

V/L

Occurring OUR Time: Sept 14, 2015.

"Supermassive" Gravitational Event

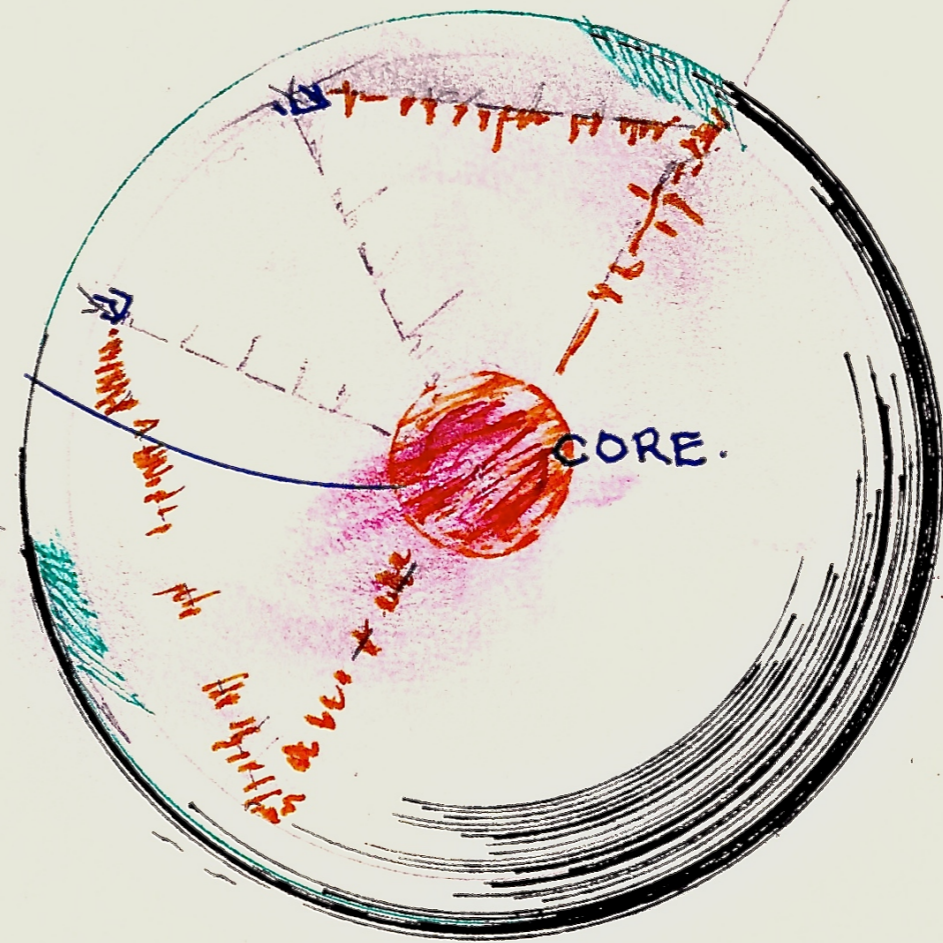

"Assume": that Earth's Centre of Gravity is the 'Core'.
In capturing LIGO signals at Livingston and Hanford there is bound to have been an Embedded pulse that reflects our dual - planetary status

After Computer-modelling has found appropriate size and distance parameters, a calculation should be available, to establish in real time, how long we have to prepare, to withstand physical effects of this "Supermassive" event in our region of this Galaxy
