New Cotton.—The crop continues to be favored with fine weather, and with the exception of the complaints of drought from the high, sandy iands, everything appears and therefore you must make up your mind what you want to be progressing favorably. From parties who have recently come through the cotton country and from Southern correspondents we learn that the plant is generally in a healthy condition and the present appearance of the crop very promising. In some piaces the dry weather of June and July has caused a stunted growth us compared with the iarge vigorous growth of last spring, but the plant is the iarge vigorous growth of last spring, but the plant is soin of the Tecumseh (Mich.) Our Metallic Currency.—The amount of annual loss by the abrasion of coin is estimated to he \$750,000, calculating the builion of the country to be \$250,000,000.

The loss in this way annually upon English coin is as I to 420—upon American coin as I to 200. The annual loss by counterfeiting is estimated at one per cent, on silver coin and two per cent, on gold currency. To obviate loss by abrasion, the chief remedy is to make the coin thicker, thereby lessening the surface, and to change the figures. The remarkable absence of complaints thus far, though a favorable indication of the present, should not lead to premature, anticipations for the future; for bad weather during August and September would do much to neutralize the present flue prospects.
