THE CHEMIGRAPH

Process Patented March 21, 1883.

Trade Mark Registered.

THE CHEMIGRAPH is the latest claimant for admiration in the field of photo-reproductive art. In truthful representation and artistic beauty, it far surpasses anything heretofore offered by the older processes of wood engraving, lithography and steel-plate engraving. It finds its only rivals in the more expensive and slower processes of Photo-gravure, Heliotype and their class.

As compared with the parent art, Photography, the Chemigraph yields but little in excellence of results, while it has the greater advantage of being more rapidly and cheaply produced. It may be mentioned that the National Chemigraph Company received the only award given for Photo-Mechanical Printing at the World's Columbian Exposition. Anything under the sun that can be photographed can be represented in photographic tones, tints and finish by the Chemigraphic process.

All communications relating to samples, estimates, etc., should be addressed to

EXPANDED METAL FIREPROOFING SYSTEM

(Section of floor showing Rib of Curved Channel Iron built up of Concrete, Expanded Metal Binder imbedded in Concrete over Channels and across I Beams. Suspended Ceiling of Expanded Metal Lath.)

EXPANDED METAL ROOFS.
EXPANDED METAL PARTITIONS.

EXPANDED METAL PARTITIONS.

Our Solid Fire-proof Partition has become the Standard Partition for all classes of buildings. They are as strong as brick walls. They possess the advantage of not only saving much valuable floor space and useless burden in buildings, but the very important one of costing much less than those of brick or tile. Unlike the latter, they are not fragmentary, but solid monolithic structures, with an imbedded binding of Steel. These Partitions are 1 1/2 inches or 2 inches in width. For Circulars and full information, address:

WM. C. LEWIS,
 (LICENSEE FOR MARYLAND, DISTRICT OF COLUMBIA AND VIRGINIA,) Builders' Exchange, WASHINGTON, D. C.
 504 Law Building, BALTIMORE, MD.
