WikiStipendiya in Brief

A WikiProject aimed at improving content on the Uzbek Wikipedia

Organized by

- Youth Affairs Agency of the Republic of Uzbekistan
 - Agency of Information and Mass Communications
 - Council of Young Artists
 - Wikimedians of the Uzbek Language User Group
-
- Will run from 20 May 2022 to 20 December 2022

Methods

Edit-a-thon

- Participants should create articles that are at least 200 words long and cite at least two reliable sources
- Content should be filed on Fountain for assessment by a team of judges

Prize fund

- Over \$30,000 has been allocated to award the most active participants with one-off scholarships
- Winners of interim marathons awarded with laptops

Sub Contests

ErkinLitsenziyalar: promotion of open content licenses, including among state agencies

WikiAudio: creating audio articles in Uzbek – for the first time

WikiAyollar: closing the gender gap on the Uzbek Wikipedia by creating content on women

WikiOromgoh: wiki camps to bring together marathon participants and Wikipedia administrators

WikiSport: improving sport-related content on the Uzbek Wikipedia

WikiTa'lim: introducing Wiki Education to Uzbekistan and collaborating with schools and colleges

Interim marathons: two rounds of intermediate contests to recruit new editors

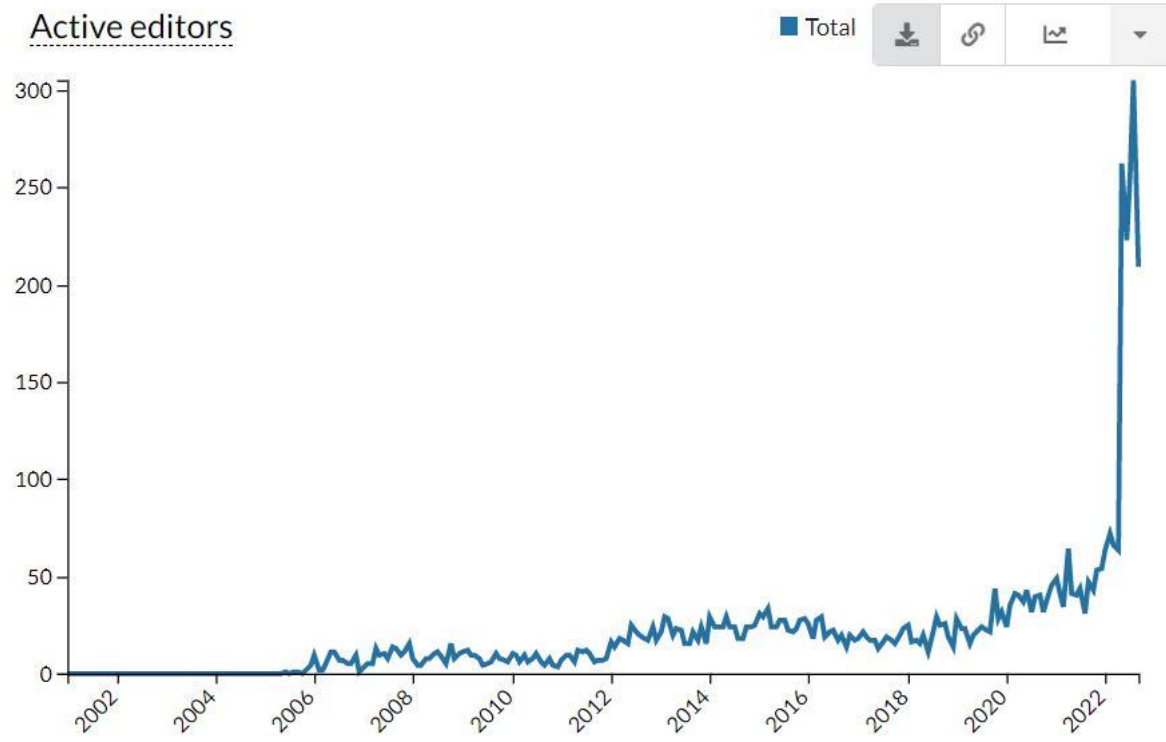

Results to Date

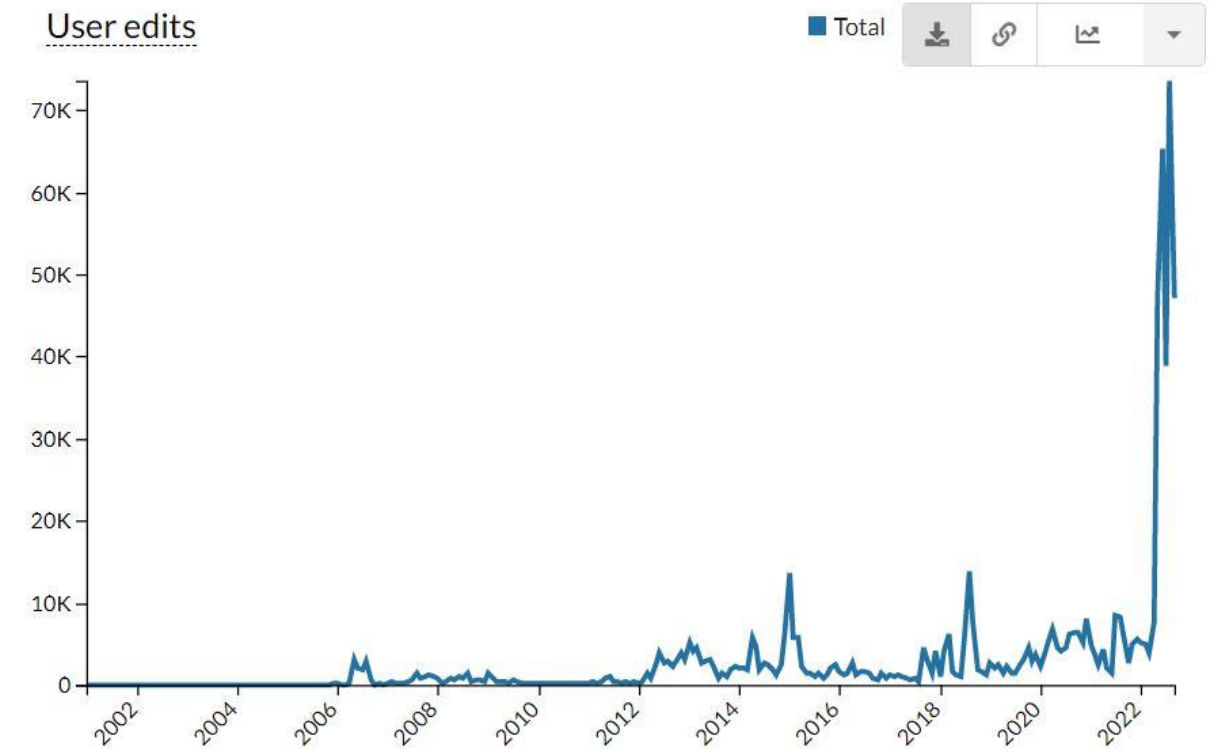

On 20 May 2020	As of Now	Difference	Increase (%)

Challenges and Lessons Learned

Machine translation a major challenge

Training scores of new contributors burdensome

Fountain is not up to the task – not by a long shot

Better to cooperate with actors interested in contributing than to ignore them

Important to keep expectations realistic, especially those of sponsors

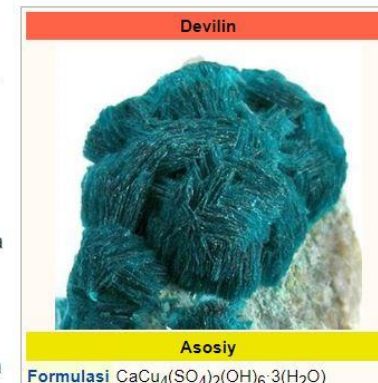

Seven months too long for a marathon, even when there's funding

--	--

13-Oktabr 2022, 18:55 dagi ko'inishi

Devillin - $\text{CaCu}_4(\text{SO}_4)_2(\text{OH})_6 \cdot 3\text{H}_2\text{O}$
kimyoviy formulasiga ega sulfat minerali.
Bu nom frantsuz kimyogari Anri Etyen Sent-
Kler Devil (1818-1881) nomidan kelib
chiqqan.

Devillin monoklinik tizmda kristallanadi^[1].
Kristallografik jihatdan u teng bo'lmagan
uzunlikdagi uchta vektorni o'z ichiga oladi va
ikki juft vektor perpendikulyar, boshqa juftlik
esa 90° dan boshqa burchak hosil qiladi.
Devillin prizmatik bo'lib, 2/m kristall sinfiga
tegishli. Bu mineral P 2₁/c kosmik guruhiga

Thank you!
