New Improved Parrot Tulips

These beautiful varieties show a vast improvement over the old sorts having larger flowers, artistic shapes and new colorings. The blooms are very large, measuring from six to eight inches in diameter when fully expanded. When in the bud state they resemble the head of a parrot, hence the name. They are very desirable when planted among shrubs or the hardy border, also for growing indoors. They are not suited for bedding purposes.

Lilium Regale

Henderson's Select Hardy Lilies

Lilies commence flowering in June and with the various species maintain a continuous and unbroken succession in the shrubby border. Most Lily Bulbs (except *Lilium candidum*, which are ready in September), being of late maturity, are not ready before October, November and December (the best time to plant them). Where the ground is liable to freeze up before the

late Lilies arrive it should be mulched with 6 to 8 inches of leaves or manure to keep it from freezing, so the bulbs may be planted on arrival.

Owing to war conditions, a few old favorites like *Lilium auratum*, *Lilium longiflorum*, etc., are unobtainable this year. The American and European grown varieties which we offer are among the finest in cultivation.

The Stately Madonna Lily (LILIUM CANDIDUM)

This is the ever popular, fragrant, snow-white, hardy garden Lily, which is also known as "Annunciation Lily" and "Madonna Lily." It grows 3 to 4 feet high and blooms in the open ground in June. When grown in masses, these Lilies are especially effective against the surrounding greenery of shrubs.

Extra size bulbs, 75c each; \$7.50 per doz.; \$60.00 per 100.

Canadense. Our native Canadian Lily. Bright yellow, marked with copious spots of red; blooms in June and July. 2 to 3 feet high.
35c each; \$3.50 per doz.; \$25.00 per 100.

Elegans George Joerg. A fine dwarf variety of easy culture. Color yellow and orange. Flowers June-July.
35c each; \$3.50 per doz.; \$25.00 per 100.

Henryi. (The Yellow *Speciosum*.) A new rare and very beautiful Lily from China. It is very hardy, and without doubt one of the best Lilies for garden culture. The flower stalks, 3 to 5 feet high, carry 5 to 8 large flowers each, rich apricot-yellow, lightly spotted with brown. Flowers July-August.
60c each; \$6.00 per doz.

Pardalinum. A grand California variety producing 10 to 15 flowers on stems 4 to 5 feet high. Color orange spotted crimson. Blooms in July.
50c each; \$5.00 per doz.

Philippinense formosanum. A beautiful hardy variety of recent introduction, pro-

ducing long, trumpet-shaped flowers on stems 2 to 3 feet high; color white with reddish brown shading on outside of petals; very fragrant. Flowers in August.
60c each; \$6.00 per doz.

Speciosum or Lancifolium. The varieties of *L. Speciosum* or *Lancifolium* are perhaps the most popular Lilies grown. They are easy of cultivation, and produce large flowers of delicate beauty on strong stems; height from 2 to 4 feet, blooming in August.

Speciosum Album. 8 to 9 inch bulbs. Pure white with green tint through the center of each petal. \$1.00 each; \$10.00 per doz.

Speciosum Rubrum Magnificum. 8 to 9 inch bulbs. Rich carmine blended white and rose, spotted with deep rose and red.
\$1.00 each; \$10.00 per doz.

Superbum (Turk's Cap Lily). One of our native species. Grown in good, rich soil, it will produce upwards of 20 beautiful orange-tipped, red-spotted flowers in a pyramidal cluster, 3 to 5 feet high. Blooms in July.
35c each; \$3.50 per doz.; \$25.00 per 100.

A Royal Beauty (LILIUM REGALE)

The flowers are white, slightly suffused with pink, with a beautiful shade of canary-yellow at the center, blending out part way up the trumpet. The fragrance is fascinating. A splendid Lily for the garden, flowering in July.

Mammoth bulbs, 8 to 9 in., 60c each; \$6.00 doz.; \$45.00 per 100.
Monster bulbs, 9 to 10 in., 75c each; \$7.50 doz.; \$60.00 per 100.

Peonies to Color (Without Names)

Double White! Double Red! Double Pink!
We offer these in strong divided roots at
75c each; \$7.50 per doz.

PLANTING PEONIES. The richest soil is none too good for the Peony and soils which retain a moderate degree of moisture are the best; inducing strong stems and large flowers. In setting out the roots, a space should be given large enough to allow them to develop into clumps, say a circle of three feet diameter. The crowns of the roots should be about three inches below the surface of the soil when planted, and the earth should be firmed well all around them. After planting, the bed or border should be lightly covered with coarse manure and leaves.

TIME FOR PLANTING. The best time for planting Peonies is in September and October because they will then make root growth before winter sets in, and bloom the following Spring.

THE "IMPERISHABLE" PERENNIAL BORDER COLLECTION FOR \$27.50

A succession of bloom and a very picturesque effect may be obtained by planting the "Imperishable Collection." A sketch plan is shown. To make one like it 5 x 50 feet would require 100 plants. We list below 30 varieties of contrasting heights and colors and the number of plants for each group. The number after each variety gives the position in which they should be planted. If out of any variety we substitute a similar sort.

Violet Royal Robe

Pachysandra terminalis (Spurge). A trailing plant which grows six to eight inches high, forming a dense mat. The small flower spikes are grayish white and produced in May and June. It is largely used as a ground cover in shady places, being one of the few plants that will thrive under trees. Plant 12 to 18 inches apart.

Price, 35c each; \$3.50 per doz.; \$25.00 per 100.

They are very graceful and superb for cutting.

Price, 50c each; \$5.00 per doz.

New Single Flowering Sweet Scented Violet, ROYAL ROBE

This newcomer in the Violet world is by far the most beautiful we have ever seen. Unlike other varieties of violets, the plant itself is a perfect picture. It develops into a compact rounded plant about one foot in diameter and about a foot in height. The foliage is magnificent, healthy, and bold and about four inches in diameter.

Its chief attraction however are the glorious flowers which are the largest of any violet we have seen; they open flat like a pansy and are produced on long stems. The color is lustrous deep violet-blue and its fragrance, which of course is the principal characteristic of any violet, is most delightful.

A few plants of Royal Robe in your garden will furnish quantities of lovely fragrant flowers for cutting in early Spring when flowers are most highly prized.

Price, 60c each; \$1.50 for 3; \$5.00 per doz.

Vinca, Bowles' Variety. Flowers are bright mauve-blue. Blooms continuously from spring to late fall. Plant 2 feet apart.

Price, 45c each; \$4.50 per doz.; \$35.00 per 100.

These Roses are budded low, and when planting, the bud or union should be placed just below the surface of the soil. Be careful to spread the roots out well.

It likes a well-drained, sunny place, with plenty of moisture throughout the season. Foliage brilliant in autumn and persists till late winter. In the southern states, it is semi-evergreen. **Price, strong 2-year plants, 18 to 24 inches high, \$3.50 each; \$35.00 per doz.**

SYMPHORICARPUS SNOWBERRY

Superb Cultivated Blueberries

IMPROVED LARGE FRUITING VARIETIES

The Garden Fruit De Luxe

Ready for delivery after October 25th

These are unquestionably a garden fruit de luxe, and are the results of years of labor by plant hybridizers connected with the U. S. Department of Agriculture. Blueberries not only occupy an important place in the berry patch, but are also, on account of their beauty, welcome additions to the ornamental border. They serve admirably as a hedge for dividing sections of the garden, as, for instance, between the ornamental section and the fruit or vegetable garden. Being somewhat related to the laurels and rhododendrons, they usually thrive in soils and locations where these plants do well, but unlike the laurels and rhododendrons the cultivated blueberries should not be grown in the shade but preferably in open sunlight. The plants are attractive at all times—in spring when the new leaves have pinkish and bronzy tones; later when covered with waxy white blossoms; then these are followed with the bluish fruit, and finally when the plants take on the rich crimson tones of autumn.

Aside from the beauty of the plants, the chief value of the cultivated Blueberries lies in the size, texture, and flavor of their remarkable fruit. Blueberries grow best in a well-drained, sandy, peaty soil, with a good supply of underground moisture. The soil should also be on the acid side, the best p.H. range being from 4.5 to 5. If the desired natural conditions do not exist in the garden, the soil can be built up by adding peat moss, sawdust or apple pomace, together with coarse sand. The latter is important in order to produce aeration in the soil. This is necessary to keep the micro-organisms alive, which are required by the roots during the active growing season.

The plants are perfectly hardy and bear profusely for many years. Their fruiting season in the vicinity of New York usually extends throughout July. They are therefore a highly desirable addition to the home garden. If set out this fall, the three-year-old plants should begin producing fruit next season.

Cultivated Blueberries can be successfully grown in the home garden, for it is a comparatively simple matter to prepare the soil where natural favorable conditions do not exist. Our pamphlet, "The Culture of Bush Fruits and Vines for the Home Garden," contains complete information for growing cultivated Blueberries. It tells how to prepare the soil and how to care for the plants for best results. It is sent on request without charge when ordering.

In planting Blueberries, it is recommended that a variety of plants be set out in close proximity to each other (space plants four feet apart in the rows and six feet between rows). This permits proper cross pollenization of the blossoms, thereby insuring bountiful crops as well as extending the bearing season to its extreme limits.

WE OFFER THE FOLLOWING SUPERB VARIETIES

Concord. (Early.) An upright growing variety which, under favorable conditions, will attain a height of six feet. The fruit is large (about the size of a Concord grape); it is very attractive in color and possesses a fine flavor.

EROSIONET

Prevents washing away of seed and soil—for new lawns, weak lawns and stubborn terraces.

Erosionet is a strong, economical, open-mesh fabric made of tightly twisted paper twine. When placed over any seeded surface its 1/4-inch squares form tiny dams, which catch and hold seed and sod firmly in place. Thus, damaging "washouts" are effectively checked without cutting off the sunlight. As it also catches and holds moisture, it helps overcome lawn disappointments.

AQUELLA

Turns wet cellar into playroom, workshop, laundry. Damp-proofs foundation—keeps house damp-free. Reconditions leaky pool, fountain, cistern. Waterproofs floors, buildings, retaining walls.

when dry. Aquella expands—sealing porous masonry surfaces, such as concrete, masonry blocks, common brick, rough plaster, stucco. Aquella is a fine white powder. When mixed with water and applied, a chemical reaction takes place, closing each microscopic pore with an insoluble compound. This micropore seal continues to harden with age, the result is a beautiful, white, eggshell-like finish. Aquella will not powder, rub off, blister, peel or flake.

It may be easily colored with iron oxides; or painted any desired color. One bag (8.4 lbs.) makes one gal. and covers 40 to 70 sq. ft. Easy to apply with brush on any thoroughly cleaned masonry surface. Directions in bag. Aquella is for interiors; Aquella No. 2 is for exteriors.

Price, \$3.95 per bag. Prepaid 150 miles N. Y. C.

JAPIDEMIC (Milky Disease Spore Dust)

Nature's Control Medium Which Destroys the Beetle Grub

Japidemic contains the living spores of the bacterium (*Bacillus popilliae*) which causes the milky disease of Japanese Beetle grubs.

Japidemic is distributed on top of the ground or on turf in grub infested areas. It is not to be used as a spray, as it has no direct effect upon the adult beetle. One treatment under favorable conditions will permit the rapid spread of the disease, and destroys the grubs within the area. The bacteria remain alive for a long period, and is ready to infect and kill successive broods of Japanese beetle grubs as they move about in the soil, feeding on plant roots.

Japidemic is harmless to grass and other plant life, and has no ill effects on human beings or warm blooded animals. Japidemic is a biological product, requiring exacting laboratory equipment, which of necessity limits the quantity in which it can be produced. One pound will treat approximately 4,000 square feet.

Price per pound \$5.00 postpaid.

Autumn Seeding of Shaded Areas Strangly Recommended for Best Lawn Results. Include Making that New Area or Renovating on Established One in Your Fall Program. Henderson's "Shady Nook" is Unsurpassed.

"SHADY NOOK"

Lawn Grass Seed—For Shaded Areas

It is a combination of fine, dwarf growing, evergreen varieties which in their wild or natural state are to be found growing in the woods or other sheltered and shaded spots. In such cases an application of slaked lime, at the rate of one hundred pounds to each thousand square feet, or two tons to the acre, is an excellent corrective and sweetener, but the moss should be first raked off.

WHITE CLOVER

An excellent Clover for lawns, makes a close, compact growth, covering the ground like a carpet. It also prevents the washing out of soil during heavy rains. Thrives well on all soils.

Price: 1/4 lb., 60c; 1/2 lb., \$1.10; 1 lb., \$2.00; 10 lbs., \$19.50.

Perfect Lawn on Shaded Avenue—Estate of Mr. Frederick T. Bonham, Riverside, Conn. Produced with Henderson's Shady Nook Grass Seed.

SEASIDE

Our "Seaside" mixture will make a good turf of green on sand where the finer grasses will not thrive, though, of course, the sand must be top-dressed with not less than two inches of soil before even our "Seaside" grass seed is sown, to enable the young grass to get a start, after which the long roots—peculiar to the varieties we use in this mixture—drive down deeply in the sand and remain permanently self-sustaining, if attention is given to sprinkling during dry weather.

Price: 1/2 lb., 50c; lb., 90c; 5 lbs., \$4.25; 10 lbs., \$8.00;
25 lbs., \$18.75; 100 lbs., \$72.50

LAWN ENRICHER and TOP DRESSER

For New and Old Lawns, Athletic Fields, Golf Courses, etc.
It is Odorless, and Quickly Induces a Luxuriant Green Growth.

The constant mowing of grass and removal of clippings also removes a proportion of digested plant food. Therefore, if the luxuriance of a lawn is to be maintained, it must be top dressed at least once a year with suitable fertilizer. The Henderson Lawn Enricher is a clean lawn dressing which never fails in inducing a rapid and rich green growth.

For a new lawn a 10-lb. package is sufficient to cover an area of 200 square feet; per acre, 1000 to 1500 lbs. Apply broadcast with machine or by hand as evenly as possible on a quiet day and preferably just before rain. If applied during the summer, use half of the quantity and water it thoroughly with a hose.

Beautiful Lawn, Estate of Mrs. W. L. Harkness, Glen Cove, N. Y. Made with The Henderson Lawn Grass Seed.

Autumn is the Best Time to Make or Renovate a Lawn

The "HENDERSON" *Lawn Grass Seed*

Sown in the autumn, produces enduring turf which will withstand summer droughts

**We give full instructions for making new lawns or re-seeding old ones in our booklet, "How to Make a Lawn."
This is enclosed in every package.**

For a long time we have recommended the fall sowing of grass seed, either for making a new lawn, or renovating the old one, and year after year the successful results have shown the wisdom of following this system, which is Nature's system.

Grass seed sown in the fall germinates rapidly, and will attain a strong growth by the time frost comes. Even with the rigorous northern winters there is very little danger of its being injured by the cold weather; in fact, our advice is not to protect it in any way.

Even before the frost is completely out of the ground, we find that the young grass responds to the first warm days. Weed seeds from the previous summer will not start until weeks after the fall-sown grass has become strong and vigorous enough to withstand their more rapid growth; in fact, if it has been planted thickly the grass will often crowd out the weeds.

Any lawn will be improved by a light sowing of the appropriate Henderson mixture during early September, together with an application of one of the Henderson fertilizers. You will find a list of our various grass mixtures for particular places on page 31 and whether you are going to make a new lawn, or renovate the old, we strongly urge your doing so at once.

A copy of our pamphlet, "How to Make a Lawn," is sent with every package of the Henderson Lawn Grass Seed.

In the latitude of New York, the seed may be sown up to the first of October; farther south later, and farther north up to about September first.
