INDEX TO VOLUME XXVI.

JULY 4 TO DECEMBER 26, 1901.

A

Acacia, 570.
 Acecanilid, Character, 5.
 Acetylpyrine, 487.
 Acid, Carbolic, Burns, Treatment, 103.
 Carriage, 382.
 Poisoning, 162, 180.
 Chronic, 538.
 Citric, New Process of Manufacture, 709.
 Powdered, Character, 5.
 Acid, Glycophosphorous, and its Salts, 628
 Hypophosphorous, 96.
 Action on Acetone, 246.
 Sulfidic Detection, 221.
 Sulphuric, Well, 325.
 Tannic, Commercial, 538.
 Tartaric, Examination of Samples, 5.
 Acids, Plants, 634.
 Aconite, 369.
 Adulteration, 569.
 Estimation, 387.
 Acopyrine, 360.
 Adulteration of Drugs, 537, 569.
 Advertise, One Method, 11.
 Advertising, Retail Druggists, 9, 63, 118, 131,
 214, 240, 245, 279, 331, 653.
 Window, See Window Display.
 Albargis, 65.
 Alboferine, 426.
 Albumen, Esbach's Test, 623.
 Plant, 643.
 Black, 715.
 Red, 690, 715.
 Alcohol, Beverage or Medicine, 422.
 Deodorized, 5.
 Examination, 154.
 Methyl, Detection, 666, 711.
 Solid Form, 207.
 Wood, Fuel, 38.
 Alcolohim, Treatment, 188.
 Alkaloids, Solanaceous and Coca, 601.
 Vegetable Processes, 543.
 Ales, 570.
 Alum, Production, 72.
 Amelsen Eier Oel, 311.
 Ammonia, Green, 106.
 Violet, 283.
 Ammonium Acetate, 537.
 Iodide, Preserving, 714.
 Amyrin, 390.
 Analan, 555.
 Anatomical Specimens, Preserving, 468
 Anisod, Star, Export, 338, 361.
 Antiferin, 38.
 Antipyridin, Incompatibilities, 312.
 Antipoxin, Diptheria, Recognition by U. S. P.,
 612.
 Antitussive, 544.
 Antivenim, Investigations, 730
 Apoplexy, 186.
 Arrowroot, Bermuda, 154.
 Arsenic, Habit, 348.
 Poisoning, Treatment, 189.
 Asafetida, Quality, 570.
 Samples Examined, 154.
 Assays, Pharmacological, 750.

ASSOCIATIONS, PHARMACEUTICAL (Clubs)

Societies, Drug Clerks, Paints, Alumal, etc.
 American Round Table, 285; American
 Chemical Society, 647, 677; Chemical Society,
 Philadelphia Section, 613; American
 Electro-Chemical Society, 550; American
 Pharmaceutical, 407, 160, 200, 203, 230,
 232, 262, 314, 346, 348, 355, 363, 397, 435,
 721; Atlanta Druggists, 406, 434; Apothecaries'
 Bicycle Club, 16, 134, 224, 341;
 Bedford Pharmaceutical, 107; Boston Drug

ASSOCIATIONS, Etc.—Continued.

INDEX TO THIS NUMBER.

THE N. A. R. D. IN NEW YORK.

The drug trade quite generally looks upon New York City as the head center of the business, and with reference to the successful operation of the N. A. R. D. plan this city has often been characterized as "the key to the problem." New York presents conditions in some respects similar to those prevailing generally throughout the country, but with many others very different, and in fact peculiar to itself. The settlement of the cut price problem is undoubtedly more difficult in this city than in any other place in the country. It is therefore all the more gratifying to observe, as all can, that much progress has been made here, and that the prospects for the future are bright and continually growing brighter.

To be sure, the problem of successfully enforcing the N. A. R. D. plan for higher prices in this city has not yet been solved. This is due to the fact that those engineering the movement have been unable to entirely shut off supplies to the aggressive cutters. The Executive Committee of the Joint Conference Committee has apparently effectually prevented the cutter from getting supplies in the local market; but it has not succeeded in stopping supplies coming from other cities nearby. Last week it was positively asserted by an irreproachable authority that Philadelphia was the place of the latest leak. This authority stated that goods on the prohibited list were coming to New York daily from a well known wholesale house in Philadelphia. The local New York jobbers are indignant at the action of the Philadelphia firm, and some assert that summary action should be taken to

stop this breach of faith. The name of the firm has not yet been given out for publication, for efforts are being made to bring it to terms without publicity, but should this fail, widespread publication will result.

An influential member of the Drug Merchants' Association (commonly called the Cutters' Association), said regarding the doings of this Philadelphia house: "That is by no means unusual. It is hardly necessary to go so far, for goods can be bought right here in New York. Some of the New York jobbers know to whom they are selling, and it is easy, anyway, to put goods in Hunyadi cases." It is believed that this reference to treachery on the part of local jobbers is not warranted, for, so far as known, wholesale houses in this city have been thoroughly tested and found to be keeping to the tripartite agreement.

Undoubtedly the situation in New York City will provide a fruitful topic for discussion at the annual meeting of the N. A. R. D. at Buffalo in October. But prior to that time it is believed that the conditions in New York will have improved to such an extent that it will be possible for the Conference Committee to meet the cutters, and to agree upon a uniform price list, or failing that, a satisfactory differential price schedule. This presumption seems to be warranted by the fact that the cutters have been steadily advancing their prices of late. The Drug Merchants' Association and the Dry Goods Dealers' Association will in a few days have finished a new price list in which there will be material advances.

It will be of interest to examine the following prices, which give an idea of the effect which the N. A. R. D. movement has already produced in this city, and from which may be drawn an augury of future accomplishments.

	Cutter's Price Nov. 2 mos. ago.	N. A. R. D. Price
Pinkham's Compound	77c.	69c.
Listerine	67c.	67c.
Swamp Foot	68c.	85c.
Fellows' Hypophosphites	90c.	45c.
Omega Oil	32c.	45c.
Scott's Emulsion	71c.	74c.
Wampole's Cod Liver Oil	73c.	74c.
Carters' Pills	45c.	45c.
Bromo Seltzer	10c.	10c.

One of the members of the Drug Merchants' Association said a few days ago that it would not be possible for them to raise prices rapidly, but that they would gradually be brought up to within one or two cents of the N. A. R. D. price.

All in all there is much reason for congratulation and for a feeling of encouragement. The drug trade in all its branches realizes that its own self-preservation demands that this cut-rate evil shall be either eliminated or materially lessened, and the cutters themselves are tired of carrying on business for nothing, or for the very slight modicum of profit which

comes to them at cut rates, especially because the drawing power of cheap patent medicines has within the past few years been greatly lessened. The cutters have used patent medicines as a bait about as long as there has been any attractiveness to the public, and we believe that in the majority of instances they are now about ready to unite with the legitimate drug trade in advancing prices to a reasonable living basis. It only needs careful management and a manifestation of a proper spirit to bring the two hitherto opposing forces into harmony and union upon measures which will be mutually satisfactory.

THE WORCESTER PLAN.

There is very widespread interest in the so-called Worcester Plan for the regulation of the sale of proprietary medicines from the manufacturer, through the wholesaler to the retailer, and by him to the customer. Many state and local organizations have formally endorsed this plan, and have adopted resolutions requesting, sometimes demanding, that proprietors generally put it into effect in their individual businesses, and the N. A. R. D. at its annual meeting next October, will have this matter to grapple with. Many druggists see in it the ideal and practical solution of the cut rate problem, and, in fact, have become so enthusiastic over it that they cannot well understand why the proprietors show the reluctance which they do about adopting it generally.

The Worcester Plan is, we think, a good one, and would prove effective if it were made to apply to every well known and well selling proprietary medicine. But unless it is thus generally adopted, it opens the way to developments which some druggists who are now clamoring for it do not perceive. For instance, take two headache remedies of somewhat similar character, both largely advertised, one of which is marketed under the Worcester Plan, the other is not. The protected article would be sold at the protected price, but the proprietor of the other would immediately recognize the opportunity and hustle to place his preparation everywhere and sell it for any old price, and he would get the business, too. This is a possibility, almost a certainty, which the proprietors have in mind, and which to a large degree, we believe, leads them to go slow in adopting the Worcester scheme. If only a few proprietors adopt it they would suffer directly and from the start in a material decrease in business. Outside competition would spring up, and there would be a host of competing articles advertised to the public, and sold, too.

Some may think that this is not a justifiable prophecy. They will say that the retail drug trade would patronize the protected article to the exclusion of the other cheap one. But those who say this do not really know the retail drug trade as well as the fearful proprietors do.

We would like to see the Worcester Plan, or any other plan which insures the protection of retail prices on proprietary medicines, put into operation, but every one of these requires for its success a very general adoption, and unless the Worcester Plan is enforced by the majority, in fact by all, the leading proprietary medicine houses, the last state of the drug trade would be worse than the first. Possibly

the N. A. R. D. and its affiliated associations may be able to induce all of the present proprietors who have signed the tripartite agreement to adopt the Worcester Plan, and if so we see no reason why it should not work satisfactorily to all concerned. But if the proprietors quite generally agree to hold out and not adopt it, the question arises, what are you going to do about it?

SOME OF THE DRUGGIST'S TROUBLES.

In the report of the Committee on Trade Interests presented to the New York State Pharmaceutical Association last month, there were some positive statements regarding prevailing conditions in the drug trade in this State which are startling and demand the earnest consideration of the retailers. The committee in speaking of the growth of the large pharmaceutical manufacturing houses expresses regret that some of these concerns, which formerly confined their efforts to having goods handled by the legitimate retail drug trade, are now placing complete lines in large department stores. Farther, the committee asserts that these same houses, by their representative in the larger cities, in sampling their goods to the medical profession, are calling the attention of the physicians to the fact that their preparations are now in these department stores. All of which has not only had a damaging effect upon the retail drug trade, but has tended to create confidence in the department store on the part of the physicians.

Another abuse which the committee charges against the pharmaceutical manufacturers is that often, by extra inducement, they over-burden the retail druggist by placing five hundred to two thousand dollar orders of their goods when only one-tenth that amount would be ample; a procedure which the committee characterizes as very unwise, in that it forces upon the druggist a wholly unnecessary burden.

Another significant paragraph from the committee's report reads thus: "We find also that the retailers feel that the sampling of such large bottles to the medical profession deprives them of a good share of the physician's business; and this applies also to the large amount of samples sent through the mails and otherwise. The tablet business is working great injury to the retailer, for the tablet manufacturers are calling regularly on the physicians, supplying them with tablets, in many instances in large quantities, and the physicians in turn furnish these tablets to their patients. In certain cities, of some 20,000 inhabitants and eighteen or twenty drug stores, not over fifty prescriptions per month are put up by all the druggists combined, and in all these cities all of the principal pharmaceutical manufacturing houses sell direct to the physicians."

This committee report paints a rather gloomy condition, and we are inclined to question whether it is as bad as depicted. If, however, the retail druggists are suffering such an infliction, it hardly seems fair to lay all the blame on the manufacturers. The retailers certainly are largely responsible for allowing this class of trade to get away from them. We have always maintained that the druggist could, if he would, hold the physician's patronage, and supply to him all the medicines (pharmaceuticals, tablets or

other) that he may wish. A wide awake druggist does not allow the traveling salesman to come into his locality and take away his trade under his very nose, but he gets out and hustles the same way among his physicians. The charge that pharmaceutical houses are supplying the department stores is a more serious one, and if true reflects no credit upon them. That sort of thing should not be permitted.

THE ERA'S VALUE TO ITS SUBSCRIBERS.

Have you, gentle reader, ever considered the advantages you possess for increasing your knowledge of the scientific and commercial sides of pharmacy? Your brother druggist of twenty or more years ago was not so favorably placed as you to equip himself to carry on his business successfully. Your immediate surroundings, your stock in trade, furnish an almost limitless storehouse from which you may draw technical information, supplementing it by the aid of various books. The old-time druggist had a limited stock. He knew nothing of synthetic remedies or elegant pharmacy. He had few text and reference books. He was not obliged to be a keen student and a hustler, as are you, to keep up with the procession.

But how many of you make the fullest use of your opportunities and advantages? How many keep abreast of the times in the application every day of the facilities and information at your command? You do not think of neglecting to read your daily paper, although the time thus spent might be greatly shortened without detriment, for the knowledge acquired from the newspaper is not of the least importance in the conduct of your commercial and professional business. The newspaper covers a generality of matter, but it never touches pharmacy, unless some pharmacist by accident or design touches the newspaper.

The pharmaceutical press, however, is a most real and valuable means of keeping posted on every phase of your calling. Especially is this true of *The Pharmaceutical Era*. Its weekly visits give you a speaking acquaintance with your brother pharmacists throughout the world, and more particularly in your immediate vicinity. Just now there are many questions of vital consequence to you, such, for instance, as the N. A. R. D. movement for better prices, and you should know all that is going on. You probably cannot afford the time to attend all the meetings of your local and state organizations, but the ERA does this for you, and presents to you fresh this variety of news, which is of direct value to you. Then, too, the legal surroundings of your profession are constantly changing, and the pharmaceutical journal is the only means of bringing to you notification of new laws, new regulations, which bear directly upon the every day conduct of your store.

In the pharmaceutical press alone the druggist of to-day has an immeasurable advantage over the druggist of twenty years back. But unfortunately, there are many druggists who even yet do not realize the value of drug journals to them; but are content to grub along from day to day, their vision extending no farther than the iron door of their stores, with no ambition for betterment, with no prospect of progress. These old fogies of the business will, however, gradually die out, and there is coming to the front a lot

of young men who are thoroughly imbued with modern ideas and modern methods, and who are even now rattling merrily the old dry bones of the past which still cumber the pharmaceutical field. These young druggists have had bred into their very beings a sense of the imperative importance of keeping posted, and they know there is no other way of so thoroughly accomplishing this as to support and read the pharmaceutical press. The pharmaceutical press has been the leading factor in the past fifteen years in securing improved pharmacy laws, in fostering and advancing pharmaceutical organizations, in removing trade alaises, and in countless ways has made possible and brought about a progress in pharmacy which otherwise would have been neither possible nor thought of.

MAINE DRUG STORES.

The compilers of the *Era Druggists Directory* experience considerable difficulty in establishing the exact status of the drug stores in many cities and towns in the state of Maine. In a single city, Lewiston, with some 30,000 inhabitants, there are about a dozen legitimate drug stores, but at least fifteen more concerns which by the commercial agencies are rated as drug stores, although a strict inquiry into their nature and the character of the business conducted would debar them from this characterization. For a number of years these latter fifteen firms have been in reality conducting a liquor business under the guise of pharmacies, but about a year ago the commissioners closed up all of these illegitimate places, or rather compelled them to cease fitting up their premises to resemble drug stores, and prohibited them from using any signs reading, "pharmacist," "druggist," or "apothecary." Because of the abuses which have crept into the drug business in Maine, due to the peculiar nature of the liquor laws of that state, an entire revision of the *Druggists Directory* for that territory has been rendered necessary, and it would puzzle a Philadelphia lawyer sometimes to draw the line between the legitimate and the illegitimate. The drug business, notwithstanding the earnest efforts of the board of pharmacy and the license commissioners, has been widely used as a cloak for all sorts of illegitimate practices in the way of liquor-selling, etc. It is gratifying to know, however, that things are getting a little better in the state of Maine, and that henceforth the name "druggist" will not be synonymous with "saloonist." The reputable drug fraternity of that state are to be congratulated upon this prospect, as well as commiserated upon the ill fame that has been brought to them in the past.

INORGANIC SERUM.—Trunecek employs the following formula for the preparation of an inorganic serum for subcutaneous injection in cases of arterio-sclerosis: Sodium sulphate, 0.41 grams; sodium chloride, 4.92 grams; sodium phosphate, 0.15 grams; sodium carbonate, 0.21 grams; potassium sulphate, 0.40 grams; distilled water, q. s. to 100 grams.

TO IMPROVE THE ODOR OF COAL OIL.—If coal oil be digested with calcium chloride, with occasional agitations, for a few hours, it loses that—to many people—disagreeable pungent odor, and acquires one of an ethereal nature which, if not exactly agreeable, is a vast improvement on the original (National Druggist).

Laboratory Notes.

THIS DEPARTMENT is designed to afford an avenue to publicity for the large amount of valuable scientific material to be found in the laboratories of the pharmaceutical manufacturing houses, but which heretofore has not been published because of lack of suitable facilities. Investigators in these houses are continually gaining information, making discoveries, improving processes, testing trade commodities, making scientific investigations, etc., in the line of their daily work, which are not strictly trade secrets, but which, on the contrary, if given for publication, would prove of great utility.

The department also includes results of investigations by the individual pharmacist, chemist, teacher, or experimenter which have a direct bearing upon pharmaceutical progress. Short notes and paragraphs relating to simple processes, solutions of practical problems, improvements in manipulation, etc., are especially desired, and every one is invited to contribute.

All contributions are printed with full credit to those making them.

ASSAY OF WHITE HELLEBORE.

Recently, an assay of several samples of white hellebore was undertaken in the laboratory here to determine their value as insecticides, there being no method for such assay found in the text-books. The following methods were worked out and found to give good results. Method "A" is based on Lyons' assay of *veratrum viride*, an allied drug.

White Hellebore of commerce is the powdered root of *veratrum album*; it should be free from admixture with the root of *veratrum viride* or other plants, of course. A good sample is grayish-white in color, has an acrid taste and will cause violent sneezing if a few particles are snuffed up the nostrils. It should assay from 0.5 per cent. to 0.8 per cent. total alkaloids. An old drug, one that has little taste and does not cause sneezing and which assays below 0.5 per cent. total alkaloids, should be rejected as being valueless for an insecticide. It should be in a very fine powder to produce best results.

Weigh out 12 gm. of the drug, in fine powder, put it into a 4 ounce bottle and pour on it exactly 100 Cc. of a mixture of 88 Cc. ether and 12 Cc. chloroform; shake thoroughly until all the drug is wetted by the liquid and add 5 Cc. of 12 per cent. ammonia water. Set aside, with frequent shaking, for at least six hours. Now measure off exactly 50 Cc. of the solvent (equal to 6 gm. drug), adding a few Cc.'s of water if the powder does not "lump" sufficiently to allow of pouring off the fluid clear. Evaporate to dryness in a dish on a water-bath, take up the varnish-like residue with a little ether and add 10 Cc. dilute (5 per cent.) acetic acid, and then drive off the ether by gentle heat. Filter the acid solution of alkaloids into a two ounce bottle, take up the residue in the dish with ether, add 5 Cc. of 1 per cent. acetic acid, drive off ether and run liquid through filter; repeat with successive portions of ether and acid until the filtrate gives no precipitate with Mayer's reagent. Usually the third washing will take up all the alkaloids present, making the total bulk of filtrate about 20 Cc. Add ammonia water in excess to the acid solution and shake out the alkaloids with ether, 10, 5 and 5 Cc.'s until a drop of the ether evaporated leaves no residue reacting with Mayer's reagent, combining the ether portions in a tared beaker. Evaporate to a constant weight on a water-bath and weigh, this weight will give the amount of alkaloids present (in 6 gm.) in a slightly impure state, but will be useful in checking off the acidimetric determination. Take up this residue with a little acid-free alcohol, add 10 Cc. of N 25 sulphuric acid, taking care that the solution of alkaloids is complete, and titrate back to neutrality with N/25 potassium hydrate. The difference between the number of Cc.'s of acid used and the number neutralized by the alkali solution gives the number of Cc. required to neutralize the alkaloids.

To get the percentage of total alkaloids in the drug, multiply the number of Cc.'s N 25 acid used by 0.458, this factor being based on the use of 6 gm. of drug for assay. Or, the factor (1 Cc. of N 25 sulphuric acid = 27.5 mgm. total alkaloids) can be used.

A shorter method for rapid work is as follows: Pour off exactly 50 Cc. of solvent from drug (equal to 6 gm.), evaporate to dryness in a dish, take up with a little acid-free alcohol, add 10 Cc. of N 25 sulphuric acid and titrate back with N 25 alkali. Multiply the number of Cc. acid neutralized by the alkaloids by 0.458; this will give the percentage of total alkaloids in the drug. This method gives results a little higher than the first.

On account of the sparing solubility of *veratrum* alkaloids in mineral acids, acetic acid is used to extract them from the ether-chloroform residue. Haematoxylin makes the best indicator; titrate with the alkali solution to a clear pink color. The factors given are those given by Lyons in his work on drug assays, for *veratrum viride*; checking them against gravimetric determinations of the alkaloids of *veratrum album*, they were found to give quite accurate results.

A third method is based on the exhaustion of the drug by dilute acetic acid, evaporating the acid solution to small bulk, shaking with ether to remove fatty substances, etc., then adding ammonia in excess and shaking out the alkaloids with ether and estimating as above.

TESTS, ETC., FOR VANILIN.

Pure vanillin should appear in white, needle-like crystals, free from color and traces of adhering oily bodies. Its melting point is from 79° to 81° Cent.; the boiling point from 284° to 285° Cent. It should be completely soluble in water, alcohol, ether, chloroform, carbon bisulphide and dilute ammonia water, the last solution being perfectly clear. It should be free from cresol and phenol like bodies and from synthetic by-products or decomposition products. A "powdered" vanillin, it must be remembered, is more likely to be adulterated than a crystalline one.

IDENTITY TESTS.—Dissolve 0.1 gm. in 5 Cc. concentrated sulphuric acid, it should not give a solution deeper in color than lemon-yellow. Acetylisoegenol, its synthetic antecedent, gives a carmine-red color. (Kehler).

Shake 0.1 gm. with 5 Cc. dilute ammonia water, it should give a clear solution. Coumarin would be indicated by insolubility or a cloudy solution.

Heat 0.1 gm. with 10 Cc. liquor potasse, the solution should not give a reddish precipitate, after neutralization with HCl, with ferric chloride solution. Benzoic acid present would give a reddish precipitate.

Poil a solution of 0.2 gm. in liquor potasse with a few drops of chloroform, no odor of isonitril should

be given off. Acetanilid would be detected by this test.

Melting point = 79° - 81° Cent. (Coumarin = 67° Cent.)

Boiling point = 285° Cent. (Coumarin = 290° Cent.)

Crystallizes in white needles (Coumarin in shining prisms).

The adulterations of vanillin so far recorded are acetanilid, benzoic acid, coumarin, acetyl-iso-eugenol and powdered sugar.

Vanillin gives a yellow color with sulphuric acid, a blue color with ferric chloride and a solution of 0.1 gm. in 10 Cc. concentrated sulphuric acid gives characteristic color reactions with copaiba and other balsams.

ESTIMATION.—Triturate 5 gm. of sample with fine, clean sand, extract the mixture with ether, shake the ether solution with a strong solution of sodium bisulphite, and separate bisulphite solution. Set free the vanillin taken up by the bisulphite with an acid, shake out with ether, in successive portions, combine, evaporate and dry to constant weight on water-bath. This gives amount of vanillin in sample. The ether solution of original substance, if free from benzoic acid or acetanilid, can be evaporated to constant weight and taken as coumarin.

Dissolve 5 gm. of sample in ether, examining and weighing residue. Shake out vanillin with dilute ammonia water (10 per cent.) using 10 Cc. each time until the washings are no longer colored yellow; reserve the ether solution for estimation of coumarin. Neutralize the ammonia solution with HCl, shake out the vanillin with ether, evaporate in a flask to dryness and take up the residue repeatedly with ligroin until a drop gives no residue on evaporation. Evaporate the ligroin solution to a constant weight in a tared beaker and weigh as vanillin. Evaporate original ether solution to dryness, take up with ligroin until all soluble is dissolved, dry to constant weight in tared beaker and weigh as coumarin. Acetanilid, if present, will be left in the residue from the ammonia extraction of the ether solution of vanillin; benzoic acid can be separated from the ammonia solution by suitable precipitant and estimated thus. Acetyl-iso-eugenol can be estimated by taking advantage of the solubility of aldehydes in solution of sodium bisulphite and dissolving out the vanillin in a mixture of the two by a strong solution of sodium bisulphite and proceeding as in the first method given. The separation of vanillin from acetanilid can also be effected by the same method, i. e.: dissolving the sample in ether, shaking out vanillin with sodium bisulphite, evaporating the washed ether solution and weighing as acetanilid. In fact, the sodium bisulphite solution will separate the vanillin in a sample from practically all the adulterants mentioned, solution of the sample in ether, of course, being the first step. Sugar may cause a difficulty from being soluble in the water of the bisulphite solution; it must therefore be estimated in the residue left from ether extraction.

FRED'K T. GORDON,
Pharmacist U. S. Navy.

Laboratory,
League Island Navy Yard,
Philadelphia.

QUALITY OF U. S. P. CHEMICALS.

The following substances were examined according to the U. S. P. with the following results:

CHLOROFORM.—(Chloroform purif. 1880) Five sample examined; four pharmacopœial. One gave reactions for acids, chlorine, chlorinated compounds, sulphate. This sample was undoubtedly the crude, although labeled purified.

FARALDEHYDE.—Of two samples examined one was pharmacopœial, the other gave reaction for free acid beyond the limit.

DEODORIZED ALCOHOL.—Three samples were found to meet the requirements.

HOFFMAN'S ANODYNE.—Of five samples examined none contained ethereal oil.

SPIRIT OF NITROUS ETHER.—Of three samples examined, one contained 3.7 per cent. ethyl nitrite, one 3.1 per cent. and one 0.5 per cent.

ETHER FOR ANESTHESIA.—Two samples were pharmacopœial, and one contained an undue amount of alcohol and some aldehyde. Sp. gr. 0.736.

CHLORAL.—Two samples met requirements of the Pharmacopœia.

BKANDY.—A suspicious sample showed upon examination presence of added sugar, glycerin and aromatic substance and fusel oil. Acetic ether could be detected by its odor. It cost wholesale four dollars per gallon. It was a poorly made article. Alcoholic strength was 39.1 per cent. and sp. gr. 0.9456.

TARTARIC ACID.—Of seven samples one was citric acid (probably a mistake in labeling); three were pharmacopœial; one contained traces of calcium and tested only 08.0 per cent. pure acid. The other two tested respectively 90.3 and 99.1 per cent. pure acid.

CITRIC ACID POWDERED.—A sample sent for examination tested with potassium hydrate v. s. only 5.4 per cent. The balance was apparently sugar. The sample was purchased from a retail pharmacist, and upon inquiry it was found that it was the basis for lemon-sugar which, because it was not labeled, but had been in an earthen 3-pound butter jar during the hot weather when this store had calls for lemon sugar, had now in the colder weather, when there was no call for it, been put in the regular citric acid shell bottle by a new clerk, who took it to be powdered citric acid.

SOLUTION OF CITRATE OF MAGNESIUM.—One sample which was deficient in magnesium citrate was found to have been made according to the U. S. P. formula, but in a way that the ingredients for twelve bottles were made to do for fifteen bottles. Another sample which had been sent by the purchaser because it was cloudy was found to be pharmacopœial. The pharmacist who prepared it claimed that the solution ought never to be filtered, and that he has been dispensing the cloudy solution for years.

ACETANILID.—A sample sent for examination was found to be boric acid crystals.

POTASSIUM BICARBONATE CRYSTALS.—A 5 pound package so labeled was found to contain potassium hyposulphite (thiosulphate).

POTASSIUM IODIDE.—Three samples met requirements.

SEIDLITZ POWDERS.—Of six examined four were full weight and two short. One of the blue papers contained tartaric acid in quantity designed for the white paper, and a white paper contained citric acid.

Advertising Remedies

as a modern abuse is a grave error, Nicolas de Blegny, who wrote the curious "Livre Commode for 1692," has a page or two of puffery not unworthy of a twentieth century ad. writer. He informs us that M. de Blegny, Junior, is "the only artist to whom the descendants of Signor Hieronimo of Ferranti, inventors of orvietan communicated the original secret," while his own remedies range from "a vegetable preparation that cures toothache and decayed teeth forever" (!) to a "biqueur that purges and helps digestion, radically cures vertigo, headache and the vapors, regulates the bowels, and, in one word, rejuvenates like the water of the fountain of Jouvence."

The following paragraph is also worthy of quotation, for the "double or quits" system may be a novelty to the modern medicine-man.

"A solvent person who knows the virtues of these remedies, guarantees, when desired, to repay the value to patients if a cure is not effected, on the condition that they promise to pay double if their cure is perfect." It is evident that at this epoch

DRUG POT.

Posters

were also used, for Dr. Lister, an English medical man who went over to Paris in 1697, says: "It was a pleasant diversion to me to read on the walls everywhere about the town (but more particularly in the Faubourg St. Germain, the quacks' bills." These, he

OLD FRENCH DRUG POTS

says, were usually headed "By the King's order," or something of the kind (doubtless to draw attention and give them an official aspect); and offered means of curing venereal and other diseases "without inconvenience or possibility of detection, etc." The same observant doctor gives a description of "Geofferies Pharmacy,"

in the rue Bourg Thibourg, which tallies curiously with our illustration. He alludes to the "Porte-Cochier with Vases of Copper in the Niches of the Windows," the "Drugs and Compositions kept in Cabinets disposed around the Room," and the laboratories behind, "in great order and neatness." This pharmacy was indeed one of the leading officines of Paris, and no less than three members of the Geoffroy family have their portraits hung in the Paris School of Paris; one of these is alluded to by Lister as a "most Hopeful and Learned Young Man."

The Newest Remedies

at the time of Lister's visit were ipecac and quinine. The former cost "20 to 40 crowns per lb.," and appears to have been first brought from Brazil in 1686 by a

¹This is the correct spelling. Our friend Lister's orthography is a little loose, a common enough fault "Two Hundred Years Ago."

French merchant. The Dauphine having been cured by this remedy, it had become popular; it was used in doses of from 10 to 40 grains for the dysentery, then so prevalent. As to quinine, Louis XIV. had bought the secret for 48,000 livres from Talbot, an Englishman, it was consequently called in France (at this time) "The English Remedy;" though it was also known as "Jesuits Powder."

The old fashioned remedies were still largely used, and the medical treatment of the epoch may be best judged by the following

Apothecary's Bill

recently unearthed by Dr. Dorveaux, and we believe, never yet published in English. This authentic document was furnished to Master Fery, a Protestant minister at Metz in 1666-9, by the widow of the late Jean Petre.

- 1666.—July 27.— $\frac{1}{2}$ oz. cassia pulp.
Sept. 3.— $\frac{1}{2}$ oz. cassia pulp.
Sept. 12.— $\frac{1}{2}$ oz. cassia pulp.
- 1667.—April 5.—1 refrigerant laxative clyster.
April 5.—Clyster repeated.
Plus 1 oz. cassia.
June 13.—For Monsieur a medicine composed of cassia, manna, senna and peach-flower syrup.
June 15.—The same.
Sept. 4.— $\frac{1}{2}$ oz. cassia.
Oct. 3.— $\frac{1}{2}$ oz. cassia.
Oct. 21.—1 clyster composed of catholicum, honey and violet.
Oct. 25.—The same.
- 1668.—May 6.—1 clyster with 10 drams cassia, violet and honey.
May 27.— $\frac{1}{2}$ oz. cassia.
July 27.—10 drams oleum spicae.
Aug. 2.— $\frac{1}{2}$ oz. cassia.
Plus (for the servant) a laxative and emollient clyster.
Aug. 18.—For the vine-tender at Platteville a bottle of Scabious Water of Blessed Thistle and Red Poppy, containing 10 oz.
- 1689.—March 25.—2 drams senna.
Plus 1 oz. manna.
Plus $\frac{1}{2}$ oz. cassia.
May 18.—10 drops cinnamon oil.
May 21.—A medicine composed of senna, rhubarb and peach-flower syrup.

Any of our readers acquainted with the opening act of Moliere's "Malade Imaginaire" will infallibly be reminded of M. Fleurant's bill as they read the above. It is to be feared that so far as invoices were concerned the dramatist's sarcasms on the apothecaries of his epoch were not wholly undeserved. In any case the expression "apothecaries' bill" is still currently applied in France to an over-long and excessively detailed claim for money. Of course, it is difficult to judge of the real character of

The French Seventeenth Century Apothecary

after so long a lapse of time. That he was a worthy and public-spirited citizen, often rich and generous, and frequently of high mental culture seems apparent. It would perhaps be an error to insist too much on the entrance examinations of the Apothecaries Guild as absolute proof of an invariably high standard of edu-

APOTHECARIES' WEIGHTS.

cation, or to compare these little family affairs with the free unbiased pharmacy board examination of modern America. It is evident that in a close corporation like that of the apothecaries, the wealth and

social status of the candidate were not ignored, and that the son of a well known, rich and respected apothecary would hardly be refused entrance except for the crassest ignorance or some other serious reason. Religion, for instance, was an important point, after the revocation of the edict of Nantes no heretic could be admitted to the fraternity. Apart from this, the

Conditions for Admission

(from 1638 to 1777) practically consisted of a slight preliminary examination to prove good general education, followed by six years' apprenticeship. Then came two examinations, one on the general principles

In the case of the Paris apothecaries, the candidate was first called upon to demonstrate and verbally explain the various elements of five different preparations, and afterward to compound the medicaments under the eyes of the jury. There were naturally certain fees to pay; the apprentices' indentures cost some 90 livres, the maîtresse or definite admission to the guild 600 livres. All the master apothecaries and two doctors of the Faculty of Medicine had the right to assist at the final examination.

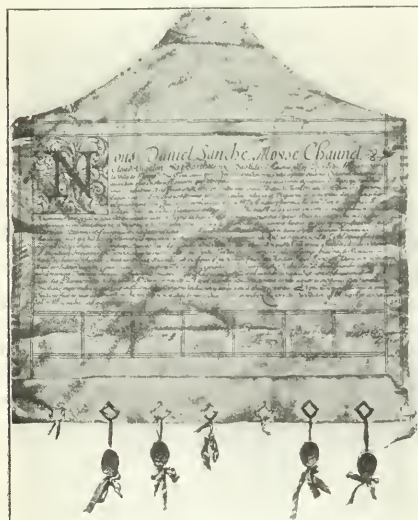

Rich candidates sometimes had elaborate copies printed of the examination papers. Some of the handsomest specimens may be seen framed in the library of the Paris School of Pharmacy, one of these bears the name of C. J. Geoffroy, whose portrait accompanies this article. (At Montpellier, where the students were examined by the university authorities, a certificate of competency was given, engrossed, signed and sealed as shown in our illustration.) In another room of the same school is an oil painting representing

A METAL MORTAR.

The Apothecary's Career,

his examination, apprenticeship, life behind the counter, etc. The costumes are those of the end of the seventeenth (or early eighteenth) century. Cracked and blistered by age, it is difficult to reproduce the

APOTHECARY'S EXAMINATION CERTIFICATE,

of the art, the second (called "The Act of Herbs") on medicinal botany. Finally the "Chef d'oeuvre" had to be executed, a custom existing in most trade guilds, i. e., the presentation of a "masterpiece" by the apprentice candidate before he was received as a master-workman.

THE APPRENTICE AND THE HIRED MAN (1700)

scenes by photography, but our artist has copied two characteristic groups, the apprentice in his shirt sleeves working at the mortar astride a rough bench, and the assistant behind the counter serving a country

woman or domestic, which forms the initial letter of this article.

A Registry Office for Drug Clerks

seeking situations existed at Paris as far back as 1714, being open every morning in the rue de la Huchette at the sign of the Lamprey, though the apothecary's assistant would also frequently address himself to the headquarters of the Grocers' Corporation.

ADVERTISING FOR THE PHARMACIST.*

By H. F. RÜHL, Manheim, Pa.

This is an advertising age. All other things being equal, the druggist who advertises has many more chances to succeed than the one who does not.

Americans seem to be a forgetful people along certain lines. Takes two similar proprietary preparations that have had about an equal sale. You have noticed when one of the proprietors began to advertise his remedy in your section how the sales of it increased while those of the other fell off. Both may have possessed equal merit, yet because one had its merits told of in a convincing manner, people forgot the unadvertised preparation.

Few pharmacists would be willing to admit that a large business like that of a department store could succeed without advertising. A drug store is only a department store on a small scale; yet how few advertising druggists are to be found. Many business men look upon advertising as an expense. It is an expense:

1. To a man who is mean, narrow minded, who overcharges, who takes advantage of his customers or who sells inferior goods.

2. When advertising an article or line of goods at a very low price of which little or none is kept in stock; and then meeting the calls with "I'm sorry, but we have sold out, etc., etc."

3. When pursuing Barnum's policy: "The people want to be humbugged." But that is only the negative side. The fact of the matter is—advertising is an investment. It is an investment only, however:

1. When a store deserves to grow.
2. When a store has the goods as advertised.
3. When the ads. are truthful.
4. When the goods and service are what the

prospective customer has a right to expect after reading the ads.

In this paper the writer intends to deal with advertising only as regards printer's ink. No wise druggist will disregard the possibilities of other methods—the show window, sidewalk bulletins, the display of goods with price tickets in show cases, store signs, etc.

The City Store.

If you are located in a large city you can hardly afford to use the newspaper unless you have a large store in the shopping district.

To the city druggist, then, any one or more of the following are available: Circulars, folders, booklets and store papers. Whatever is used should be issued at regular intervals.

A circular, while having the merit of cheapness, fails to appeal to people as a folder or booklet will. Unless a circular is unusually attractive and dainty, it will receive perhaps not more than a passing notice. A single page circular should rarely be larger than say 4 x 6 inches in size, a larger size savors too much of the dodger or handbill.

A folder or booklet is apt to be preserved and read where a circular will likely be flung into the waste basket. Small pages look more readable. The matter

on a single page looks twice as large as if cut up into a number of small pages.

It is extravagant to use any but good paper and ink. Winning trade is the object of advertising. A cheap looking piece of advertising matter will convey the impression that inferior goods are sold at the store. The paper used should not be lighter than what is known as 70 lb. The coated papers (such as are used for half tone work) admit of the best press work.

Effective color combinations may be made by using paper and ink of the same color as, paper of a light blue printed in bronze blue ink; light green paper printed in dark green ink.

In the setting of a folder or booklet not more than two styles of type should be used. A 12 or 18 point type for headlines and an 8 or 10 point book type for the body matter. The title page of course should have a larger face type.

Store Papers.

Store papers are now used by a great many city druggists. They give the advertiser a larger scope than folders or booklets. They are less expensive than newspaper advertising. Their circulation can be controlled in that they can be sent to the very class of individuals from whom you can reasonably expect to draw trade.

The ready made store papers are of somewhat doubtful value. The matter they contain is not specific enough. Better have your paper small and the matter adapted for your particular store. Let the greater portion of the reading matter be advertising or something relating to your business. To the public, a drug store has so many points of interest, that one should not lack for material. For instance: Tell the habit of some common drugs like rhubarb, licorice, ipecac, poke, etc. Mention that the habit of the last named drug is North America, and it has been naturalized in Europe. Tell how "stick" licorice is made; why pepper is gathered before it is ripe. Tell from what part of the plant cloves is obtained. Explain how difficult it sometimes is to get two lots of the same drug to have exactly the same color. State your reasons for declining to sell poisons to children. Request that brewers' bottles be not sent to be filled with other liquids at your store. Many similar examples could be given.

A store paper should be issued at regular intervals. The matter of distribution must be worked out in each individual case. In localities where the majority of families have servants, mailing the paper might be the least expensive method—it would thus reach the head of the family. In tenement districts, house to house distribution might be made.

The Country Store.

The druggist in a small city or country town should use the newspapers. After the edition of the paper is run off have slips printed from the forms used in the paper. Booklets may also be used as supplementary advertising.

It is a good plan to contract for newspaper space by the inch. If you have much to say you can use more space; if the needs are not so great you can use less. Thus you are not so apt to overcrowd your space at times as if you had contracted for so many inches each issue.

The Way of Saying It.

Many advertisers think that almost everything depends on how you say it. In their attempt to be bright or humorous they lose sight of the most essential thing—talking business. Advertising space is too expensive to use it to advertise yourself or your wit, if you have any. Talk to the many through the paper as you would to a customer at your counter. If you were trying to sell a hair brush how many arguments could you put forth why that particular hair brush, with solid back, with drawn French bristles, was desirable. Write as you would talk. In writing advertising one thing is essential, however, and that is clearness. About four years ago the writer asked

*A paper read before the Pennsylvania Pharmaceutical Association, June, 1901.

an advertising expert for some hints on ad. writing. To illustrate the point of clearness, he said, that if we asked a boy to write an ad. on sponges it would be something like this:

Sponges are animals. They grow in the sea. They have to be dived for. Sometimes a shark catches a diver. Sponges are filled with stuff like jelly when found. This has to be taken out. It takes a lot of work to get sponges ready to sell. My father sells them cheap though.

If one of us were to write on the same subject, he said, we would have to be careful or we would be apt to tell it in some manner like this:

The general public knows very little about that common article, the sponge, though sponges are used daily in almost every home. Scientists agree that the sponge is an animal, though in its natural state it has the appearance of vegetation, in fact, was long thought to be a plant. Sponges grow in the sea and the work of securing them is a hazardous occupation, and, as is often the case, sharks are plenty, which makes the trade of the sponge fisher a precarious one, etc.

He further said: "We are hardly started on the subject, yet have consumed more space than the boy did to tell it all. To be clear, short sentences must be used. Each argument should stand alone. If explanation is necessary let it stand alone. Avoid parenthesis. Shun the semicolon, and use the comma as little as possible."

Always quote prices in your ads. This is very important. The price need not necessarily be a very low one. Quoting prices implies that your prices are at least as low as those of your competitor. Many people buy an article when they know the price. If a price is not quoted some may think the price above their means and dismiss the subject. Others might shrink from asking the price for fear it might be more than they are able to pay. You know how aggravating it is to read an ad. on a carbonator or typewriter but fail to find a price. If you write to the manufacturers for prices they will soon have salesmen at your store to take up your time. Quoting a price also proves that you have but one price. When a salesman quotes a price you do not always know if it is rock bottom or not.

The Setting of the Ad.

If the majority of advertisers use borders have yours set without, but have some white space around it. If few use borders in the paper, have a border around yours. It is best to adhere to one style of setting, with the ad. in a regular position. The reader can thus tell at a glance that the ad. is yours. The headline should be set in 24, 30 or 36 point—the size used depending on the size of the space. The heading should be set in upper and lower case. It is more easily read than if set in upper case alone. The body of the ad. should not be set in smaller than to point type. The firm name need not occupy as much space as one often sees. If the reader is sufficiently interested to read the ad. through he will find out whose ad. it is if the name is set in the smallest type.

How Much to Spend.

From one and a half to two per cent. of the gross sales seems to be the right amount to invest. Some of the successful retail druggists spend as much as three per cent. Much depends on your location and competition. Three per cent. may be a better paying investment than one per cent.

"Keeping Everlastingly at It."

Advertising force is cumulative. An occasional ad. placed in a paper is not apt to bring very marked returns. A druggist once saw an ad. in the department of advertising of a trade paper that had received favorable comment. He used it in the local paper but failed to get any returns. He concluded that newspaper advertising does not pay.

It is often difficult to trace the direct returns to any particular ad. The persistent advertiser can tell, however, at the end of the year that advertising pays him by the increase of his business.

Frequent Changes.

If the paper is issued weekly the ad. should be changed every issue. If daily, change every day if possible—at least every second or third day. Three

JOHN G. WISCHERT,
Bedford and Greene Avenues, Brooklyn.

different ads. on one subject changed each issue are much better than one ad. left unchanged in three issues.

Collecting Advertising Material.

Every advertiser should have some system of collecting advertising matter. He ought to preserve his own and make clippings from the work of other successful advertisers. With a few pieces of cardboard, some twine and a number of No. 10 legal envelopes, an admirable file can be made. A card marked off with the dates when the paper is issued, with space for title of ad., serves as an index of what things to advertise the following year.

When speaking of advertising, the president of the American Pharmaceutical Association, once said to the writer:

"He that bloweth not his own horn the same shall not be blown."

Similar to the "robe" scheme is that of another advertiser. A young man was seen slowly sauntering along Chestnut street the other day, as if out for an after dinner stroll who attracted much attention from other pedestrians. It was not his personal appearance, for he was dressed in the height of fashion, but a card stuck on his back with a pin, on which was "kick me" printed in large letters, of whose existence he seemed wholly unconscious. Many smiled and a few patted the seeming victim of someone's joke, but none was bold enough to tell the young man of the card until an elderly gentleman stepped up to him and took the card off his back, showing it to him at the time and apologising for his action. With well-pretended mortification the young man thanked the old gentleman and handed him the card, saying: "You can keep it, sir, I do not want it." And before the old fellow could say a word he was gone around the corner. On the card, the reverse side, was an advertisement of someone's "corn cure," with the advice to use it before kicking, and the old gentleman grew red in the face when he saw it and threw the card into the gutter. Later on the young man was seen slyly attaching a similar card to his coat in the shelter of a doorway, then he sauntered forth to gather in other victims.

BUSINESS PHARMACY.

The Experience of Druggists with Profit-Bringing Methods. Hints and Suggestions. Original Papers from Practical Business Druggists. The Various Phases of Drug-Store Management and Economy.

ONE WAY TO ADVERTISE.

From a Woman's Point of View.

By NORA I. MITCHELL, Sparta, Mich.

The day of dingy drug stores is past, and in the city it is the brilliantly lighted plate glass front pharmacy that attracts the passer-by and is patronized. In the country town it is much the same—while plate glass and electric lights are not so common, yet the appearance of the store makes a great difference with the majority of the people.

Some one has said that the show windows of a drug store are like a pair of eye-glasses properly fitted, for through them the druggist sees the world and through them the world gets its impression of the druggist. If that is the case, let there be no flaws in the glass to distract and let them be spotlessly clean. Did you ever see persons pass on to the next store because they couldn't see through the windows? Remember I look through a woman's eyes, and a woman can see twice as much dust and dirt as a man can, so let your windows be clean if you would entertain lady customers. This means that you can't wash the windows only once a week—that is better than once a month—but whenever they are dirty and need it.

It has been estimated that at least two thirds of the drug store patrons are women, and anything that will please the women is a good advertisement, since they have long been noted for their much speech. Mrs. A. says to her neighbor, Mrs. B., "Be sure to go to L's Pharmacy, everything is so clean and neat there. They don't have to take the goods out of their show cases so you can see them, for the glass just shines, it is so clean." Mrs. B. tells her neighbor, etc.

In rules for young clerks you often see: "Don't encourage loafing in the store;" that is for the benefit of the ladies too. A woman once hurriedly entered the store and said: "Have you carbolized witch hazel salve? I know I can get it at Mr. N's store. Mrs. W. bought some there this afternoon, but there is always so many sitting around in that store I never life to go there." More of them feel that way. Another good advertisement.

Always carefully wrap every package unless the customer requests you not to do so. A woman does not care to have the people she passes on the street know her nerves are in such a state that she has resorted to ——— Nerve Compound for a cure, so arrange a neat package for her—one that will stay tied until she reaches home. It takes but a little longer and it always pays. In a certain district in Chicago a butcher literally starved three others out. Why? Because he did his meat up in dainty packages and tied them with blue baby ribbon. A woman likes those things. It is not necessary to use pretty ribbon to tie up parcels, but a good grade of wrapping paper gives a much better impression than old news papers.

It is a good plan to label everything as it is called for. All names must be properly spelled, etc.; there are some exceptions, but one lady became very indignant because she had called for a two oz. bottle of fluid extract dandelion and found when she reached home that the clerk had given her fluid extract of taraxacum instead. A good customer was lost because the clerk wanted to show that he remembered the Latin term. Nothing is more disgusting to a woman

than to enter a drug store and ask for an article and have the clerk grin and reply "You bet," and then chew the twine a while before tying up the article. Nothing pays better than unaffected politeness on the part of clerks and proprietor. This with cleanliness is the best advertising you can do to retain lady customers.

THE PRACTICE OF PHARMACY IN SMALL TOWNS.

By H. G. MOORE, Equality, Ills.

To those who are located in good live large towns and cities, I will say that they cannot for one moment imagine the drawbacks of a country druggist. A plate glass front is not always accessible for showing up window displays, nor is it always convenient for him to invest \$500 to \$1,000 in fixtures to make his store look inviting. So under these circumstances we who are located in small places, and with limited means must put on our thinking cap and try from time to time different ways as our mind may suggest to gain trade and cash.

At present I am engaged as registered clerk for Moore Bros. Drug Company. We opened business with a \$350 stock of drugs and fixtures, purchased January 18, 1899, occupying one side only of a grocery store 20x40 feet in size. Our competitors are of the very best; honest, intelligent, sociable and industrious people, had been established in the drug business with a heavy stock for about eighteen years. One member of the firm is a physician with the largest practice of any doctor in our town, so you can well imagine how we were compelled to "push" in order to be even recognized as retail druggists. Knowing this to be the case we entered into the battle in a determined but honest and honorable way, and the cause of our success may be briefly outlined as follows:

First, and most important of all, we have made all our pharmaceutical preparations since we commenced business, and will continue to do so. Included in the list of the products of our laboratory (which every druggist should have), may be mentioned fluid extracts of ergot, cotton root bark, buchu and a few others mostly used. And right here I wish to say that a druggist only has to try making a few fluid extracts in order to see how handsomely it pays. (Of course I allude to the more expensive ones, and also those of which we use a quantity.)

We have found by experience that it does not take a doctor or a druggist to distinguish between tinctures, fluid extracts, syrups, etc., made according to our U. S. P., and those obtained from the average wholesale drug house, "where they value so highly the cost of 95 per cent. alcohol for their use in practical pharmacy." Any person who can see, smell and taste can tell the difference quicker than you can say Jack Robinson. Just follow up this suggestion and note the result. Get hold of a prospective customer; take him in your laboratory, and let him witness the process of percolation or distillation. They are simple processes to you, but never mind that. If possible let him also see the manufacture of some of the solutions of iron, or that of some of the scale salts, or tell him about gun cotton—how it is made, of its use as an explosive, as well as in medicine, etc., etc. It is time

The Era pays \$5.00 for each accepted contribution to this department. Proprietors and clerks are especially urged to relate their experiences and offer suggestions on all phases of the practical business side of pharmacy. Make your papers short, about 1,000 words (one Era page) in length.

well spent. He will not forget what he has seen and heard the longest day he lives, and as for you, it convinces him that you know your business. He places confidence in you as a "pill roller," and eight times out of ten he is your customer in the future.

We watch our stock closely, and try never to be "just out" of anything called for, and never hesitate to pay for a telegram for a "rush order." We are always kind to our customers, and try never to miss a week driving out through the country, stopping along side the road engaging in short conversations with our farmer friends, which very often ends with a sale of a bill of paint or a bottle of a patent medicine which they didn't know we kept. This is especially a good way to get them interested in your welfare, hence, your business also. I have found that a ten minutes' talk with a farmer in his field or in his home is worth more as a trade winner than any special price you may offer, or conversation you can have with him in your store.

We put up a full line of carton goods, which we not only sell at retail, but wholesale as well. The former pays handsomely—the latter fairly well!

I have been a reader, and part of the time a subscriber, of the Era and other drug journals ever since I entered as an apprentice in the drug business, and since I have had the management of stores have followed up their suggestions in many ways, especially that of window displays, and testify to the fact that it pays to keep the windows clean and catchy. When we moved into our new room, where we have two fairly good-sized show windows, I took it upon myself to change the displays every week, using some original arrangements and most of the time following up suggestions taken from the pages of the Era. When I commenced, my displays were apparently unnoticed, but I kept ahead and now our windows come near to being our best advertising medium.

The best advertisement we have ever put out, however, was the announcement of the equipment of a laboratory and that we were ready to analyze specimens of urine at a very small cost. There seems to be but very few people who know of the importance of the analysis of urine in diagnosing a case, and from the fact there is not one doctor or druggist out of ten in or near small towns who is prepared to do this work it is a great ad. for the one who pushes it.

I purchased from the publishers of the Era a copy of "Practical Urine Testing," (Jennings) at a cost of one dollar. I studied it a few weeks, purchased the necessary outfit to do the work, made up the reagents, formulated a statement of the analysis of urine and proceeded to advertise. We make a charge of one dollar to doctors, and a dollar and a half to the public in general for analyzing a specimen. Some doctors were pleased to have an opportunity of having the work done at home, and "talked about it." Other doctors were displeased, and "talked about it." The people in general "didn't know it could be done in a small town," and "talked about it." So it was. Talk, talk, talk—some for, some against, but all was an advertisement for Moore Bros. Drug Company just the same. Our announcements were hardly out when we began receiving both specimens for analysis and congratulations on our ability and equipment for doing this work. We did this work for the other fellow's customer as well as our own, and made a friend of him. When proteids were found to be present in the specimen examined, we invariably advised a consultation with a physician, making a friend of him also. And now this is a part of our work, the same as the manufacture of shelf preparations.

In conclusion I desire to say that we and our competitors are and always have been on the very best of terms. We are their friends and believe they are ours. We never speak unkindly of them, and trust they do not of us. Price-cutting is unknown to us. Everything always goes smoothly. Their trade has not decreased in the least, and neither has ours.

Read your journals carefully. Select the cream of the other fellow's suggestions, and put them into

THOMAS A. SMITH,

Willis Avenue and 135th St., New York.

effect, along with original ideas. By all means make your own pharmaceuticals. Sell them at a reasonable price, and I predict success to you.

CONSUMPTION OF ALCOHOLIC BEVERAGES.—H. Bence-Jones (American Medicine) is authority for the statement that the consumption of drink in Canada is smaller than in any other country in the world for which statistics exist. In the United States in 1890 the consumption of spirits per head was 1.17 gallons; in 1898 it had fallen to 0.92 of a gallon. The consumption of beer and light wines is quite small as compared with some of the beer drinking countries of the world. In Bavaria the consumption of beer per inhabitant is given at 56 gallons; while in Germany as a whole, it is at 27 gallons; in the United Kingdom not quite 32 gallons; in the United States, 13 gallons per inhabitant. However, the consumption of beer does not indicate the entire consumption of alcoholic beverages. In North Germany, for example, very little beer is drunk, the consumption of the inhabitants of those parts being spirits rather than beer. There is also comparatively little beer consumed in Scotland and Ireland, while the consumption of spirits is proportionately larger.

PATENT AND PROPRIETARY MEDICINES.—In the oration on State Medicine, before the recent annual meeting of the American Medical Association, George M. Kober, M. D., discussed the laws regulating the sale of drugs and poisons and also the number of patent and proprietary medicines manufactured. By the term patent medicine, as properly employed in this country, England and Europe generally, it must be understood that the composition is known and can be seen at the patent office. The proprietary medicine is a secret preparation protected by trade mark in this country, and hence, preferred by the owner, but both are vaguely termed by the public patent medicines. Up to December 10, 1900, the United States Patent Office had issued patents on: disinfectants, 321; extracts, 250; hair dyes and tonics, 48; insecticides, 180; internal remedies, 376; plasters, 56; topical remedies, 371; veterinary, 78. Trade marks: drugs and chemicals, 310; medical compounds, 5,974, and increasing at the rate of about 250 per year.

SHOP TALK.

The Era man noticed a sign on front of the store of the president of one of the local N. A. R. D. associations in New York last week announcing a certain preparation at a cut rate and he asked the druggist the "why?"

"That's an old scheme of mine," replied the druggist, "and it's about as good a one as I know of to get rid of what I call wounded soldiers. As you well know we are constantly putting new proprietary articles on our shelves which, while the proprietors advertise them, are readily sold. In other words they fight well until they get hit by some other preparation, and then they fall, you might say, mortally wounded. I take certain of these soldiers and advertise to sell them to-day for, if it's a 50 cent article, 45 cents. Then each day I reduce the price one cent until I get 5 or 10 cents below the cost price. Maybe I won't sell any. Then I put them away for a day and I am almost sure to have a call for them. But I don't sell them at the bargain price. I get the full price. Sometimes I continue reducing the price until it gets as low as 3 cents. If I can't get rid of them at that price I put them away again and very soon start all over. If I can't sell them after a couple of trials I put them away and call them "dead soldiers." I often bury them at a good price. In all I think my plan is a good one and I can assure you I don't lose any money by it, besides I stimulate my business."

* * *

The Era man saw a good thing in the store of a druggist who has one of the best prescription trades in uptown Philadelphia the other day, his prescription counter. This was the usual thick board, but its surface was polished and shining and a few drops of water spilled on it rolled off like "from a duck's back." The secret of it was in a heavy coat of paraffin. A saturated solution of paraffin in ordinary gasoline had been made and this was smeared thickly over the wood, after it had been rubbed down smooth with sandpaper; vigorous rubbing, with a little fresh gasoline every once in a while, made the paraffin penetrate into the wood to quite a depth, the surplus being wiped off with a rag. Then the "boy" was put to work on it with a thick woolen rag, and it was rubbed until the remaining paraffin had been forced into every pore of the wood and a bright polished surface resulted. The beauty of a counter so prepared is that you can spill almost anything on it without defacing it or making a mess, even strong acids do not injure it unless left on too long. Then too, it makes an ideal surface for folding powder papers and many similar operations, is always clean and may be kept polished with a rub of a cloth now and then.

* * *

White enamelled signs are now quite popular, the name of the owner of the store being spelled out in white letters affixed to the windows of the place. These look very neat and professional for the drug store, but they have in them the capacity for doing unlimited evil if not closely watched, that is, in getting knocked or broken off or coming unglued from the glass, leaving a gap in the name or words. To the observant passer-by, an enamelled letter sign in which two or three of the letters are gone and ugly blotches on the glass left in their place tells a tale of the proprietor of that store that is not very flattering. Careless and untidy they proclaim loudly, for the man who is too careless to replace missing letters in the sign he uses to call public attention to his place will be careless in other things, and if he doesn't replace them because of lack of interest or "don't care," he is apt to be the same way inside. Nothing but a dirty, ill-fitted show window is more harmful to the druggist than a window on which is a lettered sign with some of the letters missing.

"We have to be up to date in this business," said a Brooklyn druggist one hot day last week, "and just to show you that I am even with the time I'll tell you what I did last week. A man came in here Sunday morning just after the furnishing stores had closed and asked me where he could buy some collar buttons. I asked him how many he wanted. 'Do you keep them,' he asked. 'Yes,' I replied, 'we have a large stock.' He said two would be enough for him. I retired back of the prescription counter, took the two bone buttons out of the wrist bands of my shirt and handed them to the man. He asked me the price and I told him ten cents. I assured him it was not the buttons I was charging him for but the accommodation, and he bought the cigars. It pays a great deal more to do little things like this than to try to sell patent medicines. I never allow any one who wants anything and has the money, to get out of my store without supplying the want."

* * *

Why will some druggists say foolish things on their advertising matter that they would never dream of saying to a customer? An instance of this is seen in a card sent out by a druggist who ought to know better, which, but for the one "break" would be good advertising. He heads his card with "Better than Prayers. A Good Druggist," in big black letters, then tells about his prescription department and its excellence. Now, while some people may believe that a good prescription carefully compounded will do more to aid the sick one to recover than would prayers at his bedside, there are others who will look upon such a statement as irreverent, not to say sacrilegious, and such people may be so offended at the flippancy of such advertising that they would not deal with the advertiser. Better leave religion and politics out of your advertising, even anything that might be construed into a reference to them.

* * *

"Does it pay to have window demonstrations?" said an uptown New York druggist last week, repeating a question the Era man had asked him, "well, I should say so. It may be that the returns are only temporary, but they sell things that would not be sold otherwise without a great deal of persuasion by his clerks and a consequent loss of time. The displays create a 'want' in the minds of the persons seeing them, and they come in and ask for the goods shown. I've had cigars of a certain brand in the window with a little colored girl fancily dressed, showing them, and during the week she was here I sold nearly a thousand and they've been on call ever since. I sold bath cabinets, coffee, corn files, perfume, soap and goodness knows what in the same way. Do these demonstrations pay? I should say yes! every time."

* * *

W. W. Noble, the St. Paul (Minn.) druggist, makes a good point in connection with the sale of drugs by department stores. "The proprietary houses," says Mr. Noble, "should be made to see that such stores are not the legitimate distributors of their goods. Furthermore, these stores are pushing their own medicinal preparations more and more, with the result that standard preparations are left out in the cold to a great extent. Perhaps the manufacturers will in time come to recognize the force of this argument."

* * *

One of the latest ideas in emergency packages is the vest-pocket roll of adhesive plaster which has been on sale in drug stores in New York for the last two weeks. It consists of five yards of one-inch adhesive plaster so tightly rolled that it will fit into a tin box about half the size of a pocket dime-savings bank. This can be carried conveniently and will serve any purpose where plaster is required.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Compound Syrup of Hypophosphites.

(S. F. Z.)—We have no practical formula in which glucose is used in the preparation of compound syrup of hypophosphites. The following, however, is claimed by a contributor in one of our exchanges to produce a cloudy preparation, besides having that greenish appearance preferred by some:

Calcium hypophosphite	352 grains
Sodium hypophosphite	176 grains
Potassium hypophosphite	176 grains
Manganese hypophosphite	22 grains
Iron hypophosphite	22 grains
Potassium citrate	50 grains
Quinine hydrochloride	12 grains
Citric acid	25 grains
Strychnine sulphate	3 1/5 grains
Sugar	56 av. ounces
Iron pyrophosphate	40 grains
Water, enough to make	64 fl. ounces

Into a wide mouthed half-gallon bottle introduce the hypophosphites of calcium, sodium and potassium, the quinine hydrochloride, the sugar, and some water. Dissolve with the aid of heat, the hypophosphites of iron and manganese, the potassium citrate and the citric acid, in about 2 fluid ounces of water, and pour into the bottle, together with the solution of strychnine sulphate (best made in a test tube). Now add enough water to make one-half gallon; tie over the bottle well with parchment paper, and shake frequently, to dissolve the salts and sugar; then strain, if necessary. This still perfectly clear syrup is now super-saturated (preferably in the same wide-mouthed bottle) with the concentrated aqueous solution of the iron pyrophosphate, and set aside for twelve hours. It will then be found that a delicate, flocculent precipitate has formed, which extends through the entire syrup and deposits but gradually. Shaking distributes it so finely that the liquid appears only turbid. Attention should be called to one point: Since iron pyrophosphate U. S. P. is known to be by no means of uniform chemical composition, it will be well to add to its solution a 1/4 per cent. solution of ferric chlorid until the developing precipitate no longer dissolves; then filter and add the filtrate to the syrup. Thus may be obtained a uniform quantity of the desired precipitate in the syrup.

A formula for a non-precipitating compound syrup of hypophosphites is the following:

Calcium hypophosphite	256 grains
Sodium hypophosphite	128 grains
Potassium hypophosphite	128 grains
Manganese hypophosphite	16 grains
Tincture citro-chloride of iron,	
N. F.	1 ounce
Tincture nux vomica	160 minims
Quinine hydrochloride	8 grains
Sugar	12 ounces
Water, enough to make	16 ounces

The hypophosphites are dissolved in 6 ounces of water previously boiled, which is easily done by triturating the salts in successive portions of the water, the addition of an acid not being required. These solutions are mixed and poured over the sugar. Shake well and add the tinctures of iron and nux vomica, then add enough water to make 16 fluid ounces. Shake until the sugar is dissolved, let stand for 24 hours and filter. The substitution of the chloride for the hypophosphite of iron cannot well be urged against this preparation.

Liquid Carbolic Dentifrice.

(H. S. J.)

(1) Quillaia, in coarse powder	14 ounces
Glycerine	3 ounces
Rectified spirit	5 ounces

Macerate for four days and add:

Carbolic acid, in crystals	1 dram
Oil of rose geranium	10 minims
Oil of cloves	10 minims
Oil of rose	10 minims
Oil of cinnamon	10 minims
Tincture of rhatany	15 ounces
Rose water	30 ounces

Macerate for another four days and filter.

For tincture of rhatany 1/2 ounce of tincture of cochineal may be substituted.

(2) Carbolic acid	1 ounce
Tincture quillaia	5 ounces
Tincture fresh lemon peel	4 ounces
Tincture myrrh	6 ounces
Alcohol	6 pints
Water, sufficient to make	8 pints

(3) Carbolic acid	120 grains
Tincture myrrh	2 ounces
Tincture soap bark	2 ounces
Cologne	4 ounces
Glycerine	1 ounce
Alcohol	15 ounces
Tincture orris	2 ounces

Effervescent Fruit Salt.

(Subscriber.)

(1) Tartaric acid	2 ounces
Sodium bicarbonate	2 ounces
Magnesium sulphate	1 ounce
Potassium bitartrate	15 ounces
Effervescent magnesium citrate	2 ounces
Sugar, powdered	4 ounces

(2) Sodium bicarbonate	2 ounces
Tartaric acid	1 1/2 ounces
Cream of tartar	1 ounce
Sodium sulphate, dried	1 ounce
Powdered sugar	6 ounces

Carefully dry before mixing and preserve in a well corked dry bottle.

(3) Rochelle salts	1 ounce
Cream of tartar	1/2 ounce
Tartaric acid	1 ounce
Sodium bicarbonate	2 ounces
White sugar	2 ounces

Carefully dry before mixing and preserve in a well corked dry bottle.

Liquid Antiseptic Soap.

(L. E. B.)—Two formulas for ethereal antiseptic soap may be found in the June 28 and July 5, 1900, issues of the Era (price 10 cents each), pages 697 and 10, respectively. Here is another formula which has been in use in the German Hospital of Philadelphia for several years, and has found much favor with surgeons and others: Green soap, 1,500 parts; alcohol, 700 parts; water, 50 parts; cresylic acid, 100 parts; carbolic acid, 50 parts. An antiseptic solution of soap used for cleaning instruments, utensils, etc., employed in the same institution, consists of green soap, 250 parts; resin soap, made with common resin, 100 parts; alcohol, 150 parts; cresylic acid, 450 parts. This soap is also recommended as a cheap and efficient disinfectant.

AN ANONYMOUS MAIL.

It is quite fashionable now-a-days to have an opening or anniversary day in the drug business.

Well, I for one, as a subscriber to your journal (and I have the endorsement of others), must say it may be all right for the department store to advertise special sales, etc. But when it comes down to a fellow druggist placing slips on the local news-stands on Sunday, claiming his was the only store to bring a pre-cipitation, and inviting the public to a grand opening, where a fine bottle of cologne and free soda water will be served on such a day. To say the least of it it is rather degrading to the profession.

Yours respectfully,
A READER.

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

THE DRUG TRUST IN NEW YORK.

The N. A. R. D. Plan Thus Unofficially Named by Members of the Drug Merchants' Association—The Real Issue Hidden—Cutters' Price Books Peddled in Abundance.

Members of the Drug Merchants' Association are endeavoring to convince the public that a hydra-headed monster has possessed the druggists of New York, and to enter one of the stores in the creature's grasp is to subject the individual to the fearful clutch of the awful beast's slimy tentacles.

The means of carrying this gladsome news is an illustrated price book which is being distributed in large numbers at present by members of the cutters association. This book contains the prices of all the articles the cutter keeps and some he doesn't, for despite the fact that he asserts he is "never out of anything," there are times when he is "out" and out badly. This was proven last week in a store uptown. A customer called for a certain proprietary article and was told "we're just out. We'll have some here to-morrow." The clerk, however, sold the customer another article.

An uptown druggist distributed as many as 10,000 of these price lists in his immediate neighborhood recently. This is the line of argument followed to secure converts to the belief in existence of the drug trust:

TO FIGHT THE DRUG TRUST.

Three national organizations have combined to force the retail druggists to raise the prices on all Patent Medicines—the National Association of Wholesale Druggists, The National Proprietary Association, and the National Association of Retail Druggists.

We consider this attempt to raise prices back to the old figure entirely wrong in principle and practice, and we do not propose to yield to the demands of the Drug Trust. We believe their demands are unjust to those retail druggists who under modern methods desire to sell drugs and drug store goods at reasonable prices.

Our prices on all Drugs, Medicines and Sick Room Supplies of all kinds are lower than ever, with a few slight exceptions. **OUR PRICES WILL NOT BE RAISED** except in these few cases. We invite you to buy all your drug store goods at our store, especially at this time when we are fighting to keep down prices. All our stocks are complete. We are not "out" of anything, and we have abundant supplies for the future.

The above does not voice the true condition of affairs, nor does it even speak for the business methods of the Drug Merchants' Association. As recent as June 11 this association prepared a new price list which embodied changes of prices to a considerably higher figure than those at which the cutters have been selling. The new price list is now out; the Drug Merchants' Association has acknowledged through several of its members, that its policy is to continue to advance prices; therefore, if a drug trust exists, the Drug Merchants' Association must be a member of it and in good standing.

J. E. Brannigan Died of Natural Causes.

After a careful investigation a coroner's jury decided in the case of druggist James E. Brannigan, Amsterdam avenue and Sixty-second street, who died at Roosevelt Hospital, June 13, that death resulted from natural causes. Mr. Brannigan told the physicians at the hospital that he had been thrown out of a restaurant and had been kicked in the abdomen. The police began an investigation shortly after Brannigan's death and had arrested Patrick McEnery, a carpenter, on suspicion of having been concerned in the fight. McEnery was released immediately when the jury rendered its verdict.

DRUG STORE EXPLOSION KILLS TWO.

The drug store of H. W. Reusswig, at Somerville, N. J., was blown up by an explosion of gasoline Wednesday afternoon, June 26, and two lives were lost.

At the time of the explosion R. L. Day, an aged druggist and John Abbott, a fourteen year old boy, were in the store while Mr. and Mrs. Cornelius Hall occupied living apartments over the place. Mr. Hall was an invalid. Young Abbott was sent to the cellar to draw some gasoline. He had not been absent long when with a deafening roar the building was rent asunder and immediately collapsed. Almost in the same moment flames began shooting from the wreck.

The firemen found young Abbott with his body half through a cellar window and his legs pinioned by heavy timbers. Before being extricated he was badly burned. Druggist Day was thrown upward and came down in the wreckage where he was securely held by the feet. By cutting his shoes away he escaped practically uninjured. Mr. and Mrs. Hall were also blown upward. They both alighted on the fallen roof of the building, Mr. Hall being held down by wreckage. Mrs. Hall was tugging to free her husband when the firemen reached her. Mr. Hall was badly injured and he was immediately taken to the Somerset Hospital, where he died a few days later. Abbott was removed to his home and died the day following the fire.

The remains of the building which was a two story affair were consumed by fire as were also two adjoining buildings.

MORE ABOUT THE LYMAN BROS. & CO., LTD., OFFER.

The New York Tribune in an issue last week devoted over a half column of space to a news article deriding the offer by circular made to the members of the New York State Pharmaceutical Association at Buffalo, by Lyman Bros. & Co., Ltd., 71 Front street, Toronto, Canada, as a bait to induce pharmacists to break the law. The matter was treated editorially in the Era, June 20, page 62.

In the Tribune's story Felix Hirschman, president of the State Association at the Buffalo meeting has this to say:

"I saw the circular at the meeting of the organization just held at Buffalo. Of course, I read it. In my opinion it was purely and simply an effort to tempt the members of the organization to do a dishonest act. Even if they bought the chemicals in Canada and paid the import duty on them, the buyers, on returning here with the goods, would be liable to a civil and a criminal action. The State pharmaceutical organization took no action on the circular. It treated the matter with silent contempt."

Appropriated Another's Money.

Solomon Blumenthal, a young druggist, was held for the Grand Jury last week on a charge of having purloined \$400 belonging to his former sweetheart, Miss Stella Goldsmid, of 367 Myrtle avenue, Brooklyn.

The story told in the Adams Street Police Court, Brooklyn, was that Miss Goldsmid's parents were to give Blumenthal \$2,000 to start in the drug business and the young druggist was to marry the daughter. The \$400 is said to have been the first installment. After receiving it Blumenthal is alleged to have gone to Philadelphia and broke the engagement. He came back when he heard of the charge of larceny against him and stated he had spent the money according to plans laid down by his fiancée. Miss Goldsmid fainted in court and Blumenthal was held.

MAX MARIAMSON,
842 East 165th St., New York.

DRUG STORE ROBBED.

Thieves broke into the drug store of Charles M. Dugay, Thirty-fourth street and Third avenue, early Saturday morning, June 22. They carried away about 100 feet of black tin soda fountain pipe, cutting it from the carbonator and at the place it went through the store floor to the fountain. The pipe weighed about 200 pounds and is valued at 22 cents a pound. Two electric fans, valued at \$13.50 each, were also taken. A closet holding chemicals of various sorts was broken open, but nothing of value taken. A closet in which whisky, wine and cigars were stored was overlooked. The robbers endeavored to force their way to the store proper, but did not succeed. Mr. Dugay had left \$50 in cash in the cash register. It is thought the robbers entered the cellar by means of duplicate keys.

Apothecaries' Bicycle Club.

The Apothecaries' "Bike" Club will wheel to City Island to-day. The start will be made from Central Bridge at 10 a. m., and dinner will be served at the City Island Hotel. The cyclists expect an especially fine time on this run, as a new bridge will be opened and the exercises attendant to this ceremony promise to be very interesting. The run a week from to-day to Greenwood Lake, N. J., has been postponed, but in its place the club will make a short run to Greenville, N. J., where dinner will be served at Stenzel's Atlantic Garden. The start will be made from the Fort Lee ferry at 9:30 a. m.

Saratoga Druggist Dies.

William H. Walker, a well known druggist of Saratoga Springs, died Monday, June 24. Mr. Walker had been ill for some time and recently, while suffering from temporary aberration of the mind, leaped from a third story window injuring himself severely. He was 60 years of age and had resided in Saratoga a long time.

Another Judgment Against Crosher.

After an absence of several weeks, the records of judgments were smirched again last week by the appearance of the name of Henry P. Crosher, the noted drug swindler. The records state that L. R. McCurdy and others have a debt against Crosher of \$69; which, of course, he will not pay.

German Apothecaries' Society.

The regular meeting of the German Apothecaries Society scheduled for this evening, has been postponed to July 11 owing to Independence Day. The meeting July 11 will be the last until September.

NOTES.

—A meeting of the South Brooklyn Pharmaceutical Association will be held at the corner of Sackett and Court streets to-morrow evening. The association has had a number of its members acting as individual detectives, as it had been reported recently that certain members of the association were not holding to the N. A. R. D. schedule. These amateur detectives will report at the meeting and interesting developments are anticipated.

—James I. Truslow, one of the best known cork manufacturers in the country, died at his home in Brooklyn last week, aged 80 years. Mr. Truslow had been in the cork business for the last fifty years, during which time he was the head of the well known firms of Truslow, Nostrand & Co., and Truslow & Co. Two years ago, on the death of his eldest son, he retired from business and his firm was merged with the Armstrong Cork Company. Mr. Truslow was of a very charitable turn of mind.

—Mrs. Herbert Turrell, wife of Herbert Turrell of the local offices of Parke, Davis & Co., has written a beautiful song, or rather hymn, entitled "Victory," which has had the honor of being chosen as the New York State hymn of the Daughters of the American Revolution. The anthem bids fair to become the national air of the D. A. R. It is tastefully arranged and has a thrilling patriotic rhythm.

—T. H. Sherwood, manager of the sundries department of McKesson & Robbins, whose return from a two months' European trip was noted in last week's Era, secured an excellent line of novelties, which will be offered to the trade later. Mr. Sherwood visited Italy and Switzerland with Mr. and Mrs. John McKesson, and then covered his regular business circuit.

—C. A. Loring, Lehn & Fink's representative in New Hampshire, Massachusetts and Rhode Island, was in the city last week. Other of the firm's salesmen will visit here as follows and inspect the new building: Edwin Magill, Maine, July 10; S. H. Cohen, Kentucky, July 17; William Creswell, Texas, July 25. Each of the salesmen will remain a week.

—O. L. Shirey, formerly clerk for William Wilson at No. 86 Broadway, has resigned to accept a position as manager in the retail department of the wholesale firm of Ringgold, Rheinhardt & Co., which is to be opened July 19. Mr. Shirey will spend a few days in his home at Chambersburg, Pa.

—A meeting of the Williamsburg Pharmaceutical Association was held Monday evening, June 17. A number of violators of the N. A. R. D. plan were reported, and it was decided to have the names placed on the cut-off list. Plans for a summer outing were also discussed.

—Druggists who read the papers took advantage of an opportunity offered by a large department store as advertised in the daily papers Wednesday, June 26. The offer was Cuticura Soap at 5 cents a cake. Cuticura Soap costs the druggists who buy it \$2.10 a dozen.

—The Andrew Jergens Company, of New York City, has incorporated to manufacture perfumery and toilet articles. Capital, \$1,250,000. Directors: Andrew Jergens, Charles H. Gellipus, and Robert C. Gastman, of Cincinnati, and Rother Buggelu, Brooklyn.

—William Muir has gone to his usual summering place among the cool hills of the Catskill Mountains. Mr. Muir has finished a hard season's work and is in need of rest and quiet. When the hot weather is done with he will return and resume his labors with renewed activity.

—Amos Maunder of the laboratory of Parke, Davis & Co. at Detroit, Mich., called at the local office last week. Mr. Maunder has sailed for England where he will spend some time with relatives whom he has not seen for fifteen years.

—C. H. White, Fifty-third street and Madison avenue, is spending a vacation of three weeks at Conasaugh, Pa. G. H. Hitchcock, of Kellogg & Co., Fifty-eighth street and Sixth avenue, and family spent Sunday with Mr. White.

—The wholesale drug business down town closed last Saturday at 1 o'clock owing to the excessive hot weather. The usual custom of closing at 1 o'clock Saturdays will be observed during July and August.

—E. F. Wagner has been elected president of the Bushwick Pharmaceutical Association of Brooklyn in place of Otto Wicke, who recently returned to the ranks of the cut-rate druggists across the river.

—Mr. Francis, of Monerief & Francis, well known druggists of Troy, N. Y., was in the city last week. Mr. Francis said that cutting in Troy had about ceased, all the druggists having adopted a uniform price list.

—John Knight, traveling salesman for the Krato Chemical Company, Nos. 81-83 Fulton street, has returned from a Western trip. Mr. Knight was as far West as Topeka, Kan., and he reports trade unusually brisk.

—Among the druggists who called on the trade last week were A. R. Hoag, of Silver, Thorne & Hooper, Toledo, O.; D. Wiley Baker, Trenton, N. J.; W. G. Munn, Louisville, Ky., and J. M. Narle, Brenham, Texas.

—S. H. Carragan, manager of the local force of travelers for Parke, Davis & Co., has gone on a month's trip to Boston and other points in the Eastern States.

—Dr. Robert C. McCall, Southern salesman for McKesson & Robbins, who had been in the city for the last two weeks, has returned to his home in Savannah, Ga.

—J. H. Cory has purchased a drug store at Dobbs Ferry, N. Y.

—John W. Gray, president of Gray & Worcester, Detroit, Mich., is in the city. He is accompanied by Mrs. Gray.

—Elliott H. Haag, of Silver, Thorne & Hooper, Toledo, Ohio, who had been visiting in the city, has returned.

—D. E. Slater, of Hunter, N. Y., and W. D. Olney, of Middletown, N. Y., were here last week.

—A. Davidson has opened a new store corner of Eighty-ninth street and Lexington avenue.

—C. H. Wettlin, No. 419 Sixth avenue, is confined to his home by illness.

—Charles Theo has accepted a position with Dr. Schmidt, Fourth street and Bowery.

—Joseph A. Besby, formerly with S. A. McDonnell, San Francisco, Cal., is in the city.

—W. T. R. Bersereau of Schieffelin & Co., has gone on his vacation.

—B. Forbes, of the Magic City Drug Co., Birmingham, Ala., is in the city for a few days.

—H. McK. Kirkland, of McKesson & Robbins, has gone to the Pan-American Exposition.

second sister in the back. As she fell to the sidewalk, Freedman turned the revolver on himself. The first bullet struck his chest and the second one entered his mouth. He dropped to the sidewalk. The police were notified of the tragedy by a small boy.

Isaac Shiparo, a druggist in Salem street, reports that for several months Freedman has acted strangely at times. A year ago he used frequently to drop into the drug store and talk with Shiparo, but several months ago, for no apparent cause, he ceased to call. Freedman did not seem to be a man likely to commit such a desperate act, so the druggist states.

State of Trade.

Boston, June 29.—With the passing of this month, it is found that the druggists as a class are satisfied that it has been a pretty good one, all things considered. At every place visited this week the statement was made that they were having a big soda trade, the weather having been extremely hot. This department in each store seems to have distanced the other more legitimate parts of the drug trade in volume of sales. Certain it is that at all hours one finds crowds surrounding every soda fountain. There does not appear to be much illness, just now, to call for activity in prescription departments. In sales of requisites for summer tourists, business still continues good and increasing, if anything. In the general market no great life is shown, consequently changes are insignificant as regards drugs and chemicals, the demand being only commensurate with the season. Dye stuffs are in fair request, with no activity. Alcohols are steady and the call for them is reported to be fair.

Warned Against Worthless Checks.

Boston, June 29.—Such is the reputation of the Potter Drug and Chemical Corporation of this city, that some as yet uncaught swindler has had apparently little difficulty in passing worthless checks, purporting to be drawn by that house. The only checks of the Potter Drug and Chemical Corporation which are genuine are signed by "George H. White," the treasurer of the corporation. The corporation warns the public that all checks not thus signed are of no value. The swindler has made out the worthless checks to which different names are signed and he has succeeded in passing them in different parts of the country. These fraudulent checks have been signed with the name of "P. L. Turner, treasurer," in some instances, and again, "P. L. Trusses, treasurer," and "P. L. Tillman, treasurer."

NOTES.

—By the Massachusetts Board of Registration in Pharmacy, examinations have been held during six days this month, and now there will be no further examinations until some time in September. In all, sixty candidates appeared for examination, and of these only seventeen (and two were young women) were successful and received certificates of registration, as follows: Clarence W. Towse, George P. Batchelder, and Eugene Y. Lord, Boston; William F. Plummer, Chelsea; Earl G. Combs, Cambridge; Francis J. Smith, Lynn; Riberot Dutton, Wakefield; Edgar S. Vinal, Holyoke; Leon A. Luther, Lawrence; Alice W. Smith, Chelsoe; Charlotte A. O'Donnell, Sonerville; Clayton H. Stevens, Leominster; William H. Morrison, Holyoke; Clarence B. H. Harding, Boston; Peter E. Doliber, and William H. Herlihy, Salem; Chester L. Goldsmith, Charlestown.

—Formal invitations for the opening of their new drug store at 353 Atlantic avenue, opposite the Revere Beach and Lynn Railroad station, on Thursday, June 27, were issued by Gray, Weeks & Co., and on that day a large number of people responded personally to the invitations. Soda water and cigars awaited all visitors and their admiration of the new store was great. The firm is made up of Hugh R. Gray, Allan T. Weeks and W. R. Willey.

—It has just leaked out among the customers and friends of a prominent Cambridge druggist that he paid dearly for the privilege of being among the first to ride on the newly-opened elevated railway system in Boston. After his return to his store he found that his diamond stud was missing. Just where or how it disappeared he does

IN AND ABOUT BOSTON.

An Unhappy Surprise.

Boston, June 29.—Druggists have some startling experiences. At Jenkin's pharmacy in Leverett street, one afternoon this week, after a tragedy which had taken place at the corner of Chambers and Ashland streets, nearby, the bodies of Richard Freedman, a suicide, and his sister, Rosa Freedman, whom he had just murdered before taking his own life, were unexpectedly brought into the pharmacy from the street, where the bodies fell at the time of death. Another sister was shot, but escaped serious injury. She also was carried into Mr. Jenkin's store and cared for until she could be sent to the hospital. The other bodies were sent from the pharmacy to the morgue. Freedman, who was 24 years of age, had been insane for some time. He was a dentist by occupation. Rosa, who was shot, was employed as a bookkeeper in a clothing store on Washington street. The other sister was at one time a night teacher in a public school. Freedman met them on Ashland street, near Chambers and when they turned the corner he drew a 44-caliber Colt's revolver from his pocket and shot at both sisters. The bullet missed one sister and another bullet struck the

not know. Sympathizing friends have not yet shown any inclination to replace the druggist's loss.

—B. F. Bradbury, the Washington street druggist, has received word of the sudden death on a train at St. Joseph, Mo., of William B. Bradbury, his eldest son, who was selling agent for several New England mills. He was formerly a prominent salesman in the wholesale dry-goods trade in Boston, but for fifteen years or more has been in the same calling in New York.

—The recent Cambridge liquor case against Charles Combs, the druggist who was charged with selling illegally at his pharmacy, corner of Cambridge and Elm streets, has been put over from this term of the Middlesex County Superior Court to the October session. In the lower court Mr. Combs was fined \$50 and appealed.

—Henry K. Mansfield, the Salem druggist who has several stores in the "Old Witch City," has been honored by election as treasurer of a new social organization called the South Salem Neighborhood Club, just formed, the membership of which is made up of prominent business men.

—Clerks in Richard's pharmacy in the Flint District at Fall River were recently called upon to care for a small boy and dress his injuries, which were rather severe, when he was thrown from his bicycle, through collision with a carriage.

—Boys who became more than mischievous in the Globo Village of Fall River, one day this week, broke a large plate glass window in Corrigan's pharmacy in that place. The expense of replacing the glass was no inconsiderable sum.

PHILADELPHIA.

Quarterly Meeting of the Philadelphia College of Pharmacy.

Philadelphia, Pa., June 29.—The meeting for the second quarter of 1901 of the members of the Philadelphia College of Pharmacy was held in the Library Monday, June 24th, at 4 p. m., the attendance being quite full. President Howard B. French was in the chair, Dr. Weidemann acting as secretary. W. Nelson Stem, secretary for the Board of Trustees, read the report of this board for the college year just closed. A very favorable financial showing was made, the affairs of the college being in a prosperous condition and its obligations now greatly lessened. There being no objections, the report was ordered approved.

G. M. Beringer, for the Committee on Necrology, presented memorials on Hans M. Wilder, by Prof. Remington; (by title) and an excellent memoir on the life and work of Dr. E. R. Squibb. Resolutions deploring the death of Dr. Chas. Rice were passed and the committee was directed to draw up suitable resolutions for formal adoption.

Under the head of "new business," several committees were appointed. Messrs. Beringer, Kraemer and Pyle—Memorial Committee; Messrs. England, Stiles, Baer, Blair, H. C. and Theo. Campbell—Nominating Committee. The report of the delegates to the recent meeting of the Pennsylvania Pharmaceutical Association was deferred until next meeting. A few remarks were made concerning the action taken at the meeting in the case of the State Pharmaceutical Board. It was reported, on the word of the president of the State Board, that P. C. P. graduates seldom fail to pass the board examinations. W. R. Graham was proposed for membership, and elected. L. S. Kent and M. W. Bamford were nominated for membership, this being referred to the proper committee. Mr. McIntyre called attention to a formula for a "cataplasm" from the Western Pennsylvania Association, which was meeting with much favor in Pittsburg. It was recommended to members for trial. There being no further business, the meeting adjourned.

C. H. CAMPBELL,
Eighteenth and Market Streets, Philadelphia.

P. A. R. D. Work.

Philadelphia, June 29.—In spite of the warm weather there is quite a bit of steady work going on throughout the city, the effort to adopt the Association price list for drug sundries meeting with good success in some wards. Much satisfaction is expressed by members at the stand taken by the State Association at its meeting last week in regard to the State Pharmaceutical Board, the resolutions passed there finding favor with both radical and conservative druggists here.

This action of the State Pharmaceutical Association will, it is hoped, close this unfortunate incident for good, druggists being fairly tired out with the battle of words that has been waged. The paper read by President Emanuel at the meeting (published in this week's Era, 7th) has created rather a favorable impression, and there is a decidedly better feeling towards the board in this city because of its explanations of the position of the board and why it was so sweeping in its work of ferreting out violators.

The P. A. R. D. will send out this month, to members and non-members, a bulletin showing the work it has accomplished during the year and what it proposes to do in the near future. A brief summary of the recent legislation affecting pharmacy will also be incorporated in the bulletin. A new by-law is to be voted on at the meeting of July 5th, changing the constitution and by-laws so as to make registered pharmacists engaged in the retail drug business, either as owners, managers or clerks, eligible to membership. On this account, members are urged to attend to take part in the discussion of this step. It is not commonly known to druggists that Philadelphia is the only large city in the country in which there are no drug stores run by "department stores," yet so it be, and it is a large peacock feather in the P. A. R. D.'s cap that such a pleasant fact can be told to the unfortunate druggists of other cities.

Business Conditions.

Philadelphia, June 29.—Business—well, there has not been much but soda business all week, although the fizz of the fountain has made up for much of the lack of dollars from patent medicines (at cost), for the hot weather has kept the soda clerks on the jump up to nearly midnight in some localities. A popular Philadelphia custom seems to be "rushing the growler" for soda water, a "step party" sending a pitcher over for a "quarter's worth of strawberry and cream, please." It's a good one for the druggist, for he thus sells lots of soda water with the least amount of trouble in serving it, and one or two who cater to this trade say that they make lots of money out of it.

There is not much doing among the jobbers except in keeping up with orders and carrying on the usual city

trade. Owing perhaps to the general prosperity of the country many people are leaving for summer resorts much earlier this year and this is causing the summer dullness to begin earlier than usual. There are some busy people, though, Mulford's representative saying that they are working night and day to keep up with their orders for biological products. Vaccine and diphtheria antitoxine are in heavy demand, all parts of the country sending in orders.

Drug Clerk Drowned.

Philadelphia, June 29.—A sad incident marred the picnic of St. Michael's T. A. B. Society last Monday, Thomas A. Duffy, a promising young man, clerk at the "South Dispensary," No. 138 Bainbridge street, being taken with cramps while in bathing and drowning before aid could reach him. The young man was well liked by those who knew him, was ambitious and gave bright promise for the future. He had matriculated at Jefferson College the week before.

NOTES.

—Among the graduates of this year's class of the P. C. P., quite a number have accepted positions in Philadelphia drug stores. A few of these, in addition to others reported earlier are as follows: Elmer F. W. Garber is with Chas. Leedom, 1403 Filbert street; Benj. H. McClurg is with Chas. Rehfuess, Camac and Norris streets; Walter Brooks is with P. M. Kelly, Twentieth and Federal streets; Alex J. Strathie is at Twenty-first street and Columbia avenue; Guy M. Musser is with R. W. Cuthbert, 4100 Chestnut street; F. A. Brenner is with L. C. Funk, Forty-first and Lancaster avenue. William E. Davis has bought the store of John W. Hayes at Edwardsdale, Luzerne county, and is making a number of alterations and improvements.

—President-elect W. L. Cliffe of the Pennsylvania Pharmaceutical Association is being kept busy answering the congratulations of his many friends. The election of Mr. Cliffe is very popular here, and everybody seems highly pleased, as it is taken to be the guarantee of lots of active work during the coming year against trade abuses.

—The \$100,000 appropriation for the Philadelphia College of Pharmacy failed of passage by the Legislature in the political game of "something for something" played by the Appropriations Committee, the P. C. P. having no political "pull" to trade for the dollars.

—J. W. Keenan, the popular down-town druggist, has made a few changes in the inside arrangement of his Seventeenth and Ritner streets store, incidental to stock taking and need of more room.

—Miss Mabelle Haydock, a graduate of this year's class, P. C. P., has returned to the College to take a special course in chemistry, preparatory to taking a position with Johnson & Johnson.

—W. W. Chaifant, of Fifteenth and Tasker streets, is now dividing his time between Philadelphia and Ocean City, N. J., the busy season for his store at the latter resort having begun.

BALTIMORE.

JAMAICA GINGER CASES.

Baltimore, June 27.—Four suits for an aggregate of \$100,000 damages were instituted yesterday against John Jay Gilbert and William E. Gilbert, wholesale druggists at 7 and 9 North Howard street, for alleged death and injuries caused by drinking Jamaica ginger and essence of lemon said to have been prepared by them with wood alcohol as one of the ingredients. The defendants trade as Gilbert Bros. & Co., but are sued as individuals.

In one of the suits filed in the Court of Common Pleas, it is alleged that the death of James Henry Duncan was caused by drinking Jamaica ginger prepared by the defendants. Duncan lived in Cecil county, Md., near the Pennsylvania line. It is averred that he bought the Jamaica ginger on August 1, 1900, and that the preparation first caused blindness and then death. The suit is brought by Duncan's widow, Ardel Jane Duncan, and her six children. They claim \$25,000 damages.

Dr. George A. Brehm, also of Cecil county, sued the same defendants in the Superior court for \$50,000 for total blindness, alleged to have been caused by drinking Jamaica ginger prepared by them. The declaration states that Dr. Brehm bought the preparation at a store on Elliott's Island, June 27, 1898.

Two other suits were brought in the City court. One is by Henry W. Jackson, a country merchant in West Virginia, who claims \$25,000 damages for injury to his eyesight, alleged to have been caused by drinking Jamaica ginger prepared by the defendants on July 15, 1890. It is averred in the bill of complaints that Mr. Jackson bought the preparation from an agent of the defendants, who assured him that it was pure.

Nimrod P. Dove, also of West Virginia, is the plaintiff in the other suit. He claims \$20,000 damages for permanent partial blindness, alleged to have been caused by drinking, on May 1, 1890, essence of lemon prepared by the defendants.

It is contended that the deleterious effects of the preparations were caused by the use of methyl, or wood, alcohol, known to the defendants to be a dangerous poison, instead of the usual and more proper, but more expensive, ethyl, or grain, alcohol.

The above cases are the outcome of an agitation started some time ago and mentioned in these columns. The matter had been brought to the attention of the medical societies and gave rise to much discussion. Data were submitted to prove that a number of deaths had occurred in Maryland and neighboring States from the use of preparations regarded as harmless but mixed with wood alcohol. Various instances of total or partial blindness were attributed to the same cause. The outcome of the suits will be awaited with the keenest interest.

Business Very Quiet.

Baltimore, July 1.—The out-of-town drug trade seems to have been quiet during the past week, a condition which can be attributed in part to the expiration of another month. Retailers hold off with their orders when a month is about to end, so as to keep the next bill as small as possible. But the curtailment should apply particularly to the city trade, and yet this branch of the business is said to have been quite active. The trade, however, was in a more or less unsettled state in consequence of the close of the fiscal year for the Government and the approach of the time when the repeal of the war revenue stamp tax goes into effect. This circumstance had a retarding influence upon the movement and reacted especially upon the market for botanicals. All the domestic goods were quiet, considerable activity being noted only in imported articles. The weather, too, has been to some extent responsible, low temperatures and heavy rains having checked the growth of plants and herbs and prevented the gathering of supplies. The uncertainty as to the effect of the revenue tax repeal upon crude drugs and botanicals has induced the manufacturers to hold back with their purchases and the deficiency will have to be made up later on. The movement of heavy chemicals is about normal. Retail druggists have had a heavy run on soft drinks and their receipts from this source have been large.

NOTES.

—Druggist Musselman, proprietor of the People's Drug Store at Gettysburg, Pa., came to Baltimore last Store at Gettysburg, Pa., came to Baltimore last Thursday as one of a party of rooters for Mr. Plank, the pitcher of the Philadelphia American League baseball club. Mr. Musselman was at one time the captain of the Gettysburg nine, with Mr. Plank as one of its star members, and he was anxious to applaud his fellow townsman, now that the latter has won fame. The shouting, waving of colors and other demonstrations, however, proved to be of no avail. Not even the presentation to Mr. Plank of a gold watch could stem the tide of defeat. The man from Gettysburg was hampered all over the field, and the visitors went home sadder, if not wiser mortals.

—Peter Lance, of Wm. R. Warner & Co., was in Baltimore last week, as was also Druggist J. K. Seltz, of Glen Rock, Pa.

LOUISVILLE.

OLD-TIME DRUGGIST DEAD.

Louisville, Ky., June 28.—Ferdinand J. Pingst, who owned a drug store in Louisville when the city was a hamlet, is dead. He died suddenly at Cassel, Germany, and his body is now on its way to his home in Louisville. Mr. Pingst was a druggist in Louisville when cut-rate shops were unknown and he died a very rich man. He was a native of Germany and came to visit a Louisville uncle when a boy, together with his brother. After arriving in Louisville they became enamored of the little village and the country surrounding it and petitioned their father to allow them to remain here. He was a man of means and asked them what business they desired to engage in. The Louisville uncle, who was a physician, advised them to open a drug store and theirs was the first store worthy of the name opened in the Falls City. The Pingst brothers prospered from the beginning. Soon they branched out and opened other stores and their business grew with the city. In 1890 Mr. Pingst retired. He was then a wealthy man. Although it is not known just how much he was worth his fortune has never been estimated at less than three-quarters of a million. He easily made more money than any druggist since his time. He was on a visit to relatives in his native country when he died. The body is now on its way to Louisville and the burial will be in Cave Hill cemetery. Mr. Pingst was a prominent lodge man. He was a member of Kiliwinning lodge of Masons, No. 506, DeMolay Commandery, Knights Templars; Ancient Order United Workmen; and a Thirty-second degree Mason.

DRUGGIST AND WIFE FLOGGED.

Louisville, June 29.—Joseph M. Britton, one of the most prominent druggists of Southern Indiana, was subjected to one of the most horrible outrages ever perpetrated in that State. Both he and his wife were called from their home, stripped of their clothing and whipped with switches and raw hides. They were flayed until the blood ran and the white-caps did

both of their victims sank to the ground in an unconscious condition. And the reason for this outrage was an accusation that the druggist sold liquor without a license. And this after the druggist had been tried in court and dismissed because there was insufficient evidence to convict. The case has attracted a great deal of attention throughout Indiana and Kentucky and the druggist has already filed a suit for damages. The assault took place in Greene county, which is just a few miles from Bloomington, the college center of the State. Mr. Britton arrived in Newark several years ago. He had a small sum of money and he invested it in a drug store. He prospered and his fellow townsmen became envious. As he became richer they claimed that he was making his money by retailing liquor to their sons. The druggist laughingly told them to prove their charges, and went about his business. The envious continued their threats and finally the druggist became entangled in several small suits. In 1890 he was indicted by the grand jury and placed in jail. Several of the most prominent citizens of the county agreed to become his bondsmen, but when the time came for signing the bonds they were prevailed upon by the druggist's enemies to refuse and he remained in jail two days. At his trial he was acquitted and the charges were dismissed. He returned to Newark and conducted his business as before. That was two years ago yet his enemies never forgave him. A few nights ago he was called from his bed by loud knocking at his door. Four masked men greeted him. He was led to a clump of trees not far from his home and his face was turned to the trunk. After stripping him he was whipped. When he sank to the ground unconscious the men left him. They returned to the house and called for his wife. When she came to the door one of the men grabbed her and she was bound to a tree not far from her husband's side. Then the switches were again applied.

When the druggist recovered consciousness he went to Bloomington. After a consultation with two of the most prominent criminal lawyers in Indiana he swore out warrants against the following: Jacob B. Young, George Marshall, Bent Gooden, C. J. Resler, James Fuller, William Resler, John Nash, Ira Brown, M. G. McIntosh, Harlan Resler, William D. Wright, William A. Booher and Ira Arthur. The suit is for \$10,000 and it is said that Mrs. Britton will file a similar suit against the same parties.

NOTES.

—Joseph Milheiser, of Louisville, and Crvald Arnold and Edward Irvine, of Bardstown, will open a new drug store at the latter place. Mr. Milheiser has had eighteen years' experience in the various Louisville drug stores and is well prepared to engage in business for himself.

—The Morse Drug Company plant at Valley View, which has been closed for several months, has again been opened. The new firm is the Eastern Kentucky Drug Company and it is said that the stock in the new company is controlled by Cincinnati residents.

—Dr. H. B. Davis, formerly of the well known firm of Davis and Robertson, Lexington, has leased the McClelland building in Lexington and will open a modern drug store.

—The Yongue stock of drugs, at Murray, was sold at public auction last week by William Linn, assignee. Edwin Bourland bought it at 40 cents on the dollar.

—Allie Solbrig, who recently graduated from the Louisville School of Pharmacy, has purchased an interest in Moorman & Owens' drug store at Cloverport.

—O. M. Crenshaw, of Louisville, has accepted a position with the Poage, Elliott & Poage pharmacy at Ashland, Ky.

CHICAGO.

DRUGGISTS TO FIGHT NARCOTIC EVIL.

Chicago, June 29.—The following news "story" appeared in a local paper this morning:

The organization in this city of the First Auxiliary District of Pharmacists to enforce the law regulating the sale of morphine, cocaine, and other narcotics, followed a report that the sale of these drugs has increased enormously in Chicago during the last year. The druggists allege that this increase is due to the non-enforcement of the statute prohibiting the sale of these remedies except on the written prescription of licensed physicians or dentists, the violation of which is overlooked by the officers.

Not only do the drug stores on the levee sell cocaine to their regular customers but to any one who is willing to buy. A stranger to the hotel yesterday walked into a drug store in "Whisky Row," and, rolling his eyes wildly and twitching his fingers nervously, whispered to the clerk a request for "flake No. 1." The clerk immediately brought the customer a three-grain package of cocaine. A drug store on Clark street was next tried, and flake No. 2 (morphine) was demanded. Here the formalities were a little greater, but after making the buyer sign a name in a book full of trembling signatures, the little package was produced.

W. H. Gale, President of the First Auxiliary District of the Chicago Retail Druggists' association, the only organization active in fighting illegitimate drug sales, said:

"The increase of narcotic sales is appalling, especially in the levee district. Some stores there buy as high as fifty ounces of cocaine a month. Nobody but a druggist can realize what an enormous figure that is. Cocaine is sold more largely than morphine, and opium comparatively little. The law is comprehensive on the question, but the heavy penalties of fine or imprisonment are never enforced. The responsibility lies with the State's Attorney. The Board of Pharmacy has no power to act. Its control is over the sale of poisons."

The impression conveyed in the opening sentence of the above clipping that the First Auxiliary District was organized for the sole purpose of combating the narcotic evil is, of course, erroneous. It will include, not only this, but will also make a fight on price cutting by the down town stores. Indeed the latter fight has already begun and promises some interesting developments. To stop the illegal sale of morphine and cocaine is in itself a work

worthy of the attention of the organization. In the article above quoted the reporter is in error in another particular when he says that cocaine and morphine may be procured without the necessary legal requirements in all the stores in the levee district. Your correspondent personally knows of one store in that district where these drugs can not be procured except upon a physician's prescription. There may be other stores which will refuse to sell these drugs, but of this one your correspondent has personal knowledge, from having heard would-be customers refused and from a positive knowledge of the character and principles of the proprietor.

Chicago Summer Trade Good.

Chicago, June 29.—There is rather more than the usual activity just now in the summer trade. The staples are moving quite freely, and the demand for hot weather goods is something enormous since the advent of the present hot wave. The manufacturers are experiencing a summer lull, for the vacation season is on and travelers are resting from their labors. The jobbing houses are fairly busy, but there is not so much active hustling for new business as there will be when the weather gets cooler.

NOTES.

—Successions.—Chicago: Jessie F. Buckley has been succeeded by Max C. Dobbratz, Armstrong, Ia.; C. W. Stockwell has succeeded Stockwell Brothers, Crystal Lake, Ia.; W. H. Mulligan succeeds Mulligan & Flo, Toledo, Ia.; Chas. Benesch & Company succeed Chas. D. Rakor, Cuba, Ill.; D. W. Harrison succeeds D. S. Ray Jr., Hornick, Ia.; J. S. Young succeeds J. S. Young & Co., Me'er, I.Ws.; C. W. Lockhart succeeds G. W. Tyler, Abington, Ill.; E. W. Cuther succeeds J. J. Rowe, Alfordsville, Ind.; Jesse Godwin succeeds Dr. H. M. Arthur.

—Ed. F. Mallory, Chicago representative of Lazell, Dalley & Company, of New York, left recently to be present at the meeting of the United Commercial Travelers in Columbus, O. Mr. Mallory holds next to the highest official position in that order, that of Supreme Junior Councillor, and is a candidate for the position of Supreme Councillor, the highest office in the order, which now has 17,000 names on its membership roll. Mr. Mallory's many friends wish him success in the attainment of the honor.

—Walter H. Gale, the president of the Illinois Pharmaceutical Association, is the youngest member of the Chicago Veteran Druggists' Association. He is delighted with his election as a member of that body. A brief sketch of Mr. Gale's life and the positions he holds was published in a local paper this morning, together with an excellent portrait—the same as that published in these columns recently.

—'Twas a fast and furious game of base ball that was played last Tuesday afternoon between picked nines of south side doctors and druggists at Washington Park. After a fierce contest the M. D. team won by a score of 11 to 7. The druggists' team was composed of Messrs. Valentine, Gazzolo, Marson, Wickert, Oscar Schmidt, Walgreen, Richardson, McCoy, and Sisson. The feature of the game, was McCoy's fine fielding and batting. He was at one time a crack player on a celebrated college team.

—The La Salle Drug Company, O. H. Eitel, proprietor, has purchased the business formerly conducted by W. L. Becker in La Salle, Ill. The store was formerly known as the Harrison House Pharmacy. It will be moved to 154-156 Marquette street,—a better location.

—The Feldkamp Drug Company has succeeded the firm of N. L. Frank & Company at 3263 Cottage Grove avenue.

—J. Grossburg has bought the store formerly owned by C. J. Kestbaum at 361 Blue Island avenue.

—Charles S. Terrill has sold his drug store in Chicago for a consideration of \$2,262.

—I. H. Hunt & Company, of Lowell, Mich., have assigned.

—W. A. Turner & Son, Sheldon, Ill., have sold out.

THE NORTHWEST.

INDIFFERENT VICTIMS.

St. Paul, Minn., June 28.—W. A. Jones, who claims to represent Fredk. Stearns & Co. of Detroit, Mich., is wanted in this city; that is, he should be wanted by some people. He is likewise wanted by Dr. W. H. Darby of the Murray Institute, Minneapolis, who was mulcted \$75 the other day because he was so obliging as to endorse a draft in Jones' favor. Noyes Bros. & Cutler, the St. Paul wholesale druggists, are reported to have honored a bad check for \$50. The strange part of the business is that Mr. Jones is said to be passing the time pleasantly at White Bear Lake, one of the popular summer resorts of this section, yet nobody seems inclined to "go for him."

NOTES.

—A. W. Davenport, formerly in the drug business at Olivia, Minn., and lately in the laundry supply business, is thinking of returning to the fold and again owning a drug stock.

—R. F. Dehossion, Wauwatosa, Wis., will remove to Milwaukee—probably so he won't have so hard a time spelling the name of his town.

—A. E. Groat is now pharmacist at the City and County Hospital, St. Paul.

—C. R. Christenson, of Baldwin, Wis., was in the city Tuesday.

—W. T. Gilmore has recovered from his recent illness and returned to St. Paul.

—J. Nichols, Atlantic, Ia., and C. W. Tyler, Mellen, Wis., have sold.

—New: J. J. Holzschuh, Minneapolis, Minn.; Eastman Drug Co., Ashland, Ore.

—William F. Holden, Sauk Rapids, Minn., has removed to Winona.

—Successions: P. T. Lee, Eau Claire, Wis., by J. M. Ballard; J. S. Young & Co., Hornick, Ia., by J. S. Young.

MONTREAL.

Montreal, June 29, 1901.

—The fifth annual dinner of the Pharmaceutical Association, which was held at the Windsor Hotel, proved a grand success. About eighty-five representatives of the drug trade were present. S. Lachance, president of the association, occupied the chair while seated at the table of honor were: H. Miles, president Board of Trade; D. Masson, T. Brosseau, K. C. attorney for the association; C. J. Coverton, Prof. Morrison, Alex. B. J. Moore, David Watson, R. W. Williams, E. Muir, Henry Willis and W. H. Chapman. The wholesale trade and manufacturers were well represented, in fact, were the annual banquet of the association to depend on the retail trade of this province to prove a success it would be leaning on a broken reed, as out of the number present about 25 per cent. would represent the retail trade. This is deplorable, as the association has always to look to the wholesale trade for the lion's share of help, as it also does in a great many other transactions connected with the drug trade.

—The annual meeting of the Pharmaceutical Association was held in the Montreal College of Pharmacy last week. The regular routine of business was carried out satisfactorily. The president, S. Lachance, occupied the chair, and after addressing the meeting appointed Messrs. Bernard and Moore as scrutineers for the counting of the ballots. There were fourteen nominees for council, six of whom were eligible for election, and the choice resulted as follows: R. H. Williams, Henry Willis, J. E. Tremble, W. H. Chapman, A. J. Lawrence and C. J. Coverton. These gentlemen with the following who remained in office, namely: S. Lachance, A. B. J. Moore, J. Contant, R. McNichol, J. A. Picotte and J. C. Sutherland, will compose the council of the association for the session of 1901-1902.

—The annual meeting of the Druggists' Rifle League proved the best attended of any yet held. The number of members now exceeds that laid down by the Government, the oath of allegiance to the King was administered to those present by Messrs. Gray and Chapman, J. P.s. and great prospects are in evidence as to the club's future. Shooting will commence on the Government ranges next month and regular matches will be held during the summer. The officers for the ensuing year are as follows: President, J. E. Morrison; vice-president, Alex. E. J. Moore; secretary-treasurer, W. P. Wilson.

—The annual meeting of the Retail Druggists' Association of Province of Quebec, was poorly attended. The principal interest was centered in the election of officers and council for the ensuing year which resulted as follows: President, H. H. Chapman, J. P.; first vice-president, A. J. Lawrence; second vice-president, H. Willis; secretary, E. Muir; executive council, H. R. Gray, J. E. Tremble, Dr. E. St. Jacques, R. H. Williams, J. C. Sutherland, S. Lachance, J. E. W. Lecour and J. E. Dube.

—Dr. Laviolette has opened his new store at the corner of Drummond and St. Catherine streets. He has spared no expense in making it up to date and while not so showy as the majority of modern pharmacies, it is certainly elegant in its solidity. The fixtures are of quartered oak, the flooring consists of variegated tiles, while the soda fountain is in every respect up to date. The doctor has certainly the courage of his convictions as all or nearly all the druggists in this city have given up this accessory to the pharmacy.

—H. A. Jones, manager export department Evans Sons & Co., Liverpool, spent last week in this city. He is on an extended tour, and visited Jamaica after leaving England. He intends, within the next few weeks, visiting New York, Philadelphia, Washington, Pittsburg, Chicago, Detroit and other American cities.

—A criminal action has been taken by the Vapo-Cresoline Co. against Jones & Co., Toronto, for alleged infringement of the former's patent lamp and Vapo-Cresoline. The plaintiffs also assert that the defendants have published verbatim one of the former's testimonials.

—F. J. Lemaistre, M. C. P., 189, whose father, Capt. Lemaistre, was drowned last winter when the latter's steamer foundered on the north coast, has become one of the pursers on the R. & O. line.

—A. R. Evans, managing director Evans & Sons, Ltd., will sail for England from New York by the Campania on July 13. He expects to return to Montreal about the end of August.

—O. Mowatt, customs clerk for Lyman Sons & Co., has just undergone an operation for appendicitis at the Royal Victoria Hospital. Latest reports say he is progressing very favorably toward recovery.

—A. E. Brethorn, of Ottawa, spent a few days this week in the city. He is at present pushing an invention of his which he has just placed on the market in the shape of a gelatine capsule filler made of solid aluminum.

—A. P. Ramsay, druggist of Trinidad, is at present in the city. The wholesalers are always particularly glad to see him.

—The pharmacy formerly owned by I. Chive, who recently died in Paris, is now being carried on by S. Gilbert, M. C. P., '97.

—Ronald Devlin, clerk with R. H. Bryson, has obtained a position as purser on the S. S. Spartan for the summer.

—J. E. Roy, of Magog, spent last week in town interviewing the wholesale trade.

—A. W. Moffat has gone on an extended trip to the west and will combine pleasure with business.

THE SOUTH.

One Young Man's Troubles.

Memphis, June 25.—A young man traveling for a prominent pharmaceutical house tells the following story on himself: Knowing that he would be in Memphis during the reunion, and being filled with a desire to share his share of the joys (or sorrows) of the great occasion with somebody else, he induced a young lady friend to promise to inquire for him at his hotel on his arrival in the city. She was true to her promise, and with her chaperon (her mamma, by the way) called in the morning at this young man's hotel and asked the clerk if the young man was in. No, Mr. ——— was not in, but would be shortly. Would the lady leave her card? She would; gave him the pasteboard, and he wrote with his pencil in one corner No. 7. "Why, what is that for?" asked the fair one. "Is that the number of his room?" "Oh, no, indeed," replied the polite but tired looking clerk. "You are the seventh that has called this morning." She gave him a look that would have stopped the tide from coming in and swept out of the place. The clerk did not tell her that the previous callers were all men, and she woman-like, just knew positively that they were all "horrid women." The traveling man hasn't recovered from the blow yet. Did I say blow? Oh, yes, the man was at one time much to the girl, and she was very much to him. He would like to take a fall out of that hotel clerk, but hasn't the heart (wouldn't take much muscle) to do it. The girl, the clerk and the traveling man are all strangers, now. The traveling man's mail contained a missive that ran somewhat in this fashion: "Mr. and Mrs. ——— request your presence," etc., etc., etc.

A Bad Cigarette Law.

Memphis, June 28.—After passing a good cigarette law, which had it not been declared unconstitutional by the Supreme Court, would have made traffic in the things a crime, the Legislature went to work at the recent session of that body and framed the following:

SENATE BILL NO. 2.

AN ACT to prohibit the sale or offering for sale, or bringing into the State for the purpose of sale, or giving away of any cigarettes, cigarette paper or substitute thereof.

Section 1. Be it enacted by the General Assembly of the State of Tennessee, That it shall be a misdemeanor for any person, firm or corporation to sell, offer to sell or to bring into the State for the purpose of selling, giving away or otherwise disposing of any cigarettes, cigarette paper or substitute for the same; and a violation of any of the provisions of this act shall be a misdemeanor punishable by a fine of not less than fifty dollars.

Sec. 2. Be it further enacted, That the grand juries shall have inquisitorial power over offenses committed under this act.

Sec. 3. Be it further enacted, That this act take effect from and after its passage, the public welfare requiring it. Passed January 25, 1901.

So little attention is paid to the law that it really borders on the farcical. Cigarettes can be purchased in any quantity, at any time, and by anybody, and any brand can be had simply for the asking.

Business Good.

Memphis, Tenn., June 28.—Business in both branches of the drug trade is very gratifying and has been for the past two weeks. Lack of rain for awhile threatened to ruin the cotton crop, but now the prospect for a good crop is splendid. The weather has been very warm and the soda fountains are doing capacity business. Insect powder, mosquito lotions and other seasonable commodities are in active demand.

The New Cocaine Law.

Memphis, June 28.—The new cocaine law passed by the last legislature has just been published and seems to give general satisfaction. The law seems to be sweeping enough and it is to be hoped that it will in a great measure put a stop to the indiscriminate sale of the stuff. So widespread has become the cocaine habit among the negroes and ignorant whites of this country that it has gotten to be a very serious matter. Below is the law:

SULPHUR WATER. — Armand Gautier, the French chemist, is reported to have announced to the Paris Academy of Sciences (American Medicine) his discovery that pulverized volcanic stones treated by water at a temperature of from 250° to 300° C., yield a liquid identical in composition with the ordinary sulphur water of mineral springs, except that it is stronger.

An act to regulate the sale or giving away of cocaine or any compound thereof in this State and to provide punishment for the violation of this act.

Section 1. Be it enacted by the General Assembly of the State of Tennessee, That it shall be unlawful for any one to sell, barter or give away cocaine or any compound thereof in this State; provided, however, that this shall not apply to the sale of cocaine or any compound thereof by a druggist upon prescription of physician, provided that no prescription calling for cocaine or compound thereof shall be filled more than one time, provided that the provisions of this act shall not apply to wholesale druggists in supplying the trade of retail druggists, supplying dentists or physicians.

Sec. 2. Be it further enacted, the violation of this act shall upon conviction be punished by fine of not less than \$100 and not more than \$500, or punishment by imprisonment in the County jail or work house for a period of time not less than thirty days or more than six months, at the discretion of the court.

Sec. 3. Be it further enacted, the grand jury shall have inquisitorial power to investigate violation of this act.

Sec. 4. Be it further enacted, that this act shall take effect from and after its passage, the public welfare requiring it.

The Substitution Question.

Memphis, June 28.—The legislature seems to have had pharmacy in mind to quite an extent. Following is the law governing the substitution of one article for another:

An act to prevent the substitution of any drug in filling physicians' prescriptions by druggists in the State.

Section 1. Be it enacted by the General Assembly of the State of Tennessee, that it shall be unlawful for any corporation, firm, or person or any combination or association of corporations, firms or persons engaged in the business of buying, compounding and selling drugs and medicines to substitute any drug or medicine in lieu or stead of that given to the patient by the physician on the face of his prescription.

Sec. 2. Be it further enacted that it shall be unlawful for any agent or employee of such person, firm or corporation or association or combination of persons, firms or corporations engaged in the business of buying and selling drugs in this State to substitute any medicine for the specific medicine mentioned in the physician's prescription.

Sec. 3. Be it further enacted that any person, firm or corporation violating the provisions of this act, or aiding or abetting the violation of the same, shall be guilty of a misdemeanor and upon conviction shall be fined not less than \$25.00 nor more than \$100.00 for each and every offense.

Sec. 4. Be it further enacted that this act shall take effect from and after its passage, the public welfare requiring it.

Passed April 1, 1901.

NOTES.

—Dr. D. C. Dunlap, one of the oldest and best known physicians in Mississippi, expired suddenly on the evening of June 23, at his home in Sardis. His death was entirely unexpected as he seemed to be in perfect health just before he died.

—The death from consumption of Jesse Hodgson, on May 31, removes a well known young druggist of Clarksville, Tenn. He was an Odd Fellow and was buried by that order. He was 33 years old, and leaves a wife and one child.

—G. E. Chalquist has resigned his position with Hammer & Ballard and will return to his home, Morristown, N. J. His health has been bad for some time, and he feels that a change will benefit him.

—C. O. Peltey, who was for many years connected with the best drug interests of Pine Bluff, Ark., has bought the Berbig drug store, No. 906 Main street, Little Rock.

—J. C. Treherne has gone to New York on a combined business and pleasure trip. While away he will accompany his uncle on a hunting trip in the Adirondacks.

—Frank K. Roseman, a prominent young pharmacist of Jasper, Ala., was married to Miss Maude Shields, of that place, on June 11.

—E. V. Sheely, the Vance street pharmacist, is away on a visit to his old home, Philadelphia. He will be away several weeks.

—W. G. Pool, representative for Nelson, Baker & Co., in Mississippi, is spending his vacation at his home in Oxford, Mich.

—The drug store of B. C. Gaston, of New Decatur, Ala., was recently destroyed by fire. The stock was insured for \$1,000.

—A. Schneider, a pharmacist of Washington, D. C., is, with his wife, visiting friends and relatives in this city.

—R. W. Cobb, representing Parke, Davis & Co., has been laid up with a bad foot for several weeks.

—W. S. McGhee has bought out J. T. Scott & Son at Austin, Tex.

CALIFORNIA.

Board of Pharmacy Meeting.

California, June 25.—The California State Board of Pharmacy has finished its business and adjourned to meet next month for examinations. The most important business transacted was the decision of the board not to recognize diplomas of any college of pharmacy or certificates from other State boards. All applicants for registration must pass an examination, and with the exception of those graduates who had applied for registration before the repeal of the old law, the board turned down all graduates who desired registration on credentials.

Then again, the certificates of having passed the junior examination of colleges of pharmacy will no longer be recognized as sufficient credentials for the issuance of assistants' certificates. The following were registered as licentiate, having applied previous to the repeal of the old law: H. R. Friedgen, G. Steinman, H. Gonzales, E. M. Cherry, G. Watt, C. W. Lund, J. P. Michiel, H. H. Siebe, W. H. Reed, E. L. Freck, Jr., S. W. Cartwright, C. A. Morris, L. A. Schmitz, F. W. Ralston, J. C. Bearcroft, Elsie B. Higgins. The board meets next month for examination in Los Angeles July 9 and in San Francisco July 16.

Retail Drug Clerks' Meeting.

San Francisco, June 25.—The meeting of the Retail Drug Clerks of San Francisco was called for the purpose of settling the question of hours. After thoroughly discussing the matter they decided upon a proposition to submit to the employers for approbation. Realizing that the stores in San Francisco could not all be closed at any fixed hour they decided to ask for 13½ working hours in two weeks. This time to be put in as best suited the interests of the individual proprietor. The association has a committee appointed who will submit the proposition to the retail druggists and at the same time get any suggestions as to what would be the most feasible course to pursue as regards Sunday closing. A number of the largest stores have signified their willingness to comply with the suggestion and no doubt there will soon be shorter hours for the San Francisco drug clerks.

San Francisco Druggists Meet.

San Francisco, June 26.—The Association of Retail Druggists of San Francisco held a called meeting Tuesday evening, June 25. Frank E. Holliday, Chairman of the Executive Committee of the N. A. R. D. being in the city, the officers of the local Association thought a conference with him might wake up their organization to such an extent that they could deal more forcefully with the cut-rate problem.

Mr. Holliday met a small but appreciative gathering of some of the best druggists in the city, who listened with interest to reports of the N. A. R. D. work in the East. He spoke of the good work done in Chicago, St. Louis, Boston and many other places where the drug conditions were much worse than the local association has confronting them. The organization of the retail druggists into an association backed by the N. A. R. D., Mr. Holliday told them, would prevent the jobbers sell-

ing to cutters and would undoubtedly bring about an agreement concerning a schedule of prices.

Mr. Holliday considers that his missionary work, as he calls it, will be of considerable benefit to the druggists of California and feels very hopeful of an early agreement between the cutters and the Los Angeles Association. The next regular meeting of the San Francisco Association will be held in the near future, at which time the proposition to employ someone to visit the druggists and work up the association movement will receive careful attention.

NOTES.

—H. M. Sale & Son, of Los Angeles, have purchased the wholesale drug business of Haas, Baruch & Co., and will take immediate possession. They intend to carry a much larger stock than the old firm and will undoubtedly make a strong whole-sale house.

—The new announcement of the California College of Pharmacy has just been issued and outlines the work for a third year course which will be in operation at the next session.

—Burt Melien, of Palo Alto, was in San Francisco last week and reported a satisfactory business condition in Palo Alto.

—T. D. Trueworthy has taken charge of the prescription work for the Dispensary in the Press Club Building on Ellis street.

—Douglass Swanee, formerly with Bristol & Rowley, Santa Ana, has resigned and is now located with E. R. White, San Francisco.

—The retail store of Sales & Son, Los Angeles, has changed hands and will be known as the Tanner Drug Co.

—S. Spencer and Eugene Horner are back at their old positions with the Owl Drug Co., San Francisco.

—F. D. Curtis has accepted a position with the Potts Drug Co., San Francisco.

—T. D. Trueworthy is now at Bogle's Pharmacy, San Francisco.

—Miss Fayette Harris has accepted a position in the laboratory of Langley & Michaels.

—N. Truhehenck is now with Simpson's Pharmacy, 74 Jackson street, San Francisco.

—J. J. McDonald, formerly of Haywards, is now prescription clerk for R. W. Coffin, San Francisco.

NO TRAITORS IN ST. LOUIS.

St. Louis, June 27, 1901.

To the Editor: In reply to your editorial, "Are there traitors in the ranks?" appearing in your journal of June 20, and alluding to the situation in St. Louis, I desire to say a few words of explanation. Our situation here is exceedingly satisfactory, and I am positively convinced that to call any one of our druggists a traitor is doing him an injustice. It is true that a few receipted bills were obtained, after our schedule had been mailed, which seemed a violation, yet not one was willing to be branded an aggressive cutter and all gave satisfactory explanation as to how the sale was made.

I believe to-day the schedule is thoroughly understood by every one in our city, and the great majority are getting more than the minimum rate of same calls for. We should always be willing to forgive, and as for those who had erred, I am very glad to say for them that it was not intentional. If you will kindly offer this in your valuable journal, you will greatly oblige,

RUDOLPH S. VITT, Ph. G.

Pres. Retail Druggists' Assn. of St. Louis

—The North Carolina Pharmaceutical Association held its 22d annual meeting at Winston, June 19 and 20. The president reported a membership of 147, an increase of 17½ members annually since the organization of the association in 1880. This increase, he thought, was inexcusably small, as compared with the enrollment of registered pharmacists which, in 1880, was 282, and today is 500, nearly double. J. R. Williams of Raleigh was elected an honorary member of the association for life. After the discussion of several questions of local importance, including advantages of membership in the N. A. R. D., the following officers were elected: President, E. W. O'Hanlon, Winston; vice-presidents, Henry T. Hicks, Raleigh; W. A. Leslie, Morganton; G. K. Grantham, Dunn; secretary, A. J. Cook, Fayetteville; Executive committee, B. E. Owens, Winston; G. R. Wooten, Hickory; J. M. Scott, Charlotte; W. H. McNair, Tarboro; local secretary, C. G. Bramham, Newbern; member Board of Pharmacy elected by Association and appointed by the Governor for a term of five years, E. V. Zoeller. Thirty-two students were in attendance at the Department of Pharmacy of the State University during the past year, and the work of Prof. Howell, the head of the school, was commended. Morehead City was selected as the place of next meeting, which will be held on the third Thursday in June, 1902.

At the afternoon session the North Carolina Board of Pharmacy announced that the following applicants passed the examination: J. Elbridge, Benson; B. L. Cole, W. F. Wilson, Jr., W. W. Kidd, T. N. Edwards, Charlotte; J. E. F. Hicks, Goldsboro; H. H. Eubank, Hendersonville; W. F. Moody, Asheville; W. D. Patterson, Chapel Hill; W. O. Singletary, Iona; J. E. Sainsting, Washington; C. W. Simpson, Monroe; L. D. Allison, Brevard; F. L. Carpenter, Stanley; J. B. Watson, Olive; E. L. Tarkinton, Raleigh; M. M. Pendleton, Warrenton; W. F. Phifer, Morganton; A. J. Ashford, Winston; J. N. Philpitt, C. R. Thomas, Thomasville; R. M. Brame, Winston; J. M. Whewless, Spring Hope; L. L. Shoop, Salisbury; W. E. Martin, Hickory; W. E. Bevans, Enfield.

There were 33 applicants, of whom 26 passed and 7 failed. One of the latter was colored.

—The forty-eighth commencement exercises of the University of Wisconsin were held in Armory Hall, Madison, June 20. The degree bachelor of science was conferred upon the following three graduates of the pharmacy course: Irvin W. Brandel, Oshkosh; Frederick G. Ehlert, Milwaukee, and Enos S. Wigdale, Fort Atkinson. The "graduates in pharmacy" were: Fred H. Chamberlain, Charles W. Check, William R. Dawner, Cora E. Eastman, Arthur R. Eberle, August E. Jensen, Alexander G. Krembs, Jr., Alfred E. Kundert, Edmund C. Neumann, Emile J. Proulx, Emile A. Ross, John A. Treber, William L. Treber, William H. Walker, John H. Williams and Thomas G. Windes. Honors were won by Irving W. Brandel, who becomes a university fellow in pharmaceutical chemistry. The August Uhlen Fellowship was awarded to Alfred E. Kundert and Emile A. Ross.

ETIDORHPA. A new edition of Prof. Lloyd's "Etidorhpa, the strange history of a mysterious being and the account of a remarkable journey," has just been issued by Dodd, Mead & Co., of this city. The book has been revised, recast, reset, and carries chapters 57 to 59, excluded from the previous editions. The illustrations, there are many of them, are by J. Augustus Knapp, and those who have read with so much interest Prof. Lloyd's "Stringtown on the Pike" will certainly want "Etidorhpa." As has been announced, the returns from the sales of these two books are being applied to the Lloyd Library. The present building used as a library is now filled and plans are being drawn to erect a new four-story building to be completed in the fall. This library is free to the public and is to be donated intact to education. The price of "Etidorhpa" is \$1.50 and it may be obtained from any book dealer or direct from the publishers, Dodd, Mead & Co.

LATE NEW YORK ITEMS.

—Col. George, Col. Clark and Messrs. Hansen and Fendler, of Schieffelin & Co., enjoyed a fishing trip at Sea Cliff, N. Y., recently. It is said the party made a large haul. Col. George is enthusiastic in describing to his friends a fine striped bass he hooked and which he avers is the first of the season. The Colonel and his fish are said to have somewhat astounded the natives of Sea Cliff.

—C. S. Bondurant, of C. S. Bondurant & Co., wholesale and retail druggists of Valdosta, Ga., has been renewing old acquaintances in the trade here during the last few weeks. W. H. Mashburn, junior member of the same firm, has returned after a visit here. Mr. Mashburn also spent some time at Montreal, Toronto, and the Pan-American Exposition.

—T. G. Bodine, druggist of Danbury, Ct., who has recently experienced financial difficulties, has notified his creditors in this city that he will make settlement at 25c on the dollar.

—William S. Mersereau, of Schieffelin & Co., will leave Wednesday, July 10, for Keene, N. Y., in the Adirondack mountains, where he will spend the month of July.

—William Zinser, dealer in salicylic acid, brewers supplies, etc., at 197 William street, and who was very well known in the down-town drug trade, died Sunday, June 30.

—Charles Fuerst, of London, and William Alfred Jones, of Liverpool, England, were guests at the Drug Trade Club last week.

—The meeting of the Board of Governors of the Drug Trade Club scheduled for July 4, has been postponed to July 11.

—Joseph Frankfurt has opened a new store at One Hundred and Seventeenth street and First avenue.

FREDERICK STEARNS, M. A.

In paying a well-deserved tribute to a man who has done so much for science and the arts, by conferring upon Frederick Stearns, of Detroit, the degree of Master of Arts, the University of Michigan did itself no small honor. In whatever channel his activities were directed, Mr. Stearns has made a record at once honorable and creditable. During his active business career he was not only a far-seeing man of affairs, but was also a tireless investigator in his chosen science, and the literature of pharmacy of his day was so frequently and so greatly enriched by his contributions that he speedily took rank among the foremost pharmacists of the country, and was chosen president of the American Pharmaceutical Association. Later, when his success in the commercial world was such that his business that bears his name could be placed in other competent hands, and thus ceased to require his own immediate attention, he devoted his leisure to science and the fine arts, collecting objects of rare interest from all parts of the world during his extensive travels. Our own Museum of Art bears splendid testimony to this effect in the collection donated by him, embracing many thousands of specimens and representing an enormous outlay of time and money. As a conchologist, Mr. Stearns ranks among the few recognized authorities, and his book, in which Pilsbury, of Philadelphia, was his collaborator, is a standard work of reference.

But the persevering investigator and the man of cultivated tastes and fine discrimination is further shown in Mr. Stearns' collection of musical instruments now in the museum of the university at Ann Arbor, which is probably the finest collection in the country, and certainly the most complete, in his elaborate collections of precious stones and objects of Japanese art, both in the Detroit museum, and in his collection of rare drugs, to be found in the museum of the Stearns laboratory in his city.

The University of Michigan has conferred the degree as stated; but to those whose privilege it has been to know him well, he has for many years been Frederick Stearns, Master of Arts.—(Detroit Free Press.)

A FRENCH PHARMACEUTICAL TRAGEDY.

The terrible drama which thrilled the prosperous city of Nancy, on the France-German frontier, on June 8th, is happily without precedent in the annals of French pharmacy; and is a grim commentary on the oft-disputed question as to whether the official inspection of French drug stores by the Professors of the Schools of Pharmacy is not merely a useless formality.

The Cause of the Crime.

A few weeks ago, the local Committee of Inspection visited the drug store of M. Raymond Four in the rue Raugraff, where Prof. Godpen, who is a member of the committee, took certain samples of cinchona bark.

These were, as usual, analyzed at the School of Pharmacy, and were found to be under the proper strength. M. Four received official notice of the fact, with an intimation that legal action might be taken against him in the matter.

Naturally concerned as to the prejudicial effect that such a prosecution would have on his business, M. Four appears to have resolved to endeavor to avoid proceedings at all costs. On Friday afternoon, June 7th, he called at the School of Pharmacy and asked to see the President of the Inspecting Committee, M. Bleicher, who is at the same time director of the school.

The secretary, M. Lamber de Cilleuls, explained that M. Bleicher was not visible at that hour, but M. Four appears to have learned that he would be received the following day. It also appears to have gathered, during his visit to the school, that the president of the committee was likely to show himself inflexible in the application of the law, and was not a man to show fear or favor. He returned to his pharmacy in an agitated state of mind. His wife did not fail to remark this, and when, on Saturday, he took a cab to drive to the school, she thought it more prudent to accompany him. She had doubtless guessed from his untouched midday meal and general manner that he was not himself, but she was evidently unaware that, just before he called the cab, M. Four had

Bought a Revolver

and a box of cartridges at a gunsmith's in the rue des Dominicains, and had in his pocket this army weapon (No. 12 calibre). On arriving at the school, shortly after 2.30 P. M., M. Four, apparently calmer, was shown into M. Bleicher's study.

The Murder.

The two men were alone, but it is not difficult to "re-constitute" the scene, to use the French expression. M. Four evidently asked M. Bleicher if the proceedings were to be pressed, and on receiving an affirmative reply, drew the revolver from his pocket and fired, across the table, on M. Bleicher. The director received the bullet in his chest and fell stone dead on the spot.

The Suicide.

Before the assistant in the adjoining laboratory (attracted by the sound of the detonation) could reach the study, M. Four turned his weapon on himself and was found inert on the floor in front of his victim, and with a bullet in his left temple; he expired some fifteen minutes afterward. Dr. Zigien and others followed the laboratory assistant, but the tragedy was as irrevocable as it was instantaneous and nothing remained but to invoke the police authorities; who promptly arrived to make their official examination.

Breaking the News.

In the cab outside Madame Four still waited. Impatient at her husband's absence she alighted and inquired. The official, hesitating to tell her the sad truth, hinted that the interview might be a long one, and advised her to return home. On her way she met her husband's chief drug clerk, who informed her of what had happened. A messenger had been sent from the school to the pharmacy simply to announce that "M. Four had been taken ill," but the drug clerk had met a friend on the way who had told him the whole story. Meanwhile Dr. Gross, of the Faculty of Medicine, had as-

sumed the painful task of breaking the news to Madame Bleicher. She was given to understand that a grave accident had befallen her husband, but the arrival of a cab (shortly after 4 P. M.), bearing his lifeless form, left her but a short illusion on the subject.

Another heartrending scene took place at M. Four's pharmacy, which was still open when his corpse arrived, about the same hour. A large crowd had gathered and as soon as the cab had been freed of its funeral burden the shop was closed. M. Four's little boy came home from school in happy ignorance of the fatal occurrence, and a kindly drug clerk sent the youngster to buy candy to prevent him coming too suddenly on such a terrible scene.

The Victim.

It was in November last that M. Marie Gustave Bleicher succeeded to the position of Director of the Nancy School of Pharmacy; his predecessor, M. Schlagdenhaufen, having reached the limit of age for retirement. M. Bleicher was an Alsatian, born at Colmar in 1838, and educated at the Military Sanitary School at Strasbourg. He left the establishment in 1862 (eight years before Alsace passed under the German flag) and entered the French army as a military surgeon. After an active life, he retired in 1884 and was named professor of Natural History at the Nancy Superior School of Pharmacy. He held the degrees of first-class pharmacist, M. D., and Doctor of Sciences; was a chavaller of the Legion of Honor; a member of many local learned societies, and a fervent archeologist. Physically he bore the stamp of his twenty-two years military service, his grey moustache and pointed beard, closely-buttoned frock coat and general manner, all betokened a man who had spent his life in the army. His fervent patriotism, and the unflinching sense of duty which cost him his life, were possibly also developed by his military career. He leaves no children.

M. Raymond Four

was 39 years of age, and had studied at the Paris School of Pharmacy. He had taken over his pharmacy in 1889 from M. Marc; it appeared to be a flourishing business, and he was understood to have recently constructed a special laboratory to assure its still further development.

DETROIT NOTES.

—The Detroit College of Medicine held its commencement exercises for the dental and pharmacy departments June 12. The exercises were in charge of Gen. L. S. Trowbridge, treasurer of the college, and speeches were made by William Livingstone, Drs. T. A. McGraw, H. O. Walker, G. S. Shattuck and J. E. Clark, dean of the department of pharmacy. A list of the graduates in pharmacy follows: O. Arndt, H. A. Burnett, C. C. Chapin, R. J. Colgrove, Ellen Covey, W. H. Frank, D. M. Gleason, O. Lyon, Berthe B. Mann, F. M. McCarrick, R. Rennie, C. G. Spaulding, J. G. Strong, V. J. Tenkonohy, G. H. Treastain, D. L. Watson, A. L. Weekes, H. F. Wolter.

—C. G. Granacher, proprietor of the Merck's Pharmacy, 473 Gratiot avenue, has just left on an extensive tour and incidentally to attend a family reunion which takes place in Germany. He has not been home in fourteen years, during which time his mother and father have both died, leaving six children, no two living in the same country. Mr. Granacher will go by boat direct to India, stopping first at France, then through the Mediterranean, at a place 300 miles inland from Bombay he is to meet his brother and then proceed together to Germany. Among other countries he will tour will be India, Germany, France, Prussia and Italy.

—E. C. Kinsel, 26 Michigan avenue, has spent several thousand dollars in fixing up his store, all new fixtures, increased stock, etc., and is pushing the business harder than ever. He is also in partnership with his brother, William, formerly of Michigan, but now at Seattle.

—Business in the country is good, rather quiet in the city. The weather is warming up and soda fountains doing a rushing business.

MISSOURI PHARMACEUTICAL ASSOCIATION.

St. Louis, June 22.—The twenty-third annual meeting of the Missouri Pharmaceutical Association was held at Pertle Springs June 18 to 21. The first session opened at 10 A. M. Tuesday morning. President Paul L. Hess, of Kansas City, presided. Rev. W. M. Rader, of Pertle Springs, opened the meeting with prayer. Dr. W. C. Coleman, of Warrensburg, made an interesting address of welcome on the part of the citizens of Johnson County, Warrensburg and Pertle Springs. Dr. Otto F. Claus, of St. Louis, and Miss F. de Wyl, of Jefferson City, responded on the part of the association.

President Hess' address pointed out that the cut-rate evil had been greatly relieved in this State during the past year through the efforts of the N. A. R. D. He laid special stress upon the credit due the drug journals of the country for their hearty co-operation. He dwelt upon the present anti-trust law of this State and showed how it handicapped the pharmacists and their organizations. He felt that an entire new pharmacy law should be drawn up and presented to the next Legislature. He felt that the pharmacists should do more sampling the physicians with National Formulary preparations, so as to make them better acquainted with these elegant preparations. He called attention to the good work being done by the local committee in St. Louis for the next meeting of the A. Ph. A., and said that every pharmacist in the State should become a member and attend the meeting in September. The colleges of pharmacy in the State were highly commended for their good work in keeping up and advancing the standard in pharmaceutical education. He urged the pharmacists to exercise even more care in selecting apprentices. He is an advocate of women in pharmacy, and believes that as a rule they are better sellers than the men.

Greetings from various sister State associations were received. The secretary was instructed to wire the greetings of this association to several associations then in session.

Secretary H. M. Whelpley reported what had been done during the past year. Treasurer William Mittelbach announced receipts \$732.58; expenses \$486.68, leaving a balance on hand of \$245.90. There are 330 members of the association in good standing. Twenty-seven members were elected during the meeting.

Prof. Francis Hemm, chairman of the Committee on Papers and Queries, reported the following contributions: "Some Narcotic Plants," by J. F. Llewellyn; "Carbon Molecules," by J. F. Llewellyn; "The Pharmacopoeias of the Three Great Nations and the Lesson They Imply for the Retail Druggist," by Prof. Gustavus Hinrichs; "Pharmaceutical Notes," by Prof. Francis Hemm; "Medicines Prescribed by 108 St. Louis Physicians," by H. M. Whelpley; "Report on the Examination of Four Popular Brands of Powdered Cocoa," by Prof. Francis Hemm; "Compound Extract of Salyx," by A. D. Cheneworth and W. K. Ihardt; "Notes on the United States Pharmacopoeia," by Carl G. Hinrichs. These papers were all read and discussed during the meeting.

Dr. H. M. Pettit reported as a delegate to the meeting of the Illinois association. The report of the Committee on Legislation was read by the secretary. This report reviewed the workings of that committee during the past year, and showed that they did the best they could under the circumstances. They succeeded in getting the law amended so that physicians could not register as pharmacists on their diplomas. They also explained that if they could have had more time and money they could have succeeded in securing the passage of an entire new law. They submitted a copy of what they considered a model pharmacy law, which was very similar to the one adopted by the A. Ph. A.

The president appointed Messrs. Hope, Mittelbach and Calus as a committee on time and place of holding the next meeting. The committee subsequently reported recommending Pertle Springs as the place and the second Tuesday in June as the time. This was adopted.

S. C. Wilson, of Lincoln, Kan., and H. H. Barth, a member of the Nebraska Board of Pharmacy, were present at the meeting, and presented the greetings of their

respective State associations. Mr. Barth spoke very highly of the work done by the colleges of pharmacy of Missouri. He said that graduates of these schools always passed a very creditable examination before their board.

William Mittelbach made some extensive remarks upon the approaching meeting of the A. Ph. A. in St. Louis. He pointed out the necessity for this association falling in line or even taking the lead in helping make this meeting a great success. As the result of his remarks a committee consisting of Messrs. Mittelbach, Hope, Murry and Hess were appointed to co-operate with the St. Louis local committee in securing new members, raising funds, etc.

The report of the Board of Pharmacy, as prepared by the secretary, A. T. Fleischmann, of Sedalia, was read by the secretary of the association. The report showed that 138 applicants for registration had been examined during the past year, and of these 88 had passed. During the few months in which physicians were allowed to register as pharmacists on their medical diplomas 2,242 physicians had been granted certificates upon application. Although the members were aware that a large number of physicians had taken advantage of this defect in the law, they could scarcely realize that the imposition had been so great, and for several minutes after the secretary had finished reading the report everything was as still as death. No one seemed able to express his indignation. Then a very peculiar and also amusing incident occurred. In the beautiful grove around the convention hall room several stately peacocks, and just when everything was so quiet one of these proud, stately birds, perched on a little knoll looking in the window, gave three shrill shrieks of derision, which can be appreciated only by one who has heard the favorite note of this bird. As soon as the uproar was quieted C. E. Corcoran, the old Irish war horse from Kansas City, arose and said: "That expresses my sentiments exactly." Everyone present agreed.

As A. T. Fleischmann's term as a member of the Board of Pharmacy is about to expire, and he specially requested that he not be recommended for reappointment, the association recommended the following to the Governor from whom to appoint Mr. Fleischmann's successor: Charles Getner and F. W. Friedewald, of St. Louis, and Paul L. Hess, of Kansas City.

D. W. B. Tevis, of Lexington, and Dr. F. L. James, of St. Louis, were voted to be placed upon the life membership roll in recognition of their long years of faithful work and membership in the association.

A resolution was passed requesting the medical colleges of the State to teach and drill their students more in the use of the metric system.

The following officers were elected for the ensuing year: President, Dr. Otto F. Claus, St. Louis; first vice-president, R. L. Hope, Centralia; second vice-president, R. L. Currens, Duncton; third vice-president, H. C. Weston, Windsor; treasurer, William Mittelbach, Booneville; recording secretary, Dr. H. M. Whelpley, St. Louis; assistant secretary, St. John Umbright, Liberal; local secretary, J. V. Murry, Warrensburg. Council, H. F. Hassebrock, St. Louis; P. L. Hess, Kansas City; H. M. Pettit, Carrollton; R. S. Vitt, St. Louis; J. F. Llewellyn, Mexico.

President Claus appointed the chairmen of the various committees as follows: Entertainment, L. A. Seltz, St. Louis; Papers and Queries, Francis Hemm, St. Louis; National Formulary, Dr. H. M. Pettit, Carrollton; United States Pharmacopoeia, Dr. J. F. Llewellyn, Mexico; Trade Interests, C. E. Corcoran, Kansas City; Transportation, W. E. Hard, Jr., Sedalia; Drug Adulteration, Ambrose Mueller, Webster Grove; Legislation, Paul L. Hess, Kansas City; Exhibits, R. E. Reilly, St. Louis; Deceased Members, W. D. Powell, Excello.

The entertainment features of the meeting turned out as successfully as had been anticipated. L. A. Seltz and wife, of St. Louis, carried off the prizes for being the most popular pharmacist and pharmacist's wife, respectively. Mrs. Dr. Claus, of St. Louis, caught the largest fish. A Breunert, of Kansas City, told the biggest fish yarn, and it was certainly a corker, while H. M. Whelpley, of St. Louis, received the second prize. C. W. Busch, of Sedalia, received a prize for being the youngest pharmacist in attendance. H. H. Barth, of Nebraska, carried off the honors for coming the farthest to attend the meeting. Besides these there was a long list of prizes, mostly

in contests requiring physical exertion, while a few were for people called "lucky."

The Missouri Pharmaceutical Travelers' Association held their annual meeting as usual in conjunction with the M. P. A. They are a jolly set of fellows, and come down to spend a week with their friends and customers, but no shop talk goes. They take a very prominent part in the entertainment features, and look after a little business of their own, which consists principally in electing officers. Their line-up for the ensuing year is as follows: President, W. C. Johnson, St. Louis; first vice-president, Dr. J. B. Woods, Kansas City; second vice-president, F. V. Perry, Philadelphia; third vice-president, E. E. Kook, St. Louis; secretary, Ed G. Orear, St. Louis; treasurer, H. J. Stolle, St. Louis.

They decided to hold their meeting with the retailers again next year.

MINNESOTA PHARMACEUTICAL ASSOCIATION.

St. Paul, Minn., June 21.—The Minnesota State Pharmaceutical Association held its seventeenth annual meeting at Hotel St. Louis, Lake Minnetonka, on Tuesday, Wednesday and Thursday of this week, and it proved one of the most enjoyable as well as profitable conventions the association ever held. Nearly 300 druggists and their families attended, every nook and cranny of the State being represented. President B. O. Kysyth, of Sherburn, presided, and on Tuesday, the opening day, gave his annual address, Miss E. Williams, second vice-president, occupying the chair meanwhile.

A discussion arose over the printing of a full report of the proceedings of the meeting of the executive committee. An amendment was proposed to the effect "that the secretary or those in charge of the proceedings be at liberty to cut out such proceedings as they deem unnecessary to be printed." The amendment was voted down and a motion to have the proceedings at the annual meeting, M. A. R. D., "printed in full" was adopted.

The report of the treasurer, H. W. Rietzke, St. Paul, was read, revealing satisfactory conditions. It was referred to the newly appointed auditing committee, Messrs. Rauch, Minneapolis; Trautman, Wabasha, and Shasgreen, Duluth.

Charles H. Huhn, one of the delegates to the national association meeting at Detroit, reported on that meeting and F. J. Walling, dean of the College of Pharmacy, State University, a delegate to the South Dakota association, gave an interesting report on it.

C. A. Robinson, president of the Travelers' Auxiliary, which was meeting simultaneously at the same place, reported on that organization.

A committee, consisting of Messrs. Heller, of St. Paul, Lynch, of Monticello, and Walling of St. Paul, was appointed to prepare resolutions on the Procter memorial.

A committee of five was appointed for the purpose of selecting and proposing names to the Governor for vacancies on the State Board of Pharmacy next year. Messrs. Gamble, Minneapolis; Rietzke, St. Paul; Nielson, Ortonville; Sheldrup, Minneapolis, and Lawm, Mankato, composed the committee.

The constitution was so amended as to make the annual dues \$3 instead of \$2.

Dr. Edward Shumpik, in recognition of his work and interest in the order, was made an active life member.

A delightful clench party was given in the evening in the hotel parlors by the Commercial Travelers' auxiliary in honor of the visiting druggists. Twenty-two tables were played. Prizes were won as follows: Ladies' first prize, Mrs. Ed. Shumpik, elegant cut glass dish; second prize, Mrs. J. D. Smeltzer, cut glass dish; consolation prize, Mrs. Charles E. Rice, silk umbrella; the men's first prize was won by L. W. Douglass, dress suit case; second prize, E. Dashley, cane; consolation prize, J. J. Blisborrow, silk umbrella.

The principal address of Wednesday morning was made by Thomas V. Wooten, of Chicago, secretary of the N. A. R. D. He spoke of the work of that organization and pointed out many of the practical benefits derived. A. W. Eckstein, of New Um, had a good paper on "Trade In-

terests," and J. H. Marshall, president of the Minneapolis city association, urged retail pharmacists to manufacture remedies and preparations to a greater extent than they are now doing. Charles T. Heller, of St. Paul, treasurer of the N. A. R. D., presented a report from the committee on national legislation. Winthrop Noyes, of Noyes Bros. & Cutler, St. Paul, extended the greetings of the jobbers to the association and discussed general topics in a pointed and entertaining way and jollied the members very happily.

Thirty-two applications for membership were received. In the afternoon the visitors were taken for an excursion on the steamer Puritan, stopping at the Lafayette Club, where they were entertained by J. C. Eliel, of the Lyman-Eliel Drug Co., Minneapolis. At night at the hotel a ball was given by the Commercial Travelers' Auxiliary.

Another business session was held Wednesday evening. The names of five druggists were selected for presentation to the governor with the recommendation that the appointment to the vacancy on the State Board of Pharmacy, which occurs the coming summer, be made from the list. The names selected were Dr. J. W. Harrah, Minneapolis; John Wilson, Ortonville; Charles Weschke, Springfield; B. O. Kyseth, Sherburn, and W. G. Alwin, New Ulm.

The doors of the dining room, which had been converted into a ballroom, were opened at 9 o'clock and from that time until midnight the room was thronged with many dancers. Fully 500 were present during the evening.

Thursday morning officers were elected, viz.: President, Stewart Gamble, Minneapolis; first vice-president, Charles Weschke, Springfield; second vice-president, Miss Anna C. Umland, St. Paul; third vice-president, Dr. M. D. Fallman, Mankato; secretary, E. B. Wilson, Minneapolis, re-elected; treasurer, H. W. Reitzke, St. Paul; executive committee, John P. Danck, Minneapolis; A. T. Hall, St. Paul, and J. H. Marshall, Minneapolis.

The Commercial Travelers' Auxiliary elected F. H. Heinert, Minneapolis, president; E. T. Jones, Minneapolis, first vice-president; F. E. Noble, St. Paul, second vice-president; John Bork, St. Paul, third vice-president; R. T. Vincott, Minneapolis, secretary and treasurer; J. D. Smeltzer, C. B. McColl, E. V. Clark, A. P. Place and O. O. Souber, all of Minneapolis, executive committee.

It was voted to meet again next year at some point on the lake.

H. G. Webster of Minneapolis, reported for the State Board of Pharmacy and read a paper which urged loyalty to the pharmacy laws and the State Boards. Charles T. Heller, of St. Paul, had an interesting paper on the "Sale of Spunges."

The Minneapolis Pharmaceutical Manufacturing Company, the stock of which is held by members of the State Pharmaceutical Association, had an exhibit during the meeting in charge of C. F. Rohde, of Spring Valley.

The joint meetings and the business of the convention came to an end with the close of the forenoon's business session, and the afternoon was devoted to sports.

An unprecedented feature was given place in the program of sports and contests—an oratorical competition. The baseball game between the retailers and traveling men resulted in favor of the retail men by a score of 9 to 11. A tug of war was pulled off between the city and country dealers, the latter scoring a victory.

The contests were exciting and there was a lively competition for the many handsome prizes.

THE OKLAHOMA PHARMACY REGULATIONS.

In the National Druggist for June, page 185, occurred the following:

"Requisites for Registration in the Wichita Reservation" (A. M. C., Maysville, Ark.) We do not think that anything more is required than to be able to "get there" in time to secure a townsite, or at least a corner lot. In fact, we don't very well see how there can be any registration. The country to be thrown open will have to make its own regulations on this subject."

This article is, of course, unintentionally misleading, and should be generally corrected.

The Wichita and Kiowa and Comanche reservations, as soon as opened, will become a part of Oklahoma and subject to all Oklahoma laws. Hence a druggist in order to get into business in any of these reservations will have to

be registered in Oklahoma.

The pharmacy laws of Oklahoma require four years of practical experience and an examination in pharmacy, materia medica, chemistry and pharmacognosy. The applicant is required to have a good common school education and must pass a general average of 75 per cent. in order to register.

Registration is not granted upon diplomas nor certificates from other States. The next board meeting will be held at Oklahoma City on the 9th of July, and parties expecting to go into the new country should qualify at that meeting. Blank applications will be supplied by the secretary.

In regard to the reservations to be opened there will be probably four counties formed, which will possibly make room for say eighty drug stores at the outside. Judging from the inquiries we have had and the number of druggists from all sections of the country who have expressed a determination to locate in this country, at least three or four times that many will be on the ground from outside of the Territory; besides, Oklahoma has now within her borders enough pushing, energetic, get-there-Eli druggists to occupy the field.

However, the "more the merrier," and Oklahoma will greet heartily every man who comes with a determination to make his home in her fertile borders, regardless of what his business may be so long as it is legitimate and honorable. We would say, however, as a word of advice to those who are doing well where they are, that it would be wise to weigh carefully and consider well the advisability of making a change for an uncertainty where there is so much element of chance as there is sure to be in the securing of a good business in the opening of these reservations.

The opening will be, in all probability, in July, one of the hottest months of the year, and every one who goes into the country must go prepared to live, at least for a time, practically an out-door life.

A complete camping outfit is quite essential. Provisions will be plentiful, but it is well to be prepared with a few days' rations suitable for a warm climate. As a recreation for those who want to see a rush for homes it will be a sight well worth going a long distance to see.

Guthrie has direct railroad connections with the new country, and only a few hours' ride by way of the Rock Island Railroad and those who desire to come a short time before the opening will find pleasant and comfortable places to stop and at much less expense in the capital city than in the towns on the border, which are already overcrowded.

Parties desiring information in regard to the country or the pharmacy laws of the Territory can secure same by addressing the undersigned, enclosing stamp for reply. F. B. Lillie, Secretary Board of Pharmacy, Guthrie, O. T.

PARKE, DAVIS & CO.'S EMPLOYEES' 11TH ANNUAL EXCURSION.

The fifteen hundred or more employes of Parke, Davis & Co., Detroit, will hereafter hold June 14, 1901, as a red letter day in their calendar, for on that day was held their annual outing and excursion which, in attendance and enjoyment, eclipsed all previous holidays in the firm's history. The trip was made to Tashmo Park, a famous resort on St. Clair river, in the new steel steamer "Tashmo," having a carrying capacity of 4,000. Nearly three thousand people joined in the day's festivities, the steamer breaking the record of carrying the largest free excursion ever afforded in any one business enterprise in any city of the Great Lakes. At the park a full program of athletic events was carried out under the supervision of Jas. W. Tonge and Robert L. Thompson. Prizes in gold were donated by W. M. Warren, manager of the firm, D. C. Whitney, T. D. Buhl, H. A. Wetzel and various other officers, members and employes of the corporation. The program, among other events, included a tug of war between teams from the Detroit and Walkerville laboratories, the team from Detroit winning the prize. On the return trip the successful contestants in all of the games were presented prizes by Prof. F. G. Ryan, fifty-three in all being awarded.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued June 18, 1901.

- 676,514.—Walther Rathenau, Berlin, Germany. Making carbide of calcium simultaneously with silicide of iron.
- 676,548.—Julius A. Reich, Vienna, Austria-Hungary. Fluorin compound and making same.
- 676,577.—Alfred H. Cowles, assignor to Electric Smelting & Aluminum Co., Cleveland, Ohio. Electric smelting process of reducing sodium compounds.
- 676,647.—Alexander N. Dubois, Philadelphia, Pa. Apparatus for oxidizing.
- 676,713.—Joseph E. Cross, Brattleboro, Vt. Therapeutical vaporizer.
- 676,814.—Leon Feval, assignor to E. D. Taylor Company, New Brunswick, N. J. Formaldehyde fumigator.

Issued June 25, 1901.

- 676,850.—Fritz Ach, Mannheim, assignor to C. F. Boehringer & Soehne, Mannheim-Waldhof, Germany. Amido-tartronic acid and making same.
- 676,860.—Fritz Ach, Mannheim, assignor to C. F. Boehringer & Soehne, Mannheim-Waldhof, Germany. Paraamidopheryl-glyoxylic acid and making same.
- 676,861.—Lorenz Ach, Mannheim, assignor to C. F. Boehringer & Soehne, Mannheim-Waldhof, Germany. Preparing alkylized purins.
- 676,862.—Lorenz Ach, Mannheim, assignor to C. F. Boehringer & Soehne, Mannheim-Waldhof, Germany. Aromatic amido-aldehyde and making same.
- 676,863.—Lorenz Ach, Mannheim, assignor to C. F. Boehringer & Soehne, Mannheim-Waldhof, Germany. Alloxan-phenol and making same.
- 676,864.—Lorenz Ach, Mannheim, assignor to C. F. Boehringer & Soehne, Mannheim-Waldhof, Germany. Oxytartronic acid and making same.
- 676,915.—Abraham L. Ridge, Catlin, Ill. Toilet article.
- 676,920.—Charles C. Schreiber, Cincinnati, Ohio. Bottle-cleaning machine.
- 676,966.—Alciron V. Russel, San Francisco, Cal. Preserving milk or cream.
- 677,061.—Hartland and H. E. Law, San Francisco, Cal. Vaginal syringe.
- 677,062.—Wilbur W. Marsh and C. H. Hackett, Waterloo, Iowa. Centrifugal liquid-separator.
- 677,208.—Charles M. Hall, Niagara Falls, N. Y. Purified crystalline alumina.

TRADE MARKS.

Registered June 25, 1901.

- 36,604.—Lanolin or Wool-fat and certain named Lanolin

- Preparations, Mixtures and Compounds, Norddeutsche Wollkammerl & Kammgarnspinnerei, Bremen-Deilmuether, Germany. The representation of a star.
- 36,605.—Acids and Other Liquid Chemicals and Gases. N. P. Pratt Laboratory, Atlanta, Ga. The representation of a band or stripe centrally and transversely located upon the body portion of a receptacle or vessel and of a different shade or color from the body portion.
- 36,606.—Remedy for Certain Named Diseases. Joshua L. Smith & Son, Marshall, Tex. The word "Cougerel" and a picture of Joshua L. Smith, one of the registrants.
- 36,607.—Remedy for Certain Named Diseases. Harry Oscar Winter, Philadelphia, Pa. The representation of a sheaf of grain located in the letter "G."
- 36,608.—Corn Cure. Walter K. Pesk, New York, N. Y. The word "Waukeazy."

Registered June 25, 1901.

- 36,624.—Nerve Tonic. The Drexel Drug Co., Chicago, Ill. The word "Mosko."
- 36,633.—Tonics. Wintersmith Medicine Co., Louisville, Ky. A seal surmounted by a triangular ornamental figure printed in gilt on a brown background.
- 36,636.—Tonic. The E. E. Sutherland Medicine Co., Paducah, Ky. A representation of three pedestrians in the act of walking.
- 36,637.—Curative-Medicated Tablet. Arthur Remedy Co., Chicago, Ill. The terms "Campho" and "Quino."
- 36,638.—Medicinal Remedies. B. S. McKean & Co., New York, N. Y. The word "Stramolin" and the representation of the migratory bird known as a "swallow."
- 36,639.—Certain Named Medicines. Abram D. Loar, Bloomington, Ill. A portrait of Dr. J. Loar.
- 36,640.—Rheumatic Cure. The Muntzel Drug Co., Versailles, Mo. The word "Romo."
- 36,646.—Moth-Destroyers. Boyajian Bros., New York, N. Y. The word "Twins."

LABELS.

Registered June 18, 1901.

- 8,467.—Title: "Suomen." (For a Medicine.) August Edwards, Ashland, Ohio. Filed May 27, 1901.
- 8,468.—Title: "Catarrhol." (For a Medicine.) Moritz Lowenthal, Cleveland, Ohio. Filed May 8, 1901.
- 8,468.—Title: "The Great Foot Elixir." (For a Medicine.) The Foot Elixir Co., Rock Island, Ill. Filed May 8, 1901.
- 8,470.—Title: "The Great Foot Elixir." (For a Medicine.) The Foot Elixir Co., Rock Island, Ill. Filed May 23, 1901.

—The Ohio Board of Pharmacy examined 230 applicants for registration at the meeting held in Columbus May 14 and 15. The following passed satisfactory examinations as pharmacists: DeLacy Clark, Cleveland; Dewey F. Howe, Willoughby; W. H. Tope, Bowerston; George F. Gams, Montpelier; Fred M. Hodson, Pioneer; J. T. Campbell, Dayton; East Hostetter, Ansonia; John Eppes Wells, Mashoppen, Pa.; William J. McGarrity, Youngstown; F. H. Whitaker, Camden; Paul J. Roll, Carey; J. S. M. Fitzgerald, Portsmouth; Earl M. Crum, Liberty Center; Michael Salzer, Cleveland; Charles E. Green, Jr., Palmsville; T. H. Callamore, West Union; Herman R. Wild, Parkersburg; W. Va., Delos Hull, McComb; W. N. Johnson, Springfield; Obed L. Green, Marietta; Edward M. Wimmer, Coshocton; H. A. Mohler, Middlepoint; W. C. Bair, Martins Ferry; Mary B. Koons, McConnellsville; Roy C. Eaton, Ada; F. A. Rostofer, Columbus; Fred A. Priche, Cleveland; Alfred L. Silverman, Cincinnati; Walter H. Ayres, Geneva; Walter E. Hoover, Ashville; Orville S. Bashart, Zanesville; Karl William Smith, Oxford; Andrew E. Walleck, Cleveland; C. H. Lefferson, Middletown; Harry J. Haudenschild, Columbus; Sam B. Bachrach, Plymouth; Samuel A. Klein, Cleveland; Earl J. Mansfield, Ada; Clyde R. Cassidy, Alliance; W. B. Collins, Akron; Felix M. Smith, Wapakoneta; John C. Mandabach, Columbus; C. B. Inman, Rising Sun; Sister M. Mechtildis, Cleveland; Everett Robinson, Cleveland; Roland H. French, Salem; C. W. Arthur, Massillon; C. H. Young, North Lawrence; Herman H. Schulze, Cincinnati; William Merton Jackson, Cincinnati; W. E. Cleave, Akron; Homer H. Thoral, Xenia; J. W. Whitehouse, Newport, Ky.; C. O. Hoffman, Arcanum; Frank H. Moyer, Williamsburg; Arthur D. Tritch, Cleveland; Harvey W. LaChat, Apple Creek; Harry F. Rigby, Cleveland; A. H. Wohlgenuth, Cleveland; Robert (Gib) Henderson, Steubenville; Ralph B. Nicholson, Ryesville; William P. Myers, Hamilton; Norman Emerich, Hamilton; Charles C. Schambe, Dennison.

Assistant pharmacists: Louis F. Frederick, Bridgeport; Charles E. Fiscus, Dalton; Fred E. Wirscheimer, Cleveland; John C. Wolfe, Zanesville; J. Renick Brown, Mansfield; Delmer K. Clippinger, Springfield; Harry H. Evans, Cleveland; A. P. Gegenheimer, Vermillion; J. H. McElroy, Wellsville; Carl Winter, Cleveland; Charles F. Mascher, East Palestine; Frederick W. Boldt, Cleveland; Charles Hasse, Cleveland; Alex. Steiner, Cleveland; Edward N. Webb, Rome P. O.; R. E. Lodge, New Waterford; Jacob Buckstein, Cleveland; Robert C. Freeman, Columbus; S. R. Crosse, Blanchester; Harry B. Pope, East Liverpool; Sister M. Marcelline, Cleveland; Charles H. Beagle, Marietta; S. M. Bachr, Cleveland; S. S. Faulkner, Troy; D. P. Argo, Cincinnati; J. T. Hess, Cincinnati; J. A. Kling, Cincinnati; M. D. Wilson, Bowling Green; Ray Rover, Columbus.

At this meeting F. H. King, of Delphos, was chosen president of the board and W. R. Ogier, Columbus, secretary and treasurer. Charles Tobey, of Troy, recently appointed to membership, was present. The next examination will be held October 9 and 10. W. R. Ogier, secretary.

—At the last meeting of the Maine Board of Pharmacy held in Augusta on June 12, 20 candidates presented themselves for examination of whom the following were granted certificates as registered apothecaries: E. B. Leighton, Hallowell; G. A. Whitaker, Portland; A. E. Colcord, Portland; George P. Larrabee, Pride's Corner; J. H. Brooks, Lewiston; J. F. Sanford, Lewiston. Certificates as qualified assistants were granted to A. H. Mansir, Richmond; E. E. Doughty, Brunswick; E. J. Warren, Waterville; E. E. Hutchins, Augusta. D. W. Heseltine, secretary.

—The annual meeting of the Oregon State Board of Pharmacy was held in Portland June 5. Twenty-six candidates for registration were examined. The members of the board are: George C. Blakely, The Dalles, president; John M. A. Laue, Portland, treasurer; L. W. Moody, Portland, secretary; A. Yerington, Eugene; C. G. Huntley, Oregon City. The board will hold its next quarterly meeting in Portland Sept. 10. L. W. Moody, secretary, Portland.

EARLY CLOSING.

If the early closing idea is ever to be put into successful operation it will be accomplished through the force of public sentiment rather than by action of law. Much has been done in the past few years in the way of educating the people, and wherever the experiment of early closing of drug stores is now tried it seems to go very easily, with little or no protest from the public. People have been led to think upon the subject, and they realize that there is no necessity for the drug store, any more than any other place of business, to be kept open an unreasonable number of hours and on the Sabbath.

We cannot begin to enumerate the towns and cities in which the experiment has been tried, or is being tried. Notice thereof comes by almost every mail. The latest section of country where the matter is being most vigorously discussed is California. The drug clerks of that State, especially in the large cities, San Francisco leading, have, through their organizations, been very successful in promoting the movement for early closing, and unless all signs fail they will soon be in a position to congratulate themselves upon complete success. In the city of San Jose, we believe, the proprietors and clerks have recently held a joint meeting, with a view to adopting measures for carrying the early closing plan into effect with the least detriment to the interests of all and any. It is to be an experiment at first, which, if it proves successful, will be made a custom.

In other sections, in Michigan and Massachusetts, similar progress is related, and we are optimistic

enough to entertain the belief that before very many years, or even months, pass, the drug stores will be quite generally closed at a reasonable time in the evening, and opened only on Sundays for purposes of necessity or benevolence.

The only unfortunate feature of the whole agitation, however, seems to us the alliance of the clerks in some sections with the labor unions to effect their aims. The drug business has nothing in common with the principles and methods which govern the trades unions, and it does not seem either dignified or wise on the part of drug clerks to affiliate themselves with the labor organizations. Labor unions govern trades and occupations where a certain definite amount of labor can be crowded into a definite number of hours, and where it is comparatively easy to fix these definite limitations. But the drug business is largely one which must provide for a variety of emergencies, and where no hard and fast rule governing the hours of labor can be formulated. Trades unions' methods applied to the conduct of the retail drug business can effect no good. The desired result can be obtained better, more satisfactorily, through the discussion of the interests of both the clerks and the proprietors in a union meeting, or through the proper compromise methods.

In England, where the laws are very different from ours, and where there exist some peculiar methods of bringing about so-called reforms, this early closing problem is attacked in a different manner. For instance, there is up before Parliament an early-closing bill which, should it pass into law, will enable two-thirds of any class of tradesmen in a district to compel the whole of that class in the same district to close their shops at a given hour, not earlier than 7 p. m. for most nights in the week. This bill is being considered by a select committee of the House of Lords, which has been listening to testimony favoring and against the measure. A spokesman for the chemists and druggists gave evidence before the committee that out of fifty-eight chemists' associations in various localities, fifty-two had passed resolutions in favor of the bill, and only three were against it. Under the provisions of the bill, while the chemists are included, they will be allowed to sell medicines and medicinal appliances after closing time. A great deal of interest is being displayed in this proposition.

TO KEEP TRADE AT HOME.

In every city or town within easy reaching distance of a much larger and more important city, the local tradesmen are at their wits' end to keep their local trade from being diverted to the larger city, of course

to their pecuniary disadvantage. There is an interesting case of this description right here in Jersey City, N. J., which is across the Hudson River from Greater New York. Jersey City is by no means a small place, and were it not for the fact that it is in another State it would long ere this have been incorporated as one of the boroughs of Greater New York. The tradesmen in Jersey City suffer, as indicated above, from a tendency on the part of the residents of that burg to do their shopping in the metropolis. Recently about one hundred of the representative business men of the place formed themselves into an unofficial joint committee for the purpose of devising ways and means for holding Jerseyites, with money to spend, on their own side of the river, thereby securing some, if not all, of the trade which now finds its way to New York City.

The druggists, however, seem to have been totally disregarded in this movement, and some of them are quite indignant thereat. In the circulars sent out by this committee of one hundred, the drug trade was not even mentioned, and the druggists are asking why they were not accorded invitations to the deliberations upon ways and means, and why it is not as desirable for them to hold their trade as it is for the grocer, the dry goods man, the lawyer, and the banker. The committee sent out broadcast a circular describing its project, but at the meeting held to discuss the matter not one druggist was present.

One of the indignant, snubbed druggists says: "The formation of the proposed board of trade is just what we want, for if it meets any success at all it will do a lot of work which we need done on the N. A. R. D. movement. But I cannot understand why we were overlooked; but then Jersey druggists seems to be getting the hot end of the stick lately. We could help that board of trade a lot if given a chance, but now we will not do it unless they ask us."

We relate this little incident simply for the lack of other real hot news in this hot weather.

THE LEGALITY OF AGREEMENT TO MAINTAIN PRICES.

Readers of trade papers are very familiar with the litigation in this country brought by owners of proprietary articles to maintain the selling prices of their products after the goods have left the makers' hands. A notorious cutters' supply house, of Cincinnati, which for years has been trying to collect heavy damages from the National Wholesale Druggists Association for this body's attempt to prevent it from procuring supplies for its illegitimate practices, is in possession of a large lot of information to the effect that agreements to maintain prices can be legally upheld. It has gained this experience through its costly litigations, for the courts have uniformly decided that these agreements are perfectly legal, and can be enforced. The originator of the now widely-discussed Worcester Plan has proven in two or three instances, and is continuing to prove, that such arrangements can be enforced. In fact, there are many decisions in trades other than the drug trade which have been rendered in the courts of law in this country upholding the same principles. This is but common justice and common sense.

In England, also, the same matter has engaged the attention of the law. Recently a well known proprietary firm of that country, who put up one of the best known of British preparations, have been selling on an agreement with each purchaser that he will not sell below a fixed price. A couple of months ago the firm brought action against a dealer who had violated this agreement. It was argued for the defense that the agreement was illegal, as being in restraint of trade, but the Justice upheld the plaintiff's contention, and, while not granting an injunction, he did give damages and costs against the defendant. Other cases of importance in England of the same general nature have been decided in the same way. The decision is of great importance to the drug trade, inasmuch as it proves that anti-cutting contracts can be enforced by law.

SODA FOUNTAINS IN ENGLAND.

It takes time for the Englishman to recognize and appreciate a good thing, especially the good thing of American origin. The English chemist and druggist is only just now directing his massive intellect to the discussion and solution of the fluid extract question. This class of preparations came to the front in America at least a score of years ago, and it was expected that the Englishmen would recognize their points of superiority long before they did. They are slow, but sure. Eventually they will adopt all of the elegant pharmaceuticals which are so familiar to us here. It has been predicted for many years that the time would come when the Englishman would become a convert to cold drinks, ice water, and especially soda water. What he has always called "soda water" is, to be sure, genuine soda water, but it is a villainous concoction, medicinal in its nature, an aperient or laxative, being a solution of real soda in real water and carbonated. The American soda water, as we all know, is misnamed, but it will never get rid of the name which has been bestowed upon it.

There are now signs that English chemists are at length turning their attention to the soda fountain as a source of profit. Two or three fountains were in action in London last summer, and did fairly well, and in several cases their possessors are now replacing the smaller by larger apparatus. This year quite a number of pharmacies are being fitted with fountains. One retail concern, which operates nearly thirty shops in and about London, has placed soda water apparatus in several of its stores, and should the experiment prove successful it will no doubt extend it to all its establishments. A few years yet and we shall hear the sizz of the fountain in all the prominent stores of England, and perhaps we shall be favored with a lot of mongrel poetry with the fountain as a subject; poetry similar in make-up and character to that which heavily burdens the drug trade journals of old Albion on every possible subject. We hope they will make their soda water more refreshing than their soda poetry.

BUSINESS PHARMACY.

The Experience of Druggists with Profit-Bringing Methods. Hints and Suggestions. Original Papers from Practical Business Druggists. The Various Phases of Drug-Store Management and Economy.

TACT.

By J. M. M., Memphis, Tenn.

Talent is something—tact is everything. Should you ask the average pharmacist (successful pharmacist, I mean) to what particular thing he owed his success, you will have propounded a question that will, in nine cases out of ten, "stump" him. He knows intuitively that he has qualities that help him to win; something in his make-up that demands respect and confidence. He knows that he has learned to depend on and believe in himself. To say that any one quality would make a man successful seems going beyond reason. But such I believe is the case, other things taken into consideration, of course. I have seen a man embark in the drug business with apparently every prospect of success. He has made a good start, and, for a year or two, perhaps, he does fairly well. He then begins to go down hill until he finally fails. It seems strange to many that he did not succeed. But, if the truth were known, his failure would be found in one little sentence: "He had no tact."

Tact is the greatest gift that ever fell to the lot of man, the druggist in particular. It comes to some at birth; every one has some. Many recognize this possession, and cultivate it. Some never do either. In no profession has a man to contend with so many disagreeable features as in that of pharmacy. The pharmacist must needs be a man of patience. If he does not inherit this quality, he must cultivate it. If he be a tactician, this advice is unnecessary. Many a high-tempered pharmacist has made concessions to an irate customer, who was in the wrong, when he has had to bite his lip to keep back the angry words that struggled for escape—has smiled when his blood is boiling. And the result is usually this: He has kept his temper, pacified the customer and retained his patronage, whereas, if he had given vent to his feelings, the customer would in all probability have never entered that store again.

It costs so little to smile whether you feel like it or not. It costs nothing to be polite, and by being so you make friends and customers, and hold them, too.

I remember once presenting a bill to a customer in the store. The amount was not large, but the bill had been running for some time. It was an unconventional thing to do, but the man was out of town a great deal, and I could not get at him, so such a course was necessary. To my surprise he flew into a towering rage, and expressed his opinion of me in no uncertain terms. He told me things about myself that I had never dreamed of. I bore the brunt of his displeasure, and calmly waited for him to finish, which he did after his storm was exhausted. I was boiling myself, but took pains not to let him see it. When he had finished giving me a piece of his mind regarding my seeming rudeness, I calmly but firmly told him why I had dunned him in the store. My earnestness must have been of the convincing kind, notwithstanding that my attitude was in no wise apologetic, because he immediately melted and his apologies were profuse, and he wound up by saying: "I felt like using you for a mop a moment ago, but your gentle bearing and good nature conquered me."

Could he have paid me a higher compliment? I think not. The druggist who says, as if he meant it,

"certainly," when asked for the use of the 'phone; who accompanies the sale of stamps with a smile; who says "good morning" and "good night" to his clerks; who does not have a fit when a clerk breaks a bottle; who cheerfully refunds money for patent medicines that the customer has decided not to take; who manages to shield the doctor when he makes a mistake in a prescription; who makes each customer feel that he or she is the one, without letting the policy crop out, and who does dozens of things that are hard to do, is the successful man. Because he has and knows how to use that valuable quality, "tact."

A man of tact is one who sees everything, and lets little that he can use escape him. Tact is the most valuable thing a druggist can possess; except his good name. It sounds extravagant and theoretical, but think about it and practise it, and you will think as I do—that it is powerfully practical.

THE DRUG CLERK.

By JOHN R. KELLY, Concord, N. H.

The popular drug clerk, and how to attain and afterward retain that popularity, are subjects both intricate and inexhaustible. We might treat the drug clerk in an idealistic form, but by that means we would never arrive at conclusions which would be beneficial or practical. We must treat him as he is and as we find him.

The drug clerk occupies a peculiar position indeed in the life of to-day. He stands out clear as a type by himself. He is of the masses, in touch with the masses, and yet they acknowledge his position as particularly distinct from theirs. All classes demand of him equal attention and recognition, and in order that courtesy may be equally extended to all, without apparently infringing upon the supposed rights of others, calls for a great amount of delicacy and cultured diplomacy. This, at first sight, may appear comparatively easy, but "experientia docet," and only an actual test under adverse circumstances will bring one to fully realize the truth of the above maxim. He is truly the servitor of the public, and is supposed to be ever ready to cater to their whims. But while they demand of him this subservience they unreservedly acknowledge him as their superior, and trust implicitly to his supposed ability.

Now, this appears at first sight a little paradoxical, but on close analytical examination it will be found to bear the closest scrutiny and investigation. You all understand how close the drug clerk stands to the people. No other class of men (not even doctors), have the opportunity of the drug clerk to study the characteristics of the people, and his popularity, to a great extent, depends on the use he makes of this available knowledge. The drug clerk being in such close touch with his customers, understands their peculiarities, and is best able to foster and cater to their needs as he finds them. Each customer has his own individual tastes, hobbies and weaknesses. The clerk must indeed cater to the first and enjoy, to all outward appearances, the exploitation of the second, but the third must be handled tactfully and studiously, or rather pharmaceutically furthered. Whether weaknesses are real or imaginary in man, woman or child,

all have their troubles.

It is well understood that nothing else pertaining to humanity are so carefully considered and tended as these little ailments and frailties of the human body. The clerk must understand these and sympathize with the sufferer, and also remember that he may be solicitous and inquire concerning each separate case's progress. This will be appreciated by your customers, as it will show that you are interested in them and their trials. All the troubles of the residents in his vicinity come under the attention of the drug clerk, and he is asked to supply preparations and remedies for them all, and of course on the efficacy and virtue of these preparations hangs, to a great extent, the trade of the family which he is treating.

Then there is another side which does not bear directly on the drug trade, but nevertheless demands great ingenuity on the clerk's part, that is in relation to the tales and gossips which come every day to his ear. The clerk must, indeed, appear to listen attentively and not seem bored, but it is a part of good policy not to divulge anything to others which might in any way be detrimental to them, or lead them to think that they had been the subject of another's vituperation or spleen. This may not seem difficult, but when one is placed in such a position it requires consummate skill and tact to avoid the pitfalls. The drug clerk is often the storehouse of all the news of the neighborhood, which he must guard zealously, and not let out anything that would probably produce contention among his customers, for in the end he would probably lose one or both.

The children who come to the store are usually taken care of by the clerk. They should also be treated with due courtesy and not growled at, as they can often induce their parents to let them go elsewhere, and thereby a great deal of trade is lost.

The clerk should at all times earnestly endeavor to be on the best of terms with his employer. By this I do not mean undue familiarity or a sycophantic subservience, but a manly and wholesome interest, not only in his business, but also in his pleasures, if the clerk is so situated as to meet him on these grounds.

No doubt the employer will at times appear overbearing and too exacting toward his clerks, especially during the rush hours, when everybody is more or less in haste. Then, truly, the clerk must call on his patience and try to preserve as far as possible, both to those before the counter and also those behind it an appearance of serenity, and to receive with as good graces as possible the reprimand or admonitions, whether deserved or not for the time being, that the head of the establishment may deem proper to administer. If the reprimand was really undeserved or given in a moment of excitement, the clerk should seek out the proprietor when he is alone, and in a quiet way explicitly state the case, and if he be a man with the right sense of justice you will receive ample satisfaction.

Thus it is seen that the clerk is, as it were, between two fires: i. e., there are those behind the counter as well as before it whom he must treat with respect and caution.

All this must not be taken in a pessimistic sense, but there can be no doubt that the life of the drug clerk does at times appear to contain more bitter than sweet. Of course this can be modified to a great extent, and depends considerably on the character, tact, diplomacy and ingenuity of the clerk himself.

HOW TO MAKE THE DRUG STORE PAY.

By P. J. DE PREE, Grand Rapids, Mich.

Perhaps a few suggestions on things a clerk may do toward increasing the business and profits of a drug store may be of interest to Era readers. They are on matters which seem essential in looking back upon several years of experience as bottle-washer, errand boy, soda dispenser and general clerk. A word to the boy who is looking forward to the time when he may begin to make a drug store pay. Begin

now. Avoid breaking bottles, by draining them in boxes instead of on a shelf or in the sink, where they are almost certain to be knocked over and some of them broken. Have a box of sawdust handy for cleaning oily graduates and mortars. It is fully as good as alcohol, and it may be well to bear in mind that one ounce of alcohol a day means several dollars a year. When running errands don't loaf. Deliver goods promptly. Customers appreciate quick deliveries, and so will your employer.

The soda season will soon be at its height. The fountain man should remember that the two things which are very essential to success are system and cleanliness. Clean and polish every bit of metal and glass about the fountain every morning without fail. If you neglect part of it some morning when it doesn't make any difference, you'll do it again when it does. Clean your copper with a mixture of oxalic acid and powdered pumice stone, using a stove brush with a handle on the top. Use plenty of water in washing it off, and wipe thoroughly dry with at least three old towels. Then oil it with a sponge dipped in liquid vaseline and wipe with a piece of waste. This oil is tasteless and odorless, and gives the copper an unusually fine polish and delays tarnishing. The counters of many fountains are so arranged that the drain board can be seen from some part of it. Whether yours is or not, take pride in keeping your copper cleaner than any other clerk in your neighborhood. Tell your friends your fountain is as clean below as it is above, and invite a few to "take a peep" at it. They'll do the rest. Keep your towels out of sight, in cupboards provided with spring doors if you can. Never wipe a glass or a spoon with a soiled towel. When they become slightly soiled they may be used for wiping the counter, thus getting the full use of every towel, but never use one that has become unsightly.

Have regular times for looking over the syrups and stock them. Don't wait for them to run out; that always happens when you are busy and need them most. Customers don't like to be disappointed. Do your best to make all drinks palatable. If you strike a crank who wants it some other way, accommodate him with a smile. He pays for it.

Keep a perforated board in the bottom of your shaved ice box. It saves ice. A cover with a hinge across the middle so it will fold back when you are busy is another valuable ice saver. The amount of ice which may be saved in a season in this way is almost inconceivable.

If you want to sell soda don't forget the signs. Neatly printed cards placed in conspicuous places about the fountain, and attractive signs painted upon the windows, with a paint made of oxide of zinc and mucilage of acacia, colored if desired with carmine or anilines are perhaps the best methods of pushing the sale of profitable beverages. But change your signs often, every day or two, and be sure and make them short. Have drinks of your own, and give them appropriate names. Keep up to date. If there is a school teachers' convention in town don't forget to have some "School Teachers' Punch, etc." It catches the visitors and pleases every one who comes into your store. The names of prominent candidates at political conventions may be used in the same way. There are numerous occasions of this kind in all towns and cities, which offer an opportunity to show people that you are alive and original.

Nothing is so annoying to customers as waiting for purchases. The clerk should do everything in his power to keep drawers and shelf bottles well stocked. A good rule to follow is, always put a bottle or container back in its place as soon as you are through with it, unless it needs filling, then never put it back until it is filled. If you do, the chance of getting busy and forgetting it is good. Better have it in your way so you won't forget to stock it, and a future customer's time will be saved.

Put up such articles as Epsom salts, sulphur, cream of tartar, borax, etc., in packages of convenient size when business is quiet. It will save time when you need it badly, and the patrons of the store will be

STEWART GAMBLE
Minneapolis, Minn.
Pres. Minn. Phar. Assn.

favorably impressed.

The use of the "Want Book" is very important. Do all you can to avoid being out of anything. When it does happen, and it is something you should have, be sure and "be sorry," and offer to get it and send it up.

Open the door for all ladies when you can reach it first. This applies to the old lady who buys sarsaparilla and boneseet as well as the pretty girl who invests her money in face powder and perfume. Quite likely the former is not used to it, and will appreciate it the more.

Don't encourage loafing among your friends. Be busy and they won't stay long. They will think no less of you, and your chances for "that raise" will surely be better, because of your attention to business.

Keep on good terms with your employer. Let him have his way and give in gracefully. One man can manage a store better than two, and as he owns the store it is his gain or his loss. Be free to offer suggestions about arranging the store and other matters, but don't be offended if they are not always acted upon. Other people sometimes have ideas somewhat different from yours.

If you have a grievance, frankly tell your employer about it. But whether you do this or not, don't grumble to your fellow clerks about it. They may have "troubles of their own," and it never helps a business to promote ill feeling between the employer and the employes.

When the proprietor goes out, do all you can by exercising such authority as you may have, and by example, to have the store conducted exactly as if he were there. Don't put off work till he gets back, and if you get that hilarious feeling keep it under control till you have a night off.

And avoid telling customers anything about the long hours and woes of a drug clerk. They may be bored, even if they do appear interested and sympathetic. But whether they are or not, you will get no shorter hours or relief from them. When they apologize for buying stamps tell them you are glad to sell them, since you must be there anyway; be glad to have them use the 'phone. Tell them all good drug stores

have directories. Make them think you are happy to be alive, and that there is no job on earth quite so pleasant as a drug clerk's, and you'll live longer, your employer will not lack patrons and you'll get a good salary—some time. If your present employer doesn't see you are worth it some other one will.

GUILTY OR NOT GUILTY?

Titusville, Pa., July 1.

To the Editor: A very important part of the drug business is the keeping up of stock. In fact, we might almost say it is the most important part, as we must surely have goods to offer for sale before transacting any business. Nine-tenths of the druggists are careless in this direction, in either not giving it enough thought or not having a system by which it can be accomplished. In support of the latter argument I will advance a few instances, with suggestions.

We will all admit that it is impossible to keep in stock at all times all goods called for, on account of various influences which we need not discuss.

Many druggists depend too much on a limited stock, quick shipments, and small purchases. The consequence is they do not have articles called for, "but expect an order to-morrow." By the time it arrives all of a certain remedy ordered may be promised to be sent, being already paid for, and the druggist is out again. And this routine is followed week after week.

On the other hand, druggists buying from jobbers at a distance are invariably disappointed in the shipment of goods, either as the fault of the jobber in not being prompt in shipping, or a delay of the transportation lines with due allowance for accidents.

Very often it is the direct or indirect fault of the clerks. Some are habitually negligent in putting things on the want book; and, again, many things are overlooked in the pell-mell rush of business. Especially is this true in a busy store where not only the drug trade is concerned, but where a general and varied business is carried on in the way of sundries, surgical instruments and physicians' supplies in general, the manufacture of tinctures, etc., soda, cigars, paints and oils, and where is put up a line of "your own preparations," to say nothing about the sale of postage stamps.

One of the biggest faults lies in a man employing cheap help, inexperienced men and those who cannot grasp the business. In order to be an all-around man one must be able to fill any capacity. In order to hold the confidence of trade, it is necessary to talk intelligently on all subjects broached. However trifling this may seem, it is often difficult to do on some of the most common articles.

One of the greatest evils of the day is price-cutting. In places where cut rates exist (and where do they not) druggists think they cannot afford to carry a supply of goods to meet the demand in proportion to the amount of profit made. Yet if we would buy by the dozen or three dozen articles sold every day we could often save 5 per cent., the discount usually allowed. At the same time we could accommodate our patrons, and the fact of having what people want is the best advertisement a man can desire.

At any rate, the being out of things continually is most detrimental to any business place. Nearly all of us can bring this home to ourselves, and if not conscious of it each form a committee of one to investigate, with the hope of being "not guilty."

H. C. ZEAMER, R. P.

GASOLINE SUBSTITUTE WANTED.—A German scientific society has offered a prize of \$250 for the best substitute for gasoline. Among the conditions are: First, the substitute and its gases must not ignite, neither freeze nor explode when in common use; second, it must not affect cloth, colors or the tanks and tubes with which it may come in contact; third, the cost must not be higher than for the ordinary article, and not be subject to so many market quotations. The competition is open till July 1.

BUYING GOODS.*

By ADDISON DIMMITT.

The practical side of a druggist's life may be "an old tale, often told," but with each telling some thought may be suggested that will help us on our way. We have discussed many subjects relating to our business, what should be done or left undone to insure our success; but the vital question of how to buy our goods, whether preparatory to engaging in business, or as an important factor in our established trade, has never received sufficient consideration.

The art of buying merchandise is a gift—natural to some, acquired by most of us, and too often acquired by costly experiences. There is possibly no other one thing that has contributed more to the failure of merchants than the lack of this essential qualification. A successful buyer is one who keeps the many threads of his business well in hand, gives careful study and thought to the demands of his trade, considers cautiously the advantages of additional lines of stock, or an increased quantity of a staple, and sees that the quality of his purchase is such as will result in ready sale and profit.

A retail drug store of to-day necessarily carries a large variety of goods, and of a character that requires greater care in its selection than any other class of merchandise.

It may be well to discuss separately the several points which are essential to buying goods.

The first and most important point for a druggist to consider is quality, especially in chemicals, crude drugs and pharmaceuticals, for these are the very foundation of the drug business; on them depend the reputation and honor of the druggist, and possibly the lives of his customers. So buy the best quality that can be obtained, cost what it may. This suggests the question, how are we to determine what is the best? Every manufacturer of chemicals or pharmaceuticals claims his goods to be the very standard of purity, and as it is impracticable for us to manufacture these goods ourselves, we are bound to rely on his representations. Yes, this is true to a certain extent, but this is just where the qualified, conscientious buyer can make observations that will enable him to determine for himself. If it be crude drugs you are buying, the United States Dispensatory fixes the standard for you, and you should be educated to know by appearance whether you are getting the required quality. If it be chemicals, they can be readily tested by the given tests for purity in the Pharmacopœia. This holds good with all pharmaceuticals that are recognized by the U. S. P., but unfortunately there is an immense line of this class of preparations in use which it does not recognize, so we are obliged to rely on practical observations of the articles we buy—their physical appearance, solubilities, compatibilities, etc., in dispensing them, and we may also inquire of our friend, the physician, as to their therapeutic value.

Next, we will consider the extensive line of proprietary and patent preparations we are required to carry in stock. It is sufficient to say buy them only when you are forced to by the demand created by the manufacturers of them. With this class of preparations the only point to consider in buying is the quantity we can use, so as to buy at the best prices offered by their manufacturers. This we will take up under another head. In this connection, permit me to say never buy substitutes for these popular remedies. It is not only bad business policy to practice this deception, but by so doing you assume the responsibility for their effect, besides doing a great injustice to all concerned, the physician, the customer, the manufacturer and yourself.

Druggists' sundries come next, and should be most carefully considered. In my opinion this part of a druggist's stock is where most of our loss occurs. This line of goods varies almost with the seasons, as

the manufacturer is constantly devising novelties to please the fancy of a fickle public, which demands new ideas and fashions in these sundries as in every other line of goods. Many of the articles are of such a nature that light and heat render them unsalable, while others soon become shop-worn from exposure to dust. Therefore, a druggist must be cautious in buying this line, yet not permit his stock to become depleted, as next to the prescription department it permits of a larger profit than any line in his stock. Buy only what you believe your trade will use, but buy judiciously and in a limited way. It is a mistaken idea which some druggists have of buying and trying to push cheap goods. Don't argue "I will buy these because they are cheap and I can make a run on them by underselling my competitor." Gentlemen, this is radically wrong, both in principle and practice. It is injurious in its effect on both manufacturer and druggist, for the manufacturer can only cheapen his goods at a sacrifice of quality, and the druggist suffers by reason of the dissatisfaction of his customers. Buy only the best, and establish a reputation among your neighbors for selling only reliable and honest goods, be they drugs or sundries. Never let your customers doubt your word or your wares.

When to buy is not of so much importance to the retail druggist as to other merchants, since only a limited number of articles have seasons; but such as they are, the buyer should always have his stock ready to meet the demand. I do not think it is good policy to buy too long ahead, as it induces over-buying, and ties up your capital too long. Good jobs can be found within twenty-four or forty-eight hours of our door and stocks can be replenished often. The secret of success to-day in the mercantile world is quick action. Keep your stock and money moving. Buy in a limited way and buy often.

This brings us down to a most important detail in buying, that is, what quantity should we buy? Many and many have been the wrecks in the retail drug business caused by over-stocking. This point in buying requires thought and discrimination. There are many things that influence us to over-buy. A mistaken idea of economy, when a slight reduction is offered as an inducement to buy a large quantity. Then some of us have a false pride about buying small quantities. We dislike to admit that our trade will not warrant our buying as much as our neighbor, and when our friend, the commercial traveler, produces his order book to show what a large order this neighbor has given, and argues in his inimitable manner the advantages we derive, we, moved "by magic numbers and persuasive sound," and in spite of our better judgment, order a dozen of this and that, when really our business does not warrant more than a quarter of a dozen. This kind of buying, if persisted in, means the gradual tying up of all your profits in stock, meantime your money is earning nothing and this accumulated stock is deteriorating all the time.

These are merely hints, as each buyer must be governed by the circumstances surrounding his business, only bearing in mind that he must be guided in his purchases by the amount of capital he has, for pay day always comes, and by the character and volume of his trade, if it will justify a quantity of an article. I mean by this if he can turn the quantity over within a reasonable time, say in two or four months, buy the quantity; if not, pay the slightly higher price and buy in a small way. It is frequently a good plan to join with some of your neighboring druggists and buy the quantity and divide it, both thereby deriving the advantage of the quantity price without overloading either.

Good credit, as we all know, is most essential to the buyer. It induces not only the commercial traveler, but the jobber, to make special efforts and concessions in prices. Guard and preserve your credit as you would your good name, for without it your reputation suffers and you lose opportunities to buy to an advantage. Always discount your bills, if possible, for it not only saves you several hundred dollars a year, but adds much to your standing with your jobber.

*Read at the meeting of the Kentucky Pharmaceutical Association held at Crab Orchard Springs, June 18-21, 1901.

PHARMACY.

GEORGE M. BERINGER
Camden, N. J.

We should all strive to win the respect and confidence of our jobbers, and to have and to hold that we must be fair and just with them. Remember "how full of briars is this working-day world," and try to smooth the path for a fellow-laborer. Errors and misunderstandings creep into every man's business, and often times things that appear at first to be unfair and irregular, will, on investigation, be explained to your thorough satisfaction. Never make a false claim for breakage, shorts, etc. Never return goods without first advising the jobber. Always try to be exact in placing an order. A very practical method of obviating troubles of this kind is to have a duplicate order book, in which you have all orders entered by the salesman, or use same in sending in mail orders, then if mistakes occurs, the responsibility can be placed where it belongs, and the mistake rectified. This method not only keeps all buying transactions together, but the book will be found very useful if indexed and used for reference as to costs and quantities purchased.

While much has been said of how, when and what to buy, I should feel that little was accomplished if I did not touch upon the important feature in our buying, the commercial traveler, and on this I am sure we all agree, that take them as a class they are the best fellows on earth, progressive, well informed, courteous and attentive, always ready to do a favor, by giving good points to the live buyer. They represent the hub in the wheel of commerce and play no small part in every branch of business to-day. It should therefore be our pleasure to treat them at all times with perfect fairness, and show our appreciation of their ready assistance.

I trust that we may one and all not only learn to buy advantageously, but reap large profits on all we buy ere we meet again.

VIOFORM.—Under this name iodochloroxyquinoline has been added to the list of iodoform substitutes. It is entirely non-toxic, and, even when administered subcutaneously in large doses, is well borne. It has given very satisfactory results in clinical practice (Pharm. Zeit.).

GROWTH OF BALATA PRODUCTION.—From statistics gathered by the India Rubber World there are indications that the production and consumption of balata are increasing, though at what rate it is difficult yet to say. So nearly as can be estimated about 100,000 pounds were imported during the calendar year 1900, one leading firm having reported its importations at 75,000 pounds. The high price of balata is accounted for partly by the relative scarcity of labor in Venezuela, and also by the fact that the better supplies of balata are remote from navigable streams, transportation charges to the nearest shipping points being very high. In collecting balata in Venezuela the practice of felling the trees is general, on account of the much greater immediate return and the area over which the trees are distributed is so great that no possibility of exhaustion is admitted by those engaged in the business. By tapping, the tree can be made to yield only up to the highest point reached conveniently with a ladder, while by felling the tree the sap can be obtained sometimes for a length of 100 feet or more. Besides, under a process used by one manufacturer, all of the bark is stripped from the tree after as much balata as possible has been extracted, and whatever remains in the bark is removed by a chemical process. The average yield of balata milk is about 3 gallons per tree, or 27 pounds, which yields 15 to 21 pounds of balata. Sheet balata is obtained by spreading the sap in shallow pans and exposing it to the sun, the process lasting sometimes nearly two weeks. The dried sheets are $\frac{1}{8}$ to $\frac{1}{2}$ inch in thickness, and are sometimes rendered thinner by running them between rollers, the chief purpose of which operation is to render the sheets less liable to curl up. Tin plate is well adapted for balata pans, though the natives use wooden troughs, lined with tree leaves to keep the gum from sticking to the wood. Block balata is formed by boiling the sap in kettles holding from 8 to 12 gallons, until it reaches the consistency of molasses candy at the stage when it can be "pulled." It is then formed into masses in size best suited to the packing cases, and placed in water to cool. The boiling requires about two hours for the first kettleful; the proper heat having then been reached, subsequent lots are boiled sufficiently in about 45 minutes. The cooling and hardening requires 3 or 4 hours. Packing cases of wood are usually 18 or 24 by 12 inches, and 4 inches deep.

ORGANIC AND INORGANIC FERMENTS.—In a paper on the theory of the process of fermentation Oppenheimer (Munchener Med. Wochenschrift; American Medicine) calls attention to the statement that by electrolysis Breding obtained a pure and stable form of metals (so-called Metallsole), which had an extraordinary catalytic action upon peroxide of hydrogen, and were capable of decomposing it, just like organic matter and enzymes. Breding called these colloid metals "inorganic ferments," and considered them identical with organic ferments. Oppenheimer takes issue with Breding, and considers that the term inorganic ferments is a contradiction in terms, as ferments are of necessity organic. Ferment action consists of two phases. The second phase, that of the actual decomposition, may be identical with the catalytic action of metallic substances; but before this catalysis is possible, the ferment probably forms a compound with the body upon which it acts; this is the first phase. The ferment is specific and selective, and acts only upon certain substances. Thus the precipitins, hemolysins, and bacteriolysins are strictly specific, and their action is best explained on Ehrlich's lateral chain theory. It is also possible to produce antiferments, the lab-ferments and egg-albumen, fibrin, and even peptone; but antipepsins and antiastatins have not been obtained. Oppenheimer's conclusions are: First, that the catalytic ac-

tion of organic substances can be separated from their specific ferment action; that fermentive processes do not strictly obey the laws of catalysis. The most important feature differentiating ferments from inorganic catalytic substances is that the former enter into actual combination with the specific substratum upon which they act.

USE OF LATIN IN PRESCRIPTIONS.—Out of date pedantry, it may seem to many, but there appears to be something in the following arguments put forth by a writer in the *Pharmaceutical Journal*: 1. The habit of writing a Latin prescription tends to greater care and deliberation on the part of the prescriber. 2. Badly-written Latin can be more easily read than badly-written English. 3. Latin prescriptions can be interpreted by any competent pharmacist of any nationality. The argument that medical Latin is at its best a mongrel form counts for little. Bearing in mind that the Latin language in the time of the Emperors was as full of Greek as English is now full of Latin; that French, Spanish, and Italian are simply degenerate forms of Latin; that the language itself was during the middle ages the medium of communication between Governments in their diplomatic relations, and between scholars of all countries, there seems still sufficient reason for its continued use in the practice of medicine.

WOOD ALCOHOL AS FUEL.—Dr. A. B. Lyons in *American Journal of Pharmacy* states that unquestionably methyl alcohol is a cheaper fuel than grain spirit. It costs less and generates, weight for weight, more heat. However, its use is attended sometimes with inconveniences that must be taken into consideration. From its greater volatility it is even more dangerously inflammable than ordinary alcohol. On account of this volatility, also, there is much greater waste in its use, the loss from evaporation in storing being more considerable and control of the rate of combustion in ordinary spirit lamps being more difficult. When burned in the safety spirit lamps, in which the fluid is absorbed by asbestos covered with brass wire gauze, the metal of the gauze is rapidly corroded, as shown by the deep green or blue color imparted to the flame, and a brass kettle heated over the flame becomes quickly tarnished. As a fuel, therefore, for use at the tea table, wood spirit cannot be recommended, at least where brass utensils are employed.

ACTIVE CONSTITUENT OF COLLINSONIA CANADENSIS.—H. J. Lohmann, in a paper read before the New Jersey Pharmaceutical Association, claims to have isolated an alkaloid which is the active constituent of *Collinsonia Canadensis*. Thirty grams of the root yielded 0.52 grams of crystals which proved very slightly soluble in ether and chloroform, freely soluble in alcohol and insoluble in water. Treated with dilute sulphuric, hydrochloric and nitric acids the alkaloid combined with them to form salts. The alkaloid fused at 62.5 deg. C. When treated with a solution of a chromate or chromic acid and gently heated the reaction is accompanied by a play of colors ranging between yellow, red and green. As a result of physiological experiment the author concludes that the diuretic effect of *collinsonia* is due to this alkaloid while the irritant effect is due to the resin which is present in the drug.

COLORED SHOE POLISHES.—(1) Yellow wax, 300, is melted and mixed with oil of turpentine 1,000. Resin soap, 120, dissolved in hot water, is then mixed in, and the whole stirred until a frothy paste results. To this Nankin brown, 15, or aniline green, 15, dissolved in methylated spirit, 75, or any other suitable coloring matter, is added. (2) Stearine, 10, is melted with oil of turpentine, 10, and any desired coloring matter, 3, incorporated. (3) Yellow vaseline, 100, olive oil, 70, ceresin, 500, and oil soluble yellow or brown, 1, are melted together and stirred until cold (*Pharm. Post*).

PUMPKIN SEED OIL.—Willard Graham, working experimentally with a quantity of whole pumpkin seeds, obtained by grinding and extraction with acetone (the acetone being recovered by distillation) an oil having the following properties: A clear, reddish, limpid liquid, having an agreeable odor and taste, sp. gr. 0.9208 at 15° C., saponification number 192.5, acid number 18.9, ether number 173.6, soluble in all proportions of carbon disulphide, ether, chloroform, and in twenty parts of absolute alcohol. The seeds yielded 25 per cent. of oil. A commercial oil examined had a sp. gr. of 0.9197, saponification number 195.2, acid number 3.5, ether number 191.7. On account of the porous condition of the seeds it was impossible to obtain an oil by expression (3,000 pounds pressure) for examination (*Amer. Jour. Pharm.*).

ECONOMY IN THE USE OF DRUGS.—An order has been issued to the hospital chiefs by the secretary-general of the Bureau of Public Aid, of Paris, in which he points out that the expense of modern medicinal preparations is enormous (*American Medicine*.) The secretary begs the profession to be as economical as possible in the use of a number of drugs, such as crystallized digitalin, which costs 15,000 francs a pound. Musk, osmic acid, pilocarpin and its salts can henceforth be prescribed by no one but the hospital chief himself.

CLARIFICATION OF ALBUMINOUS URINE.—Shredded filter paper is recommended by Gruener as the most reliable clarifying agent for clearing urine prior to testing for albumin. Many of the substances suggested for the purpose are not satisfactory, from the fact that they carry down considerable albumen. Infusorial earth is one of the least objectionable agents for the purpose, but even it should be used in small amounts only, not exceeding ½ per cent.

NEW MORPHINE PREPARATION.—A patent has been granted in Paris for the manufacture of a new local anaesthetic, containing morphine in a readily soluble form. Morphine hydrochloride or sulphate is mixed with an excess of borax, or other alkaline salt and iodoform. Phenol is added to this mixture to form an easily soluble phenate (*Oesterr. Zeits. fur Pharm.*).

NECTRIANIN is an extract obtained from cultures of *Nectria ditissima*, an organism which gives rise to cancerous excrescences on forest and fruit trees. The preparation is said to possess analgetic properties far exceeding those of morphine, and it has been injected in cases of cancer, 3.0 C.c. being administered daily.

FERSAN, a ferruginous para-nucleo-proteid, has been recommended as a nutrient in anæmia, chlorosis, etc. It is soluble in water, does not coagulate when boiled, and is not completely absorbed until it reaches the intestine. A small teaspoonful is taken three daily, before meals, together with tea, milk, cocoa, etc.

ESSENCE OF RENNET.—Rennet, chopped fine, 6 ounces; salt, 4 ounces; alcohol, 10 ounces; water to 40 ounces. Macerate four days, and add sherry wine 5 ounces; after two days strain and add glycerite of tannic acid, 10 drops; fullers' earth, 1 ounce. Shake occasionally for seven days, and filter (*Spatula*).

ZINOL.—A mixture of zinc acetate, 1, and aluminium naphthol-sulphonate, 4, has recently been introduced under this name as a remedy for gonorrhœa. It is injected in the form of 1.5 to 3.0 in 1,000 aqueous solution (*Union Pharm.*).

EXTRACT BIRCH BEER.—Oil of wintergreen, true, 1 ounce; oil of sassafras, 1 dram; oil of lemon, 2 drams; oil of cinnamon, 10 drops; magnesium carbonate, q. s.; alcohol, 2 pints; water, 2 pints, caramel, q. s.

ANTI-HERPIN.—This is a remedy for herpes, consisting of pix liquida, colza oil, of each 100; Peruvian balsam, 10 (*Oesterr. Zeits. fur Pharm.*).

SHOP TALK.

Tell us, architect of pills,
Fashioner of monthly bills,
Powder sharp and dope compounder,
Don't you envy now the rounder,
Who escapes the scorching street
And finds refuge from the heat
Where your soda water flashes
More of solace innocent
Than cocktails and brandy smashes,
Likewise comfort and content?
For he has, the whole day through,
This advantage over you:
Ever you must slave and mull,
Tackling your back-breaking toil,
Fill the glasses all the summer,
Wash them up for the next comer,
While the jingle in your till
Is but compensation ill;
Whereas, all he has to do
Is to tip a hint at you,
Open up his bearded muzzle
To a satisfying guzzle,
And for said cool palate-tickle
Plunk the easily-spared nickel.
Oh, thou meek, long-suffering druggist,
How thou patiently on pluggist!
Fate her most engaging smiles
Always should to you apportion;
May your business-place between whiles
Every non-shuruberg bore shunt
Why should Fortune be so very
Hard on the apothecary?

—John Talman.

* * *

Quite a number of people now-a-days lay in a stock of medicines to take away with them to the sea-side and other summer resorts, and the supplying of this demand means good money for the druggist. A Philadelphia druggist exhibited a little case the other day that he says is very popular among his patrons, remarking that it was the outcome of a suggestion to him by one of his best lady customers. It is a neat little wooden box with eight little compartments for bottles and a long one in front for plasters and ointments, in which he puts two ounce cork-stoppered bottles containing such domestic medicines as paregoric, quinine pills, essence of ginger and so on, an ounce jar of carbolyzed vaseline and of zinc ointment, a foot of rubber plaster, two or three gauze bandages, lint, pins and some absorbent cotton. All the bottles, etc., are labelled with the dose and use of the medicine therein, and such a case will often prove a boon in a sudden emergency when far away from doctor or drug store. He sells the boxes for \$1.00 to \$1.50, according to contents, and they cost him about sixty cents to get up. He gets his boxes from a local firm for twenty cents each in quantities of fifty or more. The idea seems worthy of copying.

* * *

Now is the time of the year when the man behind the soda counter puts forth his best efforts to devise new and seductive concoctions to please the public palate. These drinks are usually common property, and if one becomes popular it is sure to be copied. A Philadelphian has invented a new "flavor," with the seductive title of "crushed violets," which he has patented, that is, he has patented the process of manufacture of the syrup and its flavor. "Crushed violets" is served in thin glasses with plenty of shaved ice and tastes, as a young lady said, like "a big bunch of violets smells!" It is having a big run and bids fair to be very popular among the "matinee girls." Of course, violets do not really enter into the manufacture of this flavor, it being compounded from the new synthetics such as "ionone" and from orris root, and is colored a pale violet with appropriate colors. Other druggists might take the hint and work up a "violet syrup" for feminine trade.

* * *

Seven druggists in an exclusive section of Brooklyn, where soda water is sold in large quantities the year round, have combined and adopted the uniform price of eight cents for all ice cream drinks. This is rather a bargain day price, thus making it an attraction for thirsty female customers. One of the seven said recently: "We've all decided to keep just the old line syrups and will have none of the fancy side

drinks found in other stores. It may be all very well to go into a drug store and have a menu the size of the ones presented in the ordinary hotel, to select your drink from, but it don't pay. I get the finest fruit juices and make good ice cream and there's lots of money in for me at eight cents a glass. It brings a lot more customers too."

* * *

A "Carnation Flip" is one of the new and enticing things to be found at soda fountains this season. It sounds a bit wicked, yet it is mild and harmless. Sunday school young men may invite young ladies to "have something" and with perfect propriety order this flip. The girl may seem staggered a bit by the name, but if she watches she will see it compounded of chipped ice, pineapple and strawberry (or raspberry) syrups, plain cream, an egg well shaken, ice cream and a bit of nutmeg sprinkled on the top. This last ingredient is the nearest approach to anything not strictly in the temperance line, unless he who orders a flip knows his clerk and has a convincing wink which calls for the addition of a mere suspicion of brandy.

* * *

The little army of perambulating "rubes" that have been so conspicuous of late in Philadelphia streets has received a new addition in a couple who proclaim the virtues of a wonderful tonic that has kept them alive, the man for eighty years and the woman seventy-five, and they give free samples of it to those whom they manage to engage in conversation. The pair put up a pretty good imitation of country folks and many unwary pedestrians have been fooled into conversation, with consequent advertising, by their guileless ways. Whether it pays or not is a question that the advertiser alone can answer, but it seems to the observer to be a rather poor way of advertising a medicine in these modern days.

* * *

A novel method of advertising was noticed on the streets of New York last week. It was employed by a chemical company to advertise its brand of headache powders. The exhibit was composed of six young girls, clad in fantastic gingham gowns and wearing huge poke bonnets for head covering. On the bonnet and on a rubber cape the girls wore about their shoulders were exploited the merits of the headache cure, and samples of the stuff were also given away. The young women must have had trials enough during their hot perambulation of the town, to cause them to demonstrate in a practical manner the alleged virtues of the cure they so thoroughly advertised.

* * *

A hint for the soda counter comes from downtown in Philadelphia, in the way of envelopes on which is typewritten a daily list of the good things to be had at the soda fountain. These envelopes, plain ones, are used for holding small packages, etc., and are so written that almost every one getting them will be sure to read what is on the front. This same gentleman also sends out cards with purchases asking customers to be sure and tell the soda clerk what they like in the way of flavor, amount of syrup, etc., the point being made that the soda fountain is run for them, and therefore their wishes are paramount. The touch of vanity in everybody makes this appeal to one's personal likes very effective.

* * *

Mr. Churchill, who owns the drug store in the Nicollet Hotel, Minneapolis, is searching Shop Talk and all other possible sources of information to find out the best way to advertise. He says he has spent a good deal of money in printing and distributing pamphlets describing his special preparations and has also patronized the newspaper advertising columns liberally. All this has cost Mr. Churchill a good deal

of money, he says, and the rewards have not been sufficient. Meanwhile he makes good window displays and exhibits his goods in attractive manner, which, of course, he finds profitable.

An attractive way of displaying articles needed about house-cleaning time, and incidentally a way that causes the goods to sell rapidly, is shown by a Brooklyn druggist. He has reserved one window for the show. In little groups he has arranged moth balls, camphor, sulphur candles, bug poison, roach powder and the implements to apply each. A neat card is placed over each display telling its use and its price. For example, above moth balls this sign is displayed: "Will keep the moths away. Fifteen cents worth enough for all your winter clothes." The display is inexpensive and is a money maker.

A New York chemical house thinks it has a novelty, and a number of New York retail druggists have arrived at the same conclusion. It's a brand new line of drinks at the soda fountain made from concentrated extracts of flowers. Just imagine the fluffy summer girl sweeping across the burning threshold of the city drug store and up to the perspiring druggist and asking in tones that would melt the heart—if heart it has—of a street piano to melody, for a "Lily of the Valley ice cream soda, please." This is the novelty and it comes in seven flavors, each having all the fragrance, flavor and elegance of the particular flower from which it is named. Here's the list: Violet, Peach Blossom, Lilly of the Valley, Carnation Pink, Lilac, Crab Apple Blossom and Rose.

The designers of novelties for the toilet keep a sharp weather eye on the masculine sex, and every now and then something new crops out for men's convenience. The newest is a shaving brush for the man who does his own scraping. It is like the ordinary brush in every respect except that it has one important addition. This is a cup enclosing that part of the brush where the bristles unite with the handle, an arrangement which prevents the water from dripping from the brush when in use on to the user's hands, face and clothes, which is so disagreeable.

One of the most conspicuous sights on Washington avenue, Minneapolis, is the large bronze figure of a lion extending over the sidewalk. The reason for this is that the place to which it attracts attention is known as the Lion drug store. The proprietor, however, is named Clarke. There have been other leonine features of the Twin City drug trade. For example, a druggist named Lion for some time had a store at East Fourth and Cedar streets, St. Paul. These people might appropriately display Proverbs XXX.30. as a motto.

Two little girls with snub noses and public school voices stood in front of the window of a drug store the other day looking with wondering awe on the piles of sponges heaped up inside. "My," said one, "look at all them sponges! 'most a million of 'em! What d'yer sponse they use 'em all for, I didn't think there was other sponges in the world?" The other little girl looked at her companion with scorn. "Don't yer know?" she sniffed contemptuously, "that winders has to be cleaned? Did yer think folks only used 'em for wipin' babies an' slates?"

A new idea in drug store advertising was noted the other day in front of one of Philadelphia's theaters. The place is now closed for the summer season and on the sign boards that once were gaudy with pictures of actresses in tights are now big posters advertising the "Dyspepsia Cure" of a local firm. The posters are rather attractive, the locality is one where many people pass daily and the wording is good, so perhaps the connection between dyspepsia and theatrical art may result in attracting attention and thus serving the purpose of the "ad."

WM. B. KERNS
Bunceton, Mo.

Member Board of Pharmacy

A delivery wagon belonging to a prominent Philadelphia drug firm was seen the other day with large signs on the sides advertising a kidney remedy that this firm makes and sells extensively. It savored almost too much of the soap advertisements we meet staring from every little one horse "to hire" wagon to be in good taste, besides, few people would pay much attention to it. Better have the sides of your delivery wagon colored in neat and proper colors with simply the name and address of the owner thereon.

A Brooklyn druggist has a pleasant feature connected with his cigar stand that should be of value as a trade inducer, and the druggist says it is. It is a bronze image cigar lighter. Concealed in the base of the figure is a music box that plays when the cigar customer cuts off the end of his "smoke." The tune is short and sweet and cannot be heard again until the end of another cigar has been clipped. If free music is enough of an incentive, cigar smokers should purchase all their smokes of this enterprising apothecary.

A downtown New York druggist sells a lot of cheap tooth brushes through the medium of a unique advertisement in one of his show windows. It consists of a bicycle wheel from which the tire has been taken. Tied to each spoke is a tooth brush and around the felloe are a lot more. The wheel is kept revolving slowly. It attracts attention and sells the brushes.

A novel article for window display was seen a short time ago, Acetic Acid, of English make, in pound bottles, priced at \$1. Inquiry from the clerk as to the uses of this article elicited the reply that many now used acetic acid in baths and for a toilet wash, and that when properly diluted with water it was very good for prickly heat and sunburn.

A druggist on a busy West Side, N. Y., thoroughly complained to the Era man last week that business was dull, while an East Side druggist on the same busy thoroughfare commented on the excellent trade he was having. Both men spoke the truth, yet why the difference, all other things being equal?

WHAT IS THE PRIME CAUSE OF FAILURE OF THE LARGE PERCENTAGE OF APPLICANTS AT THE STATE BOARD OF PHARMACY EXAMINATIONS?*

BY LOUIS EMANUEL.

The intention of this reply is to lay before this association certain data which may point out that perhaps one of the causes for so large a percentage of failures at the State Board of Pharmacy examinations is due to the fact that many applicants are incompetent, or to the laxity of teaching colleges. It must be remembered that a college is more or less influenced by the prestige it gains in having a large graduating class, and of recording few failures. Examining Boards of Pharmacy are not thus handicapped; their sole purpose is to see that none but proficient persons are permitted to enter the ranks of pharmacy.

The appended statistics are compiled from one year's work of the Pennsylvania Pharmacy Board, namely from July, 1900, to April, 1901, inclusive. A total of 1,264 persons were examined. Of this number only 198 were graduates, 655 were students of colleges of pharmacy; of the former, 125, or 63 per cent., were successful as registered pharmacists; of the latter 363, or 55 per cent., were successful. Of these 351 applied for qualified assistants and 304 for R. P. Of the former, 247 were successful, and of the latter 116 were satisfactory—about 38 per cent. The remaining 411 had no college instruction. Of these 196 applied for registered pharmacist's certificate, and 64, or 32 per cent., were successful. Two hundred and fifteen applied for assistant's certificate, and 110, or 51 per cent., were successful. Out of a total of 853 having college instruction, 487, or 59 per cent., were successful.

GRADUATES GRANTED R. P.—Philadelphia, 70; Pittsburg, 27; Medico-Chirurgical, 7; Era Course, 1; National Institute, 1; New York, 5; Foreign, 3; Ada (O.), 4; Buffalo, 2; Chicago, 1; Scio (O.), 1; National College of Pharmacy, 1; Valparaiso, 1; total, 124.

GRADUATES REFUSED R. P.—Philadelphia, 20; Pittsburg, 20; Medico-Chirurgical, 10; National Institute, 1; New York, 1; Foreign, 1; Ada (O.), 9; Buffalo, 1; Chicago, 1; Scio (O.), 2; Valparaiso, 2; Cincinnati, 1; total, 71. Number of graduates examined for R. P., 195.

STUDENTS GRANTED R. P. (one or more times)—Philadelphia, 76; Pittsburg, 14; Medico-Chirurgical, 10; Era Course, 2; National Institute, 5; New York, 2; Ada (O.), 2; Buffalo, 2; Scio (O.), 1; National College of Pharmacy, 2; total, 116.

STUDENTS REFUSED R. P. (one or more times)—Philadelphia, 32; Pittsburg, 44; Medico-Chirurgical, 17; Era Course, 11; National Institute, 17; New York, 3; Ada (O.), 2; Buffalo, 1; National College of Pharmacy, 1; total, 188. Number of students examined for R. P., 304.

GRADUATES GRANTED Q. A.—Ada (O.) College of Pharmacy, 1.

GRADUATES REFUSED Q. A.—Ada (O.) College of Pharmacy, 2.

STUDENTS GRANTED Q. A. (one or more times)—Philadelphia, 138; Pittsburg, 65; Medico-Chirurgical, 17; Era Course, 4; National Institute, 16; New York, 2; Buffalo, 1; Chicago, 2; Scio (O.), 2; total, 247.

STUDENTS REFUSED Q. A. (one or more times)—Philadelphia, 42; Pittsburg, 36; Medico-Chirurgical, 15; Era Course, 1; National Institute, 8; Ada (O.), 2; total, 104. Number of students examined for Q. A., 351.

NO COLLEGE EDUCATION.—Granted R. P., 64; refused R. P., 132; total, 196. Granted Q. A., 110; refused Q. A., 165; total, 275.

RECAPITULATION.—Number of graduates examined, 198; number of students examined, 655; number examined having no college instruction, 411; total, 1,264. Successful in Examination—Registered Pharmacist: Graduates, 125, or 63 per cent.; students, 116, or 38 per cent.; no college instruction 64, or 32 per cent. Qualified Assistant: Students, 247; or 70 per cent.; no college instruction, 110, or 51 per cent.

* A paper read at the recent annual meeting of the Pennsylvania State Pharmaceutical Association, and contributed by the author to the Era for publication

Four hundred and eleven had no college instruction, of which 174, or 42 per cent., were successful. It may perhaps be pertinent here to mention that boards of pharmacy stand between the public and colleges of pharmacy; that they benefit the colleges and the public primarily, and benefit the pharmacist secondarily, only by inducing him to apply his energies to fit himself properly for his chosen calling.

It may be of interest to include in this paper the result of one of the examinations of specimens. Three hundred and fifty-four applicants examined 16 sets of specimens, each set containing 10 specimens.

No. 1 was Hydriodic Acid Syrup; 113 correct, 7 syr. calcei, 40 syr. citric acid and 9 aromatic elixir.

No. 2 was Syrup U. S. P.; 309 correct, 1 syr. acacia, 1 mucilage, 1 syr. orange, 1 aromatic elixir.

No. 3 was castor oil; 322 correct, 247 gave full Latin official name, 1 oleum castoreum, 1 oleum tiglium, 10 olive oil, 2 olei Oleum (?), 4 oleum amygdala dulc., 1 sweet oil.

No. 4 was Glycerin; 297 correct, 3 syr. iron iodid, 2 glycerin and rose water.

No. 5 was Fennel; 249 correct, 70 anisum, 18 carum, 1 star anise, 1 wormseed, 2 anisidum, 2 coriander, 1 caryophyllus.

No. 6 Matricaria; 287 correct, 54 German chamomile florum, 2 chamomile, 3 anthemis matricaria, 1 kousoo, 3 calendula, 3 bedemoa.

No. 7 was Galla; 174 correct, 1 ox galls, 4 arca nuts, 7 nux vomica, 6 juglans, 2 cocculus indica, poppy seed, aloë Barb., colocynth, calabar beans.

No. 8 was Calumba; 146 correct, 14 nux vomica, 6 cortex auranti amara, 5 colchicum, 8 lappa, 5 black-snake root, 2 aconite root, gamboge, rhubarb, dulcamara.

No. 9 was Magnesium Sulphate; 184 correct, 30 sulphate zinc, 10 potassium chlorate, 8 chloral hydrate, 4 oxalic acid, 8 potassium nitrate, 2 acetanilid, 4 boric acid, 3 terpin hydrate.

No. 10 was Senna; 332 correct, 3 uva ursi, 5 buchu, 1 manna leaves, 1 belladonna.

Considering the range which applicants cover in recognizing most commonly-used drugs, it would appear that the prime cause for so large a percentage of failures before the State Board of Pharmacy examination is due to incompetency on the part of those that fail. This view is perhaps emphasized by the following letter.

"Dear Sir:—

My brother, ———, will come up for examination next week. He having been with me for the past seven years is thoroughly competent, having gone three years to the Pittsburg College of Pharmacy, but was unsuccessful in his examination. Anything you can do for him will be highly appreciated by me."

This applicant's percentage was 43 per cent. on questions and 7 per cent. on specimens, and he has been a registered assistant for some years; he probably has not capacity for a more advanced degree.

I recall another instance of a similar nature. Our secretary had a letter from an active member of this association stating that he wanted to have all his clerks have certificates, and asked that we register his man. The applicant's record showed that he was thirty years old, and had had two years' experience in the drug business in Philadelphia. His percentage on questions was 30, and 5 per cent. on specimens, making a total of 35 per cent. As the Board's rule requires 50 per cent. for an assistant's certificate, of course we could not grant the request.

Now, the question is, why did not this applicant attend the Philadelphia College of Pharmacy, after he had had one year's experience in the drug business. And right here I wish to say that the purpose of the law is not to have the Board simply issue certificates, but the law contemplates the board to examine into the competency of those who are posing as skillful pharmacists, and to bar out all who are incompetent in this important craft.

In conclusion, let me say that the Board's motto has been:

"For this great commonwealth, the most skillful pharmacists."

"For the pharmacists of Pennsylvania, the highest remuneration for skillful services rendered."

THE N. A. R. D. NATIONAL FORMULARY, AND OTHER MATTERS OF VITAL IM- PORT TO PHARMACISTS.

By J. S. DIEHL, Louisville, Ky.

Trade Relations.

Some fifteen years ago, or so, there was born to the Louisville College of Pharmacy a child which, in due time, received the name "Botanical Club." Why Botanical Club, no one now seems to know, for questions of a botanical character never came up during its deliberations, so far as has come to my knowledge. However this may be, the child developed vigorously in another direction, that of "trade interests," so that in a few years after its birth the druggists of Louisville could point with pride to a local association, which, in marked distinction from all other retail druggists' organizations, had effectually prevented aggressive cutting. Then came the "cutter;" and the Botanical Club, in so far as it was a barrier to aggressive cutting, went promptly to pieces. Floundering, then, in the dark for a period, at last a glimmer of the dawn manifested itself in the far horizon, culminating in the birth of the

National Association of Retail Druggists.

And while, with the advent of this association, the Botanical Club ceased to exist, phoenix-like, it arose from its ashes and became the "Louisville Retail Druggists' Association," a title more pertinent to the purposes of its organization than that under which it had been so long and honorably known. What the N. A. R. D. has accomplished is history, with which the members of this association are doubtless as familiar as I can hope to be, and the same is true of its aims and functions. It goes without saying that this young organization has not accomplished all it has undertaken, and our patience will possibly be still further taxed before the reforms sought will manifest themselves very decidedly; but if it had accomplished nothing else than to effect an organization that meets with the support and approval of practically all the retail druggists of our land, its initiation and existence would be amply justified. For our only hope to ameliorate and to obliterate, in some degree, conditions that have become almost unchangeable, lies in active co-operation and aggressive resistance to the abuses that have threatened, and continue to threaten, our existence as independent business men. As Mr. Jones, in his report made to this association last year, very tritely stated, "it is deplorable that in these days of co-operation, combination and business organization, among all trades and vocations that of the retail druggist should stand as the one bright and shining example of one that has lost everything by lack of co-operation. Mechanics of all kinds, even unskilled laborers, have their meetings for the purpose of regulating affairs of common interest. Proprietary medicine men meet twice a year for the same purpose, and wholesale druggists have not only their national organization, but state, tri-state, and even local associations, where they meet, fix terms, prices and conditions, exchange ideas and opinions—all for the general good and profit. Yet we stand like a lot of 'wooden Indians,' and make no effort to co-operate nor get together for the interchange of ideas."

Now, I submit, Mr. Jones goes a little too far when he likens us to a lot of "Wooden Indians," although I must admit that we are altogether too willing to offer our noses to the grindstone, and thus jeopardize the beauty of that facial ornament. As a matter of fact, however, pharmacists have long been organized for the purposes of combating, among other evils, the untoward tendencies that now threaten to overwhelm us, and long before the various organizations mentioned by Mr. Jones were ever thought of; for next year the association of retail druggists, which proudly claims the title

American Pharmaceutical Association.

will celebrate the semi-centennial of its organization. We must, therefore, regard this one as the parent of the state and local associations, and, whatever may have been its failures and shortcomings, we have every reason to feel proud of it and of what it has accomplished. Organized to discourage adulteration; to encourage proper relations among the members of the profession of pharmacy, and of these with physicians and public; to regulate the system of apprenticeship; to suppress empiricism, and restrict the sale of medicines to persons educated for the purpose; to uphold standards of authority in the education, and the theory and practice of pharmacy; and to create and maintain a standard of professional honesty, with a view to the highest good and greatest protection of the public! Is it a wonder that the American Pharmaceutical Association should have failed to be uniformly successful in all its undertakings? Is it to be wondered that, with tendencies largely of a professional and ethical complexion, those of a merely mercantile nature should have languished, if, indeed, they were not neglected; the more particularly when we consider that the tendency of trade interests lies in the direction of condoning empiricism, whereas one of the express objects of the organization is the suppression of empiricism; in fine, is it to be wondered that bright, wide-awake business men in our profession should have devised a plan of organization, which, single in its tendency—the protection of the broad and mild side of our profession—has enlisted the active sympathy and co-operation of practically every retail druggist of our country?

It would lead beyond the scope of this address to review the work that has been done by the N. A. R. D. Suffice it, therefore, to say, that, from the "Bulletins" issued at different periods since its organization, it would appear that a number of plans have been proposed after consultation with the Proprietary and the National Wholesale Druggists' Associations, some of which have been abandoned while others have become inoperative, but that on the whole satisfactory progress has been made and some of the more glaring abuses have been corrected. We are at this meeting confronted with a proposition, which, if it can be carried to a successful issue, seems calculated to tie the hands of the cutters so effectually that aggressive cutting on proprietaries will become a practical impossibility. This proposition, upon which we are requested to vote, is known as

The Worcester Plan.

and is based on certain decisions of the courts, under which it is held the manufacturer can fix a contract price or prices, at which he sells his goods, and under which they are again to be sold. It is not necessary that this contract be signed by the dealer—either wholesaler or retailer—the purchase establishes the liability of the purchaser, and the latter can be prosecuted for damage by the manufacturers in cases of violation—that is, if he sells below the price or prices fixed and established by the manufacturer. I have placed into the hands of the secretary a copy of a resolution requesting the N. A. R. D. to take the initiative in this important matter, with explanatory letters from Mr. Julius Garst, of Worcester, Mass., which I submit for your deliberation and vote.

There are mutterings, more or less pronounced, that the Proprietary Association is not disposed to look upon the "Worcester plan" with favor. If these should prove to be well grounded, so much more the necessity that the retail druggists shall present a solid front, and insist on equitable action. This can only be hoped for by earnest efforts and honest co-operation, and we have for this purpose no more available medium than the N. A. R. D. Let us, therefore, not fail by word and deed to contribute our share towards upholding, fostering and maintaining this organization. Fine words and good intentions do not materially further the work laid out for the N. A. R. D. It requires money, much money, and an equitable share of this must be contributed by every affiliated association if the work is to be done properly

*Portions of the president's annual address at the meeting of the Kentucky Pharmaceutical Association, Crab Orchard Springs, June 18-21, 1901.

and carried to a successful end. In common with the other affiliated bodies, our share is fifty cents annually, for each member in good standing, for whom no like sum has been paid by a local organization of which he may be a member; and, having equitably determined the amount due the N. A. R. D., payment should be made without delay, though it may take the last cent in the treasury.

In common with the pharmaceutical profession of our whole country—I may say of the civilized world—we must deplore the loss by death of two of the brightest lights in the entire domain of pharmacy.

**Edward Robinson Squibb, of Brooklyn, and
Charles Rice, of New York.**

Dr. Squibb reached the venerable age of eighty-one years, preserving his usefulness to within a short period from the illness to which he succumbed, on the 25th of October, 1900. Originally engaged in the study and practice of pharmacy, he graduated in medicine in 1844, and entering the U. S. Navy, became Assistant Director of the Naval Laboratory, at Brooklyn. For a short period—during the year 1857—he became a resident of our own State, as one of the founders of the Louisville Chemical Works, but returned to Brooklyn at the end of a year, and there built up a business as manufacturer of chemical and pharmaceutical preparations, unique in its management and enviable in its reputation. In all the years since then he maintained his preference for his old love, pharmacy, and lived uncompromisingly up to an ethical code which he held to be due the dignity of the profession. Pharmacists, students, professors, and other respectable persons interested in the manufacture of chemicals, were always welcome visitors to his laboratory, where he saw to it that they had every opportunity to witness and inspect the various operations and apparatus employed. His hundreds of papers communicated to the pharmaceutical and medical press testify that he, at least, in distinction from manufacturers in general, had no secret processes—an example which is only too rarely followed by those who have profited by his teachings.

To Dr. Rice it was not given to reach the age which his mental vigor seemed to forecast, for, although in his sixtieth year on the date of his death, May 16, 1901, his mentality succumbed only during the last few hours of his life. Thrown upon our shores during the first years of the war between the States (1862), he became a surgeon's steward in the U. S. Navy, though fitted by education and natural attainments to far more responsible positions than those held by his superiors. In 1865 we find him ill in Bellevue Hospital, New York, where, while convalescent, he voluntarily assisted the apothecary of the hospital, Mr. Frey, so efficiently that the position of this incumbent was tendered him when Mr. Frey had become invalided by age. It is characteristic of the high sense of honor and unselfishness of Dr. Rice—since manifested on numerous occasions—that he declined the position, and that he insisted on retaining his subordinate position and in taking the brunt of the work of Mr. Frey's shoulders as long as the latter remained among the living. Endowed with a wonderful range of useful and scientific knowledge, master of a number of living languages and conversant with most of the others, both living and dead, and possessed of a consummate talent for organization, as well as forcible and clear methods of imparting his knowledge and ideas, Dr. Rice ranks easily with the foremost intellects of the world. What he has accomplished is so well known to pharmacists everywhere that I need say here only that his calling away creates a void not alone in the Department of Public Charities of New York, and as the leading spirit in the present revision of the U. S. Pharmacopœia, but in the domains of pharmacy and of the sciences in general, which it will be difficult to fill in each single direction, and never effectually in all by any single individual. Yet, with all these accomplishments, he was and remained the same modest and unassuming man; willing and eager to serve those who required his aid, and never presuming upon his

superior knowledge and intellectuality. He possessed the happy faculty of raising those with whom he came in contact to his own level, and to make those mentally far his inferiors feel that their opinion also was of value. I earnestly recommend that this association give expression to the sense of the great loss that pharmacy has sustained by the death of these truly great men, and that suitable memorial pages be inserted in the forthcoming volume of our proceedings.

The example set by these eminent members of our profession should stimulate us to improve our professional and ethical relations. So, for instance, we join in a tirade against the inroads made by patent medicine men and manufacturers of trade-named proprietaries, yet do not hesitate individually to offer similar preparations to the consideration of the medical profession. When the so-called proprietary specialties were in their incipency, the Louisville College of Pharmacy adopted a series of formulas for Elixirs and Wines, which, at the time, drove the proprietaries then in vogue from the local market. This association afterwards adopted the same formulas, with some additions—testimony that Kentucky pharmacists were early alive to the importance of fighting the innovation of the specialty makers. Indeed, although the immediate incentive to the "National Formulary" is properly credited to the efforts of the pharmacists of New York and Brooklyn, who offered their "Formulary" to the American Pharmaceutical Association as a nucleus for a National work, this preliminary work of the Louisville College of Pharmacy doubtless had its influence on the character and contents of the National Formulary. But what I particularly wish to emphasize is, that although an apparent unit in upholding the integrity of the National Formulary individuals in our midst do not hesitate to use these formulas, under coined names and possibly slight modifications, for the exploitation of their private interests; and while it is difficult here to draw a line on purely ethical grounds, it is plain to me that co-operation on the lines of the "Golden Rule"—but not as interpreted by David Harum—would have salutary effect in maintaining the dignity of our profession.

Next to the U. S. Pharmacopœia, the

National Formulary

should appeal most forcibly to our sense of responsibility, but it is plain that in this responsibility practitioners of medicine must share equally. Unfortunately the latter, as a class, have not taken very kindly to either of these authorities in recent years, though there are notable exceptions, and much missionary work seems to be necessary to convince them of their importance. Towards this our association has also contributed its mite, through the excellent exhibit of N. F. preparations at the Paris meeting, and, more particularly, through our very efficient chairman of the Committee on Papers and Queries, Mr. Henry W. Preisler, who by his individual efforts has induced the physicians in his own locality to use many of the N. F. preparations, to the exclusion of corresponding proprietaries, and has thus set a practical example of what may be done. Last year your attention was called to an "Epitome of the National Formulary," compiled for the purpose of familiarizing physicians with the preparations of the N. F. The distribution of this little work is possible only through the aid of the state and local associations, and it is therefore a matter of regret that more definite action was not taken at last year's meeting with this end in view. I urgently advise that some action be taken at this meeting that shall assure its wide distribution among physicians of our state, feeling confident that this will be followed by a demand for many of the excellent preparations of the N. F.

Pharmacy Law Amendment.

It has been suggested that the endeavor should be made to so amend the pharmacy law that the sale of morphine and cocaine shall be prohibited except on the written prescription of physicians. However desirable

such an amendment would be, personally I do not consider it wise that the association should take the initiative in any amendment to the law whatsoever during the coming session of the legislature; but the legislative committee should be prepared to do so if it develops that such amendments are likely to be offered by pressure brought to bear by interested parties. I base my objection on the fact that there are now a number of obscure points in our law that must be clearly defined by the Court of Appeals before we can hope to so amend the law as to make it effective in the direction originally designed. The Report from the Kentucky Board of Pharmacy will give you nearer information concerning the points now in legal controversy, to which I invite your attention, so that the committee on legislation can be intelligently instructed. This report, as you will understand, is made for the fiscal year of the Board of Pharmacy, ending with the annual meeting in October. From this you will learn that the total number of registered persons in October was 1865. Of this number, 38 were registered during the year, but during the same period 68 failed to re-register. This delinquency is primarily due to the fact that among the persons registered when the law went into effect many were simply general merchants, who, incidentally handling drugs and supplying medicines, posed as druggists and were entitled to register under the general provision of the law. It seems quite likely that for several years to come there will be similar delinquencies, but becoming less from year to year until the places of these "pharmacists by accident" will be filled by "pharmacists by examination," and, by reason of their examination, qualified in fact as well as by law. When we take into account the further fact that a large proportion of the registered pharmacists of the State are clerks and subordinates, the disproportion between the number of registered pharmacists and the number that have affiliated with us in membership is not so very great, and we might well be satisfied with a membership of between four and five hundred, now on our books, if these could only be prevailed upon to pay their annual dues regularly and promptly.

THE PREPARATION OF CRYSTALS AS MICROSCOPIC OBJECTS.*

Few microscopic objects are more beautiful and instructive than the crystals of various chemicals, prepared in such a way as to be suitable for viewing under the microscope. Most chemists possess a microscope, often a relic of student days, in which owing to a dearth of fresh slides, they take no further interest. The obvious remedy for this state of affairs is either to purchase more objects or to prepare some on one's own account. Where possible, the latter is much the better course to adopt, as good home-made slides are far cheaper, more typical, and instructive than bought ones. These few notes will, I trust, serve as a rough guide to the modus operandi to be observed in preparing this class of objects. The materials are to hand in every pharmacy, the other items required to ensure success, viz., knowledge of the solubilities of the various chemicals under trial and a certain amount of patience, should also be to hand. The other essential requisites are a few thin 3 by 1 inch clear glass slips, some medium thickness round cover-glasses, a small quantity of Canada balsam dissolved in xylol, test-tubes, spirit lamp, glass stirring rod, and a small pipette.

Before starting work it is necessary to get the slips and cover glasses perfectly clean and free from grease. This can easily be done by washing them with ammonia, rinsing them with distilled water, drying them on a clean cotton rag, and finally polishing them upon a piece of chamois leather. When these are ready, one of the three following methods can be adopted to prepare the slide:

The first consists of evaporating a saturated solution of the salt until enough moisture has been driven off to enable the crystals to rapidly form on cooling. The practical application of the process is as follows: Make a saturated solution of the salt in distilled water and deposit a drop with the pipette in the center of a 3 by 1 inch slip, slope the slide to make the liquid spread in a film,

then absorb the superfluous moisture from the side of the slip with blotting paper. Now hold the slide wet side up over the flame of a Bunsen or spirit lamp, at such a distance that the liquid just steams. Continue this until you see a thin film of salt form at the edges, then withdraw, allow to cool, and examine under the microscope. If satisfactory, the crystals can then be permanently mounted by depositing a drop of the cold xylol balsam over the film and covering with a clean cover glass.

Where the salt is insoluble in water, any suitable solvent such as alcohol, chloroform, etc., may be employed; in this case, of course, evaporation will take place rapidly without the aid of heat. Crystals formed from such solutions will probably require a different mounting medium, such as castor oil, or one in which they are not soluble. A method recommended by Dr. Lankester is to dissolve a little gelatin or gum acacia in distilled water and to add to this a few drops of a saturated aqueous solution of the salt. A drop of the warm mixture is then deposited on a slip, superfluous moisture drained off, and the slide is put on one side to cool. With some salts—copper sulphate, iron sulphate, etc., remarkably beautiful crystalline forms make their appearance, frequently in the forms of flowers and fern-like branches. Epsom salts, chlorate of potash, bichromate of potash, and, in fact, any salt soluble in water will lend itself for preparation by the above process.

The second principal method is by fusion. Its application is necessarily more restricted than the foregoing, but by this means some very effective slides may be prepared. The process is equally simple, but the results attained will not be so uniformly successful. A good substance to experiment with is salicine. Place a small quantity in the center of a thin slip and heat it over the flame until it just fuses, withdraw it from the heat before it chars, and allow it to cool gradually. If successful, small circular plates or rosettes will appear on the film, and these may be mounted in the usual way in cold xylol balsam. A good slide of this description, viewed with dark ground illumination, or by polarized light, will fully repay any trouble involved in preparing it. This method is useful in enabling one to prepare totally different physical forms from the same salt. With salicine, for instance, an aqueous solution deposits needle-shaped crystals, quite distinct from the circular form obtained by fusion. A point to be observed in using this process is to avoid having too much of the salt on the slip, as on cooling, the film, if too thick, will probably star and crack. If the film should be too thick for viewing as a transparent object, it will often make a good opaque one by pasting a circle of black paper on the under side of the slide.

Another class of objects, prepared in a similar way, are crystals of fatty substances, spermaceti, hard paraffin, etc. It is only necessary to place a small piece on a slip and warm it. When melted press down on it a cover-glass, the crystal forming as the mass cools. These slides cannot compare from an artistic point of view with those obtained from salts, but are interesting from the fact that the actual formation of the crystals can be watched under the microscope any number of times by simply warming the slide before viewing it.

The third principal method is still more limited in application, being confined to those substances which are easily volatilized and crystallize on cooling. Preparations of slides by sublimation may be carried out as follows: Take a dry narrow test-tube and place in it any suitable chemical—benzoic acid for instance. Hold the tube over the flame until the acid volatilizes, now invert tube and stand it on a cold 2x1 in. slip. The characteristic crystals will form on the part of the slip covered by the tube, and, if satisfactory, can be mounted in the usual way. Camphor, arsenic, and many others will suggest themselves as suitable for preparing slides in this way.

The three methods described will practically cover the whole ground of preparing crystals for the microscope, and with the expenditure of a little time and patience will enable anyone to materially increase, at a nominal cost, his collection of slides. If mounted in a suitable medium, and preserved from undue heat and light, these slides will be permanent; any change which may take place in the forms of the crystals may be put down to the solvent action on them of an unsuitable medium.

* By S. E. Dowd, M. P. S., in the Pharm. Jour. Nat. Dr.

A PLEA FOR THE CLERK.

By J. P.

How often do we hear the remark from uninterested parties, speaking of certain proprietors of retail stores, "I don't know why it is so, but Mr. Blank can't keep a clerk." Especially is it noticeable in our own drug business. I have often wondered why it is that so many drug clerks are constantly changing their locations. I meet them to-day. In the next few minutes' conversation which ensues I find that they are in the employ of Mr. B. I meet them again in a few weeks to find that they have again changed hands. Now, ask myself, why should this be so? "Oh!" some one remarks, "easily enough explained. The fellows you refer to are rolling stones, wouldn't hold down the finest job in the world if it were tendered them." True, to a certain extent, with a comparatively small number of drug clerks, but do you know that most of the boys to whom I have reference are steady, hard working fellows, who only wish to be given a half-way chance. Who, then, is to blame? I claim it is the men for whom these clerks are working.

In my own short career, I have been in the employ of several druggists. I have found as much difference in the attitude of these men toward the clerks in their employ as there is a difference between day and night. I well remember the firm for whom I first worked. The one partner was a quiet, gentlemanly fellow, at peace with every one, always firm with his clerks, but, above all things, kind to us. For such a man we boys would work ourselves sick. The other partner meant all right, perhaps, but he went at it in the wrong manner altogether. Young fellows went into that store with a determination to win, but were gradually driven out one by one in the course of a year or two by the slave driver, as we called him. From early morning until late at night, it was do this, do that, can't you find anything to do? and remarks along the same line. Note the comparison. Of eight clerks who left that store from the same cause, all had a kind word for Mr. M. and vice versa for Mr. J.

My second attempt was with a young German, not long in business. He had a way of always sneaking up behind you in whatever part of the store you might be or whatever work you might be engaged in, topping it off on every occasion with some sarcastic remark, that cut deep into the clerk so addressed. He seemed to forget that he had ever been a humble clerk himself. He was the great I am and knew it all, while you knew nothing. He kept me two weeks and wanted to give me a substantial raise to keep me longer, but money don't talk where peace of mind is absent. He meant all right, but—

My next experience was with a doctor proprietor. Here it was that I first began to realize that there might be a little pleasure in the drug business after all. The doctor, above all else, was kind to his clerks. He showed us in various little ways that he appreciated what we did for him. If there was anything in particular going on in the city he generally managed to let us see it, in fact, he was one of those good wholesaled fellows that we so often long to come in contact with. And he lost nothing by it, for pretty small the clerk must be who wouldn't put in an extra lick occasionally for an employer like that. But all good things must end. The doctor died; poor fellow, and I was forced to look elsewhere.

My next adventure was with a man too miserable to mention; close, miserly, so much so, in fact, that he would dock you for a half day's sickness, and bent on nothing but securing another dollar in some illegitimate transaction. His trade got away from him and he had to sell out a fine store in a splendid neighborhood on account of the reputation for meanness which he had acquired.

Another young fellow, new in business for himself, but old in a knowledge of it, was my next employer. He is my ideal of what an employer should be. He expected his work well done and appreciates the well

doing of it. He is not afraid to lend a hand himself when the occasion arises. He doesn't keep a fellow every night until the last minute because his agreement calls for it, as some fellows do, rain or shine, business or no business. This boss places his confidence in your keeping; gives you to understand that with you rests a great deal of the success of his enterprise. And don't you know that I would work my hide off for a man like that. Do you think that I'd kill time on him when he is absent? Would I mind working a little overtime to accommodate him or putting myself out to please him? No, indeed, not in the least. But my point is this, why can't all employers at least try to follow out this example? You have clerked yourself, you know how it goes against the grain to be kicked and cuffed. The hours are long and tiresome, the recompense small enough goodness knows. A little kindness now and then goes a long way toward smoothing it all down. You proprietors know that kind fair treatment always got more work out of you when you were clerking. Why can't you get more work from your own help by the same treatment? Try it and note the result.

HOW TO MAKE A DRUG STORE PAY?

By ERNEST C. WRIGHT, River Point, R. I.

While waiting for a car the other day I stepped into a drug store and asked to see some tooth brushes. The clerk, a bright looking young fellow, went to the case and took a tray of brushes from it, intending to put them on top of it so that I might examine them. A glance at the top of the case made me wonder how he was going to do it. A hedge of twelve-ounce bottles, exactly one inch apart, surrounded the top of it, and inside of this palisade were two easels holding headache powders, while in front and on both sides of them were arranged in circles small bottles of tooth powder and liquid. Suspended above was a large card with the words, "Our own Beef, Iron and Wine." This card completely cut off my view of the clerk's face. He took the tray and tried to place it in a small space made by the sale of a bottle of tooth powder. His sleeve caught on the palisade of twelve-ounce bottles and tipped one over, sending beef after iron and wine across the case. Then calling the boy to clean the case he proceeded to move the bottles and form an empty square, into which he placed the tray, and began telling the prices. My car came along, however, and I had to go; thus he lost a sale, though it was no fault of his.

How many druggists have this method of displaying their goods, causing great inconvenience, both to clerks and customers. Has this ever happened to you? If not, it may some time, if you continue this foolish way of displaying your goods. Sales like this may be lost and you will never know it. Instead you will imagine you are showing your goods to great advantage. Some goods, like cough tablets or cachous, will sell in this way, but staple goods like emulsion of cod liver oil or sarsaparilla will not, for people as a rule are not reminded by seeing sarsaparilla that they need a tonic. When they need it they know where to get it, and will call for it. Bulky packages spoil the looks of the store. Why not place something new on the corners of the case where they will attract attention and also be out of the way.

A poor policy some proprietors have is in allowing their oldest clerk to dress their window. Younger clerks may have a great deal more taste, but they do not have a chance to show it. So the oldest one goes on, using the same display at least four times a year. This gets so common that persons across the street seeing what is in the window have no desire for a closer view, as they "have seen it before." This same man after he has decorated for a while begins to think that no one else knows quite as much as he does about arranging windows, but he takes trips to other towns "on business," and stands and takes

mental notes of the druggists' windows, then comes home and fills the windows with his original ideas.

Proprietors, why not give all your clerks a chance at the windows, and note if there is not a difference in the sales as the different clerks have charge of them.

One store that I know of not far from here shows the poorest taste for business window displays of any store I ever heard of. Quite often in summer, spring tonics are shown. In the spring flannel chest and lung protectors are displayed, while just as the law goes on, cartridges and such firearms as they carry are used.

Now if this store, which carries a number of side lines, would fill the window with pens, pencils and cheap paper tablets and note books about the second week in September, it would probably get all the school children's trade. For without doubt all the stationery used last year at school has been lost or used up. While the children will need a new supply, show them that you have it. Introduce some little novelty that will attract. If you wait too long the children will be supplied by the 10-cent store on the corner.

One more thing about windows. Does your clerk put all your stock of an article into the window? In a store where I once worked the clerk who dressed the windows was fond of making a great show. He would not leave one sample of the stock he used for us to sell. Our sales had to be made from the window. I remember particularly his displays of cutlery. The knives, razors, and scissors were always placed in front and a background was formed of shaving-mugs and soaps. When a customer wanted to buy a knife we had to climb into the window and slowly pick our way between rows of scissors stuck through black paper, and return with a handful, and invariably the customer wanted one of the knives we did not bring, thus making a second trip necessary.

Our smokers' displays were arranged on the same principle. All our pipes had to be sacrificed to make a large pile in the center, while packages of tobacco were piled around it. It is expected that a man will want to draw through at least a dozen before he finally finds one to suit him; so a larger number of trips to the window was necessary when these displays were used.

Here is a trade-increasing scheme: have you ever tried it? I have, and find that it works well. Perhaps you have a white pole in front of your store, where the cars will stop. Sometimes you may see a lady and gentleman standing in your doorway waiting for a car. It may be very cold outside, but they do not like to come in because they don't wish to buy anything. Now is your chance to make a customer. Step to the door and ask them in; not in a business way, but as you would at home. Tell them it is warmer inside, and that they can see the car in time to stop it. Talk to them about current events, if you are not too busy. Don't mention your business, for they would probably think you asked them in solely to get them to buy, in exchange for the shelter they are enjoying. Perhaps before the car comes the gentleman will buy the lady a box of chocolates, and himself some cigars. I have tried this, and find that it pays. Often a person waiting for a car will see some cough tablets exhibited on the showcase, and as it costs only a nickel he buys a box. He was not in need of any cough tablets; he just bought them because he saw them.

I hope these little hints will help some druggist. I have learned them from hard, hard experience.

RED CINCHONA BARK.

We notice from time to time that red cinchona bark is reported to contain an unusually high per cent. of total alkaloids, and the relative proportion of ether-soluble alkaloids is also quite high. Recently there was submitted to us for examination a sample

of commercial red cinchona bark, which contained 7.59 per cent. of total alkaloids and 4.2 per cent. of ether-soluble material. The question naturally arose, whether this really was red cinchona bark; and an examination showed that it appeared to be correctly named.

Some time ago, we came across a package of red cinchona having the assays marked on the label namely, containing 11 per cent. of total alkaloids and 8.5 per cent. of quinine. The sample was assayed by a modification of Keller's method, and found to contain only 5.5 per cent. of total alkaloids, which certainly precluded the possible presence of 8.5 per cent. of quinine.

It is well known that cinchona barks are very difficult to extract completely. It seems almost impossible to bring about such a condition as to cause the solvent to so penetrate the cellular tissue as to completely deprive the bark of all its alkaloids. So far as we are aware, the modified Keller method, or Lyons' General Process of assay, are among the best available at present; but if any one has a method which is so much superior to ours that they are enabled to abstract 100 per cent. more of the alkaloids than we are, we would certainly be very glad to learn of such a process. We are constantly looking for the best possible available methods for assaying, and arriving at the potency of the various drugs and their preparations.

MICHIGAN BOARD.

The Michigan Board of Pharmacy held its annual meeting at Star Island, June 17 and 18, 1901. There were 92 applicants present for examination, 58 for registered pharmacist certificate and 34 for assistant papers, 34 applicants received registered pharmacist papers and 24 assistant papers. Following is a list of those receiving certificates:

Registered Pharmacists:—P. M. Bennett, Detroit; H. E. Brummer, Bay City; C. C. Chapin, Linden; George N. Cox, Hart; W. J. Cook, Armada; M. F. Conway, Chelsea; Ed. N. Cote, Baraga; E. D. DeLaMater, Ann Arbor; T. H. Dissozway, Ann Arbor; R. C. Eaton, Otsego; H. H. Eatough, Gladstone; T. P. Edmonds, Bangor; William Frank, Detroit; C. J. Gellenus, Detroit; H. T. Hennessey, Yale; E. S. Hauenstein, Ann Arbor; Edw. Harrison, Sault Ste. Marie; F. M. Leslie, Ann Arbor; Anthony Loeher, St. Johns; E. J. Mansfield, Otsego; F. V. Masilko, Fon Du Lac, Wis.; Carl F. Mayer, Ann Arbor; C. W. Parker, Napoleon; Wm. A. Rose, Jr., Detroit; M. J. Ryan, Clifford; G. G. Stillwell, Ann Arbor; H. I. Sanford, Chicago, Ill.; F. E. Tompkins, Fostoria; S. M. Wesolowski, Detroit; D. L. Watson, Jr., Detroit; W. D. Whitehead, Imlay City; R. A. Woodard, Lapeer; A. L. Weekes, Detroit; Parke Whitmore, Allegan.

Assistant Pharmacists:—H. L. Becker, Jr., Detroit; W. J. Braidwood, Almont; Mary L. Brown, St. Joseph; R. J. Coigrove, Detroit; Chas. H. Dawson, Hastings; Frank G. Farrall, Big Rapids; W. J. Fowley, West Bay City; F. E. Hutchins, Grand Rapids; Stanley E. Hart, Detroit; L. J. Janaeck, Detroit; J. J. Kelly, Big Rapids; Othmar Lyons, Detroit; Letha E. Mann, Pinckney; D. J. McDonald, Detroit; Wm. Michaels, Yale; Archie Peasley, Port Huron; E. W. Lollard, Merrill; E. A. Ryan, Newberry; G. H. Trestain, Detroit; S. R. VonZellen, Skanee; A. A. Wheeler, Detroit; C. H. Warner, Marlette; Marie Von Borries, Louisville, Ky.; Alf. G. Walker, Ann Arbor.

All members of the board were present at the meeting, except L. E. Reynolds. The members of the board are as follows: A. C. Schumacher, Ann Arbor, president; Henry Heim, Saginaw, secretary; W. P. Doty, Detroit, treasurer; L. E. Reynolds, St. Joseph; John D. Muir, Grand Rapids. The next meeting of the board will be held at Marquette, Aug. 28 and 29, 1901. The above officers were re-elected for the ensuing year.

HENRY HEIM, Secretary.

THE SOAP CONTROVERSY.

Cincinnati, U. S. A., July 6, 1901.

To the Editor:—Will you kindly publish the enclosed letter in answer to the letter from Mr. I. N. Heims, which appeared in yours of June 20th. As we feel that Mr. Heims dodged the issue in his letter of June 10th, which was published by you on June 20th, we would like you to publish the statement made below.

We are surprised that Mr. Heims should accuse us of any lack of courtesy and consideration, simply because we did not notify him that we had written a letter for publication in your valued publication. We did not think it necessary to notify Mr. Heims, as we thought that all of the up-to-date retail druggists read *The Pharmaceutical Era*, and we thought that either Mr. Heims or some of his associates would certainly see this letter of ours, which appeared in your issue of February 7th.

Mr. Heims devotes most of his time to explaining why the Eureka Soap Company should sell Craddock's Medicated Blue Soap only to the drug trade, but does not give any reason why he declined to give our salesman a card, when this salesman was selling nothing but the Andre Dunois Line of toilet soaps, which line of toilet soaps is sold exclusively to the drug trade. When Mr. Heims refused to give our salesman, selling the Andre Dunois Toilet Soap, a card, he simply forced all of the members of his association to purchase toilet soaps from factories which sell their entire out-put to the general trade and absolutely ignore the drug trade. We would like to know how Mr. Heims expects to benefit the members of his association if he is going to prevent them from purchasing goods which are sold only to the drug trade, when it is impossible for them to buy this same class of goods from any other manufacturers except those selling to all classes of trade.

We do not think it is a question for Mr. Heims or the retail druggists of the United States to decide whether or not the Eureka Soap Company have made a mistake in selling Craddock's Medicated Blue Soap to the general trade, but we do think it is highly important for the druggists to make up their minds whether they wish to buy a line of toilet soaps which are sold only to the drug trade, or whether they wish to buy the same goods which are sold to all classes of trade.

In conclusion, we will say that we are very anxious to sell the Andre Dunois line to every retail druggist of the United States, but if they prefer buying soaps which are sold to all classes of trade, then we will take our chances with the other manufacturers on our general line of soaps, but we are glad to say that the druggists all over the United States are giving us a liberal share of their patronage, and we believe that sooner or later all of the better class of retail druggists will handle the Andre Dunois Line of toilet soaps exclusively, with the exception of some advertised brands which they will always be forced to carry.

Thanking you for giving this article space, we remain,

Yours very truly,

THE EUREKA SOAP COMPANY.

GUARANTEES NOT ALWAYS SAFE.

A British proprietary medicine concern has just had an experience which goes to show that it is not always safe for proprietors of secret remedies to guarantee cure. A woman who submitted to the company's treatment recovered \$250 and costs from the concern, because it failed to cure her, after it had promised to do so. The moral of this little tale is that concerns of this nature should be very careful in the wording, the exact phraseology, of their guarantees, and especially the drawing up of the conditions upon which the guarantee is based.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the *Era*. Copies of these may be obtained at ten cents each.

Lead Arsenate and Paris Green for Spraying.

(J. C. H.)—The Department of Agriculture at Washington has published considerable information concerning lead arsenate and its use as an insecticide. According to the directions supplied by the department, lead arsenate is prepared by combining, approximately, 3 parts arsenate of soda with 7 parts acetate of lead. From 1 to 10 pounds arsenate of lead are used with 150 gallons of water; 2 quarts of glucose being added to cause it to adhere better to the leaves. From 2 to 5 pounds are said to answer for most larvae, though we are not informed as to the exact quantities or the strength of the solution to be employed as an insecticide against the cotton-boll weevil. Commercial arsenate of lead costs about 10 cents per pound, and it can be obtained through almost any jobber upon order. It is practically insoluble in water.

Paris green may be prepared for spraying by first making it into a thin paint with a small quantity of water, and then adding powdered or quick lime equal to the amount of poison used. This mixture is then strained into a "spray-tank," a pound being used with from 100 to 200 gallons of water. The stronger mixtures are for resistant foliage, such as that of the potato, and the weaker for sensitive foliage, as the peach and plum.

The Texas Agricultural Experiment Station has spent some time investigating the cotton boll-weevil, we believe, and it might be well for you to write to the Director of the station for information and we suggest you secure a copy of *Farmers' Bulletin No. 47, "Insects Affecting the Cotton Plant,"* by Dr. L. O. Howard. It is published by the Department of Agriculture at Washington.

Chicken Cholera.

(A. M. C.)—The following remedies and treatment, taken from the *Era* Formulary, have been proposed: Take of crystals of carbolic acid, 2 ounces; hyposulphite of soda, 2 ounces; dissolve in 1 gallon of clean water; add of this solution 1 or 2 ounces to the gallon of water that the fowls drink, or mix it in the same proportion in a mash made of ground grain or other food. This not only relieves when sick, but is an excellent preventive. Chicken cholera can only be introduced by direct importation of the virus, either with fowls or by birds, rabbits or insects carrying it from neighboring farms. The virus is never carried through the air. When more than one fowl dies within a short period cholera should be suspected. Separate the fowls as much as possible, and where disinfectants may be freely used. If the peculiar diarrhoea sets in, kill the sick ones and change the remainder to fresh ground. The infected excrements should be carefully scraped up and burned, and the enclosure thoroughly disinfected with a 1/2 per cent. solution of sulphuric acid, or a 1 per cent. solution of carbolic acid, which may be applied with a common watering pot. Burn the dead birds. The germs of the disease are taken into the system only by the mouth, and therefore, the watering-troughs and feeding-places must be kept perfectly sweet by frequent disinfection with one of the solutions mentioned. Three weeks after the last case of sickness, the fowls may again be placed together in a disinfected run. Keep them, however, under observa-

tion for two or three months before allowing them to again roam over the old places. See also April 11, 1901, Era, page 394.

Massa Pilularum Cynoglossu.

(B. & S.)—The above title is synonymous with "pilules de cynoglossu opiacées," or "pilules de cynoglossu" of the French Pharmacopœia, the official formula being as follows:

Extract of opium	10 grams
Hyoscyamus seed	10 grams
Hound's-tongue root	10 grams
Saffron	4 grams
Myrrh	15 grams
Frankincense	12 grams
Castor	4 grams
Honey	35 grams

The extract of opium is warmed on a water-bath and thoroughly mixed with the honey; the other substances previously powdered and mixed are then incorporated, the whole made into a homogeneous mass and finally divided into pills of the desired size. In France it is a somewhat general custom to keep pill masses in bulk, in powder form, such masses being termed "masses pilulaires."

A modification of the above formula is given by Hager as follows:

Hound's-tongue root	6 ounces
Hyoscyamus seed	6 ounces
Gilbaniu	10 parts
Opium, of each	10 parts
Myrrh	15 parts
Storax	15 parts
Cinnamon	15 parts
Cloves, of each	5 parts

Reduce each to a fine powder and mix.

Tooth Paste.

(R. S.)—You should read the remarks on the manufacture of tooth pastes in the Era of June 21, last year, page 671. Here are some other formulas from various sources:

(1) Precipitated chalk	16 ounces
Armenian bole	6 ounces
Powdered arca nut	3 ounces
Powdered sugar	3 ounces
Oil of cloves	½ dram
Oil of cinnamon	20 minims
Glycerin	2 ounces
Rose water	q. s.

Mix the powders, sift through a fine sieve, sprinkle, on the perfumes and again sift; then work into a mass with the glycerin and rose water.

(2) Cherry Tooth Paste.—Mix thoroughly in a mortar powdered orris root, 2 ounces; myrrh, 4 drams, and pumice stone, 2 ounces, adding sufficient solution of carmine, N. F., to tint; add 30 drops oil of cloves, 1½ drams oil of lemon, 8 drops oil of rose and 4 ounces of honey and continue the trituration until a homogeneous paste results and the flavor is fully developed.

(3) Arca Tooth Paste.—Precipitated chalk, 8 ounces; powdered arca nut, 4 ounces; white castile soap, 2 ounces; powdered orris root, 4 ounces; armenian bole, finely levigated, 2½ drams; glycerin, 2½ fl. ounces; rose water, 2½ fl. ounces; oil of rose, 4 drops; oil of clove, 5 drops; oil of pimenta, 5 drops.

Iron Pyrophosphate and Phosphoric Acid.

(Z. O. F.)—Can the following be dispensed either as a cloudy mixture?

Strychnine sulphate	1 grain
Iron pyrophosphate	3 drams
Glycerine	1 ounce
Dilute phosphoric acid	1 ounce
Elixir of calisaya bark	2 ounces
Port wine, enough to make	8 ounces

When this prescription is compounded precipitation occurs, mainly due to the incompatibility between the iron pyrophosphate and phosphoric acid. If elixir of calisaya and port wine which have not been detannated be used, there will also occur some precipitation. The first reaction can be avoided by using for the phosphoric acid an equal amount of dilute metaphosphoric acid of the National Formulary. It remains, however, for the prescriber to decide whether such substitution shall be made. The second reaction can, of course, be overcome by using an elixir and wine which have been detannated.

OTTO CLAUS,
2625 N. 9th Street, St. Louis,
Pres. Missouri Phar. Association.

Mistura Camphoræ.

(B. X S.)—What is the formula for "mixture camphoræ" of the German Pharmacopœia? The German Pharmacopœia contains no preparation under this title. In some of the older pharmacopœias "mixture camphoræ" is given as a synonym for "aqua camphoræ" or camphor water, and it may be that this is the formula wanted. There are also a large number of formulas for various combinations under this name; two or three of those used in European countries are as follows:

(1) Camphor, powdered	2 grams
Gum arabic, powdered	2 grams
Alcohol	6 grams
Rub the mixture with	
Distilled water	160 grams
(2) Camphor	1 gram
Gum arabic, powdered	2 grams
Decoction of linseed	250 grams
Yolk of egg	No. 1

(3) Sprinkle 4 grams powdered camphor with 1 gram of alcohol, then mix with 105 grams of distilled water and strain through lint (As will be noticed this preparation is practically a saturated solution of camphor and similar to the camphor water of the U. S. Pharmacopœia).

Pineapple Snow.

(W. & P.)—One of the largest dispensers of soda water in this city informs us that the fountain drink "pineapple snow," is a mixture of shaved or cracked ice, cream and pineapple syrup with or without carbonated water, the whole being topped off with shaved ice and dispensed in a glass with a spoon. Another dispenser employs the following formula:

Pineapple syrup	1 ounce
Powdered sugar	1 teaspoonful
Shaved ice	½ glassful

Add some carbonated water, stir vigorously in a shaker, strain into an 8-ounce glass, fill the latter with the coarse stream of carbonated water, stir again, and add a piece of pineapple or some crushed pineapple.

Mineral Disinfectants.

(B. & S.)—"What Mineral products are on the market beside cresylic acid or crude carbolic acid that are used as disinfectants, antiseptics, etc., and are not poisonous? They may be prepared for use either alone or by saponification." Can some reader give the information?

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

THE BORDEAUX MEDICAL COMPANY.

DRUG SWINDLER HELD.

Druggists Complain That The Firm Does Not Fulfill Its Contracts With Them—C. B. Frazier and L. S. Wandell of the Holtin Chemical Co., the Officers of the Bordeaux.

On page 453 of the Era of April 25, 1901 was printed a story relating to the Bordeaux Medical Company, which is seeking to establish a market for a preparation styled "Regenero." Of late the officers of the Company, C. B. Frazier and L. S. Wandell, who were lately connected with the now insolvent Holtin Chemical Company, have been working in Harlem. They have succeeded in placing gross lots (\$24 worth) of "Regenero" in several stores uptown. Mr. Wandell is the salesman for the Bordeaux Company. W. F. Rawlins, One Hundred and Thirty-Fifth street and Eighth avenue, J. F. Comerford, 921 Columbus avenue and Harvy Spriggs, One Hundred and Thirty-third street and Amsterdam avenue and 91 Lawrence street, have lots of "Regenero" which they would like to get rid of.

Mr. Wandell told them they could sell it easily by the Bordeaux Company's plan. This was that the Company would circulate 5,000 pamphlets with the druggist's name on in any territory he might choose to select. The person who received the pamphlet was to write his or her name on it and send it to the druggist who would then know that the writer was desirous of trying the remedy.

When Messrs. Frazier and Wandell went to Mr. Spriggs to see how "Regenero was going?" they were apparently surprised to learn that it had not moved a peg since its arrival at Mr. Spriggs' store "and its not likely to" said Mr. Spriggs.

"Have you received any requests for samples?" queried one of the promoters.

"Between 50 and 100" was the reply.

"Well, you're doing nicely," said one of the men, "you just wait. You'll sell all you've got and want a lot more. Regenero's the thing in New York." Frazier then presented his bill for \$24.00 on Mr. Spriggs who promptly refused to pay. Then the two began pleading but to no purpose. Finally Mr. Spriggs ordered them out of his store and they went, but Frazier shortly returned. He tried his persuasive powers once more but failed and then he threatened suit. Mr. Spriggs told him to get out. He got. Wandell appeared in a few minutes later with a proposition. He would discount the bill \$5 if paid at once. No go. He would accept \$5 on account. No go. He would take \$1. Then Mr. Spriggs took him by the collar and led him toward the door. He invited Mr. Spriggs outside, but the invitation was declined.

Last week one of the consulting physicians Dr. Ferd. J. Hartmann, endeavored to collect the bill. Dr. Hartmann belongs to the large (?) staff of consulting specialists in the employ of the Bordeaux Medical Company. Incidentally Dr. Hartmann has a little scheme of his own which he calls the "Medical Relief Club." He furnishes advice to members as low as 25 cents and his medicines are 3 cents a dose.

The Bordeaux Medical Company's offices are located corner One Hundred and Thirtieth street and Park avenue.

Alexander Hildreth Martyr, a Greek, Arrested for Having Stolen Drugs in His Possession, Held for Grand Jury—John A. McGill, of Chicago, the Complainant.

A story of drug swindling that began four years ago, was ended in Centre Street Police Court, Wednesday afternoon, July 3, when Alexander Hildreth Martyr, who says he is a Greek, was held for the action of the Grand Jury on a charge of grand larceny. Martyr was arrested Monday, July 1, at the instance of the Mooney and Boland Detective Agency, whose men had been trailing him at odd intervals for the last four years. About that long ago John A. McGill, of John A. McGill & Co., Chicago, discovered that an imitation of one of his remedies was being sold to wholesale druggists. The Mooney and Boland agency ascertained that Martyr was responsible for the fraud, and were ready to arrest him, when he disappeared and it was afterward learned was in Mexico.

About nine months ago Mr. McGill learned that he was being systematically robbed. He again consulted the Mooney and Boland Agency, who soon discovered that Martyr was again operating. Martyr was shadowed and was found to be offering McGill's goods to wholesalers in the Eastern trade. The detectives believed that Martyr was still dealing in the spurious article until they had a sample, taken from a quantity sold to the Eastern Drug Co., of Boston, Mass., by Martyr, sent to Chicago, for analysis. Mr. McGill sent back word that the stuff was genuine and the detectives started to round up Martyr. Martyr advertised for a woman partner and the Mooney and Boland people furnished him with one. Then Martyr wanted money and his partner put up \$1,000 taking as security \$1,200 worth of McGill & Co.'s preparations. The deal was closed at Martyr's room, 179 West Forty-seventh street, and immediately thereafter Martyr was arrested.

The goods he had were without revenue stamps and some were without labels, while a quantity of McGill's circulars were found about the room.

Martyr told a story to Magistrate Deuel of buying the goods in good faith of one J. H. Brown, but this is known to be false.

Martyr is "a new one" to detectives in the drug trade. He is about 5 feet 7 inches tall, rather stout, and has dark brown hair, slightly curly and worn in pompadour style. He has a light brown mustache, dark circles around his eyes and an extremely long face. Although Martyr says he is a Greek he speaks in clear, full English without trace of an accent. His eyes are black and have a mild expression. They are inclined to be restless.

CHARGED WITH VIOLATING PHARMACY LAW.

Samuel Goodman, who resides on the lower East Side, was arrested Thursday, June 27, charged with violating the pharmacy law. The charge is made by the Eastern Branch of the Board of Pharmacy and is to the effect that Goodman attempted to secure registration as a licensed pharmacist through false representations. In the West Side Police Court, Goodman was held for trial for the Court of Special Sessions. After spending several days in the Tombs he was released in \$200 bail, and his case will probably come up some time in September. In the meantime the inspectors of the Board are looking up several cases similar to that of Goodman's, and it is possible that other arrests may follow. It is also possible that an additional charge of perjury may be made against Goodman.

Price Cutting at Troy, N. Y., Stopped.

The cut rate war which has been raging among the druggists at Troy, N. Y., for the last two months, has stopped and peace has been declared. This happy result was secured by the efforts of the Troy Pharmaceutical Association. When this society was formed in the early part of this year, a regular schedule of prices, much the same as the one adopted by the Joint Conference Committee here, was agreed upon and on a certain day became operative. It worked successfully for a short time, when one of the druggists who had an established reputation advertised a whole list of staple goods at cut-prices. A meeting of the other druggists was called and it was decided to meet the cutter on his own grounds. Subsequently advertisements of other druggists appeared, with prices just a few cents under the cutter. When he cut thereafter all the others cut below him, and so it went until he was compelled to call for quarter. Then for some time prices were kept at cost, but gradually they were raised until the original schedule was reached and advertising has ceased. The situation is in complete control of the local association and the druggists are making money.

PASSED THE BOARD.

Of the 162 persons who tried the June examination by the Eastern branch of the Board of Pharmacy, the following have been passed: Harry N. Blair, William J. Cremin, Chanan A. Deshell, Oscar Ditmar, Fred H. Ehrhardt, Kalman Eisenbud, Adolph Englehardt, Richard Platow, Richard J. Gannon, Benjamin Glueck, John B. Keller, Frederick A. King, William Kruskal, David Letaw, Howard N. Lincoln, Marriner H. Manson, Louis Monk, Timothy J. Murray, James R. Oldham, Harry T. Peck, Abraham Progebn, Michael Raehlin, Louis P. Razney, David Robinson, John Rovenger, Charles Rubin, Charles P. Smith, Charles P. Spies, David VanBuren, Henry Weber, Milton Uffelder, Leo N. Blum, Willis G. Babeock, Andrew J. Colton, William E. Cooper, Alois A. Scorba, Alva Ellsworth, Charles P. Hart, Max Ingerman, Otto W. Schafer, Charles W. Taft, Emil Merkhofner, Walter S. Wallace, all as licensed pharmacists. Donald J. Sutherland received a druggists license and Gustav H. Tafel passed the homeopathic examination. There will probably be a few other names to be added to the above list as the board has not completed rating all the papers.

Druggist Charged with Giving Bad Check.

Michael A. Levittan, druggist at 1901 Lexington avenue, was arrested Tuesday, July 2, charged by the Adams Express Company with giving a worthless check. Mr. Levittan has a branch office of the express company in his store, and the company states he gave it a worthless check to settle an account. Mr. Levittan was called up on the telephone by the Era and asked to explain. He replied, "It's a mistake." He was asked to explain the mistake, but replied again, "It's a mistake." Further communication was cut off by Mr. Levittan.

Jersey City Druggists' Association.

The next meeting of the Jersey City, N. J., Druggists' Association will be held Tuesday, July 16, and promises to be very interesting. Reports will be given by members who attended the recent meeting of the New Jersey State Association, and the local situation regarding the N. A. R. D. movement will be discussed.

NOTES.

—Evidences of the intense heat of the last few days have been prevalent in the drug trade. Soda water has been sold as fast as it could be dished out. In one downtown store 6,000 glasses were dispensed during the day. It has been noticed that there are not many cool drug stores in the city. In one of the real hot ones the other night a customer called for a jar of clam bouillon. The store is lighted by large incandescent gas burners and the clam bouillon is kept on the top shelf. The clerk handed out a jar, the customer examined it and handed it back with the remark: "I don't want clam ehowder." This is the hottest story yet reported, but there may be others.

—Druggists, generally, are complaining of a lack of business and attribute it to the warm weather. "I never saw such a run of hard luck," said an uptown West Side druggist last week, "first, we had rain enough to drown out the cream of our spring trade and now before we get in a fair way to recuperate, along comes this hot spell and drives all our customers away from us." One druggist on Madison avenue has threatened to close his doors, business has been so poor.

—The friends of Wm. Townley Case will be very glad to learn that his health has very much improved during his visit to England. He writes home that his doctor advises him he will be well enough to return in a short time, and he expects to sail for this country within a few weeks, on a slow steamer.

—The Palmetto Chemical Co. has been bilked by the notorious drug swindler, Henry P. Crosher, to the tune of \$296. The company has secured judgment against Crosher, but there is small possibility of a collection being made.

—The Hyde Drug Co., of Malone, N. Y., has incorporated. Capital \$25,000. Directors, C. W. Hyde, J. E. Rogers and M. C. Ransom, all of Malone. Mr. Hyde is a well known retail druggist of Malone.

—In the Era of June 27 in a paragraph relating to the incorporation of the Herba-Rheuma Co., an error was made in the spelling of the company's name. It is now correctly given, The Herba-Rheuma Co.

—Eugene Marucco, who, for the last five years has managed F. Francilli's drug store at 223 Grand street, sailed on the Dutchess of Genoa for Italy yesterday. He will remain away three months.

—Chas. F. Streichert, with Hegeman & Co., 196 Broadway, left last Saturday for a two weeks' vacation in Michigan. His parents live in Saginaw, a city he has not seen for nine years.

—Charles L. Gleason, manager of the crude drug department of the Chicago office of Parke, Davis & Co., is in the city for a short while on business. Mr. Gleason was married recently.

—R. W. Phair, of R. W. Phair & Co., importers of drugs and chemicals at 14 Platt street, has returned from a European trip during which he visited England, France and Germany.

—Frank N. Pond, of Pond & Bowes, Twenty-fourth street and Ninth avenue, has gone to Buffalo and the Pan-American Exposition. He will be away about a week.

—Frederick E. Bangham, managing clerk for J. C. Gallagher, 466 Grove street, Jersey City, has gone on his vacation. He will stay two weeks at Pompton Lakes, N. J.

—B. Kramor, formerly manager for Meyer Bros., Third avenue and Seventh street, will open a new store at 394 Amsterdam avenue, Monday, July 15.

—George Gregorius, druggist at Thirty-first street and Eighth avenue, will leave next week for Germany where he will spend some time.

—Peter R. Lance is in town for a few days. He says he has been in hotter places than New York, but he doesn't mind the weather.

—B. F. Warren has moved his store from 394 Amsterdam avenue to Broadway, between Seventy-eighth and Seventy-ninth streets.

—The next meeting of the Eastern branch of the State Board of Pharmacy will occur in this city during the month of October.

—W. E. Jenkins, representative for Schieffelin & Co., in the Virginias and Carolinas, is in town on his semi-annual visit.

—John McKesson, of McKesson & Robbins, returned last week from a three months' European trip.

—Herbert Turrell, of the local offices of Parke, Davis & Co., spent a few days last week in Boston.

—G. DeBlasis has opened a store corner Oak and Oliver streets.

—The Williams Drug Co.'s store, Williams, Arizona, was completely destroyed by fire Tuesday, July 2. The loss will reach \$10,000 and is covered by insurance.

IN AND ABOUT BOSTON.

A Druggist Who Shows His Loyalty to the Trade.

Boston, July 6.—Fitchburg druggists are feeling "hot," not on account of the weather, but because they have not been granted sixth-class liquor licenses. Following out the recommendation made by the board of license commissioners, the Board of Aldermen have turned down the applicants for this class of licenses. Their consideration of the matter resulted in a tie vote, and since the question was put in the affirmative, that licenses be granted to druggists, the latter, of course, lost. The board approved the decree of the License Commissioners to grant only one license. Before the license Commission went out of office, a license was granted F. S. Stone, and now the Board of Aldermen sanctions this, thereby creating a feeling that, among the unsuccessful druggists, is bitter and intense. Mr. Stone, who was so "honored" in being singled out of the large number of druggists who had certificates from the State Board of Pharmacy by the license commissioners, before they went out of authority, returned the license with thanks, thus showing his allegiance to the trade. Few men, it will be owned, would do this. For the first time in years Fitchburg now has no licensed place of any sort. There have been great efforts to get the aldermen to grant licenses to the other druggists, but they have failed by a tie vote every time, and there is no prospect of a change in the present situation.

A Busy Week in Boston.

Boston, July 6.—This has seemed to druggists a busy week, largely because of the holiday coming in to break the usual routine of business. With the retailers, it meant added trade, especially in the soda fountain department and on the Fourth they experienced a large volume of trade from this source alone. With the jobbers and wholesalers it meant some extra effort on other days, in order to accomplish in five days what usually requires six to do. It thus made them at least seem to be busy and they report being fairly so. Retailers profited somewhat from the extreme hot weather conditions, which created quite a demand for the toilet requisites which ladies find to be a relief from heat, perspiration and other temporary discomforts. Cologne and toilet waters, talcum powder and like things had the call, in the early part of the week, which was a scorcher as to weather conditions. In the more general market the demand for drugs and chemicals has been rather satisfactory, on the whole, dealers receiving numerous small orders which have aggregated well. Dyestuffs are quiet and without feature and the same may be said with truth regarding tanning materials. Grain alcohol keeps in fair request only, with wood inactive.

NOTES.

—In the theatre district of this city there are several drug stores which receive liberal patronage each evening after the plays, when theatre-goers buy soda and like drinks, candies and cigars. An effort is being made to put a stop to wholesale begging on the street by children, whose favorite stands seem to be Tremont street and Washington street in front of these drug stores. Persons who have occasion to pass are approached with a view to assisting some one with a penny or more. So profitable, apparently, has the pursuit proved to the solicitors that they have increased both in numbers and in age. It is no uncommon thing to meet with youths anywhere from 12 to 17 years old who urge their hunger. Kind-hearted ladies who have patronized the theatres and later the drug stores, with escorts, are beset by youths in rags who demand money for soda water and chocolate drops. It is suspected that many of the juvenile beggars are not in business for themselves, but are sent out and systematically managed by professionals.

—Owing to the explosion of a five-pound bottle of ether, which so heated the room in the back part of the drug store of Dr. J. A. Tupper, Cambridge, that other cans of the same material exploded in rapid succession, a fire occurred in that place on the night of July 3. Dr. Tupper was at work with the ether, emptying it from one bottle to another, when something caused the explosion. He was considerably burned about the face, eyes and hands. The fumes were so strong that he was unable to help himself, but a customer, who was in the front of the store, by creeping along the floor was able to reach the druggist and assist him to a place of safety. The loss to the building was small, but the loss in medicines was of greater consequence, for the bottles containing the liquids exploded as soon as water was thrown on them.

—The cases of the Reyerofts, druggists in Cambridge, have been in court for settlement. That of William Reyeroft of North Cambridge was presented to the jury by District Attorney Weir, for the government, and the court instructed the jury to bring in a verdict for the defendant, for lack of evidence. Arthur Reyeroft, who has charge of the store near Brookline street transfer station, was convicted, the evidence on both sides being practically the same as in the lower court, which fined the latter \$100. The higher court, however, reduced this fine to \$75, which was paid. In the case of L. W. Reyeroft, Cambridge street, the verdict resulted in the acquittal of the prisoner. Singularly, while this case was pending in the courts, a druggist's license, on recommendation of the committee on licenses in Cambridge, was granted L. W. Reyeroft.

—Waltham druggists are feeling blue as well as disgusted because of the spasm of virtuous purity which has made the Board of Aldermen decide not to grant any licenses to them this year. Even the physicians of the "Watch City" were against the "knights of the mortar and pestle," and a number of them presented a petition urging the board not to grant any licenses of this kind. The Committee on Licenses and the Board of Aldermen had already decided not to grant such permits, however. Naturally, the druggists do not feel exactly kindly disposed toward the physicians.

—The local druggist at Lee is proudly telling the townspeople that he has added the Grover Cleavelands to his list of patrons. The former president and his wife have recently gone to their summer home at Tyringham, and Mrs. Cleaveland went shopping, as women are wont to do, and, finding that she had forgotten her purse, made known her identity to the druggist of whom she was making purchases, and asked to have an account opened. The druggist, therefore, is about the proudest man in Lee, just now.

—William B. Lincoln, of Woonsocket, R. I., who has been chosen secretary and treasurer of the Franklin Howes Medicine Company, just organized in that city, is well known to the trade in Boston. The president of the new company is Joseph Lawrence Howes, of New York, and he and Mr. Lincoln, with Charles W. Flagg of Woonsocket and George L. Combs of Brooklyn, N. Y., form the board of directors.

—General improvements in and about A. R. Vincent's drug store and also his entire block on Main street, corner of Cabot street, in Haverhill, have much benefited the appearance of that place, making it now one of the most inviting drug stores in that city. A large plate glass front and mosaic work about the entrance are among the changes noted.

—Cyrus Davies, who for some time has conducted a pharmacy at 189 Centre street, in the Roxbury district, has bought the drug store at the junction of Huntington avenue and Heath street near the Brookline line, formerly John W. Palmer's, possession of which he already has taken. He still retains his Centre street store.

—Z. W. Sturtevant, as president, and Frederick Conant, as treasurer, both of Lowell, are interested in the success of a new enterprise, the Zopher Company, which has been organized to manufacture supplies for use by druggists and chemists. The company is capitalized at \$10,000, of which thus far nothing has been paid in.

—Charles S. Viall, a prominent business man of Baldwinville, is about to build a three-story block for business purposes, in that town. Three stores will form the first floor and one of these he plans to fit up as a pharmacy, in the hope of inducing some druggist, when he sees how well equipped it is for that purpose, to establish himself there.

—Isaac F. Paul, Boston, and W. A. Swain, of Lynn, are the president and secretary, respectively, of the Fruit Orange Cordial Co., for the purpose of making and selling cordials, compounds and other medical and commercial products, with \$100,000 capital stock, of which nothing is paid in.

—Frank P. Baker, long a prominent druggist at Webster, has sold out his business to C. S. Campbell, who for many years was the chief clerk of the store, of which for the past year or more he has been the manager. He formerly was in the business at Worcester.

—As the result of a small fire in the Robertson block, corner of Park and Salem streets, Medford, J. E. McKeon, a druggist occupying one of the stores on the ground floor, suffered some damage from both smoke and water. He carried insurance, fortunately.

—A carrier pigeon flew into Charles C. Hearn's drug store in City Square, Quincy, one evening this week. A ring on the pigeon's leg bore the inscription, "N. H., 1628."

PHILADELPHIA.

PHILADELPHIA ASSOCIATION OF RETAIL DRUGGISTS.

Philadelphia, July 6.—In spite of the hot weather of Friday, there was a good attendance at the July meeting of the P. A. R. D. and considerable business of importance received attention. The "Bulletin" which had been sent out by the Recording Secretary with the usual monthly notices attracted very favorable comment on its recapitulation of the work done by the association since January 1, the amount of the actual work done surprising even many active members. The meeting took a firm stand in the question of commissions from the Keystone Telephone Company and voted to take immediate action, looking to the securing of unanimous support from the druggists of Philadelphia for the position of the P. A. R. D.

In the report of the Executive Committee, it was recommended that the resignations of L. Genois, E. C. Warg, J. A. Wamsley, C. R. Keene, E. Jungmann and G. T. Lambert be accepted. Notice was given that the one "aggressive cutter" here had practically "gone back" on his agreement to present a list of patents on which he was willing to advance prices, the list he submitted embracing only a few of this class that were "dead" as sellers, and that repeated interviews had failed to get any satisfactory declaration from him. This position was contrasted with that taken by the two largest drug firms here, who both had expressed willingness to cooperate on a price schedule and members now knew just how matters stood. The outlook is decidedly hopeful, in spite of the efforts of one "cutter" to break down the work of the association. A check for \$23.05 was turned in to the treasurer from the "Foodigest Company," this being the 3 per cent on their sales through Philadelphia jobbers for the quarter ending June 30, 1901. A vote of thanks was passed for the Foodigest Company and the check accepted.

The Committee on Telephones presented a report, through S. W. Strunk, stating that in obedience to their instructions they had waited on the manager of the Keystone Telephone Company and had presented the demand of the P. A. R. D. for 25 per cent commissions on pay stations in drug stores, but that the manager had replied that the company could not grant this demand. Nothing had been heard from the Bell Company in regard to free call days and extra commissions. In presenting this report, Mr. Strunk said that the committee had been badly handicapped in its work by the fact that over 300 drug-

gists had already signed contracts with the Keystone Company for telephones in their stores either at 10 per cent commission or, in many cases, none at all, and that unless these could be induced to cancel their contracts, there was little use for the P. A. R. D. to try to get 25 per cent commission, as the company would point to these contracts as evidence that 10 per cent was satisfactory to many druggists. A spirited discussion followed this report; Messrs. Perry, Rehfuß, Strunk, Stiles and others participating. An admission of the Keystone Company that its success depended upon the placing of their telephones in retail drug stores was made the basis for the argument that the druggists of Philadelphia were in a position to dictate terms if they worked together and that the Keystone Company needed them more than they needed their phones. It was decided to send out notices at once asking all druggists to cancel all former contracts and to stand firm for 25 per cent commission; if this was done, then the P. A. R. D. could act with prospect of success.

The report of the P. A. R. D. delegates to the recent meeting of the Pennsylvania Pharmaceutical Association was presented by the chairman, J. C. Perry. In it, mention was made of the prominent part taken by Philadelphia members and the good work done in the adoption of the Worcester Plan and the continuation of the work of "County Organization." Mr. Stiles being continued at the head of the committee on this work. Reference was made to the report read by the President of the State Pharmaceutical Examining Board, particularly that portion on prosecutions for adulterations. Tincture of Iodine, an article made by the retail druggist, was found almost invariably of U. S. P. strength, while Oil of Santalwood, an article bought from jobbers, was in most cases not up to U. S. P. requirements, this indicating, according to the speaker, that while the retail druggists of the state were almost all honest in their own preparations, they should be more careful in examining goods they purchase from wholesale firms, and he recommended frequent examination of purchases. The pecuniary and professional gains to be made by manufacturing and pushing the National Formulary preparations among physicians were also referred to, with an appeal to members to devote more time to such work and less to patent medicines. Strict compliance with the laws relating to pharmacy was urged upon members, as it was likely that a close watch would be kept by the State Board for violations, and attention was called to the summary of these laws sent out in the July "Bulletin." Mr. Stiles also spoke of the efficient work done at the State Meeting and the pleasant features of the entertainments offered members.

The amendment offered by the By-law Committee changing Art. III of the Constitution to permit registered pharmacists in the retail drug business as "owners, managers or clerks" to become members was then brought up for vote. After an earnest discussion, in which the sentiment of the meeting was shown to be in favor of doing all possible for drug clerks, the proposed amendment was voted down, as it was thought best to confine membership to actual owners as giving the P. A. R. D. stronger claims for recognition as representing the actual drug business of Philadelphia.

Mr. White, of the Pheno-Caffein Company, was introduced and spoke for a few minutes on the "Worcester Plan" and the encouragement given to it by the active work of the P. A. R. D. in its favor. He was warm in praise of this association for its leadership in this work, and predicted general adoption of the "Worcester Plan" before many years.

Beyond the assurance of the attorney of the Hunyadi Janos firm that no further costs would be imposed on druggists defending cases of selling Hunyadi Matyas water, \$88.50 being the amount of costs to date, nothing definite as to the withdrawal of these suits could be learn-

ed. The matter would receive further attention from the Executive Committee. In regard to the acceptance of revenue stamps for dues by the Financial Secretary, the decision of the Collector that date of purchase and source must accompany all claims for redemption would prevent their acceptance for dues, and members must themselves present their stamps according to the instructions sent out by the Treasury Department. A report of the Financial Secretary showed the receipt of \$139.56 in dues more than for the same period last year, the receipts for the first six months of 1901 being \$372.86.

The question of the legality of the demand of the State Board for a fee of \$12 for certificates of candidates passing at the last examination then came up for discussion. After much discussion, it was decided that the matter should rest over to next meeting, it being the feeling of the members present that this fee was exorbitant and unjust.

There being no further business, the meeting adjourned.

Fair Trade.

Philadelphia, July 8.—In spite of the roasting heat of the past week, a record-breaker in many ways, Philadelphia druggists report, with a smile, that business was pretty good and that as far as the cash register is concerned, they could stand a few weeks more of the same sort. Soda water business has been rushing from early morning to late, very late, at night, many stores being compelled to increase their force on this account alone. Never has there been such a demand for ice cream soda, and in many localities it was impossible to get ice cream soda in drug stores after 9 P. M. "Sold out" meeting the eye of the thirsty patron, and it was one continuous hustle to keep enough fresh founts on to meet the demands. The advantages of the "continuous carbonator" style over the old single fount was conclusively shown this week; without their "continuous carbonator" many druggists would have been out of soda water early in the day. A west Philadelphia druggist who ordinarily does a good soda trade said that his soda sales for the week had exceeded any for the past ten years. Prescription business was fairly good too, in the latter part of the week, the hot weather causing an alarming increase of summer complaints and nervous prostration, while sales of diarrhoea and cramp remedies took a boom along with seditives and prepared foods. Yet druggists had their troubles along with other folks, the difficulty of getting ice enough for the soda founts making many even hotter than did the thermometer, some even being forced to shut down early as 8.00 P. M. Altogether it was an exceptional week and if the hot weather continues longer it will cause many radical changes in the usual way of doing things.

Trade has been rather quiet in wholesale circles, little being done outside of regular orders and the supplying of soda water accessories, fruit juices, etc. The wholesale district has adopted its summer closing hours, 5 P. M. week days and 1.00 P. M. Saturdays. Quite a number of local retailers were "caught napping" this week and sent in orders too late to be filled. To insure early receipt of goods and to make work lighter all around, a prominent firm has requested its patrons to send in their orders by 10.40 A. M., if possible.

An Old Land Mark to Go.

Philadelphia, July 8.—After a career of over ninety years, one of the oldest drug stores in the city is to be torn down to make room for a modern building—the fate of many an old landmark. In 1811, Dr. George Glentworth bought the lot of ground on which this store stands, at the corner of Race and Darien streets, then an open lot on Sassafraus and Chester streets, and erected what was then the finest drug store in the city, and the building has stood with hardly an alteration (a type of the old time drug store) since then, the old fashioned store fixtures, shelf bottles, pill jugs and ointment pots being in their accustomed places. On the walls hang various certificates, one of them, the only one in existence, is a certificate issued to George Glentworth, by the Philadel-

phia College of Apothecaries, in 1821, signed by the president, Charles Marshall, vice-presidents, William Lehman and Stephen North, and secretary Daniel B. Smith, a certificate antedating the Philadelphia College of Pharmacy by several years. In 1892, Dr. Glentworth gave permission to the P. C. F. to build a fac-simile two section model of the old store, which was placed in Professor Remington's lecture room. It is reported that the old fixtures, antique bottles and jars, mortars, scales, etc., will be donated to the Philadelphia College of Pharmacy by their present owner, to be added to the collection in the Museum there.

NOTES.

—Philadelphians, who attended the meeting of the Pennsylvania Pharmaceutical Association at Harvey's Lake, are loud in their praises of two of their fellow citizens, who did much to further the enjoyment and business of that meeting, Dr. C. B. Lowe, who acted as chairman in several of the sessions, and D. E. Bransome, to whom fell most of the work of the Entertainment Committee. Dr. Lowe's manner of presiding is spoken of as having been very effective and happy in furthering the business of the sessions, while the entertainments arranged under Mr. Bransome's care, were unanimously declared to have been the most charming and pleasant of many years. Philadelphia may be slow, but her citizens always come to the front in every matter of importance!

—C. H. Horn, a downtown drug clerk, was censured by the Coroner this week for the careless sale of poison to a young woman who committed suicide with it. Carbolic acid was sold to a domestic who signed the name of her mistress to the register, the clerk allowing this, although he knew both mistress and employe, and for this breach of the law, he was brought before the Coroner at the inquest, held over the suicide. It should be a warning to others to exercise reasonable judgment and care in making sales of poisons to parties who claim to be acting for others.

—Among the benedicts of the month past are two well known to Philadelphia druggists, Robert T. Young, of Seventeenth and Chestnut streets, and A. C. Swisher, city representative of Johnson & Johnson. Both expect to do business "at the old stand" when they get through receiving congratulations from their many friends.

—Miss Dora Kline, daughter of Mahlon N. Kline, of Smith, Kline & French Co., was married on the 20th of June, to H. C. Valentine, the head of S. K. F.'s credit department, and the happy couple left for a honeymoon trip to Pittsburg and Buffalo, the latter part via "automobile."

—Messrs. F. W. E. Stedem and L. S. A. Stedman have bought a drug store at Narbeth, a suburb of Philadelphia, and have opened a branch of the Broad and Fairmount avenue store there. There is a very good suburban trade here and Mr. Stedem's new venture will probably do well.

—Messrs. Edler & Brother have opened a new drug store at 7th and Chestnut streets, mention of which was made a few weeks ago. Mr. Laubach has not yet been able to take possession and open his new store on South Thirtieth street, but expects to do so in the near future.

—C. F. Shoemaker, of the firm of Shoemaker & Busch, has taken his family to Atlantic City to spend the summer. Quite a number of local drug men will locate their families at this seaside suburb of Philadelphia and spend Sundays there during the hot months.

—C. A. Werkshagen, an old druggist, well known to many prominent druggists who have clerked for him, departed this life last Tuesday, at the advanced age of eighty years. He had been living at Fifth and Jefferson streets for some time.

—S. C. Henry has been making some very handsome alterations in his new store at 29th and Cambridge streets, including tiled floor, new soda fountain, etc., and now has one of the prettiest stores in that neighborhood.

—G. C. Taggart, of Ninth and Race streets, has bought the Franklin Pharmacy at Sixth and Race streets and will conduct it as a branch of his main store.

—Business is reported as being very good this season at Atlantic City, quite a number of new stores have been opened and many of the old ones have been fitted up with alterations and enlargements to meet the growing trade. There is a steady trade now to be counted on that is in addition to the transient demand, and the "Boardwalk" stores are all doing very well at this. The recent enforcing of local option laws making Atlantic City "dry" on Sundays has had a marked effect on the soda water business, that on last Sunday being the first dry one, largest for many years. Among the changes noted down that way are these: H. W. Hughes & Company have opened a drug store at the corner of Pacific and Carolina avenues; "Cuskaden's Pharmacy" is bright and attractive in its new dress, extensive alterations and enlargement having been made; Galbraith's Pharmacy, recently moved bodily from its location at New York and Pacific avenues, to make room for a new building, will open in its new quarters in a handsome ten story modern structure about July 10.

BALTIMORE.

The State Pharmaceutical Association.

Baltimore, July 8.—The preparations for the annual meeting of the Maryland Pharmaceutical Association, at Ocean City next week, are practically complete. An interesting programme has been arranged and a big attendance is expected. It is thought that not less than one hundred persons will be present and that the sessions will prove to be among the most successful in the history of the organization. The executive committee, in its call, lays stress upon the urgent need of a pharmacy law for the state and adverts to the opportunity to accomplish this object which will be afforded by the next gathering of the General Assembly, in January, 1902. "Hence it is hoped," the appeal continues, "that every druggist, whether a member of the association or not, will be present to express his views thereon, so some conclusion satisfactory to all can be arrived at. Besides this, other matters of trade interest, as also numerous excellent papers will be read and discussed; at the same time a number of social features to while away the interim between business sessions will be introduced."

The Hotel Plimhimmon will be headquarters, as usual, and reduced rates have been obtained from railroad and steamboat companies, the business sessions being held in the hotel casino. As stated in former letters, the programme follows in the main the order of exercises observed last year, the consideration of trade matters alternating with pastimes and contests of skill. Clayton T. Purnell, the mayor of Ocean City, will welcome the delegates on the afternoon of July 16 and Dr. A. R. L. Dolme will deliver a response. At this session, too, the president's annual address will be read. The reports of the other officers will be taken up on the following morning, when the legislative committee will also submit an account of its labors. Reports by the committee on pharmacy, by the committee on legislation, by the committee on pure food and drug law, by the committee to confer with medical societies and other papers will be taken up in the course of the proceedings, which will extend over the larger part of four days. The election of officers will take place on Thursday, July 13, and the installation, as well as the report of the committee on the president's address are among the business of the following day.

Included in the social features are a formal reception and a ball, shooting, bowling and swimming matches, the swapping of fish stories, conundrums, pool matches, a tug of war and a hen race. Prizes have been donated by a number of wholesale and manufacturing drug firms, the assortment being larger than ever before. Included in the make-up of the programme is a list of the queries which have been submitted to the committee of pharmacy as topics for papers to be read at the meeting.

State of Trade.

Baltimore, July 8.—Last week was a busy one for retail as well as wholesale druggists. Both classes of the trade had numerous calls from customers and the total of prescriptions, not less than the volume of transactions at the jobbing houses, was large. This activity heat. Some 75 persons died as the direct or indirect effect of the heat, while hundreds were prostrated. The hospital ambulances were kept on the move all the time and the demand for medicaments was in accordance. Crowds stood around the soda water fountains of the retail establishments and there was briskness in other directions. Some clerks in the wholesale houses were incapacitated by the torridity, which rendered the strain on the others all the more severe. The market for botanicals, however, was marked by quiet. Values were depressed and a general feebleness of tone prevailed. The laboratory forces worked under difficulties and little occurred to claim special attention.

NOTES.

—In the suit of John T. Houchens against Mrs. Mary E. Houchens, whose troubled domestic and business affairs have occupied public attention for some time past, Judge Sharp passed an order last week directing that Mrs. Houchens, in manufacturing a certain proprietary medicine, for the ownership of which both contend, must not use her husband's trade-marks, labels, bottles or wrappers, or imitations thereof, nor must she employ the name of Dr. Houchens.

—One of the members of McCormick & Co, sails on the Minneapolis, July 12, for Europe, on a business trip for his house to look into goods imported by them and also to visit some of the European dealers handling their goods. He will be away two or three months.

—Louis Hergenrath, one of this year's graduates at the Maryland College of Pharmacy and a clerk in the employ of Owen C. Smith, Pennsylvania avenue and Hoffman street, has gone to Minneapolis, where he intends to seek a position.

—The Germaie Chemical Company has been incorporated in Baltimore with a capital stock of \$100,000, by Wallace F. Cartwright, Charles P. Brown, Holland and Clifford D. Bird and others. The company will manufacture proprietary articles.

—E. R. Zimmerman, who purchased the retail drug store of Parr Bros., at the corner of Edmondson avenue and Schroeder street, has sold the place after an ownership of only six days to William J. Lauer, formerly a clerk for Parr Bros.

—The Calvert Drug Company, the co-operative concern organized by a number of retail druggists to purchase goods in quantities, has found it necessary to secure additional store facilities adjoining its old quarters, on South Gay street.

—The pharmacy at the corner of George street and Myrtle avenue, conducted since its opening by the Louis C. Horn Drug Company, has passed into the possession of Dr. Stiefel, who will manage it.

—Druggist C. C. Cook has sold his store at the corner of Druid Hill avenue and Lanvale street.

The Prestige of a Well-Known Label.

A better illustration of this could not be afforded than by the introduction of Morphine by the Mallinckrodt Chemical Works. The "M. C. W." label has always stood for highest purity in medicinal chemicals, and has been the means of carrying the "M. C. W." Morphine into immediate popularity. We hear only the most favorable reports from druggists handling the "M. C. W." Morphine, and it is now considered one of the leading brands.

Baur's
"Liquid Fruits" All varieties
(Trade Mark)
The Ideal Soda Water Syrups

Except you have drank

"Liquid Fruits"

You do not know what a really good glass
of soda water is.

June 25th, 1901.

We are so well pleased with the Bahama Pineapples which we are just now converting into Baur's "Liquid Fruits" and Crushed Fruits for Fine Soda Fountain Trade, that we cannot refrain from apprising you of the fact. The shipment is without doubt the very finest that we have ever seen during our long experience in

catering to the needs of the Soda Water dispenser. ♡
The "pines" are very even in size, rich in color and most redolent with the delicious pineapple flavor and aroma. ♡ ♡ By our special process of converting, the natural properties of the fruit itself is conserved in the highest possible degree. ♡ We do not see how the product can fail to be the finest ever offered to the trade. ♡ We are now taking orders for these new goods. Our Strawberries, which we have just finished putting up, are equally fine. ♡ ♡ ♡ ♡ ♡ ♡ ♡

DISTRICT OFFICERS MEET.

Chicago, July 6.—Officers of the various auxiliary districts held a meeting a week ago at the Sherman House, John I. Straw presiding. Fifty representatives from the various districts were present. Reports were received from each one of the twenty-two auxiliary districts, in all of which the work of advancing prices and maintaining their uniformity is progressing quite satisfactorily, except in the Thirteenth District, where there are a number of small department stores. Two of the districts that have been hanging back reported that everything is now lovely and that the aggressive cutters have come into the fold. In the first district it was reported that the drug advertising in the daily papers had stopped. It is hoped that all the department stores will line up in this district in the course of time, and, in fact, all but one are said to have done so, and vigorous measures have been instituted against that one. The officers of the First District are as follows: Walter H. Gale, president; W. M. Sempill, vice-president; L. K. Waldron, secretary and James H. Wells, treasurer.

Among the matters discussed at this meeting were ways and means to get money. Each district was called upon for a statement of how much it would give, and over \$400 was immediately pledged in amounts ranging from fifty to one hundred and twenty-five dollars, some of the districts promising to "hustle" and report next Tuesday at the regular meeting of the Chicago Retail Druggists' Association.

Joseph P. Plummer Retires.

Chicago, July 6.—Joseph P. Plummer for ten years connected with the firm of Morrissin, Plummer & Company and at present the secretary of that company, will sever his connection with that firm on August 1. He will return to his former business, the manufacture of shoes, and in connection with Frederick Watson of Dixon, Ill., will organize the Watson-Plummer Shoe Company, which will purchase an extensive manufacturing plant already erected at that place and will put it in operation at once. Mr. Plummer is thoroughly familiar with the shoe business, having been the superintendent of the plant of C. M. Henderson & Company, shoe manufacturers of Dixon, prior to his coming to Chicago. He will move his family to Dixon immediately after the first of August and will reside there in the future. While the members of the drug trade regret to lose Mr. Plummer from their immediate domain, they bid him Godspeed, nevertheless, and hope with him that the opportunity that is said to knock open at every man's door has arrived at his.

Hot Spell Affects Trade.

Chicago, July 6.—The terrific heat of the past few days has affected business rather unfavorably in some respects and favorably in others. There has been an immense demand for fountain supplies, a demand which has started in somewhat earlier than it did last summer and promises to keep up to the end of the season. Aside from hot weather goods, trade has languished. The heat and humidity have been so great that all effort seemed to cost more than it was worth, and everyone who could get away from business sought the summer resorts. This fact alone makes a difference in trade. There have been few business disasters, and no failures so far as known in local drug circles. The demand is such as usually comes at this season for drugs and pharmaceuticals. It cannot be said to be better or worse than in former good years.

NOTES.

—The third quarterly meeting of the Chicago Retail Druggists' Association will be held in the Masonic Temple on July 9 at 2:30 P. M. At this meeting the progress of the work will be discussed, especially as regards the

downtown situation, and reports will be received from the officers of the auxiliary districts. Chairman Holliday of the National Executive Committee, who has just returned from the Pacific coast, will be present and will address the meeting.

—Erastus Dean, of Waterman, Ia., a dealer in meat and drugs, has sold out. It seems to be the privilege of Mr. Dean to have combined the drug business in a new way. —The store of A. L. Coppock, at Evanston and Barry avenues, was robbed recently, the burglar securing merchandise and money to a small amount.

—An excellent picture of our genial friend, George W. Mathison, manager of the Western office of the Emerson Drug Company, appeared in the Daily News' gallery of celebrities recently. Accompanying the picture was a brief biographical sketch. He is named as "One of the Young Men who Got There."

—The well known retail drug firm of H. R. Evans & Company have sold their store at Oskaloosa, Ia., to the firm of Z. T. Reel & Company, who will continue the business.

—T. R. Behrens has sold his store at 615 West Twelfth street to the firm of Behrens & Rahls. Emil Behrens is the senior member of the firm.

—Paul Scott, a brother of A. H. Scott, at Noble and Erie streets, has bought the store of C. S. Tyrell, at Lincoln avenue and Madison street.

—George W. Foote has sold his store at 6356 South Kedzie avenue, to Charles Hollnagel.

—R. S. Alexander & Company succeed W. D. Platt at What Cheer, Ia.

—M. W. Pascoe succeeds Arenschld & Pascoe at Ottumwa, Ia.

—W. F. Moldenbauer, a druggist of Juda, Wis., is dead.

KENTUCKY ASSOCIATION.

The twenty-fourth annual meeting of the Kentucky Pharmaceutical Association was held at Crab Orchard Springs, June 18th to 21st, and was in every way eminently successful. About 75 members, with an equal number of their relatives and friends were in attendance.

The following papers were presented: "Should Purity be the Prime Consideration," by J. W. Gayle, and Vernon Driskell; "Buying Goods," by Addison Dimmitt and J. W. Gayle; "How to Keep Good Clerks," by R. M. McFarland; "Drug Store Rules," by Addison Dimmitt; "The Pharmacist from a Professional and a Mercantile Standpoint," by Vernon Driskell; "The Dispensing Counter," by Vernon Driskell; "Postage Stamps, Telephones, etc.," by Vernon Driskell.

Resolutions were adopted endorsing the methods recently proposed by the N. A. R. D. looking to the betterment of trade conditions.

An extensive and attractive program of entertainment was enjoyed by everybody.

The following officers were elected for the ensuing year: President, J. L. Clark, Vanceburg; 1st Vice-president, H. K. McAdams, Lexington; 2nd Vice-president, C. E. Townsend, Bowling Green; 3rd Vice-president, J. B. Ross, Madisonville; Secretary, J. W. Gayle, Frankfort; Treasurer, Vernon Driskell, Ghent.

Grayson Springs was selected as the place of the next meeting; the time to be fixed by the executive committee.

LOS ANGELES, CAL.—Dr. J. H. Trout, druggist, corner Sixth and Broadway, is taking a six weeks' vacation at the Pan-American Exposition, and visiting in Pennsylvania and New York. Mrs. Trout accompanied him.

J. J. Freeman, druggist at Tenth and Grand streets, is also in the east at present.

Haas, Baruch & Co., wholesale druggists and grocers, have sold their drug department to N. Sale & Son, who have incorporated with a capital of \$250,000, and expect to do a general wholesale drug business. The transfer is to take place about September 1st.

ST. LOUIS.

JOBBER'S NEW RULES CAUSE DISCONTENT.

St. Louis, July 6.—All the retail druggists of this city received a copy of the following circular on the first of the month. It has created a stir among the trade. Many of the leading druggists say that the new rules are all right and do not affect them at all. A greater number have objections to one or more features of the new rules. The cutting down from 1½ per cent to 1 per cent is objected to by the great majority. The rule in regard to the returning of empty containers, etc., is considered an outrage by a great many. There is strong talk, with a very good probability of calling a mass meeting of the retail druggists to take action upon this ruling of the wholesale houses. The circular is as follows:

St. Louis, June 29, 1901.

To the Retail Druggists of St. Louis and vicinity:

Gentlemen:—Through a desire to do everything possible to please our customers, we have for a long time permitted ourselves to assume burdens that were both expensive and inconvenient, but owing to the unlimited service expected of us in conducting our city business and the great expense attached thereto, with the profits growing smaller, it becomes a matter of necessity on our part to make the following changes, which will take effect on and after July 1, 1901.

Containers.—Containers of every description, excepting carbons, will not be received for credit, but will only be accepted for immediate refilling, nor will they be received for storage.

Deliveries.—We will make no deliveries of goods except for customers direct to their stores.

Merchandise.—No merchandise ordered by a customer can be returned for credit after the same has been properly delivered.

Signed orders for goods given to salesmen of manufacturing and distributing houses, after having been accepted by us, are not subject to countermand, and such goods, when delivered, are not returnable to us under any circumstances whatever.

First of Month Orders.—This practice will be discontinued. We cannot date bills ahead under any circumstances.

Terms.—Beginning with July 1, 1901, our cash discount will be one per cent when bills are paid prior to the 10th of the month following date of purchase. No cash discount will be allowed after the 10th of the month, and all purchases will be due and payable on the 15th of the month following date of purchase, i. e. June purchases will be subject to a discount to July 10 and bill will be due and payable on July 15 interest charged after maturity.

Trusting that you will appreciate our position in the premises, we are,

Very truly,

Meyer Brothers Drug Co.
Moffitt-West Drug Co.
J. S. Merrell Drug Co.

NOTES.

—Word has just been received that Paul L. Hess, of Kansas City, has been appointed a member of the Missouri Board of Pharmacy. Although there were two St. Louis candidates in the field, everyone feels that the selection was well made. The local candidates would undoubtedly have filled the office to their credit, still Kansas City has not been represented upon the Board of Pharmacy for many years. All concede that Mr. Hess will fill the position to the satisfaction of all the retail druggists of the state.

—C. P. Walbridge, president of the J. S. Merrell Drug Co., spent this afternoon in Bellville, Ill., where he visited the Street Fair and made a speech for the World's Fair. Mr. Walbridge is third vice-president of the World's Fair organization.

—C. F. G. Meyer and wife left last night for the East. In the course of a week or so they sail for Europe where they expect to make an extended stay. They intend to visit their son in South Africa before their return.

—Wm. F. Kahre, druggist at Thirty-fourth and Olive streets, was recently married to Miss Melle Leonhardt, of the south side. They are at present taking in the sights at the Buffalo Exposition.

—Frank L. E. Gauss is enjoying a fifteen day vacation on a large reservation, or hunting and fishing resort, near Denver, Colorado. He is local manager for The Searle & Hereth Co., of Chicago.

—The Judge & Dolph Pharmaceutical Co. have purchased a store site at 315 Olive street, upon which they will erect a three story building to be used exclusively as a drug store. They promise to have something which will be a

novelty in the line of St. Louis drug stores.

—The St. Louis Saturday Night Club meet only once a month during the hot weather. They claim this gives them ample time to discuss the cut-rate question and discuss of the little banquet which they always have.

—The Alumni of the St. Louis College of Pharmacy gave an evening boat excursion on the night of June 27th which proved to be the most select, best attended and popular excursion in the history of the organization.

—J. H. Scherzinger, druggist at 1625 S. Ninth street, has left for a two weeks' trip to St. Paul, Minn. It is reported that he is not likely to return alone, or in other words, enjoying his usual single blessedness.

—The death of James L. Baker, at Kinmundy, Ill., a short time ago came as a sad surprise to many St. Louis pharmacists. He was at one time very prominent in local pharmaceutical circles.

—G. K. Gibson, formerly a prominent local drug clerk, but for the past few months representing The Searle & Hereth Co., was recently married to a prominent young lady of St. Paul, Minn.

—A. R. Scheu, druggist at 4200 Finney avenue, sustained a severe loss by fire on July 4th, caused by the explosion of fireworks by some of the neighbor boys.

—Theo. F. Bunge, treasurer of the St. Louis Drug Clerks' Society, and a prominent local relief drug clerk, has gone to Europe to spend the summer.

—Miss Mary Layton, daughter of the well-known druggist at Grand and St. Louis avenue, was recently married to William M. Martin, of this city.

—The St. Louis Drug Clerks' Society will give another one of their select evening boat excursions on the night of July 18th.

—H. Brenner, druggist at Fifteenth and Monroe streets, was recently married to his former cashier, Miss Dora Dries.

—Wm. Tritschler, a former local drug clerk, has gone on the road for Sharp & Dohme.

—F. H. Fricke has bought out H. C. Hornburg at Fourteenth and Monroe streets.

—J. L. Wright is opening a handsome new store at Jefferson City, Mo.

—J. P. Stevens has just opened a new store at Bunceton, Mo.

—J. T. Fritz is opening a new drug store at Stanton, Ill.

RELATIVE TO BASTIAN'S CASE.

New Orleans, La., July 2.

To The Editor: In answer to Mr. J. A. Bastian's explanation, (Era, June 27, page 716), of his having been charged with violating the pharmacy law, by having in his employ a clerk who had not been registered, and who was only used as a makeshift and was not entrusted with any of the pharmaceutical duties of the business, I would like to say that I made the affidavit against Mr. J. A. Bastian that he is not a registered pharmacist, that he put up a prescription for me and stated to me that he had put it up, and that his name was E. J. Bastian. (E. J. Bastian is a registered pharmacist.) I informed him that I was personally acquainted with E. J. Bastian, that I was secretary of the board of pharmacy, and had registered him. Then he told me that he was J. A. Bastian, the proprietor of the store and that E. J. had left his employ two weeks previous and that he was unable to secure a clerk, was running the business himself and in as much as it was no fault of his, that he could not get a clerk, he proposed standing the consequences, and I could go on with my prosecution. I asked if he would get a registered pharmacist for the next day or close his store. He said that he could not get a registered pharmacist and that he would not close his store. When I informed him that I would make an affidavit against him for each and every day that he continued to violate the law, he seemed very much surprised, and promised to try and get a registered pharmacist. On the following morning I was telephoned (as I had told him that he could phone me) by him that he had a registered pharmacist in charge of his business.

Yours respectfully,
F. C. GODBOLD,
Sec'y.

THE NORTHWEST.

Drugs and Bedbugs.

St. Paul, Minn., July 5.—A drug clerk in Minneapolis got into a difficulty of peculiar nature this week, and this is the way a local paper tells how it came about: "It was in vain that Henry G. Larson, who has been clerking at a drug store at Lyndale and Lake street, tried to explain to Judge Holt, in the municipal court, that the only way he had evaded the state pharmacy law was to mix a concoction for bedbugs. He admitted doing that, and hoped to get off light by the explanation, but the court fined him \$50 or 30 days. The law was looked through very carefully, and there was nothing to show that a man was allowed to administer medicines for bugs without having first obtained a license therefor. The bug, it appears, it protected just the same as the human family, and apparently has the same right to careful treatment at the hands of the compounder of medicine. So the violator of the pharmacy law paid \$50, and the bug was avenged."

NOTES.

—Business men and capitalists of Oshkosh, Wis., have just formed one of the largest patent drug businesses in the West, with a capital stock of \$250,000. The new incorporation is the Penn Drug Company, which has been in existence for the past few months with a small capital stock. The development of the business has resulted in the reorganization of the company. Incorporation was made under the laws of West Virginia, the laws governing corporations in that state being favorable to both the corporation and the individual stockholders. The stock is issued in 250,000 shares with a par value of \$100 each. The company is officered as follows: President, Edward M. Crane; vice-president, J. Howard Jenkins; secretary and treasurer, Charles A. Wakeman. Board of directors: Edward M. Crane, manager Thompson Carriage Company, Oshkosh; J. H. Jenkins, president German National bank, Oshkosh; Charles A. Wakeman, druggist, Oshkosh; Leander Choate, president Commercial National bank, Oshkosh; J. H. Davidson, member of congress, Eighth district, Wisconsin.

—Fred A. Conger, of St. Paul, has taken a cottage for the season at Bald Eagle lake, twelve miles out of the city, one of the most charming summer resorts of the Northwest, and has moved out there with his family.

—W. A. Frost of St. Paul, was recently called to his old home at Willmer, on account of the dangerous illness of his mother, who is 86 years of age. She is still living, but hope has been abandoned.

Lanola.

Lanola is a new skin food, of which Billings Clapp Co., Boston, are sales agents. As its name indicates, its base is a wool fat, which makes it particularly desirable for skin complaints peculiar to summer. This new preparation will be extensively advertised this summer, and druggists will have calls for it. Dealers are supplied with special advertising matter, and a liberal quantity of samples. For these samples, and for further information, write to Billings Clapp Co., Boston, and mention the Era.

New Skin.

One of the newer preparations of merit which the druggist is called upon to sell is New Skin, made by the Douglas Manufacturing Co., 107 Fulton Street, New York. New Skin is a liquid, to be applied with a brush, forming a tough, waterproof covering over the skin; in other words, it is a liquid court plaster. Its base is said to be the same as that of collodion, but the solvents are different, and the manufacturers claim it is superior to collodion for the purposes for which it is intended.

THE HISTORIC DRUG STORE—A CORRECTION.

Madison, Wis., July 6.

To the Editor: In the Pharmaceutical Era for May 30, you kindly make mention of the work of the Historical Committee of the Wisconsin Pharmaceutical Association. Please permit me to make one correction of statement. The historic drug store is not to be equipped in one of the rooms of the State University, but in the new home of the State Historical Society. It is true, the University occupies the new library building jointly with the Historical Society for library purposes. The historical collection other than books, however, is in charge of the Historical Society.

The Committee of the State Pharmaceutical Association thought best to turn the collection over to the Historical Society rather than to the University. The writer began the collection of objects, etc., of historic interest in connection with his university work. In 1898, however, he turned over this work which up to that time was one of individual effort, to the State Pharmaceutical Association and suggested that the druggists of Wisconsin seek the cooperation of the State Historical Society. Several Madison druggists as well as the writer are life members of the Historical Society.

It is true the University is a state institution and ought to receive the same hearty support on the part of the druggists that the State Historical Society is entitled to and receives. It is human, however, that many of the numerous graduates of other pharmaceutical institutions residing in Wisconsin would be more interested in the work if conducted under the auspices of the State Pharmaceutical Association and the State Historical Society. Those of us who began the work ten years ago are most anxious to see the realization of the historic drug store and are perfectly willing to subordinate our love for the University in this particular to the welfare of the cause. Already others than druggists are beginning to take an interest in the collection. The time is not far distant when every druggist in Wisconsin will take pleasure in this undertaking and will want to know every drug store previous to 1898 represented, in some way or other.

Very truly yours,

EDWARD KREMERS.

AN EXPLANATION WHICH DOES NOT EXPLAIN.

Montreal, July 4, 1901.

To The Editor, My attention has been called to the item in your issue of 20th of June, under the heading "Here's Nerve and Audacity," and I may say that while your remarks are doubtless intended to be exceedingly severe, they are rather amusing.

Of course Britons have plenty of nerve, and have demonstrated this on countless occasions for hundreds of years before the United States were born or thought of, but whatever nerve we may have is certainly surpassed by that of those who admittedly charge four or five times as much as goods are worth. The German chemicals referred to are, of course, sold at a profit in Canada, and if prices in the United States are, as you say, four or five times as high as the prices at which they can be sold at a profit in Canada, it is easy to figure out how many hundreds per cent the manufacturers or patentees of these preparations are making. Such profits are certainly legalized robbery, and to a Briton it is extraordinary how Americans who profess to be liberty loving submit to such extortion.

It is illegal to import these goods into the United States, and pay the duty, Uncle Sam must at least be particeps criminis in allowing them to pass through his Custom House. I have always maintained that Americans do not know what true liberty is, and my opinion is strengthened by your remarks.

Yours truly,

HENRY H. LYMAN,

President of The Lyman Bros. & Co., Ltd., Toronto.

You will rarely find Four-Fold Lintiment in the department store. Department stores and aggressive cut-throats cannot get it.

A FRENCH PHARMACEUTICAL TRAGEDY.

(Continued from page 26, July 4.)

The Two Funerals.

Mr. Raymond Four's funeral took place on Monday, June 10 at 4 P. M. An enormous crowd, largely composed of vendors from the adjoining market-place and the surrounding streets, filled the Rue Raugraff; and many persons followed the simple hearse as far as the cemetery. The church exercised her right of refusing her ministry to the family of a suicide, and the proceedings were consequently purely secular, the massive metal crucifix on the coffin being the only sign of religion visible. The attitude of the crowd at the cemetery, rather curious than respectful, drew forth a protest from M. Lafosse, the chemist, who was one of the mourners. The unfortunate widow evidently felt her position keenly, and smelling-salts had to be administered to her more than once during the brief procession and last farewell.

Prof. Bleicher's Funeral.

Professor Bleicher's funeral was a public demonstration of respect and admiration for the martyr of duty, who, (as M. Goderin, of the School of Pharmacy, said in his graveside oration) had "fallen like a soldier, on the field of honor." It was in this spirit that General de Cornulier Luchiere, commanding the Nancy garrison, ordered the band of the 70th regiment to take part in the funeral and expressed a desire that every regiment should send a deputation.

All official Nancy was gathered in front of the director's residence when the funeral procession started.

THE ACADEMY AT NANCY.

hearse were those of the School of Pharmacy, the pharmacy students, the Lorraine Society of Pharmacy, the University, etc., etc.

The religious ceremony took place at St. Epyres church and the interment at the Preville cemetery. Graveside discourses were pronounced by M. Godfrin, already mentioned, M. Guignard, director of the Paris School of Pharmacy, M. Bruntz, on behalf of the pharmacy students, and M. Pister, as president of the Students General Association. M. Guillemin (director of the Sanitary service of the 20th Army Corps) spoke of M. Bleicher's services during the siege of Strasbourg in 1870; the Prefect offered "his personal homage of gratitude and respect;" and M. Gasquet remarked that M. Bleicher was of a kind disposition, but "his indulgence ended where his duty commenced," and begged his widow to accept the deepest sympathy of the university on behalf of which he spoke.

The Fatal Interview.

It is stated that the sample of cinchona seized in M. Four's laboratory was of superb color, but totally devoid of alkaloids, and that he stated it was merely a sample not destined to be used.

M. Bleicher's reply, it appears, ran somewhat as follows: "I am only a sort of a formal president of the visitors committees and do not actually visit the pharmacies. Nor do I meddle with the committees' decisions, I simply ratify them. You say this was a simple sample; come now, you cannot make me believe you are going to open classes on therapeutics or materia medica, there were kilos of the same cinchona at your pharmacy!"

After all, you are not going to be terribly injured. Take what comes, like a man, I'm sorry I can't help you out of the difficulty."

Our Illustrations.

The School of Pharmacy, where the tragedy occurred, occupies the rear portion of the Academy building shown in our engraving.

M. Four's pharmacy, it will be evident from our sketch, is a large and handsome establishment, situated in a busy thoroughfare which connects the rue St. Jean (the main business street of Nancy) with the market place. The laboratory will be noticed on the right of the sketch, separated from the pharmacy by the main entrance to the house. The double cross of Lorraine figures on the shop front, and the arms of Nancy and Paris ornament the four large jars in the frontage. It is altogether an excellent specimen of a French pharmacy, doing a large general business (in medicines, drugs, bandages, sundries and mineral waters) of a more or less "cutting" character.

PROF. BLEICHER'S FUNERAL.

Madame Bleicher followed on foot. The procession of the various faculties of the university, in their robes of office, were preceded by the official mace bearer. The students of the university, in velvet caps, were grouped around the banner of their association. Three generals, many officers, the mayor, the local bench, etc., were all represented. The pall-bearers included Professor Godfrin, of the School of Pharmacy, the head of the faculties of Sciences, Law, Literature, and Medicine, the Prefect of the Department, and the head surgeon of the local army Corps. Among the handsome wreaths borne behind the

Mr. Raymond FOUR's Dispensary (sketch at Nancy for L. E. A.)

Medicura Soap.

The advertising that the manufacturers of this soap are doing is likely to make it one of the greatest soap successes of recent years. Newspapers, magazines, and periodicals are used, as well as posters, painted signs and other mediums, and the whole United States is covered. The manufacturers have said that it is their intention to make Medicura the leading medicated soap in the world, no matter what it may cost. This soap is said to be prepared from one of the formulas of one of the most eminent medical authorities of Europe, and its ingredients are pure vegetable oils, with which are combined certain medicinal properties, which render it a most excellent remedy for skin diseases. It is the desire of the manufacturers to maintain the established retail price, and they make a special offer to druggists of half a dozen cakes free for a window display, on an order for six dozen soap, while an order for twelve dozen carries a 5 per cent. discount and a dozen free cakes. All orders are filled through the jobbing trade, but the free goods are forwarded direct from the manufacturers, provided the soap is not sold below the prices established by the N. A. R. D. The price of Medicura Soap since July 1st has been \$2.00 per dozen, net.

TRADE-MARKS.

Registered July 2, 1901.

- 36,668.—Certain Named Toilet Preparations and Soaps. George Chaney Stevens, New York, N. Y. The word "Zophiphrent."
- 36,669.—Proprietary Medicine. Ira L. Browning, Rich. W. Va. The letters "C. Q. R."
- 36,670.—Proprietary Medicines. The Liquid Ozone Co., Chicago, Ill. The word "Liquozone."
- 36,671.—Cough Remedies. Jeremiah S. Dorsev, Columbia, Mo. The representation of a landscape together with a cannon, an elephant, and broken bottles.

Notice Regarding Fellows' Syrup.

The Fellows Medical Mfg. Co., Ltd., sole proprietors of Fellows' Compound Syrup of Hypophosphites, warn the wholesale and retail drug trade against buying or selling colorable imitations of their well known preparation, even though these bear a different name than "Fellows'." They call attention to the fact that the highest courts have decided that if a preparation is offered for sale which so much resembles another one that an innocent purchaser may be deceived by this resemblance, this is an infringement of the trade-mark law, and makes all persons who sell it, either at wholesale or retail, liable for damages to the proprietor of the article imitated. The proprietors of Fellows' Syrup desire to be absolutely fair in all of their dealings with the trade, but they insist upon, and will protect their rights in this matter. For many years they have expended a great deal of money to acquaint physicians and the public with the superior medicinal qualities of their preparation, and to create a legitimate demand for it. They have made customers for the drug trade, and all fair-minded druggists will see the reasonableness of the stand they take, as announced in their advertisement in the Era.

Saves the Price of a New Hat.

Hat Bleach is a preparation which cleanses and bleaches soiled straw hats and makes them practically new. It reaches into every crack and crevice of a soiled hat, and drags out the dirt. The manufacturers guarantee that it will make an old hat as good as new without injuring the straw or thread, and that it will positively clean any white straw yet produced. It is easily applied, it does the business in five minutes, and costs but a trifle. At the same time, Hat Bleach will clean cane chairs and baskets perfectly. During the summer months it is a money-maker for druggists, to whom it appeals because it sells at sight and gives satisfaction to the customer, besides paying a good profit. It retails at 10c. and 25c., and may be had of jobbers, or directly from the manufacturers, prepaid. Address, Hat Bleach Co., Department E, Xenia, O.

Mrs. Dr. Drew Paid the War Tax.

Mrs. Dr. Drew & Co., Lowell, Mass., the manufacturers of the well known remedies for women, Nerve Strength, Vitol, Natural Digestal, etc., have paid the war tax since it was imposed, in 1898, and, having made no change in their prices, there was none to be made July 1st, when this tax was taken off. The remedies which Mrs. Dr. Drew & Co. are pushing have been used in Mrs. Dr. Drew's private practice for over twenty-three years, and in that time have had a wide sale. Attractive advertising matter, price lists, banners, etc., are furnished free upon application, and the remedies are handled by nearly all jobbers and up-to-date retailers.

New Prices on Vapo-Cresolene.

The following prices on Vapo-Cresolene went into effect on July 1:

Vaporizers, complete	per doz.	\$12.00
Cresolene, 2 oz.	"	2.00
" 4 oz.	"	4.00
" 16 oz. (family size)	"	12.00
Cresolene Tablets	per doz. box	2.00
Extra Lamps	per doz.	2.75
" Burners	"	1.00
" Globes	"	.75
" Wicks	per gross	.75

McGee's Corn Cure.

The manufacturers of McGee's Corn Cure and Improved Plaster state that it can be sold with an absolute guarantee that it will do all they claim for it, namely, that it is easy to apply, will give immediate relief, and will not leave the feet sore. This article pays the druggist over 100 per cent. profit. Write for prices in quantities and for samples and advertising matter to the Star Chemical Co., manufacturers, Louisville, Ky.

Druggists' Advertising.

A. J. Embree Helton, Texas, is not only a retail druggist by profession and experience, but has given careful study to the needs of the average retail druggist with reference to his advertising. He feels that his experience enables him to write business-bringing ads. and he guarantees satisfaction. He now announces to the trade that he can serve three or four more weekly clients at 50c. a week. He furnishes four original sample advertisements for \$2.00.

Hearn's Dry Goods Store, West Fourteenth street, New York, will close all day Saturdays during July and August, thus giving their employes a full holiday. This is one of the indications of liberal-mindedness of James A. Hearn & Son; another is that they do not attempt to cut into the business of druggists. They handle no drugs, groceries, or liquors, but they do carry everything in dry goods, they make a bid for the dry goods trade of druggists. They are certainly entitled to this patronage whenever it is possible to give it to them.

AN EDUCATIONAL TRAINING NECESSARY.

About a year or so ago announcement was made in these columns that the California College of Pharmacy had put into operation its scheme of demanding something more than a grammar school education as a preliminary requirement to matriculation. The experiment, according to the college authorities, has been a costly one; the number of matriculates was greatly reduced, but the work of the college was much improved by the superior culture of its student body. Indeed, results have been so satisfactory that the college authorities will go still further, and while applicants who have completed two years high school work will be admitted, they unreservedly recommend that young persons who intend to become pharmacists shall continue their studies wherever it is practicable until each student can present a diploma from a high school or accredited secondary school. These recommendations are in accord with the trend of technical education at the present time, and colleges of pharmacy are fast awakening to the fact that the better general education a student may have, the better he is equipped to master the problems presented in the study of pharmacy. A trustworthy foundation is necessary for the erection of any structure, and this elementary principle of architecture applies with equal force to the education of pharmacists. The man who has the best chance in life is the educated man, the one who best understands his calling, be it a trade, a business or a profession. It is doubtful if any business in this country is suffering so keenly from undue

competition as that of the pharmacist, and as our California friends so well argue, everything else being equal, the one who can best compete in the struggle thus brought about is the man with the best pharmaceutical education. Pharmacy is undergoing so many changes that only those who understand the scientific part of their calling, as well as its trade side, can expect to succeed. In a few years the pharmacist in middle life, who has only acquired such a smattering of the scientific matters pertaining to his business as comes under his notice from day to day in the drug store, will be handicapped by his want of exact knowledge, and will see, to his chagrin, others who have had a better pharmaceutical education than he, reaping the golden harvest, while he stands by and carps and criticizes and blames the times for his want of success. A generation ago it seemed as if it were optional whether one should acquire a scientific pharmaceutical education or not, and hence many drifted along the old way, only the more enterprising entering a college of pharmacy; but now it is different. The signs of the times indicate unmistakably that the pharmacist of the future must be an educated man. The public safety demands it.

DRUG ADULTERATION.

The adulteration of articles of food, drugs and medicines in Massachusetts continues, and a recent report on this subject by the Board of Health is made the basis for liberal comments and numerous conclusions by the popular press of that State. Some strange things are announced under "scare-heads," and many statements made by newspapers should be taken with a grain of salt. But that adulteration exists, and to an extent which makes the matter a very grave one cannot be gainsaid. To be sure, the adulteration is generally of a very mild form, but it is there. A few facts from the report referred to are not out of place.

The board recently collected several hundred samples and analyzed them in its laboratory, finding a very large percentage to be of a fraudulent character. Of twenty-nine samples of borax already examined twelve were adulterated, and it appears that most of these were taken from department stores. Lemon extracts appear to be the worst kind of commercial fraud coming to the attention of the health officers. Thirty-nine samples were analyzed without finding more than one genuine article. Vanilla, also, is badly adulterated, yielding only five genuine out of thirty-five samples. More than thirty per cent. of the mustard is deficient, and not all the maple sugar on the

market is pure. Prosecutions have been made in Springfield, Lawrence and Taunton for the sale of adulterated vanilla, lemon extracts and coffee, and fines were imposed. The percentage of adulteration in milk is comparatively small, one dealer in Concord being reported and fined for selling milk which was below the standard. Ten samples of tincture of iodine were examined, and nine of them were below the standard. One article, which in another State was found to be adulterated, was imported to Massachusetts and sold under another name. Only a few samples of confectionery have been examined, and all were reported good. The Board of Health, however, finds it somewhat difficult to determine what the quality of confectionery should be.

The expense of carrying on the investigation of the Board of Health costs the Commonwealth a nice little sum. But it is a business which pays; it pays in the protection of the people's health and purse against fraud; it pays in the way of educating the merchant, especially the druggist, up to a sense of his heavy responsibilities. It also pays by making possible the detection of willful wrong doing and bringing about its punishment.

A QUEER POISON LAW.

There seems to have been a commotion in the British world of pharmacy lately, which has been unsatisfactorily settled. It has exposed the weakness of the law governing the sale of poisons in Great Britain, where it appears claims have been made that anyone has the right to sell any drug or poison except a "scheduled poison," whether registered or not, because, to quote from the petition of the Glasgow Southern Medical Society to the General Medical Council in London, "the practice," on the part of medical practitioners, "of keeping open shop in which drugs may be sold has been the custom from time immemorial," because in the framing of the law regulating the sale of poisons "no distinction was drawn between the owner of the shop and the seller of the poison," and because "the power to sell any drug or poison except scheduled poisons is the undoubted right of every citizen."

The case in point, which discovered the weakness of the British Poison Law, was that of a Scotch physician found guilty of the charge, "that he, being a medical practitioner, habitually employs assistants for the sale of drugs and poisons, persons who are not qualified to act as chemists' or pharmaceutical assistants." Considerable public noise induced the Glasgow Southern Medical Society, in behalf of their "honor" to petition the General Medical Council to throw out the indictment against the accused practitioner. The petition was refused consideration. So the President of the Glasgow Society, in a subsequent meeting, warned his brethren that to keep within the law they had better exhibit a notice in their shops to inform the public that scheduled poisons would be dispensed only at certain hours, when the doctor would be in attendance. While he did not mention it, the president obviously intended that unscheduled drugs and poisons could be sold by anyone.

It certainly shows up a peculiar state of affairs, but according to later reports, the Glasgow medical men have promised to be good, and they will probably hereafter employ only such persons for assistants as are legally qualified to sell poisons.

THE TARRANT INDICTMENTS.

As related in our news columns this week, the Grand Jury has indicted two of the officers of Tarrant & Co., wholesale druggists of this city, in whose building a disastrous explosion occurred last October, which resulted in the loss of life. Besides the responsibility for the death of the victims, the officers of the company are charged with violating the ordinance of the fire department in storing great quantities of explosives, oils, sulphur, etc., without notice to the authorities, and also with failure to provide the proper partitions to protect the explosives, allowing them to be placed in the open, to the imminent danger of lives.

Manlaughter and criminal negligence are serious charges, and the indicted officers have many friends in the drug trade who wish they could be relieved from this great responsibility. But it has been practically admitted and proven by the evidence that undue amounts of prohibited materials were in storage on the premises. Whatever the results of the trial may be, they will serve to show that ignorance of the law is no excuse, and that it is the duty of any firm of business men to know what is on their premises. The neglect of this knowledge or duty, strikes at the right of self-preservation and the right of the conditions necessary to the maintenance of life and health. But, as we have stated on other occasions, there are others besides the indicted officers who must not be relieved of responsibility. There are the firms who stored excessive quantities of dangerous articles in the building which was destroyed, knowing, as they must have known, that they were thereby violating the law. And what shall be said also of the authorities who allowed such things to go on under their very eyes? What are inspectors for; should they not inspect? And what of the insurance companies also? Are their inspectors not supposed to see that the provisions of their policies are strictly observed?

In looking over the many samples of retail druggists' advertising which come to our attention we note a lack of that particular kind of information the druggist is supposed to best know. There are many interesting things about material, apparatus, processes, etc., used in the drug business which might be told to the public. This information only needs to be put into popular form or translated from "shop" to ordinary language to make good material to work into advertisements.

The drug clerk in hot weather earns his salary, for it is rarely he gets a vacation like other people. In many places he is even forced to forego his customary afternoon and evening off. His job is no insecure, and after a year of faithful work he should be given a chance and his regular salary to get away from the store for a reasonable length of time. Ten to one he will come back a better man and a better clerk.

BUSINESS PHARMACY.

ADVERTISING POINTERS.

By STYLUS.

My former article (under a different alias) having met with unexpected favor, I am induced to administer another dose of my Lightning Elixir, for the benefit of pharmaceutical anatomics and those in need of a restorative. In this treatment I shall use as the principal ingredient "advertising," to be used as directed. By the way, while on this metaphorical ground, I shall say that many druggists get unsatisfactory results from advertising for the same reason that many of their customers fail of benefit from their medicines—they fail to continue it long enough, or go at it haphazard—a heaping dose to-day, forget it tomorrow—a big "add" mayhap once a year, and the rest of the time without a line to let the public know they are still "on deck." In fact, the simile is very appropriate, for in order to get the good out of printers' ink it must be used judiciously and systematically, until your "little business propellers" or industrial tablets get thoroughly assimilated by the general system. Then, and not till then, you are likely to hear something "drop." It would be a fool doctor or a fool patient who would give or take one or two doses of medicine and expect a radical cure. So it would be equally foolish to expect one little ad.—and maybe that badly concocted—to create a rush of business.

I don't mean to inculcate the idea of reckless expenditure of money in bringing your particular store or certain class of goods before the public, but I do intend to prescribe all the outlay you can consistently spare in good, sensible, honest advertising. Maybe at first you can't let go of much for this purpose, but you will find after a time, as your business grows in consequence, that you can turn loose more and more, and that instead of charging it up to the Joss side of the ledger (if you keep such a thing), that you can simply add it in as profit, for although it is not specifically in evidence it is somewhere among the receipts, or in fresh stock on the shelves—and that reminds me: A new drummer started on the road, and found it necessary to purchase a late style hat. He paid five dollars for the hat, and very properly put it down against himself on his personal expense account. Falling in with a jolly old sinner, who had been on the road long enough to love a joke, especially at the expense of the "greeners," the old cock told him he should simply have charged it under the head of general expenses, and let the house pay for it. Agreeably the neophyte transferred it to the column of general expense, thus: To one hat, \$5. When he got back from his trip, and handed in his book for auditing, the general manager called him up and informed him that the house might pay whisky bills, but was not to stand for hats. On his next trip the young traveler again met the wicked Old Timer, and ruefully recited his trouble over the hat incident. The O. T. smiled blandly over the hat incident, and ruefully recited his trouble over the hat incident. The O. T. smiled blandly, and said: "Why, d— it, you should simply have charged it as 'sundries,' and left out the article." When the young man

again handed in his book, the general manager remarked: "Well, Green, I see you haven't got us charged up with a hat this time." "No," replied the smart young man, who thought he had learned a thing or two, "but I've got a \$10 silk vest in there, just the same."

So you may not always know just where your advertising returns have come in, but they are there, nevertheless, or will be, in the long run.

Now, in the first place, have something to advertise; something that is worth advertising, and tell the truth about it in the shortest, plainest, and most direct way possible. One thing at a time is best. Don't try to crowd your whole shop into a four-inch space. Take up something like soap, for instance, and then fairly rub into 'em; lather 'em with it until everybody shall think yours the only place this side of the New Jerusalem where one can get the real, genuine, pure, unadulterated, good-enough-to-eat soap. It will make all other soaps look pale and sickly in comparison, and your competitor across the way will go out behind the store and throw ashes on his bald head.

Make your ads. interesting and spicy, and folks will watch for your next. Then give them a "song" about tooth-brushes or toilet cream, or cutlery, or stationery, or scrub brushes, etc. Quote a price, and make it low, and then you can get a full profit on other articles when the little flies dance into your parlor. Don't—for Mary Jane's sake—don't put an old, stale, stereotyped ad. in, in a la this:

PILLIPUS PULVERIZER.

Druggist.

Dealer in Fresh Drugs, Chemicals, Oils,

Varnishes, Brushes, etc., etc.

Prescriptions Carefully Compounded.

And then let it run awhile year till you have forgotten about it, and the public has got so tired of looking at it that they even get "sore" on your place, and give you the go-by. That sort of advertising is the kind that really "don't pay." It's the sort that the old mossback complains about, who sits back in his shell and "cusses" business.

Put up some first-class specialty, such as you can get from a standard formulary, and use it as a "leader" and advertising lever. Expatriate on its good qualities, keep hammering on it, and offer it instead of the standard nostrums, on which you don't make a profit, but have the said standards on hand, if the customer wants that particular brand. What with the cut-rate or cut-throat policy now in vogue, department stores, groceries, livery stables, and others that infringe on the druggist's preserves, the latter day apothecary will have to cast about for new avenues, and the specialty is about the best "graft" (as our friend, John L. Sullivan, might remark) of which we wot. Put a good name on it (duly registered) and then the world is your field—all you have to do is to cultivate it.

"Be not like dumb driven cattle,"

But take the bull by the horns—

And get there!

STORE HINTS.

By FRANK B. STYLES, Hempstead, L. I.

It is very often a delicate matter to offer "hints" about some certain subject which may be under discussion, and equally as often the hint rebounds very much to the discomfiture of the originator of the same. Nevertheless, it rarely occurs that the hint has no value to any one, and with this apology for offering the following suggestions, I shall endeavor to present a few which have been profitable.

Keeping a store clean is very essential, and one question often arises: "What shall I do with the sweepings?" Naturally, they are taken out and stored in various ways, sometimes for indefinite periods until they become such a nuisance by being in the way that one is compelled to act. Then as such acts are often productive of unprofitable results, it causes two items of expense, viz.:—cartage and cost of fuel. When the store is being swept each day let the papers and boxes, which are frequently dropped on the floor behind a counter, or sometimes gathered in boxes at various stations about the store, be taken by themselves and placed in a box or barrel reserved for the purpose in a convenient place near the laboratory stove. The floor can then be swept with damp sawdust, and the dirt carried out to another box and collected to be carted away. You will find your expense account for cartage is thereby lessened and the fuel account for laboratory stove is also diminished, as, instead of burning coal, wood or gas, you can burn the papers, which make a hot, quick fire. In this way also you dispose of trash in a sanitary way that makes a saving in your expense account. Almost every packing box or barrel that comes into the store has packing in it that is very convenient to burn, and if consigned to a place reserved for such purpose, it can be made to do its share to lessen expenses. For instance, a case of empty bottles comes packed in papers—save them. A box of drugs is packed in excelsior—save the excelsior, as either one of three dispositions can be made of it very conveniently, namely, you may use it for packing, or you may sell it to be used as packing, or, if you have too much on hand, it is very handy for fuel in the laboratory stove; in either instance it has some value to you.

The disposition of cases of empty bottles for convenience is oftentimes a serious question. Many times a cellar cannot be reconstructed to accommodate either you or your stock, and it seems to require considerable time and plenty of thought to devise a suitable way to dispose of the cases. Suppose you have a bare cellar at your disposal, it will be very convenient to construct a rack of two timbers for stringers about two feet from the floor and supported by short posts resting on the cellar bottom. Under this rack you can place your bottle cases, and as you have occasion to remove the bottles the paper can be placed in your trash box for your stove. In this way you can keep each case free from paper scraps, and they are not thrown upon the floor to make a bad appearance. To keep a cellar clean requires close attention to details.

The one great idea of having a place for everything and everything in its place applies in the cellar as well as it does to any other part of the store. Upon the rack barrels of all kinds can be placed.

In some places there is an attempt to label boxes and barrels and the methods used are various, both in kinds and permanence. As good a plan as I have seen used is this: Have the required number of 6-inch square by one-half-inch thick smooth blocks of wood painted white. Upon these blocks can be painted in black or red the various titles required, and having cut a hole which will allow a nail to be pushed through the block and driven into a box or barrel, you will thus acquire a set of wooden tags which will be convenient, uniform and lasting.

There is one great convenience which all stores cannot have, and that is a rear entrance which is accessible to the street. Much of the dirt which is brought into the store by packages being carried in at

the front door, would either not get into the store, or would only be taken into the rear of the store out of sight of customers. A rear entrance to a store is a valuable acquisition.

In any store there are always quantities of scrap paper and odds and ends of trimmings to be cared for, and in many instances they are thrown upon the floor. This is a very poor disposition to make of trash. Sometimes it is convenient to have several small traps in the floor behind the center into which scrap paper can be thrown, to be received on the under side by a box put there for the purpose. These boxes can be emptied every day, or as often as they are filled.

Very often bottles are broken in the store, or there are bottles that are brought in to be filled that are worthless, and to run out of the store to throw them away uses valuable time. A box can be conveniently placed for the reception of such goods. This will also keep much stock that is of a disagreeable nature to handle separate from what might be called clean trash which you intend for burning.

NOTE ON VETERINARY PHARMACY.

By ANTHONY ERTEL, Hempstead, L. I.

Considerable has been, and is being, written daily about preparing the various pharmacopoeial preparations and physicians' prescriptions, but very little if anything is written or said in regard to our veterinarians and their prescriptions, or about preparing the various remedies for our domestic animals, and faithful servant, the horse.

Some druggists in certain localities receive quite a revenue from prescription work of this nature, which work is carried on with as much care and preciseness as is the filling of any physician's prescription, for often the life of some valuable horse, or other animal, depends upon the remedy. Some druggists have a false idea that anything will do for veterinary prescriptions; but the veterinarian should be given as good treatment and attention as the family physician. Show him that you are careful with his work, and gain his confidence, and he can help to keep your ledger balance on the right side, by recommending you to his trade, as he will be able to give both owner and attendant confidence in your ability to serve him right.

Liniments, ointments, blisters and drenches are easily prepared, but boluses and electuaries, owing to their consistency and mode of administering, require considerable experience to prepare them properly. To prepare them other than in the proper way would lead the veterinarian to believe you did not understand the preparation of his remedies, and a false impression once gained is hard to overcome.

To prepare a bolus nicely, after all the ingredients are weighed and triturated together, add a small quantity of simple syrup, and beat this into an ordinary pill mass. Roll out and cut into the required number prescribed, then roll each into the shape of a suppository, and finally wrap each one in a piece of tissue paper, twisted at each end and neatly trimmed off. The bolus is given with paper on it previously wetted.

Electuaries require practice to bring them to a proper consistence. After all ingredients are placed in the mortar, add molasses or simple syrup, gradually, while triturating, until the mass will run from the pestle when removed from the mortar. This will harden as the syrup begins to penetrate the different drugs. Owing to the mode of administering this medicine, it should be placed in a wide-mouthed jar, preferably a fruit jar, as it can be easily taken out with the tablespoon.

Druggists having business in locations where many valuable horses, and other animals, are kept, should at all times be prepared with formulas for ailments and troubles which require immediate attention: the most common of these is colic.

The kennel is also a very profitable line to cater

to, for when dogs are kept in numbers, and closely confined, they are very apt to develop mange and other diseases, which can be treated successfully by the owners of such, with a little advice on your part. A few formulas may not be out of place.

For the Kennel.

Mange.

Whale Oil	2 parts.
Oil tar	1 part.
Flowers of sulphur.....	1 part.

This is to be thoroughly mixed and applied to the affected parts, and allowed to remain for about 24 hours, when the dog should be washed and a fresh supply used, usually 2 or 3 applications will cure. This remedy contains no poison, and cannot injure the dog should he lick it off. Another common ailment is distemper, which can be successfully treated with the following mixture:

Kall Chlor	5ij
Spis. Minderer	5j
Spis. Aeth. Nit	5j
Tr. Hyocynam.	5j
Aqua q. s. ad.	℥j

M. Ft. Sig. Teaspoonful every 3 hours.

For the Stable.

Colic Drench.

Tr. Opil.	5ij
Sulph. Ether	5j
Raw linseed oil.....	℥j

M. Ft. Sig. One dose.

Founder.

Tr. Aconit.	5j
------------------	----

Sig. 20 drops in $\frac{1}{2}$ pint cold water. Repeat every 4 hours.

PHOTOGRAPHIC SUPPLIES AS A PROFITABLE SIDE LINE.

By W. ULLEMAYER, Rock Island, Ill.

It has been my experience that one of the best side lines for a druggist to handle is photographic supplies for both amateur and professional photographers. It is a clean, profitable line, and does not require much money invested. It pays to advertise this line in the daily papers, especially if you wish to introduce something new. It has paid us and well. It increases the cash sales decidedly; it being mostly a cash business and a luxury, you are seldom asked to give credit.

The line particularly fits the drug business, and no other business man is so well adapted to push it as a good, live druggist. It brings a class of pleasant, intelligent people to your store that probably would not come otherwise; it keeps your store before the public as a first-class store for photographic materials and chemicals, and helps to make a popular place of your store and increases the sales on other goods.

Two years ago in September we bought our first invoice of goods amounting to \$200, consisting of a few cheap cameras, dry plates, print paper, developing and toning solutions, a few ruby lanterns, trays, card mounts, etc. We hardly knew what to buy, as we were green at the business, but we soon found out what was wanted from the people who came in to buy. We found the goods sold readily, although there are five other stores in our three cities selling the same goods. Competition is strong, but that didn't discourage us any. Feeling encouraged we gradually increased our stock as the demand warranted. We put in a few Rochester Poco and Premo Cameras, a few Cyclone cameras ranging in price from \$10 to \$25; tripods from 75 cents to \$200; flash guns and lights, a good assortment of card mounts as large as 8x10; photograph albums, etc. Our entire investment now is not over \$250. We buy the goods as we need them, finding it is not necessary to carry a heavy stock. The first year the sales were over \$800; it will double that now. Securing the right to sell American Aristo papers, we have gone after the trade of the professional photographers, furnishing

them with their paper, on which there is a 25 per cent profit. This also brings some of their trade on plates, sulphite soda, hypo., pyro., chloride of gold, etc., averaging 20 per cent profit.

For amateurs we arranged a small dark room under a stairway where they can load their cameras, keeping a ruby lamp handy. This also serves as a good place for plates, papers and extra supplies. The profit in this line is as good as, if not better than, in patent medicines. It pays to have some knowledge of the art yourself, as you can be of much service to amateurs in giving information on developing, printing, toning, timing exposures, and by taking pictures of interesting subjects and showing your patrons what can be done, for this helps to keep up their interest in amateur photography and often makes good sales.

This line has paid us and well, and we expect to do more business than we have done in the past. It will pay any druggist profitably who has a little push and energy.

HOW TO SUCCEED IN THE DRUG BUSINESS.

By STEWART GAMBLE, Minneapolis, Minn.

The druggist who would succeed in his business is the man who has the confidence of the people, is upright and honorable in all his dealings, and who attends strictly to his own affairs.

As far as possible he should look after the welfare of his customers himself. Then, he should employ only first-class help; poor clerks are dear at any price. All should be accommodating and courteous, answering questions asked by customers in regard to the different remedies, in such a way that the customer would have confidence in what had been told him. The way to do this is to tell only what is absolutely true. By thus doing, your customer sees at once that you have taken an interest in his individual welfare, and he is sure to come back when in need of anything in your line. There is no better advertisement for a store than a well pleased customer.

Also, all in your store should keep regular hours, have your store open at 7 a. m. (the proprietor should be there himself by 8 a. m.), with regular hours for meals. He should close his place of business at 9 p. m. in winter and 10 p. m. in summer. By following this plan all would be in better physical condition to attend to their duties on the day following. The stock should be looked after carefully every morning, and I believe, if possible, by the proprietor. Nothing gives a customer greater confidence than promptness in always having on hand whatever is called for. That's our business. The store should be kept scrupulously clean and fresh, and made as attractive as possible.

Put up as many of your own remedies as you can; (providing they are first-class). Place them on your showcases neatly arranged with card and price, and stating what the article is for.

Change your window display at least once a week, and arrange for but one article at a time in each window. Have an attractive card with name of article and price placed therein, and "special" in larger print.

If in partnership, the business should be so arranged that each partner would be responsible for looking after the running of a certain portion of the work.

Be careful in buying. Discount all bills if it is possible. Give strict attention to your business, with needful vacations for the care of your health. Always live within your income, and there is no such word as fail.

ALBARGIN is a faintly yellowish powder, readily soluble in water and recommended as an antigonorrhoeic. It is reported to contain 15 per cent. of silver, combined with gelatose.

SILVER MAY BE COLORED PINK by dipping the cleaned article for several seconds into a hot strong solution of cuprous chloride, and then washing with water (Pharm. Cent.).

BUYING.

By WILLIAM MITTELBACH, Boonville, Mo.
A well kept want book is the first step toward safe buying. Arrange this book so that you can prefix the quantity needed. When ready to place the order go over the list carefully, and satisfy yourself that you need everything there. When this is done note the amount of each article you are ordering, first having carefully decided the proper quantity to purchase—not too much, but enough until you order again. Having done this, copy the order carefully and send in to your jobber, or give verbally to the representative of the jobber. Mark the order on want list, with name of house from whom ordered, and on what date. You are now ready to receive the goods. Upon arrival, go over the invoice and see that prices are correct. Compare them with your latest quotations. Those given in our drug journals are reliable. If you find any errors in over or undercharge, mark the item on the invoice, and at once report to the jobber. Be sure and report all errors, whether in your favor or not. The jobber is entitled to just compensation for his goods, and will appreciate your calling an error to his attention. Then check off from the invoice and mark those goods the prices of which are correct. Those about which there is some controversy set aside until you hear from the jobber. The goods are now ready for sale, and it depends upon you to secure reasonable and just profits.

Now comes the finale of the transaction—the payment for the goods. You can either take a certain time or a certain per cent. off for cash. Two per cent. off for cash within ten days means just that, and not eleven or twelve days. It is wrong to wait twelve, fifteen or even thirty days and still deduct the cash discount. If the discount amounts to 24 cents, don't take 25 cents. The one cent belongs to the jobber.

The above, if followed, will give you a correct and good commercial rating. Everybody will want your trade, and you will be in a position to buy goods right.

THE ART OF LABELING.—Frank E. Miller, in the *Western Druggist*, gives the following practical suggestions on the "art of labeling": Print the titles and such notes as are necessary on good white paper. The best ink for this purpose is Higgins' waterproof drawing ink. Paste the label on the container with a good adhesive mucilage or paste. A paste prepared according to the following formula has given good satisfaction:

Wheat flour, 4 ounces; boric acid, 20 grains; water, 1 pint; nitric acid, 1 dram. Heat slowly with constant stirring till it thickens.

A good way to leave a border around the label is first to paste a larger piece of colored paper on the container and then the white label over it. After drying well, apply the following size with a brush: Acacia, 4 parts; glycerin, 0.5 part; boric acid, 0.1 part; water, enough to make 16 parts. When dry, varnish with damar varnish, thinned with oil of turpentine. The glycerin in the sizing prevents the cracking of the coat when dry, and the sizing is necessary to prevent the varnish from soaking through the label. The damar varnish does not turn yellow with age, as does bleached shellac and other varnishes.

CYNOGLOSSINE is an alkaloid obtained by M. Vournazos from *Cynoglossum officinale*, a plant which grows in the southern provinces of the Peloponnesus (Rep. de Pharm.). The alkaloid occurs in small prismatic crystals, which are colorless, odorless, and of an acid taste. It melts at 115° C., is readily soluble in water, moderately soluble in alcohol, and almost insoluble in ether. A second principle, cynoglossidin, was obtained by the author in the residue of the powder from which cynoglossine had been extracted. Cynoglossidin occurs as a brown crystalline powder, is odorless and very bitter, and soluble in all proportions in ether, alcohol, chloroform, and melts at 138° C. It seems to constitute the chief active principle of the root.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.
Please be brief and always sign your name.

ADVANT THE WORCESTER PLAN.

Cleveland, O., July 10, 1901.

To the Editor:—In the editorial columns of your issue of July 4th, I notice an article on the Worcester Plan, wherein the following statement is made:

"Take two headache remedies of somewhat similar character, both largely advertised, one of which is marketed under the Worcester Plan, the other is not. The protected article would be sold at the protected price, but the proprietor of the other would immediately recognize the opportunity and hustle to place his preparation everywhere and sell it for any old price, and he would get the business too."

I trust you will pardon me in making the assertion that with the present feelings of retailers such a condition would not long exist when price protection becomes common in its use. The situation which you outline in your editorial was called to my attention some time ago, and in order to satisfy myself upon this question, I took occasion to write to some of the leading wholesale and retail firms in Massachusetts, asking for the exact status of affairs in their territory. In reply to my various communications the following answers were received:

Boston, Mass.
We do not think the sales of Pheno-Caffein have been reduced in the least. The plan has the approval of the retail trade.
Yours truly,
Gilman Bros.

Boston, Mass.
In reply to yours of April 12, would say we do not think there is any falling off in the sale of Pheno-Caffein Pills since the Worcester Plan.
Yours truly,
Eastern Drug Co.
Boston, Mass.

Replying to yours of the 18th, would say that as far as my personal knowledge extends, I can perceive no diminution in the sale of Pheno-Caffein Pills to the consumer since the Worcester Plan went into effect, notwithstanding the agitation of the question and increase in retail price.
Yours truly,
Henry Canning.
Malden, Mass.

It has been my duty and pleasure to call on over 150 druggists within the past few weeks in the interest of this plan (Worcester) and if you were to hear them express their gratitude towards Dr. Garst, I do not think you would conclude his efforts had reduced the sale of Pheno-Caffein. I fail to see how the plan can injure the sale, as it is just what the retailer, outside of a pronounced cutter, desires.
Yours truly,
G. A. Charles.

As most druggists are interested in some headache preparation of their own, the above expressions should refute any possible assumption in favor of price protected articles being given a back seat.

As a further evidence of the fact that retailers are very much in earnest in their efforts to secure recognition for the Worcester Plan, I wish to say that every member of the Northern Ohio Druggist Association is signing his name with alacrity and pleasure to the following memorial:

"Whereas, the retail drug trade would be benefited without injustice to anyone by price enforcement under the Worcester Plan; now, therefore, the undersigned do hereby endorse said plan, and as a further expression of our interest and as an incentive to manufacturers of proprietary goods to adopt it, do promise to give preferential consideration to the goods of manufacturers that are sold under said plan, whenever we can do so without injustice to any other goods or discrimination against our own. And we promise to sell the price protected goods whenever called for by name, without effort to substitute our own or to sell them in place of such price-protected goods."

Yours truly,

E. R. COOPER.

The Legal Responsibility of the Pharmacist in the Sale of Poisons and Dangerous Substances.*

By J. H. BEAL.

Liability Either Criminal or Civil.

The liability of the pharmacist for the illegal sale of poison may be either criminal or civil. His criminal liability is where he sells or dispenses a poison contrary to the positive provisions of the criminal law, and becomes thereby liable to prosecution in the name of the State, and, if found guilty, subject to fine and imprisonment. This criminal liability attaches whenever the sale is made or the article is dispensed, whether an injury results from such wrongful sale or dispensing or not.

The civil liability of the pharmacist is where he becomes civilly liable to some person who receives injury through the wrongful sale or improper dispensing of poisons or dangerous substances, which liability is enforced by a civil suit for damages, and is prosecuted in the name of the person injured, or of his representatives. Since the liability is only for the damage received by the injured person, it does not attach immediately when the wrongful sale is made, as in criminal cases, but only after the injury has actually occurred.

The pharmacist's criminal liability is independent of, but may occur simultaneously with his civil liability. For example, if he sell a poisonous drug without labeling the same, as required by law, he is liable to a criminal prosecution for his violation of the statute. If in consequence of such failure to properly label the poison the purchaser takes the same, or administers it to another, and the person taking the substance is injured, the pharmacist becomes also civilly liable to the injured person. The fact that he is criminally prosecuted does not relieve him from civil responsibility to the injured person, nor vice versa. Or the pharmacist may be criminally liable without being civilly liable to the injured party, or civilly liable in damages to the latter without being criminally liable. These statements will be illustrated by the cases cited under the subsequent titles.

What Constitutes a Poison.

It is a difficult matter to frame a definition of poison which will satisfy both scientific and legal requirements. Some examples of attempted scientific definition of a poison are as follows:

Wharton and Stille (Medical Jurisprudence, Sec. 493) define a poison as "a substance having an inherent deleterious property which renders it, when taken into the system, capable of destroying life."

Taylor on Poisons (p. 18), defines it as "a substance which, when absorbed into the blood, is capable of seriously affecting health or of destroying life."

The Standard Dictionary defines a poison as "any substance that when taken into the system acts in a noxious manner by means not mechanical, tending to cause death or serious detriment to health."

Other authorities give somewhat similar definitions. Nearly all agree upon three essential points:

First: That a poison is a substance which is inherently deleterious to life and health.

Second: That it must be taken into the system, i. e., into the circulation.

Third: That it must act by means other than mechanical.

The first criticism which suggests itself is that there is no known substance that is inherently poisonous in any quantity, no matter how minute. In fact, whether a substance is to be denominated a poison or not depends upon the quantity taken in the particular instance considered. The size of the dose

is always an important consideration. The most potent physiological agents known are habitually prescribed and safely used as medicines, while, on the other hand, there are only a very few of the substances commonly used as medicines and generally regarded as non-poisonous which are not capable of acting deleteriously to life and health, if taken internally in sufficient amount.

It is this consideration which has led to the insertion in some poison laws of a provision which makes the attachment of the poison label dependent upon the amount of the substance sold or dispensed at one time. The same consideration also was responsible for the introduction into the so-called Model Pharmacy Law of the A. Ph. A. of the provision that it shall not be necessary to place a poison label upon the container "when a single box, bottle, or other package, or when the bulk of two fluid ounces, or the weight of two avoirdupois ounces, does not contain more than an adult medicinal dose of such poisonous substance."

The second point to be considered is the absorption, or the taking into the system of the noxious substance. By taking into the system, properly speaking, we must understand absorption into the circulation, either through the mucous membrane of the air cavities or alimentary canal, or through the external skin.

If, however, the term poison be limited to substances which exert their effects only after absorption, we must exclude from the list of poisons a large number of substances which are commonly classed as such. For example, in the case of the corrosive mineral acids or caustic alkalis, the injury or death commonly results from the extensive destruction or corrosion of vital tissues, or from the "shock" or inflammation consequent upon such injury, and not from physiological effects following absorption.

The same reasons would likewise lead to the exclusion of such articles as powdered glass, and of substances which occasion death by the formation of concretions and the consequent obstruction of the intestine.

The third thing to be considered is the nature of the injury. If it be mechanical, it would hardly be called an injury through poison, and yet this limitation would also exclude such articles as powdered glass and similar agents, for though the pathological change may be an inflammation, this nevertheless must be presumed to result from the mechanical irritation of the agent.

From the foregoing considerations we are led to the conclusion that a scientific definition of a true physiological poison is not sufficiently broad for all legal purposes, and, on the other hand, that a legal definition broad enough to cover the use of all noxious agents that may be used to destroy life will necessarily include many agents which are not true physiological poisons.

One of the best of the legal definitions of a poison is that laid down by Chief Justice Coleridge in the Case of Reg. v. Cramp (5 Q. B. D. 307), which is that a poison is "that, which, when administered, is injurious to health or life."

It is owing to this difficulty of defining a poison that some statutes include after the word poison the phrase "or other noxious substance."

The Administration of Poison.

Incidentally it is of interest to the druggist to know what constitutes the crime of administering poison.

The administration of poison with homicidal intent, or with intent to injure, is, in the United States, generally covered by the statute law. "There is,

* Extracts from a lecture delivered before the Department of Pharmacy of the University of Michigan. (Reprinted from Pharm. Review.)

however, no very essential difference between the statutory crime and the crime at common law." (8 A. X E. Encye, 736.)

To constitute the crime of administering poison, the act of administration and the criminal intent must both be proved. For example, a conviction for homicide would not be sustained where, for the purpose of producing sleep, an overdose of a narcotic had been administered and death resulted. Thus, in a Tennessee case, where the evidence showed that the accused, a young nurse girl, administered a fatal dose to an infant under her care, in total ignorance of its deadly properties, and with the intention merely of quieting the child in order that she might absent herself for improper purposes of her own, the court held that a conviction for murder could not be sustained. (Ann v. State, 11 Humph, Tenn., 159.)

If the intent be proved, however, the crime of administering poison will be held complete, even though the poison be enclosed in a covering not soluble and not likely to be broken in its passage through the body. (Rex v. Cludry, 2 Car X K., 907.) In this case poisonous berries (Cocculus Indicus) were administered in their original form, and as the outer ligneous coating was insoluble in the intestine, the effect of the poison was mitigated.

Likewise, if the intent to kill be proved, if another than the one intended takes the poison, and death results, the crime of murder is complete. (Saunders' Case, Plowden's Rep., 473; State v. Faulkner, Phillips' N. C., 233.)

Ground of the Druggist's Responsibility in Civil Cases.

The ground of the druggist's civil responsibility for injury resulting from mistake is negligence only. If the error occurs without any fault or negligence of himself or servants, the case is like one of inevitable accident, and the druggist is not liable though injurious consequences follow. (Brown v. Marshall, 47 Mich., 576. Same case, Am. Rep., 728.)

What Constitutes Negligence.

It is not an easy matter to give a definition of what constitutes negligence, in the legal sense, that will fit all cases.

In general it may be stated that negligence is the failure to exercise such a degree of care or diligence in the performance of any duty as a man of reasonable care and diligence would ordinarily be expected to exercise in the discharge of that particular duty. If in consequence of such failure an injury results, the injured party will have a right of action against the negligent party for the damage caused thereby.

The two following definitions have been much approved for their conciseness and comprehensiveness.

Negligence is "a want of that care and caution which a person of ordinary intelligence and judgment would use under like circumstances." (Vass v. Waukesha, 90 Wis., 337; 63 N. W., 280.)

Negligence is "the failure to observe, for the protection or safety of the interests of another person, that degree of care, precaution and vigilance which the circumstances justly demand." (Henry v. C. C. C. X St. L. Ry., 67 Fed. Rep., 426.)

The Degree of Care and Skill Required.

From the definition above given, and cases cited, it will be noted that the care and diligence required is ordinary care and diligence.

"A druggist is responsible only for injuries resulting from a want of ordinary care and skill. The highest degree of skill is not required of him." (Simonde v. Henry, 30 Me., 155. Same case, 63 Am. Dec., 611.)

In this connection it must be remembered, however, that what would be considered ordinary care and skill on the part of a grocer or merchant would not be considered ordinary care and skill in the case of a druggist. On account of the dangerous character of the substances which he handles, the result of a mistake is much more serious than in the case of ordinary merchandise, and he must be held to a corresponding degree of skill and diligence. By his as-

sumption of the business he warrants the public in believing that he is possessed of the necessary skill and knowledge, and that he will exercise the proper degree of diligence.

"It is the duty of druggists to know the properties of the medicines which they vend, and to employ such persons as are capable of discriminating and compounding according to prescription; and if they depart from the prescription or ignorantly introduce other and poisonous drugs, they are responsible to the party injured, and cannot escape responsibility by proof that they have been extraordinarily careful in general." (Flee v. Hollencamp, 13 B. Mon. [Ky.], 219.)

In the last case a druggist ground a medicine in a mill that had previously been used for a poisonous drug (Cantharis). On the trial of the case the defendant claimed the right to go to the jury on the question of due care, and that he was not liable if he had used due or extraordinary care in compounding the medicine. The court declined to take this view of the case, and held that the defendant was liable.

Burden of Proof and Contributory Negligence.

In a suit to recover damages for an injury caused by the neglect of another, the burden of proof is upon the plaintiff to show that the neglect of the defendant was the cause of the injury complained of. It is not sufficient to establish merely a causal connection between the negligence of the defendant and the injury to the plaintiff, but the latter must also show that his own negligence did not contribute to produce the injury.

While there has been considerable difference of opinion as to the extent and application of the doctrine of contributory negligence, and a corresponding variation in the decisions, the better rule seems to be that if the negligence of the two persons is contemporaneous, and the fault of each contributes directly to the injury, the plaintiff cannot recover, if by due care on his part he might have avoided the consequences of the defendant's negligence.

Thus, in the trial of a certain case, it appeared that the plaintiff had gone into the defendant's store to purchase some extract of dandelion. By mistake the druggist took down a jar containing extract of belladonna, and so labeled, and began weighing out the quantity asked for. While so engaged, the plaintiff, without being invited to do so, took some of the extract from the jar which was standing on the counter, and swallowed it, and in a short time became seriously ill from belladonna poisoning, and afterward brought suit to recover damages for injuries received. It was held that he could not recover, since his own negligence contributed directly to the injury.

If the plaintiff had been invited to help himself from the jar, or if the druggist had completed the order, and the plaintiff had been injured by taking the portion dispensed, the druggist would undoubtedly have been liable. If he had been left to himself the druggist might have discovered his mistake before the medicine had been delivered, or at least before it had been taken, and the injury would have been prevented. In any event, the plaintiff was not justified in relying upon his own judgment.

So where the druggist warns a purchaser of the dangerous character of a medicine, and gives accurate directions as to the quantity which may safely be taken, and the purchaser is injured or killed by taking an overdose in defiance of the druggist's instructions, the druggist is not liable for negligence because of his failure to label the substance poison, as required by the statute. The customer may not disregard the directions of the druggist, and then hold the latter responsible for any injury resulting from his own recklessness or carelessness. (Wohlfahrt v. Bechert, 92 N. Y., 409; S. C. Am. Rep., 406.)

In the case just cited, Wohlfahrt, on the advice of a friend, asked for Black Drop instead of Black Draught, as intended. The druggist furnished the substance asked for, but omitted to place a poison label on the bottle, though he advised the customer of its dangerous character, and of the proper dose. The purchaser, disregarding the caution of the drug-

gist, took a poisonous dose and died. Suit being brought by his personal representatives, it was held that the druggist's failure to label the substance poison, as required by law, did not render him liable, since the death was chargeable directly to the contributory negligence of the diseased.

The druggist would, of course, still be liable criminally for his failure to attach a poison label, as required by law.

SHOP TALK.

An Eighth Avenue, New York, druggist has a way of displaying tooth brushes that sells many of them. He has at least 500 of them tied to black threads in his window. The threads are strung every which way, giving the appearance of a much larger number of brushes than is really shown. Customers have told him that the window is artistic and attractive—they have substantiated their statements by buying the brushes.

* * *

W. A. Frost, former president of the Minnesota board of pharmacy, and who has long had a drug store at Selby and Western avenues, St. Paul, is using a marvelously well-contrived pill cupboard of his own invention. Perhaps no receptacle has ever been devised that will hold so many bottles of medicine, all so easily accessible. The cupboard has two double doors, one set inner and the other outer. The inside of each outer door and both sides of the inner doors are supplied with little racks, whose upright portion consists of strips of wood about the width and thickness of lath. In these racks tiny phials of pills are kept, the place of each phial being numbered. Each set of racks holds 125 phials. In addition, the back of the cupboard likewise has three racks. One door is lettered "A," another "B," and "C," "D" and "E" follow. Mr. Frost has a book in which the contents of every rack and their numbers are entered, and he can almost place his hand upon any particular brand of pills he desires. The cupboard, which is not more than four feet wide, three feet high and a foot deep, holds something like 1,200 phials.

EXAMINATION OF CREAM TARTAR AND POWDERED OPIUM.

In going over the stock of a recent suburban acquisition, my attention was drawn to two five-pound packages labeled cream tartar. The boxes bore the name of a prominent Philadelphia concern. On close examination the contents proved to be only 12 per cent. potassium bitartrate, and a little of the calcium salt with nearly 85 per cent. of phosphate of calcium.

A very light colored sample of powdered opium suspected to be an admixture because of its light shade, proved, however, to contain 13 per cent. morphia. It evidently was made from a good quality of opium, and on account of the large amount of morphine contained, was mixed with such quantity of powdered milk sugar as was needed to produce a powder of standard strength.

F. W. E. STEDEM.

Pharmaceutical Chemist, Philadelphia, Pa.

CHEMISTRY OF UGANDA ALOES.—Tschirch and Klaveness have recently published a paper on the chemistry of Uganda aloes, a new variety belonging to the type of Cape Aloes (Arch. der Pharm.). The aloin obtained from this variety of aloes is easily soluble in water, alcohol and acetone, and also dissolves in acetic and mineral acids, and dilute alkalies. It is not soluble in ether, chloroform and benzene. It reduces silver nitrate in the cold, and has a melting point of 138° to 139°. From experiments the formula for the aloin appears to be $C_{16}H_{24}O_8$, and a careful comparison establishes the fact that it is identical with capaloin, in other words, that Uganda and Cape aloes are identical.

EXAMINATION QUESTIONS.

WEST VIRGINIA BOARD OF PHARMACY.

BOTANY AND MATERIA MEDICA.

- 1 What is the earliest stage of plant life, and of what does the plant then consist?
- 2 What three things are essential to plant development?
- 3 Name and describe the two great families of plants making your description distinguishing, (a) as to seed lobes; (b) as to growth; (c) as to leaf structure.
- 4 Name the male and female organs of the flower and state what office they fulfill in the propagation of the species.
- 5 Distinguish between a fruit and a seed.
- 6 What do you understand by the following terms applied to plant: (a) Alkaloidal; (b) Amylaceous; (c) Oleoresinous. Give example of each.
- 7 What part of the plant do the following drugs represent? Give official Latin name of each: (a) Rhubarb, (b) Asafoetida, (c) Arnica, (d) Nutgalls, (e) Buchu.
- 8 Name three official Diuretic Vegetable drugs, giving botanical name and dose of each.
- 9 (a) State source of beeswax. (b) How is white wax obtained? (c) How can you distinguish white wax from spermaceti.
- 10 Name three official drugs that are gum resins.
- 11 Give common names of the following: (a) Lappa (b) Sambucus; (c) Matricaria; (d) Cypripedium; (e) Galoplythium; (f) Echinymus.
- 12 Name four official vegetable astringents. Also four vegetable acids.
- 13 Differentiate "fixed" and "essential" oils. Name three in each class that are official.
- 14 Define and give an example of an official: (a) Rhizome, (b) Corm, (c) Tuber, (d) Stigma, (e) Petal.
- 15 What official drugs yield prussic acid?
- 16 Give botanical name of plants from which the following are obtained, respectively: (a) Manna, (b) Salicin, (c) Sparteine, (d) Thymol, (e) Elaterin.
- 17 Give distinguishing characteristics and an official example of: (a) Balsam, (b) Gum Resin, (c) Resin, (d) Gum, (e) Alkaloid, (f) Glucoside, (g) Steropten.
- 18 Name an official drug under each of the following descriptive heads: (a) Antispasmodic, (b) Caustic, (c) Narcotic, (d) Tonic, (e) Vermifuge, (f) Cathartic.
- 19 Name three coal tar derivatives. Give medicinal properties and dose of each.
- 20 What is the source of Phosphorus? How shall it be kept and why? State medicinal properties and dose.
- 21 Give official Latin name of Salol. What peculiarity does it possess in regard to its medicinal properties?
- 22 How many vegetable drugs are standardized? Name them.
- 23 From what part of the plant is ginger obtained? Give botanical name and habitat. To what is the hot taste of ginger due?
- 24 Give common name of (a) Saccharum Lactis. (b) Sanguinaria. (c) Myrristica. (d) Matricaria. (e) Icthyocola.
- 25 From what part of the plant is the U. S. Pharmacopoeia Colchicum extract prepared? From what part the Colchicum fluid extract? From what part the tincture?

PHARMACY.

- 1 In what respect does the U. S. Pharmacopoeia differ from the Dispensatory?
- 2 Explain the process of maceration, and state how it differs from digestion.
- 3 What are oleates, and how are they made? Name two.
- 4 How much morphine should there be in 500 gr. of powdered Opium?
- 5 What excipient would you use in making pills of: (a) Phosphorus; (b) Potassium Permanganate, and (c) Nitrate of Silver?
- 6 What effect has exposure to the atmosphere upon the following: Potassium Carbonate, Borax, Epsom Salts, Potassium Iodide, and Glycerine?
- 7 Write a formula for one pound of Dover's Powder.
- 8 Write a prescription for four ounces of emulsion of turpentine, each teaspoonful to contain ten drops of the oil.
- 9 Sodii Salicylatis.....dr. ii ss
Syrupi Limonis.....oz. ii
M. Sig. Teaspoonful three times a day.
What will take place on standing?
- 10 Tinct. Ferri Chlor.....dr. ii
Aqua Gualtheriae.....oz. iiii
Syrupi Tolutani.....oz. i
M. Sig. Teaspoonful one-half hour after meals.
State chemical and color reaction which takes place in this prescription.
- 11 Potassii Permanganatis.....2 Gm.
Glycerini.....4 Gm.
Aqua qs. ad.....50 C.C.
M. Sig. Apply externally.

State how you would prepare the above; giving reason for your process; what chemical reaction takes place, and what occurs on long standing.

- 12 Acid Carbolicdr. i.
Collodiondr. vii
M. Ft. Solution. Sig., apply with camel's hair brush.
Would you fill this prescription? If not, why?
- 13 Potassium Cyanide.....dr. i.
Morph. Acetate.....gr. ii.
Acid Acet. Salic.grs. ii.
Syrup qs. ad.....oz. viii
M. Sig Teaspoonful three times a day.
Would you fill the above? If not, give reasons.
- 14 How many grains of Cocaine Hydrochlorate must be added to four ounces of water to make a 4 per cent. solution?
- 15 Name a good solvent for each of the following: (a) Phosphorus; (b) Tannic Acid; (c) Camphor; (d) Chloral Hydrate.
- 16 What is Curron oil? Give its official title and state how it is prepared.
- 17 Give doses of the following: (a) Apomorphine; (b) Atropine Sulphate; (c) Antimony and Potassium Tartrate.
- 18 What is the dose of Potassium Cyanide; of Hydrocyanic Acid dilute?
- 19 What is the dose of Strychnine Sulphate, and what are the symptoms of poisoning by strychnine; (b) how would you treat a case of strychnine poisoning?
- 20 What is the antidote to be administered in a case of poisoning by Argenti Nitras?
- 21 Give doses of the following emetics: (a) Fluid Extract of Lobelia; (b) Fluid Extract. Ipecac; (c) Mustard; (d) Wine of Antimony; (e) White Vitriol.
- 22 Give the properties and dose of Citrate of Iron and Quinine. What percentage of Quinine should it contain?
- 23 For what poison is common salt an antidote?
- 24 Give the latest recognized antidote for carbolic acid poisoning.
- 25 State the solubility of the following in water or alcohol. Make a table, using 0 for insoluble, 2 soluble, 3 very soluble; Iodide of Potassium; Chlorate of Potassium; Sulphate of Quinine; Oxide of Zinc; Corrosive Sublimite; Strychnine; Glycerine; Boric Acid; Acetanilid; Gallic Acid; Phosphate of Sodium; Acetate of Potassium.

CHEMISTRY.

- 1 What is meant by the valence of an element? Can the same element possess different valences? Give example.
- 2 Give chemical name and formula of: (a) Blue Vitriol; (b) White Vitriol; (c) Green Vitriol.
- 3 What is the principal use of K_2CrO_4 in chemistry; in pharmacy. What precautions must be observed in handling this salt, and why?
- 4 Complete the following equations:
(a) $Zn + H_2SO_4 =$
(b) $H_2SO_4 + NH_4Cl =$
(c) $Na_2CO_3 + Ca(OH)_2 =$
(d) $CaCl_2 + Na_2CO_3 =$
- 5 How would you separate an albuminous substance from some other compound, when both are in solution?
- 6 How does Morphine differ in its behavior with Potassa and Soda from other alkaloids?
- 7 What kind of sugar is sometimes found in urine?
- 8 State what you understand by Isomerism, as applied to carbon compounds.
- 9 What is the chemical composition of the official Alum?
- 10 Give chemical name of Liver of Sulphur; and state how it is prepared.
- 11 How would you detect the presence of Corrosive Sublimite in Calomel?
- 12 What would be the name of a compound resulting from the union of: (a) Hydrocyanic Acid and Zinc; (b) two volumes of Hydrogen and one of Oxygen; (c) Sulphur and Iron; (d) Hydrogen and Chlorine; (e) Sulphuric Acid and Lime?
- 13 How is Sulphuretted Hydrogen prepared?
- 14 How does Red Iodide differ from Yellow Iodide of Mercury?
- 15 Differentiate and give common names of: (a) Hydrogen Monoxide; (b) Hydrogen Di-oxide.
- 16 State what color each of the following imparts to a non-luminous flame: (a) Potassium; (b) Sodium; (c) Lithium.
- 17 What is a binary salt? Name two official ones.
- 18 What constitutes an atmospheric air entering into the process of combustion; and what is its chemical significance in the process?
- 19 What chemical reaction takes place when solutions of the white and blue Sulphate powder are mixed?
- 20 Illustrate by chemical equation the change that takes place in the preparation of Spirit of Mindererus.
- 21 Mention a chemical antidote for Arsenical poisoning, and explain its action on the stomach.
- 22 What are fixed oils and fats, chemically? Of what principles do they usually consist?
- 23 Write the common English names for the following: K_2MnO_4 ; Ag_2O ; NH_4Cl ; $LiClO_4$; $CHCl_3$; KI ; $NaCl$; C_2H_5OH .
- 24 When Sweet Spirits of Nitre is added to a solution of Iodide of Potash, what change takes place?
- 25 How many liquid elements are known to science? Name them.

THE TREATMENT OF HEAT PROSTRATION.*

By A HOSPITAL PHYSICIAN.

For the next three months we shall be called upon from time to time to discuss the general topic of sun-stroke, heat stroke, heat prostration or whatever name our friends choose to call it.

There is no doubt that too much external heat for too long a period of time will produce certain marked symptoms. In considering them we must remember the chief functions of the skin which are to maintain the temperature of the body at a certain nearly fixed degree, and to excrete some of the body's waste products.

There are probably two centers in the brain which rule the body temperature. One regulates the production of heat and the other its distribution. They are intimately associated and the latter is almost, if not quite, the same center which governs the caliber of the vascular capillaries. The reason for the belief that there are certain centers in the brain that govern these functions are not pertinent here, and they are not demonstratable in the human subject on account of the impossibility of obtaining experimental evidence. Suffice it to say that they undoubtedly exist and lie at the base of the brain posteriorly—just inside the skull in fact.

Bodily heat is produced in the same way that ordinary heat is produced anywhere else—by combustion; this is to say by the combination of oxygen with the other elements of the organic compounds of which both we and our food are made.

There are two ways in which the bodily temperature may be increased: (1) By over production; (2) by under elimination.

The elimination of heat is dependent on evaporation from the skin. The blood vessels bring the warm blood to the surface and the sweat glands throw out the moisture on the skin. This is to be converted into vapor and thereby to withdraw from the body the latent heat needed to convert water into vapor. This conversion of sweat into vapor with the consequent drying of the skin is best accomplished when the amount of moisture in the surrounding air is low. It is not so dependent on the temperature of the air though it is most active when the temperature is high. When the percentage of moisture in the air is raised it becomes progressively less and less easy for the sweat to evaporate, and the result is that the skin becomes wet and the sweat stands in drops. Finally there is not enough evaporation to disseminate the amount produced and the bodily temperature rises. Then the vicious circle is complete and matters go from bad to worse—the amount of surplus heat increasing continually. The amount sweat depends on the amount of blood brought to the surface and also on the general condition of the sweat glands. The amount of blood depends on the heart and on the caliber of the blood vessels. When there is greater difficulty of evaporation there is co-ordinately less result from evaporation and more evaporation at a low rate must take the place of less at a high rate. Consequently the surface vessels are dilated and the heart acts more vigorously and the glands secrete more fluid. These actions are regulated automatically by the centers already mentioned and under ordinary conditions of health and atmosphere the action of the skin is sufficient; when too great strain is put upon it one of two things happens; either the body temperature rises or it falls. Ordinarily it rises, for the heat-producing center keeps on acting after the second center has been proven inefficient and the patient, if untreated, dies from simply too much heat.

In other cases the temperature falls; for so much poison is stored up that the heat center is paralyzed along with the rest. In these rather rare cases it is impossible to tell whether the body temperature was high before the patient became prostrate—for these cases are not found until they are overcome.

We must remember that the sun is not necessary to "sun stroke." Moisture is much more noxious for the atmosphere is dry so that the evaporation of the

*Druggists' Circular.

sweat is rapid, almost any temperature can be borne. Furthermore there are more people overcome in buildings than in the open air. To be sure most of the cases reported in the papers are street cases and most of the ambulance calls are for these cases, but they bear small proportion to those not so reported. If it were the direct action of the sun, the most afflicted would be the farmers and other out-of-door laborers, whereas there are more cases among factory hands and others engaged in indoor occupations.

The reported cases are only those who more or less suddenly become unconscious. When found, the diagnosis must be made between heat, plain intoxication, apoplexy and opium poisoning. Usually this is easy, for we have first of all the extreme heat and humidity of the atmosphere. Again, the skin usually has a peculiar color that cannot easily be described but which is readily recognized. It is not simply the flushed face of alcoholism or apoplexy but the skin is of a sort of brownish-red tinge. The respiration is apt to be rapid and shallow—not the stertor of alcoholism and apoplexy; not the slow, infrequent breathing of opium. The pupils may be dilated or unchanged; in apoplexy one is almost always dilated and does not respond to light; in alcoholism they are usually both dilated and do respond to light; in opium poisoning they are contracted. Lastly the temperature is usually elevated, it may be 107 or 110 degrees. In the other conditions it would remain unchanged.

There are other points of difference, but as they are more technical it is not necessary to mention them here. If we suspect heat stroke and yet the skin feels cool, the thermometer should be placed in the rectum to show the real interior temperature. If it registers high or subnormal our diagnosis is made and our mode of treatment also decided for us at once.

If the temperature is high we use cold bathing to lower it at the same time watching that it does not go too slow and so give us a collapse. During the bath which should preferably be given in a tub with the water at 80° or 85° to begin with, and ice at once added to bring the temperature of the water down to 70° in a few minutes. The surface of the body must be rubbed vigorously, rubbing the extremities preferably toward the body and also rubbing the abdomen and back. The rubbing is to aid the heart in sending the hot blood from the interior to the skin to be cooled, and in sending the cool blood from the skin to the interior. The bath should be kept up for fifteen minutes unless the temperature drops to 100° before that of the patient shows signs of collapse. A thermometer should be kept in the mouth, or better in the rectum, and looked at every few minutes to be sure that the temperature does not get too low. Shivering is of no consequence—of course the water feels cold for it is cold. Usually the pulse will become fuller, stronger and slower during the bath and the effect will persist after it. The patient should be dried somewhat but without much rubbing and should lie under a sheet.

If there is no bathtub to be had we may use various makeshifts. The best is a large rubber sheet spread under the patient with rolls of blankets surrounding him under the rubber so that he lies in an improvised rubber trough. Into this water is to be poured as if in a tub and when the bath is over the water may be dipped out or siphoned out or, quicker, the rubber sheet may be folded and held so that it forms a gutter at the foot of the bed with a tub placed under it, the head of the bed raised and the water quickly drained off.

If this is not available we may lay him on an ordinary blanket and sponge him off with cold water or rub him down with pieces of ice wrapped around with one thickness of towel. Time should not be wasted in trying to be over precise in the way the cold is applied. The thing to do is to apply it quickly and thoroughly. By the time the second bath is due we may be in a better position to do it modishly.

It is well to give a little whiskey before the bath, say ½ ounce, or spirituous ammonia aromaticus 1 dram or 2 drams, if the patient can swallow. If he cannot

swallow we may use the hypodermic if the pulse needs stimulating.

The temperature should be taken every half hour and as soon as it has risen again above 103° or 104° the bath should be repeated. If the pulse does not become better under bathing, stimulants should be used as much as necessary—whiskey, aromatic ammonia, strychnine, digitalis. As long as the temperature is high the baths must be continued. In favorable cases, however, the temperature stays down after the second or third bath.

The use of antipyretics such as antipyrin, acetanilid, etc., is not to be permitted except the patient is very carefully and competently watched on account of prostration so frequently caused by them.

The patients should drink small amounts of cold water at frequent intervals. By cold water iced water is not meant but water cold enough to be a refreshing drink.

As soon as the fever is under control we must open the bowels freely with a brisk cathartic, the quickest acting the best. For a few days, depending on his condition, the patient should be kept on a fluid or semi-solid diet and he should remain in bed. As his condition improves he is of course to be allowed up and on fuller diet.

If instead of a high temperature we find a low one, we must at once say to the patient's friends that the case is a much more serious one than those in the class with high fever. Such a case is profoundly poisoned and all the vital functions are at a very low ebb. The pulse is poor—weak, small and compressible, feeling as if the artery were not full and as if the heart were weak. These cases are of course not to be bathed in cold water but are to be vigorously stimulated—whiskey ½ ounce, or 1 ounce every half hour or hour; strychnine, 1-30 grain or even 1-20 by hypodermic every 2 hours; digitalin, 1-1000 grain by hypodermic every 3 hours; caffeine sodio-benzoate 3 to 5 grains every two or three hours.

It is almost impossible to over-stimulate these cases. They should be rolled up in blankets, and hot water bottles, hot bricks, flat irons, etc., put around them to raise the temperature to normal. They should take hot drinks if they can swallow and as soon as reaction has set in they should also have a brisk cathartic.

But we must not think that it is only the ones who are suddenly overcome that are suffering from the effects of heat. The heat and humidity are responsible in a large measure for the summer diarrhoeas. When the skin is unable to do its work of excretion the other organs must help. It is on this account that cool bathing is so frequently efficacious in summer complaint in children, even without much change in feeding. It will be seen that particularly in hot weather the skin is a very important organ and it behooves us to take the best care of it. Frequent bathing should be resorted to. Any sort is better than none though of course the tub bath is most efficacious. Soap should not necessarily be used, for it may irritate the skin in some instances, but the entire body should be washed off at least once a day in hot weather and the skin rubbed briskly with a coarse towel. By this is not meant that one must rub so hard as to undo the cooling effects of the bath but there should be a gentle friction to give tone to the sweat glands and other parts of the skin. Another thing to be warned against is remaining too long in the bath. It makes no difference whether the water be hot or cold if we feel depressed on leaving the bath it is probable that we remained too long in the water. One must not hesitate to make the lengths of his bath such as is best for him without regard for what more or less robust friends may say. Many people can get much good from a cold plunge of a few seconds or a few minutes who get nothing but harm from a sponge bath. Others cannot take any sort of a cold bath but can take tepid or hot baths. The danger of feeling depressed is greater after these than after cold ones, for the temptation is greater to remain in the water too long.

It is particularly important during the hot months,

and particularly during the dog days when the percentage of humidity is high, that the bowels be kept in the best condition possible. All that we have said on the subject of constipation and diarrhoea is to be reiterated, but need not be repeated here. The drinking of alcoholics should be carefully regulated. From what has been said about the free use of whiskey in sun stroke it might be thought that drinking it would act as a good prophylactic in averting a sun stroke. That is not so—for the frequent use of alcohol tends to paralyze the skin capillaries so that they remain dilated and cannot quickly respond to the extra work thrown upon them in time of need. Alcohol is also very irritating to the kidneys which should not be crippled when they have not only to do their own work but to help the other organs incapacitated by the heat and humidity.

THE MINERAL PRODUCTION OF THE U. S.

A recent issue of the Engineering and Mining Journal contains some interesting statistics regarding the production of ores, minerals and chemical products in the United States during 1900, and from which we abstract the following information concerning products in which the drug trade is especially interested:

ALUM and ALUMINUM SULPHATE.—The production of crystallized alum in the United States in 1900 was 20,531 short tons (\$615,930), against 27,276 (\$845,536) in 1898. The production of aluminum sulphate in 1900 was 61,678 short tons (\$1,480,272), against 81,805 (\$2,106,479) in 1899.

BROMINE.—The production in 1900 was 521,444 (\$140,790), against 433,003 lbs. (\$125,571) in 1899. These figures include the bromine equivalent of potassium bromide which is produced in Michigan.

CALCIUM BORATE.—The production in 1900 was 25,300 short tons, against 24,068 in 1899. Most of this product is colemanite mined in California.

COPPERAS.—The production in 1900 was 12,347 short tons (\$96,517), against 13,770 (\$108,508) in 1899. The chief producer in this country is the American Steel and Wire Company, which controls all the wire and rod mills recovering copperas as a by-product. The above statistics do not include copperas converted into Venetian and Indian reds at the works of original production.

COPPER SULPHATE.—The production in 1900, was 78,218,478 lbs., against 67,003,370 lbs. in 1899. Of this the amount recovered as a by-product, chiefly by gold and silver refiners, was 44,368,478 lbs., in 1900 and 37,285,670 lbs. in 1899. The remainder of the output each year, was made from metallic copper previously reported in the production of that metal. The average value of copper sulphate at New York per 100 lbs. was \$4.90 in 1900, against \$5.20 in 1899.

FULLER'S EARTH.—The output in 1900 was 11,813 short tons (\$70,505), against 13,626 tons (\$81,900) in 1899. The greater part each year was mined in the vicinity of Quincy, Fla.

SULPHUR and PYRITES.—Louisiana, Nevada and Utah produced 4,630 long tons of sulphur in 1900, against 1,595 tons in 1899. The average price of Sicilian seconds at New York in 1900 was \$22.05 per ton, against \$21.46 in the previous year. The domestic production of pyrites in 1900 was 201,317 long tons (\$684,418), as against 178,408 tons (\$583,323) in 1899. Virginia was the largest producer each year, Massachusetts ranking second. Sulphuric acid was recovered as a by-product in roasting blende and pyrites, chiefly the former, to the extent of 85,000 short tons, as against 50,572 tons in 1899, the figured being reduced to a common basis of 66 deg. B. Concentrated acid of the latter strength averaged \$24.07 per 2,000 lbs. at New York in 1900, as against \$22.25 in 1899.

ZINC SULPHATE.—527 short tons were produced by one concern in 1900, against 528 tons in 1899.

THE CARE OF THE HAIR.

By GEORGE THOMAS JACKSON, M. D.
Instructor in Dermatology in the Medical Department of
Columbia University, New York.

There are certain matters in regard to the care of the hair that have not been taught to some physicians in their student days, and about which they are still somewhat at sea, because they have found no mention of them in their books. About these they seek advice. Perhaps such matters may seem trivial to some of you, but they do not seem trivial to some of your patients. Therefore, they seem to me to be of sufficient importance to warrant my bringing them briefly to your notice.

Management of the Hair During and After Fevers.

It is well known that the hair falls after fevers of parturition, as well as after other exhausting drains on the general nutrition of the body. The laity know this, and in such cases are constantly asking if we cannot do something to prevent the falling of the hair. After the patient is convalescent, his or her, especially her, friends are eager to have the head shaved and cross-shaved, and cite cases of those who have had this done, and now have such magnificent hair! How shall we answer these questions? We can answer the first by saying that nothing can be done during the illness to prevent the falling out of the hair. The hair falls out not because of the dryness of the scalp in consequence of the fever, but because its nutrition has been interfered with by the illness. This we know, because the hair will fall in some non-febrile diseases. All we can do is to keep the hair and scalp in order by gentle brushing and combing, and by rubbing into the scalp, once or twice a week, the least bit of vaselin or oil. To the demand for permission to cut the hair short, or to shave the scalp, we should give emphatic denial. It is a serious business to shave the scalp of a woman, and it chiefly benefits the barber, who, by the way, is the one most urgent to have it done. It dooms the woman to months of wearing a wig, and to many subsequent months of remark from the thoughtless and cruel because she, perforce, is a member of the short-haired sisterhood. As it is impossible to say how much of the hair will fall, and as it is rare for enough to fall to render "doing up" impracticable, there seems to be no reason to subject the woman to the positive annoyances of the shaving with the advantages so exceedingly doubtful.

Well, shall we no nothing but simply fold our hands and let Dame Nature look after the hair? It would be much wiser to do this than to do some things that are done; but we can do more. We should allay the fears of the patient and her friends, by assuring them that although the hair may fall for a few weeks, it will grow in as well as before the fever, if they will obey directions. They must be directed to brush and comb the hair every day. At this they will throw up their hands in horror, and exclaim, "Why, doctor, I am afraid to brush my hair, as so much comes out." We can tell them that that need not disturb them in the least, for only the already damaged hair can be pulled out in that way, and that the sooner this is out the better. Once or twice a week a little pomade composed of a drachm of precipitated sulphur, in an ounce of a good soft, cold cream should be gently worked into the scalp, every two or three weeks the hair and scalp should be washed, and a little of the pomade applied as soon as the hair is dried. As soon as the patient regains her strength, if she follows this method of caring for the hair, she will be rewarded by having as fine a growth of hair as she had before, if not finer. Of course the older a woman is, the less the probability for this much-to-be-desired outcome.

How Often Shall the Scalp be Washed?

This is another question often asked. We can answer that once in two to four weeks is sufficient, so far as the hair is concerned. In fact, it does seem to make much difference to the hair whether it is washed or not. It is more cleanly to wash the hair, and that is the greatest reason in favor of doing it. It is bad to wash the hair too often, and daily soaping of the hair as is the too common practice, is pernicious.

Soaps.

We will be asked what soap is best to use in washing the scalp, and many women who make their living by caring for the hair have some mysterious soap which they use, vaunt, and try to sell to their customers, but the composition of which they will not reveal. As a matter of fact, except in a very few conditions of the scalp, it makes little difference what sort of soap is used, provided it is made by a good manufacturer. The most convenient soap is one that is liquid, such as the tincture of green soap. Whatever soap is used must be thoroughly washed out with plenty of water. After washing the scalp a little pomade or oil must be rubbed into the scalp to take the place of the natural oil that has been removed by washing.

The Use of Pomades.

The men of my father's generation habitually used pomades on the scalp. To protect the chair coverings from the grease on their heads tidies came into vogue. Then the pendulum swung the other way, and now pomades of all kinds are tabooed. That there has been a great increase in baldness among young men of the present generation is a general impression although I know of no statistics to support or refute it. Some fifteen years ago, when I first became interested in the study of diseases of the hair, I accepted the teaching of the time that pomades did no good, and, becoming rancid, did positive harm. With enlarging experience I am becoming more and more convinced that I was wrong, and that one reason why the hair is lost so early nowadays is because the sons have forgotten the teachings and practices of their fathers in regard to the use of pomades. They neither use pomades nor seek to stimulate the natural oily supply to the hair by systematic brushing. Instead they daily wet their heads with water to enable them to arrange their hair. By not using pomades and by wetting the hair instead of brushing it, their hair becomes more and more dry, dandruff increases, and their hair falls. I believe that if boys were trained to brush their hair thoroughly every night and morning, and had a little pomade that will not turn rancid, such as contains sulphur or salicylic acid, for instance, rubbed into their scalps once a week or so, and avoided wetting their heads, baldness in the rising generation would not be so prevalent as it is in this.

Cutting the Hair.

We are sometimes asked how often the hair should be cut. It makes no difference how often it is cut. It is purely a matter of taste. No one would think of asking how often the nails should be cut, but cuts them as often as they become too long for comfort or taste. Cutting the hair will neither increase nor decrease the amount. It will stimulate the fine hairs to become coarser, but when they have reached their normal growth cutting will have little influence on them. It is always advisable to direct that the split ends of the long hair of women should be cut off above the cleft, as this will prevent the cleft from traveling up the hair. It is best not to have the hair of a girl cut after she is ten or twelve years old, because if left to itself and given adequate care it will grow more silky than if it is cut.

Singeing.

Of all the foolish fashions in regard to the care of the hair, that of singeing is the most ludicrous. It is founded on an antiquated idea, and is a revival of an antiquated fashion. Away back in the dark ages it was thought that when the hair was cut it bled from the cut ends, or, at least, lost some fluid nutritive substance. Therefore, it was argued, we should singe the ends to prevent this loss, just as it once was the practice to sear wounds to stop hemorrhage. As the hairs are not hollow tubes, like arterioles, and neither bleed, exude, nor ooze in any way when cut, the operation has no foundation in fact, nor does it do any good. I have seen scores of barbers' customers who have gone about like singed cats for months, and without benefit.—Read before the Medical Society of the State of New York, and reprinted from *Medical News*, through *Bulletin of Pharmacy*.

WOANDSU.—In a letter to the State Department at Washington, Richard Guenther, Consul-General at Frankfurt, Germany, reports that German papers speak of an annual plant growing in tropical Africa, belonging to the leguminous class, which is largely cultivated by the negroes as a food article. It has also been introduced to some extent in Southern Asia and in Brazil. It is called woandsu by the African negroes; the botanical name is *Glycine subterranca*. The French expert chemist of ailments has recently analyzed the fruit of the woandsu with reference to its chemical composition and its value as food. The fruit, like the peanut, matures under ground. The eatable kernel has the shape of an egg, and is dark red, with black stripes and a white hilum, like most beans. It furnishes a very white flour, whose flavor after cooking very much resembles that of chestnuts. The chemical composition is 58 per cent. of starchy substance, 10 per cent. nitrogenous, 10 per cent. water, 6 per cent. oily, 4 per cent. cellulose substance, and 3 per cent. ash. It will be seen that two pounds of these beans would supply the daily requirements of the human system. M. Balland, who has had wide experience in the chemistry of nutriments, calls this fruit the first one found by him in a natural state which shows all the chemical properties of a perfect nutriment.

THE MANDIOCA PLANT.—The British consul at Maranhao reports that the *Manihot utilissima*—sometimes known as the "manioc"—grows to a height of some 10 feet, with thin, straggling branches, and the leaves, which are palmate in form, are scanty. It is cultivated for the sake of its tuberous root, which grows to a very great size, yielding a starchy food, which is used by the poorer classes throughout tropical South America as a substitute for bread. A common variety of the mandioca plant is said to contain a poisonous juice, distributed throughout the leaves, stem and root, and the toxin, hydrocyanic acid, has to be dissipated by heat or evaporation before the root can be eaten. Large plantations of mandioca are formed by cutting down and burning patches of forest, and in the clearings thus formed cuttings of the stem are planted. In about a year the plant matures, and the roots are then dug up, and are either cooked and eaten or are made into "farinha." This product was formerly sent to Portugal to be used in the manufacture of alcohol, but it is now extensively exported to the states of Para and Amazonas, the exportation elsewhere having entirely ceased.

NEW LIQUID GLUE.—Joiner's glue, 250 grams, is dissolved in hot water, 1,000 grams, and a mixture of 10 grams of barium dioxide, 5 grams of concentrated sulphuric acid and 15 grams of water added. The whole is then heated on a water-bath at 80° C. for 48 hours. Sulphur dioxide is gradually evolved, the glue loses its property of gelatinizing, acquires a pleasant odor, and does not become mouldy. It is

said to be strongly adhesive. When dried in the form of scales, it resembles gum arabic and is recommended as a substitute for the latter (Spatula).

RHUS POISONING.—It is now well established that the poisonous principle of *Rhus toxicodendron* is not an acid, but a non-volatile oil, called toxicodendrol. As an oil it is not soluble in water, and hence all watery solutions fail to produce the full benefit, and recourse must be had for the best treatment to an alcoholic solution of lead acetate in cases where the poison is fresh. The parts should be washed with alcohol to remove as much of the oil as possible, and then the solution of lead salt applied on fabric or absorbent cotton, and allowed to remain on till dry and renewed. Dr. W. H. Scaman, in *St. Louis Med. and Surg. Jour.* states that he has seen the poison applied and treated after varying intervals with the alcohol and lead salt, and the amount of poisonous effect was exactly proportionate to the interval elapsing before treatment. Of course, after a constitutional effect is produced the local treatment is of little or no use.

SPURIOUS SENNA.—E. M. Holmes describes in *Pharm. Jour.* a variety of senna which has made its appearance on the London market, and which he recognizes as *Cassia montana*. It resembles in size ordinary Tinnevely senna, but its distinctive features are in the obtuse or rounded ends of the leaflets, the obtuse angles of the lateral veins, the presence of a well-marked, dark network of veins on the under surface, and the presence of a distinct mucro, or the broken end of one, at the apex of the leaflets. The presence of scars on the rachis also affords evidence, since there are only 6-8 pairs of leaflets on Tinnevely senna leaves, but 10-15 on those of *Cassia montana*. The spurious senna was exported from Madras, but why it should be sent from there in such quantity when it appears to be unknown as a drug to writers on Indian materia medica, the author says is a mystery that needs solution.

PARIS GREEN.—Has as its chief constituent copper aceto-arsenite, which, when chemically pure, contains: arsenous oxide, 88.64 per cent.; copper oxide, 31.30 per cent.; acetic acid, 10.06 per cent. In 22 samples examined by L. L. Van Slyke and W. H. Andrews, at the New York Agricultural Experiment Station, Geneva, N. Y., the arsenous oxide varied from 55.83 to 60.89 per cent., and averaged 57.05 per cent. The water-soluble arsenous oxide varied from 0.61 to 15.09 per cent., and averaged 1.68 per cent. The copper oxide varied from 27.22 to 31.20 per cent., and averaged 30.02 per cent. The impurity most commonly found was white arsenic, and this did not appear to be excessive. The general result of the examination, according to the authors, is to show a good quality of Paris-green in the market at the time the samples were taken.

WORTHLESS VACCINE.—At the recent annual meeting of the Association of Executive Health Officers of Ontario, at Brantford, according to American Medicine, the question of the failure of vaccine as effective protection against smallpox was discussed. Many representative Ontario physicians united in testifying that a large number of vaccinations were worthless as protection against the disease. Various causes were ascribed, including careless handling and administration by doctors, careless transportation by railways, but chiefly the desire of the manufacturers to carry the refining too far and to sacrifice the practical for the scientific or commercial side. After a lengthy discussion it was decided to appoint a special committee to look into the question and report at the next annual meeting.

INDOLENE is a new iodol and albumin compound, occurs as an extremely fine, dry, yellow powder, devoid of odor or taste, and insoluble in ordinary liquids. It contains 36 per cent. of iodol, and is used as an antiseptic in place of iodoform.

RESOLUTIONS ADOPTED BY THE MASSACHUSETTS PHARMACEUTICAL ASSOCIATION.

Secretary James F. Guerin is sending copies of the following resolution, adopted by the Massachusetts Pharmaceutical Association at its recent meeting held in Fall River, to manufacturers of proprietary medicines:

Resolved: That the Massachusetts State Pharmaceutical Association in convention assembled, desires to go on record as heartily endorsing the so-called Worcester Plan, and in view of the fact that the Executive Committee of the National Association of Retail Druggists to give hearty and sincere support to the furtherance of the said Worcester Plan, and that proprietors be invited by said Committee to attend the meeting of the National Association of Retail Druggists, to be held in Buffalo, and participate in the consideration of said Plan with a view to adopting the same and co-operating with the National Association of Retail Druggists in making it operative as a part of the National Association of Retail Druggists plan; that we request the Executive Committee of the National Association of Retail Druggists to give the Worcester Plan a place in the order of business at the meeting for discussion and action.

Accompanying the resolutions is the following letter, signed by the secretary:

June 20, 1901,

To Manufacturers of Proprietary Medicines—

Gentlemen: As manufacturers of proprietary medicines are dependent upon retailers for the distribution of their goods, a commercial policy that commends itself to retailers should not be disregarded.

The plan that one proprietor is using, having been sustained by the Massachusetts Supreme Court and injunctions having been issued against certain firms for selling certain proprietary goods "in breach of the conditions upon which the same were obtained," it would seem that all that is now needed to insure stable prices is a willingness on the part of other proprietors to adopt a price protective policy.

At the present time all wholesale drug firms of Boston and Providence are using billheads with notice thereon of the intention to under sell at certain times of the year. We believe that the notice commends the wholesalers as much as it does the protected goods to the retail trade.

The co-operation of the wholesale trade, to the extent of using billheads with restrictive notices thereon, can easily be obtained.

Some proprietors are unwilling to adopt a price restrictive policy, fearing that if they should do so it would prove detrimental to their competitors, and to do the same. Our opinion is that the proprietors that protect their goods shall be gainers if their competitors do not adopt a price restrictive policy. We assume that most druggists prefer to sell articles the selling prices of which are always the same; that cheapness of selling price is not the determining factor; that the prospective customer is influenced by what he wants and by the druggist more than by the cheapness of a competing article.

The trend of events indicates that a price restrictive policy is soon to be an issue. Proprietors will need to show a willingness to do more than they are now doing to protect retail prices, otherwise it will be more difficult for them to market their goods. That they have a right to fix prices and maintain them makes it obligatory upon them to do so. This is the attitude that the retail trade is beginning to assume. The practical effect of this concern to protect the prices of its goods, it may devolve upon a number to co-operate. The judicial decision of Judge Russell of the New York Supreme Court, affirmed by Justice Kinsley of the Appellate Division, is of great need to this subject. It says: "He (the manufacturer) may join with others in similar need to accomplish by concerted action that which would be too burdensome, expensive and impracticable to achieve alone, and without which concert his power to fix the price would be barren of good result."

It is assumed that when unfair competition is stopped there will be fewer attempts on the part of cut-rate and department stores to buy direct; that purchases will not be so large; that there will be more of them; that sales in the aggregate will be larger and failures fewer; that benefit will accrue to wholesalers, non-cutting retailers and to proprietors. If these conditions exist, well-grounded wholesalers need have no fear of an increase of direct sales.

It is also assumed that when proprietors obtain adequate redress against the cutters that violate the conditions on which their goods are sold, not many suits will be required.

Believing that at the N. A. R. D. meeting in October will be a favorable time for the proprietors, the same are favorable to price protection to confer with the N. A. R. D., the Massachusetts State Pharmaceutical Association adopted the accompanying resolution; pursuant thereto I enclose a copy herewith and should be pleased to have the Executive Committee of our Association be pleased to hear from you.

Very respectfully,
JAMES F. GUERIN,
Worcester, Mass.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

What is Naphtha?

(J. F. S.) "What should be dispensed for naphtha?"

It depends, and inquiry should be made of the customer as to the use he wishes to make of the fluid or solvent wanted. "Naphtha" is a term derived from the Persian word "nafata," to exude, and was originally applied to an inflammable liquid hydrocarbon, which exudes from the soil in certain parts of Persia. In this sense it was used by Dioscorides, Pliny and other early writers. In commerce and science at the present time it is, as said above, used somewhat vaguely, but more in a general sense to embrace certain bodies in common, than as a specific name for a particular substance. By the alchemists the word was used principally to distinguish various highly volatile, mobile and inflammable liquids, such as sulphuric and acetic ethers, known respectively as "naphtha sulphurici" and "naphtha aceti" (see Roscoe and Schorlemmer's Treatise on Chemistry). In recent times naphtha has been employed to indicate volatile, limpid, inflammable hydrocarbons obtained by the destructive distillation of organic substances, as well as those produced by similar agencies acting within the earth. The term "naphtha" is used in commerce in connection with the following substances (Ure's Dictionary of Arts and Manufactures): "Coal tar naphtha," obtained in the distillation of gas-tar; "shale naphtha," obtained by the destructive distillation of shale and other carbonaceous minerals; "native naphtha," the more fluid portion of crude petroleum or rock oil; "caoutchouc naphtha," prepared by the distillation of india rubber; "wood naphtha," obtained in the destructive distillation of wood and known also as wood spirit or methyl alcohol, and "bone naphtha," or bone oil, known also as Dippel's animal oil. A description of these various substances may be found in the dispensatories and works on general chemistry.

Cement for Iron.

(E. A. S.) We have no practical formula of the character you outline, although it is possible you may make a paste filling for cracks in iron by mixing iron filings or finely powdered iron to a pasty consistency with liquid waterglass. Several formulas for cementing iron, taken from Workshop Receipts, are given below:

(1) Mix 4 parts of fine borings or filings of iron, 2 of potter's clay, and 1 of powdered firebrick, and make them into a paste with salt and water. When this cement is allowed to concrete slowly on iron joints, it becomes very hard.

(2) Coarsely powdered iron borings, 5lb.; powdered sal ammoniac, 2 ounces; sulphur, 1 ounce, and water sufficient to moisten it. This composition hardens rapidly; but if time can be allowed, it sets more firmly without the sulphur. It must be used as soon as mixed, and rammed lightly into the joints. (3) Sal ammoniac, 2 ounces, sublimed sulphur, 1 ounce, cast-iron filings, or fine turnings, 1 pound. Mix in a mortar and keep the powder dry. When it is to be used, mix it with 20 times its weight of clean iron turnings or filings, and grind the whole in a

mortar; then wet it with water until it becomes of convenient consistence, when it is to be applied to the joint. After a time it becomes as hard and strong as any part of the metal.

(4) The following is said to form a very hard cement: Take a few spoonfuls of iron filings, and oxide of iron in the form of black scales which fall from red-hot bars of iron in blacksmith's shops. Crush them fine with a hammer, mingle with the powder an equal bulk of the best Portland cement, and render the mass plastic by adding the white of eggs, and work for a few minutes, until the plastic material is about of the consistence of soft putty. Only a small quantity should be prepared at once, as it will set in a short time.

Lice on Horses.

(W. H. R.) According to Veterinary Counter Practice stavesacre is an effectual destroyer of lice, if prepared by boiling $\frac{1}{2}$ pound in a gallon of water and brushing well into the coat of the animal with a hard brush. Another mixture sometimes recommended is prepared by dissolving liquefied phenol, 4 ounces, in an infusion of quassia, 1 gallon. This mixture should be sent out with directions to dissolve 4 ounces of soft soap in a gallon of hot water, when the whole should be added to the lotion and applied warm. It is also advisable to supplement this treatment with the administration of a tonic like the following:

Iron sulphate	2 drams
Powdered gentian	4 drams
Powdered anise	4 drams

For 1 powder. One to be given night and morning in a quart of gruel.

A preparation recommended for the destruction of lice on cattle, and which, presumably, will answer equally well for horses, is this one:

Green soap	10 av ounces
Alcohol	9 av ounces
Wood alcohol	1 fluidounce
Crude Naphthalin	2 fluidounces
Water	40 fluidounces

Heat the whole together until dissolved, and then stir until cold.

To use, rub the infested places on the animal thoroughly with the preparation, and wash off the next day with warm soda solution. When the animal is dry repeat the operation twice. The lice generally die after the second application.

Essence of Pepsin.

(I. H.)

- (1) Glycerole of pepsin
 3 parts |
- Wine, orange
 5 parts |
- Glycerine
 1 part |
- Simple elixir, to make
 16 parts |
- (2) Pepsin, pure
 128 grains |
- Glycerine
 32 fl ounces |
- Oil cinnamon
 1 minm |
- Oil pimento
 2 minims |
- Oil cloves
 2 minims |
- Oil bitter orange
 2 minims |
- Purified talcum
 2 drams |
- Alcohol
 12 fl ounces |
- Sherry wine
 4 fl ounces |
- Distilled water, enough to make
 16 fl ounces |

Dissolve the oils in the alcohol. Mix the pepsin with the water, add the glycerin and agitate until solution has been effected. Then add the solution of oils in alcohol and the purified talcum and mix thoroughly. After allowing the mixture to stand a few hours filter it through a wetted filter, returning the first portions of filtrate to the filter until the liquid passes through perfectly clear.

- (3) Pepsin (1 to 3,000)
 1-3 grains |
- Resin
 60 grains |
- Glycerin
 2 ounces |
- Deodorized Alcohol
 3 ounces |
- Oil sweet almond
 3 minims |
- Oil lemon
 4 minims |
- Oil nutmeg
 1 minim |
- Water, enough to make
 16 fl ounces |

To the alcohol add the oils and five ounces of water. Dissolve the pepsin in the glycerin, diluted with an equal volume of water, and add to the first solution. Then add the rennin and sufficient water to make 16 fluid ounces. Allow to stand two days and filter.

Ink for Rubber Stamps.

(A. M.) Dieterich gives the following formula for:

Glycerine Stamp-Ink	
Aniline water-blue 1 B	3 drams
Distilled water	40 drams
Acetic acid	2 drams
Alcohol	1½ ounces
Glycerine, enough to make	16 ounces

Make a solution by rubbing in a mortar.

In the same way inks of the following colors may be prepared with the above compound menstruum, substituting, of course, the pigment named for the aniline water-blue in the formula given:

Violet	Methyl-violet (3 B)	2 drams
Red	Diamond fuchsine (1)	2 drams
Green	Aniline green (D)	4 drams
Brown	Vesuvian (B)	5 drams
Black	Deep Black (E)	3 drams

For bright red omit the acid from the solution, replacing it by water, and using 3 drams of eosin (B B N).

The same author states that a satisfactory pad for rubber stamps may be made as follows: Boil 35 parts of Japanese (tien-tian) gelatine in 3,000 parts of water until completely dissolved. Strain, while boiling hot, through flannel, add 500 parts glycerine, return to the fire, and evaporate to 1,000 parts. With this liquid as a basis, make the ink of the color desired, using 60 parts of methyl-violet (3 B) for violet, 80 parts eosin (B B N) for red, 80 parts of phenol blue for blue, 50 parts anilin green for green, and 100 parts of nigrosin for black. With this ink saturate the cushion of the pad box, and cover with mull. If at any time the surface becomes too dry, moisten with water or glycerin.

Extract of Root Beer.

(A. M.)

(1) Oil of lemon	2 fl drams
Oil of sassafras	2 fl drams
Oil of spruce	2 fl drams
Oil of wintergreen	1 fl dram
Oil of nutmeg, essential	1 fl dram
Alcohol, deodorized	12 fl ounces
Water	4 fl ounces
Talcum, purified	2 av ounces

Dissolve the oils in about 2 fluidounces of alcohol, triturate the solution with the talcum, add the remainder of the alcohol mixed with the water, and filter. Add through the filter enough of a mixture of 3 parts of alcohol to 1 of water to make 16 fluidounces.

(2) Sarsaparilla	3 av ounces
Pipsissewa	3 av ounces
Lic rice root	3 av ounces
Sassafras bark	3 av ounces
Ginger	1 av ounce
Oil of lemon	2 fl drams
Oil of sassafras	2 fl drams
Oil of spruce	2 fl drams
Oil of wintergreen	1 fl dram
Magnesium sulfate or purified talcum	½ av ounce
Alcohol	12 fl ounces
Water of each	sufficient

Mix the drugs, reduce to coarse powder, and extract by percolation with a menstruum composed of 3 volumes of alcohol to 1 of water until 24 fluidounces of product are obtained.

Now triturate the oils with the magnesium or talcum, add a mixture of 6 fluidounces of alcohol and 2 of water, mix well, add the preceding tincture, and filter the whole.

(3) Fluid extract of false sarsaparilla (sarsaparilla)	12 fl drams
Fluid extract of pipsissewa	12 fl drams
Fluid extract of wintergreen	5 fl drams
Fluid extract of licorice	5 fl drams
Oil of wintergreen	1 fl dram
Oil of sassafras	20 minims
Oil of cloves	15 minims
Alcohol	12 fl ounces

Dyeing Leather Black.

(J. B. H., Jr.) (1)—Simple treatment with solution of iron sulphate or copperas will dye leather black. Acetate of iron may be used instead with advantage. The leather may be first mordanted with solution of logwood extract.

(2) Dissolve 1 ¾ ounces of solid extract logwood and ¾ ounce solid fustic extract in boiling water and make up to 35 fluid ounces. The leather, which must have been previously cleaned and stretched out, is brushed over five times at 100 degree F.; 155 grains of chromate of potash and 77 grains of sulphate of copper are then dissolved in the same quantity of water; the leather is brushed twice with the solution, and then again with the decoction of logwood; 150 grains of liquid ammonia are then poured into 35 fluid ounces of water, and the leather is gone over with that. To make the leather supple, stir up 150 grains yolk of egg in 75 grains of glycerine, make it up with water to 35 fluid ounces, and rub the leather with it. Let it get half dry, and rub with a clean woolen rag.

(3) Beeswax	3 ounces
Black resin	2 ounces
Melt together, and then add:	
Prussian blue	1 ounce
Lampblack	¼ ounce

While the mixture is cooling add turpentine till a suitable consistency is obtained. It should be applied with a soft rag, and the leather afterward polished with a brush.

Blackberry Brandy.

(I. H.) See Era of June 27, 1901, page 707. Here are two formulas:

(1) To 10 gallons blackberry juice and 25 gallons spirit, 40 above proof, add 1 dram each of oil of cloves and oil of cinnamon dissolved in 95 per cent. alcohol, and 12 pounds white sugar dissolved in 6 gallons water. Dissolve the oils separately in ½ pint 95 per cent alcohol; mix both together, and use one-half the quantity; if the cordial is not sufficiently flavored, use the balance.

(2) One-quarter ounce each of cinnamon, cloves, and mace, 1 dram of cardamom. Grind to a coarse powder; add to 16 pounds of blackberries, mashed, and 5 gallons of 95 per cent alcohol. Macerate for two weeks; press; then add 10 pounds of sugar, dissolved in 3½ gallons of water. Filter. This product is sometimes diluted with water or a mixture of alcohol and water to lessen the cost. But why use either of these preparations when you have access to the National Formulary, which gives a reliable formula for "blackberry cordial?"

A Penicilliar Mixture.

(J. R. W.) "The following prescription was taken from the Medical Brief and we would like to know how to prepare it without leaving a great deal of residue. Prepared according to the directions it is unsatisfactory.

Zinc sulphate	2 drams
Salicylic acid	2 drams
Iodoform	2 drams
Boric acid	3 ounces
Oleic acid	8 ounces

Mix and boil for several hours; when cool, pour off and bottle."

We submit the query to our readers.

Colorless Iodine.

(Subscriber.) We know of no preparation under this title. A formula for decolorized tincture of iodine may be found in the National Formulary; a book which you should possess.

Ant and Roach Exterminator.

(J. F. S.) See the following issues of the Era, April 5, 1900, page 371; March 14, 1901, page 285; March 28, 1901, page 343.

Flavoring Extract Jamaica Ginger.

(A. M.) See this journal June 20, 1901, page 670.

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

UP TOWN DRUG STORE FLOODED.

Blast Bursts Water Pipes and A. R. Baltzly's Drug Store, Ninety-sixth Street and Broadway, Receives a Bad Ducking—Cellar Full and Two Feet of Water on Store Floor—Damage About \$3,000.

The drug store of Albert B. Baltzly, at Ninety-sixth street and Broadway, was badly damaged by water Monday evening, July 8. The water came unexpectedly and stayed about seven hours at a depth of seven feet in Mr. Baltzly's cellar and about two feet on the floor of the store. Mr. Baltzly was not the only person who suffered damage however as the whole block from Ninety-sixth to Ninety-seventh street on the west side of Broadway had conditions similar to those that prevailed in the drug store, to contend with though not quite so damaging. The deluge of water was occasioned by the bursting of a 12 inch water main directly in front of Mr. Baltzly's store. The breaking of the main resulted from a blast set off by workmen in employ of the sub-contractor who is making room for the subway and is digging a trench along the east side of Broadway for the reception of a 32 inch water main that now runs down the middle of the street. When the break occurred the water shot into the air with a hiss. Dr. C. A. Murphy was standing in the drug store door and saw the outbreak of the miniature geyser. He endeavored to avoid the flood which immediately followed but could not and was swept off his feet and into the drug store. Several of Mr. Baltzly's clerks also saw the water and made an attempt to close the store doors but the water was there ahead of them. Two women customers in the store got wet feet.

The water remained on the store floor for about seven hours. The contractors secured a pump and emptied the cellar. Mr. Baltzly kept a large stock of drugs, chemicals, etc., in the cellar which was completely ruined. In the store, the drawers containing herbs and crude drugs were swelled so tightly shut that it will be impossible to get them open without ruining the case. A large stock of cigars in the cigar case was soaked and plasters, medicated cottons and a large quantity of other goods perished. Mr. Baltzly estimates his loss will reach \$3,000. The drug store is open for business but it will require some time to replace the materials destroyed.

MANHATTAN PHARMACEUTICAL ASSOCIATION OUTING.

The first annual outing of the Manhattan Pharmaceutical Association was held at Donnelly's College Point Grove, Tuesday July 9, and it was unanimously agreed by the 146 members and friends present to be a success. The day was all that could be desired and the crowd came early and departed late. The program of entertainment arranged by the committee of which Bruno R. Dauscha was chairman, was replete with attractive events, not the least interesting of which was the baseball game. The game was not strictly according to schedule, nor did its players, or rather the umpire Eugene F. Lehr, pay much heed to any well established rules of the national sport. The sides were selected and named by second baseman Swann, the Castor Oils and Paregorics, and as Mr. Swann said after the game "the

Paregorics put the Oils to sleep." The line-up of the teams follows:

CASTOR OILS.	PARAGORICS.
Mr. Firman	Mr. Durr
Steinach	Karl Schnackenberg
Cassel	C. O. Grube
Dr. A. L. Goldwater	Mr. Hirzel
Charles Bjorkwald	E. K. Dauscha
W. Hauenstein	Gene Brown
S. V. B. Swann	Mr. Hepp
La Guna	O. C. Kleine, Jr.

Three and a half innings were played when the game was called on "account of dinner." The score then stood Castor Oils 15, Paregorics 11.

The men's prize bowling contest interested a large number as did also the ladies bowling contest and the shooting match. The prizes in the three events were won in the following order:

Men's bowling highest score 40: C. A. Niemeyer 40; W. J. Carr, F. P. Tuttle, G. H. Hitchcock, 39 each, (rolled off); R. H. Timmermann 38; C. O. Grube, F. Wich-lus, S. F. Haddad, Karl Schnackenberg, 37 each, rolled off.

Ladies bowling highest score 40: Mrs. O'Rourke 36; Mrs. G. T. Reeder 35; Mrs. G. E. Schweinfurth 34; Mrs. Maxwell 33; Miss Smith 32; Miss Norwalk 31; Mrs. Boyson and Miss Neumer 28 each, rolled off.

Men's shooting match highest score 40: A. Tscheppe 39; J. H. Lawrence 37; C. A. Niemeyer 36; Dr. A. C. Griffin 35.

The dinner was one of the regular Donnelly kind and was partaken of by 92 persons. At its close brief speeches were made by J. Maxwell Pringle, Jr., G. E. Schweinfurth, G. H. Hitchcock, B. R. Dauscha, Felix Hirsman, Mr. Firman and G. C. Diekman. Dancing was the order of the evening and the outing came to a happy finale about midnight.

TARRANT CO'S OFFICERS INDICTED.

Grand Jury Finds True Bills Against Thomas F. Main and W. V. V. Powers—Charged with Manslaughter in Second Degree—Both Men Admitted to Bail in \$2,500.

Thomas F. Main, president and W. V. V. Powers, one of the directors, of the firm of Tarrant and Co., were indicted by the Grand Jury last week on the charge of manslaughter in the second degree. The charge is founded on the testimony of 20 witnesses and holds the two men responsible for the seven lives lost in the fire and subsequent explosions that wrecked the building of Tarrant and Co. and 11 other structures near it last October.

Mr. Main and Mr. Powers were arrested last Friday and taken before Recorder Goff in General Sessions, who admitted them to bail in \$2,500 each. M. J. Breitenbach of M. J. Breitenbach & Co., went on Mr. Main's bond and John M. Corneli, the iron merchant signed that of Mr. Powers. The case will probably come up in the fall.

The witnesses who furnished the information to the Grand Jury, stated that Tarrant and Co. kept thousands of barrels of chlorate of potash, a large quantity of sulphur, several hundred gallons of explosive, nitro-cellulose and other explosives in the building without notice to the Fire Department. The charge is in filed in the indictments, as is also a charge of neglect on the part of Tarrant and Company to partition the various chemicals and from the other.

MADE PHARMACISTS CONTRARY TO LAW.

New York Civil Service Commission Has Been Examining and Passing Persons as Pharmacists Without a Right to So Do—Board of Pharmacy Has Asked Them to Desist.

In recent inspections made by the Eastern Branch of the Board of Pharmacy it was discovered that several apothecaries in various hospitals throughout the city were without licenses. As this was contrary to the pharmacy law, an investigation was started which revealed the fact that the men in question and many more like them, had been passed by the New York Board of Civil Service Examiners. Lee Phillips, secretary of the board, said the board had not intended any violation of the pharmacy law, in fact its members were not aware that such a statute was in force. He tried to shift the blame on the Commissioner of Charities but it was made plain to him that the fault really rested with the Civil Service Board. Mr. Phillips then said the board would be very glad to comply with the pharmacy law if it was officially notified by the Board of Pharmacy. Sidney Faber, secretary of the board wrote a letter to the Civil Service Commission last week calling attention to the violations and asking that they be immediately stopped.

GERMAN APOTHECARIES SOCIETY.

The last meeting of the German Apothecaries Society before the summer vacation was held Thursday evening, July 11, and owing to the inclement weather was not very largely attended. Fred. Linnig, Seventy-sixth street and Lexington avenue and F. E. Kalkbrenner, 48 Morgan avenue, Brooklyn, were elected to membership. The death of Charles Hunt, a former partner of George Gregoribus, but lately in business at Rhinebeck, N. Y., was announced. C. J. Meyer, 238 Second avenue resigned because he is going to his former home in Germany to live. George Schoensier, 622 Ninth avenue, also resigned.

Paul Arndt reported arrangements completed for the outing of the society to be held at Jamaica, Long Island, Thursday, August 1. The jubilee committee reported progress on the program being arranged to the fiftieth anniversary of the society to be held by the society in October.

It was reported that the resolutions touching the death of Dr. Charles Rice, an honorary member, were ready. They were read, ordered spread on the minutes and a copy sent to all the pharmaceutical papers. The archivist stated that the recent bequest of Gustave F. Werner of 639 Ninth avenue, deceased, had been received. It consisted of about two books. The next meeting of the society will not be held until September.

BEWARE OF THIS BLACKMAILING SCHEME.

Brooklyn druggists are being preyed upon at the present time by a gang of blackmailers and they should take unusual precautions to guard against the swindlers. The scheme that is worked is to have a simple prescription filled and paid for, and then to have the purchaser return with the medicine to which he has added poison, declare that it contains poison and has made his wife dangerously ill, and threaten to sue the druggist for his alleged mistake. If the druggist becomes frightened at the prospect of a damage suit then the swindlers suggest that it can probably be fixed up out of court for a consideration. The scale of settlement ranges from \$50, to \$200. It has not been ascertained that any Brooklyn druggist has fallen into this carefully arranged trap, but they should beware of the gang.

AN ITALIAN DRUG CLERK MURDERED.

The police of Brooklyn Borough are busily engaged in unraveling the tangle of mystery that enshrouds the finding of the dead body of Dominico Salamando in the outskirts of the borough, Monday, July 8. Salamando was a drug clerk. He is supposed to have been murdered. A

bullet supposedly from a 38 calibre revolver had entered his left eye and gone into his brain causing instant death. The body was yet warm when found by the police. Salamando is said to have had two wives living in Philadelphia where he was before coming here. The police have arrested two Italians and are still working on the case.

A CORRECTION.

Alex. J. Dostrow, formerly at the corner of West Fourth and Bank streets, this city, and now of 421 Bushwick avenue, Brooklyn, wishes it stated that the bill for \$3.00 presented by him to the Manhattan Pharmaceutical Association at the June meeting for payment, was not for "work in organizing in the sixteenth district in Manhattan, as was reported in the Era." Mr. Dostrow itemizes the bill as follows: \$2.00 for hiring a hall for meeting in the Bevoort House, cor. Fifth avenue and Eighth street, N. Y., and \$1.00 for printing and sending out 50 letters and envelopes. (Invitations to the meeting to druggists of that district.)

NOTES.

—The drug clerks in Edward's Pharmacy at East Hampton, L. I., were treated to a mild sort of a sensation one day last week. The innovation was caused by Miss Rebecca Cuyler, a clever young horsewoman, who resides in the town. Miss Cuyler had been out for a gallop and feeling thirsty on returning rode up to Edward's store and rapped on the glass door with the butt of her riding whip. As a clerk opened the door Miss Cuyler chirruped to her horse and rode into the store before the clerk could protest. She then called for a glass of soda, was served, backed her horse out and rode away while some of the rusties who had gathered gaped on in astonishment.

—The Fraser Tablet Co., 454 Eighteenth street, Brooklyn, has incorporated, capital, \$1,500,000. The corporation is to manufacture drugs and medicines "in powder, solid or liquid form." The directors are: Horatio N. Fraser, Brooklyn; J. H. Hutchens, New Rochelle, N. Y., and E. T. West, Newark, N. J.

—Thomas G. White, M. A., Ph. D., died Sunday, July 7, at his home in this city. He was a member of the Torrey Botanical Club, New York Academy of Science, and the Geological Society of America. He was a lecturer in the public schools and an instructor at Columbia from 1895 to 1900.

—T. Bruce Furnival, of the New York College of Pharmacy, has resigned and accepted a position as traveling representative for Hall and Ruckel. Mr. Furnival will remain in the city until August 1, when he will leave on a trip extending throughout the United States.

—C. Uhler, laboratory assistant at the New York College of Pharmacy, and F. N. Pond, Twenty-fourth street and Ninth avenue, attended the convention of the Grand Chapter of Phi Chi fraternity held at Buffalo, N. Y., July 10-13.

—John J. Menzies who represents Daggett & Ramsdell, New York, will spend his vacation commencing on July 25 at Old Orchard Beach, Me. On returning he will start on his western trip.

—The Sulphure Chemical Company has incorporated in New Jersey. Capital \$1,500,000. Directors, William E. Fort, Walter L. Sims and Edward B. Woodruff.

—George D. Erkenbach and Sheffield Phelps have been recently elected members of the Drug Trade Club. The club now has about 15 persons on its waiting list.

—Bakst Bros., wholesale druggists, formerly at 146 East Broadway, have completed moving into their new store at 418 Grand street.

—Studnitz and Tanner have sold their store at One Hundred and Seventeenth street and First avenue to Mr. Frankfurt.

July 18, 1901.]

—S. Ackerman has recently purchased the Breitenbach Pharmacy, One Hundred and Twenty-second street and Park avenue.

—William Wilson will move his drug store at Thirty-fourth Street and Broadway, to Seventy-third Street and the Boulevard.

—Frank Avignone, druggist at 59 McDougal street, is spending a vacation of two weeks with friends in Sullivan county N. Y.

—Henry J. Kopf's store at 70 Rivington street, which is one of the oldest stores on the lower East Side, has been purchased by B. E. Fidler.

—The Irchie Drug Habit Cure Co., of New York, has incorporated to manufacture chemicals, medicines, etc., capital \$100,000.

—Charles F. Schoenherr, clerk for Henry J. Kempf, 57½ Broadway, Brooklyn, is enjoying a vacation at Buffalo, N. Y.

—M. Schwarz has moved his store from 662 Broadway, Brooklyn, to 81 Fourth avenue, corner St. Mark's Place, Brooklyn.

—R. W. Phair & Co., New York, have become the representatives for Zimmer & Co., Quinine, Cocaine and Salts.

—W. C. Alpers, 45 West Thirty-first street, has recently opened a drug store at Saratoga Springs, N. Y.

—Charles H. Klyachko has bought the store at 41 Essex street, previously owned by S. Rosenfeld.

—The seventy-second session of the New York College of Pharmacy will begin Monday, September 20.

—J. Portugaloff has bought the store at 165 East Broadway, formerly owned by J. Weinstein.

—J. M. Boin and R. E. Finnegan, of London, are visiting members of the drug trade.

—Mr. W. G. Robeson, and Mrs. Robeson, returned from Europe Saturday.

—S. Abraham has sold his store at 562 Grand street to Charles Muhl.

A. J. WHITE, LTD., SHOWS LARGE GAIN IN PROFITS.

Statement Presented at the Annual Meeting in London—Pays Preferred Dividend of £30,000 and 5 Per Cent. on the Common Stock.

London, July 4.—The annual meeting of the shareholders of the A. J. White, Limited, was held in Memorial Hall, Farringdon street, London, E. C., on Monday, June 24th. The directors presented the account of the company for the year ending March 31, 1901, showing that there had been a marked improvement in the company's business, and that the net profits for the year amounted to 266,878 4s 8d, which is some 50 per cent greater than the profits for the preceding year.

After paying the preferred dividend, amounting to £30,000, and bringing forward the amount standing to the credit of last year's account, there remains a balance of £30,202 0s 8d, from which a dividend of 5 per cent upon the ordinary shares of the company was paid. Following is a copy of the statement presented:

Net profits for the present year.....	£	266,878	4	8
Amount brought forward from last year's accounts	£	2,333	16	0
	£	96,202	0	8
Preference dividend	£	30,000	0	0
Writing off "Unexpected Advertising" account	£	11,500	0	0
5 per cent. dividend, ordinary shares, 25,000 accounts	£	2,762	0	8
	£	69,202	0	8

The directory of this company is largely composed of Americans, and is made up of Hon. Timothy L. Woodruff, chairman; Lyman Brown, Allen S. Apgar, T. Taylor Marsh, Lucius H. Biglow, Leonard Fawell, J. P., and Henry Wellington Wack, managing director.

IN AND ABOUT BOSTON.

A FAMILY DIVIDED.

Boston, July 13.—The recent sudden death of Joseph Dailey, son of Alfred H. Dailey, a Bowenville druggist, is likely to bring about unlooked-for complications. The young man's death came about while he was sitting, in apparent health in his father's drug store, talking with friends. After his death, Rose Murray Dailey came forward and claimed to be the widow of the young man. Rose Murray was seventeen years old when she met young Dailey four years ago. She says that when he was sent to Boston to study music she joined him there, and they lived together in this city, having been married, so she claims, by a justice of the peace. Three children were born to her, of whom she says young Dailey is the father. The young woman claimed his body after death, but she was warned away from the house. She followed the funeral procession to the cemetery and stood at the grave during the burial. Through lawyers, she states that she is the wife of the recently deceased son, and alleges that his mother, Mrs. Sarah Dailey, has denied the marriage and has discredited the legitimacy of the children, otherwise slandering her to her great loss and annoyance. Notice of suit for \$10,000 damages has been served, therefore, on Mrs. Sarah Dailey, wife of the druggist.

DRUG STORE BURGLARS CAUGHT.

Boston, July 12.—It is believed that two experienced crooks have been caught at Newburyport this week. At an early hour one morning an officer came across two men soon after they had entered the drug store of A. J. Casey & Co., which they had robbed of money, clothing, cigars and other articles. The officer saw the men running, and commanded them to stop. It was found that the back door of Casey & Co.'s store was open, and that the place had been ransacked. The druggist identified some of the goods, even to the suit of clothes on one of the men. Not only the suit, but the shirt, collar, necktie and even the underclothing were found to be Mr. Casey's. At the police station the men were locked up on suspicion. Upon being searched, a revolver, several files, a glass cutter and other tools were found upon them, besides new knives and a new razor, taken from Casey & Co.'s. In the police court the men pleaded "not guilty," but the court found probable cause and bound them over to the Superior Court, in September, in the sum of \$800 each. The men are believed to have criminal records.

Present Conditions Satisfactory.

Boston, July 13.—Satisfaction seems generally to be expressed with present conditions of trade, the week having been good in that respect, in part due to especially fine weather. It has been not too warm for comfort and yet the conditions have been such as to create trade in soda fountain department, where at all places the receipts have been large this week. In general business of prescriptions and sundries the week has proved an ordinary one, neither showing a rushing trade nor any dullness. In drugs opium and quinine are taking on active interest and showing signs of life with indications of coming activity. Trade in chemicals is only seasonable. Cologne spirits, alcohol and the like are only moderately active. So small is the trading in dyestuffs that changes in prices are only unimportant.

MANCHESTER, N. H., DRUGGIST DEAD.

Boston, July 13.—After an illness lasting about a month, George A. Hanscom, a prominent druggist at Manchester, N. H., died in that city on July 8. He was a native of Saxo, Me., and was about forty-one years of age. He had lived in Manchester about seven years, and was previously in the drug business in Somersworth for several years. He entered the employ of Dr. E. H. Currier, when he first went to Manchester, and afterward bought out the Currier pharmacy and conducted the business alone up to the time of his death. A widow and two sisters survive Mr. Hanscom.

NOTES.

—At Westfield, about a year ago, there was much agitation over the selling of groceries on Sunday by a dealer who put a soda fountain into his store as an excuse for doing general business on the Sabbath, all of which resulted in the selectmen forbidding the running of any soda fountains on that day in Westfield. A strong feeling is being shown now in favor of permitting again the sale on Sunday of soda water and other temperance beverages, by drug stores. Hundreds of visitors go to Westfield every pleasant Sunday by the Springfield trolley line, and are surprised and disappointed to find that they can get nothing to quench their thirst. It is understood that the selectmen will offer no objection if the dealers in beverages will confine their Sunday sales to soda water and like temperance drinks.

—Few drug stores anywhere are without their stock of Carter's ink, and it is interesting to know that the loss by the recent fire at the Carter's Ink Company's building, Columbus avenue, this city, was amply covered by insurance. On the building, insurance to the amount of \$50,000 was carried; on rents, \$7,500; on stock and machinery, \$35,500; on albums, leaves, etc., \$7,500. The loss on the contents of the building will figure about 20 per cent.

—Dr. C. P. Flynn, one of the best known druggists in Boston, whose place of business is in the South Boston district, is always keenly alive to humanitarian efforts. Since the recent cyclone which did so much damage in the district near his pharmacy, Dr. Flynn has been most active in raising a public fund of which he has acted as treasurer for the benefit of those who met with loss because of the severity of the electric storm.

—An excited individual, who saw smoke coming from the chimney of the Minard Liniment Company's plant in Endicott street, in the North End of this city, rushed to a fire alarm box and soon had the department on the scene. The well-meaning citizen could have seen like smoke at almost any time, and the alarm was, of course, needless.

—For the purpose of conducting the business of chemists, druggists, importers and manufacturers of pharmaceutical and medicinal preparations, with \$50,000 capital stock, of which nothing is paid in, the J. V. Hale Company has been organized. A. E. Knowlton, of Malden, Massachusetts, is president, and Fredrick Drowns, of Malden, is the treasurer of the company.

—Theodore Dangelmayr, Jr., clerk at Prout & Judson's drug store, at Westfield, recently had his bicycle stolen under conditions which indicated that the thief needed no "nerve" tonic at all—he had plenty of nerve as it was. The wheel was taken by a boy who later visited a nearby bicycle store to have the seat lowered, so that he might ride away.

—Friends of Elton E. Wildes, the actuary of the Moxie Company, Boston, are congratulating him heartily on his engagement, which has just been announced, to Miss Caroline B. Kimball, of Ipswich, the daughter of N. Scott Kimball, a wealthy wholesale merchant of Boston. The marriage will be a social event.

—Before Chief Justice Mason, in the Superior Court, this week, a man who had been charged with robbing William F. Heagney, a Clinton druggist, of a watch and a coat valued at \$18 and who was convicted, was sentenced to State prison for from three to five years.

—The new drug store of the Walker-Rintels Co., in Temple Place, came near meeting with disaster on the night of July 10, by a midnight fire in the four-story building next door to the pharmacy broke out. The drug store escaped damage.

—At Bowman's drug store, in Magoun Square, Somerville, a new sub-station of the Boston post office has been established. It is a well populated district.

PHILADELPHIA.

A DRUG STORE SYNDICATE.

Philadelphia, July 13.—Druggists were treated to a mild sensation here this week in the shape of a proposed scheme for buying up a lot of the most desirable retail drug stores in various parts of the city and running them under the management of a corporation. The scheme is very much the same as that now in operation in Chicago, and it is taken seriously by a number of prominent druggists who have been approached in the matter. So far, the parties behind the plan are not known but an inspection of the application for charter at Trenton this week will disclose the promoters—it is safe to say that no druggists are connected with it. The gist of the scheme is this: "The 'Progressive Drug Company,' chartered recently under New Jersey laws at Trenton, with a paid-up capital of \$1,000,000, proposes to buy outright a number of retail drug stores having the most desirable location and trade on an inventory to be taken of stock and fixtures and to retain the present owners in charge as managers. A bonus of 10 per cent. in stock of the company will be given the seller for the "good will" of the business, and the purchase will either be for cash or for stock in the company. It is reported by a prominent druggist who was approached this week with a prospectus of the scheme and asked as to the feasibility of the idea that the promoters are in earnest and that they have practically unlimited capital behind them—the only question now delaying the scheme is as to a choice of drug stores to be bought and a sounding of the wholesale and retail trade of the city as to the way in which the plan is likely to be taken. It is possible, so the agent for the Progressive Drug Company said, that at least fifty drug stores will be bought, and the profit is to be made by large buying and close management. Retailers here have little to say beyond expression of the opinion that the plan will upset local conditions to a large degree. All are awaiting further developments.

THE TELEPHONE SITUATION.

Philadelphia, July 13.—At the last meeting of the Philadelphia Association of Retail Druggists, July 5th, it was decided to send out notices to all druggists of the city asking them to cancel any contracts they had signed with the Keystone Telephone Company for putting pay telephones in their stores for any commission less than 25 per cent.; these notices have been sent out and a number of answers have been received in favor of the proposed plan. The situation is this: The P. A. R. D. believes that the druggists of Philadelphia should have, and can get, 25 per cent. commission on pay telephones from the Keystone Company as a matter of justice to the druggists and because of the fact that the Keystone people have admitted that their success in Philadelphia depends upon the placing of their telephones in retail drug stores. Some time ago about 300 druggists signed a contract with the Keystone Company for service at 10 per cent. and 20 per cent. commission, a few signing even for none at all, and when the P. A. R. D. went to the manager to demand 25 per cent. the committee was confronted with the list of these signers and told that the Company could not make better terms than this. Now it has been found that if every druggist who signed a contract for less than 25 per cent. will at once write to the Keystone Company and cancel it, that the P. A. R. D. can get the 25 per cent. demanded—this statement is based on admissions from parties concerned—so it is now "up to" Philadelphia druggists to say whether they will now 10 per cent. commission on telephone service or 25 per cent.

THE CAMDEN RETAIL DRUGGISTS.

Philadelphia, July 13.—The Camden County Association of Retail Druggists at their regular monthly meeting held July 12 received a report from their Executive Committee that the price schedule adopted about a month ago is working very smoothly and that there is not a single instance of violation so far noted. So far, nearly all the

retail druggists and dealers in patent medicines have signed the schedule, and all who have not yet have signed have promised to do so—making 100 per cent. of the druggists of Camden who will abide by the new price list. Little comment has been made by customers on the new prices; these have been accepted without complaint and few remarks were made as to the increase. Considering the proximity to Philadelphia, where no schedule is yet in effect, this makes a remarkable good showing for Camden. There will not be any further regular meetings of the Association until September, as many of the members will be away for the summer. George D. Burton was elected delegate to the N. A. R. D. Convention at the June meeting, Charles L. Barret was elected as alternate. It is hoped that by September a still further increase in prices on proprietary articles can be made.

TRENTON DRUGGISTS.

Philadelphia, July 3.—A meeting of the Trenton Association of Retail Druggists was held in that city on Tuesday, July 9th, the second meeting of this Association. Members of the Executive Committee were elected and a number of other committee appointments were made and steps were taken to prepare a price schedule for submission to the druggists of Trenton. By unanimous vote, the Association decided to affiliate with the N. A. R. D. and a delegate was appointed to the National Convention and dues ordered paid. The meeting was addressed by James C. Perry, of Philadelphia, by invitation, on the N. A. R. D., its work and its plans for the bettering of conditions to the retail drug trade, and a brief summary of the work done by the Philadelphia Association on local conditions was given. Mr. White, of the Phenyo-Caffein Company gave an account of the scope and workings of the "Worcester Plan." Much enthusiasm prevails among Trenton druggists for local organization and substantial benefits are looked for in the near future.

BUSINESS QUIET.

Philadelphia, July 12.—Business has been quiet during the week but has been moderately good in most sections. The change in the weather has brought about a lively demand for diarrhoea and colic remedies, the former ailment seeming to be almost epidemic in some parts of the city. Soda water business has taken a slump again—cool weather to blame, prescriptions are coming in a bit more lively than last week. The usual Summer exodus is in full blast and a general dullness is looked for until cool weather brings the tourists home.

There has been little doing of note in wholesale circles; business has been steady and quiet and about up to the mark for this time of the year. Quite a number of firms closed last week at 3 and 4 o'clock on account of the heat but are making up for lost time now. A report was circulated this week that a local jobber was supplying a New York cutter with "forbidden" goods; the rumor cannot be traced to a reliable source and is probably a mistake, as jobbers here are loyal.

NOTES.

—It is not usual for druggists to seek to wound or kill their customers, quite the contrary; they strive to bring them in and let them get out when a little money is left behind; yet a Cumberland, Md., drug clerk had the misfortune to kill one of the store's best customers by a peculiar mishap. While removing a revolver from a shelf, the weapon was accidentally discharged and a customer standing in the store was killed.

—The Moss & Moore Company have bought two drug stores in the south-western section of the city and it is reported that a third purchase is contemplated by the firm. Fifth and Wharton Streets and 29th and Wharton Streets, are the locations of the stores already bought while a new store is to be opened at 65th and Woodland Avenue soon.

—Dr. W. H. Delbert, 12th and McKean Streets, is rejoicing in the possession of a motor bicycle, which he uses for visiting his numerous patients. It is said that the doctor can make very speedy time over asphalt with his flier and gets around at a lively gait.

—It is reported on good authority that Merrill's drug store, 19th Street and Fairmount Avenue, is for sale, and that a reasonable offer will be accepted by the proprietor. The death of Mr. Merrill's brother and his own illness are given as reason for desiring to make a sale.

—W. A. Shannon, of 5th and Spring Garden Streets, has opened a new drug store at the north-east corner of Germantown and Girard Avenues. This is quite a busy location and a good trade ought to come to a store located there.

—Charles Rehffuss, who won quite a little fame as chairman of the P. A. R. D. "Entertainment Committee" of this year, has taken his family on a vacation trip to Ohio to visit relatives there.

—Charles A. Eckels has bought the drug store at 16th and Pine Streets, formerly owned by Mr. Manlove, and will make a number of improvements and alterations in stock and fixtures.

—John T. Brennan, Ph. G., has opened a new drug store at 21st Street and Point Breeze Avenue, announcement of which he is making in very neat circulars to his friends and patrons.

—H. A. Nolte, the well known druggist of 6th and Race Streets, is off on a vacation with his family.

F. T. GORDON.

OBITUARY.

HENRY C. C. MAISEH.

Henry C. C. Maisch, Doctor of Pharmacy, formerly professor of materia medica at the Medico-Chirurgical College, died after a short illness, at his home, 2863 Poplar Street, Philadelphia, July 1. Dr. Maisch was a son of the late Prof. Maisch, for many years connected with the Philadelphia College of Pharmacy and one of the editors of the "Dispensary." Upon his father's death, much of the latter's work devolved upon the son, and for several years he was also professor of Materia Medica and Botany of the Department of Pharmacy of the Medico-Chi College. Dr. Maisch was graduated from the Philadelphia College of Pharmacy in 1885, with the degree of Ph. G. and continued his studies at Gottingen, taking high honors there. Upon his return to this country, he was for a time assistant professor at Clark University Worcester, Mass., going thence to a professorship at the Illinois College of Pharmacy. For a short time he was clerk for a Louisville druggist, and when he finally returned to Philadelphia to make this city his home, he engaged in the retail drug business for himself at 10th and Ogden Streets. For nearly three years past, after giving up his store, he has been connected with the chemical laboratories of Hance Bros. & White, resigning from his professorship at the Medico-Chi last year on account of the pressure of his work with that firm. Much of Dr. Maisch's work has been of a highly important and practical nature, and he has done much for the raising of the standards of drugs in commerce, the old adage that a wise father has a fool for a son not being at all justified in his case, for he was a worthy follower in the footsteps of his honored father. Dr. Maisch is survived by a widow and one son, and was at the time of his death 36 years old. He was born in Brooklyn.

EDMUND W. BRANT, a well-known retail druggist of Elizabeth, N. J., died at his home in that place late Friday evening, July 5. His death was supposed to be directly due to heat prostration. Mr. Brant was 57 years of age and had resided in Elizabeth the greater part of his life. He entered the drug business when a very young man and in 1877 purchased the store formerly conducted by T. J. Barnaby. Up to five years ago he was in business, but at that time he sold out to Parsons and Burchell. Mr. Brant was an upright business man and was beloved by all who knew him. His funeral was held Monday, July 8.

The Featherweight Eyeshade is unquestionably the most practical and popular eyeshade on the market. The manufacturers report that its sale in drug stores is steadily increasing. It pays a good profit. Write for prices to the Featherweight Eyeshade Co., Bayonne, N. J.

BALTIMORE.

THE STATE ASSOCIATION MEETING

Baltimore, July 15.—The center of interest for druggists all over the State will this week be transferred to Ocean City, where the annual meeting of the Maryland Pharmaceutical Association begins tomorrow. Not less than forty new members have been added to the organization of late, so that there is every reason to expect a large attendance. The Casino of the Hotel Pimlinnion has been made ready for the sessions and all the other preparations are complete. The responses to the request for prizes have been exceptionally liberal, and a number of premiums have been received from wholesale and manufacturing drug firms which will go to the successful contestants in the various competitions of skill and agility. The proceedings will include discussions on matters of the utmost importance to the drug trade of Maryland. A new draft of a bill for the protection and advancement of the druggists' profession, to be introduced at the next meeting of the General Assembly, will be considered and a plan of campaign to secure the enactment of the draft mapped out. Social features will receive much attention and it will be the aim of the committee of arrangements to render the stay of the druggists at the seashore as pleasant as possible. It is recognized that pastimes and enjoyments must always hold a prominent part in the annual meetings if the latter are to be successful. The average druggist wants to combine pleasure with business. When he leaves home he wants to escape the humdrum of business affairs. Briefly, he usually goes in search of a change rather than on a hunt for scientific reflection and debate.

TRADE AGAIN ACTIVE.

Baltimore, July 14.—After a period of comparative quiet the drug trade in all its branches is again becoming very active. The leading jobbers report last week to have been an exceedingly busy one and have swelled largely the total transactions for the year. As to the cause or causes of these fluctuations in movement, they are difficult to ascertain and seem to be accidental rather than the result of the operation of any particular law. Apparently, it happens from time to time that the stocks of a large number of retailers become simultaneously exhausted and must be replenished, to which circumstance the increase in the volume of transactions is due. Corresponding activity prevailed in the laboratories of the manufacturers, while the heavy chemical movement was of moderate proportions and quiet prevailed in the crude drug and botanical market. The retailers seem to be fairly busy.

ON A TOUR AROUND THE WORLD

Baltimore, July 10.—A party of four Baltimoreans left the city tonight for a tour around the world. The quartette included Dr. H. C. Croft, of Croft & Conly, retail druggists at the north-east corner of Park avenue and Madison street, and his companions are well known business men. They went by way of San Francisco, where they will embark for the Sandwich Islands and go thence to Yokohama. After a month in Japan the itinerary will be continued, including Manila, Hongkong, Singapore, Java and Ceylon. A side trip to Palestine and Egypt is also planned. Constantinople and Athens will be taken in, and the travelers will then cross over to Italy. They expect to reach England in time to attend the coronation of King Edward, and will be absent from home the better part of a year.

NOTES.

—As John Dermer, a clerk in a drug store at Cumberland, Md., was removing a revolver from a shelf in the store on the afternoon of the 5th inst. the weapon was discharged and the bullet killed Clinton Billmyer, a friend of Dermer. The coroner refused to hold an inquest as the unfortunate affair was clearly accidental.

—The retail drug store conducted for some time past at the corner of Third street and North avenue, Walbrook, which had been conducted for some time past by C. R. Yonn, has been sold at public auction to J. Harry Farrow, who is also one of the proprietors of the Walbrook pharmacy, at North avenue and Ninth street.

—Gus, Portner, who has been acting as relief clerk for several Baltimore druggists, has obtained a permanent position in the pharmacy of W. L. Campbell, Park and North avenues.

PITTSBURG AND VICINITY.

DRUG CLERK ASSAULTED

Pittsburg, July 13.—H. K. Painter, who manages the drug store of George Sawash at Irwin, Pa., was murderously assaulted and robbed of about \$300, while on his way home from the store on Friday night. Mr. Painter had been in the habit of carrying the cash to his home for safe keeping, the store not being provided with a safe, and it is supposed this, in some way became known to his assailants. He left the store as usual on the night of the assault, but had not gone but a short distance when he was felled with a blow from behind. He remained unconscious until nearly morning when he was found by a passerby. Although suffering from the effects of the blow, Mr. Painter will recover. The authorities are using every effort to find the perpetrators of the dastardly deed, but as yet have met with no success.

NOTES.

—A little excitement in lower town drug circles was created last week, the occasion

of a mystery. On the day in question a stranger deliberately walked into the store of The Pittsburg Druggist Sundry Co. and drawing a black snake whip from beneath his coat gave Mr. Levin, the junior member of the firm, a severe beating. On seeing the blood rushing from his cuts the elder Levin rushed to his son's assistance and received quite the same as his son. The stranger then left as quietly as he had entered, and all efforts to learn his identity or the cause of the assault proved futile. Messrs. Levin & Son refused to say anything.

—J. P. Urben who recently sold his handsome drug store on the North side has become tired of an inactive life and will soon engage in the drug business. Mr. Urben will open a new store in The Flannery block now building in Oakland.

—The drug store of John K. Lewis at Jeanette, Pa., which was sold by the sheriff last week was purchased by one of the creditors who afterward sold it to Joseph A. Baird formerly of Bradlock.

—O. A. Knapp was convicted in local criminal court last week on a charge of imitating and counterfeiting a well known patent medicine. He was fined 64 cents.

To Soda Water Dispensers.

Why don't you abolish the old fashioned plan of having customers pay for their soda at the counter and not force them to receive wet change, by adopting a system of soda water checks and having customers buy their checks before they go to the counter? Aluminum checks will not break or tarnish, you can have your name, business and address on one side and on the opposite side any reading you desire, and they are cheap, clean and effective. An illustrated catalogue is sent free by the manufacturer, C. L. Safford, 181 Madison St., Chicago, Ill.

Homeopathic Vials.

The very best goods at the lowest possible prices are claimed to be made by The Chesapeake Glass Co., who make a specialty of homeopathic vials. They also manufacture glass syringes, medicine droppers and tubes, eye pipettes, etc., and are jobbers of druggists' sundries, corks and bottles. Write for price list and free millimeter scale. Their address is 117 Mercer St., Baltimore, Md.

CHICAGO.

REMARKABLE MEETING OF C. R. D. A.

Chicago, July 12.—The third quarterly meeting of the Chicago Retail Druggists' Association was held on the afternoon of Tuesday, June 9 in Room 42, Masonic Temple. It was undoubtedly the best meeting the association ever held, both in the matter of attendance and in the results accomplished. About 250 members were present, many of whom were officers of the twenty-two auxiliary district associations. In the absence of President Graves First Vice-President John I. Shaw presided. The minutes of the previous meeting were read and approved, together with the minutes of the meetings of the Executive Board and of the officers of the district associations held since the last meeting of the parent organization on April 9.

The reports of the several district associations were called for and were substantially as follows: President Walter Gale of the First District outlined the work already done down town. The First had fought a good fight and already had much to show for its labors. All the stores in the down town district were organized and were ready to adhere to the price list. But one store, and that a department store, holds aloof. The strength of the opposition had been developed, and the prospect of success is even better than the most hopeful have had reason to expect until recently. Chicago druggists have reason to be proud of the excellent equipment of their organization, which is better than that of any other city in the country. The fight Chicago has won is an inspiration to the druggists all over the country. The able work of Chairman Straw was commended and reference to it was received with cheers. The help received from firms outside the trade had been not inconsiderable. But one dealer in the city now advertises patent medicines in the daily press, and it is believed that the time not far distant when window displays of proprietaries will also be abandoned. The trade is coming to recognize the fact that the association is in earnest. A salesman for a pharmaceutical house, whose name the speaker did not mention, attempted to buy goods for an aggressive cutter and very nearly jeopardized the standing of his firm among the trade and received a sharp rebuke from his employers. Mr. Gale called attention to the fact that the association was in need of funds, but thought that the need had only to be mentioned to be supplied. Chicago is in the fight and proposes to see it through. It must succeed, not only for itself, but for the sake of the moral effect success will produce elsewhere. The resources of the enemies of the association should not be overestimated, and it should not be forgotten that they are being driven to desperation by the thoroughness of the fight that is being waged against them. At the conclusion of Mr. Gale's speech three cheers were given for the First District and its able president.

President Mills and Treasurer Gill of the Twenty-first District requested the privilege of making an immediate report as they had to catch a train to Evanston and that the members are in hearty accord with the aims of the association. He himself was so thoroughly convinced of the righteousness of the cause that he would gladly contribute five or ten dollars a month to help along the work throughout the city and county and had no doubt the other members of his district association would be willing to do likewise as long as the need of funds should exist. President Mills said that each of the twelve members of the association in Evanston had handed him five dollars to be placed in the hands of the treasurer of the parent body, and he thereupon placed \$60 on the treasurer's desk. He stated further that he thought the collection of funds should proceed until the association had a substantial bank account, and that if more were needed his people would be among the first to contribute their share.

President Avery of the Fourth District placed in the secretary's hands two checks amounting to \$100—one hundred dollars having been contributed by the members of his association, sixty dollars being the dues of the twenty members of his organization. He spoke feelingly of the work of the N. A. R. D. Executive Committee in his

district and declared that to them was largely due the credit of the conversion of their last cutter.

President Turnquist of the Seventh turned in forty dollars which his district had contributed. Another officer of the district said that all of the thirty-six druggists in his district had signed the price schedule and joined the organization.

President Weise of the Eighth gave an encouraging report and stated that the prospects were good notwithstanding the fact that the district had two department stores that sold proprietaries and so far had refused to be good.

Secretary Klore of the Second said that their on-aggressive cutter was having the greatest difficulty to get goods.

He read a letter from a jobbing house in Florida enclosing an order from this cutter and stating that the order had been turned down. While his association was not at the recent Sherman House meeting where the suggestion was made that a fund be created for the use of the Executive Committee, nevertheless the Second District would do its full share in contributing money and effort.

Dr. Patterson of the Third reported everything in good shape in his district, and said that at a preliminary meeting held since the officers' meeting at the Sherman House the members of his district association had contributed \$28 for the use of the Executive Board and more would be forthcoming later.

Mr. Gillespie said that the Eleventh District was in good shape and gave several instances where druggists in his district had threatened to become cutters but on further thought had concluded not to. President Thayer announced that he was prepared to turn in \$140 as a contribution from the Eleventh District.

The announcement of President Hoelzer of the Twelfth that his association had sent him to the meeting with \$169 for the use of the board and that there were eight members yet to be heard from, was met with cheers. He called attention to a recent victory in his district over an aggressive cutter who has joined the organization.

President Ford of the Thirteenth stated that he had been unable to get a meeting of his association since the Sherman House meeting, but that ten dollars was pledged and more would be on hand before the canvass was completed. He suggested that a reorganization of his district might not be inadvisable.

Prices in the Fourteenth as listed in the schedule for that district were lived up to by the members of the district organization, according to the statement of Fred A. Thayer. It was announced by Chairman Straw that the donation from the Fourteenth would be liberal.

President Thornhill of the Fifteenth said that the results of the work of the N. A. R. D. in his district had been very satisfactory and that the members of the district association would contribute their share of money.

A gentleman from the Sixteenth said that while he had no speech to make, he had understood that money talks, and coming forward he placed on the secretary's desk a roll containing twenty 5-dollar bills. His speech was voted satisfactory.

President Haeger of the Eighteenth pledged \$125 from his association, of which amount twenty-five dollars had been given by Herman Fry, second vice-president of the C. R. D. A.

J. E. Voight of the Nineteenth turned in \$103 from his organization and said that there would be more to come if needed.

A member from the Twentieth District announced that his association would send in \$150. The Twentieth has a record for men and money.

President Murbach of the Twenty-second said that while his district was the last one organized it did not propose to be outdone. He accordingly drew a check for seventy-five dollars, which he placed in the hands of the secretary.

The total amount received and pledged was \$1,100, of which sum about \$700 was turned in at the meeting. Chairman Straw thanked the association for its liberality and announced that the districts which had not as yet contributed to the fund would be notified of the splendid showing already made and would respond handsomely.

Chairman Straw was given a vote of thanks for his untiring and able work on behalf of the association.

The new by-laws were then taken up and read and were adopted. The changes made were the addition of the following paragraphs to provide for the district organizations:

ARTICLE I. MEMBERSHIP.

Any person owning or managing a drug store in the County of Cook, State of Illinois, who shall subscribe to the constitution and by-laws of this association and is approved by the Executive Board or a majority of the association, may become a member upon payment of his dues for the current year.

Sec. 2. The Executive Board shall have power to reorganize any one of the auxiliary districts, provision for which is made in Article X, whenever in its opinion (as determined by a two-thirds vote at a regular meeting) the best interests of the druggists in that district demand that this shall be done.

ARTICLE X. AUXILIARY DISTRICTS.

Sec. 1. The County of Cook shall be divided into not fewer than 20 nor more than 30 districts by the Executive Board of the Association, these to be known as Auxiliary Districts of the Association and to be consecutively numbered.

Sec. 2. Each Auxiliary District shall elect each year a President, a Vice-President, a Secretary, a Treasurer to serve until their successors have been elected and have qualified.

Sec. 3. The President of each Auxiliary District shall have full power to appoint such committees as may be deemed needful to the best interests of the district association.

Sec. 4. The officers of said Auxiliary District shall constitute an Executive Committee for the district with full power to act during the interval between meetings.

Sec. 5. It shall be the duty of the officers of each Auxiliary District to collect the dues for the current year, such dues being fixed by the Chicago Retail Druggists' Association, as provided for in Article XI, of its by-laws.

Sec. 6. It shall be the duty of the Treasurer of each Auxiliary District to remit promptly to the Secretary of the Chicago Retail Druggists' Association the full amount of dues he may collect from time to time.

Sec. 7. The Treasurer of the Chicago Retail Druggists' Association shall refund to the Treasurer of each of the Auxiliary Districts the sum of \$1.00 for each member in good standing.

Sec. 8. The Secretary and the Treasurer of each Auxiliary District shall be present in writing a report of the transactions of their respective offices and the status of their district association to the Chicago Retail Druggists' Association at each of its quarterly meetings.

Sec. 9. The executive officers of the several Auxiliary Districts shall meet monthly on the second Friday in each month in conference with the Executive Board of the Chicago Retail Druggists' Association.

Sec. 10. The officers and members of the several Auxiliary Districts shall at all times recognize the Chicago Retail Druggists' Association.

Sec. 11. The constitution and by-laws of the Chicago Retail Druggists' Association shall be recognized as the constitution and by-laws governing each of the Auxiliary Districts, except that each District shall decide for itself what number of members shall constitute a quorum, and also the time of holding its meetings.

Chicago Trade Good as Expected.

Chicago, June 2.—Business in Chicago this week has kept up a good summer average. The quiet season is on, but in many departments the sales are large. It would be but a repetition to state what the conditions are. They are practically the same as last week.

NOTES.

—Chairman Holliday of the N. A. R. D. Executive Committee, who is stopping a few days in Chicago after his return from his recent far western trip, got caught in a washout in Montana not many days ago, and during the delay occasioned by the accident he found leisure to peruse all the Montana papers even to the patent medicine ads and the descriptions of the wonders of pink pills for some kinds of people. One drug store ad he thought was especially funny. It is from the "The Anaconda Standard" and is as follows: "Prices Reduced on Patent Medicines. From and after this day we shall sell patent medicines at cut rates as follows: Pinkham's Vegetable Compound; \$1.25 former price; now \$1.00; Payne's Celery Compound; \$1.25 former price; now \$1.00; Scott's Emulsion; 60c former price; now 50c; Hood's Sarsaparilla; \$1.10 former price; now \$1.00; Maltine preparations; \$1.25 former price, now \$1.00. Special Cut on many others."

Mr. Holliday does not intend to poke fun at the brethren of Montana and fully recognizes the fact that in a mining town such as Butte City prices are always high, but he says that he can not help wishing that the

druggists of the eastern and middle states were able to cut rates from a price above a dollar down to a dollar on some of the medicines named.

—Henry S. Wellcome, a prominent American merchant in London, has commissioned Robert Gordon Hardie of New York to paint the portrait of George Washington in his Masonic regalia for the Grand Lodge of England. The portrait will be presented next winter to the head of the order. The matter, however, comes near home when it is recalled that Mr. Wellcome was a student of the Chicago College of Pharmacy at the time of the great fire, but when the college was burned down he went to Philadelphia and entered the Philadelphia College of Pharmacy on the advice of Mr. Ebert and others. It may be of interest to add also that Mr. Wellcome has recently married a beautiful and estimable lady.

—The manager of the Chicago Directory Company says that any interview purporting to come from him stating that the slot directory is a failure and will not be adopted with the coming out of the new directory is a fake. On the contrary, the slot directory is a success and more will be put in this year. Of course, anyone who wishes to lease a directory may do so. The slot machine is not and never was compulsory.

—A. W. H. Reen, a veteran druggist of Peoria, died on June 10. He was one of the oldest and most prominent druggists in the state. For a number of years he was in Chicago, where during the '50s he was engaged as a drug clerk. In 1860 he went to Peoria and has been in business ever since.

—W. L. Campbell, vice-president of the Economical Drug Company, will leave next week on an extended vacation, during which he will visit Buffalo, Toronto, Muskoka Lakes and other points, returning by water via Georgian Bay. He will be gone about a month.

—John E. Serwe, who represents Lazell, Dalley & Co. on the Pacific Coast, was called to Fond-du-Lac, Wis., recently on account of the death of his mother. Mr. Serwe has the sympathy of a host of friends who know and admire him.

—A. J. Yaw, one of the oldest druggists of the state and for years prominent in Belvidere, died last Monday of neuralgia of the heart. The deceased was about sixty years of age and leaves a family.

—G. Henry Sohrebeck of Moline has been appointed by Governor Yates to succeed Colonel Jewett on the Illinois Board of Pharmacy. It will be remembered that Col. Jewett resigned not long ago.

—George B. Sloan, son of George W. Sloan of Indianapolis, a prominent druggist of that place, passed through Chicago this week on his way to the Pacific Coast on a vacation.

—James A. Davidson, proprietor of the well known druggists' sundries house which bears his name, has gone with his family to the Pacific Coast. They will return in August.

—Mr. Worthington of the firm of Worthington & Slade, Rockford, was called suddenly to Cedar Rapids, Ia., the other day on account of the death of his sister.

—E. H. Sargent of E. H. Sargent & Co., who has been quite ill for several days, has recovered.

—The drug firm of Weld & Hall of Elgin have dissolved partnership, Edwin Hall succeeding.

—J. C. Longcor and wife of Belvidere left last Monday for a summer outing in Colorado.

—George Christy, a prominent druggist of Quincy, was in Chicago on business this week.

—The East Side Drug store of St. Charles has been sold to L. N. Benton.

A Drug Clerks' Apron.

Every drug clerk should have one of Moore's Universal Spring Aprons, a most ingenious article of clothing which can be put on or taken off in an instant, and which is particularly serviceable in a store where the clerks have much laboratory work to do and at the same time have to be in readiness to wait on customers in the front of the store. These aprons are made by E. C. Moore & Son, Detroit, Mich., and their price puts them in the reach of every clerk.

LOUISVILLE.

DRUGGISTS WILL ENTERTAIN KNIGHTS

TEMPLAR.

Louisville, Ky., July 12.—The druggists here are preparing to entertain the knights of the mortar and pestle at the coming Knights Templar Conclave on August 27, 28, 29 and 30. It is expected that druggists from all parts of the United States will be in Louisville that will the local pill rollers are arranging to maintain the state's reputation for hospitality. So far no organized movement has been completed but several druggists will canvass the city and attempt to interest everybody in the movement. Incidentally all are cleaning their soda water fountains and enlarging the space around their counters. The druggists expect the largest crowd that ever entered Louisville and are preparing to serve 100,000 visitors with refreshing drinks. One druggist, a trifle livelier than the rest, has already applied for a copyright on a new drink which he expects to serve to those who are fortunate to enter his place of business.

NOTES.

—The body of Ferdinand J. Pfingst, the druggist who died in Germany, arrived in Louisville last week and was buried in Cave Hill cemetery. His will, containing many bequests for charity and disposing of half a million dollar estate, was filed. The following institutions are remembered: German Protestant Asylum of Louisville, \$500; Louisville College of Pharmacy, \$500; Masonic Widows and Orphans Home, \$500. It will be seen that the old time druggist still held a warm spot in his heart for the college which taught his profession. In addition to the above bequests, the will provided handsomely for distant relatives and old friends.

—Baseball has taken the place of bowling and two teams will shortly be organized among the pill rollers. The retail clerks will organize to play the employees of the wholesale houses. It was suggested to organize the ~~own~~ into another team to play their employees. The latter declined however, saying that they would probably lose their positions should they become enthused and forget themselves and win.

—Isaac Fernstein, the druggist at the Louisville Dental College, received considerable newspaper notoriety on account of the ardoer of a Blue Lick, Indiana, girl, on Tuesday. The Hoosier maid wrote a most affectionate letter and mailed it on an afternoon paper. She said that she was unable to locate the druggist and requested the newspaper to assist in the search. The paper was successful in locating Fernstein, then told its readers what the letter contained.

—There was a sensational story afloat the other day that Abraham Taylor, druggist at Boonville, had made a fortune in speculation. The story was that he cleaned up more than \$100,000 on Wall street. Mr. Taylor is still doing business at the same old stand and so far has displayed none of the riches he is supposed to possess.

—The druggists claim that the present season is the best for soda water in the history of the "heat drug-gist." The hot weather has created an unquenchable thirst and the druggists have made money in trying to allay it.

—Henry Jacob, who for several years conducted a drug store at Tenth and Jefferson streets, has retired. Mr. Jacobs met with phenomenal success and his friends are wondering at his retirement.

—Charles Jacobs, of Owensboro, has accepted a position at Scribner's Pharmacy.

Kymo.

It is claimed that the use of Kymo affords a true scientific method of manufacturing ice cream. The ingredients used by this process are Kymo, milk, sugar and flavoring—no cream or eggs—and the manufacturers of Kymo state that the very best ice cream, excepting none, can be produced at a cost of from 20c to 30c per gallon. Write for descriptive circular, or send 15c for sample, to The Kymo Co., Little Falls, N. Y.

ST. LOUIS.

ST. LOUIS APOTHECARIES.

St. Louis, July 13.—The regular monthly meeting of the St. Louis Apothecaries Association was held at the college building last Wednesday afternoon. On account of the extreme hot weather the attendance was rather small, but a great many members telephoned in their ideas and desires in regard to the action to be taken towards the local wholesale druggists. About the only business of importance transacted was in regard to the new rules made one week before by the local wholesale druggists. The druggists throughout the city seem very much opposed to having their containers except for immediate refilling has also aroused their indignation. A committee consisting of R. C. Reilly, Mr. Johnson of Johnson Bros., and F. W. Friedewald was appointed to call upon the wholesale druggists and request that the druggists be allowed a 2 per cent discount, and that the new rule in regard to containers be revoked. Some other minor concessions were also requested. The committee expects to lay its requests before the wholesalers early next week. The wholesalers have very little to say on the subject. They claim that their profits have been steadily decreasing and that they were obliged to make these new rules for their own protection. When informed as to the action taken by the retailers last Wednesday and asked what action they would likely take, the answer was that the request of the retailers would be considered, of course, but no one wholesale firm could give any information as to what the general decision of the wholesalers would be.

WORKING FOR THE A. PH. A. EXHIBITION.

St. Louis, July 13.—Thomas P. Cook, president of the New York Quinine & Chemical Works of New York City, was here this week especially in the interest of the Committee on Exhibits of the American Pharmaceutical Association of which he is a member. A special conference was held with Thomas Layton, Dr. H. M. Whempley and Prof. Francis Hemm. A diagram of the exhibit hall is being prepared and spaces will be allotted to the exhibitors in the near future. The exhibit hall is situated on the ground floor on the Walnut Street side of the Southern Hotel. About twenty-five firms have already applied for space. The committee on Exhibits is especially anxious to obtain exhibits from individual pharmacists who have old, interesting or curious pharmaceutical apparatus, books or literature.

NOTES.

—Judge & Dolph have just moved their store from Seventh and Locust Streets, to 616 Locust Street. This is only temporary quarters as they are already clearing away to erect a three-story brick building at 515 Olive to be used exclusively as a drug store. Their temporary quarters are in a building with an elegant solid glass front which contains the most spacious drug store room in the city. Their manager, Mr. Davenport, says he would resign the best position on earth before he would undertake to move a busy drug store during such hot weather as he has experienced during the past few days.

—Henry R. Huber of the firm of Huber Bros., Boonville, Mo., has been in the city this week making an extensive purchase of drugs. He also purchased many articles which would pass very well for wedding presents. He has a brother, Frank, in partnership with him who is very popular with the fairer sex and has repeatedly announced that he never intended to be an old bachelor. —Edward Niles of Grain Valley, Mo., has been in the city for over a week trying to locate his wife. He claims that she left her home and family some three weeks ago to come to St. Louis as life in their country town was too slow for her. He is a very much broken up man and his only ambition in life is to find his wife and induce her to return to her home and family.

—The St. Louis Drug Clerks Society will give one of their select evening boat excursions Thursday July 18. These excursions have always proven very enjoyable and well-attended affairs.

—L. Meyers Connor of Dallas, Texas, has been spending the week in this city. A Department of Pharmacy in the University of Dallas is to be opened at that place and Mr. Connor has the chair of chemistry and is dean of the department. He was here interviewing the professors of the St. Louis College of Pharmacy, of which he is a graduate.

—W. E. Blackwell, proprietor of the St. Francis Drug Co., St. Francis, Mo., was in the city this week buying goods and visiting old friends. He is very proud of his new and only son who made his appearance in the household a week ago. Mr. Blackwell was at one time a very popular south side drug clerk and later proprietor.

—Ed R. Burkhardt, proprietor of the drug store at Fourteenth and Market Streets, leaves early next week for a two weeks fishing trip out on the Big Piney River. For the last twelve years he has spent his vacation in this way, and he says he becomes more infatuated with the trip each time.

—The proceedings of the Missouri Pharmaceutical Association will be ready for mailing by the middle of next week. Only those members who have paid their dues for 1901 will receive copies of same. William Mittelbach of Boonville is treasurer and is always glad to acknowledge receipt of dues.

—A. E. Suppiger, proprietor of the Arcade Pharmacy has just left for Colorado where he expects to spend the summer. He has been suffering from some throat and chest troubles for the past few months which have caused him considerable uneasiness.

—Dr. F. R. Hoogan, for many years owner of the Souldard Pharmacy, has just returned from Europe where he went a few months ago with the intention of remaining. He says there is no place like America.

—Word has just been received from Mobile, Ala., that Dr. Frank L. James, editor of the National Druggist, is seriously ill at that place. Besides general failing in health he has a severe attack of the throat.

—George W. Tantz, druggist at Twenty-second and Dodder Streets, and noted for his ability for telling fish stories, was quietly married to a charming young lady of a small Illinois town last week.

—L. A. Seltz, Theo. F. Hagenow and R. C. Reilly, went on an exploring expedition to the Mammoth Cave of Kentucky this week. They brought back some very fine specimens of eyeless fish.

—The officers of the Druggists' Cocked Hat League are stirring up all the druggist bowlers in the city and are getting them in line. They expect to select their teams next month.

—H. H. Stuessel, 2400 S. Broadway has just left on a three weeks' trip through the far north. He expects to take a flying trip up among the lakes of the British possessions.

—Harry Feibelmann, druggist at Ninth and Destrehan Streets, was married last Wednesday to Miss Ida Heumann. They are away on an extended trip through the north.

—N. H. Allen of Kirkwood has gone into bankruptcy. The peculiar feature of the affair is that in his petition he gives his assets at \$15,000 and liabilities as \$7,000.

—E. A. Sennwald and wife have left for Elkhardt Lake to spend a month. Mr. Sennwald is president of the retail drug store at Eighth and Hickory Streets.

—W. D. Temm, Grand avenue, and N. Market Street, has left for an extended trip through the East. He will spend some time at the Buffalo Exposition.

—Gustavus Koch, the druggist at Twenty-first Street and St. Louis Avenue, leaves Monday for a three weeks' trip up among the northern lakes.

—Theo. F. Crusius, Thirty-second and Manchester Avenue, is taking his annual sojourn among friends and relatives in Northern Wisconsin.

—R. J. Eckert, druggist of Collinsville, Ill., but for many years a popular local drug clerk, is down with a severe case of smallpox.

—E. A. Bernius has departed on his annual tour of the northern lakes and Canada. He is druggist at 5400 Easton Avenue.

—Otto Trauble, druggist at Jefferson and Chateau Avenues, has gone to the mountains of Tennessee to spend a month.

—Dr. William Baron, formerly of N. St. Louis, is opening a new drug store at McNaire Avenue and Lynch Street.

—F. A. Pfeffer, druggist at Eleventh and Lafayette Avenue, is sojourning at the Buffalo Exposition.

—C. G. Penny, druggist at Twenty-second and Market Streets, is at the Buffalo Exposition.

—J. P. Huhn, druggist at Jefferson and Olive Streets, is sojourning at the Buffalo Exposition.

—Drs. Hall and Lewis are opening a new drug store at Blaine and Tower Grove Avenues.

THE NORTHWEST.

TREATY WITH DEPARTMENT STORES.

St. Paul, Minn., July 12.—F. E. Holliday, chairman of the Executive Committee of the N. A. R. D., has been here this week negotiating a modus vivendi between retail druggists and the managers of department stores whereby price-cutting is to be done away with. It is understood that Mr. Holliday was entirely successful. The plan adopted is the same that has been in effect in Minneapolis for a year and a half and is said to work well there. St. Paul druggists—or some of them, at any rate—are skeptical as to the utility of the agreement, but consented as the best thing that could possibly be done under the circumstances. There is a suspicion that the department stores will have considerably the better of the bargain. The plan would have been adopted long ago had not one of the department stores vetoed it. This concern has now given its consent to the scheme.

NOTES.

—Successions: Kjolrang & Helmark, Battle Lake, Minn., by C. B. Helmark; Trepanier & Co., Grand Forks, N. D., by A. J. Willund; Koch & Gerder, Eureka, S. D., by the Eureka Drug Co.; A. J. Bick & Co., Centerville, S. D., by J. E. Heiser & Bro.; Stockwell Bros., Armstrong, Ia., by C. W. Stockwell; Mulligan & Flo, Crystal Lake, Ia., by W. H. Mulligan; Charles D. Baker, Toledo, Ia., by Chares Benesch; H. O. Hanna, Lincoln, Neb., by B. W. Ganoung; Phelps & Strickling, Eldon, Ia., by C. W. Phelps; A. J. Dutton & Co., Hammond, Minn., by F. W. Zimmerman; Jay Copeland, Fairfield, Ia., by F. W. Jericho & Co.; Aronschild & Pasco, Ottermina, Ia., by M. W. Pasco; John R. Schwend, Minneapolis, by W. A. Coffin; Z. T. Reel, Oskaloosa, Ia., by H. R. Evans & Co.; W. D. Platt, What Cheer, Ia., by R. S. Alexander & Co.; B. Katsky & Co., Staples, Minn., by M. Davidson; the Vernal Drug Co., Vernal, Utah, by John Reader; W. S. Gilpin, Osseo, Wis., by L. E. Hanson.

—E. W. Cummings, after some years' residence at Tower, Minn., has come back to the Twin Cities and will probably engage in business on his own account in the near future. W. P. Meyer has gone to Tower, to succeed Mr. Cummings. E. H. Metcalf recently returned from the Philippines, and formerly well-known in drug circles in this city, is establishing himself in the business at Monterey.

—One of the drug stores in St. Paul owned by Walter Nelson, member of the legislature, was entered by burglars a few nights ago. It was the store at Rice and Iglehart streets. The unbidden guests carried off what money there was in the store—a small amount—as well as a lot of cigars and toilet articles.

—New-C. G. Nickells, 1229 Weston avenue, Minneapolis; E. H. Metcalf, Monterey, Minn.; A. P. Lenhart & Co., Washburn, N. D.; C. F. Gilbert, Boise City, Ia.

—J. F. O. Agthe, who recently came here from Philadelphia, has gone to Staples to work for M. Davidson, who recently bought out the Katsky drug stock.

—Attachments on the stock of C. W. Farney, Boise City, Ia., have been released and Mr. Farney has sold.

—Attachments have issued against E. J. Brown, lately in business at Wheaton, Minn.

WILLIAM HORLICK,
Racine, Wis.

- A receiver has been appointed for the Pink-Fehrlin Chemical Co., Cudahy, Wis.
- E. J. Tyler, Eagle Bend, Minn., and J. E. Page, Castle Rock, Wash., have sold.
- The Brock & McComas Co. has incorporated at Pendleton, Ore.
- James Grawney & Co. have discontinued at Centerville, S. D.
- James A. Helmev, DeL Rapids, S. D., will remove to Trent.
- Charles H. Feethaver has been burned out at Hampton, Neb.
- A. F. Nichols of Nichols & Thompson, Portland, Or., is dead.
- R. O. Hatfield, Wheaton, Minn., has gone out of business.
- The Marks Drug Co. has incorporated at Ashland, Or.
- D. E. Wilcox, Wood River, Neb., has been attached.
- H. C. Hawley has gone to Walhalla, N. D., to work.
- W. F. Moldensbauer, Juda, Wis., is dead.
- Mr. Kolhaus has left Mt. Pleasant, Ia.

THE SOUTH.

BUSINESS CONTINUES GOOD.

Memphis, July 12.—The condition of business is a surprise to the retail druggists of the city and surrounding country. Trade holds up remarkably well, considering the season. Anthrax or charbon, as it is commonly known, has made its appearance in the bottom lands of Mississippi, and horses and mules are dying by scores. On this account the trade in veterinary remedies is stimulated to a great extent. Anthrax vaccine is being sold in large quantities and seems to be the only remedy that can really be depended upon. During the hot spell of several days ago, the soda fountains all did a record business, and in several places extra help was needed to accommodate the crowds.

NOTES.

—The sixteenth annual meeting of the Tennessee State Druggists' Association will be held at Monteagle, Tenn., July 17 and 18. The time and place of the meeting have been selected with a view to pleasing the vast majority

of the members who will find it more convenient at this time, and who, in leaving home will like to visit a cool, delightful summer resort. Delegates will be present from the Wholesale Druggists' Association, the National Association Retail Druggists and the Georgia and Alabama State associations. The social amusements and contests for prizes will be arranged at the meeting. Wholesale and manufacturing friends have contributed quite a number of valuable prizes, which will be contested for.

—P. P. Van Vleet is at his desk again, after several weeks' spent in Texas in quest of members of the finny tribe.

—E. V. Sheely has returned from a visit to Philadelphia.

CALIFORNIA.

DRUG CLERKS' ASSOCIATION ELECTS OFFICERS.

San Francisco, July 10.—The San Francisco Drug Clerks Association is in a flourishing condition. Plans are under way for the maintenance of permanent headquarters along the line of club rooms. It is the desire of the association to entertain out of town clerks at these headquarters and render them any assistance possible. The matter of early closing has been discussed and a communication sent to all the labor unions in the city requesting members to do all their purchasing before 9 o'clock. This action is meeting with the approval of all organized labor and it is claimed by the clerks to be one step in the right direction for shorter hours.

The election of officers was held at the last meeting and resulted as follows: Past president, W. H. Adaire; president, N. P. Wynne; 1st vice-president, P. A. DuBoise; 2nd vice-president, E. J. Maloney; recording secretary, M. E. Lubosch; corresponding secretary, O. Eastland; financial secretary, J. M. F. Eitel; guide, H. A. Gerdes; trustees, D. L. Perrone, G. A. Heuter, C. E. Waite; guardian, G. L. Gerard.

BOARD OF PHARMACY IN SESSION.

San Francisco, July 10.—The newly appointed Board of Pharmacy is now holding its first meeting for examination of applicants for registration. Considerable dissatisfaction is felt by the graduates of this year's classes of the college of pharmacy in San Francisco, owing to the fact that they too must go before the board for examination. There is considerable talk of making a test case along this line but so far no formal action has been taken. The Board is in session in Los Angeles for two days and then will be in session two days in San Francisco.

NOTES.

—Long Beach, Cal., is endeavoring to prevent the sale of liquor in the city limits and the city marshal recently had a prominent druggist and his clerk up before the court for violation of the law.

—Drug business in San Francisco is experiencing the usual laxy due to summer vacations, and further, feels keenly the affect of the labor troubles caused by the strikes.

Sells Rapidly at This Season.

Now that the hot weather has brought the house-fly into most annoying prominence people seek remedies for the trouble. A good article at the drug store sells rapidly and brings more custom. There is no device equal to Tanglefoot Sealed Sticky Fly Paper. It catches the fly and his filthy load and coats both over with a varnish from which there is no escape. It is clean, sanitary and effective. The O. & W. Thum Co. by liberal advertising have spread the fame of "Tanglefoot" throughout the world and thus helped to make its sale easy. It commands itself when tried and offers a good profit. All jobbers in druggists' goods handle "Tanglefoot."

Do you ever have calls for Four-Fold Liniment? See page 10 of this issue, which will tell you something about it.

THE ROMANCE OF CAMPHOR.

Soldiers Guarding the Camphor Collections in the Wilds of Formosa.

The large Island of Formosa, off the east coast of China, fell to Japan a few years ago as one of the prizes of war. The island is famous for two products. The hill slopes of the west grow some of the finest teas in the world, the Oolongs and other Formosan teas being highly esteemed in this country, where nearly the entire crop is consumed. The tree-clad mountains of the east contain the largest camphor forests in the world. Most of the camphor kept in our drug stores comes from Formosa. Japan now produces only about 300,000 pounds a year; the yield in China has never exceeded 220,000 pounds a year; but 7,000,000 pounds of camphor were taken from the forests of Formosa in 1895 and in the past four years the annual yield has averaged over 6,000,000 pounds. Formosa controls the camphor market of the world and will probably always be the great source of this valuable gum. For some time past the purchasers of camphor have been compelled to pay more for it than formerly. The two principal reasons for the increase in price will be mentioned here; one of them is especially interesting, for it illustrates the difficulties and dangers that environ the camphor industry.

The mountains of east Formosa are inhabited by savage tribes who are the bane of the island. Nearly half of Formosa is still occupied by these murderous men of the forests whose weapons are turned against all strangers. The fertile plains of the west, filled with peaceful Chinese tillers of the soil, present a very different aspect. For many years it was almost certain death for sailors to be wrecked on the east coast of the island. If they escaped the sea they were murdered by the savages who were always on the lookout for loot from vessels driven upon the rocks of their inhospitable coast. Explorers have not dared to venture into some parts of these mountains which are still among the least known portions of the world. The savages are full of cunning and treachery. They are armed with bows and arrows, knives and swords. They are very dark and muscular and go about quite naked except for a scanty strip of blue cloth about the waist. In recent years many of them have acquired matchlocks and learned to use them.

One day, a few years ago, a party of English officers from a man-of-war went up into the mountains and met a party of natives armed with matchlocks. They challenged the natives to a trial of skill in shooting. A target was affixed to a tree about 300 feet distant and the Englishmen made what they considered pretty fair practice. The natives looked on without any apparent astonishment at the skill of their rivals. When it came their turn to fire every man of them disappeared in the jungle. They crawled on their stomachs to within about nine feet of the target and they blazed away. Of course they all hit the target in the centre. When the Englishmen protested that this method of conducting a shooting match was hardly fair, the natives replied:

"We do not understand what you mean by fair, but anyhow, that is the way we shoot Chinamen."

The men who collect most of the camphor of the world have to work among these treacherous devils. They are sent up into the mountains, pitch their camps in the camphor forests and depend upon their guns and their vigilance to protect themselves from savage enemies. But though their wits are sharpened by the ever present danger whole parties of them are sometimes slaughtered. The history of the camphor industry in Formosa has many of these tragical incidents. Though armed guards stand over the men while they are felling the trees and extracting the gum they may be attacked at any moment unless the savages consider the force before them to be too strong for them to overcome. Great is the joy when they clean out a camphor camp. All the camp equipment and the food supplies are the legitimate spoils of war; so there is profit as well as glory in the murderous business. The work of getting the camphor down into the plains is even more dangerous than collecting it. The paths are narrow and the carriers, walking in long single file, can present no strong

front to the natives concealed along the way. A strong escort front and rear, beating the bushes and scrub for the foe who may be lurking there, is always necessary to insure safety.

When the Japanese became fairly settled in the island last year they determined to put an end, if possible, to the dangers that beset the camphor industry. As a preliminary step they detailed 500 soldiers to guard the camphor camps and convoy the parties that carry the gum out of the forests. In these camps, scattered north and south among the mountains for a distance of 140 miles, the men are working to-day guarded by a part of the Japanese army. Thus war and industry are curiously combined in the island of Formosa. As a rule, when armed men are around looking for somebody to shoot there can be no such thing as industry in their neighborhood. Peaceful labor and the exploits of war are not congenial companions. But among the forests of Formosa the soldier is becoming the valuable adjunct of industry, and it could not thrive very well without him. The Japanese Government proposes to use any force that may be required to place the great camphor business on a safe basis; but the cost of protecting the camphor gatherers is added to the cost of the commodity and there seems to be no reason to complain that this is not fair to all concerned.

This is the principal reason why the price of camphor has advanced. There is another reason for it also and it may be said that the price is likely to continue at a good figure. Japan, like France and Spain, is desirous to obtain a monopoly in one or more commodities that will bring a large revenue into the Government Treasury. How could a monopoly be more easily established than in the article of camphor, the whole supply of which is practically confined to one Japanese island? So the authorities declared a while ago that henceforth the camphor industry should be a Government monopoly.

Any one may collect camphor to-day who can secure a permit to do so and permits are not difficult to obtain. But not a pound of the product can be sold to any one but the Government, which fixes the price to be paid. The price is sold fully to compensate the collectors, but a limitation upon the amount of the product will prevent too many collectors from crowding into the field. The Government names the maximum amount to be produced and will not buy a pound in excess of the limit. It was said a while ago that the amount to be produced this year would not exceed 40,000 piculs (5,320,000 pounds. As Japan does not intend that the market shall be oversupplied, there seems to be no prospect of any large fluctuation in future prices.

The world will profit at least by the efforts of Japan to preserve an industry which, a few years ago, seemed threatened with ultimate extinction. It is necessary to kill the tree in order to get the gum. Contrary to all previous practice, a tree is now planted for every one that is killed. Japan requires this to be done, and, moreover, is establishing plantations of camphor trees so that Formosa, it is expected, will, in a few years yield both wild and cultivated camphor.—N. Y. Sun.

Grinding Fruits.

Druggists do not generally know that berries, such as raspberries, gooseberries, blackberries, currants, and other similar fruits can be ground just like crude drugs in the mill advertised in the Era by A. W. Straub & Co., 3737 Filbert street, Philadelphia, Pa. Their F 4 mill will grind these fruits perfectly. Crushed fruits and fruit syrups can be made in this way by the addition of sugar to the resulting product, with very little trouble, no waste, and at a minimum expense.

This mill grinds also vanilla beans, tonca beans, peanuts, and any soft oily substances.

It is not often that one has a chance to get a first-class dose book for nothing, such as is offered by Frederick Stearns & Co., with a year's subscription to The New Idea for 25c. This offer may be withdrawn at any time, so it would be well to look into it soon.

Issued July 9, 1901.

- 677,879.—William A. Mildaugh, Kalamazoo, Mich. Her-nial truss.
- 677,913.—Martin G. Allen, Decorah, Iowa. Non-refillable bottle.
- 677,919.—Avedis D. Avedisyan, Boston, Mass. Non-refillable bottle.
- 678,102.—Henry Cremer, Chicago, Ill. Non refillable bottle.
- 678,179.—Neison G. Hodgkins, assignor of one-half to L. H. Sanford, Augusta, Me. Recovering sulphurous acid.
- 678,212.—Gilbert E. Alpha, Mount Olive, N.C. Fumi-gating apparatus.
- 678,242.—Hermann Gottermann, East Orange, N. J. Atomizer.
- 678,330.—Ferdinand Blum, assignor to Pharmaceutisches Institut Ludwig Wilhelm Gans, Frankfort-on-the-Main, Germany, Halogen albumen and making same.

TRADE-MARKS.

Registered July 9, 1901.

- 36,707.—Toilet Soap, Perfumes, Toilet Water, Cosmetics, and Face-powder. Mulhens & Kropff, New York, N. Y. The words "La Baronesse."
- 36,708.—Toilet Soap, Perfumes, Toilet Water, Cosmetics, and Face-powder. Mulhens & Kropff, New York, N. Y. A picture of the Cologne Cathedral.
- 36,709.—Insecticides. Henry W. Doughten, Moorestown, N. J. The representation of a horseshoe.
- 36,710.—Suspendories. J. Eliwood Lee Co., Conshohocken, Pa. The letters "J. P."
- 36,711.—Granular Effervescing Salts. William Ohl, Peoria, Ill. The compound word "Phospho-Pizz."
- 36,712.—Digestive Tablets. The Laxikola Company, New York, N. Y. The word "Pepsikola."
- 36,713.—Certain Named Medicines. Robert H. N. Johnson, London, England. The word "Therapion"
- 36,714.—Certain Named Medicines. Moon's Magnetic Medicine Co., Chattanooga, Tenn. A pictorial representation of a crescent and a balloon.
- 36,715.—Certain Named Medical Compound. Brynjolf Prom, Milton, N. D. The words "Den Tril."
- 36,716.—Certain Named Internal and External Remedies. William Brown, Sutton, Canada. A mono-gram composed of the letters "P" and "D."
- 36,717.—Internal Headache Remedies in Tablet Form. The Neuralgylne Company, Sistersville, W. Va. The word "Neuralgylne."
- 36,718.—Medicine for Certain Named Diseases. Raffello Ambrogio, Baltimore, Md. A monogram of the letters "B" and "A."
- 36,729.—Remedy for Certain Named Diseases. F. Hoff-man-La Roche & Co., Basle, Switzerland, and Hoff and Grenzach, Germany. The word "Strolin."

LABELS.

Registered July 9, 1901.

A New Corn File

The Antiseptic Corn File, advertised in the Era, is handled by the leading drug jobbers in the United States. It is an article of merit, and one which sells itself if properly displayed on the druggist's counter. A sample dozen is sent to the dealer for 75c. Address The Antiseptic File Co., Springfield, Mass.

The Wiley Sanitary Flesh Brush.

The manufacturers of this popular article are advertising it in the magazines, and in their advertisements state that it may be bought of all druggists. It retails at 10 cents, and it is claimed there is no better flesh brush on the market. Write for special introductory terms to The Wm. H. Wiley & Son So., Box 60, Hartford, Conn.

To prove that Las Palmas Cigars are the very best goods on the market at so low a price, the manufacturers will send prepaid to dealers who write to them, one dozen cigars free as samples. Address Chas. Jacobs & Co., 353 E. 78th St., N. Y.

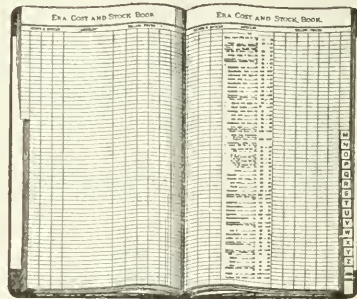

DISCOUNTS

Nearly everybody supplying the drug trade gives discounts, either from list prices, for quantities or for cash.

These discounts are given through correspondence, or are printed in price lists or upon slips of paper.

Nine times out of ten the retailer can't find this information when he wants it. He can find it in an instant if he has an

ERA COST AND STOCK BOOK

It has 24 blank pages for keeping record of such things. Discounts are profits and time is money. It pays to keep a record of discounts for quick reference and to keep it where you can always find it.

The book has 176 other pages for keeping record of cost and selling prices, location of stock in store, inventory, etc. It is a most valuable assistant for doing business as it should be done.

ASSOCIATION WORK.

Within the next two weeks nearly all of the state pharmaceutical associations will have held their annual meetings for the current year. In considering their deliberations one cannot but note what a great fellow the average American is for organization and conference. The spirit of association is in the air he breathes. He seeks advancement along certain lines, his neighbor has a like aspiration, and lo, an association is formed! In exemplification of this idea, the pharmacist is not one whit behind his fellow citizens. That he has had lots of experience the pages of pharmaceutical journalism mutely testify. Wherever two or three pharmacists have gathered together, the tendency is to attack a foe by joint or united effort has been most common. The contest, alas, has not always been crowned with victory, or even "honorable peace." The successes and failures of the various efforts at organization are a part of the history of the drug trade.

The various state associations have all done good work. Organized to secure proper legislation, to restrict the dispensing and sale of medicines, to properly qualify and train pharmacists, they marked a new era in the development of the country. They impressed upon legislative bodies the needs and desires of professional men. The primary objects of their organization were attained because there was need for such legislation. The association had but to crystallize public opinion toward this end, and the proper enactments were forthcoming. In this charac-

ter of work the association has always been successful. Considerable, too, has been done by some of the state associations in assisting the organization of druggists in cities and towns, in the belief that a local body of druggists, if it will, can settle local trade abuses every time. This is the essence of the N. A. R. D. plan, and the only practical method for bringing better times for the drug trade. The more local organizations the better.

But what about the meetings of the A. Ph. A., the N. A. R. D. and the N. W. D. A.? None of these has yet held its convention, and its 1901 record has yet to be written. The first named, after an intermission of several years, will have at the meeting to be held in St. Louis in September a drug exhibit as a drawing card, and the N. A. R. D. when it meets in Buffalo will doubtless have the Worcester Plan as one of the leading questions to be discussed. The N. W. D. A. has not yet announced its program, but it is safe to say the leading trade questions will receive attention.

THE UTILITY OF THE DRUGGIST'S WINDOW.

Too much stress cannot be put upon the druggist's utilization of his window for display. Too often is shown a loss of opportunity in his failure to use this greatest of advertisers opportunely and consistently. The other day we heard that a certain New York druggist was paid \$10.00 a day for the use of his show window by a manufacturer, who used it in advertising a certain brand of soap. If this manufacturer was willing to pay \$10.00 a day for the use of this window, it was actually worth many times that sum to him in business. And of how much greater value would it have been to the druggist did he but utilize it in the right way? For what other use are store windows than to display what the store-keeper has for sale, and in a manner appropriate to the season?

Furthermore, matter-of-fact piling up of promiscuous goods, or a continuance of one display for any length of time, is worse than nothing at all. The first thing of importance in any advertisement is its power to attract and to hold attention. An example of this power is instanced by an upper West side druggist in this city, who trimmed one of his windows with an artificial grape vine. In the center of the window was a dozen or so bottles of ———'s Unfermented Grape Juice, with the catch phrase, "From the vine to the bottle."

While being the best, window advertising is the least expensive. The show costs only a little ingenuity, a little labor and fifty cents or so for having a show-card painted.

THE OBJECTS OF BOOKKEEPING.

The object of bookkeeping is to exhibit a correct statement of one's affairs, and in such a manner that at any time he may ascertain the nature and extent of his business, the money he receives and pays out, his profits or available income, and, if necessary, the extent of his losses. These are factors which must receive attention, no matter how little or how great the business may be. Upon their proper consideration depend the stability and reputation of the man of business. Viewed as credentials, a merchant's books are invested with a character which the possibilities of the business itself cannot give.

The transactions of anyone engaged in trade are regulated and determined by the extent of his capital and credit. These are some of the questions that are answered conclusively by an accurate and satisfactory system of bookkeeping; without such a system a person must, of necessity, be proceeding upon vague and possibly erroneous conclusions, the result of which may bring financial disaster and the terrors of bankruptcy. To-day's doings are governed in no uncertain degree by the success or failures of the past. In our books we have recorded those transactions and experiences, and the record usually enables us to decide whether a contemplated investment shall or shall not be made. The data of every transaction cannot be carried in one's head. It is impossible, and the druggist, no matter how small his business, must keep a set of books. And he must put as much energy and system into the work of keeping them as he does into his efforts in filling prescriptions accurately and scientifically. Bookkeeping, when conducted upon sound principles, will prove of greatest value to him. It will show him the general results of his business career, a career whose records, if he chooses to go back over them, will admit of analysis and bring to light his successes and failures, and the value or worthlessness of each factor in any transaction as contributing to a given result. The system he chooses to follow must not only be perfectly comprehensible to himself, but it should be one which will be perfectly intelligible to anyone should ever circumstances arise in which an examination by others would be necessary. Good bookkeeping promotes order, regularity and honorable methods of business. It also defeats dishonesty and gives standing and credence to our transactions with our fellow men.

INITIATORY CEREMONIES.

There is a flavor of the Ancient Mysteries in the report of the action of some of the brethren at the recent meeting of the Colorado Pharmacal Association held in Denver, for we are informed that the "Diastase Club" was organized and many members of the association were initiated into the mysteries of that benign order. In order to escape the horrible torture the initiation called for it is said that the candidates were allowed to purchase their freedom from undergoing part of the ceremonies by making liberal contributions to the banquet, which celebrated the organization of the order. But why, we ask, let the candidates down so easy? Plato said it was the design

of initiation to restore the soul to that state from which it fell, and how can the true significance of a ritual be exemplified if part of it may be waived or omitted at pleasure? It was different in the days of Isis and Osiris. Then the wandering neophyte had to take his medicine like a little man. He was also taught that he would be happier than other mortals, and was led to dream of the happy islands and habitation of the gods. Yet we cannot but believe that the brethren of the Diastase Club will appreciate the true significance of their mysteries, and, as Epictetus said, "they will apprehend that everything therein is instituted for instruction and amendment of life." Let the mystical couch again resound!

A POLICE OFFICIAL'S RULING.

In Washington, from now on, policemen in full uniform and on duty will frequently be seen imbibing of the nectar of the druggist's soda fountain. When thirsty and weather-beaten they have the permission of their superior to drink soda water, "provided they stand up and keep their blouses buttoned." The ruling which brought forth such a privilege was recently made by the Chief of Police, when one John W. Hile, a patrolman, was haled before him for being in a drug store on North Capitol street while on duty. He was, however, sitting down with his blouse unbuttoned, and was therefore fined two days leave. But in inflicting this penalty upon the officer the Chief of Police remarked officially that he believed it not only proper for a policeman to drink soda-water while on duty, but also the act was not without its moral effect upon the department and the general public. Such a harmless beverage is not of the nature to incapacitate one for duty and while better than the more spirituous of its kind, it really satisfies the thirst.

How would a special drink in honor of this new ruling act upon the force in the direction of the drug store till? How would "Policeman's Phosphate" or "Patrolman's Brew" strike the car? At any rate the druggist of Washington can shake hands with himself, for the policeman, like other mortals, is often thirsty.

PROFIT IN THE HEAVY CHEMICAL TRADE.

One of the big alkali companies of England has recently declared a dividend of forty per cent. for the last half year, making thirty-five per cent. for the entire year. There may not be very much money in the retail branch of the drug trade, but there seems to be some profit in the heavy chemical line, if we may judge from this item of news. Don't all go into it, however, for excessive competition would only scale down profits.

Readers of drug trade papers in general, and of the Era in particular, should scan the advertising pages regularly. They are full of news of just the kind which will help make business profitable. They serve to keep one posted and incidentally contain information which brings in the dollars.

TOOTHACHE WAX.—Melt together 1 dram hard paraffin and 1 dram Burgundy pitch; when the mixture is nearly cool add 20 minims oil of cloves and 20 minims of creosote, and make the mass thus formed into pills or small cones (Dental Register).

BUSINESS PHARMACY.

The Experience of Druggists with Profit-Bringing Methods. Hints and Suggestions. Original Papers from Practical Business Druggists. The Various Phases of Drug-Store Management and Economy.

THE DRUG STORE WINDOW.

By R. F. RUPPILER, Louisville, Ky.

A cursory examination of drug store windows would lead the observer to believe that the impression prevails among druggists that windows are merely for the purpose of letting in light. They have another function that it seems is not generally recognized by druggists, but which other tradespeople exercise to the fullest extent, and that is, that they can be made the means of ingress for those most vital necessities of business life—trade and a well-filled pocketbook. They are the eyes, beaming on multitudes, that reflect the soul and life of the business within. As an advertising feature they appeal directly and strongly to that class of trade which must, by its very exigencies, forever remain more or less divided among different localities.

The man who takes enough interest in his windows to enable him to take the pains of dressing them attractively and of changing his displays frequently, is usually consistent enough to take the same interest in all other parts of his business. The public silently shows its concurrence in this belief by patronizing such a druggist. Thus, a well dressed window has the two-fold function of creating an interest in the goods displayed, and of forming a good impression of the drug store. The success of a retail business like the druggist's, whose trade must be drawn from circumscribed limits, depends more on a proper and well planned display of his goods than on any other means of advertising. And as his stock comprises a numerous class of goods, usually hidden, the necessity for such display becomes all the more apparent. Other and larger retail businesses that draw their trade through more extensive advertising from larger fields, depend largely upon and support such methods mainly by elaborate window displays.

The effectiveness of window displays, if they are periodically varied, is indisputable, it being a trait of human nature to have its eyes forever open to novelty. Even those things that are nearest and dearest to us become indifferent to or tire of by constant association. Familiarity breeds contempt. This is particularly true of the drug store windows.

Let us see ourselves as others see us.

Suppose we pass the corner drug store daily, and see in its windows, year in and year out, a display on one side of sponges, shoe polish, lamp chimneys and paint brushes, and on the other, confectionery, tin horns, balls, penny whistles, and all the other trumpery of a small candy shop that caters to juvenile needs and tastes. We are not naturally inspired with great confidence in the druggist who conducts such a store, and whose windows first make us indifferent to his place and then create an unconscious repugnance to it. Our judgment of what goes on within is in accord with our judgment of what we see without. The windows in each drug store are the guide posts that make us unconscious adepts in the art of knowing where to look for our money's worth. We shun such a place as intuitively as we would a corpse. Most druggists will acknowledge this trait in themselves, and recognize it in others when they step inside of their drug store life and take a look at themselves.

I knew a druggist once who said that he knew all about his windows. He knew how to clean them, and

knew that it was absolutely useless to use them for display or for advertising purposes in his neighborhood. He knew that his customers paid no attention to windows; that only certain staples were in vogue among his patrons, and that it was useless to push the sale of anything by displaying it in windows. He had purchased sometime previously quite a quantity of a certain patent medicine which he now considered as dead stock, and as I was desirous of verifying the value of a drug store window as an advertising feature, I induced him, after some difficulty, to use as a window display the advertising matter which had been supplied him by the manufacturer of the patent medicine. He looked affectionately at the lamp chimneys, shoe polish and sponges in the window and demurred, but finally relented, declaring that if the display had no immediate effect he would forever abandon all attempts at improvement in that quarter.

The display was not remarkable in itself, and hardly worthy of record except to illustrate the principle that it pays to change periodically the things displayed in the window, and to advertise but one thing or one class of goods in this way at a time. The medicine advertised was a spruce gum preparation. The centre-piece of the display was a Christmas tree, which, as a species of spruce from which the principal ingredient of the medicine was ostensibly derived, served the two-fold purpose of creating an interest in the medicine, and of attracting attention by being displayed at an inopportune time. Empty cartons, the fac-similes of those in which the medicine was sold, were arranged and stacked beside the tree so as to give an impression of quantity, and a few were hung upon the tree in the manner in which Christmas trees are decorated.

It is not to call attention to this particular display, which in fact was common enough, that I mention it, but to demonstrate the value of window displays as trade bringers—a fact which druggists are slow in accepting, and from all appearances of the average drug store window, slow in acting upon. Let it suffice to say that three or four dozen bottles were sold in less than two weeks, while previously the demand for the medicine in this particular store was about one bottle in two or three months. "Give me a bottle of that medicine in the window," was the order repeated several times a day by customers, who from the proprietor's account of his experience of fifteen years, were not susceptible to impressions made by changes in his window displays. "Has the place changed hands?" not a few inquired about this time. And yet, according to this druggist, his neighbors never drew any inferences from what they saw in his windows.

Instead of availing himself of the lesson so practically demonstrated to him, and, after having found the use of his windows, utilizing them for a more legitimate purpose than advertising patent medicines, this unprogressive druggist found the effort to think of any other display in his legitimate line too much for him. So he replaced the lamp chimneys, shoe blacking, sponges, tin horns and confectionery in the windows and wore away his days by sitting behind the stove and smoking his pipe. He hired a general utility man to fill the various offices of errand boy, porter and prescription clerk on half pay, that was not always paid, and on the whole he could not be called a pronounced success. Let those who do not wish to fall into the same rut, and who have no es-

pecial genius for avoiding the inevitable, look to their windows!

Like a coin that we do not care to accept as currency, if but one face is properly stamped while the other is blank or monogrammed, so the presentation of one phase of a subject without the other is equally unsatisfactory. Drawing conclusions as they bear on the subject of window displays, from a pronounced failure on the one hand, it is proper by way of contrast, to set them off by others derived from a decided success.

The methods of a retail drug firm, employing thirteen people, are worthy of consideration. From behind the counter I have observed with interest the effect of this firm's window displays, noting from time to time the relative demand for articles when displayed, and when not displayed. In the case of common articles, as soap, insect powder, etc., the demand was doubled and trebled when they occupied a place in the window. In the case of very expensive toilet requisites, costly mirrors, combs, brushes, etc., the demand was positively created, these things being rarely called for on other occasions.

The goods were so arranged as to associate inseparably in the mind of the public the idea of quantity with that of a bargain, and only one or two kinds or one class of goods was displayed at a time. An entire change in the display was made regularly every week and arranged by the head clerk, the seasonableness of the goods always being borne in mind. The prices were invariably attached to the goods displayed, and usually reduced somewhat during window week. Thus, one week a barrel of insect powder would be placed, so as to show its contents effectively, in the centre of the window, and large quantities of insect powder were dumped on paper on both sides of the barrel, while insect guns, bottles of bedbug poison and various sized packages of insect powder—all in quantities—were also placed in the window. The next week, for instance, borax would be displayed in a similar way; then, successively, soap, razor strips, clothes brushes, etc., then syringes and water bottles; and so on, until the revolution of time had brought into the window, during one week or another, nearly every article of merchandise usually kept under cover in drug stores. Thus, in rotation, nearly all kinds of goods handled in the drug store, from the coarsest and heaviest bulk goods to the finest and most costly articles, were shown in the window. Patent medicines were never used as displays, but were advertised at cut rates as a means of gaining patronage, not only for them, but for other goods well displayed. Incidentally, I may mention that in the centre of the store were two stands with shelving arranged in the manner of stairs, and on these were placed the firm's own preparations. Occasionally they were used as bargain counters. They were attractive, and conformed in appearance to the general elegance of the store.

These window displays, appealing to the public by their diversity and singleness of purpose, were enhanced in interest on every possible occasion by the addition of such natural curiosities as fell into the hands of the proprietors. The most attractive of these auxiliaries was a species of globe fish or sea hedgehog. The specimen obtained was the entire skin or covering, with bristling spines taking the place of scales, and into this when inflated was put an incandescent lamp with a red bulb, and the whole suspended from the ceiling in the centre of the window. The red light, shining through the translucent skin of the fish itself, made it an object of wonder, and incidentally attracted much attention to the window.

A constant succession in displays in no small measure increases the public interest in the goods displayed, and varies the stereotyped monotony of the average drug store window. Furthermore, it symbolizes the fact that the men who conduct the business are moving in a business way and are not standing still. The periodic handling of stock not only affords an opportunity for gaining a thorough familiarity with it and with prices, but enables one to give it an occasional overhauling and keep it in good con-

dition. The drug store window to be available for the display of expensive and easily damaged stock, should not be open to the ravages of dust, dirt and flies, and precaution is necessary to prevent damage by sunlight.

All of the druggist's showings in the way of window displays that please or repel the public are but pantomimic demonstrations that indelibly stamp his character in the public eye. It is, therefore, only necessary for him to feel convinced that his windows have an important share in influencing public opinion about him and in bringing trade to him, in order to arouse that enthusiasm and interest in the subject that will induce him to exercise his original thought and effort in that direction and to use the innumerable suggestions on the subject with which our periodical pharmaceutical literature is replete.

LABELS.

By FRANK B. STYLES, Hempstead, L. I.

The name "label" in ordinary use means some mark designated to be fastened to a package of some kind for the purpose of proving the identity of the contents of the package, and sometimes the ownership. This seems to be the great first reason for a label. In nature everything has a label peculiar to its kind. In the botanical world each flower contains what might be termed its label in the peculiar construction which is its very own. In the geological world each piece of stone or other specimen shows some peculiarity which is recognized by the scientist and proves to him the kind of stone. Thus it is through all nature.

When man takes matter from the various kingdoms into which all substances are divided, and mixes them according to his liking, so that he may be able to identify the combination again, he must necessarily label it. The combinations of matter are so numerous that it is impossible for one man to know them all by sight. Neither is it possible for any one to take one package and make it his business to tell everybody the name of it. Therefore a label is necessary.

There are many kinds of labels, and most common of all that man has devised is the paper one which is generally by paste or gum attached to the package which it is to identify. As to the patterns and uses of each individual label their number is legion, which makes it a hopeless task to enumerate more than a very few. Labels which bear the names of a single article are designed to be gummed fast to the package, are the most common. After this I think in this enlightened age comes the wonderful label which is to be attached to the patent medicine bottle. It is at least wonderful, because of the claims it makes. The wonderful claims which the label makes for the medicine, makes one believe many times that it is a fairy tale instead of what has come to be recognized as a legitimate way of lying (?) about the merits of the within contained article in order to secure your gold. The labels found upon toilet preparations of all kinds, I believe, are among the handsomest, if not really the handsomest of all labels. It certainly must be that the designer is an artist in his line, and aims to elevate the grade of his work to such a degree that none shall equal the rare taste shown in design and combination of colors. Compare the regulation "shop label" of to-day with its forerunner of twenty years ago, and you very quickly see a marked change for the better in the label of to-day—neat and simple, and yet rich in its simplicity.

Consider the prescription label for bottles—what an endless variety! At the same time how wide the difference is in the various grades of these. The pharmacist of to-day must be an up-to-date business man. He must not only keep his shoe looking inviting; his stock of goods kept full, and be able to fill within all reason any prescription that may be presented, but he must dress his prescriptions up-to-date.

Labels for prescription bottles, it seems, are more often in need of being changed than any other particular class of label. Judging from the appearance of some labels returned on prescription bottles, the patient must have tried to see how much of the medicine would stick on to the label and bottle; while others are returned and refilled several times, and the original label is almost as good as new. It is a sure sign of a well conducted pharmacy to find on a bottle that contains a repeated prescription a new, clean label each time the bottle is refilled. The labels for remedies for internal use should have a make-up different from the label for liniments, lotions, etc. They could be printed in different colored inks with the addition of "For external use" on the label. The labels for powder and pill boxes, as well as the neatly printed and well written labels for bottles must be the best. The pattern of a label depends somewhat on the bottle which is used. Again, there are various secondary labels which are oftentimes needed, and which should be designed to accord with the main label and bottle.

The effect of a label on a bottle may be likened to putting a dress on a lady. How much better she looks in a costume of a certain cut and trimming than she does in just a plain costume! But, if you put more than a certain amount of decoration on the costume, then you spoil that rich effect which seemed to be perfect harmony. No one will dare gainsay the statement that a label applied to everything leaving a drug store means a safeguard to the public, and yet I have known people to absolutely refuse to let me label a bottle. Very frequently a bottle comes into the store with three or four labels pasted one upon the other. It is quite possible that each label is from a different store and for a different remedy. Think of it! Four different labels for one bottle! I invariably make it a practice to deface a label so that the name and directions, if there are any, are not readable, before putting another label on a labeled bottle presented to me for filling.

Some ten years ago I read of a fatal mistake because of two labels being on the bottle. Reading the article taught me a lesson which I shall never forget. A father got up in the night to administer to an infant a dose of paregoric. The dose given was a teaspoonful, and when it was too late he discovered that the child had swallowed carbolic acid. It was largely the same old story of knowing just where to put your hand in the dark to get a certain article. The man had taken the right bottle, but upon investigation he found that the bottle which had been used for some time and had a paregoric label firmly attached to it, had been filled with carbolic acid, and the thoughtless drug clerk had unwisely pasted the acid label over the paregoric label, and as the bottle had been standing for some time in its place in the closet, the acid label in some way had become detached and dropped to the shelf alongside of the bottle. A label only tells the truth when the proper one is fastened to the bottle. The right label and the only one should remain on the bottle.

HOW TO MAKE A DRUG STORE PAY.

By W. W. MUNGER, Big Rapids, Mich.

The subject of "How to Make a Drug Store Pay," is one which has been so thoroughly discussed that there remains but little to be said. But different druggists have different ideas and methods. Therefore, in exchanging ideas we may be able to help each other. In the first place, to make a drug store pay we must have a certain amount of trade. One of the most important means of acquiring this is to advertise. The question of advertising, and how to advertise in a way that will be most effective and least expensive, has become one of vast importance. Newspaper advertising is always good, but rather expensive, and while it pays to do a certain amount of it there are many other ways which may be employed. Do not waste or throw away samples and

printed matter furnished you by manufacturers. But, after carefully stamping them with your rubber stamp, if your name has not already been put on them, see that they are carefully distributed in your town. If you have a country trade, make up rolls of advertising matter, almanacs, samples, etc., and give them to the country people as they pass out of your store. These may also be thrown into farmers wagons on Saturdays when many of them are in town. You will be surprised at the results you will get from this kind of advertising. In a short time you will find people asking for these rolls. Keep your name before the people, and constantly remind them that you are alive and that you have what they want. The druggist of to-day who sits down and waits for people to find him and what he has to sell, will soon find himself a back number. He will be kicking about hard times, while his neighbor, who is alive and spending a reasonable amount for advertising will be doing all the business. We must spend money in order to make money.

Another important thing is, to keep an up-to-date store. This does not necessitate a large stock, but to keep the things that are called for. Never be out of staples. Order often. Better pay a little more for express or freight than lose sales. In losing a sale you may lose a customer.

Try to establish the reputation of always having what people want, and don't be afraid of making yourself a little trouble for your customers. If they happen to want something not often kept, or for which there is no call, offer to get it for them. They will appreciate the accommodation, and you may gain a customer. See that your store always has a neat and inviting appearance. People are apt to judge the quality of your goods by the appearance of your store. Be careful about buying. Keep close watch of your stock and keep it full, but don't allow a smooth-tongued salesman to over-stock you. Better not get the quantity discount than to have a large stock of unsalable goods on your hands.

Another means of making a drug business pay is to put up a line of your own preparations. Every competent druggist can do this with a little extra effort, and if he isn't competent he should not be in the drug business. This can be done gradually, and without any great outlay for material or apparatus to start with. Commence with simple preparations like tooth powder, toothache drops, corn cure, cough syrup, headache powders, etc. Make them just as good as you know how and do not attempt to sell them until you are satisfied that you have a good remedy. This will require some study and a good deal of experimenting, but it will bring dollars as your reward. Of course it will take a little time to build up a trade on your own preparations, but if managed with good judgment and a little tact this can be done in a comparatively short time and be made to pay a nice profit.

Put your preparations up in nice neat packages at moderate prices, and when the opportunity presents itself recommend them with your personal guarantee. Do not try to force them on people who ask for something else. If a man asks for a particular "sarsaparilla," do not tell him that you put up one that is much better and cheaper. He usually knows what he wants, and if he has to buy it under protest he is liable to go somewhere else next time.

You must judge your customer. After wrapping the remedy for which he asks, you can call his attention to your own preparation and its virtues. If he does not seem interested, do not bore him. Very often he will examine your remedy and ask you to exchange.

If people come back dissatisfied, give them back their money as cheerfully as you took it. This will not often happen. Samples given to customers to try will sometimes make customers for your remedies. When people ask you to recommend something for them you will of course take this opportunity to bring your own remedies to their notice. Another good way of bringing them before the people is by small circulars, conveniently placed, which can be wrapped up with goods. The idea in putting up your own prep-

arations is to give your customer more for his money, and to give yourself more profit.

As you gradually commence to build up a trade on the simple preparations, others may be added, and they will be much easier to introduce. The only way to sell goods is to let people know that you have them to sell.

THE MOST PROFITABLE PREPARATION FOR A DRUGGIST TO MAKE AND SELL.

By J. T. PEPPER, Woodstock, Ont.

Of late years great profits have accrued to the druggists by making and selling preparations of their own manufacture. Cough mixtures, pills, blood purifiers and liniments are preparations which all druggists make and sell, and realize handsome profits from. But the preparation that I consider the most profitable, is the one that the druggist has an almost undisputed field in which to operate. I refer to the compound syrup of hypophosphites. Generally speaking, I believe, there are not many druggists who make and push the sale of a compound syrup of hypophosphites of their own manufacture. I think that I can say with all sincerity and honesty, that while I find all my own preparations highly profitable, I derive a greater amount of profit from my Tonic Hypophosphites than from any other preparation.

With preparations other than hypophosphites there seems to be more and keener competition, both in advertising and selling. I know of no preparation of hypophosphites which is being extensively advertised to the general public, and yet the people of which the public is composed all have a general knowledge that hypophosphites is a good tonic and that it will build up the system. If you should ask them from what source they obtained this information they will tell you about some one of their relatives or friends who took hypophosphites years ago, and of how much good it did them, and how they got well and strong. This information on the part of the people makes it easy for the druggist to sell his own hypophosphites.

It is true that it is more difficult to make a good compound syrup of hypophosphites than possibly any other preparation, but the making of this syrup may be made comparatively easy and perfectly satisfactory by practice and perseverance. My clerks make all of this syrup we use, and they are always successful in turning out a nice, clear product without any precipitate. We put it up in 16-ounce Erie ovals and sell it for \$1.00 a bottle, or six bottles for \$5.00. It is not an expensive preparation to make; on the contrary, it is very cheap, and if you will make an estimate of the cost of manufacture you will be surprised at the handsome profit obtained by selling a sixteen ounce bottle for \$1.00.

Compound Syrup of the Hypophosphites

Calcium hypophosphite	5 ounces, 160 gr.
Potassium hypophosphite	2½ ounces, 80 gr.
Sodium hypophosphite	2½ ounces, 80 gr.
Manganese hypophosphite	20 grains
Citric acid	480 grains
Potassium citrate	500 grains
Quinine sulphate	320 grains
Solution of iron hypophosphite	4 fl. ounces
Strychnine (falkland)	20 grains
Granulated sugar	15 pounds
Hypophosphorous acid	4 fl. ounces
Pure water, ad.	320 fl. ounces

1.—Powder the manganese hypophosphite, potassium citrate and citric acid separately, and then mix them thoroughly by trituration in a mortar.

2.—Powder the calcium hypophosphite finely in a small mortar and then put it into a larger mortar.

3.—Mix the potassium hypophosphite and quinine sulphate, and add them to the hypophosphites of calcium and sodium in the large mortar. Mix and triturate them well together, then add to them No. 1 mixture and triturate the whole thoroughly. Add 20 or 30 ounces of boiling water, continuing trituration, and then strain this solution into a large two-gallon jar, keeping the undissolved portion of the salts still in the mortar. Dissolve the strychnine in the hypophosphorous acid and add it to the salts in the mor-

tar and triturate again. Add 30 or 40 ounces more of boiling water and triturate till dissolved, then strain into the jar. Dissolve the sugar in the balance of the water by heat and strain into the jar also. Add the solution of iron hypophosphite and sufficient water to make the whole measure 320 fluid ounces.

Solution of Iron Hypophosphite.

Ferric alum	616 grains
Sodium hypophosphite	408 grains
Potassium citrate	400 grains
Glycerine	10 fl. ounces
Pure water, q. s. ad.	4 fl. ounces

Dissolve the ferric alum in eight ounces of water, and the sodium hypophosphite in four ounces of water. Strain both through absorbent cotton. Pour the alum solution into the sodium solution until a heavy white precipitate is formed. Pass combined solution through a cotton strainer, transfer the precipitate to a mortar and add to it the potassium citrate and glycerine. Then put this green-colored mass into a graduate and add boiling water to make four fluidounces. Heat in a flask or porcelain evaporating dish till complete solution is accomplished.

Hypophosphorous Acid.

Potassium hypophosphite	116 grains
Tartaric acid	600 grains
Pure water	1176 grains
Dilute alcohol	1200 grains

Dissolve the potassium hypophosphite in the water and the tartaric acid in the dilute alcohol. Mix the two solutions in a bottle, cork, and set aside in a cool place for twelve hours. Filter, weigh the filtrate, evaporate off the alcohol on a water bath, and finally add enough water to make original weight. Keep in a glass stoppered bottle.

I believe that any druggist can succeed in making a good syrup of hypophosphites composed by following these formulae. It is possible that he may not succeed at first, but if he will persevere I am sure that he will. I had my own difficulties at first, but I persevered and overcame them.

Advertising Tonic Hypophosphites.

Our success in being able to sell large numbers of bottle of Tonic Hypophosphites was obtained by newspaper advertising, window displays and personal talks with our customers. Recommendations to other friends by customers who have taken our preparation of hypophosphites and received benefits from it, have helped us to sell a good many bottles. It is a satisfaction that pleases the druggist all over when people come into his store and ask for his own preparations.

OBTAINING SAPONINE FROM HORSE-CHESTNUTS.—L. Weil, Strassburg, Alsace, Germany, has obtained an English patent for a process of obtaining saponine from horse chestnuts (*Jour. Soc. Chem. Ind.*). Riped horse-chestnuts, after peeling are ground and dried at 40-50° C. The oil and resin are removed by extraction with benzine or petroleum spirit, and a subsequent extraction with 93 to 96 per cent. alcohol dissolves the saponine, which separates on concentration and cooling. The crude product is dissolved in alcohol, treated with freshly precipitated hydroxide of lead (from lead nitrate and ammonia), and finally precipitated by pouring the alcohol solution into ether. If necessary this process is repeated. After drying, the saponine forms a white powder, readily soluble in water, giving a strongly frothing solution. The yield of saponine is about 10 per cent. of the weight of the nuts.

DETERMINATION OF HYDROCYANIC ACID IN ESSENTIAL OIL ALMOND.—According to Dietze (*Phar. Jour.*), the hydrocyanic acid in essential oil of almonds may be titrated directly by the following method:—25 grams of the oil are mixed with 10 grams of magnesium hydroxide and to Cc. of water, a few drops of neutral potassium carbonate being added as an indicator. The mixture is then titrated with silver-nitrate solution as usual.

SHOP TALK.

During the recent hot spell that made Philadelphia but a few degrees less warm than famous Death Valley, little regard was paid to the conventionalities of life in the effort to be comfortable; however, even before the hot weather began, the Era man saw something that started him on a little trip of investigation. It was in regard to the appearance of clerks and proprietors in the store in shirt-sleeves. In a store on Eighth street, where good service is the rule, the clerks were noticed one Sunday afternoon lounging around the store in shirt and suspenders, still further up the same practice was noted, and in quite a number of other stores this slovenly habit was seen. Now, no one but a stickler for propriety would want to see a storekeeper in a stiff shirt and collar in hot weather, yet this is no excuse for proprietors or clerks sitting or working in suspenders and shirt. It looks—and is—untidy, and ladies especially will notice the lack of respect for customers and draw conclusions. Nowadays light coats can be bought for fifty cents, and there is no excuse for a man in a drug store waiting on customers in a shirt uncovered by such a garment; it is more or less the same as saying to his customers: "Any old thing is good enough for your class of people!" Why in the name of Galen will proprietors and drug clerks do such things that lower the dignity of their calling—untidy or careless dress, dirty hands, unkempt appearance, etc.—and contradict in their appearance every word of their advertising "Prescriptions compounded with care"? A man untidy and careless in dress is apt to carry the habit into other things.

* * *

Mention was made in this department of the Era some time ago of the efficiency of naphthalin—coal-tar camphor—in the treatment of mosquito bites. Well, then it was given on the strength of reports from others; now it can be stated from a month's use in one of the worst places around here for mosquitoes—the League Island Navy yard—that the effect of an alcoholic solution of naphthalin on mosquito bites is little short of marvelous! The pain and smarting is relieved almost instantly, and after one application all swelling and inflammation disappears. Here is a pointer for druggists who are in the "mosquito belt." Dissolve 100 grams of naphthalin in 500 cc of alcohol, using a gentle heat if necessary, now add water, constantly shaking the mixture, in small portions until the alcoholic solution turns slightly milky, then add enough alcohol to make 1000 cc's, or, add 500 cc of water to the alcoholic solution of naphthalin and filter until clear. Add about a dram or so of good oil of lavender to perfume the lotion, and put into two ounce bottles for sale. These can be sold for 25c, and once a customer buys and tries this lotion, he or she will never want to be without it when mosquitoes are around. At this price, there is a good profit in the thing, bottles and labels being tastily gotten up. Directions:—Rub a few drops on the bites.

* * *

That the drug store is simply a place for the accommodation of the wants of the public, from selling stamps to giving free advice as to the rent of houses and character of the neighbors, is too well known to repeat here, but even into Uncle Sam's domain has the "free everything" fiend penetrated! Not long ago the pharmacist in charge of the dispensary at one of the Navy yards was roundly denounced as keeping a "mighty poor sort of a drug store," because he did not have a postal card to sell to a visitor, and, in spite of explanations, the man went away mad and will probably not "trade with Uncle Sam any more." In the midst of a busy sick-call this crank poked himself and demanded, not asked for, a postal card, and when told that the place was a Government dispensary, replied that "every first-class drug store kept postal cards and he didn't see why he couldn't get one here," and it took the combined efforts of the pharmacist, porter, two nurses and the doctor to get

him out without destroying the whole Navy yard, because he couldn't get his postal card. The next eventuality looked for there is a request for free soda water!!!!

* * *

While on the subject of lotions for summer ills, a mixture that has given very good results in the treatment of dermatitis from poison ivy may be mentioned. This, too, has the stamp of approval of the League Island Navy yard, where the thousand workmen are constantly coming in with poisoning from rhus toxicodendron. Dissolve 25 grams of bicarbonate of soda and 10 grams of borax in 1000 cc of water, add 10 cc of carbolic acid and strain through a cloth. Directions:—Apply freely to the poisoned parts; if much inflamed, wet a cloth with the lotion and keep in contact with the poisoned parts day and night. There is little danger in the use of this lotion, the carbolic acid may be omitted or decreased if desired, and the action of the alkalies seem to be wonderfully effective. It is possibly because they neutralize the acids of the poison, for the discharge from the tiny blisters has been found to be acid in reaction. This same lotion is a mighty good thing, too, for prickly heat, used in the same manner as given above. A wash in lukewarm water and free application of this alkaline lotion to the skin will relieve the itching and burning of prickly heat as by magic. Make up a lot of these two lotions, put the latter in eight ounce bottles and recommend it for prickly heat, poison ivy and such like summer ills, and see if you do not work up a good trade in them. The cost is little and the profit is good, and the writer can earnestly recommend both as being very effective and safe to use.

* * *

For a freak window display, Albert B. Baltzy, 7th avenue, corner 134th street, this city, has something original. In the window is piled up, some open and some shut, in a jumbled heap, several prescription books. A number of little signs reading, "90,000 prescriptions put up in this store, not a single error," "No substitution," "Where do you get your prescriptions made?" etc., are scattered about. The glass of the window is covered with whitening tinted blue, put on with a coarse sponge and grained so as to somewhat resemble a curtain, only a round space for a peep-hole sufficiently large to permit the curious person to take in the whole display, being left. A large sign over the window announces that the display cost \$60,000, the size of which amount is sufficient to attract the passer-by. There is always quite a number of people waiting for their turn at the peep-hole.

* * *

A neat advertisement was noted in the window of Cohen's "Terminal Drug Store," 12th and Market streets, Philadelphia—a window full of hair and tooth brushes, clothes brushes, in fact brushes of all sorts and kinds. Over the top was a sign, "This window is bristling with good bargains in bristles," while in conspicuous places were cards giving the prices of each sort of brush and a few words describing it. The brushes were good, the pun was good and the prices were good, and quite a number of people stopped to look at the display. No doubt some of the many that went into the store during the few minutes the Era man waited bought some of the "bristling" articles.

* * *

A Massachusetts man has placed on the market a combination spoon that seems to have much to recommend its use in the sick-room. It has three sizes of spoons, teaspoon, dessertspoon and table spoon, respectively, that slip into one another in such a manner that any of them can be pulled out from the socket and used, or the three can be swung out so that all can be used at the same time. For measuring medicines this appears to be a good idea, and druggists might do well to lay in a stock and display them in a showcase or recommend them when handing out prescriptions. An added feature in their favor is their accuracy, and to one who knows the varying capacity of spoons this is a good point.

THE SYNTHESIS OF INDIGO.*

By J. MERRITT MATTHEWS, Ph. D.

Until within quite recent times indigo had its chief source in the plant raised principally in India and surrounding countries and islands. If we glance into the history of the dyer's art, we find that indigo was one of the first dyestuffs of common use; its application in India and Egypt dates from times too remote to be reached by authentic history. Its introduction into European countries was of more modern date, this being accredited to Marco Polo, who carried it back with him from his journeys in India about 1300. Previous to this time, however, indigo dyeing had been carried out to quite an extent in Europe by the use of woad, a plant which contains a certain amount of indigo, and is capable of being utilized in a manner similar to that of the indigo plant itself. In fact, there appears to have been quite a conflict at the time between woad and indigo, resulting in the latter triumphantly establishing its superiority. At this point it may be well to call attention to the fact, in view of the present conflict between natural and synthetic indigo, that indigo on its first introduction into Europe, was anathematized as a pernicious drug, and was spoken of as the "devil's food"; and furthermore was regarded as a very inferior dyestuff, by no means the equal to woad in fastness of color nor beauty of shade. In fact, so bitterly was its adoption opposed that laws were passed in several countries forbidding its use. However, as the natural law of the survival of the fittest will overcome all statutory edicts, true superiority must in time work out its own justification.

Although indigo has been so well known as a dyestuff from antiquity, it is interesting to find that, notwithstanding its large and almost universal use throughout the world, very little was known of its chemical nature and constitution until comparatively recent years. It is also a highly significant point that this natural product was really the starting point for the artificial color industry. Aniline, which may be said to form a basis of the vast majority of these products, was first discovered, we are told, by Unverdorben in 1826, who obtained by it the destructive distillation of indigo. This, indeed, is a remarkable coincidence when considered in relation to the synthetic reconstruction of this dyestuff from aniline products. In fact, if we look into the derivation of the word aniline itself, we will find that it comes from anil (and this in turn from the Sanscrit word nila, meaning indigo, and also signifying dark blue), the Portuguese name for indigo; hence, etymologically considered, so called aniline dyestuffs are in reality indigo dyestuffs. Again, it appears that picric acid, probably the oldest artificial dyestuff known, was first prepared by Haussman in 1788, by the action of nitric acid on indigo.

As indigo has always been the most important dyestuff in practical use—its consumption probably exceeding that of any other—it is a matter of considerable surprise to find that its production has been regulated so little by what may be termed scientific supervision. The fact that it has always been in such constant demand probably accounts for this lack of care, as the indigo producer could always find a ready market and a good price for his article, he was not much given to worrying about improvements or progress until late years. Or, it may be that like most natural processes, the raising of indigo is not capable of any pronounced scientific refinement. Since the introduction of the artificial coal-tar dyestuffs, however, chemists naturally endeavored to obtain a substitute for this all-important vegetable dyestuff, as they had in mind several considerations:

In the first place indigo is comparatively difficult to obtain in a uniform condition, so many are the influences of weather, soil, season, cultivation, preparation, etc., in determining the quality and quantity

of the dyestuffs produced from year to year; it may be said to fluctuate with the varying whims of nature, the conditions of which are but little understood, and hence not capable of proper control.

Secondly, indigo is a peculiar dyestuff, in that its application radically differs from all others, its dyeing being carried out by what are to be regarded as clumsy and laborious methods in comparison with the ordinary processes of dyeing.

Thirdly, the commercial side of the problem was, of course, an attractive one; indigo dyeing was high priced, and stood for a high standard of excellence. Substitutes for this dyestuff would, in consequence, have a large demand. This striving to replace indigo in many of its applications by cheaper products and those more easily applied, had led to the result that there are more blue dyestuffs known than any other color, and this is especially true of those which have their chief application to cotton.

We may be sure that was not long after the artificial dyestuffs had been firmly established, that the attention of color chemists was focussed on indigo, with the certain result that the chemical nature and constitution of this body was soon ascertained. The next step was, naturally, its synthesis and its preparation by this means on a commercial scale. The solution of the problem relating to the constitution of indigo is a fascinating subject to the student of organic chemistry, and the results which have been obtained form a beautiful demonstration of the truth and validity of chemical theory and philosophy. The successful synthesis and commercial preparation of this dyestuff, which soon followed the knowledge of its chemical constitution, has been one of the most brilliant achievements of technical chemistry, and exemplifies in a most striking manner the superiority of scientific methods.

The Constitution of Indigo.

A full discussion of the chemical studies involved in the demonstration of the proper constitution of natural indigo would be a too involved and lengthy task for the scope of this paper; but in order to understand and appreciate the working out of its synthesis, it will be necessary that we review in a cursory manner the leading points which resulted in the establishment of the chemical formula of indigo.

Indigo, as it exists in the plant, appears to be combined in the form of a glucoside, which is known by the name of Indican. This substance under the hydrolyzing influence of acids or of an enzyme is resolved, like other natural glucosides, into a glucose, there also being formed indigotin, which is indigo blue. The reaction proceeds according to the following equation:

The formula of indigo here given was established by Sommaruga by analysis and determination of its vapor density, its empirical formula, $C_{15}H_{10}N_2O_6$ having been previously ascertained by Grum and Laurent. In 1865 Baeyer undertook a systematic investigation in reference to the chemical constitution of indigo, and, after fifteen years of patient labor and research, this chemist and his collaborators solved the problem, and effected the synthesis of this dyestuff. The greater part of the work was of theoretical interest, and had no industrial application, and it was not until almost twenty years more had passed that the problem received its practical solution. But it was the work of Baeyer in ascertaining the constitutional formula of indigo that laid the basis of all the future chemical work with respect to this dyestuff.

The early syntheses of indigo were of little or no value to the manufacturer, as the yield of dyestuff was insufficient, and the materials employed for its production were too expensive to allow of its being manufactured on a commercial scale, in competition with the natural dyestuff. At first, the most promising synthesis appeared to be that which used ortho-nitrobenzaldehyde as a starting point, and the methods for making this compound were so highly perfected, as to bring it within the limit of cost for the industrial

* Portions of a paper read before the New York Section of the Society of Chemical Industry. Reprinted from the Journal.

preparation of indigo. But at this point another difficulty arose which was impossible to surmount. The raw material for the preparation of nitrobenzaldehyde is toluene, and it appears that for every part of indigo finally produced by this method, there is required at the start four parts of toluene. As the annual consumption of indigo for the entire world is estimated at about 11,000,000 pounds, and as the total production of toluene itself does not much surpass this figure, it means that the world's output of toluene would have to be quadrupled in order to satisfy the demand of this chemical for the manufacture of indigo alone, to say nothing of its other uses, supposing that in order to successfully compete with the natural indigo the artificial product must be capable of being made in a quantity sufficient to supply the world's present demand for that dyestuff. As toluene is derived from the coal-tar industry in connection with benzol, and since every part of toluene obtained means also four parts of benzol, it would be necessary for the manufacturer to create a demand for that extra amount of the latter product in order to make the toluene commercially available, and such a task would be far greater even than making indigo. It was then that the derivation of the phenylglyceol compound was discovered from naphthalene, and the known method of making phthalic acid by oxidation with fuming sulphuric acid was made use of. This method furnished a raw material which was both cheap and abundant; in fact there was a surplus of naphthalene, and a quantity sufficient to supply all the demands of the indigo trade. It is interesting to note that in this connection, another important development in industrial chemistry was effected, and one which will eventually have considerable influence on other lines of work besides synthetic indigo. It was found that the lead chamber process for the manufacture of sulphuric acid was not adequate to the production of the enormous quantities of fuming acid required for the preparation of the phthalic acid from naphthalene, so the new sulphuric acid process, known as the "contact" method, was perfected. The Badische Company, to whom this valuable work was due, have become in consequence, the largest producers of sulphuric acid in the world, and are using 50,000 tons of the fuming acid annually for the preparation of their phthalic acid. In the manufacture of the other chief chemical employed, the monochloroacetic acid, large quantities of pure chlorine were demanded. The processes of Weldon and Deacon proved to be unsatisfactory, and the attention of the manufacturers were turned to the new electrolytic process for the preparation of chlorine from alkali chlorides, with the result that the method was so far perfected that the necessary conditions were realized. Hence the chlorine is now prepared electrolytically, and is used in a liquid condition.

It may be said that synthetic indigo became a commercial reality in 1897, for it was in that year that it began to appear in sufficient quantity to seriously compete with the natural dyestuff. Since then the amount manufactured has been growing with great rapidity—a fact which may be made apparent by a glance at the following statistics:

Imports of Natural Indigo to Germany.

	lbs.
First six months of 1899.....	1,771,805
First six months of 1900.....	961,837

showing a decrease of about 45 per cent.

Exports of Synthetic Indigo from Germany.

	lbs.
First six months of 1899.....	1,171,700
First six months of 1900.....	2,085,447

showing an increase of about 75 per cent. Of the above amount of synthetic indigo exported from Germany during the first six months of 1900, the United States took 695,149 pounds.

Imports of Natural Indigo to England.

	Value.
In 1899.....	5,897,700
1900.....	3,351,800
	2,610,445

showing a decrease of about 40 per cent. in one year.

According to a recent publication of the Indian Government, the exports of indigo from the provinces of Calcutta and Madras have been as follows:

1895-1896	17,242,000
1899-1900	9,777,900

showing a decrease of about 43 per cent.

These figures are very significant in their meaning. We can but behold in them the rapid extinction of the natural indigo industry, which forms one of the bulwarks of eastern trade and commercial activity. It is the case of the madder root versus synthetic alizarin over again, and we can have no doubt as to the outcome of the strife. It is merely one more step in the progress of industrial chemistry along the lines of human ingenuity, and this problem having been solved, the time is ripe for the development of other fields.

TAKING AND FILLING ORDERS.*

By EDWARD P. HIGBY, Ph. G., Stockton, Cal.

A few practical suggestions on taking and filling orders may be of interest to beginners, and perhaps there may be one or two points of some value to others.

MEETING THE CUSTOMER.

When a customer, say a lady, enters the store, advance promptly to meet her, and, unless a personal acquaintance, a slight nod of the head is a sufficient greeting. Having listened attentively to her request, repeat her order back, to show you understand what is wanted, and, if the article desired be in another part of the store, request the customer to step to that part and proceed to exhibit the article asked for. If this be of a class of which there are different grades, arrange them in front of the intending purchaser in the order of their price, at the same time indicating their value. If there be different styles of the same article, an explanation of the difference and even a few suggestions as to the advantage of some particular one is admissible.

Let the customer do as much of the talking as she will, and answer all questions politely and to the best of your ability, no matter how trivial or unnecessary they may seem to you. Never leave one customer to wait on another, unless she herself suggests that you may, and not even then unless it be absolutely necessary. Nor should you hurry a purchaser. In the wrapping of the package and the making of change is where you can show your speed.

Any samples, advertisements, or things of that nature should be wrapped in the package, which, in the case of a lady, make only one, and that as small and neat as you are able.

Should your customer have other bundles, you will learn her everlasting gratitude by offering to condense them into one bundle, or if your own package is to be delivered, offer to deliver her others also.

Little attentions like these, which cost nothing, bring big returns.

ADMINISTERING A DOSE OF MEDICINE.

When a person comes in for a dose of medicine he probably does not feel much like talking. So any attempt to start a conversation may not be very favorable. Better let him do the talking.

As the effervescent form of medicine is having its day, most calls will be for this class of goods. In giving granular effervescent salts, the principal and most important point is to have the glass absolutely dry and clean. Next, the water should be as cold as convenient. This makes the effervescent slower, which, notwithstanding the popular idea that the more brisk the effervescent the better the dose, is the thing to be aimed at. As much as possible of the effervescence should take place after the dose or while it is being taken.

Ask the customer to grasp the glass, while you add the water and stir up the draught, continuing the latter operation long enough to disintegrate the

*Western Druggist.

granules so that none remain undissolved in the glass after the dose is taken.

In the case of Seidlitz powders, one glass is sufficient. Fill this about one-third full of water, in which completely dissolve the contents of the larger package and add the smaller package all at once. Stir slightly, the patient drinking while the effervescence is at its height.

Here the point is not to use too much water. Just enough to dissolve the first powder. No more. Don't be in a hurry. Headache powders are called for quite often also. As they are nearly all tasteless, the usual way is to take them dry on the tongue, followed by a swallow of water. But, getting all the powder on the tongue is quite often a very awkward undertaking.

If possible, float the powder on a small amount of water, either in a teaspoon or a medicine-glass. Should the patient, however, prefer taking in the usual way, cut off the top of the paper where it has been folded and, holding it like a trough, cut out a piece from the middle of the paper to one end, thus leaving one end of the trough quite shallow. Now, having shaken the adherent powder loose from the paper and as near as possible to the shallow end, allow the patient to take it in his left hand, and the danger of spilling is not very great. A glass of water finishes the operation.

All may not know how to give a dose of castor oil so that it cannot be tasted, and so I will describe my method. If there be a fountain in the store, draw a liberal quantity of some syrup—say sarsaparilla—and afterwards several ounces of water from the fountain, so as to form a thick foam. Into the middle of this pour the dose of oil and let it be taken without stirring, also cautioning the patient not to smack the lips afterwards, as this renders the taste of the oil perceptible. In case there is no fountain, any beverage which can be beaten into a foam will answer.

A FEW OTHER POINTS.

A young clerk is apt to take offense and feel put out if a customer asks either for an older gentleman or some particular clerk to wait upon him or her. People like to trade with clerks they know and the time will come when you, too, will be asked for if you deserve it by being patient and obliging.

Let all conversation be in an ordinary tone. It is not necessary to whisper, nor yet to let everyone in the store know what your particular customer is buying.

If two ladies come in together, the one to "help" the other select some article, you have struck a hard combination. Whatever you suggest seems to be in direct opposition to the "other" lady's views on the article. I have tried suggesting the opposite from what I think would be acceptable, and sometimes it works all right. Another way is to divert the "other" lady's attention to some new article, even devoting your own time to her and let the real customer sell herself something. But, don't feel bad if they take nothing, as most often they are shopping and you are only one of many who has devoted some time to satisfy the shopping craze with no direct results.

ORDERS BY TELEPHONE.

The increasing number of telephones in private families has caused a corresponding increase in the number of telephone orders. If the instrument be on its "good behavior" no more trouble is experienced than waiting directly on the customer, and, in fact, not so much, as the customer knows exactly what is wanted, and so many words need not be exchanged. If, on the other hand, the machine is working badly, patience, and lots of it, must be shown. Never show your temper, as the party at the other end can often hear what you do not want heard, somewhat like a deaf person. By all means, and no matter how, get the party's address and name, and in case the order cannot be understood, send a messenger to find out what is wanted. In taking telephone orders, you must know your stock. This is especially the case in out-of-town orders, when every

moment you take to look up what is wanted costs the person telephoning money.

Don't promise to ship anything unless you are positive you have it or can get it on time.

ORDERS BY MAIL.

As correspondence by mail is mostly attended to by the proprietors, he will do the guessing when there is any to be done.

IN CONCLUSION.

When filling any kind of an order, do it to the letter, and no blame can fall on you. But if any doubt exists as to what is wanted, don't try to fill it. Better delay than a mistake.

INSECT FLOWERS.

Insect flowers are the unexpanded flower-heads of various species of *Chrysanthemum pyrethrum*, including *C. cinerariaefolium*, *Visiani* (*N. O. Compositae*), a native of Dalmatia. The plant is cultivated in Dalmatia and California, and is the source of the best, or Dalmatian, insect powder. It produces depressed roundish flower heads about 25 Mm. or less in diameter with a hemispherical and imbricate involucre, the scales having a whitish-scarios margin. Each flower-head has a somewhat convex naked receptacle, bearing a single row of about twenty whitish ray florets and numerous disc florets. The ray florets are whitish, ligulate, three-toothed, and pistillate; the disc florets are yellow, tubular, five-toothed, and perfect. The fruits are obovate achenes, each bearing a short scarios, somewhat toothed crown. The flower-heads are collected at different stages of development, the commercial varieties being known as "closed," "half-closed," and "open" flowers respectively; they are, however, understood to be most active if collected when fully developed, but before expansion. They possess the power of stupefying and killing various insects, and even when powdered retain those properties for an indefinite period if kept under suitable conditions.

Characters.—Closed dalmatian insect flowers as met with in commerce are of a dull brownish-yellow or greyish-brown color, nearly globular in shape, and measure about 12 Mm. in diameter. The bracts of the involucre are yellowish or greyish in color, lanceolate, hairy, and membranous at the margin; they are erect in the "closed" flowers, but bend outwards as the flowers expand, the capitulum then assuming a flattened hemispherical shape. The dried ray florets have whitish or brownish ligulate corollas, while those of the disc florets are yellow and comparatively short. On removing a corolla, the calyx may be seen crowning the fruit as a raised membranous ring. The fruit is longer than the corolla and has a winged appearance, owing to the presence of five projecting ribs. Yellow shining oil-glands can be seen on both corolla and fruit when examined with a lens. The flowers have a bitter, acrid taste, and a peculiar aromatic odor.

Notes.—The distinctive characters of dried "closed" Dalmatian insect flowers are their sub-globular shape, yellowish-white bracts, disc floret, with short corolla and membranous calyx, and fruit with five prominent ribs. Expanded flowers are frequently destitute of both ligulate and tubular corollas, and the membranous crowns on the closely-packed fruits then present a reticulated appearance when the capitula are viewed from above. Persian or Caucasian insect flowers, from *C. coccineum* Willdenow, and other species, are almost entirely glabrous, have nearly black involucre bracts, with ray florets which are of a dull purple color when dry, and fruits with ten ribs. They are understood to be less active than the Dalmatian flowers, and are now but rarely seen in commerce. The powder yielded by the Dalmatian flowers varies in color from yellow or yellowish-brown to yellowish-green, the finer qualities tending towards brown and the poorer qualities being more green; on microscopical examination it will be found to consist of fragments of involucre scales, composed of sclerenchyma, together with col-

lenchymatous stem tissue and pollen grains, also fragments of the corolla and of its epidermis and pilla. The better the quality of the powder the larger will be the proportion of pollen and the smaller the proportion of stem tissue. The powder is distinguished from that of Persian flowers by numerous hairs, and also contains fewer sclerenchymatous cells. Other composite flowers are used as adulterants of insect flowers, but they usually yield a darker colored powder and they are lacking in stupefying power. The presence of turmeric, quassia, fustic, lead chromate and other substances as adulterants may be detected by the aid of the microscope, or by the powder yielding more than 8 per cent. of ash and 10 per cent. of moisture. The toxic principle of insect flowers is a yellow non-volatile, butyraceous substance, named pyrethrotic acid; other constituents are a volatile oil, chrysanthemic acid, a resin acid, chrysanthemine—a liquid of alkaloidal nature, a crystalline glucoside, sugar, a hydrocarbon, wax, and a higher homologue of cholesterol.—(Pharm. Journal.)

"CURATIVE DREAMS."

Our forefathers have always believed in the veracity of dreams; the gods, or the dead, were supposed to communicate with the patient in his sleep, indicating favorable remedies in order to cure his ills. Thus, in the temples of Esculape, under the vestibules, were found the statues of Dream and Sleep.

Popular ideas of the most hypocritical forms are generally founded upon a true fact of observation. Recent discoveries in hypnotism have permitted to verify this point, as well as others on the trueness of this axiom. Dreams may sometimes seem true; in witness whereof may be mentioned the following, taken from a work of Tisse: A person was prosecuted for a sum of money when he had the firm conviction that this amount was already paid, saw in a dream his father, who informed him that receipt of this claim was in the hands of a solicitor whom he named, giving as memo that at the time there was a difficulty as regards the rate of exchange of a Portuguese gold coin, and that it was agreed that the difference should be squared in a tavern. This dream was true; very likely it was a reminiscence of youthful days.

Another case of Abercrombie: A cashier once paid £6 to a badly-clad individual who stammered, and was unbearable and grotesque, and forgot to mention this upon his books, the result of which was, that at the end of the year, when making his balance-sheet, he found this difference, which was untraceable. After several days' hard work, overcome by fatigue he fell asleep, when, in dream, he saw the individual in question to whom payment was made. A faint pain may pass unobserved while awake, and be felt as very severe during sleep; if it is the prelude of disease, the painful sensation of dream shall be considered as the forerunner of some serious affection; thus, a subject felt in his sleep a dog biting his leg; a few months after, at the very spot, was a cancerous development. It must be confessed that dreams of these sorts were quite sufficient to trouble the brain of those not versed in psychological science; the sick went formerly to the temple to be inspired with curative dreams. In Egypt sacrifices were offered to the gods, and the patients were made to lie upon the skin of the immolated goat waiting the apparition of the visions, perfumes were burnt, and music very often played; long fast was made, always followed by a bath with violent rubbing. Among the Greeks and Romans apart from sacrifices, the patient was made to lie between the doors and balustrades of the temples. The remedies indicated were, as a rule, peculiar. Varron says: Esculape appeared to me in dream, and ordered for my total recovery to eat onions and sesame. This god, according to the Emperor Marc-Aurèle, ordered one to ride on horseback, another to have cold water poured over his body, another to walk barefooted, just as would have done the illustrious Kneipp. Esculape, Galen says, prescribed one day to a patient to have his body rubbed with a liniment made with vipers.

W. H. CLIFFE, Philadelphia,
President Pennsylvania Pharmaceutical Association.

Patients generally recovered on account of their faith, and in testimony of these miracles, the columns of the temples were covered with inscriptions of the names and remedies that were beneficially prescribed. In the Middle Ages can be traced analogous histories coming from pious personages. At that time Sister Jeanne, of Angels, recovered suddenly from a disease that Doctor Fauton, who was in attendance at the convent, diagnosed as pleurisy of the worst form, and which he considered, after all attempts, as hopeless. The said patient was administered the last sacrament, the doctor having declared death inevitable in an hour or two for the most. Falling asleep she saw in a dream St. Joseph in the form of a man, the face more luminous than the sun, with long hair and with a majestic countenance far from humankind. He was followed by an angel, who appeared as a lad of eighteen, having white and brilliant hair, a garment white as snow, holding in his hands a lighted candle. St. Joseph applied his hands to her right side, and rubbed it with an ointment; after which she got up suddenly, and utterly cured, crying: "I am cured with the grace of God!" Having dressed herself, she immediately went to Church, glorifying the Almighty. Thus, Dr. Fauton had considered a case of hysteria to be pleurisy!

Dr. Pitres has quite recently had the idea of utilizing these facts to play the role of God; thus, he succeeded in curing one of his hopeless patients suffering from cardiac disease, violent headaches, with palpitations and pain in the knee. According to his observations, one day that this patient was asleep, he was told that the house surgeon would bring an ointment, with which he would rub his side, and that from then the cardiac symptoms would entirely disappear. On the morrow and from thence the patient no further complained of cardiac troubles; on the succeeding day the throat was likewise rubbed with a brush with equal results, as well as the other complaints, all being cured by suggested dreams.

A fact no less curious is reported by Dr. Gibert, of Havre, except that here the suggested cure is effected under the influence of chloroform. A patient under the effect of laborious labor is chloroformed. As soon as asleep she recited the following story: Some time after her marriage she was a lunatic, and had been confined in an asylum. The confession, under chloroform, gave an important clue to all the

accidents from which she suffered. Dr. Gibert utilized this state to absolve by suggestion the cause of this long disease. He laid special stress upon her mind of the sure paragon that she would obtain, and ordered her to forget forever the past. The success of this treatment was radical. In a second observation a young girl suffering from "coaxigie hysterique" revealed, under chloroform, that she had been the object of a fierce attack of violation, and that, in her defence, her leg had become paralyzed, similar suggestive treatment under chloroform effected complete recovery. Such treatments are encouraging from a medical point of view, although many doctors are afraid of hypnotic therapeutics. Hypnotism, they affirm, is dangerous, as it excites the nerves or gives a predisposition to such attacks. These objections can no longer hold in the suggestion in the cure of diseases during natural sleep.—E. L. N. St. Cyr, Ph. C., M. P. S. (Br. and Col. Dr.)

FROM THE WOMAN CUSTOMER'S STAND-POINT.

By B. A. F.

The writer is a woman, a mere outsider, who knows no more about the drug business than she does about electrical engineering, but as the women do most of the shopping for the family and therefore comprise a large proportion of your customers, some observations by one of the sex may not be altogether out of place here.

One of the first things the feminine eye observes on entering a drug store is its condition as regards cleanliness. A floor which looks as though it were long a stranger to the touch of a scrub brush, and a general air of untidiness pervading the place, most unfavorably impress the orderly soul of a woman. Then that critical eye travels to the proprietor's face. If he has a bored, indifferent look when we make a small purchase we inwardly resolve to go elsewhere next time. A bright friend of mine remarked of a druggist of most funereal mien that when he stepped up to her she always felt as though he were going to ask, "Would you like to see the corpse?" Affability and a thoughtful inquiry about themselves as some member of the family who is ill count for much with most women. For how we do love to pour the wale of our aches and pains into a sympathetic ear! The knight of the mortar may weary over the oft-repeated tale, but he will reap his reward in the shekels we will spend at his counter.

There is a delicate flattery in being recognized and addressed by name by the proprietor, and we feel that there must be something about our appearance or personality that has caused us to be remembered. This is easy enough for the country druggist, but his city brother must needs cultivate something of Napoleon's memory for names and faces in order to do this.

Then,—“For the trail of the serpent is over us all,”—a piece of news of special interest, or, better still, —the art of listening with profound attention to her recital of the latest happenings of the neighborhood, is never thrown away upon a woman.

The question of price is a matter of moment to the feminine soul. Few of us can understand the inscrutable law which makes the price of a quart bottle of naphtha five cents and a bottle no larger than my finger of something else a dollar. In the latter case it would at least be a satisfaction if the man of drugs would sometimes descend to explain that a certain ingredient—the very name of which usually inspires respect in the lay mind—was costly; we should feel we were getting our money's worth. Again, and what true woman will not echo the wail, is there never to be any chance from the interminable multiples of five in which all our prices run? Is there nothing in the whole pharmaceutical list that you could sell for 10 cents or 24 cents without involving your business in financial ruin? This, indeed, is a vain appeal, and utterly beneath your consideration, but it comes from a full heart, for the dear delights of the bargain counter, that give such a sportsman-like interest to ordinary shopping, these we never meet within your doors. I utterly scout the sordid soul that reckoned

“a penny saved” as merely “a penny gained.” A penny saved at a mark-down sale is a dollar gained in satisfaction.

Lastly, as the preachers say, a general air of brightness in the appearance of the store is a treat to feminine eyes. Have harmonious colors in the shape of bright cards and pictures, a bit of drapery here and there by way of relief, a good mirror or two (we like to straighten our hats), and some living green thing, such as a palm or fern. If you have no inborn artistic sense yourself, get some of your women friends to arrange these things for you. Were there but two drug stores in my town, and one was bright and cheerful with color and the other bare and dull looking, I know which one I should patronize.

Now, being a woman, I have had my say and have finished, and as this is not intended for a treatise on “How Druggists May Become Millionaires,” but merely some random jottings from my own observations, I trust you will not heap on my devoted head all the scorn and contumely which doubtless my presumption warrants.—(New England Druggist).

KNOW YOUR CUSTOMERS.

A merchant should have a good memory for names and faces. This is something that it would well repay any merchant to cultivate. In fact it is almost indispensable to success in nearly all towns where the transient trade is small. A regular customer who makes the discovery that her name and face are not familiar would feel that either her trade was not sufficiently appreciated or that the merchant took but little interest in his customers, and it would be only human nature for her ardor and interest in that store to receive a decided check. It is the best paying customers who are often the least known. The customer who has bought hundred of dollars' worth of goods in the store and paid cash for them may be known by sight among the clerks at the counters she has most frequently visited. The proprietor may also have noticed that she is one of his regular customers, but that is all he knows about her.

Is it all he cares? Would it not pay to get better acquainted? Find out who she is and where she lives from the clerk the next time she has a parcel sent to her home. Then, instead of a formal how do you do the next time she enters the store, you will be able to address her by her name and show that you appreciate her trade by many little attentions and inquiries which are in the power and province of every merchant to make. “The customers thou hast and their cash purchases tried, bind to thy store with hoops of steel, but waste not all thy honeyed smiles on dead beats with long past due accounts upon thy books.” It is usually the one that owes the most who is the best known.

It is a positive misfortune for a merchant of any kind not to be able to remember his customers. Clerks cannot commence too early to cultivate this faculty. It means extra sales and big books to the clerk who is best acquainted with his trade. For that man it means a good, fair business connection all ready to start in with, which will save him years of hard toil and much anxiety. There are many instances on record in which a salesman's business has been his capital, and has been the means of his promotion from clerk to a member of the firm, his knowledge and acquaintance with the trade being considered of sufficient importance to secure for him an interest and a partnership in the business.

The most important thing after knowing your customers and who they are, is to know who are not; especially if your business is in a small town whose transient trade is small. You should know who do their trading away from home—the mail order customers of the big city houses. They are easily known in small towns. They usually belong to one of two classes; those who trade with large city stores for reasons of economy, supposing that city buying and city competition force down prices; the other to the unpatriotic class who always imagine that home talent is too crude for their cultivated tastes, and that therefore their trading must be done elsewhere, and the farther away the better.—Dry Goods Reporter.

PHARMACY.

POISONING BY YEAW LEAVES.—The sudden death a few days ago of an inmate of the Mullingar Union, through eating yew leaves (*Taxus baccata*) reports the Pharm. Journal, has drawn public attention to the risk of adorning pleasure grounds with trees and shrubs of well-known lethal properties. Hundreds of years ago it was proved by old writers that the leaves of the yew act as a narcotic-acid poison, and as the tree is common throughout the country the wonder is that fatal results from the use of the leaves are not more frequent, they being a familiar "old woman's cure" for worms and other similar ailments. Formerly the yew leaf was used as a substitute for foxglove in the treatment of heart troubles, and an infusion of the leaves was some years ago a popular prescription for convulsions and epilepsy. There is no doubt that the yew contains a deadly poison, and the knowledge ought to have the effect of excluding its cultivation from all places where its leaves are liable to be used by the careless or the irresponsible.

CYTOTOXINES.—According to E. Metchnikoff, cytotoxines are cell poisons isolated from the animal organism. The following are known: Hepatotoxine, isolated from the liver; nephrotoxine, from the kidneys; trichotoxine, from epithelial hairs; haemotoxine, from defibrinated blood; leucotoxine, from the lymphatic ganglia; spermotoxine, from the spermatozooids; and neurotoxine, from nerve substance. In all cases the emulsions from the organs of one animal, when injected into another animal, produced a serum that proved a strong poison to the first animal. —(Zeitsch. d.allg. ost. Apt.-Ver.)

IN THE TREATMENT OF CARBOLIC ACID BURNS AND POISONING. Dr. Charles Platt (American Medicine) states that while alcohol is efficient in preventing phenol eschars, its use internally, under certain conditions, is decidedly dangerous. For internal administration he believes nothing is more efficient in preventing local injury than vinegar or diluted acetic acid, an agent too little used—in fact, it seems too little known—in this connection. In all cases, however, sodium sulphate should be administered as a chemical antidote to the phenol already absorbed. The physiologic antidote will be suggested at the bed-side.

VISCIN is a syrupy liquid, containing the purified birdlime obtained from the berries and bark of *Viscum album*, dissolved in "benzene." The solution has a green color, owing to the presence of chlorophyll, and is strongly adhesive. As a basis for plasters, 1,500.0 grams of viscin solution is mixed with 100.0 grams of powdered orris, 400.0 grams of starch, 280.0 grams of Venice turpentine, and 30.0 grams of dammar resin; this mixture is reduced to a paste by evaporation, and the product medicated as required, with iodoform, zinc oxide, chrysolabine, pyrogallol, sulphur, etc. —(Merck's Annual Report, 1900).

NEW OINTMENT BASE.—In a paper recently read by H. Foster before the Wolverhampton and District Chemists' Association, England, the author proposed a mixture of equal parts of lard, anhydrous adeps lane, and petrolatum, as being an excellent ointment base. The fats are simply melted together, and this mixture allowed to cool, stirring being unnecessary. In making ointments, the author thinks it desirable, where practicable, to prepare them in the cold by simple trituration with the medicinal substance. —(Merck's Rept.)

MAGIC PHOTOGRAPHIS.—Make a print on albumen paper in the usual way, fix and wash thoroughly with toning, immerse the print in a saturated solution of bic chloride of mercury until the image disappears; wash and dry. To make the invisible image appear, place the picture in contact with a moistened piece of blotting paper previously soaked in

a saturated solution of hypo-soda, when the image will reappear with all its pristine vigor, as if by magic. —(Can. Pharm. Journal).

"**GLYCOGENOL.**" is the name given to a white, odorless, tasteless powder found in the animal organism and nearly allied to glycogen, (Merck's Report). It is soluble in water and insoluble in alcohol or ether; the aqueous solution is opalescent, but is cleared up by the addition of acetic acid. It is recommended in the treatment of tuberculosis and typhoid fever in doses of 0.02 gram, either hypodermically or per os.

RESALDOL is an intestinal antiseptic, described as the acetyl derivative of a product of reaction between chlor-methyl-salicylic aldehyde and resorcin. It is an amorphous light-brown powder, insoluble in water or dilute acids, but soluble in dilute soda solutions. Dose.—3.0 to 5.0 grams daily taken in waters or in the form of anenias.

SAPOLAN is a brownish-black ointment consisting of 2.5 parts of fractionally distilled naphtha, 1.5 parts of lanoline and 3 to 4 per cent. of anhydrous soap. It differs from tar preparations in not giving rise to a disturbing irritating action.

PERUOL is a 25 per cent. solution of peruscabine or benzoic benzylester (the active principle of Peru balsam) in castor oil. It is used in cases of scabies.

MANUFACTURE OF COCOANUT BUTTER IN MANNHEIM.

The manufacture of cocoanut butter is an industry of some importance in Mannheim. This factory is said to be the only one of any considerable size in Germany. It has an output of about 10 tons of butter per day. The business was started in 1880, and, the proprietors say, shows a steady increase. The product is sold under the name of "Palmin"—a registered trade name—or cocoanut butter (German, "Kokosnussbutter"). It is manufactured from the kernels of cocoanuts and used as a substitute for butter and lard in cooking. As sold, it is generally white in color, almost tasteless, melts at about 80°, and is of about the consistency of mutton or beef tallow. When desired by consumers, as bakers, confectioners, etc., the product is colored to resemble ordinary butter. When furnished to dealers, it is unlawful to color it. The proprietors claim an analysis of their product shows it to contain more than 99 per cent. of vegetable fat, but with a slight trace of water, while ordinary butter contains about 8 per cent. of fat and nearly 15 per cent. of water. It is stated that the substance does not become rancid easily, that it will keep for three or four months in a cool room, and that it is much more wholesome and easily digested than the ordinary fats used for baking and cooking. For this reason the product has met with considerable favor in German hospitals and other institutions, and for use in army camps.

Cocoanut butter is generally put up in square packages wrapped in parchment paper, a small percentage being sold in tins cans. The latter are hermetically sealed for shipment during hot weather. The product is sold at one price throughout Germany, namely, about 16 cents per pound, or about half the price of ordinary butter.

The processes of manufacture are, for the most part, secret, and it is claimed, are protected by patents. The kernel of the cocoanut is imported in thoroughly dried strips, forming the "copra" of commerce. It is subjected to various refining processes by which all the free acids and other substances are separated, leaving only the vegetable fat. In the latter stages of the manufacture the product resembles ordinary butter recently churned. It is placed in machines similar to the separators used in creameries, in which the water and other foreign substances are separated by centrifugal force. In the manufacture of cocoanut butter a by-product, consisting of free acids and other substances, is obtained and sold to soap manufacturers. —Scientific American.

PROGRESS IN ORGANIC CHEMISTRY.*

Undoubtedly the most rapid strides in the development of chemistry have been made in the past century in that department known as organic chemistry. One hundred years ago our knowledge of the compounds occurring in the organs of plants and animals was very meager indeed. A few organic substances had been isolated, but their composition was very imperfectly known, as the methods of analysis were very crude. Leibig in 1830 improved the method of analyzing these compounds and thus laid the foundation of organic chemistry.

A century ago it was generally believed that organic compounds could not possibly be made artificially by synthesis in the laboratory, as was the case with mineral compounds. It was thought that a peculiar vital force in some way intervened in their production in the organs of plants and animals, and that we could never expect to prepare them in the laboratory. But this idea soon had to be abandoned, for in 1828 Wöhler succeeded in building up urea from simple organic substances, and thus the first synthesis of an organic substance was effected. This was soon followed by that of acetic acid by Kolbe, and then year after year an ever larger and larger number of substances was added to the list of synthetic compounds. It would take too long to enumerate all the compounds that have been made artificially in the laboratory. It is enough to say that the hydrocarbons of petroleum, common alcohol, wood alcohol, fusel oil, the ethers, the ethereal and essential oils, the fatty acids, glycerine, grape sugar and fruit sugar, coloring matters and dyestuffs like indigo and turkey red, aromatic substances like oil of bitter almonds, vanillin and coumarin and many others, have been made.

One hundred years ago it was generally believed to be impossible for two substances of entirely different properties to have the same composition. When Leibig in 1823 found that Wöhler had analyzed silver cyanate, and stated the percentage of composition, he saw that it was identical with the percentage composition of silver fulminate as found by himself. He at once wrote to Wöhler and told him that he must have made a mistake. Silver cyanate and silver fulminate were very different substances, he said; they could not possibly have the same composition. Wöhler repeated his analysis and found that they were correct. Leibig again analyzed silver fulminate and found that his figures also were correct. Both substances had the same percentage composition. A few years after, Berzelius showed that racemic and tartaric acids have the same composition, but different properties, and from this time on substances of this kind have been called isomeric. This phenomenon of isomerism, so rare at one time, is now very common. We have, for example, 51 substances having the formula $C_4H_{10}O$, all having the same elements in the same proportions, or the same kind of atoms and the same number of atoms of each kind. To explain isomerism it was necessary to assume that in these different bodies the atoms are differently arranged or grouped. Thus there came into chemistry the idea of structure or constitution, and by this term is meant the way in which the atoms are united to form the smallest particles of compounds. By studying the methods of formation and of decomposition of compounds it has been found possible to draw conclusions as to which atoms are more closely associated with one another. In the year 1865 the methods of determining the constitution of substances had been brought to a high state of development as the result of the work of Prof. Kekule in Bonn. Kekule proved experimentally that in a compound each atom is not united directly with all the other atoms, but that certain atoms act like links in a chain and hold different atoms together to form definite structures.

The immediate effect of this theory was that it led to a great deal of work, the object of which was to determine the way in which the atoms are linked in different substances. When once this structure had

been determined, it was easy to see how the compound might be built up from simpler substances. The outcome was that hundreds of substances were made synthetically, and in the attempt to make artificially the valuable and useful substances, very often new ones were discovered that in turn were found to possess valuable properties. For instance, after determining the constitution of atropine, Ladenburg, in making it synthetically, succeeded in making several modified atropines, such as homatropine, which also have valuable properties. Prof. Fischer attempted to unravel the structure of grape sugar and to make it synthetically; he succeeded in this, but in addition he has made twenty other sugars that had never been known before.

As work went on in organic chemistry and the methods of working with these substances were improved, and the means of distinguishing between them became more refined, it was found that there were even finer kinds of isomerism than had at first been observed. It is possible to have two or more substances of identical composition and of exactly the same chemical behavior, but differing from one another in only a very slight way. For example, one will rotate the plane the same number of degrees, but certain number of degrees to the right while the other will rotate the plane the same number of degrees, but to the left. In short, there are right and left handed compounds. This physical isomerism, as it is called, can only be explained by assuming a different arrangement of the atoms in space. Since 1888 a great deal of work has been done in the development of the theories of space chemistry or stereochemistry. We are in a position now not only to determine how the atoms are linked to one another, but also how they are actually grouped in space. Stereochemistry is the most attractive field of research in organic chemistry to-day. Prominent among the men who have contributed to this department of chemistry are Van't Hoff, Wislicenus, Baeyer, and Emil Fischer.

Progress in Physical Chemistry.

During the past fifteen years the borderland between chemistry and physics has been very successfully cultivated, and a new department of chemistry has resulted. This is the department known as physical chemistry, and it deals with such subjects as thermo and electro chemistry, with chemical statics and chemical dynamics and with the laws of solution and electrolytic dissociation. A great deal of progress has been made in all these directions. It is especially the new theories of solution and of electrolytic dissociation that have most profoundly changed our ways of looking at chemical action. We now regard a substance in solution as in a condition analogous to the gaseous state. Like a gas, the dissolved substance exerts pressure, and this pressure, which is known as osmotic pressure, obeys the same laws that gas pressure does. One great practical benefit that has resulted from the laws of solution is that it is no longer necessary to convert a substance into a gas in order to find its molecular weight; it is only necessary to dissolve it in some solvent, and from the changes which it produces in the freezing point or boiling point of vapor tension of the solvent to calculate the molecular weight.

The theory of electrolytic dissociation has greatly modified our ways of interpreting the ordinary reaction of analytical chemistry. We now hold that in all dilute solutions of acids, bases and salts—in short, the compounds of inorganic chemistry—we have no longer the unchanged substances, but their positive and negative ions. In the act of dissolving in water the acids, bases and salts are more or less completely split into their ions, and the chemical changes that take place in these solutions are reactions between these ions. A great many facts of analytical chemistry, of electrolysis and such empirical laws as the law of thermoneutrality of salt solutions and of the constant heat of neutralization of acids and bases, heretofore inexplicable, have now received a rational and natural explanation by means of this theory of electrolytic dissociation.

* Portion of a paper by Edward H. Keiser, delivered before the Academy of Science, St. Louis.—Science.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Bleaching Straw Hats.

(H. H.) The straw having been well washed with weak soda lye, is rinsed in plenty of clean water, lightly shaken, etc.; remove superfluous moisture, and place, supported on a stick, under a large glazed earthenware pan (turned upside down). A very small pipkin, capable of holding about $\frac{1}{2}$ pint, is now placed on the fire, and about $\frac{1}{2}$ ounce of roll brimstone placed in it. When the brimstone is all melted, a light is applied to it, so as to cause it to catch fire. The pipkin, with the inflated sulphur, is now placed under the glazed pan in such a position as not to scorch the article to be bleached. The spaces between the pan and the table or floor on which it rests, must be carefully closed with damp cloths placed around to prevent the escape of the sulphurous acid gas, produced by the combustion of the sulphur. In about two hours the pan may be removed, when the straw will be found nicely bleached.

(2) Or the articles having been washed as before, may be placed for an hour in weak chloride of lime water, and then hung out on a line to dry slowly. The chloride of lime water should be made by mixing 1 part (by weight) of chloride of lime with 20 of water, agitating the mixture with a stick until all the particles of chloride of lime are thoroughly broken up, allowing the mixture to settle, and pouring off the clear portion from the dregs for use.

(3) Kurrer states that straw may be economically whitened by being steeped repeatedly in boiling water and very weak alkali, and, after all the soluble matters are in this way removed, by treating alternately with very dilute solutions of chloride of lime and sulphurous acid vapor, until decoloration has been effected. This method, though tedious, is said to be very effectual for divesting the straw of its natural varnish which renders it very brittle.

(4) Soak the goods in caustic soda, and afterwards use chloride of lime, or Javelle water. The excess of chlorine is afterwards removed by hypsulphite of soda (antichlor).

A simple method of cleaning straw hats which have become deteriorated by the action of the sun or have lost their original gloss, follows: At first the dust is brushed off as well as possible. After this the hats or other objects are well brushed with tooth brushes and lemon juice, and then placed in a box or chest which is dark until perfectly dry. After a short time—a few minutes—finely pulverized sulphur is rubbed in with a white flannel cloth. Hats which have been treated in this manner immediately appear fresh again. If there should exist streaks of fat they should be removed with benzene before the lemon juice is used.

Henna.

(R. A. D.) "Please insert in your next issue some information about henna."

Henna, the dried and pulverized leaves of *Lawsonia inermis*, is much used in the Orient as a hair dye. By the women this powder is used for coloring the hair and nails red-brown. In the Turkish sweating baths the attendants scatter the henna upon the hair of the women and tie it upon the finger nails. The women then frequently remain for hours in the steam bath, whereby the powdered henna is converted into an extract-like mass which colors hair and nails red-brown. It is said that henna even colors the coal-

black hair of the Arabs red-brown, which is considered beautiful. Before treating with henna, the hair must be freed from fat with soap or fuller's earth. Hair dyed red with henna acquires a beautiful black color when subsequently treated with indigo, this mode of dyeing black being much in vogue in the Orient. The process is as follows: The hair, being freed from fat with soap, is divided into separate strands and anointed with quite a stiff paste prepared from pulverized henna and lukewarm water. The hair, after being smoothed, is allowed to remain for at least one hour in contact with the paste, and is then rinsed off with luke warmwater. Being slightly dried, it is then in the same manner anointed with a paste prepared from indigo and water, and allowed to remain in contact with it for one hour. The hairs which were colored orange-red by the henna, now give a greenish-black appearance, but by the oxidation of the indigo in a short time acquire an intensely blue-black color, which is extraordinarily durable, the hair only after several months requiring to be again dyed (Deite).

Presse gives the following process:

Rich Brown Henna Dye.

If the hair be first made light by the use of peroxide of hydrogen, it may be dyed to a rich golden brown by the application of henna. This is used as follows: Henna in powder is made into a paste with water to the consistence of cream, and this is applied to the freshly washed but not completely dried hair, very thoroughly, and is left on for several hours—say twelve; it is then completely removed by copious rinsing with tepid water, leaving the hair of a rich auburn brown color, which is very permanent. Of course, as the hair grows through the scalp it must be dyed in the same manner, so as to keep the color uniform. Henna is said to be occasionally used in medicine, both internally and locally, as a remedy in jaundice and leprosy and other affections of the skin.

Oils of Cedar and Hemlock.

(W. A. S.) For methods of distillation we would refer you to Kreymer's translation of Gilmeister and Hoffman's "Volatile Oils," a most valuable work on the subject. The bulk of the oil of cedar of commerce is economically produced by distilling the sawdust and waste wood of the lead pencil factories, the yield from this source being from 2. to 45 per cent. According to the work above named a very inferior oil of cedar is obtained as a by-product from the drying chambers of the lead pencil factories. These chambers are so constructed that the escaping vapors from the cedar wood can be condensed. In this case, however, the high boiling constituents of the wood remain behind, and only the more volatile constituents are obtained. As a result, the oil thus obtained is more mobile; its odor is both less fine and less permanent than that of the normal, and not serviceable for perfumery. Oil of cedar wood is almost colorless, somewhat viscid, and sometimes contains crystals of cedar camphor. The wood from which the oil is derived, we should state, is yielded by the *Juniperus virginiana*, a coniferous tree native of the greater part of the United States. As you are probably aware, the name cedar is applied to two totally different trees; the *Juniperus*, just mentioned, and *Thuja occidentalis*. It is said that distillers of the oil of cedar leaves not only use the leaves of both species indiscriminately, but also those of other conifers, and consequently the cedar leaf oils of commerce vary considerably in their properties. Genuine cedar oil consists principally of limonene with cadinene and some borneol, also small amounts of bornyl esters. It is said that oil of cedar wood is frequently used for the adulteration of other oils, for which purpose it is well adapted on account of its feeble odor. It can be recognized by its high specific gravity, 0.945—0.96, its high boiling point, its strong laevorotation, and by its slight solubility in alcohol.

You may be able to get considerable information concerning the market value of these oils by corresponding with such houses as Fritzsche Bros., 37 Barclay St.; Dodge & Oleott, 86 William St., this city.

and other manufacturers. Present quotations in jobbing quantities are as follows: Oil of cedar, red, 55 to 60 cents per pound; white, same price; pure, 85 cents to \$1.00 per pound. Oil of hemlock in cans of 20 pounds or less is quoted at 50 to 60 cents per pound.

Dandruff Cure.

(R. A. D.) Here are a number of formulas. You can take your choice:

(1) Chloral hydrate66 grains
Tincture of cinchona	2 fl. drams
Tincture of cantharides	1 fl. dram
Phlorrhizic muriate	4 grains
Bay rum	to	16 fl. ounces
(2) Resorcin60 grains
Glycerine60 minims
Alcohol	3 fl. ounces
Bay rum	3 fl. ounces
(3) Camphor	1 grain
Essence of musk	10 minims
Benzolic acid	10 grains
Olibanum	10 grains
Oil of lavender	5 grains
Jasmine pomade	2 drams
Rectified spirit	10 ounces

Mix all together, shake well two or three times a day, and in four days filter.

(4) Resorcin	3 scruples
Olive oil	8 drams
Ether	8 drams
Alcohol64 ounces
(5) Potassium carbonate	1 dram
Ammonia water	6 fl. drams
Tincture cantharides	2½ fl. drams
Oil nutmeg	12 drops
Cologne spirit, enough to make	1½ pint
(6) Tincture of cinchona	1 fl. ounce
Solution of potash	2 fl. drams
Salt of tartar	1 dram
Cologne water	1 fl. ounce
Water up to	1½ pint

Mix. Apply to the head twice or three times a week.

Dandruff Lotion.

Resorcin	1 dram
Castor oil	2 drams
Balsam peru	¼ dram
Oil geranium	16 minims
Oil lavender	10 minims
Alcohol, 45 p. c., enough to make	8 ounces

Books on Flavoring Extracts.

(H. H.) There is no one book devoted exclusively to this subject. The Era Formulary contains the largest and best collection of formulas under this heading with which we are acquainted. Dubelle's "Soda Fountain Requisites" is another work which contains many formulas for flavoring extracts particularly adapted to the manufacture of fountain syrups. A small work on the subject is Harrop's "Monograph on Flavoring Extracts." In addition to these works you may be able to gather considerable information from Brann's "Treatise on Animal and Vegetable Fats and Oils." Part II of this book is devoted entirely to the consideration of essential oils, their manufacture, etc., giving physical and chemical properties, uses, etc. Many practical rules are also given for testing these oils.

Sel de Gregory.

(T. P.)—"Sel de Gregory" is the name applied by the French Codex to a mixture of the hydrochlorates of morphine and codeine, as precipitated from an aqueous solution of opium by chloride of calcium. The process for the preparation of morphine hydrochlorate in the British Pharmacopoeia, employs chloride of lime to precipitate the morphine and codeine as hydrochlorates, the morphine hydrochlorate thus formed being afterward decomposed by ammonia, the morphine subsequently washed and treated with hydrochloric acid. This process was first presented by Dr. Grégory, of Edinburgh, and adopted by the Edinburgh College, hence the name.

To Give Ammonia Water a Green Color.

(X. Y. Z.) A writer in one of our exchanges reported some time ago that water-soluble chlorophyll, as ordinarily found in the market, imparts a fine green

to ammonia water. The permanence of the color, however, is a matter of doubt. He also stated that a certain green-tinted ammonia solution of proprietary make deposits a portion of its coloring substance after a time, which would indicate that manufacturers who have given especial attention to the matter have not yet found a perfect means of coloration.

Photographic Supplies as a Side Line.

(H. H.) See last week's Era, page 65.

CALCIUM CARBIDE FROM IMPURE RAW MATERIALS.—Calcium carbide is almost unique among commercial products in that it cannot be refined by any known method. Refining processes have been developed for all of the metals, and for the common marketable chemical products a process of purification is elaborated and adopted as a matter of course. The high melting point of calcium carbide, however, excludes processes involving recrystallization or sublimation, or any such fusion treatment as is applicable to iron, and the metals generally; and its insolubility under all circumstances prevents the application of any of the methods based upon treatment by and separation from solvents. Pure calcium carbide is now produced, therefore, only from pure raw materials, and is of necessity very costly as compared with the lower grades.

On the other hand, it is a comparatively simple matter to produce acetylene of sufficient purity for ordinary use from a low grade of carbide. The calcium hydrate which remains as a residue when the carbide reacts with water is itself an efficient absorbent for hydrogen sulphide, and other gases evolved can be readily absorbed by appropriate reagents. But the necessity for the application of any purifying means, however simple these may be, to the evolved gas, at once takes away from calcium carbide one of its chief advantages over other sources of illuminants, viz., its availability for small, and especially for portable, generators. It remains, therefore, as a sole practicable alternative to so conduct the furnace operation as to enhance the purity of the product, either by applying during the reduction or by incorporating with the charge, such agents as will determine the elimination of the more noxious-impurities, or will tender them inert during the subsequent treatment of the carbide for the production of acetylene.

This is a neglected field of study, but two suggestions to this end being noted in the literature. Hewes has proposed to use a furnace charge consisting of 26 parts of carbon, 64 of lime, 8 of calcium carbonate or limestone, and 2 of peroxide of manganese. From this charge carbides of calcium and of manganese are formed simultaneously, the latter acting as a flux to reduce the temperature of the reaction and to increase the fluidity of the product, and serving also by evolution of methane (CH₄) to somewhat dilute the acetylene and hence to lessen its tendency to deposit carbon. The calcium carbonate yields a considerable volume of gas which, bubbling through the molten carbide, is said to mechanically carry much of the sulphide and phosphide of calcium to the surface, where it forms an easily removable crust.

The second suggestion is due to Dr. Walther Rathenau, of Berlin, and forms the subject of a patent recently issued (June 18). It is proposed by him, when producing calcium carbide from either lime or coal of high silicic acid content, to incorporate with the charge a metal or compound capable of forming a silicide stable at the temperature of the reaction, in quantity sufficient to unite with all of the silicon present. If iron or iron oxide be chosen the silicide formed collects beneath the molten carbide and may be tapped from the surface, or afterward detached from the carbide block. Compounds of copper, manganese or chromium will serve the purpose as well as iron, but the latter metal is preferred, not only on account of its cheapness, but because of the many industrial uses which are being found for its conductive and chemically resistant silicides.—(Electrical World).

THE

Allenburys' Foods.

A PROGRESSIVE DIETARY,

Suited to the growing digestive powers of the infant.

- The "Allenburys" Milk Food No. 1 For the first three months of life.
- The "Allenburys" Milk Food No. 2 For the 2d three months of life.
- The "Allenburys" Malted Food No. 3 For Infants over six months of age.

Other SPECIAL PREPARATIONS of Allen & Hanburys, Ltd.:

BYNO-L, the "Perfected" Malt and Oil.
Free from taste or odor of Cod Liver Oil.

BYNIX, Liquid Malt.
The Perfection of Malt Extracts.

CASTOR OIL, A. & H.
Quite odorless and free from nauseous taste. Of full medicinal activity.

COD-LIVER OIL, the "Perfected."
By Special Process. The only oil which does not "repeat."

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

ARRANGING FOR THE EXHIBIT AT THE A. PH. A. MEETING IN ST. LOUIS.

Thomas P. Cook, of the New York Quinine and Chemical Works, Ltd., recently returned from a trip to St. Louis where he went in the interests of the Committee on Exhibits of the American Pharmaceutical Association, of which he is a member. Mr. Cook is the only New York member of this committee, the other members being Joseph P. Remington of Philadelphia, Dr. H. M. Whelpley and Thos. Layton, both of St. Louis. The annual meeting of the association begins September 16, in St. Louis, and Mr. Cook is very enthusiastic in his belief that the attendance will be unusually large. The exhibit will be an extremely interesting one and Mr. Cook says that "while this feature will be of moderate size it will be under careful supervision, and all objectionable matter will be refused space. It is expected that only those having articles of special merit or interest to pharmacists will exhibit; hence the officers of the Association have not hesitated to offer exceptional opportunities for having exhibits noticed by those in attendance."

"The exhibit hall is in the Southern Hotel, easy of access from rotunda, and a portion of one or more sessions will be set apart for exhibitors to briefly state the salient points of their displays; furthermore a carefully written report will be prepared on each exhibit which will become a part of the permanent record of the Association, and printed in the annual proceedings."

BEDFORD PHARMACEUTICAL ASSOCIATION OUTING.

The first outing of the Bedford Pharmaceutical Association, since organization, was celebrated at Ubert's, Beach, Channel Station, Rockaway Beach Railway, Wednesday, July 17. A business meeting occupied the first hour and a half. The minutes of the last meeting were read and approved. Reports from various committees were heard, and short discussions followed. Little new business was done, but a letter from a prominent druggist was read, protesting against having his name on the "black list." This was laid on the table to be dealt with at the next meeting. The meeting adjourned at 6 p. m. The dinner put on by host Ubert, one of Brooklyn's veteran druggists, was thoroughly enjoyed by all. About 11 o'clock, after some short speeches by prominent members, the party left for the city. The officers of the association are: J. G. Wischerth, president; W. Bussenchutt, secretary; Geo. R. Christ, treasurer. The membership is over 50 and at the next meeting, in August, a larger attendance is looked for.

INJUNCTION DENIED.

The preliminary injunction asked by the Keasbey & Mattison Company against the Philip Carey Manufacturing Company, the Schoellkopf, Hartford & Hanna Company, the American Magnesia Company, and the American Magnesia Covering Company, and their officers, for infringement of certain patent rights in an improvement in non-heat conducting coverings for boilers and steam pipes, has been denied by Judge Lacombe, in the United States Circuit Court in this city. The denial was made upon the ground of doubt as to the validity of the patent upon which infringement was alleged, and also as to the infringement. The patent in question is No.

345,843, issued on July 20, 1886, and is for "non-heat conducting coverings for boiler and steam pipes, consisting of a composition of carbonate of magnesia or calcined magnesia, combined with asbestos or other fibrous material."

The matter will come up at another hearing and it is probable that it will be finally decided next fall.

A NEW DRUG COMPANY.

The Wise Drug Company, whose incorporation under the laws of the State of New York, was recently announced in the Era, is getting ready for business at No. 177 Broadway. The company expects to open several retail drug stores in various parts of this city, and ultimately to do a wholesale business as well. Louis Jerkowski, of Swartz, Jerkowski & Co., clothiers, is president of the corporation; Herman Gardner, of M. Gardner & Co., linen importers, is the vice-president; Max Beck, of Joseph Beck & Sons, liquor dealers, is treasurer, and Louis Wise, formerly of Bloomingdale Bros., is secretary. James Hazlet, formerly buyer for McKesson & Robbins, occupies a similar position with the new company. Mr. Wise said that his company hoped to begin business about August 1.

RETAIL DRUGGISTS BOWLING.

The New York Retail Druggists' Bowling Association had its second annual outing at Feltman's Long Island, Friday, July 19. Ten members left 2nd street in one of the "Iron" steamboats, at 10 a. m. Two exciting games were bowled before dinner. A few more members arrived after dinner, and some good games were bowled. Considerable time was spent at the "Steeple Chase," and some of the "surprises" met with there were very amusing and exciting. Supper was eaten at "Pabst Loop." The fireworks display of the Mecca Shirts in the evening, was one of the features of the outing. The party took to the Manhattan Beach Theater, and left for home about 11:30 p. m.

DOCTOR VIOLATES THE PHARMACY LAW AND IS FINED.

Dr. H. M. Harman, of Frenchtown, N. J., was recently arrested at the instance of the New Jersey Board of Pharmacy, for violation of the pharmacy act. The case was tried before Justice of the Peace Hart, of Lambertville, N. J., and was promptly decided in favor of the board. Harman is a practicing physician, and although notified by the board that he was violating the pharmacy law, persisted in his wrong-doing, with the above result.

BEWARE OF THIS SCHEME.

Many druggists in Brooklyn have been victimized by a swindler who is practicing the old, well known game of passing worthless checks. The scheme is to call the druggist up on the telephone, giving the name of some physician well known to the druggist, and ask him to cash a check ranging from \$15.00 to \$50.00, saying that he was busy, but would send his office boy for the cash. The scheme has worked in nearly every instance and many druggists have fallen easy victims.

NOTES.

—The Fraser Tablet Company, of New York City, was incorporated on July 10th, with a capital of \$1,500,000.00. The object of the incorporation, as stated in the charter, is to manufacture drugs and chemicals and prepare the same into powder, solid or liquid form. The Fraser Tablet Company succeeds the Fraser Tablet Triturate Manufacturing Company and Fraser & Co.'s retail stores in New York City. Horatio N. Fraser is the president and general manager, and James H. Hutchens, of New Rochelle, is the treasurer.

—The regular quarterly meeting of the Jersey City Retail Druggists' Association, which was scheduled to be held Tuesday, July 16, was indefinitely postponed, no quorum being present. Many of the members are away on vacations, and the intensely hot weather furnished an excuse for the absence of some of the others. It is expected that N. D. A. R. matters will be discussed at the next meeting, and an attempt will be made to better the existing condition of affairs in the drug trade in Jersey City.

—Charles A. Loring and E. McGill, representatives of Lehn & Fink, 120 William street, have returned to their respective fields of labor, after a ten days' stay in New York. S. H. Cohen, Kentucky and Indiana representative, is here on his semi-annual visit, and W. W. Cresswell is expected from Texas in a few days. E. G. King, another representative, is now in the territory recently covered by W. W. Wilcox. Mr. King formerly represented Schieffelin & Co. in Pennsylvania.

—The firm of Franklin Howes & Son, at 757 Broadway, Manhattan borough, has been succeeded by a new corporation called the Franklin Howes' Medicine Company. The officers are Jos. L. Howes, president, and W. E. Lincoln, secretary and treasurer. The company manufacture several well known remedies, and the laboratory and general offices will hereafter be at Woonsocket, R. I., although the office at 757 Broadway will be continued for the time being.

—Albert Lucas, the managing partner of John Lucas & Co., paint manufacturers at Gibbsboro, N. J., is in the city. Mr. Lucas says dealers have shown a great deal of interest in their window display competition, so much so that they have decided to extend the time to Sept. 1st. The result of the competition will be announced in the Era of Oct. 3rd.

—The Upjohn Pill & Granule Company has removed to its new quarters at 48 Vesey street, where it has secured a ten years' lease of a five-story building. The new building gives the firm better facilities for making shipments, and will also allow the carrying of a larger stock. The offices of the company are located on the second floor.

—Charles W. Rice, of Lazell, Dalley & Co., 12 Duane street, has returned from an extended trip through the West. He also enjoyed a week's vacation at St. Paul, Minn. E. P. Montague, of the same firm, sailed on the Trave on July 20th, for Genoa, and will visit different parts of Europe before returning to New York.

—John F. Sprague, W. W. Curtis and J. L. Prior, three of the traveling staff of Sharp & Dohme, 41 John street, are having their vacation. Before returning to business, they will visit Kingston, Ont., Thousand Isles and the Pan-American Exposition. Mrs. Sprague accompanies the party.

—M. R. Thurlow, of Fox, Fultz & Co., 31 Warren street, is spending his vacation at his home in East Machias, Me. W. C. Doremus, a new addition to the traveling force of Fox, Fultz & Co., will hereafter cover territory in part of New Jersey and New York State.

—W. L. Strauss, head of the firm of W. L. Strauss & Co., 27 Warren street, is in Europe with his family. The company has recently opened a European office. Mr. Leistner, one of the firm's representatives, leaves Chicago next week for an extensive Western trip.

—Karl Schnackenberg, corner Amsterdam avenue and Eighty-first street, Manhattan borough, is a believer in the old adage, "All work and no play, etc.;" he closes his store on Sundays from 1 to 3 p. m., and also only requires his clerks to work ten hours per day.

—P. A. Raby, of the Evergreen Chemical Company, 130 Fulton street, has just returned from a trip through Maine. Mr. Raby reports the druggists in that section satisfied with the summer business and looking forward to a good fall trade.

—John G. Wischerth, of Wischerth & Dozier, 680 De Kalb avenue, Brooklyn, took his family to Tollman, Conn., for a month's outing, last week. Mr. Wischerth recently returned from a visit to the Pan-American Exposition.

—Henry Turrell, of the local office of Parke, Davis & Co., is spending his vacation at Saratoga Springs. Chas. Miller, another member of the company's office force, has returned from a business trip to Detroit.

—The New York College of Pharmacy commences its seventy-second annual session, Monday, September 30. The number of students who have already matriculated is greatly in excess of last year's record.

—The Medical Specialty Company, of New York city, has just been organized with a capital of \$5,000. The directors are W. J. Schultz and W. R. Bruyere, of New York city, and G. F. Jacobus, of Jersey City.

—Wm. Townley Case, with Boehringer & Soehm, 5 Cedar street, has returned from a two months' stay in Europe. Mr. Case was in poor health, but has been greatly benefited by his trip.

—The drug store at Avenue D and Third street, which has been run by R. M. Rosenthal, will hereafter be conducted by Rosenthal Bros., Solomon Rosenthal having been admitted to partnership.

—J. M. Aufmewesser, a well-known druggist of Covington, Ky., and his bride, were in the city last week. Before returning home they will visit the Pan-American Exposition at Buffalo.

—Mr. and Mrs. Miller, of Charleston, South Carolina, were at the Imperial last week, on their way to the Pan-American Exposition. Mr. Miller is connected with the Greer Drug Company.

—E. S. Wells, of Breitenbach & Co., 53 Warren street, has gone to Quogue, Long Island, where he has his summer residence. Mr. Wells will probably remain away until late in August.

—E. S. Green, superintendent of the sundry department at Fox, Fultz & Co.'s was married recently to Miss G. Pollitzer, at the home of her parents, 62 East 120th street, New York.

—John E. Serwe, representative of Lazell, Dalley & Co., in San Francisco, was recently called to his home in Fond du Lac, Wis., to attend the funeral of his mother.

—G. H. Rosell, Freehold, N. J., has had his drug store, recently damaged by fire, repaired and restocked, and the previous condition is decidedly improved.

—Thos. Furey, manager of the petty cash department at McKesson & Robbins', returned to work Monday, July 22, after an illness of nine weeks.

—S. H. Carragan, W. J. Carr, and G. S. Marlager, of Parke, Davis & Co.'s local offices, left for a fishing trip through parts of Canada, on July 24.

—The Elmer & Mendelson Company, formerly at 156 Franklin street, have removed to the new Lehn & Fink building, 120 William street.

—Wm G. Andrews, manager of the Waterbury Laboratories, at 110 John street, is at his home in West Haven, Conn., this week.

—A. S. Katzman, of 962 Second avenue, expects to start a branch store at the corner of Second avenue and 120th street about August 1.

—Chas. U. Kile, formerly with the Hegeman Co., 106 Broadway, New York, is opening a store at 1262 Bushwick avenue, Brooklyn.

—Louis Garbarino, formerly with W. L. Olive, 6 Bowery, has bought the store of D. Marlin, at 123 West Houston street.

—Nathan J. Gillespie, manager of the Columbia Drug Company, Savannah, Georgia, visited the city trade last week.

—George J. Seabury, of Seabury & Johnson, 59 Maiden Lane, was on a fishing excursion to Ainslee Lake last week.

—E. Feidler has bought the store at 70 Rivington street, Manhattan borough, formerly owned by Henry Kopf.

—Harry Hall, secretary of the Drug Trade Club, left on July 19 for the West. He will be gone a month.

—W. G. Ungerer, of Ungerer & Co., 18 Cedar street, is on a western trip, in the interests of his firm.

—Dr. P. J. Fagen, with Sharpe & Doime, is taking his vacation; at present he is in Albany, N. Y.

—Martin H. Wagner, of J. L. Hopkins & Co., 100 William street, is visiting at Shelter Island.

—Chas. C. Hinchman, of the Michigan Drug Co., Detroit, visited the city trade last week.

—John Lake Parker, wholesale druggist of Birmingham, Ala., visited the city trade last week.

—J. G. Ham, of the Centaur Company, 77 Murray street, is away on his vacation.

—M. Weil, of Weil & Reyder, Kansas City, is expected to arrive in New York this week.

—H. T. Jarrett, of Mallinckrodt Chemical Co., 90 William street, is away on a short trip.

—D. H. Smedley, treasurer of Parke, Davis & Co., Detroit, is visiting in the city.

—W. D. Olney, of Middletown, N. Y., visited the city trade last week.

—P. J. Torney, San Francisco, is in the city.

IN AND ABOUT BOSTON.

A TEMPEST IN A MORTAR.

Boston, July 20.—They have been having a "merry" time of it up in Clinton, because of the forced removal of an electric illuminated mortar over the entrance to the drug store of H. B. Merchant & Co. It appears that it was objected to because it protruded over the sidewalk, and a crusade against all overhanging signs lately was begun in Clinton. The superintendent of streets was responsible for the removal of the mortar, and later he was arrested, charged with the larceny of it, and in court was fined \$15.

For five years or more this mortar, brightly illuminated, has been a nightly feature of Clinton's main business street. Its removal, if the druggists objected, might have been sought through the courts, but this step was not taken. When the attacking party arrived at the pharmacy it brought every needed thing for the work, including a ladder. An expert electrician was with them to cut the wires, in itself a serious offence, as the selectmen, and not the street commissioners, control the electric wires in Clinton. Mr. Merchant protested against what seemed to him an outrage, but to little effect. After cutting the wires, the iron supports and mortar were removed and actually carted away, which the court construed as larceny. The chief of police stood by and refused to help Mr. Merchant, when the druggist appealed to him for protection of his property.

In the court, Mr. Merchant testified to coming to Clinton in 1895, and to taking at that time the store he occupies now. Shortly after that he placed the mortar on the outside of the store as an advertisement, having had the verbal consent of the members of the board of selectmen at that time. He told of the manner of fastening the mortar on the building, and described the removal of it. He was corroborated by E. F. McCaffery, Jr., and Newman Harrison, two of his clerks, who were in the store at the time of the seizure.

The judge was a little severe in his criticism of the whole proceeding, and in passing sentence said the court would consider the defendant as the servant of the town and the penalty would, therefore, be light. He also said that the sentence would be as much of a warning as would a heavier one. The counsel for the defence immediately gave notice of an appeal.

HAVE FORESWORN CIGARETTES.

Boston, July 20.—At Leicester, Mass., all the dealers who formerly sold cigarettes, including druggists of that town, have foresworn these "aids to the grave." There have been fifteen places where cigarettes formerly were sold. The women of Leicester started the crusade, which did not attract much attention and was not looked upon with much favor, as it was thought that it would not amount

R. C. MCGOWAN C. E. HUBBELL
Firm of Hubbell & McGowan, Boston, Mass.

to much. People who do not realize the condition of things thought that there was no call for such a thing, but when the good results were called to their attention a few times the sentiment was changed. The women visited some of the druggists and other storekeepers in town, and also sent circulars, asking them, in the interest of humanity, to stop the sale of cigarettes. In spite of the fact that the law did not allow the sale of the weed to boys under sixteen years of age, the majority of the smokers of the cigarette were boys under that age. At the first request, two of the dealers stopped the sale and several others promised to stop selling as soon as the stock they had on hand had been disposed of, and now, several months after the first request was made, there is no one selling them. The women are members of a society interested in such work, and they are to prepare circulars and send them to other towns, with the idea of holding up Leicester as a model.

A WEEK OF EXCELLENT BUSINESS.

Boston, July 20.—All in all, the week has been one of excellent business. It appears, for retailers have had a little more than the usual amount of trade, if anything. This has included a better demand for many sundries and toilet goods, and many articles which, as one dealer put it, can be handed right out, all ready and not requiring the customer to wait, as is necessary when a prescription is to be compounded. Soda fountain trade has kept up well and in some places has been especially good and brisk. Prescription work seems to keep about steady, with no special impetus given it just at this time. Quinine has been the feature of the wholesale trade, although it has been quiet, and a rather close watch is being kept on it. Opium also is without life, and the general list of drugs shows inactivity. In comparison, chemicals are far more lively and with the advance in prices on some of the acids there is more interest just now than for some time past. On a fairly steady market there is a moderate trade in dyestuffs and tanning materials. While alcohols hold firmly, there is not overmuch trading in them. Waxes keep steady on fair dealings.

LACK OF INTEREST IN PROJECTED MONUMENT

TO WILLIAM PROCTER, JR.

Boston, July 20.—Word having gone quite generally about the country that, to honor the memory of William Procter, Jr., of Philadelphia, a national research laboratory of pharmacy may be built in some large city, inquiry has been made in Boston and fails to elicit any special interest at all in the project. It has been stated that pharmacists everywhere would be expected to cooperate in the plan for this memorial. The suggestion of a memorial is reported to have quickly gained favor with the members of the New York State Pharmaceutical Association, which organization has placed itself on record as being heartily in favor of the idea, but here in Boston no interest has been manifested. Two or three leading men in the trade here have said that if anything is done it will be by individual effort, rather than by the trade or organizations related to it.

NOTES.

—The tenth annual report of the Suffolk Dispensary, located at 4 Charter street, this city, a charity established by the laws of the State to afford free medical aid to the worthy poor, has just been issued. The Dispensary furnishes relief not supplied by any other institution in Boston, and in its work among the poor nearly 60,000 patients have been treated. The report states that the receipts for the last fiscal year, including money, merchandise, and donations from all sources, amounted to \$2,672.20. The expenditures for the same period were \$2,755. The Dispensary is a practical and worthy enterprise, and while the board of officers are averse to making any special or public solicitation for funds for its support, it is clearly an institution which should be maintained.

—Vandals recently attacked the large gilt mortar in front of Emms's drug store at Winchester, and injured it so badly that the police were obliged to take it down entirely to allow people to pass by, since it obstructed the sidewalk. The vandals also stole a bicycle rack, which the druggist had placed in front of the store, and threw it into the river, where it later was found. Charles Chase, who is employed at this same drug store, while wheeling recently, collided with an unknown rider. Mr. Chase sprained both arms and one leg, and received a bad shaking up.

—The Buffington Pharmacy at Worcester showed enterprise this week by sending to the camp-meeting grounds, at Sterling Junction, a wagon stocked with drugs, note paper, toilet goods, witch hazel, court-plaster, flavoring essences, and a lot of similar articles thought to be necessary to the summer camper. The young man in charge of the outfit did an excellent business until he had notice called to his attention that his work required permission, because the "general store" on the ground had in stock the same goods and became envious of the intruder.

—H. D. Foss & Co., Boston, manufacturers of chocolates and confectionery handled by the drug trade, has just become an incorporated company, to be known as the H. D. Foss Company, Incorporated. The capital stock is \$24,000. Herbert D. Foss is president and Charles D. Rice treasurer, and the third incorporator is Charles S. Fuller. The company is in the process of moving from its former plant in South Market street to a commodious building in Union street. It had far outgrown, in its increased business, the old place.

—Charles Carter, a clerk until recently at Hall & Lyon's Pharmacy, at Worcester, has left that place to take a similar position in Frank Emerson's drug store, in South Lawrence, where he replaces Leon Luther. Mr. Luther has been there several years, learning the trade and meanwhile has studied at the Massachusetts College of Pharmacy and passed successfully the Board of Registration in Pharmacy. His home is in Vermont, where he will spend the summer, and in the fall Mr. Luther will take some new position.

—Under the laws of Maine, to do business in Massachusetts, the Hallowell Manufacturing Company has been organized with Nathan D. Pratt of Lowell as president and treasurer. It is planned to make and deal in suppository moulds, capsule fillers and strainers, tablet moulds, fluid cocks and like things. The capital is \$100,000.

—With a capital stock of \$100,000, of which nothing has been paid in, the Arctic Polar Spring Water Company has been organized at Portland for the purpose of buying, selling, charging, bottling and dealing in spring waters. George O. Pettibone, of Worcester, is to be the president and treasurer of the company.

—Among many recent small fires in Boston was that at the drug store of Shapira & Hertz, at 100 Salem street, the Jewish quarter. The fire was confined to the store, which occupies the first floor of the four-story brick building. It was caused by a gas jet igniting some camphor. The damage was small.

—Among the Massachusetts Legislative expenses reported officially at the State House is the return of the Massachusetts State Pharmaceutical Association, which reports under the lobby act, that it paid W. W. Bartlett

\$100 for appearing before the committees to give expert testimony.

—At Goldthwaite's drug store, at Whittenton, there has been a display of pictures representative of the Fourth of July celebration in that town, with buildings decorated, etc. The photographs have attracted large numbers to the drug store to see (and also buy) these souvenirs.

—Letters have been received from P. R. Warren, connected with the Moxie Company, who went abroad to Austria some time ago to be treated for deafness. He reports having made great progress, with every evidence of his hearing being entirely restored eventually.

—C. I. Hood, of C. I. Hood & Co., Lowell, is at the Oceanside, a fashionable hotel at Magnolia, Mass., where he and Mrs. Hood, who is with him, will remain throughout the season.

—After several years' service as clerk at W. C. Gregory's drug store, in Marblehead, Horace S. Trull has been offered, and has accepted, an excellent position in H. K. Mansfield's pharmacy, in Salem.

PHILADELPHIA.

SODA BUSINESS WELL UP TO THE MARK—OTHER BUSINESS QUIET.

Philadelphia, July 20.—Business, and pretty much everything else connected with the drug trade, has been quiet this week and there has been a dearth of either news or happenings. Soda trade keeps well up to the mark and is now the most profitable feature in many stores. Prescription business is quietly settling down to the summer dullness, although quite a number of druggists are making a good thing of "repeats" and filling new prescriptions for out-of-town customers. The "Progressive Drug Company" mentioned in last week's correspondence does not seem to be doing much business with Philadelphia druggists, who take the view that the proposed scheme is impracticable and not at all likely to materialize. It must be said, though, that the parties behind the scheme seem to be in earnest, and it is rumored that they approached Geo. B. Evans and C. G. Loder with offers to buy their stores, which were promptly declined. Several owners of stores located in the business section of the city have also been approached, but at the present writing there is no report of any one having accepted the offers of the "Progressive Drug Company." So it looks as if the plan to start an "Atlantic & Pacific Tea Company" of drug stores in Philadelphia is still a dream of the future, though one can never tell what will happen in the drug business. The appointment of W. G. Minnick of Allegheny to fill the vacancy on the State Pharmaceutical Examining Board caused by the retirement of Mr. Emanuel is an example of the foregoing theory, the name of this gentleman not having been even mentioned in this connection. Mr. Minnick did not have the support of a single local association; gossip says that the appointment is partly personal and partly political, the appointee being a close friend of Governor Stone. In the present condition of state politics nothing is remarkable.

SCIENCE AND FIRES.

Philadelphia, July 20.—A preliminary meeting was held at the Commercial Museum on Wednesday for the purpose of forming an organization of fire insurance men to promote the science of and improve the methods of fire protection in large cities. It is also likely that a laboratory will be established where demonstrations may be given of the dangers of storing and handling modern chemical products and for conducting experiments as to the explosiveness and inflammability of many chemicals widely used in the arts and sciences. A rather remarkable feature of the meeting was a demonstration given by Inspector William McDewitt of the explosiveness of certain chemicals long looked upon as being harmless when stored alone. Chlorate of potash, now believed with good reason to have been the cause of the Tarrant explosion,

was shown to be highly explosive when heated in the presence of smoke from burning wood, and saltpeter, picric acid and others were shown to be only slightly less dangerous. A few grains of chlorate of potash were placed in a porcelain crucible, a splinter of wood laid on top of the crucible and then placed in a tightly closed canister. On applying heat from a gas jet for a few minutes a loud explosion took place, accompanied by violent detonation, and much smoke and flame. The danger of "flash-light" powders was shown by suitable experiments, as was the inflammability of the vapors of benzene, carbon disulphide and ether. Speaking of chlorate of potash, Inspector McDevitt declared it to be the most treacherous and dangerous of explosive substances in common use, it being transferred from a harmless substance to one full of danger by the mere proximity of oxygen consuming substances. In this declaration is a warning to both wholesale and retail druggists as to the handling of substances that part with their oxygen easily. It is quite likely that stringent regulations governing the sale and storage of such substances will be framed and put into effect by the fire insurance people here and in other large cities.

SPECIAL MEETING OF LUZERNE COUNTY ASSOCIATION.

Philadelphia, July 20.—A special meeting of the Luzerne County Druggists Association was held last Tuesday to hear the report of the committee appointed to consult the only Allentown cutter as to adopting a price schedule. The report was unfavorable, the cutter positively declining to confer or agree on a price list, so, after an extended discussion, it was unanimously agreed to put up an aggressive fight and a committee was appointed to draw up a list of popular patents at prices below cost and submit it to the secretary so that a circular to members can be issued apprising them of the prices agreed on and the list of patents to be "cut." A fight to a finish is promised, unless the recalcitrant cutter sees the error of his ways, and as the Association comprises 61 out of a possible 75 druggists in Luzerne County now, it has a good chance of winning out.

Resolutions were also passed at this meeting to refuse to handle proprietary articles, the proprietors of which do not reduce the prices in accordance with the reduction of the Stamp tax. The L. C. D. A. is full of enthusiasm and is going about its work with unusual vim and vigor, and it has already materially improved conditions locally.

ARRESTED FOR SELLING SODA WATER ON SUNDAY.

Philadelphia, July 21.—W. W. Chalfant, the well known Philadelphia druggist, was arrested last Wednesday for selling soda water on Sunday at his Ocean City drug store, but was released on his own recognizance by the magistrates before whom the case was brought. This and other prosecutions are the outcome of an attempt of certain Philadelphia "reformers" to enforce the old "Blue Laws" at Ocean City, it having been necessary for the informer to go twenty miles away to find a justice who would issue a warrant against the offenders. Mr. Chalfant is naturally indignant over the matter and a pretty fight is looked for when the case comes up for trial, as there seems to be a good bit of persecution in the case. Mr. Chalfant, by the way, came very near to being appointed to the State Board, having the backing of numerous influential men, but declined the honor at the last moment.

NOTES.

—Evidence of the influence of the P. A. R. D. and National Association work was well shown here this week by the voluntary adoption of the "price restrictive plan" by a prominent shoe manufacturing firm who also sells to the trade a preparation for corns, sore feet, etc., and the printing of the exact words of the "Worcester Plan" restriction on all of their bill-heads. This action was

wholly voluntary on their part and was a recognition of the wishes of local druggists.

—D. E. Bransome, city representative of Johnson & Johnson, met with a peculiar and painful accident lately, a finger of his right hand accidentally getting within the sweep of an electric fan and being badly torn, the bone also being injured. In spite of the fact that he will have lots of dressings for it, he would rather trade the injury off for a pound of absorbent cotton.

—The store of W. W. Chalfant was entered by burglars last Friday night, July 12, and over \$100 in cash and stamps stolen. Owing to the new "Juvenile Criminal Court" law recently enacted, the burglars, boys of ten and twelve years, apparently cannot be suitably punished for their crime, although having been known to have robbed other stores.

—John Fredericks, manager of the Chas. Lippincott Company, manufacturers of soda water apparatus, is expected home soon from an extended tour through Europe in the interests of his firm. American soda fountains are gaining in popularity in England and sales in Paris are reported.

—Secretary George and Mr. Porter of the State Pharmaceutical Board were in Philadelphia on business this week and consulted with their attorney on some proposed prosecutions for adulterations.

—Mr. Knauss, of Allentown, was recently prosecuted by the State Board for conducting a drug store on an assistant's certificate and was sentenced to pay a fine and costs for so doing.

—J. M. Stoeber, owner of the Broad street station pharmacy, has just returned from a three weeks' stay at Virginia Hot Springs, where he has been for treatment, owing to recent ill-health.

—C. E. Cartmell, of Wilmington, was in the city yesterday on a business trip. Mr. Cartmell is the delegate of the Wilmington Retail Druggists Association to the N. A. R. D. Convention.

—Mr. Joyce, for a number of years clerk for W. J. Jenks, is now making a vacation trip through Canada. On his return, Mr. Joyce will enter the retail drug business as a proprietor.

—C. A. Eckles has taken a cottage for his family at Atlantic City and is giving as much of his time as he can spare from his many stores to enjoying the delightful surf bathing there.

—R. W. Johnson, of Johnson & Johnson, has returned from a trip to the salmon fishing grounds off the Labrador Coast, and reports the fishing and catch the best for years.

—H. A. Laessele, formerly owner of a drug store at 31st & Berks street, has bought and opened a new drug store at 59th & Market streets.

—H. L. Stiles and family are spending their summer over in "Jersey." Mr. Stiles going out Sundays to gun for Jersey "Skceeters."

—F. E. Holliday, chairman of the National Executive Committee, is spending a few weeks with his family at Ocean City, N. J.

—Chas. Leedom and family are spending their vacation up in the country about Mount Airy, Pa.

—D. Scott Keene, a well-known retail druggist of Galveston, and president of the Galveston, Texas, Retail Druggists' Association, has been elected a delegate to represent the association at the annual meeting of National Retail Druggists' Association in Buffalo. Mr. Keene reports that Galveston is the only town in Texas having a cut-rate store. The members of the Galveston association feel much encouraged over the outlook, however.

—Foote & Jenks, manufacturing perfumers of Jackson, Mich., have just moved into a new laboratory on Cortlandt street, in that city. The building is 40 by 100 feet in size, two stories high, being constructed with special reference to the wants and requirements daily met with in their business. The laboratory is thoroughly equipped throughout, and is said to be a model with respect to conveniences.

BALTIMORE.

MARYLAND PHARMACEUTICAL ASSOCIATION.

Baltimore, July 20.—The nineteenth annual meeting of the Maryland Pharmaceutical Association opened in the casino of the Hotel Plimhinmon, Ocean City, last Tuesday afternoon with a moderately large attendance, which was augmented as the sessions continued. The druggists were called to order by President William E. Turner, of Cumberland, at 3 o'clock, an address of welcome being delivered by W. F. Johnson, of Snow Hill, in the absence of Mayor Clayton J. Purnell, who was unable to be present. Dr. A. R. L. Dohme, for the association, made a graceful response.

President Turner then addressed the delegates, advancing a number of excellent practical suggestions as to what might be done to enlarge the influence and prestige of the organization. He dwelt on the propriety and advisability of holding a rally and ratification at the semi-annual meeting, which is to take place at Annapolis, when the legislature assembles, or soon thereafter, to discuss the proposed pharmacy bill and to urge its passage. Discussing the differences between physicians and pharmacists, President Turner said:

"The time is at hand when the unsettled feeling between the two professions should be completely harmonized and conciliated, and a mutually satisfactory understanding established as to the respective rights and privileges of the two callings, and as to ample facilities for the compounding of prescriptions."

In conclusion, he reviewed the year's discoveries in the science of pharmacy, and predicted for the association continued growth in interest, influence and membership. He said the organization would yet become a source of great gratification and pride to the citizens and druggists of Maryland.

Part of the evening was taken up with a contest to determine who could fold one dozen powder papers in the shortest time. The contest was open to ladies.

Two business sessions were held on Wednesday, the 17th inst. Among the first matters to receive consideration was the appointment of special committees. That on nomination of officers consisted of John J. F. Hancock, H. P. Hynson, Charles H. Ware, Dr. A. R. L. Dohme and W. C. Powell. Oscar E. Ross, J. Webb Foster and Daniel Rose were appointed a committee to suggest time and place for the next meeting.

Secretary Louis Schulze read his report, which was unanimously adopted. It showed a membership of 201, 47 names having been added to the rolls during the past year. Treasurer W. M. Fouch, in his report, stated that there is a balance of \$128.38 in the treasury, against \$86.93 at the beginning of the year.

The reading of the report of the committee on legislation followed, Dr. Dohme presenting the document. Dr. Dohme said among other things:

"The work of this committee has been to help as best it could to have the war tax repealed, and we feel that our little helped to make the stream that carried both the White House and the Capitol before it. We have also been very busy laying our lines for an attack upon the State House, at Annapolis, next Winter, and our plans are to circulate petitions in every county of the State, through the pharmacists thereof, and have them signed by the citizens of the State. If we can bring these petitions in duplicate to Annapolis, and present them to the Senate and House of Delegates, they will have more influence than hours of talk before committees. We propose to introduce the amended bill that was passed by the last House of Delegates, for it will not and cannot well meet with any objection from store keepers, and this has been the hurdle that has thrown all our champions in the past. It is useless to try to fight the store keepers, for they outnumber us and are more influential, as experience has taught us. Let us get a bill that establishes our standing and our rights before the law and the public, and let the store keeper continue in his present course of selling medicines, but do not allow him to compound prescriptions."

Following Dr. Dohme's report, the secretary read the

report of the chairman of the committee on pharmacy, H. Lionel Meredith, of Hagerstown. Prof. William C. Anderson, of Brooklyn, was then requested to speak. In his talk he proceeded to set forth the benefits of the N. A. R. D., and urged all Maryland druggists to join it.

The chairman of the committee on adulterations, H. P. Hynson, gave a very interesting account of the examinations made by himself of several popular preparations, and employed blackboard demonstrations which greatly added to the interest of the report. The subject of wood alcohol was touched upon. This dangerous substitute for grain alcohol had been found in the product of but one concern, although several others had been examined. One sample of essence of ginger was found to contain only 33 per cent. of ethyl alcohol, when the proportion should have been 95 per cent. Tincture of iron was examined, but none of the seven specimens submitted to tests contained wood alcohol. Several, however, contained not more than 55 per cent. of grain alcohol, when 75 per cent. was required by the United States Pharmacopoeia. The quantity in one sample was not more than 5 per cent. Of six lots of tincture of iodine examined, two were made with wood alcohol, and all but three proved to be greatly deficient in iodine. Much adulteration was shown in the common selditz powders. The number of samples with an over-weight in the quantity of the chemicals required was as large as that with insufficient quantities.

An animated discussion was occasioned by C. H. Ware's paper in reply to the query, "Can the Retail Pharmacist Make His Own Secret Preparations With Financial Success to Himself?" It was finally decided that he could.

The election on Thursday resulted in the choice of the following officers:

President—Louis Schulze, Baltimore.
 First Vice-President—J. Webb Foster, Baltimore.
 Second Vice-President—Eli T. Y. Reynolds, Rising Sun.
 Third Vice-President—Otto G. Schuman, Baltimore.
 Secretary—Owen C. Smith, Baltimore.
 Treasurer—John G. Beck, Baltimore.
 Executive Committee—W. U. Powell, Snow Hill; W. E. Brown, Baltimore; H. Lionel Meredith, Hagerstown.

The committee on a pure food and drug law reported that it had been unable to accomplish anything of importance, as there had been no meeting of the Pure Food Congress nor of the legislature since the association assembled last year. The committee advised a continuation of affiliation with the National Congress, and urged the passage by the Maryland General Assembly of a law regulating the quality of food and drugs. The recommendations were accepted, and a contribution was voted to the National Congress.

Several other committees reported, and a number of the queries were discussed. Much was said about shorter hours for druggists, but no one appeared to be able to suggest a feasible plan or one which the organization was disposed to endorse. The idea of requiring all candidates for examination by the board of pharmacy to be graduates from some reputable school of pharmacy did not meet with much favor.

The closing session took place on the morning of the 19th inst. Changes in the by-laws were ordered, to restrict the holding of "certificates of competency" from the association to resident druggists only. Permanent committees on membership and on deceased members were appointed.

As anticipated, the storm came with the consideration of the report of the committee on affiliation of the organization with the N. A. R. D., and the endorsement of the "Worcester plan," now being discussed everywhere throughout the country. The committee's report was favorable, but formidable opposition developed to the affiliation clause. There was also a decided feeling against paying the expenses of a delegate to the convention of the national association at Buffalo.

After much discussion, and some strong personalities had been indulged in, the amended report was adopted by a large majority vote. The report, as finally sanctioned, re-established relations with the N. A. R. D., provides for the payment of the per capita tax, directs the sending of a delegate to the Buffalo meeting, and binds the organization to defray the delegate's expenses. It also

carries an endorsement of the Worcester plan. This result was largely due to President W. C. Anderson, of the national association, who was present during all the sessions and kept closely in touch with the Maryland members. H. P. Hynson was elected a delegate and W. E. Brown an alternate to the Buffalo convention.

W. E. Brown, R. S. McKinney, Oscar E. Ross, John M. Wiesel and W. C. Powell were appointed a committee on trade interests, with power to act on commercial questions. The committee on the president's address reported favorable upon the recommendations made by that officer. Principal among them were the appointment of county sub-legislative committees and the selection of Annapolis as the place for the semi-annual meeting of the association during the session of the legislature, next winter.

Dr. A. R. L. Dohme read a paper on the use of acetic acid as a menstruum, instead of alcohol for fluid extracts, and strongly opposed the use of the substitute.

An interesting paper on the revision of the United States Pharmacopoeia, by Henry Malsch, of Baltimore, advocated the dropping of a number of obsolete products and the introduction of formulae for the more popular preparations which are not yet official, but are largely prescribed by physicians. The association embodied Mr. Malsch's views in a resolution, which is to be forwarded to the committee on revision of the Pharmacopoeia.

The officers were installed by Messrs. Ware and Wiesel, all the newly elected men making happy addresses. After a rising vote of thanks had been tendered the retiring officers, the ladies and the hotel management, which had looked so thoughtfully after the comfort of the visitors, the association adjourned, to meet next year at the Blue Mountain House, on a date to be fixed by the proper committee.

The social features of the annual meeting proved to be a great success. On Wednesday evening a dance was given at the casino of the Hotel Plimlimmon. A swimming contest, in the afternoon, was won by Dr. A. R. L. Dohme, with William Dawson second and Owen C. Smith third.

An egg rolling contest on Thursday was won by Mrs. A. R. L. Dohme, with Mrs. Otto Schuman second. J. Webb Foster emerged as the victor from the hen race, Dr. W. C. Anderson getting the second prize. At night a cake walk in the casino attracted a large crowd. Altogether, the gathering must be designated as most successful and profitable. The regular proceedings were full of instruction, and the diversions developed excellent good fellowship.

OLD FIRM CHANGES HANDS.

Baltimore, July 20.—It is announced that the business of the Charles A. Vogeler Company, manufacturers of St. Jacob's Oil and other proprietary articles, has been acquired by E. Geddes, of London, and that a stock company will be organized to continue it. The company failed about two years ago, and has since been in the hands of trustees. The sale includes all American interests in all the rights and patents held by the company. The building was sold some time ago to Gilpin, Langdon & Co., wholesale and manufacturing druggists, and is now being fitted up for the firm's purposes.

NO CHANGE IN THE STATE OF TRADE.

Baltimore, July 22.—The past week in the drug trade has been almost without change. The absence of a number of druggists at the annual meeting of the State Association and on other trips had marked quieting effect, causing attention to be centered upon other than trade matters. The volume of transactions, however, assumed fair proportions and there was no real cause for complaint. The normal movement was maintained in the several departments.

PITTSBURG AND VICINITY.

STATE BOARD ANSWERS.

Pittsburg, July 22.—An affidavit of defense was filed last week, in the suit of the Perkins Detective Agency against the State Board of Pharmacy, to recover \$1,874 alleged to be due for services rendered in prosecuting violators of the "Act to regulate the practice of pharmacy and sale of poisons, etc.," approved May 24, 1887. The affidavit sets forth that the contract embodied in the bill of complaint is correct, and that the plaintiff was authorized to investigate violators of the pharmacy act, and to prosecute such violators. It is averred that the plaintiff did for a while diligently investigate violators and prosecute them, for which services the plaintiff was paid the sum of \$5,735.13. It is set forth that the plaintiff then became very careless and unprofessional in further prosecutions and that the work was done in a very unsystematic and unsatisfactory manner, the reports being vague and incomplete. It is also alleged the plaintiff reported persons guilty who were carefully complying with the laws, while others who were violating them were not reported at all; that by reason of plaintiff's conduct and negligence in bringing suits it became necessary for the defendants, during the early part of December, to notify the plaintiff that on and after January 1, 1901, it should cease to make further investigations, which notice was given to the plaintiff; it being mutually understood that the plaintiff and his agents should prosecute such violators of the law as they had discovered, and to let their agents appear at such hearings of cases as the attorney for the board would institute on the information obtained by the plaintiff or his agents, and for which they were to receive the fee as stipulated in the contract. When the board was about to bring suits it is averred the plaintiff did not produce any witnesses. The suits were postponed from time to time, and were finally decided against the board, putting them to much expense and annoyance. In view of the foregoing the board prays the honorable court to nolle prosequere the case.

DRUG CLERK FOUND DEAD.

Pittsburg, July 22.—J. Byron Flenniken, employed at the Central drug store, in Mt. Pleasant, Pa., was found dead in his room at the Central Hotel, at that place, last Sunday morning.

Flenniken seemed to enjoy life, and was always in the best of health. It is said, however, that of late he had been worrying over family matters, and the night before his death had written a letter to his wife, who resides in Uniontown, after which he tore it up and seemed in a generally bad humor. Coroner Wynn held an inquest, and found that death was caused by worry, which led to an excessive use of alcohol. The victim was 30 years of age. He had formerly worked in Beck's pharmacy, in Pittsburg.

NOTES.

—A well known Wylie avenue druggist sauntered down town the other evening, and, after mingling freely with the flowing bowl, sought to put society in the lower district on a reorganized basis. His ambitious efforts were rewarded by a complimentary ride on the central station line. The return trip in the morning, however, cost him \$10.

—The Mecca Pharmacy is the name of the newest drug store in Elliott, a suburb of Pittsburg.

—Theo. Cappel has sold his handsome Oakland pharmacy to J. T. McFadden.

Druggists who are interested in Vanillin of a fine quality should write to O. Porsch Chemical Co., Department T, 19 Liberty St., New York. In addition to Vanillin, they manufacture Ottag of Rose and Coumarin, which they offer at special prices in their advertisement on the front cover of this issue.

CHICAGO.

BUSINESS FAIR IN CHICAGO.

Chicago, July 20.—Business this week has been well up to the average for July. The manufacturers are quite busy, though there seems to be no particular rush of orders. Jobbers state that country orders are good, and say the same of city orders, laying especial stress on the unusual quantities of fountain supplies sold. One jobber stated that the business of his house for July had been so far quite phenomenal, running more than a thousand dollars a day ahead of any previous July. Such reports are very encouraging and argue a healthy condition in the trade.

DENIES REBATE ON BORAX DUTY.

Chicago, July 20.—In the United States Circuit Court for the Northern District of Illinois this week, Judge Kohlsaas decided that the use of borax in preserving meats for shipment, does not constitute the manufacture of a new article. For this reason, the court held that the packers are not entitled to a rebate on the tariff duties paid under the act of 1897. The case will be carried to the higher courts and if the decision is sustained the packers of the country will lose many thousands of dollars.

NOTES.

—The manager of the Lakeside Directory Company—R. R. Donnelly & Sons Company—states that directories will not be leased this year, but that those who desire to buy them may do so. The new Chicago directory is just out. The slot machines will be continued, and more will be put in wherever wanted. The manager says that these machines have yielded just about enough for the books put in them, but not enough for the machines themselves. The company, however, is willing to continue their use.

—I. R. Diller, one of the oldest druggists in Illinois, has sold his drug store in Springfield to Hoy & James. It may be, although your correspondent is not informed that such is the case, that the senior member of the above firm is Luman T. Hoy, secretary of the State Board of Pharmacy.

—Leo Eliel, the well-known druggist of South Bend, Ind., was in Chicago last week, and visited the Chicago College of Pharmacy for the purpose of getting points for fitting up the School of Pharmacy of the University of Notre Dame, in which school he holds the chair of pharmacognosy.

—James Adams, a popular druggist at 611 Forty-seventh street, has bought the store of Buck & Evans, at 541 Forty-seventh street, and will conduct both stores.

—The Penn Drug Company, of Oshkosh, Wis., has been incorporated in Virginia for \$250,000. The company will do business in Wisconsin.

—Laughner Brothers, druggists, of Whitestown, Ind., have dissolved partnership, Frank L. Laughner succeeding.

—P. Stabb & Co., of Chillicothe, Ill., have sold out.

Rubber Bands Which Will Not Get Hard.

What druggist is there who has not become discouraged in trying to buy rubber bands which he can keep in stock? The poorer quality of bands are notoriously poor keepers, they get hard on the shelves and soon become unsalable; but dealers who buy only the Para band, made by the Goodyear Tire & Rubber Co., Akron, O., do not have this trouble. These bands positively will not get hard. They are always packed in green boxes bearing the trade mark and the Goodyear Co.'s corporate name in white letters, and each box contains a guarantee slip. These bands are absolutely sure to please your customers.

Four-Fold Liniment bears the stamp of age and respectability. It has been sold in the drug trade for 50 years.

LOUISVILLE.

FIFTY YEARS IN THE DRUG BUSINESS.

Louisville, July 19.—There was a novel reunion and anniversary celebration at Boonville, Indiana, a small town not far distant from Louisville, one day last week. Harry Fox celebrated the fiftieth anniversary of the foundation of his drug store, and did it royally. The celebration was held in the store in which he began business. The building is an unpretentious old red brick, with high ceilings and small windows. The old druggist, for he is now seventy-five years of age, is a unique character in the town. He and the little corner grocery store have grown but little. His show cases, bottles and fixtures are of the pattern that was relegated to the wood-pile years ago. He don't claim to be much at filling prescriptions, but when it comes to curing chills and fever, "ager" as he calls it, he boastfully claims "that he is second to none." His drug store was the first brick building in the town, and he enjoys the distinction of being the oldest inhabitant. In addition to being wealthy, he is the father of five sons and one daughter. All of them are druggists. The daughter, who is the youngest child, was graduated from one of the pharmaceutical colleges of Indiana last year. Of course, when Mr. Fox held his anniversary celebration, everybody in the city of Boonville attended.

NOTES.

—The friends of James Gleason, of Corydon, are congratulating him upon the good luck which followed his investment in oil wells in Texas. Gleason is the most prominent druggist in the city. His family originally came from Texas and owned considerable land in the oil field at one time. The druggist received a farm at the death of his father. So did the other children, but they sold their farms almost immediately. Gleason held to his share, and proved a clear title when the land became valuable. He was importuned to sell it, but he very wisely clung to it until he was able to sell at his own figures. Then he disposed of some of it, but held to the remainder as an investment. He has already realized enough to insure his never wanting anything that he can buy, but he is determined now to become rich, in fact, very rich.

—The Thompson-Norton Drug Company, recently organized at Lexington, Kentucky, filed articles of incorporation in the office of the Secretary of State at Frankfort July 18. The company has a capital stock of \$10,000, and will engage in the sale of drugs by the wholesale. The incorporators are W. T. Thompson and F. H. Norton and Kate Norton.

—Henry Jacobs, who recently sold his drug store at Tenth and Jefferson streets, will probably go to Alaska in a short time. Mr. Jacobs has long wished for an opportunity to hunt the yellow metal, and it now seems that his longing is to be gratified. His former employer found a fortune near Dawson.

—All of the druggists of Sellersburg, Indiana, and their wives, children and sweethearts, passed through Louisville, enroute to Mammoth Cave, last Sunday morning. There were about eight Hoosier druggists in the party, and as far as they were concerned there was no medicine sold in Sellersburg that day.

—The Scribner Pharmacy people have employed two additional clerks in the past week. They are Tom Buchanan, of Owensboro, and James Davis, of Indianapolls.

—A new drug store will probably be opened at Tenth and Walnut streets in the near future. The name of the druggist is not known.

—Walter Van der Espt, the druggist of the "Chute," has just returned from a business trip to New York.

Careful dispensers who want corks of fine quality and those who believe that it pays to buy the best corks obtainable, will do well to try the "Trefoil" brand, made by the R. W. McCready Cork Co., Chicago. These corks are kept on sale by jobbers, and come in two grades, "M" and "B."

ST. LOUIS.

J. S. MERRELL DRUG CO. INCREASES CAPITAL STOCK.

St. Louis, July 20.—The J. S. Merrell Drug Co., of this city, has taken steps to increase its capital stock from \$100,000 to \$400,000. This is one of the oldest wholesale drug firms in the West. In the circular given out, it is stated that owing to the great increase of business during the past few years, it has become necessary to have more capital to meet the expectations of the drug trade. One hundred thousand dollars preferred 7 per cent. stock has been subscribed for by outside capitalists. The remaining \$300,000 of stock will be held by the present owners and a few employees, who have worked well in aiding to build up the business. It is further stated that there will be no change in the management, except possibly the placing of more responsibility upon some of the employees who have taken a financial interest in the house. Neither will there be any change in the policy of the business except where it is necessary to adapt it to larger operations. Under the laws of the State, the matter cannot be legally closed under sixty days, although the financial arrangements are all completed at the present time. The house will be obliged to have larger quarters and negotiations are pending, though there is nothing definite to report at present.

NOTES.

—J. C. Hafner, druggist at Twenty-eighth street and Manchester avenue, had a narrow escape from a severe fire last Tuesday night. He and his wife were awakened about 2 a. m. by their pet parrot crying fire. The room was full of smoke, and they were both nearly suffocated. The fire originated in his store below, which was almost totally destroyed, and it will be more than a week before he will be open for business again.

—The committee appointed by the Retail Druggists' Association of St. Louis to call upon the wholesalers in regard to discounts, etc., laid the matter before these people early this week. It has been taken under advisement by the wholesalers, but as yet no reply has been given to the retailers. The general opinion is that no concessions will be made to the retailers.

—The evening boat excursion given by the St. Louis Drug Clerks' Society last Thursday was so largely attended that it was almost too crowded for enjoyment. The full passenger limit, 3,500, were on board before schedule time for leaving, and the boat pulled out leaving several hundred disappointed pleasure seekers on the bank.

—The St. Louis Retail Druggists' Association will give a select evening boat excursion on August 7. This will be the first entertainment feature given by this organization. Every druggist in the city is a member of this association and the excursion will undoubtedly be well attended.

—Arrangements have been made to hold what is called a "druggists' night" at the Delmar Garden, August 17. It is under the auspices of the combined local druggists' organizations, and will undoubtedly be of interest and mutual benefit to all concerned.

—L. P. Hemm, of Kirkwood, left one week ago for Colorado, for his health. His wife received a telegram from his physician yesterday, requesting her to come at once. Mr. Hemm's condition is said to be very critical.

—Dr. J. F. Pfeffer, of Pfeffer's Pharmacy, Eleventh street and Lafayette avenue, is rejoicing over a visit from the old stork last Wednesday night. He now has a young daughter in his family.

—F. W. Fahrenkroag, of Kirkwood, is moving his store into the building formerly occupied by Mr. Allen, who made an assignment a short time ago.

—F. Zahn is opening a new drug store at Vandeventer and Folsom avenues. He also has a drug store at Nineteenth and Sidney streets.

—Thomas Leitch, formerly of Toronto, Canada, has accepted the chief clerkship with Raboteau's Pharmacy on North Broadway.

—A new drug store is being opened at Nebraska avenue and Cherokee street. W. Graul will be the proprietor.

—G. B. Self, in charge of the local office for Eli Lilly & Co., has gone to Colorado to spend his annual vacation.

—J. V. Fisher, druggist at Park and Compton avenues, is spending this week at the Buffalo Exposition.

THE SOUTH.

TENNESSEE DRUGGISTS.

Memphis, July 19.—The Tennessee Druggists' Association met in Montague yesterday with a good attendance. Two honorary members were enrolled, Rev. W. D. Powell of West Tennessee and Daniel Champion of Alabama. A number of papers were assigned and read, and the following officers were elected: President, H. W. McDonald, Lebanon; first vice-president, J. C. Treherne, Memphis; second vice-president, J. D. Kuhn, Nashville; third vice-president, J. J. Ingle, South Pittsburg; secretary, W. R. Vickers; treasurer, J. C. Ammons, Gleason. D. H. Owens, of Clarksville, and G. P. Evans of Shelbyville, were appointed delegates to the next meeting of the National Association of Retail Druggists at Buffalo, N. Y., in September. A. E. Rains of Columbia; J. C. Treherne of Memphis and J. F. Voight of Chattanooga, were selected delegates to the American Pharmaceutical Association meeting at St. Louis in October. Bon Aqua Springs was selected as the place for the next annual meeting.

BUSINESS—A LITTLE OFF.

Memphis, July 19.—Trade with the wholesalers has taken a decided drop within the past week, the reason for this being the continued drought that has prevailed for more than a month. Up to several days ago the outlook for cotton was gloomy and corn was nearly ruined. Now, however, the rain that has fallen over nearly all the cotton country has relieved the situation and everybody is feeling better. The retail stores in the city are all doing a splendid business. The pharmaceutical men report lots of business in the interior. The sale of quinine and chill cures is very large. This summer promises to be a record breaker in soda water sales, all fountains doing a rushing business.

NOTES.

—Yeiser & McElrath, wholesale druggists of Paducah, Ky., recently sustained a severe loss by fire. The fire originated near the chemical department and most of the damage was done to that part of the building. The loss was about \$8,000 with small insurance.

—Morrow & Conington, who opened a store about a year ago at Decatur, Ala., have been so successful that they have started a branch house at New Decatur, Ala., with every prospect of its being a profitable investment.

—Dr. Robert L. Coley of the Coley Drug Co., Milan, Tenn., left recently with Mrs. Coley for an extended trip. They will visit Buffalo, Niagara, New York and other points east before coming home.

—S. E. Street, Jr., who has been in business with his father for several years at Columbus, Miss., will open a drug store in Greensboro, Ala. He purchased his stock in St. Louis.

—The Hayes Drug Co., Dyersburg, Tenn., will remove their stock to Paducah, Ky., about August 1st, where they will push their line of special preparations.

—J. J. McCree, who recently graduated at Vanderbilt University, Nashville, will join his father as a partner in the latter's store at Trenton, Tenn.

—Emmett Humphries, who graduated recently from Vanderbilt University, has accepted a position with Osborn & Pope, Columbus, Miss.

—J. C. Treherne has returned from an extended trip to New York. He spent part of the time fishing and hunting in the Adirondacks.

D. SCOTT KEENE,
Galveston, Texas.

—W. G. Poole has returned from his trip north and is now covering his territory in Mississippi in the interest of Nelson, Baker & Co.

—H. G. Lambert, head clerk for J. C. Treherne, will leave about the 20th for a two weeks vacation to his home in Virginia.

—Myrick Cox, formerly with E. C. Chapman, has accepted a position with Curry, Lipscombe & Cainc, Columbus, Miss.

—Jack Harris with his wife is spending several days at Mont Eagle. Mr. Harris is with the Coley Drug Co., Milan, Tenn.

—P. P. VanVleet has gone to New York with his daughter. Miss VanVleet will enter school in that city.

—W. C. Pryor has recently had his store renovated and remodeled. He now has an exceedingly pretty place.

—James Curry, a partner in the drug business of Curry & Scruggs at Tusculmbia, Ala., died recently.

—Hiram Bradford of A. J. Meadows & Co., Ripley, Tenn., will spend his vacation at Kingston Springs.

—Emmet Jones, traveling for the Wm. S. Merrell Chemical Co., in Alabama, was married recently.

—Dr. Alexander, druggist of Tunica, Miss., is visiting at Mont Eagle, Tenn.

—The new pharmacy of W. B. Waddell, Sheffield, Ala., is doing a good business.

—C. A. Minsey has opened a new store at Waverly Place, Nashville, Tenn.

—Spicer & Craig have been succeeded by W. A. Craig, Clinton, Ky.

—Smart, Doty & Co., succeed Sid Houston, Wartrace, Tenn.

Insect Powder.

One of the specialties of McCormick & Co., Baltimore, Md., is Dalmatian Insect Powder. They are said to be one of the largest importers and dealers in this particular drug. They import the flowers direct, and grind them at their own mill. They invite druggists who have never purchased insect powder from them to send for a free sample, and to compare the powder obtained from McCormick & Co., with that procured from other concerns. McCormick & Co.'s general offices are at 44 Charles street, Baltimore, Md.

Samples of Las Palmas Cigars, the special brand for druggists, free and prepaid to druggists who will send their address to Chas. Jacobs & Co., 333 E. 78th St., New York.

THE NORTHWEST.

St. Paul, Minn., July 19.

—Successions: The Taylor-Gardner Drug Co., Nora Springs, Ia., by the Taylor Drug Co.; Ellston Drug Co., Ellston, Ia., by T. J. Clark & Co.; W. A. Ballentine, Monona, Ia., by J. B. Drill & Co.; J. E. Hollister & Co., Erwin, S. D., by N. A. Nelson; Klingaman & Co., Dows, Ia., by O. B. Klingaman; A. E. Graves & Co., Ledyard, Ia., by O. L. Graves; E. P. Delander, Madrid, Ia., by E. P. Delander & Co.; Elerick Drug Co., Blakesburg, Ia., by Guy F. Hall.

—Recording the fact that a soda fountain in Missouri exploded the other day, killing one man and seriously injuring another, prompts the Minneapolis Journal paragrapher to observe: "Missourians, who have always shied at soft drinks, will be more timid than ever."

—Among the country trade visiting the wholesale houses this week are F. I. Barker, of Monticello; W. S. Savage, of Harris, and E. D. Holmes, of Havana, S. D.

—New: A. W. Swenson & Co., Maddock, N. D.; Clarence Crandall, Springville, Utah.

—Tim O'Keefe is now in East Grand Forks, Minn., working for Peterson & Sinclair.

—James Peterson has begun the manufacture of soda-water at Fargus Falls, Minn.

—C. E. Tranchell, Springville, Utah, and H. L. Swan, Waubay, S. D., have sold.

—Henry Heinzl has gone to work in Hanson's drug store, West Superior, Wis.

—The affairs of H. L. Arms, Hector, Minn., are in the hands of a trustee.

—Knapp & Co., Rock Valley, Ia., have given a bill of sale.

—Adolph Neuman has gone down into Iowa for a time.

—N. E. Berseng & Co., Eleva, Wis., have dissolved.

—Peter Engeldinger, Hedrick, Ia., will discontinue.

—C. A. Blair, Cherokee, Ia., has discontinued.

—Bernard Libemann has gone to Sisseton, S. D.

THE WORCESTER PLAN.

Worcester, Mass., July 16.

To the Editor:—The Era has done so much in furtherance of proprietary price protection that it is with reluctance that I attempt to controvert your article in the July 4th Era (page 2), pertaining to the Worcester Plan.

Your conjecture is that it would be detrimental to one proprietor if he were to protect the price of his goods if his competitors did not do the same.

In my letter of June 20, a copy of which was sent to you (See last week's Era, page 74—Ed.), I assumed that the price of a proprietary medicine is not the determining factor in its sale; that the merits of the medicine and the influence of the druggist have more to do in effecting sales than the cheapness of price. The soundness of this assumption almost any druggist could verify from daily experience or observation. Corroborative testimony can be obtained from the sale of non-medicinal proprietary goods, the purchase of which depends less on personal preference than the purchase of medicines. The proprietors of the E. & W. collar, the Shawknit Hose, and scores of other articles, did not delay fixing their prices until their competitors did so. Had they thus delayed, their prices would still be unfixed; nor have they failed to market their goods on account of competitors not following their example.

Very truly,
JAMES F. GUERIN.

Pharmacists who specify the "M. C. W." Morphine will make no mistake, as the article is of unquestionable purity, and as beautiful in appearance as any which has been brought to our notice. The Mallinckrodt Chemical Works announce that they supply it in the form of "Flakes" and "Cubes," and offer it at the lowest current prices.

MONTREAL.

Montreal, July 19.

—At this month's meeting of the new council of the Pharmaceutical Association the following officers were elected for the ensuing year: President, S. Lachance; first vice-president, J. E. Tremble; second vice-president, Harry Willis, of Quebec; treasurer, C. J. Coverntou; secretary-registrar, E. Muir; auditors, H. A. Gourlay and A. Goyette, with E. Duhi supervisor for Quebec. Board of Examiners: R. W. Williams, Alex. B. J. Moore, A. J. Laurence, W. H. Chapman, Henri Lanclot and J. Giroux, Jr.

—At the last meeting of the Retail Druggists' Association representatives of each of the wholesale houses were present on invitation of the retail council, the object being to cement a feeling of fellowship and good will between both and for any exchange of views which would further the interests of the entire drug trade in this province.

—Leeming, Miles & Co., who were recently burnt out, on St. Sulpice street, have now one of the finest warehouses and suite of offices in Montreal. Their new building, known as the Mussen block, occupies the northwest corner of Notre Dame street and St. Lambert's Hill, and is one of the busiest centers in the city.

—The many friends of A. J. Laurence will be pleased to hear that he is now convalescent, but will regret to learn that his physicians forbid him taking any active part in his pharmacy during the summer, as they consider a complete rest from business duties will be the only means of restoring him to health.

—Among the list of graduates of Montreal College of Pharmacy two have recently obtained accessory degrees, viz., G. St. Jacques, who has gained the diploma of Doctor of Pharmacy of the Philadelphia College of Pharmacy, and J. C. Sutherland, Bachelor of Arts from Queens College, Kingston.

—W. P. Watson, M. C. P., '86, apothecary to the Montreal General Hospital, has been appointed radiographer to that institution. He leaves shortly for a trip to Philadelphia, where he will study the subject of X-rays, the hospital having decided to get a complete outfit, with all the latest improvements.

—C. Nelson, of the Nelson, McPherson & Sutherland Drug Co., Vancouver, spent last week in the city. He is now on his way to England, where he intends purchasing goods for his company, which comprises six or eight pharmacies in British Columbia.

—The druggists of Westmount have acquiesced with the demands of the councillors of that suburb, and will keep their pharmacies open on Sunday for five hours only, during which hours prescriptions and necessary drugs will be sold exclusively.

—John Cuddy will for the future represent Lyman, Knox & Co. in the west end of the city, while the interests of the same firm will be looked after in the east end by Messrs. McGarrity and Lafreniere, late of Kerry, Watson & Co.

—Gilmour Bros., whose stock and building were completely destroyed during the great board of trade conflagration, are now completely settled at their new premises, on McGill street.

—S. Lachance, president of the Pharmaceutical Association, has gone on a trip to the old country. He intends visiting France and Germany ere he returns to Montreal.

—T. J. Quirk and J. H. Harte, two of our west end druggists, are spending a couple of weeks with their families at Notre Dame du Portage.

—A. D. Mann has been successful in having a branch post office placed in his west end pharmacy, corner of Tower and St. Catharine streets.

—W. Furze is at present spending a few weeks at New Glasgow, whether he has gone to recuperate, after his late illness.

—J. E. Brandt has gone to his country seat for a few weeks. J. C. Demault will be in charge during his absence.

—C. J. Coverntou is at present visiting relations in Ohio; he expects to return to work in August.

—The Magog pharmacy has again changed hands, and is now in charge of E. W. Prevost.

—J. W. Elcome has gone on a fortnight's vacation to Boston and Old Orchard Beach.

—J. Cavanagh, head clerk for John Lewis, is spending his vacation at Cornwall.

—J. S. Nicholle is preparing for a contemplated trip to England next month.

—R. H. Bryson is summering on his island, near Brockville.

MAINE PHARMACEUTICAL ASSOCIATION.

The Maine Pharmaceutical Association held its thirty-fourth annual meeting at Portland, July 9-11, some of the sessions being held at the Mt. Pleasant House, in the White Mountains. Fifteen applications for membership were received. President H. Boynton, of Biddeford, was unable to be present on account of illness, and his address was not read. The reports showed that eight members have died during the year, one had withdrawn and twenty-eight new members have been added, making an active membership of 281. Percy L. Lord, president of the Maine Commission of Pharmacy, reported that the board had examined 91 applicants for registration during the year. About 125 people joined in the excursion to the Mt. Pleasant House, White Mountains. The following papers were presented: "A Brief History of Cinchona," by J. F. Sanford, Lewiston; "Our Customers, How Shall We Treat Them So As to Increase Their Number," A. G. Gilmore; "Cinchona; History; Methods of Cultivation and Collection; Products and Alkaloids," E. T. Bowers, Lewiston.

The following officers were elected: President—F. R. Partridge, Augusta. Vice-Presidents—D. P. Moulton, Lewiston; F. T. Crane, Machias; G. W. Wiley, Bethel. Secretary—M. L. Porter, Danforth. Treasurer—W. A. Drew, Portland. Executive Committee—Five officers with George W. Dorr, Waterville; S. F. Clark, Portland. These delegates were appointed: New Hampshire Pharmaceutical Convention—Wm. D. Grace, Portsmouth, N. H.; E. C. Marr, Farmington, Me.; J. B. Stover, Bucksport, Vermont Pharmaceutical Association—G. R. Wiley, Bethel; F. R. Buck, Bingham; D. M. Moody, Boothbay, Connecticut Pharmaceutical Association—A. M. Robinson, Bangor; W. F. Norcross; A. H. Snow, Damariscotta, National Wholesale Druggists' Association—Charles Cook, Portland; George L. Fogg, Portland; C. Swett, Bangor. Proprietary Association—A. S. Hinds, Portland; C. M. Hay, Portland; E. C. True, Auburn. National Retail Druggists' Association—D. W. Heseltine, Portland; M. L. Porter, Danforth. Committees on Drug Market—H. B. Fennell, B. R. Lane, J. E. Gould, Portland. Pharmacy—D. W. Heseltine, Percy L. Lord, Calais; J. F. Young, Augusta. Legislation—Seth Wakefield, Lewiston; S. S. Lighthody, Waterville. Papers—L. B. Swett, Bath; W. C. Gawkes, Waterville; Ernest Jordan, Auburn.

Dr. Garst, of the Pheno-Caffein Co., was present during the session, and addressed the members on the "Worcester Plan," and the association passed resolutions favoring its adoption by manufacturers. The entertainment features included various athletic sports, carriage drives among the mountains, and an informal reception and ball at the Mt. Pleasant House. The time and place for holding the next annual meeting was left to be selected by the executive committee.

—The Iowa Board of Pharmacy, at its recent meeting, granted certificates of registration to D. W. Carey, Red Oak; James T. Burns, Eddyville; John W. Schott, Council Bluffs; Geo. L. Keamie, Story City; Earl Hill, Mt. Vernon; T. C. S. Cooper, Ogden; M. W. Head, Imogene; J. A. Maics, Luxemburg; Peter J. Dustee, Remsen; Harry T. Patten, Clearfield; Charles W. McGuare, Iowa City, and J. J. Underwood, Sharpburg.

BOOK REVIEWS.

SELECT METHODS IN FOOD ANALYSIS.—By Henry Lettmann, A. M., M. D., professor of chemistry and Toxicology in the Woman's Medical College of Pennsylvania, etc., and William Beam, A. M., M. D., formerly chief chemist of the Baltimore and Ohio Railroad, 8vo., 823 pages, 63 illustrations, cloth, \$2.50 net. Philadelphia, P. Blackiston's Son & Co.

The publication of this book fills a long-felt need, and will find a warm welcome among analysts. As a work on food analysis it is a storehouse of information, not only for the analyst and chemist, but also for the physician and the surgeon. While the book is intended for the needs of practicing analysts and advanced students in applied chemistry, it is not beyond the student with some knowledge of laboratory and analytical methods, for the fact that a great many physical and chemical methods are "described in detail to assist in securing uniformity of operation." Special attention is given to the detection of preservatives, artificial colors, and poisonous metals in foods, but the effects of, and means of controlling, food adulteration, being considered out of the province of the analyst, have been omitted. While the work is brevity itself, it covers a wide field by making appropriate deletions, the hiatuses thus made to be filled by the judgment of the student. This book should and will eventually find a place in the working library of every analyst.

THE VALUE OF THE CACTUS.

In southwestern America, in Arizona, Nevada and southern California in particular, there is a wide stretch of arid, sandy desert land, consisting of plain and foot hill, which, according to the saying popular in the West, "will raise nothing but sand and cactus," says the Mexican Herald. Formerly this arid district was much larger than now, but irrigation has taken away the terrors of some portions of it, and the reclaimed districts have been made to blossom like the rose. But great stretches of the original desert, hundreds of square miles in extent, still remain, on which nothing will grow but the various kinds of cactus.

For so many years has the word cactus conveyed to the minds of Americans the idea of something utterly worthless that it is only now, after decades of familiarity, the residents of southwestern America are beginning to realize that in the cactus they have a potential source of immense wealth. Almost daily are new uses being found for the products of the cactus, and the possibility of cultivating the plant is being seriously considered. Although the different kinds of cactus are found in fair abundance all over the great desert, nowhere do they grow in luxuriance. When propagated, however, by cuttings or seed, they grow readily, and the raising of a large crop of cactus would be quite feasible if earnestly undertaken.

There are in the southwest more than 500 different cacti, but the principal are the giant cactus, the Opuntia tuna, or cochineal cactus; the yucca, the barrel cactus, and the maguay, or agave. They are all grotesque in appearance, being of almost any conceivable shape. The giant cactus has some branches that reach upward and some that droop. The barrel cactus consists of a thick stem covered with thorns or spines. The yucca looks like a stunted oak, with bunches of spines at the end of the branches, while the maguay consists of a series of great, flat, spiny blades, issuing from a central bulb.

The commercial value of the giant cactus lies in its adaptability to use as paper-making material. With criminal heedlessness Americans have been feeding into the insatiable maws of the paper machines whole forests of trees from all parts of the country, and the denudation of several States is threatened. The giant and other cacti supply a way out of the difficulty of finding suitable paper-making material, since their fibres are in many cases admirably suited to the purpose. The cost would be much lower than that of any other material.

The principal peculiarity of the yucca lies in the character of its wood, which possesses no grain, but consists of an intricate and compactly interwoven mass of

wood fibres. An inventive Yankee has discovered that the yucca weed can be molded into any shape with good results, and he is utilizing his discovery in the manufacture of surgeon splints and other articles. The fibres of the yucca are also peculiarly adapted to the manufacture of an indestructible variety of paper invaluable in the printing of bonds.

When in bloom the cacti bear beautiful blossoms and some of them edible fruits. The giant cactus especially produces a delicious fruit, from the crimson pulp of which the Indians have for centuries made preserves of great excellence. That of the cochineal cactus, or opuntia tuna, is possessed of certain medicinal virtues, being used to allay fever and as remedy for ulcers. From it also a valuable pigment is manufactured. The cochineal cactus is so-called because on it are raised the valuable cochineal dye insects. The fruit of the tuna is known as the prickly pear, or Indian fig, and is highly esteemed in southern Europe, the Canary Islands and Northern Africa.

COLORADO PHARMACISTS.

The Colorado Pharmacal Association held its twelfth annual meeting at the Cliff House, Manitou, June 19 and 20. In his annual address the retiring president, Chas. D. Barnes, of Denver, endorsed the work of the N. A. R. D., and deplored the enactment of the recent law requiring druggists to pay a State liquor tax of \$25. A number of interesting papers were discussed at the meeting. Telegrams of congratulation were sent to the Colorado Medical Society, in session at Denver, and to the Missouri Pharmaceutical Association, which was holding its annual meeting at the same time in Pertle Springs, Mo. The following officers were elected for the coming year: W. L. Shockey, Cripple Creek, president; D. Y. Wheeler, Denver, first vice-president; F. F. Witting, Denver, second vice-president; Chas. E. Ward, Denver, permanent secretary; H. F. McCrea, local secretary; J. P. Fezer, treasurer. The next meeting will be held in June, 1902, at Denver, the exact date to be decided by the executive committee. The attendance was not as large as that of some previous meetings, although considerable interest was displayed by those taking part in the deliberations, and a number of applications for membership were received. Considerable credit is due to the ladies auxiliary association, or the "Silent Partners," which contributed to the social features of the meeting.

—At the examination, held by the Illinois Board of Pharmacy, in Springfield, July 9 and 10, the following passed as registered pharmacists: M. Blumenthal, W. Pauls, E. Hoernig, J. C. Krittenbrink, M. A. Levering, F. C. W. Meyneke, F. L. Newman, A. H. Schulze, all of Chicago; E. C. Corgan, Tamaroa; W. Downey, Wenona; E. Eyedett, Jr., Atkinson; H. W. Giese, Bloomington; J. A. Houser, West Salem; A. J. Leonard, Chicago Heights; F. M. Leslie, Manito; G. T. Mason, Springfield; F. A. O'Connor, Evanston; E. Peyton, Pinckneyville; F. L. Pfaff, Centralia; C. O. Schlueter, East St. Louis; J. Wilber Tudor, Homer. Assistants—C. H. Althoff, Quincy; J. F. Becker, Freeburg; W. S. Denton, Taylorville; A. Platt, Decatur; F. Simpson, Vienna; I. E. Trace, Chicago; W. C. Wich, Quincy.

The Board of Pharmacy desire to have it distinctly understood that no applicant who has gained his experience in Illinois drug stores will be examined or given an interview until after being regularly registered as an apprentice, and under the new law it is now the imperative duty of the registered pharmacist to see that his apprentice is registered. The next meeting for examination will be held at 144 East 39th street, Chicago, September 24, 1901, at 9 a. m. New applications must be on file in the office at Springfield at least ten days previous to the above date. Under no circumstances will this rule be varied from, and no one will be given the examination who has not complied fully with these requirements. Affidavits from registered pharmacists of time service must be filed at least three days before the examination. Address all communications to L. T. Hoy, Secretary, Springfield, Ill.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued July 16, 1901.

- 678,368.—Edward E. Murphy, Revere, Mass., assignor to New Era Carbonator Company, Charleston, W. Va. Carbonating apparatus.
- 678,399.—Benjamin F. Hays, assignor to H. N. Fraser, New York, N. Y. Machine for coating tablets.
- 678,400.—John A. Hoeg, Christiania, Norway. Distributing-box for powders.
- 678,401.—Fritz Hofman, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y. Salicylic ether of quinin.
- 678,502.—Robert Long, assignor to J. J. McLaughlin, Toronto, Canada. Siphon-filler.
- 678,526.—Charles P. Stewart, Oakland, Cal. Apparatus for the recovery of gold from cyanid solutions.
- 678,568.—Richard J. Hughes, Decham, Wis. Syringe.
- 678,594.—John W. Tully, Kansas City, Mo. Case for tooth-brushes.
- 678,704.—Frank M. Weil, assignor of one-half to E. G. Bowman, Monmouth, Ill. Non-resalable bottle.
- 678,724.—Louis Gangloff, Hagerau, Germany. Apparatus for Pasteurizing liquids in bottles.
- 678,732.—Charles M. Hall, Niagara Falls, N. Y. Purifying bauxite.
- 678,773.—James Coomber, Chicago, assignor, by mesne assignments, of one-half to A. Krieg, Freeport, Ill. Cork-extractor.
- 678,833.—Patrick P. Cassidy, assignor to Boston Bottle Wiring and Labeling Company, Boston Mass. Bottle-labeling machine.
- 678,848.—Joseph Kroulik, Rochester, N. Y. Binocular microscope.

TRADE-MARKS.

Registered July 16, 1901.

- 36,744.—Certain Named Medical Compounds and Toilet Preparations. Victor Bergwall, Worcester, Mass. The word "Cassinett."
- 36,745.—Hair-Tonic or Hair-renewer. Samuel Allen Richmond, San Francisco, Cal. The word "Parasifine."
- 36,746.—Proprietary Medicine. Oklahoma Drug Co., Oklahoma City, Okla. The trade-name "Quin-India."
- 36,747.—Tonic. Knoll & Co., Ludwigshafen, Germany.
- 36,748.—Tonic. Andrew McNally, Chicago, Ill., and La Muada, Cal. The word "Kito."
- 36,749.—Remedy for a Certain Named Disease. Verus Pile Cure Company, Los Angeles, Cal. The word "Verus."
- 36,750.—Remedy for Asthma. Ella M. Barton, Poughkeepsie, N. Y. The representation of a pen of fire and a seal.
- 36,751.—Remedy for Indigestion. Harry Clinton Hill, Buffalo, N. Y. The letters "P I C."
- 36,752.—Certain Named Medical Preparation. The Geer Drug Co., Charleston, S. C. The word "Bromalgia."
- 36,753.—Certain Named Medical Compounds. Burg Chadwick, Smethport and Bradford, Pa. The facsimile of the Registrant's signature.
- 36,755.—Medical Compounds for Internal Use. The Recco Pharmacal Co., Worcester, Mass. The word "Reposia."
- 36,756.—Rheumatism and Kidney Cure. John W. Trefry, Yarmouth, Canada. The representation of a bouquet of flowers of clover, dandelion, and thistle, with their roots.
- 36,757.—Drug for the Treatment of Drunkenness and Drug Habit. Vincent Newton Turvey, London, England. The word "Tacquaru."

36,770.—Certain Named Perfumery. The George Lorenz Company, East Orange, N. J., and Toledo, Ohio. The word "Triumph."

LABELS.

Registered July 16, 1901.

- 8,541.—Title: "Pepsino." (For a Breath Perfume.) The Pepsino Co., Covington, Ky. Filed June 12, 1901.
- 8,542.—Title: "Slaters' Australian Rheumatism Cure." (For a Medicine.) Arthur Slater, New Decatur, Ala. Filed June 3, 1901.
- 8,543.—Title: "Canadian Herbs." (For a Medicine.) Herrick Howitt Roche, Kingston, Canada. Filed June 21, 1901.

DESIGNS.

- 34,770.—Inhaler. John J. McPherson, Montgomery, Ala. Filed April 29, 1901. Serial No. 58,092. Term of patent 7 years. The design for an inhaler.
- 34,782.—Bottle-Filling Nozzle. John H. Fox, New York, N. Y. Filed April 20, 1901. Serial No. 56,738. Term of patent 7 years. The design for a bottle-filling nozzle.
- 34,783.—Bottle. John Schies, Anderson, Ind. Filed June 12, 1901. Serial No. 64,353. Term of patent 14 years, 1901. Serial No. 64,358. Term of patent 14 years. The design for a bottle.
- 34,784.—Bottle. Frank MacMonnies, New York, N. Y. Filed June 14, 1901. Serial No. 64,355. Term of patent 14 years. The design for a bottle.

THE GOODYEAR TIRE & RUBBER CO.
EAST AKRON STATION
AKRON, OHIO.

A New Departure.

Lehn & Fink, the wholesale druggists and manufacturing chemists, of this city, have recently inaugurated a Sundries Department. The plans for its operation are conceived and executed in accordance with their established standard. Particular attention is being given to high-grade bristle goods—hair, nail and tooth brushes,—to Chamois SKINS, Suspensory Bandages, tin boxes, ointment jars, etc.

Among the specialties that are at present attracting an uncommonly wide circle of proper attention one of the most interesting and useful is "The Holdfast," a rubber shower-bath spray that stays on. It is adjustable to any style of faucet, and so constructed that the pressure of the water only tightens its grip. There is an increasing tendency among physicians nowadays to recommend cold baths, along with cutaneous friction, for all nervous ailments. The best method of combining these two elements of treatment is by applying a swift spray to the body, the force of the stream acting as a substitute for rubbing of the skin. Therefore, shower-bath sprays are to be considered among modern therapeutic agents. They expel effete matter from the cuticle and impart to it a salutary stimulation. In cleansing the hair and scalp their efficacy is incomparable. Hitherto the use of shower-bath sprays has been limited, because of the annoyance they caused by repeatedly becoming detached. Henceforth, however, we may know the luxury of an invigorating shower-bath and a penetrating shampoo without stopping every now and then to replace the rubber tube on the faucet, for the Holdfast does not come off so long as the water is running. It has fulfilled a long-felt desideratum.

The Relation of Fixtures to Business Success.

In his announcement in this issue Mr. Bangs calls attention to the progressive spirit of the present generation, and to the fact that every person who lives by and with a community must follow or lead the spirit of that community. Mr. Bangs specially points out the fact that the druggist who tries to get along with a poorly fitted store is badly handicapped in the race for success. He does not claim that the fixtures will take the place of ability and energy, but intimates that one of the signs of great ability is the power of perceiving the necessity of utilizing every facility that leads to easier roads. He claims that a druggist with an attractively fitted store, but who possesses no better general education or pharmaceutical training than his competitor whose store is poorly fitted will travel much more quickly and easily to the goal of success. Unquestionably, Mr. Bangs is right. Druggists who contemplate additions to or changes in their store fixtures should write to C. H. Bangs, President, C. H. Bangs' Druggists Fixtures Co., Jewelers' Bldg., Boston, Mass.

A New Nail and Corn File.

This little article possesses many desirable features not usually found in so small a file. It is made of cold-rolled steel, tempered very hard, yet it is fairly flexible and not liable to fracture. The ends are beveled and polished, making it a most excellent manicure instrument. It may also be used to take the place of sand paper files, which have lately come into vogue for filing corners. Each file is in a leatherette case, which come one dozen on an easel. They retail at 10 cents, and the druggist pays 75 cents a dozen for them. They are manufactured by J. C. Kenyon, Owego, N. Y.

Profitable Preparations.

The proprietary preparations made by the P. L. Abbey Co., Kalamazoo, Mich., are well known as those on which the druggist can make a most excellent profit. They are goods which sell well, which please the customer, and which induce second orders. Price list is sent to any druggist who will write for one. Kalamazoo is the center of the celery growing district of the United States, and preparations of celery made in Kalamazoo have a world-wide reputation.

—At the recent meeting of the Wisconsin Board of Pharmacy, held at Manitowoc, W. R. Klingholz, Manitowoc, and W. F. Diedrich, Ripon, were given licentiate certificates, and G. W. Douglas, of Norwalk, was licensed as a registered pharmacist. Assistants' licenses were granted to C. H. Barnstein, Manitowoc; J. B. Bardowski, Milwaukee; O. H. Herman, New London; N. F. Ptak, St. John, Janesville; P. A. Born, Sheboygan; S. F. Htat, Milwaukee, and C. Zechel, Manitowoc. Registration certificates were granted to C. H. Welty, Milwaukee, and H. Giltzenonner, of La Crosse, both registered pharmacists from Iowa. Two cases are pending in Marinette county against dealers, Dr. J. R. Currens, of Two Rivers, President of the State Board of Medical Examiners, was present at the meeting.

INDEX TO THIS NUMBER.

URINALYSIS FOR THE PHARMACIST.

One of the most valuable diagnostic agencies at the command of the physician is the analysis of urine. This secretion not only serves to carry off the normal effete and exhausted products of the system's activity, but gives quick notification of morbid changes, of alteration in tissues and fluids and malassimilation of nutriment, giving instant alarm of dangerous conditions prevailing or likely to prevail. Variations in the proportions of normal constituents in the urine and the presence, character and quantity of abnormalites must be known to the physician if he is to intelligently and successfully combat disease. By life insurance companies urine analysis is, and justly, regarded as a factor of prime importance in determining the advisability of a risk.

But the analysis, who is to conduct it? The physician, in his daily round of activity and responsibilities, finds it difficult, even impossible, to personally make the examination, and must call upon some one qualified and who has the necessary facilities and time to do the work for him. Here is where the pharmacist comes in, and many have grasped the opportunity and succeeded in building up a very remunerative little business in this line of professional work. Aside however, from the financial reward which may be secured, the pharmacist is peculiarly the one who should do this work, and who is the one best fitted for it by his professional training and relation to the medical man. The pharmacist is the physician's right hand in many another capacity, why not in this? He knows more chemistry than the doctor, he need not be biased

by personal knowledge of the patient under treatment, he can draw his conclusions from the facts he discovers during the analysis, and from these alone. He is not bothered or influenced by any knowledge of the patient's idiosyncrasies or habits of life and diet. His report, because of all this, is the more reliable. The great number of papers on this subject which have appeared in pharmaceutical literature within the past few years evidence the interest that has been taken in the work by many successful pharmacists. They all say it has been a most satisfactory means of increasing their revenues and one of the ways of advancing their standing in the community.

THE CALIFORNIA PHARMACY LAW.

Pharmacists in California are very much interested as the present time in discussing the constitutionality of the pharmacy law enacted by the legislature of that State and approved March 15. Those who are opposed to the law give as reasons for their opposition that the law discriminates, in that, while retail druggists and their clerks, as the handlers of poisons and the compounders of prescriptions, are compelled under its provisions to be registered as pharmacists, there is no provision whatever for the registration of wholesalers and their clerks. And while the retailers employ none but graduates in pharmacy, or men expert through long years of experience in the handling of prescriptions and familiar with chemicals and their combinations, the wholesalers, it is claimed, in many cases employ boys and cheap assistants. Those opposed to the law claim that the mixtures of the wholesale dealer reach as many or more sickbeds than the prescriptions put up behind the prescription counter by graduates in pharmacy.

Another reason for opposition to the law by some is in the matter of collecting back fees. Under the old pharmacy law, repealed by the passage of the present act, there was a certain laxity in the collection of registration fees, and many druggists, it seems, allowed their fees to fall into arrears, not through inability or unwillingness to pay, but simply because the secretary of the old board did not make sharp collections. It has been ruled by the new board that all such men who are in arrears under the old law must, before they are registered under the new, make up such arrears, or else submit to a new examination by the State board before they will be registered and permitted to practice their profession in California. These individuals claim that the hardship in this lies not in the exaction of the money, which is a small matter, but in the compelling of men who have committed no fault to take time from their business to

cram for an examination, which might do either for school boys with no practical knowledge, but which also might stump the more expert pharmacist who had not kept up with his studies. Under the new law graduates in pharmacy are compelled to take the examination the same as other individuals, and of course this causes dissatisfaction with some.

In reading over the law we have come to the conclusion that in the main, it is a good one, and it is to be hoped that it will be given a trial. Only thoroughly experienced men should be allowed to practice pharmacy, and the new law seems to provide for these.

AN ENGLISH DECISION IN THE CUT-RATE PROBLEM.

An interesting decision regarding the cut-rate problem has just been handed down in England, which is virtually collateral with the American decision in the Pheno-Caffeine cases. An English manufacturer sold some of his products to a jobber who gave a required written agreement not to job to cutters, but to require of the retailers to whom he would sell the goods a similar signed agreement to maintain prices, nor himself to sell below a certain figure. The jobber violated the contract by selling some of the products in question to a retailer of whom he did not demand an agreement to uphold the stipulated range of retail prices. The manufacturer immediately brought suit against the jobber for an injunction to restrain him from selling the goods below the stipulated price, and also for damages from both the jobber and the retailer. The decision of the judge, in effect, was that, despite the defendant's contention to the contrary, the contract between the manufacturer and the jobber was valid, and that the jobber violated it by failing to require of the retailer the required agreement regarding retail prices. But the judge would not grant an injunction as to past action nor as to future, but informed the plaintiff that his only remedy lay with himself—refusing to sell goods to the defendant. This brought the suit down to a question of damages, admittedly merely nominal. As to the suit against the retailer, the action failed. The judge said that the plaintiff could sue only on a contract, and there existed none between him and the defendant. While the suit for an injunction failed, the fact that the contract in the eyes of the law was valid is an ample justification of the manufacturer, and will serve as a notable precedent.

PHYSICIANS AS PHARMACISTS.

In the report of the secretary of the Missouri Board of Pharmacy, read at the recent meeting of the State Pharmaceutical Association, the statement was made that during the few months in which physicians were allowed to register as pharmacists on their medical diplomas 2,242 physicians had been granted certificates. This state of affairs seems to call for a few words of comment. The law for licensing pharmacists to sell drugs is designed to protect and sustain that business, not to hamper it. It is to protect the public against incompetency, and to protect the pharmacist against the professionally unqualified. A certain class of physicians of Missouri is not different from a similar class in other states. There

has always been a lot of these fellows clamoring for the privilege of entering the drug business. There can be no objection to this, provided they prove their competency as pharmacists. Any man possessed of a thorough knowledge of his calling has a feeling of confidence in his ability, and fears no examination to ascertain his qualification. It is the incompetent who fears the examination, and it is he who tries to sneak in by the back door. The training obtained by the medical student and the practitioner is not of a pharmaceutical nature, and this fact is appreciated by worthy followers of the profession of medicine. They realize that for the proper compounding of a prescription is needed knowledge of a kind different from that embodied in the ability to correctly write it. The study of the effect of drugs is very different from the study of drugs themselves.

THE LATEST COLLEGE YELL.

We believe it was Dr. Holland who remarked that he trembled to think how many entered the medical profession because they had neither piety enough for preaching nor brains enough to practice law. He even felt so badly, it is said, that he heaved a sigh for the human race when he thought of the great army of little men yearly commissioned to go forth into the world with a case of sharp knives in one hand, and a magazine of drugs in the other. The good doctor was generally sound in most of his reasoning, and argued that there must be something conditionally wrong with our educational system or our political institutions to produce such a condition. But how would the following have influenced him?

"Well man, sick man, dead man—stiff!
Dig 'em up, cut 'em up—what's the diff?
Humorous, tumorous, blood and gore!
Syracuse medicos, 1904!"

This may seem to some like an exercise in onomatopoeia, where the sound of the words bears a resemblance to the signification; but it is not. It is the college yell adopted by the medical students of Syracuse University, and which comes to us via San Francisco.

FAILURES IN THE DRUG BUSINESS.

In a recent issue of Dun's Review is given some statistical information of business failures according to occupation, and also to size, for the second quarter of the year, April to June inclusive. This record is most instructive, for an aggregate of liabilities or a number of mercantile defaults has value, indicating in a general way the condition of business. Thus, there were 11 failures of manufacturers of chemicals, drugs and paints, against 10 for the same period in 1900; 9 in 1899; 14 in 1898 and 14 in 1897. The liabilities for these failures were \$270,459 in 1901; \$299,629 in 1900; \$329,100 in 1899; \$117,626 in 1898 and \$111,525 in 1897, or an average of \$24,587 for each failure. Among dealers in drugs and paints there were for the same period 71 failures in 1901; 59 in 1900; 62 in 1899; 95 in 1898 and 107 in 1897. The liabilities were \$308,330 in 1901; \$310,426 in 1900; \$347,356 in 1899; \$416,880 in 1898 and \$526,877 in 1897, or an average of \$4,342 for each failure. These figures may be taken to indicate a comparatively prosperous condition of business throughout the country.

Laboratory Notes.

THIS DEPARTMENT is designed to afford an avenue to publicity for the large amount of valuable scientific material to be found in the laboratories of the pharmaceutical manufacturing houses, but which heretofore has not been published because of lack of suitable facilities. Investigators in these houses are continually gaining information, making discoveries, improving processes, testing trade commodities, making scientific investigations, etc., in the line of their daily work, which are not strictly trade secrets, but which, on the contrary, if given for publication, would prove of great utility.

The department also includes results of investigations by the individual pharmacist, chemist, teacher, or experimenter which have a direct bearing upon pharmaceutical progress. Short notes and paragraphs relating to simple processes, solutions of practical problems, improvements in manipulation, etc., are especially desired, and every one is invited to contribute.

All contributions are printed with full credit to those making them.

DETANNATED FLUID EXTRACT OF CINCHONA.

Recently we had occasion to examine some of the market preparations of cinchona, and were rather surprised at what was furnished for fluid extract of cinchona detannated.

Of the three different makes examined only one gave evidence of having been prepared directly from the drug, and this one was sadly deficient in its alkaloid content.

Below are tabulated the results obtained:

No.	Alkaloids.	Tannin.	Sulphates.	Chlorides.
1 5.23 per cent.	Absent	Present
2 4.45 per cent.	Absent	Present
3 0.50 per cent.	Present	Absent	Absent

No. 1 was of a deep red-brown color, and was both artificially colored and flavored.

No. 2 was of an amber color and possessed a purely alcoholic odor, having none of the characteristic aroma of the bark.

No. 3 was of a deep greenish-brown color, had a pronounced acid reaction, and a peculiar odor somewhat suggestive of pyroigneous acid.

In addition to this there was present iron, probably held in solution as a tannate by the acid present, some of the organic acids possessing this property.

NOTE ON CERTAIN PRECAUTIONS IN WEIGHING GLASS CONTAINERS.

The tare of a glass beaker or flask is generally assumed to be an absolutely constant quantity. It must be verified from time to time on account of the possibility of loss of substance through abrasion, but under ordinary usage and losses should be infinitesimally small.

Not long since, when verifying the weights of some tared beakers that had been recently washed and dried by wiping, in order to make sure that they were thoroughly dry, I wiped them carefully again immediately before weighing them.

In each case the beaker was found to have lost apparently from two to four milligrams in weight. On weighing after an interval of half an hour, the beakers were found to have regained their ordinary weight.

I have since made the experiment repeatedly, and generally with the same result. The beaker may have been kept for some time in a desiccator before weighing; still, wiping would seem to lower its weight. If placed in the desiccator again for fifteen or twenty minutes the weight would come back to normal.

I cannot be sure that the change in weight is not due solely to warming of the beaker by friction during the wiping. One would not expect so marked an

effect from this cause, and yet it would be safer always to assume that such a change had taken place and allow time for the beaker to come to the room temperature before weighing.

However, while experimenting on the effect of wiping dishes, I discovered that it was possible to produce electrical disturbances which affected their apparent weight to a much greater extent than is liable to occur from any possible warming by friction. A small beaker electrified by wiping with a silk handkerchief apparently gained in weight fully 50 milligrams. In dry weather in winter merely passing the coat sleeve over the surface of a beaker, as one may do thoughtlessly, or to remove possible particles of dust or sand, may cause sufficient electrical disturbance to affect the weight notably.

The point to bear in mind is that when it is necessary for any reason to wipe a glass container that is to be weighed, it should be allowed to stand afterwards at least ten minutes before it is put on the balance.

It is not an uncommon thing to find that organic substances become spontaneously electrified when dried. I have observed this especially in quinine sulphate. It is easy to see how erroneous results of weighings of such substances may occur.

Further experiments will be made to ascertain whether the loss of weight that occurs in wiping glass containers with an ordinary towel is due to change of temperature simply, or to some other cause.

ASSAY OF FLUID EXTRACT ACONITE ROOT.

In No. 26, Vol. XXV. of the Era, Lyman F. Kebler recommends a method for assaying aconite root and leaves, by extracting the drug with lighter ether-chloroform and ammonia. We also have applied this method as well to the drug as to its preparations for several years, but instead of using 10 per cent. ammonia water we later on used 5 per cent. sodium bicarbonate solution for liberating the alkaloid, as we found that in applying the latter, the resulting amount of alkaloid was somewhat higher, probably due to a partial decomposition of aconitine when using caustic alkali.

For assaying the fluid extract the following process was used: 10 Cc. of the extract was mixed with about 5 gr. of oak saw-dust, and the alcohol removed by moderate heat. The saw-dust was then transferred to a 6-oz. bottle, 75 Cc. of ether, 25 Cc. of chloroform and 10 Cc. of a 5 per cent. sodium bicarbonate solution added, and the mixture shaken well for some minutes. After standing for 2-3 hours, the mixture was shaken once more, and after becoming clear 50

Cc. of the fluid were poured into a separator and shaken with three successive portions of 25, 20 and 15 Cc. of 2 per cent. sulphuric acid. The combined acid solutions were rendered slightly alkaline with ammonia water, and shaken with three portions of 30, 20 and 15 Cc. of a chloroform-ether mixture (equal volumes). The chloroform-ether was evaporated at a low temperature, and the residue, after treating it twice with ether to expel last traces of ammonia, was titrated in the usual way with decinormal sulphuric acid and centinormal caustic potash, using hæmatoxylin as indicator.

The same results were obtained when using for extraction amylic alcohol instead of ether-chloroform. The resulting alkaloid was very pure, light yellow in color, and of a varnish-like consistence.

As a third method, Prollius' fluid was used as menstruum. This, however, cannot be recommended, as the results are much lower than by extracting with ether-chloroform or with amylic alcohol. The average results of several assays of the same fluid extract were:

- I. Ether-chloroform extraction.....0.735 per cent.
- II. Amylic alcohol extraction.....0.735 per cent.
- III. Prollius' fluid extraction.....0.696 per cent.

A method to determine the aconitine by the amount of acetic acid obtained by hydrolysis was worked out in this laboratory some years ago, but without any satisfactory results.

The methods above apply equally well to fluid extract of aconite leaves.

Baltimore. H. ENGELHARDT.

AN ADULTERATED PENNYROYAL OIL.

In connection with the investigation of the chemical composition of the oil of *Pycnanthemum lanceolatum* Pursh. (Pharm. Review, 16, p. 414.), Mr. F. W. Alden had occasion to examine a sample of pennyroyal oil that had been purchased for the purpose of making pulegoneoxime. The oil was labeled "Oil, Pennyroyal, Discolored," by the druggist, but should have been labeled "grossly adulterated" as well. Its specific gravity was 0.960, whereas the U.S.P. requires 0.93 to 0.94. Besides being a thick liquid it was so dark that the angle of rotation could not be determined.

Before distillation with water vapor 57 per cent. of volatile products were obtained, a residue of 42.6 per cent. remaining in the flask. By means of the Prussian blue test the presence of iron in the residue was ascertained. This was probably the cause, in part at least, of the dark color of the oil. The oily distillate had a sp. gr. of 0.8843 and a rotatory power of +9° 27 min. The rotatory power of the oil, according to G.II.&K... "Volatile Oils", p. 618, varies from +18° to +22°. The low specific gravity with a noticeable odor of turpentine readily indicated at least one of the adulterants.

The oily distillate, about 35gm., upon fractionation yielded the following results:

Fraction 155-165°	15 ccm.
Fraction 165-175°	7 ccm.
Fraction 175-188°	4 ccm.

The first fraction was dextrogyrate 9° 57 min., sp. gr. 0.8678. Further evidence of its being turpentine oil was brought by the chemical test for pinene: To a mixture of 5 ccm. of the fraction with 5 ccm. of glacial acetic acid and 6 ccm. ethyl nitrite, kept cold in a freezing mixture, a mixture of 3 ccm. concentrated hydrochloric acid with 3 ccm. glacial acetic acid was slowly added with constant agitation. The white precipitate which resulted was removed with the aid of a force filter, and washed with methyl alcohol. It was then digested with an alcoholic solution of potassa for about half an hour, the mixture poured into ice water, neutralized and the precipitate filtered. It was further purified by steam distillation and dried in a desiccator. The melting point of this substance and that of nitro-pinene, taken side by side, agreed.

In as much as pinene is not a constituent of pennyroyal oil, it may be assumed beyond doubt that tur-

pentine oil had been added as an adulterant. The amount of pinene present, together with the resinous residue upon steam distillation (42.6 per cent.) led one to suppose that the "discolored pennyroyal oil" in question was nothing more or less than a solution of rosin in turpentine oil, flavored with some pennyroyal oil. The storage of such a product in tin cans (hence the iron and color), is but in keeping with its composition.

SHOP TALK.

Said a New York druggist the other day, "The photographic side line is doing better this season than for several years' past. My sales for June and the part of July we have passed are fully double what they were in the corresponding time last year. This I attribute partly to the revival of the 'camera fend' and the decadence of the 'wheel crank', and partly, to the fact that I took opportunity, like time, by the forelock. I have rigged up a dark room over there in the corner where amateurs can develop their plates and refill their plate-holders, and so on. My only charge for the use of the dark room is for the developer, and," he said with a smile, "I assure you that is no insignificant part of my revenue in this line. I have advertised this convenience in neat little circulars, and also that I will do the finishing myself charging but moderately for it. O, yes, I am very well satisfied with the photographic side-line. The little circulars I got out were really neat. I made some photographs of very pretty country views, and they were really good. You know, I'm graduated out of the amateur stage. I took great pains in finishing the photographs and then had an excellent half-tone cut made of each view. These cuts incorporated into my circulars made fetching ads, and well—I'm reaping as I've sown."

* * *

A large sign with the word "Morgue" on it in a drug-store window is gruesomely suggestive and sufficient to hold the attention of the least curious of persons. A Harlem druggist has a most striking display of which the "Morgue" sign is a feature. In the front of the window are a number of bottles containing what a neat card attached to them calls "sure death to insects of all kinds," and proceeds to enumerate a various and long list of them. Behind this, on a little platform are ranged a score or more of bugs and other insects upon their backs. They were composed, apparently, some of wood and others of stamped tin, all colored and having a fair resemblance to the originals which they were intended to represent, and ranging in size from about one to three inches in length—mammoth of their kind. This was the morgue. Each "corpse" had a little sign attached to it, on one of which was written, "Identified—Name, Mr. Bedbug, Address, Our Bedstead"; and on another, "Mr. Cockroach, Our Kitchen"; and so on through the whole range of insect pests, not omitting the Jersey Mosquito.

* * *

According to a story that comes from a town in Southern Minnesota, two rival druggists there recently gave each other little love taps quite original in character. One of them, J. Doe, slyly tampered with the drugs of the other, R. Roe, substituting an astringent for a cathartic. The consequence was that many cures were brought down upon the heads of the physicians who got their drugs from Roe. Before long Roe barred the truth and found who the author of the mischief was. One day, not long after, a customer while in Doe's store called his attention to the fact that in the big sign outside, "J. Doe, Pharmaceutical Chemist," somebody had changed the "J" in chemist to an "e." And J. Doe didn't have to advertise or employ a detective to find out "who did it."

BUSINESS PHARMACY.

The Experience of Druggists with Profit-Bringing Methods. Hints and Suggestions. Original Papers from Practical Business Druggists. The Various Phases of Drug-Store Management and Economy.

SUGGESTIONS FOR THE DRUGGIST.

By NORTH CAROLINIAN.

If one were to attempt to write under the above title without saying something that has already been said in the Era he would be forced to search about considerably in order to get material to begin with. Repetition of "business pointers" and suggestions will do none of us any harm. I think it would be a good thing for all of us to save the different articles that have appeared in this journal under the head of "Business Pharmacy," and read them from time to time. It would surely be of an incalculable amount of benefit to us.

There are a lot of small things that go to make up a progressive drug store. I fully believe that it is absolutely necessary for the successful druggist to be a master of all details of the drug store.

We might begin to enumerate them. Say we start with the proper labeling of packages and bottles. Bundles, like packages of salts, sulphur, etc., should be wrapped with two wrappers, and the label should be neatly pasted on both inner and outer wrappers, instead of simply sticking it on the outer one. Because, when the customer gets ready to use the contents, he almost always tears off the outer wrapper and throws it away. You see the situation, a half pound of Rochelle Salt without a label—the customer takes a dose and puts the balance away. Probably a week later he wants another dose. He finds the package, but no label, and you could not persuade the average person to take another dose out of that package with anything like human argument. He simply says it was your fault, and makes his next purchase at another drug store. Another thing: the label, which should be a neat one bearing your name, or the firm's name, serves as an advertisement by keeping your name before your customer and preventing his forgetting you. Whenever a bottle with a label bearing the name of another drug store is brought to you to be filled with the same medicine as is indicated by the label, always remove the label and put one of your own on. It serves as an advertisement. For instance, in many homes the camphor bottle occupies a conspicuous place, and if it bears your label it may help to bring you a customer or two. Always place the label, without too much paste on it, on the front of the bottle, a little above the middle.

Never be idle, be doing something, it "keeps up appearances," and there are a very few people who do not admire industrious folks. When there is nothing else to do straighten the bottles on the shelves, dust them off, run over the patents and the entire stock, and find out what is running low and place it on the "want book," which should be kept as properly as your ledger. It is a serious thing to be out of any drug—it is assisting your competitor. It takes but little experience to find out that it is impossible to keep up your stock without a want book.

When we have nothing to do around our stores we are getting ready for a busy day by wrapping up five and ten-cent packages of salts, sulphur, copperas, borax, alum, etc. When you have plenty of time you can wrap up a neat package, whereas in a rush you often make a very untidy looking one, which is a poor advertisement for a drug store.

Keep abreast of the times. Read the newspapers and know what is going on generally. A druggist is supposed by all to be a wide-awake person. Read the drug journals from one end to the other, advertise-

ments and all. It won't hurt you to read the ads. You may run across some bright ideas, something that will help you to get up an ad. of your own.

Keep up with the changes of prices in the drug market. Always keep the latest quotations where you can quickly get your hands on them. The trade supplements of the drug journals will serve you excellently for this purpose.

Keep a formula book, in which have a copy of the formulas of your own preparations—which should make a long list. I believe the proper name for a formula book like our's would be the Druggist's Scrap Book. I have copied in such a book the formulas of all our preparations, among which are cough syrups, vegetable pills, magic toothache drops, corn cures, headache salts, liniments, horse and cattle powders, etc., all good ones, too. I guarantee all of them, and seldom have to take one back. I have posted in this book most excellent methods, cut from drug journals, for preparing almost anything, as cold cream, elixir, iron, quinine and strychnine, lactated pepsin, etc. I also have copied in it all the veterinary remedies of the neighborhood. It is very easy to get a long list of these remedies in a country where there are stock dealers, who come in and have prepared for them their favorite colic preparations and the like, and when they leave I take down the formulas, and get some good ones, too, that sell and bring a profit.

Nowadays, it is absolutely essential for a druggist to handle insecticides. To handle them successfully, it is necessary to have a knowledge of the different plant destroyers, and the best preparations for their destruction. Secure the publications of the experiment stations of your State and of the Government. They cost you nothing, and always publish the latest and best methods and remedies for destroying cabbage insects. Only a few days since a gentleman asked me what would destroy cabbage lice. On page 657, of the Year Book of 1898, the United States Department of Agriculture showed that kerosene emulsion would do the work, and having some made up, I could immediately supply his wants. On page 660 of the same book you will find an excellent method for preparing kerosene emulsion, which, by the way, is a good seller with us at this season of the year, as it destroys grapevine enemies, potato bugs, cabbage worms, and lice—very warlike beings, at the present time. We would be in the dark if we were to attempt to get along without keeping on hand good quantities of Paris Green, bisulphide of carbon, coal tar, kerosene, benzine and turpentine.

In other words, be strictly up-to-date in everything, and be courteous and economical.

HOW TO MAKE THE DRUG STORE PAY.

By GEORGE W. HAGUE, Ph. C., Hempstead, L. I.

To make a drug store pay requires just as much study and hard work as it does for a student to pass through a college of pharmacy. To make a store pay depends on conditions; the locality, class of people, composition, etc. No man can start a store in some far off city and tell how he is going to run it before he gets there and learns the people. I have been employed in about a dozen drug stores, and find that no man under any conditions can make a success of his business unless he is clean, honest, careful and reliable.

Now, to begin with, open the store promptly at a quarter of seven, to catch the mechanics going by

your store mornings to work, and also to have the cleaning done before the other trade begins. Now that the opening time is settled, live up to it; don't be ten, fifteen or twenty minutes late every morning, as it is sure to hurt your stand, and morning patrons are always in a hurry.

The cleaning should always be lived up to; the show cases polished every morning, the windows at least once a week, the fountain and glasses every morning, for no one cares to drink soda water in a dirty store.

Allow no foul talk in the store, or loud laughing among yourselves. Never come out to wait on customers with a scowl on your face, no matter what you may have on your mind. These little things will make more difference to a business than one naturally supposes.

Postage stamps in a drug store are a nuisance and also a loss. This I find to be a fact after careful study. When you pay a clerk fifteen dollars a week to stand behind the counter and sell stamps all day, how are you going to benefit yourself? Out of every dollar's worth of stamps you handle there will be at least one stamp ripped so that it cannot be sold.

All physicians write prescriptions; some write many, others write few. Some write for a class of preparations you can make but little on, others write for a class of preparations you can make a big profit on. The physician who writes for the latter class is the one to go for. Write letters to him. Tell him that you have in stock the class of preparations for which he writes. Also tell him that you can do justice to him and his patients by giving the kind of goods he writes for, and also say a word about your competent assistants.

Don't stop here, but write to the dentists and tell them of your different mouth washes, tooth brushes, tooth cleaners, and the different things you have for neuralgia. Also write to the veterinary surgeons and tell them of your long experience in preparing this kind of prescriptions, etc., etc. Send printed circulars to the housewife, and tell her you keep cloves, cinnamon, mustard, celery seed and all kinds of spices, also cream of tartar, bicarbonate of soda, etc. Tell her you can make her a superior baking powder, etc. This is one branch of the business which should be stimulated more than it is. If no one in your store smokes it might be found profitable to keep cigars, but if you and several of your clerks smoke, you are apt to lose money with all your systems.

Employer's relation to his clerks. I am glad the Era has given this as one suggestion to write on. I could write a book on this subject alone. There is nothing that will help your business so much in the long run as kindness to your clerks. You can't give your clerk a good tongue-thrashing and then expect him, after it all, to turn around and work for your interest. Allow him time to talk to his friends when they come in to see him. If he knows a few little pointers that you don't, allow him to exercise them. Don't be stubborn. If you ill-treat your help, they will only sit down and take it easy when you are away. They will also let the business run down.

Sunday should be, as much as possible, a day of rest. The window shades should be pulled half way down, and the fountain and all cases should be covered up, and only medicines sold on this day. The store should be closed early in the evening. People eat on Sunday, but they get their supplies the day before; they can do the same with regard to their drug store supplies.

Have on hand a full line of your own preparations, and set them on the show cases where they will sell on sight, also recommend them. Your own toilet preparations should be colored, pleasing to the eye, as they will sell much more readily.

Label everything you send out: not because it is the law to do so, but do it to advertise your business. This will keep your place of business before the public. No matter how busy I am, I always remove another druggist's labels and put on my own, when refilling a bottle.

Buying is an important feature in considering how to make a drug store pay. Pay cash and buy in gross lots when buying patent medicines, and get the liberal discounts which are offered to you. If you are not able to buy in such large lots as a gross, form a buying club with a few of your friends and all buy in gross lots between you and divide up. Take about five other friends, making six in the club. If you are all honest men, you can buy cheaper than others with less capital.

When ordering from your jobber, make everything plain; it will save you no end of trouble and disappointment.

Dress your windows to suit the seasons. In the spring put in blood medicines, at Christmas time, articles suitable for presents, etc., and back your effort up with advertisements. Don't be helpless and don't be wild.

THE USE AND ABUSE OF FOOD PRESERVATIVES.*

Some Common Methods of Preserving Food.

By W. D. BIGELOW.

Assistant in Charge of Food Investigations, Division of Chemistry.

In hot, acrid regions the question of the preservation of food is of little interest. An animal may be slain and its carcass hung in the air to dry. Other foods keep correspondingly well. Putrefaction and decay are almost unknown. On the other hand, wherever climatic conditions favor decay this question becomes important, especially for those who live at a distance from markets and who kill and preserve their own meat, and for those who, either on land or sea, are for a number of days remote from a source of supply.

The methods most commonly employed for preserving food, by drying and smoking and with salt, vinegar, alcohol and sugar, have long been known. Some of them are probably as old as civilization itself, and, indeed, are not unknown to many tribes of savages. We are told by Herodotus that the ancient Egyptians were conversant with the art of preserving meat with salt, and six centuries before the Christian era Cyrus sustained his troops on long expeditions with salted meat. The aborigines of North and South America were accustomed to cure their meat by smoking or "jerking" (tearing from the bone in long strips and drying in the sun), according to the requirements of the climate. The preservation of meat by salting, drying and smoking is practised in Oriental countries by a number of the Mongolian tribes, including the Tartars and the Chinese. It is a matter of common information that these methods are still employed largely in civilized countries, and not alone by those in rural districts who preserve their own meat. Our large packing houses smoke immense quantities of meat with hickory wood. One establishment in Chicago has 43 smoke houses, each of which holds 60,000 pounds of ham or shoulder, or 120,000 pounds of side meat, besides 11 houses of half that capacity. Meat so preserved is recognized as wholesome. It is not always suitable for the sick room, but its taste is a sure indication of its character and the method of its preparation. This makes it impossible to mistake these products for fresh meats, and thus removes the great temptation to fraudulent practice that attends the use of tasteless preservatives. The preservation of meat by freezing has always been practiced, and in localities where the temperature favors this method nothing else is to be desired. Until recently, however, this method has necessarily been of limited application.

Introduction of Chemical Food Preservatives and Their Effect.

Within a quarter of a century numerous new methods for the preservation of food have been introduced, and the use of some already known has been

*Yearbook of U. S. Department of Agriculture, 1900.

developed. Some of these methods have been wonderfully beneficial, others are of questionable nature and value, and still others are open to the most weighty objections. The refrigerator has become a household article, the ice machine has been invented and perfected, and cold storage established in packing house, market, car and boat; the antiseptic and toxic properties of chemicals have been studied, and the preparation and sale of chemical preservatives have become a distinct industry.

It is now a common thing for wholesale druggists, grocers, dealers in dairy supplies, and especially dealers in butchers' supplies, to advertise as a recent discovery some article of "wonderful preservative properties—but entirely wholesome."

On account of the perishable nature of many foods, it is obvious that a substance having the properties claimed for the various commercial food preservatives would be of incalculable value. At the same time it is of the utmost importance that nothing should be added to foods which is toxic in itself, or which interferes even to the slightest extent with the process of digestion. This last point is especially important in its relation to invalids and children. Food treated with antiseptic drugs may perhaps be eaten with impunity by adults who are in good health, and yet turn the scale against an infant or invalid whose life is in the balance; and, indeed, we cannot say that the continued use of small amounts, even of those antiseptic chemicals which seem to interfere least with the normal functions of the body, will not exert a deleterious influence in time.

Again, we must remember that the absence of preservatives is often an indication of wholesome food, at least as far as cleanly methods and appliances, complete sterilization and careful, efficient management can make it wholesome. On the other hand, the presence of chemical preservatives may often be taken as an indication that food products have been prepared by shiftless, slovenly, uncleanly and generally inefficient methods.

Food preservatives are not used for the purpose of killing the germs that cause the decay of food. That would require an antiseptic of such a nature and in such quantity as to be distinctly dangerous to health and life. It would require such drastic measures as are employed by surgeons in disinfecting their instruments. The agents recommended by dealers for cleansing dairy utensils, when used in the quantities directed, only paralyze the germs and delay their action for a time. They can in no sense fill the office of plenty of sunshine and steam or boiling water. The use of antiseptics can no more take the place of careful, cleanly work in the preparation of foods and the cleansing of food receptacles than cheap perumery can replace soap as a toilet article.

No tasteless food preservative has been suggested which is entirely nontoxic, and which does not have a marked influence on digestion, even when taken in relatively small doses. There may be whose antiseptic action is so slight that food treated with the minimum amount necessary for its preservation is not unwholesome for adults in normal health. But in any case food so treated should be plainly labeled with the name and amount of the added preservative.

Practices of Manufacturers and Dealers.

In using preservatives of unknown composition, reliable and well-meaning food manufacturers may unknowingly commit two wrongs: (1) They may add to their product a compound of markedly toxic properties; (2) they may violate the law. Dependence cannot be placed on the claims of others. Representations of wholesomeness are worthless, because they accompany every food preservative. The statement that a given preservative may be used according to directions without violating the provisions of any pure-food law is always false. All claims of new discoveries and exceptional preserving power are without foundation. In this category should be placed those preservatives which by name, trade-mark and advertising matter are represented as having the same

effect on food as ice, differing only in the temperature produced.

Need of Restrictive Legislation.

The states that use large amounts of commercial fertilizers have found it necessary to enact laws requiring that fertilizers be sold only in bags, on which the composition of the contents is marked. Such legislation has been found equally advantageous to consumers and to reliable manufacturers, and has changed a business in which honesty once seemed impossible into one in which misrepresentation and deceit are relatively rare. Such laws work no hardship to any one. They encourage trade and restrict fraud. They receive practically the unanimous support of all reputable citizens who have opportunity to observe their working.

It would seem that similar legislation regarding food preservatives would not be untimely. This would not sanction the miscellaneous use of preservatives, but would restrict abuses. The air of mystery with which many dealers attempt to surround their wares would thus be dispelled, and preservatives could not be sold, as they sometimes are now, for from twice to thirty times their value.

Composition of Commercial Food Preservatives.

With a view to determining the nature of substances most commonly used for the preservation of food, the writer has recently collected and examined as many as practicable of the more common commercial food preservatives. The collection of samples of this nature is attended with many difficulties, for dealers who advertise their wares as "free from salicylic acid, boric acid, sulphites, formaldehyde, and other poisonous ingredients," and "manufactured in accordance with all pure-food laws," are often anxious to keep their products out of the reach of the chemist. The composition of these samples, and also of various commercial preservatives examined in other laboratories, is given in the Appendix of this Yearbook. Of the 67 samples examined, 33 contained borax or boric acid; 10 sodium, potassium, or calcium sulphite; 8, salicylic acid or its sodium compound; 7, benzoic acid or its sodium compound; 1, boric acid and salicylic acid; 1, boric acid and ammonium fluoride; 3, formaldehyde; 1, ammonium fluoride; 2, pyrolygneous acid; and 1, beta-naphthol. These substances may be divided into two classes, those which are undoubtedly injurious, such as formaldehyde, salicylic acid and sulphites, and those whose toxic action is disputed—like borax and benzoic acids. The addition to foods of substances belonging to the first class should be proscribed. The others should be used only with food which is so marked as to inform the purchaser of their presence.

The efficiency of commercial food preservatives being due to the presence of one or more of a few very familiar chemicals or drugs, these latter will now be briefly considered.

Borax and Boric Acid.

The antiseptic property of boric acid was noted in 1856 by Jacquez; who preserved the carcasses of rabbits by immersing them in a 5 per cent. aqueous solution and by injection with a 5 per cent. solution. Its use as a food preservative did not become general until about 1880, since which time it has steadily increased. Both boric acid and borax are now extensively employed for the preservation of meat, fish and dairy products.

According to the directions of dealers in food preservatives, meat that is ready for smoking may be dipped for a few minutes in a solution of 1 pound of boric acid to about 4 gallons of water; chopped meat and sausage are to receive an addition of from 1 to 4 ounces of boric acid to each 100 pounds of meat; brines used in curing meat may be treated with about 1 pound of boric acid to each 30 gallons of water, while to each 15 gallons of milk and each 30 pounds of butter may be added about an ounce of boric acid. A portion of the boric acid is often replaced with about one and one-half times its weight of borax, and occasionally the latter is used alone.

While boric acid and borax are not as objectionable as some other preservatives, yet they are toxic compounds, and there are still doubts as to whether their use should be permitted. In any case, only the minimum quantity should be used, and the sale of foods containing them should not be permitted unless so labeled as to indicate their presence and the amount employed.

The medicinal dose of borax and boric acid is from 30 to 40 grains of the former and from 5 to 15 grains of the latter for an adult. A pound of meat treated according to directions with a boric-acid preservative will contain from 5 to 19 grains, while an infant who is fed each day a quart of milk so treated will receive 8 grains, or a fair-sized dose for an adult.

Borax is used in the ordinary crystallized form with 10 molecules of water, in the rhombohedral form with 5 molecules of water, and as "burned borax." Both the hydrated and the anhydrous boric acids are employed.

Sulphites.

In the preparation of casks for storing wine it has long been customary to treat them with a small amount of burning sulphur. The sulphurous acid so formed assists in sterilizing the casks and preventing the after fermentation of the wine. Attempts have repeatedly been made to replace sulphurous acid in controlling fermentation with other preservatives, such as salicylic and boric acids, abrastral and formaldehyde, but all have resulted unsuccessfully. In all wine-producing countries except America the amount of sulphurous acid so employed is limited by law to one or two parts in 10,000 parts of wine (0.1 or 0.2 gram per liter, or from 1.5 to 3 grains per quart). In this connection it must be remembered that the sulphurous acid content of the wine is largely combined as aldehyde sulphurous acid. Free and sulphite sulphurous acid are only permitted in European wines in one-tenth the amount given above. The compound is recognized as distinctly toxic, and a larger proportion than that mentioned is universally recognized as injurious. The sale of beer containing sulphurous acid or sulphite is specifically prohibited in almost all civilized countries.

By following the directions of dealers in food preservatives, we would add from 1 to 4 ounces of sodium sulphite, or its equivalent, to 100 pounds of meat, or the same amount to from 35 to 50 gallons of cider, beer, or other liquid.

The maximum amount given is clearly unreasonably large, and considering the fact that sulphites are no more efficacious than less deleterious preservatives, it would seem entirely proper that their additions to foods should be prohibited.

The medicinal dose of crystallized sodium sulphite is from 10 to 60 grains, and that of sodium bisulphite half as much. This is equivalent to from 2½ to 15 grains of combined sulphurous acid. A pound of meat, treated according to the directions mentioned above, will contain from 2½ to 10 grains of sulphurous acid, while a quart of cider, beer, etc., similarly treated, will contain from 1 to 7 grains.

The preservatives of this class are not so numerous as those containing boric acid. They are much too common, however, and are often advertised as possessing such unheard-of properties that their promoters are relieved of all suspicion of ingenuousness.

Salicylic Acid.

In 1874, H. Kolbe was led, by the readiness with which salicylic acid is converted into carbolic acid, to investigate the antiseptic properties of the former. He found that it prevented the fermentation of amygdalin and sugar, and the putrefaction of meat and eggs. He also suggested that South American meat be packed in tight receptacles, covered with salicylic acid, and shipped to Europe.

The perfection of Kolbe's method of manufacturing salicylic acid in 1874 greatly cheapened the product and led to vigorous efforts to extend its use. During the first three or four years immediately following the discovery of its antiseptic properties, and before its physiological action was at all understood,

a number of prominent chemists warmly advocated it as a food preservative. It gained in favor at first, and its use increased rapidly until 1880. In that year it was claimed by the industries interested that 110,000 pounds were used in France for the preservation of foods.

Since 1880 the mass of the evidence resulting from physiological studies with salicylic acid tends to condemn the addition of this substance to foods under all circumstances. It is possible that the majority of persons in sound health may suffer no evident injury from small amounts of salicylic acid, but its use by aged and infirm persons is attended with great danger. Many European countries prohibit the addition of salicylic acid to foods. In this country it is rapidly losing favor, and is used much less, relatively to other food preservatives, than it was five years ago. At the present time salicylic acid is chiefly used to preserve fruit and vegetable products. In following the directions of dealers in food preservatives, an ounce of salicylic acid or sodium salicylate is added to from 400 to 600 pounds (50 to 75 gallons) of liquids, and from two to three times that amount to pasty or semi-solid substances. Salicylic acid has no advantage over other preservatives, which are less deleterious, to say the least, and its addition to foods would seem to be unwarranted. The medicinal dose of both salicylic acid and sodium salicylate is from 10 to 30 grains for an adult.

Owing to the early exploitation of salicylic acid as a food preservative, and the well-known indifference which characterizes both legislative bodies and the general public regarding the wholesomeness of foods, the use of salicylic acid became so common at one time that many boards of health chemists still test for no other preservative. The increased attention that this matter has recently received has resulted in a decreased use of salicylic acid, relatively speaking, and some dealers in food preservatives make a practice of changing the name of a product as soon as its composition becomes generally known.

Benzoic Acid.

The antiseptic properties of benzoic acid were investigated by Salkowski in 1875, and this substance was early suggested as a food preservative. Its use for this purpose was sufficiently widespread in 1880 to warrant the publication of methods for its detection. During the last ten years the use of benzoic acid for the preservation of food has been rapidly increasing. This is largely due to the fact that many food manufacturers have replaced the salicylic acid they formerly employed with benzoic acid. It is usually added to wine, beer, cider and fruit and vegetable preparations, sometimes to canned soup, and more rarely to dairy products.

According to the directions of dealers in commercial preservatives, cider, wine and similar liquids may receive an addition of an ounce of benzoic acid or sodium benzoate to from 15 to 30 gallons, and some direct that half that quantity be added again if the liquid be racked off in the spring. This quantity, however, seems to be excessive.

Benzoic acid is not as objectionable as are some compounds used as food preservatives, but there is still doubt as to its wholesomeness, and in any case the sale of food containing it and not so labeled as to inform the purchaser of that fact should be prohibited.

The dose of benzoic acid for adults is from 10 to 40 grains, and that of sodium benzoate from 10 to 60 grains. A quart of cider treated with the maximum amount mentioned above would contain 12 grains of benzoic acid.

Formaldehyde.

Formaldehyde has been used as a disinfectant and germicide for a number of years, and has also been suggested for use in surgical operations, but owing to its irritating character, it has not filled the office that was expected in that field. Its use as a food preservative dates back to about 1895. It is now extensively employed for the preservation of milk, and has

been reported in other articles of food. The addition of formaldehyde to foods is undoubtedly objectionable, and should be prohibited. Not only does it interfere with digestion to a marked extent, but it has been definitely proved that a compound is formed with the casein of milk which causes the latter, when treated with dilute acid such as exists in the gastric juice, to separate in hard lumps that are attacked only with difficulty by digestive ferments.

The addition of formaldehyde to milk has become only too common, and considering the fact that other and less objectionable preservatives will accomplish the same object, its use should be condemned in unqualified terms.

Fluorids.

Within the last ten years the fluorids, silico-fluorids, and boro-fluorids have come into use to a somewhat limited extent as food preservatives. It was at first believed by many that these compounds were without deleterious effect on the human organism. It is now well known, however, that they possess a marked toxic action, and should under no circumstances be added to foods. The writer has no information concerning the use of silico-fluorids in this country as food preservatives, but they are said to be used to some extent abroad. The medicinal dose of ammonium fluorid for adults is from 0.003 to 0.065 grams (0.04 to 1 grain). But one of the samples purchased consisted of ammonium fluorid. A quart of beer, treated as directed in the circular accompanying the package, would contain 0.28 grains of ammonium fluorid, or seven times the minimum dose.

Beta-Naphthol.

Beta-naphthol has been suggested as a food preservative, and it has been used for that purpose to a very limited extent for at least twelve years. It is a compound of marked toxic properties. The dose for an adult is from 0.2 to 0.52 grams (3 to 8 grains), and the statement is added in Merck's Index that it must be administered with caution. Its use as a food preservative would, therefore, seem to be unwarranted.

Pyroligneous Acid.

The preserving effect of smoke is recognized to be due to creosote. During the early part of the nineteenth century, various newspapers called attention to the possibility of avoiding the somewhat tedious process of smoking meat by immersing it for a moment in pyroligneous acid and allowing it to dry. Several experiments on this subject were made by William Ramsay, and the results were recorded in an article published in 1820. The use of this substance has not been studied from a hygienic standpoint, and we can only say that meat preserved with it should not be sold as smoked meat.

A Chestnut street (Philadelphia) music store is now selling a camera at eighty cents, and it is a good one at that price too! Of course, the price of the films, paper, chemicals and apparatus brings the cost up, but for a couple of dollars a pretty good photographic outfit can be bought. While eighty cents is a cut price, it seems as if this was a good thing for the druggist. Let those who deal in cameras lay in a few of these cheap cameras, sell them for the list price—\$1—and get their profit in the sale of chemicals and films, etc. The idea is to work up an interest in photographic work in that class of people who would like to own a camera, but are kept from doing so by fear of the expense—this camera will just exactly meet that class and will give them a chance to try their hands at taking photos. Then, after once initiated into the delights of photography, they may be depended on to buy a better camera and more supplies, and this trade the druggist can get if he takes the trouble to work up the starting enthusiasm. The dealers mentioned say that they make no profit on these cameras themselves, but sell them at a loss simply to work up a trade in films, paper, etc., and get their profit in the way outlined above.

THE PHARMACOPOEIAS OF THE THREE GREAT NATIONS, AND THE LESSONS THEY IMPLY FOR THE RETAIL DRUGGIST.*

By GUSTAVUS HINRICHS, St. Louis.

The paper presented to this association two years ago has been reasonably effective. This encourages me to present to-day, a summary of the three greatest nations—the German, British and American—together with a few reflections on the import of these facts.

Of course, mere historical, tabular matters, indices, etc., are not counted in this synopsis of the contents.

Pharmacopoeias	German	British	United States
Year of publication.....	1900	1898	1893
Size of book:			
Height, inches.....	8.5	8.1	8.9
Width, inches.....	6.5	5.2	5.8
Thickness, inches.....	1.1	1.9	1.7
Volume, cubic inches.....	69.3	50.5	87.7
Weight, ounces.....	41	31	48
Print, form, page:			
Height, inches.....	5.1	5.0	6.9
Width, inches.....	4.1	3.5	4.4
Area, square inches.....	20.9	21.0	30.4
Per cent. of entire page.....	38	50	Large 59 Small 41
Print, ems to line.....	30	31	39
Lines to page.....	30	39	42
Emis to page.....	900	1200	1638
Body, pages, number.....	413	390	384
Thousand ems.....	319	472	754
Chemical, extra pages.....	16	43	62
Thousand ems.....	14.4	52	102
Total, pages, number.....	429	442	446
Thousand ems.....	333	524	846
Ratio, total ems.....	1.00	1.58	2.57
Approximate ratios:			
As to size.....	6	5	9
As to weight.....	4	3	5
Printed part of page,%	40	50	60
Blank or margin, %	60	50	40
Emis to page.....	3	4	5
Total ems in book.....	1	1.6	2.6
Type.....	big	large	large small

We see that of the three leading pharmacopoeias, the British is the smallest and lightest (handiest); the German has the largest margins (sixty per cent. of page), and plainest, largest type with the least number of ems to the page, and the smallest number of thousand ems to the book.

We see, also, that the United States Pharmacopoeia is the biggest, the heaviest, with the smallest per cent. of margin to the page, and the largest number of ems to the page and the largest number of thousand ems to the book.

We see, also, that it is the only one using two kinds of type, one large (almost identical with that of the British), the other very small, so as to contain double the number of ems to the page, as compared with the British. If anything is deemed worthy of admission to the Pharmacopoeia, it is thereby worthy to be printed in type large enough to be read with ease.

As to enforcement by the government and boards and the courts, the German is thoroughly enforced (including chemical examination of stock on shelves at any time), while that of the United States has not yet been so enforced, though legislation now expected will create an army of chemical officials with power for such enforcement through the courts. The British stands between these extremes, and British drug journals are filling up with cases—mostly ending with fines of the druggists.

Thus we notice that bulk and amount of printed matter increase greatly with absence of actual enforcement, giving the book a sort of academic existence only.

On the other hand, actual and close enforcement for many years presents the smallest book, in largest print, with largest margin, least number of ems to the page, and smallest amount of printed matter (total number of ems) in the book.

* Read at the meeting of the Missouri Pharmaceutical Association. Reprinted from the Proceedings.

May we not conclude that these facts portend grave dangers to the retail druggists of the United States, if the new Pharmacopœia now in preparation shall follow the example of the present?

Who will suffer by fine and imprisonment if he transgresses the requirements of the Pharmacopœia, except the retail druggists?

How can he know all there is in a book four times the contents of the German Pharmacopœia?

How can he ever read it all, if the type is so small that a page contains twice as much as the British, and almost three times as much as the German?

Can the American druggist afford to be proportionally smarter and more learned than his German brothers to stand so much more of law than they find it hard enough to get along with?

Now, most of that fine print in the United States Pharmacopœia is chemistry, and rather of a fine kind of chemistry, such as is neither practical nor often true; why shall such chemistry be enforced by law, and why shall the retail druggist be compelled to pay for proving it absurd, impossible or useless, when he has been detected in not complying with the same?

These are a few of the questions which I would like to have the retail druggist answer for himself.

As good business men, they ought to set apart as large a sum as possible for fines and defense, for these will necessarily be in proportion to the multiplicity of tests to be complied with when this new book shall be enforced by an army of men who will expect to live on that work.

Our retail druggists are not working hard to help the legislation expected to come along, but they are doing nothing to prevent it.

Some men I know are working hard to bring about this legislation, and furnish the new officers fine cases for enforcement to their own great cost; this is all as it ought to be, except that many will suffer where few have deserved to smart.

If we are to have such legislation, a Pharmacopœia as large as the German will be as much as our retail druggists will be able to stand and keep alive; that is, between one-third and one-fourth the actual contents of our United States Pharmacopœias have been "expanding" too rapidly. That of 1870 was about the contents of the German; had no chemical formulæ, no atomic weights, no fancy tests, and practically no fine print.

The contents (in the amount of actual ems) of the next was double (1880), that of 1890 and three times that of 1870—hence, we now might expect one four times as full as that of 1870.

In the meantime, the German has increased only seven thousand ems (less than three per cent) and the British has diminished almost one hundred thousand ems (from 607 to 524) in its last two editions.

Is there no significance in the facts I have here brought together?

Are not great interests at stake in this work now going on?

Will it not be well to give an expression to the opinion that the retail druggists expect the Committee of Revision to produce a Pharmacopœia that will permit them to keep alive when that Pharmacopœia shall be enforced?

MASS FOR PRINTING ROLLERS.—Soak best Cologne glue 5000 parts thoroughly in water, pour off the superfluous water and melt in a kettle together with glycerin 5000 parts. The finished rollers are rendered more resisting by coating them with a solution of potassium dichromate 50 parts and water 950 parts.—(Farben Zeitung).

SAPODERMIN is a soap in which mercury is combined with casein. It contains 6.9 per cent. of the metal, but is also supplied in tablets containing only 2 per cent.

TAR BURNERS OF THE SOUTH.

Peat tar is made in northern Europe, where the chemical influences of ages have been absolutely essential to the formation of peat by means of heat and pressure acting conjointly upon a vanished vegetation. Bone tar and coal tar are by-products in the bone-black and illuminating gas and coke industries. An astonishing number of commercial fluids and solids emanate from coal tar distillations, but the manufacture of wood tar is an industry by itself.

A Southern tarheel "burns" tar for \$2.50 a barrel or thereabouts. A full barrel means about fifty-seven gallons or 400 pounds. That he wastes by his simple process illuminating gas, wood naphtha or alcohol, and pyroligneous or acetic acid does not trouble the improvident burner, although he does try to save and sell, incidentally, a little charcoal at five or seven cents a bushel. The tarheel of the South cannot construct expensive retorts and could not run them were they among his possessions. The burning question with him is: "Shall I build a round or flat kiln?" A flat kiln is more easily made and managed; a round or conical kiln is susceptible of better air draught, however, and burns out faster, but requires closer watching night and day.

Wood tar is made out of dead pine. Live pine yields turpentine and rosin, and it is only the long leaf pine that is "fat" enough to produce tar, turpentine and rosin in paying quantities. The manufacture of tar is an entirely separate process from that of making turpentine and rosin. White or yellow pine is too dry to profitably manufacture tar, turpentine or rosin from, but it does furnish much timber for building purposes.

When a tarheel decides to burn a few barrels of tar he selects a site upon the gentle slope of a hill-side where there is a clayey subsoil, not too much exposure to wind, but near running water, and, if possible, near to or in the midst of an area containing considerable dead or fallen pine. Down to the clayey subsoil he scrapes the size his kiln is to be. In the centre he drives a stake to pile to, and from that he digs a trench exteriorly to a scooped-out hole to receive a barrel or empty tub. Resinous pine roots, knots and long and short strips are then piled in a circle in layers downward toward the stake at an angle of ten or fifteen degrees. When the pile becomes five or six feet high he builds a square log enclosure around it, and fills this in with dirt. Over all is laid straw or green leafy boughs. This covering is dressed over with dirt and clay, in which are left a few vent-holes. All is now ready for "firing." His trough, dipper and tub, also barrels, are near by. He has erected quite near, too, a rough shack to which he may retreat in bad weather, and to shelter his salt flour, cornmeal, tin coffee-pot, sweet potatoes, and "fat-back" from the once lean and roaming "razor-back." A piney woods country of fallen timber is bleak enough at best, but without "razorbacks" it would be cheerless indeed.

The tar-burner must be constantly on guard. He occasionally gets an hour or two of sleep when all is running smoothly and no high winds threaten immediate conflagration. He has lighted at the top, in the vent-holes, the ends of splintered pine. They smoke and flame alternately, but a little dirt thrown here and there keeps the flames under subjection. Sometimes the tar-burner's wife comes over to the kiln to watch while he snatches a few hours of sleep. The native women of the South, black and white, actually work harder than the "stronger sex." Oftentimes they are laboring hard in the fields while the "ole man" is over at the "sto'" chewing "niggerhead" plug or swallowing quantities of "ole co'n" liquor. As he plants himself on a box or barrel head and becomes loquacious he enlightens the storekeeper as to the proper method of managing the Filipinos. Possibly he cannot read or write, has never been out of his county, and cannot run his plantation except into debt (most plantations are mortgaged), yet he can always tell how Uncle Sam should run the government.

Wood tar is the only residuum sweated from the rich red wood of the long-leaf pine. The intense heat encompassed by the dirt-covered enclosure forces forward and downward the dark molasses-colored substance. It oozes slowly down through the hole left by the withdrawn stake, and flows out from the clayed channel into the barrel or tub receptacle. As the pile burns down, the dirt and log enclosure is gradually removed. Kilns run from six to eight, and occasionally as high as thirty, barrels of tar. The burner carts it to the storekeeper, usually to liquidate some bill. In fact, the motive for "burning tar" at all generally originates with the storekeeper, whose books show many purchases of snuff, tobacco, coffee, calico, flour, corn meal, boots, fatback, and patent medicines. So he has to spur up the burner.

The tarheel may often be "plumb" out of coffee and corn meal, but he is seldom caught without snuff, tobacco, and patent medicines. If he should happen to have a "risin' on his leg," "misery in his foot," or his wife the "weak trembles," there is nothing like medicine as a "cure-all." Doctors are few, and seldom get paid, anyway, so faith and patent medicine are given full swing. Wood, water, and shelter cost the tarheel nothing but his labor, yet the sheltering feature is but a wretched farce. Cracks in the chimney walls, between the logs, and in the roof let in copious supplies of air and rain. Wood is cut up a few sticks at a time. Often you will hear axe-blows late upon a comparatively cold night—and you know that the tarheel is out-doors replenishing the fireplace by the aid of a flaming splinter of torch pine. No known argument could induce him to prepare a good-sized pile in the daytime. But he is an energetic axeman when it comes to felling a tree or slashing at a hollow trunk containing a squirrel or rabbit. Yet he is always hospitable. You cannot pass his open door without an invitation to "come in to the fire," or "sit up and have what we've got." He generally tells you that "he is poor, but he means no harm by it."

The first question asked a stranger is: "Whar are you from?" Then follows, "Whar are you follerin'?" meaning your business. After that you hear his politics and about his "crop." In the mountaineer's cabin there is seldom but one room. This is kitchen, dining and sitting room, and bedchamber for men, women and children in large and small numbers, including the stranger within the gates.—Harper's Weekly.

MILK PRESERVATIVES—M. Wynter Blyth detects the presence of added preservatives in milk by the following simple process (Analyst). To 10 c. c. of each sample of milk to be tested, and to 10 c. c. of sterilized milk known to be free from preservative, 2 C. c. of very strong solution of alkaline litmus is added. All the tubes are then to be examined, and if not of the same shade of blue as the control tube, semi-normal NaHO solution is added to them until the tint is identical. All are then plugged with cotton wool and heated in the water bath to 80° C. for ten minutes. After cooling, each tube, including the control tube, is inoculated with 0.5 C.c. of a mixture of sour milk in water (1 C. c. of milk in 200 C. c. of water). They are then allowed to stand at ordinary temperatures for twenty-four hours. If the control tube is not then white, or nearly so, the series should be allowed to stand longer. The tubes of milk containing added preservative will then be found to be blue or pink, while those which are pure will be white, like the control tube.

HETOFORM is said to be a cinnamate of bismuth, Bi (C, H, O)₂. Bi₂O₃. It contains about 63 per cent. of bismuth, and is prepared by precipitating crystalline bismuth nitrate with sodium cinnamate, and drying the precipitate. It forms a white powder with a slight odor of cinnamic acid.—Oesterr. Zeits. fur Pharm.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Cholera Mixture.

(S. M. T.) A number of formulas of the character you name are given in the National Formulary, a work you should certainly have. The Era in the past few years has published a great many formulas for cholera mixtures of widely varying composition and you will do well to consult the indexes of the various volumes. Here are some other formulas taken from our collection:

Australian Cholera Specific.

Sulphuric acid	32 parts.
Nitric acid	30 parts.
Sugar	24 parts.
Gum arabic	24 parts.
Water to make	150 parts.

Mix the acids, and add them to 500 parts of the water. Dissolve the sugar and gum in the rest of the water, then mix the solutions.

India Cholera Mixture.

Camphor	1 part.
Kino	16 parts.
Catechu	4 parts.
Cinnamon, in powder	10 parts.
Cloves, in powder	8 parts.
Capsicum, in powder	16 parts.
Brandy, q. s.	

Moisten the powders with brandy, pack in a percolator, macerate for 48 hours, and percolate 144 parts. To this add

Tincture of opium	20 parts.
Chloroform	8 parts.

Dose, one teaspoonful.

London Board of Health Cholera Mixture.

Aromatic powder, B. P.	3 parts.
Ammonia water	3 parts.
Tincture of catechu	10 parts.
Tincture of carbolom compound	6 parts.
Tincture of opium	8 parts.
Chalk mixture, sufficient to make	80 parts.

Dose, from one to two tablespoonfuls.

Asiatic Cholera Tincture.

Opium, powdered	1 part.
Camphor	1 part.
Oil of clove	1 part.
Capsicum, powdered	1 part.
Houman's anodyne	20 parts.

Macerate 2 weeks, and filter. Dose, from 20 drops to a teaspoonful.

Removing Tattoo Marks.

(G. V.) Dr. Variot pours on the marked spot a concentrated solution of tannin, and works it into the skin by a series of pricks, just as in tattooing proper. A certain quantity of tannin is thus introduced beneath the skin. He then rubs the part with nitrate of silver and allows the solution of the salt to remain in situ until the prick marks show out as black points. The caustic is then wiped off, and the result is the formation of a black stain of tannate of silver. Inflammation is set up, and in the course of a fortnight scabs form, on the disappearance of which no trace is left of the original design, the only souvenir being a reddish scar, which in time becomes less visible. Various other plans had been tried without success, saccharification, the introduction of opaque powders and caustics into the skin, etc. The tannin, in his operation, acts as a mordant, and in no case did he have to deal with troublesome suppuration, although if the area be large it is well to do a piece at a time.

Another process, recommended by foreign authorities, is this: After asepsis of region the tattoo is made with a solution of 30 parts of zinc chloride in 40 parts of sterilized water; with due precautions no great inflammatory reaction takes place. After a few days a crust forms which falls off from the fifth to the tenth day.

Pharmaceutical Formulas gives the following method: Apply nitric acid with the stopper of the bottle or a glass rod to cover the stain. In from a minute and a half to ten minutes, when the "cutis vera" is penetrated and there is a crusted appearance, wash off with cold water. A few days after this treatment a scab forms, which contains the tattoo-mark or stain; remove it, and should inflammation supervene poultice and bathe with warm water. It may be noted that the scab begins to form on the second day, when the inflammation is subsiding. It is then advisable to cover with court-plaster until the scab forms completely; then poultice with boiled bread and milk until thoroughly clean, and dress with carbolic oil (1 in 20) or boric acid. In this way the skin with the stain is not only removed almost painlessly, but at the same time the nitric acid to a certain extent seems to decolorize the stain.

It is probably best not to attempt any of these methods except under the direction of a surgeon.

Solubility of Thymol.

(F. N. K.) Thymol is comparatively insoluble in water (1 to 1200 U. S. P.), hence its incomplete solution in the following prescription:

Thymol	10 grains.
Sodium borate	15 grains.
Water	1 fl. ounce.

Mix and use as a mouth wash.

It is stated that thymol is three times more soluble in water containing 10 per cent. of glycerine than in pure water. We therefore suggest that you substitute, if the prescriber will allow, a suitable amount of glycerine for a corresponding amount of water. Reduce the thymol to a powder. Triturate it with glycerine, and gradually add the water in which the sodium borate has been previously dissolved. As the mixture is to be used for a mouth wash the addition of glycerine will probably not prove unsatisfactory.

In this connection it may be said that thymol is an excellent antiseptic, the main objection to its employment being its insolubility in water. To dissolve 1 gram in 1 liter of water the addition of 50 grams of alcohol is necessary. A solution thus made is apt to cause pain when applied to wounds. The use of caustic soda alone is unsatisfactory, because on standing the solution becomes turbid and precipitation ensues. To avoid this latter objection, Hermite recommends the following formula:

Thymol	1 gram.
Tartaric acid	1 gram.
Caustic soda, of each	2 litres.
Water	2 litres.

The solids are to be dissolved in a small quantity of water, boiling after solution takes place.

Ink Erasive.

(Subscriber.) Here are some formulas from the Era Formulary:

(1) Immerse blotting paper or any similar material in a hot concentrated solution of citric acid, roll it into a pencil, and coat the larger portion of it with paper or lacquer. Moisten the eraser with water, and rub over the ink to be removed. Drop upon the ink spot a drop of water containing chloride of lime. The ink immediately disappears.

(2) Mix equal parts of oxalic acid and tartaric acid in powder. When to be used dissolve a little in water. It is poisonous.

(3) Dissolve equal parts of cream of tartar and citric acid in water.

(4) Cold aqueous or acetic acid solution of calcium hypochlorite, bleaching powder, eau de Javelle.

For inks made from aniline dyes special treatment is sometimes necessary, though most of the aniline colors may be removed by washing with a solution

composed of sodium nitrite, 7 parts; dilute sulphuric acid, 15 parts; water, 500 parts. Put in a flask and let stand 24 hours before using. Apply to the spot with a camel's hair brush and after disappearance of the stain rinse with plenty of water.

Bichloride of Mercury and Strychnine.

(E. G. K.) "Why does gelatinization occur when a solution of strychnine is added to a solution of bichloride of mercury?"

Mercuric chloride (bichloride) is incompatible with strychnine, a precipitation occurring when the two substances in solution are brought together. If considerable alcohol be present in the mixture the precipitate is dissolved. Prescriptions of this character should not be dispensed.

FUMIGATING CANDLES.—1. Lime wood charcoal, 6,000, saturated with water (containing salt-peter 150 in solution), and dried again is mixed with benzoin 750, styrax 700, mastic 100, cascarilla 450, Peruvian balsam 40, Mitcham oil, lavender oil, lemon oil and bergamot oil 15 each, and neroli oil 3.

2. Charcoal 7,500, salt-peter 150, tolu balsam 500, musk 2, rose oil 1. The mixtures are crushed with thick tragacanth to a solid mass.

3. Sandal wood 48, clove 6, benzoin 6, licorice juice 4, potash salt-peter 2, cascarilla bark 1.5, cinnamon bark 1.5, musk 0.05. All these substances are powdered and mixed, whereupon the following are added: Styrax (liquid) 5, cinnamon oil 0.05, clove oil 0.05, geranium oil 0.5, lavender oil 0.2, Peruvian balsam 0.2. The solid ingredients are each powdered separately, then placed in the respective proportion in a spacious porcelain dish and intimately mixed by means of a flat spatula. The dish must be covered up with a cloth in this operation. After the mixture has been accomplished, add the essential oils and just enough solution of gum arabic so that by subsequent kneading with the pestle a moldable dough results which possesses sufficient solidity after drying. The mass is pressed into metallic molds in the shape of cones 1 to 2 centimeters in height.

4. Red Fumigating Candles.—Sandal wood 1 kilo, gum benzoin 1.5 grams, Tolu balsam 250 grams, sandal oil 25 grams, cassia oil 25 grams, clove oil 25 grams, salt-peter 90 grams. The powder is mixed intimately, saturated with spirit of wine, in which the oils are dissolved, and shaped into cones.—Neueste Erfindungen und Erfahrungen.—(Sci. Am.)

CEMENT FOR PORCELAIN.—An almost invisible joint may be made, with careful handling, with the following:

Chloroform	60 parts.
Indiarubber	25 parts.
Mastic	15 parts.

Cut the rubber into shreds, put into a suitable vial, and pour on the chloroform. Stopper tightly, and set aside until the rubber is dissolved, then add the mastic, and let stand until the same is dissolved. Apply the cement to each surface to be united, and let the pieces stand until the greater part of the chloroform is evaporated, then unite, press firmly to place, and if possible, tie in position. When the cement is apparently thoroughly dry on the surface, scrape off the superfluity, and dust over the line of junction a little zinc oxide, chalk, powdered infusorial earth, or some such material, and with a clean pencil brush it over the joint. After the cement has become perfectly dry, remove the cords and rub off the superfluous powder. The joint can scarcely be discovered if the work has been well done.—(Pharm. Discov.)

DYMAL.—A new antiseptic dusting powder for wounds, dymyl salicylate or dymal, has been recently introduced. It is stated to be very efficient, either when employed in the pulverulent condition or when combined in a 10 per cent. lanoline ointment. It is odorless and non-irritant.—Pharm. Post.

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

FOUNTAIN DRINKS AND DRINKERS.

Remarkably Heavy Sales of Soda—New and Favorite Tipples—Fancy Drinks Not Popular.

The growth in importance of the soda fountain as a feature of the retail drug business has been frequently remarked in the discussion of summer trade, but the sale of liquid refreshments in New York during the past two months is unprecedented, according to the report of a large number of managers who have been approached on the subject. In the larger stores in the down town districts it is not accounted a good day's business at the soda counter unless 3,500 people are served and if the thermometer is acting at all badly, between 10,000 and 15,000 drinks are sold in one establishment during the day.

Not more than ten or a dozen houses do business on this enormous scale, but the stores which sell from 3,500 drinks daily are many in number, and there is yet the countless small tradesmen of the outside districts, who have small fountains, it is true, but whose soda trade is as much an important part of their general business or even more so than that of the big dealers who have the advantage of keeping the major portion of their regular trade through mail and call orders.

Although the mixers have invented an astonishing number of new drinks, the favorite tipples of the soda fountain patron is "orange phosphate" with the other phosphates and acid drinks next in demand. The soda drinking public does not appear to catch on quickly to fancy drinks unless a house has made a reputation for new concoctions, as in the case of a store on West Eighty-first street, which employs a force of expert mixers to juggle the old ingredients into new compounds. One of the most attractive new drinks is the "Florodora Phosphate." The "Lime Ricky" and the "Bordeaux Lemonade" have attained some degree of popularity, but many drinkers inquire anxiously into the character of the rickies before drinking it and there is a tendency to avoid red lemonade. The larger concerns down town have not produced anything startling this season. Some of the curious go behind Hegeman's "Try a Broadway" sign, but the regular customer sticks to his phosphates and lemonades. New pineapple and grape phosphates are advertised and there is a novelty in beef, wine and iron that is palatable and cooling. A drink that has found favor this summer according to Manager G. H. Bancroft of Hudson's, is kumyss, or fermented milk, which is both pleasant and nourishing. It is easily digested. The greatest call for kumyss comes at the noon hour, many taking this drink in preference to eating a solid lunch.

The clerks at the soda bars have observed a change in the character of their custom. Formerly the larger number of patrons were women and children, but this summer men seem to have left their malt liquors for the milder drinks. Among both the "topers" or "regulars," as the frequent buyer is designated, and the transients, there are more men and boys than women. The "regulars" come to the soda bar for their tipples twice a day, making the two rushes, morning and evening, and the transient drinkers bill in the rest of the day.

One of the strongest criticisms at several of the largest fountains is directed at the sale of ice cream and ice cream sodas, which, the managers say, are confections and should not be handled at a soda counter. There is

the additional reason urged that the consumption of the cream and cream drinks takes up a great deal of time and valuable floor space where there is a rush of business. Yet, in one of the largest of the big down town concerns over 100 quarts of cream are sold every day.

A most commendable feature of the soda water trade is the growing tendency to serve nothing but fruit juices and perfectly prepared waters. Some of the fountains have their own steam carbonating plants and make all of the waters they use. Even the smaller stores have found the use of pure fruit juices instead of chemical essences has increased their custom and made it more profitable.

The soda fountain has come to be considered one of the largest and most profitable lines of the drug business as evidenced by the increased attention being paid to it by both the dealer and the drinking public.

"It has conferred a real benefit," said Manager Greaven, of Perry's, "by bringing me to acknowledge the superiority of soda over malt liquors as a warm weather beverage. Even in conservative England, the Londoner is leaving his ale and other alcoholic drinks for the healthful fountain waters. The trade has gained a strong foothold across the water. I actually believe that the Germans would forsake their beer gardens if soda fountains were generally introduced."

LADIES' PARLOR AT DRUG CLUB.

One of the features of the Drug Club that is attracting a great deal of attention is the handsome ladies' parlor and grill to the right of the entrance corridor. Recent notable additions to the valuable art collection on the walls have been made, making the gallery the most striking feature of the rooms. All of the paintings are by well known artists. Warran Sheppard has two, a sentimental subject, "Twilight Moon," which has been the object of much enthusiastic criticism, and a Venetian street scene, bringing out the clear, blue Venetian sky, giving a glimpse into the life of the inhabitants in their boat traffic and showing the house where the poet Browning died. Rosalind has a pretty piece entitled "A Serious Case." "Three Croonies," by Louis Muller and a Holland scene by E. L. Field are recent additions. There is a strong marine by D. J. Cue and a splendid pastoral, valued at \$2,000, the work of the English artist, T. Sydney Cooper. A wheat field in oil by the French artist Eugene de Mulertt completes the gallery which in itself will repay a visit to the ladies' parlor.

There has been put in the parlor a writing desk for the accommodation of visitors and potted palms and roses in bloom add to the charm of the parlor.

A FORGER SWINDLES DRUGGISTS.

Detective Thompson of Brooklyn, who arrested John Collins, of No. 321 Pacific street, on a charge of forging the names of prominent doctors, to checks and passing the worthless papers to druggists, thinks there are a number of other victims of the smooth shaver's operations besides Druggist E. T. Lohr, of No. 508 Marcy avenue, upon whose complaint the arrest was made. Pending a further investigation of the matter, the officer has secured a postponement of the case, and now has in his hands five more bad checks, bearing the names of Doctors W. G. Russell, Charles Bellows, F. F. McCleary, J. W. Hyde,

and A. W. Shepherd. The name of Dr. Herman Francis was used on the check with which Mr. Lohr was victimized to the extent of \$24. The checks vary in amount from this to \$40. Collins' method was to forge the name of the doctor to the check and, impersonating him, make a request to the druggist to do him the favor of honoring it.

MANUFACTURERS ENJOY THE BEACH.

A distinguished party of out of town manufacturers has been spending the past week at the Manhattan Beach Hotel, enjoying the bathing and other diversions at the beach and indulging in the gay pastimes of nearby Coney, to the exclusion of business and family cares. They are Colonel Samuel J. Tilden, president of the Tilden Co., of New Lebanon, J. H. Cox, secretary and treasurer, and J. B. Glazebrook of St. Louis, vice-president of the company.

They have looped the loop, shot the chutes and taken in the scenic railway. Even the tin type man has them on exhibition. Col. Tilden says that the sport at the summer resort is the best ever. He has been acting as chaperone for the party and in this capacity, the vice-president and treasurer report that he cannot do anything rash without the consent of his proteges as Mr. Cox, by virtue of his official position, has his foot on the money.

Newburg Druggists Elect A. A. R. D. Delegate.

The Newburg, N. Y., Retail Druggists Association held its semi-annual meeting at the Palatine Hotel, July 19, and elected Frederick Wallace a delegate to attend the annual meeting of the National Association of Retail Druggists, to be held in Buffalo. The subject of organizing a Hudson river pharmaceutical association was discussed. A resolution was presented by Clarence Miller, endorsing the position taken by the New York State Board of Pharmacy, regarding its action with the Civil Service Board in New York City. The resolution was unanimously adopted. Similar action will be taken by other associations in the state. Hiram Merritt, of Theodore Merritt's Sons, a well known member of this association, accompanied by his wife and daughter, is spending his vacation on the St. Lawrence River.

A. A. B. C.'s Enjoy an Outing.

Eight members of the Apothecaries' Bicycle Club enjoyed a trip to Roton Point on the Sound last week. The party went by train to South Norwalk and from that point rode to Roton Point, where the day was spent in fishing, swimming and sub-marine botanizing.

The party returned in the afternoon, coming back by way of Duran, Coscob, Greenwich and Hamford along the scenic Connecticut turnpike and the old Boston road. The excursion was both pleasant and profitable, some of the wheelmen making interesting additions to their submarine botanical collections. Another ride is being planned for next week, and it is proposed to get up a big club ride later in the summer.

Cup For Bowling Champions.

The perennial challenge cup of the Wholesale Drug Trade Bowling Association has been completed by the jewelers and is on exhibition at the Drug Trade Club. The cup is made of silver. It is thirty inches high and is mounted on a beautifully finished cherry base. On the body of the cup is engraved a bowling design with the names of the winners of the last tournament, the Seabury and Johnson team.

The champions of the 1900-1901 meet will hold the trophy as long as they can maintain supremacy on the alleys. It can never become the permanent property of any team. The team winning it can hold the cup but one year when it must be again put up to be contested for.

An Effective Display.

One of the most attractively dressed windows that drew the attention of the passer-by down town the past week was in the store of Hollis M. Barnes at Chambers and West Broadway. It was an advertisement for a new egg shampoo, the preparation being packed in egg-

shaped, wooden cases of the natural size. A most striking effect was obtained by the artistic arrangement of hundreds of these packages in the windows. They were built into a large pyramid with a decorative frieze, and long strings of the eggs were woven in festoons and figures about the window with appropriate placards explaining the preparation.

NOTES.

—A lower Broadway drug dealer attracted many customers for a new article in bath tub showers by an ingenious device in the way of a window advertisement. By placing a large tub in the window and standing in it a life size wax figure of a young lady, attired in a bathing suit and with the apparatus attached and the water turned on, a splendid demonstration was given of the practical utility of the shower and the result was an interested public and a number of buyers. The originality, boldness and effectiveness of the display was a subject of favorable comment among passers on the street.

—The old drug store of J. and F. Grotta at No. 446 6th avenue has been remodeled into an up-to-date, smart looking place of business. The proprietors have put in new cases, shelving and an electric lighting system with a local switchboard to regulate the number of lights desired at any time in the store. A tessellated floor and a plate glass mirror ten by twelve in the rear of the store are in keeping with the general effect of brightness and cleanliness.

—The interest of J. T. Rutherford in the drug firm of Fred W. McGee and Company, Inc., of Rutherford, N. J., has been purchased by J. M. Peterson, formerly proprietor of a store at the corner of Hudson and Franklin streets, this city. J. T. Rutherford will retire from the drug business. He has removed to Philadelphia. Gus Ranges, a clerk in the employ of the company, is spending his vacation at Umland, N. J.

—A new firm of jobbers, Hubbard & Williams, has opened a large store in Charleston, West Virginia. D. R. Williams, who is one of the most prominent men in the drug trade in his section of the country, has been in New York the past week buying stock for the new firm. Mr. Hubbard is not a druggist but has made his reputation as an able business man in the wholesale grocery trade.

—Martin Arneaman, pharmacist at No. 637 8th avenue, comes back from his vacation at Thousand Islands with a pickerel story hard to beat. Arneaman says the fish was six and one half pounds and made such a fierce resistance that it required twenty-two minutes to grass it. He sticks to the fixture and gets them straight every time he tells the story.

—The gum department, sample room, invoice and scientific department and correspondents' division of Parke, Davis & Co., have been removed to the old stock rooms on the second floor of the firm's headquarters at No. 90 Maiden Lane. The change was made in order to relieve the crowded condition of the first floor.

—W. M. Colwell, of the Osborn-Colwell Co., pharmaceutical chemists, 46 Cliff street, this city, has been absent on an extended western trip, spending the greater part of the time in Indiana and Michigan. He returns about the 1st of August. The company will be represented in this territory by Otis Jones.

—J. Cantor a well known Brooklyn druggist, and M. Ritchey are enjoying an outing and fishing trip in Canada, a short distance north of Ottawa. The party will be complete upon the arrival of G. S. Mariager, W. J. Carr, and S. H. Caragan of Parke, Davis & Co. They will be gone about two weeks.

—Col. John W. Lowe, the New Haven pharmacist, was overcome by the heat last week at Woodmont, Conn., while working in his branch store. This is the second time this summer that Col. Lowe has suffered from heat prostration.

—In the state and county Civil Service examinations to be held in New York, on August 24th, a position of apothecary for state prisons and charitable institutions is open for competition. The place pays from forty to sixty dollars a month and maintenance.

IN AND ABOUT BOSTON.

--Joseph DeBlasco, '98, New York College of Pharmacy and manager of the Paul F. Gebriecke pharmacy at No. 106 Houston street, is spending a two weeks' vacation in the Catskills.

--The guests' register at the Drug Club does not show any visitors since the 11th of the month. An effort will be made to have the book kept up to date, with the names of all visiting druggists properly entered.

--H. G. Pierson, proprietor of a store in Hornellsville, N. Y., has returned from a two month's trip abroad and has been spending some time in the downtown drug district.

--"Commodore" W. H. Tompkins, of the firm of Schiefelin & Co., is at present gone on a summer vacation which will last two weeks. He will spend part of the time at Newport.

--Albert Bruen, head of the house of Bruen, Ritchey Co., wholesale druggists, has taken a summer home in the Catskills near Stamford. He will be away three or four weeks.

--Geo. M. Dorrance of the Maltbie Chemical Company has been in Boston the past week on business connected with his house.

--F. B. Crouch is the proprietor of a new drug store, doing a general business at No. 2653 Broadway street, corner 102nd street.

--A. R. Otis, a druggist of Kendallville, Ind., will be in New York the middle part of August to purchase his holiday stock.

--A new store will be opened in about two weeks at 23th street and Amsterdam avenue. The proprietor is B. Kramer.

--A. C. Bayles, of Port Washington, L. I., and T. S. Armstrong of Plainfield, N. J. were among the visiting druggists at the Drug Club the past week.

--Two large cable orders for plasters and surgical supplies for the British army in South Africa have been filled by the wholesale firm of Seabury & Johnson.

--Nathan J. Gillespie, manager of the Columbia Drug Company of Savannah, Georgia, has been in the city during the past week.

--L. F. Warren has removed his store from No. 394 Amsterdam avenue to No. 2212 Broadway, where he will have larger quarters with new fixtures and stock.

--George J. Seabury, of Seabury & Johnson, is away on a fishing trip in the Rangley Lakes, Maine. He will also go to Quebec for bass fishing in the St. Lawrence.

--J. M. Melick, the New Jersey salesman of Lazell, Dally & Co., left on a two weeks vacation last Saturday.

--George Gregorinis, a well known member of the German Apothecaries Society, left for Europe July 26.

--A drug store has been opened at No. 2296 2nd avenue, by V. Diamond with a general drug business in view.

How To Counterfeiters.

Vice-Chancellor Reed, in the Court of Chancery, at Trenton, N. J., has rendered an important decision in the case of the Centaur Company against the C. W. Link Drug Company.

For a year or more Charles H. Fletcher, president of the Centaur Company, manufacturer of Castoria, has been fighting, through the courts, counterfeiters and imitators of goods, in which class, it was claimed, the defendant company belonged.

In his decision the Chancellor said, in part: "Every one of the packages put in evidence by the defendant show a persistent adoption of the size of the bottle and the label of the complainant, knowing that, if the bottles were distinctly larger or smaller, or if they were so differently wrapped as to at once arrest the attention of the purchaser, the sale of the remedy would at once become substantially reduced. Injunction granted."--New York Journal.

Four-Fold Liniment gives the druggist 66 2-3 per cent profit, very much more than other liniments.

A QUESTION IN WHICH MASSACHUSETTS DRUGGISTS ARE INTERESTED.

Boston, July 27.--Mayor Hurley, of Salem, who has been conducting a great crusade against all liquor traffic in that no-license city, sought from the city solicitor an opinion in regard to signing the druggists liquor licenses. He asks the solicitor as to the right of the aldermen to grant these licenses, anyway, and will take no action until he receives that opinion from the solicitor. The mayor does not intend to sign them, so it is given out, unless required by statute to do so.

Several licenses of the sixth-class, known as the druggist and apothecary license, were granted by the board of aldermen in Salem the latter part of last month. While, under the law, the mayor has no voice in granting such licenses, they are void and of no effect unless he signs them. These druggists were granted their licenses notwithstanding that the voters in Salem decided last December, by a majority of 558, that liquor should not be sold within the city limits. The pharmacists who received licenses are Thomas B. Nichols, Edward L. Rogers, Arthur H. Sinclair, Walter P. Upton, Frank A. Frisbee, of the firm of Upton & Frisbee; Jesse F. Upton, of the firm of Upton & Hennessy; Jacques A. Roulier, of the firm of J. P. Rouber & Co.; Matthew R. Karman, Joseph F. M. Edwards, Frank P. Fitzgerald, James E. Fitzgerald, Pierre L. M. Gaudette, Joseph I. Moulton, and Samuel J. Foster, of the firm of C. H. & J. Price.

Mayor Hurley expressed some doubt of the right of the aldermen to grant the licenses as they did to the druggists, who are anxiously waiting for "John H. Hurley, mayor," to be written on the licenses. The mayor says that if the board of aldermen has no authority to grant the licenses that the pieces of paper with his name thereon certifying that one had been granted would give the holder no protection, and yet probably he might go on and sell and this might be followed by an arrest and conviction. As to whether the aldermen have the right to grant licenses known as the sixth-class to druggists, even though the city voted no-license, is a matter to be decided and one of general interest to druggists. Some authorities think the vote of the city on the license question has nothing to do with the matter, and others say that the aldermen have not the authority, when the city votes no license. The Supreme Court has not decided the point under the present law.

A commission appointed by the governor and council to codify the laws, in a report to the legislature states that a joint special committee has found that there apparently is no authority under the present law that can issue druggists' sixth-class licenses in a city that votes no license.

The question of policy also is another important one, according to Mayor Hurley. The druggists only pay \$1 a year for their license and the fee when the city votes license of a first and fourth class is \$2,500. If licenses should be issued to the druggists named, the city would get \$14, whereas if they were issued under a license vote to saloons the city would get \$35,000. The question Mayor Hurley raises will be of as much importance to druggists in no-license cities as the semi-colon law is to hotels in this State. If the opinion expressed by the commission to codify the law is correct, then every licensed druggist in a city that votes no license is violating the law every time he makes a sale. If there is no authority to grant them a license, then the license certainly is void.

Trade Reasonable, with No Special Features.

Boston, July 27.--There does not appear to be anything special to say regarding trade which is reasonable and running along satisfactorily yet without any special feature to mark it. There is about the usual amount of prescriptions to be compounded, with no rush in this department at any of the stores and the sales of sundries and like goods keeps evenly good as do sales at all soda fountains. In the general market drugs as a line are without special life and are stated to be rather dormant. Chem-

F. M. GARDNER,
Boston, Mass.

icals, in contract, are a bit livelier and there is more trading done just now than in drugs. Waxes keep steady with sales of fair amount. Alcohols are held firmly as a result of the present corn situation which, however, has not created any activity in the spirits. Dye-stuffs and tanning materials seem to be firm on fair sales.

NOTES.

—One drug store in Boston has a card conspicuously displayed telling customers that German, Gaelic, Polish and English are spoken. As the store is in a rather cosmopolitan district, the need of understanding these languages often is felt. At another pharmacy in Boston eleven languages are spoken, including English, French, German, Italian, Spanish, Russian, Polish, Hebrew and Yiddish, Greek and a Slavonic tongue. Latin is, of course, understood and a small number of Chinese words and phrases have been gradually picked up, just enough to greet any "John" cordial in his own tongue, whenever a Chinaman enters the store.

—On complaint made by the Brighton police, Alexander Rose, a druggist at Oak Square, Brighton district, has been up before the board of police to answer to a charge of making an illegal sale of liquor. It was shown that a patrolman bought a half-pint of whisky at the store, without conforming to the law relative to the sale of liquor by druggists. In the Brighton court Rose was fined \$50, which he paid. The board is now considering the revocation of the druggist's license.

—George W. Gilbert and Benjamin F. Gilbert have joined with Justin Edwards in an enterprise to be known as the Gilbert Bros. Company, Boston, which will manufacture chemicals of various kinds, anilines, dyes, stuffs and the like and also deal in these commodities. The capital stock is \$2,000,000, made up of 2,000 shares of the par value of \$100 each. George W. Gilbert is president and Mr. Edwards treasurer, and they with Benjamin R. Gilbert make up the board of directors.

—A. E. Tibbetts, traveling salesman through Maine for Fox, Fultz & Co., dealers in druggists sundries, etc., this city, will enjoy the first half of August as a vacation, spending it at home in Biddeford Pool, in the Pine Tree State. He has invited about ten drummers in the drug line, who visit Maine in their regular journeyings, to make him a visit at this summer place of his, arriving on Saturday, August 10, to remain over Sunday.

—As the result of an explosion of a can of bed-bug oil in the window of the Maverick Drug Company, Albert Deizer, proprietor, Maverick Square, East Boston,

one evening this week, a lively fire started and caused a damage of \$1,000. An alarm was sounded and although the firemen were early on the scene, the contents of the store were practically ruined.

—Under the laws of Maine, the California Citrus Products Company has been formed and organized, with the intention of making chemical products and selling the same. The president is E. P. Cheney, Dover, and the treasurer of the company, which is capitalized for \$100,000, is C. D. Lanning, of Boston.

—In a fire on Sunday night, July 21, in the Union Block, a large three-story wooden structure at Taunton, several of the twelve stores were burned and suffered losses either by fire or by smoke and water, among these being A. J. Barker's drug store. The entire loss is estimated at a full \$100,000.

—Thomas F. Mullen, known to the trade as "the man with the genial smile", who travels as a salesman for Carter, Carter & Meigs, this city, will go to some attractive place in Maine, not yet chosen, however, for the last two weeks in August, the time of his annual vacation.

—A new retail drug store has been opened in the Faulkner district of Malden by E. J. Kimpton, not far from his former store, which is situated near the railroad station and which he also continues to conduct.

PHILADELPHIA.

BUSINESS IN PHILADELPHIA VERY QUIET.

Philadelphia, July 27.—The midsummer dullness seems to have at last set in and business is very quiet, not to say dull, although soda water still holds its own and is proving to be the most lucrative branch of business in many stores. Very few prescriptions are coming in and the sale of proprietary articles is also small.

Jobbers and manufacturers report a quiet week, with little doing outside of the filling of regular orders, of which soda accessories form the chief item. The accounts of the half-year, from January to June have been about made up, and, without an exception, jobbers declare that these six months have been the busiest and most profitable of many years, both in volume of business done and in the actual amount of profit from gross sales. In a recent issue of a contemporary, the statement was made that "many of the drug stores in this city are now practically owned by the wholesale druggists, which statement brought forth the comment from the credit man of one of the largest jobbing houses here that his firm now thus "owned" only one drug store, and that he could recall only three or four others that they had been forced to carry lately, all of which had either been sold or had been put in good shape by additional capital of the original owner. Inquiry along this line elicited the fact that while there are a number of drug stores, not such a very large one either, which have to be extended an unusual credit to enable the jobber to gradually secure a payment of his bill, the majority of retail druggists in Philadelphia have been meeting their bills these last few years with promptness and have run extensive and continued credits in very few cases. No doubt if the jobbers would demand instant settlement of their accounts from many druggists it would seriously embarrass them or even cause failure, but this is common to many other businesses and the amount and extent of "credits" carried on for druggists is smaller now than for a long time. The great cause of this is the starting of a drug store by a man with little capital; he gets the little he has tied up in stock and cannot meet his obligations, then the jobber has to extend credit and keep up his supplies to save his investment so that the bills of the jobbing house can be paid. In most cases, in Philadelphia at least, these small stores have weathered the stress and secured a permanent footing if managed with ordinary business skill and attention to details. "Taking it as a whole," remarked this gentleman, "the drug business of Philadelphia is on a sounder footing now than for many years," and he ought to know, if any one does.

A DRUGGIST WINS OUT AGAINST A BIG CORPORATION.

Philadelphia, July 27.—Louis Genois, of Twelfth and Chestnut streets, has recently gone through an experience that few would care to have, the culmination of a long struggle with the Commonwealth Title & Trust Company, but to-day has the satisfaction of having got the best of his powerful adversary and the certainty of a substantial bonus to compensate him for damages and annoyance. Some time ago the building in which Mr. Genois is located was bought by this trust company, with the purpose of erecting a fifteen-story office building on its site, and notice was given to all the tenants to vacate; as Mr. Genois was a "common law tenant," having signed no lease and renting his store from month to month, acting under legal advice he refused to vacate until given three months' notice at the close of the year. The battle was fought in the courts and a few days ago the trust company secured a decision in their favor and at once secured a writ of ejection and a deputy sheriff to serve it. Shortly after 4:30 o'clock that afternoon the deputy and several wagons appeared in front of the store and workmen started in to tear out the fixtures and removing them and the stock to the wagons in the street, in spite of protests from the druggist. By midnight everything in the store was cleaned out, and as Mr. Genois refused to surrender the keys, the doors were nailed up. Next day, on application to Judge Mitchell of the Supreme Court, an evidence showing that rent had been regularly tendered and had been refused, making Mr. Genois in law not a tenant, an order was issued requiring the sheriff to replace everything back in the store and to unnaill the door. This brought matters to a climax and the trust company sought a conference, the result of which was that Mr. Genois is to remain in possession of the store until August 15, and the company is to pay him well for loss and damages, the exact amount not being ascertainable. The case is given in full as showing that even the "poor druggist" has some rights that the law will protect when invoked by him.

The Telephone Situation.

Philadelphia, July 27.—Officers and members of the P. A. R. D. are well pleased with the success of the appeal to druggists to cancel their contracts for 10 per cent and 20 per cent commission with the Keystone Telephone Company, a large percentage of favorable replies having been received by S. W. Strunk, chairman of the "Telephone committee." Out of the probable 200 who signed these contracts, an unexpectedly large number have already cancelled them and more are coming up to time daily. A conference between the committee and the manager of the Keystone company will be held next week, at which some settlement in favor of the druggists' contention for 25 per cent commission is expected.

NOTES.

—George B. Evans, the Chestnut street druggist, is demonstrating a form of advertising novel for druggists—the placing of neatly lettered signs advertising some of his specialties on the fences and bill-boards of the resident sections of the city. These signs are conspicuous by their neatness, yet it is a problem whether this method will pay except for a very large business. Mr. Evans also makes much use of street car advertising.

—Charles Maier a drug clerk of Woodbury, N. J., was accidentally shot July 26. In company with a friend he had started for a gunning trip down the creek and while placing the guns in the boat a Winchester rifle was discharged, the bullet entering the right side of Maier's abdomen. The wound, which is thought to be a serious one, was dressed by Dr. George E. Reading, and the young man was removed to a Philadelphia hospital.

—Messrs. Hartzell & Reynolds, well known Kensington druggists, are now prominent members of an up-town athletic club, the Stenton, and both may be seen daily doing all sorts of "stunts" in the athletic way. Friends of the two druggists say that Hartzell has joined the club to get thin and Reynolds has joined to get fat; this ought to be a basis for a good trade if this true!

—J. G. Laubach has opened his handsome new store on South Thirteenth street, below Chestnut, and has been doing quite a good business now for the past ten days. The location is quite a good one, and as the store is fitted up in the most modern and complete way, success ought to come to its enterprising owner.

—Chairman Holliday, of the National Executive committee, was in the city this week on business connected with the N. A. R. D., returning to Ocean City later, where he has his family. The local situation is so satisfactory that it needs little of his attention.

—Mashlon N. Kline is spending the week at Detroit in attendance on the convention of the Brotherhood of St. Andrew, an Episcopal organization in which he is quite a prominent member. After the meeting Mr. Kline will take in the Pan-American Exposition.

—Walter F. Ware has secured a lease of the whole building at 512 Arch street and will soon begin the fitting up of the four floors with machinery and appliances for the manufacture of suspensories, elastic hosiery and other articles.

—Smith, Kline & French Company issued a foreign attachment against The Progressive Drug Company, from the Common Pleas Court, July 27, with bail fixed at \$268.00.

—Charles Gill has sold his store at Twenty-ninth and Diamond streets, to Farrow Brothers, who own a drug store at Twenty-ninth and Columbia avenue.

—Messrs. Theo. Campbell, Leroy King and O. W. Osterhund, West Philadelphia druggists, spent a few days at Sea Isle City fishing this week.

BALTIMORE.

KILLED BY ELECTRICITY.

Baltimore, July 26.—R. Frank Waters, proprietor of the drug store at 1201 East North avenue, was killed by a stray current of electricity in his store either this morning or last night. When Charles Streep, Mr. Waters' clerk, appeared for duty as usual this morning about 8 o'clock he found greatly to his surprise that the store had not yet been opened and that the doors were locked. He crawled in through a cellar window and went through the adjoining house, but could find no one. The policeman on the beat advised him to try again. He did so, and, coming into the store, nearly fell over Mr. Waters' body as it lay behind the prescription counter. The face and part of the chest were blackened by the discoloration of the blood. The weight of the body rested on the knees and the hands were bent under, as if from great tension. The thumb and index finger were burned to the bone, and on the right side of the back was a burn two and one-half inches long and about a quarter of an inch deep. Above the prescription counter hung an ordinary incandescent bulb, with the insulating material burned off the wire where it entered the bulb for a distance of about two inches. To the right of the table is an iron sink, and it is supposed that when Mr. Waters went to turn off the electric light, about 11:30 o'clock the night before, one hand came in contact with the naked wire, which had been heavily charged with a diverted current, while the other hand touched the sink, thus completing the fatal circuit. A terrific thunder storm had passed over the city last evening, and it is believed that the feed wires became crossed and that the powerful charge of electricity turned into the incandescent circuit was too great to be rendered harmless by the converter. Flames had been observed to shoot out from the apparatus several times, indicating some unusual disturbance. Exactly how the accident happened will never be known. Mr. Waters, however, was seen to be alive at 11:30 o'clock, the hour for closing. In turning off the current he may have accidentally touched the surcharged electric circuit and, falling back against the sink, completed the fatal loop. How long he had been dead when found, was of course purely conjectural. There was not the slightest doubt, however, about the cause of death, and the coroner gave a verdict in accordance with the circumstances. Mr. Waters was 35 years of age and leaves a widow, besides a child seven years old. One of his brothers is a physician, another a minister. Great sorrow was expressed over his demise, he having had a large circle of friends.

Two Other Deaths.

Baltimore, July 27.—Lynn C. Byrd a member of the wholesale drug firm of James Bailly & Son, 16 and 18 West German street, died suddenly about 10:30 o'clock last Wednesday morning while seated at his desk in the firm's office. He had sustained a slight hemorrhage about one hour earlier, but was thought to be recovering. A more severe recurrence of the trouble followed, however, and Mr. Byrd, falling to the floor, expired in a few minutes. He had been in poor health for some months. Recently he returned home from a trip to Detroit, Buffalo, Niagara Falls and other points, having traveled in the hope of deriving physical benefit. The deceased was 42 years old and a native of Temperanceville, Va. He came to Baltimore about twenty years ago and had since then been connected with James Bailly & Son. He had charge of the traveling salesmen and was widely known in Virginia, the Carolinas and other Southern States. He leaves a wife but no children.

F. S. Williams, who conducted a retail pharmacy at the corner of Ninth and F streets, northwest, Washington, D. C., for 17 years, died at the Johns Hopkins Hospital, this city, on the last Monday afternoon. He had suffered from typhoid fever and had been removed to the hospital during the early stage of the malady. Mr. Williams was born in Howard county, Md., fifty years ago, but had lived in Washington a long time and stood high in business circles there. In his will he directed that all his property should be held in trust for his son until the latter reaches the age of twenty-five years. The drug store is to be sold as soon as possible.

VOGELER COMPANY SALE RATIFIED.

Baltimore, July 23.—An order was signed yesterday by Judge Doble in the Circuit Court here substituting William E. Geddes, of London, England, in place of Richard J. Drinkwater, of London, as the purchaser of the business of the Charles A. Vogeler Company, manufacturers of St. Jacob's Oil and other proprietary articles, and ratifying the contract made with Mr. Geddes on June 25 last by Henry S. Dulaney, John B. Ramsay and Lawrence B. Kemp, trustees. The sale of the assets to Mr. Drinkwater was reported to the court on February 6 last, and was ratified February 13. Mr. Drinkwater having declined to carry out the contract of sale, Mr. Geddes agreed to take his place on the same terms. The petition of Mr. Geddes on which the court's order was based stated that he has paid the trustees £5,000 and has given them his promissory notes for the balance of the £10,000 purchase price. The notes are for £10,000, £15,000 and £1,000, and are to run respectively 60 and 90 days and four months. Mr. Geddes represents an English syndicate which will continue to manufacture and market the preparations previously exploited by the Vogeler Company. The sale includes all the patent rights, good will and appliances. The building was sold not long ago to Gilpin, Langdon & Co., wholesale druggists, and is being remodeled for the firm's business.

Business in Fair Shape.

Baltimore, July 29.—Business in the jobbing houses eased off somewhat last week, but the volume of transactions for the current month will nevertheless assume large proportions. Some of the firms report the business done to have been the largest in their history, and last week's decline in activity is attributed chiefly to the desire of retailers to keep down their bills as much as possible. The manufacturers continue to be active, and altogether the trade is in fair shape. The market for botanicals is without special features. Some few articles, such as *seneca root*, *serpentina* and *golden seal*, have advanced in price, instead of declining, as had been predicted in some quarters. Other values have taken a drop. No special developments are looked for until the middle of September, when the new stocks will be coming into the market and when the scarcity or profusion of supplies can be determined with greater exactitude. The retailers have been fairly busy. The heavy chemical movement is about as usual.

NOTES.

—J. Edwin Hengst, a well known East Baltimore druggist, was among the members of the East Baltimore Business Men's Association who went on the ten days' trip to Buffalo, Toronto, the Thousand Islands and other places. The party had an exceedingly pleasant time.

—H. P. Hynson, besides attending the annual meeting of the Maryland Pharmaceutical Association, served at Camp John Walter Smith as brigade hospital steward during the State encampment of the M. N. G.

CHICAGO.**ASSOCIATION DOINGS.**

Chicago, July 27, 1901.—The several auxiliary districts of the Chicago Retail Druggists' Association are gradually making up their quota of money contributions. The amount received from the eighteenth district was \$142 instead of \$125 as stated in the report of the meeting of the C. R. D. A. recently. The fifteenth district has paid in \$22 as a partial payment of the sum it expects to give, and other districts have come forward with various sums and assurances. The amount finally received will far exceed the total of \$1,160 received and pledged at the last meeting of the association.

The ninth district has been reorganized and new officers have been elected.

The next meeting of the C. R. D. A. will be held in the Masonic Temple on the second Tuesday in August.

Chicago Business Lighter.

Chicago, July 27.—Jobbers and others state that the week has not been quite so satisfactory as was last week in point of business. The very depressing heat and humidity have had a distinct effect upon trade and there seems to be little activity anywhere except upon soda fountain goods. Manufacturers are having their usual summer trade, but have not been at all rushed with orders so far as they will say.

NOTES.

—There has been a number of marriages among the young men connected with the drug trade within the past six weeks or so. Among those who have become benedictos are Charles Koebel, city salesman for the Fuller & Fuller Company. Mr. Koebel was married this week to Mrs. Louise M. Wade of this city. They will spend their honeymoon in Duluth, Minn. Mr. Koebel is looked upon by his employers as one of their most efficient men. It is understood that both Mr. and Mrs. Koebel have many tastes in common, not the least of which is a love for and appreciation of live music. George C. Gordon of the Chicago house of McKrack & Company was married on July 16 to Miss Minnie F. Copeland of Rutherford, N. J. Mr. and Mrs. Gordon will reside in Chicago. Charles L. Gleason, Chicago representative of the importing department of Parke, Davis & Company, was married on June 29 to Miss Jean Bernadine Sargent of Spokane, Wash. Mr. Gleason is enthusiastic in his patriotism.

—Horace Greely's advice concerning the west, and while he did not remain to "grow up with the country", having already attained maturity here, he believes that he has brought back with him the best product of the country which excited the admiration of the sage of the New York Tribune.

—The Chicago Drug Club, through its secretary, Charles E. Matthews, announces that the rooms at 178 Randolph street are in course of preparation for the club and will be ready not later than the first of September. The catering will be in charge of the Bismarck Hotel Company. The club will be proud of its new quarters and extends invitations to the trade to call at any time after or on the date mentioned.

—A mandamus suit has been brought against the Chicago Telephone Company to compel it to reduce the rates on business 'phones to \$125 per year according to

the schedule allowed in the franchise of 1889. Corporation Counsel Walker has given an opinion that a mandamus suit will lie in the premises.

—John W. Kask, a druggist at 5727 Wentworth avenue, was called home to Peconica, Ill., this week on account of the serious illness of his aged mother.

—James Adams, a well known druggist at Forty-seventh street and Vincennes avenue, has gone to Mackinac Island for a ten days' outing.

—The Pasteur Medical Company, Huntington, W. Va., has been licensed to do business in Illinois. Its capital stock in Illinois is \$2,000.

—Buck & Evans, Forty-seventh street and St. Lawrence avenue, have sold out to James Adams, 611 Forty-seventh street.

—Fred. Woeltz of F. W. Woeltz & Brother, well known druggists of Appleton, Wis., was in Chicago this week buying goods.

ST. LOUIS.

HOT WEATHER IN ST. LOUIS.

St. Louis, July 27.—The extreme hot weather which has prevailed for the past two weeks has played havoc with the retail drug trade, and has affected the wholesalers' business. Even the soda fountain business has very materially dropped off. People have remained at home as much as possible, and have more or less prepared their own cool drinks. The physicians have had little to do and the prescription business has been practically dead. The sale of lemonade on the street by small boys and girls, many druggists claim, has affected their fountain business. Everywhere on the streets and in doorways, are children with a table and large umbrella—providing there is no other shade—selling lemonade at one cent per glass, and as a rule it is a pretty good article, too, for it is cold and refreshing. You will frequently find one of these stands on either side and a few doors from a drug store. Many people patronize these little street vendors to help the business along, while the majority probably realize that it is an excellent opportunity to get five drinks for the price of one. All the local wholesale houses have been closing down at four in the afternoon. During the past week three employees of the Meyer Bros. Drug Co. were overcome by heat and one each at the J. S. Merrell Drug Co. and Moffit-West Drug Co.'s.

NOTES.

—The druggists of this city claim they are having a very hard time to find the right kind of young men or boys as apprentices. They claim that nearly every one they try either gives it up in disgust after a few weeks or else becomes of no account and they are obliged to discharge them. The long hours, small pay, and the idea of washing windows and bottles and sweeping floors and pavements, acts upon the boys like a scarecrow. This city affords so many opportunities to boys and young men in factories, offices and large wholesale establishments where the pay is usually better, the hours much shorter, and the work and surroundings more congenial, that the druggist has to almost go begging to find an apprentice. The old time druggists have the hardest time of it. They expect a boy to start in and do pretty much as they remember they were required to do when they were learning the business. But there is a very great difference between the city boys of to-day and those of forty years ago.

—The A. Ph. A. arrangements are being pushed right along. A committee consisting of L. A. Seitz, C. C. May and Chas. Gletner, has been appointed to get up a list of all points and things of interest to a visitor in St. Louis. This information will be published in pamphlet form, and arrangements will be made to visit as many places of interest as possible. Prof. Ives, director of the Museum of Fine Arts has tendered the freedom of the museum to all members and visitors at the meeting. Local Secretary Whelpley says his committee has arranged to issue tickets which will entitle the bearer to visit the museum as often as he chooses during that

week. Another one of the entertainment features will be a steamboat ride up and down the river. A visit will also be made to the St. Louis Historical Society where may be seen a vast number of things pertaining to the early history of this city and the old Louisiana Territory.

—As yet no concessions have been made by the wholesalers in their new rules in regard to discounts and the return of empty containers. A few of the local retailers are talking about combining and buying as much as possible in Chicago and eastern markets, in case the wholesalers do not concede their demands.

—Word has been received of the death of Miss Ida May Samms, of Clinton, Mo. Miss Samms was a registered pharmacist and conducted a store at that place. She was well known to the druggists of the state as she always attended the meetings of the state association and took part in the proceedings.

—G. H. J. Andreas, druggist at Vandaveater and Shendoah avenues, is a great fisherman and being unable to leave his store for any length of time, he is taking his vacation on the installment plan. He spends two days a week tempting the fish of Creve Couer Lake and other nearby resorts.

—Theo. F. Hagenow has moved his store directly across the street from its old location at Fifteenth and Choteau avenue. Last Tuesday night he invited a number of his druggist friends down to inspect the new location and to help him do a little celebrating.

—L. P. Hemm, the Kirkwood pharmacist, who started for the West on account of ill health a short time ago, became so much worse that he was obliged to return. He is arranging to sell out his two stores and go out of business.

—Leslie Pelham, chief clerk at the Marlon-Simms Medical College Drug store, was overheated last Tuesday. R. T. Hill, the proprietor, was called in from Illinois where he was spending his vacation.

—E. W. Knott, the city desk man at the J. S. Merrell Drug Co., has gone up among the lakes of Minnesota to endeavor to recuperate his health and incidentally to do a little fishing.

—C. W. Ochsner, formerly a druggist at Vandaveater and Finney avenues, sails next Monday for Germany where he expects to be gone at least a year.

—Jacob Friez, the druggist fisherman on S. Fourth street, says the fever is coming on him again and he is getting ready for another trip.

—N. H. Allen, the Kirkwood druggist, who recently went into bankruptcy, expects to enter business again in the near future.

—Chas. J. Sittle, chief pricer for the Moffit-West Drug Co., has returned from a two weeks' vacation spent in the far north.

—C. D. Merrem, druggist at Taylor and Finney avenues, has gone out on the Big Piney river for a two weeks' fishing trip.

—H. E. Papin, treasurer of the Moffit-West Drug Co., has gone to Northern Wisconsin on a protracted fishing trip.

—H. K. Prewitt, of Corsicana, Texas, was in the city this week purchasing a new drug store outfit.

—W. P. Pilkington, proprietor of the Garrison avenue Pharmacy has gone north on his vacation.

—L. A. Porter, representing the Coca-Cola Co., of Atlanta, Ga., has been in the city this week.

There is a constantly growing demand for the "20 Mule Team" brand of Borax in special pounds, two pound and five pound cartons. The five pound packages are designed for dispensing purposes. This brand of Borax may be depended upon absolutely as chemically pure. The Pacific Coast Borax Co. is carrying on a campaign of education among householders in regard to the uses of pure borax. Send for a supply of the two attractive and valuable pamphlets, "Hints on the Use of Borax," and "Borax in the Home," for distribution to your customers. They will surely increase your sales of borax. Address the Pacific Coast Borax Co., New York, Chicago, or San Francisco.

THE SOUTH.

AFTER THE VIOLATORS.

Memphis, July 26.—Systematic effort has been made by the Board of Pharmacy during the last quarter to discover all persons and firms who have been selling drugs without licenses. Several firms whose names were before the board, will be prosecuted. Most of these violations are from country stores having a drug department in connection with general merchandise. A special permit is granted to country stores in towns where there is no registered pharmacist, providing the town is sufficient distance from a registered pharmacist's place of business—at least six miles. The person so applying for permit must give evidence that he is qualified to dispense drugs, and must be indorsed by the physician of his locality. During the coming quarter the prosecution of this class of violators will be continued.

Drug Store Robbed.

Memphis, July 26.—The pharmacy of Hammer & Ballard, 230 Main street, was robbed some time during the morning of July 26. The thieves entered through a large transom in the back of the store and got away with \$13, all the change in the cash register being taken. Nothing else has been missed. A negro who formerly worked for the firm as porter was arrested but was released for lack of evidence. Another ex-porter was arrested, he, too, being released as nothing could be proved against him.

NOTES.

—What came near being a disastrous fire occurred on the 23d at Marietta, Ga. The fire originated in the drug store of J. W. Legg and was caused by a match igniting either a tank of gasoline or turpentine. The flames spread rapidly and covered the whole store in a few minutes and but for the prompt service of the fire department the whole block in which the store is located would have been destroyed. The building was not seriously damaged but Mr. Legg's loss on stock is \$10,000, about three-fourths covered by insurance. He will resume business as soon as possible.

—Chas. Maggee, head society man and prescription clerk for Gus. Kendle's pharmacy, Meridian, Miss., is sojourning among the Northern lakes. It is said that he contemplates embarking in the roasted coffee business on his return to Meridian.

—Arthur Clipp who has been attending the medical college at Louisville, has returned to Meridian, Miss., and accepted the management of the Southern Pharmacy.

—Mr. Sangster, the prescriptionist at RATHER'S pharmacy, Holly Springs, Miss., is with his wife and babies taking in the Buffalo exposition.

—W. S. Metcalf, the Coffeeville, Miss., pharmacist, has moved his business to Water Valley, Miss., where he has one of the prettiest drug stores in the state.

—The Mississippi Drug Co., at Laurel, Miss., is said to have the handsomest soda fountain and fixtures south of the Mason and Dixon's line.

—Mrs. Butler, who succeeded her husband in the drug business at Holly Springs, Miss., has sold out to Drs. Crawford, Reed & Seale.

—A new drug store has been established at Collins, Miss. Dr. W. A. Tisdale is the proprietor.

Happy Foot Hair Insoles.

Here is an article now having a great sale in every drug store. The manufacturers create a popular demand for it by advertising in the principal magazines, and in referring inquirers to their druggists for supply. Happyfoot Hair Insoles can be sold as readily in summer as in winter. They keep the feet cool, comfortable and in their normal condition. You can arrange striking window displays with these goods, and sell lots of them. Write for introductory terms to the Wm. H. Wiley & Son Co., Box 69, Hartford, Conn.

NEW ORLEANS.

New Orleans, July 26.

—A sharp practice that has given the Board of Pharmacy not a little trouble, from outlying districts, is the securing of recognition as pharmacists by unscrupulous persons merely for the sale of liquor. Under the state laws there is an examination of candidates for certificates every three months. However, when an application to stand the examination is received the applicant is permitted, on his affidavit and payment of the \$5 fee required, to practice until he is examined when the certificate is issued. In several parishes of the state the local option law is in effect, prohibiting the sale of spirituous liquors, except by druggists and on a doctor's prescription. These blind tiger artists have in many instances merely sent in the necessary application to the state board and have secured temporary recognition as druggists. They never stand the examination applied for, but under the law they are safe to sell tanglefoot until such time as the date for the next examination rolls around. They have found it a very profitable expenditure of money in districts where physicians are not over scrupulous in writing prescriptions for liquor. The matter has considerably annoyed the state board and doubtless there will be an effort made to effectually put an end to the fraudulent practice.

—The case of J. A. Bastian, charged with violating the pharmacy law, in practicing pharmacy without a certificate, has not yet been heard. When called for trial a continuance was secured and as court has now adjourned for summer holidays the matter will lie over until fall. In the meantime Mr. Bastian has employed a registered pharmacist and is within the law.

—After the sudden death of A. Sirjaques, the drug establishment at Washington avenue and Magazine street has been retitled and purchased by Sidney M. Gutmann, one of the young drug proprietors of the city, and formerly in the employ of William Levy.

—Primo's Pharmacy at Canal and Bourbon streets, which recently went into liquidation, has been reopened as "Williams' Pharmacy." The stand is an old drug corner and for years was occupied by W. T. Cluverius, a veteran druggist of New Orleans.

—The next examination for pharmacists will be held by Louisiana Board of Pharmacy August 2 and 3. Previously one day has been sufficient to conduct examinations, but this has in some instances worked a hardship on applicants and hereafter the quarterly examinations will consume two days.

—Owing to inclement weather there was a postponement of the last meeting of the Orleans Pharmaceutical Association. There will be a called meeting shortly to select a delegate to the National Retail Druggists' Association convention.

New Jersey Pharmaceutical Association Scholarship.

In pursuance of the resolution passed at the recent annual meeting in Trenton, the executive committee of the New Jersey Pharmaceutical Association drafted and adopted rules governing the conditions for the scholarship to be established in the New Jersey College of Pharmacy. The scholarship is to be known as the "New Jersey Pharmaceutical Association Scholarship in the New Jersey College of Pharmacy." The conditions for the examination follow: 1.—The candidate must be a person of good moral habits. 2.—The candidate must have served two years of apprenticeship in a prescription pharmacy and must present credentials to that effect from the preceptor. 3.—The examination to cover preliminary school education and will consist of questions in mathematics, geography, English grammar and spelling. Penmanship is to be taken into consideration. The examination for this free scholarship will take place in the lecture room of the New Jersey College of Pharmacy, on Friday, September 6th, at 10 a. m., under the direction of the executive committee of the New Jersey Pharmaceutical Association. Applications with credentials should be addressed to Herman J. Lohmann, chairman of the Executive Committee, Jersey City, N. J.

THE NORTHWEST.

PRICE-CUTTING.

St. Paul, Minn., July 26.—The matter of cutting drug prices is attracting attention outside of the trade immediately concerned. The St. Paul Trade Journal, an influential exponent of the Northwestern business world, discussed the question editorially in its last number saying:

"Probably none of the trades have been more affected by systematic cut rates, and particularly as to proprietary goods, than the retail drug trade. This system has been carried to such an extent that in every locality the business of selling drugs has been demoralized and the profits of retail drug stores reduced to very small sums or practically wiped out.

"This condition of things has induced the Druggists National Association and the Proprietary Association to enter upon a system of co-operation with a view of remedying the evil. These organizations co-operate directly with the National Retail Druggists' Association and the whole trade seems to have begun to harmonize for the maintenance of fair prices. Part of the plan which it is probable will be carried into effect, is for the manufacturer to fix the retail prices on his goods. Not arbitrarily, but with the approval of the Retail Dealers' Organization, and the retaining of goods below this schedule prices will be prevented by the inability of cutters to buy more goods from any of the manufacturers thereafter. The same rule may be made to apply to wholesalers and the manufacturers together as a unit, thereby gaining what may be properly termed business justice. Should this system be carried into effect thoroughly, it would seem as if there would be difficulty for the price cutters in the drug business to continue their work of demoralization.

"Recently an agent of the National Retail Druggists' Association visited this city for the purpose of reviewing the situation and seeking to find the way for a better understanding between the retail druggists and their association and the department stores which are the active factor in the cut rate business.

"It seems probable at this time as if considerable benefit would grow out of the movement, and if so, a large influence will be exerted upon other lines of trade, the vitals of which are being sapped by cut-price demoralization. The progress of this movement in the drug trade will be watched with interest by other lines of business, and while, as compared with some other manufacturers, there are fewer manufacturers and wholesalers in the drug trade, at the same time if success is attained in this movement an influence will be exerted upon trade at large which will prove of the highest consequence."

NEW MINNESOTA PHARMACISTS.

St. Paul, Minn., July 26.—The midsummer examination conducted by the State board of pharmacy resulted in the granting of the registered pharmacist certificate to these:

Philip L. Adams, Joseph A. Cox, Hans Dahl, Charles E. Geisel, Adolph W. Johnson, Emil E. Kelsing, all of St. Paul. John A. Browne, Edward W. Lansing, Jr., Albert C. Peterson, Guy C. Clark, Albert H. Erickson of Minneapolis. John H. Beutner, Jr., Winona; Westwood D. Case, Stewartville; J. Gunner Elmquist, Gunder M. Larson, Stillwater; Walter O. Flodin, Duluth; Bernt M. Hanson, Albert L-a; Hattie M. Hitchcock, Redwood Falls; Victor H. Moffatt, Hendrum; Paul V. McCoy, Dassel; Henry G. Seifert, Louis C. Heiman, New Ulm; Frank W. Smetana, Hopkins; Jennie L. Phillips, Clearwater; Mary M. Jones, Frazee. The following were granted the certificate of assistant pharmacist: Ado'f F. Burmeister, Leslie A. Britzius, Charles F. Cough, Walter F. Dreis, Ludie D. Carlson, Orley E. Couch, Albnrtus Hanson, Emil T. Schmidt, Edna B. Stultz, Ernest C. Wipperman, Henry M. Wilson, Edwin A. Buzzell, Man'ey B. Cook, Evan G. DeLander, Herman Hauneter, Christian A. Hawkins, Avery L. Johnson, Julius F. Leopold, Henry H. Scarr, Nilson P. Westberg.

NOTES.

—Successions: N. E. Alger, Wessington, S. D., by J. A. Milburn; O. K. Windberg, Lake Park, Minn., by O. K. Windberg & Co.; White Drug Co., Battle Creek, Neb., by T. M. Morris; Greenway Drug Co., Muchakinock, Ia., by J. C. Thomas Drug Co.; Churchill & Scheldrup, Minneapolis, Minn., by George S. Churchill.

—The St. Paul Dispatch talks like this and evidently feels better for it: "What ought to be done to the jocosse local druggist who, when the thermometer was at 103 yesterday, posted a weather bulletin of last winter pre-

dicting, 'Snow to-night and Sunday; not so cold to-morrow?' Either a pension or a lamp post is in order."

—Frank Davis was arrested at Hastings, Minn., Wednesday for stealing a horse and buggy belonging to F. W. Finch, a druggist of that city. He was arraigned before Justice Newell and committed for trial, going to jail in default of \$400 bail.

—E. Bruce Nimmo, formerly of Duuth and now of Brainerd, Minn., visited the city last Friday in search of a soda fountain expert. He engaged a Mr. McDonald of Shelby avenue, who has gone to Brainerd to take charge of that department.

—New: Baker & Reiff, Fergus Falls, Minn.; O'Leary Bros., Salem, S. D.; P. & M. Kline, Millerville, Minn.; A. D. Wyant, Knox, N. D.; F. G. Watson, Boyd, Minn.; Lorenzo Rounds, Armour, Neb.

—Chas. Long has left Campbell's Pharmacy, St. Paul, and gone to Brainerd to work in Spalding & Nimmo's store.

—W. E. Wold, of Austin, Minn., has gone to Granite Falls to work for B. E. Nelson.

—W. J. Camden, of Walhalla, N. D., is visiting old friends in this neighborhood, this week.

—A. McCullough, formerly of Wyckoff, Minn., is now in Rollin's Pharmacy, in this city.

—The Northern Paint Co., Minneapolis, will remove to St. Paul, Oct. 1.

—B. F. Moffet has sold his interest in W. E. Henning & Co., Clinton, Ia.

—Claypool & Wheeler, Sioux, Neb., are about to dissolve.

—Aug. Penspl and R. J. Koch, who have been running drug stores at Eureka, S. D., have consolidated.

—E. E. Winchester & Co., Eldora, Ia., have changed style to the Winchester Drug Co.

—E. L. McCollough, Wyckoff, Minn., has filed a voluntary petition in bankruptcy.

—Barrett & Preble, Webb, Ia., have given a bill of sale.

—A. B. Fisher & Co., Rodney, Ia., have sold.

CALIFORNIA.

BOARD OF PHARMACY SESSION.

San Francisco, July 22.—The California Board of Pharmacy met here last week. The board has been compelled to reconsider its ruling in regard to registering graduates of pharmacy without examination. The news came as a surprise to nearly all the graduates of this year's classes who had assembled prepared to take the examinations. The board decided that those graduates of the two colleges in California were entitled to registration under the old act of 1901 and the new act of the last legislature could not compel them to pass an examination. The future policy of the board in this matter has not been decided upon, but it is rumored that in the future the graduates of the College of Pharmacy of Physicians and Surgeons and those of the California College of Pharmacy will be registered without examination. These being the only two colleges in the state it has been argued that their graduates should be recognized.

Later in the examinations for registration were completed July 23, and the following were successful participants: Licentiate—J. W. Bodmann, M. E. Fellows, J. L. Whitlock, H. E. Howard, W. H. Boydston, S. P. Strange, G. P. Tolman and William Quinn, Assistants—P. Van Dam and B. F. Sue'fohn. Besides these, all graduates of the California College of Pharmacy and of the College of Physicians and Surgeons, who had had the requisite four years' experience, were registered without examination. This ruling, however, will not be in force after August 1st of this year. The next meeting of the board will be held October 8th, in San Francisco.

Los Angeles Would Tax All Druggists.

San Francisco, July 23.—The city council of Los Angeles seems to think the druggists of that city are an easy mark. The special committee from the council, ap-

pointed to devise ways and means of increasing the city's revenue, has under consideration a special tax on druggists. The idea is to compel all druggists in the city to register and pay the sum of \$2 per annum for the privilege. Their action in this matter has called forth a kick, and a committee of four druggists called on the council to protest against the action. It was pointed out by the druggists that, under the new pharmacy act, State registration costs each pharmacist \$2 a year and each assistant \$1. This protected the public, and a further tax by the city would bring about no better protection, but would work a hardship to druggists and clerks as well. The council took no action on the protest, but will report on it when the ordinance comes up for final action.

Gift to College of Pharmacy.

San Francisco, July 22.—The library of the California College of Pharmacy has received about one hundred and twenty-five volumes on pharmaceutical and allied scientific subjects, from James C. Steele. Mr. Steele is an old and well known druggist in San Francisco, who, before retiring from active business, conducted a pharmacy under the Palace Hotel. His gift is a valuable one and will prove a splendid acquisition to the college library.

NOTES.

—The retail drug clerks of San Francisco have commenced an active campaign for shorter hours. Large cards requesting the public to purchase their drugs before 10 o'clock are being displayed in nearly all the drug stores of the city. The movement is meeting with a great deal of encouragement, and the association hopes by this means to get an earlier closing hour in force in the near future.

—L. R. Ellert, ex-mayor of San Francisco, and a well-known pharmacist, died Sunday at his home in San Francisco. The deceased was a close student of pharmacy, but took up the study of law, and drifted into politics. Mr. Ellert held several important political positions in San Francisco, and was very well and favorably known.

—Stockton druggists are getting in line for early closing. Their stores all closed at 8 o'clock with the exception of Saturday night when the hour is 10 o'clock, and Sunday, when they close at 6 o'clock.

—Wallace L. Meyers has resigned his position with the Golden Rule Pharmacy, San Francisco, and will leave shortly to take a place in Honolulu.

—C. W. Fischer, San Jose, has sold a half interest in his store to N. Pellerano and the business will hereafter be run under the name of Fischer & Pellerano.

—Hal Cottle has taken charge of the prescription work of the Polyclinic on Ellis street, San Francisco.

—Robert Grier has accepted a position with the Zimmerman drug store at Woodland.

—The Modern Pharmacy, Fresno, has been reopened by J. J. DeGloria and Maurice Ryan.

—O. Overman, formerly of Palo Alto, is now located on Seventh street in West Oakland.

—R. R. Snowden has purchased the store of Dr. Milton McMurray, Crescent City.

—W. E. Cook has taken a position with Dr. Frank O'Connell, Yreka, Cal.

—F. R. Henderson has purchased the Agee drug store at Merced.

—Dr. J. A. Miller has opened a drug store at Geyserville, California.

C. AUG. WERCKSHAGEN, of Philadelphia, whose death on July 21, due to heart prostration, was briefly noted in the Era of July 17, was born in Westphalia, Germany, seventy-five years ago. He received a thorough education in pharmacy and chemistry in his native land, and at forty-one years of age he immigrated to this country, opening a store in Philadelphia at Fifth and Jefferson streets. There he established an enviable reputation with physicians and the public, which he extended by his contributions to pharmaceutical journals. His breadth of knowledge was such that some of the ideas of which he was the author were adopted in the U. S. P. He was a member of the Humboldt Lodge, F. A. M., and of various German societies. Surviving him is a son, a druggist in Baltimore, and three daughters.

OHIO PHARMACEUTICAL ASSOCIATION.

The Ohio Pharmaceutical Association held its twenty-third annual meeting at the Algonquin Hotel, Dayton, O., July 16. The mayor of Dayton, Hon. J. R. Lindemuth, extended a cordial welcome to the visiting society, which was responded to by A. DeLang, of Cincinnati, on behalf of the association. Short speeches were made by Adam Schmidt and Dr. Casper of Springfield, after which the president read his annual address. The address was referred to a committee for consideration.

The second session was called at 9 A. M. July 17. The privileges of the floor were extended to C. H. Jones, organizer of the Ohio Valley Druggists Association, and to E. R. Cooper, organizer of the Northern Ohio Druggists' Association. The reports of the various committees were read and accepted. The chairman of the Committee on Course of Study in Colleges of Pharmacy made the following recommendations, which were adopted:

1. That this Association requests the schools of pharmacy located in Ohio to require an entrance admission, leading to a degree, of at least one year's instruction on a standard high school, which should include algebra and natural science.

2. That this Association re-affirms its position of 1896 that schools of pharmacy should have a fixed time for the admission of students who are candidates for a degree in pharmacy, which should be at or near the opening of the school year; and a definite time when the course leading to the conferring a degree shall close.

3. That the Ohio Board of Pharmacy be, and is hereby requested to adopt a rule that after Sept. 1, 1902, it will refuse to recognize as in good standing any school of pharmacy within or without the State of Ohio which fails to require and enforce an entrance qualification equivalent to that proposed in Item 1, or that fails to comply with the conditions relating to the admission of students and the conferring of degrees in pharmacy set forth in Item 2.

Reports were read by the delegates to the National Wholesale Druggists' Association and the National Association of Retail Druggists. Affiliation dues in the National Retailers' Association were ordered paid for another year.

E. R. Cooper explained in detail the working of the so-called Worcester plan for the prevention of price-cutting in connection with which the association passed the following resolutions:

Whereas, an expression of our sentiments in behalf of price-protected goods is deemed essential, and whereas, the retail drug trade would be benefited without injustice to any one by price enforcement under the Worcester plan; Now, therefore, the Ohio State Pharmaceutical Association does hereby endorse said plan; and as a further expression of our interest and as an incentive to manufacturers of proprietary goods to adopt it, do urge our members to give preferential consideration to the goods of manufacturers that are sold under said plan, whenever they can do so without injustice to any other goods or discrimination against their own.

Resolved, that the secretary of this association be instructed to forward the following resolution to one or more members of this association in each town, with request that they obtain druggists' signatures thereto. And resolved, that all signatures so secured be returned to the secretary of this association and embodied in fac-simile memorial to proprietary manufacturers, as also for the presentation at the proposed Massachusetts fall conference.

The following resolution was adopted:

Whereas, the retail drug trade would be benefited without injustice to any one by price enforcement under the Worcester plan; now, therefore, the undersigned do hereby endorse said plan, and as a further expression of our interest and as an incentive to manufacturers of proprietary goods to adopt it, do promise to give preferential consideration to the goods of manufacturers that are sold under said plan, whenever we can do so without injustice to any other goods or discrimination against our own. And we promise to sell the price-protected goods whenever called for by name, without effort to sell our own or to sell them in place of such price-protected goods.

On Wednesday afternoon the Dayton druggists tendered the association a carriage ride and a trip through the National Cash Register Company's model factories, where were seen the detailed processes of manufacture, the system by which employees suggest their own ideas, and the lunch room where the female employees are each day served the essentials of a good lunch for five cents per week. These works certainly suggest an era of higher aim and culture among factory operatives.

The following officers were elected: President, J. C. Pirmin, Findlay, O.; First Vice-President, Chas. Freericks Jr., Cincinnati, O.; Second Vice-President, G. C. Himmelman, Akron; Permanent Secretary, L. C. Hopp, Cleveland; Treasurer, J. H. Von Stein, Upper Sandusky; Executive Committee, F. W. Herbst, Chairman, Columbus; J. P. Harley, Warren, John Kutzbach, Cincinnati.

The initiation fee for new members was abolished. The association commended the Board of Pharmacy on the fact that the number of assistant registered pharmacists had been increased in the last two years. The following names were recommended to the governor from which to select a new member of the Board of Pharmacy: W. R. Ogier, Columbus; John Von Stein, Upper Sandusky; John Byrne, Columbus; Adam Schmidt, Springfield; Geo. W. Brown, Wilmington.

An auxiliary section was formed and put on an active basis, the object of which will be to protect those members who may be unjustly persecuted or prosecuted under the existing or future laws of this State, to take care of any cases against them, both in the lower and appellate courts, without individual expense to the druggist beyond his per capita fee for membership; membership to be restricted exclusively to members of the Ohio State Pharmaceutical Association. A central committee of six was appointed by the president, to have full charge and discretion in doing the work.

The matter of a time and place for next year's meeting was left to a central committee, the preference of the committee being for a boat ride to Mackinac, holding the meetings on board; the next preference to be given to Put-in-Bay.

Mr. Jones' Address.

Following is the address of Mr. Jones, delivered at the annual meeting of the Ohio State Pharmaceutical Association, July 17:

"It is on two occasions only that I feel any regret at not being a druggist; one is such an occasion as this, when the cream of your profession is gathered together for business and social purposes, and the other is when I stand in your enticing stores and see a vast amount of our circulating medium disappearing into your capacious coffers. I was not born a druggist, and somehow my education since has not been of a character to develop me into one, but I am beginning to feel that I had better look well to my surroundings and connections, for it would certainly be dangerous the influence that environment has upon one. I had often heard it said that the profession I chose was not so dissimilar to yours, the only difference being that the class to which I belong has the reputation of being engaged in legally 'holding up' the public. But, it would seem to me, if I have anything like a proper conception of the matter, that my class only assumes the burdens of a few unfortunates who unwarily fall into our meshes, while the apothecary holds up his entire community without regard to race, color or previous condition of servitude. However, since my advent into the drug business, or rather the druggists' business, I have come to believe that the great advantages the druggists have been supposed to enjoy are largely exaggerated. Indeed, instead of the Augustus who lays tribute upon the whole world, I find the druggist to be a mere servant of the people, and an underpaid one frequently at that. Instead of large and magnificent landed estates to leisurely roam over, I have generally found modest apartments, just large enough to meet the bare necessities, located near the workshop, and these knowing their masters but a few hours out of the twenty-four; instead of a position of ease, with servants running at his beckon to meet the whimsical demands of luxuriousness, I find him coatless and hatless, and with disheveled hair, performing all manner of service down to the most menial and undesirable; and instead of the few hours daily that the wealthy and cultured devote to business, merely for a salutary effect upon the mind, I find a man overwhelmed with laborious duties and unceasing cares for such extended periods that the only wonder is that the great strain does not reduce the mind to a blank and leave its owner a helpless public charge.

"It is true that there are druggists and druggists, as well as there are stars and stars; some will have that degree of enterprise, cleverness and practicability that overcome all obstacles, while others, lacking in these

qualities, must fail. Some time ago, a gentleman remarked that a druggist who failed of success was not entitled to sympathy. I do not know his definition of the word success, but at any rate his observation was an extreme one, and too harsh. It is true that some men in the drug business fail; and so do men in other lines of business. Sometimes it is not the fault of the man, but it is due to circumstances over which the man cannot have control.

"What we are interested in, however, is not the equal distribution of talent or tact, but the betterment of conditions which every druggist must face, and the elevation of the business to a plane where the average man—the man who has a fair degree of brain, industry and conscience can make a comfortable living and provide something known as the 'yellow sear of life.'

"I have often heard it said, and so have you, that the 'cut-rate' evil, the bane of the druggist's life, is the child of the retailer, and indeed he is asked to acknowledge it without any question.

"It may be that the charge is a proper one and that he has been guilty of errors and indiscretion in the past. But he is told that he must remedy the evil or grow accustomed to it, live with it and maintain it. This is said without regard to any consideration of his ability for the task. Equity does not presume to compel the specific performance of an impossibility, and indeed we do not always look to the origin or source of trouble or mistake for its remedy or correction. If we did, we should be compelled to ask Adam and Eve to purge the world of sin and to restore lost happiness, or perhaps we should be obliged to resort to the Old Serpent who it was that brought death into the world and all our woe. It would be capital if we could make Satan bear all our infirmities, and it would certainly be just and equitable if we could compel the 'cut-rate' angels to shoulder and enjoy the chaos they have produced. But this is not the order of things, and man has been charged to go into the high-ways and byways to preach the gospel of light and truth and bring every creature within its saving grace. We have maintained that the ability to apply a remedy lay with the manufacturers, and the courts of the country, in a long line of decisions, have confirmed our contentions. They have declared in no uncertain tones that the proprietary manufacturers of special preparations not classified among the necessities of life, have the absolute control over their products. The Worcester Plan, which has been so clearly explained to you by Mr. Cooper, is that principle carried to its logical conclusion, that in order to establish such conditions as the manufacturer desires with reference to the disposition of his goods it is not necessary to resort to a written contract. Of its feasibility and legality there is no question, and it now remains for the manufacturers to adopt and enforce it, and thus relegate the word 'cut-rate,' more hideous than any nightmare, to the peacefulness of merciful oblivion, and if any vestige of it should remain in the form of memory, it will serve only as a monument to a few ill-becoming natures that sought an undue advantage at the expense of their fellow men.

"Under the present commercial and industrial system, we have grown accustomed to see men looking sharply to their own interests without regard to the rights of others; indeed, we sometimes question if it has not become a virtue to do so. We have no quarrel with the manufacturers for waxing rich and great in the business in which they are engaged. But the retailer has more or less to do with that same business, and he has contributed his labor and personality to make that business a success, and the only question is whether he has enjoyed his full share of the product of his labor. If not, is he not entitled to it? Suppose he has waived it in the past, that concerns only the past, and that fact does not stop him from demanding its enjoyment in the future. You are advertiser and distributor for the manufacturer. You devote your valuable space for advertising purposes, you contribute your labor as distributor and you lend your personality and your reputation for truth and veracity and honesty to help sell the goods of men you never saw, and goods you know very little about. It is all right if, for the value you give, you get an adequate consideration in return. If so, it is right; if not, it is wrong. We would not want the manufacturers to take any step

that is not just and equitable. It is universally admitted that the 'cut-rate' evil is injurious to the retail druggist, and the manufacturers themselves admit that it is injurious to them, that it tends to throw discredit upon their products and bring them into disrepute and eventually hurt the sale of them. But they are not asked to bear the full burden of a departure from old methods, but merely asked to co-operate in the effort to bring about better conditions that must necessarily result beneficially to them as well as to us. Why, if the product of any manufacturer must be sold without profit, is it not reasonable to suppose that whenever possible it will be cast aside and preference given to that which does afford a fair profit? Remove the incentive to substitution and you remove the thing itself. Some ninety odd manufacturers have said, 'We are in sympathy with your effort to extirpate cut rates and are willing and anxious to do all we can to assist you.' With the present conditions, although very great good has been accomplished and many of these manufacturers have made a sacrifice to carry out their agreements, yet it is difficult and almost impossible to ascertain with absolute certainty the degree of their sincerity and honesty. It is about time that we should know, and a system that reduces the matter to a certainty has accomplished wonders without going any further. If a thing is presented to a man, guaranteed to do exactly what he says he wants done, he is neither sincere nor honest if he refuses it. The socialistic reformer will tell you that if you will but remove the existing environment of men, you need not change their nature to make them better or worse, that if the fear of want and the lust for gain be removed, you will find men loving and sympathetic where before they were cold, selfish and cruel. We do not strive to change the conditions so that the hearts of men shall contain nothing but the milk of human kindness, but we do want to remove the temptation from manufacturer, wholesaler and retailer, to take away the incentive for lying and deception and to reduce the matter to a business basis, where we shall know what every man is doing and have the means of compelling him to do what is right. This applies just as strongly to the retailer as to the others, for in much of the deception and nefarious conduct he has played an important part. There are some retailers who will sell their reputation and their honor for a very small price—men like Esau, who will barter away their birthright for a temporary enjoyment of a mess of pottage. These are the most despicable of all—traitors to their cause, enemies of their fellow men, and not worthy of sympathy or respect.

"Someone has suggested that if we reduce the whole matter to a legal basis, that even then it would not afford us absolute security. We admit that there are but few things in this world that can be counted on as sure. He who violates the laws of nature must expect to pay the penalty, that is certain, and while the laws of man may be evaded or violated, the fault is not that of the laws but of him whose duty it is to enforce them. But any existing law that is constitutional can be enforced if a sufficient number of people really want to see it enforced. A legal basis is the only one that is reasonably sure. There are laws against theft, but it is argued that some men will steal, and so they will, but because some men do steal in spite of the law and are willing to take chances on suffering the penalties, is that any substantial reason why all the laws against theft should be repealed? I dare say that if this were done, your love for this country would soon be on the wane and your patriotism would fade like a desert flower. If the repeal of laws can produce chaos, then sir, the enforcement of adequate laws can bring peace and order out of chaos.

"Three years ago, as an answer to an appeal for the adjustment of grievances, we were told to go home and organize and that we would be considered. We have organized and have accomplished much good. The N. A. R. D. and its affiliated bodies are today looked upon as a power in the land. That fact was amply demonstrated recently at the time of the repeal of the War Revenue Tax, and it is being demonstrated daily in different localities by the establishment of better conditions in the drug trade. Everything so far accomplished has been the work of organized druggists, not individual druggists. It is the strength of united, systematic effort

that tells in the battle, and not the impotent wail of isolation and division. The spirit of organization is now sweeping over this country like a tidal wave, because men are coming to feel that the many can accomplish what to the few would be an impossibility. They know that inactivity means impotence and retrogression, while organization means enterprise and progress and the securing of that which is proper and just. We must continue our work of organization until we arrive at that degree of strength and importance where we can speak for the whole legitimate retail drug trade of the country, and our voice will be heard. We ask you to co-operate with us in this great movement upon the principle that all those who will be benefited thereby should contribute their mite toward the labor that must necessarily be bestowed and the expense that must necessarily be incurred. We need numerical strength as well as financial strength. There are quite a number of associations in Ohio, the largest being the Northern Ohio Druggist Association at Cleveland and the Ohio Valley Druggists' Association at Cincinnati. The N. O. D. A. is a powerful organization. The O. V. D. A. is also a splendid organization, with a very efficient Board of Control and very enthusiastic members. I believe that it is of the highest importance to all druggists in the state of Ohio, if not throughout the whole country, that these two associations should go on increasing in strength and effectiveness. I believe that every druggist in the northern part of the state should become a member of the N. O. D. A. You can help them and they can protect you. And I also believe that every druggist in Southern Ohio will be advancing his own cause and that of his fellow druggists by joining the O. V. D. A. It is these large affiliated bodies that are transforming the N. A. R. D. from a thin line of battle, weak and vacillating, into a strong, invincible army that will sweep away all opposition from its path to victory. Now is the time to take advantage of what the courts have declared to be a fundamental principle, and see that it is given universal application, to take advantage of the spirit of organization that is astir in the land; and to take advantage of our own strength to restore the profession to its time-honored place, that you may reap the rewards that you have merited, but which have been so long denied you. This is a matter that affects you vitally in your business, in your home, in your happiness, and you cannot afford to remain indifferent and inactive. You have a work to perform; it is to uplift, not to pull down; it is to build, not to destroy. And let no one for any fancied grievance of his own, trample upon that which is built, let him not in his unbridled rage, like some blind Sampson unmindful of his own welfare and that of others, grasp the pillars of our magnificent structure, N. A. R. D., built by the earnest efforts of honest hands, and attempt to pull it down to destruction and ruin. Let us work in unison, each one doing what he honestly can and everything that savors of a difficulty will disappear as the mist disappears before the morning sun."

—The American Chemical Society will hold its twenty-fourth general meeting in conjunction with the annual meeting of the American Association for the Advancement of Science, in Denver, Colo., August 26 and 27th. The same arrangement which has heretofore obtained will govern the meetings of these two associations. The first session of the Chemical Society will convene on Monday morning, August 26, immediately after the organization of Section C of the A. A. A. S. The other arrangements for the meeting will be announced later in the official program. The headquarters of the association will be at the Brown Palace Hotel, where reduced rates have been secured for members. The Western Passenger Association covering the territory west of Chicago and St. Louis has made a rate of one fare plus \$2.00 for the round trip from Chicago to Denver, Colorado Springs, and Pueblo. Tickets may be bought from July 10 to August 31 and are good for return up to October 31. The Pullman fare is \$6.00 extra each way. Various visits and excursions will be arranged by the local committee, and these will probably include visits to the smelting and reduction works in the vicinity of Denver and other places of special interest to chemists.

MAKING STARCH POLISHES.

Though many women in carrying out their laundry work use nothing more than the ordinary borax, or else stir a paraffin candle into the made starch while it is hot, there are thousands of others who prefer to purchase proprietary starch glazes, and this is especially so in the North, where, perhaps, forty or fifty packets are sold and used to every one in London and its surroundings.

And this is applicable to other similar goods—baking powder as one for instance—for in some populous Northern districts several manufacturers have managed to build up quite a snug and paying business out of these two lines alone, and were this attempted in the metropolis it would almost certainly end in failure. The main cause of this curious fact is very probably owing to the poor facilities London offers for drying and the like, the greater part of the linen being despatched to the suburban steam laundries, whereas, in the other case, it is done up at home.

The laundry people usually employ borax and ordinary liquid gum as glazing mediums or powdery mixtures, of which borax is the chief ingredient, paying fancy prices therefor, and some use compound starch and gloss, already prepared for immediate use, the "goods" being starched with this much in the usual way, then steamed and dried, next sprinkled with soapy water, then stamped, and again steamed, and finally finished off.

The following may be taken as the composition of the most popular and best known of these mixtures, designated

Compound Laundry Sizing.

Water	70 gallons
Fine wheat starch	80 pounds
Farina	20 pounds
Heavy magnesia	10 pounds
White curd soap	6 pounds
Spermaceti	5 pounds
Japan wax	5 pounds
Crystal carbonate of soda	2 pounds
Ultramarine blue	½ pound

Dissolve the blue in the water; then melt the soap, spermaceti, and wax, and add the soda, stirring well. Next mix starches and magnesia, free from lumps, with water; add others, and boil until thoroughly mixed. Then run through a strainer.

Pearl Glaze Finish.

Powdered white starch	1 cwt.
Powdered borax	56 pounds
Rectified spirit	4 pounds
Stearic acid	2 pounds, 11 ounces

Dissolve the stearic acid in the spirit; absorb this with the starch, leave exposed until the spirit evaporates, then add the borax, and mix thoroughly in the machine.

Directions.—One teaspoonful to be used to half a pound of starch.

Parisian Linen Enamel.

Powdered borax	130 pounds
Powdered starch	20 pounds
Spermaceti	10 pounds
Powdered white gum arabic	7½ pounds

Thoroughly mix. Directions for using as above.

Porcelain Laundry Gloss.

Powdered borax	24 pounds
Farina	21 pounds
White dextrine	20 pounds
Tungstate of soda	7 pounds
Powdered white wax	2 pounds
Powdered white soap	14 pounds

Mix intimately.

Directions.—One tablespoonful to be added to about one pint of boiled starch; the articles to be ironed in the usual way. A twofold result is obtained by using the sodium tungstate; it helps the gloss, and also renders the articles proof against fire.

As the directions indicate, the foregoing are for producing those varieties of glaze which are added to the mixed starch, but another sort is a "rub on" kind, the starching being performed in the approved fashion. Then, previously to ironing, a damp flannel is dipped into the following powder, and lightly rubbed

over the front of the shirt or what not, the result being a very smooth surface.

Satinette Starch Finish.

Powdered French chalk	30 pounds
Powdered white soap	28 pounds
Powdered borax	2 pounds

Run through the machine several times, to mix efficiently.

A consolidated form of glossing agent that has met with some considerable degree of favor may be produced as below. Neither added to the starch nor rubbed over the fabric, but passing it across the face of the hot iron, is the correct method of using the

Linen Polishing Block.

Bleached carnauba wax	30 pounds
Powdered French chalk	21 pounds
Powdered castile soap (white)	12 pounds
Citronelle	2½ ounces

Convert the wax and soap into shavings, melting at a gentle heat; then stir the chalk in the citronelle oil when a little cooler. Then pour out into moulds to set.

A Continental article of this form is varied a trifle, the block consisting of two pieces—one wax and soap, the other a cube of French chalk—these being held together by means of a paper band pasted round where they meet. The directions are printed upon the band, and tell the user to first rub the chalky end over the linen, then the other end, and iron as usual.

An American starch enamel, taking the shape of so many lozenges in a box, is nothing but hard paraffin scented with citronelle, melted and poured out a quarter of an inch thick, then stamped into squares the size of a lozenge.

The quantities of the ingredients are four ounces of citronelle to fifty-six pounds of paraffin wax. "Two of these cakes added to each pint of boiled starch will make the iron impart the finest possible finish, besides perfuming the articles in first-class style." So the printed matter states.

Cream Gloss.

Lard	70 pounds
Liquid Ammonia, 880	10 pounds
Bleached beeswax	5 pounds
Glycerine, 1,260	5 pounds
Citronelle	2 fl. ounces

Melt the wax and lard, stirring till creamy; add citronelle, then mix the glycerine and ammonia together, and mix all up.

It may be used by addition of a small portion to the starch or by rubbing lightly over the linen previous to the ironing, or both. Being a double purpose compound, it can be separately put up as a window-cleaning pomade, for which it is good.

Liquid Starch Gloss.

Water	6 gallons
Powdered white starch	7½ pounds
Powdered white gum arabic	6 pounds
Powdered borax	4½ pounds
Glycerine, 1,260	2½ pounds

Boil the gum in the water; add borax, then glycerine, and mix up with the starch, straining, to exclude any lumps. Then bottle.

A tablespoonful or thereabout to be added to a quart of starch.

Water	14 pints
Turps	4 pints
Japan wax	3 pounds
Lemon resin	4 ounces
Borax	4 ounces
White curd soap	4 ounces

Dissolve the wax (sliced) and resin in the turps; boil the soap and borax in the water, mix all, and churn well until amalgamated.

Snowflake Starch Enamel.

Lux soap flakes	14 pounds
Powdered borax	6 pounds
Powdered French chalk	4 pounds

Spread the flakes out, sift borax and chalk over, moving about, to well and evenly distribute.

In place of the proprietary soap flakes mentioned,

any kind of white soap may be utilized by first reducing to a granular form, then passing through a pair of rollers, to form flakes.—(Oil and Colourman's Journal, through Am. Soap Jour.)

SOME NARCOTIC PLANTS.*

By J. F. LLEWELLYN, Mexico.

Narcotics so appeal to the imagination, that sober statements are difficult. Traveler's tales, intending truth, are often exaggerated. Even J. U. Lloyd imagines a fungus that is of the marvelous, and supposes a hidden combination of the elements that alone equals all the narcotics, and fears it will destroy our civilization and even exterminate mankind.

A recent novel uses as a foundation for a long tale, a wonderful dwarf bush of high mountains of Africa, "the dead leaves of which poison the earth, on which no bird builds its nest, no insect constructs a house, no spider spins its web—capable of raising man to a higher, stronger, finer development of brain and muscle than we could conceive of under existing circumstances. A strength-giving herb unapproached in power."

The myths of the Upas tree are so wrought that it may be news that it is growing in midst of coffee plantations, birds and lizards on its branches; properly treated the inner bark can be used for garments.

Omitting the *Rhus* family, passing the *Amanitas* that gathers in the mushroom zealots, only mentioning the purple larkspur that kills sheep, in one case 250 died of 500 affected; the "snow on the mountain", a spurge that blisters like red hot iron, and its kin the *Caper spurge*, of which a few seeds endanger life; the laurel deadly to sheep and horse and rendering poisonous the flesh of animals that may be themselves immune to the plant; the loco weed so injurious to stock that the State of Colorado paid out in four years \$200,000 to check its ravages, so serious is it that a horse may be so loosed as to refuse other food. These are all well known, but a few of the less noted are *pareca*, *hidery-rhay-guill*, *sleepy grass*, *darnel* and *tutu*.

On the Amazon river several Indian tribes use snuff, called *pareca* which Wood says is made of the seeds of a species of *Inga*; when a bout of snuff taking is determined on the people become highly intoxicated and then use the snuff.

The effect of *pareca* is so violent that the taker drops as if shot, and lies insensible for some time; those more accustomed are highly excited; causing them to dance and sing as if mad; the effect soon subsides; other tribes use it to repel ague during the wet season. Lieutenant W. J. Herndon of the United States Navy, in 1851 descended the Amazon; he traded for *pareca* and the apparatus for using it, and saw it in use, and used it. He found it to be a compound of the ashes of a vine, seeds of *acacia angico* and leaves of the *abuta* (*cocculus*). He says "the Indian took his *pareca*; his eyes started from his head, his mouth contracted, his limbs trembled, he was obliged to sit down, or he would have fallen, he was drunk; this lasted but a few minutes; he was then gayer." He saw it administered to two children overcome with heat and work; in a few minutes they were at play. When lost in the woods, nearly dead from exhaustion and hunger and fever, unable to go farther, Lieutenant Herndon took the *pareca* snuff. "I instantly fell drunk on the hammock, but with a peculiar intoxication, which acted on my limbs like an electric shock; on rising I put my foot to the ground, and to my surprise felt no pain. At first I thought I dreamed; I even walked without being convinced." He then beat the two Indian guides, and walked the two remaining hours of daylight.

Hidery-guill-rhay, or Indian tobacco, not plantain or *lobelia*, is a plant used by Indians of British Co-

lumbia and Southern Alaska, discontinued by mainland Indians, but used until 1877 or 1879 by the *Hidas* of Queen Charlotte Islands.

The plant dried over fire was pounded with lime into cakes, chewed or pouched in the cheek; the effect was akin to tobacco or opium. Tradition is that the Indians brought the seed with them from a climate in which it grew to a tall tree, planted the seed in Alaska, but the climate reduced it to a shrub. Another myth is that the Deity caused it to grow to a tall tree, and Indian with bow and arrow shot down some seed, which he secreted and from which the tribe obtained the plant. The plant produces a nut or ball full of seeds, like a poppy. I have not been able to get for this plant a botanical name or description. Was it a poppy or betel nut? The use and growth of the plant has ceased, supplanted by tobacco.

Sleepy grass is a *Stipa*. There are too species; *S. inebrians*, *S. siberica* are poisonous and are found in New Mexico, Texas and Siberia. *Sleepy grass* has a most injurious effect on horses and sheep. It is a strong narcotic or sedative, causing profound sleep or stupor lasting twenty-four to forty-eight hours. The horse after eating it is a pitiable object, head and tail drooping, quivering, sweat pouring down his sides, panting and palpitating. The grass acts as a powerful narcotic, diuretic, sudorific, and irritant of the respiratory and cardiac organs. It is distinct from the loco weed.

Darnel, *lolium temulentum*, indigenous to the old world, introduced into the United States, apt to grow among wheat and grain, is narcotic, produces vertigo, dizziness, headache and a species of drunkenness; often eaten in bread. Beer in which darnel is an ingredient is drunk with impunity. A fatal case is cited of a peasant, who had for several days lived on bread, two-thirds of which was darnel. It acts thus on man, dogs, sheep and horses. Hogs, cows, ducks and poultry are fattened on it. It contains a volatile alkaloid and a solid base which decomposes to *temulentin acid*. The poisonous property is in the base and acid.

Tutu or *toot plant*, *Coriaria rustifolia*, of New Zealand, is also called *wine berry shrub* as wine is made from the berries; the seeds are poisonous. It is a shrubby herbaceous plant, five feet high; horses, goats, and pigs are immune, cattle and sheep may be poisoned by it. To cattle fresh from other pasture, or exhausted, the plant is nearly always fatal, first stupefying, then causing strong excitement, death following in a few hours. Sheep and cattle are fattened on it, yet when driven may die. Sheep badly tuted become hermits, and stupid, but no worse as mutton.

The *Coriaria myrtifolia* or tanners' sumac of Southern France killed a child that had eaten leaves and berries. The plant yields a white crystalline glucoside; three grains killed a dog.

The Sioux Indians when participating in the sun dance chew a bulbous root growing in that vicinity, which alleviates hunger, thirst, and pain, and enables them to endure protracted, violent muscular exertion.

The Ponce Indians make a decoction of a red bean found in the U. S. from Nebraska to the Rocky Mountains and which produces intoxication.

Hippomane (*horsemania*), *manchineel*, *manchineel*, *manzanillo* (little apple) is a tree indigenous to the West Indies, Central and South America and Florida, forty to fifty feet high, oval pointed, toothed, shining leaves three to four inches long, is a *Euphorbiaceae*. A circular was issued to United States soldiers in Cuba "Beware of the Manchineel tree." The milky juice of the leaf stem irritates seriously any mucous membrane; many strong stories are told of its poisonous effects; it does produce temporary blindness, and it is in general as severe as poison ivy.

The fruit of the *Unganu tree*, South Africa, yields a strong intoxicating drink for the natives. Elephants are fond of it, becoming quite tipsy, staggering about, playing antics, screaming so as to be heard for miles and have tremendous fights; when in this state the natives leave them alone.

Herodotus says: "Scythians inhaled a smoke that intoxicates, and they rose up to dance and sing."

Plutarch reports a plant of Thrace, the smoke of which when inhaled intoxicates.

*Read at the recent meeting of the Missouri Pharmaceutical Association. From the Proceedings.

PATENTS.

Issued July 23, 1901.

- 678,851.—Henry S. Anderson, Springfield, Mass. Apparatus for electrolysis of the salts of alkali metals.
 678,857.—John J. Betzold, Fresno, Cal. Filter.
 678,858.—Ph'libert Bonvillain, Paris, France. Oil or other filter press.
 678,870.—Albert R. Grever, Philadelphia, Pa. Filter.
 678,891.—John C. Miller, assignor to J. H. Miller, Canton, Ohio. Sterilizing liquids.
 678,892.—John C. Miller, assignor to J. H. Miller, Canton, Ohio. Apparatus for sterilizing liquids.
 678,893.—John C. Miller, assignor to J. H. Miller, Canton, Ohio. Apparatus for sterilizing and cooling liquids.
 678,970.—Paul Nael, New York, N. Y. Apparatus for making bleaching powder.
 679,012.—Albert Baumgarten, Freepert, Ill. Device for applying caps to bottles.
 679,004.—Reuben R. Stone, New York, N. Y. Bottling machine.
 679,173.—Philip F. Lenhart, Brooklyn, N. Y. Non-rehitable bottle.
 679,198.—Charles Witkowski, Boston, Mass. Hypodermic syringe.
 679,202.—Maximilian C. L. Althausse, Billwader-an-der-Bille, assignor to Fabrik Chemischer Preparate von Dr. Richard Stamer, Hamburg, Germany.
 679,239.—John F. Mossberg, Minneapolis, Minn. Cata-pnoic pad.
 679,254.—Charles W. Cramer, Scranton, Pa. Liquid dispensing and measuring apparatus.

TRADE-MARKS.

Registered July 23, 1901.

- 36,795.—Cough-syrup. Anna Lenau, Providence, R. I. The word "Crown" and the pictorial representation of a crown.
 36,793.—Certain Named Medical Compounds. Lydia E. Pinkham Medicine Co., Saco, Me., and Lynn, Mass. The picture representation in likeness of Lydia E. Pinkham.
 36,797.—Remedy for Internal and External Use. Tar Heel Chemical Co., Greensboro, N. C. The words "Tar Heel."
 36,798.—Rodent virus. Pasteur Vaccine (United States and Canada) Company, Limited, London, England, and Chicago, Ill. The word "Squirrelin."
 36,799.—Liquid Disinfectants. The Embalmers Supply Co., Westport, Conn. The word "Fragrine."
 36,800.—Logwood Extracts. The West Indies Chemical Works, Limited, Spanish Town, Jamaica. The representation of an alligator or the word "Alligator."
 36,801.—Paints, Stains or Lacquers. The Phoenix Chemical Works, Brooklyn, N. Y. The word "Signaloid."
 36,811.—Crucibles. The Bridgeport Crucible Co., Bridgeport, Conn. A pictorial representation of Niagara Falls.

DESIGNS.

- 34,818.—Bottle. Gustave D. Glaser, Chicago, Ill. assignor of one-half to Alfred Kohn, same place. Filed June 27, 1901. Serial No. 66,290. Term of patent 7 years. The design for a bottle.

LABELS.

- 8,550.—Title: "Wm. C. Beutel's Celery Tonic." (For a Nervo-Tonic.) William C. Beutel, N. Y. Filed June 29, 1901.
 8,551.—Title: "Cough Checkers." (For a Medical Confection.) Isaac J. Weiraich, Cincinnati, Ohio. Filed June 29, 1901.

—The Montana Pharmaceutical Association will hold its tenth annual meeting at Butte, August 13. Special effort will be made to get everyone connected with the drug trade in the state to join the association. The inflation fee for clerks has been reduced to \$1. The program so far as announced includes papers by Emil Starz, Howard Rockefeller, Lee Warren and A. Whitworth. Great preparations are being made for the entertainment of members by the Silver Bow Retail Druggists' Association which has invited the state association to become its guest Tuesday evening, August 13.

"Golf" and "Kola Cherry" continue to grow in popularity as soda fountain drinks. They are excellent goods, and make permanent customers for the soda fountain. These drinks are supplied in gallon jugs at \$2.00 per gallon, delivered, with full directions for serving.

GENUINE

Imperial PURE FINE PARA RUBBER BANDS

ARE ALWAYS PACKED IN GREEN BOXES BEARING THE TRADE MARK AND OUR CORPORATE NAME IN WHITE LETTERS, AND EACH AND EVERY BOX CONTAINS OUR GUARANTEE SLIP.

THE GOODYEAR TIRE & RUBBER CO.

AKRON, OHIO.

Tennessee Board of Pharmacy.

The Tennessee Board of Pharmacy met at Mont Eagle, Tenn., July 16 to 18. Members of the board present were: B. H. Owen, president, Clarksville; A. B. Raines, vice-president, Columbia; J. F. Voigt, Chattanooga; Al. A. Yeager, Knoxville. There were sixteen applicants for examination. The following obtained certificates as registered pharmacists: J. P. Heck, Memphis, Tenn.; Henry C. Fite, Nashville, Tenn.; J. T. Moran, Tracy City, Tenn.; F. W. Mayo, Memphis, Tenn.; and W. C. Helfer, Knoxville. T. N. Uffelman, Dickson, Tenn., attained a grade entitling him to registration as a registered pharmacist, but not having the required experience he was registered as an assistant pharmacist. Assistant pharmacist certificates were granted to the following: E. W. Grafton, Oliver P. Stewart, Chatata; Carl E. Wise, Nashville, and T. C. Prince, Knoxville, Tenn. James S. Robinson, whose term on the board expired April, 1900, was reappointed by Governor McMillin to succeed himself. The secretary's report for the past year shows that there are 1,304 registered pharmacists in the state, and 123 working under permits in small towns. The board has made strong effort during the past year to cull out all persons and firms selling drugs without licenses, and it is giving attention to small towns which do not require a registered pharmacist, but where drug stores may be operated under a permit granted by the board to competent persons. This class of violations will receive particular attention within the coming year. The analytical work done by Chemist Ruddiman shows improved conditions throughout the state over the previous year. The examinations are beneficial; the druggists appreciate the chemist's work and are desirous of furnishing preparations of standard strength.

Fountain Chocolate.

In order to do a successful soda water business, it is as necessary to use a good chocolate as it is to use good vanilla, a good apparatus, or good soda water. You cannot attract first class soda water trade and keep it unless you use good chocolate. Phillips' Fountain Chocolate is one of the best, and has a flavor and richness which fine custom demands. If you have never used it, write for a free quarter pound sample to the manufacturers, Chas. H. Phillips, Chemical Co., 128 Pearl St., New York.

Profit-Paying Preparations.

Wine of Cardui and Theodorf's Black Draught are two preparations liberally advertised to the public, and which pay the druggist a large profit. Write for attractive advertising material to distribute to your customers. Window displays and counter wrappers are supplied on application. Address the manufacturers, The Chattanooga Medicine Co., either at their main office, Chattanooga, Tenn., or their branch offices, 318 N. Main St., St. Louis, or 3 Stevenson St., San Francisco, Cal.

An Advertisement Writer.

After 10 years' experience in the retail drug business and the study of advertising, A. J. Embree, of Belton, Texas, feels that he has acquired the ability to write business-bringing advertisements. He is ready to prove this to retail druggists, and says to them: "The money you pay me is yours if not satisfied." Write to him for particulars.

The M. Winter Lumber Co. say that the question of freight should not cause druggists to hesitate to order fixtures or show cases from their Sheboygan, Wis., factory. Freight is not so high on fixtures built on the "Kade Knock Down" principle. They make a specialty of drug fixtures and fittings of all kinds. Send for their 20th Century Fixtures Catalogue, which they will mail to any one on receipt of 25 cents. This catalogue is a complete book of store fittings, and worth many times its price to any merchant.

—Alfred Vogeler has been elected president and treasurer of the Stein-Vogeler Drug Co., wholesale druggists of Cincinnati. In this position he succeeds Otto Stein. Wm. F. Wagner is the new secretary. The firm name remains the same but it is rumored that Mr. Vogeler will buy the stock in the company heretofore held by Mr. Stein.

Every month manufacturers of proprietary goods throughout the United States receive some striking advertising literature from The Globe Printing Co. This company makes a specialty of printing almanacs and pamphlets in large quantities at lowest prices. It will pay manufacturers to write to them for samples and terms.

The patent, hermetically sealed glass package in which Eskay's Food is now put up is acknowledged to be as near perfection as it is possible to obtain. The manufacturers of this popular food offer to exchange old stock for fresh goods free of charge. Write for a liberal supply of samples and attractive advertising matter to Smith, Kline & French Co., Philadelphia, Pa.

HIRING HELP.

The majority, perhaps, of druggists in business are employers of labor in some capacity or other, and a question that many of them often have to decide is that of hiring help. With most of them, as with most of business men, the wages to be paid is the dominating consideration; but there is not a few of them who have less trouble with this part of the prospective transaction than with the more important part, to them, of getting the kind of help they want. We have known of a few men, claiming to be business men, who would sacrifice the opportunity of securing a really capable employe on account of an insignificant difference, especially when the value and ability of the capable employe be compared with the qualifications of the person who could be secured for a smaller salary. Men of this caliber, however, are not generally successful business men. The successful pharmacist who has climbed up to his present position knows by experience that the cheapest man he can employ, everything else being considered, is rarely the best man for his business. An employer actuated by a spirit of fairness and who will pay a just and equitable salary can, in most instances, secure just about the kind of help he wants. Indeed, this phase of commercial activity, like every other, is governed by the law of industrial equivalents. One can get help if he will pay for it.

The help to be employed in any drug store is determined by individual surroundings and local conditions. The pharmacy laws of the various states require drug clerks to be registered men, but the

possession of a certificate of registration lightens the burden of the employer but little in choosing his man. To satisfy himself he must learn something of the applicant's private character, habits, integrity, etc. The possession of these qualifications is quite as necessary as that of satisfactory professional qualifications. The clerk who can show himself to be a natural born gentleman, is a good salesman and a competent dispenser, is worth every dollar you can afford to pay him. He is a safe man to have with you, and that is a satisfaction which cannot be computed in dollars and cents. As a rule, the successful business man has but little trouble with his clerks, because he looks upon the employment of labor in the right light. He wants good men and he gets them, because he is willing to pay for experience and brains.

LIABILITIES AND RESPONSIBILITIES OF DRUGGISTS.

The Era has at various times commented editorially upon the liabilities and responsibilities of the druggist for the goods he may sell and his duties to the community in which he lives. The courts have uniformly held to the principle that druggists are bound to use the kind and degree of prudent care proportionate to the nature of their business. The pharmacist's calling presupposes a degree of special care and skill, and any deviation from such a line of conduct constitutes a breach of special obligation to the community.

A case which has attracted considerable attention has been going through the courts in Iowa, the Supreme Court of that state recently affirming the judgment of a lower court for \$500 damages caused by alleged negligence in the filling of a prescription. From a recent number of the Journal of the American Medical Association we take the following points of the case which should be of interest to druggists:

The party who brought the action claimed that his eye was injured by lime falling into it while he was at work at his trade as a plasterer, and that the application to it of a preparation secured from the druggists sued, on a prescription, so aggravated the injury that its removal was necessary. The druggists contended that, having employed a skillful, registered pharmacist, they were not liable for his negligence, if any there was, in filling the prescription. Among the cases which they cited as illustrations were some in which it has been held that a railroad company contracting with an employe to furnish surgical aid in case of accident was not liable for the negligent acts of the surgeon thus selected and furnished, if due care and diligence were used in the selection. These cases,

however, the court does not think analogous. It says that it was the duty of the railroad company by express contract to secure for the other party professional services, which the railroad company did not hold itself out as competent to perform. The railroad company did not pretend to be a surgeon. But the parties here sued did pretend to be druggists, and held themselves out as able and willing to fill prescriptions. Whether they performed the services individually or by the aid of an employe was immaterial. The master who undertakes to perform a service is liable for the negligence of his servant in performing the service undertaken. True, the legislature has provided, as a police regulation for the protection of the public, that no one who is not a registered pharmacist shall fill prescriptions. But, when these druggists undertook, as a part of their regular business, that the prescription should be filled, it was wholly immaterial to the customer, so far as their liability was concerned, the court holds, whether the prescription was filled by one of them or by an employe. In other words, it holds that they were not relieved of their responsibility as employers by the fact that they were not required by statute to employ a registered pharmacist. The court also says in this case that it thinks there is no question but that the patient is privileged, under section 4608 of the Iowa Code, from disclosing communications made to his physician, although the statute does not so expressly provide. That is to say, it has no doubt that the statute was intended to extend to communications between patient and physician the same complete protection, not only as to physicians, but also as to the patient, which by common law was recognized in regard to communications between client and attorney. Moreover, while the patient may waive his privilege by himself testifying as to the subject-matter of the privileged communication, the court holds that for his testimony to constitute a waiver it must be voluntarily given. Therefore, testimony given on cross-examination will not have the effect of a waiver, although he might refuse to answer on cross-examination when asked with reference to a privileged communication, and did not refuse. Then, too, the court holds that any waiver resulting from the giving or introduction of testimony on a trial should be limited to that trial. Nor does it regard a communication made by the patient to a third party a waiver of privilege, when the matter comes up in court.

A DRUGGISTS' UTOPIA.

The author of "Looking Backward" wrote his famous book in the belief that the Golden Age lies before us and not behind us, and is not far away. If he could have lived until to-day he doubtless would be much interested in the tale of our British contemporary, the Chemist and Druggist, tells of drug trade conditions in Scandanavia. If this story be true, the druggist need not restrict his gaze to the imaginary island of Sir Thomas Moore, where everything is perfect. Here is the story: In Denmark, Norway and Sweden pharmacists have become so closely allied that they are practically one close corporation. Nowhere, it is said, is the community of interest idea so completely and happily exemplified. All licenses are under the absolute control of one pharmaceutical

body, which restricts the number of pharmacists, so that there is no one who does not make a good living. The whole trade acts together; prices are fixed by agreement; cutting is unknown, and one chemist will not bid against another in any way. Doctors do not dispense and pharmacists do not prescribe. The public pays a fresh fee to the doctor every time a fresh bottle of medicine is bought. The profits of dispensing discourage patent medicines, and the public has practically to do without efficacious remedies of that description. The pharmacies are said to be palatial establishments, and enormous fortunes are accumulated by their proprietors. The custom house will not sanction entry of chemicals used in pharmacy, except to licensed pharmacists. Patent medicines are by law permitted to be sold only on a doctor's prescription, and are held up at the custom house except when addressed to a registered pharmacist.

THE PROCTER AND RICE MEMORIALS.

The pharmaceutical fraternity in this country is familiar with the proposition to establish a suitable memorial in recognition of the services rendered to American pharmacy by Prof. Wm. Procter, Jr., and now comes another proposal for a similar honor to the memory of the late Dr. Charles Rice, who for many years was Chairman of the Committee on Revision of the U. S. P. The outcome of these proposals we cannot foresee, but it is hoped that something tangible will materialize therefrom. Both of these men added much to our knowledge of pharmacy, and both were distinguished in their respective fields of labor. Prof. Procter's name will long be identified with a most important period in the educational development of our calling, while that of Dr. Rice will be preserved by his work on the Pharmacopœia. Both were broad-minded, practical men, and there was a conscientiousness about them which gave strength and dignity to their lives and attracted the confidence of their scientific brethren. But it is not necessary for one to make a catalogue of their virtues, or attempt an inventory of their accomplishments. Monuments bearing their names may be erected, memorial fellowships for laboratories of research may be instituted by the pharmacists who recognize the value of their labors, but without these memorials an honorable reputation will long cling to the names of William Procter, Jr., and Charles Rice.

WILL PROTECT ITS MEMBERS.

As reported in the Era last week, the Ohio Pharmaceutical Association, at its recent meeting in Dayton, organized and put on an active basis an auxiliary section whose object is to protect its members who may be unjustly prosecuted or "persecuted" under the laws of that state, and to take care of cases against them in the courts, etc., without individual expense to the druggist beyond his per capita fee for membership. This is a comparatively new field for a State association, though some local organizations have, we believe, a similar plan in operation. The scheme has desirable features, and its operation in Ohio will be watched with interest.

SHOW WINDOW ADVERTISING.

By DWIGHT DARLING, Everett, Wash.

Of all the mediums for advertising usually employed by retail druggists for gaining publicity and getting new business, that of the show window is by far the most powerful. It is powerful not only in getting results, but it gets them immediately and directly, and consequently is the most satisfactory as well. It is cheap, too, as it costs nothing, and you don't have to write copy for it two or three times a week, or have an expert to do it for you; or to furnish cuts for it, or to pay for its distribution and have it thrown into the sewer. You have none of these disadvantages and you get immediate results. These and other reasons lead me to believe that I can hardly overestimate the good possible to be derived from a show window, if properly used.

It is successful, first, because it shows the passer-by that he needs something, although perhaps he did not know it, and, at the same time, it shows him a very easy way to fill that want. A bright, lucid description of the article might be set forth in the newspaper in catchy phrases, and yet be without results as the article was not at hand. Besides, people want to see what they are going to get. They can see it here right before them, price and all. They may take it or leave it. They feel that they have troubled nobody and are therefore under no obligation to anyone to buy, so, if a sale is made it is a satisfactory one, and not forced, which is as bad almost as no sale at all.

I believe many druggists spend too much time on their window displays. They will hang a piece of sheeting before the window to keep out the enquiring gaze of the public for perhaps two days. They will go to some expense to buy the necessary material. They will spend much time and labor in the carrying out of their ideas, when they could be used to better advantage elsewhere. It may be that the result is creditable in most cases, from an artistic standpoint, but as the end in every window display is to sell goods, will this elaborate display sell enough more to warrant the expenditure of time and trouble, and the loss of two or three days while the display is being made? I think not. In fact I have found that a simple display, taking less than 30 minutes to arrange, will sell as many goods as one taking several hours. Of course, it is well to avoid the other extreme of too little care in showing the goods, for the window to look nice must have some time spent on it. But it must be remembered that every hour spent on the display takes an hour from its use as a salesman, so this time should be reduced to as little as possible consistent with results.

The most important thing to be regarded with reference to a good window display is that it shall be made up of a number of articles of the same kind or class. This emphasizes, as it were, the article displayed so that it appeals more strongly to the public. It gives the public an impression that there must be a special sale and price when so many of one article are offered. Indeed, it is well to encourage this impression by means of a card with the price and a few words about the article. If this is continued for some time the public gets accustomed to look for these bargains.

It is true that the retailer in a small town is at a disadvantage, in that he does not buy goods in suffi-

cient quantities to be able to make a creditable display. But still, there are many things in the way of sundries that do not cost much, and by getting a half gross or so at one time he has enough to make a good showing. And the consequent sales attending the display will so reduce the stock in a week that he can carry it without an effort. Even two dozen of an article will make a fair showing. I recently bought this number of small mirrors. I put them in the window and priced them at "25 cts. For one week"; at the end of the week I had sold twenty of them. They cost me \$2.00 per doz. and it took me about 10 minutes to put them in the window. This is an extreme case but I have done almost as well with other things like whisk-brooms, tooth and hair brushes, soaps, etc., etc. If instead of following this policy of separating or singling out any article, I had put in a few whisk-brooms, some soap, brushes of various kinds and some bottles of patent medicines, how could I have looked with any degree of reason for even the most trifling results?

The price card I have mentioned is also a very important aid in selling goods from a window, for, without this, the display is to a certain extent left helpless and has but little selling power. The possible customer has nothing to use as a basis for comparing values. Nothing in the display appeals to him, he doesn't know what the articles are worth nor does he care, but if they were priced he would know whether or not he cared for them at the price. Either from their own indifference, or from a dislike to trouble the druggist, people don't like to ask the price, which fact alone is responsible for the loss of many sales. I firmly believe if a pile of tooth brushes which would regularly sell for 15c. should be placed in the window and marked to sell for 25c., more would be sold than if a 25c. article with no price given should be exposed to sell for 15c. A week is fully long enough to leave any display in the window. If left longer the people might get tired of it, or think that the druggist was a little behind the times. Then, too, the goods do not look so fresh for much longer, and they might be slightly faded or dusty. The display by this time must be very much broken up in its arrangement.

These are a few of the facts about window displays that I have learned by practical experience and observation.

HOW TO MAKE THE DRUG STORE PAY.

By CHAS. F. PFISTER, Brooklyn, N. Y.

There is no royal road to success in the drug business, any more than in any other trade or profession. However, certain maxims may be laid down, which, when followed, will almost certainly insure success, but if violated will as certainly lead to failure. Various methods will have to be followed to obtain the greatest measure of success according to the locality in which the pharmacy is situated. Therefore, in the following remarks the writer will confine himself to advice which is applicable alike to the city drug store and to the country or suburban drug store.

The success of a druggist depends upon the number of customers he can make, and then keep;—this is self-evident. The first problem, then, is how to attract the customer. This is best done with attractive, though not necessarily expensive, window display. The window and everything pertaining to the

The Era pays \$5.00 for each accepted contribution to this department. Proprietors and clerks are especially urged to relate their experiences and offer suggestions on all phases of the practical business side of pharmacy. Make your papers short, about 1,000 words (one Era page) in length.

display should be scrupulously clean and neat, and changed at least once a week. Have copious displays of one article, rather than a number of articles in one window. For instance, if you are displaying your sarsaparilla, do not include in the display hair tonics, roach destroyers, etc. Some believe in having the window nearly empty, with just the conventional colored globe and perhaps a palm or fancy jar. Most enterprising pharmacists, however, would consider that wasting their best means of advertising their goods and skill.

In the writer's experience a window of a certain article invariably increases the sales of that article for that week. Always accompany your display with some sufficiently large, attractive, but plain sign or card. If necessary, have a painter make them for you. Besides exhibiting your own sarsaparilla, cough mixture, emulsion and other strictly pharmaceutical preparations, the following will be found to sell well "at sight": Soaps, writing paper, bug-killers, ammonia, witch-hazel, moth balls, sponges, toilet paper, rubber goods, etc.

A very important factor in attracting new customers is to have the store well lighted. At night do not economize in gas. Have the reputation of having a well-lighted, cheerful store.

As to the arrangement of the show cases, shelves, etc., little need be said here, except that everything should be in its place and not thrown helter skelter. Many a sale is lost, although the article called for is in the store, by not being able to lay one's hand on it when wanted. Besides it creates a bad impression to have to hunt for things. Show cases, glasses, mirrors, etc., should be kept scrupulously clean, and the store dusted at least twice a day.

Once your new customer has been attracted into your store it behooves you to serve him so he will come again. First, wait on him promptly. If you are having a friendly chat with some one, excuse yourself and promptly attend to the incoming customer. Be polite. Move about the store with animation and not as though every move was too much for you. If a lady buys a stamp, and then on account of her veil and gloves asks you to put it on for her, do so cheerfully. Refuse to do it rather than do it grudgingly. In one word be accommodating, though not servile. It requires some judgement to know where to draw the line. If a new article is called for tell the customer that you will procure it the same day if possible, and be sure to make the effort to obtain it, even though you may lose on the first sale. Tell the customer that thereafter you will keep it on hand.

But most important of all, keep up your stock. Do not be "just out" of a good selling article. This is one of the cardinal laws in "making a drug store pay". In selling one's own preparations it is usually easier to get more than less than the price asked for a similar advertised article. The average person associates price with quality. Put up as many of your own preparations as possible, provided you can make them meritorious.

A few words about the buying of goods. This is an important matter in these days of close competition. Deal with at least two wholesale drug houses. By watching the markets and getting prices from the two houses the druggist who has never questioned prices will be surprised to find how much prices can be "shaded."

One instance of watching the market. About a year ago the Era reported that carbolic acid would go very high on account of its being used in making explosives by the English Government. The same day the writer went to New York and bought some at about 26 cents a pound, and while talking with the salesman the head of the house announced in a loud voice to the various salesmen that carbolic acid had advanced 15 cents a pound. Had the writer not watched the report he would have delayed buying with a loss of about seven dollars on the quantity bought.

Get on the jobbers' list if you can. It may save you from 10 to 40 per cent. If your business is too

small to "go it alone," combine with one or two druggist friends and buy the principal patents, etc., together. In this way you may be able to buy direct the major portion of the popular goods, at an average saving of ten per cent.

Try to have a surplus in the bank so as to enable you to discount your bills. Be a "Cash" customer, and your trade will be sought after by all merchants.

As to your help, be considerate and just to them. Require them to be punctual in all things, polite to customers and industrious about the store. Do not encourage lounging of friends in the store, and do not carry on loud conversations behind the prescription counter.

To recapitulate, the above advice may be summarized as follows:

- 1.—Attract customers through window displays, cleanliness, and well lighted store.
- 2.—Keep customers by courteous treatment and prompt attention.
- 3.—Keep your stock up to date.
- 4.—Deal with more than one wholesale drug house.
- 5.—Buy in quantity lots, by combining with friends.
- 6.—Discount bills.
- 7.—Attend strictly to business.

DON'T EMULATE THE MULE.

By B. F.

Don't kick. It is about the most useless occupation going, and a habit that clings like the old man of the sea.

Did you ever notice the disposition everyone has to tease the chronic kicker? Into whatever place of business he goes how the employes delight in slyly putting obstacles in his way and making him wait while seeming to serve him with alacrity; they like to see him fume and storm if they can avoid being the direct objects of his wrath. It is the same propensity in human nature which delights in teasing a mad bull when a good, high fence intervenes. Such a man's employes may regard him with fear, but never with respect, or a desire to serve his best interests. They never lose a chance to even up old scores, and chuckle behind his back over his discomfiture.

Such a man becomes an object of derision in his neighborhood. This weakness, or mental defect, causes him to be regarded with little more respect than if he were a drunkard or an idiot, and he is contemptuously spoken of as "old So-and-So."

The best way to stop this habit is never to begin it. Have a little experience meeting with yourself once in a while and see if you are in danger of drifting into the ranks of the chronic kickers. If you are a young man it is much the easier to stop, but if you have reached the fiftieth milestone, and have indulged for a number of years in this species of gymnastics, it ought to be time to call a halt. Reduce your record one kick a day, or even one a week, for moderation in all things is commendable and a too sudden cessation might prove fatal to yourself or at least a source of much anxiety to your family, who, missing your familiar growl, might attribute it to softening of the brain or a forerunner of your early demise.

The mental process involved in kicking produces mental friction, and friction causes wear. A machine is always carefully oiled where friction exists or it will soon wear out, and your mental equipment is a thousand times more delicate than any machine that ever was built.

An excellent lubricant to apply is philosophy. Don't kick about what can't be helped for it isn't common sense, nor over what can be helped but go to work and remedy it. Old Commodore Vanderbilt, it is said, was one day carefully looking over the floor of his office for a ten cent piece which he had dropped, when he received the news of the loss of \$10,000. He calmly continued to look for the dime, when his visitor exclaimed somewhat impatiently, "Didn't you hear what I said, that you have lost \$10,000, and what in the world are you wasting time over a dime for?" "Ah, but that is lost, and can't be

helped," said the shrewd old financier, "but the dime is not lost yet." You can adopt the old man's philosophy even if you haven't the cold cash to drop as easily as he did.

It is the little, every day mishaps that, like a swarm of gnats, irritate and choke the temper—the illegible prescription, the unreasonable customer, the delayed orders, the unseasonable weather, the careless clerk. Reprimand when necessary, but don't do it all day. Apply oil. Milton says—

"He who reigns within himself and rules
Passions, desires and fears, is more a king;
Which every wise and virtuous man enjoys;
And who attains not ill aspires to rule
Cities of men and headstrong multitudes."

Another good lubricant is to have more than one thanksgiving day in the year. In life's balance sheet reckon up occasionally your resources in other things than dollars and cents.

In Gladstone's last illness it is said he never referred to his pain and weariness, but instead spoke with deep gratitude of the long years of health he had enjoyed.

Sancho Panza was thankful to the man who invented sleep.

Pascal was thankful for cold because he found it so agreeable getting warm.

Emerson was thankful for the good invention whereby everybody is provided with somebody who is glad to see him.

Alphonse Karr, instead of finding fault with Nature for putting thorns on roses, was grateful to her for putting roses on thorns.

Be thankful you live in the age you do—not a few centuries earlier when rulers had an unpleasant trick of slicing off heads that did not suit them, and not a few decades later when Messrs. Mierpont, Jorgan & Co. shall own all there is in sight and hang out a sign of "standing room only" on our little planet.

Finally be glad you are just what you are—a plain, hard-working druggist with a place to fill in the world—and fill it. And let us all say grace with Bobby Burns—

"Some wad eat but hae na meat,
And some hae meat but canna eat it,
But we hae meat, and we can eat,
And sae the Lord be thankit."

BAD EFFECT OF THE WEATHER ON HEALTH.

The relation of climatology to health and disease is no new subject. Hygiene and meteorology have for a long time been known to be co-related to an important degree. In fact, atmospheric influence upon health is mentioned in ancient history. Over four thousand years ago, the frequency and fatality of disease during the manifestations of certain atmospheric phenomena were noted and attributed to arbitrary punishment from heaven.

The following propositions are generally held to be true: A preternaturally dry air, with a high temperature, predisposes to the development of fevers and intestinal disorders.

A very moist atmosphere, accompanied by a low temperature, is likely to induce bronchial and rheumatic affections.

In summer and autumn the tendency to sickness and death is chiefly connected with digestive organs.

In summer and autumn a rise of mean temperature above the average, increases the number of cases of, and the mortality from, diseases of the digestive organs.

A cold and rainy summer controls the prevalence and fatality of diarrheal diseases.

Diarrheal diseases become epidemic when the subsoil temperature at a depth of four feet below the surface reaches 56° F. for the season.

The physiological effects of climate embrace the degrees of humidity, fogs, cloudiness, sunshine, force and direction of wind, parity of atmosphere, and the quality and energy of all the meteorological influences.—Ohio Sanitary Bulletin.

SHOP TALK.

"I'm not naturally envious," said a drug clerk a few days since, "but I do envy the good fortune of those who, being in other lines of business than pharmacy, have Sundays and evenings to themselves. In the circle of friends which I belong to, I am the only one in the retail drug business, and as a consequence of not being able to meet them during the only time they have at their disposition for social pleasures, that is evenings and Sundays, I am growing more and more isolated, until, as I can foresee, I shall eventually become nothing more than a memory to those with whom I spent my school, and the after-hours of my college days. One of them advised me to get out of the drug business. But even were I so disposed (and I am not, because even now, as always, I have a passion for dabbling round drugs and chemicals) I could not do so, because my whole education has been bent in the direction I am now following, and to enter another business would entail several years' loss of time before I could earn what I am now getting from pharmacy, which I cannot afford. It is a trite saying about all work making Jack a dull boy. I think social intercourse is the only natural relaxation from the bustle of business. Nowadays, however, if I meet my friends once in two or three months I feel fortunate; the rest of my 'days off' gives me opportunity to see one or perhaps two of them for but a few moments at a time, while the rest of my leisure time I devote to solitary fishing parties, or play soitaire with my thoughts, until in a kind of desperation, I go back to the store glad to have something to do. Now don't you really think that drug stores could be closed the greater part of Sunday, and earlier on week days than eleven and twelve o'clock? I think they could, and also, there could be a means devised to make such a plan run smoothly. For instance, I would be willing to stay in the store all of every other night, for the privilege of having the other alternate nights, say from seven o'clock, to myself. Sundays could be arranged in a like manner. I am sure the public would understand and appreciate such a plan, and that the employers would lose nothing in trade."

* * *

Quite a unique and catching advertisement was noted in the window of a Philadelphia druggist lately—"Come in and get your hair examined microscopically and let us tell you what you need". Underneath this card were pictures showing hair bulbs, roots and follicles enlarged, the microbe that causes dandruff and falling of hair, the scalp, scales of dandruff, etc., etc., the idea being to show the public the why and wherefore of baldness, loss of hair and how it may be remedied. A good display of various hair tonics, lotions, soaps and shampoos and an assortment of good brushes and combs completed the window display. Inside, a neat little booklet was on the counter where such articles were sold, in which was a brief and plain treatise on the care of the hair and its diseases and their cure. The reason and necessity for a microscopic examination of the hair before giving treatment were also convincingly given. At a desk in the rear was a microscope and a modest outfit where the examinations were made—these being done free of charge. Several hairs were removed with tweezers and a bit of the dandruff taken, then the customer was told to call in an hour, or, if in a hurry, the examination was made at once and the appropriate treatment recommended. The originator says the plan pays him very well, the microscope being a relic of student days.

* * *

While strolling along Atlantic avenue, Atlantic City's main business thoroughfare, the Era man was struck by the number of drug stores having a red light in front of them, the usual arc light globe being of red glass, instead of clear or white. This seems to be a good idea, the attention of the passer by is attracted by the unusual color of the light, it adds dis-

tinctiveness to the store in a brilliantly lighted street, and it also attracts notice from quite a distance. The idea, no doubt comes from the old English custom of denoting the residence of a doctor at night by a red lamp—made famous by Conan Doyle's delightful stories of queer experiences—"Around the Red Lamp". It would be a good point to use in one's advertising. "You can tell our store by the red light in front" or "Jones' Pharmacy—under the red light"—and so on in many modifications. A red light can be seen much further than the usual "show globes", which, by the way, seem to be going out of fashion. Any distinctive mark or sign by which a drug store can be easily known or located is of infinite value in a city where almost every other block holds a drug store.

* * *

A rather good advertisement of cigars was noted in the window of a Tenth street cigar store the other day—an "ad" that might prove useful to the druggist, with a few modifications. The "ad" in question was a card proclaiming the virtues of a brand of cigars sold at this store, noting also the fact that for a "special sale" \$1.50 boxes of 25 cigars were offered for \$1 a box. Then came the cream of the "ad"—"Any pawnbroker will advance you 90 cents on them!"—made more appropriate by the sight of a pawnshop across the street. Now this idea, it seems, might be used to impress both the reduction in price and the intrinsic value of many articles offered for sale by the druggist—brushes, combs, toilet articles, etc.—for while the majority of his customers might know little of the pawn-shop, the mere idea that the things they are buying might in time of need have a value there would be apt to increase the desirability of the purchase and its attractiveness as a "bargain". Try it and see!

* * *

Few if any druggists in the Northwest have such downright genius for utilizing store space as W. A. Frost of Shelby and Western avenues, St. Paul, who was for many years president of the Minnesota State Board of Pharmacy. He has a system of cupboards, in addition to the pill cupboard already described in the Era, by which he not only keeps an immense stock in the smallest possible space, but keeps it free from dust and in good shape from any point of view. Old and experienced druggists who have traveled far and wide testify that Mr. Frost stows away the largest stock they ever saw in a store of similar size, and almost every graduating class of the State College of Pharmacy is taken to Mr. Frost's store to observe the perfection of his museum in parvo, and to receive other valuable pointers.

* * *

A Nassau street, New York, drug store has a "bath window" display which shows the result of much careful work and study. In the window are Turkish towels, bath waters, perfumes, hand scrubs, mits, brushes, soaps, tub shower apparatus, sponges and various preparations which contribute to the delights of the bath. A unique part of the display is a figure in the center of a bank of sponges placarded "Greek Sponge Diver," done with compressed sponges. The signal lines and other parts of the diving gear are of the same material. The figure is capped with a regulation diving helmet.

BERMUDA ARROWROOT.—There are two arrowroot factories in Bermuda, one of which, recently established, is equipped with modern plant, and is capable of producing a large quantity. The growth and manufacture of arrowroot, which were at one time important industries in Bermuda, have, from various causes, greatly declined in recent years, and the question whether with improved appliances by which the starch can be extracted from the raw material with greater economy, the industry can be revived, is one which excites the interest of those who are watchful for the future welfare of the colony. The exports from Bermuda during 1900 were valued at £2,242, against £460 in 1899.—(Chem. & Dr.)

THE QUALITY OF A FEW DRUGS AS THEY ARE OFFERED ON THE MARKET.*

By T. R. KEENE, Dallas.

During the past three or four years, business or curiosity has caused the examination of quite a number of drugs that are in every day use. While looking over a lot of notes and memoranda, the thought came to the writer, that some of that work would interest some who would be at this meeting, as a consequence, the results of some of them are given below.

Inasmuch as no process of assay will be given with any of them, most articles will be avoided that called for special methods of examination.

To many of us long technical descriptions of the methods employed to arrive at conclusions are dull reading, and only those, who may be carrying out like investigations, care anything for details of apparatus, process and manipulation.

In the main, pharmacopoeial tests and methods were used, for the reason that in my experience they are as nearly correct as any that can be found, and they have the advantage of a quasi-official standing, that gives added weight to their use.

Alcohol.—From twenty-two samples examined, only three were found which could not be squeezed within the pharmacopoeial requirements, and these had nothing worse the matter with them, than the addition of a little water, ranging from five to ten per cent.

Asafoetida.—This is evidently an article that it would seem to be wrong to put upon the market in anything approaching a state of purity. Of some thirteen specimens investigated, not one of them contained more than forty-two per cent. of alcohol-soluble matter, while the U. S. P. insists that not less than sixty per cent. of the gum shall be soluble in alcohol. The adulteration is principally sand, small gravel and earthy matter generally; no choice seems to have been made, so they got a lot of dirt into it, but with very little extraneous organic matter, not more than would be readily accounted for in careless gathering. Evidently they wanted to use something that would add weight and add it fast too.

The price of the gum does not seem to have anything to do with its quality, for some of the highest priced gums were of the worst quality.

Castor Oil.—Twelve samples of this oil showed only one to be adulterated. This one was approximately fifty per cent. cotton seed oil. Some of the others were not as bright and handsome looking as might be desired, still they all came well within the requirements of a standard oil, particularly in the matter of specific gravity, which in every instance, (save the one adulterated with cotton seed oil) ranged between .950 and .960. The adulterated oil, from appearance only, was a fairly good looking oil; it being bright, clear and almost odorless, and only after the most pronounced cotton seed oil reactions was I satisfied that the oil was not what it purported to be. It had a specific gravity of .915.

Cream of Tartar.—Four specimens from drug stores, and seven from the groceries were examined. Those coming from the drug stores were all up to standard, in every respect, but those from the groceries were badly adulterated; two of them contained only forty per cent. of cream of tartar and none of them over eighty per cent. The principal article used for cheapening purposes was starch.

Glycerine.—Five samples of this article were looked after; all were fairly good, two of them had a specific gravity of 1.232 and 1.235 respectively, instead of 1.250 as demanded by the U. S. P., but, I take it, that this discrepancy was due to keeping the glycerine in an open receptacle during some very damp weather, rather than to any intentional dilution.

Calomel.—Nine different lots of calomel were investigated. Eight of these bore the label of domestic manufacturers, while one proclaimed that it was made

*This paper was read before the Texas Pharmaceutical Association, and is reprinted from the Texas Druggist.

in Great Britain. All of them were equal to the official requirements and no fault was to be found. By the way, we, here in Texas, seem to have taken up the idea that English colamel is superior to that made in America. I want to deny that proposition emphatically. Never but once have I found anything wrong with our home product and that came from an error in the packing only. If we are as particular in some other things as we are to specify "English" in our orders for colamel, some of our customers would fare better.

Cocaine.—Nineteen different samples of this drug were looked into; five of them, each from a different manufacturer, were taken from original packages, opened by myself. All of these five were as good as is required. The other fourteen were purchased from various retail drug stores, and most of them from places that I suspected were not selling straight goods. Four out of these fourteen were all right, but the other ten had all of them been fixed to yield a better profit, the adulterant in every instance being acetanilid; this substance being found in varying amount according to the conscience of the dealer, ranging from twenty to sixty per cent. This condition of affairs is a crying shame, and a disgrace to the retail drug trade of the State. A pure food and drug law well enforced is about as badly needed in Texas as in any state in the Union.

Opium.—Eight samples of assayed powdered opium from original packages were examined. They all conformed to the claims made upon the labels, within the reasonable limits of error, and allowance for different processes of assay used.

Laudanum.—Numerous samples of laudanum have been assayed; some from the jobbing druggists, some from the retail druggists and others from the groceries. It would be too long a story to try to tell at this time. Just about half of them were near enough right to show good intentions upon the part of the maker, while the balance showed all degrees of badness, down to a dark-colored liquid that it took a stretch of the imagination to even give it the name of laudanum.

Many other articles have been examined, more or less closely, with results that on the average compare with those spoken of above; the conclusion is that the jobbing druggists, on the whole, are supplying the retail trade with drugs of as high a grade as the retailer is willing to pay for, and that where they send out goods that are not as good as they should be, it is because of the continual demand made upon them for articles that bear the name regardless of quality.

I believe that just as soon as the retailer asks for higher class drugs, the jobbers will gladly supply them. As matters stand now, many articles, particularly in vegetable and powdered drugs and essential oils, fall woefully short of even being fair, and particular people experience some little difficulty in buying what they would like to have. That there is a gradual but steady improvement in the quality of drugs none who will look into the matter closely for a period extending even over a few years will deny, but that there is room for more and greater improvement cannot be for a moment overlooked.

COMMERCIAL CINCHONINE.—According to Jungfleisch and Leger (Pharm. Zeitsch., Chem. & Dr.) commercial cinchonine sulphate contains as much as 20 per cent. of hydrocinchonine. By treatment of the sulphate with 95 per cent. alcohol, then converting into the basic sulphate, and, finally, recrystallizing several times from water, a product containing only 3 per cent. of hydrocinchonine is obtained, and after ten recrystallizations the product contains only 1 per cent. of that base. The melting point of the thus purified product is 264.3° C. (corr.), and the optical rotation is always higher than that of the commercial salt.

TREATMENT FOR WARTS.—Mercuric chloride 5 grains; salicylic acid 1 dram; collodion, enough to make 1 ounce. Mix. Paint over the warts once a day. After a few applications the warts peel off.—Lancet.

A FEW SUGGESTIONS REGARDING THE RECEIPT, LABELING, DISPENSING AND DELIVERY OF PRESCRIPTIONS.

By J. PFEIFFER.

Perhaps in no department of the conduct of a drug store is so little method displayed as in the handling of prescriptions after they are presented to be filled. Druggists, as a rule, depend upon each transaction being handled as circumstances will permit, without following any set of rules to govern all transactions of this nature. As most of the mistakes that we hear of are traceable either to imperfect labeling, or to imperfect delivery, I desire in this paper to set forth a system that I have adopted, and which, if rigidly adhered to, will reduce mistakes from this source to a minimum. How often do we hear of prescriptions carefully and properly compounded, reaching the patients with the wrong labels on the bottle. This is due, generally, to the fact that more than one prescription has been received, and the labels written separately; the attention of the compounder has been called to some other business, and, on returning to the business in hand, the labels are reversed, or a batch of prescriptions are filled, the boxes or bottles placed upon the prescription blanks and afterwards taken to a desk and labeled; in this case if a bottle be placed on the wrong blank, mistakes are apt to occur. Again prescriptions are often compounded by one and labeled by another; this is a practice that will sooner or later lead to mistakes in labeling.

My mode of procedure is this: When a batch of prescriptions is received, write upon each one the name and address of the patient; then sort them into batches in the order in which they are to be filled. If more than one person is to fill them, give each dispenser an assorted batch. Begin with the external remedies first, and after each one is compounded, first place upon the bottle or package the caution label, and then write and attach the directions before proceeding with the next prescription, and so proceed until all the prescriptions are filled, labeling each in turn before proceeding with the next, and always affixing special labels before attaching written directions.

Upon liniments to be rubbed on the surface, place the external use label. Douches, sprays, injections and vaginal and laryngeal applications take a label "Not to be taken." Eye drops and eye lotions take special labels "For the eye," and "Not to be taken." Gargles take special labels "Use as a gargle." In addition to these, if the prescription contains a potent poison, where even a very small quantity would prove fatal if taken by mistake, as is often the case in eye drops, a poison label is attached in addition to the other special labels.

If the name of the patient is known, write it upon the label. Never wrap a bottle or package until it is ready for delivery, as all packages look alike when wrapped. As to dispensing when two prescriptions, one for external use and one for internal use, are prescribed for the same person, use different colored bottles, if at hand; if not, use different shaped ones. Where two or more kinds of pills, capsules, powders or cachets are prescribed for the same person, or for different persons in the same family, use different sized or shaped boxes for each, so that the lid of one will not fit the others.

Mixtures requiring agitation take a shake label. Emulsions and heavy syrups, dispense in wide mouthed bottles. Acids and corrosive liquids in glass stoppered bottles. With all medicines to be given in drops, send a dropper. With those to be applied with a brush, send such brush as the directions indicate should be used; do this whether the prescription specifically calls for it or not. Medicines affected by the rays of the light, dispense in blue or amber bottles. All concentrated medicines, direct to be

*Paper read before the Texas Pharmaceutical Association; Re-printed from Texas Druggist.

ber bottles. All concentrated medicines, direct to be taken in a little water, whether the prescription specifically says so or not.

As to delivery, where packages are to be delivered at residences, the name and address of party is to be plainly written on the outside of the package. Delivery boys are cautioned, upon pain of immediate discharge, to refuse to receive packages that are not addressed. Where more than one delivery is to be made by a single messenger, all the items for each separate delivery are wrapped in one package. Where the items are too bulky, baskets will be used. Caution delivery boys before each and every trip, if more than one delivery is to be made on a single trip.

If these rules are rigidly and conscientiously adhered to, few explanations regarding prescriptions will be found necessary.

THE DISCOLORATION OF SYRUP OF IODIDE OF IRON.*

By F. W. HAUSSMANN.

The causes of the color change in syrup of ferrous iodide have frequently been investigated, and the published statements resulting from these researches cannot be regarded as conclusive.

Chemical decomposition of the ferrous iodide, indicated by the liberation of iodine, or the formation of ferric compounds, furnish the basis upon which the majority of investigators agree. A consideration of the process of preparation, involving the several steps, especially the common mistake of the tyro to filter the iron solution while yet brown, will readily explain the universal acceptance of such statements.

It has, however, been observed by many pharmacists that the syrup, despite the efforts at preservation by following a number of contradictory suggestions, such as exposure to direct sunlight on one hand and entire exclusion of light on the other, gradually turns darker.

The fact that application of the starch test gave negative evidence of the presence of free iodine indicated the necessity of another explanation. This was believed to be found by advancing the theory that a ferric compound is formed, and the statement that ferrous iodide changed to ferric iodide or oxyiodide was accepted as conclusive. This change probably takes place if an aqueous solution of ferrous iodide is evaporated with the view of obtaining the salt, but, based upon results obtained from the examination of a number of specimens of various ages and shades of color, the writer questions if this takes place in the syrup. In an examination of some fifteen discolored samples not one reacted for the presence of ferric compounds. This result practically excludes this theory, and the cause of discoloration must be sought elsewhere.

Recently the action of free acids upon syrups has received attention, and the changes produced thereby have been described. Considerable work still remains to be done in this direction, and the action of metallic salts, in particular those of an acid reaction, upon saccharine solutions, demands exhaustive investigation.

Regarding the reaction of ferrous iodide, the statements of the Pharmacopœia are contradictory, the saccharated iodide being stated to have a slightly acid and the syrup a neutral reaction. Founded on the results of an investigation carried on for some time, the writer inclines to the belief that the action of the iron salt, without itself undergoing any chemical change, causes discoloration of the syrup.

The amount of heat employed in preparing the syrup also has an important influence.

The following reasons may serve to substantiate these assertions: Ferrous iodide is not the only iron salt which, with the influence of heat, causes darkening in syrup. A syrup of ferrous sulphate containing 10 per cent. of the salt, prepared by dissolving, on standing from four to six months with expo-

sure to light, turned from a light green to a brown color. Examination at the expiration of six months, with the view of determining the possible formation of a ferric compound, gave a negative result. Identical results were obtained with a syrup containing 10 per cent. of ferrous chloride.

The influence of temperature is demonstrated by the fact that syrups prepared by dissolving the sugar in the iron solution at a temperature below the boiling point, possess greater stability than those heated to boiling.

The addition of hypophosphorous or other acids exerts no influence except to prevent the liberation of iodine.

Several specimens of the syrup to which hypophosphorous acid was added, originally of a bright green color, have gradually turned brown. The premature addition of an acid may cause the syrup to rapidly change in color. In an instance, where this possibility was considered, the addition of hypophosphorous acid to a boiling bright-green syrup was followed by an immediate change to dark brown. This points to the necessity of adding the acid only to the perfectly cold syrup.

This color change may also be noticed if a small quantity of the syrup, either with or without an addition of acid, be heated to boiling and the heat continued. Caramelization will be the consequence.

Brief mention may be made of the restoration of discolored syrups of iodide of iron.

Specimens containing free iodine may be restored by the well-known practice of digestion with iron filings. Care in the regulation of heat must be observed, and addition of a sufficient amount of water to restore the original weight of the syrup should not be neglected. A syrup in which the brown color is due to caramelization, is difficult of restoration. Animal charcoal will remove some of the brown color, but the writer has never been able to completely restore the original bright-green color by this method.

It may incidentally be mentioned, that if further investigations should prove this action of iron salts upon saccharine solutions to be true, the color change in elixirs containing scaled iron salts, which is the source of much annoyance to the pharmacist, is thereby explained.

PRECAUTION NECESSARY WITH HYDROGEN DIOXID.—Two French professors at Lyons have recently called attention to the ready absorptibility of hydrogen dioxid and the consequent danger of fatal gaseous embolism from bubbles of oxygen forming in the blood after absorption, when it is applied to an open wound or to detach an adherent dressing. In contact with blood, as with pus, the effervescence continues. The oxygen is disposed of by the oxyhemoglobin in the blood if the amount is small, and no harm results. Inflamed tissues are peculiarly active in decomposing the dioxid, and absorption is always slow and gradual in all cases. Crohas advises rendering the dioxid alkaline by adding a saturated solution of sodium borate, a drop at a time, until litmus paper—first reddened by the dioxid—regains its blue color. Even aside from the fear of gaseous embolism, the dioxid should always be neutralized, as it is liable to contain more or less sulphuric, phosphoric or other acids. It should never be used stronger than eight to ten volumes, and always fractionated and in moderate amounts. With these precautions there need be no fear of the slightest evil effects from its use.—(Jour. Am. Med. Association.)

EUROPIUM.—E. Demarcay, in 1806, announced the discovery of an element intermediate between gadolium and samarium. It was stated to be characterized by several strong lines in the violet and ultra-violet, and to have a special absorption spectrum, previously unnoticed. By a long series of fractionations with magnesium nitrate, Demarcay has since been able to accumulate a considerable quantity of the element, and to conform its various characteristics. He proposes for it the name "europium," with symbol Eu, and atomic weight 151 (approx.).—(Comp. rend. and Phar. Jour.)

THE EFFECT OF PHYSICAL AGENTS ON BACTERIAL LIFE.*

The fact that life did not exist upon the earth at a remote period of time, the possibility of its present existence as well as the prospect of its ultimate extinction, can be traced to the operation of certain physical conditions. These physical conditions upon which the maintenance of life, as a whole, depends are in their main issues beyond the control of man. We can but study, predict, and, it may be, utilize their effects for our benefit. Life, in its individual manifestations, is therefore conditioned by the physical environment in which it is placed. Life rests on a physical basis, and the main springs of its energies are derived from a larger world outside itself. If these functions, physical or chemical, are favorable, the functions of life proceed; if unfavorable, they cease—and death ultimately ensues. These factors have been studied and their effects utilized to conserve health or to prevent disease. It is our purpose to study some of the purely physical factors, not in their direct bearing on man, but in relation to much lower forms in the scale of life—forms which constitute in number a family far exceeding that of the human species, and of which we may produce at will, in a test-tube, within a few hours, a population equal to that of London. These lowly forms of life—the bacteria—belong to the vegetable kingdom, and each individual is represented by a simple cell.

These forms of life are ubiquitous in the soil, air and water, and are likewise to be met with in intimate association with plants and animals, whose tissues they may likewise invade with injurious or deadly effects. Their study is commonly termed bacteriology—a term frequently regarded as synonymous with a branch of purely medical investigation. It would be a mistake, however, to suppose that bacteriology is solely concerned with the study of the germs of disease. The dangerous microbes are in a hopeless minority in comparison with the number of those which are continually performing varied and most useful functions in the economy of nature. Their wide importance is due to the fact that they insure the resolution and redistribution of dead and effete organic matter, which, if allowed to accumulate, would speedily render life impossible on the surface of the earth. If medicine ceased to regard the bacteria, their study would still remain of primary importance in relation to many industrial processes in which they play a vital part. It will be seen, therefore, that their biology presents many points of interest to scientific workers generally. Their study as factors that ultimately concern us really began with Pasteur's researches upon fermentation. The subject of this discourse—the effect of physical agents on bacterial life—is important, not merely as a purely biological question, though this phase is of considerable interest, but also on account of the facts I have already indicated, viz., that micro-organisms fulfill such an important function in the processes of nature, in industrial operations, and in connection with the health of man and animals. It depends largely on the physical conditions to be met with in nature whether the micro-organisms exercise their functions, and likewise whether they die or remain inactive. Further, the conditions favoring one organism may be fatal to another, or an adaptability may be brought about to unusual conditions for their life. To the technologist the effect of physical agents in this respect is of importance, as a knowledge of their mode of action will guide him to the means to be employed for utilizing the micro-organisms to the best advantage in processes of fermentation. The subject is of peculiar interest to those who are engaged in combating disease, as a knowledge of the physical agents that favor or retard bacterial life will furnish indications for the preventive measures to be adopted. With a suitable soil and an adequate temperature, the

propagation of bacteria proceeds with great rapidity. If the primary conditions of soil and an adequate temperature are not present, the organisms will not multiply; they remain quiescent, or they die. The surface layers of the soil harbor the vast majority of the bacteria, and constitute the great storehouse in nature for these forms of life. They lessen in number in the deeper layers of the soil, and few or none are to be met with at a depth of eight to ten feet. As a matter of fact, the soil is a most efficient bacterial filter, and the majority of the bacteria are retained in its surface layers and are not met with there. In the surface soil, most bacteria find the necessary physical conditions for their growth, and may be said to exist there under natural conditions. It is in the surface soil that their main scavenging functions are performed. In the deeper layers, the absence of air and the temperature conditions prove inimical to most forms.

Among pathogenic bacteria the organisms of lockjaw and of malignant oedema appear to be eminently inhabitants of the soil. As an indication of the richness of the surface soil in bacteria, I may mention that one gramme of surface soil may contain from several hundred thousand to as many as several millions of bacteria. The air is poorest in bacteria. The favoring physical conditions to be met with in the soil, are not present in the air. Though bacteria are to be met with in the air, they are not multiplying forms, as is the case in the soil. The majority to be met with in air are derived from the soil. Their number lessens when the surface soil is moist, and it increases as the surface soil dries. In a dry season the number of air organisms will tend to increase.

Town air contains more bacteria than country air, while they become few and tend to disappear at high levels and on the sea. A shower of rain purifies the air greatly of bacteria. The organisms being, as I stated, mainly derived from the surface of the ground, their number mainly depends on the physical condition of the soil, and this depends on the weather. Bacteria cannot pass independently to the air; they are forcibly transferred to it with dust from various surfaces. The relative bacterial purity of the atmosphere is mainly therefore a question of dust. Even when found floating about in the air, the bacteria are to be met with in much greater number in the dust that settles on exposed surfaces, e. g., floors, carpets, clothes and furniture. Through a process of sedimentation the lower layers of the air become richer in dust and bacteria, and any disturbance of dust will increase the number of bacteria in the air.

The simple fact of breathing does not disseminate disease germs from a patient; it requires an act of coughing to carry them into the air with minute particles of moisture. From the earliest times great weight has been laid upon the danger of infection through air-borne contagia, and with the introduction of antiseptic surgery the endeavor was made to lessen this danger as much as possible by means of the carbolic spray, etc. In the same connection numerous bacteriological examinations of air have been made, with the view of arriving at results of hygienic value. The average number of micro-organisms present in the air is 500 to 1,000 liters; of this number only 100 to 200 are bacteria, and they are almost entirely harmless forms. The organisms of suppurative have been detected in the air, and the tubercle bacillus in the dust adhering to the walls of rooms. Investigation has not, however, proved air to be one of the important channels of infection. The bacterial action of sunlight, desiccation, and the diluting action of the atmosphere on noxious substances, will always greatly lessen the risk of direct aerial infection.

The physical agents that promote the passage of bacteria into the air are inimical to their vitality. Thus, the majority pass into the air, not from moist, but from dry surfaces, and the preliminary drying is injurious to a large number of bacteria. It follows that, if the air is rendered dust-free, it is practically

*Discourse delivered at the Royal Institution by Dr. Allan Macfadden, Director of the Jenner Institute of Preventive Medicine. (Nature, Sci. Am. Supplement.)

deprived of all the organisms it may contain. As regards inclosed spaces, the stilling of dust, and more especially the disinfection of surfaces liable to breed dust or to harbor bacteria are more important than air disinfection, and this fact has been recognized in modern surgery. In an investigation, in conjunction with Mr. Lunt, an estimation was arrived at of the ratio existing between, the number of dust particles and bacteria in the air. We used Dr. Aitken's dust-counter, which not only renders the dust particles visible, but gives a means of counting them in a sample of air. In an open suburb of London we found 20,000 dust particles in one cubic centimeter of air; in a yard in the center of London about 500,000. The dust contamination we found to be about 900 per cent. greater in the center of London than in a quiet suburb. In the open air of London there was, on an average, just one organism to every 383,000 dust particles present in the air, and in the air of a room, among 184,000,000 dust particles, only one organism could be detected.

These figures illustrate forcibly the poverty of the air in micro-organisms, even when very dusty, and likewise the enormous dilution they undergo in the atmosphere. Their continued existence is rendered difficult through the influence of desiccation and sunlight. Desiccation is one of nature's favorite methods for getting rid of bacteria. Moisture is necessary for their development and their vital processes, and constitutes about 80 per cent. of their cell substance. When moisture is withdrawn, most bacterial cells, unless they produce resistant forms of the nature of spores, quickly succumb. The organism of cholera, air-dried in a thin film, dies in three hours. The organisms of diphtheria, typhoid fever, and tuberculosis show more resistance, but die in a few weeks or months.

Dust containing tubercle bacilli may be carried about by air currents and the bacilli in this way transferred from an affected to a healthy individual. It may, however, be said that drying attenuates and kills most of these forms of life in a comparatively short time. The spores of certain bacteria may, on the other hand, live for many years in a dried condition, e. g., the spores of anthrax bacilli, which are so infective for cattle and also for man (wool-sorter's disease). Fortunately, few pathogenic bacteria possess spores, and therefore drying, by checking and destroying their life, is a physical agent that plays an important role in the elimination of infectious diseases. This process is aided by the marked bactericidal action of sunlight. Sunlight, which has a remarkable fostering influence on higher plant life, does not exercise the same influence on the bacteria. With few exceptions, we must grow them in the dark in order to obtain successful cultures; and a sure way of losing our cultures is to leave them exposed to the light of day. Direct sunlight is the most deadly agent, and it kills a large number of organisms in the short space of one or two hours; direct sunlight proves fatal to the typhoid bacillus in half an hour to two hours, to the diphtheria bacillus in half an hour to one hour, and to the tubercle bacillus in a few minutes to several hours. Even anthrax spores are killed by direct light in three and a half hours. Diffuse light is also injurious, though its action is slower. By exposing pigment-producing bacteria to sunlight, colorless varieties can be obtained, and virulent bacteria so weakened that they will no longer produce infection. The germicidal action of the sun's rays is most marked at the blue end of the spectrum; at the red end there is little or no germicidal action. It is evident that the continuous daily action of the sun, along with desiccation, are important physical agents in arresting the further development of the disease germs that are expelled from the body.

It has been shown that sunlight has an important effect in the spontaneous purification of rivers. It is a well-known fact that a river, despite contamination at a given point, may show little or no evidence of this contamination at a point further down in its course. Buchner added to water 100,000 colon bacilli

per cubic centimeter, and found that all were dead after one hour's exposure to sunlight. He also found that in a clear lake the bactericidal action of sunlight extended to a depth of about six feet. Sunlight must therefore be taken into account as an agent in the purification of waters, in addition to sedimentation, oxidation, and the action of algae.

Air, or the oxygen it contains, has important and opposite effects on the life of bacteria. In 1861 Pasteur described an organism in connection with the butyric acid fermentation, which would only grow in the absence of free oxygen. And since then a number of bacteria, showing a like property, have been isolated and described. They are termed anaerobic bacteria, as their growth is hindered or stopped in the presence of air. The majority of the bacteria, however, are aerobic organisms, inasmuch as their growth is dependent upon a free supply of oxygen. There is likewise an intermediate group of organisms which show an adaptability to either of these conditions, being able to develop with or without free access to oxygen. Pre-eminent types of this group are to be met with in the digestive tract of animals, and the majority of disease-producing bacteria belong to this adaptive class. When a pigment-producing organism is grown without free oxygen, its pigment production is almost always stopped. For anaerobic forms, N and H₂ give the best atmosphere for their growth, while CO₂ is not favorable, and may be positively injurious, as e. g., in the case of the cholera organism.

The physical conditions favoring the presence and multiplication of bacteria in water under natural conditions are a low altitude, warmth, abundance of organic matter, and a sluggish or stagnant condition of the water. As regards water-borne infectious diseases, such as typhoid or cholera, their transmission to man by water may be excluded by simple boiling or by an adequate filtration. The freezing of water, while stopping the further multiplication of organisms, may conserve the life of disease germs by eliminating the destructive action of commoner competitive forms. Thus, the typhoid bacillus may remain frozen in ice for some months without injury. Employment of ordinary cold is not, therefore, a protection against dangerous disease germs.

As regards electricity, there is little or no evidence of its direct action on bacterial life, the effects produced appear to be of an indirect character, due to the development of heat or to the products of electrolysis.

Ozone is a powerful disinfectant, and its introduction into polluted water has a most marked purifying effect. The positive effects of the electric current may therefore be traced to the action of the chemical products and of heat. I am not aware that any direct action of the X-rays on bacteria has up to the present been definitely proved.

Mechanical agitation, if slight, may favor, and if excessive may hinder bacterial development. Violent shaking or concussion may not necessarily prove fatal so long as no mechanical lesion of the bacteria is brought about. If, however, substances likely to produce triturating effects are introduced, a disintegration and death of the cells follows. Thus, Rowland, by a very rapid shaking of tubercle bacilli in a steel tube with quartz sand and hard steel balls, produced their complete disintegration in ten minutes.

Bacteria appear to be very resistant to the action of pressure. At 300 to 450 atmospheres putrefaction still takes place, and at 600 atmospheres the virulence of the anthrax bacillus remained unimpaired. Of the physical agents that affect bacterial life, temperature is the most important. Temperature profoundly influences the activity of bacteria. It may favor or hinder their growth, or it may put an end to their life. If we regard temperature in the first instance as a favoring agent, very striking differences are to be noted. The bacteria show a most remarkable range of temperature under which their growth is possible, extending from zero to 70° C. If we begin at the bottom of the scale, we find organisms in water and

in soil that are capable of growth and development at zero. Among these are certain species of phosphorescent bacteria, which continue to emit light, even at this low temperature. At the Jenner Institute we have met with organisms growing and developing at 34° to 40° F. The vast majority of interest to us find, however, the best conditions for their growth from 15° up to 37° C. Each species has a minimum, an optimum, and a maximum temperature at which it will develop. It is important in studying any given species that the optimum temperature for their development be ascertained, and that this temperature be maintained. In this respect we can distinguish three broad groups. The first group includes those for which the optimum temperature is from 15° to 20° C. The second group includes the parasitic forms, viz., those which grow in the living body; and for which the optimum temperature is at blood heat, viz., 37° C. We have a third group, for which the optimum temperature lies as high as 50° to 55° C. On this account this latter group has been termed thermophilic, on account of its growth at such abnormally high temperatures—temperatures which are fatal to other forms of life. They have been the subject of personal investigation in conjunction with Dr. Blaxhall. We found that there existed in nature an extensive group of such organisms to which the term thermophilic bacteria was applicable. Their growth and development occurred best at temperatures at which ordinary protoplasm becomes inert or dies. The best growths were always obtained at 55° to 65° C. Their wide distribution was of a striking nature. They were found by us in river water and mud, in sewage, and also in a sample of sea water. They were present in the digestive tract of man and animals, and in the surface and deep layers of the soil, as well as in straw and in all samples of ensilage examined. Their rapid growth at high temperatures was remarkable, the whole surface of the culture medium being frequently overrun in from fifteen to seventeen hours. The organisms examined by us (fourteen forms in all) belonged to the group of the Bacilli. Some were motile, some curdled milk, and some liquefied gelatine in virtue of a proteolytic enzyme. The majority possess reducing powers upon nitrates and decomposed proteid matter. In some instances cane sugar was inverted and starch was diastased. These facts well illustrate the full vitality of the organisms at these high temperatures, while all the organisms isolated grew best at 55° to 65° C. A good growth in a few cases occurred at 75° C. Evidence of growth was obtained even at 70° C. They exhibited a remarkable and unique range of temperature, extending as far as 30° of the Centigrade scale.

As a concluding instance of the activity of these organisms we may cite their action upon cellulose. Cellulose is a substance that is exceedingly difficult to decompose, and is therefore used in the laboratory for filtering purposes in the form of Swedish filter paper, on account of its resistance to the action of solvents. We allowed these organisms to act on cellulose at 60° C. The result was that in ten to fourteen days a complete disintegration of the cellulose had taken place, probably into CO₂ and marsh gas. The exact conditions that may favor their growth, even if it be slow at subthermophilic temperatures, are not yet known; they may possibly be of a chemical nature.

Organisms may be gradually acclimatized to temperatures that prove unsuited to them under ordinary conditions. Thus, the anthrax bacillus, with an optimum temperature for its development of 37° C., may be made to grow at 12° C. and at 42° C. Such anthrax bacilli proved pathogenic for the frog with a temperature of 12° C., and for the pigeon with a temperature of 42° C.

Let us in a very few words, consider the inimical action of temperature on bacterial life. An organism placed below its minimum temperature ceases to develop, and if grown above its optimum temperature becomes attenuated as regards its virulence, etc., and may eventually die. The boiling point is fatal for non-sporing organisms in a few minutes. The exact

thermal death-point varies according to the optimum and maximum temperature for the growth of the organism in question. Thus, for water bacteria with a low optimum temperature blood heat, a thermophilic temperature may be fatal (60° C.); and for thermophilic bacilli any temperature above 75° C. These remarks apply to the bacteria during their multiplying and vegetating phase of life. In their resting or spore stage, the organisms are much more resistant to heat. Thus, the anthrax organism in its bacillary phase is killed in one minute at 70° C.; in its spore stage it resists this temperature for hours, and is only killed after some minutes by boiling. In the soil there are spores of bacteria which require boiling for sixteen hours to insure their death. These are important points to be remembered in sterilization or disinfection experiments, viz., whether an organism does or does not produce these resistant spores. Most non-sporing forms are killed at 60° C. in a few minutes, but in an air-dry condition a longer time is necessary. Dry heat requires a longer time to act than moist heat; it requires 140° C. for three hours to kill anthrax spores. Dry heat cannot therefore be used for ordinary disinfection on account of its destructive action. Moist heat, in the form of steam, is the most effectual disinfectant, killing anthrax spores at boiling point in a few minutes, while a still quicker action is obtained if saturated steam under pressure be used. No spore, however resistant, remains alive after one minute's exposure to steam at 140° C. The varying thermal death-point of organisms and the problems of sterilization cannot be better illustrated than in the case of milk, which is an admirable soil for the growth of a large number of bacteria. The most obvious example of this is the souring and curdling of milk that occurs after it has been standing for some time. This change is mainly due to the lactic acid bacteria, which ferment the milk sugar with the production of acidity.

Another class of bacteria may curdle the milk without souring it in virtue of a rennet-like ferment, while a third class precipitate and dissolve the casein of the milk, along with the development of butyric acid. The process whereby milk is submitted to a heat of 65° to 70° C. for twenty minutes is known as pasteurization, and the milk so treated is familiar to us all as pasteurized milk. While the pasteurizing process weeds out the lactic acid bacteria from the milk, a temperature of 100° C. for one hour is necessary to destroy the butyric acid organisms; and even when this has been accomplished there still remain in the milk the spores of organisms which are only killed after a temperature of 100° C. for three to six hours. It will, therefore, be seen that pasteurization produces a partial, not a complete, sterilization of the milk as regards its usual bacterial inhabitants. The sterilization to be absolute would require six hours at boiling point. But for all ordinary practical hygienic requirements are likewise adequately met by pasteurization, if it is properly carried out and the milk is subsequently cooled. Milk may carry the infection of diphtheria, cholera, typhoid and scarlet fevers as well as the tubercle bacillus from a diseased animal to the human subject. For the purpose of rendering the milk innocuous freezing and the addition of preservatives are inadequate methods of procedure. The one efficient and trustworthy agent we possess is heat. Heat and cold are the agents to be jointly employed in the process, viz., a temperature sufficiently high to be fatal to organisms producing a rapid decomposition of milk, as well as to those which produce disease in man; this is to be followed by a rapid cooling to preserve the fresh flavor and to prevent an increase of the bacteria that still remain alive. The pasteurizing process fulfills these requirements.

In conjunction with Dr. Hewlett, I had occasion to investigate in how far the best pasteurizing results might be obtained. We found that 60° to 68° C. applied for twenty minutes weeded out about 90 per cent. of the organisms present in the milk, leaving a 10 per cent. residue of resistant forms. It was found advisable to fix the pasteurizing temperature at 68° C. in order to make certain of killing any pathogenic

organisms that may happen to be present. We passed milk in a thin stream through a coil of metal piping, which was heated on its outer surface by water. By regulating the length of the coil, or the size of the tubing, or the rate of the flow of milk, almost any desired temperature could be obtained. The temperature we ultimately fixed at 70° C. The cooling was carried out in similar coils placed in iced water. The thin stream of milk was quickly heated and quickly cooled as it passed through the heated and cooled tubing, and, while it retained its natural flavor, the apparatus accomplished at 70° C. in thirty seconds a complete pasteurization, instead of in twenty minutes, i. e., about 90 per cent. of the bacteria were killed, while the diphtheria, typhoid, tubercle and pus organisms were destroyed in the same remarkably short period of time, viz., thirty seconds. This will serve to illustrate how the physical agent of heat may be employed, as well as the sensitiveness of bacteria to heat when it is adequately employed.

Bacteria are much more sensitive to high than to low temperatures, and it is possible to proceed much further downward than upward in the scale of temperature, without impairing their vitality. Some will even multiply at zero, while others will remain alive when frozen under ordinary conditions.

I will conclude this discourse by briefly referring to experiments recently made with the most remarkable results upon the influence of low temperatures on bacterial life. The experiments were conducted at the suggestion of Sir James Crichton-Browne and Prof. Dewar. The necessary facilities were most kindly given at the Royal Institution, and the experiments were conducted under the personal supervision of Prof. Dewar. The action of liquid air on bacteria was first tested. A typical series of bacteria was employed for this purpose, possessing varying degrees of resistance to external agents. The bacteria were first simultaneously exposed to the temperature of liquid air for twenty hours (about 190° C.). In no instance could any impairment of the vitality of the organisms be detected as regards their growth or functional activities. This was strikingly illustrated in the case of the phosphorescent organisms tested. The cells emit light which is apparently produced by a chemical process of intracellular oxidation, and the phenomenon ceases with the cessation of their activity. These organisms, therefore, furnished a very happy test of the influence of low temperatures on vital phenomena. These organisms when cooled down in liquid air became non-luminous, but on re-thawing the luminosity returned with unimpaired vigor as the cells renewed their activity. The sudden cessation and rapid renewal of the luminous properties of the cells despite the extreme changes of temperature was remarkable and striking. In further experiments the organisms were subjected to the temperature of liquid air for seven days. The results were again nil. On re-thawing the organisms renewed their life processes with unimpaired vigor. We had not yet succeeded in reaching the limit of vitality. Prof. Dewar kindly afforded the opportunity of submitting the organisms to the temperature of liquid hydrogen—about 250° C. The same series of organisms was employed, and again the result was nil. This temperature is only 21° above that of the present absolute zero, a temperature at which, on our present theoretical conceptions, molecular movement ceases, and the entire range of chemical and physical activities with which we are acquainted either cease or, it may be, assume an entirely new role. This temperature, again, is far below that at which any chemical reaction is known to take place. The fact, then, that life can continue to exist under such conditions affords new grounds for reflection as to whether, after all, life is dependent for its continuance on chemical reactions. We, as biologists, therefore follow with the keenest interest Prof. Dewar's heroic attempts to reach the absolute zero of temperature; meanwhile his success has already led us to reconsider many of the main issues of the problem. And by having afforded us a new realm in which to experiment, Prof. Dewar has placed in our hands an agent of investigation

from the effective use of which we who are working at the subject at least hope to gain a little further insight into the great mystery of life itself.

THE HYGIENE OF THE MOUTH.*

By BYRON L. KESLER, D.D.S., Salt Lake City, Utah.

A distinguished contributor to medical literature makes the statement that the science of medicine, during the century just closed, achieved its greatest triumphs in "Preventive Medicine." The profession, through local, state and national boards of health, has advised proper regulations and sanitary measures for preventing the dissemination of those epidemic diseases which at times have threatened to depopulate the globe.

The term Prophylaxis is derived from the Greek word meaning "I defend," or "to guard against." The prevention of disease stands to-day in the front rank of medical practice. To the practitioner of general medicine it is one of his most effective weapons against the common enemy, infection. It is of even greater importance to the "common people," as an efficient means of protection against the scourges, plagues and contagions which afflict the people of those countries where ignorance, filth, superstition and uncleanness abound.

In this age of rapid and quick communication, with its increased facilities for transportation, the dissemination of contagious diseases should be accelerated; but contemporaneously our knowledge of more perfect methods for the prevention and control of disease is correspondingly increased, thus allaying fears for the future and inspiring confidence in the investigations of science and the shield of protection which it affords.

The statement is made by Professor Vaughan, in speaking of mental hygiene, that the mind must be studied from the view point of the materialist; that the mind can not be considered as an entity, dissociated from the brain, as the operations of the mind are merely the physiological phenomena of brain function; that a sound mind is dependent upon a sound body, and a sound body is dependent upon a perfect digestion, genius, even being unable to compensate for the ill-treatment produced by a faulty digestion. Logically may we not, therefore, go a step further and say that a perfect digestion is largely dependent upon, or is greatly influenced by a thorough mastication of the food, and that mastication is dependent upon a good set of teeth? Therefore the necessity for dental sanitary science, or dental surgery.

As it is practically impossible to be a good Christian when suffering from indigestion, regardless of theory and pretensions, mastication certainly, and salvation probably, in a great measure may depend upon the skill and knowledge of one's dentist.

If sanitary science is important in the practice of general medicine, it is of even greater importance in oral hygiene. The old but true axiom, that "cleanliness is next to godliness," may be applied to the oral cavity with pertinent and peculiarly appropriate fitness. In no other subdivision of personal hygiene are the sins of omission fraught with such disastrous and far-reaching consequences as are the disregarding and neglect of the sanitary principles of oral hygiene.

As mastication is an important feature of the digestive function, nature has provided suitable organs—the teeth—made not only for service, but also as one of the means of personal adornment when perfectly developed and cared for.

In the practical application of the principles of prophylaxis dental science goes further back in the scale of development than the consideration of the visible or developed teeth. Very much good can be accomplished for the teeth of the child, before its birth, by providing the mother with suitable foods,

*Dental Register.

those which contain the essential elements for the formation of hard tissues, including the teeth, such as lime salts, etc., in the form of lime water (in milk), or the syrup of lactophosphate of lime; also certain grains, as wheat, and skim-milk. The latter furnishes a form of lime, the chloride (0.3 to 0.5 per cent.), of which is very essential in building tooth substance.

After birth the tooth structure can be improved in the percentage of lime salts by the feeding of cow's milk, sterilized, which contains five times as much lime as human milk.

Parenterically, a few words as to heredity may be of interest. Children inherit the individuality and peculiar characteristics of one or both parents, or perhaps of some remote ancestor. They inherit the complexion, the color of the hair and eyes, and the facial contour. They also inherit the peculiarities of the teeth, not only as to size, form, and position in the arch, but the constitutional structure as well.

Each of the four basal temperaments, sanguine, bilious, nervous and lymphatic, are characterized as to form, size, shade, position and texture. When a child inherits a certain temperament it should be endowed with the class of teeth that go with that temperament; though a child may inherit the small teeth of one parent and the massive maxillae of the other, or the reverse. In the latter case the teeth are crowded and irregular. The correction of such irregularities constitutes a separate department of dental science, termed orthodontia.

Next after development comes the subject of sanitation and cleanliness. The salivary and serumal calculus, which accumulates in some months very rapidly, necessitate its removal by a dentist every two or three months. Other mouths may not require this operation in as many years. In the case of young people, in the majority of instances the salivary calculus is the variety usually present. When removed, the surfaces of the teeth should be polished; a slightly roughened surface is favorable to, and induces future precipitation of the deposit.

The serumal variety—a deposit from the blood—is precipitated in the mouths of persons with a gouty or rheumatic diathesis, some of these cases being benefited by systemic treatment.

After the deposits have been thoroughly removed and the enamel surfaces polished, they may be kept so, by the patient himself, by the diligent and correct use of the tooth-brush and other toilet articles, tooth powders, soaps, washes, picks, silk thread, rubber bands, etc.

The tooth-brush—first, as to its selection. In form and size it should be suited to the case. It should be curved to fit the contour of the arch, and the handle also curved, to facilitate manipulation; the bristles firm and well fastened to the handle, with the surface serrated, and an isolated tuft at the end for cleansing the inaccessible surfaces of the teeth, as back of the third molar or in spaces where teeth have been extracted, etc. If the patient be so unfortunate as to wear a "bridge" or other stationary contrivance, then an accessory brush is usually required, a special form and size for these cases.

The correct use of the brush is an important item. To produce the best results, place the bristles against the outer or labial surfaces of the teeth, then brush from the necks of the teeth toward the occlusal surface. Pronate the forearm, or rotate the brush; brush the upper teeth down and the lower ones up (inner or lingual surfaces the same). This will tend to brush the gum festoons into the interdental spaces rather than out of them. The occlusal or masticating surfaces should be brushed from side to side, and forward and backward. This will cleanse the grooves and fissures.

Use the brush as though it were a collection of toothpicks designed to remove the residual food substances which may have become lodged between and around the teeth.

Don't brush across the gums under any circumstances. It will tear them loose from the teeth, unnecessarily bruising and lacerating them. Beware of infection! Do not scour the gums, nor scrub the teeth,

nor try to polish them, using the brush as in polishing shoes. Dentists are provided with the proper instruments and utensils to perform such operations without injuring either the gums or the enamel of the teeth.

When oily or greasy films and stains accumulate which will not be removed by the brush and lukewarm water, then other agents of detergent character may be brought into requisition. Detergents may be classified into two kinds, chemical and mechanical or physical. Tooth powders belong to the mechanical. They are not of much importance as medicinal applications. The base should be alkaline and should be soluble in the oral fluids, and not too gritty; the grit should be regulated according to the condition of the teeth. Precipitated chalk is good for the basis; the grit can be increased by adding pulverized cuttlefish bone; as a solvent for fats and oils pulverized soap bark or white castile soap is added; and for sweetening use white sugar or saccharine and flavor with some aromatic substance.

Tooth Powder.

Precipitated chalk	10 ounces.
Pulv. cuttlefish bone	6 ounces.
Pulv. sugar	3 ounces.
Pulv. castile soap	1 ounce.
M. Flavor with oil of rose or oil of wintergreen, and color with carmine.—N. S. Hoff, D.D.S.	

This general formula can be changed to suit the conditions, but in no case use an insoluble grit such as pumice or charcoal. They work their way under the gingiva or free margins of the gums, establishing a nucleus for the precipitation of calculus and the accumulation of food substances, which latter furnishes a most desirable and comfortable habitat for micro-organisms.

Soaps are chemical detergents which saponify the fats and oils on the teeth, but if used too frequently, or too long continued, will also attack the gums, eventually producing "recession," with consequent exposure of the necks of the teeth.

As a general rule, don't use toothpicks. If you do employ them don't use wooden ones, especially those which are cut—they will splinter; but rather those round, pointed ones, made of hard wood. In the use of picks beware of splinters and infection. Goosequill toothpicks are the least objectionable when used once or under antiseptic conditions. They are now put on the market in convenient form, with a detachable quill-point in a holder, the latter made telescopic, like a fountain pen, so it may be closed up from dust and dirt (infection).

To properly cleanse the approximal and interdental spaces in some mouths becomes a task. The difficulty may be overcome by using silk floss, which is smooth and should be waxed.

By using moderate pressure, accompanied by a sawing movement, a rubber strip will pass between the teeth quite readily and is useful for polishing the approximal surfaces. Some tooth powder may be added to the silk floss or the rubber band to accomplish thorough cleansing.

Tooth Washes.

These are medicinal applications, but may be detergent also. The fundamental principle, however, is that of asepsis. For general use the antiseptic in the formula may be phenol 2 per cent. or formalin 2 per cent. Alkalinity may be furnished by the bi-borate of sodium or the benzoate of sodium. The solvent in the tooth wash is alcohol and the diluent is distilled water. Sweeten with saccharine, instead of sugar, as it has antiseptic properties. Flavor with essential oils and color with cochineal.

Tooth Wash.

Saccharine	10 grains.
Sodium bi-carbonate	10 grains.
Spirit	10 grains.
Salicylic acid	10 grains.
S. Ten to fifteen drops in a little water or on a wet brush, after the teeth are cleaned; brush teeth and gums gently.—(Hoff).	

A mouth wash for general use should not be irritating, but pleasant to the taste. Special conditions require specific mouth washes. A prevalent idea, that all mouth washes should be astringent, is erroneous.

Such are required in some cases, but when too frequently used, or too long continued, they will react and produce chronic inflammation of the gums, or an atrophied condition results. Weak alkalis, long used, will produce an atrophied result also.

The best method of application of a mouth wash is by means of a brush. After the teeth are thoroughly cleaned, add ten or fifteen drops to the wet brush and brush the teeth and gums gently. The medicine may be used as a gargle or wash, in suppurative conditions, inflammations, etc.

Mouth Wash.

Thymic acid	3/4	dram.
Benzoic acid	3	drams.
El-chlorid	3/4	dram.
Tinct. eucalyptus	15	drams.
Alcohol—absolute	12 1/2	ounces.
Oil wintergreen	25	minims.

M. S.—Fifteen to 20 drops in one-third tumbler of water.—(Miller.)

Green stain is a fungous growth upon the teeth of the mould species. This vegetable garden (it can hardly be classed as ornamental, therefore not a flower-bed,) develops and grows in an acid medium. The presence of green stain indicates an acid mucus. This acid has two sources of origin, fermentation and secretion. Under certain conditions gums and soft tissues, when irritated and inflamed, or by reason of constitutional or functional derangement, will secrete a viscid and acid fluid which attacks the tooth, producing erosion.

This acidity requires treatment, by the dental physician, both local and systemic. The local treatment consists of a process of neutralization by an alkali, best accomplished by milk of magnesia. This magnesium hydrate is not only alkaline, but it is also antiseptic. In a strength of 1 to 2,000 it is antiseptic or prevents the growth of the strepto coccus pyogenes.

Functional derangements of the oral tissues and membranes, such as catarrhal inflammations or reflex irritations from digestive disturbances, also those produced by eructations from the stomach, require special additional treatment.

Bacteria Fungi.

The part played by bacteria and fungi in the pathology of the mouth is an interesting topic. The effects produced may be classified into two groups, those which affect the soft tissues and those which disease the hard structures, the teeth. Of the affections of soft tissue may be mentioned thrush, a membranous disease produced by a mould.

Yeast produces fermentations, and is now being accused of producing cancer. This question is still under investigation.

Bacillus tuberculosis is actively represented in lupus, a mouth disease, being a variety of skin tuberculosis. Of the other pathogenic bacteria we might mention those of bacillus diphtheria, pneumonia, croup, Franckel's diplococcus, streptococcus pyogenes, and a number of vibrones, bacilli and spirochaetes which can not be grown upon artificial media.

Of the acids produced in the mouth we have lactic, butyric, acetic, etc. Of the pus micro-organisms, there are myriads of them.

Whenever the tissues become less resistant or below normal, through impaired nutrition, wounds or traumatic lesion, then the invasion begins, the campaign being waged so persistently and vigorously that septicaemia pyemia and death often result.

Of the purulent conditions the most serious ones are antral abscess and dentigerous cysts: of abscesses of the oral cavity we have the whole family, from the superficial gum boil to the deep seated alveolar abscess; abscesses which see with one or more eyes (fistula), and those which do not see, in fact totally "blind": those which are hot, feverish and acute, and those which are "cold," indolent and slumbering. Special treatment is indicated for each condition.

The Teeth.

The greatest havoc wrought in the mouth by bacteria, or the condition most keenly realized by the patient perhaps is that of caries, or decay of the teeth.

The process of decay, briefly stated, is as follows: The starches of the food residuum are converted by ptyalin into maltose; maltose undergoing fermentation by a bacillus, produces lactic acid; the acid dissolves the lime salts of the enamel and dentin, the organic matrix remaining becoming liquified or decomposed by other bacteria, those producing soluble ferments in either acid or alkaline media, the by-product then becoming food for saprophytic or other putrefactive micro-organisms. Each species in turn performs a certain and definite work, and is finally killed by its own toxin or product. This product, which was a poison to the former tenant, now becomes food for the subsequent occupant. The process continues till complete disorganization of the complex molecule is accomplished.

An important fact to be remembered is, that the very first step in the process of decay is the production of acid; and in the majority of instances that acid is a product of bacterial fermentation as a result of the uncleanness of the teeth.

What shall we do for that bad breath? Remove the cause which is producing it. Temporarily, as an expedient, a deodorant will either mask or destroy the odor. In the latter case the gas is made to form a chemical compound by uniting with some other chemical substance. The fetid breath is caused by derangement of the stomach and intestinal organs, or it may be a putrid condition of the oral cavity. For proper treatment consult a dentist.

As may be inferred from the outline given of some of the operations and treatments to be performed by an oral physician or surgeon, the dentist of the future must know more than to merely extract a tooth and make a plate, or to insert a gold filling and build a bridge.

The dentist should know enough about the sciences of bacteriology and pathology to realize the importance of asepsis in all operations upon the oral tissues; not merely mechanical cleanliness, but surgical and bacterial also. The latter training can only be acquired in a well-regulated bacteriological laboratory.

ALCOHOL IN CARBOLIC ACID POISONING.—Wilcox and Stevens sum up some of the reports on the antidotal action of alcohol in carbolie acid poisoning. Rodman reports a case in which about 2 ounces of the pure acid had been swallowed. When first seen the patient was in a state of profound collapse. Four ounces of alcohol were poured into a stomach tube passed as far as the pharynx. Two or three minutes later the tube was pushed down into the stomach, and the latter was then washed out with warm water and again with diluted alcohol. Within an hour consciousness had returned, and the general condition was much improved. In a few days recovery was complete. Another writer has taken pains to look up a large number of reported cases of carbolie acid poisoning that have occurred in the past, and finds that when no alcohol was given, in cases that were known or reasonably believed to have retained 60 grains or upward of absolute carbolie acid, the termination in nearly every one was fatal. On the other hand, in all cases where alcohol was given, under the same conditions, the patients survived, although the physicians in attendance had no idea that alcohol possessed any specific antidotal action. Success in treatment depends largely upon promptness.—(Boston Med. and Surg. Jour.)

"SOMNIFACIENT" FOR MOSQUITOS.—A correspondent in American Medicine gives the following "somnifacient" for use where mosquitos are troublesome:

Formaldehyd, 40 per cent.....	1 dram.
Alcohol	4 drams.
Small wad absorbent cotton, medicated.	

Place mixture in a soup plate and apply match. This is a harmless and efficient remedy. Use a half hour before retiring.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Mouth Wash.

(P. E. L.) You should read the article elsewhere in this issue on the hygiene of the mouth. Here are some formulas from the Era Formulary for so-called mouth washes or dentifrices:

(1) Menthol 40 grains.
Oil of cloves 1½ drams.
Oil of peppermint 1½ drams.
Boric acid 4½ ounces.
Tincture of iyrth 4½ ounces.
Tincture of eucbear, N. F. 2 ounces.
Alcohol, to make 36 fl. ounces.
Dissolve the menthol and boric acid in 20 ounces of the alcohol, add the oils and then the tinctures, filter and add alcohol to make 36 fluid ounces.

(2) Soap bark, ground 2 ounces.
Glycerine 1½ ounces.
Salicylate of sodium 2 drams.
Oil of bergamot ½ dram.
Oil of wintergreen ½ dram.
Oil of cloves 10 drops.
Alcohol 1 ounce.
Solution of carmine (N. F.) q. s.
Dilute alcohol, to make 16 fl. ounces.

Macerate the soap bark with the diluted alcohol and glycerine, then percolate. To the percolate add the oils dissolved in the alcohol. To this add the salicylate of sodium and sufficient solution of carmine to color. Shake thoroughly and filter through wetted tatum, returning first portion of the filtrate until it runs clear and add enough dilute alcohol through the filter to make the measure 1 pint.

(3) Thymol 2 grains.
Carboic acid 5 drops.
Oil of sassafras 8 drops.
Oil of wintergreen 8 drops.
Oil of rose geranium 8 drops.
Oil of eucalyptus 3 drops.
Oil of calamus 5 drops.
Oil of pinus pumila 2 drops.
Glycerine 2 ounces.
Alcohol 4½ ounces.
White castile soap 2 drams.
Distilled water, q. s. to 16 ounces.
Color—caramel.
Tincture of eucbear, of each a sufficient quantity.

Dissolve the soap in 5 ounces warm water. Dissolve the acid and oils in the alcohol and add to the soap solution. Filter through paper containing a small quantity of calcium phosphate. Add glycerine.

Quinine Hair Tonic.

(M. & M.) Various formulas for hair tonics containing quinine have been published in previous volumes of this journal. Consult the indexes. Here are some others.

(1) Sulphate of zinc 16 grains.
Sulphate of quinine 1 scruple.
Tincture of cantharides 1 ounce.
Bay rum 2 ounces.
Glycerine 2 ounces.
Water 2 ounces.
Dissolve the quinine in the alcoholic liquids, and the zinc sulphate in the water; add the glycerine to this and mix the liquids.

(2) Castor oil 10 drams.
Peruvian balsam 3 drams.
Rum 12½ ounces.
Tincture of cinchona 10 drams.
Eau de Cologne 10 drams.
Distilled water 6 ounces.
Add the oil to the eau de Cologne, mix with the rum, add the balsam and tincture, and lastly the water. Allow to stand for three days, and filter through paper wetted with proof spirit.

(3) Oil of rose geranium 3 drams.
Oil of sweet orange 10 drams.
Oil of bergamot 10 drams.
Peruvian balsam 2½ ounces.
Tincture of cantharides 1 ounce.
Tincture of cinchona 7 ounces.
Soap tincture 15 ounces.
Alcohol 35 ounces.
Cologne 35 ounces.
Carmine 45 grains.
Brandy, enough to make 18 pints.
Mix the whole together, allow to stand for a month, and filter.

Solubility of Caoutchouc.

(C. O. T.) "In making a rubber cement consisting of gutta-percha 30 parts, caoutchouc 60 parts, Venice turpentine 30 parts, carbon bisulphide 250 parts, I find that the caoutchouc will not dissolve. I mixed the preparation over a week ago, and all the change I can see is that the caoutchouc looks a little whiter. The gutta-percha is completely dissolved. Furthermore, I have added one-half more of the carbon bisulphide than the formula prescribed. What is the difficulty?"

Caoutchouc exhibits a very peculiar behavior toward solvents; most of the solvents penetrate it more or less completely and cause a swelling up of the mass. In many cases a portion of the caoutchouc is thereby dissolved, but is tenaciously retained by the swollen, undissolved portions. Hence, for complete solution, a large quantity of solvent is required, and we suggest that you add more carbon bisulphide. After solution is effected, with the assistance of heat, the caoutchouc is frequently decomposed. In dissolving caoutchouc particular attention must be paid to its content of water; that containing water never dissolving completely. In making cement manufacturers direct that the caoutchouc should be carefully dried, which is best effected by exposing it in a comminuted state to a temperature of from 158° to 175° F., until the weight no longer decreases.

Camphor Cream.

(Clerk.) The following is a typical formula for "camphor cream"

Castile soap 1½ ounces.
Water of ammonia ½ fl. ounces.
Camphor 6 drams.
Oil of turpentine 6 fl. drams.
Chloride of ammonium 1½ ounces.
Water 12 fl. ounces.
Dissolve the soap shavings in one-half of the water previously mixed with the ammonia, and the ammonium chloride in the other half. Mix the solutions well and add the camphor dissolved in the turpentine; then agitate briskly until the liquids are united and form a perfect emulsion. Other active medicines may be added when indicated.

The following are sometimes dispensed under the above title

(1) Camphor 1 ounce.
Spirits turpentine 2 ounces.
Aqua ammonia 2 ounces.
Sweet oil 2 ounces.
Dissolve the camphor in the turpentine, and add the ammonia and sweet oil previously well mixed.

(2) Camphor 3 ounces.
Spirits turpentine 2 ounces.
Soft soap 1 pound.
Olive oil 2 pints.
Aqua ammonia 1 pint.

Scincus Marinus.

(D. T.) Scincus marinus, or, rather, scincus officinalis, is a species of saurus or lizard, 6 or 8 inches in length, common in the arid districts of North Africa and in some parts of Asia. It was much extolled by the ancients as an alexipharmic and aphrodisiac. In former times large quantities of it were imported in a dry state into Europe for various purposes, the drug having the reputation of being efficacious in diseases of the skin and lungs. According to Hager it is now often found in apothecaries' shops in Germany and Southern Europe, farmers and country people regarding it as a powerful aphrodisiac for horses and cattle. It was at one time official in the London and

Edinburgh pharmacopias, being used as one of the forty-six or more substances entering into the "mithridate" or "confection of Damocrates," the "bellies of the skink" being the part designated. In this connection it is interesting to note the comments made upon this official substance of these pharmacopias by the author of the "New Dispensatory" (London, 1753.) "It (the scincus) stands recommended as a great restorative; whatever virtues it may have, as used fresh by the Egyptians, it has none as it comes to us, and serves to uselessly increase the articles of the mithridate."

Luminous Paint for Clock Dials.

(J. W. R.) The Scientific American Cyclopaedia of Receipts gives the following formulas

(1).—Heat strontium thiosulphate for fifteen minutes over a good Bunsen gas lamp, and then for five minutes over a blast lamp.

(2).—Heat equal parts strontium carbonate and lac sulphur gently for five minutes, then strongly for twenty-five minutes over a Bunsen lamp; then, finally, over a blast lamp for five minutes.

(3).—Precipitate strong aqueous solution of strontium chloride by means of sulphuric acid; dry the precipitate, and heat it to redness for some time in a current of hydrogen; then over a Bunsen lamp for ten minutes, and for twenty minutes over a blast lamp. Mix any of these with pure melted paraffin for use as a paint, and expose for a time to sunlight. The two former yield a greenish phosphorescence in the dark, the latter a bluish light.

Dental Cement.

(J. M. C.) The following formulas are employed by dentists:

Zinc oxide98 grains.
Calcined magnesia2 grains.

Mix. When required for use the powder should be made into a stiff paste with syrupy phosphoric acid.

Zinc Oxychloride Tooth-Stopping.

Zinc oxide35 ounces.
Silicic acid1 ounce.
Borax5 ounce.
Glass5 drams.

The zinc oxide must be freshly calcined and all of the ingredients reduced to a fine powder. Mix. Sift and keep in a stoppered bottle. When required for use make into a soft paste with a saturated solution of zinc chloride.

An Unsatisfactory Mixture.

(K.) received the following prescription

Sanmetto1 ounce.
Benzoic acid2 drams.
Copaiba1 dram.

Mix and take a teaspoonful three times a day. He says he did not fill the prescription but returned it to the physician who lives eight miles in the country. "Can it be compounded?" A satisfactory mixture cannot be made from the prescription as it reads owing to the incomplete solubility of the benzoic acid and copaiba in the "specialty" here prescribed. It is quite probable that the prescription is incomplete; at any rate the prescriber should be consulted before attempting to dispense it, for he is the only one who can tell the kind of mixture he wants to make.

Extract of Sassaaparilla.

(T. P.) A formula given by Bonham for essence of sassaaparilla for fountain use is this

(1) Oil wintergreen4 drams.
Oil Sassafras4 drams.
Alcohol1 pint.
Color with caramel.

Dubelle is the author of this formula
(2) Oil wintergreen5 fl. drams.
Oil Sassafras5 fl. drams.
Oil rose5 fl. drams.
Carbonate magnesium2½ ounces.
Alcohol1 pint.
Water, enough to make 2 pints.

Gelatinization of Tincture of Catechu.

(R. W. S.) Tincture of catechu frequently gelatinizes when kept for some time and becomes unfit for use. It is similar to tincture of kino in this respect. So far as we are aware, there is no practical means of preventing this tendency, and our experience has been that it is best to prepare the tincture frequently and in such quantities as may be used within a reasonable length of time.

Coloring Globes for Incandescent Lights.

(P. N. H.) The process generally recommended for coloring incandescent lamp globes is to coat them with a thin solution of collodion in which has been dissolved aniline of the required shade. To "frost" omit the dye. For further information on this subject see the following issues of the Era for 1900: March 29, page 344; May 3, page 474, and May 24, page 557.

Prussiate of Iron.

(Salol) "Prussiate of iron" is an old name for Prussian blue, the latter compound being so-called by Gay Lussac in 1815.

THE INJURIOUS CONSTITUENTS OF DISTILLED LIQUORS.—Most members of the profession no doubt are familiar with the remarkable series of experiments carried out about twenty years ago by Dujardin-Beaumetz on the toxic action of different alcohols. He found that the toxic action of the common alcohol (ethyl alcohol) was very slight. Hogs which were kept intoxicated for nearly three years, on being allowed to sober up, appeared in perfect health, and there were no visible lesions after slaughtering them. When ordinary spirits were fed to hogs they succumbed quickly and showed lesions and symptoms, especially of the liver, similar to those found in human inebriates. He concluded from a long series of experiments, that the toxic quality of distilled liquors lay especially in the amyl alcohol, the principal ingredient of fusel oil, though methyl alcohol and aldehyd exert a slight influence. Recent studies by Lauder-Brunton and Tunncliffe (American Medicine) seem to show that fusel oil in such quantities as is usually found in potable liquors is not a menace to public health, but the greater danger is from the furfural and other similar aldehyds which are derived from the husks of grains under the influence of heat and acids. Furfural is especially abundant in whiskeys made by modern processes to obtain as much liquor as possible from the grain. The superiority of the old liquors lay not so much in the fact that they were better aged in the wood and from this reason contained less fusel oil, but that they originally contained less furfural. Brunton made some interesting physiologic experiments on the effects of ordinary spirits and those from which furfural had been removed. When the latter were used the animals experimented upon, as soon as sober, appeared to be in perfectly normal condition and showed no after-effects lasting for any considerable time, while such bad effects were noted after the spirits containing furfural had been given. The substances popularly used in sobering up after intoxication generally contained some ammonia or similar compound which, from a chemical standpoint, is capable of combining with furfural and neutralizing its bad effects.

WILD SAFFRON.—The stigmas of the wild crocus of the Crimea, *Crocus autumnalis* or *C. sativus*, L., var. *palassii* are stated to be equal both in tinctorial power and in aroma to those of the cultivated plant; they are, however, somewhat smaller. In view of the large quantities of the plant which grow wild in the Crimea, and the cheapness of the labor required for gathering the crop, it is considered that probably Crimean saffron might be profitably sold at a somewhat lower price than is now reached by the product of cultivated plants.—(Pharm. Zeit.; Pharm. Jour.)

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

SWINDLER HUDSON HELD FOR LARCENY.

Former Operator in Drug Business Must Answer for Stealing a Trunk.

Paul B. Hudson, who, as "William Annear," of Mount Vernon Chemical Company fame, will be remembered as the drug swindler who ordered large consignments of drugs through the mails from Philadelphia wholesale dealers in the name of persons of good commercial rating, and was captured through the exposure of his methods in the Era last February and convicted in the Federal Court at Trenton, N. J., in June, of using the mails to defraud, with the light punishment of a \$500 fine, is again under arrest on a charge of grand larceny, having stolen a trunk, valued at \$300, from the room of an absent guest, at the Park Avenue Hotel. He was given a hearing before Magistrate Deuel in the Jefferson Market Police Court on Monday afternoon and was held to answer in a bond of \$1,500, after making a flimsy defense full of missing links. Hudson's career of crooked work began some time ago in this city while he was employed as a drug clerk. He lost his position through suspicious conduct and has since been almost continuously in the toils of the law. His latest role is that of a real estate dealer, with a penchant for other people's baggage.

Samuel Butterworth, a young electrical engineer, employed at the Park Avenue Hotel, is the complaining witness against Hudson on the charge of grand larceny. Butterworth, who was working as an engineer at the hotel, left on July 17, leaving his trunk in his room with instructions to send it to him when ordered. Hudson arrived the next day and was assigned to the room vacated by Butterworth. He left almost immediately afterward, taking the trunk with him in a cab. He side-stepped Detective Sergeants Armstrong and Reidy several times, going to different depots before taking a Delaware, Lackawanna and Western train to Newtown, N. J. He was traced to that place, to Albany and back to his "real estate" office in Long Acre Square by orders which he had left to have his mail forwarded. He was taken into custody at the latter place when he called for his mail, and the trunk was found in his rooms at No. 144 West 104th street. A watch and other jewelry were missing from the trunk and a pair of Butterworth's trousers were hanging in the closet.

Hudson could not explain how he came to the Park Avenue without a trunk and was followed away by one. He could not explain how he checked his baggage nor did he know how many checks were given to him. He did not know how the trousers got out of the trunk. There was something artistic about the convenience of the man's memory under the fire of questions from Magistrate Deuel. Hudson kept up a good front throughout the proceedings except for the space of a few minutes, when young Butterworth claimed that the coat which the prisoner wore belonged to him. The garment was examined closely but no maker's mark could be found on it. Butterworth insisted that the coat belonged to him.

The officers presented testimony that Hudson has been under arrest several times before, thus overturning the letters of character and evidence of a certain James, which were presented by the defense. The letters held Hudson up as a paragon of business integrity and morality and James' testimony established a genealogy that

any honest man would have coveted. Detective Armstrong bowled the whole beautiful fabric over with a word about a former arrest in New Haven, and Hudson was sent back to prison. The officers are certain that he is a cocaine fiend, as the drug and apparatus were found in his room.

GERMAN APOTHECARIES ON AN OUTING.

One of the most successful annual outings the German Apothecaries' Society has ever held was that of last week at the West End Park, Jamaica, Long Island. Over two hundred and fifty pharmacists and their guests enjoyed the trolley ride to the park and a day's picnicking, with sports, music and dancing under ideal weather conditions. The event of the day's sports was the bowling match between the clubs of the Apotheker-Verein and the Retail Druggists Bowling Association, with eleven men on each team. The contest was won by the R. D. B. A. with a score of 1,403 to 1,274. Some splendid work was done on the alleys in the course of the match. Geo. T. Riefflin making a score of 200. Geo. E. Schweinfurth was second with 150. He captained the R. D. B. A. team and President Charles F. Schleussner acted in the same capacity for the society eleven. There was also prize bowling for ladies and prize games for children. Two hundred people sat down to supper in the open air at 8 o'clock. The speech of welcome to guests was made by President Charles F. Schleussner. After the speech making, music and dancing were kept up until 12 o'clock.

The committee of arrangements was made up as follows: President Charles F. Schleussner, Paul Arndt, Geo. Schweinfurth, Henry C. Boysen and Bruno R. Dauscha. Prizes were won by the following: Boys' races—F. Schoenfeldt, Max Schneider, Leo Uhlig and Ernst Riefelin; ladies' bowling, Mrs. Staehle, Mrs. Boysen, Mrs. Khuen and Mrs. Girsch; gentlemen's bowling, Messrs. Brandt, De Zeller, Haddad, Uhlig and Boysen; "Vogelstechen," Miss Cunz, Mrs. Arndt and Miss Kuhles; Egg races, Miss Khuen, Mrs. Hendrickson and Miss A. Fink; ring throwing for girls, Miss W. Wortmann, Miss G. Wortmann and Miss F. Seifert.

Prizes distributed at the outing were: By the society—two pairs of cuff buttons, one clock, four elegant fans, one cane, one large spoon, one glass fruit dish, and miscellaneous toys for the children; other prizes—U. S. Dispensary contributed by Hugo Kantowitz; one lb. pure pepsin, by Sharp & Dohme; one box of cigars, by Bloom & Co.; one atomizer, by F. E. Spiltoir; one toilet set, by Paul Arndt.

The Apotheker-Verein will celebrate its fiftieth anniversary with a golden jubilee on October 1.

DRUG EMPLOYEES ENJOY AN OUTING.

Word comes from London, England, of a most enjoyable annual outing given to their employes by Parke, Davis & Co., at Chiselmhurst, Kent, on July 13th. A special train carried 250 guests of the company to the country, where luncheon and tea were provided and a splendid programme of sports was carried out. F. M. Flisk, European manager, had charge of the excursion.

TROUBLES OF TWO DRUGGISTS.

M. A. Levittan, the young druggist of One Hundred and Twenty-second street and Lexington avenue, who recently got into difficulties on account of a shortage or default in his express money order business, explains the matter in connection with business troubles, which have culminated in his giving up the store formerly conducted at One Hundred and Twenty-first street and Lexington avenue under circumstances that are not to his credit.

With a Mr. Lipset as a partner young Levittan bought the place at One Hundred and Twenty-first street and Lexington avenue from J. H. Caan, making a part payment and giving a mortgage on the fixtures for the remainder to secure the new firm's notes. Payments on the notes had been made regularly up to a short time ago when the partnership was dissolved, Levittan taking the property without Lipset's obligation on the notes to Caan being cancelled. Levittan then allowed the mortgage to be foreclosed, first, according to Caan, removing all the stock and a small part of the fixtures. Levittan would not admit this, but said it was no more than he had a perfect right to do. He claims that misrepresentations as to the income of the store were made to him by Mr. Caan and a broker at the time of the purchase and that he could not keep up the store on little over half what was claimed for it. Thus he claims that in endeavoring to keep up his mortgage payments he ran behind in his express business. Mr. Caan says that the young man was given access to the store books and stayed in the place a week before the deed was closed. He thinks that Levittan and Lipset are crooked, citing the facts that the former has opened up a new store across the street in his father's name with goods taken from Caan's store and that Lipset has made an assignment of his place of business and property in order to escape liability on the notes. In the meantime the neighborhood of One Hundred and Twenty-first street and Lexington avenue is being entertained with circulars airing the business troubles of the parties. Levittan is a graduate of the N. Y. C. P., 1898.

DRUGGIST CLAIMS HE WAS ROBBED.

Edward Sher, who keeps a drug store at No. 176 Delancey street, claims that burglars broke into his place of business last week, and, after drugging the whole family, stole \$34 in cash, his gold watch, eyeglasses and a pair of silver candle sticks. The intruders left the stock untouched. Sher's place of business adjoins the police station at the corner of Attorney and Delancey streets. The thieves entered and left by the back door, scaling a high brick wall and squeezing through a passage way not over sixteen inches wide between the wall and the bed where Sher was sleeping. He says that he did not hear a sound nor did his wife and little son, who were sleeping in the same room. He concludes that the whole family was drugged, but the nature of the drug used he does not know. The three year old child did not wake up during the night for its food as it has been accustomed to do and when it was awakened in the morning was drowsy and effected with nausea. Sher says that he and his wife both had severe headaches when they woke up.

An investigation was made by the police, who reported that no evidence of anyone having scaled the walls or entered the rear windows could be found. Although Sher at first thought that his family had been chloroformed, when he was informed that the giving of chloroform would certainly wake the victim up, according to reputable physicians, he said that it might have been ether or some other volatile anesthetic. No trace has been found of the burglars and the police are inclined to doubt Sher's story.

SWINDLER GETS ONE YEAR IN PRISON.

Alexander H. Martyr, who was arrested by detectives on July 1, after a four year's career of swindling in which John A. McGill & Co., of Chicago, were the principal victims, has been convicted of receiving stolen goods into the state of New York and will serve a twelve months' term in prison.

Martyr was one of the cleverest operators with whom the detectives have ever had to deal. He was an expert at covering up his tracks and although he was shadowed for months, could never be taken with any of the McGill medicine in his possession. He was caught through his advertisement for a woman partner, who was furnished him by the Mooney & Boland detective agency. The swindler was selling the real article, which was furnished to him with labels, circulars and other necessary adjuncts by a confederate in the Chicago office, who has not been found out as yet. Martyr was selling the preparation at half the price which the McGill people asked. He was charged with grand larceny, robbery in Illinois and receiving stolen goods into New York and was convicted on the latter charge.

A. PH. A. EXHIBITION COMMITTEE MEETS.

Thomas P. Cook, the New York member of the Committee on Exhibition of the American Pharmaceutical Association, which is to be held in St. Louis beginning September 16, attended a conference of the committee at Atlantic City last week. With Prof. Jos. P. Remington, of Philadelphia, he went over the correspondence and documents sent from the St. Louis headquarters, and reports that the exhibit promises to be a marked success, both in point of the number of articles shown and the make-up of the exhibition. The correspondence from the secretary included a large number of applications for space. Great care is being exercised to see that none but legitimate articles be admitted and that fairness is shown in the allotment of space, which is necessarily limited in the exhibition hall of the Southern hotel.

TRADE FLOURISHING ON PACIFIC COAST.

Dr. G. B. Colliver, physician, surgeon and pharmacist, of San Bernardino, California, arrived in the city last week.

"The drug business is one of the liveliest lines on the Pacific coast," said Dr. Colliver. "Just before I left Los Angeles, I was told that according to statistics made during the month of July, there were 61 families to every physician and 252 families to one drug store. From my own personal knowledge, I know that the trade is in a flourishing condition all through the state. While I am not talking in this strain with a view to sending any one West, I have no doubt that there is room for a number of live, up-to-date tradesmen on the coast."

Dr. Colliver will be in New York about two months before returning to his home in San Bernardino.

NOTES.

—F. N. Oxley, general salesman for Seabury & Johnson, with headquarters in Chicago, has been on a three weeks' tour to Buffalo, Niagara and his home in Worcester, Mass. He visited at the home office for several days before returning West. J. S. Marvin, the firm's Brooklyn representative and J. H. Ellsner, manager of the Chicago office, have begun vacations of two weeks and T. A. Harley has returned to the Brooklyn office after a two weeks' vacation in New Jersey. Mack Davis, Ohio representative, has returned to work after five weeks' vacation at Nashville, Tenn.

—Suit has been brought in the Supreme Court by the stockholders of the Mathieson Alkali Works against Richard T. Wilson and Edward S. Arnold, officers of the company, charging fraud and conspiracy in secretly transacting important business and transferring property and valuable patents to the Castner Electrolytic Alkali Company. Application is made to set aside these transactions and have a receiver appointed for the company. Arnold is said to be a member of the firm of Arnold, Hoffman & Co., dealers in chemicals.

—Suit has been brought by Fairchild Bros. & Foster, of this city, in the United States Court, at New Haven, Conn., against Henry S. Higby, the complaint alleging that the defendant is infringing on the trade-mark rights of an essence of pepsin, prepared by the firm. An injunction is asked for to restrain Higby from manufacturing and selling the article and petition is made that

—M. J. Breitenbach & Co., wholesale druggists, No. 53 Warren street, have been making extensive improvements in their seven story building during the past week. They have put in an electric lighting plant and electric elevators. The offices on the lower floor have been remodeled and refurnished and agallery has been built for the storage of journals and pamphlets.

—The Waterbury Laboratories, 64 Murray street, this city, are bringing a number of infringement suits to protect their trade-mark and proprietary medicines in the West. The two most recent actions brought are in Des Moines, Ia., against the Waterbury Chemical Company, and in San Francisco, Cal., against C. E. Worden & Co.

—R. C. Werner, the Brooklyn druggist, has purchased the property at the corner of Atlantic and Van Sicken avenues and will fit the place up as a pharmacy, making four stores owned in Brooklyn by Mr. Werner. The fixtures in the new store will be the most modern in design and will be of quartered oak.

—L. T. Lazelle, president of Lazell, Dalley & Co., manufacturing perfumers, is seriously ill at his Brooklyn home with stomach trouble, which has kept him from active business for some time. He has taken several trips in the hope of finding health, but his condition has grown steadily worse.

—Fred. M. Burroughs, of Dixon, Ill., with Morrisson & Plummer, wholesale druggists, Chicago, who was recently married, and has been at Buffalo and Atlantic City the past few weeks, is in New York. He is accompanied by Mrs. Burroughs.

—Col. E. W. Fitch, of Parke, Davis & Co., has received a card from W. B. Kaufman, who is spending his vacation abroad, that he has enjoyed a fine trip to Schynge Platt, Switzerland, where the snow is 20 feet deep at this time of the year.

—G. W. Ganong, M. P. of St. Stephen, N. B., was the guest of A. K. Gardiner at the Drug club last Tuesday, and Chas. A. Apmayer, of Cincinnati, and W. N. Worcester, of Detroit, were introduced by Albert Plaut, of Lehn & Fink.

—Dr. J. F. True, of J. F. True & Co., Auburn, Me., was the guest of J. L. Hopkins at the Drug club on the 30th. Dr. True has been doing the Pan-American, where he made a number of sketches for Auburn papers.

—A new incorporation is the Crown Pharmaceutical Company, of New York City, with a capital of \$25,000. The directors are L. B. Schenck and C. M. Schenck, of Manhattan, and W. E. Hober, of Brooklyn.

—Frank Moore, of the Peter-Bauer Drug Company, wholesale druggists of Louisville, has been making calls in the drug section with a view of laying in stock. He will be in the city about two weeks.

—William H. Harrison, drug exporter, of No. 60 Pearl street, who has been in the drug business for 20 years, has filed a petition in bankruptcy. Liabilities are \$6,919, and assets \$830. There are 42 creditors.

—Hall & Ruckel, now at 215 Washington street, New York, have bought the property at 12 Christopher street and will erect a large building upon it, which they will occupy as soon as it is completed.

—O. C. Bastion, prominent in state pharmaceutical affairs in Indiana, has written to Mr. Osborn, of the Osborn-Colwell Company, that he will spend several weeks at Buffalo and Rochester this month.

—H. M. O'Neil, whose drug store is at No. 888 Columbus avenue, has returned from a two weeks' trip to the Pan-American Exposition at Buffalo and a fishing excursion to Thousand Islands.

—Edwin P. Lant, who has been in the store of J. H. Jones, of Fordham, N. Y., for several years, is about to open a new store at the corner of 140th street and Amsterdam avenue.

—"Commodore" C. H. Tompkins, of Schieffelin & Co., who has been on a two week's vacation at the seashore, has returned and resumed work in the (William street office.

—John Queeny, of the Meyer Bros. Drug Co., St. Louis, was a guest at the Drug club last week, where he met many of his friends and was given a hearty welcome.

—Word has been received by a friend that Professor Virgil Coblenz of the New York College of Pharmacy is at Glocknerhaus in the Alps.

—Dr. C. P. Story, of Bayside, Long Island, was in the city on a business mission last week and made several calls in the drug section.

—L. William De Zeller, of Seabury & Johnson's, left last Saturday on a two weeks' vacation to be spent at Amagansett, Long Island.

—A new publication is the German Homœopathic Pharmacopœia, which has been issued by the German Apotheker-Verein.

—A. L. Page, manager of the Vapo-Cresolene Works, has taken his family to Block Island for a month's vacation.

—Francis E. Dodge, of the firm of Dodge & Olcott, has gone to Europe for a stay of eight weeks.

IN AND ABOUT BOSTON.

BOSTON DRUGGIST BECOMES INSOLVENT.

Boston, Aug. 3.—Edward Carroll, a druggist at 335 Columbus avenue, has gone voluntarily into bankruptcy, with liabilities of a little over \$1,300. Among the claims against him is one of H. O. Nute for \$398, which is on account of a loan of money. Mr. Nute is the treasurer of the Henry O. Nute Company, Incorporated, doing a drug business at the same address as Mr. Carroll's in Columbus avenue. Mr. Nute also has a drug store in Blue Hill avenue, in the Roxbury district. M. C. Clark, proprietor of Clark's Hotel, is a creditor to the amount of \$235, and the Hotel Reynolds is a creditor to the amount of \$60. To his tailor Mr. Carroll owes \$150 and he further owes something to his hatters, etc. A lawyer who has given legal advice valued at \$450 also is among the creditors. It will be seen from all this that Mr. Carroll's indebtedness is not due the drug trade. He has as assets an endowment policy on the Travellers' Life Insurance Company for \$10,000, which he claims has a present value of \$7,000.

Mr. Carroll's wife, Mrs. Mary (Austin) Carroll, who, so it is understood, is separated from him, has come prominently before the Boston public this week by the announcement that she has legally given a large share of her income to the University of Virginia, which from now on will each year receive at least \$10,000 through her generosity. Her annual income is considerably more than that amount and she desired to see put into execution during her life a plan long contemplated. Mrs. Carroll's father, A. W. Austin, was a well-known lawyer in Boston, who died in July, 1884. At his death he left the income of his estate, valued at \$400,000, to his daughter, Mrs. Carroll, during her life and directed that after her death it should be paid to the University of Virginia. Mrs. Carroll has been desirous of carrying out her father's wishes even before her own death, and so through the executors of the Austin estate, William Endicott, 23, and B. W. Warren, the entire income from the property, less \$5,000 a year, which Mrs. Carroll reserves for her own use, has now been transferred to the University of Virginia, and by the terms of the transfer of the income this institution will continue to receive at least \$10,000 from this source.

Trade Reasonable and No Grumbling.

Boston, Aug. 3.—Trade just at this time with the retail druggists is not over brisk, for so many people are out of town that there are not left enough to make up the ordinary quota of customers. It is true that a large number of these people who have gone away found it necessary to buy more or less at their customary place of trading, but trade of this character is now about over and the transient trade is a bit uncertain. Druggists expect these conditions, however, in August, so there is found no grumbling at all because of them. The wholesale and jobbing houses report that, in contrast, the retail druggists all through New England are now having their harvest season with so many summer visitors scattered through the various seashore, mountain and country resorts. Orders from such sources to meet this sum-

mer trade have, therefore, been good with the wholesalers. The incoming of a new month always brings with it an increase of orders and such is proving the case now. This fact enlivened the general market on drugs this week, while the trade in chemicals remains only fairly good and of a seasonable character. A fair call for dye-stuffs and tanning materials is reported, with no marked activity at all. Cologne spirits and grain alcohol are firm and the influence of the present corn market is seen in the trading in these commodities.

NOTES.

—Lewis & Co., retail druggists, who have one store at 147 Washington street, corner of Cornhill, and another at 130 Portland street, corner of Merrimac street, report that burglars entered an open window on the second floor of their building in Portland street on Sunday night, July 28, and stole 1,700 cigars and 500 cigarettes. The value of the stolen goods was nearly \$100. Since the burglary the police have arrested a young man whom they charge with the theft. Out of the 1,700 cigars stolen, only about 200 were recovered.

—Herbert A. Greeley, a drug clerk employed at the Peoples' Drug store at 892 Tremont street, in the South End district of this city, is a voluntary petitioner in bankruptcy. His liabilities are a little more than \$3,200, of which amount \$2,800 is due Byron R. Mitchell, a note broker, as a balance on a mortgage. This is the chief claim against Mr. Greeley, who has nothing in the way of assets. He carries an insurance policy in the Metropolitan Life Insurance Company, yet states it to have no cash value.

—Jaynes & Co. and the W. A. Chapin Manufacturing Co., in Summer street, have fixed up the corner entrance of their united store most alluringly for the hot weather season. Imitation icicles overhang the door and amid them is the word "Soda," also made of "icicles," and more of these with "ice" and "snow" line the sides of the doorway. It is a novel idea and especially well carried out, not unlike a scenic effect in a theatre.

—In the United States Circuit Court this week, Judge Putnam presiding, the verdict of \$4,500 for the plaintiff in the case of Alexander Boudrot vs. the Cochrane Chemical Company, has been set aside and a new trial ordered. Boudrot was injured at the defendant company's factory where he was employed, and where he had his left arm crushed in the machinery.

—A new enterprise is the outcome of the discovery of springs at Spencer, the water of which is deemed to possess medicinal properties. The springs, to be known as the "Polar Springs," are visited by a large number of persons nearly every day. Their fame has become such that the water has been placed upon the market and an office opened in Worcester.

—Charles W. Frazer, of Lynn, and H. A. Fuller of the same city, are interested, as president and treasurer respectively, in the Fuller Chemical Co., just organized under the laws of Maine to manufacture and deal generally in various kinds of disinfectants. The capital stock is to be \$350,000, none of which has been paid in.

—One Boston druggist having a popular store is thinking of adopting the method employed by some of the trade in Chicago, viz., that of issuing brass checks good for a 5-cent glass of soda water, just as was done in the days before and during the war, when token money was one means of making change.

—Epstein Brothers, the Tremont Row druggists, are to open a new store at 129 Summer street as soon as improvements and alterations now under way to fit it for their needs are completed.

—Fred O. P. Lindbom, who has a pharmacy in Millbury street, Worcester, is among the druggists who recently have been granted a liquor license by the commissioners of that city.

—John T. Harper, druggist and apothecary, is making preparations to open a new store in Great Barrington. The store will be fitted with a new onyx fountain and the latest in fixtures.

—William A. Brooks, one of the well known druggists at Salem, has sold out his place of business.

PHILADELPHIA.

PHILADELPHIA ASSOCIATION OF RETAIL DRUGGISTS.

Philadelphia, August 3.—The usual monthly meeting of the P. A. R. D. was held at the College of Pharmacy, Friday, August 2, the attendance being very good in spite of the dull season and the absence of many members from town. The report of the Financial Secretary showed a balance on hand of \$770.96, receipts for the month being \$82.88 and expenses \$63.60. The Executive Committee report was unusual in that no work of importance had demanded action during July, matters being in a very satisfactory state and few complaints had arisen.

The important feature of the meeting was the report of the "Telephone Committee" presented by Chairman Strunk. The Committee reported that the manager of the Bell Telephone Company had notified them that the Board of Directors had refused to grant the privilege of one free call daily to druggists having pay stations, on the ground that others would ask the same privilege. Mr. Strunk then read correspondence between himself and the General Manager of the Keystone Telephone Company in which the latter stated that the Keystone Company could not grant more than 2% commission on pay stations and that his company would refuse to cancel any contracts made with druggists for telephone service. In regard to this part of the question, it was stated that a large number of druggists had written to the Keystone Company demanding the cancellation of the contracts they had signed some time ago, this being done in answer to the appeal sent out by the Association in July. This report was listened to with great interest and an animated discussion followed. It was shown by Mr. Strunk that unless he could have the active support of a majority of the members and the notification from every one who had written to have his contract cancelled that his committee would be badly handicapped, so a motion was carried giving him authority to call on the Ward Chairman for immediate and active help in canvassing the various wards of the city to get the sentiments of druggists. The Chairman was also given authority to get legal advice on all the points brought up. The enthusiastic sentiment of the meeting was to stand out for a commission of 2% or no telephones—as telephone service, such as was now inflicted on the druggist, cost him more in time and trouble than the petty commission was worth. Moreover, if the Keystone Company wanted the valuable privilege of placing 'phones in drug stores they must pay for it enough to make it worth while to the druggist to give it his attention. Many members pledged themselves to stand out to the end for 2% and to refuse the installation of 'phones otherwise.

Much feeling was caused by the report of a member that the firm selling Hunyadi Matyas water had written to him that they would not pay the costs of the suit brought against him by the Hunyadi Janos people for selling the Matyas water, claimed as an imitation of theirs. This reopened the question of the suits now being brought against certain druggists here on this account, and after a very animated discussion, a resolution was adopted calling on the firm of Eisner & Mendelson for a statement of the position they intended to take in the matter of these suits, it being the opinion of the meeting that they should back up their guarantees to protect the sellers of Hunyadi Matyas water. Resolutions were also adopted asking the firm of A. Saxlehner to withdraw these suits on account of the fact that the druggists sued had sold Matyas water in good faith on assurances that they had a legal right to sell it and that it was not sold in imitation of any other water.

The resignation of Wm. McIntyre having laid on the table the prescribed six months was taken up and by unanimous vote accepted. The appointment of Dr. Clement B. Lowe as Chairman of the delegation to represent the P. A. R. D. at the forthcoming meeting of the American Pharmaceutical Association was announced. The association then adjourned to meet Friday, September 6.

BUSINESS VERY QUIET.

Philadelphia, August 3.—There has been very little doing this week in business or in anything else, trade being very quiet. Still, for this season, there is little cause for complaint, for there has been a steady demand and sale for drug sundries and domestic remedies. Soda water continues to hold its place as the most profitable branch of the business, as an old up-town druggist said "this is the biggest year for soda water I have ever seen, it seems to me as if everybody was drinking soda water nowadays". There is a wail of complaint coming up from the keepers of many of the well-known down town bars and cafes, that their customers have "knocked off" drinking beer and stronger stuff, and are taking to "soft drinks" at the soda fountain. A glance in any one of the big stores along Chestnut or Market street will corroborate this statement, for nowadays one can see almost as many men as women sipping their soda at the marble counter, and most of these are men who but a short time ago were loud in praise of "Mamie Taylors", "gin rickys" and such like concoctions. Prescription business is very dull but the sale of lotions, colic and diarrhoea mixtures and such like is fairly good. Several druggists are making good money on the sale of cheap sterilizers for milk which they are pushing by window displays and judicious home advertising. Things are rather quiet with the jobbers, only the usual trade being done, and a number of the employes of the big houses are being sent off on their yearly vacations during this dullness. Manufacturers report orders as coming in very satisfactorily and a big Fall business is expected. There is a good and brisk demand for dyes and heavy chemicals, aniline leading the list.

WOES OF A DRUGGIST.

Philadelphia, August 3.—As if the attendance on the average pay station telephone was not enough to try the patience of any one but a druggist to the breaking point, a "gang" of bad youngsters have conspired together to make life still more miserable for a well known West Philadelphia druggist. D. M. Harris, who has a drug store at 46th street and Girard avenue, has recently been having considerable trouble with a lot of boys in that neighborhood who have been ringing the bell at various houses and telling the people there that a person was calling them over the 'phone at Harris's, and of course when they rushed over in the hot sun to find that they were the victim of a joke, there was more or less surplus heat developed. One lady, whose daughter was undergoing an operation in a hospital, was called in this manner to come to the 'phone, and, fearing that her daughter was in serious danger, was thrown into such a state of nervous excitement that a doctor had to be sent for. The thing got to be such a nuisance that the police were appealed to, but now it is very hard to get any one in that neighborhood to answer a telephone call, for fear of a hoax.

JUVENILE BURGLARS.

Philadelphia, August 3.—Among the prisoners before the newly established "Juvenile Court" in this city yesterday, were three bold burglars who had broken into Chalfant's store, 15th and Tasker streets, and stolen a box worth \$80. in it; the oldest burglar being but ten years of age. There is a postal sub-station at Chalfant's and the money was stolen from a drawer in this, so the crime was a very serious one, but, owing to the extreme youth of the offenders they were allowed to go home with their parents with a lecture from the judge. This seems almost like mistaken leniency, for unless a sound thrashing accompanied the lecture it would not amount to much and the young thieves would be encouraged to repeat their escapade seeing how easy they were let off.

NOTES.

—A seemingly paying "side line" in several of the "bardwalk" drug stores is candy, of all sorts and kinds, salt water taffy in the lead. One particularly, near Young's Pier, would be taken by the casual passerby to be a candy store instead of a drug store, the whole front

space of the store being given up to a soda fountain and counters filled with candies, six or eight dainty young ladies being in attendance. Back of these counters are a number of little tables where customers are served with soda water; the same as in a cafe, and these are filled to the limit every evening. In the very back part of the store are a few shelves filled with the familiar stock bottles of drug stores while the prescription department is above the floor in a sort of gallery reached by steps. Here too are kept the patents and drugs. Two cases of "drug sundries" occupy a side opposite this end.

—Deakney's drug store in the new office building at Kentucky and Pacific avenues, (Atlantic City) is said to have the handsomest and most efficient soda fountain along the coast, and it well justifies this statement, being a very fine specimen of marble, plate glass and onyx work. The rest of the store fittings are well in keeping with this handsome fountain, this store equalling many a city one.

—One of the handsomest of the newly opened drug stores along lower Atlantic avenue, (Atlantic City) is owned by Wm. Harris of this city, who has a drug store at 21st and Pine streets. A fine fountain and modern fixtures are well set off by a very handsome system of electric lights at night.

—Among other of the officers of the local drug association who have managed to get out of the heated city are President Rumsey, whose family is at Cape May and Recording Secretary, F. T. Gordon, who is spending a month at Longport, New Jersey, and contemplates a trip to the Delaware Water Gap.

—President Cliffe, of the Pennsylvania Pharmaceutical Association has practically completed his list of appointments to committees, etc., for the forthcoming year and announcement of these will be made soon.

—A. J. Frankeberger, 13th and Dauphin streets, is also one of the many druggists whose steps are tending Buffalo-wards, he expecting to make an extended visit there this month.

—C. H. Campbell, Financial Secretary of the P. A. R. D., expects to make a trip with his wife to Buffalo, through the great lakes and Montreal this month, leaving about August 17.

—Justin Diehl, who formerly owned the drug store at Ninth and Susquehanna avenue, has gone West and will open a drug store at Denver, Colorado, in the near future.

—H. J. Batdorf of 16th and Dauphin streets is out of town on a short vacation trip. Chas. Rehfsus is just returned from a trip out West among relatives.

—Mr. Dresbach, now with Warren H. Poley, 6519 Germantown avenue, is going to take in the Pan-American with a visit to Buffalo next week.

—Chas. Leedom has his family for the summer at Inghamdale, Bucks County, where he spends the Sunday with them.

THOMAS H. LARKIN, of the firm of Larkin & Scheffer, manufacturing chemists, died July 29, at his home 2539 Laclede avenue, St. Louis, of blood-poisoning, caused by a malignant carbuncle. The funeral took place from Christ Church Cathedral and the interment at Bellefontaine cemetery. Mr. Larkin was a prominent figure in the drug trade, and, besides being a member of the firm of Larkin & Scheffer, he was secretary-treasurer of the National Ammonia Co., of St. Louis, and a prominent member of the St. Louis club. He was the son of Thomas Henry Larkin, one of St. Louis' pioneer merchants, who founded the wholesale grocery firm of Thomas H. Larkin & Co. His was one of the oldest families of St. Louis, of which his younger brother, G. Hilles Larkin, now the sole living representative in St. Louis, and two sisters, Mrs. Charles Adsit, of Hornellsville, N. Y., and Mrs. Dr. D. L. Magruder, of Philadelphia, Pa., are the only survivors. Mr. Larkin was a bachelor and 52 years of age, and his whole life was spent in St. Louis, with the exception of a few years at the Pennsylvania Military Academy at Chester, Pa.

Four-Fold Liniment is a most excellent remedy. Customers who buy one bottle always come back for another.

BALTIMORE.

BUSINESS OF SATISFACTORY PROPORTIONS.

Baltimore, Aug. 4.—Business last week was of very satisfactory proportions, at least as far as the jobbers are concerned. To the ordinary volume of transactions was added the excess in trade peculiar to the beginning of a month, and the aggregate of sales reached an exceptional dimension. The manufacturers of pharmaceuticals also report gratifying activity. Orders are again coming in more freely and the demands upon the laboratories keep the latter quite busy. In the market for botanicals no startling or unusual development is to be noted. Some articles which were generally expected to go down in price have moved upward, while others with respect to which a drop was looked for are holding their own or have scored an advance. The changes, however, are not of special moment. Heavy chemicals are moving in normal quantity.

THIEVES IN A DRUG STORE.

Baltimore, Aug. 1.—Thieves entered the drug store of H. C. Valentine, 1601 North Charles street, on the night of July 26 and stole \$34.17 in money, a portion of the receipts of Postal Substation No. 83, which is conducted by Mr. Valentine. The pharmacy was closed as usual at 11 p. m., and when the clerks retired they left everything in regular order, the postal receipts being deposited in two drawers set apart for the purpose. The burglars ransacked one of these drawers, but overlooked the other, and thus missed \$60. A supply of stamps was left undisturbed. How an entrance was effected is a mystery. Apparently the intruders used false keys, for neither the doors nor the windows showed marks of forced ingress.

College of Pharmacy Catalogue.

Baltimore, Aug. 2.—The catalogue of the Maryland College of Pharmacy for the ensuing collegiate year is out. It is handsomely illustrated with half-tone engravings which show views of the college building and the several lecture rooms and laboratory. This year's issue of the catalogue is the first to be interspersed with pictures, and it is believed that they will largely enhance the usefulness, as they undoubtedly augment the attractiveness of the brochure. Lectures will be resumed about the beginning of October.

NOTES.

—H. P. Hynson, elected delegate to the next annual meeting of the N. A. R. D., is like a stranger in a strange land. In an evil hour he drifted into a barber shop and had his moustache shaved off. Since then many of his friends fail to recognize him, and but for his towering dome of thought the Bertillon system of measurement might have been applied to establish his identity.

—Mrs. Annie Lyle Sarvery, mother of Edward Lyle, a prominent Roanoke (Va.), druggist, died several days ago, after an illness of six weeks. She was 69 years old.

Colored Spectacles and Eye Protectors.

A small assortment of colored spectacles and eye protectors is quite as necessary a part of a druggist's stock as a supply of the other staple articles generally kept on hand. T. A. Willson & Co., Reading, Pa., make a specialty of optical goods for the drug trade. Apply to them for descriptive circulars, but send your order to your jobber.

The Taste of King Edward VII.

The Apollinaris Company, Limited, who for many years held the appointment of Purveyors of Natural Mineral Waters to Her late Majesty and to His Royal Highness the Prince of Wales, have now received the same appointment under Royal Warrant to His Majesty the King.—The Times, London, July 11th, 1901.

CHICAGO.

ITS ANNUAL APPEARANCE.

Chicago, Aug. 3, 1901.—The following is clipped from a Chicago evening paper: Typhoid germs, microscopic but malignant, lurk in the glasses and spoons at the soda fountains and saloons, says City Chemist Gehrman. At many of the refreshment resorts in the city the facilities for cleansing the glasses are said to be meager and the dispensers of drinks are careless in rinsing the vessels. In many of the drug stores the glasses are simply dipped in a bucket of water, while the spoons are deposited in a vessel in which other spoons have been rinsed.

The water in which the utensils are washed is also in many cases in itself a menace to public health. When ordinary lake water is used while the lake is foul or polluted the danger of the fever germ is great.

City Chemist Gehrman says that proprietors of soda fountains should exercise great care in seeing that the carbonated water they receive has been properly filtered. "There is great danger when the unfiltered lake water is used in the carbons," he said. "If the lake is foul, disease germs must necessarily lurk in the drinks. The department is so hampered by lack of funds that it cannot put out sufficient inspectors to see that nothing but filtered water is used. It would take at least two inspectors to each ward. The department, however, will investigate such cases as are brought to its notice."

CHICAGO BUSINESS HOLDING UP WELL.

Chicago, Aug. 3, 1901.—Business in this locality, as reported by the jobbers and manufacturers, is in good shape. The summer has been a good one, and more business has been done than was expected at the beginning of the season. The soda water trade has held up well, and the cooler weather of the last two or three days is too new an experience for the people to have forgotten the soda water habit. General business is good, considering the season, and there are very few complaints to be heard anywhere.

NOTES.

—The Report of the Proceedings of the Twenty-second Annual Meeting of the Illinois Pharmaceutical Association for 1901-1902, held at Rock Island on June 11-12 last, is out, and it is in every way a creditable piece of work. It contains 132 pages and is illustrated with half-tone pictures of the officers of the association. The promptness with which the report was issued and its uniform excellence reflect great credit upon Mr. Dodds, the secretary.

—The sons of L. A. Lange, who, with their father, were formerly connected with the house of Morrison, Plummer & Co., have opened a shoe store at 183 East Madison street, and are meeting with much success. Mr. Lange, the elder, is connected with a well known wholesale drug house in Milwaukee and is a member of the Lange-Ross Company, manufacturing chemists of Chicago.

—Armour & Co., of Chicago, are erecting a large fertilizer chemical plant at Atlanta, Ga. It will cost about \$500,000. The buildings when completed will consist of a sulphuric acid plant with a capacity of sixty tons of acid per day, and a manipulating plant to take care of the various materials used in the manufacture of commercial fertilizers.

—Officers of the several auxiliary associations will meet for conference on Tuesday, Aug. 13. The meeting will be well attended and will be, it is hoped, fruitful in results along the lines on which the Chicago Retail Druggists' Association has been working for many months. It is expected that each district will have a good report to make.

—C. P. Gieraltowski has purchased the Philo Pharmacy at 643 Milwaukee avenue. Mr. Gieraltowski has been apothecary in the United States navy for the past two

years. He was formerly in the drug business in Chicago and has come back to his old job.

—Oscar Leistner, Chicago representative of the well-known druggists' specialties importing house of William L. Strauss & Co., New York, will leave Monday next on a two weeks' trip to the principal cities of the West.

—James A. Davidson and family, of Chicago, returned this week from a California trip extending over several weeks. They visited all the principal points of interest there.

—On Sunday afternoon, Aug. 4, the Morrison, Plummer & Co. base ball pine will play the Des Plaines Reds on their home field at Des Plaines, Ill.

—Valentine & Burger, a retail drug firm of Chicago, dissolved partnership last week, Henry B. and George B. Burger retiring.

—The drug store of E. C. Richmond, at Riceville, Ind., was destroyed last week in a fire which wiped out nearly the whole of the town.

—George Young has bought the Wieland Pharmacy at 418 West North avenue. Mr. Young is one of the former proprietors.

—Mrs. William Ayton has sold the J. T. Ayton Pharmacy at Kenosha, Wis., to Rushtad & Waterman.

—The F. Markham Briggs drug stock at Plymouth, Mich., was sold recently at assignee's sale.

—The drug store belonging to the estate of J. O. Lowman at Anderson, Ind., has been sold.

—The Hopkins Drug Company has succeeded F. S. Hopkins at Benton Harbor, Mich.

—W. & J. R. Bunyan, druggists of Kendallville, Ind., have dissolved partnership.

—T. T. Swift has sold his drug store at State Center, Ia., to F. L. Marcy & Co.

—Hornaday Brothers have succeeded John W. Hornaday at Mooresville, Ind.

—Roy H. Gates has succeeded Gates & Chapple at Waterloo, Iowa.

—E. T. Stout, a well known druggist of Springfield, Ill., has sold out.

ST. LOUIS.

Jobbers Propose Changes in Their Rules.

St. Louis, Aug. 3.—Every retail druggist in the city received a copy of the following circular on the 28th of last month. To say that it was a surprise very mildly expresses their feelings. In the first place, many of them desire to know who composed the committee which called upon the wholesalers and suggested the one delivery per week, and what authority they had for doing so. Your correspondent called upon a large number of the retail druggists and they all consider the idea of two deliveries per week as ridiculous. They are anxious to know who of their brethren have assumed the authority to express this as the desire of the retail druggists of St. Louis. Many of the local druggists think that the proposition relative to the returning of the containers is all right, and that the 1½ per cent. discount is fair and just, but they insist upon the necessity of daily deliveries. The city salesmen of the wholesale houses say that all of their customers are strictly opposed to the idea of only two deliveries per week. The circular is as follows:

St. Louis, July 27, 1901. To the retail druggists of St. Louis and vicinity: Gentlemen—A committee of retail druggists has requested us to make the following changes in the rules laid down in our circular letter of June 29th, and as we wish to obtain an expression of the trade before making any changes we kindly ask you to write to your jobbers advising whether such changes meet with your approval. They are as follows: First—The jobbers to allow the return of containers that are clean and in good condition, for credit on the basis of 20 per cent less than prices charged for same, and that the retailers agree to accept from jobbers containers so returned at full prices when filling orders thereafter. Second—That the jobbers allow the former cash discount of 1½ per cent. on accounts paid on or before the 10th of the month following date of purchase, and in consideration of

same that the deliveries by jobbers be reduced to one per week; but we, realizing more are needed, change their request to two deliveries per week. Awaiting reply, Very truly yours.

Moffitt-West Drug Co.
J. S. Merrell Drug Co.
Meyer Brothers Drug Co.

VACATION SEASON IN ST. LOUIS.

St. Louis, Aug. 3.—This is what the druggists call the "dead" time of the year. Nearly all their wealthy customers are away spending a few weeks at some summer resort. Their most prominent physicians are away on vacations. The weather is hot and healthy, and consequently the druggist has very little trade. The majority of druggists are taking advantage of this condition of trade and indulging in a little recreation themselves. The fishing fever has struck local members of the trade and it is surprising how many are making pretenses of spending their time while on vacation with pole and line in their hands. Relief clerks are in great demand by those who are in a position to take a short vacation. The regular relief men have their regular places to fill each week and cannot, as a rule, take a place for more than one day a week. However, there are many former drug clerks now studying medicine, who do relief work during the summer, and by their aid nearly all the proprietors who desire succeed in obtaining their customary vacations.

NEW ORLEANS.

New Orleans, Aug. 2.—Roy Hamilton Hooker, a traveling salesman for the drug firm of Gueringer & Hayman, in this city, was killed by a bolt of lightning at Mississippi City, Miss., Thursday last. Young Hooker was a native of Rogers, Benton county, Arkansas, and only came to New Orleans two years ago. His first local position was in A. T. Wainwright's drug store. While in the employ of Mr. Wainwright he attended the New Orleans School of Pharmacy and in June passed creditably into the senior class. Not being old enough to become a registered pharmacist, the energetic young man passed an examination as assistant druggist. His employment with Gueringer & Hayman commenced three months ago when he was made city drummer. His untimely death came while he was on his first out of town trip for the house.

Trade Generally Favorable.

New Orleans, Aug. 2.—A generally favorable condition of trade is reported throughout Louisiana and the South, although there is the usual summer lethargy that is a part of the long hot season.

—The Department of Pharmacy of the University of Dallas, Texas, has just published its first announcement which gives very full information concerning this new institution. Temporary quarters have been secured and equipped with the necessary lecture rooms and chemical laboratory, a pharmaceutical laboratory and dispensing room being now in the progress of construction. Accommodations for one hundred students have been supplied. The college year opens Oct. 1. The members of the faculty are: Chemistry, L. Myers Connor; pharmacy, E. G. Eberle; practical pharmacy and pharmacognosy, Q. O. Bradley; materia medica, Elbert Dunlap; microscopy and bacteriology, Henry L. Ulrich; botany, George J. Sadler; instructor in chemistry, M. V. Cregan. The officers are E. G. Eberle, president, and Q. O. Bradley, secretary.

—At the meeting of the Kentucky Board of Pharmacy held in Owensboro, July 9, the following out of a class of twenty, passed: A. A. Adcock, Carrollton; Miss Agnes H. Burr, Earlinton; G. J. Bockman, Louisville; C. H. Brane, Henderson; R. F. Friedman, Owensboro; G. B. Geiger, Ashland; R. L. Jetton, Mayfield; J. A. Kelley, Louisville; G. H. Kelly, Bardstown; E. C. McCurdy, Winchester; M. F. Scott, Ashland; M. D. Taylor, Hiseville. The next examination will be held in Richmond, October 8. Applications should be filed with J. W. Gayle, secretary of the board, Frankfort, Ky., at least ten days before that time.

THE NORTHWEST.

A POSTPONED GOLF GAME.

St. Paul, Minn., Aug. 2.—J. C. Eliel, the Minneapolis wholesale druggist and former president of the N. W. D. A., has a summer home at Lake Minnetonka and is mayor of the little town of Minnetonka Beach. He is likewise an enthusiastic golfer. He and Frank Peavey, the millionaire grain elevator man of Minneapolis, arranged a golf match, but it failed to come off. The arrangements provided that the loser should donate a cup to the Lafayette club. The match was the golf talk of the lake for a week and there was a big galaxy of golf experts and society swells at the Lafayette links on the day set in anticipation of the event. A local paper narrates that Mr. Peavey was on the battle ground long before the appointed hour. But the crowd was doomed to disappointment. The hour for the first "tee-off," 3 o'clock, came, but the party of the second part, Mr. Eliel, was missing. The gallery was growing anxious when someone derided a fleshy man rounding the hill in the distance. Mr. Eliel was that man and he was hurrying to the scene with a full head of steam on.

A crowd gathered around him as he reached the green. "I regret to report that the game's off," said Mr. Eliel, gasping for breath.

"Afraid of me, eh?" interpolated Mr. Peavey.

"Not on your nibble," said Mr. Eliel. "Had a catastrophe down at our house."

"Well, you would have had one here if you had brought your golf sticks," said Mr. Peavey, chestily.

"I'll play you next Saturday for cups, drugs, chalk or elevators," replied Mr. Eliel, "but I've got to hurry back and fix my windmill. Whole thing's fallen down and I've got to arrange for a water supply. It's an awful smash-up."

Mr. Peavey acquiesced, and the match will be played without fail Saturday afternoon. In the meantime both contestants will "practice up."

NOTES.

—At a session of the county board of equalization in St. Paul this week, D. R. Noyes, the wholesale druggist, appeared and entered a protest against the raise in the assessment against his firm. The return made by the firm was \$142,000, which amount has been raised to \$250,000. He did not object so much to a raise in the assessment, but he thought it wrong to have the burden fall upon the wholesalers. Mr. Noyes did not care to state what the assessment should be, but he claimed that his firm was assessed higher than some others who did double the amount of business. The matter was referred to the proper committee.

—Franklin La Rue has sold his interest in the Park Avenue Drug Co., Idaho Falls, Idaho. J. H. Jackson, same city, has disposed of his interest in Payne & Jackson.

—Successions: A. Melgaard & Co., Selby, S. D., by H. R. Gunderman; J. E. Goodrich, North Loup, Neb., by George C. Smith.

—Dr. Hoffmeyer, of Cushing, Wis., was in the city this week; also Mr. Gearing, of Maiden Rock.

—Morris & Co. have started at Battle Creek, Neb., and Holcomb Bros. at Goehner, same state.

—Emil Kiesling has left the city and taken charge of a drug store at Pine City, Minn.

—John J. Heffern, Ardoch, N. D., has filed a voluntary petition in bankruptcy.

—O. H. Collins, Miller, S. D., has sold his branch at Blunt.

—Otto Burger has gone to Groton, S. D.

Flint Bottle Manufacturers Combine.

The formation of a flint glass bottle combination with a capital of \$50,000,000 is reported. This combination is said to include all of the big manufacturers in the country, about fifty in number. The officers elected are: F. J. Park of Wheeling, W. Va., president; George W. Yost of Bellaire, vice president; F. W. Breed of Indiana, treasurer and G. J. M. Porter of Chicago, actuary.

W. S. GETTY,
Endicott Building, St. Paul, Minn.

THE DUTIES OF BOARDS OF PHARMACY.*

The difficulties in properly discharging the duties of a member of the Board of Pharmacy are increased by extreme views in two opposite directions that are entertained by applicants for registration and their friends. On the one hand are persons whose knowledge of pharmacy and the branches of science upon which it is based is so meager that they cannot be said to have any scientific knowledge of their calling. Such persons are usually of the opinion that all a pharmacist needs to know is how to follow a dispensatory in the making of the most ordinary preparations, and how to compound prescriptions written by men who know less of pharmacy than themselves. With a range of experience which, while it may have covered many years, has yet not made them expert in any but the most rudimentary dispensing, these persons feel competent to take charge of any pharmacy, reminding us of the rather trite saying "Fools rush in where angels fear to tread." On the other hand, are those who have had a better pharmaceutical education, and feel aggrieved, that in the eyes of the law the poorly educated men are on an equality with themselves.

These persons demand that examinations should be rigid, and that none but graduates of colleges should be permitted to engage in pharmacy. Generally they are in favor of restricting the number of persons permitted to conduct pharmacies to the few more fortunate or more diligent ones who can meet the higher requirements. These latter views are as yet so far in advance of public sentiment that they may be set down as impracticable. Between these two extreme views I have held that Boards of Pharmacy should take a middle course, for the reason that pharmacy laws are for the protection of the public, and not of pharmacists. They were never designed to create a pharmaceutical oligarchy or trust, but to protect the public from the dangers incident to ignorance and inexperience.

The law of 1861 and the one just enacted are alike in their general provisions, both intended to secure competency on the part of persons intrusted with the charge of pharmacies. That the Board may inform

*Portion of an address by William M. Seaby at the first meeting of the New California Board of Pharmacy, San Francisco and Pacific Druggist.

itself of their competence, they are required to demand certain credentials, testifying to the fitness of applicants for registration, or to examine the candidates. So much for the matter of competence. But the law assumes that experience counts for something in the management of a drug store—something which affects the public safety, and therefore a minimum of four years' experience of a certain kind, is demanded. So far as I know, all pharmacy laws in this country require four years' experience previous to registration as licentiate, and it is the consensus of opinion among pharmacists that there are some things to be learned in the school of experience behind the counter—some things affecting the public safety, which cannot be learned in college or by any other means. When a man has shown that he has the requisite theoretical, technical, scientific knowledge, and has also had four years' practical experience in stores where physicians' prescriptions are compounded, the law assumes that it is safe to leave him in charge of a pharmacy. It is the business of the Board to see that each applicant comes up to these two requirements. Having done that, it has no right to go farther and demand higher scientific attainments, however desirable it may be in theory that these should be possessed.

If, therefore, my view of a pharmacy law be correct, your duty goes no farther than to see that each applicant for registration possesses the required scientific and practical knowledge and has also the required experience. You will, however, see to it that you do not register any who are lacking in either of these particulars.

So far as I have been able to learn, boards of pharmacy have not been as careful as they ought to have been in inquiring into the nature of the "experience" which applicants for registration allege that they have had. To me it seems a burlesque on the law for a board to recognize four years' work in the capacity of porter and dishwasher as experience in pharmacy. The law, while not sharply defining just what it meant by "experience," evidently intended something which should be calculated to give some degree of practical acquaintance with drugs, poisons, and pharmaceuticals, as well as with the various purposes for which they are to be used by the lay purchaser. Doubtless, it will not be easy for you to form correct estimates in all cases of the value of the experience had by the various candidates, but I think you are bound to investigate the statements made on this subject, and if you find that the work performed was not of such a character as to meet the evident intent of the law, you will reject the claims made by reason of such work.

Now, it sometimes happens that persons come before boards of pharmacy who have drifted, as it were, into the drug business, having apparently had no intention at the beginning of their career of becoming pharmacists, or, if they had, having misconceived what would be required of them; and so, without sufficient preliminary education, they have continued their vocation under the most serious disadvantages. The late Board met with many such cases in the earlier part of its term of office. It found that some of these persons were incapable of making correct estimations for prescription work, and in other ways manifested their unfitness for a calling requiring as much general intelligence as pharmacy. It, therefore, in the year 1896, determined that no person, who had not had a grammar-school education was eligible to take the examination in pharmacy without first undergoing an examination in the ordinary branches of a grammar-school course. Other boards of pharmacy have since adopted the same rule, which will doubtless soon be universal in the United States. The influence of the Board should be to stimulate a desire for a liberal education, and should tend to exclude from the walks of pharmacy those who are too ignorant or too lazy to fit themselves to become intelligent pharmacists. But this effect cannot be secured by the sudden passing of arbitrary rules; it is to be done rather by the moral influence of the Board. Already much has been accomplished in this way. There has been a

steady advance of intelligence on the part of those following the profession of pharmacy. This has been of great benefit to the community, because those unfortunate mistakes in drug stores of which we used to hear are now scarcely ever heard of. Errors due to the ignorance of the dispenser are now happily things of the past, thanks to our colleges and boards of pharmacy.

Prosecutions for non-compliance with the law should be more promptly and vigorously pushed. While this will cost money, it will also produce some revenue, perhaps enough to pay for the increased efficiency secured by the proposed course. It will most certainly popularize the law with pharmacists to have it well enforced. The unanimity of the late Legislature in enacting a pharmacy law is an indication that the people of this State are in favor of such wholesome restrictions upon the dispensing of medicines and poisons as the law is intended to secure, and the Board need have no fear that it will not be properly sustained in its efforts to carry it out. When public sentiment is with the law, there is no difficulty in enforcing it. When the law is in advance of public sentiment, it is almost always impossible to make it effective. This law is not in advance of public sentiment, but is in accord with it, and I conceive it to be our duty, as the persons chosen by the Governor to put it into effect, to see that its provisions are properly carried out.

CALIFORNIA PHARMACY LAW.

Following is the new pharmacy law of California, which became effective July 1. It is entitled "An act to regulate the practice of pharmacy and sale of poisons in the State of California", and was approved March 15 of the present year.

The people of the State of California, represented in senate and assembly, do enact as follows:

SECTION 1. From and after the passage of this act, it shall be unlawful for any person to manufacture, compound, sell or dispense any drug, poison, medicine or chemical for medicinal use, or to dispense, or compound any prescription of a medical practitioner unless such person be a registered pharmacist or a registered assistant pharmacist within the meaning of this act, except as hereinafter provided. Every store, dispensary, pharmacy, laboratory or office for the sale, dispensing or compounding of drugs, medicines or chemicals for medicinal use, or for the dispensing of prescriptions of medical practitioners, shall be in charge of a registered pharmacist. A registered assistant pharmacist may be left in charge of a store, dispensary, pharmacy, laboratory or office for the sale, dispensing, or compounding of drugs, medicines or chemicals for medicinal use, or for the dispensing of prescriptions of medical practitioners only during the temporary absence of the registered pharmacist. Any person violating any of the provisions of this section shall be guilty of a misdemeanor, and upon conviction thereof shall be liable to a fine not exceeding one hundred (100) dollars, or to a imprisonment for a term not exceeding (30) days, or to both such fine and imprisonment.

SECTION 2. Any person in order to be a registered pharmacist must be a licentiate in pharmacy, or a practicing pharmacist.

SECTION 3. Licentiate in pharmacy are persons who have had four years' experience in stores where the prescriptions of medical practitioners are compounded, and shall have passed an examination before the state board of pharmacy, who shall present to the state board the particulars of their attainments to the said board. Practicing pharmacists are persons who, at the passage of this act, are registered pharmacists.

SECTION 4. Every pharmacist claiming the right of registration under this act, shall, on or before the first day of July, next after its passage, forward to the board of pharmacy satisfactory proof that he was a duly registered pharmacist under the provisions of an act which regulate the practice of pharmacy or sale of poisons in the State of California, approved March eleventh, eighteen hundred and ninety-one, and engaged in the business of preparing and dispensing medicines and physicians' prescriptions at the time, or that he is otherwise entitled to registration under its provisions. The board of pharmacy shall issue to said applicant, on his paying the sum of two (2.00) dollars, a certificate of registration. Any practicing pharmacist failing to comply with the requirements of this section within sixty days from and after the first of July, nineteen hundred and one, shall forfeit his right to registration, and shall appear for examination as provided for in this act.

SECTION 5. Every assistant pharmacist claiming right of registration under this act, without passing an examination by the board of pharmacy, shall, on or before the first day of July next after the passage, forward to the board of pharmacy satisfactory proof that he has had five years' experience in drug stores where

physicians' prescriptions are prepared. The board of pharmacians shall then issue to said applicant, upon his paying the sum of one (\$1.00) dollar, a certificate of registration as assistant pharmacist. Any assistant failing to comply with the requirements of this section within sixty (60) days from and after the first day of July, nineteen hundred and one, shall forfeit his right to registration without passing the examination provided for in this act. No registered assistant shall conduct a pharmacy, or be granted a certificate as registered pharmacist until he has passed the examination for licentiate in pharmacy as required by this act.

SECTION 6. Within thirty (30) days after the passage of this act and every fourth year thereafter, the governor shall appoint competent pharmacists, residing in different parts of the state, to serve as a board of pharmacy. The members of this board shall, within thirty (30) days after their appointment, individually take and subscribe before the county clerk, in the county in which they individually reside, an oath faithfully and impartially to discharge the duties prescribed by this act. They shall hold office for the term of one (1) year, and until their successors are appointed and qualified. In case of vacancy in the board of pharmacy, the governor shall fill the same by appointing a member to serve for the remainder of the term only. The office of secretary shall be located in San Francisco. The board shall organize by electing a president and a secretary, the latter to be ex-officio treasurer of the board. Four members of the board shall constitute a quorum. They shall meet quarterly, and have power to make by-laws for the proper fulfillment of their duties. The duties of the board shall be to transact all business pertaining to the legal regulation of the practice of pharmacy, to investigate all complaints respecting non-compliance with or violations of the provisions of this act, and to cause the prosecution of all persons whenever there appears to be any reasonable grounds for suspicion, and to examine and register as pharmacists or assistant pharmacists all applicants whom it shall deem qualified to be such respectively. All persons on applying for examination or registration shall pay to the secretary a fee of five (\$5.00) dollars for licentiate and two (2.00) dollars for assistants, and on passing the examination they shall be furnished with a certificate signed by the secretary and examiners. Every registered pharmacist who desires to continue the practice of his profession in this state shall annually, on such date as the board of pharmacy may determine, pay to the secretary of the board registration fees as provided by the board, but which shall in no case exceed the sum of one (\$1.00) dollar per annum, for which he shall receive a renewal of said registration. The board shall render an annual report of its proceedings to the governor of the state.

SECTION 7. It shall be the duty of the secretary to keep a book of registration open at the city of San Francisco, of which due notice shall be given through the public press, or by mail, in which book shall be entered, under the supervision of the board, the names, titles, qualifications and kind of business of all persons coming under the provisions of this act. The secretary shall give receipts for all money received by him, and disburse the same by order of the board, or by vouchers, and shall pay, after paying the expenses of the board, he shall pay to the state treasurer, who shall keep it as a special fund to be used in carrying out the provisions of this act.

SECTION 8. The members of the board of pharmacy shall each be paid the sum of five (\$5.00) dollars per diem for every meeting of the board which they attend, and the secretary shall receive such additional compensation as the board may direct. All other members, officers, and other persons in the board of pharmacy, shall be paid out of the examination and registration fees and fines.

SECTION 9. No person shall add to or remove from, or cause to be added to or removed from, any pharmaceutical, or medicinal preparation any ingredient, or material for the purpose of adulteration or substitution, or which shall deteriorate the quality, commercial value, or medicinal effect of such preparation, or substitute for such article, and no person shall knowingly sell or offer for sale, any such adulterated, altered, or substituted drug, or medicinal preparation, without informing the purchaser of the adulteration or substitution of the article sold, or offered for sale. Every registered pharmacist shall file, or cause to be filed, all physicians' prescriptions compounded or dispensed in his pharmacy or store. They shall, on request of the purchaser, or he shall furnish a correct copy of any prescription under the order or request of the attending physician. Any person who shall willfully violate any of the provisions of this section shall be guilty of a misdemeanor, and upon conviction thereof shall be liable to all costs of the action, and for the first offense be liable to a fine not exceeding fifty (\$50.00) dollars, and for each subsequent offense a fine not less than fifty (\$50.00) dollars, nor more than one hundred (\$100.00) dollars, said fines to be paid over to the board of pharmacy. On written complaint being entered against any person or persons, charging them with specific violation of any of the provisions of this act, the board of pharmacy is hereby empowered to delegate one of its members, or other suitable person, who shall have authority to inspect drugs, chemicals, or medicines, and to report the results of his investigations, or the case. He shall then report the result of his investigations, and if such report justifies such action, the

board shall duly cause the prosecution of the offender as provided in this act.

SECTION 10. It shall be unlawful for any person to retail any poisons enumerated in schedules "A" and "B," appended to this act, without labeling the box, bottle or paper in which said poison is contained, with the name of the person who prepared the same, and the name and place of business of the seller. Nor shall it be lawful to sell or deliver any poison named in schedules "A" and "B," unless on inquiry it is found that the person who prepared the poisonous character and that it is to be used for a legitimate purpose. Nor shall it be lawful to sell or deliver any poison included in schedule "A" without making, or causing to be made, an entry in a book provided for that purpose, which shall contain the name and address of the purchaser, the name and quantity of the poison sold, the purpose for which it is stated by the purchaser to be required, and the name of the dispenser, said books to always be open for inspection by the proper authorities, and to be preserved for at least five years. The provisions of this section shall not apply to the dispensing of poisons when prescribed by practicing members of medicine, nor to the sale of poisons if a single bottle or package does not contain more than an ordinary dose. Dealers shall affix to every bottle, box, parcel, or other inclosure of an original package containing any of the poisons named in schedules "A" and "B" of this act, a suitable label, or brand, with the word "poison," but they are hereby exempted from the registration of the sale of such articles when sold as aforesaid by practicing members of medicine. Any person failing to comply with the requirements of this section shall be guilty of a misdemeanor, and upon conviction thereof shall be liable to a fine not exceeding one hundred (\$100) dollars, and to imprisonment not exceeding fifty (50) days, or to both such fine and imprisonment.

SECTION 11. Any person who shall attempt to procure registration for himself or any other person under this act, by means of a false representation, or who shall fraudulently represent himself to be registered, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be liable to all costs of the action and to a fine not exceeding one hundred (\$100.00) dollars, or imprisonment for a term not exceeding fifty (50) days, or to both such fine and imprisonment. Any person who shall permit the compounding or dispensing of poisons, or medicinal preparations in his store by persons not registered, except under the direct supervision of a registered pharmacist, or any person not registered who shall retail medicines or poisons, or chemicals, or medicinal preparations in a pharmacy under the direct supervision of a registered pharmacist or a registered assistant pharmacist; and any person who shall fail to comply with the regulations of this act, shall be guilty of a misdemeanor, and upon conviction thereof shall be liable to all costs of the action and to a fine not exceeding one hundred (\$100.00) dollars or imprisonment for a term not exceeding fifty (50) days, or to both such fine and imprisonment. In addition to the penalty of this act shall be paid one half to the state board of pharmacy and one half to the county in which the conviction is obtained. Any person convicted of violating this act a third time shall be liable, in addition to the penalty hereinbefore mentioned, to have his registration as a pharmacist or assistant pharmacist canceled. Nothing in this act shall apply to or interfere with the business of any practitioner of medicine who does not keep a pharmacy, open shop, or drug store, advertised or otherwise, for the retailing of medicine or poisons, and wherein no other prescriptions are filled for regular practitioners, nor with the exclusive wholesale business of any dealer, except that portion of section ten which relates to marking or labeling certain poisons mentioned in this act. Nor shall general dealers come under the provisions of this act, if it relates to the retailing of poisons, or proprietary medicines in original packages. Nor shall this act apply to registered or copyrighted proprietary medicines registered in the United States patent office, or to the manufacture of such remedies, or to the sale of the same in original packages by persons other than pharmacists.

SECTION 12. Any proprietor of a pharmacy, who, not being a registered pharmacist, shall, ninety days after this act takes effect, be liable, in addition to the charge of such pharmacy a registered pharmacist; on any such proprietor who shall by himself, or any other person, permit the compounding or dispensing of prescriptions, or the sending of drugs, or poisons, or chemicals, by his store or place of business, except by or in the presence and under the supervision of a registered pharmacist, who shall take charge of or act as manager of such pharmacy, or store, or place of business, shall retail, compound, or dispense drugs, medicines, or poisons; or any person violating any of the provisions of this section shall be guilty of a misdemeanor, and upon conviction thereof shall be liable to all the costs of the action and to a fine not exceeding one hundred (\$100.00) dollars or to imprisonment for a term not exceeding fifty (50) days, or to both such fine and imprisonment.

SECTION 13. All persons registered under this act shall be exempt and free from jury duty.

SCHEDULE "A."

Arsenic, corrosive sublimate, cyanide of potassium, hydrocyanic acid, wood alcohol, strychnia, cocaine, and all other poisonous vegetable alkaloids and their salts, opium and its preparations, and all those which contain less than two grains to the ounce.

SCHEDULE "B."

Aconite, belladonna, colchicum, conium, nux vomica, savin, cantharides, phosphorus digitalis, and their pharmaceutical preparations, croton oil, chloral, sulphate of zinc, sugar of lead, mineral acids, carbonic acid, oxalic acid, white precipitate, red precipitate, bismuthide of mercury, essential oil of almonds; and all medicines or preparations, secret or proprietary, of whatsoever kind or nature, that are intended to cause abortion or miscarriage.

SECTION 14. An act entitled "An act to regulate the practice of pharmacy and sale of poisons in the State of California," approved March eleventh, eighteen hundred and ninety-one, and all parts of acts in conflict with this are hereby repealed.

SECTION 15. This act shall take effect immediately.

THE OREGON HOP INDUSTRY.

By JOSEPH A. HILL.

For many years hops have been cultivated extensively in Oregon. She has not only supplied her own demands, but also shipped them to the Eastern states and even to Europe. So great has this exporting been that they are recognized almost everywhere all over the world. But, however, for the last five or six years the price and demand for hops have been so low that many hundreds of growers have been compelled to plow up their yards. The methods of raising have been brought down to a very fine point, since more care and time have to be spent on them than on almost any other crop.

Hops are not generally raised from seed, as one year is lost, since they do not mature until the third year. However, as the first year's growth from roots does not give forth a crop, generally something else is raised instead of leaving the field idle, which is very possible as the vines are eight feet apart and in straight rows. In a great many places potatoes were planted, but afterward they proved very harmful, for the hops were poisoned by them, so corn has been used instead. Great care has to be taken that the young vines are not broken or injured, as they bleed badly and often die. Again in a great many cases shoots do not come forth, in these places new plants have to be supplied the following Fall. When the false crop, if you may so call it, that between the rows, has been gathered, all the vines have to be cut leaving very short stubs on the surface and at the same time small sticks are left to mark the places of the roots. Then the dead vines are raked up and burned.

In the very early spring, when the first sprouts come forth and reach about the height of six inches, then is begun the cultivation, which consists of plowing several times, first in the direction of one row and then at right angles. Harrowing is taken up and continued until the soil becomes perfectly smooth and even. By this time the young vine has sent forth many branches. The first shoots vary from five to ten in number, of these generally only four are saved. After all the shoots have been cut away the branches have to be nipped off, and this must be done very carefully as the vine may bleed and cause much trouble. When all the shoots have been cut and all the branches and creepers have been nipped, the young vines must be tied to poles by strings or wires, with which every yard is supplied. Sometimes, however, the yard has to be gone over a second time to be certain that all have started to climb their respective supports. Now the hops could be left alone until ripe if there were no lice to bother them.

The farmers and growers have been troubled for the last few years with hop lice. These little pests came over from Germany, it is believed, but how and when nobody knows. Some fly and others do not. They are a very peculiar insect and have many peculiar habits. However, I will not discuss them, but only show the harm rendered by them. They are found on the vine in the very early spring; it seems as if they come from the roots. Then when the bur of the hop forms they crawl inside to die, and decaying cause the hop to turn black and mold setting in, renders them useless. There is only one way of stopping them, and that is by spraying the vine just as the bur begins to be formed. Quite a strong solution is used, and soap is also added to hold the substance on to the leaves. But in spite of all your pains they will get inside—it takes at least ten or twelve to do much damage. Then again, if the foliage is very heavy it is exceedingly hard and almost impossible to reach them.

They also eat the leaves, which turn brown and then drop into the pickings and cause dirty hops. These sprayings are repeated several times and are very expensive, but after the bur becomes full grown spraying is useless, but if the season is hot and dry there will be few lice, as they can stand no heat.

When the hop has matured it turns yellow and then the picking begins, which is mostly done by women and children, while in many places Chinese and Japanese are employed and in some parts of Washington, Indians. Picking is done in two ways, either by the box or by the pound, a box holds nine bushels, and for filling this the picker receives from twenty-five to forty cents; the latter method, however, is not a very honest device as will be shown later. The hops are picked into baskets, sacks and hoppers, the latter are the most extensively used and similar to a large stretcher with a deep concave hole in the middle covered with burlap; in these burlap hold about three boxes. The hops hang in large bunches like grapes, and are stripped off by means of the thumb and first finger. Small leaves make little or no difference; but large ones and long stems must be kept out if possible. When these hoppers are full they are carried to a station where they are measured and tickets given for the number of boxes. But in the case where they are weighed it is done differently, the hops are generally picked in baskets and then poured into sacks by the pickers themselves. These are not carried to a station, but a wagon with scales makes a round at intervals and collects and pays for the number of pounds. Sometimes the grower lightens his scales and in return the pickers put stones and mud into the hops to make them heavier. Here it is plainly seen both are cheating each other, and almost always the pickers get the best of it, since they care nothing about the grade of the hop. About fifty to fifty-two pounds is the weight of a nine-bushel box. After picking they are taken to the hop kiln or drier to be dried or cured.

The hop kiln is a building of two stories with a ventilator at the top and bottom in order to give a good draught. On the first floor are the stoves, generally two in number, depending on the size of the house. To these are attached long stove-pipes to distribute the heat evenly, and the walls are covered with sheet-iron or calomined to prevent fire. The second story is of a rough finish. The floor is made of strips one inch square, and at the distance of one inch apart, this is covered with heavy burlap. Upon this are laid the hops, and a heat of 160 degrees is kept up for 24 hours. For 12 hours of this time sulphur is burned on the first floor, this being done to give the hops a rich color. After the drying has been completed they are allowed to chill for six hours, then shoveled into the store house to be baled. The baling of hops is similar to cotton, they average about two hundred pounds. They are kept in this form until sold.

About 1855 the demand for hops was so small and the price so low that the amount raised greatly decreased. But in 1890 an association was formed to protect the growers and hold them until the price was raised and then pay the increase of price to the farmers. It can be plainly seen that the association controlled all the hops in the state, and they would not sell until a good price was offered. In the first year of the association the price for Oregon hops doubled itself.

The outlook for the industry in Oregon is very bright at present, and if it continues so will be directly beneficial to both the grower and to the state.—Yale Scientific Monthly.

Paper Bottle Caps.

Progressive American druggists usually prefer American goods, and those that use paper bottle caps generally give the preference to an American cap. It goes without saying that a capped bottle is more attractive in appearance than one uncapped. One of the cheapest, neatest and most effective caps is the fluted paper cap now so well known. The Sayford Paper Specialty Co., Camden, N. J., manufactures these caps in several different colors. Druggists can have their name printed on them if desired. Prompt delivery of goods is guaranteed. Write to the above-named concern for samples and prices.

VINES OF PALESTINE.

The account of the trade of Palestine during last year, given in the consular report just issued, is fairly hopeful, though neither the exports nor the imports reach the level attained in 1889. The prosperity of the country depends still, as it always has done, and most probably always will do, upon the fruits of the earth. Centuries before the present era, corn and wine and oil were among the chief boons of the Promised Land, and, though we hear little now of the first, the other two are regaining their ancient reputation. To melons, which also were valued in ancient days, a new fruit has been added—the orange. This, indeed, and the grape are now the most important products of Palestine, though the exports of the former have declined considerably in value during the last few years. Jaffa oranges, however, maintain their reputation, so that it may be hoped that the depression is only temporary. Southern Palestine has always been noted for its vineyards; it was Judah who "bound his foal to the vine and washed his clothes in the blood of the grapes."

Of the principal Jewish colonies in the Jaffa district, Richon-le-Sion, Petach-Tikvah and Ekron, on the supposed site of the Philistine city which last received the fatal trophy of the Ark, the first is the chief one for grape growing. A fourth colony, Sarona, also near Jaffa, is German. In all these agriculture, and especially everything connected with wine-making, is conducted on scientific principles, and the first and last have become really important centres in the trade. Richon-le-Sion has excellent works and machinery for the manufacture of wine, and great underground cellars for its storage. These last year contained about 1,200,000 gallons, in addition to a considerable quantity which is always kept in depot at Hamburg. Two kinds are specially in demand—a red wine, like a dry claret, and a dry white wine, rather of the nature of Sauterne. The Germans of Sarona make wines of a good quality, though in less abundance. They bestow characteristic care on the processes and turn out a large number of varieties—a red and white Muscat, a red wine like Affenthaler, a red "Vicente" and two other white wines—Reisling and Sarona. All, we are told, compare favorably with the common French and Italian wines and are beginning to find their way to Europe, probably appearing in wine lists under French or, occasionally, German names.

There is an excellent prospect, therefore, that the vineyards of Palestine may once more be of note, as in the olden days. Many parts of the land seem to be naturally adapted to grape growing, although the industry has for long been neglected, partly, perhaps, because the Koran frowns upon the vine. One traveler speaks of a vine near Acre, the branches of which formed a shelter more than thirty feet broad and long, and bore bunches weighing ten or twelve pounds. The late Dean Stanley describes as one peculiarly of Judea the abundance of the terraced vineyards, with their watch towers and walls, just as they were for centuries before the fall of Jerusalem. But in those days the culture of the vine was far more general than now; it extended south of the boundary of Judah into the region possessed by Simeon, and the late Prof. Palmer tells us how he saw even in the arid Negeb, or South Country, the signs of former vineyards. The revival of the ancient industry in this and other fruits is largely due to the Jewish colonies which have been planted by the liberality of their wealthy coreligionists, and the success of their efforts at once to help their own people and to make Palestine again a land to be desired is a matter for hearty congratulation.—(London Standard.)

DR. CHAS. MOHR, well known to the older pharmacists of the country as a botanist, and a former resident of Mobile, Ala., died July 17 at Asheville, N. C. For many years he was a member of the American Pharmaceutical Association.

—The Delaware Board of Pharmacy met August 1, at Hotel Henlopen, Rehoboth, Delaware, and elected the following officers: President, Dr. J. S. Prettyman, Jr., Milford; secretary and treasurer, Elmer Outten, Lewes.

PATENT MEDICINES IN AUSTRIA.

In a report to the State Department, Carl Balley Hurst, the United States Consul General at Vienna, Austria, calls attention to the Austrian law relating to patent medicines. The report says:

"In consequence of many inquiries addressed to this Consulate General in the matter of the Government regulations in Austria regarding the importation and sale of patented medicinal and chemical preparations, I would report that the sale of 'arcana,' or secret remedies, has always been strictly forbidden in this monarchy. Trade in such medicines and advertisements of the same are under strict surveillance of the law. Further, those medicinal preparations of which the prescriptions are not open to inspection by physicians, or in the prescription of which the substance of the medicinal ingredients cannot be definitely recognized as to kind and quantity, may not be kept for sale in apothecaries. Only those manufactures may be considered as pharmaceutical specialties that contain drugs acknowledged to be medicinal remedies, as, for instance, balsam copaiba, oleum santali, and the like.

"Every new medicinal preparation intended for use by the public must be reported to the authorities, and its sale may not be begun until said authorities have found no reason to prohibit the same. Prescriptions of foreign medicines must be accompanied by precise directions for their preparation from the foreign manufacturer, and be provided with his signature and business stamp. Altogether excluded are cosmetics that by their labels, wrappers and advertisements are affirmed to be efficacious in the removal of personal blemishes—impure skin, freckles, liver spots, and baldness—and are, therefore, qualified as remedies.

"The regulations in Austria in regard to the advertisement of patent medicines are likewise strict. All laudatory notices in local publications of cures and remedies coming from abroad constitute a transgression of the trade laws, and, under certain circumstances, foundation for complaint of unlicensed medical practice."

The United States Consul, Mr. Hossfeld, of Trieste, in a report dated July 12, substantiates that of Mr. Hurst and adds:

"The Austrian law also undertakes to regulate the prices to be charged for patent medicines, for it provides that whenever the reasonableness of the price of such a remedy is questioned, it shall be rated on the basis of the official tariff promulgated in the Pharmacopœia Austriaca.

"Those of our manufacturing chemists who are disposed to take the Austrian public or sanitary authorities into their confidence will probably not find it very difficult to obtain the necessary permission for the sale of their products, but I doubt whether any business which they may do in this country will ever prove a source of great profit to them."

TREATMENT OF MOSQUITO BITES.—Dr. A. Manquat states that the most successful treatment consists in the local use of formalin, tincture of iodine and alcohol. He uses the pure formalin or alcohol in one-half strength. The tincture of iodine is objectionable because of the stain it leaves on the skin. As a prophylactic against mosquito bites the following combination is of service:

Oil of tar.....	6 drams.
Olive oil.....	6 drams.
Oil of pennyroyal.....	½ ounce.
Spirit of camphor.....	3 drams.
Glycerine.....	2½ drams.
Carbolic acid.....	1 dram.

M. Apply on retiring.—(Jour. Am. Med. Association.)

Bismuth Subnitrate.

The attention of critical pharmacists and manufacturers is directed to the extraordinary purity and bulkiness of the Mallinckrodt Subnitrate of Bismuth. The purity of Bismuth Subnitrate is of course the first consideration, but a light bulky preparation also has advantages in that it is more readily diffused over the mucous membrane of the intestines, and more easily suspended in mixtures than a heavy product. If you are not already using the "M. C. W." brand we suggest that you give it a trial.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued July 30, 1901.

- 679,295.—Orvin H. Chandler, Clinton, S. C. Measuring-faucet.
 679,365.—Max H. Fischer, West Orange, N. J. Baking-powder.
 679,388.—Johann F. W. Meyer, Scheune, near Stettin, Germany. Chemical apparatus.
 679,398.—Felle C. Sabin and E. C. Huleatt, Harvey, Ill. Powder-muff.
 679,415.—William F. Clark, Kidwell, W. Va. Non-refillable bottle.
 679,510.—John Senich, Pasadena, assignor of one-half to F. Velich, Los Angeles, Cal. Bottle-stopper.
 679,525.—Charles J. Bailey, Newton, Mass. Water-bag.
 679,525.—Louis C. Reese, London, assignor to P. Pfeleiderer, Hillcrest, Wellington, England. Apparatus for extracting matter from liquids.
 679,600.—Albert Caron, Haus Ellenbach, Germany, assignor to Farbenfabriken of Elberfeld Co., of New York, N. Y. Detachable base for measuring glasses.
 679,646.—Alfred Theberge, Lacombe, N. H. Non-refillable bottle.
 679,671.—Charles T. Hannigan, Providence, R. I. Syringe-nozzle.

TRADE-MARKS.

Registered July 30, 1901.

- 36,831.—Concentrated Albuminous Food. Leopold Sarason, Ercin, Germany. The word "Roborat."
 36,837.—Certain Named Bottle Liquids. The American Mineral Water Machine Co., New York, N. Y. The representation of the head of a dog.
 36,844.—Perfumery. Andre Perroud, Lyons, France. The word "Kerol."
 36,845.—Tooth-Powder. Frederick B. Horton, South Manchester, Conn. The word "Listerated."
 36,846.—Liquid Compound Used as a Substitute for Court Plaster. Martin E. Waldstein, New York, N. Y. The compound word "New-Skin."
 36,847.—Certain Named Drugs and Medicines. Robert Wirth, Newark, N. J. A six-pointed star arranged within a hexagon and the term "New Century."
 36,848.—Compound for the Cure of Kidney Diseases. Henry Bull, Belleville, Canada. The letters "O. R."
 36,849.—Liniment. Vincen P. McVoy, Pensacola, Fla. The word "Vigilant."

LABELS.

Registered July 30, 1901.

- 8,553.—Title: "Lithia-Malt." (For Malt Extracts and Peptonized Malt Food.) Albert Lieber, Indianapolis, Ind. Filed July 8, 1901.
 8,566.—Title: "Nervo Tablets." (For a Medicine.) Ralph W. E. Cozine, Louisville, Ky. Filed June 4, 1901.
 8,567.—Title: "Rhodes Electric Liniment." (For a Liniment.) Moses W. Rhodes, Memphis, Tenn. Filed June 28, 1901.
 8,568.—Title: "Dr. Rose's Hair Tonic and Scalp Invigorator." (For a Hair-Tonic and Scalp-Invigorator.) Charles Allen, Astoria, Oregon. Filed July 6, 1901.
 8,569.—Title: "Allen's Antiseptic Toilet Cream." (For a Toilet Cream.) Charles Allen, Astoria, Oregon. Filed July 6, 1901.
 8,570.—Title: "Ideal Brilliant Nail Enamel." (For a Nail Polish.) Minnie A. Dale, New York, N. Y. Filed June 18, 1901.
 8,571.—Title: "Cream of Roses." (For a Toilet Preparation.) Louise D. Ricketson, New Bedford, Mass. Filed July 5, 1901.

DESIGNS.

- 34,860.—Bottle. Alfred Gounelle, Marseilles, France. Filed June 21, 1901. Serial No. 65,514. Term of patent 14 years. The design for a bottle.
 34,861.—Faucet-Handle. Herman Strater, Boston, Mass. Filed May 31, 1900. Serial No. 18,675. Term of patent 14 years. The design for a faucet handle.

Protection of Trade-Marks.

At a recent meeting of the Board of Directors of the International Trade Mark Protective Co., the following resolution was adopted:

"Resolved, That on and after the 20th day of July, 1901, the sum charged for the registration of each trade mark, label, and name by this company shall be \$50.00 for the first year, instead of \$25.00 as heretofore, and the annual fee thereafter shall be \$25.00, and that a copy of this resolution be sent to each branch office and each solicitor."

This company is capitalized at \$200,000, and is doing a large business. It has published a lot of very interesting literature in regard to trade marks and their protection from infringement. It will pay every concern that markets a proprietary article to write for this literature. Address the International Trade Mark Protective Co., 520 Broadway, New York, and the literature will be cheerfully mailed to you.

Prepared Chalk.

Some of the requisite qualities of a good Prepared Chalk are purity, smoothness, and permanency of color.

Thomas' English Prepared Chalk possesses all of these qualities, and has become a standard of excellence with the drug trade. The small cones, in which form the finished product appears, are very convenient for the retail druggist in selling small quantities. The chalk is shipped carefully packed in 8 lb. boxes, reaches its destination in better shape, and is not so liable to become broken and powdered as other brands which are shipped in bulk. Thomas' Prepared Chalk is also handsome in shape, and presents an attractive appearance as sold over the counter. The manufacturers produce both a white and a pink chalk. Druggists who desire this brand should carefully specify it by name when placing orders. It will not already acquainted with this product, write for samples to the Thomas Mfg. Co., Baltimore, Md.

Will Do a Larger Business Than Ever.

Runkel Bros., manufacturers of Chocolates and Cocoa preparations, New York, recently sent out a circular letter to the trade. In it they called attention to the fact that although they recently lost one of their factory buildings by fire, in which building they had a large part of their machinery, they are now placing the most improved foreign and domestic machinery in their new building. Temporarily they have been unable to manufacture some of their brands of goods, but saved all their manufactured stock from the fire, which has enabled them to fill the orders for most of their goods. With their new and improved plant, they will be able to manufacture by the first of September the highest grades of goods in their line. They ask dealers to kindly send in orders, which they will fill as far as possible from stock on hand, and any goods which they may not have will be shipped during September. They thank the trade for past favors and ask dealers to kindly excuse any delays in shipment of goods which may have occurred because of the fire. Unquestionably, Runkel Bros. will soon be in a position to do even a larger business than ever, and to fill the exceedingly popular demand for their goods.

Make Your Own Perfumes.

On page VII of the advertised Manufacturers' Lists in the July Era Blue Book is a special announcement of the Evergreen Chemical Co. They call attention to the fact that by the use of their Concentrated Flower Oils and Colors druggists can make their own perfumes. The Evergreen Chemical Co. state that an absolutely reliable line of perfumes can be made from their goods, a line which will give entire satisfaction to customers and is sure to grow in popularity. Further: The percentage of profit for the druggist is much larger than that obtainable by selling other manufacturers' perfumes. It will pay druggists to read this announcement carefully. The Evergreen Chemical Co. offer to send free of charge their latest booklet of up-to-date Toilet Requisite Formulas. Just drop them a postal and they will mail it and full particulars regarding their very desirable line of goods. Address, Evergreen Chemical Co., Dept. C., 130 Fulton St., New York.

Profitable Preparations.

Mrs. Gervaise Graham's Toilet Preparations, Cucumber and Elder Flower Cream, Quick Hair Restorer, and Cactico Hair Grower, are well advertised to the public, and they pay the druggist handsome profits. Mrs. Graham has published some exceedingly attractive advertising matter for counter distribution. Her booklet entitled "How to be Beautiful," may be distributed with pride by druggists to their lady customers. Write for a supply of this advertising matter to Mrs. Gervaise Graham, Chicago, Ill.

New Skin Food.

The basis of Lanola, the new skin food, is wool fat, which makes it particularly desirable for skin complaints peculiar to summer. The manufacturers are advertising this preparation to the public, and plan to advertise it still more extensively. Druggists are likely to receive calls for it, and should be ready to supply the demand. On application dealers will be supplied with special advertising matter and a liberal quantity of samples. Write for these samples and for further information regarding Lanola to the distributing agents, Billings Clapp Co., Boston, Mass.

Rubber Sundries.

The most reliable line of Soft Rubber Sundries on the market and the most strikingly handsome boxes and labels ever designed for such goods are advertisements which place the "Imperial" Brand of the Goodyear Tire & Rubber Company, Akron, O., in a class which it bids fair to occupy to the exclusion of all others. Druggists with whom quality and appearance are considerations will make no mistake in thoroughly investigating the claims made for this new line.

DRUG STORE SYNDICATES!

A number of drug stores, owned and controlled by corporations composed possibly of wholesale and retail druggists, seems to be a feasible solution of the drug business in the larger cities. In this day of consolidation, such a development as this in the drug business is not improbable. A corporation, for example, owning 25, 50 or even 100 drug stores in New York would undoubtedly be a good business venture. There would be a great economy in the purchasing and operating expenses. At the headquarters of the corporation there would have to be a warehouse for the storage of goods at different branches, and all orders for supplies would be sent to the headquarters, where purchases could be made in quantities. It would not be necessary for the company to carry any quantity of the thousand and one items that go to make up the stock of a wholesale druggist, as these could be purchased as needed from the local jobbers.

Such a plan as this would not be to the detriment of the drug trade. On the contrary it would give it strength. The present retail druggist would become a shareholder in the corporation, and draw a salary with a percentage of profits as marager of a branch. The scheme would put the retail drug business more upon a business basis and, in many cases, would make better business men of the druggists. Such a plan of consolidation is in keeping with modern business development, and we would not be surprised to see it put into operation on a large scale. The wholesale druggists instead of opposing the scheme should be the first to endorse it. It would assure them of a larger customer

and more prompt pay. It is much cheaper to handle the business through one central corporation than through 100 little retailers.

Here's a chance for some of our enterprising jobbers, who can command the capital and the confidence of the trade, to put the drug business in large cities upon a modern business basis.

THE DULL SEASON.

Advertising has always been supposed to be a sort of a mutual benefit affair, the go-between of the anxious seller and buyer; but by quite common consent it seems to be agreed that there are certain seasons of the year when advertising can better perform its functions than at others. This view is not that of the seller, for he is anxious to sell at all seasons and at all hours, day or night. Neither is this view of things entirely one which should be influenced by buyers, for their desire for reasonable things is never satisfied. What then explains the almost universal idea that mid-summer is the time for dispensing with that valuable medium whose object is to bring people together to trade? The season is marked by a lassitude which favors diminution of effort, and the buying effort is one which people always desire to postpone. How many business men withdraw their announcements which should tell the buyers where and how easily and cheaply they can procure things, and both lie back and extract what enjoyment they can from what they term a period of "business stagnation." The buyer is allowed to think that his necessities can only be satisfied by a worry of soul and body in a personal search of the market, while the seller concludes with the first sign of diminishing trade that all effort to remedy matters should be discontinued.

A great deal of the blame lies with the seller. Upon him devolves the task of making buying easy, by making his advertising better. This is the sole aim of advertising anyway. Advertising should present the news of goods, and during what is popularly known as the "dull season" it should be better than usual. It should be plainer and more forceful, so that readers will not have to make an extra effort to understand it. It should tell the people of the easiest and cheapest way to supply their needs during the season when they are wont to lie "languidly in the shade and woo the wind that still delays its coming."

EMERGENCIES IN THE DRUG STORE AND HOW TO TREAT THEM.

When a person is injured in any way, or taken suddenly ill on the street, he is at once taken to the nearest drug store for emergency and temporary treatment. In olden days the druggist was something more

than a mere dispenser of medicines; to-day he is just as much expected by the people to conduct an emergency clinic whenever called upon to do so. Unless he has regularly studied medicine, particularly minor surgery, he may be, and often is, very poorly equipped to satisfactorily meet the demands of this nature which may be made upon him. What knowledge he does possess has generally been picked up in a hap-hazard sort of way, which lacks system and completeness, and frequently he is put to great embarrassment by its general slowness and unworthiness. Elsewhere in this issue we publish a paper which is expressly designed and prepared to remedy this defect in this educational equipment. The writer shows the keen realization of the necessities of emergency treatment, and treats his subject in a manner to best adapt it to the druggist's requirements and the limitations of his province and surroundings. It is not the druggist's part to usurp the legitimate functions of the physician, but merely to prevent bad becoming worse, and to see to it that the injured individual is not further injured by misplaced, misjudged and ignorant treatment before he is duly placed under professional care. First aid to the injured should be real aid, afforded by the knowledge of what is best to be done under the circumstances.

A BRITISH VIEW OF EXHIBITIONS.

The British Commissioners of the Paris Exposition have just published their report, which is another of the many prognostications of English commercial decadence. They complain of the unfair restrictions imposed upon foreigners by the managers of the Fair; of the dividing of each nation's exhibit for the purpose of direct comparison into small classified sections, instead of one large space being allotted to each nation as heretofore has been the usage; of the enormous expense which each manufacturer has to bear, with no government help and no commensurate business returns; and so on in a querulous tone which has the sound of admitting defeat. But they overlook the fact that British manufacturers were on an equal footing with those of other nations, with the single exception of those of France, who rather unfairly took the best half of all the exhibit space; and if they suffered by the comparison they should remember that they met competition and must take the consequences. The report goes on to say: "We are inclined to doubt whether British industry as a whole derives any benefit from exhibitions in which British exhibitors enter at such a manifest disadvantage. Our system has remained unchanged for half a century, but the conditions are no longer the same. When exhibitions had the charm of novelty the great manufacturers took pride in showing their best productions to the world. There was comparatively little competition, and they had nothing to fear from the rivalry of foreign countries. Now, exhibitions have become so common that manufacturers no longer take the same interest in them, and only exhibit if they see a distinct prospect of advantage to be gained by doing so. At the same time, foreign industries have made gigantic strides, and in many branches of manufacture have become formidable rivals to our own in the markets of the world. The industrial interests of the country as a whole gain nothing from an exhibition unless they are represented upon equal terms with foreign industries." On the

contrary, the fault lies not with exhibitions, but with the exhibit.

All this complaint emanates evidently from the uneasy knowledge that the products of other nations not only compare favorably with those of the British manufacturers, but in many cases surpass them. It is painfully evident that the magnificent energy in the commercial supremacy is lacking to-day, and has been for many years. Decades ago British manufacturers decided to rest upon their oars, and sunk as a consequence to that enervating plane of conservatism. The sap of the nation is not dead; there is always as good grass to grow as ever grew. But while Britain rests other nations go digging on in their mediocre way, accomplish as much as she has done, and finally pass her—the tortoise and the hare over again. There is a stately, ponderous, even haughty dignity in all the movements of her commercial world which suggests nothing so much as a funeral cortege. Apparently the nervous energy of the Norman, which William the Conqueror infused into English blood, is absorbed by the less brilliant, phlegmatic Saxon.

EXAMINING BOARDS NECESSARY.

A few days ago the results of the semi-annual examination held by the Pennsylvania State Medical Examining Board at Philadelphia and Pittsburg, June 18 to 21, were made public. Of the 407 applicants who applied for registration as physicians 89 failed to pass. This high percentage of failures was the cause of considerable comment, and the president of the examining board himself went on record as declaring that medical schools continue to admit students who are utterly illiterate. These students, he says, "cannot pass even the simplest rudimentary examination, and to them medicine is a study entirely beyond comprehension. Just so long as colleges admit men of little or no preliminary education there must be a large percentage of rejections when they take the board examination. I wish to say emphatically that the granting by a college of diplomas to such men is a fraud." This arraignment is certainly a rebuke to those medical schools which do not possess a proper appreciation of their duties and responsibilities by admitting ignorant and unworthy men and it also shows the necessity of examining boards in medicine as well as in pharmacy. The boards stand between the people and inefficient doctors and pharmacists. The experience of the Pennsylvania Medical Examining Board shows also the wisdom of not accepting diplomas in lieu of examination for registration. As the conditions of medicine and pharmacy now are in this country, examinations can be the only true test of the candidate's efficiency. Of course, not all of the medical and pharmaceutical colleges are lacking in this respect, for most of them, we believe, do conscientious work. It is those of the other kind which are criticised.

ECHINACEÆ ANGUSTIFOLIA RADIX is used in the fresh state as a remedy for snake bites. It possesses sialagogic, mild antiseptic, and aphrodisiac properties. A fluid extract is administered internally in doses of 0.3 to 3.0 grams mixed with water.

BUSINESS PHARMACY.

The Experience of Druggists with Profit-Bringing Methods. Hints and Suggestions. Original Papers from Practical Business Druggists. The Various Phases of Drug-Store Management and Economy.

ACCUMULATION OF OLD STOCK.

By J. T. PEPPER, Woodstock, Ont.

One of the sources of loss that a drug store can suffer from is the accumulation of old stock which through age has become unsalable, or at least has depreciated in value. One of the worst features of this loss by accumulation of old stock is the silent and unnoticed way in which the stock collects. Not much notice is paid to one hot water bottle that does not seem to sell until it becomes soiled or grows partially stiff and hard and has to be thrown away, and thus becomes a dead loss. A few bottles of some patent medicine which has ceased to be advertised are left on the shelf because no customer has asked for them, and being neglected for a time they grow old and become soiled and lose a portion of their value as salable goods. There are some goods even in a drug store which are staple all the year round, and will be staple year after year, but the most of the goods that we carry in stock will lose something of their value by being in stock one year. The greatest losses from accumulation in a drug store will occur in the stock composed of sundries and patent medicines, especially the latter. It is so easy not to worry about the fact that a certain bottle or bottles of a patent medicine have been on the shelf for some time and have not been asked for. You console yourself by saying that it does not amount to much anyway, even if it does not sell, and that perhaps some day a customer may come in and ask for it, and then you will have it and not lose a sale.

One occurrence like this does not amount to very much, it is true, but it is repeated a good many times in most drug stores as the years go by, and after awhile if the druggist were to collect all the patent medicines in his store that should be entered in this list and make an inventory of them, the total might surprise him.

In the list of goods carried under the classification of druggists' sundries the same accumulation and depreciation in value takes place. Rubber goods, toilet articles of numerous kinds, combs, brushes, sponges, soaps, perfumes, etc.

New goods generally command a better price, and are certainly easier to sell than goods which have been in stock for any length of time. It is easier and more pleasant to sell a nice clean bottle of a patent medicine than one that is stained and soiled. It is easier and much more pleasant to sell a new syringe or atomizer than one that has been in stock for a length of time.

The difficulty in the sundries may be overcome in a large degree by always putting the old goods to the front when new goods are put into stock, and by the salesman, whether it is yourself or clerks, making it his object to get rid of the old goods first.

It should be the object of every druggist not to allow goods to remain in his store any great length of time. This rule of keeping goods as short a time as possible will work to advantage in keeping the stock clean. If you should get in some sundries that do not seem to sell at the prices asked, I would advise you to make an effort to get the jobber or manufacturer, as the case may be, from whom you obtained the goods, to exchange them for something else that you can sell. Failing this, reduce your price and try to sell at cost or a little over, if possible. I am opposed to the cutting of prices in drug store goods,

and do not advise it; but when you get stuck with goods and cannot get them exchanged, it is better, and it good business policy as well, to get them converted into money as quickly as possible, even if it is at a loss. The goods, if you keep them and do not sell them, you can do nothing with. If you have some money obtained by selling them at a small price you can use it to buy other goods that will sell, and so make more money, thus turning an apparent loss into a profit, and when you make up your mind to do this with any article or articles in stock, the quicker you do it the better it will be for you in a business way, and the better you will feel as well. The drug store that watches these points carefully can very often avoid a great many small losses and the accumulation of old dead stock which becomes an eyesore to every druggist.

In most drug stores the old or dead stock in patent medicines is scattered along the shelves among the good salable stock, and most druggists if asked if they had much dead stock among their patent would answer in the negative. A few out-of-date patents distributed among a fair-sized stock of patent medicines do not show up to any great extent to the visitor to a drug store, nor even to the druggist himself. Because he thinks he has little or no dead stock among his patents he never, or very seldom, makes any effort to sell a package that might be considered dead stock. A real good thing to do is to go through all your patent medicine stock and select all patents for which no advertising is done, or for which there is no demand—and put all this stock in one place in one of your patent medicine cases, and go to it and take a mental inventory of it every few weeks, so that you always know what is there, and then when customers come in asking for something good for a cold or cough you have an opportunity to recommend one of your old patent medicines, and it may be that you can recommend it just as conscientiously, and that it may do as much good as one of the more lately advertised patents, and you will have one less bottle of old stock and so much more money to the good.

HOW TO MAKE A DRUG STORE PAY?

By P. A. LIGNELL, West Superior, Wis.

Why! run your store right and get more customers. Well, we all know that, of course, but how to do it is the question, or how Mr. Editor?

My opinion is to simply apply business principles to our business, and the rest is easy enough. These principles are easy: Buy for cash, sell for cash and advertise.

Buy all the quantity orders you can, but never more than you can easily sell in six months' time, and never buy anything you cannot pay for in ten days. In that way your books are clear three times a month.

Sell for cash. Don't say it can't be done. It's disagreeable to refuse credit, but what is the use of extending credit to people who think they do you a favor when they pay their bill sixty or ninety days after it is due? If you cannot collect it you not only lose the amount of the bill, but also their future trade.

So then if you buy for cash only you have no bills or drafts to worry you, and your store will not be overstocked. And if you sell for cash only, there are no bad or doubtful bills to figure on. There may be instances of course where you cannot refuse credit,

The Era pays \$5.00 for each accepted contribution to this department. Proprietors and clerks are especially urged to relate their experiences and offer suggestions on all phases of the practical business side of pharmacy. Make your papers short, about 1,000 words (one Era page) in length.

but on those occasions it is best to remark: "You know that we never charge, but if you haven't the change with you just remember it till next time; we won't charge it." But after the customer is gone you may charge it for your own remembrance, and in most cases the customer who saw that you did not write it down will feel in honor bound to remember it.

The next thing after buying and selling for cash is to keep your expenses down. Be your own head clerk, and devote fifteen hours a day to the store. It is not pleasant, but we are trying to make the drug store pay, and afterwards, when we have made the old drug store pay enough, why then we can afford to employ a first-class head clerk and play the gentleman of leisure. There are many druggists who are losing from eight to nine hundred dollars a year on this item alone, and add that to the two or three hundred the majority are losing in discounts, and we have almost twelve hundred dollars loss.

About store management, window dressing, etc., I think very little can be written, because every man will do those things according to his own idea, and it is best so, because it gives the store its own individuality.

But the question on which a great many stumble is the treatment of physicians. It's either one extreme or the other; either pandering to one exclusive of all others, or bidding defiance to all by offensive counter-prescribing. The middle course is the best. Treat all alike and sell them goods at absolute cost.

Then comes the question how to get more customers, and that is answered by "advertising." Use the daily newspapers, pamphlets, booklets, etc., if you have the knack for advertisement writing, but if you haven't don't spend your money in printers' ink, but spend it on beautifying the store, window dressing, illumination and good help. Printers' ink is a double-edged weapon; the truest friend to the one who can wield it knowingly, but the bitterest enemy (to the pocket-book) of one who handles it clumsily.

I presume the Editor will receive as many solutions to the question "How to make a drug store pay" as there will be answers, but I think we can trust each one to direct the small details of the business in his own way, if we only stick to a foundation of: "Buy for cash, sell for cash, advertise," and close personal direction.

A PROFITABLE SIDE LINE IN SMALL TOWNS.

By BEN G. JONES, Beaconsfield, Ia.

Optical goods are a very profitable side line in any town where there is no oculist. Spectacles lead first in profit and quick sale. Any druggist can with a little "posting" be able to fit any simple case of presbyopia, hypermetropia or myopia, as well as the average oculist. Of course diseased eyes, astigmatism, or any complicated case should be sent to an oculist. Numerous instruments for testing eyes are on the market at various prices. The optometer is as cheap and simple as any, and will answer the purpose very well until a better one can be afforded. It will test for presbyopia or old sight, and myopia or near sight. In testing for hypermetropia Shellen's distance test type is very satisfactory. Both optometer and test type may be obtained from any optical house; the former costing from 35 to 50 cents, the latter 15 cents.

The money invested is very small, and profits run from 200 to 500 per cent. No glasses should be sold for less than 25 cents; (fifty cents is better; it takes as much time to fit them as it does to fit five dollar glasses) and they should be the cheapest that can be bought. The sale of cheap glasses should be discouraged as much as possible.

I find that first quality periscope lenses fitted in a solid nickel frame are excellent sellers to elderly people. These will give perfect satisfaction and retail from \$1.00 to \$1.50 per pair. Periscope lenses fitted in a ten-year gold filled frame are good sellers at \$2.50 per pair. It is well to have Brazilian pebble

lenses in stock. With these you can give your customer the best that can be had. These will easily bring \$3.00 in steel frames, \$5.00 in 10-year gold filled or \$7.50 in 10k solid gold frames.

Any one starting this line with a limited capital or as an experiment, I would advise to buy a good assortment of lenses and frames separate, but a limited number of each kind of frames. By so doing he can supply his customers as well as if he had three times the amount invested in complete spectacles.

In selling a pair of spectacles be sure to insist that any pair not proving satisfactory may be returned. If good lenses are handled very few pairs will be returned, and even if some should be returned it will only be the means of selling many other pairs, for it will soon be noised around: "Go to — and get your spectacles. He guarantees a fit, and you will not get a pair that will do you no good as you are likely to if you buy from a traveling optician."

Cameras, telescopes, microscopes, etc., come under this head, and are profitable in certain places.

CRUSHING CASTOR SEED.

There are two methods of crushing castor seeds in India: One, the so-called European method or hot process, need only be briefly alluded to. The plant, which includes hydraulic presses, steam seed cooking mill and filtering or refining tanks, is very expensive, and though the process extracts a larger percentage of oil it is of lower quality, being tinged with a brown color, and fetches a lower price. In this process the seed is first crushed whole with its black skin on; after this first crushing, which under the hydraulic press reduces the seed to a bruised pulp and extracts a large proportion of oil, the cake is removed to the cooking and grinding mill where it is ground up fine and macerated by heat at the same time. This process makes it ready for a second crushing in the hydraulic press which extracts nearly all the remaining oil. The presence of the black skin and the heating process, however, destroys the purity of the oil, which even after filtration preserves a marked brown tinge. The other process is the cold drawn or so-called native process in which the "Dutch mill," so-called because, perhaps, introduced by the Dutch into India, is used. The "Dutch mill" is nothing more than two heavy iron uprights connected by two rods on which slide, by means of holes, thin sheet iron plates. One upright carries a screw thread into which a massive shaft, cut into screw form, works. This screw is actuated by long levers fitting into socket holes in a boss at its outer extremity after the manner of a windlass. The castor seed after being carefully shelled or divested of its black skin, and winnowed so that no black particles remain, is bruised and made up into little packets with thin muslin cloth. These are placed between the plates of the machine, one between each division, to the number of 40 or 50. The screw is then tightened upon them, two men working the levers windlass fashion till the oil is expressed. There is a limit of course to the power of manual labor, and the process does not extract the whole oil, much of which remains in the resulting cake. The shelling and winnowing process demands care, as upon the freedom from the black skin depends the purity of the oil; besides which this skin is of a horny and elastic nature and very resistant to pressure. This matters little under the enormous pressure of the hydraulic, but when manual labor is used the incompressibility of the skin would result in a loss of oil, by reason of the resistance offered to the action of the press. Although this process is called a cold process, it must be remarked that unless a moderate heat is applied to the plates of the machines to heat the seeds the oil will not flow freely. Heat is applied in practice by shallow troughs of lighted charcoal placed one on each side beneath the row of plates, but not under the seed being crushed. The "Dutch Mill," owing to its simplicity, is cheap to construct and easily worked by unskilled labor.—(Indian Gardening and Planting; Dr. Cir.)

GRANDE CHARTREUSE MONASTERY.

(Special Correspondence.)

FROM THE FRENCH CAPITAL.

Paris, July 31.

The French Chamber of Deputies, having voted the new "Associations" law, has now dispersed to the seaside and mountain resorts so appreciable during this dog-day heat. The gist of this hotly discussed measure is that no association (religious or lay) can legally exist in France without Governmental approval. It is hardly likely to touch such bodies as the General Association of French Pharmacists which (like many meritorious societies which live in the light of day and court, rather than shun, publicity and inquiry) was "approved" by the Minister of the Interior and the Prefect of Police when it was still in its tender infancy. The new law is mainly directed against the great religious bodies which here possess an indirect political power, appreciated with difficulty by those who have not lived in a Latin and Catholic land.

Monastic Pharmacy.

It is rumored that some of these communities will prefer to leave France altogether rather than submit. For instance, a report was spread that the monks of

The Grande Chartreuse

were about to leave their picturesque home in the Dauphiny Alps for Austria. This rumor was subsequently contradicted. The Chartreux have occupied this convent for some nine centuries, and when recently in the neighborhood, I decided on a visit, hoping to pick up some crumbs of information as to the manufacture of the celebrated liqueur familiar to your readers.

Alas! I had counted without my host. I had an uphill tramp of many miles, a frugal and fleshless dinner, a night in a room of ascetic discomfort (broken by attendance at midnight mass), and a visit to the gruesome cemetery, etc. All this uncheered by female society; our wives and sisters were sternly refused admittance to the building—unsullied by woman's presence for 900 years. (A penciled note on my cell shutters stated the contrary, but I was assured it was merely the writing of some jocular male). After thus mortifying the flesh I inquired for

the distillery, only to learn that it was two miles down the valley and strictly private; in fact I could discover neither bell nor porter's lodge in the high-walled and prison-like building. Such was my rest and only experience in discovering the secret of monastic distilleries.

The Chartreux has, I believe, never been successfully imitated here, at any rate commercially. The Convent is supposed to make three million dollars a year profit from its sale. Their authorities proposed, some years ago, to put its sale into the hands of pharmacists, and an experiment was made. But the pharmacists, one regrets to relate, began cutting prices, and the confraternity objecting, decided to continue their former system of supply. A large glass of the liqueur, by the way, is served by the lay brother to each guest in the visitor's refectory of the convent, a singular termination to a monastic meal.

Convent Specialities

are numerous in France. According to official returns there are, among the religious bodies in this country, 268 pharmacists, herbalists and druggists, five "distillers of essential oils and perfumed waters, hygienic and medical," one doctor only, five "manufacturers of alcohol and venders of liqueurs wholesale and retail," nine chocolate manufacturers, etc. The Aiguebelle Chocolate, the "Eau des Carmes" (Barefooted Friar's Water), the "Toothwash of the Reverend Benedictine Fathers," and the "Jelly of the Sisters of St. Vincent de Paul," will be well known names to all familiar with French advertisements.

These, however, by no means exhaust the list. To quote the first I come across as I glance at the advertising pages of a publication, I find the Brothers of Ploermel offer pectoral lozenges, dentifrices, and antiseptic soap; the Maristes "Harquebus Water" for wounds and sores; solution of Bi-phosphate of lime, etc., the nuns of Morct barley-sugar, the Cistercians and Trappistines various liqueurs—one might fill a page did one care to afford a gratuitous advertisement to this class of business. I purposely omit the Tisane of Abbe' S—, the ointment of Brother M—, etc., which would make up an alphabet of ecclesiastically named remedies offered by duly qualified pharmacists in divers French towns.

The fact that a product bears a monastic name

would appear to facilitate its sale in many cases, for I am convinced that many of the liqueurs, etc., bearing such titles here are not actually made in monasteries. Take, for instance, the well known

Benedictine.

The handsome seaside factory at Fecamp is built in the most ecclesiastical style of architecture, and contains a museum where relics of the Benedictine order may be seen. This new building, erected in 1890 on the site of the one destroyed by fire in 1802, was formally opened and consecrated by the Bishop of Rouen with much ceremony, and we are informed that the original recipe for the manufacture of the liqueur, dating from 1510, was re-discovered in 1863. A monk, Bernard Vincelli, skilled in the use of simples, was deputed by the Abbot to gather local plants and brew an elixir or remedy for the marsh fever, then prevalent in the neighborhood. He succeeded so well that the fame of the preparation soon spread throughout France.

Be this as it may, I believe the modern distillery, dating from 1863, is run strictly on modern business lines and has no connection with the monastic order. M. Legrand is said to have spent four million dollars or more in advertising—not without success.

While on the subject of monastic orders I must just mention that the

Illegal Practice of Pharmacy

by members of religious bodies (nuns as a rule) is a standing grievance with French pharmacists. Occasionally a pharmaceutical society or syndicate takes up a flagrant case and obtains conviction. But the Court is apt to be lenient. The magistrates can hardly suppose the Sister of Mercy has acted from motives of personal profit; it is probably one of the really poor has benefited, and if a fine is inflicted it will be paid by the religious community out of the common purse. So the old struggle goes on, as it has gone on since Louis XIV's time, between qualified pharmacist and tolerated nun.

The French law is that no non-pharmacist has the right to compound or sell remedies. But as a matter of fact so long as the remedy is given to the poor, and not sold, a French magistrate will not convict. As M. Pontier and other pharmaceutical champions hold, this is not the law. It is for the qualified pharmacist alone to compound, and for the state or municipal authorities to pay for those unable to pay for themselves. But to obtain

Free Medicine

is one of the French peasant's specialities, and country doctors tell curious tales as to what lengths the frugal cultivator of the soil will go rather than pay a doctor's fee or pharmacist's bill. He likes to have something tangible for his money and prefers a big bunch of dried herbs as a remedy to the little cachets of quinine and similar drugs "which are so dear." The country clergy would not be human if they did not occasionally pander to the minor weaknesses of the members of their flock. A curious incident I heard of happened (of recent years) not a hundred miles from the Grande Chartreuse. A parish priest was removed from his post for moral misconduct. But he had made himself popular with his parishioners by prescribing (and I fear dispensing, too)—he had been a medical student ere he entered the church—that his revocation caused a riot. His successor was pelted with stones when he entered the village, and the whole population threatened to turn Protestant, and asked the use of the village schoolroom to celebrate service.

In the French Hospitals

the religious orders still serve as nurses in the provincial towns, and in the Hospital of St. Louis and the Hotel Dieu at Paris. The rest of the Paris hospitals have been "laicised." The advisability of this step is one of those semi-religious questions on which it is hard to gather impartial evidence. I will only remark that the French lay hospital nurse is not as a rule drawn from the educated classes, as in England; any lady desirous of taking up nursing as a vocation

would be more likely to enter a religious order.

But with regard to the

Paris Hospital Pharmacists

the question was settled nearly a century ago, and no one, I am sure, regrets the fact that these have been placed in the hands of qualified laymen. In fact, Paris hospital pharmacy is one of the pleasantest aspects of the profession in modern France. The head pharmacist of a Paris hospital is a scientist of merit—sometimes of almost international reputation. His aids are bright young fellows who, having more brains than cash have successfully passed the "Interne" examination, and are thus able, by their few hours' labor per day, to earn an honest living while they study in their spare hours for their pharmacy degree. The institution is, in fact, worthy of detailed description, but can hardly be considered within the limits of the present article.

COMMON LAW RIGHTS AND THE PHYSICIAN'S PRESCRIPTION.—Jervy gives the following summary of the common sense and legal status of the physician's prescription, so far as it has been defined (N. Y. Medical Journal): (1)—The patient has no legal nor other right to demand a written prescription or written directions from the physician. (2)—It is right and wise that the druggist demand and procure from the physician his written orders for the compounding of prescriptions. (3)—The physician has the undoubted right to designate what pharmacist shall fill his prescription. (4)—The written prescription is simply an order from physician to pharmacist. It is, through courtesy, and by virtue of custom and convenience, handed to the patient for transmission; but the latter has not, at any time, the slightest right of possession in the instrument. (5)—The druggist has at least the right of permanent guardianship (perhaps of outright possession) of the prescription, and he must keep it on file for reference and for any form of proper investigation. (6)—There can be no right, extension, or excuse for a copy of a prescription, with physician's name attached, to be taken by druggist, patient, or any one else, without the authority of the physician. (7)—The careful physician should invariably retain a carbon-paper facsimile copy of every prescription he writes. (8)—The druggist has a legal right to utilize any formula that is uncopyrighted that may fall into his hands, but he cannot, unauthorized, use the name of its author in connection with it. In most states, however, statutes would bar his selling intoxicants or other poison except by direct order of physicians. (9)—If a druggist refills a prescription without the order of the physician who wrote it, he does so on his own responsibility, and he has no legal or moral right to leave or place the physician's name on the container.

CEREBRONE.—E. Woerner and H. Thierfelder (Pharm. Jour.; Merck's Report), have obtained from human brain a crystalline principle which they name cerebrone. It is obtained by extracting the brain substance with hot alcohol (4 per cent.) containing 40 per cent. of benzene, or 50 per cent. of chloroform. It is thrown out of the solution on cooling, and after purification, forms a white substance free from sulphur, phosphorus, and ash, neutral, and insoluble in water. When suspended in alcohol and heated to 50° C., the small globular masses become transformed into fine, glistening spangles resembling cholesterolin. Cerebrone frits at 130° C. in a capillary tube, turns yellow at 200° C., and melts at 200-212° C. When boiled with hydrochloric acid, it yields a sugar identified as galactose.

EMODIN IN SENNA.—Tschirch and Hiepe report that senna pods yield more emodin (1.15 per cent.) than senna leaves (7 to 1 per cent.). Alexandria and Tripoli senna yield more emodin than Tinnevely senna, the latter yielding but 8 per cent. Frangula yields 2.6 per cent. of emodin, Cascara sagrada 6 per cent., while rhubarb contains 1.5 per cent. (Sch. Woch. Ch. u. Ph.).

Emergencies in the Drug Store and How to Treat Them. *

By B. K. VAN NATEN, M. D.

In talking to you on the subject of emergencies I cannot help feeling that I am treading on ground just a trifle unsafe. Yet since the pharmacist is in so many cases the first who has to do that the wounded, those suffering from severe shock, or those, who either by accident or otherwise, are under the influence of poisonous substances it becomes one's duty as well as pleasure to throw what light he may be able upon the subject both from the standpoint of humanity where life may be saved and from the standpoint of the pharmacist whose reputation may as the case may be, be either saved or won. Almost at once I am confronted with the all-wise and omnipresent pessimist who shrugs his shoulders, looks at me pityingly, whispering "a little knowledge is a dangerous thing," swaggers off with his head elevated, his nose pointing heavenward with the air of a man who has, rather grudgingly, given to the world a new and brilliant idea. Yes, we meet this man on every side, he tells us the world is going wrong—at least the whole world but himself—that knowledge has reached its zenith and when a new idea which aims to the benefit and uplifting of humanity presents itself he again seeks to check the growth and development of the infant by saying again "a little knowledge is a dangerous thing." Well, granted this is true in some cases. One could easily imagine it to be true in the uneducated, over-confident individual, but I have no such people to deal with in this talk, but a thinking, educated class who have common sense and know how and when to use it. Yet in my opening sentence I said I felt that I was treading on unsafe ground, and unsafe in this way only. No two cases present the same peculiarities since no two individuals are the same. Two cases of shock may be as unlike as two cases of typhoid fever, and one must take in symptomatic details in applying treatment. I cannot give you treatment of specific cases. Such would be impossible until the case were presented and even then I might not be able to recommend the best treatment, but I shall aim to give you a few general facts, which may probably be of use to you in the majority of cases.

And in just such cases one needs first of all a presence of mind. Such are the times that, to use a common expression, "try one's nerve." The surroundings are in many cases such as are, to say the least, trying. An individual is knocked down in a seemingly deserted street yet, in less time than it takes to tell it, he is surrounded by an eager, curious crowd. Everybody waits on some one else to do something. Finally he is carried into your pharmacy. The crowd follows, eager to see this wise man bring the dead to life. Everybody is excited, everybody knows just how it happened, everybody wishes his neighbor to understand that he was first upon the spot, and everybody has by this time thought of something to do. You are advised to "lift his head," "lower his head," "loosen his clothes," "give him some whiskey," "where is your ammonia?" "Are you bound to let the man die?" And so on until unless you have yourself well in hand, you know less about the position of the articles in your store than your unconscious patient. Stop for a moment, take a brace, think to yourself, "I will not allow myself to get rattled." Clear out your store, these people are doing no good and may be doing a great deal of harm. Insist upon these people leaving. It may make you unpopular for the moment, but in the end will gain for you their respect, esteem and, a point never to be overlooked, their custom. If you want help send for a doctor, tell him what you have done and then freely and entirely turn the case over to him.

In the next place use your common sense. Look at your patient narrowly, try to picture his condition and act accordingly. Stop and think. If your patient

is going to die in the time it takes you, or ought to take you, to think he'll probably die in spite of anything you could have done anyway. Does this man need stimulation, or is he already too much stimulated? Will he die if that bleeding is not checked—probably—then how is the best way to stop it? Because I or some one else has told you that we find cold water of use in morphine poisoning, don't subject every case to a shower bath at once, but ask yourself if the patient can stand it. Are there contraindications? You are usually quite sensible, why not use it here? A good dose of common sense, injected directly into your own brain, will probably in the end be of more use to your patient than all your drugs on your crowded shelves.

Fainting.

Now one of the most common, even though it is often the least serious, is a condition of fainting.

It is hardly necessary to call your attention to the fact that there are many different grades of this phenomenon. One individual only says he feels faint, yet he is perfectly conscious and answers your questions directly. Another probably complains that things are getting dark, he gropes his way along the wall, yet he is still conscious and able, with a little help, to walk. Yet another suddenly loses all consciousness and falls heavily to the ground. It is to be remembered that cases of fainting are not in themselves serious, though the conditions from which they rise may be. The causes are many—sudden emotion as a fright, joy, etc., the witnessing of an accident, the sight of blood, pain, prolonged irritation, and many such are in the category of causes. So-called prodromal symptoms are usually present. The patient says that things are growing dark, he staggers slightly, he has a ringing in the ears, complains of giddiness and falls in an unconscious state. In the meantime, the face has become very pale, the lips dry and bloodless, the eyes usually partially closed. The paleness is of a peculiar color, not exactly white, but of a shade usually known as ashy. The unconsciousness is of short duration. The heart action is not impaired in the least, but is regular and full. The respiration shows nothing abnormal except that it may be a little more full and deep than normal. In short, the general condition of the patient is good and is nothing that should alarm one.

The treatment is well known. Loosen the clothing so that the respiratory apparatus may have every chance of acting. Get the patient to cool, fresh air. Keep the head low and apply stimulants to start the reflexes, such as dashing very cold water on the chest or the inhalation of ammonia. When the patient is in a condition to swallow, a glass of wine or hot whiskey is of use. One point I wish to call your attention to especially is to keep the head low. The loss of consciousness, the loss of equilibrium, the paleness of the face, all are indications that the head and brain are suffering from a lack of blood and we can help nature by placing the head low and thus making a path of least resistance for the blood on its way to the brain. I emphasize this point because nine people out of ten forget it and the first thing is to lift the sufferer's head on the knee and begin, soothingly, pushing back tangled locks and gently rubbing the head, and while this might be a pleasant sensation for one conscious, it is hardly a remedial agent.

Shock.

The second phenomenon, which is met quite commonly and allied to the above, is a condition of shock. Shock is said to be caused by an intense irritation of the peripheral nerves, especially attacking the functions of the heart and respiration. Here again the causes are many. Injuries to the vertebral column or of the abdomen are especially liable to produce it. Further shock is caused by lightning, burns, a live wire, operative measures, pain, physical emotions, fear, etc. The so-called nervous or irritable individual is particularly liable to shock.

*Read before the graduating class of the School of Pharmacy, University of Michigan, and contributed by the author for publication in the Era.

Shock is chiefly characterized by weakened energy of the heart action and irregular action of the respiratory apparatus. The temperature always falls, consciousness usually remains, the patient knows what is going on around him, but takes little interest in the surroundings. The skin and visible mucous membranes are pale. The pulse is small, markedly slow, and often interrupted and irregular. The breathing is irregular and labored. The nervous symptoms vary so that two kinds of shock are spoken of. In one set of cases the patient is much agitated, he may groan or shriek or cry out with fear. Such is spoken of as *erethistic shock*. In the second and most common series of cases, and the condition we usually associate with in our mind, the patient lies quiet, is listless, partially conscious, and takes no interest in his surroundings. The countenance is sunken and the patient shows symptoms of marked weakness. This combination of symptoms is spoken of as *torpid shock*. Death may follow from the cessation of heart's action and respiration which gradually weaken until they cease.

The indications for treatment are—first, to get the patient warm. Wrap him in warm blankets and, if possible, apply hot water bottles. If these cannot be had, a vigorous massage is good to restore peripheral circulation. Heart and respiratory stimulants are indicated and probably the best is caffeine, given in strong coffee or hypodermically. Atropine, if used, should be given carefully, since in large doses it may paralyze the respiration and thus add to the danger. The giving of whiskey or brandy has long been resorted to, but they are not direct heart stimulants, and do not seem to be of as much use as caffeine. They may by their depressant action remove inhibition and quiet the patient.

Heat Exhaustion.

Another condition quite commonly met with in the larger cities during the summer season is a condition of heat exhaustion and the still more common condition known as sun stroke. They may arise from exactly the same conditions. Yet they present clinical pictures which are opposites.

Prolonged exposure to heat, not necessarily the direct rays of the sun, often aided by impermeable clothing, physical exertion, and a lack of fluids in the body give us a picture of heat exhaustion. The patient is usually in extreme state of collapse and prostration, usually restless and often delirious. Face is pale, the surface of the body cool, the pulse small and rapid, while the thermometer would show the internal temperature markedly lowered—as low as 95° or 96°.

Here again one would attempt to get the patient warm by the methods mentioned. Hot drinks are indicated if the patient can swallow. A small amount of brandy or whiskey added to hot water would seem well. If the pulse be very small and rapid, strychnia would seem to be of use.

In sunstroke, on the other hand, we have a very different picture. The condition is most serious, death being at times almost instantaneous; in other cases, the patient barely survives an hour. However, the usual form seen in this latitude comes on during exposure to the direct rays of the sun with pain in the head, dizziness, a feeling of oppression and sometimes nausea and vomiting. Visual disturbances, such as colored vision, are common. Insensibility follows, which may be transient or deepened into profound coma, from which the patient never recovers. The picture is very characteristic and strongly contrasted with the preceding condition.

The face is deeply flushed of a bloated, purple appearance. The skin feels hot, the pulse is rapid and full, the temperature is usually way up, the thermometer registering 107° to 110°. The breathing is labored and deep. The pupils are at first extremely dilated, but later pass to the opposite pole of extreme contraction, and the case may be mistaken for morphine poisoning, the history being the sole guide.

The treatment is almost the opposite suggested in the last condition. Probably nothing has so good an effect as cold, rubbing the body with ice, putting

an ice cap on the head, or the free use of very cold water often has the very best effect. Cold drinks or cold enemata are of use.

Other than this I could only tell you to treat symptomatically, but probably by this time the case would have been transferred, and believe me when I say, gladly transferred, to an attending physician.

Apoplexy.

Another condition simulating to a certain degree the preceding is apoplexy. The patient is said to "have had a stroke." The cause of this condition is almost invariably a hemorrhage into the brain, usually at its base. The condition is a very serious one and often fatal. A few reported cases have presented such initial symptoms as dizziness, headache and giddiness. The usual mode of onset, however, is sudden. The patient, to all intents and purposes, is in good health; while reading his papers, eating his dinner or walking he is stricken. He becomes dizzy, suddenly loses consciousness and falls—when picked up he is found to be in a comatose condition. The face is flushed, the pulse hard and rather slow, the breathing is labored. The cheek at one side puffs out at each expiration. The eyes are partly closed, the eyeballs fixed or deviated to the paralyzed side. The pupils are rigid and contracted, the skin is bathed in sweat and the limbs relaxed. If the patient regains consciousness he is often found to be unable to talk and the paralysis of one side of the body is present. The whole condition, especially when the patient is unable to talk, is truly a pitiable one.

The primary indications for treatment are few, but should be carefully carried out, since on the care with which the patient is first handled determines a great deal his prospects of an early and complete recovery. Remember the cause—the bursting of a blood vessel at the base of the brain, the exuding blood causing the symptoms noted through pressure. Would it not seem wise then to keep the patient as quiet as possible and not fill him with stimulants, unless other symptoms absolutely demand them?

The patient's recovery depends upon the absorption of exuded blood, hence the less exuded the less the time of the patient's illness. So lay the patient in as nearly a horizontal position as possible, in which position the blood pressure will be reduced to the minimum. Ice bags or very cold water should be applied to the head and hot bottles to the feet. The lower extremities should be wrapped in cloths wrung out in warm mustard water—a cupful of mustard to the pail. A purge of one or two drops of croton oil is good. The reasons for this line of treatment are clear—the whole idea being to get as much blood away from the head as is possible and thus prevent further trouble. Of course, if the respiration begins to become irregular and the heart begins to become weak, stimulants are indicated.

If you carry out this line of treatment, even though you never get as much as "thank you" for your pains, you will at least have had the satisfaction of knowing you have done the best for the sufferer, have rendered valuable assistance to the doctor in charge, and have, in the face of excitement, shown yourself a rational and thinking being.

Drowning.

In this case you have the diagnosis already made, and, while such cases will probably never be brought to your pharmacy, yet any individual is liable, at all times, to be the first to arrive at the side of a drowning man. The only question arising is what to do.

The first thing noticed is that the individual is either not breathing, or is breathing with very great difficulty. The reason is not far to seek. The patient in his struggles has taken great gulps of water, some of which has passed into his stomach. Too much has passed into his air passages, and remembering the axiom that "two bodies cannot occupy the same space at the same time," we are not surprised to see him struggling for breath. So the first indication is to relieve the lungs and air passages of this foreign body. Probably the quickest and best method to do this is

to stand the patient on his head if you can, but if the patient happens to be a big man and you are not a Hercules, it may be impossible to do this. You can at least turn the patient on his face until the air passages have been relieved. If the respiration has stopped, begin artificial respiration at once.

Artificial respiration must be properly carried out if it is to be of use. Have the patient flat on his back. The most desirable position for yourself is at the patient's head. Then grasping both arms at about the elbows, bring the arms out and up. This expands the chest, forms a partial vacuum in the lungs, and the air rushes in. Then carry the arms back to the side and press on the chest walls with them. This forces the air out again. In this way we get a complete respiratory cycle. The movement should be rather slow and regular, averaging fifteen to twenty per minute.

The temperature is always low, and the next thought is to get the patient warm. The ideal way, of course, to remove the wet clothing and wrap the patient in woolen blankets, and if you have assistance this may be carried out. If you cannot do this, part of your own clothing would be very acceptable to the patient, and after you have been doing artificial respiration for some time, you will feel rather unselfish in the matter and say that he is welcome, since you don't want them.

The patient needs stimulation often, and if he can swallow a hot drink with some brandy or whiskey or a cup of strong, hot coffee, which you remember contains considerable quantities of caffeine, are certainly indicated if they can be had. Ammonia will sometimes aid in starting, reflexing, breathing.

Wounds.

In the present state of medical knowledge wounds do not hold out the picture of horror that they presented in former days. When a slight wound meant the loss of an arm, a leg, or in some cases the loss of life, or when the best to be hoped for was a suppurating sore which took weeks and months to heal, is it any wonder that the physician would almost as soon have a case of smallpox as a wounded finger? Nowadays the matter is looked upon in a different light. A wound must needs be very serious to cause much anxiety as to its outcome. The surgeon goes into the abdominal cavity fearlessly. The opening of joint cavities is almost a daily occurrence. And why? I think it is all summed up in the word "cleanliness." It seems to me that we can say here that "Godliness is next to cleanliness," instead of vice versa, as is usually quoted. Cleanly hands, cleanly instruments, cleanly dressings, cleanly wounds. Everything cleanly. Cleanliness has been the means of assigning wounds to their proper station.

Probably the first thing one attempts, however, is to stop hemorrhage, and here one has his greatest work to do. Nor can he always stop to think of cleanliness, but even in this case one may be careful.

Three principal ways present themselves in stopping hemorrhage. Compression along the course of the bleeding artery, compression at the bleeding point, and the use of styptics. The first calls for a knowledge of the anatomy of the human body, and need hardly be entered into here, though on a limb a tight bandage above and below the wound may stop the bleeding. Probably the quickest and surest method, when practicable, is to compress the bleeding point. This may be done with the finger, or better still when one can, by the use of the common artery forceps. One should first wipe away all blood when he will be able to see the exact bleeding point and can apply forceps. After which, if need be, the vessel may be tied. If the vessel is of any size it should be caught at both ends, since the anastomosis may be so free as to allow a great deal of bleeding if this is not done.

The last way is by the use of styptics. Styptics are of little use if the vessel be large, but if the vessel be small, even though they may be numerous, the proper use of styptics may be all that is required. Very cold or very hot substances are both of use as

styptics, and one or the other may usually be had at any place. Each acts by contracting the vessel wall.

Among drugs tannic acid and the iron salts have long held a high place. Of late years a new substance—suprarenal extract—has come prominently into use. The mixture of suprarenal extract and tannic acid is said to be especially good.

Don't be frightened then at the sight of blood. The ordinary individual can lose considerable blood and still survive. Be as cleanly as possible under all circumstances, keep the patient quiet, especially after using a styptic, else he will soon undo all your work by forcing the clotted blood from the mouth of the vessels which have thus been plugged.

Another form of hemorrhage which sometimes proves serious, is bleeding from the nose and here the same principles hold, though somewhat modified.

The idea of applying cold to the root of the nose or to the back of the neck has long been in vogue and will often stop hemorrhage from the nose.

When this and other common methods fail, it may become necessary to plug the posterior nares and this is not a difficult process. The ordinary soft rubber catheter found in every drug store is the best instrument to use. Tie a thread to the end of the rubber catheter and, keeping the catheter close to the base of the nose, push it back until it appears in the throat. The catheter can then be readily removed through the mouth and a cotton plug, saturated with a solution of tannic acid and suprarenal extract, or other styptics, is drawn up into the posterior nares. This simple operation will stop most any hemorrhage from this part of the body.

Hemorrhage from Stomach and Lungs.

Two other forms of hemorrhage are sometimes met with, these being a hemorrhage from the stomach, hematemesis, or from the lungs, hemoptysis, and some difficulty may arise in a differential diagnosis. The most common causes of hematemesis from the standpoint of emergencies are:

(1)—A diseased condition of the stomach wall, such as an ulceration or a cancer. (2)—Mechanical injuries, such as blows on the stomach region. (3)—Corrosive poisons. The condition, while serious, is not very fatal, the patient usually recovering, though he is left in a weakened condition.

Hemoptysis is, on the contrary, if at all extensive, a very serious affair. It is caused in practically all cases by a diseased condition of the lung, the most common being tuberculosis, though a slight hemorrhage is common in most cases of pneumonia, giving the so-called "rusty sputum," characteristic of that disease.

In making a differential diagnosis between these two conditions, several factors are involved:

- (1)—Previous history.
- (2)—In hematemesis the blood is vomited.
- (3)—In hemoptysis the blood is expectorated.
- (4)—Blood from the stomach is acid in reaction.
- (5)—Blood from the lungs is alkaline in reaction.
- (6)—Blood from the stomach is often in large coagula.
- (7)—Blood from the lungs is always in small coagula, or fluid.
- (8)—Blood from the stomach is often dark and mixed with food.
- (9)—Blood from the lungs is frothy, bright red, and mixed with mucous.

The primary indication for treatment are but few, the after treatment depending entirely upon the cause.

In either case the patient must be kept as quiet as possible. Such patients are usually frightened and anxious, and they may, under excitement, make the condition worse. Opium in some form has long held an enviable position in treating all internal hemorrhages, and probably its whole action depends upon this fact—that it quiets the patient and relieves his anxious state of mind. Ice to such is often employed, especially in hematemesis, and is of value. I need hardly say that giving of ordinary styptics is of little value in stomach cases, and is worse than useless in hemorrhage from the lungs.

Sprains.

By a sprain we usually mean the stretching or tearing of ligaments surrounding a joint. This, in itself, causes some pain, of course, but the greatest pain comes later with the swelling. The causes of swelling in these cases is the exudation of fluids from the overstretched blood vessels. The vessels on stretching, also become dilated, are overflowed, and the fluid escapes through their walls.

The most rational methods of treatment which present themselves are, first, to compress the tissues so as not to allow room for exuded fluid and, second, to constrict the vessels so that as little fluid as may be is brought to the tissues. Here again extreme heat or cold, together with pressure, are of the greatest value. Probably nothing is better than a bandage soaked in ice water drawn as tight as the patient can well stand. This should be kept on for some time and the patient may be saved considerable pain, as well as inconvenience from a swollen ankle.

Poisoning.

It will be impossible for me to take up all the different forms of drug poisoning, for I think I am safe in saying that most any, or at least the majority, of the drugs used now may, when taken in sufficient doses, give symptoms of poisoning which may prove fatal.

Perhaps, however, I may give you a few general facts which will apply to most cases, and it is to be remembered that in drug poisoning it is the prompt and often heroic measures that save life.

Alcoholic Poisoning.

One of the most common forms is the acute alcoholic poisoning. One's diagnosis depends upon the history of the case, if it may be had, and the odor of alcohol which usually may be detected. It is to be remembered, however, that every individual picked up on the street in an unconscious condition, with the odor of alcohol on his breath, is not suffering from this form of poisoning, he often being under the influence of other drugs, such as morphine. When an individual is seriously poisoned by alcohol, the condition resembles chloroform or ether anaesthesia. The patient is at first in a deep torpid sleep, from which he can only with the greatest difficulty be aroused. This passes to a stage of utter unconsciousness, from which it is impossible to arouse the patient. The respiration is very much labored and irregular, the heart also becomes slow and irregular. The face, which up to this time has been flushed, now becomes purplish or pale. It is said that should this condition last longer than ten to twelve hours, the patient rarely, if ever, recovers.

The treatment of such cases is to first evacuate the stomach. The patient should be put to bed and kept warm. Ice bags should be applied to the head to relieve cerebral congestion. If the unconsciousness be deep, respiratory and heart stimulants are indicated—caffeine and strychnia—and last of all artificial respiration (see drowning).

To evacuate the stomach emetics may be useful in some cases, though not in many, and the stomach tube should be used on all occasions when possible. The stomach tube is found in every well ordered and up-to-date drug store, and I am sure yours will be of this variety. A simple soft elastic tube is of the greatest use and the most easily passed. Passing a stomach tube is a very simple sort of operation and is, in most cases, devoid of danger, so that nobody should fear to try his skill. The tube is first to be moistened, then with the patient in a sitting posture, the head bent slightly forward, and the operator standing behind and to the right, the head is held with the left hand and supported by the body of the operator. The stomach tube is then placed in the patient's mouth, pushed back until it strikes the back wall of the throat, after which with a very slight amount of work it passes into the oesophagus and thence to the stomach. Often it is found that just before entering the stomach a slight resistance is met with. This is the cardiac opening into the stomach,

and can usually be easily overcome by a very slight rotary motion. The contents of the stomach then pass through the tube, or the stomach may be easily washed by pouring water through the tube which, acting as a siphon, helped by the contractions of the stomach wall, cleanse the stomach as thoroughly as may be wished. When, as sometimes happens, the contents are not immediately evacuated, intermittent pressure on the stomach or passing water through the tube to remove any masses that may have plugged the end will start the process. The process may also be helped at times by having the patient bend slightly forward.

Morphine Poisoning.

Acute morphine poisoning is, next to acute alcoholic poisoning, the most common and is often mistaken for this form of intoxication. The patient is unconscious. All efforts to arouse him are fruitless. The respiration is very slow, the pulse regular, full, and of moderate speed, the face is purple and congested, the temperature low, the mouth and throat are dry and the pupil contracted to a pin point. The respiration becomes weaker, the pulse smaller and often quicker, the pupil remains contracted until just before death, when it dilates widely. The patient dies in this comatose state.

The treatment of such a case must be heroic and applied early. The stomach should be evacuated at once and the stomach-tube used every fifteen or twenty minutes afterward, since the drug is excreted into the stomach in considerable quantities. Stimulants are indicated and should be freely used, as also should every means to keep the patient awake. Dashing cold water on the skin, especially on the chest, is of use, thus reflexly helping the respiration. The patient should be kept upon the move. Walking the patient as long as possible and flicking him with wet towels are of a great deal of value in obtaining this result. Very strong, hot coffee has been used from time immemorial and is, from its contained caffeine, one of the best of respiratory and heart stimulants, or the alkaloid caffeine hypodermically itself may be used. The giving of spirits is dangerous, since after all they are depressing. When these measures fail, artificial respiration (see drowning) should be used. The artificial respiration should be vigorous and kept up for a long time, since enormous doses have been recovered from under its use.

Strychnia Poisoning.

This form of alkaloidal poisoning is not so common as the preceding, the ordinary physician seeing but few, if any, cases in his practice. The cases presented are usually in children, who have mistaken the tablets, in which it is so often prescribed for candies. The first complaint is of stiffness around the muscles of the neck and face. Soon it is noticed that a slight touch causes considerable movement, or that movement may be brought on by a bright light or even a current of air. The muscles begin to twitch and the patient passes into a tonic convulsion. This convulsion includes all the muscles of the body but the extensors, which being the stronger, overcome the flexors, and the whole body is bent backward and bowed so that the patient rests only on the back of the head and heels; the remainder of the body being entirely lifted from the table. The muscles of the face are drawn so that the patient usually exhibits a hideous grin. Respiration stops, the face becomes purple, the heart is very weak and fast, the patient is suffering agonizing pain and all together, this form of poisoning forms one of the most horrible pictures the physician is called to look upon. The convulsion lasts but a few seconds, the patient becomes normal again only to have the process repeated in a very short time. Death occurs during a convulsion from the fact that the respiration is never reinstated.

Treatment.—Evacuation of the stomach. This may be rendered difficult from the fact that passing the stomach tube is liable to bring on a convulsion and it may be necessary to give a few whiffs of chloroform first. Tannic acid, either in solution or as strong tea, may be given to form the insoluble tannate, but

this should be removed soon, since it is easily broken up by the acid gastric juice.

To control the convulsions chloroform should be used. It is not necessary to induce deep anaesthesia, a few whiffs usually being sufficient to give the required result. Large doses of chloral are also indicated, the chloroform being only a temporary measure given until the chloral has had time to act. Of course, the surroundings of the patient should be as quiet as possible, since the convulsions are brought on only by external stimuli.

Arsenic.

Though this form of poisoning is not as common as it has been in the past, but the fact that it is very considerably used in the arts, in the formation of dyes, together with the fact that one of its salts, the arsenite of copper, is the principal constituent of "Paris green," and that its poisonous properties are well known, still make it a favorite means of death, accidental, suicidal, or homicidal. Arsenious acid has rather a pleasant, sweetish taste, so that it may easily be mixed with food without arousing the suspicion of the victim.

The symptoms appear rather late, an hour or so elapsing before the patient begins to complain of a feeling of constriction in the throat, difficulty in swallowing, and discomfort in the stomach region. This feeling soon becomes violent pain. The patient is purged, the stools resembling rice water.

The symptoms from the alimentary tract are accompanied by giddiness, cramps in the muscles, headache, soon to be followed by symptoms of collapse such as cold, clammy skin, pulse feeble and weak, and sighing respirations.

Treatment. Evacuate the stomach by means of a stomach tube or the use of apo-morphine. A mixture of magnesia and sulphate of iron is said to be the chemical antidote, since they form insoluble arsenites. The symptoms of collapse are to be treated in the ordinary way already mentioned—warmth and stimulation.

Carbolic Acid.

This form of poisoning, still very common, arises often from having taken a quantity by mistake or as a means of suicide. The diagnosis is usually quite easy, being based on the history of the case, the corrosion of the mouth and throat and the odor, which is characteristic. Accompanying symptoms are weakness, dizziness, headache, nausea and vomiting. These are followed by symptoms of collapse, such as pallor, weak, irregular pulse and respiration, while the body is covered with a cold, clammy sweat. The failure of respiration is the cause of death.

The corroded spots of the mouth are whitish, due to the precipitation of proteids, and are painless from the fact that carbolic acid, being a general protoplasm poison, destroys the sensory nerves. The odor can most easily be recognized in the vomited matter.

Treatment. The stomach should be evacuated at once with a stomach-tube and albuminous substances in the shape of milk or white of an egg should be administered. If these cannot be had, demulcent substances, as acacia, will serve to protect the mucous membrane of the stomach. Should unconsciousness come on, the ordinary method of stimulation and warmth are to be used.

Bichloride of Mercury Poisoning.

Accidental or suicidal poisoning may arise from taking the bichloride of mercury. The patient complains at once of harsh metallic taste, which is soon followed by burning pain in the mouth, throat and stomach. Nausea and vomiting soon supervene, the vomitus often containing blood. Diarrhoea with violent pain in the abdomen follow with watery, bloody stools. The symptoms from the alimentary tract are accompanied by collapse, and its ordinary train of symptoms before mentioned. Death may occur within an hour from shock, or the patient may linger for several days, and finally die of exhaustion. The primary indications for treatment are to wash the stomach through a stomach-tube, and give albuminous

substances or tannic acid.

It is hardly necessary to recall to your minds that in corrosive poisoning by acids the treatment should consist of alkaline mixtures, milk and white of egg, that the insoluble albuminates may be formed. Both emetics and stomach-tube are dangerous, from the fact that the corroded points may be punctured. The stomach-tube should be used, however, for the dangers from its use are not as great as the dangers of the poison without its use.

In conclusion, let me say I have avoided details as much as possible and have attempted to give you only practical generalities. Yet I have endeavored to give you principles which, if used, may help you out of an embarrassing position and may be the means of saving the life of some unfortunate. And let me beg of you to keep your nerve. Keep your head. Don't be in too much of a hurry, and do your best to act yourself—a reasonable, rational being. Then you will have upheld me in saying that in emergencies a little knowledge, rightly used, is not a dangerous but a good thing.

THE QUANTITY OF WATER IN FOODS.—

It is not very generally realized how much water is in solid food. Certain it is that no natural food is without water, varying in amount from 5 to 97 per cent., or only 3 per cent. short of pure water itself. Milk, of course, must be taken as the type of a complete food, and yet it contains, even straight from the cow, very nearly 90 per cent. of water, or, to be more accurate, from 87 to 88 per cent. That is to say, more than four-fifths of milk consist of water, and as this is the condition in which it is naturally furnished, the inference is that the fats, the sugars, and the proteids were intended to be taken in a diluted state. Indeed, the composition of other foods would teach the same thing, although, paradoxical as it may seem, some solid foods contain more water than does milk. This is especially true of vegetables and fruits. Thus the turnip contains over 90 per cent. of water, the cabbage nearly the same amount, and the cucumber and the vegetable marrow about 95 per cent.; while among fruits the strawberry contains nearly 90 per cent. of water, the apple 82 per cent., and grapes 80 per cent. Even the various meats used as food contain an amount of water far in excess of the amount of solid constituents. Thus three-fourths of beef and mutton consist of water. The housekeeper, perhaps, scarcely realizes, when consulting the butcher's price list, that three-fourths of the meat are water and are paid for with the rest at the rate of a shilling or more per pound. Lamb contains less water, namely 64 per cent., pork still less, 60.0 per cent., and bacon only 22.3 per cent. It would appear that as the flesh foods increase in the amount of fat the proportion of water, as a rule, diminishes. Coming to birds, the flesh of the fowl and duck contains about 70 per cent., while the flesh of the goose contains only 38 per cent., the last being another example of the fat increasing with a corresponding diminution in the proportion of water. Fishes contain from 40 to 80 per cent. of water. The egg, one of the most powerful of nutritives, contains 65.5 per cent. of water, the white, consisting of 86 per cent. and the yolk of 50.9 per cent. The latter, of course, is the more nourishing part. As a rule, foods containing a small proportion of water are not fit for human consumption until they are cooked, which commonly means reducing them to a digestible state by adding water and boiling or baking, and so when they are actually par-taken of they contain a good percentage of water. Wheat flour, for example, contains only 12 per cent. of water, while bread contains nearly 50 per cent. It would appear to be necessary, therefore, that food should be in a decidedly moist condition before it is fit for use, and thus water plays a role in food which at first sight, perhaps, does not seem evident. Bacteria cannot live or act, except under a wet environment, and chemical change under absolutely dry conditions is impossible; therefore, without moisture life would cease and the great vital processes would come to an end. (The Lancet; Jour. Am. Med. Association).

SHOP TALK.

It is now the custom in one or two of the large tailoring shops along Chestnut street (Philadelphia) to affix the name of their "cutter" to the usual card, giving the house name attached to the coat collar in this wise—"SMITH & BROWN, Tailors, JOHN JONES, Cutter." The idea is that as the cutter is the one really responsible for the fit of the garments the signing of his name to the finished product will tend to make him more careful in his work and to stimulate him to better efforts to get his talents better recognized. In this custom there seems to be a good hint to the druggist. Would not the scheme work to the advantage of all concerned if the clerk who compounded the prescription should sign his name to the label in a suitable place, say at the bottom? It would seem so, for not only would this signing of his work tend to fix the responsibility for looks of the finished prescription, its accuracy, neatness, etc., on the clerk who compounded it, but there would also be in it a stimulus to the man to do his best, when he knew that his handiwork would be criticised as his and not as a vague anonymity. Besides, just as the tailors seek to give credit to the man who makes their reputations for well-fitting garments, it is no more than just that a skilled clerk should get credit for the prescription work he does, especially in a large store where many are employed. The idea is worth trial; let some of our "big stores" try it and report on its workings.

* * *

While strolling around Kensington, Philadelphia's great manufacturing district, where many old and quaint customs still are preserved, the Era man ran across a decided novelty (to him) in the way of cleaning windows. An old colored woman was peddling snails from a basket at the corner of Front and Norris streets, the snails, big fat ones with shiny shells, reposing on freshly sprinkled leaves until a customer came along. Thinking at first that the snails were being sold for eating, for many there eat snails, the old woman was asked about them, and to the surprise of the questioner told him that they were bought for window cleaning. She was easily led to tell all about her strange trade, and thus it was learned that many people in the older parts of the city still depend on snails to keep their windows bright and shining. The snail is dampened and placed on the glass, where it at once moves around and devours all foreign matter adhering to it, leaving the glass as bright and clear as crystal. This way of window cleaning might be turned to good advantage as an attraction in drug store windows—a few big snails crawling over the inside of the glass with a card displayed telling of the use to which they were being put. It is a novelty anyhow, and anything novel nowadays seems hard to get. There is a good demand for snails for aquariums, as they keep the glass sides clean, and snails may be bought from any of the dealers in fishes and such like.

* * *

Messrs. Lignell & Sodergren, retail druggists of West Superior, Wis., issue a little folder they call "Lignell's Yellow Book" which is a good bit of advertising. The subject of their ad is "Modern Pharmacy," and live, snappy text is used in elucidation. "It's a long, tiresome job to become a pharmacist," the ad reads; "First, you ought to have at least a high school education, because a deficient foundation is a drawback." The making of a pharmacist requires two long years of apprenticeship at little or no wages, a difficult examination for the license of assistant, two or three years in a drug store, and, as a finale, two years at a school of pharmacy, in all six or seven years. "Most professional men, after their three or four years' university course, hang out their sign for business, requiring but a few hundred dollars for office fixtures, but the pharmacist,

whose work is a combination of the professional and mercantile, must have three or four thousand." The public seldom realizes what time and expense go to make a modern pharmacist. The old-time druggist got his "know-how" behind the counter only, but modern pharmacy laws require a more thorough training. And the ad here terminates by showing how Lignell & Sodergren's pharmacy is reliable, efficient and has only those men in it who have gone through the training described. The first page of the folder has a remarkably fine half-tone interior of the store. The text is typographically good, on yellow paper, whence the name of the folder.

* * *

Stephen B. Conger, who has long run a drug store at Virginia and University avenues, St. Paul, Minn., has contrived a time-saving and money-saving device that will probably be adopted by other druggists as soon as possible. He has simple articles, which are most frequently called for—such as salts, sulphur, etc.—already put up in little boxes of heavy paper, of different sizes, according to quality, and labeled, all ready to deal out. It frequently happens that a customer darts into the store any says "Give me ten cents' worth of (so-and-so), quick, so I can catch this car." Mr. Conger supplies his wants instantly, the money is paid and not five seconds of time is lost. On the other hand, if he had to take from drawer or bottle, put up and label the small quantity called for, he would be liable in his haste to give overweight, a great deal more time would be consumed and the customer would miss his ardently desired car. Another advantage of this system is that the patron has a box to keep his purchase in, which is much more convenient than the ordinary wrapped and tied-up package.

* * *

As a place of public conveniences the drug store unquestionably takes precedence over all others. A druggist of this city, in a neighborhood made up mainly of big apartment houses and private dwellings, has established a new service. If anybody needs a butcher, a grocer, a doctor, a carpenter, a plumber, or anything, all that is necessary is to go to the telephone, which all the apartment houses and the majority of the private dwellings are fitted with, and give the order or direction to this druggist. He will answer for the rest. Also, for those of his customers who are away in the country, he will fill mail or express orders for anything that he carries in stock—and he has a large number of side lines—and also other things he can get through his jobbers. "Why, to-day," says he, "I'm sending, by mail and by express to various points varying in distance from ten to five hundred miles, thirty-eight packages, which aggregate a profit of about \$12.00. No, I don't intend letting summer carry off any of my business, if I can prevent it." Evidently he doesn't!

* * *

A druggist, whose store is in a rather poor part of New York city, is using a unique idea for bettering his business. He made up a folder, which he issued to his neighborhood and is still distributing on every occasion, containing an index of about all the commoner form of ills that the human being is heir to. Besides giving the common name, he identifies each complaint by describing the attending symptoms—being careful to advise calling in a physician where at all necessary—and recommends the use of certain preparations which he makes himself.

* * *

A good idea for advertising cigars was seen the other day in the shape of a neat little cardboard cigar case holding three cigars, on which was printed—"When empty take me to Blanks, 909 Blank street, and get me filled with Deliciosa cigars for fifteen cents." The cigar case is old, but the wording of the advertisement seems to be rather good, and worth repetition.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Bay Rum.

(X. Y. Z.) The best formula for bay rum we know of is that given in the Pharmacopœia. A "cheap" bay rum may be prepared from one of the following formulas. Bay rum to "stand up" well and remain transparent should contain at least 50 per cent. of alcohol, although it is often made with a less amount. The preparation when made up should be allowed to stand for eight or ten days, and then filtered in a well covered funnel through magnesium carbonate, previously rubbed into a paste with a little alcohol. Many customers prefer the addition of a small quantity of salts of tartar or borax, either of which may be added in the proportion of two drams to the gallon of bay rum, as desired:

(1) Oil of bay.....	2 fl. drams
Jamaica rum.....	1. ounces
Alcohol.....	1.12 pints
Water.....	.24 pints

This preparation may be made clear and bright by filtering through magnesia and charcoal.

(2) Oil of bay.....	1½ drams
Oil of pimento.....	.45 minims
Acetic ether.....	1½ drams
Alcohol.....	.32 fl. ounces
Water.....	.32 fl. ounces

Mix the oils and ether with the alcohol, add the water, allow to stand several days, and filter through magnesium carbonate.

The Era Formulary gives the following formula:	
(3) Oil of bay.....	6 fl. drams
Oil of pimento.....	1 dram
Oil of orange peel.....	1 fl. dram
Tincture of orange peel, U. S.....	½ fl. ounce
White castile soap.....	4 drams
Cologne spirits.....	12 pints
Water.....	9 pints

Dissolve the castile soap in a pint of water by the aid of heat; dissolve the oils in the cologne spirit, gradually add the solution of soap, tincture of orange and water, let stand and filter.

Tooth Powder.

(X. Y. Z.) A formula for a tooth powder which has the indorsement of a practical dentist was published in last week's Era, page 161. Here are some others:

(1) Precipitated chalk.....	2 pounds
Cream of tartar.....	2 pounds
Powdered gum myrrh.....	2 ounces
Powdered orris root.....	4 ounces
Powdered sugar.....	4 ounces
Powdered rose pink.....	8 ounces

Mix and run through sifter and mixer twice.

Carbolic Tooth Powder.

(2) Precipitated chalk.....	16 ounces
Boric acid.....	½ ounce
Powdered cinchona bark.....	½ ounce
Powdered pumice.....	1 ounce
Powdered sodium bicarbonate.....	½ ounce
Powdered saccharin.....	30 grains
Powdered orris root.....	2 ounces
Carbolic acid.....	1 dram
Oil of rose geranium.....	1 dram
Oil of cloves.....	10 drops
Oil of pepper mint.....	5 drops

Mix and run through sifter and mixer twice.

Alkaline Dentifrice.

(3) Precipitated chalk.....	10 ounces
Heavy magnesium carbonate.....	10 ounces
Powdered cinchona.....	10 ounces
Oil of peppermint.....	40 minims

Mix well in a mortar the oil with an ounce of the chalk, gradually add the other powders, and sift several times.

You should also consult previous volumes of the Era in which have been published a great variety of formulas.

Solubility of Quinine and Camphor.

(N. F. P.) submits the following prescription:	
Quinine sulphate.....	6 drams
Spirit of camphor.....	4 ounces
Fuid extract of belladonna.....	2 ounces
Whiskey.....	8 ounces

Mix. Shake.
Our correspondent writes that on mixing the quinine with the spirit of camphor and whiskey a gelatinous precipitate was produced. On warming the mixture the precipitate readily dissolved but was immediately deposited again on allowing the mixture to cool. He did not add any sulphuric acid, he says, because he was directed not to do so. He could not see the prescriber, a V.M.D., so he refused to send out the mixture, stating that he did not have the necessary remedies. He lost his time and also the cost of the medicine and now wants to know whether he did right or wrong?

We think N. P. F. should have sent out the mixture as he prepared it. The precipitation he has noticed is due to the insolubility of the quinine in the liquids of the mixture and also, by a partial separation of the camphor when the spirit is mixed with the weaker alcoholic whiskey. On warming both the quinine and the camphor are re-dissolved. As the mixture is undoubtedly intended for veterinary use we should have no hesitation in sending it out properly labeled, and accompanied with verbal instructions to the customer to slightly warm before attempting to administer it.

Writing Fluid.

(Manufacturer.)

(1) Powdered galls.....	42 ounces
Gum senegal.....	15 ounces
Distilled water.....	18 quarts
Ferrous sulphate.....	18 ounces
Water of ammonia.....	3 drams
Alcohol.....	24 ounces

Mix in an open vessel, stirring frequently until the ink attains the desired blackness. This formula is said to give a deep black neutral ink that does not corrode steel pens.

(2)—Bruised Aleppo nutgalls, two pounds; water, one gallon; boil in a copper vessel for an hour, adding water to make up for that lost by evaporation; strain and again boil the galls with a gallon of water and strain; mix the liquors and add immediately ten ounces of copperas in coarse powder and eight ounces of gum arabic; agitate until solution of these latter is effected; add a few drops of a solution of potassium permanganate; strain through a piece of hair cloth, and after permitting it to settle, bottle. The addition of a little extract of log-wood will render the ink blacker when first written with. Half an ounce of sugar to the gallon will render it a good copying ink.

(3) Calcined sulphate of iron.....	1 ounce
Powdered gall nuts.....	1½ ounces
Vegetable gum.....	½ ounce
Distilled water.....	1 pint

Digest until dissolved.

Hair Restorer Containing No Lead.

(H. L. S.) The following are the Era Formulary:

Persian Hair Restorer.

(1) Vinegar of cantharides.....	250 grams
Milk of sulphur.....	125 grams
Glycerine.....	2,500 grams
Oil of rose.....	20 drops
Distilled water, enough to make.....	10 liters

Jaborandi Hair Restorer.

(2) Sulphate of quinine.....	20 grains
Tincture of jaborandi.....	1 ounce
Glycerine.....	1 ounce
Eau de Cologne.....	2 ounces
Bay rum.....	2 ounces
Rose water.....	11 ounces

Dissolve the quinine in the rose water with the aid of 20 drops dilute sulphuric acid, and add the glycerine. Mix the tincture, cologne and bay rum, and add to the rose water mixture.

Resorcin Hair Restorer.

(3) Resorcin	1½ drams
Tincture of capsicum	¼ ounce
Tincture quillaya	1 ounce
Glycerin	2 drams
Tincture of cantharides	3 drams
Spirit of rosemary	1½ ounces
Rose water, enough to make	8 ounces

Use on hair night and morning.

Erasive Soap.

(Soap.) Try one of the following from the Era Formulary:

(1) White soap	12 ounces
Borax	1 ounce
Salts of tartar	1 dram
Oil of sassafras	1 dram
Water	8 ounces

Cut the soap in shavings and dissolve in the water by the heat of a water bath, add the borax and salts of tartar and boil till reduced to 1 pound; then, while cooling, add the oil of sassafras, and make into cakes of about two ounces.

(2) Fuller's earth
 15 parts || French chalk | 2 parts |
| Yellow soap | 10 parts |
| Pearl ash | 8 parts |

Mix thoroughly, and make into a paste with spirits of turpentine. Color if desired. Form into cakes. A little of this detergent is scraped off with a knife and made into a paste with water and applied to the clothing.

Antipyrin and Tannic Acid.

(W. H. B.) "How should the following be compounded?"

Antipyrin	1 dram
Tannic acid	20 grains
Rose water, enough to make	2 ounces

Apply locally.

I tried compounding the prescription in three different ways and in each case a gummy substance was deposited."

Antipyrin is incompatible with tannic acid and the mixture cannot be put up without a reaction taking place. The prescriber should be informed of the difficulty.

Disguising the odor of Camphor.

(W. C.) There is probably nothing which will completely disguise the powerful penetrating odor of camphor. Of course, this odor may be partially masked or modified by such substances as cumarin, vanilla, etc. Camphor in liquid mixtures like liniments, may be pretty well covered by various essential oils, but just what substances are best suited for the purpose depends upon the manner or preparation in which the camphor is to be used.

Silvering Mirrors.

(W. G.) See Era of Nov. 8, 1900, and Jan. 31, 1901, pages 511 and 120 respectively.

Asthma Specific.

(W. E. M.) We cannot give the formula for the proprietary preparation you name.

MORPHIDINE.—Vongerichten (Berichte; Chem. & Dr.), publishes an interesting paper on this somewhat obscure derivative of morphine. When morphine is distilled with zinc dust, there is obtained, besides phenanthrene, a small quantity of a substance which is termed morphidine. This has, however, been shown to be a mixture of two bases, easily convertible into secondary bases by the action of tin and hydrochloric acid. Of these two bases, one has the formula $C_{10}H_{15}N$, and gives with methyl iodide, an iodomethylate which yields its corresponding hydroxy base. From its general behavior it appears to be a homologue of thebenidine. The other base, which forms the greater portion of the mixture, has the formula $C_{10}H_{13}N$, and appears to be closely related to the isoquinoline group.

CLASSIFICATION OF RESINS.—From experience gained in a long series of researches on resins, A. Tschirch (Journ. de Pharm.) classifies those at present examined into three groups. The first, "tannol resins," contain esters of certain resin alcohols which afford reactions analogous to tannin. These alcohols are termed resino-tannols, and are found combined with aromatic acids. The tannol-resins include the "benzo-resins," benzoin, Peru and tolu balsams, gum acaroïdes, dragon's blood, aloes, resin, and storax; also the umbelliferous gum resins, ammoniacum, asafoetida, and umbelliferous popanax. The second group is named "resene resins," from the chief constituents being indifferent "resenes," bodies which neither combine with alkalis nor show any other marked reactions. It includes the bursereaceous resins, olibanum, myrrh, bursereaceous popanax, Mecca balsam, various oleins, bellium, tacamahac, and mastic; also the dipterocarps resins, damar, doona resin, Gurjun balsam, and Manila copal. These resins contain no esters. The third group "terpeno-resins," contains free resin acids, such as resinic acid. To this belong the coniferous resins, the resin of polyporus officinalis, the resin of copaiba balsam and Zanzibar copal.

CHEMISTRY OF ELDER BARK.—F. Malmjac has isolated a new alkaloid, sambucine, from the bark and leaves of *Sambucus niger*. (Journ. Pharm. Chim., Pharm. Jour.). The disintegrated bark was extracted with alcohol acidified with tartaric acid; the acid residue, after evaporating the solvent, was first extracted with ether, then made alkaline with sodium bicarbonate, and again extracted with the same solvent. On the spontaneous evaporation of the second ethereal extract, small, extremely hygroscopic crystals were formed, which rapidly disappeared on exposure, melting to a colorless oily liquid, which, however, recrystallized in a desiccator over H_2SO_4 . The taste was bitter, and produced tingling on the tongue. The aqueous solution of the body gave marked precipitates with all alkaloid reagents. In addition to this base, a tannin, a purgative resin, and a yellowish red oil are present in the bark.

STUDENTS OF THE ERA COURSE IN PHARMACY
PASS BOARD EXAMINATIONS.

"Two Sisters of Charity were present for examination at the recent meeting of the Ohio Board of Pharmacy. They were from the dispensing department of the Cleveland Charity Hospital. Neither of them had ever been in attendance upon a school of pharmacy nor had they been employed in a retail drug store. But they had studied pharmacy for several years and obtained their practical experience in the pharmacy connected with the hospital. That they had used their time and opportunities to good advantage was apparent in the character of the work they did when upon examination. It was refreshing to an examiner to note the clear, intelligent answers given the questions, in simple but accurate terms. Evidently they had learned the importance of doing their work well, and could patiently labor and wait for an examination entirely confident of success. What an object lesson to some young men, they would but profit by it. In their haste to become registered, they adopt the quiz compend route to aid them in reaching the much desired result, to they succeed? Not as a rule. An experienced examiner on the board of Pharmacy can tell a quiz compend fellow by the time he has read his answers to five questions. A small wheelbarrow full of these worthless books may be gathered from the pockets of the young men who present themselves at every examination. The study of these kindergarten primers no more qualifies one for the duties of a pharmacist than the study of botany would fit a man to command an ocean steamship. Herein may be found a pertinent answer as to why 60 of each 100 applicants receive a notice, 'rejected'.

The Nuns passed. They were worthy to become registered. They had toiled faithfully and their work was thoroughly done. They are the first of their order to appear before the Ohio Board, consequently the first Sisters of Charity to receive from it certificates of competency by examination."—THE MIDLAND DRUG-GIST, (Columbus, Ohio, June, 1901).

The Sisters referred to in the above complimentary notice, Sister Marcelline and Sister M. Mechtildis, both of the Charity Hospital, Cleveland, were students of the Era Course in Pharmacy. We congratulate them upon their success. We are glad to be able to add that such records are common for Era Course students.

NEWS DEPARTMENT.

N. A. R. D. NCTES.

Chicago, Aug. 10.

As has been already announced the 1904 Convention of the National Association of Retail Druggists will be held in Buffalo, N. Y., Oct. 10-12, 1904. The business sessions will all be held in the City Convention Hall, including the Committee meetings. The Convention Hall furnishes ample accommodations and it is believed there will be no other official headquarters, though this matter is still in the hands of the local entertainment committee. The chairman of the committee is H. J. Dimond, 330 Connecticut street, Buffalo, to whom all inquiries about accommodations should be addressed.

A circular giving full particulars as to cost of transportation, hotel rates, and all other needed information will shortly be issued and will be furnished from the Secretary's office. Next to the 1901 convention the annual meeting of the year 1901 will be the most important event in the history of the N. A. R. D. A great many delegates have already been appointed and it is likely that the attendance will outnumber many times the attendance at any past meeting.

In January last the Executive Committee of the N. A. R. D. authorized Secretary Woolen to begin at once the work of organization outlined by the National Association at its Detroit convention. As an experiment a competent man was engaged to organize county associations of druggists in the state of Indiana. This experiment having proven satisfactory the Executive Committee decided upon extending the work to other states as rapidly as possible, and the work has been pushed vigorously. There are now fourteen men at work in this department as follows: Jos. R. Noel, M.D., General Organizer; Chas. H. Tyler, Eastern Illinois; J. C. Singer, Central Illinois; E. R. Lincke, Western Illinois; Geo. R. Quarles, Northern Illinois; E. E. Chapman, Iowa; W. L. Post, Minnesota; Geo. R. Schodde, Wisconsin; Fred. C. Vincent, Michigan; W. W. Meeks, Indiana; N. W. Hoffman, Northern Ohio; R. H. Izor, Central Ohio; Chas. H. Hughes, Southern Ohio; E. C. Bottume, New York.

Taking its cue from the effective organization of the political parties it was decided that the only way to organize was from the bottom up. As a consequence the organizers in this department are effecting county organizations and going to one county after another in regular order, regardless of size, condition or number of druggists therein. Some associations have a very small membership but the work has been done so systematically, and so thoroughly that it has given rise to many commendatory expressions from proprietors and jobbers as well as the retailers themselves. No legitimate druggist is too small or too large for the N. A. R. D. to invoke his aid and co-operation. Every man doing a local business within the territory embraced by the local association is approached, and if eligible to membership is urged to join. The proportion of druggists being brought into the association has thus far been 85%. A detailed report of the work done in the several states where the organizers have been at work will shortly be prepared for the pharmaceutical journals. At this time the number of associations formed is as follows:

INDIANA. The following county associations: Adams, Benton, Boone, Carroll, Cass, Clay, Clinton, Daviess, DeKalb, Elkhart, Fulton, Grant, Hamilton, Howard, Huntington, Jay, Kosciusko, Lake, LaGrange, Marshall, Miami, Montgomery, Newton, Noble, Pike, Porter, Pulaski, Randolph, Stark, Steuben, Tipton, Vigo, Wabash, Wells, White, Whitley. The following city associations: Alexandria, Anderson, Elwood.

ILLINOIS. The following county associations: Grundy, Henderson, Iroquois, Kankakee, Knox, Lake, LaSalle, Lee, Livingston, Logan, McLean, Mercer, Ogle, St. Clair,

Stark, Tazewell, Warren, Woodford. The following city associations: Streator.

IOWA. The following county associations: Allamakee, Benton, Buchanan, Carroll, Clayton, Clinton, Dubuque, Fayette, Grundy, Iowa, Jackson, Jasper, Jones, Johnson, Polk, Winneshiek.

MICHIGAN. The following county associations: Allegan, Barry, Berrien, Branch, Calhoun, Cass, Eaton, Gratiot, Hillsdale, Jones, Ingham, Kalamazoo, Lenawee, Monroe, Ottawa, St. Joseph, Van Buren.

MINNESOTA. The following county associations: Blue Earth, Steele, Paribault, Fillmore, Houston, Mower, Olmstead, Steele, Wabasha, Waseca.

MISSOURI. The following county associations: Adair, Clark, Knox, Lewis, Lincoln, Marion, Montgomery, Pike, Ralls, Randolph, Schuyler, Scotland, St. Charles.

NEBRASKA. The following county associations: Douglass, Gage, Lancaster, Otoe.

NEW YORK. The following county associations: Chautauque, Monroe.

OHIO. The following county associations: Preble, Van Wert, Williams.

The above named counties contain some cities of considerable size, such as Des Moines and Dubuque, Iowa, Omaha and Lincoln, Neb., Terre Haute, Indiana; Rochester, New York; East St. Louis, Decatur and Bloomington, Ill., and Lansing, Mich. Work in the other states will be taken up as soon as these can be reached.

The following has been received at the National Secretary's office:

"Cassopolis, Mich., May 18, 1901. On May 10th the druggists of this county were organized into an association at which time the following was adopted: 'Whereas the internal revenue tax on proprietary goods has been repealed by the national government, and whereas the N. A. R. D. accomplished the great bulk of the work which secured the above repeal, therefore by the Cass County Retail Druggists Association, in convention assembled, be it resolved, that we hereby demand that such proprietors as have not already agreed to do so shall restore the prices that were in vogue before the passage of the above act, and that the Secretary of the Association is instructed to record this resolution on the minutes of the Association and to forward a copy to the Secretary of the N. A. R. D. (Signed) F. M. Fink, Secretary.'

In Omaha, Neb., a cessation of the price cutting war has been effected. The Douglass County Association has reunited with the N. A. R. D. and is now doing excellent work. E. C. Bottume, an organizer for the N. A. R. D. having recently effected its organization. Good associations were also formed at Beatrice and Nebraska City. On his return to Chicago Mr. Bottume secured the affiliation of the Polk County (Des Moines) Iowa Association. While in that city the schedule price on \$1.00 proprietaries was advanced 4 cents above the former selling price.

The aggressive cutter of Galveston, Texas, has fallen into line with his fellow druggists in that city and prices on proprietaries have been restored to full figure. The Galveston druggists are loud in their praise of the N. A. R. D.

The state associations that have held their 1901 convention have almost without exception re-affirmed their loyalty to the N. A. R. D.

The "Imperial" Trade Mark is the insignia and a guarantee of quality in Rubber Goods. Any Imperfections are made good by The Goodyear Tire & Rubber Co., Akron, O.

NEW YORK AND VICINITY.

AN EPIDEMIC OF FISH STORIES.

Drug Section Overrun With Myths of Fishermen Returning From Vacations.

"It is queer how a man who is square and truthful throughout the year goes wrong annually after his vacation fishing trip," said Col. E. W. Fitch, of Parke, Davis & Company, with a significant nod toward his big "No Fish Stories" sign. He had reference to the heavy weight talk of G. L. Mariager, S. H. Carrigan, Dr. Takamine, H. Thornton and W. J. Carr, who, with Mr. Ritchey, of Bruen, Ritchey & Company, have returned from a fishing trip in the wilds of Canada, north of Ottawa, with a splendid stock of fish lore but no scales on their clothes.

"Now down in Kentucky, when I was a much younger man," the Colonel proceeded in a threatening tone, "we did some cat-fishing that was worth talking about"—but the Era man was gone. He has listened to enough fish talk the past week to stock an aquarium that would make the Battery institution look like a minnow.

According to Mariager, if the Parke, Davis delegation had attempted to eat all the fish they could have caught they would have contracted "Fin and Gill," the new disease which is making ravages among the South Sea Islanders. Mariager is the spokesman for the crowd on account of his fine voice and easy convincing style. But the team work is great. "That's right." "It was a shame to catch them." "Too easy," are chirped in artistically when Mariager gets into deep water. Mr. Ritchey is doing a solo down at Bruen, Ritchey & Company's.

C. E. Cornell, of McKesson & Robbins, comes back from Martha's Vineyard with a string of mythology that deserves a better audience than he gets in the fancy goods department. He tells sword fish yarns averaging 400 pounds, but modestly attributes them to the hotel landlord, adding, however, with a flush of pride, that sword fish make very good eating. His stories include duels between the fish that wear their side arms in front, fierce charges and punctured boats, "men impaled on the dripping steel sword points"—Mr. Cornell did not seem to realize that he had gotten out of the water. The splendid 5½ pound blue fish that he caught are passed by with a word and a wave of the hand.

In view of this awful epidemic, a suggestion has been made that a new proprietary remedy for the ichthyological imagination ought to be put out before M. J. Breitenbach returns to precipitate a general plague. He is on his annual trip to Thousand Islands. Breitenbach is one of the most enthusiastic disciples of Walton in the city and if he were an ex-president or a present vice-president, Cleveland and Roosevelt could not get the space in the papers that properly belongs to Breitenbach. Before the collection on his wall was destroyed by fire, Breitenbach had the finest gallery of stuffed and framed specimens of the finny tribes to be seen in the country. His success as a collector is largely due to the fact that he never eats any of the fish he catches or buys, but hangs them up as illustrations in the narratives of his prowess with rod and reel, with which he regales his friends and out of town visitors. He hopes to duplicate his former fine collection of fish and fable on this trip.

TOM FRASER AT HIS OLD GAME.

That the versatile drug swindler and "dead beat," Tom Fraser, who has for years attempted to carry on his crooked operations under a name similar to that of the reputable firm of Fraser & Co., 262 Fifth Avenue, is still at his old tricks is evidenced by an order on one of the old blanks of the Duane street concern broken up by Era exposures, directed to a Peekskill, N. Y., dealer in wrapping and toilet paper. Fraser has carefully cancelled the old address on the order blank and has written "266 W. Twenty-first street", where he is posing as a wholesale druggist. Although warnings against Fraser have grown trite, it is well to keep him in mind, in view of his change of base and methods.

APOTHECARY OF THE OLD KEARSARGE.

Veteran Druggist of the Civil War, George A. Tittle, Now at Soldiers' Home—Oldest Living Alumnus of N. V. C. P.

In Ward D of the Soldiers' Home at Kearney, New Jersey, is veteran of the civil war and a patriarch of the mortar and pestle, whose life history holds unusual interest for pharmacists. He is George A. Tittle, who, until four months ago, owned and managed a store at No. 246 Van Horn avenue, Jersey City, being in all probability the oldest active pharmacist in the country. He is 80 years of age.

When the Era man called at the home he received a cheery welcome from a neat little old man of erect carriage, with a clear blue eye and a snowy white beard and hair. He was reluctant to speak of his own life career, but a casual reference to the short stump of the missing index finger of his right hand put him in a reminiscence mood. The finger was lost in the famous naval engagement between the United States ship Kearsage and the terrific Confederate commerce destroyer, Alabama, off Cherbourg, France, June 19, 1864. Tittle was the surgeon steward, or apothecary, on the Kearsage. He was with Winslow in this capacity for three years, and served under Farragut for the same length of time on the Brooklyn, the first ship of the blockading squadron, patrolling off Pensacola. He has in his possession a long splinter, covered with dry blood, which he claims is the only piece of the Alabama that was ever recovered or is in existence. He is proud of his exclusive souvenir, which he extracted from the leg of a wounded British gunner, who was on the Alabama. Tittle has been at the home but a few days and is the center of interest among the "boys" in the old men's ward. He has a store of naval lore of the old navy that is fresh and interesting to these old heroes, whose greatest amusement consists in the exchange of experiences of the war time. He is a good story teller, retaining all of his faculties, even at the age of four score.

George A. Tittle believes that he is the oldest living alumnus of the College of Pharmacy of New York City, having graduated from that institution in 1849. He is apparently as energetic and ambitious as in his youth and chafes under the life of inactivity in the Soldiers' Home. He says that he never would have become a Government ward, however much he is entitled to it, unless he had grown ill, and insists that as soon as he is able to leave the ward, he will make an effort to get back into active work in the drug business. Tittle is widely known in Jersey City, having been identified with the retail line for over half a century. Although the greater part of his professional life has been passed in that city, he is a native of Massachusetts, having been born in Beverly, that State. He is unmarried and has no relatives.

HUDSON MAY HAVE TO ANSWER NEW CHARGE.

Troubles are likely to accumulate for Paul B. Hudson, former drug swindler who has been held to answer for grand larceny on a charge of stealing a trunk from the Park Avenue Hotel. He has never been punished for having secured drugs in this city by using the names of leading Philadelphia dealers, although he was fined \$500 for using the United States mails for fraudulent purposes, an extremely light punishment for a crime of the calibre he had committed. Most of the goods, which he obtained under false pretences were recovered, but a quantity of cocaine was lost by McKesson & Robbins, who are in consultation with District Attorney Philbin with a view of bringing a criminal action against Hudson. There is nothing to bar such an action, and if by any means the grand larceny charge should fail to stick, the man could be held to answer on this complaint.

The grand jury has indicted the swindler on the trunk stealing charge. His offer to make a money settlement with the complaining witness, Samuel Butter-

worth, far in excess of the value of the trunk, which Hudson took from the Park Avenue Hotel on July 30, seems to indicate that the prisoner realizes that there is no escape from a term in the penitentiary. The proffered money has been refused by young Butterworth and the hotel management, and Hudson will not escape so lightly as he did on a former charge of using the mails for fraudulent purposes. The course of justice in his case is being closely watched by several jobbers, among them the New York Quinine and Chemical Works, Ltd., with a view of holding him for his former crooked deals in the drug business, if he does not get his deserts on the grand larceny trial.

Death of Dr. W. J. Cadmus.

Dr. W. J. Cadmus, one of the oldest druggists in Jersey City, and an active member of the Jersey City Druggists' Association, died suddenly of heart trouble at his home in Paterson on August 3. He had been suffering from the effects of heat since the trying days of early July, but his ailment had not been considered of a serious nature. Dr. Cadmus has also been a practicing physician from 1879 to 1890, since which time he devoted his entire attention to his drug store at No. 229 Newark avenue. He had been in business in Jersey City for over 40 years, having been located in his present place of business for 22 years. Deceased was 65 years of age. He leaves a wife, who resides at Paterson, and two brothers, located in Passaic, N. J. The burial took place on Tuesday at the Cedar Lawn Cemetery in Paterson. The Cadmus pharmacy will continue under the management of the doctor's executors.

NOTES.

—Thomas P. Cook, of the New York Quinine and Chemical Works, the New York member of the exhibit committee for the St. Louis convention of the A. Ph. A., reports a brisk demand for spare and says that the committee will be able to select one of the most interesting exhibits of drugs, chemicals and appliances ever prepared in this country. The list includes drugs, chemicals, apparatus, books, charts, historical and antique objects, prescription helps, and novelties of all kinds.

—Arthur A. Stillwell, dealer in essential oils, 163 William street, is an enthusiastic golf player. Not long since he took part in a big tournament at his country home at Greenwich. There were fourteen players, and Mr. Stillwell was a bad fourth-best. In making confession of having finished at the foot of the class to a friend, his Scotch was so bad that the friend could not give an intelligent account of the game to the Era man.

—Miss Esther Newman of No. 122 Prince street, Newark, N. J., who recently graduated from the New Jersey College of Pharmacy, is dead as a result of an operation for appendicitis. She had intended to open a store near her home. Miss Newman was the daughter of Rabbi Newman, widely known as a brilliant Hebrew scholar and orator.

—H. G. Shaw, of McKesson & Robbins, is back after a pleasant two weeks at Seaconnet, near Newport. He reports the fishing fine, but acknowledges that he had the amateur's luck. C. E. Cornell, of the same firm, who has been spending his vacation at Edgartown, Martha's Vineyard, with his family has also returned.

—Preparations are already being made for the celebration of the Golden Jubilee of the New York Deutscher Apotheker-Verein, which is to be held October 1 to 3. Carl Schur is chairman of the committee of arrangements. The banquet will be held on October 1 and the "Kommers" on the 3rd will make an eventful day.

—The management of the Buffalo Pan-American Exposition has imposed restriction on the use of cameras in the grounds and issues a permit for kodaks, specifying size of plate and barring tripods. The kodak need not pay for his privilege and must contract not to use pictures for stereoscopic views.

—A disastrous fire in Cantarow's pharmacy at Hartford, Conn., on August 10th was caused by the boiling over of a pail of syrup, which had been placed on a gas stove.

Little of the stock was saved, the rear of the building being a mass of flames when the fire was discovered. The loss will be nearly \$2,000.

—John E. Surwe, who has for many years been the San Francisco representative of the Lazard, Dalley Co., of 12 Duane street has formed a partnership under the style of the Cheig-Serwe Mercantile Company, which will handle several different lines of goods.

—John J. Chambers, who has been in the retail drug business for 15 years at Middletown, N. Y., has sold out to his brother and will retire from business. He has promised to pay his creditors from the proceeds of the sale of real estate, which he owns.

—A large number of the officials of Schieffelin & Co. are away on vacations this week. Among those who are seeking recreation are Colonel J. W. George, W. E. Coffin, E. B. Livingstone, A. J. Cramp, J. M. Gray, W. H. Ebbitt and C. A. Bauer.

—F. W. Herbst and family, of Columbus, Ohio, have been visiting relatives in New York. Mr. Herbst's visit was saddened by the sudden death of his mother last week. He is a well-known member of the Ohio Pharmaceutical Association.

—The drug store at Ake Hopatcong, N. J., has been closed by Joseph Miller, the proprietor, on account of the dullness of trade at the resort. Miller is contemplating a move to Plainfield, N. J.

—W. K. Mattern and H. F. Smith of Parke, Davis & Co. have gone west to Detroit to post up. It is the custom of the company to send representatives west annually for this purpose.

—Dr. James W. Robertson, of Leitchfield, Minn., made several calls in the drug section last Saturday. He is on his way abroad, having been called by the sudden illness of a patient.

—Col. J. W. George, of Schieffelin & Company, left last Saturday for a three weeks' vacation to be spent down east. He has kept his place of retirement a secret.

—The drug store at Cranford, N. J., formerly occupied by W. J. Hart, who absconded, has been leased by John Marlen, who will open up a store on the premises.

—C. Golden has left the Sherman Square Pharmacy at Seventieth street and Broadway to accept a position in the store of E. W. Babcock at Amagansett, L. I.

—Visiting druggists on the Drug Club register are: J. D. Owen, of Clarksville, Tenn.; P. J. Torney, of San Francisco, and J. M. Bissell, of Navasota, Texas.

—Merek & Co. suffered a loss of \$100 last week by a fire in the store at Nos. 13 and 19 University place, chemicals on the ground floor being damaged to this extent.

—J. W. McCartney, buyer for the Drake Brothers' Company, wholesale and retail druggists, Milwaukee, Wis., is in the city in the interests of his firm.

—Manager William M. Warren, of Parke, Davis & Co., sailed on the 8th from Liverpool on the steamship Oceanic which is due to arrive yesterday.

—E. A. Schaefer, who is the proprietor of two large retail drug stores in Pittsburg, made a business trip to this city last week.

—David W. Kent, of R. W. Robinson & Son, has returned from a two weeks' vacation spent at Old Point Comfort, Virginia.

—H. N. Daneke, the Baltimore manager of Sharp & Dohme, was the guest of J. L. Hopkins at the drug club last week.

—General Manager Ernst Stoffregen, of Sharp & Dohme, has left with his wife for a two weeks' outing at Mount Kineo.

—George E. Pearson, a retail dealer of Hopewell, New Jersey was the guest of S. H. Carragan at the Drug Club last Friday.

—A new retail store is that of Charles Dichter, first vice-president of the Drug Clerks' Circle, at No. 21 First avenue.

—P. A. Raby of the Evergreen Chemical Company has left for a three weeks' business trip through Pennsylvania.

—Alonzo T. Dargan, who is with Sharp & Dohme, has gone to Atlantic City to enjoy a vacation of two weeks.

—W. W. Tamlyn, of Whittall, Tatum Co., is away on a two weeks' vacation. He will return this week.

—Dr. P. W. Brakeley, retail druggist of Glen Island, made several calls in the drug section last week.

—Henry Klein, a prominent pharmacist of Birmingham, Ala., was a visitor in the drug section last Friday.

—Dr. L. A. Van Dyke, a Chicago druggist, was a guest at the Drug Club on the 9th.

—E. A. Schafer, a Pittsburg retailer, made a business trip to this city last week.

—Charles O. Weisz, of McKesson & Robbins, visited the Pan-American last week.

NOTES.

—G. C. Prescott, formerly in the employ of the Jaynes Drug Company, and well known to many in the drug trade in this city, and who recently has been the owner of a cigar store at 15 Water street, this city, has disappeared from his usual haunts and also from his home in Somerville, where he left a wife and two young children. When last at his store, he left the place in charge of a clerk and later in the day this clerk received a letter from Mr. Prescott saying that he should not be back that day and enclosing the key to the store, with the request that the clerk close the place at night. Since that time, Mr. Prescott has not been seen either at his store or at his home, although his wife states that she knows where he is. It is hinted that all may not be right regarding his association with an organization for which he had charge of funds.

—John Eagan, the youth who was arrested last week on the charge of breaking and entering Lewis's drug store at the corner of Portland and Merrimac streets, this city, and further charged with the larceny therefrom of a large quantity of cigars and cigarettes, stated that he had nothing to say when he was arraigned in the court, one day this week. He therefore was held in \$1,200 bonds for appearance later before the grand jury.

—W. F. Cox, formerly president and director of Cox & Co., Inc., manufacturers of druggists' labels, boxes, etc., Sudbury Building, this city, has resigned and also transferred his stock, severing his connection with the company altogether. Frank C. Dennis, acting president, says the business will be continued under new management and with new heads of departments.

—Hon. John Larrabee, mayor of Melrose, and of the drug firm of Stearns & Larrabee, has received word that his son, John H. Larrabee, who is employed in the hydrographer's office of the United States navy, has been promoted and has been detailed for temporary duty as draughtsman on the United States ship Eagle. The appointment goes into active effect about September 1.

—What once was W. F. Weld's drug store, Ferry street, in the East End of Malden, and which later became Loring & Co.'s store, is now known as "Whittaker's," having passed into new ownership. Mr. Whittaker formerly was employed at Ferguson's pharmacy in Cliftondale, and previously to that was employed at Bulfinch's drug store in Lynn.

—For the purpose of manufacturing machines to carbonate water and other liquids, the New England Static Carbonating Company has been organized, with a capital stock of \$300,000, of which nothing has been paid in, as yet. Charles F. Berry, of Boston, is president and Frank H. Morgan, of Cambridge, is treasurer of the new company.

—W. B. Southworth, one of the old-established druggists of Malden, where his pharmacy is located on Pleasant street, the main business thoroughfare, has been enjoying a little respite from business cares in a visit to Wellfleet, on Cape Cod, where his family has been for some time.

—Fall River people have a new pharmacy, which is that of John Laman & Co., situated near the Chase Mills in that busy city. Harry Carter, who used to be a clerk for Henry Maxwell, a Lynn druggist, is manager of the new store.

—C. H. Perry, a traveling salesman for the Eastern Drug Company, for whom he covers Massachusetts, is planning to go to Buffalo, to the Pan-American Exposition, for his vacation, which will come the latter part of August.

—When the entire renovation of Grover's drug store at Winchester is finished, it will make that place one of the handsomest pharmacies in all Massachusetts. It is a notable addition to the business interests of Winchester.

—A trip through the White Mountain region in New Hampshire is being enjoyed this month by Joseph S. Walsh, long a clerk in Forest's drug store in Lawrence.

Customers who buy Four-Fold Liniment are pleased, and come back for a second bottle.

IN AND ABOUT BOSTON.

NEW CHANGE IN A PHARMACY WITH A HISTORY OF HALF A CENTURY.

Boston, Aug. 10.—The interest of the late Frank E. Lee, in the drug business of A. Lee & Son, at Manchester-by-the-Sea, Mass., has just been bought by B. L. Allen, who, together with Charles O. Lee, will make up the partnership in the business. The old firm name of A. Lee & Son has stood prominently for the last half century or more among the business interests in Manchester and the pharmacy is well known far and wide in Essex county, the "garden county" of Massachusetts. Manchester is the famous summer resort where are found year after year so many wealthy occupants of handsome cottages owned by residents of Boston, New York, Philadelphia, Washington and other cities. This season the Spanish, French, German, Swiss and other legations from Washington have taken up their residence there for the summer. Lee's pharmacy benefits largely from all this summer population.

A Pharmacist Back From a Year's Stay in Mexico.

Boston, Aug. 10.—William H. Butler, a former resident of Brookline, where he was the proprietor of a large pharmacy, is at home again, after a year's travel in Mexico. Mr. Butler made his headquarters at Oaxaca, a small place on the western coast of that country, and some distance from any city. He now has large mining interests there and so intends to make Mexico his permanent home, after closing up his business affairs in this part of the country so that he can return, taking his family with him. It was just about a year ago that he sold out his drug business to Philip A. Nordell, a reverend gentleman, perhaps more familiarly known as Dr. Nordell, who now combines the two professions of pharmacy and the ministry, and who still is active in both. Dr. Nordell, before coming to Brookline, was long associated with a pharmacy in Philadelphia, Pa., and as a Baptist divine he frequently substitutes now at one of the churches of this denomination in Brookline.

Little Change in Trade Conditions.

Boston, Aug. 10.—Trade conditions remain about the same as a week ago, with very little change in any of the commodities. Hot weather always creates a great demand for the products of the soda fountains, which naturally play a very large part in the revenue line with druggists. In this respect, business has been better the last few days than it was a week ago. Alcohol continues in good demand and with the price quite firm. Among chemicals the price of nitrate of soda fluctuates somewhat, but the rest of the list shows few changes. Almost all drugs remain at about the same figures with a fair demand for each. There is little demand for dye stuffs with indigo about the most quiet in the list, although the indications point to a heavier demand later with stiffer prices.

PHILADELPHIA.

THE STORAGE OF EXPLOSIVES.

Philadelphia, Aug. 10.—The recent explosion on Locust street, whereby five houses were demolished and a number of persons were killed and injured, has started anew the agitation against the storage of gasoline and explosive substances in the city proper, an agitation quite unwarranted as far as its demands for new laws is concerned, for these are ample, but quite deserved, if it will secure a rigid enforcement of them by the authorities. "Inspections are largely a farce," is what a prominent insurance man said the other day, and it looks like it, when in almost any little corner grocery store is material to blow it and its neighbors sky-high. The ordinance enacted April 2, 1901, at the instance of the Trades League and Insurance Associations will, if enforced, provide ample protection against the storage of explosives in dangerous quantities. Under it, seven classes of licenses are to be issued from the mayor's office, two of which, for gasoline, etc., on payment of fee, the others without charge. As certain of these clauses affect both wholesale and retail druggists, it seems worth while to give them with the note that there is a heavy penalty for their violation:

"Class B.—Chemicals, * * * etc., in packages: saltpeter, not to exceed 25 pounds; peroxide of sodium, not to exceed 5 pounds; permanganate of potash, metallic potassium and sodium, not to exceed 5 pounds; nitrate of soda, ammonium, strontium, barium and lead, not to exceed 25 pounds; chloride of soda, not to exceed 25 pounds; phosphorus, not to exceed 3 pounds; provided—that the articles named are kept in a fireproof brick vault and the phosphorus is kept under water." Exempt from fee.

"Class B1.—Chemicals and combustibles in packages: sulphuric ether not to exceed 1 carboy; acetone and bisulphide of carbon, not to exceed 1 drum; sulphuric acid, not to exceed 25 pounds; nitric acid, not to exceed 5 carboys; fuming nitric acid, not to exceed 35 pounds." Exempt from fee.

Space will not permit the giving in full of the text of this ordinance, but every wholesaler and manufacturer should procure a copy and familiarize himself with its provisions lest he be refused his insurance in case of fire or be arrested for violating the law.

A Dull and Quiet Week.

Philadelphia, Aug. 10.—This has been a dull and quiet week in both wholesale and retail drug lines, very little business is being done outside of the routine orders, and quite a number of prominent local druggists have taken advantage of this to make a flying trip to the seashore or mountains. In spite of the number of people away, the city still seems crowded, and one wonders where all the crowds at the seashore come from; still, lots of people are away, as is shown by the falling off in the sale of soda water in the big downtown stores. Grave fears are expressed that the steel strike will seriously cut into the fall business of the wholesalers, if it continues any length of time, for the business of Pennsylvania is so intimately bound up with the steel and iron trades that what harms one harms all. As a small matter, the strike will cause almost complete cessation of shipments of chemicals and glassware from this city to the laboratories of the big mills, much of these now being supplied by firms here.

Actress Took Too Much Medicine.

Philadelphia, Aug. 10.—Considerable excitement was caused here a day or so ago by the report that a well known actress had committed suicide with poison she had coaxed out of an impressionable young drug clerk employed by a Philadelphia druggist located at Asbury Park, and vague rumors of the following suicide of the young man were hinted at. The whole story finally resolved itself down to the fact that Miss Mabel Morrison, a daughter of the well known actor, Lewis Morrison, had taken by mistake an overdose of tincture of nuxvomica prescribed for her by a physician, and was made very ill, but was treated in time and is now out of danger. So perishes hopes of a romance of the seaside drug clerk.

NOTES.

—Deakyn's Pharmacy, Kentucky and Pacific avenues, was the victim, Monday night, of a crowd's wild impulse to drag an injured person into a drug store, regardless of the wishes or welfare of the proprietor thereof. A man who had been badly gashed by a rival in love was brought into Deakyn's drug store by the usual mob of silly people instead of sending for a doctor, and the drug clerks had to turn out and attempt to stop the flow of blood and mop up the mess until an ambulance came—for all of which they got not even a "thank you." It is a shame that a drug store should be thought legitimate prey for everything and everybody, but when it comes to ruining a fine flow with blood when there was a hospital nearby, it's about time to shut one's doors.

—The Locust street explosion Monday night shattered the windows in stores and dwellings for blocks around, yet, strange to say, the windows in Druggist Pollard's store at Eleventh and Locust streets, were not affected in the slightest degree. It was owing to the fact that the drug store doors were open at the time when the concussion came, so that the currents of air could sweep on both sides of the glass, the well known law of equalization of pressures, for all the other stores in the neighborhood were closed for the night and got the full force of the blast from one side only. So here's an argument for druggists keeping open late at night—in case a neighbor blows up his store the druggist will not have his windows broken.

—Messrs. A. C. Smith, of Miller Drug Company, and Ed. Weaver, of Harris & Bernis, have gone on a fishing trip along the Susquehanna as guests of H. H. Snyder, president of the Lancaster Fishing Club, with Safe Harbor as their headquarters and place of refuge. Rumor says that they have taken a telephoto lens camera along with them to photograph the fish in the water just "before they get off the hook," these always being the largest fish a fisherman ever catches. Luck to them.

—Dr. E. C. Warg, who has a drug store at Eleventh and Arch streets, is spending his vacation with his family at Atlantic City. Among other prominent Philadelphia druggists who are enjoying the breezes of Atlantic City are Emile Ott, of Fifth and Pine, and J. J. Finney, Thirtieth and York streets.

—"Charlie" Eckels has completely recovered from his severe illness of last spring, and is now making a specialty of catching the Atlantic City trains, with daily practice therein. Mr. Eckels has developed under the tuition of his friends into an ardent fisherman and is making some big catches.

—H. B. Leeds has returned to his Atlantic avenue store, after a year's absence traveling for his health. During his absence, the store was ably managed by H. C. Moore, formerly head clerk at Llewellyn's Philadelphia store, and it is reported that Mr. Moore will soon buy the business outright.

—The H. K. Mulford Company has broken ground for its new building at Thirteenth and Lombard streets and orders have been given to the contractors to push the work as much as possible. The firm is sadly hampered in its business by lack of room in its present establishment.

—H. J. Wedemeyer, of Sixth and Snyder avenue, has returned from a long and pleasant trip to California, where he invested in an olive grove and an orange "ranch," as the basis for a larger stake later on. Mr. Wedemeyer contemplates moving to California in the near future.

—Jas. C. Perry, the well known local representative of the N. A. R. D. Executive Committee, made a flying trip to Ocean City Thursday to locate his family there for the summer and to confer with Chairman Morrison, who has returned to Ocean City from a trip up-State.

—Miss Clara Sprissler, a young lady who is well known downtown as an investor in real estate, has started on a three weeks' trip to Buffalo and Canada, during which she will take in the exposition and all the sights of Niagara. Miss Sprissler is a sister of Dr. Sprissler.

—There was a little "spat" up at Allentown last week that looked as if it would jeopardize the newly formed association for a time, but fortunately all was settled and harmony now reigns along the lines.

—The Wayne Pharmacy, owned by O. C. Winkler, at 4544 Wayne avenue, Germantown, has been bought by D. Sweeney, who will soon assume charge.

—H. C. Ogilby, of the firm of Ogilby & Blair, which was at one time A. C. Blair & Co., has just returned from a vacation trip to the mountains.

—Ott's Drug Store at Eighth and Huntington streets, has been bought by George Lyons, late of Lambert & Kirk.

—N. Newlands, buyer for George B. Evans, is taking a vacation at Mount Pocono, up the Delaware valley.

BALTIMORE.

Against Food Adulteration.

Baltimore, Aug. 10.—Health Commissioner Besley, of this city, has inaugurated an energetic crusade against dealers in food substances which have been adulterated either with the intention to deceive or with a view to cheapening the product. Many adulterations are harmless, being merely a fraud upon the consumer. But all such wares are liable to confiscation if the Health Commissioner is enabled to carry out his ideas. A beginning was made with a sausage dealer, who had offered colored frankfurters for sale. He complained about discrimination in having been singled out for prosecution, while others were not interfered with, and Dr. Besley thereupon announced that he would proceed against all without showing the slightest favoritism. Accordingly, the sale of breadstuffs, cakes, ice cream and the like, as well as butter and cheese which are found to be colored with cheap and injurious materials, will be stopped. The law expressly prohibited the sale of artificially colored or sophisticated goods. Speaking of the matter, Dr. Besley said: "There are many such articles on the market, I know, especially ice cream. A druggist of this city told me that he was selling to a certain ice cream dealer vanilla at 80 cents a gallon for flavoring purposes. This is astonishing, when you consider that first-class vanilla sells for about 50 cents a pint. When you come to bread, cakes and candies, it is going to be rather hard to draw the line. But a line will be drawn, for I am determined that the cheap coloring material shall disappear from the markets and stores of Baltimore."

Maryland Association Standing Committees.

Baltimore, Aug. 10.—President Louis Schulze, of the Maryland Pharmaceutical Association, has appointed the following chairmen of standing committees: Executive, William C. Powell, Snow Hill; Legislative, Dr. A. R. L. Dohme, Baltimore; Pharmacy, Frank A. Hancock, Baltimore; Laws, W. E. Elderslice, Cumberland; Adulterations, Daniel Base, Baltimore; Trade Interests, W. E. Brown, Baltimore; Membership, John C. Muth, Baltimore; Deceased Members, Charles H. Ware, Baltimore; Pure Food and Drug Laws (special), J. B. Thomas, Baltimore; Committee to Confer with Medical Societies, H. P. Fyson, Baltimore. The full list includes several other committees, but they are of no special importance. Chairman Dohme, as chairman of the legislative committee, is already at work on the preliminaries to conduct an active and aggressive agitation in favor of a State pharmacy law when the General Assembly meets next January.

Maryland College of Pharmacy.

Baltimore, August 9.—Mention has already been made in this column of the handsome catalogue gotten out by the Maryland College of Pharmacy. All the information usually found in such publications is included in the contents, and a number of other facts are instructively set forth. The new year of the college will begin about Oct. 1, when the classes are expected to report.

The examination of candidates for matriculation will take place during the last two weeks in September. The college building is undergoing a thorough renovation, and the future looks exceptionally bright.

Business About Stationary.

Baltimore, Aug. 12.—No important changes are to be reported in the drug trade during the past week. The volume of orders was practically the same as before, and there may have been a slight increase. The movement of drugs and preparations is keeping up well, and the aggregate of transactions promises to run considerably ahead of 1900. Gratifying activity prevails in the laboratories of manufacturers, and the outlook is very encouraging. Quiet prevails in the market for botanicals, it being yet too early for the new crop of articles to make itself felt. Lower prices have discouraged the gathering of roots and herbs, and values may go up later on. The business of the retailers is of normal volume.

NOTES.

—Another damage suit was filed this week against Messrs. John Fay Gilbert and William E. Gilbert, trading as Gilbert Bros. and Co., wholesale druggists, on North Howard street, this city. The plaintiff alleges having sustained serious injury, including blindness, as a result of drinking Jamaica ginger which contained wood alcohol. The complainant is Oscar Ox, of Somerset county, and he asks for \$15,000. The ginger, he says, was purchased last November, and his blindness dates from that time.

—J. Emery Bond, who severed his connection with Parke, Davis & Co.'s branch in Baltimore to enter the life insurance business, with headquarters at Trenton, has gone back to his first love. He now represents Mulford here, and is not less successful than he was in his other position.

PITTSBURG AND VICINITY.

ROCKY ROAD FOR DRUGGISTS.

Pittsburg, Aug. 12.—It seems to be the fate of Pittsburg druggists to be in a constant turmoil, and to be unable to lay aside their fighting clothes, even for a brief space of time. The long drawn out fight against the cutters, so recently ended with success on the part of the local association, has been succeeded by a fight, which, if of shorter duration, was none the less fierce. The trouble started when the City Recorder, a few Sundays ago, attempted to enforce the old blue laws of two centuries ago, and compelled all confectionery and cigar stands to close their places of business on Sunday. The order was also directed at the druggists and they were notified to close down their soda fountains and cover up the cigar cases. Of course, they rebelled and a committee headed by B. F. Pritchard, the local secretary, called on the Recorder. He finally agreed that soda water might be dispensed, but was obdurate as regards the selling of tobies and cigars. Officers in plain clothes were employed to obtain evidence against those not complying with the order, and in a number of cases informations were made, followed by convictions and a fine of \$25.00 and costs. One concern, owning several stores, had nearly as many convictions, fines following in every case. The druggists, however, were not alone to suffer. The fruit dealers and confectioners, who were not even allowed to sell soda water, had a large representation in the convictions. The crisis arrived when one fruit dealer, convicted of running his fountain on Sunday, refused to pay his fine and was sent to jail. The Retail Fruit Dealers Association took the matter up and through their attorney entered suits against nearly eighty druggists on the same charges for which one of their number was languishing in jail, in default of the \$25.00 fine. When the cases against the druggists came up for a hearing, they declared emphatically that in the event of a fine they would close their stores up tight on Sundays. The enforcement of this erudite law was making it ob-

oxious to even the most pronounced Sabbatarians, and word was quickly sent from headquarters to let the druggists down easy. The hearings were held in batches of five, the druggists all pleading guilty to selling on Sunday, but declaring they would stand no fine. It was finally agreed that the cases would be dropped by they agreed the costs, amounting to \$4.75, which they agreed to do. In one case, that of the P. C. Schilling Company, there were nine counts, which in addition to previous ones made a very tidy sum. Word has now gone forth from the city hall that no more prosecutions will be made, and the druggists are awakening to the fact that they have been victims of a faction in politics who sought to further their ends by making a mess of the present administration.

DRUGGISTS ARE PROSPEROUS.

Pittsburg, Aug. 12.—In spite of the fact that druggists generally in this section have been leading a "strenuous existence," they are fairly prosperous. This is evidenced by the great number who are away enjoying a midsummer vacation, in many instances the first in a number of years. The long and careful training of pharmacists make them careful business men as a rule, and they do not leave their stores for the usual summer vacations unless the business has been such as to justify warrant it. In the matter of failures, they have been few and in very instance they have been the direct result of lack of attention and want of business ability. In a word, the want of business so much as the want of business methods. The jobbers report a good business for the last months, and express the opinion that it will continue throughout the year. The great steel strike, in which we are in the midst, is causing some uneasiness, but the opinion is generally entertained that it will be settled ere it has gone far enough to disturb existing conditions.

NOTES.

—The Park Pharmacy, corner Smithfield and Fifth avenue, one of the most costly and handsome stores in the United States, is soon to die a natural death. The store was started several years ago by James Goldfine, who after a short time was compelled to give it up to his creditors, the high rental and costly investment being assigned as the cause. The owners of the Park Building have since conducted the store, but it is said to have never given a fair return on the investment. A national bank has leased the room and a local trust company is selling the fixtures and furnishings.

—The drug store of M. Rush Means at Punxsutawney, Pa., has been closed by the sheriff on executions aggregating several thousand dollars. The United States District Court has adjudged Means a bankrupt, and will appoint a trustee to sell the store.

—James Douglass, who has been managing the drug store of S. S. Hamilton at Punxsutawney, during the latter's absence at the Legislature, is now chief clerk for the Clarion Drug Company at Clarion, Pa.

—G. F. Sichelstiel, Jr., of W. J. Gilmore & Co., accompanied by his two sons, is away on a brief trip to the Pan-American Exposition and Canadian points.

—Kulp & Cassidy are the new proprietors of the Wirsing Pharmacy at Braddock.

KYMO ICE CREAM.

It is surprising the extent to which the cost and quality of ice cream can be improved by the use of Kymo. By a new process, devised by the Kymo Co., Little Falls, N. Y., the best quality of ice cream, not even excepting an all-cream product, can be made at from 20c to 30c per gallon, without cream, eggs, or any other substance but Kymo, milk, sugar and flavoring. This means a saving of from 50% to 100% on the druggist's ice cream, which is a big item to those druggists who dispense it at their sodaountains. Fifteen cents will bring a sample, and descriptive circular.

CHICAGO.

DEATH OF C. HERMAN PLAUTZ.

Chicago, Aug. 11.—C. Herman Plautz, one of the oldest druggists in Chicago, a prominent citizen and one of the charter members of the Chicago Veteran Druggists' Association, died Friday morning at his farm, near Powers Lake, Wis. Mr. Plautz was one of the early German settlers of Chicago. He was born in Germany October 12, 1844, and came to the United States with his parents when he was but two years old. The family settled in Oconomowoc, Wis., and at the age of fifteen young Plautz came to Chicago and entered the employ of Charles Wuenche, a druggist at Milwaukee avenue and Noble street. Four years later he bought the store and soon after attaining his majority he began to manifest an interest in local politics, in which later on he became quite prominent. Being a man of excellent judgment, and withal honorable and reliable, his neighbors and friends did not hesitate to put him in positions of responsibility and trust. He was elected city clerk in 1885 and two years later was elected city treasurer. His plurality at the latter election was 39,000. He organized and was president of the Northwestern Brewing Company and was a director of the Garden City Bank. He was a member of the Union League, Germania and Chicago Athletic clubs and of the Chicago Veteran Druggists' Association. He was secretary of the finance committee of the Republican National Committee and was a member of the D. C. Cregier Lodge, F. and A. M., under whose auspices the funeral will be held on Tuesday. He is survived by a widow and two sons, Herman W. and Henry F. Plautz. The funeral takes place on Tuesday.

CHICAGO TO HAVE A NEW DEPARTMENT STORE.

Chicago, Aug. 11.—A new department store, it is reported, will soon be opened in the downtown district of Chicago. It will be owned by various merchants of Chicago not heretofore connected with a department store—the so-called small merchants. The capital stock of the company will be \$500,000. C. P. Gillman, secretary and former president of the Cook County Retail Dealers' Association, will probably be the president of the new company. The store will be run on the co-operative plan. The head of every department will be an experienced merchant and a stockholder in the company. It is expected that the new store will be open for business in October. A drug department will be one of the features of the store, and the store will be kept open night and day. This is the only way, the promoters say, that they can fight the department stores. They must be met on their own ground.

CHICAGO BUSINESS MODERATE.

Chicago, Aug. 11.—Business among the manufacturers and the jobbers has been about up to the average mark of the season during the past week. There have been a few stock orders and several buyers have been in town selecting their fall goods, but otherwise the trade has been moderate. It will not be long, however, until the fall orders begin to come in in large numbers. The crop failure is by no means so bad as reported in the papers, if one may believe what the people from the country say, and they certainly ought to know. Western merchants are looking forward to a winter of higher prices and continued prosperity.

NOTES.

—At a fire, which wiped out nearly all the business portion of the town of Rantoul, Ill., on the afternoon of August 9, the following drug stores were destroyed: C. A. Newman's pharmacy, the drug store of Neal & Son, and that of Louis Cole. The details as yet are rather meagre and the loss in the particulars is not yet reported.

—The Moritz Pharmacy at 2901 Cottage Grove avenue, has been sold by George Taylor to Dr. Orion K. Thoneson. Dr. Thoneson recently settled in Chicago from Detroit, but formerly lived in Indiana.

—John F. Matthes, manager of the Chicago offices of Whitall Tatum Company, left Wednesday night for Philadelphia via the Pan-American Exposition at Buffalo.

—A new drug store, to be known as the Lithuanian Pharmacy, will soon be opened at Eighteenth and Union streets. Dr. A. L. Graicunas will be the proprietor.

—Albert B. Hunt, manager of the city sales department of the Fuller & Fuller Company, will leave next week for a three weeks' outing at Charlevoix, Mich.

—William Remus, of the firm of Remus & Co., well known druggists of South Haven, Mich., was in Chicago this week.

—A. Schapman, M. D., has bought the drug store of C. H. Hirsch at 303 Belmont avenue.

—Charles F. Shadel has bought the store of Miss Jennie Shadel at Plymouth, Ind.

—A. J. Craig, a prominent druggist of Galesburg, was in Chicago this week.

—R. T. Adams & Co. succeeded McColm & Ransom at Gravit, Ia.

—L. R. Stookey, a druggist of Belleville, Ill., died recently.

—M. V. Leach, a druggist of Indianapolis, has sold out.

—W. G. Latham, of Michigan City, Ind., has sold out.

ST. LOUIS.

ARRANGING FOR THE A. PH. A. MEETING.

St. Louis, Aug. 10.—The druggists are not the only ones who are taking an active part in arranging for the meeting of the A. Ph. A. here next month. Their wives, sisters, mothers, sweethearts, etc., have had their ears and eyes open for some time. They finally concluded that it was time for them to act, and consequently last Tuesday twenty of them held a meeting at the home of Mrs. H. M. Whelpley. A little organization was formed of which Mrs. Whelpley was elected presiding officer and Miss Jane Good secretary. Just what all was done and said at the meeting probably no outsiders will ever know, but when the Committee on Arrangements held its regular weekly meeting at the Southern Hotel on the following Wednesday they found a committee of ladies waiting for them. In due time, after these sturdy old war-horses had apparently nerved themselves up for the occasion, it was suggested that the ladies be given a hearing. The ladies came in and explained that they had held a meeting and mapped out a programme for the entertainment of the ladies and young people during convention week. They understood that the gentlemen had been raising money for entertainment purposes, and before going any further they desired to know how much money they could have to carry out their programme. This was evidently a familiar question to most of those present; at least they all seemed to understand just what it meant. One member had previously counted noses and found that this committee of ladies was almost equal in number to that of the gentlemen. For a time time silence reigned supreme. At last some one mustered up courage to ask how much they wanted. The response was quick and to the point. A motion was made and a vote taken granting the request in a form to suit the ladies, and the gentlemen are of the one opinion that the ladies understand their business, and will see to their end of the programme. The ladies propose a programme that will keep the visiting ladies busy every moment of waking hours from the time they arrive in St. Louis until they are ready to depart. The committee of ladies who have taken this in hand are as follows: Mrs. H. M. Whelpley, Miss Jane Good, Mrs. Solomon Boehm, Mrs. O. F. Claus, Mrs. J. C. Falk, Mrs. J. M. Good, Mrs. Theo. F. Hagenow, Mrs. H. F. Hasselbrook, Mrs. Francis Hemm, Miss Anna Hinrichs, Mrs. C. C. May, Miss Lottie G. Merrell, Mrs. Theo. F. Meyer, Mrs. R. C. Reilly, Mrs. Louis Schurk, Mrs. L. A. Seitz, Mrs. E. A. Sennewald, Mrs. H. P. A. Spilker, Mrs. Louise Spilker, Mrs. F. W. Sultan, Mrs. R. S. Vitt, Mrs. C. P. Walbridge, Mrs. F. E. Whitcomb.

The Committee on Arrangements has decided to make Tuesday of convention week A. Ph. A. day at the St. Louis Exposition and the members will all attend there in the evening. It has been found that the summer gardens will all be closed so that part of the programme has been changed and a special entertainment is being arranged for Saturday night. This will be held in the parlors of the Southern Hotel.

NOTES.

—Visitors at the coming convention of the American Pharmaceutical Association in this city will be interested in one of the most wonderful sets of Indian ceremonial knives and implements in the world, which may be seen in the museum of the Missouri Historical Society. The set, known as the "Meadow Collection," consists of 46 flint pieces which were found all together on the site of a stone grave cemetery in Humphreys Co., Tennessee, and were purchased by the Society in 1895. Eleven long straight knives vary in length from 14½ to 27½ inches, and are unrivalled by any collection in this country or any other. There are four discs of different diameters, two large turtle shaped pieces, and numerous barbed, serrated, and pronged knives of various shapes and unknown uses. The pieces are, almost without exception, in perfect preservation, which, in the estimation of experts, doubles their value and adds greatly to their interest.

—The druggists of Scotland County, Mo., are rejoicing over the restoration of full prices throughout the county. It is the first time that such a state of affairs has existed there in fifteen years. The organization was started last April but its main object has just been attained. The following are the officers: Geo. M. Brown, president; D. R. Brown, Memphis, secretary; R. W. Campbell, treasurer; J. C. Leach, Jas. Piper, R. W. Campbell, trustees.

—W. E. Roeschel of Boonville, Mo., is arranging to vacate the old building which he now occupies and which has been constantly used for a drug store by his ancestors and himself for fifty-one years. The store was opened by his grandfather when the place was a very small village. In the new building which he recently erected he intends to open one of the swellest stores in that section of the country.

—The evening boat excursion given by the Retail Druggists' Association of St. Louis last Wednesday was very well attended. The only distinctive feature about it was the large number of proprietors present. There were a number present who said it was their first boat excursion in ten years; while a few had never attended one before.

—Dr. Emiel Grebe, a graduate in pharmacy, and for the past few years chief chemist for the Meyer Bros. Drug Co., has returned from his vacation spent in Europe and gone to Texas for his health. On his return trip he was attacked with serious lung trouble which prevented his returning to his former position.

—R. S. Vitt, president of the St. Louis Retail Druggists' Association and druggist at 3460 S. Broadway, is arranging to attend the annual convention of the N. A. R. D. at Buffalo. So far he is the only local druggist who is sure of attending.

—Wm. H. Lamont has been placed in charge of the local office of Eli Lilly & Co. He has been doing detail work here for the firm for some time past. The former manager, G. B. Self, has gone to take charge of the Kansas City office.

—Geo. L. Sommers, chief clerk at Smith's Pharmacy, 4501 LaCade avenue, has gone to spend a two weeks' vacation up among the lakes of Minnesota. He is a very prominent member of the Drug Clerks' Society.

—L. H. Schlenker, chief clerk at the Schwarz Homoeopathic Pharmacy, Fourth and Locust streets has organized a camping party which leaves to-night to spend a ten day vacation out on the Gasconade River.

—Frank Amler, in charge of the city sales department of the Meyer Bros. Drug Co., leaves in a few days to spend his two weeks' vacation catching the finny inhabitants of the lakes of Minnesota.

THE NORTHWEST.

NORTH DAKOTA DRUGGISTS.

St. Paul, Aug. 9.—The annual meeting of the North Dakota State Druggists' Association was held at Grand Forks this week. The following officers were elected: President, W. Mesters, Willow City; vice president, Samuel McDonald, Grand Forks; secretary and treasurer, W. S. Parker, Lisbon. It was the largest meeting in the history of the Association. An excursion was given to Lake Bemidji, Minn., and a "smoker" was held on the evening of the last day. A very extensive display of goods was made by wholesale drug houses of the West.

NOTES.

—Successions: Demars & Robertson, Hallock, Minn., by D. A. Robertson; A. Richard, Stillwater, Minn., by Richard & Elmquist; Holmes & Calhoun, Billings, Mont., by Holmes & Rixon; T. T. Swift, Water Center, Ia., by F. L. Marcy & Co.; Gates & Chapple, Waterloo, Ia., by H. G. Roy; H. S. Tubbs & Co., Glenwood, Ia., by C. H. DeWitt; J. E. Morgan, Marcus, Wash., by Morgan & Ross; E. C. Krueger, Bowbell, N. D., by E. C. Krueger & Co., Mr. Krueger still retaining his store at Forest River individually; A. A. Peters, Martinsburg, Ia., by A. A. Peters & Co.

—James Norton, a Minneapolis druggist, created a mild street sensation in this city this week. He fell unconscious in the street and was taken to a hospital. It was some time before the cause of the trouble was known, and it was then found that he had taken an overdose of cocaine. He was unconscious two days and death was expected, but at last accounts was much improved and it is believed will recover. Mr. Norton came to Minnesota from Chicago and is connected with a Nicolet avenue, Minneapolis, drug house.

—W. W. Noble, who for the past eighteen years has run several drug stores in St. Paul, and who disposed of his St. Peter-Fourth street place some months ago, has become city salesman for Noyes Bros. & Cutler.

—W. J. Howard, price for Noyes Bros. & Cutler, St. Paul, has returned from a vacation pleasantly passed on the north shore of Lake Superior. In his absence his desk was occupied by W. W. Rumble, who has long been connected with this house.

—The Ramsey County (St. Paul) board of equalization refused the request of Noyes Bros. & Cutler for a reduction of property assessment, which the druggists considered excessive.

—H. E. Lucas, Wabasha, Minn.; J. T. (Mrs. William) Ayton, Kenosha, Wis.; T. E. Matthews & Co., Alexandria, S. D., and S. C. Lough, Northwood, N. D., have sold.

—B. H. Larrabee, formerly of Sleepy-Eye, Minn., is now in a drug store at Astoria, Ore., where he reports the hottest day this summer 78°.

—Oley Erickson, dealer in family drugs at Holdrege, Neb., and S. H. Smith, Omaha, Neb., have filed petitions in bankruptcy.

—New: E. W. Childs, Almita, Wash.; Erickson & Nordin, Souris, N. D.; T. M. Witten, Newberg, Ore.

—C. A. Boyd, druggist and jeweler of Lewiston, Minn., has sold his drug stock to William F. Gessmer.

—J. F. Connolly is leaving Missoula to go to Duluth, and is to be succeeded in Missoula by J. P. Agthe.

—The plant of the Fink-Fehrln Chemical Co., Cudahy, Wis., will be sold on Monday next.

—Herman Lueders has returned from Silver City, N. M., a wiser if not a sadder man.

—G. W. Edwards' stock of family drugs has been sold at Hastings, Neb.

—The Harris Bros. Drug Co. has been incorporated at Wardner, Idaho.

—A. S. Miller, Keokuk, Ia., has given a bill of sale to his wife.

—Arthur Peterson is working in this city, temporarily.

—Walter J. Weybright has gone to Minneapolis to work.

—H. L. Gibbs has returned home from a country trip.

—Judge & Dolph are having work rapidly pushed on their new building at 515 Olive street. They are already making extensive purchases and expect to carry a large stock.

—The St. Louis Drug Clerks' Society will give its third evening boat excursion of the season on Thursday August 22. This will close the entertainment features for the summer.

—S. E. Key of the Key Drug Co., Elderado, Ark., has been in the city this week selecting an outfit for a new drug store which the company will open in that city.

—S. E. Barber has resigned his position as city salesman for the Moffitt-West Drug Co. He expects in the near future to go into the drug brokerage business.

—Dr. F. L. James, editor of the National Druggist has returned from the Gulf Coast greatly improved in health by his six weeks' vacation.

—T. J. Buchanan of California, Mo., has had his store remodeled and fitted out with entire new fixtures.

—J. L. Wright of Jefferson City has opened a branch store in the suburbs of that city.

—Collins & Tindel of Salisbury, Mo., have been succeeded by Sweeney & Tindel.

—Dr. Fleet Miller has bought Dr. Fonsler's drug store at Moberley, Mo.

NEW ORLEANS.

NOTES.

New Orleans, Aug. 9.

—The business of the late Eugene May, at Canal and Chartres streets, is still being conducted by the estate of General May. By a condition in the will it was the desire of General May that the business should be sold. For years this establishment has been one of the foremost retail houses in the city and its future conduct is a matter of great interest to the local trade generally.

—Many of the smaller drug stores in the city are having a hard fight owing to the cut-rate business, and there is some talk of a movement looking to an improvement in conditions. An agreement whereby 50 cent goods shall sell for 42 cents and dollar goods for 85 cents is one talked of, but at present there appears little hope of bettering the retail trade in this respect.

—Max Samson has been elected a delegate to the September convention of the American Pharmaceutical Association, to be held in St. Louis. As yet no delegate has been chosen from the state to attend the convention of the National Retail Druggists' Association, to be held at Buffalo, N. Y.

—Business is generally reported as being fair, considering the weather conditions. Soda fountains everywhere are working overtime, while the mercury is running up in the nineties.

—F. C. Godbold, of the Orleans Pharmaceutical Association, spent several days in Baton Rouge, La., last week, attending the reunion of Confederate Veterans.

—Gus Katz has made extensive improvements in his St. Charles avenue business. The new establishment at St. Charles and Jackson avenues is a model of beauty.

The Liberty Chemical Co., of Philadelphia, is doing some very attractive advertising in the leading medical journals of this country. The advertising is in the nature of fine plates made by the new process of obtaining half-tones from clay models. In this and other ways the Liberty Chemical Co. is thoroughly acquainting the entire medical profession with Thermol, Iodomuth, Diastin, Diurazin, Fermang, Syr. Glycero-Phosphates, and various other chemicals and medicinal preparations now being placed on the market by this Company. To druggists who desire to be informed concerning these preparations, so that they can talk intelligently regarding them to physicians who may bring up the subject, the Company will gladly send complete circular literature. Address, The Liberty Chemical Co., 2555 Rydenham St., Philadelphia, Pa.

CALIFORNIA.

OBITUARY.

SAN FRANCISCO DRUG CLERKS ASSOCIATION.

San Francisco, Aug. 6.—The Committee recently appointed by the Drug Clerks' Association to work on the 10 o'clock closing movement have met with great encouragement. Nearly all the stores in the city have signed the agreement and the others will undoubtedly yield to the opinion of the majority and fall into line. The all absorbing topic with the clerks at present is their picnics which are to be held this month. Two Sundays were selected so that all druggists could attend at least one of the outings. The wholesale druggists assisted materially in the movement by purchasing a large number of tickets.

ADDITIONAL DONATIONS FOR COLLEGE LIBRARY

San Francisco, Aug. 6.—The wholesale druggists of San Francisco have shown their good will towards the California College of Pharmacy in a very substantial manner. Prof. Wm. M. Searby, the Dean of the College, has received checks to the amount of \$450 from the wholesalers and President Gaston E. Bacon and R. E. Queen each added \$100 to the fund for equipment.

NOTES.

—J. P. Calaghan, formerly with Humiston, Keeling & Co., Chicago, has accepted a position in the sundry department of Redington & Co., San Francisco.

—Arthur Greische, formerly with W. J. Phillips of Berkeley, has accepted a position with Dr. F. L. Wright of the Avenue Pharmacy, Oakland.

—J. H. Booher has resigned his position with McNamara's Pharmacy, San Francisco, to take a position with the Holden Drug Co., Stockton.

—The old established drug firm of O. P. Willis, Sacramento, has been merged into the corporation of Willis & Martin Co.

—James Elliott of Martinez has accepted the position of head clerk with The Twin Peaks' Pharmacy, San Francisco.

—The Wonderful Drug Store at St. Helena has been purchased by Walter S. Brownlee late of Healdsburg.

—The Golden Rule Pharmacy, Fresno, Cal., has secured the services of Emilio Siorida as an assistant.

—G. L. Edelmann of Petaluma and S. F. Blake of Grass Valley have exchanged drug stores.

—The Strahman-Mayer Co. have a new store in the Sefton Block, San Diego, Cal.

—Heath & Heath of Oakland have secured the services of C. O. Wentworth.

—The New Jersey Board of Pharmacy held a meeting for the examination of applicants for registration at Trenton, July 18 and 19. The following were successful: Registered Pharmacists—Max J. Block, New York; Hiram R. Bradner, Ashbury Park; George H. Hawkey, Summit; Lewis Moore Hires, Bridgeton; John Benedict Keller, Paterson; Thomas Leslie Morlarity, Matawan; Samuel Marshall Meyers, Phillipsburg; Albert Dell McGregor, Camden; William A. Stidham, Vineland; Thomas G. Schriver, East Orange; Joseph F. Schefek, Dover; Warren L. Wainmaker, Dover; Henry E. Wrensch, Montclair; John Philip Wolfinger, Ocean City. Registered Assistants—Joseph Morris Atchison, Newark; John Joseph Buckley, Perth Amboy; Godfrey Krefepela, New York; Louis Reich, Elizabeth; Louis H. Robinson, Newark; Ephraim Shaw Tyler, Bridgeton. The next examination will be held at Trenton, Oct. 17-18. Henry A. Jorden, Bridgeton, Secretary.

—A free scholarship has been established in the Philadelphia College of Pharmacy by The Keasbey & Mattison Company, of Ambler, Pa. The holder of the scholarship will be required to pass a competitive examination and produce satisfactory evidence of ability before the committee of the college. The scholarship will embrace all of the branches of the college and has been created through the desire of Messrs. Keasbey & Mattison, both of whom are graduates of the institution, to lend a helping hand to deserving young men who have chosen the practice of pharmacy as their life work.

John Lucas.

John Lucas, senior member of the firm of John Lucas & Co., well known to members of the drug trade as manufacturers of paints, varnishes, etc., at Gibbsboro, N. J., and with offices in Philadelphia, New York and Chicago, died August 7th in Atlantic City, N. J. Mr. Lucas was seventy-eight years of age, and his death was due to heart disease. He was born at Stone, Strathfordshire, England, and was descended from John Lucas of Derbyshire, a companion of Isaac Walton, author of the "Complete Angler." In 1844 he came to the United States, and four years later settled in Philadelphia. After spending a few years as a commission merchant he began the manufacture of paints, and eventually established the house which now bears his name. Mr. Lucas took an active interest in the early development of Atlantic City as a seaside resort, and it is stated that it owed its first great start and boom to his foresight and energy in publishing and making known its many advantages while he was a director of and subsequently the president of the Camden and Atlantic Railroad. Mr. Lucas was a member of the Union League Club, and various other organizations. For many years he served as vestryman of the Grace Protestant Episcopal church in Philadelphia, and was a most liberal giver of his funds to everything connected with it. He was married in 1854, his wife, assisted by Mr. Lucas, taking an active part in the development of silk culture in the United States. She later served as one of the lady managers and delegates to the Columbian World's Fair. Mr. Lucas was the father of nine sons and six daughters; twelve of these children are now living.

Dr. DAVID KENNEDY, the well known manufacturer of proprietary medicines, died suddenly in Kingston, N. Y., Aug. 5, while addressing a taxpayers' meeting. Dr. Kennedy was born in New York City in 1832 and graduated from the College of Physicians and Surgeons of New York, in 1860. He then enlisted and served as a surgeon in the army throughout the Civil War. He was twice mayor of Kingston.

—The druggists of Ionia county, Michigan, have organized a county association, for the advancement of their interests. At the meeting held August 5 the following officers were elected: President, E. T. Yeomans, Ionia; vice-presidents, W. I. Benedict, Belding, and C. Stone, Portland; secretary, George Gundrum, Ionia; treasurer, J. Diamond, Lake Odessa. The association will meet quarterly.

A. P. H. A. ARRANGEMENTS.

The next annual meeting of the American Pharmaceutical Association will be held in St. Louis at the Southern Hotel (headquarters), Broadway and Walnut street, during the week ending September 16.

tion helps, novelties in labels, etc. A new feature will be introduced which provides that one session of the association will be devoted entirely to the exhibition, and the organization as a whole will be called upon to judge of the merits of each display. Exhibitors desiring space should forward their applications to the local secretary, Dr. H. M. Whelpley, 2342 Albion Place, St. Louis, accompanied by a statement briefly describing the character of the exhibit, etc. The local secretary reports that hotel rates have been secured as follows:

Southern Hotel (headquarters) Broadway and Walnut street. American plan, one or two persons in a room, \$3.00 to \$5.00 per day. European plan, one person in a room, \$1.50 and upwards. Two persons in a room, 50c per day additional for second person.

Planters House, Fourth and Chestnut streets. American plan, two persons in a room, \$3.00 to \$4.50 per day. European plan, two persons in a room, \$1.50 per day.

St. Nicholas Hotel, Eighth and Locust streets. European plan, one person in a room, \$1.50 per day and upwards.

Lindell Hotel, Sixth street and Washington avenue. European plan, one person in a room, \$1.00 to \$3.00 per day.

Laclede Hotel, Sixth and Chestnut streets. European plan, one person in a room \$1.00 to \$1.50.

Terminal Hotel, Union Station, European plan, one person in a room, \$1.00.

Those wishing to procure accommodations in advance should make known their wants to Dr. Whelpley. The Committee of Arrangements consists of Dr. H. M. Whelpley, chairman; Francis Hemm, secretary; J. M. Good, treasurer, and the following sub-committees: Badges and Souvenirs—Dr. O. A. Wall, chairman; Dr. Enno Sander, J. M. Good, R. S. Vitt; Collations and Refreshments—F. W. Sultan; Excursions—H. F. A. Spilker, chairman; Thomas Layton, Solomon Boehm, H. F. Hassebrock, Theo. F. Hagenow, F. W. Sultan; Finance—J. H. Good, chairman; C. F. G. Meyer, C. P. Walbridge, C. H. West, L. A. Seltz; Places of Interest—L. A. Seltz, chairman; Chas. Gietner, F. L. Whelpley; Reception—Thomas Layton, chairman; J. M. Good, F. E. Whitcomb, F. W. Sultan; Summer Gardens—Chas. Gietner, chairman; M. J. Noll, F. W. Sultan, J. M. Good; Attendance from Missouri—Wm. Mittelbach, chairman, Boonville, R. L. Hope, Centralia, Paul L. Hess, Kansas City, Chas. L. Wright, Webb City, J. V. Murray, Warrensburg; Attendance from Illinois—Theo. C. Loehr, chairman, Carlinville, J. H. Keeling, Rockford, Aug. Heimbeck, Rock Island, M. B. Travis, Saybrook; Paul G. Schuh, Cairo.

N. W. D. A.

Committee on Transportation Makes Important Rate Announcement for Old Point Comfort Convention, October 14.

The Committee on Passenger Rates and Routes for the N. W. D. A. convention at Old Point Comfort, October 14, has the following announcement to make:

"Your committee is now able to announce that all the passenger associations have courteously granted the usual concessions of one-and-a-third fares for the round-trip to all persons attending the convention, who hold certificates from the ticket agent from whom tickets are purchased at the starting point, so that the reduced rate will be available from all points east of the Rocky Mountains. All ticket offices will be notified of such action and will be authorized to issue certificates in connection with tickets purchased not earlier than October 10, nor later than October 16. Return tickets will be good for three days after the adjournment of the convention, not counting Sunday.

"Full fare must be paid for the trip to Old Point Comfort, but only one-third fare will be charged for the return ticket upon presentation of the certificate properly endorsed by Secretary A. B. Merriam and the agent of the passenger associations, who will be in attendance at the convention on Wednesday and Thursday, October 16 and 17, for that purpose. Certificates not so endorsed will not be good for return tickets at the reduced rates; and to facilitate this work the holders of certificates should surrender them to Secretary Merriam on the morning of Tuesday, October 15. Any person going to the convention can avail himself of these rates for as large a party as he may purpose taking, but a certificate must be procured with every ticket purchased. It is requested that such certificate be obtained whether the person buying the ticket intends availing himself of the reduced rates or not, inasmuch as these certificates serve to establish the number of persons present, in the event of any question arising with the transportation companies upon this point.

"Any special arrangements for local transportation that can be made, will be attended to by the following named members of the committee in their respective localities, viz.: Thos. P. Cook, chairman, New York; Edward H. Buehler, Chicago, Ill.; Norman Randolph, Richmond, Va.; John M. Peters, New York; W. O. Allison, New York; Wm. P. Redington, San Francisco, Cal.; C. H. West, St. Louis, Mo.; L. N. Brunswick, New Orleans, La.; I. A. Solomons, Savannah, Ga.; Bernard Janney, Jr., Boston, Mass.; J. T. Berry, Dallas, Tex.

"The Committee on Arrangements and Entertainment has arranged for the meeting to be held at the Chamberlain Hotel, and has provided an attractive programme for the entertainment of the members and those who may accompany them. Members are requested to preserve this circular and carefully note instructions, as no subsequent announcement will be made by the committee, except such as may be necessary in regard to local arrangements.

"THOMAS P. COOK, Chairman,
114 William Street, New York City."

DRUGGISTS IN JAIL FOR SELLING LIQUOR.

Five druggists and two hotel-keepers have been subjected to heavy fines and imprisonment in Rutland, Vermont, for violating the prohibitory liquor laws. The drug stores and hotels have been closed. The men who were sent to prison must serve their sentences at hard labor, cutting and hauling marble. The druggists and the sentences are as follows: Walter Jasmine, six months and \$500; Martin McMahon, six months and \$500; William Dugan, \$750; Stephen Cragin, \$750; John Welch, \$250. The hotel-keepers will do six months' time and pay fines of one and two hundred dollars. These are the heaviest sentences imposed for many years in Vermont for the unlawful selling of liquor. Chancellor Taft of Burlington tried the cases and imposed the sentences.

SOME NEW FORMULAS.*

By JNO. H. HAYDON, JR., New Haven, Conn.

The ensuing are original formulas for the preparations named, which will be found to produce satisfactory compounds. The first is named:

Elixir Saw Palmetto and Santal Comp.

Take of—

Saw palmetto berries.....	8 ounces
Corn silk.....	8 ounces
Sandalwood.....	2 ounces
Sugar.....	6 ounces
Alcohol.....	2 pints

Mix twelve fluid ounces of alcohol with thirty-six fluid ounces of water. With this menstruum moisten the previously ground drugs and macerate during twenty-four hours. Then pack firmly in a percolator and pour on the remainder of the menstruum, allowing the percolate to drop slowly. In this dissolve the sugar by agitation. Finally pass sufficient water through the exhausted drugs to make the finished elixir measure two pints. Caramel may be added if the color is not deep enough.

Each fluid ounce of this elixir is taken to represent saw palmetto berries, 120 grains; corn silk, 120 grains; sandalwood, 30 grains.

Compound Tincture of Curcuma.

This is used as a brown coloring agent for use in the two elixirs of heroin which follow. It has several advantages over caramel alone, the color produced by it is brighter and it is more easily measured. The formula:

Curcuma.....	10 drams
Macerate for seven days in a menstruum of	
Alcohol.....	8 fl. ounces
Water.....	8 fl. ounces
Filter and add	
Caramel.....	10 fl. drams
Menstruum enough to make.....	1 pint

Elixir Heroin.

Take of—

Heroin.....	10 2-3 grains
Alcohol, deodorized.....	8 fl. ounces
Brandy, French.....	3/4 fl. drams.
Syrup.....	12 fl. ounces
Water, enough to make.....	2 pints
Compound tincture of curcuma.....	1 fl. dram

Dissolve the heroin in the alcohol, add the other ingredients in the order given, and filter.

Each fluid dram contains 1-24 grain heroin.

Elixir Heroin and Terpin Hydrate.

Take of—

Heroin.....	10 2-3 grains
Terpin hydrate.....	256 grains
Saccharine.....	10 grains
Alcohol, deodorized.....	13 fl. ounces
Glycerin.....	1 pint
Brandy, French.....	4 fl. drams
Compound tincture of curcuma.....	1 fl. dram
Water, enough to make.....	2 pints

Dissolve the heroin, terpin hydrate and saccharine in the alcohol; add the other ingredients in the order given, and filter.

Each fluid dram contains of heroin 1-24 grain, of terpin hydrate 1 grain.

Elixir Sodium Salicylate Comp.

(Elixir acid salicylic comp.)

Take of—

Salicylic acid.....	15 drams
Sodium bicarbonate.....	11 drams
Potassium iodide.....	256 grains
Fluid extract black cohosh.....	289 minims
Fluid extract yellow jasmine.....	289 minims
Alcohol.....	1 fl. ounce
Comp. syrup of sarsaparilla, U. S. P.....	10 fl. ounces
Water, enough to make.....	2 pints

Add the salicylic acid to the water, followed by the sodium bicarbonate in divided portions. When effervescence has ceased, add the remaining ingredients in the order given; set the mixture aside for twelve hours. Finally filter.

Each fluid dram represents, salicylic acid 3/2 grains, black cohosh 1 grain, yellow jasmine 1 grain, potassium iodide 1 grain, sodium bicarbonate x.

*American Druggist.

TO YOUNG PHARMACISTS.*

By WILLIAM MITTELBACH, Boonville, Me.

Having finished your work at college, you now stand upon the threshold of that period in life when you must put into practice the things you have learned. The path before you is occasionally beset by thorns, and it will behoove you to keep your eyes open to become master of the art. This world is large and the chances for success are as good to-day as ever. It depends upon you whether you succeed or fail. Right now is the critical period of your professional career. Your skill and knowledge of the practice of pharmacy is unknown; the world, with calm indifference, is watching your struggles. If you succeed everybody applauds and has a kind word for you, but should you fail you need expect but little sympathy from your fellowman.

In this cold business world little sympathy is given the poor wretch that makes a failure of life; you alone must win the spurs you seek to wear. When you have turned your back upon the old college and are facing the work on hand, let your motto be: "Close attention to business and honorable dealings with all." He who wins an honorable position among men obtains the best of life; while he who accumulates riches without an honest name gains but little that is truly satisfactory. In spite of the fact that money is the goal towards which all are striving, the love and esteem of your fellowman is absolutely necessary for complete success and the proper enjoyment of riches.

As you start in business, whether as clerk or proprietor, guard well your own name; establish habits of industry and frugality, and let the accumulation of the almighty dollar be a secondary consideration. Too many of our graduates in pharmacy forget the teachings of their alma mater, become entangled in the meshes of a purely money-making life, and lose sight of the fact that we owe something more to our profession. We must defend its honor.

Be just with your competitor in business and in the strength of vigorous manhood cast away the petty jealousies that mar and dwarf our faculties and expose our weakness. How noble and grand stands out in his relief the man that concedes the same privilege to others that he asks for himself, and has the kindest feeling for his struggling neighbors. Such a life is an ideal one, and the young man just starting in the profession of pharmacy should make this the port towards which his efforts should be turned.

WINDOW BACKGROUNDS.

It becomes important, especially in an openly dressed window, that a background shall be provided for the double and sharply defining the outlines of the articles displayed; and, moreover, such a purpose of excluding light from the rear background, if judiciously selected, can be made to supply an important color element in itself.

In many cases mirrors form effective backgrounds, and they concentrate the light, sharpen the outlines of the objects displayed, and greatly increase the apparent size of the window.

Dark drapery, especially of plush, forms a most desirable background, affording the best possible foil for articles relieved against it. A rich and desirable effect may be secured by arranging a brass bar at the proper height, and suspending with rings a curtain of plush or of plum-colored or dark wine colored drapery silk, of the light flowing texture now so much used for the purpose. Either of these would harmonize admirably with almost any bright color placed in front of it, but in case it were desired to display goods of very dark shades, care should be used to place them close to some article of much higher tone, to furnish the required foil.

For the bottom of windows, many window dressers use loose plush or China silk coverings, which can be changed as desired, to harmonize with the goods to be displayed. They are usually made much larger than the window, so they can be draped over small boxes or standards placed on the bottom of the win-

*Meyer Bros. Druggist.

dow, the elevations and wavy lines thus produced adding greatly to the effect of the goods displayed. Thus for a blue window old gold plush is used, and for a rose colored window old blue.—Confectioners' Journal.

Establishing Trade.

Manufacturers may be divided into two classes: Those who have a long-established business, and whose staple goods are well known to the trade, and those who are introducing new lines. The first class have the advantages of trade connections which years of custom and the merit of their goods imply. Their product will usually bring the highest market rate, and at an equal cost defy competition. To have reached and maintained the prestige which their goods enjoy has cost continued effort, and this class find it advisable to hold the reputation of their goods by persistently presenting their merits to the trade in competition with the new makers. The other class, more recently established and introducing new lines to the trade, are obliged to educate the merchant as to the merits of their goods, the points in which they excel the goods already established, and solicit a trial order. If the new goods actually possess the merit claimed for them, the trial order leads to repeated sales, and an established trade follows. The established manufacturer of world-wide reputation finds it advisable to keep his name before the trade, and the new manufacturer is under the necessity of doing "missionary work" in the same direction.—D. T. Mallett, in Confectioners' Journal.

Liquid Cosmetics.

Lanolin Toilet Creme.
 Anhydrous lanolin650 parts.
 Peach-kernel oil200 parts.
 Water150 parts.
 Perfume with about 15 drops of ionone or 20 drops of synthetic ylang ylang.
 Lanolin Milk.
 Melt anhydrous lanolin.....100 grams.
 And add
 Glycerine100 grams.
 Water750 parts.
 Put in a wide-necked bottle vessel and add, with continued violent shaking:
 Tincture of benzoin.....50 grams.
 Mucilage30 grams.
 and perfume like the creme.

Preparations which have been introduced years ago for the care of the skin and complexion are the glycerine géeses. These products are filled either into glasses or into tubes. The latter way is preferable, owing to the convenience of handling. A good recipe for such a géele is the following: Moisten white tragacanth powder, 50 grams, with glycerin, 200 grams, and alcohol, 100 grams, and shake with a suitable amount of perfume; then quickly mix and shake with warmed distilled water, 650 grams.

A transparent slime will form immediately, which can be drawn off at once.—(Drog. Rundschau.)

SCARED BALDHEADED.—That intense fright should sometimes have the effect of turning the hair suddenly white has long been well recognized. That this emotion should cause the loss of the hair has much more rarely attracted attention. A ten-year-old lad of Bolivar, N. Y., is reported to have been so badly frightened at seeing a supposed apparition that his nervous system received a severe shock. This occurred about two months ago, and since then his hair has been coming out at such a rate that his head is now as bare as a billiard-ball, and there is no vestige left of either eyelashes or eyebrows. "Scared baldheaded" certainly makes a very effective phrase.—(Boston Med. & Surg. Jour.)

Through the medium of the Youth's Companion, The Goodyear Tire & Rubber Co., offers to send postpaid to any address, one pair of "Bull's Eye" Sling Shot Rubbers for 15 cents, two pair for 25 cents or one dozen pairs for \$1.25. There is a liberal discount on the Retail Drug Trade.

DRUGS IN USE 100 YEARS AGO.

In the annual address, delivered at the recent meeting of the British Medical Association, Dr. George B. Ferguson said that many admirable, mostly ancient drugs, were in vogue in 1801. To mention a few of them: Aconite and colchicum, mercury, arsenic, iron, antimony, bismuth, bark, belladonna, digitalis, ipecacuanha, the vegetable aperients and bitters, the common acids, alkalies, and salines, and, of course, opium. In fact, a very fair selection of the "blessed infusions that dwell in vegetatives, in metals, stones," to quote Lord Cerimon in "Pericles." And these drugs were well and ably wielded and with boldness and success. "We want no more drugs," said an old doctor to the speaker, some years ago, "but to use better those we have." Continuing, the president said: "There is much truth in this, for it is impossible to note without alarm the yearly increasing invasion of new, chiefly synthetic remedies, many of them by no means harmless. Fortunately, the law of the survival of the fittest soon comes into operation, and the useless ones are quickly relegated to that obscurity from which they had never emerged without the well-intentioned but too hasty laudations of over zealous men of business. The old doctor did not give a quotation, though a line in Homer's fourth *Odyssey* expresses something of his feeling—which I may thus paraphrase—'some drugs are most excellent and others quite the reverse.' I wonder what that admirable writer, the author of 'Ecclesiasticus,' would have said had he lived in these days? He who, referring to his own times, wrote that, 'of the works of the apothecary there is no end, and from him there is peace all over the earth?' I think 'Ecclesiasticus' might be oftener read than it is, and so it would be, said Addison, if 'such shining tracts of morality had appeared under the name of Confucius or of any celebrated Grecian philosopher.' How admirable is the following and how excellent its precept: 'The Lord hath made medicines out of the earth; he that is wise will not abhor them.' Also this: 'He that sinneth let him fall into the hands of the physician.' I strongly recommend a medical reading of 'Ecclesiasticus.' It may not be quite so instructive as 'Don Quixote,' recommended by Sydenham to Sir Richard Blackmore as the best medical treatise of his time, but it will certainly prove interesting and very soothing to the amour propre of our profession."

"We must not, however, discourage pharmacologic research and effort altogether, for the practitioner of 1801 had neither iodids nor bromids; no chloroform, pepsin, carbolic acid, cocain nor quinin; no salicylates, no chloral, no morphin, no strychnin, nor atropin; and how could we practice without these and many others now? Seeing how large is our modern armamentarium, and how undoubtedly effective many portions of it are, one would be inclined to pity the practitioner of 1801, were it not equally certain that the practitioner of 2001 will pity us.

"As regards the practice of to-day, that middle point of the centuries to which I referred, it is not too much to say that the whole realm of Nature—animal, vegetable and mineral—has been ransacked to find remedies against disease. Not only so, but every available physical force, heat, light and electricity—have been pressed into the same service.

"It is in the use of antitoxins and animal extracts, however, that the most remarkable advances have been made, and I would ask once more, how could we get on to-day without diphtheria antitoxin and without thyroid extract?

"If they do these things in a green tree, what shall be done in the dry?" I must leave it to others to predict the therapeutic standpoint of 100 years hence. This much, however, may be safely affirmed, that as the general public of to-day expects to be cured with all expedition, the public of the future will expect even more in proportion from the practitioner of 2001."

POISONS AND IDIOSYNCRASY

Oddities of Poisoning from Ordinary Food—Some Failures of Real Poisons.

To the question: "What is a poison?" there is more than one answer. Mr. Samuel Weller informed Mr. Justice Stareleigh, on a famous occasion, that the spelling of his, the witness's name, depended on the taste and fancy of the speller; and it is equally the fact that the effect of any substance, poisonous or otherwise, acting on the human system, is conditioned to a very large extent by the idiosyncrasy of the particular "corpore vile." One or two authenticated cases will serve to illustrate this. There was a man who declared that he was unable to eat the smallest quantity of rice in any form without great pain and nausea. In order to test the matter conclusively a friend prepared without his knowledge some buns, each containing the equivalent of about three rice grains. On eating one, unaware that any rice was present, he was quickly seized by the symptoms he had described. To him rice was virtually a poison. On the other hand, an equally well verified case is recorded of a woman in Paris, who, passing from wine to brandy, and from that to absolute alcohol, at last resorted to strong nitric acid for the purpose of stimulating digestion. Presumably, perforation ultimately ensued; but all that is recorded is that she was seen to drink the corrosive fluid repeatedly.

The interesting records of the far-famed professional poisoners of Italy and other countries would lead away from our subject, and it must suffice, therefore, merely to allude to those complacent assassins. They made their calculations with much exactitude, and were sure, sooner or later, of their victims—as Caesar Borgia epigrammatically expressed it, "What has failed at dinner will succeed at supper." It may be observed in this connection, that suspicion of poisoning has in some cases been unjustly founded, as in the notorious instance of the death of the Crown Prince of Sweden in 1810. While reviewing troops, he suddenly fell from his horse; and so rapidly did the idea of poisoning spread, that the soldiers who escorted his body to the capital were attacked by the infuriated populace, and their commander massacred. The Prince's physician was obliged to flee the country for safety, but finally it was proved that death was due to apoplexy.

Arsenic is probably the most feared of poisons, and with some show of reason. An interesting testimony to the extremely virulent nature of this poison is furnished in an anecdote related by Christison in his classical work on poisons. "A clergyman, while traveling in company with another gentleman and two ladies, was setting out one afternoon to resume his journey after dining at an inn, when he was suddenly taken ill with violent pain in the stomach. One of the ladies was similarly affected, but in a less degree; and likewise the other gentleman, though in a degree still less; but the other lady did not suffer at all. Dr. Morgagni found that this lady was the only one of the party who had not tasted a dish of soup at the commencement of the dinner. But he was puzzled on finding that the gentleman who suffered least had taken the largest share of the soup, while the clergyman had taken less than either of the two who were seized along with him. He then remembered, however, that in the district where the accident happened, it was the custom to use scraped cheese with the soup in question; and on inquiry he was informed that they had each added to the soup a quantity of cheese proportioned to the severity of their symptoms. . . . When the whole party had fortunately recovered, the innkeeper acknowledged that in the hurry of preparation he had served up to his guests cheese seasoned with arsenic to poison rats."

A common source of poisoning a century or more ago, was the mellowing of new wines by the agency of lead, which was taken up into solution in considerable proportion on account of the acid that the wine contained. About the middle of the eighteenth century, a disease the same in every respect as lead colic used to prevail in some of the western countries at the cider season; and it was generally ascribed to a too free indulgence in that beverage. The careful investigation of Sir George Baker, however, showed that the disease arose from the cider being

impregnated with lead, sometimes added for the purpose of correcting undue sharpness, but more often accidentally collected through contact with the various fittings of the casks and other vessels. In five years, 239 cases were reported at the Exeter Hospital, and eighty were recorded in a single season at the Bath Infirmary; while in districts in which leaden fittings were avoided, no such complaint existed. Similar epidemics of lead poisoning occurred at various times in Germany and France. Between the years 1498 and 1577, several decrees against the use of lead in the wine refining were made by various German Emperors, and in some provinces the offense was punished with death. There was a mysterious visitation of colic at Poitou, which began in 1572, and prevailed for sixty or seventy years; it was subsequently found to have been due to lead in wine. In the same way, the Paris authorities of 1750 wondered what became of the thirty thousand hogsheads of sour wine brought there for the alleged purpose of conversion into vinegar, of which the annual export did not exceed twelve hundred hogsheads. It was subsequently discovered that the greater part of it was treated with lead, and so made marketable.

Deaths have frequently ensued from abnormal doses taken for a wager. Besides the many instances of almost incredible quantities of strong spirit drunk in this way there have been cases in which other substances have been selected for the fatal experiment. An incident of this kind occurred in London in 1828, when a man who had gained a reputation for various feats of gluttony supped one day off a pound of common salt dissolved in a pint of ale. The "meal," needless to add, resulted in death.

Thanks to the clumsy methods of procedure generally adopted by would-be poisoners, their attempts not seldom prove unsuccessful, witness the instance of a woman who tried to poison her husband by infusing a toad in his wine. To the astonishment of the plotting spouse, the husband, who was suffering from cardiac dropsy, rapidly improved in health. The explanation is, of course, simple; under the skin of the toad is an alkaloidal substance known as phyrnine, which is beneficial in that complaint.

In looking through the pages of ancient medical works, one is struck by the profusion of the antidotes which were prepared and vended against poison and pestilence alike. All were composed of such inert ingredients as walnuts and juniper berries; and the apothecaries of the day, unless they had as much credulity as their patrons, must have smiled many a wise smile as they counted their fees.

To glance, in conclusion, at poisoning as treated in fiction: Dumas's prescient Count of Monte Cristo shows less than his usual acumen in discoursing of poisons to Mme. de Villefort. His idea that by accustoming one's self to an increasing daily dose, one is protected against a dose that would otherwise prove fatal, has a foundation of sense; but he forgets that it would be necessary to accustom one's self to several poisons daily, and not merely to one. The handling of toxicology by novelists, it must be added, frequently furnishes grief—or more probably, laughter—for the judicious. In one of the ephemeral efforts of recent years, a detective was made to proclaim the guilt of a wicked baronet with the thrilling exclamation: "Ha! chloroform on your shirt front! See there the deep blue discoloration which it leaves!"—London Globe.

—The Sterling Remedy Company, Indiana Mineral Springs, Ind., manufacturers of cascarae and other proprietary remedies, has secured an injunction against R. J. Gorey, of Cleveland, Ohio, restraining the latter from using the words "candy cathartic" and "candy cathartics," or any similar name, and also from using the word "cascara" in conjunction with a scroll or other design similar to the scroll or design used by the complainants with the word "cascarae." Gorey is also enjoined from using boxes similar in appearance and design to those used by the Sterling Remedy Co.

—D. Scott Keene, President of the Galveston Retail Druggists' Association, Galveston, Texas, has been appointed to represent the Texas State Pharmaceutical Association at the N. A. R. D. meeting to be held in Buffalo in October.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued August 6, 1901.

- 679,761.—Alexander L. Lion, Paris, France. Apparatus for purifying gases.
 679,834.—George B. Crites, Chicago, Ill. Receptacle for sugar or other powdered or pulverized materials.
 679,931.—Frank J. Abate, assignor of one-half to N. J. Gartelman, New York, N. Y. Non-refillable bottle.
 679,993.—John G. Ross and H. M. Taggart, Philadelphia, Pa. Adjustable adhesive supporting plaster or bandage.
 680,011.—Henry A. Allwardt, Detroit, Mich. Soda-water apparatus.
 680,050.—Claude M. J. Limb, (dit Claudius.) Lyons, France. Producing barium carbide.
 680,072.—Henry K. Prosser, Washington, D. C. Device for removing closures from bottles or jars.
 680,073.—Henry K. Prosser, Washington, D. C. Non-refillable bottle.
 680,122.—Erasmus T. Camp, Gadsden, Ala. Apparatus for vaporizing medicinal agents.
 680,162.—Christian W. Meinecke, Jersey City, N. J., assignor to Meinecke & Co., New York, N. Y. Bottle-stopper.
 680,191.—Edward A. Allen, Rumford Falls, Me., and H. K. Moore, Lyon, Mass., assignors by mesne assignments, to Moore Electrolytic Company, Portland, Me., and Boston, Mass. Electrolyzing salts of alkali metals.

TRADE-MARKS.

Registered August 6, 1901.

- 36,861.—Atomizer. The Mahoning Novelty Co., Youngstown, Ohio. The word "Privato."
 36,862.—Medicine for Certain Named Diseases and Vaporizers for Evaporating Same. Fritz Jacobson, Brooklyn, N. Y. The word "Lungoleo."
 36,863.—Preparation for the Hair. Minnie M. Harris, Washington, D. C. The compound word "Lus-Tro."
 36,864.—Pills for Certain Named Diseases. George Christian Weber, Lowville, N. Y. The picture of a royal Bengal tiger.
 36,865.—Malt Extracts and Peptonized Malt Foods. Albert Lieber, Indianapolis, Ind. The representation of a calla lily inscribed with the letter "L."

LABELS.

Registered August 6, 1901.

- 8,579.—Title: "Plantation Tea." (For a Medicine.) Dorr Thomas, St. Paul, Minn. Filed July 11, 1901.
 8,580.—Title: "De Bell's Kidney Pills." (For a Medicine.) C. W. Beggs Sons & Co., Chicago, Ill. Filed January 7, 1901.
 8,581.—Title: "Eoro-Carbol-Salva." (For a Salva.) C. W. Beggs Sons & Co., Chicago, Ill. Filed January 7, 1901.
 8,582.—Title: "Brown's Magnetic Liniment." (For a Liniment.) George W. Brown, Brooklyn, N. Y. Filed July 15, 1901.
 8,583.—Title: "Maxey's Violet Cream." (For Toilet Cream.) Maxey Laboratory Co., Allston, Mass. Filed July 11, 1901.
 8,584.—Title: "Prophylactic." (For Tooth-Brushes.) Florence Mfg. Co., Florence, Mass. Filed July 11, 1901.

ALCOHOL IN SOLID FORM.—Alcohol is made in solid form by heating a liter of it in a vessel of double capacity over a water bath at a temperature of 60° C. Twenty-eight to thirty grams of Venetian soap, very dry and cut fine are added, as well as two grams of gum lac. After a complete solution has been obtained, and while it is still warm, it is poured into metallic receptacles which are closed immediately and left to cool. The presence of the gum lac assures the preservation of the material and prevents too quick evaporation. The soap incorporated in the alcohol is left as a residue after burning.—(Sci. Am.)

—A soda fountain in the drug store of Hood & Grant-ham, Dunne, N. C., exploded August 6, while being charged by B. R. Shaw, a clerk, and Will Parker, an errand boy. Parker was seriously injured on the knee and leg, and Shaw was badly shocked, but no serious damage was done to him. Hood & Grant-ham's loss will amount to about \$100.

—The British Columbia Pharmaceutical Association held its annual meeting and banquet at Vancouver, June 14. The officers elected for the ensuing year follow: President, R. C. Macpherson; vice-president, D. C. Curtis; Council—Mr. Hiscock, Mr. Cockrane, George Seymour and T. Atkins, all past-presidents of the association.

PENNSYLVANIA BOARD EXAMINATION.

The Pennsylvania Pharmaceutical Examining Board at its meeting held in Williamsport July 16 examined 114 applicants for registration, five being women. Out of this number thirty succeeded in passing the examination as registered pharmacists and twenty-seven as registered qualified assistant pharmacists. The list of successful registered pharmacists follows: Harry E. Frank, Harrisburg; Andrew T. Veeder, Otto J. Ohlenger and F. A. Hartleb, of Pittsburg; Philip V. Melloy, Charles A. Wolfe, Cornelius S. Burton, George H. Barrows, William S. Baer, Frederick G. Luebert, J. T. Young, Howard Kingsbury, of Philadelphia; Harry H. Unser, Shamokin; Oscar F. Beck, Bradford; Walter H. Darling, Lawrenceville; Harry B. Wiley, Henry P. Davis, Robert F. Bradley, of Scranton; Barton Brown, Galeton; W. D. Davis, Mahanoy City; Louis Reichert, Carnegie; George H. Lyons, Frank M. Siggins, of Meadville; William McCarty, Liberty; John E. Wells, Meshoppen; Theresa Y. Donaghue, Girardville; E. W. Yeagle, Emporium; Edward P. Gannon, Wilkesbarre; John Bally, Lock Haven; F. A. Prothro, Cleveland, Ohio.

Registered qualified assistant pharmacists: Max E. Wimpler, T. C. Davis, C. LaRue Bonta, Jacob Suthif, of Philadelphia; W. E. Thompson, Arja Griffiths, of Scranton; Max C. Schmidt, Hollidaysburg; Garfield Thomas, Packville; Clyde I. Glover, Shenandoah; Frank Rockwell, Johnstown; John B. Oellig, Altoona; Thomas L. Jones, Taylor; Arthur Jenkins, Jermyn; John R. Haton, Edwardsdale; M. D. Morgan, Williamsport; N. B. Shales, Berwick; W. E. Hefflicker, Reading; E. J. Ferguson, Erie; J. H. Douglass, Bellevue; Samuel Sickenberger, Indiana; George L. Miller, Pittsburg; V. G. Newill, Warren; John B. Beiggs, Shickshinney; George W. Wilson, Wilkesbarre; William A. Bates, Mansfield; C. Walter Beck, Sheffield.

The next meeting of the board for the examination of applicants for registration will be held at Pittsburg and Philadelphia on Saturday, October 19. All necessary information may be obtained from the secretary of the board, Charles T. George, Harrisburg, Pa.

Pure Liquors.

It has always been an idea among careful consumers that if a pure whiskey or gin was wanted, the drug store was the place to go for it. There are a few manufacturers who make a specialty of druggists' business, and make pure goods with this object in view. One of these is Clarke Bros. & Co., Peoria, Ill., whose Old Juniper Gin and Clarke's Pure Rye stand for all that is good and pure in these two liquors. Both are guaranteed pure, and the Rye is bottled by the Government when six years old. The latter has been advertised so extensively that the dealer has but to call the consumer's attention to the brand to insure a sale.

An Attractive Special Offer.

On another page of this issue of the Era is a specially attractive offer in the cigar line. Chas. Jacobs & Co. will give 30 elegant cigar pouches bearing the advertisement of both the brand and the dealer, to every dealer who orders 1,000 Havana Specials. Druggists who handle cigars will find it will pay to take advantage of this offer. Address Chas. Jacobs & Co., 353 E. Seventy-eighth street, New York.

Medullary Glycerite.

Erb's Medullary Glycerite is a glycerin extract of red bone marrow. The manufacturer claims that it is the best on the market, and in order to prove to the satisfaction of druggists that this claim is well founded, he will send a pint bottle, express prepaid, to any address for 50c. It is made by Chas. S. Erb, 121 Amsterdam Ave., New York City.

One of the advantages claimed for the "Imperial" Nipples made by The Goodyear Tire Rubber Co., Akron, O., is that they may be kept clean, sweet and antiseptic by frequent sterilization. Few rubber goods will stand this treatment.

One of the best known proprietary preparations sold in the trade is Needham's Red Clover, put up in the form of dry blossoms and in fluid and solid extracts. They offer it to the trade as one of the best blood purifiers known, and in fact the efficiency of Red Clover in such cases is well known. They will cheerfully supply druggists with advertising matter with the druggist's imprint on. Druggists interested should address D. Needham's Sons, Inter-Ocean Bldg., Chicago, Ill.

THE PHARMACIST AS A BUSINESS MAN.

The articles on "Business Pharmacy" by practical pharmacists, which are running in the Era, indicate that a great deal of the talk about the lack of business ability of the druggist is tommy-rot. That there are men owning or conducting drug stores, who are acclaimed by themselves and everybody else as unfit for anything pertaining to the commercial end of the profession, having taste and talent apparently only for the technical, is unquestioned; but there are also men engaged in pursuits in which nothing but business ability is required, who are certainly as badly off, if not far worse. The supposition has gained far too great prominence, that those of the professions, as well as the arts, cannot take proper care of their exchequers. Such an idea is glaring idiocy. Probably one of the shrewdest business men of the last century—this may be a strong assertion, but, all things considered, is nevertheless true—shrewd in so far as his own and his family's interests were concerned, was the poet Tennyson. Not in a thousand years could he have become a millionaire from the mere sale of his poetry, but his skillful management of the resources he already had and what he got by selling his manuscripts to best advantage, permitted him to leave a fat will behind him. Had Tennyson failed to grasp each opportunity to better his finances, his genius would have been sufficient excuse. One is at first inclined to say that fate gives just due to the man whose ideas are too lofty for the commonplace necessities of life, but that at the same time one is induced to think Lombroso right in declaring that

genius is a form of insanity, and accept the achievement as an excuse for any shortcomings.

But business ability, in addition to professional ability, is only a matter of mental breadth, and the man of no matter what following who narrows himself limits his usefulness as part of the human world-machine. There is no excuse for the average man being a business failure due to what he calls lack of ability in that direction, but which is really due to his unwillingness to adapt himself to circumstances, and we are glad to form the opinion that pharmacists are on the whole better business men, because the standard of intelligence is higher, than the average storekeeper.

THE A. PH. A. MEETING.

The American Pharmaceutical Association holds its forty-ninth annual meeting in St. Louis, beginning September 16th and continuing five days. As announced in our news columns, the various passenger associations have granted a rate of a fare and one-third on all of the railroads, and members from New York City, Philadelphia and nearby points may avail themselves of the privilege of visiting the Pan-American Exhibition at Buffalo on the return trip, by depositing their tickets with the ticket agent of the railroad and paying a fee of one dollar.

We would earnestly advise every druggist who can do so to attend this meeting. The several sections of the association are making strenuous efforts to insure a full attendance, and aside from the pleasure of the trip to St. Louis and a knowledge of the city itself, the meeting will offer advantages for the acquisition of scientific knowledge. A number of papers of interest are already promised, and the section on practical pharmacy and dispensing makes a cordial request to every member to send "something" to the chairman to be read at the meeting or to be added to his report. The work of this section is pre-eminently that of the retail druggist, and he should realize that the life and success of this department is dependent upon his efforts and support. We would also urge all druggists not members to affiliate themselves with this organization. It costs but \$5.00 per year, which sum is many times returned in the yearly volume of Proceedings alone, which contains not only matter of transient interest, but more particularly its report on the progress of pharmacy, which is a digest of all the current pharmaceutical literature of the year. More particularly is interest in this association hoped for at this time from the fact that at the coming meeting there will be an exhibition of objects of interest to druggists. The committee has made strong efforts to secure success for this departure,

which has several novel features, and we are sure the "exhibition" of the 1901 meeting will be worthy of remembrance. We are also none the less sure that everyone who attends will carry away knowledge of many new objects and ideas which will be of direct pecuniary or educational value in his business career. There should be a full attendance of druggists from all sections of the United States at the St. Louis meeting.

EARLY CLOSING IN ENGLAND.

The subject of early closing of shops seems at present to have an all-absorbing interest for the British pharmacist. The movement has progressed to the "investigating committee" stage, and the report has just lately come upon the tapis. Judging by the overhasty demise of the kin-committees of 1886 and 1888—the former was the House of Commons Committee; the latter composed of the presidents of the two great medical colleges, aided by other leaders of the profession—and the slow deliberation in the progress of the present "Select Committee," this effort would seem to be doomed to oblivion under the phalanx of ponderous Commons Legislation, since the recommendations of the committee will be referred to Parliament to pass upon, but for the fact that the movement has emanated from pharmacy itself in the form of early closing associations, not from any extraneous sources, and that the Select Committee reiterates the reports of the older investigators regarding the unhealthy conditions prevailing, and adds that by the evidence it is satisfied that the subject is one of the utmost importance and that the existing evils show no general or sufficient sign of emendation. The weight of evidence is entirely on the side of shorter hours and shows that the adoption of the purposed measure will be a tremendous boon to pharmacists and pharmacy. Report says that the whole trade is so alive to the situation and has acted with such astonishing unanimity that this time only success can crown its efforts.

DIPLOMA FRAUDS.

In our news columns this week is related the story of a Jersey City degree pedler who, as "president" of a university he carried around in his pocket, was willing to bestow a medical, pharmaceutical or any degree wanted by any individual for a consideration. His career was short-lived, for the Governor of the state and the United States postal authorities got after him. The existence of such an institution in our midst implies a demand for its degrees and also goes to show what a nation of title and degree loving people we are. There is, to some people, a mystic significance attached to a row of letters after one's name, and to the snake charmer or circus performer their use is considered as so much stock in trade. The reputable professional man has no use for fraudulent degrees, however, and the authorities have done good service to the cause of education in running down these frauds. Some of the best arguments in favor of restrictive medical and pharmacy laws are unconsciously furnished by the operations of just such institutions as the "Central University of Medicine and Science."

COPYING ORDERS.

If druggists would make a point of always keeping a copy of every order given by them, whether sent by mail to their jobbers, or given personally to their traveling salesmen, they would save themselves much bother, and at the same time prevent any changing of price or increasing of the quantity bought. One of our exchanges, in discussing the advantages of copying orders, says a most excellent plan is to enter all orders with prices and full shipping direction and any special conditions in a regular book. Then, if the order is given to a salesman, let him sign the same, and if sent by mail, even though you copy your letter, it is convenient to have the order as a memorandum in some convenient place for reference. Such a book would have many uses. In the first place, it gives you absolute security from any change as regards terms of the sale and quantity and price of the goods bought. Should the goods arrive before the invoice, you can at once check them over and price them. By referring to this book the goods which you have "on order," but not delivered, can be ascertained, and in this way you are prevented from making duplicate orders. The labor of making such a book is not great, and the time would be profitably spent.

LIQUOR-SELLING BY DRUGGISTS.

The heaviest sentences imposed in Vermont for many years in connection with the violation of the prohibitory laws of that state were meted out two weeks ago to a number of offenders, including five druggists. Two of the druggists were each sentenced to six months' imprisonment at hard labor, hauling and cutting marble, and to pay fines of \$500. Two of the others were fined \$750 apiece, and one was let off with a fine of \$250.

The question of the violation by pharmacists of laws regulating the sale of liquor is one which is cropping up all the time all over the country, and that it causes so much agitation, with frequent conviction, is proof that all things are not as they should be. There is but one way to look at this question. The laws should be so framed as to allow druggists to handle and dispense liquors for medicinal purposes only, and this without imposing harsh restrictions and heavy license fee. But when a druggist goes farther than this and sells liquor for a beverage, he should be punished to the full extent of the law. There should be no mercy shown to the dram-selling pharmacist.

GIVE HIM A HEARING.

Druggists make the biggest kind of a mistake when they do not extend a cordial welcome to traveling salesmen. The average salesman travels over an entire state oftener than a druggist journeys across a county, and totes his grip from ocean to ocean quite as frequently as the druggist gets outside the confines of his own state. In other words, the traveling man meets a great many opportunities to pick up valuable information, and all wide-awake druggists have access to this inexhaustible source of knowledge.

HYDROGEN DIOXIDE FOR REMOVING ADHERING BANDAGES.—Bandages which have dried and adhere strongly to wounds may be readily removed, it is said (Apoth. Ztg.), by moistening the margins of the bandages with hydrogen dioxide

(Contributed to the Era.)

SMITH VERSUS THE TOMAHAWK, OR A LABEL SUIT WHICH DIDN'T COME OFF.

By THERSITES MENDAX.

My friend, Bartholomew Smith, was an individual who was always unfortunate. He "served his time" with a druggist who had been in business for five or six years before the registration act became a law, and this gentleman being absolutely ignorant of chemistry, botany and materia medica, discouraged those branches of study in his assistants, thinking that a knowledge of them would lead the young men to become conceited and think they knew more than their employer.

At the end of five years' service Smith took a course at the college of pharmacy. Two days before his final examination he broke his leg, and consequently got no diploma. When he had recovered from his accident he presented himself before the state board, and passed a very good examination, one of the members of the board even complimented him on his replies in the oral.

On his thirtieth birthday Smith found himself possessed of fifteen hundred dollars in cash, scraped up during years of clerking, and came to the conclusion that it was time to start on his own account, especially as he wished to get married.

He heard of a business "for sale" in a neighboring town through a commercial traveler. The town was a small one, but it was growing very fast, and the business opening seemed a fair one. The store was a small one, and in a rather poor locality, but the books showed a business of about four hundred dollars a month, and the proprietor offered to sell out at seventy-five per cent. of the invoice value. His health had broken down, so he said, and he had to go West. The stock was worth seventeen hundred and fifty, and Smith paid out his capital and gave his note for the balance, payable in six months, then he settled down to make money.

After he had been his own master for a fortnight he found out three things: First, that of the six thousand prescriptions on the files, for the past two years, about five-sixths were bogus ones, pasted in to deceive any intending purchaser. Second, that half the business transacted by the late owner was a bar business, pure and simple. Third, that his predecessor had left on account of the authorities saying that there were too many drug store-bars in town, and directing the police to close some of them. This store and two others were each only paying thirty dollars a month blackmail. So they were "closed up" in short order with a number of the lesser "dives." The stores which sold no liquor got the benefit of most of their legitimate trade, and those which could afford to pay larger "assessments" and go on violating the law, got the benefit of their higher financial standing.

Smith had no intention of violating the law, even if he could do so for thirty dollars a month. He informed the gentleman who called on him and explained matters of this fact. The authorities who had hoped that he would go a little higher than his predecessor, resented the way in which their emissary was received, and revenged themselves by incessant inspection of his poison register and record of liquor sales at inconvenient hours. Loafers who congregated in front of his store were not "moved on" as promptly as they might have been, and other petty annoyances were inflicted on him.

When the note Smith had given for the balance of the purchase money came due he was fifty dollars short. He pawned his watch and sold his bicycle, and contrived to raise it. He then took stock, and found that after working for sixteen hours a day for six months he was nearly two hundred dollars behind. He contrived to keep a small advertisement in the "Tomahawk" weekly; he could not afford the daily edition. As he wrote a very good ad, he contrived to sell a considerable quantity of his cough syrup, which he dispensed in four-ounce bottles at twenty-five cents. One day he found a patent medicine com-

pany's advertisement directly under his, which stated that all so-called "pine cough syrups" other than theirs were dangerous frauds, made from turpentine and cheap molasses. That afternoon the canvasser for the "Tomahawk" called on him and requested him to take more space. Some idiot started a cut-rate war, and dollar patents sold for seventy cents; twenty-five cent goods went down to fifteen cents, and trade became demoralized. Smith "kept at it," however. His prescription file looked a little better, and some of the women who used to pass his store as if it was a small-pox hospital, ventured in, and finding there were no loafers behind the prescription case they bought goods. Now Agricolla Stiggins was the largest farmer near the town. For thirty-five years he had been working an average of twelve hours a day, buying nothing that he could raise, using nothing he could sell, spending nothing he could lay by. He remembered the town when it had three hundred instead of thirty thousand inhabitants, and mourned the good old times when a farm hand got forty cents a day for fifteen hours' work. He had sold part of his farm, some of it was leased, and the rest was under cultivation. His boys had left him as soon as they grew old enough to run away, and he and his wife lived as closely as if their place was heavily mortgaged, and as though they had not a heavy balance at the bank. Mr. Stiggins patronized Smith's store when he had occasion to buy any drugs. In order that he might not be imposed on he carried a departmental store catalogue in his pocket, wherein tincture of iron was priced at three cents an ounce; castor oil, six ounces for ten cents, and other goods to correspond. He had a perfect horror of doctors and their bills, and when he was unable to find a suitable course of treatment for his own or his wife's ailments in "the big doctor book" he owned, he used to apply to the editor of the medical column in the "Tomahawk Weekly." The medical editor furnished information on human and veterinary ailments for five dollars a week, and gave consultations by mail for a dollar. The consultation fees, of course, went to the editor and proprietor of the "Tomahawk."

Now Mr. Stiggins was tormented with small boils, and another honest farmer had a horse with the heaves which he wished to trade off as a sound one.

The medical editor got both letters on the same day, and prescribed Fowler's solution for both man and beast. By some mistake two lines of type were transposed, and "A. S." in the medical column was directed to take "thirty drops of Fowler's solution in a little water at night," and in the veterinary column Andrew Stevens, also "A. S." was directed to "give three drops of Fowler's solution twice a day, and apply a poultice." Agricolla Stiggins had a constitution like a horse, but arsenic is a cumulative poison, and a very small quantity of it goes a long way. Mrs. Stiggins became alarmed at her husband's symptoms and sent for a doctor. The doctor got hold of the bottle of Liquor Arsenicalis with its poison guard, label and Smith's name on it, and found out that his patient had been taking it in half teaspoonful doses. Armed with the phial he sought out Smith's place of business, intending to find out how Stiggins came to buy it, and fully prepared to make trouble for the unfortunate "counter prescriber." Stiggins had told Smith the fact that the "Tomahawk" had recommended the use of the drug, and the druggist had not troubled to read the medical column of that journal. The doctor hated the editor like poison, and when he turned up the last issue and found the reply to "A. S." he asked Smith to say nothing about it to any one for a few days, as he hoped to pay off an old score against the paper. The reporter of the "Tomahawk" happened to hear a rumor of the case. He made his way to the Stiggins homestead, picked up what details he could from Mrs. Stiggins and tried to interview her husband, but he was too ill for the most pertinacious reporter to get much out of him. He, however, noticed an ounce bottle filled with tincture of capsicum, and unlabeled, on the table. He inquired if that was the bottle that had done the damage, and Mrs. Stiggins, who knew no better, said she thought it was.

The reporter was newly on the staff, and burning to distinguish himself—it was the dull seasons and local news was very scarce. The sub-editor gave him a column and told him to make a good job of it, and if necessary help it out with large print and scare head lines; and he did so.

It was a beautiful article. It commenced: "Another Victim. Poison Sold Without a Label. Terrible Results to one of our Prominent Citizens." There was a neat little allusion to the character Smith's store had borne in the past, and a few scathing lines on the discourtesy of the medical man who had refused "our representative" any information.

When Smith got the morning paper he felt that his cup of woe was full to overflowing. What little business he had left would surely be lost; the savings of many years were gone; his hopes of matrimony were blighted, and if he escaped a criminal prosecution he would be lucky. The doctor came in at noon. He and Smith conversed together for half an hour; then the blinds were pulled down, the store locked up, and the pair departed to seek the doctor's brother, who was a barrister, solicitor, notary public, etc., etc.

The editors of "The Free Press" and "The Tomahawk" were not the best of friends; they carried on a feud like the editors of the immortal *Estandswill Gazette* and *Fatandswill Independent* waged in the pages of "Pickwick." The "Tomahawk" had been getting the best of it for the past year, in its very last issue it had adjured the "Free Press" to write leading articles on subjects it understood, and to leave politics of every kind alone. By way of reply the "Free Press" printed an editorial on "Things we do not Understand," dealing with the error in the *Medical Column*, the article on the poisoning case, and the injustice done "our respected citizen, Mr. Bartholomew Smith, who has spent a year in our midst, paying his bills like a man and succeeding in turning a drug store bar into a highly respectable business."

Bartholomew Smith was not vindictive. The good will of "The Tomahawk" was worth having. In its next issue that paper expressed its deep regret for having printed the article of the preceding day. The editor stated that "the article was the work of a person who is no longer on our staff," and that had he been in the office himself he would never have allowed it to be published.

The medical editor also vanished. People who are ill must now consult a physician instead of "The Tomahawk." The "copy" this unfortunate sent down was correct, but his reputation as a medical encyclopedia was gone. Smith is in a better store now; he is married and does a very good business. As he is on the police commission of the town council he isn't bothered with loafers, nor are his poison and liquor records overhauled every other day. I could never find out how "The Tomahawk" stopped that libel suit, or what it cost them. I once asked Smith but he wouldn't tell me. Stiggins recovered after a very dangerous illness. He threatened to sue the editor, but for some reason he did not.

The doctor who attended Stiggins has a very good practice, and besides turning a good deal of his dispensing into Smith's store, he put in a good word for him with several other members of his profession. I once heard an unsuccessful druggist ask Smith how he got his start. Smith's answer was a characteristic one—"Through a man who was too mean to pay a doctor's bill, and a newspaper reporter who wrote up a case he didn't understand."

A NEW INDICATOR.

In a recent issue of the *Journal of the American Chemical Society* (June) E. G. Runyan calls attention to a new indicator for use in estimating the acidity of wines, the alkalinity of beet juice, etc.—a mixture of corallin and malachite green in alcoholic solution, first suggested by the French chemist, L. Lachaux, in 1892. The color changes of this indicator are a purple color with alkalis and a green color with acids. The formula for the mixture is as follows: "Dissolve 3.1 grams of corallin, or commercial rosolic acid, in 150 Cc. of 90 per cent alcohol, neutralize, if necessary,

and mix with a solution of 0.5 gram malachite green dissolved in 50 Cc. of 90 per cent alcohol." In using this, 10 drops of the indicator are added to the fluid to be titrated, then acid or alkali, as the case may be, is added—to a clear purple, if the latter, a clear green if the former.

Corallin alone is a valuable indicator, so are litmus and phenolphthalein, but any one who has tried it will exactly the neutral point in titrating red wines with either of the two will appreciate an indicator that gives an "end point" plainly marked and without "outside" use. This is just what the new mixture does, through the malachite green, which possesses no value as an indicator in itself, but when mixed with corallin blends with the colors of that indicator and renders the acid reaction very clear and distinct. Of course, this indicator can only be used for titrating substances that give a distinct acid reaction with corallin, the active ingredient of the mixture.

A number of experiments have been made with this indicator at this laboratory to determine the value with many of the fluid preparations of the *Pharmacopœia*, or solutions that are too deeply colored to be titrated with litmus or phenolphthalein, and the results have been highly satisfactory. With several varieties of wines, claret, sherry, port and riesling, the titration of the acidity with tenth-normal potassium hydrate was easily made within a very narrow limit of exactness, while litmus, as an outside indicator, variations of from 0.5 to 1 Cc. of alkali solution were about as close as could be made. Quite a number of the "liquors" of the U. S. P. were tested for acidity with this indicator, even liq. and tinct. ferri chlor. were satisfactorily titrated, and it was found to answer every requirement as to quickness of color, change and sharpness of the difference of color. It is proposed to carry out the same trials with solutions of the alkaloids as extracted from fluid extracts and crude drugs in the usually more or less colored solutions these give on first extraction, as, if satisfactory, it will be a valuable addition to our list of indicators for this purpose. It is recommended that trial be given the new "corallin-malachite green" indicator in all cases where the acidity or alkalinity of colored liquids is to be estimated, especially as to alkaloids. The use of a mixture of two substances in an indicator seems to open a profitable field for further investigation along this line as valuable combinations may be found.

FRED'K. T. GORDON,
Pharmacist, U. S. N.

"Laboratory,"
Navy Yard, League Island, Pa.

EMULSION OF COD LIVER OIL.—Vigier has suggested the following formula for cod liver oil emulsion to the Commission of the Codex, for inclusion in that work: Cod liver oil, 140 grams; simple syrup, 60 grams; orange flower water, 40 grams; Irish moss, 5 grams; distilled water, q. s.; oil of bitter almond, q. s. Mix the oil of bitter almonds, the syrup and the orange flower water in a capacious bottle. Boil the Irish moss for twenty minutes in sufficient water to give 220 grams of decoction. Strain with pressure through a cloth, evaporate to 160 grams. Introduce the cod liver oil into the bottle, pour on the boiling decoction and shake thoroughly. Continue the shaking for periods of five minutes, at intervals, until the emulsion is thoroughly cold. It contains 33 per cent. by weight of cod liver oil. If glycerin be substituted for the syrup, perfect keeping is assured. If desired, calcium hypophosphite (4 grams) may be added to the above ingredients. (L'Union Pharm.).

TO REMOVE FRECKLES. (Lentigo).—The following lotion is recommended by Pratico del Med.:
Mercuric chloride 15 grains.
Zinc sulphate 30 grains.
Solution of subacetate of lead ½ dram.
Rose water 8 ounces.
M. Apply locally night and morning.

NIOFORM—Trade name for iodochloroxy-chinolin, an antiseptic brought out by Raro.

BUSINESS PHARMACY.

A DRUG CLERK'S TALK WITH HIS FELLOW CLERKS.

By J. P.

There appeared on this page a short time ago under the head "A Plea for the Clerk," an article on which the writer believed to be the proper treatment of a drug clerk by his employer, and the friendly relations that should exist between the two, in order to make the every day work slip along smoothly and pleasantly for all concerned. In that article my talk was more to employers than to the clerks. In this one I wish to have a heart to heart talk with the boys themselves. In my experience with clerks in general, I have discovered that the big majority of them could stand the pressure of having a little more ambition instilled into them. Not that they don't mean well enough, and wish to do all that is right and honorable toward their employers, but for some reason or other we fall into a certain rut, and despite ourselves, we remain there, until finally, we begin to lose our ambition and actually become lazy. Why not "about face," be up and doing? Is there not some little thing to be done that will please our employers and lighten our own consciences as to duty well done. Can we make some little change in the store (always with the proprietor's consent) that will prove more convenient in the general arrangement of things? How about the figuring out of something new in a window trim for next week?

How many of the more salable drugs might be made up into neat little packages for ready dispensing—sulphur, borax, alum, chamomile, licorice powder, salts, and a score of others might be mentioned, all depending, of course, on the demand for certain drugs in your vicinity. Then there are bottles, cans, drawers, and many odds and ends to be kept neatly labeled, depending upon the condition of the store in which you are employed. I remember going into one store that needed renovating to the Queen's taste. My predecessor, an old chap, was not at all particular about the condition or location of the drugs carried in stock. Everything as it came from the wholesale house was left in its original container, regardless of what that container might be, and thrown into this, that and the other corner, cupboard or shelf. In skimming around the place, I found in the cellar a lot of I ounce wide-mouthed quinine bottles, just enough, when placed side by side, to nicely fill a good-sized glass cupboard in the rear of the store back of the prescription case. With hot water and soap suds I scoured them out. Next I foraged out all the drugs that were bought in small quantities, such as would be bought in quarter and half pound lots by a small store. These I transferred to my bottles and fitted them all with nice smooth corks. I then secured some old labels, of about the proper size, trimmed off the corners, and used the blank side with my printing purposes. With the dip of a fine bristle brush in the ink bottle, and a little practice, I could print a very neat label, much more preferable than a machine-printed one. Then I sized the labels up with a little glue to hold the lettering fast, placed them on my bottles in a perfectly straight line with each other by means of a plumb line stretched across the prescription desk, spread a thin coat of white varnish over the finished labels on the bottles, to prevent their being soaked off when washed; arranged them alphabetically in my glass cupboard, and I had a very pre-

sentable display, and no doubt an improvement over the condition in which I had found them. I likewise labeled the drawers with a long strip label, arranging everything alphabetically and cleaning each drawer thoroughly, as I went along. With practice I soon found that I could print a much neater and showier label by first tracing out with my pencil nice broad letters after the style of type afterwards filling in with pen and ink, and topping off with a neat black line as a border around the edge of the label.

In making labels I always cut the corners off, getting a much better result than an ordinary oblong strip could give me. In one store in which I was employed I labeled in this way, 160 cans, 190 drawers and 35 shelf bottles from which I removed the broken labels that had been on for years, besides a great many odds and ends about the store. If you wish to brighten up an old gloomy store try my scheme and note the change. But I only mention this as one of a hundred little ways in which we can utilize a little spare time. Don't allow your stock bottles to run too low, so much so in fact that when you come to need a certain preparation badly you find your sorrow that your stock bottle is empty. When you find a container getting low bring it up out of the cellar, or in from the back room, and place it on your work table as a reminder. I find it a good idea to make a note of everything that comes up during the day and that I intend carrying out in the near future.

I could speak of many little ways, space permitting, in which a clerk might cause himself to take a jump upward in his employer's estimation, but one thing I must not forget; don't stand idly by and watch your shelves fill up with accumulations of ancient patents, etc. Every patent has its day, and when this class of goods begins to look soiled and veteran, get rid of it as soon as possible. You are daily given opportunities to recommend something for this, that, and the other thing. Don't hesitate to hand out a veteran patent, when you can honestly do so.

I often have calls for a good liniment, and in such a case I open a bottle of one that perhaps still carries a Civil War Revenue Stamp, transfer the contents to one of our own bottles and pass the liniment out as one just compounded, always obtaining the price of the original patent for it. I figure the money obtained on such a sale as being so much money found. Likewise with calls for liver pills, cathartics, etc. You have pills in your pill case you can never sell otherwise. In fact, I won't every chance that comes my way. Nor do I wrong the customer in so doing, for by keeping well read up on the patent which I am handing out, I know for what it is recommended, etc. I only resort to this method, of course, with very old timers—those that will never be called for, or goods of manufacturers who have long since gone out of business. If a person requests you to compound a something for a certain little imaginary ailment, look wise, ask a few questions bearing on the case, and then proceed to open a bottle of one of the old timers you believe will strike his case. We cannot hand out a dirty, battered up looking affair of a patent medicine with a recommendation, without suspicion at once arising in the mind of the prospective buyer that you are trying to work off old stock on him.

Nor must we confine our selling abilities along this line to patent medicines alone, but to all old stock sundries, when we can safely and honestly do so without injuring the reputation of the store. Once clear the store of this class of goods—some of the older

The Era pays \$5.00 for each accepted contribution to urged to relate their experiences and offer suggestions. Make your papers short, about 1,000 words (one Era

this department. Proprietors and clerks are especially on all phases of the practical business side of pharmacy. page) in length.

drug stores are clogged up with them—and it is an easy matter to keep the shelves comparatively free from it in the future. A bright clerk can actually go a long way toward paying his own salary by sales of stock that the proprietor had long ago given up any idea of ever getting rid of without throwing away. In conclusion I have only to say—keep your eyes open, your wits about you, and you are bound to prove winners.

HOW TO MAKE A DRUG STORE PAY.

By CLYDE HUSTON, Oxford, Ohio.

An important duty of the pharmacist, which is too often neglected, is that of labeling. Not only is it necessary for the safety of the customer, but it is also a very good manner of advertising, since the printed labels contain, beside the name of the article, the pharmacist's name and address.

When a customer brings a vial to you to fill, and the vial is labeled, always scrape off the old label and paste on a new one, instead of pasting the new one over the old, as many pharmacists do. The method of pasting a new label over an old one is a very untidy and also a dangerous practice. For example, a customer brings a vial labeled "syrup of tolu" and wishes it filled with "sulphuric acid." Instead of scraping off the old label you paste the new one over it. After a time the acid label may peel off, or get torn off, leaving the sulphuric acid labeled syrup of tolu. The customer has an occasion some time after to use some syrup of tolu and gets the acid instead. Serious consequences might thus result from such carelessness on the part of the pharmacist. Keep good, clean, regular stock, and don't buy job lots, which are often shoddy or damaged goods. At any rate they are out of the regular class of goods, and when you sell them out you are unable to get more of the same kind.

Keep on good terms with your competitors, and don't try to add to your patronage by running down them or their wares. Be accommodating to your customers. If you happen to be out of an article when a customer calls for it, go out and get it for him from another druggist, and thus keep him when possible from going to your competitor's store.

Don't keep too many side lines, but confine yourself to certain lines and keep full and complete stocks in these lines instead of keeping a little of this, that and the other thing, thus having a veritable curiosity shop.

Be glad to have your friends drop in to see you, but don't permit your shop to become a loafers' rendezvous or a meeting place for the Sitting Sons of Rest, for this would be a poor advertisement for you.

Keep a number of the more staple articles, such as castor oil, Epsom salts, etc., bottled up or tied up in neat packages and labeled, ready for sale. Much time will thus be saved, as this can be done at dull times, and trade will also be improved, as prompt service, which is a good drawing card, may be rendered.

But, above all, keep the welfare of your customers at heart, and treat all with a uniform courtesy, ever having for your motto: "Honesty is the best policy."

VAPOR BATH.—The following simple method for giving a vapor bath to patients who have to be treated in the recumbent position is recommended by La Presse Medicale (Jour. Amer. Med. Assoc.). Spread a blanket over the bed, upon which place the patient, dressed only in his gown; under each foot and at each side of the body place a well corked stone-ware jar of boiling water. Before being placed in position, each jar should be covered with a damp towel and afterward covered with a piece of flannel. After the jars are placed in position the blanket is folded over the patient, and he is then covered with another blanket and an eiderdown quilt. In a few minutes a profuse perspiration is brought on, lasting for a time, varying according to circumstances. If it is advisable to increase the perspiration, warm drinks may be given. When the patient is taken out of his vapor bath, the blanket on which he lies and the jars

are withdrawn without uncovering him, and his body should be dried under the second blanket and the quilt, which are allowed to remain. After twenty or thirty minutes his linen may be changed.

SHOP TALK.

A Harlem druggist, who has a fairly large clientele simply because he has an old stand, is wondering how it is that a new store scarcely a stone's throw from his own is doing, as he reluctantly admits, fully twice as much business as he does. The reason was plainly to be seen, but his conservative mind couldn't grasp it. "Luck has everything to do with getting business," he said, "and good treatment of customers in keeping it. That druggist over there is getting a good deal of my trade at present because luck is running his way, but the time will come, and shortly, when his customers will come back to me. Why? Simply because I have an established reputation of twenty years in the neighborhood." "Do you advertise?" was asked of him. "No, what's the need! I tell you, I've got the reputation; everybody knows who and where I am." "Do you change your windows very often?" His window displays consisted of a very formal, rigid, mathematical arrangement in each window of bottles of various preparations. "My windows are cleaned once a week, but I seldom disturb the position of the show, as you call it, oftener than the discoloration of the labels on the bottles or the dummy cartons necessitates—say once a month in Summer and not so often in Winter." The other druggist, who is doing the business, when spoken to, said, "Yes, I'm doing a rattling trade, just as I had anticipated. This is my first store, and I'm proud of my success, naturally. You see, while a clerk I saved until a year ago, I had enough to start up a store, and while looking for a site I chanced upon that store over there. The idea struck me at first glance that the proprietor was altogether too conservative, in other words, wasn't up-to-date. I watched his store for a week, made inquiries in the neighborhood and was corroborated in my judgment in a score of ways. This store I now occupy was vacant at the time, and I rented it. Advertise? O, yes, a good deal. My windows are changed once a week, and each time representing a different line. I never let anything in this store grow old in one place. Everything is kept on the move, even myself," and he smiled. "Good day."

Chalfant, the druggist at Fifteenth and Tasker streets, Philadelphia whose bright advertising is well known down town, is bringing out some good advertising at Ocean City, N. J., where he has a branch store. Mr. Chalfant is "advertising manager" of Ocean City's boardwalk and amusement pier, so he has a chance to get out programmes and booklets that are brimful of good matter. Here are some of his points: "Follow your Knows and you will come to our drug store—everybody knows we are the UP-TO-DATE druggists—postal telegraph, telephone pay station, stamps for sale, in fact all the conveniences you may want are here for your convenience." "Canned Coats—coats of MOSQUITO LOTION, we mean, for the Arkansas Mosquito Chaser." "Space-L-Ontray 'Eye (S) Cream Sand-Which-Is'; two for 5 cents; too good to eat less than 6." On the back of the four-page programme of the entertainments at the Pier for the week, is given a long list of the soda water flavors and drinks to be had at the soda fountain, with a few pointed sentences telling why "Chalfant's Soda" is good to drink. There are just seventy-five different flavors and drinks named in this list, so that the most fastidious summer maiden should be able to find something to please her, while the novel and catchy names of some would inspire the curious to ask for them "just to see how they taste."

* * *

Druggists in New York and its suburbs are using time-table advertisements of their business for all it's worth. The forms and sizes, varying as widely as they

do, show a good deal of ingenuity on the part of the advertisers. Some are only cards, some are folders, some are booklets, and some of the last are bound giving durability; and the sizes run from two by three inches to as large as six by eight. It is a noticeable fact that when distributed at the proper time—in the morning when people are hurrying to business, or in the evening when they are returning home—but a very small percentage of this form of advertising is thrown away. Everybody in New York during those hours seems to have waited till the last minute and then started off in a rush with the paramount idea of catching his train, and it seems quite natural that a time-table would be put in the pocket where another kind of ad. would be thrown away. It wouldn't be a bad idea for the suburban druggists to persuade the railroads not to issue local time-tables separate from the general time-table of the whole road, but to allow each druggist or number of druggists to issue one in the company's stead. This plan is not probable, but it is possible.

* * *

The millennium has come! At least, so a Boston druggist thinks, and he bases this on the fact that a woman came into his store the other day and asked for a postage stamp and then requested him to give her an envelope, asking for pen and ink with which to address it and then, being a bit uncertain regarding the address she was writing, she had the nerve to ask the druggist to look it up for her in his directory, stating that such books always puzzled her greatly and that she could never find a name, etc. All these courtesies the druggist performed, and he says he was getting interested to see just how much further she would go, as she seemed of the type that thinks a pharmacy is a general information and accommodation bureau. To his great surprise, she sweetly thanked him and then, looking around, did not sweep out, as is the habit of such "customers," but actually bought several toilet articles and a box of headache powders of his own make, on all of which he realized a rather good profit, so he states. He nearly fainted at this unexpected result of the woman's visit, beginning as it did in the old, familiar way—the request for a stamp.

* * *

Nowadays, the soda fountain operator who cannot add a crack bartender's feats of jugglery to his other accomplishments as a "fizz" mixer, is not considered in the same class with the clerk who can mix an egg phosphate with the glasses held at arm's length. A Broadway drug store in New York, not more than a mile from the City Hall, boasts of a dispenser who can do all these things, but it is worth a trip across town to see him hand out the customer's check. In doing this he rivals an Australian boomerang thrower, for, with no apparent effort, and with unerring precision, he starts it rolling down the counter away from the customer, only to have it return in its own tracks, completing its journey in front of the customer's glass. The result is as unexpected as it is startling, and the Era man knows one at least who bought a glass of soda at that counter just to see the fellow do it.

* * *

A Boston suburban druggist tells this of one of his customers. She came in and asked for "Lettuce Soap," saying she had seen it advertised. The man of the pestle and mortar did up her little package and just as she was paying for it she asked if it was surely efficacious in its work? It then came out that her family had undertaken to raise lettuce, a few radishes, cucumbers and like things, and they had been troubled with lice on the lettuce, making it hard to wash the insects off. The woman really thought that the lettuce soap was intended to be used in some way to kill the lice, just as flea soap is used. Just how she got this idea into her head, she was unable to say, yet she laughed heartily with the druggist when he explained that it was not intended for that purpose.

NEW REMEDIES.

CARABIN.—Substance isolated from the nerium odorosum by Bosc. It has a formula which answers to $C_{21}H_{33}O_6$, and seems to be a form of saponin.

PULMOFORM.—Trade name for methylene-diguaiacol. It appears as a yellowish, inodorous, insipid powder, insoluble in water, but soluble in alcohol and ether. It has been highly recommended in the treatment of tuberculosis.

TRIFFERIN.—Trade name for an iron preparation, brought into trade recently by Knoll & Co., Ludwigshafen, in which, according to the formula, the iron must be described as paraneucleinated (ferum paraneucleinum). The new preparation contains 9 per cent. nitrogen, 2½ per cent. phosphorus, and 22 per cent. of iron.

CYSTOXINES.—Name given to a series of organic poisonous substances derived from the body of man and other animals. They are called separately after the organ or fluid in which they are found—hepatoxin, for instance, for that from the liver nephrotoxin, that from the kidneys; leucotoxin, that from the lymphatic glands, etc.

PLANTOSE.—Trade name for a new nutrient substance for invalids. It is a vegetable albumen obtained from rapeseed cake (i. e., residue after pressing out the oil), by extraction with water and coagulated by warming the solution. It appears as a light yellow powder, insoluble in water. Its nitrogenous content is from 12 per cent. to 13 per cent.

KALFROOM.—Name derived from Kalberrahm, or calves-cream, according to the Centralhalle, of a slightly yellowish powder that has recently appeared on the markets, and whose use is to thicken and enrich skimmed milk, or the residue of the centrifugal machines in butter-making, so that it will serve as food for calves. The material, according to analysis, contains about 45½ per cent. of fat, 4½ per cent. of nitrogenous matter and 32 per cent. of cane sugar.

BACILLOL.—This name has been given to a solution of tar oils in liquid soap, which, according to the researches of Werner and Pajic, is a most excellent disinfecting medium—far surpassing carbolic acid in this respect, and, in consequence of its harmlessness and solubility in water, comparing favorably with lysol. The special advantages claimed for Bacillol by its exploiters are its entire absence of odor, its high deodorizing property and its relative cheapness as compared with the other disinfectants. It is soluble in every proportion and at every temperature, in water. In calcareous waters, however, it makes a slightly milky solution, the turbidity being caused by the formation and precipitation of an insoluble lime soap. (Nat. Dr.)

ORIGIN OF THE WORD PHYSICIAN.—The following was extracted from a letter written by Dr. Murray, the editor of the "Oxford Dictionary." Physician was taken from Norman French in the thirteenth century in the form of "fiscien" and in its present sense of practitioner of the healing art. In Du Cange's Lexicon of Medieval Latin the regular sense of "physica" is medicine, and "physicus" equals "medicus." But in the classic literature of the fifth century, "physica" means natural science and "physicus" a physicist. The transformation of "physicus" and "physica" from the ancient to the modern sense is a part of the general history of the Latin language during the period of the break-up of the Roman Empire. In the third century the common peasant of Italy and Gaul thought a "physicus" must know something of the stars and planets, about the position of the bones and the virtues of the herbs. So, thinking, the "physician" a "medicus," called the "medicus" a "physicus." But when Roman civilization perished, the literary classes passed away and only the peasant survived, and his Latin became the language of the world. The substitution then of "physicus" for "medicus" is only a part of the great revolution.—Red Cross Notes.

(Concluded from Page 69, July 18, 1901.)

The Legal Responsibility of the Pharmacist in the Sale of Poisons and Dangerous Substances.

BY J. H. BEAL

Liability of Druggist for Mistake of His Employee.

It would seem that the druggist will be held liable for damages resulting from the mistakes of his servant, as shown in the following Ohio case.

A druggist's servant having negligently filled a harmless prescription with a poisonous substance, bought by G for his wife, and taken home by him, and his wife dying from its effects, the druggist will be liable to the wife's administrator. (Davis v. Guarneri, 450 O. S. 470.)

In a New York case, however, in a criminal prosecution for practicing as pharmacist without license, it has been held that where the sale was not made by the defendant personally, but by his servant, and against the express orders of the defendant, the latter was not liable, and that proof of such disobedience by the servant may be offered as a defense. (Westchester Co. v. Dressner, 23 App. Div. 215, 48 N. Y. S. 953.)

In Illinois it has been held that the proprietor of a drug store committed an offense against the statute where an unregistered boy sold poison, though he had been instructed to sell anything but poison, but was left to judge for himself what was poison, and what was not. (Haas v. People, 27 Ill. App. 476.)

The Responsibility of a Druggist for a Medicine Recommended by Him.

Where a druggist, in good faith, recommends a prescription not as his own, but as the prescription of another person, and is requested by a customer to fill it, and does so, but only charges for the medicine and for the compounding, he is not liable for the damage resulting to the customer. (Ray v. Burbank, 61 Ga. 505. Same case Am. Rep. 103.) (See also responsibility for Injury Caused by Patent Medicine.)

Druggist's Liability for Mistake, General Doctrine.

"If a druggist negligently sells to A a deadly poison as and for a harmless medicine, and A buys it to administer it to B as a medicine, and does so administer it, from the effects of which B dies, a right of action in tort survives to B's administrator. (Norton v. Sewall, 106 Mass. 143. Same case 8 Am. Rep. 208.)

Though the deceased may have been ill of an incurable disease, yet if the mistake in filling the prescription hastened or caused the death, a recovery can be had against the druggist. (McClardy v. Chandler, 2 Gaz. 1.)

In criminal cases it is frequently important to know who shall be deemed the seller. In the Pharm. Soc. v. Wheedon (Law Rep. 24 Queen's Bench, Div. 683) it has been held that the seller is the one who makes the physical transfer, and an unqualified assistant was held to be liable although he sold on behalf of his employer who was registered. The employer would also be liable for injury caused by such sale, notwithstanding conviction of the assistant. (Same case.)

Labeling a Dangerous or Deadly Substance as a Harmless Compound.

If an error of the druggist consists in labeling as a harmless compound a substance which is in itself essentially dangerous and liable to cause injury if ignorantly used, he will be liable for all injuries caused by its mislabeling, not only to the immediate purchaser, but to any subsequent purchaser into whose hands it may come, and who may be injured thereby without fault of his own.

The liability of the original vender to the injured person remains without regard to the number of in-

tervening hands through which the mislabeled article may have passed.

The leading American case upon this subject is that of Thomas V. Winchester, reported in 6 N. Y. 397.

According to this case the ground of the liability is not that of privity of contract between the original vender and the injured person, but the duty imposed by law upon everyone to avoid acts which in their nature are dangerous to the lives of others.

In this case the defendant Winchester, a manufacturer of and dealer in medicinal extracts, sold to one Aspinwall, as extract of Dandelion, and labeled as such, a jar containing Extract of Belladonna, which dangerous drug somewhat resembles the comparatively innocuous preparation of dandelion. Aspinwall believing it to be extract of dandelion, sold it as such to John Foord, also a druggist. The latter, in turn, sold a portion to Thomas, whose wife having taken a portion was rendered dangerously ill, and injured thereby.

Suit having been brought by Thomas against Winchester, the manufacturer, the latter's counsel contended, among other things, that as there was no privity of contract between the original vender and the plaintiff the latter could not recover. Also that the plaintiff was chargeable with the negligence of Aspinwall and Foord, through whose hands the substance had passed, and these persons and not Winchester should be held responsible to the plaintiff.

The following statements are quoted from the opinion of the court:

"Death or great bodily harm was the natural and almost inevitable consequence of the sale of belladonna by means of a false label."

"The defendant's duty arose out of the nature of his business, and the danger to others incident to its mismanagement. Nothing but mischief like that which actually happened could have been expected from sending the poison falsely labeled into the market, and the defendant is properly responsible for the probable consequence of the act. The duty of exercising caution in this respect did not arise out of the defendant's sale to Aspinwall. The wrong done by the defendant was in putting the poison mislabeled into the hands of Aspinwall as an article of merchandise, to be sold and afterwards used as the extract of dandelion by some person then unknown."

"In Longmeid v. Holliday, (C. Exch. 761) the distinction is recognized between an act immediately dangerous to the lives of others, and one that is not so. In the former case, the party guilty of negligence is liable to the party injured, whether there be a contract between them or not; in the latter the negligent party is liable only to the party with whom he contracted, and on the ground that negligence is a breach of contract."

The court declined to express an opinion as to what would have been the liability of Aspinwall and Foord if the action had been brought against them.

Intervention of the Act or Negligence of Third Person Between the Original Negligence and the Injury.

The wrongful or negligent act must have been the direct or proximate cause of the injury complained of.

If between the wrongful sale of a dangerous substance and the injury which results there intervene the act of negligence of a responsible third person the original vender may not be responsible for damages.

Thus in the trial of the case of Carter against Towne it was shown that the defendant wrongfully sold gunpowder to a boy eight years old who took the same home and delivered it to his parents, the latter subsequently permitting him to use a portion

of it, when an explosion occurred by which he was injured. It was held that the original wrongful act of the vendor was not the direct or proximate cause of the injury, and the case was decided in favor of the defendant. Had the explosion and injury occurred prior to the delivery of the gunpowder to the parents, the defendant would certainly have been liable.

In another case the averments of the declaration showed that the defendant on a request for black oxid of manganese furnished, by mistake, black sulfid of antimony, which the purchaser resold as black oxid of manganese to the plaintiff. The plaintiff believing the substance to be black oxid of manganese mixed it with potassium chlorate and was injured by the resulting explosion. It was held that the declaration did not disclose cause of action.

The distinction drawn by the court between this case and that of *Thomas v. Winchester*, where extract of belladonna was labeled and sold for extract of dandelion, is that of sulfid of antimony was not of itself a dangerous substance, but became so only by its subsequent admixture with potassium chlorate, and hence that the injury was too remote to justify recovery against the original vendor who mislabeled it.

Responsibility of Druggist for injury Caused by Patent Medicine.

The question of responsibility of a druggist for injury caused by a patent medicine sold by him in the regular course of business, and of whose composition he is ignorant has been before the courts but a few times. An interesting case of this kind is that of *West v. Emanuel* recently decided by the Supreme Court of Pennsylvania.

In this case a healthy girl, daughter of the plaintiff, purchased from the defendant Emanuel a nostrum known as Kohler's Headache Powders, subsequently shown by the analysis to contain about five grains of acetanilid. Shortly after taking one of the powders the girl exhibited signs of acetanilid poisoning and died within a few hours, the medical testimony being to the effect that she died as a result of the drug. The mother of the girl then brought suit for damages, alleging negligence on the part of the druggist in not labeling the package poison nor advising the girl of its dangerous nature. The court held that the defendant was not liable.

If this decision be good law, then we may conclude that a druggist who sells a patent medicine in the regular course of business, without knowing its composition, and having no reason to know of its dangerous character will not be responsible for injury resulting from its use.

It is difficult to see how any other doctrine could apply. The demand for medicines of secret composition is created by newspaper advertising and not by the druggist. The purchaser buys them on his own responsibility and uses the drug store merely as a convenient source of supply. If the druggist should have positive knowledge of the dangerous character of a proprietary remedy it would doubtless be his duty to warn his customers of the fact, either verbally or by means of a label, but if in the absence of such knowledge he should place a poison label upon the preparation he would be taking the risk of suit for damages by the manufacturer.

The Delivery or Vending of Dangerous Articles Without Notice of Their Dangerous Qualities.

A. Where the Vender is Aware of the Dangerous Quality.

In an opinion delivered by Justice Gray in *Wellington v. Downer*, (104 Mass. 67) the general doctrine is stated in the following language:

"It is well settled that a man who delivers an article which he knows to be dangerous or noxious, without notice of its dangerous qualities is liable for any injury which may reasonably be contemplated as likely to result therefrom, to that person or any other who is not himself in fault."

In this case the declaration averred, that the

defendant, knowing naphtha to be dangerous to life when used for illuminating purposes, sold a quantity to a retailer of illuminating fluids, knowing it to be the intention on the latter to retail it in his business; that the retailer being ignorant of its dangerous properties, sold a pint to the plaintiff who was also ignorant of its nature, and was injured by its explosion when attempting to use it as an illuminant.

The declaration, being demurred to as not stating a sufficient cause of action, was sustained by the court in the language above quoted.

The doctrine of this case is also sustained by an English decision, (*Farrant v. Barnes*, 11 C. B. (N. S.) 553) where the defendant delivered to the servant of a carrier a carboy of nitric acid, without notice of its dangerous character. The carboy having burst and the plaintiff being injured by the acid which escaped, it was held that the defendant was liable for the resulting injury.

The doctrine of the two preceding cases and of *Thomas v. Winchester* has apparently been infringed by a New York decision in the case of *Dosee v. Clute*, (51 N. Y. 404) where the manufacturer and vendor of a steam boiler was held not liable to a person, other than the vendee, who was injured by an explosion due to the defective construction. This decision has, with apparent justice, been criticized on the ground that the natural and probable result of a defectively constructed steam boiler would be an explosion and the consequent injury of innocent third persons who could not be aware of its latent defects, and would be justified in assuming it to be safe.

B. Where Both Parties Are Ignorant of the Dangerous Nature of the Goods.

Where both parties are equally unaware of the dangerous character of the material delivered and equally free from fault, and an injury results, not from inevitable accident, the loss must be borne by the vendor or shipper, on the ground that from his relation to the transaction, he is more justly chargeable with knowledge of the character of the substance than the person to whom it is delivered. (*Pierce v. Winsor*, 2 Cliff. 118). In this case mastic caused injury to other portions of a cargo with which it was shipped, neither party being aware of its liability to cause such damage. The shipper was held responsible.

Delivery of Dangerous Articles to Children.

The sale or delivery of dangerous articles to children too young to understand their dangerous nature, and unfit to be intrusted with such substances will usually render the person who delivers such article liable for any injury which may ensue from such negligent delivery.

In *Carter v. Towne*, (68 Mass. 567) a declaration averred that the defendant negligently sold and delivered gunpowder to the plaintiff, a boy eight years old, who was an unfit person to be intrusted with gunpowder, and inexperienced in its use, all which the defendant well knew, and that the child in ignorance of its effects, and using that care of which he was capable, exploded the powder and was injured thereby. On demurrer this declaration was sustained as stating a sufficient cause of action, though a trial of the case resulted adversely to the plaintiff upon another point.

Responsibility of Pharmacist for Sale of Drug Knowing it to be for an Improper Purpose.

If pharmacist sells a dangerous agent to another, knowing that the latter desires it for the injury of a third person, he will be liable criminally for any injury which results therefrom to such third person. Thus in a North Carolina case where a druggist put up croton oil for a purchaser, knowing that the latter intended to administer the same as a joke to another, the druggist was held liable for the resulting injury. (*State v. Mourou*, 28 S. E. 547 (N. C.)). He would doubtless also be civilly liable for resulting injury.

It is not necessary that the dose be sufficient to be poisonous or deadly, but only that it be unusual and liable to cause injury. (Same case.)

THE PREPARATIONS OF ERGOT.*

By J. C. McWALTER, F. F. P. S.

The position of ergot is unique, both in medicine and pharmacy. Few drugs have such a definite physiological action, and scarcely one is known whose properties are so characteristic. Yet the pharmacy of ergot is rather a reproach to British chemists, and the extractum ergotæ fluid resin of the Pharmacopœia, supposed to represent the summit of scientific skill at the end of the nineteenth century, is a wretched product, which it behoves the Conference to have removed from its pages. The ergotin of the Pharmacopœia, or rather the solid extract, is a creditable scientific preparation of definite physiological action and tolerably uniform in strength.

When Bonjean first reported on ergotin he considered that it consisted of two definite principles, but both alike active. One was the soft reddish-brown extract, soluble in water, so familiar to you all, and the other was a fixed oil, of which ergot yielded some 30 per cent., soluble in alcohol, ether, and caustic alkali solutions. It is now believed that ergotin should be regarded as a collective term, which comprises most of the active principles of ergot, minus the oil, resin, sphacelinic acid, and sclererythrin. The problem for pharmacy is to reduce this to a more definite active principle, or at least to produce it of still more definite weight and consistence.

Although the extractum ergotæ of the B. P. is popularly supposed to yield a product similar to that first popularized by Bonjean, it must be observed that the latter extracted the drug with water, and purified the product by alcohol, whilst the pharmacopœial preparation is made by extracting the drug with weak alcohol and treating the resultant with water. Further the weak alcoholic extract, from which the B. P. extract is now made, is practically the tinctura ergotæ of the old Dublin Pharmacopœia, which was generally regarded as a miracle of inertness. Again, although the oil is now looked on as worthless, Dr. Wright formerly regarded it as the active principle of the ergot, and the ammoniated tincture of the present Pharmacopœia seems to survive out of respect to the superstition that an alkaline solution must then be the proper medium to extract an oleaginous substance. The infusum ergotæ never had any considerable repute, and most of that found in pharmacy is comparatively worthless, but this is rather the fault of pharmacy, for a fresh infusion made from freshly bruised and fresh ergot will probably be found to contain a larger proportion of the alkaloid than the equivalent of the tincture or fluid extract. At the same time I cannot regard it as proved that the alkaloid is a definite measure of the potency of ergot. The proportion of solid extract in honestly made fluid preparations of ergot may be regarded as a rough mark to their potency. Bonjean found that 500 parts of ergot yielded 50 to 70 parts of ergotin, perhaps 10 to 14 per cent. The present fluid extract of the B. P. varies from 11 to 16 per cent., and the tincture from 3 to 3.5 per cent. Squibb's ergot, of great repute in some parts, yields, according to my examination, about 11 per cent. Kobert says that cornutine is the active constituent and is contained in the alcoholic extract with sphacelinic acid after removal of the fat. He also points out what is the experience of everyone here present—that all aqueous extracts go bad after nine months; this he asserts to be due to the decomposition of the cornutine, and is probably correct, but I have found that extracts of ergot which had developed a strong fetid odor still possessed marked action on the fibrous tissue of the blood vessels and capillaries—a fact which seems to suggest that cornutine is not the sole active constituent.

According to Keller, ergotin comprises sclererythrin, secolin, the ergotinum of Timet, the cornutine of Kobert and decersklertin of Dragonsdorff. Jacobi also considers cornutine to be the active principle, but

he also regards sphacelotoxin and resins as important constituents. This acid is non-nitrogenous and unstable, insoluble in water, but soluble in alkaline solution. It produces tonic contraction of the uterus and contracts blood vessels. Cornutine is insoluble in water and produces rhythmic contractions of the uterus, exactly like those which occur in nature. Seeing that those important bodies are insoluble in water, though soluble in alkaline solution, it is strange that Kobert recommends dilute hydrochloric acid as a solvent. Hal White states that the odor of ergot is due to trimethylamine and that the other active principles are ergotinic acid, ergotinine and sclerotinic acid. This latter acid is believed to be a compound of sphacelinic acid and cornutine. Trimethylamine I believe to be a decomposition product. It is very obvious after the distillation of an old liquid extract of ergot, and then gives an odor very unlike that of fresh ergot or its extract. This latter point is of some commercial importance, because the question came before an analyst in Dublin lately, whether he should pronounce as B. P. a liquid extract of ergot which gave decided indications of trimethylamine on distillation. On the whole I rather think that trimethylamine is a decomposition product of ergot, the better and fresher made the sample the less is the trace of it. The so-called aseptic ergot appears to be almost free of it, whilst its presence in quantity is responsible for the fetid fishy odor of old liquid extracts. It has been suggested that a formula might well be devised by which a fluid extract might be obtained from the present extractum ergotæ and the fluid extract of the Pharmacopœia superseded. I find that a solution which keeps very well can be made simply by dissolving one part of ergotine and one of glycerin with a sufficiency of distilled water to produce five parts. This solution will be about 5 per cent stronger than a well made liquid extract, and will be altogether more reliable. It is also rather palatable, and this is an important element, for if patients suffering from hemorrhage are given a dose of ergot and it happens to nauseate them, their fright is naturally intensified and the chances of relief thus diminished.

Elaborate methods have been adopted by certain American manufacturers to assay ergot on a physiological basis, namely—by ascertaining the quantity required to produce the phenomenon known as ergotism on the comb of a cock, whereby this appendage is attacked with dry gangrene as the result of ergot. The potency of the extract is assayed in proportion to the weight of the cock. Now I submit that such experiments are based on a completely erroneous assumption, namely, that the principle in ergot which causes the contraction of the unstriped tissue of the minute blood vessels is the active ingredient; besides, the human factor is quite lost sight of. The fact is that there are two distinct physiologically active principles in ergot, the one probably cornutine, which produces the rhythmic contraction of the uterus, which renders ergot of so much use in obstetrics and the other, sphacelinic acid, sphacelotoxin, or some other principle or combination of principles which produce contraction of the fibrous tissue of the capillaries and are responsible for the employment of ergot in hemorrhages, as well as in the various nervous affections where such contraction is desirable.

Now, the explanation of the praise and the blame which has been so lavishly bestowed on the various preparations of ergot is simply that one or other of these principles was present in the preparation to a preponderating extent, and according to the purpose for which the practitioner used it did he obtain results and loved ordering it.

According to my observations very many different preparations of ergot will produce that tonic contraction of the uterus which is desired in labor; any kind of moderately good fluid extract will produce it in twenty minutes, and the organ responds to the drug under the practitioner's hand in an extraordinarily definite fashion, which marks its action so definitely that experiments on the combs and wattles

*Read before the British Pharmaceutical Conference.

of fowl seem but childish bye-play. But quite a different state of affairs is found if uterine hemorrhage sets in. Then, indeed, one wants to contract the capillaries as well as the unstriped muscle, and in such cases only an efficient preparation is of any use. In this condition, as in the more ordinary but troublesome cases of metrorrhagia, the fluid extract of the *Pharmacopœia* demonstrates its incompetence and unreliability, and the more scientifically prepared extracts show their worth. Now the extractum ergotæ, B. P., can generally be relied upon in these cases, but it needs to have its consistency more accurately defined, as at present it may vary in moisture 10 per cent., more or less. Although aqueous extracts of ergot are in general to be condemned, a fresh infusion, made with fresh ergot, freshly bruised, seems to be more active. The disrepute into which it has fallen is due, I grieve to say, to the action of pharmacists in preparing it from the coarsely powdered ergot of the stock bottle, from old ergot, from concentrated infusions, and from the fluid extract. The ammoniated tincture of ergot is moderately active, as cornutine is soluble in alkalis; but it is so weak that a dose containing a sufficiency of ergotin contains such an excess of ammonia as to sicken the patient. It yields only about 4 per cent. of extractive as against about 15 per cent. in the fluid extract, and its alkaline basis makes a difficulty about prescribing it with salts of iron.

Although extractive may mean anything, the amount of extractive yielded by an honestly made preparation of ergot appears to bear a very definite relation to its value; and this is a means of roughly standardizing which is open to the pharmacist who has not an avary of roosters to experiment on.

The preparation used on the Continent under the name of ergotinum is twice as strong as our tincture, but though recommended for subcutaneous injection it seems rather painful unless mixed with cocaine. Keller's ergotin is said to embrace all the active principles with the exception of sphecelotoxic acid, and cornutine can readily be demonstrated in it.

Merck described a preparation containing an admixture of aqua laurocerasi made by depriving *secale cornuta* of its fat, and exhausting it in dilute tartaric acid solution. The effect of the solution seems to bear out the theory that the ebolic extractives of ergot are soluble mostly in alkaline solutions, and that the capillaro-constrictive constituents are soluble in acid or alcoholic solutions. The ergotine of Wigger is interesting as containing part of the oil, which in later times has been decided as useless, though at one period claimed as the active principle. It is a reddish-brown powder, soluble in warm alcohol, and is almost exclusively sphælicinic acid, being much more concentrated than our ergotine, the dose is about 1 grain.

The extractum ergotæ, B. P., contains a notable percentage of salts, and many have supposed that its virtues largely depend on these when used subcutaneously. Wernick treats an aqueous extract with alcohol and ether, and dialyses the product. This contains the natural salts in considerable proportion, and is looked on as one of the best for hypodermic administration. Latter-day pharmacologists who have condemned the oil of ergot as worthless have been faced with the problem that some obstetricians find that an infusion of freshly powdered ergot, which certainly contains the oil, has a specific action in overcoming uterine atony which seems wanting in all the other preparations. Kuhlman makes an extract containing all the oily constituents, and the action of this is the same as fresh ergot. Bombelon points out that extracts of fresh ergot form excellent culture media for fungi, and recommends that ergotine should be prepared for solution by dissolving four parts in one of alcohol and three of laurel water.

Houghton states in the *Pharmaceutical Journal* "that 50 to 70 per cent of the ergot of commerce is inert. He comes to this conclusion by testing its effects in producing gangrene of the combs and wattles of fowls, and states that he has had to destroy

as much as 2,000 pounds of it as worthless." I have already pointed out that the capillaro-constrictive properties of ergot, which are the only ones that can possibly be tested by this method, bear no necessary proportion to the ebolic effects, and hence such samples may have been moderately effective in the latter direction. It is, however, probably true that the capillaro-constrictive effects are a better measure of the all-round efficacy of a given sample.

The conclusions as to preparations of ergot would seem to be these: (1) Ergot has at least two distinct actions, one on the uterus, the other on the blood vessels, and pharmacists should have preparations possessing one or other of these properties in the most active degree. (2) Ergot comprises a number of distinct chemical substances, but so few of these can be recognized as definite entities, and so many different names have been applied to them, that it is premature to decide whether cornutine or any other alkaloid is the active principle. (3) The extractum ergotæ of the B. P. is a fairly satisfactory product, but ought to be regulated to a definite consistency. The fluid extract is a poor article, and a much better solution can be obtained by dissolving one part of the extract and one of glycerin in a sufficient quantity of distilled water to make five parts. (4) The ammoniated tincture has a moderately effective action in constricting the capillaries, but is not suitable for obstetric work, being weak, bulky, bitter and nauseous. (5) When fresh ergot is bruised and an infusion made and drunk immediately the active principles are obtained in as correct proportion as in the most elaborate extracts, but an infusion made from old ergot powdered even for a week, or concentrated infusions are a disgrace to pharmacy. (6) Trimethylamine is a decomposition product, and its existence denotes deterioration of the sample.

HOW TO CONDUCT A PRESCRIPTION COUNTER.

By W. G. ALWIN, New Ulm, Minn.

"Pharmacy" is a profession. It is not a business alone which any man may choose, and after a few weeks or months of practical observation qualify himself to pursue it full-fledged. It is a profession which to pursue and follow requires years of arduous study and endurance of application. It requires the absolute mastery of several of its sciences. It requires the strict and conscientious engagement not only of the thoroughly conversant mind, but of the deft, dexterous and practiced hand as well. It is a profession which for importance, moral and practical worth, stands second to none. It goes hand in hand with the profoundest of all studies, that of medicine. The State recognizes this and makes the proper provision to shield and protect it against fraud and imposition. It is needless for me to mention to you the strict, impartial and rigorous examinations to which it subjects the applicants who dare to choose it as their calling; and the test of competency is being made correspondingly harder from year to year as the State realizes the momentous responsibility connected therewith.

The prescription counter is materially representative. It constitutes the heart and sole center of the drug business. It is the very insignia of pharmacy obtained by worth and merit, backed by law and protected by the State. The attention and recognition that this profession receives at the hands of the law and State, surrounds and invests it with a dignity and an authority which we may all well be proud of. It therefore becomes our duty as well as our privilege to so conduct the prescription counter that the endowments above mentioned are given full cognizance on our part and by the public.

I at one time had occasion to visit a brother pharmacist in a thriving little city. The gentleman was enjoying a good prescription trade, there being an average of thirty or more prescriptions a day. He had a very pretentious store, costly sale counters, show cases and shelves. He was conducting his business on a very ostentatious plan, all of which was very commendable and no doubt his efforts and endeavors in

this direction were well rewarded—for his business flourished. However there was in this pretentious place of business a very grievous counter. In the first place, I found a small box-like fixture and altogether inadequate for the compounding and dispensing done behind it. It stood hidden behind a large amount of stock food, condition powders and the like, which was most conspicuously piled up in front of it. But, there was evident a decided lack of attention on the part of the proprietor for the outward appearance of the prescription counter and the inside or practical side was worse. There seemed to be no attempt made at order and systematizing of duplicate stock; bottles of all sizes and shapes were indiscriminately placed around wherever it might have happened to suit the direction of the hand. They were dusty and betrayed unmistakably the absence of care. On the prescription desk I noticed some mortars and graduates which, I observed, were being used altogether, regardless of kind and capacity called for, as for instance two ounces sulph. magnesia were being dissolved in a pill mortar of two ounces capacity, and many other minor incidents too numerous to mention. Spatulas, pellet knives, horn spoons, etc., were all kept in one drawer whereinto upon occasion the clerk or proprietor would delve and dig up the required utensil in about the same manner as a kitchen girl looking for her last paring knife amongst her table cutlery drawer. In another drawer which was open, and looked as though it was always open, I noticed a confusion of round and square pill and powder boxes, and, if I am not mistaken, in the same drawer were also kept the labels. I became aware also that prescriptions were not put up with the promptness and dispatch that they might have been but for the fact that enough time was lost in looking for the required wherewiths. Customers becoming weary of waiting for their medicine would curiously look back of this dispensing place and there behold a sight rivaling that of a French peasant's kitchen, the day before his best daughter's wedding.

Thus to treat and conduct a prescription counter is wrong, is unjust and that is stating it mildly. It is putting down the profession from its high and lofty plane, which by reason of its moral and practical worth it rightfully occupies, to the common and ordinary; making it appear unduly cheap and insignificant to the commonality. It is a false and unjustifiable misrepresentation of the art of compounding; for this profession, if any in the world, stands synonymous for accuracy and absolute correctness. It is throwing the results and achievements of years of study to the winds.

Having endeavored to show the relation and the significant place of the professional branch of the drug business, I cannot but urge the fraternity to realize the importance of this department, and to ever strive to accord it the conspicuous place which it deserves and which it must occupy shall it redound profitably to those who pursue it. Constantly assert the idea, boldly as well as unobtrusively, that you conduct a prescription counter with a drug store conveniently built around it. To parade this idea cannot fail to result in the public paying this profession the proper regard and respect. It is not my purpose to lay down a detailed set of absolute rules for conducting your prescription counter. Let each pharmacist suit his own fancy, if he will but carry out the idea and the purpose aforementioned. However a few practical hints on the general arrangement can nevertheless not be amiss.

I believe in a spacious one; there should be no lack of room. It should extend across the storeroom "if possible," in full view of the public. Whatever beautifications and ornamentations are indulged in, in fixtures, let your prescription counter have the preference. In the dispensing arrangements, practicability should be the main feature; sufficient shelves for all duplicates and all articles used on such a case be systematically and permanently placed; so that in time you will know, by sheer force of habit, just where to find your ingredients. Your shelf bottles should be glass labeled and stoppered already on account of their neatness, and should range from one to eight ounces in size; and such articles as acids, mercury salts, etc.,

should be kept in dark brown or blue bottles.

A special incasement should be fitted in for all costly chemicals, as should also another one for all poisons. Requiring as does this latter line the most absolute care and accuracy, too much attention cannot be given it. In this connection may also be mentioned the importance of scales. The best obtainable is none too good. I would recommend a Torsion balance upon which you can weigh 1-10 grain with accuracy, but where this cannot be afforded, a sufficient number of weights in duplicate sets should be kept and these should be of aluminum metal. A common weakness of many prescription counters is the lack of utensils, such as spatulas, graduates, mortars, etc. You cannot do your work properly unless you have a sufficient number of the proper tools for it. At least two or three spatulas of a size should be at hand. It is a mistake to measure minims in an ounce graduate. It is wrong to make a solution in a pill mortar; the same applies to emulsions and ointments. The solution mortar should be of glass, first for its neatness and second for its cleanliness; and you should have a sufficient supply of them and of different sizes.

Now then, if this profession is pursued with such energy and unrelenting vigor it will not fail of its remunerative and inspiring results and at all times have recognition by you and the public at large as that of a profession. (Rocky Mountain Druggist).

WHAT THE DRUGGIST NEEDS.*

By A. B. BURROWS, Takoma Park, D. C.

Glancing around the shelves of the average drug store the practiced eye discovers a condition of things which, if not soon remedied, will remove the small vestige of encouragement that may now be apparent in the practice of pharmacy. Not price-cutting, but a graver evil, which no one appears brave enough to denounce, and that is, the growing tendency of physicians to ignore completely the Pharmacopœia and prescribe specialties or combinations under a fancy, misleading title, the identical ingredients of which, if we accept the meager information on the label, are quietly resting on the shelves, neglected.

Things have come to such a pass that on the surface it looks as if the druggist, in spite of his long experience and collegiate training, is no longer capable of making his own paregoric or laudanum or comp. tincture of cinchona, but must needs have some distant manufacturer put up these things for him, under a new name. Not long ago a physician asked me "whose paregoric I used;" I replied that I made my own, whereupon he lost interest in that preparation right away and forgot to prescribe it. Ten to one, if I had "D. F. & Co.'s" or "A. & B.'s" he would have been interested in it on the spot.

If it were only occasionally we were called upon to supply these valuable specialties, the aspect would be more cheerful, but the number of prescriptions for this class of preparations, depending for their origin not on scientific blending or pharmaceutical or therapeutic novelty, but on the whim of certain manufacturers.

Every physician in prescribing, is expected to know the chemical and pharmaceutical nature of what he prescribes, but it is safe to say there is not one physician in ten who knows the composition of the widely prescribed antipyretics, described as analgesic, antipyretic, and anodyne. However, the druggist is supposed to know, but when he attempts to put that knowledge into practice he is accused of substituting.

This sort of thing is conducive to many evils which we have not the space here to enumerate in full, but we will mention a few; and I think that on reflection, physicians and pharmacists will agree with me that it places both quite frequently in embarrassing positions, especially when the specialty prescribed is difficult to obtain at once. The patient naturally criticises the druggist for not having what was prescribed, and the doctor is annoyed because the druggist is not up to date in keeping in stock which he never heard of and

*Merck's Report.

may never again have a call for.

Another evil in this connection is the excessive cost of these "valuable" adjuncts to science; sometimes, or in most cases, I might safely say, three or four times what it would cost the druggist to make them, and consequently more expensive to the patient. Very naturally the manufacturers are going to keep on advertising their particular article because it pays them.

It is strange that two professions so closely connected and so highly esteemed for intelligence should allow such an illogical state of affairs to develop. A druggist is supposed to know most everything, from where a total stranger lives to the composition of unknown material, but let him poke his nose into investigating such mysterious compounds as are prescribed with the warning "no substitution," and he will, in spite of his results, based on chemical laws, be told positively by the manufacturers that he has "run up against" something which defies analysis.

But what is the remedy? Simply this—let us go back to the good old days when doctors did their own pharmaceutical thinking and studied the Pharmacopoeia. I am not an alarmist nor a pessimist; the conditions I have described do actually exist, as many of us know to our sorrow.

Nor do I wish to be antagonistic to the manufacturers who deserve credit for their enterprise and, generally, for the excellence of their wares.

Physicians, too, are not much to blame, as they are generally too busy to think deeply on this matter; but it would certainly pay them in therapeutic results and harmonious action with the druggists did they take time in which to think on this important subject.

We trust that this subject will not die here, but that it may be widely discussed in the various medical and pharmaceutical journals until a "reaction" sets in in favor of the druggist being a druggist and not merely a dealer in "hand me down" concoctions.

FASHION IN DRUGS.—It must be confessed with humility that there is a fashion in drugs which is comparable with nothing so much as with fashion in dress. Drugs which but yesterday were extensively used are to-day almost forgotten. The anti-pyretics which were prescribed so freely fifteen years ago are hardly ever given now for their effect on temperature, though the more important members of the group are given still, but for entirely different reasons. The drugs which at the present moment appear to be at the height of their popularity are animal extracts and antitoxins, yet the discerning eye may even now perceive that many of them have passed their zenith and ere long will be forgotten, or at most will be employed only in rare and isolated cases. There is much excuse to be made for the mental attitude of extreme hopefulness with which we receive each new medicament, for there are still so many diseases and symptoms appealing for help and we have to acknowledge that we can do but little for them. Yet it would be well if we adopted a more cautious attitude in receiving new drugs and new methods of treatment; they deserve to be tried and to be tried thoroughly, but we must not expect too much and must sift carefully the evidence for and against them. (Lancet).

DETECTION OF SUCINIC ACID.—Neuberg (Pharm. Centralh.), recommends the pyrrol reaction for detecting minute traces of succinic acid. Ammonia is added to the solution to be examined (if the succinic acid is present in the combined state, ammonium phosphate, also), the solution evaporated to about 1 Cc., 1 gram zinc dust added, and the whole heated. When the excess of ammonia is driven off, a pine-splint moistened with hydrochloric acid is introduced into the test-tube—the wood is colored red, if succinic acid is present. The reaction is positive so long as no other substances giving the pyrrol reaction are present. By means of this method even 2.0006 gram of succinic acid may be readily detected.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Cough Candy.

(J. T. B.)

Montpelier Cough Drops.

Brown sugar	10 pounds
Tartaric acid	2 ounces
Cream of tartar	½ ounce
Water	1½ quarts
Anise seed flavoring	q. s.

Melt the sugar in the water, and when at a sharp boil add the cream of tartar. Cover the pan for five minutes. Remove the lid and let the sugar boil up to crack degree. Turn out the batch on an oiled slab, and when cool enough to handle mold in the acid and flavoring. Pass it through the acid drop rollers, and when the drops are chipped up, and before sifting, rub some icing with them.

Medicated Cough Drops.

Light brown sugar	14 pounds
Tartaric acid	1½ ounces
Cream of tartar	2 ounces
Water	2 quarts
Anise seed, cayenne, clove and peppermint flavorings	a few drops of each

Proceed as before prescribed, but when sufficiently cool, pass the batch through the acid tablet rollers and dust with sugar.

Hoarhound Candy.

Dutch crushed sugar	10 pounds
Dried hoarhound leaves	2 ounces
Cream of tartar	½ ounce
Water	2 quarts
Anise seed flavoring	q. s.

Pour the water on the leaves and let it gently simmer till reduced to three pints; then strain the infusion through muslin, and add the liquid to the sugar. Put the pan containing the syrup on the fire, and when at a sharp boil add the cream of tartar. Put the lid on the pan for five minutes; then remove it, and let the sugar boil to stiff boil degree. Take the pan off the fire and rub portions of the sugar against the side until it produces a creamy appearance; then add the flavoring. Stir all well, and pour into square tin frames, previously well oiled.

Menthol Cough Drops.

Gelatine	1 ounce
Glycerine (by weight)	2½ ounces
Orange-flower water	2½ ounces
Menthol	5 grains
Rectified spirits	1 dram

Soak the gelatine in the water for two hours, then heat on a water-bath until dissolved, and add 1½ ounces of the glycerine. Dissolve the menthol in the spirit, mix with the remainder of the glycerine, add to the glyco-gelatin mass, and pour into an oiled tin tray (such as the lid of a biscuit box). When the mass is cold divide into ten dozen pastilles.

Menthol pastilles are said to be an excellent remedy for tickling cough as well as laryngitis. They should be freshly prepared, and cut oblong, so that the patient may take half of one, or less, as may be necessary.

Precipitates in Fluid Extracts.

(D. B. T.) You ask if precipitates in fluid extracts materially change their value and whether such precipitation cannot be prevented. To answer these questions we would have to publish all that has been written, and it is a vast amount, during many years past. In brief, however, we would say this: The cause of precipitations in fluid extracts is often the choice of a menstruum or solvent of a strength not exactly adapted to the drug. Or, too, precipitation may be a natural characteristic of some of the principles present, or

because of chemical changes undergone through keeping of the drug, or through exposure to light or air. Then accidental additions may cause alterations of this character. In fact the range of causes for such precipitation is an extremely wide one. Sometimes the turbidity or precipitation is of no practical significance, as such sediment consists of indeterminate, inert, organic substances of no therapeutic value. But sometimes there is a separation of active principles, perhaps precipitations of glucosides, albuminous constituents, gummy or resinous substances, which may be of virtue. It is impossible to make a statement which will apply to all fluid extracts in general. It can only be determined whether a certain precipitate in a certain fluid extract is detrimental to the value of the preparation by examination and tests alone. In some fluid extracts a certain amount of precipitation is advisable and often necessary, but in others it would be a serious injury to the project. You ask also how precipitation can be prevented. Only by careful study of each drug upon which you work, of its constituents, their value, their solubilities, etc., and by careful selection of the proper menstruum for percolation and attention to the future steps of treatment, etc. You will find more or less upon this subject in the Dispensatories and standard text books, particularly in the A. Ph. A. Proceedings of past years.

How a Druggist Should Cleanse His Hands.

(Manager.)—The article to which you refer follows: When the hands have been stained by strong alkaline solutions, they should be washed in some dilute acid—citric, oxalic or acetic (1 to 100 of water). If soap without water is then immediately applied, fatty acids are deposited in the skin, which thus becomes liable to crack. The effects of lime solutions and also of strong ammonia may be prevented in the same way. After using mineral acids, the hands should be washed with water and rubbed well wet with a piece of soap. If the acid was very strong or has affected a large surface, they should be bathed, after washing, in a weak solution of soda (1 to 100). Strong sulphuric acid is first to be washed off, after which soap should be employed as above directed. If water is used abundantly there is no danger of too much heat being evolved. When the acid has caused severe burns, the affected parts may be covered with a paste composed of magnesia, carbonate of magnesium, or bicarbonate of sodium, with a little water. Nitric acid is removed by the same process. Burns by this acid, especially when treated with alkaline agents, are apt to leave behind a yellowness of the affected integument. Nitric acid destroys the epidermis so quickly that it can hardly ever be restored to a normal condition, and the same is the case with the fumes, also with those of nitro-muriatic acid, bromine and chlorine. Iodine stains should be treated with a solution of thiosulphate (1 to 10 of water). When the hands have been exposed for a long time to the action of carbonic acid, wash them first with alcohol—which may be used several times over for this purpose—and then with soap; after which, without being dried, they may be rubbed with lanolin. After working with sublimate solutions, it is best to bathe the hands for some time in a solution of common salt (1 to 50 of water); followed by soap and lanolin.

Maple Flavor.

(Subscriber.)—We know of no maple "flavor" excepting that produced by the use of maple sugar. The following formulas are given in "Manual of Beverages" for the preparation of maple syrup for soda fountain use:

(1) Maple sugar	3 or 3½ ounces av
Water	32 fl. ounces
Solution of citric acid.....	4 fl. drams
Vanilla extract	1 fl. dram
Soda foam	sufficient

Dissolve the sugar in the water by the aid of a gentle heat, strain and add the solution, extract and foam. The extract may be omitted if desired.

Maple syrup may also be prepared by diluting the maple syrup of the groceries with about an equal

volume of plain syrup.

(2) Best Vermont maple syrup.....	1 gallon
Vanilla extract	½ fl. ounce
Maple Frappe.	

(1) Maple syrup	1 fl. ounce
Vanilla syrup	1 fl. ounce
Water, ice, plain	2-3 glassful
Draw into a 12-ounce glass, add a spoonful of ice cream, fill the glass with the coarse stream of carbonated water, mix the whole thoroughly, add a small quantity of crushed pineapple and serve with a spoon.	
(2) Maple syrup	2 fl. ounce
Ice cream	1 spoonful
Mix well by agitation in a shaker, and add sufficient carbonated water.	

Oak Stain.

(T. N. F.) (1)—An oil trade journal says: 'A capital oak stain can be obtained by the following process: Dissolve one-fourth kilogram of permanganate of potassium in ten kilograms of cold water, and apply the violet solution thus obtained to the wood. As soon as the two come in contact the solution becomes decomposed in consequence of the chemical action that results, and a pleasing light brown color is imparted to the wood. The brushes used for applying the stain should be well rinsed as soon as done with, since the permanganate of potassium will otherwise ruin the hair.'

(2)—A good brown oak stain is produced by preparing the wood with a solution of 1 ounce catechu, boiled in 1½ pint of water. When dry, brush over a solution of bichromate of potash, 1 ounce to 1½ pint of water.

(3)—Equal parts of American potash and pearlsh, 2 ounces each to about 1 quart of water, give a good oak stain. Use carefully, as it will blister the hands. Add water if the color be too deep.

Prescription Difficulty.

(B. W. F.) "Should the following be dispensed?"

Potassium bromide	4 grams
Fluid extract of colchicum.....	2 drams
Tincture of opium.....	2 drams
Water, enough to make.....	2 ounces

One teaspoonful three times a day.

We should have no hesitancy in putting up this prescription as written. The quantity here directed would be equivalent to 16 teaspoonfuls, each containing 15 grains of potassium bromide, and 7½ minims each of the fluid extract and tincture. As potassium bromide is exhibited in doses as high as 20 grains, the fluid extract of colchicum 2 to 8 minims, and the tincture of opium 15 minims, there would obviously be no excessive dose of any of the ingredients here directed. The resulting mixture is rather murky, a condition due to the water, which is neither miscible with the fluid extract nor the tincture without some precipitation.

Hospital Stewards in U. S. Navy.

(J. H. G.) All applications for enlistment in the Navy hospital corps must be made to the Surgeon-General of the United States Navy, Washington, D. C., and must be accompanied by suitable testimonials as to character, habits and experience of the applicant, citizenship, etc. Full particulars concerning entry in the hospital corps of the U. S. service were published in this journal Aug. 24, 1899, page 263.

It sometimes happens that explanation of things that men have long been unable to understand comes from unexpected sources. The druggists of St. Paul have noticed that cases of sickness among children have been rarer this summer than for many years; at least, prescriptions for such cases have been much fewer. One of these drug men happen to mention the fact in conversation with a lady customer the other evening and she said the unwonted healthiness of "the Saint's" youngsters was probably due to the fact that fruit was so costly that parents could not afford to buy much of it, and the children had to go without their green fruit. The druggist admitted that this theory seemed very plausible.

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

N. A. R. D. CONVENTION.

President Anderson Shows Strength and Benefits of the Association, Urges Large Attendance and Suggests Plans.

If the expectations of President W. C. Anderson are realized, the N. A. R. D. convention at Buffalo on October 10 will be fraught with more importance and benefit than any event in the history of the retail trade. From correspondence, reports and personal knowledge he predicts full delegations from almost all of the 250 associations, representing about 30,000 retailers. He estimates the number of delegates who will answer the convention call at between 300 and 400. President Anderson urges the great importance of a full representation from all parts of the country in this great national convention of the retail trade, so that pharmacists in all parts of the country may have a voice in the regulation of matters for the greatest good to the greatest number and to the satisfaction of all. Again, he says, the tri-partite agreement has been tested this year and the result will be a subject of a discussion of great importance, requiring careful consideration on the part of delegates. In determining what is best for the trade in a large way and in mapping out its guidance, he says that it is necessary to have the associations from every district properly represented.

"The only way in which we can accomplish the objects of the retailers is to formulate a plan of a nature that we can absolutely force its observance," said President Anderson. "One method that has been suggested is to have the proprietors place their goods in the market under a price restriction system. The articles are then sold under a contract, which the courts have held, without an adverse decision, is legal and proper. A plan to be successful must contemplate no division in interest and must be universally operative and beneficial in its results. Uniformity in the demand from wholesalers is a big step toward the accomplishment of this end.

"The strength of the national association and the benefits that it can confer upon the trade is shown by its influence in having the revenue abolished. President E. C. De Witt, of the Proprietary Association of America, has said that the repeal of the tax was due to the activity of the national organization of retailers. The benefit is seen in the reductions in price by many of the proprietors and no reduction by the retailer to the public. As a matter of fact, the tax was paid almost wholly by the retailers, who have ridged themselves of this burden through the strength of their association.

"We expect to do an immense amount of work in Buffalo and I think it is a capital idea to have the headquarters in the convention hall so that the delegates can be held together and not have their attention diverted to other matters as they would in the down town business sections."

DRUGGISTS LOSE LICENSES.

The drug firm of Webber & Garland, at Middleport, Niagara County, and E. A. Jones, of Wilson, have had their licenses revoked by the New York State Board of Pharmacy for the reason that they are not licensed pharmacists. Secretary Sidney Faber, of the board, says that the men will be prosecuted for perjury, committed in a sworn statement that they were licensed pharmacists when they made application for licenses. They will also

be charged with violating the state pharmacy laws.

The council of the state board has held a conference which has drawn up an order of procedure to be followed by the board when it sits as a Board of Civil Procedure. This court has the power to issue subpoenas and compel witnesses to attend and testify before the board under a penalty of a \$50 fine for non-compliance with the summons and an added amount in satisfaction of whatever the claims of the aggrieved party for damages might be.

ENGLAND'S LACK OF SCIENTIFIC EDUCATION.

Dr. B. T. Whitmore of this city, who was one of the American delegates to the meeting of the British Medical Association in Cheltenham, in discussing the presidential address bearing upon England's lack of scientific education, says:

"The whole tenor of the presidential address at the British Medical Association in Cheltenham was a sad acknowledgment that Great Britain was falling behind in all departments of the medical and pharmaceutical sciences by reason of the fact that as a country it was deficient in educational facilities, principally in teaching universities and laboratories for technical research. When listening to Dr. Ferguson's address it was impossible to help feeling a patriotic glow of satisfaction at the high regard in which the United States was mentioned, yet there was a regret that such a statement of Great Britain's deficiency was so true as not to admit of any denial. He cited figures to show that the British Government contented itself with the distribution of no more than £136,000 a year among seven out of its thirteen universities, one result being that one in 2,000 of the British population receives university education, while in the United States the proportion is one in 1,500. He referred to Stanford University with endowment of \$45,000,000, and to others of the 480 American universities which have been endowed by private munificence, Chicago University with \$10,000,000, Johns Hopkins with \$7,000,000, and Cornell with \$5,000,000. No such largess, he feared, was to be expected from British millionaires. The help must come from Government, supplemented by local conditions or it might not come at all. Yet the matter is one of life or death for the country, for every year more and more the victory in every department will pass to the possessors of the latest knowledge, the deepest science, and the most perfect and most economical processes. He prayed that real universities of teaching and research might be established in every large town, and technical and research institutions (such as in America now number forty-three) in most of the smaller ones. 'At present,' he continued, 'we are feeling the competition of America, a competition that is not likely to diminish, for it possesses over a hundred schools of chemistry. This competition we can only hope to resist by imitating the foresight, generosity, and enthusiasm for science of the American governments and of the American men of wealth. Since the preceding section was written I have to record the magnificent (I hope it will prove infectious) generosity of Mr. Andrew Carnegie, with his gift of \$10,000,000 to the Scottish universities, one portion of it to the teaching and hitherto of research, and the rest to replace the fees lent to paid by their students. Happy Scotland! Let us hope that we shall not have long to wait for many universities where the best and most practical scientific education will be open to all at low cost, as in the University of Michigan, where the fees do not exceed \$35 a year, or at no cost at all, as in the State of Massachusetts and in many of the western states of America."

A WORD TO DESPONDENT DRUGGISTS.

Walter R. McMillan, who covers the central territory of the Middle States for McKesson & Robbins, has been in the city a few days before going on his vacation. Mr. McMillan, discussing trade and trade interests in his section of the country, remarked the general condition of despondency on the part of retail druggists caused by the cutting in on their lines by dry goods and notions dealers. He said:

"I find complaints everywhere I go to the effect that the stock, which druggists can handle profitably is gradually being narrowed down by the competition of dry goods men, until, the dealers say, they will soon be confined to a straight prescription business. It is not necessary to tell any live druggist that this is the sheerest nonsense. Any man who grows despondent, loses heart and his interest in his business and allows his stock to decline or decay cannot expect to keep up his trade. He could not keep his prescription trade, in this humor. If he did not have the exclusive knowledge, gained in his trade as a pharmacist. The only way for him to hold his place is to keep abreast of the times, to keep and show good lines of toilet and fancy goods. I hear the complaint of a man who says that he does not sell any hair brushes. It transpires, upon investigation, that he has in stock nothing but a half-dozen dirty brushes of the vintage of '90. He is out-of-date as much as are the brushes. It is not necessary for the small dealer to keep his case full, but he will find that even a modest showing in the latest goods, if maintained, will do much to restore his lost business and cure his despondency. It seems to me to be a simple case of enterprise and business go."

A UNIVERSITY SWindle BROKEN UP.

The "Central University of Medicine and Science," of Jersey City, an institution created by a coterie of swindlers to confer degrees upon anyone who happened to have \$10 to spend for the distinction, has been stored away in the pocket of "President" J. W. Norton-Smith, "A. M.," "S. D.," "Ph. D." and "D. D.," who is very much engaged in fighting the police and a warrant charging him with the misdemeanor of false pretenses with intent to defraud. "President" Norton-Smith and Secretary Geo. A. Lewis, "Ph. G.," "M. A.," "D. D. S.," dealt in all kinds of degrees. Their method was to send out a letter with a bill of fare of degrees a la carte. "Take your choice and pay your money. Tempting combinations of job lot honors were offered at reduced rates and there was a difference in the price of degree on paper and one printed on really and truly sheepskin. The laboratories, lecture rooms, offices, museum and other departments of the "C. U. M. S.," were located in a ten by twelve room on the top floor of No. 68 Montgomery street. Besides the "president" and "secretary," "Ph. G. Etc." of the diploma mill there was a so-called board of examiners, each with at least \$30 worth of degrees in the procession after his name. The institution was incorporated in New Jersey but will be dissolved by proclamation of Governor Voorhees. The postal authorities are also after the president for fraudulent use of the mails, for which he may get several more degrees.

THE TRADE IN TEXAS.

W. W. Creswell, the Texas representative of Lehn & Fink, is back on a visit to the home office after three years spent in his territory.

"Business in Texas is in splendid, substantial condition," said Mr. Creswell. "The affairs of the state are falling into the hands of young men of dash and business energy, with the result of notable improvement in all directions. Nowhere is this more strikingly evidenced than in the vigorous growth of the drug trade. The population of the state is increasing at a remarkable rate and with this there comes the demand for new stores. It is a steady, healthy growth and not a boom which will collapse. It is a good field for the pharmacist who knows his business. I visit as many as fifty towns in the course of my travels and they are prosperous and alive in every respect without exception."

Mr. Creswell will be in the city about a week.

NOTES.

—The creditors of Frederick W. Kimball, a patent medicine dealer at No. 3 West Union Square, have filed a petition in the United States Circuit Court asking that he be declared an involuntary bankrupt. Their claims against him aggregate \$51,477.62, and they charge that he committed an act of bankruptcy by transferring his residence property at No. 303 West 104th street to his wife with intent to defraud creditors.

—Walter Luckenbach, the 15-year-old son of A. N. Luckenbach, one of the most prominent druggists of Oconto, Wis., has been visiting in New York and Brooklyn the past week. Young Luckenbach came last week to the Pan-American at Buffalo. He rode his wheel from Buffalo to Albany in order to see the country. He called upon Charles Rice of Lazell, Dalley & Co. to whom he had letters from his father.

—Professor Alviso B. Stevens of the School of Pharmacy of the University of Michigan and a member of the Committee of Revision of the United States Pharmacopoeia is in the city on his vacation trip. After a short stay he goes to Gettysburg, leaving there in time to attend the A. Ph. A. Convention in St. Louis. Professor Stevens is making a collection of old mortars for the university museum.

—George Thompson and McLean Mount, of R. W. Robinson & Son, are away on two week's vacations. Thompson has gone to Fallsburg, Sullivan County, and Mount will visit at Old Point Comfort, Richmond and Washington. He is an enthusiastic wheelman and took his bike along with the intention of covering a great deal of territory awheel.

—Chas. F. Corindt, who died recently at his home, No. 665 Evergreen avenue, Brooklyn, was one of the pioneers of the German trade in this city, having come from Germany in 1866. In that year he established a pharmacy at No. 508 Eighth avenue. He was a member of the New York German Apothecaries Society.

—O. F. Berger has gone to Boston, where he will establish headquarters for the Osborn-Colwell Co., whom he will represent in the New England states. H. L. Barnitz, formerly with Armour, has been engaged to represent the company in New York and vicinity.

—P. J. Tormey, a leading druggist of San Francisco, has been in the city the past week. Mr. Tormey was elected president of the American Whist League at its recent Milwaukee convention, which he attended.

—James Hazlett, who has been acting in the capacity of buyer for the Wise Drug Company, 177 Broadway, has severed his connection with the company. He was formerly a buyer for McKesson & Robbins.

—Albert Bruen, of Bruen, Ritchey & Co., has returned from a month's recreation in the Catskills, and C. C. Bruen, junior member of the firm, has gone to Stalsburg for a 10 days' outing.

—T. J. Hightower, Jr., and Leonard W. Brown, both of Atlanta, Ga., were visitors at the Drug Club last Thursday. They were entertained by P. C. Magnus of Magnus & Lauer.

—W. G. Ungerer, of W. G. Ungerer & Co., dealers in essential oils, 15 Cedar street, who has been absent a month on a business trip through Canada and the West, has returned.

—The run of the Apothecaries' Bicycle Club to Rockaway Beach Aug. 15 was a well-attended and pleasant excursion. The next ride will be to Oakland, N. J., this afternoon.

—A large number of applications are coming in at the Brooklyn College of Pharmacy. The classes will be larger than last year. The college will open on September 27.

—Samuel M. Money penny, with the Schoellkopf, Hartford & Hanna Co., who has been spending his vacation at White Lake, has returned to resume work.

—The South Brooklyn Retailers' Association, at a meeting held last week, endorsed the Worcester plan. The Bushwick Association took the same action.

—D. Wiley Baker, one of the leading druggists of Trenton, N. J., was in the city on the 13th. He is spending a few weeks with his family at Liberty, N. Y.

—A. S. Katzman, who has a store at Fifty-first street and Second avenue, has opened another place of business at 122nd street and Second avenue.

—L. W. DeZeller, with Seabury & Johnson, who has been spending a two weeks' vacation at Amagansett, L. I., returned to the city on Monday.

—A. R. Otis, a leading druggist of Kendallville, Ind., has been in the city for several days placing his holiday orders with the Osborn-Colwell Co.

—W. B. Moore of the Chicago office of Dodge & O'cott is spending his vacation with his family in Brooklyn. He returns to Chicago this week.

—The Enno Sander Mineral Water Company of St. Louis has established an agency at No. 110 John street with W. A. P. Andrews in charge.

—Druggist J. W. Matchett, of Clearwater, Fla., is spending a few days in the city. He is on his way home after "doing" the exposition at Buffalo.

—Harry Hall, secretary of the Drug Trade Club, has left for Salt Lake City, Utah, on a business trip, which will keep him away for a month.

—R. M. Hartwell, a druggist of Louisville, Ky., is registered at the Drug Club. He is the guest of Col. E. W. Fitch, of Parke, Davis & Co.

—Louis Dohme has been acting manager of the house of Sharp & Dohme in the absence of Manager Ernst Stofregen, on his vacation.

—The Vapo-Cresolene Co., No. 189 Fulton street, has put out a new article in the shape of a vaporizer for use in veterinary work.

—J. L. Hopkins, of J. L. Hopkins & Co., spent the greater part of the past week in Baltimore on business.

—George F. Feldt, the Philadelphia representative of Sharp & Dohme, visited at the home office on Friday.

—G. W. Hopping, of Seabury & Johnson, has returned from a week's pleasant outing at Belle Island, Conn.

—Samuel Davis, a druggist of Boonton, N. J., made several calls in the drug section on the 16th.

—John P. Walker, of the Walker Pharmacy, Freehold, N. J., was in the city on business last Friday.

—Otto E. Betz, one of the foremost druggists of Cincinnati, has been in the city the past week.

—Thomas W. Curtius, the well-known drug and chemical broker, has returned from a trip abroad.

—Mr. Benjamin of M. F. Benjamin's Sons, Riverhead, L. I. was in the city on Friday.

—W. J. Doyle, a prominent druggist of Davenport, Iowa, is in this city.

IN AND ABOUT BOSTON.

TRADE QUIET AND NO SPECIAL CHANGE.

Boston, Aug. 17.—Little that is new or in the way of special change can be said of the week's trade in this city. It seems to be seasonable, according to the druggists, and they are getting fully as much business as they expect to find at this time of the summer season, when so many people are out of town. The conditions now found are likely to hold for the immediate present, with nothing to give any special impetus to the trade until the home-coming of people early next month, when the tide of travel turns toward Boston instead of away from it, as in the past few weeks. In the wholesale trade no great activity is reported. The lists of drugs and chemicals keep fairly steady on what may be termed "hand-to-mouth" orders, the demand seemingly being for only just such things as people actually require. Sales have been of fair amount. Alcohols and cologne spirits are strong in tone, yet do not show active trading. The call for dyestuffs and tanning materials is moderate. "commensurate with the season," as one dealer put it.

CASTORIA PEOPLE AFTER THEIR IMITATORS IN

BOSTON.

Boston, Aug. 17.—In the United States District Court in this city a hearing has been given this week before Judge Francis C. Lowell in a suit brought by the Centaur Company of New York City, of which Charles H. Fletcher is president, against a company doing business in Boston as the Turner Medicine Company. The suit was brought to restrain the Turner Company from selling a preparation put up in imitation of Fletcher's remedy, Castoria, and to protect the New York concern from imitation and infringement on the part of others. Judge Lowell granted a restraining order in favor of the Castoria people as against the defendant company.

Charged With Assuming the Office of Physician.

Boston, Aug. 17.—On the charge of illegally signing the death certificate of a little child who died in Lowell, Cornelius A. Daly, a druggist of that city, has been summoned before the Board of Health for an investigation. It is alleged that Mr. Daly not only prescribed for the child and compounded the prescription, but that he also attended her as a physician. Mr. Daly stated that it was true that he had given the child medicine, but denied that he ever pretended that he had been a physician. His signature, he admitted, was on the certificate, but he pointed out the absence of the "M. D." after it. The Board took the matter under advisement.

NOTES.

—Ashael Wheeler, long prominent in the paint and oil business in Boston, has passed away at his home in West Newton, where he had resided nearly half a century. Other than simply old age, he was eighty-three, there was no apparent cause of death. Mr. Wheeler was born in Bolton and grew up in that place, where he received his education. He was comparatively a young man when he secured employment in the paint and oil business in Boston. This trade he followed successfully, and established a lucrative business at 145 Milk Street. He retired from active business more than two years ago, but his successors retain the same name. He belonged for more than thirty years to the Ancient and Honorable Artillery Company. A widow, a son and two daughters survive him.

—Unmindful of the plain directions on the package and of the druggist's personal warning as to its character, Everett Nolan, 26 years old, of this city, took seven and one-half grains of bichloride of mercury, which had been given him for external use. He was sent to the Emergency Hospital, where he had a very narrow escape from death.

—Bertram C. Cutler, as president and treasurer, and Francis M. Harris and Mary E. Cutler as directors, have joined interests in forming the F. M. Harris Company at Worcester, for the purpose of dealing in drugs, chemicals and like goods. The capital stock is made up of forty shares of the par value of \$100 each, giving \$4,000 in all.

—John Tomlinson, well known as the manager of the drug store of the Thomas Metcalf Company, Washington Street, Brookline, has gone to Nova Scotia, accompanied by his wife and little daughter. They will visit Digby, Annapolis, Halifax and other places while away.

—Members of the Boston Drug Clerks' Social and Benevolent Association had their annual outing this week at Oak Grove and the affair was well attended. The day's programme included band concerts, dancing, sports, games and other diversions.

—The old saw, "It's an ill wind that blows no man to good," is exemplified at Millville, where the scare over smallpox has resulted in the Board of Health of that place giving John Conway, a druggist, an order for 1,000 vaccine points.

—Albert May, who has been a clerk for some time at Currier & Co.'s drug store in Lawrence, has resigned his position there to accept one which he thinks will be far more to his advantage at Nashua, N. H., where he already has gone.

—A recently organized enterprise is the Delmar Medicine Company, of which Arthur W. Pinkham of Lynn is the president, and Charles Leighton of the same city is treasurer. The capital stock of the new company is \$10,000.

—E. R. Kimball and G. B. Irish are announcing to their friends and the trade that they have connected themselves with the F. M. Keeler Company, dealers in druggists' sundries and fancy goods, 141 Franklin Street, this city.

—William S. Dana, one of the prominent druggists of Franklin, is at Buffalo at this time, along with several other business men of his town, all of whom are taking in the Pan-American Exposition.

—Charles H. Adams, the proprietor of the Cary Pharmacy in Chelsea, has removed his residence from that city to the adjoining city of Everett. He has sold his pharmacy to M. B. Fisher.

—David C. Hickey, for a long time a clerk at Butler's Pharmacy, 243 Washington Street, Brookline, is to spend his vacation in Nova Scotia.

—A. B. Morgan, the druggist of Malden, will open a drug store in the new bank building, now being erected in that place.

—George Gilmour is a comparatively new clerk at the William S. Kennedy drug store in Ware.

PHILADELPHIA.

THE TELEPHONE SITUATION.

Philadelphia, Aug. 17.—In retail circles there is a dearth of news lately; very little work is being done by the local association by reason of the absence of so many druggists from the city. The two topics agitating the minds of druggists now are the telephone situation and the suits against a number of retailers for selling Hunyadi Matyas water. In the latter there seems to be a fair prospect for an amicable settlement in the near future, as both parties to the controversy have expressed a willingness to make a fair settlement. This matter is now in the hands of the Executive Committee of the P. A. R. D.

As there seems to be a general misapprehension of the terms of the contract signed by many druggists with the Keystone Company and also as to the right of druggists to cancel such a contract and its validity and a number of minor points, the P. A. R. D. has employed counsel to give a legal opinion on all phases of the question. The opinion may be summed up as follows: "The contracts signed by druggists with the Keystone Company for installation of telephone are perfectly legal and binding, and cannot be cancelled by the druggists without permission of the Telephone Company; if this permission to cancel contract is refused, it remains in force." Section IV of the contract signed reads "This contract cannot be changed, altered or varied in any particular or any of its terms waived except by an agreement in writing duly endorsed thereon and signed by parties hereto." This clause makes the agreement of the company to allow a commission of 20 per cent, on calls amounting to over \$100 per annum and of 10 per cent, on calls to less amount worthless and it cannot be enforced, since it has been added to the printed contract in violation of the section just quoted, it being put on top of the contract with a rubber stamp. Even though no commission is mentioned in the contract, provision is made for making the contract binding by providing a consideration, which is plainly mentioned in the first section. "Signing of this contract gives the company right to place a telephone in the store of the signer to make all necessary connections and to string wires on and over the building if necessary, as the signer has bound himself to furnish all reasonable facilities for the telephone and a place in his store to install it and its connection's "If the druggist owns the building in which is his store, he cannot forbid the stringing of wires, if he is merely a tenant, his landlord can forbid this as he is not a party to the contract". The contract binds the druggist to furnish all needed facilities for the public use of his telephone, if a pay

MAHLON KRATZ,
5100 Germantown, Philadelphia, Pa.

station. Further conditions printed on the back of the contract bind the signer to erect at least one sign on the premises, to allow inspection of the instrument at all times, to abide by all the rules of the company, now in force or to be issued and to collect the outgoing toll.

Further on the signer agrees to allow the company to take possession and to remove his telephone on violation of any of the terms of the contract, after notification by the company, without further notice if the violation is continued. This means that druggists must abide by all the rules of the company as to charges, commissions, etc., under penalty of removal of telephone. The contract is made for a period of five years from and after date of connection of telephone, and unless cancelled by written notice of either party thirty days before its expiration will be continued in force for one year and so on for consecutive terms of one year unless cancelled as above.

The P. A. R. D. is working strenuously to secure 25 per cent, commission from the Keystone Company, but it is hard to see how they can be successful in the face of this reckless giving away of rights unless every druggist who has contracted for a Keystone telephone should refuse to transmit calls over this 'phone or unless they plainly show the Keystone Company that they can and will throw overwhelming obstacles in the way of the company's success, as can be done by several in each section renting 'phones outright and giving free service to the public. This would kill pay station business in such a section. It remains to be seen if an agreement can be reached by both parties fair to each.

It may be worth while to mention that the Keystone Company will charge only five cents for calls, making the druggist's commission only one cent on each call, while on the ten cent calls of the Bell Company he gets 25 per cent., amounting to two and a half cents on one call. For the Keystone Company he would have to do twice the work and get half a cent less on ten cents worth of business, and if his business is less than \$100 a year he will have to work for the Keystone Company for half a cent a call—a very encouraging prospect considering the time and trouble it takes to attend to a pay station.

BUSINESS DULL IN BOTH RETAIL AND WHOLESALE CIRCLES.

Philadelphia, August 17.—The week has been dull and quiet and devoid of anything bordering on unusual activity in both retail and wholesale circles. Business continues about the same as for the early part of the month,

sales of drug sundries, staples and soda water making up the bulk of what is being done. The jobbing houses are fairly busy with local and out of town orders but are all working short-handed on account of many of their employes being off on their annual vacation. There seems to be a good demand for the heavy chemicals used in manufacturing purposes and a strong tendency to better prices for these is evident. Buyers of heavy chemicals and dye-stuffs will do well to take advantage of present prices to lay in stock for Fall work, as it is likely that there will be advances all along these lines in the near future.

NOTES.

—A special meeting of the Delaware County Retail Druggists' Association was held at Chester last Friday, to take steps for the extension of membership and to select a committee to draw up a price schedule to govern the sale of proprietary articles in Delaware County. J. C. Perry and C. W. Shull, of Philadelphia, were present by special invitation to explain the workings of the N. A. R. D. plan and to give help in the forming of a price list. At this meeting M. H. Berkeley was elected as delegate from the Association to the N. A. R. D. Convention of next month. Although there has been some slackness in the work of the Delaware County Association of late, this meeting is expected to infuse new life into its work and to make regular monthly meetings the rule in the future.

—President Cliffe of the Pennsylvania Pharmaceutical Association has appointed the following committee chairman: Legislative, C. L. Hay; Trade Interests, H. L. Stiles; Advertisements, L. Emanuel; Papers and Queries, J. A. Koch; Membership, C. H. Marcy; Botany, Joseph Crawford; Chemistry, F. X. Moerk; Entertainment, D. E. Bransome. The following are the delegates to the N. A. R. D.: Wm. McIntyre, Philadelphia; W. O. Frailey, Lancaster. The delegate to the N. W. D. A. is C. T. George of Harrisburg. The association will be represented at the Medical Society of the State of Pennsylvania by J. P. Remington of Philadelphia, J. M. Baer of Philadelphia and J. H. Redsecker of Lebanon.

—The purchase of the business of the firm of Bullock & Crenshaw, now engaged principally in the importation and sale of chemicals and apparatus, by G. D. Feldt is reported. J. G. Bullock, the only surviving member of the old firm, has been endeavoring for some time to dispose of the firm's stock and business in order to settle up the estates of the two families, his having been on the market for some time. The new firm will combine its present business with that line peculiarly Bullock & Crenshaw's and will greatly enlarge its scope by increasing its capitalization. The transfer will take place Oct. 1.

—West Philadelphia druggists may expect to be regaled with a large and choice collection of fish yarns when Messrs. Perry and Strunk return from a fishing trip planned for next week off Ocean City, N. J. The party will be made up of Messrs. Perry, Strunk, W. W. Chalfant, F. W. E. Stedem, H. L. Stiles and F. E. Holliday, and will go out in a specially chartered yacht to try the efficacy of the N. A. R. D. plan on weak fish.

—Another jolly party of retailers will make a tour of exploration up the famous creek that flows past Bridesburg, to get fish, if any be there, and a good time no matter what else is caught. The bold spirits of this party of explorers will be Messrs. Chas. Reffuss, C. W. Shull, S. W. Strunk, N. A. Cozens and one or two others to be picked up.

—The recent passage of a city ordinance widening Rhawn street, Bridesburg, will necessitate the removal of Orth's Pharmacy back a hundred feet from its present site. Mr. Orth has decided to erect a new building along the new grade in which he will fit up a modern and handsome drug store, to be the finest in that section.

—Geo. R. Townsend, city representative of J. Ellwood Lee, has returned from a vacation at Atlantic City and is once again making his rounds among his customers, new and old, in the interests of his firm.

—H. F. Loesch has had extensive alterations and improvements made in his store at Eighth street, above Vine, and its handsome fixtures and soda fountain make it one of the most attractive in that section.

—A. Schaeffer, for many years head druggist at the University Hospital, has taken possession of Wickham's branch store at Forty-second and Spruce streets, purchase of which was made a short time ago.

—H. C. Clapham, of Emerald and Cumberland streets, who left for a trip to Europe last June, is expected home early in September with a collection of curios and notes on pharmacy on the Continent.

—Lawson C. Funk, the West Philadelphia druggist who was elected a member of Common Councils at the last election, has left for an extended trip to Canada by way of the Great Lakes and Buffalo.

—D. J. Thomas, of Scranton, passed through the city Wednesday on his way to Ocean City, where he expects to spend a week with his old chum, F. W. E. Stedem, who has a cottage there.

—Mr. Lenberg, owner of the St. Cloud Pharmacy, Seventh and Arch streets, has just returned from an extended tour of California and the West.

—S. C. Meredith, of Second and Ellsworth streets, will soon open a drug store in the new block of buildings at Broad and Porter streets.

—John Maier, the popular Kensington druggist is away on a week's vacation trip to Boston. He is accompanied by his wife.

BALTIMORE.

CAPTURED AFTER A LONG CHASE.

Baltimore, Md., Aug. 17.—M. S. Kahn, of M. S. Kahn & Co., retail druggists, at the corner of Liberty and Lexington Streets, was notified to-day by detectives of the United States secret service that they had succeeded in arresting Victor Washington, colored, who is wanted on the charge of stealing \$138 belonging to the firm. The arrest was made in Chicago yesterday. In addition to managing the drug store, the firm also conducts the branch post office there. On May 16 last they sent Washington to the main office with \$138 to purchase stamps and other postal supplies. When he failed to return after a reasonable time an investigation was instituted which resulted in the discovery that Washington had decamped. He could not at first be located, and succeeded in eluding the secret service men until now. He had been employed by the firm for some time and had frequently executed commissions similar to that which proved too much for his honesty. A clue to his whereabouts was found in the shape of a love letter from a dusky Chicago belle, which he had left behind in a coat. This missive informed him that the fair charmer must have \$200 before he could claim her as his bride.

AGGREGATE VOLUME OF TRADING IN EXCESS OF LAST YEAR.

Baltimore, Md., Aug. 19.—The general conditions of the drug trade in this city remain much the same. Jobbers continue to experience grafting activity and the manufacturers also have an exceptionally large number of orders to look after. The aggregate volume of trading, in fact, is considerably in excess of last year, and comparatively little dullness has been experienced. The movement of heavy chemicals remains fully up to the record for the corresponding period of other years, and the general status is satisfactory. The market for botanicals is still without striking features. New supplies of roots and herbs will not begin to come in for several weeks and until then no exceptional developments are expected. The retailers are doing a moderately active business.

NOTES.

—Charles G. Beck, a well-known retail druggist at the corner of Caroline and Federal Streets, has just returned from a trip to the Pan-American Exposition and different points near Buffalo. He had a very pleasant time. Among other Baltimore druggists who have visited or will shortly go to the Pan-American Exposition is Dr. A. H. Schultze, of 306 Hanover Street.

—Dr. Ernest L. Love and William B. Stuck have purchased the drug store of J. E. R. Stine, known as the Grafton Drug and Chemical Company at Grafton, W. Va., for \$10,000. The company did a wholesale as well as retail business.

—William H. Booth, a retail druggist, whose store is at 1201 West North Avenue, applied in the United States Court on the 13th inst. for the benefit of the bankruptcy laws. His schedules show liabilities of \$4,193.62 and assets of \$2,766.85.

—H. P. Hynson, of Hynson, Westcott & Co., Charles and Franklin Streets, is spending a brief vacation in the Blue Ridge Mountains, on the Western Maryland railroad.

CLEVELAND.

VERY QUIET IN DRUG CIRCLES.

Cleveland, Aug. 17.—Reports from many druggists in the city tend to show that everything is very quiet in drug circles. This has been ascribed to various reasons, among which may be mentioned the fact that so many people are absent on their summer outings. Many physicians have also taken advantage of a decrease in their sick lists and are enjoying a little much-needed recreation. Soda trade during the month of July was all that could be wished for, in most cases, but the recent sudden drop in temperature has put a damper on imbibers of cold drinks, and the sales for the past few days have not been very encouraging. Comparatively very few salesmen have tarried here during the past summer months.

NOTES.

—The principal topic of interest at the present time is the annual meeting and picnic of the N. O. D. A., to be held at Avon Beach August 29. At this meeting the Worcester plan will be taken up and thoroughly discussed and the druggists' attitude toward it will be plainly shown. The pleasurable end of the gathering will also be well taken care of, the Committee on Entertainment having arranged an interesting programme of events. A large amount of interest is being shown in the memorial for preferential consideration of price-protected goods.

The object of this movement is to inform the manufacturers of the personal feeling of druggists in regard to the Worcester plan. The druggists throughout the state are giving their signatures, almost to a man.

—An epidemic of drug-store burglaries seems to have struck Cleveland. The last unsuccessful attempt was made upon Ernest Opperman, 723 St. Clair Street, a few nights ago, and was only frustrated by the quick work of the proprietor, who used a large bottle with telling effect. After a fierce struggle the robbers made their escape, frightened by the arrival of strangers, who were attracted by the noise. Beyond a bump on the head and a mix-up with his clothing, Mr. Opperman reports himself as sound as a dollar.

—G. A. Bartlett, president of the N. O. D. A., is enjoying a three-weeks' trip up the lake. He will be joined at Georgian Bay, in a few days, by John Krause, who was to have gone with him, but was detained by the serious illness, ending in death, of his partner in the proprietary business, W. I. Lindsay.

—The application to the Post Office Department by Dr. George Stoskopf for a sub-station to be located in his drug store on the South Side, was accepted, and the office is now in active operation.

—A one hundred and twelve page cut-rate catalogue and price list, issued "To Our Friends and a Fair-Minded Public," is the latest effort of our most aggressive cutter.

—The Roseman Drug Company of Cleveland was incorporated Aug. 7 at Columbus by C. E. Roseman, C. A. Godman, Perrin Shirley, Grace Roseman and Harry L. Shape. Capital stock, \$10,000.

—W. I. Lindsay, manufacturer of a proprietary dyspepsia cure, died at Lakeside Hospital Aug. 13 at the age of 51 years. Death followed an operation for appendicitis.

—E. S. Stewart, at East Palestine, O., is putting in

a new drug store. The fixtures will all be built after his own designs, and particularly adapted to the country trade.

—Druggists located in the vicinity of the Public Square and on the down town streets look forward to a splendid run of business during G. A. R. week, which opens Sept. 9.

—Lewis C. Hopp, of Mayell-Hopp Company, has returned from a week at the Pan-American, where he took his family to see the sights.

—Treasurer George W. Voss, of the N. O. D. A., has been absent for about a month at the bedside of his mother in Cincinnati.

—"Association News" is a little four-page bulletin issued by E. R. Cooper, organizer of the N. O. D. A.

—E. P. Dohner has greatly improved his old store on Detroit street.

—W. G. Marshall has returned from a recent visit to Buffalo.

LOUISVILLE.

DRUGGIST ARRESTED CHARGED WITH SENDING OBSCENE MATTER THROUGH THE MAILS.

Louisville, Aug. 15.—J. C. Franklin, the Nashville, Tenn., druggist who is in trouble on the charge of sending obscene matter through the mails, is well known in Louisville, where he has several relatives and many friends. The charge was filed by Mrs. W. A. Cole, the wife of a traveling drug salesman, and is sensational. Mr. Franklin was arrested and at his preliminary hearing was released on \$2,400 bail. The druggist denies the charge. Franklin is one of the most prominent business men in Nashville. He is also well known in society. It is said that he is worth several hundred thousand dollars, and he claims that he will spend every dollar of it in fighting the charge. Cole is well known to the retail drug trade of the South. He is just as determined as Mr. Franklin, and claims that he will prosecute the case to the end. Sentiment is divided, the druggists all over this section, where both are known, are watching the fight.

NOTES.

—Chas. Scribner understands the value of unique advertisements. Recently a countryman presented him with two rattlesnakes. Both were five years old, as each possessed five rattles. Mr. Scribner placed them in the window of his drug store at Sixth and Jefferson Streets and kept them on exhibition for a while. Then one day he placed half a dozen rats with them and awaited developments. Of course, he expected the rats to cease existing after a while, but the snakes and the rats immediately became friends and are now living together. Incidentally the strange family is the talk of the town and there is a crowd in front of the drug store all the time.

—W. L. Wilson, of Decatur, Ill., will soon start a drug store in Louisville. One of the prominent wholesale druggists of Louisville said that one of the local department stores would place a drug department in its store in a short time. He refused to divulge the name of the druggist. It is believed that this action would bring on a fight with the local druggists. Louisville is as yet free of the department store drug counter, and the retail druggists fear that it would mean more cut rates and a corresponding loss in profits.

—The druggists of Louisville are arranging to give their brethren who attend the convulse a taste of true Kentucky hospitality. It has been decided not to entertain them collectively, but each druggist is expected to extend all of the courtesies in his power to the visiting pill-rollers.

—Charles Scribner, the proprietor of Scribner's Pharmacy, has purchased the Elks' dining room and in addition to running his drug store, is devoting some time to his eating hall.

—John Gardner, one of the young druggists of the city, returned on Monday after a tour through California and the Yosemite Valley.

—Mr. and Mrs. J. T. Creelius are spending the summer at one of the Michigan summer resorts.

CHICAGO.

CHICAGO WHOLESALE DRUGGIST VISITS KRUEGER.

Chicago, Aug. 16.—Peter Van Schaack returned last Tuesday from his twelfth visit to Holland. While there he called on President Krueger and on behalf of the Holland Society extended him an invitation to visit the United States. He found Mr. Krueger in deep grief over the death of his wife, but otherwise hopeful over the situation in South Africa. The President expressed his thanks for the invitation of the Holland Society and for what had been done in this country for the Boer cause. "Just at present," said Mr. Van Schaack, "President Krueger is inclined to feel a little hurt over the shipment of mules and horses from America to England. He mentioned the fact that 10,000 head have been shipped from New Orleans and other points, and commented on it as one of the chief things in which the United States has proved hostile to his cause.

"After talking with President Krueger I decided to look into the matter. I talked with our Ambassador and found the question had been carefully investigated. Horses and mules are not contraband of war, and the traffic between this country and Great Britain cannot easily be stopped.

"President Krueger is not at all disheartened or does not appear to be. While talking about this question of horses and mules, over which he seems to be most agitated at present, he turned to me and said: 'Well, perhaps it doesn't make so much difference after all. We shall get most of them.'

"President Krueger is not well, and when I was about to see him had been ordered to the seashore to get the air. It was through Mr. Woolmarans that I finally met him at The Hague on Aug. 1. During his working hours he seldom deserts his big family Bible. It lies open on his desk before him while he works. I should not consider President Krueger slow, but he weighs every opinion carefully before it is expressed. He expressed his cordial appreciation of the invitation of the Holland Society, but said that under the present circumstances it would be impossible for him to accept it."

Mr. Van Schaack brought back a souvenir card which Mr. Krueger handed him bearing a photograph of himself on a hotel balcony. The card bears the autograph of President Krueger.

While in Berlin Mr. Van Schaack met W. A. Robinson, the well-known wholesale druggist of Louisville, who is touring Europe, and missed Dr. Senn and party by only four hours.

Chicago Business Good.

Chicago, Aug. 17.—The week has been a fortunate one in the way of trade. The jobbers report a good business. Orders are coming in in rather larger volume than usual for the season. There have been few stock orders, but the business in the staple goods has been excellent. All the houses, both jobbers and manufacturers, are rather busier than usual, and the outlook for a good fall and winter business grows brighter day by day.

NOTES.

—It is stated that a meeting of the First District Auxiliary Association will be held next week. The course that will be decided upon is not definitely known, although it is assumed that the district will decide to ignore the Boston Store and will adopt a schedule of prices "regardless." Conversation with several members of the association indicates that a pretty strong idea prevails that there is business enough down town for all the stores if rightly handled, and that one aggressive cutter with a department on a third floor will not be able to injure trade seriously. The managers of the Boston Store say they are keeping still and sawing wood, and that they can get all the goods they want.

—"Bromo-Seltzer," the wild cat, not the beverage, is dead. He died recently of pneumonia, in spite of the best efforts of the best cat doctors. George W. Mathie-

son, who owned him, is greatly disappointed over the loss of his pet, for "Bromo," apart from being a natural curiosity as the only domesticated wild cat in existence, was a gentle and affectionate pet, and in all the four years of his life had never displayed any tendency toward treachery or any habits not common to the house cat. Although as large as a good-sized dog and much stronger, he was as active and playful as a kitten and had all the marvelous quickness of his kind.

—C. H. McConnell, president of the Economical Drug Company, accompanied by his wife and daughter, left for the East a week ago to visit the Pan-American Exposition, Niagara Falls, Toronto and other places, returning by water from Georgian Bay. W. L. Campbell, vice-president of the same company, accompanied by his wife, returned from the East last week after a tour of the lake region, including Buffalo and several points of interest along the Canadian shore.

—John N. Neeb, prescriptionist for the Economical Drug Company, left on Saturday for a two weeks' tour through the East. Mr. Neeb is one of the best known prescription men in Chicago, having been for thirteen years with Gale & Blocki, and for seven years with the Economical Drug Company.

—D. B. Chandler, Western selling agent for the "4711" toilet soaps and perfumes, was in Chicago this week on his way through the cities of the West to Honolulu, H. I. He says that business in the East is better on the whole than he has found it in the West.

—Mr. Morrison, of the Morrison Drug Company, Waco, Texas, accompanied by his family, spent several days at the Chicago Beach Hotel last week, en route around the lakes to Buffalo.

—The drug store of John G. Love at Lime Springs, Ia., was destroyed last week in a fire which consumed a large portion of the business part of the town.

—Clarence A. Davidson, accompanied by his wife and daughter, left Friday night for the Dells, Wis., where they will spend a few days.

—Dr. Turner has sold his store at Wabash Avenue and Forty-third Street, known as the Wabash Pharmacy, to Frank M. Moss, Jr.

—H. T. Addis Brady, a druggist at 1126 Addison Avenue, has given a bill of sale of his store for a consideration of \$1,200.

—Frank Herbert has sold an interest in his drug store at Bridgewater, Ia., and the new firm is known as Herbert & Pote.

—An involuntary petition in bankruptcy was filed recently against G. W. Dixon, a druggist of Colfax, Ia.

—Koerner Brothers have bought the drug store of C. F. Bancroft at Horicon, Ia.

The Two Largest Grape Juice Companies.

The output of the Welch Grape Juice Company is more than the combined output of all other grape juice companies. A still larger sale is insured by the Welch Grape Juice Company having bought out the Snow Grape Juice Company of Penn Yan, the second largest concern of its kind in the world. There will be no more Snow's Grape Juice, all Grape Juice will be sold as Welch's.

All grapes hereafter used will be from the Chautauqua Grape Belt, of which Westfield is the center, and the Westfield factory enlarged and very materially improved will be the only factory used.

Mr. J. W. Badger, brother-in-law of the original Snow and always the only proprietor of the Snow Grape Juice Company, will occupy a responsible position in the Welch Grape Juice Company.

Welch's Grape Juice will be advertised more than ever before, and it will pay druggists to handle this brand, which is the only advertised one and is the standard the world over.

Welch's Grape Juice is for sale by all jobbers. Remember it is only pressed at Westfield, N. Y.

The dollar size of Four-Fold Liniment is \$7.00 a dozen.

ST. LOUIS.

ST. LOUIS RETAILERS CONFER WITH JOBBERS.

St. Louis, Aug. 17.—The Retail Druggists' Association of St. Louis held an important meeting at the College of Pharmacy Aug. 14. About twenty of the leading members were present. The two communications which the jobbers had recently sent to all the local druggists, both of which were published in the Era, were read and discussed. The committee, which was appointed at the last meeting, reported that they had called upon the jobbers in an informal way to discuss matters before presenting their requests. On this occasion they were convinced that it would be better to wait and consult the Association further. Their action was approved. It was finally decided to draw up a new set of requests and present them in writing to the local jobbers. They are in brief as follows:

"The local retail druggists to receive $1\frac{1}{2}$ per cent. discount on all bills paid by the 10th of the month.

"That the retailers receive daily delivery of goods if they so desire.

"That the jobbers accept as equal exchange empty containers by the time of the next delivery, providing they are in as good condition as when received."

Detailed reasons were given for making each one of these requests. The Association approved of the jobbers' not dating bills ahead of time, and also decided to have cards and blanks printed which will be of considerable interest to representatives of outside patent, proprietary and similar manufacturing concerns. When such salesmen come here they will be requested to sign and have their firms sign an agreement not to sell any of their goods to any department store or any druggist or person selling goods below the local schedule price, should any be in business here at the time. Those who sign this will be given a card issued by the Association, for which they will be charged one dollar. This card will stand as an introduction of endorsement by the Association to the trade.

PROGRESS OF ARRANGEMENTS FOR THE A. PH. A. MEETING.

St. Louis, Aug. 17.—Yesterday Local Secretary H. M. Whelpley mailed an announcement of the St. Louis meeting, giving all the information, programme of entertainment, hotel accommodations, etc., up to Sept. 14. This has been mailed to all members of the Association. Since this was printed the Business Men's Club of St. Louis has decided to give the Saturday evening entertainment, which will be held in the grand dining room of the Southern Hotel Sept. 21. This entertainment will in part consist of a thirty-minutes' lecture by F. L. Seeley on the cinchona plantations of Java. Mr. Seeley spent a year visiting the cinchona plantations of the world, and has the finest collection of photographs and stereopticon views relating to the cinchona industry in existence. Ex-Gov. D. R. Francis, president of the Board of Directors of the 1903 World's Fair, will make a short address.

NOTES.

—A. W. Peterson, druggist at Fifteenth and Chambers Streets, recently completed making some extensive improvements in his drug store, one of which was to enlarge it to nearly twice its former capacity. Last Thursday he invited a number of his brethren in and that night held "open shop." Before doing so, however, he consulted Theo. F. Hagenow, on Choteau Avenue, and endeavored to get a few pointers from one who has had experience in that line.

—Dr. W. Graul is preparing to open a drug store at Second and Sidney Streets. This city has over fourteen miles of river front. Broadway or Fifth Street extends the entire length of the city, and this will make only two drug stores in the entire district between Broadway and the river. Fifty years ago nearly all the drug stores of the city were located east of Broadway.

—E. A. Medler, druggist at Twentieth and Ferry Streets.

R. L. HOOP, Centralia, Mo.,
1st Vice-President Missouri Pharmaceutical Association.

is on the sick list. Ed Fischer, chief clerk for Mr. Medler, is also laid up with a severe case of blood poisoning in the right arm. It resulted from a slight cut on the finger by a broken soda glass.

—S. E. Barber, former city salesman for the Meyer Bros. Drug Company, and later for the Moffitt-West Drug Company, has gone into the general brokerage business. He makes a specialty of selling drug stores and has opened an office at 508 Roe Building.

—H. F. Hassebrook, druggist at High and Washington Streets, has been spending a week somewhere over in Illinois. He will not tell where he went, and surprises his friends by declaring he did not go fishing. He says he was just out sunning himself.

—The Sidney Street Pharmacy, at Eighteen and Sidney Streets, was incorporated this week with a capital stock of \$2,000. The stock is held by R. F. Miller, druggist at Broadway and Leperance Street; E. J. Koeberlin, and Edward Wenger.

—Prof. Francis Hemm is invoicing the stock for a 4 s brother, Louis P. Hemm, in the two drug stores at Kirkwood. He expects to take charge of these stores on Sept. 1, as his brother is going West for his health.

—Chas. Milne, regular clerk for Ferd. Christman, Vandeventer and Washington Avenues, is putting in his three weeks' vacation at Bernius' drug store, 5400 Easton Avenue, while the proprietor is in Canada.

—E. W. Knott, city desk man for the J. S. Merrell Drug Company, has returned from his health recuperating trip North, but is unable to resume work as yet.

—William Frese, clerk for L. A. Seitz, Fourth and Cedar Streets, leaves to-night on a two-weeks' vacation, which he will spend at Jefferson City, Mo.

—Harry Stiegemeyer, manager of the Phoenix Pharmacy, Jefferson and Cass Avenues, is spending his week's vacation on a boat trip up the river.

—Chas. A. Jamison, clerk for F. H. Swift, has just returned from a ten days' vacation, which he spent visiting the Pan-American Exposition.

—Harry Sommers has taken the North Side city route for the Moffitt-West Drug Company. This route was recently vacated by S. E. Barber.

—Frank Finch, central city salesman for the Meyer Bros. Drug Company, is spending a three weeks vacation among the Northern lakes.

—W. S. Flemming, druggist at Seventeenth Street and Washington Avenue, has returned from a month's vacation spent in the East.

—F. H. Swift, Vandeventer and Olive Streets, has left

with his little son to spend a couple of weeks with his brother in Ohio.

—Dr. Otto Hartwig has greatly enlarged and made extensive improvements in his drug store at Tenth and Market Streets.

—Richard McDonald, head clerk for E. A. Bernfus, on Easton av., broke his finger while playing baseball a few days ago.

—Louis Lehmann, Jefferson and Washington Avenues, has returned from a three weeks' trip through the East.

—G. W. Smith, 4300 Laclede Avenue, has gone down in the Ozark Mountains to spend a couple of weeks.

—F. Speck has sold his drug store at Sheridan and Elliott Avenues.

—A. B. Roth, druggist at 3300 Olive Street, is quite ill.

THE SOUTH.

THE DRUG CLERK WON.

Memphis, Aug. 16.—A Murfreesboro, Tenn., newspaper recently offered a prize for the production of the handsomest man in the place. Now the little city is up to date in every particular and the people never do things by halves, so the contest was between the Beau Brummel of the town and Ben Price, a popular drug clerk, all the others found the going too heavy and pulled up. The contest was to be decided by vote and when the polls closed it was nothing but Mr. Price, he won "pulling up", by four or five thousand votes. The ladies are said to be responsible for the victory. The average drug clerk has so little to do with contests of any sort that the wearing of the laurel by one is certainly worthy of record.

NOTES.

—Several of the employes of Spurlock, Neal & Co., Nashville, came over with a crowd of rooters several weeks ago to see the Sunday game of ball between Nashville and Memphis of the Southern League. The game resulted in a victory for Nashville and Messrs. Buchanan, Caruthers and Edmiston were left behind when the excursion trains pulled out. They spent the next day very pleasantly, however, looking up at the tall buildings and dodging the trolley cars.

—Messrs. Sheats, Warnack & Harris have resigned their positions with the Hessig, Ellis Drug Co. and are now with the Van Vleet-Mansfield Drug Co. Geo. Donnell has resigned his position as head of the order department for the latter company and accepted a similar place with the Hessig, Ellis Drug Co.

—B. D. Kerr who recently graduated in pharmacy at Vanderbilt University; Nashville, and a druggist of many year's experience, is now in charge of the L. Rascoe Drug Co.'s laboratory, Nashville.

—Ernestine Bennett of Miller & Bennett, Fulton, Ky., accompanied by Mrs. Bennett and Miss Farmer will spend the month of August at Monteagle and Lookout Mountain.

—Oscar Taylor, a recent graduate of the Vanderbilt College of Pharmacy, has reassumed charge of the prescription department of Wilson's Drug Store, Martin, Tenn.

—Sterling R. Miller of Miller's Pharmacy, Chattanooga, visited his old home, Dyersburg, Tenn., recently. He spent a couple of days in Memphis on his way back.

—R. W. Telford, manager of the Greenville Drug Co., Greenville, Miss., visited Milwaukee recently, the attraction in particular being the Elks' Carnival.

—Clayton Miller of Miller & Bennett, Fulton Ky., accompanied by his wife, spent the month of July at Creal, Ky., and Dawson Springs, Ill.

—E. J. Schott, the College street druggist, Nashville, accompanied by Mrs. Schott will visit Buffalo, Niagara and other Eastern points.

—Bennett Bros., Fulton, Ky., whose store was recently destroyed by fire expect to get into their new building at an early date.

—A. Fly of McComb City, Miss., and J. W. McCorkle of Meridian, Miss., both pharmacists, are visitors in Memphis.

—Mr. Wilson, proprietor of the Five Points Drug Store, Jackson, Tenn., has made extensive improvements in this store.

—James & Nelson, Jackson, Tenn., are putting in new fixtures and will have one of the handsomest stores in the South.

—Philip Milan until recently with J. Hayden Wilson, Martin, Tenn., has accepted a position with Hunt, Mayfield, Ky.

—Tyler Jackson, formerly with Ward & Best, Jackson, Tenn., has resigned his position and gone to Monroe, La.

—T. J. Shannon, of Shannon's Pharmacy, Sharon, Tenn., is back at his store after a visit to Monteagle.

—Dr. H. H. Roscoe, of Nashville, is spending the summer at Bon Aqua Springs, Tenn.

—Jno. W. Baird, of Sumnerville, Tenn., is on a visit to his old Kentucky home.

—Dr. L. Harrison, of Dyersburg, spent his vacation at Dawson Springs, Ky.

THE NORTHWEST.

THREE DRUG CONVENTIONS.

St. Paul, Minn., Aug. 16.—The retail druggists of three Northwestern States—Wisconsin, South Dakota and Montana—held their annual meetings this week.

The Badgers held their meeting at La Crosse. It was noted more for social functions than anything else. Reports of officers were made and new members elected the first day. In the afternoon Mayor Boschert made a speech of welcome and President J. H. Kampt gave his annual address. The session was followed by a bowling contest in which both ladies and gentlemen took part. The local branch of the United Commercial Travelers entertained the drug men with a musicale in the evening. The second day's session was opened by the Committee on Adulteration, followed by papers by A. C. Otto, W. H. Barr, E. G. Ræuber, and O. T. Erhart. The rest of the day's session was devoted to reports of the Executive Committee and the secretary of the Board of Pharmacy and other business. In the evening the local lady members of the auxiliary gave a reception and ball for the visitors. The convention adjourned yesterday morning after electing the following officers: President, E. B. Heimstreet, adnesville; first vice-president, W. H. Barr, Milwaukee; second vice-president, W. H. Farnsworth, Beloit; secretary, Henry Rollman, Chilton; treasurer, W. B. Clark, Milton. Milwaukee was chosen for the next meeting place.

The South Dakota Association met at Redfield, the attendance being larger than ever before. Prof. Kremers of the University of Wisconsin gave an instructive lecture on the perfume of flowers, and Dean Walling of the College of Pharmacy, University of Minnesota, lectured on pharmacy. The usual reports of officers were made and the association was found to be in a satisfactory condition financially and otherwise. The new officers are: President, C. M. Searles of Salem; vice-presidents, H. A. Parker and Z. A. Crain; secretary, E. C. Bent of Dell Rapids. The place of meeting for next year was referred to the Executive Committee.

NOTES.

Successions: Walter Upington, Spokane, by J. H. Fanning; McCalm & Ransom, Gravity, Ia., by R. T. Adams & Co.; C. M. Forney, Valeria, Ia., by C. E. Reeves; Frank Herbert, Bridgewater, Ia., by Herbert & Pote; Speedling & Speedling, Marble Rock, Ia., by E. W. Speedling; C. F. Bancroft, Horicon, Wis., by Koerner Bros.

—A drug clerk at Mondovi, Wis., a few days ago made a mistake that may cost Miss Mildred Culbertson of Durand her life. Five grains of atropin were prescribed for the young lady, who had a headache, and the clerk gave her instead atropin, a deadly drug. Miss Culbertson is apparently at the point of death.

—The druggists of St. Paul held their annual outing at Wildwood, White Bear Lake, Monday, and the clerks gave a picnic the next day at the same place. The clerks are forming an organization similar in its aims to the Retail Druggists' Association.

—New: F. A. Theopold, Faribault, Minn.; A. Woseinka, Haugen, Wis.; Spicer & Knapp, Hastings, Neb.
 —Phil Adams, of St. Paul, is going to Clarkfield, Minn., to take charge of Mrs. Erickson's drug store.
 —Mrs. C. M. Crocker, Faribault, Minn., and Johnson Bros. & Co., Fertile, Minn., have sold.
 —John G. Love and D. D. Dayton & Co. were burned out at Lime Springs, Ia., this week.
 —E. M. Hanson of Albert Lea, Minn., has gone to work for Dr. Strabo at Spring Grove.
 —The stock of A. H. Kissau, Norfolk, Neb., was damaged by fire this week.
 —The Hockett Drug Company has been incorporated at Walla Walla, Wash.
 —A receiver has been appointed for W. S. McCoy, Lehigh, Ia.
 —C. C. Case, Buscoda, Wash., will remove to North Yakima.
 —H. L. Gibbs has gone to work in Mident's store, St. Paul.

AMERICAN PHARMACEUTICAL ASSOCIATION.

The forty-ninth annual meeting will be held at St. Louis, Mo., September 16-21 inclusive, beginning at 3 o'clock p. m., on Monday, the 16th. The Council will hold a session on the same day at 10 o'clock a. m. Credentials of delegates should reach the General Secretary at his office, Baltimore, Md., not later than Thursday, September 12th. Applications for membership may be sent to the secretary of the committee, George W. Kennedy, Pottsville, Pa., up to September 12th, after which date they should be sent to him in care of the Southern Hotel, St. Louis, Mo.

The General Secretary announces the following information relative to transportation: The Central Passenger Association, the Western Passenger Association, the Trunk Line Association, and the Southeastern Passenger Association have all granted a rate of one fare and a third, on the certificate plan, for the round trip from all points in their respective territories. The New England Passenger Association and the Southwestern Passenger Bureau have not yet agreed to the reduced rate; negotiations are still in progress and information regarding the same may be obtained later from S. A. D. Sheppard, 134 Huntington Avenue, Boston, Mass.; Dr. H. M. Whelpley, 222 South Broadway, St. Louis, Mo., and Chas. Caspari, Jr., 100 Aisquith Street, Baltimore, Md.

To secure the reduced rate, full fare must be paid going and a certificate (not a mere receipt) obtained from the ticket agent. If the agent has no certificates purchase a local ticket to the nearest point at which certificates are kept, and from that point purchase a through ticket with certificate. Immediately on arriving in St. Louis the certificate should be turned over to Dr. H. M. Whelpley, local Secretary, who will see that it is countersigned and returned to the owner. When this certificate, properly endorsed by the special agent of the Traffic Association, is presented, a return ticket over the same route used in going may be purchased at one-third the full fare. Tickets to St. Louis may be purchased not earlier than September 12th, nor later than the 15th. In the extreme West they may be purchased a day earlier. Return tickets will be good to leave St. Louis not earlier than the evening of September 19th, nor later than September 25th.

Programme of the Meeting.

The following programme has been adopted by the Council for the guidance of the association at large and the respective sections:

Monday, September 16—10 a. m., Council meeting; 3 p. m., first general session; 5 p. m., reception in parlors of Southern Hotel.

Tuesday, September 17—10 a. m., second general session; 3 p. m., meeting of Commercial Section.

Wednesday, September 18—10 a. m., third general session, devoted to discussion of exhibits.

Thursday, September 19—10 a. m., meeting of Section on Practical Pharmacy and Dispensing; 3 p. m., meeting of Scientific Section; 5 p. m., meeting of Scientific Section.

Friday, September 20—10 a. m., meeting of Scientific Section; 3 p. m., meeting of Section on Education and Legislation; 8 p. m., meeting of Section on Education and Legislation.

Saturday, September 21—10 a. m., last general session. In addition to the above, the local committee have made arrangements as follows:

Sunday, September 15—Reception of incoming delegates.

Tuesday, September 17—9 a. m., meeting of Board of Trustees of the United States Pharmacopoeia Convention; 8 p. m., visit to St. Louis Exposition and Music Hall.

Wednesday, September 18—9 a. m., meeting of the Committee of Revision of the United States Pharmacopoeia; 3 to 10 p. m., steamboat excursion on the Mississippi River.

Thursday, September 19—9 a. m., meeting of the Conference of Teaching Faculties.

Friday, September 20—9 a. m., conference of members of Boards of Pharmacy.

Saturday, September 21—9 a. m., conference of Secretaries of State Pharmaceutical Associations; 2 p. m., trolley ride, visit to Shaw's Garden and Anheuser-Busch Brewing Association plant; 8 p. m., evening entertainment. A special programme is in preparation for the entertainment of the visiting ladies.

Essays and papers to be read at the meeting should be forwarded without delay to the chairmen of the respective sections, viz: Scientific papers, Prof. Oldberg, 2421 Dearborn Street, Chicago, Ill.; commercial interests, Chas. A. Rapsley, 853 Main Street, Hartford, Conn.; education and legislation, Prof. C. B. Lowe, Philadelphia Street and Germantown Avenue, Philadelphia, Pa.; practical pharmacy and dispensing, Henry P. Hynson, 423 North Charles Street, Baltimore Md.

Modern Requirements of the Drug Business.

The pharmacist of to-day fully realizes the importance of impressing upon the public the superiority of his stock and the care observed in compounding prescriptions. The model pharmacist bestows as much care to the attractiveness and the outward appearance of every bottle of medicine delivered to customers as he does to its contents.

In promotion of this object nothing serves better than a neat bottle cap, which will give the prescription bottle a finished appearance. Heretofore only foreign bottle caps were available, but in keeping with the progress made by all our American industries, this little serviceable article is now made in this country and the domestic make would seem to deserve preference over the imported, not alone for patriotic reasons, but also for general excellence and cheapness. The line of goods under consideration is the "Baronet" bottle cap, offered by the new Sundries Department of Lehn & Fink, New York.

The "Baronet" appears to fulfil all requirements that can reasonably be expected. The caps, which come in assorted colors, are lined with white paper, which causes them to retain sufficient rigidity to present an attractive outside appearance. The pleats are made close together to facilitate affixing. Staining of the fingers, a complaint frequently made against the imported article, is out of the question, for the colors are fast. Finally, the "Baronet" paper bottle cap is much cheaper than similar articles of foreign manufacture.

These Goods Sell Well.

Here is another letter from a prominent firm of druggists regarding Chas. Jacobs & Co.'s cigars:

"Grand Rapids, Mich., July 24, 1901.

"Chas. Jacobs & Co., New York.

"Gentlemen: We just received your last shipment of cigars, and they open up beautifully. Our trade on your brands has been most satisfactory, and is continually growing. Yours truly, CHURCH & WEST."

Wild Cherry Phosphate.

Druggists should read the advertisement of the Thompson Phosphate Co., Chicago, on another page. They make a special offer of what they call their Big Three Case for \$3.00, giving the druggist 100 per cent profit. They also advertise special soda fountain extracts at \$2.00 per gallon, and give away free a handsome bronze clock with the first order of three gallons.

IS THERE A DECADENCE IN PHARMACY?*

To come to those matters more intimately concerned by our calling, let us ask, and frankly try to answer, three questions: Is there a decadence in pharmacy? If so, what are the contributing causes? Is there a remedy? It is difficult to know what was the actual condition of pharmacy at the beginning of the century, but from what information one is able to obtain about that time, there is good reason to believe that a chemist and druggist carried on a protean-sided business, prescribing freely for many of the diseases to which flesh is heir, and for some of those which flesh acquires, acting as a dental practitioner, dealing in paints and colors, selling veterinary preparations, and, on the whole, making a good living. In one town which I take as an example, there were as many pharmacists who were making individually as large profits when the town had 20,000 inhabitants as is done now when it has 80,000. The pharmacists of that period certainly occupied relatively a better position among their fellow tradesmen than the present ones are doing. In fact, we may say that, as compared with the sixties and seventies, the depreciation in good will alone among British pharmacies is at least 50 per cent. So much for the trading point of view. Doubtless, as compared with the beginning of the century, the pharmacist of today is a much better educated individual, and, in this respect, I am willing to concede that, as compared with his fellow tradesmen, he has not retrograded, but his income has not kept pace with theirs. If we compare the present time with the seventies and eighties, I think we must admit that the general interest in science exhibited by pharmacists shows a decided falling-off. The regrettable loss of numbers experienced by this Conference corroborates this statement. I am not disputing that excellent work is done by followers of pharmacy today, but I am afraid it is chiefly done by members of wholesale rather than retail pharmacy.

I answer my first question by asking another: Must we not sorrowfully admit that retail pharmacy is less prosperous now than at any time within memory? To the second question as to the cause, many exist. First, there are those which are beyond our control, such as the diminution of returns, owing to the segregation of business and professions. The working classes, who came to the druggist during the first half of the century for advice and medicines, now to a great extent belong to provident dispensaries, many of which are very excellent institutions; others, greatly assisted by charitable doles, are simply close corporations for a few favored medical men; others are notoriously abused in admitting as members individuals who are perfectly well able to pay both for medical attendance and for medicine. A very considerable share of business has thus been diverted from pharmacy. Nursing and convalescent homes and other pseudo-charitable institutions also contribute to this. The excellent socialistic work done by municipalities and parish councils in providing proper sanitation, in the preventive treatment in medicine, in the isolation of diseases, are all factors exerting adverse influence, although we cannot grumble at them because the body politic has greatly benefited. There are, however, contributing causes which are less legitimate. Practically the first half of the century saw free trade in medicines and poisons. It is true the Pharmaceutical Society of Great Britain had been established, and those members of our business who had made their way, and who were not only good business men, but also men with a respect for and lovers of scientific pursuits, established a voluntary system of examination which was useful and practical, and one in which per se was the servant and not the master, and in which a knowledge of pharmacy as a business was the first requisite. In the course of time the diploma became a valuable possession, not only from what it means from a scientific

point of view, but also as being a distinct commercial asset. It was too frequently seen in shop windows. The success of the examination was recognized by our Legislature, since it passed the Bill which gave the Pharmaceutical Society power to examine and make that examination compulsory. What has been the result? A gradual divergence towards the purely scientific side in the examinations, in which the more practical part of pharmacy has been pushed to the wall. Concurrently with this has been the passing of large numbers of candidates, who appear to be so disgusted with the modicum of science which they assimilated for the purpose of passing the examination that they forthwith drop all pretension to the name of scientists, and prefer to exist by selling their birth-right as independent men, to be a qualifying dummy, ruled over by people who know nothing, or next to nothing, of pharmacy, yet can give the qualified man points in everything relating to business transactions—a symbiotic union, in which both organisms do little good to themselves and infinite harm to us. Therefore, I think our examination system and our teaching may have unconsciously assisted in the downward movement. There has also gradually grown up in certain quarters a kind of scorn for knowledge of business routine, and an undue glorification of the scientific side. Instead of the form of education so ably sketched out by Mr. Schacht in this place twenty-three years ago, it is now seriously suggested that the proper method of educating a pharmacist is to send him to college, where, having attended a certain number of compulsory lectures on botany and chemistry, he would be able quite easily to pick up sufficient practical pharmacy to qualify. This being attained, he would be soon able to acquire a business knowledge of pharmacy. Gentlemen, I think this is a disastrous suggestion. It might possibly answer in a State-protected system of pharmacy, but I venture to think that such a plan could not succeed where the State has done much to hinder, but nothing to protect, the interests in pharmacy. In the struggle for existence how could such a one successfully compete with another trained as a draper's apprentice, for instance, in the business routine, or as a pharmacist's apprentice should be, in all the practical groundwork of his trade? Now I come to another great cause in pharmaceutical decadence—namely, the growth in the sale of so-called patent medicines, as well as those still more insidious and dangerous foes the proprietary articles used so often, alas! ordered, in dispensing. The first were in former days sold by stationers and newspaper agents, an arrangement brought about in many cases by the advertising agents taking the cost of advertising in kind, then impressed with their growth, chemists unwisely made themselves the advertising medium; but the benefit was ephemeral, as, on the cutting element being introduced, patent medicines offered an opportunity which was quickly grasped. But after all, these were open enemies; the greatest foes are those of one's own household, such as the proprietary article with which our physicians are profusely sampled, and which makes dispensing, which at one time was both pleasant and profitable, neither agreeable nor remunerative. Once pleasant, because not unskilful the prescription necessitated some call upon the intellectual faculty and one's chemical or pharmaceutical training proved of service; now, when two pills No. 4 (Brown and Jones) are ordered, with someone else's mist, bismuthi and another person's liniment, a natural feeling of injury is experienced by the pharmacist, who having expended a considerable amount of time and money in being educated to prepare such medicaments, feels that the physician is tacitly telling him he has little confidence in his knowledge. The sending out in the original packages such medicines as I have alluded to hardly comes under the head of intelligent compounding, while pecuniarily, instead of a profit an actual loss is not infrequently incurred. But all these causes are relatively unimportant compared with the effects produced by company-trading upon pharmacy, associated as that is with the robbery of our titles and the suggestive inaction of the Legisla-

*Portion of the Presidential address to the British Pharmaceutical Conference, delivered at Dublin, July 30, 1901. (Reprinted from Pharm. Jour.)

ture to give us proper protection by proper legislation. The Legislature called us into being and insisted that every chemist before commencing business should be qualified, and then out-gilberted Gilbert by allowing seven people, not one of them qualified, to open a chemist's business and call themselves chemists. Contrast this behavior with that adopted by any other civilized Government on the Continent or elsewhere. Compare it with Germany, our most powerful rival in applied chemistry, and there we shall find a very complete protection is given to the pharmacist, and an even more generous treatment is offered in Russia; but from one reason to another—possibly from the bugbear of "departing from the principles of free trade," or, perhaps, a too jealous care of vested interests which have been built up on a piratical basis—the law-making assemblies of this country stand by and see a gigantic injustice done to a body of men, which it is their duty to see receive a just protection.

Is there a remedy for the bad times we are enduring? Something can be done by the Legislature and that something should be asked for with no faltering voice, with no divided counsels, with no uncertain sound, and with no unnecessary delay. But the greater part of the problem must be left to ourselves. The battle is to be won by pitting our own exertions and our individual industry against the advantages of large capital, of great purchasing powers, and other premiums which companies possess. We shall have to rely upon ourselves—upon the fact that when a man works for himself he works for a hard taskmaster, who is satisfied with no slackness of effort, but one who demands the fullest employment of every faculty—and if this be given, the competition of a hydra-headed company should not be a too successful competition. The history of limited liability companies in Britain during the past twenty years should offer some consolation, notwithstanding the enormous amount of capital which has been invested in them, for if the price at which they were floated is put against that at which they stand today, it will be found there is a very great diminution, even without taking into account the large number of those which, unhonored and unsung, have melted into thin air.

In Ireland there is a brighter outlook, since to a considerable extent you have wrought out your own salvation; it remains for us to see that the members of this Conference, which has done so much to foster the interests and the highest aims of scientific pharmacy—this Conference, which has been and is the means of forming pleasant friendships, or of cementing and preserving old ones, and which has always advocated a high standard of mental discipline—should in no way fall short of the ideal sketched out in this city twenty-three years ago, but that not only the Conference in its corporate capacity, but each member of it individually, shall, with whatever talent he may have been blessed or with any faculty he may have acquired, strive to the utmost to defend the gage which he threw down when he entered the service, hard an unrequiting though it be, but a service which is no ignoble one, that of our common mistress—Pharmacy.

THE PREVENTION OF MALARIA.

We have more than once called attention to the very extraordinary advances which are being made in the study of malaria, and which prove that the mosquito is responsible in every instance for the dissemination of this disease, which has until recent years been thought to be due to "miasm" or to some condition entirely disassociated from animal life. The very valuable experiments carried out by Manson, Ross and a host of Italian investigators have proved beyond all doubt that the mosquito carries the infection to the human being from another human being from which it has originally drawn blood, and we called attention not long since to the interesting experiments carried out by Manson, in which he imported mosquitoes from Italy to London, and exposed

his own son, who had never been exposed to the malarial infections, to the bites of these mosquitoes, with the result that this young medical man developed the disease.

Our attention has once more been called to this important subject by a valuable issue of the *London Practitioner*, in which its able editor, Mr. Malcom Morris, has arranged for a series of articles by well known authorities on the study of malarial infection. The first article is one by Patrick Manson, in which he brings forward the evidence now at our disposal to prove positively the fact that we have already stated, namely, that the mosquito is responsible for every case of malarial fever infecting man. He recognizes the fact that many persons will claim that they have met with cases of malarial infection occurring when the patient was not exposed to mosquito bites, but he goes on to point out that to prove this point such disbelievers in the mosquito theory must show that the patient was never subjected to the bite of a mosquito, and of course this is, in the majority of cases, an impossible thing to do. The well known fact that places considerably above low-lying land or the upper stories of houses confer an immunity against malaria which is not conferred by residence in lower districts does not in the slightest degree disprove the mosquito malarial theory, because the mosquitoes naturally adhere to some extent to the water level, in which water they lay their eggs; and as he also points out, the disappearance of malarial fever during the presence of cold weather does not prove that the frost has destroyed any "miasm," so-called, but rather that it has prevented the mosquito from being so active and from infecting the individual. Further than this, the assertion that persons are very frequently bitten by mosquitoes and yet do not develop malarial fever is not proof that the theory of mosquito infection is incorrect; for so far as we know at the present time, only mosquitoes belonging to the genus *Anopheles* have been found to be efficient hosts for the carrying of the parasites from man to man. There are about thirty species of *Anopheles* in different portions of the world, and all of them, so far as we know, are capable of carrying the infection.

Manson then goes on to tell us the interesting facts that certain definite conditions are necessary for the multiplication of the malarial mosquitoes, namely, a high atmospheric temperature varying from 75° to 104° Fahrenheit; secondly, collections of water, fresh or brackish, containing not over two or three of salt to one of fresh water, which collections of water must be undisturbed by winds or currents, and which must persist for a time sufficiently long to allow for the evolution of the insect from the egg. If in addition to these possibilities we have a condition which is most favorable for the growth of the mosquito and of the parasites. In the presence of very cold weather the larvae are capable of going into a state of hibernation, so to speak, and so surviving until the return of warm weather. While it is believed in the majority of instances that the mosquito obtains the parasites from the human being, it is not yet proved that it does so in every instance; for it is well known that certain of the lower animals are capable of harboring blood-parasites which in the majority of instances at least are quite different from those harbored by man. Yet it is possible that these animals also may harbor the parasites which affect the human blood.

Manson then discusses the various prophylactic measures which may be introduced to prevent malarial infection. The first of these is, of course, the suppression of the mosquito. This may be more or less effectively accomplished by many different measures. All pools and ponds should be drained and filled in. Slowly running streams should be so trimmed at their banks as to prevent adjacent pools from harboring the malarial organism, or, to speak more correctly, the larvae of the mosquito. After the occurrence of floods, a careful drainage of the remaining pools should be instituted; and in the carrying out of engineering projects no pools should be allowed to remain alongside railway embankments.

The second important prophylactic measure is to prevent the infection of man by the bite of a mosquito bearing the parasite. In this connection most valuable experiments have been carried on in Italy within the last few years, of which perhaps the most interesting are those of Celli, Grassi, Fermi, and Tontini, and by the Red Cross Society of Italy. Some of these experiments consisted in taking the employes of two railway lines running through exceedingly malarial country, placing certain of these employes in houses during the night time, the windows and doors of which were carefully protected by mosquito netting, and allowing the other set of employes to inhabit buildings similarly situated without being provided with such protection. They found that out of twenty-four individuals who were protected, only four contracted malaria, and these were men whose duties took them abroad at night, or that neglected the precautions enjoined upon them; whereas, of the fourteen men of another road who were not protected, twelve got the fever, the two who escaped having apparently acquired immunity. On still another line of twenty-four protected individuals all contracted the fever. These experiments have been repeated again and again by Celli, and by a number of the other investigators that we have named.

Closely in association with these preventive measures to prevent the spread of infection is, of course, the well known administration of quinine in moderate dose, day after day, for the purpose of preventing the parasites from multiplying in the blood.

The third and last preventive measures which man may institute for his protection is the prevention of injection of the Anopheles by the parasites. So far efforts of investigators have not progressed sufficiently to permit us to carry out very definite action in this line. But it is worthy of note that we can do much toward preventing the multiplication and growth of the mosquito, and we may perhaps be pardoned if we remind our readers that the most important contribution to this subject was made by Celli and Casagrandi in 1899. It will be remembered that these investigators recorded the results which they had obtained from the employment of various substances which have been found deleterious to the growth of the mosquito larvae, and one of these substances, it will be remembered, was kerosene, which, in its crude form, poured upon the surface of a pool spread very rapidly, and in very small quantities acts as a powerful destructive agent. (Ther. Gaz.)

THE FORMATION OF ALKALOIDS IN CINCHONA TREES.

The objective of the extensive system of cinchona cultivation now prevailing in India, Java and other tropical countries, is the production of cinchona bark containing the largest possible amount of alkaloids, since it is to the presence of the latter substance that the bark owes its useful properties. At various times methods of increasing the yield of alkaloid have been suggested, such as shading the stems of the trees from the direct action of the sun, but these have been, as a rule, based on preconceived notions of the role played by the alkaloid in the life history of the tree, and were not the result of any real investigation of the conditions under which these bodies are produced by the plant.

This defect has now been remedied by the results obtained by Dr. Lotsy, of the Java Cinchona Gardens, in the course of a series of investigations into the mode of formation and the occurrence of alkaloids in two species of cinchona, viz., *succubra* and *ledgeriana*. Several papers giving an account of this work appeared in Dutch periodicals, and recently a resume in English has been published in the Bulletin de l'Institut Botanique de Buitenzorg, from which the following particulars have been taken:

In commencing his work the author subjected each part of the three in turn to micro-chemical examination for the presence of the characteristic cinchona alkaloids, and, as a result, was able to demonstrate the existence of these substances in certain cells of

every portion of the plant. Thus, in the leaves no alkaloid occurs in the epidermal layer of cells, or in the veins, but the fleshy part of the leaf invariably contains in its constituent cells a certain amount of alkaloid. In a similar manner, the stem, even in its earliest stages contains alkaloid, but only in the inner layers, never in the epidermis or in the large wood vessels found in adult trees. In the root a precisely similar condition of things is found, and so also in the petals and other parts of the flowers. In general it may be stated that the alkaloid occurs only in the tissue known to botanists as the hypodermis, i. e., in the part of the plant where the building-up and breaking down processes which constitute plant metabolism are most active. In the youngest parts of the plant, such as the tip of the stem and under the root cap, where no differentiation into tissues has begun, no alkaloid is found.

These observations afford an explanation of the phenomenon that the first bark obtained from a cinchona tree is always richer than that of succeeding crops. This is due to the fact that the bark first formed is produced by the drying up of hypodermal tissue, of which each cell contains alkaloids; while the secondary bark produced by continued activity of mal cells bast fibres which contain no alkaloid.

A peculiar feature of the distribution of the alkaloids is that they never occur in the sieve-tubes, of the cork cambium contains, in addition to hypodermis which are associated with the conveyance of the albuminous products of the plant.

The second part of the investigation deals with the method of formation of the alkaloid. Since the leaves of plants are mainly concerned in the production of starch and albumen, which serve for their nutrition, it was highly probable that here also alkaloids were produced, but the evidence already existing strongly negated this view. Thus, Howard found that leaves of *Cinchona succubra* contained only .11 per cent. of total alkaloid; while Broughton, in 1870, found percentages varying from .001 to .019. In a specimen of leaves examined by De Vry, in 1896, a larger amount was found, viz., .162 per cent., but this was amorphous alkaloid only. As pointed out by Dr. Lotsy, however, a mere estimation of the amount of alkaloid contained in the leaves gives no reliable answer to this question, because it is quite possible that the alkaloid as soon as formed is transported toward the stem; consequently, the author adopted a somewhat different procedure, of which the following short account may be given. A leaf of the tree under investigation was selected and cut into two, longitudinally, and on one side of the midrib, while still attached to the tree. The smaller half so removed was examined micro-chemically for its content of alkaloid, while the portion still on the tree was allowed to remain during a day or night, as might be necessary for the particular experiment then being carried out, when it also was removed and its contents of alkaloid determined in the same manner.

A large number of observations carried out in this way showed that, under normal climatic conditions a leaf accumulated alkaloid during the day and emptied itself during the night by allowing the alkaloid to be transported toward the stem. It was also observed however, that this normal removal of the alkaloid from the leaves does not occur under adverse conditions, such as are found in extremely cold or foggy weather. These climatic influences also have considerable effect on the amount of alkaloid formed during the day. That the alkaloids are transported from the leaves to the stem of the plant was clearly proved by keeping cut leaves both in the light and in the dark, when it was found that the amount of alkaloid remained unchanged, even after a month. It was also found that empty cut leaves were capable of producing alkaloid when placed in stimulating liquids such as dilute solution of ammonia. The author concludes the report of the results of his long-continued investigations with some interesting remarks on the probable methods of synthesis employed by the plant in the formation of the cinchona alkaloids, but these are too technical for reproduction in the present

abstract. Attention may, however, be drawn to the bearing which these results ought to have upon cinchona cultivation. In the first place it should be noted that, since the useful alkaloids are formed in the leaves of the plant, then in the selection of varieties for cultivation care should be taken to obtain those having a good foliage, both with regard to quantity and size of leaves formed. The author states that this plan has been generally adopted in recent years in the Java cinchona plantations, with excellent results. Further, it should follow that any method of cultivation which tends to increase the hypodermal tissue in the plant should yield bark containing an increased amount of alkaloids, and so one would expect better yields from pollarding than from ordinary growth.—Tropical Agriculturist.

GLOVE CLEANING PASTE.

There are a number of these soap mixtures now upon the market, which is some evidence that the things sell. Though all of them purport to be made from quillaja bark, we have not yet found any that consisted of anything other than white soap, with a scent-smelling of anise seed in some of them. There is a recipe for this article that has been copied and reprinted into nearly every book of recipes published during the past fifteen years that is utterly useless. It looks very good on paper, but it will not work in practice. We (Oils, Colors and Dry-Salteries) have made several tries, but it has always caused the soap to granulate, and no doubt other makers have found this happen as well. On one occasion we used pure curd soap, and when it went this way again, we put this down to the soap being adulterated with paraffin wax, which is unsaponifiable, as many people know, though it will emulsify when mixed with borax or soap.

We quote this worthless formula that others may keep clear of attempting to make the impossible:

Soap, in shavings.....	25 parts
Water.....	18 parts
Chloride of soda.....	17 parts
Solution of ammonia.....	1 part

Make into a paste by boiling the soap and soda in the water, then add ammonia. The founder of a well-known firm of packers and manufacturers of sundries, employed this following formula successfully:

Water.....	7 gallons
Cocconut fat.....	22 pounds
Castile soda.....	4½ pounds
Oil of lavender.....	3½ fl. ounces

Dissolve the caustic soda in the water in a pan, then add the fat, boiling until saponified, and continue until pasty. Add the scent on cooling, stirring in thoroughly. Then fill into tins. Apply with a sponge or flannel. We here present a new line for the above purpose:

Dry Glove Cleaner.

Powdered cream of tartar.....	30 pounds
Quillaja bark.....	40 pounds
Whiting.....	6 pounds
Russian leather scent.....	¾ fl. ounce

Mix well. To use, apply with a damp flannel or sponge, wearing the dirty glove upon the hand, or put it upon a wooden glove hand, and leave to dry. (Am. Soap Jour.).

MONTANA DRUGGISTS MEET.

The tenth annual meeting of the Montana Pharmaceutical Association was held at Butte on Tuesday afternoon, August 13, and the following officers were elected: President, Sid. J. Coffee, of Missoula; first vice-president, H. M. Parchen, of Helena; second vice-president, A. E. West, of Butte; third vice-president, F. W. Harrison, of Anaconda; secretary, John M. Doull, of Butte; treasurer, F. A. Woehner, of Great Falls; executive committee, E. A. Heuser, R. H. Paxson and A. E. West, Howard Rockefeller, C. S. Ballinger, L. G. Smith, Row Williams and E. A. Hoyser were the five members chosen as eligibles for the State Board of Pharmacy, one of whom will be appointed by the Governor of Montana. A number of new members were reported favorably by the credentials committee and were admitted to membership.

The ex-president, Mr. Gallogly, prior to the election

of officers, read the annual address in which he touched in glowing terms upon the harmony and unity of purpose of the Butte druggists, and upon the excellent results of the earnest efforts of the whole association throughout the state toward the betterment of pharmacy, and so strongly appealed to his audience that the paper was ordered filed with the records. Thereafter followed the reports of several standing committees; the secretary's report then received attention, and it was very satisfactory to every one present in that it showed the solid finances and increasing membership of the association. Before the meeting was finally adjourned it was decided that the eleventh annual meeting would also be held in Butte.

The afternoon session coming to a close the members of the state association and the visiting druggists became the guests of the local branch, the Silver Bow Retail Druggists' Association, and in the evening at the Columbia Gardens right royally did the hosts fulfill their duty in a well selected banquet.

—The Louisiana State Board of Pharmacy held an examination at New Orleans Aug. 2 and 3, and the following persons passed as registered pharmacists: F. V. Alter, Jennings; M. L. N. Ane, Houma; W. Billard, H. V. Clements, W. E. Harter, E. Koekert, New Orleans; E. A. Kentro, Shreveport; C. K. Trondly, Gretna. A. S. Germe, Natchitoches, and W. T. Hayes, New Orleans, passed as qualified assistants. G. W. Grastock was registered on experience, having obtained four years as a qualified assistant. The next examination will be held November 1 and 2. F. C. GODBOLD, Secretary.

Literature In Harness

Regarding the method of advertising books, a Philadelphia publisher uses extracts from his publications, which the National Advertiser suggests would "make good reading notices for advertisers who are not literary", as follows:

"My heart, Evelyn, is like a mirror, in which nothing changes and nothing passes."

"But I am spoiling your life! I can give you nothing for your love."

"You give me all my inspiration—you are the source of all of it."

"I beseech you," he said, after a long silence, "do not separate yourself from me because you think that."

She promised him she would not, and an indelible sensation of joy passed into their hearts, and it lasted while they looked into the sunny interspaces.

Five minutes later they were sipping orange phosphates at Fitznizzleson's new Pompeian soda fountain.

Mrs. LaGrange lay upon the low couch, her features scarcely paler than a few hours before, but now rigid in death. Upon the table beside her the supper stood unaltered, while on the same table a small vial bearing the label of one of the deadliest of poisons, but empty, told the story. Underneath the vial was a slip of paper, on which was written:

"I have staked my highest card—and lost! The game is done."

The unhappy woman had ended her life with a dose of one of the numerous substitutes for Professor Conroy's nerve tonic. Insist on having the genuine.

Fargo's Ice Cracker, advertised in this issue, is one of the handiest tools we have seen. It prepares ice for the table, for the freezer, or for packing purposes without scattering it, cracking it into uniform pieces, the fineness of which depend on the time they are subjected to the action of the Cracker. It does away with waste, it saves labor, and saves time. One of these Crackers will last for years, and on that account it is economical. They are sent on receipt of price, \$1.50, by the manufacturers, F. B. Fargo & Co., Lake Mills, Wis.

As the show window contest for the handsomest display of Lucas' Home Helps closes Sept. 1st, there isn't very much time to get photographs and send them in. Two hundred dollars in cash will be divided among the contestants, and a small exhibit will be just as apt to get the prize as a more extensive one. If you have a window display of Lucas' Home Helps, photograph it and send the photo to John Lucas & Co.'s Advertising Department, at Gibbsboro, N. J.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued August 13th, 1901.

- 680,220.—Walter S. Bowness, Moncton, Canada. Non-refillable bottle.
- 680,278.—Baptist Renter, assignor to Farbwerke, vorm. Meister, Lucius & Bruning, Höchst-on-the-Main, Germany. Salicylate of dimethyl-amido-phenyl-dimethyl-pyrazolone and making same.
- 680,310.—Shilo W. Durham, San Jose, Cal. Non-refillable bottle.
- 680,365.—Wilhelm Stark, Vienna, Austria-Hungary. Tooth-brush.
- 680,387.—Leslie R. Moore, Newton, Mass. Rubber cement.
- 680,405.—William H. Aaron, Stockton, Cal. Non-refillable bottle.
- 680,412.—Edward Freese and L. Levy, assignors of three-eighths to S. Levy, New York, N. Y., H. L. Rosen and A. Marks. Non-refillable bottle.
- 680,416.—Frederich Kuhles, Maywood, N. J. Non-refillable bottle.
- 680,433.—J. Mansfield French, Syracuse, N. Y. Apparatus for treating calcium hydrate.
- 680,469.—George A. Smith, Alberni Canada. Cork-extractor.
- 680,476.—James H. Denmead, Westpoint, Va., assignor of one-half to H. E. Stanford, New York, N. Y. Bottle stopper and seal.
- 680,490.—John Nagelinger, New York, N. Y. Device for drawing effervescent liquids.
- 680,543.—Wilhelm Pip, assignor to firm of E. Merck, Darmstadt, Germany. Producing piperidin.
- 680,603.—Jens P. Lihme, assignor to Grassell Chemical Company, Cleveland, Ohio. Making sodium sulfid and lithopone.
- 680,610.—Christina W. Meinecke, Jersey City, N. J., assignor to Meinecke & Co., New York, N. Y. Ice or water bag.

TRADE-MARKS.

Registered August 13th, 1901.

- 56,884.—Certain Named Toilet Powders. Specialty Mfg. Co., Philadelphia, Pa. The words "Sine Qua Non."
- 56,885.—Proprietary Medicine. Frederick F. Fanning, Providence, R. I. The words "Ung. Pisal. Co."
- 56,886.—Medicinal Preparations for Internal Use. Lerkem Chemical Company, Dayton, Ohio. The word "Lerkem."
- 56,887.—Curaçao. E. Cusenier Fils Ainé & Cie, Paris, Oranès, Cabrenont and Marseilles, France. Mulhouse, Germany, and Brussels, Belgium. The representation of certain heraldic devices, each heraldic device consisting of a shield inclosed by a circle and arranged in two sets of three each, each set being placed on each side of a crescent-shaped figure, and facsimiles of medals which are placed on each side of the said crescent-shaped figure.

56,892.—White Lead, Saltpeter, Brimstone Roll and Flowers of Sulphur. Brandram Brothers & Co., Ltd., London, England. The letters "B. B."

MARKET REPORT.

INDEX TO THIS NUMBER.

NEW YORK MARKET.

New York, Aug. 20.—Consumers are still pursuing a hand-to-mouth policy, and transactions continue limited to small jobbing quantities; but the general market is not without interesting features, and a few of the price changes are of some importance.

OPIUM.—Round lots are dull and neglected, with the market rather easy in sympathy with corresponding conditions abroad, but jobbing quotations are nominally unchanged at \$3.55@3.50 for 9 per cent., and \$3.45@3.60 for 11 per cent. Powdered continues to find a moderate consuming outlet at \$4.50@4.75 for 13 per cent., and \$5.00 @5.25 for 16 per cent., according to quantity, inside figures being for single pounds.

MORPHINE.—A continued unsettled market is reported with manufacturers quotations somewhat irregular, but jobbers still quote on the basis of \$2.30@2.40 for eighths, as to brand, less the usual rebate of 10c per oz. for lots of 10-ozs. or over.

QUININE.—An unexpected decline of 2c. per oz. in manufacturers quotations has had an unsettling influence, and the demand from consumers is very light. The revised jobbing figures are 31@32c. in 100-oz. tins, 31½@32½c. in 50-oz. tins, 32@33c. in 25-oz. tins, and 38@39c. in oz. vials.

ACETANILID.—Manufacturers have reduced their quotations 2c. per lb., owing to outside competition, and the revised jobbing range is 26@33c. for crystals or powdered, as to size of order.

MENTHOL.—Values continue to harden under the influences heretofore noted, and dealers offer very sparingly at \$4.50@4.75 per lb., and 33@38c. per oz.

BEEWAX.—Supplies are more abundant, both here and in producing markets, and jobbers have reduced quotations to 35@40c. for country, and 38@43c. for city.

MANNA.—Small flake is easier with jobbing quotations reduced to 75@80c., but there is no change in other varieties.

PRICKLY ASH BERRIES.—Arrivals of new crop have relieved the stringency of the market, and prices show a material decline, the revised jobbing figures being 60@70c.

IPECAC.—An easier feeling has developed, both here and in foreign markets, and spot quotations for jobbing parcels show a decline to \$3.35@3.50 for whole, \$3.40@3.55 for ground, and \$3.45@3.60 for powdered.

THYMOL.—An increased consuming demand, light available stocks, and stronger foreign markets have caused an advance in spot quotations to \$4.00@4.25 per lb., and 35@40c. per oz.

CAMPHOR.—Under the influences noted last week, the market is again easier and domestic refiners have further reduced quotations 1c. per lb., jobbers now quoting 5@5½c. in bbls., 58½@59c. in cases, and 64@60c. in broken lots.

OIL PIMENTO.—The tone of the market is easier in sympathy with raw material, and jobbers have reduced quotations to \$2.10@2.25, as to quantity.

OIL PEPPERMINT.—With the outlook favorable to holders the market continues to harden, and jobbers have advanced quotations to \$1.50@1.65 for Western, \$1.65@1.80 for Wayne County, \$1.70@1.90 for H. G. H., and \$1.80 @2.00 for the redistilled.

PILOCARPINE MURIATE.—An unsettled market, due to competition, has caused a decline in jobbing quotations to 9@30c. per grain.

OIL PENNYROYAL.—Values are firmer under reduced supplies and a good seasonal demand, and jobbers have advanced quotations to \$1.55@1.75.

ERGOT.—Since the decline noted last week a better feeling has developed among jobbers, and prices have been marked up to 60@70c. for Russian, and 70@80c. for powdered. Spanish is held at 65@70c. for ordinary, 70@80c. for sifted, and 80@90c. for powdered.

Greater London's Population.

The population of the outer ring of the suburbs of London is 2,042,550, as against 1,405,489 in 1801, 950,957 in 1881, and 651,851 in 1871. The total population of Greater London, including the outer ring of suburbs, is now 6,578,784. The census of Ireland shows the population to be 4,456,546, a decrease of 5.3 per cent. This is less than during the previous decade. Scotland has a population numbering 4,471,957 persons, while the total population of the United Kingdom is considerably over 41,000,000. HOW SHALL WE HOLD AND INCREASE TRADE?

Pharmacy as now usually followed represents two characteristic aspects. It has a professional and a mercantile or commercial side, each of which must be conducted in accordance with certain well defined principles and methods.

The professional side embraces that division where the skill and learning of the pharmacist in all that pertains to the art of compounding and dispensing medicines must be applied, for which he is competent only from long study and training. For the conduct of this branch, of laboratory and dispensing counter, he is heavily responsible, morally and legally. The mercantile side demands business ability, but in no greater degree than is necessary in other divisions of trade. In his professional position he is entitled to a liberal compensation for the time, labor and money expended in the acquirement of the knowledge and skill necessary to attain such position; as a tradesman he can expect no greater consideration from the public than is given to store keepers in general. He can justly insist upon payment for the "know how" of the art of pharmacy, but extension of this practice to the business of selling the many articles which are common property in other lines of trade proves too often a mistaken policy. The druggist has been slow to recognize the fact that the public will buy where it can buy the cheapest. The sooner he realizes that he must conduct the business department in accordance with business methods, the sooner may he expect

an increase of trade and prosperity in this branch of his calling.

In many places it seems as though it was almost useless to attempt to regain control of several lines of trade once considered a legitimate part of a druggist's stock. On many articles there is no longer a living margin of profit, unless they be handled in large quantities, as in the department stores. The attempt to get back the trade in these goods must be determined by the individual druggist, but he should keep enough stock of this character to satisfy current demand, and sell at the prices asked elsewhere.

Trade can be attracted by judicious advertising, both in papers and in the store itself. An artistically dressed window, frequently changed in arrangement, attracts as many customers as a shabby, dirty, dingy window repels. Let people know you have something to sell by exposing it in such a way as to attract attention.

There are many lines peculiarly the druggist's, many articles giving good profits if sold in sufficiently large quantities, and upon which he need fear no competition. One hundred pounds of licorice, bought at a low price, exposed in bulk in the window and sold (as it will quickly be) at five cents a stick, is preferable to keeping scanty stock in a dark drawer, for which ten cents a stick is demanded. Select some article giving a fair profit, buy a quantity of it, call the public's attention to it as a bargain, and it will be sold. Then another article can be pushed, and so on, through a long list that may be selected. Business methods in buying, business methods in selling, business method in all matters pertaining to the business of a drug store must be followed if we expect to receive our portion of the trade in lines open to every merchant.

COLLEGE TRAINING.

In a few weeks our forty-five or fifty colleges and schools of pharmacy will enter upon the work of another year, and indications are that most of them will have as large, if not larger, classes than ever before. The reports of these institutions are evidence that college training meets with appreciation. If a college training conferred no benefits it is certain schools of pharmacy would not live and prosper as they do. There was a time when the college man was in a decided minority, but now the young man entering the business of pharmacy has, as a rule, an educational and professional equipment very different from that of his predecessor. His preceptor is aware of the necessity for systematic training in botany, materia medica, chemistry, pharmacy, microscopy, in addition to the ability to wield the spatula or rotate the pestle.

But there are those who deery a college training, are all for the practical, and there are those, too, unfortunately, who do not rightly appreciate practice and experience. Practice supplemented by educational training, theory put into practice, constitute the happy medium. We all know the value of experience; let us consider the benefits of theory and college discipline.

The student acquires a systematic knowledge of various branches of pharmaceutical science, which he would under other circumstances only study superficially or remain totally ignorant concerning. Certain information necessary to the proper pursuance of his profession he is forced to attain. He is stimulated to earnest effort and deeper research by keen competition. He is brought to realize the responsibility attached to, and the true nature of, his chosen vocation. He acquires a mental training which will stand him in good stead in future life, he attains habits of exactness, and dexterity and delicacy of touch.

The modern pharmacist must delve more deeply into the sciences than he of fifty years ago. He can and will do this in college; in the store he has neither the inclination nor opportunity. The advantages and benefits of a college training are undeniable and undeniable.

In pharmacy practical experience is of utmost value. It is a mooted question, however, whether this experience should follow or precede the college course; whether the college studies are made easier by previous experience, or whether practice and experience are rendered quicker of attainment by a theoretical knowledge. However this may be, both theory and practice are essential to success. It is perhaps better that a certain amount of experience be attained prior to entering college. There is much that is disagreeable, even offensive, which must be done by the apprentice or junior clerk, which the tastes and habits acquired in college would render particularly distasteful. It is well to have the drudgery and hard work in the past, rather than in the future. The inexperienced graduate is apt to find himself much embarrassed and mortified in small emergencies, requiring a knowledge of store life best gained in early youth, and his failure in these particulars sometimes causes general denunciation of the college and its training. The complaint is perhaps a just one that the newly fledged graduate often thinks he knows it all, and deems his employer an old fogey, behind the times, etc.; but let us be patient with him. A year or two of service will tone down these exuberances of youth and inexperience, and with the knowledge that he has still much to learn, he will develop into a credit to the craft.

Neither practice nor theory is alone sufficient; union of practice with theory makes the ideal pharmacist.

THE SALE OF DRUGS BY DOCTORS IN SCOTLAND.

The medical faculties of the Universities of Aberdeen and Edinburgh have just passed a resolution addressed to their alumni, touching the at present rather sore question in Scotland of the keeping open of drug stores by physicians. Of course, while the law permits the practice, the faculties can do no more than use moral suasion. Their decision, however, cannot

fail to promote a better understanding and feeling between the two kin professions of medicine and pharmacy insofar as it, like the proverbial straw, shows which way the wind is blowing, and though there will in all probability be many medical practitioners who will unavoidably be compelled to continue in the practice or deliberately ignore the sage advice of their alma mater, the greater part of them will unquestionably follow it to the letter. The resolution of the Aberdeen Faculty says:

"Whilst it is admitted that the exigencies of practice in certain localities may sometimes render it unavoidable for a medical practitioner to supply to his patients the remedies which he prescribes—the Medical Faculty of the University is of opinion that it is undesirable and detrimental to the position of the medical graduates of the University that this custom should be followed under other circumstances; and, further, it regards the sale of objects other than remedies by its medical graduates as, under all circumstances, to be strongly deprecated."

The last clause of the above relates particularly to the recent abuses of the law regarding the sale of poisons, which recently have been associated with much odium to the medical profession of Scotland.

ADVERTISING.

Macaulay is accredited with having said at a time when commercial competition, as we now understand it, was in but an embryonic state, "Advertising is to business what steam is to machinery—the grand motive power." No doubt this aphorism was in some degree applicable to the time when it came from his pen, but how much more so now that we are well into what some people are pleased to term an age of commercialism. In the first half of the Nineteenth Century were born most of the business ideas which to-day have universal toleration, if not acceptance, as axioms; and out of that period also came those mechanical and scientific inventions and discoveries which the latter half of the century could only improve upon, though with marvelous thoroughness. So, too, advertising was discovered or invented, and has passed through the gradual change of development, until now definite rules regarding its use, its construction, and its truths, have made it, so to speak, an exact science.

These precepts governing advertising are scarcely recognized elsewhere than in this country. The ads in English papers, when compared with those in an American, show more clearly than any verbal proof the definition of advertising; and also show that the United States is the pioneer in that line, while Great Britain, in fact all other countries, have made scarcely any progress. The stereotyped form of writing, which is no writing at all, in addition to the complete absence of attractive display—picture or type—tend to make the efforts of the English advertiser seem puny and wholly disproportionate to the necessities of the times, as compared with the snap-and-go style of diction and the ever-varying attractiveness in American papers. Parenthetically it may be remarked, and in justice to our cousin, that he, like Barkis, is "willin'," but that the owners and publishers of the papers, with their old-fogysm, decline, even contemptuously ignore, the business man who tries to make his ads in any way attractive. The consequence is that in his

desire to get what he seeks—an ad that people will look at and read—he plasters trams and busses and every possible space with obnoxious and villainously bad posters, till finally Parliament is invoked by the aforesaid old fogies, fops, and a few American cads and sycophants, to abate the eye-sore.

What Macaulay said so many decades ago was really more prophetic than applicable to his own time. Business men in all probability recognized centuries ago the necessity of informing the public that they had certain wares to sell; but, despite which, they trusted mostly to luck to bring them custom, because they hadn't the faintest idea how that information was to be given. To-day advertising is a system, a science, the work of an expert—a man who has studied the subject from all possible view-points; who, with his finger on the pulse of public curiosity, has discovered just what stimulant will set that artery fluttering; who knows how to say the same thing in a million different ways, a storehouse of synonyms, and so on, with qualities too numerous to enumerate, but all summed up in the adjective, "wide-awake."

These advertising experts have formulated rules out of their fine perception, which can best be learned by direct observation of their work. Of course the ads vary; some have distinctive features which in others are supplanted by something else; that individuality is really the vitality of the whole science. An advertiser sets about his task with a system readily to be perceived by the business man who knows, or should know, all the attractive points of the articles or lines of goods he offers for sale. Usually and properly his ad is to consist of one idea, which he dresses in attractive word-clothing, and adorns with an illustration or a display of type. The words he uses, while not undignified, are colloquial. He talks with his pen just as a good salesman would talk with his tongue to the prospective buyer, in the language of everyday speech. His power of convincing lies primarily in the way he marshals his facts, his argument, his logic.

That every druggist in the country, to keep alive, must advertise is reiterated; and just as surely as every drug store has at least one good salesman, so can druggists do their own advertising, and the "good salesman" is the man to furnish ideas and words. The druggist ought to read carefully and compare with others every advertisement he sees, and thereby discover what makes one attractive and another insignificant, and then sit down and write about some line of his pharmacy, and when satisfied go to a job printer, whom he can interest sufficiently to put it in type with a little display. Every ad will be improved by a pertinent illustration; good paper is necessary, and typographical and orthographical errors are ruinous.

The best way to accomplish an end is to do it; the best way to get business is to advertise; and the best way for a druggist—and probably everybody else—to advertise, is to do it himself; and the learning is only a matter of energy.

MENTHOSOL.—This is the trade name for an antiseptic preparation, the base of which consists of parachloro-phenol and menthol.

BUYING GOODS.*

By J. W. GAYLE, Frankfort, Ky.

The importance of buying goods properly can scarcely be overestimated. Other considerations are perhaps more essential to the success of a retail druggist from both a business and a professional point of view, but it is certainly true that judicious or proper buying is a prominent factor in every successful career, and likewise will improper buying be found to be almost invariably an attendant cause of failure.

General rules intended to govern any business or department of that business are impracticable unless, to a large extent at least, similar conditions everywhere exist. Fortunately, this is the case with the subject in hand. The same general rules for successful buying will apply alike to the small and to the large retailer or druggist. The judicious buyer will of course always bear in mind the amount of capital at his command, as well as the character and extent of the patronage upon which he can safely rely. The first consideration will forestall financial embarrassment; the latter will prevent the purchasing of supplies which cannot, within a reasonable time, be disposed of.

Let us then point out a few rules which may serve, somewhat at least, as a guide to the successful buyer.

Quality.

Continued success may be regarded as impossible without the strict adherence to the fact that quality, to a retail druggist, is of the very highest importance. Neither insufficient capital, remoteness from the market, nor limited demand can justify or excuse a druggist for buying and keeping in stock a drug of known inferior quality. Crude drugs should be had from the most reliable handlers; chemicals from standard manufacturers; pharmaceuticals from firms of established integrity; and every article should conform to the most rigid requirements as to quality. While this is eminently true of the lines just mentioned, it is also true, in a large measure, at least, as to druggists' sundries, and to the selection of side lines. In the latter departments the purchase of the cheaper goods of each line is almost always imperative or advisable; each should be the best line obtainable, and each article should be absolutely true to description.

Classification of Purchase.

Every buyer should recognize the distinct and separate classes into which his stock is naturally divided commercially; and carefully select some particular source of supply for each, to which his purchases should as nearly as possible be confined.

Unexpected wants will constantly occur in each department which must be quickly supplied, perhaps from irregular sources, but as a rule the purchases should be made as above indicated. The buyer should carefully go through each department of his stock separately at suitable intervals, collecting for purchase "short" items. The greatest advantage in this practice is in the establishment of a system or method in buying which gives one a more definite knowledge of his stock, resulting in a complete assortment, and consequently fewer "shorts"—and nothing so annoys a merchant as to find, upon answering a demand, that his stock is deficient in some staple article. The rule also gives each class of goods uniformity, both in appearance and in quality, and the additional advantage, which will be considered under the separate head of

Buying at the Best Discounts.

With every source of supply selected as before suggested, arrangements should be made to obtain the very best possible terms. This may always be accomplished, the exceptions being so few as not to affect the rule. The most expedient way of effecting this will suggest itself to every buyer at the time, the only great difficulty usually encountered being that of taking care of the initial quantity of goods

*Read at the 24th annual meeting of the Kentucky Pharmaceutical Association.

which one is required to buy in a time in which the commercial value of the capital invested will not exceed the percentage of discount allowed. It not infrequently happens that when the sacrifice of the temporary use of the capital is unavoidable, it is more than justified by the future continued advantages obtained.

Commission Accounts.

Happily the custom of buying certain goods on consignment or commission is rapidly dying out. Such accounts are always a source of annoyance, besides they entail upon the retailer who carries them a responsibility for the care of stock which he does not need.

Buying Seasonable Goods.

A carefully estimated supply of those goods which are salable only at certain seasons should be purchased in advance of the demand. This practice not only enables one to get the concession in price on account of the quantity purchased at one time, but it forestalls the annoyance of having the stock exhausted in the midst of an active demand.

Speculative Buying.

Intelligent advantage of the market should be taken, and a liberal supply of any staple article should be purchased upon reliable advice of a prospective advance in price, when in sufficient funds, but the practice of buying solely for speculative purposes must be carefully avoided. Such buying cannot be considered legitimate merchandising, and, if it does not threaten commercial ruin, it encourages a spirit which is at enmity with sound, conservative business principles, and which, if indulged, is rarely if ever attended by business success.

Buying Upon Demand.

A word of caution will perhaps not be amiss concerning that class of goods commonly known as "specialties," which are being constantly promoted by enterprising manufacturing concerns, either by advertising or proposing to advertise direct to the public or through the physician. As a rule it is well to defer stocking such goods until some positive indication is seen of an active demand. While this rule should not be adhered to too rigidly the exceptions should be selected with the greatest care.

Keeping Posted.

The intelligent buyer will make it his business to keep in close touch with the demands of his trade as well as with the tendency of market values. He should carefully read the drug journals as well as gather information from the traveling man. Whenever possible the up-to-date buyer will visit the market in person at least once a year. This is of especial advantage when an extensive trade is enjoyed in druggists' sundries, or when one deals in holiday goods or carries many side lines.

The Want List.

In every well regulated store there will be kept in some prominent and convenient place a book in which should be noted articles needed or running low in stock. Every clerk connected with the store will be impressed with the importance of jotting down such articles the moment they appear; the memory should not be depended upon to carry them longer than absolutely necessary. It may be said to be impossible for the buyer to keep the stock in proper condition without the adherence to this practice.

The Traveling Man.

I cannot close this subject without calling attention to the importance of the traveling salesman to the buyer. This individual has been much abused, slurred at, and made the butt of many a ridicule, but to the ambitious and wise buyer he is always a welcome visitor. He establishes and maintains amicable relations between the jobber or the manufacturer; adjusts all sorts of differences; imparts information scarcely obtainable from any other source; and is at times in a position to render invaluable service in the way

of advice. What practical lessons he teaches us as to the value of patience and perseverance! No difficulty daunts him! No failure depresses him! He deserves to be encouraged and patronized. Never mail an order when it is possible to send it through the traveling salesman.

Buying for Cash.

The statement is here ventured that there is no rule affecting the retail druggist, the advantages of which are so apparent and so universally acknowledged, and at the same time so universally ignored, as that pertaining to buying for cash. This practice pays directly by saving a part of the purchase price; it yields a handsome profit in per cent. upon the capital employed; the commercial standing of the purchaser is enhanced, and a truer and a more definite idea of the condition of his business is constantly before him.

CARBON MOLECULES.*

By J. F. LLEWELLYN, Mexico, Mo.

If there is any 'promise and potency of matter' it surely must be in the slight adjustment or jostling of carbon molecules; in chemical union with water, the wonderful difference in chemical force and medical effect is a curious and interesting phase of organic chemistry. Pure carbon has such queer characteristics that its compounds must inherit oddities. Plumbago is soft and uninflamable, lampblack soft and inflamable, diamond hard and burned with difficulty, coke hard and good fuel.

The triumphs of organic chemistry are mostly in getting rid of a molecule of water or carbon, but the isomers are a puzzle. What is it in nature that makes the physical and chemical difference? We are told that turpentine and oil of lemon are the same. Propionic acid, methyl acetate, ethylic formate are isomers, yet entirely distinct; grouping of molecules is the difference. The ptomaines cadaverine, neuridin, saprin are isomers yet distinct, as are pyridin and collidin.

Muscarin is deadly; its isomer, cholin, is only poisonous.

Among leucomains paraxanthin will kill; carnin, an isomer, is a food. But the wonder is greater where a carbon or H₂O molecule is jostled out of place; two molecules of H added to harmless betain obtain deadly muscarine.

The difference between quinine and strychnine is but one molecule of carbon, two of H, three H₂O; between cocaine and piperine two of H and one of O.

Our mutual friend, nicotine, plus H₂ minus N₂ would be turpentine; a molecule more of water, and morphine would be cocaine.

Why should harmless carbon, nitrogen, hydrogen, chemically combined, become deadly hydrocyanic acid?

If three molecules of acetic acid roll themselves together we have grape sugar, and the why of it is a great puzzle.

Urea plus 2H₂O is carbonate of ammonia; acetic acid plus one molecule of water is citric acid.

I would quit an endless subject by reminding you of the paraffins, ranging from marsh gas to paraffin, with density and boiling point rising with the increase of carbon molecules; carbon and hydrogen bodies which have so far resisted direct synthesis, and in the case of paraffin, almost para affinis.

BATH PASTE.—A heaping teaspoonful of the following paste will perfume 2 to 15 gallons of bath water: Sodium bicarbonate, 150 parts; tartaric acid, 125 parts; starch, powdered, 210 parts; oil of sweet almond, 90 parts; attar of rose or ylang-ylang, q. s. Mix the soda, acid and starch, and make into a paste, with the almond oil, working in the perfume. As to the latter, 20 drops of attar of rose and 8 to 10 drops of clove oil to each pound of paste will be sufficient. It is claimed that the paste also softens the bath water. (Nat. Dr.).

BUSINESS PHARMACY.

The Experience of Druggists with Profit-Bringing Methods. Hints and Suggestions. Original Papers from Practical Business Druggists. The Various Phases of Drug-Store Management and Economy.

HOW TO MAKE THE DRUG STORE ATTRACTIVE.

By PILL.

So much has lately been written about how to make the drug store pay, that perhaps something about how to make the drug store attractive, and how to show goods to advantage will not be out of place.

In the first place, to be attractive the store must be clean inside and out, especially the windows, which ought to be washed outside at least twice a week, and inside once. We find aqua ammonia added to a pail of water helps wonderfully in getting the dirt off.

Although in a drug store you do not have as much to "trim up" with, as they do in dry goods or other stores, yet the store can be made attractive. Crepe paper can be purchased of your newsdealer for ten cents a roll, or from your jobber for less, but if you buy of the newsdealer you have a large assortment to select from, and do not have to carry a large stock on hand. It is cheaper in the end, unless you intend to sell it as a side line. It comes in a great many different plain colors, also in fancy colorings. The top of our soda-fountain is about five or six feet from the ceiling, and we made it very attractive with crepe paper. We had a roll of American flag crepe paper which we made into a circle with the stars outside, and then used purple and green to finish up with. We had it cut at the printer's into strips about four or five inches wide, and by twisting them a beautiful spiral effect was produced.

An attractive window was also made with white crepe cut in strips about four inches wide and twisted to produce a spiral effect. We ran the spirals about half way up the sides of the window, and about three-quarters of the way up the ends were brought together and stuck to the window with glue. We then made a bottom of white tissue paper, and also banked the sides and back with white. In the bottom of the window were placed some nice toilet soaps in boxes, with a price tag on each box. Several placards put in hoops wound with white crepe and suspended from the ceiling with string and a few festoons of white, finished the window. We had a sign printed with gold paint on white tissue paper reading: "Dainty Soaps at Dainty Prices," which I placed in the back. The window looked fine at night, and sold considerable soap for us.

Nearly all drug stores carry a line of thermometers, and the following is a nice way of displaying them. I took a one-half inch board, about 16x30 inches, and covered it with black calico. From the hardware store we purchased some right angle bronzed screw-hooks for a cent apiece, and put about a dozen on my board. Space was left in the middle of the board for a narrow strip of cardboard on which was printed the word "Thermometers." The thermometers showed up well on the hooks, and they could be easily detached. The board can be hung anywhere.

We also carry a line of chamois. They run in size from 26 inches down. The largest we pinned on a yardstick, and then pinned the smaller ones on in order of size down to the smallest. A screw-eye was put in the centre of the stick with which to hang it up. The stick can be hung anywhere, every chamois on the stick shows to good advantage, and one piece can be examined without disturbing the others. Of

course, we have duplicates in stock. A small sign reading "Chamois, all sizes, prices from 3 cents to" was pinned to the wall above the display.

A good sign for your case of hair brushes, pocket books, etc., is: "The quality will be remembered and appreciated long after the price is forgotten," or you can leave out the words "and appreciated."

We make a good liquid corn remedy, on which we have a large sale. Several new customers were gained by the following display on the top of a show case in the front of the store. We took a sheet of white cardboard about 12x20 inches, and printed across the top: "Corn Removers", and on one end of the card tied a wooden carton and beside it a bottle of the corn cure, and on the other end we tied a small hatchet, which cost 3 cents, and then gilded it. Underneath the hatchet was printed "A Sure Cure but the Toe Goes With It." Under the remedy: "Also a Sure Cure, but Painless," and at the center of the card, near the bottom, "Both Guaranteed."

We never display patent medicines on our show cases (except occasionally our own preparations), because we believe that if our customers want anything of the kind they will call for it. We prefer to devote the tops of our cases to tooth pastes, tooth powders (our own powder), silver novelties, cards of tweezers, soaps, reading glasses, electric batteries, etc.

We carry cameras and kodaks, and keep a dark room in which amateurs may develop their pictures, and in this way we have a large assortment of views and groups of local interest which we keep in albums on the show case. A great many people while waiting for their purchases to be wrapped, look over and become interested in photography. We tell them who took the photographs, show some of the first pictures amateurs have taken, and then some they have taken after they have had the cameras for awhile. One cannot help but notice the improvement. We tell them how simple it is and give them a catalogue, and offer to teach them to take pictures free of charge if they buy their camera from us.

Instead of buying a lot of paper and films at once, we buy in small quantities often. We are hardly ever "just out" of things, and always have our goods fresh. This also applies to drugs.

Our combs we have in trays which fit in the bottom of our cases. They can easily be removed, and show up well on yellow or orange tissue paper. We also use tissue paper for the bottoms of our windows. We change the paper at least once a week, and always have it looking fresh and clean, besides having a variety of colors to select from.

If you want to make your drug store pay, first have it clean and attractive. People do not like to trade in a dirty store. When you get customers into your store you should be courteous and obliging. Make them think you will willingly do anything you can to accommodate them. Offer to tie their packages, if they have several, into one bundle. Say "thank you", when you receive money from a customer, and always go to the door with a lady customer: open and close the door for her, and say "good afternoon" or "good evening."

If your store is located in a good-sized town, and a lady from the country comes in with a lot of bundles, ask her if she wouldn't like to leave her packages at your store until she goes home, and offer to take them out to her when she drives up in a carriage. And if a lady in town wants a purchase delivered, offer to send her other packages along with it.

The Era pays \$5.00 for each accepted contribution to this department. Proprietors and clerks are especially urged to relate their experiences and offer suggestions on all phases of the practical business side of pharmacy. Make your papers short, about 1,000 words (one Era page) in length.

HOW TO SELL YOUR OWN PREPARATIONS.

By S. H. HALL, Marietta, Ga.

There are many druggists who are not successful in selling their own preparations; and there are some who really injure their trade by the manner in which they try to induce customers to buy their preparations. I do not refer to those who are not competent to select good formulae, but to those who have an average preparation—these are unsuccessful because they have not the tact and skill to reason with a customer. To be successful it is essential that the goods be put up in tasty and attractive packages, that they possess the properties advertised and have real merit to benefit the ailment for which they are sold.

Judicious advertising in newspapers and booklets will make some demand, but not sufficient to make the sales satisfactory. You must be able to sell your own preparation to the customers who do not specify and also, to a majority of those who call for secret nostrums. In offering your own preparation, you must be able to convince the customer that you have his interest at heart and will satisfy him as to the merits of the preparation, otherwise it is the part of policy to give him the one called for.

Every druggist should know the effects produced by the different drugs on the human system; for without this knowledge he cannot discuss intelligently with the customer and show him how the medicine is to produce the desired effect.

The unsuccessful druggist, as a rule, follows somewhat after this manner: The customer calls for a well-known patent, the druggist answers that he has it, and instead of handing the medicine for inspection hands one of his own manufacture. (This is a serious mistake. Never hand a customer any article except the one for which he called.) He says, "Here is one much better than the one asked for," etc. He is as extravagant as the wording of the patent medicine 'ad' in his recommendation. He offers no argument for his assertions, he shows himself too anxious, then goes from bad to worse by running down the article for which the customer called. This kind of talk makes the customer demand the article he went for, or his suspicion is so aroused that he determines to abandon the use of all preparations and also to change his patronage to another drug store. It is by such failures that the "patent drummer" derives his great argument, viz., "that it is a loss of time and money to try to induce the trade to buy any substitute for a well-known patent." I will admit the truth of this statement if the druggist uses the above method in selling any article.

Now we advertise our preparations in the newspapers, booklets, etc., but this does not produce the results we want. There is still a demand for the other patents. However, we sell to a majority of these callers our preparations, retain their friendship and confidence, and find the sale of our preparations increasing. To-day we are selling twice as much of our make of sarsaparilla and cough syrup as of all the others combined. This is true of nearly all of the preparations of our own manufacture. I will add at this point that these goods are probably no better than those of other druggists who have failed. Our method is simply this: A customer asks for a widely advertised patent. "Yes sir, we have it and sell many of them." Here we always place it before our customer: never hide it; let him see it and examine it. At the same time we place one of ours alongside of it—larger and cheaper. We say, "We sell more of this than we do of the patent. We hear favorable reports about the patent, but better reports about the remedy of our own manufacture. The price of the patent is \$1, while ours, just as large, is only 75 cents. Ours is composed of the following ingredients, which produce the following effects. I am satisfied that our preparation will suit your case." Continue by saying that "we know the ingredients in our preparation are fresh, and it is the best on the market and exactly as represented." An argument after this method appeals to the common sense of the customer. Convince him also that the reason why you can afford to sell for 75 cents is that you are at less expense in the

manufacture and advertising of the preparation.

Never appear too anxious to sell your own; act as if you did not care which he bought; finally tell him to make his own choice, and eight out of ten times he will choose your preparation. Tell him that you hope he will be benefited, and if the medicine is not as represented to call again and you will return the money. Your customer leaves, perfectly satisfied that he has obtained just exactly what he desired, that he used his own judgment in the selection, and he also appreciates the information you gave him. This method only requires a minute or two, and you are well repaid for your pains. If your preparation possesses the merit of a substantial article you have gained a good customer, and the demand for your preparation will increase. Try this method and see your results.

Whenever the druggists of this country are successful in selling their own preparations then will dawn that independent day for which all have so long looked. This will also solve the cut-rate problem and the manufacturers' combination to raise prices. A well selected line of non-secrets in the hands of a common-sense druggist is an instrument with which he can readily gain commercial independence and accomplish much good by enlightening the public as to the folly of taking a medicine for a disease without knowing what the medicine is, or whether it was commended by experienced and competent pharmacists.

RECIPROCITY BETWEEN THE PHYSICIAN AND PHARMACIST.

By A. B. BURROWS, Takoma Park, D. C.

From the earliest history of medicine the physician has been recognized as dispensing his own medicines, and from the ancient records bearing on the apothecary we find he was in the habit of recommending his mysterious concoctions for the cure of the numerous ailments of the human race. With the advancement of knowledge and scientific discoveries of value to both professions there appears to be a marked tendency on the part of the physician to confine himself to prescribing, leaving the art of dispensing to his better qualified ally, the apothecary, at the same time expecting naturally that the apothecary will cease prescribing in deference to the physician.

Had these new conditions progressed without the disturbing elements which have appeared in the last quarter of a century in the shape of ready-made products of enterprising manufacturers, there would be no need to discuss the question of "How to prevent counter prescribing?" or "How to prevent the physician dispensing?" But as these conditions are here we must devote our thoughts toward preventing a retrograde tendency. If we can present to the physician the inconsistency and ridiculousness of handing out to his office patients a small package of tablets or pills, thereby suggesting to the patient that the doctor is running an opposition drug store to the one a block away, or that the supply from the drug store is unreliable, although coming from the same source (perhaps purchased from the accommodating druggist at physicians' discounts), and if we could impress effectively on the mind of the apothecary the uselessness of counter prescribing when the doctor is within easy reach, and that he could command more respect and dignity, to say nothing of obtaining a better price did he recommend the applicant for medical relief to the physician, the solution of the problems would be an easy matter.

But at the present outlook it looks as if each was waiting for the other party to give in, and there appears to be no indication of mutual agreements on that score. Not even by legislation in a few states has the desired result been accomplished, because of the difficulty in accurately defining "What is counter prescribing?" However, it is readily understood what "office dispensing" is, and if physicians will abandon that, as many prosperous and reputable ones to my personal knowledge have found they were obliged

to do, on account of increasing practice, it will not be long before pharmacists, as a rule, will study to eliminate the counter prescribing.

The impression created on the mind of the office patient who receives from the doctor's hand a small envelope or box containing tablets or pills is far from favorable. On account of the limited stock of the physician's cabinet the first suggestion is that the doctor is experimenting with some new remedy. Patients do not like to be experimented on if they are aware of it, and they usually, before taking the remedy, proceed to the family druggist to find out what it is. In this way the patient apothecary is forcibly reminded that his domain is being encroached upon, and he straightway proceeds to a little prescribing himself.

In nine cases out of ten where the druggist realizes that a case is too grave or complicated to come under the scope of his recommendations he will refer the patient to a physician. But in case of minor ailments, where the patient is not willing to pay a doctor's fee there appears to be no reason, ethical or otherwise, why a pharmacist should not prescribe and dispense materials for the relief of the afflicted. But, notwithstanding this, the druggist could well afford to refer all undecided applicants to the care of a practitioner, should physicians unanimously abandon the practise of office dispensing.

It has been remarked in the columns of the daily press that the pharmacist is exceptionally well qualified to prescribe for the ordinary symptoms, having the benefit of observation of a variety of prescriptions and having, as it were, the cream of professional knowledge.

ADVERTISING A DRUG STORE.

By P. A. LIGNELL, West Superior, Wis.

The prescription for above caption is: "First get your drug store—then make a d— noise about it." But as indiscriminate fireworks are both costly and sometimes injurious to the performer, we cannot improve upon the advice of Charles Austin Bates, the advertising expert who says: "Find some point in which you excel and harp on that."

That point may be low prices, prescription work, neighborhood business, fine store, soda fountain, etc., etc., but the idea is to find out what you can or are willing to do better than the next man, and hold that point persistently before the dear public. Then formulate your plan of campaign. Find out how much you can afford to spend for advertising, where to spend it, and how to do it. Never scatter your appropriation. One bullet will do more execution, if it hits, than a bushel of small shot. One line in one daily paper daily will consequently do more than half a page twice a year, and the cost is the same. A. T. Stewart's advice was to "spend one dollar for advertising for every dollar paid for rent." This may be true, but for the druggist it may be a too costly experiment. But whatever the sum may be and whatever medium you may choose, be it newspaper, circular, booklets or signs, there's one idea you must ever have uppermost, and that's "Persistence."

Man will say—"I would like to advertise, but I can't write ads." Of course you can if you are running a drug store; because if you are a poor salesman you cannot sell goods, and if you can't sell goods you can't keep the drug store very long. The first necessity is to give your Webster away, or put it where you won't be tempted to use it, then imagine that somebody has just come in and told you that the particular point of excellence on which you have been priding yourself is no good,—then "give it to him"—on paper, and presto, your ad. is written! It's simple, but of course if you are so conceited that you cannot imagine anybody finding fault with anything you do—why! you cannot write ads.

The best mediums in large towns are booklets mailed to families within as large a radius of the store as possible for results. In smaller towns the daily paper, with new copy every day, regular space or locals telling in a gossipy way happenings at "the

store," etc. In country towns and villages get all the notices you can, social, business or medical. Pay for them if you must, and use signs on every road coming to the village, as far and as many as you can afford, also monthly letters to as many as you can reach.

These are only outlines of an advertising campaign, but pick out the one that suits your location, follow it up persistently, and compare your balance sheet with last year's, and find out if advertising pays.

SHOP TALK.

Occasionally a mistake is made in putting up a prescription, even in the best regulated drug stores, but few such have such a comical aspect as an experience of a big up-town drug store in Philadelphia lately. A well known member of the City Council came into this store recently and handed in a prescription, evidently a copy, and said that he would send for it later, and in due course of time it was compounded and delivered to the messenger. The directions read "Use as directed by Dr. Blank," quite a common direction, so nothing more was thought of the matter until Mr. Councilman came in a week or so later fairly boiling over with rage, to demand all sorts of vengeance for the mistake he declared was made in the prescription. "I've used the blamed thing for over a week," he said, "and instead of making my hair grow it simply causes it to cake and stick to my scalp like sealing wax, and I have to wash your old tonic off after I use it if I don't want my hat to stick to my head day and night." As soon as the clerk looked at the bottle and the prescription a broad smile came out in spite of his efforts to look sober, and he gasped out, "My gracious, man, that's a cough medicine you have been using on your hair, not a hair tonic," and he retreated behind the counter to escape the wrath he looked for. For a minute the man didn't know whether to laugh or be madder still, but finally the comicality of the situation dawned over him and he burst out with a hearty laugh and called the clerk to "come out and have one on me." Over a stein of cool beer Mr. Councilman confessed that the prescription he had brought in had been given him by a friend who said it was a splendid hair tonic and that he had no idea that a mistake had been made in giving him the wrong prescription. It seems that the friend had two prescriptions from Dr. Blank, and that he had handed out the wrong one to his unwitting victim, but the lesson has cured Mr. Councilman of getting copies of other people's prescriptions filled. And it is not well to mention "hair tonic" in his presence just yet.

* * *

A company, not a thousand miles away from Boston, and which manufactures a popular nerve food or tonic, has hit upon a clever way of making widespread the virtues of their drink. A man representing the company mingles in a crowd of people around a shop window, or in the lobby of a theater, and quietly he drops a coin which rolls away and to which he, with assumed indifference, pays no heed at all. However, several in the crowd are sure that they have carelessly dropped a half-dollar piece, for such it looks to be. There is a dive to secure the bit on the part of almost everyone who has seen or heard it drop. Of course, all cannot have it and the lucky one to grab it finds it is not money, after all, but an "ad." for the drink. The coin entitles the possessor to a drink at almost any soda fountain. Naturally, those who unsuccessfully try to obtain the coin see what it has stamped on it, and this helps spread the fame of the specialty.

* * *

A druggist on one of Philadelphia's fashionable uptown streets is doing a rushing business in the sugar pellets used by homeopaths for absorbing tinctures, etc., one of his neighboring physicians having found that these were a most excellent remedy for the many ills of fashionable women. He has an understanding with the druggist that when he sends in a prescription calling for "Pilules Somnolens" that he is to dispense

the sugar pellets, placing a "caution" label on the bottle, and telling the customer that they are a powerful hypnotic that must be taken with exceeding care. The physician then goes to his patient and tells her that he is giving her whatever she may happen to fancy in the way of hypnotic, many of these women having well informed notions on the value of such remedies, and tells her that she will be asleep half an hour after taking them. It works every time too, the druggist says, and he is getting quite a local reputation for making such powerful pellets.

* * *

Here's a queer remedy, vouchsafed for by a Baltimore man, who says that he will guarantee a fortune for the enterprising druggist who will put it on the market as a specific cure for nervous diseases. The remedy is simple enough, and is made thus: Get a horn from a young deer, pulverize it, taking pains that no foreign matter gets in it, and then boil two teaspoonfuls of the powder in a pint of water, restoring the water as it boils down, for half an hour, cool and bottle. The dose for a child is a teaspoonful of the infusion three or four times a day, for an adult twice the dose. The author claims to have tried it in his own family with remarkable results, so the formula is given for what it may be worth although it somehow smacks of oldtime "herb teas" and the messes of the Middle Ages.

* * *

It has been discovered by one of the St. Paul druggists, if by nobody else, that much valuable time is lost by the proprietor having his office at the extreme rear of his store, especially when it is a long one, as in the St. Paul case. Many customers have a habit of calling for him, no matter how cheap and simple an article they want to buy, and notwithstanding the fact that the clerk could wait upon them just as well. So the druggist puts in practically all of the time in the front part of his establishment when he is in—and he generally is—and finds that the change saves him perhaps two miles of extra walking daily.

* * *

Where else than in Boston could one expect to meet with the word "fizzitian," as applied to the dispenser of soda water? Probably nowhere else would one find this term used in that connection. Yet in the "Hub" the word is coming into use. The poor, overworked clerks, who have their hands full in attending to the wants of thirsty customers these hot summer days, really ought to draw far more pay as "fizzitians," so it would seem, than they might expect to receive merely as clerks, even though they do exactly the same work. To live up to the dignity of the new term is no small task.

ACTION OF HYPOPHOSPHOROUS ACID ON ACETONE.—When crystalline hypophosphorous acid is subjected to prolonged boiling with acetone for several days, and then cooled, a crystalline deposit is thrown down, which, when collected, washed with acetone, and recrystallized from alcohol, forms monoclinic crystals which melt at 186-181° C., and have, according to Marie, the formula $C_2H_5O_3P$ or $2PO_2H_2 + 2C_2H_5O$. It is a monobasic acid which yields crystalline salts. From the mother liquor, after separating this body, a neutral soluble lead salt and a precipitate are obtained by treatment with lead carbonate. The acid liberated from the soluble lead salt by H_2S is $C_2H_5O_3P$ or $PO_2H_2 + C_2H_5O$. It is amorphous. The insoluble lead salt, similarly treated, gives a crystalline acid melting at 169-170° C., and having the formula $C_2H_5O_3P$ or $PO_2H_2 + C_2H_5O$. (Comptes rend., Pharm. Journ.)

TYPEWRITER COPYING INK.—

Transparent soap.....	1 ounce
Glycerin.....	4 fluid ounces
Water.....	32 fluid ounces
Alcohol.....	24 fluid ounces

Anilin dye, a sufficient quantity.

Dissolve the soap in the water and glycerin, with the aid of heat; dissolve the coloring matter in the alcohol, and mix the two solutions. If the ink is too soft, add more soap. (Br. & Col. Dr.)

THE DIFFICULTIES OF MEDICINE.*

BY JAMES F. GOODHART, M.D., LL.D.

It is clear, without my laboring the point, that a body so composite as ours is so very delicate a machine that there must be many and many a case presented to us where we do not—many even where we cannot—know what is the matter, and taking even the most favorable view of the progress of scientific discovery, it is probable that this will be so till time shall be no longer. We cannot know, because the intricacy of the machine hinders one in getting at the real facts; we cannot know, because even when we have got at the facts we cannot be sure that the remedies used will get at the disease.

When we come out of the aloofness of the contemplation of growth, nutrition, degeneration and death, to take part in the active grappling with these by stimulating this function and dulling that, in the attempt, in short, to arrest or stop disease, our difficulties become appalling; but this is quite unrecognized by most of those with whom we have to deal. There has been much interesting and perhaps interesting talk of late about water-tube boilers, their intricacy of working and their excessive wear and tear, and the difficulty of their repair without stopping the ship. Now, supposing that such a machine as our modern warship could be worked automatically with hatches down, and that the only positive knowledge to be obtained of the condition of its entrails was by the observation and analysis of the smoke and the bilge water, by post-mortem examination at the breaking-up of old vessels and the recording where each had gone to pieces, would the progress of knowledge, think you, be very rapid in the evolution of the science and art of shipbuilding? Would the feeling of power to deal with the defects of the machinery as they arose be very robust in any engineer who had had much experience? Would not "I can" have to wait upon "I am not sure," and the result be some tangent from direct purpose? And, excepting the self-righting of the living organism, which, from my present point of view, does but make confusion worse by rendering still more uncertain the real relation between means and ends, our naval engineer is in the same position we are when we attempt to control or modify function, for it is impossible to get at the organ: that is implicated, and function and excretion are, so to speak, waste products, or, as I like to call them, ash. Take the liver or the bones as concrete examples. Of the bones and the exchanges that go on between them and the other component parts of the body I think we may say we know nothing, and yet no doubt they extract material from the general store that the general store is better without, and they return to the common stock material which is better adapted by the abstraction for the purposes of other parts. Then the liver, the largest organ in the body; its imports and exports must be enormous, and from the familiar way in which it is spoken of there cannot be a man in the whole world who does not think he knows all about it. But what are the facts? We know something about the physiology of the liver, but this knowledge has been mostly obtained by experimentation on the lower animals, by observations that occasional cases of disease afford us, and by certain inferences that we draw—very much at second hand—from the changes produced by disease in the organ. But all these things, valuable as they are, and without which where we should be I don't know, yet are very far from giving us that real and intimate knowledge of the living organ that we require to enable us to treat its diseases.

For example, there is not a soul in this room tonight who, if I asked him how and why gall-stones are formed, could give me any useful information on the subject. Yet the kenneled public flock to us for treatment, and expect to be cured. And when, alas, as often happens, drugs fail, they apply to surgery, which in that case is but a refuge for the destitute, for that is not the treatment of disease.

*Portion of the Address in Medicine read before the annual meeting (1901) of the British Medical Association.

Then there is the question of hepatic stimulation of the liver by cholagogues—we still give our blue pill and podophyllin, and so on, and speak with early innocence of "touching" the liver, and so still perpetuate the idea that certain remedies go for the liver and increase its various secretions. I don't say this is all wrong, or that the remedies are not valuable in the conditions for which they are given, but all the positive experimental evidence that we possess I think goes to show that these remedies are chiefly intestinal in their action. And I instance them particularly because they not only show up the difficulties that an intricate machine causes us in obtaining information, but also another point too often forgotten—which, nevertheless, is constantly interfering with our inferences on the treatment of disease—that we send a remedy forth on one mission which we suppose it to have performed, whereas in reality its virtue has been expended in quite a different direction. Take the matter of pain—a pain with a definite cause, if only we can find it; but it is deep down in the recesses of our impenetrabilia, and it has absolutely no distinguishing feature—so that no human being can do more than say that it may be this or it may be that. A position this that would seem to claim for the doctor all the patient's sympathy—it usually, however, meets with a great deal of derision.

Take the next vital element and its bearing upon the handling of disease. Here again we are often foiled when we would be positive because of the personal equation, as it is called, the individuality of the patient. When Mrs. Smith asked her doctor why it was that a particular pain possessed her, he is said to have replied with ready wit and no less truth, "Madam, it is because you are Mrs. Smith." And the lady no doubt thought her doctor a very amusing man, but she had not a glimmer of the great truth that had been administered in such an excellent coating. But, indeed, that "because you are Mrs. Smith" constitutes one of, if not the most, insuperable of the difficulties to framing any system of precise medicine, and over and over again fattens crass ignorance at the expense of real knowledge.

In the practice of medicine you cannot jump the fact that the inflections of your voice are not exactly like those of anyone else; and as long as the world lasts this variability of the living force, this individuality, will prevent the attainment of the popular desire—a cut-and-dried remedy—not only for every disease—that is no use to Dick when the remedy touches only Tom's variety; no, we want a remedy for every disease, and for every variety of it, as met with in the young and in the old, in the otherwise healthy and the unhealthy, under the specious garb of mildness or the pronounced type of malignity; that is another of the cruxes of medicine that the world wots little of. And then as part of the animal energy of man, of the spirit of life, perhaps the chief human expression of it, comes that wonderful, indescribable something that we call hope. One hears talk of forlorn hopes, but hope is never forlorn; its spring is always light and buoyant, and it is as indomitable as life itself. Of all the unnatural conditions of which medicine takes count, perhaps none is so much so as life without hope. When hope flies out of the window death is lurking at the door, but in the good providence of God man cannot quench it, and I beseech you that you never try. And it is these attributes of hope, so indissolubly linked as it is to life, that constitute it indeed a thing to be reckoned with in our dealings with disease; for if not forlorn it has one characteristic—I will not call it a failing, for, after all, it brings more help than trouble in its train—it is generally blind in the matter of life to anything but the certainty of returning health. It is every ready to ask three questions, and no more. What is the matter with me? What will cure me? And how long will it take? And to these it expects immediate and positive answers.

DRUGS.

Now, why do we give drugs? To cure disease, you answer at once, and think the question uneces-

sary. But wait a minute; we give drugs for several other reasons, some of which are far less free from criticism. For example, drugs are often given, not because the disease demands one, but because the patient is not happy till he gets it; too often he is not happy even then. They are often given to hide our ignorance, I fear, or to mark time while we watch and wait; they are given sometimes as a gambler on the Stock Exchange speculates in "futures," an enhanced reputation being the windfall that it is hoped to secure; and then we often give drugs as an experiment, in the hope that they may do good. I will deal with this last more especially, for it is a reason for giving drugs about which the public are peculiarly sensitive and ill-informed. It is often said as a matter of prejudice against the hospitals of our country—than which none could possibly be conducted more humanely and considerably—that the patients are made the subject of experiment. So they are; but this happens not only in the hospital. If it be true—and it is true—that you and I are unique in our way, and that it is this individualism of man that constitutes the great barrier of the evolution of any system of medication, it follows that each new patient who demands treatment is more or less a case of experiment, and it is by experiment of this qualified kind—upon the king as he sits upon his throne, as for the poorest being within his realm—not only that the value of drugs is established and new powers gained over disease, but by which an increase of knowledge of disease itself is gained. The cure of disease is always the fundamental object; but not far behind it should come the alert eye to watch the deviations from the hypothetical normal which the individual resistance or the drug in its action may show in the course of the case.

All treatment by drugs is more or less of an experiment, and it is, indeed, in this fact that the enormous number of new drugs daily poured upon us finds its justification. Many and many an ailment that afflicts mankind badly needs a remedy, but for which, as yet, no remedy is opportune; and who knows but in each new drug some human ill may find alleviation? A chemist's shop is indeed a source of wonder and dismay to me, and I could indeed wish we were less the prey of the manufacturing chemist, but I would not for a moment even seem to discountenance new remedies. What I would discountenance is the giving drugs by rule of thumb. Diseases run in fashions; I have mentioned one or two that seem to me in fashion now, and there are fashionable drugs which, while the sun shines upon them, become the darlings of society. Their popularity is enormous—far in excess of their merits; and by and by they sink into the cold shade of neglect. Who does not even now remember the boom of the antipyretics? A few of them have remained to us for other purposes; but as antipyretics, who gives them now? They are not by any means valueless when given appropriately, but they were rushed for more than they were worth, and they are now buried by later booms, such as animal extracts and antitoxins, and many of these will be buried, too. And then as to routine in the treatment of disease. I suppose there is not a single case of gout in the whole world that has not had sodium salicylate and other easily enumerated drugs, and had them freely; and why? Because they are supposed to eliminate the cause of the disease. I find that the British public knows far more about uric acid and how to deal with it than I do with all my pains; and what men think they know in this respect, I fear that we, in the first place, and vulgar advertisement in the second place, have taught them. Yet I cannot understand how any reflective mind, making a careful study of gout in its clinical aspect, can settle down and bury itself in the doctrine that gout is a mere question of intake and output, and, if not, think of the harm that is done by false doctrine of this kind upon the thousands who are engaged in the hopeless struggle of dispossessing themselves of their fetish.

The open-air treatment of consumption, of which we are hearing much at the present day, is also hiding fair to come under the baneful influence of rou-

tine; "the new treatment," though it is hardly a compliment to our environment to call it so. What, think you, does the consumptive and his friend see in this? He sees a residence for a few months in a home, and a cure at the end of it. Is that what he has any chance of obtaining? Certainly not, and in proportion to the exaggerated hope will come the bitterness of the disappointment to the sick, and the discredit to us. The benefit to be obtained in these sanatoria is that there will be learned a habit of life—what we mean by plenty of good food and plenty of fresh air; and having learned this lesson the tuberculous man will need to practice it all the rest of his life. There is no cure in this treatment as the sick man understands cure; for although it is true that there is no disease that is more often arrested than phthisis, it is equally true that there is no disease that has a more inveterate tendency to relapse, and I very much fear that when you come to strike the balance between arrest and relapse, that the latter has the best of it. Therefore, if the open-air treatment is to take its real place and be of any abiding value, the principles of the sanatorium must be introduced into the home.

And that reminds me of another fashionable idea that is now in vogue, and I will call it medical antisepsis. Antiseptics in lung diseases have had a long day, tempered only by a momentary fall into heresy when it was proposed by those who ought to have known better that we should be converted into gasometers for the storage of sulphuretted hydrogen, and this was to cure consumption! I only mention this to show how much we need to keep our imaginations in check in thinking over the cure of disease. However, antiseptics in the lung from all the many inhalations up to iodoform, and finally creosote internally, have had a good inning and have not been without their minor successes; but it was very mete and right that the comparative inefficacy of such nauseous medicaments should drive us back into the arms of the great original antiseptic—fresh air. And perhaps for that reason we have now turned a somewhat cold shoulder to the lung, and are directing our efforts to rendering the intestinal canal antiseptic, and I hear daily of creosote and salol and all sorts of other well-meaning drugs being sent on this errand of reform. Far be it from me to decry the value of useful remedies, but I cannot help asking myself the question whether the staunch believers in intestinal antiseptics possess sufficiently cultured and liberal-minded noses to be good advisers to our intestinal apparatus. It is quite evident that stercorin, however much so to us, is not a persona ingrata to our colic mucous membrane; it is indeed bone of its bone; and it is possible that we might be none the healthier men and women even if our doctors got their wishes in this respect.

One other drug only will I wish to mention to illustrate my point, and that shall be the use of the bromides in epilepsy. Now that these are useful drugs in this complaint no one will question to-day. But long ago it has gone forth from those who are in authority in such matters that after a person has suffered from epileptic fits the drug must be given regularly in considerable doses, and for long periods of time—a year or two, or more—to prevent their recurrence. And this advice is very generally acted upon. There is no doubt that it has become the routine treatment of epilepsy; and as such I think it often does a great deal of harm, and I am by no means certain that it does any equivalent good.

MILITARY SHAVING SOAP.—

Palm oil soap.....	5 pounds
Oil of cinnamon.....	10 drams
Oil of caraway.....	2 drams
Oil of lavender.....	2 drams
Oil of thyme.....	14 drams
Oil of peppermint.....	45 drops
Oil of bergamont.....	2½ drams

Melt the soap, color if desired, and incorporate the oils.

RECOMMENDATIONS FOR THE REVISION COMMITTEE OF THE PHARMACOPOEIA.

At the recent meeting of the Alabama Pharmaceutical Association the Committee on Pharmacopoeial Revision presented a report in which it recommended that the following articles be dropped from the next edition of the Pharmacopoeia: Absinthium, alium, alumi hydras, argenti cyanidum, argenti iodidum, aspidosperma, cassia fistula, chelidonium, chimaphila, chirata, cypripedium, ficus, geranium, hematotoxylon, illicium, juglans, kamala, lappa, melissa, menispermum, macis, maschie, oleum aethericum, phytolacca fructus, prunus, rhus glabra, rosa centifolia, pyrethrum, pulvis antimonialis, petrolatum molle, petrolatum spissum; all preparations into which the above articles enter, as, for instance, extractum menispermii fluidum, etc., adeps lanae hydrosus.

The following additions are recommended: Glucose, sol. phosphate soda and citric acid, bismuth subgallate with formula for preparation, creosote carbonate, formaldehyde in solution of suitable strength, gnaicol, gnaicol carbonate, sulphonal, trional, phenacetin, phenocel hydrochloride, piperazine, antipyrin, saccharin, petrolatum as in 1880, passiflora incarnata, sterculia acuminata, piscidia crythrina, sabal serulata, oil of mullein.

The following preparations of the National Formula should be made official: Aqua hamamelidis, elixir apii graveolentis compositum, elixir digestivum compositum. (The committee believes this is as good as any similar preparation made). Elixir ferri quinine et strychnine, elixir taraxaci compositum, extractum apii graveolentis fluidum, extractum rhamni purshianae fluidum aromaticum, glyceritum pepsini, liquor sodii boratis compositus, syrupus eriodictyi aromaticus, syrupus pini strobi compositus.

In the way of general suggestions to the Revision Committee and proposed modifications of present formulae, the following notes from Prof. E. R. Miller are incorporated in the report:

1. Tinctura arnicæ florum; moisten the drug before packing.
2. Tinctura bryoniae. It is impossible to follow directions for the use of "recently" dried root, because the drug does not grow in this country.
3. Tinctura iodi. In the assay directed, some allowance should be made for iodine which has entered into combination. Would it not be well to have a tincture of iodine made with wood alcohol for all cases when tincture of iodine is to be used externally?
4. Tincture opii deodorati. If the directions to "shake repeatedly with ether" be followed, a very troublesome emulsion will be formed. Caspari's suggestion to use deodorized opium is an improvement.
5. Tinctura strophanthi. First remove fixed oil by treatment with ether (by maceration or by continuous percolation.)
6. Syrupus ferri iodidi. Since coloration can be prevented by placing some bright iron wire in the syrup, or by placing the container in direct sunlight, these facts should be stated in the U. S. P. I have seen samples of this syrup which had assumed a "wine red" color, changed back to pale green by being placed in direct sunlight for two or three days. If it remain direct sunlight, or even in diffused light for a long time, it gradually becomes colorless.
7. Syrupus calcis lactophosphatis. As suggested by Caspari, the phosphoric acid should be diluted with twice its volume of water before it is added to the calcium lactate.
8. Syrupus calcis. It seems to me this preparation should be standardized.
9. Aquæ medicatæ. Give directions for preparing these by distillation, either by passing steam through the crude drug, or by placing the oil in a flask with water, and distilling. I believe either method will yield a medicated water superior to that made by triturating with precipitated calcium phosphate.

10. Abstracta. I would recommend the reintroduction of the Abstracts of the U. S. P. 1880, with perhaps others. Considering the number of efficient powdered extracts on the market, "injury by heat necessary to evaporate" is no argument, since evaporation is done in a vacuum. Moreover, the abstracts have the advantage of being of definite strength compared with the respective drug, and this is particularly desirable in all cases in which extracts are not standardized with reference to the amount of active medicinal principle present.

11. Extractum sanguinarie fluidum. In my experience a fluid extract made with 25 per cent. lactic acid gives a permanent preparation, at least as permanent as when made with 60 per cent. acetic acid. Such a fluid extract made two years ago is almost entirely without precipitation.

12. Oleoresina. Acetone should be substituted for ether in the manufacture of oleoresins. It extracts all the active principle, is less expensive and less dangerous.

13. Liquor ferri chloridi. The method for preparing this is very troublesome, especially for beginners. Students invariably have trouble with it. The trouble lies in using just enough nitric acid to oxidize the ferrous chloride. About a year ago I had one of my students prepare this solution by two other methods. One by oxidizing the ferrous chloride with hydrogen dioxide water, and the other by passing chlorine gas into the solution until oxidation was complete. The solution can soon be finished by the use of hydrogen dioxide, but I have not verified the student's work as to quantities used. If the attention of the revision committee was called to this formula they might be able to improve it.

14. Chloral. The present U. S. P. uses the term "chloral" as being synonymous with chloral hydrate. It is sufficient to call the attention of the committee to this error.

15. Oleum olivæ. To the tests for determining the absence of cottonseed oil, there should be added Halphen's test. I find this a sure means of detecting even small amounts of cottonseed oil. My plan of carrying out the test is as follows: Place in a flask with upright condenser equal volumes of (1) amyl alcohol, (2) the oil to be tested, (3) a 1 per cent. solution of sulphur in carbon disulphide. About 2 Cc. of each liquid will be sufficient. The flask is then heated in a boiling water bath for 15 or 20 minutes, or perhaps a trifle longer, when if cottonseed oil be present, the liquid becomes bright red, the depth of color depending upon the amount of cottonseed oil present. I have applied this test to several fixed oils, but none of them gave the red coloration except cottonseed oil. Halphen says no other oil gives the red color. I hope this valuable test will be given in the next U. S. P., and that it will be sufficient simply to call the attention of the committee to it.

16. Phytolacæ radix. In the U. S. P., 1890, this is described as inodorous. This may be true before the drug is dried, but when dried, or soon after drying, it develops a disagreeable odor, and the longer it stands the more pronounced the odor becomes. Furthermore, under this heading no mention is made of an official preparation; the fluid extract should be mentioned if the drug is retained.

17. Phytolacæ fructus. Under this drug the Pharmacopœia mentions only fluid extract of phytolacæ. There is no official preparation of poke berries.

18. Mistura ferri composita. In my copy of the U. S. P., 1890, 6 gm. of ferrous sulphate and 8 gm. of potassium carbonate are directed to be used. This is much more potassium carbonate than is necessary to react with that quantity of ferrous sulphate.

The question then is: Did the Committee on Revision intend that this preparation should contain so much unchanged potassium carbonate? This large excess may have been intended to guard against having ferrous sulphate in the finished preparation, which might occur if the ferrous sulphate used were badly effloresced.

The following suggestions of L. S. Brigham are

also submitted:

1. Tinctura opii deodorati. My experience in substituting petroleum ether for sulphuric ether is entirely satisfactory. I have no trouble in removing the characteristic benzine odor complained of by some.

2. Syrupus ferri iodidi. I recommend the addition of 10 per cent. of glucose to the syrup before filtering the solution into it. This is more satisfactory in my hands than any other deviation from the official formula, making a product that is nearly inalterable.

3. Abstracts. I endorse the suggestion of Prof. Miller as to this class of preparations, but I would not call them abstracts. The name is clearly a dead one, and will never recover popularity. The name Powdered Extract, while objectionable, is too popular for rejection.

4. Syrupus hypophosphitum. Sugar should be increased to 750 gm. instead of 500.

5. Tinctura opii. The calcium phosphate should be rejected, and in place the same quantity of clean dry sand substituted. With this substitution the finest powdered opium can be percolated admirably and be thoroughly exhausted. My experience in this practice covers some years, and while original, is trustworthy.

6. Lard. Should be entirely rejected as the base of official ointments in the following and petrolatum substituted: ungt. zinc oxid; sulphuris; potass iodidi; plumbi iodidi; plumbi carb.; hydrarg. ammon.; gallæ; chrysarobin; acidi tannici; belladonnæ.

7. Glycerium acidi tannici; 15 gms. spts. rect. added to the tannic acid and then shaken with q. s. glycerine to make 100 gms. makes a far more desirable preparation than the present one. What is the objection to it?

8. Syrup quinine tasteless. Some recognition should be made of this commonly used article—it was originally 2 grs. of alkaloid quinine to the ounce of syrup—now it is usually 2 grs. alkaloid cinchonine to the ounce.

The following notes from J. W. Miller are also included:

1. Aqua hamamelidis should be adopted with tests to determine the presence of wood alcohol in it.

2. Aquæ medicatæ. The suggestion to make medicated waters by distillation is technically good, but would never be followed by the druggists at large. I have found carbonate of magnesium, and cotton both better for breaking up the oil globules than precip. calc. phosphate.

3. Tinct. opii. Brigham's suggestion of sand in making tinct. opii we find to give excellent results.

4. Iodine ointment might specify as it does now "to be freshly made when wanted for use," and add—"or preserved in small amber jars, made air-tight with paraffin." We find this practical for making up a month's supply.

GUAIACINOL is a name applied to neutral bromo-guaiaacolate of quinine $C_{20}H_{19}N_3O_3 \cdot 2HBr \cdot C_6H_5O_2HOCH_2$. It forms (L. Union Pharm.) fine crystalline yellow scales, easily soluble in water. It is claimed to be non-toxic, and when applied in aqueous or alcoholic solution, is readily absorbed by the skin.

PREPARED MILK.—An English patent was granted some months ago on a process for preparing a condensed milk claimed to be similar in composition to human milk. The specifications are as follows: 1000 liters of good milk are, after addition of 5 grams of sodium bicarbonate, placed in a vacuum pan, heated to 35°-40°C., and evaporated to about 500 liters. Two hundred liters are drawn off and receive the addition of 45 kilos of cooked, filtered butter, and 120 kilos of sugar. After stirring the mixture is run back into the vacuum pan and further concentrated to about 460 kilos. During this evaporation the constituents become thoroughly emulsified. The concentrated product is then passed through sieves into receiving cans, where 30 grams of sodium bicarbonate, dissolved in one liter of water are added. The prepared milk is then sealed in cans and sterilized. For use it is diluted with 13 parts of water.

WINDOW DISPLAYS.

Almost any kind of advertising effort will show results. Window advertising is the least expensive, and the results are almost immediate. Two per cent. of gross sales would be a conservative estimate for newspaper and circular advertising; which means \$500 yearly on a \$25,000 business. The window advertising will cost practically nothing, as at least cost can be realized out of any goods which might become shop worn, and no goods at all should be damaged if windows are properly secured against flies and the trimming changed every week.

Newspaper, circular and window advertising should be worked in conjunction. The combined result is best. We are unconsciously directed by impressions. The saying that "We are creatures of habit" is simply in line with the psychological fact that impressions once formed in our minds are constantly recurring when anything kindred is under consideration. What we wish to do is to place psychological sign boards of our business in the minds of the public. The newspaper may make a faint impression, and the window display clinch it, or vice versa. They help each other.

If you will write a newspaper advertisement each week and trim your windows each week, and never fail, doing the one will make the other easier. The advertisement suggests the window trim and the window trim the advertisement. This may be hard work for the first six months, but it will gradually become easier, and soon your material for advertising, both newspaper and window, will exceed your space. The passing public will come to recognize the regular change and look for them.

As far as possible make "good windows." Freak windows may be all right occasionally, as during carnival or fair time, but they take a great deal of time, destroy goods and bring no immediate results.

Use neat display cards. They help rivet the impressions you are striving to make. Do not put prices on trade-mark goods, or standard brands, which are carried elsewhere in your city. Your competitors will study your windows, and if your prices are high they will use them against you. If the prices are low, they may go still lower, and the tendency will be to reduce the profits on good staple lines that you all carry. Prices are, of course, always attractive, and may be put on lines of which you control the sale or on any line where qualities vary and the make is not known. Besides prices, display cards might describe new goods or make pointed suggestions. In a builders' hardware window a card might read, "Let us figure on your building bill."

As to the windows themselves, the window seat should be quite deep, and not more than fifteen or eighteen inches high inside; the glass not being over two feet from the sidewalk. The entire window should be enclosed with wire cloth screens, made in sections, and held in place by buttons, one section being a door on loose pin hinges. This will keep insects out in summer, and prevent pilfering of small articles. Sections can be removed at any time to admit articles too large to be taken through the door. If the frames are made light and oil finished, they will obstruct the light very little, are easily cleaned, and will serve as a background for the trimming; though background trimming shuts off the light, and the effect of the window from the customer who has entered the store.

For the bottom of the window a frame, made in sections, for easy handling, raised about six inches at the back and slanting to the front, covered with black cloth, is very serviceable in displaying tools, builders' hardware and small articles.

One line of goods at a time in a window is generally better unless the windows are very large. Large quantities of one article always attract attention. Few people would notice one only of a common, everyday article like a ten-gallon carrying can or milk cooler, but a window full of either of them in a graduated pile extending to the ceiling would cause any number of people to stop. My neighbor, the grocer, tells me that when he puts on the walk one or two water-melons, very few ask for them, but when he stacks

up half a car-load, every other man buys one. Thus a great many attractive window displays can be made by using quantities of common articles.

A study and faithful practice of window trimming will lead to better store service in every way. You become more critical of each individual line as you take it up for display. You ask yourself if you are carrying the right quality in proper quantity, at the right price? In establishing your sign boards in the public mind you will see the more clearly how necessary also is intelligent, courteous and prompt service. This study will shake you out of the rut in which you may be working; you will read the trade journals more eagerly for ideas, and come to realize that the prosperous merchant has no time for kicking against the inevitable; that the retailer cannot look to legislation for success, and if he is making a failure, the cause of it is in his own methods. (W. M. Woodward in Iron Age).

THE METRIC SYSTEM.

The metric system is making some headway among American manufacturers engaged in the export trade. This is especially true of machinery builders. It will continue to make headway according to the increase of our exports. The argument is produced that England, Russia and the United States should join in adopting the system simultaneously.

The advocates of the adoption of the metric system can scarcely be counting the cost when they urge Congress to pass a law compelling the abolition of the present system of weights and measures. Much should be done for a universal system; the United States being willing to surrender its weights and measures for any European invention, providing we would be benefited in the end. But to make a sweeping change by one edict would mean almost ruin to many. It would mean the abolition of all the text-books in the United States; all the rules and machinery for the same. The destruction of billions of dollars of machinery owing to the fact that all the parts would have to be changed, for when the metric system is introduced it would no more pay to keep two sets of machinery for making parts to old machines built for the inch and foot than it would to keep two sets of rolls to make shapes, one for export, the other for domestic use. The latter is one of the arguments used in favor of the metric system.

There are firms that have adopted the metric system for their export business. They do not seem to be suffering from the effects of having two sizes of templates and dies for their plants. They are filling orders for export and are teaching their workmen the use of the metric system in so doing. This will extend throughout every exporting plant, and eventually it will be introduced in the text-books, and the students of the future will be as familiar with the metric system as with the English measurements. This change should be gradual. It should not be forced upon the people with one fell swoop. Our domestic trade is still the greatest in point of balance, and it should not be confused for the sake of any additional export trade we might secure. The advocates of this drastic measure, which it is estimated would cause a direct loss of twenty billion dollars to the United States, can rest assured that for the present exporters are taking care of their foreign trade by adopting foreign weights and measures as they are compelled to do so.—(American Manufacturer).

POULTICE SUBSTITUTE.—Kaolin, 1,000 parts; glycerin, 1,000 parts; boracic acid, 100 parts; peppermint oil, 1 part; wintergreen oil, 1 part; eucalyptus oil, 2 parts. Heat the kaolin to 212° F. for an hour to render sterile; then add glycerin and heat for forty minutes. Stir in other ingredients, and keep in airtight jars. (Det. Med. Jour.)

CITRAPENE.—Name given by Theulier to a camphor-like substance derived from the rind of the lemon, and also called citron (or lemon) camphor.

MORE AMICABLE RELATIONS BETWEEN PHYSICIAN AND PHARMACIST.*

By A. M. STEINFELD, M.D.

When our president suggested that I prepare a paper on the subject, How Can More Amicable Relations Be Established Between the Physician and the Pharmacist, I confess that I was rather nonplussed, for I saw another threshing of the old straw and another winnowing of the old chaff in evidence. There are the everlasting charges and counter-charges, the same complaints by the physician that the pharmacist substitutes and refills prescriptions; that he prescribes and dispenses over his counter, and in other ways usurps the functions of the physician, who doubtless has good cause for complaint. The pharmacist, on the other hand, has his tale of woe. He is often taken to task for substituting by physicians, whose main object in insisting upon the product specified is to push the speciality of some manufacturing concern. The pharmacist claims that he is driven to counter-dispensing and patent medicine selling by the habit many physicians have of carrying miniature drug stores with them on their rounds and dispensing at the bedside. He says further that prescription writing is becoming a lost art and those that "do come" are so often bad and ill-considered that he acquires something akin to contempt for the physician who writes them. Let us consider a few of these subjects, and I think the deeper we get in the harder we will find the question.

Counter-Prescribing.—The reason for this we must seek, say, 250 years past. There were no druggists then. He of the fancy shelf bottle, he of the percolator, he of the prescription case was then unknown. The doctor was the druggist, and the druggist was the doctor, while the good word pharmacist was still safe on the sunny shores of Greece, and the term of apothecary was beginning to make itself known in Elizabethan English. Then when one ailed he went to the doctor, and in that doctor's office were all the compounds, chemicals and foreign drugs that were known. Household simples, it is true, abounded everywhere, but the physician alone knew how to mix them, and in him, too, lay the deep secret of making weird compounds from toads, flies and lizards. These were secrets that he would impart to nobody. He was the medical and the pharmaceutical all in all. Is it to be wondered that a trace of this still lingers among us and that to the masses the doctor and druggist are one and the same; and that in their code of ethics they are doing the eminently proper thing in consulting the druggist, who is a "doctor" to them, for the minor ailments of life? Indeed, it is within the easy recollection of some of the men now living, that in communities by no means small, the doctor's office, ornamented on the outside by a stuffed and varnished lizard, was the only place where medical advice could be had or drugs procured. So when we rail at so-called counter-prescribing, we are finding fault with something that is ingrained in our nature by hundreds of years of association of ideas. Dr. Carpenter, in his physiology, will tell you how those things hang on. Lowell says:

"Once get a scent of musk into a drawer,

And it clings hold like precedents in law;

Your grandma put it there—when, goodness knows,

To jest this worldly her Sunday clothes;

But better days stick fast in heart and husk,

And all you keep in it gets a scent of musk."

And that's the way with counter-dispensing. Will it take that long to end it?

Substitution.—Way back in our forefathers' days it required three, four or five months to come from England to America in a sailing vessel. The captain, ordinarily a hearty old soul, had a chest of medicine in his cabin and with the chest a list saying that No. 1 was good for fits, No. 2 for a broken arm, No. 3 for diarrhoea, and possibly No. 10 for those sailors who were taking too much grog. Some times, unfortu-

nately, in a long voyage and after much use, No. 10 would run out. Woe the poor sailor who came for treatment, for he was the victim of the first substitute. And yet history does not record an alarming mortality among the old sailors, and lots of them died real comfortably and no druggist was accused. Substitution of to-day, in all seriousness, exists, I am inclined to think, more in the minds of the manufacturers with proprietary remedies to push than it does in actual fact. "We are advertised by our loving friends," is the trademark of one firm, and might really be adopted as a trademark by a number of them, for their loving friends, the half-educated physician and recipient of numerous sample bottles, is the person who in nine times out of ten specifies some proprietary; who make the most fuss about a substitution; and who, the chances are, wouldn't know the preparation written for when he saw it. Physicians are too prone to accuse the pharmacist of meretricious substitution. For that gentleman has been through college just as well; he knows the therapeutic value of drugs; and he has probably quite as keen a sense of right and wrong as the gentleman who wrote the prescription. Is the substitute always wrong then? Or does the physician never substitute when, hastily called to a case, he finds himself with an un-filled vial of some necessary and uses the next best thing he happens to have? Is the physician always right and the druggist always wrong?

Patent Medicines.—"If all the patent medicine advertisements were true, heaven would have to do something to encourage emigration." The trouble is in too many of these discussions, we are apt to leave human nature out of humanity and argue as if we had automata to deal with. As long as men are men, and women are women, and the millenium has not come, patent medicines have to be reckoned with and have to be bought and sold. It is said that Americans are fond of taking medicine, but when you have put it up in a package, add a few testimonials and charge four shillings for it, you have produced something which is as dear to the Englishman's heart as "Rule Britannia." He wants it, and is going to have it, and some one is going to sell it to him, and there you are. All the medical societies can't stop the demand, nor will they reciprocate the druggist for his self-denial if he does not sell them. Enough of his business has gone to department stores, and he isn't to be blamed for holding on to as much of this as he can. Is there any reason why he shouldn't?

Refilling Prescriptions.—That is wrong, radically wrong. The pharmacist should not do it, and the physician should either write or print across his prescription blank a notice to the druggist that no prescription of his should be refilled unless specifically so ordered. Yet from the patient's point of view there is another side of the question. He has paid the physician for a consultation; he has had a two or four-ounce bottle mixture which is doing him good and assisting him toward recovery. Shall he pay another fee for another prescription, which he feels he does not need? Would you do it under similar circumstances? The truth is, the further we get into these questions the wider becomes the vista for discussion. The solution, however, is the one of the "belly and the members." The physician is not a thing apart from the druggist, nor the druggist a person apart from the physician. The two must work together for a common end or neither will accomplish his purpose. As in the fable, the birds said to the farmers who were about to exterminate them:

"Since heaven accepted our joint adoration,

Since earth was both an abode and a tomb,

Why could we not sojourn, Oh, man, as one nation?

Were waste lands so precious; had mountains no room?

Or were you so wingless, so wanting in vision,

Ye saw not as we did the things of the sky;

But dooming the birds to your earthly ambition,

Forgot in vain glory yourselves were to die?"

Involved in these questions, it is true, is the ethical side, so generally discussed, yet really the dominating

*Read before the Columbus Academy of Medicine (Columbus Medical Journal.)

one is the bread and butter side, which is almost always ignored. If the pharmacist doesn't sell patent medicines which are so extensively advertised, and for which the manufacturer creates a demand, where is he to get even, and how? And, besides, who guarantees us that the patent isn't a good thing occasionally for the one that buys it? The general public isn't a fool and doesn't continue to put up its money for the pleasure of doing it. So if the druggist does sell patents, he does it because the public wants it. Here is another thing to consider, when the medical law was put into operation in Ohio, ten years' practice of medicine without a diploma was deemed sufficient to put the unschooled practitioner in good standing in the state. Yet we question the right of the druggist to advise or dose his friends, withal he may have had more experience in a legitimate way than some of the old-style physicians got in a lifetime. In closing, will say that the only solution for the conditions as they exist is a mutual understanding in both professions.

SOME LITTLE THINGS.*

By PROF. W. L. SCOVILLE.

Pharmacists who have hieroglyphic prescriptions, careless or slovenly clerks, and cut rates to deal with, do not need to have their attention called to the importance of little things. It is enough for them to see the minor points and then to utilize them. It is the purpose of this paper to designate a few of the minor points in a couple of popular preparations, which make a considerable difference in the results.

The first preparation will be designated as—

Liquor Thymol Compositus (antiseptic solution).

He is a bold man who attempts to add to the confusion of formulas already in existence for this preparation. My only excuse for adding to these is the fact that success, or rather satisfaction, with this preparation will depend more upon the quality and variety of the ingredients employed than with variations in the preparations or methods. As is well known, the ingredients commonly directed are eucalyptol or oil of eucalyptus, oil of gaultheria, thymol, menthol, benzoic and boric acids, alcohol and water. Other ingredients may be directed, but these are most frequent.

The eucalyptus odor and flavor predominate in this preparation, but it usually receives the least consideration.

The recent work on the Volatile Oils by Gilde-meister and Hoffmann describes 46 varieties of eucalyptus, all differing in odor and flavor. The oil most commonly employed is distilled from eucalyptus globulus, because it is rich in eucalyptol. The oil obtained from eucalyptus odorata is, however, nearly as rich in eucalyptol, but it has a sweeter odor and a softer flavor.

A second point is the quality of the benzoic acid employed. There are two varieties of this acid in the market. The most common is a synthetic acid made from toluol, and costing about 60 cents per pound. Another variety is natural benzoic acid, sublimed from benzoin. This is much softer in odor and flavor and is more soluble in water. It costs about 20 cents per ounce. It makes a notable difference in the preparation.

The formula which I would offer for the antiseptic solution is as follows:

Thymol	1.00 gm. or 1 dram
Oil of eucalyptus odorata	2.00 cc. or 2 drams
Oil of gaultheria	0.75 cc. or 40 minims
Oil of peppermint	0.20 cc. or 10 minims
Natural benzoic acid	8.00 gm. or 1 ounce
Fluid extract of baptisia	8.00 cc. or 1 ounce
Boric acid	24.00 gm. or 3 ounces
Alcohol	375.00 cc. or 3 pints
Water	675.00 cc. or 5 pints
Talcum	20.00 gm. or 2½ ounces

Dissolve the thymol, oils and benzoic acid in the alcohol, add the fluid extract and the talcum. Dissolve the boric acid in the water, preferably with heat.

*Paper read before the recent annual meeting of the Massachusetts Pharmaceutical Association.

and add to the alcoholic solution. (Heat favors the ripening of the preparation).

Allow to stand seven days, or better, a month, shaking occasionally, then cool to about 10° C. (50° F.), and filter. By cooling just before filtering the preparation is obtained in a condition to remain clear under usual changes in temperature. The preparation should be allowed to stand three months to ripen to get the best results, but may be used at once if desired. It will improve on standing.

The next preparation which I would submit will be called—

Glycerin Tonic Compound.

There are formulas galore in print, but all of them are disappointing because they are harsh in flavor and lack a certain limpid sweetness and ripe quality which is desirable. A little solution of saccharin, with a proper adjustment of the glycerin, will supply the former, and a little acetic ether will furnish the latter quality. A little acetic ether will be found to impart a ripeness and fruity flavor to many aromatic preparations of this character.

The formula which I would offer is as follows:

Taraxacum root, ground	30 grams
Gentian root, ground	20 grams
Sugar	150 grams
Spirit of orange, U. S. P.	10 cc
Tinct. Cardamom comp.	40 cc
Solution of saccharin N. F.	20 cc
Phosphoric acid (85%)	5 cc
Acetic ether	2.5 cc
Glycerin	400 cc
Sherry wine q. s. to make	1,000 cc

Moisten the mixed drugs with the spirit of orange and about 10 Cc. of wine, pack in a percolator, and cover the drugs with wine. When the fluid begins to drop, close the lower orifice of the percolator and allow to macerate 24 hours. Then percolate slowly (not exceeding one drop in four or five seconds) until 400 Cc. of percolate are obtained. In this dissolve the sugar, then add the other ingredients in order, and finally enough wine to make 1,000 Cc.

GASOLINE AS A VERMIFUGE.—D. V. Salmon Chief of the Bureau of Animal Industry, Washington, in a recent circular issued by the U. S. Department of Agriculture, states that gasoline has recently gained considerable reputation as a vermifuge. He has used it in a number of cases and has found the claims made for it to be more or less justified. Three objections, however, arise to its use, and he does not, therefore, consider it an ideal treatment. These objections are: (1) Not less than three doses, and usually four to six, are required to expel the worms. Its use involves a great expenditure of labor, and it is therefore impracticable on the large ranches. (2) While several doses are not necessarily injurious to the stock still, if the doses are large, repeated drenches cause a more or less severe congestion of the bowels. Not only that, but repeated handling of range sheep, with the necessary preliminary treatment of withholding food, is injurious to the animals. (3) If used on animals suffering from pleurisy, it is likely to be fatal. Nearly all vermifuges are, however, more or less poisonous in one way or another, and gasoline, if properly used, is not particularly dangerous. The necessity of repeating the dose from four to nine times in order to effect a complete cure will, however, militate against its general adoption. If gasoline is used, ammonia should always be kept on hand. If an animal is suddenly overcome by the effects of gasoline, a small amount (a teaspoonful or so) of aromatic spirits of ammonia may be given in water as a drench, to be repeated if necessary, and will usually result in the recovery of the patient.

The usual doses of gasoline for stomach worms are: Lambs, ¼ ounce; sheep, ½ ounce; calves, ½ ounce; yearling steers, 1 ounce. He has used these doses repeatedly without any serious effects. Each dose is mixed separately in linsed oil, sweet milk, flaxseed tea, or an egg, and given as a drench. If given directly in water, it is more severe on the patient.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Cheap Extract of Vanilla.

(A. H. E.) Many formulas for extract of vanilla have been published in the Era, several being given in the issue of February 28, of the present year, page 234. In reply to your question we would say that the only way you can make a cheap flavoring extract of vanilla is to reduce the strength of a strong preparation, employ inferior material, or strengthen a weak extract with tonka, or use a solution of vanillin. We give you several formulas, but we do not believe in preparations which are to be sold for something other than they are to be labeled.

Vanilla Tonka Extract.

Vanilla	1 ounce
Tonka	2 ounces
Alcohol, deodorized	32 fl. ounces
Syrup	3 fl. ounces

Cut and bruise the vanilla, afterward adding and bruising the tonka; macerate for fourteen days in 16 fl. ounces of the alcohol, with occasional agitation; pour off the clear liquid and set aside; pour the remaining alcohol on the magma, and heat by means of a water bath to about 77° C., in a closely covered vessel. Keep it at that temperature for two or three hours, then strain through flannel with slight pressure; mix the two portions of liquid and filter through felt. Lastly add the syrup. To render this tincture perfectly clear it may be treated with pulverized magnesium carbonate, using from 1/2 to 1 dram to each pint.

Artificial Vanilla Extract.

Vanillin	3 drams
Cumarin	1 dram
Water—enough to make	2 gallons
Glycerine	4 fl. ounces
Alcohol	32 fl. ounces
Caramel—about	2 drams

Condensed Milk.

(Druggist) We can give only an outline of the general process used in the manufacture of condensed milk. It is substantially as follows: On reaching the factory the milk is warmed for the first time in a water bath, and a second time in copper vessels, where the temperature reaches 80° C. It is then sweetened by adding sugar in the proportion of thirteen to one hundred in weight, the sugar being forced into vacuum pans by means of a pump. These vacuum pans are for condensing the milk, and are similar to those for condensing the beet root, having a double bottom and spiral coils, in which the steam circulates. The water contained in the milk is removed in the form of a vapor by means of a jet, which is connected with the top of the vacuum pan, and which is operated by means of a pneumatic pump. When the milk has been sufficiently condensed, it is removed from the vacuum pans and cooled in vessels placed in reservoirs of running cold water. The milk is then packed in tin boxes, cylindrical in shape and hermetically sealed, the box and contents weighing one pound, and is ready for shipment. In the preparation of condensed milk, it may be observed that the milk, as taken from the cow, has on the one hand simply been deprived of the water it contained, while on the other hand the only addition consists of sugar, which is designed to preserve the milk better. Milk thus "condensed" is claimed to contain all the elements

of the fresh milk, which has practically undergone no modification, the boiling of the milk under slight pressure having never passed 80° C.

Hair Oil.

(S. N. C.) As a rule there is very little sale for hair oils, these having been replaced by more elegant preparations, and particularly by hair tonics. Hair tonics, most of them, contain in addition to the cleansing and stimulant ingredients, more or less of oily material to restore that taken from the hair during the process of cleansing. However, for a "hair oil" we know of nothing better than pure cocoanut oil, to the use of which is attributed the fact that the inhabitants of certain tropical countries possess such luxuriant growths of hair and that baldness is never seen among them. Almost any non-drying fatty oil may be made the base of a good preparation, those usually employed being olive, castor, lard or benne. Olive oil is used in the finest articles, but is fully equalled by benne, lard oil being cheaper and not always agreeable. Castor oil has the advantage of being soluble in alcohol. For perfumes it is customary to directly infuse with flowers or aromatics or by adding essential oils which are freely dissolved. Sesame oil is a good basis for a hair oil, inasmuch as it is odorless and may be perfumed with very delicate perfumes, but carries the disadvantage of being insoluble in alcohol. Try this formula: 1 pint benne oil in which is dissolved 2 drams oil of bergamot, 15 minims oil of cassia, 5 minims oil of bitter almonds. If castor oil is used, use it in the proportion of 12 ozs. each of alcohol and any favorite handkerchief perfume. Color may be given to hair oil by using annatto for yellow by infusing in the oil before perfuming; red is imparted by alkanet root. In a castor oil and alcohol preparation anilin red is of service.

Solvent Wanted.

(A. M. F.) "How can I compound the following formula so as to make a clear solution, perfectly miscible with water, and preferably slightly acid when finished? What solvent shall I use and of what per cent. alcohol?"

Phenacetine	64 grains
Salol	32 grains
Caffeine citrate	32 grains
Acetanilid	80 grains
Tartaric acid	16 grains
Sodium bicarbonate	96 grains
Glycerine	4 drams
Spirit of lemon	3 drams
Solvent; enough to make 8 ounces.	

Most of the substances here named are comparatively insoluble in water, but quite readily soluble in alcohol (sodium bicarbonate and tartaric acid form sodium tartrate, which is insoluble in alcohol). Hence, though a clear solution be made with alcohol or diluted alcohol, only a limited amount of water can be added before the various substances are thrown down in their order of solubility. The reaction is not acid, however, as the tartaric acid is completely neutralized by the sodium bicarbonate, only about 18 grains of the latter salt being needed for this purpose. By reducing the quantity of the sodium bicarbonate or omitting it altogether, and using only enough tartaric acid to make the reaction slightly acid, you can make a fair solution of the remaining substance in simple elixir containing about twenty-five or thirty per cent. of alcohol. Upon the addition of much water, however, the phenacetine and acetanilid are thrown out of solution.

Cleansing Cream.

(C. H. R., Jr.)

Oleate of ammonia	2 ounces
Ammonia water	2 ounces
Ether	1 ounce
Benzine	5 ounces
Chloroform	1 ounce

Mix the ammonia water and oleate; shake well and add the ether; shake, and add 5 ounces of benzine; agitate thoroughly. Then add 1 ounce of chloroform shake well. Allow to stand a few minutes and shake

at intervals, when a mixture having the consistency of cream and showing but little tendency to separate will result.

Oleate of ammonia for the above may be prepared as follows:

Oleic acid	1 ounce
Spirit	1 ounce
Ammonia water	7 ounces
Distilled water to	16 ounces

Pour the acid into a bottle; mix the spirit and ammonia and pour into the bottle. Cork tightly, and allow to stand a week or more until saponification is complete.

We have published at various times formulas for cleansing fluids, pastes, etc., similar in composition to the above. Consult the indexes.

Menthol Pencils.

(L. J. K.) The Era Formulary gives this one:

(1) Cacao butter is melted on a water bath with three to four per cent. of pure wax, and the menthol is added to the somewhat cooled mass in the proportion prescribed by the physician—this amounting usually to three or four per cent. By suction it is collected in glass tubes of the required bore—from the thickness of a knitting needle to that of a lead pencil—which have previously been moistened with glycerine, and the tubes are then placed in cold water. After a short time the menthol pencils are removed from the tubes by means of wires or glass rods of suitable size.

(2) Menthol

Chloral hydrate	1 part
Cacao butter	1 part
Spermaceti	2 parts
.....	4 parts

Fuse the latter two together, add the first two, then the mixture can be moulded.

Removing Tattoo Marks.

(G. V.) In further reply to your query, this journal, August 1, 1901, page 131, W. B. Palamountain, San Francisco, Cal., writes: "I tried the plan credited to Dr. Variot two years ago, and, observing aseptic precautions, had excellent results with no suppuration, only a very faint scar, which is now indistinguishable, remaining." I also tried a common ink eraser consisting of tartaric acid and solution of chlorine from chlorinated lime, pricked it in with a set of needles and then applied a strong solution of silver nitrate. The ink was completely removed, but an elevated reddish scar resulted which has not disappeared. This process was more painful than the tannin method, because the chlorine excited a greater inflammation.

Ink Powder in Capsules.

(W. H. B.) Nigrosine or atramine may be employed for the ready preparation of black ink. The pigment in fine powder is simply enclosed in a gelatin capsule and instructions given to dissolve it in a suitable quantity of water to produce the shade desired.

The Era Formulary gives the following formula for an "ink extract," which may be put up in capsules:

Tannin	1 ounce
Dried sulphate of iron	3½ grams
Gum arabic	75 grains
Sugar	40 grains
Aniline, water-blue, I. B.	40 grains

Information Wanted.

(A. F. & S.) "Where can we obtain a price list of Ajon, the perfumer, of Paris? Has the firm an agency in this country?" Who can supply the information?

THE POWER IN PRICE TICKETS.

Window dressing is a subject of perennial interest to the retailer, even if it has been talked upon, written upon, and preached upon until it has been pumped dry of everything new it may have at one time possessed.

But there is one phase of the subject which does not receive its proper attention, and while the number of window dressing articles running through the columns of the trade press is legion, one rarely finds any mention of this one point—price tickets.

This is a subject on which a deal may be said, but

it may all be summed up in a comparatively few words, but as there are price tickets and price tickets, it may be well to look at the subject in all its lights.

Of course, it is a recognized fact that price tickets are a necessity, and while a shoe may be ever so invitingly displayed, if it does not tell the people on the other side of the glass just how much it costs, more than half of its power as a business bringer is lost.

Still, price tickets should be used with considerable judgment, for an otherwise extremely attractive display may be easily ruined if the proper kind of card is not used. They must not be too obtrusive, but at the same time must be sufficiently in evidence to insure their being seen plainly. It is a good plan to have the tickets harmonize in color with the general scheme of decoration.

Honesty in price tickets is one of the most important things to keep in mind. There may have been a time, perhaps, when a "marked down" ticket was swallowed by a gullible public and the legend "was \$2.08, now \$1.76" was taken with childish faith.

But all this is changed now. People are growing more cynical on this subject every day, for they have been taken in at odd times by this same scheme, and it behooves the retailer to keep in step with the times.

Of course, if you have a lot of goods you want to get rid of, have a reduction sale, but make a special feature of it. Here's where your newspaper advertising comes into play, for it is sure to bring people to your store if the inducements you hold out are strong enough.

This can be supplemented with a tastily drawn placard in the window where the marked-down goods are displayed, calling attention to the bargain. In that case a "marked-down" ticket might be used to good advantage, although it would be better to group the different kind of goods under a certain price, flat, for all in the group, irrespective of their former prices.

This subject naturally broadens into the question of getting rid of "storekeepers," of which every retailer collects more or less during the course of a year.

Some retailers are opposed to reduction sales, claiming that it hurts their regular trade. Maybe it does, and every dealer ought to have such an intimate knowledge of his trade that he can tell what will hurt it and what will do it good, and he naturally has to be governed by conditions.

To go back to the subject of window dressing, there is one point which it is well to bear in mind, and which a window dresser in a big department store in Philadelphia overlooked. Be on the lookout for accidental effects, for the most elaborately dressed window will lose much of its drawing power if there's something in it striking the observer as incongruous. (Shoe and Leather Facts.)

TRAPA NATANS (Water Nut). The fruit of the water-nut is extensively used as a food by the poorer classes in Servia, and also as swine fodder. The plant usually grows wherever there is standing water, from April to November. The nut has a hard shell of triangular appearance, provided with four sharp thorns. The white kernel is covered with a thin brown skin and including the skin has the following composition (Chem. Zeit.): water 37.19 and 39.71; nitrogenous substances 10.34 and 8.04; fat 0.71 and 0.80; carbohydrates 48.99 and 48.04; woody fibre 1.36 and 1.27; ash 1.41 and 1.24, and P₂O₅ and undetermined 0.56 per cent. The starch granules are, for the most part, elliptical and round, but there are also many irregular granules, some which resemble the nut itself in form. The nut is eaten either in the green or ripe condition.

DETECTION OF SALICYLIC ACID IN WINE.—Ferreira da Silva has pointed out that under some circumstances, ether, like petroleum spirit, will extract from wine a substance which gives the salicylic acid reaction, although not containing that acid. The substance in question is, however, insoluble in a mixture of equal volumes of ether and petroleum spirit. In using the method of Pellet-De Grohert, therefore, the ether should be replaced by such a mixture. (Jour. Soc. Chem. Ind.)

NEWS DEPARTMENT.

NEW YORK AND VICINITY.

WOMAN WOLKS CHANGE SWINDLE.

Several druggists on the West side in the vicinity of Hudson and King streets have been flim-flammed the past week by a woman, who is working the old change game. Making a small purchase, she tenders a large bill in payment. She picks up the change, but quickly finds that she has the amount of the purchase in change and does not care to be troubled with carrying a big roll of bills of small denomination. She asks for the bill she first gave offering to give back the change and the amount of the purchase. The courteous druggist usually complies with this simple request only to find that his cash does not come out right for the day's business. While she holds the change in her hand, the woman manages to tuck part of it away, and the druggist seldom counts the money when it is returned to him in exchange for the bill. One tradesman lost \$9, a second lost \$4 and a third is out \$5. The woman is short and undersized and always wears a veil.

Another one of her schemes which has worked successfully is a more simple process. The woman asks for change for a ten, gets two fives and claims that she discovered when she started to leave the store that she had received a five and a one. A more simple case of substitution.

DRUG CLERKS' CIRCLE.

The Board of Directors of the Drug Clerks' Circle held its midsummer meeting August 14 in order to get matters into shape for the regular meetings which begin the second Wednesday in November and will be held every following week at No. 235 East Broadway. The Circle is in a flourishing condition. The dues have been reduced one-half. The report of the director of the Employment bureau, Maurice Zeitlin, showed that of 137 positions reported open, the Circle bureau had filled 119, including seniors, juniors and reliefs. The present membership numbers 168.

Before the regular meetings begin in November, the directors will hold another special meeting to revise the constitution in such a manner as to make the Drug Clerks' Circle an organization that will have a voice in the election of the eastern member of the State Board of Pharmacy under the proposed new law, which gives the right of franchise to members of incorporated bodies of druggists. Especial provisions will be made under the revised constitution for the separate organization of juniors.

TRADE AND ASSOCIATIONS IN ATLANTA, GA.

R. S. Palmer, one of the leading druggists of Atlanta, Ga., was in the city last Friday engaged in buying for the fall and winter. Speaking of trade conditions and the general business tone of his section of the country, Mr. Palmer said:

"Business conditions are far better than they were last year at this time, in fact the trade pulse shows a healthier condition than we have seen for several years. Our local association is flourishing. We will send W. S. Elkins, Jr., President of the Georgia Pharmaceutical Association, to represent us at the N. A. R. D. Convention in Buffalo. Representatives from the G. Ph. A. will be George Case of Milledgeville, and Mr. Arrington of Rome.

"We are just beginning to realize the benefits of association of retailers, which were unknown in our section up to the past two years. We are at the present time involved in a suit with the Jacobs Pharmacy Company

cutters, the purpose of which is to test the constitutionality of a law which provides against combinations in any business for the purpose of setting, maintaining or controlling prices. We think that we can show the unconstitutionality of the law."

A MUCH PAINTED STORY.

Some of the daily papers printed a highly colored story last Thursday to the effect that druggist Chas. H. Pleasance, Worcester and West Houston streets, had denied assistance and shelter to a dying young man, Joseph Newark, who had cut the artery in his left wrist while working in a restaurant. A tourniquet had already been put in the wound when Newark was taken to the store. About the only thing to be done was to send for an ambulance or a surgeon. The druggist made the mistake of asking for \$2 in advance before he would send for a doctor. The ambulance was finally summoned and Newark was taken to St. Vincent's Hospital, not in a dying or serious condition, according to the attending physician, but only slightly weakened by the loss of blood. The druggist was severely criticized for his action in demanding a fee before he would send for a doctor. His excuse is that he has been beaten a number of times when he has summoned doctors for emergency cases. He claims that all had been done that he himself could do and that the only thing to be done under the circumstances was to summon an ambulance as he did.

ART COMMITTEE FOR DRUG CLUB.

The Board of Directors of the Drug Trade Club held a short meeting on August 21. President J. L. Hopkins presided. The meeting was called primarily for the purpose of taking measures for the care of the large number of valuable paintings on the walls of the club rooms. Heretofore, the greater part of the work of this kind has been done by President Hopkins. The board took action in Wednesday's meeting empowering him to appoint an art committee from the members of the board. This committee has not as yet been announced. As the duties which will devolve upon it are many and important Mr. Hopkins is very desirous of selecting men who are known to be enthusiasts in the direction of art. From a very modest beginning, the collection has grown to a splendid gallery, being valued at over \$60,000.

A NEW SARATOGA GEYSER.

A new geyser, surpassing in volume and strength of flow any of those at Saratoga Springs has been discovered on the property of the Saratoga Carlsbad Spring Company. The natural flow of the new spring is claimed to be 18,000 gallons daily, the water containing over 2,000 pounds of salts. The boring is 420 feet in depth and the water rises to a height of 40 feet above the surface, being impelled by a 32-pound natural gas pressure. Plans are on foot for the building of a sanitarium and luxurious bath house near the new geyser.

CANADIAN PROPRIETORS' CONVENTION.

The delegates of the Proprietary Association of America, appointed by President E. C. DeWitt, to attend the convention of the Proprietary Articles Trade Association of Canada, which was held in Montreal on Thursday and Friday left for the north August 21. The representatives are H. B. Harding of the Humphreys' Homeopathic Medicine Co., T. L. Leeming, Jr., of the Henri Nestle's Co., and Brent Good of The Carter Medicine Co.

N. Y. S. P. A. COMMITTEES.

Thos Stoddard, president of the New York State Pharmaceutical Association, has appointed the following committees:

COMMITTEE ON LEGISLATION.—Thomas Stoddard, Buffalo, Chairman; W. H. Rogers, Middletown; William Muir, Brooklyn; Felix Hirseman, New York; Gustavus Michealis, Albany; William Muench, Syracuse; S. V. B. Swann, New York.

COMMITTEE ON TRANSPORTATION.—George Reimann, Buffalo, Chairman; Clay W. Holmes, Elmira; M. R. Mandelbaum, New York; Albert Firmin, New York; R. J. Strassenburgh, Rochester; Rufus E. Smith, Syracuse; Henry B. Lawrence, Poughkeepsie; Charles F. Brown, Corning; H. P. Monroe, Dunkirk.

COMMITTEE ON PHARMACY AND QUERIES.—Frederick P. Tuthill, New York, Chairman; Willis G. Gregory, Buffalo; Albert H. Brundage, Brooklyn.

COMMITTEE ON NEW REMEDIES.—Thomas J. Keenan, New York, Chairman; R. G. Eccles, Brooklyn; George C. Dickman, New York.

COMMITTEE ON ADULTERATIONS.—William C. Anderson, Brooklyn, Chairman; Harry B. Ferguson, New York; R. K. Smither, Buffalo.

COMMITTEE ON COMMERCIAL INTERESTS.—Clark Z. Otis, Binghamton, Chairman; George Hahn, Rochester; Julius Hammer, New York.

DELEGATES TO National Wholesale Druggists' Association.—George J. Sealy, New York, Chairman; S. H. Carragan, Brooklyn; Charles W. Parsons, New York; W. J. Walker, Albany; Charles B. Hubbard, Syracuse.

DELEGATES TO National Association of Retail Druggists.—Thomas Stoddard, Buffalo, Chairman; William Muir, Brooklyn; Judson B. Todd, Ithaca; Thomas W. Dalton, Syracuse; Felix Hirseman, New York.

GINSENG CROP BLIGHTED.

Word has been received from Texas County, Missouri, by a local jobber to the effect that the disastrous drouth, which blighted the grain crops of the Middle West, played havoc with the ginseng crop in that section of the country, where almost half of the ginseng in the United States is produced. Not only have the plants withered under the scorching sun and hot winds but seed has been almost wholly destroyed. The loss on one farm, the Millard estate, is estimated at \$15,000 or \$20,000. This is by far the largest farm of the kind in the country. Ginseng seed, which are now worth five cents apiece according to the report from Missouri cannot be found in the Western market in quantities sufficient to insure a crop next year even with favorable weather conditions.

NOTES.

—A number of proprietors and manufacturers recently received a strike order, "calling them out to the centennial outing of the Premiers of the Amalgamated Confederation of Blood Purifiers and Liver Invigorators, Friday, August 16". Among those who received the order were "Grand Marshal" F. L. Perrine, of Hall & Ruckel; "Commander-in-Chief" E. G. Wells, of Pepto-Mangan; "General" Clarence G. Stone, Manager Mellins' Food; "Charge d' Affairs" H. B. Harding, of Humphreys' Homeopathic Medicine Company; "Director" Joseph Leeming, of Nestles' Food; "Boss" Herbert Turrell, of Parke, Davis & Co., and "Admiral" A. Cressy Morrison. The unique invitation was gotten up by G. H. Risley president of the National Remedy Company, who entertained the strikers in royal style at his country home "The Wigwag" at Manasquan, N. J., with a luncheon and musical program.

—A committee of forty chemists, including some of the most famous names in the scientific world, has set a movement on foot to present M. Berthelot, the great French chemist, with a handsome medal in token of their admiration for his untiring and brilliant labors, extending over a period of half a century. Subscriptions of from one to five dollars are asked of all those interested in the movement. The American members of the committee are C. F. Chandler of Columbia University, this city and Ira Remsen of Johns Hopkins University, Baltimore. M. Berthelot was made one of the forty "immortals" of the French Academy of Sciences last May.

—Lehn & Fink have secured the services of E. H. Powell, who formerly traveled for the Requa Manufacturing Company. W. W. Creswell has returned to Texas after a stay of ten days at the home office. Wellington Bond, the firm's eastern Pennsylvania representative was in the city last Thursday. R. R. Lampa has returned from his vacation and F. Ehrman, Jr., has gone to the Catskills for an outing.

—The Committee of Arrangements for the jubilee anniversary of the New York Deutscher Apotheker-Verein has begun preparations for the big celebration to be held October 1st to the 3rd. The program of speakers and toasts at the banquet on the 1st and that for the "Kommers" on the 3rd will shortly be ready for publication.

—A new corporation is the United States Army and Navy Tablet Company of this city. The capital is \$300,000 and the directors are: Abraham Meyers, Chas. Meyers and William E. Hardt of New York City. The company is designated as a manufacturer of patent medicines and chemicals.

—Advance registration at the New York College of Pharmacy indicates that the incoming classes will be much larger than those of last year. The laboratory and apparatus are being put into condition and furnished for the opening of the college year next month.

—At a meeting of the executive committee of the Jersey City Druggists' Association, held last week it was decided to send a delegate to the Buffalo Convention. The first regular meeting of the association was set for the second Tuesday in September.

—W. J. Lanterman, who has been with Dr. W. H. Kneivitt of Rutherford, N. J., has resigned his place to accept a position as traveling salesman with John Wyeth & Bro. of Philadelphia. He will cover Central Ohio, his headquarters being at Springfield.

—P. C. Candidus of Mobile, Ala., has been in the city laying in a stock of goods for a large retail store which he will open in Mobile this fall. Mr. Candidus retired from business only a short time ago. He is a member of the Alabama Board of Pharmacy.

—A new corporation is the Bergen County Pharmacal Company at Rutherford, N. J. The company will begin business about Oct. 1 under the management of F. A. Schradley who was formerly with C. O. Bigelow of New York.

—Among well-known Southern druggists who were seen in the drug section this week were J. W. Hollan of Troy, Ala.; J. N. Knight and W. T. Knight of Knight's Pharmacy, Savannah, Ga., and Dr. E. B. Norton of Birmingham, Ala.

—Dr. John B. Wood and Frank Scott, both prominent in the drug business in Kansas City are visiting in New York. They were the guests of W. B. Kaufman of Parke, Davis & Co. at the Drug Club last Thursday.

—R. W. Robinson & Son, wholesale druggists, 224 Fulton street, have been working with a short force the past week, losing no less than seven men as a result of sickness, injuries and vacations.

—The Manhattan Pharmaceutical Association has issued a neat pamphlet, containing the articles of incorporation, the constitution, officers, committees and a list of members, who are in good standing.

—Dr. J. W. Wainwright, with Viotor Koelch & Co., No. 122 Hudson street, has returned from a vacation of two weeks, spent at Block Island, Newport, Narragansett Pier and other resorts.

—John S. Wells, druggist and dealer in fancy goods at Danville, Ky., is spending his vacation in New York getting a line on the markets with a view to buying for the fall and winter.

—Joseph Well of Well & Ryder, dealers in drug sundries, Kansas City, Mo., was in the city several days last week. He is making a business trip through the East and South.

—Among out-of-town druggists who have been in the drug section the past week were C. Kervan of White Plains, N. Y. and F. A. Leeman of Perth Amboy, N. J.

—M. J. Breitenbach, of the Pepto-Mangan Company, No. 53 Warren street, has returned from a three week's outing and fishing trip at Thousand Islands and in Canada. He says that the sport was splendid and bronzed face and arms show how much he enjoyed his vacation.

—W. M. Colwell, of the Osborn-Colwell Company, No. 46 Cliff street, left on Monday for a trip West in the interests of the firm. Prof. I. V. S. Stanislaus, with the same company, spent three days at the Pan-American last week.

—M. R. Thurlow, local salesman of Fox, Fultz & Co., who with his wife has been spending a three weeks' vacation at Cutler, Me., has returned to resume work.

—George M. Dorrance, No. 221 Fulton street, left on Monday for a business trip to Boston, calling on the trade in the New England territory.

—Frank P. Healey, a Hartford, Conn., druggist, has filed a petition in bankruptcy. His liabilities are \$2,173.96 while his assets schedule at \$372.71.

—Gustav Pfingsten, No. 12 Pearl street, has been chosen toastmaster for the banquet of the Deutscher Apotheker-Verein in the jubilee celebration.

—B. Mishking, pharmacist, of No. 56 Jefferson street, left for Saratoga with his wife and two children to enjoy a vacation until September.

—William Allen, with the Morrisson-Plummer Company, of Chicago, is spending his vacation in the East. He was in the city August 24.

—Joseph Mathias, manager for James B. Horner, No. 3 Platt street has left on a fishing trip into Canada. He will be gone two weeks.

—Eleven new members have been elected to membership in the Drug Trade Club. This leaves but about seven on the waiting list.

—Major James B. Horner, who has been traveling in Canada, the Northwest territory and on the Pacific Coast returned August 20.

—Col. E. W. Fitch of Parke, Davis & Co. is away on his annual two weeks' vacation, which he is spending at Digby, Nova Scotia.

—Mr. Brandruff of Brandruff & Hedges, a retail druggist at Piqua, Ohio, has been in the city for several days laying in a fall stock.

—H. A. Cassaber, a pharmacist at Seventy-second street and Columbus avenue, is renovating, painting and refitting his store.

—A new homeopathic pharmacy will be opened at an early date at No. 634 Columbus avenue by Messrs. Boerliche and Tafel.

—Isaac V. S. Hillier, secretary and treasurer of the R. Hillier Son Co., has returned much benefited by his two weeks' outing.

—P. A. Roby, of the Evergreen Chemical Company, 130 Fulton street, has returned from a business trip through Pennsylvania.

—E. Sher, who formerly kept a store at Attorney and Delancey streets has removed to Ninety-ninth street and Park avenue.

—H. P. Grimm, a prominent pharmacist of Aurora, Ill., has been in the city the past week laying in a fall and winter stock.

—Alex J. Silverman, Brook avenue and 147th street is away on three weeks' outing at Morristown, N. J.

—I. P. Stanton, a New Orleans pharmacist, is in the city with a view to buying fall and holiday stock.

—Max Weil, with W. L. Strauss & Co., left on the 21st for an eastern trip to Boston and Portland, Me.

—S. H. Carragan of Parke, Davis & Co., spent several days in Rochester last week for the company.

—Benjamin Halpin, president of the Drug Clerks' Circle is spending his vacation in the Catskills.

—H. N. Clarke, a leading pharmacist of Cornwall, N. Y., was a guest at the Drug Club on Saturday.

—John Molloy, with McKesson & Robbins, is enjoying a vacation at Sayville, L. I.

—O. M. Reid, with McKesson & Robbins, is back from his vacation of two weeks.

PROGRAM FOR N. W. D. A. CONVENTION.

The Committee on Arrangements and Entertainment for the convention of the National Wholesale Druggists' Association at Old Point Comfort has made a report embodying the program for the meeting and providing for the care and entertainment of the large number of delegates and friends, who are expected to be present. Headquarters have been established at the Hotel Chamberlain, which will be given up to the accommodation of the N. W. D. A. and its friends. The committee suggests that it is desirable to engage quarters in advance. This can be done by addressing Chamberlain Hotel, Old Point Comfort, Va.

The ladies' division of this committee has been especially active. A large attendance of ladies is assured for this meeting and the committee has made an effort to provide for them one continual round of pleasure. Every member in attendance is urged to bring one or more ladies in order to make use of the entertainments that have been prepared for the occasion. Among the most interesting of these will be the trip on the James River, passing over the historic waters of Hampton Roads and viewing many points of great interest in the history of the country. The site of Jamestown, the first permanent English settlement in North America, and the place of establishment of the first "Apothecary" will be visited. These points of historic interest will be pointed out and commented on through a megaphone.

The official program for the meeting is as follows:

Tuesday, October 15.—First session, 10:30 a. m.; Afternoon, second session, 2:30 p. m.; Dress Parade, Fortress Monroe, 5 p. m.; Evening, President's Reception, 9 p. m., and hop, Chamberlain Hotel.

Wednesday, October 16.—Third session, 10 a. m.; Afternoon, Trolley Ride, 3 p. m., visiting Soldiers' Home, Normal School at Hampton and St. John's Church; Evening, entertainment at hotel by PoK Miller, cakewalk, etc.

Thursday, October 17.—Fourth session, 10 a. m.; Afternoon, fifth session, 3 p. m.; Evening, Banquet at hotel, 7 p. m., to which ladies are invited to be present.

Friday, October 18—9 a. m. sharp, trip up James River on steamer "Pocohontas" to Jamestown.

A Profitable Line of Cigars.

It will pay all druggists who carry cigars and who wish to increase their business in this line to take advantage of Chas. Jacobs & Co.'s special offer on another page of this week's Era. Already a great many druggists in all parts of the country are handling these goods, and many have written strong letters to Chas. Jacobs & Co. endorsing their Havana specials and other brands of cigars as possessing quick-selling and customer-satisfying qualities. Some of these letters have been published in recent issues of the Era. Druggists who carry Jacobs' brands of cigars find that they are business-bringers and that they afford a sure means of increasing the profits of this department of any drug business. The manufacturers will ship any amount to suit the convenience of the retailer and pay express on first shipment. Further, they ship all goods on approval, to be returned to them at their expense if not found positively the best ever sold at so low a price. Any responsible dealer who will write for them will receive free samples of these goods. Address Chas. Jacobs & Co., 353 E. Seventy-eighth street, New York.

Carter's Smartweed Co.

The Brown Medicine Co., of Erie, Pa., the proprietors of Carter's Ext. Smart Weed and Carter's K. & B. Tea, have changed their name to Carter's Smart Weed Co. The object of the change is to more thoroughly identify its corporate name with its principal article of manufacture. A generous appropriation has been set aside to advertise and extend the sale of Carter's Ext. Smart Weed and Carter's K. & B. Tea. The company proposes to boom these two medicines.

—The "German Homeopathic Pharmacopoeia" is the title of a recent publication by the Apotheker-Verein of Germany. Its object is to bring about a uniform practice of homeopathic pharmacy. It is compiled in the style of the German Pharmacopoeia.

IN AND ABOUT BOSTON.

ADVERTISING THAT HAS PAID A PHARMACY

Boston, Aug. 24.—Some weeks ago the Columbia Company, in Munroe street, Lynn, (formerly the Walker-Rintels Company's pharmacy in that city) placed a fine new bicycle in its principal show window and set the wheels a-going. They were to run so many hours a day for a certain number of days, in all several weeks, and purchasers of even the smallest things at the pharmacy were given the privilege of guessing the number of miles which the revolving of the wheels should register. The person fortunate enough to come the nearest to the correct number was to receive a fine reward. The wheel has just been brought to a stop, and the registration proved that 6,711 and 3-10 miles were recorded. The fortunate winner of the reward is a man named Fred G. Glines, who made a guess of 6,711 miles. He had more than 200 guesses and had registered one of 6,710 and another of 6,712 miles. Mr. Glines worked on a system of his own, so he says, and the correctness of this was proved by his success. He also turned in the largest number of purchase checks of any customer. He was given an order for tickets to the Pan-American Exposition at Buffalo and return, and \$25 in gold. He likewise receives a new bicycle. The clerks in the store had no small work in going over and assorting the 60,000 guesses which were registered. It all has proved an excellent drawing card for trade at the pharmacy.

TRADE SEASONABLE AND WITHOUT FEATURE.

Boston, Aug. 24.—While no one is found to be grumbling in the least because of lack of active trade this week, several have said in effect that they could do more and not get tired. It has been a time of only fair, seasonable business, but there is sure to be a change soon, when the early part of September will bring back to Boston and surrounding places large numbers of families, at about the time that schools open for their fall terms. Till then, as one leading man sized up the situation, there will be only moderate business. No special life marks the week, as applied to the general list of drugs and chemicals, and these are without any notable feature, unless the lower rate on cocaine be looked at in that light. For this season of the summer time the sales of chemicals are felt to be rather satisfactory. A fair amount of trading goes on in dyestuffs and tanning materials with lack of real activity and without changes of prices of any moment. Alcohols are in a bit better demand than they were a short time ago, especially grain.

PHARMACY CHANGES OWNERSHIP.

Boston, Aug. 24.—After a long and honorable existence of more than two score years, the Garland Pharmacy at Gardner passes into new ownership. The store, which is situated at the corner of Pleasant and Parker streets in that town, has been bought from Dr. Guy W. Garland by Dr. George B. Underwood and Roy D. Judd. The store will continue to be known as the Garland Pharmacy. Exactly the same force of clerks will remain in service under the new owners. The business will be managed by Mr. Judd, who has been the manager for Dr. Garland for some time. The Garland Pharmacy is one of the oldest of its kind in this section of Massachusetts, being established April 1, 1850, by Dr. R. F. Andrews. Dr. Garland, the retiring owner, purchased the property in 1872. He will devote the remainder of his life to his property interests in Gardner.

NOTES.

—Just as Frank L. Wiswell, a clerk at the Choate drug store under the Revere House, Bowdoin Square, was about to close that place at midnight, on Monday of this week, a man entered and complained that he was suffering from cramps in the stomach. He fully described his ailment to the clerk and asked for something to relieve his pain. Mr. Wiswell sized up the man's conditions and decided that a dose of ipecac ought to benefit him. This was given the stranger, who thereupon went out upon the sidewalk, where he had an ill turn afterward falling

unconscious in the street. He was taken to the station house nearby, where he died almost immediately. The physician who was summoned stated that death was due to heart failure.

—The stock and fixtures of Willcomb's Pharmacy, on Harvard street, near the Village Square, Brookline, have been sold by auction. The Brookline National Bank, which long has occupied the adjoining place in the same block finds need for the premises occupied by the pharmacy, and therefore has leased the store to enlarge the bank's quarters. Samuel Siskind, now having a drug store at 1277 Tremont street, this city, formerly conducted the Brookline Pharmacy, after which it was closed for a time, when Mr. Siskind moved into town, and later was opened by Mr. Willcomb.

—Among the cases soon to come up in the Superior Court at Fitchburg is that of Loren B. Walker of Clinton, who as superintendent of streets, was fined \$15 in the district court in that town (and appealed) for removing from its position over the door of H. B. Merchant Co.'s drug store in Clinton a large mortar which it had been the custom to light at night with many small electric lights. It was claimed by the defendant, Superintendent Walker, that the mortar came under the head of "signs obstructing or overhanging public sidewalks."

—Extensive repairs and renovations are under way at William D. Wheeler's pharmacy at the corner of Massachusetts avenue and Beacon street, in the Back Bay section of this city. The front of the store is undergoing a change in appearance, with fine large show windows put in and with an elaborate, ornate doorway. When entirely completed, the improvements will make the pharmacy one of the finest in Boston.

—Some changes are being made in the Boston Emergency Hospital, whereby the main operating room is removed to a larger place and the former operating room is now converted into two medical rooms for the use of physicians and surgeons. The pharmacy department is much bettered by these changes and will now be convenient in every way.

—Hugh R. Gray, one of the druggists in the South Boston district where he has a pharmacy in West Fourth street and an interest in still another store in West Broadway, while at Nantasket Beach recently, rescued from drowning a woman weighing fully two hundred pounds. He modestly disclaimed any special credit for what he had done.

—Z. W. Sturtevant, who has been connected with C. I. Hood & Co. for many years, has left that company and with Frederick Conant and C. W. Trombly has started a new corporation in Lowell, Mass., under the name of "The Zopher Company," which will engage in a wholesale, retail and manufacturing business.

—Thomas M. Pengilly, who for a long time had a drug store at 2821 Washington street, in the Roxbury district, has removed from there to a new location a little further along in the same thoroughfare, at the corner of Marcella street, which is a much more advantageous location for the drug business.

—Frank Broad, one of the popular druggists of Lynn, unfortunately continues to remain ill at his home in that city. It is many weeks, now, since Mr. Broad's illness first began. He is receiving much sympathy from members of the trade, traveling men and others who know him.

—Joseph Joyce, who has been a clerk in Donovan's pharmacy in Lawrence, has given up his position at that place to join the United States Cavalry and already he has left for Texas, on the frontier of which he has been assigned to duty.

—W. C. Merriam has taken a position at Pero's drug store at Indian Orchard, where he succeeds Charles W. Penney, who resigned and who now is enjoying a vacation at his home in Mill River.

—While riding her bicycle recently, Bessie Adams, the little daughter of C. M. Adams, a druggist at West Medway, fell off and broke her collar bone.

—Ralph Newton is a new clerk at the pharmacy of E. M. Ellis, at Stockbridge. He comes from Gardner.

PHILADELPHIA.

SATISFACTORY TRADE CONDITIONS.

Philadelphia, Aug. 24.—The "midsummer dullness" is still with us and business continues quiet and steady. There has been a slight epidemic of colds somewhat resembling influenza in symptoms, for which a good sale of quinine and similar popular remedies has been made during the week. Soda water continues to maintain its reputation as the best single stand-by of the summer, while "sundries" keep in good demand. Prescriptions averaged higher this week than for a month past, mostly for bowel and summer complaints. Residents of certain sections of the city are just now being tormented with a plague of fleas, the small, black "sand fleas," which have swarmed over blocks at a time and have made life miserable for the unfortunate dwellers therein, breeding in carpets and rugs and defying all ordinary means of extermination. Consequently, the sales of insect powders and insecticides have been larger throughout the city than for many years and druggists are reaping good profit.

Having nothing else in particular to do, a canvass of the city was made recently by the Era representative here, in order to get some pointers as to the general state of business, representative druggists of each section being asked for an opinion on the subject. Much to his surprise, the investigator found that there was a very general verdict that trade was better this summer than for several seasons past, this in spite of the increasing exodus of summer tourists from the city. While things have been rather quiet, the average daily sales have yielded a fair profit, trade holding steady and constant in volume and sufficient to keep most retailers fairly busy, and this trade has been mostly in such lines as pay well. This is not saying, though, that everybody has been busy this summer, for there are a number of stores in localities where there is a general exodus of dwellers to summer resorts from June to September, and here business has been pretty dull, indeed, almost every store feels the loss of steady customers, but even such stores have done a better business than usual. Taking it all in all, Philadelphia druggists have reason to be grateful for the better conditions now prevailing and for the bright outlook for the future. Another discovery made in this canvass was that there is more harmony, good feeling and willingness to work together displayed by the retail druggists of this city than has ever been the case—for which good condition the P. A. R. D. deserves wholly the credit.

A CHANCE FOR CHEMISTS.

Philadelphia, Aug. 24.—The recent disastrous oil fire at Point Freze has set the minds of many to speculating as to the possibility of discovering some preventive of such conflagrations in the future, and it is said on excellent authority that the Standard Oil Company will pay well for any device that will be effective and not too expensive. The problem, as put by a prominent chemist here, is to find some substance, liquid or solid, that is lighter than benzine, naphtha or coal oil, and which is non-combustible in itself and will not decompose so as to support combustion. Such a substance could be kept in a layer a foot or so in depth floating on the oil or benzine, thereby keeping it from contact with the oxygen of the air, and if the oil should become inflamed by any possible chance the fire would be at once smothered. It would be almost impossible for a tank of oil to be set on fire if such a preventive was in use. In such a vast conflagration of oil as this fire all ordinary means for controlling it are worthless, the only thing possible is to let the oil burn itself out and meanwhile keep as much surrounding property as possible from catching fire from the heat. Bearing in mind the well-known efficacy of carbonated water in extinguishing fire, it would seem that here is a chance for the druggist to get up some device for supplying a sufficient quantity of highly charged water to smother an oil fire in its incipency; if any one can solve the problem the trials of the retail drug store need trouble him no more—there's a fortune in it.

DEATH OF A WELL-KNOWN DOWN TOWN DRUGGIST.

Philadelphia, Aug. 24.—E. J. Finnerty, Jr., a well known down town druggist, located at Eighteenth and McKean streets, died on Wednesday last of typhoid pneumonia, after a short illness of only a week. The death was a shock to a wide circle of friends, for Mr. Finnerty was quite prominent in local political, religious and beneficial society circles. He was a member of several organizations and a leading member of the local Democratic party; he was also an active member of the Philadelphia Association of Retail Druggists, being a member of the Executive Committee until recently, when he was compelled to resign on account of ill health. Mr. Finnerty had been in business in the neighborhood of Eighteenth and McKean streets for about seven years, previous to this time he was manager of Nebecker's Pharmacy, at Twelfth and Ellsworth streets. He was born in England thirty-nine years ago, and came to this country when quite young. He leaves a family of a wife and six children. The funeral took place this morning, interment being in Holy Cross Cemetery, representatives of the P. A. R. D. and other organizations being in attendance.

NOTES.

—Quite a tempest in a teapot is going on in Ambler over the question of electric lighting of the town. Dr. Richard Mattison, whose plant is located there, is owner of the electric light works and has refused to furnish lighting to the town at the price the borough members of council think should be enough, so there is a deadlock over the question while the residents go about in the dark at night time. Small politics is playing a big part in the squabble, there being a faction opposing Dr. Mattison, in spite of the fact that the works of Keasbey & Mattison have made Ambler what it is and gives employment to a large part of its population, and that it is due to the doctor that the pretty little town has become such a flourishing suburb.

—J. C. Perry, chairman of the Executive Committee, P. A. R. D., has just returned from a short trip to Ocean City with a stock of choice "fish stories" for his friends. A jolly party of Philadelphia druggists were out up the Inlet Tuesday, and it is said that they had almost as good luck getting fish as they have in persuading retailers to "come into the fold" and help out the N. A. R. D. The luckiest in the party were Messrs. Perry, F. W. E. and L. S. A. Stedem, H. J. Morse, Chas. Leedom, W. W. Chalfant, D. J. Thomas (of Scranton), and Mr. Small, an Indiana druggist.

—Dr. A. S. Erney, for some time located at Sixteenth and Ritzer streets, has sold his branch store at Twenty-first and Reed streets to H. M. Ueberroth, of Bethlehem, who took possession this week. The store is one of the neatest and prettiest of down-town stores, and is in a good location.

—Thomas Russell, a chemist in the employ of Powers & Weightman, was overcome by sulphuretted hydrogen in one of their laboratories at Ninth and Brown streets last Wednesday. He was found unconscious by a workman, and was taken to the hospital at once, where he was soon revived.

—A jolly party of local druggists was taken down to Delaware for a sail recently by J. Roffetts, one of G. D. Feldt's city salesmen, the trip taking in the river as far down as Chester. Among the party were Messrs. C. W. Shull, W. L. Cliffe, H. J. Siegfried, Chas. Refuss and several physicians from the northeastern section of the city.

—Among local druggists who have signified their intention of attending the convention of the American Pharmaceutical Association at St. Louis are Prof. C. E. Lowe, Messrs. W. L. Cliffe and Stedem and probably Dr. C. A. Weldermann also. Prof. Lowe will be chairman of the delegation representing the P. A. R. D.

—D. E. Bransome, city representative of Johnson & Johnson, the manufacturers of surgical dressings, is off for his vacation, and there has been an exodus of fish to the depths of the sea to escape his rod and line. Mr. Bransome holds the record for sea bass up to date.

—A. C. Smith, of the Miller Drug Company, has taken a cottage for his family for the summer at Sea Isle City and manages to spare considerable time away from business at this pleasant resort.

—Alfred D. Evans, a well known Connelleville druggist, committed suicide last Tuesday with cocaine. Business worries are supposed to have been the cause of the unhappy man's act.

—Howard B. French, of Smith, Kline & French Company, and family, have left for a visit to Canada after a short stay at Buffalo, to take in the Pan-American Exposition.

—J. L. Smart is soon to open a drug store at Twentieth and Wharton streets, which will be fitted up in modern style with handsome fixtures and a fine soda fountain.

—Wm. P. Bender, who has been located at Eighteenth and Morris streets for some time, is spending a vacation week at Ocean City, N. J.

—Mr. Massaur, head clerk at Keenan's Fifteenth and Ritner streets store, has just returned from a vacation trip to the seashore.

—Mr. Ross, city salesman for Geo. D. Feldt, is spending his vacation at Cochransville, a village in the mountain section.

BALTIMORE.

TRADE LESS ACTIVE.

Baltimore, Aug. 26.—The past week has not been characterized by exceptional activity. In fact, the volume of transactions showed an appreciable reduction, especially with respect to the local dealings of the jobbers. The manufacturers were kept fairly busy in the laboratories, but the selling departments were by no means rushed. The movement up to date, however, is far ahead of last year and the total for 1901 will from present indications be found to constitute a new record. The feature of the market for botanicals is the remarkable drop in the price of prickly ash berries, which has gone down from \$2 to 40 cents per pound. Other staple articles are either stationary or advancing. This latter observation applies to oil of sassafras and nearly all the other essential oils. Whether prickly ash will reach previous figures depends entirely upon the condition and volume of this year's crop. The gathering time is now about over and dealers will soon know where they stand. If the offerings happen to be smaller than has been anticipated a rise will shortly take place. In fact, the present figures are not likely to be maintained long, being abnormally low. The movement of heavy chemicals continues to be about normal, and there is an absence of special developments in the retail trade.

A Druggist's Travels.

Baltimore, Aug. 24.—Among the visiting druggists in Baltimore this week was A. C. Taylor, of Elliecott City, who has just returned from an extensive trip to Nova Scotia. Mr. Taylor was induced to travel by the precarious state of his health. He had been ill for some time and grave fears were entertained for his recovery, when he decided to try the benefits of a more bracing climate and new scenes. The results justified every expectation. Mr. Taylor, during his stay in Northern latitudes, not only shook off the debilitating effects of the malady which had afflicted him, but regained his old-time vigor. When he presented himself in Baltimore after his return his robust appearance occasioned general surprise, and he was commonly pronounced a most convincing demonstration of the healthfulness of Nova Scotia's weather.

MARYLAND COLLEGE OF PHARMACY.

Baltimore, Aug. 24.—The several halls and lecture rooms of the Maryland College of Pharmacy on Alsiquith street are undergoing a thorough renovation preparatory to the commencement of the fall and winter work. Painters and decorators are busy to give the interior of the building an attractive appearance, and the laboratory equipment will also be amplified. The fall examinations for admission to the senior class will be held on September 26 and 27, while September 25 will be devoted to the examination of candidates for matriculation. October 1

is fixed as the date for the beginning of lectures, the senior preparatory class getting to work on the following day, while the studies in the junior pharmacy laboratory will not be under way until two days later. From present indications the classes will be the largest in the history of the institution.

NOTES.

—Among the out-of-town druggists here last week were Charles Franzoni, of Z. D. Gilmore, Washington; Dr. Thomas H. Williams, of Cambridge, Md.; Charles H. S. Henry, of Cambridge, Md.; J. N. Simonson, of Crisfield, Md.; Capt. Thomas G. Forwood, Belair, Md.; A. H. Melhorn, Hanover, Pa.; W. E. Snelling, Norfolk, Va.; Mr. Anders, of the L. H. Dillman Drug Company, New Windsor, Md.

—George L. Muth, senior member of the wholesale drug firm of Muth Bros. & Co., East Fayette street, has been traveling in the West with several relatives since the early part of this month. He has now arrived at the Pan-American Exposition and reports that he is having a good time. His return is looked for this week.

—A small fire occurred on the morning of the 21st inst. on the first floor of 316 Dover street, one of the manufacturing buildings of Sharp & Dohme. The fire was discovered by William A. Herman, the watchman, who turned in an alarm, the flames being extinguished before they had assumed destructive proportions.

—After an interval of two months the Wedgewood Club will resume its monthly social sessions with a dinner at Electric Park this evening. The members will attend the variety performance at the park and afterward enjoy a feast. J. S. Parr will act as president and Owen C. Smith as secretary pro tem.

—Mr. Schwarzenbach, until recently clerk in the drug store of M. B. Blum, Madison avenue and Wilson street, has gone with druggist Stewart, at the corner of Hanover and Camden streets.

—John P. Sullivan, a retail druggist at the northeast corner of Carey and Mulberry streets, is off on a vacation trip to Atlantic City, the first he has taken for a number of years.

—Nicholas Hess, for some time past in the employ of druggist N. T. Lang, Fulton and Frederick avenues, has accepted a position in the store of J. F. C. Klepper.

—Among the members of the Old Town Merchants who went on a trip to Buffalo was Gus Woltrack, a popular retail druggist of that part of the city.

—J. R. Cullen, who sold his drug store at Catonsville some time ago to W. E. Piquett, has bought it back and will continue the business.

—The American Artificial Leg Company of Baltimore has been incorporated at Dover, Del., with a capital stock of \$100,000.

—William J. B. Duncan, a druggist of Alexandria, Va., was married on the 15th inst. to Miss Georgia Idensen of Washington.

—A. M. Tumbleson, a retail pharmacist at the corner of Biddle and Eden streets, has been quite ill, but is now on the mend.

—Joseph Graham has resigned his clerkship in the pharmacy of A. E. Bowman, Preston street and Greenmount avenue.

—Druggist William A. Otto, of Eager and Ann streets, has gone to Ocean City for two weeks.

An ingenious little device is the Klip Klip, the new pocket manicure instrument advertised by the Klip Klip Co., Dep't A., Rochester, N. Y. This unique little toilet article trims, files and cleans the nails, and keeps them in perfect condition. It is made of silver steel, nickel plated, and retails at 25c. It is sold to the dealer at a price which gives him a liberal profit, and has but to be shown to the customer to make an easy sale.

CHICAGO.

EXECUTIVE BOARD MEETS.

Chicago, Aug. 24.—A meeting of the Executive Board of the Chicago Retail Druggists' Association and of the officers of the several auxiliary associations of the city was held last week at the Sherman House. Reports from the several districts were heard. The conduct of breweries in selling their malt products to customers direct who had been secured through the efforts of the druggists, was adverted to and the fairness of the Pabst Brewing Company, of Milwaukee, in this respect received favorable comment. The sale of brick ice cream by manufacturers was also discussed and the president of the association agreed to take the matter up with one of the large companies and determine if a satisfactory arrangement to all concerned may not be reached.

Since the last meeting of the C. R. D. A. the following sums of money have been received: Twenty-second district, dues, \$12.00; second district, donation, \$79.00; fifteenth district, dues, \$6.00; same, donation, \$19.00; eighteenth district, donation, \$12.00; seventh district, additional donation, \$4.00; twentieth district, additional donation, \$9.00; twenty-first district, donation, \$45.00; eighteenth district, donation, \$12.00; fifteenth district, donation, \$22.00; first district, donation, \$100.00.

Business Fair.

Chicago, Aug. 24.—The conditions have remained normal during the past week. There have been one or two local changes in the retail trade and several orders in the nature of stock orders were taken by the jobbers.

Trade is normally active on all staple goods and sundries. Pharmaceuticalers are moving quite freely and the manufacturers are looking forward to an increased business in the fall.

NOTES.

—In a recent interview published this week in a local paper, John I. Straw, vice-president of the C. R. D. A. and local organizer, stated that the organization of druggists all over the city is now complete and anyone who refuses to be good will be put on the cut off list. Apropos of the above the following sign in the window of a down town drug store may be interesting: "We Don't Belong to the Trust. We Run Our Business to Suit the Masses, Not the Drug Trust!"

—Frederick J. Schroeter, well known to Chicago druggists as the city solicitor for the J. W. Sefton Manufacturing Company, makers of paper boxes and cartons, has been elected Eminent Commander of the Chevalier Bayard Commandery, Knights Templar, and leaves soon with his commandery for the Louisville conclave.

—It may not be generally known, but such is the fact, that a leading cigar importing house in Chicago has leased the cigar privileges in twenty of the most prominent drug stores of the city, paying from \$2,000 to \$6,000 a year for the privilege and furnishing the necessary clerical help to run the cigar counter.

—H. Bowman of Oakland, Cal., a former early druggist of Chicago, has recently sent an account to the historian of the Chicago Veteran Druggists' Association of the drug stores of the early forties, including a description of their interior and exterior and several brief character sketches of early druggists.

—Walter H. Gale, president of the Illinois Pharmaceutical Association and of the First Auxiliary District Druggists' Association of Chicago, is spending the later part of the summer with his parents in Pasadena, Cal., where they have a large fruit farm. Mr. Gale will return August 31.

—Albert E. Ebert, the Chicago member of the Transportation Committee, A. Ph. A., is distributing circulars regarding the coming meeting next month through the various wholesale houses of the city. A full attendance of Illinois druggists at St. Louis is earnestly desired.

—John Blocki, of the Chicago Veteran Druggists' Association, has a project in charge to convey that association in a body to the meeting of the American Pharmaceutical Association, to be held in St. Louis next month.

—T. C. Ballard, manager of the sundries department

of Morrison, Plummer & Co., just returned from a visit to La Crosse, Wis., where he attended the meeting of the Wisconsin Pharmaceutical Association last week.

—A. A. Cu'Ver, formerly a member of the Illinois Board of Pharmacy and a prominent druggist of Mokenca and Danville, Ill., is now located at Ortonville, Minn., where he moved some time ago with his family.

—George A. Graves, president of the Chicago Retail Druggists' Association, has gone to Wisconsin to indulge for a few days in the art piscatorial and is expected to tell some whoppers when he returns.

—The many friends of Wilhelm Bodemann of the Board of Pharmacy will be pleased to learn that he is rapidly recovering from a severe attack of pleuro-pneumonia. He is expected at his store next week.

—Prof. C. Lewis Diehl, Louisville, Ky., has been in Chicago several days. He was called here on account of the serious illness of his sister. He returned to Louisville this evening.

—The next meeting of the Illinois Board of Pharmacy will take place in Chicago about the middle of next month.

—Newton P. Williams, of Evanston, Ill., a well known druggist of that suburb, has sold out.

PITTSBURG AND VICINITY.

DRUG TRAVELERS' CLUB.

Pittsburg, Aug. 19.—An effort, which bids fair to be successful, is being made to establish a Drug Travelers' Club in Pittsburg. The want of such an institution has long been felt, and is especially great now that so many pharmaceutical traveling men are making their headquarters here. The matter is in charge of local men representing houses situated here, and it is proposed to secure a membership of one hundred. The club will be conducted on modern principles, and embrace all the features of an up-to-date organization.

NOTES.

—Druggist F. L. Fry, of Manor, Pa., who manages a crack amateur base ball club of that place, was in Pittsburg last Saturday, enroute to Homestead, where his team was playing.

—The firm of Flotow & Gross, druggists of Meyersdale, Pa., has been dissolved. Mr. Gross continues the business, having purchased his partner's interest.

—Druggist C. C. Gans, of Freeport, Pa., will give up the drug business this fall and begin the study of medicine at the University of Pennsylvania.

—D. Morrison Dempster, of W. J. Gilmore & Co.'s city force, has returned after a two weeks' vacation trip along the coast.

—W. J. Gilmore, accompanied by his family is spending a brief vacation in looking over the Pan-American Exposition.

Jobbers Throughout the U. S. Carry a Full Line.

Druggists will be pleased to learn that Dr. Frances H. Drew, proprietor of Mrs. Dr. Drew & Co.'s famous remedies, whose Head Office and Laboratory has been located at Lowell for twenty-three years, Boston office, 175 Tremont street, has placed her full line of remedies, which have been used in her private practice for many years, on the market to be handled by druggists, owing to the increased demand for them. The Eastern Drug Co., Carter, Carter & Meigs, Gilman Bros., Weeks & Potter Co., Maine jobbers and all wholesalers and jobbers throughout the United States, carry a full line of her famous remedies. Dr. Drew's remedies are highly endorsed by some of America's most eminent men and women and skillful physicians; they are said to be the most complete line on the market, and are having the largest sales. Mrs. Dr. Drew & Co. are to do extensive advertising the coming season, and will furnish druggists with cartons, banners, literature and attractive window advertising matter free of charge upon application. Druggists wishing to know further about the remedies should write direct to Mrs. Dr. Drew & Co. for full information. Special discount given to druggists ordering in one-half and gross lots of one item or assorted.

THE NORTHWEST.

DRACHMS AND DRAMS.

St. Paul, Minn., Aug. 23.—Not even the Klondike, Galconda, or Texas, Standard or any other old oil, it would almost seem, is a greater wealth-giver than the drug business in the prohibition state of North Dakota. The Minneapolis Journal the other day printed a resume of the operations of the "dry" statute in the Flickertail state, and here is an extract:

"The drug store has usually been a prosperous mercantile enterprise in North Dakota since the disappearance of the saloon. The idea of prohibition is to prohibit the sale of liquor as a beverage. As a medicine it goes. The drug store can supply liquor to persons making an affidavit that they require it as a medicine, the affidavit to contain the name of the particular ailment for which it is required. These affidavits are filed with the county authorities.

"It is but fair to say that many of the drug store proprietors deprecate the prominence which liquor has attained in that traffic. The North Dakota Druggists' Association at its meeting last year passed resolutions favoring the repeal of the law. But the fact that the drug store is made the only lawful liquor dispensary has made drug store proprietors of many who would not be in the business were it not for that traffic. Towns that under the saloon system would have one or possibly two good drug stores have twice that number and all are usually prosperous. The only danger is the possible refusal of the county judge to grant them a liquor permit on the objection of a certain number of taxpayers in that community.

"The affidavit books for many towns tell a woeful story. The death rate may be low, but the amount of 'sickness' is staggering. The number of ill for which common rye whiskey is considered a cure, is interesting. 'stomach trouble,' 'kidney trouble,' and similar terms appear often. Now and then some town will have a run of 'severe cold' that requires a comparatively large amount of treatment. The Enforcement League has gone into the drug store records in some instances and made some progress toward restricting the consumption for 'medicinal purposes.'"

The Era man is able to add a few points that the Minneapolis paper failed to mention. For example, small towns, of not over 600 or 800 population, may be found in North Dakota, each having two drug stores that are nothing less than palatial; as fine as any that the Twin Cities or any large Western city can boast. At one end of the prescription counter, back out of sight, bottles, demijohns and glasses are within easy reach, and friends of the Good Samaritan druggist slip in there, help themselves to a swig of the ardent, leave the money for it on the counter and walk out with all sorts of exhilarating motive power inside their little vests. Men who have been in the saloon business, and others who are prominent in other branches of trade, get a registered graduate of a college of pharmacy interested and start a drug store. Only the pharmacist's name figures on the sign, but generally coupled with "& Co.," the latter being the real capital-suppliers of the business. Then they go ahead and coin money, in spite of all the "enforcement leagues" in Christendom. In the little town of Langdon, to give one illustration, two mighty barrels of "tanglefoot" were dispensed by the drug stores in a week—so alarmingly prevalent was "stomach trouble" and "sich." What is worse (or should we say better?), the prohibition law is almost universally regarded a permanent fixture in North Dakota. It sticks and will continue to "stick like grim death to a nigger."

DOUBLE PAINT IN A DRUG STORE.

St. Paul, Minn., Aug. 23.—A druggist on Franklin avenue, Minneapolis, had an experience this week that, while amusing, was a bit grisly. According to a local paper's story, he was sitting at his desk, in the rear of his store, figuring on how to make a profit of 639 1/2 per cent. on his pink wrapping paper and yellow string, when two young ladies entered and asked permission to use the telephone. The druggist knew them and smiled

his assent. The girls are sisters and wanted to call up their father who holds down a desk in a freight office. The elder sister stepped to the 'phone, gave a number and then asked: "Is Mr. Smith there?" (Smith isn't the name, but it will serve.) "What?" she cried a moment later. "What's that?" Then she reeled and fell to the floor in a dead faint. The dispenser of postage stamps and face powder picked her up, tenderly carried her to a couch in the rear, and set about applying restoratives. The younger girl aided him, but finally, remembering that someone was at the other end of the wire, she too went to the 'phone. Again came that request for Mr. Smith; again a startled scream, and another girl lay fainting upon the floor. She too was picked up and placed beside her sister. The druggist was curious. He picked up the receiver and called into the 'phone: "What's the matter here?" he yelled. Where's Smith?"

"Easy, now," came a voice from the other end. "I don't know whether we've got your friend or not. There's a man here who was killed down in the yards this morning, but he is so disfigured that identification will be difficult. We don't know who he is. Why don't you come down and see for yourself."

A light dawned upon the druggist. "Who's talking?" he demanded. "Why, this is the county morgue," came the reply.

"Well, by the holy pestle!" said the mixer of drugs.

Bailey; Lindstrom Drug Company, Lindstrom, Minn., by I. H. Tyrell; Hobbs & Co., Edgewood, Ia., by F. D. Kriebs; Frank L. Connelly, Hedrick, Ia., by F. L. Stolte; Sorenson & Elder, Marshalltown, Ia., by — Elder; A. W. Downs, Seymour, Ia., by C. R. Adair.

—W. W. Rumble, of Noyes Bros. & Cutler, St. Paul, a cricket enthusiast and authoritative writer on that game, is taking part in the tournament at Chicago. Yesterday he helped the Minnesota eleven defeat the St. Louis team.

—New: Tower City Drug Company, branch at Oriska, N. D.; McGruer & McGruer, Wales, N. D.; Brunelle & Allen, Cloquet, Minn.; H. H. Brown, Washtucna, Wash.; F. W. Hanson, Magnolia, Minn.; George Crandland, Caldwell, Idaho.

—Sold: Estate of R. K. Slater, Michigan City, N. D.; A. F. Isham, Caldwell, Idaho; L. A. Kjos & Co., Wales, N. D.; F. T. Carlton, Palmyra, Neb.

—Aug. E. Jensen, of Baldwin, Wis., is going to work in Roberts' drug store, Great Falls, Mont.

—Henry Heinzell has gone to Aitkin, Minn., to relieve J. A. Dannewick for a while.

—Mrs. J. Y. Breckenridge, of Pine City, Minn., was in St. Paul Thursday on business.

—A storm at Lushton, Neb., this week damaged the store of P. K. Moore.

—F. A. Savage is removing his drug store from Har. Is., Minn., to Currie.

—Emil J. Kiesling has gone to Little Falls, Minn., to work.

—Quiet Bros., Tacoma, Wash., have discontinued.

—L. A. Smith, Kellogg, Idaho, has been burned out.

—G. W. Dixon, Colfax, Ia., is bankrupt.

The Lucas Window Display Competition.

By the time this reaches many Era readers the show window competition for the \$200 cash prizes offered by John Lucas & Co., the big paint manufacturers at Gibbstown, N. J., will have closed, and the photographs submitted turned over to the judges for their decision. Announcement of the award will be made in the Era of October 3.

Four-Fold Liniment.

All jobbers supply it. Most of them carry it in stock.

ST. LOUIS.

Business Inactive and Druggists Away on Vacations.

St. Louis, Aug. 24.—This has been about the quietest week of the season among the local druggists. Trade has been very poor and the druggists as a rule have been very inactive. A great many of them are out of the city on vacations and a large proportion of the others have recently returned from some kind of a trip. These latter are resting up, telling their friends all kinds of stories, and waiting until the first of the month to turn a new leaf and again begin work in earnest. While the proprietors are away the clerks usually take it rather easy and manage to stir up considerable amusement which is not on the regular daily programme.

NOTES.

—Louis Schurk, 3400 Olive street, is putting in a great deal of time getting information about places of interest preparatory to entertaining the visitors to the A. Ph. A. meeting here next week. The commander of Jefferson Barracks has extended a hearty invitation to the committee on arrangements of the A. Ph. A. to bring the members to inspect this time-honored post. A one hour's stop will probably be made there during the boat excursion.

—On account of the bad weather last Saturday night "Druggists' Day" at the Delmar Garden was not very well attended. Arrangements were accordingly made and last Wednesday night at the garden was dedicated to the druggists. There was a large attendance and the local association cleared about one hundred dollars.

—The Retail Druggists Saturday Night Club of this city will hold its regular monthly meeting to-night. Some very important and interesting developments are expected.

—The boat excursion given by the St. Louis Drug Clerk's Excursion was very well attended in spite of the bad weather which prevailed.

—It has been decided to hold the Saturday night entertainment during the A. Ph. A. meeting at the Union Club, Jefferson and Lafayette avenues.

—The local jobbers have not yet made any reply to the letters of request they received a week ago from the St. Louis Retail Druggists' Association.

—J. S. Williams of Eolia, Mo., who burned out recently, has purchased a new outfit and expects to be ready for business in a few days.

—T. M. Young, Channing and Franklin avenues, is sending a couple of weeks on his farm in Jefferson County.

—George C. Paulus, Indiana avenue and Pestalozz street, is down in the Ozarks on a squirrel hunt.

—George Billerth, Jefferson avenue and Arsenal street, is on a ten day fishing trip down on Black River.

—J. C. Thomser, Menard street and Russel avenue, is spending a couple of weeks out in Colorado.

—E. Trittermann, Ninth and Allen avenue, left last night for the Pan-American Exposition.

—H. A. Kunz, Twenty-first street and Franklin avenue, is fishing on the Gasconada River.

—Prof. J. M. Good and family have gone to Chicago to spend a week on the lake shore.

—There is an unusual large number of drug stores for sale in this city just at present.

—Robert Crooks is opening a new drug store at St. Louis and Arington avenues.

—J. P. Schoenhals, Eighteenth and Sidney streets, is visiting relatives in Kentucky.

—A. A. Bernius and wife have returned from their trip to Canada.

The advertisement of the J. H. Day Co., Cincinnati, Ohio, appears on page 16 of this issue. Besides the Hunter's Lightning Sifter and Mixer (a machine which has been so long popular with the trade), they manufacture almost everything needed in the laboratory. Their catalogue "Els" describes and illustrates their regular styles, and in addition they manufacture special machinery.

THE SOUTH.

THEY BLAME THE GOVERNOR.

Memphis, Aug. 23.—The druggists of West Tennessee have got it in for the Governor because of an appointment recently made by that official on the board of pharmacy. The appointment of J. S. Robinson to succeed himself is what has aroused the ire of the drug men. Mr. Robinson is a successful business man and a good druggist. He is also an aggressive cutter, and, as such, an enemy to organization upon which rests the future of the retail drug trade. Many druggists regret, therefore, that the Chief Executive should appoint a man, who, to say the least, is not friendly to pharmacy as a profession when there are so many others who are eminently fitted for the place. And this in the face of the strongest opposition, too. As one Tennessee pharmacist puts it: "The Governor deserves the censure and rebuke, individually and collectively, both public and private, of every druggist in the state. He will not be forgotten by the druggists and their friends when he again asks for further honors."

Trade Rather Slow.

Memphis, Aug. 23.—The drought that has just broken has played havoc with business in the country. The corn crop is a total failure, and on cotton entirely depends this country's prosperity for the next eight or nine months. Business with the wholesalers is very quiet, more so than it has been for years. The retail trade in the city is splendid, and several of the uptown druggists claim that not within several years has business been so good in the summer.

NOTES.

—Dan F. Vaught, a young druggist in the employ of E. M. Wheat & Co., of Columbus, Ga., was recently badly beaten by a young man named Lakey of that city. Lakey called at the store in which the young man was employed and demanded the retraction of a statement which he claimed Vaught had made. Upon the latter's refusal to take back what he had said, he was set upon and badly beaten by Lakey, who was a better man physically.

—Crook & Brown, of Yazoo City, Miss., will move into the building vacated by the Commercial State Bank. The interior is being remodeled and when completed will be one of the most convenient stores in the Delta.

—J. F. Hunter & Co., of Jackson, Miss., are changing the interior of their store, which will present a very handsome appearance when completed.

—David Wolerstein, who was with James McCormick, Yazoo City, Miss., has gone to New York, where he will take a course in pharmacy.

—J. R. Tague, manager of the Van Vleet-Mansfield Drug Company, has returned from an extended trip North and East.

—S. T. Anderson has resigned his position with Sharp & Dohme and will embark in the drug business in West Tennessee.

—Dr. S. H. McLain, Jackson, Miss., will open a drug store in the new Century Opera House block about October 1.

—Jack Hofmeister, head clerk for Fortune, Ward & Co., who is in St. Louis on his vacation, is expected home this week.

—John Quinn, of the C. C. Reynolds Drug Company, Vicksburg, Miss., is making an extended trip North and East.

—H. P. Cox, of Crystal Springs, Miss., now does business in the new brick erected on the site of his recent fire.

A Criticism

It strikes me that much of the stuff that goes to make up the patent medicine advertising of the day is unnecessary, vilely written and in every way poor taste.—Newbury (Mass.) News.

NEW ORLEANS.

Druggists in the Recent Storm.

New Orleans, Aug. 23.—Local druggists were particularly lucky in the recent severe storm and flood that swept over the city. Not one of the many small retailers in the district damaged by flood, reported a serious damage. Some few stores suffered a considerable inconvenience by a flooding of the streets, but stores and stocks came through the ordeal nobly. At Mandeville, La., Dr. R. B. Paine's store had a close call. Mandeville is a summer resort across Lake Pontchartrain from the city. The water in the lake rose until it was rippling at the door sill of Dr. Paine's store, but fortunately no damage of consequence resulted.

NOTES.

—The drug store of Charles G. Peter, at Poydras and Baronne streets, was recently broken into. The thieves, however, satisfied themselves with \$2 from the cash register and half a dozen razors.

—At a recent meeting of the Orleans Pharmaceutical Association it was decided definitely that a delegate, and perhaps two, will be sent to the N. A. R. D. Convention to be held at Buffalo. The delegates will be chosen at an early meeting of the association.

—The D'Aquin drug store at Esplanade avenue and Tremé street has been purchased by Mr. Chretien. The business will be conducted under the management of Albert Ferry.

—M. Stolzenhaier, has removed his drug business from St. Charles avenue and Amelia street, to Louisiana avenue and Dryades street.

—The St. Cyr Fourcade drug store at Canal and Rampart streets has just undergone repairs and has been made decidedly attractive.

—Dullness pervades the local drug trade and there is little hope for any betterment until after September 1, the opening of the Southern business season.

WISCONSIN BOARD OF PHARMACY.

The Wisconsin State Board of Pharmacy met at La Crosse Aug. 15. The first day's session was given over exclusively to general business, and four cases of violation of the pharmacy laws which were reported were ordered to be prosecuted. Friday and Saturday were devoted to the board examinations of 34 applicants. Nine licentiate certificates were granted: E. E. Bersing, Strum; R. J. Taylor, Sparta; A. G. Krembs, Stevens Point; R. W. Freeman, River Falls; Z. O. Föllinger, Waterloo; W. R. Downer, Appleton; W. F. Voigt, Stevens Point; F. C. Miller, Oconto; Edward Neumann, Milwaukee. Seven assistant certificates were granted: A. H. Wetlauffer, Friendship; J. H. Bliss, Janesville; C. J. Fuhrman, Fond du Lac; G. J. Hepler, Pardeeville; H. M. Priest, Reedsburg; G. H. Kopp, Milwaukee; A. T. Mayer, Kaukauna. Messrs. H. A. Frost, Wausau; O. Von Schnellern, Ripon; A. H. Erickson, Soldiers' Grove; G. E. Weatherley, Schullsburg were given certificates by registration. The next meeting of the board will be held at West Superior October 16 and 17. The meetings following will be at Milwaukee December 11 and 12 of this year, and February 12 and 13, 1902; and at Madison April 23 and 24, 1902. President Heimstreet gave out his annual report which says that out of 307 applicants taking the examinations during the past year in which the board met six times 23 licentiate, and 67 assistant certificates were granted, and that there are 1,428 first grade pharmacists, and 385 second grade, in Wisconsin of which 94 will have their certificates revoked if by September 1st their registration fee be not paid. Twelve pharmacists died during the previous year. Of five cases in the courts the board has been successful in all. The report further says that there were 67 cases of poisoning, from which 52 persons died: By carbolic acid 40, and 6 recovered; by opium 8, and 4 recovered; by rough on rats, Paris green, chloroform, wood alcohol, strychnine, 2 cases each; by mercury, acomete, belladonna, bed-bug poison, sulphuric acid, 1 case of each; but not one instance is due in any way to an error of a pharmacist.

CALIFORNIA.

STATE BOARD OF PHARMACY STANDS PAT.

San Francisco, Aug. 20.—The San Francisco daily papers have been devoting considerable space to sensational articles concerning the State Board of Pharmacy. They make the assertion that the board is demanding back fees from registered pharmacists in the state and also that mandamus proceedings are to be started against the members of the board to compel them to register certain applicants without examination. These statements are practically without foundation. As a matter of fact the new act under which the board conducts its business is in the opinion of the Attorney General, simply a continuation of the old law. The board decided that it would be more just to the pharmacists of the state who for some reason were in arrears in their dues to offer them an alternative. They could either pay their back dues and be registered or submit to an examination. This they considered the fairest to all concerned. President Seaby does not wish to go to the courts to settle the matter but says the board is fully able to cope with the situation.

SAN FRANCISCO DRUG CLERKS' OUTING.

San Francisco, Aug. 20.—The first of the two picnics planned for by the Retail Drug Clerks' Association of San Francisco, was held Sunday, August 11. Fully five hundred people took advantage of the excursion and spent the day in the Santa Cruz Mountains. The crowd was the best that the railroad has drawn to a picnic this year and every one has been congratulating the association on the success of their initial effort in the line of entertainment. Wholesalers, retailers and clerks with their wives and lady friends mingled together to make the day one to be remembered by all who attended.

The second picnic of the drug clerks was even larger than the first with the good times in proportion. Henry Gerdes, city salesman for C. E. Worden & Co., had charge of the dancing and made a reputation for himself as a floor manager. The two picnics netted the association a tidy sum which will be used for advertising necessary to bring the objects of the organization before the public.

THE STRIKE IN SAN FRANCISCO AFFECTS DRUGGISTS.

San Francisco, Aug. 20.—The labor troubles in San Francisco are beginning to be felt by the retail druggists throughout San Francisco. The fight is between the Employes Association, composed of the prominent wholesalers and jobbers; and the different labor unions of the city. Neither side will give assurance of an early settlement and the retailers have taken the matter in hand and will endeavor to bring about an adjustment of the difficulty. The druggists of the city are taking an active part in the work and have a committee of five appointed to wait on the wholesalers and endeavor to obtain their co-operation in bringing about a settlement of the strike. The strike has not as yet interfered to any great extent with the drug business in the city, but if prolonged it will certainly have a very depressing effect on the winter business.

Ten O'Clock Closing.

San Francisco, Aug. 20.—The retail drug clerks' cards calling upon the public to purchase before 10 o'clock are having the desired effect. Many of the outside stores are closing at 10 P. M. instead of 10:30 and 11 P. M. as formerly. If the down town stores can all be brought into line the success of the movement will be assured.

NOTES.

—During the summer vacation the directors of the California College of Pharmacy have been busy making improvements. A new pharmaceutical laboratory has been added, also an additional one for advanced chemical work. These additions were made necessary on account

of the third year course the college inaugurates this year. The matriculation at the present writing shows that when the college opens, August 26, the classes will all be large.

San Jose is having trouble with the early closing movement. The clerks succeeded in having an 8 o'clock closing movement put in operation, but it has proven unsatisfactory and the Richards Pharmacy has announced its intention to remain open after the hour agreed upon. This will probably be followed by the opening of the other stores.

The old Shaw Pharmacy on the corner of Sutter and Powell streets, San Francisco, has been vacated and the present manager, K. B. Bowerman, has moved the stock across the street to 500 Sutter street. The Shaw Pharmacy is one of the oldest in the city, having been opened in 1848.

Warren Brazelton who has been with the Twin Peaks Pharmacy, San Francisco, for the past year will take a position with S. W. Cartwright, Berkeley, Cal.

Oscar Edinger, until recently with R. E. White, San Francisco, has accepted a position with Boyson's Pharmacy Twenty-first and Valencia streets.

Leo A. Schroeder formerly with Trouts' Pharmacy, Los Angeles, is now with Freeman's Drug Store on Tenth and Grand avenue.

Jack Neil formerly with Trouts' Pharmacy, Los Angeles, is now clerking for Boyson on Valencia street, San Francisco.

E. L. Madden who recently passed the Illinois State Board of Pharmacy is clerking for O. L. Halsell, Santa Ana, Cal.

Miss Madge Rust has accepted a position with Searby's Pharmacy on Suller street, San Francisco.

James Elliot of Martinez is now clerking for the Twin Peaks Pharmacy, San Francisco.

The Oklahoma Board of Pharmacy met in regular session at Oklahoma City July 9, 1901. Present C. A. Dow and E. E. Howendibler. The secretary, F. B. Lillie, was absent from home on account of ill health which accounts for the delay in making this report. A class of fifty-one was present and took the examination. The following received the necessary grades and were granted certificates of registration: Gardner H. Applewhite, Tecumseh; John Brandenburg, Shawnee; Theo. M. Blank, Elk City, Kan.; W. S. Biggs, Tecumseh; Thos. K. Baker, Oklahoma City; F. L. Carson, Tecumseh; S. D. Chambers, Blackburn; W. S. Courtney, Quince; Noah B. Davis, Weatherford; Fred Dinkler, Henessey; Curtis B. Day, Edmond; Edw. E. Fowler, Oklahoma City; Albert R. Gilpin, Euid; Henry W. Hubbell, Curtis; Joel H. Hubbell, Edmond; S. B. Howard, Yukon; R. C. Huntington, Nardin; Palmer C. Jay, Pawnee; R. E. Johnson, Kildare; Lula D. Karr, Alva; Edd N. Lewis, Newkirk; C. O. Lynch, Chandler; Geo. C. Mayer, Chandler; Ella C. Mooney, McCloud; W. T. Martin, Pawnee; Frank N. Mann, Edmond; Geo. W. McMillin, Pond Creek; Arthur R. Ostrander, Geary; Thos. Roach, Oklahoma City; Geo. R. Sutton, Arlington; Frank C. Straw, Alva; Irvin H. Stafford, Marshall; Isadore Stone, Cash; Poe Underwood, Weatherford; Wm. C. Whitenberg, Morrison; J. Clay Webber, Oklahoma City; Ray Wood, Perkins. The graduates of the Oklahoma University Pharmacy Department receiving registration on their diplomas are as follows: Lilly Emma Chandler, Woodward, O. T.; Henry A. - Chandler, Woodward; Miss Evans Montgomery, Franklin; Dor A. Northup, Dover; Chas. C. Suman, Cushing; Abert R. Smith, Yukon. Two were granted assistant certificates as follows: Henry G. Hale, Guthrie; and Claude Slater, Kingfisher. J. M. Remington and F. M. Weaver of Oklahoma City, kindly assisted the board in the examination, M. Weaver taking the secretary's subject, materia medica. The next meeting will be Oct. 8th, at El Reno. On Aug. 14th the Governor appointed J. A. Hill, of Enid, on the Board of Pharmacy to succeed C. A. Dow, Pond Creek, his term having expired. The board will reorganize at the El Reno meeting. Parties desiring information in regard to registration can obtain same together with blank application for examination on application to the secretary, F. B. Lillie.

The Pittsburg College of Pharmacy Shares in the General Prosperity.

The Pittsburg College of Pharmacy has created a new chair of applied pharmacy, which has been tendered to Professor J. H. Beal, of Scio, Ohio, in whose hands it is felt, it will prove of great importance to the coming generation of pharmacists. Professor Beal is an able and progressive teacher and the college and pharmacists of Pittsburg are to be congratulated on his acceptance of the appointment. The creation of the new chair and the great increase in the attendance at the college, makes it necessary to provide additional room, and extensive improvements are being added. Plans for an annex to the College building are being drawn. The proposed new structure is to be sixty-five by forty-five feet, of brick and stone, four stories high, and fire-proof throughout. It is the intention to refit the old building for laboratory purposes exclusively, the new building supplying new lecture rooms, an amphitheatre, library, museum and faculty rooms. This will permit of the increase in the size of the present pharmaceutical and chemical laboratories and the installation of the new laboratory of applied pharmacy. The laboratory of pharmacognosy will be in charge of Professor W. J. McAdams, who is at present in Europe, to be absent until the opening of the college. It is expected that he will bring with him many valuable and practical ideas regarding his branch.

New Prices on Peru-ru.

One proprietary medicine firm, at least, has officially recognized the fact that the retail druggist is a power which can be used to make or unmake his business. Some proprietors have talked as though the good will of the retailer was of little value, "we create the demand, and they must sell our goods," said they. But, it was found that this was true in theory only, for as long as the corner druggist holds the confidence of his customers, just so long will he be able to influence their purchases. He is not in business for his health, and he will endeavor to confine his sales to goods on which he can make the most profit. The Peru-ru people, in reducing their prices, have in mind the making of Peru-ru the most profitable, as it is the most salable dollar preparation on the market. They announce in this issue, on another page, that they have always labored hard in hand with the retailers, and shall continue in the same course. Now that the Stamp Tax is no more, they have felt it to be their duty to reduce their prices by amount equal to the advance three years ago; and in making this reduction, they will continue their aggressive advertising policy so that the retailers' sales, as well as his profits, may be increased.

Attenuation of the Milk Curd in Infant Feeding.

The recent article by Dr. F. W. White, published in the Journal of the Boston Society of Medical Sciences, along the lines suggested by that eminent pediatrist, Dr. Rotch, shows that cereal decoctions in which the starch has not been dextrinized are most efficacious in breaking up the tough leathery curd of cow's milk and producing a fine soft coagulum similar to that produced in human milk. Eskay's Albumenized Food contains no amylolytic ferment and when used in the modification of cow's milk it produces a very fine, soft and flocculent curd. Owing to this and its many other advantages, it agrees with a larger portion of infants and adults than any other food.

Druggists can serve their own interests and please their customers by recommending Eskay's where the opportunity presents itself for them to do so.

The Caswell-Preston Drug Co., wholesale druggists and manufacturing chemists, Beaumont, Texas, are making a bid for the patronage of the retail trade in the Southwest. Beaumont is in the oil producing section of Texas and has already felt the big boom in business of all kinds. The laboratory management of the company is in charge of R. L. Grigsby, a manufacturing chemist well known to the trade in Texas.

KOLA NUTS.

By E. L. N. ST. CYR, Ph.C., M.P.S.

The marvellous virtues attributed to fresh kola nuts (*Sterculia acuminata*)—used since centuries by the natives of Central Africa as a cardiac and general tonic, and restraining tissue waste and hunger, as well as a diuretic, and controlling diarrhoea, as a gastric-tonic in small doses, therefore useful in dyspepsia, and, on account of its tannin, an astringent in diarrhoea—have in reality produced but limited action in Europe, and this is due to the fact that they lose their properties on desiccation, for on drying the ferment "oxydase" is destroyed, and the natural soluble combinations of caffeine and theobromine are transformed into insoluble products. Koloxydase is truly an oxydase ferment, and which, on drying the nuts, produces their brown color, at the same time converting three-quarters of the alkaloids into insoluble products; it resides in the center of the dried nuts, and produces the turbidity of all galenic preparations of kola, which may be proved by using the roasted nuts instead, when the preparations will be found to be perfectly clear, thus showing that the ferment was primarily killed. It can be sterilized by a dry or humid heat from 70°. Contact with pyrogallic acid is sufficient to cause it to burn with the liberation of carbonic acid, thus determining a sort of artificial respiration; with sugar alone the virtues of oxydase remain latent and integral for years. True kolonine is found in all the fresh nuts, and is in reality a normal combination of all the natural soluble alkaloids; for extraction in its natural state it is only necessary to heat the fresh nuts above 75°C., when it will be converted into a stable substance. It is not, as has been stated, a glucoside, for when the fresh fruit is divided into its two cotyledons, and one of these cotyledons is sterilized, there is produced, progressively, it is true, a little of a glucoside in the last, but at the expense of the tannin transformed into an insoluble product by the oxydase. The starch not having been attacked, there is not any amylase.

As regards "kola red," this term is really meant to designate three substances; for instance, the red principle that imparts the natural red color to the nuts, and sometimes called "knebel red" and "heckel red," although, from my observations the last two substances are identical, as they are in reality produced by the oxidation of the tannin by the ferment oxydase, which resides in the fresh nuts; it therefore follows that it is an absurdity, the practice of fixing the value of kola nuts by their richness in kola red, as nothing is more simple than either to prevent the formation of this red principle or to stop its formation at the desired point, or to let it go to on the last extremity. The red principle must, therefore, be considered as a dead and undefined pathological product, and should be called "red insoluble kolanin," in contradistinction with true kolanine, which, on the contrary, is a normal, natural and living product (at any rate, when in contact with oxydase), and should be called "red soluble kolanin."

It therefore follows that to benefit from all the pharmacological consequences of kola nuts, as deduce the masticators of the fresh seeds, it is evident that all pharmaceutical and hygienic preparations of this drug must contain the fresh juice, thus representing in its integrity not only all the true kolanine—that is, the soluble caffeic combinations of the fresh juice—but also the primitive ferment "koloxydase" and the phosphates of lime, iron and manganese that kola nuts contain. Up to now this result has not been fully obtainable, but this can be done by making use of sugar alone. Thus can be prepared the following, having its full physiological activity: A "soft extract," made with equal parts of the fresh fruits and sugar, and which keeps well in air and in a heated atmosphere; chemically no difference could be found in a preparation made on the eve with one three months old. A "syrupy wine" can be made, containing one-fifth of its weight of fresh kola, and on account of the wine resists all fermentations, but it is not clear, and became turbid on repeated opening of the bottle every day; an "elixir" having wine as its

base, and containing one-tenth of its weight of fresh kola, and possesses the same properties as the syrup, with its advantages and unfortunate defect, as regards transparency. (Br. & Col. Dr.)

POINTS ABOUT THERMOMETERS.

1. In cold weather thermometers require a longer time to register than in warm, because the mercury is at a lower temperature when placed under the tongue.

2. The mercury in a clinical thermometer cannot be shaken lower than the temperature of the room.

3. A clinical thermometer should not be subjected to a greater heat than 110° F., which is the full registering capacity. A greater heat is sure to damage the instrument.

4. A thermometer is made self-registering by contracting the bore to such an extent that the smallest particle of mercury will not pass without being forced, the expansive force of heat drives it upward, and a downward swinging motion serves to force it back. The above conditions make it impossible to obtain absolute accuracy in a self-registering instrument, as the mercury rises in little jumps, which necessarily vary according to the conditions present in each instance. However, this variation is usually one-tenth of a degree or less and never exceeds one-fifth of a degree in a reliable instrument.

5. The average normal temperature is 98.6° Fahrenheit, or 37° Centigrade, though many persons in perfect health have subnormal temperatures. The temperature varies about one-half of a degree in twenty-four hours, being highest just after the heaviest meal of the day. The temperature of any particular individual does not afford a satisfactory test as to the accuracy of an instrument, since uniformity cannot be depended upon in different persons.

6. Standing with the back to the light facilitates the reading of a thermometer.

7. Thermometer bulbs are made of very thin glass to secure the least possible shrinkage, and to obtain the quickest registration—hence are easily broken. It is a great injustice to the manufacturer to be called upon to replace instruments broken in the hands of the dealer or physician.

8. Small bulb thermometers are much more difficult to shake down, owing to the smaller bore and lighter mercury column, but are not so apt to lose their registration.

9. Reliability is of the utmost importance, as life is often at stake; a thermometer is not cheap at any price if it is inaccurate; economy is bad policy where quality (the vital point in a thermometer) has to be sacrificed.—(Rev. Prac.)

FLORIDA SPONGES.

The Florida exhibit of sponges at the Pan-American Exposition interests all who visit the Horticultural Building. T. M. Wier, of Tampa, the Commissioner from Florida, says: "The Florida sponges are of many varieties, differing in commercial value from \$2.00 to a great many dollars per pound. It is one of the largest industries in the state, more than 100 vessels being engaged solely in this trade. The business is carried on almost entirely by negroes. It is not an uncommon sight to see a vessel's captain and all of the crew composed of colored men. The sponges are gathered by means of a long pole with a hook attached to the lower end with which the sponge fisherman is very expert. He lies prone upon his stomach in the stern of a boat looking through an ordinary water bucket with a glass bottom, which does away with the glare from the water and allows him to survey the bottom leisurely while the boatman rows or sculls the boat. A schooner lies at anchor near by, from which a half dozen or more of these small boats fish, which returns to port when it is loaded or at night, as the case may be. The men all share and share alike of the cargo, the captain receiving a larger portion and the owner of the vessel one-quarter of the profit. Anclote Harbor in Hillsboro county and Key West are the principal sponge stations off the coast of Florida."

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued August 20th, 1901.

- 680,681.—Aguste F. Avezard, Jr., and Jules E. Clerc, Paris, France. Filter for purifying water.
- 680,836.—Richard Berkholz, Milwaukee, Wis., assignor to Liquid Carbonic Acid Mfg. Co., Chicago, Ill. Apparatus for cleansing faucets and their connections.
- 680,870.—Frederick Leub, Collegepoint, N. Y., assignor to Max C. Rosenfeld, Boston, Mass. Device for attaching rubber washers to bottle stoppers.
- 680,898.—Onesime Thomas, Verdun, France, assignor to the Pasteur Vaccine Co., Paris, France. Machine for impregnating thread with virus.
- 680,902.—Robert T. Weaver, New York, N. Y., assignor to the General Engineering Company, of New Jersey. Filter.
- 680,905.—Francis A. Woods, Chicago, Ill., assignor, by direct and mesne assignment, to Wods Non-Refillable Bottle Co., same place. Non-refillable bottle.
- 680,908.—Harriet F. Cutter, East Lyme, Conn., executrix of Frederick W. Robinson, deceased. Process for extracting wool fat.
- 680,972.—Charles S. Gooding, Brookline, Mass., and Fred Hausmann, Boston, Mass., assignors, by direct and mesne assignment, to Siegel Labeling Machine Company, Boston, Mass. Bottle-labeling machine.
- 680,977.—John Hopkinson, Bradford, Eng. Process of treating wool grease.
- 680,986.—Rudolph F. Stahl, Boston, Mass., assignor to the Bottlers Machinery Company, same place. Labeling machine.
- 681,010.—Frank Y. Wilhoft, New York, N. Y. Vaginal syringe.
- 681,085.—Carl Uebel, Aachen, Germany, assignor to Chemische Fabrik Rhenania, same place. Method of making nitric acid.
- 681,096.—Henry S. Blackmore, Mount Vernon, N. Y. Process of making carbids.
- 681,101.—Patrick F. Cassidy, Boston, Mass., assignor to Boston Bottle Wiring and Labeling Company, same place. Paste-applying device.
- 681,104.—Hans P. Clasen, Flensburg, Germany. Bottle closing device with cork stopper.
- 681,153.—Addison G. Waterhouse and John S. Forbes, Philadelphia, Pa., assignors to said Forbes. Apparatus for heating and sterilizing fluids.

TRADE-MARKS.

Registered August 20th, 1901.

- 36,913.—Certain Named Toilet Preparations. Octorine Chemical Company, Chicago, Ill. The word "Octorine."
- 36,914.—Facial Preparation. Elizabeth Livengood and Ida V. Kallough, a firm, Uniontown, Pa. The word "Vldicl."
- 36,915.—Hair Dyes. Louis Alexandre, a Firm, London, Eng. The word "Shadeline."

MARKET REPORT.

NEW YORK MARKET.

New York, Aug. 27.—There is no material change so far as the volume of business is concerned, but there are indications that the conditions of the midsummer season are on the wane, and preparations are in progress for the approaching fall and winter campaign.

OPIMUM.—Round lots remain dull and neglected, but there is no further change in the general condition of the market, and jobbers continue to quote \$3.25@3.50 for 9 per cent, and \$3.45@3.60 for 11 per cent. Powdered is moving fairly in small lots, at \$4.50@4.75 for 13 per cent, and \$5.00@5.25 for 16 per cent, according to quantity, inside figures being for single pounds.

MORPHINE.—Competition among manufacturers continues more or less keen, but former prices are still current, and jobbers quote on the old basis of \$2.20@2.40 for eighths, as to brand, less the usual rebate of 10c. per oz. for lots of 10-ozs. or over.

QUININE.—There has been no further change in manufacturers' prices, and the consuming demand continues light, with jobbers quoting 31@32c. for 100-oz. tins, 21@22½c. for 50-oz. tins, 32@33c. for 25-oz. tins, and 38@39c. for ounce vials.

MEXTHOL.—Available spot stocks continue to diminish under a fair consuming inquiry, and jobbers have further advanced their prices to \$5.10@5.30 per lb., and 37@40c. per oz.

UNION SALAD OIL.—Manufacturers' prices are again higher, and quotations in a jobbing way have been further advanced to 50@52c. by the barrel, and 65@75c. in smaller quantities.

DILL SEED.—Supplies in first hands are more abundant, and the market is a shade easier, with jobbing quotations reduced to 15@20c., as to quantity.

COCAINE.—Competition among manufacturers has caused a decline of 50c. per oz, and the revised jobbing figures are \$3.75@4.25 for small crystals, and \$6.00@6.40 for large.

GRAINS OF PARADISE.—The new crop has begun to arrive, and, with the market better supplied, jobbers have reduced quotations to 30@40c., as to quality and quantity.

BISMUTH PREPARATIONS.—Owing to a recent decline in values of the metal, manufacturers have modified their views regarding prices, and jobbers are now quoting \$1.65@1.90 for subnitrate, \$1.85@2.10 for subgallate, and \$2.05@2.30 for subcarbonate.

SAFFRON.—Valencia is cabled higher abroad, and spot quotations here for jobbing quantities have been advanced to \$8.50@8.75.

OIL PEPPERMINT.—Values continue to harden under the influences heretofore noted, and jobbing quotations show a further advance to \$1.60@1.70 for Western, \$1.65@1.75 for Wayne County, \$1.75@1.85 for H. G. H., and \$1.85@1.95 for redistilled.

PRICKLY ASH BERRIES.—Further arrivals of new crop continue to influence an easy feeling among holders, and jobbing prices have been further reduced to 55@60c., as to quantity.

THYMOL.—Stocks are somewhat larger, owing to recent arrivals, and quotations in a jobbing way have retreated to \$3.80@4.00 by the lb., and 35@40c. per oz.

GUM GAMEOGE.—The tone of the market is somewhat easier, and jobbers have reduced quotations to 55@60c. for whole, and 60@65c. for powdered.

SERPENTARIA ROOT.—Owing to extreme scarcity, the market is stronger, and quotations for jobbing quantities have been advanced to 55@60c.

LICORICE ROOT.—Powdered peeled Russian is easier, and jobbers have reduced quotations to 21@26c., as to size of orders.

SPICES OF TURPENTINE.—Primary markets are lower, and spot jobbing quotations show a decline to 41@42c. in barrels, and 44@49c. to smaller quantities.

LINSEED OIL.—Crushers have reduced their prices, and the revised jobbing figures are 68@69c. for raw in barrels, and 72@75c. for less, 70@71c. for boiled in barrels, and 74@77c. for less.

SHELLAC.—Foreign markets are stronger, and jobbers have advanced quotations to 38@43c. for D. C., 32@37c. for V. S. O., and 24@28c. for Native.

An Italian journal records an extraordinary case of fecundity, of which it guarantees the authenticity. Flavia Granata, who, it appears, is well known at Rome, has recently given birth to her sixty-second child. This woman is now 59 years old. She was married at 28, and has successively given birth to a daughter, then six sons, then five sons, then four daughters, and then a long series of twins annually, and ended by having four sons. (Medical Times.)

THE RELICS OF SPAIN IN OUR NEW POSSESSIONS.

Just one small phase of one of the many difficulties this country has to contend with, now that it is suzerain or is in absolute possession of several colonies formerly belonging to Spain, where the old Spanish laws are still extant, touches upon the registration of trademarks. In many European countries, including Spain and her colonies, when she had them, and in all South American countries, priority of registration gives ownership; that is, the person who shall first register a trademark becomes the lawful proprietor, regardless of the originator or the rights of the individual who made prior use of it. Such a law is obviously a travesty on justice. In this country the ownership of trademark rights is founded upon the principle of common law and justice, but the principle which obtains in the countries named is diametrically opposite, as some of our proprietary manufacturers have found to their sorrow. It seems that for a very small fee, and a practical absence of any formalities—which certain Philistines term "red tape"—a trademark can be registered without the necessity of proving a claim to it; sufficient the fact, saith the Spanish thesmothete, that you get in your fee first and you get the "lawful" rights. The upshot of the matter is, certain enterprising manufacturers thinking they saw in the whilom colonies of Spain productive markets for their goods, went so far as to advertise and make shipments before they were informed they were usurpers, and now they must either go home or buy out the in-

dividuals who had taken advantage of the difference between Spanish and American law. Accordingly, some of these manufacturers went home, some grudgingly gave up the money and some are still considering whether there is or is not a fighting chance. In the meantime, their experience should be instructive to other prospective manufacturers, who, as a further protection against like experiences, combining, of course, with those so lately bitten, should induce Congress to appoint a commission of American lawyers to throw out these relics of the ancient *Hidalgos*, and substitute a temporary act to stand until the inhabitants shall have forgotten sufficient Spanish to learn English and American ideas.

RETURNING GOODS.

The constant returning of goods is a pernicious trade practice and much has been said against it in the trade papers. In some recent literature issued by the National Association of Credit Men the subject is discussed from several viewpoints, which should be considered by the members of the drug trade generally. The practice is denominated as a source of great annoyance and extra expense, requiring extra clerical service and more work in many departments. It is also in many cases a source of positive loss, by reason of goods coming back in a damaged condition, or so long after purchase as to be unseasonable—and the wholesaler divides his feelings (?) between the fear of loss on the goods so returned, and on the other hand the fear of losing a customer if he refuses to make the credit.

The retailer who is guilty of this practice evidently does not realize that he is gaining an unenviable reputation in the business world, and that it affects his credit standing in a very great degree.

However, the wholesaler is very largely responsible in furnishing the excuse for the return of goods. Orders are frequently made out in a careless manner by the salesman, leading to mistakes in filling. Still more frequently are substitutions made in the hope that the customer will keep the goods when they are at his store, of course knowingly taking the risk of their very just return.

We must not overlook the fact that misunderstandings often occur in filling orders, and for all these reasons the customer is certainly justified in making returns.

By such faults of the wholesale house the customer falls easily into the habit of returning goods, and is then not always too particular about having good and sufficient cause for his action.

This is a case where reform must begin at home.

Let the salesman use more care in taking the order, and the house in seeing that it is correctly filled, and the annoyance of having goods returned will be much reduced.

THE A. PH. A. MEETING.

It is confidently expected that the meeting of the American Pharmaceutical Association to be held in St. Louis beginning September 16, will be a record breaker in more ways than one. Reports seem to indicate that the attendance will be greater than at any previous meeting of the organization. And it is a good sign that increasing interest is taken in the association. The drug trade like many others has awakened to the fact that combination and association of effort are becoming more and more essential to the securing of the best results. Each trade has interests which demand mutual co-operation and concession on the part of individuals. Many desirable objects can be reached only by united effort. It is only by meeting together and taking counsel of one another, that the members of any profession or trade are able to adopt any uniform policy in resisting unwarranted encroachment from any quarter. Many of their grievances they find when they discuss them, are imaginary, and many real grievances they find that by united action they can easily remove. But these are not all of the advantages of associations. Attendance upon the meetings bring the members opportunities for social enjoyment that are of inestimable value, laying the foundation for warm personal friendships and enabling the members to see their fellows in a more favorable light than that merely of business competition.

The benefits of membership in the American Pharmaceutical Association are so obvious that no further argument is needed to induce druggists to send in their applications and we urge them to do so at once. Then attend the meeting in St. Louis and take an active part in its proceedings. The local committee has worked and is working hard to provide for the entertainment of visitors.

WINDOW DISPLAYS OF PATENT MEDICINES.

There seems to be at present quite a fad among retail druggists in the way of window displays of patent medicines. There are several manufacturers, of some of the most popularly known proprietaries, who offer quite large money prizes for the best window exhibits of their particular products. The druggists tumble all over themselves in their eagerness to win these prizes, and many go to an expense entirely disproportionate to the largest prize they could possibly hope to win, in making a display of these proprietary specialties. Of course all this is a good thing for the proprietor, but it is good for the druggist? This is a question which will stand a vast deal of argument. The druggist helps the other man's business by this sort of advertising, and probably makes a few dollars himself, but the demand thus created for this particular medicine is but temporary and largely artificial. The same amount of time, labor and expenditure to advertise his own business and his own preparations might bring the druggist far more satisfactory returns. It is a matter worth thinking over, at any rate.

IN PURSUIT OF THE MOSQUITO.

The medical press and newspapers generally have given much space to the warfare now being waged against the malarial mosquito. Columns of space have been devoted to the presentation of "evidence" which is claimed to prove positively that the mosquito is responsible for every case of malarial fever infecting man, and that if mankind would have freedom from this disease the Anopheles must be suppressed. Many different measures have been suggested for this purpose, but as yet none of them has much more than reached the experimental stage. All investigators are agreed, however, that cleanliness and enforcement of sanitary regulations, etc., are of greatest service. In this city a circular has been issued by the Board of Health asking physicians to advise their patients to be on guard against the pest, and already experiments are under way to determine the best method of conducting a successful campaign.

"HANDS ACROSS THE SEA."

The common interests of English speaking people has been a theme upon which ambassadors and literary diplomats have spoken on every occasion. But none ever spoke more gracefully and in keeping with his profession than did Prof. Albert B. Prescott, the Dean of the School of Pharmacy, University of Michigan, at the recent annual meeting of the Society of Chemical Industry in Glasgow. He said "In the English tongue we have a family bond, and in our common science we are held as members of a family. The state of many salts in the sea has never been adequately investigated, but certainly the salts of the Atlantic Ocean cannot separate chemists. The ties of common enterprise bind people of all countries together." Students of Shakespeare and diplomats should take notice!

A CONGRESS OF QUACKS.

"Quacks in Council" is the suggestive caption an esteemed medical contemporary employs over the information it gives in a paragraph relating to the congress of "lay practitioners of medicine in Germany," to be held this month in Berlin. The advantages of organization are apparent even to the ordinary fakir, and it is expected that a number of "Nature healers," magnetopaths, disciples of Kneipp and others of like ilk will attend the "congress" and take counsel together as to the measures to be taken for their protection against laws, existing and prospective, for the regulation of the practice of medicine.

"SHORTER HOURS" IN CALIFORNIA.

The retail drug clerks of San Francisco seem to be meeting with success in their effort to obtain shorter hours for themselves and their employers. The campaign was inaugurated some time ago by the display of large cards in nearly all of the drug stores in the city requesting the public to purchase their drugs before ten o'clock at night.

—The Treasury Department has just decided that "unadulterated opium, dried or powdered, containing 9 per cent. or over of morphia, not refined or purified or mixed with other ingredients, is dutiable at \$1 per pound as crude or manufactured opium, under paragraph 43. act of 1897."

Right Relations in Business and How to Secure Them.*

By O. H. PECKHAM.

The condition of trade under free competition places the buyer in a position of advantage; he, in a sense, can dictate terms to the seller. The favor of the buyer means business and profit, but on the part of those seeking it, is often obtained by a debasing sacrifice of self respect.

Fortunately the majority of buyers are eminently just and honorable. The pleasures of business are much enhanced by dealing with a class of men who fully recognize their own rights and responsibilities and respect those of others, who make no unreasonable demands, and ask only that the seller fulfill his contract in accordance with the terms of the purchase. Now I believe that a buyer who is endowed with a proper sense of justice is most likely to secure the best bargains. The reason for this is that while it may serve the seller to obtain the favor of the buyer, so also the buyer by fairness and courtesy is served by the other's friendship, and let me say there is profit in the favor of the seller. He will, by a natural preference, give a just buyer the best he has, in quality, quantity and price, whenever opportunity offers.

As sellers, we come in contact with the buyer through representatives, through our salesmen, and much depends upon the personality and character of a salesman. Value cannot be measured by the time given to business, nor can the value of any man be judged, except by the results of his work.

Method and business count. A machine will do certain work in a certain way, and do it well, but there must be brain back of the machine, and while we cannot do without machines, yet man is something more than a machine; he is an intelligence, a generator of ideas, and ideas rule the world.

The faculty of analyzing the conditions of his surroundings and utilizing them for his own benefit is the distinguishing mark of man's higher mental development. Habit, however, is a powerful factor in making machines of men, and some men unconsciously permit themselves to become slavish subjects of habits in business, habits of thinking and doing things in the old way.

Times are changing, opinions are changing, tastes are changing, everything is moving in newer and altered channels, and unless held, as in a vise, by unalterable habit, intelligent man will change with the conditions, adapting his methods to them. Therein lies his supremacy.

A good salesman will never allow his method of work to become old fogy. He recognizes that the facts of yesterday are not the facts of to-day. He is ready to accept suggestions from all sources and profit by them, as, coming in contact with all sorts and conditions of men, he knows from experience the ridiculous position of those who cling to out-of-date modes.

The true salesman is a man of genius. He has brains and resources; he finds a way to sell his goods at a fair price; he don't have to be given the best prices, the best of everything, the advantage over all others in his goods. He is the best part of the whole thing himself.

The true salesman is ever seeking that which will aid him in securing the interest and attention of his trade, as the object of his work is to forward the business to his house, but he will employ only fair and honorable means to accomplish his purpose.

The only real criterion of his ability is the number and quality of orders obtained. He sells his goods, he sells them at a profit, he complains little, he finds a way to do business with the goods of his employer, he believes in his house, he believes in himself and is never without enthusiasm, energy and pluck.

Such a man is a treasure. Compare him with the man who is always finding fault, who is ever blaming

the other fellow, and who by this attitude of mind weakens his house, his business and himself.

A salesman is born, not made; he is capable and shrewd, but his greatest gift is naturalness. He attracts the friendship of men by a confident, inspiring manner without apparent effort on his own part. He has individuality.

No two salesmen are alike, and no one can successfully imitate another's method of approaching trade, for the moment he makes the attempt he ceases to be natural, and arouses in the prospective customer that indefinable spirit of aversion fatal to favor.

Thus it is that no one can tell a salesman how to sell goods; the salesman must do it himself, and if he don't do it, no matter what explanations are forthcoming, he is not the man for the place. The right man can do it, and that is the man who is wanted.

There is an old saying that "A poor workman blames his tools;" so it is with a salesman; so it is with all men in all places. There are many misfits in life. Every man has qualities that suit him for a successful career in something. We can only arrive at it by exclusion. If a man don't sell goods he is not a salesman; that is evident.

I repeat, a good salesman will, by his natural adaptability, find a way to win the interest of the buyer; he will sell his goods, and succeed under the usual conditions of trade competition, without being guilty of underhand practices, without cutting prices.

I do not mean to leave it inferred that I believe his employer can expect him to surmount obstacles of unusual and extraordinary character, that fabulous prices can be obtained, but I do say that a good salesman will not tremble at every frown of the buyer, will not magnify every obstacle and believe it to be extraordinary.
