IN many of our Pomologieal Mleetinge，and in
She A gricultaral and Horticultural papere，we often the A gricinltaral and Horticutural papere，we often
hear and reat the mostslanderonsstatements made
againet farmers as a class．This we have endured aganst farmers as a class．This we have endured
nntil onr human nature ean bear it no longer－
notil forbearance has ceased to be a virtue，and ntil forbearance has ceased to be a virtue，and
now，for onee and forecer，we enter our protest
How often is it said that it will not do to recon－ mend farmers to piant pears，partieniarly dwarfs，
for they wonld not take caro of them－that farm－
ers need trees that will bear nerlect，as hardy as aks，and with as many lives as a cat．
This is all slathderous，There is nothing abou
the culture of flec avar pear，or any pear，beyon We culture of the dwart pear，or any pear，beyon
the complrebension of the farmer－nothing mot
difficult than a score ot other thinga that he pre the farmers who breed our fine Durhams an
Devons，ko soft and sleck，with such beautif ormx；the Soxony and Merino sheep，with their delicions muttun；who grow tobacco antl perfor our sugat：and are geriousty talking of groving
our tent；who sul，soil and drain，nad feed an clothe the world：we reveat it would he strange
indeed if the nen wbo do so much und are stion
ing for the accornjisispuent of even nare than this peare，which requir res butt prey litule more eurn
skill，or time thun to grow a decut ucre of Let us then hear no more of this slander．It is nu1
insult to the farmers that we can eadure no longer．
Ile who repeats it doce so at his prile

$\mathfrak{S p i c e}$ from New Boolis.

|  | OUr young friend was tweuty years of age edneatlon at Salistury, Before sending him forth to try conelusions with the world, wo will take the liberty of denining him : moment here on the threshold while we snrvey his person and equiprocat. It is, inderd, necessary to state brieny what kind of a young man young Jaekson was, in order to render credible much that is soon to be related, as well as to correot the impressions which the wild ways of his youth may have made upon the reader's mind. 'The occusioual audaci ties and irregularities of a young man like this were llkoly to be remembered and exaggerated. He had grown to be a tall fellow. He stood six. feet aud an inch in his stoekinga. IIo was remarkably slendor for that robust age of the world, but he was also remarkably erbet; so that symmetrioal. His moverments and cartlage were singnlarly graceful aud dignified. In the aceomplishments of his day and sphere be excelfed the young men of his own circle, and was regarded by then as their chief and model. He was an cxquisite horseman, as all will agree who ever saw him on horseback. defierson tells us that General Washington was the lest horseman of his time, but he conld searcely hare been a more Young Jaekson Loved a horse. From early boy. hood to extreme old age he was the mnster and friend of horses. He was one of those who mast coat. Horses luay be expected to play a leading part in the eareer of this tall young burribter. <br> Into the secrets of forest and frontier lifo Jampon was carly initiated. He was nsed to eath and knew how to make it the most luxariuts cade of passing a night known to man. He was a capital shot, and beeame a better one after years, wed to point out the tree in which he hol often seen his master put swo surecessive balls into the same hole. His bodily activity, as we have seen, was uansual. He was a young man of a quiek, brisk, springy step, with not a lazy bone in his body; and though his constitn tion whis not robust, it was tongh and enduring beyond that of any man of whom history give: aceount. He was far from handsome. His fuee was long thin and fair; his forclead high and somewhat narrow; his hair, reddish-sandy in color, was exceedingly abundant, and fell down low orer his furehead. The Lristling hair of the ordinary portraits belonga to tha" latter lade of his life, There was but one feature of his face that was not common-place - his cyect, which were of |

GRASSHOPPERS.
Ens. Reras. New. Yorrers:-I noticed in your
valuable farm paper of the 14 th of this month,
 daga counly Naturalist und huow all ahont grosss
hoppers. I was down in Oswego conuty in 1859.
in in grasshopper the, and satr millions if hem,
enough, as then thought, to de rour all the green that conuty, in June, 1 saw innumerable quanti-
ties of miniature grasshoppers which, lat for the providentiull frostansal cold weather which de
stroyed tiem, would have consunnell the eutire stroyed them, would have consmin.
vegetalbe products of that section.
$\qquad$
 female grashopplers, -the mode of operation he
can wituess ly observation during the later part of next antamu. Tha female, grasashopper will at
that time be greatly distendel with evges. Nalure has providech her with an faztrument at tho end
of her bonly whicla sho cau shenthe or unshouthe

$\qquad$
 I would advise my young friend to study th
grasshopper, - be will do well in the warin day of early June to visit some grass lands and se
the little liopper, as to coures out of his diminu-
tive shell. Whe has not fot a glass for examin ing inseets he shonld get one.
You call will our young friond that the Crasshoppor and Locust tribes ary numerous and inter-
esting - their hatita have drawn the attention and engaged the minds of the most emlnent
naturalista lu all aged, and in all comentries. The
wise suyans oil pur A Aricultural Depurtment, and Lhe Faculty of the Smithionian Iustitute at Wash ington, are secking information as to the most
speod, suffe nud effectual mode of destroying
theme, Sut fuough oi tho hopper, at this time, teresting items.
MAKING CONE FRAMES.

|  <br> Mr. Moors:-lu your issue of Jan. 28, Mr. <br> Chaprere mishes to know how to save his sheep I should do is the same circmostances, nnd it is no theory, for it has been practisod on rhy farm for a number of years past with complete succers. It is this. Get anme plank, 10 fect long will be of sumfient length for his diteh, and 20 iachea, or 2 feet wide; (if uarrown nail two together with cleats to prevent their getting apart) then lay lirmly on ench bank $a$ plank as often as 8 or 10 rods apmrt, will, (if his sheep are like mine.) be anflicfent, as they will run for the plank when they kafety. Ilease try it, Mr, Chapree, and if yon suceed as well as I have done with them, you will be satisficd. <br> I will here give my recipe for taking a film from the eyp of any domestic animal. It is sinn ple and effectual, and whal humane, I think. Thake of atrained bonoy in a spoon, (or anything new at can be hat, and open the eyelid and turn tho honey in the eye, lettlug the lid close over it. never perm the operation night and inorning longer the film has been on the eye the longer it will take to remove it Ithink it a better remedy and never dops harm. Jonathan talcott. <br> Riome, Oueida Co., N. Y., 1860. <br> HAY FOR WINTERING HOGS. <br> Eds. Hibal New-Yohher:-In your issue of Jan. 28 th, there is copied a short paragraplh from a correspondent of the American Farmer iulaudation of Sorghum for fattening hogs. The statement of the writer calls to mind a fact touehing the practice of a farmer not a thousand miles away, rize, that be winters his shoats ou mere hay regions hay is measurably cheap, and this method saves all "expenditure" for anything that is adapted to the animal's neelle, and leaves them in "excellent condition" to devour anything eatalule that they cau find on seveufarme. When we can winter hogs on hay, summer them by stealing, and fatten them with Sorghum, pork must inevitably be cheap. <br> luara! Saplrit of the 㭵ress. |

| year with another." Again I latughed, and commended his resolution, but he hardly waited to licur me throngh before he said, "Shase you wauldn't like farmin, wonld you? chase if you wonld I'rl-yon might-Ira be vilten to marry yem myself." The lapt words were bolted out with a desperate encrey, and, as if greatly relioved hy the itterance, he pulled ont his red silli handkerchief and lubbel his forchead algoronsly. I wery calmly ascured him that I did nut think I ehembd like farming: at inl, and rugrested that it was nearly nize o'clowk, and he had tectuer go nfter his mother. "I reckon I lad," said he, slowly, resting his hunds upon his knece, and gazing inlo the lire. "Trell ge what," Raid her, "I'd bes willin to have it in the bargain that you should have all the rege and butter moncy to get fimeracke with, and l'll give you that red heifer benjes. Come, now, that's fair." I whe obllined to decline cren this templog offer, and then he put on his hat nod stated for the door. Coming bark in 1 moment, be anid, "I reckon you'd hetter tuke a day or two to think abont it Traint every day you'll git mo good a chance, and you uint uncomman handsome, nor no ways smarter than the ordibary run, as I know on." <br> With there compllmontary worde, Syen viuish. ed, lenving we to langli or cry over the ocenrrence, as I naw tlt. I thlnk I did loth, and then went off to bed, thinking to myself, sure onough, I am not "uneommon handsome" - I khall find it out, lyy-and-hy. <br> April lith.-It is all arranged that I am to start to-morraw. My good-hyes are all said, my trinks nearly packed, and I an ready to loave this place, where 1 have passed no many hours af mingled juy and korrow. Mis. Watkon has male me a parting prescut of a Plaster of Parls cast, reprov senting at freen parout standing on at conl-hod full of frost-hitten tomatuca. She bought it of a L.rnveling pedder, becaune, as she said, "the tomatoges was so natural." |

## COLORING RECYPES,

Eds. Ruinal Now-Youker:-In a December miber of the lewas I perceive Jensue asking Iferisa Red.-For a chnap, bright red, suitable hrars, carpugt, one pound miewool, boiled 2 or color 3 poounds old flamnel, or 2 pounds new. I.ct it remain in the dye twenly forr hours.
will have patience to dye it, first blue, and then yellow, according to the following recipes, she
will feel amply repail: Butur.-O ne ounce
BLue:-(One onnce prussiate of potash; 1 table-
spoontiul of coppreras; 1 duo oil of vitriol. Bring spoonthl of coppirass; 1 du oil of vitriol Bring
to a lool, then put hit the goods for twenty minutes, stirring thens often. Rinse in clear
warn water: Xhis is sulficient for five pounds. Yeziow,-One-half pound surar of lead, dis-
solvel in hot water; onc-Fourth do. Di-chromate of potash, dissolved, in a vessel or wood, in cold water. Dip tirst in lead.water, then in the potash,
and alternate until the color suite. On now, -To mike the yollow a bright orange,
take cuick lime, slake it, suttle, and draiu of elear. talie cquick lime, slide it, stetle, and drain off elear.
Allil sufficent water so that the goods will not be uromided in the least, bring to a acislaing heat for
an hour, or until it is brigltit enongl.

## How to Cure a leboos.- - felon can be cared

 skin and keeping it on as lonk as you are able tobenr the pain, repeatinn if necyssary: bear the pain, repeatinu ifncecessars. A felon
starts from the bone, and Ure eess slini draws so
hard it will soon come to apered. If son is lot go too loner many months,
and perlaps a year, will lapme, be fore it gets well; Ksurtisa Macmises- - Iying upon our table

Writen for Moores' Rural Nee- Yorker
MOUNTAINS OF PALESTINE.
Wrata a strange, thrilling interest, these words possesg Not that there is anything peculiar
alout the eames,-it is siuply the iucidents conuceted with them. How sacred all thase places,
 to aninate our chilnlyst hearts when our nother
told us storles ectnnected wlth that liftle town of Bethlelem. Howr carerly we uxed the listent
the storics of the star in the East,- the babe in
 and, in later yearg, with what wrapt attention
have we listened while these things were dcserihed and pie tured to ns from the sacred desk.
Mrthinks if 1 was as traveler, if it was my privilege to roam over dlstant tunde, there is no place plains of Palestine. How I shoulla love to stand on that monnt where Jpaus ant and tanglit the
multitude; or wader smid the solltnile of Olivel, His favorite resort whero His disciples lirst
listened to those words of instrnetlon which we gather from the inspired voluve, - those words Which have come down to ns as a preclons legacy. we feel at the mention of Mount Taber, wore it
not that the fect of 1 susus had lingered there, and a halo of glory froin the eterral world lad
crowneal its summith besido the glorions presence of Moses and Elass just from Heaven resting
unon it Hons nacred tur to the memery of that aparden where the prayer ifst went up which has
gecn so olten repented by earth's sorrowing ones, "Fathcr, not may will, but thine, he done." With
joy would 1 lall thy rugged semmita, joy would hall thy rugged silnmits, O, Monn-
taius of Salestino! Wlth joy would I tread in the footsteps of that little band who daily list
cued to the words of "Himu who spake as nerer fallen,- -theugh thon art renpining the fruit of thy will I remember thee with sacrod pleasure,
being so nearly conneeted with the those whom I one day hope to meet in thic eity
$\qquad$ supposing the world to be a misto. To is is people-and their number is not small-the oarth
is but a thicatre of pain and sickuess, sorrow and death. Joy is illusive, plensure a chcat, laughte not even to be louked for an this siss of and grave.
"taking up" of what thes call "a cross." The
are authit shadowing impression that they have no right to
be happy in this life. They believe there is something intrinsically brid in thic world that thicy
inhabit and all the joy that proceedls from it.
They have an ide that They bave an idea that the moral evil which
afficts the human raco has struck in. To them life is a trial-severe, nurclenting, perpetual.
All that seems in the world, is a hollow sham, for the cleception
of the unvary and the ruin of the unwion Diving hyowhemge, -A perfect knowledge of
nature is nowhere to be found but in the of it; no less wisdom and understanding than
that which made the world, and contrived this rast and regular frume of nature, can thoroughly
anderstand the philosophy of it, and comprchend undcrstand the philosophy or it and comprchend
so vast a design. liut yet there is a knowledge which is very proper to man, and lies lovel to
human undorstanding; and that is the knowledge
$\qquad$ conmands, and avoiding what ile forbids. This
knowledge and wisdom may be attained by man,

| Is what direetion must we now look for im provement in our agtieulture, is a question thatoceupies the thoughts of all thinking, observing farmers, and one which a subscriber wishes us to answer. To do this satisfaetorily would require more spaee than we ean now deroto to it, Wewill, howerer, give a fow hints on this point, which we lope will be both interesting and provitalle. We look for improvement by muans of thorough drainage and deep plowing, and the cuitivationof those crops that will furnish the greatest amount of food lor stock on the least quastity of land. American farmers have doubtless done aswell, and we believe even vetter than any other elass of nuen under the same circumstances. With new farms to be clearcd and paid for, taxesto be met, with labor dear; and in muny cases not to be obtained at any price, land and produce cheap, it could not be expected that our farmerscould engage in any expensive or laborious system of improvement. To obtain as much |

## DOMESTIC NEWS．

Washluglon Mutcere
Is consegnence of information reccived at the
War Depratment from Gor．Honston，of Texas， Col．Lee，who commandsthe Department of Texas，
is especially ordereat to pursue and canyturc Cor is especinily ordered to pursue and capture Cor－
tengan and his band，whetber they
or not into Mefieco

 minder completelenk incers，and with special instruc．
tions as to vigilanceic Information received at Washington ropresents Cortenas as an Ancerican
citizen，who recruited lis followers by opening the jail at Prownssilie，and then plunderius on both sides of the river．The helief is，that he
has more $\Delta$ mericans than Nexicuns in his hand． Thuc leter of Gov．Honstou to the President has
not been but may soon be mate puble in
response to the resclutions of hoth branches response to the resolutione of both branches of
Congress，culling for iuformantion in relation to
theub） troubies along the rexas border．It is under
stood havereve，that Gor．Houstou，anoong other
sto things，reprcsents the existene of actanal war），
and urges imuediate succor，and indicates his intention to eall out volunteers in sulticient force
 extent．It is knowny from the latest Texos dates，
that he is vigorously prosecutitg his pians to the
letter． letter．$A$ reply has been sent ty the President，
wwho，there is rasoon to believe，is opposed to
this inden el

 nd these instruetions arc of suel a character as
 out of volunteers for the purposes mentioned，
properly devolves on Congress．
The order of the War Department for the relief
of New Nfexico and the Texas frontier，have jnst

 whics Col．Laring returned from Fort Bridger．
Theses forese are to scour the phains in the recrion fen obstructed indians，and whylere the mails have
fosted in strony deounts．They will be Posted in strong detachments in New Mexico．
Thuc troops now statioued there，thus rcliered by
these forces，will march to the Texan troutite
 disurbiances from Indian hostilitics exist．In
add ition to these arrian gements，and the orderin $a$ battery of light artillers from Fort Leaven． Worth to Fort Brown，all the companies allend
on the frontier will be filled out with reeruits． ment of Stante to Mr．Ward，our Mriuister in Clinana
 ho purpose of Mr．Reed＇s treaty．He had inti．
nated his intention to returna

traced, the same haunt revisited, with an interest,
a fuscination, and a joy that nerer reach thecir
climax. This is duc in part, we doubt not, to
climax. This is duc in part, we doubt not,
merely physical experience. The pure, thin
bracing alr of clevated regions 1 s inhaled withbracing alr of clevated regions is inhaled with
conkcious laxnry, which gelliom accompanics th
process of braathing on the plain or by
ife of two days seems condensed into one. T
undlulating pathe, the alternate ascent and d
scent, toring in then oll the
relief and relaxation, so that not only docs the
entluasiastlc pedestrian find his capacity enhanued
but, as we have learecd by repented trial, the
 ..... cry is its unceasing unvelty. On no two days, for
no two succersive hours, is the panorama the
in eombinations that change as, often, and are a
incapable of repenting themselves, as the groun
or politheringws, of moaths, and fillets of azure mists, the shacqunset, the passage of dense columng of yaponeinent as freell a joy to the beholder as If the
like had never becen seen lefore. The midsum
too long, for a fcast of heauty and grandenn
served by elemental spirits that know how to greettheir guest with a new surprise at
Yese tops have come. We raw one yesterday-
a veritable top. - we heard the music of fith hum.

- we wathon- we wateled it as it went to alkep,- and we
waital until jits last ayyation died away, and it
fiew off, out of the magic clrcle, in the bano old-
raslioned and irregular tangent. "Well, what ifanything particular in a top? Good friend-
althougl somewhat critical - there is much in a
top. It has a story to tell, - it comes in with
"Ient,"-it sings of white clouds and blue kikes,"Ient," - it sings of white clouds and blue ekies,
-it is the fore-runncr of April showers - the
first hlossom of epring. Thocord, are the best chroniclers of the clanging sea-
sons. They watch for the ides of March, wi-when the sunsline is longer and stronger, as well
as astrononers nud meteorologists. Tops, mar-
bles, and kitce, are as regular in their round as thethem, as mue sometimes swear by Jupiter and Mar
And so yesterday, whea we heard the ercalinslip of the cord, and that soft, musical whistlethe si
the smountains, what beginning to disalve on the
megdows, and that the circling sap was warminup the liearts of ancient onks and elms, and giv
ing werw life to their stout trunkis and arms,
There may still bo flories
pino in the North, and the winds may blow and
heat against our doors and slake ns in our leds,
- but the wiuter is over and the sceptre of icicles
steps out of the Enst like a king in purple, an
is sunset pavilions ure bathed in slowers of gol
is top. Yon may put fuith in his fore-know
kehem humminglike bees in the streets and alloynear, and you may look for clearer horizons an

Follow thls treathent for several days, and should tho discharge have detho chances favor a enpe. The olject in this mode is to exelte allienive influmation, by means of whieh, and external pressare, the surfaces of the interiorare glued together. atroere the jomamentary, tennmome, and bony the only remedy is the knife. The part must be latd open, and all fistulous pipes cat out. Ir be removed. Clennse with a solution of chloride of lime, or hyrollnucous aeld, bring the edges together by suture, leaving an opening at the lase for the diseharke of matter. Healing by adhesion is the object which minst be kuptin vew. If hailure is apparent, and the part assume a morbid type, intine, pyrolignenas acid, and linseed oil. Fir lan sam may be need with good effect, when iudolence a dispositlon to heal is manlfested, dress with tincture of aloes and myrrh. While the locality of the discaso has ita specife attention, do not fall to watch the gencral health, and keep the bowels solnble. Sulphinr, sassafras, and cream of tartar, are the best remedies. <br> This is better done ou a moist day. <br> Killing couch or Cluach ciratno. $\qquad$ <br> ply to a correspondent we expressed the opiaion <br> that salt would destroy it, if applied in very large <br> periments with this grase, but becanse we had <br> found very few weeds or plants of any kind to <br> Avon, N. Y., doubts its elficacy is this ease, and <br> glves his experience as follows: <br> In the Rlvest, in reply to a correspondunt, <br> you say that salt will kill quack grass, if enough is applicd. This assertion I dare not contradlet <br> because the quantity of ealt to bo nsed is nolim- <br> ited; but I aust be allowed to throw a shadow of doubt npon the theory, by stating an experiment <br> doubt npon the theory, by stating an experimunt which 1 made last sumncr. Having an asparagus bed which was being ruined by quack grass, agus, I covered a part of it with salt, to the depti of two duehes; half this plat I spaded up, mixing the eult on the remaining half to leach by the actiou ol dew and rains. The result was the achou of dely and rains The result was the same. It kilfeda fias, thrifty cherry tree, elght or ten years old, ind several currant bushes, which stood near the edge of the bed, (and I an wot the "quack: asparagns eseaped unharmed, but "still lives," having passed the or mphantly as the threc Isractites | cmerged from the fiery furnace of King Nebiciadmezzar. <br> Here, where this grass is becoming quite too generally conceded that all experiments short of spaling the ground, and carecully gathering nod destroying the roots, have proved total fililures. gether in masses, this plan involves less labor than would at first thonght he supposed. <br> I have, however, heard it stated, by a very respectable and candid farmer, that he once accidowning; att open winter succeeding, the routs were entirely destroyed liy alferuate frecziug and thawing. While I do not squestlon the resnlt in this particular case, it is extremely doubtful if the practieg would be generally suecessful." <br> The nature of the roots, or rather the undergromd stems, may be learned by those who are happily unacquainted with it, by an examination will form a stroug plant, so that its destrnction is very difficult. $\qquad$ <br> BhablLes-Nature, Treatment, dic. $\qquad$ $\qquad$ tho ranst, Jabio to bo uffected with it. Thus far it has Lake Cio., Ohie, 1860. $\qquad$ disease linown us black leg, is possessed of as many names as there are parts of the nimal syy- ten in which it is wont to dovelop itself. In it first appears in the thigh, it is called guurter-ill, Iharter-cvil, black-quarter, joiut-murrain, etc.- Then, agaln, our mout distloguished veterinarians, and writers upon topics connceted with atimal health, are at utter valiance in both diagnosis and treatment of the malady. Under such circusu- stances, it may ba well to give the rationale of the two leading pathological systems, leaving the subyect open for the viows and experiences of Rrash. correspondents. Youltr, who is classed mong the "orthodox veterinary writers" says: a disease, which, from its virulent character and speedy course, may be termed inflammatory lever ber of strange yet cxpressive terms, is occasionally prevalent, and exoeculingly fatal among cattlu anary distict. It is termed blauk-quarter leg , shont of blood, isc.; aud although it may not, at any time, embody all the symptoms of either on these diseases, according, at loast, as they are few cases in which the prevailing bymptoms of most of them are not exlibited in some of the stages. <br> fecer, indicates the mode of treatment. It a case of excessive vaseular action, the first and most important step is copious bleeding. As much blood minst be taken as the animal winl bear to staggers or threatuns to full. Here, more than in any other disease, there must be no looliah direc tuker acong as can be got; for it is only by bold de. pletory mensures that a inalady can be suldued that runs its course so rapidly. <br> Purging must immediately follow, Epsom the best purgative. A ponud and a half, dissolved in water or gruel, and poured duwn the throat as gently as possible, should be the lirst llose; and not oporato in the course if six hours, another. bonud shonle bo glven; and, nfer that, halfo pound duses uvery six hours until the ellect is produced. $\qquad$ |

ROCHESTER, N. Y.,-FOR THE WEER ENDING SATURDAY, MAY 12, 1860
\{WHOLE NO. 539.

MOORE'S RURAL NEW-YORKER,
 CONDUCTED BY D. D. T. MOORE, With an Able Corps of Assistants and Contributors.

CULTURE OF THE PEA
Mowe than once, the present apring, we have
 fact that eyery year there are brought to this city from Curiada, from six to tou thousand bushels, at bushel. This quantity ray sceur so large as to eause some to doubt the coriectness of the statcseedsmen supply a large section of conutry; and another fact perhyps we may be allowed to menzens have a way of turniug them into ground, and we have no doubt very Larmless, coffice.
The great fucmy to pean culture in this section is the P'ea Burn, (Brruethes P'isi,) whieh has made ment of the erop. Its appearanee, when magni-
fied, is shown in the engraving. Early in summer

## When the peas are in flower and forming pods, th fermale beetle deposits au egy" in almost every pea

 When matnred, the pea docs not applear injuredbut on elose examination we can discover in ench a rainute black gpeck, which is the larrus Dr the might, or in clondy weather. Fach cgg i
placell opposite the pea, and the holes throug Which are soon closed," The larva remains in the pea all winter, gradually consuming its interna
substance, and in spring it is ruansformeã into perfeet insect, pierces the skin, and emerges to
depusit its eggs in the new pods. The larva has a soft whitish body, und a head small, scaly, an
armed with strony aud sharp cotting mandible The maggot, when it reaebes maturity, gnaws even cnts roand the inner surface which coaver by a elight dilation of its body it forcez off the seuted ju small engraving. In many of the pen rises from anl we founc dead. Whether this eustored to, not invigorating them salficiciently to ced when they cannot make their escape readils, here caso when tue picas are confined in determined. The vitality of the secd is no
usurlly destroyed; as the cyg is deposited in the nsurlly destroyed; as the cyg is deposited in the
siae of the pea, where the ivsect when hatche emeryes, leaving the germ nninjared. It
loubtful, however, whether the plants rais roin such peas are as strong and healthy as thos from perfect ssed; and they shoald therelore

Tuere are opon our table quite a number o sheep, and as some of these require immediatc attention, thereto.
Grain for Breeding Ewew.
 seecmed the most baneful. Our own opinion
diat grain can be used without evil results fullow
the ing as a neressity, but it mast be given spariogly
and with julgment. Until two or threo weeks
 a fair start at the period of laiding, eareful roots mixed with oats or meal, and the results,
as exhithited ly the lioeks of this elass of men, would feem to indlcate that snch a coarse in
excellent ecouomy. If ewes were to poor cond nothing the feeding of grain commenced, a
$\qquad$ eseapcd the cvils arising from constlpation and inflammation, it might be deemed jemarkable
If, however, the grain was given ground, fed in a warmol brian mash, we cannot well conceive
of aught sare a beneficial termiuation. l'robably we cannot do better than quote the American
Shepherd on this foint:-"The ewes during preg. nancy should be disturbed as little as possible, quality of their food. Ewes, however, should injurious, as it predisposes them sometimes to
abortion; but what is nsaalls termel 'good store condition'should be maintained through the
whole periou of gestation. It cannot be espected pur sigorons limate it the lam officing, in tion; thercfore it will be wise if the sheep hus thegm, 'so the darn, so the offspring.' Thes

 line of animal portraiture, having sketched aud ous improved breede, thuring the fast ten yenrs, brecer and connoiseur of fine stock, gives hinn great adrautarge in underatanding the "points" of the best breds of Catlle, Horsees, Shecop and
Swinc. It is with pleasure, therefore, that wo
 conditiou is equally necessary to sustain the lamb size, and thrilt."
summer Care or Lambs, ico. to give as some practical directions for the man-
agement of ahcepp-ewes and lanlls, morc particn-arly,-from the pieriod of yeaning until brough to traverse, and we cannot bs expeeted to cover
the whole within the limits of orie or even two articles. bath litunch will have its due suare or atentitted, upon which our young friend would
be ogire the experience of others, he will please make it manifest.
During the lanhing period, if the ewes are in
fair condition, the nasture in which they are keep fair eondition, the pasture in which they are kept
must not be very luxnriant, but when it is over ing together, at this time, of large numbers of
ewes is nut considered as working advantagcously to either ilock or mastor. Monski.l. sets the num. less will prove better. The breeder slonold, at all seasons, have hefore him the fact llat a fow sheer
kept together will do leeter than many. In from five to twenty days from the biith of
the lamh, (being governed somewhut hy the weather, the importint and neeessary operations
of docking and eastration are performed. By the majority of breedurs these operat:ons are accom. that the lamb has hardly salficient stanina to en. dure both at the one handling, and that $a$ sulfi-
cient period should clapye between them to pernit its recruting. Writers upon the sulject arguc that more depends upout the work being properly donc than anything else, and that where
skint and eare are used no danger may be appreas quietly as possible, no bustle or hurry, and be log confined in a small eurflosire, so ns to preveut
 process of castration are various liut we give,
rom the anthority alrcady referred to, one eane "One catches a lamb and seats himself astrid of a narrow plank or seautling, which is plaec
at an inclination of about thirty degrees, prcesing the lack of the lanll firmly against his belly, and
with his hands grasps the hind legs, draving thein upward and toward him, so that the scrotum

| with a sharp knife, cuts off about one-half to twothirds of the testiele bag; then drops his knife, and draws ont one of the testicles at a time, till a purtlon of the connecting cord is seen, wheh he divides by friction of Lis thumb nail. This mode of division laterates the cord, and leas blecding will follow than if done by a sharp in. strmant. It may, to some, appear unueccsasary, and therefore ohjectionable, to cut off so much of the serotum or bag; hut if dislodeded of its contenta it is eertainly quite an useless allair, the little wool growing upon it being almost worthlese, and a buther always to the tagerer und shearer when cuttlng it oll:" <br> Yowatr says the preferable mode of operating is to tie a waxed cord as tightly as possible romed the serotum, above, and quite clear of the testieles. This will completely stop the circulation, and in a few days serotum and testicles will drop oft: Care mnst be exercleod in tho application of the cord to the exact part, and in the tighterning of the ligature. <br> Where the first given method has been adopted, an applleation of the following ointment is re-commended:-0no fuart of tar; two ponuds of lard; warm to a thlu liquid, and add one glll splrits of turpentinc. Apply to the mutilationa, and for one or two inches around them, by meuns of a soft swab. This ointment is healing in its effecte, prevents inflummation from colles, and, most importunt of all, in an eflectual guard against the attacks of the maggot-lly. <br> The operation of docking is very simple. An assistant holds the lamb with its back pressing against its hody; thus presentlig the haumelios to the operator, who cuts off the tail at the second joint from the rump. It is sçldom that bleeding will eontinne long, but if the laml) is grow. ing weak in consecgnence of the loss of blood, a pisee of twine tied tightly tround the tail, Just above the dock, wlll chect the hemorrhage. In a few hours ather the flow of blood eeases the twine should be remored. <br> REARING AND TRAINING MILCH COWS. <br> Eds. Reral New-Yorker:-We would arge the follest care in selecting, rearing, and training cows for the dairy; not only cows, but the calves, which are to grow to be cows. We lay it down as a rule that all antecedents should bo groul,not only of the male, but, much wore eapecially, the female. We consider the instances raro where good and valuable dairy cows are grown from | contrary, every dairyman bus seen good cows that hred ufter themselves, and every heifer ealf, saved from the knife, which they brought hore the good points and possessed the qualitics of the parent. We have known lustances of sach excel. lence where plain evidence of this fact was trans. mitted from clam to offepring for jears, agnin to Le reproducod and purpetuated if allowed by them. <br> But there are principles ol practice at work which sacrifiee many,-victims to ignorance,-of the better class of ealves for the dalry. First, the covi is a good milker, and all her milk is wanted, and the valf is leaconed,-sccond, her calpes fattun readity and bring four fifly in the village markct. If they cescmpe all this, beloge hearty, gool feeders,-an good nillicrs always are,-they derclop and fallen carly, and are bally admired as the "awretrst lit" of beef ever caten. Are not these sallicient cauges to hinder inereaso in the production of good dairy cown? We lay it lown as af fact, that it is much mom difficull finding first elaqs dairy cows, even in dalry reglons, in prox. imity to a lively markct for veal, than away from such duatroying eauses. <br> In selecting a calf to be grown for the lairy, see that it has a line head, bright eycs, thin, tapering neck, flat, clean logs, good skin, hind-quarters set wide behind, and udder vcius well developed. The: calf relected sloould then grow to what nature designed,-ucither joresd by over feedlag, nor, what is stlll worse, stinted. If you want dwarfed cattle, grow them, as too many are grown, iuside a luiry leathern kack, wheth two starved eyes in front, and mpindle legs bencath, animated by the last fraction of animal life which will servo to kecp the clanorous crows away, but lacking all those anluad spirlts so good to look upon in tho frollc of beathiful, developing excreise. Espeeially should licifers never be stinted whleh are to lic in calf young. Do not let then to the male too early, for the same reason. Maturity, or ripeness, in both mate and female, should be secured telure they are allowed to propagate. Hence the importance of never stinting heilers growing to be dairy cows,-we love full-grown, not dwarfed, or stanted, animuls. <br> The freynency with which we mect unruly cows,-cows in the habit of kickiag, ranniug, starting, se., when heing milked,-leads us to append a lew thoughts by way of direction, or instruction, in the training of cows and heifera. What is to be dome? First of all, atcustom the creature to your presence. You might as well |

$\qquad$ baked as hard as over again，especially if fonlo owe
ly rains sulficient to wash the fine particlesof carth to the pressed clody bempath， 1 have often seen
it so line on top that in the spring it rum together
and looked llke suan；and when the ury weather and looked llke suall；and when the Iry wenther
connmened，it laked，and in some instances
cructed

 do not krow any other，amd I calnot tell yon any
better way of plowing your hard laked soil than
iuto chula lo inches wade，then Lho Clod－Crusher is a useful
hnplement－and I would mot adviso you to dig． pense with it，or the Tristees of the Agrienltinal
College tu thry theirs． For the purpose of testing tha principle，I will
take two pieces that，would bocm to the ns neces． sury for the ansi ar the Clod－Crinalier as any soil I
have ever culltivated．The first is au old traveled roand，talken up nid inclosed to prepare it for wheat．
I set a sharp plow so as to cut twelve or Ifitean pending on the coudition and certainty of lis dis－ golls，can judge，－und then I shave ap the hard
goil without turning It over，but simply shaving
$\qquad$
$\qquad$ ciently light to raise it two feet，ns the goliul com－ pact soll，when shaved up in thls manncr，will be
increased in depth from its original twelvo or fiften laches，to at least two ferto l＇repared in hins manner，the alt eirculate日 freely throngh this
two feet of cilifuect－ul）soil，which you and the Tristees of the Agrientlural College，what the Crusler，as if to keep the nir ount，and put at deli－ ance the pilain teaching of the Crentor，－as if the
All－Wlag lad never given a thought to Agricul－ I can harilly fouldt that youn，as well as all cupe－ assertion，that wheat dues nucti better where the
and ships，than where it is all pulverizel and made bed．There are several reasons why this is so，
the nooxt important of which is， chunks gradually dissolve and cisntinue to fertilize
the roots lonig after the sed is sivn，which pro． cess is quito enllal to a thorongh hoelng when in
Irllls．Agaill，all leary clay golls whin which linve conragtuently settled down tor，and compact，need only to Le treatga as alove de－
seribed，to gleld from tive to teet ）u4hely more of Wheat per acre，thank by tho process of chunking
up and pressing down a gain，if in other respects land is to make hoavy soils light，and solls which ure too light，more tenacious and heavy．No Wise fumer ever chlunks ap his land with tho
plow，or makes it into brick－tats，for the purpose of breaking them up again with tho Cringher or Agaiu，Mr．S．says：
$\qquad$ Mr．Dicknsov：＂ regard mo quilte so verdant as to reconnuend hirce plowings to make hard rolls finc．When it crop that season．I do not pretena to be sur iently skilled in the trealiment of soils to be able to prepure it in nuy manner to make it pay th
same senson it is cllunked up－and 1 have not tho pleasure of an aequaintance with a firmer that ever could．I learucd when I whas much younger
than now，how to slice up the soil with the per than now，how to slice up the soil with the plow
when it lay folld，so as to make it lay up light when it lay solu，so as to make it lay up light at
the first plowiug－and，therefore，Inever plow but one frst plowing－and，therefore，I never plow but

| PRESERVATION OF BIRDS, \& c - NO. IV <br> आOUNTING BILDS WTHOUT WIBE. <br> Mr. Waterton, a celebraten English Naruralist, objeets to the use of wire, aud recommends the following plan. I have tried it on small birds, and coating with preservatives, stulf the body with cotton and sew it up. Tie the hill together by putting a thread through the nostrils, and a needle must be stuck uniler the lower maudible, gether, to their natural position, by runuing a thread through them, and didd the cyes. Tiuk and 111 threc-fourths of it at one end with cotton, at the other form an inelined plane. Make a hol10 in in for the reocption of the bird, and place it in the box with its legs in a sittiug posture. Then take a cork into which three pins bave been stuck, for legs, like at three-legged stool,-place it |

| was formerly run through the bill is stuck into the cork, which whll act as a support to the blril's head, while drying, and may be placed in any poaition reqnired; and if tho wiuge are to be elevated, wace a little cotlon under them. Place the box out of reach of sun or fire, that it may dry slowly, and frequently adjast the feathers. When the legs begin to stillim, place them in their desired position, arrange and curve the toes, so as to hold a branch, in which, when the bird is dry, plare two splkes for thelr reception. <br> It is often dillicult to get hranches of trees that are suitable for arranglng groups upon, and they can be made to any shape by a lratue of wire, and winding romal it llax, securing it with a striug, and covering with grem or brown paper; or better, by sizing and coating the paper with thick white paint, which may he covered with moss, dried and rubbel with the hand and dusted on. All sulyects shoull leegerept in glass cases, or the flies and dust in one beason will spoil nll jour labor. <br> SK1NNTAG UTJADRUPETA. |
| :---: |

Plua up the mouth, nostrils, and any shot holes,
with coltun, lay it on its buck, and walke a long in with cotton, lay it on its back, and make a longi-
tudinal inelsion in the akin of the abdomen, to King care not to penetrate the nld ominal museles.
In this operatiou thy hairs must be carefully separatell to the right and left, and nono of them cut
if possible. Separate the skin to the right and left, putting pads of cotton between it suad the skin ns far as the inoision will permit, each of the thigh bones mast be sepurated at its
juuction with the body. The intestinal canal
then is then cut across nud the tail cut off as
close to the body us possible. Alter this the pel-

| moore's rupal new-yoriker, rural, literary and pamily nemspaper. CONDUCTED BY D. D. T. MOORE, <br>  <br> IMPORTED WEEDS AND INSECTS.-NO. II. <br> Ow making our irsts 1 lsit to the Pral les of the many reeds that are the bane uf limacis fin this Eeetlon of the eountry. When the prairic sod is maiug boro of all forn pianted, tie sronna re Ly hio larmer. In ulder fizlds we also notleed the same general absence of noxious weeds, and we touched with tho hoe, where scarcely a wild jlaut of nuy kind conld be ilseoperet. In tistricts whore the soll has been longer under cultivation, foreign weeds have no loubt elept in, and these "squatters," uuless loosed after, will inerease in number und varicty, and cause trouble to the rightfal owners of the soit. Care on the part of farmers and others will do nuch toward cheeking thls growing evil, and we were pleased to ob- serve that some, at least, were alive to the inportance of the subject. <br> Stopping at a villare over une bundred miles from Chicago, on the Illinois Ceutral lailroad, wo obscrved a merehant burulng straw and ernarse hay in fromt of bis store, as fast as be took it lrom boxes aud crates, which he was unpaeking. We sopposed we divined the cause, but being a little to intuire, and wero informed that this was done to prevent the introdnction of bad weeds, and that the west. Such care years ago inight bave pre vented the introdnction of the Cunadu Thistle, the Hessian $F \%$, und the Wheut Mude, and saved our couutry many millions of dollars. <br> The Cumudar Thistle. <br> Prmaras the greatest curse we have in the way ol imported weeds is the Gimeder Thistle. A celeluated botanist was perfectly justifiable in naming it the Cursed Thistlo. It is so tenacions of life that many become discouraged in their af forts to destroy it, while too maty mase no at tempt at staging the ravages of this invader: The roadsides of many farming districts are lined with then, and the vacant lots in the cilices and villages of this State produce a crop of seeds <br> each year sulncient to stock a Continent. <br> Dr. Danlisoros, in American Wheeds and Usefne ble weet] that has yet invaded the farms of ecra $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ <br> quent plowing, or dressing with the hoe, - so as |  | It is said that the Indians called this phat The Whice Mthis Jont," believing that wherever it was found there the white man had trod. Be <br> to grow along his foot-paths and around his door. <br> The Ox-liyo Daimy. <br> This weed is becomiug far too common. Dablincoton gays this vilo intruder is becoming a great nuisanee in our country. In some distriets the carelese, slovenly furncra, have permitted it to get almost nxclusive possesaion of their pasturo fields,-rendering them ynite white when the plant is in bluom. Cows will occaslonally corlp a portion of the weed in our pastures,licard it alleged that it contributes io the making me to regard it as utterly wortbless. It 19 propa. gated rapidly, and is, woreover, exceedingly diffienlt to get rid of, when once lully estublished; so that ono negligent sloven may be the source of a grievous annogance to a whole eommunity. the most effectual remedy for the evil; but then the fencerows ant nefoliboting fields must be well watched, to provent the formation and introduction of fresh sced. The Corn Marigold (Chrysaid to bo such a pest to the agriculture of Europo -dues not appear to have found its way, as yot, to tlie United States. <br> Most ol our troublesome weeds are of foreign origin. Even the Dandelion, Fonad in every corucr of the land, for aught wo know, is an emprant from Europe. Our object is to draw at dention lo the slleject, no that all may form some spreading over the lund, and hence feel the necessity of maklng a vigorons and united effort to check the iuvaders. <br> HinTs On sheer management, <br> Want of space in our last issue compelled us to putover for a week responses to certain inquiries pertaining to this branch of farm conomy, aud we nuw take up such natiers as varions tion. It is hoped that those of our readers who have had uxperience in the abbjects upon which these several indmirers desire fuformation, will matually bound to "help one another." Diseates of the Ismin. <br> A resident of l'enn Yan, C. V. B., writes, "I three fine, fat ewes this sporing. They are taken with spasma, or fits of trembling, a Trightonod exputting the hoad down between tieir fore feet, or inclining it to one side, with muny eymptoms of severe palu. Havo tried varions remedies recom- mended ly the booke, but without elrect. My sheep have been kept iu a viarm, high shed, good ventlation; fed on barley straw, com stalks, und four quarts of sholled corn, daily, for thlity-one sheep." <br> From the description given, it is evident that |  | which shonld be deposited in a slanlow vessel, and immondiately apply it to the wethers on the right slionlderg, owes on tho left, or vice versa, and the bucks on the rump. This is practieable, If others near ly do not ndopt the stune mark. Such marks of ownuerthif are quite necessury with a views to distant or more alvious recongnition, und more typecially no If any of the flock uro Lreachy and difposed to struy. The waterials to markius should be hamphlack and linseed oil, or as a subsaltute for the latter, heg's bard. Wet the lumplath bo "killed,", ns minters term it, by the oil is mixed. It will uot ralo oft so casily if nllo wed to stand twenty-Four hours beriore appliced It is comumon to nse tar; lint this is oljjectionable witin the munuafacturer, it being dificult to separate by the clennsing process. <br> mandahatileses preference ty boiled tar,- the boiling continued until it assumes a glized, hard conasistency, when eold, and a brilliani. Wack color is given by stirriug in a littlo lamphbeck enough not to burn the slieepr's hide, and it forms a bright, congpienous marlk the yenr round. Woil it in a highashiled lrou vessel (to provent fil fron <br>  forty or tifty fleeep can be marked before it gets too stif: It is then warmed fronn tirne to time, as better place to murk than the side. The murk i alont as cousplicuons on the former, under any circumbthneses, and lif is more so when the shenep awsy from your. Aud slould any wool be injured by the matrk, thant on the rump is less valuable than that on the side. <br> A correspondent or the Ritiant, Mr. A. Whin,son, In onr volume for 185s:-" "The mode of marring sheep in thit neigllborhood is to inuprlat the inilials of the owner's nume on the side of the gheep. Boiled lingend gil and lampllack form the compusitlon. Tha letters are mado of soft Wood, in this manner:- - Take a piece of soft wood two aud oucturd lird ly four or five inelhes, and thros inches loug; make one enl smiooth, then mark out the letters and cut away the wood nround thens form of printer's type." |

 next week two beautiful classes of tlowering
shrabs and trees will be in perfe:lion, the Spireas
and the Thorns.
Among the late Tulips worthy of particular
commendation, we notice Churbon Noir, durk rel. commendation, we notiee Charbon Noir, durk rel
vely brown, stripped with red and yellow, -one o the best of the dark Rowers; lad Antique, yellow
iashed with red; La Dlayesteure, creamy white

 Rossius, dark red and yellow; Juliana, red and
porple, shaded with white. Among the Parrors parple, shaded with white. $\Lambda$ mong the Parkors
the best wrre Phenix, red, manked with parple;
Jaure, yellow; Orange, of bright orange color;
Constantinople, red, purple and yellow, The Jaire, yellow; Orange, or bright orange color;
Constantinople, red, purple and yellow. The
Dovbre sorts neser looked finer, but we liave not
one
the most attractive. ....
Oar correspondents in aitiost all seetions speal encouragingly of the fruit crop. The Eastern
portion of this State and socie of the Eastern
States were visited with frosts on Suoday States were visited with frosts on Sunday and
Honday last, but we hope not antlicient to do

 gratifying
foliage.
"WW, attention, it is difficult to say; unless it is tha attention has not been drawn to their growtb, of from the fact that fine frnit is puttehased s
checaply that it is su ohjeet to raise it; or perhay
because, to use the cant phrase, "it will not pay because, to use the cant phrase, it will not pay
For we har it on all 1 idides that the apple is to
eumbrous a tree for small gardene, however de sirable the fruit, and it must therefore be rejected
This is so; and all who tave liut little space prefer to give it to the near, a fruit not so readily
purehased, and ouly at a very dear rate. If it purchased, and ouly at a very dear rate. If it
was only generulty known that dwari apples were
ay eanily cultivated as dwarf pears, were as readay easily caltivated as dwarf pears, were as read
ily prodnced, were quite as ornamental oljects,
and almost as valuable where the early kinds are selected, no garden, large or small, would le
without them. Farly appiles of fine quality arc
never vely never very ylenty in the market; they come even
before many of the good pearg, and are "quite as
desirable as any other innit. "The French culfivate the apple almost exvlr
sively as dwarls, in pardens of gruater or les extent, Truineal in fanciful shapes, as pyrumids,
goblets, or espulierz, they border the main walks or form quarturs lyy thenkelves, where they
only
hroduce an sabundance of fruit, but fo highly ornamental objects. What mnore leauti
fuls sight than the apple tre when in full bloom
what more tempting to the eje, and what more gratefnl to the appetite, than its besutiful fruit? ensiest cultare. The laradise stock, on which
they are worked, will thrive in any ordiuary yar
den eoil properly enriched for from the prolin den soil, properly enriched, for, from the prolini
charactur or the trees, they ured the latter. The
preparatioa for planting should the the same as

 sary is to keep the lead open; pincla off the
snmmer hoots, and head in the slender oues at
the winter pruning and if only the winter pruning; and if only the woderate
growing sorts arc chosen, they will not occupy
more space than a more epace than a good-sized chrrant insh,
produee two or three dozen of apples each.
"Mr. Fivers says, thut "Mr. Kivers says, that the trees 'must
ehosen with stems not execeding one and a $u$
feet.' In Septer trees, takes off superillaous wood, and shorturs
the long roots; this strengthens the bods, which are formed abundantly upon the
young wood; of course, in doing' this, an ceye must be had to the formation of the tree, which
ought to be gradually brought into a handsome round bush. For the first five years a row of
strawberries may lje grown letween each row of apples, or any other dwarf, light crop; but straw-

in this way, they continue, under good care, to
 friend.t. As espaliers, triincd to wires, not more
tbau a foot highl, they are very attractive an intend to show at another opportnnity.
"Onr object is not ut this the to dotilil all particulars of dwarf alple cultene, hut simply to
direct attention to what we think has heenn sady
neglecter neglected. We shall again reffer to the subject,
and give not only fiuther afrections for their marugement, but supply some engravings, which
will show what truly ornamental featores they will show what truly ornamental featnres they
are in cvery gavilen. In the mean time we wonld say, that those who feel any intercest in whlteir
growth may examine these 'miniature orehards, in tho grounds of the nurserymen we have al
really named, whieh, when in fruit, will well
renay a vigit,"

## school-TEAChing vs. schooi-ReEping.

 Sctool.tracuma Axi scumot-ribriva are
 It is a matter of great importance thnt a person Tho onfers himself as a candidate for taking
chargo of a schoull, be well eduncatcd in the

 of carefululy nouring in mustally. But, lappily,
that opinion is fast dyying awyy, and is supurseceded by the just thelief that it it in not so muel the peda.
foope an the instructer that is called for in this progressive age
It is my belief that the whecls of time and
progress will soon roll round the tiue when the qucstion, "Can you governa a school", as asked by commissioners and trnstees of the present
days, will be but iale words; and the allimpor-
 hanve son line power or imparting, in an clear and
comprctensive manner, to the young ideas, that
 This would, indeed, be a preat cuange, and
less great thnn good. It would not ouly rrove
grent benefit to the secholat, butt also to great bencent will bee thlining from the teacher ond
 giving him miore strongth to perform, with suce-
cess, that which reunaina. My short exproncece has tuyght me thut it is an exceediugly dificicul
mattor to fix the minuds of a elass of geliolars on
 other parts of the room, there is samething clsp
to autract their uttention. The couscquucuce is double and even triple the time and labor in
requited to uuake them understonuld had the in
 briug as anoum this chango? Is it tho school
teaneluer? Is it the cemmulksioner? $1 s$ is it the

 country yuf to thut position which they are des-
tined to oecupy. Parente, you are aceesuntable

 around yout, heaping hlessings upon your head
and sheduing jay and huppiuess on those who come within the circle of their iutunucce" Would
you have them a benefit to socicty, and as the you have them a benefit to socicty, and, as the
got hrough lite, leave "footprints on the sanns o time," which will withstand the aunihilating
raild of ages? Instill into their minds, ore the cross the threshula of your door to go to tho
scliool-room, that they go there to seareh out treasures that are hifden, and which inust alway remain hidden, unless found out Dy their own
exartion. Teach thena, white get under your watchrful care, that it is not to ido their time
away, in mischierous sports, that you send them for trowwledge, -tasch them to look apon their teacher with respect,-that he is not there to
beat and to hate them, but that he is placed over
them and are amllitious to know. Thus you will seeure for
and the teacher their love nul respeet; and by se
doing, securc lor your childrea relloubled energy and labor, on the part of the teacher, to Fathere, will you not take this into considerathat too many of you, I fear, throw upon the
texcher? Do not offer the excuse tlat the tcacher and thercfore, you are uut to peliform his labor. sad mistake, you pay for teaching, and not fo
keeping your child ren.
Yousc TEAcher.

applieution of the shoes，neglect in paring away
the dly horn，aud the dry condition of the hoofs．
The class of towes anforen the dry horn，aud the dry condition of the hoofs．
The class of horses suffering most from this
lamentuble svil，are those most carelully cared lamentible evil，ure those most carelully cared
and provideal for．Continual shocing and dry
stubling are the two evlls．To the fisut stabling aro the two evlls，In the first place，the
horse nends a good，dry atalile，and，eypectly，a good water bath for the forwarul fleot，that they may le moistenesl to the samo extent，or more，than when
in u stato of nature，with the ruins and dews， Therefore，my experience teiches ne that Nater inth shond be provided in every well
regolatel stable，of a depth of lour to live inclies， tinaes，with a good plank caver hung upon hinges， and the horse adnuitted when he is is feedlugge pleasare，the cover may be let lown，covering tho of the lloor． is appliced to the foot，it shontld protect instcad of corne．livery oue of observation，knows the with the upper or fool surflue the lowest nfon the lusthe，which prodnces what is called＂dish．＂
This lorm is eontluned out of respect to time－ honorea custom，－no other good reason can sup－ nort the practice；for every horsnowner is awaro
that the heols and quarters angle in and for－ ward io the same degree as the toe，whifeh is at an an angle of forty－five degrees．Now，place this angle upoun a perfect tevel，and you have aus
inclinution in，aud lorward，of tho ruarters， inclinution in，and lorward，of the quarters，
equal to a perpendilenlar placed nion an inclined plane of forty－five degrees．Thus，the weifht of
the hor：a will press the licels nand quarters in and forwirrl to prodnce an equal contraction．Now
add the customatry dish fo the shoc nenrly forty－flive degrees，to the angle of the yaar－
ters，and you have ous and ters，and you bave an angle，makink ninety de－
grees to prodnce contraction and tendernesg of the forwarid fect．Add to thin，hy continuing the
shoes on as lang as thoy will stay，while the hoofs have accumulated a half incld new horn，and tho
sloes have prevented the oll horn from warel not
 cutting out the frug which cuts so eary，and looks principal support of the heels sunhl feet is gonc，－ from a eirular to an oval，nar row，long form．
When the snith cuts und opens outs as is aid，the heels are prepured to bo pressed furthicr in ly the
lish，nuld shape，und weight，of the horse，－the

| consistency of the land, and despite all impedi- mente, the yield was surprising. I can form no estimate of the ratio per acre, but find the weight per lushel will exceed serenty pounds. Six pints weigh over seven pounds, The grain is only moderate sired, as the stalks were too thiekly get In weight and soliduty it sustuins the title of Crystul-llint. The meal of this grain is gaid to bee nearly as fine and nutritions as the best four. <br> Anong amall fruits the Winter-cherry is a valuable variety. I procuren honno seeds of the wild kind, terned "Ground-cheirg," anci the improved soit, (Physalis.) The former is found in cornfielder, sunt often in pastures of sandy moil. It dlacs not attain the bejght of tho Winter-cherry; bint its branches spread on all aldes, and when laden with the frult, rest on the ground. In one instance sevenal of them were a yard in lengtb, while there were at lcast ten branehes on a stalk. The Ground cherry is more harlly and prodnctive, but not sin palatable as the winter kind. Tho aromatic llavor, and good kecping qualities. The cherries will renaln somun all winter if left in <br>  but believe they will make a cheap aud execllent and pine-aipple. Ours were transplinuted too late. Having come into hlossom in the seed-bed, the change retarded their growth. They should le tion, require the salue treatment as the tomato. All the experlence whisch we have heard (verbal this fruit is soon, we anticfinate, to kecome as well known and udmired, and as generally oultivated, as the tomato. <br> laying drains in quicksand. |

| whose twig it fell; the sipme of the humblest tion which gave it birth; aud at the other end of the seale of life, the child that resembled neither the paternal nor the maternal side of the honse would be regariled as a kind of monster. So that the one end to which in all living beings the formative impulse is tending-the one scheme Which the $A$ relareus of the old speculators strives to carry oat, seems to be to mould tho offepring into the likeness of the parent. It is the tirst great law of reproduction, that the offspring tends to resemble its parent or parents, more closely than anytbing else.-W'estminster Revien for April. <br> Three Poels in a Purzle. <br> I LrD the horse to the stable, when a fresh perplexity urose. I removed the barness withont dificulty, lut, after many strenuous attempte, I could not remove the collar. In despair, I ealled for assistanee, when aill soon drew near. Mr. Wordsworth brought his ingennity into exercise, but after several unsuccessful elforts, he relinquished the achievement as a thing altogether impraetieable, Mr. Coleridge now tried hishand, but ehowed no raore grooming skill than his predecessors; for, after twisting the poor horse's neck almost to strangulation, and the great danger of his eyes, he gave up the useless task, pronouncing that the horse's head mist have grown (goat or dropsy,) since the collar was put on, for he said "it was a downright impossibility for a collar!" Jus: at this moment a ser;ant girl | wild froit, of which there is a great varlety, seve- <br> 121 sorts of ualifkn (eordial.) A bottle of this was produced, and a glass of it hauded to me;; it was the color of elaret, but the llayor vastly superior. Immediately four other bottles of dif. ferent sorts were ordered in, from all of which X was obliged to drink a "wee drap" durlng sapperi and most dolieions nalilkas they were. in a botule of Champagne and troo glasses on a tray, evidently intending that he and I should diak it slone; bat here I was forced to disap. for 1 im , for, as soon as he had lifled a buther evidently to her help presenting to to liss wio, Auother glass was brought for me, and we then very deliberately proeeeded to finish the botle. <br> When this was disposed of, I thonght all concluded lor the night, but was minstaken; my Lostess left the room, presently returning with other varieties of Slberlan lifuors, all of which ghe insisted on my tasting; this, with then, means finishing a glass; I had no sooner taken one than she had another ready. At last I got throngh the tasting process, or, at least, supposed that I had; but judge my astonishmeut when my host walked In with another bottle of Chanpague, which, in spite of all opposition, my friends conpelled me to join in drinklng. I was then provided with a sofa to sleep on, and turned in for the uight. <br> At seven o'cluck next morning a hoy broaght me tea and bread, of which 1 partook; I then went with my host to the iron-works. Bar-irou in large quantities is made here, and is sent in barlis | Atkinson. <br> Exercine Phatine. <br> If there is any work that ealls loudly and constuntly for the exercise of patience, it is that of the tencher. His labors are ardnous nnder the most favoring and fivorable circuustances. The good seed sown in the school-room during the day may be rooted up lyy other hands in the evc- <br>  stead. Way alter day will yonn, my find, be your to undo aud do over; and at tines your ed upor very soul will almost sink within you, and exhansted latience be ready to take her flight. But let her depart not. In the expressive words of another, -"Lift up your eyes in the fields; they are white already to harvest. With the blessing of Provideuce go to the field of your slow, patient work. That slowness of the resnlt may be the bltterest element in the discipline. <br> To-motiow : and to-morrow! and to-morrow: <br> Creeps In this putty pace from day to day, <br> To the last syllable of recorded the. <br> Be content to wait for 11 in with whom agres are days, and in due season ye shall reap if ye faiut not Go out with luith, with supplication. Ye shall come again in the jubilee and sabbath of the resurrection, rejoicing."-" The T'eacher's Assistant," by Chambs Nobthend. <br> $H_{E}$ in whom there is ruach to be developed, will be later in accuuiring true perceptions of himself and of the world. hlow asing life to the seauty few that are seattere along those desolate regions; while in the tem-
pernte and torrid zones, strong current blop
over vast bodies of the watery deep, cvaporating molisture, which it raists and carries moug, far
aliove ns, In clouds of ungt and vapor, and a lust precipitates it upon tho nrid and dusty fielde
if the anxious luskandman, fu plenteons and refresllugg nhowers; thins giving neve hope and
vigor to tho hearts of wiehing, watehing multituldes. T'o distribnte moisture over the earth, and
to temper tho ellmates of different lattudes, it Creator for it to periorm; bint the atmosphere, like
hese ofices of the atmognophere, the onds and pur poses for whicht they wero desigued, presont at
once a dellglutful anll a pronltaille sulject for inway studions ur observing.
It is a subject white the Young Raralist can stuly at all times aud in all places, without a
great deal of tromblo or expense. Ho ean study it while laboring in the fictd or the ebop; he can
study it while waithy for the raln to deseend wad hess the curth with its freeboness; aud he can thdy it during the winter, that great vacallon for of its irearimess. 11 is principal text-1woks are,
the airs, the lyeeze, tho wind, and the storm; the mists, the vapor, and the clonda. The astronomer
is said to ses tho hand of Gon in the sly, but can
$\qquad$ Young liuralist, whin look aloft to tha clouds an
bey nouter over these things, hear his voico in the moanlug of every htornu, anul teel his pres.
cuce in every brecze that blows. The iuvestigaen: coancected with the wints of heaven, aro lhe lessous whiolh they teach. Marmonious in its netions, tho atmosplacre is
obedient to laws, und subject to order in all ita averments. When wo consult it in the perice,
$\qquad$ mist and the vapors, the mysteries of the sky
ud the clouds, tho greatness and the wisdom and groonness of the Creator, which make
viser and better wen.
J. (ioul.D.

CHARCOAL AS MANURE.
AN inquiry from a eorrespondent seeking
Information of the valin of chareoal for manure
 sublect, whith we denigned, urc thif, to present $w$
our readers. Next to gnano, there is no substance our readers. Next to gnano, there is no substance
used as manure, so nseful th the hauds of the garused as manure, so nesfinl ly the hands of the gar
dener, as a altte powdered charcoull, -and we
know not whiy it may not he finat an meful for the know not why it may not he just an meful for the
furner. The mechanical eflect or fine charcoal on a stiff soil is very benchicial. So emall a quair
thy of no othor material that we are acqualuted thy of no other material that we are acqualnheal
with will so effectually benefit a stig, impervious soll. Not only does charcoal lighten a heavy
clay, but it absorbs tieat and makes a collu, heavy sull, hoth warm and frillule. It alko has a good
cifiect upon firjurious ingects, either destroying them or driving them uway. A very goond test o Whth the radish. Prepare in bed in a coll, heary
soil, eally ju the pprlug, and on one-lalf sow rad Ialies, and they wilf be small, stuated, ind eaten
by the worme. On the other hall give a good dressing of charconl, which works in well, then
sosv the seed and senter moro charcoal on the
gan face and the radishyy will ender and sound. Chareonal has a wonderfin often secu, where gnany and all oflect wexcerting

| Tms has been called the lazy farmer's haps from the story of the man who conling all summer to break up a sum ow, to sow with wheat lin the fall. Vaili s, by neglecting to plow and prepare ound at the proper time, he coneludel to sprlact and plant, with corb, but was agai : and finally unded ly lurni"dly tarnlak mand uver and neratelhing in a fittle buckw ws, whlle buckwheat is particularly adapit clase or stack lirmers, there are ules) soum tages connected with lis cuitare whe y commend to eome who do not include then ves in thata catrgory, in a lavorable bia ha decent preparaton of the gromad, ceen to thisty bushels per acre, (and even in often raised, at an expmese of merely the tiou of the gromm, nad a trille for seed. wo very branchluf, half a boshell, well cos anogh to sow. CONDUCTED BY D. D. T. MOORE, With an Able Corpz of 4 ssistants and Contributors.

 $\xrightarrow{\text { For }}$

docking and nigitng horses.

 Axosa the host of inquiries reccived by th and dentiment that e ertainly cannot be considered
complimentary to those oceapy ing the querists position. Still wo must 1 ight the cande of ou
nelthburs, provided almus, we sre not ourselve

 ingly respond to "Farmer," be will please permit us to characterize the practices by him men-
tioned 1 sas brrbroarons in the extreme. Standard anthorities upon the care and man
 Docking, the Dr. remarks: - "Faslion und con ventence sem to require that hortes nuut sub
mit to have their caudal arpenages shortened Yet that fastion which condemna a porr, uncom
plaining trute to torture, menerely for the caprice of herf owner ,is to be deplored, especialy when
performed atier the borrid fustion uf some who seem to pay no regard to der reelings of the sub thst aro as susceptible to pain as those in our meuts against $a$ practice so long establi itued; he Nicking receives no mure favor at the Doctor's
hands, for this is declared to be "unother fashionable harburism that very fow horses escape.
The world of horemen luye decised no herse: $\begin{aligned} & \text { nnd ir an unimal does not descrlbe a } \\ & \text { angle of forty-live degrees with his tail, he }\end{aligned}$
 ers aud dealers cuen now are sometimes tempted
to intlict the torture of ir in order to outain a nimentin less ser ere in condemning the practice of dock-
ing thau those from whom we have already quoted. "In this country," he remarks, "the horse's
tail is regarded na a useles, or troublesome appendage. It was given to ward off the attack move it withont bsing able to give the horse Which it was intended to operite. They say that minishes lis conceans he horses quartera, di work, aud soils his rider. It is also supposed that amputation of the tail renders the back
stronger. These sace sayings liave been promut gatel so extensively from one to another, that
seims to be universally deciucd that all hursc secins to be universally decided that all hursc
must be docked. These, ; will be observed, ur very strong objections to a lomg tail. It is a te t rible thing to bide the quarters, aud to make thi
horse look lower by an inch than harerally
in

| The tail many he very usiful in some respects, and in the good old timeses it was per.nitted to flourish as it grew, heing only bonad up when it truabled the horsa's riecr. But in times blo these, when men clanor for freedom, and pautice tyranny, it mast be cut ort:" <br> Even Hexiry Whlatar Hfarert, who, fiom his association with the fashiumble horsewnold, might be sugpe ted of at least sympathizing with these practices, diapproves of them so cutircly that he refinsed be modes of operation the space they would ocengy in lis "Hintet to Horse-kerners." There uther was a more thorougio and experienced hateman nmong us, bild whou he deprecates sach whion on the pact of breenters, it is time to stay th. band mad yut ap the knife. <br> If the tail of the burse were given to him for no good phrpose, ani if it were not a design of nature that bo should bave the power of moving it forcibiy to his sildes, there might be some excuse for cutting it off wihhin a few inches from his body; or for separatiug the mascles at its sides, and thns lessouing its power. It was customary to orop the carb of the horse in England many years ago, and senseless as that practice may now scom, it was not more so than either docking or nicking. <br> We have been thus particnlar in referring to atandard authorities, in the hope, first, that our Canadian friend, (althongh we furnish the information he desireg, will glve up the idea of improving upon the handiwork of the Creator; second, becaare the line of the poet, <br> "Nature when unadorned, in ndorned the most," is jost as applicable to that noble animal, the horse, as to anything eise in her kingdom; and, third, the iatereste of bumanity so demand |
| :---: |

|  | alluw the knife to pass through the skin. Sever the cord twice on each side, the cuts being two incleyes apart. I'ut iu the pallegs, and the job is complete. <br> There is a more humane way of Retting np the tail of a horse than the firegoing, and ns a finate to our remaiky we extract it fromn "Mhats to Horse-Keepers:"-Welght the tail fur a lew houra each day, in the stall, uutil it atnins the desired Hevation. This is done liy having two pulleys at the top of the at ulf, ane at cach wide, through and are fabteles to the tril, the ropes having at their other enda weights (bings of sand or of shot nre very good for the purpose, which must ho dhay. the tail has tiken a permanent position as de sired. It is true that this method requires a muscles longer time than that of cutting the never off his work, and he suffers intiuitely less pain. <br> seasonable motes. <br> Now that the millgg has ceased, temporarily at least, to materinlly iujnres the whent crop of Weat. ern New York, -erpecially that portion grown from early varieties anwn early on good, properrly cultivated soil,-there in a generul Alppositlon among our grain growers to return largely to the culture of their fiavorite cereal. Indeed, many large scale, while دthers express regret that their land is so fully occupied with spring crops, as to prevent very extensive whent sowing the present |  |

Lunneus the botanist.
Rrcentir we have been reading the life of that invarid aud nucontrollable love of nature hioh cuused him to climb tho rugged monntains rearch of hinge plame, an obedinco mimands of his stern, yet well-meanlng father. frint wlth his prover studles, and distractin
 shioldd him from his father's anger, and framed
all the apulogles she coull think of to acreen her he good and the true, and in her allicted, yet glory of her family rud her name. Young Lus-
Nsus never neglected the studies assigned him by his fither aud teachers, and empleyed only his
Hours of recreation In his fuvorite pursnit. Yet, in a fo of disappointment, and perlaps of anger,
 was taken from selool, and apprenticod to a shoe-
aker. Soon after this he came near dying from diboase of tha brain, cansed 10 donbt by exe itephysiciun who sttended
underatand his charao ter,-gave hils father some geod advieo, and thore-
fter the path of the persevering Rolanist was Wooth and pleasant
We had purposed to give a synopsis of the life Wo great Swedlal, sanan, for tho encourage vileh anawers our parpose, furnished by a cor
ver now traveling in Sweden: of very inoderate means, the was bort on the of May, (ond style,) 17n7, and abowed in early ary, by wandering Into the fields and loreats in Yesest of plants and insects, His father had pareademy, but it was discovered that from his oring habits in the foreste, ho had mude but poor rogress, and found at length, when he shonla
ayo been fitted fer College, that he knew more of plauts aud worns, than Latin and Greek. Ho hereforo dotormined, in great disuppointuent, to
carn him a trade, and fixed upon that of a shoomaker as the only thing ho would so atros. rediciue hutang better opinien Professer determined to avert suel a fate from the young ne of the family, und initinted him futo the mysteries of physile. Afterwards hent blm to the College at Upsala, where, with scanty parse, he
was obliged to fight his road to knowledge. The Professor of Botany there, however, also discor.
$\qquad$
$\qquad$ was enabled to tinally progecute his stuaies-80
mach so, that at the age of twenty-three he was Uo was iuformed upon, however, as not being
qualified by a diploma, and as a mater of course Wals stopped. He, howver, agninst all impedi-
menta, completed his studies, and was shortly of Uparala, to visit Laspland on a botanlcal excurgion, which ho willingly aecepted, having the hand to defray the eost of his journey. On this
small sumn lio traveled eight hnudred German He successfully conclnded his journoy, and gave a He succecsiduly concladed his journoy, and gave a
graphic aecount of hiss latoors and frugally in his journal, entlted 'Laehesis Lapponica.' After years, during which he paid a short visit to England, where be also added much to his knowledge.
At the end of that period ho returned to Sweden, aud settled in Stockholm as a physician, and thero
married. While here he originated the A dendenıy of Sciences, and was eleeted its frat I'residont.
$\qquad$ till be was finally arpointed, 1740, Y'rofessor of
Botany in the Uuiversity of Upsala. This was the goal for whieb he had been alwaysa striving, and
$\qquad$ Professor's a hair and the Printius Press, together
his fame epread over the scicutific world, -drew students to the University, and honors to himself,
from all parta of the world. Ho oecupied the Chair for the long perind of thlirty-elght years, fortnaatoly
scientilio career and world-wide fanse. How dif. ferent from the fato he interded for him !

MOORE'S RURAL NEW-YORKER,
 CONDUCTED BY D. D. T. MOORE,
With an AbleGorps of Assistan 1 S. and Contribatore With an Able Corps of Asistants and Con tribators.

WHEAT CULTURE IN NEW YORE:
 York-a distinguighed U. S. Sonator ruaurlsed to ns that the scourge whs a whe digpensation
Yrovidence, as he believed our fanmers would
find it inure alvantageouq to turn thelr sttention to frult cultare. He cited the higli price of peary to frult culture. He cited the higln price of penrs,
and partieularly spake of the profits of thelly cul-
ture as compared with whent. Our rerly was ture ne compared with whent. Our reply wab
that Provideuce had glven us a soil with tho proper conatituents for producing wheot, and
good calture and attention would, we hoped, engood culture und atiention would, we hoped, en-
able us to continue its growth successfully, at it
was certainly more relinille for the mags of cult. was certainly more rcciable for the mass of culti.
vators than Bo nerishable an article as the parar. We admitted, however, that were were canaed for
the isisitution ol the sconrge, and that turmers geedeत the lessiver of Good, by carelessiness, poor culture, and extratagance in living. P'erthaps they
were too prospremens previons to the advent of the mildge; and shonld the evil be stayod, and the
great staple be produced abondantly again, the blessing would be appreciated, and the increase propeny himbaned.
At that periou, and enbseruently, we feared the
midge would, for some years at lcast, prectude the profitable culture of wheat in thls repion, and
we were coustralned to express our fears and
 ful cultivators, (who had sown carly varieties, and
adopted other requisite changry, that whe:al adopted other requiste change,
growing could be succesfilly resuned in Westeat
and Central New York, provided proper pains and Central New York, provided proper pains
were taken, and advised or readers according'y. of Jaly, 1859, upon the subject or whant Culture, midgeinfeested districts, we remarked:
the mana who, by wate vowising, poor otherat-for encoaraged and propagated the midge, injur
his more carefal neightor in like manner as
yount wremises and esanter their seedst to the four winds
or heaven. Shudful of the past, let ua be whee

$\qquad$ of sowng early, on good and wbll cult vated soil,
that it is unvecessaly to reiterate views with
which our readers are already faniliar. 13 at many farmers who are abont respming wheat enl-
ture, destre information as to the lest varietics those which arc mincoromhat are "midge proof,"
to their circumstaicos - then
or will beu before the advent of the lusect, and which we have devoted no lltule atteutlon, in the
 eulrely satistied as yet that any one of the severul
comparutively nesw varteties ts "worthy of gere-
ral cultivallun" (as tho frult growers say) in

Prdioree-Roan, bred hy B. \& C. S. Haines, Elizabethewh, N. J., the property of David Croereri, Langingville, Tompkins Co., N. Y, calved

| the Early May from Missouri, and Bonghton's Larly Vlrginia - whleh some think are identical,) may prove equally valuable, their remutation is not yet well established in this imaceliate necthon. We are of opinion that cither of the three varictics first named - und perhaps the Ehrly May also - will yield remmerative crops if the caltivator "acts well his part," and without snch ucton no one uecd expect any variuty of wheat can the profitably grown in the milde-lufestell districts. Let this be borne in mad by the thonsands who ure preparing to sow wheat this fall. I'radence is the mother uf Safily in this cnse, quite as mach (and fir more) than "Eteral Vigilance Is the prlce of Liberty" in political and governmental affairs. <br> THE POTATO CROP AND DISEASE. <br> Ir is not for the parpose ol making complaint, or cansing uncusiness or alarm, that we ask the farmers to axamine thelr potatoes, and see if they can find evidence of diserse, and if so, to watch ita progress. Oar obfect la to obtain information in legard to the natare of this strange malady. Up to July 2tth, our potatoes never looked better, never gave promise of a more abundant crop. After this we began to nutice a change; first in the lass of that healthy durk-green color which denotes a healthy, vigurous growth; gradually, the topis assunsed a jellowish, fictily bue. Then the lower leaves hegan to die, while here and there a plant entlrely perished. Uthers retained a few alckly gellow leaver on the top, whille the mase of plante only exhibited disease by the yelluw color of the leaves and stems, and the drying up of those learceg nearest the ground. <br> Chauncer E. Goommen, of Utica, writing to the Country Gentleman on the 23 d ult, stated that the weather of the present sammer los heen pre. cisely such as has most commonly preceded and attended the potato disease in former yours; bud expressed the opinlon that bufore many daga nearly all the old varictijes of putatocs wonld exhibit iudications of disease. Mildew, he sayp, already thegina to manifest itself here. Even should the weather immediately become dry und cool, yet, as an Impolso has already been given to morhid elaborations in the plant, there will he unavoldably a cousiderable development of discase in conring weeks. But should the present moist and warm weather continue, that development will be rapid, and advance from the foliage, to which it is at present confined, to the tuber. Mr. G. carnestly solicits the attention ol cultivators to the state of the wather and the progress of ulsease, especially with reference to different, surts on various goils. On the 23th, he says:"Sluce the above llate, the weather has been variable, frecuent warm rains laving beca minglell with very cool nights. The mildew has developed pretty rapidly on the Farly l'iuk Liyc, Early Mountain Junc, Ash Leaf Kidney, Carter, and in the Western Red and Peach Blow, where planted closely. On such of my seedlings as have been thoroughly tested, and sent out to the publie, | hardly in any case is there seen even the slightest appearance of mildew. The Peach Blow, l'rince nor forced with manare, are also free. Those who are digylag the carly sorts for market, flid occastomally signs of dsease ou the tuber. Should the dryer and cooler weather of yeaterday and th. day continue, there is still hope that even the old and feether varicties will mostly extare." <br> Our (rin) ia very thlekly planted, and well mannted, as we were tryling to grow tive hundred bushels to the acre, thongh wo have sume graw. lng on a poor koil without manare, by way of experiment, and othera on which only placter has been uren. We have about a dozen of Mr. Goonmacres reedinge, as well as mort of the leading good sorts, a few seedlings lrom other sources, and some early varieties from Fingland, aftording as a good opportunity for investigation and cimer parison, yo that while, with our readere, we slanll mach regret to see tho potato diserse prevalent, wos shall rejoice that it fonad us welf preparce to get a littlo good out of the general evil. <br> The tubers of alunot all varietien wo find larger and further advanced townord maturity than usual at this scason of the year. Wherrs the tops are inuch injared, growth scerns to be checked or entirely suspended. Wo lave yet scen no evidence of rot among the tuberr, everr under the most favorable combination of circumstances for its development. <br> HOXIOUS WEEDS. <br> Bad Wesde alound in all darta of the country that we visit ; they liue the roud-rides, encronch upon the meadows and grain fields, and but intle We uever taw a Ancr season for Cimaln 'thistles. Inlced, had tho Japanese paid us a visit they might have supposen them socme very valuible crop, and consldered the whinat and grass and oate merely intruders. We digeovered a new varlety the present reason, with white flowers, but has we do net consider it of any particular value, iluthbless apread arer the conntry soon enough without such advicc. It 19 toc late to save the sproad of the secel, and yet, cyery larmer shonld cut up all the Canada thistles on and around his promises, and as soon as dry chouglh, burn them $1 \mu$. <br> The law of this State makes it the duty of the Overseets of the Highways in eacle town to "cause the noxious weeds on each side of the hihhway or destrosed, twice in each year, onee buffore the first day of Suly, and aguin lufore the tirst day of Sepember; and the requisite labor sball he cunsidered highway work.' <br> The penalty for the neglect of this duty is $\$ 10$, of such neglect to the O Oersecre of the omplathe who are required hy hav to prosecute the delinquent. This is a good hav, but many paits of the State. | MR. PLOWHANDLE AND THE STATE FAIR. <br> [Tus folluwing amusing, suggestive and ibstructive fetter, by our eathemed and fast-becoming celebrated corre"pondent, Buj. Jons flownanmey, was lime publiahed in the Rural of Dec. 6, 1857. It attracted considernthe attention, and was wiftly copibad and comsuended at the tirno. Siace then wo have had many requesta for <br>  Bryor's account of "Smith's Rallorin, snasmuct su this in tho menmon for appolatiug Commetcen, while Stnto and Conaty Fairn ery shan to take phace, we think The re-appuarance of the article guite timely and approdil thote Who nerar <br>  <br> Con. Moore:-Some years ago 1 got aequalnted with one of your contrlbutors who edited the Wool. Grower, and ho used to pat me haprint. I must suy my vanity was tlattered by seeing wy nume printed in the papar, iwlols bout thinge I said, and sone I dlun't gay, and we've kept the papers ever since. Alter all, uverybody likes a little fame, but some are satiafled whth asmaller amount than others. Well, I have not the editor any more to set wo unt, so I have been thinking I would just try and see if you would not put me into the RUbal ou my own hook-especially as I want to tell your all about my going to the State Fair, at Butfalo, the other day. <br> CONCluthes ro ag. <br> As it was not so fur but what we could go with onr own tean, mother and I concluded wo wonld hitch up and linve a week to seo the sights and some ennsing wo had nat seen for a long thuc. to take something to the Exir. I told lier to take a tuls of her butter, but she said she didn't think it was good enough, but thought I anight take some of the stock. liut I thought jo whuld ba a great bother. However, Sas was proty strong in the fuith that we could heat everybody on horses, and wanted to tuke old Nance. She's a right smart beast, is that old mare, jou may depend. <br> tares the hate. <br> Well, we packed ofl Ess, for I was willing to give the boy a holiday. It dues the boys great good to attend these kind of Faits, I do believe, after seeing all I raw there. <br> coes in. <br> We got salluly to tawu Monday night, and Tacaday I went up carly to the Fair grouods to see what was going ou. I got in and bunted up Sasm, and found he'd got the mare entered, and bad got bis card on ber head and a goonl stall, and all things comportable. The aufmal argangernonts were tirst-rato generally, and during, nll the time think that Maj. Рstauck, who was everybody in managing thaga, in tramp sort of a man. <br> HEARS SOMETHING. <br> AbI was standing upucar the business oflice in the crowd, I head a couple of men talsing about remiuma. One said to the uther: <br> "Yes." |

## 2 TO KEEP MOTHS FROM CLOTHES.

 Norung moths dislike so much as being diss- once a month. A bug of clothes left mushakien is like an undisturbed fox covert, where there are
plenty of rabbits, to a fox. He won't go away till he is furced to decamp, by being hunted up.
Sothe can't bear tallow; and if curtaing, \&c., are put away for any time, I should recommend a, 110und of the commonest tullow candlen to bo put
1n paper, and placed in with them. In the mus. seaun of the Jurcitin des Plantes, at Paris, they told
me they ased benzoin collas to keci the niothis ant of the sking of the animals, and not a moth
did $I$ see in their miles of gulleries of stufed
luasts. The other day I was askod what to do with a
Crimenu alucep-*kin cont that had got the moth in rimenn alucep-skin cont that had got the moth in mabed ino It is not the moth that dies nbouk rub from which the moth comes,- - a white little crature with a red hend. I collected siveral
thees grubs froun the Crimean coat, anul having of thesegrubs from the Crimenu coat, anly having ollas, 1 put the grabs on it. liey hegan ond or collas to destroy moth-grabs wheu preeent, and
a keep them awny.
$\qquad$ cyanide of potuskinm whe In would be worth trying
hey wou't yo neur it
his; and d imakine the best form to use it would to lny some of the soap that photugruphers an to clean the nitrate of slivner stuins from their fter mil, frequeut slakings are the best nutldotes
for moths and their grubs.-Lurdon Field.

| effeets for themselves. And we urge all to save the waste frotu the stables, and apply to the com. post heaps. Of the propriety of this course there can be no question. $\qquad$ ther present yenr, and burdy know what advice to give our correspondent. We have recommended tho course saggested hy our cor respondent to some parties, fund it will he fairly trled. The blight in the haulm has progressed so far in own fiefa that we hardly thiuk eutting the tops will produce any materlal effich we phated much thickor thun is cuctomary with farmera, encouraped ly our suceess lust y ear-1 lout apart in the rows, and the rows 2 feet apart. A smali plot the usual distance, in hifls :3 feet cach way, shows far leas dlyense. In Investigathg the suho ject, wo fiud that thick planting has nasally roport of a series of carefaf exportments inado by the Government of Pruskin, we lind the follow- ing facts stated:-"In making an experlnent in ing facts Rtated:-"In making an experment in tro adjoiniag flets, bomngeneous fin tho charac. acter of their soil, matared and treated alike in with a vuricty of red potatoe, with only this dif- <br>  feet apart, and those in the other a font apart each way. At harvest, it apperel the more open eutturo were qnite hoalthy, while the other, lor the moat part, were disensed." cannot state, as we have not heard vines is, we suhject from our correspondents, Jut we see sad evidences of it in onr short Jonrneys in this sec- tion. The present destruction of the hanlms, it seems to us is different from anythlag we have boforo secu, and its elfect apou the tubers in all cases we cannot state. The report to which we have hefore referrud, gives a large number of cases in which the vincs were hlighted, but the tabers were perlictly sonad. Wo copy furcher on this point:-"Accordiug to au opinion generally adopted, the blight of the vines and the rot of the ease. Fnrthermore, it is supposed that lu most of that of the tuber. From olseryations is ever, in the experimeats of the last two yeare, The vines of acarly all of the varieties were unaffected by the disesse of the tuber romainod land owner in the vicinty harvested 1,930 buahels totally healluy. Furthermore, among the few varieties which did not sulfer from the blight of the vines had diseased tubers"" hrial ak, hyo of then <br> Tbe dillientty with us is, that the vines blighted the plants aro destroyed, while the tubers are so amall as to the wortbless, cven if sound. We dug balf a dozen hills lately, without guttinga quart of potatoor. In addition to thly, we lind they are watery, with evident signs of decay. In some lofs where the owners thought the crop had ripened, the taps bejng cintirely dead, we fourd the tubers to be mero sacks of water, having a very uopleasant smell. What appears singular iu onr own lot ig, that the lighest and dryest part shows the most diseasc. <br> Sevcral weeks since a correspondent in Orlcans doing a good deal of mischief to the potatoes in that section, "alinost completely destroying whole fields.: At that time we had not observed this enemy, although we had watched the progress of the Wlight. Since then, we have reccived specimens of leaves and inseets from other nections, and have exaniued their depredations here. They are usablly most numerons on sandy soils, eating the leaves of the plants so as to deatroy them entirely. They seem to commence work on them entrely. They seem to commence work on a few plants, and to extend their operations in a circle, so that in a field, one or more patches, from a few rods to a quarter of an are or more, will be found eompletely dead. Many fine lots wc have seen alnost rnined by this insect, and those fields that have best escaped the blight present a spotted, unsighty appenrance froin this cause. No varieties, so far as we can ascertain, are erempt. | LABOR-SAVING MACHINERY IN FARMING, <br> We hold is a molfevident trath, that work is results, and good for nothlug except as somethiug usefut is thereby nueouplished. In enying this, we are fully aware that we are opposed thy the vencrable adage about that peraonage who, ac- cording to the eonplet, ts anaid to he cyer flading <br>  <br> and which was all donbtless verg true when it was written; bnt that wat a long time ago, when, if a man wam not workfus, ho conld lave mothing else to do bnt to get into misehicf. Bat with all the $\qquad$ <br> the faylug na longer holimg good; amil if ary cure $\qquad$ <br> gant work, why - welf the Evil One will and ought <br> Wet him, any how! Wo are, Ilierefore, not in the lenat nlarmed lest tho rapid improvements in furm implemente, and $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ years that the grentest huprovements lin farm introduction is the besterldence of their neces <br> sity. Bu $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ in ventions, which maker at ulmost impossicle that they should be produced before they are needed. <br> The ettect will probably be to place tho farming land of the country in fewer bands, not only because these machines enable an individual to aecomplist so much mare than before, but also because they can be most adrantageously operated ou large furms. We thluk the censas, now being talien, it it does not show ay absolute decrease in the namber of landholders, (which is suarcely possible, on acconnt of the vast tracts of new territory which have been opened,) wlll yet show that the number of farmers has not increased in proportion to the grow th of the country. Every in eities or villa popand thls proportion will prob ably increase for some time. This tendency to desert farming, over which some mourn, as the effect of laziness or other wrong ideas, is really a | necessity,- for, it the samo proportion of our popket for grain would speedily be overstoeked. Supply and demand will, and must, regulate these mattors, und, we donlt not, will do it wisely. <br> AX-GRINDING AT AGRICUITURAL FAIRS, [The following urticte was writena at the time of the first publicatino of the lether op phow in the npea <br>  <br>  bubllealion.] Sorestel in Anw-Yobrer:-[ was very mnch on the subjest of the late State Fair, and have heen anxiously tonomg tor finther commuications from hisknowing pro. He is up to a thing matters at Agrlcultaral Fans, and if ho had communicute to him privately soms, further partheniary ou the satue subject, which, with all his penctration, ha 31 not soe, or from some couse does mot ree int to communicate. <br> All good citizelus, and erpectally all sincere professions und employments of all हelences, profcsions und employments, are interested, depuly Interested, in tho fair, honnest and impartial manngement of onr various Agricullural Eschibso <br>  ly eonducted,) can bo used by designing mon to lidfluce their own private emfe, interests, and hobbes, and what ure now asource of National alvancement, influldual improvement and fano. cont aunsiruent, wilf dwhinde into deserved insignificance. This consnmmation, so devontly to be deprecated, may perhups bettor than any ather way be provented by snch oxposures as those of Plowhasdike <br> Let such despienble offonders know that they friendly warning, shall be exposed, and they may stop their mean tricks, while others may be teuptible as to endeavor to wrest our valuable exhibitions to their own aggrandi\%conent. I, too, was at the late State Fair, and hope thing or two la regird to the dolngs there. I may here say that I was mo way interested, except as a spectato:. 1 novor was at a State Fair bofore. I had nothing to exhibit, had 110 hoblites or prejndices to advocate, and knew not one of the officers, and hadd never seca the parly whom I may juplicate, natil the day in question. $\qquad$ Committecs were organl\%lig, and huppened to be when it was ascertained that ono of their number was missing. The superintendont belug applicd to fur a sufintitne, gaid, "We want a good Jndge," and inquired of Mr. A., who of course haplyenet to the there, whether he knew of one on tho perfutendent aprointed, and asked him to send for, but tofd the Juilges, C, nod D., to proeeed with their duties, and if Mr: Br should not be lound, and they disagreed, low wonld find another substitute. <br> Mr. A. then said to the Judges, "There is a man on exhibitiou are honestly what they appear to be, and are not fised up and prepared for the anard him the preminm in proference to uny of those my farm: <br> Tho Superintendent here interfered and said, These gentlenum were appointed to decide that by othery. <br> The Judges C. and D. were commencing to act when Mr. A. again appeared and introduced Mr. who had just been appointed, and C., D. and E. proceeded with their dutles as Jndges. <br> I thogight all this quite too bad, and went and told Mr. Fu, Who complained to the Saperintendits action interfered with by a porson baving no authority in the mattor. Tho Superintondent soon eame to the Committce, and said he could Judges, and told Mr. E. he must cease to aetthat Mr. A, had no power in the matter-that C. found, and if they conld not agrec, ho (the Super- intendent) would see to the appointment of a third Judge. |

AR.]

aUTUMNAL NOTES AND thoughts. Tre Fall Campaign of the Ruralist opens with
September. Summer, with its scorehing sung september. Summer, with its scorehing suns,
soltry amosphere, long days, and atteodunt
wearying cares and labors, having departed, the wearying cares and labors, having departed, the
scene chayges willh the seasou, introdueing the scene chauges with the seasou, introdueing the
genial rays, balmy zephyrs and frnit-laden, varle-
gated fielus of golden-tinted Aotumn gated fields of golden-tinted Autrmn. This is the
rhapsodizing season for poets and idealists and the pieasant and profituble one for the Hnasband
man-wherein the products of fieid, orchard an man-wherein the products of fieid, orchard and
garden are to be gathered, preparatory to the joyful eeleb
vest Home."
Test Home." As wave said aforetime, the invineible Rara Army now enters upon the performanco of th
final aet of the Drama of the Seasons. Enacte as its spring and Summer seeness have been, by myriads of lutelligent, skillful and sudustrions enitivators in the great Laboratory of Nature,
with Mother Earth for stage, various seeds, trees, domestic aninalls, labor-saving implements trees
ferti fertiizers for properties and machinery, the snn,
moon and stars for ilde and foot lights, the zealth and horizon for scene and drop curtalns, the birds of heaven for orehestra, and the numerous labithns far this thabsorbingly interesting and proniable drama has proceeded most auspicionsly in almost every scction of onr widely extended and naturally fertile and prodnctive conntry-e en thoagh the
star aetors were interspersed with the iguoraut, careless and slothful non-progresslvcs. at the popular, magaziue style of writinc-for the crops gathcred and growing in the East, West,
North and South, demonstrate that the fore assertion embraces quite as much trath as poetry. Indeed, if what cverybody proclaims, and the
nesspapers from varions sections of the Union and Cauadaz assert, is tiue, or only half fulifled,
our eandidate for the Chicf Magistracy, 1'Rospruaty, (with Cares, Puyova, do., for stan
or ebinact fieers,) ia destined to be clocted with great unanimity, at the ciose of the Faliccted campaith
(about the period known among politicinns as
"the the ides of November,") and the intercsts of the
People will no doubt loe vastly enhanced by bis
inatuguration. If the General's diseharse their duty, all will (D. V.) rceult batis faetorily. No fear" of his aduinistratlon being
other than "national,"-for with the stapie pro may proelsim in the the Union at command, he

is snpposod to be nnnecesasary, whlle swamps
and low srounds should now be wither aad low grounds should now be ditctued, and tho
krush and stampls "extracted." See to the old
meadow, and the scoding of timothy. The harmeadow, and the scoding of tinnothy. The har-
vesting of Indian corn will soou requirc atten-
tion " Moto tion. "Mrake roady" in ucason for these and
other important opcrations which we need not
enumerate ln this connection, for they arc oftel discnased at length in our pages.
Xhe earth produccs most abndantly the year Nature is beantiful at all scasona, but now the Garden, the Orchard and the Ficld exlifint
splendor and profasion which ahoula ingpire splendor and profasion which should inspire
both admiration and gratlude. We mean th
gardens, orchards and fild gardens, orchards and fields which have becen well
callivated-for those of the carcless and झlotiful
awaken other cmotlons awaken other cmotlons Many there are, in
every yectiou, that exhblbty the reverse of the
pieasing picturo whith they ougbt to prosent in
the the antumn of this most fruitfal season. Evo
 abondantly; numerous fields and furing in every county bo poorly eultivatel, (on the skinning
mako-do, slovenly y ystemu,) that we are snrprised
the oecapsits do not the oecapsnts do not atarve or "slope" for parts
nnknown. Thoy are cleariy indictable for frand-
ulent praetices or prelences, and might as wcll ulent praetives or prictences, and might as wol
attenpt to bore angur holes will gimiets as to prodnee good graln, frolt and other crops with out
the neceasary use of mind, musele and money. he necessary use of mind, masele and money.
Why fs that wlthin ive milles of thls city, in ing erops of most kinins, while the crops of the good soil, will not pay for harvesting? We need not answer the question, for every intelligen
reader knows the "why and whereforc." It I late, and requisites to abnndant production, nnerring and noalterable-but for the rcuson
that man is dereliet in diseharging the duties enjoined upon every good husbandman and fover
of his family, raee and country.
In this world of ours there is a strange admi
ture of good and evil. Nothiug is so bad but It the charitable and kindly diaposed may diseover a iittle good, and nothing so good as to be en-
tirely free from evil. The Canada thistle fills the air with its delightful fragranee, and the rose
bristles with thorns. The snn porrsita directre upon the earth, the soll is parehed, the a tmosphere heated, the mill streams dry, but the eorn revels in this little less tban tropieal heat, and the golden
grain is ripened for the harvest. Tho hcavens are opened and the rains descend npon the
parched earth; all nature is pronme their forgotten song, the trees put on a
rivelier living green, and tho riant in the meadows; but the lowisuds are flonded, and the bridges over he small strcanas
aro earried away, eansing a littie evil and a great aro earried away, eansing a littie evil and a great
deal of complaint. Happy is the man who ean
enjoy the good aud endure necessary evils with enjoy the good aud endure necessary evils with-
ont repining; still bappier he who an see "good
in evcrything." Some are very expart ing the badd their eevea are like po portul insmes,
magnifying inieroseopie evilg into oljects giant proportione, compuptetyly hiding the good
from view. An English statesme the habit of looking at the good in everything The good lenelo.s, when his library was burn-
ing, expressod his thankfuluess ther the home of some poor cottagess that while was no man
who found a shilling felt unbappy who found a shilling felt unbappy because it wab
not a quarter. Onr happiness depends not so
much upon circumstances, tnyos, as our dispositions; and these dispositions
are in a great meazare, ander our control, and
may lee carbed or cultivated
 the summer season, ns far as our duties will admit.
We find jo both plcasant and proitiobie; but sel-
dom can tell much of the crops, without a persoual Inspection. sees and feeis the darks side. The previous winte was unusually loug and bevere. If it had bec was, they didn't seem to come out in the spring
in as good conditlou as nnal. Then the spring
was rather dry ana rain soon after corn planting and bclped the
grass some, so that the hay erop was pretty good, after all, but the corn came up poor and sallow-

| MOORE'S RURAL NEW-YORKER, <br>  CONDUCTED BY D. D. T. MOORE, With an Able Corps of Assistants and Contributors. <br> ThF RURas, Now-Yorier is lealgned to be nngurpassed in Value, Purity, Usefutness and Variety of Contents, and apiqua add buru, Usefun in and his peranolal atreaton to the survervinion of jta variona deeminently kejiable Guily na ull tha important lrmatical Scientific ami ather Sulyents intimatoly connected with the <br>  tortaining - belng Ro courtucted that it cin bu fufety takuz and Alscriminntion. It mmbraces inara dgriculfoma, Hurtitatera, sersud wis <br>  $\qquad$ <br> INQUIRIES AND NOTES. Dorlifug aut blatk suanis! Fowlso <br>  Bramah Pootias, that, were so much lauded ц fim yoary that they do ant lay in peoportion tu the fond consumed, $\qquad$ respect, to our oun combunamort. The Dozking in comits into faver nguin, as J have nos loubt it well doservag to $\qquad$ $\qquad$ $\qquad$ know when we get the genufar? The Black Spanisib, Please tell in wotnos something about theoc also - Lover of Fowls, Septentier, 1860. <br> Tue large Chineso fowls were no doult won derfully orer-prated. The people of almost the Whole civilized world becrame affected by the Shanghai excitemeu:; and therefore it was no verbially susceptible to influences of this kind, should feel its effecta rather severcly, Now that the excitement has passed away, there is dauger of going to the otherextreme. These laree fowls accomplished is great deal of good lor the poultry it had become sadly degenerated ond stock until nary fowls of the barn-yard were not much larger than pigeous. By the infusion of the blood of this new race, our fowls have generally doubled in size; and whatever loay be said of the Cochin be no doubt as to the advantages of the cross, evidences of which we sec in almost every flock of fowls. <br> The Dorkings are a valuable brced of forils, or they Would not have retained their popularity so long. They are ssid to have existed as a distinet breed more tban two thousand years; and whether this is true or not, we have abundant evidence of a breed with two hind toes. Their most pominent characteristic is five toes instead of four, as in other breeds. Oar engraving of a Dorking's foot shows this point so that it caunot be mistaken. <br> They are square and compact in form, with short lega, short nech, and heavy breast, giving a greater proportion of desirable flesh to the fatten easily, and this, with the other desirable qualities mentioned, makes them favorites with those who deal in dressed poultry. Some contend | that originally the Dorkings were pare white, diversity of colors. They are now white, spotted with black, these colors sometimes merging into a grizzly grey. The Dorking lays well, and makes in good nother, fowls for this nupese. <br> A correspondent of Andes, N. Y., wishes to know where gnod Dorking furls can be obtained. have no donht plenty can be had. They have been exhibited nt our state Fair lor several scars मlast, and at wany of the County Fairs. <br> The Expatish or Blart šrmish is the most beautiful of all our domestic fowls. We quote the deseription of Richardion. "The color of the the lege, thlyha, und belly, arie particnlarly dochled la their hue, and of a velvety aspeet. It is ment, and is, iu cithur atility or beauty, to be sur. lassed hy none of its congeners. One of the most cheok, fund the comb and wattles are singularly large, aimple, and of a very high color; the feet and logs are of a leaden color, except the soles of the feet, which are of a dirty flesliy hue. A fult grown wack will werb aboul is pounde the ber about $6 f$. This is a fowl well duserving tho attention of tho lirceder, and present an peculiariin either hatching or rearing. As table birds, they hold a place in the very first tank, their llesh heing particulariy white, tenter, and juicy, ani the skin possensing that beautifully clear white for the consumpition of the gomrmand. The bens are likewise lagers of the first order.' <br> headis of phack siavisll cock and men. The only objection to this fowl is, that the In the engraving, is very apt to become frozen, and thus this creat ornament is lust. <br> To Kicep lentatoces from Rotiuy. $\qquad$ that the Rokah in the best medium by which it can bo obtained, I therefore inquirt of you, or your reaters, about the best mode of keeping lrisla Putatoes. We hare had a very dry summer in this section, which las. put sway, and they Lura rotted. They ary cottipy in ground also. The reasou why peoplo are aigging so earlg, fs frum the fuct ibut they are duing no good in growth whenever we have rain to make the ground wet. The pototo bug has becolise very try.-C. W., Fuirciev, Ky., 1800. <br> Falsots plans have been recommendel to keep potatoes lrom rotting, such as dustiag with powdered lime, sc. A thorough drying in the sun and ajr and then storing in a cool but dry cellar, is the best means we know of. If disposed to rot, and buried in the ground when damp, their loss is almost certain, as the moisture ol the soil watch them and select aut those that are decaying, aud the whule lot soon becumes a rotten mass. We were the first, we think, to speak of the potato ous attack and progress for sume time previous to making the announcement, lesc we might arouse unnecessary alarm. Now, the fapers in all parts of the country are complaining of the ravages of | the discase. In Ireland the greatest fears are entertioned, lest the sad seenes of former yenrs shoolu be repeated, in vier of the alinost tatal destruction of the potato crop, which peens ine- <br>  plaint. The Phyfocurs, , which hane have supl\|estent caused the rot, have been very numerous the pres. cnt senson, and we have counted twenty and thirty on a single plato In our grounls the tops are entirels dend or yying. The thleers are not fit to he caten. All varietles secin to be affected. The culy kinds whicth are not serlously injured ont of furly socts, are the Yourk Regent and the Lapstone Niduney, two varicties inported ifoon England. $\qquad$ <br> Texs of thousands and millions of now ripe <br> uow ripening nipna aluust every firm to a crop of weeds and trouble nuother $\qquad$ $\qquad$ are now ripeniug their seedd, and nay be sceu in <br>  $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ $\qquad$ labar to destroy. $\qquad$ to this sulject, are a avare how abundant are the of them ripen from one thonsand to ifteen hume dred seeds, so that but a few plants are needed apt to mistahe, and allow a portion of the seefs to ripen and fall to the ground before removing fow plant. The seeds of the primary or first sulficieutly ripenced to vereetate before the flowers of the secondary branches appear, so llat in dowers searcely appear, we are seattering Beeds sufficieut to grow a hundred plants, and bursing thein sufficiently to secure their growth. It before a flower appears. But if this is neglected until too late, then remove every wced from the the match and consume all hy fire. The Ama. seeun everywherere, ripens its secd when the pliant is applarently grecen and vigorous, and will do so buds are formed, the only safc way is to remove it entirely and consumc. The same may be said of the Chenopodium, which in some places is called Lanntss Quarter, and in others Gíoose-Foot <br> The nature of weeds should be understood, as such knowledec is of great service in devising ways and means for their destruction. Weeds wiss and meas, are cither Anmual, Biennuial, or Perremial. Aneus weeds are those that frow fron the seed in the spring, Hower and ripen their seeds during the summer and autumn, and die. In this chass is the goose-font, mulstarlh, chickweed, groundsel, \&c. These can be cradicated by destroying the plants Lefore seeds are formed. If this is followed up for a fer years, all the geeds fying in the ground will germinate, and as no otherin are permitted to ripen, the stock will be exhausted. <br> plant where they have lain. In thesc cases, and, |  | cheapest of falirics. Next to that which nourIshes the inner man is that which linparts eom- fort to the outer. There never was nor never will bo a substitute for the llecece of the sheep. Well, I sauntered into the warehouse of one of <br>  portunity to men the largest and best pilu of AmeriCan wool together that I ever sav. Inive often in llithuelphia, New York, and Loston, and I never sanv three hundred thonama pounds of annerien wool, bonglit up ir iromiscously, as this wool-graver to leara that sinch a line pile of wool was growu iu Western New York. I hope that lirather wool-growera who visit your city will not fuii to take a pect intu the wool lonso of Mesara. Thare id Emeksas. They will receive the contestes of those gentemen and he well paid for what their of ce may soe. I am tuite sure that manulfacturers will not pass through without secfing it. I know that in the pullmy days of manuit all ht one large grab. The great minss of it is that the muillenlium has not yet come. There aro (I am sorry to siy, ) watil- groverers who arc base wought to tho theeeal their unwashed tugs hod pulled a great luss and the grower to a heary penalty, <br> I fiuld that portions of this wool weru bought in ahout overy connty west of Seneca Lak wool was put up in difiterent piles, $I$ had a fine opportunlly to make a compurisou of the style of woul grown in dilifereut locallites and on dillerent <br>  <br>  more and better wool than on olher soils. I am fully satisisicd that jou muy take twil linudred <br>  your county and take the other half to the beech and maple lands of Catarangus, giving each flocle the zame channa nas to quautity of fevd, and the <br>  like lmprovemont will be viaille In the fibre and fulting rropertios of the wool. Yoon may froun felting fropertins of the wool. You may from year to year reverse the tlocks, and you will all tho time sec the visille all anntage the limestone soil tinue sec the vishte aivanage the himestone soil has over the other. 1 an inclined to the opinion that all domestic animuls are inuproved by being <br>  coutributors on this last suggestion. $\begin{aligned} & \text { STEUBEN. }\end{aligned}$ Yours truly, <br> butter maining. <br> Eds. Relall New-Yorker:-Below jou will finil a repont of the Commitice on Butter, submitted at the Proome County Fuir, 1 1 59 , Butter being the leading dgriveltural product thronglout an extensive prortion or sectiou of New York, the Commsttee, (atter fully canvasasing the surbect, enme tonluntely detailerd stitement of the prucerss of natsing a good article, so that a noviee in the art, ly elogely following ont the rulc, woull not lial to make a the or pitime dairy. And as a taken, I would state that I have not manolue bured ing home dairy in twelve yeare, -and every dairysaid duiry luring that time, were inexperinced at the commericement,--jet I have never failen to send to market a prime dairy, ani my prices have averaged over twenty-llve cents per pound for the entire reriod. I havg hut one ycar sold nuder twenty-five venty, and that year at twenty-four The repart was first published by request of the Farmects Cluah in East Maine, Broome county, and has appeared in the Prome Gizelle and Bing. hamptun Democrat. It will no doubt be pernsed Binghampton, N. Y., 18 cio. O. C. 0 <br> REPORI ON BUTTER MAKIMG. <br> The Committee on Butter, having taken great pleasure in examining a number of very fine samples, presented at the Fair in Broone Co., Sept. 30tb, $183^{\prime}$, anil after having awarded preminms, deen this a proper occaslon for a few plaiu and The butter interest is considered the leading one In our county, and if so, the process of mannfacturing a gaperior quality of linter shoald be thoroughly nuderstoud by the masses. According to the best informatiou this Committec has been able to obtain, by an interchange of opinion |

AN AGED WOMAN'S STORY.
sclling hat been said and sung of changing, or sclling, ofd clothes for ohina and glass nick-baeks
with those peddlars who seent to seour this sand,
calling calling allke at the hoones of refined culture, of
honest industry, and of thriftecese degredation, awaking, by the sight of their well-cillod baskete, the desire of possesslon, The peddlar enters,
bending beneath the weight of his cunningly ar. ranged ware, and the honse is carofolly searched forth from their long seclusion. Perlaps there yet laeks something to complete the desired trate
-it is, it may be then, inodestly iutimated that -it is, it may be then, inodestly intimated that spare, would be abont enongh. The transfer 1s
completed, and the clothes and quilt whicl would
have clothed and warmed some aulleriut child of have clotheid and warmed some alllering cliild of
sorrow, are changed for showy ornaments, while sorrow, are cbanged for slowy ornaments, while
the gentle emotions of clarity, and those higher feelings arising from self-denial aud conscious ministration to the wants of poor humanity are
checked; thus the aetor, instead of rising in the scale of being, has, blhall we whlsper it, taken a
step back. Their garments smell more of earththeir hearts are less pare, less fited lor mansions
of rest. Thees rellections were sngeested by the
story of an old woinan, which we elve, with a story of ann old woinana, which we glve, with a
short preface, nearly in her One bright das, while visiting an old triend One bright das, white visitug an od mien in
neighbroing townat an aged woman came in, who
as cordially greeted as Aunt Pan.e. The lad soon gave her a con of tean, and some other re.
reshneuts, arter which she left the room saying know your wauts, and will go and see what I This seemed to relieve and quiet Aunt Pmise,
who then turned to us, with her bright eyes. We Were mach interested in that mild-faeed woman,
and dreiv from her her lilc's tory.
"It was a long time before I found out what "It was a long time before I found out what
as my mission. We all have a work to do here, -all of ns have a place to fill, a part to act. Perhaps you do not know your work, bnt if you wil
ask our Father, he will show what He wants yo
to accomplish, Sometimes the answer secms lon coming. Yes, it was so with me, bnt now that 1 love my task. For thirty years I was the village nurse, -that was my business. One night
while 1 was watching Miss B- she suddenly While 1 was watching Miss B- she suddenly
started np saying, 'Why, Ant Phus, why don' ou gather np the fragments, and give them to the woor? state,- -she sauk back exhanasted, and as watched, and carea for her during the long honrs that followed, I pondered the words, for 1 tell me, with rauch cllurt, that she meang bave me gatber all the old clothes I coold, an Wolten thaulfolls take from yon things tha nulowed with this world's goods. $\qquad$
$\qquad$ rrlend, of unbounded tenderness, who is infinite in wisdon, and so "knoweth our frame." The
human heart ueeds symupatly while beset hy the myny eares and ins of che present slate. Earthly
eymprathy is riceles. Dreary would hife be were
there no hearts of whose love we are assurel, and whose kinducss never fails; hint sometimes the
winds grow bolsterous, and the arm of earthly 9ympathy is powerless to save from sinking be-
neath the dark lillows of Eorrow, whioh seem ready to engulph us. Blessed it is then to trust
for sapport to the out-skretched and all-potent Earibly jozs are unsatisfying, and only moek onf seeking. Our spirit's thirst can never be asis sweet to slake that thirst with theasure, puro waters rawn by fatch from the life.giving fountaln open di by the love of Him who "knoweth our frame."
hire is not all sunlight, neither is it all shadow,
$\qquad$
and while we are affected by devonte grantua eshould also remember that it is indeed love hat peruits the shadow to fall. How strongly our hearts need disuppointments and sorrows to ivorce us from tho world; and so the shadons ur thoughts heavenward, to the blooming plain where "shines onc eternal das," with no shadory
of grief to ever inpair the brightness of its glory. Wrier to ever inpair the brightness of its glory
Whonld, therefore, adore the love that gives
 that as much of the one and as little of the othe as shall be for our highest and final good, will be
pivel by the Disposer of all events, for "H
$\qquad$ the child we should never listen to the dark ntterances
Distrust, for it is not only our duty hut onr bles ca privilege as Christinus to have peace, -yea, to
"rejoiee evermore." Though darls clouds shrond our skg in gloom, and it is bat an uncertain light hat glimmers upon our prescut pathway, the
$\qquad$
$\qquad$ dered, and how all the circamstances of the pres realization of the real and never-fading glory. This attests the unfailing promiscs of the kind
one who "knoweth anr frame.". Kind reader, if thou hast not a paith that doth
evidence to thee the unscen, and if thou hast not a well-defived hope of a happy future wher time shall proclaim that thy days on earth are is One who hath sympathy for thee, and there is a
time certaingly coming, - it is but a little way of time certainls coming, - it is but a little way o
in the future, - when thou wilt know the worth of that Friend if thou dost not now. And if throngh
life thou dost continue to slight tis love, how sad and hopeless will be thy condition when H
taketh His friends home to dwell in light inefru

IT was thought by the old heathens to be the grandest thing they could say of a man that he brethren, we eat at these tables every day. the table of my God I feast and from His cup
drink. I bave nothing which I have not

 reading for youth A wisk man ouee said, of the making of books than wher apoken some threc thonsaral yeara ago. Thousnads of uev books are cevery yeur published in this country, and many more in England, and devoted entirely to readiag, would not afford time for the peruana of one-tenth of the hoodsalieady pablished, to suy nothing of the vast an. noal increase, and the great anoont of perlodiconl herature. As, therofore, with the time young not ones in a hanaren-of the exisung books and of the periolicul anttur cun be read, it becomes
neceresary that the youth slould be very select in ehoosing works to which they devoto their tinio and attention. If this is not tho case, valuable melecting bot as in choosing friends. There are those with whom we chanot associate,
and books we cannot read, without receiving positive ibjury. Then there are light, triling and foolish people and loaks, whose company tends to thing manly and natble. Sielect only a few books for pernall, and those culculated to Improve the
mind aud the least The mannerof reading, too,
 divides readers into four classes. "The first,"
he sayg, "may bo compsed to an hour-glass, thoir reldiag beiug as the sind; it rung in, and do ruas
outh, end leaves not a vestige behlad. A second class resemblen a sronge, which imbines every. a little dirtler. A third class Is liko a jolly-bag, retalns only tie refuse and tho dregs. The fousth mines of (inlompana, wito, catating uside all that is worthless, preserves only the pare gem."
Another author nays tit necessury to have a as hehind physical streugth in mecular pursuites
othervise what is read wlll be of curpuatively little service. These fow hinta on reading are
designcd as merely angkestive of thought, and genealogy of the prince of wales. wru, was the grandson of Sophla, who was the sitter of William and Mary. aw of James the Second, who Was the son of Charles the First, who was tho son of James the

## - EUROPEAN AGRICULTURE

 Harvesting in wet weather.Tat past season was a ring one to English
farmers, owing to the almost incessant rains, and those specially interested gre now alsenasing, in modes of coradnctlug the operations of var bar Vest field during wot or "eatchlng" weather
"Neeesity the mother of invention" is A car dial prifuclpole readily recognized by English

 from its col amps, as follows:
"In wet harvests the universal maxim is, never to postpone anything till tomorrow that can be
dene today, Rivera providing fe tie moral I fiches pantile with the washer, the farmer han storming and in a storm, be it wet or dry.
In a nl eases of this kidd, masters and servant. generally speaking, thoroughly understand tach
others' interests, and accordingly are ready
willing to act together whenever the gold e orportuisty occurs. If rapers are allow teed
recruit their strength lu a wet monnlug, they wi l go into it, when the day breaks up, with a spit
and a force which otherwise they would not, an and a force which otherwise they would not, an
even could not do. And even if they have two of tho drat wet day to themselves, they will the What would be the thought of the general, who under similar circumstances, bad not his soldier
fresh and ready for the fight? Just 80 it is wit
the ing time is wet, and barely the other half dry,
is often the ease, nothing can be more short is often tho ease, nothing can be more short
sighted than to dabble hands at some dirty job
during the former period when they have to per during the former period when they have to per
form dounho work during the later. In a we
harvest always have your bands ready for the on
bought and slaught, and never squander a single hone that
should be spent directly or indirectly for the harvest.
The second thing in a wet season is, to have the
teams frosh and ready for their extra work when teams frosh and ready for their extra work when
ever occasion requires. In this case, as In the last, the farmer mast look often a long way before
him; for if his teams sro not prepared to do the oxtra work within the short tine a wet seas allows, the upshot need not to bo told. Nigh
work la carrying is generally avoided if possible but wo have frequently gone on two days and the
two intervening nights, stopping only one hour
each night, and when we awoke on the fourth each night, and when we awoke on the fourth
morning and pcreived about three acres of all corners of the, camp, that wo were not held on
to the previous midnight, so as to lave secured the whole. If prepared for it, men and horse will go through a vast amount of work, in sock
eases, to secure 'the fruits of the earth,' but not otherwise
Fug, and stackinork itself, 'the cutting, stook

> VISIT to canada.
> farnctra, crops, Agricultural shows. \&c. Mr. Moonz:-I have recently been in Canada ton, and I think the ce towns the garden of the excellent and highly cultivated; buildings good equal to guy farming district 1 have ever passed
through, with the exception of those near large cities, and their highways are as good ss ans roads and batldiugs, especially when I trow that thirty years ago, and perhaps lees, that whole dis
thin was in pally tueviand maple, yet the stumps are all gone,
and tho country looks ats old as around fieneviL I attended the Agricultural Show at Whity tho first day, when the grail, roots, implements and
ladies' work were exhibited. The roots were the best I have ecu; tho carrots and turnips very
large. The grain was ala o very fine. The white wheat (soulc'g) I think contd not be excelled in
any country. The spring wheat shown was good, The peas and oats were very good. I am sorry our oats as good.
The Tallies' work was beautiful, but 1 am no judge of such articles. There were some flue
portraits and other palutings exhibited in the
same haul, and what 1 thought a fino toned piano Was kept in use all the time 1 was there.
The slechanical productions (farm lwplerne
 they call Yankee plows are better than the long
heavy ones Which they lave held on to so long
without ever reasoning on the subject. Many are
 There wore two kinds shown; some with cast.lnon
beams, similar to ours ; then there were steel
plows with wooden beams, similar to those made by sears. Remingross, Manias \& Co., of this
State, but not uar so good a plow, In ry opingion, and I believe the latter would sell better if
introduced there than those made in Oshawa. The mannfacturcry at Oshawa might in well to Sessis. R., M. \& Co., could undersell the Osbavia article at the same price. 'Their castiron beam plows appeared to the to be equal to any of ours,
and for some part
the cultivators better. I thought well of The iron ones wert new to
$\qquad$ two kinds of harrows shown; one a rotating,
new prinesple; the other was an improve-
hic common double harrow, which I think good. There were different kinds of cutting
boxes; those I never pay much attention to. I

TOUNGRURATMO
(a)
propagating the grapg by cuttings Mucu atcution is being paih to the propagation of new varieties of grapenh by cuttings. Some of us
soung farmers, who have becowe amateur fruit joung farmers, who have become amateur fruit
growers, would 1 like to know how thls is done, as
I for one have beca somewhat unsuceesful.-A Young a aistruy.
Sinca there bus been in good dent of oxeitement on the grape questlon, and vines of some now
varieties have been scarce aud dear, our nursery. varieties have been searce and dear, our nurser.7.
men have propugated grapes in honscs vory rap-
idty This nroeesa we will not at present describo
 nceded by a young amateur. The soril for all
cuttings ghould be well prepurce cuttinge thould be well prepurci, mollow, finely
puiverized und moderately rich. Propagatlou by cuttings eonsists in cuusing $n$ shoot to grow by
detaching it from tho parent treo and planulng It
in the ground, at the propor seagon and under detaching fitroni tho parent treo and planulng it
in the ground, at the propor seagon and under
favorabio cireumstancos for the development of favorablo eireumstancos for the develoment of
roots. All fruit trees may be grown from cht-
tings, but onty a very fowy crow will sufficient fings, but onty a very fow grow will sulficient
enso to make it desiralle or profitublo to propaeaso to make it desiralle or profitahlo to propa-
gate them In thls way. The gooseberry, currant,
vloo and quinco, of our conmon fruits, are gonorally grown in this way.
$\triangle$ gulting is a shoot or part of $a$ shoot, and A culting is a shoot or part of $a$ shoot, and
genarally of one season's growth. $\triangle$ foot is the proper length for cuttings, for ordinary out-door
cultary though under some circumstances a singlo, cyo or Jolnt ts nged. We give an engrav-
ving, which we havo altered from Baurs's l'ruit Ving, which we havo altered from hank
Boonk, to auit onr purpose as woll as our e elumns showiug the dillerent forms of cuttings ass well
as the manner of plantling. The wood should be as the manner of plantlig. The wood should bo
as stout and matuio as possible, and should bo
cut eloso and smoeth to a bud at both ends, as

and , are more certain to grow than when out at any ho old wood left attaehed rendo.ss successs moro ertain. The philosephy of the matter ls that at the lower end of the shoot, and hus the eutan beromes a now plant. The more buds that ter, for theso buds the base of a carting the bet Scanco new matter for the formation of root eyes having alont two inehes of vood attachod, as secn in diguro 4, and buccess is supposed by
many to be more certain where the jolat Is hatve before planting, as alown In figure b. When this mode is adopted it la nsual to plant the eyes
abont half an lnch deep in llgut soif in a hot-bed,

Cuttings should wo ing housc.
Wo buds will be above the surface of the Boil, and in the vine only one. Vine cuttings it is
well to mako long, but they need not be set upright so as to be out of the reach of heat and ait,
but sloping, as we have endeavored to show but sloping, as we have endeavored to show $\ln$
figure 3. They may bo set much more sloping than we have hocen able to exhblt in the engraving, from lack of roorn.
Cuttings may be made any time during the fall or early winter. It shonld always be done before Who bids hegin to swell. A soil for cuttingg
should be fuellow nad warm, yet sumiciently coms. pact to retain moisture. Those who try to grow
hical in a hard, baking, compaet soil, or one lows and wet, or dry and bandy, will ansuredly fall.
Very eurly in the suring is tho bost time things considured, to plant cuttingg. If it is
delayed uutif late, the warin weather starts the
$\qquad$Cours in a p int where tho water will not हtand. A
dound of eartis should be mude over the pit to

is dest
dition.

| A wosa tho irst " improvements" of the settler upon new timbered land, whether in old seetions or recently organilyed Sthtes or Terrltories, is thio "clearing," (the removal of trees, grtuly, brusid, ote.) and then conles the "tug of war" - the cxiraction of stumpys to render the aurace and soii casily coltlvated. In many localltie, however, it has becen customary to allow tho stumpa to remnin aumolested for yearra, to the great Inconvenience, not to asy ! :o.s of the cullipylurthe labor and exi ense or their destrnotion or removal leing considieroul too fricat to puyy. Bat of late veers inventive cenlus lase supplied nas | ehincry which performs this important branch of fario lmprovement with great expedition, and at a comparatively umall expeuse. Varlouq atamp machinve have been introduced and aucd advantageously, and we trast they will rupldy increaso in numbere, speed, power, and cheapness of operation, untll the farins of the whole conntry slanl be free from the unsightly and unprolitalle obstructions now so common, even in ycclions of yeara. Like tice honey bee, the atump machine should be recogaized as a pioncor of clvilkatiou and cultivation, and accompany or speedily fol- | low the settler in all rogions whero forests abound. Of the stump machines beforo the poblie we lave heretofore commended neveral-inctidng those of WIL,IIs, of Mass., and HAfr, of Owogo, N. Y,,- and now take pleasure in callug the attention of all interostod to that of (G. D. HARsKis, of Fituhburg, Mass. Tho liventor clalms that thls lixtractor ls superior to others in several reapeete, and challengen the world to produce a muchine which equals It in the three great reqni- sitcs of power, speed, and portulisilty, Mr. H.'s alvertiseluent, in this paper, embrices particulars as to price, and other information. |
| :---: | :---: | :---: |
| heaps. Humus, under the form of peat, muek, ete., coutains organic acids which redily combine with ammonia, forming involatile com pounds. <br> nia. Its action is chemical. <br> aimblar thate of iron (copperas) acts in a manne to the ammonia, forming au involatlle sulphate of ammonill, while the 1 rou becomes first a carbo nate, then an oxide. The copjecres must he ap- plied in solution. One pound to four gallons of water is suflicient. It may be sprlukled over the the different portions of manure as they are Acids. a strong aflinity for ammonla. If either of them be diluted with twenty parts of water, and sprinkled over a fermenting manure heaj, the eacape of ammona will be at once arrested in every part of the mass to which the acid lijuid has access. <br> all mauures contalaiug ammonia. It will with acmmonia from any aud all of its compounds. Sulphate of lime, on this other hand, is bencticial; carbouste of lime has no cifcet, while canstlo lime is ralnous when mingled with ammoniferous fertilize rs. <br> Thoroushipin. $\qquad$ <br>  <br> Thorovgupin is an extravasation of apara, and the formation of a sac, running between the bones of the hock joint, -not from the front backward, bat, across the joint, froin side to side. Its prescuce Huid can be felt ebb and flow noder pressure. nounces it incarable. <br> In the Jfurse and his Diseases, recently pubished by Roberi Janmings, V. S., hiood apayin, hos sparin, aud thoronghpin are considered one and the same disease, oucasinucd by anover secretion of the capsular ligament, and presentiag soft pulfy swellings about the joint. The anpearance throwing the anlmal apon his launches, runnlug jumplag, etc. Whlle HFrusert aajs a horye with thoroughpin mast be summarily rejected in a purchase, Jrwnisus remales that "ss it seldom causes lameness, treatment is rarely needed; i roqnisite, blisterjag, bandaging with compresses, and rest are the most anccessfui." Yolitr considers the prescuce of thoronghpi | rarely attended by lameness. Blistering is an ef- fectual, but too often temporary remedy. Firing is thought to bo more certain, but this meamare is so bevere, he would not call it into requislition an leas the tumors are auffciently iarge and unaler ous to Jastlify sueb courne. Ladino and mercurial ointuents, in tho proportion of three pars of with advantage. <br> The treatment recommendod by Mr. Spoonrris repeated rabbing in of the olntment of lodine and mercury. a seton over the dlseased part has frequently restored it to a healthy condition. Mr. says that a wcakness and stiffeess of the jolnt is often the consequence. <br> Dr. Dadn cousiders thoroughpin a and bienish mend acapunctaration and pressare. <br> 1'olatoes for siced. <br> What pothen of hat year's growth answer for seed supposed that this yearis crop of patheoes would be an sre on bally allected wiht the "t rut," that it is thought <br> they <br> We fear the potatoes of last нeason's growth have already become so weakened by "sprouting" that it would not bo worth while to attempt to save them for seed. Potatoes are rotting badly in most sections, yet on light land we luvegeen good crops very ilula allicted with the rote The price hercis quite low,as many growers are afraid to keep their crop over winter, and are forcing them upun the market. Yet, hose who they have confidence are holdiug on for ietter prices. They will donbtless be higher in the spring, and yet, with suchan abundaut crop of grain of every kiud wo do ont think they will reach a yery high rate. Yon will toes here in the spriag for planting at a fair price. <br> Cinre of Calves $\qquad$ <br> to raife good stock for the purpose or realinenishing my $\qquad$ $\qquad$ <br> hhart, Nashrille, Tenne, 1860. <br> is customary to remoro the calf after the gecon dag. If the cow gives a reasonable quantity of milk, the calf gets one-laif of it for a couple of woekg. After this time a small portion of mea is given, - ostmesl is in the best repute,-and a | to one-fourth and the quantity of meal increased. When the ealf 18 two months, or ten week old it is fed only on meal <br>  the molle pursued where millk is an olject of im. <br>  raise $a$ good calp, vix., et tit run with tho cow, und have ali the mills it wishes. Some let the calf suck a portlon of the mllk and appropriate tho remaluder to otber purlineeng poor plan. If the owner gets his share first, the calf will go hungry at least half the time, and, if, on the other hand, the ealf is given lirst privllegees, the owner whil get cheated full as often. Wili not somio of tho get chented furl as onten. Rurati's contributors who are engaged in dairying, or huve had experience thercin, give our Tennessee fricnd such information as ho wishcs Tennessee fricnd such information as he wishcs to elicit. <br> sorghum and fairs. <br> Edos. Rerar. New. Yorkzk:-It may bo owlog to dell cient rendlug, but really, I havo acarecly heard of Sorgama this side of lowa. If four searg have proved suficient to senil it beyond tho Misslasippi, a like addiltional period of time may pitch it into the Pacific. So mote it bo. <br> For the beneft of younger readers, it may be well to tate that the cercal in questlon,-generally knowa ay Chinese Sugar Cane,-was sought to bo introduced into this country and latitude a few years ago, with a view to the productlon of sugar fer domeatic naso and that zealons mon catertained the ldes with decided favor beoauso they conid therewth not only y provide for a necessary want $\ln$ life, bat, as they thougtt, could alko ase it effectively to weaken and perhaps deatroy a systern of lator pecaliar to nearly halp of tho tivation of Sorghom in good earnest, -and for a time tried to make themselves believe they wero sncceeding. They palliphed experiments,-por- trnyed cane croshery aud syrup evaporators, and heralded resulta with great gasto-even going so far as to fix day und date when "fall panicles of bright goed burst the apper joint" of the wonder- ful stalks., Giradually, however, the notes of sncfuss grew les,,-one after another retired bohind the scenes with "a Hou in his ear," and we now hear searcely anything of ft . I venture that its feel yo more kindly to the writer now than when he first told them it was a humbug; but as they are gettlng short of eucouraging facts and expelie back and growl. I commend their diseretion. The history of Sorghum wonld seem to support two positlons: Pirrt, That diferent portions of the earth have productions in some measure pecaliar to each, nud that efferts by men to translate sach to tho |

 It is to new diseovery; bat doubtless there ar
many to whom it has never occured; and o these, some may be benefited by having it pro
posed to them. Irdeed, within the last fem
monthe, I have heard persons who pay cousidera ble attention to gardeuiug, express their regret
at not taving thad an opportunity to otrtain such
and snch things from the nurecry, and attribute and such thiags from the nuresry, and attribute
their dizappointmento the fact that no agent bad
called ou them solieiting ordere, as if there were called on them solice cummanicatiog with the nar-
no other means of
sery than through an agent, or ty a personal visit An important preliminary to marking out an
order for a natsery, however it is to be filled, the proearement of a catalogue, Even when the
selection of varieties is to be lect to the jusgroent
of the narserymmn, which, providel he is honest is geuerally best uuless yon know esaetly what
jou want-yet there are always preferences as to the size, color, time of blooming, sc., in the case
of floweriug plants; so that, to a peroson of limited gequaintance with sueh matters, the information
contained in a deseriptive catalogno of fowers is
of great nge in giving general ditections. Also in the case of fruits, it is desirable to know some
thing of the eharacter of the dille entat kiuds, from which a selection is to bo made, even when the
choice is to be left to anotlier person; and in no
other way can such knowledse be pained so easily and eheaply as hy means of a deseriptive catalogue
of fruits. Again, one intending to purchase nur-
serymen's goods natarally wishes to know thie
prices which they are sold; and, ns the cost of
exch article is stated along with its description in

shown in the engraving, and of a bright reddish

WASTE OF FOOD.
Nownare in the elvilized world, we thinb, in so
mach food wasted as in onr own happy land.
The art of feeding inan and beast in the most
 It is a lesson we have not get been compelled to
learn; while in Europe the nsual higli prlce, the
oecasional searelty of food, and the superubundance of popalation, have taught the farmer,
the landlord, and the honsckerper, how to oso everythlng to the best possible advantage; and la
this work un astonishling amount of gkill is dis.
played. Thic traveler in Europo is astonished st played. The traveler in Earopo is astonished at
the number of strange and savory ulshes set before hlm, of the eomposition of which ho eanno
even give a gucss. Aul, if fortunate enough to be on famliar terms with ste ward or landlord,
and is thns onabled to show a llttle Yankeo cnriosity withoul appearing impertinent, be is still
more astonllised to learn that he has partaken of more astonithed eal prarn that ho has partaken of
a smmptnoun mater materials that
in his own hotee would have been thrown to the dogs. If of an observiag mind, and le parshes
his fuquiries, desirons to know some what of the conditlon of sll classes, he learna to wis anrprise
chat sood farm laborers receive but alout s3 per week, and that with this pittance they have to
hire a dwelling and clothe and feed a numerons family. His astonlshment is not lessened., when he learns the cost of provisions, \&o., and observes
the tity and respectable condition in whluth these fae tidy and respectable condition in whel these
failies appear. Dressed neatly, becaube appro-
priately, they claim respect knd admiration. priately, they claim respect knd admiration,
Every peny is a treasurc, and is osed to the best
possible advantage, not for show, lont for berviee possible advantage, not for show, lnt for berviee;
not for parade, luat comfort. Perhaps a cow fnrnishes the main snstenauee for the children. If
so, how earefully eqerything is saved that can
furnish lier a choice mouthfol-a fug 80, how earefuny eyerything is saved tuat can
furnish her a choice mouthal-a fens struws fom
the farmer's wagon scarcely toach the ground before a child is seady to piecs them up and carr them to the cow-shed-a little grass by the road
side is gathered with the same care. The woult of the familly my not have permitted the pur-
chuse of a cow, but the litule garden which suronuds the cotlage yields abundance of veget..-
bles; for the soil is exceedingly rich, highly manared and well caltivated. And how is this done? Not a hole by the road-sidg, not a citch in the neighborhood, but is carefully seraped o
its mud, whieh is carried to the manure pile in
the baek of the garden; not a partiele of dropped in the road by passlag horses, but i
remurced to the same depository by the ehildren Who perform mueh of the laior in the garden,
whiel jields to the contented family, under the saperintendence of the good wife, alundance or
healthfinl fuod. By this care and ecouomy family is kept well fed and comfortabte on means
whieh in this conutry would be thonght insuficent to keep starvation from the door. 'rbe same eare and economy may be observed
in all farn operations. Everything that ean be ased for food is husbanded with the greatest cure,
so that nothlag may be lost; and afcer storiug, it is nsed in the wsy to aeeomplish the best resulta. is nsed in the wey to aeeomplish the best results.
Cutiong and cooking, aud adapratiou to the con.
dition of animals, are matters of constant atten. tion. To obstrve the anxicty with which the
$\left\lvert\, \begin{aligned} & \text { and the pains taken for its inerease, one would } \\ & \text { soppose that he fmagined it to be a heap of gold, } \\ & \text { instead of mannre, }\end{aligned}\right.$ instead of mannre. Every beason, in this country, we waste a large amount of food which would, if pronerly eared
for, make valnalle meat, and no less valuable
manure. for, malke valnalle meat, and no less valuable
manuure. To. day we heard a farmer of Niagara
eonuty manure. To. day we heard a farmer of Niagara
county remark, that he had eleven aures of pump.
king and several hutured bushela of turnipg, not one half of whiell would bo gatheled, besides a good many carrota, hardly worth the digging,
If carried to market they would not bring enough to pay for cost of gathering and earrylng. It
was this remark that caused the above reflections
njou the stite of thinga in Earope, so far differ. ent. The present season has been unusually
preotuctire, and many farmers find theinselves
 note no mane can be called a good farmer who does
not provide meana to turn all the food produced
into
 aeasons of ecarcty wiil come an well as those of provide for every cmergency, so that nothing
will be lost nud nothing suffer:
We: will never be able to boast of cconomy in Wes will never be able to boast of ce
feeding nutil we provide hetoter storage
and pay more attentlon to enting and
 systorn of feeding. Our ohservation at the Wcst
has convinced us that onc balf of tho food given to cattle In that section is wasted, as will alway
be tho easo where enrn is fed to catte in the car or on the stalk. Wo know the exeuse for this
conrso is the abundaneo and cheapneess of grain,
end the seareity of lubol. Stlll, we huro no faith in lts economy. We have macly get lo leary on
this sukject, and it is for the purpose of inducings reflectien, rather than to ludtrate any partieular
conarso of practiee that we make these brief sug. STERILITY.- MR. HATHAWAY REVIEWED. Soyr time since, Mr. Hatirativy of Ohio, guve
his experience upon the "Starility question", I take the first Ceisnro time to review hifs etite. ments. His farm bas been cultivated for a seore
or two of years, and his prlneipal crop, wheut las incrensed its yield from yiar to year with no
other manure than plaster and clover. Shall wo hat anomer nap, with the comfortable assurano Mr. Han? with evident eandor, and desire fur the trutb, states several interesting partieulars-and here let me say that in citing
ezamples and illnatrations, we should always be cumstauces. Thls land had been annually burned of course it was deticient in vegetable matter
of later Which may cxplain the noderate yield during the
first years of eultlvation. Clover and plaster are factiy adapted to sueh a ease, -the cloper with For sapport, and whon plowed under supplles the that Mr. materian needed. Taking it for grante a good supply of every other year for the full term, perhaps, or the have been a regular increase of vegetable manter from the clover, and a consequent increased sield of whest. But J, H. T. B., farmer, Justiee of the
Peare, late eandidate for Path-master, neighbor
to to a man who saw the Prince of Wales, do here
by notify Mr. Inathaway that, according to elaw crops have taken, and are taking, frowaid the soil
aforeald even clover seed and plaster, -and, forthermore, from the fmallost leak. It is the peenliar weakness of this American
peorle, to nobstitute the experience of a llfe-time,
for the trensulal for the treasured knowledge of ages, -the unfin
isherd experinents of to-day, for the attested istan experments of to-day, for the attested
teachings of eentaries, -uor do we always read
our short lessons rlght. Meu whom their grand fathers woald hlush to reeognize, - elfeminate, dyspeptic, billions, rheamatic,-will complacently of their medienal and dietic theories ind favor Anything short of annihilation is glorie Anything short of famine (with an oeca

$\underset{\text { atr }}{T}$

 Improved implementa, aleo, greatly incuease the
annount of horse worts on the tiurn. Onee all the reaning aud mowing was done by hand; now this
work is performed by lorse-power; and the cut Work is performed by liorse-power; and the cul
tivator has almost supercelled the hoo. Some
years a yith a hundred aeres of haud, one half of which Was in wood, and the other half only partinly bonce., with a single teanu. Now, the larger number
of aeres under cultivalion, in wooded eonntries of aeres under cultivation, in wooded eonntries,
tho general settlement and colture of our praltrie lands, and the extra demand for team labor in have raore and heavicr horses, Sceing this want farmers and breeders have iruported some of th
heavy English breeds, to one of which, th heavy English breeds, to one of which, the
Clyllesciale, we eall the attention of onr readers,
 adigree that an Earl of \#unting cont kimported some Dntch
mares, a hreed then much thought of, into the mates, a heted then much thought of, into the
matrict of the Clyde, and belug erossod with the diftriet of the Clyde, and helus crossed with the
nativo breed, (probably the nuelent pack-horse,) thun hecame the findera of the now highly ap-
preciatell Clydesdafe. Tho prevalling color is hiarik; liut thero are also many browna, and nome greyg. The great hulk of this breed \$a susceptiile of numeh improvement, hy careful selection in pointed out us those to prone."
hards, palling true and rurely part of scolland is matinly supplead with this hited, amil many of them find their way to the
central nud sonthern counties of Eagland, for tho
 horses, excellent for farm purpozen, and would make, without any improvement of hood, ex
tremely nesfinl stage horses, cepcecilly for hilly tremely nsefnl stage horses, capecially for hilly
and hoavy roads where more power than speed
is desired.

Wheat to the acre is proof among as of the
mighty strides we sre making in agriculture, mighty strides we sre making in agriculture,
proof gositive that our land will never wear out - whereas bome countrics that have been fore Warned to guard againgt "Irvaspeetive sterility,"
have, by attention to their night soij, und other sources of fertility, maintained an averago onnsual crop here, when ourr land was urem. Parts of Cireat Britain and Holland show the good e furtilizers, prompted hy a wholesome diead The Chinese have olive cornplexions, opal fea tnres, a relish for rats, and a very disngreable
halit of minding their own business, and wishiog other natlons to mlad theirs,-but with all these grest many kindred virtues, wiflch, if ontside
barbarians would imitate, elsewhere, as theru "every rood of gronnd world maintain its man." WHAT THE FARII WILL PRODUCE. "Excelsion" (a snbseriber in Canada West, sends us the following description of one handred
acres of land, copied from a Survesor's report asking whether such land is proftable for cultidescription, with the remarks of an experienced farmer and geologist to whom we subrulted it "The land is gently rolling and good. Soil, sandy loam. Timber-Naple, beecb, elm, and hemloek. Crossing the rear of said lot there is
six chains of swamp, eontanining eedar and some good white pine. The remainder is good hard-
wood land, gently rolling. On the west side of wood land, gently rolligg. On the west side o
said lot the land is flat, but not too wet for agri.

## SORGHUMI, WHERE IS IT?"

Turs signilleant question was anked a jcar ago hat it had tolen in of tho Ririah, who insiuuated buge of "Morus multicanlis and Merino Shee nnm. portation," bat hls attack a awabencel a defunce by somo hopeful and snceessful cultivator "Ont
West," whieh wis at the timc sitisfuctory. Bnt, a year has hassed sinee then, and "tle world does asked where it ls , I will tell you frankly whare it In tho month of Soptember, 1860 , it was. seen in the fields of uearly every farmer in North Weaterim Mishonri. Now, November Tith, just one found in a conyerten states election, it may be "well regnlated faninily," in thif "Old Mormon County of Culdwell." We have sorghnm in pre-
aerves, lu molaeses, aud most anil beat in scase Sugar has been the desideratum long sought by and cultinators of the Chineso eanc, but since a wo, of Pliladelphia, sonie five or six seary sine I have secm uothing authencte in the Reports of ing a single ray of hope.
It was rescrved for the Rural Nem- Yorker, of Sune, 1860, to put ns on the traek for zorghum
sugar. I motlecd in said truthfol knowledgment of the reception of some sorghum

 will feel, rathe
way for the re
 standing of tho subject before them. Here the
special wook of toachimg begius, and ty ofire
 sign of this article.
What, than, is the proper course to pursuc in
teachiny? How shall
 question, one innportant fact is to be ly ornc in
mind, nannefy, that the mind is very slow to
receive and clearly appreheud a new thongltthat it rectulres tline to thiuls of it, to examine it, and thus become acquainted with fh and perceive
its relathon to other thoughte. Now, snce sceral
distiuct thoughts cnter into most of the soliecte of which tho papil is to aerquire a knowledge,
and these thoughts aro so rclated that a clear apprehension and lamiliar acypaintance with
caeh is necessary to a rifht understanding of the subject into which they cuter, it is evid nt that
the first work of the teacher, in presenting a
subject for examination snd explanaliou, is to present cach thonght by liself to the mind of the
papil-to explaiu aud lilnatrate it, and eo hold it
up tefore the up before the mind, that the mind shall see it,
and become acquainted with it. In this way, un
acquaintance with the distinct thonghts of whicha acquatanee win the distuct thonghts of which
the salject is composed, loads at oucc, by a pre-
sentation of them in tbeir logical order and rela-
tions, to a tho tions, to a thorough auquain tance with the subject
itself.
To and become açuainted with them, and huces
with the sabject itself, is what is properly called study-something which many pupils, and not a
few teachcra, know bat litte about. The great work of the teacher, then, is not slzoply to assist
the pupil in aequiring a certuin amount of knowl.

 investigate pincipies. When this is done-and
its accomplishment is a work of time aud patient
labor-little remains for the teacher to do bot to mark out the course for the papil to pursse, and
assist him in the more difficult questions which, from time to time, arise.
From this view of the subject, the relative importance of books and teachers is readily per-
ceived. Until the pupil has learned to stuady, uo book can take the place of the living teacher.
The number and variety of explanatlons and
illustrations necessary to the full presentation a subject to the mind of the pupi!-and without
which he falls to understand it-preclude the idea of thelr being presented through a book;
they must come directly from the teacher. In presenting new sabjects, therefore, cespecially to
young and less advanced pupila, thic teacher y, teacher

long neglected to repay her immens debt of
gratitudu to hita who gave her all her walth gratitude to hirn who gave her all her weallh,
power, and position. As with mill great benefac tors of mankind, some fatare century mat recori
his name on the historic page, whilo millouna
starved.
Intimately connccted with the early history of
the the state, is the name of Capt. Jorrn A. Surrme
and fow tuen sowell merit this distinction. Born in 1803 , the son of a Swiss, of the Canton Berne
his enrly life was passed in the Grand Dochy, and thero ho received hil educstion. Like many of his countryinen, feeling desirous of enjoglng the
Institntions of our own farffamed Republic, he
nalled for and reatehed New York in Jnly, 1831 but finally settled, and for हeveral years residod a charm for him, bnt his adventnrous apirlt looked
atill further toward the eettlag san, and roved along the waters that soaght theirir derlous way to
the Paciinc, anã bc went out witil a party con nected with the Aurlcan l'ar Company. He
left that party of trappers in the Rocky Monn-
taing atid with taing, and with a now party of six, decided on
proceeding to their destination (Calfornia) by way of Oregon. They at length arrivod at For
Vanconver, and found difficulties and dclaga in
their way to Californis.
 offering pasagese to Califromla, he sailed to Sitka
Island, in Runsian Amerian, and from that point managed to enil for, and set foot on, California soll
at Monterey, in July, 183 , just 18 nouthe after leaving MLssouri, Mhing gs succeeded in overcom-
ing the Spanish oppostion to forejgn settlerg, ho obtained the permiesion of Gev. ALVARADO

urc, that arc truly eurprising. bat little more

| had scarcely awakened from its jrimeval trancc. Among ith fastuesses, indeed, the sborigine his simplo dreas and scanty food. The footsteps of the Pioncer vontared to penctrate lis wilds. Following hla devious pathway came the sons of toil, lured liy the love of adventurc or the hope of gain and here, where there was henrd <br> "The dull, low tramp of waven <br> That bent the sna-liued nhorv," <br> the great ocenn of hanantey lifte aloft its living billowe, hearling an argosy more precious than all her conntless tromsares. The tenples of rellglon and the altars of liw crown the places whero then atood the tents of the rover, and the cabins of a wandering race. <br> The auriferoun atroam that fleat made its nippearance in the lailrace of a sawmill, now flows minderruptedly out at tho "Golden Gate" at the briak rate of $\$ 1,000$ per hour, pooring lta yellow tide into the lap of commerce, qulckening her pulse, and extending her domain to the encircling of the glube. Nor need we fear that the stream will dry up. The exhanstless force will continue for centurics, bupplying the means of a higher civilization; and if tho viaions of modern scers are to be fulfilied, its inflaence will cross and recross the earth and the ocean, and the world shall therewtuh bo re-dreared in lts purstine beanty -the arts and sciencershall be greatly extendedpeverty and want shall ceaso to hold ita carulval plenty bhall fill her horn and ponr it out on the sons of men. Cultivated farma, and vineyards, and gardens, shall deck tho country, whlle citles and smilling towns, like gems in tho crown of royally, bhall adorn and lend enchantment to tho scene. The discovery of Marsmal, and Surters was opportune. There was urgent ncod of an increase of tho circulating modlum. Cemmerce was crippled for want of it. Every department neoded the stimnins which could be supplica hy nothing less. Who that has falth lu an overruling Providence cau fuil to comprehend his designs,-that hy thla golden tide ho intends to work ont a redemption from many phyafona llis, and glve to the race hero a higher and nobler destiny than has as yet been attained. s. в. r. | nuity can persundo to mateh, are stuck together, and $a$ bowl, cup, or plate mado that will roadily sell tor a half peury. Whatever steadlly refuses to bo thus matched, ls earted away to inake new atreots with. Sometimea jewclry is found, which very noon finds lts way frome the pucket of the lucky flader into the pawnibroker'a band, who advances a shilling or two, and is sure it wil nevor bo rodecmed. Then, tan, old bodes are carefully gathered together, and sold to the bone anco in bright battons. Old Sron auld brass havo their place, and a considerable rovenue is olenin ed from them. Old glasa, old carpeta, palla, jase keta, handkerchlefs-all aro cagerly sought and easily degrosed of. We mast not rorget old shoes, which, after passiule throngh tho hands of a akillful "translator," bring very respectablo prices. <br> That which has passed through the sleve bas a history equally lntercsting. The unburnt eoala are gathered in a scparato henp, to he sold at the best price. Then the "breczo," or half burn coal, has fita place; thes is sold to the briekmakers, who na ft ay fuel to burn hetween their layers. The nelea, also, carefully sifted, aro sold clay. Thousands of chaldrons of nubes aro dis. pored of for thla prryose yivay iuonti. <br> A dust heap as largo as is frequently seen, in said to be worth from ofe to thre thousand pounds. How lucky it is that London can consume its own dirt. If it did not, where could it be pat? la a generatlos or twe, it could bridge the channel, and maylan even make a driveway along the great Atlantic plateau. When that in done, we can re-lay the cable. <br> Civilization onder water. <br> I Have had an ample opportunity to watch the pamctis, in the brceding season, overy apring, for the last elght yearb. At that time, it apwhitch 14 mins the morea of two ponde in placer, overgrown with potamogeton, water-filics, and other arguetlo filanta, in which it begira heg clearing a spacc of about a foot in diameter, reoting ont the ydants, removing, with vluleut jerks of its tail, the larger melblen, and leaving egge, of verdare. In this enciosnre, one of the parents a hana hoving over ith brood, and kecping at a dintauce all lntrnders. <br> The offce of watching over the progeny docs sexce, lont the malcs und females watch alter- | MOULDED AND PRESSED GLASS. <br> Hint glase, or cersatnl, forms one of the most beaulfal varictios of this beantifal material, and lof its manufactare into the various objecta em. incthods are emploged. Moulded flist glabs may De considered ono of the mast inpartant inprove. <br>  to those ohtalned, at a mach greater cost, by cut. ting glasy, that it is not ensy to determine whether it is really conl or not. The peculfarily of modern has no indentationd correspoudifik to tho figure ontalde, and ita lustreals, couscryucntly, duc to the gathered on a rod, in the urdiumy way, and allowed to cool a little; somo more is then taken metal mould, on the interior of which the figure to bo impreased on the ginss is indented. In than way tho exterior conting only fills the indentasroooth und circular form. When abont halfformed, the projecting pirts aro made slightly to rod, whllo the workman ut tho sume timo biows Into it. Tho metolo is then brought as usabl into iab, it is uxposod to heat just sunfiolont slightly to melt ita external burface, wheh in called the fire polish, and Is then annetuled. <br> What is calle id presed glasa, is a variety of this labt kind, and the operatlon of its prodaction ia qulte rimule. A dic and monld of the deaired shapo ares socured on the tublo; the die is capable of being pluaged into tho mould by a lever, thus forcing down the flass before it, and causiau it to assume the shape of the mould. It requires much practlce to collect the exact ganatlity of fused glass noceanary; and 18 this be not tho case, and cheap mode of produclag glass objocta. Tho effect, however, in not so good as tho last, and this method is chlefly conlned to the production of very commen otjects. <br> Another varicty of the pressed glass manufacture is what is called drop pinching, and Ia employed chlefly for maling the drops and apangles presaly for glass furnace. When anficiently boftened, they are then squeczod in pairs of glasa dey, wad the required form is thun given to them. They also reguiry to bo cut and polished in the same way as ordhary cut glass.- Ihiladelphia North American. |

를

KNOWLEDGE REQUIRED IN FARMING. Turpe are many who look npon farming a
rather a amall businese, who think that its snc cespul prosceution requires only a llttle ocommon
son?a- Jist enousb 10 prompt the liardy worise to seek sheltor in a raln storm-and a very littl
knowledge, Just sumficient to connt a flock of sheep, or read a newqpaper. This opinion wat
oneo more general than now, for the world growing wiser; yet at the present tlme it fse enter
talned by many. It is an old nnd trae saying talned by many.
that "honor and
that "honor and shame from no condition rlee;"
that honor la only accquired by part in whatever sitastion we may be plaeed.
man of abllity and knowledge, who duotes all his energies to his bnsiness, will make it honora
ble and prostable, no matter how insignilican that Luainess may nt frat reem. The maklog or a pin, or a button, or a lead pencil-how tulting
bnsinees does this appear-and yet even the man onfacture of theso articles atrords full seopo for the
ureatest manufacturing skill and business tact
gren and we see large factories erccted for thls worls,
giviug proatable employment to handreds, and yielding rlch revenues and princely fortunes to
the proprietore. If, then, a lusiness so small and energy of those engaged in $i$ its management, $i$ only reqnires the same cinergy and abllity on the part of those enuploged in farming, to cauze it to
take its proper position as the most importan and honorabie profession that can engage the
attention of man, a profession tust feede and elothes the woild, that furnishes all the Inxuries
and neeessaries of lifo, the sugpension of whioh even for a singie jear would bring upon the world
wretchedress and starvation, the like of whieh has never been witnossed, is certainly of sullicien
importance to rank with any trace or man faeture. A profession that has to do with the earth and its variously formed soils-with air, an
rain, and heat, and light-with every tree and shrub that beautiace, and every thora and briar
that curses the oarth-with the wholo animal and vegetable economy-Ehould certainly rank with Thero it no business requiring such varied judgment and commercial ability combined, as
necessary for the thorounb, accomplished farm He stauls arst among the manufucurers of the
land. He makes the wheat and corn, the beef, and mutton, aud york, the wool and day, and manu all that we eat, and all we wear. And this is not one prodnces many, if not all, of these articles. The msnufacturer usually eonfines his lators to the produetion ol one article; bnt the farmer is
by necessity compelled to make mango. If he would make graije, ho must also make beff,
gotter and cheese, or mutton and wool. Ilenc The neeessity for extensive knowledge. It is an
casy matter for the manufacturer to ascertain how mnch wool will make a yard of eloth of a
certain description, and what will be itt cost; bat it is not so easy for the farmer to abcertain how
mueh grass, or hay, or grain, will make a pound

ROCHESTER, N. Y.,-FOR TIIE WEEK ENDING SATURDAY, DECEMBER 22, 1860

| thinks it might affect trade and commerce if farmers should feed so muelh grain to their stock; yet my eandid ndvice to farmere is to try it. If they tin it ralmons they can difeird the jractlee. Bnt to buegin with lean stock, they must feed thenin well for two ytais before they gee the fail effect of the clange, and it many eveu take ionger than that mith poor, stan yed anfiunls; but hegin and continue one year and you will never kive it up, J am confident. <br> Near Geneva, ㅅ. Y., Dec., 1860 . Johs Jousetos. <br> cutting straw por stock. <br> A comrgsponimest of the Conntry Gentlemnn, in a long aud very well wriliten article, endeavors to eonvince us that our nima can ecencer it is plosed than in cuting gtraw for fecding. It is true that cutting straw ly hand power for even a Emall stock, is nut guite as pricasant as sitting iu a cory corner with our favorite pallicatlons, freal from the press, and will the conscleussess that our horsue, catlue and blcep are quite as well served with loung-fodder. But go in for the eom- |

## 2824 <br>  <br> PREPARING BLEF FOR DRYIRG.

 EDs. Recent New-Youkgr:- Whit you Inform me the "niodus operandi" of preparing beff, (or We are not aware that thero is nuy apceificmodo for aecomplishtug the objeet concerning which "Xoung Housekeeper" debires hiforma-
lioul as oach individual usually consalte his or oll, as oach indivìdual usually consalts his or ried beef, whicla was pronounced excellent, proto barely hoat a potato or egg, hent to bolling point, and slifiu olf all the scum whi lh comes to
the surfice, sald two ouncea of watpectre and two fuarts of eugur-house situp, then set away to ou havo plenty of bitine to cover;) and let it ro (hecordiug to tho Rlyo of the ploces,) will necesgary. Tate out the menth let ut dralu, then
hang ap in any dry place. If a smosy finvor is hang up in any dey place. If is smoky linvor
destroul, smoko in yance manner es you would are culcenlated for 100 pounds of heeff. In addition to the foregoing wo give the follow. ing extracta fiom pierion Is the liurat, of Dec. 19th, 1857, "N." gives the collowng method of curing beef, hans und ven a which he has cured manny tnan, he knows of
 and f plat malto Dissolve and thoronghly mix a hagredlents with a quantity or water, on loosely. After making tho brine, let it stand a hep them from floating in the brino. Abon nee a weok takic out the hams and re-pack, that with brine. In nlout furr weebs they will bo rensuro. Nu fear need be entor tainca that the will becomo too salt. After smoking they may ho vithout injury. If altpectro is objectiouabio to any one, leave it out and add more salt and
molabece. lieef and venison may bo curell in the same way.
l. G. he, in the Rural for Dec. 11th, 1858 , gaya -"To cora beef, my method is to cut it up and good rock salt, atrong cuough to bear mpancgs The Olio Fuluing sys:" "To ef plet mallons ivater add two pounds of brown sugar, one quart
of molasses, four ounces of saltecter, and finc salt ontii it will float an cgg.'

CURE FOR IN-GROWING NAILS.
and Sursical Journall, that canterization will hot
tallow is an imnodiate cure for in-growing nails.
He eass:-"गhe pattent on whom I first tried this was a young faly who had becn nnallic to put on wort case I hade ever seen. The disense had been of long standin\%. Tho edge of the mall was decply madermined; party coverod with akin, and pus
conatantly cozulug from the root of the nall; the wholc toc was swollun, and extremely tender and
painfa. My modo of proceuldog was thls:-
put a very braill pieco of tallow in a spoon and 1 pieco of tallow in a apoon and 1 dropped two or thrie drops hetweon the nail d granalatious. fow days the grannations were all gone, the dis. cuge of the nail cxnosed so as to admit of being
pared avny yithont any inconvenicnce. The cure pared avny ysithont any inconvenicnce, The cure have tricil this plau repentaly since, with the saise
Ratisiactory results. The operalon canses little
if any pain, if the tallow is proverly hented."
$\qquad$ If any one has made sweet applo jelly that whll
compare with tho rich, thick joice, which will be
left in a tin where sivect apples atc laked, and
 cream tarter. Flavor to sait the tas

|  | might be seou secking shelter near some fullen tree or at the edgo of the woods, Perhaps at the next cloalng, everyth has, though new and rastic, was of the moat ounfortublo and pleaslng character, - the stables made of sinall logs and ohlaked so tlgit as offeotnally to exelude the snow upon whleh tho snow was piled, milking tho Interlor as comfortable as could bo deaired by any same charactur, where, secure from sovero storms, the anlmals conld pasas tho wintry niahteand rongh duys in comfort. Now, it, was not want of means that made this differencc. It was just the differenco that is always seen between lazy negligence and carefnl industry, in overy position in llfe. <br> CDEAF himel <br> Wo have often called the attention of our roaders to these matters. In onr last we gave a design plans of sheep racks, one ol' which cen be made by any larmer, und tho other is a very noat and conveniont arragemeat recently Introdnced in Eagiand. Wo commend it to tho attontion of somo of tho manufacturers of agricaltaral limple ments and madifnery. We aro dotermlaed to do our part in introducing anch lopprovements as are calcalated to advauce tho farming lateresto. The ahoon rack la pon ample, and its mojner of onatructlon ta so olcarly ahown in thid eagraving, that wo liave ouly to add tho dimensions to enablo nuy farmer to build a fuc simile. Wiuth 2 隹 inches; helght 40 inohes, truagh one foot from the ground; Hals 2 inches wide and :s luches apart. <br> PORTABLE FOKDING BIKEET RACK. <br> This rack is a recent English invention, and in that country it is deelared to bo "erfaal to any rack mado for strength, durability, and completestrircted so as to bo folded ap and removed with care from place to place. The trame is of iron, and the netting of wire. Thg wover, we helleve, is of sheet Iron, prepared so as to prevent rusting. Boneath the rack, and fisatened to the frame, are two feeding troughs, and these fold towether. At the lowerenif of the frane, or legs, aro jron woints which enter tho ground and keop all steady. long, and cost ia Eugland madout nine dollars. $\qquad$ labors of the year and volume, withontexpressing In any manner contrihuterl to the extriordinary success and wholy-cxtended influonco of the Indrar. Nris-Yurebr. To each aud all of its friende, therofore, vear and distant-and they are seatfered all over the land, from the Atlantle to the Pacitic, and IIndsua's Bay to the Ciulf of Mexlco - wo hend low in fratefin acknowledg. ment. During the past cloven jears, thousands havo aided us materially loy introundris the havo aided us materially by introdnclige the tion anal nefofulaces, whilo other thousainda have cabazeed the latereat and valac of its pages by contribating thereto the resnlts of thelr observa- tion and experienco in tho various branches of Agriculturo, Hortlculture, Sclence, Art, Travel, Ee, de. The condactor of a journal having fricads so numorous, kind, and gencrona, may le while bending under the weight of olllg gations to them - and would be angrateful were ho not to feknowledge the indobtednegs and ulso resulvo to more than ever merll such manifestatlons of apgations to lonth Individanla and Cominulity, we shall atrive to repay the indohtedness in an nupro. printe manner - and meantime wish one and all joyous roturns of the same to themselves and their (we trust always happy) fatuilies. |
