition to one bottle of soda of one claret glass of vermouth, a few drops of angostura, a small piece of ice, and the merest suspicion of sliced bananas, raspberries, strawberries, or any other favored fruit.

Any of these concocted liquids is warranted to revive the limpest mortal on the hottest day and grant a new lease of life.

### LENGTHENING HUMAN LIFE.

The census reports show that during the last decade the death rate in the United States has decreased one and one-half for every thousand of population. Dr. Kober, of Washington, claims that in three hundred years the average of human life has been doubled. He states that in the sixteenth century it was between 18 and 20 years; at the close of the eighteenth it was a little over 30 years; to-day it is over 40 years, having been lengthened six years since 1880. For a long time 33 years was considered and taught to be the average duration of life. Just how this figure was obtained is a matter of speculation, and there are those who will question the accuracy of Dr. Kober's statistics.

But this matters little; the fact remains that the span of existence has been lengthened appreciably, though it may defy exact mathematic calculation. Various factors have entered into the production of this extension, for some of which, at least, the science of medicine may claim credit.

The enormous infant mortality of the past has been responsible for the low average length of life, and it is here that medical science has achieved its most brilliant hygienic and therapeutic results. The single item of diphtheria, now effectually combatted with antitoxin, is a shining instance. The diarrheal diseases of infancy are still the worst foes of babyhood, but magnificent work has been done in their prevention and cure.

By hygiene and quarantine nearly all the infectious and contagious diseases have been lessened in prevalence and mortality. Surgery, too, saves thousands of lives that would formerly have been lost. It cannot be denied, however, that its results are marred by the fatalities attending unnecessary and ill-advised operations by embryonic "surgeons" who desire to make a "record."

Perhaps the most important element promoting longevity is the education of mankind in hygiene, and the physician is its prophet. In this work the newspaper has been a powerful ally, in spite of all its blunderings. From the mass of ridiculous "health hints" and pseudo-science published daily, the public has sifted out the grains of truth and profited accordingly.

Many other things help to stay death's coming; the standard of living has been raised enormously; the hours of work have been shortened; amusements are no longer counted as evil; drunkenness is discouraged.

Another factor not to be ignored is the transmission by inheritance of specific resistance to disease. While man has learned to shun infection, his cells have also learned defensive measures against it, and elaborate their antitoxins more readily. The theory of Dr. W. J. Class, that the inexplicable febrile affections of childhood are simply mild attacks of the ordinary communicable diseases, is compatible with this. And so, it seems, life is preserved more successfully in early and middle life, but the bitterest enemy the worry that kills. In all the centuries before the Edylites there have been really Christian Scientists who did not deny with idiotic autohypnosis the evidence of the senses, but encouraged only a calm acceptance of this evidence. They have taught that

misfortune may be real, but that unhappiness is a creation of "mortal mind"; that trouble and grief and woe are unnecessary subjective states; that worry is foresight gone mad; that riches and fame and place and power are nothing, and that contentment is everything. All mankind might well subscribe to this good old creed and drink more hopefully than the toast, "Here's to your health; may you live long and prosper." (St. Louis Med. Review.)

### SOME CHEMICAL MYSTERIES.

It has happened more than once that just as we had firmly established our sciences upon a basis which seemed as unyielding as the Biblical rock, and had toilfully formulated theories that explained all phenomena with unvarying simplicity, some obscure experimentalist made a discovery which by no possibility could be twisted and molded to fit the existing system and, indeed, even challenged the truth of all established doctrines. Thus it was that Young and Fresnel overthrew the old emission theory of light with their experiments in the phenomena of interference; and thus our theories of chemical interaction, and even our conception of matter, may be modified by the researches made within the last few years in the field of the radio-active substances.

What chemist formerly would for a moment have thought of attacking the law of Avogadro—the law which tells us that if the temperature and pressure be equal, equal volumes of different gases contain the same number of molecules? And yet a modern chemist, Lord Rayleigh, did find it necessary to test the truth of that law by precise determinations of the densities of well-known gases. If he had never studied the behavior of nitrogen, or if he had considered the discrepancies which he observed in determining the vapor density of that gas, as errors due to defective observation, as many a chemist before him had done, argon and the other newly discovered constituents of the atmosphere might still be unknown, and many chemical doubts never aroused. Roentgen, too, found it necessary to revive theories of radiant matter which we thought had long since been refuted, and he supplied us with rays which we cannot yet explain. Becquerel increased our perplexity with his thorium and uranium rays. But when M. and Mme. Curie exhibited to our astonished eyes the results which they had achieved with radium and polonium, we were completely mystified and were compelled to admit that there were more things in chemistry than our philosophy had dreamed of. Other chemists have also experimented with uranium, following methods different from those of the Curies, and have obtained additional active substances.

Still another supposed element has been found to mock our periodic system. It has been discovered that thorium, when subjected to the action of acids, yields helium, and that thorium is often associated with radio-active substances.

Helium and its gaseous companions on the one hand, the radioactive substances on the other hand, are mysteries which have so far completely baffled our chemists. And uranium and thorium, elements with which we once considered ourselves thoroughly familiar, are now to us as curious as if they had been but the discovery of yesterday.

If the eccentricities of uranium, thorium and helium, and the mysteries of Roentgen rays cannot be adequately accounted for by our existing chemical system, the question arises: Can our system be wrong? Chemistry is an exact science—at least we had flattered ourselves that it had been at last raised to that eminence. But an exact science is inflexible, and will hear nothing of exceptions. Some day a chemist will be found whose mind, broad enough to grasp the scattered facts unearthed in the course of a century of research, will elaborate a chemical system which may prove as revolutionary in its way as the theory of Young; but which will embrace in its comprehensiveness those puzzling gases and radiant substances so utterly inexplicable at present. (Sci. Am.)

## Patents, Trade Marks, Etc.

### PATENTS.

Issued September 10, 1900.

- 8,664.—Title: "Vitaqua." (For Mineral Water.) Consolidated Bottling Co., Huron, S. D. Filed August 5, 1901.
- 8,665.—Title: "Tantaka." (For Mineral Water.) Consolidated Bottling Co., Huron, S. D. Filed August 5, 1901.
- 8,666.—Title: "Beeman's Sweetheart Gum." (For Chewing-Gum.) Elbert Beeman, Waco, Texas. Filed August 15, 1901.
- 8,667.—Title: "H-H Chewing-Gum." (For a Medicinal Chewing-Gum.) Robert Arthur Wilson, Portland, Oregon. Filed August 15, 1901.
- 8,668.—Title: "Mekko Cough Mixture." (For Cough Remedy.) Ogden & Shimer, Middletown, N. Y. Filed August 15, 1901.
- 8,669.—Title: "Forest Tar Drops." (For Cough-Drops.) Frank S. Zappulla, Brooklyn, N. Y. Filed July 9, 1901.
- 8,670.—Title: "Perrin's Plea Specific." (For a Medicine.) C. A. Perrin, Helena, Mont. Filed February 23, 1901.
- 8,671.—Title: "Rumol." (For a Medicine.) Irwin McGregor Adams, New York, N. Y. Filed August 7, 1901.
- 8,672.—Title: "Cole's Cough Cure." (For a Medicine.) J. W. Cole & Co., Black River Falls, Wis. Filed August 10, 1901.
- 8,673.—Title: "Crown Ant Exterminator." (For Ant Extermination.) Ida E. Stevens, Whiteplains, N. Y. Filed August 16, 1901.

### TRADE-MARKS.

Registered September 10, 1900.

- 37,038.—Perfumery, Toilet Water, Face Powders and Sachet Powders, Albert F. Jammes, New York. The word "Exquisia."
- 37,041.—Carbonated or Non-Alcoholic Beverages, Pennsylvania Bottling & Supply Co., Ltd., Philadelphia, Pa. The word "Swallow," a diamond-shaped figure, the representation of a building, and a panel.
- 37,042.—Non-Alcoholic Beverage, Blue Seal Supply Co., Boston, Mass. The compound word "Ron-Bre" and the representation of a bear.

### LABELS.

Registered September 10, 1900.

- 682,181.—George Eichelbaum, Berlin, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y. Producing albumoses.
- 682,228.—Gottlieb Neudecker, Chicago, Ill. Measuring-funnel and strainer.
- 682,269.—James G. Poe, Dallas, Tex. Syringe attachment.
- 682,292.—Jerome F. Taft, assignor of one-half to E. J. Prest, Uxbridge, Mass. Non-refillable bottle.
- 682,244.—Claude A. O. Trossel, assignor to J. A. Spriven, New York, N. Y. Medicated fabric.
- 682,355.—Joseph F. Geisler, New York, N. Y. Filter.
- 682,357.—Konrad R. Jahn, Copenhagen, Denmark. Stopper for bottles, jars, or similar containers.
- 682,495.—David Richards, Pantyffynnon, England. Receptacle for transporting bottles, etc.
- 682,549.—John A. Just, Syracuse, N. Y. Casein powder.

### A FABLE.

The Druggist stood in his Place of Business surrounded by Capsules, Hot Water Bags, Perfumes, and Fluid Extracts. A Man came in and said he wanted to look at the directory. Then he asked if "Murphy" was spelled with an "f." He looked at the Hair Brushes, whistled a few bars of the "Tiger Lily," and went out.

A small boy entered and wanted to trade two empty Sarsaparilla Bottles for a Piece of Licorice Root. The Deal fell through, because the bottles had a name blown in the Glass.

A Woman came in and said she was waiting for a

Friend. She had the Druggist bring her a Glass of Plain Water. She said she could not drink Soda Water because the gas got up in her Nose.

Another Woman came in for a Stamp. She did not have any change with her, but was going to come in and hand him the Two Cents some time, that is, if he was Small enough to remember it.

The next who came was a Man with hardly any Chin. He wanted a free sample of Liver Pills and an Almanac telling the Date of the Battle of New Orleans, when the Sun rises and sets, and why the Chickens crossed the Road.

After him there came a man who was in a hurry and wanted to use the phone. He was vexed when he learned that Skinner & Skinner did not have any Number. He asked the Druggist why it was. The Druggist said he was sorry and would see to it before the Man came in again.

Soon after two little Girls came on a Run and helped themselves to Picture Cards. They left the Door open, and the Boy in Overalls stepped in to ask if he could hang a Litograph in the Window. The Druggist went into the Laboratory and got a large stone Pestic. He was just ready to heat the Life out of the Cash Register, when an Elderly Gentleman came in with a prescription.

The Druggist started the Blow and chirped up quite a bit. "This is where I catch even on the Day," he said. It was no Alibi. He had to, and he did.

Moral: Don't Blame the Druggist.—George Aile in Collier's Weekly.

**BRUCINE TEST FOR NITRATES.**—P. Cazenove and H. Defournel suggest the substitution of glacial formic acid for sulphuric acid in applying the familiar brucine test for nitrates. By this means the difficulty in obtaining a reagent which, in the absence of nitrates in the substance tested, is absolutely without color reaction on the alkaloid, is overcome. In applying the test to waters a litre should be evaporated to dryness in the usual manner, the residue taken up in 20 C. c. of water, and evaporated in a flat bottomed capsule with a little brucine. A few drops of glacial formic acid are then dropped on while the capsule is still warm. The delicacy of the test is 1:100,000. A yellow tint is obtained which turns to a rose-color in twelve hours, or, on the addition of hydrogen peroxide, in a quarter of an hour. The test may be applied quantitatively by the colorimetric method. (Bull. Soc. Chim.; Pharm. Jour.)

## CONFUCIUS

was a precocious infant and, before he was five years of age, his dad had laid out nearly all China telling them about "the bright thing my boy said the other day." He found out many things by hook or crook and these he imparted to the public in such captivating style that he was recognized as the Mr. Dooley of his native land before he was old enough to vote. In repute he was a bold wag and the tea house damsels voted him "just too cute." One day the Emperor sent for him and, after beating about the bush a while, offered him a good thing at the Court with a salary of nothing a year and what he could get in the way of fees. Confucius made the good thing pay somewhat, and eventually landed where it was a close race between the Emperor and himself. Shortly afterward he became an ancestor and tried to invent an "Imperial" Nipple. In this he failed, but later on it was accomplished by an American gentleman whose fore-bears were immigrants.

# MARKET REPORT.

## NEW YORK MARKET.

### Business Generally Satisfactory.

NEW YORK, Sept. 17.—Continued warm weather has somewhat retarded the movement of Fall and Winter goods, but business in a general way is fairly satisfactory and fluctuations in values are wholly due to natural causes.

**OPIUM.**—There is no improvement in demand and tame conditions continue to prevail with quotations more or less nominal at the old range of \$3.25@3.50 for 9 per cent, and \$3.45@3.60 for 11 per cent. Powdered is easier in a large way, but jobbers continue to quote \$4.50@4.75 for 13 per cent, and \$5.00@5.25 for 16 per cent, as to size of order.

**MORPHINE.**—Market conditions are practically as noted for several weeks past, and a continued fair jobbing business is in progress at prices on the basis of \$2.20@4.40 for eighth, as to brand, less the usual rebate of 10c. per oz. lots of 10-oz. or over.

**QUININE.**—Trading is wholly of a routine order and prices in a jobbing way are nominally steady at 28@28c, in 100-oz tins, 28½@29c in 50-oz tins, 29@30c in 25-oz tins, and 35@36c in ounces.

**LARKSPUR SEED.**—Extreme scarcity has caused jobbers to advance quotations to 70@80c.

**SAFFRON.**—Valencia is steadily growing firmer both here and abroad and local jobbers have further advanced their quotations to \$8.50@8.75.

**ERGOT.**—Values are easier in sympathy with foreign markets, and the revised jobbing figures are 5½@68c for Russian and 6@70c for Spanish.

**OIL ALMONDS.**—Sweet is lower abroad and spot jobbing quotations have been reduced to 90@70c for pure and 33@45c for French.

**LYCOPODIUM.**—Primary markets are stronger, owing to a small yield of new crop and jobbers have advanced quotations to 70@80c as to quality.

**ANISE SEED.**—Late advices fully confirm previous reports of a short crop, and the tone of the market is strong with jobbing quotations showing an advance to 15@18c.

**SANTONINE.**—Owing to a short supply of raw material manufacturers have advanced prices 25c per lb. and the revised jobbing quotations are \$6.25@6.50 per lb. and 50@55c per oz. for crystals and \$6.35@6.60 per lb. and 52@57c per oz. for powdered.

**MANNA.**—Sorts are in light supply and steady at old figures, but owing to the near approach of new crop, holders have reduced quotations for large flake to \$1.25 @1.50 and for small flake to 65@75c.

**BISMUTH.**—Jobbing quotations for the metal have been reduced to \$2.15@2.25, oxychloride to \$1.90@2.00 per lb and 18@20c per oz, and salicylate 40 per cent to \$1.80 @1.90 per lb, and 17@20c per oz.

**NITRATE OF STRYCHNINE.**—A slightly easier feeling has developed and jobbing quotations show a decline to the basis of \$1.45@1.55 in eighths.

**OXALATE CERIUM.**—Lower quotations are named by jobbers and the revised range is 50@55c.

**SEIDLITZ MIXTURE.**—There has been a fractional decline in jobbing values, and supplies are obtainable at 13½@14c in barrels, 14@14½ in cases and 17@20c in broken lots, according to quantity.

**BALSAM FIR.**—Canada continues to harden in price under the influence heretofore noted and jobbing quotations show a further advance to \$3.75@4.00 per gallon in bulk, and 60@65c in pound bottles, inclusive.

**OIL WINE.**—Heavy is firmer owing to light supplies and jobbers have advanced quotations to \$7.00@7.25 per lb.

**NITRITE OF AMYL.**—Values in a jobbing way are somewhat lower and 19@21c is the quoted range according to quality.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | PAGE     |

THE CHEMISTRY OF INSECTICIDES.—By F. T. Shutt. Canada Exp. Farms Rept., 1890, 148-149; (Jour. Am. Chem. Soc.) An analysis of a sample of Paris green indicated 44.2 per cent. of arsenious acid, of which 4.56 per cent. was soluble in water. An emulsion of kerosene and crude carbolic acid with some soap, was found effective in destroying borers and bark lice. The addition of copper sulphate to the emulsion caused separation of the emulsion constituents and is not to be recommended. Addition of a strong tobacco decoction to Bordeaux mixture caused separation of the constituents, but only after standing some time. If used fresh, this would not injure the Bordeaux mixture.

### Druggists Labels.

A neat and attractive label on an article always aids in its sale. Prescription labels should be especially neat and druggists would do well to write for a catalogue to Philip Zunsler, 129 William street, New York. He prints labels of every description and makes cartons, folding boxes, powder papers, pill, powder and ointment boxes etc., and the quality and prices are right.

## THE ST. LOUIS MEETING.

The work of the forty-ninth annual meeting of the American Pharmaceutical Association was satisfactory in an eminent degree. The proceedings were marked with a vim, snap and vigor that surprised some even of the oldest members. The several sections maintained their record for being late in opening and continuing long after proper time for adjournment, but it must be admitted that while they were in session they did a large amount of work and did it well. Less discussion of unimportant matters of detail were permitted than usual, and the chairmen were reasonably strict in preventing the waste of time by the palavering of some of those who are known to be fond of the sound of their own voices. Some unnecessary abuse of the floor was made by one or two chronic talkers, but the improvement over some former years was plainly noticeable.

Each section presented a well-filled program, and some of the papers presented were of decided merit. The new section on Practical Pharmacy and Dispensing especially distinguished itself by the value and interest of its exhibit of products, and the important dispensing points brought out in the discussions. If the section continues to provide such a spread of good things as it prepared at St. Louis, it will soon be able to claim one of the most important places on the week's program.

The new features, or rather an old feature revived after a period of many years, of having an exhibit of

pharmaceutical products, and which some of the more conservative members looked forward to with fear and trembling, turned out to be one of the most important events of the entire meeting. The space assigned to exhibits was fully taken, and in fact was found inadequate for the proper display of all that was presented. The exhibit room was at all times well filled with an admiring crowd, and the favorable comments frequently heard indicate that the display was of benefit both to visitors and exhibitors alike. Already members are beginning to plan for the exhibit at Philadelphia next year, and some are discussing the advisability of attempting at that place a display which in extent and interest shall eclipse anything of the kind previously held in the United States.

Taken altogether the forty-ninth annual meeting was a notable success, and the members of the association go home with a renewed confidence in the vitality and power of their organization and in its ability to serve the interests for which it was formed.

In attendance the meeting was one of the largest ever held, considering more than 400 visitors being registered at the local secretary's office, while the number of new members elected, 147, was the largest in ten years.

Much of this success is attributable to the fact that the association was last year particularly fortunate in selecting as its officers and committeemen those who were deeply interested in its welfare, and willing to make some sacrifice of time and effort to the discharge of their duties. But the retiring president, Mr. John F. Patton, and the incoming president, Dr. H. M. Whelpley, were indefatigable during the year in bringing the meeting to the attention of the druggists and urging their co-operation. Likewise, Prof. J. P. Remington and Thos. P. Cook are deserving of great credit for their painstaking efforts in connection with the organization and conduct of the exhibition.

## THE CHRONIC KICKER.

There is probably no cause which does more to make life about drug stores miserable than the habit of complaining and fault-finding. The individual who indulges this habit is constantly whining about persons and things in general, and about his own trials and tribulations in particular. The characteristics of this variety of nuisance are well known, for nearly every store or office has at least one. If he cannot find fault with the weather or with politics, he pesters his fellow clerks with his own troubles and lack of luck. It is impossible to suit him, and he carries about with him a cloud which obscures the sun wher-

ever he goes. Every one admits that the chronic kicker is disagreeable, but the fact that the habit which he represents is a positive detriment to business is too often lost sight of. It does not pay.

If the pharmacist is to succeed in this age of competition he will need all the energy he can command. His business deserves his best attention, and he cannot afford to waste his time and energy in feeling sorry for himself or others. The drug clerk cannot properly attend to his duties if he is constantly worrying about the troubles of himself and others, and the proprietor who is in the habit of walking about his store with a face as long as a gallon percolator need not be surprised if his business refuses to flourish.

If cheerfulness pays because it acts as a stimulant to the mental force required to meet the difficulties of business, it also does its part in attracting and holding trade. Pharmacists expend considerable sums in illuminating their stores with a view to making the place bright and attractive. Quite as important results may be obtained by insisting upon having cheerful faces behind the counters. No one likes to enter a badly lighted store, and still less one in which the clerks wear the air of having recently lost their dearest friends. The pharmacist cannot afford to be a chronic kicker himself, nor to have even one of these unfortunates about his place. It may seem heartless to discharge a clerk because his view of life is unusually gloomy, but it will not appear unjust when it is borne in mind that this lugubrious point of view is in nearly all cases merely a habit, which may be overcome quite as easily as a number of much less objectionable habits which are universally condemned. It is probably true that much of the ill-humor exhibited in business is unavoidable. Everyone has his troubles. The sun cannot always shine. But by far the greater proportion of the whining one hears is merely the result of a habit of self-commiseration. This habit is contagious and spreads like the plague. If everyone will stop to think that he is probably no more abused than anyone else, and will cease feeling sorry for himself, the world will soon wear a brighter look.

#### PHARMACISTS OF THE TRAGEDY.

While the names of physicians, surgeons and nurses connected with the tragedy at Buffalo which deprived the nation of its President, the part that each took in the emergency of the events following it up to the time of the death of Mr. McKinley, have become familiar to almost everyone, nothing has been made public concerning the pharmacists who rendered the services that made possible the work of the surgeons at the time of the shooting, through a week of terrible suspense and in the last hours of the President. The pharmaceutical history of the national tragedy holds as much of interest for the druggist as any other phase of the treatment and care of the distinguished patient. The readers of the Era are given in this issue, the benefit of a review of the pharmaceutical aspects of the case, based upon a careful investigation. The exercise of despatch and acumen in the first instance, the subsequent alertness and tireless devotion to professional duty and the fulfillment of trusts imposed in the druggist by those directly in

charge of the case are of no less interest and importance than any other feature. The responsibilities were of great weight, and there is certainly room for pride among the profession that no adverse criticism can be applied to the work of the men to whose lot it fell to minister to the wants of the late President through his physicians and surgeons. While the case was almost purely a surgical one, calling for the most part for supplies upon order rather than prescription; for stimulants, anaesthetics, antiseptics, lotions and cathartics, yet it will be seen that every virtue of the pharmacist was called into requisition in the furnishing of these supplies. In no less degree is he entitled to the gratitude of the people and the admiration of his fellow workers than others who administer to the President in his illness and last hours.

#### IS A LAW TO REGULATE THE SALE OF PATENT MEDICINES NEEDED?

A concrete instance of the need of some kind of restrictions governing the indiscriminate sale of patent medicines is suggested in the death of a child in Milwaukee, Wisconsin, from a dose of a proprietary soothing syrup. The father says that the child appeared so nervous and fretful that he gave it what he thought to be an average dose of some soothing syrup he had purchased, but which really was an overdose.

Many of these nostrums marketed, and widely advertised to the public as cures for this and that awful malady—the awful malady being luridly described—are menaces to health and morality, not to say professionally unethical. Cold cures and headache powders and like remedies of the milder ills have times out of number resulted in death or violent illness. True, the label on each bottle has the directions for administering, the "cure," but the fatalities still go on and will continue to do so. It is plainly evident that it is not the highest degree of intelligence that flies to some nostrum, whose advertising matter "just describes how one feels," or recommended by some self-deluded person, on the appearance of a little constitutional derangement; and that minimum of intelligence cannot be expected to attain suddenly to a higher plane for the purpose of reading the label on a patent medicine bottle. The sensible person, even if he has to suffer a little monetary embarrassment as a consequence, will always go to a physician for treatment, and it is the druggist's duty as a professional man and as a humanitarian, to recommend a doctor in preference to a patent medicine. Were all druggists to do that, many of the preparations marketed to-day would die out, and only those in which there is merit would survive, and they would be used only under the direction of a physician.

It is argued that Legislation could very properly be taken up to regulate the sale of patent medicines. Those manufacturers who know their preparations to have merit would have nothing to lose, but everything to gain, while the manufacturer, who knows in his heart of hearts that his preparation is a pure fake or will not do all he claims for it, can expect only deserved justice.

## PHARMACEUTICAL ASPECT OF THE NATIONAL TRAGEDY.

### Druggists Are Given Credit For Their Splendid Services During the Illness of President McKinley.

"I have only words of the strongest commendation for the admirable services rendered by the pharmacists who assisted us in the crisis when the late President McKinley was shot and through his illness to the end," said Dr. Matthew D. Mann in answer to a request for a criticism upon the work of the druggists, who were called upon in a professional capacity in the national tragedy at Buffalo, September 6. "There was never a time during the whole terrible ordeal that we did not find a quick, sympathetic and active spirit among all the persons associated with us in the endeavor to save the President's life, and I cannot speak too highly of the prompt and efficient work of the druggists who filled our orders and prescriptions." Dr. Mann's tribute is heartily endorsed by all of the physicians and surgeons who were approached on the subject.

Every phase of the late President's injury and illness has been exhaustively discussed from all points of view with the exception of that of the pharmacist. Until the operating physician and his associates had paid this splendid compliment to the druggists connected with the case of the distinguished patient, nothing had been given out for the public to the credit of the men, whose accuracy, despatch and devotion to duty won the gratitude of the surgeons, who are in a position to realize how materially their work is forwarded by the prompt and sure action of the druggist upon whom they are depending.

There are four pharmacists who rendered valuable services in the care of the wounded President. The first druggist called upon immediately after the shooting was B. J. Bixby, a bright young man in charge of the drug department of the Emergency Hospital on the Pan-American exposition grounds. When President McKinley was removed to the Milburn house on Delaware avenue the services of druggist E. A. Kingston, who owns the nearby store on the corner of Main and Ferry streets, were called into requisition. The store of Horace P. Hayes, on the corner of Allen and Main streets, was the scene of many hurried orders,

which were promptly and accurately carried out by Mr. Hayes and his efficient manager, Fred A. Darrin. To these men belong the credit of upholding the honor of their profession by the exercise of those qualities which make for the recognition of the phar-

DR. ROSWELL PARK,  
Associate Surgeon.

macist as a man of consequence in the professional world.

A short time after the tragedy was enacted in the Temple of Music a rush call for the ambulance came to the Emergency Hospital, and young Bixby was told to prepare all the necessary articles for the dressing of the wounds or the performing of an operation. In speaking of the shock incident to the terrible news and his subsequent actions, Mr. Bixby said:

"The word of the attempted assassination of the President, coming as a bolt from a clear sky, seemed to paralyze all of us for a moment. There was no confusion, however. The table, stands, bowls, and other apparatus were quickly put into order for an operation. I began work at once in the drug department without knowing the extent of the President's injuries or exactly what would be needed. We prepared bandages, gauzes, cottons, stimulants, anaesthetics and antiseptics. The work was done smoothly, without a hitch. It took us just seven minutes to prepare for the emergency. Besides the surgical supplies proper, there were, a normal salt solution, bichloride of mercury for antiseptic use, brandy, strychnine and morphine. Two hypodermic injections of brandy were used, two of strychnine, each injection being of one-thirtieth of a grain, and one hypodermic injection of morphine of one-sixth of a grain. The administering of the hypodermic injections was intrusted to me. After the operation had been finished and the wound dressed, I went ahead to the Milburn house, taking a complete case of hypodermic tablets. Two nurses, Miss Barnes and Miss Simmons, accompanied me, our duty being to set up a bed and prepare the room for the President's reception. This being done I returned to the hospital and saw him removed. I

DR. MATTHEW D. MANN,  
Operating Surgeon.

DRUGGIST E. A. KINGSTON,  
Whose Work was Praised by Surgeons.

had nothing further to do with the case until Thursday, when I sent over some bandages and other surgical supplies."

Bixby is a student at the university of Buffalo and is one of the brightest young men in the medical college. The drug department of the Emergency Hospital, of which he has charge, is a small room opening off the main operating room. The supply of drugs is limited to what is generally required for emergency cases, being composed largely of stimulants, anaesthetics and surgical supplies.

When President McKinley was removed to the Milburn house the work of supplying drugs and other requisites was given to E. A. Kingston, his store being the nearest one to the sick room. Mr. Kingston immediately set about making special preparations to

insure the most perfect and quickest service. Three messengers were retained and some of them were in readiness at all times during the week to respond promptly to any call for medicines or supplies which might be needed. The messengers were provided with bicycles. Only once did Mr. Kingston fail to have what he was called upon for a certain kind of bandage, but his messengers were promptly dispatched to different stores and one of them returned within ten minutes with the required article. Over twenty prescriptions and orders were filled at this store, including hypodermic tablets, gauzes, bandages, plasters, cottons, calomel, castor oil and lotions for external application. Every precaution was taken to fill orders with accuracy and despatch. The store force held themselves in readiness at all hours of the day and night, taking no chances of not being prepared for an emergency.

Mr. Kingston is one of the most widely known druggists in Buffalo. He established his business fifteen years ago and has built up, through his energy and thorough going business methods one of the leading drug establishments of Buffalo. He is justly proud of the excellent services rendered by him during the late President's illness, and has been highly complimented by the physicians and surgeons connected with the case. Talking to the Era representative in regard to the illness of Mr. McKinley and the pharmaceutical phase of the case, Mr. Kingston said:

"As soon as I was informed of the fact that the President was to be brought to the Milburn residence, I began making preparations to meet any call for service from my store. The messenger service proved to be just the thing. There was no delay in filling an order or prescription, of which there were about twenty. We held ourselves in readiness night and day throughout the week to respond instantly when anything was wanted. All other business was subordinated to our one desire to be prompt and accurate in attending to the prescriptions of the attending surgeons. That our efforts were appreciated is evidenced by a beautiful bouquet sent to us from the Milburn house and by personal assurances from the doctors. Although we have the satisfaction of having done all in our power, there is a great inexpressible regret that we could not have done more, and that what was done was futile to the end of saving a noble and useful life. The nature of the medicines and supplies used you already know. It was almost purely a surgical case and the orders filled were for supplies to fit the circumstances."

Another store which figured prominently in the

KINGSTON'S STORE FROM WHICH DRUGS WERE SUPPLIED BY SPECIAL MESSENGER SERVICE.

DRUGGIST HORACE P. HAYES.

FRED A. DARRIN,  
Manager Hayes' Drug Store.

furnishing of medicines and supplies for the distinguished patient, was that of Horace P. Hayes, corner Allen and Main streets. Dr. Mann's residence is just around the corner from this store and Mr. Darrin, the manager, held himself in readiness to fill all of the orders of the surgeon, of which there were not a few. Zinc oxide plasters, dressings and surgical odds and ends were sent out by Mr. Darrin. The most important service rendered by him was the secret delivery of the oxygen to the Milburn house on Thursday night under orders from the doctors, who were anticipating

at that time a crisis in the President's condition. It was considered undesirable that the information that oxygen was being taken to the house should be given out until the surgeons were sure that its use would be necessary, yet all agreed that it was wise to take the precaution of having it at hand. Mr. Darrin was told of this condition of affairs and was detailed to deliver the two large cylinders of gas at the house on Thursday night, being left to his own resources. Securing a closed carriage he took the two oxygen cylinders and drove out to the house. Although he was stopped

INTERIOR OF HORACE P. HAYES' DRUG STORE,  
A base of Supplies for the Sick Room.

at the lines by the guards, he insisted upon having a personal message for Dr. Mann, and argued for half an hour before he succeeded in reaching a side door to the house and delivering the gas without anyone knowing the nature of his mission. Mr. Darrin refused to be interviewed about the incident, modestly disclaiming any credit for doing his duty.

The store of which Mr. Darrin is manager is one of the four establishments belonging to Horace P. Hayes, one of the longest established druggists in the city of Buffalo. The Main street store is a model in the way of equipment, and Mr. Darrin has established a splendid reputation for reliability and promptness, supplying many of the most eminent physicians and surgeons in the city.

Dr. Roswell Park, speaking of the pharmaceutical aspect of the President's illness, said:

"It was almost purely a surgical case. There is of necessity in the treatment of a case of that kind but little pharmaceutical history. Little medicine was employed aside from adrenaline, strychnine and other vascular and heart stimulants, anaesthetics, cathartics, plasters and external applications. No fault can be found with the service given us by the pharmacists who supplied these things. It was perfectly satisfactory."

Dr. Herman Mynter spoke along the same line, adding that codeine and digitalis had been used and speaking in terms of the highest praise of the work of the druggists who furnished the required medical and surgical supplies.

Dr. H. M. Gaylord, state chemist and autopsy surgeon and Dr. H. M. Hill, official chemist of Buffalo, have made analyses of the bullets left in the

Operating room at the Emergency Hospital, showing table, stands and bowls arranged by Druggist Bixby for the operation.

chambers of the assassin's pistol and of portions of the viscera removed from the body at the autopsy and, according to rumor, have been unable, after a most searching examination, to find any trace of a poisonous substance. Their official report had not been made public on Monday. They have been very careful to conceal the results of their work in the laboratory under orders from the surgeons, until the report is ready for the public.

B. J. BIXBY, Pharmacist.

Drug Department, Emergency Hospital, Exposition Grounds, who administered the hypodermic injections for the first operation.

ACOPYRINE is the name given to a combination of acetylsalicylic acid and phenyldimethylpyrazolone. It is a white crystalline powder, fusing between 63 degrees and 64 degrees, easily soluble in alcohol and chloroform and soluble with difficulty in ether. It dissolves in 20 parts of hot water, in 400 parts of cold water, in 20 parts of a 2 per cent solution of soda, and in 5 parts of cognac. Treatment with ferric chloride imparts to acopyrine a blood red color which passes into a clear yellow when treated with concentrated sulphuric acid. It has been highly recommended as an antipyretic in the treatment of articular rheumatism, and is administered in capsules containing 50 centigrams repeated several times during the day.

IMPURITIES IN MORPHINE SALTS.—Dr. O. Rössler (Apoth. Zeit.) reports having received a sample of morphine hydrochloride said to be of English origin, which possessed a faint odor of trimethylamine. Another sample contained bacteria, a solution of the salt producing abscesses when administered to an apparently vigorous patient. After sterilizing the solution no disagreeable symptoms were produced. Upon examination the sample was found to contain organisms belonging to the group of *Bacterium coli commune*.

HYDROGEN SULPHIDE IN BOILED MILK. The decomposition of milk by boiling or prolonged heating is well known. The failure of infants to readily assimilate certain kinds of sterilized milk has been ascribed to the breaking up of the albumens of the milk into various products. Recently attention has been called to the fact that hydrogen sulphide is formed when milk is heated. Dr. K. Oppenheimer (D. Mediz. Zeit., through Apoth. Zeit. found this gas in 50 or 60 trials, the time of heating varying from 5 to 30 minutes.

KINKILIBAH is a febrifuge extensively used in South Africa, and appears to be composed of the leaves of *Cassia occidentalis*. Usually an infusion of 15 : 1000 is employed, lemon juice and sugar being added.

**SEA SALT\*.**

BY JOSEPH FEIL, PH. G.

In nearly every drug store in the United States there is sold in small wooden boxes holding four or five pounds or in cotton bags containing about ten pounds a substance in cubical crystals measuring along an edge from three to eight millimetres and labeled Sea Salt. It is usually slightly gray in color, due to a very small quantity of organic or earthy matter, has an impure saline taste, when dissolved in water the solution is somewhat opalescent and has a distinctive marine odor, occasionally a specimen is found containing an admixture of a few brownish-yellow crystals.

I could find no reference to this commercial article in any standard pharmaceutical work or in a search through the pharmaceutical journals at my command. The United States Dispensatory and Watt's Dictionary of Chemistry give the name as a synonym of Sodium Chloride; the title is not mentioned in the National Dispensatory. On asking the meaning of quite a number of intelligent and well-informed pharmacists, I received on of two answers, viz.: "it is the saline residue of evaporated sea water" or "it is rock salt," and the majority seemed to have the latter opinion.

The physical characteristics enumerated above all seem to point to a probable marine origin, excepting the taste was not bitter as sea water and the substance was hardly hygroscopic enough to contain the amount of magnesium chloride and calcium chloride said to be contained in the water of the ocean. An investigation seemed desirable.

That sea water must vary in composition is well known, and the reasons therefor are too well understood to need repetition here, but for comparison an analysis by Thorp and Morton given by Roscoe and Schorlemmer in Treatise on Chemistry, Vol. 1, p. 257, is copied below:

|                              |          |
|------------------------------|----------|
| 100 Gm. sea water contain:-- |          |
| Sodium chloride .....        | 2.643918 |
| Potassium chloride .....     | .074619  |
| Magnesium chloride .....     | .315083  |
| Magnesium bromide .....      | .007052  |
| Magnesium sulphate .....     | .000985  |
| Magnesium carbonate .....    | traces.  |
| Magnesium nitrate .....      | .000207  |
| Calcium sulphate .....       | .132158  |
| Calcium carbonate .....      | .004754  |
| Lithium chloride .....       | traces.  |
| Ammonium chloride .....      | .000044  |
| Ferrous chloride .....       | .000503  |
| Silicic acid .....           | traces.  |

Authorities, however, state that the chemical composition of ocean water is comparatively constant and varies usually less than five per cent. in the proportion of its various constituents. The Dictionary of Applied Chemistry—Thorp—gives fourteen analyses of rock salt obtained from various countries and different geological formations; these vary in the important constituents as follows:

|                       |                                                                    |
|-----------------------|--------------------------------------------------------------------|
| Sodium chloride ..... | From 100 to 97 per cent.                                           |
| Potassium salts ..... | practically none.                                                  |
| Magnesium oxid. ....  | From 1 per cent. to none.                                          |
| Calcium oxide .....   | found only in one specimen and then to the extent of 1/2 per cent. |

The Dictionary of Arts, etc.—Ure—states that sea salt is deprived of magnesium salts by the following method: Quicklime is added and magnesium hydroxide precipitated and calcium chloride formed, an addition is then made of sodium sulphate and the calcium precipitates as sulphate, but as this is soluble to the extent of 1 part in 400 of water, of course some remains in solution and appears in the salt.

P. L. Simmonds in "Commercial Products of the Sea," gives two analyses of French crude sea salt (that is, the first crystallization of evaporated sea water) as follows:

|                          |                    |                   |
|--------------------------|--------------------|-------------------|
|                          | Salt of the South. | Salt of the West. |
| Sodium chloride .....    | 95.11              | 87.97             |
| Magnesium chloride ..... | 1.25               | 1.58              |
| Magnesium sulphate ..... | 1.50               | .50               |
| Calcium sulphate .....   | .91                | 1.65              |
| Earthy particles .....   | .10                | .80               |
| Water .....              | 2.55               | 7.50              |

100.

100.

I collected quite a number of specimens of commercial sea salt and found that about three varieties could be distinguished:

(a). Large crystals measuring about eight millimetres, quite clear.

(b). Small crystals about four millimetres in length, light gray in color.

(c). Small crystals about three millimetres along the edge, gray in color with an admixture of a few brownish-yellow crystals.

An analysis of a typical specimen of each variety gave the following results:

|                                  |               |                      |         |
|----------------------------------|---------------|----------------------|---------|
|                                  | A.            | B.                   | C.      |
| Moisture .....                   | 2 to 3        | ep. cent.            |         |
| Odor of solution .....           | Distinctly    | marine.              |         |
| Taste of solution .....          | Impure saline | but not bitter.      |         |
| Clearness of solution            | Almost        | slightly opalescent. |         |
| Potassium oxide .....            | traces.       | traces.              | traces. |
| Magnesium oxide in 100 Gm. ....  | .002          | .003                 | .003    |
| Calcium oxide in 100 Gm. ....    | .376          | .482                 | .500    |
| Sulphur trioxide in 100 Gm. .... | .224          | .260                 | .328    |
| Iron .....                       | none.         | nonc.                | traces. |

An insoluble residue of a few milligrams microscopically examined showed merely a little silica and a crystal or two of calcium sulphate.

A careful study of these analyses, compared with the information given above, would seem to indicate very clearly that the specimens were certainly not rock salt, as this substance is usually free from calcium salts and sulphates and its solution has no odor. On the other hand, these samples certainly do not in any way represent all the saline constituents of sea water, and yet have quite a number of distinctive characteristics found in such material. The following explanation seems to me to clear up the matter:

The sea salt of pharmaceutical commerce is crude sea salt, or the first crystallization of concentrated sea water, purified by quicklime and sodium sulphate, as stated by Ure; this will account for every difference in chemical composition and makes clear all the peculiar physical characteristics. Therefore, pharmaceutically, sea salt is not a synonym of sodium chloride, but has a distinctive use as a name for an article very extensively used and obtained from the sea. The large use of this substance would seem to entitle it to pharmacopoeial recognition, and in case such action is considered desirable, I would respectfully suggest that the characteristics and tests should not be those of a substance representing the entire saline residue of sea water, as it is not physically well fitted for ordinary retail sale, but the average properties of the substance found in about every drug store would be the proper ones.

**SUMMARY.**

1. Sea salt is neither evaporated sea water nor rock salt.
2. Sea salt is purified crude sea salt.
3. The substance last named should find a place in the U. S. P., owing to its well-established use.
4. Sea salt is not a proper synonym of sodium chloride, pharmaceutically speaking, at the present time.

**THE EXPORT OF STAR ANISEED,** the centre of supply of which is Nanning, is reported to have almost ceased from Pakhoi (China), the West River having silted up that route. As star aniseed is made into bales weighing considerably over 1 cwt. it is of necessity far more easily and cheaply carried by water than by coolie labor. Aniseed oil, on the other hand, still travels via. the Pakhoi route. Because of its great value, it is used, like native opium, as a convenient medium of exchange between the Nanning and Chin Chow markets. It is more portable, and being difficult to dispose of, except among a certain category of merchants, is less likely to excite the cupidity of land pirates than its corresponding value in sycee. Hence, aniseed oil is not unlikely to be one of the most permanent of the exports from Pakhoi.—(Pharm. Jour.)

\*Read before the American Pharmaceutical Association, St. Louis.

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Shoe Polish.

(J. L.) Some formulas for liquid shoe dressing are given in the Era of June 27, 1901, page 708. Here are some others:

|                   |       |          |
|-------------------|-------|----------|
| Animal charcoal   | ..... | 8 parts. |
| Molasses          | ..... | 4 parts. |
| Hydrochloric acid | ..... | 1 part.  |
| Sulphuric acid    | ..... | 2 parts. |

|                                           |       |           |
|-------------------------------------------|-------|-----------|
| This combination makes a tenacious paste. |       |           |
| Bone black                                | ..... | 2 pounds. |
| Molasses                                  | ..... | 1 pound.  |
| Olive oil                                 | ..... | 1 pound.  |
| Sulphuric acid                            | ..... | 1 pound.  |

Water, a sufficiency.

Mix the acid with the bone black, first diluting with a little water, then beat all together, using more water or more bone black as may be required, to give the proper consistency. The acid may be omitted. The polish afforded will not then be so brilliant, however, but the leather will be less liable to injury.

(3.) To 1 pound animal charcoal add 4 ounces commercial sulphuric acid; work them well together, and when the acid has done its duty upon the charcoal add 4 ounces fish or colza oil; stir the mixture until the oil is thoroughly incorporated, then pour in gradually a strong solution of washing soda or other suitable antacid, and continue the stirring until ebullition has ceased and the acid is neutralized. Next add about 8 ounces molasses, and then pour in a solution of gelatine and glycerine sufficient to form a paste. The solution of glycerin and gelatine is made by dissolving the best size in hot water, in the proportion of 4 parts water to 1 of size, adding to every quart of the liquid 1½ ounces of glycerine. The addition of the glycerine and gelatine preparation gives great brilliancy, depth of color, and permanency to the blacking when applied to leather, and at the same time makes it damp proof; besides which the solution of washing soda has the effect of neutralizing the sulphuric acid employed, and thus prevents the injurious action of that acid on the leather, which many paste blackings contain.

### Menthol Pencils.

(L. J. K.) In further reply to your query, this journal, Aug. 29, 1901, page 254. Frank Edel, Carthage, Mo., writes that the process before given is far from correct. He says: "These pencils are made by taking a good article of menthol which is melted at a low temperature and poured into molds to cool and shape. The cheaper grades of pencils are said not to be pure menthol, but I have never seen any of them. Pencils from pure menthol are easily made. The pencil may be fastened to a holder by first coating the holder with paraffin, then heating the pencil slightly and immediately setting it on the holder. Or, if the end is smooth, so that no filling is required, the warmed menthol can be directly applied to the wood."

### Extract of Trailing Arbutus.

(W. X Co.) The following formula has been published:

|                                            |       |           |
|--------------------------------------------|-------|-----------|
| Rose essence                               | ..... | 1 ounce.  |
| Jasmine essence                            | ..... | 1 ounce.  |
| Cassia essence                             | ..... | 1 ounce.  |
| Orange flower essence                      | ..... | 1 ounce.  |
| Tincture vanilla (6 drams to 1 pint)       | ..... | 2 ounces. |
| Spirit bitter almond (5 minims to 1 ounce) | ..... | 2 drams.  |

### Registration in Tennessee.

(L. P. K.) The Tennessee Board of Pharmacy does not recognize certificates granted by other boards of pharmacy. Every applicant for registration is required to take an examination. The secretary of the Board of Pharmacy is R. L. Eves, Nashville.

### Transparent Mirrors.

(J. H. B.) See this journal June 6, 1901, page 622. We cannot give the technical details of any of the processes employed in the manufacture of transparent mirrors.

### Information Wanted.

(S. & M.) The name and address of the manufacturer or of a jobber who handles "Imperial drawing tablets."

### Manufacturers of Paper Pulp for Filtering.

(P. B.) J. H. Lyons & Co., 174 Duane street, this city, are manufacturers of paper pulp for filtering purposes.

### FIRST PHARMACOPOEIA IN IRELAND.

The first Pharmacopoeia which appeared in Ireland was a reprint of the London Pharmacopoeia brought out in 1746 by P. Wilson and J. Esdell. Wilson's son printed other editions in 1772 and 1774. A similar production was brought out in 1778 by W. Gilbert, and it was not till 1791 that the College of Physicians issued specimen copies of a Dublin pharmacopoeia. The dates of the three editions are 1807, 1826 and 1850. In the 1826 one buchu and valerian were first officialized in pharmacy. An essay by a Dublin doctor, named Macbride, "on the use of lime-water as a menstruum in place of spirit of wine" was probably responsible for aq. calcis comp.—an infusion of guaiacum, licorice, sassaparilla, and coriander in lime-water. A reprint of the 1850 Pharmacopoeia, published in 1856, contains as a supplement a series of poison-regulations which, as they anticipated the British regulations by many years, we reproduce:

(1) That angular bottles or vessels and none others be employed in the dispensing of all medicines intended for external use.

(2) That round bottles or vessels and none others be employed in the dispensing of medicines intended for internal use.

(3) That all articles of the materia medica and preparations included in the list which is hereto appended be kept in shops and warehouses in angular bottles or vessels, and also that the same shaped bottles and vessels be employed in the case of such medicines and preparations being sold or delivered.

(4) That all articles of the materia medica and preparations not included in the list of appended be kept in shops and warehouses in round bottles or vessels, and also that the same form of bottle or vessel be employed in the case of their being sold or delivered.

(5) That a similar rule be observed with reference to other medicines which though not in the list of this Pharmacopoeia may be kept by apothecaries and druggists—namely, those possessed of dangerous qualities should be invariably kept and sold or delivered in angular bottles or vessels.

The lists which followed included everything in the Pharmacopoeia possessed of direct or remote poisonous qualities.—(Ch. & Dr.)

**AQUARIUM CEMENT.**—The following formulas for cements for glass joints of aquariums are from La Nature: (1) Six parts of Spanish white, three parts each of gypsum and fine white sand, an equal quantity of litharge, and one part of finely powdered resin are mixed with the necessary quantity of a good varnish to form a homogeneous, plastic cement. (2) Two parts each of gypsum and chalk are mixed with an equal quantity of litharge and one part of powdered resin, and formed into a paste with boiled linseed oil.

## 49th ANNUAL MEETING

# American Pharmaceutical Association

— AT —

St. Louis, Mo., Sept. 15-21, 1901.

(Concluded from page 351, Sept. 19.)

### THE GENERAL SESSIONS.

The reports of the officers were then in order. Treasurer S. A. D. Sheppard, of Boston, stated that on July 1, 1900, the cash on hand was \$1,758.80. The sale of certificates yielded \$20; proceedings, \$1,789; badges and bars, \$3.50; amount from various other sources, including the sale of one bond (general fund and interest on same) brought the amount up to \$8,595.40. From this were to be deducted disbursements of \$7,215.88, leaving cash to new account, \$1,379.52.

Secretary Caspari, Chairman of the Committee on Publication, reported that the delay in issuing the last report of the proceedings was due to the order of the association to make the reports on the Progress of Pharmacy include journals issued to July 1, some of which did not reach the reporter's hands until the last of the month.

Fourteen hundred copies of the Proceedings were printed last year, at a total cost of \$3,385.38. Prof. Caspari also made a report of the receipts and expenditures on account of the National Formulary since its publication in 1888, showing that the receipts on account of sales have been \$12,154, and the expenditures \$7,345. George W. Kennedy presented his twenty-seventh annual report as Chairman of the Committee on Membership. At the last meeting of the association 125 persons were invited to become members, of which 102, or nearly 82 per cent, completed their membership and were placed on the roll. During the present year a large number of new applications have been received, and the indications are that the number of new members elected this year will greatly exceed those of former years.

The present condition of the membership of the association is as follows: Members in good standing at last report, 1,155; elected since last report, 102, making a total of 1,257. The loss in membership since last report follows: By resignation, 23; transferred to life membership, 5; loss by death, 18; dropped for non-payment of dues, 98, making a total loss of 144 members. The number of active members is 1,113; life members, 113; honorary members, 11, bringing the total present membership up to 1,237.

### Report on Committee on Weights and Measures.

F. G. Ryan, Chairman of the Special Committee on Weights and Measures, reported in regard to progress toward the adoption of the metric system in the United States that the following bill had been reported with a favorable recommendation to the House of Representatives on March 1, 1901:

#### A BILL.

To adopt the weights and measures of the metric system as the standard weights and measures in the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in congress assembled, That on and after the first day of January, nineteen hundred and three, all the departments of the Government of the United States, in the transaction of all business requiring the use of weights and measurement, except in completing the survey of public lands, shall employ and use only the weights and measures of the metric system; on and after the first day of January, nineteen hundred and three, the weights and measures of the metric system shall be the legal standard weights and measures of and in the United States."

The members of the association were requested to aid in acquainting the large number of new members of the House of Representatives with the advantages to be

gained by the adoption of this measure. Attention was called to the fact that probably no form of occupation using weights and measures could make the complete change to the metric system with less expense than those of medicine and pharmacy.

Dr. A. B. Lyons of Detroit, Mich., read the report of the delegates to the American Medical Association. He said the delegates were received most cordially by the officers of the section on Materia Medica, Therapeutics and Pharmacy of the Medical Association, and that they were given the privilege of taking part in the discussions. A special mission entrusted to Dr. Lyons was the distribution of 500 copies of the Epltoque of the National Formulary to members of the Medical Association. Concluding his remarks, Dr. Lyons said that the relations which have been established between the two national organizations should be sedulously cultivated, and to this end the members of the American Pharmaceutical Association should see that the latter be represented by a strong delegation at the meetings of the American Medical Association.

### PROCEEDINGS OF THE SCIENTIFIC SECTION.

The proceedings of the Scientific Section, like those of the other sections, were full of interest and profit, for much of which credit must be given to the efforts of Prof. Oldberg, chairman, and Lyman F. Kebler, secretary. The sessions were all well attended, and the papers in some instances provoked animated discussions. In his annual address as chairman Prof. Oldberg said:

HENRY M. WHELPLEY, President.

## CHAIRMAN OLDBERG'S ADDRESS.

Scientific medicine can accomplish little or nothing without the aid of scientific pharmacy. The recognition of this truth is not as pronounced and general as it might be, but, feeble as it is, it accounts for the scientific section of the American Pharmaceutical Association.

## Signs of Scientific Activity.

Signs of scientific activity in American pharmacy are by no means wanting. The American Pharmacopoeia is scientific and technical to a degree which gives it high rank among the Pharmacopoeia of the world. None of them are perfect, but the unscientific features seen in them are being gradually eliminated.

The progress in medicine is rapid. The progress in pharmacy must keep pace with it. New remedies are discovered almost daily. These must be studied, analyzed, described, and means provided for their identification and examination. All this work must be done by scientifically trained specialists—the pharmacists. The Pharmacopoeia must be understood and obeyed. It can be fully understood only by pharmacists of proper scientific-technical education. We all subscribe to the principle that the training of the pharmacist must not be far below that which is necessary to an intelligent interpretation of the requirements of the Pharmacopoeia, and as the Pharmacopoeia is improved, pharmacists must improve with it.

The only truly practical pharmacist is the educated pharmacist. If the papers read before this section of the American Pharmaceutical Association may be taken as a reliable index of the scientific progress of American pharmacy we would have little cause for regret. But these papers do not indicate what proportion of the pharmacists of our country are actually doing their work in a scientific manner.

During the past ten years 218 papers were read before the scientific section of this Association. Of these 218 papers 165 came from the pharmaceutical schools, 22 from laboratories of manufacturing pharmacists, and 31 from other sources. Not all of the 31 others were by practicing pharmacists.

It is quite natural that a large proportion of the scientific papers read before should come from the schools and from the laboratories of manufacturers. We have a right to expect that a large number of papers should be expected more than 30 papers in ten years from the practicing pharmacists of this great and progressive country? I believe that the technical knowledge and training of the members of this association ought to bear more abundant fruit in the scientific section.

## Education and Legislation.

This section is vitally concerned in the question of pharmaceutical education and legislation. If we do not sow the seed and diligently cultivate the ground, neither can we reap.

The most direct, simple and rational method of ascertaining whether or not a man has really prepared himself in any serious way for the responsible duties of pharmacy is to require him to state, in writing, what he has done in that direction. Then, if his categorical answers show that he has actually done something to justify the hope that he may possibly know enough to be recognized as a pharmacist, give him an examination. But the Boards of Pharmacy never ask a candidate whether or not he has ever pursued any course of study, or received any instruction, or done any work along the lines upon which the examination is conducted. They do ask the candidate if he has attended or graduated from any college of pharmacy. If he answers "yes", then they feel in duty bound to punish him with a more perplexing exam. If he says "no", then they give him a milder examination; but they never refuse to examine a candidate who may be obliged to confess before-hand that he never studied chemistry, or materia medica, or pharmacy in all his life. You might think that their object is to effectively eliminate the young man that he ought not to insult the examiners by asking for an examination upon matters about which he ought to know that he is totally ignorant; but many of these candidates pass the examination, and are later called upon by the energetic friends of the American Pharmaceutical Association, and invited to become members of this body.

Let us think. Is it wonderful that such men refuse to join our Association? Or that they join one year and drop out the next year? Or that they do not participate actively in our work if they do become members?

## Standard for Association Membership.

At its last annual meeting the American Pharmaceutical Association, to its everlasting credit, adopted without a dissenting vote, a draft of a "model pharmacy law" the most important feature of which was the requirement that no person should hereafter be admitted to the rank of a pharmacist unless he has graduated from a pharmaceutical school. It will be noted that the Association now go one step further and fix upon some kind of an educational qualification or standard of technical training for membership. We cannot consistently do less. Let us remember that the old membership which has made the Association what it is must pass away. Let us provide for the future of our dearly beloved

Association by seeing to it that its coming membership shall be such as to preserve and improve it.

The strenuous method of increasing our membership in numbers is perhaps a good thing for the new members as well as for the present needs of our country. Let us henceforth particularly strive to "treasure" our members as far as possible by the men who may increase the usefulness, influence and good name of our Association in the scientific direction. Then will we have more than 30 papers in ten years from those of our members who are not engaged in teaching or in manufacturing.

I may not attempt any review of important discoveries during the past year in the sciences most intimately related to pharmacy. It is, in the nature of things, forbidden the chairman of this section, yet, I may be pardoned for calling your attention to the possible if not probable solution of one of the mooted questions which has puzzled the student of chemistry during recent years. The gaseous elements recently discovered in the atmosphere, for which it was said, no place could be found in the periodic system of classification, seem to fit into that system, as far as to add new evidence to the truth of the periodic law. Helium, argon, krypton and xenon would seem to form one family which belongs, as another eighth group, between the halogens and their antipodes, the alkali metals:

|          |         |           |
|----------|---------|-----------|
| Fluorine | Xenon   | Sodium    |
| 19       | 20      | 39        |
| Chlorine | Argon   | Potassium |
| 35.5     | 39.9?   | 39        |
| Bromine  | Crypton | Rubidium  |
| 80       | 84      | 85        |
| Iodine   | Xenon   | Cesium    |
| 126.5    | 128     | 133       |

With a due sense of the feebleness of my right and fitness to discuss question of theoretical chemistry in a critical attitude I ask your attention further to the inconsistencies of the molecular formulas and weights used in our pharmaceutical and chemical works. If we subscribe to the theory that molecules are the smallest particles into which any substance of matter can be divided without losing the specific properties which determine its individuality, we shall have little difficulty in remedying a few of the inconsistencies referred to. Avogadro's law states that equal volumes of all gases contain an equal number of molecules; but it seems to me that no one substance can have more than one kind of molecules or more than one molecular weight. I leave it to the masters of chemistry to say whether the law of Avogadro ought not to be qualified so far as to read to the effect that equal volumes of all gases contain the same number of individual particles of matter (not necessarily "molecules"). Our Pharmacopoeia assigns to ferric chloride the old formula Fe<sub>2</sub>Cl<sub>6</sub> and a corresponding molecular weight, whereas modern recognized authorities on chemistry give the new formula FeCl<sub>3</sub>. Particles of Fe<sub>2</sub>Cl<sub>6</sub> exist in the state of vapor, and also particles of FeCl<sub>3</sub> at a higher temperature. Here the old formula is inconsistent while the new one is consistent with the theory of atomic linking. On the other hand our Pharmacopoeia writes arsenous oxide as As<sub>2</sub>O<sub>3</sub>, although, so far as I know, that compound has not yet been obtained in vapor of a density corresponding to the formula, but it has been obtained of a vapor density corresponding to the formula As<sub>4</sub>O<sub>6</sub>.

May it not be profitable to adopt the rule that the molecular weight of any vaporizable compound must be twice the number indicating its lowest possible vapor density, and that the molecular formula must be consistent with the theory of atomic linking? This question is one of the most practical importance.

Thanking you for your indulgence I hope that the sittings of the scientific section of the American Pharmaceutical Association at this meeting will be successful, and that our future may be brighter than any of our past years."

## New Officers.

The new officers of the section are Lyman F. Kebler, chairman, and J. W. England, secretary, both of Philadelphia.

A partial list of the contributions to this section is as follows:

- "Influence of Synthetic Remedies on Urine Testing," by Frederick T. Gordon.
- "Introduction of Gasometric Tests into the Pharmacopoeia," by Gustavus D. Hinrichs.
- "Changes of Specific Gravities of Volatile Oils with Changes in Temperature," by O. Schreiner.
- "Note on the Cold Nitric Acid Test for Albumins," by F. W. E. Stedem.
- "Adulteration of Drugs," by Lyman F. Kebler.
- "Alkalinometric Estimation of Di-Acid Alkaloids," by H. M. Gordin.
- "Gross and Minute Characters of Cito Bark, Etc.," by Albert Schneider.

WM. M. SEABRY,  
First Vice President,  
Baltimore, Md.

GEO. F. PAYNE,  
Second Vice President,  
Atlanta, Ga.

WM. S. THOMPSON,  
Third Vice President,  
Washington, D. C.

"Comparative Pharmacological Characters of Scopolia and Belladonna Roots," by Dr. A. B. Lyons.

"Calcium Oxalate Crystals in the Study of Vegetable Drugs," by Henry Kraemer.

"The Atomic Weight of Arsenic," by Gustavus D. Hinrichs.

"A New Classification of Terpenes," by O. Schreiner.

"Pharmacological Action of Suprarenal Gland," by Dr. E. M. Houghton.

"Sea Salt," by Joseph Fell.

"Estimation of Chloroform," by W. A. Puckner.

"The Iodoform Reaction in Analysis," by Lyman F. Kebler.

"Some Plants of the Philippine Islands," by C. B. Lowe.

"The So-called Pure Berberine of R. Gaze," and "The Estimation of Berberine," both by H. M. Gordin.

"Does the Mexican Poppy Contain Morphine?" by J. O. Schotterbeck.

Besides these several other interesting papers and reports were read which will be printed later.

#### SECTION ON EDUCATION AND LEGISLATION.

This popular and useful section was compelled to compete with several other attractions which were simultaneously in session, but nevertheless the meeting was favored with good attendance, and the proceedings were up to the usual standard. The chairman, C. B. Lowe, spoke as follows:

##### CHAIRMAN LOWE'S ADDRESS.

Since last we met some interesting events have taken place in the world that have been of marked interest to pharmacists. One of the most important of these was the repeal of the Internal Revenue Tax upon proprietary articles. This tax, which bore hard upon the retail pharmacist, because it diminished his already too small profits, was considered by many of us as being a somewhat unrighteous tax, because certain industries had been singled out for taxation, and many others which could have born the tax just as well allowed to go free. We are glad that the American Pharmaceutical Association, through its membership and Committee on National Legislation, have borne so prominent a part in its repeal.

##### Manufacturers Who Have Not Resumed Anti-Bellum Prices.

We think that this should be made an occasion for uttering words of praise to those proprietors who themselves assumed the burden of taxation. All honor to them for their kindness; we hope that the good will that this must have aroused has been crystallized into tangible dollars and cents. If praise is due to this class, what shall we say of those manufacturers who compelled the pharmacist to bear the war tax, or of that more reprehensible class who made the institution of the tax an occasion for advancing the price of their preparations beyond the amount of the tax. In the case of those who advanced their prices, it would seem that the least that they can now do, would be to promptly resume their

old prices. In quite a number of cases this has been done, but in other cases the war prices are still retained. I would recommend that we pass resolutions stating the view that we take of the miserly greed exhibited by this latter class, and that these resolutions be communicated to the N. A. R. D., with the request that the latter organization bring the matter to the attention of those manufacturers. If the latter be found not amenable to reason and justice, that then notice be given to all of the pharmacists of the United States requesting them to use all of the influence possible to limit the sale of said preparations.

##### An Era of Good Feeling the Result of Organization.

One of the pleasant things to which I called your attention last year was the era of good feeling which then prevailed amongst pharmacists. This condition, which is largely the result of the organization of the national and local trade societies, the closer relationship into which pharmacists have thus been brought, and the removal of much of the distrust and suspicion of former years, has resulted in improved trade conditions. In fact in many parts of our country these conditions are more favorable than have been known before for years. All honor to those who have worked so hard to accomplish these most desirable results, for an improved financial condition of pharmacists is most devoutly to be wished and sought for, as it means so much in so many ways. It means more of leisure for the hard-worked druggist, the means and opportunity to attend the state and national pharmaceutical meetings, an increased attendance upon our colleges of pharmacy, and the adoption of pharmacy as a profession by a better qualified class of young men, and above all, the chance to acquire a reasonable competency for the time of old age and the support of those dear to us. I have indicated that much has been done for the betterment of the pharmacist yet there is a tendency on the part of some to complain because greater progress has not been made. Let us not forget that "Rome was not built in a day;" the evils of years can be fought out slowly; it is better to conciliate an enemy than to fight him. If, however, we do have to fight to maintain fair prices, let us be careful to fight along those lines which are legal as well as just.

##### Pharmaceutical Legislation.

The last year witnessed much pharmaceutical legislation attempted or achieved; some good, some bad, and some indifferent. It seems that we must be continually on our guard against the unwise acts of our duly elected representatives, eternal vigilance being the price of pharmaceutical safety.

Some excellent legislation has failed in some of the States from a variety of causes; perhaps the chief cause of failure has been the apathy of the pharmacists themselves. I am convinced that any legislation that is reasonable can be obtained by pharmacists if they go about it in the right way. The first thing in the preparation of a bill for legislative enactment is to remember that laws are passed for the welfare of the public and not for any one class; any advantage accruing to pharmacy must be only incidental. The second thing is to have the desired legislation passed upon by a constitutional lawyer, so that if the legislation is secured it will not later be declared unconstitutional. The third, and not the least important thing, is to arouse the interest of the

CHAS. CASPARI, JR.,  
Secretary, Baltimore.

SAMUEL A. D. SHEPPARD,  
Treasurer, Boston.

pharmacists themselves in favor of the desired legislation, and have them exert all possible pressure upon the members of the legislature. Personal interviews and letters from their constituents carry great weight with legislators. In this connection it might be said that the model pharmacy law adopted by this section last year, while not adopted in its entirety by any State that I am aware of, has, I am sure, been of value indirectly in indicating what the desired legislation should be like.

#### Pharmaceutical Examining Boards.

A few words may not be out of place with regard to the personnel of the different State pharmaceutical examining boards and the method of appointment thereunto. It is to be greatly regretted that the governors of the different states do not follow the example set by the governor of New Jersey, who voluntarily confines his appointments to the pharmaceutical examining board to the list presented to him by the State Pharmaceutical Association. Too often politics or other unworthy considerations influence the appointments, with the result that men of but ordinary qualifications are selected to pass upon the qualifications of young men who know much more than their examiners. This last winter I was in conversation with a pharmacist who thought he was as much entitled to be a member of the "Examining Board" as any one, and that he had possibly sufficient "pull" with the governor to get the position; the governor, however, thought otherwise and turned him down. I asked this would-be examiner "if, in case he had secured the appointment, how he would have managed the duties of the examination." He replied that "he didn't pretend to know enough to prepare the proper questions, but if he had secured the position he was coming up to the college to get some of the members of the faculty to prepare them for him." Now the question which I cannot solve is this: How could one who had not the ability to prepare a proper set of questions know enough to decide whether the questions had been properly answered? There seems to be no way of controlling these appointments by law, for such a law in many of the States would be declared unconstitutional, as limiting the governor's appointing power. It is possible that the different State Pharmaceutical Associations might create a public sentiment strong enough to induce the appointment of only the best men. The "Course in Commercial Training," instituted some two years ago by one of our Colleges of Pharmacy, has been initiated by a number of other Colleges; whether this has been caused by a realizing sense of the value of such a course, or simply to be able to say that they are up-to-date and have everything that is going, is a question. It is not a question that such a course may be made of the greatest value, in enabling the embryo pharmacist to avoid the rocks of financial failure by a wise adherence to proper business methods. It would probably pay the wholesale drug houses and allied interests to endow such a chair in each College of Pharmacy; they would simply be putting a little of their money where it would eventually do them the most good.

#### The U. S. Patent Laws.

One of the evils to which your attention has been repeatedly called is the working of the United States patent laws, which allow the patenting of both the process of manufacture, the product of the manufacture and the copyrighting of the name of the article manufactured. This extreme liberality of our government is greater than that of the governments of those countries where many of these articles are manufactured, constitutes a burden amounting annually to millions of dollars. The larger part derived from the sick and the suffering. It seems to me that a deadly blow could be struck at this evil by rescinding the right which now exists to obtain

product patents to be sold under registered names. We have smarted under this injury for years past, and have talked the matter over at great length; if it not possible that the time for action has arrived, I would recommend to the Association the appointment of a committee to take this matter in charge, that they be empowered to procure the services of an eminent patent lawyer to aid them in preparing a bill to be presented to the Association, the bill should be introduced into Congress and a strong effort should be made to secure its passage, by enlisting the support and co-operation of all the pharmaceutical and medical societies of the country.

#### Shorter Hours For Drug Clerks.

There has been considerable talk the last year about the hours of labor of drug clerks, and an effort was made to one State to limit the time of their work. There is no doubt that it would be advantageous, at least to the clerks, to have shorter hours, but in many cases the proprietors cannot do otherwise; in other cases they will not do otherwise. I have found, by my experience, that it pays to be as liberal with one's clerks as possible; to remember that they are flesh and blood, and that they get tired, and need a change as well as ourselves. A pharmacist who seeks the welfare of his clerks will generally find himself well paid.

#### Procter Memorial.

Much has been said about a suitable memorial to the late Prof. Procter, and opinion is by no means a unit as to the form the memorial should take. To my mind the question depends entirely upon the amount of money that is contributed. If the amount permits, a research laboratory should be established in the city of Washington. If this cannot be done, then one or more post-graduate scholarships should be established to be given to students to be done by a committee of the American Pharmaceutical Association.

With regard to the work done of this Section, I would say that a number of papers which will probably be of much interest are promised us. I hope their reading will be listened to with attention, and that they will be valuable in calling out much intelligent discussion. The Secretary of the Section will present the usual statistics regarding registration and the number of pharmacists in the United States. These statistics which no other organization endeavors to secure, are of much value in showing the status and trend of pharmacy.

#### Secretary's Report.

Secretary J. A. Koch reported that during the year legislation affecting pharmacists had been attempted in nineteen States, meeting with success in eleven. Of the unsuccessful attempts, the majority provided for the registration of physicians without examination. At the close of the board year the number of registered pharmacists in the United States was 85,949, showing an increase over last year of 12,502, and 7,979 registered assistant pharmacists, an increase of 138 over last year. The number of pharmacists registered during the year was 6,661, an increase over last year of 1,583, while the number of assistant pharmacists registered was 1,056. The large increase in the number of registered pharmacists may be accounted for by the fact that in certain States many physicians registered on medical diplomas, taking advantage of the old law, now repealed, permitting physicians to register without examination. Of the pharmacists registered during the year, 2,885 were registered on examination, 487 on pharmaceutical diplomas, 2,811 on medical diplomas, and 451 by other means.

Pharmacy legislation during 1900 and 1901 was made the subject of a separate report by J. H. Beal. Papers were presented and read as follows:

"Liquor Laws of States and Provinces as They Apply to Pharmacists," C. B. Lowe.

"Teaching Microscopy, Botany, Physiology, Etc., in Colleges of Pharmacy," Albert Schneider.

"A New Economic Order in Pharmacy," Harry B. Mason.

"Teaching Prescriptions in Colleges of Pharmacy," A. B. Stevens.

The new officers of the sessions are E. G. Eberle, Dallas, Tex., chairman, and J. W. T. Knox, Detroit, Mich., secretary.

Before adjournment the following resolution, offered by Prof. Oscar Oldberg of Chicago was adopted:

"Resolved, that it is the sense of the Section of Education and Legislation of the American Pharmaceutical Association that the actual preparation for the pursuit of pharmacy by way of study and training is far greater importance than the examination which is required by law, and that therefore candidates who have studied the subject covered by the examination have no rightful claim to be examined by the Board of Examiners in Pharmacy."

## SECTION ON PRACTICAL PHARMACY AND DISPENSING.

The report of this section was the most interesting and important since its establishment, and amply justified the prediction of those who urged its creation. The papers and reports were full of meat, and, as one member expressed it, suggested more than one plan of increasing the receipts of the retail druggist to an amount greater than the expense of attending the convention. The displays of convenient home made apparatus for use in the drug store and at the dispensing counter, the exhibit of styles of packages and the numerous valuable suggestions for overcoming dispensing difficulties, were extremely valuable. Unfortunately, many of the most important points were presented verbally, or were brought out in the discussions, and cannot be presented here. The chairman, Henry P. Hynson, spoke in part as follows:

"I am anxiously and earnestly hoping that we shall, in a few years, all feel happily satisfied with the work and the results of this section. Naturally it is very dear to me. It seems to be the very essence, the source from which our inner food supply is coming, and I beg to thank you and most helpful support. I must say it has had all possible help from officers and leaders; from press and noble patron. For this generous patron it must be congratulated, dear Dr. Sander has given it the recognition but substantial aid. The prize he has offered must stimulate and, in the growth impelled, he will be honored. He does not boast of great wealth but he has it freely. I cannot but give him the credit of the best I have, and all the time I could possibly spare, have been given to this section. Consequently, I am sure I speak for Dr. Sander when I speak for myself, saying that nothing I ever done, has given me so much satisfaction and pleasure. It remains for you to go forth, sow and reap even a richer harvest than has been ours.

Efforts has been made by my colleagues and myself to put before you a large amount of matter for discussion. As a result of close observation and careful thought in connection with this work, I would suggest that members of this Association engaged in retail business, enlarge and improve their laboratory operations and pay more careful attention to dispensing, offering as a practical means of going so, the consolidation of two or more stores into one. I will not discuss here the commercial side of this proposition, but will positively assert that this is plenty of food for the scientific pharmacist's work to be done, which must be done if one desires to be in the front rank to-day or remain there to-morrow."

He also presented a series of Practical Notes on Dispensing, which are reserved for publication in another issue.

Secretary F. W. E. Stedem presented his report as secretary of the section, in which he advised that the members of the association should take the stand formally and determinedly that patent medicines are on the whole a nuisance, and are tolerated simply as a matter of convenience for patrons. He believed it very unwise in exposing for sale preparations of the druggist's own make, to devote too much time to those particular ones which seem to be an imitation of patent medicines. He advocated the sale of toilet requisites and those things of household necessity which appeal to the people, on the ground that they could be sold without interfering with the rights of physicians, or becoming guilty of counter-prescribing. He also recommended lines of veterinary remedies, and thought the sale of such preparations could be made to yield a very large profit.

### COMMERCIAL SECTION.

The officers of this section were Charles A. Rapelye, Hartford, Conn., and F. W. Meisner, Jr., La Porte, Ind., respectively chairman and secretary. After the section was called to order the chairman proceeded to read his address which follows:

#### CHAIRMAN RAPELAE'S ADDRESS.

Pharmacy to-day is a wide departure from the methods in vogue when the formation of this Association was undertaken. Professional features were then coming into prominence and most of the commercial questions that confront us to-day were then unknown. Our present condition is at one and the same time one of advancement and retrogression. During the life of this Association, the advancement of pharmacy along professional lines has been far beyond the dream of the founders of this body. The commercial conditions governing the practice of pharmacy to-day are not as favorable to the comfort and contentment of the pharmacist as they then were, as no outside competition then ex-

C. LEWIS DIEHL,  
Reporter on the Progress of  
Pharmacy.

G. W. KENNEDY,  
Secretary of the Council.

isted, and commercial questions were the least of their troubles. But the growth of our country in commercial spirit has effected pharmacy in common with all lines of trade, and its business side has grown to be an important problem in the conduct of our business. In spirit is and should be paramount; but pharmacy, combining as it does both the professional and commercial features, presents a problem that requires special treatment, and how best to foster and make prominent the professional feature and educate the people up to the idea that pharmacy is a profession and not purely a trade, and at the same time give to the commercial side the attention which is necessary to the successful conduct of business, is a question that confronts us to-day, and is likely to confront us for some time to come.

#### Pharmacy Has a Commercial Side.

The formation of the Section on Commercial Interests by this Association established the fact that we recognize that pharmacy has its commercial as well as its professional side. It has been the contention of some critics of the Association that our time and attention was too largely given to scientific matters and men and that the pharmacist in his relation to commercial and practical matters received too little attention; but criticisms of that character usually come from those who are not well informed as to the scope of the Association's work. It is, I believe, true that when a section devoted to the consideration of the commercial interests of the pharmacists was made part of the scheme of reorganization of this Association, those who planned the reorganization builded better than was at that time apparent. Originally planned to handle as best it might the ever present question of cut prices, or at least to restrict the consideration of that question to its proper time and place in the work of the Association, it has by the formation of the N. A. R. D. had that question taken out of its hands, leaving the section more time to consider the mercantile interests of pharmacy which are now forcing themselves upon our attention to a much greater degree than could have been foreseen at the birth of this section.

#### Future Work of the Section on Commercial Interests.

That the work which this section may do in the future will be an important part of the work of this Association, I believe, cannot be questioned. It is perhaps true that the history of the work done by this section up to the last year had not been considered to be of especial value, and also that there has been a tendency to brush aside as unnecessary any special attention to commercial matters by this body. But at the present time, with commercial questions becoming as they are an important factor in the conduct of the business of pharmacy, this Association must, if it would maintain its place as leader in the affairs of pharmacy, recognize the importance of giving a fair share of its time and attention to commercial interests. I do not wish to be understood as underrating in the least the important scientific work that has been and is being done by this Association and without which it must fall, but I do wish to emphasize the necessity for more attention to the plans for the alleviation of the confused condition which exists in our business to-day. If the growth of this Association has failed to be as large as might have been hoped for, I believe we have to look no farther than to the fact that the idea has gone abroad that we care only for the scientific side, and give little attention to the commercial. It is a matter of choice with the pharmacist that he is obliged to give so much prominence to the commercial questions; but the tendency of the time demands their careful consideration, and it is

not a matter of choice but one of necessity that compels us to give much of our time to business details that we formerly employed in solving matters of professional interest. What applies to the individual applies with equal force to the Association. It may be thought unwise to make the consideration of commercial matters a prominent part of the work of this Association, it would be simply good business sagacity to strongly enforce the fact that this Association is for the benefit of pharmacists and all that tends to advance their welfare, and let it be understood that its policy is to strive in every way possible to enhance the interests of all pharmacists, and that the main business of the body or Association is already the plan and purpose of the Association, but it is not so well understood as it should be.

#### Limitations of the Section's Powers.

It is not possible for any body of men associated together for any purpose to accomplish all that may be expected of them, neither is it possible for them to escape criticism, whatever their action may be. Criticism usually comes from those who never attend meetings, or who fail to take an active interest in matters with which they find fault. It is expected by many that a body has but to adopt certain measures and the work is done, but these same could have been learned and learned that the organized body can only formulate plans which to become operative must have the sanction and support of individuals interested. Having such support, the wisdom of the measures are proved, and they become the policy of the trade.

#### Causes of the Pharmacist's Difficulties.

The troublous times of to-day are due to the lack of action on the part of this or any other body of pharmacists, neither can the cause of our troubles be well defined. It is not to the cutter, the proprietor, the manufacturer, the jobber, the dispensing physician or to our prescribing of proprietary products by physicians that our troubles are due, but it is to a combination of circumstances which embraces all the causes above mentioned and many more that cannot be here enumerated. It could not be expected that pharmacy would escape being drawn into the whirl of the intense commercialism of the present time, and neither would we wish that it should, if that could be the means of increasing our business and profits; but unfortunately the reverse is true, and we are progressively losing what was formerly regarded as business belonging exclusively to ourselves being distributed into other channels. Pharmacy is as much governed by the laws of trade as any other branch of commerce, and it cannot escape the competition in some instances in its most vital parts from the grasping methods of the department store, which lays its hand upon anything that may in any way tend to advance its interests without regard to the inherent rights of the smaller dealer. Logically the smaller dealer has inherent rights, but commercially he has none that will be recognized by his mammoth competitor.

#### The Cutter.

Of the cutter much the same can be said as his methods are of the same order, and although we cannot endorse the means he takes to gain trade, the fact remains that he does not cut with any delicacy in connection with his methods, they would come to naught, which goes to show that business haste is the price of success. There is no doubt in my mind that there is altogether too much time spent in whining about the cut rate evil, and the same amount of time devoted to the development of business would result to the benefit of many pharmacists who while they bemoan the presence of a cutter in their midst, yet are not improving themselves, and foolishly put prices in the line of legitimate pharmacy where there is no necessity for it, and lose the opportunity to get good prices for goods which should not be cut and need not be.

#### Causes of Changed Conditions.

Many pharmacists seem to forget that they render any service when dispensing prescriptions beyond that rendered by ordinary merchants, and they fail to charge for the time and skill for which they are entitled to a fair remuneration. Times are changing, and the business of pharmacy is changing with times. Conditions various in their kind, are affecting our business. Domestic remedies and crude drugs are much less called for than in the past, and the manufacturer has displaced them to a great extent. The physician contributes his share to the changed conditions, for instead of ordering the recognized remedies of the U. S. P., he orders some common or fancy name, which he knows nothing except what has been told by some smooth individual, who tells him the wonderful advantage it has over preparations dispensed by the pharmacist. Of course the character of the remedy he orders the remedy he is told is ignorant, yet he orders the remedy, and the pharmacist is obliged to stock it. Its use is continued for a time until another oily-tongued ambassador puts in an appearance with another remedy which is new and appeals to the doctor as an improvement on the first, when he takes up the new one, and so on ad infinitum. It has sometimes been my thought that if pharmacists through their local organizations would endeavor to stock these remedies and let it be known to the physicians that they did so,

that a long step toward solving this part of our troubles would be taken. I believe that the time is fast coming, and in fact is now here, when we will have to assume the aggressive in dealing with our many troubles with physicians. I do not by any means feel that an aggressive action taken should be of an offensive nature, but rather in the line of educating the physician to the fact that we are competent to do, and that if we do, through having been told so by interested parties. The mere assertion that we have competency will accomplish nothing, but our proofs of skill be shown will yield by the power of persistence. It is to a certain extent the fault of the pharmacist that this condition has attained the position that it holds, and that we are not anxious to assert our rights the physician will soon come to respect us the more for asserting them. Unless we do take a firm stand, the dispensing physician will take from us what little remains of our business, and our business will soon degenerate into a mere buying and selling of proprietaries with the few domestic remedies and supplies demanded by the public, and whatever side lines we may find profitable.

#### Dispensing by Physicians.

Through the impertinence of houses who do not care to sell their products to pharmacists, the physician is being induced in many cities and towns to dispense his own medicine, thus taking from us the vital part of our support, not only tablets, but syrups, vixirs, cough remedies, tonics, in fact almost every form of medication with blank label in form for quick dispensing is offered to him, and he is told that the pharmacist renews his himself, the patient must come to him for a renewal, and he can charge his office fee. The tempting bait dazzles him, and the further argument is used that the pharmacist substitutes, counter prescribes, charges exorbitant prices, and in short is little better than a rogue. Under such tuition the physician quickly comes to lose confidence in all pharmacists, and as a result he does not write a prescription unless compelled to do so in order to supply a need for an urgent case. When brought down by actual facts, it is with the physician almost purely a business proposition, and an example of commercial medical practice. Here the buyer must pay for an article of comparison. The question arises, do we not, in keeping quiet, give tacit acquiescence to these assertions on our character and ability. However, the matter may be looked at, the cause of our troubles will give us some concern.

#### The Public Must be Educated.

The public may be treated with a different remedy. The only one which promises to be found in their education is the fact that medicine is not mere merchandise, and is not sold as such, and that in order to secure favorable results from medicine, it should be procured of the pharmacist who is fitted by education to dispense it with skill and accuracy, and that for this skill he should be paid a fair remuneration. The public have not as yet become educated up to this point, and they buy medicine much as they buy ordinary merchandise, where it is the price that counts, and not such a condition should prevail, knowing as we do the importance of skillfully prepared remedies in combating disease. The cause is largely to be found in the present careless methods of advertising whereby the people are led to buy without discrimination or judgment. Such education can be accomplished only by persistent effort, but with the ever increasing intelligence of the people, it is probable that the desired result will ultimately be attained.

#### Unsatisfactory Nature of Present Conditions.

It is evident that returns commensurate with outlay and labor are not derived by the pharmacist to-day, and there is no indication of improved conditions in the near future. The constant increase in the number of stores is more or less owing to the fact that the pharmacist is aware that there is a chance for success, and the constant division of trade lessens the income derived.

#### Remedies for Existing Evils.

If rightly handled the sale of the pharmacist's own remedies and toilet goods may be made to afford a liberal profit, these goods being made by the manufacturer and labeled as though they were the pharmacist's individual production. To whatever the pharmacist attaches his name as the producer, he should in fact produce, as he is held responsible for such production, and therefore should know positively every detail of their production. Profits in this class of goods may, however, prove to be resultant losses if undue urging of customer interest is shown by the salesman, who has been induced by glowing advertisements into the belief that the remedy called for is the one just suited for their needs, are loth to accept anything "just as good", and induced by urging responsibility for their purchase. The consequence is the possible loss of a customer. Careful and intelligent judgment is necessary in the successful handling of your own goods, and if they are so handled a profitable trade may be built up.

**Advertising.**

Advertising is one of the most perplexing questions with which we have to deal, but some form of advertising is necessary to the pharmacist as it is to the other branches of the trade. In whatever form it be done I appeal for clean methods without deceit or exaggeration. Whatever method is adopted should be carefully watched, and failure to produce results is evidence of the necessity for a change of method. The first essential to success is to be looked for in the store itself, as even liberal advertising cannot attract business to a badly kept store.

**How Improvement Must be Obtained.**

No one will attempt to deny that great progress has been made in professional pharmacy. This progress has not been accomplished without constant study and application, and our treatment of commercial problems that surround us must be upon the same lines. We must not expect the vexed questions of the trade to solve themselves. If they are to be overcome, it must be by untiring application to the devising of ways and means their extermination. If we apply ourselves to the task, success will eventually attend our efforts. So much has been said and written concerning the adverse circumstances surrounding our business that many have come to believe that no remedy will ever be found to alleviate the present conditions, but persistent and well directed effort will overcome almost any difficulties. What is needed is patient and united effort against our common foe. We can conquer if we will and conquer we must.

**The Conference of the Colleges and Boards of Pharmacy.**

Two important events of the forty-ninth annual meeting were the completion of the organization of the American Conference of Pharmaceutical Faculties and the taking of preliminary steps for the formation of a similar organization of the Boards of Pharmacy. By these means it is hoped to bring about a greater uniformity in the requirements for admission and graduation by the colleges of pharmacy, and in the standard of examination to be passed for admission to the practice of pharmacy.

**American Conference of Pharmaceutical Faculties**

The Conference of Teaching Faculties of American Colleges of Pharmacy was held at the Southern Hotel, Sept. 19 and 20. The principal business transacted was to complete the organization begun last year by the notification of election of members provisionally elected at the Richmond meeting. The following officers were elected: President, J. P. Remington, Philadelphia; vice-president, Edward Kremers, Wisconsin; secretary and treasurer, Wilbur L. Scoville, Massachusetts; executive board, J. H. Beal, Ohio; chairman; Oscar Oldberg, Chicago; William Simon, Maryland; L. E. Sayre, Kansas; and E. A. Ruddiman, Tennessee.

In order to become a member, a college must be passed upon by the Executive Board. Several applications for membership were presented, but as the Executive Board did not possess the required information to enable it to pass judgment they were laid over until the next annual meeting. The conference adjourned to meet in Philadelphia in 1902 in conjunction with the American Pharmaceutical Association.

The constitution and by-laws, and the proceedings of the conference, including a list of the colleges admitted to membership will be printed in a short time, and will be furnished to the secretaries of the various boards of pharmacy.

**Conference of the Boards of Pharmacy.**

The Conference of the Boards of Pharmacy of the United States was held at the Southern Hotel at 2 p. m. on Sept. 20. The committee in temporary session, W. M. Seabury was elected temporary chairman and A. Brandenberger, temporary secretary. The following members were presented: T. A. Miller, Richmond, Va.; Max Samson, Louisiana; Fletcher Howard, Iowa; Theo. E. Otto, Indiana; F. B. Lilly, Oklahoma; Paul L. Hess, Kansas City, Mo.; W. M. Seabury, San Francisco, Cal.; L. Ardery, Connecticut; E. T. Klein, Hot Springs, Ark., and A. Brandenberger, Jefferson City, Mo. Ten States were represented.

On motion of Mr. Miller a committee was appointed to consist of a chairman and secretary to draw up resolutions requesting the Arrangement Committee for the

next meeting of the American Pharmaceutical Association to provide a space on their next programme for a conference of boards of pharmacy. On motion it was decided to appoint a committee consisting of the chairman, secretary and three members to draw up a constitution and by-laws as soon as possible, and mail a copy of the same to the secretary of each State board of pharmacy, with the request that each board send a representative to the next annual meeting to be held at Philadelphia. This committee is composed of L. Ardery, E. F. Klein, Max Samson, A. Brandenberger and W. M. Seabury.

The committee was also appointed to ascertain from the several boards of pharmacy the qualifications, percentage, requirements in general, for granting a certificate by these respective boards. F. B. Lilly and T. A. Miller were appointed on this committee.

The conference then adjourned to meet in Philadelphia in 1902, in conjunction with the American Pharmaceutical Association.

**AMUSEMENTS OF THE WEEK.**

The efforts of the Entertainment and Amusement Committee to make their program one of the leading features of the meeting met with great success. A continuous round of pleasant social affairs, trips into the country and sight seeing parties was planned and admirably carried out, the delegates enjoying these occasions between business sessions and the ladies, of whom there were a large number, being occupied throughout the week in attending entertainments and seeing the city and country.

The Reception Committee which began work on Sunday, Sept. 15, met all in-coming trains, armed with the name and description of all expected guests. After viewing the Grand Union station, the visitors were escorted to their hotels. A reception and welcome was given at the Southern Hotel headquarters on Monday morning by the lady relatives and friends of St. Louis' pharmacists, and the grand reception took place in the parlors of the hotel in the evening. The evening reception was more quiet and formal than had been planned, and the dance was abandoned out of respect to the memory of the late President. The visiting ladies were given a trip Tuesday morning, visiting the Museum of Arts, the Missouri Historical Society, Washington University and other places of interest. The afternoon was passed pleasantly with a euchre party at the Southern Hotel. The St. Louis College of Pharmacy was thrown open to the visitors for inspection during the evening. Refreshments were served at the college, this being accounted one of the most pleasant features of the week's entertainment.

The St. Louis Exposition was given up to the druggists on Tuesday night, a special program of much excellence being arranged for the occasion. The ladies devoted Wednesday in visiting public buildings one of which was the sub-treasury. The afternoon and evening was occupied with an excursion along the river front and a visit to the famous Jefferson Barracks. Supper was served on a boat in the mid-stream.

Tuesday was taken up with carriage drives through the public parks and a luncheon at the Glen Echo Club, seven miles from the down-town portion of the city.

Friday and Saturday were devoted to the "Twentieth Century Auction," the "Ladies Theatre Party," trolley rides, a visit to the Anheuser Busch Brewery and a reception at the Union Club. An excursion was made to Irontown on Sunday, completing a week of the rare entertainment, which is always one of the greatest attractions of the A. Ph. A. meetings.

**NEW MEMBERS.**

ST. LOUIS, Mo., H. F. A. Spilker, Russell Riley, Max P. Heinrichs, Jean C. Haffner, Frederick C. Euler, E. H. Ameling, Bruno Batt, Theodore F. Meyer, C. P. Walbridge, P. C. Meyers, W. F. Hagee, A. E. Suppiger, F. H. Fricke, W. D. Tenn, George W. Smith, A. H. Bartscher, John P. Schoenthaler, W. B. Pilkington, Emil Stegner, F. W. Frierichs, A. E. Suppiger, L. D. Philbert, William E. ## N. A. R. D. NOTES.

Chicago, Sept. 20.

Arrangements are now completed for the convention to be held at Buffalo, October 10, 11 and 12. To secure suitable accommodations application should be made at once. The headquarters of the association will be at the Buckingham Hotel, which is within one and a half blocks of Convention Hall, where all the meetings will be held. Delegates who desire accommodations in private residences in the vicinity will be assisted in their selection by the local entertainment committee, of which J. H. Dimond, 350 Connecticut avenue, Buffalo, is the chairman. No special convention rates have been secured, as the regular Exposition rates are in many cases better than could be secured by the transportation committee. This committee will superintend the making up of parties in various cities to attend the convention in a body. Information relating to these parties will be furnished by the chairman of the transportation committee, W. G. Markell, 6219 Penn avenue, Pittsburgh, Pa.

Organizers of the association have been very active in the states of Illinois, Indiana, Iowa, Michigan, Minnesota, New York, Ohio and Wisconsin. In Illinois the following associations were organized during the month of August: Christian County, Hancock County, and Bureau County, and all of them passed resolutions asking proprietary manufacturers to reduce prices to antebellum figures. In Indiana organizations were organized at Hartford City (Blackford County) and White County, both of which passed similar resolutions. In Iowa the druggists of Tama County, and those of Des Moines County organized branches of the N. A. R. D., the latter passing a resolution demanding the establishment of wholesale prices that will allow 50 per cent. gross retail profit, the members pledging themselves to discourage the sale of goods that do not conform to these prices. In Michigan associations have been organized in Ionia County and Montcalm County, and in Minnesota the druggists of Rice County, Le Sueur County and Goodhue County organized and declared in favor of a reduction of prices by manufacturers, so as to allow a reasonable profit to the retailer. In New York the Cattaraugus County Retail Druggists Association was organized August 16, and the retail druggists of Allegheny County met at Wellsville, August 22, organized and affiliated with the N. A. R. D. In Auglaize County, Ohio, a county organization was effected, and similar association were organized in Green, Fulton and Preble counties. The Fulton County organization appointed a committee to formulate a price schedule, which is to be adopted at future meeting. The prices on proprietaries in the county were heretofore 90 cents on dollar goods, and druggists are anxious to agree on full prices. Kenosha County, Wis., eight druggists, with six general store-keepers formed an association on September 2.

THE MEDICAL DIRECTORY OF NEW YORK, New Jersey and Connecticut, Vol. III. 12 mo., 990 pages, cloth, \$2.50. Published by the New York State Medical Association. 1901

This, the third, volume is the same in make-up as the last, with the exception of the inclusion of all legally registered physicians without regard to their school of practice. The reason assigned for this departure is that a reliable list of registered physicians will materially aid in the elimination of illegal practitioners, against whom a recent decision of the Supreme Court of New York determined recently the right of the New York State Medical and its component County Associations to prosecute. The total number of physicians' names contained in this directory is 12,644, of which 10,112 are in New York State, 1,472 in New Jersey, and 1,060 in Connecticut. Greater New York contains 5,579 physicians of which Manhattan and Bronx has 3,991. The directory also contains a list of associations, benevolent institutions, asylums, hospitals, dispensaries, medical colleges, etc., in short everything of which physician is likely to desire information. The work is published by the New York State Medical Association and is given to its members.

# NEWS DEPARTMENT.

## NEW YORK AND VICINITY.

### MANHATTAN PHARMACEUTICAL ASSOCIATION.

The Manhattan Pharmaceutical Association held its first fall meeting on the evening of September 16 with J. M. Pringle, Jr., in the chair. The most important matter came up for consideration was the report of chairman Hitchcock of the Legislative Committee. The report stated that although it had been found impossible to have a pharmacist of each political faith in each branch of the legislature, a plan has been formulated which would insure a larger measure of protection of the interests of the retail pharmacist. The idea of the to be constantly at the Capitol during the session of the legislature and to look out for the interests of pharmacists, keeping a close watch upon pharmaceutical legislation and making reports to the various associations in this city. The Committee suggests a conference of the legislative committees of the several associations to the end that the action in this direction may be concerted and harmonious. The plan is to have each association contribute pro rata to the expense of maintaining a lobbyist. The report of the Committee was received with much enthusiasm and unanimously carried. The Manhattan Association will at once enter into correspondence with other organizations with a view to arranging a conference of the legislative committees to take action upon this matter within thirty days.

Manhattan will send but two representatives to the N. A. R. D. Convention, George H. Hitchcock and George E. Schweinfurth. The association elected three delegates, the third being Charles White, who withdrew from the appointment when the association voted to pay but \$75, as its assessment to the N. A. R. D. As the assessment is but fifty cents for each member in the society and the \$75 would indicate a membership of 150 instead of 234, Mr. White considered that the society was entitled to but two delegates on the basis of one for each 100 members or fraction thereof. The assessment of \$75 was substituted for the exact dues for the reason that it is impossible to get at the membership in good standing of the association. Not only this, but Manhattan has in its membership a large number of men who are members of other organizations. As it would involve an immense amount of labor to get at the actual membership, the association considered it advisable to approximate and reduce the representation at the Convention.

A large number of applications for admission into the Manhattan Association were received. These will be taken up in the regular manner.

### FANCY GOODS IN EUROPE.

#### W. L. Strauss Tells of Flat Trade Conditions and New Styles Abroad.

W. L. Strauss, of W. L. Strauss & Co., who has been travelling in Europe for the past six months, calling upon manufacturers and dealers in the fancy goods line through England, France, Germany and Switzerland, returns with an interesting budget of trade talk on conditions abroad. He said: "I found very little activity in European factories. There is a general breakdown in the trade. That this has been a chronic condition for some time is a matter of my own personal knowledge

gained by the study of business conditions covering a wide area and extending over a long period of time. I have been told everywhere that America is the only customer of any consequence for our line of goods in the European market. They say that if it were not for American buyers it would be necessary to close up. The conditions are such that the manufacturers do not know how far to go in as much as the banks may withdraw their credit at any time.

A decided change in styles is sweeping over Europe. On the continent it is called the secession and is characterized by elaborate artistic designs applied to the simplest articles in the fancy goods line. This style of work is sure to invade America during the Fall and Winter.

It is a relief to come from such industrial conditions as I have outlined to this side where we are working day and night to keep up with our orders."

#### CLARENCE G. STONE GOES WITH THE LAMBERT PHARMACEUTICAL COMPANY.

Clarence G. Stone, one of the most popular and successful representatives in the drug trade, has resigned his position with the Mellin's Food Company, Boston, to accept the responsible position of Eastern representative for the Lambert Pharmaceutical Company of St. Louis. The change goes into effect on Oct. 1, next, and Mr. Stone's headquarters will be in New York.

Few men have been more successful than Mr. Stone in his chosen field, as special representative to physicians and druggists for pharmaceutical and proprietary houses. After graduating from the School of Pharmacy of the University of Michigan in 1877, he gained a thoroughly practical experience in the drug store of Frank Ingils in Detroit. From there he went with McKesson & Robbins, with whom he was connected for some ten years, and then returned to the retail field, with the firm of Milburn & Co. of Detroit. But his love for "the road" soon asserted itself, and he engaged with the Mellin's Food Co., then Dolber-Goodale Co., with whom he has been most pleasantly associated for the past eight years.

When the Lambert Pharmaceutical Company recently decided to open an office in New York, they wanted the best man to be found in their Eastern representative, and their choice soon fell on Mr. Stone. That they have made no mistake in their selection will be the unanimous verdict of thousands of physicians and members of the drug trade who have known Mr. Stone for many years, always found him upright and square in his dealings, and universally respected by all who know him.

The Era congratulates Mr. Stone on his new position, and the Lambert Pharmaceutical Company on securing so capable a representative for their new Eastern branch.

## NOTES.

- Among the pharmacists seen in the drug trade section the past were: P. L. Gaskins, of Stark, Fla.; David Merritt, of Fishkill-on-the-Hudson; S. Thornhill, of Sayville; L. I. W. S. Albertson, of Amityville, L. I.; L. E. Switzer, of Southport, Conn.; A. E. Pickard, of Roslyn, L. I.; Paul Traub, of Bordentown, N. J.; U. G. Wynkoop, of Battora, Wash.; C. N. Klauber, of Joplin, Mo.; G. H. Battier, of Memphis, Tenn., and Geo. W. Hurlbaeus, Washington, D. C.
- The Wholesale Drug Trade Bowling Association held a meeting September 17. An effort will be made by the Association to secure control of alleys for its own use. It is proposed to open the season somewhat earlier this year than has been the custom heretofore. Elmer & Amend, wholesale druggists and jobbers at Eighteenth street and Third avenue are organizing a bowling team and will be represented in the association tournament this year.
- Frederick H. Plump, of Plump & Loring, chemist, Seventy-sixth street and Lexington avenue, has been in St. Louis during the past week attending the meeting of the A. Ph. A. as a delegate from the German Apothecaries Society. He has also taken a great interest in the brewing industry of St. Louis. Frederick Linnig, of the same firm has returned from a two weeks stay at Southampton, L. I., as the guest of Captain J. R. Harlow.
- Miss Margaret Quinn just twenty years old is the only feminine student this year of the New Jersey College of Pharmacy. By hard study she matriculated last week with a large class of men. A year ago she accepted a position in the Verona Pharmacy of which her brother, Harry Quinn, is proprietor, and subsequently determined to be a pharmacist. Miss Quinn lives in Roseville, a suburb of Newark, N. J.
- The Cuhlmann Chemical Co., of Passaic, N. J., was incorporated and filed its articles of incorporation with the County Clerk of Passaic County on Sept. 20, to do business in general drug manufacturing. Its capital is \$40,000, divided evenly into common and preferred stock. The incorporators are Amos L. Prescott, Frank Hughes, Passaic, N. J., Harry P. Prindle, New York; and William Miller, Brooklyn.
- Commissioner John T. Britton died at his home in Long Branch, N. J., September 16, of Bright's disease, at the age of sixty-one. He was well known as a prominent Republican throughout the State and was a life-long resident of Long Branch, where he was a successful druggist. He is survived by a wife and four children.
- Hugh O'Reilly, who for the past 39 years has been a druggist in the Second Ward, Brooklyn, died at his home after a brief illness on Sunday, September 15. In 1862 he opened a pharmacy at the corner of Bridge and York streets, and only recently removed to his present store at the corner of Bridge and Tallman streets.
- Dr. Fred. J. Hirtmann has sent out circulars, prospecting a Medical Relief Club, No 120 East 114th street. It is a co-operative scheme on the subscription plan, membership costing 15 cents a week for each family. Medicine is sold for 3 cents and 4 cents a dose. Dr. Hartmann is both an M. D. and Ph. G.
- Paul Traub, formerly a clerk in the store of G. M. Carselake at Bordentown, N. J., will succeed to the proprietorship and management of the establishment. Mr. Traub recently married the daughter of Mr. Carselake, who is one of the oldest and most widely known druggists in New Jersey.
- Last Thursday was generally observed by druggists throughout the city closing their stores for a part of the day in honor of the late President McKinley. President Max Mariamson, of Bronx Borough Pharmaceutical Association No 2, issued an order to the members of his association to observe the day.
- Samuel Davis, of Boonton, N. J.; L. H. Goodwin, of Hartford, Conn.; W. T. MacPherson, of Winnepeg, Manitoba; J. E. Quinn, of Halifax, N. S.; H. C. Sanderson, Scranton, Pa., and Henry A. Wetzel of Detroit, Mich., have just made visits to this city.
- Manager Albert Hart who is in charge of the spouse exhibit of the Smith, Kline & French Co., rooms 416-418, Broadway Central Hotel, has decided to keep the display open another week, closing on Friday, September 27.
- G. H. Hitchcock, treasurer of the Manhattan Pharmaceutical Association, has returned from an outing of three weeks at Conasaugh, Pike Co. Druggist I. Eschman, enjoyed a vacation at the same place.
- Herbert M. Hill, Ph. D., the University of Buffalo Chemist, is making an analytical examination of the remaining bullets in Czolgosz's revolver for traces of potassium cyanide.
- Dr. E. T. Whitmore, of Parke, Davis & Co., who attended the meeting of the Mississippi Valley Medical Association at Put-In-Bay, Ohio, has just returned to the city.
- Charles F. Scott, Pacific Coast representative of McKesson & Robbins, is at the home office this week. He reports promising trade prospects in his territory.
- Chas. J. Perkins, of J. W. Perkins & Co., Portland, Me., and formerly South American representative for Seabury & Johnson, is visiting the trade this week.
- A new wholesale dealer is the house of Bell & Weatherly, Anniston, Ala., who has added a stock of wholesale drugs to their big grocery establishment.
- H. J. Fish and John H. Taylor, of London, are registered at the Drug Club. They were the guests of Col. E. W. Fitch, of Park, Davis & Co.
- J. H. Leggett, who has been identified with the drug trade in Plainfield, N. J., for many years has had his store closed under a chattel mortgage.
- John A. Hoge, of Lamar & Sons, Macon, Ga. and Thomas L. Sparks, a pharmacist of the same city are buying a holiday stock in New York.
- Prof. J. L. Lurie, manager of the Owl Drug Co., and the Eagle Drug Co., Kansas City, was one of the buyers who called on the trade this week.
- Francis E. Dodge, of Dodge & Olcott, arrived in this city on Sept. 18 on the Teutonic after an extended pleasure and business trip in Europe.
- E. C. Fowell, Pacific Coast representative of Schieffelin & Co., has returned to his territory after a two weeks' stay at headquarters.
- Dr. J. B. George, of E. E. Dixon & Co., Gainesville, Ga., who has been in town during the past week, left for his home on Sept. 20.
- Charles Wolanek, whose business is now at 3266 Third avenue, will remove his pharmacy in a few days to 3194 Third avenue.
- R. C. W. Clark, of the Clark Extract Co., of New Haven has been in the city making calls among the local trade.
- Caswell, Massey & Co. have been making extensive improvements in their store at Nos. 355 and 357 Columbus avenue.
- Charles F. Scott, Pacific Coast representative of McKesson & Robbins, has been visiting at the home office.
- Harry Gibney, manager of the Columbian Pharmacy at Olean, N. Y., has been in the city for several days.
- H. S. Livingston of the advertising department of Schieffelin & Co. has been in the city for several days.
- C. N. Klauber, a prominent pharmacist of Joplin, Mo., has just returned from an extended trip abroad.
- J. W. Judson of the publication department of Parke, Davis & Co., Detroit, is in the city for a few days.
- Eugene W. Rutherford, a prominent druggist of Malden, Mass., has been visiting in New York.
- William L. Brower, of Schieffelin & Co., has just returned from his vacation trip through Maine.
- Almost all of the downtown jobbers closed last Thursday on account of the President's funeral.
- E. L. Lillbridge with Fox, Fultz & Co., No. 31 Warren street, is away on a two weeks' vacation.
- S. A. MacDonnell, pharmacist of San Francisco, is in the city on a buying tour.

## IN AND ABOUT BOSTON.

### PHARMACISTS PASS RESOLUTIONS.

Boston, Sept. 21.—Influential leading men in the drug trade of this city met on Wednesday last and as a result of the special meeting the following resolutions were adopted:

"We, the executive committee of the Massachusetts State Pharmaceutical Association; the Massachusetts Druggists' Alliance; the Apothecaries Guild of Boston Association; the Massachusetts College of Pharmacy; the Boston Druggists' Association, in joint committee assembled, deeply deplore the untimely death of William McKinley, the twenty-fifth president of our Nation, and while we bow to the will of the Divine Providence, who ruleth us over all, we feel that the world has taken from it a man who has made the world better for having been born, and therefore.

Resolved, that in his death the American Nation has lost one of its best-loved statesmen, whose life was devoted to the whole people, and whose death is mourned by the whole nation. Kind and loving as a husband, firm but just as a president, one of God's true gentlemen.

Resolved, that we extend our sympathy to his widow, and beg the protection of the Divine Providence for her in her affliction.

We recommend as a mark of respect that all the pharmacists of the Commonwealth close their places of business on the afternoon of Thursday, Sept. 19, 1901, between the hours of one and six o'clock.

L. C. HEINRITZ, Chairman,  
J. F. GUBERIN, Secretary."

A committee consisting of Secretary Guerin and Dr. C. P. Flynn, the South Boston pharmacists, visited all the Boston newspapers to secure the insertion of a paragraph in them all, urging the druggists to close their stores. However, some druggists paid no heed to the request and their places of business remained open as usual.

### NAMES OF CANDIDATES PRESENTED TO THE GOVERNOR OF THE STATE.

Boston, Sept. 21.—Representative druggists of Massachusetts met Governor Crane at the State House, one day this week, in the interests of candidates for the position on the State Board of Pharmacy, made vacant by the expiration of the term of John L. Rice of North Adams, who according to the rule, cannot be renominated. Representative F. S. Dewey, Jr., of Westfield, representing the Connecticut Valley Druggists' Association, introduced the delegation, (which was appointed at Fall River) and which presented these names of druggists for the Governor's consideration: Charles E. Bardwell, of Holyoke; Henry Adams, of Springfield, and George T. Clark, of Northampton. These were the names endorsed by the association in its annual session at Fall River. The appointment is to be made by law. Mr. Bardwell has many friends working hard for his interests and it is believed that he stands a good chance of securing the membership.

### Medicine Bills Thought to be Too High.

Boston, Sept. 21.—There appears to be much ado in Lawrence over the cost of medicines furnished by druggists in that city to the department of overseers of the poor. In the past six months medicines to the amount of \$1,500 have been furnished at far larger expense than that incurred by most institutions of the size and capacity of the Lawrence almshouse. The overseer of the poor suggests that the department establish a dispensary of its own, from which medicines could be dispensed cheaper. He claims there is too much partially shown, some druggists having enormous bills against the city, while others get nothing at all, or at least very little business. Some people have said that a bonus and percentage of the business is given. The board voted that a rule be put into operation whereby the ward physicians shall be compelled to make monthly reports of their visits and the number of the prescriptions written by them for each visit.

### NO ROOM FOR COMPLAINT AT BUSINESS CONDITIONS.

Boston, Sept. 21.—This week has brought its measure of good trade, and the druggists are finding no room

for complaint at business conditions. No great activity is found in the general line of drugs, the demand for which seems to be only fair with no one thing standing out as a feature. There is more life in chemical trade, where prices remain steady with fair activity. Alcohols keep quiet, with only small demand for them. Prices hold firmly for dyestuffs, on moderate sales. Waxes are sought in moderate quantities.

### A New Drug Store Attracts Thieves.

Boston, Sept. 21.—A perfect epidemic of burglaries lately has spread over the district which radiates from the South Terminal Station. One of the latest places chosen by the thieves is Epstein's new drugstore, at 127 Summer street, which seems to be in the hardest luck, having been entered three times since they opened up business there, about a month ago. On the first visits small amounts of cash and cigars were taken, while on the last visit the thieves looked for cigars only, and they made away with about \$200 worth of them.

### NOTES.

—The clerks at Robert Fabery's pharmacy at the corner Tremont and Hollis streets received a decided fright, one day this week, at the time when several customers were present, who were also scared. A chemical engine responding to a fire alarm had to pass the drugstore, and, owing to the rain at the time, the wet tires of the chemical, when they struck the asphalt on Hallis street, slid as if on smooth ice. The horses plunged and leaped ahead and with a crash went through a big show window of the drugstore. Directly in front of the window which was broken stood the soda fountain, where several customers were drinking. The clerk behind the counter near the window barely had time to escape before the big glass was shattered, and the two struggling animals fell on the very spot where he had been standing. The whole side of the store was wrecked, and there was general excitement.

—When it was determined to set apart Thursday, Sept. 19, as a day of mourning and prayer as a tribute to the late President McKinley, the Massachusetts Board of Registration in Pharmacy promptly sent out word to those who had been notified to appear on that day before that body for examination for registration, saying that the stated examination had been postponed until some date yet to be arranged.

—The Cambridge police have been troubled lately by the reports of several cases of breaking and entering, one of the places broken into being a drugstore at the corner of Elm and Cambridge streets, owned by Charles Combs. Money was taken from the store. Three boys have been arrested and a fourth is under suspicion.

—Among the fires of the week was a slight one on the second floor of the building at the corner of Tremont and Eliot streets, on the entrance floor of which is situated Joseph L. Parker's drugstore. He uses the second floor as a laboratory. The damage was about \$100.

—Alexander S. Arnold has just come into control, as president, treasurer and manager, of the Dr. Seth Arnold Medical Corporation, of Woonsocket, R. I., the death of whose late president occurred last October.

—Among the heaviest taxpayers in Lynn is the estate of Charles H. Pinkham, son of the late Mrs. Lydia E. Pinkham. The tax paid is \$3,168. The Lydia E. Pinkham Compound Company in the same city pays a tax of \$2,406.

—After having been away for a fortnight's vacation, which he spent at the seashore, Oscar E. Kneppel, employed as a clerk at Chandler's drugstore in Springfield, is again performing his usual duties at that place.

—C. J. O'Malley, clerk at Leonard's pharmacy in West Springfield, is now enjoying a belated, though none the less welcome, vacation.

—Leon Luther, one of the clerks at C. W. Currier's drug store in Lawrence, is enjoying a vacation which he is spending in Maine.

## PHILADELPHIA.

### BRISK DEMAND FOR VACCINE.

Philadelphia, Sept. 21.—The past week has been rather quiet; the death of President McKinley in some way seeming to affect trade. While there is not much doing, trade still is fairly steady in volume and prescriptions seem to be slightly increased in number. About the only brisk demand is for vaccine and vaccine shields etc., the present small-pox "scare" having caused a rush to be vaccinated by the people. One firm alone sold over sixteen gross of vaccine shields to druggists and physicians in one day this week, while the sale of vaccine lymph on points and in tubes has been phenomenal. The principal manufacturers of vaccine here, Mumford & Co., have been hard pushed to meet the demand for vaccine, and out-of-town makers have been almost unable to keep up their stock. Some weeks ago several druggists made arrangements to supply the physicians of their wards with vaccine for the usual rush of children requiring vaccination before being allowed to attend school, and made a good thing out of it. These same far-sighted retailers are reaping a harvest in the sale of vaccine to both doctors and customers, the trade going chiefly to them because of their ability to supply it.

The jobbing houses report that their trade has been rather slack this week, although about equal to the average of last year. This present falling off is made more noticeable by the briskness of trade in the early part of the month, which was unusually good. According to the experts of our wholesale houses, the outlook for a good Fall trade is very promising, business is good with the retailers and the demand for a higher grade and priced list of toilet articles, very little "cheap stuff" is being ordered. The manufacturers are fairly busy, orders being well up to the mark.

### COLLEGE NEWS.

Philadelphia, Sept. 21.—The opening of the local colleges of pharmacy for the coming year's session is close at hand, both the Philadelphia College of Pharmacy and the Department of Pharmacy of the Medico-Chirurgical College being scheduled to begin their courses on the First of October. At the P. C. P. every one is busy in getting the laboratories and class rooms ready for the expected classes and the registrar has his hands full of work issuing cards to matriculants and the returning students. This year's freshman class will be very large, already it numbers sixteen more than at the same date of last year, and an unusually large proportion of second and third year men are returning to complete their studies, so that the new century will open with the largest attendance in the history of the college. The same news comes from Medico-Chi., large classes and many new students. The first of the monthly social meetings which have proved to be such a pleasant feature of college life will be held at the P. C. P. Tuesday evening, Oct. 8. The Alumni Association is making a great effort to have these meetings even more enjoyable than in the past, and at the first social the students will be welcomed by the President of the college, Mr. Howard B. French, and the Dean, Prof. Joseph P. Remington.

### NOTES.

—The Philadelphia Association of Retail Druggists has secured the services of an expert canvasser to look out for its interests throughout the city, it having been found that press of business prevented the members of the executive committee and the ward chairman from giving proper attention to the many little matters of weekly occurrence. Another feature of local work will be the issuance of a monthly bulletin to members, in place of the old style postal card notice, which will give a concise review of the happenings of the month and post members as to what is going on.

In the death of Commissioner John T. Britton of Long Branch, N. J., who died at that place this week of Bright's disease after a long illness, pharmacy lost a most worthy representative and the State a most honored citizen. Mr. Britton was a life long resident of

Long Branch, where he was a successful druggist for many years, being well known to the many visitors to this noted resort. He is survived by a widow and four children.

—The "Sunday Press" shows a record of 118 advertisements for "clerks wanted" to 97 "situations wanted" in the retail drug business for the month so far, a most unusual state of affairs, the former generally being far less than the latter. With the opening of the college year there will be probably some relief for the proprietors from the present scarcity of drug clerks.

—Among the well known Philadelphia retailers who have returned to the city from their summer outing are J. P. Frey, the popular downtown druggist; A. C. Smith, of the Miller Drug Company, and C. A. Eckles, he of "many stores." Friends of Eckles will be pleased to learn that he has entirely recovered from his illness of last Spring.

—A tribute was paid to our martyred President by the druggists of Philadelphia on the day of his burial, Thursday last, many drug stores closing from 2 to 4 p. m., as a token of respect to his memory, some even remaining closed except for prescriptions and necessary articles, the whole afternoon.

—John H. Winslow, of 27th & Gordon streets, a P. C. P. graduate has successfully passed the State Medical Board examination and is now practicing medicine in addition to his retail business. Dr. Winslow graduated from Jefferson Medical College with high honors a short time ago.

—The "jobbing district" is back again to winter closing hours, all the leading firms having announced their closing at 6 p. m. week days and at noon on Saturdays. Most of the desks now have their accustomed occupants, and the city salesmen are once again on their rounds.

—Dr. C. H. Ballantine, who conducts a retail drug store at Tenth and Morris streets, has been appointed Medical Consultant for the Sunday Issue of the Philadelphia "North American," his duty being to answer queries of subscribers as to the treatment of their ailments.

—The Publication Committee of the Alumni Association, P. C. P., has decided to start a "want advertisement" department in the "Alumni Report" for clerks and proprietors to begin with the October number.

—James Buckman, president of the Philadelphia Wholesale Drug Company and owner of the drug store at Eighth and Green streets, has returned from a summer's vacation spent in New Hampshire visiting friends.

—H. Eschbaugh, a well known drug clerk, who has filled an important position with Leedom, Clapp, Connor and other well known druggists, has started in business for himself with a store at Milton, Pa.

—Dr. H. T. Pollard, of Eleventh and Locust streets, has returned from a long vacation in Maine, sunbrowned and hearty from his outdoor life, his health having been greatly benefited.

—A. Griffith, for some time manager for Taggart's Ninth and Race street store, has taken a similar position with J. B. Moore, Thirteenth and Lombard streets.

### Duroy Wines.

Retail druggists control the sale of Duroy Wines exclusively, and the increased sales of these goods speak well for the popularity with the consumer. The wines are made from the products grown by the Duroy & Haines Co., Sandusky, Ohio, and yield the druggist a good profit. Any dealer not satisfied with his present stock will do well to write to the company and get samples, price lists, etc.

### A Book Catalogue Free.

D. Van Nostrand Co., have just issued a 112 page catalogue containing an alphabetical and classified list of books on chemistry, chemical technology and physics. It is arranged by subjects and authors. Any one desiring a copy can obtain it free by addressing a postal inquiry to D. Van Nostrand Co., 23 Murray street, New York

**BALTIMORE.****MARYLAND COLLEGE OF PHARMACY.**

Baltimore, Sept. 21.—Applications from young men who desire to enter the Maryland College of Pharmacy are coming in slowly, but the indications for a large attendance are very encouraging. By the time the work of the college is well under way the two classes may be expected to show certainly as large attendance as last year, and there are prospects that the roster will exceed the one of 1900 in length. The past week was especially uneventful for the reason that the president of the college, Charles E. Dohme, and Prof. Charles Caspari, Jr., were away in attendance at the annual meeting of the American Pharmaceutical Association in St. Louis. Upon Professor Caspari falls much of the work of advising applicants and disposing of other details appertaining to the management of the institution; so that his absence is materially felt.

**CUPID BUSY.**

Baltimore, Sept. 21.—Cupid had several innings, in which Baltimore members of the drug trade were interested, last week. One of the victims was Frederick W. Schanze, the popular druggist at the corner of North and Pennsylvania avenues, who, on September 18, married Miss Josephine Frances Abbott, daughter of W. R. Abbott, of 207 North Fulton avenue. The ceremony was performed in Christ Reformed Church by the Rev. W. I. Stewart. Walter Kriel, Harry Ehlen, Charles Manger and Philip M. Kell were the ushers. Mr. and Mrs. Schanze left for a trip to Buffalo, Niagara Falls and Canada.

Charles E. Vanderkleed, an analytical chemist in the employ of Sharp & Dohme, was married on the same day at La Fayette, Ind., to Miss Edith Parks, of that place. They will be at home after October 1, at the La Fayette, this city.

**TRADE RATHER QUIET LAST WEEK.**

Baltimore, Sept. 23.—Trade was rather quiet last week. Notwithstanding the intermission of one day, which had been set aside by Governor Smith as a holiday in order that the public might pay tribute to the dead President at the time of his funeral, the latter part of the week was by no means distinguished for a rushing business, and the movement at other times also was of moderate volume. The manufacturers of pharmaceuticals report about the same degree of activity in laboratories. Nothing of special moment developed in the market for botanicals and crude drugs, neither was the distribution of heavy chemicals characterized by unusual features.

**NOTES.**

—After a visit of three weeks to his son, Henry Mueller, of the Stanley & Brown Drug Company, Hopkins Place, this city, F. Herman Mueller, a retired German manufacturer, will leave next week for Rahway, N. J., there to visit another of his children. He will remain some six months or more and then return to his home in Chemnitz, Saxony. His son was taken into the firm at the time of its reorganization early in the present year and has since applied himself most industriously to business.

—During the sessions of the American Pharmaceutical Association last week in St. Louis, greetings and wishes for his speedy recovery were conveyed to Dr. E. R. L. Dohme, who has been ill for some weeks past at his residence in Roland Park, by the committee on the revision of the United States Pharmacopoeia. The patient now has all dispatches and many letters read to him and is mending rapidly.

—The Baltimoreans in attendance at the annual meeting of the American Pharmaceutical Association in St. Louis, were expected home Monday morning. They are Charles E. Dohme, of Sharp & Dohme; H. P. Hynson, of Hynson, Westcott & Co., and Prof. Charles Caspari, Jr.

—The name of the Winkelman & Brown Drug Company has been changed to the Stanley & Brown Drug Company. It has also been decided to increase the capital from \$80,000 to \$100,000.

**CHICAGO.****A PHASE OF THE PRICE SITUATION.**

Chicago, Sept. 21.—Some discussion has of late arisen among retail druggists concerning the work of organization being done in the First Auxiliary District. Some complain that until the First, or down town, district gets into line and adopts such a schedule of prices as not only will meet the views and have the support of its members, but will also be fair to druggists in other districts, the best fruits of general organization will never be tested. It has been urged that until a uniform price list for the whole city can be agreed upon there will always be friction, and discontent, and success will be a doubtful quantity. In answer to this, it is very pertinently pointed out that if it were not for a certain difference between down town prices and those in vogue elsewhere most of the down town stores would have to confine their sales to cigars and soda water or go out of business. With the exception of those people who reside in down town hotels and the few who make up the night forces in the various buildings and newspaper offices nobody lives down town, and few would trade in this district were it not for some advantage to be gained in doing so. The question of differentiation in prices is one, however, which presents no small difficulty. How to arrange price schedules so as to be fair to everyone is a question which is engaging much attention, and it is hoped that it will be satisfactorily adjusted in the near future.

In the meantime, evidences of rebellion seem to be cropping out in the First district. The one department store which has never come in out of the brush keeps on selling goods at cut rates, while another which was among the "good" ones, has shown signs of wavering and a prominent retail drug store is openly advertising and cutting. Your correspondent looked into this matter recently and discovered that prices would probably go lower than they are at present, and from a pretty reliable source learned that if the war went on it would have a purpose—which can be none other than the demonstration of the proposition that price cutting in drugs is not necessary and does not pay.

Such methods are often used in other lines of business to accelerate the coming of rational agreements, and there seems to be no good reason why it would not work in the drug business. The down-town men in their efforts toward a reasonable agreement with one another need, and doubtless will receive the support of their brethren all over the city.

**WESTERN TRADE GOOD.**

Chicago, Sept. 21.—Local business has been good this week, notwithstanding the mental depression caused by the death of President McKinley and the emblems of mourning which clothe the city. Manufacturers and jobbers report a large out-of-town trade, Fall orders come in rather more than in their usual number and volume. It is prophesied that the holiday trade will be larger than ever this year since industrial conditions are favorable in nearly all parts of the country. Staple goods are in excellent demand and collections are entirely satisfactory.

**NOTES.**

—At the meeting of the officers of the C. R. D. A. and auxiliary officers, held recently in the Sherman House, reports from the various districts showed that, in the main, matters are in very satisfactory shape. Routine matters chiefly were discussed, and among other things it was decided to leave to a committee the question whether or not the most recent arrival in the mated milk field deserved recognition by the druggists or not, that is to say, to decide whether or not the business methods of the new company were in accord with the principles governing the druggists as a whole. It is understood that the decision of the committee was in the affirmative.

—L. Degen has succeeded W. F. Brabrook at 296 Ogden avenue. Mr. Brabrook will move his family to California, which will be his home in the future. The condition of Mrs. Brabrook's health made the move im-

perative. Mr. Brabrook is one of the older druggists in Chicago, having been actively in business on his own account for more than a decade. His father was a pioneer druggist.

—E. Farnham, who travels for Morrissan, Plummer & Company in the northern peninsula of Michigan, passed through Chicago this week on his way to Grand Rapids, Mich., where he has been called by the serious illness of his brother-in-law.

—Charles E. Matthews, Chicago representative of Sharp & Dohme, has just returned from St. Louis, where he attended the meeting of the American Pharmaceutical Association.

—The members of the Illinois Board of Pharmacy are nearly all here in readiness for the meeting of the board, which takes place next week. Examinations will begin on Tuesday.

—Among the Chicago druggists who have recently visited the Pan-American Exposition is Dr. R. C. Ingalls of Forty-seventh street and Union avenue.

—A. M. Levi, a well known Chicago druggist, whose store is at Harrison street and Wabash avenue, has gone west for the benefit of his health.

—A. C. Davidson and wife returned last Wednesday from a ten days visit to Buffalo, Niagara Falls and other Eastern points.

—W. H. Allen, of Morrissan, Plummer & Company, returned recently from a few weeks' outing at Atlantic City, N. J.

—Max W. McCoy, a popular druggist at Thirty-first street and Prairie avenue, spent some time in Buffalo recently.

—W. L. Pearson, a well known druggist of Dahlgren, Ill., has moved to Oklahoma Territory.

—L. A. Becher, formerly of Neligh, Neb., has opened a new drug store in Rockport, Ill.

—Ira N. Read has succeeded N. S. Read & Company at Chandlersville, Ill.

—Miller & Garner succeed Bolin & Miller at Rockport, Ill.

#### A NEW DRUGGISTS' DIRECTORY.

The eighth edition of the Era Druggists' Directory will be ready some time next month. The revision is complete, and the book is now in the hands of the printer. Unusual pains have been taken in the compilation of this new edition, which has been made by an actual canvass of the entire trade during the past two months. In addition to the features that have made it a standard work of reference in the drug and allied trades, it will contain complete lists of the druggists in Canada, Hawaiian Islands, Cuba, Porto Rico, and the Philippines.

The book will be divided into four sections. Part I being the wholesale druggists, about 400 names. Part II, the retail druggists in the United States, showing what side lines they carry (surgical instruments, cigars or tobacco, soda fountains, etc.), and the foreign lists already mentioned, about 42,000 names; Part III, manufacturers, jobbers, importers, brokers, and other who do business with the drug trade, about 7,000 names, while Part IV, will be a classified business directory of the drug and allied trades, giving the names and addresses of nearly 7,000 firms in the United States who do business with the drug trade, all classified according to the business they are engaged in, or their principal product.

To our old subscribers, we can say that the book will be fully equal in accuracy to the last edition, and to those who are not familiar with the Directory, that it is the only complete and accurate list of this trade. The price of the Directory for orders received in advance of publication, is \$5.00 net, postpaid. This price, however, is likely to be raised after publication; the edition is limited, and few copies will be printed over and above the number required to fill our regular subscribers' orders. Samples pages and further information may be obtained of the publishers, D. O. Haynes & Co., New York.

## THE NORTHWEST.

### DRUG MEN AT LOGGERSHEADS.

St. Paul, Minn., Sept. 20.—One of the most complicated business mix-ups on record in this section is that in which two druggists have become involved. A. T. Sharpe and Clint G. Nickells, formerly partners in a drug specialty house in Minneapolis are in trouble at Fargo, N. D., and their differences may be aired in the North Dakota courts. Nickells is in possession of a drug stock which he took to Fargo from Minneapolis, and which Sharpe, who is his brother-in-law, claims as his property. Nickells, however, has a bill of sale from Mrs. Sharpe for the stock, a document which Sharpe says was improperly secured. The partnership of the two men was dissolved some time ago, Sharpe succeeding to the business, and Nickells opening a drug store out on Western avenue. Later Sharpe bought him out, and Nickells removed to Felton, Minn. Sharpe says that Nickells then told Mrs. Sharpe a number of stories that caused domestic trouble, which finally compelled him to leave home. As soon as he had done so, he says, Nickells moved the drug stock from Western avenue to Fargo, and opened a business there. Then Sharpe and his wife became reconciled, and demanded from Nickells the return of their property. This he is said to have refused and they have now placed the matter in the hands of an attorney. Nickells says that when Sharpe went away he concluded his sister had been deserted; and as he held a mortgage on part of the drug stock he moved the whole of it to Fargo to protect both her interests and his own. There is apparently a demand for the early services of the proverbial Philadelphia lawyer to solve this puzzle.

### NOTES.

—One of the drug stores run by Sidney Reeves at the Seven Corners, St. Paul, was the scene of a sensational episode the other day. At the noon hour a yellow spaniel created a stampede and caused damage to property that will amount to a good many dollars. The dog, apparently mad, and probably greatly frightened, made a straight run down Third street to the drug store, where he gave a spring, jumping through a plate glass show-window, scattering the glass bottles and show goods and driving the customers out of the store in fright. The dog then jumped on a counter, running over and smashing three show cases and scattering contents over the floor. Officer Ben Morse killed the dog after a spirited chase around the store.

—Stewart Gamble, of Minneapolis, president of the state Pharmaceutical Association, did something this week that no druggist has ever before accomplished. He was the means of the closing of every drug store in the Twin Cities during business hours. Mr. Gamble issued a circular requesting that the druggists of the state close up from 1 to 5 P. M. Thursday, in honor of the late President McKinley. Every drug store in St. Paul and Minneapolis complied with the request, and no doubt the same may be said of the other Minnesota towns.

—Walter Nelson, of St. Paul, member of the Legislature, who owns more drug stores than any other man in the city—i. e., four—is visiting in Sweden, his native land.

### Creating a Wide Demand.

The extensive and attractive advertising done by the Liberty Chemical Co., of Philadelphia, is thoroughly acquainting the medical profession all over the country with Thermol, Iodoluth, Syr. Glycero-Phosphate Comp., Fernang, Colchicine Salicylate Comp. Tablets and the many other chemicals and medicinal preparations of this company. Thermol has been used with great success in fever cases and it is now largely prescribed by physicians in various sections. Complete circular literature, giving the formulas and uses of all prescriptions will be sent to any druggist on application. Address Liberty Chemical Co., 2555 Sydenham street, Philadelphia.

# CALIFORNIA.

San Francisco, Sept 17.

—Druggist Smith, of Twelfth street, Oakland, had been flooded five time with water from the floor above him. Some nights ago a miniature Niagara descended upon his shelves and interrupted his pill-rolling. He summoned the police and found the source of the flood in the dental rooms above. He is now determined to get payment for the damage done.

—Ralph Henrhan, assistant in the drugstore of J. M. Boynton, Visalia, recently met with a painful and serious accident. A piece of glass from a broken bottle, which exploded in his hands, penetrated one of his eyes. He will probably not lose his sight.

—Among the pupils in the entering class of the California College of Pharmacy, is Jee Shin Yen. He is the first Chinese to study pharmacy in San Francisco, and is a graduate of the Polytechnic High School, San Francisco.

—J. P. Eaton, has sold his store in Redding, to C. H. Darrough, a druggist of Red Bluff, who will continue business at both points. Eaton has been a druggist in Redding for twenty-five years.

—McCarthy's Prescription Pharmacy, at 303 Sixth street, San Francisco, has been sold to Dr. Charles Green, formerly surgeon in the United States transport Service.

—All the drugstores in San Jose will keep open at night and on Sundays. Richard's Pharmacy, in the Theatre Building, made the break and the others have followed.

—J. A. Patterson, of Stockton, is in the East. He was a delegate to the Foresters' Convention, and is visiting all the large cities of the Atlantic seaboard.

—Wm. Wolf & Co., have moved into their new building at 214-218 Mission street. They have been located at 327-329 Makret street for years.

—T. B. Blake, formerly of Grass Valley, and recently of Petaluma, has opened a drugstore on Third street San Francisco.

—Frank Hughes, who recently came here from the East is in the J. A. Hughes Pharmacy, at Bakersfield.

—Endicott & Donaldson, have opened their new store in the Emery Block, Oakland.

—Frank Gamble, has taken a position with Ing & Allee Company, Sacramento.

—Walter A. Taylor, late of the firm of Taylor & Butler, Nome, is in San Francisco.

—Dr. Robert E. Bering, late of Alice, Texas, has opened a store in Tulare.

—Editor Allen, of the California Druggist, is ill in a hospital in Los Angeles.

—A. C. Tufts, of Virginia City, has recovered from a severe illness.

—Dr. Haile, has opened a drugstore at Crow's Landing.

## A Perfect Stopper.

An article that has proved most useful to druggists putting up toilet preparations of their own is the Brawn Patent Self-Closing Glass Sprinkler Top. It seems to be perfect in all details, is made of glass and cannot corrode and gives the package the elegance of a glass stoppered bottle. The sprinkler device is in the shape of a dumb bell, the head of which rests on an offset in the opening of cork and the opening in neck is always securely closed when the sprinkler is not in use. Perfumers and manufacturers of toilet preparations find the stopper most suitable for their use. It is always clean and in perfect order and costs less than a metal sprinkler. Samples will be sent on application to the manufacturers, Swindell Bros., Baltimore.

Erb's Malaria Capsules, for malaria, chills and fever, dumb ague, fever and ague, intermittent fevr, etc., are made by Charles S. Erb, manufacturing chemists, of 121 Amsterdam avenue, New York. He also makes Erb's Medulary Glycerite and Elixir Ambrosia Comp. (Erb) which have had a good sale with many of the retail druggists.

# BUSINESS RECORD.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS' DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA, New York.

ALABAMA.—Selma.—J. C. Groves & Co., Selma & Broad streets, sold to S. S. Sellers & Co.

ARIZONA.—Suumonsville.—W. G. Clemens & Co., sold to John H. Lacey. Thatcher.—J. D. Love, M. D., sold to J. A. Woods Drug Co.

COLORADO.—Denver.—Card & Draeseke, 501 Fourteenth street, succeeded by George W. Card—M. H. Mayers, corner Nineteenth and Stout streets, sold to Fred. E. Leeper.

CONNECTICUT.—Seymour.—The Bristol Drug Co, sold to John C. Nichols.

D. C.—Washington.—W. E. Shaffer, 509 E. street, N. W., sold to Wm. L. Yeager.

FLORIDA.—Tampa.—Morton & Co., incorporated as Morton Drug Co.

GEORGIA.—Gainesville.—M. C. Brown & Co., succeeded by M. C. Brown.

ILLINOIS.—Chicago.—H. R. Struthers, N. Kedziel avenue and Ohio, sold to John Richmond.

INDIANA.—Carthage.—O. S. Coffin & Co., sold to O. S. Marsh & Co.

Edinburg.—Moffett Bros., sold to Harry Chandler. Evansville.—E. D. Kivary, 900 Upper Second street, sold to Beiling & Shively—John H. Wells, 324 Upper First street, sold to J. G. Bryson.

Indianapolis.—Charles E. Eitel, 1502 Shelby, succeeded by Eitel Bros.

South Bend.—Frank D. Striebel, 1223 South Michigan street, sold to Henry Spohn.

INDIAN TERRITORY.—Tamaha.—Elmer Cole & Co., burnt out, insured.

IOWA.—Crowth.—Severin & Oelke, succeeded by W. C. Oelke & Co.

Prarie City.—Johnson Drug Co., succeeded by F. W. Johnson.

Renscu.—O. G. Luehrs, sold to A. L. Schultz. Wapello.—H. E. Blanchard, deceased.

MAINE.—Gorham.—L. J. Lermend, sold to H. M. Wittshire.

Rockland.—F. H. Donohue, 422 Main street, damaged by fire.

MASSACHUSETTS.—Becket.—W. E. Higley, deceased. Gardner.—A. G. Durgin, 289 Central, sold to R. T. Stuart.

Lawrence.—Currier & Frost, succeeded by C. W. Currier & Co.

Manchester.—Frank E. Lee, of the firm of A. Lee & Son, deceased.

Newburyport.—Joseph Williams, 212 Merrimac, deceased.

MICHIGAN.—Bay City.—George S. Layeret, 1102 Twelfth street, damaged by fire, duly insured.

Detroit.—Wm. B. Gordon, 1029 Grand River avenue, sold to Walter Rosser.

Grand Rapids.—P. V. Finch & Co., 75 Canal street, burnt out, insured.

Mason.—H. H. Bradley & Co., sold to Pratt & Hayden.

MISSISSIPPI.—Jonestown.—Mrs. M. I. Dickson, sold to J. M. McAllister.

MISSOURI.—Carthage.—Frank Edel, 320 Grand street, damaged by fire, insured.

Cowgill.—H. V. Ross, sold to J. R. Tunks.

Huntsville.—H. L. Terry, sold to W. H. Sears.

Lamonte.—Fordice J. Redman, sold to Mitchell Bros.

MONTANA.—Virginia City.—W. C. Clemens, sold to C. W. Rank & Co.

NEBRASKA.—Elgin.—George C. Smith, sold to S. T. Jackson.

Phillips.—W. A. Harrison, sold to Faught & Seignor. Ravenna.—M. G. Wheelock & Son, sold to J. C. Faught.

NEW YORK.—Alfred.—J. R. Burdick, sold to O. J. Davis.

OHIO.—Delta.—Pratt Bros., succeeded by J. Pratt.

Toledo.—Gernhardt Bros., 1502 Cherry, succeeded by George C. Gernhardt.

RHODE ISLAND.—Providence.—W. K. Reynolds, 354 Friendship, sold to Frank E. Crawford.

SOUTH CAROLINA.—Spartanburg.—W. W. Rigby, deceased.

**SOUTH DAKOTA.**—Brookings.—G. A. Williams, succeeded by Williams & Hart.  
**TENNESSEE.**—Mount Pleasant.—W. Long, sold to J. T. Jenkins.  
 Ripley.—R. D. Jenkins, damaged by fire, partly insured.  
**TEXAS.**—Alvin.—Alvin Drug Co., sold to O. S. Cummings.  
 Bremond.—Long & Hellums, damaged by fire, insured.  
 Brownwood.—D. S. Camp, succeeded by Camp & Bell.  
 Fayetteville.—J. A. Sauls, sold to C. J. Schramm.  
 Midlothian.—Pirson & Huggard, succeeded by J. W. Pierson.  
 Weatherford.—Wadsworth, Bains Drug Co., burned out, insured.  
**WEST VIRGINIA.**—Wheeling.—Robert B. Burt, corner Va. & Penn streets, deceased.

#### Money in Fountain Pens.

That is the heading to the advertisement of Waterman's Ideal Fountain Pens an advertising page 8 of this week's Era. We hope every reader will read this announcement carefully. It presents to all druggists who do not already carry Waterman's Ideal Fountain Pens an opportunity to add another profitable side line to their business. Already many druggists are carrying the line and making money from it. L. E. Waterman Co., the manufacturers, will loan fine show-cases for proper display of the pens to any dealer who will carry an adequate assortment of their goods. There is absolutely no risk in carrying such an assortment, as the manufacturers agree to buy back at any time at full price paid any or all unsold stock. The Waterman Ideal Fountain Pen is absolutely guaranteed, and we know of no better pen on the market. The goods may be sold by the dealer on approval, subject to exchange until satisfactory or money refunded. Any ordinarily bright salesman finds no trouble in selling these goods, but if you wish to take a correspondence course in the art of selling pens, you can do so without expense. L. E. Waterman Co. have instituted a correspondence course of this nature. It consists of twenty lessons which will be mailed, five at a time, free to any salesman of fountain pens who desires to take the course. Prizes are offered for proficiency, and much interest is already manifested on the part of salesmen in all parts of the country. Druggists who contemplate carrying these goods should bear in mind that they are thoroughly advertised in all the leading magazines and periodicals. Goods well advertised are already half sold. Write for further information regarding these pens, or if you already have them in stock, have your clerk write for information regarding the correspondence course. Address L. E. Waterman Co., 173 Broadway, New York.

#### Preserved Natural Plants.

Now, that cold weather is approaching, and the druggist's thoughts are occupied with hot soda, Christmas decorations and holiday trade, his attention is invited to our natural prepared plants advertised by Frank Netschert in this issue. These plants cannot be told from living, growing plants. They are beautiful for purposes of adornment, and if a druggist is willing to take orders for them, they afford him 200 per cent. profit. Mr. Netschert has just published a new, 80-page catalogue, which he will send to any druggist

who will write for it.

#### L. & S. Peroxide Hydrogen.

The remarkable increase in the use of peroxide of hydrogen within the last few years has brought a number of impure and unstable liquids into the market, and unless bought of a reliable firm the peroxide of today is likely to be harmful if used internally. Larkin & Scheffer guarantee their peroxide of hydrogen to be always the same strength, not too acid, and it is harmless. The firm's preparations can be bought of any jobber or by writing them direct to St. Louis, Mo.

## BRIEF HISTORY OF THE CINCHONA.\*

By J. F. Sanford, Lewiston, Me.

Let your imagination carry you back several hundred years, to a scene in the district of Loxa, in South America. A poor Indian is struggling through a dense forest, his footsteps are slow and faltering, there is a look of despair on his face, as his bloodshot eyes search in every direction. He is lost, and has wandered this way for hours without food. At last he drops down beside a pool of water and drinks eagerly; at first his parched lips fail to convey the intense bitter taste, and when they do, what does it matter to him, for he is lost, alone, and very near death with fever.

At last he drops into a troubled sleep, and remains so for hours. When he awakens, the fever has left him, but still he is very weak; he crawls to the pool and takes another drink. This time the bitter taste seems more intense; he notices a tree-trunk in the water, and trying the bark it has the same peculiar bitter taste. He has discovered a remedy for the most dread disease of the tropical countries. Thus runs the legend of the discovery of the quina or bark of barks, as it is called by the South American Indians.

But to Anna, Countess of Chincon, the wife of the Count of Chincon, Governor of Peru, is awarded the glory of introducing this, the most valuable of all febrifuge drugs. In the year 1638 she was suffering from an attack of fever, and a magistrate of Loxa sent a package of Peruvian bark to her physician, assuring him that it was a never failing remedy in fevers. It was administered and effected a complete cure.

When the Countess and her husband returned to Spain in 1640, they carried large quantities of the bark with them. In this way was the first of what is now one of the most valuable of all drugs introduced into Europe. In memory of this great gift to mankind, Linnaeus named the genus which yielded the drug cinchona, dropping the "h" in the first syllable. Since then there have been several ineffectual attempts to correct this error in spelling. This is the first well-founded instance of the use of the Peruvian bark, though the virtues of certain species must have been known to the Indians of South America long before this. The Brotherhood of Jesuits came to know of Peruvian bark soon after the introduction by the Countess, and distributed it through their several stations in Spain, Italy and Rome. They did more than anyone toward making its medicinal virtue known. It attained great celebrity and was sold for enormous prices by the Jesuits, but soon fell into disuse.

It was again brought to notice by Sir Robert Talbot, who carried it to England in 1671. He kept it secret and gained great fame with it in curing intermittent fevers. In 1682, Louis XIV. purchased the secret, and in 1690 it was brought into general favor by Norton and Sydenham of England.

The work of gathering the bark is done almost entirely by the Indians or cascarijeros, as they are called. A master cascarijero, with his band, sometimes as many as several hundred, selects a favorable spot on high land and establishes a main camp, then the party divide and form smaller camps, scattered through the forest.

The trees grow alone or in small clumps in the dense forest, which is so thick that one has to cut his way through. One or two men from each squad are detailed to find the trees, which are found with their trunks covered with moss and vines; these are removed and the outer bark broken off by pounding with a club. Then the bark is peeled off as far as one can reach. After this the tree is cut and the bark removed from the smallest twigs. Now the bark is taken chiefly from branches.

The tract of land in South America that yields the cinchona is not so large as many think it to be, nor is

\*Read before the Massachusetts Pharmaceutical Association and awarded third prize.—(New England Druggist.)

the supply of the bark inexhaustible. The dealers and natives claim that the old system of destroying the trees, which was carried on for so many years, and is now to some extent, came near exterminating the tree from its natural sources. In Bolivia, according to the report of the Consul of the Netherlands in 1863, private parties have begun to replant the denuded cinchona forests, and at the present time there are more than a million young trees growing at La Paz. New plantations are springing up everywhere, and the old grounds revisited where the sprouts from the stump yield much quill bark.

The cinchona flourishes from 7 degrees north to 20 degrees south of the equator, and they grow generally from 5,000 to 8,000 feet above the level of the sea. The chief sources of bark in South America are in New Granada, in Colombia, Equador, Peru and Bolivia. The bark from New Granada is mostly shipped from Carthagena on the Caribbean Sea. That from Equador is mostly shipped from Guayaquil and Esmerilda. The bark from northern Peru from Paytu, that from Peru and Bolivia from Arica and Ilay and Calleo. A limited quantity of bark from Bolivia is exported down the Amazon to Para.

In 1735 the French sent an expedition to South America and La Coudamine, a member of the party, while journeying through the province of Loxa, had an opportunity to examine the plant, and on his return published a description of it. It was soon after this that Linnaeus gave it the name of *Cinchona officinalis*, in honor of the Countess of Chincoa. For a long time it was not known that more than one species of it existed. According to Bentham and Hopper, there are 36 species of cinchona, while Howard recognizes 39, although only about a dozen have been used to advantage. It was nearly a century after this bark was known in Europe that the plant producing it was made known to naturalists.

Great difficulty has been found in determining the species by which the different varieties of cinchona bark known to commerce are produced. The common names are derived partly from the color of the bark, partly from the district where grown or the part clipped from.

The calisaya bark, also called royal or genuine yellow bark, one of the best kinds, is chiefly the product of Calisaya, a large tree grown in the hot mountain valleys of Bolivia and southern Peru.

A number of the worthless varieties of cinchona bark are put on the market separately as adulterations of the other varieties. The accurate discrimination of the different kinds of bark requires much experience.

The first attempt to transplant these trees was by La Coudamine in 1737. He started to carry several plants home with him, but they were destroyed after he had preserved them for eight months. In 1846, Dr. Weddell was sent by the French to study the habits and try to obtain plants for transplanting, but the next successful attempt to transplant cinchona was in 1853 by the Dutch, who sent Mr. Hassparl, former superintendent of the Botanical Gardens of Java. A number of young trees were sent to him and planted in the mountains of Java, but, owing to the worthlessness of some of the varieties, the Dutch reaped success very slowly, although at one time their plantations were among the finest in the world. But during the twelve years ending in 1879, the amount of land devoted to the cultivation of the cinchona fell off nearly one-half.

The first suggestion of transplanting the cinchona trees into the English colonies was by Dr. Doyle, whose long residence in India satisfied him that the climate was adapted to their growth. He was unsuccessful in his effort in his lifetime, but he had set the ball rolling, and in 1859 Lord Stanley, secretary of the state of India, made another attempt, to which the success of the present day is due. He authorized Mr. Markham to equip an expedition to go to South America for the purpose of obtaining some cinchona plants and seeds, and, despite the opposition by the government of South America, they left in 1860 with six hundred and thirty-seven hearty plants and 100-

000 well ripened seeds. These were planted in India, and in the year 1863 there were 160,000 of the trees growing, while in 1860 Mr. Markham stated that during his whole stay in South America he only saw one cinchona tree planted by human hands. In India they cut longitudinal strips of bark from the trees and then cover the trunks with moss. This seems to increase the yield of quinine.

The first chemical examination of the bark appears to be by Herzmstadt in 1785, who obtained the calcium salt of quinic acid which he designated as the essential salt of cinchona. Quinotannic acid was discovered by Deraux in 1793.

Cinchonine appears to have been obtained by Gomez of Lisbon in 1811, but it remained unknown until 1820, when Pelletier & Caventou succeeded in obtaining cinchonine and quinine and proving them to be true vegetable alkaloids.

Later investigation in the chemical reaction of the alkaloids seem to indicate that within a few years they may be made synthetically.

## OUR CUSTOMERS: HOW SHALL WE TREAT THEM SO AS TO INCREASE THEIR NUMBER?\*

BY A. G. GILMORE.

This question is one of the most difficult and perplexing problems for the financial success of all retail drug stores.

One of the prime essentials is keeping a stock of goods for which there is a demand. By this, I do not mean that you should carry a large quantity, unless you have sufficient demand. Keep a want book in a convenient place, and when you sell the last package, or your supply is getting low, place it on your want hook. If you do this, you will not have to say "We are all out, but will have a supply in a few days." Of course, you will have some dead stock in the long run, but if you are shrewd in buying, you will not have a large refuse.

One of the drawers of custom is good clerks. Some proprietors believe in employing cheap help, and think they are economizing in that way, but those proprietors who practice that sort of apparent economy will soon come to an end, if they do not realize their mistake in due season. Pay a clerk a fair price and he will invariably take interest in the work he is doing. If he is not capable of doing the work designed for him, you must get some one who is competent. Teach your employes to be courteous and obliging.

A proprietor should be capable of studying his customers. Study the wants of your trade, as different localities have different wants. If you have a country trade, cater to that class, or, if you have a city business, try to meet their wants. If you have a combination of both city and country trade, you must strive to please both.

Advertising is the best medium through which you may come in contact with your customers, or would-be customers. Your advertisements should be impressive and to the point. Write plainly and intelligently. I think the best results are obtained from house to house distribution of books and circulars. Advertising matter distributed thoroughly in this way is sure to bring good results.

Spare moments may be utilized in contriving some new features of your business and also stimulating indifferent interest in others.

When you attempt a scheme, do it with a will and keep at it persistently. The competition of to-day requires all druggists to "hustle."

Keep your store neat and clean, and your goods arranged attractively.

Keep your windows looking bright, and display the various goods in their season. Don't expect your window display to shine every week with bright colors, but arrange all goods as attractively as possible. Window signs properly worded are excellent drawers

\*Read before the Massachusetts Pharmaceutical Association and awarded third prize.—New England Druggist.

of custom. I have found that original ideas in window dressing are one of the best and cheapest means of reaching our customers.

If you have a soda fountain (as all up-to-date pharmacists do), make it a center of attraction. Have some specialties which no other store in your vicinity has. People like novelty, and a good name for a beverage goes a long way toward popularizing a drink.

Run your business in the proper way. Be temperate and your success is assured.

Pharmacy nowadays is a profession and a trade. The most successful pharmacist will be one who can combine professional dignity and skill with mercantile affability.

A good rule to follow is to keep friendly with your fellow druggists. Nothing will injure you more in the eyes of the public than to talk down your neighbors. There may be hard feelings between rivals, but your customers would not be the proper judges of your differences. Above all, try and use your customers honorably and do nothing to make them (as David Harman says) "smell woolen."

Remember, "The block of experience is a hard block to whittle, and every shaving is of precious value to the whittler." So sharpen your implements and keep whittling away, and in time you will have the whole world at your feet.

## OBITUARY.

W. H. BLAKE, whose death is announced and which was a complication of heart troubles, was well-known in the drug trade in Springfield and Holyoke, Mass. Mr. Blake was a native of the Green Mountain state and was born in Bellows Falls. He first was in the drug business in Holyoke and later went to Springfield and became well known in that city, where he was in business for fifteen or more years. He had been engaged in business in Boston for two or three years past. He served in the Civil war and was a Grand Army man. He leaves three daughters, and also a brother, a resident of Holyoke, Mass. The burial was at Bellows Falls.

JOHN P. SAMMONS died a few days ago at his parent's home at Westfield, Mass. Death was the result of an operation for appendicitis, from which he had been ill only about four days. He was a young druggist and had started on what seemed a most promising career. He was educated at the Massachusetts College of Pharmacy, Boston, and had passed the state examinations in New Hampshire and Rhode Island. He was twenty-three years of age and recently had been employed as clerk at E. E. Wilkin's drug store in Pittsfield.

—The Oregon State Board of Pharmacy held its regular quarterly session September 10, in Portland, for the purpose of examining candidates for registration. Certificates were issued to fourteen successful applicants. The present members of the board are: President, George C. Blakely, The Dalles; treasurer, John M. A. Lane, Portland; secretary, L. W. Moody, Portland; A. Yerington, Eugene; C. G. Huntley, Oregon City. The next meeting will be held December 10, in Portland.—L. W. Moody, secretary.

—"The Mother of Sam Hill's Wife's Sister," the humorous sketch by Prof. J. U. Lloyd, read by the author before the American Pharmaceutical Association at its meeting in 1899 at Put-in-Bay, O., appears in the September number of the Criterion. Members who were present at this meeting will doubtless recall the reading of this curious story. Copies of the Criterion may be obtained of newsdealers for ten cents.

Chas. A. Vogeler Co., Ltd., announce in this issue a 25-cent size of St. Jacob's Oil, which will be placed on the market at once. The 25-cent size is well known in every country in the world except America, and it is believed that the introduction of this size in this country will appeal to a new public altogether. The new size will be extensively advertised, and all orders will be filled in rotation.

### Pure Borax.

The increased sales of "20 Mule Team" brand of borax show that consumers are awaking to the fact that this is a chemically pure product, and no doubt the pamphlet published by the Pacific Coast Borax Co., "Borax in the Home" has proved very effectual, as nearly every house-keeper who receives a copy preserves it for the valuable hints it contains. That borax as found in many stores is adulterated, is a well known fact. The "20 Mule Team" brand is put up in 1 pound, 2 pound, and 5 pound cartons, by the largest producer of borax in the world. It is chemically pure and yields a good profit to the retailer. A supply of pamphlets will be sent to any druggist writing to The Pacific Coast Borax Co., New York, Chicago or San Francisco.

### Wright's Dentomyrh.

Wright's Dentomyrh Tooth Paste is widely advertised is a preparation of merit and already a staple article in most of the up-to-date drug stores in the larger cities. A dozen placed on your counter or show case will soon be sold, as customers recognize at once that it is the Dentomyrh they "see advertised," and are anxious to give it a trial. The druggist gets a good profit, and by having the teeth paste on hand will be able to meet the call which may come any day. Write for special discount inducements and advertising to the Charles Wright Chemical Co., Detroit, Mich.

### A Cigar Proposition.

It will pay druggists to take advantage of the offer of Chas. Jacobs & Co. to give free 100 Havana Specials with the first order for 1,000 of this popular brand of 5-cent cigars. By distributing the 100 samples to your cigar customers you will create a demand for Havana Specials. They pay a good profit, and are guaranteed by the manufacturers to be positively the best goods in this line ever offered at so low a price. All goods are shipped on approval, and if you do not wish to order as many as 1,000, order whatever quantity you desire. Address Chas. Jacobs & Co., 333 E. 78th street, New York.

### Eosot and Geosot.

Eosot, or valerianate of creosote, is one of the popular preparations of creosote now prescribed by physicians. The Fischer Chemical Importing Co., 14 Platt street, New York, are the sole agents for the United States and Canada and supply druggists with literature free of charge. The company also controls the agency for Geosot, or Valerianate of Guaiacol, Uricidin Stroschein, Eosolate of Calcium, Eosolate of Silver, Sulpho-Acid salts of the aliphatic creosote esters, and the organic vegetable iron compound Spinelum Siccum.

The extensive and persistent advertising done by the American Malt Cream & Drug Co. is steadily increasing the demand for Malt Cream, and it is becoming recognized as a perfect food for infants and invalids, in fact, a general food for all people. As a substitute for tea and coffee, particularly as a cure for insomnia, it is without a peer. The American Malt Cream & Drug Co., South Bend, Ind., have attractive advertising matter which they will furnish to druggists. There is no cutting on Malt Cream, and druggists make 43 per cent. profit on every package sold.

### Electric Batteries.

The idea that has prevailed among physicians for many years that a first class battery could not be had for less than twenty or thirty dollars, has been disproved and double and single dry cell batteries can now be had at very reasonable figures. Druggists looking for reliable and moderate priced Electro Medical batteries and instruments of any kind should write for illustrated catalogue and price list to P. G. Williams, 6 Barclay street, New York.

# PATENTS, TRADE MARKS, ETC.

**PATENTS.**

Issued September 17, 1901.

- 682,611.—Essington N. Giffillan and E. T. McKaig, Chicago, Ill., assignors to New York Labeling Machine Company, of New York. Labeling-machine.
- 682,741.—Johannes Pfeifer, assignor to Deutsche Gold & Silber-Scheide-Anstalt, vorm. Roessler, Frankfurt-on-the-Main, Germany. Making cyanids.
- 682,794.—Friedrich A. Gasach, Hönningen-on-the-Rhine, Germany. Obtaining zinc solutions free from iron and mesanese compounds.
- 682,836.—Lucien H. Arnold, Chicago, Ill. Tooth-brush.
- 682,837.—Colby M. Avery, Chicago, Ill., assignor to Chulholm, Boyd & White Company, of Illinois. Pulverizing calcium oxide or lime.
- 682,854.—Charles E. Longden, Hamden, Conn. Stopper for water-bags.
- 682,855.—George Lucas, Brooklyn, N. Y. Bottle.
- 682,855.—William H. Wright, assignor to Vacuum Can & Jar Company, New York, N. Y. Apparatus for treating food products.
- 682,871.—Daniel Hogan, New York, N. Y., and C. W. Meinecke, Jersey City, N. J., assignors to Meinecke & Co., New York, N. Y. Cushion.
- 682,936.—George V. House, Mount Vernon, N. Y. Her-nial truss.
- 683,000.—Isaiah L. Roberts, assignor of one-third to E. N. Dickerson, New York, N. Y. Obtaining alu-minum hydrate by electrolysis.

**TRADE-MARKS.**

Registered September 17, 1901.

- 37,065.—Fly-paper. Lebrecht G. Heinrich, Holyoke, Mass. The words "New Wrinkle."
- 37,066.—Certain Named Medical Compounds. Lacto-Marrow Company, New York, N. Y. The word "Lactomaro."
- 37,067.—Remedy for Certain Named Diseases. Haworth N. Townsend, New York, N. Y. The word "Navanoids."
- 37,068.—Preparation for Certain Named Diseases. American Medicine Co., Waterbury, Conn. The representation of a scroll and the monogram of the registrant placed in a circle arranged between the lower ends of said scroll and beneath the same.
- 37,069.—Stomach and Blood Remedies. The Chapman Manufacturing Company, Chicago, Ill. The word "Normalia."
- 37,070.—Certain Named Cure for the Tobacco Habit. Robert Arthur Wilson, Portland, Oreg. The compound word "IH-HI."
- 37,071.—Medical Tablets. The Antikamnia Chemical Company, St. Louis, Mo. The letters "H A K" arranged in the form of a monogram.
- 37,072.—Tooth-Powder, Tooth-Paste or Tooth-Wash. Walter K. Peck, New York, N. Y. The word "Per-fectine."
- 37,073.—Liquid Hair-Restorers. Frank C. Fowler, Moodus, Conn. The word "Lore'aine."
- 37,074.—Remedy for Scalp Diseases and Tonic for the Scalp. Sophia North, Arlington, Mass. The letters "D R" arranged in a monogram form.

- 37,075.—Perfumed Soaps and Toilet Preparations. Annie S. Butler, London, England. The word "Poppia."
- 37,076.—Disinfectants and Deodorizers. Abraham Dreyfuss, New York, N. Y. The word "Antozone" and the representation of a gladiator grasping in one hand a sword holding a shield against which is directed a number of arrows, with the representation of the rising sun in the background.

## PHARAOH

was given so black an eye in sacred history, that some people hold their noses whenever his reputation is discussed. He really wasn't a bad fellow, however, because he had a pretty daughter who with a lot of the other girls went down to the beach every day and looked lovely in the bathing suits worth made for them. One day "Sary Ann" this was the real name of "P's" daughter discovered a basket in some tall grass near the beach, and such a squealing and giggling you never heard, when it was opened and found to contain a boy kid. Some say "S. A." should have minded her own business and thrown the kid in the river, but being "P's" daughter, and considering herself a privileged character, she took the basket home and advertised for a wet nurse.

!! "Imperial" Nipples had been known at that time Moses' mother would have lost a snap.

## MARKET REPORT.

## INDEX TO THIS NUMBER.

## NEW YORK MARKET.

## NO SPECIAL ACTIVITY IN ANY DEPARTMENT.

**NEW YORK, Sept. 24**—Weather conditions have been more favorable to the movement of Fall and Winter goods, and the general demand is somewhat better, but there is no special activity in any department.

**OPIUM**—The demand continues slow and unimportant, and quotations remain more or less nominal at \$3.25@3.50 for 100 lbs. and \$3.00@3.50 for 11 per cent. The easier feeling in powdered noted last week has resulted in a reduction in prices to \$4.40@4.60 for 13 per cent. and \$4.7@5.00 for granular, 16 per cent. is held at \$5.10@5.25.

**MORPHINE**—A continued fair jobbing business is reported with quotations unchanged on the basis of \$2.60@2.40 for eighths as to brand, less the usual rebate of 10c per oz. on lots of 10-ozs. or over.

**QUININE**—Trading continues wholly of a routine order, but the aggregate volume of business is somewhat larger and jobbers continue to quote 28¢@29c for bulk in 100-oz tins, 28½¢@29½c in 50-oz tins, 29¢@30c in 25-oz tins and 35¢@36c in ounces.

**MENTHOL**—The market is better supplied and easier in tone, with jobbing quotations reduced to \$4.60@4.80 per lb. and 35¢@40c per oz.

**BALSAM FIR**—Canada is again higher owing to diminishing stocks both here and in producing points and the revised jobbing quotations are: \$1.25@1.50 per gallon in bulk and 65¢@70c per lb. in pound bottles, inclusive.

**SPICE ROOT**—Western is very scarce both here and in the West and jobbers have further advanced quotations to 65¢@75c for whole and 70¢@80c for powdered.

**OIL BERGAMOT**—Values are easier in sympathy with lower foreign markets and jobbing quantities are obtainable at \$2.65@2.90 for best and \$2.40@2.65 for good, as to quantity.

**OIL PEPPERMINT**—Holders in producing markets are decidedly firmer in their views, and jobbers have advanced spot quotations to \$1.70@1.90 for Western, \$1.50@1.85 for Weynes Co., \$1.85@1.95 for H. G. H. and \$1.85 for distilled.

**BALSAM PERU**—The tone of the market is slightly easier owing to competition among dealers, and jobbing quotations show a decline to \$1.55@1.80 as to quantity.

**STEARIC ACID**—Owing to much higher cost of crude material jobbing prices have been advanced to 18@22c.

**MERCURIAL PREPARATIONS**—Holders have modified their views somewhat and jobbers are quoting 42¢@45c for 1-3 and 52¢@55c for 1/2.

**COD LIVER OIL**—There is no change in Norwegian, but Newfoundland is easier with jobbers willing to sell at 80¢@1.00.

**HYPOSULPHITE OF SODA**—Jobbing quotations are a shade lower, and crystals are obtainable at 2 1/2-10¢@2 1/2c by the keg and 2 1/2-3¢ for less, granular 2 1/2¢@2 1/2c by the keg and 2 1/2-3¢ for less.

**ANISE SEED**—Italian is again higher and jobbers have advanced quotations to 15¢@16c for whole and 16¢@20c for powdered.

**LYCOPodium**—Foreign markets continue firm and the outlook is favorable to holders, but spot prices for jobbing quantities have reacted to 57¢@62c.

**CUBEB BERRIES**—Market dull and easier with jobbing quotations showing a decline to 20¢@25c for whole and 25¢@30c for powdered.

**MAFE**—Quotations in a jobbing way have declined to 60¢@5c for whole and 55¢@6c for powdered.

**CARAWAY SEED**—Dutch is a shade lower and the revised jobbing figures are: 10¢@11c for whole and 14¢@16c for powdered.

**LARKSPUR SEED**—Stocks continue to diminish and jobbing prices show a further advance to 80¢@90c for whole and 90¢@1.00 for powdered.

**MANNA**—Pressure to sell old stock before arrival of new has caused a further decline to \$1.25@1.35 for large flake, 65¢@70c for small flake and 42¢@45c for sorts.

**LARD OIL**—Winter bleached is higher and jobbing prices show an advance to 35¢@41.00.

**HARLEM OIL**—Competition among importers has caused a reduction in jobbing prices to \$2.50@2.75 per gross and 35¢@40c per doz.

**OIL SAVIN**—Jobbing quotations have been reduced to \$1.30@1.45.

**HENNA LEAVES**—Quotations for small lots have declined to 70¢@75c for whole and 80¢@90c for powdered.

**NITRATE OF SILVER**—Jobbers have reduced quotations to 42¢@45c for ordinary and 45¢@50c for fused.

**LINSEED OIL**—Values have declined and jobbers offered raw at 60¢@70c by the barrel and 40¢@50c, boiled at 71¢@72c by the barrel and 80¢@85c for less.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |     |

**TYRATOL**, carbonate of thymol, is recommended as a vermifuge. It is a white powder having no taste, and is administered in quantities amounting to four grams per day. This treatment should be continued for four days, and at the end of this time followed by a purgative.

**EUGUFORM**, acetyl-methylendiguayacol, is used in dermatology with good results. It is obtained in the form of a grayish powder which is insoluble in water and almost odorless. It is particularly recommended in burns of the second degree, and is said to alleviate the most severe pains almost instantly.

**CARRIAGE OF CARBOLIC ACID**—The attention of the London Board of Trade has been called to the report of a Court of Inquiry recently held into the circumstances attending a casualty to the British ship "Piarraigian," in which three seamen lost their lives while endeavoring to secure some casks of carbolic acid which had broken adrift, and been stove in. The Court were of opinion that their death was due to absorption of carbolic acid through the skin, and found that the barrels containing the acid, being what is known in the trade as second-class barrels, were not up to the usual standard, and that, while stowed properly and in the usual manner, they were not sufficiently secured from shifting by being tommed down from the upper deck. The Court considered that special care should be taken in connection with this acid; that the casks in which it is shipped should be thoroughly sound and fitted to withstand the risk of bad weather; that care should be taken as to the manner and place of stowage, so that in the event of bad weather the danger and risk may be minimized, and that all those who are called upon to handle such cargo should be made aware of the special danger incurred by absorption of the acid through the skin.

### WOMEN IN PHARMACY.

From the remarks made at the meeting of the Deutsche Apotheker Verein, recently held in Hannover, it is apparent that the pharmacists of the kaiser's realm are far from ready to admit members of the fair sex to the ranks of the knights of the pestle. Certain members from the rural districts stated that they were unable to employ regularly authorized assistants, and they therefore proposed that the feminine members of the pharmacist's family be allowed to attend to the duties of the establishment, in order that the head of the institution might occasionally enjoy a stroll with an easy conscience, or meet with friends in social gatherings. This aroused vigorous opposition, calling forth remarks which were in several cases more forceful than chivalrous. Some of the opinions expressed were to the effect that no "pharmaceutical shop-girls" were wanted; that women were too stupid; that they should find their proper sphere of activity in the kitchen, and that girls should marry. Similar ideas shocking to American ears were freely advanced. One member was certain that it would be impossible to obtain apprentices if women were employed in the same establishments, which is contrary to the opinion widely accepted among ourselves that femininity has an attractive and not a repellent force. One member remarked that the idea that a pharmacist in sole charge of a country pharmacy could find no time for recreation, was nonsense. He had carried on a pharmacy unaided during seven years, and had found time to meet his friends 365 evenings in common

years, and 366 evenings in leap years. According to this gentleman the apothecary should know how to treat his patrons, and give them to understand that the pharmacist also relishes his glass of beer or wine, and teach them to adapt themselves accordingly. In a really urgent case he thought almost anyone would be willing to wait two or three minutes until the apothecary could be called.

Truly the conditions prevailing in Germany differ from those in force in America. To give expression to these views in any gathering in the United States would require great courage, and the pharmacist in the habit of spending his evenings in a neighboring saloon would not require to be called very often. There may be some objection to the admission of women to the profession among some of the more conservative members of our community, but we are not accustomed to hearing such reasons for their belief as those advanced by the apothecaries of the waterland. It would in all probability make very little difference if the male druggists did object. The American woman is accustomed to do as she pleases, and will continue to do so in this as in other matters. She has appropriated a place in pharmacy, and if she has as yet not made it uncomfortable for the male members of the profession, this is very likely owing to her own wishes. There is little or no opposition to the presence of woman in pharmacy in this country. She has proved herself to be efficient, faithful and worthy of confidence. There are no reasons why she should not take an important place in this line of business, except perhaps her natural modesty and the common and apparently incurable habit of getting married.

### THE GERMAN APOTHECARIES SOCIETY.

The members of the German Apothecaries Society may well feel proud of the history of their organization. The society has done a great work in the years of its life. Somebody has wisely remarked that the highest effort of philosophy in one generation may become the common sense of the next. The statement is certainly applicable in this connection. In the early days of its existence the members of the D. A. V. were always found supporting the side of their profession, advancing its interests, and doing much to elevate its educational and material standards. Many of the measures suggested by these pioneer pharmacists are incorporated into the pharmacy laws of to-day. The dreams of the society's founders have been more than realized and the grand result of fifty years of toil and anxiety in building up the organization afford an example of what united effort may do. Its history shows that institutions in harmony with

progress may expand and strengthen as time rolls on, that they may and do strike their roots deeper and take on new forms of perennial growth.

There are two factors in the German Apothecaries' Society which have contributed to its success as one may learn from a perusal of the sketch of the organization elsewhere in this issue. They are—the desire for improvement and professional education, and the German characteristic of knowing how to have a good time. The reading circles, the lectures upon various topics related to pharmacy, the constant effort in behalf of better laws are proof of the former proposition; while evidence supporting the latter is to be found in the numerous social gatherings, picnics, etc., held by the society. The happy combination of business and pleasure is the real cause of the success of this organization. It should be borne in mind by other societies if they wish to prosper.

The spirit of the founders has been kept alive in their successors. Well might the poet sing of their deeds:

"We shunned not labor; when 'twas due,  
We wrought with right good will,  
And for the home we won for them,  
Our children bless us still.  
We lived not hermit lives; but oft  
In social converse met;  
And fires of love were kindled then,  
That burn on warmly yet.  
Oh, pleasantly the stream of life  
Pursued its constant flow,  
In the days when we were pioneers,  
Fifty years ago!"

#### THE FUTURE OF PHARMACY.

Among the papers read at the St. Louis meeting of the A. Ph. A. was one in which the modern tendency toward combination and the probable effect of this tendency upon the future of pharmacy was discussed. The consolidation of large business interests into trusts, the gradual disappearance of the smaller establishments and the growth of department stores were considered. The changed conditions observed in the business of selling and compounding drugs were ascribed to the same general causes, and the futility of attempting to prevent the growth of a new order of things by legislation and other means was pointed out. The general tone of the paper is hopeful. The author seems to believe thoroughly in the beneficial effects of combination. The first result of concentration he contends is a saving by lessening the waste of competition, greater efficiency and better prices to the consumers being obtained. Little account is taken of the inevitable hardships to those engaged in the line of business undergoing alteration. He believes that both the business and professional side of pharmacy will gain by the change, and that efficiency will be more certain to bring its reward in the new order of things than in the old. Altogether a rosy future is prophesied, and a gradual improvement of the unsatisfactory conditions prevailing at the present time predicted.

There are no doubt many who are unable to take this optimistic view of the situation, being unwilling

to admit that the effect of combination is entirely beneficial. Druggists like other professional and business men find it difficult to see any advantage in a movement which must lead to at least a temporary loss of income and prestige. There will always be many who will look back with regret upon the time when the business of preparing and dispensing medicines was in the hands of numerous independent pharmacists who prepared practically all of the remedies employed in the treatment of disease. Complaints of the hardness of existing conditions are the order of the day. From the expressions one hears over the counter and in gathering of druggists it would seem that the conditions are all bad, and that the profession is rapidly going to the dogs. A cheerful view of the situation is therefore very welcome. There is certainly food for thought in the opinion advanced by a representative successful pharmacist that many of the difficulties with which druggists are at present contending are merely the means by which a better order of things is to be brought about.

In one of the European pharmaceutical journals we find a recipe for restoring insect-infected powdered drugs to a salable condition. The writer proposes killing the grubs and beetles by sprinkling with gasoline, and removing the "cadavers" by means of a sieve, taking no account of excreta slyly added to the powder and the legs and antennae broken off in the shuffle. The originator of this plan must be an economical soul. It probably has not occurred to him that he might also utilize the material incorporated in the bodies of the insects by adding the cadavers to his stock of Spanish fly or cochineal. A druggist mean enough to work off damaged stock in this way is probably also too mean to read a reputable journal. There is, therefore, little danger that any of our readers will make use of the information and suggestion here offered.

One of the questions, discussed by the members of the Virginia Pharmaceutical Association at its twentieth annual meeting, was the ease with which persons who have failed to pass the Board of Pharmacy Examination can get a special certificate to practice pharmacy through legislation by direct grant, a movement was inaugurated looking to an amendment to cure the evil. Grants of this character are not peculiar to Virginia, for all states have had similar experiences. Legislation of this kind is a menace to public health, and it also handicaps the board of pharmacy, which honestly tries to restrict the sale of drugs to competent men.

In the death of William S. Thompson of Washington, D. C., pharmacy loses one of its most ardent disciples. Long identified with his calling as practiced in this country, he was a true representative of the best progressive and scientific element of the profession. He was an energetic worker in the ranks of the American Pharmaceutical Association, having been president of that body in 1883. He was also a member of the Board of Trustees of the United States Pharmacopoeial Convention, and his removal leaves a vacancy hard to fill. His colleagues and many friends will deeply mourn his loss.

## SHOP TALK.

A new field for druggists in small country towns has been opened by the growing scarcity of many of the medicinal plants once gathered in such quantities in various sections. The professional root diggers who traverse the country systematically gathering plants have threatened the practical annihilation of many species by their greedy and wasteful methods of collection, and unless something is done the supply of many useful plants will be almost completely cut off. Blood root, golden seal and many others are very scarce in their usual haunts, while others of less importance are only to be found in out of the way localities. There is a chance here for country druggists to make money by taking advantage of this situation and inducing farmers to cultivate such plants, either on waste lands or in their home gardens, and then purchasing their crops from them for sale to wholesale firms. Probably the most feasible plan would be to get the women of the family to cultivate medicinal plants instead of flowers, many species growing well under cultivation and returning good yields, as a source of "pin money" and profit, while the farmers themselves might be made to see the profit in devoting a few acres to such cultivation. The cultivation of our native drugs can be made very profitable with the same amount of care devoted to vegetables or large crops, and waste or forest land can be made the source of a handsome revenue by a very little labor in propagating species growing there wild. Hitherto this has not been given much thought because of the plentiful supply of wild plants; now this supply is threatened with total extinction in many sections and prices of crude drugs are correspondingly high, a condition that promises money for some shrewd observers. Any country druggist who will take the trouble may make himself the central supply for the crude drugs of his neighborhood with very little expense and big profits. He will find the dealers more than eager to secure supplies from a man who can ship them crude drugs properly classified and cured, and who is better fitted to do this than the druggist whose profession it is to identify drugs and to take proper care of them. Let the country druggist make it a business to pay boys and girls for collecting wild species, and to persuade farmers to cultivate others and let him take their crops. It will not need much capital.

\* \* \*

The recent small pox scare in Philadelphia emphasizes the need of druggists keeping posted as to local affairs. Although the newspapers were full of the news, and physicians everywhere were being called in to vaccinate even whole families, only a few local druggists were shrewd enough to arrange for a fresh and adequate supply of vaccine from the dealers, and many complaints were heard from both physicians and customers that it was very difficult to get vaccine from the average drug store. Nowadays, it is possible for the druggist to arrange with the manufacturers of vaccine to furnish him with a fresh supply daily in any quantity, especially in cities where any shortage in stock can be made up previously agreed on telephone orders, and some manufacturers are so jealous of the reputation of their product that they will exchange fresh vaccine for old. Vaccination shields were also badly wanted and were hard to find, as were plasters and other dressings. One druggist sold over a gross of bunion plasters in one week for placing over the vaccinated spot to prevent it from being chafed by the clothing; another disposed of an equal amount of vaccination shields in five days. When one reads in the daily papers of over 3,000 persons being vaccinated at one big steel making plant, and of physicians being kept busy day and night, it seems as if it would pay the druggist to keep up with the times and supply the demand. A point not to be forgotten is to advertise the fact well to public and physicians that one keeps fresh vaccine and shields, etc., then see that your stock is fresh and well kept.

A tin can hung in the ice chamber of the soda fountain will hold a number of points and will insure their being fresh for quite a time; do not keep them in the show case or in a warm place behind the prescription counter. It is not yet too late to take advantage of the situation, small pox is on the increase in New York and Philadelphia and the populace are just beginning to get thoroughly scared. The law requiring school children to be vaccinated before admission to the public schools also creates constant demand, and the local vaccination physicians can easily be made good customers. Many parents vaccinate their own children, here, too, is good trade for the druggist.

\* \* \*

It happened in an uptown Philadelphia drug store the other day and goes to show that omniscience is an often needed stock in trade for the druggist. A little girl came into this drug store the other day, saying "I want a spool of cotton. I want a spool of cotton" to the clerk who was trying to learn her wants, and she continued to reiterate her request for some time in spite of the attempts to find out what she was sent for, clutching something tight in her hand the while. Finally the druggist sent her home to ask her mother what was wanted, he thinking she had got things mixed somehow. Pretty soon an indignant woman appeared. "Do you mean to tell me you haven't got any nutmegs?" she said. "Certainly I have," replied the druggist. "Then why didn't you give my little girl one when she asked for it," exclaimed the woman. "A nutmeg," said the druggist, "why she asked for a spool of cotton." "Couldn't you see the nutmeg she had in her hand," retorted the mother. "I saw something in the little girl's hand, certainly," he answered, "but how could I guess it was a nutmeg when she held it shut?" "Well, you might have smelled it," snorted the woman; "what are you druggists good for any way?" and out she flounced.

\* \* \*

A Philadelphia druggist well-known for his reputation for prescription work has almost entirely given up the use of twine for small parcels in the substitute of rubber bands. These his clerks use to make secure little packages like those containing pill or powder boxes, vials up to eight ounces and for the many little things sold over the counter. A wide-tight-fitting band, he says, holds the wrapping around a pill or powder box much neater than twine, and it is easily slipped on by the clerk in a rush and is as easily removed by the customer when unwrapping the package. For bottles he uses two sizes, one long enough to go around the bottle lengthwise, the smaller one is then put around the neck with a couple of turns, holding the first one fast in place. The only precautions to be taken are to secure a good grade of rubber and to use wide bands, the very narrow ones slip and are not so satisfactory. The greatest advantage of rubber bands is in a busy hour, it taking far less time to secure a package this way than by twine, which has a habit of slipping when one is in a hurry.

\* \* \*

Stewart Gamble, president of the Minnesota Pharmaceutical Association, who, with his partner, runs one of the largest and busiest drug stores in Minneapolis, has noticed several evils in connection with the practice of keeping drug stores open until midnight. He has in consequence entered upon a crusade to cause all such stores to close by 9 o'clock. The matter will come up for action at the next meeting of the State association. Mr. Gamble says that clerks who have been on duty until midnight are more than half incapacitated for work a great part of the following day. With earlier closing he says, almost every drug store could get along with one or two fewer men.

(Specially Prepared for the Era)

**FROM THE FRENCH CAPITAL.**

Paris, September 5, 1901.

August and September are the holiday months in Paris, and pharmacists and others (tied in town last year by the Exhibition), are now absenting themselves as far as possible. All the Faculties and Schools are still dispersed for the holidays.

**The Institute of Applied Chemistry**

terminated its scholastic year by a formal prize distribution. On this occasion Prof. Moissan (late of the Paris School of Pharmacy), Director of the Institute, insisted on the necessity of new premises. During a recent storm, he affirmed, the laboratory floors were flooded and the students had to put on sabots (wooden shoes) to avoid wet feet! There is some talk of appropriating the buildings of the recently closed College of Ste. Barbe for the use of this Institute.

Another little scientific function about the same epoch was the

**Unveiling of Chevreul's Statue**

in the gardens of the Paris Museum of natural History (Jardin des Plantes). M. Edmond Perrier, Director of the Museum, presided, and reviewed the life and work of the centenary chemist in a neat speech. The monument bears the inscription Chevreul 1786-1889.

Professor of Organic Chemistry, 1830-1889  
Director of the Museum, 1863-1884  
Contrast of Colors, 1839-1884.  
Studies of Dyes, 1834-1864.

**The Pharmacists' Foes.**

One profession knows no holiday months—the swindler's. The individual who makes the pharmacist his especial prey seems to have been both very busy and very original during the last month or two. One calls in and presents a bogus prescription to be made up and sent to a given address, asking at the same time for a few put-up goods (wine, toilet requisites, or anything handy) to take away with him for immediate use, but to be paid for at the same time as the prescription. The address given is of course a false one. Another simply requests goods to be sent to some neighboring address, awaits the pharmacy messenger outside the door, and persuades him to hand him the parcel "while he goes to get change." He never returns, and is unknown at the house where the address was given.

Add to this several cases of robbery by past and present employes, and the minor accidents and inconveniences reported in the following paragraphs, and it will be seen that pharmacy in Paris, as elsewhere, is hardly a bed of roses.

**A Curious Case**

indeed was the tripping up of a servant girl by passing dogs in the Avenue des Ternes. She fell through the plate glass window of a pharmacy. The pharmacist caught one dog and sued its master, a doctor, for the value of the damage. But it appears that there were two dogs playing together; the bigger one escaped. The one caught was held to be too small to have caused the girl's fall, and the pharmacist was nonsuited. He is still looking for the big dog.

**A Fire**

was caused at M. George's pharmacy, Boulevard de Strassbourg, by the carelessness of an employe who carried a lighted candle into the cellar, although he knew there was a broken benzine bottle there. The flames caught the wickerwork around a carboy of alcohol, and dense smoke soon attracted the firemen. Learning from the drug clerk that a man was in the cellar, a courageous policeman crept into the opening, in spite of the thick fumes, and emerged with his insensible burden. In fact the whole neighborhood was alarmed by the dense smoke and the possibility of a fatal accident, but the fire was promptly got under control.

**Illegal Sale of Medicine.**

Complaints having reached the local pharmaceutical syndicate that the grocers, etc., at Aix-en-Provence (a small town near Marseilles) were in the habit of selling medicaments, an official inspection was made by the police commissary of the town, accompanied by Prof. Domergue. The raid was most successful; in every one of the six shops visited seizures of more or less importance were made. Arnica figured in most of the lists; in one shop 88 packets of cotton wool (iodoform and boric acid) were seized, and nux vomica and other poisons were discovered in several cases. The Court condemned each delinquent to a fine of \$100, and \$5.00 damages, to be paid to the Pharmacists' syndicate, and confiscated the goods seized; but gave the culprits the benefit of the First Offenders' Act.

**Old Age Pensions for Pharmacists**

are favorite topics of discussion just now. M. Leger, a pharmacist of Le Chesnay (S & O) founded his "Confraternal Association of French Pharmacists" in March, 1900. Since then six deaths have occurred, each of his members has accordingly disbursed a total of about \$12.50. The sum payable at death is \$2.00 per head; as the Association now numbers 500 members, the total would accordingly be \$1,000. M. Leger hopes to increase the number of subscribers to one thousand. In this case \$2.00 a head would of course give the widow exactly the double of what she now receives.

The "South-eastern Federation" of Pharmaceutical Societies are studying a scheme of their own for old age pensions; but the most original idea is one recently published at Paris.

**Pensions and Pensions.**

The "Regalia" Society proposes that all pharmacists who sell proprietary medicines, at full prices should combine and form an "agency." This agency should collect 10 per cent on all specialties sold at marked figures; and a fund thus formed to pension all pharmacists over 60 years of age who have been in business at least twenty-five years.

The sale of proprietary medicines in France, it is stated, totals \$9,000,000 yearly. Were it only \$5,000,000 this would suffice to give the sum necessary to provide \$640 yearly for each aged pharmacist, according to the calculations of the authors of the project, who, by the way, insist on their idea as the best method of putting an end to the hostile feeling at present existing between the makers and venders of cut-priced preparations.

**CHARACTERISTICS OF STROPHANTHUS SEED OIL.**—Strophanthus hispidus yielded by expression 12.8 per cent. of fatty oil, while an additional 0.2 per cent. was obtained by subsequent extraction with ether. The oil was fairly thick and of a brownish-green color, appearing yellowish brown by transmitted light. Its specific gravity at 15°C. was 0.9249. It became completely solid at -6°C., and melted again at 2°C. It was rapidly bleached by sunlight, but did not dry. Completely insoluble in water, slightly soluble in alcohol, and readily soluble in ether, chloroform, and petroleum spirit. Examined by the usual methods it gave the following results:—Acid value, 24.3; saponification value, 104.6; iodine value, 101.6; Reichert value, 0.9; Hehner value, 94.1; melting point of fatty acids, 30.2°C. It was found to contain slight traces of a volatile oil, phytosterol, formic acid, and another volatile fatty acid. The insoluble fatty acids were converted into their ethyl esters and separated by fractional distillation. In this way oleic, stearic, and arachidic acids were identified.—(Bjalobrsheki in Pharmaz. Jour.; Journ. Soc. Chem. Ind.)

**CORRECTION.**

By an unfortunate error in the formula for Solution of Iron Hypophosphites, this journal, July 25, 1901, page 66, the quantity of glycerin required is stated to be 10 fluid ounces. This statement is incorrect; it should be 10 fluid drams, as any pharmacist would easily determine on reading the directions for preparing the solution.

# A PH. A. PAPERS.

## A GINSENG GARDEN.

BY JOHN URI LLOYD.

When the American Pharmaceutical Association met in Kansas City in 1881, Mr. Huber, of Fond du Lac, Wisconsin, consulted the author of this paper regarding the cultivation of ginseng. The firm with which he was connected was much concerned in American roots, barks and herbs, and Mr. Huber thought of fortifying the wild ginseng by that grown in cultivation. He presented the author of this paper with a package of seed and we talked over the possibility of the venture. So far as the writer is concerned he does not know that Mr. Huber did anything more in that direction, although if memory does not fail, he stated at the aforementioned meeting that he had not been successful in practical propagation. During the recent year or two this subject of ginseng has been again agitated, and it is now taking quite a hold on the thought of persons engaged in developing the resources of our country. Indeed, the problem is an important one, for we all know the value of ginseng as an article of exportation to China.

In March, 1885, the author of this paper called attention (in a supplement to *Drugs and Medicines of North America*) to the use of ginseng in China, and although that phase of the subject is not directly connected with our article, we presume to introduce here in the note referred to. By reason of its past and present interest and also by reason of the fact that this supplement to the publication mentioned is entirely out of print, the data should be recorded:

**THE USE OF GINSENG IN CHINA.**—The following letter from Mr. K. W. K. Chu, a highly educated gentleman, and former professor of the Chinese language in Yale College, is of special interest on account of its reliability. It was written to us in 1881, in reply to our inquiries on the subject:

The Chinese physicians make frequent use of ginseng root, particularly in Canton province, but do not regard it as a panacea. The fact and occasions of its use are quite familiar to me, and I have studied and practiced medicine for some time in China.

The Chinese ginseng grows in but few localities, is very scarce, and commands a high price—the best commanding a hundred times its weight in silver, and from that down to half its weight, according to the locality where it is grown. The native root has different and more tonic properties than the imported. We think it strengthens the breath and sometimes saves life. The emperor and his friends consume nearly all the high-priced native product.

Doubtless the medicinal value of the plant is exaggerated, and the popular belief in its virtues heightened by the example of the imperial family and wealthy persons in using it.

That imported from America is considered to have cooling properties and to be especial useful in yellow fever and inflammation of the bladder. It is also given for tenderness and enlargement of the liver, and whenever the urine is high colored. It is also considered to promote the discharge of the urine. Sometimes persons who have taken liquor to excess, eat a little of it with benefit to relieve the tipsy feeling. We regard it as opposite in properties to ginger-root and cinnamon.

It is not used for incense.

You are at liberty to mention my name in connection with the statement, if you desire."—Addenda to *Drugs and Medicines of North America*, 1885.

As is well known, the section of country about Cincinnati, the heavily wooded Ohio Valley, was (and is yet a factor) the chief source of ginseng supply. But as the woods have been mostly cleared off and the thickets cleaned out, this plant, which never grows in beds and is always very scattering at the best, became scarcer and scarcer, until now it is nearly in a condition of extermination.

During the time the section of country in which the root was indigenous was producing large quantities of ginseng, the hills and knobs of Boone (Stringtown) county, Kentucky, were wooded, thickly under brushed, the soil very rich, and there the ginseng grew to perfection. But things even here have changed. The great knobs are bare, the woods are gone, the ginseng has disappeared. The price the gatherers received in the time of the boyhood of the writer of this paper was 50 cents per pound, even as

low as 25 cents per pound, but now the prices range from \$1.00 to \$4.50 per pound. Only from the almost inaccessible mountain lands of West Virginia, Eastern Kentucky and Northern Tennessee (largely called dry) can we expect to get the vanishing supply of ginseng for the future, a supply that in 1880 amounted to 80,000 pounds from this one city of Cincinnati.

And now, after these preliminary remarks, we reach the subject of this article. In a recent visit to Boone county (Stringtown), the old time land of the author, he was asked if it would be of interest to visit a ginseng garden. Of course the writer was concerned immediately, and took the first opportunity to do so. This garden belongs to Mr. S. Long, of Union Boone Co., Ky. It is situated in the shade on the side of a hill, is fenced in by a tall paling fence with narrow cracks between the palings. About ten feet in height it is covered with three-inch slats, between which about 34-inch space is left for the light, and in very hot weather in the summer the top is covered loosely with brush. We thus briefly describe the surroundings of the garden. Inside it bears the appearance of any vegetable garden under proper conditions where the stock seems to be thrifty and in its native element, and as I found Mr. Long very willing to impart information concerning the same, I hereby relate, in his own words as he gave it, his experience with this ginseng garden:

"I secured first about 300 plants from the woods where ginseng naturally grows in this section of the country. These plants were taken up with great care, plenty of dirt being left on their roots. They were carried in the cool of the day from their native location to the garden I had prepared. The earth was such as I would have used for the purpose of raising onions, a rich loamy soil. These plants were set about 6 inches apart, the rows being about 6 inches from each other. I did not notice in any instance that the transplanting disturbed the early plants in the least. From the 300 plants I collected the first year about 3,000 seed. That fall when the seeds had ripened I collected them from about 600 more plants, which I planted in the same manner as I had done the 300 plants, making a total of 900 roots. The following spring out of the 900 roots, 800 came up making a good crop of seed. Of this I will add that of the plants set out in the fall there was a greater portion lost than of the plants that were set out in the growing season. The seeds that ripened in July, if planted at once, will come up the next spring; those that ripened later do not come up until the second spring. I can give the proportion of loss in sprouting. The first year's plant is a little three-leaved spindle, and the growth is very slow. As is well known, the scars left by cast-off stalks give the age of the root. I have plants in my garden that are at least twenty years of age. I am cultivating ginseng both for the root and the seed, the seed at this time being very costly, although the root only has any commercial value except for planting. I am enlarging my gardens as rapidly as possible and use all the seed that is produced, at the present having none to distribute.

It will be seen from the above that Mr. Long supplies from his own experience in a ginseng section of the country just the data to serve persons concerned in drug cultivation. The fact that he did not go to the woods for natural dirt seems in my mind to be of great interest, for it is certain that in any section of the country a slat garden after the manner of Mr. Long's garden can be easily put up, and it is also easy to obtain mature plants from gatherers by paying them an additional price therefor. As the writer of this paper predicted years ago, either cultivation must be given such plants as Ginseng and Hydrastis, or they must within a moderate period become extinct.

ACONITE may be estimated in preparations of aconite, according to M. Ecalle (*L'Union Pharmaceuticque*), by precipitating the alkaloid with silicog-tungstic acid, as in Bertrand's method.

SOUNDAKE, or African cinchona is the subject of a report by M. le Dr. Heckel (*Bulletin de pharmacie de Lyon*). The bark of soundake, which is unfortunately rather rare, is said to possess remarkable curative properties for affections of the stomach, and seems to be an excellent tonic.

## THE MEDICINAL PLANTS OF THE PHILIPPINE ARCHIPELAGO.

A REVIEW BY CLEMENT B. LOWE.

Through advanced sheets furnished by the courtesy of the publishers, Messrs. P. Blakiston's Son & Co. of Philadelphia, I am enabled to call your attention to a work with the above title that is just about to be issued.

The work was originally published in Spain in Madrid in 1892, and was from the pen of Dr. T. H. Pardo De Tavera, a distinguished physician of Paris, originally a native of the island of Luzon. The book contains the results of two years' investigations of the plants of the Philippines by Dr. Tavera under commission of the Spanish government. Unfortunately the specimens gathered by Dr. Tavera of which it was designed to make further investigations and definite chemical analyses in Paris, were spoiled in transit through imperfect packing; consequently the constituents of many of the plants are only imperfectly ascertained.

The work has been translated into English by Capt. Jerome B. Thomas, Assis't Surgeon U. S. V., stationed in Manila. The book in size is a demy octavo of about 275 pages. The plants treated are arranged according to their natural orders, the poly-petalous dicotyledons being considered first, then the gamopetalous dicotyledons, and finally the monocotyledons. The work has a very full index which contains all the native names of the plants. It also contains a full therapeutical index which gives the diseases for which the plants are used in the islands. The book, of which Surgeon General Sternberg has ordered 500 copies for use of the army, is valuable for being the only one of the kind in existence, and it will probably prove a stepping-stone to further investigations. It is hoped that it will prove an incentive to the study of the plants mentioned by the medical and pharmaceutical officers of the government now stationed in these, our new possessions. To assist in this study, the botanical descriptions which are very fully given, and also the time of flowering, have been supplied by Dr. Thomas where they were wanting, and also the English names.

It might be profitable for some of the large manufacturing pharmacists to take up the study of the most used and apparently valuable of these Philippine drugs, have their constituents determined by chemical analysis and their medicinal properties determined by physiological experimentation.

Among the plants of special interest are *Tinospora crispa*, *N. O. Menispermaceae*, whose Tagalo name Makabuhay means literally "you may live." This plant is one of the most widely known and used in the Philippines, a kind of cure-all. A decoction is given internally in malarial fevers and dyspepsia; and externally proves a valuable stimulating wash for ulcers. The stem is the part employed.

The *Dipterocarpus turbinatus* yielding Gurjun balsam grows in Luzon, Mindanao, and other islands.

One of the pleasant remedies used is the acid juice of *Averrhoa Carambola*, which is successfully used in the treatment of bilious diarrhoea.

*Samadera Indica*, belonging to the Quassia Family, is used by the natives for fashioning cups and vases in which water is allowed to stand for 6 to 12 hours, as in the quassia cups used in our country, used for stomach disorders. Gum Elemi of the Philippines is distinctly claimed to be the product of *Canarium commune*, and that in addition to its value as a tropical application it has properties similar to Copaiba. In speaking of the seeds of *Abrus Precatorius* the author alludes to the fact that in the distant past they were used by the Filipinos to weigh gold.

One of the most popular remedies is *Cassia alata*; it is used largely for herpes, the juice of the fresh leaves being applied, its activity depending upon the chrysophanic acid present. A plant which should be studied is *Entada scandens* *N. O. Leguminosae*. The mashed bark which probably contains saponin is used extensively as a substitute for soap in bathing, espe-

cially in bathing the hair, as it is said to render it very soft without drying it too much, as does soap. A popular shampoo preparation might be made from it. The maceration is vigorously applied by means of the bark in case of itch; the female acari is thus rubbed out of her burrow. *Acacia Farnesiana* grows everywhere, forming dense thickets in some of the provinces; it yields an abundant gum, quite similar to gum arabic, and equal to it in value. It is claimed that it will eventually supersede the latter in the Philippines.

In speaking of *Carica Papaya* it is stated that the natives use the cold infusion of the leaves to wash clothes spotted with blood, and the spots disappear rapidly by virtue of the ferment papain which digests the fibrin. The infusion is also used as a wash for sores and gangrenous ulcers.

*Coffea Arabica* is mentioned as constituting one of the greatest sources of agricultural wealth, and there are many ideal sites on the islands for its cultivation, so that in a short time it looks as if the United States would be independent of other nations as to its coffee supply. *Alstonia scholaris* yielding the Dita bark grows in the forests of Luzon, and is used extensively as an intermittent.

*Nicotiana Tabacum* grows in all parts of the islands. Among the interesting comments is the following, viz.: "The antiseptic power of tobacco is undoubted, but it is intolerable that a physician under the pretext of avoiding self-infection should enter the house of his patient and continue smoking at the bedside."

Other interesting drugs might be cited, but perhaps I have mentioned enough to induce you to examine the book for yourselves.

## OXYGEN AS STANDARD FOR THE GASOMETRIC TESTS OF THE PHARMACOPOEIA.

CARL G. HINRICHS, Ph. C., St. Louis, Mo.

The pharmacopoeia contains only one gasometric process, that for the three nitrites (p. 509), but those commonly used by the chemist for peroxide and hypochlorites are much superior to the volumetric process given, and are therefore recommended for introduction in the new pharmacopoeia. The difficulty about the practical use of gasometric determinations exists mainly in the supposed necessity of the reduction of the gas volume to the standard pressure and temperature, 760 mm. and 0°C. This involves really two equally great difficulties, namely, the accurate determination of the pressure and temperature by means of a tested standard barometer and the thermometer, and the calculation of the expansion due to these causes. The vapor tension must also be carefully allowed for. These difficulties have long ago been removed by the system described in Hinrichs' General Chemistry, Lecture 49 (pp. 228-231). The essential condition aimed at in devising this method was to complete the chemical work by strictly chemical means exclusively, that is, by the sole use of the balance and gas burette, neither thermometer nor barometer being required.

The unit in this system is the milligramme molecule of hydrogen, occupying 24 cc. It is produced by the solution of one milligramme atom of magnesium (Mg equals 24). Hence each milligramme of magnesium produces one cc. of hydrogen gas under the standard condition. This hydrogen standard is for practical purposes perfectly reliable, but the conflicting determinations recently made by certain chemists make it desirable to make this work independent of hydrogen. I have therefore made careful determinations of the oxygen standard, obtained by dissolving a weighed amount of pure crystallized permanganate in peroxide of hydrogen acidified with one eighth volume of concentrated sulphuric acid. Since 2 atoms of permanganate produce 5 molecules of oxygen gas (one-half from each of the permanganate and peroxide), it follows that 316 mgr. permanganate gives 5 times 24 or 120 cc. of gas under the standard condi-

tion of this system. Hence 38 cc. oxygen gas per decigramme permanganate.

The determinations made are given below. They show that the values chemically produced agree exactly with the requirements of the reduction obtained by calculation from temperature and pressure. For practical purposes it is best to refer to the cubic centimeter as the unit, by simply dividing by 38.

| 4   | 740       | 24      | 1.074                  | 2.144         | 87.5       | 40.81            | 1.074                   |  |

The result are practically identical, which is all that is required for the best practical work.

The statements of the pharmacopoeia in regard to the reduction are unfortunately faulty in regard to the change of the barometer which de facto may cause an error of three per cent. They entirely omit reference to the great influence of vapor tension. Per contra, they give the expansion due to temperature altogether too fine, namely to the millionth. This part of the pharmacopoeia of 1900 will, I doubt not, be most carefully revised by the present committee of revision.

## LABORATORY NOTES.

### THE ESTIMATE OF UREA BY MERCURIC NITRATE.

An important article on the quantitative estimation of urea in urine is contributed to the Journal of the American Chemical Society for September by J. H. Long of the Northwestern University, Chicago. After reviewing the methods of estimating urea by mercuric nitrate and hypobromites and hypochlorites, and pointing out the errors that make both methods far from accurate, the author proposes to revive the Liebig method by the use of a mercuric nitrate solution of which 1 cc. shall equal 0.01 gm. urea, checked by tolerably constant factors which he has determined. This method has been worked out in this laboratory on a number of samples of pure urea mixed with ammonia, uric acid and creatinine, and applied to samples of urine, and it has proven so satisfactory that it has been definitely adopted as the routine method for urea estimations. Its adoption by pharmacists who make a feature of urinalysis is recommended on the score of ease of application, quickness of operation, and closer approximation to accuracy than the hypobromite methods, nor does it require any apparatus other than that in common use. While the estimation of urea by a measurement of the nitrogen evolved from calcium hypochlorite solution ("bleaching powder") is not so difficult, there is often difficulty in completely decomposing the urea, and other constituents of urine also evolve nitrogen with the solution.

The estimation of urea by the mercuric nitrate solution is carried out in the usual manner with an accurately standardized solution, 1 cc. of which equals 0.01 gm. urea, a paste of sodium bicarbonate being used as an outside indicator. The corrections are as follows:

Chlorides.—With urine containing the normal amount of sodium chloride 2 cc. should be subtracted from the total reading of the burette, this quantity of the reagent being required to convert the chloride of sodium present into nitrate which must be completed before the reaction with urea begins. If the chlorides are not in normal amount, discovered by the previous estimation of chlorides, the above correction must be altered accordingly, or, the chlorides may be precipitated before estimating urea by silver nitrate solution, care being taken not to use an excess.

Ammonia.—Present in urine normally about 600 milligrams to 1000 cc. Taking this as the representa-

tive amount, the factor for correction was estimated by titrating 20 cc. of solution of urea 0.2 gm. with ammonia nitrate 0.01 gm. by mercuric nitrate solution (standard); this was found to average 1.6 cc. mercuric nitrate solution.

Uric Acid.—Present in urine normally about 650 to 750 milligrams to 1000 cc. On this basis, 20 cc. of a solution containing 0.2 gm. urea and 0.005 uric acid required 0.1 cc. mercuric nitrate solution in excess.

Creatinine.—Present in urine normally about 1 to 1.6 grams to 1000 cc. On this basis, 20 cc. of creatinine solution (1 per cent) required 0.5 cc. mercuric nitrate solution, therefore 0.1 gm. creatinine equals 4.75 cc. mercuric nitrate solution.

The total value of these corrections, based on the normal amount of disturbing substances in urine, will be therefore as follows for 10 cc. urine the amount generally employed for urea titration:

|                                                         |                                             |
|---------------------------------------------------------|---------------------------------------------|
| for 6 mgm. ammonia in 10 cc. urine + 10cc. water =      | 10 cc. Hg (NO <sub>3</sub> ) <sub>2</sub>   |
| for 1.5 mgm. uric acid in 10 cc. urine + 10 cc. water = | 0.15 cc. Hg (NO <sub>3</sub> ) <sub>2</sub> |
| for 14 mgm. creatinine in 10 cc. urine + 10 cc. water = | 0.85 cc. Hg (NO <sub>3</sub> ) <sub>2</sub> |
| for normal chlorides in 10 cc. urine + 10 cc. water =   | 2.0 cc. Hg (NO <sub>3</sub> ) <sub>2</sub>  |
| Total correction for normal urine =                     | 4.00 cc. Hg (NO <sub>3</sub> ) <sub>2</sub> |

In estimating urea then, the urine is treated with baryta water to remove phosphates and sulphates, a portion of the filtered liquid containing 10 cc. of urine is titrated with mercuric nitrate solution; from the number of cc. used subtract 4, the remainder multiplied by 10 will give the percentage of urea in the sample. (1 cc. sol. equals 0.01 gm. urea.)

### TEST FOR FORMALDEHYDE IN MILK.

A. G. Luebert (in Journal Amer. Chem. Society, September) proposes the following test for formaldehyde in milk:

Five grams of coarsely powdered potassium sulphate are placed in the bottom of a 100 cc. flask, 5 cc. of the suspected milk are distributed over the sulphate by means of a pipette, then 10 cc. sulphuric acid (sp. gr. 1.84) are carefully poured down the side of the flask. It is now allowed to stand quietly for a few minutes. If formaldehyde is present a violet coloration of the potassium sulphate appears in a few minutes, the color gradually dispersing through the liquid. If no formaldehyde is present, the liquid will at once assume a brown color, rapidly changing to black. This test is sensitive to a dilution of at least 1 part of formaldehyde in 250,000 parts of milk.

League Island, Pa.

FREDERICK T. GORDON,  
Pharmacist, U. S. Navy.

RHIMBA WAX.—A product called "Vegetable Wax," is furnished by the "Rhimba" tree of Madagascar. It appears in the shape of small irregularly tabulated masses, and adheres to pieces of bark, of a brownish red, coming from the tree. Most of these masses are incrustated with woody and earthy particles, which give it a very unclean appearance; others have a smooth, but dull and greyish surface, column-like, resembling many resins, which harden in the open air whilst running over the surface of the trunks of trees. "Rhimba" wax is fusible at 60° C., completely soluble in boiling alcohol, incompletely soluble in cold alcohol (20 per cent. insoluble). It contains 14 per cent. of vegetable wax. Unlike beeswax, however, it resists decolorizing agents, such as peroxide of hydrogen, hypochlorites, and even weak nitric acid. It might be used as a basis for sealing and modeling wax. The bulk of it melts below 100° C., but a simple means of separating from it the vegetable and earthy particles which stain it is required. At present the yield is only about 15 per cent. of pure product, but by means of a hydraulic press with plates heated to 90° C., the whole of the resin-wax might be obtained. The separation of the resin from the wax would next have to be undertaken. The wax fuses about 72° C., and hence might serve for candles, but the resin is too dark at present to be used in making varnish.—(Jour. Soc. Chem. Ind.)

## THE CULTURE OF CINCHONA IN BRITISH INDIA AND JAVA.

An interesting communication on the culture of cinchona was submitted to the Congress International de Pharmacie by Professor Verne. The principal points are here briefly reviewed. The author has been able to study the question in the course of a scientific journey around the world. In India the principal cinchona plantations are found in British Sikkim, the plantation of Ceylon being at the present time nearly destroyed. The station of Sikkim in the vicinity of Mumpoo is situated between 26° and 27° north latitude, at an altitude of 3,600 feet. The species cultivated are three in number: *Cinchona calisaya* of Weddell (*Ledgeriana* of Howard) *Cinchona succirubra* of Paron, and *Cinchona* hybrida.

The plantations annually raise from 2,000 to 5,000 plants. The simple operation of planting consists in clearing the soil and loosening it to the depth of 20 centimetres. The vegetation is burned, the ashes serving as a fertilizer. *Ledgeriana* is planted in March, in the dry season, in rows six feet apart. The shoots are obtained from seed upon fern land.

The removal of the bark is begun in the third year, and is repeated every three years during fifteen years, which seems to be the average life of the trees subject to this treatment. All is removed from the base of the trunk to the branches of reasonable size. The plantations are spread over the slope extending from the river upward to the limits of the virgin forest. On the lower levels *Ledgeriana* is cultivated, this species yielding the largest proportion of quinine and also requiring the greatest care.

A quinine factory has been established for the purpose of treating the bark of dead trees. The process followed in the extraction is that of Dubreuil slightly modified. It consists in forming a hydrochloric acid decoction of the powder obtained by grinding in a mill driven by means of a turbine. This is neutralized with soda, and shaken with petroleum from Burma. The petroleum is decanted and shaken with water acidulated with sulphuric acid. The resulting solution of quinine salt is separated by decantation and concentrated by means of heat, so that crystallization may take place upon cooling. A second crystallization yields a sulphate in fine needles, but not quite white, and containing less than 5 per cent of cinchonine.

Mungpoo produces annually 5,000 kilograms of crystallized white sulphate of quinine, and 2,000 kilograms of amorphous alkaloids. The future of this station rests upon the cultivation of *Ledgeriana*, the yield of which has been found to be as follows: Quinine; roots, 4 per cent; trunk, 4.5 per cent; branches, 2.5 per cent; the maximum yield of cinchonine is .5 per cent.

The prevalence of the plague in India prevented the author from visiting the immense plantations of *Cinchona* officialis of northern India. In Java M. Verne found a favorable field for continuing his observations.

The method employed in Java is the same that is used in the Himalayas, but seems to be carried out with greater care. The yield of alkaloid is larger. While 4 per cent is obtained in India, in Java the yield may rise as high as 9 per cent. The trunk which has the highest proportion yields as much as 14 per cent. In Java the planters also allow the trees to grow 12 years before removing the bark. *Ledgeriana* is the only species planted, and the finest bark is sold in Europe while the less desirable material is worked up on the spot. Bandoeng, the center of the district, furnishes annually 30,000 kilograms of quinine sulphate which is exported to the United States. The factory, which is of modern design, is equipped with the latest perfected apparatus. It thus appears that Java is in advance of India, both in the culture of cinchona and in the production of quinine. The author draws from the results of his voyages the following conclusions: That the plantations will in future mostly cultivate *Ledgeriana* of Moens; that the

culture of *succirubra* should be restricted, and the other species abandoned; that the removal of the bark from the trees after they have reached the age of 10 or 12 years secures the best product, and at the same time insures the preservation of the plantations; that a factory should be installed in the district in order to utilize chips and refuse bark; and, that cinchona culture is essentially an industry of the tropics.—(Translated for the Era from Nouveaux Remedes.)

## PHARMACY.

SAN THOME BALSAM is the name given to an indigenous product of Portuguese West Africa, and its mercantile value is so great on the spot where it is produced that it never reaches Europe. The balm tree, which attains a height of 60 or 80 feet is generally found in the interior of the island, at an altitude of 1,100 m. The balm exudes naturally from the tree through the chinks in the bark, and in such abundance that it accumulates like crusts on the soil. The natives who are anxious to avoid any loss of the precious product, obtain it by incisions made at the bottom of the trunk. At every incision is placed a receptacle, ordinarily the half of a cocoanut, which sells at .400 to .500 reis (1 fr. 48 c. to 1 fr. 85c.). It is reputed to be a remedy for wounds, and is used in urinary and bronchial diseases, while the bark is renowned as a tonic.—*Jour. Soc. Chem. Ind.*

ABSORPTION OF DRUGS BY THE BLADDER.—Barbiana, according to the Ther. Gas., has found by experimental research that dilute solutions of various drugs, with the exception of iodine, are never absorbed by the bladder at first irrigation, but that if consecutive irrigations are made there is fairly active absorption. This he attributes to certain functional disturbances of the epithelium incident to the mechanical action of the lavage upon the vesical walls, since such absorption may take place without further alteration of this epithelium. He believes that the complete retention is in itself sufficient to produce such changes in the vesicular wall as are calculated to encourage absorption.—(*Jour. Am. Med. Assn.*)

ANAGYRINE.—The alkaloid found in *Anagyris foetida* was formerly supposed to contain cystine, having an action similar to that of strychnine. Dr. Otto Loewe (*Archives internationales de Pharmacodynamie*) has found that this body probably contains two alkaloids, one of which resembles lobeline and is known as anagyryne.

THIOPYRINE is equivalent to antipyrine in which the oxygen has been replaced by sulphur. Its preparation is somewhat similar to that of antipyrine. It is obtained in the form of flat, odorless crystals, and is moderately soluble in cold water, and very soluble in hot water and alcohol. The crystals melt at 166 degrees.

TOBACCO ALKALOIDS.—Three new alkaloids have been found in tobacco by MM. A. Pictet and A. Rotschy (*Acad. des Sciences*). These bodies are present in the plant in much smaller proportions than nicotine, and are named nicotine ( $C_{10}H_{12}N_2$ ), nicotelline ( $C_{10}H_{12}N_2$ ), and nicotimine ( $C_{10}H_{12}N_2$ ).

VIOFORM or iodochloroxyquinoline is proposed by Dr. Krenke (*Munch. med. Wchschr.*) as a substitute for iodoform. It is entirely odorless, and may be used as the dry powder or in the form of vioform gauze. It cannot be employed for injection into tuberculous joints.

CALCINOL is a name sometimes applied to the iodate of calcium, which has been proposed as an antiseptic.

## GOLDEN JUBILEE CELEBRATION.

Members of the New Yorker Deutscher Apotheker Verein Observe Fiftieth Anniversary of the Pioneer Pharmaceutical Society—Record of Half Century's Triumphs.

THE New Yorker Deutscher Apotheker Verein, the pioneer pharmaceutical society of New York City, celebrated its Golden Jubilee at Terrace Garden on Tuesday night. Over five hundred members and guests assembled at the banquet board to partake of a rare feast of good things, to listen to the excellent program of music and the spirited addresses of men who have been active for the past half a century in promoting the profession of pharmacy to its present high standing in the estimation of the public, to honor these men and to celebrate the occasion of their triumphs. An elaborate program was most successfully carried out in every detail. The Committee of Arrangements had spared no effort or expense in making the celebration worthy of the occasion. The immense hall had been turned into a bower of evergreens. The balcony, extending around the great corridor, was festooned with wreaths of ivy and laurel, decked with pinks and roses, and long chains of evergreens reached from the balcony to the dome of the hall where they were woven into an emerald mass. Six tables extended the full length of the hall and every seat was taken at the opening of the festivities. Across the heads of these tables, at the stage end of the hall, was the table of honor for the oldest and most prominent members of the "Verein" and the guests of honor. At the center of this table sat the father of the society, the venerable Gustav Ramsperger, the only surviving charter member, and honorary president of the society. After serving the "Verein" in almost every official capacity in its government, having been president a number of terms, he has retired from active duty at the ripe old age of four score. Being considered the father of the organization it was natural that the greater part of the ceremonies attending the celebration of the fiftieth anniversary should center about him.

A beautiful and touching ceremony was the presentation of a handsome gold medal to Herr Ramsperger. The complimentary address of presentation was made by E. C. Goetting in the course of his remarks in response to the toast "Unser Verein, Always and Forever," proposed by Jubilee Toastmaster Dr. Gustav Pfingsten. Mr. Goetting paid a glowing tribute to the founders of the Deutscher Apotheker Verein, dwelt at some length upon the history of the society and other societies, and concluded his remarks with a direct tribute to the Honorary President, mentioning the gold medal as a token of the "Verein's" love and admiration. The actual presentation of the medal was given to Frederic Linnig, the youngest member of the society, who is 28. All of the members rose to their feet at the presentation, making a most impressive scene.

To President Charles F. Schleussner belongs the honor of presiding over the Golden Jubilee celebration. He opened the meeting with a masterly address of welcome, greeting all the guests present in behalf of his society. Other speakers of the evening were, Hon. Randolph Guggenheimer, president of the City Council, on "Our Glorious City," W. C. Anderson, president of the N. A. R. D., on "Our Sister Societies," Prof. Charles F. Chandler, honorary member, on "Pharmaceutical Education," Oscar Krause, second vice-president, on "The Ladies," Albert Plaut, of Lehn & Fink, on "Our Wholesale Brethren," and Francis B. Hays on "The Pharmaceutical Press."

Randolph Guggenheimer, representing the city, acknowledged in glowing terms the splendid services which have been rendered to the people through the accomplishments of the "Verein" in the way of pharmaceutical

education, and the attainment of a high degree of proficiency in catering to the wants of the public. He spoke in words of the warmest praise of the founders of the "D. A. V.," and congratulated the present members upon their adherence to the principles of their predecessors. In no uncertain language he set forth the obligation of the public to the pharmacist and concluded with a wish for a future duplicate of the past successes of pharmaceutical organization as exemplified by the Deutscher Apotheker Verein.

Gustav Ramsperger in a graceful speech of acknowledgment of the honors paid him, expressed the greatest satisfaction at the progress made in the advancement of the profession in the past half century, and predicted a brilliant future both for the profession and the society.

"It required a far longer time than any of us anticipated to advance scientific pharmacy to its present condition," said he, "and it has been only through the energetic efforts of the members of the profession and the society for two generations that these conditions which we had in view in the first organization have been brought about."

Dr. Gustav Pfingsten made an excellent toastmaster, frequently winning rounds of applause by his remarks introducing the speakers. Dr. Pfingsten has rendered eminent service to the society in many positions, and is one of the most distinguished and oldest members.

The celebration concluded with a grand ball, the program of twenty dances with excellent music by Lederhaus, keeping the younger set until the small hours of the morning. Taken as a whole, the celebration was a glorious success, and it will be another half century before the beautiful design in red, white and blue lights "1851—D. A. V.—1901," fades from the memory of those who attended the Golden Jubilee.

The Committee of Arrangements consisted of the following members: Gustav Ramsperger, Geo. Leinecker, Prof. Coblenz, John M. Fischer, Carl Schleussner, Felix Hirschman, Henry Imhof, Dr. Gustav Pfingsten, Paul Arndt, Carl Kessler, E. C. Goetting and Max Schneider. The Ball Committee was made up as follows: Paul Arndt, (chairman), John M. Fischer, Henry C. Boys, Jr., Geo. E. Schwinfurth, Bruno R. Dauscher, Henry Imhof and Geo. Klein.

PRESIDENT CHARLES F. SCHLEUSSNER, who has served three successive terms.

GUSTAV RAMSPERGER.  
Honorary President and only surviving Charter Member.

In view of the recognized fact that the history of the New York Deutscher Apotheker Verein, and more especially its early history, is, in a large measure, the history of pharmacy in the State of New York, and not lacking in significance in its bearing upon the history of the profession from the national point of view, a short historical review of the society in connection with the celebration of its Golden Jubilee, seems a necessary accompaniment. The society, in the brilliant observance of its 50th anniversary has paid many glowing tributes to the enthusiastic and constant spirits who founded the Deutscher Apotheker Verein, and to those who have been faithful in its maintenance through half a century. All the honors rendered were due. From that preliminary meeting of thirteen German pharmacists perhaps the number is significant on the 19th and 21st of Sept., 1851, there has resulted benefits to pharmaceutical interests that have gone far toward elevating pharmacy to its proper plane as a profession. The results of their work upon pharmaceutical education, pharmaceutical legislation and closer association, not only among German druggists, but in that closer union and greater strength of all men interested in the welfare of their calling, deserve the highest praise.

The names connected with the preliminary work looking toward permanent organization are those of Messrs. Hasse, Gnadendorf, Rudolph and Walldorf. Their efforts resulted in the first meeting, which was presided over by Geo. A. Cassabeer and formed the famous "Lese-Verein" or Reading Circle, limited to scientifically educated German pharmacists. A constitution and by-laws were adopted and the organization of the "New Yorker Phar-

maceutischer Lese-Verein" was effected on Sept. 30 at a meeting held in Mr. Zschocke's place on the Bowery, with a membership of twenty-five. Meetings were held at the residences of the different members until Augustus Weissman put a room in one of his houses in Ludlow street at the disposition of the "Verein." This was made the headquarters of the society and for many years the fast increasing library and pharmacognostical collection were kept here. The growth of the city and an increased membership led to the securing of a new and more centrally located meeting room at Third avenue and Nineteenth street then at the College of Pharmacy and later in the meeting and reading room at 19 Third avenue.

The "Lese-Verein" soon realized the benefits and felt the strength of association, and in a short time plans began to be put into operation for a more extensive field of action in the general interest of the profession. Accordingly the sphere of the society was extended and its name was changed into "Deutscher Apotheker Verein." The first great and valuable service in its new character was done by the "D. V. A." in the preparation of a Manual or Formulary for the use of the members. Its purpose was to remedy the existing confusion and bring about uniformity in galenic preparations, which had theretofore been put up by pharmacists of different nationalities according to the pharmacopoeias of their respective countries or provinces, causing much annoyance and unpleasantness between pharmacist, physician and patient. The committee which prepared the Manual was composed of Messrs. Balluff, Cassabeer, Hasse, Faber, Ramsperger and Stenden. This work was later translated into English by F. Mayer. The society was en-

GEORGE A. CASSEBEER.

Who presided at first Organization meeting (Dec.).

thusiasm over the reception which the new Formulary received at the hands of physicians, and interest in its meetings was greatly stimulated. Lectures were delivered by members and friends of the "Verein," and much practical benefit was derived from the discussion of scientific subjects and business interests, and visits to chemical laboratories and factories. A great deal of emphasis began to be laid upon social features in the way of excursions, parties and an annual banquet. The annual ball was inaugurated in 1858. A museum of pharmacognosy was established about this time through the activity of Mr. Heberling and several other members. Great credit is due to the "Verein" for the creation of a Board of Examination which set a high standard for candidates for the practice of the profession, requiring proficiency in the following branches of science: Physics, Chemistry, Botany, Zoology, Mineralogy, Pharmacognosy, Practical Pharmacy and Toxicology. This board was in active existence for several years, being a splendid incentive to higher pharmaceutical education, which was in a poor condition at that time. The work of the board served to revive interest in the College of Pharmacy, which gradually absorbed its functions. The influence of the "D. A. V." upon the college has always been very marked since that time and many of the officers of the college have been held by members of the society.

The officers of the "Verein" for the first decade were: Presidents, Messrs. Cassebeer, Dung, Weismann, Ramsperger, Balluff, secretaries, Messrs. Dung, Hasse, Ramsperger, Schumann; treasurers, Messrs. Metz, Heberling, Elmer; trustees, Buchbinder, Gnadendorf, Ehlers, Faber, Gelhaar. During the second decade: Presidents, Messrs. Balluff, Elmer, Ramsperger, Diedel, Frohwein, Reinhold; secretaries, Messrs. Schumann, Lange, Hillebrecht, Van der Emde, Ruprecht; treasurers, Messrs. Diedel, Elmer, Heberling, Ramsperger; librarians, Messrs. Ehlers and Nauman. The first loss by death among the members occurred in the year 1853, when Mr. Kruger died, and his memory was properly honored by the "Verein."

Important changes were made from time to time in the by-laws of the society. A broader provision was made for membership, allowing all pharmacy proprietors, conversant with the German language, who were of good moral character, to become members, and creating extraordinary members, interested in branches of science allied to pharmacy, and honorary members. Honorary members of the society during the first ten years of its existence were: Professor Schlossberger, Tübingen; Professor Schumann, Esslingen, and Mr. Ehrhart of Brooklyn.

One of the most consequential events in the history of the society was the union of the "Literary and Scientific Society of the German Apothecaries of the City of New York," more commonly known as the "East Side

Society," with the parent German "Verein" in the year 1873. This "East Side Society" had been formed in the year 1864 by a number of pharmacists living on the east side of the city, with the same purposes in view as the older organization. It was a live, active body, and brought about an excellent spirit of friendly rivalry that accomplished a great deal for the promotion of the interests of the profession. The feeling for German unity, brought about by the Franco-Prussian war in 1870, appeared to find an echo among the members of the two existing societies, leading to a proposal by their presidents, Dr. Mettenheimer and Mr. Theodore Louis, for their union. The two were made one under the certificate of incorporation of the younger society.

A very material service was rendered in the interests of pharmacy by the "D. V. A." in the year 1871, when an act of the Legislature was passed, creating a well paid examining board, which extorted large fees from each pharmacist under a pretence of examination not having any regard to the matter of whether he had a diploma and proofs of proficiency or not. There had not been up to this time any adequate legislation for the practice of pharmacy. What laws had been passed were of no effect, and the more progressive members of the profession felt sorely the need of proper laws for the welfare of the apothecary. It was at this juncture that the Legislature passed the law, which had for its purpose no other result than the robbing of the pharmacist and the bringing of the profession under the influence of politicians. There was a strong feeling of indignation among the pharmacists of the city, but many of them submitted because they lacked confidence in the power of themselves and their fellow-pharmacists to successfully resist the outrageous law. A general meeting of the pharmacists of the city was finally called, at which the Deutscher Apotheker Verein was largely represented. An Apothecaries Union was organized for the purpose of collecting funds and making a determined fight for the repeal of the law and the substitution of one which would operate for the good of the profession. Two members of the "D. A. V." were given important and responsible positions. Mr. Hoffman was appointed to draft a new law and Mr. Ramsperger was elected treasurer and collector of funds. To the energy and untiring zeal of these men, and of Augustus Weismann, then State Senator, D. C. Robbins, Paul Balluff, M. L. M. Peixotto and others, who, as delegates of the combined societies, made a most determined fight before the Committee of the Legislature against the Board of Pharmacy of 1871, is due the gratitude of all pharmacists for the repeal of the law and the substitution of a new measure of a far better character.

In the first Board of Pharmacy created by the new law the "D. V. A." was represented by three members, Messrs. Neergaard, Balluff and Frohwein.

THEODORE LOUIS.

President United German Societies, 1873 (deceased).

VICTOR KOSTKA.  
Five times President of the "Verein" (deceased).

The first president of the United German societies of 1873 was Theodore Louis. A work most creditable to the "Verein" in the early life in its new character was done by its scientific committee in publishing a comparative list of the preparations of the United States pharmacopœia, with those of the German pharmacopœia, showing to physicians and pharmacists the great difference in some of them. Much of the credit for this work is due to Dr. A. Tsheppe.

In 1875 Mr. Ramsperger succeeded Mr. Balluff as a member of the Board of Pharmacy, and the latter gentleman was elected president of the society, holding the office for three successive terms. The "Silver Jubilee" fell due in October, 1876, and was celebrated with due solemnity. Secretary Ruprecht had compiled a history of the society which was read at the celebration. There were seven of the founders living at that time, G. A. Cassaber, Herman Metz, William Ehlers, G. Hebblering, F. Mann, Gustav Ramsperger and Augustus Wisemann, of whom but one now survives, Gustav Ramsperger. Shortly after the celebration of the silver jubilee, the society was saddened by the loss of its president, Mr. Reinold. Two years later, a law was enacted, through the efforts of the "D. A. V.," exempting pharmacists from jury duty. In 1879, the New York State Pharmaceutical Society was organized, and a number of members of the "Verein" joined. During the presidency of Dr. Tsheppe in 1883, the society was instrumental in having published the New York and Brooklyn Formulary, containing formulæ for the so-called "elegant" preparations. The purposes of the formulary was to obtain uniformity in such preparations. The cooperation of the College of Pharmacy and the Kings County Society was enlisted and the committee worked with earnest zeal and unparalleled enthusiasm under the able direction of the late Dr. Charles Rice, the result giving the greatest satisfaction. The "D. A. V." was represented on this committee by Messrs. Bendiner, Balsler, Götting, Louis, Meumann, Püngsten, Ramsperger, Dr. Rice, Schleussner, Schmid and Dr. Tsheppe. The enthusiasm with which the work was received and the wide spread endorsement of it prompted the committee, in order to give it a national character, to offer it to the American Pharmaceutical Association, of which many of the society were members, for revision and extension. The offer was readily accepted and the result was the National Formulary. Dr. Rice was elected to honorary membership in 1885 in appreciation of his great services as a member of the formulary committee. It was a short time after this that the society sustained severe losses in the deaths of Mr. Ruprecht, for over fifteen years recording secretary, and Dr. Menninger, one of the officers of the College and a member of the Board of examiners. It was about this time that several members of the society were put to great expense in defending blackmail suits brought against them. This serious

question was brought to the attention of the society and action was promptly taken, leading to the appointment of a protective law committee, the duties of which were to investigate the circumstances of suits brought against members and provide for their defense wherever such a course was justified, at the expense of the society. The firm of Kudlich & Fink was retained to handle all litigation for the society, so that the expense of defending blackmail suits was reduced to the minimum, again demonstrating the value of association.

Mr. Paul Balluff several times president of the society, and for many years active in promoting its every interest, died in January, 1890. Mr. Louis resigned the office of treasurer after fourteen years of efficient service. Mr. Götting was the next president of the "Verein," and Mr. Louis was succeeded by Mr. O. P. Amend. The presidents during this forth decade were: Messrs. Püngsten, Lehlbach, Dr. Tsheppe, E. C. Götting, and a second term by Dr. G. Püngsten. In the year 1891, Victor Kostka was elected to the executive chair, and gave the society an administration characterized by vigor and the introduction of new methods in the arrangement of the meetings of the society. The next five years were full of important events. A mutual life insurance fund was created; unions were formed among the members for mutual benefit in educational lines, and weekly botanical excursions were inaugurated, and factories and other institutions were visited. The society has recently devoted a great deal of attention to pharmaceutical legislation, and it is the intention of the present administration to continue the vigorous policy in this direction. The examination by the scientific committee of the "Verein" of drugs or preparations suspected of being impure or adulterated has proved a most valuable department of the society's work. Essays have been presented and lectures have been read in most of the monthly meetings, covering a great variety of subjects in connection with the profession of pharmacy. Some of the most instructive of these papers were by Messrs. Droberg, Faber, Hoffman, Kostka, Müller, Dr. Püngsten, Ramsperger, Roller, Dr. Tsheppe, and Wortmann.

One of the most pleasant and memorable events in the recent history of the society was the celebration of the twenty-fifth anniversary of the membership of Dr. Gustav Püngsten, when, in recognition of his valuable services, he was presented with a handsome silver set with appropriate ceremonies. In 1895 Mr. Ramsperger succeeded Victor Kostka as president, the latter declining a renomination after four years of service in this capacity. In 1896 Mr. Ramsperger retired from active official duty and Mr. Kostka was again prevailed upon to accept the executive office. Mr. Ramsperger was elected honorary president and was presented with a beautiful testimonial in token of the appreciation of his eminent services in various official capacities since the founding of the Deutscher Apotheker Verein. At the end of the year 1896 the society had in the treasury

DR. PAUL BALLUFF.  
Former President and for many years librarian.

DR. GUSTAV PFINGSTEN.  
Toastmaster.

\$2,788.88. The same members were continued in office in 1897, and the society took a deep interest in pharmaceutical legislation, celebrating with great satisfaction the passage of the "Brush Bill." Members most active in this work were Messrs. Muir and Brundage. The papers on scientific and practical business interests were continued, among the prominent contributors being Dr. Eccles, Dr. Pfingsten, Dr. Klippert and Dr. Hubner. The society suffered this year by the loss of President Kostka, who died on July 7. In 1898, Sidney Faber was chosen to represent the society on the Board of Pharmacy, and still continues in the office, being one of the most active men in the State in the efficient discharge of his duties. Charles F. Schlessner was elected president in January of this year, and has held the office since that time. The membership at the end of the year was 270 and the society had a balance of \$3,063.98.

The society was represented in the N. A. R. D. convention in St. Louis in 1899 by two delegates and took an active interest in the affairs of the National association until its withdrawal in the following year. The "Verein" has, however, since that time, continued to work in harmony with the plans of the N. A. R. D.

Professor Chandler was elected an honorary member in February, 1900, at which time the society roll was at its maximum, having 309 members. The present officers are: President, Chas. F. Schlessner; first vice-president, Carl Schur; second vice-president, Oscar Krause; recording secretary, Dr. Carl Klippert; corresponding secretary, Sidney Faber; treasurer, Felix Hirseman; superintendent of archives, George Lehecker; librarian, Geo. Stolzenberger; trustees, Carl Schur, Henry Tuhof, Carl Kessler; chairman of scientific committee, Geo. Diekmann; of business affairs, Geo. Kleinau; entertainment, Paul Arndt; legislation, Carl Schur.

**ALCOHOL V. COAL IN GERMANY.**—According to a German technical publication, alcohol cannot be profitably used for making steam. It is stated that one kilo. of coal, costing 2½ pfennigs, produces from 7,000 to 8,000 calories, while one kilo. of alcohol, valued at 22 pfennigs, produces only 6,000 calories. In spite of the number of good alcohol lamps on the market, alcohol is only used where a very strong light is necessary without reference to economy. Only in one instance is alcohol preferable to coal or benzine, and that is in motors run on the explosion principle. Alcohol leaves no residue in the motor and from 23 to 24 per cent. of its heating power is utilized, while steam utilizes only 13 per cent., and benzine, petroleum, and gas from 14 to 18 per cent. As the number of minor establishments requiring relatively small power is constantly growing, alcohol motors are in demand. The automobile industry has lately given preference to alcohol motors, especially in the construction of freight automobiles. The price, in Germany, of alcohol for motor purposes is at present \$4.80 for 110 quarts.

## SOMETHING ABOUT THE SOCIAL SIDE.

BY GEORGE L. KELLEY.

In any business, unfailing pleasantness, tact, and courtesy bring their own reward. Especially is this true in the drug business, where so much trade is dependent on personality. To meet people pleasantly, to treat them courteously, and to handle them with tact does as much toward drawing and holding trade as any feature of the conduct of a drug store.

The foregoing may be regarded as generally true. In different places, however, its truth will be more clearly evident than in others. Transient trade, while in some measure influenced by such considerations as these, is not so much affected as are local and family trade, and it is in these last that the handling of the individual counts for so much. Each family has its favorite druggist, just as it has its favorite grocer or doctor. It follows that, other things granted, the pharmacist is most successful who enjoys the most extended popularity. This fact realized, the problem becomes how to acquire an acquaintance and popularity that is at once extended, desirable, and profitable.

To lay down hard and fast rules for this is an absolute impossibility, and it will not be attempted in this paper. At most, we can give only a few general suggestions which must be adapted to fit one's own peculiar circumstances.

The largest share of family trade goes to him who can get the closest to the greatest number of people in his vicinity. Acquaintances made in the store can be developed, but there are many people not approachable in this way. Some of your neighbors do not enter your store at all, and others come, but maintain such reserve that you cannot feel acquainted. And here lies the value of membership in social organizations. In the club or society there exists among the members a bond of friendship that cannot be helpful to those included within its range of influence. The members meet on such a familiar footing that there necessarily arise acquaintances and friendships otherwise impossible. As a means of extending acquaintances the club is undoubtedly of great value.

Whatever a man's position, his interests behoove him to mingle as best he can with those on whose patronage he is dependent. The clubs and societies of his patrons act as an open door to their regard. There he can meet the fathers, sons, and brothers of families whose trade is to supply his profits. There, if he have a social temperament, he can quickly secure direct results. There he can show geniality and courtesy and reap the personal esteem of many whom, otherwise, he might not have met at all. All of this is sure to be a help in the upbuilding of a business. Indeed, so clearly is it one of the pathways to success that no live pharmacist will fail to follow it.

The writer, owing to certain personal considerations, is not so largely a member of these organizations as he could wish. But observation has so clearly demonstrated to him the advantages that have been gained through just such membership of employers and clerks that he has no hesitation in advising every pharmacist to become an active member in at least one of the most influential clubs or societies in his vicinity.—Western Druggist.

**TILIADINE** is a new compound obtained from the bark of the linden tree, which has also been found to contain vanillin. Tiliadine has been given the formula  $C_{10}H_{12}O_6$ , and is related to the vegetable cholesterines, but unlike these bodies it does not possess the character of an alcohol.

**PETROSULFOL** is a new bituminous preparation employed in the treatment of affections of the skin. This product resembles ichthyol, and is used in the form of an ointment and in aqueous solutions. It mixes readily with ethereal solutions.

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Printing Press Rollers.

(F. P. D. & Co.) We have no practical experience with the following formulas for the manufacture of printing press rollers. They have been recommended, however, and they are given for what they are worth:

(1.) To eight pounds of transparent glue add as much water as will just cover it, and occasionally stir it during seven or eight hours. After standing twenty-four hours, and all of the water is absorbed, submit it to the action of heat or a water-bath until the glue is all dissolved. Remove from the fire as soon as froth is seen to rise, and mix with it seven pounds of molasses previously made tolerably hot. Stir the composition well together while heating, but do not allow to boil. After being thus exposed to the heat for half an hour and frequently well stirred, it should be withdrawn from over the fire and allowed to cool a short time, previous to pouring it into a cylindrical mould made of tin, tinned sheet iron or copper, having a wooden cylinder previously supported in its centre by means of its end pivots or gudgeons. After remaining in the tubs at least eight or ten hours in winter and a longer time in summer the roller is to be taken out of the mold by means of a cord fastened to one of the gudgeons, and passed over a stone pulley fixed to the ceiling. Old rollers are recast in the same manner, first taking care to wash them with a strong alkaline lye and adding a small quantity of water and molasses. The best mode, however, of making use of the old composition is by mixing it with a fresh batch made of two pounds of glue and four pounds of molasses.

(2.) The Scientific American Encyclopedia of Receipts gives the following formula for the "mysterious black composition, so durable and elastic, and known to but few persons until recently":

|                                                   |            |
|---------------------------------------------------|------------|
| Best glue.....                                    | 10½ pounds |
| Black molasses or honey.....                      | 2½ gallons |
| India rubber, dissolved in oil of turpentine..... | 1 pound    |
| Venice turpentine.....                            | 2 pounds   |
| Glycerine.....                                    | 12 ounces  |
| Vinegar.....                                      | 4 ounces   |

Purified India rubber only is used. To recast, add 20 per cent of new material.

(3.) Take an equal quantity of good glue and concentrated glycerin; soften the former by soaking it in cold water, then melt it over a water bath, gradually adding the glycerin. Continue the heat until the excess of water has been driven off, meantime constantly stirring. Cast in brass or bronze moulds, well oiled.

(4.) Strong medium weather rollers:

|                         |           |
|-------------------------|-----------|
| Cooper's best glue..... | 8½ pounds |
| Extra syrup.....        | 2 gallons |
| Glycerine.....          | 1 pint    |
| Venice turpentine.....  | 2 ounces  |

Steep the glue in rain water until pliant. Drain it well. Then melt it over a moderate fire, but do not "cook" it. This step in the process takes from 15 to 25 minutes, when the syrup is added, the mixture boiled for three-quarters of an hour, stirred occasionally and the impurities arising to the surface skimmed off. Add the glycerine and the surface skimmed off. Add the glycerine and Venice turpentine a few minutes before removing from the fire, and pour into the moulds slowly. Slightly reduce or increase the glue as the weather becomes colder or warmer.

### Syrup of Hypophosphites.

(A. H. E.) We cannot give the formula for the proprietary preparation. A formula for compound syrup of hypophosphites was published in the Era of July 25, 1901, page 96. Here are two others:

|                              |            |
|------------------------------|------------|
| Calcium hypophosphite.....   | 352 grains |
| Sodium hypophosphite.....    | 176 grains |
| Potassium hypophosphite..... | 176 grains |
| Manganese hypophosphite..... | 22 grains  |
| Iron hypophosphite.....      | 22 grains  |
| Potassium citrate.....       | 50 grains  |
| Quinine hydrochloride.....   | 12 grains  |
| Citric acid.....             | 25 grains  |
| Strychnine sulphate.....     | 3¼ grains  |
| Sugar.....                   | 40 grains  |
| Iron pyrophosphate.....      | 40 grains  |
| Water, to make.....          | 4 pints    |

Into a wide-mouthed, half-gallon bottle introduce the calcium, sodium, and potassium hypophosphites and the quinine salt, sugar, and some water. Dissolve with the aid of heat, the iron and manganese hypophosphites, the potassium citrate, and the citric acid, in about 2 fluid ounces of water, and pour into the bottle, together with the solution of the strychnine sulphate (best made in a test tube). Now add enough water to make one-half gallon; tie over the bottle well with parchment paper and shake frequently to dissolve the salts and sugar; then strain if necessary. This still perfectly clear syrup is now superstratified (preferably in the same wide-mouthed bottle) with the concentrated aqueous solution of the iron pyrophosphate, and set aside for 12 hours.

|                                |              |
|--------------------------------|--------------|
| Calcium hypophosphite.....     | 180 grains   |
| Sodium hypophosphite.....      | 60 grains    |
| Potassium hypophosphite.....   | 30 grains    |
| Iron phosphate (U. S. P.)..... | 15 grains    |
| Manganese hypophosphite.....   | 13 grains    |
| Quinine sulphate.....          | 5 grains     |
| Strychnine sulphate.....       | 1 grain      |
| Water.....                     | 3 fl. ounces |

Heat together all the ingredients until dissolved, and add to

Boiling syrup.....1 pint

Boil for about half a minute with constant stirring, and then set aside and finally strain.

### Tar Cough Syrup.

(F. M. G.) Try one of the following; all contain tar in some form or other:

|                            |               |
|----------------------------|---------------|
| Wine of tar (N. F.).....   | 4 fl. ounces  |
| Syrup, enough to make..... | 16 fl. ounces |

This syrup contains about the same proportion of tar as that given in the formula for syrup of tar in the U. S. Pharmacopoeia.

|                              |               |
|------------------------------|---------------|
| Fluid extract horshoofd..... | 6 fl. ounces  |
| Syrup of wild cherry.....    | 18 fl. ounces |
| Syrup of tar.....            | 36 fl. ounces |

An excellent formula for "syrup of tar and wild cherry" is the following from the Era Formulary:

|                                    |          |
|------------------------------------|----------|
| Tar.....                           | 6 parts  |
| Wild cherry in No. 20 powder.....  | 12 parts |
| Sugar.....                         | 60 parts |
| Glycerine.....                     | 10 parts |
| Boiling water.....                 | 60 parts |
| Cold water, a sufficient quantity. |          |

Upon the tar contained in a suitable vessel pour 12 parts of cold water and stir the mixture frequently during 24 hours; then pour off the water and throw it away. Pour the boiling water upon the residue and stir briskly for 15 minutes, then set aside for 36 hours, stirring occasionally. Decant the clear solution and with it thoroughly moisten the wild cherry. Macerate for twenty-four hours in a closed vessel, then pack it firmly in a cylindrical glass percolator, and gradually pour upon it first the solution of tar and then water until 30 parts of percolate are obtained. Dissolve the sugar in the percolate by agitation without heat, add the glycerin and strain.

### Calcium Sulphide Skin Lotion.

(X. Y. Z.) We know of no practical formula of this character. Calcium sulphide in aqueous mixtures is gradually decomposed by water into calcium hydroxide and hydrosulphide.

# NEWS DEPARTMENT.

## AFTERMATH OF A. PH. A. CONVENTION.

Thos. P. Cook, of the N. Y. Quinine & Chemical Works, who was a member of the Exhibition Committee of the A. Ph. A. Convention returned from St. Louis September 26 full of enthusiasm at the result of the 49th meeting and the success of the exhibition feature.

"For the first time," said he, "the exhibition was made a part of the convention and a session was given to its examination and the hearing of instructive explanations of their displays by the exhibitors. I should say one of the most interesting things in the meeting consisted of the commercial section of the exhibition by retail druggists. Many of the more modern methods of handling prescription work as well as transient trade were explained and many simple yet ingenious devices were shown for conducting some rather difficult matters that come up in connection with a prescription department. The exhibition will be made a permanent feature of A. Ph. A. meetings.

The most liberal provisions were made by the people for the entertainment and amusement of visitors, sparing neither trouble nor expense, and the perfect working conditions allowing the carrying out of the program in every detail. Much credit is due to the business men's committee, who arranged for the entertainment of the visiting members at the Union Club on Saturday Evening. It was a splendid entertainment lacking in no detail. In the matter of attendance and in every other respect, the meeting was a brilliant success."

Among the most interesting and attractive exhibits were those of the Smith, Kline & French Co., of Philadelphia, Sharp & Dohme, of Baltimore, the Mallinckrodt Chemical Works and The New York Quinine & Chemical Works. The display of the Smith, Kline & French Co. was one of an entirely ethical character showing a collection of adulterated drugs, which have been found in the regular course of the work of the analytical department of this house. This feature was supplemented with an exhibit of rare gums. The display of Sharp & Dohme was taken from the analytical department, representing the crude drug and its equivalent in its one or more derivatives. The processes and results were admirably illustrated, showing work in each department of the laboratory. The exhibit of the Mallinckrodt Chemical Company consisted in a beautiful display of morphine. Large blocks weighing about three pounds, were arranged in front of a large plate glass mirror above which was a large sign made of small morphine vials, reading "M. C. W.". This display of morphine together with that of the New York Quinine & Chemical Works, making almost a hundred pounds of the powerful drug, made an exhibit that attracted more attention than any other in the exhibition.

One of the most pleasant occasions in connection with the meeting of the A. Ph. A., was the dinner given at the Southern Hotel in honor of Prof. A. B. Stevens, of the University of Michigan, by a number of graduates from the School of Pharmacy, of the University. Those present were: A. B. Stevens, '75; E. M. Houghton, '93; Clarence G. Stone, '77; L. G. Blakeslee, '81; J. H. Beal, '82; Wm. Hauenstein, '83; Dr. A. B. Lyons, '68; H. M. Gordin, '98; J. W. T. Knox, '95; O. S. Ladman, '83; Harry Albers, '00; R. B. Carssow, '92; W. K. Illhardt, '40; Theo. H. Wurmb, '81; Otto P. Meyer, '90; J. E. Ferris, '00; Lyman F. Keibel, '90; Theo. F. Meyer, '78; Richard Fischer, '92.

The able representation of the retail dealers through President W. C. Anderson, of the N. A. R. D. and the splendid reception which he received together with the assurances of co-operation from the A. Ph. A. were the

most significant events of the meeting. President Anderson's address, which was so favorably commented upon at the time was as follows:

Mr. President and Members of the A. Ph. A.:

The honor of representing the N. A. R. D. before this body would be a pleasure at any time or in any place; but the same is increased on this occasion, when I recall the fact that it is within a few days of the anniversary of the organization of the N. A. R. D. in this city.

The scene I look upon, is not unlike the one it was my privilege to witness on the seventeenth of October, 1886, when representative pharmacists from every section of the country met here and with a determination to use every honest endeavor for pharmacy and the pharmacist and launched the N. A. R. D. upon its mission.

The same interest in the welfare of our profession that is demonstrated by this grand gathering of the members of this old and honorable association, was manifested at the formation of the organization. I have the honor to represent. Nearly fifty years of active service and continued success prove conclusively the great importance and value of your association. The respect shown for it at all times, and the anxiety with which pharmacists look for a record of its deliberations, indicate the effect it has had, and the high position it occupies in the pharmaceutical world.

The difficult problem with which the N. A. R. D. has attempted to cope, and the short time it has had for active work since it first took position where it can best hope to attain the marked success of your organization; but its activity, the justice of its cause, and possibilities of success have appealed so strongly to the retail drug trade, that after the existence of less than three years, I am able at this time to extend to you through it, the fraternal greetings of more than 250 affiliated associations representing nearly 30,000 retail druggists of this country. We congratulate you upon the long and prosperous history of your organization.

We congratulate the pharmacists of this country upon the fact that they have had, and still have at their disposal in every movement for the improvement of the science and art of pharmacy, the services of the powerful and influential A. Ph. A. We congratulate ourselves that we have had such a good example of the value of organization and power of consistent and concerted action, and that the day of our profession is the day of the leading pharmaceutical organization in the land.

The A. Ph. A. was one of the first to extend greetings to the N. A. R. D., and the cordial relations engendered thereby, should be strengthened at each annual meeting.

The objects of our organizations while they differ in some respects, lead to one conclusion, the betterment of pharmacy. The conduct of the retail drug business to-day, is such that scientific and commercial pharmacy are inseparable. One depends to a great extent upon the other, for pursuing a purely scientific course without any attention to commercial interests, will as a rule result as unsatisfactorily as maintaining a commercial course without proper regard for scientific requirements. The tendency to low commercial tactics is reduced by high scientific attainments, while advantageous commercial conditions stimulate scientific advancement.

The necessity for and value of both the A. Ph. A. and the N. A. R. D. are, therefore, apparent and I am enthused with the bright prospects for pharmacy, when I look to the most interested faces, the exponents of pharmaceutical organization and picture the N. A. R. D. looking up to the A. Ph. A. and the older organization in turn, leaning toward and securing support from the younger, each following the course suggested by their principles with renewed earnestness and vigor, until drawn closer and closer together with scientific pharmacy elevated to the high standing desired, commercial pharmacy strengthened and each retailer's position in the firm, they stand shoulder to shoulder forming a firm foundation for the support of that magnificent structure AMERICAN PHARMACY.

The pharmaceutical products and specialties of the Empire State Drug Co. are sold by over 1,600 up-to-date druggists who own stock in this company. By patronizing it, the druggist not only secures goods which are readily salable and at a good profit, but the money he pays for the goods eventually comes right back to him in the form of dividends. Those who are interested in a proposition of this sort, should write to the Company for full particulars. It is a new, untried concern, but has been established long enough to demonstrate not only its usefulness but its popularity. See the advertisement in this issue.

**POLICY OF THE N. A. R. D. CONVENTION.**

Prof. Wm. C. Anderson, of Brooklyn, President of the National Association of Retail Druggists, in outlining the plans of the coming Convention at Buffalo and discussing the probable policy to be pursued upon that important occasion said:

"The splendid disposition of the American Pharmaceutical Association toward the retail trade, represented by the N. A. R. D., as indicated in the St. Louis meeting, is a source of great encouragement to me. It is my sincere hope that we receive the same recognition from the N. W. D. A. Convention to be held at Old Point Comfort. If we do there is no reason to doubt that some relief is in sight, for with these three associations behind the Worcester plan, I cannot but see the attainment of the best results for which we have been laboring. I do not think that the jobbers will insist upon the continuance of the tri-partite agreement. Any attempt upon their part to do so would be an indication that they are not acting in good faith with the retail trade. I desire to say that in the Buffalo Convention, there will be no mincing of matters. The whole situation will be brought out into the full light and we will deal with it in a practical, business-like manner without regard to feeling. There has already been too much delicacy and sentiment. We wish to deal with matters in the open, to say what we know and think and then act upon it. This will be the policy of the convention."

President Anderson is delighted with the proposition to have the N. A. R. D. Convention meet in Philadelphia next year with the A. Ph. A. and the N. A. R. D. will probably decide to hold its next convention in that city during the A. Ph. A. jubilee celebration.

**N. A. R. D. CONVENTION POINTERS.**

Secretary Wooten, of the National Association of Retail Druggists has sent out blank credentials to the secretaries of affiliated associations. It will be necessary for the delegates to be provided with these credentials and any secretary who has not received them should communicate with Secretary Wooten at once at No. 153 La Salle street, Chicago. Bulletin No. 10 has been issued and distributed. Secretaries who have not received a supply and want the bulletin should notify the secretary stating the number of bulletins desired. Associations which are unable to send delegates to the Buffalo Convention may secure representation by placing credentials in the hands of a member of an affiliated asso-

ciation not farther distant than fifty miles and in the same State. A ruling has been made that no association, which is delinquent in dues, shall be allowed a seat in the Convention.

The Buffalo headquarters will be at the Buckingham Hotel, one and a half blocks from the Convention Hall. The accommodations are first class in quality and the rates are \$1.00 and \$1.50 a day, meals being served at reasonable rates in addition. H. J. Dimond, No. 339 Connecticut street, is the chairman of the local entertainment committee, and will assist members in the selections of quarters in private houses in the vicinity at reasonable rates. No special railroad rates have been secured, the Exposition rates being as low as an excursion rate.

**DRUGGISTS OF THE ISLANDS.**

Little has been written or said of the extent or conditions of the drug trade in the insular possessions of the United States, despite of the fact that this is one of the most important fields open to pharmacy. A great deal of useful information has recently been sent from Puerto Rico and the Philippine Islands, as well as from Cuba, to the editors in charge of the work of compiling the Era Druggists Directory, which will be issued in a short time.

The correspondent at San Juan, Puerto Rico, writes that there are one hundred and twenty-eight pharmacists in the Island, the population of which is 1,000,000. He has sent a complete list of these calling attention to the fact there is but one American druggist on the Island, R. H. Patron, of San Juan. He is one of the importers, of whom there are very few, being confined for the most part to the ports of San Juan, where there are six, Ponce, which has five and Mayaguez, the largest import, where there are nine houses worthy of note. Business is not considered to be on a very sound footing. Few of the dealers have money and the American business methods have not yet gained a secure hold.

The drug trade in the far eastern islands is in its infancy and there is an immense field open for the retail trade. In the city of Manila, with over a half a million of population, there are but twenty-one stores and among these there is but one American name, that of A. S. Watson & Co., Cebu, the second city of the islands and Iloilo, which is almost as large, each have but five stores. The directory will contain a complete list of all the dealers in the insular possessions, as well as in Cuba.

**NEW YORK AND VICINITY.****PETITION TO HAVE DRUGGIST COMERFORD DECLARED A BANKRUPT.**

James F. Comerford, No. 921 Columbus avenue, one of the most prominent druggists in Manhattan has become involved in financial difficulties, according to a petition filed in the United States District Court by Schieffelin & Co., asking that he be declared an involuntary bankrupt. The petition states that goods were sold and delivered to the druggist between January 1, 1901 and May 9, 1901 to the total amount of \$884.99 of which but \$96.24 has been paid, leaving \$788.64 still due with interest added from June 15, 1901. No security was given for the debt, but Schieffelin & Co. hold a judgment, recovered in the city court on June 18, for \$529.07 with interest and costs added. The allegation is made that Comerford is insolvent and the petition is based upon the claim that he committed an act of bankruptcy by transferring the title to the stock and fixtures in the Columbus avenue store to Gertrude T. Cockerill, his sister, with the intention to prefer her over other creditors. Comerford is one of the leading members of the Manhattan Pharmaceutical Association and is prominent in drug circles.

A petition in involuntary bankruptcy has also been filed against druggist Alfred Beley, who recently sold his place of business at No. 918 Sixth avenue to S. V. B. Swann. The leading claimants are Alfred and Joseph

Plaut, composing the house of Lehn & Fink. The amount of their claims is \$686. It is alleged that he paid out of the proceeds of the sale to Mr. Swann, \$900 to H. J. Kelly, of Belmar, N. Y., and \$500 to a Mr. Heller with intent to prefer them to other creditors. Mr. Beley has been in the drug business for many years. He bought the Sixth avenue store three years ago.

**GOOD PROSPECTS IN KANSAS.**

Chas. E. Potts, of the C. E. Potts Drug Co., wholesale dealers at Wichita, Kan., was in the city the past week. Mr. Potts is one of the most widely known drug dealers in the West. Speaking of the crop and business conditions in his section of the country he said:

"I find a more or less false impression existing in the east as to conditions in the middle west. The report that our crops have been blighted appears to have gained credence, of course some sections have suffered in a measure, but crops in general are good. This means that business will be good. As for the drug business, it never looked better. All branches of the trade are in a healthy condition with good immediate prospects. It would be difficult for me to give you an idea of the growth of the drug trade in the State in the past few years. It has gone ahead with a rush unsurpassed by any other line of business. The succession of good crops during this time has brought relief and prosperity that account for the growth in all lines of business."

**HOWARD E. WOOTEN.**

The new business opened by Howard E. Wooten, at No. 155 Duane street has been the subject of numerous inquiries and a great deal of gossip in the business community. Mr. Wooten says that he opened his place of business about three months ago and that the extent of his dealing in drugs is limited to buying at auction, mostly of alum and carbolic acid. He admitted, however, that he had been in communication with a number of out-of-town drug houses with a view to ordering. He made the statement that he had secured a discount from one of these concerns when it is known that the quotations given him were 25 per cent above the list price. Wooten ordered the goods but the cash was demanded before delivery. He has been generally held to a cash basis by the houses which have had dealings with him. He asserts that he can give references as good as gold and says that he has a man in view, who intends to put money in the business and become a silent partner. Wooten is from Canada. He claims to have been in the wholesale drug and chemical line for the past four years. He is given no rating by the commercial agencies.

**HELD FOR VIOLATING PHARMACY LAW.**

Henry Beinfeld, a druggist whose store is at No. 941 Amsterdam avenue was arraigned in the West Side Police Court on August 18 in answer to a summons served upon him on the complaint of Miss Brown, the woman detective of the State Board of Pharmacy, charging a violation of the pharmacy law by permitting prescriptions to be compounded by a junior clerk. Miss Brown's evidence is corroborated by that of detective Thomas E. Conway. Beinfeld alleges persecution by the board because he would not discharge his clerk and take one of the board's choosing. Secretary Sidney Faber says that this charge is absolutely ridiculous, the only mention of a clerk ever made to Beinfeld being a recommendation that he employ a licensed man. Paul Langefeldt, another druggist at No. 497 Tenth avenue was arraigned on the same charge and admitted his guilt. Both men were held in \$100 bail for trial in the Court of Special Sessions.

**DEATH OF MRS. E. P. MONTAGUE.**

E. P. Montague's many friends in the trade will be sorry to learn of the death of his wife, September 18. Upon the advice of the attending physicians, Mr. Montague took his wife abroad last July in hope of restoring her health, but instead of improving she grew gradually worse, and they returned to this city September 17. It was evident at that time that Mrs. Montague's condition was such that she could live but a short time and her death occurred late Wednesday night, September 18.

E. P. Montague is well known in this city having been connected with Schiffelin & Co., for many years and being at the present with Lazell, Dalley & Co.

**NOTES.**

—J. Elwood Lee, Jr., of the J. Elwood Lee Co., Conshohocken, Pa., manufacturers of surgical sundries, was the complaining witness in a case before United States Commissioner Shields this week against William G. Parker, a forger, who, Mr. Lee alleges, has been operating under the fictitious name of Keene & Co. Mr. Lee sent \$100 for investment in answer to an advertisement. This was to cover all expenses except deterioration. Keene & Co., sent Mr. Lee a communication September 16, informing him that it had been necessary to sacrifice the stocks on account of depreciation in the value of the securities due to the President's death. Parker's arrest followed. The hearing was not concluded and was postponed.

—The Harlem Drug Co., a new corporation, has purchased of druggist N. D. Lippincott the old store at No. 2227 Third avenue, known as Wood's Drug Store. This is one of the oldest stores in Harlem, having been established sixty-four years ago. Mr. Lippincott who is the proprietor of eight pharmacies in Manhattan, has purchased a store at the corner of 168th street and Brook avenue.

—Charles Wolanek will remove his pharmacy at No. 3206 Third avenue to No. 3194 Third avenue, giving as his reason in a circular letter, "high rental, no lease and above all no hopes". He makes the assertion that his present landlord is in the drug business and has kept the rents up in order to keep him down.

—William Haas, with W. L. Strauss & Co., has gone on an extended western trip. He will call at El Paso, Tex., Los Angeles, San Francisco and Sacramento, Cal., Portland, Ore., Seattle, Tacoma and Spokane, Wash., Butte and Helena, Mont., Ogden and Salt Lake City, Utah, and Denver, Col.

—S. H. Carragan, of Parke, Davis & Co., is taking a trip through the West. He will accompany his son to the University of Michigan, where the latter is entering college. Mr. Carragan will then visit the laboratories at Detroit.

—The names of E. B. Wade of Lincoln, N. J., and Chas. A. Rapelye of Hartford, Conn., are on the Drug Club register. Mr. Rapelye was the guest of R. R. Lampa of Lehn & Pink and Mr. Wade was entertained by Louis L. Drake.

—Joseph Toy, of the Carter Medicine Co., has been absent from his office the past week on account of illness. Mr. Toy is one of the most general men of drug-town and a host of friends join in wishes for his early recovery.

—Albert S. Wolffs, whose drug store is at No. 981 Amsterdam avenue, was fined \$50 in Court of Special Sessions, September 26th for permitting a junior clerk to compound prescriptions in the absence of a licensed druggist.

—The Colonial Chemical Co., producers and bottlers of witch hazel, with factories at Chester, Conn., have sold their plant to the International Witch Hazel Co., whose headquarters will be at No. 39 E. 42d St., New York.

—One of the leading druggists of Louisville, Ky., E. H. Ferguson, visited the trade this week. He is the proprietor of several large pharmacies in the Kentucky metropolis. Mr. Ferguson is buying for his Winter trade. —Max Gebauer, who removed a short time ago from No. 400 First avenue to allow of improvements in the building at that number has moved back again to his old location, where he has fitted up a new store.

—B. I. Hicks, New York salesman for Lazell, Dalley & Co., has gone on a shooting and fishing trip in the Adirondacks. He is accompanied by his son, B. H. Hicks and will be in the mountains about ten days.

—B. Kramer, formerly prescription clerk at Meyer Bros.' pharmacy at the corner of 3d avenue and 70th street, has opened a store at Amsterdam avenue and 79th street, recently occupied by B. F. Warren.

—Julius Foerster, who covers the New England territory for Sharp & Dohme, stopped over for a few days at the New York office on his way home after an extended trip through the West and South.

—Charles West, president of the Eastern Drug Co. of Boston and I. R. Read of the Parke, Davis & Co., laboratories in Montreal were the guests of Col. E. W. Fitch at the Drug Trade Club September 24.

—A. G. Yeomans, president of Reid, Yeomans & Cubit is making a pleasure trip to Quebec and other Canadian cities. Charles T. Cubit has returned from a trip to the Pan-American and northern points.

—R. S. Neal, of London, who is inspecting American pharmaceutical houses in the interest of a big English firm has been making visits to the New York establishments the past week.

—Out of town druggists registered at the Drug Trade Club September 24 as follows: George D. Rosengarten, Philadelphia; George C. Choate, Rochelle, N. J.; E. H. Ferguson, Louisville.

—W. A. Lusk of the Allison-Moore Co., Knoxville, Tenn., has been in New York for several days calling upon friends in the drug section with a view to laying in a holiday stock.

—W. L. Strauss, of W. L. Strauss & Co., No. 27 Warren street, is away on a tour through Canada and northern cities. He will take in the Pan-American at Buffalo before his return.

—R. Lucke, well known to the retail trade in this city, and who formerly owned the store on Eighty-first street and Amsterdam avenue, died in Colorado, September 15.

—Edward C. Howard has been added to the traveling force of the Osborn-Colwell Co. R. C. Barney, president of this company called at the New York office during the week.

—W. Van Antwerp, of G. Van Antwerp & Sons, druggists and seedsmen of Mobile, Ala., was among the prominent out of town visitors to the New York trade this week.

—Mrs. Ella B. Cook of Trenton, N. J., who recently died suddenly was buried September 24. She was the wife of Daniel L. Cook one of the leading druggists of New Jersey.

—H. B. Spackman who has been conducting a pharmacy at Beach Haven during the summer months has closed his store and returned to New York for the winter.

—J. L. Hopkins of J. L. Hopkins & Co. has been spending a week in the Berkshire hills, where he went to bring his family back to the city after a pleasant summer.

—Louis Couette, a Paris chemist, passed through New York September 25 on his way to Detroit where he has a position in the laboratories of Parke, Davis & Co.

—Mr. Schwartz, of the Red Cross Drug Co., Dwyer, Del., was a visitor in New York this week. He makes two trips annually, buying his season stock.

—W. M. Borden, of Columbia, Pa., was among the well known out-of-town druggists who were seen in the drug trade section this week.

—Jackson S. Little one of the prominent members of the trade in Toronto, Canada, made several calls on the perfumery trade this week.

—J. S. Brown, a prominent tradesman of Cleveland, Ohio, visited the local drug trade September 28, with a view to buying in New York.

—Louis A. Riz, one of the leading Manufacturing Chemists of Hamburg, Germany, was the guest of H. C. Louis at the Drug Club September 28.

—W. J. Carr, of Parke, Davis & Co., has returned from a business and pleasure trip through the northern and western parts of the state.

—H. Dehnhoff, proprietor of the drug store at No. 303 Hudson street, has returned from a week's trip through Virginia and the South.

—J. J. Childs, pharmacist of Austin, Tex., is in New York on a business visit. He has made several calls on the drug trade.

—Dr. L. G. Casella, pharmacist at Hester and Mott streets has been spending a week at the Pan-American Exposition.

—E. E. Darien, of Chicago and Justus Flohs, of Stettin, Germany registered at the Drug Trade Club September 30.

—J. B. George of E. E. Dixon & Co., Gainesville, Ga., made several calls at down town drug houses September 25.

—W. S. Oppenheimer, a well-known pharmacist of Tampa, Fla., was among the buyers in New York this week.

—Charles A. Osmun, proprietor of the store at 13 Seventh avenue is confined to his home by illness.

—F. L. Hotchkiss has severed his connection with the Bolton drug Co., No. 456 Fulton street, Brooklyn.

—J. N. Allen of Milbrook, N. Y., was one of the buyers who called upon the local drug trade this week.

—R. W. Phair, of R. W. Phair & Co., No. 16 Platt street, made a business trip to Philadelphia this week.

—T. G. Friedlieb has succeeded A. E. Gebhard as the proprietor of the latter's 8th avenue store.

—J. F. Garugie, one of the largest retail proprietors of Chicago is in the city on a buying tour.

—C. W. Snow, prominent in drug circles at Syracuse, was a visitor in New York this week.

## IN AND ABOUT BOSTON.

### A NEW SCHEME IN WHICH DRUGGISTS HAVE BECOME INTERESTED.

Boston, Sept. 28.—Some clever people have formed a stock company in this city with a laudable object—that of supplying people with umbrellas in an emergency. The company sells a check for a dollar and is to have in Boston 600 umbrella stands located in drug, cigar and confectionery stores, also restaurants, hotels and barber shops. Thus far the drug stores predominate as the agents for the company. If it rains, the subscriber consults the company's list and enters the nearest store acting as agent, gives the check to a clerk and receives an umbrella in exchange. The subscribers are supplied with a vest-pocket book containing a list of these stores, arranged by streets in alphabetical order. When it stops raining one can leave, if he so desires, the umbrella at the nearest store having one of the stands, and receive in exchange another check. Subscribers can pick up an umbrella as many times a day as desired, in any part of Boston, and will also find a place to leave it when not needed.

All that is needed in starting away in the morning is a check, and a man can assure himself that he will not get wet if he avails himself of this protection. Among those earliest to go into the scheme as agents of the company are the following-named druggists: Beacon Pharmacy, Bromfield street; Ralph B. Quinlan, Cambridge street; Knight's Pharmacy, Court street, corner of Hanover street; C. E. Eaton, Friend street; C. S. Lombard, Green street; Roger's Pharmacy, Hanover street; Epstein's Pharmacy, Tremont Row; Theo. Metcalf Company, Tremont street; C. E. Woodward, Tremont street; George Burwell, Adams House, Washington street, and several others.

### Suit for Heavy Damages Against a Druggist's Daughter.

Boston, Sept. 28.—Miss Maule B. Wetherell, daughter of M. L. Wetherell, who used to conduct a pharmacy at Gloucester, where the family has been very prominent socially, has been made the defendant in a suit for \$20,000 damages, brought by the wife of the Wetherell family coachman, who alleges alienation of her husband's affections. The Wetherells have several valuable trotting horses and it was a part of the coachman's duties to take Miss Wetherell out for a daily drive, the two of course were thrown together in that way—as everyone in Gloucester could see. Beyond that fact, however, they have seen nothing that formed any basis for this suit, which Miss Wetherell will contest. The coachman is known, moreover, to be a man of high character for one in his position. The late Emma Abbott, the opera singer, was the wife of Eugene Wetherell, an uncle of the defendant. When Emma Abbott died she left Miss Wetherell \$20,000, and she left \$10,000 to her grandmother, who has since died and left Miss Wetherell most of this money.

### NOTES.

—Higgins & Hurley, druggists at Winthrop, are voluntary petitioners in bankruptcy, with liabilities of \$2,827 and assets of \$1,671. The secured claims amount to \$1,000. The unsecured claims represent a large number of creditors. The firm is made up of George Higgins and Edward L. Hurley, and has operated two stores—one at Winthrop proper, and another at Winthrop Beach. The stock and fixtures in these two pharmacies are mortgaged, thereby securing some creditors to the amount of \$1,000, as stated.

—Horace A. Bishop, formerly head chemist for the Independent Pharmaceutical Company, of Worcester, claims that he was wrongfully discharged from their employ and has brought suit for \$1,500, to recover for alleged breach of contract. Through his attorney, Mr. Bishop has attached the company's place of business and the deputy sheriff who served the writ of attachment has placed a keeper in charge of the company's plant.

—Horace B. Davis, inspector of drugs for the Massachusetts State Board of Health, recently was sent to Littleton to take sample of milk from five cows belonging to Frank Litchfield. These samples he brought to Boston for analysis. Herman C. Lidgove, State analyst, found the samples deficient. In the court at Ayer, Mr. Litchfield was fined \$20 for having in his possession, with intent to sell, watered milk.

—Walter R. Dolliver, an inside salesman at the Eastern Drug Company's plant, has just been on his annual vacation, which he passed at Ocean Point, Me. His wife and some friends accompanied him and they all had a great time, deep-sea fishing. Mr. Dolliver caught a 42-pound cod, the largest taken by any amateur fisherman in the last four or five years.

—Jesse W. Sargent, leading druggist of Malden, and his wife, are having a comprehensive tour, including a voyage by steamer from Boston to Norfolk, Va., and Baltimore, then on to Washington and north to Buffalo, taking in the Pan-American Exposition and home by way of the White Mountains. Mr. Sargent is an expert photographer.

—J. F. Hayes, the treasurer of the Thorn Medicine Co., of Fitchburg, states (that company's condition to be thus: Cash and debts receivable, \$736; manufacturers and merchandise, \$4,362; furniture and fixtures, \$700; profit and loss, \$1,838; a total of \$7,636. Against this there is a capital stock \$5,000; debts, \$2,636; a total of \$7,636.

—Dr. Alonzo Green, of Boston and New Hampshire, of "Nervura" fame, intends entering the field this fall as a candidate for Republican nomination for member of Congress from the First District in New Hampshire where, in Laconia, he is Mayor of the city. He has also served as a representative in the Legislature.

—John C. Howe, of the firm of Howe & French, wholesale druggists, Boston, died at his home in Cohasset on Wednesday, Sept. 25, aged seventy-three. He was one of the wealthiest men in that part of the State. He leaves a widow, a son and a daughter. He was a member of the Masonic fraternity.

—The Bristol County Drug Company, through its treasurer, W. C. Chamberlain, reports its financial standing as follows: Cash and debts receivable, \$324; manufacturers and merchandise, \$7,201; a total of \$7,615. Offsetting this there is capital stock, \$6,200; debts, \$1,415; a total of \$7,615.

—J. F. Whitnew, whose store at the corner of Hanover and Blackstone streets, long has been a landmark, has moved temporarily into the next adjoining store, in order that the corner place may be entirely remodelled and made over into a finer store.

—Easthampton has lost one of its familiar characters through the death of James Robert Selman, who for a long time has been a "type", as he went about the streets selling his own patent medicines and salves.

—Winthrop M. Baker, of Boston, manufacturer of confectionery, whose goods are found in drug stores everywhere, has just returned from a trip to Buffalo and the Pan-American Exposition.

—Edward Laporte, a drug clerk at Holyoke, is among those who will enter the Massachusetts College of Pharmacy, in Boston, this fall.

#### MALLINCKRODT MORPHINE.

The keen interest manifested in the Mallinckrodt Morphine by the drug trade, is plainly indicative of the confidence pharmacists have in goods bearing the "M. C. W." label. Druggists who have specified the Mallinckrodt chemicals for years, have not been disappointed, and they will not be disappointed in handling the "M. C. W." Morphine.

Druggists who carry surgical instruments, trusses, bandages, and deformity appliances in stock, are invited to correspond with F. Eissner, 18 Bible House, N. Y., the manufacturer of and wholesale dealer in these goods. His advertisement is in this issue.

## PHILADELPHIA.

### BUSINESS IMPROVING.

Philadelphia, Sept. 28.—Business has brisked up somewhat this week and trade is increasing in volume, with a noticeable improvement in the demand for domestic medicines. Prescriptions are coming in more frequently, owing to local conditions, and there is a prospect for betterment in this line. The small pox epidemic continues and the rush for vaccination is causing a very great demand for vaccine points and dressings, last week's record being eclipsed. One druggist alone sold over 1,800 vaccine points and tubes this week to his customers and nearby physicians, others are doing almost as well, while the demand for vaccine shields and plasters can scarcely be supplied from day to day. Big orders are coming in from hospitals and also from local colleges and boarding schools. Jobbers have had a pretty fair week, orders from both local and out of town customers coming in briskly. Sales of drug sundries have been good, toilet preparations and soaps are in good demand. There is a good outlook for a brisk fall trade and already some of the houses are getting ready for the sale of holiday goods. Manufacturers are being kept fairly busy and several good sized orders have been placed with a prominent manufacturer of chemicals.

### OCEAN CITY DRUGGISTS CAN SELL SODA ON SUNDAYS.

Philadelphia, Sept. 28.—Vice Chancellor Grey, in Camden, refused a preliminary injunction in the case of W. W. Chalfant, an Ocean City druggist, restricting him from selling any other articles than drugs on Sundays. It was shown that the covenant in Ocean City deeds prohibiting the sale of goods on Sundays had been practically a dead letter for the past twelve years; this nullified it in the present suit. The decision is a victory for Mr. Chalfant and is particularly welcomed by Jersey druggists inasmuch as the prosecution was instigated by so-called "reformers" from Philadelphia in an attempt to force "blue laws" on the coast resorts. Mr. Chalfant deserves the thanks of all druggists for so manfully fighting for their rights.

### NOTES.

—Philadelphia received a flattering share of the appointments of the American Pharmaceutical Association at the St. Louis Meeting, several very responsible committee positions coming to the Philadelphia pharmacists. Prof. C. B. Lowe, of the Philadelphia College of Pharmacy, was elected a member of the General Council, F. W. E. Stedem was elected chairman of the Section on Practical Pharmacy and Dispensing, Lyman W. Kebler, chairman of the Scientific Section, with J. V. England as Secretary, and W. L. Cliffe, President of the State Pharmaceutical Association was appointed Local Secretary for the coming year. With the next meeting to be held at Philadelphia, it looks as if Philadelphia druggists were coming to the fore in good style.

—Isaac Cohen, president of the Foodigest Company, of Philadelphia, whose portrait appears elsewhere in this issue, is well known to the retail drug trade, and he has given very substantial proof of his interest in the work of the Philadelphia Association of Retail Druggists by paying to it quarterly 3 per cent. of the profits made on the sale of the Company's specialty, "Foodigests." Mr. Cohen's plan has been appreciated by the members of the association, who have taken an active interest in his scheme. A check of more than \$23 was received by the association from Mr. Cohen for the quarter ending June 30. He is an active member of the P. A. R. D., serving on two committees.

—The First Annual Meeting of the Philadelphia Drug Bowling League will be held on Tuesday next at the office of D. E. Bransome, 1022 Commerce street. An election of officers for the coming year will be held, and the bowling schedule for the various clubs will be arranged. The outlook for a very successful season is most excellent; a large fund has been subscribed for the fitting up of club quarters for the League, and steps will soon

ISAAC COHEN.

President and General Manager of the Foodigest Company, Philadelphia.

be taken to equip a comfortable club and alleys. All the local firms will be well represented by strong teams.

—The regular monthly meeting of the Philadelphia Association of Retail Druggists will be held on Friday, October 4, at the Philadelphia College of Pharmacy, at 2:30 p. m. A report from the committee on the supplying of medicines to the out-door poor of the city will be an important feature of the meeting and the "telephone committee" will also have a report to make on their work on telephone service commissions. Other topics of local interest will be discussed.

—Several other new drug stores are already opened or soon will be; among these are one at Seventeenth and Moore streets, owned by Mr. Thompson, one at Twenty-second and Ellsworth streets, by Mr. Love and another by Meredith at Broad and Porter streets. Addison Ladow, owner of so many drug stores here, has purchased the store at Sixth and Snyder avenue.

—Among the delegates to the meeting of the State Medical Society this week were J. H. Redsecker, of Lebanon and J. M. Baer, of Philadelphia. A very good exhibition of medical and pharmaceutical preparations and apparatus was shown, over seventy exhibitors being represented.

—Ross & Wagner, proprietors of the Pearl Pharmacy, Fifty-fourth and Pearl streets, West Philadelphia, are building a new drug store at Fifty-second and Havertord avenues, which will be fitted up with complete and handsome fixtures.

—H. B. Terncy is building a handsome store and residence across the street from his present location, Fifty-second and Master streets, and will move into his new quarters as soon as the building is completed.

—J. L. Steltzer will soon open a new drug store at 2700 Germantown avenue, to be conducted in connection with his present store at Sixth and Cumberland streets.

—Samuel Fisher will open a new drug store at 4439 Germantown avenue in the near future, which will be fitted up with handsome modern-style fixtures.

—John Leo Smart has opened a handsome drug store on the northeast corner of 20th and Wharton streets. He carries a full stock of drugs and sundries.

—E. W. Giles, Medico-Chirurgical College, '01, formerly clerk for James C. Perry, has been promoted to the management of this store.

—Dr. H. Wilkinson has bought the drug store at Tenth and Reed streets, for several years conducted by Jas. Rutherford.

—F. Groff, of Funk & Groff, Lancaster avenue, has returned from a vacation trip to Maryland, much benefitted by his outing.

## BALTIMORE.

### NOTED DRUGGIST DEAD.

Baltimore, Sept. 26.—Wm. S. Thompson, one of the best known druggists in the East, and who was a familiar figure at the gatherings of the American Pharmaceutical Association for years, died suddenly this morning of heart failure, superinduced by acute indigestion. He had just eaten a light breakfast at his residence, 1322 New York avenue, Washington, D. C., when he complained of a severe pain in his abdomen. Word was sent to his pharmacy, on Fifteenth street, opposite the treasury building, and Mr. Thompson rose to go up stairs, when he was completely overcome and fell to the floor. Medical aid was quickly summoned, but the dying man passed away in a short time. For a quarter century Mr. Thompson had been a notable force in the District of Columbia business affairs. At the time of his death he was president of the Riggs Insurance Company, a member of the executive committee of the American Security and Trust Company, treasurer of the Children's Hospital, a trustee of the Boys' Reform School, a vice-president of the American Pharmaceutical Association, and prominently identified with other organizations. His pharmacy had long been one of the commercial fixtures of the national Capitol. The deceased was 62 years old and is survived by his wife and five children. One of the sons is a lieutenant in the United States Navy. Mr. Thompson was a man of singularly lovable qualities. To a wide range of information on pharmaceutical and business matters he added a most genial disposition. He had a large circle of friends and acquaintances, who will be shocked by the news of his sudden death.

### GILPIN, LANGDON & CO.'S FINE NEW QUARTERS.

Baltimore, Sept. 25.—Gilpin, Langdon & Co., the widely known wholesale druggists and drug millers, have moved from their temporary quarters on Light street, occupied since the fire, into the new home, on Lombard near Howard street, formerly inhabited by Charles A. Vogeler Company. This structure is one of the most commodious and elegantly equipped of its kind in the United States and the new quarters admit of all divisions of the business being housed practically under one roof. Virtually no artificial light is required, even on cloudy days, and access to the shipping apartments is had by means of a private driveway. In Mr. Gilpin's private office is a fine desk of the style no longer in vogue, but which calls for the most skilled workmanship to bring out the details. It was made especially for the late Charles A. Vogeler at a cost of \$250 and enjoyed the distinction of having its exact duplicate in the working room of the President at the White House.

Much yet remains to be done before everything is in order. Considerable machinery is to be moved and placed, but the laboratory is already fully equipped. Among the additions is the installment of a 200-horse power boiler and some new machinery of special design.

### BUSINESS RATHER QUIET.

Baltimore, Sept. 29.—Business among the jobbers was rather quiet last week, which may be attributed partly to the circumstances that the end of the month is drawing near, when the retailers always curtail their purchases in order to keep down their bills as low as possible. In the aggregate the volume of transactions was fully up to the average, however, and the year continues to show up well. Operations in the laboratories were conducted with unabated vigor, the demand for pharmaceuticals being in the main undiminished. Local druggists and traveling salesmen report meeting with much encouragement and are able to show a gratifying increase in orders. The movement in heavy chemicals is about normal, while the market for botanicals has developed a stiffening as to the prices in some directions.

**WEDGEWOOD CLUB.**

Baltimore, Sept. 26.—The first regular meeting of the Wedgewood Club to be held after the summer intermission took place last evening at the Eutaw House. Nearly the entire membership was present, John S. Muth, of Muth Bros. & Co., occupied the chair and excellent good cheer prevailed throughout the evening. The Wedgewoodites thoroughly enjoyed the tempting menu provided by the hotel management, and the feast of wit which followed proved to be not less delectable. Several members who happened to be unacquainted with the peculiarities of the club saw a favorable opportunity to acquire a reputation as orators, and soon discovered their mistake. One of these novices in particular persevered in an effort to recite and abandoned the attempt only when the din had grown so great that he could not make himself heard.

**NOTES.**

—The regular monthly meeting of the Maryland College of Pharmacy was held last Thursday, and arrangements were completed for the opening of the college next week. According to treasurer Mansfield applications for admission to the college as matriculates are coming in freely and the classes promise to be larger than those of last year.

—The delegates from this city to the annual meeting of the American Pharmaceutical Association in St. Louis, arrived home last Monday well pleased with their trip and with the results accomplished during the sessions. The party included Charles L. Meyer, a well-known retail druggist.

—The firm of Barnitz & Harbaugh has succeeded G. Edward Harbaugh in the proprietorship of the pharmacy at Hanover, Pa. Mr. Barnitz, who was in Baltimore last week, is a former newspaper man.

—George Wendel, formerly a clerk in the pharmacy of J. O. Harrison, Baltimore, has accepted a similar position with W. C. Downey, proprietor of the Ebbitt House Pharmacy, in Washington, D. C.

—H. M. Wilson, Jr., of Charlotte, N. C., a graduate of the Maryland College of Pharmacy, has entered the employ of Hynson, Westcott & Co., Charles and Franklin streets.

—Charles M. Grauer will shortly open a new drug store at the corner of Sharp and Hill streets.

**Of Interest to Druggists.**

A leading druggist of one of the large Connecticut towns recently remarked: "It is a wonder to me that more of the retail druggists in this country do not catch on to the fact that there is a good profit to be derived from the sale of preserved natural plants as a side line. I have been carrying a line of these plants for over a year and you would be surprised to learn the number I have sold in that time. I put a lot of these plants in my windows, and place a neat card with the price plainly printed on it on each one. It makes an attractive window and sells the plants. There is very little trouble attached to the care of this line and it yields a good profit." Up-to-date druggists should take the hint. This is undoubtedly a good line and besides being profitable makes the store more attractive. A large and assorted stock of preserved natural plants is always kept by Frank Netschert, No. 129 Fifth avenue, New York, and No. 150 So. Clark street, Chicago. These plants cannot be detected from living, growing plants, and yield the druggist 300 per cent profit. Mr. Netschert will send a handsome 80 page illustrated catalogue and price list free, on application.

—The Spatula Publishing Co., of Boston, has issued a new edition of "How to make Tablets" by Frank Edel. Dispensing pharmacists who have occasion to make a limited number of tablets will find the information contained in this little book very practical and useful. It contains careful directions for making preparations of this class besides many useful formulas. It may be obtained of the publishers for twenty-five cents.

**CINCINNATI.****FALL FESTIVAL IN QUEEN CITY.**

Cincinnati, Sept. 28.—The retail business in the Queen City on account of the opening of The Fall Festival last week was exceptionally good. Many of the downtown stores were handsomely decorated and did a big business. The wholesale houses fared equally as well on account of the numerous visitors in town, who had taken advantage of the cheap excursion rates on all the railroads. Among the prominent druggists in town were Vernon Driskell, treasurer of the Kentucky Pharmaceutical Association, and prominent druggist at Ghent, Ky. Howard Jett and wife of Cynthia, Ky.; W. A. D'Amesberthe and his clerk, E. W. Patterson, of Pensacola, Fla.; C. N. Peters, wife and daughter of Milan, Ind.; C. D. Carmine, Delaware, Ind.; C. H. Wilson, Smithfield, Ky.; F. W. Gibson, Amesville, Ohio; F. H. Gilbert of Pensacola, Fla.; J. D. Humphrey, Huntsville, Ala.

**SUIT AGAINST WOMAN CUTTER.**

Cincinnati, Sept. 30.—W. D. Freeman, of the Freeman Perfume Co., has brought suit for \$5,000 damages and a permanent injunction against Miss Cora Dow, the owner of five cut-rate drug stores, to prevent her from handling his face powder, on the ground that she mutilated his private marks and cut the price from 25 cents to 19 cents. In order to cut off the source of supply of Miss Dow and other cut-rate dealers, Freeman attached private marks to the boxes sent to different jobbers and when he found the article sold under price, he would cut off the jobber who handled the goods. Miss Dow learned of this and has been blotting out the private mark in order to conceal her source of supply. She will maintain that she has a right to erase any private marks from goods which she has purchased.

**NOTES.**

—The influx of strangers to this city was even greater this week than last and the wholesale trade report good business in consequence. Among the prominent druggists in town we noticed A. H. Cochran and wife, Berry, Ky.; Grant Hoover, Gratis, Ohio; W. H. Hannah, Georgetown, Ohio; John Porter, Williamstown, Ky.; T. R. Fulton, Bessemer, Ala.; W. H. Gwin, Hinton, W. Va.; H. B. Osborn, Manchester, Ohio; W. T. Elrod, Bethel, Ohio; E. W. Stacey, Highland, Ohio, and M. A. Grier, Carrollton, Ky.

—Albert D. Wells, druggist at 4th and Central avenues, and one of the best known young men in town, was this week nominated for representative by the Democratic convention. Mr. Wells will no doubt secure the solid support of the profession.

—W. Lozier, prominent druggist at Xenia, Ohio, and president of the Green County Drug Association, was in town last week getting pointers from the Ohio Valley Drug Association.

—Jos. H. Nicholas, West End druggist and captain of the Druggists' Base Ball team, is rejoicing over the arrival of a brand new boy.

—Albert Bingel, who has been in the drug business for twenty-five years, is back from Germany, looking twenty years younger.

—John H. Lineman, Walnut Hill's druggist, has just returned from a two weeks' vacation at the Pan-American Exposition and Niagara Falls.

—Maddox Bros., prominent druggists at Ripley, Ohio, were in town this week attending the Fall Festival and laying in a stock of goods.

—B. George, of Winchester, Ky., stopped over to take in the Fall Festival on his way to the Pan-American.

—C. H. Mueller, one of the oldest druggists of the city, will shortly return from his European trip.

—F. W. Blesi of Covington, Ky., returned last week from Europe after an absence of three months.

—The Cincinnati College of Pharmacy has opened with the largest class in its history.

## LOUISVILLE.

Louisville, Ky., Sept. 26.

—James Eames, a druggist from the southwestern part of the State, was run over by an automobile on the Bardstown Pike on Thursday and seriously injured. He was in a buggy and his horse became frightened at the approaching automobile. The druggist got out of his vehicle, caught the animal by the head and attempted to quiet him. Just as the auto got opposite the animal made a lunge and threw Mr. Eames under the wheels of the machine, the rear wheel passing over his head. He was unconscious when assistance reached him and was removed to the city. His condition is still critical. Mr. Eames was here to purchase a stock of drugs.

—The shock of seeing his two sons leaving the city to fight a band of unruly coal miners in Hopkins county, came near proving fatal for Arthur Peter, a member of the Peter-Hauer Drug Company, wholesale druggists. Mr. Peter had two sons who are members of Battery A, which Governor Beckham called out, ordering the members to hold themselves in readiness at one of the depots. Mr. Peter heard of the order and rushed to the depot where he saw his sons, both of whom were in uniform. Mr. Peter collapsed upon the spot. A physician was summoned and the unconscious man was removed to his home. His sons were detailed to go with him and for several days his condition was serious.

—The druggists of Louisville claim that the present has been one of the most profitable years ever experienced. They claim that their sales have been large and that the suppression of the aggressive cut raters has made Louisville one of the best drug cities in the country. Many of the druggists are putting in new fixtures. Another indication of prosperity is the large number of new drug stores which have been started within the last few months. Altogether the drug business in Louisville is first class and another year of prosperity seems in store.

—Baseball has been forsaken by the druggists of the city and they have returned to bowling their favorite sport. Last year there were several teams composed exclusively of druggists and it is probable that they will be reorganized.

—Charles Scribner, the proprietor of Scribner's Pharmacy, Sixth and Jefferson streets, has retired from the restaurant business. He was for several months proprietor and manager of the Elk's Cafe. His brother, James, also a druggist, was the founder of the restaurant.

—Henry Jacobs, who formerly conducted a drug store at Tenth and Jefferson streets, has been seriously ill with typhoid fever. His condition was critical for several days and at one time his life was despaired of.

—A new drug store was opened Monday in the hall owned by the Liederkrantz Society, at Sixth and Walnut streets.

## CHICAGO.

### CHICAGO BUSINESS GOOD.

Chicago, Sept. 28.—The advent of the Fall trade has brought good business to Chicago druggists and manufacturers. All the houses are busy and report that it has been necessary this week to work nights during part of the week. Orders are reported to be heavier than usual even considering the season. All the men on the road are sending in satisfactory orders and their reports are of a nature greatly to encourage their employers concerning the business outlook for the fall and winter. Locally in the city business is good. The retailers are busy and while there is some cutting down town, it is not causing much worry among the average members of the trade.

### ILLINOIS BOARD MEETS.

Chicago, Sept. 28.—The Illinois Board of Pharmacy met in Chicago this week. There was a full attendance of the board. Seventy-nine persons were examined for

B. F. PARNELL,  
Assistant Manager, Public Drug Co., 150 State St.,  
Chicago

certificates as registered pharmacists, twenty-five of whom passed. Out of thirty-six applicants for certificates as registered pharmacists twelve passed. The next meeting of the board will take place in Chicago on Nov. 19.

### NOTES.

—Among those who attended the meeting of the American Pharmaceutical Association in St. Louis last week were the following Chicago people: Messrs. Albert E. Ebert, F. S. Hereth, T. V. Wooster, Bruno Batt, C. Hisgen, N. Bruun, Adolph G. Vogeler, W. H. Gale, August Merz, Mrs. M. S. Hall and Professors Hallberg, Oldberg, Schneider and Puckner.

—The drug war in the down town district is on. Peruna, Swift's Specific, Pinkham's Compound, etc., are selling at 67 cents and other things in proportion. Patients are being advertised in the windows and by other means.

—The announcement of the death of William S. Thompson of Washington a few days ago was a great shock to his many friends and fellow members of the American Pharmaceutical Association in Chicago.

—Clarence A. Davidson, manager of the druggists' sundries house of James A. Davidson, has been confined to his room this week, being threatened with an attack of typhoid fever.

—Smith & Yaple, 342 West Madison street, have sold their store at that place to William Hookway, who has moved it to Douglas boulevard and West Harrison street.

—Bruno Batt, formerly one of the best known druggists in Chicago, has moved to St. Louis, where he has engaged in the manufacture of proprietary medicines.

—William Gillmann has moved his drug store from North Clark street and Belden avenue to 1,025 North Clark street.

—The drug firm of Weaver & McDonald at Chandler-ville, Ill., has dissolved partnership. J. E. McDonald succeeded.

—The Kirchstein Drug Company of Chicago was incorporated this week with a capital stock of \$2,500.

—The drug store of Mrs. W. H. Pelz at Peoria, Ill., was burned early this week.

—C. B. Judy has succeeded Judy & Prince in the drug business at Matthews, Ind.

—W. Watson has opened a new drug store at 5,727 West Chicago avenue.

## THE NORTHWEST.

### CENTURY'S EDUCATION IN PHARMACY.

St. Paul, Minn., Sept. 27.—Dean F. J. Wulling, of the College of Pharmacy of the University of Minnesota, delivered a striking address at the opening of the tenth year of the college Wednesday. The title was "The Achievements of Pharmaceutical Education in the Nineteenth Century." The lecturer showed how the colleges had been responsible for the higher standard which the profession had attained during the past century. Before the nineteenth century there were no colleges of pharmacy in this country. During the century, of the fifty-three colleges now in existence two were established in the first quarter, three in the second, eight in the third and forty since 1876. Continuing the dean said:

There are no laws making a college training obligatory for those who practice pharmacy. Young men may study by themselves, and when, in their opinion, they have memorized a sufficient number of facts, they may present themselves to the state board for examination. This is not as it should be. The pharmacist, like the physician, should have a professional training such as can only be obtained at a well equipped teaching institution. Those who do not go to a college have to be their own instructors. It is right at this point that the pharmacists of to-day are making a serious mistake. They are handing the profession down to a posterity which they are crippling by not affording it the fullest means for development. A profession that should be powerful in its learning, intelligence and wisdom, cannot expect to be what it should, nor can it expect recognition as a learned profession when it is so indifferent as to the qualification of those into whose hands it places its own continuance. This indifference is shared, happily, by all the members of the profession. The few are pulling the many, and it is my firm conviction that before the end of the first quarter of the present century, no applications will be received except from such as have obtained a college training. We are in the transition period, and the colleges and graduates are hastening the transition. Public opinion and the demand of the public are also aiding. Despite this lack of legal requirements, there were in attendance at colleges of pharmacy in 1878 the goodly number of 1,187. This number had grown in 1900 to nearly 1,000—an increase of over 50 per cent.

### NOTES.

—Successions: G. J. Smart, Blue Earth, Minn., by Cummings Bros.; Revolt & King, Fulda, Minn., by King & Wilson; Charles Henry, Corning, Ia., by H. H. Harris; Greiver & Co., Ringsted, Ia., by M. P. Madsen; B. Anderson, Tacoma, Wash., by Lien & Selvig; C. J. Hinkley, Battle Creek, Ia., by Iddings & Iddings; H. C. Grave, Central City, Neb., by Robinson & Multhead; J. F. Hilton, Thayer, Neb., by F. M. Hilscherk; Newquist & Hong, Essex, Ia., by Newquist & Clem; Hahn & McClintock, St. Edwards, Neb., by McClintock; J. P. Curran, Cottage Grove, Or., by J. S. Benson.

—While the gas cylinder to the soda fountain in Dean's drug store at Estherville, Ia., was being charged Tuesday, the tank exploded, killing Fred Benson, aged ten years, immediately, and injuring Ed. Rose, a boy of nine years so badly that his recovery is doubtful.

—New: B. E. Nelson, Lilly, S. D.; C. G. Nickels, Fargo, N. D.; C. Buzae, Pepin, Wis.; Theo. W. Thomas, Wood Lake, Minn.; W. R. Wherrett, Heber, Utah; F. W. Congdon, Hutchinson, Minn.

—The Dillon Drug Co., South Omaha, Neb., has increased its capital stock \$10,000, and the Western Pharmaceutical Co., Omaha, Neb., has added a similar amount to its capital.

—F. W. Congdon, formerly in Noyes Bros. & Cutler's laboratory, in St. Paul, and since then in Montana, has bought out Hart's drug store in Hutchinson, Minn.

—Hutchins & Skinkle, Geneva, Neb.; O. W. Bullard, Beaver City, Neb., and H. M. Tradwell, Monroe, Wash., have sustained fire losses.

—J. M. Millan, who has for some years been with Broderick & Walker at Kalispell, Mont., has left there and gone to a Chicago Medical College.

—John Hollenitsch, who has been doing relief work at Litchfield and other places, has accepted a good position with Mr. F. P. Parke, at Tracy.

—George W. Bloomhardt, Keller, Wash., F. H. Haeking, Wood Lake, Minn., and R. Bridge, Heber, Utah, have sold.

—J. D. Webb is leaving Duluth to take a good position in Noyes Bros. & Cutler's laboratory, St. Paul.

—D. M. Newbro has sold his interest in the Montana Drug Co., Butte, Mont.

—Miles Sheerin, a Rainier, Or., druggist, was robbed of \$400 a few days ago.

—J. F. Nagel has withdrawn from the Robertson-Nagei Drug Co., Minneapolis.

—Spicer & Knapp, Hastings, Neb., have filed articles of association.

—O. T. Kjauraug has gone to work for Mr. Mossberg, of Willmar.

—John J. Ogg, Minneapolis, is negotiating to sell.

—J. C. Brown has gone to Jeffers to work.

—Louis W. Sautter, Omaha, Neb., has given bill of sale.

—R. Robinson, Omaha, Neb., is to sell.

## ST. LOUIS.

### ST. LOUIS DRUG CLERKS' SOCIETY.

St. Louis, Sept. 28.—The St. Louis Drug Clerks' Society has taken a new lease on life and promises to be very much in evidence this winter. For the past two years or more, general interest in the organization had been gradually dying out. Many of the old members had become proprietors, some had left the city or studied medicine or dentistry. The membership gradually dwindled down, no one looked after the collection of dues, and no special effort was made to secure new members. About two months ago a few of the remaining old members held a meeting and laid plans for reviving the organization. Four or five of these members had come into positions where they could devote a reasonable amount of time to this work and they took hold of it in earnest, made a thorough canvass of the city, calling upon every registered drug clerk. They have already secured over fifty new paid up members and have good prospects of securing as many more in the near future. One of the main desires is to get the society in such a condition that permanent quarters can be maintained where they can have the Bureau of information and a reading room, in fact, headquarters for drug clerks, open at all times. Mr. Soellner and Mr. Kaufmann took a trip to Chicago last week to see how the Chicago Drug Clerks' Association was run and they came back more enthusiastic than ever. The very great demand for drug clerks in this city for the past year, has very perceptibly increased salaries and shortened the hours of the clerks. With scarcely an exception the proprietors heartily approve of the clerks taking an interest in this organization.

### NOTES.

—The St. Louis Paint, Oil & Drug Club held a special meeting last Wednesday night to select delegates to the convention of the National Paint, Oil & Varnish Association to be held at Niagara Falls beginning October 8th. The following members were chosen: H. H. Clark of the Waters Pierce Oil Co.; Mr. Wieder, of the Wader Paint Co., and Mr. Venable, of the Berry Varnish Co. Besides these delegates, about twenty other members have signified their intentions of attending the convention. Guy Hallingsworth has been employed to represent the Moffit-West Drug Co., in southern Illinois to fill the vacancy caused by the recent death of J. G. Churchmann.

—Word has just reached here of the sudden death of Wm. S. Thompson, of Washington, D. C. It is a sad shock to the many St. Louis pharmacists who became personally acquainted with him during the convention here last week. The prominent and active part he took in that meeting increased the admiration of his old friends and won the highest regards of many new ones.

—L. P. Hemm, of Kirkwood, Mo., has placed his two drug stores in charge of his brother, Prof. Francis Hemm of this city, and has left for Arizona where he

hopes to recuperate his health. Prof. Hemm has employed A. N. Reitz of this city as manager of one of the stores, and placed his son George in charge of the other store.

—Druggist F. C. Merker, of East St. Louis gained considerable notoriety last week by displaying in his show window a jar containing the heart of a negro who a few days ago had been shot by a farmer while stealing chickens. The display aroused the indignation of the colored people.

—Frank L. E. Gauss, for the past few years in charge of the local office for The Searle & Hereth Co., has been called to a position at the Company's headquarters in Chicago. In the future he will have charge of the branch offices in various parts of the country.

—O. H. Geyner, manager of the Star Drug Co., Broadway and Market streets, was married September 24, to Miss Inez Tippen of the South Side. It was quite a surprise to their many friends. The ceremony was performed at the M. E. Church of Belleville, Ill.

—The drug store at 2600 Olive street will in the future be known as the J. H. Blum & Co. Pharmacy. The store was recently purchased by J. H. Blum and H. A. Kalbfleisch. The latter gentleman will be manager of the store.

—Chas. Whitney, formerly chief clerk for W. S. Fleming, Seventeenth street and Washington avenue, has accepted a similar position with M. J. Noll, Goodfellow avenue, and Suburban Road.

—F. C. Wangelin has sold out his drug store at Thirty-fourth street and Laclede avenue, and gone to his old home in Belleville. He says he has had enough of the drug business.

—Theo. H. Specht, formerly a druggist in the far southwestern part of the city, is now chief clerk for F. T. McAuliffe, 1001 O'Fallon street.

—E. R. Drace has closed his store at 3200 Chestnut street, and announced his intentions of permanently quitting the drug business.

—E. G. Bauer, for several years chief clerk for E. J. May, 420 Olive street, has gone on the road for H. K. Mulford & Co.

—The Doehring-Brenner Drug Co., is moving its store from Fifteenth and Monroe streets, to Lee and Neustead avenues.

—Ed. Barmhair has been placed in charge of E. A. Medler's recently purchased drug store at John and Florissant avenues.

—Dr. F. J. Minich, in charge of the City Department for the J. S. Merrell Drug Co., is quite ill at present writing.

—The St. Louis Saturday Night Drug Club will hold a banquet at the St. Nicholas Hotel next Tuesday night.

—W. J. Schneider, druggist at 6343 Michigan avenue, is slowly recovering from a stroke of paralysis.

—On last Monday R. C. Crooks opened his new drug store at St. Louis and Arlington avenues.

—Chas. H. Zahn opened his new drug store at 1954 Sidney street, last Thursday morning.

#### SOFT CAPSULES.

The original manufacturer of soft capsules in this country was the firm of Dundas Dick & Co. This firm was established in 1865 by Mr. Dundas Dick, who had previously manufactured soft capsules in Glasgow, Scotland. Mr. Dick died about six year ago, but the business has been continued without change of firm style and under capable management. Dundas Dick & Co., have established an enviable reputation for the purity of their goods. Their Deuts Sandalwood Capsules are claimed to be the best made, and are quite generally prescribed by physicians for diseases of the genitourinary organs. They are put up in packages retailing at \$1.50 and cost the dealer \$12.00 per dozen.

Druggists desiring cash register paper of the best quality and at a reasonable price will do well to write for a price list to the Standard Cash Register Co., Wabash, Ind., before ordering their next supply. This concern is also prepared to sell modern cash registers of all styles at very reasonable prices.

## THE SOUTH.

### ATLANTA DRUGGISTS LOSE.

Memphis, Sept. 27.—In the injunction suits of the Jacobs Pharmacy Co. against Brown & Allen, and others, fourteen in number, Judge J. H. Lumpkin last week handed down his decision, which is in favor of the Jacobs Pharmacy Co. The decision is the first rendered under the Georgia Anti-trust law, which was passed by the Legislature in 1896.

It was prayed by the Jacobs company that the defendants be enjoined from carrying on the alleged boycott; that they be enjoined from calling the plaintiff "the aggressive cutter;" from fixing a list of prices for drugs and patent medicines; from requiring that a card be issued to travelling salesmen, and from anyway singling out or designating the plaintiff as a cutter of prices. The defendants answered all this by saying they were compelled to adopt a scale of prices. They denied that they had violated the law. The case has been in the court for some time and has attracted a great deal of attention. A \$50,000 damage suit was filed by Jacobs at the same time as the petition for injunction, but this has not yet come to trial.

Following is the portion of Judge Lumpkin's decision which relates to the Anti-trust law:

But even if at common law the action of these defendants could not be held unlawful, it is expressly so under the act of the Legislature of this State passed in 1896. By that act it is declared that "all arrangements, contracts, agreements, trusts or combinations between persons or corporations made with a view to lessen, or which tends to lessen, full and free competition in the importation or sale of articles imported into this State, or in the manufacture or sale of articles of domestic growth or of domestic raw material, and all arrangements, contracts, agreements, trusts or other combinations between persons or corporations designed, or which tend to advance, reduce or control the price or cost to the producer or to the consumer or any such product or article, are hereby declared to be against the public policy, unlawful and void."

A violation of this provision of this act is made criminal, and it is provided that any person injured by any such arrangement, may sue and recover the full consideration by him for any goods, the sale of which is controlled by such combinations.

The judge wound up his elaborate opinion with the following order:

"Upon the whole case I hold that the defendants who are members of the Atlanta Druggists' Association and that association should be enjoined from sending out to wholesale druggists or proprietors of proprietary medicines through the mails, or delivering to them otherwise, the letter and agreement set out in exhibits A and B to the petitioner, or seeking to cause the letter to be signed by means of the letter sent out in exhibit A or other like means, or sending out any letter, circular or agreement of similar character or import, directly or indirectly, to wholesalers, jobbers or proprietors, and from issuing to salesmen and causing to be signed the card or agreement attached to the petition as exhibit C, or any card or agreement of similar import or purpose; and from in any manner threatening or seeking to intimidate proprietors or wholesalers, and so prevent them from selling to plaintiff as a cutter or aggressive cutter, and from conspiring and from seeking to prevent wholesale or other druggists from dealing with or selling to plaintiff by direct or indirect threats of cutting off their means of obtaining goods or merchandise, or causing such means to be cut off if they should deal with or supply the plaintiff, and from taking part or causing them injury or loss of custom in carrying out any conspiracy or combination for that purpose, and from designating or pointing out the plaintiff to other druggists' associations or their representatives as an aggressive cutter, and from writing or sending through the mails any card, circular, letter and other written or printed communication conveying or intended to convey to proprietors or wholesalers throughout the United States that plaintiff is an aggressive cutter and under the ban of the local association, or of similar import."

**Tried to Warn McKinley.**

Memphis, Sept. 28.—According to the story of H. S. Test, a druggist of North Memphis, the President could have been warned of his assassination had he taken the trouble to make an appointment to meet Mr. Test last October. Mr. Test says he wrote to the President and registered the letter for which he never received an answer. Had the President replied Mr. Test would have gone to Washington and given him warning. Mr. Test again wrote, this time to the President's wife. This letter was also unanswered. In it he made the same statement that he did to the President. Just before the fatal bullet was fired Mr. Test remarked to a customer that the President would be assassinated and the repetition of this remark coupled with subsequent events caused no little comment. The druggist claims that the warning came from God and regrets exceedingly that he was denied the privilege of warning the President of his impending fate.

**Business Picking Up.**

Memphis, Sept. 28.—Trade with the wholesalers has shown a decided improvement but hardly enough to justify a feeling of buoyancy as yet. The past summer has been exceedingly dull with scarcely a busy week to relieve the relaxed condition. The prospect for a lively fall and winter business, however, is excellent. The retailers in the city have been busy all during the hot season, oil of pennyroyal and other mosquito remedies supplementing the already active trade. As a soda water season the past summer has been a record breaker.

**NOTES.**

—S. C. Jones, a well-known salesman traveling for Powers & Weightman recently met with a painful accident in the basement of the Van Vleet-Mansfield Drug Co.'s house. In company with Mr. Tague, the firm's manager, he was going down into the vault to look at some damaged chemicals. As they reached the stairway leading to the basement, Mr. Tague stepped to one side to turn on a light. While his back was turned Mr. Jones mistook his way and stepped off the stairs and fell to the floor of the first cellar, striking the edge of the steps below on his side, and then fell through to the bottom of the sub-cellar, a distance of at least fifteen feet. Mr. Tague had the injured man removed to his room at the hotel. He found that no bones were broken, but that he was painfully bruised, so painfully in fact that he was deemed advisable to send him to his home at Bloomington, Ill. Mr. Jones is between sixty and seventy years old and his escape was miraculous. In his fall he struck a sharp corner and to the presence of a thick price list which he always carries in his pockets, he probably owes his life.

—News has been received in Eatonton, Ga. that Respass Nesbit of that city died in Manila, P. I. several days ago. He embarked for the Philippine Islands about two years ago as a member of the U. S. hospital corps in which he held the position of pharmacist. He was preparing to leave for home when death overtook him. He leaves a mother, two brothers and a sister to mourn his untimely end. He was a son of the late Dr. Richard H. Nesbit.

—J. D. Martin, until recently with the Van Vleet-Mansfield Drug Co. was married to Miss Olga Norvelle of this city, on September 12. Mr. and Mrs. Martin will make Shreveport, La. their future home, as he has accepted a position with the Morris-Dickson Drug Co. of that city.

—Besthoff's drug store, Main and Union streets, has been renovated and remodeled and now presents a very handsome appearance. New fixtures in cherry and gold with wall paper in harmony, make the store one of the most attractive in the city.

—A. Lillybeck, the wholesale druggist at Meridian, Miss., is dividing his vacation between Newport, Long Branch and other Eastern resorts. He will visit the Pan-American Exposition before he returns.

—E. T. Warnock has resigned his position and sold his stock in the Hessig-Ellis Drug Co. and now has charge of the traveling men for the Van. Vleet-Mansfield Drug Co.

—Dr. George F. Payne, of Atlanta, Ga., but formerly of Macon, whose present term as a member of the state Board of Pharmacy has expired, has been re-appointed.

—Dr. Clark and Mr. McGehn will open a new drug store at Meridian, Miss., at an early date. Mr. McGehn will be in charge.

—G. E. Chalquist, formerly with Hammer and Ballard of this city has accepted a position with the Schultz Drug Co., Denver, Col.

—The Bradford Drug Co., of Lagrange, Ga., sustained a loss of several hundred dollars by fire on Sept. 16.

—W. A. Webster, travelling for the W. S. McVreil Chemical Co., was in the city this week.

—The Walter Smith Drug Co. at Okalona, Miss., has been succeeded by Brown & Bearden.

—W. A. Dozier, the Hotkissburg druggist, will shortly open a branch store at Laurel, Miss.

—P. P. Van Vleet has gone to New York on a business trip

**NEW ORLEANS.****The May Pharmacy.**

New Orleans, Sept. 28.—The trade and business generally is still watching for the sale of the establishment of the late General Eugene May. For seven-teen years May's Drug Store at Chartres and Canal streets has been a landmark of New Orleans and it has been the best known retail establishment in the city. The annual receipts of the establishment have been estimated at \$125,000. General May, long before his death, had frequently said he would retire as the duties of the business were a heavy burden. In his will there was a clause providing that the business should be sold as soon as possible and the proceed divided among a mother, widow and an invalid child. The popularity of the establishment has never waned and had it not been for the expressed wish there would be no sale. However, bids are being received and within a month it is more than likely that the store will pass into other hands.

**Testing the Pharmacy Law.**

New Orleans, Sept. 28.—John A. Bastian, a local druggist, proposes to test the constitutionality of a law governing pharmacists. Last spring Bastian was charged by C. P. Godbold, secretary of the Board of Pharmacy, with violating a statute in not having a registered pharmacist in charge of his establishment. After the charge had been made Bastian employed a regular qualified clerk, but not until he was threatened with a new charge of violation for every day he conducted his business in violation of the law. After hearing the evidence, Judge Gill, of the First City Criminal Court, imposed a fine of \$100 with the alternative of serving thirty days in jail.

Before the case went to trial, Bastian, through his attorney, filed a demurrer to the affidavit on the ground that it charged no crime, and that the law which he was charged with violating was illegal and unconstitutional. The appeal will be taken on these grounds.

**NOTES.**

—Max Samson is attending the 49th session of the American Pharmaceutical Association in session at St. Louis.

—George McNulty has recently thoroughly refitted and beautified his Camp street drug store.

DR. ROBERT H. LANSING, who had the distinction of having established the oldest drug house in the State, died recently in Chillicothe, Ohio. His name has been connected with present store in Chillicothe since 1843. For almost 60 years his pharmacy has occupied the building on the corner of Paint and Second streets and is one of the most widely known establishments in Ohio. Dr. Lansing was a charter member of the Chillicothe lodge of Odd Fellows and was the oldest living member of the Order in the State. He was also a charter member of the Logan Tribe, No. 9 of the Improved Order of Red Men, was a member of the Knights of Pythias and one of the most prominent Masons in Ohio. His death was caused by the infirmities of old age.

## PREPARING SPONGES FOR THE MARKET.

**A** Magnificent exhibit of Mediterranean sponges was given at the Broadway Central Hotel in New York by the Smith, Kline & French Co., of Philadelphia, Sept. 16 to 27. It was conducted by Mr. Albert Hart, manager of their sponge department. These sponges come from the waters of the Mediterranean Sea, off the coast of Turkey. They are dived for in deep water, without the aid of apparatus, as the use of the apparatus has been forbidden by the Turkish government for many years, to prevent excessive fishing and deterioration in the growth and quality of the sponge, which requires about three years to obtain proper formation, and the supply was thereby decreased and the cost enhanced. The same conditions now exist in the Florida waters, where we obtain the sheepswool sponge, and our government has recently placed restrictions on the fishing to the extent of forbidding the taking out of the water all sponges that have not attained growth of four inches, and has also sent a representative there to study the question of cultivating the beds.

Sponges in their natural condition are unsightly objects, and look more like black jelly fish than the much prized and useful toilet article. After being taken out of the water they are laid out to decompose, a process which is observed best at a distance. They are then thoroughly cleansed in sea water, and treated with lime to obtain a pleasing color, which leaves them a pretty biscuit shade, which is known to the trade as their natural color. Of course much depends on the quality of the sponge as to the results obtained, for the reason that the coarser grades are much darker, and it is customary to treat them with strong acids and bleach them to various shades of yellow. This process, we need hardly say, seriously injures the fibres of the sponge, and we earnestly recommend the use only of those sponges that have not been treated this way. The finer grades of sponges are then sanded, compressed and packed in cases, and shipped to the London market, where they are sold by the merchants to such wholesale dealers as are members of the close association, controlling the output of the Mediterranean goods. This privileged class, in turn, distribute them all over the world. None but members of this select association can obtain these goods except through dealers connected with them, and no new members are admitted without the consent of the majority, which is very difficult to obtain. It is for this reason that the Smith, Kline & French Co. derive their advantage in being able to place such a superior grade on the market at more advantageous prices than other houses in this country. Mr. John Hart, father of their manager, is one of the oldest members of this association, and he personally selects and buys all their goods on a commission, thus

BANK OF UNIFORM SIZES.

securing them an advantage of about twenty per cent. over all competitors, with the additional advantage that the goods are shipped in their original compressed condition, thus saving freight and other expenses. These goods come into the London market at a certain season of the year, and the first parcels received are the pick of the season's catch, and the representative of the Smith, Kline & French Co. has instruction to purchase of these first shipments the finest qualities obtainable. Upon the arrival of the goods in Philadelphia they are cleaned of all sand and shells, and are then assorted into uniform sizes, and all poor and weak quality of sponges thrown out. The grading of sponges to a uniform size has been much appreciated by the trade, as formerly it had been the custom to pack several sizes in one case, making it more difficult for the retailer to price them. A prominent feature of the lower cut is the banking of rare cup-shaped sponges every size being represented, and the importers take pride in this line of goods, perfect ones being very hard to secure, as cases usually contain a percentage of flat, solid sponges which are thrown out and packed in cases by themselves. The rapid growth of the house in the sponge trade has been obtained because of their advantages, because of the superior quality of the sponges offered, and the carefulness exercised in the re-packing of their goods; the uniformity of sizes, and the care taken to exclude poor sponges. The guarantee accompanying the goods, to the effect that should a sponge be tried and not prove satisfactory it will be replaced, forms additional inducement for purchasers of this house.

### Change in Name.

Buyers of paper boxes, either of the folding variety or for drug, jewelry or confectionery purposes, will be interested in knowing that the Sudbury Paper Box & Machine Co. have succeeded Cox & Co. at 79 Sudbury street, Boston. They not only make all kinds of paper boxes, but are printers, embossers and lithographers.

A CORNER OF THE EXHIBIT.

T. A. Wilson & Co., the manufacturing opticians of Reading, Pa., turn out each day 10,000 pairs of spectacles. The company claims that their low priced Coquille spectacles and eye protectors are the best in the market. Druggists who carry a line of optical goods should give Wilson & Co.'s goods a trial. Prices are right and all jobbers carry a stock. Send for descriptive circulars to T. A. Wilson & Co., Reading, Pa.

# Patents, Trade Marks, Etc.

**PATENTS.**

Issued September 24, 1901.

- 683,044.—Richard E. Holder, Columbus, Ind. Bed-pan.
- 683,061.—Hermann Nordmeyer, Celle, Germany. Portable filtering apparatus.
- 683,075.—Adam Schneider, Berlin, Germany. Appliance for cleaning the teeth.
- 683,060.—Arthur E. Bonesteel, Central City Colo. Syringe.
- 683,187.—Ernest Solvay, Brussels, Belgium, assignor to Solvay Process Co., Syracuse, N. Y. Apparatus for drying bicarbonate of soda.
- 683,210.—Edward C. L. Kressel, assignor of two-thirds to T. Hill-Jones, London, England. Alimentary extract and making same.
- 683,343.—Adolph Sorge, Jr., Chicago, Ill. Apparatus for purifying water.
- 683,410.—Oscar Mussinan, New York, N. Y., assignor to Denison Manufacturing Company, Boston, Mass. Collapsible tube for containing semiliquid substances.

**TRADE-MARKS.**

Registered September 24, 1901.

- 27,107.—Remedy for Skin and Blood Diseases. George E. Remick, St. Louis, Mo. The pictorial representation of a sheep's head on a red circular background.
- 27,108.—Medicines for Certain Named Diseases. Dr. J. C. Brown Medical Co., Albany, N. Y. The word "Rubebra."
- 27,109.—Ointment. Arthur Collins Stewart, Boston, Mass. The word "Claranol."
- 27,110.—Disinfectants and Germicides. Gustave A. Stoehr, Elgin, Iowa. The word "Tarsol."
- 27,111.—Toilet Soap. Allen Conkling, Chicago, Ill. The words "Bitter Sweet."

**PRINTS.**

Registered September 24, 1901

- 463.—Title: "Woodland Violet Specialties." (For Perfumery and Toilet Supplies.) George E. Tooker, New York N. Y. Filed August 31, 1901.

**Chocolate Chips.**

High class confectionery has long been a popular and profitable side line of many druggists, and one of the confections most called for to-day is Trowbridge's Original Chocolate Chips. This is a delicious confection and has made a hit with the people. Druggists who have not already handled it and who wish to give their customers something that will please them, should get a supply at once. Can be bought of any jobber in 10c, 1/2c, and 1-lb. boxes; also in large and small pails. Manufactured by the Trowbridge Chocolate Chip Co., Meadville, Pa.

**A Curious Thermometer.**

In these days of bric a brac and curio worship, the most curious and rare of such articles are usually ornaments, and ornaments only. Some time ago, Mr. E. Kessling, the well known manufacturer of clinical thermometers, came into possession of the beak of a sawfish—the dangerous looking weapon of offense and defence of that rare and curious inhabitant of the ocean. This beak is composed of bone, and is about three feet in length, tapering from a width of 7 inches at the base to 2 1/2 inches at the extreme end, and having a row of ferocious teeth on each side, 30 in all, making a veritable saw. It is said that this butcher of the sea carves up its victims to suit its masticating capacity, by means of this saw.

After receiving this saw, Mr. Kessling had it polished and mounted, and having attached a thermometer, obtained a most useful and curious ornament, which is on exhibition in his salesrooms. During these hot days, however, one contemplating a plunge in Old Ocean begins to feel creepy on seeing this curio, since it brings to his mind most vividly what kind of society he contemplates entering.

**A New Bottle.**

One of the most important features of every article handled by a druggist under his own name is to have a neat and attractive container. The "gem panel" bottle should interest druggists who put up liquid preparations. While it retains the features of the old ball neck panel, it is very different in appearance, having an oval front and curved neck and shoulders. The bottle was patented April 10, 1900, and has the appearance of a regular prescription bottle of much more than its actual capacity. The price is the same as for ordinary panels and any druggist can obtain a sample by writing to the manufacturers, Address the Saltsburg Bottle Works Co., Ltd., Pittsburg, Pa.

**Aseptuloid.**

Aseptuloid is the trade mark for a perfectly venting and thoroughly aseptic celluloid vacuumation shield. Druggists can obtain them through their jobbers at 75c. per dozen, or from the maker, E. Kleinschmidt, 122 Fulton street, New York.

## NEBUCHADNEZZAR

was a lusty youth and at an early age manifested an inclination to run things. He got himself elected Mayor of Babylon the fall of which is attracting some attention at Buffalo and things were wide open in that city from that time on. His speedy gait caused a complication in his belly with the result that the Common Council acting upon the advice of the prestidigitators, etc., who hung around the city hall looking for a soft thing, declared his trolley to have slipped the wire. For eight years he thought he was a billy goat and played the role of the boss ram in the sheep pasture. He then took the gold cure, survived it, reformed and offered a reward to anyone who could produce a soft, healthy, artificial feeding apparatus for the infants of his harem. Had "Imperial" Nipples been known at that time theirs would have been the "Gran Prix."

# MARKET REPORT.

## NEW YORK MARKET.

### FAIR BUSINESS REPORTED.

New York, Oct. 1.—A fair general demand is reported with the distributors covering a large variety of articles but a return of mild weather has checked the movement of the Fall and Winter goods.

**OPIMUM**.—Tame conditions prevail throughout the market and quotations remain nominally unchanged at \$3.25@3.50 for 9 per cent, and \$3.45@3.60 for 11 per cent. Powdered is quiet and at \$4.00@4.60 for 16 per cent, and \$4.75@5.00 for granular, and \$5.10@5.25 for 16 per cent.

**MORPHINE**.—Dealers report a continued fair jobbing business with prices unchanged on the basis of \$2.20@2.40 for eighth, as to brand, less the usual rebate of 10c per oz. on lots of 10-ozs or over.

**QUININE**.—Domestic manufacturers have reduced quotations 1c per oz. and the revised jobbing range is 27@28c for bulk in 100-oz tins, 27@28c in 50-oz tins, 28@29c in 25-oz tins and 34@35c in ounces.

**SENEGA ROOT**.—Values are again firmer owing to the scarcity, both here and in producing markets, and jobbers have advanced quotations to 70@80c for whole and 75@85c for powdered.

**HYPOPHOSPHITES**.—Manufacturers have reduced quotations 5c per lb. and jobbers now quote 70@80c for calcium, sodium or potassium.

**GAMBIDGE**.—Supplies are light and the market is a firm in tone, with jobbing quotations showing an advance to 65@70c for prime whole and 70@75c for powdered.

**CITRIC ACID**.—Owing to a decline of 1c per lb. in manufacturers' prices, jobbers have reduced quotations to 36@37c in bbl. 37@37½c in kegs and 42@42c for broken lots.

**CINCHONIDIA**.—The market is easier and jobbing quotations have declined to the basis of 27@28c for bulk in 100 oz tins, as to brand and quantity.

**CASTOR OIL**.—Manufacturers' prices are higher and jobbers have advanced quotations to 13@13½c in bbls. 13@14c in cases and 14@14½c in cans. Crystall 1c per lb. higher.

**OIL WINTERGREEN**.—Supplies are light and market firmer with jobbing prices advanced to \$1.70@1.85 as to quality and quantity.

**OIL SWEET ALMONDS**.—Foreign markets are easier and spot jobbing quotations for time have declined to 60@70c.

**UNION SALAD OIL**.—Manufacturers have advanced quotations 2c per gal. and the revised jobbing figures are 70½c in bbls and 65@75c for less.

**COCOANUT OIL**.—The tone of the market is firmer and jobbers have advanced quotations to 19@22c for bulk and 20@25c in pound cans.

**MENTHOL**.—With the market better supplied and the tone is again easier with jobbing prices showing a further decline to \$4.50@4.75. Ounces unchanged at 35@40c.

**COFFEES**.—The market is weak owing to competition among manufacturers, and quotations in a jobbing way have declined to \$5@5.10 per 100-lbs. by the bbl. and 24½c for smaller parcels.

**ORRIS ROOT**.—Jobbing quotations are a shade lower and the revised jobbing quotations for whole Verona, 17@22c for powdered, 16@20c for whole Florentine and 20@25c for powdered.

**GLAXEED**.—A slightly firmer market is noted and jobbers have advanced quotations to \$7.25@7.50 per bbl. for whole cleaned and 5½@6c per lb. for less than a barrel. Ground by the barrel is held at 4½@4c and smaller barrels 7@6c.

**STIGALLS**.—Blue Aleppo are firmer in sympathy with foreign markets and jobbers quote 60@65c for whole, 23@25c for bruised and 26@30c for powdered.

**COFFINEAL**.—Market easier with jobbing prices reduced to 20@25c for whole and 25@40c for powdered.

**STAM KING**.—Jobbers have advanced quotations to 60@70c for whole and 80@90c for powdered.

**IPECAC**.—An easier feeling has developed and jobbing prices have declined to \$3.00@3.50 for whole, \$3.35@3.55 for ground and \$3.46@3.70 for powdered.

**ERGOT**.—Spanish is lower with jobbing parcels obtainable at 60@70c for whole, 65@75 for sifted and 70@80c for powdered.

**SULPHITE OF SODA**.—Jobbing quotations have been reduced to 7@10c.

**FORMALDEHYDE**.—Jobbers have reduced quotations to 16@17c in carboys and 27@35c for less.

**SANTONIN**.—Values are higher in sympathy with crude material and jobbers quote 85.00@92.50 per lb. and 42@50c per oz for crystals and \$6.10@6.35 per lb. and 43@50c per oz for powdered.

**LARKSPUR SEED**.—Very scarce and trading upward with jobbing prices advanced to \$1.10@1.60 for whole and \$1.50@1.75 for powdered.

Four-Fold Liniment is sold to drug stores, never to department stores.

## INDEX TO THIS NUMBER.

### A Good Salesman.

It is an acknowledged fact that a neat, clean show-case, attractively dressed, is, in itself, a good salesman for any line of goods. Customers are often attracted by a display in a show case and become purchasers of articles that, if kept on a shelf, would not be sold at all. The M. Winter Lumber Co., Sheboygan, Wis., make a specialty of drug store fixtures and fittings of all kinds. The Cornwell Pyramid Floor Show Case, manufactured by this concern is in many of the best equipped drug stores in the United States, and is endorsed as perfect in every detail. The illustrated catalogue recently issued by the M. Winter Lumber Co., gives a full description of this case, and is a complete book of store fittings. The catalogue is 272 pages, size 7½x11. It is mailed to any merchant on receipt of 25 cents.

### Lanola.

A widespread demand has sprung up for Lanola the new skin food, and the Billings Clapp Co., Boston, has had repeated orders from druggists in all sections. Lanola is for skin complaints of all kinds, and yields the druggist a good profit. Advertising matter and a liberal quantity of samples can be had from the distributing agents, Billings Clapp Co., Boston.

## THE ATLANTA DECISION.

In the news columns of last week's issue of the Era appeared a report of the decision of Judge Lumpkin, in the injunction suit brought by a firm of retail druggists against fourteen members of the Atlanta Druggists' Association. This association is a local division of the National Association of Retail Druggists, and has endeavored to maintain prices and prevent cutting by the N. A. R. D. plan. The dealer filing the petition for the injunction asked that the members of the association be enjoined from calling him "the aggressive cutter," and from carrying on an alleged boycott against him. The decision is in favor of the dealer and against the members of the association, the judge declaring that the action of the defendants is expressly unlawful under an act (the Anti-trust law) passed by the legislature of the state in 1896, even if it could not be held unlawful at common law.

This case has, from time to time, received attention in the columns of the pharmaceutical press, and the decision is important, as it is the first to declare the operation of the N. A. R. D. plan unlawful. Similar suits have been brought in California, West Virginia, and other States, but the decisions have hitherto, in each case, upheld the right of associations to employ the methods proposed in the plan. It will be interesting to note the influence of this decision upon the deliberations of the N. A. R. D., which meets in Buffalo this week. There is considerable sentiment in

favor of the general adoption of the N. A. R. D. plan. How much this will be influenced by the opposition which the friends of the plan may now expect to encounter in states in which an anti-trust law is in force remains to be seen. Advocates of the Worcester plan will no doubt use this set-back as an argument for the adoption of the method which they favor. The members who have enjoyed the benefits of the N. A. R. D. plan will not readily give up a system which they have found to work in the interest of the retail trade. One unfavorable decision need not discourage any one, and should not prevent any druggist from joining his brethren in their fight with the cutter. No great progressive movement can be expected to move along without an occasional check. The litigation in Atlanta involves a suit for damages amounting to \$50,000, which has not yet come to trial. A violation of the anti-trust law is made a criminal act, and any person injured by such an arrangement may sue for damages. A bitter fight may, therefore, be expected.

## SIDE LINES IN THE DRUG BUSINESS

The younger members of the drug fraternity are apt to think that the business or profession of pharmacy has sadly degenerated since the good old days before they appeared upon the scene. From the utterances of writers and speakers upon pharmaceutical topics, one naturally receives the impression that there were other and better days, when pharmacy was a profession only, and the apothecary could earn a fair income from the preparation and dispensing of medicines alone. The necessity of filling the show-cases and windows with articles having no place in the Pharmacopœia is commonly spoken of as a disagreeable feature of the modern drug business with which the apothecaries of former years had nothing to do. We are accustomed to think of the pharmacist of the past as a man of science placed far above the ordinary worries of business, and sought by the physician and general public as the only one competent to prepare the remedies necessary to cure the ills of mankind. It is only natural that the young druggist should think that in the constant endeavor to restrict the right of dispensing drugs the pharmacist is only trying to regain a source of livelihood which he formerly enjoyed, and of which he has been unjustly deprived.

In contrast with this common idea that the druggist of fifty years ago was a pharmacist pure and simple, is the description of the conditions actually prevailing at that time, presented at one of the

British conventions during the past summer. The druggist and chemist of the early part of the nineteenth century was depicted as doing a business of an extremely varied character, prescribing freely for many ailments, acting as a general dental practitioner, dealing in paints and colors, selling veterinary preparations and carrying quite as many side lines as the pharmacist of to-day. Although not so well educated as the dispensing pharmacist of the present time, he was more generally useful to the community, more highly respected, and usually made a good living. The conditions prevailing in the United States were probably somewhat different from those of England during the time referred to, but in general they were much the same. The sale of poisons was unrestricted, and physicians not only dispensed freely, but prepared many of the remedies employed in practice. It seems, therefore, that side lines have always furnished a large proportion of the druggist's income. If there did not happen to be sufficient demand for his professional services to occupy all of his time, he was willing to be useful in other ways. The successful druggist of the present time proceeds in about the same way. If he has time and space for the proper display and sale of side lines, these will serve as a source of income without increasing the expenses of his establishment. If some of the trade which was formerly his has been taken from him by the competition of other lines of business, why not retaliate and add another side line to make up for the loss? It often appears as though a large proportion of the time spent by druggists in seeking relief from existing evils by legislation and other means could be more profitably spent in studying the requirements of the times and adapting business methods to the conditions observed.

#### A NEW CO-OPERATIVE SCHEME.

One of the new departures in the nature of side lines in drug stores is an enterprise described in a recent news item from Boston. It consists in the establishment of numerous agencies, for the purpose of furnishing umbrellas to persons who suddenly find themselves in need of these useful means of protection. It is, in fact, an umbrella lending scheme. The payment of a small fee to the association entitles any one to the loan of an umbrella from any of several hundred stands scattered throughout the city. If caught in a sudden shower a person who has paid this fee can step into the nearest drug store, and, upon the presentation of a card, receive an umbrella from the stand. When the rain-cloud has passed, he can relieve himself of a burden, which is no longer necessary, by depositing it in another stand, receiving a card or check in return. This borrowing and returning may be repeated as often as occasion may require.

This novel scheme should become very popular, especially in the eastern cities, where the weather is famous for its capriciousness and the government prognostications are notoriously uncertain. No one carries an umbrella unless obliged to do so, and the well-known perversity of this useful article in never being at hand when required is the cause of much loss of temper. The universal bedraggled appearance and the irritability of temper observed upon the streets and in the cars of our cities during a sudden

shower indicate a very lively want for an umbrella supply association of some kind. The druggist or cigarman to whom one of these stands is intrusted cannot fail to benefit by the arrangement, for rain would bring people into their stores, with the vague sense of wanting something which wet weather is known to produce, fresh upon them, and the cigar case, soda fountain or syrup of wild cherry bottle would be at hand to supply the want. Now that this enterprise has been established, it seems strange that some such arrangement has never been thought of before. How much better to own a share in several thousand umbrellas literally standing about waiting to be used in all parts of the city than to claim individual ownership in from one to one-half dozen which are usually lost and never at hand when wanted. We expect to see this system extended to other articles of common use. A great convenience to the public cannot fail to have its reward, and there is no reason why the druggist should not receive his share.

#### POLITENESS IN BUSINESS.

In no other avocation are good manners and urbanity of behavior so necessary and their absence so noticeable as in the retail drug business. The druggist cannot afford discourtesy, ungraceful demeanor, bearish, disagreeable speech. He is often vexed to be sure, and suffers many peculiar annoyances, but he should at all times endeavor to wear a smile of amiability, and be suave and soft spoken. Servility and obsequiousness are to be avoided, their intent is plainly obvious, and repel rather than attract. A happy mean is attainable, and the druggist does well to attain and retain it, though it is annoying to wait upon a dirty urchin whose wants are embraced in the terse expression "Gimme a stamp." An illustrative episode in a well-known store is worthy of mention. A little girl timidly asks for a postage stamp, is cheerfully supplied by the proprietor himself, who also presents her with a pretty picture card accompanied with a few pleasant words. A shy "Thank you, sir" and the girl departs. A bystander asks "Who is she?" "I don't know," is the answer, "Why did you give her that card if she isn't a customer?" "She'll be a customer some day," comes the reply, and he is right. The little girl and her playmates will come to that store for their small supplies, their parents too, will patronize the druggist who has a kindly word for their little ones, and the seed so easily sown bears fruit many fold. In the drug store, especially, is knowledge of human nature essential. The druggist must listen patiently to descriptions of the ills and misfortunes afflicting his patrons, he must be ready with his sympathy and the many little acts of kindness and thoughtfulness so grateful to their recipient. Each kindly courtesy may not gain or keep a customer, but it cannot drive one away. Placed upon no higher plane than this selfish one, politeness pays. But the politeness that is assumed, that is seen to be but masking the true nature behind it, is of little worth compared with true gentility and nobility of soul.

FORMAZOL is a preparation put up in tablets, which are burned in an apparatus, for fumigating purposes. It contains 30 per cent. of paraformaldehyde, and small quantities of iodoform, chloral hydrate, terpine, and menthol.

## A NEW ECONOMIC ORDER IN PHARMACY.

By HARRY B. MASON.

The final goal towards which industry has been moving throughout all the centuries is an era of co-operation and combination of effort. The movement has been slow, but constant and irresistible; and the very fact that it has been in response to natural law indicates, even if there were not abundant proof on every hand, that the end is one which will better conserve the interests of man and be in harmony with his higher and ever higher development. So far as moral considerations are involved, it cannot be gainsaid that in a co-operative system men work together in friendship instead of being arrayed against each other in a fierce competitive struggle, and that thus the day is brought nearer when the brotherhood of man shall finally be realized; while, so far as economic results are concerned, the facts clearly show that the expenses of production are lessened, the demand for goods, therefore, enhanced, and the income of the individual man increased on the one hand, while the cost of the goods which he consumes is decreased on the other. So strongly are most of us wedded to the customs and institutions of the present, however, that very decided changes in government or industry are always met at the outset with opposition; and the fierce outcry which was raised at the appearance of the machine a century ago in England is now, though in lesser degree, being repeated in this country with the trust. There are admittedly certain grave evils connected with the trust, as we know it in its early history, but these evils are certainly not inherent, and I do not doubt for an instant that they will disappear when the trust has been made to yield to proper governmental regulation, as it will when society has finally adjusted itself to the new order.

But I do not desire to discuss what seems to me the almost unnecessary question of the benefits which shall arise from the era of co-operation and combination of efforts towards which industry is moving; my purpose is, instead, merely to state the fact that all industry is really moving resistlessly in that direction. This fact, viewed in the light of history, is scarcely open to doubt. In the field of production we already have in the trust a long stride toward the final goal, while in the field of distribution the rapid growth and success of the department store proves the inevitable tendency. The goal will be reached in the field of production before it will be possible in that of distribution, for the obvious reasons that there are fewer persons involved, fewer interests to harmonize, usually no obstacle of geographical position to overcome, and in general many less difficulties of all kinds to surmount. The professions will respond to the movement last of all, for in them, added to these difficulties of number and geographical position, is a still greater obstacle—the fact that personal reputation, counting for so much, and often constituting almost one's entire capital, will not readily yield to an order which in some measure means its sacrifice. Individualism is much more important in the professions than elsewhere, and will, therefore, last much longer than in other departments of activity. It may, indeed, never be wholly supplanted by co-operation, certainly not for a long while; but, nevertheless, I believe that the professions will in time succumb to the new order as well as the trades, though perhaps not with the same degree of completeness.

### The New Order in the Professions.

Indeed, I am of the opinion that the co-operative movement has already reached the professions. In the profession which is generally given first rank, that of the ministry, sectarian barriers are now being broken down daily; there is a world-wide movement

towards unity of action, if not of belief; federative associations are the order of the hour; and the co-operative spirit is making rapid headway. In the profession which possibly ranks next to the ministry, that of the law, the tendency is still more pronounced. A recent writer has declared that "it is no uncommon thing in New York City to-day to find law firms employing twenty to twenty-five clerks, and having in their offices, either under salary or sharing the profits, from five to fifteen members of the bar;" and—more significant still—it is in such combinations that "the strongest and best lawyers" are to be found. In medicine, the profession which contests the second place with law, and the one with which we as pharmacists are most closely connected, we find that the complete system of local, state, and national associations which has for many years been utilized mainly for social and educational purposes is now being followed—though not superseded—by the next step in organization. Associations are now being formed in several cities for purely business purposes in order that physicians may not take advantage of one another in the cutting of prices and the like, and may protect themselves against such common enemies as the "dead beat" and the legislative halls. But the co-operative movement in medicine has gone even beyond this formation of protective organizations. Combination itself has already been reached in small measure. "Medical Supply and Attendance Companies" have been formed in several cities for the purpose of contracting with subscribers to furnish them with physicians' services at a stated sum each month. And within a year Boston has witnessed the organization by a number of physicians of the "Union Medical Service Company," which was formed for the same purpose, and which, it was reported in the Boston and Massachusetts papers, would ultimately open branch offices in every city of the United States and Canada.

### The New Order in Pharmacy.

It is natural to expect that our own calling, occupying a position midway between trade and profession, would be reached by the tide sooner than any of those mentioned in the preceding survey; and upon investigation this is found to be the fact. In the so-called "company pharmacy" of England and Scotland we find the principle of combination already firmly established. Beginning more or less precariously, twenty years or more ago, the company-pharmacy movement has developed and spread in Great Britain until now company after company owns twenty, forty, eighty and a hundred "shops." And last spring the next step was taken when one large company bought out another, thus gaining control of 248 stores, and having a capitalization of 300,000 pounds, or a million and a half dollars! Effort after effort has been made by the pharmacists of England to exterminate this movement by legislative enactment and otherwise, just as in this country, and more particularly in Germany, the extermination of the department store has been resolutely and perseveringly sought; but artificial law can never stop the operation of natural law, and our English cousins, discovering finally the absolute futility of their efforts, and observing the unabated growth of the movement, are now wisely attempting to regulate instead of destroy. Meanwhile, the sentiment against the companies is gradually subsiding, and pharmacists, at last learning the lesson imparted so clearly, are beginning in a small way to combine and form companies themselves.

I would not be understood as an unqualified defender of company pharmacy as it exists to-day in England. The movement has in some respects exerted an unfortunate influence, and this I shall refer to in another paragraph. On the other hand, that company pharmacy has been of undoubted economic benefit cannot be gainsaid. Basing my statements upon the

reports of five fair-minded, unprejudiced men thoroughly familiar with the conditions in England and Scotland, I may say that the companies have considerably reduced operating expenses, applied what might well be termed scientific methods to the conduct of business; avoided credit losses by adopting an absolutely cash method, and lessened the percentage expense of running a shop by increasing the amount of trade done at a given cost. It is significant that, with here and there an exception, the companies have the largest establishments in London. It is likewise significant that the clerks, except for the sentiment against companies, a sentiment which, as I have said, is now diminishing, had much rather work for the companies than for individual pharmacists. The businesses are larger, and the room for advancement therefore more ample; the division of labor is greater, and the hours of service, therefore, fewer—a condition made more desirable still by the custom of closing at seven o'clock evenings and all day on Sundays; and the profits being good, and a fair effort being made to divide them more or less equally between employe and stockholder, the salaries are much larger—from twenty to fifty per cent. larger, declares one of my correspondents.

#### The Need For It Becoming Manifest.

It is only a question of time when what is thus known in England as "company pharmacy" will, with certain differences, be generally realized in the United States. The conditions favorable to its development are gradually being given birth. The need for it is slowly but unconsciously coming to be felt. During the last two or three decades pharmacy has become less and less remunerative. The inevitable and natural development of the department store has taken away much of the trade in toilet articles, sundries, and even proprietary medicines; the equally inevitable and entirely natural development of manufacturing pharmacy, which is but the tardy application of the factory system to the drug industry, has taken away most of the manufacturing of medicines formerly done by the pharmacist himself; and the physicians' supply-house, which, though hated by the pharmacist, is still but a natural outcome of the tendency toward combination and centralization of effort, has taken away a considerable share of the physician's patronage, while even more of it has been taken away by the physician himself, who, impelled by the gradual lessening of his income, has been more and more given to doing his own dispensing and leaving the pharmacist entirely out of the reckoning. Nor is this all. Not only has the content of retail pharmacy—the quantity of it, so to speak—been greatly reduced, but that which is left has been rendered less remunerative through the lessening of prices and the consequent reduction of profits. Finally, as if this were not enough, the number of pharmacists has continued to increase. Not only has the pasture gotten thinner, but more and more men have been turned into it for sustenance.

Under these conditions there could be but one result. While the more capable and energetic have, by redoubled efforts, continued in the path of success, the majority have been reduced to a condition which is far from satisfactory. Discontent and restlessness have naturally developed. Grumbling has been heard on every hand, and on every lip has been the wail: "Pharmacy is a failure. No longer can any money be made in it. No longer, indeed, can we scarcely keep our heads above water." The era of industrial prosperity which has been casting its mantle over us now for two years, and which has brought warmth and gladness in pharmacy as elsewhere, has lessened the growing dissatisfaction, but when the reaction comes, as it inevitably will during the next two or three years, the old feeling is sure to break out again. And what does this feeling portend? What means this restlessness, this discontent? Simply this: The old order is gradually being outgrown, and the need for a new one is gradually being developed. The point is slowly being reached like that in the evolutionary history of an animal species when continued growth and development make necessary an organ of

hearing or one of sight, and as in the one case, so in the other, the organ will slowly follow and respond to the changes which make it necessary.

#### The Preparation For It Being Made.

And while thus the need for a new order in pharmacy is slowly developing on one hand, on the other preparation for its reception is unconsciously being made. I mean by this that the co-operative spirit is growing among pharmacists; and much of this growth may be attributed to the National Association of Retail Druggists. This body has made the pharmacists of the entire country to realize, as they have never realized before, that they are one in thought and purpose; that they are striving to fight the same battle, and endeavoring to accomplish the same ends; and that they should stand together in the protection and advancement of their interests. To a considerable extent, at least, mutual distrust has given way to mutual confidence; hostility and warfare have been succeeded by harmony and united action, and the energies which were formerly wasted in fighting one another have been marshaled against common enemies.

But turning from these beneficent results achieved by the N. A. R. D., other evidences may be noted of the growth of the co-operative spirit. Three notably successful mutual insurance companies among pharmacists are to be found in Ohio, Wisconsin and South Dakota, and the establishment of two or three additional ones is a probability of the near future. Several local associations have within recent years provided defense for their members in damage suits and the like, and others have lately been considering the advisability of undertaking, not only this work, but other co-operative activities as well. And, until they were seen to threaten the failure of that union of interests between retailer, jobber and proprietor, upon which the N. A. R. D. plan depends for success, "buying clubs," as well as companies manufacturing "non-secrets," had developed to a considerable extent. All these phenomena are evidences of the growth of the co-operative spirit in pharmacy, and they pave the way for, and make possible, the approaching era of combined activities, centralized control, and a more complex and highly-organized structure.

#### Early Beginnings of the New Order In This Country.

But while the new order in pharmacy will be ushered in very slowly, and will by no means be complete, or perhaps even well started, within the lives of any of us here present, there are already evidences of its tentative appearance among us. Within the last few years corporations owning a number of stores, like Hegeman & Co., of New York, have developed in several large cities; and other bodies controlling stores in different cities, like the Los Angeles Drug Co., have similarly come into existence. But more recently a much longer step has been taken. In Pittsburg, Pa., forty drug stores, I believe, are now under the control of one corporation; and thus has "company pharmacy" already gotten an appreciable start in this country. In Chicago a similar effort to bring a considerable number of the best stores in the city under one centralized control was made last spring, as those of us will remember who were much disturbed by the "drug trust" reports in the newspapers and drug journals. And now, as I am writing this paragraph, the air is full of rumors from that staid old town of Philadelphia concerning the operations of some syndicate, duly incorporated, and having a capital of \$1,000,000, which proposes to buy a large number of stores, close up those which are unprofitable, and improve the others in every possible way, in each case retaining the former proprietor as manager. These beginnings are experimental; it is possible that some of the more ambitious ones will not succeed, that the need and the preparation for them have not yet proceeded far enough; but, if I mistake not, they all show the direction in which the current flows, and though they meet with obstacles at the outset, they are sure to gather force and impetus as the favorable influences continue to grow.

The precise form which the new order in pharmacy will ultimately assume it would be folly to attempt to foretell. It can only be said with probable accuracy that at first, and doubtless for a considerable period, what in England has been termed "company pharmacy" will obtain here—that is, a number of stores will be under the control of one corporation. Barring a few unprofitable stores that will doubtless be closed from time to time, each store now existing will be continued with the present owner retained in most instances as manager. As it is in England, so probably will it be the case here, that several "companies" or combinations will exist in a single city; and it seems probable that these will continue to grow in size until, fierce competition arising between them, as it did between the individual factories, a large combination formed out of them all in each city will be created, exactly as the trust was created, and for exactly the same reason.

It will, of course, be a considerable period before all individual stores will pass into combination control. Those pharmacists with whom the element of personal reputation is strong, and particularly those who have built that reputation up by virtue of professional and scientific activities, will for a long time remain in possession of their individual businesses. Nay, more, I believe that at first the number of such pharmacists will even increase in response to the growing demand for scientific services from pharmacy, and in resistance to that commercialism which is quite likely to attend combination in its early history. But when the point in the history of combination has been reached when commercialism begins to disappear through the elimination of competition, when professionalism begins to develop as a natural reaction, and when the increasing demand for scientific service will be satisfactorily supplied, the day will have arrived when even the scientific pharmacist with a large reputation will discover that it is suicidal to continue in competition. He will find it desirable to give his services to a combination which will reward him liberally, and in which, moreover, his reputation will suffer little or no diminution.

#### The Financial Effects upon the Calling.

So far as the financial advantages alone are concerned, it is scarcely necessary to argue that combination will result in great improvement. Indeed, it is primarily to avoid the economic wastes of the pre-existing industrial order that the new one is ushered in, and if it be doubted that these wastes will be avoided in pharmacy as elsewhere, it is only necessary to point to the history of company pharmacy in England. Despite the fact that the companies have in every case started new stores instead of buying those already in existence, thus greatly increasing competition; and despite the additional fact that they have greatly reduced the percentage of profit through the reduction of the retail price which this competition made necessary—despite these unfavorable conditions, I say, the companies have paid their managers and assistants salaries considerably larger than those paid by individual pharmacists; they have, meanwhile, paid their shareholders good dividends; and their stock can usually be bought only at a premium. In this country, where existing stores will be bought instead of new ones started, where it will not, therefore, be necessary to reduce prices and so reduce the percentage of profit, and where, moreover, it will be possible after a time to begin the closing of unprofitable stores, is it not reasonable to expect that still greater economic advantage will result? Nor will this advantage redound only to the benefit of the officers and leading stockholders in the corporation. We have seen how salaries all along the line have been increased by the English companies; and, moreover, as in the great field of industrial production the stock will more and more be owned by the wage-earners, and thus the day of real co-operation be gradually brought about, so will the clerks and managers of pharmacies in the new order be part owners in the organization which employs their services. Thus se-

curring larger salaries, and in addition getting their share of the general profits, they will be directly benefited by the superior economic advantages of combination.

#### Educational and Professional Effects.

That combination will result in educational and professional advantage to pharmacy, as it will to the economic or financial advantage, is by no means so certain. It must be admitted that the tendency of company pharmacy in England has been rather in the lower than to elevate the professional status of the calling. But I think this has been largely, and perhaps wholly, the result of conditions which would not obtain in this country. The English companies, as I stated a moment ago, started new stores instead of buying those already in existence; this, of course, meant competition with the existing stores; and competition meant cut-rate and other methods which only result in professional deterioration. In this country the tentative movements towards combination already under way indicate that existing stores will be purchased and the foregoing condition of things, therefore, avoided.

But, even with this rock avoided, it is possible, and I think quite likely, that in its early stages combination, giving an impetus to the commercial spirit, will sink the professional spirit into partial shadow. Should this really come about, however, I believe it will be but temporary. I have faith that, ultimately when the new order has become fairly well established, and when it has adjusted itself to the conditions, it will redound to the professional and educational interests of pharmacy not less than to its economic interests. By reducing the number of men in the calling it will cause the elimination of the unfit, and place a greater premium upon excellence, and by demanding, in the interests of economy and success, a better and better service from employes, it will make necessary a greater degree of education and training. Moreover, combination, in making possible a higher degree of organization, and a more extended division of labor, will separate pure pharmacy from the innumerable side lines which conceal it from public view, and which make its advancement well-nigh impossible. The specialism which has developed other professions and sciences so markedly within the last decade will be possible in pharmacy, and with the same good results. If there ever comes about the great central establishment, which I have not dared to predict, then will pharmacy truly come into its own. The various chemical, microscopical, compounding and dispensing operations will be split into numerous divisions; each will be developed to its utmost; and the day will have arrived which we all wish for so devoutly—the day of the trained pharmaceutical specialist!

#### The Author's Purpose.

But I do not desire to be understood as a special pleader for the combination system in pharmacy. I am not endeavoring to make out a good case for it. Neither am I striving to hasten in the least the day of its appearance. My purpose is simply to express my belief that it is coming; that it is as inevitable as the tide; that, whatever its consequences, we shall have to accept it and adapt ourselves to it; and that we had better prepare ourselves for its appearance, and endeavor to increase its advantages and decrease its disadvantages, than to waste our time and dissipate our energies in a futile and Quixotic effort to hurl ourselves against it and destroy it. As to just when it will come, no man can tell. Economic law operates with exceeding slowness. Great natural movements sometimes consume ages in their development. We may not expect that the new order in pharmacy will suddenly appear among us, and quickly attain its perfection. The youngest of us will scarcely see it well established, and it may be ten or twenty, or thirty years—perhaps even fifty years—before it gets even a good foothold. It is folly to predict the date when the change is likely to come about, for no one even knows anything about it, and the wisest make prophecies which are proved ridiculous in the unfold-

ing of time. Let us be content with the belief that the new order in pharmacy is coming, though we cannot tell when; let us realize that all efforts to oppose it will be futile; and let us, remembering Darwin's law, prepare to adapt ourselves to it and be the fit to survive instead of the unfit to perish.

## THE LIQUOR LAWS OF THE STATES AND PROVINCES AS THEY APPLY TO PHARMACISTS.

By CLEMENT B. LÓWE.

Having had for some time under consideration the subject of the Sale of Alcoholic Liquors by Pharmacists, with the view of learning more about the subject, by permission of the committee I addressed a circular to one or more members of the A. Ph. A. in each of the states and provinces. The circular read as follows:

"There seems to be quite a lack of uniformity in the laws of the different States in regard to the sale of alcoholic liquors by pharmacists. In some States the laws bear harshly upon pharmacists, and they are not allowed to dispense them, even upon physicians' prescriptions. In others the latter privilege is allowed, but sales cannot be made otherwise, even in cases where life and death are involved. In still other States too much liberty is allowed (or is taken) and the pharmacy too often degenerates into a 'speak-easy'."

"It is thought by the committee that the information asked for will be not only of interest, but also of importance, as from it a model license law, or section of such a law might be drafted. If you will kindly answer the following questions, and send them to the committee WITHOUT DELAY, it will be GREATLY APPRECIATED."

After much effort, as is usually the case in any public quest, replies were received from 36 of the States and 4 of the Provinces. The questions asked are hereby submitted, viz.:

What are the laws which govern in your State the sale of alcoholic liquors?

- a. Is a special license required for the sale?
  - a. Under what conditions is this license granted?
  - b. What are the conditions governing the sale under such a license?
2. If a license is not necessary, can a sale be made without restriction?
3. If a license is not required, but their sale is restricted by law, do any of the following restriction apply?
  - a. Must a sale be on a physician's prescription only?
  - b. Can such a prescription be renewed?
  - c. If the proprietor of the pharmacy is a physician, can he write a prescription for such a sale?
  - d. Is the writing of this prescription permitted in the store, or in an office attached to the store?
4. Can alcohol be sold in your State for the use in the arts and sciences?
  - a. Is this privilege abused by its sale as a beverage?
    - b. Are alcoholic tinctures sold to any extent as a beverage?
    - c. Are you in favor of the reduction of the internal revenue tax upon alcohol?
    - d. Are you in favor of the government allowing the sale of methylated spirits? (Wood alcohol I. Alcohol S.)
5. Are the license laws of your State as they apply to pharmacists, generally observed?
- a. Can you suggest any desirable change in them?
6. Any other information upon this subject will be received with pleasure.

It was first intended to classify these answers, but as it was found exceedingly difficult to do so, it was thought better to give a brief synopsis of the answers arranged according to states, hence I submit the following:

**ARKANSAS.**—A license is required, \$50 for State, \$600 for city, which is granted under the same conditions as for a saloon. In the absence of a license, prescriptions can not be dispensed legally, nor renewed, neither can the proprietor, if a physician, write a prescription for such sale.

Alcohol can be sold under the United States license, not much used as beverage, as there is plenty of saloons; the same applies to alcoholic tinctures. Strongly in favor of a reduction in the internal revenue tax upon alcohol, and of the government allowing the sale of methylated spirits.

Thinks the license laws are generally observed in wet counties doubtful in dry; also the pharmacists should be allowed to dispense liquors upon physicians' prescriptions, but no renewals.

**ARIZONA.**—In addition to the United States license (R. L. D.), a county license must be paid of \$30.50 per quarter, which permits the sale of 1/2 pints to 4 1/2 gallons. Prescriptions can be compounded without a license,

right of renewal questionable; proprietor, if a physician, can write them unless fraud is shown. No exceptions are made in favor of the sale of alcoholic tinctures, not sold to any extent as a beverage. In favor of a reduction in tax upon alcohol if its use can be restricted to the arts and sciences. Also in favor of the sale of methylated spirits. License laws generally observed.

**COLORADO.**—A license of \$25 per annum required, under which malt and spirituous liquors may be sold for medical purposes. Alcohol can be sold without a license; it is used to some extent as a beverage. Not in favor of a reduction in the internal revenue tax, but in favor of the government allowing sale of methylated spirits. The license laws generally observed, but in favor of abolishing them.

**CONNECTICUT.**—License of two classes. In license towns \$50.00 per annum, which permits the sale of one gallon or less of liquor, five gallons of alcohol and five gallons of other than distilled liquors may be sold for the premises. In no-license town \$100.00 to \$120.00 tax is charged per annum for the privilege of filling physicians' prescriptions which can not be renewed, or written by the proprietor, or in an office attached to the store. Alcohol can be sold in any amounts of not more than five gallons, which is not used to any extent as a beverage, nor are alcoholic tinctures. In favor of a reduction of tax upon alcohol, but not of the sale of methylated spirits. Laws generally observed. Would suggest that drinking be absolutely stopped in drug store, which perhaps can not be done.

**DELAWARE.**—License granted by the superior court. Sales only to be made on prescription, which can be renewed, and can be written by any physician, probably abused. Alcohol can be sold, but the privilege is not abused; tinctures not sold as a beverage. Not in favor of the reduction of the tax. License laws generally observed.

**DISTRICT OF COLUMBIA.**—No license required. Sale can only be made on prescription, which can not be renewed. No restrictions regarding the writing of the prescription. Alcohol can be sold upon government license; privilege not abused to any extent. In favor of a reduction in the tax, if the concession has to be made good by a tax on something else. In favor of allowing the sale of methylated spirits. License laws generally observed.

**FLORIDA.**—License granted in all "wet" counties, upon which sales can be made to persons over eighteen years who are not habitual drunkards. Sales cannot be made in the "dry" counties even upon prescription. Alcohol can be sold in the "wet" counties.

In abused, in some also in the "dry" alcoholic tinctures. Not in favor of a reduction in the tax upon alcohol. Physicians should be allowed to prescribe liquors and druggists to fill prescriptions for the same in case of sickness.

**GEORGIA.**—The general license laws regarding the sale of alcohol and alcoholic liquors are very moderate, but they are largely inoperative, as most of the 137 counties are "local option" and have special laws governing the sale.

**IDAHO.**—Annual license of \$200 is required, upon which sales can be made of one pint or over, not to be drunk in the store. Prescription not required. Alcoholic tinctures not sold as a beverage. In favor of a reduction of tax upon alcohol. License laws generally observed.

**ILLINOIS.**—The general license laws of the State apply to drug stores the same as to saloons, but in cities the city council may authorize the sale of liquors for medicinal, sacramental, mechanical or chemical purposes, not to be consumed on the premises. Annual license in Chicago \$2.00. Prescription not required. Alcohol can be sold. Used to some extent as a beverage. Not in favor of a reduction of the tax on alcohol. In favor of the government allowing the sale of methylated spirits. The license laws generally observed.

**INDIANA.**—No license is required other than the government R. L. D. Sale must be made upon prescription when amount of less than quart is required. Thinks the proprietor has no right to prescribe, but may dispense. Alcohol can be sold only as mentioned. Hopes it is not used as a beverage. Alcoholic tinctures not used to any extent as a beverage. In favor of a reduction in the tax upon alcohol for the use in the arts and sciences. Not in favor of the sale of methylated spirits. The observance of the laws depends on local conditions. It is suggested that permits should be issued by the State Board of Pharmacy.

**KENTUCKY.**—Three classes of license are issued: "a druggist's," costing \$50.00 per year, permitting the free sale of alcohol, but restricts sale of spirituous and malt liquors to prescription; "a merchant's," costing \$100.00 per year, permitting the sale in any way, but not to be drunk on the premises; "a saloon license," costing \$150.00, permits the sale without restrictions. Proprietor of a drug store, if a physician, could write prescription if he has a practitioner's license. Alcohol can only be sold under a license; not sold as a beverage to any extent. Alcoholic tinctures are sold as a beverage in the mountainous districts of the State, where most of the counties are prohibited. In favor of a reduction in the tax upon alcohol, and also the sale of methylated spirits. Thinks druggist should be allowed to sell upon prescription without license, and the sale of alcohol for use in the arts and sciences should be allowed.

**MASSACHUSETTS.**—License granted by the Pharmacy Board upon payment of \$2.00 for advertising and \$1.00 for license. Sales to be made only for medicinal, mechanical or chemical purposes, purchaser signing a special register kept for that purpose. Prescriptions not re-

quired. Alcohol cannot be sold without a license; it is used to some extent as a beverage, as is tincture of ginger. Most assuredly in favor of a reduction of the tax upon alcohol, and also on the sale of methylated spirits. Think the law is all right, but it is not properly enforced in "local" or "town" unprincipled druggists do a profitable business in the sale of liquors.

**MAINE.**—No licenses are granted as it is an absolute prohibition state, and liquors can not be dispensed even on physicians' prescriptions. Alcohol can be sold for use in the arts and in medicinal liquors by a town agency. The privilege is abused, as they sell it without discretion. Alcoholic tinctures are not sold to any extent as a beverage. In favor of a reduction in tax on alcohol, but not on medicinal spirits.

**MARYLAND.**—License is not required. Sales can only be made on prescription, which can not be renewed. Alcohol can be sold for use in the arts and sciences. Do not think the privilege is abused; alcoholic tinctures are sold to any extent as a beverage, with the possible exception of tinct. of ginger. Not in favor of the reduction of tax on alcohol, but in favor of the sale of methylated spirits. In Baltimore a special register is required to be kept in which must be entered the kind, quantity and price of the liquor sold, purchaser's name and purpose for which sold.

**MICHIGAN.**—No license required. Liquors can be sold by druggists for medical, scientific or sacramental purposes, registration of the sale being required. Sales can not be made to minors except upon written order of parent or guardian.

Alcohol can be sold subject to the U. S. License. It is used as a beverage in localities where the population is largely foreign. Alcoholic tinctures not sold. Not in favor of the reduction of the tax upon alcohol, but in favor of the sale of methylated spirits. The license law is generally ignored. A desirable change would be to pass the last proposed pharmacy law.

**MINNESOTA.**—Only the government license required. Sale must be made on physician's prescription, which can be renewed or written anywhere. Alcohol can be sold. Do not think it or alcoholic tinctures are used as a beverage. In favor of a reduction of tax upon alcohol and the sale of methylated spirits. License laws of the state are generally observed.

**MISSISSIPPI.**—Pharmacists can not sell alcoholic liquors even on a prescription, without a retail liquor license; in fact they can not sell at all. Alcohol can not be sold for use in the arts. Alcoholic tinctures not sold as a beverage. In favor of the reduction of the tax upon alcohol, and also of the sale of methylated spirits under physician's prescriptions. It would be desirable to have a law allowing the sale of physicians' prescriptions strictly for medicinal purposes.

**MISSOURI.**—Sale must be on physician's prescription, which can be renewed, or written by the proprietor of the store if physician's prescription is not used. Alcohol can be sold for use in the arts, etc., the privilege abused only in few sections. Alcoholic tinctures not sold as a beverage. In favor of allowing the sale of methylated spirits. The license laws are generally observed.

**NORTH CAROLINA.**—A license of \$50 is required in addition to the United States license. This license permits of sales only on physicians' prescriptions, which can be renewed or written to the writing of the proprietor. Alcohol can be sold for use in the arts, etc. Privilege not abused; nor are alcoholic tinctures sold as a beverage. In favor of the reduction in the tax upon alcohol. Thinks the present license fee should be abolished, as it amounts to prohibition most cases, as few sell enough to pay the tax.

**NORTH DAKOTA.**—License required, which allows the sale for medical purposes only; affidavit of purchaser required as to its intended use. Alcohol can be sold subject to the same conditions. Privilege not abused to any great extent. Alcoholic tinctures not sold as a beverage. The license laws of the state, which are peculiar, are generally observed.

**NEBRASKA.**—License not required by the state, but required by the city of Omaha, where application must be signed by thirty resident freeholders of the sale and a bond of \$5,000 given. Liquors can only be sold for medical, medicinal and sacramental purposes, and the sale must be registered. Sale of alcohol must be registered. Privilege abused to some extent. In favor of a reduction of the tax upon alcohol and the sale of methylated spirits. Licenses are sold "in a way." It is suggested that circulating petitions annually for signatures is a nuisance, without any benefit.

**NEW HAMPSHIRE.**—No special license is required. Sale must be on physician's prescription or permit from town agent. Such prescriptions can be renewed and there are no restrictions regarding the writing of it. Alcohol can be sold for use in the arts, etc. No knowledge of the abuse of the privilege. Thinks that in the northern parts of the state alcoholic tinctures are sold to quite an extent as a beverage. In favor of a reduction of the tax upon alcohol and the sale of methylated spirits. License laws generally observed by pharmacists.

**NEW YORK.**—A special license is required under the "Baines' Law," which is granted upon payment of \$5 to licensed pharmacists who give bonds; this entitles to sell only on physicians' prescriptions. The sickness, names and dates must be given, and the prescription written and countersigned by a physician. The license is renewed, neither can the proprietor write it, and it must be written in an office wholly unconnected with the

store. Alcohol can be sold for use in the arts, etc. Alcohol apparently not sold as a beverage, alcoholic tinctures rarely. The license laws are generally observed. A \$50 license entitles to sell in all quantities, but not to be drunk in the store.

**NEVADA.**—No license required but the regular U. S. R. L. D. license. Sales can be made without restrictions. Alcohol can be sold for any use. Not sold as a beverage to any extent by pharmacists, nor are alcoholic tinctures. In favor of the reduction of the tax upon alcohol and the sale of methylated spirits. Saloons are so plentiful in Nevada that pharmacists have little to do as pharmacists except for medicine strictly. Thinks "a pharmacist's license should be revoked for running a dram shop in every town in the union."

**OHIO.**—License not required when the sale is on prescription, or is for mechanical, sacramental or pharmaceutical purposes. The law is silent regarding the writing of it. In favor of the reduction of the tax upon alcohol, as specified above. Believes the alcohol can be sold for the uses of alcohol and the sale of essence of ginger. In favor of the reduction of the tax upon alcohol and of the sale of methylated spirits. As the "Dow" tax upon saloons is very heavy thinks the law is evaded by saloons with drug-store fronts.

**OKLAHOMA.**—Pharmacists have no special privileges, but must make out a saloon license if they sell liquors in any way. Alcohol can be sold subject to the conditions as specified.

**OREGON.**—License is not required by state; prescription not required, but liquors can not be exposed for sale or advertised or drunk on the premises, but the legitimate demand can be supplied. Alcohol can be sold for use in the arts, etc., its sale or that of alcoholic tinctures not abused. If sales not made as specified, \$500 fine is levied. In favor of the reduction of tax on alcohol and the sale of methylated spirits.

**PENNSYLVANIA.**—License not required, other than the U. S. R. L. D. license. Sales must be only on prescription, which can not be renewed, conditions as to the writing of them not specified. Alcohol can be sold for use in the arts, etc. The privilege is abused to some extent on Sundays, and on other days where there is a large foreign population. Essence of ginger sold largely by some unprincipled druggists. In favor of the reduction of the tax upon alcohol and of the sale of methylated spirits. The license laws are fairly observed.

**RHODE ISLAND.**—License is required, which is granted by the License Board to a registered pharmacist. Prescription not required. Sale must be registered. Liquors cannot be drunk on the premises. Alcohol can be sold on registration; the privilege is abused. Most of the liquor troubles are due to the so-called "French." Not in favor of a reduction of the tax upon alcohol, but in favor of the sale of methylated spirits. License laws not generally observed. Have worked for several years, but have them changed.

**SOUTH DAKOTA.**—License is required, but pharmacists not allowed to sell malt liquors. Sale need not be on prescription. Sale to be for mechanical or medicinal uses. Alcohol can be sold for use in the arts, etc., the privilege not abused to any extent. Not in favor of alcoholic tinctures. In favor of a reduction of the tax upon alcohol and the sale of methylated spirits. License laws are generally observed as they might be.

**TEXAS.**—State license required of \$300 per year for a saloon. Prescriptions for uncompound liquors cannot be filled without a license. Cannot be written by proprietor of store. Alcohol can be sold for use in the arts, etc., the abuse of the privilege is only very limited, as is the sale of alcoholic tinctures. In favor of the reduction of the tax upon alcohol, and the sale of methylated spirits upon certain conditions. License laws generally observed.

**TEXAS.**—Alcoholic liquors or alcohol cannot be sold under any conditions without the payment of the state "occupancy" tax of \$300 per year. Alcoholic tinctures not sold to any extent as beverages. Doubtful if the license laws are observed. "Not in favor of a druggist selling liquors under any circumstances."

**VIRGINIA.**—The law makes no distinction between druggists and regular liquor stores. There is an unwritten law that druggists have a right to sell on a doctor's prescription, which most of them do without being prescribed.

**VERMONT.**—Sales which are "discretionary" and must be registered can only be made through "town agencies." Cannot be sold by druggists even on prescription, neither can alcohol. Alcohol is used as a beverage in some places, as is the sale of essence of ginger. In favor of a reduction of the tax upon alcohol and of the sale of methylated spirits. License laws not generally observed.

**WASHINGTON.**—License not required. Sales must be on prescription or for mechanical or sacramental purposes. The prescription can be renewed, and there is no restriction regarding it. Alcohol can be sold for use in the arts, etc. The privilege is abused. In favor of a reduction in the tax upon alcohol and of the sale of methylated spirits. "The license laws practically a dead letter, yet drug stores in Washington are drug stores in saloons."

**WISCONSIN.**—A license may be granted to pharmacists by town or city councils upon petition and the payment of \$10, which permits the sale for medicinal, mechanical or sacramental purposes. Sale need not be on prescription. Any person making a false statement to a pharmacist to induce the sale is guilty of a

misdeemeanor, punishable by fine or imprisonment. Alcohol can be sold for use in the arts, etc. The privilege not abused, nor alcoholic tinctures used as a beverage. In favor of a reduction in the tax upon alcohol and the sale of methylated spirits.

PROVINCE OF MANITOBA, D. OF C.—License not required. Sale need not be on prescription. A druggist cannot sell more than six ounces of intoxicating liquors at one time, for medicinal purposes only. The purchaser's name must be on the label, and the register is inspected semi-monthly by an inspector. Heavy penalties debar both druggist and customer from transgressing the law. Alcohol can be sold for use in the arts, etc. The privilege not abused. In favor of a reduction in the tax upon alcohol. 65 per cent. alcohol cost the druggists at lowest price \$4.75 per gallon; were it cheaper the people might buy it. The people of Manitoba are in the habit of buying from many of the conditions known in some of the States across the line.

PROVINCE OF NOVA SCOTIA, D. OF C.—License not required. Druggist may sell where there is no appointed agent. Such sales must be for medicinal purposes, upon the certificate of a duly registered medical practitioner. For mechanical or manufacturing purposes, upon the certificate of the justice of peace. Sales to be duly registered, and the register open for inspection by the inspector. Physicians are held to very strict account for the prescriptions they write. Alcohol can be sold for use in the arts, etc. In favor of a reduction in the tax, which is \$3.17 per imperial gallon. The government allows the sale of methylated spirits. The license laws generally observed. In favor of keeping the sale of liquors out of drug stores; they should be sold by regular agents of high license not required.

PROVINCE OF ONTARIO, D. OF C.—License not required. Sales must be on a bona fide prescription, etc., in amount of not more than six ounces at one time, which must be duly recorded in a book open for inspection. Prescriptions cannot be renewed unless the proprietor of a pharmacy or a physician, and there is no other. No liquors can be consumed at the premises, or mixed with soda water, apollinaris, ginger ale, etc. Alcohol can be sold for use in the arts, etc.; the privilege not abused, nor are alcoholic tinctures used. The government allows the sale of methylated spirits. License laws generally observed. Thinks that a prescription should not be the indispensable condition of the sale; thinks the majority of pharmacists could be trusted with the observance of the laws.

PROVINCE OF QUEBEC, D. OF C.—(Conditions of sale about the same as in preceding province; amount to be sold not to exceed one imperial pint. Alcohol can be sold for use in the arts, etc. The privilege not abused to any extent. Isolated cases of the sale of alcoholic tinctures as a beverage occur now and then. In favor of a reduction of the tax upon alcohol, as the inland revenue tax amounts to \$1.10 per imperial gallon. Methylated spirits largely used in Canada for burning, in varnishes, etc. Now mixed in the government stores; shipped as ordered. Price of purified wood alcohol about the same as that of methylated spirits; do not see any advantage in using it.

"I am not a temperance crank, but I do not believe in pharmacists handling liquors at all; the drug store is no place to get liquors."

Although it has been found exceedingly difficult to properly classify the answers received, I have on second thought endeavored to do so as accurately as possible. I submit the following:

- I. States or provinces in which licenses are required, nineteen.
  - a. Sales can only be made on physicians' prescriptions, seven.
  - b. Physicians' prescriptions not necessary, ten.
- II. States or provinces in which licenses are not required, nineteen.
  - a. Sales can be made with a prescription, six.
  - b. Sales must be on physicians' prescription, twelve.
  1. The prescription can be renewed, seven.
  2. The prescription can not be renewed, five.
  3. Prescriptions can be written by proprietor of the store if a physician, eleven.
  4. Prescription can be written in the store or office attached, eight.
  5. Prescription can not be written in the store, etc., three.
- III. Alcohol can be sold for use in the arts and sciences, twenty-four.
  - a. This privilege is not abused, sixteen.
  - b. This privilege is abused, eight.
  - c. Alcoholic tinctures used as beverage, thirteen.
  - d. Alcoholic tinctures not used as a beverage, seven.
- IV. In favor of a reduction of the tax upon alcohol, twenty-four.
  - a. Not in favor of a reduction, nine.
- V. In favor of the government allowing the sale of methylated spirits, twenty-four.
  - a. Not in favor of allowing the sale, two.
- VI. States in which license laws are generally observed, fifteen.
  - a. States in which license laws are not observed, six.
- VII. States in which the observance is doubtful, six.
  - a. States in which alcoholic liquors can not be sold by apothecaries; Maine, Vermont, Georgia, largely "local option." Arkansas, Florida, Connecticut, Mississippi, Massachusetts, Kentucky, partly "local option."

It would seem to me that these answers, which have been received from many of the most prominent members of the A. Ph. A., give one at least a bird's eye view of the subject, and that possibly there could be deduced from them two general laws covering the sale of alcoholic liquors in most of the States or Provinces.

LAW A.—Alcoholic liquors are to be sold only by properly registered pharmacists upon the following conditions: A license costing \$5 must first be obtained by a registered pharmacist in each drug store where liquors are sold. Sales on the Sabbath day shall be only on the prescription of a duly registered physician, not to be renewed, and subject to the conditions specified below. Sales upon week days shall be to adults not known to be of habitually intemperate. The amount, in amount, for medicinal purposes only, not to be drunk upon the premises. Not more than one sale to be made to the same person in each twenty-four hours, unless upon the prescription of a registered physician, a special register shall be kept, specifying the date of sale, kind and amount sold, medicinal purpose for which required, name and residence of purchaser. Said register to be always open for inspection by the proper authorities. Alcohol shall not be sold only for use in the arts and sciences, and the amount, purpose for which required, and name and residence of the purchaser shall be registered in the above-mentioned register. Upon conviction of any pharmacist of the violation of the law, his license shall be revoked and a sign notifying the public of this fact shall be fastened in a conspicuous place upon the outside of the store. He may be punished by fine or imprisonment, not to exceed one year, for false statements shall be punished by fine, or imprisonment, or both.

A copy of this law, properly framed, shall be conspicuously displayed in each store receiving a license.

LAW B.—Must differ from the above in requiring all sales to be upon the prescription of a registered physician, the prescription not to be renewed, and not more than one prescription to be written for the same party in any twenty-four hours.

## THE PHARMACOLOGIC ASSAY OF PREPARATIONS OF THE SUPRARENAL GLANDS.

By E. M. HUGHENTON, M. D.

Since Addison, in 1855, called attention to the relation of pathological lesions of the suprarenal glands to the disease which has since borne his name, these bodies have been the subject of numerous researches by workers in all lines of medical science. The histologist, the chemist, the physiologist and pharmacologist has each contributed his share to the sum total of the results obtained, which, often enough, have been widely divergent. But it is not my purpose to review the history of this interesting subject. It may be remarked, however, that for the first forty years the active principle found in these glands was the plaything of science, then leaped into prominence when Bates discovered that it could be employed as an astringent in ophthalmology, since which time physicians are finding new uses for it almost daily. In the course of some experimental work on the pharmacology of the adrenals, it appeared possible to take advantage of the marvelous influence of the active principle contained in extracts of these bodies upon the blood pressure which had been observed by Oliver and Shafer as a means of measuring their activity. Furthermore, it seemed quite advisable, as we had no chemical means of standardizing them, that some method of assay should be found, since in all probability in keeping with products of similar nature there must be much variation in the pharmacologic activity, owing to the liability to undergo chemical or bacteriological decomposition before, during, or after manufacture, in the various products that were to be obtained on the market.

Believing that the results of my observations may be of some interest to members of the Association, I will briefly outline the method that has given me the best results. This method is based upon the changes produced in the blood pressure of the carotid artery when variable quantities of a given preparation of the suprarenal glands dissolved in slightly acidulated water, the inert substance being removed as far as possible, are injected into the femoral, or jugular vein, of an anaesthetized dog or other animal.

The apparatus required are an operating table suitable for experimenting on dogs, and such surgical instruments as are usually found in physiological and pharmacological laboratories, including small glass conulæ, suitable for inserting in blood-vessels and veins and a syringe of 10 Cc. capacity. A large-sized kymograph, with manometer arranged for taking blood-pressure tracings on continuous rolls of white paper, with ink pens, or fitted with the more convenient smoked-paper sheets, upon which the results are traced with a stylus is required. In either case, whether smoked or unsmoked paper is employed, for convenience in making measurements of the height of the blood-pressure tracings, the paper should have linear rulings, five millimeters apart.

The method is as follows: A small or medium-sized dog is carefully anaesthetized with chloroform, ether or chlorotone. I have used the latter drug almost entirely, as but one dose, which is given per stomach, is required. In from fifteen to thirty minutes the animal is thoroughly anaesthetized, and will remain entirely insensible to pain for any length of time. Another decided advantage possessed by this anaesthetic over chloroform and ether for laboratory work is the fact that the blood-pressure remains constant for many hours. After the animal is completely anaesthetized he is placed on the operating table, and glass conulæ of suitable size are tied, as quickly as possible into the carotid artery and femoral vein, the vessels being clamped off previously with forceps. The conula in the artery is connected to an inelastic tube, completely filled with a half-saturated sodium carbonate solution to prevent the blood from clotting by means of a short piece of rubber tubing, great care being exercised to exclude all air. The other end of the inelastic tube terminates in a U-shaped glass manometer tube which is partly filled with mercury, which has resting upon its free surface a glass float tipped with a glass writing pen or stylus. As soon as all the connections are made between the artery and manometer, the clamp employed to prevent the flowing of blood from the vessel is removed and immediately the float bearing the writing instrument begins to rise and fall in unison with the beats of the heart. The recording drum, which has been carefully placed in contact with the writing instrument, is released at the same moment and a graphic record of the blood pressure and heart beats is made upon the traveling sheet of paper. A few inches of record are taken as a normal tracing. Then a quantity of the solution of the preparation of the suprarenal glands, representing a known quantity of the product, is injected into the vein, through the other glass conulæ, care being again exercised to prevent the entrance of air into the vessel. Within a few moments after the injection the blood pressure is enormously increased, but it quickly falls again to the normal. As soon as the blood pressure has become normal a second injection is made in precisely the same manner, of a known quantity of the standard solution of the suprarenal gland. Again increased blood pressure results. A comparison of first and second tracings will show whether more or less of the solution being assayed should be injected to produce the same rise in blood pressure as is produced by a given amount of the standard preparation. Ultimately, by repeating the injections, the requisite amount of the preparation being assayed will be found which will produce a rise in blood pressure equal to that produced by a given quantity of the standard. The extent of the rise in blood pressure varies in proportion to the amount of the active constituent of the suprarenal gland injected. Several dogs are usually required for making an assay. Two kinds of tracings may be made. Complete when the drum of the kymograph is allowed to run continuously, and abbreviated when the drum remains stationary, while the reaction takes place. In the latter the rise in blood pressure is recorded as a short, perpendicular line. These abbreviated tracings answer admirably for most work, as only variations in blood pressure are taken into account. The smoked paper tracings are fixed by dipping them into shellac, and

allowing them to dry. A great many variations must be observed in carrying out the experiments, such as the amount of material injected at a time, since the extent of the increase in blood pressure must be sub-maximal, the volume of fluid injected at one time, the length of time required in making the injections, etc., but in keeping with all other methods of pharmacologic assay the conditions obtaining in the experiments must be kept constant and the reaction of the preparation being assayed must be compared with a known standard.

Naturally the question will arise as to what should be the standard. At first a freshly-prepared fluid extract of fresh bovine suprarenal glands was employed as a standard, but after the insulation of the active constituent, adrenalin, I adopted it as a standard, because its activity remains constant while other preparations of the suprarenal glands are prone to undergo decomposition and consequent alteration in strength. The animals, after the experiments are concluded, are immediately killed. Since the dogs are procured from the pound, and killed by an anaesthetic instead of drowned, there should be no trouble with the humane societies.

The accuracy of the results obtained by the application of this method depend, like those of quantitative methods, generally upon the skill of the operator and attention to details. As a specific example of the results that may be obtained, the following illustration will suffice: Three samples of adrenalin, of known but concealed strength, were prepared and assayed. Calling the standard 100 per cent., the unknowns contained 40, 85, and 130 per cent., respectively. The results reported were 40, 83 and 135 per cent.

#### PHOTOGRAPHIC PRINTING IN TWO COLORS.

A new method of photographic printing upon paper in two colors has lately been devised by M. Bolle. By this means images may be printed side by side in different colors and an agreeable effect thus produced; it is especially applicable in the case of a central image surrounded by a border of a second color. One of the images is printed from a photographic negative and the second from a negative prepared from a hand design. The method is based upon the combination of the ferro-prussiate (blue print) and the bichromated gum process, and gives a blue image combined with another whose color may be varied according to the taste of the operator. To obtain the blue image the paper is sensitized by a mixture of the two following solutions:

|                                     |          |
|-------------------------------------|----------|
| A. Citrate of iron and ammonia..... | 15 parts |
| Water .....                         | 50 parts |
| B. Ferricyanide of potassium.....   | 8 parts  |
| Water .....                         | 40 parts |

These solutions, prepared and filtered, may be mixed in advance and kept in yellow bottles, but it is best to mix at the time of using. The image is strongly printed and developed by washing in water till the whites become pure. The second image may form, for instance, a border for the blue image. To obtain it a plate is first prepared by exposing an ordinary gelatine plate to daylight and developing it until it is entirely black. The design to be reproduced is copied or traced upon tracing paper and transferred to the plate by impression paper. It is then engraved through the film with the point of a needle, giving a negative in black and white. To print this design the border of the blue image is sensitized by brushing over it a thin and even layer of gum arabic, 40 per cent. solution, to which is added a sufficient quantity of the color decided upon. When this layer is dry a sensitizing solution of bichromate of potash (10 per cent.) is applied in the same way. The printing is carried out as usual and the image developed by washing in cold or lukewarm water. The process may be modified in different ways and will find many applications; if desired, the center of the image may be printed by the latter method and the margin in blue, or different images may be printed side by side.

## SHOP TALK.

In a South St. Louis drug store, a few days ago, a lady came in and asked the proprietor if he had a "rent list." The proprietor said he never kept them. The lady remarked that "this was strange, for nearly every other drug store keeps them," and left, evidently with the intention of going to the druggist in the next block in quest of one. These "rent lists" are issued weekly by the Real Estate Exchange, and a supply of them are left with every druggist in the city, and with stores in other lines of trade where drug stores are far apart. They contain a list of houses, rooms, etc., for rent, and for sale. After the lady had left the proprietor turned to the correspondent and asked "why in the world this thing had never been written up, and written up right." The proprietor thought that any druggist was very foolish to give out these lists. By so doing he was just encouraging people to move out of his neighborhood. It was suggested that this might be true, but at the same time other druggists were encouraging people to move into his neighborhood by giving their customers a list of houses for rent, perhaps next to his store, and which might otherwise be vacant for several weeks. He was expecting, and anxious for, this reply. He estimated that it took all the way from a few hours to several months to get acquainted with a new family in the neighborhood. The family might ask for credit, be worthy and good pay, and one would make an enemy by refusing to trust its members. Or, you might think new people were good pay, trust them and get beaten. He said he preferred old customers every time, and he never encouraged a reliable, old customer to leave the neighborhood for he might get a dead-head in his place. One does not have to encourage a dead-head to move; he will go of his own accord soon enough.

\* \* \*

Apropos of the international yacht races, which have just now set all New York City, and, to some extent, the whole country agog, there is one druggist in Harlem who is using the public interest in the contest for business ends. His show-window floor is spread with a crumpled cloth of sea-green color; and two little yachts, representing the Columbia and the Shamrock, and a number of toy steamboats make up the maritime display. A good-sized card informs the passer-by that the complete returns of each race are given as accurately as any newspaper bulletin-board. There is no reference to advertising in the whole window, but those who look into it cannot fail to see beyond, in the store, a large sign giving the name of the druggist. As the yacht race progresses the two little toy boats, one flying an American the other the British flag, are shifted according to their relative position in the contest down the Bay, the druggist keeping in close communication with a near-by ticker. Naturally the display draws large crowds, and, the cost being so little, cannot be a loser; in fact it should prove a decided winner.

\* \* \*

A very strange mutation in the soda-water trade is noted by one of the St. Paul druggists, and he is somewhat mystified. He has long owned and operated a store on one of the principal streets, just outside the business section of the city. One Summer his soda-water trade is large and the next, without any apparent reason, it will fall off almost completely. But whenever, discouraged by the collapse of this branch of his business, he starts in a season without a soda fountain calls for the cooling beverage shower in upon him, but always too late to make it worth while to start his fountain. The druggist, in consequence, is in a constant state of perplexity, not knowing, when the Summer opens, whether or not it will pay to prepare to dispense soda-water. Other drug men in St. Paul have had a similar experience, and the exasperating thing about it is that no satisfac-

tory theory to account for the phenomena suggests itself.

\* \* \*

A gentleman entered a North side St. Louis drug store last week, bought a cigar and reached to the back edge of the show case to use the cigar cutter. Knowing the druggist pretty well, he ventured to ask why the cutter was kept in such an unhandy place. The druggist replied that his old cutter was worn out, and that a few days before the cigar firm had sent down a new one, which was one of these consisting of revolving knives, winding up with a key and operated by pressing the end of the cigar in the hole on top. He claimed this new machine had cost him the profit on several cigars as children would slip up and press the machine with their fingers, with the result that the tips were cut off, and he felt obliged to furnish the cotton, bandages, etc., used in bandaging up the wounds.

### A TRUE STORY.

"Well, Cissy, what can I do for you," said the kind druggist, in one of the east side tenement districts, beaming over the show-case at a wee bit of femininity, who had just rushed into the store and stood panting and holding on to the counter with her arms extended over her head, in order to reach the edge.

"I want free cents wurf' wuf' talk," explained the three-year-old, "an' will you talk to the Doctor, an' I'll talk to you." Her face was flushed and her eyes shone brightly. The child seemed very much excited and frightened. The druggist hurried to the telephone, called up a well-known physician, and turned to the little girl at his elbow.

"All right, my dear."

"My mamma has felled down stairs, an' can't do her washin' 'cause she broke her leg, and she says she is a-goin', maybe, to die."

Here the little messenger broke down, while the druggist repeated the message.

"Please come now, Doctor, an' mamma has free cents."

The druggist told the doctor to hurry, but hesitated when he came to the 3 cents part of the message. She was waiting for him to repeat the rest of the message. He could not disappoint her. Hanging up the phone, he repeated, loudly, "The woman has but 3 cents," and the child was satisfied. The poor woman received good medical attendance, and it cost but 3 cents, together with the telephone message.

**SOLUTION OF IRON ALBUMINATE.**—The following formula for this preparation appears in the *Journal de Pharmacie de Liege*:

|                                  |           |
|----------------------------------|-----------|
| The white of 40 eggs.            |           |
| Solution of ferric chloride..... | 42 grams. |
| Glycerin .....                   | 60 grams. |
| Distilled water .....            | 2 litres. |

Mix the white of eggs with the water and glycerin, and add to this mixture the ferric chloride under constant stirring; a precipitate forms, which is removed by filtering through flannel. About 2 litres of solution are obtained. It is not necessary to filter at once, allowing the mixture to stand during twenty-four hours giving better results. The solution will keep for months.

**TOBACCO SMOKE AS A DISINFECTANT.**—The action of tobacco smoke upon the microbes in the human mouth has been made a subject of investigation by E. Dunan (Apoth. Zeit.) Staphylococci and diphtheria bacilli were killed, while the growth of tubercular and influenza bacilli was retarded by contact with the smoke. No action was observed upon the bacteria of tetanus and typhus. The bactericidal action cannot be ascribed to the nicotine present in the smoke, for after the removal of this alkaloid the effect upon the micro-organisms was found to be unchanged.

## AMERICAN NAMES OF THE COCOANUT.

The origin of the name *cocoa* or *coco*, as the earlier writers used it, seems to have remained quite as obscure as that of the tree itself. Oviedo refers to the fruit of several species of palms as "cocos," and seems to have been the first to record the fanciful idea that that word was applied to the cocoanut because the three foramina or "eyes" suggest the grimace of a monkey, a notion which Hernandez and many subsequent writers have ascribed to the Portuguese, and some lexicographers have derived *coco* from a Portuguese name for monkey, *macaco*, or *macoco*. Others have thought to trace it to the Greek *kouki*, and even to an ancient Egyptian word *kuku*, which was formerly thought to apply to the cocoanut; and although Seeman furnished, in 1868, excellent reasons for believing that at least the Egyptian reference does not apply to the cocoanut, but to *Borassus aethiopicus*, the Egyptian theory is still repeated in the latest editions of our most popular dictionaries. Nor did anybody attempt to show that either Hernandez, Acosta, or any of their contemporaries was acquainted with either the Greek or the Egyptian words, or that they were familiar with the cocoanut before coming to America. Hernandez refers, whether correctly or not, to Strabo, which indicates that he would not have avoided mention of any other Greek writers, while Acosta prefaces his discussion of the cocoanut by the following remark:

And it is an admirable thing to see so many different forms, tastes, and effects unknown, whereof we did never hear speak before the discoverie of the Indies. And whereof Plinie himselfe, Dioscorides and Theophrastus (reca, the most curious), had no knowledge, notwithstanding all their search and diligence.

Moreover, it seems probable that the word *coco* as a lineal descendant from the Latin *coccus* was in use among the Spaniards in its original sense of a seed, nut, or fruit, and the seeds of *Cocculus* or India berries are still called in Spanish *cocas* de Levante in much the same way as Hernandez referred to cochineal as "*Cocco Indico*." Both Oviedo and Acosta used the word in a wide generic sense for the seeds of several palms, and it is still applied to the seeds of smaller palms which much resemble those of *Cocculus* and are strung for rosaries. Acosta also refers to the seeds of a palm of Chili (*Jubaea*) as *coquillos* (modern *coquitos*), and describes the large fruits of *Bertholletia* (Brazil nut) or other *Levthidaceae* as "another kind of *cocos*" containing almonds. We have thus, apparently, another case like those of *Mimosa* and *Cereus*, where ordinary Spanish words adopted into botanical nomenclature have been tortured at great length to fit the most improbable theories of classical Latin, Greek, or even more ancient derivations. But though already possessed by the Spaniards, the word *coco* was by no means new to America. Eighteen of the names of plants in the "Historia" of Hernandez begin with *coco* and twenty-eight with *coca*, which seems to have been used interchangeably. Thus Dampier and Cockburn frequently refer to *cacao* (*Theobroma*) as "*coco*," "*coco-nuts*," and "*cococa*." The difficulty which we still have in attempting to restrict *cacao* to *Theobroma*, *coca* to *Erythroxylon*, *cococa* to *Cocos*, and *coco* to *Colocasia* may be but a legacy from the popularity of these syllables in the plant names of American aboriginal tribes. However curious such a coincidence between the Spanish and American word

*coco* may seem to us, it appears to have produced no such effect upon Hernandez, even when explaining the name of the plant *cocoyate*, on the ground that the leaves were similar to those of palms, and, although not noted by Hernandez, this remarkable suggestion seems to receive support from the fact that the cocobut plant has large, spherical swellings near the roots.

The statement of Hernandez, already quoted, that the Mexicans called the cocoanut "*coyolli*" is turned by De Candolle into an argument against an American origin on the ground that the word *coyolli* "does not seem to be native," though no attempt is made to indicate when it was introduced; nor is the implication of an extra-American word met by the theory of maritime distribution. Yet if *coyolli* was not an Aztec word it either did not come alone or it fell into very friendly society with dozens of others, like *amolli*, *ylli*, *coyopatli*, *cocotzin*, *chilli*, *quilamoli*, *copalli*, and *atolli*. But a different objection may be taken to *coyolli* as an Aztec name for the cocoanut. It is well known that the Aztecs came from the temperate plateau of Mexico, and that their power had recently been extended to the tropical coast regions.

It seems probable from the descriptions and figures of Hernandez that the *coyolli* was a native Mexican palm, probably *Aerococmia*, the fruit of which has the outer layer edible, oily, and yellow, so that Hernandez supposed it to be the same as the *Areca* or betel palm of the Philippine Islands, which is not known to have any similar name in the Eastern Hemisphere, while *coyolli* is still current in southern Mexico and Guatemala for *Aerococmia mexicana*. Although declaring that the Mexicans (Aztecs) called the cocoanut "*coyolli*," Hernandez distinctly says that he never saw any of the trees in New Spain. This, however, is not necessarily a discrepancy or an indication that Hernandez thought that the palm had been introduced by the Spaniards, since "*Nova Hispania*" was used by some of the early writers in a rather narrow sense for the Aztec region of Mexico, and not for that country as defined by its modern boundaries. But before this Hernandez had already said that the *coca* palm was generally distributed in the East and West Indies, and especially in maritime and sandy places about human habitations. He secured from travelers accounts of many Philippine plants and their uses, which seem to have been largely drawn upon in the present instance. But it must not be forgotten that even in his time the "Indies" were still one-quarter of the world, for as Acosta quaintly says:

Wee meane by the Indies those rich countries which are farre off and strange unto us. So we Spaniards do indifferently call Indies the countries of Peru, Mexico, China, Malaca and Bresil; and from what parts soever of these any letters come, wee say they bee from the Indies, which countries be farre distant and different one from another.

Our modern curiosity as to how the cocoanut and other plants crossed the Pacific had not yet developed. Hernandez learned about the Philippine plants by questioning travelers who were going and coming across Mexico, but this was a matter far different from the introduction of the Philippine palms to use and culture in Mexico, which with three more centuries of improved opportunity has not yet taken place. Chocolate was certainly a far more important article to the Spaniards than the cocoanut, and yet *cacao* tree is believed not to have been introduced from Mexico to the Philippines until after 1650, a century later than Hernandez's visit; and Humboldt believed that *Citrus trifoliata* was the only Asiatic species which had become established in Mexico. This would seem to render improbable any very ex-

<sup>1</sup>Flora Vitiensis, pp. 275-278. *Borassus aethiopicus* stands in the Index Kewensis as a synonym of *B. flabellifolia* of the East Indies. Drude admits (Enzler and Prantl, *Natürlichen Pflanzenfamilien*) but one species of *Borassus* distributed in cultivation from Senegambia to Ceylon, Hindustan, and the Sunda Islands.

Hernandez's chapter on the cocoanut opens with the following caption and first sentence:

"De Nucis Indicar. et Cocci vocati arbore. Nux Indica, quam vulgus Indorum Marton, Strabo vero ut quidam voluit Palma vocat. Mexicenses Coyolli, a Lusitanis ob oculos quosdam Cercopitheci similes Cocom, a vulgo vero Persarum, et Arabum nuncupant Harel."

"Los cardones o los cristiflanos llaman drios . . ." Oviedo, vol. 1, p. 311.

"Cocoyatic, seu herba Palmae similis.—The herb cocoyatic, which the people of Michoacan call Xahuique, has the leaves of Porrum or of a small palm, whence the name." "*Nova Plantarum, Animalium et Mineralium Mexicanorum*." Hernandez, p. 14 (Rome, 1650).

According to Humboldt the Kingdom of Monteuzuma occupied only one-eighth of the territory of modern Mexico. Political Essay on the Kingdom of New Spain, vol. 1, p. 68 (New York, 1811).

<sup>2</sup>Loc. cit, vol. 2, p. 365.

tensive introductions of tropical plants at an earlier date, and is a strong reminder that notwithstanding its obvious importance the introduction of useful plants is a subject still generally neglected in the agriculture of the most advanced countries, and even in dealing with plants which can be grown from seed of indefinite vitality instead of with the delicate and short-lived germs of tropical species.

But to return to Hernandez. We find in the sentence already quoted, the name maron ascribed to the "vulgus Indorum," or ordinary Indians, as distinguished from the "Mexicensibus," a fact which seems to have been entirely overlooked by De Candolle, who, after dismissing coyolli, leaves us with the implication that no genuine American name for the cocoanut was known. Possibly he supposed this word to pertain to the East Indies, as does much of the essay of Hernandez. Such, however, is not the case. Nothing resembling maron appears in the extensive lists of Polynesian, Malayan, and Asiatic names, but it was reported by Heller, in 1853, as apparently still in use in southern Mexico.

But etymological arguments based on old records are often of little use except as literary confirmations of facts already ascertained by more reliable evidence. Thus, the cocoa question might be carried another stage around the world when we read, in Pigafetta's account of the voyage of Magellan, that among the native products offered by the people of the Philippine island of Samar that "one which they call cochi is the fruit which the palm trees bear." But as no subsequent traveler has recorded such a name in that quarter of the globe, we may reflect that Pigafetta was an Italian among Spaniards and Portuguese sailors, some of whom had previously visited the "Indies," and that he did not show a philologist's caution in studying the forms and origins of words.

Although, as indicated above, the cocoanut is supposed to have been introduced into Brazil by the Portuguese, Nieuhoff recorded a native name for it in 1647.

But, as Nieuhoff had already explained that the fruit of the pindava palm (*Maximiliana?*) was called *inajamira*, meaning "small cocoanut," we may be dealing, as in the case of coyolli, with a recently extended use of some native word or combination misinterpreted by Nieuhoff.—Contributions to U. S. National Herbarium.

**SCHUMBURG'S PROCESS OF WATER PURIFICATION BY MEANS OF BROMINE.**—In order to ascertain the value of this process, Schuder examined the whole quantity of water, after treatment with bromine and removal of the excess of the latter, for the presence of living germs. (*Jour. Soc. Chem. Ind.*) He concludes that Schumburg's process of water purification fails almost completely as regards value, as (1) the quantities of water examined for proof of the destruction of bacteria were much too small; and (2) by filtering through a double filter, the investigators named provided conditions which would very seldom occur in practice in the purification of water by bromine. The bromine process applied to a very impure water certainly considerably reduces the number of ordinary water bacteria in the latter, and doubtless also effects a considerable reduction in the number of typhus and cholera germs, but the degree of purification is not such that the water, after treatment, can safely be used as drinking water. Even with filtration through a double filter before treatment with bromine, the method fails in the majority of cases.

<sup>1</sup> P. 421, footnote.

There also grow coco trees in Brazil, called by the natives *inajamucuba*, and the fruit *inajamacu*, *Churchill's Travels*, vol. 2, p. 134 (1732).

## MODERN EXPERIENCE VS. ANCIENT TRADITION CONCERNING ALCOHOL AS A BEVERAGE AND MEDICINE.\*

By H. D. DIDAMA, M. D., Syracuse, N. Y.

A tradition which traces its origin to almost prehistoric times is that alcohol in some form, as beer, wine, whisky, or brandy, is harmless and valuable as a beverage, important in the management of minor disorders and *sine qua non* in the treatment of dangerous ones. Regarding the use of alcohol as a beverage, opinions differ radically. Advocates of the canteen claim that when the soldiers could buy wine, beer and "soft drinks" there was little or no drunkenness, but since its abolition the men resort to outside saloons and buy whisky as well as beer, and intoxication is very common.

The active principle in the soft drinks is identical with that in the strong ones. Whisky contains an indefinite amount of alcohol, from 20 per cent. to 40 per cent. Beer ranges from 4 to 8 per cent.; claret, 9 per cent.; champagne 11 per cent.; Tokay, the favorite prescription of some physicians, 12 per cent.; port 18 per cent., and sherry, another soft drink, 22 per cent. People can and do get drunk on any one of these beverages, and a high authority holds that beer, rather than whisky, is the cause of certain forms of neuralgia.

Many a new recruit tasted an alcoholic beverage for the first time in the canteen. The acquired taste led him, with boon companions, to the grog shop. Many newspapers advocate the restoration of the canteen for ostensible temperance reasons, and at the same time advertise, in another column, some favorite brand of whisky side by side with an account of an assault or horrible murder committed by an inebriate. Dr. H., claimed by a leading daily paper to be one of New York's most eminent medical authorities, read an essay advocating the daily use of old whisky as a stimulant, an excellent predigested food, and a healthful beverage.

A New Jersey Judge, in granting licenses to saloons, declared that the craving for alcoholic liquors is as natural as the craving for food, and that, if it had not been the Divine intent that these liquors should be used as drinks, God would not have made alcohol to gratify this appetite. Lauder Brunton, M. D., F. R. S., in his great classic work on pharmacology and therapeutics, enumerates thirty-seven diseases for which alcohol had been, and still was, commended, while only two remained to be mentioned in which its use was proscribed. Let me mention a few of the thirty-seven: Acute rheumatism, Asiatic cholera, cough, convulsions, delirium tremens, diphtheria, pericarditis, suppuration, mania, vomiting, pytalism. Although its employment was generally forbidden in gonorrhoea, the prevailing practice was to use it in leucorrhoea. Holt, a modern writer and a professor in a polyclinic, while admitting in his valuable volume on "Diseases of Children," published five years ago, that "alcoholic stimulants are no doubt greatly abused in the hands of many practitioners," insists that they are "well tolerated even by very young infants." "There is no question," he declares, "in regard to the value of alcohol in diphtheria." For a child 4 years old he thinks that an ounce of whisky or brandy is enough to begin with, but that in very bad cases five or six times as much may be given.

Keating, who was a firm believer in the necessity of crescendo doses of alcohol in children's diseases, states that he gave whisky in moderate amounts to four children, suffering with diphtheria in the Foundling Hospital. The ages of the children were from 4 to 7 years. Deriving no benefit from the small doses, he increased them to a teaspoonful every 20 or 30 minutes, equal to 9 ounces in 24 hours. All the children died.

Another defender and zealous advocate of alcohol is the eminent scholar, teacher and practitioner, whose

\* Address to the American Medical Temperance Association, at St. Paul, June, 1901. (*Am. Med.*)

seventieth birthday anniversary was celebrated with great eclat and laudation in New York. A few months ago he delivered an address at a meeting of the New York State Medical Society. The address may be found in the Albany Medical Annals for May, 1900. The genial doctor, after speaking favorably of fluid silver in diseases containing pathogenic germs and denouncing the use of acetaminid in any circumstances, introduced the discussion of his favorite topic. I quote from his words: "As a dose of a half-ounce of alcohol is liable to prove fatal to a child under 10 years of age, the question whether it should be used at all is a grave one." He disposes of this question, which is considered by the medical profession a very important one, in a manner less remarkable for its urbanity than for its emphatic positiveness. He said: "There have been fanatics, like a professor of physiologic chemistry in Switzerland, who is opposed to the use of alcohol under any circumstances." I will venture to cull a few antiseptic than alcoholic beverages." "I claim, as one of the most meritorious facts in my professional life, to have proclaimed, long before the time of most of you, the necessity of giving large doses of alcohol in the grave forms of diphtheria. There is almost no dose that is not well tolerated." "What I have observed and written these forty years still holds good." "Septic cases that will not improve after 3 or 6 ounces of whisky are apt to do well with 6 to 16 ounces. Indeed I have seen such septic children of 3 or 4 years take 15 ounces of whisky a day, which had no bad influence on the brain." Poor Keating confessed that he was not so successful with his big doses of Bourbon! And the critical doctor himself admits, as has been quoted, that "half an ounce of alcohol"—an ounce or so of whisky—"is liable to prove fatal to a child of 10."

Ossler, the leading medical author in America, called attention in the first edition of his "Practise of Medicine" to some of the results of alcoholism. He mentioned irritability of temper, impaired judgment, enfeebled will, a change in moral character, catarrh of the stomach, diseases of liver and kidneys. And he showed by statistics that drunkards are especially liable to acute and chronic tuberculosis. And yet he added—still clinging to worn-out tradition—that alcohol may be given when the pulse flags in delirium tremens, and that "in moderation, wine, beer, and spirits may be taken throughout a long life without impairing the general health or causing disease in any organ." He did not stop to consider that "moderation" is a word of dangerous elasticity, and that it is the early step in the downward course of every inebriate. I learn that in the third edition of his scholarly, scientific, admirable work, the well-qualified and progressive author has modified his opinion, or, at least, withheld its injurious expression. For, as it stood, unguarded, this apparent approval of the drinking habit might have had a pernicious influence upon the thousands of young physicians who read it and who might have commended it to their patients and to the community.

Every day we read accounts of men who tarry long at night, and spend their money in those restaurants—clerically christened "Poor Men's Clubs"—where the precious Atwater liquid food is furnished, and who then go home and in their hilarity abuse, beat and maim their half-starved wives and children. The unanimous testimony of those who train for athletic exercises, football, footraces, rowing matches, pugilistic contests, is very emphatic that alcoholic drinks are always harmful. It is ancient history that Kane, Nansen and other Arctic explorers would not give their men a drop of alcohol—this so-called king of stimulants—although the thermometer in those long, frigid nights sometimes indicated a temperature of 80 degrees below zero. We all remember that General Kitchener, who fought and destroyed the army of the Dervishes, at Omduran, determined to test the effect of total abstinence on his soldiers. He knew that the Dervishes, who were famous for their fearlessness, endurance and fighting

ability, were forbidden by the Koran to use alcoholic drinks. He therefore cut off entirely the grog ration. And he reports that in the long march of weeks and months, over the hot sands of the desert, his men endured fatigue and exposure better than they did when they drank the customary ration, and that in rapid marching, in attack and defense, they were quite equal to their total abstaining enemies.

Business men, also, and employers of laborers, testify that the abstainers in their service not only endure cold and heat, hunger, exposure and fatigue better, but they recover sooner than those who indulge in intoxicants. This testimony of practical men, who know what they are talking about, would seem to overbalance the statements of a few tiptling surgeons that alcoholic drinks are indispensable in hot climates. Bruntton asserts that the action of alcohol upon psychic processes is curious; for while it renders them much slower, the individual under its influence believes them to be much quicker than usual. He also states that alcohol is antagonistic to strychnin.

An important lecture was delivered in London by Victor Horsley, who is acknowledged to be a great authority on the brain and who is known not only as a fearless investigator for truth but as the servant of science. The lecture is published in the British Medical Journal of May 5, 1900. Horsley's experiments demonstrated that the effect of alcohol on the brain was first an apparent quickening of the cerebral act, which lasted but a few minutes, and then, for a period of two to four hours, this cerebral activity was diminished. That is, it took longer for a person who had had a small quantity of alcohol to think. And he asserted that the evidence was overwhelming that alcohol in small amounts had a most deleterious effect on voluntary muscular work.

Up to seven years ago, alcohol was employed in the treatment of diphtheria by nearly all physicians in Europe, and by a majority in our own country. The mortality abroad was 68 per cent., but was not so great in America; and this lessened death-rate here was attributed by many practitioners to the use of Rhine and domestic wines, which contain but a small percentage of alcohol. After the introduction of Behring's antitoxin, the mortality in Europe was reduced to 30 per cent., this still enormously high rate continuing in spite of, if not in consequence of, the persistent employment of the accustomed alcohol. At home the early use of antitoxin sine alcohol brought the mortality nearly to the vanishing point.

Notwithstanding the evolution resulting from scientific experiments, observation and experience, of the conviction that alcohol is harmful as a beverage, promotive of many disease, and useless in medical practice, it is to be regretted that a large number of authors—especially those who have already embalmed their opinions in printers' ink—still adhere to their ancient views and advocate them vehemently. Many teachers in medical colleges—the numbers, it is to be hoped, will grow beautifully less every year—follow their leaders, the bookmakers, who, in too many instances are not so much original idealists as transcribers. And not a few of the worthy rank and file of the profession, who have little time and few conveniences for experimentation, are content to adopt as their excuse for administering alcohol the one given by a candid young practitioner at a discussion of the subject in New York City: "I use it because other doctors do."

The number of careful and scientific observers at home and abroad who have proven that alcohol is an anesthetic and depressant instead of a stimulant is rapidly increasing. The small army of physicians who have had the courage to relinquish the use of alcohol in the treatment of disease have cause to rejoice at the daily addition to its list of recruits. "The acorn is small, but it has in it the potentiality of the giant oak." The science of medicine is intimately associated with its practice. As a rule, those who best know best do. Their philanthropy instead of halting at easy benedictions passes forward to practi-

cal benefactions. Their delight, as well as their duty, inspires them not only to alleviate suffering but to anticipate and ward it off. They endorse the popular maxim: "An ounce of prevention is worth a pound of cure"—16 to 1.

In conclusion: Those of us who neither use alcohol in so-called moderation as a beverage nor prescribe it in heroic or minute doses as a medicine, and who have personal experience for our belief that the non-alcoholic treatment of any disease is far more satisfactory than the alcoholic management which we formerly employed, are likely to have many pleasant and gratifying experiences. For instance, gastric catarrh is a complaint abundantly prevalent among those who use beer, wine or whisky in asserted moderation. The statement of many of the victims is possibly well founded, that the whisky was prescribed by a reputable physician to improve digestion. A careful investigation of the case results in the regulation of the diet and the exaction of a promise to abstain permanently from the use of every form of alcoholic beverage. And it is not an uncommon occurrence for the patient to return after a week or two to express his gratification, to inquire why other doctors had not given the same counsel, and to renew his pledge to be a life-long abstainer. Satisfactory experiences like this, which any physician may possess, are already enjoyed by a rapidly increasing number of medical men who are counted among the most eminent in this country and abroad, in Germany and France as well as in England.

### PHARMACY IN DUTCH GUIANA.\*

As would be supposed, the practice of pharmacy and the laws governing pharmacy in the Dutch colony of Guiana are very similar to those of the parent country, the Netherlands. As in the Netherlands, so here there is a class of merchants known as "drug-gists" who are an entirely distinct class from the apothecaries. Druggists are dealers in crude drugs, and there is no government examination or requirement for this class except that they are not allowed to sell less than specified quantities of the different drugs; and that they are not allowed to compound drugs or prescriptions. Any one can go into the drug business, just as any one can go into the grocery business.

When we come to consider the apothecaries, we find an altogether different state of affairs. The apothecary is a man of high social and professional standing in a community. He is considered as professional a man as a doctor or a lawyer. This is so because the requirements for becoming an apothecary are equally high with those for becoming a physician, and because an apothecary is extremely careful of his professional standing. He would consider it an inexcusable breach of professional dignity to carry in stock, for instance, cigars, hair brushes, candy, or any of the numerous side lines carried by pharmacists in this country. He sells only drugs, and, principally, only such drugs as are compounded by himself. This matter of professional dignity is carried still farther. They use only the Latin names of drugs under all circumstances. For instance, saltpetre is always *nitras calicis*, plaster paris is *sulphas calcicus*; *senna leaves*, *folia sennae*, etc.

The assistant pharmacists of Guiana are known as candidate apothecaries. To obtain this title it is necessary to pass an examination in Dutch, French, German and English, algebra, geometry and arithmetic, or to show a diploma of a high school; after that an oral and written examination in organic and inorganic chemistry, general botany, practical and theoretical pharmacy and natural science—of light, heat, sound, electricity, and mechanics. There is no requirement as to time of experience or college education, it being understood that to pass the examina-

tion requires such knowledge as must have been gained in practical experience.

To obtain the degree of apothecary it is necessary to pass an examination in zoology, special botany, as applied to pharmacy, toxicology, quantitative and qualitative chemical analysis, theoretical and practical pharmacy, and *materia medica*.

The Pharmacopoeia of the Netherlands is the authoritative standard, and the metric system of weights and measures is used exclusively.

As in Germany, everything, both liquid and solid, used in compounding prescriptions, must be weighed. In many pharmacies, however, this custom is not strictly adhered to, being so much more easy to measure liquids that this is sometimes done in case of an unusually busy period.

The pharmacy law makes it obligatory for a pharmacist to seal all prescriptions sent out, with a wax seal bearing his name, in such a way that when the package is opened the seal will be broken. Poisons, which can only be sold on a permit from an inspector of the medical service or from the chief of police, must be sealed in the same manner. As in this country, a poison record must be kept, in which is noted kind, quantity, price, and name of purchaser, together with the name of the officer who issued the permit and a prescription which contains a poison; even, for instance, opium cannot be repeated without a new prescription from the doctor.

Specialties are practically never used, partly because of prejudice on the part of the medical profession, and partly because there has never been a serious effort made to introduce them.

The pharmaceutical preparations in use are very similar to those of the United States Pharmacopoeia. Syrups are used very extensively in mixtures as corrigents, e. g., simple syrup, syrup of orange peel, syrup of citric acid, etc. Syrups are, however, preserved with great difficulty in that climate, and in their stead they have a class of "dry syrups," made by evaporating a syrup to dryness, and then when it is required in prescription work it is dissolved in an equal weight of water. Decoctions and infusions are scarcely ever used on account of the difficulty of preservation. Instead, the physician prescribes a tincture or fluid extract, to be taken in a large quantity of water.

Tinctures are made by maceration, the process of percolation being seldom used. Pills are a favorite method of medication, they being made up as required at the prescription counter. Plasters, too, are made altogether by the apothecary, as they are prescribed.

Fluid extracts are imported from England, and, to a small extent, from the United States. There is a small trade in English patent medicines, because of the number of English subjects who have settled in Dutch Guiana.

What will appear to pharmacists of the United States as an unjust regulation is one of relating to errors in prescriptions. In case of an error made by a physician in writing a prescription, it is considered the duty of the apothecary to correct it. Should he not notice such an error, and it proved fatal to the patient, he, the pharmacist, is alone held responsible, and is liable to imprisonment. The physician is exonerated, because he writes his prescriptions often under very trying circumstances and so is liable to err, while, on the other hand, the apothecary is blamed because he is in his shop where there are no disturbing elements, but where, on the contrary, chances for detecting such errors are most favorable.

Each of the large plantations in the country districts has its own hospital and apothecary shop, together with a physician to every three or four plantations. These shops are usually in charge of the hospital steward, who is not, necessarily, an apothecary, and who does the compounding according to the directions of the physician, who is responsible. These plantations employ from two to three hundred people each, and so it will be seen that the openings for apothecaries are limited to the larger towns and cities.

\* From an interview with D. da Silva Pereira; Reprinted from *Alumni Rept.*, Phila. Col. of Pharmacy.

The pharmacy laws are enforced, and the examinations conducted by a committee on pharmacy appointed by the governor of the colony. This committee consists of nine members—the chairman being the government supervising physician; five doctors, two military apothecaries, and a secretary.

The president, secretary, and one apothecary member of this committee make a yearly inspection of all the pharmacies in the colony. They examine the prescription file, the poison register, and, altogether, make a very thorough inspection of each shop. The apothecary is compelled to show everything requested by them, even to the state of his bank account and cash book.

The salaries of apothecaries run from twelve to fifteen hundred florins, a florin being worth about forty cents. However, as a florin is about equivalent to a dollar in purchasing power, the salaries are, on the average, better than here in the United States. Malarial fevers and fevers of all kinds are very prevalent, and are the most common kind of sickness, but the scourge of the country is leprosy. In Paramaribo, the capital of the colony, which has a population of 80,000, there are estimated to 500 or 600 lepers. Active measures are taken to subdue this awful condition of affairs, and at the present time there are two large hospitals for this class of patients, one controlled by the Government and the other a Catholic institution. Twenty-five florins are offered to any one reporting a case of leprosy to the authorities, and when found these unfortunates are thereafter confined to the hospitals. A curious belief of the lower classes is that this disease is caused by bacteria, which propagate in the sand, and that it is contracted by walking over the sand in bare feet.

We all have our peculiar imaginings on the way in which our business is carried on in other parts of the world, and such accounts are always interesting to us, but sometimes, as in the case of Dutch Guiana, we may find points of interest which have also a suggestion of usefulness.

**DETECTION AND DETERMINATION OF PRESERVATIVES IN MILK.**—The following method is put forward with the primary object of allowing a large number of milk samples to be tested for preservatives for waste of time (Analyst): 10 c.c. of each milk are measured into clean test-tubes, and at the same time 10 c.c. of sterile milk, known to be free from preservatives, are also placed in a tube. To each tube and to the control tube, 2 c.c. of very strong, slightly alkaline solution of litmus are added. If any of them, as is the case with old milks, are not of the same blue tint as the control tube, half normal soda solution is added until the correct shade is obtained. The tubes are then plugged with cotton wool and heated to 80° C. in a water-bath for 10 minutes. After cooling, each tube, including the control, is inoculated with 0.5 c.c. of sour milk in water (0.5 c. c. milk to 100 c.c. water), mixed, and allowed to stand at the ordinary temperature for 24 hours, or until the control tube is white, or nearly so. Those tubes which contain preservatives remain blue, or pink while the tubes containing no preservative become white, like the control tube. The quantities of preservative which may be detected by this method are 0.005 per cent. of borax or boric acid, 0.05 per cent. of salicylic acid, and 0.0003 per cent. of formaldehyde. The method may be applied quantitatively for the estimation of preservatives in milk by using control tubes containing known amounts of the preservatives.

**PURGATOL** is a form of diacetyl ether of anthrapurpurine. It is obtained in the form of a yellow crystalline powder, which is insoluble in water and dilute acids, and soluble in alkalis with the production of a violet rose color. It is a purgative employed in one dose of .50 to 1 gram. This dose may be increased to 5 grams without danger.

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Blood Purifier.

(D. M. R.) This term is exceedingly elastic, and is employed to designate a wide range of remedies. A well-known formula of this class is the compound elixir of corydalis of the National Formulary, to which we refer you. Here are some others:

|                                         |            |
|-----------------------------------------|------------|
| (1.) Fluid extract of sarsaparilla..... | 1 ounce.   |
| Fluid extract of stillingia.....        | 1 ounce.   |
| Fluid extract of yellow dock.....       | 1 ounce.   |
| Podophyllin.....                        | 3 grains.  |
| Water.....                              | 4 ounces.  |
| Simple elixir.....                      | 4 ounces.  |
| Alcohol.....                            | 2 ounces.  |
| Glycerine.....                          | 2 ounces.  |
| Ibide of potassium.....                 | 30 grains. |

Mix. Dose: From one teaspoonful to a dessert-spoonful, three times a day.

|                                     |              |
|-------------------------------------|--------------|
| (2.) Burdock root.....              | 8 ounces av. |
| Stillingia.....                     | 8 ounces av. |
| Sarsaparilla.....                   | 8 ounces av. |
| Sena leaves.....                    | 4 ounces av. |
| Sassafras bark.....                 | 2 ounces av. |
| Iodide of potassium.....            | 1 ounce av.  |
| Oil of wintergreen.....             | 20 minims.   |
| Sugar.....                          | 1 pound av.  |
| Alcohol.....                        | 3½ pints.    |
| Water, sufficient to make a gallon. |              |

Grind the drugs to a coarse powder, and having mixed a pint of the alcohol with a pint of water, macerate them for twenty-four hours with the liquid; then pack in a percolator, mix the remaining 2½ pints of alcohol with an equal measure of water and pour upon the drugs; set in a warm place for twenty-four hours, then percolate slowly, adding water to the drugs after the liquid has all disappeared from the surface, and continuing the percolation until 7½ pints have passed. Dissolve the oil of wintergreen in half an ounce of alcohol and add to the solution, with the sugar and iodide of potassium to the percolate; dissolve and filter.

The dose is a teaspoonful to a tablespoonful. This may be put up as a blood purifying bitters, blood cleanser, or by any other similar title.

|                               |           |
|-------------------------------|-----------|
| (3.) Buckthorn bark.....      | 5 pounds. |
| Sodio-potassium tartrate..... | 2 pounds. |
| Potassium bicarbonate.....    | 2 ounces. |
| Sugar.....                    | 6 pounds. |
| Alcohol.....                  | 6 pints.  |
| Spirit of lemon.....          | 3 ounces. |
| Tincture of ginger.....       | 3 ounces. |
| Oil of anise.....             | 1 dram.   |
| Water.....                    | enough.   |

With sufficient water to make 3 gallons of decoction from the buckthorn bark, which may be deprived of bitterness by the addition of calcined magnesia, and dissolve it in the sodio-potassium tartrate, potassium bicarbonate and sugar. After allowing to stand for some time, clarify it by straining through flannel. Then mix the remaining ingredients and incorporate with the decoction.

### Petroleum Emulsion.

(H. and K.) Here are several formulas:

|     |                                        |            |
|-----|----------------------------------------|------------|
| (1) | Oil of sweet almonds.....              | 3 ounces.  |
|     | Pure white petrolatum or vaseline..... | 5 ounces.  |
|     | Mucilage of Aëtrin (1 in 3).....       | 5 ounces.  |
|     | Syrup of tolu.....                     | 2 ounces.  |
|     | Lemon, rose, or almond essence.....    | q. s.      |
|     | Water to.....                          | 16 ounces. |

Place the mucilage in a warm mortar; melt together the oil and petrolatum, and, while warm, add

gradually to the mucilage, ensuring that each portion is thoroughly incorporated before adding the next; lastly, add flavoring, syrup, and water q. s.

(2)

|                                      |             |
|--------------------------------------|-------------|
| Paraffin oil (liquid petroleum)..... | 16 ounces.  |
| Acacia.....                          | 8 ounces.   |
| Glycerine.....                       | 4 ounces.   |
| Calcium hypophosphite.....           | 288 grains. |
| Sodium hypophosphite.....            | 288 grains. |
| Water, enough to make.....           | 3 pints.    |

Add the acacia to the oil, and mix thoroughly in a large mortar; then add one pint of water (all at once) and rub briskly until the emulsion is formed. Dissolve the hypophosphites in half a pint of water, to which add the glycerine; then add all to the emulsion and rub well together, adding any water necessary to make up the measure of 3 pints of finished product.

(3)

An English formula is the following: Mix in a mortar, terrol or vaseline, 1 oz.; powdered acacia,  $\frac{1}{2}$  oz.; essence of almond (r-20) 5 min. Add, all at once, distilled water 6 drams, and triturate continuously for five minutes; then add the following mixture, dram by dram: Sodium hypophosphite  $\frac{1}{2}$  dram, calcium hypophosphite 20 grains, hypophosphorous acid 20 minims, distilled water 6 drams. The resulting product is a thick cream, measuring 3 ounces. Odorless, heavy petroleum oil may be used in place of vaseline.

#### Effervescent Phosphate of Sodium.

(C. F. C.) The following formula is from the British Pharmacopœia:

|                               |            |
|-------------------------------|------------|
| Phosphate of sodium.....      | 25 ounces. |
| Bicarbonate of sodium.....    | 25 ounces. |
| Tartaric acid, in powder..... | 3½ ounces. |
| Chloric acid, in powder.....  | 9 ounces.  |

The final product should weigh about 50 ounces. Dry the phosphate of sodium until it has lost rather more than half (60 per cent.) of its weight; powder the product and mix it with the other ingredients. Place the mixture in a dish or pan, of suitable form, heated to between 200 and 250 degrees F., and when the particles of the powder begin to aggregate, stir them assiduously until they assume a granular form; then, by means of suitable sieves, separate the granules of uniform and most convenient size, and preserve the preparation in well-closed bottles.

The National Formulary (which you may obtain through this office, price \$1) contains a number of formulas for the preparation of the effervescent powders, and, also, some general observations and directions which you will do well to read.

#### Remedy for Dropsy.

(J. V. R.) We cannot give the formula for the proprietary preparation. There are so many things to be taken into consideration in the treatment of dropsy that no one remedy can be found adapted to all cases. The only satisfactory method is to employ a physician, and then follow his directions. For your information, however, we append several combinations which have been employed by practitioners in different phases of the disease.

(1.) Powdered squill..... $\frac{1}{2}$  dram.  
Powdered digitalis..... $\frac{1}{4}$  dram.  
Potassium nitrate.....1 dram.  
Mix, and divide into 30 pills. One, 3 times daily.

(2.) Potassium acetate..... $\frac{3}{4}$  drams  
Spirit of nitrous ether.....2 drams.  
Water, enough to make.....8 ounces.  
Teaspoonful every 3 or 4 hours.

(3.) Elaterin.....1 grain.  
Spirit of nitrous ether.....2 ounces.  
Tincture of squill..... $\frac{1}{4}$  ounce.  
Tincture of colchicum..... $\frac{1}{4}$  ounce.  
Syrup.....1 ounce.  
A teaspoonful 3 or 4 times, daily, for hepatic and cardiac dropsy.

#### Impervious Corks.

(Bottler.) Impervious corks are made by soaking the best quality of corks for several hours in a solu-

tion of half an ounce of glue or gelatin in a mixture of three-quarters of an ounce of glycerin and one pint of water, heated to a temperature of about 50 degrees C. (122 degrees F.). Such prepared corks may be rendered proof against acids and other chemicals if they are dipped, after thoroughly drying for ten or fifteen minutes, into a mixture of four parts paraffin and one part vaseline. In this way they could be used with volatile solvents before the treatment with paraffine and vasline.

(2) Soak the corks in a freshly-prepared, warm solution of gelatin, four parts; boiling water, fifty-two parts; ammonium bichromate, one part; and expose to the sunlight for several days. The same result is accomplished by treating the corks with a solution of gelatin, five parts; boiling water, fifty-two parts, and tannin, three parts.

#### Tincture of Ferric Chloride, With Ammoniated Tincture of Guaiac.

(L. W. B.) "I cannot make a complete solution of the following prescription on account of the water in the syrup precipitating the guaiac, and the mixture becomes black and unsightly.

|                                    |           |
|------------------------------------|-----------|
| Tincture of ferric chloride.....   | 2 drams.  |
| Tincture of cantharides.....       | 40 drops. |
| Ammoniated tincture of guaiac..... | 1 ounce.  |
| Tincture of aloes.....             | 2 drams.  |
| Syrup.....                         | 4 ounces. |

Teaspoonful, 3 times daily.

Please criticise the prescription."

The resulting mixture is black and very turbid; the tincture of guaiac is incompatible with the tincture of ferric chloride, tannate of iron being formed. The tincture of aloes gives a brown-black color with the iron, and both tinctures also precipitate on coming in contact with water. The prescription should not be dispensed.

THE PROPER METHODS OF BATHING are four: 1. By the bath in the ocean water at the seashore. For only a very few of the entire people, and for but one-fourth of the year is this possible. Such bathing, like many other kinds of bathing, is not for cleansing the body. 2. By the tub bath with pure water, possible only for the well-to-do and for a limited number in public bath-houses. 3. By the spray or rain-bath, the sole method advisable in public baths, and especially if supported by the benevolent, by the State, or by city appropriations. 4. By means of sponge or towel at home, even with only a few gallons of water. This method should be encouraged by hygienists, physicians and all those who would discriminatingly help forward the cause of the public health. The free swimming bath for the vast majority of our people is impossible to provide if the water shall be pure, and it is impossible to keep the water pure when it is provided. We leave out of the count the not-to-be-sneered-at fact that unless the bathing is done unclothed, soap and cleanliness are not thought of, and, even at best, modesty, that hardly-won virtue, is not encouraged in public bathing. The one incontestable fact is that the public swimming pool is a danger to, not promoter of, the public health. The newspapers, the politicians, and the selfishly charitable are right in their efforts to encourage cleanliness, but the mere desire to do good nowadays does not prevent the final result from showing wasted efforts, and, not infrequently, positive evil. Science should ballast our sentimentalism, and nowhere more carefully than in socialistic experiment and fervors.—(Am. Med.)

ADULTERATION OF BELLADONNA LEAVES.—C. Hartwich reports (Apot. Zeit.) having received two samples of belladonna leaves adulterated with leaves of *Phytolacca decandra* and *Scopolia carniola*, respectively.

ALBOFERINE is a tonic containing phosphorus and iron, combined with albumen. It is soluble, odorless and tasteless.

# NEWS DEPARTMENT.

## NEW YORK AND VICINITY.

### N. Y. D. A. Y. KOMMERS.

The members of the New Yorker Deutscher Apotheker Verein held a private jubilation on the evening of Oct. 3 in celebration of the 50th anniversary of the founding of the society. The "Kommers" took place in the rooms of the "Verein" at 142-144 Third avenue. About one hundred and fifty members were present. The early part of the meeting before the opening of the regular program was given up to greetings and congratulations on the part of the members. The stag party then listened to and participated in an excellent program of song, instrumental music, original poems and "Kommers Lieds", while the cup and weed went the rounds and the "salamander" was proposed in honor of the highest officers and most distinguished guests, altogether making up a famous old fashioned German jubilee. Henry Imhof was president of the Kommers.

President Carl Schleussner was the recipient of a handsome present from the members of the "Verein." It was a massive silver set in a heavy oaken chest, with a silver plate on the cover bearing the inscription, "New Yorker Deutscher Apotheker Verein, Golden Jubilee: To His Worthy President Carl Schleussner, October, 1901." The presentation was made by Mr. Imhof and President Schleussner responded in a few well-chosen words, saying that the silver would always be kept sacred in his family.

Gustav Ramsperger, in whose honor the first "salamander" was drunk, responded with a speech, in which he gave the society and interesting retrospect and expressed a wish for its future prosperity and usefulness. The gold medal, which was presented to Mr. Ramsperger at the big celebration on Tuesday night was passed among the members for inspection.

Songs were written for the Kommers by President Schleussner, W. I. Gessel, E. Rölller and A. Schulz and were sung in chorus. Each received the honor of a "salamander." Max Haessler made a great hit with his humorous recitations, receiving a number of encores. The complete program was as follows:

March, "Hurrah Boys"; speech, Kommers President Henry Imhof and presentation of silver set to Mr. Schleussner; speech of thanks by President Schleussner; Kommers Lied and chorus (C. Schleussner); salamander; humorous song, P. Arndt, accompanied by B. R. Dauscha; selection, "Tannhauser," R. Wagner; Kommers Lied and chorus (A. Schulz); salamander; Kommers Lied and chorus (W. I. Gessel); La Paloma; Kommers Lied, E. Rölller; humorous Recitations, Max Haessler; Idyl, "Salome"; Kommers Lied and chorus (W. I. Gessel); humorous recitation, A. Schulz; salamander; Kommers Lied and chorus (E. Rölller). Ambos-Polka (stein accompaniment) E. Parlow.

### Results of the N. Y. State Board of Pharmacy Examination.

Sidney Faber, secretary of the New York State Board of Pharmacy, reports that out of a total of 82 present at the various examinations held in the state on September 18, there were 35 licenses granted. In Brooklyn out of 52 applicants, 23 passed the examination for pharmacists, while none passed that for druggists; in Buffalo there were 15 present, of whom 2 passed as pharmacists and 4 as druggists; in Albany, out of 8 applicants, 2 passed as pharmacists; and in Rochester out of 7 present 2 each of pharmacists and druggists passed the examinations.

### BROOKLYN COLLEGE ALUMNI OUTING.

The annual outing of the Alumni Association of the Brooklyn College of Pharmacy was held on Wednesday, Oct. 2, at Distler's West End Park, Jamaica, L. I. About one hundred graduates and students with their lady friends and the members of the college faculty spent a jolly afternoon and evening. The sports consisted of a baseball game between the Alumni and the senior class nines and prize bowling contests for ladies and gentlemen. The alumni and their guests enjoyed a splendid dinner and the evening was passed pleasantly with a successful ball.

The baseball game was called at the end of four painful innings upon the excuse of darkness and rain with the score 9 to 6 in favor of the alumni. Professor W. C. Anderson was the star of the winning nine, playing first in big league form and getting two hits out of two times up. The immaculate professor played ball in a natty black frock uniform, patent leather shoes, a high square block hat and gold rimmed "specks." He was the object of a great deal of good-natured chaffing, a senior wag inventing a faculty yell,

"Cigars, cigars,  
Cigarettes and beer,  
Faculty, faculty,  
We're right here."

The game was umpired with great abandon and artistic looseness by Phillip Shappiro, manager of the Alumni team.

The prize winners in the ladies' prize bowling contest were: Dr. Rose Owen, Mrs. S. Wood, Miss Jennie Muir, Mrs. W. C. Anderson and Mrs. F. P. Tutthill. Dr. W. C. Anderson, Dr. J. Schelling, L. Jacoby, William Bussen-schutt and W. W. Welton were the prize winners in the Gentlemen's Tournament. The highest regular game score was made by Dr. F. P. Tutthill with 192.

### FLAUMAN CONVICTED OF LARCENY.

Samuel Flauman, who was arrested last month on the charge of keeping a fence for stolen drugs at his place of business, No. 20 Second avenue, has been convicted on the charge of petty larceny. Flauman corrupted a number of boys in the employ of wholesale dealers, inducing them to steal high priced drugs for him and paying them a nominal price for the goods. According to detective Burns who made the arrest, he has been operating for about two years. His methods were exposed through Edward Jaworsky, a young man in the employ of Schieffelin & Co., who was approached by Flauman with the same proposition with which he had misled the other boys. Jaworsky listened to the scheme and reported it to his employer, Christopher Morgenstein, who had stolen cocaine from Schieffelin & Co., for Flauman and Edward Lang, who took goods from Max Zeller, were arrested at the same time. Both boys pleaded guilty and were sent to the Home of Refuge.

The charge of committing felony, which was first made against Flauman was reduced of necessity to petty larceny by reason of the fact that Mr. Zeller was the only wholesaler who appeared against Flauman and he could swear to the loss of but \$25 worth of a certain preparation. Flauman's defense was of a most flimsy and ridiculous character. He simply contradicted all that the boys had established by their testimony. In the course of the examination it was brought out that

Flauman has been arrested before on the charge of practising pharmacy without a license, although in his direct examination he had sworn that he had never been arrested before. There could be no doubt as to the prisoner's guilt and the jury required but one ballot to come to a unanimous verdict of guilty as charged. Judge Cowing, of the Court of General Sessions administered a severe lecture to Flauman in commenting upon the verdict, saying that his greatest crime did not consist so much in being a thief as in inducing boys to become criminals, possibly wrecking their lives and bringing shame and sorrow to their parents. Both of the boys were in repentant mood and showed themselves anxious to expose the crooked dealings of the man who had led them astray.

It seems that there is a great deal more in the Flauman case than appears upon the surface or was brought out in the trial. The extent of his criminal operations was not at all indicated by the testimony. Not only this, but there is a big scandal back of the scenes, involving some of the most favorably known men in the trade, according to the statement of a leading wholesale dealer, who will not allow his name to be published in this connection, but who is a man of high standing in the business community. He asserts that his information is from absolutely reliable sources.

#### N. W. D. A. CONVENTION ARRANGEMENTS.

There is every prospect of a large attendance at the 27th annual convention of the National Wholesale Druggists' Association, which is to be held at Old Point Comfort next week, beginning on Monday. A large number of rooms have been engaged at the Hotel Chamberlin, which will be the association headquarters and many applications have been sent in for transportation accommodations. Chairman Thomas P. Cook of the Passenger Rates and Routes Committee has issued the following statement for the direction of all who wish to attend the meeting:

One or more special cars will be attached to the Baltimore & Ohio train, leaving foot of Liberty street, Monday, Oct. 14, at 1 o'clock p. m., arriving at Washington 6 p. m. From there carriages will be taken to the pier of the Norfolk and Washington Steamboat Co. steamers, which will convey the delegation to Old Point Comfort, arriving at 7 o'clock a. m. Members who prefer to join this party will please advise the undersigned, at their earliest convenience, of the number of seats in parlor car they desire reserved; also number and price of staterooms they wish. Full fare is charged to Old Point Comfort, and one-third fare for the return ticket, purchased at Old Point, over the same route, provided the purchaser has a certificate, issued by the ticket agent from whom he obtained his ticket to Old Point, duly countersigned by Secretary Merriam at the convention. Any person going to the convention may avail himself of these rates for as large a party as he may propose taking, but a certificate must be procured with every ticket purchased. It is requested that such certificates be obtained whether the person buying the ticket intends availing himself of the reduced fare or not, inasmuch as these certificates serve to establish the number of persons present, in the event of any question arising with the transportation companies on this point. Tickets may be purchased and certificates obtained at any office, and will be on sale as early as Oct. 11 for the benefit of any who may desire to go in advance of the parties arranged for, as stated above. Persons who purchase tickets at the time of starting should be at the station at least 20 minutes before train time, as certificates have to be signed by them in the presence of the ticket agent, and some little time is necessary to avoid confusion.

Steamers of the Old Dominion Line sail from pier 26, North River, daily, except Sunday, at 3 p. m., for Old Point Comfort direct, arriving 9 a. m. following morning. By the Cape Charles Route trains leave via the Pennsylvania Railroad from the foot of Cortlandt street at 9 a. m., reaching Cape Charles at 5:35 a. m., thence by steamer to Old Point Comfort, arriving at 7:50 a. m. The Committee assumes that you have engaged rooms at the hotel. In any event, upon receipt of notice

that you will join the New York party, you will be furnished with special tags for trunks, which will facilitate delivery to room after arrival at Old Point Comfort. If you have not reserved rooms, it would be well to write at once to Colonel George A. Keefer, Manager, Hotel Chamberlin.

#### TWENTY-THREE NEW PHARMACISTS.

The State Board of Pharmacy has finished the consideration of the papers and practical demonstration work of the examination given Sept. 18. Of the sixty-five candidates who took the examination and tests, but twenty-three were successful in passing and two of these were young women, Miss Annie Krepela and Miss Mary L. Martin. The others who will be granted licenses are: Charles B. Bidwell, Fred Derscheldt, Charles Frank, Aaron Kaufman, James J. Kolb, William B. McDonald, Theodore E. Pundt, Martin M. Soroch, Henry Cook, Wolfram Dreyfus, Aaron J. Gites, Samuel R. King, Joseph Lieberman, Abraham Ratner, Norman C. White, Elmer F. Courter, Paul Frohwein, Fred W. Hesse, Marc A. Lamorte, Charles H. Moran, and Louis Rotkowitz.

#### PROPRIETORS WILL TAKE NO ACTION ON N. A. R. D. PLAN UNTIL REGULAR MEETING NEXT YEAR.

The Proprietary Association of America will hold no contemporary session this year with the National Wholesale Druggists' Association at Old Point Comfort. It has been given out from headquarters that no members of the Proprietary Association will attend the Old Point Comfort Convention in an official capacity, although a number may be in attendance as individuals. Accordingly, the retail dealers can expect no endorsement of or action upon the plan, adopted in the N. A. R. D. Convention at Buffalo by the proprietors before the time of their regular annual meeting, which is to be held in New York in May.

#### NOTES.

—A fine signal system for the yacht races was rigged up in the dining room of the Drug Club during the international challenge cup races. Handsome silk flags, green for the Shamrock and the Stars and Stripes for the Columbia were floated before an electric fan, the positions of the yachts being indicated by the positions of the flag in the standard.

—Miss Josie A. Wamons, of Minneapolis, at one time a vice-president of the American Pharmaceutical Association and one of the most widely known druggists in the country, is in the city. She was entertained at the Drug Club, October 1, by Albert Plaut, of Lehn & Pink.

—Frederick Hyett, for twelve years manager of M. Michaelson's 5th avenue store in Brooklyn, died at his home, at No. 780 Grand street, Jersey City, on September 21 as the result of a stroke of paralysis. He was seventy years of age. A widow and two children survive him.

—A wager of \$10,000 has been made by George J. Seabury, president of Seabury & Johnson, that the fusion forces will be victorious in the coming municipal election. The bet was made with George Conside, election. The bet was made with George Conside.

—D. H. Hawkes, of Goshen, Ind. and Chas H. Leonard, of Elkhart, two of the most prominent pharmacists in northern Indiana, are spending a week at the pan-American Exposition and will visit New York before returning west.

—Reid, Yeomans & Cubit have been making extensive improvements on their Nassau street store, putting in a complete syrup plant occupying one entire room in the basement with the carbonating and manufacturing departments.

—E. P. Ferguson, has succeeded the firm of James & Co., No. 2413 Seventh avenue, where he was formerly a partner in the business. The establishment will remain at the present location but will be known as Ferguson & Co.

—The New York Credit Men's Association gave a dinner in the dining rooms of the Drug Club on the evening of October 2. Over one hundred and fifty members and guest enjoyed the occasion.

## IN AND ABOUT BOSTON.

### Some McKinley Drapings.

Boston, Oct. 5.—At several drug stores in this city the decorative tributes to the lamented President McKinley still are kept in place, and if flowers have been used these are renewed to keep them fresh. A unique decoration used in several pharmacies is in the form of a big block of ice, frozen, in the center of which is a wreath of laurels, with white asters or other flowers or ornamental foliage tied with black ribbon. In the town of Brookline, which is the wealthiest place of its size in the United States, the store windows of two druggists attracted much attention because of their beautiful mourning emblems. In one of the large show windows of Butlers' pharmacy, which is conducted by Rev. Philip A. Nordell, who is both a Baptist preacher and an experienced pharmacist, a large portrait of the martyred president is handsomely draped with black and surmounted by a golden eagle around whose neck hangs a wreath of feathery fern. The whole window is shrouded in black and on both sides of the portrait are several small flags and a couple of unsheathed swords with their scabbards and belts lying close by, this feature being singularly suggestive of President McKinley's war record. Another window across the street which has suitably recognized the season of mourning is that of the T. Metcalf Company, managed by John Tomlinson, which has a beautiful portrait of the dead president draped appropriately and with a large wreath of purple and white asters and ferns reclining at the base, the wreath having been reverently placed in position on the morning of the funeral.

### No Material Change.

Boston, Oct. 5.—Quotations have not materially changed since a week ago. In the line of chemicals the Fall trade is rather promising, as several industries largely dependent upon certain kinds are already doing a large business which naturally has its reflection in the chemical market. Prices of grain alcohol are holding pretty firm, but for wood alcohol there is little more than a normal demand. Drugs are quiet, with opium and quinine rather more so than usual. The demand for hops is about the same as it has been for several weeks past, and it would appear that local conditions in this commodity are about the same as are found in all sections of the country. Local authorities say that this year's crop will average about the same as last year and that prices will fluctuate very little. In dyes the best improvement is noted in indigo, though even this is slight, and in other lines the prospect appears to be for higher prices later on.

### NOTES.

—In a voice choking with emotion and with eyes filled with tears, Clarence Hall, who claimed to be a student at the Massachusetts College of Pharmacy, made a successful plea for clemency in the Municipal Court the other day. The crime for which he was arrested and to which he frankly confessed, was the stealing of a large gold crown valued at \$30 which he took from a dentist's office. It seems that Hall went into dentist's office and made an appointment to have some teeth filed. He did not show up then, but came in later when the dentist was out and the glistening gold crown caught his eye. He explained to the judge that this was his last year in school and added: "If you send me away, it means that I have to give up my profession and am ruined for life. I admit I did this, but I don't know why. I swear I never did anything like it before and am sure I never will again." And the judge believed the youth, so he was allowed to go free.

—A fine of \$50 and imprisonment in the House of Correction was the sentence meted out by the District Court to William P. Dunn, druggist of South Framingham, for maintaining a liquor nuisance. His store is situated in Waverly street, and several weeks ago it was raided by the police when a miscellaneous assortment of wet goods was found and taken away. On the strength of this evidence charges were preferred against

—Alfred Hammer, a drug clerk in a store at 667 Melrose avenue, the Bronx, this city, was arrested on Sunday, Oct. 6, on a charge of criminal assault upon a sixteen year old girl living just over the store.

—Edward T. Williams, who had been in the employ of McKesson & Robbins, forty-five years in charge of the dry department, died at his home in Brooklyn October 2, at the age of eighty-two.

—W. L. Strauss, of W. L. Strauss & Co., No. 27 Warren street, has returned from a trip through Canada and the East with a flattering report of trade conditions in the localities in which he called.

—A. T. Fleischman, of Sedalia, Mo., who is one of the most widely known pharmacists of that State, has been in the city the past week, combining business and pleasure on his eastern trip.

—Charles Daniel, formerly with Col. J. W. Lowe, at New Haven, Conn., and Arthur G. Gilmore, of Anderson's Pharmacy, Bath, Me., are registered at the New York College of Pharmacy.

—Dr. F. H. Kattenberg, for many years the proprietor of the pharmacy at Houston and Essex streets, contemplates opening a new store at Third avenue and East 161 street.

—Thomas P. McNeill, of Leake & McNeill, wholesale druggists of Jacksonville, Fla., is spending a vacation of two weeks in New York, accompanied by Mrs. McNeill.

—E. B. Felt, a well known retailer of Elkhart, Ind., is in New York on a visit. He made several calls in the drug section during the week with a view to buying.

—S. H. Carragan, of Parke, Davis & Co., who has been absent for about two weeks on a western trip, returned to the New York office October 2.

—The store of P. A. Hyatt, at Bordentown, N. J., has been purchased by R. P. Dinges, who will continue in the general drug business.

—Edward Ball, a prominent drug dealer of Lee, Kent, England, registered at the Drug Club October 3, as the guest of W. D. Paris.

—H. M. Decker, of Fiske, Decker & Clarke, one of the leading Cincinnati drug houses, is in the city in the interest of his firm.

—Charles Steiner, of the Empress Manufacturing Co., 725-727 Broadway, has just returned from a three month's European tour.

—W. L. Morkell, a manufacturing chemist of Buenos Ayres, was the guest of Col. E. W. Flitch, at the Drug Club October 3.

—Among the visitors at the Drug Club on October 2, were Walter C. Nelson, of Chicago and Herbert Taylor, of St. Louis.

—F. B. Crouch, pharmacist, Grand and Elizabeth streets, will shortly open a second store at 101 street and Broadway.

—W. J. Butts, a well known pharmacist of Brunswick, Ga., was one of the buyers in New York last week.

—W. A. Spaulding, pharmacist of New Haven, Conn. was in the city on a business mission October 4.

—J. L. Hopkins, of J. L. Hopkins & Co., No. 100 William street, made a business trip to Baltimore this week.

—Carmino Pugliese, clerk in the store of George Leincker, No. 57 Houston street, was recently married.

—T. E. Delano, with Charles N. Crittenton Co., has been spending several days at Southampton.

—The Retail Druggists' Bowling Association opened for the winter season on October 8.

Licorice, if kept in stock and exposed to the air for any length of time, will become hard and unsalable. Buy the well-known and reliable D. & S. licorice and you will not have this trouble. It can be obtained through any jobber or from the makers, W. G. Dean & Son, 361 Washington street, New York, who also make the well-known staple, Dean's Patent Ardenter Mustard.

Dunn with the above result. From this sentence, however, Dunn has appealed and furnished bonds of \$200 for his appearance at the October term of the Superior Court of Middlesex county. The case has interested the people of South Framingham considerably, and Dunn's conviction is the first of any of the local proprietors of drug stores since the crusade against illegal liquor selling was inaugurated two months ago.

—Dr. Francis E. Hines, one of the best known druggists in Essex County, died the last day of the month at Salem, Mass., after a long and painful illness. He was a native of Boston where he spent many years of his early life. He was born in 1852 and after attending the public schools he entered the Harvard Medical School, taking up courses in both medicine and pharmacy. For three years he was an assistant assessor in Boston, and also represented the Seventh Suffolk District at the State House, where he made many friends during his legislative term. He removed to Salem in 1870, and for twelve years was honored with an annual appointment to the school board. He was prominent in a number of fraternal organizations and leaves behind him many warm friends.

—The death of John C. Howe, senior member of the firm of Howe & French, which previously has been referred to, has revived more or less interest in his partner, Mr. French, who it seems, possessed one of the most valuable collections of theatrical literature and pictures to be found anywhere in the city. After Mr. French's death this collection was sold at auction and was the occasion of many reminiscences of dramatic life, long forgotten until brought to notice by this sale.

—C. A. Daley's drug store at 617 East Broadway, South Boston, was visited by the liquor squad a few nights ago, and when they left Mark A. Brown, employed by Mr. Daley as a clerk, was invited to go with them. Though unprepared for so sudden a departure, there was no alternative but to comply with the peremptory demand, as he was charged with selling liquor, which, if true, is not a good beginning for a youth only twenty-two years of age.

—At a recent meeting of the Society of California Pioneers of New England, held in Boston, among the officers who were elected for the ensuing year was Hon. Gorman D. Gilman as second vice-president. At the banquet which followed the business meeting the post-prandial exercises included an address by Mr. Gilman, who is senior member of the drug firm of Gilman Brothers.

—L. A. Auger of Southbridge, proprietor of the Southbridge Drug Company's store, and Miss Emma Gigure of Montreal, Canada, formerly of Southbridge, were married in that Canadian city a few days ago. Immediately after the ceremony Mr. and Mrs. Auger started on a wedding trip and upon their return will go to housekeeping in a new house.

—Wilbur F. Coburn and Thomas J. Reid have announced that the partnership lately existing between them at 205 Meridian street, East Boston, where they carried on a drug store under the firm name of W. F. Coburn & Co., has been dissolved by mutual consent; and that the business will hereafter be conducted by Wilbur F. Coburn, alone.

—A new enterprise is the John C. Trott Co., which has been organized for the purpose of making and selling absorbent cotton, antiseptic supplies and like articles. The capital stock is to be \$150,000, of which nothing is paid in. H. T. Wood of Boston is president, and Edmund Wilcox of Waverly is treasurer of the company.

—The wholesale house of Chester H. Graves & Son on Hawkins street, West End, was the scene of a good-sized blaze a few nights ago, due to the explosion of a large tank of alcohol, which caused quite an excitement in the immediate neighborhood. Quick work of the firemen prevented a heavy loss.

—"Bert" Anderson, as his friends and customers call him, who has been employed in Chapman's drug store at Monson, has entered the Massachusetts College of Pharmacy in this city.

—Earl Vosburg, in order to enter the Jefferson Medical College at Philadelphia has resigned his place at Wells & Nash's drug store at Greenfield where he is succeeded by Samuel Dimes.

—Fred Brown, who for the past seven years has been

employed in Lee's Chemical Works in the Arlington district of Lawrence, has severed his connection with that business.

—George A. Taylor of Castle's drug store at Methuen has been enjoying a two weeks' vacation, passed in a pleasant way.

## PHILADELPHIA.

### COLLEGE OF PHARMACY ELECTS TRUSTEES.

Philadelphia, Oct. 5.—The regular "Quarterly Meeting" of the members of the Philadelphia College of Pharmacy was held in the Library on Monday afternoon, Sept. 30 with President Howard B. French in the chair. The minutes of the Board of Trustees were read by Registrar W. Nelson Stem and approved. Reports from various delegations were then presented. Professor Remington speaking for the delegates to the recent meeting of the State Pharmaceutical Association called attention to the action of that association towards an abatement of the State Medical Association. The suggestion of this latter body that names and addresses of "poor patients" be kept in a public register was approved by the meeting. Professor Kraemer reported on the meeting of the American Pharmaceutical Association calling it the most successful of many years. In view of the selection of Philadelphia as the next meeting place of the A. Ph. A., he suggested that a committee be appointed to represent the Philadelphia College of Pharmacy in providing entertainment for expected visitors. A motion to this effect later. The committee on nominations reported the names of five members for trustees, three to be elected, Messrs. L. C. Funk and W. A. Ramsey having requested the withdrawal of their names, the secretary was instructed to cast the ball of the meeting for the remaining three, Messrs. E. M. Boring, R. M. Shoemaker and Charles Leedom. Messrs. M. W. Bamford and Kemp were elected members of the college.

The records of the registrar show a very gratifying attendance of students this year, 188 students matriculating and a majority of the members of other classes returning. Seven young ladies are among the matriculants.

The first of this year's series of "Pharmaceutical Meetings" will be held Tuesday afternoon, Oct. 15, for which a very interesting programme is promised. Among the speakers will be Dr. Jokichi Takamine who will lecture on "Adrenalin Hydrochloride" and exhibit specimens, and Mr. Wilbur, of the German hospital. The collection of unusual adulterations of drugs shown by Smith, Kline & French at the American Pharmaceutical Association meeting will be exhibited, in charge of L. W. Kebler.

### ANNUAL MEETING OF THE STATE MEDICAL SOCIETY.

Philadelphia, Oct. 5.—The fifty-first annual meeting of the Medical Society of Pennsylvania was held in this city during the past week, with a large attendance of members and delegates from all parts of the State. Two resolutions were acted upon regarding measures interesting druggists, one relative to counter prescribing and the sale of patent medicines by druggists, the other of the "Free Dispensary Evil". The first of these resolutions, passed by a good majority, rectified the growing tendency of the public toward self-prescribing and urged that druggists assist physicians to discourage by discouraging the sale of patent nostrums. Nothing was said, however, of the dispensing of medicines by the physician. The resolution passed regarding the Free Dispensaries was in line with the action taken at the last meeting of the State Pharmaceutical Association; the co-operation of State and local pharmaceutical associations was asked to abate the evil. A suggestion was made that a list of patients be kept and that when fraudulent solicitation was discovered that notification be sent to all the free dispensaries in the State; this met with much favor. It was agreed that hospital physicians should be urged to use great discrimination in accepting "poor patients", and that members should take concerted action in refusing to recommend any but persons they knew personally to be unable to afford to pay for treatment.

S. W. STRUNK, Chairman Telephone Committee, P. A. R. D., 1890 No. Fifteenth St., Philadelphia, Pa.

Several lists were submitted showing that an enormous amount of medicine had been dispensed to non-paying patients during the year and that many thousands had been treated in the free dispensaries without charge. A marked feature of the sessions was the sentiment of good will expressed toward the druggists.

#### RECENT LAWS AFFECTING DRUGGISTS.

Philadelphia, Oct. 5.—The attention of Pennsylvania druggists is called to two recent enactments of the State Legislature, both of which seem to possess a capability of being used for blackmail by evil-minded parties. Law number one prohibits the sale or furnishing of tobacco in any form to persons under 16 years of age, the penalty being a fine of not more than \$100 and imprisonment for not more than 30 days. It often happens that children are sent by parents to buy tobacco and cigars; if the druggist supplies them he renders himself liable to arrest, etc., for violation of the law in case the parent chooses to deny sending his children. The law does not prohibit the delivery of tobacco to children if for adult's use, only requiring that this be positively ascertained, so written orders from unknown customers should be demanded for protection. Law number two permits the registration of the name or title of any article, descriptive or fanciful, on the payment of a fee of \$2, which gives the registrar sole right to its use. Comment is made on this law that it may be possible for a person to register the distinctive title of some well-known article under his own name and then demand payment from the actual owner for its use. The advantage of the law is that druggists can register the name of some "taking" specialty and confine its sale to their own store if desired.

#### Trade Steady With Prospects Favorable for Good Business.

Philadelphia, Oct. 5.—Trade has been fairly good and active during the week; "steady" would be its most fitting term. The fall trade seems to have opened with quite favorable prospects for a good business during the remainder of the year, with local conditions in good shape. There is very little "aggressive" cutting being done or advertised in any section, although prices still are not as satisfactory as they might be, and there is a

harmonious feeling prevailing that all good promises for better times. Those druggists who make an effort to cater to a prescription trade say that there is a better feeling between druggists and doctors just now than for some time, due to recent co-operation of local and state pharmaceutical associations with the medical associations along certain lines, and that there seems to be a tendency towards relying on the druggist to compound prescriptions instead of ordering semi-proprietary preparation. Small pox is decreasing but the demand for vaccine and accessories is yet brisk.

There is little change in the situation in wholesale circles; business is good and steady and the barometer of trade—collections—shows that retailers are in good shape to meet their obligations. All of the local firms are quite busy and dealers in druggists sundries, rubber goods, sponges, etc., report that their fall trade is showing up very well.

#### COMPLIMENTARY RECEPTION TO THE OLDEST WOMAN PHARMACIST.

Philadelphia, Oct. 5.—A reception at the woman's Medical College was tendered to Dr. Susan Hayhurst last Tuesday afternoon, in honor of her twenty-fifth anniversary as pharmacist of the college, the managers and faculty of the college, students, friends and many prominent guests attending. Several valuable silver articles and a number of floral pieces were presented to the veteran leader in celebration of the occasion. Dr. Hayhurst has the honor of being the oldest woman pharmacist in Philadelphia and was for the first two years of her medical studies the only woman in her class. Although past the allotted term of life, and frail and delicate in appearance, this lovely old Quakeress sets an example in activity and devotion to her chosen profession that younger women may well emulate, as she not only has entire charge of the hospital supplies, but also conducts a drug store on Locust street which enjoys the patronage of many of the nearby physicians. Dr. Hayhurst is also a member of the New Century Club, Philadelphia College of Pharmacy and many other social and scientific societies. All honor to this pioneer in pharmaceutical work for women.

#### NOTES.

—The delegates from the P. A. R. D. to the convention of the National Association of Retail Druggists at Buffalo will leave next Tuesday, it being likely that the full strength of the delegation, six, will attend. The Philadelphia delegation will probably advocate adoption of the "Worcester Plan," more effective control of jobbers and "cutters" under the "Tripartite Plan," repeal of the \$25 special tax required from druggists who sell alcohol and the restoring of prices on proprietary articles to ante-bellum rates.

—The abandoned plant of the Hunter Chemical Co., Fifty-Sixth street and Lancaster avenue, was destroyed by fire Friday forenoon, causing a loss of about \$1,000. The building has not been used for manufacturing purposes for some time, but a lot of chemicals was stowed in it for safe keeping, these causing a lively blaze that for a time endangered neighboring buildings.

—Norristown druggists have been considerably disturbed by the advent of an aggressive cutter in their midst and it looks as if prices would be demoralized for some time to come unless the local committee can straighten out the matter. Grist, the cutter, is making a specialty of belladonna plasters of all makes at a nine cent price.

—With the opening of the college terms the scarcity of drug clerks is not now so marked, there being plenty of young men procurable for junior and "qualified assistants" positions. Good registered managers are still scarce and the demand for clerks honest, well posted and of good habits is far from being supplied. Poor men get a short shift nowadays here.

—Great interest in the yacht races was shown in this city during the week, several suburban druggists posting bulletins in their windows showing the position of the two boats, a bit of enterprise seemingly greatly appreciated. Among the few "sporty" ones who took in the races was C. A. Eckels, the veteran druggist.

—S. R. Randall, a well-known uptown druggist, has bought the drug store of Dr. J. C. Wamsley at Nineteenth and Diamond streets, which he will run in connection with his present store at Eighth and Parrish streets. It is reported that Dr. Wamsley intends devoting his time to his medical practice.

—William Bransome, son of the genial representative of Johnson and Johnson for this State, has recently been confined to his home by a severe illness. The eldest son, E. S. Bransome, is being initiated into the art of pharmacy by Druggist Leeds of Atlantic City.

—W. H. Olmstead of Fifty-eighth and Woodland avenues has returned from an extended trip through the West, having been away for over a month seeking health and pleasure.

—J. Griffith, formerly manager at Taggart's Ninth and Race Street drug store has accepted a similar position with J. B. Moore, Thirteenth and Lombard streets.

—George F. Conner, who has been confined to his home by illness, has now completely recovered his health and is again at his store at 829 Chestnut street.

## PITTSBURG AND VICINITY.

### BOWLING SEASON OPENS.

Pittsburg, Pa., Oct. 3.—An informal meeting for the purpose of reorganizing the Greater Pittsburg Drug Bowling League was held at the Hotel Henry Sept. 25. In the election of officers George F. Eckhardt was re-elected president. A. L. Johnson was chosen secretary and J. Morrison Dempster, treasurer. A committee on schedule was appointed and the first contest was held Monday evening, October 7. The Retail Drug Clerks' Association have announced their intention of putting a team in the field, and this will make the number of contesting teams seven. Last season's tournament was a most successful one, and attracted attention all over western Pennsylvania, not only on account of the spirited contest but also from the fact that some phenomenal scores were made. The league, as made up, is composed of the following teams:

The Pharmaceutical Club, W. J. Gilmore & Co. Club, G. A. Kelly Co. Club, W.-R. Drug Co. Club, Allegheny Drug Club, Pittsburg Drug Club, and the Retail Clerks' Association.

### NOTES.

—S. Logan Walthour, a well-known druggist of Greensburg, Pa., will shortly retire from work at the mortar and pestle, and engage in the hotel business. He has purchased a fine hotel property in that city and when the work of remodeling is complete, expects to have one of the finest hotels in the state.

—Paul Eaton, employed as a chemist in the laboratory of the Pittsburg Gas & Coal Co., Glassport, met with a painful accident recently. He accidentally got some bromine in one of his eyes and also inhaled the fumes which made him seriously ill for a time. The doctors think they can save his sight.

—Charles Fox, manager of the Vandergrift Drug Co., has leased the Casino, the handsome new theater at Vandergrift, Pa., and will divide his time between the drugs and theatricals.

—George Hendee, formerly traveling salesman for Bauer & Black, Chicago, is now engaged in that capacity in the sundry department of W. J. Gilmore & Co.

—Garfield Weir, formerly of the office force of W. J. Gilmore & Co., is now with Shipley, Masingham & Co. as city representative.

—Frank J. Parrish, druggist of Cresson, Pa., who has been seriously ill of typhoid fever, is convalescing.

## BALTIMORE.

### W. S. THOMPSON'S WILL.

Baltimore, Oct. 4.—The will of the late W. S. Thompson, the prominent Washington druggist who occupied a leading position among the business men of the National Capitol, bears striking evidence of the kindness and magnanimity which always characterized him. F. S. Henry, who has been long employed in the pharmacy and virtually grew under Mr. Thompson's eye, was remembered in particular handsome manner. Although the establishment is valued at not less than \$40,000 or \$45,000 by persons familiar with such matters and would readily bring \$35,000 at auction, the deceased modestly rated it at \$20,000 and provided that Mr. Henry should have the option of purchasing it for \$15,000. The purchaser shall be permitted to give notes in payment, said notes to have no other endorsement than that of the maker and to run for an indefinite period, at Mr. Henry's pleasure and ability to redeem them. No security is asked, the testator having apparently had absolute faith in his employe's honesty. Such instances of complete confidence are rare. The funeral of Mr. Thompson, which took place last Saturday, was largely attended, delegations of prominent druggists from a number of cities testifying by their presence to the esteem in which the deceased had been held. Baltimore was represented by Prof. Charles Caspari, Jr.; George L. Muth, of Muth Bros. & Co.; Dr. John F. Hancock, H. P. Hynson and Charles E. Dohme, of Sharp & Dohme. Philadelphia also sent a delegation, among the members being Prof. Remington.

### BUSINESS DECIDEDLY ACTIVE.

Baltimore, Oct. 7.—Business was decidedly active last week, a condition attributable partly to the fact that it was the beginning of the month, when retailers always send in large orders. But the trade generally is in good shape and gives promise of a continuation of a brisk movement. The laboratories were as a rule kept busy and here and there some pressure was required to meet the demand of customers. The market for botanicals is in the main stronger, various staples going up and prices being as a rule firm. Serpenteria, golden seal and seneka root stiffened perceptibly. The supply of mandrake root and prickley ash berries is shown to be rather limited, which circumstance occasioned an upward movement. The price, it is thought, will go to 90 cents or \$1. Some of the crops are found to be rather short, gatherers having found more remunerative employment during the summer, and dealers who contracted for supplies at low figures will be able to realize good profits. Oil of sassafras is higher, while oil of pennyroyal and oil of wintergreen (birch) are weaker. With respect to sassafras pith the report is given out that the supplies are exhausted and that little new stock is expected this season. The movement of heavy chemicals is about normal. Not a few retailers have been complaining of dullness.

### MARYLAND PHARMACEUTICAL ASSOCIATION.

Baltimore, Oct. 5.—A special meeting of the Maryland Pharmaceutical Association executive committee was called yesterday to action with respect to the ensuing sessions of the N. A. R. D. at Buffalo. H. P. Hynson and W. E. Brown had been elected to the annual meeting in June to represent the local association at Buffalo and the ways and means of sending them were again considered. Nothing definite was done, however, the matter being left in abeyance. The efforts to be made next winter when the Legislature assembles, to secure the enactment of a pharmacy law applicable to all parts of the State also came up for consideration, and Messrs. Louis Schulze, the president of the Association, and Owen C. Smith was named authorized to visit Annapolis and arrange for the semi-annual meeting there, when the programme of moving upon the lawmakers will be finally outlined. President Schulze occupied the chair and called the meeting to order.

**Lectures Resumed at the Maryland College.**

Baltimore, Oct. 4.—The scholastic year at the Maryland College of Pharmacy began last Tuesday with the examination of applicants for matriculation. As stated in previous letters, the buildings have been thoroughly renovated and extensively improved, the scientific apparatus being amplified and the laboratories fitted up in a manner conducive to greater efficiency in studies. No changes in the faculty have taken place, the composition of the corps of instructors meeting all demands that could well be made. The outcome of the examination was satisfactory. As was the case last year, practical pharmacy and dispensing will again get much attention, this department being regarded as one of exceptional importance. The outlook for the ensuing year appears particularly bright. The two classes include not less than seven woman students, the largest number of the fair sex yet entered. Four are taking the junior and three the senior course. They are bright young women and can be depended upon to finish somewhere near the head of their respective classes.

**NOTES.**

—The Globe Chemical Works, which intends to engage in the manufacture of chemical preparations, drugs and proprietary medicines has been incorporated in Baltimore by G. Fred. Krantz, Wm. Baumgarten, Howard W. Gill, J. H. Brandt and Frank I. Clark with a capital stock of \$5,000. Mr. Clark was formerly with Gilpin, Langdon & Co., and afterward engaged in the bicycle business, being one of those identified with it during the most prosperous period, when the wheeling fever was at its height.

—H. A. Brown Dunning for some time past in the employ of Hynson, Westcott & Co., will shortly enter the married state. Report has it that he is engaged to Miss Fitzgerald, of Mount Royal avenue, and that the wedding will take place the latter part of this month. Mr. Dunning served in Cuba during the war with Spain as first sergeant in the regiment of immunes sent to the island. He was entrusted with much of the hospital work.

—In the retail drug store at the southwest corner of Druid Hill and North avenues, conducted for some time past by J. W. Booth will be sold at auction this week.

—Among the visiting druggists in Baltimore last week were T. H. Nicholson, of Murfreesboro, N. C., and Mr. Roberts, of Racoon Ford, Va.

—J. M. Warren has closed his pharmacy at Carroll, near the city, and will clerk for Thomas F. Russell, Calvert and Pleasant streets.

**CHICAGO.****C. R. D. A. HOLDS SPECIAL MEETING.**

Chicago, Oct. 5.—A special meeting was held last week in the Masonic Temple to discuss the down-town situation and to hear and discuss the report of the Executive Committee upon the subject. About 200 members of the organization were present. President George A. Graves occupied the chair. The Executive Board of the Association made a complete and exhaustive report concerning the work that had been done down town and that which had been attended. Much had been accomplished, but the work was by no means accomplished as yet. The board went into details and its report was unanimously accepted. After some discussion the board was authorized to continue the work along the same lines as they have begun. The plan is, in brief, that if it becomes necessary to convince the firms down town who are holding out of the agreement that it does not pay to cut, there will be cutting all along the line in the down town district and the cut will be deep and the war will wax merry until no one shall be left unconvinced that cutting does not pay.

**CHICAGO BUSINESS SAID TO BE AHEAD OF 1900.**

Chicago, Oct. 5.—"I think," said a jobber to-day, "that business this fall as far as we have gone is better than it was last year. There seems to be more money in circulation, goods are ordered in better volume and there are in-

dications of a better holiday trade all over the country, judging by the size of the orders in such goods." The same sentiment is voiced by manufacturers, and there seems to be none with sufficient courage to kick against the universal opinion. There are no croakers his year. There is a large demand for all grades of goods, staples and otherwise and the houses are sometimes compelled to work nights to fill their orders.

**NOTES.**

—The new building which is being erected for the Searle & Hereth Company adjoining their plant on Wells street, is now nearly completed. It is a handsome six story building and when occupied by the firm the capacity of the entire manufacturing plant will be more than doubled.

—A peculiar case which occurred last week was that of a druggist who was arrested at the instance of the Board of Health for making physician's calls when he had no license to practice as a physician. Perhaps he was trying to turn the tables on the doctors.

—The Drug Trade Club will be formally installed in its new home at 178 Randolph street on Chicago Day, Oct. 3, and a reception of the members and the guests of the club will be held between the hours of 11:30 a. m. and 2:00 p. m.

—On the night of Oct. 3, the drug store of R. J. Lauterbach, at Fifty-first street and Wentworth avenue, was entered by burglars, who rifled the cash register, securing about twenty dollars in money and stamps.

—C. A. Davidson, manager of the druggists' sundries house of James A. Davidson, returned to his desk this week, having been kept up for some days with a threatened attack of typhoid fever.

—C. J. Milligan, formerly head clerk for F. J. Weiss, at Harrison and Morgan streets, has bought the Swoboda drug store at Polk street and Albany avenue.

—Harry Milles has sold his drug store at 2000 Wentworth avenue to Mr. Frank, who was formerly with J. Walther, at West Polk and Paulina streets.

—Paul G. Schuh & Son, of Cairo, Ill., one of the best known retail drug firms in the State, this week announced a dissolution of partnership.

—George Ironson, a well known druggist at Center avenue and Van Buren street, has gone to Michigan on a two weeks' hunting trip.

—F. M. Brown succeeds M. M. Glass at Brookport, Ill., and S. J. Brown succeeds E. Baugh at the same place.

—The Universal Vitaleme Company has removed its plant and business from Hammond, Ind., to Chicago.

—G. B. Stump of Modoc, Ind., has discontinued the drug business at that place.

—E. Larsen has sold his store at Alta, Ia., to N. A. Christensen & Company.

—H. L. Seyfert succeeds E. J. Askew & Company at Valley Junction, Ia.

—Salmon & Son, druggists of Brownsburg, Ind., have dissolved partnership.

—Gardner & Wendt succeeds W. W. Gardner & Company at Avoca, Ia.

—C. W. Crawford has opened a new drug store at 117 Wentworth avenue.

—W. F. Keith & Sou of Elwood, Ill., have sold their drug business.

—Samuel H. White, a druggist of Sullivan, Ind., has sold out.

—J. S. C. Cussons, a druggist of Owanecco, Ill., has sold out.

—Stone & Son succeed Stone & Worden at Albion, Ind.

—E. M. Fischer of Auburn, Ind., has sold his drug store.

**Castoria Imitators Enjoined.**

Judge Lowell of the United States District Court yesterday granted an injunction in the case of The Centaur Company vs. the Turner Medicine Company. This suit was brought by Charles H. Fletcher, president of The Centaur Company, against the local concern to enjoin them from the sale of an imitation of Fletcher's Castoria, and is only one of several such cases recently brought and decided in Mr. Fletcher's favor.—Boston Post, Aug. 31, 1901.

## THE NORTHWEST.

### INVOLVING PRESIDENT MCKINLEY'S MEMORY.

St. Paul, Minn., Oct. 4.—Ever since the late President McKinley has been shot the papers have been filled with accounts of swift punishment of the miscreants who applauded the deed of Czolgosz. Minneapolis furnishes something of a variation. W. K. Hicks of that city is made a defendant in a slander suit brought by a rival druggist. The plaintiff is Matt H. Wittich, whose store is about half a block away from that of Mr. Hicks. He says that Mr. Hicks has been telling generally that he (Wittich) uttered such unpatriotic words as the following.

"I am glad that McKinley has been shot. He ought to have been shot six years ago."

The effects of the dissemination of such reports, says the plaintiff, has injured his business and he wants satisfaction to the extent of \$5,000.

### NOTES.

—Successions: P. B. Herman, Dundee, Minn., by H. H. Filbert, F. W. Hart, Hutchinson, Minn., by F. W. Congdon; J. R. Hofflin, Minneapolis, Minn., by Virgil Dillin; E. S. Ballard & Co., Davenport, Ia., by the Ballard Drug & Dental Co.; C. E. Quire, Searsboro, Ia., by J. S. Elerick; B. W. Moore, Stewartville, Minn., by Stone-breaker Bros.; Townsend & Hollihan, Ireton, Ia., by the Townsend Drug & Jewelry Co.; W. W. Gardner & Co., Avoca, Ia., by Gardner & Wendt.

—At a recent meeting at New Ulm, Minn., the druggists of Brown County perfected an organization as part of the N. A. R. D. A. J. Eckstein was made president Eugene Pfefferle secretary. Every druggist in the county is a member.

—Daniel R. Noyes, of St. Paul, has returned from Saratoga, where he has been at work as a member of the committee on revision of the Presbyterian Creed.

—G. E. Michael of Michael Bros., Tacoma, Wash., has sold his interest, but the firm's name remains the same.

—C. R. McPhee, who has been having a vacation at Buffalo, has now returned home to Williston, N. D.

—Albertus Hanson has left Albert Lea, and gone to work for C. H. Onstad, Dawson, Minn.

—Albert Geyler, Grand Island, Neb., has filed a voluntary petition in bankruptcy.

—C. A. Swennes has gone to Grantburg, Wis., to work for Loneragan & Burgan.

—P. C. Peterson is now doing relief work in Emmert's drug store St. Paul.

—E. Larsen, druggist and publisher, Alta, Ia., has gone out of business.

—The Culver Drug Co., has begun business at Ortonville, Minn.

—L. D. McConnell, Lincoln, Neb., will remove to Garrison.

—G. W. Brush, Sioux Center, Ia., has assigned.

—C. R. Hamilton, Hunter, N. D., has been burned out.

## THE SOUTH.

### INJUNCTIONS SERVED ON ATLANTA DRUGGISTS.

Memphis, Oct. 3.—The defendants in the case of the Jacobs' Pharmacy Co., against Brown, Allen and others, which was recently decided by Judge Lumpkin in favor of Jacobs, have been served with copies of the injunction. Each and all are restrained from combining to affect prices and referring to the plaintiff as the "aggressive cutter." The defendants feel that they have not been given a square deal and will appeal the case. The fight has been a bitter one from the start and the members of the Atlanta Drug Association do not propose to give up the fight as long as there is a possibility of winning, and it seems now that the end is not yet in sight.

### NOTES.

—The drug business of Dr. C. H. Sullivan, Florence, Alabama, has grown so that present quarters are entirely too small. To make room for the increasing trade the

Doctor is having erected a handsome brick business block across the street from the store he now occupies. He will use the corner for his pharmacy, which will be a handsome modern one, and the remaining three first floor rooms have been leased and will be occupied as soon as completed. The upper floors will be used as a hotel.

—Will Phillips, son of Capt. D. D. Phillips of Berry, Demoville & Co., Nashville, Tenn., had a narrow escape recently. Mr. Phillips was returning from the theater and in stepping from the car he fell into an excavation made by the Street Car Company and left unprotected. The young man was painfully hurt and will be laid up for some time.

—Moses L. Buchanan, for several years city salesman for Spurlock-Neal & Co., Nashville, is now traveling for Sharp & Dohme in the territory tributary to Nashville. Mr. Buchanan succeeded S. T. Anderson who left the road to go in business for himself.

—R. W. Vickers, secretary of the Tennessee State Druggist Association, accompanied by Mrs. Vickers, enjoyed a well earned rest during August and September. They returned to their home at Murfreesboro, Tenn., much benefitted by the trip.

—James Jenkins, prescription clerk for George H. Trevathen, Paris, Tenn., enjoyed the sights at Buffalo and Niagara during the month of September. Charles Trevathen, manager of the same pharmacy also made an extensive trip East and spent a month at the summer resorts.

—Mr. Stephens, formerly prescription clerk for the E. B. Davis Co., Nashville, has returned and assumed charge of the store as manager. Under Mr. Stephens' capable direction the business has shown marked improvement.

—Jefferson Killen, the Buena Vista Avenue druggist, Nashville, Tenn., is enjoying a large and steadily increasing business in the prescription department to which he gives his personal attention.

—J. P. Jenkins succeeds to the business of John C. Long, Mount Pleasant, Tenn. Mr. Jenkins was formerly manager of the store and will naturally play the role of proprietor to advantage.

—August Schardt, the West End Avenue pharmacist, Nashville, Tenn., has proven his popularity in his ward by being re-elected councilman by a large and increased majority.

—Dr. T. A. Hughes of New Decatur, Ala., whose store was destroyed by fire some time ago, will soon be in possession of a handsome new store now being erected for his use.

—W. E. McPherson, one of the leading druggists of Paducah, Ky., was married to Miss Mickie Hansbro, Sept. 2. The couple left for Buffalo and New York on a bridal trip.

—James McAvort of Vickers and McAvort, Murfreesboro, Tenn., recently enjoyed an outing trip of three weeks, "wooing the finny tribe" from the waters of Caney Forks.

—Jeff B. Ramsey, assistant secretary and treasurer of the Van Vleet-Mansfield Drug Co., has returned from a three weeks' trip to the Eastern summer resorts.

—Dr. George H. Trevathen, proprietor of the Trevathen pharmacy, Paris, Tenn., on his way East, stopped at Detroit where he has business interests.

—R. D. Jenkins of Ripley, Tenn., who lost his store by fire some weeks ago, will soon open a new pharmacy, this time on a much larger scale.

—Dr. E. P. Birkshire, the Buchanan street druggist, Nashville, Tenn., has returned from an extended Eastern trip.

—George Merrell, president of the William S. Merrell Chemical Co., was in the city for a short time last week.

—J. H. Moore of Juka, Miss., has disposed of his pharmaceutical interests and sold out to Barnett and Wilson.

—J. F. Vickers, Southern representative for Eli Lilly & Co., is calling on his city trade this week.

—J. A. Andrews, Grenada, Miss., is now in charge of the N. C. Skinner pharmacy at Greenville.

—E. W. Henderson of the William S. Merrell Chemical Company was in the city this week.

—Daniel Cushing has opened a new drug store at Columbus, Miss.

—P. P. Van Vleet has returned from a trip to New York.

## ST. LOUIS.

## A. PH. A. SOCIAL SESSION.

St. Louis, Oct. 5.—The sixth and last session of the A. Ph. A., better known as the Social Session, was held at the Southern Hotel on Wednesday evening, Sept. 25. President H. M. Whelpley called the association to order, and in the absence of the permanent secretary appointed W. L. Dewoody, of Pine Bluff, Ark., secretary pro tem. The president read a telegram announcing the sudden death that morning of W. S. Thompson, chairman of the Council. A memorial session followed in which Dr. Otto F. Claus, H. F. A. Spilker, Francis Hemm, Dr. J. C. Falk and W. L. Dewoody paid tribute to the memory of Mr. Thompson. No further business being presented and the social session being concluded, the association adjourned to meet again at Philadelphia, Pa., in September 1902.

## NOTES.

—There is a movement on foot among several of our leading druggists to form a stock company, and buy up and open a large number of drug stores in this city. This plan has been under consideration here for over a year and whether or not it is put into effect apparently depends largely upon the results of the N. A. R. D. plan. The druggists seem to feel quite well satisfied with what has been accomplished here during the past year, but they consider this only a beginning. They are anxiously awaiting the results of the annual convention which will be held at Buffalo next week. They have great hopes and expectations for the next year, and should these hopes not be realized to a reasonable degree it is quite apparent that some very radical steps will be taken by some of our energetic local pharmacists.

—The St. Louis College of Pharmacy opened last Monday night with an enrollment of over two hundred students, which is a few more than last year. No special changes have been made in the course of instruction and no changes whatever in the faculty. It is quite apparent that the class of students attending the college is improving each year.

—S. H. Wilson has been appointed druggist at the Missouri Pacific Hospital to fill the vacancy caused by the resignation of C. C. Borchers, who has gone to the St. Louis Granule Co.

—R. S. Vitt and Theo. F. Hagenow will leave Monday for Buffalo, N. Y., where they will attend the annual convention of the N. A. R. D.

—Frank Carey of Carey Bros. pharmacy, Twenty-third street and Cass avenue, has returned from Denver where he has been spending the summer.

—J. W. Estes, for many years in charge of the outfitting department of the Meyer Bros. Drug Co., has resigned his position and gone into the insurance business.

—Chas. A. Kucker, of the Swift Specific Co., Atlanta, Ga., has been in the city this week looking after their advertising business.

—A. Katzky has purchased the drug store at Delmar avenue and Kings Highway from C. A. Brockmiller.

—Dr. O. F. Claus has purchased the Columbia Pharmacy at Thirty-third street and Laclede avenue.

## MCKESSON AND ROBBINS' 1901 PRICES CURRENT.

We are in receipt of a copy of McKesson and Robbins' 1901 "Prices Current," just fresh from the press. This price list has long been a standard work in many drug stores, and the present volume will be appreciated by busy druggists who have occasion to consult works of this character. The book contains 280 pages, the first 57 of which are printed somewhat in the form of a price-book, so that changes in prices, or other memoranda, may be inserted, as desired, on a line with each article listed. The specialties manufactured by McKesson and Robbins are, of course, fully covered, and there is also given an interesting table setting forth the general rules governing weights and tares of original packages and other information.

## NEW ORLEANS.

## New Interpretation of Pharmacy Law.

New Orleans, Oct. 4.—After the conviction and fine of several druggists on a charge of violating Act No. 66 of 1888, Messrs. Hardin and Langston escaped punishment by an interpretation never before put upon the act, namely. The particular section of the act that has called for frequent contributions in the way of fines is that section requiring the compounding druggist to affix his signature to the prescription. Several careless druggists have been assessed from \$50 to \$100 for this oversight. When the case against Hardin & Langston was called the state produced a vial that was admitted as coming from the establishment of the defendants. It was labeled but carried no signature. The state did not take long to make out the case that had been successful in many other trials. There were no witnesses placed on the stand for the defense and a simple reading of the article under which the charge was brought worked a ready acquittal. It was shown that under the verbiage of the act, Section 7 specifies that the name of the druggist and his place of business should be written or pointed in plain characters on the label. Further on the act provides that the prescription should bear the signature of the compounding druggist. In the case of Hardin and Langston, as in several other cases where convictions have resulted, no prescription was offered in evidence. It is plainly the intention of the act that the label should bear the signature of the compounding druggist, but under the verbiage there can be no violation with a printed address of the druggist, unless it be shown that the prescription was not properly inscribed with the signature. This flaw has never before been discovered and the ruling in the case of Hardin and Langston will doubtless result in the re-hearing of several other cases where there was a conviction.

## NOTES.

—Max Samson, who recently returned from the 49th annual meeting of the American Pharmaceutical Association recently held at St. Louis, is enthusiastic over the work done at the meeting. Mr. Samson said that it differed considerably from many other meetings in that it treated less of scientific affairs and more attention was given the practical business end of the drug trade. The question of cut rates was given consideration, he said, and business methods generally were gone over intelligently. Mr. Samson was of the opinion that the meeting would work a great good in the trade generally.

—The liveliest sort of trade awakening has been reported in the wholesale district and many prominent drug houses have announced that September past has broken all September records for business.

## Fine Lubricating Oils.

Manufacturing pharmacists who have machinery which should be lubricated with the very finest mineral oils, or who use such oils for any manufacturing purpose, will be interested in the advertisement headed "Mineral Oils," in the Buyers' Directory department of the E. T. Southwick supplies chemically pure, odorless, tasteless, water white and near white mineral oils to many of the largest manufacturers in the country. Write for samples and prices to T. T. Southwick, Rochester, N. Y.

## Notice.

Manufacturers and others contemplating doing business with druggists in Porto Rico, are invited to correspond with W. A. Hutton, P. O. Box 245, San Juan, Porto Rico. Mr. Hutton is an American and has resided in San Juan for some time and is thoroughly familiar with the trade there. He will be glad to answer, free of charge, inquiries in regard to trade matters, credits, etc.

## PHILADELPHIA ASSOCIATION OF RETAIL DRUGGISTS.

The October meeting of the P. A. R. D. was very well attended and considerable important business was transacted. The finances of the association were reported to be in a good condition, \$732.36 being in the treasury, and three new members were elected. The charter secured for the association was exhibited to members and its broad provisions created much favorable comment. The P. A. R. D. is now a chartered body.

Among the questions brought up for discussion was the "Free Dispensary, XVII," the action of the recent meeting of the State Medical Association in adopting resolutions advocating publicity as the best remedy for this evil being commended and resolutions to the same effect were adopted and ordered sent to the various newspapers with a request for editorial notice. These resolutions urge that a record of patients be kept by every free dispensary and that the same shall be open to public inspection, also that lists of those who receive free treatment under the plea of poverty shall be published from time to time, in this manner making it possible to trace fraudulent patients from place to place. Hearty co-operation with the medical profession to abate this evil was promised by the Association.

A bill passed at the recent session of the Legislature was made a prominent feature of the executive committee's report because of its importance to druggists. By the term of this bill, it is unlawful to sell or furnish tobacco in any form to any person under 16 years old, and the penalty is made a fine of \$100 or imprisonment not to exceed 30 days, it being termed a misdemeanor. This law makes it a very delicate matter for druggists to sell cigars or tobacco to children under the plea that such are for their parents, as the word "furnish" distinctly prohibits even this and such a sale would render the druggist liable to blackmail if the parent chose to deny the order and threatened information. The only safe course would be not to supply tobacco to children in the absence of a written order from the adult for whom it is requested. Attention was called to another new State law by Mr. Chalfant, a member of the Executive committee, under which druggists can register the name of any preparation they may desire to put on the market on payment of a fee of \$2 to the secretary of the Commonwealth. This law was enacted last June and any one can register any name, coined, fanciful or descriptive, of any article he may wish to protect against public use, indeed, the law is so broad that even descriptive titles may be registered. Comment was made that this opened a wide field for blackmail; any one can register the name of an established article not protected by copyright and demand payment for its public use by the original owner, showing the need of some further restrictions in the Act.

The committee on the "Supplying of Medicines to the Out-door Poor of Philadelphia" made a report to the effect that Superintendent Geary of the Department of Charities and Correction favored the payment of a salary to the druggist dispensing medicines for the city, drugs to be supplied them. The plan agreed on by the committee and Superintendent Geary, which is to be urged on City councils, is that one druggist in each ward is to be selected to fill the prescriptions of the city "Poor Physicians," for which he will be paid a salary of \$200 yearly, and that the drugs used are to be supplied on requisition from the City hospital as needed and charged to the druggist. At the end of the year, the prescriptions and the requisitions for drugs will be compared, if more drugs have been requisitioned for than is shown by the prescriptions to have been used the excess will be deducted from the druggist's salary. Superintendent Geary believed this to be the best and most economical plan for the city and the fairest for the Druggist and promised the committee his hearty support.

This being the first meeting of the P. A. R. D. since the death of President McKinley, resolutions deploring the country's loss and extending the sympathy of Philadelphia druggists to Mrs. McKinley were unanimously

adopted as expressing the sentiments of its members, and \$10 was voted as a contribution to the fund now being raised here to erect a monument to President McKinley in Philadelphia.

An offer having been made by an advertising firm to solicit advertisement for the programme for next year's Euchre, the Executive committee was instructed to investigate the offer and to make terms for the association.

The question of policies to be advocated by the delegates of the P. A. R. D. at the National convention at Buffalo was then taken up, and the following instructions were given the delegates: (1) That they advocate the adoption by the N. A. R. D. of some plan whereby proprietors may be induced to reduce their prices to the old rates existing before the passage of the "Stamp Tax," this now having been abolished, urging a firm stand by the N. A. R. D. in this matter and the adoption of drastic remedies if necessary. (2) That they request the N. A. R. D. to take steps looking towards securing national legislation abolishing the present tax of \$25 for the privilege of retailing alcohol by druggists, this tax being onerous and unnecessary since the alcohol sold by druggists is seldom used as a beverage. (3) That they advocate the petitioning of Congress to amend the postal laws so that any person buying \$100 worth of stamps at one time for the purpose of retailing them to the public should be given a special rate of 95 for \$100 worth of stamps, thus permitting a small profit to be made on this exceedingly burdensome feature of the druggist's trade.

The work of the "agent" employed by the association was reported as having been very effective during the month although both he and the Executive committee were greatly hampered by the lack of effective interest and support of many members. This same lack of interest was also shown to be largely responsible for the failure of the Telephone committee to carry out the instruction of the association, up to the present time; it seeming to be an impossibility to get members to act together in impressing their requests upon the Keystone Telephone Company. An appeal to members for more active work and assistance was made by Chairman Perry of the Executive committee, who pointed out that very little good could be accomplished unless every member did his share in supporting his association, and that local conditions imperatively demanded that every druggist in Philadelphia should become a member of the P. A. R. D.

## MASSACHUSETTS COLLEGE OF PHARMACY NOTES.

—Some changes have been made in the teaching corps of the school. Dr. A. W. Balch resigned the assistant professorship of analytical and organic chemistry and Thomas J. O'Brien, Ph. G., M. D., has been appointed instructor in these subjects. The vacancy in the instructorship of bacteriology has been filled by the appointment of H. J. Berry, M. D. Dr. O'Brien was graduated from the Massachusetts College of Pharmacy in 1895 and from the Harvard Medical School in 1899. Dr. H. J. Berry is a graduate of Tufts College and of the Harvard Medical School, and has had an appointment of assistant in bacteriology for some years at the Harvard Medical School. Dr. A. W. Balch has received the appointment of assistant surgeon in the United States navy with the rank of lieutenant. He served upon the Receiving Ship Washah for a few weeks and then was transferred for service in the Philippines.

—The preliminary examination took place Sept. 18 and the regular exercises began Sept. 23, 1901. The registration of new students indicates a full and successful school during the coming session. The changes that have been made in the building during the summer months consist of a new gallery placed in the library fitted with cases. This increases the space for books, and is considered sufficient for expansion of the library for some time to come. New rooms have also been partitioned off, and are being fitted up, one for a Bacteriological Laboratory, and another for the use of students in Sanitary Chemistry.

—Prof. LaPierre spent some time traveling through Vermont and N. H. The college was represented in the exhibit at the St. Louis meeting of the American Pharmacopoeias. This collection is quite extensive, and is one of which the college is proud. Some of the books in the collection were secured by Dr. Charles Rice, through the personal request of S. A. D. Sheppard.

—The Massachusetts Pharmaceutical Association at its meeting in Fall River last June, voted to establish and maintain a scholarship at this college for students pursuing the Ph. G. course.

—Prof. C. F. Nixon was appointed to the chair of Materia Medica and Botany, made vacant by the death of Prof. R. W. Greenleaf, and spent the Summer in Europe.

—The Alumni Association has arranged for several social gatherings at the College Building during the coming session.

—Prof. J. O. Jordan spent his vacation at Buzzard's Bay.

THE ABSOLUTE ATOMIC WEIGHTS OF THE CHEMICAL ELEMENTS ESTABLISHED UPON THE ANALYSIS OF THE CHEMISTS OF THE NINETEENTH CENTURY AND DEMONSTRATING THE UNITY OF MATTER. By Gustavus Detlef Hinrichs, M. D., LL.D., Honorary and Corresponding Member of Scientific Societies in Austria, England, France, Germany and the United States. Professor of Chemistry in the St. Louis College of Pharmacy. With a portrait of Berzelius, and three plates. Octavo, 304 pages, paper, \$1.00. St. Louis, Carl Gustav Hinrichs, Publisher.

This book seems to have been written in defense of doctrines advanced in *The True Atomic Weights* by the same author published some years ago. According to this work the common atomic weights expressed in round numbers as ordinarily employed in chemical analysis are the true ones, and the weights published by the Smithsonian Institute and endorsed by various authorities are mere refinements of mathematical calculations based upon erroneous weights and carried out far beyond the limits of accuracy of laboratory manipulation. The book is written in a style which differs widely from that of the ordinary scientific treatise. The author does not rely solely upon dry details to carry conviction to his readers, but makes free use of humorous phrases and sarcastic allusions in order to render his arguments effective. He indulges in great freedom of speech, and some of his expressions may appear to those who have been taught to have great respect for authority to border upon lese majeste. Not only the accuracy but the veracity of men who stand high in the esteem of the world are called in question. The work shows the result of wide study, and students of chemistry, especially those interested in the history of the science, should find much to interest them in its pages.

#### Lia Rand's Specialties.

In this issue of the Era will be found a small announcement of Lia Rand's Specialties. Send for a booklet description of what is claimed to be the finest line of toilet specialties on the market. Prices are right and the goods are such that your recommendation of them will make friends and bring trade to your store. Address Lia Rand, 199 Washington street, Brooklyn, N. Y.

#### High Grade French Perfumes.

McKesson & Robbins have been appointed sole agents in the United States for the high grade perfume essences, toilet preparations, etc., of Deletrez, Paris. Their specialties are: Agalia, Amaryllis Du Japon, Violettes Celestes, Supra Violetta, Bouquet Du XX Siecle, Chypre Royale, and Royal Deletrez. Some of these are new to this country, but all of them may be depended upon as being of the highest grade of excellence.

## OBITUARY.

### JOSEPH A. TOY.

Joseph A. Toy for many years special representative of the Carter Medicine Co., of this city, and private secretary to Brent Good, the manager, died Oct. 8. Death was due to Bright's disease from which he had suffered for some time. He was about fifty-five years of age.

Mr. Toy was known every where in the drug trade, and his kindly nature and genial manners endeared him to a host of friends. He was born and bred in Norfolk, Virginia, and was a druggist by profession, his father being a member of the firm of King & Toy, wholesale druggists, of Norfolk, who conducted a large and important business in ante bellum days. Mr. Toy had a fine collegiate education and his natural tastes were of a refined character. In 1878 he came to New York and engaged with the old house of W. H. Schieffelin & Co., representing them in the large cities of the South. Later he became the western representative of Billings, Clapp & Co., of Boston, a position he held for several years and which he gave up to enter a larger field with Messrs. Stalman & Fulton, drug importers of this city. This connection he severed in 1890 to accept the position he held with the Carter Medicine Co. One of his brothers, Crawford H. Toy, is a member of the faculty of Harvard University and a well known authority on Oriental languages. He leaves a widow, two sons and two daughters.

JOHN F. NEILL, a well known wholesale botanic druggist of Boston, Mass., died Oct. 7. He was about 43 years of age and leaves a widow.

—Frank J. Quereau has severed his connection with the Bridaham-Quereau Drug Co., wholesale druggists of Denver, Colo., and will engage in the brokerage business in that city.

The Era received a call the other from W. M. McPherson, who although still a young man, is one of the leading druggists of Paducah, Ky., and his store is on the principal corner of the city. Mr. McPherson is an enterprising man, and one of original ideas. He says he makes it a rule to always buy novelties that cannot be found in any other store in town, and the saying, "if you want to be sure and get it, go to McPherson's" is common around Paducah. He says not long ago he saw Bangs' advertisement in one of the drug journals, and sat down and answered it. Not long afterward, Mr. Bangs himself appeared in the store, having come all the way from Boston to interview him. When Mr. Bangs told him it would cost him \$5,000 to put the right kind of fixtures in his store, Mr. McPherson nearly dropped dead; but the more he thought of it, the more he became convinced that it would not be a bad investment after all, and the fixtures and a Bangs' Soda Fountain were put in. Now he says it was the best investment he ever made. The fixtures have been paid for themselves out of the business, and he has not had to put his hand in his pocket for a cent. Mr. and Mrs. McPherson, who are stopping at the Murray Hill, visit this market every year. He says although Kentucky is the only State in the Union, it does him good to get away once in a while and touch elbows with new people.

# The Chattanooga Medicine Co.

No proprietary medicine laboratories in America have a more romantic location than those of the Chattanooga Medicine Co., at the foot of Lookout Mountain, near

Main Office and Laboratories, Chattanooga.

Chattanooga, Tennessee.

In the heart of St. Elmo, the beautiful suburb south of Chattanooga made famous by Augusta Evans' popular novel, the main offices, laboratories and printing department of this great business are located. Here where Grant and Bragg engaged in their bloody struggle for supremacy is this hive of industry, sending its products to every part of the civilized world.

Begun in 1870 on one floor of a small building in what was then an obscure southern town, this proprietary medicine plant has now come to be numbered in the front rank of its

St. Louis Office and Warehouse.

line. What was twenty-two years ago represented by a part of one small building now consists of four large buildings at Chattanooga, a large office and warehouse at St. Louis and another at San Francisco.

The main building of the Chattanooga group is 200x50 feet in size. The engine, boiler and machine shop addition in the form of an "L" is 50x75 feet. The adjoining four-story laboratory is 125x50 feet and the printing office is 150x50 feet in size. Duplicate stocks of all important materials are carried in the fire-proof shipping warehouse.

The Autumn, 1901, advertising announcement shows that the following material is to be issued by the printing office this season.

15,000,000 Ladies' Birthday Almanacs for 1902.  
5,000,000 Cardui Books.

1,000,000 Cardui Weather Charts and Calendars,  
1,500,000 20th Century Song Books,  
1,000,000 Black-Draught Stock and Poultry Books,  
4,000,000 Show Cards, Hangers, Banners, Signs, Counter Wrappers, etc.

This material is the regular output of the printing office for six months. This office is equipped with

Printing Department, Chattanooga.

the latest improved Webb-Perfecting presses, automatic feeding machines, folders, stitchers, trimmers, stringers, etc.

Shipping Warehouse, Chattanooga.

The division of territory as supplied from the different cities are as follows:

San Francisco; California, Oregon, Washington, Idaho, Montana, Wyoming, Utah, Nevada, Arizona, Hawaii and the Philippine Islands.

St. Louis; Missouri, Illinois, Indiana, Ohio, Michigan, Wisconsin, Minnesota, Iowa, Nebraska, Colorado, North Dakota and South Dakota.

The remainder of the territory is supplied direct from the Chattanooga laboratories.

## A New Wafer Capsule.

We shall introduce to our readers in an early issue a new wafer capsule, manufactured at Johann Schmidt's wafer factory at Nurnberg, Germany, and sold to the trade in this country through his representative, Mr. Charles Adolph Wolff, 32 Park Place, N. Y. The new capsule has some very important advantages over others now on the market:

- (1.) It is of an elongated, four sided form, easily filled and easily swallowed.
- (2.) It has no gummed edge, and is, therefore, small in diameter.
- (3.) It is unusually easy to close, requiring no apparatus.
- (4.) No moistening of the capsule is required, the two parts telescoping somewhat after the manner of an ordinary gelatin capsule. It is as easy to fill these wafers as it is a gelatin capsule, and they are filled in the same manner.

We predict a ready sale for these capsules, samples of which will be sent to any druggists interested, if he will address the American representative.

—The Elam Drug Co., wholesale druggists of Anniston, Ala., have moved their entire business to Birmingham, Ala., where they are located at 1416-1418 First avenue. Anniston, however, is not to be left without a wholesale druggist, for the Bell & Weatherly Co., wholesale grocers at that place, have opened a wholesale drug department, and have joined the ranks of Southern wholesale druggists.

San Francisco Office and Warehouse.

## GOLIATH

It is said to have been "some pampkins" in his time and if history can be relied upon, he was a bigger Philistine than the one in East Ayrton, though not so well advertised by his backers. His ways became somewhat masterful even before he attained maturity and, by the time trouble began to brew between his folks and the second-hand clothing dealers, he had taken part in several little differences of opinion. There is still some doubt as to whether he was a better scrapper than John L., but this question must remain open until conditions permit of arrangements for a meeting. In a talking match it is safe to say that some more recent champions would have distanced either of them in all heats. Goliath held the belt until a trifling circumstance interfered with his career and thereafter a young money-lender by the name of David kept the boys amused. His large family was obliged to do without **Imperial** Nipples which was bad thing all around

# MARKET REPORT.

## NEW-YORK MARKET.

### Improved Condition.

New York, Oct. 8.—A generally fair condition of business prevails, with a wide range of changes in jobbing prices, a decided improvement over the conditions as reported last week.

**OPIUM.**—Conditions remain practically unchanged, and jobbing prices continue at \$3.25@3.50 for 9 per cent and \$3.45@3.60 for 11 per cent. Powdered is quiet and easy at \$4.0674.00 for 13 per cent and \$4.75@5.00 for granular, and \$5.10@5.25 for 16 per cent.

**MORPHINE.**—Securely more than average jobbing business maintains and dealers report prices on the basis of \$2.20@2.40 for eighths, as to brand, less the usual rebate of 1c per oz. on lots of 10-ozs or over.

**QUININE.**—Manufacturers prices have been advanced 1c per oz and the jobbing range has gone up to 28@29c for bulk in 100-oz tins, 25½@26½c in 50-oz tins, 23@26c in 25-oz tins, and 35@36c in ounces.

**MENTHOL.**—With the market well supplied the tone continues easier, and jobbers give out a further decline to \$4.55@4.90 per lb, while the ounce prices remain the same at 35@40c.

**GAMBOGE.**—Supplies continuing light, the market remains firmer, and an advance has been made to 65@75c for prime whole, and 70@80c for powdered.

**HYPHOSPHITES.** Supplemental to last week's decline in calcium, sodium and potassium hypophosphites, there is now a decline in iron and manganese to \$1.30@1.50 in lbs and 12@15c in ozs.

**COCOA BUTTER.**—With the market easier, supplies have declined to 44@45c in boxes, and 48@53c for less.

**ASAFETIDA.**—With a good supply, jobbers have marked down quotations to 40@45c for extra, 35@40c for No. 1, and 40@45c for powdered.

**VANILLA BEANS.** Jobbers are quoting a decline in Mexican, medium at \$11.50@12.50, and Bourbon at \$8.25@8.75.

**SENEGA ROOT.**—Scarcity continues to hold values firm, but prices have corrected themselves to 65@75c for whole and 70@80c for powdered.

**BELLADONNA LEAVES.**—A firmer market has caused jobbers to raise prices to the range of 50@55c for whole, 33@37c for ground, and 35@40c for powdered.

**CALENDULA FLOWERS.** Jobbers have marked down quotations to 60@70c.

**COLCHICUM SEED.**—Prices have advanced to 70@80c for whole, and 80@90c for powdered.

**BEEWAX.**—With a firmer tone the market owing to scarcity quotations have advanced, city being quoted at 41@46c and country at 35@43c.

**BALSAM TOLU.**—Prices have advanced to 37@38c in cans, and 42@50c for less.

**SULPHUR.**—Quotations have been marked up for flowers to \$2.52½, by the hundred lbs and 49c for less; for flour to \$2.35@2.50 by the hundred lbs; and for roll to \$2.15 by the hundred lbs, and 34@35c for less.

**CALAMUS ROOT.**—Bleached has been marked down to 35@40c.

**RAPE SEED.**—A good consuming demand has advanced the prices to 34@44c by the bag, and 5@7c for less.

**ACETIC ACID.**—Manufacturers have advanced prices, and jobbers have marked up the jobbing range to 5½@6c for number 8 in carboys and 8@10c for less; and U. S. P. to 6½@6½c in carboys and 9@12c for less.

**GUARANA.**—A decline is made to 50@90c for whole and 90c@81.00 for powdered.

**POPPY SEED.**—Prices are advanced to 11@15c.

There is a little advertisement in this issue entitled "Catchy Names." The advertiser, who has had long experience in this business, is prepared to furnish catchy, attractive names for any preparation or novelty, and as it is considered that a thing well named is half sold, the importance of getting a good name for it cannot be over-estimated.

## INDEX TO THIS NUMBER.

### What Is in a Name.

We all agree that a rose under another name would have just as many thorns, and that the thorns bearing any other appellation would get there just the same; but notwithstanding all the philosophy that has been philosophized on the question of naming something something else and obtaining the same results, we are of the opinion that in some cases the name is a very essential factor.

We think that in many cases the name either encourages or discourages further investigation, and therefore pronounces and promises either success or failure. Therefore, in marketing a preparation, for instance, we should be very careful to choose a name that will give either an idea of the component parts of the preparation or of the ills that the preparation will cure. A name that does this spells success for a meritorious article. In advertising anything of this kind the name must be backed up by ideas that associate themselves with the name and formula.

An instant of this is the cut-out stand which the Dr. J. C. Brown Medical Co., of Albany, N. Y., are sending out to the drug trade. The article in question is a life-size cut-out which they have happily named "The Original Chemist"; the representation is that of a sturdy, good natured, healthy monk carefully brewing a kettle of herbs. There is something about this good natured face that inspires confidence and makes one want to taste that brew, or at least get a sniff of the aroma which he seems to be thoroughly satisfied with. And this work of art is for the purpose of advertising Ru-Ter-Ba, Nature's own remedy. The name proclaims the ingredients, Roots and Herbs. If you are interested write for a copy of the "Original Chemist" as advertised on another page of this issue.

### THE N. A. R. D. CONVENTION.

The sessions of the annual convention of the National Association of Retail Druggists, held at Buffalo during the past week, proved to be quite as stormy as we had been lead to expect that they would be. There has been considerable difference in opinion among the druggists in different parts of the country as to the efficacy of the means adopted by the Association in combating the "cut-rate" evil. This subject being of vital importance to the trade, naturally aroused great interest, and the different delegations which assembled in Buffalo came primed with facts and arguments and prepared for battle. It soon became evident that the Convention was divided into two factions, representing the believers in the "Tripartite Agreement Plan" and those who wished to see the trade relieved from the obligations of this plan, and the "Worcester Plan" adopted instead. The friends of the Worcester Plan claimed that the Tripartite Agreement has proved beneficial in certain sections of the country only, and ascribed its failure to be of general benefit to lack of support by certain parties to the agreement. Their opponents wished to have the present plan continued in force, believing that the unsatisfactory features can be eliminated, and that with more general adoption it will prove of benefit to a larger number of retail pharmacists.

The fight was hot and bitter, some of the discussions being notable for extreme vigor of state-

ment. The final action of the convention must be considered as at least a temporary defeat for the friends of the Worcester Plan. The Tripartite Agreement plan was continued in force, provision being made to test the constitutionality of the operation of the Worcester Plan in the courts of Illinois, where an anti-trust law is in force. There was at one time grave danger that the differences between the two factions would result in a permanent split in the organization, but this was fortunately averted. The members of the Association and the drug trade at large are to be congratulated upon the fact that the separation was successfully avoided, for the time being at least. The necessity for united action must be apparent to all. A division of forces can result in no good for the cause which is of the utmost importance to every retail druggist in the country.

### REMEDY FOR THE FREE DISPENSARY EVIL.

The abuse of the dispensaries established in our cities for the purpose of furnishing medical aid to the the deserving poor is an evil which has been frequently discussed in pharmaceutical and medical journals. Among the numerous remedies which have been proposed for reforming this evil, there is probably none more worthy of the support of the members of both professions than the plan endorsed by the pharmaceutical and medical societies of Philadelphia. The societies ask:

That the Legislature pass an act requiring that all persons seeking aid at dispensaries and other charitable institutions record their names and addresses, or, when unable to write, make their marks, as is customary in legal documents, in a book kept for the purpose, which shall be open to inspection by proper persons; and, if possible, inflict a penalty upon those who fraudulently receive aid.

A careful perusal of this request will show that an appeal is to be made to the pride of those seeking aid and it is hoped that this will cause those not destitute to obtain treatment at their own expense. There is a very prevalent tendency among persons in moderate circumstances to consider dispensaries as institutions established for the convenience of the public at large. It is reasonable to suppose that these persons will hesitate to rank themselves with the admittedly pauper class solely to avoid a small expense for medicines and medical attendance. Free dispensaries have been established for the benefit of those legally classed as indigent. Their purpose is as distinctly charitable as that of almshouses and other means of providing for persons unable to take care

of themselves. It is only too true that many who would not think of applying for financial aid do not hesitate to avail themselves of an opportunity of receiving treatment for minor diseases, which seems to be offered for the asking.

There can be little doubt of the excellence of the plan proposed by the Philadelphia societies. It can result injury to no one. The deserving poor are not without their pride, but the intention is to expose those who are not deserving, so that those for whom these benefits are intended will be spared the humiliation of seeing themselves publicly branded as paupers. Americans take great pride in being able to take care of themselves, and an appeal to this admirable trait should go far toward eradicating an evil, which in many places, has become a positive disgrace. It seems probable that imposing a penalty will not be found necessary.

#### THE VALUE OF COMMERCIAL COURSES OF STUDY.

A writer in one of the European pharmaceutical journals doubts the value of the commercial courses of study which some of our colleges have lately undertaken to supply. This writer argues that if any quality is innate, business ability is that quality. The attempt to determine by means of an examination the ability to carry on great commercial enterprises, and the granting of higher degrees by such institutions of learning, are held up to ridicule.

No doubt this writer is correct within the limits of his conception of the purpose of these commercial courses. It is, of course, absurd to attempt to impart any innate ability by means of a few courses of lectures, and thus convert the average student into a Carnegie or a Rockefeller. But, as we understand it, these institutions attempt nothing of the kind. Their purpose is not to supply a natural aptitude, which, in the nature of things, cannot be acquired, but to adapt modern higher education to the needs of the commercial, so that it may not be mere waste of time, but a positive aid to the student already possessing the qualities necessary for a business success. Much of the knowledge required in business is undoubtedly best acquired in the actual doing of things, but there is also much of this information which can be obtained in the lecture room with much greater certainty and dispatch.

According to a story which appears in one of our foreign exchanges, the would-be pharmacists of the French Republic also have their little troubles. At a recent examination, a candidate found difficulty in recognizing a specimen of crude drug. The examiner, kindly wishing to give the youngster a clue, remarked:

"Oh, come now, you certainly know what that is. Why, you use it every day."

"Of course—absinth," responded the candidate under a sudden inspiration.

As the leaves under consideration were of the species *Nicotiana tabacum*, it seems probable that the student is now devoting more time to the study of pharmacognosy.

The Deutscher Apotheker Verein is about to set a plan intended to enable its members to compete with the makers of proprietary medicines. Preparations made by individual pharmacists according to formulas selected by the society are to be sold under a trade-mark registered by the association. We fail to see how the operation of this plan can place the retailer on an equal footing with the manufacturers. No account seems to have been taken of the superior facilities possessed by the manufacturers, the greater economy possible in working up large quantities, and the difficulty of limiting the use of the selected formulas to the members of the society. To offset these difficulties remains only the right to use the society trade-mark. The value of this privilege will depend entirely upon the prestige of the Verein. To what extent the endorsement of a society will influence prospective purchasers we are not prepared to say.

The action of the Philadelphia Association of Retail Druggists in supplying the daily newspapers with a copy of a resolution of general interest with a request for editorial comment, is worthy of imitation by other bodies. The newspapers are now practically the only means of quickly and certainly reaching the public notice. An editorial comment by the daily press is far more effective for this purpose than any number of resolutions passed by bodies of limited membership. If the subject is of general interest, it should also have a distinct value as news, and should, therefore, be welcome to those whose business it is to meet the daily demand for something to read.

In our news columns recently was related the information that a certain Illinois retail druggist had gained considerable notoriety by displaying in his show-window a jar containing the heart of a colored individual who had been shot while stealing chickens. This is certainly a new departure in window displays, though it is not likely to be imitated by many members of the craft. Moral courage at one time was supposed to reside in the heart, but when placed on exhibition as a trade bringer we are afraid the sight of this part of the anatomy would make the heart of the average customer sink into his boots.

**CHINESE REMEDY FOR RHEUMATISM.**—In a recent issue of the *Drogisten-Zeitung* we find reference to a remedy with which a Chinese physician, formerly of the United States, purposed curing an attack of rheumatism with which Prince Chun was afflicted during his official visit to Potsdam. The remedy which he intended to employ was obtained from the skunk. In the preparation of this attractive substance the entire animal is boiled to a semi-liquid mass, which is then made into a salve and also into pills. A German druggist who had spent a number of years in California and Nevada testified to the efficacy of the preparation, but declared that Europeans who were treated with it nearly succumbed to the nauseating effects of the loathsome application.

**CAFFEIN OR COFFEIN.**—Dr. Vanino (*Chem.-Ztg.*) questions the propriety of employing the name *coffein* instead of *caffein*, a practice which seems to be common in Europe. The author prefers *caffein* as being the correct form of the word, which he states is derived from "caveh," an Arabian name used to designate any of a number of drinks.

### A WINDOW DISPLAY AND WINDOW DISPLAYS.

By WILLIAM F. PILCHER, Lyons, N. Y.

It has been said that goods well displayed are half sold, and this is particularly true of goods in the window.

I never make a display of any article unless I have enough stock to make a good showing. I don't mean to pile a window full of goods, and leave it so, for a window with too much stock displayed looks about as bad as one with half enough.

I recently had a display that not only attracted considerable attention; it was of bath supplies, and was the means of selling lots of goods for me.

I had a couple of large frogs that were left from an assortment of frogs I received with a gross of "Frog in your Throat." One of my frogs had flexible wire arms and legs, and could be adjusted to any desired position, and the other was made in a sitting position, and could not be changed.

From the hardware store I borrowed a small foot bath-tub, oval in shape, about two feet long, a foot wide, and a foot deep. I placed a few small boxes in the tub so as to bring the frog a little above the level of the edge, and placed the other frog near him, on a box, so as to represent the one giving the

other a bath in the tub. I tied a bath sponge in one hand and fastened it to the other frog's back, making the one frog look as though he were washing the other one. (See illustration). Around the edge of the tub I placed several small frogs, and filled the window with perfumed bath tablets, perfumed ammonia, toilet water, patented bath sponges, bath brushes, cologne, etc. On the sheeps'-wool sponges in the window I placed the sign, "Sheeps'-wool sponges, the kind that wear; from 20c. up." People passing would glance in, and then come back and look in again.

I always change my windows at least once a week, unless I have a special display, and then sometimes it goes for ten days or two weeks. No matter how good your window display is, people lose interest in it if it is left too long, and, besides, your goods fade and deteriorate in value.

I never display more than one line of goods in my window at a time, and very seldom give my windows to the display of patent medicines.

Watch your competitors' windows carefully so as not to have the same display in at the same time that they do, but, if this cannot be avoided, have your window better than theirs.

It is not necessary to spend all day on a window. Your time is worth too much. Have the boy get the goods out of the window, and the glass washed the first thing in the morning; you or the clerk can begin at the window by eight o'clock.

When you make a window display of an article have your ad. in the window co-operate with it. Either one of these methods of advertising is good, but the two make a very effective combination. After your advertisement is written have inserted, "See our window display of the above this week."

A window of sick-room necessities is very appropriate just now. You have disinfectants, ice-bags, fever thermometers, hot-water bags, night lamps, absorbent cotton, bandages, invalid cushions, and foods, atomizers, feeding cups and tubes, medicine droppers, formaldehyde generators, lamps, etc. These tastefully arranged in your window and an advertisement describing each running in your paper, supplemented, if possible, by some booklets for counter distribution cannot help but start for you a good trade on these articles.

Another good window display may be made with razors and shaving supplies. Get in a good line of razors that you can guarantee, and let people know it. Put them in your window, with a nice line of lather brushes, soaps, razor strops, talcum powder, triplicate mirrors, shaving mirrors, etc., and call attention to them.

A window of office supplies is very good. You have little labor-saving devices for the business man that, perhaps, he has never heard of, or he has never seen them displayed in good shape. Put in office books, rulers, erasers, patented ink wells, ink, typewritten paper, pens, carbon copying books, pencil sharpeners, pencils, pen racks, letter files, etc.

### VACATION.

A Plea For the Clerk.

By FRANK E. STYLES, Hempstead, N. Y.

The above definition may give to some folks an idea of what a vacation should be. Most people consider a vacation as a space of time to be devoted to picnicking and excursions; and a continuous going hither and thither until the specified time has passed, when they must return to work. Then they find out that instead of being rested and recuperated in health and strength, they are as tired as they were when they stopped work.

Who have vacations? Who need them? Who want them? Who get them? Who value them? These few questions cover the field very well. In answer to the first one it can be said that the large majority of pharmacists, with all their help, from the manager down to the errand boy, enjoy at some time in each year a short vacation, varying from a week for the errand boy up to two or three weeks for the proprietor; and this, understand, means salaries paid as if the help were working. In answer to the second question, it may be said that every regular employee needs a vacation once a year, by all means. The long hours of the profession, the heavy drain on nerve force which, is constant and wearing, works to the detriment of good health. Man needs rest, and if he does not get it after a protracted strain on his system he will break down, and then will be of no use to his employer and of not much account to

The Era pays \$5.00 for each accepted contribution to this department. Proprietors and clerks are especially urged to relate their experiences and offer suggestions on all phases of the practical business side of pharmacy. Make your papers short, about 1,000 words (one Era page) in length.

himself. The third question is very easily answered. Everybody, every pharmacist, wants a vacation. It is quite natural for man to want to take his ease. An employe looks forward to a vacation with pleasure. He works hard to get his work up in shape for some one else to take hold of it, if necessary, when he leaves off, and when he returns to work it is with a feeling that he has had a rest and can work with a will.

It is a matter of fact that the employers of all business houses get vacations. The length of time allowed depends on the line of business, what kind of a firm it is, relative to its methods of doing business, and who the employe is.

The fifth question might be left for the reader to answer; but, I believe that human nature does not vary so much that I would be mistaken if I should say every pharmacist, or every person in a pharmacy enjoys the vacation, and values it.

It has become a recognized fact that a person cannot work for a long and indefinite period and show the same vigor and force in performing the task at hand. The need of a breathing spell several times a day, a chance to sleep, are evident, and these are the first reminders that it is necessary to have a little more rest at some regular interval to give nature a chance to restore vitality to its full force. There is at least one very strong reason why a pharmacist needs a vacation, whether some other clerk does or not, and it is this: The pharmacist's work requires his attention so exactly, and the hours are so long, that he surely should have an opportunity once a year to have an extra breathing spell. In some locations, an afternoon and evening are given off each week and all Sunday, every other week. Well, this partially compensates for the extra long hours during each week, but it does not give the much-needed chance of rest to the regular year-around clerk. Why is it that a large majority of business houses give their employes a vacation? There certainly must be something in it for the proprietor, else it would not be done. The successful business man is not the one to give for the sake of giving. He generally gives when he sees he may reap something in return. There are at least two points that might be considered at this time, the second one being dependent on the first. The first is this: He gives a vacation to his help for the benefit of the help. The second is undoubtedly a question, and can be put thus by him: "Do I get anything out of it?" No matter who the help may be, it is certain that the vacation is much appreciated. The gift, which it certainly is, is like a dividend declared in favor of the help for showing interest in the employer's behalf. With the conscientious employe this little "tip" makes him feel that his efforts have been appreciated. To answer the employer's question, "Do I get anything out of it?" I would answer, certainly. You keep closer in touch with the employe. There is an increased feeling of interest in your behalf which causes the employe to work harder for your interest when the vacation is over.

There is another side to the vacation question. The proprietor takes a vacation without having to ask any one. That is perfectly right; if he feels like it, it is his right. At the same time his faithful employe cannot take one, no matter how much it may be needed without asking for it, or if taking it without leave, is liable to forfeit the position. The proprietor is conceded to be making money and can afford to take a vacation better than the employe can. When the proprietor goes on his vacation his income continues the same as if he were there; while if the employe takes a vacation, and he be a man of family, his regular weekly expenses begin to swallow him up, as it were, because his salary has just been sufficient to keep his home establishment running smoothly without being able to lay anything by for a "rainy day," and much less for a vacation.

A homely old saw, which is often repeated: Promises are like pie-crust—made to be broken.

## THE UTILIZATION OF SAWDUST.

By W. DONAGHY, Hudson, Mass.

The disposal of the sawdust has always been a troublesome question to saw-mill owners. This applies particularly to Canadian saw mills, where the product of a few days is more than enough to supply the season's demand. Some mills have gone to the expense of building incinerators, while others have been satisfied to dump it in the rivers that pass their doors and let it go at that. Naturally this latter method had the disadvantage of polluting the streams, filling up the channels and destroying the fish.

With a view to obviating this wasteful and destructive practice, and to turning the material into more useful channels, V. L. Emerson has patented a machine which is designed to overcome the many defects of earlier inventions along the same line. It consists of a retort which is placed upright and encased in brickwork, built in such a way as to allow the heat to circulate around it.

Within the retort, and projecting from its lower end, is a tube several inches in diameter, which extends nearly to the top of the retort, and is capped at the upper end, the lower end resting in a seat. To that portion of the tube inside of the retort there are attached, at intervals, cone-shaped or bell-shaped castings, slightly less in diameter than the retort, leaving only a narrow space between their rim and the retort, and well up under these cones the pipe is perforated by several holes. The retort is surrounded by a hopper, into which the sawdust is fed. Passing into the retort it strikes the first cone, which, revolving slowly, scatters it outward toward the retort which is heated to the proper temperature. It then falls to the next cone, and so on, until it reaches the bottom of the retort, when it is ready to be removed as charcoal. This is done by a worm working in a horizontal tube, one of whose ends terminates in the base of the retort. A sufficient length of this tube is encased in a trough of running water, as otherwise the carbon would inflame spontaneously upon reaching the air.

The vapors pass through the perforations in the tube under the cones, to the base of the tube, then they are conducted to an atmospheric condenser, where the tar condenses first, and is taken off through one pipe, while the light oils and aqueous vapors are condensed further on and escape through another pipe. The uncondensable gases pass through a scrubber, and are otherwise purified, then through a positive blast fan, which forces some of the gas through a coil of pipe heated in the descending flue of the furnace, thence back into the retort, the fan thus causing a slight pressure in the retort and a slight vacuum in the central pipe.

The surplus gas is fed into the furnace after passing through a trap to prevent explosion, and is sufficient to heat the retort. The heat from the furnace passes up around the retort, then down a back flue containing the coil of gas pipe, then through a blower to the drier, where it is used to dry the sawdust.

The entire process is continuous, the hopper being kept full of sawdust by a carrier from the dryer. As the contents of the retort are reduced by removal or shrinkage, a valve opens and admits enough new material to supply the deficiency, and then closes again, allowing no vapors to escape.

These carbonizers are intended to be built in batteries of any number, according to the quantity of sawdust to be utilized. A small engine drives the central spindle or tube, the carriers, fans, and the worm that withdraws the carbon from the retort. The retort is placed a little to one side of the furnace, so that the lower point is not exposed to the direct heat.

Several tests of a single carbonizer were made, the figures of one test being as follows:

Ten thousand pounds of white pine sawdust were dried to 5,000 pounds, and passed through the carbonizer, yielding the following products:

Charcoal, 1,234½ pounds; acid liquor, 1,088½ pounds; tar, 145½ pounds. The same amount of red pine sawdust yielded: Charcoal, 1,437 pounds; acid liquor, 1,513½ pounds; tar, 146 pounds; and of spruce: Charcoal, 1,515 pounds; acid liquor, 1,218 pounds, and tar, 157½ pounds.

The time occupied to pass these through the carbonizer being about ten hour for each, or at the rate of six tons of dried sawdust for each carbonizer in twenty-four hours.

## THE BACK SHOP.

By MISS MEDORA A. GORMAN, Haverhill, Mass.

There are all kinds of back shops: clean ones, dirty ones, rich ones and poor ones, but I think this one is unique in its uses and findings.

A city store? No! A city store could not produce the wonders to be found here. It is a real country shop, conspicuous for the absence of anything that looks like fixtures.

A prescription desk or tablet case would be out of harmony with the general surroundings. Boards nailed around the walls hold the stock. There are two oil stoves (used for many things besides prescription work and manufacturing), and a safe—burglar-proof (?), locked with a big brass key, that would make one think of the Blue Beard story. The boy is the only link that connects the shop to this century. He is strictly up to date.

The chief article of furniture is a large parlor stove, around which the affairs of the neighbors and the nation are discussed with a great deal of solemnity, and many wise counsels given, which the neighbors and our mighty statesmen never have the good fortune to hear.

A regular train of visitors gather every morning. The 'Squire' is usually first. He plans to come in a few minutes before the constable, for he always needs a morning dose of the following prescription:

|                        |     |
|------------------------|-----|
| Spiritus frumenti..... | 5ij |
| Aqua pura.....         | ʒij |
| Syrupii simplex.....   | ʒi  |

After taking this for his liver, so he tells us, he is ready for action. He and the constable are generally on one side of an argument, and the selectmen defend the other.

I remember one day a traveling Indian medicine man came to town, and offered to cure all ills, and show in moving pictures the battle of Vinegar Hill. No one knew just where this battle was fought. The 'Squire and constable held that it was one of the decisive battles of the Civil War. They could not exactly locate Vinegar Hill, but knew it was somewhere in the South. The selectmen declared it was one of Napoleon's defeats, and thus kept the back shop busy all morning. Finally, in order to settle the matter, the medicine man was sent for. When he said Ireland, the 'Squire and the constable were ready to commit him to the State insane asylum. The selectmen were jubilant because the 'Squire was beaten. I don't believe to this day they are sure of where Vinegar Hill is.

The 'Squire and his friends were not the only "curios" this back shop can boast of. I am sure some of the drugs belong to past generations, and could tell tales of great moment of dead and gone 'squires and constables. The bottles have the dust of ages for a covering. It is too sacred to the past to be removed. Crude drugs of all kinds are in evidence, for many a one in this village brews his own herb tea. Five cents' worth of skull cap and five cents' worth of pink root is a favorite mixture. We often hear of a man brewing a nightcap for himself, but as a rule the physician or the druggist brews the skull cap.

I actually found in this dear, old-fashioned store an ounce or two of picra, left, I presume, as a relic of the good old time a hundred years ago. What a boon this would be for some poor young man studying for registration before a certain state board in the East. He would be sure this favorite mixture

was, at one time, kept in drug stores, and was not a myth, as he had been led to believe in his fruitless search for it.

Indeed, this back shop is a splendid field to study for many State Board questions. Dragon's blood is a great seller, and kind of a specific. It makes a cure-all, mixed with snake root. Perhaps these were the herbs Shakespeare's witches brewed together. Surely a combination of skull cap, snake root and dragon's blood would either kill or cure, if there is any virtue in a name.

The prescription file is an object of veneration, and is seldom used. I saw one order filed away very carefully, marked "Opeldilock." About fifty prescriptions in all, dating back nearly six years.

The villagers stand in awe of the doctor and his fee. The undertaker, who is also the jeweler, librarian and bicycle agent, is a constant attendant at the back shop conferences, watching and waiting for his prey, but I never knew any one to die. I do not believe a concoction of all the drugs in the back shop would kill the 'Squire or his friends, and I am sure the place would be very lonesome without them.

The neighbors would miss their good advice, if these village oracles were gathered into the great beyond. This quaint old back shop would lose half its charm if the old stove were not surrounded by these guardian spirits.

It is such a rest at times to get away from the busy to-day and look at the world, as it were, from a distance with the eyes of our grandfathers that I hope this old back shop will not change either its visitors or its stock for many a year to come.

## SHOP TALK.

There is a certain druggist in Philadelphia—on Easy street now—who sells more seidlitz powders than any four of his competitors. Why? Because he buys his rochelle salt, bicarbonate of soda and tartaric acid in the finest powders, made from clean crystals, and makes his clerk sift the powders through a fine sieve until every particle of dirt is removed from them. Now, a seidlitz powder is often wanted by a person whose stomach is more or less upset; to such a one the sight of a floating scum on top of the water in which the powder is dissolved is very unpleasant, even disgusting; it may be anything, he thinks. Yet druggists will mix up seidlitz powders from salts which have been lying in dirty drawers or boxes, with never a thought of the dirt and trash clinging to them, and he wonders why he sells so few seidlitz powders. The same thing holds good, too, in many other ways—phosphate of soda, epsom salt, in fact, any salt or powder that is dissolved in water before taking. How disagreeable it is to stir up a dose of salt in a tumbler of water and then have to fish out bits of wood, dirt and scum before it looks fit to take. Wouldn't it make you think the drug store it came from was dirty? All such things should be as clean as it is possible to get them, then they should be kept clean, in tight drawers or bottles, not in open barrels, drawers without lids, or in paper bags, to accumulate dirt and dust. People often judge a store by little things, and one of the little things is the clean or dirty look of the medicines or drugs they get from a drug store. Another thing, do druggists always take pains to send out all solutions of salts, alkaloids, etc., perfectly bright and clear, free from floating particles and dingy look? They might if they only stopped to think, for people often judge of the quality of both medicine and service, and professional skill, by the way the medicine looks. The man who sends out his prescriptions bright, clear and sparkling will get the preference every time over the one who just puts in the salt and the water, and shakes 'em up. Filter paper is cheap, cotton is cheaper, and it takes little time to run eight ounces of a solution through absorbent cotton strainers.

A valuable hint to druggists located in suburban or outlying districts of large cities, or in country towns, may be gathered from the idea of one or two progressive Philadelphia druggists, who posted bulletins in their show windows during the recent yacht races. City druggists can easily arrange to get bulletins from newspaper offices by telephone on any event in which the public is interested, and the enterprise that takes the trouble to post up frequent and reliable bulletins will carry the country druggist through. Does it pay? "Well, rather," was the reply of one of the druggists above mentioned, who had tried it. "I not only got a big crowd in front of my window, in which I had a fine display of toilet goods, but I also got the reputation for being the most enterprising druggist in my neighborhood, and my sales are daily increasing since I started the bulletin scheme." The Era man suggests that druggists make it a point to post bulletins of the coming big football games in their windows this fall, and take pains to impress their neighborhood that the best and latest news will always be found in their windows on days when games are played. Then, dress your windows for that day with an extra fine display, with price cards on every article. During intermissions between bulletins the crowd will rather enjoy having something to look at to pass the time, and they will be dead certain to look at every thing you have in your window, and remember a lot of what they saw. You will gain a reputation for being enterprising and accommodating at small cost, which will make your name known throughout your neighborhood, and will at the same time get a splendid chance to attract attention to any line of goods you may want to sell. But don't post up bulletins in a shabby window.

\* \* \*

There was a letter from a country store keeper in "Printer's Ink" lately, that is full of interest to druggists as showing a simple plan by which they can make a fairly accurate canvass of their neighborhood, especially is the idea valuable to druggists in small towns. The scheme is this: Advertise that on a certain day you will give a card, free of cost, to every caller in your store, entitling him to a chance in a drawing for some prize; make it strong that everybody in your town who comes in, whether he buys anything or not, will get a card. Then, when the people come, take down the address of each when you hand out the card; no one will object to this if you tell them it is to identify the winner of the prize. You will then have a pretty good directory of addresses, against each of which you can note the appearance, etc. of the parties. As a further aid to trade, offer, say, a bottle of perfume as the prize, then ask each caller his preference in perfumes! that will give you a mighty valuable list of individual preferences if you work it up. Take soda water, make the prize a dollar's worth of tickets, ask each one's preference in flavors; that will tell you what flavors you will need most, etc. By offering different articles, and asking each individual's preference, a shrewd druggist can get at the foibles, likes and dislikes, of his town, if he lives in a small one, that will be a gold mine to the man who has sense and push enough to take advantage of such an invaluable directory. Try it. some of you country druggists, and learn why you don't sell this or that and why people go to your rival's store for certain things he pushes, and city men, too; it may be worth your while.

\* \* \*

The sale of clinical thermometers and thermometers of all kinds is particularly the province of the druggist, still he need not work up trade in a way overheard in a Philadelphia department store the other day. The customer, a woman, was looking at thermometers of the 10 cent kind and was asking as to their accuracy; the clerk assured her that each and every one was carefully tested and was absolutely correct. "Then why do those at this end of the basket say 76 when those others say 81?" she asked. That was where the clerk rose to the occasion. "This, madam," he replied, "only shows how very

accurate and sensitive they are. You will observe that this end of the basket is turned toward the sunny side of the store; the thermometers there register 81 degrees, the others are toward the shady side and register only 76. If you will examine them carefully, you will see that no two register alike, which shows that each one is affected by a different stratum of heat about it, which could not happen unless they were remarkably delicate and accurate." "Oh, I see now," exclaimed the woman, enthusiastically. "I never did know why they were so different before. You may give me one from each end of the basket, please."

\* \* \*

One of the Campbell brothers, who run two drug stores in St. Paul, has a method of bringing delinquents to time that is quite apt to be successful. When he has reason to believe that a customer who is in arrears is unwilling rather than unable to pay, or is an out-and-out dead beat, he duns him sharply in the presence of that customer's friends. The back-number account is very apt to be settled on the spot. Mr. Campbell does not, like many druggists, destroy old outlawed accounts. He preserves them all religiously, and frequently succeeds in collecting one. Furthermore, the list is valuable for reference, as it warns him never again to trust certain people.

THEIN IN DIFFERENT PARTS OF THE TEA PLANT.—According to U. Susuki (Bull. Coll. Agric., Tokio Imp. Univ.) all parts of the tea plant, with the exception of the seed, contain thein in greater or less proportion. Among the author's conclusions are the following: The formation of the alkaloid in the germinating seed cannot be ascribed to a simple splitting up of the proteids, because no thein is produced when these bodies are treated with hydrochloric acid. Light seems to have no influence upon the formation of the alkaloid, for this body is found in etiolate shoots as well as in parts exposed to the light. The cotyledons of the seedling contain some alkaloid, although very little. The stem and roots contain a moderate proportion of thein, but considerably less than the leaves. The leaves contain the largest proportion of the alkaloid, the percentage depending upon the development of the leaf. Thein is not a synthetic product like asparagin, but one of catabolism. The bark of the stem contains only doubtful traces of the alkaloid, while resting buds are moderately rich.

ALKALOIDS OF SANGUINARIA CANADENSIS.—Fischer, in an account of an exhaustive study of the alkaloids of *Sanguinaria canadensis* (Archiv. des Pharmazie), confirms some of the results obtained by former investigators, while others are found erroneous. König first pointed out that the alkaloid which had been named sanguinarine by Dana, and shown to be identical with chelerythrine by Probst, was a mixture of three or more substances. One of these bodies is an alkaloid yielding red salts, and has been called sanguinarine; another, which seems to be the principal base, yields yellow salts and is named chelerythrine; and a third is homochelidonine. Fischer confirms the formula  $C_{23}H_{23}NO_5$ , obtained for chelerythrine by König. He also found that this body when crystallized from alcohol retained alcohol of crystallization. The formula advanced by König for sanguinarine ( $C_{28}H_{27}NO_4$ ) is also confirmed by Fischer; but that of homochelidonine is found to be nearer  $C_{21}H_{21}NO_5$  than  $C_{21}H_{21}NO_6$  as found by König.

ONONINE is the subject of renewed investigation. This body, which is a glucoside from *Ononis spinosa*, has, according to Hlasiwetz, the composition  $C_{20}H_{20}O_{10}$ . This chemist also stated that this compound melts at 162 degrees C, and that upon hydrolysis it is decomposed into sugar and ononine. In more recent investigations Hemmelmayr has found the formula of this compound to be  $C_{21}H_{20}O_{10}$ , and its melting point 172 degrees C. He also found that in the decomposition of this body a number of isomeric compounds are obtained.

# NATIONAL ASSOCIATION OF RETAIL DRUGGISTS.

## THIRD ANNUAL MEETING.

HELD IN BUFFALO, N. Y., OCTOBER 10-12, 1901.

### THE PROCEEDINGS IN DETAIL.

#### FIRST SESSION.

THURSDAY, OCT. 10.

Buffalo, N. Y., October 10.—President William C. Anderson called the third annual convention of the National Association of Retail Druggists to order at 10 o'clock Thursday morning in Convention Hall. He was greeted with cheers from two hundred and six delegates, representing one hundred and thirty-one associations of retailers from twenty-nine states and territories. The first business in order was the appointment of the Committee on Credentials to determine the standing of the various delegates and to decide upon the proxies to be admitted. The personnel of this committee was W. O. Fraley, Pa., Charles Freericks, Ohio, and W. E. Bingham, Ala.

Hon. Conard Diehl, mayor of the city of Buffalo, then delivered an address of welcome, extending the hospitality of the city to the druggists. In the course of his remarks, he paid many compliments to the profession, referring to their consequence in catering to the wants of the public and bringing down his hearers frequently with humorous allusions to their "mysterious" calling. The response on behalf of the convention was made by J. W. Seeley of Detroit in a speech which, as an ex tempore effort, did him great credit. A further welcome was extended the visiting pharmacists in short addresses by Thomas Stoddart, president of the New York State Pharmaceutical Association, and President J. A. Lockie of the Erie County Pharmaceutical Association. After the addresses of welcome and congratulation, D. W. Cowan of Buffalo, took the rostrum as a representative of the National Wholesale Druggists' Association, recognizing the good work of the Retailers' Association and pledging the co-operation and good will of the jobbers in furthering its aims. Mr. Cowan was greeted with an enthusiastic reception and was vociferously applauded at the conclusion of his remarks.

The convention business was formally begun with the admirable address of President W. C. Anderson, who came out strongly for the Worcester plan and showed wherein the tri-partite agreement had been a failure. Mr. Anderson did not hesitate in the delivery of his strong opinions, defining his position exactly before the convention and advising the action that he thought would be for the best interests of the N. A. R. D., the adoption of the Worcester plan or other price restrictive system. The address, although anticipated, created a great furor. The convention was obviously divided as to its main points, some favoring the recommendations made and others preferring to adhere to the tri-partite agreement and allow the new proposition to develop and mature before its final adoption, as was proposed in the contested and doubtful report of the Executive committee submitted immediately afterward by F. E. Holliday, who brought in the report personally with only the consent and not the endorsement of the other members of the committee. It was finally decided, after a prolonged discussion to submit the portion of President Anderson's address relating to the price restrictive plan to the convention as a committee of the whole at the Friday session, and to refer the remainder of it to the Committee on resolutions. President Anderson after briefly stating the objects of the association and calling attention to the fact that its principles now enjoy the support of 400 affiliated associations, entered upon a discussion of the subject of paramount interest to the association—the methods of combating the cut-rate evil, as follows:

#### PRESIDENT'S ADDRESS.

##### The Numerous Interests to be Considered.

In reviewing the important subjects that will be brought before you, due consideration should be given to the fact that the past year has been in a great measure an experimental one.

The numerous interests to be considered and various ideas to be notified and concentrated added greatly to the difficulties that had to be overcome in arranging a plan to carry out the gigantic undertaking of the N. A. R. D. In fact, these conditions appealed so strongly to many of those who ushered the N. A. R. D. into existence, that the feasibility of attempting negotiations with other branches of the trade whereby better commercial conditions could be secured to the retail section or to take advantage of the inherent power of the retailer to produce and thus protect himself against the sale of goods that fail to pay a reasonable profit, became an important issue.

The retailer, however, demonstrated his usual good will and generous disposition by recognizing the condition of the other branches of the trade and in deference to the wishes of their representatives adopted a policy of reciprocity and co-operation.

##### Cut-rate Evil the Cause of Unsatisfactory Conditions.

Each branch of the trade was confronted with conditions that were detrimental to its interests, the primary cause of which could be easily traced by the CUT-RATE EVIL. Consequently any plan that might be arranged by the N. A. R. D. and approved by the other branches of the trade for a renewal of satisfactory trade conditions, must have for its principle object relief from, or a substantial modification of the cut-rate evil, with such regulations as will save for the proprietor his favor with the retail trade and maintain its co-operation in making products popular and valuable in the eyes of the public, and provide protection for the jobber in consideration of his position as a distributing agent.

WILLIAM C. ANDERSON,  
Brooklyn, N. Y. Retiring President.

assumed that these were the only ones who were willing to or did live up to their agreement. Some no doubt acted without giving notice of it while others were placed in uncertain position by conflicting notifications.

#### Effects not Satisfactory.

The general understanding of the position of the Executive Committee of the N. W. D. A. together with resolutions adopted by the P. A. of A. left little doubt as to the source from which notifications of violations of the tripartite agreement were to come and in order to avoid complications the official list of wholesale distributors that was placed in the hands of each proprietor as a guide for the distribution of his products should have been subject to immediate changes in conformity with such notifications, but the want of uniformity we found that while your committee's notification was duly circulated the name of the firm thus reported still remained on the list of accepted jobbers and inquiry developed the fact that this list unlike other reports pertaining to the work of the N. W. D. A. was printed, circulated and controlled by the Proprietary Committee of the N. W. D. A. and at the January meeting of our committee we were informed that while we might suggest or request the power to remove a name from that list was held by the Proprietary Committee of the N. W. D. A.

#### Conciliatory Methods Tried.

The act of the Detroit convention in approving the engagement of the chairman of our Executive Committee by the Proprietary Committee of the N. W. D. A. brought the two committees into such close relation that a contest as to authority in this instance so early in the year and just as concerted action was so much needed, would have been most unfortunate; especially so in view of the fact that the process proposed by the Proprietary Committee of the N. W. D. A. that of inducing violators to change their action by conciliatory methods gave some promise of strengthening our position, but experience soon proved its weakness, for violators were repeatedly appealed to and forgiven only to be caught in similar acts again. Until failure to remove the names of such offenders from the process the appearance of a protection of the wholesale interest rather than a benefit to the retail trade and after much discussion and careful deliberation your committee decided to demand that the proprietors do their duty and the refractive wholesalers be dealt with as designated in their agreement. As this conclusion was not arrived at until late in August its effects can only be conjectured but the manifest fear of the consequences of resorting to the full provisions of the tripartite agreement by those most familiar with its arrangement and workings, the memory of the results of our first effort in this line and the knowledge that the owners of the vast quantities of tripartite goods in their trade, leads me to express the opinion that this or any other plan, the provisions of which offer so many inducements for the exercise of such methods and open so many channels through which violations of agreements may be conducted with slight possibility of detection and even less possibility of effective punishment when violations are detected, the success of which actually depends upon the sincerity and integrity of so many dealers, never can carry out the purposes of this organization and extend universal benefit to the retail druggists of this country.

#### The Effects of the Plan of Benefit Only to the Few.

This opinion is given after due consideration of the fact that through its existence if not to force the tripartite agreement has indirectly benefited the retail dealers in certain sections. The hope which its provisions gave stimulating organizations to such an extent that in some localities conditions are so favorable and too much antagonism did not exist or the financial condition of the would-be aggressive cutter or desired advantage over the remainder of the trade given to the more independent opposer, so that the advanced schedule of prices has been inaugurated but as experience has taught, the maintaining of a definite schedule of prices upon a simple promise without something to force adherence, is usually unsuccessful, so in these cases while some continued others soon found themselves in the old rut again and most earnest efforts on the part of committees and local associations has not been able to overcome the tendency to depart from the advantage over their competitors when nothing more substantial than their integrity was at stake. Even had the results in these instances been more favorable my contention would not be successful, so in these cases while some organization and its objects cannot be accomplished unless its benefits are extended to the members of every affiliated body throughout this land. A process that would benefit a few at the expense of the rest is not in conformity with its purposes or the expressed desire of its members.

The cordial relations between the retailers of every State and Territory in the Union engendered by the formation of the N. A. P. and the interest and sympathy created thereby, naturally causes the pharmacist of one section to rejoice over the success of his fellow tradesman in another if such success is attained without injury to any, but to secure the same for one or another section the process requires the forfeiture of beneficial rights by others as is the case with the present conduct of the tripartite agreement, these cordial relations

R. K. SMITHER,  
Buffalo, N. Y., First Vice-President.

must be weakened and this interest and sympathy that is so essential to strong organization diminished.

#### The Worcester Plan More Desirable.

The unsatisfactory situation that presents itself today and the condition of our affiliated associations many of which are clamoring for some of the promised benefits and some even that have been able to maintain a schedule of prices implying a lack of confidence in its continuation under the present system by their appeals for a more definite policy together with my anticipation of the possible results of changes that would be entirely experimental, would place me in an embarrassing position were it not for the fact that a true friend of the retail drug trade has for a long time devoted much valuable time and money to demonstrate the feasibility and lawfulness of a plan that will afford absolute relief from the cut-rate evil and maintain a definite retail price on proprietary remedies and my personal thanks as well as that of this association are due Dr. Julius Garst of Worcester, Mass., and his able assistant Mr. J. Leyden White. Through their efforts I am able to present to you a plan known as the "Price Restrictive Plan" or "Worcester Plan" which consist essentially of the sale of proprietary remedies under a contract containing the conditions of sale the minimum retail price and the changes to which the proprietor will be entitled for each violation of the terms therein specified.

The provisions of the plan have been sustained by the courts of a number of States including Massachusetts and Ohio without an adverse decision and preparation is now being made for tests in other sections. As the substance of all decisions thus far rendered is embodied in that of the Supreme Judicial Court of Massachusetts, it will only be necessary for me to append a copy of this, in order to show the principle involved in all.

Copies of the decisions in the following cases were submitted in proof of the speaker's statement—Garst vs. Harris, Holmes, C. J., Commonwealth of Massachusetts; John D. Park & Sons Co. vs. The National Wholesale Druggists Association, Supreme Court, Appellate Division; Kodak, Limited vs. A. W. Gamage, Ltd. & F. Wade, Kings Bench, London, England; Owl Drug Co. vs. P. W. Braun & Co., and Hans Bruch & Co., Superior Court, Los Angeles, California. The chairman then continued as follows:

#### Further Evidence.

Other evidence in support of the force and stability of the plan is the fact that a number of firms are maintaining the designated retail price on their products through it. These include the Shaw-Elliott, Earl & Wilson Collar, Waterman Fountain Pen, Sorosis, Edison Phonograph, Eastman Kodak and Forsyth Kid Gloves. The earnestness with which they maintain their principle is proof of its value to their business and

THOMAS V. WOOTEN,  
Chicago, Ill., Secretary.

counteracts the argument that maintaining a fixed retail price reduces sales and stimulates substitution.

Substitution was never caused by full prices and living profits and the greater the profit the less incentive to it.

While low prices and reduced or no profit will sooner or later bring forth a substitute for the most carefully guarded article.

Retail dealers must live and as if manufacturers who desire to use them as their distributing agents after having the means placed at their disposal do not protect them; they are duty bound to use every lawful and honorable means to protect themselves.

#### Advantages of the Plan.

The value of a price restrictive plan is shown by the following:

1. Its success does not depend upon the veracity of any man or body of men but is attainable through actual force of law.

2. The difficult and almost impossible tracing of goods is unnecessary as disposing of them at less than the specified price with knowledge of the conditions of sale is sufficient cause for prosecution regardless of how they are obtained.

3. Notification of conditions of sale is valid if served on dealers at any time whether goods accompany it or not.

4. It will not interfere with the progress made in any section but increase the opportunities of all.

5. It will stimulate old organizations and encourage new ones by giving something substantial in return for their labors and expense and bring the N. A. R. D. the support of every retailer in the land.

6. Besides restoring prices on most articles it will do the retail trade a great service and place it in a position to act decisively by settling beyond a doubt that important question as to who of the proprietors are their true friends and consequently entitled to their good will and support and who are not.

7. It avoids the possibility of proprietors gaining the good will of the retailer through promises he may or may not keep and places each in his proper and indisputable position before the retail trade of the country, an advancement which alone will enable the retailer to better his commercial condition by placing him in a position to favor those who favor him and oppose those who oppose him. One of our greatest needs today is a positive understanding in this respect, for we can never make a success of any movement while the sincerity of those upon whose co-operation we depend is in doubt.

8. It will relieve the proprietors of much uneasiness and doubt by giving them the assurance that their advertising matter will be judiciously used, window displays of their products made, and their sales stimulated and business increased by the retail trade. The

interest of our affiliated associations will also relieve them from searching for violations, obtaining evidences, etc., and to a great extent the trouble and cost of prosecution, for the equity of the plan demands that each shall do his share and after the proprietor places his products on the market under a price restrictive plan, associations of retailers should see that it is made effective in their respective towns, cities, countries and States.

9. While the success of the plan depends to some extent upon successful prosecutions, experience has shown that as a rule these are unnecessary. The knowledge of the conditions of sale and possible consequences of violating the same usually causing strict adherence without a contest.

10. The fact that the retail price is fixed by the proprietors and is universal, thus avoiding the possibility of competition and securing a better profit for all, has much influence in obtaining willing accord.

11. The interest of the jobber is protected and he is placed in position to do effective work for the proprietor and retailer; receiving his proper proportion of benefits and at the same time being relieved of the disagreeable and in some instances detrimental cut-off list.

12. The benefits of the plan cannot be secured by any branch of the trade unless the retailer receives his just share.

After calling attention to the necessity of united organization and the impossibility of maintaining this under existing conditions, the speaker recommended that all branches of the drug trade be relieved from the provision of the tripartite agreement, and a plan of price protection which be formulated in detail be adopted. The relations of the Association with affiliated body was briefly dwelt upon and the attitude of the Pharmaceutical Press commended. The finances of the Association were reported to leave considerable room for improvement.

After advocating the adoption of certain changes in organization the speaker concluded as follows:

In conclusion I desire to assure you of my sincere appreciation of the many courtesies received, extend my thanks to all who have assisted in the work of the year and express the hope that every proposition that comes before you on this important occasion will be met with such calm deliberation and firm unselfish action that the grand objects of this association may be subserved and our organization sent forth with the hearty approval of every delegate to make the coming year the most important and successful in its history.

To the end that our relations with the other branches of the trade may be made more firm and our business conditions greatly improved with honor to our association, honor to our constituents and honor to the noble calling it is our privilege to represent.

F. E. HOLLIDAY,  
Member of Executive Committee.

## SECOND SESSION.

THURSDAY, OCT. 10.

The afternoon session opened with the report of the Executive committee which was presented by F. E. Holliday of Topeka, Kan., upon the consent of the committee, but was assigned, the division upon its contents and the contrary tone of the president's remarks becoming more apparent. The report of the Executive committee was referred to the Committee on Resolutions as a minority report after a spirited contest not lacking in bitterness. In this struggle the tri-partite forces came out strongly and it was thought at the end of the session that an attempt would be made to resurrect the committee report and send it to the convention as a committee on the whole. The committee report which is opposed to President Anderson's address is as follows:

## EXECUTIVE COMMITTEE'S REPORT.

## Work of the Past Year.

The Detroit Convention ratified the Tripartite Agreement and it is in accordance with this plan that the Executive Committee has been working the past year. The first two years of the National Association of Retail Druggists was of necessity devoted to organization and preliminary work, and it was not until a little more than a year ago that we were able to put into effect a definite working plan. That plan was originated by the N. A. R. D. and, when adopted by the jobbers and proprietors, became the Tripartite Plan. When the terms of the plan were officially communicated to the affiliated bodies it was accomplished by such suggestions from the executive committee as, it was thought, would enable every locality to work in substantial accord and with unerring effectiveness. It seems, however, that in spite of all labor and effort to make the plan, and the policy of the N. A. R. D., in carrying out the plan, understood, some misinformation and inattention to duties has resulted. The committee has no complaint to make of anyone, but feels that the future of the organization can only be assured by calling attention to the delinquencies and shortcomings that they may be removed as far as possible in the time to come.

## The Adoption of Price Schedules.

The question of what the schedule upon which seventy-five per cent should agree might be, was left under the tripartite plan to the N. A. R. D., and by that body it has been left to the local associations affiliated with the national organization. Different communities find it advisable to adopt different schedules, and in some cases, as in Chicago, one city may have several schedules each of which is satisfactorily maintained. It should be the rule to base cut-off contests as closely as possible on the principle of aggressive cutting, and not to involve a war over differences in a schedule which can in nearly all cases be adjusted in a few months time at the most.

## Failure to Report Cutters.

Each local body, having the privilege and duty of naming the cutter, should, as a corresponding duty, assume the work of furnishing jobber and manufacturer with such evidence of sources of supply to aggressive cutters in their locality as would enable the jobber and manufacturer to act promptly and intelligently in stopping the supply. In this latter duty, many of the local associations have failed, thus hampering the work and throwing the burden of tracing the source of supply elsewhere.

As to the seventy-five per cent provision; as enforced in the past it means that proportion of the trade should agree upon a minimum selling schedule. Whether they were active members of the local bodies that was immaterial. As a matter of fact, however, experience proves clearly that no local body should depend upon a membership represented by merely nominal consent to a schedule. A membership should be active, determined and united; otherwise it will frequently prove ineffective in the accomplishment of results. This has been demonstrated during the past year.

## Inefficient Work of Local Associations.

In a very few instances have the local associations reporting aggressive cutters complied with all the conditions assigned them as their part. Some have not thought it necessary to unite the requisite seventy-five per cent; some have not employed public or business like measures to secure the co-operation of persons selling at less than full prices; some have overlooked the fact that it is the policy of our association to put aside all feelings of animosity toward the department store or the cutter; and a few have furnished proof of the source of supplies to aggressive cutters. The local body has not done its whole duty when it saddles a cut-rate war upon the national association and then proceeds to sit down and do nothing. Such action has caused much loss of time to the officers when it should be possible for at least a portion of the work to be done more expeditiously by local bodies.

## N. A. R. D. a Power for Good.

It is gratifying, however, to be able to report distinct progress for the drug trade interest under the operation of the plan. The condition of the drug trade as a whole is better now than it has been for many years. This improved condition is for the most part due directly to the efforts of the N. A. R. D., and the N. A. R. D. is to-day displaying power and influence in the drug trade because it has been able to unite jobbing, manufacturing and retailing interests in a common plan with reciprocal duties as nearly equally balanced as it is possible under the circumstances. The N. A. R. D. movement represents at the present time the strength and power of the N. A. R. D. in the control of the proprietary drugs trade and in all questions requiring the co-operation of other branches of the drug business. Without it there would be no concerted action until some new plan had been tried and years again spent in demonstrating its desirability and feasibility.

The plan has undoubtedly operated strongly to prevent the spread of the cutting, for notwithstanding the prosperous condition of the country, very few stores have ventured upon a cut-rate policy which were not following such policy when the plan was adopted. Practically all new stores of consequence have been opened as cut-rate establishments.

Under the plan the advertising of proprietary medicines at cut prices has decreased. Every opportunity is being taken to demonstrate to the greater part of the business wisdom of using their influence to prevent such advertisements being published. The result is to be seen in the fact that fewer cut rate price advertisements have appeared since the plan was put down, and that quite a number of large proprietors have shown their readiness to co-operate with local bodies in correcting the evils, to the extent of serving notice on the offending journals that they would patronize publications which regularly followed a policy calculated to depreciate the character of their products.

## Additions to the List of Firms in the Agreement.

During the year there have been a number of additions to the list of firms in the tripartite agreement, and the list now contains the names of the greater part of the large manufacturers of proprietary medicines, while the list of jobbers who are now giving adherence to the plan to represent the entire distributing service of the country; and the N. A. R. D. plan originally did not propose to control any but proprietary medicinal preparations, the committee has endeavored to extend the benefits of the agreement by securing the adoption of the principle of the plan to all classes of other classes of goods sold to the jobbing trade under the rebate or contract plan. The result has been a constant increase in advantage along this line. The tripartite plan has brought the retailer, jobber and manufacturer together upon practically all propositions affecting the commercial welfare of the trade as a whole.

## Repeal of War Revenue Tax.

One excellent illustration of this unity of action is seen in the repeal of the war revenue tax, in which its important work the retailers were capably assisted by the representatives of the Proprietary Association of America and of the National Wholesale Druggists Association. It would have been impossible to have secured either the repeal of the stamp act, or the reduction of prices, had the drug trade been in the condition it was prior to the adoption of the plan. The repeal of the tax and reduction of prices, on a conservative estimate, saved every retail druggist approximately 20 per cent of his gross profits on proprietary medicines. In this connection special commendation is due to the committee on national legislation under the leadership of Chairman Gallagher.

In one instance, however, that of the manufacturers of Perry Davis' Pain Killer, the price had been advanced to \$2.25 and \$4.50. This action is recommended to the convention for its consideration. The houses of Hood and Ayer have also thus far declined to reduce prices to those in force prior to the passage of the stamp act.

## Success in Dealing With Manufacturers.

Generally, we have been quite successful in all dealings with the manufacturing trade and in only one instance, that of the Green Nervura Company has it been necessary to ask your aid. It is gratifying to state that the response was prompt and well organized sections, particularly in those recently organized, and the results were prompt and entirely satisfactory. The Company are now in accord with the tripartite plan.

## Harmonious Relations With Jobbers and Manufacturers.

The attitude of the jobbing and manufacturing trade toward the N. A. R. D. and the tripartite plan is now more cordial and sincere than it ever has been. The jobbing trade never was so thoroughly organized and harmonious; and outside of the city of New York, where local bodies have operated on a commercial basis, there is very little violation of the tripartite plan. Even in New York, the selling to cutters is almost exclusively local, though of course the local New York cutters supply outside cutters, as has been found to be the case in

Chicago and other points. In all such instances the goods are costing the outside cutters so much that not many of them are likely to continue the policy very long at a time. Proprietors who were, at the inception of the plan, indifferently in favor of the tripartite plan, and who at the beginning of the plan are showing not only a lively appreciation of the power of the N. A. R. D. but are also showing in the conduct of their business a recognition of wisdom in the policy of the tripartite plan, are, however, here and there, losing the strength of the tripartite plan. Time is proving to each manufacturer, jobber and retailer that it hurts no one, but operates more strongly as time passes to promote harmony and to equalize profits among the various branches of the trade.

#### Opposition of Retail Druggists.

The retail druggists who have been opposed to the tripartite plan have placed their opposition apparently on personal grounds. The most active are the comparatively few in large numbers who felt that the loss by reason of inability to buy proprietaries direct would off-set any possible gain through the operation of the plan. This is not true, for, even in the city of New York the advance of prices and the reductions secured under the tripartite plan far more than off-sets any loss from inability to purchase direct. This loss is more imaginary than real anyway. The largest selling medicines are now sold under the tripartite agreement and the committee has worked consistently for the establishment of intermediate quantities and discounts, with such results that at this time it is believed a careful computation by any dealer, figuring the capital invested and interest paid on the same, and the prices when buying direct, and the present intermediate quantity and discount with but a small amount of capital invested, will show little if any difference. The majority of dealers who are consistently opposed to be able to buy the present intermediate quantities as the differences would scarcely pay interest on the money invested to say nothing of the overstocking.

#### Success of the Plan.

It will not be claimed by anyone at all familiar with the drug trade that the plan of the N. A. R. D. are working under will wholly eradicate the evil of price cutting. No one has ever asserted that they would. The country is so large that only thorough organization of the trade in its entirety, and the complete elimination of the low loyal manufacturer and jobber might be, there could be and doubtless will be, spasmodic out breaks that will come upon a community without warning. This can, and doubtless will, be met by the plan which that plan we are working under. But the thorough organization of the country will enable the N. A. R. D., under the tripartite plan to minimize this evil. So long as the plan is enforced by capable men who are in the front of the matter, and who are thorough and thoroughly unselfish in their labors; the tripartite plan will pay the retail drug trade many times more than it costs, and will thus yearly earn its claim to consideration year by year. It should, and we believe it will, reduce the possibility of spasmodic outbreaks of cutting. We believe that we are justified in saying that no other commercial organization has equalled the N. A. R. D. in the extent of its activity, direct and indirect, to the trade it served. It is true the tripartite plan has not produced directly all of these benefits, but we can say that perhaps not a single benefit that has been secured would probably have been gained except those of local organization, had it not been for the existence and prosecution of the tripartite plan.

The report then described the conditions existing in different localities, and the attitude of a number of local organizations observed during visits made by members and delegations. Concerning the attitude of members of the committee toward the Worcester Plan the report continues as follows:

#### Attitude Toward the Worcester Plan.

The committee regrets that the attitude of some of its members toward the Worcester plan has been consistently, not to say maliciously, misrepresented. No member of the committee seeks to belittle this, or any other plan, that is calculated to help the druggists in any degree. The committee desires that every plan promising advantages to the drug trade shall have a full and fair trial. The Worcester plan should have its chance to present such facts to this association as are necessary for the members to act in conformity. We, therefore, recommend that provision be made for the appointment by the incoming President of a special committee, whose duty it shall be to collect all available data bearing upon the plan, and to further recommend that an appropriation be made of a sufficient sum to secure a competent legal report on the questions of law involved in the various jurisdictions in which the plan must be enforced in order to become successful from a national standpoint.

#### Recommendations for Action.

The summarized recommendations of the Committee for action are as follows: 1. Organization for the succeeding year should be held in the larger cities, as well as in the rural districts, such organization in

the cities to be under the joint direction of the executive committee of the National association and the 2. Consideration of an increase of the annual dues, 3. Notification concerning cutters should be exclusively by the national officers. 4. A special committee to investigate the Worcester Plan asking for restoration of the attitude of proprietors refusing to restore ante-bellum non-paying members.

It was immediately realized that this report could not be harmonized with the president's address and it could be seen that the adherents of both sides were casting mutual distrust out of the corners of their eyes. The report was, however, referred to the Committee on Resolutions, and the factions rested on their oars while the reports of the secretary and treasurer were presented as follows:

#### SECRETARY'S REPORT.

The secretary's report filled thirty-nine type written pages and related a history of the work done in his office for the past thirteen months. For the past year the 2. Consideration of the Detroit Convention were printed, the proceeding of the thousand of which were sent to affiliated associations the remainder being distributed by organizers. Letters had been sent to two hundred and fifty of the proprietary manufacturers asking for information relative to proprietary manufacturers or reduction. A large number of replies to these letters were received but the work of tabulating the answers was not completed as originally contemplated on account of the lack of exactness on the part of the proprietors making replies. Added cost of crude material, bottles, boxes, increased cost of alcohol, etc., and advanced prices of labor and other expenses, were among the reasons assigned by proprietors for advancing prices. Up to the present time the association had collected \$75.13 more than enough to pay the expenses and salaries of the organization. The money expended by the association represented a vast deal of effort in the direction of adjusting difficulties, healing breaches of long standing, securing adoption of schedules yielding better profits, etc., and devising plans for more satisfactory trade conditions in localities where work has been done. The work of organization had been carried on in Indiana as instructed by the Executive Committee and later, was extended to the states of Illinois, Michigan, Iowa, Missouri, Nebraska, Minnesota, Wisconsin, Ohio, and New York, Chicago being the radiating point. The attitude of the organizers were as an aggressive one of the character of the business. Organizer Noel receiving a salary of \$100 per month.

Regarding the character of the organizations formed it was almost impossible to determine, but a few substantial ones have been formed, but an effort has always been made to secure the very best men obtainable for the important officers and to instill into the minds of these officers the necessity of alertness and vigorous action in setting promptly such unbusinesslike as may arise concerning the business and to keep constantly in close touch with the National Association.

The number of state pharmaceutical associations now affiliated with the N. A. R. D. is thirty-three, as follows: Alabama, Arkansas, Colorado, Connecticut, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montana, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Dakota, Tennessee, Texas, Utah, Washington, Wisconsin and the Society of Retail Druggists of Quebec. The number of local associations on the rolls is 442. During the year the Delaware and New Hampshire associations have withdrawn.

The preparation of the lists of aggressive cutters had required a great deal of the secretary's time and so far as known no adverse criticism has been made in the Worcester Plan. The work of the N. A. R. D. had been advanced by the methods followed. The fact that aggressive cutters were being supplied with proprietaries by certain persons and firms who make a practice of buying the proprietaries from the proprietaries with labels and cartons obtained from the manufacturers, was brought to the attention of the executive committee, which obtained the cooperation of manufacturers and boards. This evil was corrected and is now being handled by the secretary and the secretary was of the opinion that some rule should be adopted whereby delinquent associations may be dropped from the rolls by the executive committee. The copies of lists of aggressive cutters have been issued semi-monthly until Oct. 1 when the number was raised to 1,200. The cost of printing and ruling these amounts to more than \$50 per month. The secretary's financial statement extending over the period from Sept. 1, 1910 to Oct. 1911 follows:

#### Disbursements.

|                                                            |          |
|------------------------------------------------------------|----------|
| Expense of President's Office.....                         | \$ 14.77 |
| Secretary's Salary.....                                    | 2,083.76 |
| Expense of Secretary's Office.....                         | 5,910.20 |
| Salary of Treasurer and Expense of Treasurer's Office..... | 278.18   |
| Expense of Committee on National Legislation..             | 66.75    |
| Expense of Committee on Transportation, 1900..             | 73.75    |
| Expenses of Organizers.....                                | 4,007.62 |
| Expenses of Organizers.....                                | 4,725.06 |

|                                                 |             |
|-------------------------------------------------|-------------|
| Expenses and Per Diem of Executive Committee..  | 77059       |
| Expenses of Proceedings of Detroit Convention.. | 21175       |
| Total .....                                     | \$18,885.00 |

#### Summary of Expenses of Secretary's Office.

|                                                                |            |
|----------------------------------------------------------------|------------|
| Stenographers' Salaries .....                                  | \$ 1157.00 |
| Other Office Assistance .....                                  | 312.18     |
| Rent of Office .....                                           | 410.00     |
| Furniture for Office (Including two typewriter machines) ..... | 285.42     |
| Printing and Stationery .....                                  | 738.12     |
| Postage .....                                                  | 726.33     |
| Office Supplies and Petty Office Expenses .....                | 60.45      |
| Express and Telegrams .....                                    | 104.01     |
| Books and Files .....                                          | 61.65      |
| Bank Charges and Exchange .....                                | 15.13      |
| Secretary's Traveling Expenses .....                           | 55.51      |
| Expense of Mrs. Lake at Detroit .....                          | 16.50      |
| Total .....                                                    | \$3,940.20 |

The project to have the association incorporated under the laws of New Jersey was found to be unnecessary and therefore it was abandoned. The recommendations of the secretary were as follows:

#### Recommendations.

In view of the experience of the past year, which have come under my observation as Secretary of the Association and of the Executive Committee I desire to urge upon the association the importance of making such additional plans or so strengthening existing ones as to use as well enable to secure more satisfactory results for our investment of effort and money.

The extreme difficulty we have experienced in securing for the retail trade the benefits which ought accrue to its members as the result of the working of the tripartite plan, emphasizes not only the necessity of compact and effective organization among retail druggists thousands without which any plan would be a failure, but it emphasizes also the necessity of such relationship being established between the manufacturers and the wholesale and retail distributors of his goods as will so effectively punish those who disregard his desire that these goods be sold by the final distributors at remunerative prices, that the handling of these goods under improper conditions will be prevented. Recent court decisions which tend to prove the efficacy of a price restrictive contract in dealing with the cut-throat problem have inspired in the minds of many of our members confidence that such a plan if adopted would, form an invaluable aid in accomplishing the cherished objects of the N. A. R. D. I feel it is needless to urge upon the Association a very thorough discussion of the merits of the proposed Plan which some of the affiliated bodies have so heartily endorsed, and the securing for the N. A. R. D. of all the advantages which this plan can be made to yield. During the past year I have bent my energy toward making the tripartite plan a success, because this plan has received in three conventions the unqualified endorsement of the Association, and as far as the National Association, as such, has expressed itself. It has no other plan. I have no apology to offer, therefore, for my unwavering loyalty to the tripartite plan; I conceived it to be my duty to make this plan succeed or demonstrate its lack of feasibility. Just as determined effort would have been given to the carrying out of any other plan that might have been adopted in lieu of that which we are now using.

In answer to the charge secretly brought against me, which charge, though without foundation, has proven detrimental to the interests of the association that I have gone out of my way to antagonize the Worcester Plan, nothing in my official career could have been more, when properly considered, to this assumption. It has been charged that resolutions endorsed by Worcester Plan, sent to me by affiliated associations, have not been turned over to the Executive Committee. So far from the truth is this statement that I have not only reported every resolution and resolutions endorsed by the Worcester Plan, sent to me by affiliated associations, but I have also sent those of associations which have no connection with the national body. It is altogether probable that some associations adopted resolutions favoring this plan, which resolutions found their way in the Pharmaceutical Journals but were never placed in my hands; I certainly ought not to be charged with failing to report these to the Executive Committee. On the 26th last, I submitted to the Executive Committee a set of resolutions adopted by the North American Druggists' Association, the essential feature of which is the following:

"Resolved that we request the Executive Committee of the N. A. R. D. to call a conference of manufacturers, wholesalers and retailers of proprietary medicines to consider whether their several interests would be subserved by organizing for the purpose of obtaining financial co-operation, in case a sufficient number of proprietors adopt a protective trade policy; that the proposed conference be held at such time and place as in the judgment of the Committee will best accomplish the purpose thereof."

This proposition had previously been the subject of correspondence between the Pheno-Caffein Company and

myself, which correspondence has been reported to the Committee. On receipt of the resolutions before mentioned I submitted the following proposition:

"In order to ascertain definitely the wishes of the Committee I move the adoption of the following: Resolved, that the National Executive Committee look with favor upon the proposition of the Pheno-Caffein Co. to send literature and resolutions to the different associations affiliated with the N. A. R. D., the object being to have these associations request the National Committee to call a conference of proprietors, wholesalers, and retailers, to consider the price restrictive plan."

The vote on this resolution was in the Executive Committee 10-1; may, too, the result being submitted in a report to the committee issued in the month of December of which I am not fully informed the matter was dropped at this stage. The charge brought against me of indifference or neglect in placing the matter before the Committee is, therefore, without any foundation. I am charged with having stated recently that the Worcester Plan exists only in the minds of a few of our people. I do not recall the circumstances under which this observation was made, but I remember having made it with the thought in mind that I remember having made forty-two thousand retail druggists who know of the tripartite plan and who are expecting beneficial results from its operation, those who are urging the adoption of the Worcester Plan are few in number. I wish to state to myself to state that I have made no use of my official position to injure the prospects of adopting a price restrictive plan, or any other that might be urged upon the Association. A secretary who is loyal to his duties knows, in his official capacity, no plan except that which the Association has placed in his hands to execute under the direction of the Executive Committee. If the Worcester Plan, or any other that may be devised, can be made more serviceable than that which we are using in accomplishing the object of increasing the profits of retail druggists the N. A. R. D. would be faithless to the trust in it accepted if it did not adopt it. It would be most unfortunate if partisan bias is to be used to warp the judgment or improperly influence the decision of an organization whose record in the past for loyalty to high purpose has won for it the respect and confidence of the drug world.

I would recommend that specific instructions be given the Executive Committee regarding the future work of organization, particularly with reference to the conditions upon which our members are to be received. In the present condition of our finances it is evident that organization work, if it is to be continued, must be self-supporting. This being true, such resolutions should be adopted, and if necessary such changes in the constitution and by-laws of the Association as will place the Executive Committee, with reference to this matter, beyond question. For the reason that during the past year it has been apparent that the results which the association has been trying to accomplish have been out of proportion to its financial resources, it is imperative that the organization give serious consideration at this time to the important matter of finances with the intention of relieving officers from embarrassment in reference to this important matter. I desire to reiterate here what I have stated in previous reports, that the druggists of the United States must be educated to give all needed financial support to an organization from which they expect such great benefits as are afforded as the result of the N. A. R. D. I have an abiding faith that retail druggists are not such poor business men as to withhold their financial support from an organization that is to be their salvation from commercial degradation if not commercial extinction.

I desire to express here my personal gratitude to the pharmaceutical journals for the help they have given the association during the past year by publication of editorials and news notes, and for the kind and courteous letters which I have received. To the large number of loyal jobbers whose co-operation has helped me to perform my duties acceptably, and to the proprietors whose courtesy and whose disposition to give me have been a source of satisfaction I desire to express my thanks. To the membership of the association at large, I wish to voice my appreciation of their patience and the fraternal feeling they have ever manifested; but most of all I want to thank the officers, particularly the secretaries, and the affiliated associations for their self sacrifice and their vigilance in aiding me by carrying out the plans decided upon by them and me in the effort to correct and improve their local conditions.

#### TREASURER'S REPORT.

The treasurer reported the receipts of his office since Sept. 12, 1900, to be as follows: Dues \$6,462.40; donations, \$18,355.00; total, \$24,817.40. The balance on hand, Sept. 12, 1900, was \$1,123.49; making the total, \$26,040.89. The disbursements were \$18,885.00, leaving a balance of \$7,155.89. Among the donations received were the following: Sterling Remedy Co., Indiana Mineral Springs, Ind., \$4,842.00; J. Rowell, Excelsior Springs, Mo., \$2.00; Charles Ryan, Springfield, Mo., \$10.00; J. H. Stitham, Springfield, Ill., \$2.00; D. Ransom Sons & Co., Buffalo, N. Y., \$25.00; M. Harter, Milan, O., \$0.50; S. G. Skidmore & Co., Portland, Ore., \$0.50; E. H. Cross, Gadsden, Ala., \$1.00; California Fig Syrup Co., San Francisco, Cal., \$25.00.

CHAS. T. HELLER,  
St. Paul, Minn.

### THIRD SESSION.

After the smoke of battle had cleared away, the Committee on Credentials made its report, finding that twenty-seven members held forty-nine proxies. All of these were found to be within the fifty mile rule and were allowed. "Let 'er go!" J. C. Gallagher was next called upon for the report of the Committee on National Legislation. The report was received with great applause and drew a vote of thanks from the convention. It read as follows:

#### REPORT OF THE COMMITTEE ON NATIONAL LEGISLATION.

Among the objects upon which your committee on National Legislation was to direct its best efforts, was one of pre-eminent importance to us individually, as well as collectively. The abolition of Schedule "B" of the Stamp Act of June 13, 1898. In November 1900 word was received by us that the Ways and Means Committee of the House was to meet ten days prior to Congress being in session assembled, and consider the abolition or the repeal in part of the War Revenue Tax. Together with E. C. De Witt, Chairman of the Committee on National Legislation of the P. A. of A., Mr. Mahlon N. Kline, Chairman of the Committee on National Legislation of the N. W. D. A., Mr. Douglass, Counsel of the P. A. of A., and many proprietors, we assembled in Washington, November 20, 1900, only to find that no more hearings would be granted. The members of the Ways and Means Committee were interviewed personally, and we received the assurance that our request for relief would be duly considered and acted upon. A brief outlining our arguments for the repeal of Schedule "B" was drawn up and signed by the Chairmen of the National Legislative Committees of the N. W. D. A. and P. A. of A. and the N. A. P. D. This was presented to the Chairman of the Ways and Means Committee. The report No. 2016 of the Ways and Means Committee was submitted and referred to the Committee of the Whole. This report recommended the repeal of all of Schedule "B" excepting the tax on wines; great hope was thereby given that we would ultimately accomplish the objects of our mission. The bill No. 12,394, 56th Congress, 2nd session, passed the House and when presented to the Senate, was referred to the Finance Committee of that House, while the bill was under consideration, grave doubts were entertained on all sides that Schedule "B" would not wholly but only in part be repealed. In the latter part of January, 1901, the representatives of many associations interested in the War Revenue Tax Repeal again journeyed to Washington; among those present were: President W. C. Anderson of our Association; Mr. E. C. De Witt, Chairman of the Committee on National Legislation of the P. A. of A., Mr. M. N. Kline, Chairman of the National Legislation

Committee of the N. W. D. A.; Mr. Douglass the Counsel of the P. A. of A., and many others. Many conferences were held with the Chairman of the Finance Committee and its various members; the final hearing was given before the Committee; it was apparently their fixed opinion that the tax on proprietary goods be reduced one-half. After exhausting all efforts for total repeal, we induced them to make it one per cent. We felt that this would, in view of the circumstances, be a material gain. At no time was there a disposition on the part of the Finance Committee to burden with tax the retail trade. It was not deemed that the bill was not clear to draft a law which would not be unconstitutional, and yet exempt the retail trade from taxation. Many of the Committees stated this, and added considering the enormous profits being made by the retailers, that this tax shall be theirs to bear. Mr. G. P. Englehard, who appeared before the Committee in the interest of the retail trade rendered valuable assistance to you. The bill No. 12,394 as amended by the Senate, was referred to the House and not occurred in. This made necessary a Conference Committee of both Houses; the committee from Congress stood firm and refused to accede to the amendments passed by the Senate. Conference were held and the pros and cons vigorously debated until finally the Senate Committee weakened, and the bill as it left Congress, was passed during the closing days of the session and signed by President McKinley. The bill went into effect July 15, 1901. Your Committee can now report that the War Revenue Act in as far as it affected the Drug Trade is a thing of the past, a saving of about \$4,000,000 to the Drug Trade, the greater part of which was made by the retailers. Special credit is due Secretary Thomas V. Wooten for the able assistance given to us in this work. We must emphasize that the repeal of this tax was accomplished mainly owing to the untiring efforts of the retail druggists, affiliated with the N. A. R. D. The manufacturers and proprietors contributed a considerable share to our endeavors; numerous were the number of petitions sent to the members of Congress. Some subjects were thoroughly brought to the notice of the various committees, so that our work was greatly facilitated by the information thus given; of the press too much cannot be said in praise. The repeal of this tax exemplified the value of united effort in accomplishing what all wish—results.

While engaged in the work of the repeal of Schedule "B" of the War Tax, Your Committee on National Legislation was apprised of the fact that the Commission appointed to revise and amend the Trade-Mark and Patent laws had made its final report. On page 5 of this report, we note the following:

"We also held public hearings in Chicago, New York and Washington, which, in addition, which, and at which a full opportunity was given for the expression of the views of all persons interested in the questions before the Commission for consideration. We have, in making our recommendation brought to the attention taken into consideration the views expressed on these questions by the American Bar Association, the manufacturers' Association of America, the Pharmaceutical Association, (which we take to be the American Pharmaceutical Association) the Trade Mark Association, the Association of Retail Druggists (evidently N. A. R. D. is meant). Notwithstanding the consideration that the Commission here assert of our views, as set forth on pages 31 and 32 of the Commission's report, as follows:

#### CLASSES OF INVENTION EXCLUDED FROM PROTECTION.

"Under the United States Patent Law, no class of useful inventions is excluded from protection. The same is true of the laws of Great Britain and the British Colonies generally, but many foreign countries exclude from protection one or more classes of inventions. The class of inventions which more than any other is excluded from protection, is that relating to medicine. It is excluded in Germany, France, Austria, Hungary, Italy, Japan, Denmark, Norway, Sweden, Switzerland, and a number of other countries. Other classes of inventions excluded from protection in many countries, are foods, chemical productions and inventions relating to war material.

The classes of inventions excluded from protection to medicine or foods does not generally extend to those relating to processes or apparatus for their manufacture. In all foreign countries which exclude chemical products from protection, except Switzerland, invention relating to chemical processes may be patented, and in nearly all such countries it is expressly provided by law that a patent for a chemical process, by which a new chemical product is made, shall not extend to such process made by some other process.

It has been urged before us, both at the hearing above referred to and in written communications, that in the United States, Switzerland, should be amended to exclude from patent protection, both medicine and chemical products generally, at least so far as such inventions are the inventions of subjects or citizens of the foreign countries in which these classes of inventions from patent protection, and it has been contended that subjects or citizens of foreign countries should not be permitted to receive in this country, patents for inventions which are not patentable in their own country.

Nevertheless no recommendation for the remedial legis-

lation desired by us is made in the bills prepared by the Commission submitted to Congress, to correct the shortcomings of our present Patent and Trade-Mark Laws. Our Association waited for this report hopeful that the justness of our claims would appeal to the Commission as worthy of embodiment in the bills now prepared for consideration by Congress. As our hopes have not been realized, your Committee recommends that strenuous efforts be made to accomplish the result that we desire, to rid us of the piratical exactions of the courts and exploiters of the Patent and Trade-Mark Law. The Chairman of the Committee on Patents, to whom the report has been referred; he was out of town. The session of Congress was so far advanced that nothing at that time could be done by Congress, or by the action, and therefore we present for your consideration, the following amendment to the present patent laws that should, if it meets with your approval, be presented to Congress at its coming session.

#### An Act Amending The Patent Laws Of The United States.

BE IT ENACTED BY THE SENATE AND HOUSE OF REPRESENTATIVES OF THE UNITED STATES OF AMERICA IN CONGRESS ASSEMBLED: That section forty-eight hundred and eighty-six of the Revised Statutes as amended by Act of Congress approved March 3rd 1897, be, and the same hereby is amended by adding thereto the following sentence: Provided, however, that this section shall not apply to such articles as are used in medicines, nor to substances prepared by chemical processes, in so far as the invention does not relate to a definite process for the preparation thereof.

So that the section as amended shall read as follows:— Any person who has invented or discovered any new and useful art, machine, manufacture, or composition of matter, or any new and useful improvements thereof, not known or used by others in this country, before his invention or discovery thereof, and not printed or described in any printed publication in this or any foreign country before his invention or discovery thereof, or more than two years prior to his application, and not in public use or on sale in this country for more than two years prior to his application, unless the same is proved to have abandoned, may, upon payment of the fees required by law, and other due proceedings had obtained a patent therefor. Provided, however, that this section shall not apply to such articles as are used for medicines, nor to substances prepared by chemical processes in as far as the invention does relate to a definite process for the preparation thereof.

SEC. 11. That this act shall take effect— and Sec. 1, amending Section 4,886 of Revised Statutes as amended by Act of Congress, approved March 3rd 1897, shall not apply to the patent granted prior to said date nor to any application filed prior to said date, nor to any patent granted on such an application.

From the surprise expressed by the Finance Committee of the Senate, that patented synthetics were exempt from taxation, we believe that but little trouble will be encountered in passing such a measure, if care be taken to present same in proper shape.

A matter that was brought up at our last meeting was the manufacture and sale of the biological preparations by the United States Department of Agriculture; at the last session of Congress an effort was made by the manufacturers to have the appropriation cut down; instead of a reduction, the appropriation was increased. Owing to ill health, the Chairman of our Committee while in Washington, was unable to do anything in this matter. Your Committee deem it that at the same suitable action should be taken to prevent the United States Government and State and Municipal Departments, from assuming the role of competitor. Their products are given to people well able to pay for them, these products have passed the experimental stage, and it is manifest that various lines of our Government that private enterprise should be thus thwarted in its efforts to obtain perfection of product, and at the same time be paying a tax to support government competition.

At the last session of Congress, a resolution was passed, authorizing the Finance Committee of the Senate to sit during the recess; a meeting will be called under the authority of this resolution, some time in this fall. There are several matters that are being pressed for consideration by various interests, but it is probable that the most important only will be taken up for formal legislation and this we believe, relates to the laws governing the manufacture and sale of distilled spirits. The operation of the present laws is very unsatisfactory to the Government, as well as to those interested in the handling of spirits. The main difficulty arising from the fact that the laws have been passed at various times without due regard for those already on the Statute Books, and that the result is a hodge podge of legislation that it is important to have done away with. We are led to believe that the Committee will pass a comprehensive bill to Congress and hope to recommend a comprehensive bill to Congress when it meets in December. Herein is a field of action where the progressive spirit of our Association may show good service, and our members should be ready for the use of distilled spirits enters so largely into our products that its exemption from taxation would confer a boon upon the retail drug trade. We should have tax

free alcohol for the use of the arts and sciences. We recommend, therefore, that prompt action be taken to communicate our views to the Finance Committee, and thereby drive the entering wedge that may lift the tax off this article so largely used in our pharmaceutical products.

In conclusion, your Committee desires to state that the nature of their work requires an adequate appropriation to aid it in its endeavors. This subject was referred to by your last Committee on National Legislation, and is respectfully again made in the hope that the Association will appeal strongly to this Association as an indispensable requisite to accomplish results.

W. E. Bingham of Alabama then presented the report of the Committee on Commercial relations.

#### REPORT OF THE COMMITTEE ON COMMERCIAL RELATIONS.

The Committee reported progress along the line of commercial relations, and that the business policy outlined by the N. A. R. D. at the Detroit Convention had borne fruit. The greatest drawback had been, and is, in the handling of proprietary remedies, for on these the "cut-rate" fight has been made. The decisions of the courts that the manufacturer has the right to control the price of his products demonstrated the exactness of our position, and we should endeavor to give this "fundamental principle" widespread notoriety and application. The Committee was of the opinion that this decision of the courts had cleared up the dark cloud of the anti-trust laws in various States.

There are a few manufacturers who have not yet signed the "Tripartite", and these should be made to feel the necessity of falling into line with this movement. The action of the various State Associations in demanding that prices on proprietary medicines be reduced to what they were before the stamp tax was put on, was noted. The Committee also recommended that the Association should take the "Worcester Plan" under careful consideration. They recommended that its merits be fully investigated with a view, if it presented no obstacles, to incorporating it into the "Tripartite Plan". Under the specific methods of the N. A. R. D. plan, the different branches of the trade have been drawn together as never before upon a basis of active and common efforts. The possibility of extending the principles embodied in the "Tripartite" to other articles seeking a sale over the counter of the druggist was also discussed, and the Committee recommended that bodies which are members of the National Association should have no hesitation in calling upon the manufacturers of such other products to meet substantially the principles of the "Tripartite Plan".

A great drawback to closer relation is treachery in the ranks of those composing the "Tripartite Agreement" and their apathy in some quarters in the work of the N. A. R. D. by the retail druggists. It is of prime importance that there should be no drones in the hive and no traitors in the camp.

The Committees on Nominations and Resolutions were formed by a State roll call and will get into action at the Friday session.

The various opinions upon the best plan for the N. A. R. D. to pursue, as represented in President Anderson's speech and the Executive Committee report gave rise to caucuses of the different factions after the adjournment of the evening session. Plans were formulated by both sides, each working for the discomfiture of the other. The caucuses held until a late hour, charges of bossism on the one hand and maladministration on the other being made. Thursday night the outlook was for a hot fight on the convention floor when the two plans come into conflict Friday morning.

## FOURTH SESSION.

### FRIDAY, OCTOBER 11.

President Anderson called the meeting to order promptly at 9 o'clock and asked for reports from the various committees which had not been heard from. None of the chairmen of the committees being present, the reports were postponed and the meeting proceeded to the consideration of communications, the most important of which were those from the St. Louis Business Mens' League and the authorities of the Louisiana Purchase Exposition inviting the association to hold its annual convention for 1903 in St. Louis. The invitations and accompanying resolutions were referred to the incoming Executive Committee.

Charles W. Parsons, formerly editor of the Pharmaceutical Era, and Irving L. Benjamin, at one time connected with the business staff of the American Druggist, submitted to the convention a proposition to start a monthly drug journal as the official organ of the N. A. R. D. In bringing the matter before the national body Mr. Parsons made clear its great benefits from a co-operative point of view, assuring the delegates that the journal would be absolutely subject to the dictation of its supporters. He asked that, in view of the fact that the journal was to be the official organ, it should from its beginning receive the support of every member of the N. A. R. D. in the way of subscriptions. The matter was referred to a special committee, of which J. C. Gallagher of Jersey City was chairman. This committee reported that upon consideration, they had found the matter to be one of such great importance that it was deemed advisable to refer it to the In-coming Executive Committee with power to act. The report of the committee was adopted. The plan for a national organ was received with great enthusiasm and it is probable that the new periodical will appear in the field in a short time. Mr. Parsons will handle the editorial department and Mr. Benjamin will look to the business end of the enterprise.

Lewis C. Hopp of Cleveland, Ohio, then presented the report of the Committee on Trade Marks and Patents, endorsing the findings of the committee of last year. The most significant of the new recommendations made by the committee of this year was that providing for excluding from the United States foreigners who have been denied patents in their own countries. The report was referred to the Committee on Resolutions. No action was taken on several propositions for amendments to the by-laws, one of which provided for dropping members, who do not pay their dues before the end of the fiscal year.

On account of the sharp division in the meeting on Thursday with regard to President Anderson's address, lively sessions were expected on Friday. Charges and countercharges had been made after the adjournment of the Thursday evening session. President Anderson was on the floor early with a compromise scheme involving a legitimate jobbers' list, but the matter was not brought before the convention. After a fifteen minutes' recess, that part of President Anderson's address relating to a price restrictive plan and recommending the adoption of the Worcester plan as the N. A. R. D. plan to succeed the tri-partite agreement, was taken up as a special order of business. The opposing factions as they were called, were lined up on opposite sides of the house, the Ohio delegation being the center of the Anderson forces with Dr. William Muir in the foreground, and the opposition being headed by F. E. Holliday, who submitted the minority Executive Committee report, with W. I. Straw and A. K. Smither as lieutenants. Dr. Muir fired the first big gun by moving the adoption of the recommendations contained in the address. The whole convention was on its feet in an uproar asking for recognition. I. N. Helms of Indiana was finally recognized and moved the consideration of the report seriatim. Although the motion was supported it was lost in the confusion and was not carried until later when the convention went into session as a Committee of the Whole. As soon as the matter was open for discussion the fiery Smither was on his feet drawing a word picture of the N. A. R. D. turning inside out, facing about, making itself utterly ridiculous and ending in total failure by abandoning the tri-partite plan without an adequate trial and taking up a new scheme of which the majority knew little; the principles of which were yet the subject of litigation and which was doubtful as to its effectiveness on account of anti-trust laws in many States forbidding combinations to fix or maintain prices. All of his contentions were sturdily contested, it being shown by the opposition that judicial decisions in Massachusetts, New York and Ohio, the first being in the Supreme Court, had established the price restrictive plan in the eyes of the law. It was also shown that the anti-trust legislation was unconstitutional, as declared in the Nebraska case, as being laws impairing the obligation of contracts, against the provisions of the United States Constitution.

The debate was extremely spirited, but the members maintained the dignity of the meeting in a manner that showed they were determined to get at the facts without any equivocation. Each speaker was called to account with sharp interrogatories on every point. An effort was made to send the matter to the Executive Committee, but this met with loud protests and upon motion of Charles F. Mann of Michigan the convention resolved itself into Committee of the Whole. J. N. Seeley of Detroit taking the chair and President Anderson going on the floor to support his position. Volleys of innumerable questions were fired from all sides at Anderson and the only disgraceful incidents of the meeting occurred in a personal tilt between the President with Parliamentarian Smither and Chairman Holliday of the Executive Committee. Muir of Brooklyn secured the floor and quelled matters down. It was at this juncture that all gloves were thrown aside and everybody went at the question rough shod. Charles Fleischner wanted to know why the preparations of the author of the Worcester plan were being cut in his own city, if the courts of Massachusetts had established it. He was silenced with the answer that the men who had been cutting were now defendants in a suit, in which a favorable decision had been rendered but not handed down. Yet Mr. Fleischner insisted that the co-operation of all proprietors was necessary for the successful working of the plan. Dr. Muir retorted that the proprietors had not given any assurances in the first action by the N. A. R. D. and that no such assurance was now desired. He advocated acting independently. At this juncture Thomas Stoddard heaved a bombshell into the assemblage that he could not trust the Executive Committee as mentioned by Dr. Muir. He said that six months experience and recent events had taught him that it was not safe; that its members had not acted in good faith but had practiced deceit; that they had smothered and covered up important matters and that the retailers had been made tools for the past three years. Other remarks of similar trend were made by members, charging that the jobbers were largely represented in the meeting.

The speech of Hopp of Cleveland against the tri-partite agreement and in favor of the Worcester plan, citing flagrant instances of the violation of the former without any remedy, brought one of the ablest and soundest speakers of the day to his feet. He was A. B. Smith of Erie county, Penn. in a calm, conciliatory and sensible address, he supported the present N. A. R. D. plan, taking the position that it had accomplished a great deal of benefit to the trade and that it had far from a fair trial. The convention listened respectfully to this conservative view, in marked contrast to the turbulence of a few minutes before. He pointed out that it was impossible to have two plans for the same thing; that the proprietors could not be driven into line, more especially in the matter of labeling the goods now in warehouses, shipped in advance for winter trade. He concluded with a passionate appeal for harmony and took his seat amidst a storm of applause that shook Convention Hall.

At this juncture there was a clamor for information with respect to the Worcester plan, a large number of delegates desiring a clear definition of its provisions, and asking how far it had been upheld where it had been introduced. Dr. Julius Garst of Worcester, Mass., the author of the plan and who has been instrumental in its establishment in the Massachusetts courts was extended the privileges of the floor and spent a half an hour in explaining the working of his price restrictive plan on a contract basis, enforceable at law. He was given the closest attention. He assured the convention that if it adopted a price restrictive plan, and publicly insisted upon it, that he knew of a large number of large proprietors who would support the proposition. He said that the proprietors lacked confidence in the retailers, because they had never received from them a clear cut business proposition and concluded by urging decisive action and the importance of giving wide publicity to that action.

R. S. Vitt of Missouri then asked President Anderson to explain the effect of the adoption of the Worcester plan upon the present conditions under the working of the Worcester plan. Mr. Vitt maintained that the

tri-partite plan had given good results in many sections and insisted that it was undesirable and inadvisable to throw these over absolutely without making sure of some equivalent. A great deal of interest was shown in Mr. Vitis' timely query and it was greeted with cries of "Hear, Hear." All eyes were turned toward President Anderson and it was a highly dramatic situation as he stepped to the front of the stage amidst the profoundest silence, for the feeling was general that he was in a rather awkward position, having recommended the absolute abandonment of the tri-partite plan. The question was how could he answer Mr. Vitis' query gracefully. But the President was equal to the occasion. He did the only thing that could be done under the circumstances—retired from the extreme position taken in his address and made the hit of the convention in a splendid ex tempore address of over an hour in length, the major part of which was devoted to showing how the two plans could be reconciled; how what had been gained under the present arrangement, for the benefit of the trade, could be preserved and how the new price restrictive scheme would work additional good for those who had reaped the benefit of the tri-partite agreement, while extending the benefaction all over the country under the operation of the Worcester plan. His masterly analysis was greeted with roars of applause from both sides of the house and for the first time since the opening of the convention, a feeling of trust began to prevail and both sides began to come together on the common ground. President Anderson's second address was a far more rational effort than the first. He did not hesitate in exposing every person and every piece of crooked work that had come to his notice under the old plan. He called every card by its right name, going deeply into politics and firmly maintaining that corruption had been wrought through the influence of jobbers and manufacturers. His remarks were given the most rapid attention. He was frequently interrupted with incisive questions, some of which embarrassed him, yet were answered frankly and openly in so far as possible. Only once in the course of Mr. Anderson's speech was there any indulgence in personalities. The occasion of his explanation of the Executive Committee's refusal to sign the report and his so-called exposure of Mr. Holliday gave rise to a passage of words on a question of privilege raised by the latter.

At the conclusion of President Anderson's address, Fred I. Straw, chairman of the Illinois delegation took the floor in opposition but had great difficulty in securing a hearing. The preceding speakers, remarks had left a good impression and the convention was not disposed to entertain an opposition that would give rise anew to the discord and bad blood of the early morning session. Mr. Straw had not gone far in his remarks, being constantly interrupted, when he made the statement that he desired a practical business discussion and was willing to refer both propositions to the new Executive Committee. Dr. Muir was on his feet like a flash, extending his hand to Mr. Straw and telling him that at last they had met on a common ground. Both sides cheered the new proposition and Dr. Muir submitted the following motion.

"I move that article A be approved and referred to the Executive Committee with power to enforce so much of its provisions as will not conflict with the tri-partite plan. The motion was carried almost unanimously despite the spirited opposition of A. O. Zwick of Cincinnati who said that no one opposed the plan from honest motives. Pandemonium reigned. The Holliday forces were jubilant at the result, realizing that they had side-tracked the Worcester plan for at least a year and had practically buried it, while the Anderson and Ohio crowds did not seem to realize that they had practically conceded the recommendations made in the minority report of the Executive Committee, and had given up those contained in President Anderson's first speech, upon which they had made such a stout fight.

## FIFTH SESSION.

FRIDAY, OCTOBER 11.

At the opening of the session Muir made a motion that the other articles of the Worcester plan be disposed of in the same way as Article A. This was unanimously carried. The remainder of the afternoon session was taken up in listening to a large number of proprietors who were in attendance. Without exception they pledged their sincere good will to the retail association, commended the interest and spirit of the meeting and praised the result of its deliberations. Among those who spoke were: Harry Kramer of Cascares fame, Dr. V. Mott Pierce, A. H. Beardley of the Miles Medical Co., and George Douglass, attorney for the Proprietors' Association. All of them dwelt upon the uncertainty of results from the Worcester plan, saying that they needed more light, more time and more judicial decisions in support of the price restrictive plan before they could endorse it. Mr. Douglass laid especial stress upon the legal phase of the question involved in the anti-trust laws. At the conclusion of his remarks, he was bombarded from all quarters by members, well posted on the late judicial decisions supporting the Worcester plan and became involved in such a mess that President Anderson came to the rescue with the remark that Mr. Douglass would have a bill for legal advice if he did not call a halt. The attorney retired to his seat while an embarrassing silence reigned. He admitted that there was room to suppose that the anti-trust statutes would be declared unconstitutional as in the recent Nebraska case.

President Anderson here read a letter from the manager of the Omega Oil Co., which stated that they had found the tri-partite agreement a flat failure and asking for a substitute. The letter continued:

"We have adhered strictly in both letter and spirit to the provisions of the tri-partite plan, turning down many cash orders where we knew that the jobber was selling to cutters. The wholesalers have been traitorous, for we have furnished Omega Oil only to the list jobbers. Yet the cutters get the goods. The present scheme is no better than none. We have been supporting a so-called protective plan which does not protect."

The letter ended by saying that the Omega people would run down the wholesale supply sources to cutters if the N. A. R. D. would cut them off of the legitimate jobbers' list and said that a conference had been held with other big medicine houses, which had agreed to substantially the same thing. On motion of C. E. Cooper of Ohio, this was carried. The report of the Committee on Pharmacy Laws was submitted and placed on file.

## FRIDAY EVENING.

The evening was given up to enjoying a splendid programme, ball and refreshments provided by the Buffalo druggists. The following programme was rendered: Selected songs, J. W. Tyson; Lillian Aiklen, Elocution; Druggist A. J. Lockie, monologues; "The Rosary," song, Gertrude Tischendorf; Imitations and Music, Archy McCan and a Violin Solo by G. A. Schwab. The entertainment was an admirable one and was thoroughly enjoyed by the pharmacists and their friends. The dancing was continued until the small hours of the morning. The following song was sung by about fifty delegates during the jolly up of the evening.

For the love of our Profession  
We all came to Buffalo  
To attend the Convention  
And see the Pan-Am. show  
We had a lively show,  
Though we compromised 'tis true,  
And the honor of the work,  
To Straw and Muir is due.  
When you hear the Committee on "well well,"  
The fun did come, for the beer began to tell,  
When our nightgale did sing,  
And Gallagher did swell;  
There was a hot time in Buffalo last night,  
My Baby Montvre,  
Of Pennsylvania,  
T. V. Wooten, our noble Secretair  
And then there's Anderson,  
Who does not want the chair,  
And our Diamond  
Gives a hot time to-night.

The Committees on Resolutions and Nominations were in executive session during the greater part of the

evening, and rumors of warm contests came from the committee rooms. There was renewed talk of secession on the part of several delegations who have not been satisfied with the way the affairs of the convention have been conducted. Ohio threatened secession early in the meeting and several members of the delegation declared openly late this evening that they would advise their constituents to walk out upon their return home. The day's proceedings were gone over and over by small groups of pharmacists who collected in groups during the evening's entertainment and the probable outcome of the sessions for Saturday formed a topic of lively discussion.

## SIXTH SESSION.

SATURDAY, OCTOBER 12.

The proceedings of the last day of the convention opened with the report of the Auditing committee, which was presented by Chairman H. H. Arrington, approving the work of Treasurer Heller in every detail and bringing out a vote of thanks for his faithful services. A. O. Zwick of Cincinnati then secured the floor and presented a plan for a national card system for traveling men, his idea being that the national card should take the place of the present local card in that it would be made exchangeable for the local credentials. Mr. Zwick spoke at some length on the deplorable conditions existing in Ohio. He insisted upon bringing before the convention the names of jobbers and manufacturers against whom he had secured evidence of supplying cutters. After a warm debate, in the course of which the Ohio delegate became greatly excited, it was decided that the convention would hear the evidence against a house, which had been particularly characterized as a "rank violator of good faith." Mr. Zwick then read an affidavit bringing out the fact that a well-known firm of Philadelphia had furnished great quantities of goods to J. D. Park & Sons Co., the notorious cutters' supply house. The mention of the name in a dramatic manner by Zwick created quite a furor. No action was taken on the matter, although a number of condemnatory speeches were loudly applauded, and many of the delegates pledged themselves to look out for the interests of the retail trade in this quarter.

When the excitement incident to Mr. Zwick's exposure had subsided, Owen of Tennessee offered a most sensible resolution, as follows:

"That the Executive Committee, in the name of Dr. Julius Garst be instructed to immediately institute action at law in the state of Illinois so as to test the constitutionality of what is known as the Worcester plan in that State." Illinois was chosen for the reason that her Anti-trust law is considered the most severe of those brought to the attention of the convention in the Friday discussion, and it is considered that if that law can be beaten, any and all of them can be turned down, allowing the establishment of a price restrictive plan. The resolution was carried without a dissenting vote and is considered one of the best pieces of work done in the convention as it will clear up the strongest objection against the proposed plan, which caused so much heated debate, a serious division and all but a disruption of the association.

Thomas Voegel of Minnesota next presented the report of the Committee on Resolutions, to which had been referred all of the reports presented before the convention. President Anderson was commended for his spirit and energy in behalf of the association during the past year, but little was said of his address and the conflicting report of the Executive Committee. The resolutions were taken up serially and adopted as presented with a few slight changes. One of the most important actions with respect to the report was the amendment made on motion of Mr. Hopp, to strike out section two of the by-laws and abolish all proxies. This was carried and an attempt was made to put it into immediate force in order to bar the great number of proxies held by the Illinois delegates and which it was known were to be used when it came to the big fight on the election of the Executive Committee. Illinois was sold for Holliday, whom President Anderson characterized as

the "delegate from Kansas and Philadelphia," yet with his uniform fair mindedness, Anderson ruled that the amendment could not apply at that meeting.

Thomas Stoddard's resolution to the effect that N. A. R. D. organizers must get the consent of the president of the State association was carried.

There was a great stir when Chairman Anderson called for the report of the Nomination Committee. Chairman Muir announced what was known the night before and what was thought to be the point upon which the convention would go to pieces,—that there were two reports, a majority report and a minority report, the only difference being in the name of one member of the Executive Committee. F. E. Holliday's name appeared on the majority report and that of F. A. Hubbard in its stead on the minority report. An attempt was at once made to bar Mr. Holliday on the ground that he is no longer in the retail business, but is representing other interests. The chair was called upon for a decision, and President Anderson, with admirable courage, and against his own personal inclinations decided that any man who had been accredited as a delegate in the convention was eligible to office. A motion was then made that the majority report be rejected and a roll call was demanded. Illinois came along with an avalanche of proxies and the whole West and South went solid for Holliday against the East. The vote was 111 to 57 and the motion was declared lost and the majority report was adopted. The opposition had not yet lost all hope of ousting Holliday and stood out strongly against suspending the rules and allowing the secretary to cast the ballot. Instead a clever trick was resorted to. A motion was put and carried that the convention continue in session until the work was finished. As it was then almost 2 p. m., a large number of delegates left the room for lunch, thinning out the Holliday forces by a large number of votes, several Illinois men with a half dozen proxies each retiring from the room. A motion was made and quickly carried that the election proceed and each nominee was elected in turn by allowing the secretary to cast the ballot, until the name of Mr. Holliday was reached when a ballot was called for. It was a clever ruse, but Holliday was equal to the occasion. Putting a number of his followers on the floor to talk against time, he delayed the ballot long enough to allow messengers to collect his supporters. The proxies were again poured into the breach and he was elected by a vote of 103 to 36. The officers for the ensuing year are: President, J. W. Seeley, Detroit; First Vice-President, R. K. Smith, Buffalo; Second Vice-President, Thos. Voegel, St. Paul; Third Vice-President, B. E. Pritchard, Pittsburg; Secretary, Thomas V. Wooten, Chicago; Treasurer, R. S. Vitt, St. Louis; Executive Committee, Chairman Simon Jones, Louisville; J. C. Gallagher, Jersey City, W. E. Bingham, Tuscaloosa, Ala., F. W. Meisner, La Porte, Ind., F. E. Holliday, Kansas, and Charles Fleischer, New Haven, Conn.

After the election of officers was completed, R. S. Vitt renewed the invitation of St. Louis to hold the 1903 meeting in that city during the Louisiana Purchase Exposition. His resolution was adopted and the matter was referred to the new Executive Committee as was also the invitation of Ed. Jurglewicz of New Orleans to hold the convention next year in the southern city. This invitation to partake of the generous hospitality of the South was seconded in cordial words by Case of Georgia and Bingham of Alabama.

The new officers were then installed and a better feeling prevailed than at any time during the convention when Mr. Seeley made a strong plea for harmony and pledged himself to thoroughly test the Worcester plan in accordance with the wish of the association. The following speeches were of a like tenor and were received with great applause. Secretary Wooten was given a most hearty reception. The convention adjourned with three cheers for the N. A. R. D.

# NEWS DEPARTMENT.

## NEW YORK AND VICINITY.

### HOWARD E. WOOTEN.

**One-time Partner of Wm. T. James of the German Chemical Co. Imprisoned on the Complaint of Anthony Comstock—A Warning to the Trade.**

Howard E. Wooten, who for the past three months, according to his own statement, has been doing business at 155 Duane street, but of a character that has called forth numerous inquiries regarding his reliability and a great deal of talk in drug circles, has been traced back to an intimate connection with certain men and acts more notorious than famous in the pharmaceutical world. In an interview with the Era in the issue of October 3, he says that his dealings in drugs are limited principally to buying alum and carbolic acid at auction. He admits to have been in communication with certain out-of-town houses with a view to buying—what, he does not disclose—and says that he secured a discount from one of these firms, and ordered the goods, when the quoted price was known to be fully 25 per cent. above the list. But he was then, as always, held to a cash basis. He further asserted that he has references as good as gold—but falls to disclose them—and says that he has a man who has decided to invest some capital in his business as a silent partner. He says that he has been in the wholesale drug trade for the past four years.

As a matter of fact Wooten's record shows him to have been the manager for about five years of the German Chemical Co., at 11 Broadway, New York City, which, he said, was incorporated in Toronto, Canada, and the partner in this concern, of William T. James, who was prosecuted by a large drug house of this city about two years ago in the United States Circuit Court for violation of certain patent rights. Wooten at that time on the witness stand, and also James, denied that they were in any way connected, but later on the latter broke down and confessed that they were partners in the German Chemical Co. The methods of business of this concern were the buying in Canada of phenacetine and other articles patented in this country but not in any other by the Farbenfabriken Co., and in violation of the patent laws importing the goods into the United States and selling them at a fifty per cent. lower price than the actual list. Those who bought from this commerce unsuspecting druggists who thereby laid themselves open to the law. James on the stand, when cross-examined, named a number of people with whom he had dealings, who either bought the imported chemicals from his and Wooten's company or sold the goods for them, among whom he spoke of Ichabod C. Bryant, one of the parties to the Ellison pharmacy litigation reported in the Era in the early part of the present year. He also mentioned A. R. Gosling, notorious for his efforts, about two years ago, to wreck the Brooklyn Rapid Transit, and known at present as the proprietor of a bucket shop in this city, as a financial backer.

In this connection of importing these patented goods into this country, Wooten was accused by the United States authorities of relationship with a gang of drug smugglers operating on the Canadian border of New York State. The case was brought before Commissioner Shleids. The indictment, however, was never proven against him for want of sufficient evidence of his affiliation with the gang.

Last February 6th Wooten was arrested at the office of the German Chemical Co., at 11 Broadway,, on

the charge made by Anthony Comstock, of making and selling obscene pictures and literature and articles of indecent nature and also certain rubber goods under the ban of the law. He was brought to trial in General Sessions, and on February 7 was fined \$300 and sentenced to ninety days in States prison. Mr. Comstock when asked what was the character of Wooten, said, "Thoroughly bad! He is not to be trusted in any regard. He was, I understand, connected with certain operations in the drug trade of a thoroughly low character. I also understand that he was connected with the operations of a well-known gang of drug smugglers, to what extent I am uncertain." At Dun's Mercantile Agency Wooten's record is such as not to invite business dealings with him in any manner, and his career is undergoing still further scrutiny.

When seen last Friday by the representative of the Era, Wooten said that he had been employed for about three months by the German Chemical Co., and that he, despite certain sworn testimony to the contrary, never was in any way connected with James. When asked the nature of his present business, he handed out a business card, which made no reference to the drug trade, although pilled about the room were cases stamped with the names of well-known firms manufacturing articles sold by every pharmacist. When questioned still further, he became abusive. On the the letter box at the entrance to his office, beneath his name, is the name of the Globe Chemical Co., which, according to his statement made to Dun's Agency was formerly located at 116 Nassau street, and of which he claimed to have been manager for five years. At 116 Nassau street a denial was made of the existence of any such firm in that building.

Wooten is a young man of about thirty years of age, slightly built, of medium height, light complexioned, brown hair, light eyes and a small blonde moustache, and a slight scar on his right jaw.

### THE ORGANIZATION OF THE BOWLING ASSOCIATION OF THE DRUG & CHEMICAL TRADE.

At the offices of Seabury & Johnson on the night of October 9, a meeting of representatives of nine firms, which had bowling teams competing in the Drug Trade Tournament last year, practically resulted in the organization of the Bowling Association of the Drug & Chemical Trade.

The object of the meeting, and now of the new-born association, is to promote, to encourage and to supervise local bowling and to select a team which shall compete in the national tournament of the drug and chemical trade. It was decided that anyone is eligible for membership in the association, who is interested or employed in the trade, although all the bowlers who will compete in the local tournament, are not required to join.

While the new association was definitely decided upon it was not formally organized; but that that will be done at the next meeting which will be held later in the month: The by-laws and the constitution, however, were drawn up, and all the enthusiastic bowlers are expected to become members.

Among the firms of the drug trade represented at the meeting were: Seabury & Johnson, Colgate & Co., Dodge & Olcott, Parke, Davis & Co., General Chemical Co., Lanman & Kemp, Church, Dwight & Co., and Johnson & Johnson. It is confidently expected that Powers

& Weightman, Merck & Co., Roessler & Hasslacher and several other firms will apply for membership. Harry C. Barnes, C. L. Parker and R. K. Strom were empowered to complete arrangements for their season's tournament which will commence on October 19 next.

#### THE MEETING OF THE GOVERNORS OF THE DRUG CLUB.

The Board of Governors of the Drug Club, 100 William street, held their regular monthly meeting on Friday night, Oct. 11. Two new members, F. E. Wallace, 203 Broadway and S. S. Somers, 100 William street, partner of S. S. Lavanburg, were elected, leaving eleven still on the waiting list. John T. Baker, of the Baker, Adamson Chemical Co., Easton, Pa., was made a non-resident member. Henry A. Dalley, of Lazell, Dalley & Co., 12 Duane street, New York, was restored to membership. A committee was appointed to draw up resolutions on the death of Joseph A. Toy, and was made up of J. M. Peters, Col. E. W. Fitch, Edward G. Wells, and Thomas P. Cook.

#### ESTATE OF SAMUEL COLGATE COMPANY INCORPORATED.

Articles of incorporation of the "Estate of Samuel Colgate Company" were filed October 7 with the county clerk of Hudson County, New Jersey. The capital stock of the company is \$1,200, divided into twelve shares of \$100 each, of which the incorporators, Richard M. Colgate, West Orange; Sidney M. Austen and Russell Colgate, Orange, N. J.; Gilbert Colgate, New York City; and Samuel Colgate, East Aurora, N. Y., hold ten shares. The authorized agent of the concern upon whom process against the company may be served is Austen Colgate. The main office of the Estate of Samuel Colgate Company is at Greene and York streets, Jersey City, New Jersey.

#### NOTES.

—Commodore C. H. Tompkins, of Schieffelin & Co., as a result of his sojourn with Neptune at the recent Columbia-Shamrock yacht races, is brimful of reminiscences of affairs of the kind that are now a matter of yachting history, but mostly of those in which a few years ago he cut a prominent figure. While at the yacht races he happened upon a number of old nautical friends who were mainly responsible for his present "old salt" mood and who figured prominently in his reminiscences. From his audible smile it is not difficult to perceive that the Commodore and his friends had gala time, though he modestly admits to only a few small bets being made.

—Solomon Ritt, a drug clerk, was convicted Oct. 10, before Judge Cowing in General Sessions, of manslaughter in the second degree. The jury, however, made a recommendation of mercy. Almost four years ago, on December 23, 1897, Hymen Levi, of 5 Chrystie street went to the pharmacy of Boris Kohoshoff, at Bayard and Chrystie streets, where Ritt was employed, with a physician's prescription calling for six calomel tablets to be administered to Levi's young son, Solomon. Ritt by mistake gave morphine tablets, which when given as prescribed for the calomel tablets caused the death of young Levi.

—Among the out-of-town druggists who are visiting New York are, R. L. Corbin, Allentown, New York; Charles H. Pettet and Charles P. Barton, both of Louisville, Ky., and both guests of Col. E. W. Fitch at the Drug Club; James Lee, of James Lee & Co., Seattle, Wash., to make purchases to cover his winter trade; C. H. Keaster, of Youngstown, Ohio on a buying trip.

—The old stand at the corner of Broome street and Broadway, where about 29 years ago Hegeman & Co., conducted a drug store, which, after the death of William Hegeman, for so many years prominent in local drug circles, was discontinued, is about to be rejuvenated by the Sherlek Drug Co., in a thoroughly up-to-date pharmacy.

—W. S. Douglass, of the Douglass Manufacturing Co.,

and George J. Seabury and Mr. Hopping, of Seabury & Johnson have gone to the N. W. D. A. convention at Old Point Comfort. A special train leaving New York on Monday afternoon conveyed many of the guests and officials to the convention.

—A great number of the prominent men of the trade, and the business and social friends of the late Joseph A. Toy who died Oct. 8, were present at the funeral services held at his late residence, 65 West 70th street, New York, on October 10. The attendance was a splendid tribute to one so generally esteemed in the trade.

—W. L. Haas of W. L. Strauss & Co., dealers in druggists' sundries, is on a trip through southern Texas and California. He reports the drug business out there to be exceptionally good. Mr. Haas will return to the city in about three weeks.

—Dr. H. Yocum, of Beverly, W. Va., a member of George W. Yocum & Sons, druggists of that place, was in the city last week visiting the drug trade accompanied by his wife. Later in the week Dr. Yocum left town for the Pan-American.

—Carl Schnackenberg, the well-known druggist, whose store is at the corner of Eighty-first street and Broadway, has recently become a subject of hymen. As a honeymoon trip Mr. and Mrs. Schnackenberg are doing the Pan-American.

—George W. Norrell secretary and treasurer of the Houston Drug Co., Houston, Tex., on his way to attend the convention of the N. W. D. A. at Old Point Comfort, stopped off here for a few days last week.

—John W. Considine, of the retail drug firm of C. H. & H. A. Lawton & Co., New Bedford, Mass, was in town last week and a guest at the Drug Club of R. Raymond Lampe.

—Frank M. Hall, who is a prominent member of the drug trade in the Middle West and a manufacturing chemist of Denver, Col., has visited down town circles on a buying trip.

—H. L. Kramer, president of the Sterling Remedy Co., Indiana Mineral Springs, Indiana, one of the largest advertisers in the trade, has been in New York visiting down-town circles.

—The wife and daughter of Herbert E. Harding, secretary and treasury of Humphreys' Homeopathic Medicine Co., returned on the Oceanic October 9, after a five months' tour through Europe.

—E. M. Weed, head of the sundries department of Schieffelin & Co., has just returned from a month's stay in the Adirondacks for his health. Congratulations are in order that he has entirely recovered.

—G. A. Belling, a city salesman of Parke, Davis & Co., on Wednesday, Oct. 9 became a benedict. Mr. and Mrs. Belling immediately left town for a short trip, returning Monday.

—William Hale of Hale, Justis & Co., wholesale druggists of Cincinnati, O., came to town last week on a pleasure trip and intends making his sojourn about ten days. Mr. Hale is accompanied by his wife.

—The first bowling match of the Retail Druggists' Bowlers' Association was held at the Starr's Alleys on the night of October 8.

—Louis N. Halpern has just opened a store at the corner of Grand & Attorney streets, to be known as Halpern's Prescription Pharmacy.

—Andrew P. Preston, a retail druggist of Portsmouth, N. H., was in town on October 10, on a business visit to the local trade.

—Horace W. Redheffer, a retail druggist of Sparrows Point, Baltimore, Md., was in town last week on a buying trip.

—Joseph B. Day, of the wholesale drug firm, Day, Field & Co., Chicago, was in New York last week on a business trip.

—The Wholesale Drug Trade Bowlers' Association held its annual meeting at the office of Seabury & Johnson on October 9.

—M. M. Guillen, a pharmacist of Nicaragua, Central America, was a guest of Col. E. W. Fitch at the Drug Trade Club October 8.

—C. B. Grimes, an Elizabeth, N. J., druggist, was at the Drug Trade Club October 7, a guest of Louis L. Drake.

—Wm. E. Saller, the right hand man of John Wyeth of John Wyeth & Bro., Philadelphia, Pa., was in New York October 10.

—C. Kervan, of White Plains, and L. J. Schlessinger, have just made their periodical visits to down town circles.

—F. M. Allen, a prominent member of the drug trade of Denver, Col., came to the city on the 8th, on a buying trip.

—E. R. Frankenstein, a well known chemist in England, is at present visiting this country. On Oct. 11, he was the guest of P. C. Magnus at the Drug Club.

—The Bergen Pharmaceutical Co. has opened a new store at Rutherford, N. J., F. A. Schradley, formerly with C. O. Bigelow, New York, is manager.

—H. Jaschun has removed his pharmacy from its old stand at 237 Second avenue to a splendid location at 31st street and Lexington avenue.

—A. W. Dows, a druggist of Lowell, Mass., was on a buying trip to New York last week.

—The Board of Governors of the Drug Club held its regular monthly meeting on Friday the 11th.

—Nestle's have won another gold medal, this time at the Pan-American.

—R. E. Finegan, New York, was the guest of A. K. Gardner at the Drug Club Oct. 11.

—Seabury & Johnson have received the award of a gold medal for their exhibit at the Pan-American.

—J. P. Foye, druggist at 117th street and 7th avenue has sold out his business.

## IN AND ABOUT BOSTON.

### TROLLEY RIDING CUTS INTO TRADE.

Boston, Oct. 12.—Marlboro druggists have made up their minds, now that the summer is over, that the season has not been very successful as regards soda and like trades on Sundays, especially. They feel as if they would be just as well off now if they had closed their drug stores all day on Sundays throughout the summer. This is due to the incoming of so many attractive electric car lines. The fact that there are so many pleasure resorts in surrounding places has been responsible for the lack of people in Marlboro on Sundays. Conditions were bad enough two years ago, according to those whose business demands their keeping open Sunday, but since the institution of a new electric road to West- ington and a through line from Hudson to South Fram- ingham, the trend of travel seems always to be going out of Marlboro, because there is nothing doing in that place to bring people into the city. The soda business has been the greatest sufferer right along, according to the druggists who dispense the article.

### Fall Trade Picking Up.

Boston, Oct. 12.—The fall trade, it is worthy to note, is picking up considerably in most lines. The chemical market is showing a fairly satisfactory volume of business, with prices steady and unchanged since a week ago. The one exception is oxalic acid which has somewhat declined in price. Neither in grain nor wood alcohol is there much of any change, the demand for both being normal. The market for hops holds well, which is somewhat surprising as there has been some belief that the new crop would show a decrease in price. It is felt that a slight increase shown in the west may be found here later. There appears to be only a moderate demand for dye stuffs and tanning materials. Quite a large amount of sumac recently arrived but was quickly disposed of. Indigo and gambier are strong in price and both are in fair demand. The retailers as a whole are having good trade and no one is found making any complaint as to the present conditions of trade.

### NOTES.

—It will come as quite a surprise to Cambridge people to learn that F. W. Putney, who succeeded the late John C. Sylvia in the drug business at 2109 Massa- chusetts avenue, has sold out his business to John B.

O'Hara, who has been with Mr. Sylvia as clerk three years, and with Mr. Putney for two years. He has until within a few days been in the employ of Billings & Stover, druggists of Harvard Square, and is a young man who thoroughly understands the business. Mr. O'Hara proposes to at once make his store one of the most progressive ones in Cambridge, so that he may be ready to meet all the demands of a first-class place. He has secured as clerk William J. Larkin, who comes from Malden and who has had valuable experience in the line of pharmacy.

—One of the most disastrous fires which Malden has experienced in a long time occurred early in the week, and before it had run its course it almost completely destroyed the drug store of Jesse Sargent, located on the end of the block next the Boston & Maine Railroad. The fire removes an old land mark, as the drug store had been located there more than two score years. It formerly was Larned & Varina's, and later it was conducted by Dr. Larned himself. He was succeeded by Mr. Sargent, who has had it a number of years. Mr. Sargent has been in poor health for some time and has not been able to attend very closely to his business.

—After a long and painful illness Dr. Alexander G. Nye, a man well versed in many sciences and an expert chemist of long standing, died this week at Weymouth at the age of 84 years. For more than fifty years he was a dentist in the town and his intimate acquaintance with chemistry led him to devote a process of using platinum in that profession, he being the only one for many years who understood the art. He also was a manufacturer of telescope lenses, which he made for some of the most famous telescopes in this country.

—From a barbershop to a drug store is considerable of a jump; but this is what Thomas McNally of Fall River is about to do. For several years he has kept a tonsorial parlor in one of the frequented parts of the city, and deciding to engage in the other line, he recently disposed of his shop to another party who will continue the business. Meanwhile Mr. McNally is making preparations to open his drug store, which he will locate on Bogle Hill, and hopes to have everything ready in a few weeks.

—William A. Volkmar, who for the past six years has served efficiently as clerk at the old Burbank drug store corner of Main and Elm streets, Worcester has bought out the People's Pharmacy on Main street, near Thomas street. Mr. Volkmar is one of the best known druggists in that city, having had an experience covering 22 years. The store which he has taken has been open for a little more than one year and was previously conducted by Dr. W. J. Ryan.

—L. G. Heinritz, president of the Massachusetts State Pharmaceutical Association, and who is the prominent druggist among those having pharmacies in Holyoke, addressed the local druggists of Brockton on the evening of Thursday, Oct. 10, giving them many excellent hints regarding the conduct of their business. Mr. Heinritz is a most able speaker.

—For more than five years a drug store has been one of the principal shops of the Adams Block, at North Brookfield, and it was kept by Albert Poland. But the curtains have been drawn and the door locked, and when the place is again opened it will be with a different line of goods, for Mr. Poland has gone out of business permanently.

—The drug store for many years located at the corner of Water and Mechanic streets, Leominster, has been sold by auction to H. C. Bascom, who takes it only temporarily, as he will endeavor to find some competent druggist who will permanently conduct the business. At the present time it is rumored that Charles E. Nutter may possibly take it.

—The many friends of Frank H. Clayton, who is well known in the drug, drygoods and notions trades of Boston, will be surprised, doubtless, to learn that he has changed his vocation, and will henceforth have charge of the agency of Messrs. Blood & Ellery, the pioneer California oil operators.

—W. F. Smith, the proprietor of the Buchu Lithia Kidney Pill business bearing his name, has moved into his new quarters at 123 Summer street, a far more com-

mous place than the one formerly occupied by him at 41 Tremont street.

—The summer season being over, and as there is little demand for drugs at seashore resorts during the winter months, Albert Basset has accordingly closed his place of business on Main street, Hull.

—Edgeworth, one of the suburbs of Malden, is priding itself in the possession of a drug store just opened in Maloney's block, at the corner of Highland avenue and Medford streets.

## PHILADELPHIA.

### Business Rather Quiet.

Philadelphia, Oct. 12.—Business has been rather quiet during the week, keeping steady along all lines with no unusual demand for any particular article. Prescriptions were below the usual run and soda water was in little demand, it being almost too warm for hot soda and not cool enough for cold soda. Vaccine, shields and plasters still sell well, the smallpox, while not spreading to any considerable extent, is yet all too prevalent. West Philadelphia is particularly affected, which seems but a part of the hard luck dwellers there have, and next it will be typhoid fever to keep them guessing who will be the next one to go. There is more filtered and distilled water sold in West Philadelphia during the year than in any other section of the city, and druggists there keep it as a regular stock. Very little out of the usual Fall trade is being done by the jobbers, although this is somewhat above the average. The drug market keeps steady without fluctuations and there is little speculation in any of the staples. One of the large manufacturers of fluid extracts has been buying heavily in native drugs lately, in anticipation of a shortage in supply in the near future.

### A "SENSATION" UPSET BY FACTS.

Philadelphia, Oct. 12.—What promised to furnish a great sensation to the "yellow" Journals of the city early this week resulted in a complete vindication of the young drug clerk accused of a fatal error. The death of a colored man shortly after taking a dose of medicine filled by a clerk at Ross's drug store, Thirteenth and Brown streets, was made the basis of a charge that the clerk had filled the prescription with aconite instead of the digitals called for. It was said that the man had given the wrong bottle of medicine by mistake, when the first charge was disproved, but at the Coroner's inquest it was proved that the man died of heart failure and not from the medicine. The clerk was completely exonerated from blame, so the "yellows" had to lose their story of "Another Victim of the Druggist's Carelessness". It is typical of newspapers that while the first story was given with big headlines the finding of the Coroner disproving their story was printed in small type in an out of the way part of the local news page.

### FIRST "SOCIAL MEETING" AT THE P. C. P.

Philadelphia, Oct. 12.—The first of the "Social Meetings" of this year's session of the Philadelphia College of Pharmacy was held in Museum Hall last Tuesday evening. The reception was tendered by the members of the Alumni Association to the students, especially to those matriculating this year, the classes being welcomed in a very pleasant address by President H. B. French. Among the speakers were Dr. Clement B. Lowe and M. W. Bamford. Several vocal selections were rendered by Mrs. McCormick and Mr. Wade, a graduate of the Class of '99, following which dancing was indulged in to a late hour. Refreshments were served downstairs during the evening. Two very pleasant innovations in these entertainments were warmly commended by many of those present, the providing of a checking system for hats and wraps and a room for ladies, the library, and the limiting of the guests to those whom tickets of invitations had been sent.

EDWIN M. BORNING,  
Fairmount avenue and Tenth street, Philadelphia.

### NEXT MEETING OF THE PHARMACY BOARD.

Philadelphia, Oct. 12.—The next meeting of the Pennsylvania Pharmaceutical Examining Board for the examination of applicants for registration will be held in Philadelphia on October 19th, in the girl's commercial High School building at Broad and Green streets, between 12 and 5 p. m. The Board will also meet in Belfield school house, Pittsburg on the same date. Blank applications and necessary information can be obtained from the Secretary, Charles T. George, Harrisburg, Pa.

### NOTES.

—A meeting of the members of the Drug Bowling League was held at the office of D. E. Bransome last Tuesday evening, for the election of officers and appointment of committees for the coming season. A. C. Smith was elected president, D. E. Bransome, vice-president; E. Thorpe, of Whitall Tatum Co., secretary and E. C. Donnell, of Smith, Kline & French Co., as treasurer. Executive and entertainment committees were appointed and a special committee was named to arrange the schedule for the year. Steps were also taken to raise a fund for entertaining guests at the Drug League tournament which is to be held in this city next April. The headquarters of the clubs will be at Ninth and Walnut streets, where a new alley has been fitted up especially for them, with Thursdays and Saturdays as regular bowling days. The schedule will provide for as many games as possible each week. —The Austrian steamer "Bitinia" is discharging a valuable cargo of drugs at Camden wharves. Gum opium, licorice root, raisins and gums from Asia Minor are the principal items of her cargo, the vessel coming here direct from Smyrna. It is reported that this is the largest direct shipment of opium ever received at Philadelphia, most of the drug used here coming in through New York, and a regular direct trade is promised for the future. —Most of the Philadelphia delegates to the recent N. A. R. D. Convention have not yet returned, they taking the occasion to pay a visit to the Pan-American Exposition. Little news of the meeting has yet been received here, it is said that many of the Eastern delegates were much disappointed with the outcome of several matters.

As an external remedy, there is no superior to Four-Fold Liniment.

## BALTIMORE.

### MUCH DRUG TRADE ACTIVITY.

Baltimore, Oct. 14.—Gratifying activity is reported by nearly all the jobbing houses in this city. Orders have been coming in freely and the volume of the movement of goods is exceptionally large. In the aggregate this year's business will be far ahead of 1900 and will present other satisfactory aspects. The market for botanicals has not undergone any change during the past week, staple articles commanding about the same price, the whole range of values showing no indications of a rise or drop. Some crops are disappointingly small and may be expected to rule considerably higher than was expected. In heavy chemicals a fair amount of business is being done; although many retailers complain, others find much in the situation to encourage effort.

### THE WHOLESALERS' NATIONAL MEETING.

Baltimore, Oct. 14.—The attendance from this city at the annual meeting of the National Wholesale Druggists' Association this year will be rather larger than usual, which is in part attributable to the close proximity of the meeting place to Baltimore. As far as can be ascertained Charles E. Dohme, of Sharp & Dohme; John W. Emory, of the Borough Bros. Manufacturing Company; Frank Baily, of James Baily & Son; John C. Muth, of Muth & Bros., and, perhaps, H. B. Gilpin, of Gilpin, Langdon & Co., will go. The journey to Old Point can be made with exceptional comfort by boat down the bay.

### NOTES.

—The visiting druggists last week included Mr. Allen, of Kings and Queen Court House, Va.; Dr. David Fahrney, Hagerstown, Md.; Dr. P. D. Fahrney, Frederick, Md.; M. W. Waters, Washington, D. C.; S. S. Van Trump, Trump, Md.; L. H. Diehman, New Windsor, Md.; Dr. E. J. Wolff, Cambridge, Md.; M. S. Purcell, Leesburg, Va.; N. C. Cameron, Perryville, Md.; T. Stewart, Delta, Pa.; T. H. Nicholson, Murfreesboro, N. C., and George P. Riggs, formerly of Washington, D. C., but now of New London, Conn.

—John Gleichman, formerly engaged in the retail drug business here, but for several years the representative of Rosengarten & Son, of Philadelphia, was married to Miss Jane Abell Irvine, of Twenty-first street, this city, last Monday at noon. The ceremony was private, only members of the respective families having been invited. Mr. and Mrs. Gleichman will give an entertainment at home later.

—The retail drug store at North Druid Hill avenues, formerly conducted by William H. Booth, who was compelled to make an assignment not long ago, has been purchased by Luther B. Benton, an experienced pharmacist, in business on McCulloch street for a long time. Mr. Benton has made a number of improvements. He had spent the interval in taking a well-earned rest.

—A new departure has been inaugurated by L. J. Jimenez, formerly of Santo Domingo and engaged in the drug business there. Mr. Jimenez has been in Baltimore for several months, and has now opened a combination pharmacy and toy store at the corner of Light and Ostend street.

## PITTSBURG AND VICINITY.

### A MERRY WAR.

Pittsburg, Oct. 14.—What promises to be an interesting conflict is on between the physicians and druggists in New Castle, Pa., a thriving city some fifty miles west of here. Several of the leading physicians, believing they have a grievance against the druggists have formed a company for the purpose of operating an independent drug store to be run under the direction of a board of

directors chosen from among them. It is the intention to conduct the store along lines to suit the requirements of physicians only, that is, no patents, toilet requisites or sundries other than those in demand by the physician or sick room will be carried. In a word it will be a strictly prescription and drug store, according to the claims made by its promoters. Of course, the dozen or more druggists do not view it calmly and have already formulated a very novel retaliatory plan which is as follows: The services of one or more physicians of good standing are to be employed, they are to treat all cases coming to them gratuitously, the only charges being the usual ones for the filling of their prescriptions. The physicians thus employed to be paid a salary, the druggists sharing the expense of this pro-rata. The druggists claim a practicability for their plan and state that arrangements are already complete for putting it in force. In the meantime, the local physicians are going steadily on and are arranging their quarters preparatory to commencing business.

### PIONEER DRUGGIST DIES.

Pittsburg, Pa., Oct. 14.—J. C. Armstrong, mention of whose illness was made in a former issue, died at his home at Brownsville, Pa., last week. Mr. Armstrong was one of the oldest druggists in this section and was a most popular and widely known man. On all matters pertaining to the betterment of existing conditions in pharmacy he took an active interest, and his support, both morally and financially could always be depended on. He was in addition an ardent church worker, and gave much of his income to that source. He is survived by a wife and two children, daughter and son. The latter, a well known travelling representative for a Pittsburg drug house was named executor for the estate which is considerable.

### NOTES.

—The stock and fixtures of the Park Pharmacy at the corner of Smithfield street and Fifth avenue were sold at public auction last week, thus bringing to an end the career of the most expensively fitted store in the country. The stock which had been allowed to run down brought fair prices, the public generally being the purchaser. The fixtures and working apparatus was bought by the various druggists throughout the two cities. P. C. Schilling Co., operating several stores, bought the fourteen foot onyx soda fountain paying \$820. W. D. Markeit, the wall fixtures for \$900, which he will remove to his Connelleville, Pa., store. The original cost of these fixtures was said to be \$10,000.

—J. Walter Beyer who has been clerking in the drug store of his father at Punxsutawney, Pa., has given up the drug business and entered the Jefferson Medical College at Philadelphia.

—H. E. Gelsenheimer formerly travelling representative for Parke, Davis & Co., has accepted the position of general manager for the Anderson-Kneeder Co., dealers in physicians supplies.

—Frank Bros. now operating drug stores in Braddock, Homestead, Turtle Creek, and other places have invaded Pittsburg, they having opened a drug store in the Liberty Market.

—The Pittsburg College of Pharmacy has entered a protest against the assessment of taxes, claiming to be a charitable institution. Decision was reserved.

—S. R. & G. A. Kelly, Jr., of G. A. Kelly Co., were away last week for a brief visit to the Pan-American Exposition and the N. A. R. D. meeting at Buffalo.

Every druggist and drug clerk who desires a quickly adjustable and removable apron which will keep the clothes clean when working in the laboratory, should obtain Moore's Universal Spring Apron. See the advertisement of this article. It is the best thing of the kind that has come to our notice. It costs only 75 cents; postage 14 cents extra. The manufacturers are E. C. Moore & Son, Detroit, Mich.

## CHICAGO.

### DRUG TRADE CLUB IN NEW QUARTERS.

Chicago, Oct. 12.—The new home of the Chicago Drug Trade Club on the parlor floor of the Bismark Hotel was opened to the members and their friends on Chicago Day, Oct. 9. The opening was informal, about 100 gentlemen being present at luncheon. Later in the month a formal opening and reception will take place. Among those present on the opening day were: Messrs. A. E. Remick, of William R. Warner & Company; J. J. Kearney, W. N. Sharp, C. O. Sethness, Porter B. Fitzgerald, Romaine Pierson, O. W. Schmidt, H. E. Davis, Charles E. Matthews, of Sharp & Dohme; C. C. Lake, of Eli Lilly & Company; John F. Matthes, of Whitall Tatum Company; F. W. Bahnsen, of Rock Island, Ill.; Curtis Stream, George D. Searle, Franklin S. Hereth and O. T. Eastman, all three of the Searle & Hereth Company; B. T. Van Allen, H. C. Mackey, Henry Beck, S. H. Gunder, T. F. Murray, I. W. Blood, George W. Mathison, of the Emerson Drug Company; H. C. Mathison, of Bauer & Black; H. N. Timolat, W. J. Stange, W. H. Hatfield, Fred. A. Leahy, H. W. Wood, E. A. Vosburg, Vincent de Messimy, J. H. Odbert, John Blocki, H. A. Antram, of the Randolph Box & Label Company; Louis K. Waldron, Fred D. Koehn, William Buehler, F. K. Lyon, of Lord, Owen & Company; W. H. Gallenkamp, T. C. Ballard, of Morrission, Plummer & Company; John Franklin, J. W. Van Winkle, James R. Owen, of Lord, Owen & Company; D. W. Gorman, of Philadelphia; J. J. Burns, J. Walker, Scofield, of the Fuller & Fuller Company; George F. Lewis, N. H. Townsend, R. A. Hevenor, of Lord, Owen & Company; W. C. Hayhurst, A. Waldschmidt, G. A. Thomas, Alexander Harris, of Johnson & Johnson; M. S. Landecker, C. P. Van Schaack and R. H. Van Schaack, both of Peter Van Schaack & Sons; J. E. Bartlett, S. D. Simpson, C. C. Leonard, F. N. Oxley, A. M. Foster, W. L. Peters, Thomas J. Ross, Joseph G. Peters, of the Fuller & Fuller Company; E. C. McCune, A. J. Horlick, of Horlick's Malted Milk Company, Racine, Wis.; C. M. Phelps, of Racine, Wis.; James R. D. Stevenson and Charles Stevenson, both of Robert Stevenson & Company; Albert B. Hunt and J. V. Pierce, both of the Fuller & Fuller Company; F. Eberlein, L. A. Becker, C. J. Lillenthal, Arthur Dawson, of Robert Stevenson & Company; G. W. St. Clair, of Johnson & Johnson; Oscar Leistner, of William L. Strauss & Company.

The windows and interior decorations of the club rooms are artistic and unique, the designs being the first of the kind in the United States, having been modeled after similar designs which evoked much favorable comment at the recent Paris Exposition.

### CHICAGO BUSINESS FLOURISHING.

Chicago, Oct. 12.—There is little to add to the record of general prosperity which has been the rule for several weeks. Chemicals and pharmaceuticals are in heavy demand and all staple goods are active. In fancy goods and sundries the demand is very large, and all druggists who cater to the holiday trade are placing heavy orders in anticipation of a record breaking business. All the manufacturers and jobbers are busy getting out orders and night work is the rule rather than the exception.

### NOTES.

—Frank L. E. Gauss, who used to be city salesman for Peter Van Schaack & Sons, but some two or three years ago accepted a position with the Searle & Hereth Company and went to St. Louis as general representative of that Company, has returned to Chicago and will become general sales representative for the company here. As a pharmaceutical salesman Mr. Gauss has no superior anywhere.

—Two drug stores in Lake View were entered by burg-

lars this week. The thieves gained entrance to the store at J. J. Schmitt at 1127 North Clark street, through a rear door and secured \$35 from the cash register besides \$48 worth of stamps and \$25 worth of cigars. Louis Lehman's drug store at 1229 North Halsted street, was burglarized on the same night and \$6.50 taken from the cash register.

—Thomas V. Wooten, G. D. Searle, of the Searle & Hereth Company; Charles E. Matthews, Western Representative of Sharp & Dohme; Wilhelm Bodeman, A. J. Benson, A. V. Lane and several other well known men in the trade have gone to Buffalo to attend the annual meeting of the National Association of Retail Druggists.

—A. W. Hatch, formerly with Peter Van Schaack & Sons, but more recently with the Crown Perfumery Company, has returned to his old love and has accepted a position as manager of Peter Van Schaack & Sons' sundries department.

—Gustavus A. Hoffman, a former Chicago druggist, but now in Detroit, Mich., has gone into bankruptcy. The meeting of the creditors was held in Detroit at the office of Referee in Bankruptcy H. P. Davock on Sept. 30.

—The wife of W. P. Knoche, a popular druggist at Sixty-first and South Halsted streets, presented him with a son on Oct. 9. All concerned are ready for congratulations.

—M. A. Bilz has succeeded Klesling & Bilz at 709 West Twenty-third street.

—R. I. Kirkwood has succeeded Mrs. C. M. Kirkwood at 1230 North Western avenue.

—C. L. McDermott succeeds Mrs. F. E. Renken & Company at Waterloo, Ia.

—C. L. Kaul has bought H. N. Pool's drug store at Earlville, Ill.

—A new store will soon be opened at Thirtieth street and Michigan avenue.

—Harry C. Burgman has sold his store at 305 West Harrison street to Rollins & Rice.

—Lytle & Orr, druggists of Delphi, Ind., have been succeeded by the Lytle & Orr Company.

### ILLINOIS BOARD OF PHARMACY.

At the examination held by the Illinois Board of Pharmacy in Chicago, Sept. 24-26 the following passed as Registered Pharmacists: P. A. Born, G. F. Brenner, H. F. Foote, S. Fox, M. G. Franke, G. A. Hodges, O. F. Hubbell, C. E. Hagyard, E. Jensen, F. Meisner, J. Meserow, W. H. McCurdy, A. McLean, F. H. Ostertag, E. F. Peterson, A. H. Pohl, H. A. Salceter, J. C. Swan, H. C. Shippee, all of Chicago; F. O. Anderson, Cambridge; C. E. Barnhardt, Peoria; C. Boyer, Peoria; M. C. Condry, Oblong; J. J. Huff, Gilson; E. Jayne, Evanston; F. E. Lambert, Seatonville; J. D. McDougall, Berwyn; C. T. Peiz, East St. Louis; F. E. Smith, Girard; M. H. Simmons, Macomb; Lottie B. and Frances S. Watson, Minooka. Assistants: C. Bauers, F. W. Beck, J. F. Chapman, F. J. Edelman, E. Haney, W. A. Mankey, S. E. Perlow, C. Rademacher, G. W. Thorson, all of Chicago; R. B. Anthony, Kewansee; C. E. Kraeger, Pekin; C. F. Nelson, Rockford.

The Board of Pharmacy desires to have it distinctly understood that no applicant who has gained his experience in Illinois Drug stores, will be examined, or given an interview until after being regularly registered as an apprentice, and that under the new law it is now the imperative duty of the registered pharmacist to see that this apprentice is registered. The next meeting of the Board of Examination will be held at 144 East 39th St., Chicago, Nov. 19 at 9 a. m. New applications must be on file in the office at Springfield at least ten days previous to the above date. Under no circumstances will this rule be varied from and no one will be given the examination who has not complied fully with these requirements. Affidavits from registered pharmacists of time service must be on file at least three days before the examination. Address all communications to L. T. Hoy, secretary, Springfield, Ills.

**T**HE PRINTER is still a failure; with the three-color process he gives you a fair idea of the architectural beauty of a fountain, but he cannot show you the vitals of the apparatus. All men who wear silk hats are not to be trusted, and sometimes a pretty fountain disguises a very inferior apparatus.

We ask, when buying a fountain, that you *first investigate the Mechanical Construction*, to make sure of the profit-producing efficiency—then put it in as fine a case as you can afford.

For artistic fountains with scientifically-constructed working parts, for money-making soda-water apparatus, the name "TUFTS" has stood for the best for nearly half a century.

Our prices are very low. We will take your apparatus in exchange, and make easy terms. May we send you our portfolio of prints?

## AMERICAN SODA FOUNTAIN COMPANY

Manufacturing under the Tufts Patents.

278-288 CONGRESS STREET - BOSTON, MASS.

# The Great Profit

to-day in Hot Soda is attracting nearly every one who has a convenient opportunity to serve it. We are having a great demand for catalogues and estimates of cost.

If you are buying a Hot Soda Fountain you will find many beautiful patterns from which to choose. But remember one important point: Mere beauty is a secondary matter. More important than shape or style of ornamentation is the construction itself, and on this subject we commend to intending buyers a careful examination of the apparatus which we have furnished to dispensers for the last few years and which has made such marvellous records for economy in operation.

Bear in mind that in its last analysis the mechanism of the apparatus is simply the story of dollars and cents; it is the fact not the fancy of the subject; it is the business end of the transaction, and as such it ought to be read and pondered by every buyer before he settles upon the apparatus he will buy.

We shall be pleased to send to any one who is interested in the subject our latest books on the production of Hot Soda. They give facts and figures in a way which will leave no doubt in the mind of the thoughtful reader as to the wisdom of having the best apparatus obtainable.

The patronage for Hot Soda is assured; the profit is enormous; the possibilities ahead are very great; do not be content with a second-grade or inferior make of apparatus. Remember that in Hot Soda it is the apparatus which wins.

## CINCINNATI.

### WILL ORGANIZE A DRUG CLUB.

Cincinnati, Oct. 12.—An informal meeting will be called in the near future by several prominent druggists and others connected with the drug trade to organize a drug club in this city. Those back of this movement are said to be Ashley Lloyd, of Lloyd Bros.; Billy Hale, of Hale, Justis & Co.; Alfred Vogeler, of Stein-Vogeler Drug Co.; Frank Pike, representing Sharp & Dohmer; C. M. Browning, of Benton, Myers & Co.; Albert Schwartz, with Parke, Davis & Co.; Jacob Blitz with J. Elwood Lee Co.; and William Healey, with Johnson & Johnson.

### NOTES.

—Miss Cora Dow who is the owner of five cut-rate drug stores has obtained a lease on the store of the Wolff Estate at the northwest corner of Sixth and Walnut streets. The deal was closed this week thereby shutting out many competitors who were anxious to secure this location. The owners of the property will spend about \$8,000 in remodeling the store front. This corner has become a landmark through having been occupied for over fifty years by John Keeshan & Co., the oldest druggist in this city.

—Howard W. Agborn, a drug broker of this city has just returned from a two months' trip in the northwest and along the Pacific coast. He reports a phenomenal export trade to the Philippines, Hawaii, China, Japan and the Straits settlements. "The volume of business is staggering," says he, "the increase is due to superiority of American goods and American hustle."

—Conrad Waldvogel, manager of N. E. Smith's Court street pharmacy, was married this week to Miss Elizabeth Schemel. After a short wedding trip they will reside in a handsome flat at Allison & Walnut streets.

—W. E. Harvey, a prosperous druggist of Blockton, Ala., and president of the Harvey Ice Shaver Co., was in this city during the week making arrangement for the manufacture of his patented ice shaver.

—Emil Zorn, Otto Groenland and Charles Freericks, Jr., delegates, accompanied by Chas. H. Jones, organizer of the Ohio Valley Drug Association left for Buffalo this week to attend the N. A. R. D.

—Crossed electric wires set fire to the rafters in the cellar of George W. Kylius' drug store at Woodburn and Fairfax avenues. The fire was extinguished with a loss to the stock of about \$1,000.

—Edward Kaufman for ten years clerk for T. J. Widrig, Newport, Ky., has purchased the drug store of Dr. S. Scheffner in that city.

## THE NORTHWEST.

### DRUGGIST LOSES IN COURT.

St. Paul, Minn., Oct. 11.—George Ticknor of Ticknor & Jagger, druggists of this city, was in court this week in a somewhat peculiar case. Judge Otis of the district court filed an order in which he overruled the defendants demurrer to the complaint in the case of John Moore against Mr. Ticknor, with leave to the defendant to answer on paying \$10 costs. Plaintiff recites that in February last he had cut the end of his thumb and called on defendant, a licensed pharmacist, for treatment. That Mr. Ticknor applied a bandage saturated with a solution of carbolic acid, winding the bandage tight around the thumb and giving the plaintiff a bottle of the solution to moisten the bandage, with instructions to keep it in place. The thumb began to swell, and on March 4 was amputated by physicians. Mr. Moore alleges damages of \$2,500. Judge Otis, overruling the demurrer, said: "Knowledge, as alleged, that the treatment was wrong and improper, coupled with the fact that compensation was received for the service, saves the complaint."

### NOTES.

—Successions: M. A. Thul, Webster, S. D., by the Irwin Pharmacy; Woodward & Flibert, Watertown, S. D., by Munger & Engelsby; E. J. Askew & Co.,

E. J. ROMANS.

Fourth and Wabasha streets, St. Paul, Minn.

Valley Junction, Ia., by M. L. Seyfert; F. K. Gregg, Manchester, Ia., by Denton & Ward; Jeffrey & Yeoman, Elwood, Neb., by M. I. Britton; F. E. Costigan, Seattle, Wash., by Esther J. Reid; F. E. Herman, Dundee, Minn., by H. H. Flibert; Bert Davis & Co., Bussey, Ia., by K. E. Gose & Co.; Ben Bridgeford, Ord, Neb., by the Goodrich Drug Co.; A. C. Butz, Talmage, Neb., by I. B. Rose.

—Fire in the drug store of Dr. Oscar Houck of La Crosse, Wis., the other night completely gutted the building. A clerk struck a match, which fell on a shelf of drugs. An explosion followed, blowing the entire front of the building into the street. The clerk escaped injury. The loss was \$4,000; fully insured.

—Mr. Pierson of the Pierson Drug Co., Great Falls, Mont., was in the city for a day or two on his way to South Dakota for a visit.

—L. S. Gould has taken charge of the Crocker drug store at Fairbault for the Thiebold Mercantile Co., the new owners.

—O. K. Ronum, of Downsville, Wis., cannot, unfortunately, live up to his first two initials. He has filed a petition in bankruptcy.

—Gus Hargesheimer has gone to Heron Lake to work for J. F. Llepold.

—P. C. Peterson is going to North Dakota to work very soon.

—Geo. C. Wellner has gone to Fessenden, N. D., to work.

—G. R. Frey of Adrian was in the city for a few days this week on business.

—Potter & Larg, Braddyville, Ia., have been damaged by fire.

—The stock of H. F. Stempel & Son, Ft. Madison, Ia., has been sold for taxes.

—A. W. Bork, St. Paul, and N. J. Devin & Co., Salix, Ia., have sold.

—New: E. L. Blackmun, Triump, Minn.; Webb & Smith, Meadows, Idaho.

—Dr. G. B. Loring, Marysville, Utah, is to admit a partner.

—C. A. Jensen, Prosser, Wash., was burned out this week. Loss, \$2,000; insurance, \$600.

### The Pins.

Druggists and drug clerks desiring neat and attractive the pins of appropriate design can obtain them from the J. Arthur Co., 18-20 Colonial Arcade, Cleveland, Ohio. Pins are supplied in oxidized and bright silver, with ruby or emerald eyes, for 26 cents; solid gold, Roman or bright finish, \$1.50. Sent postpaid on receipt of price.

## ST. LOUIS.

### A BUSY WEEK.

St. Louis, Oct. 12.—This has been a very busy for the local wholesale druggists and for many of the retailers. It is what is known as Carnival and Fair Week. The cheap railroad rates, and the many attractions, such as the Fair, Exposition, Velled Prophets' Parade & Ball, and the South Broadway Street Fair, attracted many thousands of visitors at this time. The drug trade was well represented among the visitors. Many outside druggists come to the city but once a year and it is at this time, many of the salesmen being called in from the road to look after them.

### NOTES.

—Two bowling teams have been organized among the West-End druggists. They are known as the "Castor Oils" and the "Epsom Salts." They have the name of being the noisiest set of bowlers in the city, but each member claims to get two dollars worth of enjoyment out of each dollar it costs him to bowl. The bowlers found it very necessary to have a referee to settle the many disputes for which they are also noted, and this honor has been conferred upon Mr. Louis Pauge, city salesman for the J. S. Merrell Drug Co. They meet at the Cote Brilliant Alleys on Tuesday nights. The members of the clubs are: Epsom Salts—E. A. Bernius, captain; J. A. Gibson, W. H. Lamont, H. Vallance and F. White. Castor Oils—A. R. Shen, captain, H. Wassen, Chas. Pins, Ben Switzer and H. Hertzog.

—At the meeting of the Druggists Coked Hat Bowling League last Thursday night the Searle & Hereth Co.'s team took three out of five games from the Meyer Bros. Drug Co.'s team; the Moffit-West Drug Co. scored four to the J. S. Merrell Drug Co.'s one; the Herf & Frierichs Chemical Co. took three out of five from the Mound City Paints. Term of the Searle & Hereth's made a 49 average, and Schneider of the Moffit-West's led the league with a 50 average.

—The Alumni Association of the St. Louis College of Pharmacy will open its winter's scientific and social season on Tuesday night, Oct. 15. Dr. H. M. Whipple, president of the A. Ph. A., will give a lecture entitled, "A trip through the Mammoth Cave." Following the lecture a banquet will be given to the members and their ladies.

—E. V. Koscielski, druggist at 2613 S. Broadway, died of heart disease Sunday morning. He was just in the prime of life and was considered one of the best pharmacists in the city. He was a man who seldom left his store and associated very little with other druggists, but was honored and respected by all who knew him.

—Chas. Renner has purchased the A. P. Kaltwasser drug store at Pestalozzi and Salina streets. This is one of the largest drug stores in south St. Louis. When the cut-rate war was on it was noted for selling "lower than the lowest." Mr. Renner has been chief clerk at this store for some time.

—The St. Louis Drug Clerks Society will hold a regular monthly meeting at Bowman's Hall, Eleventh and Locust streets, Friday night, Oct. 18. Final arrangements will be made at this meeting for the annual ball and general plans for the winter will be considered.

—Dr. H. M. Pettit of Carrollton, Mo., one of the most prominent pharmacists in that part of the State, has been spending Fair week in St. Louis. He says he enjoyed the A. Ph. A. meeting so much that he was homesick to visit St. Louis again.

—C. P. Walbridge, president of the J. S. Merrell Drug Co., leaves tonight for Old Point Comfort where he will attend the annual meeting of the N. W. D. A. After that he will travel through the South for a couple of weeks.

—S. H. Wilson has been appointed druggist at the Missouri Pacific Hospital. C. C. Borchers recently resigned this position which he had held for seventeen years, to accept a situation with the St. Louis Granule Co.

—N. C. Shanahan, proprietor of the Marlon Sims Pharmacy, Grand and Caroline streets, has returned to take charge of his store after a three months' vacation spent in recuperating his health.

—G. B. Self, in charge of the Kansas City branch of Ell Lilly & Co., was married in this city last Wednesday to Miss Helen Zimmerman. Until quite recently Mr. Self was located in this city.

—Chas. Fritz, a former local drug clerk, but now city salesman for the Hoeffken-Finke Laboratory, was married last Tuesday to Miss Borriede of the South Side.

—W. J. Freese has left the chief clerkship at the Seitz Pharmacy to accept a similar position with Chas. H. Zahn at Nineteenth and Sidney streets.

—Dr. Otto F. Claus has purchased the Columbia Pharmacy at Compton and Laclede avenues. F. Mueller has been placed in charge of the stand.

—Invitations are out for the wedding of M. J. Noll to Miss May Horn on Oct. 16. Mr. Noll is proprietor of two West-End drug stores.

—R. S. Vilt, druggist at 3800 S. Broadway has resumed the study of Medicine at the Marlon Sims-Beaumont College.

—Rudolph Fischer, druggist at the City Dispensary, has returned from a week's hunting and fishing trip over in Illinois.

—Geo. W. Tantz, druggist at 234 and Dadier streets, is studying medicine at the Marlon Sims-Beaumont College.

—Dr. R. B. Tilley, formerly of the Reck Drug Co., Columbia, Mo., is opening a new drug store at that place.

—A. E. Rives, druggist in the southern part of East St. Louis, was visited by a \$500 fire early this week.

—C. L. McGee, a former local drug clerk, is opening a new drug store at Meridian, Tenn.

## FORGING LABELS.

**A Gang Caught Who Were Carrying On a Business of Counterfeiting Copyright Labels—Also Believed to be Smugglers of Drugs.**

Detroit, Mich., Oct. 18.—A gang of forgers of the labels of well-known patented drugs was unearthed last week and on Oct. 7 were placed under arrest. The five were: Edward H. Horn, 122 Elizabeth street, East, and William F. Bartlett, 502 Fourteenth street, together doing business under the name of the German Tablet Co., at 122 Elizabeth street; the other three, Louis J. Fulmer, 187 Jefferson avenue and H. T. and John O. Jenkins comprise another company known as the Windsor Chemical Co.

It is believed that an extensive trade has been carried on by this quintet and that they are also the same gang which has been smuggling drugs into the United States from Canada. H. J. Jenkins, with another G. L. Schumacher, was arrested on April 4, 1897 on the charge of smuggling the patented goods of the Farbenfabriken Co. of New York, the same concern whose labels are now being forged by this gang. Louis J. Fulmer is believed to be the leader of these two companies. At the addresses of both the German Tablet Co. and the Windsor Drug Co. large quantities of the products of the New York firm, together with the plates from which thousands of counterfeit labels, also discovered on the premises, were made. It is not yet ascertained whether the drugs found were genuine or not, as no examination has yet been made.

Efforts will be made to connect these men with certain smuggling operations which the United States authorities are endeavoring to trace, and incidentally to find some others who are believed to be carrying on the illicit commerce.

The Mercer Chemical Co., manufacturing pharmacists, Omaha, Neb., allow 20 per cent discount for cash with mail orders in addition to their customary 40 per cent discount on pharmaceuticals. They guarantee that their goods will give satisfaction, and invite every druggist to send for catalogue.

## CALIFORNIA.

### ENGLISH AS SHE IS WRIT.

San Francisco, Oct. 10.—Frank Rattan, of Martinez, Cal., received the following letter which illustrates the variety of knowledge called for on the part of an up-to-date apothecary:

Dear Sir: Please give me some medicine that can on the blood that covered some of the white part of my friend's eye. While he was engaged in a greatly excited race, showing the full power of his neck by pulling a rope hanged from his neck to that of his friend.

In that moment the blood covered some of the white part of his eye. Also it is not painful at all, or makes any harm of his sight. I think the blood flows out on account of excitement. Yours truly,

Henry. A Japanese boy.

### NOTES.

—Boericke & Runyon, who have a handsome drug store on Sutter street, San Francisco, have especially apt windows. Passing there yesterday, the pedestrian was struck by a tableau, an elegant basin filled with water was the center of a group of sponges, wash rag, soap, flesh brush, and toilet water. A sign read, "A cold sponge bath, and a rub down morning and night with a dose of a good tonic before each meal, is a good cure for nervousness." On the other side of the streets in the same block, is a drug store whose windows have attracted attention for some years. It is the Snake Drug Store, and is so called from its having one window devoted entirely to the exhibition of snakes, horned toads, alligators, tarantulas, and other hideous but fascinating creatures. The window is filled with rocks and grass, with waterfalls and lakes, to imitate the natural landscape. About these rocks twine dozens of rattlers and other slimy reptiles. They are fed well, and the place is kept very clean. Almost any hour of the day and up to a late hour at night, one is sure to see a number of people "rubbering" at the snakes. They seem to have a strange attraction for some people, and there are a few San Franciscans who go regularly every day to take their snake view.

—Tarweed is attaining note as one of California's valuable products. Its scientific name is *Grindelia robusta*. J. W. Thompson, of College City, Cal., recently shipped seventy-five bales of 250 pounds each, to an Eastern patent medicine firm to be manufactured into cough medicine. Tarweed has hitherto been considered a great nuisance by farmers.

—Professor W. M. Searby, dean of the California College of Pharmacy, was a prominent figure at the meeting of the American Pharmaceutical Association at St. Louis. During his absence, the pharmaceutical laboratory was in charge of John Calvert, secretary of the State Board of Pharmacy, and the Seniors were lectured to by Professor Argent.

—George R. Webb, who has charge of the cigar department of Redington & Company, is meeting with success in introducing his lines. The handling of cigars by a wholesale druggist is rather a novelty in California.

### HAWAIIAN TERRITORY.

Honolulu, H. T., Sept. 23.—S. L. Rumsey, of the well-known firm of Benson, Smith & Co., of Honolulu, has returned here after a visit of five months among old friends in New York and elsewhere in the East. He had a narrow escape while traveling on a train which met with a head on collision in Wyoming. Mr. Rumsey, though enjoying his visit to old scenes, states his delight in getting away from the frightfully hot weather of the East, and being again in the balmy trade-wind climate of Hawaii. He brings back to Honolulu many new ideas gained in his Eastern visit.

—Hon. S. K. Marsh, of Rochester, New York, has come to Honolulu to accept a position with Benson, Smith & Co. Mr. Marsh, is a competent druggist and will infuse New York ideas into the business here.

SECTION OF FOUNTAIN AND COUNTER, HAMNER & BALLARD'S DRUG STORE, Memphis, Tenn.

### PASSAIC DRUGGISTS TROUBLED WITH CUT RATES.

A cut rate war that has never been paralleled in the history of the drug trade of the town is now waging in Passaic, N. J. The trouble started on Friday, Oct. 4, when Dr. Stemmerman who conducts the pharmacy at Main avenue and Jefferson street, published an advertisement in one of the local papers announcing his withdrawal from the Passaic Association of Retail Druggists and giving a list of patent medicines and toilet requisites at cut rates. In a statement over his signature Stemmerman says he "had to, at least he thought he had to," join the Association of Retail Druggists.

Saturday, Oct. 5, the druggists of Passaic and some in Rutherford, Carlstadt and Lodi published a full page advertisement in the same paper, refuting the statements made by Druggist Stemmerman and stating that he, Stemmerman, was one of the first advocates of higher prices and was the first to sign the constitution of the Passaic Retail Druggists' Association. Each side has had several advertisements in the paper since October 4, and it is not known what the outcome of the cut rate war will be.

The druggists of Passaic and vicinity composing the Passaic Retail Druggists Association have threatened to open a store near the Stemmerman pharmacy and undersell the latter in everything, if the cutting is not soon discontinued. Meetings of the druggists have been held and it is thought some action will be taken in the case at once.

JOHN F. NEILL, who for several years past had kept a botanic drug store at 19 Union street, Boston, died from the effects of apoplexy with which he was stricken Oct. 7, while on his way to an electric car that was to convey him to the South station. At no time during the day did he complain of feeling ill, which made his death all the more unexpected.

The deceased was born in Boston and was educated in the Boston schools. While a boy he entered the employ of B. W. Conant & Co., a firm that was burned out in the fire of 1872, and afterward located in Haymarket Square. From there Mr. Neill entered the botanic drug store of Cheney, Myrick & Hobbs, in Union street, with which concern he was identified for twenty-one years as partner, the style of the house being Cheney & Neill. In December, 1893, he withdrew from the firm and opened for himself a botanic drug store at No. 19 Union street, where he continued until his death. His business relations extended all over the United States. In Freemasonry and Odd Fellowship he was best known, and he was a member and past master of many chapters and lodges. He leaves a wife, a mother, four brothers and four sisters. The funeral was held from the Mt. Vernon Church, corner of Beacon street and Massachusetts avenue, and was largely attended by members of the drug trade.

## BOOK REVIEWS.

**MANUAL OF CHEMISTRY.** A guide to lectures and laboratory work for beginners in Chemistry, specially adapted for students of medicine, pharmacy and dentistry. By W. Simon, Ph. D., M. D., Professor of Chemistry in the College of Physicians and Surgeons of Baltimore, in the Maryland College of Pharmacy, and in the Baltimore College of Dental Surgery. Seventh edition. Thoroughly revised and much enlarged. In one octavo volume of 613 pages with 66 engravings, one colored spectra plate and 3 colored plates representing 64 of the most important chemical reactions. Cloth, \$3.00, net. Lea Brothers & Co., Philadelphia and New York, 1901.

The appearance of another edition of this text-book of chemistry is evidence of a continued demand which, in itself, is sufficient testimony to the excellence of the work. The science of chemistry now covers such a vast field and is separated into so many highly specialized branches that to one desiring a general view of the subject a comprehensive treatise is almost necessary. To obtain a comprehensive view requires also sufficient consideration of the allied sciences to render the phenomena described in a purely chemical treatise understood. In the seven parts contained in this volume, the author has endeavored to furnish the student in a concise form a clear presentation of the science including as much of the matter as is necessary for a fair understanding of the subject, care being taken to place in the foreground all facts and data which are of direct interest to the physician, pharmacist and dentist, and to exclude those portions which are to them of only limited interest. The first and second parts contain a brief discussion of the physical properties of matter which are involved in the operations and reactions of chemistry, and a presentation of the principles of the science. In the third and fourth parts the student finds descriptions of the properties of the substances found in inorganic nature. The fifth part treats of the reactions and the methods employed in chemical analysis, while in the sixth division the compounds of carbon are briefly discussed. In the last part some of the facts of physiological chemistry are given, special care being taken to describe the most modern methods for chemical investigation in clinical diagnosis.

The book fully sustains the reputation gained by previous editions of this work. It contains considerable new material and presents an attractive appearance. The colored plates add to the beauty of the volume, but their value to the student of chemistry may be doubted, for the art of reproducing colors has not yet reached that degree of perfection which would be necessary to reproduce the delicate shades obtained in the operations of the laboratory. These colors are useful to the student only in the laboratory where they can also be studied to the best advantage.

**A HANDBOOK OF MATERIA MEDICA, PHARMACY AND THERAPEUTICS.** by Sam'l O. S. Potter, formerly Professor of the Principles and Practice of Medicine in the Cooper Medical College of San Francisco, author of the "Quiz-Compend of Anatomy and Materia Medica," an Index of Comparative Therapeutics," several articles in Foster's "Practical Therapeutics," and "Speech and Its Defects," late Major and Brigade-Surgeon of Volunteers U. S. Army. Eighth edition, revised and enlarged; 350 pages octavo; cloth, \$5.00; sheep, \$6.00. Philadelphia, P. Blakiston's Son & Co.

This work is so well known and has been so frequently reviewed that an extended notice of this eighth edition is unnecessary. The revision was commenced in Manila, Philippine Islands, while the author was serving as Attending Surgeon at the Headquarters of the Department of the Pacific and Eight Army Corps. The present edition contains material gathered from the writer's experience in active professional practice in a tropical climate, among soldiers and civilians, men, women and children, during the period of nearly two years' duration. Besides this new matter, the section on Materia Medica contains twelve articles which have been rewritten and thirty-eight articles which are newly inserted.

**SOLUTION OF VALERIANATE OF AMMONIA.**—The following formula for the preparation of this solution is recommended by Perrens (Nouveaux Remedes):

|                                        |                 |
|----------------------------------------|-----------------|
| Distilled water .....                  | 475 grams.      |
| Valerianic acid .....                  | 15 grams.       |
| Ammonium carbonate, q. s., about ..... | .....           |
| .....                                  | 15 to 20 grams. |
| Alcoholic extract of valerian .....    | 10 grams.       |

Dissolve the valerianic acid in 300 grams of the water, no attention being paid to the oily drops which appear on the surface; these quickly disappear when the next ingredient is added. Then add the ammonium carbonate in lumps; these cause an effervescence. When the liquid becomes quiet and enough ammonium carbonate has been added to render the solution neutral to test paper, filter rapidly, leaving the undissolved lumps of ammonium carbonate upon the filter. Dissolve the extract of valerian in the remainder of the water, mix with the solution previously formed and filter again.

**SOLUTION FOR PRESERVING ANATOMICAL SPECIMENS.**—In the preparation of anatomical specimens M. R. Blondel (Nouveaux Remedes) employs three solutions, immersing the fresh specimen successively in a solution the formula for which is given below, 80 per cent. alcohol, and, finally, in a solution of sodium acetate (3 to 100). The specimen is first placed in about five times its volume of the following solution:

|                     |              |
|---------------------|--------------|
| Water .....         | 4,000 parts. |
| Formol .....        | 200 parts.   |
| Carlsbad salt ..... | 2 parts.     |

The Carlsbad salt employed by Pick is either the natural salt or an artificial product of the following composition:

|                          |           |
|--------------------------|-----------|
| Sodium sulphate .....    | 44 parts. |
| Potassium sulphate ..... | 2 parts.  |
| Sodium chloride .....    | 18 parts. |
| Sodium bicarbonate ..... | 33 parts. |

**THE FUNCTION OF OXYDASE IN THE PREPARATION OF COMMERCIAL TEA.**—Fresh tea leaves retain, according to R. Aso (Bull. Coll. Agric., Tokio Imp. Univ., 1901) their green color if steamed after gathering, while they turn brown if partially dried in the sun. The development of the dark coloring material appeared to the author to be the result of the action of an oxidizing enzyme upon the coloring matter of the leaves. To determine this question the author carried on a series of experiments, from which he draws the following conclusions: The black color of commercial tea is developed by the action of oxydase upon the tannin. The color of green tea is green because this enzyme has been destroyed in an early operation in the preparation of the leaves. In the final preparation black tea also loses this oxidizing enzyme. In tea leaves occur protids, which contain iron and manganese.

### The Record.

The advertisement of the New York Surgical Appliance Co., in this issue should be of interest to druggists. In offering the Record Vaporizer the Company believes they have a perfect instrument, and one which uses the solution to the last drop, an advantage over any other vaporizer on the market. Mr. I. Lundquist, the inventor, is a specialist in surgical appliances, and after practical tests of the various vaporizers on the market, invented one which he claims combines the good qualities and eliminates the objectionable features of all others. The fact that physicians are prescribing the Record Vaporizer indicates the merit of the instrument. The New York Surgical Appliance Co., offer very liberal terms to druggists who will push the sale of the Record. By producing the vaporizers in large quantities, they are able to reduce the price and place the article within the reach of all who suffer from any affection of the respiratory organs. The fact that this article will give entire satisfaction to customers and also pay the druggist a large profit, should be sufficient inducement to druggists to write for complete particulars to the New York Surgical Appliance Co., 124 Broadway, New York.

**PATENTS.**

Issued October 8, 1901.

- 683,962.—Hudson Maxim, New York, N. Y. Method of making calcium carbide.
- 683,971.—William J. H. McGurn, Syracuse, N. Y., assignor of one-half to Duane Howard, same place. Non-Refillable bottle.
- 683,989.—Abraham S. Roos, Kingston, N. Y. Non-Refillable bottle.
- 683,991.—Stella Rowe, Cincinnati, Ohio. Water-bag for the head.
- 683,994.—Gustav Schirmer, Chicago, Ill. Medicament-Applicator.
- 684,112.—Leonard M. Sears, South Omaha, Nebr. Bottle washer and rinser.
- 684,137.—Samuel L. Troupe, Philadelphia, Pa., assignor of one-half to Harry Hewes, Darby, Pa. Bottle-filling machine.
- 684,263.—Wallace S. Judd, Cleveland, Ohio, assignor to the Avery Stamping Company, same place. Soda-water tank.

Registered October 8, 1901.

- 8,721.—Title: "Secord's Menthol Tooth Powder". (For Tooth-Powder.) Frederick R. L. Secord, New York, N. Y. Filed September 11, 1901.
- 8,723.—Title: "Dental Chewing Gum". (For Chewing-Gum.) A. J. Bradford and W. P. Murray, Cincinnati, Ohio. Filed September 13, 1901.

**An Old Firm Under New Management.**

The Roworth Manufacturing Co., manufacturers of Medicated Confectionery, 85 Malden Lane, N. Y., announce an entire change in the management, Mr. J. G. Roworth, Jr., having severed his connection with the company. The new management assures the trade that they will give careful and prompt attention to orders, and that samples and prices will be carefully furnished direct or through the jobber.

**DESIGNS.**

- 35,165.—Walter H. Williams, Detroit, Mich. Bottle.
- 35,166.—Oscar M. Wolff, Chicago, Ill. Bottle.
- 35,167.—Homer Worden, New York, N. Y. Bottle-Case.

**TRADE-MARKS.**

Registered October 8, 1901.

- 37,178.—Certain Named Medicine. Sure Mfg. Co., Duluth, Minn. The word "Sweaturo's".
- 37,179.—Throat and Lung Medicines. Thomas F. Harrington, Indianapolis, Ind. The word "Clmona".
- 37,180.—Remedy for Rheumatism. Boleslaus Zaleski, Chicago, Ill. The word "Mermaid" and the representation of a mermaid.
- 37,181.—Remedies for Eczema and Kindred Diseases. Zema-Cura Company, Newcastle, Pa. The word "Cutazema".

**LABELS.**

Registered Oct. 1, 1901.

- 8,708.—Title: "Hixson's X-Ray Oil." (For a Medicinal Oil.) Benjamin E. Hixson, Kansas City, Mo. Filed June 10, 1901.
- 8,709.—Title: "Shields Malaria Tablets." (For a medicine.) Edward Shields, Chicago, Ill. Filed September 3, 1901.
- 8,710.—Title: "Cole's Laxative Liver Pills." (For Medicine.) J. W. Cole & Co., Black River Falls, Wis. Filed September 3, 1901.
- 8,711.—Title: "Lankol." (For an Ointment.) The Lankol Chemical Company, Milwaukee, Wis. Filed September 3, 1901.
- 8,712.—Title: "Uncle Humphrey's Salve." (For Salve.) Albert A. Huseman, Cincinnati, Ohio. Filed September 10, 1901.
- 8,713.—Title: "Mlle. Jewell's Beautifier." (For a Toilet Preparation.) Nellie L. Jewell, Olean, N. Y. Filed July 22, 1901.
- 8,714.—Title: "Mosquito Soap." (For Soap.) Mortimer Soap Co., Woodcliff, N. J. Filed September 3, 1901.
- 8,718.—Title: "Shelbyville Lithia Water Co., Hamilton Well." (For Mineral Water.) Shelbyville Lithia Water Co., Shelbyville, Ind. Filed August 24, 1901.

**Of Interest To Druggists.**

The Empire State Drug Co., of Buffalo, N. Y., advise us that any druggist who carries a line of proprietary preparations of his own will learn something very much to his advantage by addressing them. They hope that this notice to all enterprising druggists will bring many inquiries.

## ALEXANDER

always had a reputation as a fighter. He licked all the boys in his class at the kindergarten, tried a go with the teacher who attempted physical argument against his strenuous ways, and won the feather weight belt before he graduated from the fine arts course at Chicago University. He made so much reputation that the government made him an offer of so much down and a share of the loot if he would undertake to give the rest of the earth a much needed dressing down. He closed with the deal, interested a few other bruisers in the lay and the job was done before the government had the first payment ready. Al then attached the principal office at the Capital, raised the salaries of all the court stenographers and acquired a greater and more lasting popularity than the "Hero of Manila Bay" ever thought of. When he had attained all the fame in sight he went for a battle with the people who were trying to signal him from Mars, and his hair appearing "Imperial" Nipple.

Imperial Nipple.

# MARKET REPORT.

## NEW YORK MARKET.

### BUSINESS CONDITIONS SATISFACTORY.

New York, Oct. 15.—Business conditions continue satisfactory to dealers and the general outlook is considered favorable to a good Fall and Winter season, but fluctuations in prices during the past week are few in number and of no special significance, the market presenting very little in way of developments or new features of special interest.

**OPIUM.**—Advices from primary markets are not encouraging holders, and round lots on the spot are dull and neglected while in a jobbing way the movement is light and unimportant with quotations nominally unchanged at \$3.25@3.50 for 9 per cent and \$3.45@3.60 for 11 per cent as to quantity. Powdered remains quiet and easy at \$4.40@4.60 for 13 per cent, \$4.75@5.00 for granular and \$5.10@5.25 for 16 per cent.

**MORPHINE.**—Business in a jobbing way continues for fair average volume but there is no improvement in values and consumers wants are being supplied at prices on the old basis of \$2.20@2.40 for eighths, as to brand, less the usual rebate of 10c per oz on lots of 10-ozs or over.

**QUININE.**—The market is firmer in tone and the consuming demand is somewhat better with the outlook favorable to further improvement. The ruling quotations for moderate quantities are 28¢@29c for bulk in 100-oz tins, 28½¢@29½c in 50-oz tins, 29¢@30c in 25-oz tins, and 35¢@36c in ounces, according to brand.

**GUARANA.**—Values for second lots are higher owing to reduced stocks and stronger foreign markets and jobbing quotations have reacted to \$5@95c for whole and 95¢@1.05 for powdered.

**MENTHOL.**—The market has worked into a better position and there are indications of further improvement in the near future, as most of the cheap lots in first hands have been taken up for consumption, jobbing quotations show an advance to \$4.60@4.80 per lb. but the ounce prices are unchanged at 25¢@4c.

**GAMBOGE.**—Available supplies are steadily diminishing and the market shows increasing strength under the influence of corresponding conditions both in Europe and producing markets. Jobbers have further advanced their quotations to 70¢@80c for pipe and 75¢@85c for powdered.

**CUBEB BERRIES.**—Slow trading and some pressure to sell on the part of large holders have resulted in an easier market and a reduction in jobbing quotations to 19¢@24c for whole and 24¢@26c for powdered, as to grade and quantity.

**STROPHANTHUS SEED.**—Cables received on Saturday last reported an advance of fully 25 per cent in values abroad and the spot market is correspondingly firmer with jobbing quotations marked up in price to \$1.50@1.75 per lb. and 15¢@18c per oz, according to quality and size of order.

**OLIL WORMWOOD.**—With stocks light both here and at producing points, holders are firmer in their views and quotations in a jobbing way have been advanced to \$6.50@6.75 for prime and \$5.75@6.00 for good.

**THYMOL.**—The tone of the market is easier owing to competition among importers and jobbing parcels are available at \$3.55@3.75. On the other hand late advices are to the effect that foreign markets show a hardening tendency.

F. S. Wright and F. A. Sherwood have retired from the Swedish Asthma Cure Co., Buffalo, and have sold their interest in that Company to A. Thomas Hart, who will conduct the business under the name of Hart's Swedish Asthma Cure Co. at the old address. Mr. Hart, the proprietor of the new Company, announces that all bills of the old concern will be paid by him.

## INDEX TO THIS NUMBER.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                              | PAGE |

Druggists who sell cigars should not fail to take advantage of the special offer of Charles Jacobs & Co., who will send with the first order for 1,000 Havana Specials 100 cigars free for distribution as samples. Havana Specials are sold on approval, to be returned at the manufacturer's expense if not found to be absolutely the best 5 cent cigar ever sold to the trade at so low a price. Druggists who prefer to order less than 1,000 may order in any quantity they desire. Express charges will be prepaid by the manufacturers on first shipment. Samples sent free to any responsible dealer on application to Chas. Jacobs & Co., 358 E. 7th St., New York.

Jenkins Bros., the manufacturers of the well known preparation, "Aunt Hannah's Death Drops," are introducing a new hair tonic, which they call "Aunt Hannah's Hair Tonic," and in which they will maintain the same standard of excellence as in their Death Drops. The Tonic is put up neatly in 12 oz. bottles, and pays the druggist a profit which makes it to his interest to carry it in stock. For counter advertising, literature, etc., address Jenkins Bros., 250 Pulaski street, Brooklyn, N. Y.

The drug store is the place to which people naturally look for elastic stockings and kindred surgical appliances. One of the best lines of elastic stockings on the market is that made by the Surgical Fabric Co., 528 N. 10th St., Philadelphia, Pa., and it will prove to the advantage of all druggists to send for this company's descriptive price list which will be mailed free on application.

## THE MEETING OF THE NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION.

The twenty-seventh annual meeting of the National Wholesale Druggists' Association, held during the past week at Old Point Comfort, Va., is reported on another page of the present issue. The meeting was eminently satisfactory, and was marked throughout by a spirit of mutual confidence and good will. Nothing occurred to mar the harmony of the assemblage, the most closely contested measure being that related to the selection of the place of meeting for the next convention. The members were practically unanimous in expressing their determination to uphold the principles and methods which have proved satisfactory in the past. The work of the various committees was approved, especial satisfaction with the results of the efforts of those active in obtaining the repeal of oppressive laws being expressed. In accordance with a custom which is, happily, becoming general in meetings of this character, a large proportion of the time and attention was devoted to social entertainment. The members of the N. W. D. A. know how to have a good time, and this year all things seemed to work together to make this feature of the convention unusually successful. The importance of the social side of these meetings can scarcely be overestimated. As one member remarked, "It is easy to do business with a man whose hand you shake in a social way at least once a year." Distrust and lack of confidence in the good-will of others are the natural results of compe-

dition, and in the removal of these obstacles to co-operation social entertainments are far more effective than any set resolutions that might be adopted by an assembled body.

Among various recommendations made by the Board of Control, in reviewing the committee reports, is one of peculiar interest, as it is in complete accord with a policy which the Era has long advocated. This recommendation is to the effect that all possible encouragement be extended to those colleges of pharmacy which include in their course comprehensive instruction in commercial work. The recognition of the value of business courses shows plainly the trend of the current of opinion among the pharmaceutical public. Pharmacy is no longer considered as purely a profession, but as partaking more and more of the nature of a commercial pursuit. The pharmacist of to-day employs his knowledge of business details quite as frequently as that which bears more directly upon the science of drugs, and it does not appear reasonable that in preparation for this calling the student should be carefully instructed in one department of his calling while the other is entirely neglected. The druggist is compelled to compete with merchants in various other branches of trade, and needs a knowledge of the tricks of trade quite as much as the training which enables him to prepare and dispense medicines with safety to the public.

Some of the remarks made at the meeting of the National Wholesale Druggists' Association are worthy of comment, as probably expressing pretty accurately the sentiment toward the work of the N. A. R. D. of a large proportion of the wholesale trade. One speaker said that the tripartite plan was adopted at the request of the retailers, and primarily for the benefit of the retailers. Another expressed the hope that the retailers would apply the discipline that the wholesalers were powerless to enforce. He declared that the retailers hold the club, and he was glad that they propose to wield it, adding that the sincere wholesaler would stand by them. Another speaker emphasized the fact that the remedy for the practice of cutting lies in the hands of the retailers, saying that the solution of the whole matter lay in co-operation, not in the application of force, nor in legal statute. In other words, the retailer must furnish the force in a battle which is essentially his own. If the jobber fails to live up to his agreements, the retailers can quickly bring him to time by withholding their patronage. But this remedy can be effective only when there is unity of action. The merchant may view with

equanimity the loss of five or ten per cent. of his customers, but when the larger proportion of his trade goes elsewhere he will be sufficiently interested to consent to make a few changes in his methods.

#### RESULTS OF THE BUFFALO MEETING OF THE N. A. R. D.

In many ways the results obtained at the meeting of the N. A. R. D., during the past week, are disappointing. Hopes were entertained that some definite action would be taken to insure a uniform scheme of procedure in combating the practice of price cutting in all sections of the country. On the whole, undoubted progress has been made, and with definite action upon necessary modifications in the methods in force the prospects for still greater progress seemed bright.

The methods employed by the Association failed to hold the confidence of the members in a large section of the country, consequently neither the old plan nor the one newly proposed received the solid support of the entire convention. The work as outlined for the coming year is, therefore, again of an experimental character, and no united action in accordance with a permanent plan is possible. The work which the Association has undertaken—the reform of the cut-rate evil—is one of extreme difficulty, and in the nature of things complete success should not be expected at once. The interests involved are extremely diverse, and are often apparently conflicting in character. The difficulty of obtaining sincere support from every member of the trade is, therefore, very great. Modern business methods are essentially selfish; hence, a refusal to believe that what is good for the whole is also good for the individual is not surprising. Competition means success at the expense of others, and the life of one enterprise often involves the death of another. Any attempt to modify competition must meet the resistance of long established business habits.

Under these circumstances progress must be slow, methods must be tried and adjusted to varying conditions. In a matter which promises so much to the retailer there can be no lack of interest after the trade at large is once convinced that the desired results are possible. It could hardly be expected that every one would see the superiority of any one plan at once, many of the details requiring a long process of development before they can become generally acceptable. Many of the difficulties can be overcome by the conqueror of all evils—patience.

The tendency to divide into factions representing different sections of the country is one of grave danger to the continued usefulness of the Association, and the attitude of some members in taking a purely local or sectional view of the merits of the work accomplished is to be deplored. No method can produce the same results in all sections of the country. There must be sincere endeavor to advance the interests of all, without regard to sectional feeling, or the body must split up into numerous factions, which can accomplish nothing. It has been charged that certain persons sought to manipulate the conduct of affairs in their own interests, and resorted to sharp practice and political trickery to further private schemes.

Nothing can be more fatal to the Association than an occurrence of this kind. Distrust is all too common as it is, and the appearance of trickery or jobbery would quickly destroy the mutual confidence upon which the life of the N. A. R. D. depends.

#### ANOTHER VIEW OF VACATIONS.

The writer of an article entitled "Vacation," in last week's issue of the Era, argues that the annual outing, which is now a recognized requisite of every employe, is an unmixed blessing resulting in substantial benefits to all concerned. No doubt the few days of freedom which the average drug clerk is able to obtain during the summer does him good and usually pays his employer as well, but in many quarters there is a tendency to overwork the vacation doctrine. The demand for an outing from those who keep the machinery of a store in operation usually comes in the busiest season of the year, when it is most difficult to fill the places left vacant. The work which the clerk leaves behind must be done by some one, and is usually added to the burden of his fellow worker. The vacation of a drug clerk is often anything but a vacation for his fellow clerks and employer. In stores where the force is nicely adjusted to the work to be done, this extra work during the hot season is a great hardship, and, when continued too long, is a heavy price to pay for an outing. In the average drug store it is usually the employe who suffers; he is, unfortunately, seldom able to do just as he pleases, and too frequently goes without his vacation entirely. We know of pharmacists who work along from year to year without a break, although as clerks they formerly insisted as loudly as any one upon the benefits of a vacation. The clerk should remember that for his pleasure some one must "pay the freight," and be moderate in his demands.

A curious case of poisoning is reported in one of our foreign exchanges. It seems that among our friends in the German empire the practical joker is still allowed to perform his cheerful pranks unmolested. Indeed this form of pleasantry is so highly esteemed that the variety of fiend in question is even supplied with apparatus to aid him in the discomfiture of his fellowmen. Little bulbs filled with ammonium sulphide, known by the suggestive name of "stink-bomben," are a regular article of commerce. These are apparently employed for the purpose of producing a highly interesting odor in social gatherings and other assemblies. Recently a young man appeared at one of the hospitals suffering from an injured tongue and excoriated mouth. The history of the case showed that he had found one of these little bulbs, and had undertaken to absorb its contents, under the impression that the liquid it contained was castor oil, and apparently being unwilling that good material should go to waste. Fortunately, the "fool-killer" happened to be off duty.

CORDIA EXELSA contains a crystalline substance which has been studied by Dr. H. Thoms (Apot. Zeit.). The material was sent to the author by T. Peckolt from Rio de Janeiro, under the name cordianin. The body was found to be identical with allantoin in every respect.

## OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors. Please be brief and always sign your name.

### LIQUOR LAWS OF MASSACHUSETTS.

To the Editor—In the last issue of the Era is a classification of the liquor laws of the different states, as they apply to druggists.

Your authority from Massachusetts has not made the case exactly clear. In this state, Massachusetts, certificates—after careful examinations are made by the State Board of Pharmacy—are given to the applicant, certifying that, in their opinion, the bearer is a competent person to receive a sixth-class liquor license.

This application comes to the Selectmen and Aldermen of the city for their consideration. In this State we have local option, the question coming before the voters yearly, in December, "Shall licenses be issued to sell intoxicating liquors in this town for the ensuing year? Yes or no?" By act of the Legislature cities that vote "No" shall grant one or more licenses to druggists to sell liquor. There is no penalty for not doing it; therefore, fully one-half of the cities and four-fifths of the towns vote "No." Then the druggists apply, and between the temperance people on one side, who want no liquor sold, and the liquor element on the other, who wish to make the vote obnoxious so that they may get a "Yes" vote next year—between these two—the druggists gets left ever time, and he is turned down.

We are not allowed to fill prescriptions calling for any fermented liquors—whisky, brandy or wine—nor can we fill one unless the liquor is so covered or disguised as not to be used as a beverage. Any violation of this means \$50 to \$100; second offence, House of Correction three months. Alcohol can be sold without a license merely by signing the book, and unlimited quantities of this so-called "Split" are drunk in non-licensed towns and cities.

Henry C. Hall.

Waltham, Mass., October 14, 1901.

### VALUE OF COMMERCIAL COURSES OF STUDY.

To the Editor—I wish to thank you for your editorial on page 442 of the October 17 issue of the Era on the "Value of Commercial Courses of Study." Every sensible person recognizes that a course on commercial training in a college of pharmacy is simply for the purpose of "rounding out" a pharmaceutical education. Inasmuch as a pharmacist is compelled to earn his living by conducting a business, it is just as much the legitimate purpose of a college to make him acquainted with business forms, simple book-keeping, the use of checks, promissory notes, and to teach him to write legibly, etc., as it is to train him in the proper use of the mortar and pestle, the pill-tile, graduate and spatula. No institution in the world can confer upon its graduates brains or innate ability, but they can take these brains and fit them, by education, for the practical duties of life. You have expressed these ideas admirably. Very truly yours,

Joseph P. Remington.

Philadelphia, October 18, 1901.

**RUSSIAN ADULTERATION OF TEA.**—The leaves from the Caucasian cranberry are employed in Russia for the adulteration of tea. These leaves have been investigated by B. Lorenz (Anat. Zeit.), who finds that they contain traces of arbutin and more than 8 per cent. of tannin. The leaves are best distinguished by their club-shaped trichomes and the form of the epidermal cells.

## SHOP TALK.

Recipe 662  
dloc ruoy eruc lliw  
dna  
hguoc taht pots  
lliw ew ro  
yenom ruoy dnufer

Such was the sign which appeared one day this week on a big blackboard across from Lorning's drug store, corner of Hancock and Beach streets, Wollaston, Mass. It is the most traversed thoroughfare in the town, therefore hundreds of townspeople were puzzled to make out what the sign meant. All of the Latin scholars were appealed to for an explanation of the writing, but the students of this historic language were as much at a loss as any of their less learned friends. In fact, it was about as much of a puzzle as was the writing on the wall in the Bible story, and the "Daniel" who could explain the meaning of these words was found across the street in the drug store, in the person of Charles Winkelmann. "What does it mean, Charlie?" they would ask. And Charlie would answer: "It means just what it says, that Recipe 662 will cure your cold and stop that cough or else we will refund your money, which you would see much easier if you went to a Chinese school and learned to read backwards, instead of forwards." It has proven a most effective advertisement.

\* \* \*

A rather unique method of attracting the attention of passers-by was used by a down-town druggist last week. A well-worn glove was attached to a large display card, and below it was printed: "Glove worn by Mr. Hink Casey. We do not know who Mr. Hink Casey is, but we do know that Blank's witch hazel soap is awfully cheap, at — cents a box." Around the card the soap advertised was displayed in large quantities. The scheme had the desired effect, almost every passer-by stopping to see the novel display. The proprietors of the store seemed to be highly gratified with the results of the advertisement, and asserted that several gross of the soap had been sold since the card had been displayed.

\* \* \*

A well-known druggist of St. Paul, Minn., notes one little point about making emulsions that many drug men—especially amateurs—are not "on to." One new in the business, when he attempts to make an emulsion of acacia, is liable to put the water into the mortar first. In consequence he wastes a great deal of valuable time unnecessarily. Experience teaches him to use a dry mortar, putting in the acacia and adding water gradually, afterward slowly adding the oil that is to be emulsified.

\*

A well-known retail drug firm in lower New York has a rather fetching window display, which attracts a lot of well-merited notice from passers-by. The display is made up of varying sizes of blue and white colored dummy cartons of a proprietary article, and arranged so as to make a fair and recognizable representation of Brooklyn Bridge. The cartons are so placed as to make the labels easily read by the public, who are attracted by the very pretty color scheme. It is a display, costing little, that cannot do else than draw.

**NEW ISSUE OF THE SWISS PHARMACOPŒIA.**—The latest publication of the Permanent Pharmacopœial Commission contains forty-four articles, among which are fourteen new additions. Of the latter eight are chemical preparations: Acid Sulphuric Crud.; Aethylum chloratum; Bismut. Subgallic oxyiodat.; Bromoforn.; Ferr. sesquichlorat. crystallis.; Morphin. Aethylate. hydrochloric.; Natr. theobrominum cum Natrio salicylico.; Natr. carbonic. sicc.;—four vegetable raw materials—Gossypium, Gutta Percha. Sem. Arceae, Sem. Colae—and two galenic preparations: Calcaria chlorata in cubis, and Vin. camphorat.

The above graduates will receive diplomas within a short time. A large and very handsome engraved diploma, printed on fine paper, with the graduates name engraved, especially suited for framing, will be furnished to all who request it for the sum of \$2.00. Those who desire the latter should forward the necessary fee at once, to The Pharmaceutical Era.

## THE LIFE OF LAVOISIER.\*

Those who only think of his tragic end may look upon Lavoisier as an unhappy man. But those who have read the remarkable "Life of Lavoisier" written by Grimaux some few years ago will be aware that his lot was cast in pleasant places until the final tragedy set in. The book is the more remarkable as the sources of original information on the subject are few—the short biographs of Lalande, Fourcroy, and Cuvier, and the papers of the great chemist which Mme. Leon de Chazelles inherited from her great-aunt, Mme. Lavoisier.

Lavoisier was the only son of Jean Antoine Lavoisier, Procureur of the Parliament of Paris (Born in 1783), and of his wife, nee Emilie Punctis, whom he married in 1742. Lavoisier was born on August 26, 1743, in the Cul-de sac Pecquet, in the heart of Paris, and baptized the same day at St. Merri's Church, being named Laurent after his great-uncle, Messire Laurent Warocquier, who was in holy orders.

The future great chemist was left an orphan very early in life. His mother died in 1748, and he went to live with his father and sister at the house of his godmother, Mme. Punctis. He was brought up by

\*Chemist and Druggist.

her unmarried daughter Constance, and went to the Mazarine College, Paris, as a day-boy.

At this time he had some idea of following his father's profession, and when he left school studied at the faculty of law and took his degree as Bachelor and Scientiate. He had, however, good masters in science he studied botany and made herborizing excursions with Bernard de Jussieu, learnt mineralogy and geology with Guettar, and attended the chemistry classes of Rouelle at the Jardin du Roi, where Diderot, Macquer, Bucquet, Bayen and Darcet were among his fellow pupils.

This all-around education, this quiet home life—for Mme. Punctis was not fond of society, and his sister had died in 1780—naturally made Lavoisier a sober, studious young fellow. At 20 we find him making barometrical observation and geological excursions, and in fact the first communication he made to the Academy of Sciences in 1765 was on the different sorts of gypsum. In the same year he was a candidate for the Academy prize of 2,000 livres (equal to about \$80.) on the best method of lighting a large town. He did not gain the prize, but was awarded a gold medal, and his name appeared in the newspapers for the first time.

The year 1768 was a memorable one for Lavoisier. It was on June 5 that he first took his seat in the Academy of Sciences, and the same year he entered the offices of the Ferme Generale—the fatal decision which cost him his life. His duties required him to visit the Custom-houses, tobacco-factories, etc., and while on a journey of the kind we find him in 1769 visiting the field of battle of Fontenoy, where the Duke of Cumberland had been defeated by the French when Lavoisier was 2 years old—not that this patriotic excursion meant any dislike to the English, as we shall see later on.

His marriage took place on December 16, 1771, at the chapel of the Hotel du Controle Generale de Finance, rue des Petits Champs. His wife was a Mlle. Marie Anne Pierrette Paulze. She was 14 years of age and he was 28.

They lived at the rue Neuve des Bon Enfants till 1775. Then when his father died, and Lavoisier was named Regisseur des Poudres, he went to live at the Arsenal, near the Bastille. Here he practically spent all the remainder of his life.

The curious difference in age between himself and his wife might seem to suggest an ill-assorted union, especially as Lavoisier's education had probably given him a somewhat serious view of life; while Arthur Young tells us that Mme. Lavoisier was lively and animated, and the way in which she treated her unfortunate second husband, Count Rumford, would suggest that she was a person of strong will and high spirit.

Lavoisier's life was a busy one. He could only write in his laboratory from 6 to 9 a. m., and 7 to 10 p. m., the Ferme Generale, the Reglades Poudres, and the Academy of Science filled up the rest. But one day a week was consecrated to experiments.

The house was the rendezvous of English as well as French savants. Here Priestley came in October, 1774. The English Tennant, still young and unknown, Watt, and others. Among his French friends distinguished in science were Cadet de Gassicourt, Darcet, Bucquet, Macquer, Monge, Laplace, the Duc de la Rochefoucauld, and the Duc d' Ayen.

The girl-wife of the savant took an active part in the laboratory experiments, writing under her husband's dictation. She was a clever artist, and drew the illustrations for the "Treatise of Chemistry" which Lavoisier published in 1789.

Nor did she neglect the duties of hospitality, but charmed her husband's friends by her cordiality; then her knowledge of English stood her in good stead. Arthur Young tells us that when he visited Paris in 1787 (October) Mme. Lavoisier had prepared "an English breakfast, with tea and coffee." but the best part of the meal was undoubtedly her conversation on Kirwan's Essay on Phlogistics (which she was then translating) and other subjects. When he visited

the laboratory Young much admired Lavoisier's apparatus, the machine for the synthesis of air and water, etc. Lavoisier pointed out that all was of French make, and that he was happy to have encouraged the development in France of this industry, hitherto specially English.

In his rare leisure he was very fond of music, nor did he disdain an occasional visit to the theatre. He doubtless felt the necessity of country air, and bought the Chateau and domain of Frechines (half-way between Blois and Vendome) in 1787. It is not our intention to trace his glorious scientific career at this epoch. He was honored by all, even by the King himself. In 1785, for instance, he was at the Palace of Versailles, and presented Fourcroy to the King, Queen, Ministers, Dauphin, Comte d'Artois (Charles X); it was the habit then to present the new members of the Academy of Sciences to the Royal family. Afterwards there was a dinner at the Baron de Breteuil's. The dinner was at 3 p. m., we notice.

The Revolutionary tragedy now approaches. In 1790 (April) Lavoisier was named a member of the Assembly of Representatives of Commerce; Demachy and Quinquet, the pharmacists, were his colleagues in that body. Lavoisier and Quinquet jointly studied the means to prevent the rusting of musket-barrels.

Towards the end of 1791 he was named treasurer of the Academy of Sciences. In April, 1792, Fourcroy proposed to strike off the list of members all those known as guilty of incivism—in fact, to democratize the Academy. Although all the nobles at this time had fled, the proposition was disputed. Finally it was decided to leave the matter in the hands of the Minister of State.

The efforts of the Academy in general, and Lavoisier in particular to avoid the suppression of the Academy by the study of the metric system and other services, hardly form a portion of the savant's private life, and it is not our intention here to review his public career.

In 1792 he had left the Arsenal to live in the Boulevard de la Madeleine. Here he was arrested in November, 1793, and the scelles opposes both at Paris and Frechines. The seats were taken off twice at Paris once to allow Fourcroy and Guyton de Moreau to obtain the papers, etc., relative to weights and measures (metric), and a second time to allow Mme. Lavoisier to obtain some MSS. to be printed.

Lavoisier was imprisoned on November 28 at the Port Libre Prison and was removed on December 29, 1793, to the Hotel des Fermes, Rue Grenelle St. Honore, then transformed into a prison. One day early in May, 1794, he was one of a batch of prisoners who arrived at the Conciergerie, where some were placed in the dungeon formerly occupied by the ill-fated Marie Antoinette. There the trial began on May 6 at 1.30 p. m., and twenty-eight were condemned to death. They were conducted to the Place de la Revolution (now the Place de la Concorde), and Lavoisier was the fourth to be guillotined. Their remains were thrown into the cemetery of the Madeleine Church near by.

Mme. Lavoisier had done her best to save her husband, but in vain. She was herself arrested on June 14, and remained in prison till after the 9 Thermidor (fall of Robespierre).

Then she again claimed justice, and on April 17 obtained the restoration of her husband's effects—papers, laboratory utensils, and apparatus—and her other property.

**LUPININ.**—The crystalline alkaloid found in the seeds of the yellow lupine has recently been studied by Dr. R. Willstätter and E. Fourneau (Apot. Zeit.). Former investigators ascribe the formula  $C_{20}H_{16}N_2O_2$  to this body. Studies of the boiling point and molecular weight of the alkaloid showed this formula to be erroneous, indicating  $C_{20}H_{16}NO$  as the correct composition. This formula is also in harmony with the results of the study of the boiling points of a number of derivatives of the alkaloid. Lupinin was found to be a primary alcohol containing nitrogen, which forms a link in two closed carbon rings.

## STUDY YOUR EMPLOYEES.

As a trade-increasing policy, the education and handling of the force of salespeople are of more importance than is generally accorded to them. The difference between the results from the work of satisfied, intelligent and enthusiastic salespeople and of those who perform their work in a perfunctory manner, and with little intelligence, is almost as marked as the difference between success and failure.

There are plenty of devices adopted by different managers to keep employes in good fettle. There need be no sacrifice of dignity, no relaxation of discipline, no surrender of privileges. All that is necessary is perfect fairness and good faith, together with a frank and genuine interest in the salespeople as men and women. Close association and interest in the welfare of employes do more toward binding them to employers' interests than an increase of pay can.

Employes should be encouraged to make studies of special topics, and be invited to speak upon them before their associates. It is not unlikely that a suggestion thus drawn out may net the store hundreds or even thousands of dollars. Many a salesman who appears to be a mere dummy may brighten into activity under the stimulating influence of appreciation and encouragement.

It is the successful merchant who most fully appreciates the value of his salespeople and shows broadminded ingenuity in his management of them. It pays to study your employes, and, having studied them, to apply the knowledge in a manner that will influence the right side of the profit and loss account.

You can get lots of friendly and very good advice from your employes if you will only cultivate the habit of getting from them what they have learned by contact with the customers. This really is the most accurate information which one can have from a business. It should be your ardent desire to find out as near as possible what the customer thinks of you and your goods. If you could get the confidence of your clerks, and every once in a while have a private conversation, you can likely get out of them a great deal of valuable information which will enable you to correct any bad points which your business may have, or which will point out to you how to improve your store service. Don't hold yourself so far above your employes that there is no unbending to come down to them, and be friendly enough for them to desire to tell you anything which is of advantage for the improvement of the store.

How to engage help so as to reap the largest results is a serious question. The question of how much shall a merchant pay, and to whom shall he pay it, disturbs the larger number of retailers. And it is right that this should be so. But how much shall we pay Smith and how much Jones? If your help numbers even four or five, this matter is worthy your best thought. You ought to engage your help on the competitive plan. You ought to watch closely for talent, and draw it out by placing responsibility on its shoulders. And that clerk who is shouldering responsibility should be paid more than the clerk whose work is to sweep, keep stock, or attend to the less important trade.

Then, again, there is the careless clerk who have to look out for, as he does not consider that little things cost much, and these little leaks lead to large ones; and it is these little leaks that cause so much trouble, and drain out all the profits. The store that will watch the little things, the little expenses, the things wasted here and there, and see that they are kept within bounds, will be very apt to save a great many dollars in the course of a year. Many clerks think very little of wasting a yard or two of twine, or a sheet or two of paper, in many unnecessary ways, when they might just as easily have saved that amount. They forget that while a yard or two of twine does not amount to much in itself, yet when repeated day after day by a great many clerks it soon amounts to a great many dollars.

So, after you have a clerk for a week or so, and

JAMES W. SEELEY, Detroit, Mich.,  
Recently Elected President N. A. R. D.

you think he will not do, let him go, and do not keep him for months just because you have not the so-called "nerve" to let him out.

And one of the best and greatest things in the mercantile line is the clerk's hours. They are unlike any other business, as they are so long, and that is what disgusts some of the best clerks of the present age. So try and let them have at least two evenings off each week, as they enjoy pleasures as well as any one else, and they will work harder when they have work to do, because they know that their night is coming when they can have it all to themselves and can do as they please, and the merchant who gives his clerks the right hours and treats them well is the one that will prosper and be considered the right kind of a man for the town to support. And if you think this over yourself you will think the same as I do; that is, if you are inclined to think your clerks ought to have some recreation. And the time will come when they will have it.—Frederick A. Castenholz, in "Show Window."

## QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Furniture Polish.

(J. S.) See this journal November 29, 1900, page 598. Here are some other formulas.

(1.) Dissolve 4 ounces of orange shellac in two pints of alcohol of 95 per cent. This will take from 24 to 36 hours if the liquid is kept in a warm place and frequently shaken. Add one pint of oil of turpentine and shake well. This will probably take up any

residue of undissolved shellac. Add two pints of boiled linseed oil, and mix well by agitation. When thoroughly mixed add 4 ounces of sulphuric ether and an equal amount of stronger water of ammonia, and agitate. Shake the bottle before using. It should be applied with a sponge and very lightly. The furniture should, of course, be washed and thoroughly dried before its use.

(2.) Yellow wax..... 1 pound.  
Yellow soap..... 2 ounces.  
Oil turpentine..... 2 pints.  
Boiling water..... 2 pints.

Melt the soap and wax over a slow fire, add the turpentine, and lastly stir in the water until quite cold.

Here are three formulas for Polishing Pastes:

(1.) One ounce beeswax,  $\frac{1}{4}$  ounce white wax, 1 ounce castile soap, 1 pint boiling water,  $\frac{1}{2}$  pint turpentine,  $\frac{1}{2}$  pint spirits of wine. Shred the wax and soap very thin; pour the boiling water upon the shavings and let it become cold; then pour on the turpentine and spirits of wine. Put a little on a cloth, rub it into the furniture, and then rub to a polished surface with a woolen cloth.

(2.) One ounce pearlsh, 8 ounces genuine beeswax, 8 ounces water. Put all the ingredients into an earthenware jar, and warm the mixture so that it becomes semi-fluid; then add sufficient water to bring it to the consistency of cream. Reduce the consistency by adding more water, and then spread it on the wood with a painter's brush; let it dry, and then polish with a hard brush or cloth.

(3.) Two quarts of soft water, 2 ounces soap, 8 ounces white wax in shavings, 1 ounce pearlsh. Boil the ingredients, except the pearlsh, which is added after; then dilute the compound with water. Put the composition on the furniture with a paint brush, and polish with a cloth or hard brush.

### Artificial Vichy Water for Syphons.

(P. H. H.) An English formula is this one:  
Sodium bicarbonate..... 20 grains  
Sodium chloride..... 4 grains  
Potassium sulphate..... 3 grains  
Calcium sulphate..... 2½ grains  
Dried Epsom salt..... 1 grain.

Add to 40 ounces of distilled water and charge.

Lippincott's Book of Instructions for the Soda Fountain gives the following formula:

Bicarbonate of sodium..... 25½ grains.  
Bicarbonate of Potassium..... 115 grains.  
Sulphate of magnesium (anhydrous). 115 grains  
Chloride of sodium..... 230 grains.

Filter and charge to 100 pounds pressure.

### Residue Obtained by Washing Rusty Gold.

(H. B. M.) We cannot undertake to make an analysis of the powder which you send us, and without an analysis it is impossible to tell just what it is. What millmen call "rusty gold" usually, consists of particles of gold covered with a film of oxide of iron, which prevents amalgamation by keeping the mercury away from the precious metal. The residue which you obtained is probably composed of particles of gangue, and as gangue is usually a mixture of minerals, your residue may contain many substances, probably among others, some hydrous silicates; these also interfere with amalgamation.

### Deshler's Salve.

(W. W. B.) Deshler's salve was formerly official in the U. S. Pharmacopoeia under the title of "compound resin cerate." The formula is as follows: Resin, suet, yellow wax, of each, 12 troy ounces; turpentine 6 troy ounces; flaxseed oil 7 troy ounces. Melt together; strain through linen, and stir till cold.

### Formulas for Elixirs.

(H. B. M.) We cannot give the working formulas for the pharmaceutical specialties you name. The ingredients and quantities given in each formula you submit appear to have been taken from some manufacturer's label.

# NATIONAL WHOLESALE DRUGGISTS ASSOCIATION.

## TWENTY-SEVENTH ANNUAL MEETING.

HELD AT OLD POINT COMFORT, VA., OCTOBER 15-18, 1901.

### FIRST SESSION.

Old Point Comfort, Va., Oct. 15.—Nothing could be more delightful than the weather conditions that marked the opening here this morning, of the twenty-seventh annual meeting of the National Wholesale Druggists' Association.

The members of the organization seem to have anticipated just such conditions, for they are here in unusually large numbers and comparatively few are unaccompanied by their wives and daughters. These seem bent upon enjoying every moment of their stay within the confines of the Old Dominion; and in this they are being aided and abetted to the fullest degree by Mrs. E. D. Taylor, at the head of the committee having the temporary happiness of the feminine contingent in charge.

President William J. Walker called the meeting to order at 10:45 a. m., in the Hygeia Hotel; and promptly thereafter, Chairman E. D. Taylor, of the Entertainment Committee, introduced Assistant U. S. District Attorney Hugh Gordon Miller, of Norfolk, who delivered a very able and pleasing address of welcome.

Mr. Miller began by returning thanks for the book of entertainment coupons which had been presented to him, and expressed the pleasure the unwonted occupation of coupon-clipping would give him. He said he was at a loss to understand why a lawyer had been selected to welcome such an assembly unless, indeed, it was that he is a doctor of laws and some of his auditors might be in need of a legal prescription. Notwithstanding they were on a government reservation and hence under the protection of Old Glory, Mr. Miller, as their temporary legal advisor, cautioned his hearers not to levy on any of Virginia's fair daughters, unless they were careful to effectively drug "the other fellow" first. He gave a vivid description of the varied merits of Virginia as a whole and of this part of it in particular; and wound up by saying that it gave him keen pleasure to "throw open the golden gateway of the South and place the keys in your hands".

Ex-president M. N. Kline, of Philadelphia, in responding on behalf of the Association, said that had Mr. Miller been more familiar with the history of the National Wholesale Druggists' Association he would not have been surprised at their sending for an attorney to address them, adding that, though a commercial organization, their knowledge of the law, gained from actual experience, would surprise even such an expert as Mr. Miller. And the speaker frankly confessed that practically all his associates had at least practised before the bar. Mr. Miller had vividly pictured the advantages of his own home, giving it, in fact, a very nice bit of advertising, in which art, however, the members of the Association could give him some valuable advice. Mr. Kline closed with a warm tribute to the South and the eloquence of both its sons and daughters and with thanks for the welcome extended.

The reading of the minutes of the last meeting was dispensed with, and ex-president C. F. Weller having been called to the chair President J. Walker read his address:

#### PRESIDENT'S ADDRESS.

It is my pleasant duty to address you at this our twenty-seventh annual meeting concerning some items of interest in the work of our Association for the past year. My remarks necessarily must be brief as all of the matters in which we are vitally interested have been referred to the various standing committees, from the

chairman of which you will receive special reports with suggestions of needed action.

#### Business Prosperity.

At the opening of this convention I cannot refrain from calling your attention to the wonderful continued prosperity of our Country which is acknowledged by our world competitors to be the first in commerce. In this general prosperity the business in which we are engaged has had a full share of the good times, and as a whole it is upon a substantial basis and no serious failures have overtaken our members. In the midst of commercial activity such as this country has never before experienced, our beloved President was stricken by the hand of an assassin. In common with all organizations where men meet for conference, we deplore the death of him who did so much for the prosperity of all the people. An example in his own person of the highest type of citizenship and conspicuous for the conscientious and wise manner in which he discharged every duty, his loss will be felt to the remotest part of our Country.

It was originally planned to hold this meeting at Montreal, but it was soon demonstrated after our adjournment that a change would meet the views of a large part of our membership, and, after consultation with the Board of Control, and with their consent, Old Point Comfort was selected. I might add in this connection, that the jobbers of Montreal unitedly presented a petition requesting that no change be made, and while this had to be denied we must appreciate the cordial relations which exist between our Canadian friends and the members of the N. W. D. A.

Special sympathy has been extended by our members to those whom the great calamity of fire has overtaken, resulting in the loss of business and anxiety not compensated by insurance. To our ex-president, Thomas F. Main, especially have our sympathies extended to the great catastrophe which in a few hours wiped out of existence an honorable business of many years standing. It is my privilege at this time to voice the sentiment of our members in testifying to the universal respect in which he is held both as a merchant and a man, and to extend to him our best wishes for his future success.

#### Abolition of the Stamp Tax.

The stamp tax which in the past has been frequently discussed and protested against has been happily removed to the great joy of all the parties upon whom it was so great a burden. The thanks of all are due to the committee in Legislation, and especially to the Chairman M. N. Kline, for the time, energy and wisdom he contributed to the desired result. The voice of the N. W. D. A. under his guidance was effectually heard for repeal by our Senator and Representatives in Congress from every city where a jobber in drugs was located. In view of the abolition of this tax many proprietors, notwithstanding the general increased expense of making former terms, which action is appreciated both by us and our customers.

#### Expenses and Contributions.

Our finances are in a healthy condition as you will learn from the report of the Treasurer. Our expenses have increased during the past few years on account of an increase in our working staff, but I do have yet to see the jobber who does not acknowledge that the yearly payment to the N. W. D. A. is the best expense investment of the many he is called upon to make. Our dues are smaller than some of the great associations, and we needed more money this year than we had in our treasury to carry us through the thirteen months. I took the liberty of asking for voluntary contributions. The responses were most unanimous and gratifying and especially the sentiment so often expressed that if the check sent was not sufficient more would be cheerfully given. These contributions came not only from our own members, but generous offerings were voluntarily made by wholesale dealers not in our membership as an appreciation of the work of this Association for the common good of all in similar business. To these friends who have so signally manifested their interest we extend a hearty invitation to come and join us and give to the Association, not only their money, but their influence and experience in making the organization what it should be in helpfulness to our mutual interest.

#### Deceased Members.

Death has been busy with our membership and some of those who have met with us in the past have been

called away from their friends and the activities of life. Charles H. Pinkham will always be gratefully remembered for his advice and co-operation in the work of this Association. For the first time in many years we miss the genial presence of J. C. Fox who one year ago you elected to the responsible position of Chairman of the Board of Control. He has retired from business to enjoy a well earned rest, and bears with him the wishes of every member that he may live long and be the reward of a life-time devotion to business. Mr. Fox attended the first meeting to consider the advisability of organizing this Association, and with but one or two exceptions has attended all of our annual meetings and freely given his aid on all committees. In recognition of worth and work, I suggest that we honor him and ourselves by electing him an honorary member.

#### Proprietors Should Sell to Jobbers Only.

The Association still maintains and emphasizes the position it has advocated for years that the sale of proprietary articles at best discounts should only be to jobbers who will faithfully carry out such conditions as may be imposed by proprietors. It is gratifying that there are so many proprietors who recognize the justice and fairness of this method of distributing their goods, and in behalf of the jobbers generally I urge upon those proprietors who do not place their sales department in harmony with this modern and enlightened method of controlling the sales of their articles to accord to the jobber his just dues as a general distributor by designating recognized and reputable wholesale distributing agencies. This method of sale has been recommended to the proprietors by the N. A. R. D., and is an essential part of the plan under which many of the leading proprietary articles are now sold. The jobbers believe in the cause of the retail dealers and that they are entitled to and should receive a liberal compensation in the handling of all proprietary goods. The jobbers are ready, anxious and willing to do anything in their power to make the retail dealers prosperous and look forward to the time when the vexatious question of cut prices and the deprivation of profits to which the dealers are entitled shall be permanently remedied. To solve this difficult question will be satisfactory to all who can be no doubt when we consider the improved trade conditions since the organization of the N. A. R. D. The retail dealers are in earnest, know what they want to accomplish, and are endeavoring by intelligent and proper action to bring about needed changes. Their good methods of organization, education and conciliation have been eminently successful, considering the work undertaken and the few years of their association. The jobber as an individual and the jobber as a voluntary association will cheerfully carry out any reasonable conditions imposed by the proprietors that will aid in bringing about the desired result.

My attention was called by a member some months ago to a new organization of manufacturers and the desirability of having a committee confer with that association in our mutual interests. There was no standing committee to which the subject could be properly referred. With the growing tendency of our age to consolidate large business enterprises, I would suggest the advisability of the appointment of a new standing committee consisting possibly of a member from each local association to confer with the various business connections as occasion may require. We have a large distributing power, and arrangements for distribution with a satisfactory profit could often be obtained if properly presented by a committee representing practically the entire drug jobbing trade of the U. S.

#### The Fraternal Spirit.

A notable work of the year has been the development of a fraternal spirit as a result of meetings in which the competitors have been brought together socially. The dealers in competition with each other in large cities and districts have overcome their distrust of each other and have ceased in the past to engage in unprofitable practices. Misunderstandings that might have led to serious results or demoralization of prices have been explained and harmonious relations restored. That there is further need of the cultivation of this spirit will be readily conceded when one recalls the articles sold at cost or a slight advance over cost, or the large number supplied at a profit that does not cover the expense of conducting business. This waste of competition is making serious inroads in the profits that legitimately belong to the jobber, and it would be most desirable where these conditions prevail, to abandon such ruinous and unprofitable competition.

In conclusion, I wish to express my thanks to Mr. Taylor Chairman of the Committee on Entertainment, for his willingness to accept and carry on the work which you made our meeting in this beautiful place possible. To the Chairman of the Committee I also wish to extend my hearty thanks for accepting committee work often at a personal inconvenience, but cheerfully undertaken because it was for their Association and its perpetuation. The work of the committee has brought me into personal relations with many of our members, and it will always be a pleasure to recall the friendships and associations of the past year.

The address was referred to a special committee, Messrs. James E. Davis, W. S. Merseener and J. B. Purcell.

The president announced Messrs. Chas. A. Holzhauer, Leo Eliel, A. R. L. Dohme, E. G. Eberle and Caswell A. Mayo as delegates representing the American Pharmaceutical Association. Mr. Holzhauer, being called upon, spoke of the harmony of interests of the two associations, Col. J. B. Purcell responding.

New York State Pharmaceutical Association was represented officially by Messrs. Geo. J. Seabury, S. H. Carragan, Chas. W. Parsons, W. J. Walker and Chas. B. Hubbard. Mr. Seabury expressed the pleasure of himself and his associates at being present and added some pleasantries upon his being again with the National Wholesale Druggists' Association, which evoked much applause. Lucien B. Hall replied for the Association.

G. E. Mennen extended the greetings of the New Jersey Pharmaceutical Association on behalf of himself and his committee, Messrs. Wm. R. Laird, Thos. F. Main, Geo. H. Whipple and C. C. Smith to which C. W. Snow responded.

The president announced Messrs. Chas. Cook, Geo. L. Fogg and C. Sweet as a committee representing the Maine Pharmaceutical Association, though none of these gentlemen were present. Upon motion it was decided to give all the representatives above named seats on the floor, and the right to participate in the debates.

Treasurer S. E. Strong read his report, as follows:

#### TREASURER'S REPORT.

##### CASH RECEIPTS.

|                                                                            |             |
|----------------------------------------------------------------------------|-------------|
| Balance on hand as shown by last report.....                               | \$ 1,777.96 |
| Contributions from non-members who pay an amount equal to annual dues..... | 100.00      |
| Initiation fees 29 new members.....                                        | 290.00      |

| Balance now on hand.....           | 2,409.48    |

It was referred to Messrs. James S. Hoey, Joseph D. Price and H. H. Eliel as an auditing committee, after which an adjournment was had for lunch.

## SECOND SESSION.

The afternoon session was held in the pavilion of the Chamberlain, a structure that may be described as entirely surrounded by water except on top.

J. D. Price, chairman, read the report of the committee on Membership, the following names being presented for Active Membership: Ferrell-Kellam Drug Co., Baltimore, Md.; Sanford, Chamberlain & Albers Co., Knoxville, Tenn.; Gay, Hardie & Durr, Montgomery, Ala.; The Augusta Drug Co., Augusta, Ga.; J. B. Davenport, Augusta, Ga.; The Acme Drug Co., Anderson, S. C.; The Kanawha Drug Co., Charlestown, W. Va.; Conger, Kahn & Gibbs Co., Shreveport, La.; Morris & Dickson Co., Shreveport, La.; L. Richardson Drug Co., Greensboro, N. C.; Broughton & Graves, Rome, N. Y.; The Elk Drug Co., Binghamton, N. Y.; The Doster Drug Co., Birmingham, Ala.; Stanley & Brown Drug Co., Baltimore, Md.; Hefley-Arcularius Drug Co., Colorado Springs, Col.; Western Wholesale Drug Co., Los Angeles, Cal.; Florida Mutual Drug Co., Jacksonville, Fla. For Associate Membership: Solon Palmer, perfumery and toilet soap manufacturer, New York; Garden City Stationery Co., manufacturing stationers, Elkhart, Ind.; Seabury & Johnson, New York.

Under the rules the report was posted for 24 hours prior to the names being voted upon.

The secretary, A. B. Merriam reported:

**SECRETARY'S REPORT.**

The secretary reported his action in appointing a delegate to represent the N. W. D. A. in the convention of the League of National Associations held at St. Louis for the purpose of taking united action on the opening of the coming session of Congress to secure the enactment of the Cum On Bill amendatory to the act to regulate commerce. The number of associations present at this convention was 51 with 99 delegates in attendance. The object of the meeting was defeated however, and the proposed bill was presented for consideration at the succeeding session of Congress. In the last published report the active membership was 222 and the associate membership 188. One wholesale drug firm had resigned during the year. In discussing the repeal of Schedule B of the war revenue law showing the comparison of it with the act of 1861. The act of 1898, he denominated as a "hodge podge of irreconcilables." Incorporated in the report were statistics taken from the statement of the Commissioner of Internal Revenue showing the collections under the war revenue law from June 13, 1898 to May 31, 1901, as follows: The total collections from the war revenue law only were \$349,053,303. This was obtained from the following sources: Schedule A (documentary stamps), \$108,722,674; schedule B (proprietary stamps), \$13,922,438; special taxes, \$14,095,636; tobacco, \$17,274,780; snuff, \$2,897,818; cigars, \$9,180,072; cigarettes, \$3,818,901; legacies, \$1,420; excise tax, \$2,657,882; mixed liquor, \$21,536; additional taxes on tobacco and beer, \$982,885.

The report was referred to the Board of Control, as usual.

Chairman M. N. Kline read the following report from the Committee on Legislation:

**REPORT OF THE COMMITTEE ON LEGISLATION.**

Upon your Committee on Legislation devolves this year the pleasant duty of reporting the completion of the very important work inaugurated by the former Committee. The abolition of the Stamp Tax upon medicines was to think due very largely to the work inaugurated during the early part of 1900 under the leadership of the Chairman of the Committee on Legislation of the Proprietary Association, Mr. DeWitt and his able assistant, Mr. George L. Douglas. In the report of the Committee at our meeting on the 19th of October the account is given to a hearing before the Ways and Means Committee in Washington April 17th when the representatives of the National Retail Druggists' Association, the National Wholesale Druggists' Association, the Proprietary Association and the American Pharmaceutical Association presented arguments that subsequent events showed were sufficiently convincing to induce the members of that committee to favor a withdrawal of this tax.

The first work of this Committee was to address a communication to our members and many other wholesale and retail druggists and manufacturers, under date of November 22nd, asking them to get pledges through correspondence or otherwise from many Congressmen and Senators in favor of the repeal of the Internal Revenue Tax on medicines as possible.

Very soon after the assembling of Congress in December 1900 the House of Representatives passed the Reduction Bill in which Schedule B. of the War Measure was stricken out. When this Bill reached the Senate the Finance Committee of that body made a great number of changes which it is not necessary to refer to in detail here. It suffices to say that Senator Aldrich the Chairman of the Finance Committee was fully convinced that this reduction of tax on medicines should apply only to articles made in accordance with the U. S. P. or which were not made under secret formulas.

**Policy Modified.**

On January 20th the Chairman of your Committee was summoned to Washington and found upon his arrival that Senator Aldrich and his Committee had fully agreed upon this policy and to the hands of your Chairman was to be committed the honor of introducing the Reduction Bill in accordance with this decision. While protesting against the policy he with the assistance of Mr. Englehard of the Western Druggist, representing the retailers, and Mr. Kilmer, a Bill was introduced which met the wishes of the Finance Committee and at the same time guarded against the exemption of non-secret proprietary articles, which all conceded should remain taxed. Through the influence of this smaller Committee selected by Senator Aldrich as according to the Finance delegation present in Washington at that time, representing the three organizations, were finally admitted to a hearing before the Finance Committee, and as the result of this hearing not only was the provision originally suggested by Senator Aldrich agreed upon, but a further reduction to 1 per cent on the articles which it was intended to continue the Stamp Tax upon, was obtained.

Following this hearing about a month the Chairman of your Committee was very actively occupied in answering requests from various sources for modifications of this proposed revised section to suit if possible the various interests claiming recognition. This work was neither pleasant or satisfactory but upon the whole it seems to us that your organization should feel flattered in having such marked recognition accorded to its representatives by the Senators having charge of this measure.

**Final Form of The Measure.**

While we were deeply disappointed at the decision which the Finance Committee announced, it was apparent that Senator Aldrich meant to revise the Bill in accordance with what he believed to be just and equitable to all concerned.

When the Senate Bill on February 6th finally passed that body with the provisions affecting our interests practically included in almost precisely the language suggested by our Committee, our efforts were concentrated upon the members of the Conference Committee of the House who were Messrs. Dalzell, Hopkins and Richardson, and who favored strongly the position which we never wavered from desiring the whole of Schedule B. stricken from the Bill. The Conference Committee finally under date of February 26th endorsed this position and then in order to concentrate the influence of the entire membership of our Organization upon Congress in favor of a favorable consideration of this report we wired to 171 of the active members of our organization as follows: "Wire your representatives demanding action upon the conferees report Revenue Bill." Under the same date our Chairman wrote to Senator Aldrich as follows: "According to newspaper reports this morning, you have gracefully accepted the House Bill, so far as our interests are concerned, and I feel quite confident that you did so to finally come to this position, for which I most heartily thank you in behalf of our Organization, and also beg to thank you again for the many courtesies extended to me and my associates, during the consideration of this measure."

And as you are all aware, the Reduction Bill became a law with the taxes under Schedule B. stricken out, to go into effect July 1st, 1901.

**Importance of Organization.**

We cannot leave this part of our report without again calling attention to the importance of organization and to the efforts that came from the proper use of organized effort. We are firmly of the opinion that if there had not been this splendid organization of the retailers, the wholesalers, and of the proprietors to bring strongly but judiciously before the legislative bodies, the claims of the interests represented by these bodies, the Stamp Tax on medicines would most likely remain in force. It so frequently happens that individual members of our trade excite a doubt of the value of our organization that it seems well to refer to this in this connection. It was predicted that the loss of revenue by the reductions in the War Revenue Measure would be very much greater than subsequent statements from the Internal Revenue Department have shown it to be, and from figures which have been given publicly, it would seem that a further reduction could be made, and would be made. Our Committee is strongly of the opinion therefore, that our subsequent work should be directed towards securing a reduction in the internal revenue tax on alcohol, or if it is found practicable, towards securing free alcohol for use in the arts and medicines.

It was also referred to the Board of Control. To it Mr. Kline added verbally that, touching the pure food bill, nothing had been done.

The report of the Committee on Relations with local Associations, City and Interstate, handed in by Chairman W. J. Walding, was read by the assistant secretary, E. J. Toms, and referred to the Board of Control.

The report of the Committee on Fraternal Relations and the special Committee on Paris Green, were also presented and referred to the Board of Control.

For the Committee on Memorials to Deceased Members Chairman Arthur B. Claflin reported:

**DECEASED MEMBERS.**

The Committee on Memorials of Deceased Members reported that four active and three associate members had died during the year. These were: Henry C. McIlvaine, of McIlvaine Bros., Philadelphia, died Oct. 12, 1900, aged sixty-two; Oliver P. Morgan, President of the Fort Wayne Drug Co., Fort Wayne, Ind., died Oct. 24, 1900, aged seventy-six; Chas. H. Pinkham, of the Lydia E. Pinkham Medicine Co., Lynn Mass, died Nov. 10, 1900, aged fifty-six; Eben C. Jayne, of Dr. D. Jayne & Son, Philadelphia, died Nov. 15, 1900 aged seventy-three; William Warner, April 3, 1900, aged sixty-five; Thomas H. Larkin, of Larkin & Scheffer, St. Louis, died July 29, 1901, aged fifty-three, and John Lucas, of John Lucas & Co., Philadelphia, who died Aug. 7, 1901. The committee recommended that a memorial page be set apart for the inscription of the names of the deceased members.

This report was also referred to the Board of Control. Ex-president Walbridge took the chair to hear the report of the special committee, Chairman J. E. Davis, on the President's report. It was favorable and the President's report was adopted by a rising vote.

President Walker named Mr. Cary Peter, Chas. F.

Weller, Chas. Hubbard, M. N. Kline and C. F. Cutler as the committee on Nominations and F. A. Faxon, E. D. Taylor, W. J. Walding, C. W. Snow and John M. Cary as the Committee on Time and Place.

Chairman Chas. A. Jerman's report for the Committee on Commercial Travellers and the report of the Committee on Adulterations, Chairman H. B. Fairchild, were read by the assistant secretary and both were referred to the Board of Control.

In connection with the latter report Mr. Kline called attention to the fact that the Brosius Pure Food Bill no longer includes drugs in its provisions.

The report of the Committee on Paints, Oils and Glass, Chairman John N. Cary, was read by the assistant secretary and referred to the Board of Control.

Upon the motion of Chairman C. F. Shoemaker, of the Committee on Proprietary Preparations, the report of that committee was made the special order for Wednesday morning Oct. 16th., at 11 o'clock.

Chaplain Turner, of the Hampton Normal Institute, a visit to which was to be the feature of the entertainment of the visitors on Wednesday, was introduced and explained the aims of the Institute, at the same time promising the prospective visitors a very cordial welcome.

Adjournment was then had on motion of Col. Purcell.

In the afternoon the members attended dress parade at Fortress Monroe and in the evening the president's reception was very largely attended. President and Mrs. Walker were assisted in receiving by Mrs. E. D. Walker, Mrs. F. Ashenbach, Mrs. John B. Purcell, Mrs. T. F. VanNetta, Mrs. Polk Miller, Mrs. Blanding, Miss Nina Randolph and Miss Maud Miller. The hop that followed was most enjoyable, the post band, which had furnished the music for the reception, alternating with the Chamberlain orchestra for the dancing.

### THIRD SESSION.

Old Point Comfort, Va., Oct. 16.—The one session of the second day of the meeting of the National Wholesale Druggists' Association was held in the Hygeia Hotel. Immediately after calling the meeting to order President Walker introduced President James W. Sealey, of the National Association of Retail Druggists, as the head of an army of 25,000, marching on to victory. Mr. Sealey said that he was present to bring the greetings of his association and to tell something of what it had done at its recent meeting at Buffalo. He outlined the sentiments of its members touching the tripartite agreement and the Worcester Plan and said that it was disloyalty to the former that had brought out the latter. The existence of that disloyalty, he said, is recognised in the retailers, the honest ones among whom are willing to live up to the agreement. His association has not abandoned the tripartite agreement nor approved the Worcester Plan as a whole, but has instructed its use where it did not conflict with the tripartite agreement. In return the retailers asked the wholesalers to help them. Otherwise the retailers would become more and more manufacturers on their own account. Mr. Sealey said the retailer had discovered one of the sources of supply of the radical price-cutters that had perhaps escaped the wholesalers to be the wholesale grocers, and, while recognising the difficulties of the latter with regard to the wants of their general-country-store trade, the retailers urged against their being supplied in gross or half-gross lots.

Simon N. Jones, chairman of the executive committee of the National Association of Retail Druggists was then introduced, said that he could add little to what had already been said, but that he wished to say that, while disclaiming all intent to threaten, if the wholesalers wished the trade of the retailers some of the former would have to give the latter a "different deal." "On the recognised list of wholesalers," he said, "are 6 or 8 who play fast and loose. We are going to report such to the manufacturers. We are willing to put up our ante, but when we win we want some chips. We know certain proprietors who are loyal. We know a certain jobber who, on one occasion, had two men selling the same town—a town already cut to pieces. One of them sold the legitimate trade only, the other only the price-cutters. We

asked that his name be removed from the recognised list and the first mail brought twenty-one replies saying the house in question would be sold no more goods until we removed the ban." Mr. Jones' remarks aroused considerable enthusiasm.

Mr. Faxon said what had just been heard was different from the greetings usually received from kindred associations and he congratulated the members of the retailers association upon having elected such strong men to represent them. He himself had been surprised at the patience the retailers had shown. Both speakers had hit the nail on the head and he sincerely hoped the retailers would apply the discipline that it was out of the power of the wholesalers to apply. They hold the club and he was glad that they propose to apply it, and he declared the sincere wholesalers would stand by them.

Mr. Kline said that the solution of the whole matter lay in co-operation, not in the application of force nor in legal statutes. He emphasized the fact that the remedy lies in the hands of the retailers.

Mr. Jones took the floor and said that the procedure of the future would be different from that of the past; that when a violation of the agreement is conclusively proved the proprietor will be notified to take the name of the offender off the recognised list and that the retailers will be asked to withdraw trade from him.

Col. Purcell expressed his hearty approval of what he denominated the "manly and outspoken utterances" of the representatives of the retailers. "But," he said, "the mote is in your own eye; we ought to expel those Judas Iscariots. There has been too much complaint without the mention of names, which leaves all of us alike under suspicion. Our part is to purge ourselves."

Mr. Walbridge declared himself gratified at the way in which the retailers had taken hold of matters and added his belief that they would be quite right not only to threaten, but to punish as well.

### REPORT OF COMMITTEE ON PROPRIETARY GOODS.

The year which has passed since our last meeting in the "Lake City" has been one of general business prosperity. This has been generally regarded as more smooth the path of this Committee in one respect at least. When merchants are busy and their business is fairly profitable, even the most pessimistic are less apt to make complaints. The work of your Committee during the year, however, and especially during the early part of it, has been very heavy. The larger number of proprietors were constant and frequent in their applications to the Committee, requesting information in regard to the eligibility of applicants as buyers, as well as information in regard to the practical working of the Tripartite Plan itself. This made the volume of correspondence during the first six months of the year heavier probably than it had ever been before in the history of the Committee. In fact it seemed at one time as if it would be absolutely necessary to increase the clerical force of the office, but later this necessity passed away.

#### Tripartite Plan.

The Tripartite Plan, of course, has been the chief source of interest, and likewise of our work during the year. It must be borne in mind that this plan is distinctively a retail measure. It was designed especially for the protection of the interests of the retailer, and at their request. It was not intended in any sense to supplant the Rebate or Contract Plan and is in no way antagonistic to it, but on the contrary, is clearly supplemental in its operation. For the reason that your Committee in its work during the year has constantly borne in mind the fact that the Rebate Plan has lost none of its importance, but on the contrary, is more necessary and important than ever because of the habit of compliance with one contract is apt to lead to compliance with others. Of the Tripartite Plan itself, there is much that may be said. It has undoubtedly achieved a marked success in many directions. It is impossible that a complicated plan of this kind should be placed in active and successful operation at once all over this great country of ours; and while there are some places in which it has been less successful than others, that is due to a variety of causes not within the control of those chiefly interested. So long as human nature is weak and faulty, it is impossible to expect that every proprietor and wholesale and retail druggist in the land should have a keen and active sense of his moral obligations. Experience, however, is rapidly teaching us the best method of treating these cases, and a constant improvement in this direction may be confidently looked for. In contrast to the few cases which have been reported, your Committee can cheerfully recommend the most unstinted praise to the great mass of proprietors and jobbers, who have loyally accepted and honestly carried out the provisions of the Tripartite Plan. You have constantly had reported to us instances in which both jobbers and proprietors have turned down most

liberal orders because of their obligations in this respect, and your Committee desires to place on record its full appreciation of their action.

#### Conditions Not Uniformly Favorable.

It must also be borne in mind that the improvement in retail conditions has been more or less unequally distributed. This is not the desire or intention on the part of those in charge of the plan to discriminate in favor of one section as against another, but because at some points the surroundings of the case have been more markedly and directly favorable than at others. At any rate, no one can deny the decided improvement which has taken place in several large cities, as well as many small towns, in giving retail dealers a moderate profit on proprietary articles. In addition to this, the retail trade had been shown the importance and value of united action. Any united body of retailers have it in their power to discipline an offending jobber most effectively by withholding their trade. Any wholesaler who is disposed to disregard his obligations under the Tripartite Plan is quite as likely to be influenced by the prospect of such action on the part of retailers as by the fear of having his supplies withheld by proprietors.

As previously stated, the Tripartite Plan is the result of the most careful and deliberate thought on the part of a considerable number of the leaders in both the wholesale and retail drug trades. Its chief merit is its reasonableness in permitting the question of prices to be settled by each trade centre in accordance with its own peculiar conditions, without attempting to enforce uniform retail prices over the land. While it is possible that a proprietor may have a legal right to retain control of the retail price of his goods until they reach the consumer, no practical method of exercising such control through a succession of buyers (some of whom are unknown and untraceable) has been shown. Our experience has apparently demonstrated its hopelessness.

#### The Keypote of the Situation.

The Tripartite Plan is likewise most reasonable in securing the retail trade at large a comparative uniformity of cost so far as their supplies of proprietary articles are concerned. In fact, it seems to us that this is really the keynote of the whole situation, and indeed it is the principal point urged against the plan by the largest retail buyers. Many of these have not actively and persistently objected to agreements in regard to prices, but all of them have objected to the responsibility under this plan to buy goods direct. For this reason your Committee has during the year been besieged by an unprecedented number of applications to be placed on the list of wholesale drug trades, and indeed it is of course unnecessary to say that in each case the most thorough investigation of the applicant has been made, and the most absolute impartiality used in making the decision. It is impossible at this time to predict the future of the Tripartite Plan, but whether it shall or shall not continue to be a feature of the drug trade in this country, we earnestly recommend proprietors to continue the distribution of their goods through the hands of legitimate wholesale druggists only. This has been the constant position assumed by this Association for many years, and it seems to us that this is the only course dictated by common sense and good business policy. There is no doubt that the practice followed by some proprietors of selling retailers at their lowest price was the first cause of miscellaneous price-cutting. The larger retailer who found he could buy his supplies at a price of 10 per cent or 15 per cent less than his smaller competitor, felt that real competition on the part of the latter was impossible. In addition to this, the proprietor who confines his sales to jobbers exclusively, it is less likely to lose his business than he who retains control over his goods. In fact, no rebate proprietor who really wishes to see his contract prices maintained can afford to sell his goods on any other basis.

#### Competition Giving Way to Community of

##### Interest.

Much has been said in past reports about the Rebate Plan, and we feel that little can be added in this direction, yet we may be permitted to accentuate the fact that it is not only growing stronger year by year from a local standpoint, but is also in direct accordance with the present trend of business ideas. The old adage that "competition is the life of trade" has been very much overworked and should be relegated to the past. In fact, within the last twelve months a judge on the bench has had occasion to deliver himself as follows: in regard to it:

"If it is true also that competition is the life of trade, it may follow, such premises being the fact, that competition is in an act injurious to trade; and not only so, but he commits an overt act of treason against the commonwealth. But I apprehend that it is not so, that competition is the life of trade. On the contrary, that maxim is the least reliable of the host which may be picked up in every marketplace. It is, in fact, the substitute for mere gambling speculation, and is hardly entitled to take rank as an axiom in the jurisprudence of the country. I believe universal observation will attest that for the

last quarter of a century competition in trade has caused more individual distress, if not more public injury, than the want of competition."

It is undoubtedly true that the "community of interest" idea is rapidly gaining ground in all business circles. In point of fact, the merchant who depends upon price-cutting as his particular method for gaining success in trade is being rapidly and successfully succeeded by abler men. Price-cutting itself at the best can give but a temporary advantage, because it will only be resorted to by those who are unable to do which business ability may be shown, such as giving the customer the best goods, prompt shipment and courteous business treatment generally; and these are the means by which the retailer is bound to the wholesaler by chains of supply.

#### Position of Rebate Plan Strengthened.

We have already alluded to the fact that the legal position of the Rebate Plan is being constantly strengthened. We need not refer in detail to the decision in October of last year in the Park case by Justice Rumsey in the Appellate Division of the Supreme Court of New York, of which you have already been advised by your Special Committee on Suits. In this, there have been a number of other decisions during the year in collateral cases, all of which tend to strengthen and these decisions are based upon the one uniform proposition that proprietary medicines are not considered "necessaries of life"; and this being the case, not only proprietors, but likewise the parties engaged in selling such goods are perfectly justified in using all lawful means to obtain such price as they may desire. In the case of the Owl Drug Co., of Los Angeles, Cal., vs. F. W. Braun & Co., and others, including a local retail drug judge, Shaw distinctly stated this as the view of the Court, and added the manufacturers had the right to do this, either alone or in combination with others.

#### Another Decision.

In March of this year a suit was brought by a retail confectioner in Philadelphia against the Philadelphia Jobbing Manufacturers' Association on the ground that this Association had declined to sell the aforesaid retailer because he refused to agree to a schedule of prices, and had thus injured his business. The magistrate in reaching a decision, stated that the testimony had failed to establish any injury in the case and there was nothing unjust or unreasonable in the action of the defendants, and they were discharged.

In June of this year, in the Appellate Court of Kentucky, in a somewhat similar case, the Court ruled as follows:

"There is nothing in this which violates any provisions of the statute. It appears that certain brands of imported kinds of groceries are protected by the manufacturers by a refusal to sell the goods to any one who will not agree to refrain from selling them at a price below a minimum from time to time fixed by the manufacturer. We are not called upon to decide whether the Legislature could prevent the manufacturer from requiring such an agreement of his customers. It is necessary to decide here is that such an agreement with the manufacturers is not within the purview of the statutes."

#### The Rebate Plan a Necessity.

It is useless to allude here to the Rebate Plan as an absolute necessity to every wholesaler in order to maintain a reasonable profit in his business. Not only this is a reasonable profit, but in many instances a necessity, but likewise a necessity of another kind should induce every jobber to regard his signature to a rebate contract with the same fidelity which he would attach to his check or promissory note. In matters of this kind, we think that the old adage that honesty is the best policy is not an empty string of words. The Rebate Plan was devised to provide a reasonable profit on proprietary medicines, and likewise to facilitate their easy distribution. If a necessity, it is a necessity of another kind, and the number of distributing points, but this is a part of the plan and may not be overlooked. Any jobber who seeks to override geographical considerations in the sale of proprietary articles may, but necessarily do so at the sacrifice of his rebate obligation, and can only be influenced by unworthy motives of self aggrandizement, or by the vain and inordinate desire to increase his sales at the expense of his profits.

#### Essentials of the Requirements.

There are within the ranks of our Association a few who frankly oppose the Rebate Plan as a matter of business policy, but who nevertheless use their best efforts to follow its requirements. There are others who profess to be its friends, and yet secretly undermine it. An eminent man once said: "Defend me from my friends, I can defend myself from my enemies." So the Rebate Plan needs help from the part of some of its friends. We are too often disposed to wink at little evasions on the part of our travellers, and these in time pay to larger ones. Quite recently a wholesale house against whom a trifling complaint had been made, wrote in reply to the charge, acknowledging their fault, and placing the blame on their traveller, and likewise added, "We have never credited Dr. . . . with the

amount on our books, neither have we written to him that we cannot allow it, because he is such a sensitive man. If we had written him, it would have made him mad, and we would have lost his trade." How many of us have sensitive customers! It must be borne in mind that in this, as in all other business propositions, there must be a certain amount of reciprocity. Many proprietors have made sacrifices of considerable extent in order to comply with the provisions of the Rebate and Tripartite Plans. Some of the wholesale drug trade should feel an obligation on their part to compensate such proprietors as far as possible by refusing any encouragement or assistance to imitations, by keeping their stocks in sufficient quantity to supply a reasonable demand, and by giving the proprietor, so far as possible, the benefit of the advertising which he does. It is quite true that a few proprietors have not been liberal in such matters. It is possible that some jobbers may have been unreasonable.

#### Question of Goods Listed Under Tripartite Plan.

Shortly after the work of the year had actually commenced, your Chairman was asked to call a meeting of the jobbers in Baltimore, Philadelphia, Richmond, Alexandria and Norfolk to consider the practical working of the Tripartite Plan, and especially to make an authoritative decision of the question whether jobbers were to be held to the list of articles as stated, or as aggressive cutters goods of any kind, or whether such prohibition should attach only to those proprietary articles listed under the Tripartite Plan. This meeting was accordingly held at the Hotel Connerly, Baltimore, on October 14th, 1900. It was well attended, and the following resolutions were adopted and signed by all:

**RESOLVED**, That the undersigned jobbing druggists, present at a meeting held in Baltimore on October 14th, 1900, will loyally and faithfully carry out the spirit as well as the letter of the Tripartite Rebate Plan, and we pledge ourselves to give our fullest co-operation to the efforts of the Association, if necessary to make the present N. A. R. D. plan a success; and we specifically agree that when we receive notice through the Secretary of the N. A. R. D. that any article has been reported by local organizations or otherwise under the terms adopted by the manufacturers marketing their preparations under the Tripartite Plan, we pledge ourselves individually not to sell such persons any such goods.

**RESOLVED**, That the secretary of this meeting be instructed to secure the signatures of the jobbers doing business in this to this action."

#### Situation in New York.

During the ensuing month, your Chairman became convinced that the situation in New York demanded his attention, and a meeting was held in the rooms of the Chamber of Commerce, New York, November 8th, 1900, which was attended by the managing members of all of the jobbing houses in New York and Brooklyn. As a result of this meeting, a renewed complete allegiance to the Rebate Tripartite Plans was affirmed, and the following notice was issued to the retail trade by all the houses represented:

"New York, November 12th, 1900

"Undoubtedly you are aware of the resolutions passed and the results reached at recent meetings of manufacturers of proprietary medicines, wholesale druggists and retail pharmacists, and the purpose declared to maintain by joint action established prices, so that both retail and wholesale druggists may handle patent medicines with a semblance of profit.

"The Tripartite Agreement arrived at, which has the Rebate Contract as its basis, provides that the manufacturer shall sell only to the recognized jobber, of whom in turn the retail dealer will make his purchases.

"We, the undersigned, therefore beg to inform you that we have been appointed distributors for New York City and vicinity by the manufacturers of proprietary medicines sold in accordance with the terms of the Tripartite Agreement, and we therefore will sell such articles strictly on rebate-agreement terms, with no discount except in the intermediate quantities specified by the manufacturers.

"We will also, cordially support and carry out the N. A. R. D. plan."

In addition to these agreements, Mr. Holliday has during the year obtained practically similar agreements from the jobbers of Chicago, from the jobbers of St. Louis, and likewise from nearly all the jobbers of the South. His trip through the South was only recently made, and it was most gratifying in its results. It has not only given us a considerable increase in applications for membership, but likewise has removed many petty grievances which had existed for several years in Southern territory and has brought about, we believe, a better understanding among the dealers in that section than ever before.

#### Suggestions for Strengthening Rebate Plan.

We wish to strongly impress upon our members not only the advisability, but likewise the necessity of local organizations. They are not only a source of much pleasure to those who form them, but they are the way of forming personal friendships, but they are also of the utmost value in strengthening the Rebate Plan itself.

Personal acquaintance begets personal confidence. Measures of this kind do not restrict competition; they simply remove its sharper corners. If competitors in business can once bring themselves to the point of taking their grievances to each other, no violation of the Rebate Plan will be reported in their territory. We likewise wish to call the attention of proprietors to the necessity of insisting that signatures shall always be properly attached to each rebate contract. In more than one instance it has come to our knowledge that where violations have been traced, it has been offered as a partial excuse that no rebate contracts had been signed. This is most important.

#### Additions to the List of Proprietors Who Have

##### Adopted the Tripartite Plan.

Since our last report, the names of the following proprietors have been added to the list of those who have adopted the Tripartite Plan, viz:

Alcock Mfg. Co., New York City; E. H. Bacon Co., Rochester, N. Y.; Brandreth Co., New York City; Daudelin Co., Worcester, Mass.; Himrod Mfg. Co., New York City; Dr. B. J. Kendall Co., Enosburgh Falls, Vt.; Donald Kennedy, Roxbury, Mass.; Chas. B. Kingsley, Northampton, Mass.; Laxson, Northampton, Mass.; Malt-Diastase Co., New York City; Maltine Co., Brooklyn; R. Matchett, Allegheny City, Pa.; Medico-Malt Co., Syracuse, N. Y.; Theo. Metafal Co., Boston, Mass.; A. C. Meyer & Co., Baltimore, Md.; Trangleme Chemical Co., Chicago, Ill.; Pyramid Drug Co., Marshall, Mich.; Pyro-Febrin Co., Northampton, Mass.; F. A. Stuart Co., Marshall, Mich.; Smith, Kline & French Co., Philadelphia, Pa. (Hand's Remedies only); C. G. Snow & Co., Syracuse, N. Y.; T. J. Tamm, Cambridge, O.; W. C. Tamm, Belmont, O.; Yapo-Cresdene Co., New York City; Dr. C. Wakefield, Bloomington, Ill.; Wells & Richardson Co., Burlington, Vt. (Paine's Cel. Comp., and Willis' Pills only); I. C. & G. C. Wilson, Boston, Mass.

##### Repeat of Stamp Tax.

It is also a matter of pleasure to be able to refer to the fact that the stamp tax on proprietary medicines, cosmetics, etc., which had been imposed as a result of our War with Spain, was removed during the last session of Congress, this removal taking effect July 1, 1901. In bringing this matter to a successful conclusion before both houses of Congress, our Association took active part; and while it may not claim perhaps to have been the chief factor, still "there is glory enough for all", and it is a great satisfaction to feel that this tax, which was so onerous in its character, and so burdensome in its application, and which yielded such comparatively small results, has been removed from the shoulders of the trade at large.

##### New Rebate List.

At our last meeting, your Committee was instructed to issue a new edition of the official Rebate List. As it was considered quite probable that the attempt to remove the stamp tax might be successful and consequently the changes in preparation were advanced. It was thought best not to commence the preparation of this work until after the session of Congress was finished. After action had been taken in regard to the stamp tax, it then became necessary to delay the commencement of the work until after July 1st, and finally it was completed in September. Four Thousand (4,000) Rebate Lists have been printed, the larger portion of which have been distributed to the trade. In accordance with an expression of opinion made at our meeting, the price was made 25 cent to members of this Association and 50 cent to non-members.

Your Chairman desires to place on record his appreciation of the work accomplished during the year by his assistant, F. E. Holliday who has been most assiduous in his efforts, and has been absent from Philadelphia on various missions during the greater part of the time. His work has been performed with the utmost tact, diplomacy and success, and in fact, Mr. Holliday has proven himself to be the right man in the right place. Your Secretary, Mr. Toms, has also fulfilled his duties with great faithfulness and discretion, and your Chairman desires to express his sense of personal obligation to both.

Mr. Seabury spoke at some length along similar lines, and then there was a lull, the calm before the storm, while the reports of the Committee on Proprietary Preparations and on Suits were read by Chairman C. F. Shoemaker and M. N. Kline, respectively, both reports being referred to the Board of Control. While this was going on Col. Purcell and Mr. Seabury had their heads together, and, when the reports were disposed of, Col. Purcell offered the following resolution:

"**RESOLVED**: That the Board of Control take into consideration the introduction of a by-law requiring the Chairman of the Proprietary Committee, when he finds that any jobber, a member of this association, is guilty of a repeated violation of the 'Rebate' or 'Tripartite' plans, to report the same to the Board of Control, who shall investigate the charge against the member; and if they are satisfied that the charge is maintained, they shall report the fact at the next meeting of this Association with a recommendation that the guilty member be expelled from membership in this Association."

WILLIAM J. WALDING.

applause was far more enthusiastic than any that had been heard previously during the present meeting. The resolution was manifestly greatly to the liking of practically all the members. It was, therefore, not to a sympathetic audience that Mr. Kline made his appeal against the resolution, which he said would be seized upon by the lawyers of the other side as an evidence that the members of the Association were coerced into refusing to sell to firms on the cut off list. He hoped that nothing of the sort would go on record.

Mr. Seabury said that such a resolution could not possibly be called coercive, it being really in the nature of a beneficent act, and he strongly favored its adoption.

Col. Purcell added that the resolution had absolutely nothing to do with anything outside the Association and he urged the adoption of the resolution even against the objections of Mr. Kline, of whom he spoke as "the balance-wheel of the Association."

Mr. Kline said that he was thoroughly in harmony with the resolution and as evidence of the fact referred to his own reports to past meetings. He urged, however, that at least the resolution be submitted to counsel with a view to ascertaining whether such a by-law would be legal. This suggestion was not opposed and many of the members present believed that, with that proviso, Col. Purcell's resolution had been adopted. This proved not to be the case however. It went into the all-embracing maw of the Board of Control for digestion.

The report of the Committee on Credits and Collections was read by the assistant secretary, Chairman W. A. Hover being unavoidably absent. It was referred to the Board of Control.

Col. Purcell offered a resolution looking to the appointment of a special committee of three to take charge of suits. It was adopted, and the President named as the committee Messrs. M. N. Kline, Thomas F. Main and I. S. Coffin.

Upon motion of Mr. Peter it was resolved, in order to expedite the business of the meeting, that the remaining reports be read by title and referred to the Board of Control. Those so read were from the committees on the Drug Market, Fraternal Relations, Rates and Routes, Pharmaceutical Preparations, Pharmaceutical Lists, Transportation, Trade Marks and Commercial Travelers.

The Auditing Committee reported the accounts of the treasurer correct and were discharged. Adjournment for the day was then had.

In the afternoon a long line of trolley cars were drawn up in front of the Chamberlin Hotel and the visitors were given a most enjoyable ride to the Soldiers' Home and the Normal Institute at Hampton and to St. John's Church. In the evening Polk Miller, of Richmond, entertained in a manner all his own a number of guests that quite filled the ball-room of the hotel.

#### FOURTH SESSION.

The third day of the annual meeting of the National Wholesale Druggists' Association was a busy and important one, and work was begun with fair promptness, the President's gavel falling at 10:20 a. m., only twenty minutes behind schedule time. The first business, after the reading of the calendar by Assistant Secretary Toms, was action upon the applicants for membership already announced. Referring to them, Chairman Price of the Committee on Membership, said that he and his associates had been careful to keep in touch with the Committee on Proprietary Preparations, who had been of great assistance in their investigations as to the fitness of applicants for membership. He added a recommendation that the new Committee on Membership arrange, whenever possible, for a personal interview between some one of its members and future applicants for membership. Mr. Weller then moved that the secretary cast the ballot of the association in favor of all the applicants, and this was done.

Then came the much-speculated-upon report of the Committee on Nominations, which report, it was fully recognized, was equivalent to the election of the gentlemen it named. The nominations were as follows:

For President, W. J. Walding.

For First Vice-President, Theodore F. Meyer.

For Second Vice-President, W. O. Blanding.

For Third Vice-President, W. F. Redington.

For Fourth Vice-President, W. A. Nelding.

For Fifth Vice-President, H. H. Sinnige.

For Secretary, A. B. Merriam.

For Treasurer, S. E. Strong.

For the Board of Control, Lucien B. Hall, chairman; T. E. Shoemaker, W. A. Hover, Thomas F. Main and John N. Cary.

Under the rules, it was necessary to lay these nominations over for two hours before taking the formal ballot.

M. Cary Peter, for the Board of Control, read this resolution on the death of the late President McKinley:

WHEREAS, we unite with our fellow citizens all through this land in deploring the sudden taking away of the magnificent specimen of an American citizen who has presided at the helm of this nation, having just received an indorsement by election to a second term at the hands of a united country.

**BE IT RESOLVED**—That we bow in humility to this disposition of Providence, and we thank our Heavenly Father for the splendid specimen of manhood that was exhibited in the life of our martyred President; that we unite with our countrymen in the condolence offered to his widow, and in the sentiment of gratitude that the assassin's act, instead of spreading discord, has brought unity to our people and confidence in his successor.

Upon motion of Mr. Peter the resolution was adopted by a rising vote.

Also for the Board of Control Mr. Peter moved the election of J. C. Fox to honorary membership in the association and the motion prevailed. Mr. Peter, further reporting for the Board, said the body "recommends the careful perusal of the secretary's report and sincerely hopes that we may long continue to have the benefit of his mature judgment and experience."

In order that it might lay over the two hours required by the rules and that there might be plenty of time for debating it, Frank A. Faxon, chairman of the special committee on time and place then reported that a majority of his colleagues favored Monterey, Cal., as the next place of meeting, and that, in deference to the wishes of the minority, Atlantic City, N. J., was suggested as an alternative. There was some disposition to debate and settle the matter then and there, regardless of the rules, but these finally prevailed, and the matter went over, being, on motion made the special order for 3 p. m.

Mr. Peter then resumed the reading of the report of the Board of Control, as follows:

**Report of Board of Control.**

The Board of Control reported its concurrence in the recommendation that the Committee on Revision of Pharmaceutical Lists be continued; commended the report of the Committee on Commercial Travelers; recommended the formation of local associations to take up and control local affairs and correct local abuses, congratulated the association on the favorable report of the Committee on Fraternal Relations, and recommended the adoption of the following resolution:

**RESOLVED:** That the Association reiterates its conviction that adulterated essential oils and sophisticated goods of any kind should not be sold.

The Board further recommended that the report of the Committee on Deceased Members be printed in the proceedings of the Association and that the names of the deceased members be inscribed on the memorial page. Thanks were extended to the members of the Committee on Paints, Oils and Glass, and the Board recommended that the Committee on Legislation be instructed to continue the effort to secure free alcohol for use in the arts and medicine. On the report of the Committee on Suits against members, the Board was of the opinion that the Committee was more competent to handle this character of litigation than the Association itself and, therefore, the questions should be referred back to the Committee with power to act.

In connection with the report of the chairman of the Committee on Credits and Collections the Board offered the following resolutions.

**RESOLVED:** That the suggestion offered by the Committee on Credits and Collections recommending the use of uniform inquiry and property statement blanks, be adopted.

**RESOLVED:** That the recommendations of the Committee in regard to the National Bankruptcy Law be referred to the incoming Committee on Legislation.

**RESOLVED:** That this Association lend its hearty co-operation and encouragement to the schools of pharmacy which have adopted as a part of their curriculum a comprehensive course of commercial work, which in our opinion, will when properly mingled with thorough scientific and technical instruction, produce a class of graduates better qualified and better fitted to endure the vicissitudes of commercial life, than would be possible under the old ultra-conservative and purely technical courses of training.

**RESOLVED:** That it is the sense of this Association that the adoption of thirty days and one per cent for cash as being the established terms in the sale of drugs and proprietary articles, is not only wise but amply justified by sound commercial reasons and practice.

**RESOLVED:** That we urge upon the local associations throughout the United States to continue the agitation on this subject, as it is only through such local agitation that the desired end can ever be accomplished.

**RESOLVED:** That it is the sense of this Association that the acceptance of transfer orders on terms other than regular terms, current in territory in which such orders are taken and transferred, is unbusinesslike and pernicious in its results, and should be discontinued.

The suggestion in the report in regard to local checks is recommended to the careful consideration of local associations and of our individual members.

We recommend the suggestion of the Committee that those of our members who are experimenting with credit liability insurance report the results to this Committee from year to year, until we can form an adequate idea of its value.

Daniel Myers, for the Committee on Fire Insurance, then read his unavoidably delayed report, as follows:

**Report of the Committee on Fire Insurance.**

The losses by fire in the United States and Canada during the first six months of the year 1900, were in round figures, \$116,000,000. This is certainly an astounding and colossal sum to pass away in smoke and ashes in the short space of six months. A comparison of figures between the first six months of 1900, and the first six months of 1899, show an increase of \$36,000,000. This phenomenal and abnormal increase of losses by fire has financially weakened many companies and has led out of existence several companies, and has also set in motion a movement throughout the country for a general increase of rates. Such an increase would certainly be a necessity and inevitable, but the loss ratios of the past three years were to continue.

Such, however, has not been the case. Fortunately, the reverse is the fact. Statistics show that normal conditions have again returned, and that the losses the first six months of 1901 were, in round figures, \$80,000,000, a decrease of \$23,000,000 below the first six months of the previous year of 1900. Unless this condition is mater-

ially changed for the worse during the remainder of this year, there will be no excuse for indiscriminate rising rates by the large insurance companies who now have practically a monopoly of the business.

Your Committee again recommend that the incoming Committee print in pamphlet form and mail to each member a copy turning on all the light possible on the following queries:

First. Origin of fires in stocks of Chemicals and drugs.

Second. List of hazardous chemicals, drugs and fluids, and how they should be stored and handled.

Third. How best to organize a fire brigade within the house.

Fourth. How to equip a drug house so as to promptly extinguish a fire, if one occurs.

If the foregoing recommendations are carefully and studiously executed, and if the information that will hereby be given to the Trade is studiously heeded, it will result in greatly reducing the loss ratio on stocks of drugs and chemicals.

The very best fire insurance, after all, is to so guard your premises as to prevent fires, and in the event fires do occur, to be so equipped as to reduce the loss to a minimum.

The report by the Committee on the Drug Market, Chairman James Hartford, was then read, as follows:

**The Report of the Committee on Drug Market.**

The report of the Committee on Drug Market, shows the conditions prevailing in the drug and chemical trade to be entirely satisfactory. The drug trade has been active during the twelve months under review, and has been almost entirely devoid of speculation. A steady consuming demand has prevented any undue accumulation of stock, and the market to-day is in an excellent position. The chemical market has also been good as regards volume but in some cases prices have suffered, owing chiefly to overproduction and competition. The manufacture of the following articles has been undertaken in America during recent years: bleaching powder, potassium chlorate, hypophosphites, lithia salts, chloral, caffeine and others. The report was signed by James Hartford of Schoellkopf, Hartford & Hanna Co., of New York, chairman, and the full committee.

A telegram from W. A. Thompson was read, announcing the death last night, in San Francisco, of John T. Thompson, of the firm of John L. Thompson Sons & Co., of Troy, N. Y., and Mr. Kline was instructed to send a suitable telegram of reply in the name of the association.

**Remarks of F. L. Seely.**

Mr. F. L. Seely speaking in behalf of the Paris Medicine Co., called attention to an injustice under which this company had been the sufferer. This firm had for a number of years paid commissions to jobbers' salesmen upon orders for one of their preparations. Upon protest from the jobbers this was discontinued. Later it was found that the very jobbers who objected to the payment of these commissions had allowed imitators of this preparation to pay their men commissions. The speaker requested fair treatment and stated that unless better returns were received the preparation in question would be withdrawn from the rebate list.

The matter was discussed briefly, Mr. Shoemaker, for the Committee on Proprietary Preparations, taking occasion to pay a high compliment to the Paris Medicine Co. for the consistent and conscientious manner in which it has always lined up to the tripartite agreement, and the subject was then referred to the Board of Control.

Charles S. Martin said that a number of the members of the old Southern Association are desirous of reviving it and that steps to that end will be taken.

Mr. Kline nominated Mr. Shoemaker for re-election to the chairmanship of the Committee on Proprietary Preparations, and Mr. Weller moved that, as a mark of appreciation of the excellent work he has done in the position, Mr. Shoemaker's re-election be by rising vote. This motion prevailed, and Mr. Shoemaker said a few graceful words of thanks for the compliment.

The election of officers now being in order, Mr. Main moved that the secretary be instructed to cast the ballot of the association for Mr. Walding for president, and it was done. Mr. Walding took the floor and made a speech of acceptance that will probably long hold the record for brevity. He said:

"Gentlemen, I accept the office and thank you for the honor. I am myself a poor speaker and the speech Mr. Cary Peter prepared for me I have had no time to rehearse. I do heartily thank you."

The newly elected president then, as is customary, cast the ballot of the association for the other nominees, and the annual election of 1901 was over.

Some further discussion as to the next place of meeting ensued, Mr. Weller favoring Monterey, and Mr. Shoemaker opposing it, and suggesting Put-in-Bay and Asheville, N. C., while Col. Purcell called attention to the fact that the available meeting places in Virginia are by no means exhausted yet. An invitation to hold the next meeting in Detroit, from the Chamber of Commerce of that city, was also read.

Mr. Peter moved the thanks of the association to the Entertainment Committee, but it was decided that no ordinary hastily framed expression would be adequate in this case, and so Mr. Walbridge was named a committee of one to frame a suitable resolution on the subject, after which the meeting adjourned for lunch.

## FIFTH SESSION.

The reassembling for the afternoon session was much more prompt than for that of the morning, thanks, perhaps, to the fact that the selection of the place of meeting next year was to be, presumably, the first business transacted. But one or two minor matters were given precedence, thus enabling the stragglers to be present when the important business was taken up. H. H. Armstrong was recognized as the representative of the Retail Dealers' Association of Georgia and given the privileges of the floor, and Col. Purcell read a telegram nominating Carpenter Bros., of Greenville, N. C., for membership. The nomination, as required by the rules, went over for twenty-four hours. Chairman Taylor, of the Entertainment Committee, moved the thanks of the association to the long distance telephone company for the free use of their facilities extended to the members of the association, to the president of the trolley line for the use of his private car for the ladies of the party and to Polk Miller, of Richmond, for the entertainment given by him in the ballroom of the Chamberlin on Wednesday evening, and all these were voted unanimously.

F. A. Faxon opened the discussion touching the special order—next year's place of meeting—saying he had intended urging the election of Monterey last year, as he was satisfied that a meeting there would be of the greatest benefit, from a business point of view, to the association. Mr. Faxon said that the idea is for the Eastern and Southern members to gather at Chicago or Kansas City (preferably the latter) and proceed thence by special train. For Kansas City he promised a most cordial welcome and entertainment for a day as a pleasant break in the transcendental journey. He paid a glowing tribute to the attractions of California, promised favorable rates and an interesting trip throughout, and predicted that the meeting held on the shores of the Pacific would be a big success and largely attended. Messrs. Kline, Snow, Taylor and others spoke in favor of California, and Messrs. Cary, Davis and others against it, Mr. Davis speaking of the large expenditure of time and money the trip would entail. Mr. Faxon, to correct any misapprehensions on this score, said that from Boston the actual round trip might be made in eight days at a cost of \$75.00, and that these figures would be lowered proportionately in the cases of less remote points. Mr. Powers, of Richmond, said that four years ago he had extended the invitation to that city. Now he wished to suggest an equally historic city and named Boston. Mr. Davis had objected to California and Mr. Peter, rising, said Mr. Davis had requested him to explain his (Mr. Davis') speech, which he proceeded not to do, by declaring in witty language, that he could see no objection, whatever, to going to California.

Col. Purcell moved the previous question and it was ordered, Mr. Davis moving that the ballot be a secret one. It was taken for and against California. Messrs. Faxon and Davis being appointed tellers, and resulted in favor of Monterey, 42 for and 38 against. Mr. Davis' motion, immediately made, that the selection be made unanimous, was carried. Mr. Coffin said he felt sure that he could extend a hearty welcome in the name of the

whole Pacific Coast, and the mighty matter of selecting the next meeting place was concluded.

Mr. Kline read a communication from Capt. Reilly, of the local Officers' Club, regretfully withdrawing an invitation thereto, because of the illness of the Captain's son, and was instructed to frame a message of sympathy in reply.

Mr. Peter for the Board of Control, reported that the adoption of such a by-law as that contemplated by Col. Purcell's resolution of Wednesday had not been objected to by counsel, to whom it had been submitted, but, on behalf of the board, recommended the adoption of this substitute, suggested by Mr. Coffin:

**RESOLVED:**—That the by-laws be amended to the effect that the Board of Control have power to drop from membership in this Association the name of any firm proven, by a report of any Committee, to have repeatedly violated the object of his Association, as set forth in the preamble of the constitution.

Col. Purcell said he preferred his own resolution, in that it puts all suspects under notice, but that if the more mild suggestion of Mr. Coffin were preferred by them he would vote in support of the Board of Control. Mr. Kline said the substitute was more far reaching than the original resolution, in that it covered any violation of the preamble or constitution of the Association and, he added, that in his opinion there certainly should be some provision for the expulsion of delinquents. The report of the Board of Control on the resolution was then adopted.

The reading of the report of the Board of Control was then continued, as follows:

The Board of Control reported in favor of the recommendations of the Committee on Fire Insurance. It also recommended the adoption of the following resolution:

**RESOLVED:** That it is the sense of this Association that it is unwise and unbusinesslike on the part of any of our members to permit any manufacturers to pay a bonus or reward to any of their traveling representatives.

The Board also recommended the report of the Committee on Drug Market and proposed the following resolutions in connection with the report of the Committee on Proprietary goods:

**I. RESOLVED:** That we reaffirm the action of the Association a year ago as expressed in the following resolutions.

**RESOLVED:** That it is as much for the interest of the manufacturer as the jobber, that the contract plan should be continued, the active interest of both the manufacturer and the jobber should be secured.

**RESOLVED:** That the strength of the contract system lies in the manufacturers' adhesion to a recognized list of wholesale distributors to whom sales at their largest quantity discount should be restricted.

**RESOLVED:** That the Chairman of the Proprietary Committee be requested to continue his efforts to secure the acquiescence of each proprietor who sells his goods on the contract plan, to such list.

**RESOLVED:** That the Chairman of the Proprietary Committee be given control of sufficient funds to investigate all reported violations of Rebate Terms with power to take such actions as may be proper in the premises.

**II. RESOLVED:** That the thanks of this Association are extended to those proprietors who have adopted the Tripartite Plans and have long supported the same.

**III. RESOLVED:** That proprietors are especially requested to exercise greater care and vigilance in regard to the signing of their contracts, and in insisting that their rules on the subject shall be complied with.

**IV. RESOLVED:** That it is the urgent recommendation of this Association that every wholesale druggist in the country whether a member of this organization or not, should co-operate in every reasonable manner with the retail trade in its efforts to secure protection by the operation of the Tripartite Plan.

**V. RESOLVED:** That we also wish to remind all Wholesale Druggists of the primary importance of maintaining absolutely the obligations imposed upon them by the Rebate and Tripartite Plans, not only from a sense of duty but also as a matter of sound business policy.

The report of the Board of Control was adopted as a whole.

Mr. Walbridge read an exceedingly (and deservedly) complimentary resolution of thanks to the Entertainment Committee and the Ladies' Committee, which he had been instructed to prepare, and as an added compliment to these committees it was adopted unanimously by a rising vote.

Mr. Miller moved a resolution of thanks to the management of the Hotels Chamberlin and Hygela, and Secretary Merriam one to Berry Bros., of Detroit, for the flowers which, by their order, have graced the president's table since the meeting opened. Both resolutions were adopted.

Mr. Peter moved that when the meeting adjourned it be to meet on the boat during the James River excursion to-morrow, and, the motion prevailing, adjournment was had on motion of Mr. Cary.

The banquet at the Chamberlin to-night will doubtless go into history as one of the most delightful in the history of the Association. The large and beautiful dining-room of the hotel was given over to it, the regular guests of the hotel being served with dinner in the ball-room. It is but just to the hotel management to say that the manner in which the banquet was served left nothing whatever to be desired. Except for those at the speakers' table, the guests were seated in parties of eight, an arrangement that added materially to the enjoyment of the occasion.

These were the speakers and the toasts to which they devoted their eloquence: "National Wholesale Druggists' Association of the Past," W. J. Walker, Albany, N. Y.; "National Wholesale Druggists' Association of the Future," W. J. Walding, Toledo, O.; "Getting Together," P. A. Faxon, Kansas City, Mo.; "Hampton Roads and James River; 'The Cradle of the Republic,'" Col. John B. Purcell, Richmond, Va.; "Virginia," Hon. Lyon G. Tyler, Williamsburg, Va.; "Medical Profession," Dr. Geo. Ross, Richmond, Va.; "The Ladies," M. Cary Peter, Louisville, Ky.; "The Old and New Flag," Hugh Gordon Miller, Norfolk, Va.

## THE EXCURSION TO JAMESTOWN.

Old Point Comfort, Oct. 18.—To-day was devoted by the members of the National Wholesale Druggists' Association to an excursion on the James River, historic Jamestown being the objective point. The steamer Pocahontas left the wharf soon after 9 o'clock in the morning, and there were few absentees. The business meeting that was planned resolved itself into a mere occasion of formal adjournment, the applicant for membership that was to have been voted on having been found ineligible by the committee on membership. The party landed at Jamestown, inspected the ancient tower, registered in the visitors' book, bought souvenirs, wandered about the site of the oldest white settlement in America, and—the uninitiated ate green persimmons and expressed surprise that any one could cultivate a taste for such fruit. The Hon. Lyon G. Tyler gave a sketch of the history of Jamestown, and Mr. Robert Traylor, of Richmond, made some highly interesting remarks (in which mention of "grass" figured), with the aid of a megaphone. An elaborate lunch was served on the return trip, for the purpose of aiding in which a very large majority of the dining-room force of the Chamberlin seemed to have been transferred to the boat. A brief stop was made at Newport News for the accommodation of those who desired to leave by the evening trains, and the twenty-seventh annual meeting of the National Wholesale Druggists' Association was wafted into the past, to the music of reiterated songs of praise of the committees—and especially their heads—to whom the entertainment of the visitors had been intrusted. These were made up as follows:

ENTERTAINMENT COMMITTEE.—Edgar D. Taylor, Richmond, chairman; Clarence G. Stone, New York; T. P. Cook, New York; C. Frank Baily, Baltimore, N. Y.; Randolph, G. G. Minor, John B. Purcell, Polk Miller, Richmond; W. T. Case, New York; W. H. Terry, Norfolk; D. M. Cowan, Buffalo; E. S. Everett, Portland, Me.; C. P. Cutler, Boston; Albert B. Lambert, St. Louis;

F. Aschenbach, Philadelphia; M. Carey Peter, Louisville; T. F. Van Natta, St. Joseph, Mo.

LADIES' COMMITTEE.—Mrs. Edgar D. Taylor, chairman; Mrs. T. P. Cook, Mrs. C. G. Stone, Mrs. G. F. Baily, Mrs. N. V. Randolph, Miss Nina Randolph, Miss Julia Lee, Mrs. G. G. Minor, Mrs. J. B. Purcell, Mrs. Polk Miller, Mrs. W. H. Terry, Mrs. D. M. Cowan, Mrs. C. F. Cutler, Mrs. A. B. Lambert, Mrs. F. Aschenbach, Mrs. M. Carey Peter, Mrs. R. W. Powers, Mrs. R. L. Powers, Mrs. T. F. Van Natta.

## CONVENTION NOTES.

Too much cannot be said in praise of the efforts of Mr. and Mrs. Edgar D. Taylor to further the enjoyment of all at Old Point. They seemed to be omnipresent and to consider nothing too great a tax upon their kindness.

President Walding, during the excursion on the James on Friday, told the correspondent of The Era that he was much gratified with the meeting as a whole. He will take plenty of time in selecting the various committees, as upon their composition, he believes, depends in very large measure the success of the Association. It will probably, he said, be at least thirty days before he is prepared to make his announcements.

Secretary A. B. Merriam is exceedingly deliberate in his every movement, as becomes one of his years, but just as the afternoon session of the first day's meeting was about to open he moved more quickly than he has probably in a long time. He was sinking slowly into his seat when a practically unanimous yell from the members present brought him to an upright position, and thus saved President Walker's derby hat from ruin.

Louis Dohme, of Sharp & Dohme, Baltimore, was obliged to leave on Thursday evening, before the banquet. He expressed himself as much pleased with the results of the meeting. Mr. Dohme is a firm believer in the benefits accruing from such gatherings, and says they brush aside very many misapprehensions and misunderstandings. "It is easy," he said, "to do business with a gentleman with whom you are in the habit of shaking hands socially at least once a year."

The post band of Fortress Monroe is a superb one, and much credit is due the leader, who labors under the immensely unmusical name of Buglione.

A visitor remarked that Hugh Gordon Miller, of Norfolk, who delivered the speech of welcome, is a brilliant young orator and had a splendid future before him, at which a native shook his head sadly, and corrected: "Would have it he were on the other side of the political fence." Mr. Miller is assistant U. S. District Attorney for his district, and, of course, a Republican.

The return of Geo. A. Seabury, of Seabury & Johnson, to membership in the National Wholesale Druggists' Association, after a lapse of ten years, was considered quite an important event and as meaning much in favor of the Association. Mr. Seabury talked much New York City politics in the lobby of the Chamberlin and claimed to have been one of a party of five who, one afternoon, caught seventy-nine blackfish—which, of course, has nothing whatever to do with the negro vote.

When Treasurer S. E. Strong rose to read his report, and considerable applause greeted him, he said, "You must anticipate a big balance."

The reading of Col. Purcell's expulsion resolution was received with a burst of applause that left no shadow of doubt as to its meeting the views of a vast majority of those present.

The officers of the Fortress Monroe garrison were much in evidence about the Chamberlain, and lent an agreeable bit of color. And their appreciation of the many pretty girls accompanying the druggists was manifestly keen.

If Mr. Frank A. Faxon's ideas prevail—as they probably will—those who go through Kansas City on the way to Monterey next year will have no fault to find with Kansas City hospitality.

Mr. F. L. Seely delivered the protest of the Paris Medicine Company in a manner that left not the slightest doubt as to his earnestness, and he made a good impression.

When Secretary Merriam cast the ballot of the Association in favor of Mr. Walding's election he made him-

president not of the National Wholesale Druggists' Association, but of the United States. The mistake was corrected in time to prevent any friction with Washington, however.

Mr. Faxon, in advocating California as the next place of meeting, several times spoke of the Missouri River and Mr. Kline remarked that he did not know where that stream is. Instantly Mr. Faxon retorted, "That's one reason you ought to go west."

Mr. Powers, of Richmond, alluded to his partner, Mr. Taylor, chairman of the entertainment committee, as "that young man," and, notwithstanding Mr. Taylor's hair is perfectly white, he seems otherwise to fully deserve the appellation.

When Monterey had been decided upon as the next place of meeting, Mr. Coffin arose and said: "I feel that I can extend to you the hearty sympathy—" Of course there was a yell, after the subsidence of which Mr. Coffin explained that he meant welcome, not sympathy.

Polk Miller, of Richmond, could, it would seem, tell negro dialect stories continuously for the remainder of his natural life and never repeat a single one. He was constantly surrounded by a crowd of amused listeners to his splendidly-told yarns.

To induce a dignified elderly gentleman to taste a very unripe persimmon is hard enough, but to then recommend as an antidote for the "pucker" the preparation in which the joker is most interested, especially when, as in the case in point, the preparation is Pond's Extract did look a little like adding insult to injury.

#### Mr. Seabury's Speech.

Mr. Seabury presented a report containing extracts from the report of the Committee on Commercial Interests of the New York State Pharmaceutical Association which related the chief grievances involved and rehearsed the state of existing conditions in New York State. After reading the report Mr. Seabury closed with the following speech:

There are further irritants that revolve around those mentioned by the Committee as to whether department stores, grocers and arch cutters in the drug trade shall dictate terms of sale, or whether legitimate profits shall be sustained by the contracting parties to a Tripartite reciprocal agreement between manufacturers, wholesale druggists and retail druggists, the latter being represented in action for offensive and defensive mutual.

In the agitation for the settlement of these and other mercantile questions, the result will be either a reckless, unprofitable and suicidal policy in our business affairs, or a complete harmonization of conflicting interests. Legitimate profits should be insisted upon by manufacturers, wholesalers and retailers. Any plan not having reciprocal conditions between contracting parties will not succeed.

While I may be charged with being too optimistic, be not deceived. I have invariably leaned on the practical side of trade subjects, as I term it, "overcomeable." The present apparently complex situation as to who shall dispose of the wares involved in this department of the drug business is, to my mind, extremely simple; it is immaterial who become the final distributors—not one bottle or less will be sold by manufacturers, and if they are wise they will protect themselves by complying with the demands of wholesale and retail druggists, and deal with them alone. The manufacturers, wholesalers and retailers can settle it definitely, without foreign interferences, within a year's time, by simply being honest and true to each other in the Tripartite Plan. No other plan can, or will, succeed.

When these philosophical and moral conditions are attained you will realize the fact that it is an exceedingly easy problem to remove department stores, grocers and the destructive methods of the arch cutters. There is a large proportion of our fellow members that will say it at the present time as if it had been accomplished twenty years ago, when I prophesied that the situation among us in our commercial affairs would, by evolution, develop.

A restoration of legitimate profits to all involved will come even quicker when the retail druggist becomes conscious of his power, that naturally leads to greater independence in his business transactions with his natural suppliers, and when he becomes more completely organized, separating in its course, the "goats from the sheep," as my friend "Simon Pure" Jones puts it, he will dictate mutual obligations.

The drug trade will learn to unite itself for offensive and defensive invasions on their trade interest, and relations, and the retailer will finally patronize only those who have been friendly to his cause. He will cast out of stock the wares of unscrupulous manufacturers who are

over ready to "serve God and the Devil," and who performs his part of the agreement in a Tripartite plan by disposing of his wares to "any old thing" in any business, as long as they are able to pay for them. Such a course simply perpetuates the struggle. The manufacturer is more to blame in this plan for defeat, since every lot of goods supplied to department stores and arch cutters prolongs the "causid bellum!"

Wholesale druggists, next to manufacturers, as distributors occupy the second important position. If he refuses to sell to commercial vaudeville bazaars and arch cutters who make a business of underselling legitimately established prices, then ninety per cent of our difficulties have been overcome, the other ten per cent will pass slowly out to fashion and existence.

For the past ten years this Association has been unable to prevent violations of the Rebate and Tripartite plans. The result has been a destructive conquerable warfare. There is still one method for this Association to adopt to triumph, and that is, to introduce heroic means and impartially enforce them. When members find it to their interest to remain true to their obligations in any plan that is created for their own welfare, then the end is exceedingly near. It will also develop harmony, respect and greater prosperity. "So mote it be." Amen!

ACETOPYRINE is a body obtained in the form of a white crystalline powder. It is employed as a remedy for acute rheumatism, and as an antithermic and analgesic agent. It has no unfavorable action upon the stomach and digestive organs, produces no adverse secondary symptoms, and lessens the number of the heart beats and respiratory movements without causing collapse even in tuberculous patients. Its elimination by the kidneys is unaccompanied by any action on the renal tissues. It is given in doses of  $7\frac{1}{2}$  grains, which may be repeated from two to six times per diem. The substance has a faint odor of acetic acid, melts at 64 or 65 degrees C., is sparingly soluble in cold water, more soluble in hot water, readily soluble in alcohol or chloroform, and almost insoluble in ether.

PILOCERINE is the name given to a new toxic alkaloid obtained by G. Heyl (Archiv.) from *Pilocereus sargentianus*. Neither the alkaloid nor any of its salts have been obtained in crystalline form. Pilocerine is precipitated by all the usual alkaloidal reagents, except tannin, and has been given the formula  $C_{20}H_{15}N_2O_4$ . This body acts upon the heart in a peculiar manner, destroying the power of contraction of the ventricles. A dose of 1 gram is fatal to a rabbit weighing 1 kilo.

THE FAT OF STRYCHNOS SEEDS.—Petroleum ether was found by La Van Itallie to remove 11.7 per cent. extract from *Strychnos* seeds, 3.6 per cent. of which consists of fat. The author recommends the removal of the fat in the preparation of the extract for the reason that although some of the alkaloid is removed the resulting product is better in appearance and has much less of the unpleasant odor of the seed.

A PROCESS FOR THE PREPARATION OF MANNITE, or similar substances, by the reduction of carbohydrates of the formula  $C_6H_{12}O_6$  by means of an electric current has been patented in England. Glucose, or a similar body, in a water solution is subjected to electrolysis in a cell containing two chambers, separated by a porous diaphragm. The substance is obtained in solid form by evaporating the reduced solution.

SPANISH CANTHARIDES have, according to Karl Dietrich (Apot. Zeit.), practically disappeared from the market, and materials designated as such are not genuine. The trade is now supplied principally from Russia and Hungary. The author recommends the adoption of the Chinese insects in the German Pharmacopoeia as being decidedly superior, containing a large proportion of cantharidin.

## THE DEVELOPMENT OF COMMERCIAL CHARACTER AND GENIUS.

The article by Mr. Shaw appearing in the September issue of "Business Topics," and bearing upon boys and young men entering business, is a very significant departure from our current credit literature, but an exceedingly wise and commendable one.

It is a mistake not to heed the passing of days and that we are being relentlessly pushed forward to create a vacancy which must be filled by the immediately succeeding or the very youngest generations. Much injury has been, and will be done, by men of commercial acumen, but thoughtful of themselves or their individual circumstances only, and apparently unconscious of the younger men who are almost treading upon their feet and waiting simply for a word of advice or encouragement to develop profound business tact and character. Instances are very numerous within the zone of our own observation where successful business and even professional men have no offspring worthy to take their places when the time of retirement or separation comes; and this condition has been undoubtedly brought about in many instances by a failure on the part of the senior to consider the young men a part and parcel of his responsibility and create that atmosphere in his business surroundings or set aside a little time for substantial advice and encouragement, which would have caused a flowering of the natural abilities that were simply withered.

Now, we credit men have had a very great awakening in many directions; and it is no idle boast to say that it has given us a much better and safer equipment for our work; and along educational and helpful lines the present question should hold a very definite place. We have been passing through a crisis of change in commercial life and plans during the past few years and "specializing" in every department appears to be the fundamental element of success. Therefore, to acquire any one line thoroughly, there must be constant study and application. Not more than a decade ago it was not considered at all necessary for a young man to have beyond a common school education if he intended to take up a commercial life; but now it is very necessary that a young man should have gone through a period of close study, so that the habits of application and attention may have been developed and a range of knowledge concentrated on the branch of business that he may have selected. With a credit man, "Shakespeare," with its character sketches, can be as appropriately a part of his desk library as "Business Forms," or the "Legal Directory." This applies, of course, where the privilege can be allowed, but where it cannot (and that so often occurs), then the young business man should continue his studies after entering upon the commercial life, and realize that he is facing strong conditions which must be met and overcome. The power of realizing a commercial character and success beyond the monetary feature, in any branch of business, depends more largely on these features of study and application, with a serious comprehension of what we are aiming to become, than even the genius with which nature may have endowed us.

When a young man upon entering business manifests these attractive qualities, he should be given the atmosphere in which they can alone be developed and used for the advantage of his seniors. It is hard to make men over, and we love to dwell on the ideal; but there is really nothing which should hurt us more than to see a fine effort wasted and contracted because there is no appreciative spirit; and it was simply looked upon as one of the daily cog of business to grind and grind, and at last wear out. Surely every firm in filling subordinate positions should recognize the responsibilities surrounding them, and that it means just as much a life to develop as that the right side of the profit and loss account should be substantially increased by a proficient assistant.

We can only wish that the men who hold the positions, and influence should generally recognize this

natural law, and "as they sow, so will they reap." There is undoubtedly a great deal of the school feeling and lack of seriousness upon the part of many boys who leave their desks very early in life and wish to enter business. The trouble they give and the numerous changes necessary are frequently very discouraging, and it looks as though the proper stuff is hard to get; but, nevertheless, very many of these boys have a good foundation away underneath the surface, and if they are given some advice and caused to realize just what the business life means will sober and make splendid men.

In conclusion, it is a matter of attention and emulation on one side and care and development on the other. A blending of these features will give our business atmosphere a soundness and stability, but if lacking on either part then there cannot be success as we would define it, either for the seniors or the young men. Surely let us all be encouraging and helpful.

**TREATMENT OF POISONING WITH NITROBENZOL.**—As nitrobenzol is not dissolved by water or the stomach secretions, is remains unchanged for an interval—usually about half an hour—after its digestion. Consequently, thorough lavage of the stomach is indicated until the fluid aspirated is odorless. Alcohol and oil dissolve it and all substances containing them, such as milk, wine, etc., should be avoided. The fatal cases on record were not treated with lavage. In two of the published cases the symptoms of intoxication were apparent at once. The only constant symptoms are the odor of the breath and cyanosis. The blood becomes brownish and the entire central nervous system is more or less affected, with various manifestations. The dose in the fatal cases was 150, 20 or 15 gm. Serious intoxication has followed indigestion of three drops and recovery has followed indigestion of as much as 30 gm.—(Jour. Am. Med. Assn.)

**SAPONIN FOR CATCHING FISH.**—Prof. Dr. Schaer, in a study of the plants employed in fishing, says that more than one hundred different species are used for this purpose, most of these containing saponin. Berberin also seems to have a toxic action upon fish. A number of species belonging to the Cameliaceae exert a very energetic action. In India representatives of the Sapindaceae and Sapotaceae, which contain as much as 9 per cent. saponin are employed in a compressed form as means for capturing fish. The natives of Egypt use certain Zygophyllaceae, which contain about 7 per cent. of saponin; while in other countries plants belonging to the Leguminosae and Rhamnaceae serve the same purpose. In southern Europe a species of *Verbascum* is sometimes employed in this curious method of fishing.

**NEROLI OIL.**—The oil distilled from the leaves of the bitter orange contains, according to Theulier, methyl anthranilate, while that obtained from the flowers of the sweet orange is without a trace of this compound. The oils from the bitter orange family vary greatly from season to season. The oil of the present season was found to contain 8.08 to 14.7 per cent. of ester calculated as linalyl acetate, and .42 to 1.10 per cent. of methyl anthranilate. The specific gravity was found to vary from .869 to .8725, and the optical rotation from + 2 degrees 50 minutes to + 7 degrees 20 minutes.

**SALVOSAL** is, chemically, salol-phosphinic acid. It is a complicated body formed by the action of phosphorus penta-chloride upon salol. Salvosal is now largely used as a substitute for salol, especially in the form of sodium and lithium salts.

**SAPONIN**, according to G. Heyl (Archiv.), makes up 24 per cent. of dry specimens of *Cereus gummosus*. The author finds no alkaloid in this plant.

# NEWS DEPARTMENT.

## NEW YORK AND VICINITY.

### CONVICTED OF LARCENY.

**Employee of Lehn & Fink Sentenced. Employees of C. N. Crittenton Co. Convicted But Sentence Suspended.**

Hans Dierks, a young man twenty-four years of age, who was employed as a porter in the chemical department of Lehn & Fink's wholesale drug establishment for over a year, was convicted of larceny Oct. 17, and sentenced by Judge Hinsdale in the Court of Special Sessions, to thirty days imprisonment in the City Prison.

Dierks, it appears, had been robbing his employer, from time to time, since the date of the fire which destroyed the old building of the firm. His scheme was to stow the articles in his clothing during the day and walk out with them in the evening. On Friday evening, Oct. 11, as he was starting home, the watchman observed that his pockets were bulging out in a most unnatural manner, and, being suspicious, requested him to step into the office, where, on investigation, it was found that he had a package containing four pounds of potassium iodide. On being searched at the police station, several packages of high priced chemicals were found in his possession. The value of the goods stolen is not known, but probably will reach several hundred dollars. The leniency of the sentence is thought to be due to the youth of the prisoner and the fact that some of his friends appeared in Court, testified as to his previous good character and that he had never been convicted before. Dierks confessed to having disposed of the goods to a porter who was formerly in the employ of Lehn & Fink, and who was discharged for theft.

Two of the employees of the Chas. N. Crittenton Co., and one ex-employee were before Judge Hinsdale and Holbrook, on charges of theft, the same day that Dierks was convicted. The ex-employee and one of the employees pleaded guilty and were sentenced, but in consideration of the families of the prisoners sentenced was suspended. The other employee's trial was postponed until Oct. 21. The convicted men confessed to having stolen about five hundred dollars' worth of goods, but the Crittenton Co., estimates the extent of its losses between \$2,000 and \$3,000, and believes that the parties have been operating for over a year. The principal goods stolen are a number of well-known proprietary preparations.

### THE WHOLESALE DRUG TRADE BOWLING ASSOCIATION.

The Wholesale Drug Trade Bowling Association of New York was formally organized at a meeting held in the offices of Seabury & Johnson, No. 59 Malden Lane, Oct. 16. The new organization starts off with a membership of 48 although provision is made for the reception of charter members up to and including Nov. 1.

The object of the association as set forth in the constitution adopted is to promote good fellowship and acquaintanceship among members of the trade, encourage and supervise the bowling tournament, and to select and maintain a team to compete in the annual tournament of the American Drug Trade Bowling Association. All those interested or employed in the drug, chemical and allied trades and who approve of the objects of the association are eligible to membership.

Heretofore the association has been re-organized at

the commencement of each bowling season. The new association will be a permanent organization and have a stated membership fee in addition to the initiation fee. With the exception of Merck & Co., all of last season's competing teams will again participate. The following are the teams: Seabury & Johnson, Dodge & Olcott, Johnson & Johnson, Parke, Davis & Co., Colgate & Co., General Chemical Company, National Lead Co., Lanman & Kemp, Church, Dwight & Co., Powers & Weightman, and Roessler & Hasslacher Chemical Co. The last two teams have been added this year. An application from Ricketts & Banks to enter a team was rejected on the ground that the house was not eligible, its members being only professionally engaged in the trade and are not tradesmen.

The officers elected were: President, H. F. Baker, General Chemical Co.; vice-president, Harry O. Barnes, Colgate & Co.; secretary, Charles E. Meek, National Lead Co.; treasurer, William J. Carr, Parke, Davis & Co.; statistician, Lester Stevens, Johnson & Johnson; Board of Directors, C. A. McCormick, Johnson & Johnson; John Ruddenim, Dodge & Olcott; Dr. Lovis, Seabury & Johnson.

Harry O. Barnes, chairman of the bowling committee reported that Reid's Alleys No. 200 Church street, had been engaged for the season, beginning Saturday afternoon, Oct. 19. The teams scheduled to bowl on that day were Seabury & Johnson, Powers & Weightman and Johnson & Johnson, one set. Church, Dwight & Co., Lanman & Kemp and Colgate & Co., the other set. Among the charter members of the association are: George J. Seabury, R. P. Rowe, George W. Fortmeyer, S. H. Carragan, W. J. Carr, G. S. Mariager, Chas. A. McCormick, H. O. Barnes, H. F. Baker, Chas. E. Meek, Dr. Lovis.

### MEETING OF N. Y. C. P.

A meeting of the officers and members of the New York College of Pharmacy was held at the college building, No. 115 West Sixty-eighth street, Tuesday evening October 15. In the absence of the President and vice-president, A. C. Searles an ex-trustee, was appointed chairman and called the meeting to order. After the minutes of the last meeting were read Prof. Coblenz as chairman of the delegation to the meeting of the American Pharmaceutical Association at St. Louis gave a verbal report. The delegation had been particularly pleased with the department devoted to exhibits and in his report Prof. Coblenz made special mention of an exhibit made by a graduate of the college, Wm. Kaemmerer, of Columbus, Ohio. The sugar coated pills exhibited by Mr. Kaemmerer were so well and uniformly made that it was said many of the manufacturers would be put to shame by comparison of products. The attendance was small, only about 15 members being present.

### PROPOSED CONFERENCE OF CHAIRMEN OF LEGISLATIVE COMMITTEES.

A suggestion has been made that chairmen of the legislative committees of the several local pharmaceutical associations of greater New York meet in conference with the legislative committee of the New York State Pharmaceutical Association and decide on amendments to the pharmacy law to be presented at the next session of the legislature; also to agree on a plan to oppose any obnoxious legislation relating to pharmacy,

that may be brought up at the session. It is not unlikely that the suggestion will be acted upon and the conference will probably be held during the sessions of the State Board of Pharmacy at the New York College of Pharmacy, Oct. 28 and 29.

#### Society of Chemical Industry, N. Y. Section.

The New York Section of the Society of Chemical Industry will hold its first meeting of the season at the Chemists' Club, 108 West Fifty-fifth street, Friday evening, Oct. 25. Following the address of the chairman, Clifford Richardson, papers will be read by Samuel A. Tucker, "The Possibilities of Production of Ethylene from Inorganic Sources", and R. H. Moody, "The Reduction of Alumina by Calcium Carbide". Previous to the meeting of the Section, the members will hold the usual dinner at the cafe of the Hotel Savoy.

#### NOTES.

—The Wholesale Drug Trade Bowling Association opened the season's play on Saturday, October 19. The scores made by the competing teams follow: First game, Seabury & Johnson, 723; Powers & Weightman, 787. Second game, Seabury & Johnson, 840; Johnson & Johnson, 823. Third game, Powers & Weightman, 662; Johnson & Johnson, 789. Fourth game, Church & Dwight Co., 780; Lanman & Kemp, 727. Fifth game, Colgate & Co., 700; Lanman & Kemp, 700. Sixth game, Colgate & Co., 743; Church & Dwight Co., 814. The schedule committee of the association tournament has arranged the next six series as follows: October 26—Roessler & Hasslacher, General Chemical Co., and Dodge & Olcott, National Lead Co., Parke, Davis & Co., and Seabury & Johnson. November 2—Lanman & Kemp, Roessler & Hasslacher and Powers & Weightman; Johnson & Johnson, Dodge & Olcott and Church & Dwight Co. November 9—Colgate & Co., General Chemical Co., and Powers & Weightman; Dodge & Olcott, National Lead Co., and Lanman & Kemp. November 16—Church & Dwight Co., General Chemical Co., and National Lead Co.; Colgate & Co., Dodge & Olcott, and Seabury & Johnson. November 23—Johnson & Johnson, National Lead Co., and Lanman & Kemp; Seabury & Johnson, Church & Dwight Co., and Roessler & Hasslacher. November 30—Johnson & Johnson, Parke, Davis & Co., and General Chemical Co.; Powers & Weightman, National Lead Co., and Dodge & Olcott.

—Dr. Jokichi Takamine, was entertained at the Drug Trade Club, together with the heads of the departments of Parke, Davis & Co.'s New York branch, by Col. E. W. Fitch on Saturday October 12. Dr. Takamine, who holds the degree of Doctor of Science from the University of Tokio, leaves this week on the Celtic for London, where he will spend some months at the branch of Parke, Davis & Co. From London he goes to Japan and expects to return by way of San Francisco in about ten months. Dr. Takamine will be accompanied by his wife who is a sister of Mrs. Henry George, Jr. The Marquis Ito, late prime minister of Japan, who has been visiting different parts of America and is a personal friend of Dr. Takamine, also sails on the Celtic this week.

—Some of the out of town druggists visiting the trade last week were Dave S. Bauer, of Dave S. Bauer & Bro., Mobile, Ala.; James F. Ballard, St. Louis; H. O. Nute, of Irving, Nute & Co., Boston; O. F. Fuller, of Fuller & Fuller, Chicago; F. P. Weller, of the Richardson Drug Co., Omaha, Neb.; T. C. Treffy, New Haven, Conn.; F. R. Pease, New Bedford, Mass.; F. E. Blenkinsstone, Oradell, N. J.; Samuel Davis, Boonton, N. J.; H. N. Clarke, Cornwall-on-Hudson; and George M. Burr, Northport, L. I.

—Many delegates to the N. W. D. A. meeting at Old Point have stopped in New York on their way home, and many familiar faces of out of town members of the trade are seen this week in the drug district and at the club. Among others may be mentioned James E. Davis, Detroit; G. D. Searle, Chicago; Chas. E. Matthews, Chicago; Frank M. Bell, Chicago; Chas. F. Cutler and C. A. West, Boston; C. F. Weller, Omaha, and B. C. Hartz, Rock Island.

—F. L. Holton, of Holton & Adams Co., returned

October 15 from a three months' trip to various points in the Western States. Mr. Holton says that druggists in that part of the country are prospering and the number of stores is increasing, especially in Colorado. The growing town of Cripple Creek, where so many mines have been opened during the past two years, now maintains nineteen drug stores, and Mr. Holton says none of them seemed to be complaining of "hard times."

—Irving McKesson and H. McK. Kirkland, of McKesson & Robbins, returned from a two weeks' hunting trip in New Brunswick, Canada, on October 16. The trip was successful in every way each hunter bagging one moose and one caribou, all the law in that province will allow any person to shoot in one season. It is not unlikely that these crack shots will venture forth again this season and try their skill with the gun in another field.

—The Deutsch-Amerikanische Apotheker Zeitung, our German contemporary of this city, has reason to feel proud of its October issue which is printed on better paper than usual, and contains a very complete and interesting account of the recent celebration of the German Apothecaries Society of this city. The article was prepared by Hugo Kantrowitz and is illustrated with half-tone portraits of prominent officers and members of the society.

—De Witt W. Mertz, a partner in the De Miracle Co., dealers in patent medicines at No. 19 East Fifteenth street, has filed a petition in bankruptcy in the United States District Court. The schedules in the petition show liabilities of \$1,385 and nominal assets. There were thirty-eight creditors, mostly advertising agents, with claims for printing and distributing. Louis Rosenberg and Frank E. Ketcham are partners in the firm.

—C. Dickinson, the veteran druggist of New Britain, Conn., was in the city a few days last week making purchases for the fall and winter trade. Mr. Dickinson is over 80 years of age, and has been actively engaged in the drug business the greater part of his life. His store at New Britain is one of the leading pharmacies in that section, and customers' wants are still, to a great extent, attended to by Mr. Dickinson personally.

—J. Van Straaten, an exporter of crude drugs, The Hague, Holland, and A. A. Wittech, exporter of essential oils, Semarang and Toerabaya, Java, Dutch East Indies, are in New York calling on their customers. Mr. Van Straaten is buying modern machinery for the laboratories connected with his works in Holland. Both these gentlemen were guests of P. C. Magnus at the Drug Trade Club last week.

—Wallace C. Doremus, representative of Fox Fultz & Co., in Pennsylvania and John S. Lane, representative for Schieffelin & Co., in Massachusetts and Connecticut were in the city a few days last week. Harry C. Yager, formerly a city salesman for William R. Warner & Co., now has a similar position with Schieffelin & Co.

—P. V. Myer, Belfast, and E. M. Suckles, New York, were guests of Louis L. Drake, at the Drug Trade Club, October 16. F. E. Treat, Boston, and Clinton Sutphen, Annandale, N. J., were guests of J. B. Booth October 17. E. A. Kimball, of Washington, was registered at the club October 18.

—The junior class of the New York College of Pharmacy will exceed in number the class of last year. Already one hundred and eighty-two students have been enrolled and more are expected in the early part of November. The total number in the junior class last year was one hundred and eighty-two.

—Seward Thornhill, of Seville, L. I., was in the city October 14 on his way home from a vacation trip to the Pan-American Exposition and other points in this State. Mr. Thornhill reports a most satisfactory summer's trade, but that it is rather quiet of late.

—Thomas Voegel, of Voegel Bros. Drug Co., Minneapolis, Minn.; W. I. Woodman, of Smith & Woodman, St. Augustine, Fla., and G. Gaylord Bragdon, of Bragdon & Co., Middletown, Del., were among the out-of-town buyers visiting the drug trade last week.

—E. L. Eschman, senior partner of the firm of G. Leipnitz & Co., the first retail drug firm established in San Francisco, visited friends in the drug trade last week. Mr. Eschman has just returned from a trip to Europe.

—Ewen McIntyre, Jr., of Ewen McIntyre & Son, Fifty-sixth street and Sixth avenue is able to attend to business again after an absence of two weeks. Mr. McIntyre had a fall while wheeling and received serious injuries, breaking his collar bone.

—Oscar F. Berger, representative of the Osborn Colwell Co. in the New England States, was in the city last week. A. C. Irving, formerly with the Missisquoi Chemical Co., has been added to the staff of travellers of the same company and will cover New York.

—Among the New York men attending the N. W. D. A. meeting, at Old Point Comfort, Va., last week, were: Thomas P. Cook, William S. Mersereau, S. H. Carragan, Herbert Turrel, W. E. Kauffman, H. B. Harding, Brent Good, L. Stallman, C. S. Latelle and W. P. Ritchey.

—A. C. Heisler, formerly with druggist Thomas Latham at Seventy-fifth street and Third avenue, will open a store at No. 3,266 Third avenue near 161st street, about October 25. This store was formerly occupied by druggist Charles Wolanek now at No. 3,194 Third avenue.

—F. W. Meissner, a member of the executive committee of the N. A. R. D., and a well-known pharmacist of Laporte, Ind., visited friends in the trade last week while stopping here on his way home from the Buffalo convention.

—Frank Feury, formerly with the Fraser Tablet Co., is attending the classes at the New York College of Pharmacy. Mr. Feury is engaged at the laboratories of the Osborn Colwell Co., on "off days".

—C. McFarlane, of Jamaica, W. I., late of the firm of Crosswell & Co., Kingston, Jamaica, was in the city last week. Mr. McFarlane was a guest of Col. E. W. Fitch at the Drug Club October 14.

—Willis L. Mix, the New Haven pharmacist visited friends in the drug trade last week. Chas. M. Whitteley, of the same city was also here, on a buying trip for his firm.

—Frank S. Henry, of the Williams Manufacturing Co., Cleveland, Ohio, was one of the visitors in the drug section last week. Mr. Henry attended the meetings of the N. W. D. A. at Old Point Comfort.

—C. C. Bruen, of Bruen, Ritchey & Co., left Saturday, October 19, for Buffalo, and will be gone about two weeks. A. S. Smith, of the same firm, has returned from his vacation spent in Washington and Norfolk, Va.

—William S. Settle has purchased the drug business formerly conducted by Frank F. Wright, corner Reid and Gates avenues, Brooklyn. Mr. Settle was formerly a clerk with Mr. Wright.

—Emil Levi, of C. F. Boehringer & Soehne, sailed on the Kaiser Wilhelm Der Grosse, Tuesday for Europe, and will spend some time at Mannheim, Germany, the home office of the firm.

—Schaaf Brothers have opened another new store at No. 2137 Eighth avenue. This firm now runs three drug stores in the city the others being at No. 798 Eighth avenue and No. 3,409 Third avenue.

—F. M. Robinson, of R. W. Robinson & Son, who was confined to his home through illness several days last week, has recovered sufficiently to enable him to resume work.

—F. W. Hancock, a well known pharmacist of Oxford, North Carolina, was in the city a few days last week. Mr. Hancock attended the N. A. R. D. meeting at Buffalo.

—T. F. Wheeler, of Boston and F. A. Hubbard of Newton, Mass., visited the trade in this city, October 15.

—N. Wolfert, the druggist at 101st street and Madison avenue is opening a branch store at 120th street and 5th avenue.

—J. A. Conover, one of the hustling pharmacists of Jacksonville, Fla., was in the city last week making purchases for the holiday trade.

—George Norton, M. D., of Cambridge, Mass and O. W. Jones, of Auburn, Me., were in the city during the week making purchases for the fall trade.

—R. B. Robbins, who formerly conducted the store at 135th street and Lenox avenue is now established at No. 541 Lenox avenue, near 137th street.

—P. E. Hall, auditor in the offices of Parke, Davis & Co., at Detroit, is in the city this week.

## IN AND ABOUT BOSTON.

### HOLYOKE DRUGGISTS CHARGED WITH LAW-BREAKING.

Boston, Oct. 19.—In a recent raid made on liquor sellers of Holyoke, as the result of warrants sworn out by several clergymen of that city, some of the druggists' places, among others, were visited, including the stores of A. S. Mesnard, Michael Murphy, John E. Fessant, A. J. N. Desmarais and Charles E. Bardwell. The pharmacy of the C. E. Ball Drug Company was visited, but there was found no evidence of illegal liquor selling. The accused men were in court at Holyoke, following a summons in which they were charged with keeping a common nuisance. All of those arraigned pleaded not guilty and the cases were continued for further hearing. Sureties in each case were fixed at \$500 and bonds were furnished by all.

Singularly, Mr. Bardwell is one of the candidates recommended by the State Pharmaceutical Association for appointment in the State Board of Registration in Pharmacy to fill a coming vacancy. It is now said there will be protests by temperance men, who claim to have evidence against Mr. Bardwell. These men claimed to have learned that the State Board of Pharmacy is composed of five men, three of whom favored rigid enforcement of liquor laws concerning druggists and were opposed to all legislation favoring them, while two members were more liberal in the matter of liquor selling. The expiration of one member's term leaves the board evenly divided, and as it was understood that Mr. Bardwell was not in favor of rigid temperance legislation, the temperance men have been opposed to his appointment to the board. The reputation of Mr. Bardwell's store has been much better than that of some druggists. The temperance men, by looking into the matter more closely, might have learned that their supposition (that two members of the board held liberal views on liquor laws) perhaps would be found to have no real basis.

### DRUGGISTS CONTENTED AND TRADE SATISFACTORY.

Boston, Oct. 19.—Conditions have not changed materially this week over those of the previous week, the same generally good trade being found at places visited, with the druggists feeling contented because of present business. There has been no special impetus, it may be said, yet in an evenly good way trade keeps satisfactory. Fountain trade has dropped off, somewhat, yet this is not unexpected, and before long hot drinks will be in order. In the general market there are sought only just the things most needed for immediate wants, without marked activity at all, yet with a firm undertone. Chemicals are little more in demand, in comparison, with rather good business. Alcohols are only fairly active, although the prices are firm. The situation on hops is encouraging and bright. Dyestuffs and tanning materials show firmness and in some instances better prices.

### PAINT AND OIL CLUB'S ANNUAL MEETING AND ELECTION.

Oct. 19.—Members of the Paint and Oil Club of New England held their annual meeting and dinner this week. The attendance was fair. President Norris S. Wilson presided. The report of the secretary showed a membership of 122. The treasurer reported a large balance on hand. The election resulted as follows: President, John D. Morton, of Boston; vice-president, Walter Tufts, of Boston; secretary, C. W. Willis, of Boston; treasurer, William S. Cutler, of Boston; directors, Samuel G. King, of Boston; Henry A. Robbins, of Boston; John E. Pushee, of Boston; Jacob W. Hoffman, of Boston, Charles S. Eobes, of Portland; A. E. Balcom, of Providence and J. B. Robinson, of Lawrence.

### NOTES.

—That some clever crooks are always alive to their opportunities is shown by an incident which happened one evening this week in the drug store at the corner of Broadway and Dorchester streets, South Boston Dis-

trict. A ten-year-old child was sent from her home to the drug store nearby, with a five dollar bill for which she was instructed to get change. The regular clerk of the store was in the rear room putting up a prescription. In the front part was a young man who had evidently just come in from the street. He asked the child what she wanted and was told about the five dollar bill. "Oh I'll get that changed for you," said he, and taking the money, which was given him with childlike trust, he went out and failed to return.

—Carter, Carter & Melgs, the well known wholesale druggists of this city, have finally traced the many larcenies from their store to the door of David F. Farnham, one of their employees; and when he was arrested and brought into court the specific charge was theft of \$90 worth of cocaine. For some time past, so the members of the firm allege, articles have been disappearing from the store, and having exhausted their own resources they finally called in the police to help to find the criminal, with the result as above stated. Farnham resides at Swampscott, and has been with the firm for some time.

—Among the fires of the week was an early morning one in the building numbered 66-68 Market street, Brighton, occupied by George McKee, druggist. The fire started in the cellar, from some unknown cause, and resulted in damage of \$500 to Mr. McKee's stock and \$300 to the building.

—The pharmacy so long located at 686 Main street, Springfield, conducted by F. L. Vaughn, has been moved to larger and more convenient quarters at 701 on the same thoroughfare. The new store is finely lighted and handsomely fitted up throughout.

—By a recent fire at 237 Broadway, Chelsea, the awning shading James McGilvary's drug store at that place was destroyed, a damage of about \$25. It was caused by someone from above throwing a hot cigar stub down upon the awning.

—The well-equipped drug store in the Marcy block at West Warren, so long conducted by Dr. H. H. Moore, has been disposed of to Felix J. Labrie, who will run it in connection with another business which he has in that town.

—Henry J. Cunningham, of Cambridge is president and James A. Molver, of the same city is treasurer of the Davis Medical Company, organized at Portland with a capital stock of \$10,000 of which nothing has yet been paid in.

—The friends of Fred Knapton, in Adams, well-known through his connection with Thompson's pharmacy, where he efficiently acts as clerk, will be sorry to learn that he has been confined to his house through illness.

—C. S. Lombard & Co., of this city, have decided to keep drug store at 1 Green street, open all night. They also operate stores in Davis Square, West Somerville, and Sheridan Square, North Cambridge.

—Orville H. Dow, for some time a clerk in a Roxbury Pharmacy, has given up the position to go into business on his own account, having bought out a pharmacy in the Edgeworth district of Malden.

—Frank J. McGuire, who has many friends in Monson, has been engaged by G. L. Keeney, as clerk in his drug store in that town.

—Dr. E. H. Flagg, Jr., of the Kickapoo Medicine Co., recently has been visiting in West Sterling, where his parents reside.

#### A GROWING BUSINESS.

The Sudbury Paper Box & Machine Co., Boston, has moved its Pitt street factory to the Sudbury Building, and has also taken additional quarters in another building. The company reports an increase of 100 per cent. in business within recent time, but is fully equipped to fill all orders promptly. Druggists who desire the advantages of a very large and varied stock of druggists' labels and paper boxes should correspond with this company. Besides making all kinds of paper boxes, they are printers, embossers and lithographers. See their advertisement in this issue.

## PHILADELPHIA.

### MUCH UNFAVORABLE COMMENT ON THE N. A. R.

#### D. CONVENTION.

Philadelphia, Oct. 19.—The principal topic of discussion in both retail and wholesale circles just now is the Buffalo Convention, the return of the Philadelphia delegates with their news and the published reports of the meetings have pretty well posted everybody interested. The general feeling seems to be one of disappointment at the practical shelving of the price protective plan and the re-adoption of the Tripartite Plan, which is looked upon as having failed of any practical benefit to the retailers of the large Eastern cities. Philadelphia druggists, as are many Eastern druggists, are strongly in favor of the "Worcester" or price protective plan; they claim that it is the only one that can be made to protect the retailers in cities like this, and they have almost lost faith in the Tripartite Plan. A prominent member of the P. A. R. D. says: "Look at the vote on the resolutions, each one of Philadelphia's delegates represented 100 retail druggists, while many of the Western men represented only 15 to 20 members, it's a case of minority rule all the way through". Many persons here even go as far as to say that the Convention was dominated by influences altogether too favorable to the jobbers and they resent the forcing on them again of a plan that benefits chiefly the jobbers for another year and which deprives the retailer of certain very valuable privileges in return for which they get nothing but promises. They declare that the failure of the Tripartite Plan in the East was caused mainly by the breaking of pledges by jobbers and they have lost faith in any promises from this part of the "Tripartite" in view of the many shameless breaches of faith by prominent houses who refused to sacrifice a single order for the plan. Another thing, there is a pretty strong feeling here that the East did not get a "square deal", that the great associations of the New England States, New York, Pennsylvania, Ohio, Maryland and New Jersey, were voted down by delegates from associations whose membership did not equal that of even one of the associations like that of the Philadelphia Association and that the programme shows too much evidence of having been "inspired" by interests controlled by jobbing interests that insisted on forcing the adoption of a policy distasteful to the retailers of this section. The leniency shown towards flagrant violators of the Tripartite agreement is cited as a proof of this statement, as is the fact that the jobbers are the ones to gain the most by maintenance of the old policy.

However, there is not the slightest hint of disloyalty or disruption among members of the P. A. R. D., although disappointed in the setback in the "price protective plan" they are hopeful that a more rigid enforcement of the "Tripartite Plan" will alleviate present conditions and that the past indefinite control of jobbers will be replaced by a stringent rounding up of offenders and public proclamation of guilty ones. After the recent action of the Convention and the expressed sentiments of the controlling party, less than this may bring about a wholesale withdrawal from the N. A. R. D., the sentiment is that now the Tripartite Plan is again endorsed it must be enforced by those in control of the National Association down to the very last letter of the agreement. Any evasive policy will bring down the wrath of the retailers on those who betray them. In spite of several unpleasant happenings during the sessions of the Convention, there does not seem to be the slightest bitterness among the Philadelphia delegates, and they all expressed their willingness to work cheerfully along the lines laid down by the Convention and to let time decide who was right. An active campaign locally is already being drawn for presentation at the next meeting of the P. A. R. D., which will pledge itself to give hearty and loyal support to the National officers and policies, and everybody will do his share. Now it is up to the jobbers; will they be loyal or not?

**RETAIL BUSINESS GOOD—OUTLOOK PROMISING.**

Philadelphia, Oct. 19.—Business has been quite good with the retailers this week, some of the larger stores having been kept going at their full capacity, and even the smaller ones have done very well. It seems as if trade was going in streaks this Fall, one week is quiet and then the next will be good and so on, but through it all there has been a steady volume done that shows up well at the end of the week. The sale of patent medicine is rather light except with certain well advertised remedies, but more and more people appear to be treating themselves with the "prescriptions" of the Sunday newspapers, most of which are for pills or tablets, which amounts to about the same thing in lessening legitimate prescriptions.

Local jobbers are quite busy, returns in from September trade show it to have been much larger than that of last year, and the present month is still better. One of the leading jobbing firms states that its local orders are extremely good and that out of town buyers are also buying briskly, which, with good collections, causes a feeling of hopefulness for a good winter's trade. At the big manufacturers everybody is too busy to talk except to say that they are full of orders and are pressed to fill them. The prospect of the establishment of a direct steamship line to Mediterranean ports is welcome news to dealers and manufacturers here as by it they will save quite a sum yearly in freight from New York and in the advantage of direct shipments and buying.

**PHARMACEUTICAL MEETING AT THE P. C. P.**

Philadelphia, Oct. 19.—The first of the year's series of "Pharmaceutical Meetings" was held at the Philadelphia College of Pharmacy on last Tuesday afternoon the programme including much of decided interest and value to druggists. The first speaker was Dr. Jokicht Takamine, who read a very interesting paper on adrenalin chloride, its preparation and incompatibilities. M. I. Wilbert read a paper on the use of digestive ferments in surgical practice, illustrating this by reference to the use of acid solutions of pepsin to dissolve and remove necrosed bone, tissue, etc. The influence of cereal decoction on cow's milk was the subject of a paper by C. H. LaWall, in which the author showed how the addition of infusions of various cereals caused coagulation to take place in much finer masses than when alone. Lyman F. Kebler spoke briefly on various samples of adulterated drugs in the collection exhibited at the A. Ph. A. Meeting by Smith, Kline & French Co., of this city, these being passed around among those present as they were described by the speaker. The collection and the remarks on the various adulterations were of great interest to retail druggists, so it was unfortunate that the attendance was not greater.

**NOTES.**

—Quite a number of unfavorable comments on the manner of sending out invitations to last week's "Social Meeting" at the Philadelphia College of Pharmacy are being heard from members and alumni of the college. While the policy of restricting these invitations to persons interested in the P. C. P. is quite right it seems as if members of the college and the alumni, who are really responsible for these meetings, should be extended the courtesy of an invitation, yet very few of these received one, so there was scarcely any outside of students and faculty present at the last Social.

—A meeting of the druggists of the Seventh and Thirtieth wards will be held in the hall at Seventeenth & South streets Friday evening, October 25, to take up the question of effective organization of the retail druggists of these wards and to discuss the question of prices. Several speakers will represent the P. A. R. D. at the meeting, which is intended to be in the nature of an informal "smoker" and talk. Cigars will be provided for guests by the committee in charge.

—Extensive alterations and enlargements are being made in the building so long occupied by Bullock & Crenshaw by the new owners, Geo. D. Feidt & Co., and when completed, the new firm will have a strictly modern

warehouse and salesrooms. John G. Bullock, one of the old firm, will continue to manage the chemical and chemical apparatus department and this branch of the business will be greatly enlarged and a wider line carried.

—Considerable loss and annoyance has been caused at the works of Keasbey & Mattison, Ambler, Pa., by the theft of brass fittings of machinery and apparatus, the work having been carried on systematically for some time. The arrest of two men thought to be at the head of a gang of brass thieves will, it is hoped, put a stop to the depredations.

—A test case to ascertain the validity of the "contract bill of sale" used in the "Worcester Plan" for protecting prices of patent medicines has been brought into Court by the P. A. R. D. acting for Dr. Julius Garst and it will be put through to a definite conclusion as speedily as possible. The action of the Buffalo Convention will not alter the plans of local workers.

—An unusually handsome display of assayed powdered drugs from Gilpin, Langdon & Co., of Baltimore ornamented the show window of L. C. Funk, the West Philadelphia druggist this week. Mr. Funk makes a specialty of supplying physicians' wants both as to medicines, surgical appliances and dressings and sick room requisites, with good success.

—The State Pharmaceutical Board held its Fall examination in this city yesterday in the old Boys' High School, Broad and Green streets. Two hundred and two candidates presented themselves for examination for certificates as registered pharmacists and qualified assistants.

—L. S. A. Stedem, brother of the recently elected Chairman of the A. Ph. A. "Section on Practical Pharmacy and Dispensing", has purchased a drug store at Narbeth, Pa., which will be conducted in connection with his present store at Eleventh and Master streets.

—L. I. Clewell, of Berwick and P. C. Curran, of Williamsport have purchased the drug store of Dr. G. L. Reagan & Co., Berwick. Mr. Clewell has been with G. L. Reagan & Co., for ten years. Mr. Curran was formerly with E. A. Cornell, of Williamsport.

**PITTSBURG AND VICINITY.****TRADE CONDITIONS SATISFACTORY.**

Pittsburg, October 21.—The fall season, which is now pretty well on, finds nearly all the people who make it a practice to absent themselves from town during the summer returned, and the druggists are noting with satisfaction an increased amount of business because of this. The report of several druggists interviewed during the past week indicates a much better condition of affairs than have existed during the past several years. The agreement reached some time since between cutters and retailers to maintain certain scheduled prices is working admirably, and thus far no complaint of violations has been made by either. The tripartite plan in so far as it applies to this section is a success, and perfectly satisfactory to the retailers. The Flint Bottle Manufacturers' Association, in which so much dissension and price cutting have occurred, have at last formed an agreement and adopted a uniform list, which is satisfactory to both retailers and jobbers. The Flint factories are now all running and the supply, which for a time was so short as to be of much annoyance to druggists, is again sufficient. Among the wholesalers favorable conditions are also reported, the one exception being the fact that prices are ruling a trifle low, due doubtless to sharp competition. However, the volume of trade is large, especially for this time of year. This applies particularly to out of town trade. The demand for heavy goods on the part of large manufacturing plants is great, due to the fact that they are all running to their greatest capacity. This is the source of a great deal of business for local wholesalers. The one cloud on the retail druggist's horizon is the scarcity of good clerks. This lack is now all the more emphasized because of the opening of the various colleges of pharmacy, to which many clerks are returning. The secretary of the local Clerks'

Association has made strenuous efforts to interest clerks from other parts of the State, and even from other States, to come here, but the demand is not perceptibly diminished.

#### NOTES.

—E. A. Ferrin, a slick swindler, who has been operating for some time in western Pennsylvania under the guise of a promoter, negotiated a note for \$400 on a local hotel, bearing the name of H. Alex. Stoke, a well-known druggist of Reynoldsville, Pa. Mr. Stoke pronounced the note a forgery. Ferrin has been apprehended.

—F. M. Martin and George P. Manry have closed a deal with Beaver Falls people for the lease of the large building formerly occupied by the Roberts Manufacturing Co., and will establish a large chemical works, employing over one hundred men, at that city.

—The first games of the Drug Bowling League were played last Monday evening between the Pharmacuticals and the Allegheny druggists. On Friday the Gilmores and Kellys met. Monday and Friday evenings will be the regular bowling nights during the season.

—The election of B. F. Pritchard to a vice-presidency in the N. A. R. D. was a pleasure to the many friends of this gentleman, who has worked so hard for the interests of his fellow druggists in this section.

—John Weyles, who formerly clerked for E. O. Freebing, at Frankstown and Park avenues, has purchased the drug store of E. R. Goldsmith, at Braddock, Pa.

—The drug store of M. Rush Means, bankrupt, Punxsutawney, Pa., will be sold by the sheriff at public auction on Friday, October 25.

—Mr. William Gray, a prominent young chemist of Allegheny, was married last week to Miss Irene Gregg, of Freeport. The young couple will reside in Allegheny.

—Few if any of the local wholesalers attended the meeting of the N. W. D. A., at Old Point Comfort.

## BALTIMORE.

### DRUG TRADE BOWLERS.

Baltimore, Oct. 19.—Notwithstanding the illness of Dr. A. R. L. Dohme, who must be regarded as one of the chief supporters and champions of bowling, the work of the Baltimore Drug Trade Bowling Club is well under way. The members of the club had a meeting early in the month and elected officers, besides transacting other business. Mr. Holtzman is the new president of the club; Andrew Baumgarten, vice-president; Charles Baker, treasurer, and James Cann, secretary. The interest in the sport of bowling continues unabated. The club this year consists of seven teams, Gilpin, Langdon & Co. and Muth Bros. & Co. having dropped out and the Ferrell & Kellam Co. and the Armstrong Cork Co. having been admitted. The rules of admission have been made somewhat more elastic, so that trades even remotely connected with the drug trade can have representation. So far the scores made have been rather low. As last year, contests take place twice a week.

### BUSINESS ABOUT THE SAME.

Baltimore, October 21.—The drug trade situation underwent practically no change during the past week. Botanicals retained their relative positions in the market with respect to price and demand, and the volume of movement in proprietaries and pharmaceuticals was virtually unaltered. Orders from retailers continue to come in quite freely, and the aggregate of transactions is large. The manufacturers of pharmaceuticals express themselves as being satisfied both with present conditions and with the outlook for the future. The total volume of business continues to be considerably ahead of last year, and there appears to be every reason to expect good trade for the balance of the current twelve months. The retailers also find much to encourage them.

### THE NATIONAL WHOLESALE MEETING.

Baltimore, October 19.—The Baltimoreans who attended the annual meeting of the National Wholesale Druggists' Association, at Old Point Comfort, have come back full of enthusiasm over the generous hospitality

dispensed by their entertainers, most of whom were from Richmond. The delegation from this city say they are never more handsomely treated than in the Old Dominion, and they declare that they thoroughly enjoyed themselves. Baltimore's representation at the meeting included Dr. M. H. Carter and Allan Carter, of the Resinol Chemical Co.; Louis Yakel, of the Kohler Manufacturing Co.; Louis Dohme, of Sharp & Dohme; Frank Bally, of James Bally & Son; John C. Muth, of Muth Bros. & Co.

### MARYLAND COLLEGE OF PHARMACY.

Baltimore, October 18.—At a meeting of the Maryland College of Pharmacy, held yesterday afternoon, it was resolved to leave all other matters except business relating directly to the college and its management to the committee on papers and queries, of which Dr. A. R. L. Dohme is chairman. This committee, therefore, will hereafter take charge of every gathering devoted to the discussion of pharmaceutical questions and to such other topics as have no direct bearing on the conduct of the college and as appertain rather to the professional and scientific side of pharmacy.

#### NOTES.

—The marriage of John Gleichman, traveling representative of Rosengarten & Sons, Philadelphia, and formerly in the retail drug business here, to Miss Jane Abel Irvine, as already announced, took place on the 14th instant, at the residence of the bride's sister, Mrs. Frederick McDonald, 23 East Twenty-third street. After a wedding breakfast the new couple went on a tour to Old Point Comfort and other places in the South.

—After having been absent in Europe about one year, Mr. Louis Dohme has returned to Baltimore once more. He looks hale and hearty, and seems to have derived great benefit from his travels. He was warmly welcomed home by old associates and personal friends, who are legion.

—A petition to have the H. Kasheva Chemical Co., 118 South Eutaw street, adjudged a bankrupt was filed in the United States District Court last Friday by James Armstrong and others. The petition states that the defendant company owes the petitioners \$1,644.00, and alleges that it is hopelessly insolvent and has allowed two of its creditors to obtain preferences.

—Dr. Alfred R. L. Dohme is able to be out again, after a long and serious illness. He was taken sick August 19, and has been confined to his room until a few days ago, when he left for Atlantic City to recuperate. He expects to get back to his desk about the middle of November.

—H. B. Gilpin, senior partner of Gilpin, Langdon & Co., contemplates a hunting trip in the far West. He will be absent about two or three weeks, and expects to bag some big game.

## CINCINNATI.

### DRUG CLERKS' ASSOCIATION OF OHIO.

Cincinnati, Oct. 19.—A meeting of Drug Clerks at the Palace Hotel in this city formed what is to be known as the "Drug Clerks' Association of Ohio." The objects of the association are social advancement and to obtain situations for unemployed fellow-clerks. The following officers were elected: President, Fred, Scheibenzuber; vice-presidents, Clifford J. Trauter, and Edw. A. Ohm; secretary and treasurer, H. G. Schmullinger; chief of employment bureau, Wm. A. Mueller. The association will meet every week at room 111 Bell Block.

### WANTS TO MAKE COCAINE A PROHIBITED DRUG.

Cincinnati, Oct. 19.—Prosecuting Attorney Harry M. Hoffheimer will asked the Hamilton County members of the next Legislature to introduce a bill placing cocaine on the list of prohibitive drugs, as people are now able to get the drug without any trouble whatever. Mr. Hoffheimer favors the bill because his observations in the criminal court have led him to believe that a majority of the people who commit crimes are led to do so by the use of cocaine, this being especial-

ally so among the poorer classes. He believes that if the sale of the drug is prohibited its use will be greatly restricted.

#### NOTES.

—David Klein, prominent druggist and Postmaster at Madisonville, Ohio, died last Tuesday after a lingering illness. His brother Albert E. Klein will be appointed postmaster to succeed him.

—Hamilton (Ohio) druggists have signed an agreement to close their stores on Sundays between the hours of 10 a. m. and 6 p. m.

—Dr. P. Cornelius will open a new drug store at Berea, Ky.

—W. F. Warning the hustling druggist at Blauchester, O., was in town last week.

## CHICAGO.

### CONVENTION AFTERMATH.

Chicago, Oct. 19.—Chicago druggists are naturally not displeased at the outcome of the Buffalo meeting of the N. A. R. D., and while not at all arrayed as opponents of the Worcester Plan, but, as a rule, favoring its ultimate adoption, they believe that the action taken by the association will prove in the end to be the wisest course, promising as it does, the most conservative thought and action with the probable final adoption of the plan through the action of the Executive Committee. Perhaps the most characteristic remarks anent the meeting were those made the other day by Wilhelm Bodemann. Among other things, Mr. Bodemann said: "Neither the Worcester Plan or any other plan can be made a success except by organization. Hence, Illinois was and is and will always, be in favor of organization first and then any other plan that is feasible and adopted by the majority. When the Worcester Plan came up for discussion it was evident that there was more emotion than a motion before the house. When the Worcesterians saw that the friends of the N. A. R. D. were not opposed to the Worcester Plan per se, a compromise was soon reached. During a recent Chicago mayoralty campaign noon prayer meetings were held with great success; the same was true at Buffalo. Followers of all kinds of plans met at Wyand's, discussing viands under the auspices of the committee on R. H., and when the convention adjourned sine die this same committee held a great rally, and all the different fighters peacefully assembled around the festive board. President Seelye was present and was toasted, the chairman of the Committee on R. H. pledging the loyal support of all the different States that had not previously gone on record to that effect at the last session. Mr. Zwick, who so generously offered to the East a dish of crow, was the victim of a toast, and the committee unanimously voted to change the dish of crow to a dish of Worcester Sauce on top of the N. A. R. D. gander. I really believe these noon and evening prayer meetings did much to smooth over many a wrinkle, and future conventions would do well to make the Committee on R. H. a standing feature of the programme."

It is said that several Illinois men covered themselves with glory on the floor of the Convention. Those receiving especial mention are the convincing Straw, and the eloquent Gale of Chicago and the irrepressible Zimmerman, of Peoria.

### CHICAGO BUSINESS KEEPING UP.

Chicago, Oct. 19.—Trade in Chicago has been good during the past week. Business is well up to the average on staple lines and on holiday goods is much above the average. Manufacturers and jobbers have noted an increase in their orders this season, but have expected it since commercial conditions are so favorable. All the houses have had to work some nights during the week and expect to continue doing so until well on toward the holidays.

#### NOTES.

—S. W. Ford has sold his drug store at 1218 Milwaukee avenue to Windmuller & Elich. Mr. Windmuller has been with Mr. Ford several years, and Mr. Elich was formerly connected with the Lincoln Park Palace Pharmacy.

—J. D. Payne has sold his drug store at Belmont avenue and West Ravenswood Park avenue. It is reported that the purchaser is a neighboring real estate man and that the store will be operated by a managing R. Ph.

—N. H. Frazier & Company is the name of the firm which has just opened a new drug store at Thirtieth street and Michigan avenue. Asa Oren is manager of the store.

—J. H. Kelly, a druggist on Fifth avenue in La Grange, Ill., contemplates opening a new store on Stone avenue in that town.

—M. Rowland, of Rowland Brothers, druggists of Dixon, Ill., was in Chicago this week buying a stock of holiday goods.

—F. C. Pierce, a well known druggist of Fifty-fifth and State streets, is spending some days with relatives at his former home in Polo, Ill.

—W. J. Blythe, a well known druggist of Centralia, Ill., was in Chicago last week laying in a large assortment of holiday goods.

—F. M. Nichols, of Mokenca, Ill., a well known salesman for Robert Stevenson & Company, was in Chicago this week.

—G. C. Gleason, formerly of the firm of Bech & Gleason, Aurora, Ill., has bought the Peter Staab drug store at Chillicothe, Ill.

—The firm of Deetkin & Whaley, druggists at Council Bluffs, Neb., has dissolved partnership, S. E. Whaley succeeding.

—The Goodrich Drug Company has bought the drug store of Benjamin Bridgeford, at Ord, Neb.

—The Spencer Drug Company has succeeded the Oile Smith Drug Company, at Racine, Wis.

—The Schuh Drug Company, successors to Paul G. Schuh & Son, Calro, Ill., has been incorporated.

—Nate Link, a druggist of Calro, Ill., has sold his drug store at that place.

—Mrs. C. E. Braden, who owned a drug store in Brough-ton, Ill., has sold out.

## THE NORTHWEST.

### WORK OF THE MINNESOTA COLLEGE OF PHARMACY.

St. Paul, Oct. 18.—The third annual course of the College of Pharmacy, University of Minnesota began as the Era has already announced, Sept. 24, with an attendance about equal to that of last year. Of the new candidates all but one presented satisfactory credentials as to preliminary training. The credentials offered were high school diplomas covering four year' work above the grades, by 93 per cent. The remaining seven per cent lacked either Latin or physics and were conditioned in these entrance branches. The scholarship is therefore equal to that of former years. Not all of the seniors have returned, a number having been induced by their employers to remain for a year or until the scarcity of good clerks abates. This is usual, however.

The new lecture room addition to the chemical laboratory, seating 200 comfortably is completed and is proving a valuable addition to the college room.

E. M. Freeman, M. A., Instructor in Botany and Materia Medica has obtained a year's leave of absence to do research and advanced work at the University of Cambridge, England. Fred Butters, M. S., Harv., a candidate for the doctorate degree in philosophy is conducting Mr. Freeman's work.

Dean and Mrs. Wulling spent the summer at the Lake Minneshashta.

Geo. W. Ditts '95 took the civil service examination in 1899 for the position of Hospital Steward in the U. S. Marine Hospital Service. His rating was of a nature to put him at the head of all eligibles and he was soon

after appointed to serve at the San Francisco, Cal. Station, where he has been since and prospering.

Gus Demars, '98 has recently established himself in business in the town of his old home. To add happiness to prosperity he took unto himself a wife.

J. C. O'Connell, '01 is doing post graduate work at the State University in the subjects of organic chemistry, mineralogy, physiological chemistry and practical physiology.

The following alumni of the college are now studying medicine at the State University; E. Haugsett '94; Nauman McCloud '95; Oscar Weiner '98; N. J. Johnson '01; Abe Gunz '00; J. Elden Hynes '00; Alfred Hart '94; Mr. F. E. Stewart '01 has established himself in business in Wyckoff, Minn.

Wm. Neumann '01 is studying medicine at Rush Medical College, Chicago.

Guy C. Clark '01 has engaged with S. F. Sanderson '95, Minneapolis.

H. Scarf '01 has a position with Mr. E. K. Herrman, Minneapolis.

J. H. Staddon '01 is taking special work in the academic department of the University.

Miss Eva Greer '01 has removed to St. Louis.

#### NOTES.

—Successions: Kenney & Edwards, Salmon City, Idaho, by Guy Edwards; Mrs. F. E. Renken & Co., Waterloo, Ia., by C. L. McDermott; Squier & Segar (Paints), Albert Lee, Minn., by L. D. Smitler; F. H. Graves, Madrid, Ia., by Q. A. Sturgeon; H. P. McKnight, Long Pine, Neb., by J. N. Sturdevant, who removes from Naper; Prestholdt Bros., Marietta, Minn., by H. H. Hiltsey.

—A lamp exploded in the City drug store at Aurora, Ia., this week, severely burning James Mackin, proprietor, Mr. Mackin, being alone ran into the street for help. Citizens promptly put out the fire, but not until his face and arms were badly burned.

—L. S. Gould has assumed the management of the Crocker Pharmacy of Faribault recently bought by Mr. Theopold.

—A. E. Lofstrom is spending a short vacation with his brother in Windom.

—W. D. Elliott has been spending a vacation at Spooner, Wis., but is now going to Marietta to work.

—Henry Prestholdt, having sold out his store at Marietta, has returned to the city.

—W. K. Wasser & Co., Rock Valley, Ia., have given a bill of sale.

—Boniface Courtl, of Dr. B. Courtl & Son, Papillon, Neb., is dead.

—The F. A. Groezinger Co., Worthington, Minn., has sold.

—New: P. E. Herman, Westbrook, Minn.; Street & Co., Elmwood, Neb.; Leren F. Rich, Rexburg, Idaho.

—R. W. Smith, Meuntain Home, Idaho, has sold his Weiser branch.

—Charles F. Pfander, Ackley, Ia., has sold a two-third interest.

—Fred T. Hoagland, Jesup, Ia., has assigned.

—M. F. Rapp, Roseburg, Ore., has been attached.

#### A Prominent Foreign House.

In this issue an announcement is made by a large Australian house who seek to establish connections with manufacturers in the drug trade of this country. F. H. Fauiding & Co. are wholesale druggists and manufacturing chemists with extensive business connections throughout the whole of Australia. They are stated to be the largest distillers of Eucalyptus oil in Australia. They are all large importers of practically all lines of druggists' sundries and proprietary preparations. This company is an old established concern, having begun business in 1845. The main house is at Adelaide, South Australia, but they have branches at Sydney, New South Wales, and Perth, West Australia, and also an office at London, England. They invite American manufacturers interested in establishing Australian connections to address them at 54 Great Tower street, London, England.

## THE SOUTH.

### HIS AIM WAS GOOD.

Memphis, Oct. 19.—During the recent meeting of the Tennessee State Druggists' Association at Monteagle, not one of the many knights of the mortar and pestle came in for a larger share of attention than Daniel Lenahan of Dechard. "Uncle Dan," as he is familiarly known has been a conspicuous figure in the association meetings for a great many years, and always plays a prominent part in the gathering. A recent performance of his, however, lays in the shade anything heretofore placed to his credit. Among the prizes offered for the various contests to be decided during the meeting was a silver plated spatula. This caught the eye of Uncle Dan and he determined to possess the spatula if he had to win every event to do it. So he approached the committee in charge and asked the members as a special favor to offer the spatula as a prize in a contest that he could enter. They agreed to do as he requested, and one of them proposed a foot race. "Now," said Uncle Dan, "there was a time when I could throw dust in the face of any man in my part of the country, but boys, that time has gone." "Well," said another, "How about a spelling bee?" But Uncle Dan's confidence in his ability as a speller was not very firm and he declined to enter a contest that did not give him an even chance. The third man suggested shooting at a target with a rifle. "Now you are talking," said Uncle Dan; "there was a time when I could shoot and I believe I can do it again." So the spatula was offered as a prize for the best rifle shot, the pill rollers assembled at the appointed time and place and went down to defeat in regular order. The target was a five cent piece stuck on to a tree. When Uncle Dan's time came, he stepped forward, took quick aim, fired and hit the target in the center. He explained afterward that he got his practice during the war, doing duty as a sharpshooter. Uncle Dan is seventy-one years old, neither smokes nor chews, never takes a drink and does not wear glasses. He is a druggist of the old school and a good fellow.

### TIED UP.

Memphis, Oct. 18.—Hamner & Ballard, 299 Main Street, have paid out some good money for an ice cream plant that is just at present "so near and yet so far". They bought the apparatus, which is one of the most complete in the South, at a bargain and made preparations to install it in the basement of their store. But the stern individual whose business it is to serve attachments, said "not so", and would have none of it until several parties who held claims against Mr. Brady, who sold the plant to Hamner & Ballard were satisfied. Mr. Ballard thereupon went before a magistrate armed with a writ of replevin and tried to get possession of the firm's property, but the other side opposed the case. However, the firm will not be the loser in the end as Mr. Brady, Jr., has kindly volunteered to refund the money if the case is decided against the drug firm. So the matter stands. Young Mr. Brady came here from Nashville some months ago and opened a palatial ice cream and soda water parlor, but bad management made the venture a losing one from the start, and the business has been closed. The attachment was levied to protect the notes held by the lessor of the building Brady occupied.

### NOTES.

—E. G. Beard, formerly of the firm of Beard & George, Shreveport, La., has accepted a position with Sharp & Dohme and will travel for them in Mississippi.

—Jack Adams, one of the most popular druggists in Birmingham, Ala., was married to Miss Moore of that city Oct. 16.

—It is rumored that a new wholesale house, backed by St. Louis capital, is soon to make an appearance in Birmingham, Ala.

—W. G. Patterson, of Lewisburg, Tenn., has gone to Texas to spend the winter, on account of his wife's health.

—Harry G. Reuner, a young druggist of Natchez, Miss., died in that city on the 14th inst. of consumption. He was very prominent in society and was a member of the Prentiss & Elks Clubs. He was 25 years old and unmarried.

—Buffalo Bill's Wild West Show visited Jackson, Tenn., recently and some of the light-fingered gentry who follow such entertainments robbed the Jackson Drug Co. The thieves got away with all the available cash and several toilet articles.

—Dr. R. H. Whitfield, the pharmacist who died recently at Natchez, Miss., had been identified with the drug business of that city for the past twenty-five years and was one of the best known druggists in the South.

—E. B. Johnson has accepted a position with J. F. Hunter & Co., Jackson, Miss. Mr. Johnson was formerly in charge of the Hines Pharmacy, WaterValley, Miss.

—J. H. Aycock & Co. have the field all to themselves now at Monton, Miss., having bought the stock of O. A. Moore & Co., and added it to their own.

—J. M. Rabb, until recently manager of the Newton Drug Co., Newton, Miss., now has charge of the Peoples Drug Store, Laurel, Miss.

—W. DeArnold formerly connected with the DeArnold Chem. Co., is now in the hotel business at Iuka, Miss. He calls his house "Hotel Willard".

—Carl Dauthat, of Danier & Son, Fayetteville, Tenn., has gone to New York, where he will resume his studies in the New York College of Pharmacy.

—W. H. Scrape has opened a new drug store at 758 Main street, near the Union station. The location is one of the best in the city.

—H. M. Tyler, traveling for the Hessig-Ellis Drug Co., is back on the road after having been laid up for two months at his home at Paris, Tenn., with a broken leg.

—Len Wilkerson, who once had designs on the stage, but who now holds down a desk with W. N. Wilkerson & Co., has gone to California on a pleasure trip.

—Wm. Nixon, has resigned his position with J. F. Turner, Pulaski, Tenn., and will in future be with Lloyd & McLaurin of the same place.

—Dr. J. P. Moore, of Yazoo, Miss., was married to Miss Elizabeth Taylor of that city on Oct. 2.

—W. W. Curtis, representing Sharp & Dohme in the South, was in the city last week.

—F. M. Odena, representing Parke, Davis & Co., was in the city last week.

—McWilliams Bros. succeeds Geo. F. Carter at Fayetteville, Tenn.

—Mr. Marshall, has withdrawn from the firm of Black & Marshall and is now travelling for a paint house.

—The New Century Drug Store at Jackson, Miss., is under the competent management of Dr. Woodruff.

—W. G. Poole, representative of Nelson, Baker & Co., Detroit is in the city calling on his traders.

—The firm name of T. H. Robinson, Water Valley, has been changed and now reads H. Robinson & Co.

—Reese Price of Enterprise, Miss., has bought out the Newton Drug Co., Newton, Miss.

—R. M. Hammer and wife are visiting relatives in Atlanta, Ga.

—A. D. (Parson) Roach, representative of Wm. R. Warner & Co., Philadelphia, was in this city this week.

—Albert Moore has succeeded Walter Carter, Marianna, Ark.

—Dr. I. West has purchased the J. C. Means Pharmacy at Natchez, Miss.

—Moore Bros., Grenada, Miss., have sold their business to Dr. W. H. Whittaker.

H. Gamse & Bro., Baltimore, Md., have superior facilities for the production of druggists' labels, pill and powder boxes of every description, and invite every druggist interested in obtaining the best goods in this line at lowest possible prices to write for catalogue.

## OBITUARY.

J. CLITHEROW SMITH.

J. Clitherow Smith, a member of the firm of Smith & La Roche, Plattsburgh, N. Y., and a well-known member of the New York State Board of Pharmacy, died suddenly of heart disease on the morning of Oct. 18. Mr. Smith was born in South Elkington, Lincolnshire, England, in 1847, where he learned the drug business, serving an apprenticeship of seven years. After spending some time in Montreal, Canada, he went to Plattsburgh in 1872, where he began an engagement as a prescription clerk. In 1880 he became the senior member of the firm of Smith & La Roche. He had been a member of the New York State Board of Pharmacy for eleven years, his appointment as a member of the present board having been made last year. He was also a member of the New York State Pharmaceutical Association, a thirty-second degree Mason, and had a wide acquaintance among the business men of the country and district in which he lived. Two young daughters survive him. The funeral was held last Sunday afternoon in the Plattsburgh Episcopal Church, a large concourse of people attending the services. The floral emblems included a large wreath from the State Board of Pharmacy and a design in palms from the Board of the Middle Section of the State, and of which Mr. Smith was a member. The Board of Pharmacy was represented at the funeral by Geo. H. Merritt, Newburg; Warren L. Bradt, Albany, and Dr. Wm. Muir, of Brooklyn.

FRANK E. COLLINS, a Millbury, Mass., druggist, after an illness of several months, has succumbed to consumption of the blood complicated with organic heart trouble. He had been ill since February, yet continued to go to his pharmacy till within less than a week of his death. Mr. Collins was born in Topsham, Vt., and was forty-four years of age. He was a resident of Worcester for twenty years or more, going from there to Millbury. In both places he was well known in the drug business and in the latter town he bought the B. Frank Aiken pharmacy on Elm street. Besides his wife, a Frank mother, a brother and sister, survive Mr. Collins.

## BOOK REVIEWS.

## NEW ORLEANS.

New Orleans, Oct. 17.

**WARWICK OF THE KNOBS, A Story of Stringtown County, Kentucky,** by John Uri Lloyd, Author of *Stringtown on the Pike*, *Etidorpha*, etc. Illustrated pp. 31, 305, 12 mo., \$1.50. New York, Dodd, Mead & Co.

After having read "Stringtown on the Pike" by Prof. John Uri Lloyd, well known throughout the pharmaceutical world, the reader feels that, powerful as it is, better is to follow. This comparative degree is achieved in "Warwick of the Knobs". The story deals with the same country, Stringtown County, in Northern "Kaintuk", as does the author's former volume "Stringtown on the Pike", but although many of the personages prominent in the latter appear in "Warwick", the web of the story is woven about another group of characters. It is a vivid, highly dramatic picture of life in the Knobs or the hill country of Kentucky near the northernmost border-line that faces Ohio, during the most bitter period of the Civil War, when Stringtown County, just on the dividing line between the North and South, was herself divided so cruelly, in many cases father against son and brother against brother, in sympathy and in deed between the contestants. The bitterness, the fierceness of the struggle at that time, and particularly in that part of Kentucky, brought death in all its stark terror swiftly, and just as cruelly as it appeared to the afflicted Warwick. Families broken up, destitution, starvation, crime, fierce partisanship, all fed the flames of this horrible period, which history somehow and perhaps humanely, leaves untouched.

Here in this Knob County during the most bloody period of the greatest war of modern civilization, Old Warwick of the Knobs, a man of steel tempered in the unswerving faith of his conception of his maker, and the dogma of his particular sect, the hard-shell, seven-day Baptist, lived with his three sons and daughter at the outbreak of hostilities. Two sons were sacrificed to the Confederacy and the honor of his daughter to his dogma and the last of the Warwicks turns coward; and yet all this which would suffice to make an agnostic of an angel, only binds him closer to the faith of his fathers.

As a story, there are more entertaining ones which are not so strong. A book that is merely entertaining one forgets, is only the evanesence of an author's brain and is but temporarily infused into some reader's; while this book, so full of strength, is not to be forgotten, and as Belasco once said when asked his definition of true literature, answering "Life, life, life!" so is this volume life.

**DAS KOMPRIMIREN VON ARZNEITABLETTEN**, von F. Utz, k. Korps-Stabs-Apotheker k. b. II Armee-Korps und Vorstand der chemischen Untersuchungsstation. Mit in den Text gedruckten Figuren. Berlin, Verlag von Julius Springer. Preis M. 2.40\*

This little book tells the reader, in a clear and concise way, all about tablets. According to the characteristic German custom, the author begins his treatise with a brief history of the use and preparation of medicines in compressed forms. This is followed by a description of the machines and apparatus employed in preparing tablets in the dispensing pharmacy as well as those used in larger manufacturing establishments. The preparation of the mass is next considered, and directions given for banding machines, etc.

A large proportion of the 56 pages is devoted to a discussion of formulas and the difficulties likely to be encountered in their use. The formulas are selected from the author's own practice and bear witness to his skill as a dispensing pharmacist. Directions for the care and preservation of tablets and methods of coloring material for use in this form are also given.

The work is eminently thorough and practical, and is evidently the result of deep study and years of experience.

\***THE COMPRESSION OF MEDICINAL TABLETS**, by F. Utz, Imperial corps-staff-apothecary of the II Imperial army corps, and director of the station of chemical investigation. With illustrations. Berlin, Julius Springer, Publisher. Price, 2.40 marks.

The College of Pharmacy has become established in its new quarters in Camp street and appears to have taken on new life with its new address. By arrangement there is a general grouping of the different pharmaceutical bodies in the college building, and altogether the move has been one of vast importance to the drug trade of New Orleans. The College will open Monday night with about forty matriculans. The opening will be an event in local pharmaceutical circles.

—Locally the drug trade continues to pay close attention to the warfare on cut rate methods and the vast majority of dealers are anxiously watching for some remedy to the evil, which it is said, demoralizes the trade and induces unscrupulous dealers to sell imitations, and compound worthless nostrums to take the place of known proprietary medicines. It is generally reported that trade along all branches of the drug business is flourishing both in the city and State.

—The Board of Pharmacy of the State has announced a meeting for the first week in November.

**A Notable Exhibit of Alkaloidal Salts.**

The exhibit of Merck & Co., at the recent meeting of the A. Ph. A. in St. Louis attracted much attention on account of the very large quantities of alkaloidal salts it contained. The display consisted of a nine-foot pyramid of fine chemicals, at the top of which were two large revolving jars filled with cocaine hydrochlorate. The gross value of this salt was twenty-nine pounds and its value was \$2,700. On the faces of the pyramid were arranged about four hundred bottles of Merck's superior chemicals. Surrounding the pyramid were sixteen large jars filled with salts of atropine, sparteine, cocaine, and other chemical products, such as styptlein, dionin, hydrastine hydrochlorate, etc. The value of the entire exhibit was over \$10,000. Sixteen gold medals, which have been awarded to the house of Merck at various international expositions, were also displayed. In connection with this feature of the exhibit it was remarked that the history of "world's fairs" might be traced in the line of medals awarded in different lands to the products of the famous old laboratories of Merck.

**A Patent Medicine Exchange.**

Many druggists have in stock proprietary preparations for which the sale in their locality has ceased entirely, but which might be sold by dealers in other parts of the country where there is a demand for these preparations. The Knickerbocker Drug Co. is a New York State corporation organized for the purpose of marketing such preparations. This company has instituted a complete patent medicine exchange, has ample storage facilities, and is in a position to handle goods on consignment, or any equitable basis. The managers state that because of their large acquaintance with the New York market, the largest and most varied patent medicine market in the world, and their extended acquaintance with the trade throughout the entire country, they have especially good facilities to assist druggists to exchange salable for unsalable goods. See their advertisement in this issue. They invite druggists to send lists of goods which they desire to sell or exchange, or to write regarding goods they wish to obtain. Address Knickerbocker Drug Co., 39 Murray street, New York.

**Good Wine.**

Sometimes it is rather difficult for a druggist to select a line of wines that will meet the demands and requirements of all classes of his customers, as usually there is a great diversity of opinion as to the quality of a wine. The line of wines produced by the Duroy & Halmes Co., are always reliable and cannot fail to please the most pronounced connoisseur. A good profit is realized on the sale of these wines and druggists not satisfied with their present stock are requested to send for free samples, express prepaid, to the Duroy & Halmes Co., Sardusky, Ohio.

## PATENTS.

Issued October 15, 1901.

- 684,447.—Harvey F. Mitzel, Barborton, Ohio. Hot-water bottle.
- 684,476.—Frederick B. Thatcher, Providence, R. I. Bottle-stopper.
- 684,498.—Jacob M. Doolittle, Pittsburg, Pa. Non-refillable bottle.
- 684,510.—Charles O. K. Hallgren, Bayonne, N. Y. Car-boy packer.
- 684,545.—William A. Hall, Bellows Falls, Vt. Casein glue.
- 684,553.—Adolph G. Rhode, Hoboken, N. J., assignor of one-half to August C. Hartmann, same place. Glove-powder.
- 684,578.—Charles W. Merrill, Alameda, Cal. Precipitant for recovering metals from solutions.
- 684,650.—Leopold Spiegel, Berlin, Germany, assignor to the Chemische Fabrik Guestrow, Germany. Yohimbin and process of making same.
- 684,651.—Fritz Streckelsen, Utzendorf, Switzerland. Evaporating apparatus.
- 684,665.—John Babis, Philadelphia, Pa., assignor, by mesne assignments, to S. S. Wenzel Machine Company, Philadelphia, Pa., and Charlestown, W. Va., a corporation of West Virginia. Bottle-washer.
- 684,701.—Christian W. Meinicke, Jersey City, N. J., assignor to Meinicke & Co., New York, N. Y., a corporation of New Jersey. Water-bag.
- 684,719.—Frank H. Raymond, Meadville, Pa. Measuring Liquid-dispensing vessel.

## TRADE-MARKS.

Registered October 15, 1901.

- 37,193.—Certain named beverage. The Ice & Cold Storage Co. of Los Angeles, Los Angeles, Cal. The word "Kornel".
- 37,196.—Chemical Solvents for Gums and Oils. Bausch & Lomb Optical Co., Rochester, N. Y. The Word "Synbol".
- 37,201.—Antiseptic Preparations. Bruno Batt, St. Louis, Mo. The word "Menthym".
- 37,202.—Antiseptic Preparations for External and Internal Use. Schiebel & Co., Scranton, Pa. A scroll, with fanciful sprays inclosing a field or space, and a ring lying below the same.
- 37,203.—Liquid remedy for External and Internal Use. Frederick G. Birr, Morgan, Wis. The words "The World's Triumphant".
- 37,204.—Proprietary Medicines. Horace Edwin Henwood, Chicago, Ill. The word "Sulphume".
- 37,205.—Therapeutic Product or Chemical Remedy for Tuberculosis. The Yonkerman Chemical Co., Kalamazoo, Mich. The word "Tuberculozyme".
- 37,206.—Dyspepsia Remedy in the Form of Tablets. Curesal Tablet Co., St. Albans, Vt. A monogram composed of the capital letters "C. T.".
- 37,207.—Cure and Preventive of Certain Named Diseases. Carpenter Bros., Greenville, S. C. The word "Craps" and the representation of two negro boys playing craps.
- 37,208.—Medical Compound for Cure of Certain Named Diseases. Calvert Chemical Company, Baltimore, Md. The letter "R" and the numerals "197".
- 37,209.—Malaria Cure and Tonic. Frederick W. Cook, Jr., San Antonio, Tex. The compound word "Chocolat-Malaria".

- 37,210.—Adhesive Plasters for Surgical Purposes. Johnson & Johnson, New Brunswick, N. J., and New York, N. Y. The letters "Z O".
- 37,211.—Salve. P. W. Lerch & Co., South Canaan, Pa. The word "Universal".

## LABELS.

Registered October 15, 1901.

- 8,726.—Title: "Cleandent". (For Tooth-Powder.) Claremont Chemical Company, Bronx, N. Y. Filed September 9, 1901.
- 8,727.—Title: "Sim's Tonic Elixir of Pyrophosphate of Iron". (For a Medicine.) Elbridge B. Sims, Antwerp, N. Y. Filed September 14, 1901.
- 8,728.—Title: "Delmachlor Regulator". (For a Medicine.) The Delmac Medicine Co., Lynn, Mass. Filed September 9, 1901.
- 8,729.—Title: "Effervescent Seltzer Mint". (For a Medicine.) O. Stafford & Co., Washington, D. C. Filed August 1, 1901.
- 8,730.—Title: "Dr. Humphrey's Medicated Holland Gin". (For a medicated Holland Gin.) Henry Lightward, Jr., Philadelphia, Pa. Filed March 1, 1901.

## PRINTS.

Registered October 15, 1901.

- 411.—Title: "The Kind You Have Always Bought". (For Castoria.) The Centaur Company, New York, N. Y. Filed September 14, 1901.

## SOLOMON

undoubtedly knew a thing or two, but he was somewhat handicapped by his matrimonial predilections. New faces often attracted him and he was married considerably. When he was a very young lad his mother dreamed that he would some day be a king, but this notion was discouraged by the opposition who had a dark horse in training for the event and did not favor women's rights. This did not deter Solomon, however. He saw his duty and remarked to the chairman of the national committee that if he failed to get the party nomination he should run on an independent ticket. This he did and achieved the distinction of being the first candidate ever elected on the women's vote. Fathers, brothers and other male relatives of eligible girls supported him throughout the campaign and were repaid by his marrying into their families. He became a great man and it was a pair of aces when he met the Queen of Sheba. Solomon's large family enjoys most mortally the sympathy of mothers in **Imperial** Nipples, who know all about

# MARKET REPORT.

## NEW YORK MARKET.

### INCREASED ACTIVITY AND CONDITIONS GENERALLY SATISFACTORY.

New York, Oct. 22.—Cooler weather has stimulated demand for seasonal goods, and the general market shows increased activity with the volume of business reaching satisfactory proportions. Price changes are rather more numerous, but only a few are of more than ordinary importance.

**OPIMUM.**—Round lots remain dull and neglected and in a jobbing way the movement continues light and unimportant but quotations are unchanged at \$3.25@3.50 for 9 per cent. and \$3.45@3.60 for 11 per cent. Powdered is in moderate demand and nominally steady at \$4.00@4.60 for 13 per cent. \$4.75@5.00 for granular, and \$5.10@5.25 for 16 per cent.

**MORPHINE.**—Consuming channels continue to absorb an average amount of stock and the market is steady with prices unchanged on the basis of \$2.20@2.40 for eighths, as to brand, less the usual rebate of 10c. per oz. on lots of 10-ozs. or over.

**QUININE.**—The firmer tone noted last week is maintained and a fair business is reported with small lots receiving the larger share of attention, but quotations are unchanged at 28@29c. for bulk in 100-oz. tins, 28½@29½c. in 50-oz. tins, 29@30c. in 25-oz. tins, and 35@36c. in ounces, according to brand.

**MENTHOL.**—Prices have reacted slightly and jobbing parcels are obtainable at \$1.50@1.70, but improvement is looked for in the near future.

**COCAINE.**—Values are lower owing to sharp competition among manufacturers and jobbing quotations show a decline to \$5.75@6.00 for large crystals, and \$5.50@5.75 for small.

**CAFFEINE.**—This article also is unsettled on account of competition among makers, and quotations for jobbing quantities have been reduced to \$4.25@4.45 per lb. in bulk, 45@50c. In ounces and 65@70c. in eighths.

**BALM OF GILEAD BUDS.**—A firmer feeling has developed owing to scarcity and jobbing prices have been advanced to 50@60c. as to quantity.

**STRAMONIUM LEAVES.**—Foreign markets are easier and spot quotations for small lots have declined to 13@15c. for whole and 18@23c. for powdered.

**FRICKLY ASH BERRIES.**—Stocks are light both here and at producing points and jobbers have advanced quotations to 65@75c.

**COLCHICUM SEED.**—Continued scarcity is a prominent feature and jobbing prices show a further advance to 70@80c. for whole and 80@90c. for powdered.

**OIL CLOVES.**—A firmer market for the spice has caused an advance in values and the revised jobbing range is 75@85c.

**OIL WORMWOOD.**—Under the influence noted last week, the market is again stronger, and jobbers have further advanced their prices to \$6.75@7.00 for prime and \$6.00@6.25 for good.

**OIL PEPPERMINT.**—The market continues to harden in sympathy with corresponding conditions at primary sources of supply, and quotations have been marked up to \$1.80@1.90 for Western, \$1.85@1.95 for Wayne Co., and \$2.05@2.15 for redistilled.

**OIL LEMONGRASS.**—Stocks are exceedingly small and closely concentrated and jobbing prices have been advanced to \$2.40@2.65.

**SAFFRON.**—Valencia is easier owing to competition among importers, and quotations in a jobbing way have been reduced to \$8.00@8.25.

**RICHU LEAVES.**—Easier markets abroad have caused a weaker feeling among local dealers and jobbing prices for short have been reduced to 34@40c. for whole and 36@45c. for powdered.

**MANNA.**—Supplies are more abundant and with foreign markets weaker, spot prices for small lots have declined to 45@50c. for small flake and 40@45c. for sorts.

## INDEX TO THIS NUMBER.

|                                                                                                                                                                                                                                                                                                                                                       | PAGE, |

### THE VERMONT PHARMACEUTICAL ASSOCIATION.

The Vermont Pharmaceutical Association held its eighth annual meeting at Vergennes, Oct. 10. The following officers were elected for the ensuing year: President, A. L. Dutcher, St. Albans; vice-presidents W. F. Root, Brattleboro; F. A. Morse, West Rutland, and A. L. Cheney, Morrisville; secretary, C. W. Ward, Rutland; treasurer, G. L. Harwood, Chester. It was decided to hold the next meeting of the Association at St. Johnsbury. In the afternoon the delegates, accompanied by some of the prominent citizens of the town, enjoyed a trip down the river and on Lake Champlain. In the evening, a banquet was held at the Stevens House.

## IS PHARMACY WITHOUT SIDE LINES DESIRABLE?

According to a report read at the last meeting of the American Pharmaceutical Association, the total number of registered pharmacists in the United States is 85,849. With the population of the country something less than eighty millions, the average number of persons available for the support of each pharmacist is less than one thousand. The total number of retail drug stores in the country is not far from thirty-nine thousand. Thus, without taking into consideration those employed in wholesale and manufacturing establishments, each retail pharmacy furnishes occupation for an average of about two registered pharmacists. From an estimate in one of our exchanges, we learn that the United Kingdom has less than ten thousand separate pharmacies, while the population is as yet more than one-half that of the United States. It appears from these figures that in America drug stores draw their support from an average of about one-half the number of persons allotted to each pharmacy in England. In Germany, and other European countries, and also in most of the countries of the western hemisphere, pharmacy is much more purely professional than in the United States or even England, and the number of pharmacists per thousand of inhabitants must be proportionately less.

In view of these facts, it is apparent that American pharmacy is something quite different from that of the countries we have mentioned. If the druggists

in the United States were compelled to draw their support from the restricted kind of business carried on by the apothecaries of Germany and Russia, they must inevitably starve, for we cannot believe that it requires very much more medicine to keep a person in reasonably good condition in our own country than in foreign lands. It is also improbable that the average income of our druggists is less than that of those who do business under another flag, for in spite of the continual whine about unfavorable conditions, the stores decorated with the red and green bottles wear a distinctly prosperous look all over our land, and the dealer in side lines and drugs has a way of figuring as a prominent citizen in all our towns and villages. Pure pharmacy could not supply food, clothing and bank accounts to the immense number of druggists scattered over our states and territories. It is evident that a large proportion of their income must be derived from some other source.

A large number of the registered pharmacists in the United States may be physicians who keep dispensaries as side lines, and in prohibition States a number of drug stores may perhaps be more correctly called "liquor joints." But, after deducting the comparatively small number of stores which are not properly pharmacies, the number of establishments which derive a reasonably sufficient income from the sale of drugs and what are considered legitimate side line is, as compared with the population, still much larger in the United States than in Europe. This being the case, is it not somewhat unreasonable for members of the trade to bewail the introduction of side lines into the drug store? The sale of soda, cigars and other articles not found in European pharmacies seems, on the whole, to be a necessity in the American trade. If it were not for this side of the business a much smaller number of druggists could gain a livelihood. This would mean fewer drug stores which are now so convenient to the thirsty as well as to those in search of medicines, fewer students in our schools of pharmacy, and a smaller number of a class of useful citizens whom our communities can ill afford to spare.

## THE SCARCITY OF PRESCRIPTION CLERKS.

Difficulty in securing qualified assistants to fill salaried positions in drug stores is reported from various parts of the country. The demand for good clerks seems to be increasing and may be ascribed to a number of causes. In some sections the requirements have lately been changed to include a much higher scholarship than formerly, thus eliminating the unfit. This cause of the scarcity of clerks is, in the trade, considered the most important one. The demand, on

the whole, is a hopeful sign, and promises to remove one serious cause for complaint in compelling an increase in the wages paid competent clerks. There is at the present time an abundance of openings for technical graduates in several lines of occupation. The various schools of engineering are unable to supply the demand for graduates, and in a number of branches of industry trained workers are hard to get. In the general prosperity of the country all lines of occupation seem to enjoy an unusual degree of activity, thus giving employment to an increased number of men.

Although a part of the present demand for trained pharmacists may be ascribed to the generally prosperous condition of the country, and the higher requirements for registration, a large measure of the scarcity must be attributed to a different cause—a growing disinclination of young men to engage in a business which they are led to believe is rapidly going to the dogs. They are told that the conditions surrounding the drug trade are becoming more and more unsatisfactory, that physicians no longer send prescriptions to the pharmacies, and that drug stores are rapidly degenerating into shops for the sale of toilet articles, soda and cigars. The prospective druggist is given to understand that he will be obliged to acquire a vast store of scientific knowledge which he will seldom use in the pursuit of his calling, and that he can expect nothing better than long hours and a salary which is smaller than that earned in any other profession.

Taking into consideration the pessimistic tone of the talk in the stores, the utterances of the speakers at pharmaceutical assemblages, and the discussions found in the journals of the trade, it is surprising that so many bright young men are still willing to engage in a calling which is so universally considered undesirable. The students making up the classes in the pharmaceutical colleges must be made of courageous stuff to be willing to undertake a battle for success against these overwhelming odds.

Happily druggists are not all pessimists. Many still find time to enjoy themselves and take a hopeful view of things. We have reason to believe that pharmacy, as a calling, is not quite so black as it is painted. Many still find it worthy of their best efforts. If careful inquiry were made, it is very probable that the income of the pharmacist would not be found to compare so very unfavorably with that of the doctor and lawyer after all.

#### MIXED FORMULAS.

An interesting case of unintentional substitution comes to us in a round about way from one of the daily journals of the Belgian capital. The highly specialized knowledge which the druggist is required to possess is supposed to serve as a protection to the public. This being the case, is the apothecary who figures in the following story entirely without blame?

A gentleman about to cross the English channel happened, during a call upon a lady of his acquaintance to refer to his dread of the seasickness which is usually incident to the passage from the Continent to England. The hostess having a sovereign remedy for this malady kindly requested her daughter to copy the formula from her collection of family recipes, for

the use of the prospective voyager. The prescription was duly filed by the apothecary, and the journey was begun under favorable auspices. In due time the traveller returned and called upon his friend in order to thank her for her efforts in his behalf. His hollow eyes and pale cheeks indicated that the ordeal had been a severe one. He explained wearily that in his case the effect of the remedy had been entirely opposite to that which he had been led to expect, as he had suffered frightfully from seasickness although a teaspoonful of the mixture had been faithfully taken every quarter hour until the last drop was removed from the jug. "—Jug!" exclaimed the hostess, "the recipe calls for only a small bottleful." "The mixture I received was put up in a mighty earthenware jug," replied the caller. An examination of the slip of paper which had been given the traveller at once explained the discrepancy to his fair adviser. The gentleman had been sent to sea armed not with her uncle's unfailing remedy for mal de mer, but with her mother's favorite mayonnaise dressing. The patient is still thanking his stars that the copyist, in her confusion, did not happen upon a formula for shoe dressing.

#### SELF MEDICATION.

A speaker in an address recently delivered in England referred to the growing practice of what he called "self-medication," the ailing public being more and more inclined to get along without the physician and his prescription, employing instead remedies selected without medical advice. He characterised this habit as pernicious and was of the opinion that its increase is due to the convenient forms in which medicines can now be obtained. Proprietary articles and compressed tablet preparations were especially pointed out as leading to a custom which viewed from a medical standpoint is highly unsatisfactory. It has been claimed that the American public is also less dependent upon the family physician than formerly, but this is still a matter of some difference of opinion. Doctors seem to be as plentiful as ever and still enjoy a large measure of public confidence. Observations among ourselves tend to show that people who are constantly taking medicines are also the most frequent visitors at the doctor's office. If the excellent preparations now offered for sale in our pharmacies are gradually taking the place of grandmother's collection of herbs' this can not be considered an entirely unmixed evil. The average American is of the opinion that he has a right to swallow whatever he pleases, and would undoubtedly resent any interference with this privilege.

TRIPHENYLGUANIDINE GUAIACOL SULPHONATE has been introduced as a local anæsthetic by Goldschmidt (Pharm. Zeit.). This salt is very slightly toxic, and is soluble in ether and alcohol. It is prepared by treating triphenylguanidine with barium guaiacol sulphate.

ORIENTAL STORAX.—In a study of storax, A. Tschirch and L. Van Itallie (Archiv.) find that liquid storax consists of a mixture of cinnamic acid, vanillin, styrol, styracin, cinnamic ethyl ester and storacolin. Storacolin is a white, odorless powder, and yields benzol, toluol and phenol when distilled with zinc dust. The formula for this body is found to be  $C_{12}H_{20}O_2$ .

(For the Era.)

**THE VERY MUCH TRAINED NURSE.**

By THERSITES MENDAX.

I will commence by apologizing to any and all "trained nurses," who read this article, for any misstatement I may make in it, and I take this opportunity of expressing my warm admiration for the class of women who have taken up nursing as a profession during the last ten or fifteen years. As there are plenty of quacks in the medical profession, and any number of scamps who bring pharmacy into disrepute by their unprincipled methods of business, so there are a number (and a large number, I am sorry to say) of women who have no earthly right to the designation of "trained nurse," who take liberties and claim privileges which no graduate from a first-class hospital would dream of doing. It is this class of imposters that I designate "The Very Much Trained Nurse." I have met quite a number of them in my time, and I consider them just as much of a nuisance as the crank doctor or the drug store loafer. The history of the breed is very much as follows: A young lady imagines she would like to take up nursing as a profession. Possibly she has read novels in which the heroine is a nurse, probably she prefers to earn a nurse's salary to clerking in a store or teaching school, or, again, she may imagine that a hospital is a good matrimonial hunting ground. Sooner or later she gains admission to a hospital as a probationer; we will assume it to be an institution which requires a three or four years' course for a diploma, where the discipline is rigid, and the salary is none too high. The first three or four months are enough to dissipate any romantic ideas the young lady may have formed as to her prospective profession. Possibly she has been a spoiled child at home; in the hospital she is simply part of a machine, her social status, good looks and accomplishments go for nothing. She is there to work, and when she fails to give satisfaction she can either resign or take her dismissal.

About the end of her first year she has some unpleasantness with one of the staff, and receives a sharp reprimand; her paper in the yearly examinations are not up to the mark, and she leaves, taking with her a smattering of medicine and medical terms and a very rudimentary knowledge of nursing. Her parents are of the opinion that the authorities were jealous of their daughter, "there are always so many wheels within wheels in a large hospital, you know."

A few months elapse and she accepts a position in an institution where genius is recognized, and in a very short time she emerges with a diploma attesting her qualifications as a thoroughly trained nurse. The place she graduates from is not recognized by the State Medical Board, or by the State Board of Health, or the legislature, but still there is a hospital with patients, doctors and nurses, and a diploma is a diploma. Of course, in many cases a year's training in, let us say Bellevue, is all that is necessary, supplemented, perhaps, with a diploma gained in a "correspondence course."

Now I know a good many doctors who would no more think of trusting a case to a nurse with dubious qualifications than they would give an anesthetic with commercial ether or chloroform, or perform Marsh's test with commercial sulphuric acid. I regret to say that there are others who are not as particular, and acting on the theory that the nurse's uniform makes the nurse they furnish employment to women who are utterly unqualified to assume charge of the sick-room "Nurse Agatha" has sufficient common sense to realize that her success depends on the patronage of the doctors—at first—and by more or less attention to her duties and a little judicious flattery to the medical man she succeeds in gaining his good will and that of the patient as well.

It is not until her reputation is established, and a certain following among the public built up, that the "Very Much Trained Nurse" comes into conflict with the druggist. To use a vulgar expression, she has "to mind her P's and Q's" at first. She realizes that any

tampering with her patients means a row with the doctor, and that an unpleasantness with the druggist may lead to his influence being used against her.

After a year or two's nursing, Sister Agatha begins to develop ideas; she also begins to wield more or less influence among her lady acquaintances. In her hospital days she got hauled over the coals for not attending to details, and now that she is in business on her own account she is apt to forget the difference—if she ever knew it—between spirits of chloroform and chloroform pure. I give below a couple of prescriptions which I have been asked to fill by "very much trained nurses," with the same corrected. Comment is unnecessary.

No. I.

R Chloroformi ..... ʒiil.  
Bismuth subnit. .... ʒi.  
Aqueæ ad. .... q. s. ʒiil.  
Sig. ʒi. every half hour until vomiting ceases.  
Misc. ....

No. II.

R Sodii bromid. .... ʒiiss.  
Chloral hydras. .... ʒi.  
Glyzine ..... ʒi.  
Elix. simplex ad. .... q. s. ʒiil.  
Misc. ....  
Sig. ʒi every four hours.

No. I, corrected.

R Spiritus chloroformi ..... ʒiil.  
Bismuth subnit. .... ʒi.  
Aqueæ ad. .... q. s. ʒiil.  
Misc. ....  
Sig. ʒi. every half hour until vomiting ceases.

No. II, corrected.

R Elixir sodii bromid. .... ʒiiss.  
Chloral hydras. .... ʒi.  
Glyzine ..... ʒi.  
Elix. simplex ad. .... q. s. ʒiil.  
Misc. ....  
Sig. ʒi. every four hours.

I could cite dozens of similar ones, but I select these two because in each case the "nurse" maintained that she was in the right. Number 1 was for use in a case of severe vomiting in pregnancy; No. 2, for insomnia in an anæmic, delicate girl of thirteen or fourteen years of age. In neither case was the "very much trained nurse" in attendance on the patient. She merely volunteered her advice out of the goodness of her heart. In each case my refusal to fill the prescription failed to convince the parties that it was an error on the "nurse's" part, until they had submitted it to another druggist.

Every now and then one encounters "Nurse" or "Sister" Agatha at the table d'hôte of a summer hotel. She is usually "down on a vacation," with her clinical thermometer. If any of the guests are taken ill, she may work in a little time and pay her expenses. She never misses an opportunity of running down "country doctors," and her opinions on medicine and surgery pass for gospel truth with a number of the ladies who are in the house. Now and then she gets a bad "set down," however. I remember a quiet little woman who boarded at the same house I did, and registered as plain "Mrs. Smith." At our table was a "very much trained nurse;" she "talked shop" incessantly, and passed as an oracle among a large circle of ladies. My wife was more or less taken with her, and grew quite indignant when I suggested that the lady had rather too much to say about medical matters. The hotel was some distance from a town, six miles from a railway. The local practitioner was a man of some years' experience, and a graduate of Edinburgh. A youngster fell sick, and Sister Agatha proceeded to take charge of the case. She disagreed with the doctor, criticised his treatment on the hotel veranda, comparing his treatment of the case with that of "my doctors in New York, etc.," and when "Mrs. Smith" ventured to disagree with some statement she made, she retorted that nobody but a professional person could be expected to understand the matter in dispute. "Mrs. Smith" replied that she fully agreed with her, and presented her with her card, "Dr. Mary Smith, Consulting Physician. — Women's Hospital." Sister Agatha collapsed, and for the remainder of her stay we heard very little about "my hospital," "my doctors" and "my patients."

We subsequently found out that the young lady

had spent just six months in a third-rate hospital, from which she was dismissed for some serious offense.

In addition to the prescription-writing habit, indulged in by the "very much trained nurse," the druggist frequently has to discuss the discount problem with her. I have had young women whom I did not know from Potiphar's wife come into my store, purchase some article and demand a discount on the grounds that they were "trained nurses." I am always pleased to meet a lady who is attending a case for one of the doctors who deals with me, and I like to show her every conceivable courtesy and consideration, both in business and in private life, but for some reason or other such ladies don't often ask for discounts. I usually meet them out of uniform, and find out their profession through one of the doctors or some mutual acquaintance.

I certainly believe that a bona fide nurse, who is doing business in a locality, should receive some recognition from doctors and druggists alike. Consequently, if a nurse whom I know requires a clinical thermometer, an hypodermic syring, or any other necessary part of her armamentaria, I supply it to her at "doctor's prices," viz., 10 per cent. over first cost, but I don't propose to keep her in Roger & Gallet's perfume, Pear's soap and expensive toilet articles.

The medical men it is my good fortune to be associated with are most particular in the choice of their nurses. They recommend ladies who are highly qualified, draw a good salary, and understand their business. Sometimes one of them wishes to see me privately, in which case I receive her in my dispensing department. As I make it a rule to keep the back shop well stocked, and clean of dirt and loafers, she usually goes away with a good impression of my establishment. On the other hand, when an unknown woman comes in and asks for 20 per cent. discount on the strength of being a "trained nurse," I point out a card, which several of us had printed and displayed in neat frames over the door of our dispensing departments, "Trained nurses and medical men who are unknown to us are requested not to ask for discounts." My card cost me 50 cents, framed. It may have cost me some business, but it certainly saved my assistants and myself a good deal of trouble.

The "very much trained nurse" owes her continued existence to the laxness of the medical profession, and the extreme gullibility of the public. As long as people pin their faith to Christian science, Dowie and osteopathy, there will be a section of society who prefer women of the class I have described to the genuine article. Sarah Gamp and Betsy Prig were ladies I should not have desired in my sick-room, or that of any one belonging to me. They, however, restricted their energies to eating, drinking, and did not experiment on their patients with drugs that they knew nothing about, or, if they did, Charles Dickens is silent on the subject.

#### EXEMPTION OF DRUGGISTS FROM SPECIAL TAX AS LIQUOR DEALERS.

Under date of Oct. 18, 1901, the Commissioner of Internal Revenue, John W. Yerkes, has issued the following circular to collectors of internal revenue, which is of especial interest to retail druggists. We quote it in its entirety:

By the provisions of Section 3246, Revised Statutes, a druggist is permitted to keep spirits and wines, and use them, in combination with drugs, in the preparation of medicines that are not beverages, and to sell such medicines without paying special tax as a liquor dealer under the internal revenue laws of the United States. But under the uniform rulings of this office, and the decisions of the United States courts, he can not, without subjecting himself to this special tax, sell spirits or wines that are not combined with drugs or materials of any kind taking these liquors out of the class of beverages, even when he

sells the liquors on a physician's prescription and for medicinal use only.

Besides the medicinal compounds which a druggist is authorized to sell without paying special tax as a liquor dealer, although they contain alcoholic liquors, there are other compounds containing spirits which, while they are not medicines, are non-potable articles that do not come under the head of "distilled spirits, wines, or malt liquors," in contemplation of the internal revenue laws, and which, therefore, he is entitled to sell without paying special tax, i. e., toilet articles, such as cologne and bay rum; and other with alcohol, for use in photography; benzine or ether with alcohol, for cleaning purposes; castor oil and alcohol, for toilet use; Florida water, violet water, etc., toilet articles made from alcohol; camphor and alcohol; alcohol and ammonia and whiting, a cleaning preparation; alcohol and shellac, for painters, etc.

Malt extracts, which are compounds of malt liquor and drugs, and which are manufactured for use as remedies for disease and not as beverages (as shown by labels on the bottles), are medicinal compounds; and druggists and merchants who sell them in good faith for medicinal use only are not to be called on to pay special tax as dealers in malt liquors on account of such sales.

As to the compounds called "bitters," "tonics," and the like, the rule is that if they are composed of spirits in combination with drugs, herbs, roots, etc., and are held out as remedies for diseases stated in labels on the bottles, they are to be regarded as medicines until the facts ascertained as to the purposes for which they are usually sold or used show them to be beverages; and until such facts are obtained druggists and merchants who sell these compounds in good faith as medicines only are not to be called on to pay special tax as liquor dealers on account of such sales.

Every person who sells these compounds as beverages, either by the bottle or by the drink, or sells them knowingly to those who buy them for use as beverages, involves himself in liability to criminal prosecution under the internal revenue laws of the United States, unless he holds a special tax stamp as a liquor dealer (or malt liquor dealer, as the case may be) covering such sales.

The fact that a compound may be used as a medicine, and may be so intended by the person making it, does not relieve the seller from the liability of a retail liquor dealer (or retail malt liquor dealer), if the compound is intoxicating, and is not sold as a medicine.

The true test in all such cases is: Was the compound sold in good faith for medicinal purposes only, or was it sold as a beverage, or sold knowingly to persons who bought it for use as a beverage? (United States v. Frederick Cota, 20 Int. Rev. Rec., 249; United States v. Stafford, 30 ibid., 247; 20 Fed. Rep., 720; United States v. J. W. Bibb, 33 Int. Rev. Rec., 301; United States v. Starnes, 35 ibid., 136; 37 Fed. Rep., 665.)

**NEW CINCHONINE SALTS.**—Three new cinchonine salts have been prepared by G. Tarrozi (Pharm. Zeit.). These salts, the sulphocarbonate, the sulphocresotate, and the acid hydrochloride, are all antiseptic in their action, and are more effective as an antiseptic agent than the free base. The acid hydrochloride is obtained in crystalline needles, and the sulphocarbonate occurs in reddish white crystals, while the sulphocresotate is amorphous.

**AMERICAN STORAX,** the secretion of *Liquidambar styraciflua*, has been found by A. Tschirch and L. Van Itallie (Archiv.) to be a mixture of cinnamic acid, vanillin, styrol, stracin, cinnamic phenylpropyl ester, and styrcinol. The formula of styrcinol (C<sub>15</sub>H<sub>26</sub>O<sub>2</sub>) is the same as that of stercinol, which is a constituent of oriental storax, but the optical activity of these bodies is quite different. American storax also differs from the oriental product in containing no ethyl cinnamate.

Phases of Drug-Store Management and Economy.

### ADVERTISEMENT AND MANAGEMENT OF A DRUG STORE.

By M. A. C., Lyons, N. Y.

The interchange of ideas regarding the management of a drug store is of great practical value. It is for this reason that I here offer a few words along this line, and I believe it is for this reason that so many readers of the Era have availed themselves of the offer made by the publishers of this journal of both space in which to express their ideas as well as remuneration for the effort involved in preparing their ideas for publication.

My thoughts seem to cluster around two points, namely, successful advertising and the management of a drug store. First, what is successful advertising? The essential points in successful advertising are, to my mind, constant change and an element of enlightenment or instruction running through the matter. People, as a rule, like to learn about things. They read the papers to learn what is going on in the world, and a large part of the activity of the world is spent in the manufacture and sale of articles to be used for the benefit and convenience of the people. Advertising is really educating the people up to the

use of articles we have for sale. To illustrate my meaning I herewith submit one or two sample advertisements which we have used to introduce to the people the use of antiseptic surgical dressings instead of the old-time healing salves which are now known to be useless, if not harmful. These two "ads." were used in our regular space, running for two weeks owing to press of other matters which prevented our usual weekly change, which we always adhere to strictly unless for some unavoidable reasons.

We always back up our newspaper work with a window display of as much magnitude and pointedness and as nearly at the same time as possible. By magnitude and pointedness of a window display I mean making as large a showing of the goods advertised as possible, and displaying a placard giving some of the uses of the article, and also price prominently mentioned.

We use many other forms and ways of advertising, but I will not mention others because the point I am specially trying to bring out here is that constant changing, educational advertising, are what bring people into a store.

And then comes the greatest proposition of all; that is, how to please a customer and hold his trade when once you get a chance at him. In order to do

**WHEN  
YOU  
BUMP  
YOUR  
SHIN**

Try an  
antiseptic  
dressing for it  
rather than smear-  
ing it over with some  
irritating, greasy salve.

Try it once and see how perfectly nature heals her injuries only given perfectly clean surroundings to work in. Let us tell you how to use Antiseptic Dressings for cuts, bruises and sores and show you our line.

**WHEN  
YOU  
CUT**

Yourself instead of daubing on some "healing salve" which really poisons the wound, try the ANTISEPTIC WAY of cleansing the cut with a solution of say half a teaspoonful of carbolic acid in a pint of water and then draw the edges together with some adhesive plaster and cover with a piece of gauze held on by a roller bandage. In a few days your cut will be healed without scar or trouble from pus or matter, as it is sometimes called. You have cured it scientifically.

Let us show you our line of Surgical Dressings and aids to the injured.

**BLANK & CO.**

Mooreville, - - N. Y.

this, it seems to me that the person who should meet and deal with customers, as much as possible, is the proprietor, unless, of course, he has clerks who are fully competent to handle people, with all their likes and dislikes, their whims and ignorance.

A clerk to be valuable to his employer must be a young man of high ideals, an active mind, of good breeding and manners, and, above all, having a lively interest in the business, not only for the sake of the paltry dollars distributed to him each week, but rather from a love of the work and a liking for a chance to serve and please people and his employer. If a clerk has all these qualities, and the proprietor has not, I say let the clerk deal with the people as much as possible. In some way, and by some one, our customers must be pleased and satisfied or all our advertising to get them into the store is in vain. Do not jeopardize the reputation of the store by allowing incompetent clerks to try to wait on people before they know how. I prefer to let the people wait a few moments than to do this. A competent person can find out what the customer wants, and then direct a boy in such a way that they can get what is called for, this I believe to be the better way, although, of course, it is much more difficult and annoying for the proprietor to be trying to do several things at once.

To reiterate, successful newspaper advertising must be constantly changing, newsy and instructive. In the management of a store, be sure that customers are treated cordially and intelligently, and that they always feel satisfied.

### THE DRUGGIST'S WANT BOOK.

By J. T. PEPPER, Woodstock, Ontario.

Perhaps every druggist will agree with me when I say that the Want Book is a very useful book in a drug store. Some wholesale houses supply these useful books to their customers among the retail drug trade, and sometimes the title bears the name "Wants Book." It certainly is a book containing a list of "wants," but retail druggists usually refer to it as the "Want Book." The wholesale drug houses, when they supply these books, make use of them as an advertising medium, and, at the same time, confer a favor on the retail druggist. The retailer appreciates the kindness, for the Want Book, properly used, helps him to systematize his work and business, and to make more money. The Want Book is a necessity in the successful and profitably conducted drug store.

#### Where to Keep It.

It should be kept in the most convenient place in every drug store. This may be near the till or cash register, or desk, or on the dispensing counter. Wherever it is kept, it should always be in its place. If you go to the place where the Want Book is kept, with the intention of entering some "want," and find that some one has left it some where else, and, as frequently happens, you are too busy to hunt for it, you mentally say that you will remember the item and enter it at another time. If you remember to do so, it may be all right; but if you do not, it may be all wrong. For instance, when a certain "want" has not been entered in the book and drugs are ordered without, of course; including this particular article, it often seems that after the drugs arrive at the store and are put into stock, the first customer will ask for the very thing that you neglected to enter, because the "Want Book" was not in its accustomed place. By an omission of this kind a sale may be lost; perhaps, a customer. If you can get the article quickly from a neighboring druggist, perhaps, you may only lose a part of the profit. The loss of a sale is a trifle, but the loss of a customer is a more serious matter. The old adage, "A place for everything, and everything in its place," certainly applies to the "Want Book."

#### How to Use It.

The purpose for which the "Want Book" is intended is that all stock should be entered as soon as it becomes low, so that new goods may be ordered before the stock on hand becomes exhausted. In or-

der to always have on hand all goods that are called for, and which druggists are supposed to keep in stock, it is absolutely necessary that this rule should be rigidly adhered to. It should be impressed most emphatically upon the minds of our assistants that this must always be attended to whenever they discover that any portion of the stock is getting low. No excuse should be accepted for neglect of this duty. When your assistants enter wants in the book, you can have them make a note of how much or how many of any kind of goods there are on hand, so that when you are ordering your supplies you can be your own judge as to whether the stock is low enough to require a new order. You being the master of your own business, know the demand for certain lines of goods. You also have an idea of how long a certain amount will last you under ordinary circumstances. Knowing all these things, you certainly are the best judge of when to order goods, and how much or how many of each kind should be obtained at any one time, so as not to lose any sales, and still have just enough to run your business successfully and profitably without carrying too large a stock.

At the side of the page, opposite each want, you can, either using your own private cost mark or plain figures, put the price at which you buy the goods. This will impress the price upon your own mind, and you may also want to use it sometime for reference. At the side of the page you can also mark down the quantity ordered. When an order has been given, it is well to draw a line across the page of your "Want Book," and put down the date when ordered. By doing this, you will never duplicate and you will know where the dividing line is.

I think that most druggists do keep "Want Books," and, generally speaking, I believe that they make a profitable use of them. At one time I had a druggist for a neighbor who did not keep a want book, or, if he did, must have looked after it very indifferently, for he was constantly sending to my store for goods that he wanted immediately, "for the customer was waiting." This I did not object to, for we had arranged to exchange goods, each one taking half the profit. In this way I was constantly making a little profit from a portion of his business. He was losing because he did not properly attend to his stock when it became low, and did not enter goods required into his "Want Book." If he had kept his want book properly he would not have run out of stock so often, and would not have lost the small amounts represented by the extra price which he was obliged to pay in order to be able to supply his customer. The "Want Book," if well looked after, will remove a source of considerable loss.

### WHAT IS THE SAFEST AND MOST PRACTICAL WAY OF KEEPING POISONS.\*

By W. H. McDONALD.

I cannot give you a very exhaustive or learned paper on this subject, but will offer you a few suggestions taken from daily experience in the drug store that may be helpful to others handling poisonous articles.

The ideal method would be to have a closet or apartment in which to keep these articles away from the rest of the stock and to have one man to attend to it and weigh or measure out the required amount of each article when called for. Going through one of the large wholesale houses they showed me a vault in which were kept all expensive and poisonous chemicals, and the whole stock was in one man's charge. It was his duty to keep this stock in order and to hand out each article when called for. This was done primarily as a protection against fire, but it also guaranteed accuracy in handling. Such an arrangement is not altogether practicable for a retail store, but some features of it may be carried out.

Somewhere near or convenient to your prescrip-

\*Read before the Tennessee Druggists' Association, Monticello Meeting, 1901.

tion case have a poison closet, or simply a section of shelving separated from the rest of your stock, in which can be kept all very active poisonous alkaloids, chemicals, etc., contained in small packages. Each bottle or container should be plainly labeled with the full name of the article and marked "poison." The ordinary dose for an adult should also be given. Each package should have its special place on the shelf and should remain in its place. The old adage, "A place for everything and everything in its place," can never find a more fitting application than here.

Some well regulated retail stores have a number on the shelf and a corresponding number on the bottle, also a record is kept in a book of the amount in stock. This is an excellent plan. I think it is better to let all such articles as these remain in the original bottles or packages in which they come from the manufacturers than to transfer them to stock bottles. When dispensing these articles, train yourself to look at the label carefully before weighing out the article, and again after you have done so and are replacing the bottle to its proper place on the shelf. I have adopted this rule for a long time, and find it a great help in the accurate dispensing of these articles.

Another point to observe is to school yourself not to be unduly hurried by impatient customers. Unfortunately, we all have such customers at times, and, if we listen to their importunities for haste, are liable to make a mistake that may be very serious. Near this section should be kept a list of the most active poisons, together with the doses and their antidotes, convenient for reference in case of emergency.

A frequent mistake is the dispensing of morphine instead of quinine. I have adopted a plan for preventing this particular mistake by buying the morphine in one-eight ounce bottles only, and the quinine in one ounce, or larger packages, and keeping them in the original packages, and it has proven very helpful in this particular case.

This arrangement will apply to such articles as are contained in small packages, but it is not so easily applicable to goods in bulk—such as acids in carboys, tinctures in large bottles sulphate of zinc and Paris green for domestic uses, etc. However, the same general plan can be used; separate these articles as far as possible from the rest of your stock, have every container properly labeled and exercise the same care in handling these articles that you would others. Such articles as are bought from the wholesaler in paper packages should be removed to the proper receptacle, that is, plainly labeled as soon as received. These packages should not be allowed to accumulate upon the shelves.

The chief points to be observed in handling poisons are to keep them separated from the rest of the stock; to have a place for each article and to keep it in its proper place; to have each package plainly labeled and marked "poison," and last to exercise persistent and determined care in dispensing.

## OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

### WHAT IS THE MATTER WITH THE ERA?

Chicago, Oct. 23, 1901.

To the Editor—Your report of the N. A. R. D. meeting, held at Buffalo, Oct. 17, has worked up quite a feeling among the Illinois druggists, and I have been asked over and over again how it came about that you take such a seemingly offensive stand as far as Illinois is concerned. Take what you say about "proxies;" if all the proxies had voted against Mr. Holliday (and some did vote against him), but if they all had he would still have come out ahead. If Chicago had wanted to insist on proxies, according to what she contributed, every auxiliary district could

have had a vote. The Era seems to forget that Illinois went to the convention with the determination to save what the N. A. R. D. had done for us; we did not go there, as the Ohio delegates did, and threaten secession should the delegates accede against us. Ohio filed notice, "Unless you adopt our scheme, we will quit." That position deserved your severest condemnation, and certainly Illinois did not deserve the way you treated her. Do you think it right to cast a reflection on Illinois for getting a move on, and succeeding in organization? If we have more organized associations and could get druggists into closer organization, should we sit by and allow New York, with her greater facilities and smaller representation (I believe the New York State Association paid for two delegates only), to rob us of the results of our labors? Therefore, I close as I started, "What is the matter with the Era?" W. Bodemann.

### "A DECIDED SUCCESS."

To the Editor—In your issue of Sept. 19, 1901, I find an advertisement on page 15, headed, "A Decided Success," stating, among other things, that Pepto-Mangan (Gude) yields the druggist a good profit.

Now, I would like to know where that profit does come from? Our jobbers out here price it anywhere from \$9.25 to \$9.75 per dozen, and I call myself lucky to get it at the last figure. Our so-called physicians, steeped in the honor of the profession, where they dispense it themselves, expect to get it at the drug store for 75 cents per bottle, or kick at the outrageous profit we want to make on them and where they prescribe it, as they cannot buy it from their supply houses at 75 cents, they tell the patient not to pay more than \$1 for a bottle. And the manufacturers of that preparation, which thanks to the competition of our manufacturing laboratories, can now be bought at almost half that figure and gives the same satisfaction, if not better (at least Blank's), claim it yields the druggist good profit. Now, Messrs. Breitenbach & Co., you better come down a perch or two, and we will push your goods. C. S. Katz, M. D. Hillsboro, Kas.

[We must take issue with our Kansas friend. The wholesale price of Pepto-Mangan (Gude) has nothing to do with the case. If it was sold at \$4 a dozen, would the retailer make any more on it? When he gets \$1 for it he makes from 10 cents to 23 cents a bottle. If the price were \$4 it would probably sell for 40 to 45 cents a bottle, a profit of from 7 cents to 12 cents. But that is not the point. Our subscriber practically admits he dispenses a bulk preparation on prescription for Pepto-Mangan (Gude). Does he tell the doctor he does this, or does he tell the patient he is not giving what the doctor ordered? This is downright swindling, and cannot help but bring the druggist into bad repute. Furthermore, to such practices is due, in a large measure, much of the dispensing by physicians, and the growth of the Physicians' Supply House, against which the trade is crying out so loudly. The doctor's right to have dispensed just what the prescription calls for is based not only on common sense, but on common honesty, and no druggist who values his reputation will do anything else.—Ed.]

RUSSIAN PEPPERMINT.—The culture of peppermint introduced into the Tula district about forty-five years ago, but subsequently allowed to partially die out, has been revived during the past five years (Pharm. Zeit.). The mint, the curly variety preferred, is grown in rich garden mold, enriched with horse manure and deeply ploughed. The plants are grown from cuttings, which are set out during the latter part of May or early June. The crop is harvested in August, the plants being allowed to wither before being subjected to distillation. The distilling apparatus is, in many cases, very primitive. Ten pounds of peppermint yield about one-half pound of oil, while this quantity of curly mint yields  $\frac{1}{4}$  to  $\frac{1}{2}$  pounds. The quality of the oil depends upon the nature of the soil and the method employed in distillation.

## HOW WE INCREASED OUR PRESCRIPTION BUSINESS.\*

By WILLIAM KAEMMERER, Ph. G.,  
Columbus, O.

Finding our prescription business in an unsatisfactory condition, we determined to do something to revive it. It was evident that we were not filling as many prescriptions as we should, although we were prepared in every way to do a good prescription business.

After thinking over several plans as to how we could best accomplish our object, we decided that the best and least expensive way was to make personal calls upon the physicians, show sample of our work, and explain matters of interest in our prescription department. Accordingly I filled a good sized grip with samples, and went to work among the physicians.

My samples consisted mostly of galenic preparations, a few crude drugs and chemicals, and some extemporaneous preparations, which required skill in compounding.

In order to make the scope and character of the work better understood, I will repeat, in a general way, the conversation I had with the physician. It must be borne in mind, however, that samples were shown and examined as the conversation proceeded.

After gaining an audience with the physician and opening up my samples, I would explain the object of my visit as follows: "Doctor, I haven't anything to sell, nor anything to give away, and I am not going to worry you with any preparations or new cures. My object is to show what we can do in the way of fine prescription work, and in that way increase our prescription business. We manufacture a complete line of elixirs. They are of the same strength and composition as those usually found on the market. We are in a position to manufacture anything in this line you may wish to prescribe. In order to show what they are like, I have brought a few of them with me."

"This is our simple elixir or elixir simplex. You will find it a most pleasant and agreeable vehicle. It is composed of sugar, water, and alcohol, and is highly flavored with fresh oil of sweet orange. It is clear, colorless, and of a true orange flavor. We use this as a base for all of our elixirs. As a flavoring agent we use nothing but pure, fresh oil of sweet orange, the best that money will buy. The reason you do not always get an elixir like this one when you prescribe is because proper care is not always exercised in selecting the oil of orange. Oil of orange turns rancid very readily, and when used in that condition will forever ruin an elixir.

This is our red elixir, or elixir rubri. No doubt you have often prescribed it. It is nothing else than our simple elixir colored red. As a coloring agent we use nothing but cochineal, which is perfectly harmless. We never use aniline in any of our elixirs.

"Our elixir of calisaya represents the equivalent in alkaloids of five grains of calisaya bark in each teaspoonful. It is useful as a simple tonic.

"Our elixir of potassium bromide contains ten grains of potassium bromide in each teaspoonful. Our elixir of sodium bromide also contains ten grains in each teaspoonful.

"Our elixir of ammonium bromide contains five grains in each teaspoonful.

"Our elixir of ammonium valerianate contains two grains of ammonium valerianate in each teaspoonful. In this elixir we have, to a great extent, masked the odor of the salt without in any way affecting its medicinal properties. This is done chiefly by neutralizing the valerianate of ammonium. Ammonium valerianate as found on the market, is always acid, owing to the escape of some of the ammonia. It is the valerianic acid which has such a disagreeable odor, and when neutralized with ammonia water, the odor is almost completely overcome. Whenever we receive a pre-

scription calling for ammonium valerianate we are always careful to neutralize the valerianate of ammonia before sending it out, and you will never have your patients complain about the disagreeable odor.

"Our elixir of valerianate of zinc; each teaspoonful contains one grain of valerianate of zinc.

"Our elixir of calisaya and iron; each teaspoonful contains two grain of citrate of iron and five grains of calisaya bark.

"Our elixir of calisaya, iron and strychnia; each teaspoonful contains five grains of calisaya, two grains of citrate of iron and 1-50 grain of strychnia.

"Our elixir of calisaya and tincture of chloride of iron; each teaspoonful contains five grains of calisaya bark and five minims of tincture of chloride of iron.

"Our elixir of gentian; this is about half the strength of the tincture of gentian compound. Our elixir of gentian with tincture of chloride of iron, has, in addition, five minims of tincture of chloride of iron in each teaspoonful.

"Our elixir of calisaya and phosphate of iron. Five grains of calisaya and two grains of phosphate of iron in each teaspoonful.

"Our elixir of pyrophosphate of iron, quinine and strychnia; each teaspoonful contains two grains of pyrophosphate of iron, one-half grain of quinine, and 1-64 of a grain of strychnia.

"Here is one to which I would particularly direct your attention, our elixir of terpin hydrate. It is different from any other elixir of terpin hydrate on the market. It contains full three grains of terpin hydrate in each teaspoonful, enough to produce results. All other elixirs of terpin hydrate on the market contain only one grain in each teaspoonful, an amount entirely too small to be of much value. The minimum dose of terpin hydrate is three grains. Like all the rest of our elixirs, it is flavored with oil of sweet orange. Our elixir of terpin hydrate and codeine contains in addition one-eighth grain of codeine in each teaspoonful. Our elixir of terpin hydrate and heroin contains three grains of terpin hydrate and one-twenty-fourth grain of heroin in each teaspoonful.

"This is our simple syrup. It is prepared by percolation, by which process the use of heat is avoided; it insures a thoroughly saturated solution, removes all coloring matter, and renders preparations made with it less liable to decompose. A heavy syrup acts as a preservative agent, whereas a weak syrup will do just the opposite, often starting a fermentation. We use this syrup as a base for nearly all our syrups.

"Our syrup of wild cherry is one of the same strength as the U. S. P. syrup, and it will mix with water without precipitation. There is nothing so disappointing to a physician as to receive a muddy mixture when he expects to receive a clear, bright preparation.

"Our syrup of white pine compound is equal to any on the market. We make one with morphine, and one without morphine. The one containing morphine is usually dispensed, unless the other is specified. Our syrup of white pine compound contains one-eighth grain of acetate of morphine in each fluid ounce.

"Syrup of ipecac, when properly prepared according to the Pharmacopoeia, is a permanent, clear and transparent syrup, and is not the muddy mixture made by simply adding the fluid extract to simple syrup as frequently dispensed.

"Syrup of iodide of iron. This syrup is of our own manufacture; it is a permanent preparation, unaffected by exposure to light or contact with air.

"Syrup of hydriodic acid. This syrup is also of our own manufacture. It contains one per cent. of hydriodic acid. Each fluid ounce represents a little over six and a half grains of iodine, or is equivalent to a little over eight and a half grains of iodide of potassium. It has an agreeable acid taste, and is useful where the patient cannot tolerate iodide of potassium.

"Our 100 per cent. solution of phosphate of soda; each teaspoonful represents sixty grains of phosphate of soda, U. S. P. It is prepared without the addition of any foreign chemical, such as Sodium nitrate, usually employed by other manufacturers. It contains a

\* Read before the American Pharmaceutical Association.

slight excess of phosphoric acid. An agreeable efferevving phosphate of soda can readily be made from this solution by dissolving about fifteen grains of bicarbonate of soda in a half tumblerful of water and adding a teaspoonful of the solution.

"Our tasteless castor oil. This is the best quality of castor oil, sweetened with saccharin and flavored with some essential oil.

"Our essence of pepsin. Very active, and far superior to the usual run of wines and elixirs of pepsin found on the market. Each dessertspoonful represents three grains of pepsin, U. S. P.

"This is a sample of the Muscatel wine we keep in stock. It has a fine flavor, and is almost free from tannin.

"Here is a sample of our tincture of digitalis. I brought this along to call your attention to how it is manufactured. It is manufactured direct from the leaves. Here is a tincture made by diluting the fluid extract, quite a different preparation, and one which will not give the results obtained by using a tincture of digitalis prepared from the leaves. We make nearly all our tinctures from the drugs themselves, especially the important ones. Diluted fluid extracts are not tinctures. When the physician writes 'tincture,' he does not want his patient to have a diluted fluid extract.

"Here is another important preparation, infusion of digitalis. What I have said in regard to making tinctures from fluid extracts applies with a great deal more force to the making of infusions from fluid extracts, and in this instance particularly it is not only wrong but criminal to dispense such a preparation. Fluid extract of digitalis is prepared with alcohol, which extracts certain principles of digitalis, which are harmful in most cases where the infusion of digitalis is especially valuable.

"Doctor, you cannot be too careful in selecting your pharmacist, and directing your patients to have your prescriptions prepared by him. A little matter like what I have just shown you here often may mean life or death; success or failure.

"With pharmacists it is the same as it is with physicians. As there are both good and bad physicians, so there are also good and bad pharmacists. It is the physician's duty to see that his prescriptions are put up by a good pharmacist. He owes this duty both to himself and to his patients.

"Here are some samples of digitalis, belladonna and hyoscyamus, showing you exactly the quality of drugs we use in making these important tinctures.

"Now, as to the finished prescription, the prescription as it reaches the patient. All of our prescriptions are neatly wrapped with this red paper and tied with thin twine. We never use this paper for anything else, reserving it especially for prescriptions. For all liquid preparations we use a good long cork, and cap each bottle. Capping is done entirely by hand. We use no ready-made caps.

"It makes all the difference in the world, the condition in which a patient receives a prescription. External appearance often forms the patient's only means of judging a medicine. If it is badly wrapped, without much attempt at neatness, he is apt to think the medicine is not of much account, and nine times out of ten he is not much out of the way in coming to such a conclusion.

"Konsals; we carry all the different sizes, and have a machine for closing them. They are not used very often; but occasionally they are useful, especially when you wish to give a bulky powder, such as trional or stlfonal.

"For powder papers we use nothing but parchment paper, cut in suitable sizes.

"Here are a few filled capsules of sandalwood, copaiba, and Haarlem oil, showing how completely we seal every capsule. Here is the one with Haarlem oil. You know what a disagreeable odor there is about Haarlem oil. If I had not told you these capsules contained Haarlem oil you never would have suspected it, at least not by the odor. It is the same with the other capsules of sandalwood and copaiba. When-

ever an oil is directed to be dispensed in capsules, we are careful to seal every one of them. You will not be bothered by the patient coming back to you, and complaining about the taste or smell, or that the capsules did not do him any good because half of them leaked out.

"Here is some other capsules which you cannot tell what they contain. They are not quinine, although they look very much like quinine capsules. They are asaetida capsules, and we make them of very select tears of Asaetida, entirely free from all impurities, no dirt and no sand. This is the kind we use in all our prescriptions and in all preparations of asaetida. Asaetida is one of the most valuable medicines we have in the whole materia medica, but the physician is very often disappointed in his results because his patient has been given a poor quality of the drug. Here is the common asaetida. There is quite a difference. One costs about a dollar and sixty-five cents, the other only thirty-five or forty cents a pound. You don't expect to get the same results from the one as you would get from the other.

"I do not know what the manufacturers use in preparing their ready-made pills. I don't believe they use the same quality of asaetida that we use in preparing prescriptions. These asaetida capsules are made by massing the asaetida with a little soap and then rolling and dividing it on a pill tile. Each division is then rolled in flour and with the aid of a pin they are put into capsules, the fingers never coming in contact with the asaetida. These precautions are taken so that the patient will never know he is taking asaetida. He will think he is taking quinine.

"Tablet Tritrates. We are prepared to make them extemporaneously. Here are some that I have made. They are firm, but at the same time they can be readily crushed between the fingers. Sugar of milk is used as a base. Should you have any unusual formula you wish to prescribe in tablet form, or if you should want a fresh tablet we are in a position to make them on short notice.

"Here are a few pills. I have brought these along in order to show what we can do in the way of making pills. The pills in this box are not sugar-coated pills; they are just the common, every-day, plain, two-grain quinine pills. You will notice that they are all alike, every one of them round as a shot and white as snow. That is just the kind of a pill we always dispense. You will never find in a batch of pills coming from our store some that are large and others small, neither will you find them to be of different shapes—some three-cornered and some four cornered. Another point, if the ingredients entering into the composition of a pill are white, your patient is going to get a white pill.

"Here are some silver coated and gold coated pills. We can coat any pill for you with either gold or silver. We use nothing but pure gold leaf and pure silver leaf. We can also sugar-coat them, or chocolate-coat them, which ever you may direct in your prescription.

"Here are some pills that we do not make. They are the commercial, ready-made Bland's pills. Here is one I have broken in two. I had to use a hammer to do it. Just take a good look at that pill. It has been actually painted black and varnished in order to make it look nice. You would not expect to get any results from a pill like that, would you?

"If you want to be sure of good results when you wish to give Bland's pills, always order them freshly made. These are some of our own make of Bland's pills. We never keep them on hand ready made, as they are only fit to use a short time after making them.

"Suppositories. We make them on short notice, and of any composition you may wish. In making them we use nothing but pure cacao butter. They are uniform throughout. You will not find among the suppositories we have made one light-colored one and one dark one, or one marbled and another speckled. Here is one I have cut in two in order to show how well they are made.

"We are also prepared to make bougies, either of gelatin or cacao butter, and any formula you wish to use. It sometimes happens that a physician has a case requiring something of this kind, but hesitates to prescribe them, because he does not know just where he can send his patient to have them put up.

"Citrate of magnesia. We never keep any made up. We always prepare it fresh. We also use the new patent stoppered bottles. Likewise we never keep any spirit of mildererous nor solution of potassium citrate made up.

"Now, as to chemicals. We keep a separate set of pure chemicals especially for use in prescriptions. The kind of chemicals we sell over the counter for mechanical purposes, and for use in the arts, we would never think of using in a prescription. We think that in medicine, where the health and happiness of a patient are at stake, the best is none to good.

"Take for instance, ammonium chloride, chemically pure. This is the kind we use in our prescriptions. Notice how nice and white it is, and free from odor. Here is a sample of the commercial article; some druggists keep only this kind, and use it for all purposes. Notice the color and odor. It smells like common muriatic acid.

"Sodium bicarbonate, pure, is free from dust and dirt, and tastes quite different from the common baking soda.

"Tannic acid. Pure and completely soluble in water, making a clear solution. Here is the common tannic acid, not entirely soluble and making a dark solution. It is the same with sodium salicylate. Here we have the refined sodium salicylate, pure, white, forming with water a colorless solution without the necessity of filtering. It is odorless, and of a pure, sweet taste. Here is some of the common salicylate of soda. It is pink instead of white; its solution in water is not clear, and its odor and taste are quite disagreeable.

"This is a sample of pure granulated phosphate of soda.

"This is the kind of oil of eucalyptus we use. Notice whose make it is.

"Beechwood creosote. We use the best that can be had. See on the label what the manufacturer has to say.

"This is granulated gum arabic. We use this in making emulsions. A word about mucilage of gum arabic. We never have a drop of it in the house. Whenever mucilage is called for in a prescription we always prepare it extemporaneously, using this granulated gum arabic and distilled water. I don't know of anything that will spoil as quickly as mucilage of gum arabic. Just take a look at the mucilage bottle in the different drug stores you happen to visit, and then imagine you see some of it going into a prescription you have just written for a sick baby.

"Here is some imported syrup of lactucarium. This preparation is very popular with some physicians in eastern cities. We also have the lozenges of lactucarium.

"This is the special brand of pure castile soap we carry. It is a pure and neutral soap, made of olive oil and soda.

"Pure benzoated lard. We use this in all ointments wherever lard is directed to be used.

"Here is a very important ointment, and one which, if not carefully made, will do harm instead of good. It is the oxide of zinc ointment. In preparing this ointment we use what is known as Hubback's oxide of zinc. Notice how smooth and white this ointment is. An ointment made from the commercial oxide of zinc will always be gritty. It can never be made smooth, and instead of having a soothing and healing effect it will do just the opposite, irritate instead of heal. The same care and quality of materials we use in preparing our zinc ointment is also used in preparing all ointments dispensed by us. The finish, you will notice on this jar of ointment, is an example of the kind of a finish we put on all ointments we dispense. It adds fifty per cent. to the appearance of an ointment, is quickly done, and costs nothing.

"This is about all I have to show at present. Doctor, I thank you very much for your kind attention, and for allowing me to take up your time in this manner. I wish you would kindly bear us in mind when prescribing, and say a good word for us whenever you can. Any work that you can send us will be thoroughly appreciated by us, and skillfully and promptly executed.

"I wish to say a word about these various specialties on the market, such as listerine, borolyptol, and celerina. Nearly every physician occasionally prescribes one or another of these preparations. Whenever we receive a prescription calling for any of these various specialties you can rest assured that it is exactly what your patient is going to receive. Such a thing as substituting something else is never allowed in our prescription department. It is true we can make something to look, smell, and taste like some favorite specialty, but whether it will give the same results is questionable. Results are what the physician is aiming at, and it is our business to help the physician get good results."

Now, it must not be supposed that when we called on a physician that all of these samples were shown, and this long talk was given in our first visit. Such was not the case. We made several calls, and expect to continue calling on physicians, and working along this line, our prescription department furnishing us with an almost inexhaustible supply of material.

The result of this work was satisfactory in every way, affecting not only our prescription department, but trade in general, a most noticeable feature being a decided improvement in the quality of our patronage, more than justifying us in continuing our efforts in this direction.

The following are the formulas, samples of which were shown to the physicians:

Simple Elixir—Best oil of sweet orange, 2½ fluid drams; alcohol, 16 fluid ounces; syrup, 24 fluid ounces; water, 24 fluid ounces; washed talcum, 1 ounce. Dissolve the oil of orange in the alcohol, and mix with the washed talcum; then add the syrup, and then the water; mix and filter. Return the first portion of the filtrate until it runs through clear. The best oil of orange must be used. To preserve oil of sweet orange in good condition, mix it with an equal volume of alcohol as soon as a fresh bottle is opened, and keep in a cool, dark place.

Washed talcum is superior to anything we have tried as a filtering agent for elixirs. In preparing it we make use of the process of elutriation, excepting that the coarser particles are to be reserved and the finer particles allowed to escape. Where ordinary powdered talcum is used as a filtering agent, it is these finer particles which retard filtration and cause trouble, sometimes neither sinking nor rising. When washed talcum is used filtration proceeds rapidly, and the elixir remains clear. Gray filter paper works better with washed talcum than the white. If an elixir does not come through clear at the start, return the first portions to the filter until it comes through clear.

Red Elixir—Simple elixir, one pint; solution of cochineal, a sufficient quantity; mix and filter.

Elixir of Calisaya—Sulphate of quinine, 36 grains; sulphate of cinchonine, 12 grains; sulphate of quinine, 10 grains; sulphate of cinchonidine, 6 grains; simple elixir, 4 pints; caramel, q. s.

Triturate the mixed sulphates with one-half pint of the elixir, pour the elixir into a glass flask, and heat in a water bath until solution is affected; while still hot add the remainder of the elixir and the caramel; when cold, filter. (W. S. Thompson.)

Elixir Bromide of Potassium—Bromide of potassium, 1.280 grains; red elixir, to make 15 fluid ounces; mix and filter.

Elixir of Sodium Bromide—Bromide of sodium, 1.280 grains; red elixir to make 16 fluid ounces; mix and filter.

Elixir of Ammonium Bromide—Ammonium bromide, 640 grains; red elixir to make 16 fluid ounces; mix and filter.

make 1000 grams. Dissolve the two potassium salts in 15 cc. of water, and the tartaric acid in 25 cc. of diluted alcohol. Mix the two solutions, shake, and place in ice water for half an hour, occasionally shaking. Filter through a small, rapid-acting white filter into a bottle graduated to 75cc. Carefully allow the liquid to drain, and wash with small successive portions of diluted alcohol until the requisite quantity of filtrate (75 cc.) is obtained. Dilute this with 275 cc. of water, add the sugar, dissolve by agitation without heat, and bring the measure up to 1000 grams by the addition of sufficient water. The addition of the acid filtrate to the previously prepared syrup will answer equally well, and is more expeditious. To restore syrup of hydriodic acid which has become colored, the author recommends shaking with 3 to 5 per cent. of purified animal charcoal and filtration.

Tasteless Tincture of Ferric Chloride (Drug. Circ.)—Citric acid, 2176 grains; sodium carbonate, 4,000 grains; distilled water, 6 fluid ounces; alcohol, a sufficient quantity to make 16 fluid ounces. Dissolve the citric acid in the distilled water and neutralize with the sodium carbonate. Mix the solution with the solution of chloride of iron and add a sufficient quantity of alcohol to make 16 fluid ounces.

## DIPHTHERIA ANTITOXIN AND ITS RECOGNITION BY THE U. S. PHARMACOPOEIA.\*

By JOSEPH W. ENGLAND.

At the meeting of the American Pharmaceutical Association, held in Richmond, May, 1900, the writer read a paper urging the pharmacopœial recognition of diphtheria antitoxin. Since that time a new edition of the German Pharmacopœia has been issued, and for the first time in the history of pharmacopœias diphtheria antitoxin has been recognized.

The importance of the official recognition of antitoxin cannot be overestimated. Fortunately, antitoxin has been prepared in the past by reliable firms, but the only way to safe-guard its quality in the future, and prevent unscrupulous firms marketing spurious products, is to officially recognize it, following somewhat the lines of requirements of the German Pharmacopœia.

This authority, after defining diphtheria antitoxin as "blood serum from horses, immunized against diphtheria poison," provides for a manner of testing and selling. It requires also that a vial of the liquid shall be labeled with the name of the maker, the content of immunizing units in each cubic centimetre, and the total number of units in each vial. The liquid has the odor of the preservative (trikresol or phenol), and must not contain more than a slight precipitate. The serums are well numbered by Governmental authority, and after their numbers have been called in are not allowed to be dispensed.

It will be noted especially that the contents of immunizing units in each cubic centimetre, and the total number of units in each vial are required to be stated on the label. This is an admirable provision, and with the official recognition of antitoxin by the United States Pharmacopœia it should be required. It is to the credit of the American manufacturers that one of their number was the first in the world to protect the quality of antitoxin by dating each package with its "life," so that old or weakened antitoxin could not be administered. The numbering system of the German Pharmacopœia does not compare in simplicity and efficiency with the dating system.

As a class, the serum products have come to stay. While many remedies after introduction, fall into disuse, the few that survive are added to the list of "the tried and the true." Never before in the history of medical practice has such strenuous efforts been made to ascertain the exact truth regarding new remedies, and their limitations in disease treatment as to-day, and while whim and fancy may have some influence in affecting the life of a new remedy its own inherent

possibilities for good is really the determining factor, otherwise there could be no progress in medical practice.

One of the most important of these serum products is diphtheria antitoxin. This is pre-eminently an emergency remedy. When it is wanted, it is wanted at once. The retail pharmacist is the natural source of supply for it, and it is imperative for him to keep a constant stock in anticipation of demands and good business policy to acquaint his physicians of this fact. He is frequently asked for information regarding diphtheria antitoxin, viz: Dosage, safety of administration, how and when necessary to repeat, etc. The writer shall emphasize those points which seem to have practical value.

Briefly, diphtheria antitoxin is prepared by a reaction between the tissues of horses and injected diphtheria toxins, whereby an antitoxin is formed. To prepare the toxins, diphtheria bacilli are grown in faintly alkaline bouillon; toxins are produced and the bacilli are killed by the addition of tri-kresol, and their dead bodies filtered out.

The strength of the toxin solution is determined by its injection into guinea-pigs, and it is then injected in gradually increasing amounts into horses until trial bleedings demonstrate that the animal will produce antitoxin of sufficient strength to be valuable, when full bleedings are made, this period being from four to six months. The blood is collected in sterile bottles, set aside for a time to clot, and the serum is pipetted off and preserved with trikresol. The serum is then standardized, the standardization being expressed in immunizing units. A unit is the amount of antitoxin necessary to protect a standard weight guinea-pig (one-half pound in weight) against 100 times its minimum fatal dose of toxin. The finished product is placed in glass tubes containing from 250 units to 500 units to each Cc., and hermetically sealed.

In the making of this diphtheria antidote the natural processes that take place in a human body infected with diphtheria are duplicated in the horse, with this difference: That in the human body the diphtheria organisms multiply with almost unthinkable rapidity and as rapidly develop virulently poisonous toxins (which are the causes that bring about death), while in the horse its body is not infected by the diphtheria bacilli at all, but subjected to a toxin free from bacteria, develops an antitoxin capable of combating diphtheria and its effects in the human body in the same manner as does the body itself.

In other words, when antitoxin is used in the treatment of diphtheria, the natural immunity of the human body is greatly increased, just as we may give certain enzymes—diastase, pepsin, pancreatin, papoid, etc., to fortify the natural digestive processes.

Commercially, antitoxin is sold in this country in vials containing either, (1) over 250 units in each Cc., or, (2) over 500 units in each Cc. In Germany, according to German Pharmacopœia, it is sold in vials containing a total of from 100 to 3,000 units, the general range of doses in Germany being from 200 to 1,500 units; antitoxin containing over 300 units to each Cc. being called high potency antitoxin.

In this country much more successful results in reducing the mortality rate in diphtheria have been achieved than in foreign lands, and this has been brought about by the fact that American physicians inject antitoxin earlier in the disease, and inject a far larger number of units. The death-rate from diphtheria abroad is fully ten per cent.; in this country it is one-half that. Where the Germans, for example, inject usually from 200 to 1,500 units, the Americans have been using from 500 to 1,000 units for immunizing doses and from 1,000 to 3,000 units for curative doses, doubled in quantity at the second injection, if necessary—the trend of practice being distinctly toward still higher doses—and the results of the American practice speak for themselves in its cutting of the death-rate in two.

The advantage of using high potency antitoxin rests in the fact that less volumes are required for

\* Read before the St. Louis meeting of the American Pharmaceutical Association, September 19, 1901.

injections, and the less the volume the more rapid the absorption. While the high potency antitoxin weakens more quickly than the low potency, it can lose a much larger number of units and still remain much more effective than a weakened low potency serum. The disadvantage of using very high potency serum (i. e., 500 units and over to each Cc.) rests in the fact that as few horses yield it the supply is limited. The American physicians use very high potency serum for very grave cases, and the lower potency serums for average cases. The supply of antitoxin containing 250 or 300 units to each Cc. is practically unlimited. If the Pharmacopoeia recognizes diphtheria antitoxin, it would seem to be the part of wisdom to follow the general trend of medical practice toward larger doses, and require not less than 250 to 300 units in each Cc. or more, if practicable. In this way the usual dose of from 2 to 8 or 10 Cc. would represent from 500 to 3,000 units or more.

The limit of dose of antitoxin that may be safely administered has never been definitely fixed. In a most interesting and instructive paper, by Dr. John H. McCollom, of Boston City Hospital, entitled a "Plea for Larger Doses of Antitoxin," published in the "Medical and Surgical Report of the Boston City Hospital," for 1901, he reports upon 5,000 cases of diphtheria, in which were employed from 5,000 to 10,000 units as initiatory doses, repeated every four hours, and as much as 60,000 to 100,000 units administered in from 12 to 24 hours.

In the class of apparently hopeless cases where further or any administration of antitoxin has been heretofore thought to be futile, it has been proven beyond a question of doubt by Dr. McCollom that antitoxin has a positive value and should be administered in all stages of the disease. It matters not how advanced or severe the conditions may be, antitoxin should be administered in large doses, frequently repeated. The absolute safety to the patient of large doses of antitoxin has been demonstrated.

Probably one of the most frequent inquiries made by physicians is, how much antitoxin is it safe to administer? In reply to this it may be stated, as proven by the experiments of Dr. McCollom, from 500 to 100,000 units, according to the severity of the type; a repetition of dose should be made at intervals of not less than 4 to 6 hours, or more often if necessary. The treatment being perfectly harmless, there can be no danger of over administration; the only danger lies in insufficient amounts being administered.

For immunizing the dose is from 500 to 1,000 units; children require as large a dosage as adults, since they are much more susceptible to the disease.

The following interesting laboratory experiments demonstrating the necessity of administering sufficient antitoxin or else no beneficial results, will be noted:

Where 10 units of antitoxin have saved from death a guinea-pig poisoned with toxin, 9 units of the same serum, used under the same conditions, with a guinea-pig of the same family, weight, etc., have failed to save life.

This illustration is merely pointed out as a cause why it is that when an insufficient amount of the remedy has been administered there is no apparent benefit from the treatment.

Another feature is interesting, likewise, and that is the necessity of administering double the amount when the dose is repeated. In diphtheria there is an active bacilli developing and growing at a rapid rate. When an insufficient amount of antitoxin is administered, by the time a repetition of the dose is made a sufficient time has elapsed for this bacilli to increase and multiply, and develop toxins, which latter are rapidly absorbed by the system, and the conditions are as bad, if not worse, than they were at time injections were first made, consequently the same amount of a second injection would not be of benefit, whereas double the amount of antitoxin would probably overcome and neutralize the toxins.

Antitoxin should be kept in a moderately cool

place, ice-chest preferred, and it should be kept from exposure to light.

Antitoxin has a tendency to gradually lose strength, and for this reason should be dated with the date when it is to be returned for fresh stock. The usual life of an antitoxin before it begins to deteriorate to any appreciable extent is about six months.

Should antitoxin be administered, after the expiration of the time that it should have been returned, its administration would be perfectly safe, but the product would not be of full strength, and with a life-saving remedy no hazardous risks should be taken.

## TRADE INTERESTS.\*

By JOHN STUCHLIK.

A learned physician told me not long ago that "he is twice a man who speaks more than one language." That is the condition of the art and science of pharmacy, which demands that the pharmacist of the present generation be twice a pharmacist.

Taking it for granted that the pharmacist of today is competent and possesses a mastery of his vocation, coupled with all the necessary adjuncts, namely, ability, intelligence, capital, the arrangement of his store as regards its neatness and cleanliness, prudent purchasing, economy and a good location, all these are not sufficient for the modern pharmacist. The present condition is such that the pharmacist must advertise. Advertising has been defined as the art of attracting attention to your business in such a manner as to inspire confidence in your goods, your prices and your business methods.

The methods employed in attracting customers are so many that I will enumerate only those that I have found to be the most profitable at our stores. A profitable and inexpensive method of advertising is by vigilant attention to your windows. Display your preparations generously with appropriate prices and placards, and keep your windows scrupulously clean. Keeping your windows clean and artistically arranged requires work, but if you want results you must make window dressing your hobby. The results from this inexpensive method of advertising will be beyond your expectation. Circulars distributed from house to house are effective, and can also be made effective and attractive by having a number of them framed and hung in the stores of your neighboring business men. Booklets are a profitable method of advertising, but they lose their effectiveness when not distributed or mailed with samples. A scheme of advertising that is quite popular is the use of premium tickets. Newspapers charge such high rates that it is profitable only to druggists whose stores are centrally located and easily accessible by all street railways. This, however, will lead into the patent medicine traffic. Fortunes have been lost through the folly of pharmacists in not pushing aggressively their own preparations. Let your individuality be felt by your politeness, and by rigid rules of making a profit on your goods at fair prices. The successful pharmacist is he who improves his methods and keeps the public impressed with his enterprise.

Advertising should be made a special department in your store. The present conditions demand that you ever be on the alert to the body politic, namely, the public. I believe that the most reliable way of doing business with the public is by cash transactions. Keeping accounts involves much labor, time and expense. The argument that if you refuse credit to your customers they will be offended is in reality not the case, because it is only those who do not expect to pay at all that will feel offended. Be polite and give unfailing and uniform courtesy to the public, especially to the ladies and children. The public prefers to deal with a man who has character and intelligence, rather than with one who is slovenly and ignorant. Put on an air of business, but do not attempt to soar too high. If you do, it will embarrass you in many

\* Prize essay, read before the Illinois Pharmaceutical Association.

# QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

### Glucose and Saccharin as Syrup Substitute.

(J. T. B.) "Kindly let us know whether a combination of glucose and saccharin can be safely used as a substitute for syrups made from granulated sugar? Will such a mixture stand any reasonable temperature with out fermenting? If so, and it can be safely used, what proportions would you advise?"

We do not recommend a solution of glucose and saccharin as a substitute for syrup made from cane sugar. Further, the substitution of a mixture of this character may be looked upon as being antagonistic to the pure food laws of some States. The desirability of utilizing glucose and saccharin in food products and their action upon the human economy have caused much discussion among medical men who do not by any means agree in their conclusions.

We are aware that mixtures of this character are employed in the conserving of fruit and the preparation of fruit juices, cordials, etc., the "syrup" being prepared about as follows: Put into a bright polished or well tinned copper boiler or kilograms of the best white glucose syrup and heat till it boils gently, the operation being best conducted in a closed boiler by steam, as then no alteration in the color of the syrup is likely to take place. Then remove from the fire and stir in with a wooden spatula, until dissolved, 70 grams of refined saccharin. Lastly, enough water (boiling) is added to make the quantity measure two liters when cold. It is stated that one liter of saccharin syrup so prepared corresponds in its sweetening power to 1 kilogram of sugar or to 1 liter of syrup containing 1 kilogram of syrup and may be utilized in the same way. Saccharin possesses antiseptic properties, and mixtures of the above character will probably stand any reasonable temperature without fermenting.

### Bust Developer.

(J. T. B.) Some physicians, we believe, have recommended fluid extract of saw palmetto in the treatment of atrophied glands, including those of the mammae. However, many of the so-called "bust developers" are simply cold creams or salves perfumed with some suitable odor and colored as desired. Their application is always accompanied by massage, which assists the skin in the absorption of the fat, thereby imparting a fullness to the skin and appearance of the bust. The application used has but little to do with the "development." That is due to the exercise, the right kind of a diet and perfect hygienic surroundings. Any cold cream will answer, though the following is said to be a typical preparation:

|                           |            |
|---------------------------|------------|
| Oil sweet almond .....    | 100 parts  |
| White vegetable wax ..... | 25 parts.  |
| Spermaceti .....          | 100 parts. |
| Glycerin .....            | 250 parts. |
| Boric acid .....          | 12 parts.  |
| Water .....               | 500 parts. |

Dissolve the boric acid in the glycerin and mix the solution with the oil, wax and spermaceti. Melt together with very gentle heat, stirring constantly. When homogeneous pour in a warm mortar, add the water, and beat energetically until it forms a smooth mass. In case the mixture becomes lumpy, remelt, and again beat up.

Another formula is this one:

|                                 |        |
|---------------------------------|--------|
| Woolfat .....                   | ounce  |
| Cadyver oil .....               | ounces |
| Perfume, any desired odor ..... | enough |

Sponge each breast for ten minutes with cold water and rub with a coarse towel for five minutes. Then rub the above unction well into the skin.

### Vegetable Hair-Dye.

(J. H. M.) See this journal March 14, 1901, page 278. In this connection Gawalowski (Pharmaceutical Formulas) proposes the use of ammonium anaacardate as a vegetable hair dye. The pericarp of anacardium occidentale, or cashew-nuts, contains, besides tannic acid, two principal organic constituents. One of these, cardol, is an oily substance, possessing strongly irritating qualities; the other, obtained uncombined from the investing membrane of the kernel, is anacardic acid, which is said to be perfectly harmless. The principals may be isolated by evaporating an ethereal extract of the pericarp and treating the residue from tannic acid by water. The tannin-free residue is then dissolved in 15 to 20 parts of spirit and well shaken with freshly precipitated lead hydroxide, filtered quickly and washed with spirit. During these processes the air should be excluded as far as possible. The precipitate is a fairly pure anaacardate of lead. The cardol remains in the spirit. The lead precipitate is treated with ammonium sulphide and filtered; the filtrate, besides the surplus ammonium sulphide, contains ammonium anaacardate. When cold sulphuric acid is added to it, the anacardic acid separates in the form of a soft mass, which soon hardens. This is pressed between layers of filter paper, and, when dissolved in ammonia, constitutes the hair-dye, and is miscible with water.

By wetting the hair with this liquid, and afterwards using a comb dipped in a solution of sulphate of iron, a lighter or darker shade of color is imparted, which is quite durable. The anacardic acid may also be made into a pomade, and oleate instead of sulphate of iron may be used to bring out the color.

### Normal Salt Solution.

(J. H. M.) "Normal salt solution," as it is termed, is simply a solution of common salt in water. It is called "normal" because it is made to correspond in specific gravity very closely with the normal serum of the blood, whence the term normal or physiological salt solution. It is prepared by dissolving six grams of salt in a liter of water, preferably distilled (approximately a heaping teaspoonful of salt to a quart of water). The solution, when sterilized, is ready for use. It is rapidly coming into use in many hospitals and is taking its place in aseptic surgery, replacing the bichloride and carbolic solutions, and even simple sterilized water. This fluid is said to possess the same osmotic pressure as the liquid of living tissues, and is called by some authorities an "isotonic" solution. By its use the transference of water or salt from the tissue to the fluid is claimed to be partly prevented, and the normal environment of the living cells is much less disturbed than it would be by distilled water.

### To Remove Mildew.

(J. S.) Mildew is the hardest of stains to remove and cannot be taken out of linen unless the effort is made soon after it appears. A very fresh light stain may be treated successfully by covering it with table salt wet with lemon juice and placing it on the grass in the sun. According to the Era Formulary the following is the best remedy: Mix soft soap with powdered starch, half as much common salt, and the juice of a lemon. Spread this mixture thickly on both sides of the mildewed linen and then lay the fabric on the grass in the sun. Repeat the operation two or three times a day, leaving the cloth out over night as is done in bleaching.

An old time method of removing mildew from colored cotton goods is to soak the goods for one or

two days in sour milk, then rinse in water and wash in strong soapsuds. For silk goods rub the spot with a piece of flannel dipped in whiskey, then iron on the wrong side, after placing on top a moist cotton cloth.

#### SkIn Cream for Collapsible Tubes.

(J. T. B.).

- (1) White vaseline ..... 6 ounces  
 White wax ..... 1 ounce  
 Spermaceti ..... 5 drams.  
 Sub-chloride bismuth ..... 6 drams.  
 Oil of rose ..... 6 minims.  
 Oil of bitter almonds ..... 1 minim.  
 Rectified spirit ..... ½ ounce.

Melt the vaseline, wax and spermaceti together, and while cooling incorporate the subchloride of bismuth (in warm mortar). Dissolve the oils in the alcohol, and add to the fatty mixture, stirring all until uniform and cold. In cold weather the quantities of wax and spermaceti may be reduced.

- (2) Lanoline ..... 1 ounce  
 Almond oil ..... 1 ounce  
 Oxide or zinc (powder) ..... 3 drams.  
 Extract of white rose ..... ½ drams.  
 Glycerine ..... 2 drams.  
 Rose water ..... 2 drams.  
 Mix.

#### Bleeding at the Nose.

(S. H.) Authorities on the treatment of common accidents and diseases generally direct to lay the patient his full length on the floor or on a table and stretch out his arms behind his head, to their full length, on a level with his body; unloose the collar and apply wet towels or ice to the back of his neck. If the bleeding continues obstinate put a plug of lint in the nostril steeped in a strong solution of alum and water. Sometimes a solution of gallic or tannic acid is similarly employed or even injected up into the nose. A common domestic remedy (for children) is to place a large cold door key behind the neck and between the shoulders, compressing at the same time the nostril with the finger for a few minutes. Many other remedies have been suggested.

#### Scalp Cleaner (Powder).

(H. K. X Co.) Try one of the following:

- (1) Borax ..... 1 ounce  
 Sodium carbonate ..... 1 ounce  
 Camphor ..... 20 grains  
 Oil of rosemary ..... 10 drops  
 (2) Borax ..... 3 ounces  
 Sodium carbonate ..... 3 ounces  
 Quillaia ..... 3 ounces  
 Perfume ..... to suit  
 (3) Borax ..... 3 ounces  
 Camphor ..... 80 grains  
 Cutchical ..... 40 grains  
 Oil of rosemary ..... 25 drops

Powder the dry substances and mix well. May be put up in half-ounce packages, each of which is sufficient for one pint of water.

#### Floor Stain.

(L. J. P.) Caustic potash is usually employed for staining floors. Here is a formula from the Techno-chemical receipt Book: Boil 25 parts of fustic and 12½ parts of Brazil wood with 1,000 parts of soapboiler's lye, to which has been added 12½ parts of caustic potash. When the liquid is boiled down to 700 or 800 parts, add 3½ parts annatto and 75 parts of wax, and when this is melted stir until it is cold. The mixture is of a brown-red color, and the above quantity is claimed to be sufficient to keep a floor in good condition for a year by applying it once a week, and rubbing it on with a brush.

#### Dyeing White Fur.

(J. M. R.) To dye white fur black rub into the hair, with a brush, a solution of ½ ounce of silver nitrate in 1 pint of soft water, and hang in the sun

THOMAS VOEGELI, Minneapolis.  
 Second vice-President of the N. A. R. D.

to dry. Afterward, apply, in the same way, a solution of 1 ounce of potassium sulphate in pint of water. Dry in the sun; afterward rub off and dry in the shade; work occasionally while drying. To intensify, apply a solution of pyrogallic acid before rinsing.

#### Vaginal Suppositories.

(L. T.) The formula you supply is incomplete and has all of the earmarks of having been taken from the advertising literature of some "specialty" manufacturer. We cannot give the working process.

#### Removing Tattoo Marks.

(M. W.) See issues of the Era for August 1 and August 29, of the present year, pages 131 and 254, respectively.

#### Manufacturer of Paper Vests.

(J. N. M.) Paper vests are manufactured by F. E. Rowen & Co., 521, Sixth avenue, this city.

#### Hectograph.

(R. Z.) See this journal, Feb. 21, 1901, page 205.

THE COCOANUT PALM is, according to the "Monthly Bulletin of the Bureau of the American Republics," found in practically all tropical regions, in many places furnishing the principal article of food for the support of the inhabitants. The space devoted to the culture of this most useful tree is estimated to cover three million acres. Of this territory, one million acres are situated in South America; two hundred and fifty thousand in Central America; and thirty-five thousand in the West Indies. The total number of trees is estimated to equal about three hundred millions, and the yield of coconuts between five and six billions. The culture of the coconut has greatly increased in recent years. About five hundred of the nuts are required to produce one hundred pounds of coconut oil, and about two hundred and forty for one hundred pounds of copra, a preparation of the dried kernel. The residue obtained in the preparation of oil is employed for fodder and as a fertilizer. Large quantities of the kernels are also cut in shreds and dried for use in baking and confectionery. About forty million nuts are annually employed for this purpose. The hulls of the nuts yield fibres which are utilized for various purposes.

# NEWS DEPARTMENT.

## N. A. R. D. NOTES.

The following are the officers of the association for the year 1901-1902: President, James W. Seelye, Detroit, Mich.; first vice-president, R. K. Smith, Buffalo, N. Y.; second vice-president, Thos. Vogel, Minneapolis, Minn.; third vice-president, B. E. Pritchard; Secretary, Thos. V. Wooten, Chicago, Ill.; treasurer, Rudolph S. Vilt, St. Louis, Mo.

The members of the Executive Committee are as follows: Simon N. Jones, Louisville, Ky., chairman; Jas. W. Seelye, Detroit, Mich.; F. E. Holliday, Topeka, Kan.; Jno. C. Gallagher, Jersey City, N. J.; W. E. Bingham, Tuscaloosa, Ala.; F. W. Meissner, La Porte, Ind.; Chas. Fleischer, New Haven, Conn.

The following are the resolutions adopted by the association at its recent convention in Buffalo, in conformity with the recommendations of the Committee on Resolutions: Resolved, that we commend the forceful and able address of President Anderson, and recommend that the thanks of the association be tendered him for the discharge of the duties of his office and the valuable recommendations contained therein, which recommendations have been voted upon in the different resolutions that follow.

### Resolution "A"—Organization.

Resolved, That the Secretary of the N. A. R. D. is instructed to proceed with the work of local organization throughout the country, subject to the action and approval of the Executive Committee, as rapidly as the condition of the finances of the association and the training of competent organizers will justify.

That the Secretary is authorized, with the approval of the Executive Committee, to employ such organizers as the territory to be organized may seem to require.

That inasmuch as the formation of local associations and the adoption of schedules are calculated to bring immediate financial benefit to the members of such associations, it is directed that organization work should be as nearly self-sustaining as possible, and the Secretary is authorized, with the approval of the Executive Committee, to provide for the collection from the members of such new associations of an organization fee. In addition to the annual dues to the N. A. R. D., of such amount as may be essential to meet, approximately, the cost of organizing the territory as thoroughly as it can be organized, and the Secretary shall issue to all organizations that may be formed a certificate of membership to each of its members, which certificate shall also show the affiliation of the association with the N. A. R. D.

That the organization work conducted in a State in which the State Pharmaceutical Association is affiliated with this body shall be done with the advice, knowledge and co-operation of the State association.

### Resolution "B"—Reduction of Prices on Proprietaries.

Resolved, That inasmuch as the N. A. R. D. has been largely instrumental in securing the repeal of the stamp act on proprietary medicines, the association feels strongly its right to expect that manufacturers who have advanced their prices to the retail trade to cover the cost of this tax should now reduce their prices to conform to those in existence prior to the imposition of the tax.

That we commend the action of those proprietors who promptly reduced their prices when the tax was repealed. That the Secretary is instructed to prepare a list of all proprietors who advanced their prices, and have not reduced them since the repeal of the tax. The Executive Committee shall consider any special reasons given by each of these manufacturers who have not reduced their prices, accompanied in each case by the recommendation of the Executive Committee with reference thereto.

### Resolution "C"—Non-Tripartite Goods.

Resolved, That while the tripartite plan is intended to control the sale of proprietary goods only, the association desires to again commend the action of those manufacturers of pharmaceuticals and other products who have uniformly recognized the principles of the plan.

That we renew our recommendation that the goods of such manufacturers be added to preferential consideration at the hands of the drug trade.

That the recommendation be brought to the attention of every association in membership, by the Secretary of the National Association.

### Resolution "D"—The N. A. R. D. Plan.

Resolved, That the results of the causes and plans of the N. A. R. D. during the past year for the betterment of drug trade conditions is a practical demonstration of the benefits of organized effort, and furnishes gratifying encouragement for the continuation of those policies and plans.

That we urge upon all manufacturers of goods sold to the drug trade, and all jobbers, the advantages to be gained from a loyal and vigorous maintenance of the plans jointly adopted.

That local associations not now reaping the benefits of the tripartite plan are urged to renew their efforts at organization upon such lines as will offer most satisfactory results, calling upon the Secretary and Executive Committee for such assistance as they may deem necessary to success.

That in the enforcement of the tripartite plan all names intended to be listed as aggressive cutters be submitted to the Executive Committee; the Secretary shall duly list the names and notify the necessary person.

### Resolution "E"—Change in Basis of Representation, Etc.

The committee recommends that Article III on Membership be amended by the substitution of the following section for Section 2:

"Section 2. Each State and local association shall be entitled to one delegate for each fifty active members, or fraction of fifty members. Such delegates shall be actively engaged in the retail drug business."

The only effect of the amendment above recommended is to change the basis of representation from one hundred members to fifty members, which, under a form of local organization throughout the country, would equalize the representation between the city districts and the country districts more nearly than under the present basis.

We recommend that the Fourth By-Law be amended to read as follows:

"Fourth: The fiscal year shall be identical with the calendar year, and the dues of the self-affiliated associations shall be payable at the beginning of the fiscal year. The collection of the dues is placed in the hands of the Executive Committee and the Committee shall have the power to drop from the membership roll any association which has not paid its dues for any preceding fiscal year."

### Resolution "F"—National Legislation.

Resolved, That we commend the efforts of the Committee on National Legislation in securing the repeal of the stamp tax on medicinal preparations, and express appreciation for the assistance rendered by the members of the National Wholesale Druggists' Association, the Proprietary Association of America, and any other persons in accomplishing the repeal.

### Resolution "G"—Trademarks and Patents.

Resolved, That in accordance with the suggestion of the Committee on Trade-marks and Patents regarding pharmaceutical products, we reaffirm our declaration that it is an indispensable principle of justice that the Government should not grant a patent on the product itself, but should confine such patent protection to the process of manufacture. To patent the product is to create a monopoly, and retards progress in the healing arts.

That the Committee on Trade-marks and Patents, in conjunction with the Committee on National Legislation, is instructed to prepare and distribute to the organizations in membership, through the office of the N. A. R. D., a memorial urging upon Congress favorable action on this subject.

That in the preparation of such memorial the said committee is requested to embody the suggestions contained in the proposed "Act Amending the Patent Laws of the United States," contained in the report of the Committee on National Legislation.

That all association in membership and all retail druggists are urged to promote such favorable action by Congress at the earliest date practicable.

### Resolution "H"—Government Competition.

Resolved, That in accordance with the recommendations of the Committee on National Legislation concerning the manufacture of vaccine and biologic products, the association recommends that the body affiliated with the N. A. R. D. use their efforts with their respective Congressmen to secure the discontinuance by the Government of the manufacture of the products in competition with private enterprise.

**Resolution "I"—Finances.**

Resolved, That if it becomes necessary, in order to promote most actively the work of the association, the Executive Committee may instruct the Secretary to ask for contributions from the associations in membership of such amount as they may feel inclined to make.

Steps have already been taken by the National Executive Committee to carry out the association's instructions to test the merits of the Price Restrictive Plan, beginning in the State of Illinois. Counsel has been consulted, and all possible speed will be made in accomplishing desired ends. Details will be furnished the affiliated associations from time to time, that all may inform

themselves as to the progress being made. Local associations or individuals desiring information regarding the Price Restrictive Plan may obtain suitable literature from Secretary Thos. V. Wooten, 153 La Salle street, Chicago. Suggestions regarding the plan and its enforcement will be gratefully received by the committee. These suggestions will be sent to the Secretary.

The National Executive Committee is in possession of proof that it is the intention of the Dr. Green Nervura Co. to observe faithfully hereafter the provisions of the tripartite agreement. This firm has not only signed this agreement, but has given evidence that it will hereafter confine its sales exclusively to the wholesale distributors on the uniform list.

**NEW YORK AND VICINITY.****MANHATTAN PHARMACEUTICAL ASSOCIATION.**

The Manhattan Pharmaceutical Association held its regular monthly meeting in the College of Pharmacy building Monday evening, October 21. J. Maxwell Pringle, Jr. in the chair. The report of G. H. Hitchcock the delegate attending the N. A. R. D. Convention at Buffalo was read and brought forth considerable discussion. The fact that the method of voting by proxy enabled certain delegates to practically control the most important measures voted on at the convention received much adverse criticism. Felix Hirsman, one of the New York State Pharmaceutical Association's delegates was present and endorsed the report as presented by the Manhattan delegate. He spoke particularly of the voting done at the convention by proxies, saying that one of the members from the West had a large number, and with the absence of these proxies the results of the convention would have been different. The report was received and adopted and ordered to be spread on the minutes.

Chairman G. H. Hitchcock of the Legislative Committee reported that it was about decided that the legislative committees of the different local associations of Greater New York would hold a conference with the Legislative Committee of the New York State Association some time this month, probably during the sessions of the State Board of Pharmacy, October 28 and 29. The committees will consider plans to have a representative at Albany during the coming sessions of the legislature, to look after the interests of retail pharmacists. The following were elected members of the Association: John H. Wall, Eugene J. Ward, William Schapira, Richard H. Luthin, Charles M. Rosenbaum, Max Montescr, Charles U. Grube, of Manhattan Borough and George H. Roberts, Port Richmond, S. I.

No action was taken in regard to the associations' support or non-support of the Worcester Plan, but an informal discussion of its merits, etc., took place after the meeting adjourned. One prominent member remarked that he did not think the Worcester Plan could be adopted as it would be impossible to get the manufacturers to agree to it. He said, however, that some plan to better conditions would probably be brought before the Association before a great while.

**PASSED THE EXAMINATIONS.**

The Eastern section of the New York State Board of Pharmacy held a meeting October 22, when the result of the examination held October 16 was announced. The following applicants for registration were successful and were given certificates as pharmacists: Robert C. Bicknell, Robert P. Fallon, Arnold Jerrawitz, George A. Lewis, Anthony W. Paulus., Fortunato Cianciulli, Edward P. Green, Aram Juster, Saul V. Louis, Jos. A. Simpson, Frank Cirota, Edward Holt, John A. Kenney, Michael J. Parvin. There were thirty-four applicants who took the examination.

**RETAIL DRUGGISTS' BOWLING ASSOCIATION.**

The Retail Druggists' Bowling Association held its annual meeting Tuesday, October 22, and elected the following officers: Charles H. White, president; R. H. Tim-

mermann, vice-president; L. W. De Zeller, secretary; J. Maxwell Pringle, Jr., treasurer; and George E. Schweinfurth, captain. Starr's alleys at Fifty-ninth street have been engaged and the association will meet there for bowling every Tuesday evening during the season. Several games were rolled after the meeting adjourned Tuesday evening, but with the exception of S. F. Haddad who scored 200 in one game, the bowling of the members was not up to the standard.

**NOTES.**

—A prominent member of the N. W. D. A. in New York tells a good story on another member of the association who attended the Old Point Comfort convention. When the preparations for the trip to Jamestown were under way the member referred to was debating whether he should wear his silk hat or cap and after consulting several friends decided that as they were "going to the beautiful and historic city of Jamestown" the hat would be the proper headgear. The New York man says that the expression on the silk hat man's face when the party landed at Jamestown, furnished considerable amusement to the members who were "in the game". The next visit to Jamestown will doubtless find the member wearing a cap, as he thinks the society people of that "city" do not appreciate silk hats as they should.

—James F. Ballard, of Ballard's Snow Liniment Co., St. Louis, Mo., was in New York several days last week making purchases for the Winter trade. Mr. Ballard said that the druggists in St. Louis are prospering and that the last year's business has been much more satisfactory than for many previous years. Price cutting has been, to a great extent, abolished, many prominent druggists adhering to the rates provided by the local association's schedule. Mr. Ballard doubted if the majority of the pharmacists in his city would favor the adoption of the Worcester Plan as business had prospered so during the past year under the Tripartite agreement, they would be rather opposed to trying any new scheme.

—The teams of Dodge & Olcott and of the National Lead Co. were the winners in last week's tournament of the Wholesale Drug Trade Bowling Association. The scores follow: First game—Roessler & Hasslacher Chemical Co., 651; General Chemical Co., 730. Second game—Dodge & Olcott, 825; Roessler & Hasslacher, 824. Third game—Dodge & Olcott, 815; General Chemical Co., 718. Fourth game—Parke, Davis & Co., 715; National Lead Co., 739. Fifth game—Parke, Davis & Co., 765; Seabury & Johnson, 751. Sixth game—Seabury & Johnson, 727; National Lead Co., 735.

—The Drug Clerks' Circle, at a meeting held October 22, elected the following officers for a term of six months: Max Kahn, president; Edward Siman, vice-president; Isaac Leaf, second vice-president; Morris D. Wallach, recording secretary; William Mindlin, financial secretary; Benjamin Halprin, corresponding secretary; L. B. Epstein, treasurer; SaGlicksberg, sergeant-at-arms; Benjamin Halprin, editor; Nathaniel Gilman, associate editor. A resolution was passed to have a letter addressed to the drug clerks of Greater New York, requesting them to join the Drug Clerk's Circle.

—One of the paintings on exhibition in the ladies

room at the Drug Club for some time has been purchased by A. Plaut, of Lehn & Fink. The piece is from the brush of Warren Sheppard, is entitled "Moonrise on the Long Island Coast" and has received much favorable comment from competent critics. The painting will remain in the ladies room until Mr. Plaut is able to make room for it in his already quite extensive collection.

—The handsome silver cup of the Wholesale Drug Trade-Bowling Association, which was won by the Seabury & Johnson team last season, has been placed on exhibition at Reid's alleys, No. 200 Church street. The coveted cup is contested for each season, and can never become the property of any one team. The winner in the association tournament holds it from one season to the next.

—Some of the retail pharmacists are taking an active part in the political campaign in this city. Dr. D. A. Casella the well known druggist at 507 Pearl street is out as the fusion candidate for alderman against T. Foley, and druggist John Goldwater is fusion candidate for alderman in the Bronx.

—Frederic H. Humphreys, president of the Humphreys' Homeopathic Medicine Co., has been confined to his home at Morristown, N. J., several days. Mr. Humphreys while riding a spirited horse was thrown and received quite serious injuries to his shoulder. He is now convalescing and will soon be around again.

—The pharmacists at Derby, Conn., closed their establishments between the hours of 9 and 12 a. m. Thursday, October 24. This was done out of respect for the late Dr. La Bonte, the funeral services being held that day. Dr. La Bonte was a most popular and prominent physician of Derby, and a member of the board of health.

—J. N. Benjamin, of M. F. Benjamin's Sons, River Head, L. I.; George R. Rogers, Huntington, L. I.; F. M. Allen, of L. Rockfeller Co., Englewood, N. J.; A. E. Pickard, Roslyn, L. I., and G. W. Jacques, of South Amboy, N. J., were among the visiting pharmacists in the city last week.

—Wm. L. Haas, of Wm. L. Strauss & Co., is now in California and has sent in very encouraging reports relative to the prosperity of the druggists in that State. The outlook for holiday trade is said to be very promising. Mr. Haas is expected in New York about November 1.

—Out-of-town visitors in the drug section October 22 were Frank Nau, of Portland, Ore.; C. H. Krauter, Youngstown, O.; O. A. Jones, Auburn, Me.; J. K. Lawrence, Stamford, Conn., and R. C. Tuthill, Middletown, N. Y.

—Horace E. Burrough, a member of the firm of Burrough Bros. Manufacturing Co., the Baltimore manufacturing pharmacists, spent several days in New York last week. Mr. Burrough was present at the N. W. D. A. convention at Old Point Comfort.

—Several New England pharmacists visited the trade in New York last week, among the number were: Charles West, of The Eastern Drug Co., Boston; Henry T. Corson, New Bedford; W. D. Wheeler, Boston and Fred. A. Hubbard, Newton.

—W. M. Warren, general manager of Parke, Davis & Co., and W. H. Holden, superintendent of the laboratories, were in New York last week. Mr. Holden was on a vacation trip, accompanied by his wife, and was called home on account of serious illness in his family.

—The stores formerly owned by Dr. Rundle have been sold to the managers, C. Bausch taking the pharmacy in Garfield, N. J. and Walter Peters acquiring possession of the store at Passaic and Third avenues, Passaic, N. J.

—Mrs. W. K. West, of Toledo, O., one of the most prominent lady pharmacists in that State, was in New York last week, making purchases for the holiday and winter trade. Mrs. West owns two of the neatest and most successful drug stores in Toledo.

—T. B. Hanna, Jr., a member of the firm of T. B. Hanna & Son, druggists at Denison, Tex., has been in the city several days, making the usual purchases for his firm.

—W. L. Strauss & Co., have just had a new trade mark registered at Washington. The word used is "Wolesco", which is coined from the initials of the firm's name, W. L. S. Co.

—E. H. La Pierre, professor of applied pharmacy at the Massachusetts College of Pharmacy and G. E. Norton, of Boston, Mass., were in the city last week and dined at the Drug Club October 21.

—F. A. Faxon, Jr., of Faxon, Horton & Gallagher, wholesale druggists at Kansas City, Mo., paid a short visit to friends in New York on his way home from Old Point Comfort, Va.

—C. Eschmann, of G. Leipnitz & Co., retail druggists at San Francisco, Cal., made a flying trip to New York last week, but took time to call on a few of his friends in the drug section while here.

—R. P. Hogaland, Boston; John H. Barr, Irvington, N. Y.; J. N. Walker, Carmel, N. Y.; H. N. Clark, Cornwall Bridge, N. Y., and S. Davis, Boonton, N. J., were among the druggists visiting the New York trade October 21.

—John A. Halpern has opened a new drug store at 121st street and Amsterdam avenue. About two years ago Mr. Halpern conducted a store on Third avenue, between 120th and 130th streets.

—Josiah Vaughan, senior member of the firm Vaughan Robertson & Co., Richmond, Va., was in New York several days last week and made the rounds of the down town drug circle.

—F. Geiger, Philadelphia; W. G. Haynes, Gullford, Conn.; A. G. Thomson, Brooklyn, and Emilio Perera, Genoa, Italy, were registered at the Drug Trade Club Thursday, October 24.

—F. S. Stevens has recently returned from a trip to Niagara Falls and the Pan-American Exposition at Buffalo. Mr. Stevens is one of the prominent pharmacists at Bridgeport, Conn.

—W. J. Woodman, of Smith & Woodman, the St. Augustine, Fla., pharmacists, was one of the recent visitors in New York.

—C. T. Pierce, Riverside, Conn., and George E. Tubevoise, New York, were guests of Louis L. Drake, at the Drug Club Friday, Oct. 25.

—A. V. Oxley, formerly a traveling salesman for Seabury & Johnson, now engaged in the drug business at Southington, Conn., was in the city a few days last week.

—W. P. Diggs, manufacturer of proprietary preparations, St. Louis, Mo., was in New York several days last week and called on his many friends in the drug trade.

—W. H. Warren & Co. have moved their pharmacy in Newark, N. J., from 141 Verona avenue to 363 Mount Prospect avenue.

—Lloyd & Terry, druggists at Atlantic and New York avenues, Brooklyn, have sold their business to Adatte & McMaster.

—M. F. Bahnsen, of Hartz & Bahnsen, wholesale and retail druggists in Rock Island, Ill., was one of the buyers visiting in the drug circle last week.

—R. W. Phair, of R. W. Phair & Co., spent several days in Philadelphia last week.

—S. H. Kunstlich has opened a new drug store at No. 48 Monroe street, Passaic, N. J.

---

—The annual meeting of the New Hampshire Commission of Pharmacy was held at the State House, Concord, Oct. 23. The Board organized as follows: President, Dr. Edward H. Currier, Manchester; secretary and treasurer, Geo. F. Underhill, Concord; auditor, Ben. O. Aldrich, Keene. Three candidates passed the Junior examination and will receive certificates as Assistant Pharmacists as follows: Clarence O. Coburn, Manchester; Alan D. Finlayson, Wadpole; Geo. C. Stone, Dover. The second quarterly meeting will be held at the State House, Concord, on the fourth Wednesday in January, 1902. Geo. F. Underhill, secretary.

---

Careful dispensers are properly particular about their labels, pill and powder boxes, and drug envelopes. Retail druggists who want the very finest that skill can produce, are invited to correspond with David Heston & Sons, Frankford, Phila., Pa., whose advertisement is in this issue.

## IN AND ABOUT BOSTON.

### HARD LINES FOR SPRINGFIELD DRUGGISTS.

Boston, Oct. 26.—There appears to be trouble ahead for the druggists of Springfield, owing to the fact that they paid little heed to notices sent out recently by the city marshal advising them of the intent of Section 2, Chapter 434, of the Acts of 1895, which defines what may, and what may not, be sold on Sunday. It seems the law says, in effect, a druggist has no more right to sell toilet or like articles than a general storekeeper can sell groceries, etc. The law, however, provides that a druggist may furnish any article called for by a physician's prescription, and some stores, on orders from reputable physicians, supplied to different customers brushes, ice-cream, candy, soda and other articles. Some of the physicians regarded the matter as a joke, and furnished their friends with prescriptions calling for various kinds of merchandise. The city marshal's order was obnoxious to drug store proprietors and to the public, which has come to look upon soda and ices almost as necessities. The keepers of small variety stores in Springfield, to the number of nearly fifty, formed themselves into a close "corporation" of spotters and spent quite a sum to obtain evidence against the druggists, who are their rivals, on Sundays. The small storekeepers who received warning from the police against selling on Sunday anything except papers, milk and pastry, therefore sold no soda nor candy, but kept a sharp watch on the apothecaries, who, they understood, had also been given warning not to do other than strictly a drug business. The "spotters" had no difficulty in purchasing soda, which flowed freely from many fountains, and they bought candy, toilet articles and various things other than drugs or medicines. They learned that some druggists in the outlying districts had been notified, and that those in the business section were selling almost anything, not having been notified to the contrary. They regarded this discrimination as unfair. The marshal acknowledged that some of the druggists had not been notified. A committee from the variety store-keepers went to the police court to seek redress, and seem bound to make a test case of the matter to determine their rights.

### SALEM'S MAYOR ANTAGONIZES DRUGGISTS.

Boston, Oct. 26.—At Salem, this week, application was made by the thirteen druggists who were granted sixth-class liquor licenses by the board of aldermen for a writ of mandamus to compel Mayor Hurley to sign and issue these same licenses. This he has refused to do ever since the action of the aldermen in the matter, on August 14, and he has raised a question as to the legal right to issue such licenses because Salem is a no-license city; therefore, he has persisted in declining to sign them. The druggists intend to have the matter decided through recourse to the Supreme Court, Boston. Mayor Hurley has retained counsel, and when the case comes up to be argued by the Supreme Court he intends to appear with counsel, and make a fight. He states that if he is beaten in the courts, of course, he will sign the licenses, but he seems confident that he will not be compelled to affix his signature. Salem voted no-license last year by 558 majority, and the mayor feels it to be his duty to see that the people get what they want. As he views the situation, he says "the druggists may know how to mix pills, but when they come to mix the rum business, politics and myself in one mess they'll find it a rather tough proposition."

### Business Is Fairly Good.

Boston, Oct. 26.—With fine cool weather, which comes with the chill of frost in the air, trade has received some impetus. Druggists report that they are putting up about the usual number of prescriptions, and that in the sale of toilet articles and sundries there seems to be a little more than the usual demand. Evening trade in hot chocolate and beef-tea, and like drinks, has started in well, early though it is in the season. In the general market, while trade is pretty good, the druggists are

buying perhaps a little less than they sometimes do, because of its being the last of the month, at which time they usually purchase only just what is absolutely needed. With the jobbers and wholesalers trade is fairly good as regards drugs, with a firm undertone, and much the same may be said of chemicals, except that the demand for them is of less proportion. In dyes and tanning materials trade is moderate at rather steady prices. Only a fair demand for alcohols is found, with no change in prices.

### NOTES.

—The annual meeting of the Independent Pharmaceutical Co., of Worcester, has just been held, at which the election of officers resulted as follows: President, Dr. William J. Delehanty, Worcester; vice-president, Dr. Francis Storey, of Natick; secretary and treasurer, M. D. Pardee, of Worcester; directors, the above-named men, with also Dr. Percy P. Comey, Dr. Charles H. Perry, Dr. E. H. Trowbridge, Dr. A. P. Peck, all of Worcester; Dr. L. M. Palmer, of Framlingham; Dr. S. B. Soule, of Hudson; Dr. H. G. Howe, of Hartford, and Dr. A. H. Briggs, of Ashway, R. I. F. M. Harris, of Worcester was chosen as general manager. The company was organized in Worcester a year ago.

—The Boston trade, of course, has been deeply interested in the decision of the Supreme Court in the case of Julius Garst vs. Hall & Lyon, of Worcester. Most druggists in this city try to do business without cutting prices, to allure trade, and they feel a regret that the case has turned out as it has. The feeling of sympathy for the most part has been on Dr. Garst's side in his attempt to elevate the standard of trade conditions in his fight for a principle. The majority of druggists in Boston favor trading with proprietary manufacturers willing to protect their goods from sale at cut prices by certain retailers.

—As the result of the recent visit of President Helmritz, of the Massachusetts State Pharmaceutical Association, to Brockton to address the druggists of the "Shoe City," a movement has been started toward the formation of an association of druggists in that section of the country. Temporary officers have been elected, as follows: President, Charles R. Hillberg; secretary, A. Dakin; executive committee, Frank A. Braconier, George A. Torrey and L. T. Adams. Druggists in towns near Brockton were present at this meeting, and are deeply interested in the proposed association.

—Among the many October weddings is that of A. Ernest Baxter and Miss Helen S. Warren, daughter of Thacher C. Warren, of East Boston. Mr. Baxter has been connected with the drug trade of Charlestown for the last ten years. At present he is with A. S. Putnam, of Huxley and Parks streets. After a wedding tour, the couple will live in Monument Square, Charlestown.

—Desiring to transfer his liquor license from his place of business in Washington street, Gloucester, to a new location higher up on the same thoroughfare, Druggist Frederick Lane has obliged to go through the formality of giving advertised notice of this proposed change of place for ten days. This gives any "kicker" a chance to remonstrate, if so disposed.

—On the charge of two Fall River policemen that he sold them whiskey on a recent Sunday Arthur P. Vaillancourt, of the Maplewood Pharmacy, in that city, has been found guilty and fined \$65. Vaillancourt appealed from the fine imposed, and furnished bonds in the sum of \$300 for future appearance.

—For the better protection of his creditors, William M. Dedrick, a Fall River druggist, with a store in South Main street, has made an assignment to his brother, Albert C. Dedrick. The liabilities are estimated at something more than \$5,000. The assets consist of such stock as the store contains, not yet inventoried.

—Dennis F. Rouke, who is in the drug business in this city, has just been married to Miss Julia M. Murphy, of the Brighton district. A reception was given the bridal pair at the home of the bride's parents.

—In a \$30,000 fire at Worcester, on the night of October 19, T. A. Brennan & Co., druggists in Millbury street, among others, suffered some loss to the amount of \$500.

honor men of '01, will be with W. S. Merrell Chemical Co., of Cincinnati, O., R. H. French, another of '01's brightest members, is now engaged in work at Smith, Kilne & French's laboratory, Canal and Poplar streets.

—The alertness of druggist Hiltwein, of 908 N. Nineteenth street, will land two passers of counterfeit coins in jail. The men entered his store last Thursday and made small purchases tendering 50-cent pieces, which the druggist thought suspicious, so he tested one and finding it had followed the pair until he met a policeman, to whom he turned them over.

—William B. Burk, the well known importer of sponges and chamois skins, has been confined to his bed for some time from a painful accident met with while on the train from Atlantic City. His many friends will be pleased to learn that he is now recovering rapidly and will soon be able to resume attention to his business.

—Crumble Brothers have bought the drug store at Broad street and Cumberland avenue lately owned by Dr. W. R. Davis. This store has had many changes in ownership lately but it is likely that the new firm will make it pay better than their predecessors.

—Dr. G. W. Kennedy, president of the State Pharmaceutical Examining Board, announces that only 102 of the 333 students recently before the Board passed the examination.

—C. H. Esbach and S. C. Klapp, P. C. P. graduates, have bought Armstrong's drug store at 14 Broadway, Milton, Pa., and will greatly enlarge and improve it to bring it up to modern standards.

—Howard B. Sausser, a well-known Philadelphia druggist, has just re-enlisted as Hospital Steward in the Navy, after serving over two years in the Philippines on the "Princeton".

—Dr. Freedman, located at Passyunk and Washington avenue, has bought the drug store at Second and Federal streets and will conduct it as a branch of his main store.

—L. S. Steltzer will soon open a drug store at Germantown avenue above Lehigh, which he will conduct in connection with his store at Sixth and Cumberland avenue.

—C. W. Beyerly, of 3,600 Kensington avenue, has bought the drug store at Fourth and Huntington streets, an old landmark, and will make many improvements.

—W. H. Sheehan, a P. C. P. Graduate, class of '99, has accepted the position of manager for Campbell's Pharmacy, Second and McKean streets.

## PITTSBURG AND VICINITY.

### PRESIDENT SCHILLING RESIGNS.

Pittsburg, Oct. 28.—P. C. Schilling, the president and general manager of the P. C. Schilling Co., the so called "drug trust", at a meeting of the directors last Monday, resigned both offices. He has also sold his interests to the stockholders and in the near future will operate independently.

At the same meeting the directors elected R. J. McCready of Allegheny, temporary president and manager, who will hold office until the next regular meeting, when positions will be filled according to the rules of the corporation. It is stated that the resignation of Mr. Schilling was due to a difference between himself and the directors as to the policy of the company, and that other changes are in contemplation. Several years ago Mr. Schilling conducted a drug store at 2801 Penn. ave., when he conceived the idea of forming a corporation by buying up a number of the best established rival concerns. He was enabled to do this by the aid of a number of private partners, in conjunction with a local wholesale firm and at the present time there are 20 or more stores belonging to the corporation which are valued at \$200,000. For obvious reasons many of them are operated under the name of the original owner, as the company is incorporated it will continue to be known as the Schilling Drug Co., although the founder has dropped out.

### NOTES.

—E. T. Flister one of the oldest drug travelling salesman in Pittsburg, for many year with the late A. C.

Henderson Co. and their successors "The Walther-Robertson Co. has given up the road and joined the office force of W. J. Gilmore & Co.

—The drug store of M. Rush Means, bankrupt at Punt-sutawney, Pa. was sold by the sheriff at public auction at that place last Saturday. It was purchased by Chas. M. Feicht of Reynoldsville, Pa. who will form a partnership with H. Alex. Stoke of the latter place.

—Burglaries of drug stores continue to be reported. The store of William Cain of Dravosburg a suburb was visited last week and a large quantity of cigars, soaps, and liquors taken.

—D. Arter Miller, chief clerk in the drug store of J. R. Stephenson, Greensburg, Pa., was married at that place last week to Miss Carrie Wightman.

—Raymond Brosius of Philadelphia and formerly of Johnstown, is now managing the drug store of the late J. C. Armstrong at Brownsville, Pa.

## BALTIMORE.

### TRADE CONTINUES ACTIVE.

Baltimore, Oct. 26.—The drug trade of this city has been characterized by marked activity during the past week. Jobbing houses were in receipt of large numbers of orders, and the aggregate of their transactions assumed impressive proportions. Manufacturers of pharmaceuticals also had a good week, the laboratory forces being kept steadily at work to supply the demand for the various preparations. The market for botanicals presents a rather mixed aspect. Some articles bring high prices, while others rule rather low. Lobelia seed, turkey corn, American wormseed, balm of Gilead buds, pink root and scullap leaves are reported to be rather scarce and rising in value. This season's crop, it is said, has turned out somewhat disappointing with regard to quantity, and quotations are expected to advance. One dealer, in speaking about the indications, said he would not be at all surprised if some of the articles mentioned doubled in price before very long. He attributes the present situation in part to the tendency among farmers to hold back with stocks in expectation of getting better returns. More or less complaint is heard among the retailers, but such adverse opinions seem to proceed from force of habit rather than actual conditions, for the statements of the wholesalers do not indicate any prevalence of dullness. The movement of heavy chemicals is in the main steady and of gratifying volume, and the prospects are for a continuance of the existing status.

### DRUG TRADE BOWLERS.

Baltimore, Oct. 26.—The Drug Trade Bowlers were again busy at work this week. Last Tuesday the Ferrell & Kellam Co. and the Armstrong Cork Co., the two newcomers, were pitted against each other, the latter taking two out of the three games bowled by 572, 630 and 635, against 580, 525 and 525 pins, respectively. The Ferrell & Kellam Co.'s highest individual score was only 133, made by Roeth, the others being considerably lower. Last night the Root and Herb quintette met the Stanley & Brown Drug Co. (formerly Winkelmeil & Brown Drug Co.), and took all three games by 700, 760 and 768, against 648, 650 and 690 pins. Kabernagel was high score man, with 203, Vordenberge, of the Stanley & Brown Drug Co., rolled up 169 in the last game. The Root and Herbs are again showing up strong, and promise to dispute the lead with Sharp & Dohme. The present standing of the teams is as follows:

| Teams.                       | Games won. | Games lost. | Per cent. |
|------------------------------|------------|-------------|-----------|
| Sharp & Dohme.....           | 6          | 0           | 100.0     |
| Root and Herbs.....          | 7          | 2           | 77.8      |
| James Baily & Son.....       | 4          | 2           | 66.7      |
| Stanley & Brown Drug Co..... | 3          | 6           | 33.3      |
| Armstrong Cork Co.....       | 2          | 4           | 33.3      |
| McCormick Co.....            | 1          | 5           | 16.7      |
| Ferrell & Kellam Co.....     | 0          | 6           | 0.0       |

NOTES.

—A reception for the students of the Maryland College of Pharmacy is to be held at the institution on Alsquith street, in the near future. Dr. D. M. R. Culbreth, H. P. Hynson and Charles H. Ware have been appointed a committee to make the necessary arrangements. The primary purpose of the reception is to afford an opportunity for students to get better acquainted with the faculty and with each other.

—The marriage of H. A. Brown Dunning, a young pharmacist in the employ of Hynson, Westcott & Co., and Miss Beatrice Garelle Fitzgerald, of 1522 Mount Royal avenue, took place Oct. 24, at the bride's residence. The reception which followed was attended by some two hundred guests. Mr. and Mrs. Dunning went on a wedding tour north. They will live at 411 East North avenue.

—Among the property destroyed by the conflagration which visited Delmar, Del., last Saturday afternoon, were the drug store, dwelling and furniture of Dr. Ellegood, and the drug store of Dr. James Bradshaw. The former suffered a loss of \$10,000, the latter of \$2,000, with \$1,000 insurance. Delmar underwent a similar visitation in 1892.

—Joseph B. Hall has bought the drug store of the late Frank Waters, who was killed by an electric shock in his pharmacy, late at night, last summer. The store is at the corner of Alsquith street and North avenue. Mr. Hall also conducts the pharmacy at Charles and Twenty-second streets.

—John and Paul Hauser, both retail druggists, the former at Fayette and Poppleton streets, the latter at Gilmore and Lexington streets, last week went to Cumberland, Md., to attend the wedding of their brother, who is a minister.

—The Tourist Drug Co. has been incorporated at Alexandria, Va., with a capital stock of \$100,000, to conduct a manufacturing drug business. The officers are: R. W. Brown, president; Mary Olmstead, vice-president; W. M. Starr, treasurer, and Katy B. Klock, secretary.

—Among the visiting druggists in Baltimore last week were W. R. Rudy, Mount Airy, Md.; I. W. Dasher, Peru, W. Va.; F. Forthman, Waynesboro, Pa.; Jos. B. Boyle, Westminster, Md., and Dr. Jos. Carrow, Odessa, Del.

—Louis Dohme, of Sharp & Dohme, went to Atlantic City last Saturday to visit his nephew, Dr. A. R. L. Dohme, who is spending a few weeks there to recuperate from the debilitating effects of typhoid fever.

—The Wedgewood Club will hold its regular monthly session this evening, at the Eutaw House, and the invitations promise plenty of good cheer.

—The retail drug store of Nicholas T. Lang, at the corner of Fulton and Frederick avenues, has passed into the possession of Dr. Bennett, a young graduate in medicine.

NOTES.

—On Monday, October 14, the several teams of the Chicago Drug Trade Bowling League rolled the following games at Bensingers' Alleys: Sharp and Smith, 736, 790, 761, against Lord, Owen & Co., 769, 717, 742; A. M. Foster & Co., 669, 569, 645, against Buck & Rayner, 514, 602, 676; Parke, Davis & Co., 698, 606, 563, against E. H. Sargent & Co., 678, 727, 676. On Monday, October 21, the following games were rolled: Lord, Owen & Co., 750, 767, 721, against A. M. Foster & Co., 651, 638, 698; E. H. Sargent & Co., 663, 721, 626, against Buck & Rayner, 652, 716, 775; Sharp & Smith, 742, 758, 784, against Parke, Davis & Co., 693, 707, 691. The standing and the percentage of the teams to date are:

|                     | Won. | Lost. | Pct. |
|---------------------|------|-------|------|
| Sharp & Smith       | 6    | 3     | .667 |
| E. H. Sargent & Co. | 6    | 3     | .667 |
| Lord, Owen & Co.    | 5    | 4     | .550 |
| Parke, Davis & Co.  | 4    | 5     | .445 |
| Buck & Rayner       | 3    | 6     | .334 |
| A. M. Foster & Co.  | 3    | 6     | .334 |

—Mr. and Mrs. Oscar Damman, a young couple, married this week in Milwaukee, were the recipients of many attentions by their fun loving friends on their departure for Mr. Damman's home in Nebraska City, Neb., where the groom runs a drug store. The bride was Miss Ida Van Ellis of 573 Reed street, Milwaukee. The wedding was celebrated at noon and the young couple on their departure eluded all of the waiting friends except a Milwaukee physician, a friend of Mr. Damman. He pursued the carriage to the depot on horseback and tacked the following circular outside the car beneath the window at which they sat and pasted it all over their baggage.

"We are it. Look at us. We are just married and are going out West to set up housekeeping. Don't lose sight of us."

—Other friends of the couple caught the train before it left the city and did the rice throwing act.

—Adolph Gustaf Vogeler, editor of the Western Druggist, celebrated his fiftieth birthday on Oct. 24. He was born at Radhen, Westphalia, Prussia in 1851. He came to this country with his parents in October, 1860, entering the employ of Charles Heylman, an old time German apothecary and serving a regular apprenticeship to the business. During this time he attended the Chicago College of Pharmacy graduating with honors. He organized the Chicago Retail Drug Clerks' Association and was the moving spirit until 1875 when he engaged in the retail drug business. In the early '80's after the "Pharmacist" had been transferred to Mr. Cowdrey, Mr. Vogeler acted for a time as editor of that publication, and when the "Pharmacist" was incorporated with the "Western Druggist" he became associated with the latter journal.

—H. H. Green, of Bloomington, one of the most prominent druggists in Illinois, who has been one of the foremost figures in pharmaceutical legislation, member of the Board of Pharmacy, recently a member of the Board of Penitentiary Commissioners, was recently elected Grand Commander of the Knights Templar of Illinois. Mr. Green has been in the drug business in Bloomington since 1882, has been president of the Illinois Pharmaceutical Association and is an associate member of the Chicago Veteran Druggists' Association.

—An alleged theft of earth at Fifty-ninth and Robey streets, which involves M. J. Murphy, 1231 Garfield Boulevard, and John Byrne, 4615 Marshfield avenue contractors employed recently by the South Park commissioners, is the basis of a suit commenced in the Circuit Court by F. J. Schmidt, a druggist at Seventy-first street and Cottage Grove avenue. Schmidt seeks to recover \$2,000 which he says is the value of the earth alleged to have been taken from him by Murphy.

—Among those who returned this week from the N. W. D. A. meeting at Old Point Comfort, Va., were Messrs. Charles E. Matthews, of Sharp & Dohme; Frank Faxon, of Faxon, Horton & Gallagher, Kansas City; Harry Skillman, of Detroit; Robert Winchester, St. Louis representative of Sharp & Dohme; Harold Sorby, of the Pasteur Vaccine Company; Eugene Yahr, of the Fahr-Lange Drug Company, Milwaukee, and George D. Searle, of the Searle & Hereth Company.

CHICAGO.

VETERAN DRUGGISTS' ASSOCIATION MEETS.

Chicago, Oct. 26.—The Chicago Veteran Druggists Association held its quarterly meeting at the Union Hotel on Monday October 21. Nearly all the members were present. A committee was appointed to draft appropriate resolutions on the death of the late C. Herman Plautz. Andrew Scherer was elected to membership. After other routine business, the members listened to the introductory part of the history of the Early Drug Trade of Chicago, read by the historian, Mr. Ebert. The portion of the history read was very favorably received and it was the consensus of opinion that when the work is finished it should be published.

CHICAGO TRADE GOOD.

Chicago, Oct. 26.—The week has been a busy one among the pharmaceutical manufacturers and the jobbers. All staple articles are active and such goods as sundries, etc., are in good demand. Very few business failures are on record and collections are good. Orders are of goodly size and volume and all the houses are busy.

Neu, of the Mound City Paints, which was 52 1-5. Schnelder, of the Moffitt-West Drug Co. and Decker, of the Meyer Bros. Drug Co., each received an average of 51 2-5.

—R. S. Vitt and Theo. F. Hagenow have returned from the N. A. R. D. convention, at Buffalo. They both express themselves as well pleased with the work that was done at the meeting. The druggists of the city feel honored in the election of one of their number as treasurer of the organization, and feel certain that R. S. Vitt will fill the office with credit to himself and his fellow members.

—The St. Louis Paint, Oil and Drug Club held its annual dinner and election of officers last week. About forty members were in attendance. The new officers are as follows: President, A. A. Eberson; vice-president, Duncan Mellier; secretary, R. W. Sample; treasurer, Fred. Westerbeck; directors, W. H. Gregg, Jr., George S. Merrill, Henry Boardman, Herman Pockels and Arthur Davis.

—The following is the record of the Druggists' Cockeyed Hat League teams last Thursday night: J. S. Merrell Drug Co., 3; Meyer Bros. Drug Co., 2; Moffitt-West Drug Co., 3; Mound City Paint Co., 2; The Searle & Hereth Co., 5; Herf & Frerichs O. Brenner, of Meyer Bros. Drug Co. lead the league with a 61 average, while P. Pauge, of the J. S. Merrell Drug Co. and Blitz, of the Searle & Hereth Co., came in with over a 50 average.

—The Epsom Salts and Caster Oils tried their strength at the Cote Brilliant alleys last Tuesday night. Capt. Bernius, of the Epsom Salts says they intend to change their names and see if they cannot break the "hoo doo." For the past three weeks they have only been able to take one out of five games from R. E. Scheu's Castor Oils.

—Emil Fehling has resigned his position as druggist at the O'Fallon Dispensary, 1814 Locust street, and has taken charge of the store at 2613 S. Broadway, formerly owned by the late E. V. Koscielski. The position at the O'Fallon Dispensary has been filled by the appointment of W. L. Horstman, a well-known local drug clerk.

—Frank A. Ruf, the well-known president and treasurer of the Antikamnia Chemical Co., has been elected vice-president of the Fourth National Bank, of this city. Mr. Ruf has been a director of the bank for a number of years.

—The J. S. Merrell Drug Co. has leased the property at Fourth and Market streets on which the old McLean building stands and upon which they intend to erect a new fire-proof building to be used as a wholesale drug house.

—Mr. Knott, city desk man of the J. S. Merrell Drug Co., was relieved of a \$40 overcoat last Wednesday. He is consoling himself with the feeling that it will keep some poor rascal warm this winter and that he still has his old overcoat.

—Several local druggists wish to attend medical college, but have been unable to secure managers for their stores. There is great demand for first-class drug clerks in this city, and salaries are continually rising.

—A. N. Blackman has closed up his store at Lafayette and Nebraska avenues, and has accepted a position with the Meyer Bros. Drug Co. He finds that location not "strong enough" to maintain a store.

—T. O. Moses, proprietor of the drug store at Welston and Easton avenues is laid up with a broken leg. When asked how he is getting along he simply remarks that he "cannot kick".

—M. C. Arendes, J. Kleiber and A. H. Stalle, of the office force of the J. S. Merrell Drug Co., are spending a few days at Pocañontas, Ark., the guests of Druggist W. H. Skinner.

—Mr. Martine, chief clerk of the Garrison Pharmacy is mourning the loss of his wife and young child who died yesterday. Mr. Martine's host of friends sympathize with him in his misfortune.

—After numerous postponements the St. Louis Retail Druggists' Saturday Night Club held their annual banquet at the St. Nicholas Hotel last Saturday night.

—C. F. G. Meyer, president of the Meyer Bros. Drug Co., has arrived in New York from an extended trip abroad and is expected home by Monday.

—Chas. H. Camp, special representative of the Centaur

Co., has been in the city all of the week looking after the company's advertising.

—J. J. Hoelscher, druggist at Kings Highway and Suburban Road, spent several weeks hunting among the Ozark Hills recently.

—Henry Hoch, formerly partner in the store at Seventeenth and Washington avenue, is now head clerk at the Boemer Drug Co., Eleventh and Madison streets.

—A \$600 fire occurred in the store at Page and Prairie avenue, last Sunday night. The store is owned by M. J. DeVorkin.

—Dr. Lanigan has opened the store at Elliot and Sheridan avenues, closed some months ago by Theo. H. Specht.

—There are very good prospects of four new drug stores being opened in the West End before the end of the year.

—J. R. Strite is opening a new drug store at Fairmount avenue and Suburban Road.

—Chas. Milne, one of the best-known relief clerks in the city is dangerously ill with erysipelas.

—Ed Lesanauer succeeds his father in the drug business at Pacific, Mo.

## THE NORTHWEST.

### New Minnesota Pharmacists.

St. Paul, Minn., Oct. 25.—The State board of pharmacy has issued licenses to the following persons as pharmacists: Floyd R. Cogsdill, A. Le Roy Eger, Oliver V. Jones, Minneapolis; David L. Colberg, St. Paul; Thomas C. Biscoe, St. Paul Park; Adolph A. Lawson, Stillwater; Jeppe D. Pederson, Brownton; John P. Scholten, Winnebago City; John A. Swenson, Winona. The following were granted the certificate of assistant pharmacist: Adolph S. Bender, Cora M. Fairbank, Louis Hergenrath, Harry D. Holmberg, Oscar Lundemo, Julian A. Zbrocki, Andrew Sivertsen, William W. Philo, John G. Anderson, James H. Crew, Willis Clay, Perry R. Day, Oscar Hargesheimer, Oscar A. Hellberg, Frank Kramer, Ernst Otto, Luther Thompson. The next examination will commence on the third Tuesday in January at the university.

### Shutting Off Cutters.

St. Paul, Minn., Oct. 25.—The principal question with which druggists here are wrestling just now is the prevention by legitimate means of the sales of aggressive cutters, who are the bane of the trade. Some progress has already been made in this direction, but much still remains to be done in order to bring about a solution of the trouble, which is of long and burdensome standing. The tripartite agreement has been on trial long enough to prove what it can do if lived up to honestly. The chief difficulty encountered is the irresponsible action of its own members.

### NOTES.

—Richard Tener of St. Paul is dead at the age of 61 years. He died suddenly while apparently in perfect health. Mr. Tener came to St. Paul in 1879 and for twenty years gave faithful service as druggist in St. Luke's hospital. Two years ago, owing to poor health, he gave up his duties there, but, his strength returning, he for the last year took care of the son of the city health officer, Dr. Justus Ohage, whose death occurred a few weeks ago. Mr. Tener had just been appointed to a post in the bacteriological department of the city health office when his death occurred. He is survived by his brothers Kinley J. Tener, a prominent attorney of Philadelphia, and Henry Tener, president of the Philadelphia Mortgage & Loan association, and by his wife and his two daughters, Mrs. T. J. Hoyt, of Kansas City, and Mrs. J. H. Hintermister, of St. Paul.

—Successions: Clarence Crandall, Springville, Utah, by Crandall & Harwood; R. H. Bowman, Pocañontas, Ia., by R. A. Grover; Humeston Drug Co., Humeston, Ia., by Foltz Bros.; C. M. (Mrs. C. W.) Alt, Williamsburg, Ia., by A. L. Holmes.

- C. B. Nimmo, Brainerd, Minn., has been closed under a chattel mortgage.
- Tessler & Son are soon to begin a combined drug and grocery business at Terrbonne, Minn.
- The Mercer Chemical Co., Omaha, Neb., suffered a fire loss this week.
- Smith & Corbett, Sioux City, Ia., have removed to Glidden.
- New: Blair & Mewins, Herreid, S. D.; Ekeren & Higgins, Foxhome, Minn., Carl Hoehn, Columbus, Neb.
- Sold: W. O. Sanders, Stacyville, Ia.; P. W. Jones, Albert City, Ia.; A. D. Hard, Wentworth, S. D.
- A. D. Norling, Litchfield, Neb., will open a branch at Hazard.
- M. N. Barry & Co., druggists, Gray Eagle, Minn., have entered the grocery trade in addition.
- Joseph Heil, a Heidelberg, Minn., druggist, has sold his general merchandise stock.
- Bills of sale have been given by E. H. Anderson, Fonda, Ia., and A. O. Blair & Co., Emerson, Ia.
- The Quaker Drug Co. has incorporated at Seattle, Wash.
- M. F. Rapp, Rosenberg, Ore., has filed an involuntary petition in bankruptcy.
- J. C. Threlkeld, Republic, Wash., is dead.

#### THE HEYWOOD MEDICINE MAN.

To the Editor—May I use your columns to post the lally in regard to one Heywood? He and his wife (so-called) came to this city, and rented a house. He said he made a cough medicine and nerve. The first sold for 25 cents, the latter (marked \$1) for 50 cents. He left the cough medicine on sale at first, but I sold it out and bought more. He then said he would like to put in some nerve, as in driving through the country, selling his remedies, he often found people without ready money, but who wanted some of his goods. He wished to borrow a rubber stamp to put my name and address on his circulars so as to remind such people where his medicines could be found. That was all plausible, and so I consented. He, it seems, went about saying he was my clerk and that I was the "Heywood Medicine Co." He sold three bottles for \$1, and referred them to me to refund if no benefits were received. He did a large business, retained the stamp, and quietly left town. People, many of whom were customers, came back for the money, and were much annoyed to know that I did not authorize him to make such bargains nor to state that I was willing to refund. It required long explanations and in some cases made enemies. I also learn that two or three other local concerns had very unsatisfactory relations with him. I am informed that he operated in and about Corning in much the same manner. He is no doubt fooling other druggists the same way in various places, and a hint to the innocent from a "burned child" may be a good thing.

This is my first experience of the sort, and almost any subject of his deceitful way would hope that it may be the last. My advice to the whole fraternity is to beware of the Heywood medicine man. Tall, about 32 years old, and not too prepossessing. Yours truly,

JUDSON B. TODD.

Ithaca, N. Y.

WILLIAM ORR BARCLAY, senior member of the firm of Barclay & Co., manufacturers of drugs, at No. 44 Stone street, New York, died on Thursday, October 17. Mr. Barclay was one of the oldest members in the trade, and one of the founders of the business of Barclay & Co., which was established over thirty years ago. He was born in New York, and leaves a widow and two daughters.

"Merz" Santal Compound (perles) are claimed to be superior to the imported, and are sold to the trade at the uniform price of \$3.00 per dozen. There is no reason why retailers should not make a big profit on these goods. All jobbers carry them in stock.

#### PAINT PROFITS FOR PHARMACISTS.

One of the profitable side lines that naturally belongs to the drug trade is the sale of ready for use paint specialties. No line pays the retailer better profits in proportion to the money invested than paint. Nothing in any line has a wider field than paint. It is simply indispensable. Pretty much everything from a wheelbarrow to a house has paint applied to it in some form. In this connection we include varnish as being part of the paint trade.

Profitable paint selling can be done if the paint handled is good paint, if it can be sold at a fair price and still leave the retailer a good profit; if it is sold in easy to open cans; if it is labelled in good style for display on shelves or in windows; if it is well advertised. Lucas Paint Specialties answer all these requirements.

Fifty-two years ago Mr. John Lucas started to manufacture paints and colors in a small grist mill at Gibbsboro, N. J., twelve miles from Philadelphia. At first it was uphill work, and he met with some discouragements, but as the high quality of his manufactures became known and appreciated by the paint trade, he was compelled to enlarge the works until to-day they cover ten acres of ground, and at the present time are building a monster warehouse 300x150 feet; also a power house to contain engines and boilers capable of running a plant twice as large, so as to admit of another enlargement in the near future. The works are kept busy the year round, producing, with the aid of almost every good modern appliance for making paint and varnish, and

hundreds of employees, the highest quality paints at the least cost. Fifty-two years in business and never a strike tells better how we treat our helpers than anything we could write. Satisfied employees means good work; pays us, pays them, pays our customers.

The almost universal use of paint in this country begets the feeling that you know all about paint, and that one kind is pretty much the same as another, so long as it is paint and of the color you may desire; but that is clearly a mistake, there is as much difference in paints as there is between black and white in beauty of appearance and wearing qualities. We describe below a few of the Lucas high grade paint specialties that have a large sale among the drug houses throughout the entire country.

LUCAS PREPARED PAINTS are made of good material expressly for use about the home. Thirty beautiful tints and colors, including white and black, enable you to make an intelligent selection of a color or tint that will harmonize with the furniture or wood work of any room. They are sold by the pound in small one or five pound easy to open cans, and will be found of great value for painting and renovating chairs, benches, kitchen tables and dressers, window sash and sills, doors and shelves, flower stands and pots, etc. Full directions, very easy ones, are printed on every label, and with a little care any person can use same. We have a card showing samples of the colors; a fine wood sign with painted wooden slats showing the paint as it actually appears on wood; a booklet containing directions for painting; a nicely framed show card showing colors, and a variety of circulars.

LUCAS ENAMEL PAINT gives an exact imitation of the high priced porcelain tile surface at a fraction of the cost. It is another of the easy to use paints that Lucas makes. The range of work that can be done with this enamel paint is rather astonishing. It can be used on the walls and wood work of the best homes, giving beautiful lasting effects; or for wood or wicker furniture, frames, iron bedsteads, fancy chairs and tables, flower pots, umbrella stands, and dozens of other articles. The handsome appearance of this enamel paint cannot be duplicated by any other ready to use paint. The very complete direction printed on all the labels enable any person of intelligence to do good work. Twenty handsome colors and tints, along with black and white, gives a chance to choose one that will be exactly suited to the article or work to be decorated. We furnish with this enamel paint cards and show card showing the colors and tints, booklets and circulars.

LUCAS ALUMINUM ENAMEL is made from pure aluminum, combined in a practical manner with a liquid that, when painted over a surface gives

the appearance of a solid sheet of bright silver, but unlike silver, will not tarnish or turn black. Easy to apply, does not show brush marks and is altogether a shining success when used for improving gas or electric fixtures, lamp stands, radiators, frames, bric-a-brac, etc.; used in conjunction with Lucas Enamel Paint, most elegant effects may be obtained.

LUCAS ARTISTS' GOLD PAINT, either ready mixed or not, is another decorative paint that can be used to good advantage with the above enamels. Sold in attractive packages, easy to use, there is nothing better for the purpose. Dozens of articles can be beautified with its help at little cost.

LUCAS ARTISTS' GOLD PAINT, either ready mixed zinc bath tubs, inside or outside; also for bath room walls, etc. Withstands extremely hot or cold water, soap and weak alkalis. Four delicate tints and white. LUCAS BICYCLE ENAMELS, twenty fine colors. LUCAS SCREEN ENAMEL, green or black, for door or window screens. LUCAS STOVE ENAMEL for stoves, ranges, heaters, stove and hot water pipes. These enamels are made specially for the service their name indicates, and for those purposes nothing quite equals them. Samples or show cards with them all.

LUCAS PERFECT WOOD STAINS can be depended on for converting any of the cheap soft woods, pine poplar, etc., into exact imitation of expensive hardwoods, such

as cherry, walnut mahogany, rosewood, flémish and other oaks, etc. They are a varnish stains and impart artistic finish to the wood that leaves nothing to be desired. The printed directions on every label are easy to follow and the results sure. They are exactly what are needed for the wood and floors of rooms, wood wicker furniture, baskets and other like articles. Samples and show cards, booklets and circulars are furnished.

LUCAS RELIABLE VARNISH put up in small cans for household use is needed wherever there is a home. Old furniture is easily made to look bright and new looking; the woodwork of the room re-varnished sets off to the best advantage everything they contain. The

varnish is reliable and sells at prices that are sure to show large sales.

LUCAS CARRIAGE GLOSS PAINT is what the name implies, a ready mixed carriage paint, but one that can be used to great advantage for numerous other things. It is equally useful for baby coaches, porch chairs or settees, flower stands, etc., as well as buggies, road carts, sleighs. It dries with a very handsome gloss in twenty-four hours, and requires no varnishing. Sample cards, show cards and circulars.

LUCAS TINTED GLOSS PAINTS, mixed ready for use, are high quality low cost paints for outside and inside house painting. The colors are durable and the oil pure. Covers 500 to 600 square feet of surface to each gallon. Color harmony is exemplified in the arrangement on the sample cards of the 78 colors in combinations for house painting; also have gloss and wood signs, booklets and circulars.

LUCAS PAINT is made for painting floors; for that purpose unsurpassed; dries hard as rock; easily cleaned; looks well and wears; don't fade; with the aid of a rug or two, is a most beautiful sanitary floor covering. Card, sign, booklet and circulars.

The above specialties do not include all the Lucas lines, but only part of what we term our Home Helps, expressly put up for retailing in drug and other stores. We also make full lines of colors ground in oil, in Japan, in water and dry; white lead and zincs; varnish, japans, brushes glass, etc.

We help dealers sell our paints by furnishing the best grade for the money, put up ready to use in easy to open cans, attractively labelled, just the thing for window or shelf display. With the dealers' help Lucas pushes their sales with cards showing samples of the colors arranged in harmonious combinations, show cards, wood and glass signs, booklets and circulars in great variety. Dealers name, full line of business and address printed on all advertising matter. Properly displayed and distributed they are bound to bring trade. We would like you to write us for detailed information about any of our products, or would be pleased to send you on request samples of our advertising matter, free. Address all inquiries to Advertising Department, Gibbsoor, N. J. John Lucas & Co., Philadelphia, New York, Chicago.

**Marvel Syringe.**

The Marvel Whirling Spray Syringe is claimed to be the only syringe that can be carried filled and ready for use and that can be used anywhere without soiling the clothing. By extensive advertising the sales of this syringe have been greatly increased during the past few months. Druggists are cautioned against selling any other syringe under the trade mark "Whirl Spray" or "Whirling Spray." The Marvel Syringe can be had of any jobber or from the Marvel Co., Times Bldg., Room 14, New York.

**Goodyear Tire & Rubber Co.'s New Building.**

A new building, said to be the finest in this country for the purpose, has recently been completed for the Sundries Department of the Goodyear Tire & Rubber Co., Akron, Ohio, makers of the "Imperial" Rubber Goods. The work of installing machinery is progressing rapidly and, with the added facilities afforded by greatly enlarged quarters, this concern expects to be able to care for the business which is increasing with giant strides.

## THE SOUTH.

### A Young Druggist Killed.

Memphis, Oct. 24.—J. F. Conroy, a druggist from Urbana, Ohio, was found by a night-watchman in an alley about three o'clock in the morning of the 23rd inst. Investigation proved that the young man had fallen from a window on the third floor of the hotel where he was a guest. He was dressed in his night clothes and the supposition is that he walked out of the window while asleep. At the hospital he was conscious for about an hour but was suffering too much to be able to tell how he came to fall. Everything that could be done was done for the unfortunate young man but his chief injuries were internal and he died after being unconscious for five hours. Mr. Conroy was on a visit to his brother, who lives at Stuttgart, Ark., and with the latter and his wife was in this city for the purpose of seeing the harness racing now in progress here. He was 26 years old. The remains were shipped to Urbana for burial.

### Not Very Brisk.

Memphis, Oct. 24.—Business has not increased as rapidly as it should and it is not at all unlikely that this month's sales will fall behind those of the same month for a great many years past. Two reasons are assigned for this, the locality is in an unusually healthy condition and the farmers are holding the cotton for a rise.

### NOTES.

—David Chilton, the only son of Thos. H. Chilton of the W. N. Wilkerson Drug Co. died at his fathers residence, 253 Union st., early on the morning of the 20th inst. Mr. Chilton was 26 years old and was a bright and promising young man. He was very popular in the circle in which he moved. The remains were interred in Elmwood Cemetery.

—The United States Grand Jury has returned an indictment against Dr. J. C. Franklin, of Nashville, Tenn., charging him with sending obscene matter through the mails. Dr. Franklin is president of the City Savings Bank of Nashville and a druggist of many years standing. The case is set for trial, Oct. 31.

—L. S. Cowles has bought the stock of S. L. Raines on Poplar st., and will remove it to just opposite the Union depot. Mr. Cowles has been connected with Fortune, Ward & Co. for several years and has many friends who wish him all success as a proprietor.

—B. H. Paslay, Ackerman, Miss., has formed a partnership with Dr. Strong of Histonville in the practice of medicine, and has sold his drug interests to Z. N. Whitehead & Co., of Winona, Miss.

—Lucas Dancy, formerly of Holly Springs, Miss., and now in the drug business at Clarendon, Ark., is visiting college friends in St. Louis.

—R. D. Miller formerly with W. A. McBath & Co. Knoxville, Tenn., has accepted a position with J. N. Thompson of this city.

—Mr. Patterson, formerly with the Huntington Drug Co., Huntington, Tenn., has accepted a position with Miller & Bennett, Fulton, Ky.

—Dr. W. W. Hamilton of Hamilton, Brush & Meeks, Brooksville, Miss., has joined the ranks of the benedicts and is now East on his honeymoon.

—Byrd Busby, Coldwater, Miss., has sold out to Claude Varnia, Senatobia, Miss. Mr. Varnier will run both stores.

—E. L. James of James & Nelson, Jackson, Tenn., is convalescent after a severe spell of sickness.

—W. G. Poole, representing Nelson Baker & Co., is in the city this week.

—Mr. Pricly has resigned his position with McCracken & McClaud, Huntington, Tenn., and is now with the Huntington Drug Co.

—J. R. Boyette of Durant, Miss., has recovered from a long spell of fever.

—W. A. Webster representing Wm. S. Merrell Chem. Co. was in the city last week.

—J. C. Treherne and wife have gone to Golconda, Ill., to attend the wedding of Mrs. Treherne's sister.

—E. H. Nelson, of Nelson, Baker & Co. Detroit, was in the city this week.

## BUSINESS RECORD.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS' DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,  
New York.

ALABAMA.—Louisville.—W. P. Patterson, succeeded by Patterson Bros.

Prattville.—J. T. Floyd & Co., sold to Smith & McKeichen.

ARKANSAS.—Argenta.—A. Coates, 102 Washington avenue.

CALIFORNIA.—Pasadena.—A. G. Smith, 48 South Raymond, sold to H. F. Metcalf.

Redlands.—Gillis & Spoor, succeeded by W. L. Spoor.

COLORADO.—Loveland.—Wait Drug Co., sold to Jeffery & Yeoman.

CONNECTICUT.—Danielson.—R. F. Lyon, of the firm of R. F. Lyon & Co., deceased.

GEORGIA.—Adel.—S. T. Tygart, sold to J. H. Parrish.

Rome.—P. L. Turnley, of the firm of P. L. Turnley & Co., deceased.

Wrightsville.—J. W. Flanders, sold to J. H. Birch & Co.

ILLINOIS.—Warren.—Baldwin Bros., succeeded by L. A. Baldwin.

INDIANA.—Campbellsburg.—Frank Chastain, sold to Lane & Clark.

INDIAN TERRITORY.—Miami.—N. S. Sweeney, sold to Parrish & Caldwell.

Wagoner.—J. N. Fain, sold to Charles Lawrence.

IOWA.—Clarinda.—W. L. Lundy, sold to F. W. Beecher.

Davenport.—E. S. Ballard & Co., 146 W. Second street, succeeded by Ballard Drug & Dental Co.

Essex.—Newquist & Hoag, succeeded by Newquist & Clem.

Ringsted.—Greiner & Co., sold to M. P. Madsen.

KENTUCKY.—Millerstown.—T. A. Vinson & Co., sold to David Line.

MAINE.—Biddeford.—Charles E. Goshen, sold to Dion & Crowley.

MASSACHUSETTS.—Leominster.—E. P. Duval, deceased.

MICHIGAN.—Kingsley.—George L. Fenton, damaged by fire.

Petoskey.—R. T. Bower, succeeded by Eckel Drug Co.

MINNESOTA.—Chokio.—C. H. Dyer, sold to M. Riedner.

Holland.—Charles Ellis & Son, succeeded by Charles Ellis.

MISSISSIPPI.—Okolona.—Walter Smith & Co., sold to Brown & Bearden.

MISSOURI.—Alanta.—L. M. Thompson, sold to Southern & Ayers.

Callao.—J. A. Griffin, sold to Benning & Underwood.

Fulton.—Nichols & Herndon, succeeded by W. C. Herndon.

NEBRASKA.—Peaver City.—O. W. Bullard, damaged by fire; partly insured.

Crete.—A. H. Johnson, succeeded by H. M. Johnson.

Mason City.—Chase Bros., succeeded by H. C. Chase, Jr.

NEW JERSEY.—Long Branch.—John T. Britton, deceased.

NEW YORK.—Edmeston.—Lough & Talbot, succeeded by G. S. Talbot.

Jamesstown.—Clark Bros., 300 N. Main, succeeded by Frank M. Clark.

Oneonta.—A. D. Rowe, succeeded by Rowe & Lane.

OHIO.—Lagan.—F. Harrington, sold to Bent & Co.

PENNSYLVANIA.—Philadelphia.—Oscar Sprister, 1600 N. Eighth street, sold to W. Preston Lutz—Henry Sunderland, 1252 South Thirteenth street, sold to John J. Bender.

Reading.—Clarence T. Stubbs, 751 Penn street, deceased.

SOUTH DAKOTA.—Elkton.—W. S. Ranney, sold to M. E. Donahoe.

Geddes.—F. M. Tibbetts, sold to Bossingham & Jehn.

—The firm of Ralston & Bare, retail druggists at Weston, W. Va., dissolved partnership September 1. M. B. Ralston retiring member of the firm, has opened a new drug store in Weston.

Under the heading "Catchy Names" an advertiser in this issue offers to supply catchy, attractive names for any preparation or novelty. The selection of a name for a new preparation is a matter of great importance.

# PATENTS, TRADE MARKS, ETC.

### PATENTS.

Issued October 22, 1901.

- 684,784.—Johannes De Bolster, Amsterdam, Netherlands. Apparatus for making lemonade.
- 684,854.—Oscar P. Ostergren, New York, N. Y., assignor to the Ostergren Manufacturing Co., a corporation of New Jersey. Manufacture of carbonic acid.
- 684,861.—Fritz Projahn, Duisburg, Germany. Method of making alkalies and aluminates.
- 684,870.—Moritz Rosenstock, New York, N. Y., assignor to the Thompson Manufacturing Co., Dover, Del., a corporation of Delaware. Non-refillable bottle.
- 684,912.—Arthur Colton, Detroit, Mich. Pill-forming machine.
- 684,914.—George Craig, Glasgow, Scotland. Method of purifying alkaline cyanids.
- 684,936.—Charles M. Higgins, Brooklyn, N. Y. Collapsible can or tube.
- 685,038.—Pearis B. Ellis and Albert Y. Werner, Carson City, Nev. Substitute for rubber and process of producing same.
- 685,059.—George H. Richards, London, England. Nicotinn salicylate and process of making same.
- 685,060.—George H. Rickenards, London England. Nicotinn insecticide.
- 685,061.—George H. Richards, London, England. Nicotinn salicylate and process of making same.
- 685,114.—Peter Davis, Melvin, and Charles D. Brown, Valley Center, Mich. Non-refillable bottle.
- 685,138.—Johann G. Hehr, Pittsburg, Pa. Bottle-washing machine.
- 685,175.—Achilles P. Rimoldi, Forbes, New South Wales, assignor of one-half to John Dixon Rand, Eulog, near Forbes, New South Wales. Non-refillable bottle.
- 685,225.—Edward D. Schmitt, Baltimore, Md., assignor, by mesne assignments, to the Universal Seal and Stopper Co., Camden, N. J. Bottle-sealing device.
- 685,226.—Edward D. Schmitt, Baltimore, Md., assignor, by mesne assignments, to the Universal Seal and Stopper Co., Camden, N. J. Bottle-seal.
- 685,227.—Edward D. Schmitt, Baltimore, Md. Bottle-sealing device.

### TRADE-MARKS.

Registered October 22, 1901

- 37,318.—Tonic or System-Regulator. W. W. Gavitt Medical So., Topeka, Kans. The representation of the State capitol at Topeka, Kans.

# MARKET REPORT.

## NEW YORK MARKET.

### Business Satisfactory and Moderately Active.

New York, Oct. 29.—Business conditions continue satisfactory, with the movement into consuming channels moderately active, and the tone of the general market steady.

**OPIMUM.**—A continued quiet market is reported, with jobbing quotations unchanged at \$3.25@3.50 for 9 per cent., and \$3.45@3.60 for 11 per cent. Powdered catnip in moderate demand, and nominally steady at \$4.00@4.60 for 13 per cent., \$1.75@2.00 for granular and \$1.90@5.25 for 16 per cent.

**MORPHINE.**—A fair demand is reported, with a continued steady market and prices are maintained on the basis of \$2.20@2.70 for eighth, as to brand, less the usual rebate of 10¢ per oz. on lots of 10-ozs. or over.

**QUININE.**—Manufacturers have advanced quotations 1c per oz., and the revised jobbing prices are 2½c for bulk in 100-oz. tins, 29½c on 50-oz. tins, 30c in 25-oz. tins, and 36c in ounces.

**CODEINE.**—Owing to keen competition among manufacturers, prices have declined 5¢ per oz. and jobbers are quoting \$1.25@1.50 in ounces and \$4.50@4.75 in eighths.

**OIL PEPPERMINT.**—A continued strong market is reported, with quotations further advanced to \$2.05@2.25 for H. G. H. and \$2.15@2.40 for redistilled.

**OIL WINTERGREEN.**—Supplies are light, and the market firmer, with spot quotations for jobbing quantities showing an advance to \$1.75@2.00.

**OIL BAY.**—A stronger feeling has developed among holders, owing to a shortage, and jobbing prices have been advanced to \$3.25@3.50 per lb. and 50¢@50c per oz.

**OIL SANDAL.**—The market is easier, and jobbers have reduced quotations to \$1.00@1.25 for English, and \$3.00@3.25 for German.

**COD-LIVER OIL.**—An improved demand is noted and jobbing quotations have been advanced to \$23.00@27.00 per barrel, and \$1.10@1.30 per gallon for the same a barrel.

**MANNA.**—Large flake is lower, in sympathy with other grades, and the revised jobbing range is 85@95c.

**UNION SALAD OIL.**—Manufacturers have reduced quotations 2c per gallon, and jobbers quote 60¢@52¢ by the barrel, and 58¢@58c.

**LITHIUM CARBONATE.**—In sympathy with a corresponding decline by manufacturers, jobbers have reduced quotations to \$3.50@3.75 per lb., and 20¢@30c per oz.

**CUBE BERRIES.**—Abundant supplies and a slow demand have caused a decline to 18@23c for whole, and 23@25c for powdered.

**BALSAM TOLL.**—The market is firmer in sympathy with primary sources, and jobbers have advanced quotations to 35¢@36c in tins, and 40¢@50c for less.

**SQUILL ROOT.**—Powdered is higher, and the revised jobbing range is 28¢@35c, as to quantity.

**HEMP SEED.**—Foreign markets are stronger, and spot jobbing quotations have been advanced to 3¼@3½¢ by the bag, and 55¢@6c for less.

**GUM CAMPHOR.**—Market is slightly firmer, and jobbers now quote 65¢@75c. Powdered has been advanced to 70¢@80c.

**ASAFAETIDA.**—Jobbing values are a shade easier, and the revised figures are 35¢@40c for selected, 30¢@35c for No. 1, 25¢@30c for No. 2, and 35¢@40c for powdered.

**CANNABIS INDICA.**—Stronger markets abroad have imparted a firmer feeling among local dealers, and spot prices have been advanced to 70¢@75c.

**MENTHOL.**—The market is again strong, and jobbers have advanced quotations to \$1.75@2.00 per lb., and 35¢@40c per oz.

**GUARANA.**—Stocks are light, and prices have been advanced to 75¢@80c for whole, and 85¢@95c for powdered.

**STROPHANTHUS SPEC.**—Values are higher, owing to scarcity, and the jobbing range is now \$1.40@1.50 per lb., and 15¢@18c per oz.

**BLUE VITRIOL.**—Jobbers have reduced quotations to 5¼¢@6c by the barrel, and 7¢@8c for smaller quantities.

**SPRUCE GUM.**—Select is scarce and decidedly higher, with jobbers quoting \$2.00@2.25.

**PERMANGANATE OF POTASH.**—Market easier on account of competition, and jobbing prices have declined to 15@18c.

**LARKSPUR SEED.**—Supplies are steadily diminishing and jobbers have advanced prices to \$1.15@1.25 for whole and \$1.75@1.85 for powdered.

**CAMPHOR.**—Quotations for ounce cases have been advanced to 60¢@66¢ by the case, and 67¢@70c for less.

**GUM ARABIC.**—There has been a general revision of prices, and the corrected jobbing figures are 40¢@45c for selected and 30¢@35c for powdered, 35¢@40c for No. 2, and 45¢@50c for powdered, 22¢@25c for sorts, and 25¢@30c for sifted.

**SPIRITS TURPENTINE.**—A firmer feeling has developed, and jobbers have advanced prices to 43¢@44c by the barrel, and 50¢@60c for smaller quantities.

## INDEX TO THIS NUMBER.

THOMAS A. BEARD, Phar. D., a prominent pharmacist of Brooklyn, died Sunday, Oct. 20, at his late home No. 168 Rutledge street. On the afternoon of October 3 he was thrown from a trolley car and received internal injuries which hastened his death. Dr. Beard was born in Columbia, S. C., in 1843. Prior to the breaking out of the Civil War he was in the dry goods business in the South. He joined the staff of General "Stonewall" Jackson and was afterwards attached to the staff of General Lee. Dr. Beard graduated from the New York College of Pharmacy and established a drug store at Rutledge street and Lee avenue twenty years ago. He was actively engaged in business until he met with the accident which primarily caused his death. Besides his widow he is survived by two sisters who live in the South. Dr. Beard was an ex-alderman-at-large, a member of the Kings County Democratic Committee, the Seneca Club, Marsh Lodge, No. 188 F. and A. M., and Rathbone Lodge No. 1 Knights of Pythas. He also belonged to the New York Consolidated Exchange, and was an honorary member of Gen. Grant and Ricard Posts, Grand Army of the Republic. Funeral services were held in Christ Church, Bedford avenue, Brooklyn, October 22, and were largely attended by the members of the lodges and clubs of which the deceased was a member. The interment was at Mount Olivet Cemetery.

## COMMENT UPON THE ACTION OF THE N. A. R. D.

As the Buffalo meeting of the National Association recedes into the past, it becomes more and more evident that the differences of opinion concerning the policies and plans of the organization, shown at the convention, are more serious than was at first supposed. It is now apparent that the expressions of disapproval from the various sections of the country voice the conviction of the rank and file of the Association, and are not merely evidences of personal disappointment of a few delegates. The evidence points to the conclusion that the division of opinion is a sectional one, and the possibility of an early agreement seems somewhat remote.

Unfavorable comment upon the attitude of the members of the two camps are coming in daily. The fact that the difference is distinctly sectional augurs ill for the continued harmony which is so eminently desirable. The druggists of the eastern part of the country seem to favor the immediate adoption of the price restrictive plan, while those of the regions farther removed from the Atlantic coast are satisfied with a further extension of the tripartite plan.

The friends of the tripartite plan are on the whole satisfied with the action of the convention, but complain that the members of the opposition have not been just to the methods which have been in force during the past year. They claim that wherever the plan has failed to accomplish the desired results, this

has been entirely due to inefficient local organization and lack of loyal support of the measures upon which the success of the plan depends. The objection to voting by proxies which has been raised by delegates from the eastern States, is met with the statement that all sections had an equal right to representation of this kind, and that the failure of certain localities to provide sufficient representation was due to half-hearted support of the organization. They assert that all has been done that the advocates of the price restrictive plan could reasonably demand, and that the tripartite plan has proved quite as successful as could be expected, taking into consideration the short time during which it has been in force. They are unwilling to abandon a plan which they have found effective and adopt instead one of doubtful value, but are ready to test the merits of any method which promises better results. With the provision made for this purpose in the resolutions adopted at Buffalo they think every one should be satisfied.

The general feeling among the friends of the price restrictive plan seems to be that the druggists of the eastern cities have not received the consideration which is their due. They have largely lost faith in the tripartite plan, which they claim is of benefit principally to the jobbers who instead of loyally doing their part, give in return for substantial benefits nothing but promises. In some sections there are even broad hints that some of the deliberations of the Buffalo convention show plain evidence of having been inspired by outsiders, and that the real interests of the retail trade were ignored.

While the druggists of the country are still divided as to the relative merits of the two methods of combating the practice of price-cutting, both plans are encountering opposition in the courts of law. The decision unfavorable to the tripartite plan, lately rendered in Atlanta, has been followed within a few weeks by one holding the operation of the price restrictive plan contrary to law, or at least limited in its lawful application.

In spite of the abundant unfavorable comment upon the results of the Buffalo convention, there is no sign of disloyalty to the organization. There seems to be a general determination to abide by the decision of the majority, and support the measures which have been adopted. The druggists of the country are to be congratulated upon this adherence to the policies of the Association in spite of the evident division of opinion concerning their merits. This attitude is full of promise for the future. If success is to crown the efforts of the druggists of the country in the tremendous task of removing one of the most burdensome evils of competition, the united power of
