1919.....	2,309,007	8,322,802	577,144	6.93
1920.....	2,022,271	7,066,395	510,440	7.23
1921 (9 months).....	1,185,895	3,228,439		

## SOYA BEANS.

	Pounds.			
1918.....	1,433,319	\$111,818		
1919.....	4,368,780	201,496		
1920.....	3,136,850	180,759		
1921 (9 months).....	3,414,625	115,533		

## PREPARED BEANS.

1918.....	243,170	\$16,061	\$2,432	15.14
1919.....	385,443	33,005	3,854	11.68
1920.....	891,906	75,452	8,019	10.63
1921 (9 months).....	379,441	29,389		

Since beans are provided for in the emergency tariff act of 1921 (par. 5), statistics<sup>26</sup> of imports by months for 1920 and 1921 are given below:

Month.	Quantity.		Value.	
	1920	1921	1920	1921
	<i>Bushels.</i>	<i>Bushels.</i>		
January.....	492,191	36,958	\$2,300,364	\$95,421
February.....	213,340	30,812	762,167	79,231
March.....	264,069	52,114	1,107,766	115,203
April.....	139,648	19,430	477,374	44,351
May.....	79,942	33,166	298,334	54,365
June.....	265,311	11,212	712,118	30,421
July.....	219,644	13,339	670,136	34,252
August.....	148,230	4,536	408,155	11,273
September.....	109,952	8,810	297,350	18,350
October.....	53,308	15,736	162,764	44,282
November.....	70,371	24,661	201,052	53,475
December.....	38,610	23,254	112,299	64,968

*Exports* of canned beans are not itemized. The total export of canned vegetables increased in value from \$782,973 to \$6,340,359 from 1908 to 1920.

Exports of beans ranged from 400,868 bushels in 1909 to 4,489,078 bushels in 1918 (fiscal year). Later statistics of the export of beans, for calendar years, follow:

	1918	1919	1920	1921 (9 months).
Quantity (bushels).....	2,398,834	3,795,420	1,764,735	1,079,739
Value.....	\$14,226,277	\$19,965,737	\$7,672,241	\$3,673,664

In 1920, 50 per cent went to Cuba, 21 per cent to Danzig, and 14 per cent to Germany.

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—Provisions for beans in the act of 1913 are here combined; and lentils, added in the act of 1913, have been put in a separate paragraph (par. 765) with chickpeas and cowpeas. Soya beans, prepared or preserved, appear in paragraph 773. Specific provision has been made for green or unripe beans (which include string beans). The words "in brine" have been added to prepared or preserved beans in order to make string beans in brine, for instance, dutiable under this paragraph rather than under the general provision for vegetables in brine. Bushel equivalents have been dropped, since the trade is largely conducted on the basis of weight.

Since no specific provision has been made for soya beans, not prepared or preserved, exempt from duty under the act of 1913 (par. 660), they would be dutiable under this paragraph.

*Suggested changes.*—Since the principal use of soya beans is crushing for oil, it is better to classify them, except when prepared or preserved, with oil-bearing materials in paragraph 760.

<sup>26</sup> Figures are for beans and lentils to July, 1921.

## PARAGRAPH 764.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 764. Sugar beets, 80 cents per ton; other beets, 17 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 250. Beets, twenty-five per centum ad valorem; sugar beets, ten per centum ad valorem.

PAR. 198. Beets of all kinds, 5 per centum ad valorem.

## SUGAR BEETS AND OTHER BEETS.

*Description and uses.*—The beet is a root crop consisting chiefly of mangels, garden, and sugar beets. Mangels and garden beets are raised for seed, feed, and table use. Sugar beets are by far the most important.

*Production* of sugar beets averaged 5,056,393 short tons during 1910-1914, valued approximately at \$28,417,000; in 1920 production was 8,545,000 short tons, with a farm value of \$99,396,000. The principal producing States are California, Colorado, Michigan, Utah, Nebraska, Idaho, Ohio, and Wisconsin. In 1909 the value of the beet crop, exclusive of sugar beets, was \$352,696, about one-third in the Middle Atlantic States, the remainder widely distributed.

*Imports* of sugar beets in 1913 were valued at \$28,751. Following the reduction of the tariff from 10 per cent to 5 per cent, imports in 1914 reached a value of \$75,590, but decreased to \$30,774 in 1918 (fiscal years).

Imports of mangels and garden beets in 1913 were valued at \$3,344, nearly one-half from Cuba; the value rose to \$16,772 in 1914, and to \$14,466 in 1918 (fiscal year.) Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
----------------	--------	-------	------------------

## SUGAR BEETS.

1921 (9 months).....	42,973		

## PARAGRAPH 765.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 765. Chickpeas or garbanzos, 1 cent per pound; cowpeas, one-half of 1 cent per pound; lentils, 2 cents per pound; lupins, one-half of 1 cent per pound.

ACT OF 1909.

ACT OF 1913.

[No corresponding provision. Chickpeas and cowpeas classable as peas; lentils and lupins classable as vegetables.]

PAR. 197. \* \* \* lentils, not specially provided for, 25 cents per bushel of sixty pounds.

[No corresponding provision for the other commodities. Chickpeas and cowpeas classable as peas; lupins classable as vegetables.]

## CHICKPEAS, COWPEAS, LENTILS, ETC.

(See Survey G-8.)

*Description and uses.*—Chickpeas or garbanzos are used as a vegetable and in soups—in the United States chiefly by Latin-Americans. The great bulk of the domestic crop of cowpeas is used for feeding purposes, but some varieties, notably the Blackeye, are utilized for food, in both the green and dried form. The lentil, the seed of a leguminous plant similar to the bean and pea, is largely used in soups and purées, chiefly by foreign residents. Lupines, the seed of a leguminous plant, rich in protein, are used for feed and to some extent for food, particularly by Europeans.

*Production.*—Chickpeas or garbanzos are extensively produced in Mexico and Spain, but the American production is largely confined to a small acreage in California. That State also produces a small crop of lentils, and most of the commercial Blackeye cowpeas. The great bulk of the domestic requirements of chickpeas and lentils, and substantially all of the lupines used for food, are imported. The South, especially the Southeastern States, devote several millions of acres to cowpeas, nearly all for feeding purposes. In 1921, the harvested acreage of cowpeas was 1,133,000 and the yield 9,581,000 bushels.

*Imports* of these legumes are not separately stated.

*Exports.*—None reported.

*Important changes in classification.*—New specific provisions for chickpeas, cowpeas, and lupines, the dutiable status of which has been the subject of litigation. The first two have been held dutiable as peas, though botanically and commercially distinct products. Lentils have been transferred to this paragraph from paragraph 197, of the act of 1913, for beans.

*Suggested changes.*—The proper spelling is "lupines."

## PARAGRAPH 766.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 766. Mushrooms, fresh, or dried or otherwise prepared or preserved, 33½ per centum ad valorem; truffles, fresh, or dried or otherwise prepared or preserved, 25 per centum ad valorem.

## ACT OF 1909.

PAR. 251. \* \* \* mushrooms, and truffles, prepared or preserved, or contained in tins, jars, bottles, or similar packages, two and one-half cents per pound, including the weight of immediate coverings; mushrooms, cut, sliced, or dried, in undivided packages containing not less than five pounds, two and one-half cents per pound.

## ACT OF 1913.

PAR. 199. \* \* \* mushrooms and truffles, including the weight of immediate coverings, 2½ cents per pound.

## MUSHROOMS AND TRUFFLES.

(See Survey G-9.)

*Description and uses.*—Mushrooms and truffles are food luxuries, since they possess but little food value relative to their price. Mushrooms are very perishable and are imported only in the canned and dried form, while most of the domestic product is marketed fresh. About one pound of fresh mushrooms goes into an 8-ounce can, while about 5 pounds are required for one can of dried. But the prices per pound of canned and dried are about the same.

*Production* of mushrooms has increased considerably in recent years. It is estimated that between 5,000,000 and 6,000,000 pounds were produced in 1920.

Truffles are not commercially grown in this country.

*Imports* of mushrooms and truffles in 1914 were 9,188,177 pounds, and in 1917 4,419,374 pounds, valued respectively at \$1,306,818 and \$1,462,510. About 80 per cent are from France. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	1,290,114	\$524,917	\$32,253	6.14
1919.....	2,084,676	1,354,337	52,117	3.85
1920.....	3,132,842	1,527,807	78,321	5.13
1921 (9 months).....	3,271,340	1,135,590		

*Exports.*—None recorded.

*Suggested changes.*—In view of the fact that in the agricultural schedules of H. R. 7456 specific rates of duty have been adopted wherever they were possible, attention is invited to the fact that such rates are feasible in the case of mushrooms and truffles.

## PARAGRAPH 767.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 767. Peas, green or dried, 75 cents per one hundred pounds; peas, split, 1 cent per pound; peas, prepared or preserved in any manner, 2 cents per pound.

## ACT OF 1909.

## ACT OF 1913.

PAR. 251. \* \* \* pease, \* \* \* prepared or preserved, or contained in tins, jars, bottles, or similar packages, two and one-half cents per pound, including the weight of immediate coverings; \* \* \*

PAR. 199. \* \* \* peas, prepared or preserved, or contained in tins, jars, bottles, or similar packages, including the weight of immediate coverings, 1 cent per pound; \* \* \*

PAR. 262. Pease, green, in bulk or in barrels, sacks, or similar packages, twenty-five cents per bushel of sixty pounds; seed pease, forty cents per bushel of sixty pounds; pease, dried, not specially provided for in this section, twenty-five cents per bushel; split pease, forty-five cents per bushel of sixty pounds; pease in cartons, papers, or other small packages, one cent per pound.

PAR. 209. Peas, green or dried, in bulk or in barrels, sacks, or similar packages, 10 cents per bushel of sixty pounds; split peas, 20 cents per bushel of sixty pounds; peas in cartons, papers, or other similar packages, including the weight of the immediate covering,  $\frac{1}{2}$  cent per pound.

## PEAS.

(See Survey G-8.)

*Description and uses.*—Peas included in this provision are of the field variety. They are grown for human food and for stock feed, for canning, forage, green manuring, and seed. The green garden pea is used in the fresh state; dried peas are used in soups and purées, and sometimes are baked like beans; split peas are used in soup, etc.

For prepared or preserved peas, two varieties are used, the smooth, round pea, known as the early or Alaska type, and the wrinkled sweet pea, not quite spherical. The two have distinct flavors, the latter being generally sold as sweet or sugar peas.

*Production.*—The pea is native to Asia and South Europe. It is cultivated both as a field and garden crop in many parts of the United States, principally in the South Atlantic and east North Central States. In 1909 the product was 7,129,000 bushels of dried peas, valued at over \$10,000,000, while the crop of green peas approximated \$3,000,000. The estimated production of dried peas for seed in 1918 was 65,912,000 pounds, or over 1,000,000 bushels. In 1919 the commercial area in green peas was 103,686 acres and the harvest was valued at \$7,164,988.

Production of canned peas in 1914 was 264,787,520 pounds, and in 1919, 279,771,810 pounds, valued respectively at \$15,089,047 and \$25,073,220. Wisconsin and New York supply about 65 per cent of the total.

*Imports* of green or dried peas were 611,666 bushels, valued at \$1,150,611 in 1914; of split peas, 251,353 bushels, valued at \$332,271. Other peas in cartons, papers, or other similar packages amounted in 1914 to 35,000 pounds, valued at \$3,025.

Imports of canned peas in 1914 amounted to 4,504,729 pounds, valued at \$344,118, French peas constituting the bulk.

Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
PEAS, DRIED, IN BULK OR IN BARRELS, SACKS, OR SIMILAR PACKAGES.				
	<i>Bushels.</i>			<i>Per cent.</i>

1919.....	2,127	502	7	1.41
1920.....	8,056	1,457	40	2.76
1921 (9 months).....	1,436	165		

PEAS, PREPARED OR PRESERVED, OR CONTAINED IN TINS, JARS, BOTTLES OR SIMILAR PACKAGES.				
1918.....	49,123	\$4,504	\$491	10.91
1919.....	402,915	84,445	4,029	4.77
1920.....	1,913,498	270,856	19,135	7.06
1921 (9 months).....	1,492,844	185,609		

In 1920, 78 per cent of imports of dried peas came from Mexico.

Exports of dried peas in the fiscal year 1918 were 266,824 bushels, valued at \$1,346,816; these went largely to Belgium, England, Canada, Norway, and France. Earlier or more complete figures are unavailable. Exports since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (bushels).....	322,452	476,106	295,679	92,813
Value.....	\$1,689,457	\$2,664,511	\$1,415,528	\$397,497

In 1920, Canada received 22 per cent; Germany, 15 per cent; Cuba, 14 per cent; England, 13 per cent; and Poland and Danzig, 11 per cent.

*Important changes in classification.*—The provisions of the act of 1913 (pars. 199 and 209) for peas, green, dried, split, and canned (prepared or preserved) have been combined and the provision (par.

199) regarding the inclusion of the containers in the dutiable weight has been dropped. Likewise, the clause (par. 209) regarding peas in cartons and similar packages has been eliminated, imports in this form being insignificant. Finally, the rate of duty has been placed upon the basis of weight rather than measure, since the trade is largely so conducted.

Specific provision has been made in paragraph 765 for chickpeas and cowpeas.

---

### PARAGRAPH 768.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 768. Onions, 75 cents per one hundred pounds; garlic, 2 cents per pound.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 261. Onions, forty cents per bushel of fifty-seven pounds; garlic, one cent per pound.

PAR. 208. Garlic, 1 cent per pound; onions, 20 cents per pushel of 57 pounds.<sup>27</sup>

#### ONIONS AND GARLIC.

(See Survey G-15.)

*Description and uses.*—Besides its wide culinary use, the onion is an important ingredient of many sauces and relishes. Of the numerous varieties those of Italy, Spain, Mexico, California, and the Bermudas are specially noted for size and quality. Garlic is an onionlike bulbous plant, native to Central Asia and the Mediterranean region. It may be used in the fresh state as a condiment, and as an ingredient in some sauces.

*Production.*—In 1910 there were 47,625 acres under onion cultivation, producing a crop valued at \$6,709,047. The corresponding figures for 1921 were 55,829 acres, producing a crop valued at \$26,966,000 and amounting to 12,652,000 bushels. New York, Ohio, and Texas grew about one-third of the output. The growing of Bermuda onions has been attempted in southern Texas, and has become a successful and important industry. Commercial production of garlic in the United States is very small.

*Imports* of onions in 1914 were 1,096,781 bushels, valued at \$890,508, and in the calendar year 1920, 1,818,514 bushels, valued at \$2,362,316. In the latter year 78 per cent came from Spain and 10 per cent from Egypt. In 1914, 9,282,302 pounds of garlic were imported as compared with 7,688,000 pounds in the calendar year 1920. In the latter year Italy furnished 50 per cent; Spain, 29 per cent; and Mexico, 14 per cent. Our Latin population consumes the greater part. Imports since 1917 have been as follows:

---

<sup>27</sup> Onions, 40 cents per bushel of fifty-seven pounds. (Par. 8, emergency tariff act of 1921.)

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.

1920.....	1,818,514	2,362,316	363,703	15.40
1921 (9 months).....	574,874	602,817	.....	.....

## GARLIC.

	<i>Pounds.</i>			
1918.....	3,991,868	\$219,808	\$39,919	18.16
1919.....	9,960,346	1,334,327	99,375	7.51
1920.....	7,688,410	870,326	76,864	8.84
1921 (9 months).....	4,940,977	271,614	.....	.....

General imports of onions, included in paragraph 8 of the emergency tariff act, are given by months for 1920 and 1921 in the following table:

Month.	Quantity.		Value.	
	1920	1921	1920	1921
	<i>Bushels.</i>	<i>Bushels.</i>		
January.....	335,569	20,733	\$432,694	\$20,322
February.....	244,153	63,732	297,926	66,625
March.....	369,262	41,405	385,392	49,760
April.....	143,371	7,243	228,604	15,425
May.....	88,452	13,016	204,761	22,018
June.....	104,942	9,036	226,836	12,175
July.....	95,009	32,181	119,853	34,075
August.....	35,224	125,029	40,393	125,895
September.....	59,743	261,965	72,504	254,602
October.....	177,742	306,447	183,943	355,634
November.....	119,396	652,883	120,642	722,061
December.....	46,295	442,413	50,249	569,457

*Exports* of onions increased from 386,322 bushels in 1914 to 534,192 bushels in the fiscal year 1918, and in value from \$435,953 to \$788,584. About 50 per cent of the exports go to Cuba and 25 per cent to Canada. Later statistics, for calendar years, follow:

	1918	1919	1920	1921 (9 months)
Quantity (bushels).....	692,855	816,959	945,778	732,969
Value.....	\$1,112,074	\$2,095,142	\$2,075,362	\$970,779

*Important changes in classification.*—The basis of duty on onions has been changed from bushels to pounds to conform to commercial usage.

## PARAGRAPH 769.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 769. White or Irish potatoes, 42 cents per one hundred pounds; dried, dehydrated, or desiccated potatoes, 3½ cents per pound; potato flour, 1½ cents per pound.

## ACT OF 1909.

PAR. 265. Potatoes, twenty-five cents per bushel of sixty pounds.

PAR. 480. \* \* \* articles manufactured, in whole or in part, not provided for in this section, \* \* \* twenty per centum ad valorem. (Abstract 23912, T. D. 30901, of 1910.)

[No corresponding provision for dried, dehydrated, or desiccated potatoes.]

## ACT OF 1913.

PAR. 581. Potatoes, and potatoes dried, desiccated, or otherwise prepared, not specially provided for in this section: *Provided*, That any of the foregoing specified articles shall be subject to a duty of 10 per centum ad valorem when imported directly or indirectly from a country, dependency, or other subdivision of government which imposes a duty on such articles imported from the United States.<sup>25</sup>

## WHITE OR IRISH POTATOES.

(See Report T. I. S.-20 and Survey G-33.)

*Description and uses.*—The chief domestic consumption of potatoes is, of course, in the familiar table uses. Relatively small quantities are used for starch, for potato flour, and for dried or riced potatoes. Large quantities of cull potatoes are fed to swine and other animals on American farms. Potatoes are employed extensively in European industries, principally in making starch, dextrin, alcohol, glucose, and lactic acid; corn, which is in this country usually cheaper, is here substituted for these purposes.

The fresh potato is from 75 to 80 per cent water. Potato flour consists of the whole potato except the peel, washed, cooked and dried, ground and bolted. It is used chiefly for mixing with bread flours, also for soups and other food products. Dried or dehydrated potatoes in the form of chips, flakes, or "rice," contain all the potato except the water and peel, and are used almost entirely for food.

*Production and prices of potatoes fluctuate greatly.* Between 1916 and 1920 the harvest ranged from 287,000,000 to 430,000,000 bushels. Though widely cultivated, the bulk of the commercial crop is concentrated in Aroostook County, Me., western New York, western Michigan, Minnesota, Colorado, Idaho, and central California. Each of the potato crops—the "early," the "seed," and the "late"—enter into a distinct market. Early potatoes are grown principally in the South and move northward, seed and late varieties move southward and eastward. Europe produces about 90 per cent of the world's harvest, its physical and economic conditions being well suited to this crop.

Domestic manufacture of potato flour began about 1917, and in 1918 in five factories the production was about 2,500,000 pounds. Sixteen plants were producing dried or dehydrated potatoes in 1918, chiefly for Army use, with an output of about 7,000,000 pounds.

*Imports of potatoes from the principal producing countries have been barred by quarantines since October, 1912, only Canada and the Bermudas shipping without restriction.* Shipments of potatoes from

<sup>25</sup> Potatoes, 25 cents per bushel of sixty pounds. (Par. 7, emergency tariff act of 1921.)

the Bermudas are from 150,000 to 200,000 bushels annually; from Canada, about 200,000 to nearly 6,000,000 bushels annually since 1914. In 1920, 85 per cent of the imported potatoes came from Canada and 13 per cent from Denmark.

Imports of both potato flour and dried potatoes amounted to about 550,000 pounds, valued at \$17,000, in 1914. Normally these imports came chiefly from Germany and the Netherlands. In 1920, 48 per cent of dried and desiccated potatoes came from Canada and 40 per cent from the Netherlands. Statistics of imports since 1917 are as follows:

Calendar year.	Quantity.	Value.	Duty. <sup>1</sup>
POTATOES.			
	<i>Bushels.</i>		
1918.....	1,201,385	\$1,367,668	\$76,582
1919.....	5,543,686	5,907,064	862
1920.....	6,061,718	12,526,534	5,934
1921 (9 months).....	1,248,715	1,390,904	.....

POTATOES, DRIED, DESICCATED, OR OTHERWISE PREPARED.

	<i>Pounds.</i>		
1918.....	469,961	\$115,558	\$11,367
1919.....	1,888,697	480,194	7
1920.....	3,421,405	310,496	6
1921 (9 months).....	3,451,745	140,595	.....

<sup>1</sup> Dried potatoes are dutiable only when imported from a country which imposes a duty on potatoes imported from the United States.

Since potatoes are provided for in the emergency tariff act of 1921, a comparison of general monthly imports for 1920 and 1921 is given below:

Month.	Quantity.		Value.	
	1920	1921	1920	1921
	<i>Bushels.</i>	<i>Bushels.</i>		
January.....	494,532	384,173	\$867,966	\$317,759
February.....	294,754	219,872	607,730	235,007
March.....	624,158	353,999	1,314,285	281,163
April.....	1,179,597	317,638	3,061,036	191,791
May.....	1,118,008	172,643	3,332,006	154,441
June.....	399,637	23,805	1,204,964	41,867
July.....	65,400	5,122	178,661	6,077
August.....	268,847	55,214	427,353	59,221
September.....	236,696	116,249	245,781	103,578
October.....	443,170	160,536	396,401	141,663
November.....	615,612	136,865	581,893	143,408
December.....	321,334	69,446	308,544	76,212

*Exports* for 1910-1918 (fiscal years) were between 1,000,000 and 4,000,000 bushels, chiefly to Cuba and Canada. Later statistics (for calendar years) of exports of potatoes, except sweet potatoes, follow:

	1918	1919	1920	1921 (9 months).
Quantity (bushels).....	3,853,187	3,642,322	4,153,565	3,149,101
Value.....	\$5,834,349	\$6,475,203	\$10,199,928	\$4,263,820

In 1920, 65 per cent of the exports went to Cuba and 20 per cent to Canada.

*Important changes in classification.*—Potatoes covered by this paragraph were conditionally free under paragraph 581 of the act of 1913. Potatoes are dutiable under the emergency tariff act of 1921 (par. 7). The rate of duty in H. R. 7456 has been changed from bushel measure to a rate per 100 pounds to conform to trade usage. The paragraph has been restricted specifically to white or Irish potatoes since the potato provision has been held to embrace sweet potatoes, a commercially distinct product. Imports of sweet potatoes and yams are restricted by quarantines. Such as are allowed entry would be dutiable under the provision for "vegetables, not specially provided for."

Specific provision has been made for potato flour.

---

### PARAGRAPH 770.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 770. Tomatoes in their natural state, 1 cent per pound; tomato paste, 28 per centum ad valorem; all other, prepared or preserved in any manner, 10 per centum ad valorem.

#### ACT OF 1909.

PAR. 252. Vegetables \* \* \* prepared \* \* \* not specially provided for in this section, \* \* \* forty per centum ad valorem.

[No corresponding provision for tomatoes in their natural state; classable as vegetables.]

#### ACT OF 1913.

PAR. 200. Vegetables, \* \* \* prepared \* \* \* not specially provided for in this section, \* \* \* 25 per centum ad valorem.

[No corresponding provision for tomatoes in their natural state; classable as vegetables.]

### TOMATOES.

*Description and uses.*—The limited keeping quality of the tomato restricts the trade in the raw product. For this reason and because of its popularity for many uses it is the most widely canned of all vegetables. It is packed whole, and as pulp, purée, and a mixture of whole tomatoes and purée. Tomato purée is the whole tomato with skin and seeds removed and concentrated to a little less than half its bulk. It is used as a basis for soups and sauces. Tomato paste is heavily concentrated tomato produced by evaporating pulp in a vacuum kettle or by first making pulp and then draining it.

*Production.*—For 1919 the Census reports that the commercial area in tomatoes was 316,000 acres, with a harvest valued at \$38,675,000. A preliminary estimate of production in 1921 gives 1,044,000 tons as compared with 1,648,000 tons in 1920. The falling off was largely in canning stock. In 1919 the value of canned tomatoes produced was \$38,068,000; of tomato paste, \$1,301,000; and of tomato pulp, \$3,819,000.

*Imports* of raw tomatoes are not separately reported. Some are grown by Americans on the west coast of Mexico for export to the United States during the winter season. Some are also imported from the West Indies. Shipments in the season 1920-1921 were

estimated at over 20,000,000 pounds. Imports of canned tomatoes, mostly of tomato paste from Italy, are given below:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Doz. cans.</i>			<i>Per cent.</i>
1918.....	4,161	\$6,743	\$1,686	25
1919.....	235,060	9,620	2,405	25
1920.....	235,907	366,055	91,514	25
1921 (9 months).....		308,634		

*Exports of raw tomatoes are not separately reported. In 1920, 66 per cent of the exports of canned tomatoes went to Cuba. Export values of canned tomatoes have since 1917 by calendar years been as follows: 1918, \$479,260; 1919, \$2,127,896; 1920, \$1,079,582; 1921 (9 months), \$332,650.*

*Important changes in classification.*—New specific provision.

*Suggested changes.*—Widely different rates are provided for tomato paste and other canned tomatoes. In view of the fact that the paste may be packed in varying degrees of concentration, it may be possible to avoid the higher rate by shipping products such as purée, pulp, etc. The dividing line between tomato paste and tomatoes prepared or preserved, is also not clearly defined, and the provision may therefore be difficult to administer.

### PARAGRAPH 771.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 771. Turnips, 12 cents per one hundred pounds.

ACT OF 1909.

ACT OF 1913.

[No corresponding provision; classable as vegetables.]

[No corresponding provisions; classable as vegetables.]

### TURNIPS.

*Description, uses, and production.*—The turnip is a vegetable of relatively minor importance in this country, only about 4,000 acres being planted in 1919.

*Imports come from Canada, largely through Buffalo. Figures for the years 1918-1921 are given below:*

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Bushels.</i>			<i>Per cent.</i>
1918.....	<sup>1</sup> 1,593,231	<sup>1</sup> \$484,373	<sup>1</sup> \$72,656	15
1919.....	2,155,243	790,164	118,525	15
1920.....	1,886,843	711,425	106,714	15
1921 (9 months).....	668,278	174,278		

<sup>1</sup> July 1 to Dec. 31.

*Exports are not separately reported.*

*Important changes in classification.*—New specific provision.

## PARAGRAPH 772.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 772. Vegetables in their natural state, not specially provided for, 20 per centum ad valorem: *Provided*, That in the assessment of duties on vegetables no segregation or allowance of any kind shall be made for foreign matter or impurities mixed therewith.

## ACT OF 1909.

## ACT OF 1913.

PAR. 254. Cabbages, two cents each.

PAR. 269. Vegetables in their natural state, not specially provided for in this section, twenty-five per centum ad valorem.

PAR. 215. Vegetables in their natural state, not specially provided for in this section, 15 per centum ad valorem.

## VEGETABLES IN THEIR NATURAL STATE, N. S. P. F.

*Description and uses.*—The common cabbage, kale, kohlrabi, cauliflower, broccoli, and Brussels sprouts are all of the same family. They are perhaps the most important of more than a score of vegetables of minor commercial interest included in this paragraph. Cabbage serves as green fodder for cattle, in addition to its use as a food for man, and a dye known as cauline may be made therefrom.

*Production* of cabbage in 1919 from 123,994 acres was valued at \$21,848,112. It grows in every State, and in 1920 twelve States reported a production of 820,750 tons, valued at \$25,266,000. Complete production statistics for "all other vegetables" are unavailable, but in 1919 nearly 1,000,000 acres were devoted to these crops.

In 1919 the commercial acreage and value of harvest of the more important vegetables were reported by the Census as follows: Asparagus, 30,244 acres, \$5,102,135; cantaloupe and muskmelons, 78,436 acres, \$10,766,591; celery, 20,148 acres, \$9,462,277; sweet corn, 271,584 acres, \$17,297,561; cucumbers, 51,643 acres, \$8,579,102; lettuce, 21,544 acres, \$8,535,093; watermelons, 159,088 acres, \$10,466,133.

*Imports* of cabbage in 1913 were valued at \$262; in 1914, at \$22,875. Imports decreased during the war. Imports of all other vegetables n. s. p. f., valued at \$998,565 in 1913 and \$1,083,458 in 1914, came chiefly from Canada, Italy, Cuba, and Belgium. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
CABBAGES.				
1918.....		\$4,483	\$672	15
1919.....		12,831	1,925	15
1920.....		99,808	14,971	15
1921 (9 months).....		3,354		

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
SWEET POTATOES.				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	364	\$479	\$10	.....
1919.....	2,848	1,591	157	.....
1920.....	50	94	1	.....
1921 (9 months).....	57	77	.....	.....

## VEGETABLES IN THEIR NATURAL STATE, N. S. P. F.

1918.....	\$1,131,479	\$154,643	.....
1919.....	1,224,693	176,502	.....
1920.....	1,833,318	267,456	.....
1921 (9 months).....	1,609,922	.....	.....

*Exports* of "all other" vegetables in 1914 amounted to \$1,712,000; in 1918, \$2,204,464; 1919, \$3,237,009; 1920, \$2,807,439; 1921 (9 months), \$2,441,250. (Statistics for 1918-1921 are for calendar years.)

In 1920, Canada was the destination of 80 per cent of the exports.

*Important changes in classification.*—The provision for nonallowance for foreign matter or impurities is new and designed to simplify administration.

## PARAGRAPH 773.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 773. Vegetables, if cut, sliced, or otherwise reduced in size, or if parched or roasted, or if pickled, or packed in salt, brine, oil, or prepared or preserved in any other way and not specially provided for; soya beans, prepared or preserved in any manner; bean stick, miso, bean cake, and similar products, not specially provided for; soups, pastes, balls, puddings, hash, and all similar forms, composed of vegetables, or of vegetables and meat or fish, or both, not specially provided for, 25 per centum ad valorem.

## ACT OF 1909.

PAR. 252. Vegetables, if cut, sliced, or otherwise reduced in size, or if parched or roasted, or if pickled, or packed in salt, brine, oil, or prepared in any way; any of the foregoing not specially provided for in this section, and bean stick or bean cake, miso, and similar products, forty per centum ad valorem.

[No corresponding provision for the other commodities; soya beans classable as beans.]

## ACT OF 1913.

PAR. 200. Vegetables, if cut, sliced or otherwise reduced in size, or if parched or roasted, or if pickled, or packed in salt, brine, oil, or prepared in any way; any of the foregoing not specially provided for in this section, and bean stick or bean cake, miso, and similar products, 25 per centum ad valorem.

[No corresponding provision for the other commodities; soya beans classable as soya beans or as vegetables, prepared.]

## VEGETABLES PREPARED OR PRESERVED.

*Description and uses.*—This paragraph covers all prepared and preserved vegetables not elsewhere provided for. It embraces principally canned vegetables, but also those preserved in brine, oil, etc., and packed in kegs, boxes, and similar containers. It also provides for fancy food preparations of vegetables or of vegetables mixed with meat or fish. Our canning and preserving industry exceeds that of any other country, but Asiatic and European food specialties are imported largely for resident aliens. In preserving supplies of perishable commodities during the seasons of surplus for periods of scarcity and in extending the range of markets, the industry saves vast quantities of foodstuffs, and tends to stabilize prices and conditions of distribution.

Bean stick or bean cake is an oriental food product made from ground and fermented soya beans. Miso is a cooked and fermented combination of rice and soya beans, generally used in making soup.

*Production* of canned vegetables (exclusive of beans, peas, and tomatoes) in 1919 was valued at \$56,904,000. While canning and preserving is carried on extensively, the industry is local, factories being located near those sections where the vegetables are grown. California produces about 98 per cent of the canned asparagus; more than 80 per cent of the canned corn was packed in the seven States of Illinois, Indiana, Iowa, Maine, Maryland, New York, and Ohio; while Maryland far exceeds any other State in canned tomatoes.

*Imports* in 1913 of vegetables prepared or preserved were valued at \$2,213,365; they rose to \$2,681,247 in 1914, but declined during the war. Italy furnished the greater portion, but considerable quantities came from France, Spain, and Belgium. Imports of bean stick or bean cake and miso were valued at \$73,097 in 1914, soya bean cake constituting about 70 per cent. Edible bean cake and miso are imported to meet the demand of the oriental population. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
----------------	-----------	--------	-------	------------------

## VEGETABLES, PREPARED OR PRESERVED.

	Pounds.	Value.	Duty.	Per cent.
1918.....		\$459,241	\$114,810	25
1919.....	12,763,376	1,623,242	405,781	25
1920.....	20,379,212	2,251,847	562,956	25
1921 (9 months).....	11,015,210	1,178,004		

## BEAN CAKE, OR BEAN STICK, MISO, OR SIMILAR PRODUCTS.

1918.....		\$121,299	\$30,325	25
1919.....	3,519,146	247,851	61,963	25
1920.....	2,272,420	198,133	49,533	25
1921 (9 months).....	2,012,986	142,963		

*Export* values of all canned vegetables in 1910-1914 ranged from \$783,000 to \$1,822,000. The United Kingdom and Canada were the chief markets. Later statistics, for calendar years, follow:

	1918	1919	1920	1921 (9 months).
Soups, canned.....	\$1,085,173	\$1,980,624	\$1,506,010	\$760,457
Corn, canned.....	195,632	548,037	334,519	125,726
All other vegetables, canned (except corn, soups, tomatoes).....	10,659,454	6,698,834	3,420,248	1,252,320

*Important changes in classification.*—New specific provision has been made for soya beans, prepared or preserved. Some retain their identity as beans. These have been exempt from duty as soya beans. There is also a new provision for vegetables with or without meat or fish, in the form of soups, hash, etc.

*Suggested changes.*—For the reasons stated under the subheading "Conflicting provisions" under paragraph 748, the words "sauces of all kinds, not specially provided for," followed by a semicolon, might be inserted in this paragraph after the words "not specially provided for" in line 19, page 97.

Conflict with paragraph 749 might be avoided by imposing the same rate of duty on vegetables, prepared or preserved, and fruits prepared or preserved.

#### PARAGRAPH 774.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 774. Broom corn, \$2 per ton.

ACT OF 1909.

ACT OF 1913.

PAR. 233. Broom corn, three dollars per ton.

PAR. 434. Broom corn [Free].

#### BROOM CORN.

*Description and uses.*—Broom corn belongs to the sorghum group of plants. Two kinds, "standard" and "dwarf," are commonly grown. The dwarf is produced in the semiarid regions of the Southwest, the standard in the more humid sections of Illinois, Kansas, Oklahoma, and Texas. The standard brush is 18 to 30 inches long, used largely in carpet brooms; the dwarf makes a brush 1 or 2 feet long, such as the whisk and other small brooms. Special equipment in the form of drying sheds, threshers, and balers, is required in broom-corn production.

*Production* of broom corn in 1920 was 33,900 tons, valued at \$4,263,000. The principal producing States are Oklahoma, Illinois, Kansas, Texas, and New Mexico.

*Imports* of broom corn for 1910-1914 ranged from 186 to 7,622 tons. Austria-Hungary was formerly the chief source.

Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	2,399	13	1,361	49
Value.....	\$364,936	\$4,290	\$76,715	\$3,941

In 1920, 97 per cent came from Kwantung leased territory.

Exports during 1910-1914 ranged from 3,000 to 4,000 tons, valued at \$327,000 to \$461,000, and went chiefly to Canada and Cuba. Later statistics, for calendar years, follow:

	1918	1919	1920	1921 (9 months)
Quantity (tons).....	4,343	4,316	3,917	1,913
Value.....	\$1,396,348	\$899,790	\$776,631	\$266,500

In 1920, 79 per cent went to Canada and 18 per cent to Cuba.

*Important changes in classification.*—Transferred from free list, paragraph 434, act of 1913.

### PARAGRAPH 775.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 775. Acorns, and chicory and dandelion roots, crude, 1½ cents per pound; ground, or otherwise prepared, 3 cents per pound; all coffee substitutes and adulterants, and coffee essences, 3 cents per pound.

#### ACT OF 1909.

PAR. 291. Chicory root, raw, dried, or undried, but unground, one and one-half cents per pound; chicory root, burnt or roasted, ground or granulated, or in rolls, or otherwise prepared, and not specially provided for in this section, three cents per pound.

PAR. 294. Dandelion root and acorns prepared, and articles used as coffee, or as substitutes for coffee not specially provided for in this section, two and one-half cents per pound.

PAR. 484. Acorns, raw, dried or undried, but unground [Free].

PAR. 554. Dandelion roots, raw, dried, or undried, but unground [Free].

#### ACT OF 1913.

PAR. 230. Chicory root, raw, dried, or undried, but unground, 1 cent per pound; chicory root, burnt or roasted, ground or granulated, or in rolls, or otherwise prepared, and not specially provided for in this section, 2 cents per pound.

PAR. 233. Dandelion root, and acorns prepared, and articles used as coffee, or as substitutes for coffee not specially provided for in this section, 2 cents per pound.

PAR. 389. Acorns, raw, dried or undried, but unground [Free].

PAR. 473. Dandelion roots, raw, dried or undried, but unground [Free].

#### ACORNS, AND CHICORY AND DANDELION ROOTS, ETC.

*Description and uses.*—Dandelion root and dried acorns, ground, are among the substitutes for or adulterants of coffee. Other substitutes are chicory, parsnips, carrots, beets, various cereals, and saccharin fruits, such as roasted figs, dates, and raisins. The regulations under the pure food and drugs act, requiring proper branding, discourage the use of such substitutes and adulterants.

Dandelion root is also used as a bitter material in so-called tonics and blood purifiers, chiefly proprietary.

*Production.*—Dandelion root is collected for commerce in various European countries where the plant is both wild and cultivated. It is grown extensively as a garden plant in America, but wild supplies

are more than sufficient for domestic medicinal purposes. The low-priced foreign product has taken the market, but domestic dandelion appeared during the war scarcity.

Practically all of the domestic chicory is grown in Michigan—18,196,000 pounds in 1919. It has been grown also in California, New York, Wisconsin, Nebraska, and Connecticut.

Imports of dandelion root and acorns, prepared, used as substitutes for coffee, were 132,262 pounds, valued at \$17,780 in 1913, and 162,487 pounds, valued at \$15,481 in 1914. Practically all came from Germany and Austria. Imports of dandelion roots for the fiscal years 1909–1918 averaged annually 87,205 pounds, valued at \$11,555.

In 1920, of the imports of raw chicory 49 per cent came from Belgium and 29 per cent from Germany. Recent statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.

1921 (9 months).....	172,383	13,774		

Exports are not separately recorded.

*Important changes in classification.*—Two dutiable and two free paragraphs relating to coffee substitutes and adulterants have been here combined and a new item, coffee essences, added.

## PARAGRAPH 776.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 776. Chocolate and cocoa, sweetened or unsweetened, powdered, or otherwise prepared,  $17\frac{1}{2}$  per centum ad valorem, but not less than 2 cents per pound; cacao butter,  $3\frac{1}{2}$  cents per pound.

## ACT OF 1909.

## ACT OF 1913.

PAR. 292. Chocolate and cocoa, prepared or manufactured, not specially provided for in this section, valued at not over fifteen cents per pound, two and one-half cents per pound; valued above fifteen and not above twenty-four cents per pound, two and one-half cents per pound and ten per centum ad valorem; valued above twenty-four and not above thirty-five cents per pound, five cents per pound and ten per centum ad valorem; valued above thirty-five cents per pound, fifty per centum ad valorem. The weight and value of all coverings, other than plain wooden, shall be included in the dutiable weight and value of the foregoing merchandise; powdered cocoa, unsweetened, five cents per pound.

PAR. 293. Cocoa butter or cocoa butterine, \* \* \* and all substitutes for cocoa butter, three and one-half cents per pound.

PAR. 231. Unsweetened chocolate and cocoa, prepared or manufactured, not specially provided for in this section, 8 per centum ad valorem. Sweetened chocolate and cocoa, prepared or manufactured, not specially provided for in this section, valued at 20 cents per pound or less, 2 cents per pound; valued at more than 20 cents per pound, 25 per centum ad valorem. The weight and the value of the immediate coverings, other than the outer packing case or other covering, shall be included in the dutiable weight and the value of the merchandise.

PAR. 232. Cocoa butter or cocoa butterine, \* \* \* and all substitutes for cocoa butter,  $3\frac{1}{2}$  cents per pound.

## CHOCOLATE AND COCOA.

*Description and uses.*—Chocolate and cocoa are derived from the cacao bean or crude cacao (par. 1548). After being cleaned, sorted, blended, and roasted, the crude cacao is crushed into small fragments, termed "chocolate nibs," from which the shells or husks are removed by a winnowing process. The nibs are then ground into a molasseslike product which hardens upon exposure to air. This is the unsweetened chocolate ("chocolate liquor" in the trade) of this paragraph. Confectioners and bakers take most of the marketed product, and a considerable proportion is used as cooking chocolate. The great bulk of this liquor is further elaborated for sweetened chocolate or cocoa powder and butter. The removal of all but about 20 per cent of the natural fat content, enabling the product to powder, distinguishes cocoa from chocolate. There is much demand for this fat or cacao butter.

The familiar sweet chocolate is prepared by milling or stirring the liquor, adding sugar and cocoa butter, and sometimes other ingredients and pouring the semifluid mass into molds to harden or "cake." There is a growing market for Swiss or milk chocolate, which involves merely the addition of powdered milk. In the manufacture of cocoa and cocoa butter the chocolate liquor is subjected to hydraulic pressure, a large part of the oil or fat expressed, the pressed mass passed through a fine sieve, dried thoroughly, and canned or packed.

*Production.*—The output of the cocoa and chocolate industry increased about tenfold from 1895 to 1918. In 1914, 36 factories (exclusive of confectioners) had a capital of \$24,000,000 and a product

valued at \$36,000,000. The industry is localized in the Eastern States, four plants producing about half the domestic output. Automatic machinery is employed almost exclusively and raw materials constitute the principal item of cost. In 1917 the 29 largest factories reported the following production, which is substantially the total for this country:

	Pounds.		Pounds.
Cocoa powder.....	56,241,669	Cooking chocolate.....	13,725,617
Cacao butter.....	17,348,012	Chocolate liquor.....	16,635,892
Sweet chocolate.....	68,835,847	Chocolate coating.....	75,373,052

In 1919 the total value of the products of the 48 establishments was \$139,000,000, divided as follows: Chocolate cakes, sweetened and unsweetened, \$51,000,000; chocolate liquor and coating, \$36,000,000; chocolate, including milk chocolate, \$12,000,000; cocoa, \$24,000,000; cacao butter, \$14,000,000; all other products, \$2,000,000.

Imports of chocolate (largely unsweetened) are chiefly from Switzerland. Values declined from \$845,639 in 1907 to \$379,876 in 1914, due to the sale of Swiss patents to an American concern and the erection of a branch factory here by a leading German manufacturer to avoid import duties.

Import values of cocoa were \$373,888 in 1907, \$379,876 in 1914, and \$483,740 in 1917. Holland is the principal competing country, with the product "Dutch process" cocoa, designed for the high-grade trade, and falling almost entirely under the classification "powdered, unsweetened." Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
COCOA, SWEETENED.				
	Pounds.			Per cent.
1918.....	10,083	\$3,992	\$980	.....

1919.....	1,190	569	46	8.00
1920.....	28,798	13,738	1,099	8.00
1921 (9 months).....	80,679	15,310	.....	.....

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
CACAO BUTTER AND SUBSTITUTES FOR.				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	3,049	\$372	\$107	12.24
1919.....	8,179	2,539	286	11.27
1920.....	14,080	6,705	493	7.35
1921 (9 months).....	448,378	96,999		

In 1920, 60 per cent of the cacao butter came from the Netherlands and 30 per cent from Germany.

Exports during 1910-1914 were valued at \$300,000 to \$500,000. Later statistics, for calendar years, follow:

	1918	1919	1920	1921 (9 months).
Cocoa and chocolate, prepared or manufactured (not including confectionery):				
Value.....	\$6,961,457	\$21,380,801	\$9,047,918	\$975,786
Cacao butter:				
Quantity (pounds).....		7,320,255	5,377,188	2,295,689
Value.....		\$3,031,748	\$1,948,617	\$601,880

In 1920, 50 per cent of the cacao butter went to Canada and 20 per cent to Belgium. The latter country also took 44 per cent of the manufactured cocoa and chocolate.

*Important changes in classification.*—The two paragraphs relating to cocoa, chocolate, and cacao butter have been combined and simplified. The graduated specific and ad valorem duties upon cocoa and chocolate have been replaced with an ad valorem rate, a minimum specific rate being provided to prevent dumping of low-priced products, and the provision with respect to containers eliminated, being unnecessary.

The provisions for "cocoa" butterine and "cocoa" butter substitutes have been eliminated, and the spelling changed to the correct form, cacao butter, to avoid confusion with "coco" butters made from coconut oil. The provision for refined deodorized coconut oil is also eliminated; the article falls within the general provision for coconut oil in paragraph 50, H. R. 7456.

### PARAGRAPH 777.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 777. Ginger root, candied, or otherwise prepared or preserved, 15 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

[No corresponding provision; classable as sweetmeats.]

[No corresponding provision; classable as sweetmeats.]

## GINGER ROOT, CANDIED OR PRESERVED.

*Description and uses.*—Candied or preserved ginger root is a delicacy or "comfit" resulting from the addition of heavy rich sirups or coatings of sugar to the cleaned and specially prepared root. In certain sections of China the preserved root is prepared in small earthen jars, in which manner it is shipped to this country.

*Production.*—In this country the candied ginger root is an important product of certain candy manufacturers and confectioners.

*Imports.*—In 1914, 478,058 pounds of ginger, preserved or pickled, valued at \$36,434, were imported. About 95 per cent came direct from China or Hongkong. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	224,791	\$30,116	\$6,023	20
1919.....	581,435	102,580	20,516	20
1920.....	540,158	124,858	24,972	20
1921 (9 months).....	142,434	31,808	.....	.....

*Important changes in classification.*—New specific provision.

## PARAGRAPH 778.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 778. Hay, \$4 per ton; straw, \$1 per ton.

ACT OF 1909.

ACT OF 1913.

PAR. 258. Hay, four dollars per ton.

PAR. 205. Hay, \$2 per ton.

PAR. 267. Straw, one dollar and fifty cents per ton.

PAR. 213. Straw, 50 cents per ton.

## HAY AND STRAW.

(See Report T. I. S.-20.)

*Use.*—About four-fifths of the domestic hay is consumed on farms where grown, while the trade is in large part due to the demand for horse feed in the urban centers. Timothy, the principal variety of the Northern States, is preferred for this purpose.

*Production.*—The crop of tame hay, approximately three-fourths of which is raised in the Northern States, averaged over 80,000,000 tons in the years 1914 to 1918, and its farm value was over \$1,000,000,000. Production in 1921 was 81,567,000 tons of tame hay, and 15,235,000 tons of wild hay, the farm value of the two being \$1,090,776,000.

*Imports* of hay fluctuate according to domestic crop conditions. From 1910 to 1914 they ranged from 96,763 to 699,213 tons. Partly because of quarantines, which prohibit imports from nearly all countries, and also because of the high cost of transporting so bulky a product, Canada is the only foreign competitor in domestic markets.

Shipments move from the eastern provinces to adjacent eastern markets and consist principally of timothy. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
	<i>Tons.</i>			<i>Per cent.</i>
1918.....	398,937	\$4,824,106	\$797,874	16.54
1919.....	202,648	3,081,537	405,296	13.15
1920.....	208,621	4,482,015	417,242	9.31
1921 (9 months).....	38,466	782,416		

*Exports* ranged from 50,151 to 60,720 tons during 1910-1914. They went chiefly to Canada and Mexico. Later statistics, for calendar years, follow:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	28,342	32,142	63,154	36,909
Value.....	\$904,030	\$962,975	\$1,797,396	\$839,158

### PARAGRAPH 779.

H. R. 7456.

SENATE AMENDMENTS

PAR. 779. Hops, 24 cents per pound; hop extract, \$1.50 per pound; lupulin, 75 cents per pound.

ACT OF 1909.

ACT OF 1913.

PAR. 260. Hops, sixteen cents per pound; hop extract and lupulin, fifty per centum ad valorem.

PAR. 207. Hops, 16 cents per pound; hop extract and lupulin, 50 per centum ad valorem.

### HOPS, ETC.

*Description and uses.*—The hop is a perennial twining herb of the nettle family, which produces burs or “hops,” used in brewing. The yellow, resinlike pollen covering the base of each hop is called lupulin and imparts the bitter taste to beer, while the amount in the hop practically determines its value. The chief substitutes for the hop are imported hop extract and lupulin, occasionally also quassia, gentian, and camomile. The last three impart an unpleasant, rough, and bitter taste to beer. Hop extract is the essence of the hop in a semisolid form. Hop extract and lupulin are seldom separated from the hop in this country. The two commodities are combined in the statistics.

The quantity of hops consumed by brewers declined from 42,000,000 pounds in 1917 to 6,000,000 pounds in 1920, including hops used to make “cereal beverages.”

*Production.*—In 1921 production was 29,140,000 pounds, valued at \$7,117,000, on an area of 28,000 acres. Of the total crop, California produced about 50 per cent; Oregon, 30 per cent; Washington, 18 per cent; and New York, 2 per cent. In 1915, 52,986,000 pounds were produced.

*Imports* of hops in 1914 were 5,360,748 pounds, valued at \$2,775,882, with a revenue of \$857,719; 46 per cent from Austria-Hungary and

53 per cent from Germany. Imports of hop extract and lupulin were valued at \$49,451 in 1914, and at \$24,059 in the calendar year 1920. Later statistics (for hops) follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	106,711	\$59,185	\$17,074	28.85
1919.....	379,405	191,092	60,705	31.71
1920.....	4,075,999	2,482,286	652,160	26.27
1921 (9 months).....	1,419,409	583,053		

In 1920, 29 per cent of the imported hops came from Belgium, 28 per cent from Czechoslovakia, and 23 per cent from Germany.

Exports of hops in 1914 were 24,262,896 pounds, valued at \$6,953,529, 90 per cent to England and 5 per cent to Canada. Shipping conditions and short supply greatly reduced exports from 1916 to 1919. Statistics for the calendar years 1918-1921 follow:

	1918	1919	1920	1921 (9 months)
Quantity (pounds).....	3,670,352	20,797,504	25,624,055	12,991,902
Value.....	\$970,598	\$8,832,255	\$17,088,472	\$4,701,100

In 1920, England took 69 per cent and Ireland 14 per cent.

### PARAGRAPH 780.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 780. Spices and spice seeds: Anise seeds, 2 cents per pound; caraway seeds, 1 cent per pound; cardamom seeds, 10 cents per pound; cassia, cassia buds, and cassia vera, unground, 2 cents per pound; ground, 5 cents per pound; cloves, unground, 3 cents per pound; ground, 6 cents per pound; clove stems, unground, 2 cents per pound; ground, 5 cents per pound; cinnamon and cinnamon chips, unground, 2 cents per pound; ground, 5 cents per pound; coriander seeds, one-half of 1 cent per pound; cummin seeds, 1 cent per pound; curry and curry powder, 2 cents per pound; fennel seeds, 1 cent per pound; ginger root, not preserved or candied, unground, 2 cents per pound; ground, 5 cents per pound; mace, unground, 4 cents per pound; ground, 8 cents per pound; Bombay, or wild mace, unground, 18 cents per pound; ground, 22 cents per pound; mustard seeds (whole), 1 cent per pound; mustard, ground, prepared in bottles or otherwise, 5 cents per pound; nutmegs, unground, 2 cents per pound; ground, 5 cents per pound; pepper, capsicum or red pepper

## H. R. 7456.

## SENATE AMENDMENTS.

or cayenne pepper, and paprika, unground, 2 cents per pound; ground, 5 cents per pound; black or white pepper, unground, 2 cents per pound; ground, 5 cents per pound; pimento (allspice), unground, 1 cent per pound; ground, 3 cents per pound; whole pimientos, packed in brine or in oil, or prepared or preserved in any manner, 6 cents per pound; sage, unground, 1 cent per pound; ground, 3 cents per pound; turmeric, 10 cents per pound; mixed spices, and spices and spice seeds not specially provided for, including all herbs or herb leaves in glass or other small packages, for culinary use, 20 per centum ad valorem: *Provided*, That in all the foregoing no allowance shall be made for dirt or other foreign matter: *Provided further*, That the importation of pepper shells, ground or unground, is hereby prohibited.

## ACT OF 1909.

PAR. 266. Seeds: \* \* \* seeds of all kinds not specially provided for in this section, ten cents per pound.

PAR. 668. Seeds: Anise, \* \* \* caraway, cardamom, \* \* \* coriander, \* \* \* cummin, fennel, \* \* \* mustard, \* \* \* [Free].

PAR. 298. Spices: Mustard, ground or prepared, in bottles or otherwise, ten cents per pound; capsicum or red pepper, or cayenne pepper, two and one-half cents per pound; sage, one cent per pound; spices not specially provided for in this section, three cents per pound.

PAR. 679. Spices: Cassia, cassia vera, and cassia buds; cinnamon and chips of; cloves and clove stems; mace; nutmegs; pepper, black or white, and pimento; all the foregoing when unground; ginger root, unground and not preserved or candied [Free].

PAR. 552. Curry, and curry powder [Free].

PAR. 698. Turmeric [Free].

[No corresponding provision for whole pimientos; dutiable as vegetables prepared.]

## ACT OF 1913.

PAR. 212. Seeds: \* \* \* caraway seed, 1 cent per pound; anise seed, 2 cents per pound; \* \* \* seeds of all kinds not specially provided for in this section, 5 cents per pound: *Provided*, That no allowance shall be made for dirt or other impurities in seeds provided for in this paragraph.

PAR. 595. Seeds: Cardamom, \* \* \* coriander, \* \* \* cummin, fennel, \* \* \* mustard, \* \* \* [Free].

PAR. 235. Spices, unground: Cassia buds, cassia, and cassia vera; cinnamon and cinnamon chips; ginger root, unground and not preserved or candied; nutmegs; pepper, black or white; capsicum or red pepper, or cayenne pepper; and clove stems, 1 cent per pound; cloves, 2 cents per pound; pimento,  $\frac{1}{2}$  of 1 cent per pound; sage,  $\frac{1}{2}$  cent per pound; mace, 8 cents per pound; Bombay or wild mace, 18 cents per pound; ground spices, in each case, the specific duty per pound enumerated in the foregoing part of this paragraph for unground spices, and in addition thereto a duty of 20 per centum ad valorem; mustard, ground or prepared, in bottles or otherwise, 6 cents per pound; all other spices not specially provided for in this section, including all herbs or herb leaves in glass or other small packages for culinary use, 20 per centum ad valorem.

PAR. 471. Curry, and curry powder [Free].

PAR. 634. Turmeric [Free].

[No corresponding provision for whole pimientos; dutiable as vegetables prepared.]

## SPICES AND SPICE SEEDS.

## ANISE.

*Description, uses, and production.*—Anise is the seed of an annual plant native to Egypt and other Mediterranean regions. It is cultivated in the south of Europe, South America, India, Cuba, and in Germany, especially around Erfurt, where a large quantity is produced. Anise is used as a spice, in the preparation of liqueurs, and as a medicinal stimulant. Oil of anise, a volatile oil obtained by crushing and distilling the seed, is used for similar purposes. Anise has a warm, sweetish taste and an agreeable odor.

*Imports averaged annually 1,083,339 pounds from 1910 to 1913. Later statistics follow:*

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	275,625	\$37,482	\$5,512	14.71
1919.....	494,456	89,721	9,889	11.02
1920.....	425,845	67,144	8,517	12.68
1921 (9 months).....	261,204	29,580		

## CARAWAY SEED.

*Description, uses, and production.*—This is a grass seed growing wild in Europe and parts of Asia, and cultivated in Europe and America. The grass has a branching stem from 1 to 2 feet high, finely divided leaves, and dense, whitish flowers. The seed is used medicinally, and as an aromatic condiment by distillers, confectioners, and perfumers in the preparation of liqueurs, cakes, scented soaps, etc. Caraway oil, fragrant and volatile, is obtained by crushing the seeds and distilling with water. It serves the same purposes as the seed.

*Imports averaged 3,279,230 pounds from 1910 to 1913. In 1914 they declined to 1,909,300 pounds, compared with 3,691,831 pounds in 1913. Later statistics follow:*

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	382,581	\$151,355	\$3,826	2.53
1919.....	2,013,887	370,343	20,139	5.44
1920.....	1,887,587	146,901	18,876	12.85
1921 (9 months).....	2,535,121	132,921		

## CARDAMOM.

*Description, uses, and production.*—Cardamom is the fruit of various species of East Indian or Chinese plants of the ginger family. The true official cardamom is native to Malabar and cultivated in India. The fruit is three-celled and contains numerous small seeds, which form a pleasant, pungent spice used as a condiment and as medicine on account of its cordial and stimulative qualities.

Imports in 1914 were 80,782 pounds, valued at \$72,148. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months)-
Quantity (pounds).....	220, 739	147, 480	199, 144	218, 626
Value.....	\$97, 876	\$64, 196	\$132, 621	\$71, 250

*Important changes in classification.*—Cardamom seed is exempt from duty under paragraph 595 of the act of 1913.

#### CASSIA BUDS AND CASSIA.

*Description and uses.*—Cassia buds are the dried, unripe fruit of the cultivated tree *Cinnamomum cassia*, and are used as a spice, the flavor differing slightly from cinnamon. They are of little commercial importance. Cassia is the dried bark of the same tree and is used as a spice, in the preparation of incense, and for the production of the essential oil for flavoring material. Good cassia is sweet and aromatic, with a flavor resembling that of cinnamon.

*Production.*—This spice comes from Canton and Hongkong. There is no probability of its production here.

*Imports* of unground and ground cassia buds steadily declined from 638,979 pounds in 1908 to 23,367 pounds in 1913. In 1915, 200 pounds of ground buds were imported, and in 1917, 139,224 pounds. Imports of unground and ground cassia increased from 3,692,300 pounds in 1908 to 7,151,605 pounds in 1913. A total of 9,019,350 pounds was imported in 1917. After 1914 the ground spice ranged from 200 to 24,800 pounds a year. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
----------------	-----------	--------	-------	------------------------

#### CASSIA BUDS, UNGROUND.

	Pounds.			Per cent.
1918.....	445, 647	\$67, 713	\$4, 456	6. 58
1919.....	18, 851	1, 646	189	11. 45
1920.....	250, 842	26, 487	2, 508	9. 47
1921 (9 months).....	399, 636	29, 553		

#### CASSIA BUDS, GROUND.

1918.....	200	\$20	\$6	30. 00
1920.....	24, 800	7, 753	1, 799	23. 20

#### CASSIA AND CASSIA VERA, UNGROUND.

1918.....	7, 665, 048	\$598, 996	\$76, 650	12. 80
1919.....	6, 330, 857	608, 658	63, 309	10. 40
1920.....	6, 642, 381	770, 844	66, 424	8. 62
1921 (9 months).....	5, 095, 448	392, 784		

#### CASSIA AND CASSIA VERA, GROUND.

1919.....	140	\$29	\$7	24. 83
1920.....	100	6	2	36. 67
1921 (9 months).....	58, 010	1, 437		

In 1920, of the total imports of cassia and cassia vera those from Hongkong were 38 per cent, from Dutch East Indies 32 per cent, and from China 27 per cent.

*Exports* were not separately stated.

## CORIANDER SEED.

*Description, uses, and production.*—Coriander, a native of the south of Europe and of the East, is naturalized in England and in some parts of the United States. The seed is used as a flavor in cooking and as a stimulant and carminative. It is popular among the Germans, who put it in bread and liquors. Sugar-coated coriander seeds are used as confections.

*Imports* in 1914 were 1,238,430 pounds, valued at \$46,158. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	2,298,015	573,252	2,135,979	760,774
Value.....	\$246,417	\$42,151	\$86,656	\$22,018

*Important changes in classification.*—Coriander seed is transferred from the free list of the act of 1913 (par. 595).

## CUMMIN SEED.

*Description and uses.*—Cummin seed, constituting the cummin of pharmacy, is stimulative and carminative. It is employed in the making of curry powder and in veterinary medicines.

*Production.*—There is no production here; the seed is imported.

*Imports* in 1914 were 530,350 pounds, valued at \$31,709. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	1,230,890	1,182,364	1,357,990	685,775
Value.....	\$159,900	\$131,870	\$104,436	\$42,227

*Important changes in classification.*—Cummin seed is transferred from the free list of the act of 1913 (par. 595).

## CURRY.

*Description, uses, and production.*—Curry is a kind of sauce or relish, made of meat, fish, fruit, eggs, or vegetables, cooked with spices, such as cayenne pepper, coriander seed, ginger, garlic, etc. It is very popular in the eastern Tropics especially in India, where it originated. Curry powder, the mixture of spices used for making curry sauce, is composed of ginger, cayenne pepper, turmeric, and coriander seed, to which salt, cloves, ground cinnamon, garlic, scraped coconut, etc., may be added.

*Imports* in 1914 were \$11,807, about 95 per cent of which came from the United Kingdom. Since 1917 imports by calendar years of curry and curry powder have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....		25,076	41,113	13,449
Value.....	\$5,193	\$9,669	\$14,873	\$4,132

*Important changes in classification.*—Curry and curry powder are transferred from the free list of the act of 1913 (par. 471).

#### FENNEL SEED.

*Description, uses, and production.*—The fennel grows wild in southern Europe, and is cultivated in both Europe and America. The aromatic seeds are used as a condiment and as a medicine.

*Imports* in 1914 were 207,135 pounds, valued at \$12,299. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	161,082	178,075	237,693	65,862
Value.....	\$20,087	\$28,261	\$20,858	\$10,039

*Important changes in classification.*—Fennel seed is transferred from the free list of the act of 1913 (par. 595).

#### CINNAMON.

*Description and uses.*—Cinnamon is the dried bark of cultivated varieties of *Cinnamomum zeylanicum*. Its quality varies with the age of the bark and the geographical source. Chips are coarse and inferior in quality. Cinnamon is used as a spice and in making incense; its essential oil is distilled for use in perfumery and spice.

*Production.*—Large quantities are produced in Ceylon, the Spice Islands (Moluccas), China, Java, the Philippines, and around Singapore.

*Imports* of the ground and unground were 520,459 pounds in 1908 and 1,405,832 pounds in 1913. Imports of ground cinnamon have been negligible. Small amounts from the Philippines are admitted free. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
----------------	-----------	--------	-------	------------------------

#### UNGROUND CINNAMON.

	Pounds.			Per cent.
1918.....	675,718	\$115,165	\$6,757	5.87
1919.....	482,697	103,662	4,827	4.66
1920.....	673,473	178,714	6,735	3.77
1921 (9 months).....	309,016	66,464		

#### GROUND CINNAMON.

1918.....	1,553	\$308	\$77	25.04
1919.....	902	233	54	24.22
1920.....	1,480	343	83	24.31
1921 (9 months).....	265	41		

## CLOVES.

*Description and uses.*—Clove stems, the dried stem of the flower buds of *Caryophyllus aromaticus*, have a legitimate use in the production of oil of cloves.

Cloves are the dried flower buds of *Caryophyllus aromaticus*. The clove tree grows to a height of 12 to 20 feet, and rarely attains 40 feet. Cloves produce spice and the essential oil of cloves, used as a spice, as a perfume, and as a source of the chemical eugenol, in turn used in making vanillin. The last named is one of the chief flavoring substances of vanilla and, together with coumarin, is used to make artificial vanilla flavor.

*Production.*—Cloves grow in the Spice Islands, the Malay Peninsula, Sumatra, the West Indies, and Mascarene Islands.

*Imports* of cloves during 1909–1913, while cloves were on the free list, averaged per annum 4,463,043 pounds, valued at \$516,830. Ground cloves have not been imported appreciably since they were made dutiable.

Imports of clove stems were 293,316 pounds in 1909 and 32,830 pounds in 1913, then on the free list. Imports in 1914, when dutiable, were only 243 pounds, but reached 57,160 pounds in 1916. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
----------------	-----------	--------	-------	------------------------

## CLOVES, UNGROUND.

	Pounds.			Per cent.
1918.....	4,964,593	\$1,341,137	\$99,292	7.40
1919.....	5,473,269	1,376,211	109,465	7.95
1920.....	5,648,930	2,004,925	112,979	5.64
1921 (9 months).....	3,482,194	625,369		

## CLOVES, GROUND.

1918.....	5	\$2		25.00
1919.....	5	2		25.00
1920.....	26	6	\$2	28.67

## CLOVE STEMS, UNGROUND.

1918.....	33,132	\$4,276	\$331	7.75
1920.....	3,739,968	410,011	37,400	9.12
1921 (9 months).....	79,958	8,148		

## CLOVE STEMS, GROUND.

1918.....	2,160	\$327	\$87	26.61
1919.....	100	11	3	29.09
1920.....	3	2		21.50

In 1920 the imports of cloves, unground, from England were 50 per cent of the total and from British East Africa 35 per cent.

*Exports* are not separately shown.

## GINGER.

*Description and uses.*—Ginger is the washed and dried, or decorticated and dried, rhizome of *Zinziber officinals*. The ginger grown in Jamaica has particular qualities of excellence and is sold as "Jamaica ginger."

*Production.*—The plant is an herbaceous perennial, cultivable more widely than most spices—in the Himalaya Mountains of India to an altitude of 4,000 to 5,000 feet, in the Canton (China) region, in the Malay Peninsula, in northern Australia, in West Africa, the West Indies, and Central America. A high grade, equaling the Jamaica product, is being experimentally produced in Florida.

*Imports* of ground and unground root totaled 7,856,401 pounds, valued at \$406,197 in 1913. On the ground root a tariff of 1 cent per pound plus 20 per cent is laid and the maximum import has remained below 6,000 pounds except in 1917, when it reached 361,050 pounds. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equiva'ent ad valorem.
UNGROUND GINGER ROOT.				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	4,627,135	\$392,092	\$46,271	11.80
1919.....	4,979,923	570,856	49,799	8.72
1920.....	7,103,115	1,021,763	71,031	6.95
1921 (9 months).....	3,834,109	375,752		

GROUND GINGER ROOT.				
1918.....	5,425	\$328	\$120	36.54
1919.....	310	36	10	28.61
1920.....	3,552	820	200	24.33
1921 (9 months).....	1,723	265		

The bulk of the imports of ginger root unground comes from England (41 per cent), British India (15 per cent), British West Africa (16 per cent).

## MACE (NOT WILD).

*Description and uses.*—Mace, the dried arillus of *Myristica fragrans*, is used as a spice.

*Production.*—(See "Nutmegs," p. 820.)

*Imports* were 611,005 pounds, valued at \$244,117, in 1913. With a duty of 8 cents per pound on unground mace the 1914 importation fell to 287,926 pounds, valued at \$113,162. Imports of ground mace are insignificant. Imports of mace, unground, since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.	Equiva'ent ad valorem.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	308,377	\$98,413	\$24,670	25.07
1919.....	533,391	171,507	42,911	25.02
1920.....	528,724	171,791	42,298	24.62
1921 (9 months).....	439,349	92,125		

## WILD MACE.

*Description, uses, and production.*—Bombay or wild mace is the arillus of the fruit of *Myristica malabarica*. The seed is oblong, tawny, and hairy, longer than the true nutmeg, and as broad. The shell is black and wrinkled longitudinally, and the kernel yields a red oily juice. The seeds are valued only for the oil or as an adulterant for true nutmeg. The arillus is used for adulterating mace.

*Imports* since 1913, when a tariff of 18 cents per pound was assessed on the unground article, have been insignificant. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
UNGROUND WILD MACE.				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	1,573	\$580	\$283	48.82
1920.....	4,839	595	871	146.39
1921 (9 months).....	373	51		

## GROUND WILD MACE.

1920.....	20	\$4	\$4.40	110.00
1921 (9 months).....	18,358	1,697		

## MUSTARD SEED.

*Description and uses.*—Mustard seed is ground into powder to make the common table mustard. It is used also for seeding.

*Production.*—Mustard grows wild in middle and southern Europe and western United States, where it is also cultivated. In 1909 the seed production of California was 3,168,270 pounds.

*Imports* in 1914 were 11,543,941 pounds, valued at \$370,964. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	9,768,081	14,226,213	9,063,335	4,916,195
Value.....	\$596,157	\$1,259,931	\$952,064	\$192,337

Thirty-two per cent of the imports come from Japan, 31 per cent from England, and 11 per cent from Denmark.

*Important changes in classification.*—Mustard seeds are transferred from the free list of the act of 1913 (par. 595).

## GROUND MUSTARD.

*Description and uses.*—Black and white mustard produce seeds which are ground into powder to make the common table mustard. The two varieties when mixed make the best product. Mustard has medicinal qualities, as a rubefacient. The white plants are used for salads and the curled for greens.

*Production.*—Data for ground or prepared mustard are lacking.

Imports in 1913 were 1,433,118 pounds, valued at \$383,710, with revenue of \$143,311. Later imports of mustard, ground or prepared in bottles or otherwise, are as follows:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	880,527	\$362,494	\$52,832	14.57
1919.....	1,500,358	797,118	90,021	11.29
1920.....	1,566,258	776,400	93,975	12.10
1921 (9 months).....	712,317	384,449		

Ninety-seven per cent of the above imports come from England. *Important changes in classification.*—Mustard seed is transferred from the free list of the act of 1913 (par. 595.).

#### NUTMEGS.

*Description and uses.*—Nutmeg is the dried seed of *Myristica fragrans*. The tree is somewhat bushy, growing to a height of 30 or 40 feet. The fruit, the nutmeg of commerce, is used as a spice.

*Production.*—It is a native of the eastern Moluccas (known as the Spice Islands), Banda, Amboina, Gilolo, and western New Guinea, and is cultivated in the Malay Peninsula, Zanzibar, and the West Indies.

Imports were 3,458,339 pounds in 1913 and 4,201,872 pounds, valued at \$661,012, with revenue of \$42,018 in 1917. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
NUTMEG, UNGROUND.				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	3,570,069	\$604,677	\$35,701	5.90
1919.....	3,519,529	603,939	35,195	5.83
1920.....	4,041,138	791,051	40,411	5.11
1921 (9 months).....	2,174,279	259,992		

#### NUTMEG, GROUND.

1919.....	1,000	\$274	\$65	23.65
1920.....	33,620	7,151	1,766	24.70
1921 (9 months).....	10,066	661		

The bulk of the imports of nutmegs, unground, comes from the Dutch East Indies (39 per cent), Netherlands, and the British West Indies."

#### CAYENNE PEPPER.

*Description and uses.*—Cayenne (or red) pepper is the dried ripe fruit of some species of capsicum. Cayenne is a hot, pungent, red pepper, while paprika is mild.

*Production.*—The cayenne peppers are cultivated extensively in the East Indies, Zanzibar, Japan, Africa, Mexico, and continental United States. War conditions stimulated cultivation of red pepper in the United States, especially in southern California.

Imports averaged about 5,000,000 pounds from 1909 to 1913. Imports in 1914 were 6,522,463 pounds of unground and 1,322,308 pounds of ground, totaling nearly 8,000,000 pounds. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
<b>UNGROUND CAYENNE PEPPER.</b>				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	2,543,792	\$307,073	\$25,438	8.25
1919.....	1,746,735	194,399	17,467	8.99
1920.....	2,950,462	467,792	29,505	6.31
1921 (9 months).....	1,764,568	221,393	.....	.....
<b>GROUND CAYENNE PEPPER.</b>				
1918.....	2,256,676	\$504,324	\$123,432	24.47
1919.....	1,882,603	593,040	137,434	23.17
1920.....	2,422,888	985,530	221,335	22.46
1921 (9 months).....	2,105,460	370,736	.....	.....

Of the unground pepper the largest proportion comes from the Dutch and British East Indies. Spain ships most of the ground article.

#### PAPRIKA.

*Description and uses.*—“Paprika,” or “sweet pepper,” is sometimes mistaken for “red pepper.” Paprika, such as “Hungarian paprika,” has a peculiar mild pungency and flavor. “Spanish paprika” is also known in the trade.

*Production.*—Paprika is cultivated in Hungary, Spain, and China.

*Imports.*—Statistics of imports of paprika are included in “Cayenne (or red) pepper.”

*Suggested changes.*—Omit “pepper” before “capsicum” and substitute “paprika,” transferring “and” from in front of paprika to follow “paprika,” making this provision read:

Paprika and capsicum or red pepper or cayenne pepper, unground.

#### BLACK PEPPER.

*Description and uses.*—Black pepper is the dried immature berry and white pepper the dried mature berry of *Piper nigrum*. In making white pepper the “pepper shells,” are obtained as a by-product. The shells have been used as an adulterant of black pepper.

*Production.*—The pepper plant is strictly tropical, being successfully cultivated only between latitudes 20° N. and 20° S., in the Spice Islands, Borneo, Ceylon, Sumatra, tropical Africa, Zanzibar, the Malay Peninsula, Java, India, Cochin-China, and southern China. It requires a heavy rainfall.

*Imports* of unground and ground black or white pepper in 1913, while on the free list, were 27,568,317 pounds, valued at \$2,855,183. In 1914, under a duty, they were 21,959,367 pounds, valued at

\$2,197,945, with revenue of \$181,133. Ground pepper imports in 1917 were negligible—187,182 pounds. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equiva- lent ad valorem.
UNGROUND BLACK PEPPER.				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	31,570,899	\$5,000,151	\$315,709	6.32
1919.....	20,312,641	3,269,678	203,126	6.21
1920.....	22,687,239	3,842,710	226,872	5.90
1921 (9 months).....	23,740,391	2,028,768		
GROUND BLACK PEPPER.				
1918.....	33,082	\$7,524	\$1,836	24.40
1919.....	12,578	5,183	1,162	22.43
1920.....	182,039	44,959	10,812	24.05
1921 (9 months).....	9,840	1,355		

The sources of imports of pepper, black or white, unground, are as follows: Dutch East Indies 40 per cent, England 26 per cent, British Straits Settlements 14 per cent, Netherlands 13 per cent.

#### PIMENTO (ALLSPICE).

*Description and uses.*—Pimento or allspice is the dried, nearly ripe fruit of *Pimenta officinalis*. The fruit is a white or purple one-seeded drupe about the size of a pea. When ripe it has a sweet pulp which has lost much of its aromatic property, and so it is gathered immature. It is used as a spice and to distill aromatic oil of pimento.

*Production.*—The tree is native to the West Indies, growing in calcareous soil on the islands of Cuba, Haiti, Trinidad, the small islands of the Caribbean Sea, and in Mexico, Costa Rica, and Venezuela, but is most abundant in Jamaica.

*Imports* of unground pimento for 1909–1913 averaged 6,148,742 pounds, valued at \$210,158. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equiva- lent ad valorem.
UNGROUND PIMENTO.				
	<i>Pound.</i>			<i>Per cent.</i>
1918.....	3,557,125	\$161,028	\$26,678	16.28
1919.....	2,211,648	160,059	16,587	10.36
1920.....	3,621,016	275,108	27,158	9.87
1921 (9 months).....	2,239,159	97,117		
GROUND PIMENTO.				
1918.....	82,634	\$4,267	\$1,473	34.52
1919.....	23,656	3,799	937	24.67
1920.....	42,813	5,376	1,396	25.97
1921 (9 months).....	7,821	2,232		

## PIMIENTOS.

*Description and uses.*—Pimientos are sweet peppers, picked when ripe. They are usually packed in oil in small cans for use in salads, fancy dressings, and condiments.

*Production.*—Until recently canned pimientos used in this country were almost entirely of foreign origin. In more recent years some of the South Atlantic States have begun to grow pimientos for canning purposes.

*Imports.*—Imports are included in “all other canned or preserved vegetables.”

## SAGE.

*Description and uses.*—Sage, the dried leaf of *Salvia officinalis*, is used as a spice, particularly in flavoring sausages.

*Production.*—The plant is cultivated in the Temperate Zone, the spice quality becoming inferior in the warmer regions. Our home-grown sage is superior to the Austro-Hungarian article imported before the war and much of the Italian and Greek product imported recently. Domestic production of dried sage is estimated at 30,000 to 40,000 pounds.

*Imports* of unground sage averaged 1,363,199 pounds, valued at \$23,268, during 1909–1913. Imports of ground sage are insignificant. Later imports of unground sage are shown as follows:

Calendar year. —	Quantity.	Value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	1,291,547	\$171,686	\$6,458	3.76
1919.....	980,390	142,669	4,902	3.44
1920.....	2,275,005	194,580	11,375	5.85
1921 (9 months).....	828,237	50,738		

## TURMERIC ROOT.

*Description and uses.*—Turmeric root is a vegetable product native to India and cultivated largely in tropical climates. It is sold in the form of a dry powder, and used principally in coloring mustard; it is also employed as a dye in foods and pharmaceutical preparations. This root has a peculiar odor and a warm, bitterish, slightly aromatic taste. In the East it is employed as an ingredient of curry powders. The coloring principle of turmeric is called curcumin.

*Production.*—In the preparation of turmeric, the root is cleaned, boiled, dried, and the outer skin removed. It comes chiefly from India and China, and is not produced in this country.

*Import* values of turmeric for the period 1910–1918 averaged \$51,423. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....		1,230,229	1,215,057	463,352
Value.....	\$11,278	\$68,852	\$86,141	\$15,859

*Important changes in classification.*—Turmeric is transferred from the free list of the act of 1913 (par. 634).

## HOARHOUND SEED.

*Description and uses.*—Hoarhound (or horehound) belongs to the mint family: The seed is used only for flavoring.

*Production.*—Hoarhound is native to southern and eastern Europe. The white variety grows in America, but no record of seed production can be found. Dealers usually handle the imported seed.

*Imports* of hoarhound are included under "spice seeds n. s. p. f.," below.

ALL OTHER SPICES AND SPICE SEEDS, N. S. P. F., INCLUDING HERBS OR HERB LEAVES.

*Imports* under this head are unimportant, the average annual value from 1909 to 1913 being only \$6,823. After the duty was changed from 3 cents a pound to 20 per centum ad valorem, the average value per annum of imports from 1914 to 1918 (fiscal years) was \$6,460. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....		\$9,063	\$1,813
1919.....	27,945	11,536	2,307
1920.....	22,538	9,360	1,872
1921 (9 months).....	6,419	1,557	.....

The principal sources of imports are Jamaica, 30 per cent; British East Africa, 18 per cent; England, 13 per cent.

*Exports* have in recent calendar years been as follows: 1918, \$480,508; 1919, \$588,462; 1920, \$516,171; 1921 (nine months), \$150,982.

The bulk of the exports are as follows: To Canada 30 per cent, to Mexico 15 per cent, to Cuba 6 per cent.

## GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—The several provisions for spices and seeds chiefly used as spices have been combined and alphabetically rearranged. Instead of the present specific duty upon unground spices, and combined specific and ad valorem rates upon ground spices, specific rates have been adopted throughout. Transfers from the free list of the act of 1913: Cardamom, coriander, cummin, fennel and mustard seed (par. 595); curry and curry powder (par. 471); and turmeric (par. 634). There are new provisions for paprika, mixed spices, and whole and canned pimientos. The importation of pepper shells is prohibited. These have no condimental value and are used for adulterating pepper. The detection of this adulteration involves an expenditure of time and expense on the part of food-control officials that is out of proportion to the importance of the trade. Allowance for dirt or other foreign matter is prohibited.

*Suggested changes.*—"Aniseed" is the preferred spelling for "anise seed."

## PARAGRAPH 781.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 781. Teazels, 25 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 268. Teazels, thirty per centum ad valorem.

PAR. 214. Teazels, 15 per centum ad valorem.

## TEASELS.

*Description and uses.*—The flower heads or teasels of the teasel plant are covered with stiff, hooked bracts, which, when dried, are used by woolen mills to raise a nap on woolen cloths. Teasels are arranged on a cylinder so that their recurved hooks catch the fibers of the wool, causing them to stand up and form a nap. While strong enough for the work, the teasel hooks are sufficiently elastic to prevent breaking the cloth. The plant is a biennial, in its second year a bush about 6 feet high. Its main stalk produces the strongest and largest or "king" teasel; the larger branches, the "queens" or "mediums"; and the smaller branches, "buttons" or the smallest teasels. "Kings" are used on blankets, "buttons" on broadcloths.

*Production.*—Onondaga County, N. Y., raises almost the entire domestic supply of teasels; they are grown to a small extent in Oregon. In 1909 only 162 acres were devoted to this crop (110 acres in New York), with a production of 78 tons and a farm value of \$13,760.

*Imports* of teasels, largely "kings," are almost exclusively from France, and range in value between \$15,000 and \$75,000. Southern France produces the most wiry hooks known, useful for deep-napped woolens. Imports since 1917 have been as follows:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$11,886	\$1,783	15
1919.....	22,007	3,301	15
1920.....	32,964	4,945	15
1921 (9 months).....	73,545		

*Exports* are no longer separately reported.

## SCHEDULE 8.—SPIRITS, WINES, AND OTHER BEVERAGES.

### PARAGRAPH 801.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 801. Liqueurs, as defined in the National Prohibition Act, when imported in compliance with the provisions of that Act, shall be dutiable at the rates hereinafter provided in this title.

ACT OF 1909.

ACT OF 1913.

SCHEDULE H.—SPIRITS, WINES, AND OTHER BEVERAGES.

SCHEDULE H.—SPIRITS, WINES, AND OTHER BEVERAGES.

[No corresponding provision.]

[No corresponding provision.]

*Suggested changes.*—Page 99, line 23, of H. R. 7456: "Liqueurs" should be "liquors."

Page 100, line 1, of H. R. 7456: Insert after "Act," "or any subsequent act," so as to include any later law than the national prohibition act.

### PARAGRAPH 802.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 802. Brandy and other spirits manufactured or distilled from grain or other materials, cordials, liqueurs, arrack, absinthe, kirschwasser, ratafia, and bitters of all kinds containing spirits, and compounds and preparations of which distilled spirits are the component part of chief value and not specially provided for, \$5 per proof gallon.

ACT OF 1909.

ACT OF 1913.

PAR. 300. Brandy and other spirits manufactured or distilled from grain or other materials, and not specially provided for in this section, two dollars and sixty cents per proof gallon.

PAR. 237. Brandy and other spirits manufactured or distilled from grain or other materials, and not specially provided for in this section, \$2.60 per proof gallon.<sup>1</sup>

PAR. 302. On all compounds or preparations of which distilled spirits are a component part of chief value there shall be levied a duty not less than that imposed upon distilled spirits.

PAR. 239. On all compounds or preparations of which distilled spirits are a component part of chief value there shall be levied a duty not less than that imposed upon distilled spirits.

<sup>1</sup> Imported spirits are subject to the duty imposed by this paragraph as well as to the internal-revenue tax.

PAR. 303. Cordials, liqueurs, arrack, absinthe, kirschwasser, ratafia, and other spirituous beverages or bitters of all kinds, containing spirits, and not specially provided for in this section, two dollars and sixty cents per proof gallon.

240. Cordials, liqueurs, arrack, absinthe, kirschwasser, ratafia, and other spirituous beverages or bitters of all kinds, containing spirits, and not specially provided for in this section, \$2.60 per proof gallon.

## DISTILLED SPIRITS.

Imports under this paragraph since 1917 have been as follows:

*Important changes in classification.*—Paragraphs 237, 239, and 240, act of 1913, have been combined in this paragraph.

### PARAGRAPH 803.

H. R. 7456.

SENATE AMENDMENTS

PAR. 803. Champagne and all other sparkling wines, \$6 per proof gallon.

**ACT OF 1909.**

PAR. 306. Champagne and all other sparkling wines, in bottles containing each not more than one quart and more than one pint, nine dollars and sixty cents per dozen; containing not more than one pint each and more than one-half pint, four dollars and eighty cents per dozen; containing one-half pint each or less, two dollars and forty cents per dozen; in bottles or other vessels containing more than one quart each, in addition to nine dollars and sixty cents per dozen bottles, on the quantity in excess of one quart, at the rate of three dollars per gallon; but no separate or additional duty shall be levied on the bottles.

**ACT OF 1913.**

PAR. 243. Champagne and all other sparkling wines, in bottles containing each not more than one quart and more than one pint, \$9.60 per dozen; containing not more than one pint each and more than one-half pint, \$4.80 per dozen; containing one-half pint each or less, \$2.40 per dozen; in bottles or other vessels containing more than one quart each, in addition to \$9.60 per dozen bottles, on the quantity in excess of one quart, at the rate of \$3 per gallon; but no separate or additional duty shall be levied on the bottles.

## SPARKLING WINES.

Imports of wines containing not more than 24 per cent of alcohol—champagne and all other sparkling, in bottles—since 1917 are shown in the following table:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
CONTAINING ONE-HALF PINT OR LESS.				
	<i>Dozens.</i>			<i>Per cent.</i>
1918.....	864	\$4,545	\$2,074	45.62
1919.....				
1920.....	20	145	48	33.10
1921 (9 months).....	16	106		
CONTAINING MORE THAN ONE-HALF AND NOT MORE THAN ONE PINT.				
1918.....	43,739	\$404,539	\$209,947	51.90
1919.....	5,824	65,581	27,955	42.63
1920.....	9,152	88,663	43,930	49.55
1921 (9 months).....	9,017	100,479		
CONTAINING MORE THAN ONE PINT AND NOT MORE THAN ONE QUART.				
1918.....	68,147	\$1,212,173	\$654,211	53.97
1919.....	12,986	276,463	124,066	45.09
1920.....	16,653	330,387	159,869	48.39
1921 (9 months).....	16,107	346,286		

Imports of champagne and other sparkling wines—quantity in bottles or vessels in excess of 1 quart per bottle or vessel—were 308 gallons in 1918, since when no imports have been recorded.

Exports of all wines for the calendar years 1918–1921 are shown below:

	1918	1919	1920	1921 (9 months).
Quantity (gallons).....	3,225,048	4,926,425	4,573,587	15,474
Value.....	\$2,040,815	\$4,754,765	\$3,279,341	\$27,714

*Important changes in classification.*—The duty has been put entirely on the gallon basis, instead of on the basis of one dozen bottles with a gallon basis for quantities in excess of one quart (par. 243, act of 1913); and the provision excepting the bottles from a separate duty has been dropped (they would be dutiable at one-third the regular rates under par. 809).

## PARAGRAPH 804.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 804. Still wines, including ginger wine or ginger cordial, vermouth, and rice wine or sake, and similar beverages not specially provided for, \$1.25 per gallon: *Provided*, That any of the

## H. R. 7456.

## SENATE AMENDMENTS.

foregoing articles specified in this paragraph when imported containing more than 24 per centum of alcohol shall be classed as spirits and pay duty accordingly.

## ACT OF 1909.

## ACT OF 1913.

PAR. 307. Still wines, including ginger wine or ginger cordial, vermouth, and rice wine or sake, and similar beverages not specially provided for in this section, in casks or packages other than bottles or jugs, if containing fourteen per centum or less of absolute alcohol, forty-five cents per gallon; if containing more than fourteen per centum of absolute alcohol, sixty cents per gallon. In bottles or jugs, per case of one dozen bottles or jugs, containing each not more than one quart and more than one pint, or twenty-four bottles or jugs containing each not more than one pint, one dollar and eighty-five cents per case; and any excess beyond these quantities found in such bottles or jugs shall be subject to a duty of six cents per pint or fractional part thereof, but no separate or additional duty shall be assessed on the bottles or jugs: *Provided*, That any wines, ginger cordial, or vermouth imported containing more than twenty-four per centum of alcohol shall be classed as spirits and pay duty accordingly: \* \* \*

PAR. 244. Still wines, including ginger wine or ginger cordial, vermouth, and rice wine or sake, and similar beverages not specially provided for in this section, in casks or packages other than bottles or jugs, if containing 14 per centum or less of absolute alcohol, 45 cents per gallon; if containing more than 14 per centum of absolute alcohol, 60 cents per gallon. In bottles or jugs, per case of one dozen bottles or jugs, containing each not more than one quart and more than one pint, or twenty-four bottles or jugs containing each not more than one pint, \$1.85 per case; and any excess beyond these quantities found in such bottles or jugs shall be subject to a duty of 6 cents per pint or fractional part thereof, but no separate or additional duty shall be assessed on the bottles or jugs: *Provided*, That any wines, ginger cordial, or vermouth imported containing more than 24 per centum of alcohol shall be classed as spirits and pay duty accordingly: \* \* \*

## STILL WINES.

*Imports* of all still wines containing not more than 24 per cent of alcohol have been as follows since 1917:

Calendar year.	Value.	Duty.	Equivalent ad valorem.
			<i>Per cent.</i>
1918.....	\$4,794,324	\$2,305,396	48.1
1919.....	1,276,793	532,462	41.7
1920.....	999,926	411,462	41.1
1921 (9 months).....	962,686		

*Important changes in classification.*—The duty has been put entirely on the gallon basis instead of partly per gallon and partly per case with a pint basis for excess quantities (par. 244, act of 1913) and the provision excepting the bottles and jugs from a separate duty has been dropped (they would be dutiable at one-third the regular rates under par. 809). The provision requiring wines, cordials, brandy, etc., to be packed in packages containing not less than one dozen bottles or jugs, or be assessed as if the package contained at least one dozen has been eliminated; also the specific provision for regulations determining the percentage of alcohol in wines and fruit juices.

## PARAGRAPH 805.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 805. Ale, porter, stout, beer, and fluid malt extract, \$1 per gallon; malt extract, solid or condensed, 60 per centum ad valorem.

## ACT OF 1909.

PAR. 308. Ale, porter, stout, and beer, in bottles or jugs, forty-five cents per gallon, but no separate or additional duty shall be assessed on the bottles or jugs; otherwise than in bottles or jugs, twenty-three cents per gallon.

PAR. 309. Malt extract, fluid, in casks, twenty-three cents per gallon; in bottles or jugs, forty-five cents per gallon; solid or condensed, forty-five per centum ad valorem.

## ACT OF 1913.

PAR. 245. Ale, porter, stout, and beer in bottles or jugs, 45 cents per gallon, but no separate or additional duty shall be assessed on the bottles or jugs; otherwise than in bottles or jugs, 2<sup>9</sup> cents per gallon.

PAR. 246. Malt extract, fluid, in casks 23 cents per gallon; in bottles or jugs, 45 cents per gallon; solid or condensed, 45 per centum ad valorem.

## MALT LIQUORS.

*Imports of malt liquors since 1917 have been as follows:*

Calendar year.	Quantity.	Value.	Duty.
	<i>Gallons.</i>		
1918.....	381,091	\$383,566	\$126,877
1919.....	11,998	10,493	3,884
1920.....	8	8	4

*Exports of malt liquors since 1917 by calendar years have been as follows:*

	1918	1919	1920	1921 (9 months).
Quantity (dozen quarts).....	1,077,593	1,006,927	371,812	3,700
Value.....	\$2,075,767	\$2,179,809	\$747,550	\$8,937

## IN BOTTLES.

Quantity (dozen quarts).....	1,077,593	1,006,927	371,812	3,700
Value.....	\$2,075,767	\$2,179,809	\$747,550	\$8,937

## IN OTHER COVERINGS.

Quantity (gallons).....	97,160	36,638	11,388	1,425
Value.....	\$35,479	\$16,474	\$7,390	\$1,459

*Important changes in classification.*—One rate has been provided for ale, porter, stout, beer, and fluid malt extract, regardless of the character of the containers, and the provision excepting from separate duty bottles and jugs containing ale, porter, stout, and beer has been dropped. (They would be dutiable at one-third the regular rates under par. 809.) The articles contained in this paragraph were covered by two paragraphs in the act of 1909 (308 and 309) and in the act of 1913 (245 and 246).

## MALT EXTRACT.

*Description and uses.*—Two distinct articles are known as malt extract. One is a strong, heavy beer, used both as a beverage and as a tonic; the other, a viscous, semisolid substance, containing about 45 per cent solid matter and less than 2 per cent alcohol, used medicinally and as an emulsifying agent. A form of the latter, easily convertible into beer by the addition of yeast, sugar, and water, has recently appeared on the market.

*Imports of fluid malt extract* were valued at \$12,137 in 1914 and of solid and condensed malt extract at \$767. Nearly all came from the United Kingdom. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equiva- lent ad valorem.
FLUID IN BOTTLES.				
	<i>Gallons.</i>			<i>Per cent.</i>
1918.....	2	\$1		90.00
1919.....	1	4		11.25
1920.....	3,243	3,204	\$1,459	45.55
1921 (9 months).....	1,227	2,039		

## FLUID IN CASKS.

1920 <sup>1</sup> .....	1,678	\$2,723	\$386	14.17
1921 (9 months).....	240	359		

<sup>1</sup> No imports of fluid malt extract in casks in 1918 and 1919.

## SOLID OR CONDENSED.

	<i>Pounds.</i>			
1918.....		\$44	\$20	
1920.....	56	15	7	45.00
1921 (9 months).....	1,507	349		

## PARAGRAPH 806.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 806. Cherry juice, prune juice, or prune wine, and all other fruit juices and fruit sirups, not specially provided for, containing less than one-half of 1 per centum of alcohol, 70 cents per gallon; containing one-half of 1 per centum or more of alcohol, 70 cents per gallon and in addition thereto \$5 per proof gallon on the alcohol contained therein.

## ACT OF 1909.

PAR. 310. Cherry juice and prune juice, or prune wine, and other fruit juices, and fruit sirup, not specially provided for in this section, containing no alcohol or not more than eighteen per centum of alcohol, seventy cents per gallon; if containing more than eighteen per centum of alcohol, seventy cents per gallon and in addition thereto two dollars and seven cents per proof gallon on the alcohol contained therein.

## ACT OF 1913.

PAR. 247. Cherry juice and prune juice, or prune wine, and other fruit juices, and fruit sirup, not specially provided for in this section, containing no alcohol or not more than 18 per centum of alcohol, 70 cents per gallon; if containing more than 18 per centum of alcohol, 70 cents per gallon and in addition thereto \$2.07 per proof gallon on the alcohol contained therein.

## CHERRY JUICE, PRUNE JUICE, ETC.

*Description and uses.*—Cherry juice and other fruit juices are obtained by pressing or crushing the fresh fruit; the sirups are made by mixing sugar with the fruit. Nonalcoholic juices or combinations of them, and especially grape juice, are widely used as beverages, fruit sirups and crushed fruits in flavoring soda water and other "soft drinks" and confections. Fortified fruit juices, made by the addition of from 15 to 17 per cent of alcohol to prevent fermentation, are utilized entirely in making cordials and other alcoholic beverages. Prune juice, similarly made, is used in blending whisky and flavoring chewing tobacco.

*Production* of nonalcoholic fruit juices and sirups is extensive, the domestic output being wholly consumed here. Juices made abroad are usually fortified. In 1916 the output of grape juice was 5,000,000 gallons, made principally in New York and Ohio. California contributed only 150,000 gallons, the European grapes grown in that State not being adapted to this purpose. Some competition in cherry, blackberry, raspberry, and other fruit juices may be expected from France, Germany, and Austria—where methods of manufacture and handling are highly developed—when a satisfactory substitute is provided for the alcohol used to prevent fermentation.

*Imports* of cherry and other fruit juices and sirups in 1914 were 65,295 gallons, valued at \$56,795; of prune juice or wine, 23,932 gallons, valued at \$17,462. Prior to the war these alcoholic juices were derived chiefly from France, Germany, and Austria. Imports since 1917 of all fruit juices and sirups have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Gallons.</i>		
1918.....	3,165	\$7,478	\$2,226
1919.....	4,850	3,938	1,134
1920.....	22,747	44,744	3,065

*Important changes in classification.*—The dividing line as to alcoholic content has been changed from 18 per cent to one-half of 1 per cent.

## PARAGRAPH 807.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 807. Ginger ale, ginger beer, lemonade, soda water, and similar beverages containing no alcohol, and beverages containing less than one-half of 1 per centum of alcohol, not specially provided for, 15 cents per gallon.

ACT OF 1909.

ACT OF 1913.

PAR. 311. Ginger ale, ginger beer, lemonade, soda water, and other similar beverages containing no alcohol, in plain green or colored, molded or

PAR. 248. Ginger ale, ginger beer, lemonade, soda water, and other similar beverages containing no alcohol, in plain green or colored, molded or

## ACT OF 1909.

## ACT OF 1913.

pressed, glass bottles, containing each not more than three-fourths of a pint, eighteen cents per dozen; containing more than three-fourths of a pint each and not more than one and one-half pints, twenty-eight cents per dozen; but no separate or additional duty shall be assessed on the bottles; if imported otherwise than in plain green or colored, molded or pressed, glass bottles, or in such bottles containing more than one and one-half pints each, fifty cents per gallon, and in addition thereto duty shall be collected on the bottles, or other coverings, at the rates which would be chargeable thereon if imported empty. Beverages not specially provided for containing not more than two per centum of alcohol shall be assessed for duty under this paragraph.

pressed, glass bottles, containing each not more than one-half pint, 12 cents per dozen; containing each more than one-half pint and not more than three-fourths of a pint, 18 cents per dozen; containing more than three-fourths of a pint each and not more than one and one-half pints, 28 cents per dozen; but no separate or additional duty shall be assessed on the bottles; if imported otherwise than in plain green or colored, molded or pressed, glass bottles, or in such bottles containing more than one and one-half pints each, 50 cents per gallon, and in addition thereto duty shall be collected on the bottles, or other coverings, at the rates which would be chargeable thereon if imported empty. Beverages not specially provided for containing not more than 2 per centum of alcohol shall be assessed for duty under this paragraph.

## SOFT DRINKS.

*Description and uses.*—Ginger ale or ginger beer is made by adding a small quantity of ginger or capsicum extract and sugar to water. For lemonade or lemon beer, citric acid or lemon juice is similarly used. Soda water, seltzer, and vichy are waters impregnated with carbonic acid gas. Other nonalcoholic or "soft" drinks, such as root beer, orangeade, sarsaparilla, fruit phosphates, cream soda, birch beer, juniper ale, pop, lemon soda, and various well-known proprietary drinks consist mainly of sweetened carbonated water with some flavoring matter. Near-beer, hop ale, and similar cereal beverages are also included.

*Production* of carbonated beverages and "soft" drinks in 1914 was valued at \$58,401,000, derived from 5,463 establishments capitalized at \$53,233,000, employing over 15,000 persons, paying wages of \$8,864,000, and using materials valued at \$26,779,000. In 1919 the output of 5,112 establishments was valued at \$130,673,000. These figures include artificial mineral waters and lime and grape juices. The industry is well established in every State—New York, Pennsylvania, Georgia, Illinois, Massachusetts, and Alabama leading in the order named.

*Imports* of ginger ale and ginger beer in 1914 were valued at \$374,515; lemonade, soda water, and similar beverages imported were valued at \$65,740. Later statistics follow:

Calendar year.	Value.	Duty.
GINGER ALE AND GINGER BEER.		
1918.....	\$40,215	\$6,819
1919.....	53,436	6,637
1920.....	87,528	11,927
1921 (9 months).....	95,862	

LEMONADE, SODA WATER, AND SIMILAR BEVERAGES.		
1918.....	\$17,676	\$2,308
1919.....	66,895	5,172
1920.....	28,318	3,953
1921 (9 months).....	20,646	

*Exports* of "other beverages," comprising cider, ginger ale, mineral water, and soda water, amounted to \$375,919 in 1914 and \$509,872 in 1918.

*Important changes in classification.*—The duty has been put entirely on the gallon basis instead of partly per dozen bottles and partly per gallon (par. 248, act of 1913). The alcoholic content of beverages not specially provided for has been changed from "not more than 2 per centum" to "less than one-half of 1 per centum." The provisions for duty or exemption from duty on bottles have been eliminated. The bottles would be dutiable at one-third the regular rates under paragraph 809.

### PARAGRAPH 808.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 808. All mineral waters and all imitations of natural mineral waters, and all artificial mineral waters not specially provided for, 10 cents per gallon.

#### ACT OF 1909.

PAR. 312. All mineral waters and all imitations of natural mineral waters, and all artificial mineral waters not specially provided for in this section, in bottles or jugs containing not more than one pint, twenty cents per dozen bottles; if containing more than one pint and not more than one quart, thirty cents per dozen bottles; if imported in bottles or in jugs containing more than one quart, twenty-four cents per gallon; if imported otherwise than in bottles or jugs, eight cents per gallon; and in addition thereto, on all of the foregoing, duty shall be collected upon the bottles or other containers at one-third of the rates that would be charged thereon if imported empty or separately.

#### ACT OF 1913.

PAR. 249. All mineral waters and all imitations of natural mineral waters, and all artificial mineral waters not specially provided for in this section, in bottles or jugs containing not more than one-half pint, 10 cents per dozen bottles; if containing more than one-half pint and not more than one pint, 15 cents per dozen bottles; if containing more than one pint and not more than one quart, 20 cents per dozen bottles; if imported in bottles or in jugs containing more than one quart, 18 cents per gallon; if imported otherwise than in bottles or jugs, 8 cents per gallon; and in addition thereto, on all of the foregoing, duty shall be collected upon the bottles or other containers at one-third of the rates that would be charged thereon if imported empty or separately.

## MINERAL WATERS.

*Description.*—Mineral water, bottled for table or medicinal use, is the commercial name of spring and well water having mineral contents possessing physiological properties.

Artificial mineral waters and imitations of natural mineral waters, made by adding sodium or magnesium sulphates, hydrogen sulphide, or other sulphureous or saline substances to water, are often of marked therapeutic value and widely used.

*Production* of mineral waters in 1916 was 55,928,491 gallons, valued at \$5,735,035, and obtained from 802 commercial springs in 47 States or Territories, chief among them Wisconsin (25 per cent of the total), New York (12 per cent), California (8.7 per cent), and Maine (6 per cent).

*Imports* of natural and artificial mineral waters were 3,364,676 gallons, valued at \$955,788 in 1913, and 1,172,440 gallons, valued at \$624,302 in 1916. Germany, France, and Austria were formerly the principal sources. Later statistics follow:

Calendar year.	Value.	Duty.
1918.....	\$241,788	\$39,567
1919.....	116,948	16,742
1920.....	203,901	42,485
1921 (9 months).....	116,977	.....

*Exports.*—Large quantities of a few domestic waters are exported, but statistics are not available.

*Important changes in classification.*—The duty has been put entirely on the gallon basis instead of partly per dozen bottles or jugs and partly per gallon (par. 249, act of 1913). The provision for duty at one-third the regular rates on bottles and other containers has been dropped from this paragraph. The bottles and jugs would be dutiable at one-third the regular rates under paragraph 809.

## PARAGRAPH 809.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 809. When any article provided for in this title is imported in bottles or jugs, duty shall be collected upon the bottles or jugs at one-third the rate provided on the bottles or jugs if imported empty or separately.

[No corresponding provision.]

*Important changes in classification.*—This is a new general provision.

*Suggested changes.*—Page 101, line 10, of H. R. 7456: "Title" should be "schedule."

## PARAGRAPH 810.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 810. Each and every gauge or wine gallon of measurement shall be counted as at least 1 proof gallon; and the standard for determining the proof of brandy and other spirits or liquors of any kind when imported shall be the same as that which is defined in the laws relating to internal revenue. The Secretary of the Treasury, in his discretion, may authorize the ascertainment of the proof of wines, cordials, or other liquors and fruit juices by distillation or otherwise, in cases where it is impracticable to ascertain such proof by the means prescribed by existing law or regulations.

ACT OF 1909.

PAR. 301. Each and every gauge or wine gallon of measurement shall be counted as at least one proof gallon; and the standard for determining the proof of brandy and other spirits or liquors of any kind imported shall be the same as that which is defined in the laws relating to internal revenue: *Provided*, That it shall be lawful for the Secretary of the Treasury, in his discretion, to authorize the ascertainment of the proof of wines, cordials, or other liquors, by distillation or otherwise, in cases where it is impracticable to ascertain such proof by the means prescribed by existing law or regulations: \* \* \*

ACT OF 1913.

PAR. 238. Each and every gauge or wine gallon of measurement shall be counted as at least one proof gallon; and the standard for determining the proof of brandy and other spirits or liquors of any kind imported shall be the same as that which is defined in the laws relating to internal revenue: *Provided*, That it shall be lawful for the Secretary of the Treasury, in his discretion, to authorize the ascertainment of the proof of wines, cordials, or other liquors, by distillation or otherwise, in cases where it is impracticable to ascertain such proof by the means prescribed by existing law or regulations: \* \* \*

## PARAGRAPH 811.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 811. No lower rate or amount of duty shall be levied, collected, and paid on the articles enumerated in paragraph 802 of this title than that fixed by law for the description of first proof; but it shall be increased in proportion for any greater strength than the strength of first proof, and all imitations of brandy, spirits, or wines imported by any names whatever shall be subject to the highest rate of duty provided for the genuine articles respectively intended to be represented, and in no case less than \$5 per gallon: *Provided*, That any brandy or other spirituous or distilled liquors imported in any sized cask, bottle, jug, or other packages, of or from any country, dependency, or province under whose

## H. R. 7456. SENATE AMENDMENTS.

laws similar sized casks, bottles, jugs, or other packages of distilled spirits, wine, or other beverage put up or filled in the United States are denied entrance into such country, dependency, or province, shall be forfeited to the United States.

## ACT OF 1909.

PAR. 304. No lower rate or amount of duty shall be levied, collected, and paid on brandy, spirits, and other spirituous beverages than that fixed by law for the description of first proof; but it shall be increased in proportion for any greater strength than the strength of first proof, and all imitations of brandy or spirits or wines imported by any names whatever shall be subject to the highest rate of duty provided for the genuine articles respectively intended to be represented, and in no case less than one dollar and seventy-five cents per gallon.

PAR. 301. \* \* \* *And provided further.* That any brandy or other spirituous or distilled liquors imported in any sized cask, bottle, jug, or other packages, of or from any country, dependency, or province under whose laws similar sized casks, bottles, jugs, or other packages of distilled spirits, wine, or other beverage put up or filled in the United States are denied entrance into such country, dependency, or province, shall be forfeited to the United States; and any brandy or other spirituous or distilled liquor imported in a cask of less capacity than ten gallons from any country shall be forfeited to the United States.

## ACT OF 1913.

PAR. 241. No lower rate or amount of duty shall be levied, collected, and paid on brandy, spirits, and other spirituous beverages than that fixed by law for the description of first proof; but it shall be increased in proportion for any greater strength than the strength of first proof, and all imitations of brandy or spirits or wines imported by any names whatever shall be subject to the highest rate of duty provided for the genuine articles respectively intended to be represented, and in no case less than \$1.75 per gallon.

PAR. 238. \* \* \* *And provided further.* That any brandy or other spirituous or distilled liquors imported in any sized cask, bottle, jug, or other packages, of or from any country, dependency, or province under whose laws similar sized casks, bottles, jugs, or other packages of distilled spirits, wine, or other beverage put up or filled in the United States are denied entrance into such country, dependency, or province, shall be forfeited to the United States; and any brandy or other spirituous or distilled liquor imported in a cask of less capacity than ten gallons from any country shall be forfeited to the United States.

*Important changes in classification.*—This paragraph is made up of paragraph 241 and part of paragraph 238, act of 1913. The provision for the forfeiture of brandy and other spirituous or distilled liquor imported in a cask of less capacity than ten gallons has been eliminated.

*Suggested changes.*—Page 102, line 3, of H. R. 7456: Should not "title" be "schedule"?

Page 102, lines 9 and 10, of H. R. 7456: "Proof" should apparently be inserted between "per" and "gallon."

## SCHEDULE 9.—COTTON MANUFACTURES.

### PARAGRAPH 901.

#### H. R. 7456.

PAR. 901. Cotton yarn, including warps, in any form, not bleached, dyed, colored, combed, or plied, of numbers not exceeding number 40, one-fifth of 1 cent per number per pound; exceeding number 40 and not exceeding number 120, 8 cents per pound and, in addition thereto, one-fourth of 1 cent per number per pound for every number in excess of number 40; exceeding number 120, 28 cents per pound: *Provided*, That none of the foregoing, of numbers not exceeding number 100, shall pay less duty than 5 per centum ad valorem and, in addition thereto, for each number, one-fifth of 1 per centum ad valorem; nor of numbers exceeding number 100, less than 25 per centum ad valorem.

\* Cotton yarn, including warps, in any form, bleached, dyed, colored, or plied, of numbers not exceeding number 40, one-fourth of 1 cent per number per pound; exceeding number 40 and not exceeding number 120, 10 cents per pound and, in addition thereto, three-tenths of 1 cent per number per pound for every number in excess of number 40; exceeding number 120, 34 cents per pound: *Provided*, That none of the foregoing, of numbers not exceeding number 100, shall pay less duty than 7 per centum ad valorem and, in addition thereto, for each number, one-fifth of 1 per centum ad valorem; nor of numbers exceeding number 100, less than 27 per centum ad valorem.

Any of the foregoing yarns, if combed, shall pay in addition to the rates of duty provided in the preceding paragraph, if exceeding number 9 and not exceeding number 40, 1 cent per pound; if exceeding number 40, 2 cents per pound.

Cotton waste, manufactured or otherwise advanced in value, cotton card laps, sliver, and roving, 5 per centum ad valorem.

#### SENATE AMENDMENTS.

## ACT OF 1909.

## ACT OF 1913.

## SCHEDULE I.—COTTON MANUFACTURES.

SCHEDULE I.—COTTON MANUFACTURES.<sup>1</sup>

PAR. 313. Cotton thread and carded yarn warps or warp yarn, in singles, whether on beams or in bundles, skeins, or cops, or in any other form, except spool thread of cotton, crochet, darning, and embroidery cottons, hereinafter provided for, not colored, bleached, dyed, or advanced beyond the condition of singles by grouping or twisting two or more single yarns together, two and one-half cents per pound on all numbers up to and including number fifteen, one-sixth of a cent per number per pound on all numbers exceeding number fifteen and up to and including number thirty, and one-fifth of a cent per number per pound on all numbers exceeding number thirty: *Provided*, That none of the foregoing shall pay a less rate of duty than fifteen per centum ad valorem; colored, bleached, dyed, combed, or advanced beyond the condition of singles by grouping or twisting two or more single yarns together, whether on beams, or in bundles, skeins, or cops, or in any other form, except spool thread of cotton, crochet, darning, and embroidery cottons, hereinafter provided for, six cents per pound on all numbers up to and including number twenty-four, and on all numbers exceeding number twenty-four and up to number eighty, one-fourth of one cent per number per pound; on number eighty and up to number two hundred, three-tenths of one cent per number per pound; on number two hundred and above, sixty cents per pound, and one-tenth of one cent per number per pound additional for every number in excess of number two hundred; cable-laid yarns or threads, made by grouping or twisting two or more grouped or twisted yarns or threads together, not colored, bleached, or dyed, four-tenths of one cent per number per pound; colored, bleached, or dyed, nine-twentieths of one cent per number per pound: *Provided further*, That said threads and yarns, colored, bleached, dyed, combed, advanced beyond the condition of singles, and cable-laid yarns or threads, as hereinbefore provided, except those (other than cable-laid threads and yarns) finer than number one hundred and forty shall not pay a less rate of duty than twenty per centum ad valorem:

PAR. 250. Cotton thread and carded yarn, warps, or warp yarn, whether on beams or in bundles, skeins, or cops, or in any other form, not combed, bleached, dyed, mercerized, or colored, except spool thread of cotton, crochet, darning and embroidery cottons, hereinafter provided for, shall be subject to the following rates of duty:

Numbers up to and including number nine, 5 per centum ad valorem; exceeding number nine and not exceeding number nineteen,  $7\frac{1}{2}$  per centum ad valorem; exceeding number nineteen and not exceeding number thirty-nine, 10 per centum ad valorem; exceeding number thirty-nine and not exceeding number forty-nine, 15 per centum ad valorem; exceeding number forty-nine and not exceeding number fifty-nine,  $17\frac{1}{2}$  per centum ad valorem; exceeding number fifty-nine and not exceeding number seventy-nine, 20 per centum ad valorem; exceeding number seventy-nine and not exceeding number ninety-nine,  $22\frac{1}{2}$  per centum ad valorem; exceeding number ninety-nine, 25 per centum ad valorem. When combed, bleached, dyed, mercerized, or colored, they shall be subject to the following rates of duty: Numbers up to and including number nine,  $7\frac{1}{2}$  per centum ad valorem; exceeding number nine and not exceeding number nineteen, 10 per centum ad valorem; exceeding number nineteen and not exceeding number thirty-nine,  $12\frac{1}{2}$  per centum ad valorem; exceeding number thirty-nine and not exceeding number forty-nine,  $17\frac{1}{2}$  per centum ad valorem; exceeding number forty-nine and not exceeding number fifty-nine, 20 per centum ad valorem; exceeding number fifty-nine and not exceeding number seventy-nine,  $22\frac{1}{2}$  per centum ad valorem; exceeding number seventy-nine and not exceeding number ninety-nine, 25 per centum ad valorem; exceeding number ninety-nine,  $27\frac{1}{2}$  per centum ad valorem. Cotton waste and flocks, manufactured or otherwise advanced in value, cotton card laps, roping, sliver, or roving, 5 per centum ad valorem.

<sup>1</sup> 7 cents per pound, in addition to the rates of duty imposed thereon by existing law, is imposed by par. 17 of the emergency tariff act of May 27, 1921, on manufactures of which cotton having a staple of  $1\frac{1}{8}$  inches or more in length is the component material of chief value.

## ACT OF 1913.

## ACT OF 1913.

And provided further, That all the foregoing threads and yarns as hereinbefore provided, when mercerized or subjected to any similar process, shall pay, in addition to the foregoing specific rates of duty, one-fortieth of one cent per number per pound; cotton card laps, roping, sliver, or roving, thirty-five per centum ad valorem. Cotton waste and flocks, manufactured or otherwise advanced in value, twenty per centum ad valorem.

## COTTON YARN.

(See Report, T. I. S.—12.)

*Description and uses.*—Cotton yarn is spun from roving, and may be of upland, American staple, Egyptian, sea-island, or other cotton; it may be carded or combed, ring spun or mule spun, made with varying degrees of twist from extra soft up to extra hard; it may be unbleached, bleached, printed, dyed, or colored; plain or finished (gassed, mercerized, prepared, polished); and it may be in the single or doubled or cabled. There are many varieties of cotton yarn, and several modifying adjectives are required for the precise identification of any particular count. The relative values depend on various factors, but particularly on the material used and the count to which spun.

Number or count of yarn means the number of 840-yard hanks required to weigh 1 pound. No. 1 cotton yarn measures 840 yards to the pound and No. 100 cotton yarn measures 84,000 yards to the pound; the higher the count, the finer the yarn.

*Production.*—In quantity the United States ranks first, followed by the United Kingdom, British India, Japan, France, Germany, Russia, and Italy. In 1914 domestic production amounted to 2,170,578,612 pounds. Of the 2,467,914,386 pounds domestic output in 1919, the makers consumed about 75 per cent. Of the 625,071,000 pounds, valued at \$460,479,000, offered for sale in 1919, the knitting industry was the largest purchaser. In domestic spinning the normal limit is about 100s warp and 120s filling, while 93 per cent of the output consists of coarse and medium counts not above 40s. The United Kingdom leads in number of spindles and supplies a major portion of the fine and special yarns used in international trade.

*Imports* are less than 0.5 per cent of domestic consumption, the maximum being 10,564,304 pounds in 1917. During the 30 fiscal years ended June 30, 1920, imports averaged 4,964,209 pounds, valued at \$3,425,668 per annum. Imports were 6,853,235 pounds, valued at \$4,092,072 in 1914. The larger portion consists of two-ply unbleached yarns mule spun in England from Egyptian cotton. About 60 per cent are gassed or otherwise finished. Lace yarns, mostly "prepared" or flattened for use in brass bobbins, constitute the leading import. The second largest import is of soft-spun yarns for mercerization and for combination with silk in knitting and in the weaving of broad and narrow fabrics. The main count imported is two-ply 78s, and the main competitive range is from 58s to 78s.

Imports are supplemental rather than competitive, and as the domestic industry develops the average count imported steadily tends upward. The tariff plays a minor part in this trade.

Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....	3,975,200	\$6,336,365	\$1,470,781
1919.....	3,979,107	7,188,592	1,680,126
1920.....	9,992,073	23,926,270	5,445,245
1921 (9 months).....	2,236,431	3,127,719	

*Exports* of cotton yarn were valued at \$716,036 in 1914. During and since the war they have increased greatly, exceeding imports. Exports are mainly of counts under 40s, knitting yarns leading. Argentina, Canada, Hongkong, and Colombia were the leading buyers in 1920.

Exports for the calendar years 1918-1921 were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	13,355,800	20,699,124	24,099,399	11,077,263
Value.....	\$8,846,694	\$14,488,630	\$20,014,949	\$4,435,440

*Important changes in classification.*—Paragraph 901 is intended to cover all types and varieties of cotton yarn except the special yarns which are put up in short lengths for use in handwork. It does not include any sewing thread. Since sewing thread and yarns for handwork are more specifically provided for in paragraph 902 it is unnecessary that paragraph 901 should note their exception; the phrase used in the 1913 act (par. 250) "except spool thread of cotton, crochet, darning and embroidery cottons, hereinafter provided for" has therefore been omitted.

Since paragraph 901 relates solely to cotton yarn, it is appropriately headed "Cotton yarn, including warps, in any form." In most foreign tariffs "cotton yarn" is considered inclusive and exclusive, but to prevent any possibility of the courts' construing cotton yarn in the form of warps (a number of ends gathered together, sized or not sized, on beams or in balls or other form) as further advanced than cotton yarn, there have been added the words "including warps." The phrase "in any form" has been substituted for the present wording (par. 250, act of 1913) "whether on beams or in bundles, skeins or cops, or in any other form" as being simpler and fully as inclusive.

As in previous acts, cotton yarns have been classified as "basic" and "advanced," each with its own progressive rates of duty. The basic term "not bleached, dyed, colored, combed, or plied," refers solely to grey carded single yarns. Advanced yarns include those that are bleached, dyed, colored, or plied, and an additional duty is imposed when they are combed. The term "colored" is used in addition to the term "dyed" in order to cover printed yarns, and also yarns which are made of two or more rovings or two or more

yarns only one of which may be dyed. The term "plied" means that two or more yarns have been twisted together to form ply yarn. The act of 1913 provides no differential for ply yarns which in the grey are dutiable under the basic rates; in H. R. 7456 a differential is provided for ply yarns, as was the case in the act of 1909. This differential, however, is not intended to include grouped yarns. Imports of grouped yarns, that is, single yarns wound together without twisting, are small and almost entirely for use in electrical wire covering. There is apparently no object in including grouped yarns with ply yarns since the cost per pound of multiple winding is usually less than the cost of single-end winding; the more ends wound together side by side the greater the weight obtained in a given time and hence the less the unit cost.

The term "plied" includes not only two or more single yarns twisted together but also cabled yarns made by twisting together two or more ply yarns. The act of 1909 provided a further differential for cabled yarns over ordinary ply yarns, but this has been omitted for the reason that practically all imports consist of fine cabled yarns, particularly 130/9 and 140/9, known as harness-twine or heald yarn, needed for making loom harness for the silk industry; these must be made so carefully and are required in amounts so small that domestic manufacturers do not find it profitable to attempt their manufacture.

The progressive rates are levied, as in preceding acts, on the yarn count, that is, the number of 840-yard hanks that weigh 1 pound. The higher the count the finer the yarn, and, other things being equal, the higher the percentage of labor costs; therefore the duty increases progressively with the yarn number. The progressive rates on advanced yarns are higher than those on the basic gray single yarns, and increase at a faster rate of progression. Group progression was used in the act of 1913, but, as it involves a jump in the rates of duty between each group, individual-count progression used in the act of 1909 is more logical. In the revised classification both basic and advanced yarns have one rate of progression up to and including No. 40, and another and steeper rate of progression above No. 40 up to and including No. 120, above which the rate becomes stationary. The change in the rate of progression, on both basic and advanced yarns, at No. 40 is made because that number marks the normal ring-spinning limit of yarns made from short-stapled upland cotton not over  $1\frac{1}{16}$  inches in length. Above No. 120 there is rarely any domestic yarn made for sale; the stoppage of the advance in duties at this point should stimulate the production of lace, fine ply voiles, and other goods which require extra high count yarns not produced in this country.

It is inadvisable to break up the smooth rate of progression and complicate the paragraph by inserting a flat rate of duty on coarse yarns up to 10s, as imports of such yarns are small, being less than 1 per cent of the total yarn import. Aside from a few special knitting yarns, they consist mainly of turkey-red yarns for border and name work on towels; these towel yarns are in demand because they are fast dyed rather than because they are low priced. There is likewise no object in changing the rate of advance of duties at 15s, 20s, 24s, or 30s, such as occurred in tariffs before the American industry attained its

full growth, and the same rate of progression can well be used from the coarsest up to No. 40s.

The act of 1909 provided a cumulative differential for yarns subjected to mercerization and the act of 1913 included mercerized yarns in the advanced classification. Testimony secured by the Tariff Commission shows that skein mercerization is as cheap in this country as abroad, and that warp mercerization is considerably cheaper here; also that this was the normal condition prior to the war. Such being the case, it has been deemed advisable to omit any differential for mercerizing, particularly as none has been used for other finishing processes such as preparing, polishing, or gassing.

The act of 1909 (par. 313) provided a minimum ad valorem rate of 15 per cent flat for all single gray yarns and a minimum ad valorem rate of 20 per cent flat for advanced yarns not exceeding No. 140, above which there was no minimum. H. R. 7456 substitutes progressive ad valorem minimums for both basic and advanced yarns up to No. 100, above which the rate remains stationary. (For more detailed discussion see Chap. VI of Tariff Information Series, No. 12, entitled, "Cotton Yarn.")

*Suggested changes.*—There is apparently no provision for unbleached combed yarns up to No. 9. There is also doubt whether the provision beginning "any of the foregoing yarns," page 104, line 17, relates to the first part of the paragraph. If it does not there is no provision for any unbleached combed yarns. It is suggested that lines 17 to 21, page 104, be omitted and the word "combed" be inserted after the word "colored" in line 5, page 104, which would make the part of the paragraph relating to "bleached, dyed, etc.," exactly complementary to the first part of the paragraph relating to "not bleached, dyed, etc."

#### COTTON CARD LAPS, SLIVER, AND ROVING.

*Description, uses, and production.*—Raw cotton in the bale is opened in the mills and there partially cleaned and made into laps, usually 40 inches wide and about 18 inches in diameter. These laps are then run through the card and drawn down into a loosely compressed but untwisted rope called a sliver. After further attenuation and cleaning a small amount of twist is inserted in the sliver, which thereupon becomes roving, and this is further attenuated and twisted into yarn. The amount of cotton card laps, sliver, and roving produced for sale in 1919 was 4,260,000 pounds, valued at \$1,956,000.

*Imports.*—Laps, sliver, and roving are ordinarily not articles of commerce, owing to the difficulty of handling them without damage and because spinning mills have their own preparing machinery. Imports are usually negligible. In 1914 they amounted to \$367.

Imports for the calendar years 1918–1921 were as follows:

	1918	1919	1920	1921 (9 months).
Pounds.....			1 100,612	
Value.....	\$4,627		\$31,684	
Duty.....	231		84	

<sup>1</sup> Includes 100,000 pounds, valued at \$30,000, from Philippine Islands.

*Exports.*—None recorded.

COTTON WASTE, MANUFACTURED OR OTHERWISE ADVANCED IN VALUE.

*Description, uses, and production.*—Waste occurs in each process of manufacture. A part of this waste is remanufactured in the mills where made and part is sold for manufacture elsewhere. Waste is on the free list (par. 467), but when bleached, dyed, manufactured, or otherwise advanced in value is dutiable under this paragraph.

*Imports* in 1914 were 45,147 pounds, valued at \$2,182.

Imports for the calendar years 1918–1920 were as follows:

	1918	1919	1920
Pounds.....	400	1,500	500
Value.....	\$72	\$187	\$56
Duty.....	4	9	3

*Exports.*—None recorded.

*Suggested changes.*—The deletion of the phrase “cotton waste, manufactured or otherwise advanced in value, not specially provided for,” is suggested, with the intent that all cotton waste, in whatever condition, shall fall under paragraph 1557. Imports are insignificant and will undoubtedly continue so, whether dutiable or free. Cotton waste which has been made into card laps, sliver, roving, yarn, or finished articles will, of course, take the same rates as apply to such merchandise made from raw cotton.

## PARAGRAPH 902.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 902. Cotton sewing thread; crochet, darning, embroidery, and knitting cottons, put up for handwork, in lengths not exceeding eight hundred and forty yards; one-half of 1 cent per hundred yards: *Provided*, That none of the foregoing shall pay a less rate of duty than 17 nor more than 33½ per centum ad valorem. In no case shall the duty be assessed on a less number of yards than is marked on the goods as imported.

ACT OF 1909.

ACT OF 1913.

PAR. 314. Spool thread of cotton, crochet, darning, and embroidery cottons, on spools, reels, or balls, containing on each spool, reel, or ball, not exceeding one hundred yards of thread, six cents per dozen; exceeding one hundred yards on each spool, reel, or ball, for every additional hundred yards or fractional part thereof in excess of one hundred, six cents per dozen spools, reels, or balls; if in

PAR. 251. Spool thread of cotton, crochet, darning, and embroidery cottons, on spools, reels, or balls, or in skeins, cones, or tubes, or in any other form, 15 per centum ad valorem.

## ACT OF 1913.

## ACT OF 1909.

skeins, cones or tubes, containing less than six hundred yards each, one-half of one cent for each one hundred yards or fractional part thereof: *Provided*, That in no case shall the duty be assessed upon a less number of yards than is marked on the spools, reels, cones, tubes, skeins, or balls: *And provided further*, That none of the foregoing shall pay a less rate of duty than twenty per centum ad valorem.

## COTTON SEWING THREAD AND "COTTONS."

(See Report T. I. S.—12.)

*Description and uses.*—Cotton sewing thread is ply or cable yarn that has been finished by polishing; it is usually either bleached or dyed. It may be two, three, or four-ply, or six-cord cabled; the last named is usually put up on spools for the retail trade and the former on tubes, cones, or large bobbins for the use of garment makers.

The count of cotton yarn indicates the number of 840-yard hanks required to weigh 1 pound. Sewing thread, however, is numbered or lettered arbitrarily, and the same is true of one class of cotton yarns, namely, those known as "cottons." This term refers solely to yarns, usually soft spun and in two, three, four, or eight fold, put up in short lengths for handwork—not to those put up in the longer lengths customary for machine work. Knitting cotton is similar to crochet, darning, and embroidery cottons, the four terms often being used interchangeably.

*Production of cotton thread* in 1914 was 26,507,023 pounds, valued at \$22,917,099; in 1919 it was recorded as 58,096,000 pounds, valued at \$57,125,000, but included a considerable quantity manufactured on a contract basis, for which the cost of materials was not included in the value of products. The production of "cottons" for handwork was not recorded separately from other cotton yarns. For these reasons exact comparison with imports is impossible.

The United Kingdom is the only large exporter of cotton sewing thread, though a substantial amount is normally exported from Germany and smaller amounts from Switzerland, Italy, Belgium, France, and Japan.

*Imports* of cotton sewing thread and "cottons" during the 30 fiscal years ended June 30, 1920, averaged in value \$798,089 per annum. Imports in 1914 were valued at \$2,066,346.

Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.
	<i>100 yards.</i>		
1918.....	50,638,323	\$1,871,885	\$280,783
1919.....	46,474,969	1,851,957	277,794
1920.....	52,055,369	3,302,142	495,321
1921 (9 months) <sup>1</sup> .....	34,053,166	1,392,577	.....

<sup>1</sup> Includes 135,688 pounds, valued at \$484,850, under the emergency tariff act.

Imports of cotton sewing thread, which are small, come mainly from England: imports of "cottons" for handwork, most largely from Alsace, constitute the bulk of the imports under this paragraph.

*Exports* of cotton sewing thread and "cottons," mainly the former, are larger than imports. For the last four calendar years exports have been valued as follows: 1918, \$2,824,776; 1919, \$4,367,762; 1920, \$4,471,617; 1921 (9 months), \$1,498,329.

The chief purchasers of American cotton sewing thread in 1920 were Canada, Philippine Islands, Cuba, Mexico, and Australia.

*Important changes in classification.*—Paragraph 902 covers cotton sewing thread, for hand or machine work, and special yarns which are put up in short lengths for handwork. These two classes of goods are grouped for the reason that they are usually numbered or lettered arbitrarily without reference to the true yarn count. Instead of the progressive rates based on the yarn count, as used in the preceding paragraph for cotton yarns intended for machine work, there has been adopted a system of progressive rates based on the length. The flat rate per hundred yards results in the duty per pound advancing in proportion to the fineness of the yarns for handwork and likewise in proportion to the fineness of the sewing thread.

"Cotton sewing thread," the first class of articles here covered, is the term agreed upon by both manufacturers and importers. "Spool thread of cotton," as used in preceding tariffs, was a misnomer, as imports of cotton thread, when intended for use by garment makers, are put up on tubes, cones, or large bobbins, instead of on spools.

"Crochet, darning, embroidery, and knitting cottons, put up for handwork," clearly defines the particular class of cotton yarns which are excepted from the provisions of the preceding paragraph on cotton yarn and here specifically provided for because of the arbitrary numbering ordinarily employed. The provisions of the acts of 1897, 1909, and 1913 are extended or at least clarified by the addition of the word "knitting." "Knitting cottons" are so similar to other "cottons" or soft-spun yarns here provided for that the labeling is often "Cottons for crocheting, embroidering, or knitting," yet under the act of 1913 it is possible to levy a different rate on the same yarn if invoiced as knitting cotton from that which would apply were it invoiced as crocheting cotton. This anomaly is avoided by the use of the above wording.

The term "cottons" had its origin in the fact that most of the short lengths of yarn used for handwork are of a soft and loosely twisted or "cottony" character, and although some are fully as hard twisted as ordinary yarns for machine work the use of the term "cottons" instead of "yarns" implies that this provision is limited to yarns for handwork. By the use of the specific wording "put up for handwork" confusion of meaning is avoided and short lengths of yarn put up for machine work are prevented from coming in under this paragraph. Practically the only short lengths of yarn used in machine work are the minute bobbins known as schiffli or bobbin yarns, which are wound on a bare spindle and used on embroidery machines to fasten in place the embroidery yarns proper. As these schiffli yarns, whatever their length, are similar to yarns used in machine knitting and other industries and are numbered

according to the true yarn count, they should be dutiable at the progressive rates provided in paragraph 901. It is not intended that any yarns used for machine work should be imported under the provisions of paragraph 902.

Ordinarily it is not economically feasible to use as short lengths for machine work as are preferred for handwork, and a clear line of demarcation between ordinary yarns for machine work and special yarns for handwork is afforded by the phrasing "in lengths not exceeding 840 yards." Yarn in lengths of more than 840 yards, if imported for handwork, would be dutiable under H. R. 7456 as ordinary cotton yarn. The appraiser at New York, however, states that such importations are rare and that 840 yards, which is the length of one hank as used in cotton yarn numbering, is the logical point of demarcation between yarns for machine work and yarns for handwork.

The act of 1909 bracketed together sewing thread and yarns for handwork and assessed a rate of 6 cents per dozen spools of not over 100 yards each on either class put up on spools, reels, or balls, and a rate of one-half cent per 100 yards on either put up in skeins, cones, or tubes. The two rates come to the same thing, one-half cent per 100 yards, but the arrangement is illogical in that no distinction is drawn between the two dissimilar articles, "sewing thread" and "yarns for handwork," whereas a distinction is made as to the entirely immaterial matter of the way the two should be put up for sale. The new wording is designed to improve import statistics, in that there will be separate records for sewing thread and yarns for handwork, irrespective of how each may be put up. Cotton yarns in short lengths for handwork are imported in substantial amounts, whereas imports of cotton sewing thread are small.

Both minimum and maximum rates of duty have been provided for articles in paragraph 902. The provision, also used in the act of 1909, that the duty shall not be levied on a less number of yards than is marked on the goods as imported, is again inserted as a preventive measure against the fraudulent marking of lengths.

*Suggested changes.*—Attention may be called to the fact that the rate of one-half cent per 100 yards on cotton sewing thread makes the duty per pound higher than that provided for in paragraph 903 on any countable cotton cloth, including Jacquard woven fancies. For instance, a No. 24 six-cord thread made of No. 50 yarn has a finished length of about 6,760 yards per pound, and a No. 60 three-cord thread made of No. 50 yarn has a finished length of about 13,520 yards per pound. The duty of one-half cent per 100 yards would mean a duty of 33.8 and 67.6 cents per pound, respectively, on six-cord and three-cord sewing thread made from No. 50 yarn. In contrast, the specific duty on cotton cloth, printed, dyed, colored, or woven-figured, with No. 50 average yarn count, would be 28.5 cents per pound, and the specific duty on No. 50 cotton yarn, printed, dyed, colored, or plied, if combed, would be 15 cents a pound.

## PARAGRAPH 903.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 903. Cotton cloth, not bleached, printed, dyed, colored, or woven-figured, containing yarns the average number of which does not exceed number 40, forty one-hundredths of 1 cent per average number per pound; exceeding number 40, 16 cents per pound, and, in addition thereto, fifty-five one-hundredths of 1 cent per average number per pound for every number in excess of number 40: *Provided*, That none of the foregoing, when containing yarns the average number of which does not exceed number 100, shall pay less duty than 9 per centum ad valorem and, in addition thereto, for each number, one-fifth of 1 per centum ad valorem; nor when exceeding number 100, less than 29 per centum ad valorem.

Cotton cloth, bleached, containing yarns the average number of which does not exceed number 40, forty-five one-hundredths of 1 cent per average number per pound; exceeding number 40, 18 cents per pound and, in addition thereto, three-fifths of 1 cent per average number per pound for every number in excess of number 40: *Provided*, That none of the foregoing, when containing yarns the average number of which does not exceed number 100, shall pay less duty than 13 per centum ad valorem and, in addition thereto, for each number, one-fifth of 1 per centum ad valorem; nor when exceeding number 100, less than 33 per centum ad valorem.

Cotton cloth, printed, dyed, colored, or woven-figured, containing yarns the average number of which does not exceed number 40, fifty-five one-hundredths of 1 cent per average number per pound; exceeding number 40, 22 cents per pound and, in addition thereto, sixty-five one-hundredths of 1 cent per average number per pound for every number in excess of number 40: *Provided*, That none of the foregoing, when containing yarns the average number of which does not exceed number 100, shall pay less duty than 13 per centum ad valorem and, for each number, one-fifth of 1 per centum ad valorem; nor when exceeding number 100, less than 33 per centum ad valorem. Plain gauze or leno woven cotton nets or nettings shall be classified for duty as cotton cloth.

## ACT OF 1909.

PAR. 315. Cotton cloth, valued at not over seven cents per square yard, not bleached, dyed, colored, stained, painted, or printed, and not exceeding fifty threads to the square inch, counting the warp and filling, one cent per square yard; if bleached, and valued at not over nine cents per square yard, one and one-fourth cents per square yard; if dyed, colored, stained, \* \* \* or printed, and valued at not over twelve cents per square yard, two cents per square yard: cotton cloth, not bleached, dyed, colored, stained, painted, or printed, exceeding fifty and not exceeding one hundred threads to the square inch, counting the warp and filling, and valued at not over seven cents per square yard, not exceeding six square yards to the pound, one and one-fourth cents per square yard; exceeding six and not exceeding nine square yards to the pound, one and one-half cents per square yard; exceeding nine square yards to the pound, one and three-fourths cents per square yard; cotton cloth, not bleached, dyed, colored, stained, painted, or printed, not exceeding one hundred threads to the square inch, counting the warp and filling, and valued at over seven and not over nine cents per square yard, two and one-fourth cents per square yard; valued at over nine and not over ten cents per square yard, two and three-fourths cents per square yard; valued at over ten and not over twelve and one-half cents per square yard, four cents per square yard; valued at over twelve and one-half and not over fourteen cents per square yard, five cents per square yard; valued at over fourteen cents per square yard, six cents per square yard, but not less than twenty-five per centum ad valorem; cotton cloth, exceeding fifty and not exceeding one hundred threads to the square inch, counting the warp and filling, if bleached, and valued at not over nine cents per square yard, not exceeding six square yards to the pound, one and one-half cents per square yard; exceeding six and not exceeding nine square yards to the pound, one and three-fourths cents per square yard; exceeding nine square yards to the pound, two and one-fourth cents per square yard; cotton cloth, not exceeding one hundred threads to the square inch, counting the warp and filling, if bleached, and valued at over nine and not over eleven cents per square yard, two and three-fourths cents per square yard; valued at over eleven and not

## ACT OF 1913.

PAR. 252. Cotton cloth, not bleached, dyed, colored, stained, painted, printed, woven figured, or mercerized, containing yarns the average number of which does not exceed number nine,  $7\frac{1}{2}$  per centum ad valorem; exceeding number nine and not exceeding number nineteen, 10 per centum ad valorem; exceeding number nineteen and not exceeding number thirty-nine,  $12\frac{1}{2}$  per centum ad valorem; exceeding number thirty-nine and not exceeding number forty-nine,  $17\frac{1}{2}$  per centum ad valorem; exceeding number forty-nine and not exceeding number fifty-nine, 20 per centum ad valorem; exceeding number fifty-nine and not exceeding number seventy-nine,  $22\frac{1}{2}$  per centum ad valorem; exceeding number seventy-nine and not exceeding number ninety-nine, 25 per centum ad valorem; exceeding number ninety-nine,  $27\frac{1}{2}$  per centum ad valorem. Cotton cloth when bleached, dyed, colored, stained, \* \* \* printed, woven figured, or mercerized, containing yarn the average number of which does not exceed number nine, 10 per centum ad valorem; exceeding number nine and not exceeding number nineteen,  $12\frac{1}{2}$  per centum ad valorem; exceeding number nineteen and not exceeding number thirty-nine, 15 per centum ad valorem; exceeding number thirty-nine and not exceeding number forty-nine, 20 per centum ad valorem; exceeding number forty-nine and not exceeding number fifty-nine,  $22\frac{1}{2}$  per centum ad valorem; exceeding number fifty-nine and not exceeding number seventy-nine, 25 per centum ad valorem; exceeding number seventy-nine and not exceeding number ninety-nine,  $27\frac{1}{2}$  per centum ad valorem; exceeding number ninety-nine, 30 per centum ad valorem; plain gauze or leno woven cotton nets or nettings shall be classified for duty as cotton cloth.

## ACT OF 1909.

over twelve cents per square yard, four cents per square yard; valued at over twelve and not over fifteen cents per square yard, five cents per square yard; valued at over fifteen and not over sixteen cents per square yard, six cents per square yard; valued at over sixteen cents per square yard, seven cents per square yard, but not less than twenty-five per centum ad valorem; cotton cloth, exceeding fifty and not exceeding one hundred threads to the square inch, counting the warp and filling, if dyed, colored, stained, \* \* \* or printed, and valued at not over twelve cents per square yard, not exceeding six square yards to the pound, two and three-fourths cents per square yard; exceeding six and not exceeding nine square yards to the pound, three and one-fourth cents per square yard; exceeding nine square yards to the pound, three and one-half cents per square yard; cotton cloth, not exceeding one hundred threads to the square inch, counting the warp and filling, if dyed, colored, stained, \* \* \* or printed, and valued at over twelve and not over twelve and one-half cents per square yard, three and three-fourths cents per square yard; valued at over twelve and one-half and not over fifteen cents per square yard, five cents per square yard; valued at over fifteen and not over seventeen and one-half cents per square yard, six and one-half cents per square yard; valued at over seventeen and one-half and not over twenty cents per square yard, seven and one-half cents per square yard; valued at over twenty cents per square yard, nine cents per square yard, but not less than thirty per centum ad valorem.

PAR. 316. Cotton cloth, not bleached, dyed, colored, stained, painted, or printed, exceeding one hundred and not exceeding one hundred and fifty threads to the square inch, counting the warp and filling, and not exceeding four square yards to the pound, one and one-half cents per square yard; exceeding four and not exceeding six square yards to the pound, two cents per square yard; exceeding six and not exceeding eight square yards to the pound, two and one-half cents per square yard; exceeding eight square yards to the pound, two and three-fourths cents per square yard; any of the foregoing valued at over nine and not over ten cents per square yard, three cents per square yard; valued at over ten but not over twelve and one-half cents per square yard, four and

square yards to the pound, six and one-half cents per square yard; any of the foregoing, bleached, and valued at over sixteen and not over twenty cents per square yard, eight cents per square yard; valued at over twenty and not over twenty-five cents per square yard, eleven and one-fourth cents per square yard; valued at over twenty-five cents per square yard, twelve and one-half cents per square yard, but not less than forty per centum ad valorem; if dyed, colored, stained, \* \* \* or printed, and not exceeding three square yards to the pound, six and one-half cents per square yard; exceeding three square yards to the pound, eight cents per square yard; any of the foregoing, dyed, colored, stained, \* \* \* or printed, and valued at over twenty and not over twenty-five cents per square yard, eleven and one-fourth cents per square yard; valued at over twenty-five cents per square yard, twelve and one-half cents per square yard, but not less than forty per centum ad valorem.

## ACT OF 1913.

## COUNTABLE COTTON CLOTHS.

(See Survey I-3.)

*Description and uses.*—Cotton cloth is a term used to include all loom-woven fabrics in the piece if over 12 inches in width, whether made on a plain loom or on looms with dobby, Jacquard, or other special attachments. Paragraph 903 includes all cotton cloths except the following, more specifically provided for elsewhere: Lappets and swivel (par. 905); sateens woven with 8 or more harness (par. 905); tire fabrics (par. 905); filled or coated cotton cloths, including tracing cloth, oilcloths, and window hollands (par. 906); waterproof cloth (par. 906); those containing silk or artificial silk (par. 907); Jacquard woven upholstery cloths (par. 908); pile fabrics (par. 909); and table damask (par. 910).

The main points of demarcation between cloths are the yarn counts and their spacing (ends and picks per square inch), the weave, the weight, the width, and the finish. All of these affect the cost, but the average yarn count is, in most cases, the primary cost-determining factor.

All cloths are included in the five-color classification: unbleached, bleached, printed, piece-dyed, and yarn-dyed. According to weave, cloths may be divided into plain fabrics (including plain-woven, twill, and sateen), figured fabrics (made with the assistance of special attachments such as dobbies, Jacquards, lappets, or swivels), and pile fabrics. The majority of cotton cloths are plain, made of unbleached yarns not over 40s count, have between 80 and 200 threads per square inch, and are between 25 and 45 inches in width.

*Production* in 1914 of woven goods, including plain, figured, and pile fabrics (but excluding narrow fabrics of 12 inches and under),

amounted to 6,813,540,681 square yards, valued at \$489,985,277, from 672,754 looms, of which 30.9 per cent were automatic. Corresponding statistics for 1919 were 6,232,842,000 square yards (1,819,980,000 pounds), valued at \$1,487,723,000, produced on 691,738 looms, of which 51.3 per cent were automatic. The United States has more automatic looms than are contained in all other countries. The main cotton-cloth producing States are Massachusetts, South Carolina, North Carolina, Rhode Island, and Georgia.

*Imports* of countable cotton cloth are less than 1 per cent of domestic consumption. Annual imports during the 30 fiscal years ended June 30, 1920, averaged 53,916,530 square yards, valued at \$9,310,321. Imports in 1914 were 58,621,496 pounds, valued at \$11,523,829. The United Kingdom has always supplied the bulk of such cotton cloths as were required from abroad, particularly dyed linings (including venetians); fine, plain white goods, such as muslins, cambrics, lawns, and voiles; high-grade ginghams; piques; and fancy shirtings and dress goods. Switzerland supplies fine white goods, such as lawns, organdies, and dotted Swiss; and France supplies principally plain and novelty dress goods. Imports from Germany are mainly novelty dress goods. Imports from Japan are chiefly of the specialty known as "Japanese crêpe."

Imports of cotton cloths are supplementary, rather than directly competitive, and are confined largely to goods of a quality or finish different from the domestic. Investigation by the Tariff Commission shows that the bulk of the imported cloths are sold on the American market at higher prices than are obtained for the nearest comparable and competitive domestic cloths. Certain cloths, such as dotted Swisses, and transparent organdies of extremely fine yarn count, are not made here at all.

Recent statistics of imports follow:

Calendar year.	Quantity.	Value.	Duty.
	<i>Square yards.</i>		
1918.....	37,450,688	\$12,599,751	\$2,292,642
1919.....	47,846,024	17,047,514	3,675,772
1920.....	124,446,600	44,913,694	9,857,887
1921 (9 months) <sup>1</sup> .....	76,137,895	34,435,969	.....

<sup>1</sup> Includes 2,144,038 square yards, valued at \$4,422,170, under the emergency tariff act.

*Exports* have exceeded imports in every year since 1875, and the net result of American foreign trade in countable cotton cloth during the fiscal years 1821-1920 was a favorable trade balance of almost half a billion dollars. This is shown as follows:

*One hundred years of imports and exports of countable cotton cloth.*

Fiscal years.	Total imports.	Total exports.	Balance of trade.
1821-1875.....	\$583,867,993	\$155,955,090	<sup>1</sup> \$427,912,903
1876-1920.....	331,939,762	1,238,715,376	<sup>2</sup> 906,775,614
Total 1821-1920.....	915,807,755	1,394,670,466	<sup>2</sup> 478,862,711

<sup>1</sup> Unfavorable.

<sup>2</sup> Favorable.

Exports during the 30 fiscal years 1891-1920 averaged per annum 120,037,628 linear yards, valued at \$10,861,189. Exports in 1914 were 414,860,013 yards, valued at \$28,844,627. Exports now include a great variety of fabrics, not only coarse-yarn sheetings, drills, denims, and cotton trouserings, and medium-yarn prints, sateens, gingham, and voiles, but also fine-yarn goods such as India linons and Persian lawns, and fancy fabrics, including those made with silk and artificial silk ornamentation. During the past decade the main purchasers have been the Philippine Islands, Cuba, China, Central America, Canada, Colombia, and Mexico.

Exports for the calendar years 1918-1921 were as follows:

	1918	1919	1920	1921 (9 months)
Quantity (yards).....	544,174,574	683,045,326	818,750,954	393,811,476
Value.....	\$107,519,333	\$151,997,817	\$238,153,557	\$52,957,505

*Important changes in classification.*—Paragraph 903 covers all cotton cloth in the piece, not specially provided for. The fabrics here included are known as “countable cotton cloths,” because the threads have to be counted in ascertaining the average yarn count on which the progressive duties are based; this term distinguishes them, on the one hand, from the *eo nomine* cloths where the threads do not have to be counted in ascertaining the duty, and, on the other, from articles made of cotton cloth.

Countable cotton cloths have been divided into the three classes—namely, basic, bleached, and printed, dyed, colored, or woven-figured. The basic classification includes only unbleached plain (i. e., plain-woven, twilled, or sateen) cloths, listed as “not bleached, printed, dyed, colored, or woven-figured.” The word “colored” is used, in addition to the terms “printed” and “dyed,” in order to cover cloths made with printed, dyed, or partly dyed yarns.

The term “stained” has been omitted as tautological. A stained cloth must necessarily be dyed either in the yarn or in the piece and would undoubtedly be covered by the terms “dyed” or “colored.” The appraiser at New York has no record of any cloth listed as stained. The term “painted” has been omitted as of no effect, because such cloth is more specifically provided for in paragraph 906 as “coated” cloth. The appraiser at New York states that in his opinion no administrative difficulty will ensue because of the omission of the two terms mentioned.

The differential on mercerized cloth has been omitted because of representations made to the Tariff Commission to the effect that cloths are mercerized more cheaply in this country than abroad.

In levying progressive rates of duty on cotton cloth it is necessary to set up some standard on which to base the progression. Under preceding acts experience with double standards, such as the thread count and weight, and triple standards, such as the thread count, weight, and value, has demonstrated the advisability of using the single standard of the official average yarn count derived by simple arithmetic from the thread count and weight. Any standard that is adopted must be more or less arbitrary, because of the many types of cotton cloth, but conversion costs vary more in conformity to the variation in average yarn count than to any other factor or group of

factors. The average yarn count as a standard on which to base progressive rates of duty is therefore the most scientific and equitable that can be devised; and it has the further merit of being easy of administration. The same standard is used in the act of 1913, but with group progression, entailing a jump in rates of duty between successive groups of cloths, and with ad valorem rates. There have been here substituted individual count progression and specific rates.

Cloth duties have usually been stated in terms of cents per square yard. "Cents per pound" has been substituted as being easy of application and as facilitating the correct adjustment of duties to values. In whatever terms stated, prices on cotton cloth are primarily based on the pound, since both cotton and cotton yarn are sold by the pound. Yarns and cloths are so closely related that progressive rates of duty on the one should be adjusted with regard to the other; this is difficult unless a common base is used, and the only one possible is the pound.

Over 90 per cent of the domestic cotton yarns and of cloths made therefrom do not exceed No. 40; this marks the ordinary ring-spinning limit of short-staple upland cotton of not over  $1\frac{1}{16}$  inches in length. For cotton cloth, as for cotton yarn, it has therefore been deemed advisable to have one rate of progression apply up to No. 40 yarn count, and to use another and somewhat steeper rate of progression on cloths made of finer yarns.

For each of the three divisions of cloth there are provided not only progressive specific rates of duty, but also minimum ad valorem rates. As the main competition from abroad is on cloths with average yarn counts between 40 and 100, the minimum ad valorem rates of duty are made progressive up to No. 100 and thereafter remain stationary.

---

#### PARAGRAPH 904.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 904. The term cotton cloth, or cloth, wherever used in this schedule, unless otherwise specially provided for, shall be held to include all woven fabrics of cotton, in the piece, whether figured, fancy, or plain, and shall not include any article, finished or unfinished, made from cotton cloth. In the ascertainment of the condition of the cloth or yarn upon which the duties imposed upon cotton cloth are made to depend, the entire fabric and all parts thereof shall be included. The average number of the yarn in cotton cloth herein provided for shall be obtained by taking the length of the thread or yarn to be equal to the distance covered by it in the cloth in the condition as imported, except that all clipped threads shall be measured as if continuous; in counting the threads all ply yarns shall be separated into singles and the count taken of the total singles; the weight shall be taken after any excessive sizing is removed by boiling or other suitable process.

## ACT OF 1909.

## ACT OF 1913.

PAR. 320. The term cotton cloth, or cloth, wherever used in the paragraphs of this schedule, unless otherwise specially provided for, shall be held to include all woven fabrics of cotton in the piece or cut in lengths, whether figured, fancy, or plain, the warp and filling threads of which can be counted by unraveling or other practicable means, and shall not include any article, finished or unfinished, made from cotton cloth. In determining the count of threads to the square inch in cotton cloth, all the warp and filling threads, whether ordinary or other than ordinary, and whether clipped or unclipped, shall be counted. In the ascertainment of the weight and value, upon which the duties, cumulative or other, imposed upon cotton cloth are made to depend, the entire fabric and all parts thereof, and all the threads of which it is composed, shall be included. The terms bleached, dyed, colored, stained, mercerized, painted, or printed, wherever applied to cotton cloth in this schedule, shall be taken to mean respectively all cotton cloth which either wholly or in part has been subjected to any of these processes, or which has any bleached, dyed, colored, stained, mercerized, painted, or printed threads in or upon any part of the fabric.

PAR. 253. The term cotton cloth, or cloth, wherever used in the paragraphs of this schedule, unless otherwise specially provided for, shall be held to include all woven fabrics of cotton, in the piece, whether figured, fancy, or plain, and shall not include any article, finished or unfinished, made from cotton cloth. In the ascertainment of the condition of the cloth or yarn upon which the duties imposed upon cotton cloth are made to depend, the entire fabric and all parts thereof shall be included. The average number of the yarn in cotton cloth herein provided for shall be obtained by taking the length of the thread or yarn to be equal to the distance covered by it in the cloth in the condition as imported, except that all clipped threads shall be measured as if continuous; in counting the threads all ply yarns shall be separated into singles and the count taken of the total singles; the weight shall be taken after any excessive sizing is removed by boiling or other suitable process.

*Important changes in classification.*—Paragraph 253 of the act of 1913 is adopted almost without change as suitable phrasing to define the use of the official average yarn count as the basic standard of progression. The phrase “in the paragraphs of” is omitted as unnecessary.

The first sentence of paragraph 904 defines cotton cloth and states that it does not include any articles made from cotton cloth. The second sentence states that, in ascertaining the condition of the cloth for dutiable purposes, the entire fabric and all parts thereof shall be included; this wording is clear and there has been no litigation as to its meaning.

The average number of the yarn is next stated to mean the number as ascertained by the “straight-line” method, whereby all yarn in the cloth is considered as lying in a straight line without regard to contraction. This official average-yarn count is easily ascertainable, by simple arithmetic, from the number of single threads per square inch and the weight. The Treasury has not only stated rules governing the calculation, but has published tables wherein it can be found for any cloth without calculation.

Since by the straight-line method of paragraph 904 the yarn length and the cloth length, in any given weight of cloth, are regarded as being the same, whereas the yarn length, by reason of the threads having to bend around each other, is actually greater than the cloth length, it is obvious that the official average yarn count will, except in the case of clipped fabrics, be less than the

actual average yarn count. This, however, does not affect its value as a standard between different cloths.

It is to be noted that the expression "except that all clipped threads shall be measured as if continuous" raises the average yarn count (by reason of the use of the actual weight of the fabric after it is clipped together with a longer length of yarn than is actually contained therein) of all fabrics with clipped threads. This serves to raise the rate of duty above that which would apply to a cloth constructed in the same way but not clipped, and thus automatically provides a differential for any extra cost involved in making clip spot fabrics.

### PARAGRAPH 905.

#### H. R. 7456.

PAR. 905. Cotton cloth with extra threads introduced by means of the lappet or swivel shall be dutiable at the rate on the basic cloth and, in addition thereto,  $7\frac{1}{2}$  per centum ad valorem.

Cotton sateens, woven with eight or more harness, shall pay, in addition to the rate on cotton cloth, 10 per centum ad valorem.

Tire fabric or fabric for use in pneumatic tires, including cord fabric, 25 per centum ad valorem.

#### ACT OF 1909.

PAR. 323. In addition to the duty or duties imposed upon cotton cloth by the various provisions of this section, there shall be paid the following cumulative duties, the intent of this paragraph being to add such duty or duties to those to which the cotton cloth would be liable if the provisions of this paragraph did not exist, namely: On all cotton cloth in which other than the ordinary warp and filling threads are used to form a figure or fancy effect, whether known as lappets or otherwise, one cent per square yard if valued at not more than seven cents per square yard, and two cents per square yard if valued at more than seven cents per square yard; on all cotton cloth mercerized or subjected to any similar process, one cent per square yard.

PAR. 330. \* \* \* tire fabric or fabric suitable for use in pneumatic tires. \* \* \* made of cotton or other vegetable fiber, and india rubber, or of which cotton or other vegetable fiber is the component material of chief value. \* \* \* forty-five per centum ad valorem; \* \* \*

[No corresponding provision for cotton sateens.]

#### SENATE AMENDMENTS.

#### ACT OF 1913.

PAR. 262. \* \* \* tire fabric or fabric suitable for use in pneumatic tires, \* \* \* made of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value, or of cotton or other vegetable fiber and india rubber, \* \* \* 25 per centum ad valorem; \* \* \*

[No corresponding provision for the other commodities; see par. 252.]

## LAPPETS AND SWIVELS; SATEENS; TIRE FABRICS.

(See Survey I-4 and Report T. I. S.—10.)

*Description and uses.*—Lappets are cloths ornamented in zigzag patterns by extra warp threads introduced by means of needle bars. Lappets are usually cheap fabrics which have a certain limited demand for curtain and dress use. Swivels are cloths ornamented in small spot or figured patterns by extra filling threads introduced by a series of small shuttles operated by rack and pinion. After the regular shuttle carrying the ground filling has been thrown through the shed of the warp, a special shed is opened for the introduction of the small shuttles carrying the decorative threads, and each of these in its traverse covers only the distance required for the figure to be produced. Each swivel shuttle can, if desired, carry a different color; a single figure will, however, seldom exceed two colors. The most staple form of swivel goods is the "dotted Swiss," consisting of one-color or white dots on a one-color or white lawn ground.

Cotton cloths which are constructed in the same manner as silk satins, with the object of producing a smooth and lustrous surface, are termed sateens. In sateens the face is practically all warp or all filling, according to whether it is a warp sateen or a filling sateen, and the interlacings of the yarns predominating on the face are so scattered as to prevent any obvious twill or other design, and to permit the face yarns to float loose between points of interlacing. The long floats lying side by side hide the interlacings and deflect the light in one direction, thus giving the smooth lustrous effect. This luster is improved by mercerizing, schreiner, and other special finishing processes. Sateens are plain cloths made on ordinary cam looms using five or more harness; where there are a large number of threads to the inch the dobby-head lift is substituted. Venetian linings are mainly sateens woven with eight or more harness and finished to resemble silk linings.

Tire fabric, or fabric for use in pneumatic tires, includes various types of cotton cloths used, together with rubber, in making automobile tires. Cord fabric is a peculiar type of tire fabric, consisting of a number of cords held parallel by occasional picks of filling; a typical cord fabric has 26 ends per inch of 23/5 ply yarn cabled 3-fold, and 2½ picks per inch of 23s single yarn. These fabrics are usually woven in wide widths, particularly the 48, 54, and 60 inch.

*Production* of lappets is not recorded, but is known to be small. Cotton swivels are not now made in the United States. Production of twills and sateens in 1914 amounted to 392,109,000 square yards, valued at \$32,892,000; in 1919, to 424,478,000 square yards (131,537,000 pounds), valued at \$101,057,000, but it is not shown how much of this consisted of sateens woven with 8 or more harness. Prior to the war 8-harness venetians were largely imported, but the demand is now mainly supplied by domestic mills.

Production in 1919 of tire duck was 121,745,000 square yards (128,174,000 pounds), valued at \$143,086,000; and of other tire fabrics 36,806,000 square yards (29,917,000 pounds), valued at \$32,602,000. The United States produces over 80 per cent of the automobile tires of the world, and a corresponding amount of the tire fabric.

*Imports* of lappets, swivels, and sateens are not separately recorded. It is known, however, that lappets constitute a minor item, whereas swivels and sateens are among the most important of the countable cotton cloth imports, although the importation of the latter, mainly 8-harness venetians, has declined before the increasing domestic competition. Venetians are almost entirely from England, whereas cotton swivels are mainly the products of hand looms in Switzerland and France.

Imports of tire fabrics amounted to 2,542 yards, valued at \$4,726, in 1919; and to 48,246 square yards, valued at \$55,637, in 1920. Imports during the first nine months of 1921 were 3,017 square yards, valued at \$2,837.

*Exports* of the three classes of cotton cloths here mentioned are not recorded separately. Exports of 8-harness warp sateens are known to be fairly substantial. Exports of tire fabrics are probably small, but there is a large export, particularly to Europe, of automobile tires into which such fabric enters.

*Important changes in classification.*—Paragraph 905 provides special rates of duty, higher than those applying under the provisions of paragraph 903, to three special types of cotton cloths, viz, to lappets and swivels, to sateens woven with eight or more harness, and to tire fabrics.

Lappets and swivels are given a differential over other cloths of the same construction and weight in order to compensate for any extra cost involved in their manufacture. The act of 1909, in paragraph 323, likewise provided for such differential "on all cotton cloth in which other than the ordinary warp and filling threads are used to form a figure or fancy effect." This provision applied to three, and only three, types of cloth; that is (1) cloths in which extra warp threads are introduced by means of the lappet attachment, (2) cloths in which extra filling threads are introduced by means of the swivel attachment, and (3) cloths in which certain threads are allowed to float, to be afterwards removed by shearing or clipping. The third class is, as previously noted, given a differential by means of the provision in paragraph 904 that all clipped threads shall be counted as if continuous. This leaves only two cloths of the 1909 grouping, viz, lappets and swivels, and these are here provided for by name and given a differential rate of duty that is cumulative on the basic cloth. In applying this cumulative rate it will be necessary to ascertain the number of threads per square inch in the basic cloth, together with the weight after the extra figuring threads are removed, in order to ascertain the official average yarn count and the regular duty applicable thereto under paragraph 903, and then to add thereto the cumulative differential rate here provided.

The second part of this paragraph, providing for a cumulative differential on sateens woven with eight or more harness, is an entirely new provision. It is intended particularly to cover venetians and grey goods to be finished into venetians. Venetians are dyed and mercerized and schreinered cloths of close texture, most of them being 8-harness sateens, which are used for various purposes, particularly for linings. Prior to the war cotton venetians were almost entirely imported and constituted the largest item in the list of

countable cotton cloths. Their manufacture in this country developed during the war and is now substantial.

The third section of this paragraph covers tire fabrics. Heretofore these have been provided for in the "small wares" paragraph, but as they are wide fabrics they are more logically placed here as special cloths.

*Suggested changes.*—The advisability of a special differential on sateens woven with eight or more harness is questionable. The manufacture of venetians is now firmly established, and it would seem that such cloths should be dutiable under paragraph 903 at whatever progressive rates are provided for other countable cotton cloths. Since venetians constitute one of the largest items of imported countable cotton cloths, the levying of additional duty would mean a substantial increase in the average rate of duty applicable to countable cotton cloths. It would also necessitate the examination of every sateen to determine whether it is made with eight or more harness, and this would add considerably to the work of customs examiners. This provision might well be omitted, with the intent that all cotton sateens fall under paragraph 903.

## PARAGRAPH 906.

### H. R. 7456.

### SENATE AMENDMENTS.

PAR. 906. Tracing cloth, 5 cents per square yard and 17 per centum ad valorem; cotton window hollands, all oilcloths (except silk oilcloths and oilcloths for floors), and filled or coated cotton cloths not specially provided for, 3 cents per square yard and 17 per centum ad valorem; waterproof cloth composed wholly or in chief value of cotton or other vegetable fiber, whether or not in part of india rubber, 5 cents per square yard and 20 per centum ad valorem.

### ACT OF 1909.

### ACT OF 1913.

PAR. 321. \* \* \* Cotton cloth filled or coated, all oilcloths (except silk oilcloths and oilcloths for floors), and cotton window Hollands, three cents per square yard and twenty per centum ad valorem; tracing cloth, five cents per square yard and twenty per centum ad valorem.

PAR. 347. \* \* \* waterproof cloth composed of cotton or other vegetable fiber, whether composed in part of india rubber or otherwise, ten cents per square yard and twenty per centum ad valorem.

[See opposite Par. 903 for painted cotton cloth, omitted there where stars appear.]

PAR. 254. \* \* \* tracing cloth, 30 per centum ad valorem; cotton cloth filled or coated, all oilcloths (except silk oilcloths and oilcloths for floors), and cotton window hollands, 25 per centum ad valorem; waterproof cloth composed of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value or of cotton or other vegetable fiber and india rubber, 25 per centum ad valorem.

[See opposite Par. 903 for painted cotton cloth, omitted there where stars appear.]

## SPECIAL CLOTHS (COATED, FILLED, OR WATERPROOF).

(See Survey I-4.)

## GENERAL.

Paragraph 906 covers special cloths (filled, coated, or waterproof), which were provided for in preceding acts with very similar wording. Since tracing cloth, window hollands, and oilcloths are all filled, coated, or filled and coated, those not specifically mentioned are provided for in a basket clause: "and filled or coated cotton cloths not specially provided for."

A filled cloth is one in which all the interstices are filled flush with the top of the weave with a filler of starch or other material, the whole being smoothed down in the operation of the filling machine so as to leave the weave evident through the starch or other materials applied. The filler makes the cloth opaque or nearly opaque, and adds to the weight and stiffness. Among the various filling substances are starch, china clay, chalk, plaster of Paris, white lead, glue, Glauber's salt, and glucose. Typical examples of filled cloths are window hollands and heavily sized grey shirtings.

A coated cloth may be more or less filled in the interstices, but the primary requisite is that the surface be coated with a plaster finish at the expense of the face. The coating materials consist of varnish, paint, pigments, etc. Typical examples of coated cloths are those used in the sign-painting trade, and those used for tags, bookbinder's cloth, and imitation vellum, "green cloth" (a fabric treated with a solution of copper and wax and used in making artificial flowers), artificial leather, and the like. A coated cloth is usually, but not necessarily, opaque. Transparent goods such as tracing cloth and "near glass" (used for covering goods on the counter and for making certain styles of lamp shades) are classed as coated cloth.

## TRACING CLOTH.

*Description and uses.*—Tracing cloth is a plain-woven cloth, almost always of cotton, that is processed by filling and coating to make a smooth transparent fabric, glazed on one side but dull finished on the other, that will take ink without blurring. It is used by draftsmen, architects, and engineers in duplicating drawings of plans for buildings, machinery, and construction work in general. The transparent cloth is placed over the original plan and the lines inked in; this is then put over blue-print paper and exposed to sunlight, or to such high-power artificial light as the arc or the mercury globe, in order to secure blue-print reproductions. Specially prepared tracing paper, although not so durable as the tracing cloth, finds considerable use as a cheaper substitute.

*Production.*—The manufacture of tracing cloth in the United States was inaugurated about 1906 by a firm which ceased production in 1914. Another firm, started in 1911, developed to a point where it supplied about half of the domestic demand, but closed down in 1921. In both instances the failure to survive was due to the preference of the trade for the old-established British brands; right or wrong, they regarded the domestic article as of inferior quality. Another company now being formed will undertake manufacture in 1922.

*Imports* are almost entirely from England, mainly from one firm which is an amalgamation of several firms manufacturing various types of coated and filled cloths. Tracing cloth was first mentioned in the act of 1909. During the period from August 6, 1909, to June 30, 1920, inclusive, annual imports averaged 2,339,565 square yards, valued at \$484,414. Imports in 1914 were 2,051,693 square yards, valued at \$347,028.

Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.
	<i>Sq. yards.</i>		
1918.....	3,037,266	\$861,077	\$258,323
1919.....	1,346,996	469,807	140,942
1920.....	2,753,192	1,167,082	350,125
1921 (9 months) <sup>1</sup> .....	606,377	271,854	.....

<sup>1</sup> Includes 3,745 pounds, valued at \$12,407, under the emergency tariff act.

*Exports* are not recorded.

#### COTTON WINDOW HOLLANDS.

*Description and uses.*—Cotton window hollands are used in making roller shades for windows and doors. They are ordinary cotton sheetings which have been filled to make them more or less opaque, and are finished by bleaching, or dyeing, and beetling.

*Production* is not recorded, but is steadily increasing and supplies the great bulk of the domestic demand.

*Imports* are mainly from one Scotch firm which has a long-established trade and which finds a limited market, at a higher price than the domestic, on the basis of superior finish. These goods, which are mainly in ecru and other light shades, are finished slowly and carefully with old-fashioned wooden faller beetles, whereas domestic goods are, as a rule, beetled by quicker-acted steel hammers.

Cotton window hollands constitute the bulk of the goods which are brought together in import statistics under the title "cotton cloth filled or coated, all oilcloths (except silk oilcloths and oilcloths for floors), and cotton window hollands." Annual imports of this class of goods during the period August 6, 1909, to June 30, 1920, inclusive, averaged 2,197,164 square yards, valued at \$350,383. In 1914 they were 3,018,050 square yards, valued at \$420,775.

Recent figures for such inclusive imports have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Sq. yds.</i>		
1918.....	613,835	\$190,853	\$47,713
1919.....	612,764	219,650	54,913
1920.....	930,299	322,410	80,603
1921 (9 months) <sup>1</sup> .....	383,020	140,409	.....

<sup>1</sup> Includes 10,253 pounds, valued at \$10,518, under emergency tariff act.

*Exports* are not recorded, but are substantial. Australia is one of the main markets and is reported to prefer American-made window hollands in the deeper colors because these are mineral dyed and faster to sunlight than any produced in Europe.

## OILCLOTHS (EXCEPT OF SILK AND FOR FLOORS).

*Description and uses.*—The oilcloths included in paragraph 906 are for covering tables, shelves, and walls, and for upholstering automobiles, carriages, couches, etc. For the first-named purpose a thin pliable cotton cloth, usually of light sheeting or print-cloth, is used. This cloth is covered with several coatings of linseed oil, benzine, ocher, or other pigments, china clay sometimes being added for weighting, and is usually finished by printing and varnishing. Oilcloth for upholstering is known as enameled cloth and is made on a cotton base of sheeting, duck, twill, or sateen, which is sized, coated, and varnished; specially engraved rollers are usually employed to impress on the surface grained finishes of various kinds.

*Production* in 1914 was 59,358,872 square yards of table oilcloth, valued at \$6,025,348, and 18,357,097 square yards of enameled oilcloth, valued at \$2,495,255. Production in 1919 of oilcloth made on a cotton back consisted of 39,842,000 square yards, valued at \$13,147,000, of table, shelf, and wall oilcloth, and 8,461,000 square yards, valued at \$3,421,000, of enameled oilcloth.

*Imports* are not recorded separately but are reported to be small.

*Exports* of "oilcloth and linoleum other than for floors" were valued at \$666,684 in 1914 (fiscal year), and at \$1,281,507 in 1918, \$1,936,544 in 1919, \$3,618,835 in 1920 (calendar years), and at \$1,191,189 for the first nine months of 1921.

## FILLED OR COATED COTTON CLOTHS, N. S. P. F.

*Description and uses.*—Among cloths falling under this clause are artificial leather made on a cotton base, book cloths, buckram and similar cloths stiffened by filling or coating and used for padding suits, "green cloth" used in artificial flower manufacture, tag cloths, imitation vellum, heavily sized shirtings, "near glass," and various other specialties.

*Production* in 1919 of artificial leather consisted of 3,332,000 square yards, valued at \$3,923,000, of pyroxylin coated textiles; and 10,300,000 square yards, valued at \$4,821,000, of other than pyroxylin coated. Production of other specialties here included is not recorded.

*Imports* are not recorded separately but are reported to be small.

*Exports* are not recorded.

## WATERPROOF CLOTH.

*Description and uses.*—Waterproof cloths under paragraph 906 include all those made of cotton or other vegetable fiber, with or without the addition of india rubber, not otherwise specially mentioned.

Waterproof cloths are used for raincoats, auto tops, dress shields, infants' wear, in hospitals, and for many other purposes. Any cloth that is impervious to water, or that is substantially so and intended to turn water, may be classed as a waterproof cloth. Some fabrics invoiced as waterproof cloths and held to be so dutiable are simply close-woven cotton cloths which have undergone no special treatment; others are made by cementing together two cloths (such as the duplex fabric made of a printed cloth and a dyed cloth and used for raincoats) that are otherwise not waterproof. The waterproof cloths

used in domestic trade have for the most part, however, been subjected to various finishing processes, the nature and extent of which are dependent on the service that is expected of the particular goods.

*Production* of waterproof cloths in the United States is large and constantly increasing. There are no data as to the extent of the output, but it is known to run into millions of dollars.

*Imports* were 258,207 square yards, valued at \$88,427 in 1914, fiscal year. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.
	<i>Sq. yds.</i>		
1918.....	270,495	\$190,279	\$47,570
1919.....	61,172	39,146	9,786
1920.....	160,500	121,106	30,276
1921 (9 months) <sup>1</sup> .....	96,753	73,536	.....

<sup>1</sup> Includes 1,263 pounds, valued at \$3,286, under the emergency tariff act.

### PARAGRAPH 907.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 907. Cloth in chief value of cotton, containing silk or artificial silk, 8 cents per square yard and 17 per centum ad valorem: *Provided*, That none of the foregoing shall pay a less rate of duty than 33 $\frac{1}{3}$  per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 321. Cloth, composed of cotton or other vegetable fiber and silk, whether known as silk-striped sleeve linings, silk stripes, or otherwise, of which cotton or other vegetable fiber is the component material of chief value, eight cents per square yard and thirty per centum ad valorem: *Provided*, That no such cloth shall pay a less rate of duty than fifty per centum ad valorem. \* \* \*

PAR. 254. Cloth composed of cotton or other vegetable fiber and silk, whether known as silk-striped sleeve linings, silk stripes, or otherwise, of which cotton or other vegetable fiber is the component material of chief value, \* \* \* 30 per centum ad valorem; \* \* \*.

### COTTON CLOTH CONTAINING SILK OR ARTIFICIAL SILK.

(See Survey I-4.)

*Description and uses.*—Cotton-weaving mills are large users of silk and artificial silk for the production of such fabrics as silk-striped shirtings, sleeve linings, and voiles, and fancy gingham and other fabrics containing silk figures. Cotton mills now dominate the trade in many lines of silk-and-cotton fancies. In recent years artificial silk has been employed as a substitute for silk in the ornamentation of various types of cotton cloth.

*Production* figures are not separately recorded, except in the case of one type of cotton cloth, silk-striped shirtings, of which there were 33,866,000 square yards (5,854,000 pounds), valued at \$12,379,000, produced in 1919. The total is much larger than this, as there has been a marked and steady increase in the use of silk and artificial silk by the cotton industry. The silk industry is also a large user

of cotton, but most silk-and-cotton mixed goods produced in silk mills have silk as the component material of chief value.

*Imports* are negligible as compared with the domestic production. During the 30 fiscal years ended June 30, 1920, imports averaged only 149,583 square yards, valued at \$43,397. In 1914 they were 213,147 square yards, valued at \$67,254.

Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.
	<i>Sq. yds.</i>		
1918 .....	127,467	\$61,550	\$18,465
1919 .....	84,618	45,580	14,574
1920 .....	199,833	113,478	34,043
1921 (9 months) <sup>1</sup> .....	276,206	70,553	.....

<sup>1</sup> Includes 13,158 pounds, valued at \$33,491, under the emergency tariff act.

*Exports* of cotton cloth containing silk or artificial silk are not recorded separately, but are larger than imports.

*Important changes in classification.*—Two changes have been made in the wording previously in use.

The phrase "or other vegetable fiber" has been omitted in order to confine this paragraph exclusively to cloths in chief value of cotton; this was done in consonance with the desire to restrict, so far as feasible, each schedule to the material to which it relates, and also because there are few imports of cloths in chief value of any vegetable fiber, other than cotton, which contain silk or artificial silk; if imported, such cloths should fall under schedule 10.

The second change is the inclusion of cloths, in chief value of cotton, which contain artificial silk. Under the act of 1913 such cloths fell under the basket paragraph of the cotton schedule. One reason for their inclusion here is to avoid the administrative necessity of determining whether the stripes or other ornamental effects in a cloth chiefly of cotton are silk or artificial silk.

The wording has been shortened by the omission of terms such as "silk-striped sleeve linings" and "silk stripes," as these are fully covered without specific mention.

## PARAGRAPH 908.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 908. Tapestries, and other Jacquard woven upholstery cloths, in the piece or otherwise, composed wholly or in chief value of cotton or other vegetable fiber, 30 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 326. \* \* \* tapestries, and other Jacquard figured upholstery goods, weighing over six ounces per square yard, composed wholly or in chief value of cotton or other vegetable fiber; any of the foregoing, in the piece or otherwise, fifty per centum ad valorem.

PAR. 258. \* \* \* tapestries, and other Jacquard figured upholstery goods, composed wholly or in chief value of cotton or other vegetable fiber; any of the foregoing, in the piece or otherwise, 35 per centum ad valorem; \* \* \*.

## JACQUARD-WOVEN UPHOLSTERY CLOTHS IN THE PIECE OR OTHERWISE.

(See Survey I-4.)

*Description and uses.*—The term “Jacquard-woven upholstery cloths,” includes two classes of cloth: (1) Heavy fabrics, such as tapestries, brocades, brocatelles, damasks, armures, and “pocket cloths,” which are used not only for covering furniture, walls, seats in railway coaches and in inclosed automobiles, but as wall hangings, portières, pillow tops, table covers, and mantel and bureau scarfs; and (2) light-weight clipped fabrics, such as madras muslin, used mainly as curtains. The paragraph, as worded, includes only cloths of cotton or other vegetable fiber, woven on a Jacquard loom and intended for upholstery use. These Jacquard-woven upholstery cloths usually have patterns of much larger size and more elaborate character than those used in Jacquard-woven cloths for dress use. The words “or otherwise” after “in the piece” extends the meaning to include tapestry panels and also curtains and other articles made from Jacquard-woven upholstery cloths.

*Production* of cotton tapestries in 1914 was 10,138,000 square yards, valued at \$5,412,000; and in 1919, 21,656,000 square yards (9,580,000 pounds), valued at \$17,157,000. The production of madras muslin and other Jacquard-woven upholstery cloths is not recorded separately. Philadelphia is the main center of production.

*Imports* during the period from August 6, 1909, to June 30, 1920, inclusive, averaged \$608,633 in value per annum, with no record as to quantity. This figure includes substantial amounts of Jacquard figured net and lace which were, by judicial interpretation, permitted entry under paragraph 258 of the act of 1913.

Imports in the fiscal year 1914 was valued at \$634,617.

Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.
	<i>Sq. yds.</i>		
1918.....		\$413, 420	\$144, 697
1919.....	1, 195, 923	422, 269	147, 794
1920.....	6, 111, 494	2, 683, 002	939, 051
1921 (9 months) <sup>1</sup> .....	3, 426, 892	1, 768, 974	.....

<sup>1</sup> Includes 110,079 pounds, valued at \$260,018, under the emergency tariff act.

*Exports* are not recorded.

*Important changes in classification.*—The wording of the two previous acts—“tapestries, and other Jacquard figured upholstery goods”—has been changed to “Tapestries, and other Jacquard woven upholstery cloths.” This was done to prevent Jacquard figured nets and laces, which logically should be dutiable at the higher rates provided for net and lace, from being entered at the rates here provided for special types of Jacquard woven cloth. The act of 1909, by the proviso “weighing over six ounces per square yard,” accomplished the same ends, but the omission of this weight limitation in the 1913 wording led to decisions which have permitted large amounts of goods to come in at a lower rate (35 per cent) than is imposed on

nets, nettings, and laces (60 per cent) in the lace paragraph (358, act of 1913). Plain net now pays 60 per cent duty under the said paragraph 358, but the more expensive Jacquard figured net, if for curtain use, is admitted under paragraph 258 of the act of 1913 at 35 per cent ad valorem. Domestic manufacturers oppose the reinsertion of the weight proviso, which would throw madras muslins into the countable cotton-cloth paragraph, and the wording of paragraph 908 puts madras muslin with heavier woven Jacquard cloths and yet excludes net and lace, which are provided for in paragraph 1430 at higher rates of duty. The Jacquard is an attachment that is used on looms, braiding machines, lace machines, etc. to attain fancy effects, and all fabrics so made are Jacquard figured. Only cloth is woven (net and lace are "made," not woven, and the operator of a lace machine is known as a "lace maker" and not as a weaver), and further strength is added to the use of the word "cloth" by employing "Jacquard woven" in place of "Jacquard figured."

Paragraph 258 of the act of 1913 includes not only Jacquard figured upholstery goods but also cotton chenille and articles made of Jacquard woven goods. Specific mention of these has been omitted because of their small importance. Cotton chenilles have gone out of style, being mainly replaced by tapestries and other goods for upholstery, and imports are negligible. Their omission here permits them to fall without specific mention under the pile fabric paragraph 909. Imports of "Jacquard figured manufactures of cotton"—that is, articles made of Jacquard figured cloth, not specially provided for—are also normally small; they include a variety of articles of little importance individually, and omission of specific mention is with the intent that they fall under the basket paragraph 920.

---

### PARAGRAPH 909.

H. B. 7456.

SENATE AMENDMENTS.

PAR. 909. Pile fabrics, composed wholly or in chief value of cotton, including plush and velvet ribbons, cut or uncut, whether or not the pile covers the whole surface, and manufactures, in any form, made or cut from cotton pile fabrics, 33½ per centum ad valorem; terry-woven fabrics, composed wholly or in chief value of cotton, and manufactures, in any form, made or cut from terry-woven fabrics, 25 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 325. Plushes, velvets, velveteens, corduroys, and all pile fabrics, cut or uncut, whether or not the pile covers the entire surface; any of the foregoing composed of cotton or other vegetable fiber, except flax, not bleached, dyed, colored, stained, painted, or printed, nine cents per square yard and twenty-five per centum ad valo-

PAR. 257. Plushes, velvets, plush or velvet ribbons, velveteens, corduroys, and all pile fabrics, cut or uncut, whether or not the pile covers the entire surface; any of the foregoing composed wholly or in chief value of cotton or other vegetable fiber, except flax, hemp, or ramie; and manufactures or articles in any form, including

## ACT OF 1909.

rem; if bleached, dyed, colored, stained, painted, or printed, twelve cents per square yard and twenty-five per centum ad valorem: *Provided*, That corduroys composed of cotton or other vegetable fiber, weighing seven ounces or over per square yard, shall pay a duty of eighteen cents per square yard and twenty-five per centum ad valorem: *Provided further*, That manufactures or articles in any form including such as are commonly known as bias dress facings or skirt bindings, made or cut from plushes, velvets, velveteens, corduroys, or other pile fabrics composed of cotton or other vegetable fiber, shall be subject to the foregoing rates of duty and in addition thereto ten per centum ad valorem: *Provided further*, That none of the articles or fabrics provided for in this paragraph shall pay a less rate of duty than forty-seven and one-half per centum ad valorem.

## ACT OF 1913.

such as are commonly known as bias dress facings or skirt bindings, made or cut from plushes, velvets, velveteens, corduroys, or other pile fabrics composed of cotton or other vegetable fiber, except flax, hemp, or ramie, 40 per centum ad valorem.

PAR. 264. \* \* \* bath mats, \* \* \* wash rags or cloths \* \* \* any of the foregoing made of cotton, or of which cotton is the component material of chief value, not embroidered nor in part of lace and not otherwise provided for, 25 per centum ad valorem.

PAR. 358. \* \* \* coach, carriage, and automobile laces, \* \* \* 60 per centum ad valorem.

## COTTON PILE FABRICS AND MANUFACTURES OF.

(See Survey I-4.)

*Description and uses.*—Cotton pile fabrics may be divided into two broad classes: (1) Velveteen, corduroy, velvet, and plush, and (2) Turkish toweling and other terry-woven fabrics. The production of both classes of fabrics in the United States has been steadily increasing.

Pile fabrics consist of a foundation cloth covered in whole or in part by short projecting ends or loops made with an extra set of threads. In the case of velveteen and corduroy this extra set of threads consists of filling whereas in the case of velvet and plush it consists of warp. Filling piles are always cut whereas warp piles may be either cut or loop (uncut). Terry-woven fabrics are made by a different method from that used for other pile fabrics and usually have uncut loops on both sides of the cloth.

Velveteens are used for dress and upholstery purposes, also for handbags and shoe tops, and for lining jewelry and silverware boxes. Corduroys are velveteen cords; the finer varieties are used for children's clothing and dress fabrics, whereas the coarser varieties are used for riding trousers and skirts and for suits of men engaged in rough labor and field sports. Cotton plushes are used for cloaks, as upholstery material, etc. Terry cloths are used as Turkish toweling and for bath robes, wash cloths, bathroom mats, etc.

Manufactures of pile fabrics here dutiable include, particularly, portières and other articles used for upholstery and decorative purposes. They do not include any wearing apparel as this is more specifically provided for in paragraph 918.

*Production* of cotton pile fabrics in 1914 included 29,129,000 square yards of velveteens, velvets, plushes, and corduroys, valued at \$8,540,000, and 75,799,000 square yards of terry-woven fabrics valued at

\$9,805,000; in 1919, 20,444,000 square yards of velveteens, velvets, and plushes, 19,863,000 square yards of corduroy, 31,506,000 square yards of Turkish towels and toweling, and 442,000 square yards of other terry weaves, a total of 72,255,000 square yards (43,686,000 pounds), valued at \$51,251,000. The main producers of cotton velveteens, corduroys, and plushes are Pennsylvania, Rhode Island, Massachusetts, and New York; the main producers of Turkish toweling and other terry weaves are North Carolina, Georgia, and Pennsylvania.

*Imports* of cotton pile fabrics during the 30 fiscal years ended June 30, 1920, averaged 5,250,351 square yards, valued at \$1,815,449 annually. The record import was of 15,917,514 square yards in 1897. Imports in 1914 were 4,100,503 square yards, valued at \$2,204,224. Imports of manufactures of cotton pile fabrics were first recorded in 1898 and during the fiscal years 1898-1920 averaged in value only \$45,652 per annum. With the continued development of the domestic industry the field for foreign pile fabrics of cotton has been narrowed down to those of exceptionally high grade and to specialties such as hand-cut velvets. Although imports fluctuate, the tendency is downwards.

Imports of cotton pile fabrics since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Square yds.</i>		
1918.....	747,676	\$598,207	\$239,283
1919.....	589,385	712,032	284,813
1920.....	925,281	969,756	387,902
1921 (9 months) <sup>1</sup> .....	189,209	244,749	.....

<sup>1</sup> Includes 11,968 pounds, valued at \$29,522, under the emergency tariff act.

Imports of manufactures of cotton pile fabrics since 1917 have been as follows:

	1918	1919	1920	1921 (9 months) <sup>1</sup> .
Value.....	\$19,398	\$55,854	\$179,960	\$80,381
Duty.....	7,759	22,342	71,984	.....

<sup>1</sup> Includes 2,505 pounds, valued at \$7,446, under the emergency tariff act.

*Exports* of cotton pile fabrics are not recorded separately but are substantial. An indication is afforded by the Canadian statistics which for the fiscal year ended March 31, 1921, show imports from the United States of cotton velveteens, velvets, and plushes valued at \$320,246; of towels valued at \$285,995; and of toweling in the web valued at \$37,268, although there is not shown how much of the two latter items were terry woven.

*Important changes in classification.*—The term "cotton pile fabrics" is used as inclusive, and specific mention of plushes, velvets, velveteens, and corduroys has been omitted as unnecessary. Terry-woven fabrics are also pile fabrics, but as they are cheaper articles they are provided for by name at a lower rate of duty than is applied to other pile fabrics of cotton. As heretofore, the paragraph

includes manufactures of pile fabrics. To secure the inclusion of manufactures of pile fabrics which properly belong here, particularly Turkish towels, terry-woven bath mats and wash cloths, and velvet polishing cloths, the phrase "nor made of pile fabrics" was inserted after the provision for towels, etc., in paragraph 911.

### PARAGRAPH 910.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 910. Table damask, composed wholly or in chief value of cotton, and manufactures, in any form, composed wholly or in chief value of such damask, 28 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 331. Cotton table damask, forty per centum ad valorem; manufactures of cotton table damask or of which cotton table damask is the component material of chief value, not specially provided for in this section, forty per centum ad valorem.

PAR. 263. Cotton table damask, and manufactures of cotton table damask, or of which cotton table damask is the component material of chief value, not specially provided for in this section, 25 per centum ad valorem.

#### COTTON TABLE DAMASK, AND MANUFACTURES OF.

(See Survey I-4.)

*Description and uses.*—Damask fabrics are usually woven on Jacquard looms, although some varieties are made on doobby looms, and show ornamental patterns, usually elaborate in character, such as fruit, foliage, scrolls, and vases. The figures in the patterns are made by alternately exchanging warp for filling surface and vice versa. The surface threads of the figures lie at right angles to the surface threads of the background, and the rays of light falling on the fabric are dispersed and the pattern is brought out in bold relief, even though the entire fabric be white. Damasks for upholstery fall under the provisions of paragraph 908; damasks dutiable under paragraph 910 are restricted to the specific class known as table damask. While these are generally bleached goods, some are made in colors, e. g., Turkey red damask, made of red and white yarns. Cotton table damask, although mainly Jacquard woven, is made of coarse yarns, between 16s and 30s, from ordinary upland cotton. Cotton table damask is cheaper than linen table damask, for which it is substituted, and is being made in this country in increasing quantities.

Cotton table damask refers to the woven cloth; the principal manufactures are table cloths, napkins, and doilies.

*Production* in 1919 amounted to 27,400,000 square yards (10,495,000 pounds), valued at \$9,507,000. North Carolina, Georgia, Massachusetts, and Maine are the leading producers.

*Imports* during the 30 fiscal years ended June 30, 1920, averaged in value \$463,875 per annum. The values imported in 1914 amounted to \$503,341. The record import, so far as values are concerned, was, in the fiscal year 1920, a total of \$1,662,643, of which \$796,727 consisted of cotton table damask in the piece, and \$865,916 of manufactures thereof. Quantities were not recorded, but taking into con-

sideration the high prices of 1920, it is probable that the \$759,491 worth imported in 1904 was the high-water mark as to quantity. The scarcity and high price of linen have led to the increased use of cotton table damask. Statistics of imports since 1917 follow:

Calendar year.	Quantity.	Value.	Duty.
COTTON TABLE DAMASK.			
	<i>Square yards.</i>		
1918.....		\$645,706	\$161,427
1919.....	1,284,583	565,495	141,374
1920.....	1,148,159	607,688	151,922
1921 (9 months) <sup>1</sup> .....	574,056	268,174	.....

MANUFACTURES OF COTTON TABLE DAMASK.

1918.....		\$459,994	\$114,999
1919.....		625,984	156,496
1920.....		934,371	233,593
1921 (9 months) <sup>2</sup> .....		612,080	.....

<sup>1</sup> Includes 13,874 pounds, valued at \$17,687, under the emergency tariff act.

<sup>2</sup> Includes 8,356 pounds, valued at \$8,790, under the emergency tariff act.

*Exports* are not recorded but are known to be fairly substantial.

*Important changes in classification.*—This paragraph covers the same class of goods as those provided for in paragraph 263 of the act of 1913, that is, cotton table damask and manufactures of; the wording has been clarified and condensed.

*Suggested changes.*—Various types of cotton cloth, such as muslins, Chinese nankeens, coarse colored cottons, and cotton duck, have in the past been made dutiable at relatively high rates during certain periods, and have then dropped back to a tariff level with other cotton cloths. Cotton table damask affords an example of a cloth on which the same procedure might be followed. It is made of coarse counts, the domestic industry supplies the great bulk of the demand, and there is a substantial export. The Tariff Commission is unable to find any reason for the *eo nomine* designation of this cloth at a distinct rate of duty, particularly as the progressive rates of duty levied on other countable cotton cloths under paragraph 903 cover many Jacquard fabrics of much finer yarns and higher percentage of labor cost. Specific mention of manufactures of cotton table damask might be continued for purposes of statistical record.

It is therefore suggested that paragraph 910 be reworded "Manufactures of cotton table damask, in any form, composed wholly or in chief value of cotton," with the intent that cotton table damask in the piece fall under the progressive rates of duty in paragraph 903 without specific mention.

of filling threads, 30 per centum ad valorem; other quilts or bedspreads, wholly or in chief value of cotton, 20 per centum ad valorem; sheets, pillowcases, blankets, towels, polishing cloths, dust cloths, and mop cloths, composed wholly or in chief value of cotton, not Jacquard figured or terry-woven, nor made of pile fabrics, and not specially provided for, 20 per centum ad valorem; table and bureau covers, centerpieces, runners, scarfs, napkins, and doilies, made of plain-woven cotton cloth, and not specially provided for, 23 per centum ad valorem.

## ACT OF 1909.

[No corresponding provision.]

## ACT OF 1913.

PAR. 264. Towels, \* \* \* quilts, blankets, polishing cloths, mop cloths, \* \* \* sheets, pillowcases, \* \* \* any of the foregoing made of cotton, or of which cotton is the component material of chief value, not embroidered nor in part of lace and not otherwise provided for, 25 per centum ad valorem.

[No corresponding provision for the other commodities.]

## HOUSEHOLD ARTICLES OF COTTON.

*Description and uses.*—Quilts, also termed bedspreads, coverlets, and counterpanes, are used as bed covering. The four main types are Marseilles, satin, crochet, and dimity. The first three are Jacquard woven, usually in elaborate designs of bold character. All four are loom-woven fabrics, which are usually finished by bleaching, and with hemmed or bound edges. Honeycomb and Alhambra quilts are of the same class as crochet quilts, differing principally in the type of design used. The term "quilts" also includes padded bed coverings, such as the comfortable. Sheets are made of plain-woven cloth, cut and hemmed in various sizes. Pillowcases are made of plain-woven cloth, some of it tubular, cut to appropriate lengths, sewed, and hemmed at one end. Towels covered by this paragraph refer to ordinary plain and huck towels, and do not include Jacquard-woven towels or Turkish towels. Blankets covered by this paragraph refer to ordinary plain or twilled blankets, and do not include Jacquard-woven blankets. Polishing cloths are small squares of napped cotton fabric, usually flannel, used in the household for polishing and dusting metal, glass, and wood; also in the harness trade and in the automobile-accessory business. Polishing cloths made of velveteen, such as is used for polishing silverware, are dutiable under paragraph 909. Dust cloths are similar to polishing cloths, but are given specific mention because heretofore dutiable under the basket paragraph. Mop cloths are used for scrubbing and may be either plain or leno woven; the filling is usually of cotton waste, jute, or other cheap material. The phrasing "table and bureau covers, centerpieces, runners, scarfs, napkins, and doilies" is used to cover a class

of imports known in the trade as "Japanese blue prints," consisting of articles made of coarse sheeting which has been stencil-dyed in indigo, and imports similar thereto.

*Production* in 1919 of bedspreads and quilts (crochet, Marseilles, and satin) was 24,072,000 square yards (12,700,000 pounds), valued at \$10,245,000; of sheets and pillowcases, 20,817,000 square yards (5,019,000 pounds), valued at \$3,369,000; of cotton blankets of all kinds, 96,621,000 square yards (42,321,000 pounds), valued at \$32,640,000; of towels and toweling (not terry woven), bath mats, wiping and polishing cloths (not pile woven), 43,327,000 square yards (20,809,000 pounds), valued at \$16,786,000. The production of dimity and ripplette quilts is not recorded. Japanese blue prints are also not separately shown in production statistics. Such articles, made in imitation of Japanese designs, were first manufactured during the war, but as the basic cloth is better made than the Japanese, they lack the "oriental novelty" of the imported blue prints and reach a somewhat different class of trade.

*Imports* in the fiscal year 1914 of quilts and blankets were valued at \$116,892; polishing cloths, mop cloths, wash cloths, at \$63,077; sheets and pillowcases, at \$4,836. Imports of huck towels are not recorded separately from imports of Turkish towels, but the total for towels and bath mats was \$154,326 in 1914; most of these were terry woven. Imports of household articles of cotton during the calendar years 1918-1921 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
COTTON BLANKETS AND QUILTS.			
	<i>Number.</i>		
1918.....		\$144,926	\$36,232
1919.....	54,476	168,895	42,204
1920.....	86,817	387,074	96,769
1921 (9 months) <sup>1</sup> .....	45,908	147,433	.....
COTTON SHEETS AND PILLOWCASES.			
1918.....		\$15,563	\$3,891
1919.....	4,911	6,134	1,534
1920.....	16,946	22,317	5,298
1921 (9 months) <sup>2</sup> .....	18,265	21,042	.....
COTTON TOWELS AND BATH MATS.			
1918.....		\$59,395	\$14,849
1919.....	236,927	49,946	12,487
1920.....	410,489	108,682	27,171
1921 (9 months) <sup>3</sup> .....	205,554	48,513	.....
COTTON CLOTHS FOR POLISHING, MOP CLOTHS, AND WASH CLOTHS.			
1918.....		\$7,555	\$1,889
1919.....		7,023	1,756
1920.....		37,723	9,431
1921 (9 months) <sup>4</sup> .....		28,378	.....

<sup>1</sup> Includes 10,315 pounds, valued at \$10,915, under the emergency tariff act.

<sup>2</sup> Includes 752 pounds, valued at \$6,026, under the emergency tariff act.

<sup>3</sup> Includes 2,973 pounds, valued at \$2,676, under the emergency tariff act.

<sup>4</sup> Includes 1,902 pounds, valued at \$707, under the emergency tariff act.

*Exports* are not recorded, but are substantial. Their volume is indicated by Canadian statistics which show imports from the United States for the fiscal year ended March 31, 1921, valued as follows: Bed quilts or spreads, \$235,932; sheets and pillowcases, \$125,595; blankets, \$257,622; also \$285,995 worth of towels, the greater part of which, however, may have been of Turkish towels. It is obvious that, with the exception of Japanese blue prints, exports are larger than imports of the articles covered by this paragraph.

*Important changes in classification.*—In the act of 1913 a number of articles were removed from a basket paragraph of the preceding act and provided for *eo nomine* in paragraph 264. Paragraph 911 is a revision of this paragraph. It comprises four brackets.

The first two brackets cover cotton quilts and bedspreads of all kinds, composed wholly or in chief value of cotton. It is intended that Marseilles and satin quilts shall be assessed one rate of duty, and all other quilts another and lower rate.

The third bracket covers sheets, pillowcases, blankets, towels, polishing cloths, dust cloths, and mop cloths, wholly or in chief value of cotton, when not Jacquard or pile woven. Ordinary cotton blankets are here dutiable but Jacquard woven cotton blankets will fall under basket paragraph 920. Ordinary cotton towels, including huck, are here dutiable; Turkish towels are dutiable under paragraph 910; Jacquard woven towels, not terry, fall under paragraph 920. Ordinary polishing cloths are here dutiable; those made of velveteen, such as Selvyt, are dutiable under paragraph 910. Dust cloths have been taken out of the basket paragraph and given specific mention. Mention of bath mats and wash cloths is omitted because imports are almost entirely terry-woven fabrics which will be dutiable under paragraph 910. Mention of batting has been omitted, letting it go back under the basket paragraph, because imports are small and this article does not properly belong with the others here enumerated.

The fourth bracket is entirely new and has been inserted, not for the purpose of securing a higher rate, but to insure statistical record of the largest items now included under the basket paragraph. These are "Japanese blue prints" and similar articles. These "blue prints," such as covers, centerpieces, etc., are usually stencil-dyed with reproductions of Mount Fuji, rural scenes, flowers, foliage, birds, etc., the basic cloth being mainly coarse sheeting.

table fiber, 10 cents per pound and 12½ per centum ad valorem; boot, shoe, or corset lacings, made of cotton or other vegetable fiber, 15 cents per pound and 12½ per centum ad valorem; loom harness, healds, and collets, made wholly or in chief value of cotton or other vegetable fiber, 25 cents per pound and 20 per centum ad valorem; labels for garments or other articles, composed of cotton or other vegetable fiber, 50 cents per pound and 20 per centum ad valorem; belting, for machinery, composed wholly or in chief value of cotton or other vegetable fiber, or cotton or other vegetable fiber and india rubber, 20 per centum ad valorem.

## ACT OF 1909.

PAR. 330. Bone casings, garters, \* \* \* suspenders and braces, and tubing, any of the foregoing made of cotton \* \* \* and india rubber, or of which cotton \* \* \* is the component material of chief value, and not embroidered by hand or machinery, forty-five per centum ad valorem; spindle banding, woven, braided or twisted lamp, stove, or candle wicking made of cotton or other vegetable fiber, ten cents per pound and fifteen per centum ad valorem; loom harness, healds or collets made of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value, fifty cents per pound and twenty-five per centum ad valorem; boot, shoe, and corset lacings made of cotton or other vegetable fiber, twenty-five cents per pound and fifteen per centum ad valorem; labels for garments or other articles, composed of cotton or other vegetable fiber, fifty cents per pound and thirty per centum ad valorem; belting for machinery made of cotton or other vegetable fiber and india rubber, or of which cotton or other vegetable fiber is the component material of chief value, thirty per centum ad valorem.

PAR. 349. \* \* \* bands, bandings, belts, beltings, bindings, cords, \* \* \* ribbons, tapes, webs, and webbings; \* \* \* all of the foregoing, composed wholly or in chief value of cotton, \* \* \* or other vegetable fiber, or of cotton, \* \* \* or other vegetable fiber and india rubber, or of cotton, \* \* \* or other vegetable fiber, india rubber, and metal, and not elsewhere specially provided for in this section,

## ACT OF 1913.

PAR. 262. Bandings, belts, beltings, bindings, bone casings, cords, tassels, cords and tassels, garters, \* \* \* suspenders and braces, and fabrics with fast edges not exceeding twelve inches in width, all of the foregoing made of cotton \* \* \* or of which cotton \* \* \* is the component material of chief value; or of cotton \* \* \* and india rubber, and not embroidered by hand or machinery; spindle banding, woven, braided, or twisted lamp, stove, or candle wicking made of cotton or other vegetable fiber; loom harness, healds, or collets made of cotton or other vegetable fiber, or of which cotton or other vegetable fiber is the component material of chief value; boot, shoe, and corset lacings made of cotton or other vegetable fiber; and labels for garments or other articles, composed of cotton or other vegetable fiber, 25 per centum ad valorem; belting for machinery made of cotton or other vegetable fiber and india rubber, or of which cotton or other vegetable fiber is the component material of chief value, 15 per centum ad valorem.

PAR. 358. \* \* \* coach, carriage, and automobile laces, \* \* \* 60 per centum ad valorem.

## H. R. 7456.

## SENATE AMENDMENTS.

sixty per centum ad valorem: *Provided*, That no article composed wholly or in chief value of one or more of the materials or goods specified in this paragraph, shall pay a less rate of duty than the highest rate imposed by this section upon any of the materials or goods of which the same is composed:

\* \* \*

## COTTON SMALL WARES.

*Description and uses.*—Paragraph 912 includes narrow woven fabrics which have not been ornamented after leaving the loom, manufactures of such narrow woven fabrics, and certain articles made by braiding or twisting together yarns or threads. These “small wares” are confined mainly to those of which cotton is the component material of chief value. Similar small-wares paragraphs are to be found in the other three textile schedules.

“Fabrics with fast edges not exceeding 12 inches in width” is an inclusive term for narrow woven fabrics, as distinguished from cloth which is a woven fabric over 12 inches in width. These narrow woven fabrics, such as tapes, ribbons, bandings, beltings, bindings, webbings, etc., are made on narrow-ware looms which produce a number of them simultaneously by means of numerous small shuttles positively driven by means of a rack and pinions. Articles made therefrom include bands, belts, cartridge belts, gun slings, webs, saddle girths, etc. Tubings are tubular woven products of the narrow-ware loom; they are used in stem work for artificial flowers, as bone casings in corset manufacture, and for various other purposes. Garters, suspenders, and braces are articles made from narrow fabrics; usually from elastic webbings which are woven with elastic threads in the warp. Cords are made by braiding or cabling three or more threads. Tassels are pendent ornaments ending in a tuft of loose threads or cords. Cords and tassels are formed by securing tassels to cords. Spindle banding is used on spinning machines in transmitting power to the spindles; one type is a cord made by braiding or twisting together rovings or yarns, whereas another type is a narrow woven tape. Wicking for candles is usually a twisted or cabled yarn; wicking for oil-burning lamps and stoves may be either braided or tubular woven. Lacings for boots, shoes, and corsets may be round, flat, or braided; they are usually made on the braiding machine. Loom harness consists of a number of heddles or healds, each with an opening or eye tied in the center, stretched side by side on a flat frame; it is used on the loom, after the warp threads are drawn through the heddle eyes, to govern the order in which the warp threads are interlaced with the filling during weaving. Healds are made from harness twine to form constituent parts of the loom harness. Collets are cords used to hold the loom harness in position on the loom and are made of either flax or cotton. Woven labels for use on garments or other articles are made on a ribbon loom with Jacquard attachment. Belting for machinery is, in the narrower widths, made on webbing looms; the wider widths differ from the other woven fabrics under this paragraph in that they are made on heavy fly-shuttle looms.

*Production* in 1919 was valued at \$40,724,000, as against \$11,525,000 in 1914. It includes \$15,196,000 of round braids (including shoe and corset laces); \$15,104,000 of tape and webbing (not elsewhere specified); \$626,000 of banding, belts, and belting (not over 12 inches in width); \$624,000 of labels, woven figured; and \$424,000 of spindle banding.

*Imports* in 1914 were valued at \$844,552. Imports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Narrow wares <sup>1</sup> .....	\$782,217	\$332,421	\$275,797	\$133,227
Garters, suspenders, and braces.....	(2)	22,364	31,945	86,696
Cords and tassels.....	(2)	17,582	45,693	26,142
Wicking, and spindle banding.....	15,044	7,930	8,045	5,226
Lacings, boot, shoe, and corset.....	11,718	1,640	11,555	10,794
Loom harness, healds, and collets.....	11,606	16,193	12,188	10,137
Labels for garments.....	8,359	5,831	35,466	27,921
Belting for machinery.....	666,249	550,970	804,353	195,692

<sup>1</sup> Includes imports recorded as "fabrics with fast edges not exceeding 12 inches in width," "bandings, bindings, and bone casings" and "belts and beltings."

<sup>2</sup> Included in (1) without separate record.

*Exports* are not recorded. Canadian statistics show imports from the United States for the fiscal year ended March 31, 1921, amounting to \$289,994 for cotton tape, \$89,348 for braces and suspenders, \$56,447 for lamp wicks, and \$174,717 for cotton belting.

*Important changes in classification.*—This is the small-wares paragraph of the cotton schedule, and, with few exceptions, is confined to products of the narrow-ware or ribbon loom and to articles made from such products. It is therefore appropriately begun with the words "Fabrics with fast edges, not exceeding twelve inches in width, and articles made therefrom." In both manufacture and trade woven fabrics wider than 12 inches are known as cloth.

Fabrics with fast edges not exceeding 12 inches in width necessarily include all narrow woven wares and it is not necessary to mention bandings, beltings, bindings, webbings, tapes, ribbons, or other specific articles. Narrow strips cut from cloth can not be so included, because they are not made with fast edges, and they would be dutiable as the cloth of which they are made. Articles made from narrow woven fabrics necessarily include bands, belts, webs, etc., without specific mention.

The term "tubings" has been retained because such narrow woven fabrics are a special form of narrow wares in that they are woven as tubes and therefore have no edges. "Bone casings" has been omitted because it is included under the term tubings. Specific mention of "garters, suspenders, braces" is retained to avoid their being classed as wearing apparel. "Cords, tassels, cords and tassels" are specifically mentioned because they are not woven fabrics and have heretofore been listed with woven small wares. The peculiar wording of this provision is due to a judicial decision that, for tariff purposes, a cord with a tassel attached is not a cord or a tassel but both.

The revised wording confines the provisions of this paragraph on the above articles to those composed wholly or in chief value of cotton or of cotton and india rubber. Small wares of vegetable

fibers other than cotton belong in the small-wares paragraph of Schedule 10; in a few instances paragraph 912 includes by specific mention small wares of other vegetable fibers, mainly because of their small importance and for ease of administration.

Narrow wares ornamented by embroidery or lace are more specifically provided for in paragraph 1430 and it is not necessary to note such exclusion from this or other paragraphs.

In addition to the foregoing, this paragraph assigns a special rate of duty to spindle banding and to wicking. This rate applies irrespective of how these goods are made and it is not necessary to say "woven, braided, or twisted." Separate rates are also provided for boot, shoe, and corset lacings, by whatever process made; for loom harness, healds, and collets; for labels for garments or other articles; and for belting for machinery.

The principal difference between paragraph 262 of the act of 1913 and paragraph 912 of H. R. 7456 is not in the class of articles included, but in the wording which clarifies the phraseology relating to narrow woven fabrics and articles made therefrom.

"Tire fabric or fabric suitable for use in pneumatic tires" does not properly belong with small wares, as it is a specially constructed cloth that is usually 48 inches or more in width. It has, therefore, been more appropriately placed with other special cloths in paragraph 905.

---

### PARAGRAPH 913.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 913. Knit fabric, in the piece, composed wholly or in chief value of cotton or other vegetable fiber, made on a warp-knitting machine, 35 per centum ad valorem; made on other than a warp-knitting machine, 23 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

[No corresponding provision; dutiable under basket paragraph 332, at 45 per centum ad valorem.]

[No corresponding provision; dutiable under basket paragraph 266, at 30 per centum ad valorem.]

### COTTON KNIT FABRIC.

(See Survey I-6.)

*Description and uses.*—The article here covered is cotton knit fabric in the piece. There are several varieties, but essential differences exist between those made on warp-knitting machines and those made on circular or on flat welt-knitting machines. The structure of a warp-knit fabric is composed of any number of warp threads as in a woven fabric, but held together by interlocking loops instead of by other threads. The resultant fabric has only a slight stretch, will not ravel, and can be produced with such fine, closely knit loops that it is difficult to distinguish from a woven cloth. A variety often known as "atlas cloth" has been especially developed for gloves; by means of a finishing process, called suèding, it is made to resemble chamois or similar soft-finish leathers. Further improvements have

resulted in the duplexing process, a union of two thicknesses of the fabric, whereby the suèded surface appears on both sides. Other cotton knit fabric is usually made on circular knitting machines, which operate rapidly and produce the fabric in tubular form. Underwear, cheaper grades of gloves, and other garments are cut from fabric knit in this manner. Special types of knit fabric are made for lining rubber shoes and a thin, cheap grade is used for covering meats.

*Production.*—Practically all of the glove establishments make their own suèded fabric, so that very little is offered for sale. Hence the census figures for 1919—165,000 square yards, valued at \$380,000—represent only a small proportion of the total, which was estimated at over 1,000,000 square yards for that year. The warp-knitting industry is of comparatively recent origin in the United States, as prior to the war practically all suèded gloves were imported. The manufacture of knit cotton fabrics for garments is an integral part of the knit-garment industry, and probably the entire production, which, because of the size of this industry, must be enormous, is consumed in the knitting mills.

*Imports and exports.*—None recorded.

*Important changes in classification.*—This entire paragraph is new. Knit cotton fabric in the piece has not been specially mentioned in previous tariff acts, but because of the growth of the knit-goods industry, and especially the manufacture of fabric gloves, in this country, it has been deemed advisable to include it here. Imports under this paragraph may never be large, but there is the possibility that "atlas cloth" will be imported from Germany, where a superior quality can be produced at less cost. It seems desirable to secure statistical enumeration so that any development of this trade can be made known.

#### PARAGRAPH 914.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 914. Gloves, composed wholly or in chief value of cotton or other vegetable fiber, made of fabric knit on a warp-knitting machine, 40 per centum ad valorem; made of fabric knit on other than a warp-knitting machine, 33½ per centum ad valorem; made of woven fabric, 23 per centum ad valorem.

#### ACT OF 1909.

PAR. 328. \* \* \* Men's and boys' cotton gloves, knitted or woven, valued at not more than six dollars per dozen pairs, fifty cents per dozen pairs and forty per centum ad valorem; valued at more than six dollars per dozen pairs, fifty per centum ad valorem.

[Women's cotton gloves, not being specifically provided for, were held dutiable as cotton wearing apparel, under paragraph 324, at 50 per centum ad valorem.]

#### ACT OF 1913.

PAR. 260. \* \* \* Gloves by whatever process made, composed wholly or in chief value of cotton, 35 per centum ad valorem.

## COTTON GLOVES.

(See Survey I-6.)

*Description and uses.*—Cotton gloves made of warp-knit fabric are usually known by the trade name, suèded or chamoisette gloves, because of the finish which resembles suède or chamois leather. This fabric, often called "atlas cloth," is finely knit and will not ravel. (See par. 913.) Other knit gloves are lisle gloves, which include many varieties of women's dress gloves, made from severely gassed yarn, and the cheap gloves, made from goods knit on a "circular" machine, such as are commonly used by policemen and undertakers. Woven fabric gloves are work gloves of canvas or cotton flannel, often reinforced with leather, or, for husking, with metal.

*Production* values of various kinds of cotton gloves for 1918 were estimated as follows: Work gloves, \$4,000,000 to \$5,000,000, the bulk produced in the Middle West; gloves of "circular" cloth, \$500,000; lisle gloves, \$2,000,000; and suèded cotton gloves, \$8,450,000 (1,300,000 dozen pairs). The three last-named classes are made chiefly in New York State. Before the war the manufacture of cotton gloves was confined largely to work and "circular" gloves, our supply of lisle and suèded gloves coming almost wholly from Germany. After 1914, and until the resumption of trade with Germany, production grew so rapidly that at least one-half the lisle and practically all the suèded gloves required for domestic use were made in this country. The quick revival of glove imports caused many domestic manufacturers to curtail production.

*Imports* of cotton gloves during the fiscal year ended June 30, 1914, were 1,523,728 dozen pairs, valued at \$2,184,039. These were mainly women's suèded gloves from Germany. The decreased imports during the war were mainly lisle gloves from Japan. Germany was again the main source in 1920.

Imports since 1917 have been recorded as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Dozen pairs.</i>		
1918.....	368, 038	\$544, 048	\$190, 417
1919.....	159, 374	269, 650	84, 378
1920.....	304, 015	1, 078, 081	377, 328
1921 (9 months) <sup>1</sup> .....	813, 604	2, 727, 487	.....

<sup>1</sup> Includes 327,764 pounds, valued at \$1,226,147 under the emergency tariff act.

*Exports* are not recorded.

*Important changes in classification.*—Gloves composed wholly or in chief value of cotton or other vegetable fiber are here divided into three tariff classes, because each class represents a distinct phase of the industry and presents an entirely different tariff problem. The description "made of fabric knit on a warp-knitting machine" has been used in preference to the various trade-marked names of materials. For the same reason "warp-knitting machine" instead of "Tricot" or other special type of machine has been given because the former describes a general type which would cover any future patents or inventions of similar machines. Few woven-fabric gloves are imported, but the classification has been added to make the paragraph comprehensive as well as definite.

## PARAGRAPH 915.

## H. R. 7456.

PAR. 915. Hose and half-hose, fashioned, seamless, or mock-seamed, finished or unfinished, composed of cotton or other vegetable fiber, made wholly or in part on knitting machines, or knit by hand, valued at not more than \$1 per dozen pairs, 35 cents per dozen pairs; valued at more than \$1 and not more than \$1.50 per dozen pairs, 45 cents per dozen pairs; valued at more than \$1.50 and not more than \$2 per dozen pairs, 65 cents per dozen pairs; valued at more than \$2 and not more than \$3 per dozen pairs, \$1.20 per dozen pairs; valued at more than \$3 and not more than \$5 per dozen pairs, \$2 per dozen pairs; and, in addition thereto, on all of the foregoing, 12½ per centum ad valorem; valued at more than \$5 per dozen pairs, 35 per centum ad valorem.

Hose and half-hose, finished or unfinished, made or cut from knitted fabric composed of cotton or other vegetable fiber, and not specially provided for, 23 per centum ad valorem.

## ACT OF 1909.

PAR. 327. Stockings, hose and half-hose, made on knitting machines or frames, composed of cotton or other vegetable fiber, and not otherwise specially provided for in this section, 17½ per centum ad valorem.

PAR. 328. Stockings, hose and half-hose, selvaged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, including such as are commercially known as seamless stockings, hose and half-hose and clocked stockings, hose and half-hose, all of the above composed of cotton or other vegetable fiber, finished or unfinished, valued at not more than one dollar per dozen pairs, seventy cents per dozen pairs; valued at more than one dollar per dozen pairs, and not more than one dollar and fifty cents per dozen pairs, eighty-five cents per dozen pairs; valued at more than one dollar and fifty cents per dozen pairs, and not more than two dollars per dozen pairs, ninety cents per dozen pairs; valued at more than two dollars per dozen pairs, and not more than three dollars per dozen pairs, one dollar and twenty cents per dozen pairs; valued at more than three dollars per dozen pairs, and not more than five dollars per dozen pairs, two dollars per dozen pairs; and in

## SENATE AMENDMENTS.

## ACT OF 1913.

PAR. 259. Stockings, hose and half-hose, made on knitting machines or frames, composed of cotton or other vegetable fiber, and not otherwise specially provided for in this section, 20 per centum ad valorem.

PAR. 260. Stockings, hose and half-hose, selvaged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, including such as are commercially known as seamless stockings, hose and half-hose, and clocked stockings, hose and half-hose, all of the above composed of cotton or other vegetable fiber, finished or unfinished; if valued at not more than 70 cents per dozen pairs, 30 per centum ad valorem; if valued at more than 70 cents, and not more than \$1.20 per dozen pairs, 40 per centum ad valorem; if valued at more than \$1.20 per dozen pairs, 50 per centum ad valorem. \* \* \*

ACT OF 1909. *IN REVENUE ACT OF 1913.*

addition thereto, upon all the foregoing, fifteen per centum ad valorem; valued at more than five dollars per dozen pairs, fifty-five per centum ad valorem. \* \* \*

## COTTON HOSIERY.

(See Survey I-6.)

*Description and uses.*—Hosiery is of three general types: Full-fashioned, seamless, and “cut.” Full-fashioned hosiery is knitted flat, shaped by the increase or diminution of the number of stitches in the width, and selvaged ready for seaming. After the leg of a full-fashioned stocking is knit it is transferred to another machine for the formation of the foot. Besides this there are the processes of seaming and of looping the toe and heel. Seamless stockings are made in tubular form on circular machines, usually automatic, and come from the machine complete except for the toe, which must be seamed or looped. Sometimes a mock seam is added to such stockings to make them resemble the full fashioned. Ribbed hose or ribbed-topped socks require two machines for the knitting.

Full-fashioned hosiery fits better and is more elastic than seamless; but seamless hosiery is cheaper, as the circular machine is more productive and the labor cost therefore less.

“Cut” hosiery is an inferior grade of hosiery cut out of long tubular webs made on large circular machines, or from the good portions of other kinds of hose spoiled in the making.

*Production* of cotton hosiery in 1914 amounted to 61,409,575 dozen pairs, valued at \$59,631,474; in 1919, to 60,613,000 dozen pairs, valued at \$84,366,000. In 1909 cotton hosiery constituted 91 per cent; in 1914, 82 per cent; and in 1919, 72 per cent of the total quantity of hosiery produced in the United States. From 1914 to 1919 the decline was actual as well as relative. A considerable quantity of women's fine cotton stockings was formerly imported, but during the war the extension of flat knitting enabled the domestic industry to supply all demands, though silk, mixed silk, and to some extent artificial silk, for various reasons, especially the high price of cotton, encroached upon the cotton hosiery market. In 1914 Pennsylvania was by far the first State in production, North Carolina was second, and Tennessee third. The industry in the South is growing rapidly, and so far is almost entirely in seamless hosiery. There is very little manufacture of “cut” hosiery in the United States at the present time and the salvaging of imperfect hose is probably the only reason for its continuance.

*Imports* of seamless and full-fashioned hosiery in 1914 were 1,846,862 dozen pairs, valued at \$2,770,781. Prewar imports were almost entirely from Germany, and consisted mainly of full-fashioned hosiery for women.

Imports of cut hosiery in 1914 were 347,509 dozen pairs, valued at \$178,897. These were mainly from Germany, and consisted largely of hosiery for infants.

Imports of hosiery since 1917 have been as follows:

	1918	1919	1920	1921 (9 months). <sup>1</sup>
SEAMLESS AND FULL-FASHIONED HOSEIERY.				
Quantity (dozen pairs).....	94,611	58,349	139,831	331,365
Value.....	\$124,655	\$124,453	\$640,132	\$736,780
Duty.....	\$54,120	\$57,657	\$317,715	

<sup>1</sup> Includes 130,244 pounds, valued at \$360,365, under the emergency tariff act.

## CUT HOSEIERY.

	1918	1919	1920	1921 (9 months). <sup>1</sup>
Quantity (dozen pairs).....	13,740	7,164	14,506	129,366
Value.....	\$7,641	\$6,622	\$16,311	\$95,846
Duty.....	\$1,528	\$1,324	\$3,262	

<sup>1</sup> Includes 6,749 pounds, valued at \$13,133, under the emergency tariff act.

*Exports of cotton hosiery are much larger than imports. Exports since 1917 by calendar years have been as follows:*

	1918	1919	1920	1921 (9 months).
Quantity (dozen pairs).....	5,574,343	9,477,338	11,575,655	1,954,534
Value.....	\$13,258,474	\$26,882,566	\$37,879,665	\$5,019,645

The main purchasers in 1920 were England, Cuba, Australia, France, Argentina, Sweden, and Denmark.

*Important changes in classification.*—As hose and half hose are inclusive, the word “stockings” has been omitted as superfluous. For the same reason the words “selvedged,” “narrowed,” and “frames” have been omitted. The full-fashioned hose comes from the knitting machine as a selvedged piece of material and a stocking could not be selvedged except by being shaped or fashioned in the knitting. Even if designed to apply to the shaped material for hose not sewed into form the term “selvedged” would be unnecessary because of the provision for unfinished hose. “Narrowed” would also mean fashioned as the shape of a fashioned hose is given by “narrowing” or decreasing the number of loops in the width at certain places. A “narrowed” hose is not necessarily full fashioned but the revised wording does not specify full fashioned, nor does it give separate classifications to seamless and to full-fashioned hose, hence hose which is seamless but partly fashioned or narrowed would be covered by the first provisions of the paragraph. The word “mock-seamed” has been inserted to cover a type of seamless hosiery that is made to imitate full-fashioned hosiery, although it is hardly necessary as it would be included in seamless hosiery.

Besides the fashioned and the seamless hose which are given form on the knitting machines, there is a third general type shaped by cutting from knitted fabric and made into the finished hose by sewing. In cotton hosiery these are usually made from a cheap grade of fabric knit on large circular machines or from the good parts of other hosiery damaged in manufacture. Imports of cheap cut hosiery are small, but because they consist largely of one type, infants' socks, are

competitive with a special branch of the industry. The revised wording states more clearly the type of hosiery heretofore covered by the phrase "not specially provided for."

"Clocked" has been omitted from the revised wording. Clocking is ankle ornamentation, but there are three types of hose sold as clocked hose. The first is embroidered by hand or machine, and the omission of the word clocking here throws these into the paragraph provided for embroidered articles. The second is made by plating on the knitting machine, whereas the third, sometimes known as imitation clocking, is made by openwork knitting along the ankle. The two last-named classes would be included as hosiery in any case, as it is immaterial whether the plating and openwork is only along the ankle or all over the hose. The omission of "clocked," thereby throwing hose with embroidery clocks into the paragraph provided for embroidery, is in line with the present procedure in connection with silk hose.

### PARAGRAPH 916.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 916. Underwear and all other wearing apparel of every description, finished or unfinished, composed of cotton or other vegetable fiber, made wholly or in part on knitting machines, or knit by hand, and not specially provided for, valued at not more than \$1.50 per dozen, 40 cents per dozen and 12½ per centum ad valorem; valued at more than \$1.50 and not more than \$3 per dozen, 70 cents per dozen and 12½ per centum ad valorem; valued at more than \$3 and not more than \$5 per dozen, \$1.20 per dozen and 20 per centum ad valorem; valued at more than \$5 and not more than \$7 per dozen, \$1.40 per dozen and 25 per centum ad valorem; valued at more than \$7 and not more than \$15 per dozen, \$2.25 per dozen and 25 per centum ad valorem; valued at more than \$15 and not more than \$20 per dozen, \$4 per dozen and 28 per centum ad valorem; valued at more than \$20 per dozen, 40 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 329. Shirts and drawers, pants, vests, union suits, combination suits, tights, sweaters, corset covers and all underwear of every description made wholly or in part on knitting machines or frames, or knit by hand, finished or unfinished, not including stockings, hose and half-hose, composed of cotton or other vegetable fiber, valued at not more than one dollar and fifty cents per dozen, sixty cents per dozen and fifteen per centum ad valorem; valued at more than one dollar and fifty cents per dozen and

PAR. 261. Shirts and drawers, pants, vests, union suits, combination suits, tights, sweaters, corset covers, and all underwear and wearing apparel of every description, not specially provided for in this section, made wholly or in part on knitting machines or frames, or knit by hand, finished or unfinished, not including such as are trimmed with lace, imitation lace or crochet or as are embroidered and not including stockings, hose and half-hose, composed of cotton or other vegetable fiber, 30 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

not more than three dollars per dozen, one dollar and ten cents per dozen, and in addition thereto fifteen per centum ad valorem; valued at more than three dollars per dozen and not more than five dollars per dozen, one dollar and fifty cents per dozen, and in addition thereto twenty-five per centum ad valorem; valued at more than five dollars per dozen and not more than seven dollars per dozen, one dollar and seventy-five cents per dozen, and in addition thereto thirty-five per centum ad valorem; valued at more than seven dollars per dozen and not more than fifteen dollars per dozen, two dollars and twenty-five cents per dozen, and in addition thereto thirty-five per centum ad valorem; valued above fifteen dollars per dozen, fifty per centum ad valorem.

## COTTON KNIT WEARING APPAREL.

(See Survey I-6.)

*Description and uses.*—Knit wearing apparel may be divided into "flat" and "ribbed." Ribbed goods are distinguished from flat (plain surface) goods by having ribs or wales on both sides of the fabric. Cuffs, anklets, hosiery tops, etc., as well as sweaters and other knit goods for outer wear, are made on the rib machine, but undergarments having smooth surfaces are not ordinarily so produced.

Full-fashioned underwear is the product of a straight spring-needle machine, which narrows or shapes the garment to fit the body. Only the finest grades are made in this way. The ordinary and cheapest method is to knit the fabric into long tube-shaped material on a large circular knitting machine, when it may be cut and made into any type of underwear desired. Such garments are known as "cut goods," the finishing being the most important part of the process.

*Production* of cotton knit underwear in 1914 amounted to \$68,715,752; in 1919, to \$143,687,000, about 70 per cent of the value of all knit underwear. There was no increase in quantity over 1914, but there was a greater number of combination suits and fewer separate pieces. Cotton knit outerwear is not a distinct industry. The cotton is as a rule used with wool or with silk. Bathing suits and, less frequently, sweaters are sometimes all cotton. Official returns do not show separately the production of knit outerwear made of cotton. New York and Pennsylvania in 1914 were the chief producers of knit wearing apparel.

*Imports* in 1914 of cotton knit goods, other than hosiery and gloves, were valued at \$341,983, or less than 1 per cent of domestic production.

Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Dozens.</i>		
1918.....	97, 248	\$606, 001	\$181, 001
1919.....	36, 051	296, 734	85, 590
1920.....	22, 441	193, 119	57, 936
1921 (9 months) <sup>1</sup> .....	22, 426	146, 309	.....

<sup>1</sup> Includes 4,579 pounds, valued at \$18,554, under the emergency tariff act.

*Exports* of cotton-knit wearing apparel are much larger than imports. The main purchasers in 1920 were the United Kingdom, Norway, Cuba, and Australia.

Exports for the calendar years 1918-1921 were as follows:

	1918	1919	1920	1921 (9 months)
Cotton knit underwear.....	\$2, 897, 486	\$8, 602, 293	\$14, 067, 839	\$2, 535, 434
Other cotton knit goods <sup>1</sup> .....	945, 833	1, 508, 995	2, 510, 558	340, 024

<sup>1</sup> Other than hosiery, gloves, and underwear.

*Important changes in classification.*—"Underwear and all other wearing apparel of every description" is broadly inclusive and it is not necessary to retain specific mention of certain articles, such as shirts, drawers, pants, vests, etc., as all of these are included under the revised wording. The phrase "not including such as are trimmed with lace, imitation lace, or crochet, or as are embroidered" is omitted as superfluous because these articles are more specifically provided for elsewhere.

## PARAGRAPH 917.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 917. Handkerchiefs and mufflers, composed wholly or in chief value of cotton, finished or unfinished, not hemmed, shall pay duty as cloth; hemmed or hemstitched, shall pay, in addition thereto, 10 per centum ad valorem; *Provided*, That none of the foregoing, when containing yarns the average number of which does not exceed number 40, shall pay less than 25 per centum ad valorem; nor when exceeding number 40, less than 30 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 322. Handkerchiefs or mufflers composed of cotton, whether in the piece or otherwise and whether finished or unfinished, if not hemmed, or hemmed only, shall pay the same rate of duty on the cloth contained therein

PAR. 255. Handkerchiefs or mufflers composed of cotton, not specially provided for in this section, whether finished or unfinished, not hemmed, 25 per centum ad valorem; hemmed, or hemstitched, 30 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

as is imposed on cotton cloth of the same description, weight, and count of threads to the square inch; but such handkerchiefs or mufflers shall not pay a less rate of duty than forty-five per centum ad valorem. If such handkerchiefs or mufflers are hemstitched, or imitation hemstitched. \* \* \* they shall pay a duty of ten per centum ad valorem in addition to the duty hereinbefore prescribed, and in no case less than fifty-five per centum ad valorem; \* \* \*.

## PLAIN COTTON HANDKERCHIEFS AND MUFFLERS.

(See Survey I-5.)

*Description and uses.*—The plain cotton handkerchief, hemmed or hemstitched, not embroidered or otherwise adorned, is the staple article of largest domestic manufacture and use. Mufflers are of minor importance.

Manufacturers buy the finished cloth in the piece, usually already bleached or, less frequently, dyed or printed. It is then cut to size and hemmed or hemstitched, principally by machine, ironed, folded, and boxed for sale. The cloth used is composed of yarns ranging from 30s to 110s, mainly under 60s for men's handkerchiefs and under 80s for women's. Domestic cloth is generally used, prices being no higher than for foreign fabrics.

*Production.*—The domestic output of cotton handkerchiefs in 1914 was estimated at \$10,000,000, about two-thirds the value of all handkerchiefs made in the United States. The normal output is probably greater, as 1914 was a year of reduced operation. As plain and embroidered cotton and linen handkerchiefs are usually made in the same plant, it is difficult to treat cotton handkerchiefs separately. The manufacture is centralized in the North Atlantic section, from Rhode Island to Pennsylvania. Passaic is the most important manufacturing city and New York the principal center of distribution. Large-scale production predominates, although a considerable portion of this manufacture is in small shops and by individuals who do the cutting, hemming, and embroidering on commission.

*Imports* of plain cotton handkerchiefs are usually much less important than those of "fancy" handkerchiefs made of lace or embroidered or otherwise adorned, which are dutiable under paragraph 358 of the act of 1913 at 60 per cent ad valorem. The increase in importations of plain cotton handkerchiefs in recent years has been, in part at least, due to the scarcity and high price of linen handkerchiefs. Imports are mainly from the United Kingdom and Switzerland. Ireland is now the main source, many Belfast handkerchief manufacturers having had to turn from linen to cotton. The finished hemmed or hemstitched handkerchief has made up the bulk of these imports. Importations of handkerchiefs in the piece, or cut but not hemmed, are of minor importance. Imports of plain cotton handkerchiefs in 1914 were valued at \$112,499.

Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
UNHEMMED HANDKERCHIEFS.			
	<i>Dozen.</i>		
1918.....	.....	\$86,094	\$21,524
1919.....	110,134	51,129	12,782
1920.....	275,717	152,083	38,021
1921 (9 months) <sup>1</sup> .....	100,879	54,522	.....
HEMMED OR HEMSTITCHED HANDKERCHIEFS.			
1918.....	.....	\$353,820	\$106,145
1919.....	790,244	607,482	182,245
1920.....	1,882,705	1,481,686	444,505
1921 (9 months) <sup>2</sup> .....	1,183,890	894,174	.....

<sup>1</sup> Includes 500 pounds, valued at \$1,797, under the emergency tariff act.

<sup>2</sup> Includes 67,240 pounds, valued at \$244,561, under the emergency tariff act.

*Exports* are not recorded. Canadian statistics show imports from the United States during the fiscal year ended March 31, 1921, of cotton handkerchiefs valued at \$110,745.

*Important changes in classification.*—This paragraph is intended to cover all handkerchiefs and mufflers of which cotton is the component material of chief value, except such as are ornamented with lace, embroidery, etc., and more specifically provided for in paragraph 1430. As in the act of 1913, one rate of duty is imposed on unhemmed handkerchiefs, and another and higher rate on hemmed or hemstitched handkerchiefs. The provision that unhemmed handkerchiefs shall be dutiable at the same rate as the cloth of which they are composed, and that hemmed or hemstitched handkerchiefs shall be dutiable at the cloth rate plus 10 per cent ad valorem prevents classification at a lower rate of duty than that imposed on the basic cloth of the handkerchief.

Minimum ad valorem rates of duty have been provided, one rate for handkerchiefs made of cloth containing yarns the average number of which does not exceed number 40, and another and higher rate for those composed of cloth with finer yarns.

## PARAGRAPH 918.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 918. Clothing and articles of wearing apparel of every description, manufactured wholly or in part, composed wholly or in chief value of cotton, and not specially provided for, 33½ per centum ad valorem.

Shirt collars and cuffs, of cotton, not specially provided for, 25 cents per dozen pieces and 12½ per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

PAR. 324. Clothing, ready-made, and articles of wearing apparel of every description, composed of cotton \* \* \* or of which cotton \* \* \* is the component material of chief value, made up or manufactured, wholly or in part, by the tailor, seamstress, or manufacturer, and not otherwise provided for in this section, fifty per centum ad valorem.

PAR. 348. Shirt collars and cuffs, composed of cotton, forty-five cents per dozen pieces and fifteen per centum ad valorem; \* \* \*.

PAR. 256. Clothing, ready-made, and articles of wearing apparel of every description, composed of cotton \* \* \* or of which cotton \* \* \* is the component material of chief value, or of cotton \* \* \* and india rubber, made up or manufactured, wholly or in part, by the tailor, seamstress, or manufacturer, and not otherwise specially provided for in this section, 30 per centum ad valorem; shirt collars and cuffs of cotton, not specially provided for in this section, 30 per centum ad valorem.

## COTTON WEARING APPAREL.

(See Survey I-5.)

*Description and uses.*—Paragraph 918 covers cotton wearing apparel of every description, not specially provided for. Articles specially provided for elsewhere are garters, suspenders, braces, and other manufactures of narrow wares (par. 912); knit goods (pars. 914, 915, 916); handkerchiefs (par. 917); and apparel ornamented with lace, embroidery, etc. (par. 1430).

*Production.*—Separate figures for cotton wearing apparel are not available, but an estimate based on figures of the clothing trades in general as recorded in the census of 1914 places the production of cotton wearing apparel at over \$200,000,000 for that year. It is evident that all but a very small proportion of our increasing demand is supplied domestically.

*Imports* are mainly from France, with the United Kingdom second and Switzerland third.

Imports during the fiscal year 1914 and the calendar years 1918–1921 were as follows:

Cotton wearing apparel.	1914	1918	1919	1920	1921 (9 months).
Collars and cuffs.....	\$5,619	\$29,316	\$24,035	\$75,228	\$41,582
Corsets, not ornamented.....	1,273	18,954	20,010	4,148	7,373
Clothing and articles of wearing apparel, n. s. p. f.....	1,065,365	942,487	436,664	1,226,819	832,599
Total.....	1,072,257	990,757	480,709	1,306,195	881,554

*Exports* are much larger than imports. The United States ships cotton wearing apparel to almost every country of the world. In 1920 the main purchasers of collars or cuffs were Cuba, Mexico, and Holland; of corsets, Australasia, United Kingdom, Canada, and South Africa; of other apparel for men and boys, Cuba, Canada, Norway, Panama, Dominican Republic, and Japan; of other apparel for women and children, Canada, Cuba, and Poland.

Exports during the fiscal year 1914 and in the calendar years 1918–1921 were as follows:

Cotton wearing apparel.	1914	1918	1919	1920	1921 (9 months).
Collars and cuffs.....		\$329,227	\$771,219	\$816,142	\$303,770
Corsets, all kinds.....	\$2,220,739	1,923,078	2,880,858	3,523,767	1,237,772
Wearing apparel, all other:					
For men and boys.....	5,999,887	6,181,308	10,082,218	17,724,523	3,898,703
For women and children.....		3,015,130	3,664,724	4,542,235	2,144,250
Total.....	8,220,626	11,448,743	17,399,019	26,606,667	7,584,500

*Important changes in classification.*—Paragraph 918 covers cotton wearing apparel of every description, not specially provided for. Wearing apparel wholly or in chief value of vegetable fiber other than cotton has been appropriately placed under Schedule 10. The word “ready-made” has been omitted as unnecessary, because this paragraph covers wearing apparel, whether ready-made or custom-made. The words “by the tailor, seamstress, or manufacturer,” used in previous acts after the words “manufactured wholly or in part,” have been omitted as tautological, since all wearing apparel must be so made. Mention of india rubber is omitted, and although india rubber may be present in the goods covered, cotton must be the material of chief value. If india rubber is the material of chief value, such wearing apparel would be classified as an article of rubber.

### PARAGRAPH 919.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 919. Lace window curtains, nets, nettings, pillow shams, and bed sets, finished or unfinished, made on the Nottingham lace-curtain machine, and composed of cotton or other vegetable fiber, when counting five points or spaces between the warp threads to the inch, 1½ cents per square yard; when counting more than five such points or spaces to the inch, three-fourths of 1 cent per square yard in addition for each point in excess of five; and in addition thereto, on all the foregoing articles in this paragraph, 17 per centum ad valorem: *Provided*, That none of the foregoing shall pay a less rate of duty than 40 per centum ad valorem.

### ACT OF 1909.

PAR. 351. Lace window curtains, nets, nettings, pillow shams, and bed sets, finished or unfinished, made on the Nottingham lace-curtain machine or on the Nottingham warp machine, and composed of cotton or other vegetable fiber, when counting five points or spaces between the warp threads to

### ACT OF 1913.

PAR. 265. Lace window curtains, pillow shams, and bed sets, finished or unfinished, made on the Nottingham lace-curtain machine, and composed of cotton or other vegetable fiber, when counting not more than six points or spaces between the warp threads to the inch, 35 per centum ad valorem;

## ACT OF 1909.

the inch, one cent per square yard; when counting more than five such points or spaces to the inch, one-half of one cent per square yard in addition for each such point or space to the inch in excess of five; and in addition thereto, on all the foregoing articles in this paragraph, twenty per centum ad valorem: *Provided*, That none of the above-named articles shall pay a less rate of duty than fifty per centum ad valorem.

## ACT OF 1913.

when counting more than six and not more than eight points or spaces to the inch, 40 per centum ad valorem; when counting nine or more points or spaces to the inch, 45 per centum ad valorem.

PAR. 358. \* \* \* nets, nettings, \* \* \* and articles made in whole or in part of any of the foregoing fabrics or articles; all of the foregoing of whatever yarns, threads, or filaments composed, 60 per centum ad valorem.

## NOTTINGHAM LACE-CURTAIN MACHINE PRODUCTS.

*Description and uses.*—Paragraph 919 covers specified products, composed of cotton or other vegetable fiber, made on the Nottingham lace-curtain machine. This is a machine that is used in many countries, the name "Nottingham," from its original place of development, being retained to distinguish it from other types of machines, such as the Levers lace machine, which also produces curtains.

Nottingham lace-curtain machines are made with 6 to 18 points or bobbins to the inch, making curtains and other goods with 6 to 18 meshes to the inch. Over 60 per cent of the machines used in the United States are of 8 point or coarser. Each machine is designed to make a specific number of meshes to the inch and can make no other number. No. 100/2 ply is about the finest yarn used on such machines and the majority consists of 58/2 to 78/2 yarns.

In making a fabric on a Nottingham lace-curtain machine it is necessary to have at least three sets of yarns—the main or ground-warp yarn; the spool yarn, which interlaces with the warp; and the so-called "brass-bobbin" yarn, which acts as a binder between the warp and the spool yarns. For producing special types of curtains, an additional beam warp or spool yarn may be used. The warp and spool yarns are carried on beams beneath the machine; they are drawn up vertically to intertwist with the brass-bobbin yarns as the latter, suspended from the beam at the top of the machine, swing like pendulums and are shifted to right or left of the vertical yarns. The spool yarns are of domestic spinning, as are also most of the warp yarns, but brass-bobbin yarns of the required character and finish are not produced in the United States. Therefore the lace-curtain manufacturers, who are the largest importers of cotton yarns, are dependent on the output of English mills for this essential element of manufacture.

Curtains made of cloth, or of Lever's lace, and curtains ("novelty") of voile or marquisette trimmed with lace, are excluded from this paragraph by virtue of the Nottingham machine qualification.

*Production* in 1914 of Nottingham lace curtains was valued at \$4,678,847, and of Nottingham lace-curtain nets at \$1,258,307; production in 1919 of Nottingham lace curtains was 3,933,000 pairs, valued at \$8,166,000; and of Nottingham lace-curtain nets, 19,465,000 linear yards, valued at \$7,616,000. Other products of the Nottingham lace-curtain machine were not recorded separately. There are

10 Nottingham lace-curtain manufacturers, operating over 500 machines, of which about 450 are located in Pennsylvania.

*Imports* of Nottingham lace curtains, pillow shams, and bed sets were valued at \$174,652 in 1914 (fiscal year). Imports of Nottingham lace-curtain nets and nettings fall under paragraph 358 of the act of 1913 and are not recorded separately.

Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Sq. yds.</i>		
1918.....	136,216	\$41,863	\$18,691
1919.....	144,937	50,240	21,351
1920.....	361,813	144,089	58,207
1921 (9 months) <sup>1</sup> .....	382,534	45,253	.....

<sup>1</sup> Includes 1,718 pounds, valued at \$4,651, under the emergency tariff act.

*Exports* are not recorded.

*Important changes in classification.*—The wording here used for products of the Nottingham lace-curtain machine is the same as that in paragraph 351 of the act of 1909 except that the words “or on the Nottingham warp machine,” have been omitted because the machine so designated is really a “warp lace” machine, the products of which properly belong under paragraph 1430. The classification of the act of 1913 has been followed in placing the articles here covered under the cotton schedule because they are mainly of cotton.

The Nottingham lace-curtain machine makes goods with 6 to 18 meshes to the inch, using yarns coarser than No. 100/2 ply. The Levers lace machine makes goods with 14 to 30 meshes to the inch, and although it uses a wide range of yarns the greater number are finer than 100/2 ply. In other words, the Nottingham lace-curtain machine makes the coarser and the Levers lace machine makes the finer products of the lace and net industry. The products of the Nottingham lace-curtain machine are therefore here made dutiable at a lower rate than is levied under paragraph 1430 on the products of the Levers lace machine. The Nottingham lace-curtain industry is firmly established in this country and has comparatively little foreign competition as compared with the Levers lace industry.

In the preceding wording, as in that of the act of 1909, there are included nets and nettings made on the Nottingham lace-curtain machine, whereas in the 1913 act all nets and nettings were covered by paragraph 358. As about half of the output of the Nottingham lace-curtain industry consists of nets and nettings, the 1909 classification is the logical one to follow.

## PARAGRAPH 920.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 920. All articles made from cotton cloth, whether finished or unfinished, and all manufactures of cotton or of which cotton is the component material of chief value, not specially provided for, 28 per centum ad valorem.

## ACT OF 1909.

PAR. 326. Curtains, table covers, and all articles manufactured of cotton chenille, or of which cotton chenille is the component material of chief value, \* \* \* composed wholly or in chief value of cotton or other vegetable fiber; any of the foregoing, in the piece or otherwise, fifty per centum ad valorem.

PAR. 332. All articles made from cotton cloth, whether finished or unfinished, and all manufactures of cotton, or of which cotton is the component material of chief value, not specially provided for in this section, forty-five per centum ad valorem.

## ACT OF 1913.

PAR. 258. Curtains, table covers, and all articles manufactured of cotton chenille, or of which cotton chenille is the component material of chief value, \* \* \* any of the foregoing, in the piece or otherwise, 35 per centum ad valorem; all other Jacquard figured manufactures of cotton or of which cotton is the component material of chief value, 30 per centum ad valorem.

PAR. 264. \* \* \* batting, any of the foregoing made of cotton, or of which cotton is the component material of chief value, \* \* \* and not otherwise provided for, 25 per centum ad valorem.

PAR. 266. All articles made from cotton cloth, whether finished or unfinished, and all manufactures of cotton or of which cotton is the component material of chief value, not specially provided for in this section, 30 per centum ad valorem.

## BASKET PARAGRAPH OF COTTON SCHEDULE.

*Description and uses.*—Paragraph 920 covers a large number of miscellaneous articles wholly or in chief value of cotton, none of which is of sufficient individual importance to warrant specific mention. Among such articles are twine, cordage, and rope; fishing nets and seines; bags; roller shades; lamp shades; Jacquard-figured blankets; Jacquard-figured towels, not terry woven; batting, wadding, and mattress felts; etc.

*Production.*—It is impossible to make up an inclusive total of domestic output for comparison with imports under a basket paragraph. However, the production of cotton twine amounted to 13,050,000 pounds, valued at \$2,716,000, in 1914 and to 11,340,000 pounds, valued at \$5,597,000, in 1919; cotton cordage and rope, 4,962,000 pounds, valued at \$792,000, in 1914 and to 5,763,000 pounds, valued at \$2,207,000, in 1919; cotton batting, wadding, and mattress felts, not recorded in 1914, to 65,467,000 pounds, valued at \$8,272,000, in 1919.

*Imports* were valued at \$1,622,258 in the fiscal year 1914 and \$2,333,185 in the calendar year 1920. The largest item consisted of the cloth articles, mainly for table use, known in the trade as "Japanese blue prints."

*Exports* are not recorded.

*Important changes in classification.*—This basket paragraph is worded the same as in preceding acts, but its scope is reduced by the specific provisions made for a number of articles formerly included. For example, Japanese blue prints, such as table and bureau covers, centerpieces, etc., made by stencil-dyeing plain-woven cotton cloth, are provided for in paragraph 911. Dust cloths and bedspreads are also placed under paragraph 911, while railroad air hose will fall under paragraph 1007. On the other hand, Jacquard-figured manufactures of cotton not specially provided for, such as blankets, towels not terry woven, etc., are included without specific mention.

## SCHEDULE 10.—FLAX, HEMP, AND JUTE, AND MANUFACTURES OF.

### PARAGRAPH 1001.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1001. Flax straw, \$2 per ton; flax, not hackled, 1 cent per pound; flax, hackled, including "dressed line," 2 cents per pound; flax tow and flax noils, three-fourths of 1 cent per pound; hemp and hemp tow, three-fourths of 1 cent per pound; hackled hemp, including "line of hemp,"  $1\frac{1}{2}$  cents per pound.

### ACT OF 1909.

### ACT OF 1913.

SCHEDULE J.—FLAX, HEMP, AND JUTE, AND MANUFACTURES OF.

SCHEDULE J.—FLAX, HEMP, AND JUTE, AND MANUFACTURES OF.

PAR. 333. Flax straw, five dollars per ton.

PAR. 334. Flax, not hackled or dressed, one cent per pound.

PAR. 335. Flax, hackled, known as "dressed line," three cents per pound.

PAR. 336. Tow of flax, twenty dollars per ton.

PAR. 337. Hemp, and tow of hemp, twenty-two dollars and fifty cents per ton; hemp, hackled, known as "line of hemp," forty-five dollars per ton.

PAR. 485. Flax straw, flax, not hackled or dressed; flax hackled, known as "dressed line," tow of flax and flax noils; hemp, and tow of hemp; hemp hackled, known as "line of hemp" [Free].

### FLAX.

*Description and uses.*—Flax is the oldest of all vegetable fibers of which we have record as being applied to the use of mankind, but the comparatively recent development of the manufacture of cotton has tended to prevent expansion in the production of the older material. Cotton is more pliable than flax, can be manufactured more cheaply, and can be so finished as to make it almost indistinguishable from linen. Flax has been able to retain a certain demand because of its inherent beauty, strength, and durability, which enable it to endure repeated handling and washing with less loss of its sheen and hard surface and without napping. Flax is used for thread, fishlines, fishnets, water hose, towels, table and bed linen, handkerchiefs, and dress goods.

Flax straw is the dried stem of the flax plant before the extraction of the fiber. Flax, not hackled, is the fiber that has been taken from the straw by retting (rotting away the retentive gum) and scutching (knocking out the woody core from the surrounding fibers), but which has undergone no further treatment. Hackled flax consists of the longer fibers after the more or less complete

combing out of the shorter fibers by hand or machine heckling operations. Flax that has been completely hackled is known as dressed line, and is used in making thread and fabrics of the higher grades. Flax tow for spinning consists of the shorter and less valuable fibers discarded in the hackling operations and corresponds to the noil of a worsted mill. The coarse and medium counts produced from such tow form a very important part of the world's output of flax yarns and are extensively used in the manufacture of paddings, crashes, and canvas. Flax upholstery tow, used in stuffing furniture and lining refrigerator cars, is of a different character, as it can not be spun and is made by merely crushing unretted straw of seed flax or poor grades of short fiber flax. Flax noils are the short tangled fibers discarded at the card or the comb in the manufacture of tow yarns; some of this is used as raw material in the manufacture of low-grade goods.

*Production.*—In prewar years, Russia, with an annual production of about 600,000 tons, half of which was exported, supplied about 85 per cent of the world's flax. The remainder was produced mainly in Austria-Hungary, France, Italy, Ireland, and Belgium. Courtrai flax from Belgium is considered the highest grade.

As a result of the World War the production of flax in Russia has declined to about one-tenth of the normal, and the world acreage in fiber flax had fallen from about 4,500,000 to about 1,175,000 acres in 1920. The war shortage stimulated production in Canada and Japan, as well as in European countries where flax was already grown, but the sharp decline in the price of linens in 1921 caused a large decrease in the acreage in fiber flax in all of these countries. For instance, Canadian acreage in fiber flax increased from 4,000 in 1915 to 20,262 in 1920, and declined to 7,300 in 1921. Ireland had, in fiber flax, 49,000 acres in 1914, 127,000 acres in 1920, and only 40,000 acres in 1921.

The American acreage in fiber flax was 2,240 in 1911; 1,100 in 1914; 4,300 in 1918; 6,090 in 1920; and 1,525 in 1921. The States producing flax fiber in 1920 were Michigan with 3,500 acres; Minnesota with 1,000 acres; Wisconsin and Oregon with 700 acres each, and Maryland with 190 acres.

The hand labor involved in weeding and pulling the flax and in natural retting has proved a great obstacle to domestic production of fiber flax in competition with crops better adapted to the use of machinery. Attempts have recently been made here and in Canada to introduce labor-saving devices to eliminate weeding and pulling by hand, and to provide for artificial retting in central plants.

Yarn spun from domestic flax is used in the manufacture of twines, shoe thread, and toweling. Domestic flax is not suitable for spinning high-grade yarns such as are used in the manufacture of table linen, cambrics, and laces.

The United States is a large producer of flaxseed, but growing flax for seed is an industry entirely distinct from and much simpler than the growing of flax for fiber. In 1914 the United States had 1,645,000 acres, and in 1921, 1,706,000 acres devoted to the former. The fiber of flax raised for seed is not suitable for spinning. The straw of seed flax is used in making upholstery tow of a low grade, in insulating board, and in rugs for floor coverings.

Imports in 1914 of flax straw were 220 tons, valued at \$9,659; of flax, not hackled, 6,056 tons, valued at \$1,497,660; of flax, hackled, 2,590 tons, valued at \$1,242,129; of flax tow, 1,322 tons, valued at \$264,303; of flax noils, 96 tons, valued at \$8,388; a total of 10,284 tons, valued at \$3,022,139. The United Kingdom supplied about half of the total. Russia and Belgium supplied a large part of the remainder.

Imports since 1917 for calendar years have been as follows:

Flax.	1918		1919		1920		1921 (9 months).	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	<i>Tons.</i>		<i>Tons.</i>		<i>Tons.</i>		<i>Tons.</i>	
Straw.....	142	\$14, 116	568	\$25, 570	2, 084	\$25, 813	179	\$9, 482
Not hackled...	5, 026	4, 225, 260	939	757, 060	2, 795	1, 825, 729	1, 011	550, 408
Hackled.....	1, 773	2, 558, 428	2, 129	2, 929, 062	1, 061	1, 675, 605	738	813, 532
Tow.....	721	524, 460	471	185, 191	744	276, 282	780	199, 891
Noils.....	207	39, 783	313	99, 707	107	45, 520	4	1, 176
Total...	7, 869	7, 362, 047	4, 420	3, 996, 590	6, 791	3, 848, 949	2, 712	1, 585, 073

In 1920 imports of hackled flax were supplied largely by Japan, Canada, and Ireland. Over half of all other flax than hackled came from Canada; the remainder was in large part from Russia, Japan, and Italy.

*Important changes in classification.*—Flax is transferred from the free list of the act of 1913 (par. 485). The words, “flax, hackled, including ‘dressed line,’” are here used instead of the wording “flax, hackled, known as ‘dressed line,’” which was used in the acts of 1909 and 1913. This change has been made to avoid possible litigation with respect to the extent of the hackling operations. Flax which has been subjected to either hand or machine hackling is hackled flax, but “dressed line” designates only flax which has been completely hackled by both hand and machine operations.

#### HEMP.

(See Survey FL-16.)

*Description and uses.*—Hemp is a term that correctly denotes only soft hemp (*Cannabis sativa*), although it is loosely used sometimes in connection with other fibers. Hemp is stronger, glossier, and more durable than cotton, but more costly to manufacture; in these respects it is similar to flax, but it is somewhat coarser than flax and even more difficult to bleach. Its great strength and resistance to rotting in water make it an excellent material for all cordage purposes; its relatively high cost, however, confines its use mainly to those articles where strength is the prime factor, such as shoe thread, certain types of commercial twines, tarred rigging for ships, and elevator ropes. Large cordage, like ships' cables and hawsers, is usually made of the cheaper manila.

Hemp (meaning hemp not hackled) is the fiber that has been extracted from the stem of the hemp plant, by methods similar to those used in extracting flax fiber, but which has undergone no further treatment. Hackled hemp consists of the longer fibers after the more or less complete combing out of the shorter fibers by

hand or machine hackling operations. Hackled hemp is used alone or mixed with flax in the manufacture of twines, cordage, and fabrics. Tow of hemp consists of the shorter and less valuable fibers discarded in the hackling operations; the better grades are carded and spun into yarns for twines, cordage, and coarse coverings; the poorer grades are used in caulking ships.

*Production.*—In prewar years, Russia, with an annual output of about 500,000 tons, produced about two-thirds of the world's hemp. The remainder was harvested mainly by Austria-Hungary and Italy. The finest quality is produced in Italy. The output from Russia has greatly declined as a result of the World War.

The United States is a relatively small producer of hemp. It produced in 1914, 1,339 tons; in 1918, 9,375 tons, and in 1921 about 3,400 tons, which constituted 16 per cent, 72 per cent, and 30 per cent, respectively, of the domestic consumption in the same years. Prior to the war, Kentucky had the principal yield. In 1921 Wisconsin reported about two-thirds and Kentucky about three-tenths of the 11,000 acres devoted to hemp.

*Imports* in 1914 of unhackled hemp were 7,880 tons, valued at \$1,443,994; of hackled hemp, 451 tons, valued at \$83,911; of hemp tow, 262 tons, valued at \$40,250; a total of 8,593 tons, valued at \$1,568,155. Italy was the main source, followed by Russia.

Imports since 1917 have been, by calendar years, as follows:

Hemp.	1918		1919		1920		1921 (9 months).	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
Not hackled..	<i>Tons.</i> 3,394	\$1,550,836	<i>Tons.</i> 1,403	\$821,062	<i>Tons.</i> 7,117	\$2,792,337	<i>Tons.</i> 5,407	\$946,310
Hackled.....	255	351,059	15	19,048	607	413,365	713	637,432
Tow.....	86	33,276	280	113,466	86	20,764	12	3,602
Total...	3,735	1,935,171	1,698	953,576	7,810	3,226,466	6,132	1,587,344

In 1920, over half of the total imports were from Italy; Canada and England were the next leading sources of imports.

*Exports* are not recorded.

*Important changes in classification.*—Hemp is transferred from the free list of the act of 1913 (par. 485). The words "hackled hemp, including 'line of hemp,'" have been substituted for the wording "hemp, hackled, known as 'line of hemp,'" which was used in the acts of 1909 and 1913. The reasons for the change are the same as those stated above for the wording relating to hackled flax.

## PARAGRAPH 1002.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1002. Sliver and roving, of flax, hemp, ramie, or other vegetable fiber, not specially provided for, 13 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 341. \* \* \* ramie sliver or roving, thirty-five per centum ad valorem.

PAR. 270. \* \* \* ramie sliver or roving, 15 per centum ad valorem.

## SLIVER AND ROVING OF VEGETABLE FIBERS N. S. P. F.

(See Survey J-1.)

*Description and uses.*—Sliver is a continuous strand of fiber in a loose, untwisted state, and roving is the same thing with a slight twist inserted preliminary to spinning into yarn. Ramie sliver and roving, mainly prepared by hand, come from China. Prior to 1914 Germany was the largest consumer and France and the United States the next largest. Flax and hemp sliver and roving are products of intermediate mechanical processes in a series ending with the spinning of the yarn.

*Production.*—No figures are available regarding domestic production of sliver or roving of flax, hemp, or ramie, as these are partial manufactures and, excepting the ramie, not regular articles of commerce.

*Imports* of sliver and roving of flax, hemp, or ramie are small. Figures are available only for imports of sliver and roving of ramie, which in 1914 amounted to \$6,707. Later imports have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918 .....		\$4	\$1
1919 .....	4,597	3,093	464
1920 .....	21,711	18,499	2,775
1921 (9 months).....	4,873	3,416	.....

*Exports* are not recorded.

*Important changes in classification.*—Sliver and roving of ramie were provided for in preceding acts (par. 270 of 1913 and 341 of 1909) but sliver and roving of other vegetable fibers, except cotton, were not mentioned. Paragraph 1002 provides for sliver and roving of all vegetable fibers, with the exception of cotton (par. 901) and jute (par. 1003).

## PARAGRAPH 1003.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1003. Jute yarns or roving, single, coarser in size than twenty-pound,  $2\frac{1}{2}$  cents per pound; twenty-pound up to but not including ten-pound, 4 cents per pound; ten-pound up to but not including five-pound,  $5\frac{1}{2}$  cents per pound; five-pound and finer, 9 cents per pound; jute sliver,  $1\frac{1}{2}$  cents per pound; twist, twine, and cordage, composed of two or more jute yarns or rovings twisted together, the size of the single yarn or roving of which is coarser than twenty-pound,  $3\frac{1}{2}$  cents per pound; twenty-pound up to but not including ten-pound, 5 cents per pound; ten-pound up to but not including five-pound,  $6\frac{1}{2}$  cents per pound; five-pound and finer, 11 cents per pound.

## ACT OF 1909.

PAR. 338. Single yarns made of jute, not finer than five lea or number, one cent per pound and ten per centum ad valorem; if finer than five lea or number, thirty-five per centum ad valorem; yarns made of jute not otherwise specially provided for in this section, thirty-five per centum ad valorem.

[No corresponding provision for twist, twine and cordage.]

## ACT OF 1913.

PAR. 267. Single yarns made of jute, not finer than five lea or number, 15 per centum ad valorem; if finer than five lea or number and yarns made of jute not otherwise specially provided for in this section, 20 per centum ad valorem.

[No corresponding provision for twist, twine and cordage.]

## JUTE YARNS AND CORDAGE.

(See Survey J-1.)

*Description and uses.*—Jute yarns may be divided into two classes: (1) Those made from long jute and (2) those made from jute butts and rejections. In manufacturing, the long jute is first opened, graded, and batched, after which it is put through a softener, a breaker card, a finisher card, two draw frames, and a roving frame, and then spun into yarn on a flyer or ring spinning frame. These yarns are used in weaving burlap and other jute cloths, in the manufacture of wool carpets (being employed in the foundation and other threads which do not appear on the surface), and in making the lower grades of cordage. Jute butts are subjected to fewer processes and are spun into very coarse yarns which are consumed mainly in bagging for covering raw cotton and in the lower grades of cordage. Jute yarns are numbered according to the weight in pounds of a fixed length of 14,400 yards; the higher the count the coarser the yarn. This method is the opposite of the yarn-numbering systems used in the cotton and worsted trades where the base is a fixed weight.

Twist, twine, and cordage are made by doubling or cabling single yarns. Jute twist is a term usually employed for jute ply yarns intended for weaving. Jute twines are harder twisted ply yarns which are used most extensively in tying up bundles of medium bulk. They are commonly called after the trade that uses them—fodder twine, for tying up fodder; paper makers' twine, for tying up bundles of paper; box twine, for bundling box shooks, etc. Jute cordage, other than twines, is employed as a substitute for manila and sisal in halter ropes, plow ropes, and baling ropes; it is also extensively used as cores in steel-wire cables.

*Production.*—British India is the largest producer of jute yarn, but most of the yarn manufactured is consumed in the mills where produced for making burlap and twilled bags, and exports in the form of yarn are small. In the Indian fiscal year 1921, when exports of Indian jute yarn were relatively large, they amounted to only 4,554 tons as against an export of 825,004 tons of jute cloth and bags. Dundee, Scotland, which ranks second to Calcutta in manufacture, is the largest exporter of jute yarn and cordage. Total exports of jute yarn and cordage originating mainly in Dundee, but recorded as from the United Kingdom, amounted in the calendar year 1920 to 43,533,800 pounds, valued at about \$10,524,000.

In 1920 American mills used 110,752,000 pounds of long jute and 104,375,000 pounds of jute butts as against 128,312,000 pounds of long jute and 114,389,000 pounds of jute butts in 1914. Considering

that waste in manufacture is balanced by the oil and water added during manufacture, the output of jute yarn in 1920 was approximately 215,000,000 pounds as compared with 243,000,000 pounds in 1914. This quantity was mainly used in mills where it was spun for manufacture into twines, cordage, and cotton bagging. The amount used in burlap manufacture is insignificant. The sales of jute yarn in 1919 amounted to 56,570,000 pounds, valued at \$11,269,000, as against 69,827,000 pounds, valued at \$7,358,000, in 1914. The wool-carpet industry is the main purchaser of jute yarns. The production of jute twine in 1919 was 52,398,000 pounds, valued at \$10,904,000, as compared with 55,282,000 pounds, valued at \$5,268,000, in 1914. The output in 1919 of jute rope was 40,716,000 pounds, valued at \$9,327,000, and in 1914, 26,814,000 pounds, valued at \$2,079,000.

*Imports* of jute yarns, including single and ply, during the 30 fiscal years 1891-1920, averaged per annum 1,771,710 pounds, valued at \$105,120. In recent years about three-fourths of the total have consisted of single yarns not finer than five lea; that is, yarns weighing 9.6 pounds or more per spynkle of 14,400 yards. These yarns are mainly for use in wool-carpet manufacture. Dundee is the principal source of imports. Entries of jute twines and cordage are small.

Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
SINGLE JUTE YARNS.					
	<i>Pounds.</i>		<i>Cents.</i>		<i>Per cent.</i>
1918.....	18,127	\$11,419	41.3	\$2,284	20
1919.....	51,960	36,964	71.1	7,314	20
1920.....	2,528,713	498,982	19.7	79,614	16
1921 (9 months).....	6,096,838	610,039	10.0		.....
JUTE YARNS OTHER THAN SINGLE.					
1918.....	25,181	\$7,495	29.7	\$1,499	20
1919.....	10,069	1,756	17.4	351	20
1920.....	64,387	7,843	12.1	1,569	20
1921 (9 months).....	203,911	28,914	14.1		20

*Exports* of jute yarn are not separately recorded. Canadian statistics show that in the Canadian fiscal years ended March 31, 1920 and 1921, imports of jute and hemp yarns from the United States amounted to 3,668,690 and 1,751,420 pounds, respectively.

*Important changes in classification.*—Roving has been specially provided for with the yarn because in the jute industry much of the so-called yarn is made on a roving frame and is in fact roving. The combining of roving and single yarn avoids any administrative difficulty which might arise in attempting to distinguish between a hard-twisted roving and a slack-twisted yarn. Specific provision is also made for jute twist (ply yarn), twine, and cordage, because of their commercial importance. The classification of such products under the act of 1913 is indefinite. Twisted yarns fall under the provision for jute yarns not specially provided for, but there is some question as to the classification of finished jute twines and cordage. They probably come within paragraph 284 of the act of 1913.

In previous tariff laws jute yarns have been numbered according to the lea system; that is, the number of 300-yard leas that weigh 1 pound. In the new classification jute yarns are numbered according to the pound system; that is, the weight in pounds of a spynkle of 14,400 yards. This length is equal to 48 leas so that the one system is inverse to the other; thus 4-pound yarn is equivalent to 12-lea yarn, 6-pound yarn to 8-lea yarn, etc. This change has been approved by manufacturers of jute yarns, who have called attention to the fact that jute yarns, both here and abroad, are numbered according to the pound system, and that the lea system, which is used in the linen industry, is never used in connection with jute.

The new classification of single jute yarns divides them into four groups instead of two as formerly. The former dividing point was at 5 lea, which is equivalent to 9.6-pound yarn. The new dividing points are at 5-pound, 10-pound, and 20-pound yarn. Since conversion costs increase with fineness of the yarn, expanding the number of groups creates a more equitable basis of classification. Group progression is, in this instance, preferable to individual count progression because of the tendency of jute to gain materially in weight by absorbing moisture during shipment. A gain in weight automatically changes the count. A 10-pound jute yarn at Dundee, for example, might be found to be an 11-pound yarn upon arrival in this country.

---

#### PARAGRAPH 1004.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1004. Single yarns, in the gray, made of flax, hemp, or ramie, or a mixture of any of them, not finer than eight lea, 8 cents per pound; finer than eight lea and not finer than sixty lea, 8 cents per pound and one-half of 1 cent per pound additional for each lea or part of a lea in excess of eight; finer than sixty lea, 35 cents per pound; and in addition thereto, on any of the foregoing yarns when boiled, bleached, dyed, or otherwise treated, 5 cents per pound: *Provided*, That the duty on any of the foregoing yarns not finer than eight lea shall be not less than 20 per centum ad valorem; on any of the foregoing yarns finer than eight lea, not less than 23 per centum ad valorem. Threads, twines, and cords, composed of two or more yarns of flax, hemp, or ramie, or a mixture of any of them, twisted together, the size of the single yarn of which is not finer than eight lea, 16 cents per pound; finer than eight lea and not finer than sixty lea, 16 cents per pound and three-fourths of 1 cent per pound additional for each lea or part of a lea in excess of eight; finer than sixty lea, 56 cents per pound: *Provided*, That the duty on the foregoing threads, twines and cords shall be not less than 23 per centum ad valorem.

## ACT OF 1909.

PAR. 340. Threads, twines, or cords, made from yarn not finer than five lea or number, composed of flax, hemp, or ramie, or of which these substances or either of them is the component material of chief value, ten cents per pound; if made from yarn finer than five lea or number, twelve cents per pound, and three-fourths of one cent per pound additional for each lea or number, or part of a lea or number, in excess of five.

PAR. 341. Single yarns in the gray, made of flax, hemp, or ramie, or a mixture of any of them, not finer than eight lea or number, six cents per pound; finer than eight lea or number and not finer than eighty lea or number, forty per centum ad valorem; single yarns, made of flax, hemp, or ramie, or a mixture of any of them, finer than eighty lea or number, fifteen per centum ad valorem; \* \* \*.

[Single yarns not in the gray and not finer than eighty lea were dutiable at 45 per centum under paragraph 358.]

## ACT OF 1913.

PAR. 269. Threads, twines, or cords, made from yarn not finer than five lea or number, composed of flax, hemp, or ramie, or of which these substances or any of them is the component material of chief value, 20 per centum ad valorem; if made from yarn finer than five lea or number, 25 per centum ad valorem.

PAR. 270. Single yarns, made of flax, hemp, or ramie, or a mixture of any of them, not finer than eight lea or number, 12 per centum ad valorem; finer than eight lea or number and not finer than eighty lea or number, 20 per centum ad valorem; finer than eighty lea or number, 10 per centum ad valorem; \* \* \*.

[No distinction made between yarns in the gray and not in the gray.]

## YARNS, THREADS, AND TWINES OF FLAX, HEMP, OR RAMIE.

(See Survey J-1.)

*Description and uses.*—Flax, hemp, and ramie are stem or bast fibers, but differ in that the first two are obtained by retting and the last named by decortication. Flax, hemp, and ramie yarns are used in making thread, cordage, and fabrics. Flax yarns, from a finer fiber than hemp, are used in the United States chiefly for making linen thread, for weaving fabrics, such as toweling, and to some extent for fire-hose. Hemp yarns are used in cordage and rope, in wool carpets, and to a small extent in canvas. Ramie yarns, composed of fibers having a greater tenacity and elasticity than flax or hemp, serve most extensively in the manufacture of gas mantles. The fibers are spun on flax-working and similar machinery, imported largely from England. All the ramie and the bulk of the raw flax absorbed here is imported, but about one-half of the hemp consumed in 1914-1921 was of domestic production.

Threads, twines, and cords are made by doubling or cabling single yarns. Thread is a slender, well-rounded line, generally polished, used principally for sewing. Linen thread may be divided into (1) household threads, usually sold at retail, consisting mainly of three-cord and six-cord sewing thread; (2) manufacturing threads, used by garment makers, shoemakers, saddlers, upholsterers, bookbinders, etc., made in a variety of ways, some being cabled and others made of ordinary ply yarns.

Twine is composed of two or more yarns or rovings twisted together. The chief uses of linen twine are as gilling twine for fish nets, and as seaming twines for sails. Although used to some extent for tying packages where strength is required, linen twine has been largely supplanted by cotton and jute. Hemp twine is employed chiefly for

wrapping purposes. Cord is most commonly made of cable-laid yarns, but some is braided, as in fancy sash cords. It is larger than twine and smaller than rope, and serves for sash cords, clotheslines, plow lines, etc.

*Production.*—In 1914 the United States had 67,412 spindles, or about 2 per cent of the world's total, devoted to flax spinning. No figures are available showing the total domestic production of flax, hemp, and ramie yarns. Production of such yarns for sale only in 1914 and 1919 is shown by the following table:

Yarns for sale.	1919		1914	
	Quantity.	Value.	Quantity.	Value.
Hemp.....	<i>Pounds.</i> 1,454,000	\$829,000	} 6,048,317	\$962,298
All other <sup>1</sup> .....	2,622,000	872,000		

<sup>1</sup> Other than hemp and jute in 1919; other than jute in 1914. In reality this consists largely of flax yarn in 1919; of flax and hemp yarn in 1914.

It is certain, however, that the quantity of linen yarn produced for sale is but a minor portion of the total production. The leading domestic consumers, i. e., the manufacturers of linen thread and fabrics, produce in their own mills most of the yarn which they consume. While the total production can not be precisely determined, a rough approximation (for 1914) can be obtained by adding to the total number of pounds of linen thread and twine produced (shown below), the estimated number of pounds of yarn consumed in fabrics, namely, 10,799,628 square yards at roughly 6½ ounces per square yard, or approximately 4,330,000 pounds, and to this the yarn produced for sale (mainly to the carpet industry, as shown by the consumption therein of linen yarns), namely, 6,048,317 pounds. On this basis, something like 29,000,000 pounds of yarn must have been produced, about ten times the importation in 1914. Judging from the incomplete statistics as yet available for 1919, the production was not far from that in 1914.

The domestic production of linen thread and twines in 1914 and 1919 was as follows:

	1919		1914	
	Quantity.	Value.	Quantity.	Value.
Linen thread.....	<i>Pounds.</i> 4,280,000	\$6,691,000	<i>Pounds.</i> 5,707,668	\$3,409,136
Hemp thread.....	7,738,905	1,572,841	.....	.....
Hemp twine.....	7,988,000	3,864,000	9,318,771	1,583,354
Flax twine.....	( <sup>2</sup> )	( <sup>2</sup> )	3,953,622	1,051,684

<sup>1</sup> Derived by subtracting figures for hemp twine from a combined production of hemp thread and twine (shown in a revised return) of 15,725,905 pounds, valued at \$5,436,841.

<sup>2</sup> Included with "all other (than cotton, jute, and hemp)," which amounted to 8,534,000 pounds, valued at \$3,273,000. Assuming the same ratio of flax twine to "all other" as in 1914, the 1919 production would amount, roughly, to 1,600,000 pounds, valued at \$975,000.

The United Kingdom, which possesses over one-third of the world's spindles working on flax, is the largest producer of flax yarns, threads, twines, and cords. She also takes first rank in the production of

similar articles of hemp. Her exports of flax and hemp yarns in 1919 totaled 132,384,000 pounds and in 1920, 63,952,000 pounds, the major portion of which went to European countries.

In prewar years Germany, because of her success in degumming ramie, was the only nation producing ramie yarn on a large scale. The spinning of ramie yarns in the United Kingdom and France has made marked advances since the close of the war. The American output is practically limited to the production of one company.

*Imports* of single yarns of flax, hemp, or ramie during the fiscal years 1911-1920 averaged per annum 2,187,819 pounds, valued at \$899,310. Flax yarns made up the bulk of imports. Imports of flax yarn consist chiefly of counts under 40 lea. The United Kingdom is the chief source of our imports of flax yarns. Italy supplies the bulk of the hemp yarns.

The domestic consumption of foreign threads, twines, and cords of flax, hemp, or ramie normally averages a half million pounds per annum. In 1909 imports amounted to 446,594 pounds, or about 2½ per cent of the domestic consumption; corresponding figures in 1914 were 784,932 pounds, or about 4 per cent; and in 1920, 585,449 pounds, or about 3 per cent of the domestic consumption in 1919. From one-half to two-thirds of the imports are supplied by the United Kingdom. In the fiscal years 1914-1920, 83 per cent of the imports of threads, twines, and cords, practically all linen, was made from yarn finer than 5 lea.

Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
SINGLE YARNS OF FLAX, HEMP, OR RAMIE.					
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	507,313	\$366,909	\$0.723	\$73,284	20.0
1919.....	1,315,844	1,190,669	.886	228,964	19.2
1920.....	1,874,051	1,423,936	.759	252,804	17.7
1921 (9 months).....	1,128,998	687,384			
THREADS, TWINES, OR CORDS OF FLAX, HEMP, OR RAMIE.					
1918.....	203,551	\$333,149	\$1.636	\$82,145	24.6
1919.....	328,855	623,283	1.895	153,752	24.6
1920.....	585,449	819,813	1.400	200,683	24.7
1921 (9 months).....	339,698	346,158			

*Exports* are not recorded. Canadian statistics show imports of linen yarn from the United States, a part of which may have been transhipped, amounting to 158,070 pounds in the fiscal year ended March 31, 1921; of linen thread, 1,883 pounds; and of jute and hemp yarn, 1,751,420 pounds.

*Important changes in classification.*—The provisions for yarn and for thread have been incorporated in the same paragraph because of their closely related character. Threads being further manufactured than yarns, the order of the two paragraphs has been reversed from that in the acts of 1913 and 1909. In the classification of yarn, 60 lea rather than 80 lea is made the dividing line between intermediate

and fine yarns, because the bulk of that produced in this country is not finer than 40 lea.

Threads have been classified on the same basis of count as the yarns. In both provisions, 8 and 60 lea are made the respective dividing points for yarn count. This is in contrast to the acts of 1913 and 1909, which contained a thread grouping apparently unrelated to the yarn grouping. For yarn, 8 and 80 lea were the respective dividing points; for thread, there was one dividing point only, namely, 5 lea, although the act of 1909 did provide for graduated duties on thread made from yarn finer than 5 lea. Logically, the yarn and thread classifications should be on the same basis.

Distinctions in rates of duty have been drawn between gray and treated yarns, owing to the fact that flax yarn in the gray loses approximately 20 per cent in weight when given a full boil. Where the duty is specific, absence of a differential produces an inequitable result with respect to boiled yarns, because importation of a given quantity of gray yarn, to be boiled here, involves payment of duty on approximately 20 per cent more yarn (in weight) than is paid when the same quantity of gray yarn is boiled abroad and subsequently imported with the waste excluded. The loss in weight, however, where the duty is based on the individual gray yarn count is partly offset by the automatic increase of the yarn count, and hence of the rate of duty, when the yarn is boiled. A 20-lea gray yarn, i. e., 20 by 300 yards weighing 1 pound, becomes, when given a full boil, 20 by 300 yards, weighing eight-tenths of a pound, or 25 lea. The act of 1913 makes no distinction between yarns in the gray and yarns which have been boiled, but there is no inequity because the duty is *ad valorem*.

*Suggested changes.*—Paragraph 1004, as now worded, establishes a differential duty as between gray and bleached yarn but not as between gray and bleached thread. Imports of linen thread consist largely of thread which has been boiled; but there might be some importation of gray thread, and there is certainly some importation of gray hemp twine. Likewise, the production of gray linen shoe thread and of gray hemp twine forms a not inconsiderable part of the domestic industry. Provision for the suggested differential will involve establishment of the thread duties in paragraph 1004 upon a gray basis and then establishment of additional duties on the finished (i. e., boiled, bleached, etc.) thread by phraseology corresponding to that used for the yarns.

---

#### PARAGRAPH 1005.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1005. Cordage, including cables, tarred or untarred, wholly or in chief value of manila, sisal, or other hard fibers, three-fourths of 1 cent per pound; cordage, including cables, tarred or untarred, wholly or in chief value of hemp, sunn, or other bast fibers, but not including cordage made of jute, 2 cents per pound.

## ACT OF 1909.

PAR. 339. Cables and cordage, composed of istle, Tampico fiber, manila, sisal grass or sunn, or a mixture of these or any of them, three-fourths of one cent per pound; cables and cordage made of hemp, tarred or untarred, two cents per pound.

## ACT OF 1913.

PAR. 268. Cables and cordage, composed of istle, Tampico fiber, manila, sisal grass or sunn, or a mixture of these or any of them,  $\frac{1}{2}$  cent per pound; cables and cordage made of hemp, tarred or untarred, 1 cent per pound.

## ROPES AND CABLES.

(See Survey J-1.)

*Description and uses.*—Although the term cordage is used in a collective sense to include all sizes and varieties of cords, ropes, and cables, from twine to the heaviest cables, anything less than three-sixteenths of an inch in diameter is not cordage in the usual acceptation of the term. Rope is cordage 1 inch or more in diameter, formed by twisting several yarns into strands, and then twisting these strands together into a strong line. A cable is a strong rope not less than 10 inches in circumference, and is formed by twisting together three 3-strand ropes, the twist being the reverse of that used in making the constituent ropes. Ropes and cables are made either by the old-fashioned rope-walk method or in up-to-date factories by "house" machines. When made on compound rope machines, which are extensively used, the stranding of the yarn is combined with the closing of the strands into rope, the process being essentially one of machine braiding.

Manila, often called manila hemp, is the world's foremost cordage fiber. Its great pliability and strength make it particularly well-adapted for hawsers, ships' cables, hoisting ropes, and transmission ropes. The production of manila is a monopoly of the Philippine Islands. Sisal, like manila, a hard fiber, and jute, a soft fiber, are largely used in the cheaper grades of cordage; istle (otherwise called Tampico fiber) and sunn are used to a smaller extent. Hemp (*Cannabis sativa*) is also used in cables and cordage. A great deal of it is tarred. The yarns of tarred rope are passed through a tank of tar heated to 220° F.; this renders the rope measurably impervious to water and enables it to resist the ravages of weather. Russian hemp has long been held superior for tarred rigging. Untarred hemp rope is preferred for elevators and dumb-waiters. Sunn, or sunn hemp, is a soft fiber, possessing many of the same qualities as true hemp, but is coarser and weaker. It comes mainly from India. Very little is used in the domestic cordage industry.

*Production.*—The United States, with the possible exception of the United Kingdom, ranks first as a producer of cordage. In 1919 the domestic production of rope and cable amounted to 225,660,000 pounds, valued at \$59,369,000, as compared with 198,400,692 pounds valued at \$21,530,858 in 1914, and with 239,031,893 pounds in 1909, valued at \$19,850,635. Of the total cordage production in 1919, 77 per cent was made of hard fibers (manila 58 per cent, sisal 12 per cent, and henequen 7 per cent). Marine rope and cable accounted for two-thirds of the manila cordage produced. The output of hemp rope and cable is relatively small, and is not shown separately in census returns.

*Imports* of both hard and soft fiber cordage are negligible in quantity compared with domestic production and are much smaller than exports. In the fiscal years 1891-1920 imports averaged per annum, 880,667 pounds, valued at \$113,899, equal to less than 1 per cent of domestic production. Beginning with 1916 imports began to increase and by 1920 had reached 3,714,680 pounds, valued at \$639,421, or about 1.5 per cent of the total output in the United States in 1919. Previous to 1913, imports of hemp cordage, tarred or untarred, constituted four-fifths of our small import trade. Since 1913 imports of soft fiber cordage have declined and those of hard fiber have increased, the latter advancing from 148,048 pounds in 1914 to 3,262,589 pounds in 1920. Before the war, the United Kingdom was the leading source of imports. During 1914-1920 Cuba and the Philippine Islands furnished more than one-half of our increased imports, for the most part consisting of henequen cordage from Cuba and manila cordage from the Philippines. Imports for 1918-1921 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
ROPES AND CABLES OF HARD FIBERS.			
	<i>Pounds.</i>		
1918.....	3,311,307	\$500,242	\$13,265
1919.....	3,490,761	546,432	10,865
1920.....	3,262,589	546,367	11,199
1921 (9 months).....	1,474,009	183,208	.....

## ROPES AND CABLES OF HEMP.

1918.....	472,558	\$107,216	\$897
1919.....	300,922	91,773	677
1920.....	452,091	92,874	1,213
1921 (9 months).....	266,004	55,948	.....

*Exports* in the fiscal years 1891 to 1920 averaged 10,062,857 pounds annually, about twelve times the quantity of imports. The United States ranks next after the United Kingdom as an exporter of cordage. There probably exists a superiority in the quality of the exported over the imported cordage. Prior to the war the former was frequently higher in price than the latter.

Exports since 1917 by calendar years have been as follows:

*Exports of cordage (other than binder twine) made from vegetable fibers.*

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	12,684,673	20,286,256	17,292,000	4,188,250
Value.....	\$3,397,064	\$4,316,109	\$4,101,256	\$556,813

Our cordage markets, like those of other exporting countries, have been very widely distributed. The most regular—and prior to the war the largest—have been Canada, Panama, Peru, Mexico, and Cuba. The war greatly stimulated exports to the United Kingdom, France, and Norway, and there was also a considerable increase in exports to South America.

*Important changes in classification.*—The phrase, “cordage, including cables,” has been substituted for “cables and cordage,” because cables are merely one, though an important, type of cordage. “Tampico fiber” and “istle,” separately enumerated in the acts of 1909 and 1913, are from the same plant. Both are omitted from the new classification, however, because such fiber is relatively unimportant as a raw material for cordage and is covered by the phrase, “or other hard fibers.” Manila and sisal are separately enumerated because of their major importance as cordage materials. The proper term is “sisal,” not “sisal grass.”

The terms “hard fibers” and “bast fibers” cover a group well understood botanically and commercially. Hard fibers are those obtained from the leaves of the plant, as in the case of manila and sisal; bast fibers are those obtained from the stem of the plant, as in the case of flax, hemp, jute, and ramie. The former are generally removed from the leaf by mechanical treatment only, and are used mainly in cordage or other coarse goods; the latter are removed from the stem by retting or degumming and then beating away the woody matter, and are generally adapted to the manufacture of finer goods. The term “hard fiber” does not, however, include sunn, which has been transferred from the hard to the bast fiber provision, both because it is in fact a bast fiber and because, in the United States, it is used in cordage in the same manner as true hemp. Jute cordage, although made from a bast fiber, is elsewhere provided for (par. 1003). Cotton cordage, made from neither a hard nor a bast fiber but from a seed hair, falls under the basket clause of the cotton schedule (par. 920).

Manila, sisal, and other hard fibers are free of duty under paragraph 1575, whereas hemp, the leading bast fiber used in cordages, is dutiable under paragraph 1001. Hemp cordage, moreover, generally sells for more than manila or sisal cordage. For these reasons, cordage made of soft or bast fibers is here made dutiable at a higher rate than cordage made of hard fibers.

---

#### PARAGRAPH 1006.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1006. Gill nettings, nets, webs, and seines, and other nets for fishing, composed wholly or in chief value of flax, hemp, or ramie, shall pay the same duty per pound as the highest rate imposed in this Act upon any of the thread, twine, or cord of which the mesh is made, and, in addition thereto, 10 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 342. Flax gill nettings, nets, webs, and seines shall pay the same duty per pound as is imposed in this schedule upon the thread, twine, or cord of which they are made, and in addition thereto twenty per centum ad valorem.

PAR. 271. Gill nettings, nets, webs, and seines made of flax, hemp, or ramie, or a mixture of any of them, or of which any of them is the component material of chief value, 25 per centum ad valorem.

## FISH NETTING AND NETS.

(See Survey J-2.)

*Description and uses.*—Gill netting, made by crossing threads, twines, or cords and knotting the intersections to form meshes, is used in the manufacture of fish or gill nets. Gill nets are designed to catch the fish by gilling, i. e., being of sufficient size to admit only the head of the fish, the mesh slips under and back of the gills, thus holding the fish. Gill webs are pieces of netting that have not been hung or rigged to ropes. Seines are large nets for sweeping in the fish. Practically all the netting and nets used in domestic fisheries are made by machinery. Hand labor is now limited to repairs. Flax, manila, and cotton, principally the last, are the fibers used in making domestic fishing tackle. The amounts of soft hemp and ramie consumed for such purposes are negligible. Gill nets of flax are used mainly in fresh-water fisheries and in the salmon-producing areas of Alaska. The high price of linen twines prohibits their use in seines. While inferior to flax in strength and durability, cotton is much cheaper and is more largely used in the domestic manufacture of fishing nets and nettings.

*Production* in the United States of fish netting, seines, and crab scrape bags of all materials, as turned out by 15 establishments in 1914, was valued at \$3,088,000, and by 19 establishments in 1919 at \$5,114,000.

*Imports* are small, the largest under this classification amounting to 66,664 pounds in the fiscal year 1918. In 1920 they totaled 34,906 pounds. Imports are mainly of linen gill netting from the United Kingdom, entered for manufacture into nets and then reexported with the benefit of the drawback. In 1905–1920 imports under this classification totaled 395,000 pounds, as compared with fish nets exported with the benefit of the drawback amounting to 401,000 pounds in the same period. Imports of cotton fishing nets (dutiable under the basket clause in the cotton schedule) are much smaller, and come mainly from the United Kingdom and Japan. Record exports to this country from Japan amounted to 43,000 pounds in 1917. Imports of nettings, nets, webs, and seines of flax, hemp, or ramie during 1918–1921 were as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....	64,172	\$53,192	\$13,295
1919.....	41,639	72,984	18,246
1920.....	34,906	55,265	13,816
1921 (9 months).....	26,497	29,362	.....

*Exports* are not recorded. Exports of textile fishing tackle from the United States usually constitute over one-half the value of Canada's total imports of such articles. In the Canadian fiscal year ended March 31, 1921, shipments from the United States were \$1,301,519 out of a total of \$2,693,537.

*Important changes in classification.*—The new classification revives the system of compensatory duties contained in the act of 1909 and abandoned for a straight ad valorem duty in the act of 1913. That

part of the act of 1909 reading "as is imposed \* \* \* upon the thread, twine, or cord of which they (i. e., nettings, nets, etc.) are made" might lead to litigation, because a netting or net or seine may be composed of threads or twines of several sizes, each size being dutiable at a different rate. This difficulty has been avoided by fixing the compensatory duty at "the highest rate imposed in this Act upon any of the thread, twine, or cord of which the mesh is made."

---

PARAGRAPH 1007.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1007. Hose, suitable for conducting liquids or gases, composed wholly or in chief value of vegetable fiber, 26 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 345. Hydraulic or flume hose, made in whole or in part of cotton, flax, hemp, ramie, or jute, fifteen cents per pound.

PAR. 274. Hydraulic or flume hose, made in whole or in part of cotton, flax, hemp, ramie, or jute, 7 cents per pound.

HOSE FOR CONDUCTING LIQUIDS OR GASES.

(See Survey J-4.)

*Description and uses.*—The common varieties of hose used to convey water, liquids, and gases may be divided into three general classes: (1) Rubber hose, constructed of a rubber tube surrounded by a fabric covering, the most popular medium for conducting water, the principal size (2½ inches) being extensively used for fire protection purposes; (2) unlined linen hose, which is used chiefly for indoor emergency fire protection purposes; (3) unlined cotton hose, of which comparatively little is made, employed where considerable quantities of water are to be conducted under little pressure, as in mining and railroad work. No. 12 cotton yarn is the chief size employed in the production of rubber hose. Prior to 1914 about two-thirds of the yarn used in the manufacture of unlined linen hose was line yarn and one-third flax tow; in 1919, about 30 per cent was line yarn and 70 per cent flax tow. The bulk of the linen yarns used for these purposes varies from 15 to 20 lea.

*Production* of rubber hose in 1914 was valued at \$16,854,000, and in 1919 at \$26,998,000. The domestic production of all-linen water hose, an enterprise carried on chiefly by firms specializing in that line, was \$477,000 in 1914.

*Imports* of hydraulic or flume hose made in whole or in part of flax, hemp, or ramie were negligible prior to 1914. Since then there has been an increase in imports, due in large part to the high price of flax yarns on which the specific equivalent of the ad valorem rate has become greater than the specific duty on the finished hose. Imports are almost entirely of linen hose. The average annual import of hydraulic or flume hose during the 30 fiscal years 1891-1920 was 10,530 pounds, valued at \$12,381. The United Kingdom is the chief

source of imports. Imports since 1917 of hose made in whole or in part of cotton, flax, hemp, or jute have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	76,644	\$156,199	\$2.08	\$5,365	3.43
1919.....	46,550	75,426	1.62	3,261	4.32
1920.....	89,873	147,682	1.64	6,291	4.26
1921 (9 months).....	62,118	102,812	1.65		

*Exports* are not recorded separately. Exports of india-rubber hose, which are large, are not included under this paragraph, because the bulk of the rubber hose exported has rubber as its component material of chief value. Exports of unlined linen hose, according to statements submitted to the Tariff Commission by manufacturers, were greater than imports prior to 1918; since that time imports have been greater.

*Important changes in classification.*—This paragraph covers hose composed wholly or in chief value of vegetable fiber. Hose composed wholly or in chief value of rubber is dutiable, without specific mention, under paragraph 1437. The new classification has been phrased to clarify and to expand the scope of the provisions in the acts of 1909 and 1913, which were identical in wording. Inquiry among the trade indicates that the words hydraulic or flume hose, previously used, do not define a type known in the hose trade. An underwriter's laboratory states it is not familiar with the terms. A wide divergence of opinion exists in the trade regarding the material from which such hose might be made. (See Survey J-4, p. 17.) The suggested provision covers all hydraulic or flume hose, and also includes air hose. Heretofore the latter has been classified as a manufactured article according to the constituent material of chief value.

#### PARAGRAPH 1008.

##### H. R. 7456.

##### SENATE AMENDMENTS.

PAR. 1008. Fabrics, composed wholly of jute, plain-woven, twilled, and all other, not specially provided for, not bleached, printed, stenciled, painted, dyed, colored, nor rendered noninflammable, 1 cent per pound; bleached, printed, stenciled, painted, dyed, colored, or rendered noninflammable, 1 cent per pound, and in addition thereto, 13 per centum ad valorem.

##### ACT OF 1909.

##### ACT OF 1913.

PAR. 352. Plain woven fabrics of single jute yarns, by whatever name known, weighing not less than six ounces per square yard and not exceeding thirty threads to the square inch, counting the

PAR. 279. Plain woven fabrics of single jute yarns, by whatever name known, bleached, dyed, colored, stained, painted, printed, or rendered noninflammable by any process, 10 per centum ad valorem.

warp and filling, nine-sixteenths of one cent per pound and fifteen per centum ad valorem; if exceeding thirty and not exceeding fifty-five threads to the square inch, counting the warp and filling, seven-eighths of one cent per pound and fifteen per centum ad valorem.

[Twilled, and all other jute fabrics, not specially provided for, were dutiable at 45 per centum under paragraph 358.]

PAR. 408. \* \* \* plain woven fabrics of single jute yarns by whatever name known, not bleached, dyed, colored, stained, printed, or rendered noninflammable by any process; \* \* \* [Free].

[Twilled, and all other jute fabrics, not specially provided for, were dutiable at 35 per centum under paragraph 284.]

#### UNBLEACHED JUTE CLOTHS.

(See Survey J-7.)

*Description and uses.*—This paragraph includes, with two exceptions, all cloths composed wholly of jute, irrespective of manner of weave or whether woven from single or ply yarns. The two cloths not included are paddings or interlinings (par. 1010) and bagging for covering raw cotton (par. 1517). Burlap and sacking constitute the bulk of the world's production of jute fabrics. Burlap is a plain-woven cloth made of single jute yarns, ranging in weight from 6 to 16 ounces to the linear yard. The 40-inch 10½-ounce make is usually taken as the market standard. Burlap is largely used in the manufacture of bags and for baling merchandise; also for other purposes requiring a cheap but fairly strong cloth. Wide goods are used as backing for linoleums and roofing felts. Eighty per cent of the burlap consumed in the United States in 1914, and 83 per cent of that consumed in 1919, was used by bag factories. The American consumption of burlap in 1920 was about 1,000,000,000 yards, practically all imported, for the reason that burlap is not made here in commercial quantities. Sacking is a twilled jute cloth made of either single or ply yarns and is heavier, coarser, and stronger than burlap. The standard size is 27 inches wide, weighing 16 ounces to the linear yard. The chief use of sacking is in the manufacture of bags. The world consumption of sacking is as great as that of burlap, but the American consumption of new sacking has been very small because of the levying of higher tariff duties on sacking than on burlap. The largest export in recent years of sacking to the United States from India, the main source of both burlap and sacking, was in 1917 and amounted to only 5,000,000 yards. The bulk of this was probably for reexport to adjacent or near-by countries.

*Production.*—Jute burlap and sacking are not produced on a commercial scale in the United States, being confined almost entirely to one or two firms which weave a small amount for baling other commodities made by them. Although under the acts of 1897 and 1909 nonprocessed burlap was subject to a compound duty averaging 1.65 cents per pound (about 1 cent per linear yard), the average ad valorem equivalent of which was 26.75 per cent, American manufacturers have considered it unprofitable to attempt manufacture in competition with India. India has the following advantages: (1) A monopoly of the raw material; (2) proximity of material to centers of manufacture; (3) an abundance of cheap though relatively inefficient labor; and (4) large manufacturing units, equipped with the best machinery, managed by experienced Europeans. During the emergency created by the war some American concerns under-

took the manufacture of burlap and in 1918 produced 7,292,000 linear yards—their record output, but still less than 1 per cent of the consumption. As soon as the emergency passed the manufacturers abandoned burlap for more profitable lines.

*Imports.*—Burlap is used as a covering for farm and factory products during their journey to the consumer, and as the output of American farms and factories increases, so does the demand for burlap. Imports of burlap for domestic consumption have more than doubled since the beginning of the century. Imports in the fiscal year 1914 of nonprocessed jute cloths other than cotton bagging amounted to 523,714,285 pounds, valued at \$44,481,408. Imports since 1917 have been, by calendar years, as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	436,237,502	440,237,595	568,809,189	349,485,096
Value.....	880,013,843	365,406,320	888,896,470	831,369,068

Over 99 per cent of the imports are supplied by India and the United Kingdom, with the former furnishing a constantly increasing part of the total. Burlap imported from Calcutta is used for bag material and for baling, whereas that from Dundee consists mainly of the better grades, such as those used for paddings and for wall decorations, or wide goods, such as are used in making linoleums.

*Exports.*—None recorded.

*Important changes in classification.*—Sacking is dutiable at 35 per cent under the act of 1913 (par. 284), whereas burlap, if not processed, is exempt from duty (par. 408). Under the act of 1909 sacking was dutiable at 45 per cent (par. 358), whereas the greater part of the burlap was dutiable at a compound rate equivalent to about 27 per cent. The price of sacking per pound is normally about one-third less than that of burlap, and therefore sacking should bear a specific rate at least no higher than that imposed on burlap. As neither burlap nor sacking is produced in the United States, the same rate of duty has been applied to both. In the new classification burlap and sacking have been separately enumerated in order to encourage the keeping of separate import records.

#### JUTE CLOTHS, YARN-DYED, CONVERTED, OR PROCESSED.

*Description and uses.*—The amount of jute cloth woven with dyed yarns, or converted or processed, is very small as compared with the amount used unbleached and unprocessed for bag material, for baling material, and for linoleum backing. Jute cloths woven in the grey and converted by bleaching, printing, stenciling, painting, or dyeing, are used mainly for wall covering and other upholstery purposes. Jute cloths processed to make them fireproof are mainly brattice cloths, employed chiefly for ventilating purposes in mines.

*Production.*—The production of yarn-dyed and of converted jute cloths is not separately recorded. The 1920 production of jute brattice cloth, according to data obtained from the manufacturers by the Tariff Commission, amounted to 3,380,876 square yards, with an estimated value of \$899,000. There has been a marked advance

in the output of jute brattice cloth in recent years; this is due in large part to its increasing use as a substitute for cotton duck, a more durable but higher-priced fabric.

*Imports* under this classification averaged 2,092,244 pounds annually in the fiscal years 1914-1921. Brattice cloth is the main import. The United Kingdom furnished about two-thirds of the total and British India the bulk of the remainder. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....	873,229	\$157,941	\$15,794
1919.....	2,204,041	350,518	35,052
1920.....	2,227,107	391,694	39,169
1921 (9 months).....	886,179	92,367	.....

*Exports* are not recorded.

*Important changes in classification.*—The description of the treated fabrics has been slightly changed. The word “stained” has been omitted as unnecessary, as stained cloth must necessarily be dyed either in the piece or in the yarn, and is covered by the words “dyed or colored.” There are no imports on record of cloth that has been stained. The word “stenciled” has been inserted because such cloths may be stenciled and because of some uncertainty as to the classification of such fabrics. The descriptive terms have been rearranged approximately in the order of mill operations.

*Suggested changes.*—Strike out comma before “and” and the words “in addition thereto,” after “and” page 115, line 23, H. R. 7456, as unnecessary.

### PARAGRAPH 1009.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1009. Woven fabrics, not including articles, finished or unfinished, of flax, hemp, ramie, or other vegetable fiber except cotton, or of which these substances or any of them is the component material of chief value, not specially provided for, 28 per centum ad valorem.

### ACT OF 1909.

PAR. 357. Woven fabrics \* \* \* not specially provided for in this section, composed of flax, hemp, or ramie, or of which these substances or any of them is the component material of chief value, weighing four and one-half ounces or more per square yard, when containing not more than sixty threads to the square inch, counting the warp and filling, one and three-fourths cents per square yard; containing more than sixty and not more than one hundred and twenty threads to the square inch, two and three-fourths

### ACT OF 1913.

PAR. 283. Plain woven fabrics, not including articles, finished or unfinished, of flax, hemp, or ramie, or of which these substances or any of them is the component material of chief value, including such as is known as shirting cloth, 30 per centum ad valorem.

PAR. 284. \* \* \* manufactures of flax, hemp, ramie, or other vegetable fiber, or of which these substances, or any of them, is the component material of chief value, not specially provided for in this section, 35 per centum ad valorem.

## ACT OF 1909.

cents per square yard; containing more than one hundred and twenty and not more than one hundred and eighty threads to the square inch, six cents per square yard; containing more than one hundred and eighty threads to the square inch, nine cents per square yard, and in addition thereto, on all the foregoing, thirty per centum ad valorem: *Provided*, That none of the foregoing \* \* \* fabrics in this paragraph shall pay a less rate of duty than fifty per centum ad valorem. Plain woven fabrics, not including articles, finished or unfinished, of flax, hemp, or ramie, or of which these substances or any of them is the component material of chief value, including such as is known as shirting cloth; weighing less than four and one-half ounces per square yard and containing more than one hundred threads to the square inch, counting the warp and filling, thirty-five per centum ad valorem; weighing less than four and one-half ounces per square yard and containing not more than one hundred threads to the square inch, thirty per centum ad valorem.

## ACT OF 1913.

## WOVEN FABRICS OF FLAX, HEMP, OR RAMIE.

*Description and uses.*—The major part of the cloths covered by this paragraph are made in whole or in chief value of flax. Among the leading types of flax fabrics here covered are dress linens, used for dresses and summer suits; sheer linens and cambrics, used for underwear, blouses, and handkerchiefs; embroidery linens; household linens such as sheetings, pillow linens, glass cloth, huck and crash toweling; and canvas and sailcloth. If paragraph 1012 is changed as recommended to cover only manufactures of linen table damask, linen damask in the piece (now covered in par. 1012), will also fall here. Hemp fabrics consist chiefly of canvas and sailcloth. Ramie fabrics are used to a small extent for wearing apparel and upholstery.

*Production* of linen fabrics in 1914 amounted to 10,800,000 square yards, valued at \$1,766,000, and in 1919 to 14,342,000 square yards, valued at \$3,799,000. These fabrics, of which over a third in 1919 were union goods made of flax and cotton, were coarse linens, mainly crash for toweling, averaging less than 60 threads to the square inch. The production of fabrics of hemp or ramie is not recorded, but is negligible.

*Imports* in the fiscal year 1914 (under three months' operation of the act of 1909), of woven fabrics of flax, hemp, and ramie, including a small amount of unspecified articles amounted to 92,129,629 square yards, valued at \$14,049,822, with duties amounting to \$4,639,160. The greater part of these imports consisted of plain-woven linens; a smaller but considerable portion of linens other than plain woven. Of these latter, the bulk was probably table damask. The importation of fabrics of hemp or ramie is negligible. The subsequent sharp decline in imports and consequent falling off in the American consumption of linen fabrics have been due largely to the scarcity and

high prices resulting primarily from the collapse of Russia, the main flax producer. Imports come, for the most part, from the United Kingdom, Ireland supplying the major portion of the light-weight and better quality linens and Scotland the heavier and coarser goods. Smaller amounts were furnished by Belgium, Germany, France, and Austria-Hungary, but these have greatly declined. In the calendar year 1920 the United Kingdom supplied 92 per cent of the total import of woven fabrics of flax, hemp, and ramie. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Sq. yds.</i>		
1918.....	21,033,286	\$9,104,584	\$2,816,932
1919.....	20,882,537	10,591,529	3,249,191
1920.....	35,694,760	21,365,194	6,540,675
1921 (9 months).....	25,157,134	12,362,215	.....

*Exports* are not recorded.

*Important changes in classification.*—This paragraph embraces all piece goods of flax, hemp, or ramie, other than paddings (par. 1010), pile fabrics (par. 1011), and table damask (par. 1012). Imports consist for the most part of linens of a finer grade than those made in this country. The value of such goods depends not only on the weave but also on the quality and finish, and the arrangement here employed of a straight ad valorem duty, irrespective of the number of threads per square inch and irrespective of whether plain or fancy woven, seems to be the most equitable plan.

*Suggested changes.*—Strike out "except cotton" in line 3, page 116 of H. R. 7456, because if retained it would require also the exception of jute. There is no necessity for excepting either cotton or jute, since both are more specifically provided for.

## PARAGRAPH 1010.

### H. R. 7456.

### SENATE AMENDMENTS.

PAR. 1010. Woven fabrics, composed wholly or in chief value of flax, hemp, or jute, exceeding thirty and not exceeding one hundred threads to the square inch, counting the warp and filling, and weighing not less than four and one-half and not more than twelve ounces per square yard, such as are commonly used as paddings or interlinings in clothing, 33½ per centum ad valorem.

### ACT OF 1909.

### ACT OF 1913.

[Not specially provided for: If of all jute, dutiable under par. 352, at seven-eighths of 1 cent per pound, and 15 per centum ad valorem; if of all flax or all hemp, or in chief value of flax or hemp, dutiable under par. 357 at 2¾ cents per square yard, and, in addition, 30 per centum ad valorem, with a minimum duty of 50 per centum ad valorem; if in chief value, but not wholly, of jute, dutiable at 45 per centum ad valorem under par. 358.]

[Not specially provided for: If of all jute, free under par. 408; if of all flax, or all hemp, or in chief value of flax, or hemp, dutiable under par. 283, at 30 per centum ad valorem; if in chief value, but not wholly, of jute, dutiable under par. 284 at 35 per centum ad valorem.]

## TAILORS' PADDINGS.

(See Survey J-7.)

*Description and uses.*—Paddings are used as interlinings in coats and overcoats. About a yard of material is required for a coat. Fabrics of all linen are considered most suitable as paddings and form the bulk of consumption. There has been a marked increase since 1914 in the consumption of paddings made from all jute, jute and cotton, and flax and jute. Paddings are generally woven in widths of 22 and 24 inches and vary in weight from  $3\frac{1}{2}$  to 7 ounces per linear yard ( $5\frac{1}{4}$  to  $11\frac{1}{2}$  ounces per square yard). In threads per square inch those of all jute range from about 40 to 50 threads; cotton and jute from 60 to 80; flax and jute from 60 to 80; and of all linen from 60 to 100. Paddings in excess of 100 threads are confined to those made of all linen and form a very small part of the total. Cotton is not listed among the materials in this paragraph because when it is mixed with jute in paddings the jute is the constituent of chief value.

*Production.*—The domestic production of paddings other than of all cotton was begun in 1915. The output in 1918 was 8,540,000 linear yards; in 1919, 4,200,000 yards; and in 1920, 4,150,000 yards. The production was the output of three companies, one of which started in 1915 and the other two in 1918. In 1921 the only one of the three then in operation was weaving paddings of jute and cotton. Nine-tenths of the domestic output consists of paddings of jute and cotton, made for the most part from yarn of domestic manufacture.

*Imports* of paddings are not separately recorded. It is estimated that the annual domestic consumption is about 50,000,000 linear yards. Paddings are imported in a great variety of qualities. Most of them are all-linen paddings; others are of all jute, jute and cotton, and flax and jute. The United Kingdom furnishes the greater part of the imports, Ireland specializing in those of all linen, and Scotland in those of all jute and jute and cotton. Belgium is also an important source of imports.

*Exports* are not recorded.

*Important changes in classification.*—This is a new paragraph. Since a great variety of paddings are made in whole or in part of flax, jute, or cotton (but not in chief value of cotton), and since those of the same materials differ widely as regards quality, thread count, and weight, it has been deemed best to draw up a general paragraph covering all types of paddings. The words "woven fabrics" are used to connect this paragraph with the two preceding, which treat of unspecified woven fabrics of jute, and of flax, hemp, or ramie. The number of threads per square inch and the weight per square yard as found in this paragraph are in accord with an analysis made of fifteen representative paddings. (See Survey J-7, pp. 64, 65.) The paddings analyzed ranged in thread count from 41 threads per square inch for those of all jute to 103 for those of all flax, and in weight from 10.2 ounces per square yard for all jute to 5.5 for all flax.

Paddings or interlinings are a well-known product commercially and are easily differentiated from the general run of other fabrics made in whole or in chief value of flax, hemp, or jute. Burlap, linoleum backing, and the leading types of jute cloths have about 25 threads to the square inch and are in every way distinct from jute paddings. Jute

cloths of more than 30 threads to the square inch are practically limited to those used for upholstering and padding purposes, with these two types distinct from each other. While there are a number of plain-woven linen fabrics that have the same range in thread count and weight as linen paddings, the general appearance of such goods makes them readily distinguishable from paddings. The phrase "such as are commonly used" is employed in order to limit this paragraph to fabrics used for interlinings without following up their actual use and to have the trade as an authority as to what paddings are. Paddings of all cotton are not mentioned, because paddings of all cotton are seldom imported, and when cotton is combined with jute or other vegetable fiber it forms a small part of the total weight and value.

---

### PARAGRAPH 1011.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1011. Pile fabrics, composed wholly or in chief value of vegetable fiber other than cotton, cut or uncut, whether or not the pile covers the whole surface, and manufactures in any form, made or cut from any of the foregoing, 33½ per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 353. All pile fabrics, whether or not the pile covers the entire surface, composed of flax, or of which flax is the component material of chief value, and all articles and manufactures made from such fabrics, not specially provided for in this section, sixty per centum ad valorem.

PAR. 280. All pile fabrics, whether or not the pile covers the entire surface, composed of flax, hemp, or ramie, or of which flax, hemp, or ramie is the component material of chief value, and all articles and manufactures made from such fabrics, not specially provided for in this section, 40 per centum ad valorem.

#### PILE FABRICS OF VEGETABLE FIBERS OTHER THAN COTTON.

*Description and uses.*—Pile fabrics consist of a foundation cloth covered in whole or in part by short projecting ends or loops made with an extra set of threads. Pile made of flax, hemp, ramie, jute, etc., lacks the resilience of pile made of cotton, mohair, or silk, and when pressed down does not readily revert to its upright position; for this reason the manufacture of pile fabrics of vegetable fibers other than cotton is small and confined mainly to specialties, particularly mixed goods for upholstery purposes.

*Production* is not recorded.

*Imports* in the fiscal year 1914 of pile fabrics wholly or in chief value of flax, hemp, or ramie were valued at \$230,222 and manufactures of such pile fabrics at \$1,815. Imports are mainly for use as draperies and furniture coverings. They include some all-over pile fabrics for use as portières and hangings, but are mainly furniture covering specialties showing cut or uncut pile figuring on a bare (nonpile) ground. They are usually made of mixed yarns, particularly flax and cotton.

Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
PILE FABRICS OF FLAX, HEMP, OR RAMIE.			
	<i>Sq. yds.</i>		
1918.....		\$10,517	\$4,207
1919.....	1,418	1,724	690
1920.....	37,888	53,930	21,572
1921 (9 months).....	14,336	27,978	
MANUFACTURES OF PILE FABRICS OF FLAX, HEMP, OR RAMIE.			
1918.....		\$269	\$108
1919.....		1,511	606
1920.....		15,382	6,153
1921 (9 months).....		20,375	

*Exports* are not recorded.

*Important changes in classification.*—To render the provision in this schedule as nearly uniform as possible with the corresponding provision in the cotton schedule, the phrase “cut or uncut” has been introduced and the phrase “made or cut from” has been substituted for “made from.” The suggested provision expands the wording to cover all vegetable fiber except cotton, as such fabrics logically belong in Schedule 10.

#### PARAGRAPH 1012.

##### H. R. 7456.

##### SENATE AMENDMENTS.

PAR. 1012. Table damask composed wholly or in chief value of vegetable fiber other than cotton, and manufactures composed wholly or in chief value of such damask, 28 per centum ad valorem.

##### ACT OF 1909.

[Not specially provided for. Dutiable under par. 357 at a minimum rate of 50 per centum ad valorem, or under par. 358 at 45 per centum ad valorem, depending on whether weight did or did not exceed 4½ ounces per square yard.]

##### ACT OF 1913.

[Not specially provided for. Dutiable at 35 per centum ad valorem under par. 284.]

#### LINEN TABLE DAMASK, AND MANUFACTURES OF.

*Description and uses.*—Damask is a woven figured fabric distinguished by the appearance of the design on the smooth surface without any contrast in colors. Warp sateen is usually employed for the figures and filling sateen for the ground. The surface threads in the figures lie at right angles to those in the ground, with the result that the light falling on the smooth surface is refracted when it strikes the figures and the pattern is caused to stand out in bold relief. Linen damask, although mainly Jacquard woven, is usually of coarse or medium yarns. It varies from 4 to 6 ounces to the square yard, with 96 to 350 threads to the square inch. It is usually sold bleached or cream colored; a small amount is woven in colors. The standard cloth

width is 72 inches, although some cloths are as wide as 144 inches. It is made up into table covers, napkins, doilies, etc., the articles in each set being usually made of the same pattern. Napkins range from 20 by 20 inches to 27 by 27 inches; table covers from 36 by 36 inches to 63 by 63 inches.

*Production* of all-linen table damask in the United States is negligible; there is a small manufacture of union goods made of linen and cotton.

*Imports* are not recorded separately from other linen fabrics. Export statistics of the United Kingdom show shipments to the United States of table linen not in the piece in the years 1914-1918 averaging annually \$2,313,000, and in the year 1919 valued at \$1,857,000. The United Kingdom is the main source of imports; Belgium supplies the greater part of the remainder. In normal times these imports are mainly all-linen, the proportion of union goods being small. During the war imports of damask fell off greatly and the high prices tended to cause a larger proportionate use of union goods. The high prices also stimulated the substitution of cotton imitations.

*Exports* are not recorded; there are probably none.

*Important changes in classification.*—This is a new paragraph which has been inserted mainly to secure statistical enumeration of imports of linen table damask, and manufactures of, for contrast with recorded imports of similar goods made of cotton.

*Suggested changes.*—It has been suggested that paragraph 910 of the cotton schedule be confined to articles made of cotton table damask and in conformity thereto it is suggested that this paragraph be confined to articles made of linen table damask. The following wording might be used for paragraph 1012:

Manufactures of table damask, in any form, composed wholly or in chief value of vegetable fiber other than cotton [rate].

Since all woven fabrics of flax, hemp, or ramie, with the exception of paddings (par. 1010), are combined in a general paragraph (1009), there is no particular reason why damask in the piece should be specially provided for. Confining paragraph 1012 to articles made of damask, such as table covers, napkins, etc., ready for use, would be in accordance with the procedure followed in paragraph 1013, which relates to towels, sheets, and pillowcases, and not to the fabrics from which made; and in paragraph 1015, which covers only handkerchiefs, and not the cambrics and sheer lincens from which such articles are manufactured.

### PARAGRAPH 1013.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1013. Towels, sheets, and pillowcases, composed wholly or in chief value of flax, 28 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

[Not specially provided for. Dutiable at a minimum rate of 50 per centum ad valorem under par. 357, or at 45 per centum ad valorem under par. 358, depending on whether the weight did or did not exceed 4½ ounces per square yard.]

[Not specially provided for. Dutiable at 35 per centum ad valorem under par. 284.]

## LINEN TOWELS, SHEETS, AND PILLOWCASES.

*Description and uses.*—Towels of all flax, or of flax and cotton, are mainly of the huck weave, comparatively few being terry woven. The normal range in weight is from 5 to 7 ounces to the square yard. Imports range from the lower grades with about 80 to 100 threads to the square inch, competing with domestic products, to high grades, up to 200 threads to the square inch, which are not made in this country. The cheaper grades form the bulk of consumption and imports. Sheets and pillowcases of all flax, or of flax and cotton, are made from piece goods, usually weighing from 4 to 4½ ounces to the square yard, and having from 100 to 160 threads to the square inch. In size, the sheets run from 72 by 96 inches, to 90 by 108 inches; the usual size of the pillowcases is 22½ by 36 inches.

*Production* is not recorded. About a dozen domestic firms manufacture huck towels of flax and cotton, flax constituting the component part of chief value; the production of towels of all flax is much smaller. The union towels range from 80 to 135 threads to the square inch. Production of linen sheets and pillowcases is confined to those made from imported cloth.

*Imports* are not recorded. Imports of linen sheets and pillowcases are small, since it is usually more profitable to import the cloth and make the finished articles here; prior to 1914, however, there was a fairly large import from Germany. Imports of linen towels are larger; those of all flax normally constitute about three-fourths of the total. Prior to the war Germany was an important source, but since then imports of linen towels have been supplied mainly by Belfast, and a smaller amount by Scotland.

*Important changes in classification.*—This is a new provision, inserted mainly to secure statistical enumeration of imports of towels, sheets, and pillowcases, wholly or in chief value of flax, for contrast with recorded imports of similar articles wholly or in chief value of cotton.

## PARAGRAPH 1014.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1014. Fabrics with fast edges not exceeding twelve inches in width, and articles made therefrom, tubings, garters, suspenders, braces, cords, tassels, cords and tassels; all the foregoing composed wholly of vegetable fiber other than cotton, or wholly of vegetable fiber other than cotton and india rubber, and not specially provided for, 28 per centum ad valorem; tapes composed wholly or in part of flax, woven with or without metal threads, on reels, spools, or otherwise, and designed expressly for use in the manufacture of measuring tapes, 23 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 346. Tapes composed wholly or in part of flax, woven with or without metal threads, on reels, spools, or otherwise, and designed expressly for use in the manu-

PAR. 275. Tapes composed wholly or in part of flax, woven with or without metal threads, on reels, spools, or otherwise, and designed expressly for use in

## ACT OF 1909.

facture of measuring tapes, forty per centum ad valorem.

PAR. 349. \* \* \* bands, bandings, belts, beltings, bindings, cords, \* \* \* ribbons, tapes, webs, and webbings; \* \* \* all of the foregoing, composed wholly or in chief value of \* \* \* flax, or other vegetable fiber, or of \* \* \* flax, or other vegetable fiber and india rubber, or of \* \* \* flax, or other vegetable fiber, india rubber, and metal, and not elsewhere specially provided for in this section, sixty per centum ad valorem: *Provided*, That no article composed wholly or in chief value of one or more of the materials or goods specified in this paragraph, shall pay a less rate of duty than the highest rate imposed by this section upon any of the materials or goods of which the same is composed: \* \* \*.

## ACT OF 1913.

the manufacture of measuring tapes, 20 per centum ad valorem.

PAR. 278. Bands, bandings, belts, beltings, bindings, cords, ribbons, tapes, webs and webbings, all the foregoing composed wholly of flax, hemp, or ramie, or of flax, hemp, or ramie and india rubber, and not otherwise specially provided for in this section, 30 per centum ad valorem; \* \* \*.

## SMALL WARES OF VEGETABLE FIBERS OTHER THAN COTTON.

*Description and uses.*—This paragraph covers narrow woven fabrics which have not been ornamented after leaving the loom, manufactures of such narrow woven fabrics, and certain articles made by braiding or twisting together yarns or threads. The "small wares" thus covered are confined to those composed wholly of vegetable fiber other than cotton, or of such vegetable fibers (other than cotton) and india rubber. For description see the cotton small-wares paragraph (912). Chief among the small wares here included are jute webbings used for upholstering and linen tapes for dress-making. Flax tape designed expressly for use in the manufacture of measuring tapes is specifically mentioned.

*Production* is not recorded except in regard to one item, jute webbing, which amounted in 1919 to 30,856,000 linear yards, valued at \$1,325,000. The domestic production of flax tape for manufacture into measuring tape is confined almost entirely to one company whose production in 1919 was about the same as in 1914.

*Imports* in the fiscal year 1914 of small wares of flax, hemp, and ramie were valued at \$34,053; of flax tapes for use in the manufacture of measuring tapes at \$10,421. Imports in later years have been as follows:

	1918	1919	1920	1921 (9 months).
Small wares of vegetable fiber other than cotton:				
Value.....	\$23,889	\$12,492	\$28,048	\$11,228
Duty.....	7,088	3,469	8,076	.....
Flax tape for use in manufacture of measuring tapes:				
Value.....	826	754	5,454	3,721
Duty.....	165	151	1,091	.....

*Exports* are not recorded.

*Important changes in classification.*—The basic wording of this small-wares paragraph is the same as used in the other textile schedules; the reasons therefor are stated under paragraph 912. The

paragraph as worded covers small wares composed wholly of vegetable fiber other than of cotton, or of such vegetable fiber (other than cotton) and india rubber. Small wares in chief value of vegetable fiber other than cotton would therefore come within the basket clause of paragraph 1019.

*Suggested changes.*—The following wording is suggested for this paragraph:

Fabrics with fast edges not exceeding twelve inches in width, and articles made therefrom; tubings, garters, suspenders, braces, cords, tassels, and cords and tassels; all the foregoing composed wholly or in chief value of vegetable fiber other than cotton, or of vegetable fiber other than cotton and india rubber [rate] per centum ad valorem.

The suggested wording for paragraph 1014 would cause it to be entirely complementary to paragraph 912 in taking care of small wares of vegetable fibers and would render unnecessary any mention of flax tapes for use in the manufacture of measuring tapes (as they would be automatically included), unless a special rate is thought to be necessary for this latter. Imports of such tape are very small and there is no apparent reason for a specific provision for them. Imports of other small wares are also small and the advisability of making the rates in paragraphs 912 and 1014 the same, to facilitate the work of administration by avoiding the necessity of determining the chief component material by an analysis of small wares made of cotton and other vegetable fibers, might be considered.

Page 116, line 25, of H. R. 7456: Change comma to semicolon after "therefrom," to agree with paragraph 912.

---

### PARAGRAPH 1015.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1015. Handkerchiefs composed wholly or in chief value of vegetable fiber other than cotton, finished or unfinished, not hemmed, 33½ per centum ad valorem; hemmed or hemstitched, 36 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 356. Handkerchiefs composed of flax, hemp, or ramie, or of which these substances, or either of them, is the component material of chief value, whether in the piece or otherwise, and whether finished or unfinished, not hemmed or hemmed only, fifty per centum ad valorem; if hemstitched, or imitation hemstitched, \* \* \* but not embroidered, initialed, or in part of lace, fifty-five per centum ad valorem.

PAR. 282. Handkerchiefs composed of flax, hemp, or ramie, or of which these substances, or any of them, is the component material of chief value, whether in the piece or otherwise, and whether finished or unfinished, not hemmed or hemmed only, 35 per centum ad valorem; if hemstitched, or imitation hemstitched, \* \* \* but not embroidered, initialed, or in part of lace, 40 per centum ad valorem.

### LINEN HANDKERCHIEFS.

*Description and uses.*—The plain hemmed or hemstitched linen handkerchief is used by those who prefer its appearance and wearing qualities to the cheaper cotton article. Prior to 1914, when prices

were normal, the ordinary linen handkerchief displaced the finer grades of cotton handkerchiefs. Practically all of the imports under this paragraph are of linen, as all the other leading fibers other than cotton, with the minor exception of ramie, are not sufficiently fine or flexible to make satisfactory handkerchiefs. Linen handkerchiefs are made up into a variety of sizes and qualities, for the most part from light cambrics weighing from 1.5 to 3 ounces per square yard, which are dutiable at 28 per cent ad valorem under paragraph 1009 of H. R. 7456.

*Production* of plain linen handkerchiefs from cloth imported in the piece is far in excess of the imports of these articles. Since 1914 there has been a marked decline in the domestic output owing to the scarcity and high price of linens. Plain cotton handkerchiefs probably constitute more than three-fourths of the number of handkerchiefs of all descriptions produced annually in the United States. The greater number of domestic producers manufacture both cotton and linen handkerchiefs.

*Imports* of linen handkerchiefs, hemmed or hemstitched, averaged \$853,902 per annum for the fiscal years 1911-1920. Of the plain imported linen handkerchiefs about 90 per cent are hemstitched. The value of imported linen handkerchiefs ornamented with lace or embroidery, classified under paragraph 1430 of H. R. 7456 and dutiable at 37½ per cent, is ordinarily about twice as great, averaging \$1,626,047 in the decade 1911-1920. The chief source of imports is the United Kingdom, principally the north of Ireland. Imports for 1918-1921 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Dozens.</i>		
1918.....		\$1,150,351	\$454,564
1919.....	374,220	730,306	286,388
1920.....	856,811	1,859,501	732,157
1921 (9 months).....	673,250	1,312,363	

*Exports* are not recorded.

*Important changes in classification.*—The words “or with drawn threads,” which were eliminated from the provision for cotton handkerchiefs in 1913, have also been omitted from this paragraph. Cotton handkerchiefs hemstitched and ornamented with drawn work have been held to be more specifically provided for under paragraph 255 of the act of 1913 as “handkerchiefs \* \* \* hemmed or hemstitched” than under paragraph 358 of the same act as “articles from which threads have been omitted, drawn, punched, or cut, and with threads introduced after weaving, forming figures or designs, not including straight hemstitching.” (G. A. 7769, T. D. 35675, of 1915.) In the new classification of paragraph 358 (par. 1430 of H. R. 7456) there is a provision for “handkerchiefs \* \* \* from which threads have been omitted, drawn, punched, or cut, and with threads introduced after weaving to finish or ornament the openwork, not including straight hemstitching.” Hemmed handkerchiefs have been classed with the hemstitched, as was done in 1913 in the case of cotton handkerchiefs, because machine hemming and hemstitching are commonly done in a single operation. The words “or imitation hemstitched” are superfluous since such hemstitching is really machine

hemstitching. The words "but not embroidered, initialed, or in part of lace" are also unnecessary, since handkerchiefs embroidered, initialed, or in part of lace are specifically covered by paragraph 1430 of H. R. 7456.

### PARAGRAPH 1016.

H. R. 7456.

SENATE AMENDMENT.

PAR. 1016. Clothing, and articles of wearing apparel of every description, composed wholly or in chief value of vegetable fiber other than cotton, and whether manufactured wholly or in part, not specially provided for, 33½ per centum ad valorem; shirt collars and cuffs, composed wholly or in part of flax, 28 cents per dozen, and, in addition thereto, 17 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 324. Clothing, ready-made, and articles of wearing apparel of every description, composed of \* \* \* vegetable fiber, or of which \* \* \* vegetable fiber is the component material of chief value, made up or manufactured, wholly or in part, by the tailor, seamstress, or manufacturer, and not otherwise provided for in this section, fifty per centum ad valorem.

PAR. 278. \* \* \* wearing apparel composed wholly of flax, hemp, or ramie, or of flax, hemp, or ramie and india rubber, 40 per centum ad valorem.

PAR. 348. Shirt collars and cuffs, \* \* \* composed in whole or in part of linen, forty cents per dozen pieces and twenty per centum ad valorem.

PAR. 277. Shirt collars and cuffs, composed in whole or in part of linen, 30 per centum ad valorem.

### LINEN WEARING APPAREL.

*Description and uses.*—The domestic consumption of wearing apparel, made in whole or in part of linen, has declined greatly since 1914. Practically all linen wearing apparel, other than collars, is either embroidered or in part of lace, and is classified under paragraph 1430 of H. R. 7456. Linen blouses and men's collars form the bulk of goods falling under paragraph 1016. In the domestic trade a collar with one of its several plies made of linen is known as a linen collar. The consumption of linen collars and cuffs is insignificant as compared with the consumption of such articles of all cotton. The latter form the basis of the domestic trade.

*Production.*—Prior to 1914 large quantities of imported linen fabrics were used by the domestic clothing trade in the manufacture of ladies' dresses and men's clothing. During the years 1914–1920, the production of linen apparel, owing to the excessively high prices of flax fabrics, was negligible. In 1921 the consumption was in excess of 1914–1920, though far below the amounts used before the war. In 1914 only one domestic company manufactured linen collars and cuffs in any quantity. In 1919 its production was negligible.

Imports consist chiefly of linen blouses and men's collars. Shipments of wearing apparel of all linen were valued in 1914 at \$20,343 and in 1920 at \$80,819. Linen collars and cuffs imported in the same years numbered in 1914, 53,370 dozen, valued at \$56,629, and in 1920, 30,703 dozen, valued at \$71,980. Imports during 1918-1921 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
WEARING APPAREL OTHER THAN COTTON, N. S. P. F.			
1918.....	.....	\$22,816	\$9,045
1919.....	.....	27,656	9,131
1920.....	.....	80,819	27,599
1921 (9 months).....	.....	52,486	.....
SHIRT COLLARS AND CUFFS IN WHOLE OR IN PART OF LINEN.			
	<i>Dozen pairs.</i>		
1918.....	18,652	\$37,996	\$11,399
1919.....	15,310	35,884	10,765
1920.....	30,703	71,980	21,594
1921 (9 months).....	23,169	61,746	.....

*Important changes in classification.*—Linen collars and cuffs, heretofore covered in a separate paragraph (par. 277, act of 1913), have been added to this paragraph, the quantity entering into the domestic trade not being large enough for an entire paragraph. The wearing apparel provision has been enlarged by substituting the words "wholly or in chief value" for the word "wholly." The reference to wearing apparel composed in part of india rubber has been eliminated, because imports are small, and would almost always be composed in chief value of the textile fibers utilized rather than of the rubber.

*Conflicting provision.*—Paragraph 1016 conflicts with paragraph 1210 with respect to shirt collars, because both paragraphs provide for shirt collars "in part" of the particular material.

*Suggested changes.*—In case the provision in paragraph 1210 for shirt collars wholly or in part of silk shall be eliminated, as there suggested, the conflict above mentioned will be avoided.

Page 117, line 18, of H. R. 7456: Strike out the comma after "dozen" and after "and" and omit the words "in addition thereto," as unnecessary.

## PARAGRAPH 1017.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1017. Bags or sacks made from plain woven fabrics of single jute yarns or from twilled or other fabrics composed wholly of jute, 1 cent per pound, and, in addition thereto, 17 per centum ad valorem.

## ACT OF 1909.

PAR. 354. Bags or sacks made from plain woven fabrics, of single jute yarns, not dyed, colored, stained, painted, printed, or bleached, and not exceeding thirty threads to the square inch, counting the warp and filling, seven-eighths of one cent per pound and fifteen per centum ad valorem.

[Jute bags or sacks containing more than 30 threads to the square inch, or made from twilled fabrics, or dyed, colored, etc., were dutiable at 45 per centum ad valorem under par. 358.]

## ACT OF 1913.

PAR. 281. Bags or sacks made from plain woven fabrics, of single jute yarns, not dyed, colored, stained, painted, printed, or bleached, 10 per centum ad valorem.

[Jute bags or sacks, dyed, colored, etc., or made from twilled fabrics, are dutiable at 35 per centum ad valorem under par. 284.]

## JUTE BAGS AND SACKS.

(See Survey J 9.)

*Description and uses.*—Jute bags are the most popular medium the world over for sacking bulky commodities. There are two leading types: (1) Burlap bags, made from a plain woven jute cloth, and (2) sacking bags, made from a twilled jute cloth, heavier and coarser than burlap. The domestic production is limited to bags made from imported burlap, entries of which material in 1920 amounted to about 1,000,000,000 yards. Four-fifths of the burlap consumed is used in American bag factories. (For a description of burlap and sacking cloth, see par. 1008, p. 918.) The leading domestic use of burlap bags is for sacking grain, bran, feed, fertilizer, sugar, flour, and vegetables. Sacking bags, which are stronger than burlap bags of the same capacity, and which weigh about twice as much, enter this country as containers of a great variety of products, principally raw sugar, coffee, and nitrates. After the sacking bags have been emptied and repaired, the best are used to contain vegetables and cottonseed meal, and the poorest for covering raw cotton, the amounts used in recent years for this latter purpose constituting about 10 per cent of all such wrapping. The consumption of new sacking bags is limited to Porto Rico, which employs several million a year for shipping raw sugar, principally to the United States.

*Production* in 1914 amounted to 388,526,154, and in 1919 to 457,306,416, burlap bags. The production of cotton bags in the same years was 543,311,602 and 506,451,571, respectively. The burlap bag and the cotton bag are each so adapted to particular uses that they do not compete except at times when the price of one is very high in terms of the other. No sacking bags are produced in the United States, largely owing to the tariff, which in the past has imposed a higher duty on jute sacking than on jute burlap.

*Imports* of burlap bags (made from plain woven fabrics of single jute yarns) amounted to 48,691,852 pounds in 1920, as compared with an average of 52,138,628 pounds for the years 1910-1914. Imports of new bags are practically limited to those measuring 22 by 36 inches, weighing 12 ounces; these are known as centals, and are used almost exclusively on the Pacific coast for sacking grain. The consumption of centals averages about 50,000,000 bags annually, of which two-thirds are supplied by imports. Imports of new bags are practically limited to centals, because, in contrast to other jute bags

of domestic origin, they are standardized, unprinted, and used in very large quantities. New centals are all supplied by British India and form the largest part of her exports of burlap bags, which are small as compared with her shipments of sacking bags. The number of jute bags shipped from India in the year ended March 31, 1921, totaled 397,013,000 sacking bags and 136,895,000 burlap bags. Second-hand bags, which form a steadily decreasing part of our imports, are supplied by the United Kingdom. Cotton bags, dutiable under the basket clause of the cotton schedule, are rarely imported and then only in negligible quantities.

Imports of burlap bags since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....	31,360,482	\$5,056,826	\$505,683
1919.....	43,042,985	4,536,042	453,584
1920.....	48,691,852	7,493,240	749,208
1921 (9 months).....	54,986,166	3,628,493	.....

*Exports of all bags of vegetable fiber are normally small and consist chiefly of cotton bags. The value of exported bags of vegetable fiber was \$683,483 in 1914 and \$5,951,669 in 1920. Argentina, Cuba, Canada, and the United Kingdom were the leading markets. In 1914, according to special data secured by the Tariff Commission (see Survey J-9), exports of jute bags amounted to 500 new and 1,334,000 second-hand bags, and in 1919 to 2,945,300 new and 4,607,000 second-hand bags. The increased exports of new jute bags in 1919 were due to war conditions, as under normal circumstances the United States can not compete with India in the trade in new jute bags.*

*Important changes in classification.*—In former tariff acts provisions for bags and sacks have been confined to those made of burlap. Although the world production of sacking bags is as extensive as that of burlap bags, the former were not specifically mentioned and have fallen in the basket paragraph of Schedule J. In the acts of 1909 and 1913 sacking bags, though made from cloth of poorer quality than burlap, were assessed at a higher duty. The duty on sacking bags in the act of 1909 was 45 per cent, and in the act of 1913 it is 35 per cent, whereas the duty on burlap bags amounted during the operation of the former act to about 30 per cent; in the latter it is 10 per cent. The differential between the cloth and bags in these acts was as follows: Between burlap and burlap bags, about 7 per cent in the act of 1909 and precisely 10 per cent in the act of 1913; on sacking and sacking bags, little, since both the cloth and the bags fell under the basket clause in each act, each being dutiable at 45 per cent in the act of 1909, and at 35 per cent in the act of 1913. In H. R. 7456, the same duty is placed upon both burlap and sacking.

The descriptive terms "not dyed, colored," etc., have been omitted because imports of such bags dyed, colored, etc., have been negligible.

Burlap and sacking bags have been separately enumerated in the new provision, so that the recording of imports of burlap bags may be continued, and statistics may also be obtained on sacking bags, which hitherto have not been separately classified in custom statistics.

*Suggested changes.*—Page 117, line 22, of H. R. 7456: Strike out the comma after "pound" and after "and" and omit the words "in addition thereto," as unnecessary.

## PARAGRAPH 1018.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1018. Linoleum, including corticine and cork carpet, 28 per centum ad valorem; floor oilcloth, 20 per centum ad valorem; mats or rugs made of linoleum or floor oilcloth shall be subject to the same rates of duty as herein provided for linoleum or floor oilcloth.

## ACT OF 1909.

PAR. 347. Linoleum, corticine, and all other fabrics or coverings for floors, made in part of oil or any similar product, plain, stamped, painted or printed, only; not specially provided for herein, if nine feet or under in width, eight cents per square yard and fifteen per centum ad valorem; over nine feet in width, twelve cents per square yard and fifteen per centum ad valorem; and any of the foregoing of whatever width, the composition of which forms designs or patterns, whether inlaid or otherwise, by whatever name known, and cork carpets, twenty cents per square yard and twenty per cent ad valorem; mats for floors made of oilcloth, linoleum, or corticine, shall be subject to the same rate of duty herein provided for oilcloth, linoleum, or corticine; oilcloth for floors, if nine feet or less in width, six cents per square yard and fifteen per centum ad valorem; over nine feet in width, ten cents per square yard and fifteen per centum ad valorem; \* \* \*.

## ACT OF 1913.

PAR. 276. Linoleum, plain, stamped, painted, or printed, including corticine and cork carpet, figured or plain, also linoleum known as granite and oak plank, 30 per centum ad valorem; inlaid linoleum, 35 per centum ad valorem; oilcloth for floors, plain, stamped, painted, or printed, 20 per centum ad valorem; mats or rugs made of oilcloth, linoleum, corticine, or cork carpet shall be subject to the same rate of duty as herein provided for oilcloth, linoleum, corticine, or cork carpet.

## LINOLEUM AND FLOOR OILCLOTH.

(See Survey J-3.)

*Description and uses.*—Floor oilcloth is composed of a foundation of jute burlap coated with a mixture of linseed oil, ocher, and benzine. Several coats are applied to attain the desired thickness, each coat in turn being dried and rubbed smooth with pumice stone. Floor oilcloth may be plain or have designs stamped, painted, or printed on the smooth finished coating. Printed designs are now usually applied by automatic machinery.

Linoleum gets its name from *linum* (flax) and *oleum* (oil). A cement is made of solidified linseed oil, resin, and kauri gum; this is then mixed with cork dust, and the paste thus made rolled upon a foundation of jute burlap. If the fabric is to be plain (that is, of a uniform color), the coloring matter is added before rolling. In inlaid or mosaic linoleum the colors go through and do not wear away as in printed or stenciled linoleum. Among the leading types of linoleum are: Inlaid linoleum made in several ways, but generally by cutting rolls of linoleum cement of various colors into separate pieces, fitting them into a design on a jute burlap foundation, and incorporating them into a fabric by means of hot rollers; granite linoleum made

from pastes of different colors, the colors remaining separate in the completed fabric, the assemblage and relation of the various colored spots and masses being casual; plank linoleums, oak plank linoleums, or plank inlaid linoleums, made by running two separate paste mixtures, which are not allowed to mix, side by side upon a burlap foundation, the effect resembling an inlaid flooring; corticene, prepared like linoleum, but having the linseed oil oxidized differently and containing rubber also in the composition; cork carpet, resembling plank linoleum and made in the same way, except that the cork is not ground so finely, and a larger proportion thereof is used in the mixture, resulting in a softer, and more sponge-like substance.

*Production* in 1914 and 1919 of linoleum and floor oilcloth made on burlap back was as follows:

Article.	Quantity.		Value.	
	1914	1919	1914	1919
	<i>Sq. yds.</i>	<i>Square yds.</i>		
Floor oilcloth.....	7,536,000	1,211,000	\$1,484,000	\$424,000
Inlaid linoleum.....	8,479,000	9,834,000	4,726,000	10,336,000
All other linoleum.....	33,307,000	22,098,000	10,043,000	17,121,000
Total.....	49,322,000	33,143,000	16,253,000	27,881,000

The marked decline in 1919 in the production of floor oilcloth and linoleum other than inlaid was due in part to the scarcity and high price of burlap for use as a backing and especially to the substitution of floor coverings made on felt back for the cheaper grades of linoleum. The last type of floor covering consists of a base of felt paper saturated with asphaltum, painted on both sides with one or more coats of paint, and printed on the top surface with decorative designs. The domestic production of floor coverings made on felt back has made great strides since 1914 when its production was negligible and limited to one establishment. The output in 1919 was 30,370,000 square yards, valued at \$13,909,000.

*Imports.*—Imports of linoleum and floor oilcloth have shown a marked decline since 1914, in which year their quantity was 4,231,066 square yards, valued at \$1,877,324. The bulk of the imports consists of the highest grades. In 1920 inlaid linoleum constituted 61 per cent of the total; all other linoleum, 30 per cent, and oil cloth for floors about 9 per cent. Prior to 1914 the United Kingdom furnished about three-fourths of the total, and Germany the bulk of the remainder; since 1914 the United Kingdom has supplied practically all, furnishing 99 per cent of the total in 1919 and 1920.

*Imports* for 1918–1921 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
LINOLEUM, ALL TYPES.			
	<i>Sq. yds.</i>		
1918.....	387	\$652	\$215
1919.....	116,140	123,577	40,712
1920.....	1,051,497	1,175,231	399,793
1921 (9 months).....	228,446	281,587	.....

Calendar year.	Quantity.	Value.	Duty.
OILCLOTH FOR FLOORS.			
1918.....	93	\$44	\$9
1919.....	9,353	5,638	1,128
1920.....	97,232	46,870	9,374
1921 (9 months).....	619	657	.....

*Exports of oilcloth and linoleum for floors* have shown a marked advance in recent years, in 1914 amounting to 163,214 square yards valued at \$60,403, and in 1920 to 2,227,803 square yards valued at \$1,583,392. The leading markets in 1914 were, in order of importance, Cuba, Australia, Switzerland, and Argentina, and in 1920 Australia, New Zealand, and United Kingdom. Exports consist for the most part of the lower grades, and since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (square yards).....	2,235,989	2,537,780	2,227,803	.....
Value.....	\$1,369,196	\$1,740,186	\$1,583,392	\$1,191,189

*Important changes in classification.*—The classification and wording of this provision have been simplified. The distinction hitherto drawn between ordinary linoleum and inlaid linoleum in rates of duty has been abolished, because while the cost of manufacturing inlaid linoleum is ordinarily greater than that of plain or printed linoleum, there is so wide a variation, depending largely on the thickness of the goods, that a great deal of plain linoleum sells for more than the low or medium grades of inlaid. The elimination of the former distinction between the various types of linoleum is approved by the manufacturers, who in their brief state: "All of the forms of our product can now be classified together as a single product and duties assessed accordingly." (Ways and Means tariff hearings, 1921, p. 2500.)

The distinctions in duties made in the acts of 1897 and 1909 between linoleum of narrow and wide widths have not been reestablished. Width is a cost factor of much less importance than thickness, or than type, that is, whether ordinary or inlaid. Domestic manufacturers are also opposed to the revival of the classification based on width, stating that "this system made a complicated tariff paragraph and added complications to its administration." (Ways and Means tariff hearings, 1921, p. 2500.)

The adjectives describing linoleum and floor cloth, such as "plain," "stamped," "painted," etc., have been omitted. Likewise the phrase, "also linoleum known as granite and oak plank" has been omitted as superfluous, since these are well-known types of linoleum. While corticene and cork carpet are two types of linoleum, yet because of certain differences in composition from ordinary linoleum they have been specifically mentioned to remove any doubt as to their inclusion in this paragraph.

## PARAGRAPH 1019.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1019. All woven articles, finished or unfinished, and all manufactures of vegetable fiber other than cotton, or of which such fibers or any of them is the component material of chief value, not specially provided for, 28 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 357. Woven \* \* \* articles not specially provided for in this section, composed of flax, hemp, or ramie, or of which these substances or any of them is the component material of chief value, weighing four and one-half ounces or more per square yard, when containing not more than sixty threads to the square inch, counting the warp and filling, one and three-fourths cents per square yard; containing more than sixty and not more than one hundred and twenty threads to the square inch, two and three-fourths cents per square yard; containing more than one hundred and twenty and not more than one hundred and eighty threads to the square inch, six cents per square yard; containing more than one hundred and eighty threads to the square inch, nine cents per square yard, and in addition thereto, on all the foregoing, thirty per centum ad valorem: *Provided*, That none of the foregoing articles \* \* \* in this paragraph shall pay a less rate of duty than fifty per centum ad valorem. \* \* \*

PAR. 284. All woven articles, finished or unfinished, and all manufactures of flax, hemp, ramie, or other vegetable fiber, or of which these substances, or any of them, is the component material of chief value, not specially provided for in this section, 35 per centum ad valorem.

PAR. 358. All woven articles, finished or unfinished, and all manufactures of flax, hemp, ramie, or other vegetable fiber, or of which these substances, or any of them, is the component material of chief value, not specially provided for in this section, forty-five per centum ad valorem.

## WOVEN FABRICS AND ARTICLES N. S. P. F.

*Description and uses.*—This paragraph is the catch-all section of schedule 10. A great variety of miscellaneous articles, none of which is imported in large quantities, will fall under this provision.

*Imports.*—Total imports under this classification, as provided by H. R. 7456, will be considerably reduced. They will include netting bags and school bags made from jute; bumpers, fenders, and rope made from coir, a fiber obtained from coconut husks; hammocks of hemp or sisal; knotted hemp fiber wound on spools; tennis nets made of hemp; and sea-grass cord and tagal threads. Statistics showing imports or production of any of these articles are not available. Imports under the basket clause of Schedule 10, with the exception of fabrics not plain woven of flax, hemp, or ramie (which are listed under par. 1009) were as follows during the calendar years 1918–1921:

	1918	1919	1920	1921 (9 months)
Value.....	\$5,977,054	\$4,789,493	\$10,648,083	\$5,826,134
Duty.....	1,988,675	1,641,576	3,610,035	.....

*Important changes in classification.*—The scope of this provision has been greatly reduced by the adoption of specific provisions for all the important products formerly included under the catchall paragraph. Among these are (1) manufacturers of linen table damask (par. 1012); (2) linen towels, sheets, and pillowcases (par. 1013); (3) jute cloths made of ply yarns, and jute cloths other than plain woven (par. 1008); (4) twilled jute bags or sacks, and all jute bags or sacks dyed, colored, stained, etc. (par. 1017); (5) tailor's paddings composed in chief value, but not wholly, of jute (par. 1010); and (6) jute twine and cordage (par. 1003).

*Suggested changes.*—Since this paragraph is the catchall of Schedule 10, it is suggested that in conformity with the catchall paragraphs of other schedules, it be made the last paragraph in the schedule.

### PARAGRAPH 1020.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1020. Common China, Japan, and India straw matting, and floor coverings made therefrom, 3 cents per square yard; all other floor coverings not specially provided for, 26 per centum ad valorem.

#### ACT OF 1909.

PAR. 343. Floor mattings, plain, fancy, or figured, manufactured from straw, round or split, or other vegetable substances, not otherwise provided for in this section, and having a warp of cotton, hemp, or other vegetable substance, including what are commonly known as China, Japan, and India straw matting, three and one-half cents per square yard.

PAR. 344. Carpets, carpeting, mats and rugs made of flax, hemp, jute, or other vegetable fiber (except cotton), valued at not exceeding fifteen cents per square yard, four cents per square yard and thirty per centum ad valorem; valued above fifteen cents per square yard, eight cents per square yard and thirty per centum ad valorem.

PAR. 384. \* \* \* chenille carpets, figured or plain, and all carpets or carpeting of like character or description, sixty cents per square yard and in addition thereto forty per centum ad valorem.

PAR. 393. Carpets and carpeting of \* \* \* flax, or cotton, or composed in part of any of them, not specially provided for in this section, and mats, matting, and rugs of cotton, fifty per centum ad valorem.

#### ACT OF 1913.

PAR. 272. Floor mattings, plain, fancy, or figured, including mats and rugs, manufactured from straw, round or split, or other vegetable substances, not otherwise provided for in this section, and having a warp of cotton, hemp, or other vegetable substances, including what are commonly known as China, Japan, and India straw matting, 2½ cents per square yard.

PAR. 273. Carpets, carpeting, mats and rugs made of flax, hemp, jute, or other vegetable fiber (except cotton), 30 per centum ad valorem.

PAR. 293. \* \* \* chenille carpets, figured or plain, and all carpets or carpeting of like character or description, 35 per centum ad valorem.

PAR. 302. Carpets and carpeting of \* \* \* cotton, or composed in part of either of them [wool or cotton], not specially provided for in this section, and on mats, matting, and rugs of cotton, 20 per centum ad valorem.

## FLOOR COVERINGS OTHER THAN WOOL.

(See Survey J-3.)

This paragraph relates to floor coverings made of vegetable fibers or vegetable substances. Among these are included floor coverings made respectively from straw, grass, jute, or other vegetable fiber, and from rags (usually cotton). By far the most important are those made of straw or grass.

## FLOOR COVERINGS OF STRAW OR GRASS.

*Description and uses.*—Straw and grass floor coverings fall into three general classes: (1) Common China and Japan straw mats and mattings; (2) rice-straw mattings and rugs, and (3) wire-grass mattings and rugs, the last named being known generally as "crex" floor coverings. Common mattings, made on crude hand looms from certain species of matting rushes woven with a straw, hemp, or cotton warp, are distinctively an oriental product and are not made in the United States. They are the cheapest of the three classes. Rice-straw rugs are made of rice-straw wound about with a binding thread so as to produce a straw twine which, used as a filling, is then woven with cotton or other warp. They, too, are distinctively an oriental product and are not made in the United States, though their close resemblance to the domestic wire-grass rugs has led to direct competition with the grass rugs. Wire-grass rugs are made of a variety of swamp grass known as wire-grass. The grass is first formed into a twine in the same manner as the rice-straw described above, and then woven with cotton or other warp. These rugs are distinctively a domestic product and are generally of better quality than the rice-straw rugs which compete with them.

*Production.*—Production of wire-grass rugs in the United States began in 1899. In 1913 (fiscal year) 6,083,093 square yards were produced valued at \$1,931,067; in 1920, 4,481,731 square yards, valued at \$4,206,347.

*Imports.*—During the last 20 years imports of straw floor coverings have declined by more than one-half. During the years 1900–1909 they ranged per annum between 40,000,000 and 50,000,000 square yards; during the period 1910–1913, they averaged 27,200,000 square yards; and during the period 1914–1918, 17,300,000 square yards per annum. Imports during 1918–1921 have been as follows:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
	<i>Sq. yds.</i>			<i>Per cent.</i>
1918.....	12,444,016	\$2,018,526	\$310,879	15.40
1919.....	15,022,279	3,610,554	375,555	10.40
1920.....	21,827,292	6,421,885	545,671	8.50
1921 (9 months).....	8,077,771	1,846,981		

Despite the decline in total imports of straw floor coverings, the importation of rice-straw rugs (which are the only imports directly competing with the domestic grass rugs) has increased. Imports were only beginning to come in prior to the war. Figures compiled

by the Tariff Commission from returns made by leading importers indicate that in 1919, 5,976,000 square yards, or approximately 46 per cent of our total importation of straw floor coverings consisted of rice-straw rugs. They constituted slightly more than one-half of our total consumption of grass and similar (i. e. rice-straw) rugs. (See Survey J-3, pp. 10, 11.)

As a rule, more than half of our annual imports have come from Japan. During the period 1914-1919, 94 per cent came from Japan. More recently there has been an increase in the share coming from China. All of the rice-straw rugs, however, come from Japan.

*Exports* are not recorded. There is, however, some exportation.

*Important changes in classification.*—Common mattings are covered by an *eo nomine* provision (being a well-known product commercially and covered by specific provision in former tariffs), but rice-straw floor coverings are not specifically mentioned and are made to fall under the general provision, because it has been found impossible to work out a description of them which could not be circumvented by some minor alteration in either construction or content. At the same time there is no other important type of floor covering imported in quantity which will fall within this basket provision. Among the less important types which will come within this general heading are (1) the floor coverings now falling under paragraph 273, act of 1913 (mainly jute); (2) braided straw floor coverings, classified under the act of 1913 as "manufactures of straw" (par. 368); (3) woven paper floor coverings other than those made on ingrain looms, and (4) felt-base floor coverings, unless a separate provision is made for such felt-base coverings in the paragraph relating to linoleum.

#### JUTE FLOOR COVERINGS.

(See Survey J-3.)

*Description and uses.*—Carpets, carpeting, mats and rugs of vegetable fiber other than cotton (act of 1913, par. 273) consist largely of jute carpets and rugs and are covered by the basket clause in paragraph 1020 (H. R. 7456). Jute is so cheap that its primary use in floor coverings is as a backing for wool carpets and rugs. Its use as a filling (the only case in which it is likely to be a component of chief value) is very limited; consequently the floor coverings containing jute that fall under this paragraph are of minor importance.

*Production.*—Production of jute carpets and rugs in 1914 was 4,862,302 square yards, valued at \$1,172,257, and in 1919, 2,289,000 square yards, valued at \$1,603,000.

*Imports* in 1914 amounted to 656,376 square yards, valued at \$185,616. Since 1917 they have been as follows:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Sq. yds.</i>			<i>Per cent.</i>
1918.....	109,070	\$65,065	\$19,520	30
1919.....	89,709	73,507	22,052	30
1920.....	363,792	271,441	81,427	30
1921 (9 months).....	61,387	51,628		

*Exports* are not recorded.

*Important changes in classification.*—Because of the relatively minor importance of floor coverings in chief value of jute or other vegetable fiber, specific provision for them has been abandoned and they will fall under the basket clause in paragraph 1020 of H. R. 7456.

#### FLOOR COVERINGS OF COTTON.

(See Survey J-3.)

*Description and uses.*—Floor coverings of cotton consist mainly of rag rugs and are provided for under paragraph 302 of the act of 1913. They will fall under the general provision in paragraph 1020, H. R. 7456.

*Production.*—The value of rag rugs produced in 1914 was \$2,786,439 and in 1919, \$505,000.

*Imports* of cotton carpets and carpeting, n. s. p. f., amounted in 1914 to 134,528 square yards, valued at \$16,187. Later imports have been as follows:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Square yds.</i>			<i>Per cent.</i>
1918.....		\$105,929	\$21,186	20
1919.....	225,396	181,232	36,246	20
1920.....	321,585	397,811	79,562	20
1921 (9 months).....	120,822	166,152	.....	20

*Exports* are not recorded.

*Important changes in classification.*—For reasons similar to those given in the case of jute carpeting, specific provision for cotton floor coverings has been abandoned and they will fall under the general clause in paragraph 1020, H. R. 7456.

#### PARAGRAPH 1021.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1021. Matting made of cocoa fiber or rattan, 9 cents per square yard; mats made of cocoa fiber or rattan, 7 cents per square foot.

ACT OF 1909.

ACT OF 1913.

PAR. 466. Matting made of cocoa fiber or rattan, six cents per square yard; mats made of cocoa fiber or rattan, four cents per square foot.

PAR. 371. Matting made of cocoa fiber or rattan, 5 cents per square yard; mats made of cocoa fiber or rattan, 3 cents per square foot.

#### COCOA MATS AND MATTINGS.

*Description and uses.*—Cocoa mats and matting, made from the fibrous husk of the coconut, are produced chiefly in Ceylon, British India, the Straits Settlements, and islands of the Eastern Archipelago. The fiber is removed from the husk by soaking and beating and is then crudely hand spun by the natives. Machinery is occasionally used, but the hand-spun yarn is both cheaper and better.

Cocoa matting is generally in plain or twill weave, without pile. It is very durable and is used for runners in aisles, corridors, offices, etc. In this country it is generally made on power-driven looms. Cocoa mats are usually woven with a pile, but some types are braided and sewed together. They are used as doormats, automobile mats, etc. The mats are still largely made on hand looms, although the use of power looms for the pile mats has been introduced. In India, which is the leading source of imports, manufacture is by hand.

The great harshness of the cocoa fiber has been an obstacle to the use of labor-saving machinery, and the industry is handicapped by labor conditions. At one time the production was carried on mainly by prison labor; this still obtains to some extent, but it has been greatly diminished by State legislation.

Matting made of rattan differs from cocoa matting in manufacture and raw material. Rattan is an East Indian and African creeping palm, the stem of which can be split into slender strands and woven into basket work, chairs, couches, pillows, mats, and similar articles. In weaving rattan matting, a simple bamboo framework is used, the operation being entirely handwork.

Production of cocoa mats and matting is included by the Census in production figures for grass rugs and other articles, and is therefore not obtainable separately. An inquiry made by the Tariff Commission discloses that there are four or five mills using power looms (also some hand looms), and that there are several additional firms making cocoa mats on hand looms, these being located chiefly in Michigan and Wisconsin and specializing largely on mats for automobiles. Practically no rattan mats or matting are made in the United States.

Imports of mats and matting steadily increased prior to 1915, but fell off sharply during 1916-1918. In 1914, imports of mats amounted to 1,545,449 square feet, valued at \$139,419; and imports of matting to 114,987 square yards, valued at \$34,863. Later imports are recorded as follows:

Calendar year.	Quantity.	Value.	Duty.	Equiva- lent ad valorem.
----------------	-----------	--------	-------	--------------------------------

## MATS OF COCOA FIBER OR RATTAN.

	Square feet.			Per cent.
1918.....	4,639	\$645	\$139	21.58
1919.....	320,939	43,215	9,627	22.29
1920.....	2,103,839	294,707	63,100	21.44
1921 (9 months).....	2,005,540	249,028		

## MATTING OF COCOA FIBER OR RATTAN.

	Square yds.			
1918.....	30,788	\$4,974	\$1,488	29.92
1919.....	73,401	31,546	3,670	11.63
1920.....	87,774	48,115	4,389	9.12
1921 (9 months).....	125,596	52,325		

Exports are not recorded.

## SCHEDULE 11.—WOOL AND MANUFACTURES OF.

### PARAGRAPH 1101.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1101. Wools, not improved by the admixture of merino or English blood, such as Donskoi, native Smyrna, native South American, Cordova, Valparaiso, and other wools of like character or description, and hair of the camel, 28 per centum ad valorem: *Provided*, That the duty shall not exceed 7 cents per pound. The duty on such wools, imported on the skin, shall be 24 per centum ad valorem, but not to exceed 6 cents per pound.

### ACT OF 1909.

### ACT OF 1913.

SCHEDULE K—WOOL, AND MANUFACTURES OF.

SCHEDULE K—WOOL AND MANUFACTURES OF.<sup>1</sup>

PAR. 360. All wools, hair of the camel, \* \* \* and other like animals shall be divided, for the purpose of fixing the duties to be charged thereon, into the three following classes: \* \* \*.

PAR. 362. Class two \* \* \* hair of the camel \* \* \*.

PAR. 363. Class three, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair, and all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Syria, and elsewhere, excepting improved wools hereinafter provided for.

PAR. 368. The duty upon \* \* \* hair of the camel, \* \* \* of class one and class two, which shall be imported in any other than ordinary condition, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject: *Provided*, \* \* \* The duty upon \* \* \* hair of the camel \* \* \* of any class which shall be changed in its character or condition for the purpose of evading the duty, or which shall be

PAR. 650. Wool of the sheep, hair of the camel, and other like animals, and all wools and hair on the skin of such animals \* \* \*. This paragraph shall be effective on and after the first day of December, nineteen hundred and thirteen, until which time the rates of duty now provided by schedule K of the existing law shall remain in full force and effect [Free].

<sup>1</sup> Paragraph 310 provided that—

“The provisions of this schedule (K) shall be effective on and after the first day of January, nineteen hundred and fourteen, until which date the rates of duty now provided by Schedule K of the existing law shall remain in full force and effect.”

Paragraph 19, emergency tariff act of 1921 provides that—

“Wool and hair of the kind provided for in paragraph 18, when advanced in any manner or by any process of manufacture beyond the washed or scoured condition, and manufactures of which wool or hair of the kind provided for in paragraph 18 is the component material of chief value, 45 cents per pound in addition to the rates of duty imposed thereon by existing law.”

## ACT OF 1909.

reduced in value by the admixture of dirt or any other foreign substance, shall be twice the duty to which it would be otherwise subject. \* \* \*

PAR. 370. On wools of the third class and on camel's hair of the third class the value whereof shall be twelve cents or less per pound, the duty shall be four cents per pound. On wools of the third class and on camel's hair of the third class, the value whereof shall exceed twelve cents per pound, the duty shall be seven cents per pound.

PAR. 371. The duty on wools on the skin shall be one cent less per pound than is imposed in this schedule on other wools of the same class and condition, \* \* \*.

## ACT OF 1913.

## CARPET WOOLS.

(See Report "The Wool-Growing Industry.")

*Description and uses.*—This paragraph covers a class of wools produced by native breeds which have not been improved by crossing with sheep of either merino or "English" blood. These wools, which are not competitive with domestic varieties, are coarse and stiff and usually kempy (having white brittle hairs which resist dyeing); they are often gray, brown, or black. Their lack of fineness, suppleness, and felting qualities makes them unadaptable for ordinary clothing purposes but peculiarly suitable for carpet manufacture. Some are employed in coarse blankets, robes, and upholstery cloths, or, when mixed with better wools, in the manufacture of rough tweeds or cheviots, but their main use is in carpets and rugs.

Native unimproved sheep are found in many countries, but most largely in Asia, European Russia, and South America. Donskoi, a South Russian wool, is one of the most important and includes Savolga, Kasan, Tscherski, and Kuban wools. These are the better sorts for carpet making and have a long "combing" staple. Native Smyrna and Syrian wools also are generally of the higher grade. "Native South American wools" are mainly from the "Criolla" breeds, which originated from early Spanish importations and consist of sheep with apparently little or no merino heredity. Wools shipped from Valparaiso, Chile, are known as Valparaiso wools. Cordova wools are grown in the Provinces of Cordova and San Luis, Argentina. Other unimproved wools include Central Asian wools such as Bokhara, Merv, Transcaspian, and Calmuc; East Indian wools; and Chinese wools. The term also includes various European carpet wools, particularly wool of the Scotch "blackface" sheep, an animal which yields a carpet wool par excellence.

This paragraph also covers camel's hair, of which Russia and China are the two main sources. Camel's hair is imported chiefly to make the press cloth required in the extraction of vegetable oils, particularly cottonseed oil.

*Production.*—Carpet wools and camel's hair are not produced in the United States, with the possible exception of negligible amounts

of wool such as used by the Navajo Indians in making blankets and rugs.

Imports of "class 3," including the carpet wools here covered, and camel's hair from Russia, averaged, per annum, 91,097,535 pounds for the 1891-1900 decade, 99,614,106 pounds for the 1901-1910 decade, and 85,836,333 pounds for the 1911-1920 decade (fiscal years). The decrease in imports is an indication of the decreased production of wool carpets and rugs in the United States.

Imports since 1917 of the wools and hairs falling under paragraph 1101 of H. R. 7456 are recorded as follows:

Calendar year.	Unimproved wools, class 3.		Camel's hair, classes 2 and 3.	
	Quantity.	Value.	Quantity.	Value.
	<i>Pounds.</i>		<i>Pounds.</i>	
1918.....	68,696,633	\$29,041,103	1,321,897	\$682,112
1919.....	95,732,470	36,246,823	1,120,933	762,365
1920.....	35,549,300	11,351,262	2,725,180	1,850,923
1921 (9 months).....	73,872,072	8,712,529	715,541	237,075

Leading sources in 1920 were China, the United Kingdom, Chile, Turkey, Russia, and Argentina.

*Exports.*—No exports are recorded.

*Important changes in classification.*—The wools covered in this paragraph were admitted free of duty under paragraph 650, act of 1913, and, as carpet wools, were not made dutiable by the emergency tariff act of 1921.

This paragraph covers practically the same wools as were covered by paragraph 363 of the act of 1909 and there called "class three" wools. The phrasing "wools, not improved by the admixture of merino or English blood" has been substituted for "class three \* \* \* wools \* \* \* \_excepting improved wools hereinafter provided for." Mention of Donskoi, native Smyrna, native South American, Cordova, and Valparaiso wools has been retained as an indication of the kind of wools so covered, but mention of sources has been omitted for the reason that carpet wools are imported from all over the world. "Hair of the camel" has been substituted for "Russian camel's hair" as there is no tariff significance in a division of camel's hair according to origin.

The duty on unimproved wools is made ad valorem, with a maximum specific rate which is the same as the highest specific rate provided in paragraph 370 of the act of 1909. The specific rate per pound applies to the weight of the wool in the condition imported, whether in the grease, washed, or scoured. These wools are mainly imported in the grease; they sometimes enter in the washed state, but rarely in a scoured condition. Much of this wool is manufactured without any scouring.

The duties, both ad valorem and maximum specific, on unimproved wools imported on the skin are lower than those levied on such wools other than on the skin because of the difference in value.

## PARAGRAPH 1102.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1102. Wools, not specially provided for, and hair of the Angora goat, alpaca, and other like animals, imported in the grease or washed, 25 cents per pound of clean content; imported in the scoured state, 26 cents per pound; imported on the skin, 24 cents per pound of clean content: *Provided*, That none of the foregoing shall pay a higher rate of duty than 35 per centum ad valorem.

## ACT OF 1909.

PAR. 360. All wools, hair of the \* \* \*, goat, alpaca, and other like animals shall be divided, for the purpose of fixing the duties to be charged thereon, into the three following classes:

PAR. 361. Class one, that is to say, merino, mestiza, metz, or metis wools, or other wools of Merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including Bagdad wool, China lamb's wool, Castel Branco, Adrianople skin wool or butcher's wool, and such as have been heretofore usually imported into the United States from Buenos Aires, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, Egypt, Morocco, and elsewhere, and all wools not hereinafter included in classes two and three.

PAR. 362. Class two, that is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also hair of the \* \* \*, Angora goat, alpaca, and other like animals.

PAR. 365. Whenever wools of class three shall have been improved by the admixture of Merino or English blood, from their present character as represented by the standard samples now or hereafter to be deposited in the principal custom-houses of the United States, such improved wools shall be classified for duty either as class one or as class two, as the case may be.

PAR. 366. The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to

## ACT OF 1913.

PAR. 305. Hair of the Angora goat, alpaca, and other like animals, and all hair on the skin of such animals, 15 per centum ad valorem.

PAR. 650. Wool of the sheep, hair of the camel, and other like animals, and all wools and hair on the skin of such animals, \* \* \*. This paragraph shall be effective on and after the first day of December, nineteen hundred and thirteen, until which time the rates of duty now provided by schedule K of the existing law shall remain in full force and effect [Free].<sup>2</sup>

<sup>2</sup> Par. 18, emergency tariff act of May 27, 1921:

"Wool, commonly known as clothing wool, including hair of the camel, angora goat, and alpaca, but not such wools as are commonly known as carpet wools: Unwashed, 15 cents per pound; \* \* \*. Unwashed wools shall be considered such as shall have been shorn from the animal without any cleaning; washed wools shall be considered such as have been washed with water only on the animal's back or on the skin; wools washed in any other manner than on the animal's back or on the skin shall be considered as scoured wool. On wool and hair provided for in this paragraph, which is sorted or increased in value by the rejection of any part of the original fleece, the duty shall be twice the duty to which it would otherwise be subject, but not more than 45 cents per pound."

## ACT OF 1909.

## ACT OF 1913.

which they would be subjected if imported unwashed; and the duty on wools of the first and second classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed. \* \* \*

PAR. 367. Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water only on the sheep's back, or on the skin. Wools of the first and second classes washed in any other manner than on the sheep's back or on the skin shall be considered as scoured wool.

PAR. 368. The duty upon wool of the sheep or hair of the \* \* \* Angora goat, alpaca, and other like animals, of class one and class two, which shall be imported in any other than ordinary condition, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject: *Provided*, That skirted wools as imported in 1890 and prior thereto are hereby excepted. The duty upon wool of the sheep or hair of the \* \* \* Angora goat, alpaca, and other like animals of any class which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be twice the duty to which it would be otherwise subject. When the duty assessed upon any wool equals three times or more that which would be assessed if said wool was imported unwashed, the duty shall not be doubled on account of the wool being sorted. \* \* \*

PAR. 369. The duty upon all wools and hair of the first class shall be eleven cents per pound, and upon all wools or hair of the second class twelve cents per pound.

PAR. 371. The duty on wools on the skin shall be one cent less per pound than is imposed in this schedule on other wools of the same class and condition, \* \* \*

MERINO, ENGLISH, AND CROSSBRED WOOLS, AND MOHAIR, ALPACA, ETC.

(See Report "The Wool-Growing Industry.")

*Description and uses.*—This paragraph covers all wools, other than those from native unimproved sheep (see par. 1101), and also includes hair of the Angora goat, alpaca, and other like animals. Wools here covered may be divided into three broad classes, the merino, the English, and the crossbred.

Merino wool: Merino sheep are raised for wool rather than mutton; they are small but have a very dense fleece. Merino wools are short, mainly 1 to 2 inches in length, but are noted for their fineness, softness, strength, and elasticity; they have a very large number of serrations per inch and therefore are easily felted. As they can be spun to the finest counts and are relatively high in price, they are used for fine worsteds and for the finest qualities of closely compacted cloths such as broadcloths, billiard cloths, officers' uniforms, doeskins, etc. Merino sheep originated in Spain but there are now many widely distributed varieties. The largest numbers are found in Australia, British South Africa, and the United States in the order named. Merino wool is naturally very oily, and in consequence a large amount of dirt adheres to it. For this reason the shrinkage in weight when scoured is higher than for other wools, ranging from 40 to 80 per cent, with an average of possibly 60 per cent.

English wools: The "English breeds" of sheep are grown for mutton rather than wool; they are for the most part larger framed and relative to body weight they shear less wool than merinos. Wools are divided into two main classes, the "long-wools" and the "Down" or "short wools." The long-wools, such as those produced by the Lincoln or Cotswold breeds, are 6 to 15 inches in length, rather coarse, but strong and noted for their luster and brilliancy. The Down wools, such as those produced by the Southdown or Hampshire breeds, are 3 to 5 inches in length, but softer, finer, and more elastic than the long wools. "English" wools constitute but a small percentage of the world total, being little raised outside of England proper. They are used chiefly in the manufacture of coat linings, also in braids and in some varieties of lustrous dress goods. The shrinkage in weight from scouring is small; when, as is the rule, they are brook washed prior to shearing, the shrinkage after purchase is often less than 20 per cent.

Crossbred wools: The "crossbreds" are sheep partly of merino and partly of "English" blood; they have the size and weight of good mutton sheep and their wool retains some of the fineness and elasticity of the merino. Such sheep are valuable for both mutton and wool and, since the development of the frozen mutton trade, have steadily increased in commercial importance. South America is the largest producer, New Zealand second, Australia third, and the United States fourth. Crossbred wools are known abroad as three-fourths, one-half, three-eighths and one-fourth blood wools, according to the percentage of merino blood in the crossing. In the United States they are graded as one-half, three-eighths, one-fourth, low one-fourth, and common, but these grades designate fineness of fiber on the downward scale; they bear no definite relation to the merino heredity of the sheep. The shrinkage in weight in scouring can hardly be averaged; it ranges from 35 to 75 per cent, varying with the percentage of merino blood and the conditions under which the sheep are raised.

Merino and crossbred wools are listed in import statistics under the 1909 tariff designation as "class 1" wools. Wools not containing merino blood, such as those of English blood, but not including carpet wools, are listed as "class 2" wools.

Wools imported on the skin are from slaughtered sheep, and after removal with the assistance of chemicals are known as "pulled wools." This wool is not so valuable as that sheared from the sheep because the process of pulling damages the serrations of the fibers and detracts from the spinning quality. Pulled wools are used for soft twist knitting yarns, for blankets, felts, etc.

The animal hairs here classed with wool are mainly mohair, alpaca, vicuna, and llama.

Mohair comes from the Angora goat. South Africa ranks first in its production, Turkey (the original habitat) second, and the United States third. The fiber is soft, silky, white, and lustrous; it is used largely in making plushes for Pullman car seats; for coat linings; and for summer suitings, dress goods, imitation furs, etc. Goods woven of mohair or other animal hair are generally made with cotton warp.

In response to inquiries by the Tariff Commission, four important manufacturers of mohair fabrics gave the shrinkage of foreign and domestic mohair as follows:

	Domestic mohair.	Turkish mohair.	Cape mohair.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
Company No. 1.....	10	15	17
Company No. 2.....	16	18	18
Company No. 3.....	12	20	20
Company No. 4.....	18-25	20-32	18-25

These companies gave 40s as the maximum spinning count in this country for domestic mohair, and from 40s to 60s as the maximum for imported mohair.

Alpaca is the hair of the animal of that name found in Peru and Bolivia. The hair is 10 to 16 inches in length, finer and softer but less lustrous than mohair, although much like it in the better grades. The reddish hair is superior to the white. Alpaca is used, with cotton warp, in making coat linings, summer suitings, and dress goods. The shrinkage is from 15 to 20 per cent. Vicuna hair is fine and soft, reddish brown, and much like the alpaca but shorter. Llama hair is closely allied to alpaca, although somewhat coarser. The vicuna and the llama, like the alpaca, are found in Peru and Bolivia.

*Production* of wool in the United States has remained practically unchanged for the past four decades, about 300,000,000 pounds in the grease, rarely varying as much as 10 per cent from this figure. Production in the 1891-1910 decade averaged 298,818,032 pounds per annum; in the 1901-1910 decade 301,846,046 pounds; and in the 1911-1920 decade 300,732,995 pounds, per annum. The maximum, of 349,000,000 pounds, was in 1893; the minimum, of 259,000,000 pounds, in 1897. Production in 1920 was 302,207,000 pounds.

Wools produced in the United States may be divided into two classes, farm or fleece wools and territory wools. In both classes they range in grade from merino or "fine" down to "braid" or luster wools. Only one-fourth of the domestic production consists of

merino; virtually all the rest is of crossbred types, but a large part of these approximate fairly closely to the Down types.

Fleece wools, grown in the farming States east of the Rocky Mountain region, may be subdivided into "semibrights" and "brights." The only difference between them is the darker color of the former, which apparently results from the character of soil on which the sheep graze in the western part of the farming region. Fleece wools are for the most part brights. A former subdivision called Georgia or "Lake" wools, grown in and adjacent to piney-woods areas in the South, is now of too small importance to merit separate attention. Most farm-grown wools fall within the  $\frac{3}{8}$ -blood to common grades; little merino is produced outside of the upper Ohio Valley and a few areas elsewhere. Fine wool of unusual length called Delaine, grown mainly in Ohio, is reputed to be the strongest merino fiber in the world.

Territory wools derive their name from the region west of the Missouri River which formerly comprised the "Territories." At the present time such wool is grown west of about the one hundredth meridian. Formerly the great bulk was of the merino type; and large quantities of fine wool are still grown in the drier, rougher areas, but a rapid and general adoption of crossbreeding to secure a greater mutton output has resulted in the production of a large proportion of crossbred wools which grade half-blood and coarser. About two-thirds of the domestic clip is now shorn in the Far West and in Texas.

The main wool-producing States in 1920 were Wyoming, Idaho, Texas, Utah, Montana, New Mexico, Oregon, California, Ohio, and Michigan. The average shrinkage in scouring in 1920 for all domestic wools was estimated by the Department of Agriculture at 58.7 per cent, ranging from 38 per cent for the State of Virginia to 67 per cent for the State of Washington.

The world production of wool averages about 3,000,000,000 pounds. The main producers of wool are Australasia, the River Plate countries, the United States, the United Kingdom, Russia, China, and South Africa. The only ones having a large surplus for export are Australasia, the River Plate, and British South Africa. The chief importers of wool are the United Kingdom, France, Germany, United States, and Belgium; these are also the main manufacturers employing power-driven machinery.

*Imports* of wool (including carpet wools, par. 1101) less reexports, averaged per annum 161,061,322 pounds in the 1891-1900 decade; 189,609,955 pounds in the 1901-1910 decade; and 318,238,867 pounds in the 1911-1920 decade (fiscal years). The minimum, of 49,000,000 pounds, was in 1894; the maximum, of 533,000,000 pounds, in 1916. In the three decades mentioned the ratio of net imports to the total consumption increased from 35.2 to 38.6, and then to 51.5 per cent. As the production during this period has been stationary, it is obvious that the increased demand for wool has been met by larger importations. In spite of increased imports the United States still produces a much larger percentage of its wool requirements than any of the other leading wool manufacturers such as the United Kingdom, France, Germany, and Belgium.

Imports are largely of merino wools and wools containing merino blood, listed as "class 1" wools, the main sources in 1920 being Argentina, Australia, Uruguay, the United Kingdom, and British South Africa. Imports of "class 2" wools are small, normally consisting largely of luster wools of low shrinkage from England; in 1920 the largest amount was credited to China, the second largest amount to England, and the third to Argentina.

Imports since 1917 of the wools and hairs falling under paragraph 1102 of H. R. 7456 are recorded as follows:

Calendar year.	Merino and crossbred wools, class 1.		English and other wools, class 2.		Mohair, alpaca, etc., class 2.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	<i>Pounds.</i>		<i>Pounds.</i>		<i>Pounds.</i>	
1918.....	374, 101, 453	\$216, 668, 818	3, 638, 617	\$2, 322, 824	5, 162, 386	\$2, 616, 976
1919.....	334, 523, 510	171, 407, 751	7, 404, 145	4, 353, 506	6, 123, 123	3, 471, 286
1920.....	212, 453, 148	109, 057, 448	4, 177, 602	2, 140, 296	4, 435, 711	2, 342, 720
1921 (9 months)...	195, 247, 783	43, 354, 716	9, 532, 869	1, 848, 164	4, 401, 606	1, 594, 604

*Exports* of domestic wools are, for the most part, taken by Canada. In 1920 the main purchasers, after Canada, were the United Kingdom and Japan.

Exports since 1917, for calendar years, have been as follows:

	1918	1919	1920	1921(9 months).
Quantity (pounds).....	406, 944	2, 839, 980	8, 845, 270	1, 607, 169
Value.....	\$462, 969	\$2, 230, 629	\$4, 936, 740	\$459, 722

*Important changes in classification.*—The wools covered by this paragraph were free of duty under paragraph 650, act of 1913, but are dutiable under the emergency tariff act of 1921.

This paragraph embraces all wools, except those of unimproved blood, generally used as carpet wools, which are dutiable at a special low rate in paragraph 1101. Imports under paragraph 1102 will therefore include wools which in previous tariffs were known as class 1 wools and class 2 wools; hair of the goat, alpaca, and other like animals will also be included as heretofore.

Since this paragraph covers all wools and hairs not more specifically provided for elsewhere, the long phraseology of preceding tariffs, mentioning different classes and sources, is omitted as unnecessary.

Basing the specific duty on the clean content instead of on wool in the grease obviates the necessity of distinguishing between wools of class 1 and class 2, formerly dutiable at different rates because of their different percentages of shrinkage.

The specific duty is based on the scoured content, whether the wool is imported in the grease or washed on the sheep's back; a slightly higher duty is imposed if the wool is imported in the scoured state. The specific duty on wools imported on the skin is also based on the scoured content, but at a slightly lower rate because of the somewhat lower average value of such wools.

The following table is a mathematical demonstration of the equivalent duties per grease pound produced by a duty of 25 cents a pound scoured, and the equivalent duties per scoured pound produced by 11 cents a pound in the grease, using varying percentages of shrinkage:

Shrinkage.	Yield.	Duty per pound in grease.	Equivalent duty per pound scoured.	Duty per pound scoured.	Equivalent duty per pound in grease.
<i>Per cent.</i>	<i>Per cent.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>
75	25	11	44	25	6.25
70	30	11	36.67	25	7.50
64 $\frac{2}{3}$	33 $\frac{1}{3}$	11	33	25	8.33
65	35	11	31.43	25	8.75
60	40	11	27.5	25	10.00
55	45	11	24.44	25	11.25
50	50	11	22	25	12.50
45	55	11	20	25	13.75
40	60	11	18.33	25	15.00
35	65	11	16.92	25	16.25
33 $\frac{1}{3}$	66 $\frac{2}{3}$	11	16.50	25	16.67
30	70	11	15.71	25	17.50
25	75	11	14.67	25	18.75
20	80	11	13.75	25	20.00
15	85	11	12.94	25	21.25

This table shows that a specific duty based on the weight of the wool in the grease bears lightest on light-shrinkage wools and heaviest on heavy-shrinkage wools in the equivalent duty per scoured pound. This works to the disadvantage of such sections of the domestic manufacturing industry as desire wools of a type which have a relatively heavy shrinkage in scouring. A specific duty based on the scoured content, that is, on the actual wool itself, places all wools on an equal tariff footing so far as shrinkage is concerned. Owing to the existing depression in the wool markets of the world, however, a specific duty on the clean content bears more heavily on the light-shrinking wools so far as concerns the ad valorem equivalent. These wools constitute the bulk of the present surplus of wools in the world but the demand for them is relatively small. Prices for such light-shrinking wools were so low when H. R. 7456 was framed that the ad valorem equivalent of the clean content duty was very high. For this reason the maximum ad valorem percentage provision was added to paragraph 1102. A table, prepared at the time H. R. 7456 was being considered by the Committee on Ways and Means, contrasts the ad valorem equivalents of the duties on wool, other than carpet wools, under the act of 1909 and the proposed duty of 25 cents per pound in the grease. The following table is based on foreign prices as of about June 8, 1921:

*Ad valorem equivalents of wool duties, contrasting the 1909 duty of 11 cents per pound in the grease with the proposed duty of 25 cents a pound on clean content.*

[Based on foreign prices.]

	Shrinkage.	Yield.	Foreign prices June 8, 1921, obtained by cable.		Scoured pound equivalent of grease, duty of 11 cents per pound.	Ad valorem equivalent of specific duty (per clean pound).	
			Grease.	Scoured.		11 cents per grease pound.	25 cents per scoured pound.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per pound.</i>	<i>Per pound.</i>	<i>Per pound.</i>	<i>Per cent.</i>	<i>Per cent.</i>

Since June, 1921, the world wool market has improved considerably. The ad valorem equivalent of the clean content duty has decreased in proportion. The following tabulation presents the ad valorem equivalent calculated on the foreign cost as of about December 12, 1921. From this table it will be seen that the ad valorem equivalent of the two forms of duty shows less marked divergencies owing to recent market improvement. Wide variations may yet be noted, especially in the grades of 36/40s. These are practically the same as domestic braid wools, approximate fairly closely to English luster wools in character, and were not used in the United States in very large amounts until during the past two years in carpet manufactures. The tabulation follows:

*Ad valorem equivalents of wool duties, contrasting the 1909 duty of 11 cents per pound in the grease with the proposed duty of 25 cents a pound on clean content.*

[Based on foreign prices.]

	Shrinkage.	Yield.	Foreign prices Dec. 12, 1921, obtained by cable.		Scoured pound equivalent of grease, duty of 11 cents per pound.	Ad valorem equivalent of specific duty (per clean pound).	
			Grease.	Scoured.		11 cents per grease pound.	25 cents per scoured pound.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per pound.</i>	<i>Per pound.</i>	<i>Per pound.</i>	<i>Per cent.</i>	<i>Per cent.</i>

The world wool market is still in a very unsatisfactory condition, and the surplus of, and slack demand for, low shrinking types of wools depress their price relative to finer grades. It therefore may be of interest to contrast the equivalent ad valorem effect of these two specific duties on the average clean value in Boston of foreign wools during prewar years, i. e., on the basis of American valuation in a normal series of years. Such a comparison should more nearly suggest the normal effect of a specific duty on the clean content of wools imported. The table follows:

*Ad valorem equivalent of wool duties, contrasting the 1909 duty of 11 cents per pound in the grease with the proposed duty of 25 cents a pound on clean content.*

[Based on prewar prices in Boston.]

	Shrinkage.	Yield.	Average pre war prices in Boston October-December, 1909-1915.			Scoured pound equivalent of grease, duty of 11 cents per pound.	Ad valorem equivalent of specific duty (per clean pound).	
			Grease.	Scoured.	Per pound.		11 cents per grease pound.	25 cents per scoured pound.

*Suggested changes.*—Litigation is now pending as to whether the Cashmere goat is more "similar" to the Angora goat than to the camel. It might therefore be well to insert in paragraph 1102 (also in par. 1121) the words "Cashmere goat" after the words "Angora goat."

### PARAGRAPH 1103.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1103. If any bale or package containing wools, hairs, wool wastes, or wool waste material, subject to different rates of duty, be entered at any rate or rates lower than applicable, the highest rate applicable to any part shall apply to the entire contents of such bale or package.

ACT OF 1909.

ACT OF 1913.

PAR. 368. \* \* \* If any bale or package of wool or hair specified in this Act invoiced or entered as of any specified class, or claimed by the importer to be dutiable as of any specified class, shall contain any

[No corresponding provision.]

## ACT OF 1909.

wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair, or other material of any class specified in this Act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

*Important changes in classification.*—This provision is the same in intent as the last sentence of paragraph 368 of the act of 1909, although the wording has been condensed and clarified. It is a penalty provision intended to prevent materials subject to different rates of duty from being brought in at rates lower than provided for each. For instance, carpet wool and merino wool may be contained in the same bale, and if the correct amount of each were stated the respective duties would be levied, and no penalty would apply. If, however, the carpet wool and the merino wool were mixed and the whole entered as carpet wool, such fraudulent entry would be penalized, if discovered, by applying the merino rate to the entire contents of the bale, including the carpet wool contained therein.

The word "entered" means that the importer has submitted the shipment for customs clearance at a stated rate of duty.

---

 PARAGRAPH 1104.

## H. R. 7456.

PAR. 1104. The Secretary of the Treasury is hereby authorized and directed to prescribe methods and regulations for carrying out the provisions of this schedule relating to the duties on wool and hair.

## SENATE AMENDMENTS.

## ACT OF 1909.

PAR. 364. The standard samples of all wools which are now or may be hereafter deposited in the principal custom-houses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools under this Act, and the Secretary of the Treasury is authorized to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other custom-houses of the United States when they may be needed.

PAR. 371. \* \* \* the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe.

## ACT OF 1913.

[No corresponding provision.]

*Important changes in classification.*—This is not a new provision, but a consolidation and extension of provisions in the act of 1909. In paragraph 364 of that act the Secretary of the Treasury was authorized to maintain and renew standard samples of wool, and in paragraph 371 to prescribe rules for ascertaining the quantity and value of wools on the skin. In paragraph 1104 the Secretary of the Treasury is not confined to a particular procedure but is authorized to prescribe such methods and regulations as may be necessary for the execution of the intent of the bill so far as relates to the duties on wool and hair.

---

PARAGRAPH 1105.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1105. Top waste, slubbing waste, roving waste, and ring waste, 25 cents per pound; garnetted waste, 20 cents per pound; noils, carbonized, 20 cents per pound; noils, not carbonized, 16 cents per pound; thread or yarn waste, and all other wool wastes not specially provided for, 14 cents per pound; shoddy and wool extract, 14 cents per pound; mungo, woolen rags, and flocks, 6 cents per pound.

ACT OF 1909.

PAR. 372. Top waste, slubbing waste, roving waste, ring waste, and garnetted waste, thirty cents per pound.

PAR. 373. Shoddy, twenty-five cents per pound; noils, wool extract, yarn waste, thread waste, and all other wastes composed wholly or in part of wool, and not specially provided for in this section, twenty cents per pound.

PAR. 374. Woolen rags, mungo, and flocks, ten cents per pound.

ACT OF 1913.

PAR. 651. Wool wastes: All noils, top waste, card waste, slubbing waste, roving waste, ring waste, yarn waste, bur waste, thread waste, garnetted waste, shoddies, mungo, flocks, wool extract, carbonized wool, carbonized noils, and all other wastes not specially provided for in this section. This paragraph shall be effective on and after the first day of December, nineteen hundred and thirteen, until which time the rates of duty now provided by schedule K of the existing law shall remain in full force and effect [Free].

WOOL WASTES AND WASTE MATERIALS.

(See Survey FL-40.)

*Description and uses.*—Wool wastes consist of the materials discarded in wool manufacture and as a general term may also include what are sometimes known as "wool waste materials," such as woollags and the shoddy and mungo obtained therefrom. Top waste, slubbing waste, roving waste, and ring waste are derived respectively from the comb, slubber, roving frame, and spinning machine during the process of manufacture. The term "ring waste" is used for the broken roving which becomes wound in rings around the under-clearers on the spinning frame. Garnetted waste is hard waste (see "thread and yarn waste," below) which has been torn up on the garnetting machine to reduce it to its original fibers. Noils are the shorter fibers which are discarded by the comb in the process of making tops. Carbonized noils are noils which have been carbon-

ized to remove extraneous vegetable matter. Thread or yarn waste, the two terms signifying the same thing, are hard waste; that is, waste in which twist has been inserted. Such hard wastes must be garnetted, i. e., torn up into their original fibers by the action of the saw teeth of a garnetting machine, before they can be reworked. Wool flocks are the soft, fluffy fibers removed from the fabric in the finishing processes of fulling, shearing, or teasing. They are a very cheap waste. The better qualities may be reworked with new wool; the others are used in adding fullness and face to cloth by being pressed thereon, and also in wall-paper manufacture. "Wool wastes not specially provided for" include card wastes, made on either the woolen or the worsted card; bur wastes, which consist of small particles of wool clinging to burs (this waste is created by special "burring" rollers which are generally attached to the carding engine, and has to be carbonized before being used again); sweepings and oily wastes; and others.

Woolen rags include all rags wholly or in part of wool except those unfit for remanufacture and used as paper stock. Rags are torn up on a rag picker or "devil" (as it is called in Yorkshire) to shred them into their original fibers before they are ready for remanufacture. Rags are of many different classes, varying from new clippings from the finest cloths to old and worn-out suits of the poor. The materials vary widely in value but the average is very low.

Shoddy is the wool fiber obtained by tearing apart the yarns in soft woolen fabrics, such as old stockings and sweaters. Mungo is a much lower-grade product, with shorter fiber, obtained by tearing apart the yarns in hard woolen cloths. Wool extract is shoddy or mungo from which cotton or other vegetable fibers have been removed by carbonization. Recovered wool fibers, such as shoddy and mungo, are used as a substitute for new wool and are of considerable economic importance. They can not be used in making worsteds on account of the shortness of the fiber, but go into the manufacture of woolens of various classes.

*Production* of wool wastes and wool waste materials in 1914 and 1919 was as follows:

	1914		1919	
	Quantity.	Value.	Quantity.	Value.
	<i>Pounds.</i>		<i>Pounds.</i>

<sup>1</sup> Fiscal year.

<sup>2</sup> Calendar year.

The United Kingdom supplies the greater part of our imports of wool wastes and wool waste materials (which are grouped together in the statistics showing imports by countries), more than two-thirds coming from this source. In 1914, Germany and Canada ranked second and third as sources of imports; in 1920, France and Canada held these positions.

Imports constitute only a very small portion of the domestic consumption. In 1914 (calendar year), the quantity of wool waste imported (noils, top waste, etc.) amounted to 5.08 per cent of the domestic production for sale only; in 1919, to 5.41 per cent. Of woollen rags, the ratio of imports (pounds) to domestic consumption was, in 1914, 3.67 per cent; in 1919, 1.18 per cent. For recovered wool fiber, it was, in 1914, 0.31 per cent; in 1919, 0.18 per cent.

Exports are not recorded for any of the wool wastes except rags. These are shown as follows:

	1914 <sup>1</sup>	1918 <sup>2</sup>	1919 <sup>2</sup>	1920 <sup>2</sup>	1921 <sup>2</sup> (9 months).
Quantity (pounds).....	26, 852, 402	\$ 3, 344, 150	31, 476, 118	15, 132, 261	1, 268, 437
Value.....	\$973, 653	\$ 346, 217	\$5, 538, 440	\$2, 812, 752	\$161, 522

<sup>1</sup> Fiscal year.

<sup>2</sup> Calendar year.

<sup>3</sup> Exports of woollen rags were under restrictions from Sept. 24, 1917, to Dec. 10, 1918.

The chief foreign market is the United Kingdom, which took 70.4 per cent of our exports in 1914 and 90.6 per cent in 1920. Prior to

the war, Germany and Belgium were next in importance, but they have been superseded by Canada and Japan.

Since 1912—when exports of woolen rags were first recorded—exports have greatly exceeded imports both in quantity and value. On the other hand, the imports, as indicated by the average value per pound, are distinctly better in quality than the exports—though a decline in the quality of the imported rags followed the removal of the duty in 1913.

That there is some exportation of wool wastes other than rags (noils, top waste, etc.) is indicated by Canadian statistics, which report, for the fiscal year ended March 31, 1921, imports of wool wastes and noils from the United States amounting to 1,252,277 pounds, valued at \$592,398. In 1914, Great Britain also imported 448,068 pounds from the United States, and in 1919, 19,808 pounds. Likewise, exports of recovered wool fiber are given in foreign statistics, Great Britain having imported 345,156 pounds from the United States in 1914, and 338,500 pounds in 1919; Canada, 2,892,897 pounds in the year ended March 31, 1915, and 833,023 pounds in the year ended March 31, 1921.

*Important changes in classification.*—Wool wastes are exempt from duty under paragraph 651 of the act of 1913, but wastes in fiber form derived from clothing wool are dutiable under the emergency tariff act of 1921 (par. 18). (T. D. 38798, of 1921.)

This paragraph is intended to cover all varieties of wool waste and wool waste materials, and to adjust the duties in fair ratio to the relative value of such articles. Top waste, slubbing waste, roving waste, and ring waste sell at approximately the same price as the raw wool of which they are made; therefore, the same specific rate of duty has been applied as that on raw wool, although without the maximum ad valorem provision. Garnetted waste sells at a lower price than the four preceding types and so is assessed a lower duty. Carbonized noils come next in value and are dutiable at a higher rate than the uncarbonized noils from which they are made. Thread or yarn waste and other unspecified wastes, such as card waste and bur waste, are ranked next in value and duty. Prices of thread or yarn waste vary widely, however. After the above wastes of manufacture have been provided for, there are inserted duties on shoddy and wool extract (carbonized shoddy) at the same rate as unspecified wastes of manufacture. In general, prices of shoddy resemble those of thread and yarn waste, both fluctuating widely. Mungo, which is a cheaper material than shoddy, is given the same rate as woolen rags, at a much lower rate than that levied on shoddy. Flocks, which are the lowest and cheapest form of wool waste, are placed in the last-named classification instead of being given a special lower rate, because they are of almost negligible importance.

There are many varieties of the different types of waste and of waste materials, but the above classification has been made up on the basis of the general levels of price and is considered a logical order.

*Suggested changes.*—Inasmuch as there is a maximum ad valorem rate of thirty-five per cent on raw wool in paragraph 1102, it would appear to be logical that a similar maximum ad valorem rate should be embodied in this paragraph relating to wool wastes and wool waste materials.

Page 119, line 22, of H. R. 7456: Insert a comma after "shoddy."

Page 119, line 23, of H. R. 7456: Insert the following after "pound" at the end of the line:

Wastes of the hair of the Angora goat, alpaca, and other like animals shall be dutiable at the rates provided for similar types of wool wastes.

### PARAGRAPH 1106.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1106. Wool which has been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, and not specially provided for, including tops and roving, valued at not more than 40 cents per pound, 16 $\frac{3}{4}$  cents per pound and, in addition thereto, 10 per centum ad valorem; valued at more than 40 cents per pound, 27 $\frac{1}{2}$  cents per pound and, in addition thereto, 10 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 366. \* \* \* The duty on wools of the third class, if imported in condition for use in carding or spinning into yarns, or which shall not contain more than eight per centum of dirt or other foreign substance, shall be three times the duty to which they would otherwise be subjected.

PAR. 375. On combed wool or tops, made wholly or in part of wool or camel's hair, valued at not more than twenty cents per pound, the duty per pound shall be two and one-fourth times the duty imposed by this schedule on one pound of unwashed wool of the first class; valued at more than twenty cents per pound, the duty per pound shall be three and one-third times the duty imposed by this schedule on one pound of unwashed wool of the first class; and in addition thereto, upon all the foregoing, thirty per centum ad valorem.

PAR. 376. Wool and hair which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this section, shall be subject to the same duties as are imposed upon manufactures of wool not specially provided for in this section.

PAR. 286. Combed wool or tops and roving or roping made wholly or in part of wool or camel's hair, and on other wool and hair which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this section, 8 per centum ad valorem.

PAR. 306. Tops made from the hair of the Angora goat, alpaca, and other like animals, 20 per centum ad valorem.

### PARTIALLY MANUFACTURED WOOL.

(See Survey K-1.)

This paragraph includes tops and roving of wool or hair of the sheep, camel, Angora goat, alpaca, or other like animals. It also includes such wool or hair advanced in any other manner beyond the washed or scoured condition, but not yet spun into yarn. Only the tops enter extensively into commerce.

## TOPS OF WOOL, MOHAIR, ALPACA, ETC.

*Description and uses.*—In the worsted industry, scoured wool is either carded or prepared and put through a combing machine, which removes the shorter fibers and lays the longer ones substantially parallel. The product—a large, continuous strand of combed wool—is called “tops.” It is used almost exclusively for conversion into worsted yarns. Tops made from mohair or alpaca are produced in the same general manner, although considerable experience in handling such hair and special adjustments of equipment are required.

*Production.*—The regular quinquennial census does not give the total domestic production of tops, the figures shown referring only to those produced for sale and those purchased. The war census of 1918, however, shows an average production, for the years 1915, 1916, and 1917, of 203,424,031 pounds. At the average value per pound of the tops purchased in 1914 (as reported by the Census Bureau for that year), the foregoing quantity would be valued at over \$110,000,000—over 25 per cent of the value of all wool manufactures in 1914. At the average value per pound of tops produced for sale in 1919, as reported in preliminary census returns, the total value would be almost \$295,000,000. Tops are produced chiefly by yarn mills, largely for their own consumption; but production outside the mills where consumed has been growing, having increased from 20,828,245 pounds in 1909 to 29,106,307 pounds in 1914. These are the figures for tops purchased. Preliminary census returns do not show the amount purchased in 1919. Tops produced for sale in 1914 amounted to 8,985,170 pounds, valued at \$4,926,929; in 1919, to 10,199,000 pounds, valued at \$14,751,000. The apparent discrepancy between tops bought and tops sold is explained partly by imports, but more largely by the fact that the output of commission combers was not separately recorded by the Census Bureau and, though evidently included in the purchase figure, is not included in that of production for sale.

The Census Bureau does not state whether the foregoing figures for tops purchased and sold include those made of mohair, alpaca, etc., although the latter are not elsewhere shown. Tops of mohair, alpaca, etc., enter into commerce, however, only to a limited extent.

A striking feature of the domestic production of tops has been the development, during the last 30 years, of commission combing on a considerable scale. There are to-day some ten or a dozen mills devoted wholly or mainly to commission combing, and half a dozen other concerns which combine commission combing with other work. The bulk of the tops turned out for use other than in the producing mill is commission combed; in addition, a certain amount is sold by concerns utilizing their own wool.

*Imports* prior to 1914 were negligible, and in the first half of the fiscal year 1914 they amounted to only 4,630 pounds, valued at \$2,093. In the latter half of that fiscal year they were (excluding tops of mohair, alpaca, etc.) 3,228,237 pounds, valued at \$1,453,287—slightly more than 3 per cent of the quantity consumed in domestic worsted spinning. In 1915, imports of such tops were 3,412,250 pounds, valued at \$1,770,917. Imports of tops of hair of the Angora goat, alpaca, and other like animals in the latter half of the fiscal year 1914 (when they were first separately shown) were

33,165 pounds, valued at \$11,356; in 1915, 66,723 pounds, valued at \$25,663. Imports of tops since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
TOPS OF WOOL OR CAMEL'S HAIR.				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	77,535	\$116,045	\$9,284	8
1919.....	709,300	813,667	65,093	8
1920.....	853,719	1,098,003	87,840	8
1921 (9 months).....	1,147,822,470	1,976,272		

## TOPS OF MOHAIR, ALPACA, ETC.

1918.....	26	\$38		
1919.....	22,655	33,752	\$6,750	20
1920.....	139,077	148,729	29,746	20
1921 (9 months).....	332,769	3308,412		

<sup>1</sup> Includes 17,891 pounds, valued at \$12,240, under emergency tariff act of 1921.

<sup>2</sup> From Philippine Islands.

<sup>3</sup> Includes 4,414 pounds, valued at \$5,304, under emergency tariff act of 1921.

The very striking increase in importation of tops in the first half of the calendar year 1921 was due to liquidation of large British stocks and to the fact that, anticipating an emergency tariff on raw wool and wool manufactures, importers felt a greater assurance of obtaining the tops from Europe before the duties were raised than of securing the raw wool from Australia and other distant sources. Since the emergency tariff act went into effect, May 27, 1921, imports have almost ceased.

The United Kingdom has been the leading source of the imports. In 1920, however, imports from Australia, though lower in quantity than those from the United Kingdom, were almost double the latter in value. Imports from France and Belgium are much smaller.

*Important changes in classification.*—See General Notes on Paragraph, page 964.

## ROVING OR ROPING.

*Description and uses.*—In the worsted industry, after tops are made, the process of drawing follows: Under the English system the top is elongated, decreased in diameter, and given a twist, yielding a comparatively slender strand of wool called roving. Under the French system the top is elongated and decreased in diameter without imparting a twist, and the product, while often called roving, is more properly known as sliver. In the woolen industry the scoured wool is carded and delivered by the condenser in numerous small strands, usually known as rovings. Rovings from either the worsted or the woolen process are rarely dealt in commercially.

*Imports* were not recorded separately before the calendar year 1919. In that year they were 224 pounds, valued at \$349; in 1920, 18 pounds, valued at \$24; and in the first nine months of 1921, 240 pounds, valued at \$419.

*Important changes in classification.*—See General Notes on Paragraph, page 964.

## WOOL ADVANCED BEYOND THE SCOURED STATE, N. S. P. F.

*Description and uses.*—Besides tops and rovings, this paragraph covers all partial manufactures of wool between the scoured state and the yarn state. Except for carbonized wool, these are not common in trade. Carbonized wool is that which has been subjected to a bath of sulphuric or other acid to eliminate burs and foreign vegetable matter. Slubbing is intermediate between tops and roving, being the product of the initial operation incident to the drawing process.

*Imports* in the fiscal year 1914 were 22,592 pounds, valued at \$25,305; in the calendar year 1918, 81 pounds, valued at \$81; in 1919, 700 pounds, valued at \$907; in 1920, 70,118 pounds, valued at \$101,520; and in the first nine months of 1921, 208,424 pounds, valued at \$202,886.

## GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—The scope of this paragraph is the same as covered by paragraphs 286 and 306 of the act of 1913, and by paragraphs 375, 376, and part of 366 of the act of 1909. It includes wool and hair in a partially manufactured condition—more advanced than washed or scoured wool, but not so far advanced as yarn—therefore the rate of duty is intermediate between that placed on scoured wool and that placed on yarn. Further extension of this logical arrangement, by gradually increasing the duty from card sliver to tops, to slubbing, and finally to roving ready to be spun into yarn, has not been deemed advisable because tops are the only intermediate product that enters into commerce to any extent.

*Suggested changes.*—Paragraph 1106 is restricted to wool advanced or partially manufactured. Paragraph 286 of the act of 1913 includes partial manufactures of hair. Hair would not be included in paragraph 1106 because 1121, defining wool, is restricted to manufactured articles. If hair is intended to be included in paragraph 1106, it would be well to provide in this paragraph for hair of the kinds covered by this schedule.

A manufacturer stated to the Finance Committee (hearings of Dec. 14, 1921, pt. 42, p. 3377) that this paragraph, so far as it relates to articles other than tops and roving, is a basket provision, and as such is in conflict with the general or catchall provision (par. 1120). To avoid the possibility of such litigation it might be well to specify clearly that the paragraph does not cover manufactures as far advanced as yarn, that is, further advanced than roving.

The following revision of the descriptive wording of this paragraph is therefore suggested:

Wool, and hair of the kinds provided for in this schedule, which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, including tops, but not further advanced than roving [rate].

## PARAGRAPH 1107.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1107. Yarn, made wholly or in part of wool, valued at not more than 55 cents per pound, 20 cents per pound and, in addition thereto, 15 per centum ad valorem; valued at more than 55 cents but not more than \$1.50 per pound, 30 cents per pound and, in addition thereto, 18 per centum ad valorem; valued at more than \$1.50 per pound, 30 cents per pound and, in addition thereto, 20 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

PAR. 377. On yarns made wholly or in part of wool, valued at not more than thirty cents per pound, the duty per pound shall be two and one-half times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto thirty-five per centum ad valorem; valued at more than thirty cents per pound, the duty per pound shall be three and one-half times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem.

PAR. 287. Yarns made wholly or in chief value of wool, 18 per centum ad valorem.

PAR. 307. Yarns made of the hair of the Angora goat, alpaca, and other like animals, 25 per centum ad valorem

## WOOL YARNS.

(See Survey K-1.)

*Description and uses.*—This paragraph includes all yarn made wholly or in part of wool or hair of the sheep, camel, Angora goat, alpaca, or other like animals. The principal types of wool yarns are woolen or carded yarns and worsted or combed yarns. Stated briefly, the difference is that in woolen yarns the fibers are crossed and intermixed, while in worsted yarns the fibers are drawn parallel. Woolen yarn makes cloth of a thicker, fuller, rougher effect, and the individual fibers are often raised by teaseling to give a napped surface. It is used for a variety of purposes, as in cloths (both the fine and the cheap), blankets, flannels, carpets, and knit goods. Worsted yarn, on the other hand, produces a smoother, firmer fabric without nap and with weave structure and colors more sharply defined. It is used more particularly in fabrics for the manufacture of clothing, such as suitings and dress goods.

Camel's hair is spun on both the worsted and woolen principle, but the latter method is more common. Its main use is in press cloth for oil-milling, but it is also employed to some extent in fabrics for wearing apparel, particularly cloaks. Mohair and alpaca yarns, used in staple fabrics, are, for the most part, worsted; only when made from short fiber are they woolen. The leading uses of such yarns are in plushes, coat linings, suitings, and dress goods.

*Production.*—Only partial census returns for 1919 are as yet available. The following tables show the production of wool yarns in 1914, 1915, 1916, and 1917. The figures for 1914 are taken from the

Federal Census; those for the other three years, from the Census of War Commodities, 1918.

Production in 1914 follows:

Yarn.	Total.	For sale.	For use in same establishment.
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>
Woolen.....	205,746,745	2,947,681	178,799,064
Worsted.....	174,099,950	86,998,805	87,101,145
Merino (union of wool with other fiber).....	74,338,905	10,705,510	63,633,395
Total.....	454,185,600	124,651,906	329,533,604

Of worsted yarns, one-half was manufactured for sale—the carpet and knit-goods industries taking less than one-half of this, the bulk going into worsted cloth for men's and women's wear. Only one-eighth of the woolen yarns was for sale, nearly all of this being taken by the carpet and knit-goods industries.

Production in 1915, 1916, and 1917 was as follows:

Yarn.	1915	1916	1917
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>
Woolen.....	342,382,073	358,220,518	393,546,822
Worsted:			
English system.....	130,471,252	148,807,362	145,991,074
French system.....	40,543,680	47,415,307	47,701,523
Total.....	513,397,005	554,443,187	587,239,419

The preliminary census returns for 1919 show production for sale only, as follows: Woolen yarn, 28,387,000 pounds; worsted yarn, 75,851,000 pounds; merino and union yarn, 13,578,000 pounds. Of the last-named yarn, more than two-thirds was made on the woolen system.

Prior to 1910 the proportion of worsted yarns to the total of wool yarns produced tended to increase. Subsequently, however, it declined—from 43.3 per cent in 1909 to 38.3 per cent in 1914, and to 33 per cent in 1917, the Army demand being predominantly for woolens.

Production in 1914 of "mohair and similar" yarns was shown as 8,844,234 pounds, but whether this was production for sale only and whether it includes camel's hair yarn are not apparent from the census. Almost 16,000,000 pounds of mohair, alpaca, vicuna, and camel's hair were consumed, and allowing for loss in scouring, combing, and spinning, it is clear that the total production could not have been much in excess of 9,000,000 pounds. Preliminary statistics for 1919 show the production of yarn of such hairs to have been 1,350,000 pounds, but with an estimated domestic production of mohair somewhere between 5,000,000 and 6,000,000 pounds in that year, and imports of mohair, alpaca, etc., and of camel's hair amounting to 6,123,123 and 1,102,938 pounds, respectively, it seems probable that the 1919 production figures for yarn refer to sales only.

Imports of wool yarn from 1910 to 1913 averaged 199,545 pounds annually. In the calendar year 1914 they increased to 4,760,610 pounds, about 1.1 per cent of the total domestic production and 2.7 per cent of the worsted-yarn production. Imported wool yarns

are largely worsed. Imports of mohair and similar yarns were not separately classified prior to 1914, in which year from January to July they amounted to 465,012 pounds, valued at \$266,883. In 1915 they were 583,383 pounds, valued at \$356,552.

Imports since 1917 of the foregoing yarns have been as follows:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
WOOL YARN.				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	813,598	\$1,483,676	\$267,062	18
1919.....	201,889	484,721	87,250	18
1920.....	2,694,809	5,846,886	1,052,439	18
1921 (9 months).....	1 3,880,688	1 4,876,368		
MOHAIR AND SIMILAR YARN.				
1918.....	32,184	\$103,305	\$25,826	25
1919.....	174,888	346,974	86,743	25
1920.....	711,844	1,337,948	334,487	25
1921 (9 months).....	2 521,646	2 872,945		

<sup>1</sup> Includes 591,952 pounds, valued at \$603,320, imported under the emergency tariff act of 1921.

<sup>2</sup> Includes 32,504 pounds, valued at \$62,287, imported under the emergency tariff act of 1921.

Prior to 1910 the greater part of the wool yarn imported came from Germany. During the period 1910-1915 imports of wool yarn by countries were not separately shown in "Commerce and Navigation," but other statistics indicate that Germany was still the leading source until 1914. In 1916 and 1917 the great bulk came from the United Kingdom; but in 1918 and 1919 Canada furnished over 93 per cent. In 1920, however, 97 per cent of the imports came from the United Kingdom, and imports from Canada practically ceased. Mohair and similar yarns are not separately shown in imports by countries, but British export statistics indicate that the leading source is the United Kingdom.

Exports, probably negligible, are not separately recorded.

**Important changes in classification.**—This paragraph follows the act of 1909 (par. 377) in imposing the same duties on yarns made of wool, camel's hair, mohair, or alpaca, etc., rather than the act of 1913, where yarns of wool or camel's hair are provided for in paragraph 287 and yarns of mohair, alpaca, etc., in paragraph 307 at different rates of duty.

The compensatory duties in this paragraph are based on the assumption that yarns valued at more than \$1.50 a pound will be made entirely of wool or hair dutiable at 25 cents a pound; the "full compensatory" of 30 cents a pound is similar to that worked out by the Tariff Board and shown on page 626 of their 1912 report on Schedule K. The smaller compensatory duties on yarns of different values up to \$1.50 a pound are based on the assumption that such yarns will necessarily contain more or less wools, hairs, or reworked materials which will be subject to a lower duty than 25 cents a pound. The lower the yarn value the larger is assumed to be the proportion of such materials subject to a lower duty, and therefore the less compensatory duty required. The act of 1909 had a value class consisting of yarns valued at not more than 30 cents a pound, but imports at this value were so rare that it was practically inoperative. Values to-day are on a much higher level and the 55 cents a pound (American valuation)

here provided as the value limitation of the lowest class, is likely to include few, if any, imports unless there is a marked decline in prices.

### PARAGRAPH 1108.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1108. Woven fabrics, weighing not more than four ounces per square yard, wholly or in part of wool, valued at not more than \$1.25 per pound, 30 cents per pound and, in addition thereto, 22 per centum ad valorem; valued at more than \$1.25 per pound, 36 cents per pound and, in addition thereto, 27½ per centum ad valorem: *Provided*, That if the warp of any of the foregoing is wholly of cotton or other vegetable fiber, the duty shall be 25 cents per pound and, in addition thereto, if the fabric is valued at not more than \$1.25 per pound, 22 per centum ad valorem: if valued at more than \$1.25 per pound, 27½ per centum ad valorem.

### ACT OF 1909.

PAR. 379. \* \* \* Flannels composed wholly or in part of wool, valued at above fifty cents per pound, shall be classified and pay the same duty as women's and children's dress goods, coat linings, Italian cloths, and goods of similar character and description provided by this section \* \* \*.

PAR. 380. On women's and children's dress goods, coat linings, Italian cloths, and goods of similar description and character of which the warp consists wholly of cotton or other vegetable material with the remainder of the fabric composed wholly or in part of wool, valued at not exceeding fifteen cents per square yard, the duty shall be seven cents per square yard; valued at more than fifteen cents per square yard, the duty shall be eight cents per square yard; and in addition thereto on all the foregoing valued at not above seventy cents per pound, fifty per centum ad valorem; valued above seventy cents per pound, fifty-five per centum ad valorem: *Provided*, That on all the foregoing, weighing over four ounces per square yard, the rates of duty shall be five per centum less than those imposed by this schedule on cloths.

PAR. 381. On women's and children's dress goods, coat linings, Italian cloths, bunting, and goods of similar description or character composed wholly or in part of wool, and not specially provided for in this section, the duty shall be eleven cents per square yard; and in addition thereto on all the foregoing valued at not above seventy cents per pound, fifty per centum ad valorem; valued above seventy cents per pound, fifty-five per centum ad valorem: \* \* \*.

### ACT OF 1913.

PAR. 289. \* \* \* flannels, composed wholly or in chief value of wool, 25 per centum ad valorem; flannels composed wholly or in chief value of wool, valued at above 50 cents per pound, 30 per centum ad valorem.

PAR. 290. Women's and children's dress goods, coat linings, Italian cloths, bunting, and goods of similar description and character, composed wholly or in chief value of wool, and not specially provided for in this section, 35 per centum ad valorem.

PAR. 308. Cloth \* \* \* wholly or in chief value of the hair of the Angora goat, alpaca, and other like animals, not specially provided for in this section, 40 per centum ad valorem.

## DRESS GOODS AND LIGHT-WEIGHT CLOTHS OF WOOL.

*Description and uses.*—This paragraph covers light-weight woven fabrics, such as women's and children's dress goods, linings, bunting, etc.; light-weight fabrics used for men's wear, such as summer suiting; and light-weight flannels.

"Dress goods" is a term used to cover woven fabrics for women's wear, particularly those of a soft, draping character. Probably a major portion of them is made with cotton warp and wool or mohair filling. Linings are mainly cotton-warp goods, with filling of mohair, alpaca, or wool. Italian cloths, specially mentioned in previous tariffs, are high grade sateen-woven linings made from merino wool, generally with a cotton warp. Bunting is a light, loosely woven fabric, used for flags, decorations, etc. Light-weight cloths for men's wear here included might be of all-wool, but would be mainly of mohair, with cotton warp. The light-weight flannels falling here would be likely to consist mainly of the fine, white flannels used for infants' underwear; in addition, a certain amount of the finer shirting flannels might also fall here. But the bulk of the flannels would very likely weigh more than 4 ounces per square yard; hence they are more fully discussed under paragraph 1109, p. 972.

*Production.*—The Census classifies dress goods with cloths (i. e., suitings, overcoatings, etc.). For the inclusive figures, see paragraph 1109.

*Imports.*—Imports of dress goods, coat linings, Italian cloths, and bunting, wholly or in part of wool, amounted to \$6,907,168 in the fiscal year 1914 and to \$10,100,686 in the calendar year 1914. The average for 1910-1913 was \$5,491,115. Imports of these fabrics since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
1918.....	Lbs. 517, 837 (Sq. yds. 1, 977, 788)	\$1,000, 504	\$350, 176
1919.....	Lbs. 334, 732 (Sq. yds. 1, 232, 753)	903, 968	316, 389
1920.....	Lbs. 1, 438, 096 (Sq. yds. 4, 639, 213)	3, 911, 872	1, 369, 155
1921 (9 months).....	Lbs. 1, 973, 203 (Sq. yds. 3, 358, 266)	2, 288, 013	.....

\* Includes 155,971 pounds, valued at \$349,623, imported under the emergency tariff act of 1921.

Prior to the war from one-half to two-thirds of the imports of dress goods came from the United Kingdom, about one-fourth from France, and most of the remainder from Germany. In 1918 and 1919, the United Kingdom was almost the exclusive source, but in 1920 over 25 per cent was from France.

The general nature of the recent imports of dress goods, linings, etc., is shown by the following import figures:

Calendar year.	Dress goods.				Coat linings and Italian cloths.		Bunting.	
	Cotton warp.		Other.		Quantity.	Value.	Quantity.	Value.
	Quantity.	Value.	Quantity.	Value.				
	<i>Pounds.</i>		<i>Pounds.</i>		<i>Pounds.</i>	<i>Pounds.</i>		
1918.....	125, 967	\$235, 814	95, 296	\$238, 336	201, 865	\$322, 852	94, 709	\$203, 502
1919.....	99, 137	238, 518	117, 508	410, 999	113, 362	242, 483	4, 725	11, 983
1920.....	122, 142	277, 715	996, 804	2, 891, 299	317, 926	738, 459	1, 224	4, 399

Prior to 1914, imports of dress goods, etc., weighing 4 ounces or less per square yard, were shown in square yards; weighing over 4 ounces per square yard, in pounds. The latter dress goods were dutiable as "cloths." The following table shows the average annual imports of each during the period 1910-1913:

Dress goods, linings, etc.	Weighing 4 ounces or less per square yard.		Weighing over 4 ounces per square yard.	
	Quantity.	Value.	Quantity.	Value.
Cotton warp.....	<i>Sq. yds.</i> 12,474,132	\$1,990,321	<i>Pounds.</i> 253,631	\$223,054
Other.....	8,058,669	1,815,613	1,605,718	1,461,638
Total.....	20,532,801	3,805,934	1,859,349	1,684,692

Imports of woven fabrics of mohair, alpaca, etc., have been separately classified since 1914. Practically all of these would weigh less than 4 ounces per square yard and hence fall under this paragraph. Imports during the first half of the calendar year 1914 amounted to 920,866 pounds, valued at \$953,518; in 1915 (fiscal year), 1,198,319 pounds, valued at \$1,266,099. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....	326,213	\$591,954	\$236,782
1919.....	152,835	385,751	154,300
1920.....	412,203	1,070,812	428,325
1921 (9 months).....	1,356,953	894,461	.....

<sup>1</sup> Includes 86,705 pounds, valued at \$157,420, imported under the emergency tariff act.

Imports of woven fabrics of mohair, alpaca, etc., come almost entirely from the United Kingdom.

*Exports* are not separately recorded. (For exports of dress goods and cloths, inclusive, see par. 1109.)

*Important changes in classification.*—In preceding tariff acts, woven fabrics of wool were divided into (a) cloths, and (b) women's and children's dress goods, coat linings, Italian cloths, and goods of similar description and character. The word "cloths" is used in the wool industry in a restrictive sense to denote the heavier-woven fabrics used mainly for men's wear, as distinguished from the lighter-woven fabrics used as dress goods for women and children, and as lining, bunting, etc. There is, however, no clear line of demarcation between the two; for instance, some types of dress goods are heavier than cloths used in men's summer suits. In the acts of 1897 (par. 369) and 1909 (par. 381) it was therefore stipulated that women's and children's dress goods, linings, etc., which weighed over 4 ounces per square yard should be considered as "cloths." Irrespective of the use of the fabrics or the trade terminology employed, therefore, woven fabrics were primarily classified according to weight. This has logically led to the procedure here adopted, the discarding of trade terms such as dress goods and cloths, and the classifying of woven fabrics of wool into two paragraphs, one of which (1108) covers those weigh-

ing not over 4 ounces per square yard, and the other (1109) covering those weighing over 4 ounces per square yard. The classification of woven fabrics of wool is therefore practically the same as that previously used but with the omission of unnecessary verbiage.

The omission of specific mention of flannels stops litigation as to what is or is not "flannel" and permits such goods to enter on a parity with other woven fabrics, under paragraph 1108 or under paragraph 1109, according to their weight.

On page 626 of the 1912 report of the Tariff Board on Schedule K it was stated that if the duty on the scoured content of wool is 25 cents a pound, the correct compensatory duty on wool fabrics should be \$0.3564 a pound. Taking this last as a round figure, 36 cents, this is here used as the compensatory duty for woven fabrics made of all wool. In applying this "full compensatory" it has been assumed that fabrics such as dress goods, linings, etc., entitled to this rate by reason of being all wool, would be valued at more than \$1.25 a pound. Fabrics valued at not more than \$1.25 a pound are assigned a compensatory of 30 cents a pound, on the theory that they must be made partly of materials such as carpet wool, reworked wool, cotton, etc., dutiable at less than 25 cents a pound. Fabrics made with an all-cotton warp are assigned a compensatory duty of 25 cents a pound, irrespective of their value, inasmuch as there is no duty levied on raw cotton in H. R. 7456.

It may be noted that the full compensatory of 36 cents a pound, and the lower compensatories of 30 and 25 cents, are based on the assumption that the wool contained in the fabric is dutiable at 25 cents a pound; in cases where such wool pays less than 25 cents a pound, by virtue of the maximum ad valorem provision of 35 per cent in paragraph 1102, the result is that the compensatory duty is more than sufficient to maintain the ratio.

---

## PARAGRAPH 1109.

### H. R. 7456.

### SENATE AMENDMENTS.

PAR. 1109. Woven fabrics, weighing more than four ounces per square yard, wholly or in part of wool, valued at not more than 75 cents per pound, 20 cents per pound and, in addition thereto, 18 per centum ad valorem; valued at more than 75 cents but not more than \$1.25 per pound, 25 cents per pound and, in addition thereto, 21 per centum ad valorem; valued at more than \$1.25 but not more than \$2.50 per pound, 30 cents per pound and, in addition thereto, 24 per centum ad valorem; valued at more than \$2.50 per pound, 36 cents per pound and, in addition thereto, 27½ per centum ad valorem.

### ACT OF 1909.

### ACT OF 1913.

PAR. 378. On cloths, \* \* \* made wholly or in part of wool \* \* \* valued at not more than forty cents per pound, the duty per pound shall be three

PAR. 288. Cloths, \* \* \* wholly or in chief value of wool, not specially provided for in this section, 35 per centum ad valorem; \* \* \*.

## ACT OF 1909.

times the duty imposed by this section on a pound of unwashed wool of the first class; valued at above forty cents per pound and not above seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto, upon all the foregoing, fifty per centum ad valorem; valued at over seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class and fifty-five per centum ad valorem.

PAR. 379. On \* \* \* flannels for underwear composed wholly or in part of wool, valued at not more than forty cents per pound, the duty per pound shall be the same as the duty imposed by this section on two pounds of unwashed wool of the first class, and in addition thereto thirty per centum ad valorem; valued at more than forty cents and not more than fifty cents per pound, the duty per pound shall be three times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto thirty-five per centum ad valorem. \* \* \*

PAR. 381. On women's and children's dress goods, coat linings, Italian cloths, bunting, and goods of similar description or character composed wholly or in part of wool, and not specially provided for in this section, the duty shall be eleven cents per square yard; and in addition thereto on all the foregoing valued at not above seventy cents per pound, fifty per centum ad valorem; valued above seventy cents per pound, fifty-five per centum ad valorem: *Provided*, That on all the foregoing, weighing over four ounces per square yard, the duty shall be the same as imposed by this schedule on cloths.

## ACT OF 1913.

PAR. 289. \* \* \* flannels, composed wholly or in chief value of wool, 25 per centum ad valorem; flannels composed wholly or in chief value of wool, valued at above 50 cents per pound, 30 per centum ad valorem.

## CLOTHS, AND OTHER HEAVY-WEIGHT FABRICS, OF WOOL.

*Description and uses.*—This paragraph relates primarily to wool "cloths" for men's wear, but it includes also any women's dress goods, flannels, and other wool fabrics, which weigh over 4 ounces per square yard.

The term "wool cloths" signifies woven fabrics of wool destined for men's suits, overcoats, etc., and for women's cloaks. Cloths are ordinarily heavier, firmer, and stronger than dress goods and without the draping quality of the latter, but the distinction is no longer clear-cut. Fabrics weighing over 4 ounces have usually been considered cloths; the act of 1909 contained a definite provision by which dress goods weighing over 4 ounces per square yard were held dutiable as cloths, but this provision was omitted in the act of 1913.

which made cloths and dress goods dutiable at the same ad valorem rate. Because of the extensive use of heavier fabrics for women's suits, the term "dress goods" has lost its original significance as a light-weight fabric, so that a dividing line can no longer be definitely drawn between cloths and dress goods on the basis of weight, process of manufacture, or cost of production. Some fabrics by nature dress goods weigh over 4 ounces per square yard; while some men's summer fabrics weigh less.

Woven fabrics of wool are of two general classes, (1) woolens, woven of carded yarns, and (2) worsteds, woven of combed yarns. The dress goods are usually worsted; the cloths may be either woolen or worsted. The weave structure of woolen fabrics is usually more or less concealed by a nap, and the colors are thereby somewhat softened and intermerged. The weave structure and colors of the worsted fabrics are more sharply defined, and the surface is smoother and firmer. In making worsted, wools of long or medium lengths are more generally employed, although the use of the shorter wools in worsteds has been increasing; in making woolens, not only short wools, but shoddy and waste are also utilized. Typical woolens are broadcloths, cassimeres, tweeds, and meltons; typical worsteds are serges, unfinished worsteds, and fancy trouserings.

Flannels, heretofore specially provided for, will fall either here or in paragraph 1108, according to the weight. That the greater portion will fall here, however, seems to be indicated by the preliminary census figures for 1919, from which may be derived the average number of ounces per square yard produced, as follows: Flannels for underwear, 7.82 ounces (for all-wool) and 6.91 ounces (for cotton-mixed); domest flannels and shirtings, 8.51 ounces. But the term flannel can not be precisely defined, and it is for this reason that specific provision for it is abandoned. In general, a flannel is a loosely woven fabric, largely of wool and having a soft, "smooth" finish, the texture being practically the same as when it leaves the loom. It is usually made of woolen yarns. Flannels are of three general classes, corresponding to their use for underwear, shirtings, and outer garments. Only underwear and shirtings are clearly defined. Flannels for outer wear are hard to distinguish from other fabrics; in the garment trade they have come to signify a cloth with a soft, springy feel similar to flannel for underwear, despite the absence of nap and of high finish. But this feel can be given to many cloths.

*Production.*—No distinction is drawn in the report of the Census Bureau between light-weight and heavy-weight wool fabrics. Below is shown the production, in 1914 and 1919, of all varieties of woven fabrics of wool (except upholstery fabrics—probably largely pile). These figures refer to the fabrics covered by paragraphs 1108 and 1109 combined.

*Production of woven fabrics of wool.*

Kinds.	1914		1919	
	Quantity.	Value.	Quantity.	Value.
Total, all kinds.....	<i>Square yards.</i> 522,919,228	\$254,434,415	Sq. yds. 491,961,000 (Lbs. 298,190,000)	\$692,179,000

Union or cotton-mixed:				
Suitings, overcoatings, dress goods, etc.....	31,400,082	11,710,610	Sq. yds. 28,576,000 (Lbs. 24,823,000)	32,297,000
Flannels for underwear.....	4,995,575	1,089,661	Sq. yds. 6,508,000 (Lbs. 2,617,000)	5,219,000

The tendency which for decades had been toward a larger proportion of worsteds in the cloth (suitings, overcoatings, etc.) and dress-goods output, since 1909 has been in the opposite direction. Between the latter year and 1914 woolen production increased slightly, while that of worsted, especially of cotton warp and worsted filled goods, declined. Consequently, the ratio of woolen to total production (based on square yards) advanced from about 35 per cent in 1909 to approximately 40 per cent in 1914. Between 1914 and 1919, primarily because of the stimulus provided by the great Army demand during the war, the woolen production increased by about 32,000,000 square yards, while the worsted production fell off by about 50,000,000 square yards, so that in 1919 practically one-half of the total output was woolen. Production of woolens of all-wool increased by almost 50,000,000 square yards, but this increase was partly offset by a marked decline in the cotton-warp woolens and a slight decline in the cotton-mixed goods (mainly woolens). All of the decline in the worsted production was in the all-wool worsteds, production of cotton-warp worsteds having slightly increased. The combined production (in square yards) of woolens and worsteds declined between 1909 and 1914, and still further between 1914 and 1919.

Production of flannels for underwear increased somewhat between 1914 and 1919 (the increase being in the cotton-mixed variety), but it still remains small in comparison with the output of twenty or thirty years ago, when the principal production of flannels was for underwear. Because of the competition of knitted and woven underwear, both cotton and silk, this branch of flannel manufacture has declined

about one-half since 1899. The present output is chiefly of the finer qualities, such as are used for infants. Production of flannels for shirts, continuing the marked development which began a decade ago, increased by about 25 per cent between 1914 and 1919. In the reports of the Census Bureau, flannels for outer garments are not differentiated from cloths and dress goods. They include white fabrics for trouserings, and women's skirts, or dress goods with a flannel finish. Production of such fabrics has undoubtedly been increasing.

Imports of wool cloths (including cloths of mohair, alpaca, etc.) from 1910 to 1913 averaged 4,742,081 pounds, valued at \$5,164,287. In the first half of the fiscal year 1914 imports were 1,984,689 pounds, valued at \$2,298,765. Thereafter cloths of mohair, alpaca, etc., are given separately. With such fabrics omitted, imports of wool cloths for the second half of the fiscal year 1914 were 9,474,620 pounds, valued at \$9,725,041; and for the calendar year 1914 they were 16,439,655 pounds, valued at \$16,107,505. Thereafter they declined. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
1918.....	Lbs. 2,073,260 (Sq. yds. 3,000,955)	\$4,175,499	\$1,461,425
1919.....	Lbs. 2,072,115 (Sq. yds. 3,079,259)	5,484,234	1,919,482
1920.....	Lbs. 4,840,351 (Sq. yds. 7,544,889)	12,694,989	4,443,246
1921 (9 months).....	Lbs. 1,508,552 (Sq. yds. 7,414,424)	9,770,883	.....

<sup>1</sup> Includes 1,546,574 pounds, valued at \$2,904,225, imported under the emergency tariff act of 1921.

For 1910-1913 the imports of cloths and dress goods (combined) averaged about 4 per cent, and in the calendar year 1914 about 11 per cent, of the domestic production in 1914 (in square yards); in 1919 they were about 1 per cent of the production (in pounds) of that year.

Imports under former tariffs, and to a considerable extent under the act of 1913, have generally been of fine goods, fancy weaves, and specialties—cloths largely for the best custom tailors, such as Scotch and Irish tweeds, superior faced goods, etc. Some imports of shoddy cloths appeared in 1914, but were checked by the war before their acceptability to American consumers had been ascertained. The ready-to-wear trade has never utilized imported cloths to any great extent.

The relative imports of woolsens and worsteds since 1917 have been as follows:

Calendar year.	Woolsens.		Worsteds.	
	Quantity.	Value.	Quantity.	Value.
1918.....	Lbs. 1,624,666 (Sq. yds. 2,300,784)	\$2,997,192	Lbs. 448,594 (Sq. yds. 700,171)	\$1,178,307
1919.....	Lbs. 1,742,523 (Sq. yds. 2,485,723)	4,324,024	Lbs. 329,592 (Sq. yds. 593,586)	1,160,210
1920.....	Lbs. 4,283,174 (Sq. yds. 6,544,805)	10,710,798	Lbs. 557,177 (Sq. yds. 1,000,084)	1,984,191
1921 (9 months).....	Lbs. 4,531,491 (Sq. yds. 6,473,345)	8,167,574	Lbs. 552,061 (Sq. yds. 941,079)	1,603,309

In prewar years, from 50 to 60 per cent of the imports came from the United Kingdom and from 25 to 33 per cent from Germany and Belgium. During and since the war practically all of the imports have come from the United Kingdom; about 10 per cent came from Canada in 1918; about 5 per cent from France in 1920. Practically all of the imports from countries other than the United Kingdom have been woolens.

As regards imports of flannels, statistics prior to January 1, 1914, pertain only to flannels for underwear, of which the average importation from 1910 to 1913, inclusive, amounted to \$108,746, or about 5.5 per cent of domestic production in 1914. Almost 90 per cent of these imports consisted of flannels weighing over 4 ounces per square yard. Notwithstanding the widening of the provision in the act of 1913 so as to include all flannels, and a lowering of the duty, imports for the second half of the fiscal year 1914 amounted to only 193,222 pounds, valued at \$160,668. Imports of flannels since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....	46,004	\$112,646	\$33,790
1919.....	150,426	331,554	99,466
1920.....	337,692	780,820	234,097
1921 (9 months).....	<sup>1</sup> 414,767	667,195	.....

<sup>1</sup> Includes 44,157 pounds, valued at \$97,387, imported under the emergency tariff act of 1921.

*Exports.*—Until 1918 separate figures for exports of woven fabrics of wool were not obtainable; thereafter they have been available only for cloths and dress goods combined. Under the designation "wool manufactures, all other" (including carpets and rugs, blankets, etc., as well as cloths and dress goods), exports before 1914 were usually under \$1,000,000, decreasing after 1909. In 1914 (fiscal year) they amounted to \$1,668,199; in 1916, they reached \$33,331,873, declining to \$13,435,946 in 1918 (fiscal year), of which latter figure \$7,009,554 was for cloths and dress goods. Later exports of cloths and dress goods have been as follows:

Calendar year.	Quantity.		Value.
	Square yards.	Equivalent in pounds.	
1918.....	5,626,729	3,152,224	\$8,636,888
1919.....	12,113,649	7,852,785	19,799,723
1920.....	11,998,579	8,724,742	24,258,584
1921 (9 months).....	2,593,474	1,795,241	3,438,953

The leading markets have been Canada and Cuba, but others prominent in a very wide distribution of the trade include Argentina, Chile, Norway, Denmark, and Russia in Asia.

*Important changes in classification.*—This paragraph covers mainly "cloths" of wool for men's wear. The reason for the omission of trade terms and the basing of the classification on weight has been stated under paragraph 1108.

As stated in paragraph 1108, 36 cents is used as "full compensatory" for all-wool goods where the wool is subject to a duty of 25 cents a pound. It is assumed that, in the case of these heavy goods for men's wear, only those valued at above \$2.50 a pound will be entitled to this rate. Cloths of lower values per pound are assumed to contain more or less carpet wool, reworked wool, cotton, or other materials which enter at lower rates than that levied on clothing wools; such cloths are therefore given lower compensatory duties. The lower the value the larger is assumed to be the proportion of such materials; therefore a compensatory duty of 30 cents a pound has been assigned to goods valued at more than \$1.25 but not more than \$2.50 a pound; a compensatory duty of 25 cents for those valued at more than 75 cents but not more than \$1.25, and one of 20 cents a pound for those valued at not more than 75 cents a pound.

As stated under paragraph 1108, these compensatory duties are based on the wool being subject to a duty of 25 cents a pound and where the wool pays less duty, by reason of the maximum ad valorem provision, the compensatory rates are more than sufficient to maintain the ratio.

---

#### PARAGRAPH 1110.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1110. Woven fabrics, wholly or in part of wool, which have been cut to garment or suiting lengths or which have been subject to the process of dampening, sponging, or shrinking, shall pay, in addition to the rates hereinbefore provided, 2 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

[No corresponding provision.]

[No corresponding provision.]

*Important changes in classification.*—This is an entirely new provision. It levies on cloths imported in short lengths suitable for individual use a duty additional to that which would apply if such cloths were imported in whole pieces. It also levies on cloths which have been dampened, sponged, or shrunk a duty additional to that which would apply if such cloths were imported without being subjected to such processes.

---

#### PARAGRAPH 1111.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1111. Pile fabrics, cut or uncut, whether or not the pile covers the whole surface, made of wool or of which wool is a component material, whether or not constituting chief value, and manufactures, in any form, made or cut from such pile fabrics, 36 cents per pound and, in addition thereto, 27½ per centum ad valorem.

## ACT OF 1909.

PAR. 378. On \* \* \* all manufactures of every description made wholly or in part of wool, not specially provided for in this section, valued at not more than forty cents per pound, the duty per pound shall be three times the duty imposed by this section on a pound of unwashed wool of the first class; valued at above forty cents per pound and not above seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto, upon all the foregoing, fifty per centum ad valorem; valued at over seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class and fifty-five per centum ad valorem.

PAR. 443. Plushes \* \* \* and manufactures thereof, composed of the hair of the camel, goat, alpaca, or any animal, combined with wool, vegetable fiber, or silk, shall be classified and dutiable as manufactures of wool.

## ACT OF 1913.

PAR. 288. \* \* \* plushes, velvets and all other pile fabrics, cut or uncut, woven \* \* \* whether or not the pile covers the entire surface, made wholly or in chief value of wool, and articles made wholly or in chief value of such plushes, velvets, or pile fabrics, 40 per centum ad valorem; \* \* \*.

PAR. 309. Plushes, velvets, and all other pile fabrics, cut or uncut, woven \* \* \* whether or not the pile covers the entire surface, made wholly or partly of the hair of the Angora goat, alpaca, or other like animals, and articles made wholly or in chief value of such plushes, velvets, or pile fabrics, 45 per centum ad valorem.

PAR. 358. \* \* \* coach, carriage, and automobile laces, \* \* \* 60 per centum ad valorem.

## PILE FABRICS, OF WOOL OR HAIR, AND MANUFACTURES OF.

*Description and uses.*—Pile fabrics consist of a foundation cloth covered in whole or in part by short projecting ends or loops made with an extra set of threads.

Pile fabrics of mohair, and to a lesser extent of alpaca, are used in covering furniture (especially seats in Pullman cars and in inclosed automobiles), as well as for curtains and portières. They are also employed often as imitation fur, in cloaks for women and children, and in covering "Teddy bears" and other imitation animal toys.

Wool, because of its lack of resilience and its tendency to felt, is little used as pile. When so employed, for women's cloaks, etc., it is usually of the light-shrinking and coarser varieties.

In most fabrics made with a pile of mohair, alpaca, or wool the foundation cloth is of cotton or other vegetable fiber.

*Production* is not separately recorded.

*Imports* were first separately stated in 1914. Imports of pile fabrics during the first six months of 1914 were 214,385 pounds, valued at \$239,861; in 1915, 151,978 pounds, valued at \$191,536. Imports of articles made from pile fabrics during the first six months of 1914 were \$23,578; in 1915, \$52,975. Later imports have been, by calendar years, as follows:

Calendar year.	Quantity.	Value.	Duty.
PILE FABRICS OF WOOL, MOHAIR, ETC.			
	<i>Pounds.</i>		
1918.....	10,596	\$13,521	\$5,940
1919.....	7,365	23,074	10,036
1920.....	33,812	95,423	40,538
1921 (9 months).....	131,616	178,221	.....

<sup>1</sup> Includes 14,345 pounds, valued at \$24,139; imported under emergency tariff act of 1921.

Calendar year.	Quantity.	Value.	Duty.
MANUFACTURES OF PILE FABRICS OF WOOL, MOHAIR, ETC.			
	<i>Pounds.</i>		
1918.....		\$16,226	\$6,837
1919.....	4,003	20,977	8,457
1920.....		61,114	25,721
1921 (9 months).....		\$ 31,312	

\* includes \$6,370, value of 1,533 pounds, imported under emergency tariff act of 1921.

*Exports* are not separately recorded.

*Important changes in classification.*—In the act of 1909 pile fabrics of wool, mohair, etc., were dutiable under paragraph 378 without specific mention other than a reference thereto in paragraph 443; in the act of 1913 pile fabrics of wool were dutiable under paragraph 288, and pile fabrics of mohair, etc., under paragraph 309.

The manufacture of pile fabrics forms a distinct branch of the textile industry and for this reason, and to secure uniformity with pile fabric provisions (pars. 909 and 1011) in other textile schedules, a special paragraph is here devoted to pile fabrics and manufactures thereof, falling under the wool schedule. This paragraph does not include manufactures of pile fabrics used as clothing or as floor covering which are provided for elsewhere.

*Suggested changes.*—Attention may be called to the fact that the 36 cents a pound compensatory duty is that which has been applied in other paragraphs to all-wool goods. Inasmuch as pile fabrics of wool, mohair, etc., are usually made with a cotton back, the full compensatory thus provided as applied to such goods of mixed material is more than adequate. (See Report of the Tariff Board on Schedule K, 1912, p. 133.)

## PARAGRAPH 1112.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1112. Blankets, wholly or in part of wool, not exceeding three yards in length, plain woven, with not more than one color in warp or filling, and not advanced beyond weaving by any process of finishing, valued at not more than 75 cents per pound, 20 cents per pound and, in addition thereto, 20 per centum ad valorem; valued at more than 75 cents, but not more than \$1.50 per pound, 25 cents per pound and, in addition thereto, 20 per centum ad valorem; valued at more than \$1.50 per pound, 30 cents per pound and, in addition thereto, 20 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 289. Blankets \* \* \* composed wholly or in chief value of wool, 25 per centum ad valorem; \* \* \*.

## ACT OF 1909.

## ACT OF 1909.

duty per pound shall be the same as the duty imposed by this section on two pounds of unwashed wool of the first class, and in addition thereto thirty per centum ad valorem; valued at more than forty cents and not more than fifty cents per pound, the duty per pound shall be three times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto thirty-five per centum ad valorem. On blankets composed wholly or in part of wool, valued at more than fifty cents per pound, the duty per pound shall be three times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem. \* \* \*

## WOOL BLANKETS.

*Description.*—The foregoing provision was originally intended to cover ordinary blankets and to exclude the fancy varieties; but the clause limiting this provision to blankets “not advanced beyond weaving by any process of finishing” would, as explained below, result in eliminating practically all blankets from this paragraph and should be omitted. At the same time the paragraph should be made to include not only bed blankets and horse blankets (to which varieties the courts have limited the term “blankets”), but also carriage and automobile robes and other articles when made in the same manner as blanketing. (See “Suggested changes,” p. 982.)

Blankets are made of woolen yarns, or of cotton and woolen yarns, fully or shrunken to a high degree, and napped on both sides of the cloth. They may be all-wool, merino (cotton and wool mixture in the yarn), or cotton-warp. Practically all of the horse blankets, and fully two-thirds of the bed blankets, are in part cotton—the former largely cotton-warp; the latter, both cotton-warp and merino, with the merino rapidly gaining in popularity. In addition to cotton, other substitutes for new wool, such as wool wastes, shoddy, and cattle or other hair, are used, so that new wool forms but a small proportion of the raw material in most blankets.

Blanket cloth is usually woven of coarse yarns with a plain or twill weave; it is then put into a large, closed box where it is soaked with water, or water and soap, and passed between rollers or under a heavy hammer. By this operation (called “fulling”) the area of the cloth may be reduced as much as 20 or 25 per cent, and the weave compressed or even obliterated. Thereafter the cloth goes to the napping machine, in which the individual fibers are raised to a thick nap by the fine teeth on the cylinders. The designs are usually elementary and conventional. The most critical stages in manufacture are the choice and blending of the raw materials, and the finishing operations, as respects the latter especially the attainment of a thick, high nap.

*Production.*—The domestic production in 1914 and 1919 of bed blankets and horse blankets, also of carriage robes and carriage

cloths (the latter, as well as most of the former, falling under paragraph 1112 only in case the wording is revised), was as follows:

Article.	1914		1919	
	Quantity.	Value.	Quantity.	Value.
	<i>Square yards.</i>		<i>Square yards.</i>	
Blankets:				
All-wool.....	6,489,689	\$4,186,754	6,344,000	\$7,196,000
Cotton-warp.....	17,973,821	3,010,070	9,291,000	7,391,000
Cotton-mixed.....	3,937,463	2,067,934	10,465,000	8,711,000
Total.....	28,400,973	9,364,758	26,100,000	23,298,000
Horse blankets:				
All-wool.....	102,205	82,398	(1)	(1)
Cotton-warp.....	5,831,305	1,539,526	(1)	(1)
Cotton-mixed.....	2,231,162	395,858	(1)	(1)
Total.....	8,164,672	2,017,782	1,696,000	1,606,000
Carriage robes:

Cotton-warp.....	1,282,417	936,687	(1)	(1)
Cotton-mixed.....	354,049	137,968	(1)	(1)
Total.....	1,768,865	1,233,555	2,197,000	3,845,000
Carriage cloths, all-wool.....	514,226	443,223	687,000	1,371,000
Grand total.....	38,848,736	12,959,318	30,680,000	30,120,000

<sup>1</sup> Not separately shown in preliminary census returns.

Prior to the war the production of bed blankets wholly or in part of wool had been declining to some extent by virtue of the growing competition of all-cotton blankets; but, seemingly on account of foreign military orders, production increased greatly in 1914, and, as appears above, remained at almost the same high level in 1919. Fewer cotton-warp and more merino blankets have been produced since 1914. Production of horse blankets had already been declining prior to the war (except in 1914), but the decline between 1914 and 1919 is particularly striking. The increasing replacement of horses by automobiles is probably an important factor in the decline.

*Imports.*—Prior to the war imports of blankets usually amounted to only 25,000 to 50,000 pounds annually, valued at from \$25,000 to \$50,000. Despite a distinct lowering of the duty in 1913, imports immediately thereafter increased only slightly. In the fiscal year 1918, 5,206,613 pounds, valued at \$5,839,921, were imported, but this exceptional importation was clearly due to the tremendous army requirements. Later imports are shown below. The countries from which they came are not recorded.

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....	2,327,882	\$2,981,212	\$745,303
1919.....	20,350	38,263	9,566
1920.....	75,749	140,556	35,139
1921 (9 months).....	<sup>1</sup> 30,746	<sup>1</sup> 48,898	.....

<sup>1</sup> Includes 13,612 pounds, valued at \$21,142, imported under the emergency tariff act of 1921.

*Exports.*—Blankets are among the few domestic wool manufactures that have been exported to any noticeable extent. Between 1900 and 1910 exports of blankets and flannels (combined in the statistics) ranged annually from \$50,000 to \$125,000—a small figure, but in some years larger than the imports. Thereafter, until 1918, exports were not separately listed. Later exports of blankets only have been as follows by calendar years: 1918, \$2,691,408; 1919, \$823,544; 1920, \$1,257,433; and in the first nine months of 1921, \$222,872. In 1918 about 80 per cent of the exports went to Italy and about 15 per cent to France; in 1919 about one-half went to France and Austria, and the remainder was scattered; and in 1920 almost one-half went to Russia in Asia, considerable quantities to Mexico, Turkey, and Poland, and the remainder was scattered.

*Important changes in classification.*—As stated above, paragraph 1112, as worded, was intended to exclude fancy blankets; in fact, it excludes practically all blankets. The words “not advanced beyond weaving by any process of finishing” would eliminate practically all blankets from the paragraph, because at least two of the most characteristic operations of blanket manufacture, namely “fulling” and “napping,” are finishing operations.

*Suggested changes.*—Paragraph 1112 should be so worded as to distinguish between the ordinary and the fancy blankets without the vitiating clause which reads “not advanced beyond weaving by any process of finishing.” At the same time it should be made to include all carriage and automobile robes, steamer rugs, and other articles, when similar to blankets in construction and method of manufacture. It is true that the articles named are generally of better quality than the ordinary grades of blankets, but this is likewise true of the fancy blankets. Differentiation in duties should be made between the cheaper and the more expensive goods, irrespective of whether they are blankets or other articles of similar construction. This can best be accomplished not by describing the articles but by applying to all of these goods the same general scheme of classification by valuation (further expanded) as contained in paragraph 1112 above. The lower brackets will thus catch mainly horse blankets (containing very little new wool) and shoddy bed blankets—types characterized not only by low raw material costs but by simplicity of construction, since they are generally given a minimum of manipulation and finish, and are woven either plain or twill, and also usually have only one color in the warp or filling. The higher brackets will catch the better grades of bed blankets and other articles containing a larger proportion of new wool and more generally characterized by elaboration of color or finish.

It is suggested that paragraph 1112 be made to read as follows:

Blankets and similar articles, including carriage and automobile robes and steamer rugs, made of blanketing, wholly or in part of wool, not exceeding three yards in length, valued at not more than 75 cents per pound, 20 cents per pound and, in addition thereto, — per centum ad valorem; valued at more than 75 cents but not more than \$1.50 per pound, 25 cents per pound and, in addition thereto, — per centum ad valorem; valued at more than \$1.50 but not more than \$2.50 per pound, 30 cents per pound and, in addition thereto, — per centum ad valorem; valued at more than \$2.50 per pound, 36 cents per pound and, in addition thereto, — per centum ad valorem.

The foregoing classification expands paragraph 1112 so as to include fancy blankets and articles similar to blankets in construction and method of manufacture. The compensatory rates are based on

the assumption that in the lower grades of goods comparatively little new wool is used, but that the proportion of new wool increases with the value of the blankets, etc., until, among the highest grades, it constitutes practically the entire raw material and requires a compensatory rate as high as that for cloth. This latter, assuming a duty of 25 cents a pound on raw wool, clean content, should be 36 cents per pound. (Report of Tariff Board, 1912, p. 626.)

---

PARAGRAPH 1113.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1113. Felts, not woven, wholly or in part of wool, valued at not more than 75 cents per pound, 20 cents per pound and, in addition thereto, 20 per centum ad valorem; valued at more than 75 cents but not more than \$1.50 per pound, 25 cents per pound and, in addition thereto, 20 per centum ad valorem; valued at more than \$1.50 per pound, 30 cents per pound and, in addition thereto, 25 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 382. On \* \* \* felts not woven, and not specially provided for in this section, composed wholly or in part of wool, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto sixty per centum ad valorem.

PAR. 288. \* \* \* felts not woven, \* \* \* wholly or in chief value of wool, not specially provided for in this section, 35 per centum ad valorem; \* \* \*.

FELTS, NOT WOVEN.

*Description and uses.*—Felts, not woven, known in the trade as pressed felts, are produced by matting or felting together wool or hair under the influence of moisture, heat, and pressure. The property of felting is peculiar to wools and some hairs; the felting results from the tendency of the curly fibers to wind around each other, as well as from the cohesion caused by the interlocking of the scales. On the number of scales or serrations, together with the curly or wavy nature of the fiber, the felting quality of any wool largely depends.

In making felts the wool is sorted and scoured, and, if desired, then mixed and blended with other materials; it is then carded, a process which tends to straighten out the fibers to their fullest extent. The filmy web leaving the card is laid down on traveling aprons and superimposed until a sufficient thickness is obtained: the different layers are then pressed together and consolidated in a hardening machine, containing either steam-heated rollers which have a rotary and vibrating motion, or a huge vibrating flatiron under which the material is automatically fed. The goods are then soaped and placed in a fulling machine where they are subjected to the continued action of kicking beams. Here the actual felting of the fibers takes place. The individual fibers subjected to work entangle themselves more closely by reason of their tendency to regain their

original length and condition of curl, and, being prevented from slipping back from position because of the interlocking of their scales, they become firmly united in a fabric which has shrunk in both length and width.

Wool felts are of many grades and values, varying according to the quality of the wool and the percentage of other fibers mixed therewith, according to the thickness, and according to the extent of the felting and finishing operations. They include lining felts for padding suits and overcoats, boot and shoe linings, polishing felts, saddle felts, typewriter cushion pads, chair seat covers, etc. Piano felts represent the highest grade.

*Production* of the felt goods industry was valued at \$13,693,000 in 1914 and \$39,230,000 in 1919, but deducting the items of woven felt cloths (which include endless belts for paper makers), hair felting (which includes gun-wad felts), and waste, the value was \$7,952,000 in 1914 and \$27,154,000 in 1919. The main item so embraced was listed as trimming and lining felts, including felt skirts and skirtings; other items are boot and shoe linings, polishing felts and buffing wheels, piano felts, and saddle felts; while "all other" without description constitute over half of the total value recorded.

Massachusetts has the largest number of felt mills, followed by New York, New Jersey, Pennsylvania, and Connecticut.

*Imports* were 88,864 pounds, valued at \$105,624, in the fiscal year 1914. Imports since 1917 are recorded as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....	17,074	\$33,286	\$11,650
1919.....	10,965	27,664	9,682
1920.....	122,808	64,483	22,569
1921 (9 months).....	1 23,531	1 40,814	.....

<sup>1</sup> Includes 3,280 pounds, valued at \$5,909, imported under emergency tariff act of 1921.

*Exports* are not recorded.

*Important changes in classification.*—Unwoven felts are the product of a distinct branch of the wool manufacturing industry and for this reason are given a separate paragraph instead of being included with goods made by weaving or other processes, as has been the case in other tariff acts. The compensatory duty of 30 cents a pound is assigned to felt valued at more than \$1.50 a pound on the assumption that felts above this value would be made entirely of wool subject to a duty of 25 cents a pound and that the loss of material would not exceed that in the manufacture of yarns. Felts ranging in value up to \$1.50 a pound are divided into two classes, with compensatory duties based on the assumption that the lower the value the larger the percentage of other materials, such as wool waste, reworked wool, cotton, cattle hair, etc., dutiable at less than 25 cents a pound.

This paragraph covers only unwoven felts, wholly or in part of wool, and does not include woven felts, such as used in paper makers' endless belts and for other purposes. It does not include hair felting if not in part of wool, such as is used in making gun wads or as insulation in ice houses and refrigerators, etc., as this type is more specifically provided for in paragraph 1426. (See p. 1140.)

## • PARAGRAPH 1114.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1114. Fabrics with fast edges not exceeding twelve inches in width, and articles made therefrom; tubings, garters, suspenders, braces, cords, and cords and tassels; if wholly of wool, 36 cents per pound; if in part of wool, whether or not wool constitutes chief value, 25 cents per pound; and, in addition thereto on all the foregoing, 30 per centum ad valorem.

## ACT OF 1909.

PAR. 383. Webbing, gorings, suspenders, braces, bandings, beltings, bindings, \* \* \* cords, cords and tassels, ribbons, \* \* \* any of the foregoing made of wool or of which wool is a component material, whether containing india rubber or not, fifty cents per pound and sixty per centum ad valorem.

## ACT OF 1913.

PAR. 292. Webbing, suspenders, braces, bandings, belts, beltings, bindings, cords, cords and tassels, and ribbons; any of the foregoing made of wool or of which wool or wool and india rubber are the component materials of chief value, and not specially provided for in this section, 35 per centum ad valorem.

PAR. 358. \* \* \* coach, carriage, and automobile laces, \* \* \* 60 per centum ad valorem.

## WOOL SMALL WARES.

*Description and uses.*—This paragraph embraces narrow woven fabrics which have not been ornamented after leaving the loom, manufactures of such narrow woven fabrics, and certain articles made by braiding or twisting together yarns or threads. The small wares thus covered here include all made in whole or in part of wool.

“Fabrics with fast edges not exceeding 12 inches in width” is an inclusive term for narrow woven fabrics as distinguished from cloth, which is a woven fabric over 12 inches in width. These narrow woven fabrics, such as tape, ribbons, bandings, beltings, bindings, webbings, etc., are produced on narrow-ware looms by means of numerous small shuttles positively driven by a rack and pinions. Articles made therefrom include bands, belts, webs, etc. Tubings are tubular woven products of the narrow-ware loom. Garters, suspenders, and braces are articles made from narrow fabrics; largely from elastic webbings which are woven with rubber threads in the warp. Cords are made by braiding or cabling three or more threads. Tassels are pendant ornaments ending in a tuft of loose threads or cords. Cords and tassels are formed by securing tassels to cords.

*Production* is not recorded separately.

*Imports* in 1915 were valued at \$5,781. Imports since 1917 for calendar years are recorded as follows:

	1918	1919	1920	1921 (9 months).
Value.....	\$4,824	\$1,652	\$3,907	<sup>1</sup> \$1,154
Duty.....	1,688	578	1,367	.....

<sup>1</sup> Includes 76 pounds, valued at \$133, imported under emergency tariff act of 1921.

*Exports* are not recorded.

*Important changes in classification.*—This is the small-wares paragraph of the wool schedule and, with few exceptions, is confined to products of the narrow-ware or ribbon loom, and to articles made from such products. For the sake of uniformity the basic wording has been made the same as in the small-wares paragraphs of the other textile schedules (pars. 912, 1014, and 1207), although small wares of wool are much less important than those of cotton, jute, flax, or silk. Reasons for the revised wording have been stated under paragraph 912.

### PARAGRAPH 1115.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1115. Knit fabrics, made of wool or of which wool is a component part, whether or not constituting chief value, valued at not more than \$1.25 per pound, 25 cents per pound and, in addition thereto, 20 per centum ad valorem; valued at more than \$1.25 per pound, 36 cents per pound and, in addition thereto, 25 per centum ad valorem.

Hose and half hose, and gloves and mittens, made of wool or of which wool is a component part, whether or not constituting chief value, valued at not more than \$3 per dozen pairs, 30 cents per pound and, in addition thereto, 25 per centum ad valorem; valued at more than \$3 per dozen pairs, 36 cents per pound and, in addition thereto, 30 per centum ad valorem.

Knit underwear, finished or unfinished, made of wool or of which wool is a component part, whether or not constituting chief value, valued at not more than \$2.50 per pound, 30 cents per pound and, in addition thereto, 20 per centum ad valorem; valued at more than \$2.50 per pound, 36 cents per pound and, in addition thereto, 25 per centum ad valorem.

Outerwear and other articles, knit or crocheted, finished or unfinished, made of wool or of which wool is a component part, whether or not constituting chief value, valued at not more than \$2.50 per pound, 30 cents per pound and, in addition thereto, 28 per centum ad valorem; valued at more than \$2.50 per pound, 36 cents per pound and, in addition thereto, 33½ per centum ad valorem.

#### ACT OF 1909.

PAR. 378. On \* \* \* knit fabrics \* \* \* made wholly or in part of wool, not specially provided for in this section, valued at not more than forty cents per pound, the duty per pound shall be three times the duty imposed by this section on a pound of unwashed wool of the first class; valued at above forty cents per

#### ACT OF 1913.

PAR. 288. \* \* \* knit fabrics, \* \* \* wholly or in chief value of wool, not specially provided for in this section, 35 per centum ad valorem; \* \* \* stockings, hose and half hose, made on knitting machines or frames, composed wholly or in chief value of wool, not specially provided for in this section, 20

## ACT OF 1909.

pound and not above seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto, upon all the foregoing, fifty per centum ad valorem; valued at over seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class and fifty-five per centum ad valorem.

PAR. 382. On \* \* \* articles of wearing apparel of every description, including shawls whether knitted \* \* \* and knitted articles of every description made up or manufactured wholly or in part \* \* \* and not specially provided for in this section, composed wholly or in part of wool, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto sixty per centum ad valorem.

## ACT OF 1913.

per centum ad valorem; stockings, hose and half hose, selvedged, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, including such as are commercially known as seamless stockings, hose and half hose, and clocked stockings, hose and half hose, gloves and mittens, all of the above, composed wholly or in chief value of wool, if valued at not more than \$1.20 per dozen pairs, 30 per centum ad valorem; if valued at more than \$1.20 per dozen pairs, 40 per centum ad valorem; \* \* \*.

PAR. 291. \* \* \* shawls \* \* \* knitted \* \* \* and knitted articles of every description made up or manufactured wholly or in part, and not specially provided for in this section, composed wholly or in chief value of wool, 35 per centum ad valorem.

## WOOL KNIT FABRICS.

(See Survey K-3.)

*Description and uses.*—Wool knit fabric in the piece, as distinct from knitted articles, represents a field in which there has been enormous development during recent years and in which there is every prospect for greater development in the future. The most common form of wool knit fabrics is jersey cloth made on large circular machines, but flat machines on which a greater variety of stitch is possible are also used. Wool knit fabrics are made in a wide range of textures.

*Production.*—Statistics for the production of wool knit fabric in the piece were not separately stated in former census reports. Cotton knit fabric and wool knit fabric amounted to a value of \$1,639,612 in 1914. In 1919 the production of wool knit fabric alone was 6,055,361 square yards, valued at \$13,240,491. Most frequently wool knit fabric is made by small concerns which knit wool articles. One or two large concerns have become interested in the piece-goods trade. The bulk of the output is consumed by the ready-to-wear garment industry, but each year larger quantities are sold at retail.

*Imports* recorded as "Wool knit fabrics, not wearing apparel," were 13,666 pounds, valued at \$14,923, in 1914. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....	8,561	\$16,164	\$5,657
1919.....	229	679	238
1920.....	4,123	12,181	4,263
1921 (9 months).....	1,605	16,166	.....

<sup>1</sup> Includes 754 pounds, valued at \$1,842, imported under emergency tariff act of 1921.

*Exports* are not recorded.

*Important changes in classification.*—Wool knit fabric has been removed from the paragraph for woven wool cloths (288 of 1913 and 378 of 1909) and placed here in order to assemble all knit goods belonging under the wool schedule. This obviates the danger of discrepancies in rates. The same separation and assembling of knit goods have been carried out in the other textile schedules.

#### WOOL HOSIERY.

(See Survey K-3.)

*Description.*—The three classes of wool hosiery (according to methods of manufacture) are covered by this paragraph. These are described under "Cotton hosiery," paragraph 915. Wool hosiery is probably made in a greater variety of colors than either cotton or silk hosiery and in a greater range of texture—from the finest cashmere, not much heavier than silk, to thick ribbed athletic hose. Much of the domestic production is of a cheap coarse grade often known as lumbermen's socks, because of its use by men in such out-of-door occupations. Imports are largely of the fancy sport hose.

*Production* of all-wool hosiery declined from 1,985,833 dozen pairs, valued at \$3,875,486 in 1914, to 1,047,000 dozen pairs, valued at \$5,397,000 in 1919, while the output of wool and cotton (mixed) or "merino" hosiery, increased from 3,059,294 dozen pairs, valued at \$4,798,949 in 1914, to 4,193,000 dozen pairs, valued at \$14,998,000 in 1919. The proportion of merino to all-wool hosiery has increased with each census. The manufacture of wool hosiery is usually carried on in connection with that of other wool knit goods, particularly gloves and underwear.

*Imports* of wool and wool-mixed hosiery in the second half of the fiscal year 1914 were 28,827 dozen pairs, valued at \$63,310; in 1915, 70,053 dozen pairs, valued at \$168,877. Imports since 1917 are recorded as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Dozen pairs.</i>		
1918.....	448,757	\$2,333,587	\$933,339
1919.....	42,747	379,292	151,706
1920.....	380,449	3,074,113	1,225,910
1921 (9 months).....	1 229,075	1 1,428,722	.....

<sup>1</sup> Includes 251,742 pounds, valued at \$693,807, imported under emergency tariff act of 1921.

England is the chief source of supply.

*Exports* are not recorded.

*Important changes in classification.*—The word "stockings" has been omitted since the term "hose and half-hose" is sufficiently inclusive. No subdivision according to methods of manufacture has been retained because wool hosiery, other than seamless or fashioned, imported under the act of 1913 was only a small proportion of the total. The dividing line between value classifications has been raised, as the rise in prices since the act of 1913 was passed has thrown almost the

entire import into the higher category. Value classifications which will approximate an equal division of imports are difficult to establish at a time when prices are undergoing such radical changes. "Clocked" hosiery has been omitted from this paragraph. (See par. 915, p. 890 for explanation.)

#### WOOL GLOVES AND MITTENS.

(See Survey K-3.)

*Description and uses.*—Wool gloves and mittens may be cut from jersey cloth and stitched to shape; they may be knit continuously, so that no seams are required in the finishing; or they may be fashioned in the knitting with selvaged edges. Gloves are of all three types; mittens, as a rule, are seamless.

*Production.*—No statistics are available for former census years. Production in 1919 amounted to 239,984 dozen pairs of woollen and worsted gloves, valued at \$1,235,140. The industry is conducted by about 50 concerns, which vary from small establishments equipped with less than a dozen machines to large organizations capitalized at one-half to a million dollars, but in almost every instance wool knit goods other than gloves are also manufactured.

*Imports* in the second half of the fiscal year 1914 were 26,126 dozen pairs, valued at \$40,343; in 1915, 148,377 dozen pairs, valued at \$218,194. Imports since 1917 are recorded as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Dozen pairs.</i>		
1918.....	224,494	\$1,718,353	\$687,324
1919.....	39,135	315,513	126,200
1920.....	48,221	273,286	109,298
1921 (9 months).....	184,768	1,231,447	.....

<sup>1</sup> Includes 70,038 pounds, valued at \$155,253, imported under emergency tariff act of 1921.

The United Kingdom is the main source of imports, normally supplying over nine-tenths of the total. The record import, attained in 1918, was due to war demands and was mainly supplied by Canada.

*Exports* are not recorded.

*Important changes in classification.*—The same change has been made in the value dividing line as in hose and half hose. Gloves and mittens are retained in the clause with hosiery rather than transferred to the clause covering outerwear, because, like hosiery, the commercial unit is the dozen, and retention in this classification will more likely insure separate statistical record with the dozen as the unit of quantity. Moreover, the manufacture of gloves and mittens is no more closely allied to the manufacture of outerwear than to that of hosiery. They are frequently made in connection with one or the other or both, and there are some concerns which make only gloves and mittens. Like hosiery, gloves and mittens are more highly standardized than outerwear and less subject to style variation. There may be certain popular models, but fewer varieties and less marked differences from season to season are demanded for gloves and mittens than for sweaters and other articles of outer apparel. There is no apparent reason why gloves and mittens should carry a higher rate of duty than hosiery; hence the classification with hosiery seems more logical.

## WOOL KNIT UNDERWEAR.

(See Survey K-3.)

*Description and uses.*—The different types of knit underwear are described under the paragraph on knit cotton underwear (par. 916). Most of the wool underwear produced in the United States is made from tubular fabric knit on circular machines. There is very little demand for full-fashioned underwear.

*Production* of all-wool and wool-mixed knit shirts and drawers increased from 1,808,000 dozen, valued at \$12,677,000, in 1914 to 2,164,000 dozen, valued at \$22,677,000, in 1919, and union suits from 633,000 dozen, valued at \$8,197,000, in 1914 to 1,211,000 dozen, valued at \$23,418,000, in 1919. Less than one-eighth of the foregoing consisted of all-wool underwear.

*Imports* of wool knit underwear and outerwear are included under the classification "Wool knitted articles, n. s. p. f.," from which knitted shawls, hosiery, and gloves and mittens are excluded by special mention. Imports of wool knitted articles were valued at \$415,773 in 1914.

Imports of "wool knitted articles, n. s. p. f.," since 1917 are recorded by calendar years as follows:

	1918	1919	1920	1921 (9 months).
Value.....	\$756,894	\$109,303	\$215,094	<sup>1</sup> \$132,823
Duty.....	264,911	39,256	75,282	.....

<sup>1</sup> Includes \$16,574 imported under emergency tariff act of 1921.

*Exports* are not recorded.

*Important changes in classification, etc.*—See under "Wool Knit Outerwear," etc., below.

## WOOL KNIT OUTERWEAR AND OTHER ARTICLES, N. S. P. F.

(See Survey K-3.)

*Description and uses.*—The demand for wool knit outerwear has grown rapidly in the last few years, especially for such garments as sweaters, toques, scarfs, and bathing suits. Knit outerwear, like other types of knit goods, may be fashioned or may be cut from knit fabric. It is more frequently fashioned than is underwear.

*Production* of wool knit articles of outerwear is not stated separately from those of other fibers.

*Imports* are not separately recorded, being included under imports of "wool knitted articles, n. s. p. f.," shown above.

*Exports* are not recorded.

*Important changes in classification.*—It has been considered advisable to mention specifically knit underwear and outerwear in this paragraph, as the two represent entirely distinct industries. The development of the knit outerwear industry during the last few years makes it particularly desirable to have separate statistics of imports. The word "crocheted" has been inserted in the classification concerning outerwear and other knit articles because crocheted

goods, although differing in process of production, are similar to knit goods in appearance and use.

*Suggested changes.*—The words “and not specially provided for” might be inserted after the words “not constituting chief value” in the clause concerning outerwear in order that “other articles” in this clause may not conflict with the articles enumerated above.

### PARAGRAPH 1116.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1116. Clothing and articles of wearing apparel of every description, not knit or crocheted, manufactured wholly or in part, made of wool or of which wool is a component part, whether or not constituting chief value, valued at not more than \$2.50 per pound, 20 cents per pound and, in addition thereto, 25 per centum ad valorem; valued at more than \$2.50 but not more than \$5 per pound, 25 cents per pound and, in addition thereto, 25 per centum ad valorem; valued at more than \$5 per pound, 36 cents per pound and, in addition thereto, 30 per centum ad valorem.

#### ACT OF 1909.

PAR. 382. On clothing, ready-made, and articles of wearing apparel of every description, including shawls \* \* \* woven, \* \* \* and not specially provided for in this section, composed wholly or in part of wool, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto sixty per centum ad valorem.

#### ACT OF 1913.

PAR. 291. Clothing, ready-made, and articles of wearing apparel of every description, including shawls \* \* \* woven \* \* \* made up or manufactured wholly or in part, and not specially provided for in this section, composed wholly or in chief value of wool, 35 per centum ad valorem.

### WOOL WEARING APPAREL, N. S. P. F.

*Description and uses.*—This paragraph covers wearing apparel of every description, manufactured wholly or in part of wool, camel's hair, mohair, alpaca, and the like, not knit or crocheted, and not specially provided for. Articles excluded by virtue of special provision elsewhere are garters, suspenders, braces, and other articles made from narrow wares (par. 1114); knit goods (par. 1115); and apparel ornamented with lace, embroidery, etc. (par. 1430).

*Production* is not recorded.

*Imports* in the fiscal year 1915 were valued at \$1,368,866, including wool hats to the value of \$49,081, but not including any knit goods. Similar imports since 1917 by calendar years are recorded as follows:

	1918	1919	1920	1921 (9 months)
Value.....	\$4,894,021	\$1,425,890	\$5,011,135	<sup>1</sup> \$2,379,715
Duty.....	1,712,907	499,062	1,753,892	.....

<sup>1</sup> Includes 328,394 pounds, valued at \$1,465,158, imported under emergency tariff act of 1921.

Imports are mainly from the United Kingdom; in 1920 relatively small amounts came from France, Canada, and Switzerland.

*Exports* are larger than imports; in the fiscal year 1914 they were valued at \$2,148,235. Later exports by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
For men and boys.....	\$2,797,704	\$10,401,744	\$5,386,441	\$1,193,918
For women and girls.....	1,441,558	4,263,325	2,773,975	1,443,717
Total.....	4,239,262	14,665,069	8,160,416	2,637,635

In 1920 the largest purchaser of American clothing for men and boys was Russia in Asia; Poland and Danzig, Canada, Mexico, and British South Africa in the order named followed.

Canada was the largest purchaser of clothing for women and girls; Poland and Danzig, Germany, Mexico, and France were the next best markets.

*Important changes in classification.*—This paragraph has been drawn to exclude all wearing apparel that is knitted or crocheted, these being provided for in paragraph 1115. The word “ready-made” has been omitted as unnecessary because this paragraph covers wearing apparel whether ready-made or custom-made. The scope of this paragraph has been extended beyond that of paragraph 291 of the act of 1913, and 382 of the act of 1909, by the provision that it shall include all wearing apparel made of wool “whether or not constituting chief value.”

### PARAGRAPH 1117.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1117. Oriental, Axminster, Savonnerie, Aubusson, and other carpets and rugs, not made on a power-driven loom; carpets and rugs of oriental weave or weaves, produced on a power-driven loom; chenille Axminster carpets and rugs, whether woven as separate carpets and rugs or in rolls of any width; all the foregoing, plain or figured, 5 cents per square foot and, in addition thereto, 30 per centum ad valorem.

#### ACT OF 1909.

PAR. 384. Aubusson, Axminster, moquette, and chenille carpets, figured or plain, and all carpets or carpeting of like character or description, sixty cents per square yard and in addition thereto forty per centum ad valorem.

PAR. 391. Carpets of every description, woven whole for rooms, and Oriental, Berlin, Aubusson, Axminster, and similar rugs, ten cents per square foot and forty per centum ad valorem: *Provided*, That in the measurement of all mats, rugs, carpets and similar articles, of whatever material composed, the selvage, if any, shall be included.

#### ACT OF 1913.

PAR. 293. Aubusson, Axminster, moquette, and chenille carpets, figured or plain, and all carpets or carpeting of like character or description, 35 per centum ad valorem.

PAR. 300. Carpets of every description, woven whole for rooms, and Oriental, Berlin, Aubusson, Axminster, and similar rugs, 50 per centum ad valorem.

## HANDMADE CARPETS AND RUGS, CHENILLE AXMINSTERS, ETC.

(See Survey K-6.)

*Description and uses.*—This paragraph includes the following types of carpets and rugs: (1) Handmade, usually knotted-pile fabrics; (2) machine-made knotted-pile fabrics; and (3) chenille Axminsters.

Handmade knotted-pile floor coverings include both the oriental and the European hand-tufted rugs. The term oriental rug includes the hand products not only of countries of the Near East, such as Persia and Turkey, but also similar products of India, China, and other countries of the Middle and Far East. This hand industry, as a whole confining its operations to the production of the finest qualities of handmade rugs, has managed to survive, although on a limited scale. Oriental rugs are usually produced in the home and with primitive appliances. The foundation threads are generally of linen or hemp and these are covered with a pile consisting of tufts of wool knotted to the warp by the weaver's fingers. The design required is produced by using tufts of different colors. Such rugs are fundamentally superior to machine-made goods in that the knot is the best method of securing the pile to the warp. The permanence thus secured, the individuality attaching to each rug because of manufacture by hand, and the oriental or exotic designs make them very popular.

European hand-tufted rugs are usually produced in workshops having improved appliances and where better materials are used than those employed in oriental rugs, but although the two varieties differ in design the details of their manufacture are essentially the same. Typical European hand-tufted rugs are the "real" Axminster, the Savonnerie, and the Aubusson; there are also less important varieties, such as the Berlin, which are not specifically mentioned.

Until recently it was thought impossible to develop a power loom which would make carpets and rugs of oriental weave; that is, with knotted pile. A loom has, however, been invented that produces a fabric of similar structure. Pile yarns are inserted vertically between the warp threads as required and knotted into place by a mechanical crossing and recrossing of alternate warp threads.<sup>3</sup> One such loom is in operation in the United States and there are two or three in Europe.

Chenille Axminsters are mainly high-priced articles and their manufacture, although on a power loom, closely approaches the handicraft method of production. The preparation of the chenille, or "fur" as it is known in the trade, necessitates the preliminary weaving of a special cloth which is cut in strips and twisted to make a tufted yarn. The loom has to be stopped while the fur is being aligned in position; it is then started up to throw in binding picks, and again stopped to align another row of fur. The loom therefore is operated only intermittently and considerable handwork is involved. The warp binder threads are of cotton; the stuffer or backing threads used in the warp are of jute; for weft threads which do not appear on the surface there may be used jute or coarse woolen yarns (the latter often containing a large percentage of hair).

<sup>3</sup> A technical description of this loom is to be found in the *Scientific American* of June 6, 1914.

The "Smyrna" rug resembles the chenille Axminster, although it is inferior; as yet, however, it is made only in this country. It is so woven that the chenille or fur projects on both sides, making a reversible piece of goods. The warp yarns are usually of cotton, and the filling yarns, which are inserted between the rows of fur, are usually of jute.

*Production.*—Handmade knotted-pile carpets and rugs are not made in the United States. One loom is in operation which produces a knotted-pile fabric very similar to the handmade article.

Chenille Axminster rugs, woven whole, were 178,000 square yards, valued at \$715,000 in 1914; and 310,000 square yards, valued at \$2,527,000 in 1919. Smyrna rugs, woven whole, were 822,000 square yards, valued at \$871,000, in 1914; and 808,000 square yards, valued at \$1,914,000, in 1919.

*Imports.*—Imports which would be dutiable under the wording of paragraph 1117 are not determinable precisely owing to the listing of imports of chenille Axminsters with other machine-made Axminsters. Imports listed as "carpets woven whole for rooms, and oriental, Berlin, Aubusson, Axminster, and other similar rugs" would practically all fall under paragraph 1117. Imports by calendar years since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
CARPETS WOVEN WHOLE FOR ROOMS, AND ORIENTAL, BERLIN, AUBUSSON, AXMINSTER, AND OTHER SIMILAR RUGS.				
1918.....	Sq. yards. 268,897	\$1,257,399	\$628,699	50
1919.....	391,592	2,529,692	1,264,846	50
1920.....	925,453	7,808,031	3,904,015	50
1921 (9 months).....	1,684,741	14,964,253		

AUBUSSON, AXMINSTER, MOQUETTE, AND CHENILLE CARPETS, AND CARPETS AND CARPETING OF LIKE CHARACTER.				
1918.....	43,397	\$220,266	\$77,094	35
1919.....	55,898	290,497	101,674	35
1920.....	233,535	993,077	347,577	35
1921 (9 months).....	2,194,351	2,885,414		

<sup>1</sup> Includes 511 square yards, valued at \$3,295, imported under emergency tariff act of 1921.

<sup>2</sup> Includes 759 square yards, valued at \$1,951, imported under emergency tariff act of 1921.

*Exports* are not recorded.

*Important changes in classification.*—The number of tariff paragraphs heretofore devoted to carpets and rugs of wool—for instance, 11 in the act of 1909 and the same number in the act of 1913—has been disproportionately large. In wording this bill it was decided to use only three paragraphs: One to cover wool carpets and rugs that are distinctively luxuries, another to include all other varieties of carpets and rugs made with the use of wool, and a third to cover special articles made from wool carpets or rugs. These paragraphs are numbered 1117, 1118, and 1119, respectively.

The intent of paragraph 1117 is to include only such carpets and rugs as are distinctively luxuries. Falling within this classification are handmade carpets and rugs such as the oriental, "real" Axmin-

ster, Savonnerie, and Aubusson, and also chenille Axminsters which, although made on a power loom, necessitate a large amount of hand-work and are costly goods which are in much the same class as hand-made goods. There is also included "carpets and rugs of oriental weave or weaves, produced on a power-driven loom." The term "oriental weave or weaves" means woven similar to the oriental; that is, with knotted pile. This provision at present covers the product of only one loom, that invented by J. K. Dalkranian, but is inserted because of possible future developments in the production of knotted-pile carpets by machinery.

The compensatory duty of 5 cents per square foot is based on evidence obtained in a careful study of the domestic carpet industry by the Tariff Commission. (See Tariff Information Survey K-6, "Carpets and rugs of wool.") The average weight of wool yarn per square yard in the chenille Axminsters reported to the commission was 3.82 pounds, and statements from the trade show that on an average about 60 pounds of yarn were produced from 100 pounds of carpet wool in the condition in which imported. The maximum duty applicable to carpet wool entered under paragraph 1101 would be 7 cents a pound. The duty paid on the wool required per pound of yarn would therefore be 7 divided by 0.60, or  $11\frac{2}{3}$  cents. The wool duty for a square yard of chenille Axminster would be  $11\frac{2}{3} \times 3.82$ , or 44.57 cents per square yard, and this divided by 9 is 4.95 cents per square foot. A round figure of 5 cents per square foot was therefore suggested and adopted for the compensatory duty. This is considered liberal, particularly as much of the carpet wool dutiable under paragraph 1101 would, by virtue of the ad valorem clause, pay less duty than 7 cents a pound.

---

### PARAGRAPH 1118.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1118. Axminster carpets and rugs, not specially provided for, and carpets and rugs of like character or description, 2 cents per square foot; Wilton carpets and rugs, and carpets and rugs of like character or description, 3 cents per square foot; Brussels carpets and rugs, and carpets and rugs of like character or description, 2 cents per square foot; velvet and tapestry carpets and rugs, and carpets and rugs of like character or description,  $1\frac{1}{4}$  cents per square foot; and, in addition thereto, on all the foregoing, 25 per centum ad valorem.

Ingrain carpets, and ingrain rugs or art squares, of whatever material composed, and carpets and rugs of like character and description, not specially provided for, 1 cent per square foot and, in addition thereto, 20 per centum ad valorem.

All other floor coverings, including mats and druggets, not specially provided for.

## H. R. 7456.

## SENATE AMENDMENTS.

composed wholly or in part of wool, whether or not constituting chief value, 2 cents per square foot and, in addition thereto, 25 per centum ad valorem.

Parts of any of the foregoing shall be dutiable at the rate provided for the complete article.

## ACT OF 1909.

PAR. 384. \* \* \* Axminster, moquette, and chenille carpets, figured or plain, and all carpets or carpeting of like character or description, sixty cents per square yard and in addition thereto forty per centum ad valorem.

PAR. 385. Saxony, Wilton, and Tournay velvet carpets, figured or plain, and all carpets or carpeting of like character or description, sixty cents per square yard and in addition thereto forty per centum ad valorem.

PAR. 386. Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, forty-four cents per square yard and in addition thereto forty per centum ad valorem.

PAR. 387. Velvet and tapestry velvet carpets, figured or plain, printed on the warp or otherwise, and all carpets or carpeting of like character or description, forty cents per square yard and in addition thereto forty per centum ad valorem.

PAR. 388. Tapestry Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, printed on the warp or otherwise, twenty-eight cents per square yard and in addition thereto forty per centum ad valorem.

PAR. 389. Treble ingrain, three-ply, and all chain Venetian carpets, twenty-two cents per square yard and in addition thereto 40 per centum ad valorem.

PAR. 390. Wool Dutch and two-ply ingrain carpets, 18 cents per square yard and in addition thereto forty per centum ad valorem.

PAR. 392. Druggets and bockings, printed, colored, or otherwise, twenty-two cents per square yard and in addition thereto forty per centum ad valorem.

PAR. 393. Carpets and carpeting of wool, \* \* \* not specially provided for in this section, \* \* \* fifty per centum ad valorem.

PAR. 394. Mats, rugs for floors, \* \* \* bedsides, art squares, and other portions of carpets or carpeting made wholly or in part of wool, and not specially provided for in this section, shall be subjected to the rate of duty herein imposed on carpets or carpetings of like character or description.

## ACT OF 1913.

PAR. 293. \* \* \* Axminster, moquette, and chenille carpets, figured or plain, and all carpets or carpeting of like character or description, 35 per centum ad valorem.

PAR. 294. Saxony, Wilton, and Tournay velvet carpets, figured or plain, and all carpets or carpeting of like character or description, 30 per centum ad valorem.

PAR. 295. Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, 25 per centum ad valorem.

PAR. 296. Velvet and tapestry velvet carpets, figured or plain, printed on the warp or otherwise, and all carpets or carpeting of like character or description, 30 per centum ad valorem.

PAR. 297. Tapestry Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, printed on the warp or otherwise, 20 per centum ad valorem.

PAR. 298. Treble ingrain, three-ply, and all-chain Venetian carpets, 20 per centum ad valorem.

PAR. 299. Wool Dutch and two-ply ingrain carpets, 20 per centum ad valorem.

PAR. 301. Druggets and bockings, printed, colored, or otherwise, 20 per centum ad valorem.

PAR. 302. Carpets and carpeting of wool \* \* \* or composed in part of either of them [wool or cotton], not specially provided for in this section, \* \* \* 20 per centum ad valorem.

PAR. 303. Mats, rugs for floors, \* \* \* bedsides, art squares, and other portions of carpets or carpeting, composed wholly or in part of wool, and not specially provided for in this section, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description.

## CARPETS AND RUGS, N. S. P. F.

(See Survey K-6.)

*Description and uses.*—The carpets and rugs covered by this paragraph may be divided into four classes.

(1) Axminster carpets and rugs, not specially provided for, signifies Axminsters other than the handmade ("real") Axminsters and the chenille Axminsters. The machine-made Axminsters here covered are sometimes known as "spool" Axminsters, a term derived from the fact that the pile yarns are, in weaving, drawn from wide spools, each spool being as wide as the loom. The spool Axminster is an imitation of the oriental weave, in that the pile threads are drawn from outside and not formed from the warp; it differs from it in that the pile is not knotted to the warp threads but inserted around a filling thread and bound in by additional filling threads. It is made with uncut loop pile. The materials consist of cotton or linen for the binding warp; jute for stuffer warp, float and bottom or back weft; cotton, linen, or jute for top and binding weft; and worsted yarn of good quality for the fur or tufts. Weight and firmness are supplied by the jute and cotton threads and the worsted yarn gives the surface only.

(2) Wilton, Brussels, velvet, and tapestry carpets form a distinct class, being warp-pile fabrics having a foundation made with warp and filling and a surface made of an extra set of warp threads woven over wires.

The Wilton is a cut-pile fabric and the better varieties rank among the highest examples of machine-made floor coverings. The warp is usually of cotton and the weft yarns of either cotton or jute. The extra warp threads to form the piles are drawn from superimposed frames of spools at the back of the loom; the spools in each frame are usually of a single color and the fabric therefrom known as a "five-frame" or "six-frame" Wilton; the larger the number of frames the greater variation of color and design obtainable. These pile-warp threads may be either woolen or worsted yarn. The term Saxony usually signifies a Wilton made with woolen pile yarns.

The Brussels is a loop (uncut) pile fabric, durable and of high quality. It is made in much the same manner as the Wilton, drawing the dyed warp-pile yarns from frames of spools at the back of the loom, but differing in construction in certain details. The pile is always worsted yarn; the warp is of jute, and the weft yarns of linen or jute; sometimes jute stuffer threads are inserted to give greater bulk and weight to the goods.

Velvet (sometimes known as tapestry velvet) is a cut-pile fabric made in imitation of the Wilton but cheaper and less durable. Instead of a design formed from dyed warp-pile yarns, the pattern is printed on the pile warp. As this printed pile is used only for the surface there is a smaller proportion of wool and a larger proportion of jute and cotton than is the case in Wiltons in which the dyed pile when not used to form pile is buried in the body of the fabric. Tournay velvet is a type of velvet carpeting of fine quality.

Tapestry (sometimes known as tapestry Brussels) is a loop (uncut) pile fabric made in imitation of the Brussels. The pattern is printed on the warp and this, as for velvet, permits a greater economy of wool; the fabric produced is cheaper but less durable than the Brussels.

(3) Ingrain carpets differ from all the preceding in that they are not pile fabrics but multiple cloths. The primary meaning of the term "ingrain" is "dyed in the grain"; that is, yarn dyed. Ingrain carpets are composed of two or more webs, each with its own warp and filling of a distinctive color. The superimposed webs are interlaced in weaving and the design is secured by bringing to the surface, from either the warp or the filling, the color required. Three-ply or treble ingrain has three sets of warp and filling interlaced; it is possible in this type to have six colors, a different one for each warp and filling, instead of four as in two-ply ingrain. Venetian is an inexpensive ingrain carpet, made with worsted or cotton warp and jute filling, and used only for stairs and hallways. The warp predominates on the face to such an extent that it is sometimes known as "all-chain" (meaning "all-warp") Venetian. Ingrain rugs woven in one piece are known as art squares. "Wool Dutch," a term now obsolete, was used to designate a coarse heavy carpet, woven in stripes and similar in appearance to ingrain. Production of the old-fashioned wool ingrain carpeting has practically ceased in this country; but the production of fiber (paper) and wool and fiber floor coverings on ingrain looms has grown to large proportions.

(4) "All other floor coverings, including mats and druggets, not specially provided for, composed wholly or in part of wool, whether or not constituting chief value" is a basket clause that covers a number of miscellaneous floor coverings. Mats are small rugs not longer than 36 inches and not wider than 18 inches. A mat or small rug for use at the side of a bed is a "bedside," but this term is now rarely used. The term "druggets," also "bockings," a more obsolete term, was formerly used to mean coarse woolen cloths, felted or woven, used for floor coverings; druggets now usually signify a lighter woven cloth that is used to cover carpets in summer time or to substitute therefor. Felt carpets are included in this catch-all provision.

Production in 1914 and 1919 was recorded by the Federal Census as follows:

Carpets and rugs.	Quantity.		Value.	
	1914	1919	1914	1919
	<i>Sq. yds.</i>	<i>Sq. yds.</i>		
Axminster and moquette.....	15,742,000	14,700,000	\$18,579,000	\$35,503,000
Wilton.....	5,616,000	4,959,000	11,930,000	23,431,000
Brussels.....	2,695,000	785,000	3,986,000	2,188,000
Tapestry velvet.....	13,228,000	9,865,000	12,867,000	20,626,000
Tapestry Brussels.....	13,615,000	9,996,000	9,853,000	13,119,000
Ingrain, including art squares.....	8,973,000	1,956,000	3,406,000	1,770,000
Wool and paper.....	4,169,000	6,829,000	1,543,000	6,248,000
Colonial or rag.....		290,000		505,000
All other.....	1,302,000	1,493,000	933,000	2,246,000
Total.....	65,340,000	50,873,000	63,097,000	105,636,000

If the chenille Axminster and Smyrna types (dutiable under par. 1117) be added, the grand total for the American production of carpets and rugs is 66,340,000 square yards, valued at \$64,683,000, in 1914; and 51,991,000 square yards, valued at \$110,077,000, in 1919. As this decrease in quantity of production was accompanied by a greater

decrease in imports and is a continuation of a decline that began earlier (for instance, production in 1904 totaled 82,670,000 square yards and in 1909, 81,219,000 square yards), it is evident that the demand for carpets and rugs in general is declining in this country. This is largely explained by two factors, the increasing use of hardwood floors, requiring less carpeting, and the substitution of other styles of floor covering, such as felt base fabrics, linoleums, and grass rugs.

In spite of this decline the United States continues to rank as the world's largest producer of carpets and rugs of wool.

Imports of machine-made carpets and rugs of wool constitute less than 1 per cent of the domestic production. Imports of goods covered by this paragraph during the fiscal years ended June 30, 1914 and 1919, were as follows:

Carpets and rugs.	Quantity.		Value.	
	1914	1919	1914	1919
Axminster and moquette.....	<i>Sq. yds.</i> (1)	<i>Sq. yds.</i> (1)	(1)	(1)
Wilton, Saxony, and Tournay velvet.....	34,606	1,126	\$64,851	\$5,857
Brussels.....	6,760	122	8,110	468
Velvet and tapestry velvet.....	41,467	2,484	88,050	15,971
Tapestry Brussels.....	8,730	11,779	7,083	13,568
Ingrain.....	9,372	10,481	150	353
All other.....	56,543	8,272	66,538	9,390
Total <sup>2</sup> .....	157,478	34,264	234,782	44,607

<sup>1</sup> Imports of spool Axminsters here dutiable not recorded separately. See imports under preceding paragraph.

<sup>2</sup> Exclusive of spool Axminsters.

It is obvious from the above that imports of Wilton, Brussels, velvet, tapestry, ingrain, and other machine-made carpets included under this paragraph are too small to affect the domestic market.

Exports of machine-made carpets and rugs included under this paragraph are not recorded separately but are now larger than imports. As an indication, Canadian statistics for the fiscal year ended March 31, 1921, record imports of carpets and rugs from the United States valued at \$71,509, in addition to \$198,696 worth of "Oriental and handwoven squares" which, as they are not made in the United States, were probably reexports.

*Important changes in classification.*—The intent of this paragraph is to cover all carpets and rugs which contain any wool, other than those that are strictly luxuries provided for in paragraph 1117; but the first two sentences of the paragraph are not restricted to wool.

This paragraph includes (1) Axminsters, other than the handmade and the chenille Axminsters; (2) warp-pile, such as the Wilton, Brussels, velvet, and tapestry; (3) ingrain; and (4) all other floor coverings, not specially provided for, which contain any wool.

The floor coverings thus covered in one paragraph concisely worded have in past acts required several paragraphs and these were worded more loosely and contained terms which are to-day obsolete or else designations of varieties covered by other terms.

Terms used in previous acts and here omitted include moquette (a variety of spool Axminster); Saxony (a variety of Wilton); Tour-

may velvet (a variety of velvet); two-ply, three-ply, treble, all-chain Venetian, and wool Dutch (all varieties of ingrain); bocking (an obsolete term for a coarse woollen cloth similar to the drugget); and bedsides (small mats or rugs). There has also been omitted the perplexing phrase "carpets woven whole for rooms," as well as the phrase "rugs for floors," and the Tariff Commission recommendation was adopted to omit any differentiation between carpets and rugs and to base the tariff classifications solely on method of manufacture.

The compensatory duties used for wool pile carpets in this paragraph were derived by calculations similar to that stated in paragraph 1117. They are based on the highest duty (7 cents a pound) applicable to carpet wool under paragraph 1101, and a yield of 60 pounds of yarn from 100 pounds of carpet wool in the condition imported. The calculations, and compensatory duties based thereon, are as follows:

	Average weight of wool yarn per square yard of carpet.	Duty paid on wool.			Compensatory duty suggested per square foot of carpet.
		In each pound of yarn.	In each square yard of carpet.	In each square foot of carpet.	
	Pounds.	Cents.	Cents.	Cents.	Cents.
Axminster, n. s. p. f. ....	1.42	11	16.57	1.84	2
Wilton.....	2.31	11	26.95	2.99	3
Brussels.....	1.52	11	17.85	1.98	2
Velvet.....	.96	11	10.62	1.18	1½
Tapestry.....	.47	11	5.48	0.69	1½

These compensatory duties are considered liberal, particularly as much of the carpet wool dutiable under paragraph 1101 would, by virtue of the ad valorem clause, pay less duty than 7 cents a pound.

Ingrain carpets and rugs are assigned a compensatory duty of 1 cent per square foot. Wool yarns used in such goods are generally of the poorest class of carpet wools, the duty on which, under paragraph 1101, would generally be less than 7 cents a pound. At present only a small amount of wool ingrain is made in this country; in most ingrains the yarns are now in part or in whole of "fiber" (paper).

"All other" floor coverings cover various types and the compensatory duty has been made the same as that assigned to Brussels and spool Axminsters on the assumption that they will be mostly medium grade goods with approximately the same percentage of wool to total weight.

Specific mention of carpets and carpeting of cotton, n. s. p. f. (par. 393, act of 1909, and 302, act of 1913), has been omitted, with the intent that these shall fall under the basket proviso in paragraph 1020.

### PARAGRAPH 1119.

H. R. 7456.

SENATE AMENDMENTS.

Par. 1119. Screens, hassocks, and all other articles composed wholly or in part of carpets or rugs, and not specially provided for, 22 per centum ad valorem

## ACT OF 1909.

PAR. 394. \* \* \* screens, covers, hassocks, \* \* \* made wholly or in part of wool, and not specially provided for in this section, shall be subjected to the rate of duty herein imposed on carpets or carpetings of like character or description.

## ACT OF 1913.

PAR. 303. \* \* \* screens, covers, hassocks, \* \* \* composed wholly or in part of wool, and not specially provided for in this section, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description.

## ARTICLES MADE FROM CARPETS.

*Description and uses.*—Carpets and rugs are not infrequently used in making other articles. Screens made of such materials are here dutiable, as also are hassocks, which are thick, hard cushions used for footstools. These are mentioned specifically only as an indication of the scope of the paragraph, which would include any article made in whole or in part from carpets or rugs.

*Production, imports, and exports* are not separately recorded.

*Important changes in classification.*—This paragraph is a modification of a part of paragraphs 394, act of 1909, and 303, act of 1913, and is intended to secure separate enumeration of articles made from carpets and rugs. This provision would include articles made wholly or in part of carpets or rugs, whatever the materials might be, and whether or not any wool be used. It does not include any such floor coverings themselves.

## PARAGRAPH 1120.

## H. R. 7456.

PAR. 1120. All manufactures not specially provided for, composed of wool or of which wool is a component part, whether or not constituting chief value, 25 per centum ad valorem.

## SENATE AMENDMENTS.

## ACT OF 1909.

PAR. 378. On \* \* \* all manufactures of every description made wholly or in part of wool, not specially provided for in this section, valued at not more than forty cents per pound, the duty per pound shall be three times the duty imposed by this section on a pound of unwashed wool of the first class; valued at above forty cents per pound and not above seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto, upon all the foregoing, fifty per centum ad valorem; valued at over seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class and fifty-five per centum ad valorem.

## ACT OF 1913.

PAR. 288. \* \* \* all manufactures of every description made, by any process, wholly or in chief value of wool, not specially provided for in this section, 35 per centum ad valorem; \* \* \*.

PAR. 308. \* \* \* and all manufactures of every description made by any process, wholly or in chief value of the hair of the Angora goat, alpaca, and other like animals, not specially provided for in this section, 40 per centum ad valorem.

PAR. 289. Blankets, \* \* \* composed wholly or in chief value of wool, 25 per centum ad valorem; \* \* \*.

## ACT OF 1909.

## ACT OF 1913.

PAR. 379. \* \* \* On blankets composed wholly or in part of wool, valued at more than fifty cents per pound, the duty per pound shall be three times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem. \* \* \* *Provided*, That on blankets over three yards in length the same duties shall be paid as on cloths.

## BASKET PARAGRAPH OF WOOL SCHEDULE.

*Description and uses.*—The basket paragraph for the wool schedule is intended to cover miscellaneous articles, in whole or in part of wool, which are not individually important enough to be specially provided for. Among the items covered are articles of furniture in chief value of wool; fancy baskets composed of willow or metal and wool; cotton quilts with wool fringe; dolls' wigs of goat hair attached to a cotton foundation; dusters having strips of wool cloth attached to a wooden handle; hat crowns of wool and silk; musical instrument key pads of leather, cotton, and wool; penwipers, for use or for ornament, containing wool; and scapulars of wool and cotton, with religious emblems printed thereon. It also includes manufactures of woven felt, such as endless belts used by paper makers; all blankets, containing wool, other than those mentioned in paragraph 1112, and carriage and automobile robes, steamer rugs, and the like.

*Production.*—It is impossible to make up an inclusive total of domestic output for contrast with imports under a basket paragraph. However, the production of carriage robes was 1,768,000 square yards, valued at \$1,231,000, in 1914; and 2,197,000 square yards (2,470,000 pounds), valued at \$3,845,000, in 1919; the production of endless belts, largely paper makers' felts, was valued at \$4,164,186 in 1914.

*Imports* of manufactures of wool not specially provided for were valued at \$658,337 in the fiscal year 1914, and at \$1,112,678 in the calendar year 1920. These figures can hardly be used in contrast, however, since the list of unenumerated articles under paragraph 1120 of H. R. 7456 will be somewhat different from that of preceding acts.

*Exports* are not recorded.

*Important changes in classification.*—Heretofore manufactures of wool not specially provided for have been included in paragraphs (such as 378 of 1909 and 288 of 1913) which also covered other goods specifically mentioned. A basket or catchall paragraph is here provided, in accordance with the logical arrangement usual in the other textile schedules, to include all manufactures, in whole or in part of wool, which are not provided for elsewhere.

Inasmuch as many of these miscellaneous articles, such as fancy baskets, wooden-handled dusters, musical instrument key pads, etc., would be in part of other materials, it was considered inadvisable to attempt a compensatory wool duty based on the total weight of the article, or to have a compensatory wool duty based on the weight of wool contained in the article, as this latter would in many instances involve destructive analysis. For these reasons the duty on such miscellaneous articles is made a straight ad valorem.

The wool schedule of H. R. 7456 provides for manufactures *in part* of wool, whereas the wool schedule of the tariff act of 1913 requires manufactures to be wholly or *in chief value* of wool. The other textile schedules require cotton, flax, silk, etc., to be in chief value. The general rule of construction is that a provision for manufactures in chief value of a material is more specific than a provision for manufactures in part of a material. However, in prior tariff acts an exception has been made of manufactures in part of wool. Thus, in the act of 1897 there was a proviso to paragraph 391 reading:

*Provided*, That all manufactures, of which wool is a component material, shall be classified and assessed for duty as manufactures of wool.

And in the act of 1909 there was a proviso to paragraph 403 reading:

*Provided*, That all manufactures of silk enumerated under any paragraph of this schedule, if composed in any part of wool, shall be classified and assessed for duty as manufactures of wool.

There is no such provision in the act of 1913.

Under H. R. 7456 as passed by the House of Representatives, articles in chief value of some other textile than wool, or in chief value of india rubber, might be held not to come within the wool schedule, although in substantial part of wool, in cases where the same descriptive terms, such as "wearing apparel" or "manufactures", are used in the paragraph requiring the particular material to constitute chief value of the article and in the paragraph permitting the particular component material to constitute a minor part of the article. Thus a provision for "manufactures in chief value of india rubber" might govern as against a provision for "manufactures in part of wool," but a different situation would be presented if the competing provisions were such as "wearing apparel in part of wool," and "manufactures in chief value of india rubber", (or of any other material other than wool). The expression "whether or not constituting chief value" in H. R. 7456 is, however, broader in form than usual.

*Suggested changes.*—Because there is no compensatory duty, a straight ad valorem duty does not give fancy blankets, traveling rugs, etc., the equality of treatment accorded other manufactures of wool that are specially provided for. It is suggested that, in lieu of a compensatory duty in this paragraph, paragraph 1112 be extended to include, in such form as desired, all blankets, carriage robes, steamer rugs, and the like.

If a compensatory duty is inserted in this basket paragraph, it is suggested that the wording be changed to cover only manufactures wholly or in chief value of wool.

If paragraph 1120 should be construed to apply to importations having wool in any quantity, however small, as a component part, merchandise might be manufactured for the express purpose of avoiding a higher rate of duty than 25 per cent, such as cotton tapestries and other jacquard figured upholstery goods, carrying 30 per cent ad valorem under paragraph 908. Substitution of the word "substantial" for "component" before "part" in line 21, page 125, of H. R. 7456, would require something more than a negligible part such as a few picks of wool in a silk tie.

## PARAGRAPH 1121.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1121. Whenever in this title the word "wool" is used in connection with a manufactured article of which it is a component material, it shall be held to include wool or hair of the sheep, camel, Angora goat, alpaca, or other like animals, whether manufactured by the woolen, worsted, felt, or any other process.

## ACT OF 1909.

PAR. 395. Whenever, in any schedule of this Act, the word "wool" is used in connection with a manufactured article of which it is a component material, it shall be held to include wool or hair of the sheep, camel, goat, alpaca or other animal, whether manufactured by the woolen, worsted, felt, or any other process.

## ACT OF 1913.

PAR. 304. Whenever in this section the word "wool" is used in connection with a manufactured article of which it is a component material, it shall be held to include wool or hair of the sheep, camel, or other like animals, whether manufactured by the woolen, worsted, felt, or any other process.

*Important changes in classification.*—In the act of 1913, manufactures of hair of the Angora goat, alpaca, and other like animals are provided for separately from manufactures of wool or hair of the sheep, camel, and other like animals. Paragraph 1121 of H. R. 7456 eliminates such separate provision and restores paragraph 395 of the act of 1909, with the word "like" inserted between "other" and "animals" and "Angora" before "goat."

This paragraph deals with the hair covering of certain animals and not with the animals themselves; therefore the expression "other like animals" does not mean animals which are like the sheep, camel, Angora goat, or alpaca in build or appearance, but those which are like them in the wool or hair which they produce. (*Bloomingtondale v. United States*, 8 Ct. Cust. Appls., 104, of 1917.) Animal hair which is dissimilar in its characteristics and uses to the above—for instance, hair of the horse and cattle—is provided for in paragraph 1579.

A true fur does not differ materially from a true wool, which, like fur, is a modified form of hair and is distinguished by its fine, soft, and curly nature and by pointed scales or plates attached to the filament. Hair which is so short that it is commercially unfit to be spun into yarn or for the making of textiles, and is chiefly employed in the making of furs or fur garments, or for other fur uses, is that kind of hair which is known as fur, though it be taken from the back of a sheep. Hair which possesses all the characteristics of fur, but is so long and of such quality that it can be spun into yarn and converted into cloth and is chiefly used for that purpose, should be classified as a wool or hair other than fur. (*Bloomingtondale v. United States*, *supra*.) Undressed furs are provided for in paragraph 1573.

*Suggested changes.*—Litigation is now pending as to whether the hair of the Cashmere goat is more "similar" to that of the Angora goat than to that of the camel. It might therefore be well to insert in paragraph 1121 (and also in par. 1102) the words "Cashmere goat" after the words "Angora goat."

PARAGRAPH 1122.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1122. All samples of manufactures of wool which are not admitted under bond for exportation within six months shall be subject to the same rates of duty and the same valuation as the manufactured articles which they are intended to represent.

ACT OF 1909.

ACT OF 1913.

[No corresponding provision.]

[No corresponding provision. Subsec. 4 of par. J of Section IV, however, exempts from duty "samples solely for use in taking orders for merchandise."]

*Suggested changes.*—This is a new provision in the wool schedule. It is peculiarly difficult of administration, especially in appraisement. In Title III, section 311, of H. R. 7456, provision is made for samples solely for use in taking orders for merchandise.

## SCHEDULE 12.—SILK AND SILK GOODS.

### PARAGRAPH 1201.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1201. Silk partially manufactured from raw silk, waste silk, or cocoons, and silk noils exceeding two inches in length, not twisted or spun, 35 cents per pound: *Provided*, That none of the foregoing shall pay a less rate of duty than 25 per centum ad valorem.

### ACT OF 1909.

### ACT OF 1913.

#### SCHEDULE L.—SILKS AND SILK GOODS.

#### SCHEDULE L.—SILKS AND SILK GOODS.

PAR. 396. Silk partially manufactured from cocoons or from waste silk, and not further advanced or manufactured than carded or combed silk, thirty-five cents per pound.

PAR. 311. Silk partially manufactured from cocoons or from waste silk and not further advanced or manufactured than carded or combed silk, and silk noils exceeding two inches in length, 20 cents per pound.

#### RAW SILK PARTIALLY MANUFACTURED.

(See Survey L-1.)

*Description.*—Raw silk passes through only a few stages in the course of its manufacture into thrown silk; therefore possible imports of silk partially manufactured from cocoons are practically limited to silk wound on spools or tubes.

*Production.*—The winding of silk on spools or tubes in the United States is a preliminary operation to “throwing” (see par. 1203, p. 1013), and hence practically none is offered for sale.

*Imports.*—See below under “Silk Waste Partially Manufactured.”

*Exports* are not recorded and are probably nil.

#### SILK WASTE PARTIALLY MANUFACTURED.

(See Survey L-1.)

*Description and use.*—Where silk waste (par. 1650) in course of conversion into spun silk has gone through any or all of the processes up to but not including roving, it is dutiable under this paragraph. Until recently waste silk degummed by boiling seems to have been dutiable under the paragraph, but in *Smillie v. United States*, 11 Ct. Cust. Appeals, —; T. D. 38966, of 1922, it has been held that waste silk so degummed is not advanced in manufacture and thus comes in dutyfree as silk waste. (See par. 1650, p. 1430.) Dressed and combed silk, known as peignée, is the only important article of commerce covered by this paragraph; it is useful only in the further processes of silk spinning.

*Production.*—The making of waste silk into peignée involves numerous technical processes requiring highly skilled adult male

labor. Domestic spinners prefer to make their own peignée, and there is no domestic output for sale. It is estimated that about 7,300,000 pounds were produced here in 1920. In Europe little is manufactured in excess of needs of European spinners. The same was true of Japan until the World War. Japanese producers during that period, however, enlarged their peignée-making capacity without proportionately increasing their spinning facilities. In recent years they have been installing additional spindles in order to sell spun silk instead of peignée.

*Imports.*—Imports prior to 1917 averaged less than 1,000 pounds annually. With American participation in the war, there was an enormous Government requirement for cartridge bag cloth made from noil yarn or coarse spun silk yarn (see par. 1202). The demand caused a shortage of peignée. As low-grade coarse yarn was needed, the peignée furnished by the newly expanded Japanese industry was used. In 1918 and subsequent years, moreover, domestic spinning facilities were expanded somewhat more rapidly than peignée-making facilities, and the Japanese product was also imported to make up for the deficiency thus arising in the domestic supply. Furthermore there has recently been established here a spun-silk plant owned by the European spun silk combination and importing its peignée from Europe. The results will be seen in the following statistics of imports of partially manufactured silk, chiefly peignée.

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	478,716	\$995,450	\$95,743	9.62
1919.....	717,953	2,089,493	143,591	6.87
1920.....	479,044	1,552,732	95,809	6.17
1921 (9 months).....	585,967	1,848,986		

Imports in 1919, the year of largest entry, were probably about 10 per cent of domestic production.

*Exports* are not recorded.

#### LONG SILK NOILS.

(See Survey L-1.)

*Description and use.*—Silk noils are the short fibers removed when silk waste is dressed. Those above 2 inches in length, known as long silk noils, are capable of being redressed or combed; shorter lengths can not be so used, and are admitted free as silk waste (par. 1650).

*Production* is not recorded.

*Import* statistics do not appear separately, being included in the figures for imports given under "Silk Waste Partially Manufactured;" they constitute, however, only a small percentage of this item.

*Exports.*—None.

*Important changes in classification.*—The corresponding paragraphs in the act of 1909 (par. 396) and in the act of 1913 (par. 311) do not cover waste silk advanced beyond the peignée state; sliver and roving, intermediates between peignée and spun silk, came in under the basket paragraph of Schedule L (pars. 403 of 1909, and 318 of 1913) at a higher rate of duty than either peignée or spun silk. In H. R. 7456

sliver comes within this paragraph (1201); roving, within paragraph 1202 at the same rate of duty as spun silk.

*Suggested changes.*—If it is desired to bring degummed silk under the operation of this paragraph, the following changes are suggested:

(1) In line 11, page 126: Insert after “manufactured” a comma and the words “including total or partial degumming” followed by a comma.

(2) In line 13, page 126: Change the comma after “length” to a semicolon and insert the words “all the foregoing” before the word “not.”

---

### PARAGRAPH 1202.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1202. Spun silk or schappe silk yarn, and roving, in skeins, cops or warps, if not bleached, dyed, colored, or advanced beyond the condition of singles, by grouping or twisting two or more yarns together on all numbers up to and including number 205, 45 cents per pound and in addition thereto ten one-hundredths of 1 cent per number per pound; exceeding number 205, 45 cents per pound, and in addition thereto fifteen one-hundredths of 1 cent per number per pound; if advanced beyond the condition of singles by grouping or twisting two or more yarns together, at the rate on the single yarn and in addition thereto 5 cents per pound cumulative; if bleached, dyed, or colored, at the rate on unbleached yarn and in addition thereto 10 cents per pound cumulative: *Provided*, That any of the foregoing on bobbins, spools, or beams shall pay the foregoing rates, according to the character of the yarn or roving, and in addition thereto 10 cents per pound: *Provided further*, That none of the foregoing shall pay a less rate of duty than 26 per centum ad valorem. In assessing duty on all spun silk or schappe silk yarn and roving, the number indicating the size of the yarn or roving shall be determined by the number of kilometers that weigh one kilogram, and shall, in all cases, refer to the size of the singles: *And provided further*, That in no case shall the duty be assessed on a less number of yards than is marked on the skeins, bobbins, cops, spools, or beams.

#### ACT OF 1909.

PAR. 397. Spun silk or schappe silk yarn, valued at not exceeding one dollar per pound, whether in singles, or advanced beyond the condition of singles by grouping or twisting two or more yarns together, thirty-five cents per pound; if valued at exceeding one dollar per pound, in the gray, in skeins, warps, or cops, if in

singles or not advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, forty-five cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, forty-five cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, fifty cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, fifty cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if valued at exceeding one dollar per pound, in the gray, on bobbins, spools, or beams, if in singles or not advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, fifty-five cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, fifty-five cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, sixty cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, sixty cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if valued at exceeding one dollar per pound, colored, bleached, or dyed, in skeins or warps, if in singles or not advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, fifty-five cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, fifty-five cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, sixty cents per pound, and in addition thereto ten one-hun-

## ACT OF 1909.

## ACT OF 1913.

dredths of one cent per number per pound; exceeding number two hundred and five, sixty cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if valued at exceeding one dollar per pound, colored, bleached, or dyed, on bobbins, cops, spools, or beams, if in singles or not advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, sixty-five cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, sixty-five cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, seventy cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; on all numbers exceeding number two hundred and five, seventy cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound. In assessing duty on all spun silk or schappe silk yarn, the number indicating the size of the yarn shall be taken according to the metric or French system, and shall, in all cases, refer to the size of the singles: *Provided*, That in no case shall the duty be assessed on a less number of yards than is marked on the skeins, bobbins, cops, spools, or beams. But in no case shall any of the goods enumerated in this paragraph pay less rate of duty than thirty-five per centum ad valorem.

## ROVING.

(See Survey L-1.)

*Description and uses.*—Silk roving—a loosely compressed rope of fibers in which has been inserted a slight twist—is the product of the process which, in the conversion of waste silk into spun silk, immediately precedes spinning; it is of use only for spinning into yarn.

*Production.*—The amount of silk roving produced in the United States is approximately equal to the production of spun silk. (See p. 1011.) It is produced as an intermediate in the manufacture of spun silk, and hence none is offered for sale.

*Imports* have never been separately recorded; they have been negligible.

*Exports* are not recorded.

*Important changes in classification.*—See page 1012.

## SPUN SILK.

(See Survey L-1.)

*Description and uses.*—Spun silk or schappe yarn is manufactured from waste silk by a series of highly technical processes, chiefly dressing and drawing, the products of which are covered by paragraph 1201; and roving and spinning, the products of which are covered by paragraph 1202. Spun silk is employed principally in velvets and plushes, piece-dyed broad silks, wool-mixed fabrics, and knit goods; its use is rapidly expanding. A low grade of spun-silk yarns, called noil yarn, made from exhausted silk noils, is used in cartridge-bag cloth and in various wool and silk goods; a shortage of noil yarn during the war caused the substitution of coarse spun silk yarns.

There are two general systems for numbering spun silk. In the metric system, used on the Continent of Europe, the count indicates the number of thousand meters per kilogram, and is based on the singles. In the English system, which is more generally used in this country, the count indicates the number of 840-yard hanks to the pound. The latter system is similar to the cotton-yarn numbering so far as single yarn is concerned, but is different for ply yarn, where cotton is based on the single and spun silk on the finished yarn.

*Production.*—In recent years the industry, almost wholly in the hands of seven large producers, has rapidly expanded both in volume and in variety of output. In 1914 there were reported 101,382 active spindles engaged in spun silk production; in 1919, 187,306. In 1914 the output for sale was 1,607,416 pounds; in 1919, 3,957,000 pounds (1,764,000 pounds of single and 2,193,000 of ply yarns). Including that for manufacturers' own use, the estimated production in 1914 was around 2,500,000 pounds; in 1919, 8,000,000 pounds; in 1920, 6,700,000 pounds. Until recently, American spinners have manufactured yarns chiefly of coarse or medium size from high-grade wastes, which require in their production less skill and labor per unit than do fine yarns or yarns from low-grade waste. They now, however, manufacture on a large scale fine yarns from high-grade waste and are slowly developing their manufacture from low-grade waste.

Other leading producers are France, Switzerland, the United Kingdom, Italy, Germany, and Japan. Production in France, Switzerland, and Italy is largely by three concerns which work in close cooperation and which supply the bulk of American imports. The war greatly stimulated coarse spun silk and noil yarn spinning in Japan.

*Imports.*—Imports of spun silk, which supply about one-third of the present annual consumption, are used chiefly in the manufacture of velvets, where fine yarns made of low-grade waste are preferred. Before the war this type of yarn was not produced here, but recently domestic spinners have, to a limited extent, undertaken its production; this branch of the domestic industry is, however, not yet entirely out of the experimental stage. In the decade 1901 to 1910 (fiscal year) the average annual import was 2,226,824 pounds;

in the decade 1911 to 1920, 2,943,000 pounds. The latest import figures are given below:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	2,146,897	\$6,261,871	\$2,191,655	35
1919.....	2,255,235	9,548,871	3,342,105	35
1920.....	2,864,264	13,164,585	4,607,605	35
1921 (9 months).....	1,625,346	4,880,745	.....	35

General imports for nine months in 1921 were as follows:

Month.	Quantity.	Value.	Month.	Quantity.	Value.
	<i>Pounds.</i>			<i>Pounds.</i>	
January.....	94,756	\$328,353	July.....	265,327	\$785,653
February.....	90,320	290,592	August.....	223,467	597,633
March.....	134,850	432,726	September.....	132,658	345,777
April.....	328,000	842,798			
May.....	316,469	765,889	Total for 9 months..	1,828,728	5,110,730
June.....	242,881	721,309			

The chief sources of imports are Switzerland, France, the United Kingdom, and Italy. Germany was, before the war, also an important source. Imports from Japan, except for the calendar year 1918, when there were fairly large purchases of coarse spun silk and noil yarns for Army uses from that country, have always been less than 50,000 pounds annually.

*Exports* are not separately recorded and are probably negligible.

*Important changes in classification.*—Roving is for the first time placed in this paragraph (1202). In the acts of 1909 and of 1913 it came in like sliver (see par. 1201 above), under the basket paragraph of Schedule L (pars. 403 of 1909, and 318 of 1913), at a higher rate of duty than that on the spun silk into which it was made.

In this paragraph (1202 of H. R. 7456) the bracket, contained in paragraph 397 of the act of 1909, covering yarns valued at not more than \$1.00 per pound, is omitted. Under the act of 1909 only 1 per cent or less of the total imports came in under this bracket and with present values there probably would be no importations thereunder. However, should prices fall to the 1913 level, very low-grade coarse tussah waste silk yarns and noil yarns would probably be below that value, and with this provision omitted would come in at a materially higher duty than they paid under the act of 1909, and at a materially higher ad valorem equivalent than most other yarns covered by paragraph 1202.

*Suggested changes.*—Strike out comma after the word “singles” in line 18, page 126, of H. R. 7456.

Page 126, line 19: Insert a comma after “together.”

Page 126; line 20: Insert a comma after “pound.”

Page 127, lines 1 and 2: Insert a comma after the word “yarn.”

Page 127, line 13: Strike out the colon after “singles”; also the words “And provided further, That” and begin a sentence with “In,” to agree with paragraphs 1203 and 1204.

## PARAGRAPH 1203.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1203. Thrown silk in the gum, if singles, 50 cents per pound; if tram, 75 cents per pound; any of the foregoing containing more than thirty turns of twist per inch, and organzine, \$1 per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture, in addition to the rates herein provided, 50 cents per pound: *Provided*, That none of the foregoing shall pay a less rate of duty than 12½ per centum ad valorem. In no case shall the duty be assessed on a less number of yards than is marked on the goods as imported.

## ACT OF 1909.

PAR. 398. Thrown silk in the gum, if singles, fifty cents per pound; if tram, seventy-five cents per pound; if organzine, one dollar per pound; and if ungummed, wholly or in part, or if further advanced by any process of manufacture, in addition to the rates herein provided, fifty cents per pound. \* \* \*

## ACT OF 1913.

PAR. 313. Thrown silk not more advanced than singles, tram, or organzine, \* \* \* 15 per centum ad valorem.

## THROWN SILK.

(See Survey L-1.)

*Description and uses.*—Thrown silk is a yarn made from raw silk by doubling and twisting or by twisting only. The more important thrown silks are known according to the method of manufacture, as "organzine" made by twisting separately two or more singles and then doubling and retwisting in the opposite direction; "tram," made by twisting together, usually with a slack twist, two or more raw-silk threads; crêpe, which is in structure a tram made with extra-hard twist; and "singles" (if hard twist, known as "poile") consisting of raw silk singles twisted without doubling. Organzine is used chiefly for warp; tram, for filling; crêpe yarn, for crêpe fabrics; singles, for chiffons.

In the United States there are two methods of numbering thrown silk: (1) The English method based upon the weight (in drams) of a hank 1,000 yards in length; (2) the continental European method based upon the weight (in deniers) of a hank 450 meters long. To reduce denier counts to dram counts, divide the deniers by 17.44. Thus four-thread tram of 16/18 denier size is  $17 \times 4 \div 17.44 = 3.90$  drams. There are 256 drams to the pound avoirdupois.

*Production.*—In 1914 a total of 13,869,000 pounds of raw silk was thrown on contract by commission throwsters and 4,070,401 pounds thrown for sale; in 1919 the amounts were 18,476,000 and 5,569,000 pounds, respectively. In neither year are figures presented for the large amount of thrown silk produced by weavers for their own use. The estimated total production for 1914 was 23,500,000 pounds; for 1919, 28,000,000 pounds. The United States is by far the greatest thrown silk producer and has an almost continuously increasing output.

*Imports.*—Imports of thrown silk have long formed a negligible proportion of domestic consumption. For the thirty years ended June 30, 1920, the average annual import was 34,213 pounds, valued at \$116,322. The record import of the period was in 1917, when there were imported 125,495 pounds, a quantity probably a little less than one-half of one per cent of domestic production. The latest import data are presented below:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	30,146	\$230,354	\$34,553	15
1919.....	12,599	126,803	19,021	15
1920.....	95,355	929,494	139,424	15
1921 (9 months).....	22,580	204,719		15

*Exports* are not recorded and are probably small.

*Important changes in classification.*—In the act of 1909 (par. 398) three types of thrown silk were differentiated: Singles, tram, and organzine. Crêpe yarn (i. e., hard twist tram), although costing more to produce than organzine, was subject, as tram, to a lower rate of duty than organzine. In H. R. 7456, crêpe yarn comes within the provision for singles, and tram "containing more than 30 turns of twist per inch" is given the same rate of duty as organzine.

In 1909 (par. 398) and in 1913 (par. 313) thrown silk and sewing silk were included in the same paragraph. For uniformity with other textile schedules, as well as on account of their distinct character and uses, the two products are placed in separate paragraphs in H. R. 7456.

#### PARAGRAPH 1204.

##### H. R. 7456.

##### SENATE AMENDMENTS.

PAR. 1204. Sewing silk, twist, floss, and silk threads or yarns of any description, made from raw silk, not specially provided for, if in the gum, \$1 per pound: *Provided*, That none of the foregoing shall pay a less rate of duty than 20 per centum ad valorem: if ungummed, wholly or in part, or if further advanced by any process of manufacture, \$1.50 per pound: *Provided*, That none of the foregoing shall pay a less rate of duty than 26 per centum ad valorem. In no case shall the duty be assessed on a less number of yards than is marked on the goods as imported.

##### ACT OF 1909.

##### ACT OF 1913.

PAR. 398. \* \* \* Sewing silk, twist, floss, and silk threads or yarns of any description made from raw silk, not specially provided for in this section, if in the gum, one dollar per pound; if ungummed wholly or in part, or if further advanced by any process of manufacture, one dollar and fifty cents per pound: *Provided*, That in no case shall duty be assessed on a less number of yards than is marked on the skeins, bobbins, cops, spools, or beams.

PAR. 313. \* \* \* sewing silk, twist, floss, and silk threads or yarns of every description made from raw silk, 15 per centum ad valorem.

## SEWING SILK, TWIST, FLOSS, ETC.

(See Survey L-1.)

*Description and uses.*—Sewing silk is a thread made by winding and doubling silk, giving it a hard twist, and doubling and twisting again in reverse direction under a strong tension; it is used for hand sewing. Twist is a thread resembling sewing silk, but is three-ply instead of two-ply; it is used for both machine and hand sewing, principally the former. Embroidery silk consists of numerous slackly twisted singles, doubled, and slackly twisted together in the reverse direction. Floss silk is a variety of embroidery silk composed of a large number of singles slackly twisted together.

*Production.*—Silk-thread production, the oldest branch of the domestic industry, has long supplied the bulk of domestic needs. It is carried on largely by automatic machinery. In 1914 the output of all kinds of silk and embroidery threads was 1,562,039 pounds, valued at \$9,681,613; in 1919, 1,326,000 pounds, valued at \$9,682,000. Silk thread has in recent years been steadily superceded by cotton thread, mercerized and unmercerized.

*Imports.*—In the fiscal year 1910 imports were 43,624 pounds, about 2.3 per cent of domestic production in the calendar year 1909. Since then imports have, except in 1920, been a fraction—usually a small fraction—of 1 per cent thereof. In the fiscal year 1914 they amounted to only 3,031 pounds, or less than one-fifth of 1 per cent. In the calendar year 1920 they amounted to 22,499 pounds, or 1.7 per cent, of the domestic production in 1919. Imports for the calendar years 1918–1921 are recorded as follows:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	2,265	\$5,473	\$821	15
1919.....	5,302	24,295	3,644	15
1920.....	22,499	135,156	20,273	15
1921 (9 months).....	800	5,724		

*Exports.*—Exports are not separately reported but are larger than imports. Before the war there was a fair export to Australia and small shipments to a few other countries; since that time this trade has increased. Canada is now apparently the best market. Canadian statistics for the fiscal year ended March 31, 1921, record imports from the United States valued at \$407,313, as compared with imports from the United Kingdom valued at only \$173,026.

*Important changes in classification.*—In the act of 1909 (par. 398) and the act of 1913 (par. 313) sewing silk and thrown silk were included in the same paragraph. For uniformity with other textile schedules, as well as on account of their distinct character and uses, the two products are in H. R. 7456 placed in separate paragraphs.

## PARAGRAPH 1205.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1205. Woven fabrics in the piece, composed wholly or of chief value of silk, if dyed in the thread or yarn, and the weight is not increased in dyeing beyond the original weight of raw silk, if containing not more than 30 per centum in silk, \$1.25 per pound; if containing more than 30 per centum but not more than 45 per centum in weight of silk, \$1.60 per pound; if containing more than 45 per centum in weight of silk, \$3 per pound; if weight is increased in dyeing beyond the original weight of raw silk; if weighing more than one-third of one ounce but not more than one ounce per square yard, if black (except selvages), \$2.25 per pound; if other than black, \$3 per pound; if weighing more than one ounce but not more than one and one-third ounces per square yard, if black (except selvages), \$2 per pound; if other than black, \$2.75 per pound; if weighing more than one and one-third but not more than one and two-thirds ounces per square yard, if black (except selvages), \$1.80 per pound; if other than black, \$2.50 per pound; if weighing more than one and two-thirds but not more than two ounces per square yard, if black (except selvages), \$1.65 per pound; if other than black, \$2.25 per pound; if weighing more than two but not more than eight ounces per square yard, and if containing not more than 30 per centum in weight of silk, if black (except selvages), 75 cents per pound; if other than black, 90 cents per pound; if containing more than 30 per centum but not more than 45 per centum in weight of silk; if black (except selvages), \$1.10 per pound; if other than black, \$1.30 per pound; if containing more than 45 per centum in weight of silk, but not more than 60 per centum, if black (except selvages), \$1.40 per pound; if other than black, \$1.60 per pound; if containing more than 60 per centum in weight of silk, or if composed wholly of silk, and if having not more than four hundred and forty single threads to the inch in the warp; if black (except selvages), \$1.50 per pound; if other than black, \$2 per pound; if having more than four hundred and forty, but not more than six hundred single threads to the inch in the warp, if black (except selvages), \$1.65 per pound; if other than black, \$2.25 per pound; if having more than six hundred but not more than seven hundred and sixty single threads to the inch in the warp, if black (except selvages), \$1.80 per pound; if other than black, \$2.50 per pound; if having more than seven hundred and sixty, but not

## H. R. 7456.

## SENATE AMENDMENTS.

more than nine hundred and twenty single threads to the inch in the warp, if black (except selvages), \$2 per pound; if other than black, \$2.75 per pound; if having more than nine hundred and twenty single threads to the inch in the warp, if black (except selvages), \$2.25 per pound; if other than black, \$3 per pound; if weighing more than 8 ounces per square yard, 33¼ per centum ad valorem.

Woven fabrics in the piece, composed wholly or in chief value of silk, not specially provided for, weighing not more than one-third of one ounce per square yard, \$4 per pound; weighing more than one-third of one ounce, but not more than two-thirds of one ounce per square yard, if in the gum, \$3 per pound; if un gummed, wholly or in part, \$3.25 per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$3.50 per pound; if weighing more than two-thirds of one ounce, but not more than one ounce per square yard, if in the gum, \$2.65 per pound; if un gummed, wholly or in part, \$3 per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$3.25 per pound; if weighing more than one ounce, but not more than one and one-third ounces per square yard, if in the gum, \$2.50 per pound; if un gummed, wholly or in part, \$2.85 per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$3.10 per pound; if weighing more than one and one-third ounces, but not more than two and one-half ounces, and if containing not more than 20 per centum in weight of silk, if in the gum, 75 cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, 85 cents per pound; if containing more than 20 per centum, but not more than 30 per centum in weight of silk, if in the gum, 85 cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$1.10 per pound; if containing more than 30 per centum, but not more than 40 per centum in weight of silk, if in the gum, \$1.05 per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$1.25 per pound; if containing more than 40 per centum, but not more than 50 per centum in weight of silk, if in the gum, \$1.25 per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$1.50 per pound; if

## H. R. 7456.

## SENATE AMENDMENTS.

containing more than 50 per centum in weight of silk or if wholly of silk, if in the gum, \$2.50 per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$3 per pound; if weighing more than two and one-half ounces, but not more than eight ounces per square yard, and if containing not more than 20 per centum in weight of silk, if in the gum, 57½ cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, 70 cents per pound; if containing more than 20 per centum but not more than 30 per centum in weight of silk, if in the gum, 75 cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, 90 cents per pound; if containing more than 30 per centum, but not more than 40 per centum in weight of silk, if in the gum, 90 cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$1.10 per pound; if containing more than 40 per centum, but not more than 50 per centum in weight of silk, if in the gum, \$1.10 per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, \$1.30 per pound; if containing more than 50 per centum in weight of silk, or if wholly of silk, if in the gum, \$2.25 per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture, or otherwise, or if dyed or printed in the piece, \$2.75 per pound.

Woven fabrics in the piece, composed wholly or in chief value of silk, having threads or yarns whether in the warp or filling containing more than thirty turns of twist to the inch, or woven on Jacquard looms, or having more than one color in the filling, shall pay, in addition to the foregoing specific rates, 25 cents per pound. None of the foregoing fabrics in this paragraph shall pay a less rate of duty than 31 per centum ad valorem.

## ACT OF 1909.

PAR. 399. \* \* \* Woven fabrics in the piece, composed wholly or in chief value of silk, not specially provided for in this section, weighing not more than one-third of one ounce per square yard, four dollars per pound; weighing more than one-third of one ounce, but not more than two-thirds of one ounce per square yard; if in the gum, three dollars per pound; if un-

## ACT OF 1913.

## ACT OF 1909.

gummed, wholly or in part, three dollars and twenty-five cents per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars and fifty cents per pound; if weighing more than two-thirds of one ounce but not more than one ounce per square yard; if in the gum, two dollars and sixty-five cents per pound; if un gummed, wholly or in part, three dollars per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars and twenty-five cents per pound; if weighing more than one ounce but not more than one and one-third ounces per square yard; if in the gum, two dollars and fifty cents per pound; if un gummed, wholly or in part, two dollars and eighty-five cents per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars and ten cents per pound; if weighing more than one and one-third ounces, but not more than two and one-half ounces, and if containing not more than twenty per centum in weight of silk, if in the gum, seventy cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, eighty-five cents per pound; if containing more than twenty per centum, but not more than thirty per centum in weight of silk; if in the gum, eighty-five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and ten cents per pound; if containing more than thirty per centum, but not more than forty per centum in weight of silk; if in the gum, one dollar and five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and twenty-five cents per pound; if containing more than forty per centum, but not more than fifty per centum in weight of silk; if in the gum, one dollar and twenty-five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and fifty cents per pound; if containing more than fifty per centum in weight of silk or if wholly of silk; if in the gum, two dollars and fifty cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars per pound; if weighing more than two and one-half ounces, but not more

## ACT OF 1913.

The following table shows the tariff rates for various articles of silk, as provided by the Act of 1913. The rates are given in dollars and cents per pound. The articles are classified according to their weight and whether they are gummed or un gummed, and whether they are further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece. The rates are as follows:

Article	Rate (per pound)
Wholly or in part, three dollars and twenty-five cents per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars and fifty cents per pound; if weighing more than two-thirds of one ounce but not more than one ounce per square yard; if in the gum, two dollars and sixty-five cents per pound; if un gummed, wholly or in part, three dollars per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars and twenty-five cents per pound; if weighing more than one ounce but not more than one and one-third ounces per square yard; if in the gum, two dollars and fifty cents per pound; if un gummed, wholly or in part, two dollars and eighty-five cents per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars and ten cents per pound; if weighing more than one and one-third ounces, but not more than two and one-half ounces, and if containing not more than twenty per centum in weight of silk, if in the gum, seventy cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, eighty-five cents per pound; if containing more than twenty per centum, but not more than thirty per centum in weight of silk; if in the gum, eighty-five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and ten cents per pound; if containing more than thirty per centum, but not more than forty per centum in weight of silk; if in the gum, one dollar and five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and twenty-five cents per pound; if containing more than forty per centum, but not more than fifty per centum in weight of silk; if in the gum, one dollar and twenty-five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and fifty cents per pound; if containing more than fifty per centum in weight of silk or if wholly of silk; if in the gum, two dollars and fifty cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars per pound; if weighing more than two and one-half ounces, but not more

than two ounces per square yard, three dollars and twenty-five cents per pound; weighing more than two ounces per square yard, two dollars and seventy-five cents per pound.

But in no case shall any goods made on Jacquard looms or any goods containing more than one color in the filling, or any of the goods enumerated in this paragraph, including such as have India rubber as a component material, pay a less rate of duty than forty-five per centum ad valorem.

## BROAD SILKS.

(See Survey L-3.)

*Description and uses.*—In value of imports and in revenue derived this is by far the most important paragraph of the silk schedule. All broad silks (i. e., woven silk fabrics in the piece over 12 inches in width), except bolting cloth (par. 1526), of which silk is the component material of chief value, are included in paragraph 1205, unless they are covered with pile (i. e., plushes and velvets, pars. 1206 and 1453); or are embroidered, tamboured, etc., or made wholly or in part of lace, netting, veiling, etc. (par. 1430). "Broad silks" are used for many purposes, particularly as women's dress goods, as linings, and as materials for shirts, ties, underclothing, furniture coverings, and draperies.

*Production.*—Broad silk manufacture, it is estimated, consumes about 50 per cent of raw silk imports and considerable quantities of spun silk, artificial silk, cotton, wool, and mohair yarns. The output of broad silks in 1914 was 216,034,000 yards, valued at \$137,720,000, or 54 per cent of the total value of all silk manufactures; in 1919, 307,104,000 yards, valued at \$391,225,000, or 44 per cent of the total value of all silk manufactures. From 1904 to 1914 yardage increased 73 per cent and value 105 per cent; from 1914 to 1919 yardage increased 42 per cent and value 184 per cent. The industry employed in 1919, 85,071 looms, while 7,829 additional looms were idle. In making woven-silk fabrics, skilled labor is essential, although a large proportion of women and girls of 16 years of age and older can be utilized. The bulk of domestic production consists of goods of standard weave, made from high quality silk, of coarse and medium sizes, permitting a high degree of machine manipulation and mass production. In recent years, however, domestic weavers have increased the variety of their product and have gone extensively into the manufacture of fancies such as are required in large quantities.

*Imports.*—Imports vary widely from year to year with seeming independence of tariff changes. The general tendency has in the past been for imports to supply a decreasing proportion of domestic consumption. Both in 1914 and 1919, however, they were in value about 7.2 per cent of domestic production, although in most intermediate years the percentage was evidently somewhat smaller. For the five fiscal years 1911 to 1915, inclusive, the average annual import was 1,872,577 pounds; for the five fiscal years 1916 to 1920, inclusive,

2,585,128 pounds, an average materially raised by the large import in 1919, which corresponds with the large domestic production of that year. Imports for the three calendar years 1918, 1919, and 1920 and for the first nine months of 1921 are shown below:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	1,676,168	\$10,645,113	\$4,790,301	45
1919.....	3,123,889	28,416,782	12,787,551	45
1920.....	2,565,535	25,470,263	11,445,262	45
1921 (9 months).....	3,394,393	19,892,120	.....	45

General imports in 1921 are shown by months, as follows:

Month.	Quantity.	Value.	Month.	Quantity.	Value.
	<i>Pounds.</i>			<i>Pounds.</i>	
January.....	202,358	\$1,180,931	June.....	464,884	\$2,624,528
February.....	285,542	1,797,909	July.....	437,048	2,465,451
March.....	420,513	2,643,703	August.....	333,020	1,716,091
April.....	566,927	3,279,057	September.....	290,752	1,536,772
May.....	617,165	3,337,922			

Since the fiscal year 1914 there has been a radical change in the relative importance of the different sources of broad silk imports. In that year 52.1 per cent of the total value of imports came from France; 12.2 per cent from Switzerland; 24.8 per cent from Japan; and 1 per cent from China. In the fiscal year 1921 the percentages were: Japan, 71.1; France, 10.3; China, 5.5; Switzerland, 4.8. In quantity Japan's predominance in 1921 is even greater. Accompanying this change in the source of imports, there has been almost as great a modification in their character. Fabrics obtained from Europe are chiefly expensive goods demanded because of style, unique design or construction, and because desired in small amounts, or because of complicated weave, requiring much labor, frequently hand weaving. In general, they are supplementary rather than directly competitive. Imports from China and Japan are ordinarily low and medium grade goods of simple weave, made from fine or coarse silk filaments. The silks imported from Japan are mainly habutae—an unweighted fabric woven of pure, unthrown (i. e., untwisted) raw silk—although considerable quantities of light-weight wash satins and crêpes, pongees, and striped and figured shirtings have in recent years come from that country. Considerably more than half of the total from Japan are light-weight habutae and light-weight wash satins such as are not made in the United States and therefore only indirectly competitive; the rest of them are heavy-weight habutae and other goods similar to those made in the United States and therefore directly competitive, although a considerable percentage is brought in from time to time to supply temporary shortages in domestic production. From China come chiefly pongees woven in the gum from wild tussah silk.

*Exports* have been recorded only for 1918 and subsequent years, and all available annual figures are therefore presented below. Before the war the export was small, consisting, except for a fairly

regular trade with Canada, of men's linings and a few other lines of specialties and goods sold for "quick delivery." Such exportation (except possibly that of linings) did not attest American ability to compete with similar goods in neutral markets. During the war the trade rapidly expanded, enlarged markets being found in Canada, Cuba, and South America, and to a limited extent in Europe. Since the war this export has been reduced by more than one-half, but is still far above the prewar level. It consists of satins, taffetas, crêpes, and other staples, and to a less extent of specialties of American origin. Much the largest market is Canada. Official trade figures for that country show that broad silk imports from the United States in the fiscal year ended March 31, 1920, amounted in value to \$7,270,981; in the fiscal year 1921, to \$2,961,727. From Japan the Canadian import was in 1920, \$6,938,400; in 1921, \$4,202,884. From Switzerland, the largest European source, Canada imported broad silks valued at \$5,165,531 in 1920 and at \$7,431,829 in 1921. Exports from the United States since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (yards).....	10,623,304	8,985,647	5,645,038	2,356,742
Value.....	\$9,671,058	\$10,225,376	\$8,775,079	\$2,542,244

*Important changes in classification.*—The classification of silk fabrics in H. R. 7456 is, with two exceptions, the same as that in the act of 1909. The two exceptions are as follows:

(1) In H. R. 7456 the brackets contained in the act of 1909 covering fabrics printed in the warp, are omitted. This omission makes it doubtful where, in the various divisions of paragraph 1205, such fabrics will fall, and will, therefore, probably lead to litigation.

(2) A new departure in H. R. 7456 is the additional duty (of 25 cents per pound) superimposed upon all other specific duties in the case of the following types of fabrics:

(a) Those containing threads of more than 30 turns of twist to the inch—a provision which covers crêpe fabrics and a wide variety of other piece-dyed fabrics, some of them European specialties. Crêpe fabrics from Japan, however, make up the only very important import of goods containing this type of yarn, and that import is not more than 3 per cent—usually less—of the total import from that country and an even smaller percentage of the total import from all countries.

(b) Those made on Jacquard looms—a provision which covers most fancy figured fabrics. Imports from Europe consist largely of this type of goods; most of them coming from that source are high-priced specialties.

(c) Those containing more than one color in the filling—a provision which covers changeable taffeta and other box-loom specialties. Imports of these are small but regular.

*Suggested changes.*—Change "of" to "in" between "or" and "chief" in line 12, page 128, of H. R. 7456.

Page 128, line 15: Insert "weight of" before "silk."

Page 129, line 12: Change semicolon after "silk" to a comma to agree with similar provisions elsewhere.

Page 129, lines 17, 18: Omit the phrase "or if composed wholly of silk" as unnecessary.

Page 129, line 19: Change semicolon after "warp" to a comma.

Page 129, line 21: Strike out comma after "four hundred and forty."

Page 130, line 4: Strike out comma after "sixty."

Page 130, line 11: Insert the following, which was in paragraph 399 of the act of 1909, and which was apparently inadvertently omitted:

Woven fabrics in the piece, composed wholly or in chief value of silk, if printed in the warp, and if weighing not more than one and one-third ounces per square yard [rate]; if weighing more than one and one-third ounces, but not more than two ounces per square yard [rate]; if weighing more than two ounces per square yard [rate].

Page 130, lines 13, 15: Insert "if" before "weighing" to agree with similar provisions elsewhere.

Page 132, lines 1, 2; page 133, line 1: Omit as unnecessary the phrase "or if wholly of silk."

Page 133, line 4: Change the period after "pound" to a semicolon, and add "if weighing more than eight ounces per square yard [rate]" to agree with lines 10 and 11, page 130. This was apparently inadvertently omitted.

Specific provision is not made for yarn-dyed fabrics advanced beyond the original weight of raw silk, weighing one-third and less of an ounce per square yard. Provision, therefore, might be made by striking out the words "more than one-third of one ounce but" in lines 19 and 20, page 128, thereby making the context read "if weighing not more than one ounce per square yard."

To avoid possible uncertainty, the last sentence (lines 11 and 12, page 133), "None of the foregoing fabrics in this paragraph shall pay a less rate of duty than 31 per centum ad valorem" should be made a paragraph and the word "foregoing" omitted therefrom.

---

## PARAGRAPH 1206.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1206. Plushes, cut or uncut, composed wholly or in chief value of silk, weighing not less than nine and one-half ounces per square yard, \$1 per pound; weighing less than nine and one-half ounces per square yard, \$2.40 per pound: *Provided*, That none of the foregoing shall pay a less rate of duty than 33½ per centum ad valorem. Velvets, chenilles, and other pile fabrics, not specially provided for, cut or uncut, composed wholly or in chief value of silk, weighing not less than five and three-fourths ounces per square yard, \$1.50 per pound; weighing less than five and three-fourths ounces per square yard, but not less than

## H. R. 7456.

## SENATE AMENDMENTS.

four ounces, if all the filling is not cotton, \$2.75 per pound; if all the filling is cotton, \$2 per pound; all the foregoing weighing less than four ounces per square yard, \$4 per pound: *Provided*, That none of the foregoing shall pay a less rate of duty than 33½ per centum ad valorem. Measurements to ascertain widths of goods for determining weight per square yard of the foregoing articles shall not include the selvages, but the duty shall be levied upon the total weight of goods, including the selvages. The distinction between "plushes" and "velvets" shall be determined by the length of the pile; those having pile exceeding one-seventh of one inch in length to be taken as "plushes"; those having pile one-seventh of one inch or less in length shall be taken as "velvets." The distance from the end of the pile to the bottom of the first binding pick shall be considered as the length of the pile.

Velvet or plush ribbons, and all other pile fabrics, cut or uncut, composed wholly or in chief value of silk, not specially provided for, not over twelve inches and not less than three-fourths of one inch in width, containing no silk except that in the pile and selvages; if black, \$1.60 per pound; if other than black, \$1.75 per pound; if containing silk other than that in the pile and selvages; if black, \$2 per pound; if other than black, \$2.25 per pound; for each one-fourth of one inch or fraction thereof, less than three-fourths of one inch in width, there shall be paid in addition to the above rates, 40 cents per pound: *Provided*, That none of the foregoing shall pay a less rate of duty than 33½ per centum ad valorem.

## ACT OF 1909.

PAR. 399. Velvets, chenilles, and other pile fabrics, not specially provided for in this section, cut or uncut, composed wholly or in chief value of silk, weighing not less than five and three-fourths ounces per square yard, one dollar and fifty cents per pound; weighing less than five and three-fourths ounces per square yard, but not less than four ounces, or if all the filling is not cotton, two dollars and seventy-five cents per pound; if all the filling is cotton, two dollars per pound; all the foregoing weighing less than four ounces to the square yard, four dollars per pound. Plushes, cut or uncut, composed wholly or in chief value of silk, weighing not less than nine and one-half ounces per square yard, one dollar per pound; weighing less than nine and one-half ounces per square yard, two dollars and forty cents per pound.

## ACT OF 1913.

PAR. 314. Velvets, plushes, chenilles, velvet or plush ribbons, or other pile fabrics, composed of silk or of which silk is the component material of chief value, 50 per centum ad valorem.

PAR. 358. \* \* \* coach, carriage, and automobile laces, \* \* \* 60 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

Measurements to ascertain widths of goods for determining weight per square yard of the foregoing articles shall not include the selvages, but the duty shall be levied upon the total weight of goods, including the selvages. The distinction between "plushes" and "velvets" shall be determined by the length of the pile; those having pile exceeding one-seventh of one inch in length, to be taken as "plushes"; those having pile one-seventh of one inch or less in length, shall be taken as "velvets." The distance from the end of the pile to the bottom of the first binding pick shall be considered as the length of the pile. Velvet or plush ribbons, or other pile fabrics not over twelve inches and not less than three-fourths of one inch in width, cut or uncut, of which silk is the component material of chief value, not specially provided for in this section, containing no silk except that in the pile and selvages; if black, one dollar and sixty cents per pound; if other than black, one dollar and seventy-five cents per pound; if containing silk other than that in the pile and selvages; if black, two dollars per pound; if other than black, two dollars and twenty-five cents per pound; for each one-fourth of one inch or fraction thereof, less than three-fourths of one inch in width, there shall be paid in addition to the above rates, forty cents per pound. \* \* \* But in no case shall any goods made on Jacquard looms or any of the goods containing more than one color in the filling, or any of the goods enumerated in this paragraph, including such as have India rubber as a component material, pay a less rate of duty than forty-five per centum ad valorem.

## SILK PILE FABRICS.

(See Survey L-1.)

*Description and uses.*—Silk pile fabrics include cloths and ribbons composed of a woven ground of silk or other material more or less completely concealed by a covering of short silk threads, or pile, which project from it as cut ends or, in a few fabrics, as loops. Silk pile cloths are mainly velvets and plushes, which differ principally in that the pile of velvet is the shorter. Silk pile ribbons are almost invariably velvet. Velvets and plushes are usually woven as double pile fabrics, i. e., two cloths are woven one above the other, connected by the interlacing of pile warp threads. A knife traveling from side to side cuts the pile halfway between the two cloths, leaving each with its half of the pile. Silk velvets are used chiefly for women's garments and millinery purposes. Plushes serve for upholstery and decoration and for women's garments, especially imitation sealskins and other imitation furs. They are also used

for hats for both men and women, especially for men's high silk hats. If of the qualities and widths ordinarily used in making men's silk hats they are separately provided for. (See par. 1453.)

Chenille yarn is made by cutting a specially woven cloth into narrow strips and twisting the strips to produce a rough yarn from which the cut thread ends stick out in every direction. Fabrics woven of chenille yarn are used for curtains, rugs, upholstery, and as fringes for women's wear. Chenilles are a minor product.

*Production.*—From 1904 to 1914 production of silk velvet increased from 7,262,000 yards, valued at \$3,161,000, to 16,318,000 yards valued at \$8,570,022; of silk plushes, from 2,547,000 yards valued at \$1,341,000, to 9,115,000 yards, valued at \$10,136,000. For 1919, preliminary census figures show a production of 16,150,000 yards of silk velvets, valued at \$20,950,000, and of 5,860,000 yards of silk plush, valued at \$10,136,000. In the same year 2,144 active looms were reported as employed in the industry. Silk pile fabrics are as a rule made with cotton back or ground and spun silk pile; some all-silk velvets are made, mainly light draping velvets. Velvet-ribbon production is comparatively small, irregular demand making profit in manufacture uncertain.

*Imports* of broad pile fabrics are mainly fine all-silk velvets, produced only to a limited extent here; high-grade figured specialties, which American firms generally do not produce; and velvet ribbons, the import of which supplies a large proportion of domestic consumption. Imports of plush fabrics are small, usually one-tenth or less of the broad velvet import. The average annual import of all types of silk pile fabrics for the 30 years ended June 30, 1920, was 652,015 pounds, valued at \$2,496,817. In the fiscal year 1913, 864,714 pounds, valued at \$3,486,011, entered; in the fiscal year 1914, 740,795 pounds, valued at \$4,171,390. From that time through 1919, when only 95,807 pounds, valued at \$440,780, were imported, there was a steady decline. The year 1920 shows a considerable recovery, though in quantity the import was still less than half of the 1914 figure and about half of the 30-year annual average. Below are given statistics for the period 1918–1921:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	213,405	\$499,564	\$249,782	50
1919.....	311,121	1,145,620	572,810	50
1920.....	151,196	2,279,698	1,139,849	50
1921 (9 months).....		1,157,110		

France, England, Germany, and Switzerland are the chief sources of imports.

Velvet ribbons alone also showed a decline of from 140,304 pounds, valued at \$1,749,746, in 1914, to 59,902 pounds, valued at \$203,397, in 1919.

Imports of velvet or plush ribbons for the period 1918-1921 follow:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....		\$172,169	\$86,085	50
1919.....	156,947	565,491	282,746	50
1920.....	90,124	529,757	264,879	50
1921 (9 months).....	45,609	240,187		

*Exports* are not recorded. A small export trade has grown up in broad pile fabrics, especially since the war, but its survival is questioned in the trade.

*Suggested changes.*—Page 134, line 19, of H. R. 7456: Change semicolon to a comma after “selvedges.”

### PARAGRAPH 1207.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1207. Fabrics with fast edges, wholly or in chief value of silk, not exceeding twelve inches in width, including ribbons, and articles made therefrom, tubings, garters, suspenders, braces, cords, tassels, and cords and tassels; all the foregoing composed wholly or in chief value of silk or silk and india rubber, if not embroidered in any manner by hand or machinery, and not specially provided for, 33½ per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 401. Ribbons, bandings, including hatbands, beltings, bindings, all of the foregoing not exceeding twelve inches in width, and if with fast edges, bone casings, braces, cords, cords and tassels, garters, gorings, suspenders, tubings, and webs and webbings, composed wholly or in chief value of silk, and whether composed in any part of India rubber or otherwise, if not embroidered in any manner, by hand or machinery, fifty per centum ad valorem.

PAR. 316. Ribbons, bandings, including hatbands, belts, beltings, bindings, all of the foregoing not exceeding twelve inches in width and if with fast edges, bone casings, braces, cords, cords and tassels, garters, suspenders, tubings, and webs and webbings; all the foregoing made of silk or of which silk or silk and india rubber are the component materials of chief value, if not embroidered in any manner, and not specially provided for in this section, 45 per centum ad valorem.

PAR. 358. \* \* \* coach, carriage, and automobile laces, \* \* \* 60 per centum ad valorem.

### SILK SMALL WARES, INCLUDING RIBBONS.

(See Survey I-1.)

#### RIBBONS.

*Description.*—Ribbons are narrow-woven fabrics with straight selvages. This paragraph applies only to ribbons wholly or in chief value of silk, or of silk and india rubber, with fast selvages, not over

12 inches in width, not embroidered, and not covered with pile. (See par. 1206.)

*Production* of ribbons in 1914 was valued at \$38,201,000; in 1919, at \$66,053,000. Between 1899 and 1914 the ratio of domestic production to domestic consumption increased from 83 to 93 per cent; it was over 99 per cent in 1919.

*Imports* from 1910-1918 had an average value of \$676,000; in 1914 the value was \$2,146,988; in 1918, \$105,483. Changes in fashion largely account for variations in imports, which consist mainly of extreme novelties, goods of complicated, multicolored weave, or of those with metal threads and similar articles, in which the element of hand labor is exceptionally high. These are required in quantities so small that American manufacturers do not care to concern themselves with their production. Imports are for the most part supplementary rather than competitive. Ribbons made from low-grade silk, though not produced here, are not extensively imported, their prices, plus the duty, equaling those of better-grade domestic ribbons.

Later imports are recorded as follows:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Yards.</i>			<i>Per cent.</i>
1918.....		\$96,127	\$43,257	45
1919.....	1,198,128	182,052	81,923	45
1920.....	10,484,874	989,661	445,347	45
1921 (9 months).....	3,728,910	421,957		

*Exports.*—Small quantities of ribbons are exported, principally to Canada and Latin America.

#### OTHER SILK SMALL WARES.

*Description and uses.*—Small wares include, in addition to ribbons, practically all products of ribbon looms and some small articles which are not woven, such as cords and tassels. Many of the items enumerated are in whole or in part of elastic banding which has india-rubber threads woven into the warp.

*Production* statistics are only partially comparable. In 1914 silk braids and bindings valued at \$3,073,648 were reported; trimmings, cords, tassels, ornaments, etc., other than military and tailors' trimmings, valued at \$1,674,399; labels, at \$971,789; hatbands, at \$607,204; and fishlines, at \$177,150.

*Imports.*—During 1910-1914 the import value averaged \$567,000; in 1914 it was \$527,100; and in 1918, \$147,461. Hatbands, largely from Germany, formed 80 to 90 per cent of the imports prior to the war. In 1914 they amounted to \$484,369. Thus, although the imports of small wares as a whole are far below the total domestic production, they are competitive with one branch of the industry, because they consist so largely of one item. There has been some increase in the imports of hatbands in 1920 and 1921, and also of cords and tassels, principally from the Far East.

Imports since 1917 by calendar years are recorded as follows:

	1918	1919	1920	1921 (9 months.)
Value.....	\$82,604	\$80,264	\$416,204	\$218,925
Duty.....	37,171	36,118	187,291	

*Exports.*—None recorded.

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—This small-wares paragraph is appropriately begun with the words "Fabrics with fast edges \* \* \* not exceeding twelve inches in width \* \* \* and articles made therefrom." In both manufacture and trade, woven fabrics wider than twelve inches are known as cloth.

The description covers all narrow woven wares and for the most part it is not necessary to provide for articles separately. The term "tubings" has been retained because tubings are a special form of narrow wares woven as tubes and therefore having no edges. "Bone casings" has been omitted as it is included under the term "tubings." Specific mention of "garters, suspenders, braces" is retained because if not mentioned here they might possibly be construed as belonging under wearing apparel. "Cords, tassels, and cords and tassels" are specifically mentioned because they are not woven fabrics and have heretofore been listed with woven small wares. "Tassels" is added because tassels alone were not covered by "cords" or "cords and tassels" in the act of 1913 (par. 316) and act of 1909 (par. 401). Narrow wares ornamented with embroidery or lace are more specifically provided for in paragraph 1430.

*Suggested changes.*—Page 135, lines 3 and 4: Omit words "wholly or in chief value of silk" because this is duplication of phrase in line 7.

Page 135, line 5, H. R. 7456: Change comma to semicolon after "therefrom."

Page 135, lines 8 and 9: Articles embroidered by hand or machine are specifically provided for in paragraph 1430 and the words here used "if not embroidered in any manner by hand or machinery" are unnecessary; such wording has been omitted from other paragraphs of the textile schedules.

#### PARAGRAPH 1208.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1208. Knit fabrics, in the piece, composed wholly or in chief value of silk, 35 per centum ad valorem; knit underwear, hose, half hose, and gloves, finished or unfinished, composed wholly or in chief value of silk, 40 per centum ad valorem; outerwear and other goods, knit or crocheted, finished or unfinished, composed wholly or in chief value of silk, 40 per centum ad valorem.

## ACT OF 1909.

PAR. 402. \* \* \* clothing ready made, and articles of wearing apparel of every description, including knit goods, made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer; all of the foregoing composed of silk, or of silk and metal, or of which silk is the component material of chief value, whether in part of India rubber or otherwise \* \* \* not specially provided for in this section \* \* \* sixty per centum ad valorem: *Provided*, That articles composed wholly or in chief value of any of the materials or goods dutiable under this paragraph shall pay not less than the rate of duty imposed upon such materials or goods by this section: \* \* \*.

PAR. 403. All manufacturers of silk, or of which silk is the component material of chief value, including such as have India rubber as a component material, not specially provided for in this section, fifty per centum ad valorem: \* \* \*.

## ACT OF 1913.

PAR. 317. Clothing, ready-made, and articles of wearing apparel of every description, including knit goods, made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer: all the foregoing composed of silk or of which silk or silk and india rubber are the component materials of chief value, not specially provided for in this section, 50 per centum ad valorem.

PAR. 318. \* \* \* manufactures of silk, or of which silk or silk and india rubber are the component materials of chief value, not specially provided for in this section, 45 per centum ad valorem.

## SILK KNIT GOODS.

(See Survey L-1.)

*Description and uses.*—Silk knit fabrics are made on both warp and weft knitting machines. (See cotton knit fabrics, par. 913.) The warp knit fabric is made up in the mills into underwear and gloves and to some extent into hosiery, but as yet is not on the market for the use of the home dressmaker. Other silk knit fabrics are produced in great variety and are sold in the piece at retail as well as to the garment trade. This is a field of manufacture which is constantly enlarging, new and improved processes adding to the uses of silk knit fabric. Silk underwear made in the United States is almost entirely of warp knit silk fabric, variously known as glove silk, Italian silk, tricot, milanese, etc. Gloves are made of this same fabric. Silk hosiery is made by the same processes as cotton hosiery (par. 915). "Cut" silk hosiery, made of glove silk, however, is a much more important division of the industry than is "cut" cotton hosiery. Sweaters are probably the most important articles of knit outer wear, but silk knit scarfs, bathing suits, caps, blouses and even dresses are increasingly used.

*Production.*—The total production of silk knit goods increased from a value of \$41,262,000 in 1914 to \$234,927,000 in 1919. The items which constituted the total in 1919 were hosiery valued at \$125,710,000; underwear, \$13,742,000; outer wear, including gloves, \$88,926,000; and warp-knit "cloth," \$6,437,000. The outer wear group showed the greatest percentage of increase over 1909 production. The silk hosiery industry is largely full-fashioned, but considerable quantities of seamless silk hosiery are also produced, varying with the relation of silk to cotton prices. "Cut" silk hosiery is of the best quality and is made by the underwear and glove mills.

*Imports* of silk knit goods, recorded as one item, amounted to \$181,135 in 1914. Later imports are recorded as follows:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$14,259	\$7,125	<i>Per cent.</i> 50
1919.....	68,093	34,047	50
1920.....	146,269	73,135	50
1921 (9 months).....	145,606		

*Exports* are not recorded.

*Important changes in classification.*—In H. R. 7456 silk knit goods are for the first time placed in a separate paragraph—a position warranted both by their importance and by the desirability of uniformity with other textile schedules. In the acts of 1909 and 1913 silk knit fabrics, nowhere specifically provided for, came in under the general provision of Schedule L contained in paragraph 403 of 1909 and paragraph 318 of 1913. In both these acts silk knit goods “made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer,” including hosiery, knit underwear and outer wear and other “made-up” knit goods—came under the general paragraph embracing clothing and articles of wearing apparel of silk (par. 402 of 1909 and par. 317 of 1913).

### PARAGRAPH 1209.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1209. Handkerchiefs, and woven mufflers, composed wholly or in chief value of silk, finished or unfinished, not hemmed, 33½ per centum ad valorem; hemmed or hemstitched, 40 per centum ad valorem.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 400. Handkerchiefs or mufflers composed wholly or in chief value of silk, finished or unfinished, if cut, not hemmed or hemmed only, shall pay fifty per centum ad valorem; if such handkerchiefs or mufflers are hemstitched or imitation hemstitched, \* \* \* sixty per centum ad valorem.

PAR. 315. Handkerchiefs or mufflers composed wholly or in chief value of silk, finished or unfinished; if cut, not hemmed or hemmed only, 40 per centum ad valorem; if hemstitched or imitation hemstitched, \* \* \* but not embroidered in any manner with an initial letter, monogram, or otherwise, 50 per centum ad valorem.

### SILK HANDKERCHIEFS.

(See Survey L-1.)

*Description and uses.*—There is not a steady demand for silk handkerchiefs as there is for those of cotton and linen. They are more susceptible to the vagaries of fad and fashion. During recent years large quantities of women’s cheap silk handkerchiefs have flooded the markets, but fine silk handkerchiefs, except a few for sport wear, have been little used. There is a constant though small demand for certain types of men’s silk handkerchiefs. In the bandanna size they are worn as mufflers. Silk handkerchiefs printed with flags, etc., are extensively made as souvenirs.

Silk handkerchiefs may be woven in the loom, two or three to the breadth, and then cut and finished; or they may be cut from silk cloth and hemmed or hemstitched, ironed, folded, and boxed for the trade. The material is chiefly habutai (Japanese), a pure, soft, plain-woven, unthrown washable silk. Crêpe de chine, a cloth of domestic manufacture, is also extensively used.

*Production.*—The manufacture of silk handkerchiefs is not a separate industry in the United States; it is carried on in conjunction with the manufacture of broad silks or of other kinds of handkerchiefs—production is small and varies with demand, but imports supply by far the larger part of the domestic market.

*Imports of embroidered and other fancy silk handkerchiefs, formerly included under the same paragraph at the same rates as the hemstitched article, but now covered by paragraph 358 of the act of 1913, have been slight. The plain hemstitched silk handkerchief has been the chief grade imported, occasionally constituting over 80 per cent of the total. Imports of silk handkerchiefs "cut, not hemmed or hemmed only," seldom equaled 10 per cent of the total until 1916, but since then have increased noticeably. Prior to 1916 import values of silk handkerchiefs remained fairly stationary at between \$300,000 and \$400,000 a year, despite reduced duties on the principal type (hemstitched). Japan is the chief source, supplying over 90 per cent of the total imports.*

Imports from 1918–1921 are recorded as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Dozens.</i>		
1918.....		\$1, 195, 628	\$558, 429
1919.....	1, 668, 944	1, 616, 140	751, 826
1920.....	1, 077, 062	1, 602, 581	735, 870
1921 (9 months).....	699, 048	818, 762	.....

*Exports* are not recorded.

*Important changes in classification.*—Knitted mufflers have been transferred from this provision to paragraph 1208.

## PARAGRAPH 1210.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1210. Shirt collars, composed in whole or in part of silk, whether natural or artificial, 50 cents per dozen and 20 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 402. \* \* \* clothing ready made, and articles of wearing apparel of every description, \* \* \* made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer; all of the foregoing composed of silk, \* \* \* or of which silk is the component material of chief value, \* \* \* not specially provided for in this section, \* \* \*

PAR. 317. Clothing, ready-made, and articles of wearing apparel of every description, \* \* \* made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer; all the foregoing composed of silk or of which silk \* \* \* are the component materials of chief value, not specially provided for in this section, 50 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

sixty per centum ad valorem: *Provided*, That articles composed wholly or in chief value of any of the materials or goods dutiable under this paragraph shall pay not less than the rate of duty imposed upon such materials or goods by this section: \* \* \*

PAR. 405. \* \* \* articles \* \* \* composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair, by whatever name known, and by whatever process made, forty-five cents per pound, and in addition thereto, sixty per centum ad valorem.

PAR. 319. \* \* \* articles \* \* \* composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair \* \* \* by whatever name known, and by whatever process made, 60 per centum ad valorem.

## SILK SHIRT COLLARS.

(See Survey I.-2.)

*Description and uses.*—This paragraph is restricted to shirt collars in whole or in part of silk or artificial silk, and would not include fancy collars for women.

*Production, import, and export data* are not available. It is known, however, that silk shirt collars are a small item both of production and import. Exports are probably negligible.

*Important changes in classification.*—In H. R. 7456 silk and artificial-silk shirt collars are for the first time given specific mention. The reason for this departure is not clear. Shirt collars wholly or in chief value of silk came in under the general wearing-apparel paragraphs of the acts of 1909 (par. 402) and of 1913 (par. 317) and shirt collars wholly or in chief value of artificial silk under the paragraphs of those acts (405 of 1909 and 319 of 1913) for articles of artificial silk.

This paragraph and paragraph 1211 alone of the paragraphs of this schedule provide for goods containing silk or artificial silk, when not in sufficient quantity to constitute chief value. It, therefore, includes goods which came within other textile schedules of the acts of 1909 and 1913.

*Conflict in classification.*—Paragraph 1210 conflicts with paragraph 1016, which provides for shirt collars composed wholly or in part of flax.

*Suggested changes.*—Since silk and artificial-silk shirt collars are a small item of import, and as there is no apparent reason why they should be given separate treatment, it is suggested that this provision be omitted. These articles would then come within paragraph 1212 if wholly or in chief value of silk, and within paragraph 1215 if wholly or in chief value of artificial silk. Silk striped collars in chief value of cotton would come within paragraph 918.

## PARAGRAPH 1211.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1211. Shirts, for men and boys, in whole or in part of silk, whether natural or artificial, 40 per centum ad valorem, but not less than 10 per centum in addition to the duty on the component materials.

## ACT OF 1909.

PAR. 402. \* \* \* clothing ready made, and articles of wearing apparel of every description. \* \* \* made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer; all of the foregoing composed of silk. \* \* \* or of which silk is the component material of chief value. \* \* \* not specially provided for in this section. \* \* \* sixty per centum ad valorem: *Provided*, That articles composed wholly or in chief value of any of the materials or goods dutiable under this paragraph shall pay not less than the rate of duty imposed upon such materials or goods by this section: \* \* \*

PAR. 405. \* \* \* articles \* \* \* composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair, by whatever name known, and by whatever process made, forty-five cents per pound, and in addition thereto, sixty per centum ad valorem.

## ACT OF 1913.

PAR. 317. Clothing, ready-made, and articles of wearing apparel of every description, \* \* \* made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer; all the foregoing composed of silk or of which silk \* \* \* are the component materials of chief value, not specially provided for in this section, 50 per centum ad valorem.

PAR. 319. \* \* \* articles \* \* \* composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair \* \* \* by whatever name known, and by whatever process made, 60 per centum ad valorem.

## SILK SHIRTS FOR MEN AND BOYS.

(See Survey L-1.)

*Production.*—While no figures are available as to the exact amount of domestic production, it is known that silk shirt manufacture is a large and growing industry, and that a large proportion of cotton shirts contain a silk stripe or figure and come within this paragraph. Artificial silk shirtings, usually woven with a warp or filling of cotton, are not widely produced; fancy shirts, however, often contain artificial silk stripes or figures. Shirt factories at Paterson, N. J., reported the 1921 season one of the most successful ever known.<sup>1</sup>

*Imports.*—The import of silk shirts is small in actual quantity and forms only a negligible proportion of domestic consumption. This is true, even if one include silk striped shirts with cotton the component material of chief value. A few silk shirts are imported by exclusive men's furnishing shops from England and France.

*Exports* are not recorded.

*Important changes in classification.*—In H. R. 7456 silk and artificial silk shirts are for the first time given specific mention. The reason for this departure is not clear, especially since the duty, with the exception of the minimum in the proviso, is the same as the duty on

<sup>1</sup> Daily News Record, Nov. 16, 1921.

wearing apparel in paragraph 1212. Shirts wholly or in chief value of silk came in under the general wearing-apparel paragraphs of the acts of 1909 (par. 402) and of 1913 (par. 317), and shirts wholly or in chief value of artificial silk under the artificial silk paragraphs of those acts (405 of 1909 and 319 of 1913).

This paragraph (1211) and the preceding paragraph (1210) alone of the paragraphs of this schedule provide that goods shall come within its scope if they contain any silk or artificial silk, even though not in sufficient quantity to constitute chief value. It therefore includes goods which came within other textile schedules of the acts of 1909 and 1913. The provision that the duty shall not be less than 10 per cent in addition to the duty on the component materials is ambiguous and might require destructive analysis to determine the exact weights of the various materials used. Samples can not be taken as in the case of fabrics.

*Suggested changes.*—Since silk and artificial silk shirts are a small item of import, since shirts are not specially provided for in other textile schedules, and moreover, since there is no apparent reason why they should be given separate treatment, it is suggested that the provision be omitted. Shirts in chief value of silk would then come within paragraph 1212 and those in chief value of artificial silk, within 1215. Shirts in which silk or artificial silk is not the component material of chief value come within wearing-apparel provisions according to the material of chief value.

### PARAGRAPH 1212.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1212. Clothing, ready-made, and articles of wearing apparel of every description, not knit or crocheted, manufactured wholly or in part, composed wholly or in chief value of silk, and not specially provided for, 40 per centum ad valorem: *Provided*, That articles composed wholly or in chief value of any of the materials or goods dutiable under this paragraph shall pay not less than the rate of duty imposed upon such materials or goods by this title.

#### ACT OF 1909.

PAR. 402. \* \* \* clothing ready made, and articles of wearing apparel of every description, \* \* \* made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer; all of the foregoing composed of silk or of silk and metal, or of which silk is the component material of chief value, whether in part of India rubber or otherwise, \* \* \* not specially provided for in this section, \* \* \* sixty per centum ad valorem: *Provided*, That articles composed wholly or in chief value of any of the materials or goods dutiable under this paragraph shall pay not less than the rate of duty imposed upon such materials or goods by this section: \* \* \*

#### ACT OF 1913.

PAR. 317. Clothing, ready-made, and articles of wearing apparel of every description, \* \* \* made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer; all the foregoing composed of silk or of which silk or silk and india rubber are the component materials of chief value, not specially provided for in this section, 50 per centum ad valorem.

## SILK CLOTHING.

(See Survey I-1.)

*Description.*—This paragraph includes all clothing and wearing apparel wholly or in chief value of silk, except knit goods (par. 1208), shirts for men and boys (par. 1211), and shirt collars (par. 1210).

*Production.*—All but a small percentage of the domestic consumption of silk wearing apparel is made in this country. No statistics are available, but the industry is undoubtedly larger in this than in any other country. More broad silk is produced in the United States and the wearing-apparel industry is the largest consumer of broad silks.

*Imports.*—Imports in 1914 were valued at \$2,607,596, including corsets, \$8,463; and ready-made clothing and articles of wearing apparel, \$2,599,133. Imports in 1918 were valued at \$967,860, of which corsets amounted to \$3,809, and ready-made clothing and articles of wearing apparel to \$964,051. Figures for ready-made clothing include shirts and shirt collars, specially mentioned in paragraphs 1210 and 1211.

Later imports for calendar years are recorded as follows:

	1918	1919	1920	1921 (9 months).
Value .....	\$655,028	\$1,173,168	\$2,074,279	\$1,234,613
Duty .....	326,706	585,080	103,604	.....

*Exports.*—A considerable export trade was built up during the war. Statistics were not recorded prior to 1918, since which time they show values of exports during calendar years as follows: 1918, \$3,634,861; 1919, \$7,435,929; 1920, \$11,224,687; 1921 (9 months), \$2,831,259.

*Important changes in classification.*—In H. R. 7456 the following silk goods and articles covered in the corresponding paragraphs of the acts of 1909 (par. 402) and 1913 (par. 317) are placed in other paragraphs:

- (1) Knit wearing apparel—underwear and outerwear—paragraph 1208.
- (2) Shirt collars, paragraph 1210.
- (3) Shirts for men and boys, paragraph 1211.

See discussion of "Important changes in classification" under those paragraphs.

*Suggested changes.*—The word "ready-made" should be omitted, as has been done in the wearing-apparel paragraphs of the other textile schedules, that there may be no confusion as to the intent to cover in this paragraph all wearing apparel, whether ready-made or custom-made, wholly or in chief value of silk and not specially provided for elsewhere.

## PARAGRAPH 1213.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1213. All manufactures of silk, or of which silk is the component material of chief value, not specially provided for, 35 per centum ad valorem.

## ACT OF 1909.

PAR. 403. All manufactures of silk, or of which silk is the component material of chief value, including such as have India rubber as a component material, not specially provided for in this section, fifty per centum ad valorem: *Provided*, That all manufactures of silk enumerated under any paragraph of this schedule, if composed in any part of wool, shall be classified and assessed for duty as manufactures of wool.

## ACT OF 1913.

PAR. 318. \* \* \* all manufactures of silk, or of which silk or silk and india rubber are the component materials of chief value, not specially provided for in this section, 45 per centum ad valorem.

## MANUFACTURES OF SILK N. S. P. F.

(See Survey L-2.)

*Description and uses.*—The principal items falling under this general catch-all provision are upholstery and made-up articles other than wearing apparel, composed wholly or in chief value of silk.

*Production.*—No data available.

*Imports.*—For the four fiscal years 1910 to 1913 the average annual imports of silk manufactures not specifically provided for (par. 403, act of 1909) were valued at \$548,791. In the fiscal year 1914 they amounted to \$1,090,411. Imports in later years are recorded as follows:

Calendar year.	Quantity.	Value.	Duty.
	<i>Pounds.</i>		
1918.....		\$476,659	\$214,466
1919.....	189,264	602,669	271,187
1920.....		1,183,408	532,529
1921 (9 months).....		798,374	

*Important changes in classification.*—In H. R. 7456 the following items covered by the corresponding paragraphs of the acts of 1909 (par. 403) and 1913 (par. 318) have been provided for elsewhere:

(1) Sliver—the product of the drawing operation in the conversion of waste silk into spun silk yarn. (See “Important changes in classification,” par. 1201, p. 1007.)

(2) Roving—the product of the operation immediately preceding spinning in the conversion of waste silk into spun silk yarn. (See “Important changes in classification,” par. 1202, p. 1012.)

(3) Knit fabrics in the piece; specially provided for in paragraph 1208.

## PARAGRAPH 1214.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1214. In ascertaining the weight or number of silk under the provisions of this title, either in the threads, yarns, or fabrics, the weight or number shall be taken in the condition in which found in the goods, without deduction there-

## H. R. 7456.

## SENATE AMENDMENTS.

from for any dye, coloring matter, or moisture, or other foreign substance or material. The number of single threads to the inch in the warp provided for in this title shall be determined by the number of spun or reeled singles of which such single or two or more ply threads are composed.

## ACT OF 1909.

PAR. 404. In ascertaining the weight of silk under the provisions of this schedule, either in the threads, yarns, or fabrics, the weight shall be taken in the condition in which found in the goods, without deductions therefrom for any dye, coloring matter, or other foreign substance or material. The number of single threads to the inch in the warp provided for in this schedule shall be determined by the number of spun or reeled singles of which such single or two or more ply threads are composed.

## ACT OF 1913.

[No corresponding provision.]

*Important changes in classification.*—There is but one difference between this paragraph and paragraph 404 of the act of 1909 (there is no corresponding provision in the act of 1913), and that is the insertion of the words “or number” after the word “weight” each time that it appears. Spun silk yarns are provided for in paragraph 1202 by number and silk fabrics in paragraphs 1205 and 1206 by weight.

*Comments and suggestions.*—Change “title” to “schedule” in line 17, page 136, H. R. 7456.

---

 PARAGRAPH 1215.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1215. Yarns, threads, filaments, and lame, of artificial or imitation silk, or of artificial or imitation horsehair, or of the waste of such materials, by whatever name known, and by whatever process made, if singles, 45 cents per pound; if tram, 50 cents per pound; if organzine, 60 cents per pound: *Provided*, That none of the foregoing shall pay a less rate of duty than 23 per centum ad valorem. Knit goods, ribbons, and other fabrics and articles composed wholly or in chief value of any of the foregoing, 45 cents per pound, and in addition thereto 37½ per centum ad valorem.

## ACT OF 1909.

PAR. 405. Yarns, threads, filaments of artificial or imitation silk, or of artificial or imitation horsehair, by whatever name known, and by whatever process made,

## ACT OF 1913.

PAR. 319. Yarns, threads, filaments of artificial or imitation silk, or of artificial or imitation horsehair, by whatever name known, and by whatever process made,

## ACT OF 1909.

if in the form of singles, forty-five cents per pound; if in the form of tram, fifty cents per pound; if in the form of organzine, sixty cents per pound: *Provided*, That in no case shall any yarns, threads, or filaments of artificial or imitation silk or imitation horsehair, or any yarns, threads, or filaments made from waste of such materials, pay a less rate of duty than thirty per centum ad valorem; \* \* \* beltings, cords, tassels, ribbons, or other articles or fabrics composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair, by whatever name known, and by whatever process made, forty-five cents per pound, and in addition thereto, sixty per centum ad valorem.

## ACT OF 1913.

35 per centum ad valorem; beltings, cords, tassels, ribbons, or other articles or fabrics composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair, or of yarns, threads, filaments or fibers of artificial or imitation silk, or of artificial or imitation horsehair and india rubber, by whatever name known, and by whatever process made. 60 per centum ad valorem.

## ARTIFICIAL SILK.

(See Report T. I. S.—3.)

*Description and uses.*—Artificial silk and real silk have in common one property, luster; the former is the more lustrous of the two, but has a different "feel." Artificial silk is heavier, less elastic, weaker, and more difficult to manipulate than real silk. All of the commercially important artificial silks are obtained from some form of cellulose, the predominating constituent of plant tissue. They are cheaper than real silk, and sometimes for this reason are preferred, but in general artificial silk has distinct uses and is not directly competitive with the natural product. The chief uses of artificial silk are for hosiery and other knit goods, silk and cotton fabrics, braids, plush goods, and tapestries.

*Production.*—Domestic production of artificial silk increased from approximately 1,566,000 pounds in 1913 to 10,240,000 pounds in 1920. It supplied less than one-half of domestic consumption in most pre-war years, but covered 88 per cent of the home demand in the post-war years, 1919 and 1920. This increase was a result of the varied uses of artificial silk and of war and post-war conditions, which reduced imports from Europe, especially from Germany. Until recently practically the entire domestic output has been manufactured by one company, whose stock is controlled by an English artificial-silk firm. This company uses the "viscose" process—i. e., the dissolving of wood pulp in a strong alkali and the treatment of the resulting solution with dilute caustic soda. In Europe the nitro-cellulose, the cupra-ammonium, and the new acetate processes are also used. In 1920 and 1921 several large plants—some of them of domestic and some of foreign ownership—have been completed for the production of artificial silk by various processes. There is impending, therefore, an increase both in quantity and variety of output.

*Imports* declined from 2,733,952 pounds in the fiscal year 1914 to 259,373 pounds in the fiscal year 1918: that is, from about two-thirds to one-fiftieth of the domestic consumption. Imports for the calendar years 1918–1921 are shown below. The importation for 1920 is 12.6 per cent of the total consumption.

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	120,540	\$313,785	\$109,825	35
1919.....	1,072,040	4,415,813	1,545,535	35
1920.....	1,479,610	5,059,905	1,770,967	35
1921 (9 months).....	2,785,939	4,998,918		

General imports for 1921 are shown by months as follows:

Month.	Quantity.	Value.	Month.	Quantity.	Value.
	<i>Pounds.</i>			<i>Pounds.</i>	
January.....	139,560	\$196,804	June.....	385,455	\$665,039
February.....	76,593	168,783	July.....	473,260	831,254
March.....	353,476	540,242	August.....	318,348	507,480
April.....	648,276	1,171,549	September.....	261,587	418,909
May.....	502,292	841,864			

Imports are of practically all sizes—150 denier is the largest item, but the proportion of the finer sizes is greater than in domestic production. A Belgian concern has, however, recently installed a plant in this country for the production of fine sizes. The importation of a new type of artificial silk should be noted. It comes in ribbon form for making braids and is called "ribbon straw" or "lame." Ribbon straw or lame, although flat, is made in the first process of manufacture.

Belgium, France, England, Italy, Switzerland, and Germany are all important sources.

*Exports* are not reported.

#### MANUFACTURES OF ARTIFICIAL SILK.

(See Report T. I. S.-3.)

*Description.*—Artificial silk is used in an increasing range of goods. The domestic output in 1920 was distributed as follows: Hosiery, 25 per cent; silk weaving, 13 per cent; knit goods other than hosiery, 21 per cent; cotton weaving, 10 per cent; plush fabrics, 3 per cent; tapestry, 2 per cent; braids, 14 per cent; embroidery and other minor uses, 11 per cent.

*Production* figures are not available, but the domestic output is known to be many times greater than imports.

*Imports* in the fiscal year 1914 were valued at \$643,975. Later statistics are recorded as follows:

Calendar year.	Value.	Duty.	Ad valorem rate.
			<i>Per cent.</i>
1918.....	\$36,577	\$21,946	60
1919.....	129,154	77,492	60
1920.....	726,438	435,863	60
1921 (9 months).....	319,354		

*Exports*, made up chiefly of artificial silk hosiery, are larger than imports. England, Argentina, Australia, Denmark, Canada, British South Africa, Cuba, and Italy are all important markets. For the calendar years 1918-1921 exports have been as follows: 1918, \$3,406,191; 1919, \$9,694,248; 1920, \$7,909,299; 1921 (9 months) \$2,962,843.

## ARTIFICIAL HORSEHAIR AND MANUFACTURES OF.

*Description and use.*—Artificial horsehair differs from artificial silk in that it is coarser and stiffer and is produced and used in coarse single filaments.

*Production* is not recorded separately. It has increased in recent years.

*Import* values of artificial horsehair and manufactures thereof decreased from \$569,283 in 1909 to \$63,970 in 1914. Formerly imports came principally from Germany and Austria, but lately they come from Switzerland. Imports since 1917 are recorded as follows:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
----------------	-----------	--------	-------	------------------

## YARNS, THREADS, AND FILAMENTS.

	Pounds.	Value.	Duty.	Per cent.
1918.....	1,752	\$5,185	\$1,815	35
1919.....	20,211	66,571	23,300	35
1920.....	46,090	100,516	35,181	35
1921 (9 months).....	52,056	79,596		

## MANUFACTURES OF ARTIFICIAL HORSEHAIR.

	Value.	Duty.	Per cent.
1918.....	\$398	\$239	60
1919.....	1,571	943	60
1920.....	6,937	4,162	60
1921 (9 months).....	5,504		

*Exports* are not recorded.

## SCHEDULE 13.—PAPERS AND BOOKS.

### PARAGRAPHS 1301.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1301. Printing paper, not specially provided for, one-fourth of 1 cent per pound and 10 per centum ad valorem: *Provided*, That if any country, dependency, province, or other subdivision of government shall forbid or restrict in any way the exportation of (whether by law, order, regulation, contractual relation, or otherwise, directly or indirectly), or impose any export duty, export license fee, or other export charge of any kind whatsoever (whether in the form of additional charge or license fee or otherwise) upon printing paper, wood pulp, or wood for use in the manufacture of wood pulp, the President may enter into negotiations with such country, dependency, province, or other subdivision of government to secure the removal of such prohibition, restriction, export duty, or other export charge, and if it is not removed he may, by proclamation, declare such failure of negotiations, setting forth the facts. Thereupon, and until such prohibition, restriction, export duty, or other export charge is removed, there shall be imposed upon printing paper provided for in this paragraph, when imported either directly or indirectly from such country, dependency, province, or other subdivision of government, an additional duty of 10 per centum ad valorem and in addition thereto an amount equal to the highest export duty or other export charge imposed by such country, dependency, province, or other subdivision of government, upon either an equal amount of printing paper or an amount of wood pulp or wood for use in the manufacture of wood pulp necessary to manufacture such printing paper.

ACT OF 1909.

ACT OF 1913.

SCHEDULE M.—PULP, PAPERS, AND BOOKS.

SCHEDULE M.—PAPERS AND BOOKS.

PAR. 409. Printing paper (other than paper commercially known as handmade or machine handmade paper, japan paper, and imitation japan paper by whatever name known), unsized, sized, or glued, suitable for the printing of books and newspapers, but not for covers or bind-

PAR. 322. Printing paper (other than paper commercially known as handmade or machine handmade paper, japan paper, and imitation japan paper by whatever name known), unsized, sized, or glued, suitable for the printing of books and newspapers, but not for covers or

## ACT OF 1909.

ings, not specially provided for in this section, \* \* \* valued above two and one-half cents per pound and not above four cents per pound, five-tenths of one cent per pound; valued above four cents and not above five cents per pound, eight-tenths of one cent per pound; valued above five cents per pound, fifteen per centum ad valorem: *Provided, however*, That if any country, dependency, province, or other subdivision of government shall forbid or restrict in any way the exportation of (whether by law, order, regulation, contractual relation, or otherwise, directly or indirectly) or impose any export duty, export license fee, or other export charge of any kind whatsoever (whether in the form of additional charge or license fee or otherwise) upon printing paper, wood pulp, or wood for use in the manufacture of wood pulp, there shall be imposed upon printing paper when imported either directly or indirectly from such country, dependency, province, or other subdivision of government, an additional duty of one-tenth of one cent per pound when valued at three cents per pound, or less, and in addition thereto the amount of such export duty or other export charge imposed by such country, dependency, province, or other subdivision of government, upon printing paper, wood pulp, or wood for use in the manufacture of wood pulp.

## ACT OF 1913.

bindings, not specially provided for in this section, valued above  $2\frac{1}{2}$  cents per pound, 12 per centum ad valorem: *Provided, however*, That if any country, dependency, province, or other subdivision of government shall impose any export duty, export license fee, or other charge of any kind whatsoever (whether in the form of additional charge or license fee or otherwise) upon printing paper, wood pulp, or wood for use in the manufacture of wood pulp, there shall be imposed upon printing paper, valued above  $2\frac{1}{2}$  cents per pound, when imported either directly or indirectly from such country, dependency, province, or other subdivision of government, an additional duty equal to the amount of the highest export duty or other export charge imposed by such country, dependency, province, or other subdivision of government, upon either printing paper, or upon an amount of wood pulp, or wood for use in the manufacture of wood pulp necessary to manufacture such printing paper.

[Value per pound changed from  $2\frac{1}{2}$  to 5 cents by sec. 600 of Revenue Act of 1916, and to 8 cents by Act of Apr. 23, 1920, chap. 158.]

## PRINTING PAPER.

(See Survey M-2.)

## NEWSPRINT PAPER.

*Description and uses.*—There are two kinds of printing paper, newsprint and book paper. Newsprint is a cheap grade, consisting usually of 80 per cent mechanically ground wood pulp and 20 per cent sulphite pulp. It is used primarily for printing newspapers, and secondarily for cheap magazines, books, catalogues, etc.

For further information in regard to newsprint, see paragraph 1659, p. 1440.

## BOOK PAPER.

*Description and uses.*—Book paper is of a higher grade than newsprint and is usually made entirely of chemical wood pulp. Rag pulp alone or mixed in a greater or less proportion with chemical wood pulp is used for the better grades, while some of the cheaper grades contain a small proportion of mechanically ground wood pulp. It is used primarily for printing books, magazines, and catalogues. It serves a great number of secondary purposes, among which may be mentioned its use for school pads and cheap writing papers. There are four principal grades of book paper—machine finish, sized and supercalendered, coated, and cover.

Production in 1914, was 934,979 short tons, valued at \$73,499,514; in 1919, 1,001,000 short tons, valued at \$153,368,000. The chief centers of production are to be found in the Northeastern and Lake States. The rank in percentages of output, by States, in 1914 was Pennsylvania (15), Massachusetts (14), Maine (12), Michigan (11), New York (10), Wisconsin (9), Ohio (8), all other (21).

Imports of book paper in 1914 were 3,359 short tons, valued at \$310,551, and in 1918, 139 short tons, valued at \$41,377. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	230,679	\$44,445	\$0.93	\$5,333	12
1919.....	164,886	58,319	.35	6,998	12
1920.....	4,156,464	493,411	.12	59,209	12
1921 (9 months).....	1,298,349	191,838			

Under the act of 1913, printing papers were classified for tariff purposes as (1) printing paper valued at not more than  $2\frac{1}{2}$  cents per pound, and (2) printing paper valued at more than  $2\frac{1}{2}$  cents per pound. By act of September 8, 1916, the dividing line was changed from  $2\frac{1}{2}$  cents to 5 cents, and by act of April 23, 1920, from 5 cents to 8 cents. This division by price corresponds roughly with division into newsprint and book paper. The above table is based on the division by price. The great increase in imports in 1920—the year of the so-called “paper famine”—will be noted. In spite of the great increase, however, the imports in 1920, amounted to only one-fifth of 1 per cent of the domestic production of that year.

Exports of book paper in 1914 were 14,301 short tons, valued at \$1,612,370, and in 1918, 45,036 short tons, valued at \$7,695,298. Later statistics for calendar years follow:

*Book paper (printing paper other than newsprint).*

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	99,220,241	153,382,000	95,116,118	36,155,330
Value.....	\$8,710,940	\$16,169,055	\$13,776,464	\$5,450,387

In 1919 exports of book paper amounted to 8 per cent of the domestic production, in 1920 the proportion fell to 4 per cent, and the decrease has continued in 1921.

*Important changes in classification.*—The distinction made previously between the two kinds of printing paper on the basis of value per pound has been dropped. Newsprint paper is specifically provided for as “standard newsprint paper” (par. 1659). Printing paper other than standard newsprint, which includes not only book paper (except the coated and cover grades which are provided for in other paragraphs) but also grades of newsprint other than standard newsprint paper, takes the place of printing paper valued above the maximum value per pound specified for newsprint.

The reason for the change is that the value distinction between newsprint and book paper is now unsatisfactory because of the markedly fluctuating prices of printing paper. The term "standard newsprint paper" is the commercial term for the principal subdivision of newsprint paper, being paper weighing 32 pounds per ream, used for printing newspapers. It constitutes more than nine-tenths of the total output of newsprint paper in this country. It applies to practically all the newsprint shipments from Canada to the United States. The use of this term furthermore disposes of complaints that because of the present 8-cent maximum free limit on printing paper, some cheap grades of book paper are allowed to enter this country free.

In each of the following paragraphs—paragraph 1301 on book paper, paragraph 1610 on wood pulp, and paragraph 1659 on newsprint—there is inserted a clause for a countervailing duty in case any country or part of a country restricts the free export of pulp wood, wood pulp, newsprint, or book paper. It consists of a 10 per cent ad valorem duty plus a duty equal to the highest export duty or other charge applied by the country in question to an equal or equivalent amount of pulp wood, wood pulp, or printing paper.

All three of these clauses providing countervailing duties are so phrased that an export duty placed by another country on one of the three items (wood pulp, newsprint, or book paper) or on pulp wood (in case of presidential proclamation to that effect) would presumably result in a 10 per cent import duty on all of them except pulp wood, a conditional countervailing duty on some of which is provided for independently and in a different manner in paragraph 402. In addition, the highest foreign export duty on one of them or on pulp wood would be translated into an equivalent duty on all of them (but not on pulp wood). For example, according to this interpretation, if another country should impose a certain export duty on a cord of pulp wood and it should be so announced by the President, such duty (plus 10 per cent) would immediately be applied on an amount of ground wood pulp that on the average is made from a cord of pulp wood. As considerably less chemical pulp than ground wood can be made from a cord of pulp wood, the equivalent import duty per ton of chemical pulp would be higher than on ground wood. In a similar way the equivalent duty would be worked out for standard newsprint and book paper, based on a general average of the percentages of ground wood and chemical pulp entering into the finished paper, for with these varying percentages the amounts of wood used to make a ton of paper vary considerably. Similarly, a foreign export duty on either standard newsprint, book paper, or wood pulp would be applied as an import duty (in addition to 10 per cent ad valorem) either direct or in equivalent form to all three items named.

## PARAGRAPH 1302.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1302. Paper board and pulpboard, including cardboard, and leather board or compress leather, not laminated, glazed, coated, lined, embossed, printed, decorated or ornamented in any manner, nor cut into shapes for boxes or other articles and not specially provided for, 10 per centum ad valorem: *Provided*, That for the purposes of this Act any of the foregoing less than nine one-thousandths of an inch in thickness shall be deemed to be paper; sheathing paper, roofing paper, deadening felt, sheathing felt, roofing felt or felt roofing, whether or not saturated or coated, 10 per centum ad valorem.

## ACT OF 1909.

PAR. 407. Sheathing paper and roofing felt, ten per centum ad valorem.

PAR. 415. \* \* \* cardboard and bristol board, thirty-five per centum ad valorem; \* \* \*

PAR. 564. Felt, adhesive, for sheathing vessels [Free].

[No corresponding provision for paper board, pulpboard, and leather board.]

## ACT OF 1913.

PAR. 320. Sheathing paper, pulpboard in rolls, not laminated, roofing felt, common paper-box board, not coated, lined, embossed, printed or decorated in any manner, nor cut into shapes for boxes or other articles, 5 per centum ad valorem.

PAR. 328. \* \* \* cardboard and bristol board, \* \* \* 25 per centum ad valorem.

PAR. 481. Felt, adhesive, for sheathing vessels [Free].

PAR. 530. \* \* \* leather board or compressed leather; \* \* \* [Free].

[No corresponding provision for paper board.]

## PAPER BOARD AND BUILDING PAPERS AND FELTS.

(See Survey M-1.)

*Description and uses.*—Paper board and pulpboard, which may be regarded as synonymous terms, consist of paper  $\frac{9}{1000}$  of an inch or more in thickness. They are made in the main on a cylinder machine from a cheap grade of pulp, the strength and condition of the fibers not being an important element of consideration except in the best grades. About 80 per cent of the United States paper board output is made of waste paper. The principal use of paper board is in making paper boxes and other containers. It is used also in sheathing the interior of buildings; in bookbinding; in printing; in making trunks, suitcases, shoes, tags, cartridges, cards for street railway advertising, etc., placards of various sorts; and other articles; and for various other purposes. The principal kinds of paper board are box board, wall board, binders' board, bristol board, tag board, pressboard (see par. 1313 for pressboard), leatherboard, trunk board, and cartridge board. The above terms overlap to a certain extent. The term cardboard is often used to cover a number or all of the varieties of paper board.

Building papers and felts are heavy, coarse papers made usually on a cylinder machine out of coarse, low-grade stock, such as woolen, cotton, and jute waste; old gunny sacks; paper-board cuttings; sulphite screenings; waste paper of all sorts; old coarse, dirty rags; cornstalks; straw—in fact, almost any fibrous material. They are used for roofing buildings, as a liner for the walls of buildings, for deadening sounds by being placed under carpets or floors, and for manufacturing shoe soles.

*Production.*—The production of paper boards in 1914 was 1,208,795 short tons, valued at \$39,493,174, and in 1919, 1,885,000 short tons, valued at \$124,090,000. The production of building paper in 1914 was 243,908 short tons, valued at \$9,475,733, and in 1919, 195,000 short tons, valued at \$17,737,000.

*Imports of pulpboard* in 1914 were valued at \$203,862; in 1918, at \$1,377,291. Imports of paper box boards in 1914 were valued at \$43,137; in 1918, at \$16,619. Imports of cardboard and bristol board (including bristol board made on a Fourdrinier machine) in 1914, were valued at \$81,229; in 1918, at \$10,081. Imports of sheathing paper in 1914 were valued at \$4,236; in 1918, at \$9,235, exclusively from Canada. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.

Exports of paper board and strawboard in 1915 were valued at \$663,230. Exports of sheathing paper in 1914 were valued at \$1,029,127. Later export values for calendar years of paper board and strawboard follow: 1918, \$3,055,255; 1919, \$4,604,048; 1920, \$5,553,094; 1921 (9 months), \$1,901,530.

*Important changes in classification.*—See General Notes on Paragraph below.

#### LEATHER BOARD OR COMPRESSED LEATHER.

*Description and uses.*—Leather board or compressed leather is a composition made of leather scrap and paper. It is used principally for insoles and heels of shoes.

*Production.*—No data available.

*Imports, 1918–1921, are shown in following table:*

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$119,577	.....
1919.....	795,256	82,661	\$0.10
1920.....	213,746	21,352	.10
1921 (9 months).....	96,455	9,917	.....

*Important changes in classification.*—Leather board and compressed leather (par. 530) and adhesive felt for sheathing vessels (par. 481) have been transferred from the free list of the act of 1913.

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—All varieties of paper board which have been advanced no further than the original manufacture on the paper machine have been grouped together in this paragraph. The aim has been to throw together all kinds of paper board which were separately named in the act of 1913, such as cardboard and cylinder-machine bristol board in paragraph 328, leather board in paragraph 530 and box board and pulpboard in paragraph 320. It appears to be desirable for the purpose of avoiding confusion and inconsistencies to place all paper board which has not undergone special processes of manufacture on the same tariff basis. Some manufacturers define paper board as paper nine one-thousandths of an inch or more in thickness. As this seems to be the more generally accepted dividing line between paper and paper board, it is used in the present classification. The phrasing "sheathing paper and roofing felt" is amplified to include in general all papers and felts used for building purposes whether or not they had their origin on a paper machine. It is anticipated that felt now admitted free under paragraph 481 as "adhesive felt for sheathing vessels" will be dutiable under this paragraph. Apparently the greater part of the imports of this adhesive felt has been used in the manufacture of soles for shoes and as a substitute for roofing felt. Adhesive felt would appear to have practically the same use for building purposes as tar-saturated roofing felt or paper. Thus the need of two items for this general grade of paper does not appear to be evident and the two are combined.

## PARAGRAPH 1303.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1303. Filter masse or filter stock, composed wholly or in part of wood pulp, wood flour, cotton or other vegetable fiber, 1½ cents per pound and 15 per centum ad valorem; indurated fiber ware, masks composed of paper, pulp or papier-mâché, manufactures of pulp, and manufactures of papier-mâché, not specially provided for, 23 per centum ad valorem.

## ACT OF 1909.

PAR. 408. Filter masse or filter stock, composed wholly or in part of wood pulp, wood flour, cotton or other vegetable fiber, one and one-half cents per pound and fifteen per centum ad valorem.

PAR. 447. Indurated fiber ware and manufactures of pulp, not specifically provided for in this section, printed or unprinted, thirty-five per centum ad valorem.

PAR. 464. Manufactures of \* \* \* papier-mâché, \* \* \* or of which these substances or any of them is the component material of chief value, not specially provided for in this section, \* \* \* thirty-five per centum ad valorem.

PAR. 465. Masks, composed of paper or pulp, thirty-five per centum ad valorem.

## ACT OF 1913.

PAR. 321. Filter masse or filter stock, composed wholly or in part of wood pulp, wood flour, cotton or other vegetable fiber, 20 per centum ad valorem.

PAR. 355. Indurated fiber ware and manufactures of pulp, not specially provided for in this section, 25 per centum ad valorem.

PAR. 369. \* \* \* manufactures of \* \* \* papier-mâché, \* \* \* or of which these substances or any of them is the component material of chief value, not specially provided for in this section, 25 per centum ad valorem; \* \* \*.

PAR. 370. Masks, of whatever material composed, 25 per centum ad valorem.

## FILTER MASSE, INDURATED FIBER WARE, PAPIER-MÂCHÉ, ETC.

(See Surveys M-1, M-4, and N-11.)

*Description and uses.*—Filter masse (M-1) is a mass of cellulose or fiber, usually pressed into the form of cakes, varying in dimension from 12 by 12 by 1 inch to 20 by 20 by 2 inches, with embossed top and bottom. Although made of the same material as many kinds of paper, it is put up in entirely different form. It is used for clarifying beer, wine, soft drinks, glue, gelatine, vinegar, cider, soups, fruit beverages, chemicals, etc. The best quality of filter masse, like the best quality of paper, is made of fiber from selected white linen and cotton rags, and also of cotton linters. The greater part of the American production is of this type. Sulphite wood pulp and to a smaller degree jute fiber are used mainly for the cheaper grades; some asbestos fiber is sometimes also mixed in, particularly in the better grades. The chemicals used are lime, chloride of lime, and sulphuric acid.

Indurated fiber ware (N-11) is wood pulp chemically treated and molded into pails, kegs, tubs, boxes, cuspidors, coolers, trunks, cases, etc. Other manufactures of pulp include composite board for car ceilings, bulkheads, and door panels for steamboats, vulcanized fiber and fiber specialties for motors and dynamos, insulators, skate wheels, washers, disks and bushings, railway signals, electric rail joints, noiseless rollers and gears, fiber sheets, and fiber rods and tubing.

Papier-mâché (M-4) is a hard, tough, and plastic substance generally made from pulped waste paper, mixed with mineral matter, such as china clay, rosin, etc., or made from sheets of paper glued and pressed together. It is molded when moist by steel dies into architectural ornaments, lacquered boxes, trays, durable utensils, dress forms, window dummies, signs, figures, toy animals, other kinds of toys, and other articles.

*Production.*—The annual production of filter masse in the United States is about 750,000 pounds per year. Owing to the decrease in the demand for filter masse on account of the decrease in the production of alcoholic beverages, the establishments now existing in this country have no difficulty in producing enough filter masse for domestic requirements; nevertheless, manufacturers say that the use of filter masse for filtering soft drinks and other liquors has increased to such an extent as largely to make up for the decrease in its use for filtering wine and beer.

In 1914 the production in the United States of pulp goods, which include indurated fiber ware, was valued at \$4,483,000. There were 24 establishments, located chiefly in Delaware and New York. The total capital was \$6,862,000, and the number of wage earners, 1,654. In 1919 the value of production had increased to \$24,257,000, and the number of establishments to 42. A very rough estimate places the average annual output of papier-mâché in the United States at 5,000 tons, valued at \$250,000.

*Imports* in 1914 of filter masse were 486,476 pounds, valued at \$53,974; of indurated fiber ware and manufactures of pulp at \$4,559. Imports of manufactures of papier-mâché in 1914 were valued at \$25,679. (Imports of papier-mâché unmanufactured not segregated.) Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
----------------	-----------	--------	-------------	-------	------------------

FILTER MASSE OR FILTER STOCK, COMPOSED WHOLLY OR IN PART OF WOOD PULP, WOOD FLOUR, COTTON, OR OTHER VEGETABLE FIBER.

1920.....		33,024		8,256	25
1921 (9 months).....		29,960			

*Exports not segregated.*

*Important changes in classification.*—To filter masse have been added indurated fiber ware and manufactures of papier-mâché from the sundries schedule because these goods are akin to filter masse in being made of pulp. Masks have also been transferred from the sundries schedule. The act of 1913 includes all masks, whatever the material, and the act of 1909 masks of paper or pulp only. The present act retains the 1909 phraseology with the addition of papier-mâché as a material, leaving all other masks dutiable under other schedules according to the material.

*Suggested changes.*—Page 139, line 6, of H. R. 7456: Change comma to a semicolon after "ware."

### PARAGRAPH 1304.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1304. Papers commonly known as tissue paper, stereotype paper, and copying paper and all papers not specially provided for in this section, weighing not over eight pounds to the ream of four hundred and eighty sheets on the basis of twenty by thirty inches, and whether in reams or any other form, 6 cents per pound and 15 per centum ad valorem; if weighing over eight pounds and less than twelve and one-half pounds to the ream, 5 cents per pound and 15 per centum ad valorem; crêpe paper, 6 cents per pound and 15 per centum ad valorem: *Provided*, That no article composed wholly or in chief value of one or more of the papers specified in this paragraph shall pay a less rate of duty than that imposed upon the component paper of chief value of which such article is made.

#### ACT OF 1909.

PAR. 410. Papers commonly known as copying paper, stereotype paper, bibulous paper, tissue paper, pottery paper, and all papers not specially provided for in this section, colored or uncolored, white or printed, weighing not over six pounds to the ream of four hundred and eighty sheets, on the basis of twenty by thirty inches, and whether in reams or any other form, six cents per pound and fifteen per centum ad valorem; if weighing over six pounds and less than ten pounds to the ream, and letter copying books, whether wholly or partly manufactured, five cents per pound and fifteen per centum ad valorem; crêpe paper \* \* \* five cents per pound and fifteen per centum ad valorem: *Provided*, That no article composed wholly or in chief value of one or more of the papers speci-

#### ACT OF 1913.

PAR. 323. Papers commonly known as copying paper, stereotype paper, bibulous paper, tissue paper, pottery paper, \* \* \* crêpe paper \* \* \* and articles manufactured from any of the foregoing papers or of which such paper is the component material of chief value, 30 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

fied in this paragraph shall pay a less rate of duty than that imposed upon the component paper of chief value of which such article is made.

## TISSUE PAPER, ETC.

(See Survey M-3.)

*Description and uses.*—Tissue paper: The predominant characteristic distinguishing tissue paper from other kinds of paper is its thinness. Tissue paper is a thin paper of fine, soft texture, silky to the touch, translucent, and to a limited extent transparent. The better qualities are made from rag and the cheaper from wood pulp. Its principal uses are for toilet purposes, for napkins, and for wrapping articles, especially those which the manufacturer does not wish to tarnish. The antitarnishing quality results from special processes pursued in its manufacture, which makes it free from sulphur or other chemicals that would tarnish a metal article.

Tissue paper is treated in H. R. 7456 as paper weighing less than 12½ lbs. per ream of 480 sheets on the basis of 20 x 30 in. Stereotype and copying papers are merely subdivisions of tissue paper. Stereotype paper is an extra strong, pliable tissue used in the manufacture of stereos (molds or matrices), from which printing plates are made. It is often an absorbent, unsized, so-called waterleaf paper. The sheets of paper, a considerable number together and backed by matrix paper, which is absorbent paper similar to high-grade blotting paper, and by ordinary brown paper, are pressed against the type to form the mold, the metal for the plate being then cast in the mold. Copying paper is a strong unsized, usually cheap tissue paper, used for the manufacture of letter books, in which copies of letters are kept, and also for the manufacture of carbon paper.

Crêpe paper is usually a very thin, strong tissue paper, variously colored, and passed through heavy embossed rollers which crinkle the paper into a form resembling crêpe. It is used for fancy and decorative purposes and also for paper towels. Some grades of crêpe paper are heavier than tissue paper.

*Production.*—The production of tissue paper in 1914 was 115,401 tons, valued at \$11,535,720. In 1919 it was 191,000 tons, valued at \$40,696,000. Nearly half the tissue paper produced in this country is made in New York. The other tissue-paper States of importance are New Jersey, Wisconsin, New Hampshire, Pennsylvania, and Massachusetts. There are no separate figures available for the production of crêpe paper.

*Imports* in 1914 of tissue, stereotype, letter-copying, and pottery papers were 1,996,751 pounds, valued at \$383,831. Imports of crêpe and filter paper and articles manufactured therefrom were 984,596 pounds, valued at \$144,538. Later statistics follow:

Carbon paper.....	579,306	964,288	1,029,898	394,027

*Important changes in classification.*—As the purpose of this paragraph has always been to include tissue paper in general, it has been reworded so as to be more consistent. The classification in the act of 1913 and preceding acts grouped both bibulous and filtering paper along with tissue paper. Filtering paper is a different kind of paper from tissue paper; consequently it is now being removed from this paragraph and appears in paragraph 1309. As bibulous paper is the term for absorbent papers in general, such as blotting paper, it is undesirable to use it in this connection. Apparently it was placed here originally in order to include so-called bibulous tissue paper, the principal use of which seems to be for massage purposes in beauty parlors. The term is very little used in the trade to-day, and what bibulous tissue paper might be imported would easily fall under the general heading "tissue paper." Also, the paragraph has been rearranged somewhat so that the term "tissue paper" stands at the head. It was hardly logical, in the old phraseology, to name copying paper first, as copying paper is merely a relatively unimportant variety of tissue paper. The term "pottery paper" has been dropped as a term not used in the paper trade. Pottery paper is either a thin tissue of good quality, well glazed, used for wrapping pottery, or a special kind of paper by which designs are transferred to pottery. In the former sense it is sufficiently covered by the term "tissue paper," and in the latter case it would probably be covered by decalcomania paper. The item letter-copying books has been left out both because it is unimportant and because it is sufficiently covered by the provision in this paragraph for manufactures of tissue and similar papers. Also the weight qualifications have been revised so that papers weighing up to 12½ pounds per ream are classed in this paragraph as tissue paper, instead of those weighing up to 10 pounds per ream as in the act of 1909. (The act of 1913 has no weight qualification.) As in the act of 1909 crêpe paper is not included in the weight classification. The reason for this is that it is desired to extend the jurisdiction of this paragraph to crêpe paper even if its weight is above the maximum fixed for tissue paper in general. Crêpe paper is ordinarily a tissue paper, and so is properly included in this paragraph.

Paper (other than crêpe) above 12½ pounds per ream will fall under whatever other heading in the paper schedule it happens to come, such as the writing-paper paragraph.

*Conflicting provisions.*—The provision in this paragraph for "all papers not specially provided for in this section," is in conflict with the concluding provision of paragraph 1309 for "paper not specially provided for."

*Suggested changes.*—As the context of the provision for “all papers not specially provided for in this section” relates to papers of the tissue class, it is suggested that the word “all” in line 10, page 139 be changed to “similar.” The words “in this section” should in any event be stricken out of line 11, page 139, to agree with the practice elsewhere in the bill H. R. 7456. Page 139, line 15, of H. R. 7456: Strike out “if” before “weighing,” to agree with line 11 and practice elsewhere.

---

PARAGRAPH 1305.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1305. Papers with coated surface or surfaces, not specially provided for, 5 cents per pound; papers with coated surface or surfaces, embossed or printed otherwise than lithographically, and papers wholly or partly covered with metal or its solutions (except as herein provided), or with gelatin or flock, 5 cents per pound and 15 per centum ad valorem; papers, including wrapping paper, with the surface or surfaces wholly or partly decorated or covered with a design, fancy effect, pattern, or character, except designs, fancy effects, patterns, or characters produced on a paper machine without attachments, or produced by lithographic process,  $4\frac{1}{2}$  cents per pound, and in addition thereto, if embossed, or printed otherwise than lithographically, or wholly or partly covered with metal or its solutions, or with gelatin or flock, 17 per centum ad valorem: *Provided*, That paper wholly or partly covered with metal or its solutions, and weighing less than fifteen pounds per ream of four hundred and eighty sheets, on the basis of twenty by twenty-five inches, shall pay a duty of 5 cents per pound and 17 per centum ad valorem; gummed papers, including decalcomania paper not printed, 5 cents per pound; cloth-lined or reinforced paper, 5 cents per pound and 17 per centum ad valorem; papers with paraffin or wax-coated surface or surfaces, vegetable parchment paper, grease-proof and imitation parchment papers which have been supercalendered and rendered transparent or partially so, by whatever name known, all other grease-proof and imitation parchment paper, not specially provided for, by whatever name known, 3 cents per pound and 13 per centum ad valorem; bags, printed matter other than lithographic, and all other articles, composed wholly or in chief value of any of the foregoing papers, not specially provided for, and all boxes of paper or papier-mâché or wood covered or lined with any of the foregoing papers or

lithographed paper, or covered or lined with cotton or other vegetable fiber, 5 cents per pound and 20 per centum ad valorem; plain basic paper for albumenizing, sensitizing, baryta coating, or for photographic or solar printing processes, 3 cents per pound and 15 per centum ad valorem; albumenized or sensitized paper or paper otherwise surface coated for photographic purposes, 3 cents per pound and 20 per centum ad valorem; wet transfer paper or paper prepared wholly with glycerin or glycerin combined with other materials, containing the imprints taken from lithographic plates, 30 per centum ad valorem.

## ACT OF 1909.

PAR. 166. \* \* \* wet transfer paper or paper prepared wholly with glycerin, or glycerin combined with other materials, containing the imprints taken from lithographic plates, fifty per centum ad valorem.

PAR. 411. Papers with coated surface or surfaces, not specially provided for in this section, five cents per pound; if wholly or partly covered with metal or its solutions (except as hereinafter provided), or with gelatin or flock, or if embossed or printed, five cents per pound and twenty per centum ad valorem; papers, including wrapping paper, with the surface decorated or covered with a design, fancy effect, pattern or character, whether produced in the pulp or otherwise, but not by lithographic process, four and one-half cents per pound; if embossed, or wholly or partly covered with metal or its solutions, or with gelatin or flock, 5 cents per pound and twenty per centum ad valorem: *Provided*, That paper wholly or partly covered with metal or its solutions, and weighing less than fifteen pounds per ream of four hundred and eighty sheets, on a basis of twenty by twenty-five inches, shall pay a duty of five cents per pound and twenty-five per centum ad valorem; parchment papers, and grease-proof and imitation parchment papers which have been supercalendered and rendered transparent, or partially so, by whatever name known, 2 cents per pound and 10 per centum ad valorem; all other grease-proof and imitation parchment papers, not specially provided for in this section, by whatever name known, two cents per pound and ten per centum ad valorem; bags, \* \* \* printed matter other than lithographic, and all other articles composed wholly or in chief value of any of the foregoing papers, not specially provided for in this section, and all boxes of paper or wood covered with any of the foregoing paper, five cents a pound and thirty per centum ad valorem; albu-

## ACT OF 1913.

PAR. 137. \* \* \* wet transfer paper or paper prepared wholly with glycerin, or glycerin combined with other materials, containing the imprints taken from lithographic plates, 25 per centum ad valorem.

PAR. 324. Papers wholly or partly covered with metal leaf or with gelatin or flock, papers with white coated surface or surfaces, calender plate finished, hand dipped marbled paper, parchment paper, and lithographic transfer paper not printed, 25 per centum ad valorem; papers with coated surface or surfaces suitable for covering boxes, not specially provided for, whether or not embossed or printed except by lithographic process, 40 per centum ad valorem; all other paper with coated surface or surfaces not specially provided for in this section; uncoated papers, gummed, or with the surface or surfaces wholly or partly decorated or covered with a design, fancy effect, pattern, or character, whether produced in the pulp or otherwise except by lithographic process, cloth-lined or reinforced papers, and grease-proof and imitation parchment papers which have been supercalendered and rendered transparent or partially so, by whatever name known, all other grease-proof and imitation parchment papers, not specially provided for in this section, by whatever name known, bags, \* \* \* and all other articles composed wholly or in chief value of any of the foregoing papers, not specially provided for in this section, and all boxes of paper or papier-mâché or wood covered with any of the foregoing papers or covered or lined with cotton or other vegetable fiber, 35 per centum ad valorem; albuminized or sensitized paper or paper otherwise surface-coated for photographic purposes, 25 per centum ad valorem; plain basic papers for albuminizing, sensitizing, baryta coating, or for photographic or solar printing processes, 15 per centum ad valorem.

## ACT OF 1909.

menized or sensitized paper or paper otherwise surface coated for photographic purposes, thirty per centum ad valorem; plain basic papers for albumenizing, sensitizing, baryta coating, or for photographic or solar printing processes, three cents per pound and ten per centum ad valorem.

PAR. 418. All boxes made wholly or in chief value of paper or papier-maché, if covered with surface-coated paper, forty-five per centum ad valorem.

[No corresponding provision for papers with paraffin or wax-coated surface or surfaces.]

## ACT OF 1913.

PAR. 567. \* \* \* decalcomania paper, not printed [Free].

[No corresponding provision for papers with paraffin or wax-coated surface or surfaces.]

SURFACE-COATED, WAXED, GUMMED, DECALCOMANIA, AND DECORATED PAPER, ETC.

(See Surveys M-3, M-4, and C-15.)

*Description and uses.*—Surface-coated paper, as the name implies, is paper one or both surfaces of which may be coated. The larger part of the surface-coated paper made in the United States is coated with clay. There are also some coatings with a metal base and others made of gelatin and other products. An important grade is coated book paper, which is used for printing half-tones and for other printing purposes. It is usually coated on both sides, its base generally being a good grade of book paper. Other kinds of coated paper are used mainly for covering boxes and for various other fancy or decorative purposes. They are usually known as super-calendered, flint-glazed, friction glazed, plated, embossed, waterproof, and fancy papers. Flock, referred to in one of the tariff items on surface-coated paper, is finely ground wool, felt, or vegetable fiber. It is a coating substance.

Gummed paper is a kind of coated paper one surface of which is covered with gum or glue. It is used in making stickers, labels, stamps, seals, etc.

Waxed paper is also a kind of coated paper with one or both surfaces covered with wax. It is used for wrapping and preserving bread, cake, pie, and various bakery products, confectionery, other food products, drugs, flowers, etc.

Decalcomania paper is a kind of gummed paper. It is used for transferring colored designs to glassware, porcelain, marble, and the like. It is covered with a vegetable gum or alumina coating, on which the design in colors is placed and which allows the complete removal of the design and its adherence to the surface of the glassware or other article when the paper is pressed against the latter after being soaked in water.

Cloth-lined or reinforced paper is paper lined with cloth or reinforced by string or some other substance. This paper is used sometimes where an especially strong, nontearable variety of packing paper is needed, but there are also cheaper grades, which are not very durable. It is much used in merchandise shipments, particularly for lining cases or covering machinery shipped in crates and for outside coverings of cases shipped on flat cars. An important use

for the better grades is as a durable drawing paper for draughtsmen and as a tough, durable paper for children's books.

Vegetable parchment paper (M-3) is an unsized or waterleaf paper made preferably of cotton rags, vegetable fiber, or sulphite wood pulp treated with dilute sulphuric acid. It is dull in finish, dense, hard, and hornlike; it is grease proof, waterproof, translucent, and to a limited extent transparent. It is used for drawing, bookbinding, as covers for corks in medicine bottles, for filtering in sugar manufacture, in refining gutta-percha, as wrapping paper for greasy substances and for various food products, as casing for sausages, and in many other ways.

Vulcanized paper (M-3), produced in a manner similar to the production of vegetable parchment paper, ordinarily so called, but treated with zinc chloride instead of sulphuric acid, is a type of vegetable parchment paper. This paper is much used, a number of sheets being pressed together, in the manufacture of trunks, tubs, waste baskets, trucks, etc. Willesden paper is a variety of vegetable parchment paper, made by passing paper through an ammoniacal solution of copper oxide.

Grease-proof or imitation parchment paper (M-3) is made of sulphite wood pulp, preferably that produced by the Mitscherlich or slow-cook process. In the course of manufacture the stock is subjected to an unusually extended process of beating, which reduces it to a gelatinous condition. The first finished product of this process is a paper with a dull finish, dense and hard, resembling parchment paper in various ways, especially in the characteristic hornlike appearance above noted. The paper is not waterproof and is but partially grease proof; that is, it is not entirely impervious to grease, but nevertheless it has the quality of resisting grease to a limited extent. The paper is more tenacious than sulphite paper not so treated. It is translucent and imperfectly transparent. A part of the paper thus produced is afterwards moistened and run through supercalender rollers under heat and pressure. It loses thus its dull finish and becomes very glossy and more perfectly transparent.

The dull, uncalendered kind is known variously in the trade as imitation parchment, grease proof, and pergamyn. The calendered, transparent kind is usually called glassine, parchmyn, or japanin paper, although sometimes, as in the tariff act of 1913, also called grease proof. Both kinds are used as a wrapping for cakes and similar articles which do not require a perfectly grease-proof covering. The supercalendered variety is more useful, however, for the manufacture of an outer wrapping for bottles and boxes, through which labels may be read, as the transparent material for "window envelopes," and for making sanitary protectors for telephone receivers.

Photographic and blue-print paper (M-4): Two groups of paper are included in the tariff items which cover photographic and blue-print paper, namely, (1) photographic paper and platinum paper, and (2) blue-print paper and brown-print paper. Each of these in turn is divided into two kinds: (1) "Raw" paper, which is practically the same as high-grade writing paper, and (2) the finished paper, which is the "raw" paper after it has been sensitized for printing by photographic, blue-print, or brown-print processes. As the names imply, these are the kinds of light-sensitive paper on which photo-

graphs, photostats, blue prints, and other similar forms of prints are made.

Wet transfer paper (C-15) is a kind of coated paper used in lithography for transferring designs to lithographic plates. As indicated in the tariff phraseology, this paper contains the imprints taken from lithographic plates. The same sort of paper coated but not yet imprinted with the design is included under the provisions for surface-coated paper in the first part of paragraph 1305.

*Production.*—Surface-coated, waxed, gummed, decalcomania, and decorated paper: In 1914, 117,342 tons of coated book paper, valued at \$11,605,584, were produced in the United States. The 1919 production was 132,000 tons, with a value of \$24,010,000. No figures are available for production of other kinds of coated paper. In the 12 months ended January, 1921, the 22 members of the Waxed Paper Manufacturers' Association, representing approximately 85 per cent of the waxed-paper production of the United States, produced 46,880 tons of waxed paper. The annual output of decalcomania paper is estimated at 100 tons, valued at \$80,000. The decalcomania paper industry is a new one in the United States, having been carried on only since 1916. Decalcomania paper manufacturers estimate domestic consumption at 600 tons annually. No figures for the production of gummed paper and decorated paper are available.

Cloth-lined or reinforced paper production in the United States is estimated at 1,000 to 1,500 tons annually.

Vegetable parchment-paper production in the United States is about 12,000 tons per year. In January, 1921, six mills were engaged in parchmentizing. The 1915 production was 13,500 tons and the 1920 production 10,800 tons.

Imitation parchment-paper production figures are not available.

Bags, boxes, etc.: See par. 1313, p. 1088.

Photographic and blue-print paper: The annual production of "raw" photographic paper is roughly estimated at 5,000 tons.

Figures for sensitized photographic paper production and raw blue-print paper production are not available. The annual output of sensitized blue-print paper is variously estimated by sensitizers at from 2,000 to 10,000 tons.

Wet transfer paper: No figures available.

*Imports* for 1914 and 1918 (fiscal years) of the paper mentioned in paragraph 1305 are shown in the following table:

	1914		1918	
	<i>Pounds.</i>	<i>Value.</i>	<i>Pounds.</i>	<i>Value.</i>
Grease-proof and imitation parchment papers (act of 1909) supercalendered and rendered transparent.....	6,184,511	\$300,725	287,234	\$27,469
Parchment paper (act of 1913 only).....		51,483		27,104
Plain basic for albuminizing, sensitizing, etc.....		1,371,346	1,416,513	430,252
Reinforced or cloth-lined paper.....	14,145	2,281	13,318	9,775

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
BOXES OF PAPER, PAPIER-MÂCHÉ, OR WOOD COVERED WITH SURFACE-COATED PARCHMENT, OR SIMILAR PAPERS, OR COVERED OR LINED WITH COTTON OR OTHER VEGETABLE FIBERS.					
					<i>Per cent.</i>
1918.....		\$121,510		\$42,528	35
1919.....		72,677		25,430	35
1920.....		129,813		45,435	35
1921 (9 months).....		19,771			

*Exports* since 1917 by calendar years are shown in the following tables:

	1918	1919	1920	1921 (9 months).
Wax paper.....	\$228,137	\$552,167	\$403,810	\$106,228
Paper bags.....	884,415	1,566,373	2,593,459	670,882
Paper boxes and cartons.....	1,079,413	1,351,930	2,237,596	988,436
All other paper.....	6,170,601	8,799,550	11,091,952	4,879,930

*Important changes in classification.*—This paragraph has been remodeled substantially on the lines of the act of 1909 with certain additions.

Surface-coated paper: Changes in wording have been made for the sake of clearness, but little change in application. The items paper with white-coated surface or surfaces, calender plate finished, hand dipped, marbled paper, surface-coated papers suitable for covering boxes, and lithographic transfer paper not printed, which appeared for the first time in the act of 1913, did not need to be enumerated *eo nomine* in H. R. 7456 because sufficiently covered otherwise.

Decorated paper: To the item "papers, including wrapping paper," etc., which appeared in the act of 1909, has been added a qualifying phrase, "except designs, fancy effects, patterns, or characters produced on a paper machine without attachments," and the phrase "whether produced in the pulp or otherwise" has been omitted. The purpose of the change is to exclude from the application of this paragraph papers, particularly wrapping paper, which have been decorated to no greater extent than receiving lines or designs as a watermark while they are on the ordinary paper machine.

Gummed paper: Gummed paper is different from the paper with which it is classified in the act of 1913, and hence is given a separate provision. Decalcomania paper not printed exempt from duty under the act of 1913 (par. 567) has been included with gummed paper, where it appears logically to belong.

Wax-coated paper: This is a new item. The trade has suggested its inclusion and it appears that they are justified in doing so for wax-coated paper is an important item of production in the United States.

Vegetable parchment paper: In the acts of 1909 and 1913 this was called parchment paper. The new wording is used to distinguish it from certain fine writing papers which are sometimes called parchment papers, and because it is the ordinarily used trade designation. It is a chemically treated paper different in process of making from any other paper in the paper schedule, but has been grouped with imitation parchment paper because of the similarity of use.

Photographic paper: The plain basic paper is now being placed ahead of the sensitized paper, as being a more logical order than the reverse which occurs in the acts of 1909 and 1913.

Wet transfer paper or glycerine-prepared paper contains imprints from lithographic plates. This paper is a coated paper used in the lithographic process for transferring lithographic designs. In the acts of 1909 and 1913 it appeared in the metal schedule in paragraphs 166 and 137, respectively. Being coated paper, its logical location is in this paragraph.

*Suggested changes.*—Photographic and blue-print paper: Inasmuch as the albumenizing process went out of use some years ago, the words "albumenized" and "albumenizing" might be omitted.

It is suggested that cigarette paper be moved from paragraph 1452 either to this paragraph or to paragraph 1309.

---

### PARAGRAPH 1306.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1306. Pictures, calendars, cards, labels, flaps, cigar bands, placards, and other articles, composed wholly or in chief value of paper lithographically printed in whole or in part from stone, gelatin, metal, or other material (except boxes, views of American scenery or objects, and music, and illustrations when forming part of a periodical or newspaper, or of bound or unbound books, accompanying the same), not specially provided for, shall pay duty at the following rates: Labels and flaps, printed in less than eight colors (bronze printing to be counted as two colors), but not printed in whole or in part in metal leaf, 20 cents per pound; cigar bands of the same number of colors and printings, 30 cents per pound; labels and flaps printed in eight or more colors (bronze printing to be counted as two colors), but not printed in whole or in part in metal leaf, 30 cents per pound; cigar bands of the same number of colors and printings, 40 cents per pound; labels and flaps, printed in whole or in part in metal leaf, 50 cents per pound; cigar bands, printed in whole or in part in metal leaf, 55 cents per pound; all labels, flaps, and bands, not exceeding ten square inches cutting size in dimensions, if embossed or die-cut, shall pay the same rate of duty as hereinbefore provided for cigar bands of the same number of colors and printings (but no extra duty shall be assessed on labels, flaps, and bands for embossing or die-cutting); fashion magazines or periodicals, printed in whole or in part by lithographic process, or decorated by hand, 8 cents per pound; decalcomanias in ceramic colors, weighing not over one hundred pounds per one thousand sheets on the basis of twenty by thirty inches in dimensions, 70 cents per pound and 15 per centum ad valorem; weighing over one hundred pounds per one thousand sheets on the basis of

## H. R. 7456.

## SENATE AMENDMENTS

twenty by thirty inches in dimensions, 22 cents per pound and 15 per centum ad valorem; if backed with metal leaf, 65 cents per pound; all other decalcomanias, except toy decalcomanias, 40 cents per pound; all other articles than those hereinbefore specifically provided for in this paragraph, not exceeding eight one-thousandths of an inch in thickness, 20 cents per pound; exceeding eight and not exceeding twenty one-thousandths of an inch in thickness, and less than thirty-five square inches cutting size in dimensions, 8½ cents per pound; exceeding thirty-five square inches cutting size in dimensions, 8 cents per pound, and in addition thereto on all of said articles exceeding eight and not exceeding twenty one-thousandths of an inch in thickness, if either die-cut or embossed, one-half of 1 cent per pound; if both die-cut and embossed, 1 cent per pound; exceeding twenty one-thousandths of an inch in thickness, 6 cents per pound: *Provided*, That in the case of articles hereinbefore specified the thickness which shall determine the rate of duty to be imposed shall be that of the thinnest material found in the article, but for the purposes of this paragraph the thickness of lithographs mounted or pasted upon paper, cardboard, or other material shall be the combined thickness of the lithograph and the foundation on which it is mounted or pasted, and the cutting size shall be the area which is the product of the greatest dimensions of length and breadth of the article, and if the article is made up of more than one piece, the cutting size shall be the combined cutting sizes of all of the lithographically printed parts in the article.

## ACT OF 1909.

PAR. 412. Pictures, calendars, cards, labels, flaps, cigar bands, placards, and other articles, composed wholly or in chief value of paper, lithographically printed in whole or in part from stone, metal, or material other than gelatin (except boxes, views of American scenery or objects, and music, and illustrations when forming part of a periodical or newspaper, or of bound or unbound books, accompanying the same, not specially provided for in this section), shall pay duty at the following rates: Labels and flaps, printed in less than eight colors (bronze printing to be counted as two colors), but not printed in whole or in part in metal leaf, twenty cents per pound; cigar bands of the same number of colors and printings, thirty cents per pound; labels and flaps printed in eight or more colors, but not printed in whole or in part in metal leaf, thirty cents per pound; cigar bands

## ACT OF 1913.

PAR. 325. Pictures, calendars, cards, \* \* \* labels, flaps, cigar bands, placards, and other articles composed wholly or in chief value of paper lithographically printed in whole or in part from stone, gelatin, metal, or other material (except boxes, views of American scenery or objects, and music, and illustrations when forming a part of a periodical or newspaper or of bound or unbound books, accompanying the same, not specially provided for in this section) shall pay duty at the following rates: Labels and flaps printed in less than eight colors (bronze printing to be counted as two colors), but not printed in whole or in part of metal leaf, 15 cents per pound; cigar bands of the same number of colors and printings, 20 cents per pound; labels and flaps printed in eight or more colors (bronze printing to be counted as two colors), but not printed in whole or in part

## ACT OF 1909.

of the same number of colors and printings, forty cents per pound; labels and flaps, printed in whole or in part in metal leaf, fifty cents per pound; cigar bands, printed in whole or in part in metal leaf, fifty-five cents per pound; all labels, flaps, and bands not exceeding ten square inches cutting size in dimensions, if embossed or die-cut, shall pay the same rate of duty as hereinbefore provided for cigar bands of the same number of colors and printings (but no extra duty shall be assessed on labels, flaps, and bands for embossing or die-cutting); \* \* \* fashion magazines or periodicals, printed in whole or in part by lithographic process, or decorated by hand, eight cents per pound; \* \* \* decalcomanias in ceramic colors, weighing not over one hundred pounds per thousand sheets on the basis of twenty by thirty inches in dimensions, seventy cents per pound and 15 per centum ad valorem; weighing over one hundred pounds per thousand sheets on the basis of twenty by thirty inches in dimensions, twenty-two cents per pound and fifteen per centum ad valorem; if backed with metal leaf, sixty-five cents per pound; all other decalcomanias, except toy decalcomanias, forty cents per pound; all other articles than those hereinbefore specifically provided for in this paragraph, not exceeding eight one-thousandths of one inch in thickness, twenty cents per pound; exceeding eight and not exceeding twenty one-thousandths of one inch in thickness, and less than thirty-five square inches cutting size in dimensions, eight and one-half cents per pound; exceeding thirty-five square inches cutting size in dimensions, eight cents per pound, and in addition thereto on all of said articles exceeding eight and not exceeding twenty one-thousandths of one inch in thickness, if either die cut or embossed, one-half of one cent per pound; if both die cut and embossed, one cent per pound; exceeding twenty one-thousandths of one inch in thickness, six cents per pound: *Provided*, That in the case of articles hereinbefore specified the thickness which shall determine the rate of duty to be imposed shall be that of the thinnest material found in the article, but for the purposes of this paragraph the thickness of lithographs mounted or pasted upon paper, cardboard, or other material, shall be the combined thickness of the lithograph and the foundation on which it is mounted or pasted.

PAR. 415. \* \* \* articles composed wholly or in chief value of paper printed by the photogelatin process and not specially provided for in this Act, three cents per pound and twenty-five per centum ad valorem.

## ACT OF 1913.

of metal leaf, 20 cents per pound; cigar bands of the same number of colors and printings, 25 cents per pound; labels and flaps printed in whole or in part of metal leaf, 35 cents per pound; cigar bands printed in whole or in part of metal leaf, 40 cents per pound; \* \* \* all other articles not exceeding eight one-thousandths of an inch in thickness, 15 cents per pound; exceeding eight one-thousandths of an inch and not exceeding twenty one-thousandths of an inch in thickness and less than thirty-five square inches cutting size in dimension, 5 cents per pound; exceeding eight and not exceeding twenty one-thousandths of an inch in thickness and thirty-five square inches and over cutting size in dimension, 7 cents per pound; exceeding twenty one-thousandths of an inch in thickness, 5 cents per pound, providing that in the case of articles hereinbefore specified the thickness which shall determine the rate of duty to be imposed shall be that of the thinnest lithographed material found in the article, but for the purpose of this paragraph the thickness of lithographs mounted or pasted upon paper, cardboard, or other material shall be the combined thickness of the lithograph and the foundation upon which it is mounted or pasted; \* \* \* fashion magazines or periodicals printed in whole or in part by lithographic process or decorated by hand, 6 cents per pound; \* \* \* decalcomanias in ceramic colors, weighing not over one hundred pounds per thousand sheets, on a basis of twenty by thirty inches in dimensions, 60 cents per pound; all other decalcomanias, except toy decalcomanias, 15 cents per pound.

PAR. 425. \* \* \* lithographic prints, bound or unbound, \* \* \* [Free].

## PICTURES, CALENDARS, CARDS, ETC.

*Description and uses.*—Pictures, calendars, cards, etc. may be lithographically or otherwise printed. They are used principally for advertising, display purposes, and for presents, souvenirs, etc.

*Production.*—No data available.

*Imports,* including pictures, calendars, cards, booklets, labels, flaps, cigar bands, placards, decalcomanias, and other similar articles composed wholly or in chief value of paper lithographically printed, were 4,895,643 pounds, valued at \$1,780,548 in 1914. Post cards imported in 1914 were valued at \$527,932. Later statistics follow:

*Exports not segregated.*

*Important changes in classification.*—The provision for determining the cutting size which shall govern the rate of duty is new.

*Suggested changes.*—This paragraph provides that pictures, calendars, cards, and placards, as well as labels, flaps, and cigar bands, "shall pay duty at the following rates" without, however, separately imposing duties thereon as in the case of labels, flaps, and cigar bands. It is therefore suggested that the words "pictures, calendars, cards \* \* \* placards, and other articles," together with the phrase in parentheses "(except boxes, views of American scenery or objects, and music, and illustrations when forming part of a periodical or newspaper, or of bound or unbound books, accompanying the same)," and

the words "not specially provided for," be stricken out of the first part of the paragraph, which would thereby be confined, from line 17, page 141, to line 15, page 142, to labels, flaps, and cigar bands, with the respective rates of duty thereon set forth in proper order.

If this should be done, a period should be substituted for the semicolon in line 15, page 142, and the word "fashion" ending line 15, be made the beginning of a new sentence to end with the word "pound" in line 18, page 142, with the words "from stone, gelatin, metal, or other material" inserted after the word "process" in line 17.

The provisions concerning decalcomanias in line 18, page 142, to line 1, page 143, should be inserted as another sentence after the word "pound" in line 13, page 143, and the words "pictures, calendars, cards, placards, and all other articles, composed wholly or in chief value of paper lithographically printed in whole or in part from stone, gelatin, metal, or other material (except boxes, views of American scenery or objects, and music, and illustrations when forming part of a periodical or newspaper, or of bound or unbound books, accompanying the same), not specially provided for" should be inserted after the word "pound" in line 18, page 142, and the words "all other articles than those hereinbefore specifically provided for in this paragraph," should be omitted from lines 1 to 3, page 143.

If it should be desired to have lithographically printed envelopes, used as containers of hair nets or seeds, come within this paragraph rather than paragraph 1308, which provides for paper envelopes without qualification or limitation, specific provision therefor should be made in this paragraph. With these changes, paragraph 1306 would read as follows:

Labels, flaps, cigar bands, composed wholly or in chief value of paper lithographically printed in whole or in part from stone, gelatin, metal, or other material, shall pay duty at the following rates: Labels and flaps, printed in less than eight colors (bronze printing to be counted as two colors), but not printed in whole or in part in metal leaf, [rate] per pound; cigar bands of the same number of colors and printings, [rate] per pound; labels and flaps printed in eight or more colors (bronze printing to be counted as two colors), but not printed in whole or in part in metal leaf, [rate] per pound; cigar bands of the same number of colors and printings, [rate] per pound; labels and flaps, printed in whole or in part in metal leaf, [rate] per pound; cigar bands printed in whole or in part in metal leaf, [rate] per pound; all labels, flaps, and bands not exceeding 10 square inches cutting size in dimensions, if embossed or die-cut, shall pay the same rate of duty as hereinbefore provided for cigar bands of the same number of colors and printings (but no extra duty shall be assessed on labels, flaps, and bands for embossing or die-cutting). Fashion magazines or periodicals, printed in whole or in part by lithographic process from stone, gelatin, metal, or other material, or decorated by hand, [rate] per pound. Pictures, calendars, cards, envelopes, placards, and all other articles, composed wholly or in chief value of paper lithographically printed in whole or in part from stone, gelatin, metal, or other material (except boxes, views of American scenery or objects, and music, and illustrations when forming part of a periodical or newspaper, or of bound or unbound books, accompanying the same), not specially provided for, not exceeding eight one-thousandths of an inch in thickness, [rate] per pound; exceeding eight and not exceeding twenty one-thousandths of an inch in thickness, and less than 35 square inches cutting size in dimensions, [rate] per pound; exceeding 35 square inches cutting size in dimensions, [rate] per pound, and in addition thereto on all of said articles exceeding eight and not exceeding twenty one-thousandths of an inch in thickness, if either die-cut or embossed, [rate] per pound; if both die-cut and embossed, [rate] per pound; exceeding twenty one-thousandths of an inch in thickness, [rate] per pound. Decalcomanias in ceramic colors, weighing not over 100 pounds per 1,000 sheets on the basis of 20 by 30 inches in dimensions, [rate] per pound and [rate] per centum ad valorem; weighing over 100 pounds per 1,000 sheets on the basis of 20 by 30 inches in dimensions, [rate] per pound and [rate] per centum ad valorem; if backed with metal leaf, [rate] per pound; all other decalcomanias, except toy decalcomanias, [rate] per pound: *Provided*, That in the case of articles, etc.

## PARAGRAPH 1307.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1307. Writing, letter, note, drawing, handmade paper and paper commercially known as handmade paper and machine handmade paper, japan paper and imitation japan paper by whatever name known, and ledger, bond, record, tablet, typewriter, manifold, and onionskin and imitation onionskin paper, Bristol board of the kinds made on a Fourdrinier machine, calendered or uncalendered, 3 cents per pound and 15 per centum ad valorem; but if any of the foregoing is ruled, bordered, embossed, printed, lined, or decorated in any manner, other than by lithographic process, it shall pay 10 per centum ad valorem in addition to the foregoing rates.

## ACT OF 1909.

PAR. 413. Writing, letter, note, handmade paper and paper commercially known as handmade paper and machine handmade paper, japan paper and imitation japan paper by whatever name known, and ledger, bond, record, tablet, typewriter, manifold, and onionskin and imitation onionskin papers calendered or uncalendered, weighing six and one-fourth pounds or over per ream, three cents per pound and fifteen per centum ad valorem; but if any such paper is ruled, bordered, embossed, printed, lined, or decorated in any manner, other than by lithographic process, it shall pay ten per centum ad valorem in addition to the foregoing rates: *Provided*, That in computing the duty on such paper every one hundred and eighty thousand square inches shall be taken to be a ream.

PAR. 415. \* \* \* bristol board, thirty-five per centum ad valorem; \* \* \*.

## ACT OF 1913.

PAR. 326. Writing, letter, note, drawing, handmade paper and paper commercially known as handmade paper and machine handmade paper, japan paper and imitation japan paper by whatever name known, and ledger, bond, record, tablet, typewriter, and onionskin and imitation onionskin papers calendered or uncalendered, whether or not any such paper is ruled, bordered, embossed, printed, lined, or decorated in any manner, 25 per centum ad valorem.

PAR. 328. \* \* \* bristol board, \* \* \* 25 per centum ad valorem.

## FINE PAPER.

(See Survey M-6.)

*Description and uses.*—Fine paper, as is evident from its classification in the above paragraph, has a great many subdivisions. It consists of paper made from a high grade of raw material, principally cotton and linen rags, also cotton linters, esparto, and special fibers. Sulphite wood pulp, however, is being used increasingly in making writing paper. It is impossible to exclude such medium-grade writing papers as those containing wood pulp from the general heading of fine paper, because it is desirable to treat all classes of writing paper together.

Writing paper and other fine papers are very similar in the raw material from which they are manufactured and in texture to certain high grades of book paper, except that watermarks and special finishes are much more used in the former.

It is impossible to differentiate satisfactorily the manifold varieties of fine paper. This is particularly true of the principal group of fine papers, namely, writing papers. Writings, bonds, and ledgers are classified separately; yet bonds and ledgers are actually writing paper. There is no uniform system of classifying bonds, ledgers, papeteries, linens, etc., by raw-material content, by size, or by the use to which they are to be put. Every variety overlaps one or more varieties to some extent. Some varieties bear two names, such as "linen bond." In actual practice, in the mill, the product will often be named according to the dimensions of the finished sheet turned out by the mill, because the mill ordinarily sells sheets of certain standard sizes to makers of papeterie, other standard sizes to makers of bond, and yet others to makers of ledgers, etc. In general, however, the distinctions in terminology are as follows: Bond paper (which derives its name from the fact that it was first used as paper for engraved bonds) is usually of medium weight, is not highly calendered, and hence has not a highly polished surface, and tends to be translucent. It often rattles when handled. The cheapest bond paper is made of pure sulphite wood pulp and the best of 100 per cent new linen rags. Intermediate grades are made of various proportions of sulphite and old and new cotton and linen rags.

Ledger paper is usually harder, tougher, and has a more polished surface than bond paper. Oftentimes it is heavier also. There are no bond papers of as great a weight as the heaviest ledger papers. A smooth polished surface on which frequent erasures can be made is necessary, for ledger paper is most frequently used for bookkeeping, public records, and similar purposes. Strength and durability are also naturally requisites of this sort of paper. It is usually made entirely or in greater part of rags.

Papeterie is the term applied to writing papers to be packed in boxes as stationery. It differs usually from bond and ledger in having a rather soft coarse texture. It has a dull, rough finish, for, like bond paper, it often is not calendered. It is usually rather heavy.

Letter, note, record, tablet, and typewriter papers, as specified in the tariff, are merely subdivisions of the kinds discussed above, classified according to use. Often it is merely the size or the form in which the paper is cut for a particular purpose that determines its tariff classification. Tablet paper is often of material inferior to that used in the other grades named. Drawing paper is a high-grade product made chiefly of rags. In England esparto grass is much used for drawing paper. Handmade papers, when imported, are usually extra fine and fancy papeteries or special stationery. Japan paper is a paper of a pronounced silky texture, formerly made exclusively from the bark of the mulberry tree, beat out by the Japanese with mallets. Now, however, it is made also of other vegetable fibers. It is used principally for writing, printing, tapestry, imitation Japanese wall hangings, and to some extent in art-craft books. It is almost transparent, and has a highly glazed surface and a texture almost like the skin of an onion.

Bristol board made on a Fourdrinier machine is also a kind of fine paper. Its classification is discussed in detail below in the section on "Changes in classification."

*Production.*—The production of fine paper increased from 248,000 tons, valued at \$34,055,000, in 1914 to 325,000 tons, valued at \$87,741,000, in 1919. Massachusetts is the principal seat of the fine-paper industry; the other States of importance are New York, Pennsylvania, Wisconsin, and Ohio. The domestic production is sufficient to supply practically the whole of the demand for domestic consumption and to export a surplus.

*Imports of writing paper in 1914 were 2,163,432 pounds, valued at \$203,171. Later statistics follow:*

*Writing, drawing, and similar papers.*

## ALL OTHER.

1919.....	363,945	\$268,697	\$0.74	\$67,174	25
1920.....	607,479	428,624	.70	107,156	25
1921 (9 months).....	754,372	437,449			

<sup>1</sup> Includes both the "ruled, bordered, embossed," etc., and "all other."

*Exports* in 1914 of writing paper and envelopes combined were valued at \$1,179,232; later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Writing paper and envelopes.....	\$6,113,498	\$13,188,165	\$8,908,230	\$3,841,127
Cash-register and adding-machine paper.....	109,207	132,515	211,167	135,606

*Important changes in classification.*—The minimum weight provision is omitted because practically all the papers included are papers heavier than what is ordinarily called and sold as tissue paper. Manifold paper, which did not appear in the act of 1913 but did appear in 1909, is restored. Manifold and typewriter paper are practically always heavier than tissue paper. Bristol board of the kinds made on a Fourdrinier machine is a new item. Bristol board appears in connection with cardboard in paragraph 328 of the act of 1913. However, there are two entirely different kinds of bristol board. The kind included in this paragraph is made on the Fourdrinier machine in the same way as writing paper, and is used as a fine writing paper and for cards in index files. A Fourdrinier machine may be defined as a paper machine on which the sheet of paper is first formed by placing pulp much diluted with water onto a horizontal moving wire screen from which part of the water is removed through drainage and through suction. Bristol board of this type is sometimes made as a single-ply sheet and is calendered and finished in practically the same way as a heavy ledger paper. Sometimes two or three thicknesses are placed together after they have come off the Fourdrinier machine, after which the calendering and other finishing processes take place. This kind is usually called solid bristol board. The other kind of bristol board is included under paper board or pulpboard in paragraphs 1302 and 1313; it is not specifically named.

### PARAGRAPH 1308.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1308. Paper envelopes not specially provided for, folded or flat, if plain, shall pay the same rate of duty as the paper from which made and 5 per centum ad valorem; if bordered, embossed, printed, tinted, decorated, or lined, 10 per centum ad valorem in addition to the foregoing rates.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 411. \* \* \* envelopes, \* \* \* composed wholly or in chief value of the foregoing papers, not specially provided for in this section, \* \* \* five cents a pound and thirty per centum ad valorem, \* \* \*.

414. Paper envelopes not specially provided for in this section, folded or flat, if plain, twenty per centum ad valorem; if bordered, embossed, printed, tinted, decorated, or lined, thirty-five per centum ad valorem.

PAR. 324. \* \* \* envelopes, \* \* \* composed wholly or in chief value of any of the foregoing papers, not specially provided for in this section, \* \* \* 35 per centum ad valorem; \* \* \*.

PAR. 327. Paper envelopes, folded or flat, not specially provided for in this section, 15 per centum ad valorem.

## ENVELOPES.

(See Survey M-6.)

*Description and uses.*—Kraft paper (made of sulphate wood pulp) forms the basis for a considerable class of envelopes. These are ordinarily large, strong coverings and are used mainly for mailing circulars, photographs, pamphlets, and catalogues. Manila envelopes constitute an important class. They are much used for filing-cabinets and, like kraft envelopes, for mailing circulars, etc. A great many manila and kraft envelopes are made in all sizes with metal clasps for wrapping and for mailing a variety of small articles. A very large number of envelopes are made to carry business correspondence and light weight advertising matter. Of these the great preponderance is made of wood pulp, principally sulphite. The stamped envelopes sold at post offices are of this type. Oftentimes the envelopes used by business concerns are of material inferior to the correspondence sheets they contain. The best grades of envelopes (other than ornamental specialties) are those designed to be used with fine stationery or so-called social writing paper. In this class both envelopes and writing sheets are ordinarily manufactured from the same kind of paper and thus may range in content from all sulphite to all new rag.

*Production.*—The production of envelopes in the United States increased from \$18,481,000 in 1914 to \$39,664,000 in 1919 and the number of establishments making envelopes from 90 in 1914 to 106 in 1919. Domestic production supplies practically the whole of the demand for domestic consumption. The capitalization of the 90 envelope establishments in the United States in 1914 was \$15,830,000.

*Imports* in 1914 were valued at \$29,350. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
			<i>Per cent.</i>
1918.....	\$5,122	\$768	15
1919.....	14,291	2,144	15
1920.....	148,742	7,288	15
1921 (9 months).....	31,387		

<sup>1</sup> In addition to the figure given (\$48,742) envelopes to the value of \$152 were imported free of duty from the Philippine Islands.

*Exports* not segregated.

*Important changes in classification.*—The wording of this paragraph is slightly changed so that all paper envelopes instead of bearing a uniform rate of duty shall bear duty according to the paper from which they are made. This change is made because of the great variety in quality of the paper from which envelopes are made.

## PARAGRAPH 1309.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1309. Jacquard designs on ruled paper, or cut on Jacquard cards, and parts of such designs, 23 per centum ad valorem; hanging paper, not printed, lithographed, dyed, or colored, 10 per centum ad valorem; paper hangings with paper back or composed wholly or in chief value of paper, not printed, lithographed, dyed, or colored, 5 cents per pound; printed, lithographed, dyed, or colored, 20 per centum ad valorem; wrapping paper not specially provided for, 23 per centum ad valorem; blotting paper, 2 cents per pound and 10 per centum ad valorem; filtering paper, 5 cents per pound and 15 per centum ad valorem; paper not specially provided for, 23 per centum ad valorem.

## . ACT OF 1909.

PAR. 410. \* \* \* filtering paper, five cents per pound and fifteen per centum ad valorem: *Provided*, That no article composed wholly or in chief value of one or more of the papers specified in this paragraph shall pay a less rate of duty than that imposed upon the component paper of chief value of which such article is made.

PAR. 415. Jacquard designs on ruled paper, or cut on Jacquard cards, and parts of such designs, \* \* \* thirty-five per centum ad valorem; \* \* \* paper hangings with paper back or composed wholly or in chief value of paper, twenty-five per centum ad valorem; wrapping paper not specially provided for in this section, thirty-five per centum ad valorem; paper not specially provided for in this section, thirty per centum ad valorem: \* \* \*

[No corresponding provision for hanging paper and blotting paper.]

## ACT OF 1913.

PAR. 332. \* \* \* all papers \* \* \* not specially provided for in this section, 25 per centum ad valorem.

PAR. 328. Jacquard designs on ruled paper, or cut on Jacquard cards, and parts of such designs, \* \* \* paper hangings with paper back or composed wholly or in chief value of paper, and wrapping paper not specially provided for in this section, 25 per centum ad valorem.

PAR. 323. \* \* \* filtering paper, and articles manufactured from any of the foregoing papers, or of which such paper is the component material of chief value, 30 per centum ad valorem.

[No corresponding provision for hanging paper and blotting paper.]

## JACQUARD DESIGNS, HANGING PAPER, PAPER HANGINGS, WRAPPING, BLOTTING AND FILTERING PAPER.

(See Surveys M-7, M-3, and M-4.)

*Description and uses.*—Jacquard designs or Jacquard cards are used with the Jacquard loom, a machine for fancy weaving, having a chain of perforated cards passing over a rotary prism, the perforations permitting the passage of wires that determine the raising of warp threads, causing the figure to be woven in accordance with the prearrangement of the perforated cards.

Wall paper, or paper hangings, is paper ready for use as a covering for the interior walls of buildings. Hanging paper is the paper used for making wall paper, i. e., it is wall paper not yet ready for use as wall covering. The distinction between them is discussed in detail below in the section on changes in classification.

Wrapping paper, as its name indicates, is used for wrapping and packing purposes of all sorts. This is practically its sole use. There are, however, three principal varieties according to material used: (1) Kraft, a very tough brown paper made wholly or in part of sulphate wood pulp, introduced within the last 15 years; (2) manila, a strong paper of lighter color, formerly made principally of old and waste manila rope and rope ends, hemp, jute, and flax waste, old gunny cloth and old gunny bags, but now made chiefly of sulphite wood pulp, and frequently called bogus manila; and (3) fiber paper, a cheap, more or less brittle and tearable variety made of waste paper, cuttings from paper-board factories, mechanically ground wood pulp, wood-pulp refuse, or almost any fibrous material of inferior quality. Of these three sorts, genuine manila made of old rope, bagging, etc., is the strongest per unit of weight. Next comes kraft paper, followed by the best grades of wood pulp or bogus manila. Last, of course, are the fiber papers of common stock. In addition to these varieties, there are a number of cheap wood-pulp papers made of ground wood with varying proportions of chemical pulp.

Bag paper is made of all the different substances above listed. Paper to be made into sacks for flour, cement, charcoal, sugar, nails, etc., is necessarily heavy and tough and often is reinforced by cloth.

There are a great many special kinds of wrapping paper, all of which may be classified under the varieties already named. Mill wrapper is a thick, coarse paper used to a great degree in paper mills, where it is made to pack the staple products of those mills. It is made often out of paper-mill sweepings. So-called news wrapping paper comes under the head of fiber paper, the raw material being repulped newsprint. Straw wrapping paper; screenings (paper made from pulp screened out as unfit for use in the paper for which it was originally intended), express paper (primarily for wrapping express shipments), fruit wrappers, and silk wrappers are other varieties. Certain kinds of tissue paper are used for wrapping purposes, but are treated separately in the tariff and bear a higher rate of duty. (See Survey M-3, on tissue paper.) Grease-proof paper and imitation parchment are also mainly used for wrapping. A special survey treats of these grades.

Blotting paper, as its name indicates, is used for soaking up liquids for one purpose or another. It is unsized, porous, and absorbent.

Filtering paper is a white, unsized, porous paper. The domestic product in the main is a very ordinary grade, differing little from blotting paper and used principally for clarifying liquids. It is used by soap, paint, sugar, color, and pharmaceutical manufacturers. It is also used by electrical companies to filter oil for transformers. Another use is for chemical qualitative analyses. The best grades for qualitative analysis are not made in this country and must be imported mainly from England, Sweden, Germany, and France. Recently, however, a beginning has been made in the United States in manufacturing the better grades.

*Production.*—Jacquard designs used here are almost exclusively domestically produced. They are made by punching holes in pieces of cardboard with a plate (or a piano) punching machine. There is little need to import designs. Our imports compared with domestic

production are of no importance. They are accounted for in part by the fact that one American company weaving with Jacquard looms has a mill in France which sends for reference to the American mill copies of the designs it produces.

The production of hanging paper in the United States decreased from 97,000 tons valued at \$4,489,000 in 1914 to 69,000 tons valued at \$6,043,000 in 1919. The output of hanging paper fluctuates considerably from month to month and from year to year. One of the reasons for this fluctuation is the fact that many of the machines making hanging paper can be operated at will either in the manufacture of newsprint or of hanging paper.

The production of wall paper not made in paper mills increased from \$15,887,000 in 1914 to \$23,895,000 in 1919. The number of establishments increased from 48 in 1914 to 49 in 1919. Production of wall paper in the United States supplies practically the whole of the demand for domestic consumption.

The production of blotting paper decreased from 14,000 tons valued at \$1,458,000 in 1914 to 13,000 tons valued at \$2,309,000 in 1919.

A rough estimate places the annual production of filter paper in the United States at 500 tons.

*Imports* in the fiscal year 1914 are shown by the following table:

Article.	Quantity.	Value.
Jacquard designs.....		\$10,763
Paper hangings.....		936,339
Wrapping paper (pounds).....	36,515,554	1,028,500

Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
----------------	-----------	--------	-------------	-------	------------------

JACQUARD DESIGNS ON RULED PAPER OR CUT ON JACQUARD CARDS.

	Pounds.	Value.	Duty.	Per cent.
1918.....		\$877	\$219	25
1919.....		452	113	25
1920.....		7,059	1,765	25
1921 (9 months).....		10,411		

PAPER HANGINGS, WITH PAPER BACK OR COMPOSED WHOLLY OR IN CHIEF VALUE OF PAPER.

	Pounds.	Value.	Duty.	Per cent.
1918.....		\$135,697	\$33,924	25
1919.....		99,674	24,918	25
1920.....		361,363	90,341	25
1921 (9 months).....		270,025		

WRAPPING PAPER.

	Pounds.	Value.	Unit value.	Duty.	Per cent.
1918.....	7,795,466	\$530,278	\$0.07	\$132,569	25
1919.....	4,653,484	393,450	.08	98,362	25
1920.....	4,542,156	423,395	.09	105,687	
1921 (9 months).....	6,606,317	326,580			

PAPERS NOT SPECIALLY PROVIDED FOR.

	Pounds.	Value.	Unit value.	Duty.	Per cent.
1918.....		\$31,115		\$7,779	25
1919.....	23,373	14,916	\$0.64	3,729	25
1920.....	431,444	86,915	.20	21,729	25
1921 (9 months).....	512,555	59,547			

Exports in 1914 of paper hangings were valued at \$453,412. Exports of wrapping paper were 14,133,097 pounds, valued at \$532,657. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Paper hangings (value).....	\$529,539	\$899,457	\$1,251,743	\$503,058
Wrapping paper:				
Quantity (pounds).....	59,899,043	74,916,830	61,264,501	20,208,163
Value.....	\$4,828,856	\$6,664,462	\$6,994,381	\$1,913,840

*Important changes in classification.*—Cardboard and bristol board are omitted from this paragraph. Cardboard is now taken care of in two paragraphs: paragraph 1302 provides for all paper board and pulpboard, including cardboard which has not had a special treatment after leaving the paper machine, and paragraph 1313 provides for cardboard when it has been subjected to some sort of special treatment. There is apparently no good reason why cardboard should appear in the tariff act widely differentiated from paper board and pulpboard in general, especially as it has been held that cardboard is the generic term for paper board. Bristol board of the kinds made on a Fourdrinier machine is provided for *eo nomine* in paragraph 1307. The other kind of bristol board is produced on a cylinder machine out of layers of pulp pressed together when wet. As the inside layer or layers are usually of inferior material, this kind is ordinarily called filled bristol board. The principal variety of it is called bogus bristol. Bristol board of this kind comes under the general heading for paper board and so does not need an *eo nomine* provision.

The provision for hanging paper is new. Hanging paper is the raw material for paper hangings or wall paper, i. e., it is wall paper not yet printed or decorated. The principal variety of hanging paper is No. 2 hanging paper. This is an uncolored, untreated paper. There are also certain kinds which are specially treated, some of which do not have to be subsequently printed in a wall-paper mill in order to be used for interior decoration. Among these are oatmeal and tile paper. These special papers, such as oatmeal and tile, although often called hanging paper in the trade, are in reality finished wall paper or paper hangings.

Blotting paper has been introduced *eo nomine* for the first time. A great deal of blotting paper is produced in this country, and, although the imports are negligible, separate classification seems desirable.

*Suggested changes.*—It is suggested that cigarette paper be moved from paragraph 1452 either to this paragraph or to paragraph 1305.

## PARAGRAPH 1310.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1310. Books of all kinds, bound or unbound, including blank books, slate books and pamphlets, drawings, engravings, photographs, etchings, maps, charts, music in books or sheets, and printed matter, all the foregoing not specially provided for, 20 per centum ad valorem; books bound wholly or in part in leather, the chief value of which is in the binding, not specially provided for, 33½ per centum ad valorem; books of paper or other material for children's use, printed lithographically or otherwise, not exceeding in weight twenty-four ounces each, with more reading matter than letters, numerals, or descriptive words, 20 per centum ad valorem; booklets, printed lithographically or otherwise, not specially provided for, 7 cents per pound; booklets, wholly or in chief value of paper, decorated in whole or in part by hand or by spraying, whether or not printed, 15 cents per pound; all post cards (not including American views), plain, decorated, embossed, or printed except by lithographic process, 26 per centum ad valorem; views of any landscape, scene, building, place or locality in the United States, on cardboard or paper, not thinner than eight one-thousandths of one inch, by whatever process printed or produced, including those wholly or in part produced by either lithographic or photogelatin process (except show cards), occupying thirty-five square inches or less of surface per view, bound or unbound, or in any other form, 15 cents per pound and 20 per centum ad valorem; thinner than eight one-thousandths of one inch, \$2 per thousand; Christmas and other greeting cards, printed lithographically or otherwise, or decorated in whole or in part by hand or by spraying, 30 per centum ad valorem.

## ACT OF 1909.

PAR. 410. \* \* \* letter copying books, whether wholly or partly manufactured, five cents per pound and fifteen per centum ad valorem; \* \* \* *Provided*, That no article composed wholly or in chief value of one or more of the papers specified in this paragraph shall pay a less rate of duty than that imposed upon the component paper of chief value of which such article is made.

PAR. 412. \* \* \* booklets, seven cents per pound; books of paper or other material for children's use, not exceeding in weight twenty-four ounces each, six cents per pound; \* \* \* booklets, dec-

## ACT OF 1913.

PAR. 323. \* \* \* letter-copying books, wholly or partly manufactured, \* \* \* 30 per centum ad valorem.

PAR. 325. \* \* \* booklets, \* \* \* composed wholly or in chief value of paper lithographically printed in whole or in part from stone, gelatin, metal, or other material \* \* \* booklets, 7 cents per pound; \* \* \* books of paper or other material for children's use, lithographically printed in whole or in part, not exceeding in weight twenty-four ounces each, 4 cents per pound; \* \* \* booklets, wholly or in chief value of paper, decorated in whole or in part by hand or

## ACT OF 1909.

orate] in whole or in part by hand or by spraying, whether or not lithographed, fifteen cents per pound; \* \* \*.

PAR. 416. Books of all kinds, bound or unbound, including blank books, slate books and pamphlets, engravings, photographs, etchings, maps, charts, music in books or sheets, and printed matter, all the foregoing wholly or in chief value of paper, and not specially provided for in this section, twenty-five per centum ad valorem. Views of any landscape, scene, building, place or locality in the United States, on cardboard or paper, not thinner than eight one-thousandths of one inch, by whatever process printed or produced, including those wholly or in part produced by either lithographic or photogelatin process (except show cards), occupying thirty-five square inches or less of surface per view, bound or unbound, or in any other form, fifteen cents per pound and twenty-five per centum ad valorem; thinner than eight one-thousandths of one inch, two dollars per thousand; *Provided*, That the rate or rates of duty provided in the tariff Act approved July twenty-fourth, eighteen hundred and ninety-seven, shall remain in force until October first, nineteen hundred and nine, on all views of any landscape, scene, building, place, or locality, provided for in this paragraph, which shall have, prior to July first, nineteen hundred and nine, been ordered or contracted to be delivered to bona fide purchasers in the United States, and the Secretary of the Treasury shall make proper regulations for the enforcement of this provision.

PAR. 517. Books, maps, music, engravings, photographs, etchings, bound or unbound, and charts, which shall have been printed more than twenty years at the date of importation, \* \* \* [Free].

PAR. 518. Books and pamphlets printed chiefly in languages other than English; \* \* \* [Free].

[No corresponding provision for the other commodities.]

## ACT OF 1913.

by spraying, whether or not lithographed, 10 cents per pound; \* \* \*.

PAR. 329. Books of all kinds, bound or unbound, including blank books, slate books and pamphlets, engravings, photographs, etchings, maps, charts, music in books or sheets, and printed matter, all the foregoing, and not specially provided for in this section, 15 per centum ad valorem. Views of any landscape, scene, building, place or locality in the United States, on cardboard or paper, not thinner than eight one-thousandths of one inch, by whatever process printed or produced, including those wholly or in part produced by either lithographic or photogelatin process (except show cards), bound or unbound, or in any other form, 20 cents per pound; thinner than eight one-thousandths of one inch, \$2 per thousand.

PAR. 332. \* \* \* all post cards, not including American views, plain, decorated, embossed, or printed, except by lithographic process, \* \* \* 25 per centum ad valorem.

PAR. 425. Books, maps, music, engravings, photographs, etchings, lithographic prints, bound or unbound, and charts, which shall have been printed more than twenty years at the date of importation, \* \* \* [Free].

PAR. 426. Books and pamphlets printed wholly or chiefly in languages other than English; \* \* \* and all textbooks used in schools and other educational institutions; \* \* \* [Free].

PAR. 428. Books, libraries, \* \* \* of persons or families from foreign countries, \* \* \* if actually used abroad by them not less than one year, and not intended for any other person or persons, nor for sale.

PAR. 582. Professional books, \* \* \* in the actual possession of persons emigrating to the United States owned and used by them abroad; \* \* \*.

[No corresponding provision for the other commodities.]

## BOOKS, PAMPHLETS, POST CARDS, AND OTHER PRINTED MATTER.

*Description and uses.*—The items mentioned in paragraph 1310 are self-explanatory.

*Production* of books of all kinds in 1914 was 786,626 tons, valued at \$58,496,221.

Imports in 1914 were valued at \$6,644,265. Later imports have been as follows:

*Books, pamphlets, and other printed matter.*

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
BOOKS AND PAMPHLETS, BOUND AND UNBOUND.

1921 (9 months).....	1,118	556			

*Exports* in 1914 were valued at \$9,639,860. Later statistics (for calendar years) follow: 1918, \$11,493,524; 1919, \$18,239,016; 1920, \$24,803,932; 1921 (nine months), \$16,345,578.

*Important changes in classification.*—Drawings have been added to the list of printed matter in this paragraph to cover fashion plates and like drawings in water colors, mechanical drawings, etc., not works of art or original drawings, now classified as manufactures of paper. Leather-bound books, with chief value in the binding, are included for the first time. Children's books have been transferred from paragraph 1306 to this paragraph and the clause "with more reading matter than letters, numerals, or descriptive words" inserted. The reason for this qualification is that in paragraph 1414 a new item,

"toy books without reading matter other than letters, numerals, or descriptive words, bound or unbound, and parts thereof," has been inserted to be distinguished from books which do not involve such elaborate processes of printing, lithographing, and decoration. Booklets are transferred to this paragraph from paragraph 1306. The phrase "printed lithographically or otherwise," n. s. p. f., has been inserted in the general provision for booklets to show more definitely the inclusiveness of this item and to indicate explicitly that booklets more specifically provided for are not included here. The phrase "wholly or in chief value of paper" has been inserted in connection with booklets decorated in whole or in part by hand or by spraying, in order to limit the application of this item to paper booklets. At the end of this item the phrase "whether or not printed" is used in place of the phrase "whether or not lithographed" which appeared in the act of 1909 or the phrase "whether printed lithographically or otherwise" as in some other provisions of this paragraph so as to be more inclusive and cover all booklets decorated as described. Booklets fall in this paragraph for printed matter more logically than in paragraph 1306. Christmas and other greeting cards are separately named in this paragraph for the first time.

Several items included in the free list in the act of 1913 become dutiable under this paragraph in H. R. 7456: (1) Paragraph 425: "Books, maps, music, engravings, photographs, etchings, lithographic prints, bound or unbound, and charts, which shall have been printed more than twenty years at the date of importation"; (2) Paragraph 426: "Books and pamphlets printed wholly or chiefly in languages other than English," and "All textbooks used in schools and other educational institutions"; (3) Paragraph 428: Books and libraries of persons or families from foreign countries, exceeding \$250 in value; (4) Paragraph 582: Professional books, exceeding \$250 in value, of immigrants.

### PARAGRAPH 1311.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1311. Photograph, autograph, scrap, post-card and postage-stamp albums, and albums for phonograph records, wholly or partly manufactured, 23 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 417. Photograph, autograph, scrap, post-card, and postage stamp albums, wholly or partly manufactured, thirty-five per centum ad valorem.

[No corresponding provision for albums for phonograph records.]

PAR. 330. Photograph, autograph, scrap, post-card, and postage-stamp albums, wholly or partly manufactured, 25 per centum ad valorem.

[No corresponding provision for albums for phonograph records.]

PHOTOGRAPHIC, AUTOGRAPHIC, POST-CARD, AND POSTAGE-STAMP ALBUMS, ETC.

*Description and uses.*—The albums enumerated above consist of bound volumes of unprinted paper, designed to contain post cards, stamps, paper clippings, or photographs, when such articles are pasted to the leaves of the album or inserted in cut or slotted perforations.

*Production.*—No data available.

*Imports* in 1914 were valued at \$26,094. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$3,967	\$992	<i>Per cent.</i> 25
1919.....	9,300	2,325	25
1920.....	8,170	2,042	25
1921 (9 months).....	14,677		

*Important changes in classification.*—Albums for phonograph records have been added to this paragraph because they have grown to be one of the important divisions of albums.

### PARAGRAPH 1312.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1312. Playing cards, 60 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 419. Playing cards, in packs not exceeding fifty-four cards and at a like rate for any number in excess, ten cents per pack and twenty per centum ad valorem.

PAR. 331. Playing cards, 60 per centum ad valorem.

### PLAYING CARDS.

*Production.*—The domestic playing-card industry shows annual sales amounting to about \$3,000,000 in 1913. In 1914 there were three manufacturers, with 1,402 employees, wages of \$685,000, a capital of \$4,634,000, and raw materials costing \$918,000; the value of the finished product was \$3,898,000, and value added by manufacture, \$2,980,000.

*Imports* of playing cards in 1914 were valued at \$7,664. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Packs.</i>				<i>Per cent.</i>
1918.....	37,221	\$5,487	\$0.15	\$3,292	60
1919.....	58,505	9,897	.17	5,938	60
1920.....	71,117	12,758	.18	7,655	60
1921 (9 months).....	179,073	19,327			

*Exports* to China, India, and Oceania have greatly increased in the last five years, particularly to British India (\$58,909 in 1914, \$143,494 in 1918). Previous to 1914 exports to France were limited by its State monopoly and almost prohibitive tariff regulations, since removed. Exports to France rose from \$214 in 1914 to \$18,128 in 1918. Export values were \$330,194 in 1914. Later exports by calendar years have been as follows: 1918, \$882,370; 1919, \$1,522,516; 1920, \$1,173,559; 1921 (9 months), \$527,347.

## PARAGRAPH 1313.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1313. Papers and paper board and pulpboard, including cardboard and leatherboard or compress leather, embossed, cut, die-cut, or stamped into designs or shapes, such as initials, monograms, lace, borders, bands, strips, or other forms, or cut or shaped for boxes or other articles, plain or printed, but not lithographed, and not specially provided for; paper board and pulpboard, including cardboard and leatherboard or compress leather, laminated, glazed, coated, lined, printed, decorated, or ornamented in any manner; press boards and press paper, 23 per centum ad valorem; test or container boards of a bursting strength above 60 pounds per square inch by the Mullen or the Webb test, 15 per centum ad valorem; stereotype-matrix mat or board, 28 per centum ad valorem; wall pockets, composed wholly or in chief part of paper, papier-mâché or paper board, whether or not die-cut, embossed, or printed lithographically or otherwise; boxes, composed wholly or in chief value of paper, papier-mâché or paper board, and not specially provided for; manufactures of paper, or of which paper is the component material of chief value, not specially provided for, 26 per centum ad valorem.

## ACT OF 1909.

PAR. 415. \* \* \* press boards or press paper, valued at ten cents per pound or over, thirty-five per centum ad valorem; \* \* \* paper not specially provided for in this section, thirty per centum ad valorem; *Provided*, That paper embossed, or cut, die-cut, or stamped into designs or shapes, such as initials, monograms, lace, borders, bands, strips, or other forms, or cut or shaped for boxes, plain or printed but not lithographed, and not specially provided for in this section, shall be dutiable at thirty-five per centum ad valorem; articles composed wholly or in chief value of paper printed by the photogelatin process and not specially provided for in this Act, three cents per pound and twenty-five per centum ad valorem.

PAR. 420. Manufactures of paper, or of which paper is the component material of chief value, not specially provided for in this section, thirty-five per centum ad valorem.

## ACT OF 1913.

PAR. 328. \* \* \* press boards or press paper, \* \* \* 25 per centum ad valorem.

PAR. 332. Papers or cardboard, cut, die cut, or stamped into designs or shapes, such as initials, monograms, lace, borders, or other forms, \* \* \* and manufactures of paper or of which paper is the component material of chief value, not specially provided for in this section, 25 per centum ad valorem.

PAR. 530. \* \* \* leatherboard or compressed leather; \* \* \* [Free].

PAR. 650. \* \* \* paper twine for binding any of the foregoing (wool) \* \* \* [Free.]

## MISCELLANEOUS MANUFACTURES OF PAPER.

(See Surveys M-4, and M-1.)

*Description and uses.*—In the main this paragraph is made up of miscellaneous manufactures of paper. The significance of the phraseology is explained below in the section on "Changes in classification."

Press boards are made of mechanical wood pulp and certain good grades of waste paper. They have a very close texture and a hard, smooth finish. They are used to form the backing for the bedplates of printing presses, and also in the compression of some kinds of cloth to impart a certain desired finish.

Test or container board is a type of box board of especially high quality. It is made into boxes for holding commodities such as canned goods, paint, grease, varnish, etc., when packed in smaller containers. The size and strength of boxes for which container board is used are usually specified by the railroads and shipping companies. Hence container board often has to meet a certain minimum specified bursting strength test and must be of superior quality. It is usually made out of sulphate wood pulp. Jute and hemp waste are also much used in making container board.

Mullen testers and Webb testers are instruments commonly used for testing the bursting strength of shipping containers.

Stereotype matrix board or mat is a specially prepared board used in making stereotypes for printing papers. The board is imprinted with type, thus becoming a matrix from which the stereotype is made. The ordinary way of making a matrix is by building it up from sheets of stereotype tissue paper. This matrix board, however, is prepared by the manufacturers in ready form to be used for imprinting with type. It is known in the trade as "flongs" or "dry mats."

*Production.*—The value of paper box production increased from \$74,711,000 in 1914 to \$213,384,000 in 1919. New York is the principal seat of the industry. Illinois, Massachusetts, and Pennsylvania rank next. Production of paper bags, not made in paper mills, increased from \$17,603,000 in 1914 to \$47,264,000 in 1919. New York is the principal paper bag manufacturing State.

*Imports* in 1914 of paper or cardboard, cut, die-cut, or stamped into designs or shapes, were valued at \$30,470; those of press boards or press paper were 93,633 pounds, valued at \$9,290. Imports of "all other" manufactures of paper or of which paper is the component material of chief value were valued at \$1,216,891. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
PAPERS OR CARDBOARD CUT, DIE CUT, OR STAMPED INTO DESIGNS OR SHAPES SUCH AS INITIALS, MONOGRAMS, LACES, BORDERS, OR OTHER FORMS.					
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....		84,608		\$1,152	25
1919.....		4,528		1,132	25
1920.....		8,962		2,240	25
1921 (9 months).....		6,039			

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
PRESSBOARDS OR PRESS PAPERS.					
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	47,662	\$5,550	\$0.12	\$1,387	25
1919.....	16,650	3,181	.19	792	25
1921.....	1,417	458	.32	114	25
1921 (9 months).....	50,955	7,136			

MANUFACTURES OF PAPERS OR OF WHICH PAPER IS THE COMPONENT MATERIAL  
OF CHIEF VALUE.

1918.....		\$127,799		\$31,945	25
1919.....		265,613		66,327	
1921.....		553,318		137,877	
1921 (9 months).....		629,690			

*Exports* of the items enumerated in paragraph 1313 are not segregated. The total exports of papers and manufactures of paper for the calendar years 1918-1921 have been as follows: 1918, \$54,170,134; 1919, \$86,983,063; 1920, \$89,072,289; 1921 (9 months), \$40,310,856.

*Important changes in classification.*—This paragraph supplements paragraph 1302. The two paragraphs cover generally papers and paper board and pulpboard, including cardboard and leatherboard.

The provisions for test or container boards, stereotype-matrix mat or board, and wall pockets and boxes, composed wholly or in chief value of paper, papier-mâché or paper board, are new.

*Suggested changes.*—Page 147, line 5, of H. R. 7456: Change “part” to “value” after “chief” to agree with uniform practice elsewhere.

There is no separate provision for paper bags other than bags made of surface coated and certain other special kinds of paper. (See par. 1305.) As paper bags constitute an important staple article made of paper, it might be desirable to name them specifically in the tariff law. The following wording is suggested: “bags, composed wholly or in chief value of paper, n. s. p. f.”

## SCHEDULE 14.—SUNDRIES.

### PARAGRAPH 1401.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1401. Asbestos, manufactures of: Paper and millboard, composed of long fiber asbestos, used for making gaskets or similar articles, and electrical papers not exceeding five one-hundredths of one inch in thickness, 8 cents per pound; composed of other asbestos fibers,  $1\frac{1}{2}$  cents per pound; sheets and plates, of asbestos and hydraulic cement, flat, not exceeding one-eighth of one inch in thickness, 1 cent per square foot; exceeding one-eighth but not exceeding one-fourth of one inch in thickness, 2 cents per square foot; exceeding one-fourth of one inch in thickness,  $2\frac{1}{2}$  cents per square foot; other than flat,  $3\frac{1}{2}$  cents per square foot; colored, stained, or mixed with other material,  $3\frac{1}{2}$  cents per square foot and 10 per centum ad valorem; wick and rope, 18 cents per pound; woven sheet packing, in rolls, 24 cents per pound; gaskets, folded or cut from the straight sheet, rubberized, graphited, or otherwise coated or treated, 56 cents per pound; yarn containing more than 10 per centum of foreign matter, 32 cents per pound; yarn and listings, containing less than 10 per centum of foreign matter, exceeding twenty-five one-thousandths of one inch in thickness, 84 cents per pound; not exceeding twenty-five one-thousandths of one inch in thickness, \$1.68 per pound; textile fabrics containing 10 per centum and not more than 20 per centum of foreign matter, 42 cents per pound; containing more than 20 per centum of foreign matter, 32 cents per pound; mantle threads, with or without wire, treated or untreated, \$1.40 per pound; all other manufactures of asbestos, or of which asbestos is the component material of chief value, not specially provided for, 20 per centum ad valorem: *Provided*, That no article manufactured from any of the foregoing shall pay a less rate of duty than herein imposed on the asbestos paper, millboard, electrical papers, sheets, plates, wick, rope, woven sheet packing, yarn, listings, or textile fabrics of which it is composed.

## ACT OF 1909.

PAR. 462. Manufactures of \* \* \* asbestos, \* \* \* or of which these substances or any of them is the component material of chief value, not specially provided for in this section, twenty-five per centum ad valorem; woven fabrics composed wholly or in chief value of asbestos, forty per centum ad valorem.

## ACT OF 1913.

PAR. 367. Manufactures of \* \* \* asbestos, \* \* \* or of which these substances or any of them is the component material of chief value, not specially provided for in this section, 10 per centum ad valorem; yarn and woven fabrics composed wholly or in chief value of asbestos, 20 per centum ad valorem.

## ASBESTOS MANUFACTURES.

(See Survey N-20.)

*Description and uses.*—Manufactures of asbestos are used mostly for heat and acid resisting purposes. Asbestos paper varies in thickness from about one one-hundredth to one-eighth of 1 inch. Thicknesses up to and including one-sixteenth inch are known as asbestos paper, and three thirty-seconds and one-eighth inch thicknesses are spoken of as "rollboard." The width is generally 36 inches, and the paper is put up in rolls weighing approximately 100 pounds each.

Asbestos millboard is made of asbestos fiber with a small percentage of cementing or sizing material, built up in thin layers in a manner similar to paper, in sheets 42 by 48 inches, and usually from one-sixteenth to one-half of an inch in thickness.

The chief uses of asbestos paper and millboard are for high-pressure gaskets and packings, insulations, lining for stoves, air-cell pipe covering, roofing, building paper, and other purposes in the building trades.

Under the head "Sheets and plates" come asbestos shingles, slate, wood, or lumber. These articles are made from short asbestos fiber mixed with hydraulic cement, the asbestos forming about 15 per cent of the product by weight. Asbestos shingles and slate are suitable for use wherever roofing material is required or employed. Asbestos lumber is used largely in making fireproof walls, doors, and partitions.

Asbestos wick and rope are made from rovings produced by ordinary carding machinery, the rovings being twisted to the desired diameter and density on the wick and rope making machinery. They are used for emergency packings, for wiping tin plate, sheet steel, and other metals during the cooling period, and for general packing purposes in or near hot surfaces.

Asbestos woven sheet packings are made from asbestos cloth, rubber treated, cut to size in strips and laid or wound to desired finished size, either square, round, or oblong, and with or without rubber, wire, lead, or core. These are employed for general packing purposes, especially in service using high pressure and superheated steam.

Asbestos gaskets are of two kinds: (1) Gaskets made from rubber-treated asbestos cloth, cut in strips, folded, and formed to shape and size desired. They may be folded and tape jointed, or they may be made from asbestos tubings, the latter being known as seamless gaskets. These gaskets are used largely to seal joints on manhole or handhole openings of boilers, and at flanges in pipe lines, also at ports of gasoline motors. (2) Gaskets made from compressed sheet (made

by mixing short asbestos fiber with binding or filling materials). Compressed sheet gaskets are used principally for jointings in connection with internal-combustion motors. They are also employed for emergency uses, the engineer preferring to cut gaskets from a sheet of compressed packing rather than wait to secure gaskets of a given size from a supply house.

Asbestos yarn is made from asbestos crudes and fibers, often mixed with cotton to add strength and lessen expense. Frequently in twisting the yarn very fine brass or copper wire is used, which gives the material greater durability under certain conditions. The basis of all asbestos textiles is asbestos yarn.

Asbestos listings are narrow woven strips, ranging from about  $\frac{3}{4}$  inch to  $1\frac{1}{2}$  inches in width, used chiefly for winding armatures of motors.

(For unmanufactured asbestos, see par. 1515, p. 1245.)

*Production.*—In 1914 there were 32 establishments manufacturing asbestos products. The total value of the output, other than steam packings, for that year was \$2,814,000, of which \$1,813,000 represented building materials. In 1919 there were 43 establishments with an output valued at \$18,948,000.

*Imports* of asbestos yarn and woven fabrics for the fiscal years 1910 to 1913 averaged a little over \$90,000; in 1914, \$113,426. Imports of all other manufactures of asbestos in 1913 were valued at \$287,308; in 1914, at \$283,027. Later statistics, for calendar years, follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
ASBESTOS YARN.			
1918.....	\$2,349	\$470	20
1919.....	49,265	9,853	20
1920.....	248,649	49,730	20
1921 (9 months).....	57,023		
WOVEN FABRICS.			
1918.....	\$783	\$157	20
1919.....	138,551	27,710	20
1920.....	230,266	46,053	20
1921 (9 months).....	56,909		
ALL OTHER MANUFACTURES OF ASBESTOS.			
1918.....	\$23,154	\$2,314	10
1919.....	69,565	6,957	10
1920.....	139,535	13,954	10
1921 (9 months).....	128,711		

Imports are from England and Canada.

*Exports* increased in value from \$293,616 in the fiscal year 1910 to \$687,073 in 1914. In the calendar year 1918 the export value was \$2,493,320; in 1919, \$3,531,978; 1920, \$4,431,132; and in 1921 (nine months), \$2,167,324.

*Important changes in classification.*—H. R. 7456 divides manufactures of asbestos into nine classes with separate rates of duty for each class, whereas the act of 1913 has only three classes, two of which have the same rate of duty.

*Suggested changes.*—Page 147, lines 15 and 16: Should not "electrical papers" have a bracket of their own since the immediately following provisions in lines 17 and 18 apparently relate to paper and millboard to the exclusion of electrical papers?

Page 147, line 23, of H. R. 7456: Change "other than" to "not" before "flat" to agree with usual practice.

Page 148, line 1: Woven sheet packing not in rolls is not provided for.

Page 148, lines 4-7: As the two thicknesses apparently refer only to listings, it is suggested that in lines 5 and 6 a comma be inserted after "yarn" and the comma after "listings" be stricken out. No provision is made for textile fabrics, other than listings, containing less than 10 per centum of foreign matter. Insertion of the words "and other textile fabrics" after "listings" or substitution of "textile fabrics" for "listings" would accomplish the purpose.

#### PARAGRAPH 1402.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1402. Boxing gloves, ice and roller skates, and parts thereof, baseballs, footballs, tennis balls, golf balls, and all other balls, of whatever material composed, finished or unfinished, designed for use in physical exercise or in any indoor or outdoor game or sport, and all clubs, rackets, bats, or other equipment, such as is ordinarily used in conjunction therewith in exercise or play, all the foregoing, not specially provided for, 30 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

[Classable according to component material of chief value.]

[Classable according to component material of chief value.]

BOXING GLOVES, SKATES, BALLS, BATS, ETC.

*Production.*—Production data are not available for the various articles enumerated in this paragraph. In 1914 there were 162 establishments engaged in the manufacture of sporting and athletic goods with products valued at \$13,235,000; and in 1919, 187 establishments with products valued at \$22,806,000.

*Imports and exports.*—None recorded.

*Important changes in classification.*—The articles enumerated in paragraph 1402 were not provided for in the act of 1913 nor in previous tariff acts. They are dutiable according to material of chief value, principally under paragraphs 167, 176, 360, 368, and 369 of the 1913 act.

## PARAGRAPH 1403.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1403. Spangles and beads, including bugles, but not including imitation pearl beads and beads in imitation of precious or semiprecious stones, 25 per centum ad valorem; fabrics and articles not embroidered, tamboured, appliqué, nor scalloped, composed wholly or in chief value of beads or spangles other than imitation pearl beads and beads in imitation of precious or semiprecious stones, 40 per centum ad valorem; imitation pearl beads of all kinds and shapes, of whatever material composed, pierced or unpierced, strung or loose, mounted or unmounted, 40 per centum ad valorem; all other beads in imitation of precious or semiprecious stones, of all kinds and shapes, of whatever material composed, pierced or unpierced, strung or loose, mounted or unmounted, 45 per centum ad valorem: *Provided*, That no article composed wholly or in chief value of any of the foregoing beads or spangles shall pay duty at a less rate than is imposed in any paragraph of this Act upon such articles without such beads or spangles.

## ACT OF 1909.

PAR. 421. Beads and spangles of all kinds, including imitation pearl beads, not threaded or strung, or strung loosely on thread for facility in transportation only, thirty-five per centum ad valorem; fabrics, \* \* \* and other articles not specially provided for in this section, composed wholly or in chief value of beads or spangles made of glass or paste, gelatin, metal, or other material, but not in part of wool, sixty per centum ad valorem: *Provided*, That no article composed wholly or in chief value of beads or spangles made of glass, paste, gelatin, metal, or other material shall pay duty at a less rate than is imposed in any paragraph of this section upon such articles without such beads or spangles.

## ACT OF 1913.

PAR. 333. Beads and spangles of all kinds, including imitation pearl beads, not threaded or strung, or strung loosely on thread for facility in transportation only, 35 per centum ad valorem; curtains, and other articles not embroidered nor appliqué and not specially provided for in this section, composed wholly or in chief value of beads or spangles made of glass or paste, gelatin, metal, or other material, 50 per centum ad valorem.

## BEADS AND SPANGLES.

(See Survey N-1.)

*Description and uses.*—A spangle is a small plate or bar of shiny metal or other material used as an ornament or trimming on wearing apparel. A bead is a small perforated sphere, ball, or cylinder made from a great variety of materials, principally glass, fusible enamel, paste, metal, bone, wood, etc., and is used in the manufacture of jewelry, rosaries, and as ornaments or trimming on wearing apparel. A bugle is an elongated glass bead used as a tassel, pendant or ornament on wearing apparel. Imitation pearl beads may be divided into three classes: (1) A cheap hollow glass bead with an inside coating of pearl essence; (2) a hollow glass bead coated on the inside and filled or partly filled with wax; (3) a solid glass or fusible enamel bead

coated on the outside. The last-named class is known as the indestructible bead.

*Production.*—Imitation pearl beads are perhaps the most important. The solid or indestructible imitation pearl bead is an American development, the hollow types not being produced to any extent in this country. The finer grades of beads of all sorts are usually made in Europe, principally in Italy, Czechoslovakia, France, and Germany, where the industry has long been established and where the operatives have become skilled in the work. Since 1914, owing to the war's effect on importation, there has been in the United States considerable increase in the output of some classes of beads. The production, however, is small compared to imports. Exact figures are not available, but the Census in 1914 reported 19 establishments engaged primarily in bead work with products valued at \$1,083,000. The Association of American Manufacturers of Imitation Pearls and Specialties in Fusible Enamels has stated that the industry has developed rapidly within the last five years and that their products have increased in value from \$500,000 in 1914 to \$6,000,000 in 1920, and cover imitation pearl beads, imitation pearls, beads, imitation precious stones, buttons, and pins.

*Imports* in 1914 were \$1,185,495, beads and spangles, and \$998,494 curtains and other articles not embroidered, etc., composed wholly or in chief value of beads or spangles; from Germany, a total of \$819,725; from Austria, \$735,056; and from France, \$555,595. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
BEADS AND SPANGLES OF ALL KINDS, INCLUDING IMITATION PEARL BEADS NOT THREADED OR STRUNG.			
			<i>Per cent.</i>
1918.....	\$1,005,822	\$352,038	35
1919.....	4,131,737	1,445,363	35
1920.....	7,248,570	2,521,230	35
1921 (9 months).....	3,841,394		35
CURTAIN AND OTHER ARTICLES, NOT EMBROIDERED, ETC., N. S. P. F., COMPOSED WHOLLY OR IN CHIEF VALUE OF BEADS OR SPANGLES, ETC.			
1918.....	\$506,512	\$253,256	50
1919.....	2,143,177	1,071,588	50
1920.....	4,575,372	2,287,676	50
1921 (9 months).....	3,229,860		50

General imports of all beads and bead ornaments in 1920 were \$3,985,425 from France, \$2,236,400 from Japan, \$2,088,290 from Germany, \$2,704,941 from Czechoslovakia, and \$886,013 from Italy.

*Exports.*—None recorded.

*Important changes in classification.*—Rosaries dutiable in some cases under the bead paragraph of preceding tariff acts have been specially provided for in paragraph 1444, H. R. 7456. Bugles, which are elongated beads, are included within the ordinary designation of beads. Imitation pearl beads and beads in imitation of precious or semiprecious stones are excluded from the ordinary designation of beads, but are specifically provided for at higher rates of duties.

This paragraph also provides that no article composed wholly or in chief value of beads or spangles shall pay duty at a less rate than is imposed upon such articles without such beads or spangles.

*Conflicting provisions.*—See paragraphs 1429 and 1430, pages 1148 and 1153.

### PARAGRAPH 1404.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1404. Ramie hat braids, 30 per centum ad valorem; manufactures of ramie hat braids, 40 per centum ad valorem.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 349. \* \* \* braids \* \* \* composed wholly or in chief value of cotton, flax, or other vegetable fiber, \* \* \* and not elsewhere specially provided for in this section, sixty per centum ad valorem: *Provided*, That no article composed wholly or in chief value of one or more of the materials or goods specified in this paragraph, shall pay a less rate of duty than the highest rate imposed by this section upon any of the materials or goods of which the same is composed:  
\* \* \*

PAR. 334. Ramie hat braids, 40 per centum ad valorem; manufactures of ramie hat braids, 50 per centum ad valorem.

### RAMIE HAT BRAIDS.

(See Survey N-2.)

*Description and uses.*—Ramie braid, used for making hats, resembles silk braid, and may be made either by hand or by machinery, as other hat braid.

(For hat braids made of straw, chip, grass, palm leaf, horsehair, etc., see paragraphs 1406 and 1430.)

*Production* of ramie hat braid is not very extensive. Importers state that the demand in this country has ceased entirely. Switzerland is the chief producer, but Italy, Germany, and France also make some braids. The raw material comes almost wholly from China and Formosa.

*Imports.*—In 1914 imports of ramie hat braids were valued at \$3,018; those of manufactures of ramie hat braids were valued at \$153. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
RAMIE HAT BRAIDS.					
	<i>Yards.</i>				<i>Per cent.</i>
1918.....		\$2,255		\$902	40
1919.....	7,000	150	\$0.02	60	40
1920.....	800	126	.16	50	40
1921 (9 months).....	60	2	.03		40
MANUFACTURES OF RAMIE HAT BRAIDS (HATS).					
	<i>Number.</i>				
1919.....	912	\$533	\$0.58	\$266	50
1920.....	20	147	7.35	73	50
1921 (9 months).....	246	278	1.13	139	50

*Suggested changes.*—In view of the small quantity and value of ramie hat braid and manufactures of ramie hat braid imported and produced in the United States separate classification thereof appears unnecessary. Furthermore, the exception of this paragraph from the operation of paragraph 1430 would make such articles as embroidered ramie hats or ramie hats in part of lace dutiable at the same rate as ramie hats not embroidered, under this paragraph. If this paragraph should be retained the express exclusion of manufactures of ramie hat braids embroidered or appliquéd or in part of lace would apparently avoid such classification.

---

PARAGRAPH 1405.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1405. Boots, shoes, or other footwear, the uppers of which are composed wholly or in chief value of wool, cotton, ramie, animal hair, fiber, silk or substitutes therefor, whether or not the soles are composed of leather, wood, or other material, 25 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

[No corresponding provision.]

[No corresponding provision.]

FOOTWEAR, COMPOSED OF WOOL, COTTON, ETC.

*Description and uses.*—This line of footwear is distinct from leather footwear. It is not made in factories which are equipped to make leather shoes.

*Production.*—Official figures covering footwear of this description are not available for 1914, but for 1919 the Census reports the production of 19,896,000 pairs of canvas shoes with rubber soles, valued at \$25,177,000. The National Association of Felt Shoe Manufacturers state that 24 of their 27 members reported 17,328,895 pairs produced in the year ended July 1, 1920, and that sales amounted to nearly \$24,000,000. Felt used in the manufacture of this class of footwear is imported.

*Imports.*—Not shown in official statistics. Imports are principally from Germany, England, Austria, Japan, and Turkey, and consist almost entirely of low cuts or slippers. Felt boots are not imported to any extent.

*Exports.*—None recorded.

*Important changes in classification.*—Separate classification has been provided for boots, shoes, or other footwear the uppers of which are composed wholly or in chief value of wool, cotton, ramie, animal hair, fiber, or silk, regardless of the material in the sole. These articles come within various paragraphs of the existing law according to material, such as 256, 291, 308, 317, and 530.

*Suggested changes.*—If "substitutes" is not to be limited to silk, "or" should be inserted after "fiber," and a comma after "silk," and "therefor" changed to "for any of the foregoing."

The words "or not," page 150, line 4, H. R. 7456, should be omitted.

## PARAGRAPH 1406.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1406. Braids, plaits, laces, and willow sheets or squares, composed wholly or in chief value of straw, chip, grass, palm leaf, willow, osier, rattan, real horsehair, cuba bark, or manila hemp, suitable for making or ornamenting hats, bonnets, or hoods, not bleached, dyed, colored, or stained, 13 per centum ad valorem; bleached, dyed, colored, or stained, 17 per centum ad valorem; hats, bonnets, and hoods composed wholly or in chief value of any of the foregoing materials, whether wholly or partly manufactured, but not blocked or trimmed, 25 per centum ad valorem; blocked or trimmed,  $33\frac{1}{2}$  per centum ad valorem; straw hats known as harvest hats, valued at less than \$3 per dozen, 20 per centum ad valorem; all other men's hats, composed wholly or in chief value of any of the foregoing materials, whether wholly or partly manufactured, not blocked or blocked, not trimmed or trimmed, if sewed, 40 per centum ad valorem. But the terms "grass" and "straw" shall be understood to mean these substances in their natural form and structure, and not the separated fiber thereof.

## ACT OF 1909.

## ACT OF 1913.

PAR. 422. Braids, plaits, laces, and willow sheets or squares, composed wholly or in chief value of straw, chip, grass, palm leaf, willow, osier, rattan, real horsehair, cuba bark, or manila hemp, suitable for making or ornamenting hats, bonnets, or hoods, not bleached, dyed, colored, or stained, fifteen per centum ad valorem; if bleached, dyed, colored, or stained, twenty per centum ad valorem; hats, bonnets, and hoods composed wholly or in chief value of straw, chip, grass, palm leaf, willow, osier, rattan, cuba bark, or manila hemp, whether wholly or partly manufactured, but not trimmed, thirty-five per centum ad valorem; if trimmed, fifty per centum ad valorem. But the terms "grass" and "straw" shall be understood to mean these substances in their natural form and structure, and not the separated fiber thereof.

PAR. 335. Braids, plaits, laces, and willow sheets or squares, composed wholly or in chief value of straw, chip, grass, palm leaf, willow, osier, rattan, real horsehair, cuba bark, or manila hemp, suitable for making or ornamenting hats, bonnets, or hoods, not bleached, dyed, colored, or stained, 15 per centum ad valorem; if bleached, dyed, colored, or stained, 20 per centum ad valorem; hats, bonnets, and hoods composed wholly or in chief value of straw, chip, grass, palm leaf, willow, osier, rattan, cuba bark, or manila hemp, whether wholly or partly manufactured, but not blocked or trimmed, 25 per centum ad valorem; if blocked or trimmed, and in chief value of such materials, 40 per centum ad valorem. But the terms "grass" and "straw" shall be understood to mean these substances in their natural form and structure, and not the separated fiber thereof.

## STRAW BRAIDS AND STRAW HATS.

(See Survey N-2.)

*Description and use.*—Straw hats may be divided into two general classes according to process of manufacture: (1) Sewn-braid hats, (2) woven hat bodies, including Panamas, Leghorns, Javas, etc.

The principal business of straw-hat factories in the United States is the production of sewn-braid hats, i. e., hats made by sewing plaits or braids of straw or other vegetable fibers into the shape of hat bodies. Woven-body hats are shaped, finished, and trimmed in American factories. The manufacture of sewn-braid hats constitutes the bulk of the business in every large straw-hat factory.

Hat braids used in the manufacture of men's and women's straw hats are not produced to any extent in the United States.

*Production.*—In 1914 there were 149 manufacturers of straw hats, with 9,483 employees receiving wages of \$5,253,000; capital invested was \$12,589,000; cost of materials, \$14,086,000; and product was valued at \$25,444,000—an increase over 1904 of 70 per cent in employees and of more than 100 per cent in capital, wages paid, and value of product. The industry centers largely in New York, Massachusetts, and Maryland. About 45 per cent of the production was of men's hats. In 1919 there were 147 establishments with products valued at \$31,920,000. It is estimated that the entire output of men's straw hats in 1920 amounted to \$20,000,000, of which about \$12,000,000 was sewed hats.

The manufacture of hats of straw and similar material is well developed in Japan, Italy, England, France, and in Colombia, Ecuador, and Mexico.

*Imports* in 1914 of braids, plaits, laces, and willow sheets or squares composed of straw, etc., not bleached, dyed, etc., were: \$5,891,258 dutiable and \$13,845 (from the Philippines) free; bleached, dyed, etc., \$356,698. The values of hats, bonnets, and hoods of these materials were: Not trimmed, \$425,026; not blocked or trimmed \$3,919,218 dutiable and \$232,777 (from the Philippines) free; trimmed, \$21,355; blocked or trimmed, \$881,762 dutiable and \$62 (from the Philippines) free. In 1914 more than one-half the braids, etc., came from Japan, the rest mainly from France, England, Italy, and Germany. Of the hats, bonnets, and hoods of straw, etc., imported in 1914, more than one-half came from Japan and Colombia, the rest largely from Italy, England, Ecuador, Mexico, and France. Later statistics follow:

*Braids, plaits, laces, and willow sheets or squares of straw, chip, etc.*

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
NOT BLEACHED, DYED, OR COLORED.

## Straw hats.

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
NOT BLOCKED OR TRIMMED.					
	<i>Number.</i>				<i>Per cent.</i>
1918.....		\$2,711,943		\$529,948	20
1919.....	15,260,794	3,844,888	\$0.252	816,425	20
1920.....	16,691,421	4,770,858	.285	997,286	20
1921 (9 months).....	10,061,717	1,898,486	.188		20
BLOCKED OR TRIMMED.					
1918.....		\$198,097		\$70,135	40
1919.....	106,854	169,820	\$1.588	66,296	40
1920.....	710,210	934,470	1.315	358,252	40
1921 (9 months).....	681,994	861,100	1.257		40

In 1920 about one-half of the material for straw hats was imported from China, and over 35 per cent from Japan. The other countries from which braids were imported in their order of importance were Italy, England, Switzerland, and France. Of the straw hats not blocked imported in 1920, over 20 per cent came from Italy, about 19 per cent from Colombia, 12 per cent from Japan, and the rest principally from Mexico, Ecuador, and Dutch East Indies. Considerable quantities are imported from the Philippines free of duty. Straw hats not blocked are principally of the woven-body type. Of the straw hats blocked or trimmed about 45 per cent came from Japan and about 40 per cent from England and less than 10 per cent from Italy.

*Important changes in classification.*—The important changes made in H. R. 7456 with respect to straw hats are those relating to men's hats. Straw hats known as harvest hats, valued at less than \$3 per dozen, are specially provided for. This classification was inserted in order to provide a lower rate of duty on straw hats worn principally by farmers and other persons in rural districts. The other change provides for a higher rate of duty on men's hats, "if sewed," thus distinguishing them for tariff purposes from men's woven hats.

*Suggested changes.*—Imitation Panama hats made of tissue paper are being imported from Japan in considerable quantities. As manufactures of tissue paper they are dutiable at 30 per cent under paragraph 323 of the act of 1913.

The exception of this paragraph from the operation of paragraph 1430 would make such articles as embroidered hats or hats in part of lace dutiable at the same rate as such hats not embroidered, under this paragraph. Express exclusion of hats, etc., embroidered, appliquéd, or in part of lace would apparently prevent such result.

Women's hats, if sewed, are not included in the last bracket of paragraph 1406.

## PARAGRAPH 1407.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1407. Brooms, made of broom corn, straw, wooden fiber, or twigs, 15 per centum ad valorem; tooth brushes and other toilet brushes, 35 per centum ad valorem; all other brushes not specially provided for, including feather dusters and hair pencils in quills or otherwise, 30 per centum ad valorem.

## ACT OF 1909.

PAR. 423. Brushes, brooms, and feather dusters of all kinds, and hair pencils in quills or otherwise, forty per centum ad valorem.

## ACT OF 1913.

PAR. 336. Brooms, made of broom corn, straw, wooden fiber, or twigs, 15 per centum ad valorem; brushes and feather dusters of all kinds, and hair pencils in quills or otherwise, 35 per centum ad valorem.

## BROOMS.

(See Survey N-3.)

*Description and uses.*—Brooms for sweeping floors and streets, cleaning ceilings and hearths, and ordinary whisk brooms usually are made of the tops of broom corn. Brooms for brewers' use are made of bristles; street and push brooms, of brass and steel, rattan, bass-wood fiber, or split bamboo. Those made of broom corn, straw, and wooden fiber and twigs, included hereunder, compose the bulk of the brooms used.

*Production of brooms in 1914* was valued at \$14,085,000, of which those made from broom corn were valued at \$13,800,000. The total production of brooms in 1919 amounted to \$30,094,000.

*Imports.*—The value of brooms imported in 1914 amounted to \$3,640. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Number.</i>				<i>Per cent.</i>
1918.....		\$7,831		\$1,173	15
1919.....	155,621	17,874	\$0.14	1,173	15
1920.....	147,144	21,902	.15	3,281	15
1921 (9 months).....	80,433	8,176	.10		15

<sup>1</sup> Includes a small amount from the Philippines, free of duty.

*Exports.*—The value of brooms exported in 1914 amounted to \$135,207, of which one-half went to Panama, Mexico, and Canada. Later statistics for calendar years are as follows: 1918, \$157,885; 1919, \$292,729; 1920, \$330,267; 1921 (nine months), \$92,986.

The export trade in brooms with Mexico and Canada declined in 1919 and 1920 while that with Panama and Cuba increased. Exports to Ireland in the years 1919 and 1920 amounted respectively to \$113,900 and \$134,883, being almost as much as was exported to all other countries.

## BRUSHES.

(See Survey N-4.)

*Description and uses.*—Brushes may be divided into three classes: (1) Toilet, tooth, hair, nail, hand brushes, etc.; (2) painters' and artists' brushes; and (3) all other brushes, including feather dusters. Hair pencils and artists' brushes are made of soft hairs and are used by artists, decorators, strippers, and letterers. Toilet brushes and painters' brushes are made of bristles.

*Production.*—The Bureau of the Census reports the value of the output in 1914 as \$17,894,000, divided as follows: Toilet brushes, \$2,675,000; paint and varnish brushes, \$7,303,000; and all other, \$7,916,000. The output of feather dusters and hair pencils is not reported separately. In 1919 the production of all brushes was valued at \$39,030,000.

*Imports.*—In 1914 the value of all brushes imported into the United States amounted to \$2,171,615, of which \$682,003 came from France, \$665,952 from Japan, \$514,240 from Germany, \$267,734 from England, and \$29,734 from Austria. The increase in imports from Japan during the war period more than offset the decline in imports from Europe. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
----------------	-----------	--------	-------------	-------	------------------

## TOOTH BRUSHES AND OTHER TOILET BRUSHES.

	Number.	Value.	Unit value.	Duty.	Per cent.
1918.....	27,009,043	\$1,528,244	\$0.05	\$534,885	35
1919.....		2,257,669		\$440,184	35
1920.....	36,476,920	2,215,446	.06	775,406	35
1921.....	41,437,232	3,594,100	.09	1,257,935	35
1921 (9 months).....	23,348,062	1,787,552			35

## FEATHER DUSTERS.

1918.....	\$21,801	\$789	\$0.04	\$276	35
1919.....	498,388	5,178	.01	1,312	35
1920.....	840,523	11,530	.01	4,035	35
1921 (9 months).....	247,961	8,768			35

## HAIR PENCILS.

1918.....	\$311,125	\$4,132	\$0.01	\$1,446	35
1919.....	737,459	7,081	.01	2,478	35
1920.....	1,212,043	24,870	.02	8,704	35
1921 (9 months).....	1,663,717	16,613			35

## ALL OTHER BRUSHES N. S. P. F.

1918.....	\$4,994,196	\$104,661	\$0.02	\$36,631	35
1919.....	6,228,647	175,372	.03	61,377	35
1920.....	10,775,716	464,322	.04	162,512	35
1921 (9 months).....	8,437,551	114,530			35

<sup>1</sup> Brushes, Jan. 1 to June 30.<sup>2</sup> Toilet brushes, July 1 to Dec. 31.<sup>3</sup> July 1 to Dec. 31.

In 1920 the general imports of toilet brushes from Japan amounted to 49,474,118, valued at \$3,831,886. England, France, and Germany were also exporting considerable quantities of these brushes in 1920.

*Exports.*—Official statistics do not show exports of brushes by classes or grades. Exports of brushes aggregated \$449,909 in 1914. With the exception of the years 1915 and 1916, Canada has been the chief country to which brushes have been exported. Later statistics for calendar years are as follows: 1918, \$1,099,016; 1919, \$1,470,555; 1920, \$2,085,821; 1921 (nine months), \$945,180.

*Important changes in classification.*—Specific provision is made for toilet and other brushes.

*Conflicting provisions.*—This paragraph and paragraph 29 are in conflict in respect to brushes having backs or handles of compounds of pyroxylin.

*Suggested changes.*—The phrase "in quills or otherwise" should modify hair pencils only. A comma inserted after dusters would more clearly restrict the phrase to hair pencils.

### PARAGRAPH 1408.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1408. Bristles, sorted, bunched, or prepared, 7 cents per pound.

ACT OF 1909.

ACT OF 1913.

PAR. 424. Bristles, sorted, bunched, or prepared, seven and one-half cents per pound.

PAR. 337. Bristles, sorted, bunched, or prepared, 7 cents per pound.

### BRISTLES.

(See Survey N-4.)

*Description and uses.*—Bristles are the strong hairs growing on the back (and to some extent on the sides) of the hog, wild boar, and certain other animals. They are extensively used in brushes and by shoemakers and saddlers. The best bristles come from the cold regions of the Temperate Zone. (For crude products, see par. 1536.)

*Production.*—The small and immature bristles obtained from slaughterhouses (as a by-product of the pork-packing industry) are short and inferior. Russia supplies the finest grade, the hairs being much longer and stiffer than those of American bristle-bearing animals. China, however, with a somewhat inferior product, supplies from 60 to 75 per cent of the bristles we require for paint brushes.

*Imports.*—In 1914 imports of sorted, bunched, or prepared bristles were 3,551,081 pounds, valued at \$3,255,554, of which 1,410,373 pounds, valued at \$934,211 came from China. The revenue aggregated \$253,753 in 1914. Bristles are also imported from England, France, and Germany. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	3,820,718	\$5,055,898	\$1.32	\$267,450	5.29
1919.....	2,971,083	5,567,462	1.87	207,976	3.74
1920.....	4,897,868	10,097,579	2.06	342,851	3.40
1921 (9 months).....	2,455,681	4,330,591			

Imports from Germany were cut off during the war, but bristles are now being imported from that country, amounting, in the calendar year 1920, to 53,245 pounds, valued at \$208,470. Imports from Japan in 1920 amounted to 133,805 pounds, valued at \$694,433. Before the war imports from Japan were small.

*Exports.*—Bristles of the quality required in brush making are not produced in the United States and consequently there are no domestic exports.

### PARAGRAPH 1409.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1409. Button forms of lastings, mohair or silk cloth, and manufactures of other material, in patterns of such size, shape, or form as to be fit for buttons exclusively, and not exceeding three inches in any one dimension, 10 per centum ad valorem.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 426. Button forms of lastings, mohair or silk cloth, or other manufactures of cloth, woven or made in patterns of such size, shape or form as to be fit for buttons exclusively, and not exceeding three inches in any one dimension, ten per centum ad valorem.

PAR. 338. Button forms of lastings, mohair or silk cloth, or other manufactures of cloth, woven or made in patterns of such size, shape, or form as to be fit for buttons exclusively, and not exceeding eight inches in any one dimension, 10 per centum ad valorem.

#### BUTTON FORMS, ETC.

(See Report T. I. S. — 4.)

*Description and use.*—Button forms included in this paragraph are pieces of cloth, of whatever composition, of a shape and size fit for use only as coverings for buttons. Lasting is usually a strong and durable worsted fabric woven with a double or three-ply warp and single filling into a twill or satin weave.

*Production.*—No information available.

*Imports* in 1914 were valued at \$19,183. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$76	\$8	<i>Per cent.</i> 10
1919.....	5	.....	10
1920.....	1,634	164	10
1921 (9 months).....	890	89	10

## PARAGRAPH 1410.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1410. Buttons of vegetable ivory, finished or partly finished,  $1\frac{1}{4}$  cents per line per gross; vegetable ivory button blanks, not turned, faced, or drilled, three-fourths of 1 cent per line per gross; buttons of pearl or shell, finished or partly finished,  $1\frac{1}{4}$  cents per line per gross; pearl or shell button blanks, not turned, faced, or drilled,  $1\frac{1}{4}$  cents per line per gross; and, in addition thereto, on all the foregoing, 15 per centum ad valorem: *Provided*, That the term "line" as used in this paragraph shall mean the line button measure of one-fortieth of one inch.

## ACT OF 1909.

PAR. 427. Buttons or parts of buttons and button molds or blanks, finished or unfinished, shall pay duty at the following rates, the line-button measure being one-fortieth of one inch, namely: \* \* \* buttons of pearl or shell, one and one-half cents per line per gross; buttons of \* \* \* vegetable ivory, \* \* \* not specially provided for in this section, three-fourths of one cent per line per gross, and in addition thereto, on all the foregoing articles in this paragraph, fifteen per centum ad valorem; \* \* \*

## ACT OF 1913.

PAR. 339. Buttons of vegetable ivory in sizes thirty-six lines and larger, 35 per centum ad valorem; below thirty-six lines, 45 per centum ad valorem; buttons of shell and pearl in sizes twenty-six lines and larger, 25 per centum ad valorem; below twenty-six lines, 45 per centum ad valorem; \* \* \* parts of buttons and button molds or blanks, finished or unfinished, \* \* \* all the foregoing \* \* \* 40 per centum ad valorem.

## VEGETABLE IVORY BUTTONS.

(See Report T. I. S.—4.)

*Description and uses.*—Vegetable ivory buttons are made from tagua nuts which grow in northern South America and in Panama. A similar nut, the "palma dum," from Africa has been much used in Italy. (See par. 1664, p. 1450.)

The vegetable ivory button is the button generally used on men's and women's coats and suits.

*Production* increased from 2,470,000 gross, valued at \$1,300,000, in 1904, to 5,125,000 gross, valued at \$2,885,000, in 1914, and to 7,835,000 gross (not including trouser buttons), valued at \$7,676,000, in 1919. There were 22 factories in this country in 1921. Germany and Italy were important producers and exporters of vegetable ivory buttons before the war. At present (1921) Italy is the most important exporter, and Germany is again doing a large business in these buttons.

*Imports* into the United States of tagua nuts increased from over 23,000,000 pounds, valued at \$790,000, in 1912, to about 51,700,000 pounds, valued at over \$425,000, in 1917. In the calendar year 1920 almost 50,000,000 pounds, worth \$2,550,000, were imported, of which Ecuador sent 66.2 per cent, Colombia 23.4 per cent, and Panama 8.3 per cent.

Imports into the United States in 1918 (fiscal year) were 32,128 gross, valued at \$13,624. The import value ranges from \$10,000 to \$50,000 a year. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
VEGETABLE-IVORY BUTTONS—36 LINES AND LARGER.					
1918.....	<i>Gross.</i> 4,928	\$5,006	\$1.02	\$1,752	<i>Per cent.</i> 35
1919.....	1,631	736	.45	258	35
1920.....	1,285	2,238	1.74	783	35
1921 (9 months).....	3,036	7,282	2.40	2,549	35

VEGETABLE-IVORY BUTTONS—BELOW 36 LINES.					
1918.....	14,177	\$3,431	\$0.24	\$1,544	45
1919.....	151	160	1.06	72	45
1920.....	9,862	3,710	.38	1,670	45
1921 (9 months).....	16,874	4,844	.29	2,180	45

*Exports* are sent in small amounts to several countries of South America. Exports to Canada for the three years 1919 to 1921 averaged about \$35,000 per year.

*Important changes in classification.*—This paragraph eliminates the provision of the act of 1913 (par. 339), dividing these buttons into two classes, "36 lines and larger" and "below 36 lines." Specific rates per line per gross varying in amount depending upon the condition of the blank or button are added.

*Suggested changes.*—Horn buttons, being used for the identical purposes as vegetable-ivory buttons, mostly on men's and women's clothing and being very similar in price, could well be placed in the same provisions as vegetable ivory.

#### PEARL OR SHELL BUTTONS.

(See Report T. I. S.—4.)

*Description and uses.*—Ocean-pearl buttons are made of several varieties of salt-water mollusca, chiefly from the waters off the coasts of Oceania and Asia. The quality varies greatly with the shell. Wholesale prices for the same sized buttons range from 10 cents to \$1.20 per gross. The better grades are used on women's wear and men's shirts. Fresh-water pearl buttons are made from the shells of mussels obtained in rivers and lakes. They are, on the whole, a cheaper grade of buttons than those of ocean pearl.

*Production* of ocean-pearl buttons in the United States in 1918 was by 112 establishments. In 1914 the output of ocean-pearl buttons was over 4,500,000 gross, valued at \$2,489,000; in 1919 the output was 5,892,000 gross, valued at \$6,564,000. Our production of fresh-water pearl buttons in 1914 was over 21,000,000 gross, valued at about \$4,800,000. The output for 1916 was valued at \$7,450,000, and the production in 1919 (census) was 23,969,000 gross, valued at \$8,200,000. Imports of shells (unmanufactured) amounted to \$2,219,000 in 1912, to \$1,328,000 in 1915, to \$2,435,000 in 1917, to 10,071,565

pounds in 1920, and to 3,815,912 pounds, valued at \$1,177,024 in 1921, valued at \$3,144,786. Austria-Hungary long maintained a practical monopoly of the ocean-pearl button industry, but the development of a domestic fresh water pearl industry caused Austrian imports almost to disappear. Japan is an important producer and large exporter of both ocean and fresh water pearl buttons, sending very large quantities to the United States and other button-importing countries. Japan exported over 18,000,000 gross of all kinds of pearl buttons in 1918, valued at \$4,216,978. The volume has been less in later years.

Imports of pearl or shell buttons in 1918 amounted to 4,784,041 gross, valued at \$913,721, and in 1921 to 2,412,935 gross, valued at \$1,099,643, practically all of which came from Japan and the Philippines, about \$900,000 worth from Japan, and \$200,000 (free) from the Philippines. The estimated Japanese output of fresh-water pearl buttons for 1917 was about 600,000 gross of first-class buttons and over 1,000,000 gross of inferior grades.

Over 80 per cent of all the pearl buttons imported are below 26 lines. Prices on most imported pearl buttons are low compared with the domestic product, and the great quantities of these buttons in the domestic market have resulted in severe competition with domestic producers. The lower price is said to be less than the cost of cutting the blanks in the United States as reported in a brief submitted by the Button Manufacturers' Association to the United States Tariff Commission. Imports for 1918-1921 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
PEARL OR SHELL BUTTONS—BELOW 26 LINES.					
	<i>Gross.</i>				<i>Per cent.</i>
1918.....	70,367	\$33,272	\$0.47	.....	( <sup>1</sup> ) 45

	85,148	69,762	.82	17,441	( <sup>1</sup> ) 25

<sup>1</sup> From the Philippines, free.

General imports of pearl buttons by principal countries are shown as follows:

	Japan.	Philippine Islands (free).	England.
1918.....	\$471,596	\$47,851	\$326
1919.....	1,175,509	112,519	49,431
1920.....	1,947,404	226,112	10,758

*Exports of pearl buttons in 1918 (fiscal year) amounted to \$600,666, of which \$303,019 went to Europe, \$222,017 to North America, and \$51,106 to South America. Previous statistics are not available. Statistics for later calendar years follow: 1918, \$631,948; 1919, \$710,727; 1920, \$712,714; 1921, \$142,884.*

England and Canada are the principal countries to which the United States ships pearl buttons.

*Important changes in classification.*—This paragraph changes the act of 1913 (par. 339) by eliminating the classes, "26 lines and larger" and "below 26 lines," and substituting a specific duty per line per gross.

#### BUTTON BLANKS OF VEGETABLE IVORY, PEARL, OR SHELL.

(See pp. 1109 and 1113.)

### PARAGRAPH 1411.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1411. Buttons commonly known as agate buttons, 15 per centum ad valorem; parts of buttons and button molds or blanks, finished or unfinished, not specially provided for, and all collar and cuff buttons and studs composed wholly of bone, mother-of-pearl, ivory, vegetable ivory, or agate, and buttons not specially provided for, 38 per centum ad valorem.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 427. Buttons or parts of buttons and button molds or blanks, finished or unfinished, shall pay duty at the following rates, the line-button measure being one-fortieth of one inch, namely: Buttons known commercially as agate buttons, \* \* \* one-twelfth of one cent per line per gross; buttons of bone, \* \* \* one-fourth of one cent per line per gross; \* \* \* buttons of horn, \* \* \* glass, \* \* \* not specially provided for in this section, three-fourths of one cent per line per gross, and in addition thereto, on all the foregoing articles in this paragraph, fifteen per centum ad valorem; shoe buttons made of paper, board, papier-maché, pulp or other similar material, not specially provided for in this section, valued at not exceeding three cents per gross, one cent per gross; \* \* \* buttons not specially provided for in this section, and all collar or cuff buttons and studs composed wholly of bone, mother-of-pearl, or ivory, fifty per centum ad valorem.

PAR. 339. \* \* \* agate buttons and shoe buttons, 15 per centum ad valorem; parts of buttons and button molds or blanks, finished or unfinished, and all collar and cuff buttons and studs composed wholly of bone, mother-of-pearl, ivory, or agate, all the foregoing and buttons not specially provided for in this section, 40 per centum ad valorem.

PAR. 383. \* \* \* buttons or barrel buttons or buttons of other forms for tassels or ornaments \* \* \* any of the foregoing made of wool or of which wool is a component material, whether containing india rubber or not, fifty cents per pound and sixty per centum ad valorem.

## AGATE BUTTONS.

(See Report T. I. S.—4.)

*Description, uses, and production.*—Agate buttons are made of feldspar and a clay similar to that manufactured into porcelain, and are used on cheap underwear, boys' waists, etc., and on shoes. Very few, if any, have ever been made in this country.

*Imports* in 1918 (fiscal year) were 2,857,167 gross, valued at \$188,669. During the war imports were chiefly from France and Japan, and averaged annually about 2,500,000 gross. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Gross.</i>				<i>Per cent.</i>
1918.....	2,163,350	\$132,310	\$0.06	\$19,847	15
1919.....	1,482,552	110,708	.07	16,606	15
1920.....	2,423,270	163,898	.07	24,585	15
1921 (9 months).....	1,108,341	71,328	.06	10,699	15

## BUTTON MOLDS OR BLANKS.

(See Report T. I. S.—4.)

*Description.*—Blanks or molds constitute material prepared especially to be manufactured into particular kinds of buttons.

*Production* in 1914 of button blanks for sale was 14,304,148 gross, valued at \$2,349,406, and was more than double the output of 1904; the production in 1919 (census) was 13,093,000 gross, valued at \$3,092,000.

*Imports.*—Only small quantities of blanks and parts are imported. Some pearl shell blanks have been imported from Japan in recent years. No statistics available.

*Exports.*—No separate statistics (United States) available. Canadian statistics report a few thousand dollars worth of "animal shell" blanks received from the United States.

*Suggested changes.*—See General Notes on Paragraph, page 1113.

## COLLAR AND CUFF BUTTONS AND STUDS.

(See Report T. I. S.—4.)

(See Schedule 3, paragraph 349, for other metal buttons; trouser, collar, and cuff, etc.)

*Production* in 1914 was 1,771,053 gross, valued at \$56,251, including some metal buttons. Production in 1919 (Census) was 974,000 gross, valued at \$80,000.

*Imports* in 1918 (fiscal year) were valued at \$577; in 1914, at \$52,125. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
----------------	-----------	--------	-------------	-------	------------------

## COLLAR AND CUFF BUTTONS OF BONE, MOTHER-OF-PEARL, IVORY, OR AGATE.

	2 <sup>967</sup>	685	.71	411	60

<sup>1</sup> Collar and cuff.<sup>2</sup> Dress.

*Exports.*—None recorded. Statistics of some other countries report the import of small quantities of these buttons from the United States.

*Important changes in classification.*—See General Notes on Paragraph, page 1113.

## BONE BUTTONS.

(See Report T. I. S.—4.)

*Description and uses.*—Bone buttons are made chiefly from the shin bones of cattle, and are used mostly on underwear, waists, and inside flaps of garments.

*Production.*—In 1919 (Census) 2,171,000 gross were produced, valued at \$509,000; the output in 1914 was 2,199,000 gross, valued at \$330,000. Small amounts are produced in Japan. Formerly Germany practically controlled the export trade.

*Imports* aggregated 30,289 gross, valued at \$11,318 in 1918; 35,572 gross, valued at \$4,241 in 1915; 2,279 gross, valued at \$492 in 1916; and 10,444 gross, valued at \$1,803 in 1917 (fiscal years). Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Gross.</i>				<i>Per cent.</i>
1918.....	28,622	\$11,081	\$0.39	\$4,432	40
1919.....	8,870	1,700	.19	680	40
1920.....	13,517	9,330	.69	3,732	40
1921 (9 months).....	17,464	1,888	.11	755	40

*Exports.*—None recorded, but small amounts are sent to various countries.

## GLASS BUTTONS.

(See Report T. I. S.—4.)

*Description and uses.*—These buttons are made from glass rods, sometimes called "fusible enamel," in a great variety of sizes, shapes, and colors, and are described as "fancy buttons used largely for women's wear."

*Production* in 1919 (Census) was 571,000 gross, valued at \$261,000, as compared with 217,000 gross valued at \$100,000 in 1914. Most of our imports of glass buttons come from Czechoslovakia.

*Imports* were 142 gross, valued at \$448, in 1918, and 1,000,000 gross, valued at \$464,117, in 1914 (fiscal years). Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Gross.</i>				<i>Per cent.</i>
1918.....	429	\$674	\$1.57	\$270	40
1919.....	144,399	39,382	.27	15,753	40
1920.....	431,822	100,215	.23	40,086	40
1921 (9 months).....	141,394	44,146	.31	17,658	40

*Exports.*—Small quantities are now exported to Canada, South America, and other countries, but statistics are lacking.

#### HORN BUTTONS.

(See Report T. I. S.—4.)

*Description and uses.*—Horn buttons are in the main made from the horns and hoofs of domestic cattle. These buttons are often made in large sizes and are much used on suits, cloaks, and overcoats. England and Japan are large producers and exporters.

*Production.*—Eight factories employing about 600 persons were making these buttons in 1918. The census of 1914 reported a production of 537,000 gross, valued at \$299,487; the 1919 census reports an output of 2,575,000 gross, valued at \$1,111,000.

*Imports* since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Gross.</i>				<i>Per cent.</i>
1918.....	226,157	\$69,098	\$0.31	\$27,639	40
1919.....	121,711	64,320	.53	25,728	40
1920.....	27,281	33,684	1.23	13,473	40
1921 (9 months).....	28,129	51,068	1.82	20,427	40

*Exports.*—Separate statistics are not available.

#### SHOE BUTTONS.

(See Report T. I. S.—4.)

*Description and uses.*—Shoe buttons are made from a number of materials, the most important being papier-mâché, composition and agate. Cheaper grades from Austria and Germany were agate. The domestic product is in the main made of papier-mâché.

*Production.*—Twelve factories, chiefly in New England, gave an output in 1914 of about 15,500,000 gross, valued at about \$610,000. The manufacture of papier-mâché buttons greatly increased with the

elimination of German and Austrian competition during the war. In 1919 (census) production was 5,295,000 gross, valued at \$632,000.

Imports in 1918 (fiscal year) were 46,684 gross, valued at \$3,134; in 1914, over 570,000 gross, valued at about \$21,500. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Gross.</i>				<i>Per cent.</i>
1918.....	44,152	\$2,247	\$0.05	\$337	15
1919.....	3,010	1,867	.62	280	15
1920.....	120,171	11,856	.10	1,778	15
1921 (9 months).....	8,762	2,050	.23	308	15

*Exports.*—Small quantities are exported but separate statistics are not given.

*Important changes in classification.*—See General Notes on Paragraph, page 1113.

#### SILK BUTTONS.

(See Report T. I. S.—4.)

*Imports.*—Statistics for silk and “all other,” are given below; statistics of other kinds not available.

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Gross.</i>				<i>Per cent.</i>
1918.....		\$364		\$146	40
1919.....	3	13	\$4.33	5	40
1920.....	178	173	.97	69	40
1921 (9 months).....	7,042	1,783	.25	713	40

#### ALL OTHER BUTTONS, N. S. P. F.

1918.....		\$79,617		\$31,847	40
1919.....		10,182			(1) 40
1920.....		106,310		42,524	40
1921 (9 months).....		229,153		91,661	40
		202,564		81,026	40

<sup>1</sup> From the Philippines, free of duty.

*Exports.*—The total domestic exports of all buttons for the calendar years 1918, 1919, 1920, and 1921 were as follows: \$2,438,822, \$3,296,687, \$3,846,830, and \$1,033,573, respectively. Canada, England, and Argentina were the principal markets. There were also exported for the same periods the following amounts of foreign buttons, viz: \$14,820, \$26,191, \$75,670, and \$73,747.

## MISCELLANEOUS.

(See Report T. I. S. — 4.)

*Description and uses.*—There are numerous kinds of buttons coming under the “not specially provided for” clause of this paragraph. The celluloid, composition, wood, and covered buttons, are of great importance in domestic manufacture. Silk, crochet, galalith, and many other kinds are also included under this paragraph.

*Production.*—Celluloid (plastic) buttons to the amount of 623,000 gross, valued at \$724,000 were produced in 1914 (Census); for 1919 the same source gives a production of 2,210,000 gross, valued at \$3,323,000.

Covered buttons produced in 1914 (Census) amounted to 3,017,000 gross, valued at \$1,600,000; although the quantity decreased to 2,872,000 gross in 1919, the value increased to \$1,769,000.

Other buttons not specified in the 1914 census amounted to 2,001,000 gross, valued at \$696,000. In 1919 the production had increased to 4,364,000 gross, valued at only \$523,000.

Production of the many other kinds is not definitely known.

## GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—The provision for collar and cuff buttons and studs of vegetable ivory is new.

Shoe buttons specifically mentioned in paragraph 339 of the act of 1913 are relegated to the provision for buttons not specially provided for.

*Suggested changes.*—“Parts of buttons and button molds or blanks, finished or unfinished, not specially provided for,” carry a duty of 38 per centum ad valorem, while a finished button under paragraph 349, carrying a duty of a fraction of a cent per line per gross and 10 per centum ad valorem, might be dutiable at a less rate than a part of the same or similar button.

The expression “button blanks, not turned, faced, or drilled,” is said not to express the process of manufacture and to be meaningless in the vegetable ivory button business. It is suggested that “vegetable ivory button blanks, not drilled, dyed or finished” would be proper.

## PARAGRAPH 1412.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1412. Cork bark, cut into squares, cubes, or quarters, 8 cents per pound; stoppers over three-fourths of one inch in diameter, measured at the larger end, and disks, wafers, and washers over three-sixteenths of one inch in thickness, made from natural cork bark, 20 cents per pound; made from artificial or composition cork, 10 cents per pound; stoppers, three-fourths of one inch or less in diameter, measured at the larger end, and disks, wafers, and washers, three-sixteenths of one inch or less in thickness, made from natural cork bark, 25 cents per pound;

## H. R. 7456.

## SENATE AMENDMENTS.

made from artificial or composition cork, 12½ cents per pound; cork, artificial, commonly known as composition or compressed cork, manufactured from cork waste or granulated cork, in the rough and not further advanced than in the form of slabs, blocks, or planks, suitable for cutting into stoppers, disks, liners, floats, or similar articles, 6 cents per pound; in rods or sticks suitable for the manufacture of disks, wafers, or washers, 10 cents per pound; granulated or ground cork; cork insulation, wholly or in chief value of cork waste, granulated or ground cork, in slabs, boards, planks, or molded forms; cork tile; cork paper, and manufactures, wholly or in chief value of cork bark or artificial cork and not specially provided for, 25 per centum ad valorem.

## ACT OF 1909.

PAR. 429. Cork bark cut into squares, cubes, or quarters, eight cents per pound; manufactured corks over three-fourths of an inch in diameter, measured at larger end, fifteen cents per pound; three-fourths of an inch and less in diameter, measured at larger end, twenty-five cents per pound; cork, artificial, or cork substitutes, manufactured from cork waste or granulated cork, and not otherwise provided for in this section, six cents per pound; manufactures, wholly or in chief value of cork, or of cork bark, or of artificial cork or cork substitutes, granulated or ground cork, not specially provided for in this section, thirty per centum ad valorem.

## ACT OF 1913.

PAR. 340. Cork bark, cut into squares, cubes, or quarters, 4 cents per pound; manufactured cork stoppers, over three-fourths of an inch in diameter, measured at the larger end, and manufactured cork disks, wafers, or washers, over three-sixteenths of an inch in thickness, 12 cents per pound; manufactured cork stoppers, three-fourths of an inch or less in diameter, measured at the larger end, and manufactured cork disks, wafers, or washers, three-sixteenths of an inch or less in thickness, 15 cents per pound; cork, artificial, or cork substitutes manufactured from cork waste, or granulated corks, and not otherwise provided for in this section, 3 cents per pound; cork insulation, wholly or in chief value of granulated cork, in slabs, boards, planks, or molded forms, ¼ cent per pound; cork paper, 35 per centum ad valorem; manufactures wholly or in chief value of cork or of cork bark, or of artificial cork or bark substitutes, granulated or ground cork, not specially provided for in this section, 30 per centum ad valorem.

## MANUFACTURES OF CORK.

(See Survey N-6.)

*Description and uses.*—Cork manufactures are of two classes, those cut from the natural cork bark, such as cork stoppers and disks used in metallic crown corks, and products of composition cork. The composition is made from the waste or residue from natural cork cutting, which is ground and baked in molds. The process of molding differs with the purpose for which the composition is intended; that for insulation board, for instance, is made entirely from natural cork granules, the natural resin or gum serving as a binder when baked under pressure, while in the composition from which disks for crown

corks are cut a separate glutinous binder is used. Cork paper, made by pasting very thin sheets of bark to paper, is used for cigarette tips. The uses of natural and composition cork are very numerous, a complete listing being almost impossible. Portugal and Spain supply nearly all the raw material. (See paragraph 1556.)

*Production* in 1914 was by 52 establishments (30 in New York and 10 in Pennsylvania), with a capital of \$7,602,000, over 3,400 employees, and wages of \$1,582,000. Materials used were valued at \$4,751,000, and the product at \$7,875,000. In 1919 the number of establishments reported had increased to 62, with production valued at \$16,282,000.

*Imports* in 1914 were valued at \$2,628,387; in 1916, at \$878,268; in 1917, at \$2,626,804. Imports are practically all from Portugal and Spain. Statistics of imports of various forms of cork follow:

*Exports* for the fiscal years 1914-1918 were valued at \$462,199, \$211,795, \$455,424, \$541,579, and \$847,377, respectively. Canada, Australia, and Brazil were the chief purchasers of domestic cork manufactures in 1914. Exports since 1917, by calendar years, have been as follows: 1918, \$996,821; 1919, \$1,081,537; 1920, \$2,002,174; 1921 (nine months), \$580,597. Canada, Mexico, Cuba, and Argentina were the chief purchasers during these years.

## PARAGRAPH 1413.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1413. Dice, dominoes, draughts, chessmen, chess balls, and billiard, pool, and bagatelle balls, and poker chips, of ivory, bone, or other material, 40 per centum ad valorem.

## ACT OF 1909.

PAR. 430. Dice, dominoes, draughts, chessmen, chess balls, and billiard, pool, and bagatelle balls, of ivory, bone, or other materials, fifty per centum ad valorem.

## ACT OF 1913.

PAR. 341. Dice, dominoes, draughts, chessmen, chess balls, and billiard, pool, bagatelle balls, and poker chips, of ivory, bone, or other materials, 50 per centum ad valorem.

## DICE, CHESSMEN, ETC.

(See Survey N-7.)

*Production* and export data are not available. Establishments engaged in the manufacture of these articles are not given a separate classification by the census. France is the principal foreign manufacturer of articles within this paragraph.

*Imports of dice, dominoes, draughts, chessmen, etc., in 1914 were valued at \$67,789, nearly all from Germany and France; in 1918 (fiscal year) three-fourths of importations came from France, the rest largely from Hongkong, Japan, and China. Later statistics follow:*

Calendar year.	Value.	Duty.	Ad valorem rate.
			<i>Per cent.</i>
1918.....	\$21,081	\$10,539	50
1919.....	57,789	28,893	50
1920.....	55,470	27,734	50
1921 (9 months).....	93,519		

### PARAGRAPH 1414.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1414. Dolls, and parts of dolls, doll heads, toy marbles, of whatever materials composed, air rifles, toy balloons, toy books without reading matter other than letters, numerals, or descriptive words, bound or unbound, and parts thereof, and all other toys, and parts of toys, not composed of china, porcelain, parian, bisque, earthen or stone ware, and not specially provided for, 40 per centum ad valorem.

ACT OF 1909.

PAR. 412. \* \* \* books of paper or other material for children's use, not exceeding in weight twenty-four ounces each, six cents per pound; \* \* \*.

PAR. 431. Dolls, and parts of dolls, doll heads, toy marbles of whatever materials composed, and all other toys, and parts of toys, not composed of china, porcelain, parian, bisque, earthen or stone ware, and not specially provided for in this section, thirty-five per centum ad valorem.

ACT OF 1913.

PAR. 325. \* \* \* books of paper or other material for children's use, lithographically printed in whole or in part, not exceeding in weight twenty-four ounces each, 4 cents per pound; \* \* \*.

PAR. 342. Dolls, and parts of dolls, doll heads, toy marbles of whatever materials composed, and all other toys, and parts of toys, not composed of china, porcelain, parian, bisque, earthen or stone ware, and not specially provided for in this section, 35 per centum ad valorem.

PAR. 132. \* \* \* air-rifles, \* \* \* and parts thereof, 15 per centum ad valorem.

### TOYS.

(See Survey N-7.)

*Description and uses.*—Toys, under the judicial decisions, are playthings intended and designed for the amusement of children only, and by their very nature and character reasonably unfit for other use. (*Illfelder v. United States*, 1 Ct. Cust. Appls., 109, of 1910; *Carson, etc., v. United States*, 2 Ct. Cust. Appls., 386, of 1911.)

*Production.*—Available figures cover toys and games in general. In 1914 there were 290 manufacturers of toys and games, with an output valued at \$13,757,000, a capital of \$10,484,000, and 7,887 employees. Before the war Germany supplied a large part of the world's demand

for toys. In 1919 there were 541 establishments engaged in the manufacture of toys and games, the product amounting to \$45,720,000. The Toy Manufacturers' Association reports that in 1914 there were 10 concerns in the United States manufacturing dolls, and that the product amounted to \$1,000,000, and in 1919, 48 concerns with a product valued at \$9,000,000.

*Imports.*—In 1914 imports amounted to over \$9,000,000, divided as follows: Dolls and parts of, \$1,816,937; all other toys and parts of, \$7,274,035. Of the dolls and parts of, \$1,791,913 came from Germany and of all other toys \$5,926,941 from Germany, \$434,006 from Japan, \$420,859 from England, and \$206,194 from France. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Dolls and parts of:				
Value.....	\$365, 473	\$1, 205, 215	\$2, 593, 108	\$1, 215, 662
Duty.....	127, 916	421, 825	907, 588	.....
All other toys and parts of toys, n. s. p. f., including toy marbles:				
Value.....	848, 013	1, 630, 311	7, 094, 418	4, 784, 769
Duty.....	296, 805	570, 609	2, 483, 040	.....

Japan began to ship considerable quantities of toys to the United States during the war. In 1920 imports from Japan amounted to 60 per cent of the dolls and to 50 per cent of all other toys. Germany in the same year supplied, respectively, 37 and 40 per cent.

*Exports.*—In 1914 exports amounted to \$809,120, chiefly to Canada, England, Australia, and Cuba. Later statistics for calendar years follow:

Item.	1918	1919	1920	1921 (9 months).
Dolls and parts of.....	\$292, 219	\$454, 770	\$539, 821	\$98, 034
Mechanical toys.....	166, 970	224, 628	471, 369	122, 583
All other toys.....	1, 196, 923	2, 190, 131	3, 178, 132	1, 112, 182
Total.....	1, 656, 112	2, 869, 529	4, 189, 322	1, 332, 799

*Important changes in classification.*—Air rifles, toy balloons, and toy books are added.

*Conflicting provisions.*—Page 153, lines 6, 7, of H. R. 7456: There is conflict between the provision for “dolls, and parts of dolls, doll heads, toy marbles, of whatever materials composed,” and the provision in paragraph 29 for articles of pyroxylin. A common material for dolls and parts of dolls and doll heads is pyroxylin. The proviso to paragraph 29 is intended to make all articles of pyroxylin dutiable thereunder by virtue of the words “whether or not more specifically provided for elsewhere.”

*Suggested changes.*—If dolls, parts of dolls, doll heads, and toy marbles of pyroxylin are intended to be covered by paragraph 1414, an exception should be made thereof in the proviso to paragraph 29. If they are not intended to come within paragraph 1414, the exception of pyroxylin should be made in line 7 on page 153, making that read “of whatever materials composed except those enumerated in paragraph 29.”

Page 153, lines 10-12, of H. R. 7456: The same comments apply to toys provided for in lines 10 to 12. If toys of pyroxylin are not intended to be included in paragraph 1414, pyroxylin should be mentioned with china and the other materials therein named.

### PARAGRAPH 1415.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1415. Emery, corundum and artificial abrasive grains and emery, corundum and artificial abrasives, ground, pulverized, refined, or manufactured, 1 cent per pound; emery wheels, emery files, emery paper, and manufactures of which emery, corundum or artificial abrasive is the component material of chief value, 20 per centum ad valorem; crude artificial abrasives, 5 per centum ad valorem.

### ACT OF 1913.

#### ACT OF 1909.

PAR. 432. Emery grains and emery, manufactured, ground, pulverized, or refined, one cent per pound; emery wheels, emery files, and manufactures of which emery or corundum is the component material of chief value, twenty-five per centum ad valorem; crude artificial abrasives, ten per centum ad valorem.

PAR. 343. Emery grains and emery, manufactured, ground, pulverized, or refined, 1 cent per pound; emery wheels, emery files, emery paper, and manufactures of which emery or corundum is the component material of chief value, 20 per centum ad valorem.

PAR. 479. \* \* \* and crude artificial abrasives, not specially provided for [Free].

### EMERY AND CORUNDUM.

(See Survey B-3.)

*Description and uses.*—Corundum and emery, prior to the invention of artificial abrasives, were the most important abrasive materials. Corundum is a natural crystalline mineral composed of aluminum oxide. Emery is an impure form of corundum. They are used in making emery cloth and paper, and are manufactured into grinding wheels by mixing with suitable materials.

*Production.*—The chief commercial sources of emery are the Greek island of Naxos and the Province of Smyrna in Asia Minor. Emery is produced here chiefly in the Peekskill district of New York and recently has been obtained in Pittsylvania County, Va. Domestic production increased from 485 tons, valued at \$2,425, in 1914, to 16,315 tons, valued at \$173,589, in 1917, an increase due to restricted imports and increased war demand. Production of emery in 1919 amounted to 2,601 short tons, valued at \$23,203, and in 1920 to 2,327 short tons, valued at \$21,685.

Canada, formerly the chief source of corundum, has been practically unproductive since 1913. There are important deposits in India and the South African Transvaal, whence considerable quantities reached this country during 1917. Crude ore is usually shipped to Glasgow for refining and is reexported to this country. Domestic production in 1917 (all from North Carolina) was 820 tons, valued at \$67,461. No production of corundum was reported in 1919 and 1920.

Imports of emery grains in 1914 were 844,157 pounds, valued at \$33,874, with about 60 per cent from England and 25 per cent from France. In 1917 they fell to 136,969 pounds, valued at \$7,889, all from England and Canada.

Imports of corundum ore declined steadily from 840 long tons, valued at \$63,286, in 1911, to 17 tons, valued at \$633, in 1916.

Imports of corundum grains have varied considerably. In 1913 they were 1,937,803 pounds, valued at \$87,187, with over 90 per cent from Canada; in 1916, 657,826 pounds. Scotland has been the chief source since 1915.

Imports of manufactures of emery and corundum have been small, in 1913 valued at \$15,067. Later imports have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.
EMERY GRAINS.				
	<i>Pounds.</i>			
1918.....	623,241	\$32,499	\$0.05	\$6,232
1919.....	392,789	22,432	.06	3,928
1920.....	543,514	22,462	.04	5,435
1921 (9 months).....		7,684		
CORUNDUM GRAINS.				
	<i>Tons.</i>			
1918.....	1,569	\$199,409	\$127.13	
1919.....	69	9,696	140.52	
1920.....	546	63,504	116.32	
1921 (9 months).....	582	74,218	127.51	

Exports of abrasives, natural and artificial, for calendar years since 1917, have been as follows:

	1918	1919	1920	1921 (9 months).
Wheels, emery, etc.....	\$3,862,531	\$3,032,067	\$2,791,128	\$2,040,639
All other.....	1,982,822	2,809,231	3,810,171	2,854,921

The principal countries of destination have been Canada and England.

#### ARTIFICIAL ABRASIVES.

(See Survey B-3.)

*Description and uses.*—Artificial abrasives are of two kinds (1) silicon carbides, sold under the trade names of carborundum, crystolon, and carbolon; and (2) aluminum oxides, sold as alundum, aloxite, exolon, and lionite. Artificial abrasives sold under other names are either the above products or are imported materials marketed under special trade names. Carbide of silicon is the best abrasive for use on cast iron, brass, bronze, and other metals of low tensile strength, and marble, granite, pearl, leather, and carbon. It is also used in the form of bricks as a refractory in furnace construction. Oxide of aluminum is the best abrasive for grinding steel and wrought iron. It also has found considerable use as a refractory and filtering medium. These artificial abrasives, by far the most important abrasive materials, have replaced emery and corundum to a large extent.

*Production.*—Carbide of silicon is made by heating coke, sand, sawdust, and salt to a very high temperature in an electric furnace. Oxide of aluminum is made by fusing the mineral bauxite and carbon in an electric furnace and allowing it to cool and crystallize. By variations in conditions of manufacture, several degrees of hardness and toughness can be secured. These crude products are crushed and separated into grains of uniform size; the grains are then mixed with suitable binding materials and shaped into the desired form. Production in the United States and Canada (including a small quantity of steel abrasives) has increased from 33,489,000 pounds, valued at \$2,017,458, in 1913, to 115,822,000 pounds, valued at \$8,137,242, in 1917. The 1917 production was divided as follows: Silicon carbide, 16,646,000 pounds, valued at \$1,074,152; aluminum oxide, 96,926,000 pounds, valued at \$6,969,387; and metallic abrasives, 2,250,000 pounds, valued at \$93,703. In 1919 production of all artificial abrasives was 56,562,000 pounds (not including entire production), valued at \$5,019,779, and in 1920, 64,034,000 pounds (not including entire production), valued at \$6,269,084. The industry was first established at Niagara Falls, N. Y., because of the electrical power. In recent years, power at Niagara failing to meet growing demands, branch factories, owned by American concerns, have been established in Canada, where water power is available; about 65 per cent of the 1917 production was from those plants. A large part of the Canadian output is exported to this country and manufactured into wheels, stones, and other finished products.

*Imports and exports* of artificial abrasives are included with those of natural abrasives.

#### GENERAL NOTES ON PARAGRAPH

*Important changes in classification.*—Crude artificial abrasives are transferred from the free list of the act of 1913 (par. 479).

*Suggested changes.*—The attention of the Tariff Commission has been called to the fact that there is no provision for and no uniform treatment of abrasive paper and cloths. Emery paper is the only one mentioned specifically in H. R. 7456 (par. 1415). This same paragraph contains a provision for "manufactures of which emery, corundum, or artificial abrasive is the component material of chief value." The abrasive material used in the manufacture of abrasive cloths and paper, in most cases, is not the item of chief value, and, moreover, materials other than emery, corundum, and artificial abrasives are used in making these products. It seems desirable that a specific provision covering abrasive cloths and paper be inserted in H. R. 7456. To accomplish this the provision for "emery paper" in paragraph 1415, page 153, line 16, should be stricken out and the words "not specially provided for" inserted after the word "value" in line 18. The following provision should be inserted as a separate paragraph to follow paragraph 1415:

All papers, cloths, and combinations of paper and cloth, wholly or partly coated with artificial or natural abrasives, or with a combination of natural and artificial abrasives [rate].

## PARAGRAPH 1416.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1416. Firecrackers of all kinds, 8 cents per pound; bombs, rockets, Roman candles, and fireworks of all descriptions, not specially provided for, 12 cents per pound; the weight on all the foregoing to include all coverings, wrappings, and packing material.

ACT OF 1909.

ACT OF 1913.

PAR. 433. Firecrackers of all kinds, eight cents per pound; bombs, rockets, Roman candles, and fireworks of all descriptions, not specially provided for in this section, twelve cents per pound; the weight on all the foregoing to include all coverings, wrappings, and packing material.

PAR. 344. Firecrackers of all kinds, 6 cents per pound; bombs, rockets, Roman candles, and fireworks of all descriptions, not specially provided for in this section, 10 cents per pound; the weight on all the foregoing to include all coverings, wrappings, and packing material.

## FIREWORKS.

(See Survey N-8.)

*Description and uses.*—The materials most used in fireworks are gunpowder or its constituents, carbon, sulphur, and potassium nitrate. Fireworks are so varied in form that many substances may be employed in their manufacture. Metallic salts are used to produce different colors; several oxidizing materials may supplant potassium nitrate; and other explosives may replace gunpowder for certain purposes. Besides their use for scenic purposes, rockets, Roman candles, and Bengal lights, they are also employed for signaling at sea.

*Production.*—In 1914 there were 41 manufacturers of fireworks with a capital of \$2,162,449, and output valued at \$2,296,236. In 1919 there were 57 manufacturers with an output valued at \$6,532,000.

*Imports* of firecrackers for 1910–1915 averaged annually over 3,000,000 pounds, valued at about \$216,000, with revenue of \$250,000. In 1917 the imports were 2,999,503 pounds, valued at \$382,248. Imports of bombs, rockets, Roman candles, and fireworks, n. s. p. f., in 1914 amounted to 185,514 pounds, valued at \$20,237. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem
----------------	-----------	--------	-------------	-------	-----------------------

## FIRECRACKERS.

## PARAGRAPH 1417.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1417. Matches, friction or lucifer, of all descriptions; per gross of one hundred and forty-four boxes, containing not more than one hundred matches per box, 6 cents per gross; when imported otherwise than in boxes containing not more than one hundred matches each, three-fourths of 1 cent per one thousand matches; wax matches, wind matches, and all matches in books or folders or having a stained, dyed, or colored stick or stem, tapers consisting of a wick coated with an inflammable substance, night lights, fuses and time-burning chemical signals, by whatever name known, 30 per centum ad valorem: *Provided*, That in accordance with section 10 of "An Act to provide for a tax upon white phosphorus matches, and for other purposes," approved April 9, 1912, white phosphorus matches manufactured wholly or in part in any foreign country shall not be entitled to enter at any of the ports of the United States, and the importation thereof is hereby prohibited: *Provided further*, That nothing in this Act contained shall be held to repeal or modify said Act to provide for a tax upon white phosphorus matches, and for other purposes, approved April 9, 1912.

## ACT OF 1909.

PAR. 436. Matches, friction or lucifer, of all descriptions, per gross of one hundred and forty-four boxes, containing not more than one hundred matches per box, six cents per gross; when imported otherwise than in boxes containing not more than one hundred matches each, three-fourths of one cent per one thousand matches; wax and fancy matches and tapers, thirty-five per centum ad valorem.

## ACT OF 1913.

PAR. 345. Matches, friction or lucifer, of all descriptions, per gross of one hundred and forty-four boxes, containing not more than one hundred matches per box, 3 cents per gross; when imported otherwise than in boxes containing not more than one hundred matches each,  $\frac{3}{4}$  of 1 cent per one thousand matches; wax matches, fuses, wind matches, and all matches in books or folders or having a stained, dyed, or colored stick or stem, and tapers consisting of a wick coated with an inflammable substance, and night lights, 25 per centum ad valorem: *Provided*, That in accordance with section ten of "An Act to provide for a tax upon white phosphorus matches, and for other purposes," approved April ninth, nineteen hundred and twelve, white phosphorus matches manufactured wholly or in part in any foreign country shall not be entitled to enter at any of the ports of the United States, and the importation thereof is hereby prohibited: *Provided further*, That nothing in this Act contained shall be held to repeal or modify said Act to provide for a tax upon white phosphorus matches, and for other purposes, approved April ninth, nineteen hundred and twelve.

## MATCHES.

(See Survey N-8.)

*Description and uses.*—Since friction matches appeared, about 1830, the industry has grown rapidly. Many changes have been made in the ignition mixture, each company usually having its own special formulæ; but the principal substances used are phosphorus sesquisulphide, some oxidizing material (such as potassium chlorate), red lead, lead peroxide, or manganese dioxide, glue, ground flint or glass, and a filler, such as clay. White or yellow phosphorus was formerly extensively used, but owing to the dangerous character of these matches they are now practically prohibited by law. Pine wood is usually used for the stems. The manufacture is wholly by machinery, from the cutting of the stems from the block until finished, boxed, and ready for shipment.

Safety matches contain neither phosphorus nor phosphorus compounds, but the substance on which they are struck usually contains red phosphorus—sometimes antimony sulphide—and powdered glass made into a paste with glue.

Matches may be grouped into three classes: (1) Friction matches, single dip; (2) friction matches, double dip; and (3) safety matches.

*Production.*—In 1914 there were 20 establishments, employing 4,546 persons, with a capital of \$11,736,187, and product valued at \$12,556,279. In 1919, with one additional establishment, the value of products had increased to \$15,874,000.

*Imports of matches in 1910* were valued at \$372,945, increasing to \$882,795 in 1914, of which \$473,628 were from Sweden, \$117,748 from Norway, \$91,118 from Austria-Hungary, \$49,651 from Germany, \$35,187 from Belgium, and \$22,797 from Japan. Imports have been chiefly of matches in boxes containing not more than 100 per box. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
MATCHES, FRICTION OR LUCIFER—IN BOXES CONTAINING NOT MORE THAN 100 MATCHES PER BOX.					

	Gross.				Per cent.

## TAPERS, FUSEES, AND NIGHT LIGHTS.

1918.....		\$2,017		\$504	25.00
1919.....		4,076		1,019	25.00
1920.....		6,007		1,502	25.00
1921 (9 months).....		4,473			25.00

The value of matches imported from Japan amounted to \$858,738 in 1918, \$730,338 in 1919, and \$111,510 in 1920. Imports from Sweden dropped in value from \$2,299,045 in 1918 to \$377,895 in 1919 and to \$640,817 in 1920, and those from Norway from \$402,005 in 1918 to \$46,302 in 1919, and to \$79,981 in 1920.

*Exports* increased in value from \$80,877 in 1910 to \$102,407 in 1913, but decreased to \$77,736 in 1914. In the calendar year 1918 the value of exports was \$481,130; in 1919, \$626,780; in 1920, \$514,592; and in 1921 (nine months), \$200,683.

*Important changes in classification.*—Time-burning chemical signals are added.

### PARAGRAPH 1418.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1418. Percussion caps, cartridges, and cartridge shells empty, 25 per centum ad valorem; blasting caps, containing not more than one gram charge of explosive, \$2.25 per thousand; containing more than one gram charge of explosive, 75 cents per thousand additional for each additional one-half gram charge of explosive; mining, blasting, or safety fuses of all kinds, not composed in chief value of cotton, \$1 per thousand feet.

ACT OF 1909.

ACT OF 1913.

PAR. 437. Percussion caps, cartridges, and cartridge shells empty, thirty per centum ad valorem; blasting caps, two dollars and twenty-five cents per thousand; mining, blasting, or safety fuses of all kinds, not composed in chief value of cotton, thirty-five per centum ad valorem.

PAR. 346. Percussion caps, cartridges, and cartridge shells empty, 15 per centum ad valorem; blasting caps, one dollar per thousand; mining, blasting, or safety fuses of all kinds,<sup>1</sup> 15 per centum ad valorem.

### PERCUSSION CAPS AND CARTRIDGES.

(See Survey N-8.)

*Description and uses.*—Percussion caps and primers are shallow cups of gilding metal filled with fulminate or other igniting mixture. The term percussion cap, as used in the trade, refers only to the detonators used with muzzle-loading firearms. The trade name for the inserted detonator of cartridge ammunition is "primer." Cartridges, and cartridge shells empty, in common use, are of three types: (1) Center-fire metallic; (2) rim-fire metallic; and (3) center-fire paper shot shells.

*Production.*—Under "ammunition" the Census covers establishments manufacturing small-arms ammunition, including metallic and paper cartridges, empty and loaded gun shells, explosive shells, gun wads, caps, primers, shot, and bullets; also blasting caps and electric blasting caps, fuses and electrical exploder fuses, miners' squibs, rail way torpedoes, etc. Ammunition for large guns is produced in steel works, rolling mills and Federal establishments. The value of the product is not reported separately. Data are shown separately for

<sup>1</sup> Safety fuses in chief value of cotton will come within par. 920.

cartridges and all other ammunition. In 1914, the value of the former was reported as \$25,573,000 and of the latter as \$5,267,000. In 1919 the total value of the products reported under "ammunition" was \$88,059,000.

*Imports.*—In 1914 imports of percussion caps were valued at \$622 and of cartridges and cartridge shells, empty, at \$84,622. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
PERCUSSION CAPS.					
	<i>Thousands.</i>				<i>Per cent.</i>
1918.....		\$991		\$149	15
1920.....	1	50	\$50.00	7	15
1921 (9 months).....	21	294			15
CARTRIDGES AND CARTRIDGE SHELLS, EMPTY.					
1918.....		\$1,024,589		\$153,688	15
1919.....		170		25	15
1920.....	678	8,885	\$13.10	1,333	15
1921 (9 months).....	2,079	15,853	7.62		15

Imports of cartridge shells, empty, are negligible.

*Exports.*—In 1914 exports of cartridges, loaded, amounted to \$3,521,533, going principally to Mexico, Russia in Europe, the Philippines, Canada, Australia, and Latin America. Later exports during calendar years have been as follows: 1918, \$10,764,765; 1919, \$10,346,957; 1920, \$5,972,322; 1921 (9 months), \$1,119,229. In 1920 exports included \$1,773,049 to Brazil, \$798,340 to Argentina, \$763,038 to Australia, \$441,191 to Canada, and \$307,843 to Cuba.

#### BLASTING CAPS.

(See Survey N-8.)

*Description and uses.*—Blasting caps are used in connection with a fuse to detonate high explosives employed in the blasting of coal, ores, in quarrying, and in farming. They consist essentially of a measured charge of high explosive pressed into a thin copper shell. In addition to the blasting cap there is manufactured an electric blasting cap of similar construction. Ignition in the latter is obtained by the use of an electric current instead of a fuse.

*Production.*—Official statistics are not available. One manufacturer states that there are five establishments in the United States and that their combined product of blasting caps would range from 250,000,000 to 300,000,000 caps with sales value of \$3,200,000 to \$3,800,000. Germany, Belgium, and Japan are the chief foreign producers exporting to the United States.

*Imports.*—In 1914 imports were valued at \$4,890. Later statistics covering calendar years are as follows: 1919, \$5; 1920, \$191; and 1921 (9 months), \$15.

*Exports.*—Not shown in official statistics. Exports are principally to Mexico, Central and South America.

## MINING, BLASTING, OR SAFETY FUSES.

(See Survey N-8.)

*Description and uses.*—Fuses are used in connection with blasting caps to detonate high explosives.

*Production.*—Official statistics are not available.

*Imports.*—In 1914 imports were valued at \$183,035 of which an amount valued at \$48,605 was dutiable under the act of 1909. Imports before the war were principally from Belgium and Germany. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....		\$195		\$29	15
1919.....	4,878	1,554	\$0.31	223	15
1920.....	8,215	3,771	.46	566	15
1921 (9 months).....	6,364	1,623	.26		15

*Exports* of fuses are principally to Mexico. Statistics cover calendar years and show values of exports as follows: 1918, \$3,050,257; 1919, \$600,718; 1920, \$736,225; 1921 (9 months), \$217,517.

*Important changes in classification.*—The rate of duty on blasting caps has been made dependent on the weight of the charge of the explosive. It is stated by a manufacturer<sup>2</sup> that the classification in this paragraph based on the 1-gram charge is in keeping with the weight and strength of caps used to-day.

Mining, blasting, or safety fuses of all kinds composed in chief value of cotton are excepted.

## PARAGRAPH 1419.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1419. Feathers and downs, on the skin or otherwise, crude or not dressed, colored, or otherwise advanced or manufactured in any manner, not specially provided for, 20 per centum ad valorem; dressed, colored, or otherwise advanced or manufactured in any manner, including quilts of down and other manufactures of down, artificial or ornamental feathers suitable for use as millinery ornaments, artificial and ornamental fruits, vegetables, grains, leaves, flowers, and stems or parts thereof, of whatever material composed, not specially provided for, 45 per centum ad valorem; natural leaves, plants, shrubs, herbs, trees, and parts thereof, chemically treated, colored, dyed or painted, not specially provided for, 45 per centum ad valorem; boas,

<sup>2</sup> Tariff Information, 1921. Hearings, Committee on Ways and Means, Part V, pp. 3257-3259.

H. R. 7456.

SENATE AMENDMENTS

boutonnieres, wreaths, and all articles not specially provided for, composed wholly or in chief value of any of the feathers, flowers, leaves, or other material herein mentioned, 50 per centum ad valorem: *Provided*, That the importation of birds of paradise, aigrettes, egret plumes or so-called osprey plumes, and the feathers, quills, heads, wings, tails, skins, or parts of skins, of wild birds, either raw or manufactured, and not for scientific or educational purposes, is hereby prohibited; but this provision shall not apply to the feathers or plumes of ostriches or to the feathers or plumes of domestic fowls of any kind: *Provided further*, That birds of paradise, and the feathers, quills, heads, wings, tails, skins, or parts thereof, and all aigrettes, egret plumes, or so-called osprey plumes, and the feathers, quills, heads, wings, tails, skins, or parts of skins, of wild birds, either raw or manufactured, of like kind to those, the importation of which is prohibited by the foregoing provisions of this paragraph, which may be found in the United States, on and after the passage of this Act, except as to such plumage or parts of birds in actual use for personal adornment, and except such plumage, birds or parts thereof imported therein for scientific or educational purposes, shall be presumed for the purpose of seizure to have been imported unlawfully after October 3, 1913, and the collector of customs shall seize the same unless the possessor thereof shall establish, to the satisfaction of the collector that the same were imported into the United States prior to October 3, 1913, or as to such plumage or parts of birds that they were plucked or derived in the United States from birds lawfully therein; and in case of seizure by the collector, he shall proceed as in case of forfeiture for violation of the customs laws, and the same shall be forfeited, unless the claimant shall, in any legal proceeding to enforce such forfeiture, other than a criminal prosecution, overcome the presumption of illegal importation and establish that the birds or articles seized, of like kind to those mentioned the importation of which is prohibited as above, were imported into the United States prior to October 3, 1913, or were plucked in the United States from birds lawfully therein.

That whenever birds of plumage, the importation of which is prohibited by the foregoing provisions of this paragraph, are forfeited to the Government, the Secretary of the Treasury is hereby authorized to place the same with the departments or bureaus of the Federal or State Governments or societies or museums for exhibition or scientific or educational purposes,

## H. R. 7456.

## SENATE AMENDMENTS.

but not for sale or personal use; and in the event of such birds or plumage not being required or desired by either Federal or State Government or for educational purposes, they shall be destroyed.

That nothing in this Act shall be construed to repeal the provisions of the Act of March 4, 1913, chapter 145 (Thirty-seventh Statutes at Large, page 847), or the Act of July 3, 1918 (Fortieth Statutes at Large, page 755), or any other law of the United States, now in force, intended for the protection or preservation of birds within the United States. That if on investigation by the collector before seizure, or before trial for forfeiture, or if at such trial if such seizure has been made, it shall be made to appear to the collector, or the prosecuting officer of the Government, as the case may be, that no illegal importation of such feathers has been made, but that the possession, acquisition or purchase of such feathers is or has been made in violation of the provisions of the Act of March 4, 1913, chapter 145 (Thirty-seventh Statutes at Large, page 847), or the Act of July 3, 1918 (Fortieth Statutes at Large, page 755), or any other law of the United States, now of force, intended for the protection or preservation of birds within the United States, it shall be the duty of the collector, or such prosecuting officer, as the case may be, to report the facts to the proper officials of the United States, or State or Territory charged with the duty of enforcing such laws.

## ACT OF 1909.

PAR. 438. Feathers and downs of all kinds, including bird skins or parts thereof with the feathers on, crude or not dressed, colored, or otherwise advanced, or manufactured in any manner, not specially provided for in this section, twenty per centum ad valorem; when dressed, colored, or otherwise advanced or manufactured in any manner, including quilts of down and other manufactures of down, and also dressed and finished birds suitable for millinery ornaments, and artificial or ornamental feathers, fruits, grains, leaves, flowers, and stems or parts thereof, of whatever material composed, not specially provided for in this section, sixty per centum ad valorem; boas, boutonnières, wreaths, and all articles not specially provided for in this section, composed wholly or in chief value of any of the feathers, flowers, leaves, or other materials or articles herein mentioned, sixty per centum ad valorem.

PAR. 509. Birds, stuffed, not suitable for millinery ornaments [Free].

## ACT OF 1913.

PAR. 347. Feathers and downs, on the skin or otherwise, crude or not dressed, colored, or otherwise advanced or manufactured in any manner, not specially provided for in this section, 20 per centum ad valorem; when dressed, colored, or otherwise advanced or manufactured in any manner, and not suitable for use as millinery ornaments, including quilts of down and manufactures of down, 40 per centum ad valorem; artificial or ornamental feathers suitable for use as millinery ornaments, artificial and ornamental fruits, grains, leaves, flowers, and stems or parts thereof, of whatever material composed, not specially provided for in this section, 60 per centum ad valorem; boas, boutonnières, wreaths, and all articles not specially provided for in this section, composed wholly or in chief value of any of the feathers, flowers, leaves, or other material herein mentioned, 60 per centum ad valorem; *Provided*, That the importation of aigrettes, egret plumes or so-called osprey plumes,

ACT OF 1909.

ACT OF 1913.

and the feathers, quills, heads, wings, tails, skins, or parts of skins, of wild birds, either raw or manufactured, and not for scientific or educational purposes, is hereby prohibited; but this provision shall not apply to the feathers or plumes of ostriches, or to the feathers or plumes of domestic fowls of any kind.

## FEATHERS, ARTIFICIAL FLOWERS, FRUITS, ETC.

(See Survey N-9.)

*Description and uses.*—Artificial flowers, fruits, etc., are made from various materials, chiefly textile fabrics, wax and metal. For millinery purposes textile fabrics varying from cheap calicos to expensive silks and satins are used. Fancy feathers, prior to 1914, came from both domestic fowls and wild birds, but as the act of 1913 prohibited imports of the skins, feathers, and plumage of wild birds, except of the ostrich, the feather trade now relies chiefly upon ostrich plumes and the feathers of domestic fowls. Raw feathers in their natural state are not suitable for millinery purposes until considerable labor has been expended upon them.

*Production.*—The domestic artificial flower, feather, and plume industries are centered in New York, over 85 per cent of the total value of products in 1914 being credited to that city. In that year there were devoted primarily to the feather and plume industry, 239 establishments with products valued at \$11,451,000, and 217 establishments with an output valued at \$7,614,000 engaged in the production of artificial flowers, leaves, fruits, etc. In 1919 the value of feathers and plumes produced was \$15,568,000 from 217 establishments, and that of artificial flowers, etc., \$15,978,000 from 225 establishments. In addition to this there was some production of these various articles by establishments interested primarily in other industries, such as those engaged in the manufacture of house furnishing goods (feather pillows and beds), and millinery and lace goods manufactures (trimmed hats and frames).

*Imports* in 1914 of crude ostrich feathers were valued at \$3,866,428; ostrich feathers suitable for millinery use, \$34,976; feathers for beds, \$45,357; other feathers, crude, \$1,028,152; other feathers suitable for millinery, \$1,459,900; other feathers, advanced, but not for millinery, \$19,482; quilts and manufactures of downs, \$13,237; fruits, grains, flowers, etc., \$2,415,521; and boas, boutonnières, etc., \$18,767. Ostrich feathers were chiefly from England and British South Africa. Other feathers and artificial flowers and millinery ornaments came chiefly from Germany and France. Cheap flowers from Germany and Austria were cut off entirely and imports of more expensive grades from France greatly reduced during the war. Later statistics follow:

<sup>1</sup> From Philippine Islands, free.

British South Africa and England continue to be the chief sources of ostrich feathers, with large amounts also coming from Argentina. China has taken the lead as the chief source of other crude feathers, and France and Hongkong are also important sources. Artificial fruits, flowers, grains, etc., came chiefly from France in 1919, but in 1920 Germany was the leading country of origin, with France second.

Exports are shown only for feathers not for millinery purposes, and millinery trimmings including artificial flowers. The former in 1914 were valued at \$640,020. The latter were not separately shown until 1918. Later statistics for calendar years follow:

	1918	1919	1920	1921(9 months).
Feathers.....	\$252, 903	\$863, 250	\$378, 644	\$238, 850
Millinery trimmings, including artificial flowers.....	773, 910	1, 024, 036	1, 240, 681	726, 797

Feathers were exported chiefly to Canada, Denmark, France, and Cuba; millinery trimmings to Canada, Cuba, and Argentina.

*Important changes in classification.*—The provisions for artificial vegetables, and for natural leaves, plants, shrubs, trees and parts thereof, chemically treated, colored, dyed or painted, n. s. p. f., are new.

The specific inclusion of birds of paradise in the provision prohibiting the importation of plumes, feathers, quills, skins, etc., of wild birds, is new. The second proviso is also new.

*Suggested changes.*—Change comma after “manufactures of down” to a semicolon to set off the provision immediately following for “feathers suitable for use as millinery ornaments” to agree with paragraph 347 of the act of 1913.

The act of 1913 (par. 347) requires the flowers, etc., to be both artificial and ornamental (*Bayersdorfer v. United States*, 7 Ct. Cust. Appls., 66, of 1916), whereas the act of 1909 (par. 438) required merely that the flowers, etc., be either artificial or ornamental. If restoration of the provision of the act of 1909 should be desired, “and” in line 12, page 155, should be changed to “or.”

## PARAGRAPH 1420.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1420. Furs dressed on the skin, excepting silver or black fox furs, not advanced further than dyeing, 20 per centum ad valorem; plates and mats of dog and goat skins, 10 per centum ad valorem; manufactures of furs, excepting silver or black fox, further advanced than dressing and dyeing, prepared for use as material, joined or sewed together, including plates, linings, and crosses, except plates and mats of dog and goat skins, and articles manufactured from fur, not specially provided for, 35 per centum ad valorem; silver or black fox skins,

## H. R. 7456.

## SENATE AMENDMENTS.)

dressed or undressed, and manufactures thereof, not specially provided for, 40 per centum ad valorem; articles of wearing apparel of every description partly or wholly manufactured, composed wholly or in chief value of hides or skins of cattle of the bovine species, or of dog or goat skins, 15 per centum ad valorem; articles of wearing apparel of every description wholly or in part manufactured, composed wholly or in chief value of fur, not specially provided for, 50 per centum ad valorem.

## ACT OF 1909.

PAR. 439. Furs dressed on the skin, not advanced further than dyeing, but not repaired, twenty per centum ad valorem; manufactures of furs, further advanced than dressing and dyeing, when prepared for use as material, including plates, linings, and crosses, thirty-five per centum ad valorem; articles of wearing apparel of every description, partly or wholly manufactured, composed of or of which fur is the component material of chief value, fifty per centum ad valorem.  
\* \* \*

PAR. 573. Furs, undressed [Free].

PAR. 574. Fur skin of all kinds not dressed in any manner and not specially provided for in this section [Free].

[No provision for articles manufactured from fur not specially provided for.]

## ACT OF 1913.

PAR. 348. Furs dressed on the skin, not advanced further than dyeing, 30 per centum ad valorem; plates and mats of dog and goat skins, 10 per centum ad valorem; manufactures of furs, further advanced than dressing and dyeing, when prepared for use as material, joined or sewed together, including plates, linings, and crosses, except plates and mats of dog and goat skins, and articles manufactured from fur not specially provided for in this section, 40 per centum ad valorem; articles of wearing apparel of every description partly or wholly manufactured, composed of or of which hides or skins of cattle of the bovine species, or of the dog or goat are the component material of chief value, 15 per centum ad valorem; articles of wearing apparel of every description partly or wholly manufactured, composed of or of which fur is the component material of chief value, not specially provided for in this section, 50 per centum ad valorem; \* \* \*

PAR. 491. Furs and fur skins, undressed [Free].

## FURS, DRESSED, AND MANUFACTURES OF FURS.

(See Survey N-10.)

*Description and uses.*—Raw fur skins are known as “pelts.” Fur dressing and dyeing are intermediate processes applied in preparing the pelts for manufacture into garments or other articles, and are generally conducted as independent industries. After the skin has been removed, it is usually salted for preservation until it can be dressed and dyed. Dressing consists of the application of preservative materials and a mechanical treatment to soften the pelt. All the various kinds of furs coming under paragraph 1573 (free list) are subjected to these processes and provide the raw material for the fur manufacturing industry. Skins of the American bison formerly furnished the material for moderate-priced fur coats. The skins of dogs and goats are now substituted. The skins are sewed together in plates or mats for protection in transportation.

Coats, muffs, capes, jackets, stoles, neckwear of various sorts, trimmings, and other articles of wearing apparel are by far the most important manufactures of fur, fashion deciding the kinds used and the style. Great fluctuations in prices occur over a series of years. The use of all kinds of furs has become very popular, and there is an almost unlimited variety in their application as articles of apparel. The most expensive are those of sable, seal, ermine, chinchilla, silver fox, beaver, otter, mink, and marten; the inexpensive are those of skunk, rabbit, squirrel, raccoon, opossum, and others. By the use of the Cimiotti unhairing machine the long hairs of the outer coat of the seal, beaver, muskrat, mink, otter, and other fur animals can be removed, leaving only the soft underfur; thus, by skillful dressing and dyeing, low-grade furs are sometimes made to resemble more expensive skins. Muskrat and coney are sometimes marketed as Hudson seal, near seal, electric seal, or Baltic seal, and the marten as Hudson Bay sable.

*Production.*—Dressed furs: In 1914 there were 96 establishments engaged in the dressing and dyeing of furs, chiefly located in Brooklyn, N. Y., with 1,525 employees and an output of \$2,875,000. The industry has expanded greatly, the United States taking first place over Germany since 1914. The sealskins from Alaska, formerly sent to London, are now dressed and finished here. In 1919 there were 141 establishments with products valued at \$20,421,000.

Fur wearing apparel and other manufactures of fur: In 1914 1,322 establishments produced fur goods, the output being valued at \$43,633,000; in 1909, 1,241 establishments, with output of \$55,938,000. In 1919 there were 1,812 establishments engaged in the manufacture of "fur goods" with products valued at \$178,533,000. The manufactures consist mostly of wearing apparel. Some of these establishments dress and finish the furs used. New York produced to the value of \$30,312,000 in 1914, leading the States. New York City is the principal center and, it is stated, manufactures more fur goods than London, Paris, Vienna, Leipzig, and Moscow combined. Manufacturers of fur goods may be divided into makers of high-grade furs; medium-grade furs for the better class of the dry-goods trade; "popular priced" furs; low-grade, coarse furs and articles made from fur pieces. During the war the United States assumed the lead, both in fur distribution and manufacturing.

*Imports.*—Furs dressed on the skin averaged in value over \$5,000,000 before 1914. In the latter year they amounted to \$3,204,251 of which \$1,206,587 came from Germany, \$647,538 from France, \$553,019 from Belgium, \$487,001 from China, and \$250,018 from England. All other manufactures of furs, including waste, amounted to \$1,791,074 in 1914, principally from France, Germany, China, Belgium, and England. Later imports have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
FURS DRESSED ON THE SKIN NOT ADVANCED FURTHER THAN DYEING.					
	<i>Number.</i>				<i>Per cent.</i>
1918.....		\$427,384		\$128,216	30

1921 (9 months).....	78,148	21,269	.27		

<sup>1</sup> 15 per cent on wearing apparel composed of cattle, dog, or goat skins and 50 per cent on wearing apparel composed of fur n. s. p. f.

Imports of wearing apparel composed of cattle, dog, or goat skins have never reached \$20,000 in value and in only two years since 1914 have they exceeded \$10,000.

Exports of dressed furs and manufactures of fur in 1912 were valued at \$615,441, about half going to Canada; in 1914, at \$870,824, more than half to Canada; in 1915, over \$1,000,000; in 1916, nearly \$2,500,000; in 1917, over \$5,000,000. In 1916 and 1917, England, France, and Canada took most of our exports. Later statistics cover calendar years: 1918, \$2,160,107; 1919, \$7,474,873; 1920, \$6,613,688; 1921 (nine months), \$1,302,757. In 1920 the destination of exports was as follows: France, \$2,944,529; Canada, \$1,257,964; England, \$1,145,739; and Argentina, \$472,292.

*Important changes in classification.*—The most important change is that with respect to silver or black fox furs. Under the act of 1913 these furs, if undressed, are free of duty and, if dressed, dutiable at 30 per cent. Both the undressed and dressed silver or black fox skins are specifically provided for in this paragraph. Manufactures of silver or black fox furs are also specifically provided for.

*Conflicting provisions.*—Manufacturers of silver or black fox skins and wearing apparel of fur are provided for in this paragraph at different rates of duty.

*Suggested changes.*—If it is desired to include wearing apparel of silver or black fox skins with other manufactures thereof, it should be there specified to avoid the conflict.

Paragraph 1420 provides for a duty of 40 per cent on black or silver fox furs undressed and paragraph 1573 provides for "fur and fur skins, undressed," free. Should not the latter paragraph have "n. s. p. f." inserted after "undressed?"

### PARAGRAPH 1421.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1421. Hatters' furs, or furs not on the skin, prepared for hatters' use, including fur skins carotod, 22 per centum ad valorem.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 439. \* \* \* Furs not on the skin, prepared for hatters' use, including fur skins carotod, twenty per centum ad valorem.

PAR. 348. \* \* \* furs not on the skin, prepared for hatters' use, including fur skins carotod, 15 per centum ad valorem.

### HATTERS' FUR.

(See Survey N-10.)

*Description and uses.*—Hatters' fur is the fur or hair after it has been removed from the skins of such animals as the hare, rabbit, nutria, and beaver. After being prepared and chemically treated it can be used only for the manufacture of felt hats. Fur skins carotod are skins which have been treated with a solution of nitric acid and quicksilver to protect them from damage by insects and to facilitate the operations of manufacture. The raw materials; that is, the fur skins, are imported.

*Production.*—No separate statistics are given for the production of hatters' fur. The Census classification, "hat and cap materials," which includes fur prepared for hatters' use, gives an output valued at about \$7,600,000 in 1914. Hatters' fur was also reported under "furs, dressed."

*Imports.*—Imports of furs not on the skin, prepared for hatters' use, including fur skins carotod, in 1914 were \$607,254. The bulk of the imports come from France and Belgium. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....		\$457,020		\$68,230	15
1919.....	138,913	496,559	\$3.57	74,484	15
1920.....	341,257	1,387,420	4.07	208,113	15
1921 (9 months).....	313,162	522,267	1.67		

*Exports.*—None recorded.

## PARAGRAPH 1422.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1422. Fans of all kinds, except common palm-leaf fans, 40 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 440. Fans of all kinds, except common palm-leaf fans, fifty per centum ad valorem.

PAR. 349. Fans of all kinds, except common palm-leaf fans, 50 per centum ad valorem.

## FANS.

(See Survey N-11.)

*Description and uses.*—The varieties of fans may be classified as (1) those which can be folded or closed and (2) those permanently expanded or fixed. The former are sometimes made of thin slips of ivory or wood, but more commonly of a continuous surface of paper, silk, or other fabrics mounted on strips of rigid material, pivoted at one end, and folding together easily in the manner of a plaiting. Fixed fans are made of feathers set side by side, of leaves of palmate-leafed palm trees, or of paper or similar films spread on slender radiating sticks. Common palm-leaf fans, plain and not ornamented or decorated, are provided for in paragraph 1567.

*Production.*—Statistics of production in the United States are not available. France, Austria-Hungary, Germany, Japan, and China have been leading producers.

*Imports* of fans in 1914 were \$216,330, about 40 per cent from Japan. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Dozens.</i>				<i>Per cent.</i>
1918.....	186,125	\$67,939	.....	\$33,872	50
1919.....	419,990	56,211	\$0.30	27,978	50
1920.....	204,166	184,239	.44	92,060	50
1921 (9 months).....		103,345	.....	51,677	.....

## PARAGRAPH 1423.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1423. Gun wads of all descriptions, not specially provided for, 10 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 441. Gun wads of all descriptions, twenty per centum ad valorem.

PAR. 350. Gun wads of all descriptions, 10 per centum ad valorem.

## GUN WADS.

(See Survey N-11.)

*Description and uses.*—Gun wads are disks used to hold in place powder or shot, and are made of felt, cardboard, or jute.

*Production.*—Not shown in official statistics.

*Imports* in 1914 were valued at \$3,716 and in 1916 at \$507. No imports, with the exception of an insignificant amount in 1920, are shown for subsequent years.

*Important changes in classification.*—The phrase “not specially provided for” has been added in order that there shall be no conflict between this paragraph and paragraph 1426, which provides for manufactures of hair felt, including gun wads.

*Suggested changes.*—Gun wads are specifically provided for in paragraphs 1423 and 1426. Paragraph 1426 is for wads of hair felt only, but inasmuch as the importation is small, the provision in paragraph 1426 might be stricken out and gun wads of hair felt classified under the general provision, or at least under this paragraph even though different rates of duty be imposed on the two classes. In such case, if different rates are desired, paragraph 1423 might be amended to read:

Gun wads of hair felt [rate]; all other gun wads [rate].

---

 PARAGRAPH 1424.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1424. Human hair, raw, 10 per centum ad valorem; cleaned or commercially known as drawn, but not manufactured, 20 per centum ad valorem; manufactures of human hair, including nets and nettings, or of which human hair is the component material of chief value, not specially provided for, 35 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

PAR. 442. Hair, human, if clean or drawn but not manufactured, twenty per centum ad valorem; manufactures of human hair, or of which human hair is the component material of chief value, not specially provided for in this section, thirty-five per centum ad valorem.

PAR. 351. Human hair, raw, 10 per centum ad valorem; if cleaned or commercially known as drawn, but not manufactured, 20 per centum ad valorem; manufactures of human hair, including nets and nettings, or of which human hair is the component material of chief value, not specially provided for in this section, 35 per centum ad valorem.

PAR. 583. \* \* \* human hair, raw, uncleaned, and not drawn [Free].

## HUMAN HAIR.

(See Survey N-12.)

*Uses* of human hair are (1) for switches, wigs, hair nets, etc., made from a fine quality of hair, and (2) press cloth, used in extracting the oil from cotton and other seeds. The latter is made of coarse human hair derived from the Orient.

*Production* of hair nets, switches, wigs, etc., apparently decreased during the war, but the output of press cloth made from human hair greatly increased. Prior to the war press cloth was made from camel and goat hair, chiefly from Russia, but large quantities of coarse human hair from China are now used. Under the Census classification "hair work," 199 establishments are shown, with products valued at \$7,325,000, in 1919. This includes, in addition to wigs, switches, etc., of human hair, similar articles of adornment made from hair other than human.

*Imports* of human hair in 1910 were valued at \$3,500,000; in 1915, at \$500,000. Of these imports the largest single item is unmanufactured hair. The great sources of supply have shifted, since 1914, from Continental Europe to the Orient. Imports from Europe in 1914 were 633,253 pounds, valued at \$533,172; from China and Japan, 280,170 pounds, valued at \$115,084. Of manufactured products, the most important item is "nets and nettings," valued at \$103,000 in 1915. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
HUMAN HAIR, RAW.				
	<i>Pounds.</i>			<i>Per cent.</i>
1918.....	1,547,731	\$791,670	\$79,167	10
1919.....	2,069,988	1,363,999	136,400	10
1920.....	2,203,206	1,534,308	153,431	10
1921 (9 months).....	801,904	505,465	50,546	.....
HUMAN HAIR, CLEANED OR DRAWN, BUT UNMANUFACTURED.				
1918.....	18,660	\$28,922	\$5,784	20
1919.....	69,000	72,492	14,498	20
1920.....	68,936	117,216	23,443	20
1921 (9 months).....	40,334	90,936	18,187	.....
HUMAN HAIR, MANUFACTURES OF.				
1918.....		\$641,192	\$224,417	35
1919.....		2,158,696	755,444	35
1920.....		5,923,285	2,073,150	35
1921 (9 months).....		6,242,709	2,184,948	.....

In 1920 raw hair of Asiatic origin amounted to 1,947,624 pounds, with a value of \$1,000,078; cleaned or drawn, to 53,374 pounds, valued at \$52,790. Compared with the latter, imports of cleaned or drawn hair from other sources (chiefly European) amounted to 15,562 pounds, valued at \$64,426. These are from Italy, southern France and Germany. "Nets and netting" continue as the chief item of manufactured products, being valued in 1920 at \$5,774,022. Practically all comes from China.

*Exports.*—None recorded.

*Suggested changes.*—Should not "human hair tops" be enumerated in this paragraph?

## PARAGRAPH 1425.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1425. Hair, curled, suitable for beds or mattresses, 10 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 444. Hair, curled, suitable for beds or mattresses, ten per centum ad valorem.

PAR. 352. Hair, curled, suitable for beds or mattresses, 10 per centum ad valorem.

## CURLED HAIR.

(See Survey N-12.)

*Description and uses.*—Short horsehair, cow hair, and the softer kinds of pig hair, after being curled by twisting, boiling, and drying, are used for stuffing beds, mattresses, sofas, divans, and seats. Often Tampico and coconut fiber and Spanish and sea moss are added to the hair in the manufacture of some grades of upholstery.

*Production* in 1914, valued at \$3,657,414, was by 19 establishments, with \$2,930,000 capital, 1,317 employeess, and wages of \$524,000. The industry is widespread, New York and Pennsylvania leading. Figures for 1919 are not available.

*Imports* of hair, curled, suitable for beds or mattresses, are negligible, being valued at only \$2 in 1914, with no substantial increase until 1921, when, for the first nine months of the calendar year, 18,787 pounds, valued at \$18,735, were imported.

*Exports* are included with manufactures of animal hair, which were valued at \$344,756 in 1914. Later statistics for calendar years follow: 1918, \$374,985; 1919, \$695,962; 1920, \$1,095,712; 1921 (nine months), \$189,919. Canada, France, and Japan were the principal countries of destination in 1920.

## PARAGRAPH 1426.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1426. Haircloth, known as "crinoline" cloth, haircloth, known as "hair seating," and hair press cloth, 35 per centum ad valorem; hair felt, made wholly or in chief value of animal hair, not specially provided for, 25 per centum ad valorem; manufactures of hair felt, including gun wads, 35 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 382. On \* \* \* felts not woven, and not specially provided for in this section, composed wholly or in part of wool, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto sixty per centum ad valorem.

PAR. 288. \* \* \* felts not woven, and all manufactures of every description made, by any process, wholly or in chief value of wool, not specially provided for in this section, 35 per centum ad valorem; cloths if made in chief value of cattle hair or horse hair, not specially provided for in this section, 25 per centum ad valorem;

PAR. 441. Gun wads of all descriptions, twenty per centum ad valorem.

PAR. 445. Haircloth, known as "crinoline" cloth, eight cents per square yard; haircloth, known as "hair seating," and hair press cloth, twenty cents per square yard.

\* \* \* press cloth composed of camel's hair, not specially provided for in this section, 10 per centum ad valorem.

PAR. 350. Gun wads of all descriptions, 10 per centum ad valorem.

PAR. 353. Haircloth, known as "crinoline" cloth, 6 cents per square yard; haircloth, known as "hair seating," and hair press cloth, 15 cents per square yard.

PAR. 422. \* \* \* Press cloths composed of camel's hair, imported expressly for oil milling purposes, and marked so as to indicate that it is for such purposes, and cut into lengths not to exceed seventy-two inches and woven in widths not under ten inches nor to exceed fifteen inches and weighing not less than one-half pound per square foot [Free].

#### HAIRCLOTH—CRINOLINE AND HAIR SEATING.

(See Survey N-12.)

*Description and uses.*—Haircloth is made with horsehair filling and warp of cotton, linen, or worsted. "Crinoline" is a light haircloth with a cotton warp, used extensively for stiffening clothing, bonnets, and hats. Hair seating is a heavy, long-wearing horsehair covering formerly used in upholstery.

*Production* of all kinds of haircloth in 1909 was valued at \$2,230,033; in 1914, at \$2,394,486; and in 1919, at \$3,315,000.

*Imports* of crinoline are small, amounting in 1914 to \$46; in 1918 (calendar year) to 2,465 yards, valued at \$11,787; and in 1920, to 74 square yards, valued at \$150. In 1919 and 1921 none was imported. Imports of hair seating are combined with imports of hair press cloth, and are shown under that item.

*Exports.*—None recorded.

*Important changes in classification.*—See General Notes on Paragraph, page 1142.

#### HAIR PRESS CLOTH.

(See Survey N-12.)

*Description and uses.*—Press cloth is a very thick cloth woven entirely from spun hair. It is used in the oil milling industry as a wrapper for holding the seed meats while under pressure. Two classes of press cloth are now in use—that made from camel's hair and that made from human (chiefly Chinese) hair. Camel's-hair press cloth excels, because of its quality of not absorbing the liquid or allowing the residue of the seeds to cling to it, as well as for its strength and long life. The human-hair press cloth also possesses these qualities to some extent and is widely used. Its cost is less than that of the camel's-hair cloth. Horse, cattle, and goat hair are employed to some extent.

*Production* data are not separately shown for either camel's-hair press cloth or press cloth made of human hair. Human-hair press cloth is included in the total for all kinds of haircloth, while camel's-hair press cloth is combined with wool manufactures. Estimates of the trade place the production of human-hair press cloth at approximately 1,800,000 pounds, with a value of \$1,600,000.

Imports of camel's-hair press cloth were not separately shown until 1914, when 129,004 pounds, valued at \$62,804, were entered from January 1 to June 30. Imports of haircloth known as hair seating and hair press cloths in 1914 amounted to 54,920 square yards, valued at \$106,757. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
CAMEL'S-HAIR PRESS CLOTH.				
	<i>Pounds.</i>			<i>Per cent.</i>
1919.....	22,673	\$29,823		
1920.....	15,608	18,408		
1921 (9 months).....	4,476	4,460		

HAIRCLOTH KNOWN AS "HAIR SEATING," AND HAIR PRESS CLOTH.				
	<i>Square yards.</i>			
1918.....	21,379	\$95,751	\$3,209	3.35

1921 (9 months).....	4,969	14,884		5.00

*Exports.*—None recorded.

*Important changes in classification.*—See General Notes on Paragraph below.

#### HAIR FELT, AND MANUFACTURES OF.

*Description and uses.*—Hair felt is made from cattle or goat hair. Manufactures include polishing felts for plate glass, cushion felts for shoes, refrigerator felts, cartridge felts, felt washers, pipe covering, bumper felts, etc.

*Production, import, and export data* are not shown in official sources.

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—The provisions of this paragraph extend to all classes of hair press cloth. In the 1913 act camel's-hair press cloth is separately provided for (par. 288). The provision in paragraph 422 of the 1913 act for camel's-hair press cloths imported expressly for oil-milling purposes has been omitted. Hair felt, and manufactures of hair felt, including gun wads, have been added.

*Conflicting provisions.*—It is possible that in the case of camel's-hair press cloth paragraph 1121 may conflict with this paragraph. This paragraph provides for "hair press cloth," whereas paragraph 1121, in defining the word "wool," states, "Whenever in this title the word 'wool' is used in connection with a manufactured article of which it is a component material, it shall be held to include wool or hair of the \* \* \* camel, \* \* \* whether manufactured by the woolen, worsted, felt, or any other process."

*Suggested changes.*—To avoid litigation growing out of this possible conflict, the provision for "hair press cloth," page 159, paragraph 1426, line 22, of H. R. 7456, might be changed to read, "press cloth of camel's or other hair." Gun wads of hair felt are provided for in

this paragraph, and gun wads n. s. p. f., in paragraph 1423. In view of the small imports of gun wads of all descriptions (\$4 in 1920, none in 1918 and 1919), separate provisions appear inadvisable. If different rates are desired, gun wads of hair felt could be given in paragraph 1423 a higher rate than on gun wads n. s. p. f.

Provision might be made in this paragraph for "cloths and all other manufactures of every description, wholly or in chief value of cattle hair or horse hair, not specially provided for, [rate]" following the word "valorem" in line 2, page 160.

### PARAGRAPH 1427.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1427. Hats, caps, bonnets, and hoods, for men's, women's, boys', or children's wear, trimmed or untrimmed, including bodies, hoods, plateaux, forms, or shapes, for hats or bonnets, composed wholly or in chief value of fur of the rabbit, beaver, or other animals, valued at not more than \$4.50 per dozen, \$1.50 per dozen; valued at more than \$4.50 and not more than \$9 per dozen, \$3 per dozen; valued at more than \$9 and not more than \$15 per dozen, \$5 per dozen; valued at more than \$15 and not more than \$24 per dozen, \$7 per dozen; valued at more than \$24 and not more than \$36 per dozen, \$10 per dozen; valued at more than \$36 and not more than \$48 per dozen, \$13 per dozen; valued at more than \$48 per dozen, \$16 per dozen; and in addition thereto, on all the foregoing, 20 per centum ad valorem.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 439. \* \* \* articles of wearing apparel of every description, partly or wholly manufactured, composed of or of which fur is the component material of chief value, fifty per centum ad valorem. \* \* \*

PAR. 446. Hats, bonnets, or hoods, for men's, women's, boys', or children's wear, trimmed or untrimmed, including bodies, hoods, plateaux, forms, or shapes, for hats or bonnets, composed wholly or in chief value of fur of the rabbit, beaver, or other animals, valued at not more than four dollars and fifty cents per dozen, one dollar and fifty cents per dozen; valued at more than four dollars and fifty cents per dozen and not more than nine dollars per dozen, three dollars per dozen; valued at more than nine dollars per dozen and not more than eighteen dollars per dozen, five dollars per dozen; valued at more than eighteen dollars per dozen, seven dollars per dozen; and in addition thereto, on all the foregoing, twenty per centum ad valorem.

PAR. 348. \* \* \* articles of wearing apparel of every description, partly or wholly manufactured, composed of or of which fur is the component material of chief value, not specially provided for in this section, 50 per centum ad valorem; \* \* \*

PAR. 354. Hats, bonnets, or hoods, for men's, women's, boys', or children's wear, trimmed or untrimmed, including bodies, hoods, plateaux, forms or shapes, for hats or bonnets, composed wholly or in chief value of fur of the rabbit, beaver, or other animals, 45 per centum ad valorem.

## FUR HATS.

(See Survey N-13.)

*Description.*—The furs most generally used in fur-felt hats are the beaver, coypou, nutria, or South American beaver, the Saxony and Russian hare, the Scotch, English, and French coney, and muskrat. Through processes of manufacture the fur in a felt hat loses its resemblance to fur as generally known. Most of the raw materials used are imported. The fur of the domestic rabbit is unsuitable for fur-felt hats.

*Production.*—In 1914 the number of fur-felt hat establishments was 224, with 21,318 employees, a capital of \$39,401,429, wages of \$12,070,812. Materials cost \$16,947,058, and the value of products was \$37,349,744. In addition, fur-felt hats to the value of \$476,499 were made in establishments engaged primarily in the manufacture of other products. There is some duplication in the value of the product owing to the inclusion with "hats, fur-felt," of the product of establishments which made nothing but hat bodies, in some instances under contract work for other manufacturers, and of still others which did finishing only. The industry is concentrated in Pennsylvania, Connecticut, New Jersey, and New York. In 1919 there were 176 establishments, with a total product valued at \$82,745,000.

*Imports of hats, bonnets, or hoods of fur in 1914 were 36,725 dozen, valued at \$664,717, of which 13,656 dozen, valued at \$304,308, came from Austria-Hungary, the rest mainly from France, England, Italy, and Belgium. Later statistics follow:*

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Dozens.</i>				<i>Per cent.</i>
1918.....	20,644	\$451,738	\$21.88	\$203,382	45
1919.....	15,244	488,479	32.04	219,816	45
1920.....	28,039	1,094,373	39.03	492,468	45
1921 (9 months).....	14,791	436,783			

In 1920 imports were principally from Italy (17,043 dozen, \$617,288); France (6,768 dozen, \$194,154); Czechoslovakia (1,729 dozen, \$120,220); and England (2,816 dozen, \$108,811).

*Exports.*—Domestic exports of fur-felt hats are not separately stated in official statistics. With the exception of one firm, which has a well-known trade-mark or name, exports are small. Felt hats and hat materials for men and boys were exported to the values of \$1,273,799, \$1,699,532, and \$3,145,224, respectively, in the calendar years 1918, 1919, and 1920. For the nine months ending September, 1921, exports of felt hats amounted to \$889,402. Exports were chiefly to Canada, Mexico, Cuba, and South American countries.

*Important changes in classification.*—A provision for caps, composed wholly or in chief value of fur of the rabbit, beaver, or other animals, has been added. Such caps were held dutiable as articles of wearing apparel (paragraph 348, act of 1913), and not as hats, bonnets, or hoods of fur (paragraph 354, act of 1913). Caps are not hats in either customs practice or common parlance. (G. A. 4708, T. D. 22228, of 1900.)

## PARAGRAPH 1428.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1428. Jewelry, commonly or commercially so known, valued above 20 cents per dozen pieces, 55 per centum ad valorem; rope, curb, cable, and fancy patterns of chain not exceeding one-half inch in diameter, width, or thickness, valued above 30 cents per yard; and articles valued above 20 cents per dozen pieces, designed to be worn on apparel or carried on or about or attached to the person, such as and including buckles, cardcases, chains, cigar cases, cigar cutters, cigar holders, cigarette cases, cigarette holders, coin holders, collar, cuff, and dress buttons, combs, match boxes, mesh bags and purses, millinery, military and hair ornaments, pins, powder cases, stamp cases, vanity cases, and like articles; all the foregoing and parts thereof, finished or partly finished, composed of metal, whether or not enameled, washed, covered, or plated, including rolled gold plate, and whether or not set with precious or semiprecious stones, pearls, cameos, coral, or amber, or with imitation precious stones or imitation pearls, 55 per centum ad valorem; stampings, galleries, mesh, and other materials of metal, whether or not set with glass or paste, finished or partly finished, separate or in strips or sheets, suitable for use in the manufacture of any of the foregoing articles in this paragraph, 45 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

PAR. 448. Chains, pins, collar, cuff, and dress buttons, charms, combs, millinery and military ornaments, together with all other articles of every description, finished or partly finished, if set with imitation precious stones composed of glass or paste (except imitation jet), or composed wholly or in chief value of silver, German silver, white metal, brass, or gun metal, whether or not enameled, washed, covered, plated, or alloyed with gold, silver or nickel, and designed to be worn on apparel or carried on or about or attached to the person, valued at twenty cents per dozen pieces, one cent each and in addition thereto three-fifths of one cent per dozen for each one cent the value exceeds twenty cents per dozen; all stampings and materials of metal (except iron or steel), or of metal set with glass or paste, finished or partly finished, suitable for use in the manufacture of any of the foregoing articles (except chain valued at less than thirty cents per yard other than nickel or nickel-plated chain), valued at seventy-two cents per gross, three

PAR. 356. Jewelry, commonly or commercially so known, valued above 20 cents per dozen pieces, 60 per centum ad valorem; rope, curb, cable, and fancy patterns of chain not exceeding one-half inch in diameter, width, or thickness, valued above 30 cents per yard; and articles valued above 20 cents per dozen pieces designed to be worn on apparel or carried on or about or attached to the person, such as and including buckles, card cases, chains, cigar cases, cigar cutters, cigar holders, cigarette cases, cigarette holders, coin holders, collar, cuff, and dress buttons, combs, match boxes, mesh bags, and purses, millinery, military, and hair ornaments, pins, powder cases, stamp cases, vanity cases, and like articles; all the foregoing and parts thereof finished or partly finished, composed of metal, whether or not enameled, washed, covered, or plated, including rolled gold plate, and whether or not set with precious or semiprecious stones, pearls, cameos, coral, or amber, or with imitation precious stones or imitation pearls,

## ACT OF 1909.

## ACT OF 1913.

cents per dozen pieces and in addition thereto one-half of one cent per gross for each one cent the value exceeds seventy-two cents per gross; rope, curb, cable, and other fancy patterns of chain, without bar, swivel, snap or ring, composed of rolled gold plate or of silver, German silver, white metal, or brass, not exceeding one-half of one inch in diameter, breadth or thickness, valued at thirty cents per yard, six cents per foot, and in addition thereto three-fifths of one cent per yard for each one cent the value exceeds thirty cents per yard; finished or unfinished bags, purses, and other articles, or parts thereof, made in chief value of metal mesh composed of silver, German silver, or white metal, valued at two dollars per dozen pieces, ten cents per piece and in addition thereto three-fifths of one cent per dozen pieces for each one cent the value exceeds two dollars per dozen; all of the foregoing, whether known as jewelry or otherwise and whether or not denominatively or otherwise provided for in any other paragraph of this Act, twenty-five per centum ad valorem in addition to the specific rate or rates of duty herein provided; all articles commonly or commercially known as jewelry, or parts thereof, finished or unfinished, including chain, mesh, and mesh bags and purses composed of gold or platinum, whether set or not set with diamonds, pearls, cameos, coral, or other precious or semiprecious stones, or imitations thereof, sixty per centum ad valorem.

60 per centum ad valorem. Stampings, galleries, mesh and other materials of metal, whether or not set with glass or paste, finished or partly finished, separate or in strips or sheets, suitable for use in the manufacture of any of the foregoing articles in this paragraph, 50 per centum ad valorem.

## JEWELRY AND RELATED ARTICLES.

(See Survey N-1.)

*Description and uses.*—The wording of the paragraph describes and indicates the uses of the articles of jewelry included therein.

*Production.*—In 1914 there were 1,914 establishments manufacturing jewelry, with \$72,404,000 capital, 28,289 employees, wages of \$18,302,000, and a product valued at \$81,006,000. In 1919 there were 2,037 establishments, with products valued at \$203,898,000.

*Imports* of jewelry in 1914 were valued at \$1,057,900, principally from Germany, France, Austria-Hungary, England, and Switzerland. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
JEWELRY, COMMONLY OR COMMERCIALY SO KNOWN, VALUED ABOVE 20 CENTS PER DOZEN PIECES.			
1918.....	\$147,851	\$88,700	60
1919.....	543,998	326,288	60
1920.....	1,063,190	637,902	60
1921 (9 months).....	711,312		

Calendar year.	Value.	Duty.	Ad valorem rate.
STAMPINGS, GALLERIES, MESH, ETC.			
1918.....	\$4,716	\$2,358	50
1919.....	18,160	9,080	50
1920.....	14,873	7,437	50
1921 (9 months).....	16,661	.....	.....

## MESH BAGS AND PURSES VALUED ABOVE 20 CENTS PER DOZEN PIECES.

1918.....	\$5,864	\$3,518	60
1919.....	288	173	60
1920.....	15,514	9,308	60
1921 (9 months).....	18,182	.....	.....

## ARTICLES DESIGNED TO BE WORN ON APPAREL OR CARRIED ON OR ABOUT OR ATTACHED TO THE PERSON VALUED ABOVE 20 CENTS PER DOZEN PIECES, N. E. S.

1918.....	\$26,719	\$16,031	60
1919.....	155,449	90,950	60
1920.....	196,916	118,059	60
1921 (9 months).....	125,595	.....	.....

Imports of cable, curb, rope, etc., are negligible, being valued at only \$66 in nine months of 1921.

*Exports* in 1914 were valued at \$1,005,285—mainly to Canada. Later exports in calendar years have been valued as follows: 1918, \$547,377; 1919, \$1,428,910; 1920, \$815,780; 1921 (nine months), \$247,862. In 1919, when exports were largest in value, of the total amount \$549,435 went to England and \$300,235 to Canada.

*Conflicting provisions.*—This paragraph provides for cigar and cigarette holders if composed of metal, at 55 per cent ad valorem, and paragraph 1452 provides for the same articles, of whatever material composed, at 45 per cent ad valorem.

*Suggested changes.*—"Dress" buttons valued above 20 cents per dozen pieces are dutiable at 55 per cent ad valorem under this paragraph, while such buttons worth less than 20 cents per dozen pieces would come within the provision in paragraph 349 for buttons of metal not specially provided for at three-fourths of one cent per line per gross and 10 per centum ad valorem, or, if embossed, at 35 per centum ad valorem. It is thus possible to have the same kind of dress buttons varying in value only a few cents per dozen pieces pay rates as divergent as 12 per centum and 55 per centum, or to have a high-valued metal button come in at the common metal button rate.

## PARAGRAPH 1429.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1429. Diamonds and other precious stones, rough or uncut, and not advanced in condition or value from their natural state by cleaving, splitting, cutting, or other process, whether in their natural form or broken, any of the foregoing not set, and diamond dust, 10 per centum ad valorem; pearls and parts thereof, drilled or undrilled, but not set or strung; diamonds, coral, rubies, cameos, and other precious stones and semiprecious stones, cut but not set, and suitable for use in the manufacture of jewelry, 20 per centum ad valorem; chatons, doublets, and synthetic cut stones, used in the manufacture of jewelry and other similar articles, 20 per centum ad valorem; imitation pearls of all kinds and shapes, of whatever material composed, pierced or unpierced, mounted or unmounted, and imitation precious or semiprecious stones except chatons, doublets, and synthetic cut stones of any kind, of all kinds and shapes, of whatever material composed, 45 per centum ad valorem.

## ACT OF 1909.

PAR. 449. Pearls and parts thereof, drilled or undrilled, but not set or strung, ten per centum ad valorem; diamonds, coral, rubies, cameos, and other precious stones and semi-precious stones, cut but not set, and suitable for use in the manufacture of jewelry, ten per centum ad valorem; imitation precious stones, including pearls and parts thereof, for use in the manufacture of jewelry, doublets, artificial, or so-called synthetic or reconstructed pearls and parts thereof, rubies, or other precious stones, twenty per centum ad valorem.

PAR. 555. Diamonds and other precious stones, rough or uncut, and not advanced in condition or value from their natural state by cleaving, splitting, cutting, or other process \* \* \* [Free].

PAR. 556. \* \* \* bort<sup>3</sup>; any of the foregoing not set, and diamond dust [Free].

## ACT OF 1913.

PAR. 357. Diamonds and other precious stones, rough or uncut, and not advanced in condition or value from their natural state by cleaving, splitting, cutting, or other process, whether in their natural form or broken, and bort; any of the foregoing not set, and diamond dust, 10 per centum ad valorem; pearls and parts thereof, drilled or undrilled, but not set or strung; diamonds, coral, rubies, cameos, and other precious stones and semiprecious stones, cut but not set, and suitable for use in the manufacture of jewelry, 20 per centum ad valorem; imitation precious stones, including pearls and parts thereof, for use in the manufacture of jewelry, doublets, artificial, or so-called synthetic or reconstructed pearls and parts thereof, rubies, or other precious stones, 20 per centum ad valorem.

## PRECIOUS STONES.

(See Survey N-1.)

*Description.*—"Precious stones" as a trade term includes the diamond, sapphire, emerald, pearl, opal, turquoise, garnet, beryl, topaz, rock crystal, lapis lazuli, agate, onyx, jade, amethyst, tiger-eye, chalcedony, bloodstone, moonstone, tourmaline, chrysoprase, etc.

<sup>3</sup> Or opposite par. 1561, H. R. 7456.

*Production.*—In 1914 there were 89 establishments engaged in lapidary work with value of products amounting to \$5,380,000, and in 1919, 121 establishments with products of \$30,056,000. In many cases the work is done for jewelry concerns which furnish the materials.

*Important changes in classification.*—See General Notes on Paragraph, page 1152.

## BORT AND DIAMOND DUST.

(See Survey N-1.)

*Description and uses.*—Bort denotes diamonds of inferior quality, especially such as have a radiating crystallization, not taking a polish; also, an amorphous variety of diamond, brown, gray, or black, known as "black diamond or carbonado," found massive in Brazil in association with pure diamonds. Diamond dust is a powder secured by rubbing together two diamonds in the process of faceting, and also by crushing bort. It is used for cutting and polishing diamonds and other precious stones. The amorphous variety is extensively used in diamond drills and stone saws, for which ordinary diamonds are unsuited.

*Imports* in 1914 of bort and diamond dust were valued at \$90,512 and came principally from France and England. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
BORT.			
			<i>Per cent.</i>
1918.....	\$460,237	\$46,024	10
1919.....	1,367,088	136,709	10
1920.....	3,328,371	332,837	10
1921 (9 months).....	314,240	31,424	10
DIAMOND DUST.			
1918.....	\$15,633	\$1,563	10
1919.....	53,354	5,335	10
1920.....	59,117	5,912	10
1921 (9 months).....	19,609	1,961	10

*Important changes in classification.*—See General Notes on Paragraph, page 1152.

## DIAMONDS.

(See Survey N-1.)

*Uses.*—Besides its value as a gem, the diamond is of great use in the arts and manufactures.

*Production* of rough and uncut diamonds for 1907-1918 ranged from \$608 (1915) to \$6,315 (1913), and was \$1,910 in 1918. A few diamonds have been found along the base of the Sierra Nevadas, in Wisconsin, Michigan, Indiana, Ohio, Kentucky, Tennessee, and along the eastern base of the Appalachians from Virginia to Alabama. South Africa furnishes almost the whole of the world supply; its total production in 1917 was valued at \$37,527,689.

*Imports.*—During 1911–1913 imports of diamonds in the rough ranged from \$9,071,089 (1911) to \$11,973,764 (1913); in 1915 they amounted to \$3,204,206. More than three-fourths are from England. Imports of diamonds cut, but not set, were \$24,390,076 in 1911, and \$27,170,996 in 1913. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
DIAMONDS, ROUGH OR UNCUT AND NOT ADVANCED.					
	<i>Carats.</i>				<i>Per cent.</i>
1918.....		\$12,636,024		\$1,263,602	10
1919.....	290,677	20,306,758	\$69.86	2,030,676	10
1920.....	121,031	10,526,125	86.97	1,052,613	10
1921 (9 months).....	29,517	1,997,427	67.67	199,743	10

DIAMONDS, CUT BUT NOT SET, AND SUITABLE FOR MANUFACTURE OF JEWELRY.

1918.....		\$7,734,150		\$1,546,830	20
1919.....	524,710	164,085,610	\$122.13	12,817,096	20
1920.....	302,920	45,240,013	149.34	9,048,003	20
1921 (9 months).....	184,408	19,327,173		3,865,435	20

<sup>1</sup>Includes small amount from Cuba.

*Important changes in classification.*—See General Notes on Paragraph, page 1152.

PEARLS.

(See Survey N-1.)

*Description and uses.*—Mother-of-pearl, the inner layer of the shell of the pearl mollusk, is secreted from the mantle of the shellfish. When a grain of sand or like foreign element finds lodgment between the shell and the mantle, it becomes enveloped in this pearly secretion, and thus is formed the pearl of commerce.

*Production.*—River pearls are found in many parts of the United States, and have been systematically worked in the Little Miami and Mississippi Rivers. Pearls are obtained from India, the Persian Gulf, the Sulu seas, the coast of Australia, the shores of South America, and some of the Pacific islands. (See also Imitation Precious Stones, p. 1151.)

*Imports* were valued at \$1,932,109 in 1916, \$1,551,597 in 1915, \$5,800,790 in 1913, and \$515,478 in 1908. About 90 per cent comes from France and England. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	<i>Number.</i>			<i>Per cent.</i>
1918.....	{	1,897,939	\$133,598	20
1919.....		667,990		
1920.....	{	1,755,463	2,186,702	20

		7,801,728	487,343	
		2,436,714		

<sup>1</sup>From Philippine Islands, free.

*Important changes in classification.*—See General Notes on Paragraph, page 1152.

## OTHER PRECIOUS STONES, ROUGH OR UNCUT.

(See Survey N-1.)

*Production* of precious stones, other than diamonds, was valued at \$104,413 in 1918.

*Imports* were \$167,331 in 1916, \$54,141 in 1915, \$75,614 in 1913, and \$180,012 in 1911. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Carats.</i>				<i>Per cent.</i>
1918.....		\$129,959		\$12,996	10
1919.....	2,183,858	219,526	\$0.10	21,953	10
1920.....	1,607,900	354,937	.22	35,494	10
1921 (9 months).....	283,692	145,278	.52	14,528	.....

*Important changes in classification.*—See General Notes on Paragraph, page 1152.

## OTHER PRECIOUS AND SEMIPRECIOUS STONES, CUT BUT NOT SET.

*Imports* were valued at \$2,774,220 in 1913, and \$4,058,696 in 1911, coming principally from France, England, and Germany. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
			<i>Per cent.</i>
1918.....	\$956,939	\$191,387	20
1919.....	4,935,287	987,057	20
1920.....	5,010,563	1,002,113	20
1921 (9 months).....	2,000,689	400,138	.....

*Important changes in classification.*—See General Notes on Paragraph, page 1152.

## IMITATION PRECIOUS STONES.

(See Survey N-1.)

*Description and uses.*—Imitation gems are manufactured from a specially prepared glass called "strass," after its German inventor. This glass consists essentially of a complex borosilicate of lead and potassium. The finished colorless glass is used in imitation diamonds. When employed to imitate colored precious stones, the strass is melted with various metallic oxides. Real diamonds, however, have been made artificially by Prof. Moissan, of Paris, by the use of an electric furnace. The stones produced were exceedingly small, but they possessed all the characteristics of the natural diamond.

Artificial pearls are of two kinds, the solid or massive and the blown pearls. The first are known as "Venetian pearls," made chiefly on the island Murano, near Venice, from small white or col-

ored glass tubes, the desired hues being produced by the use of oxide of tin and other metals. Blown pearls consist of small globules of thin glass, coated on the inside with the so-called oriental pearl essence, or "essence d'Orient," which is made from silvery scales of the bleak, a small fish common in France and Germany. Many imitation pearls are also formed of an opaline glass of nacreous luster, and the soft appearance of the pearl is obtained by the judicious use of hydrofluoric acid. It is said that certain Japanese firms are producing by artificial methods a genuine pearl in the body of the oyster. Synthetic or reconstructed stones differ from the imitation article in that they are of the same composition as the true stone. Doublets are defined as imitation gems consisting of a real stone cemented to a piece of glass colored to simulate the imitation gems, or paste jewels mounted with a thin face of the genuine jewels. A chaton is an eight-faceted stone in imitation of a diamond or other precious stone.

*Production.*—The United States has never been an important producer of imitation precious stones. In recent years domestic manufacturers have produced considerable quantities of imitation pearls but it can not be said that the business is in a stable condition.

*Imports* of imitation precious stones, including pearls and parts thereof, for use in the manufacture of jewelry, doublets, artificial or so-called synthetic or reconstructed pearls and parts thereof, rubies, or other precious stones, amounted to \$1,192,897 in 1914. They came chiefly from France. Later import statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
			<i>Per cent.</i>
1918.....	\$889,086	\$177,817	20
1919.....	1,590,182	318,036	20
1920.....	2,174,632	434,926	20
1921 (9 months).....	1,045,361	209,072	20

*Important changes in classification.*—See General Notes on Paragraph, below.

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—Bort is not specifically provided for.

The provision for chatons is new. Synthetic stones have been restricted to cut stones. The phrase "used in the manufacture of jewelry and other similar articles" is made to cover chatons, doublets, and synthetic cut stones.

Imitation pearls are given a separate classification and are not included under imitation precious stones. The descriptive phrase "of all kinds and shapes, of whatever material composed, pierced or unpierced, mounted or unmounted," is new and the phrase "for use in the manufacture of jewelry" is omitted.

Imitation precious or semiprecious stones exclude chatons, doublets, and synthetic cut stones, which are specifically provided for. The phrase "of all kinds and shapes, of whatever material composed" is new and the phrase "for use in the manufacture of jewelry" is omitted.

*Conflicting provisions.*—The provision in this paragraph for imitation pearls differs from the provision in paragraph 1403 for imitation pearl beads only in the words “strung or loose” which are in paragraph 1403 and not in this paragraph. There was litigation under the act of 1909 between two somewhat similar provisions (pars. 421 and 449), in which the provision for imitation pearl beads was declared more specific than the provision for imitation pearls. For legislative purposes, paragraph 449 of the act of 1909 was declared to include only such imitation pearls for use in the manufacture of jewelry as were not also imitation pearl beads. (*Lorsch v. United States*, 5 Ct. Cust. Appls., 93; *Cohn v. United States*, 5 Ct. Cust. Appls., 339; both of 1914.) The words “pierced or unpierced” in both paragraphs increase the conflict.

*Suggested changes.*—Since beads are usually if not always pierced, omission of the words “pierced or unpierced” wherever they occur in paragraphs 1403 and 1429 would tend to limit the provisions of 1403 to beads and 1429 to imitation pearls and imitation precious and semiprecious stones.

Specific provision might be made for pearls, strung.

Page 161, line 20, of H. R. 7456: Insert rate and change semicolon to a comma.

### PARAGRAPH 1430.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1430. Laces, including burnt-out laces, lace window curtains; handkerchiefs, napkins, wearing apparel, and all other articles or fabrics of lace, or made wholly or in part, however small, of lace or of imitation lace of any kind; edgings, insertings, galloons, nets, nettings, veils, veilings, neck ruffings, ruchings, tuckings, trimmings, flouncings, flutings, quiltings, ornaments; ribbons ornamented in the process of weaving; braids loom woven and ornamented in the process of weaving, or made by hand, or on any braid machine, knitting machine, or lace machine; and all articles composed in any part, however small, of any of the foregoing fabrics or articles; all the foregoing (except plain gauze or leno woven cotton nets or nettings, and materials and articles specially provided for in paragraphs 919, 1006, 1403, 1404, 1406, and 1424 of this Act), by whatever name known, and to whatever use applied, and whether or not named, described, or provided for elsewhere in this Act, when composed wholly or in chief value of yarns, threads, filaments, tinsel wire, lame, bullions, metal threads, spangles, or beads, 45 per centum ad valorem; embroideries, handkerchiefs, napkins, wearing apparel, and all other articles or fabrics embroidered in any manner by hand or machinery, whether with a plain or fancy initial, monogram,

## ACT OF 1909.

or otherwise, or tamboured, appliqué, scalloped, or ornamented with beads or spangles, or from which threads have been omitted, drawn, punched, or cut, and with threads introduced after weaving to finish or ornament the openwork, not including straight hemstitching; all the foregoing (except plain gauze or leno woven cotton nets or nettings, and materials and articles specially provided for in paragraphs 919, 1006, 1403, 1404, 1406, and 1424 of this Act), by whatever name known, and to whatever use applied, and whether or not named, described, or provided for elsewhere in this Act, when composed wholly or in chief value of yarns, threads, filaments, tinsel wire, lame, bullions, metal threads, spangles, or beads, 37½ per centum ad valorem.

## ACT OF 1909.

PAR. 179. \* \* \* laces, embroideries, braids, galloons, trimmings, \* \* \* ornaments, \* \* \* made wholly or in chief value of tinsel wire, lame or lahn, bullions, or metal threads, fifteen cents per pound and sixty per centum ad valorem.

PAR. 322. Handkerchiefs or mufflers composed of cotton, whether in the piece or otherwise and whether finished or unfinished, \* \* \* embroidered in any manner, whether with an initial letter, monogram, or otherwise, by hand or machinery, or are tamboured, appliqué, or trimmed wholly or in part with lace or with tucking or insertion, they shall not pay a less rate of duty than sixty per centum ad valorem.

PAR. 349. Laces, lace window curtains, and all other lace articles; handkerchiefs, napkins, wearing apparel, and all other articles made wholly or in part of lace or laces, or in imitation of lace; nets, nettings, veils, veilings, neck rufflings, ruchings, tuckings, flutings, quillings, embroideries, trimmings, braids, feather-stitch braids, edgings, insertings, flouncings, galloons, gorings, \* \* \* ornaments, ribbons, \* \* \* wearing apparel, handkerchiefs, and other articles or fabrics embroidered in any manner by hand or machinery, whether with a plain or fancy letter, initial, or monogram, or otherwise, or tamboured, appliqué, or scalloped, by hand or machinery, for any purpose, or from which threads have been drawn, cut, or punched to produce openwork, ornamented or embroidered in any manner herein described, in any part thereof, however small; hemstitched or tucked flouncings or skirtings; all of the foregoing, composed wholly or in chief value of cotton, flax, or other vegetable

## SENATE AMENDMENTS.

## ACT OF 1913.

PAR. 358. Laces, lace window curtains, not specially provided for in this section, coach, carriage, and automobile laces, and all lace articles of whatever yarns, threads, or filaments composed; handkerchiefs, napkins, wearing apparel, and all other articles or fabrics made wholly or in part of lace or imitation lace of any kind; embroideries, wearing apparel, handkerchiefs, and all articles or fabrics embroidered in any manner by hand or machinery, whether with a plain or fancy initial, monogram, or otherwise, or tamboured, appliqué, or scalloped by hand or machinery, any of the foregoing by whatever name known; edgings, insertings, galloons, nets, nettings, veils, veilings, neck rufflings, ruchings, tuckings, flouncings, flutings, quillings, ornaments; braids, loom woven and ornamented in the process of weaving, or made by hand, or on any braid machine, knitting machine, or lace machine, and not specially provided for; trimmings not specially provided for; woven fabrics or articles from which threads have been omitted, drawn, punched, or cut, and with threads introduced after weaving, forming figures or designs, not including straight hemstitching; and articles made in whole or in part of any of the foregoing fabrics or articles; all of the foregoing of whatever yarns, threads, or filaments composed, 60 per centum ad valorem.

## ACT OF 1909.

fiber, or of cotton, flax, or other vegetable fiber and india rubber, or of cotton, flax, or other vegetable fiber, india rubber, and metal, and not elsewhere specially provided for in this section, sixty per centum ad valorem: *Provided*, That no article composed wholly or in chief value of one or more of the materials or goods specified in this paragraph, shall pay a less rate of duty than the highest rate imposed by this section upon any of the materials or goods of which the same is composed: *And provided further*, That no article or fabric of any description, composed of flax or other vegetable fiber, or of which these materials or any of them is the component material of chief value, when embroidered by hand or machinery, or having hand or machinery embroidery thereon, shall pay a less rate of duty than that imposed in this section upon any embroideries of the materials of which such embroidery is composed.

PAR. 350. Laces, embroideries, edgings, insertings, galloons, flouncings, nets, nettings, trimmings, and veils, composed of cotton, silk, artificial silk, or other material (except wool), made on the Lever or Gothrough machine, seventy per centum ad valorem: *Provided*, That no wearing apparel, handkerchiefs, or articles of any description, composed wholly or in chief value of any of the foregoing, shall pay a less rate of duty than that imposed upon the articles or the materials of which the same are composed.

PAR. 383. \* \* \* braids, galloons, edgings, insertings, flouncings, fringes, gimps, \* \* \* ornaments, laces, trimmings, and articles made wholly or in part of lace, embroideries and all articles embroidered by hand or machinery, head nets, nettings, \* \* \* and manufactures of wool ornamented with beads or spangles of whatever material composed, any of the foregoing made of wool or of which wool is a component material, whether containing india rubber or not, fifty cents per pound and sixty per centum ad valorem.

PAR. 400. Handkerchiefs or mufflers composed wholly or in chief value of silk, finished or unfinished, \* \* \* embroidered in any manner, whether with an initial letter, monogram, or otherwise, by hand or machinery, or are tamboured, appliquéed, or having tucking or insertion, sixty per centum ad valorem.

PAR. 402. Laces, edgings, insertings, galloons, flouncings, neck ruffings, ruchings, braids, \* \* \* trimmings, ornaments, nets or nettings, veils or veilings, and articles made wholly or in part of any of the foregoing, or of chiffons, embroideries and articles embroidered by hand

## ACT OF 1913.

## ACT OF 1909.

## ACT OF 1913.

or machinery, or tamboured or appliquéed, \* \* \* all of the foregoing composed of silk, or of silk and metal, or of which silk is the component material of chief value, whether in part of India rubber or otherwise and braid composed in part of India rubber, not specially provided for in this section, and silk goods ornamented with beads or spangles, sixty per centum ad valorem: *Provided*, That articles composed wholly or in chief value of any of the materials or goods dutiable under this paragraph shall pay not less than the rate of duty imposed upon such materials or goods by this section: *Provided further*, That tamboured, embroidered, or appliquéed articles or fabrics shall pay no less rate of duty than that imposed upon the material if not so tamboured, embroidered, or appliquéed.

PAR. 405. \* \* \* braids, laces, embroideries, galloons, neck rufflings, ruchings, \* \* \* trimmings, \* \* \* or other articles or fabrics composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair, by whatever name known, and by whatever process made, forty-five cents per pound, and in addition thereto, sixty per centum ad valorem.

PAR. 421. \* \* \* nets or nettings, laces, embroideries, galloons, wearing apparel, ornaments, trimmings, curtains, fringes, and other articles not specially provided for in this section, composed wholly or in chief value of beads or spangles made of glass or paste, gelatin, metal, or other material, but not in part of wool, sixty per centum ad valorem: *Provided*, That no article composed wholly or in chief value of beads or spangles made of glass, paste, gelatin, metal, or other material shall pay duty at a less rate than is imposed in any paragraph of this section upon such articles without such beads or spangles.

## LACE, EMBROIDERY, ETC.

*Description and uses.*—Paragraph 1430, after paragraph 1008 (jute burlap, etc.), is probably the most important textile provision as regards value of imports. It includes laces, nets, embroideries, braids, and articles made of any of these materials.

Lace is ornamental network made by intertwisting fine threads to form a pattern. When made by hand it is termed "real" or "point" lace, as distinguished from machine-made lace, sometimes known as imitation lace. Modern lace is mainly machine-made. The machines used are either the Lever or the "go-through."

Netting is made by intertwisting fine threads to form open meshes, usually hexagonal in shape. Net, sometimes used as a synonym for netting, is, correctly, a particular length of netting.

Veiling is a general commercial term covering a great variety of articles, such as chiffon, grenadine, fancy netting (having fancy "veiling" meshes, or ornamented with a bar or border or figuring), used chiefly or exclusively for the making of veils. A veil is a particular length of veiling.

Embroidery is ornamental stitching. It implies a foundation material, such as cloth, or net, on which the embroidery is worked, thus differing from lace, which is made directly from yarn. Embroidering is done by hand and by hand or power machines. Modern embroidery is made chiefly on the power-driven schiffli (shuttle) machines. A special type of embroidery is known as burnt-out lace; this is also called etched lace, embroidery lace, and Plauen lace. It is made by embroidering on a specially prepared cloth and then removing this foundation material, by chemicals or otherwise, so as to obtain an openwork embroidery fabric which resembles lace.

Fancy braids, including the type known as "Barmen lace," are made on braiding machines with Jacquard attachments.

Edging is narrow lace or embroidery specially designed for trimming frills and parts of dresses. It is usually made with one edge straight and one scalloped. Inserting, or insertion, is narrow lace or embroidery or other ornamental material especially made for inserting in a plain fabric. It is made with both edges alike, usually straight, and with a certain amount of plain work on either edge for use in sewing it to the fabric. Galloon is a narrow fabric made of lace, embroidery, or braid. Some of it is made with a mixture of metallic threads, composed of threads or cords covered with gold, silver, gilt, etc., and is used for ornamenting uniforms. Neck ruffling is a strip of textile material drawn up at one edge in gathers or pleats, especially prepared for wearing around the neck. Ruching is a full quilling or pleating of net, lace, ribbon, or other material in widths ranging from 1 to 3 inches, used as a trimming for women's garments or worn at the neck or wrists. It usually consists of two or more rows of material arranged in box or shell pleats, or in the form of quilling. Tucking consists of textile material ornamented with parallel rows of tucks, either arranged close together and covering the surface, or in clusters with spaces between. It is used for women's summer waists, yokes, underwear, and skirts and as fronts for men's shirts. Flouncing is textile material of any description used for making deep ruffles or flounces, usually gathered or pleated at one edge and loose at the other, the gathered edge being sewn to the garment. Fluting is ruffling made with a flute-shaped crimp. Quilling is a narrow border of lace, net, or ribbon, pleated or fluted so as to resemble a row of quills; it is a variety of ruffling. Tambour work originally meant a kind of embroidery worked by hand on muslin tightly stretched by means of hoops or a frame similar to that encircling a tambour. It is now usually applied to work, made on the embroidery machine, in which the tambour stitch is used. This stitch produces a pattern of straight ridges crossing each other in every direction at right or acute angles. Appliqué in dress and upholstery usage means applied or sewn on. Thus, a gimp or pattern of lace may be sewn on a new ground, or embroidered flowers may be secured to silk net; in such case the pattern ornament is said to be appliquéd.

*Production* data of clothing and articles of wearing apparel made or ornamented with lace, embroidery, etc., are not obtainable. Their manufacture centers in New York, Chicago, Philadelphia, and other large cities.

The production figures of lace, embroidery, etc., are not available except for certain items. The output of Lever laces of cotton, amounted in 1914 to 7,237,000 square yards, valued at \$3,681,000, and in 1919 to 19,863,000 square yards, valued at \$6,608,000. The production of braids and narrow laces, of cotton, was valued at \$897,000 in 1914 and at \$620,000 in 1919. The production of silk laces, embroideries, nets, veils, veilings, etc., was valued at \$1,362,000 in 1914 and at \$5,953,000 in 1919; of silk fringes and gimps, at \$1,025,000 in 1914 and at \$3,464,000 in 1919; of military and tailors' trimmings of silk, at \$642,000 in 1914 and at \$1,317,000 in 1919.

The machine embroidery industry centers around New York City, being largest on the New Jersey side of the North River; there are also aggregations of embroidery machines at Philadelphia and Chicago and smaller numbers at other points. Fancy laces are produced most largely in Pennsylvania, Rhode Island, New Jersey, New York, and Connecticut.

*Imports* of laces, embroideries, etc., have been valued as follows: 1914, \$48,134,985; 1918, \$22,314,665; 1919 (calendar year), \$30,811,353; 1920 (calendar year), \$50,190,422. The record was \$53,361,350 in 1907. The temporary free entry accorded lace and embroidery machines from August 5, 1909, to January 1, 1911, more than doubled the capacity of the local lace and embroidery industries and their development has tended to curtail the imports of foreign laces and embroideries. The decline in imports after 1914 was, however, largely because of the war. Lace imports are normally from Nottingham and Calais; embroidery from St. Gall; etched lace (burnt-out embroidery) from Plauen; and fancy braids most largely from Barmen. Ornamented wearing apparel comes chiefly from Paris.

Imports are shown more in detail as to nature and material as follows:

*Lace, embroidery, etc.*

*Exports* of clothing and other articles of wearing apparel made or ornamented with lace, embroidery, etc., are not separately recorded, nor are there separate export statistics of the other articles covered by this paragraph except in regard to one item. Exports of cotton laces and embroideries were valued in the fiscal year 1914, at \$232,457, and in the calendar years 1918-1921 as follows: 1918, \$1,569,322; 1919, \$1,731,675; 1920, \$1,629,409; 1921 (nine months), \$500,298. Canada is the main purchaser, followed by Mexico, Cuba, and the Philippine Islands.

*Important changes in classification.*—In general this paragraph covers the same class of goods as is covered by paragraph 358 of the act of 1913. These articles, however, have been divided into two groups at different rates of duty, the group carrying the higher duty being composed of laces, fancy braids, and certain other specialties, and that carrying the lower duty being composed of embroideries and articles more or less similar. A special form of embroidery, known as "burnt-out lace" or "etched lace" is, however, placed in the higher class with laces. Fabrics and articles specially provided for in other paragraphs which are not of the class of goods covered by this paragraph are expressly excepted.

The wording of the paragraph has been strengthened so that its intent can not be evaded because of the wording in any other paragraph. The need for a careful phraseology has been shown by judicial construction of the act of 1913, which took from paragraph 358 Jacquard figured nets and nettings intended for use as curtains and admitted them under the lower rates of paragraph 258.

"Coach, carriage, and automobile laces," which are listed in paragraph 358 of the act of 1913, have been omitted from paragraph 1430 because they are not similar to the other articles here included; they are narrow woven fabrics, usually pile-woven, used as arm straps in vehicles, and except for their misleading trade name would probably never have been included with lace in preceding acts.

There has been inserted a provision for "ribbons ornamented in the process of weaving"; this will include all ribbons other than the plain (plain woven, twilled, or sateen). There has also been inserted a provision for fabrics and articles "ornamented with beads or spangles."

*Conflicting provisions.*—This paragraph conflicts with the provisions for "ribbons, beltings, toys, and other articles made wholly or in chief value of tinsel wire, lame or lahn, and india rubber, bullions, or metal threads, not specially provided for, 45 per centum ad valorem; woven fabrics, fringes, and tassels, made of any of the foregoing, 55 per centum ad valorem," in lines 1 to 5, page 73, paragraph 382. There is also a conflict with paragraph 1403.

*Suggested changes.*—In view of the foregoing conflict, with articles of tinsel, etc., and as the articles in this paragraph carry rates of duty not greater than the articles provided for in paragraph 382, "382" might be inserted before "919" in line 21, page 162, and in line 12, page 163. Should this be done appropriate changes should be made in paragraph 1430. It may be noted that the phrase "ribbons ornamented in the process of weaving" causes the inclusion with laces at the lace rate of duty of ribbons woven with a jacquard or other special loom attachment, and leaves under the textile schedules only plain ribbons.

As fringes and gimps are of the same class as trimmings, the words "fringes, gimps," might be added after "trimmings" in line 13, page 162.

Separate provisions for articles of lace and embroidered articles at different rates of duty may involve litigation where both lace and embroidery are used on the same article. This litigation might be avoided by having one rate of duty on all such articles. If this should be done the two provisions should be combined. The omission of 1403 from this paragraph, H. R. 7456, page 162, line 21, page 163, line 12, would prevent a conflict with paragraph 1403 and assure the classification of such articles as beaded net and spangled gowns in paragraph 1430.

Page 162, line 15, of H. R. 7456: Insert comma after "braids."

### PARAGRAPH 1431.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1431. Chamois skins, pianoforte, pianoforte-action, player-piano-action leather, enameled upholstery leather, and glove leather, finished, in the white or in the crust, 20 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 451. \* \* \* chamois skin, twenty per centum ad valorem; \* \* \* enameled leather weighing not over ten pounds per dozen hides or skins, twenty-seven cents per pound and fifteen per centum ad valorem; if weighing over ten pounds and not over twenty-five pounds per dozen, twenty-seven cents per pound and eight per centum ad valorem; if weighing over twenty-five pounds per dozen, twenty cents per pound and ten per centum ad valorem; pianoforte leather and piano-forte-action leather, and glove leather, twenty per centum ad valorem; \* \* \*

PAR. 359. Chamois skins, 15 per centum ad valorem; pianoforte, pianoforte action, enameled upholstery leather, and glove leathers, 10 per centum ad valorem.

### CHAMOIS SKIN.

(See Survey N-17.)

*Description and uses.*—The goat antelope, known as the chamois, is nearly extinct. The trade name "chamois skin" applies to a form of "tawed" or oil-tanned sheepskin. Only the stronger sheepskins are capable of conversion into chamois leather. The skin is split into two layers and the flesh side is treated vigorously with oil. The grain split is called a "skiver" and is vegetable or chrome tanned and marketed for bookbindings, pocketbooks, hat sweat bands, and other light leather uses. As domestic sheepskins are usually not suitable for making chamois, sheepskins for such purpose are generally imported. When domestic skins are used they must be tanned in "the full pelt," as it is impossible to split them because the grain is porous; this also precludes their use for the light-leather purposes

mentioned. Chamois skin is used extensively for washing and polishing. Formaldehyde-tanned sheep fleshers are bought and sold as steel-color chamois. These skins are made by a new process of tanning, and will bear washing in very hot water and remain soft without shrinkage until completely worn out. They will not absorb cold water as do the oiltanned chamois.

*Production* in 1914 was 1,948,533 skins, valued at \$925,492. A half dozen companies manufacture it exclusively, 12 or 15 only incidentally. Fleshers, in 1919, were valued at \$2,160,873, not all of which were chamois, although the production of the latter was probably greater than in 1914.

*Import* values were \$149,057 in 1913; \$107,424 in 1914; \$64,267 in 1915. The ratio of imports to production in 1914 was about 12 per cent. France is the principal competing country. England sends to the United States large quantities of "crust chamois"—tanned but unfinished—figures for which are not given separately. Imports of chamois skin since 1917 are shown as follows:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$26,711	\$4,007	15
1919.....	47,533	7,130	15
1920.....	53,439	8,016	15
1921 (9 months).....	64,804	9,720	.....

#### PIANOFORTE AND PIANOFORTE-ACTION LEATHER.

(See Survey N-17.)

*Description and uses.*—This leather is oil-tanned buckskin made largely from Central American deerskins. It is used in pianos, principally to deaden the click of the keys, and must be of uniform thickness and pliability; the imported skins are best suited on account of their thickness and close texture. The skins for this use are especially selected and cost 10 per cent over the price of the ordinary quality. Some other varieties of light leather are used in pianos. Much of this can not be distinguished from light leather for other purposes. The amount of oil-tanned buckskin used has not increased greatly in recent years.

*Production.*—The output of pianoforte-action leather in 1914 was 92,639 skins, valued at \$159,031, production being mostly in New York, and sometimes in connection with that of glove leather. Separate figures were not given in 1919. The best quality of cod oil, a good quality of finishing lime, soda ash, and aniline dyes are used. The process requires close attention, and machinery is less used than in making most kinds of leather.

*Import* values in 1912 were \$7,311; in 1913, \$521; in 1914, \$2,790. Imports from Germany ceased during the war period. The ratio of imports to domestic production in 1914 was about 2 per cent. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1920.....	\$3,605	\$360	10
1921 (9 months).....	5,554	555	10

*Exports.*—None recorded.

*Important changes in classification.*—See General Notes on Paragraph, page 1165.

#### ENAMELED UPHOLSTERY LEATHER.

(See Survey N-16.)

*Description.*—Enameled upholstery leather is made principally from cattle hide “grains” or “splits.” It differs from the patent leather made here for shoe uppers, the enamel being usually on the flesh side, while the patent leather is finished on the grain side.

*Production* statistics are not obtainable for enameled upholstery leather. The output of upholstery leather was valued at \$14,328,358 in 1914, and in 1919 the number of hides tanned for all upholstery was 2,441,662, valued at \$32,224,644. The proportion which was enameled was not separately stated for either year.

*Imports* in 1913 were included with “all other leather, patent, japanned, varnished or enameled;” in 1914 the value of the imports of enameled upholstery leather was \$17,123; in 1915, \$6,563; in 1916, \$3,579; in 1917, \$2,710. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$126	\$13	10
1919.....	604	60	10
1920.....	1,290	129	10
1921 (9 months).....	479	48	.....

*Exports* of enameled upholstery leather are not separately stated. For exports of “carriage, automobile, and upholstery,” see paragraph 1600, page 1353.

#### GLOVE LEATHER.

(See Survey N-17.)

*Description and uses.*—The principal kinds of leather used in making dress gloves are sheep and lamb skins, goat and kid skins, Capeskin, and Mocha, for which large quantities are imported. The greater part of domestic dress gloves was formerly made of imported materials, sheep and lamb skins being the most important. Of recent years domestic sheep and lamb skins have been more largely used. Horsehide and cowhide “splits” (the flesh side of the hide split into two layers) are the chief materials used in making work gloves. Deer, elk, and pig skin are also used. The term “Capeskin” at first designated the skin of a goat found in South Africa. The skins were

fairly large, heavy and tight-grained—that is, having small pores. This designation is now used, but applies to other kinds of high-quality glove leather as well as to the genuine. Mocha skins are the pelts of a variety of haired sheep found in Arabia and Africa. Deerskin, formerly plentiful here, now comes in large quantities from South America. Nearly all the goat and kid skins used in making glove leather come from Europe, the best from France, with Italy, Germany, Austria, and Belgium following. Most of the lambskins used for glove leather come from Italy, Sicily, Sardinia, Corsica, Spain, France, Germany, Austria, Russia, and the Balkan States—the best, known as Tuscany lambskin, from northern Italy. The skins of the dog, fox, bear, colt, kangaroo, and other animals are also used, but are not, save some grades of colt skin, used for the finer grades of gloves.

*Production.*—The value in 1919 was \$20,853,999. Sheep and lamb skins were valued at \$9,179,619; calf and kip declined to \$27,323; goat and kid skin production increased to \$297,003; and horsehide glove leather rose to \$5,014,024. Cattle grains and splits, particularly the latter, became very important, amounting to nearly \$4,000,000. Several other varieties, pig and hog, deer and elk, etc., were manufactured. A most important feature in the glove-leather industry was the development of the chrome process of tanning. Leather imported for gloves has been of the fine grades calling for considerable hand labor. The chrome tannage is distinctly a machine process and is better adapted to American conditions. The cessation of imports of glove leather from Germany, and the chrome method of tanning glove leather explain the domestic development of this industry in the past five years. Statistics of production of glove leather are given in the following table:

	1914		1919	
	Quantity.	Value.	Quantity.	Value.
	<i>Number.</i>		<i>Number.</i>	
Sheep and lamb skins.....	3, 637, 279	\$2, 169, 839	4, 872, 351	\$9, 179, 619
Calf and kip skins.....	356, 935	725, 024	5, 530	27, 323
Goat and kid skins.....	5, 694	4, 080	123, 397	297, 003
Cattle grains, sides.....	(1)	(1)	43, 169	312, 298
Cattle splits, sides.....	(1)	(1)	4, 357, 984	3, 566, 702
Horse, sides.....	343, 949	998, 303	2, 968, 816	5, 014, 024
Pig and hog skins.....	(1)	(1)	217, 122	334, 137
Deer and elk skins.....	(1)	(1)	324, 273	1, 027, 511
All other.....		387, 409		1, 095, 382
Total.....	4, 343, 857	4, 284, 655	10, 912, 642	20, 853, 999

<sup>1</sup> Not specified.

<sup>2</sup> Figures given in 1919 census of manufactures are 197,482 hides and 573,852 sides; hides are multiplied by two to make figures comparable with 1914 amounts; the total is 968,816 sides.

*Imports of glove leather* in 1912 were valued at \$1,783,950; in 1913, \$2,307,057; in 1914, \$2,225,645. Before the war more than 75 per cent came from Germany; Austria-Hungary and France followed. Italy has recently been exporting a considerable quantity to the United States. In 1919 nearly \$560,000 out of the \$789,098 value imported came from Italy. France was the source of imports valued at \$131,984; Spain, \$38,515; Austria-Hungary, \$34,920; and England, \$18,102. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
			<i>Per cent.</i>
1918.....	\$11,818	\$1,182	10
1919.....	747,632	74,763	10
1920.....	954,816	95,482	10
1921 (9 months).....	132,344	13,234	.....

*Exports of glove leather*, almost entirely to Canada, were valued at \$316,715 in 1913 and at \$359,486 in 1914. In 1917, out of exports of \$1,497,957, \$1,436,970 went to Canada; in 1920, the same country's share of our exports was over \$2,000,000. Later statistics for calendar years are: 1918, \$2,908,890; 1919, \$1,797,024; 1920, \$2,198,759; 1921 (nine months), \$445,150.

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—Provision is made for player-piano-action leather. The words "finished, in the white or in the crust" are also new.

*Suggested changes.*—If the words "finished, in the white or in the crust," are intended to be confined to glove leather, the comma after "leather" and after "finished" should be omitted. If the word "finished," but not the words "in the white or in the crust," relates to glove leather, the comma should be stricken out after "leather." In either of these cases the word "and" should be inserted before "enameled upholstery leather." If the words "finished, in the white or in the crust," or the words "in the white or in the crust," are intended to apply to the entire paragraph, the words "all the foregoing" should be inserted before "finished" or before the first word "in," as the case may be.

"Pianoforte and pianoforte-action leather" was formerly practically synonymous with oil-tanned buckskin, but a number of other kinds of leather are now used in pianos. Some of these are, and some are not, tanned expressly for the purpose. Furthermore, felt and cork are more often used now to accomplish the purpose for which buckskin was formerly used. Calf, kid, and lamb skins are used for "pneumatic" leather for the bellows of player-pianos. It should be made clear in the law either that it is intended to include only oil-tanned buckskin or that it is intended to include all leather suitable for use in pianos and pianoforte-actions and player-pianos, so far as the possibility of such use can be ascertained.

#### PARAGRAPH 1432.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1432. Bags, baskets, belts, satchels, cardcases, pocketbooks, jewel boxes, portfolios, and other boxes and cases, wholly or in chief value of leather or parchment, not jewelry, and moccasins, and manufactures of leather, rawhide, or parchment or of which leather, rawhide,

## H. R 7456.

## SENATE AMENDMENTS.

or parchment is the component material of chief value, not specially provided for, 25 per centum ad valorem; any of the foregoing permanently fitted and furnished with traveling, bottle, drinking, dining or luncheon, sewing, manicure, and similar sets, 30 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

PAR. 452. Bags, baskets, belts, satchels, cardcases, pocketbooks, jewel boxes, portfolios, and other boxes and cases, made wholly of or in chief value of leather, not jewelry, and manufactures of leather, or of which leather is the component material of chief value, not specially provided for in this section, forty per centum ad valorem; any of the foregoing permanently fitted and furnished with traveling, bottle, drinking, dining or luncheon and similar sets, fifty per centum ad valorem.

PAR. 360. Bags, baskets, belts, satchels, cardcases, pocketbooks, jewel boxes, portfolios, and other boxes and cases, made wholly of or in chief value of leather or parchment, not jewelry, and manufactures of leather or parchment, or of which leather or parchment is the component material of chief value, not specially provided for in this section, 30 per centum ad valorem; any of the foregoing permanently fitted and furnished with traveling, bottle, drinking, dining, luncheon and similar sets, 35 per centum ad valorem.

## BAGS, BELTS, POCKETBOOKS, ETC.

(See Survey N-18.)

*Description and uses.*—These articles—bags, baskets, belts, satchels, cardcases, pocketbooks, jewel boxes, etc.—correspond very closely with the Census classifications, “Trunks and Valises,” “Pocketbooks,” and “Leather goods, not elsewhere specified.” The first class includes leather bags; only a few leather trunks are now made. Under the second class are “purses, ladies’ purse handbags, cardcases, wallets, coin purses, etc., made chiefly of leather.” The third group includes “handbags, belts, wristlets for watches, straps, music rolls, burnt-leather goods, razor strops, leather cases of all kinds, fobs, handles, firemen’s leather helmets, suspender parts, sweatbands, tags, kid hair curlers, washers, valves, dog collars, leather garments,” and similar products.

*Production* of “leather goods, not elsewhere specified,” was valued at \$18,838,000 in 1909, at \$19,334,000 in 1914, and \$52,934,098 in 1919. New York State produced \$9,895,000 in 1914; Illinois, Pennsylvania, and New Jersey, nearly \$2,000,000 each; and Massachusetts, \$1,309,000. Of the quantity produced in 1919, New York led with over \$30,000,000, followed by Minnesota, with slightly over \$4,000,000. The production of pocketbooks in 1909 was valued at \$3,628,000 and in 1914 at \$3,351,000, New York leading, and Massachusetts second. The value in 1919 was \$14,725,930, New York producing \$11,292,361 and Massachusetts \$1,324,791. Although there are a few large concerns, this is mainly a small-scale industry, the majority of establishments having less than 20 employees and an average capital of about \$25,000. Formerly there were many skilled artisans and handworkers, mostly of German origin; but the adoption of machine methods has greatly reduced their numbers. England, Germany, France, and Austria-Hungary were leaders in the production of

leather goods; England in the manufacture of high-class hand-sewed leather and pigskin goods. Jewelry cases, manicure sets, etc., requiring much hand labor, were made in small shops in England and Germany, the factory output not being large. France originated styles of handbags, which were frequently "extreme."

Imports under this classification in 1913 were valued at \$1,252,520; in 1914, at \$1,381,649. England, Germany, France, and Austria-Hungary have supplied the largest quantities of leather goods, with Germany and England leading in 1914. In 1916 and 1917 England supplied about two-thirds; in 1918, Canada, over 90 per cent; Japan, to the value of \$38,502 in 1918, and \$80,170 in 1920. Imports since 1917 have been as follows:

Calendar year.	Value.	Duty.	Ad valorem rate.

<sup>1</sup> From Philippines, free.

Exports of "all other manufactures of leather" (exclusive of boots and shoes and harness and saddlery) were \$2,175,179 in 1913, and \$1,881,223 in 1914. Later exports in calendar years have been as follows: 1918,<sup>1</sup> \$3,058,924; 1919,<sup>1</sup> \$7,254,395; 1920,<sup>2</sup> \$5,521,569; 1921<sup>2</sup> (nine months), \$1,404,217. Of the value of exports in 1920, England received \$1,327,960, Canada \$1,206,185, and Cuba \$650,758.

*Important changes in classification.*—See General Notes on Paragraph, page 1168.

<sup>1</sup> Exclusive of boots and shoes, gloves, and harness and saddlery.

<sup>2</sup> Exclusive of boots and shoes, gloves, harness and saddlery, and leather belting.

## LEATHER BELTING.

(See Survey N-18.)

*Description and uses.*—Leather belting is generally produced from green-salted hides, free from scratches, brands, etc., as it is essential that the finished product possess uniformity. Most of the leather belting is vegetable-tanned, oak tannage giving a product of great tensile strength at moderate cost. Chrome tannage is employed to some extent, especially when a steam-proof product is desired. Chrome leather is effective in temperatures where leathers tanned by the vegetable processes fail. Chrome-tanned belting usually costs more per pound owing to the lower yield from the hide. Progress has been made in the sewing of leather belting, handwork being practically supplanted by machine sewing. Leather belting is used in a great number of industries. Chain belting and other substitutes for leather compete with this product.

*Production.* of leather belting increased from \$6,525,737 in 1879 to \$14,220,306 in 1904, and to \$23,035,951 in 1914. In 1919, the value of the leather belting manufactured was \$40,540,653. Materials cost \$28,156,713. New York led in production with an output valued at \$9,391,023, followed by Pennsylvania with \$5,574,105; Massachusetts came next with \$3,943,685, and Connecticut with \$3,930,487.

*Import statistics* are not separately recorded.

*Exports* of leather belting were included under "all other manufactures of leather" prior to 1920. In that year and nine months of the following, exports were, respectively, 2,819,078 pounds, valued at \$5,412,290, and 64,124 pounds, valued at \$41,035. Cuba received the largest amount in 1920, taking 359,106 pounds, valued at \$807,715. England followed with purchases valued at \$507,728, Japan with \$402,235, British India with \$399,180, and Mexico with \$288,889.

## GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—The provisions for moccasins and manufactures of rawhide are new.

*Suggested changes.*—Page 163, line 24, of H. R. 7456: Transpose "wholly or in chief value of leather or parchment" and "not jewelry" so as to make the phrase read: "and other boxes and cases, not jewelry, wholly or in chief value of leather or parchment, \* \* \*."

Page 164, line 5: change "and" to "or" before "similar sets."

## PARAGRAPH 1433.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1433. Gloves made wholly or in chief value of leather, whether wholly or partly manufactured, shall pay duty at the following rates, the lengths stated in each case being the extreme length when stretched to their full extent, namely: Men's gloves not over twelve inches in length, \$4 per dozen pairs; and women's and children's gloves not over twelve

## H. R. 7456.

## SENATE AMENDMENTS.

inches in length, \$3 per dozen pairs; for each inch in length in excess thereof, 50 cents per dozen pairs: *Provided*, That, in addition thereto, on all of the foregoing there shall be paid the following cumulative duties: When lined with cotton, wool, or silk, \$2.40 per dozen pairs; when lined with leather or fur, \$4 per dozen pairs; when embroidered or embellished, 40 cents per dozen pairs: *Provided further*, That all the foregoing shall pay a duty of not less than 37½ per centum ad valorem: *Provided further*, That glove trunks, with or without the usual accompanying pieces, shall pay 75 per centum of the duty provided for the gloves in the fabrication of which they are suitable.

## ACT OF 1909.

PAR. 453. Gloves made wholly or in part of leather, whether wholly or partly manufactured, shall pay duty at the following rates, the lengths stated in each case being the extreme length when stretched to their full extent, namely:

PAR. 454. Women's or children's "glace" finish, Schmaschen (of sheep origin), not over fourteen inches in length, one dollar and twenty-five cents per dozen pairs; over fourteen inches and not over seventeen inches in length, two dollars and twenty-five cents per dozen pairs; over seventeen inches in length, two dollars and seventy-five cents per dozen pairs; men's "glace" finish, Schmaschen (sheep), three dollars per dozen pairs.

PAR. 455. Women's or children's "glace" finish, lamb or sheep, not over fourteen inches in length, two dollars and fifty cents per dozen pairs; over fourteen and not over seventeen inches in length, three dollars and fifty cents per dozen pairs; over seventeen inches in length, four dollars and fifty cents per dozen pairs; men's "glace" finish, lamb or sheep, four dollars per dozen pairs.

PAR. 456. Women's or children's "glace" finish, goat, kid, or other leather than of sheep origin, not over fourteen inches in length, three dollars per dozen pairs; over fourteen and not over seventeen inches in length, three dollars and seventy-five cents per dozen pairs; over seventeen inches in length, four dollars and seventy-five cents per dozen pairs; men's "glace" finish, kid, goat, or other leather than of sheep origin, four dollars per dozen pairs.

PAR. 457. Women's or children's of sheep origin, with exterior grain surface removed, by whatever name known, not over seventeen inches in length, two

## ACT OF 1913.

PAR. 361. Gloves, not specially provided for in this section, made wholly or in chief value of leather, whether wholly or partly manufactured, shall pay duty at the following rates, the lengths stated in each case being the extreme length when stretched to their full extent, namely:

PAR. 362. Men's, women's, or children's "glacé" finish, Schmaschen (of sheep origin), not over fourteen inches in length, \$1 per dozen pairs; over fourteen inches in length, 25 cents additional per dozen pairs for each inch in excess of fourteen inches.

PAR. 363. All other women's or children's gloves wholly or in chief value of leather, not over fourteen inches in length, \$2 per dozen pairs; over fourteen inches in length, 25 cents additional per dozen pairs for each inch in excess of fourteen inches; all men's leather gloves not specially provided for in this section, \$2.50 per dozen pairs.

PAR. 364. In addition to the foregoing rates there shall be paid the following cumulative duties: On all leather gloves when lined with cotton or other vegetable fiber, 25 cents per dozen pairs; when lined with a knitted glove or when lined with silk, leather, or wool, 50 cents per dozen pairs; when lined with fur, \$2 per dozen pairs; on all piqué and prixseam gloves, 25 cents per dozen pairs.

PAR. 365. Glove trunks, with or without the usual accompanying pieces, shall pay 75 per centum of the duty provided for the gloves in the fabrication of which they are suitable.

PAR. 495. Gloves, made wholly or in chief value of leather made from horsehides, pigskins, and cattle hides of cattle of the bovine species, excepting calfskins, whether wholly or partly manufactured [Free].

## ACT OF 1909.

## ACT OF 1913.

dollars and fifty cents per dozen pairs; over seventeen inches in length, three dollars and fifty cents per dozen pairs; men's, of sheep origin, with exterior surface removed, by whatever name known, four dollars per dozen pairs.

PAR. 458. Women's or children's kid, goat, or other leather than of sheep origin, with exterior grain surface removed, by whatever name known, not over fourteen inches in length, three dollars per dozen pairs; over fourteen inches and not over seventeen inches in length, three dollars and seventy-five cents per dozen pairs; over seventeen inches in length, four dollars and seventy-five cents per dozen pairs; men's goat, kid, or other leather than of sheep origin, with exterior grain surface removed, by whatever name known, four dollars per dozen pairs.

PAR. 459. In addition to the foregoing rates there shall be paid the following cumulative duties: On all leather gloves, when lined, one dollar per dozen pairs; on all pique or prix seam gloves, forty cents per dozen pairs; on all gloves stitched or embroidered, with more than three single strands or cords, forty cents per dozen pairs.

PAR. 460. Glove trunks, with or without the usual accompanying pieces, shall pay seventy-five per centum of the duty provided for the gloves in the fabrication of which they are suitable.

## LEATHER GLOVES.

(See Survey N-18.)

*Description and uses.*—Leather gloves may be dress gloves, work gloves, or automobile gloves (now almost an independent branch of the industry). Work gloves are "block-cut" with dies of approximate measurements; dress gloves are "table-cut,"—that is, the skin is manipulated to the sizes that will stretch to desired widths when drawn on the hand. The dress gloves made here are "broad-cut;" the imports, principally in the lighter weight, fit more exactly. Most dress gloves were formerly made of imported sheep and lamb skins, but are now made principally from domestic raw materials. Mocha skins, extensively used, are practically all dressed and finished here. Work gloves are from domestic materials—cowhide, horsehide, and sheepskin, or of canvas or canton flannel reinforced with leather.

Schmaschen gloves are cheap dress gloves made of the skins of stillborn (or sometimes of very young) lambs.

*Production* of leather gloves and mittens in 1914 was 3,082,376 dozen pairs, valued at \$20,296,558. Of this total, men's gloves were 2,367,263 dozen pairs, valued at \$15,334,605; women's and children's gloves, 425,501 dozen pairs, at \$3,963,170; boys' gloves, 289,612 dozen pairs, at \$998,783. The output of dress gloves was 1,086,509 dozen pairs, valued at \$10,494,253; of work gloves, 1,995,807 dozen pairs, at \$9,802,305. In 1919 the total number of dress gloves, street

gloves, mittens, and gauntlets was 1,227,284 dozen pairs, valued at \$24,563,017; of working gloves, 2,388,419 dozen pairs, at \$20,268,760. The number of all leather gloves produced was 3,615,703 dozen pairs, worth \$44,831,777. Fulton County, N. Y., is the center of the industry, producing 54.7 per cent in 1909. Wisconsin, Illinois, and California follow in order, their products being largely work and automobile gloves. In 1919 New York produced gloves and mittens, valued at \$27,003,998; Wisconsin, \$6,772,808; Illinois, \$5,422,794; and California, \$2,048,503.

*Imports* are almost wholly of the "dress" variety and are principally women's gloves. Before the war approximately 40 per cent of the dress gloves was imported. In 1913, 99.7 per cent of the imports came from Germany, France, England, Italy, Belgium, and Austria, in order. In 1914 about \$8,000,000 of a total \$9,000,000 value came from Germany and France. Of the men's gloves imported in the years 1919 and 1920, England sent amounts valued at \$104,754 and \$485,122, respectively. During the war period imports of women's and children's schmaschen gloves decreased. In 1918 none was received from Germany and Belgium, and but small quantities from France and Italy. In 1920, however, Germany sent gloves to the value of \$170,890, which was a large proportion of the total. Imports of women's and children's gloves, not schmaschen, less than 14 inches in length, came largely from France. In 1920, the United States imported a value of \$8,796,004 from that country, \$1,615,900 from Germany, \$1,061,374 from Italy, over \$750,000 from Belgium and almost the same amount from England. Imports of leather gloves for recent years are shown as follows:

*Exports of dress gloves not given separately.*

*Important changes in classification.*—See General Notes on Paragraph, page 1174.

#### GLOVES OF HORSEHIDE, ETC.

(See Survey N-18.)

*Description and uses.*—Gloves made from horsehide, pigskin, and cattle-hide leather are chiefly work gloves, but include a small proportion of automobile gauntlets and heavy winter gloves. Work gloves are not used to any extent in foreign countries, except in Canada. Unlined gauntlets of horsehide and cowhide are the most important type of work gloves manufactured; although some deerskin and elk-skin workmen's gloves are still made, this branch of the business is of comparatively little consequence.

*Production of work gloves, mittens, and gauntlets of leather in 1914* was 1,995,807 dozen pairs, valued at \$9,802,305—horsehide, cattle-hide, and calfskin gloves, 852,513 dozen pairs; sheepskin gloves, 675,190 dozen pairs; deer or elk skin, 94,002 dozen pairs; and all other kinds, 374,102 dozen pairs. Women's and children's work gloves were valued at \$199,630; men's unlined gloves, at \$6,312,817; and men's lined gloves, at \$2,027,079. In 1919 the production of working gloves, mittens, and gauntlets was 2,388,419 dozen pairs, valued at \$20,268,760. Horsehide, cattle-hide, and calfskin gloves numbered 1,510,895 dozen pairs, sheepskin 274,998 dozen pairs, deer and elk skin 81,408 dozen pairs, and working gloves of other kinds 521,118 dozen pairs. Women's and children's work gloves were valued at \$468,405 and men's and boys' at \$19,800,355. Work gloves and automobile gloves and gauntlets are manufactured principally in factories located in the Middle West.

*Imports in 1914* were 145 dozen pairs, valued at \$503; in 1917, 60 dozen pairs, valued at \$965. Sources are not indicated. There has been practically no foreign competition in work gloves; they are used principally in this country, and foreign manufacture is negligible. The importation of gloves of this class in 1918 was large, but the value per dozen pairs indicates that they were not largely of the "work"

variety. Imports of gloves made from horsehides, pigskins, and cattle hides, except calfskins, for calendar years are as follows:

	1918	1919	1920	1921 (9 months).
Quantity (dozen pairs).....	86,385	5,246	6,716	27
Value.....	\$1,857,371	\$65,207	\$66,297	\$356

*Exports of gloves were not separately given prior to 1918, but were included under "all other manufactures of leather." Since 1918 the quantity exported has been increasing. In that year 6,374 dozen pairs out of the total of 13,186 dozen pairs were sent to Canada. In 1919 the quantity to Canada decreased almost half, but 19,142 dozen pairs were taken by England. In 1920 England again received the bulk of the exports, taking 17,537 dozen pairs, valued at \$325,620. Working gloves are the kind principally exported. Exports since 1917 by calendar years have been as follows:*

	1918	1919	1920	1921 (9 months).
Quantity (dozen pairs).....	13,186	41,936	33,359	2,349
Value.....	\$153,781	\$623,693	\$552,930	\$28,786

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—Gloves, manufactured wholly or in chief value of leather made from horsehides, pigskins, and cattle hides of cattle of the bovine species, except calfskins, whether wholly or partly manufactured, are on the free list of the act of 1913 (par. 495).

Specific enumeration of different kinds of leather has been omitted.

#### PARAGRAPH 1434.

##### H. R. 7456.

##### SENATE AMENDMENTS.

PAR. 1434. Catgut, whip gut, worm gut, oriental gut, and manufactures thereof, 25 per centum ad valorem.

##### ACT OF 1909.

##### ACT OF 1913.

PAR. 462. Manufactures of \* \* \* catgut or whip gut or worm gut, \* \* \* or of which these substances or any of them is the component material of chief value, not specially provided for in this section, twenty-five per centum ad valorem; \* \* \*.

PAR. 467. \* \* \* strings for musical instruments, not otherwise enumerated in this section, \* \* \* forty-five per centum ad valorem.

PAR. 529. Catgut, whip gut, or worm gut, unmanufactured [Free].

PAR. 366. Manufactures of catgut, or whip gut, or worm gut, including strings for musical instruments; any of the foregoing or of which these substances or any of them is the component material of chief value, not specially provided for in this section, 20 per centum ad valorem.

PAR. 443. Catgut, whip gut, or worm gut, unmanufactured [Free].

## CATGUT, WHIP GUT, WORM GUT, AND ORIENTAL GUT.

(See Survey N-19.)

*Description and uses.*—Catgut is made from the intestines of sheep, sometimes from those of the horse, ass, or mule, but never from those of the cat. The best grades and parts of intestines are used in making strings for musical instruments and surgical sutures for closing wounds. Catgut is also used for making tennis strings, clockmaker's and hatter's cords, and whipcord. Catgut known as spinning gut forms the base of all wound strings. "Oriental" gut, used for tennis strings, is made from animal sinews, silk, and glue. Worm gut is a strong cord composed of the fiber drawn from a silkworm ready to spin its cocoon; it is used in the manufacture of snelled hooks, leaders, casts, and other fishing tackle.

*Production.*—The manufacture of gut strings is a comparatively new industry in the United States. Value of the domestic product is not given in the census reports. Based upon reports of individual manufacturers, the annual value of gut strings produced in the United States is about \$2,000,000.

*Imports* of catgut and worm gut in 1914 were valued at \$123,551. About one-third of the imports came from Japan, the remainder principally from Germany, England, Scotland, Spain, and France. Imports in 1914 of manufactures of gut amounted to \$62,566, excluding strings for musical instruments, which amounted to \$13,755. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
CATGUT, WHIP GUT, OR WORM GUT, UNMANUFACTURED.					
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....		\$229,734

1921 (9 months).....		11,919			
STRINGS FOR MUSICAL INSTRUMENTS.					
1918.....		\$21,332		\$4,266	20
1919.....		17,395		3,479	20
1920.....		49,820		9,964	20
1921 (9 months).....		59,429			

*Exports.*—Not shown in official statistics.

*Important changes in classification.*—Catgut has been imported almost wholly under paragraph 443 of the free list of the act of 1913 as unmanufactured catgut. The strings, the form in which gut is imported, are the crudest form in which catgut is known to the trade.

The strings are not raw, dried, or salted, but have passed through processes of manufacture. These strings, including whip gut, worm gut, and oriental gut, are made dutiable in H. R. 7456 at the same rate of duty as manufactures of gut. Specific enumeration of catgut strings for musical instruments (par. 366, act of 1913) has been omitted.

*Suggested changes.*—It is represented to the Tariff Commission that worm gut, which is used by manufacturers of fishing tackle, is not produced in the United States and might be retained on the free list.

### PARAGRAPH 1435.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1435. Gas, kerosene, or alcohol mantles, and mantles not specially provided for, treated with chemicals or metallic oxides, wholly or partly manufactured, 30 per centum ad valorem.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 183. \* \* \* gas mantles treated with chemicals or metallic oxides, \* \* \* or 25 per centum ad valorem.

PAR. 154. \* \* \* gas, kerosene, or alcohol mantles treated with chemicals or metallic oxides, 25 per centum ad valorem; \* \* \*.

### GAS, KEROSENE, OR ALCOHOL MANTLES.

(See Survey C-22.)

*Description and production.*—Incandescent gas mantles are composed of 99 per cent of thoria and 1 per cent of ceria. In their manufacture a fabric of cotton or ramie is knit into the proper shape and saturated with a solution of thorium and cerium nitrates. The fabric is then dried and heated to a red heat to convert the nitrates into oxides, a process which preserves the shape and structure of the knit fabric. Much skilled labor, principally by women, is required in this industry. There are 30 domestic manufacturers, and the output is estimated at about 80,000,000 mantles per year.

*Imports* of gas mantles averaged about \$60,000 in value before 1914 and yielded an annual revenue of approximately \$24,000. In 1915 the imports were 1,077,289 mantles, valued at \$40,627. Before the war imports were principally from Germany. Later statistics follow:

Calendar year	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Number.</i>				<i>Per cent.</i>
1918.....	3,117	\$316	\$0.10	\$79	25
1919.....	132	54	.41	13	25
1920.....	208,497	13,243	.06	3,311	25
1921 (9 months).....	379,101	16,214	.....	4,054	.....

*Exports* of gas mantles first shown separately in 1918, have been valued as follows for calendar years: 1918, \$252,284; 1919, \$358,642; 1920, \$478,371; 1921 (nine months), \$167,850. Exports are principally to Canada, British India, and South America.

*Important changes in classification.*—The provisions for gas, kerosene, and alcohol mantles in paragraph 154 of the metal schedule of the act of 1913 have been transferred by H. R. 7456 to Schedule 14, Sundries, where they properly belong.

### PARAGRAPH 1436.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1436. Manufactures of amber, bladders, or wax, or of which these substances or any of them is the component material of chief value, not specially provided for, 15 per centum ad valorem.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 462. Manufactures of amber, \* \* \* bladders, \* \* \* or wax, or of which these substances or any of them is the component material of chief value, not specially provided for in this section, twenty-five per centum ad valorem; \* \* \*

PAR. 367. Manufactures of amber, \* \* \* bladders, or wax, or of which these substances or any of them is the component material of chief value, not specially provided for in this section, 10 per centum ad valorem; \* \* \*

#### MANUFACTURES OF AMBER.

(See Survey N-19.)

*Uses.*—Amber is used principally in ornaments, beads, pipes, cigar holders, and sometimes in scientific instruments as an insulating material. (For amber unmanufactured see par. 1577, p. 1319.)

*Imports* were valued at \$9,333 in 1914; and \$5,436 in 1916. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$425	\$43	<i>Per cent.</i> 10
1919.....	2,466	247	10
1920.....	{ 125,000	( <sup>1</sup> )	( <sup>1</sup> ) 10
1921 (9 months).....	{ 21,846	2,185	10
	8,564	856	10

<sup>1</sup> From Philippine Islands, free.

*Exports.*—None recorded.

#### MANUFACTURES OF BLADDERS.

(See Survey N-19.)

For unmanufactured bladders, see paragraph 706.

*Imports* have been negligible except in 1917 and 1918, when they were valued at \$1,259 and \$8,288, respectively.

*Exports.*—None recorded.

## MANUFACTURES OF WAX.

(See Survey N-19.)

*Uses.*—Waxes are used chiefly for the manufacture of candles, floor waxes and other polishes, insulating compounds, plastic masses, phonograph records, modeling wax, and pharmaceutical preparations. (See par. 1676.)

*Imports* prior to 1914 averaged about \$20,000 in value; in 1914 they were \$36,327. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
			<i>Per cent.</i>
1918.....	\$9,613	\$769	8
	3,630	363	10
1919.....	12,955	236	8
	12,039	1,204	10
1920.....	12,895	1,232	8
	14,117	1,412	10
1921 (9 months).....	19,489		

<sup>1</sup> From Cuba.

*Exports* increased from \$47,303 in 1911 to \$112,193 in 1914. Later statistics follow for calendar years: 1918, \$592,132; 1919, \$1,382,355; 1920, \$1,001,345; 1920 (nine months), \$487,943. England, Australia, Canada, and Japan are the principal countries of destination.

## PARAGRAPH 1437.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1437. Manufactures of bone, chip, grass, horn, quills, india rubber, gutta-percha, palm leaf, straw, weeds, or whalebone, or of which these substances or any of them is the component material of chief value, not specially provided for, 20 per centum ad valorem; automobile and bicycle tires composed wholly or in chief value of rubber, 10 per centum ad valorem; molded insulators and insulating materials, wholly or partly manufactured, composed wholly or in chief value of india rubber or gutta-percha, 30 per centum ad valorem; combs composed wholly of horn or of horn and metal, 35 per centum ad valorem. The terms "grass" and "straw" shall be understood to mean these substances in their natural state and not the separated fibers thereof.

ACT OF 1909.

ACT OF 1913.

PAR. 463. Manufactures of bone, chip, grass, horn, quills, india rubber, palm leaf, straw, weeds, or whalebone, or of which these substances or any of them is the component material of chief value, not specially provided for in this section,

PAR. 363. Manufactures of bone, chip, grass, horn, india rubber or gutta-percha, palm leaf, quills, straw, weeds, or whalebone, or of which any of them is the component material of chief value not otherwise specially provided for in this section,

## ACT OF 1909.

thirty-five per centum ad valorem; but the terms "grass" and "straw" shall be understood to mean these substances in their natural form and structure, and not the separated fiber thereof; sponges made of rubber, forty per centum ad valorem; combs, composed wholly of horn, or composed of horn and metal, fifty per centum ad valorem.

PAR. 464. Manufactures of gutta-percha, \* \* \* or of which these substances or any of them is the component material of chief value, not specially provided for in this section, \* \* \* thirty-five per centum ad valorem.

## ACT OF 1913.

shall be subject to the following rates: Manufactures of india rubber or gutta-percha, commonly known as druggists' sundries, 15 per centum ad valorem; manufactures of india rubber or gutta-percha, not specially provided for in this section, 10 per centum ad valorem; palm leaf, 15 per centum ad valorem; bone, chip, horn, quills, and whalebone, 20 per centum ad valorem; grass, straw, and weeds, 25 per centum ad valorem; combs composed wholly of horn or of horn and metal, 25 per centum ad valorem. The terms "grass" and "straw" shall be understood to mean these substances in their natural state, and not the separated fibers thereof.

MANUFACTURES OF BONE, CHIP, GRASS, HORN, QUILLS, PALM LEAF, STRAW, WEEDS, OR WHALEBONE.

(See Survey N-21.)

*Description and uses.*—This paragraph covers a considerable variety of the manufactures of bone, chip, grass, horn, etc., the qualification "n. s. p. f." not restricting narrowly the number of items. Among articles held dutiable are mats made of braids of straw sewn together with cotton; millinery ornaments consisting of natural straw twisted together loosely and looped or tied, used in the crowns of straw hats; palm-leaf baskets; baling twine consisting of strands of braided grass; bottle covers and caps of palm leaf; and so-called paintings on straw mattings.

*Production* data under these various classifications are not shown in official sources. Unclassified manufactures of bone and horn are included under paragraph 1438, in the Census classification of "Ivory, shell, and bone work."

*Imports* in 1914 of manufactures of the various substances and the chief countries of origin were: Palm leaf, \$13,073 (Germany); bone and horn, \$109,909 (France, United Kingdom, and Germany); chip, \$4,086; quills, \$21,682 (France and Austria-Hungary); whalebone, \$713; grass and straw, \$426,438 (Japan, Canada, and Netherlands); combs composed wholly of horn, or of horn and metal, \$127,137. Later import statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
MANUFACTURES OF HORN, N. S. P. F.

<sup>2</sup> From Philippines—Free.

<sup>3</sup> Jan. 1 to June 30.

Manufactures of bone, horn, and combs of horn, chiefly from Japan, France, and United Kingdom. Manufactures of straw and grass, chiefly from Canada, France, and Japan.

*Export statistics are lacking in most cases.* Exports of manufactures of straw and palm leaf were valued at \$799,507 in 1914, and later were as follows (calendar years): 1918, \$849,709; 1919, \$926,430; 1920, \$1,602,941; 1921 (9 months), \$264,875. Cuba, United Kingdom, Canada, and Mexico were the principal countries of destination.

#### MANUFACTURES OF INDIA RUBBER.

(See Survey N-21.)

*Description and uses.*—Manufactures of india rubber provided for in this paragraph constitute the greater portion of products of the rubber industry. Automobile and other tires form the largest single item, while manufactures not specially provided for include such important items as rubber boots and shoes, rubber tubing, dentists' rubber supplies; rubber balls, pouches, bulbs, and sponges; partly manufactured rubber; rubber sheets and rubber hospital sheeting; hot water bottles, ice bags, and similar articles. Rubber belting is not included, nor is rubber hose, except that made entirely of rubber not combined with cotton or other fiber. Gutta-percha products are not shown separately.

*Production.*—The census of manufactures gives statistics of the rubber industry under three classifications: Rubber belting and hose, Rubber boots and shoes, and Manufactures of rubber not elsewhere specified. The first classification is not covered by the provisions of this paragraph except to a small degree in the case of pure rubber hose. For the other two classifications, 324 establishments were shown in 1914, employing 68,907 wage earners, with production valued at \$276,150,510. In 1919 there were 461 establishments with production of \$1,112,258,000. This total included rubber boots and shoes, \$132,188,000; casings and solid tires, 34,404,000, valued at \$550,718,000; and inner tubes, 41,093,000, valued at \$202,207,000. Ohio leads in the production of general manufactures, New Jersey in belting and hose, and Massachusetts in boots and shoes.

*Imports of all classes in 1914 were valued at \$1,489,680.* Statistics for later years follow:

Calendar year.	Quantity.	Value.	Duty.	Equiva- lent ad valorem.
AUTOMOBILE TIRES.				
	<i>Number.</i>			<i>Per cent.</i>

MANUFACTURES OF GUTTA-PERCHA, N. S. P. F.				
1918.....		\$48,214	\$4,821	10
1919.....		143,438	14,344	10
1920.....		199,265	19,927	10
1921 (9 months).....		18,445	1,844	10

<sup>1</sup> July 1 to Dec. 31.

<sup>2</sup> Includes small amounts from Cuba.

England, Canada, and Japan are the chief countries of origin; tires come mostly from England.

*Exports* in 1914 amounted to \$12,441,220, of which tires constituted \$3,505,267. England, Canada, and Germany were the principal purchasers. Later statistics follow for calendar years: Automobile and other tires, 1918, \$15,267,509; 1919, \$30,481,886; 1920, \$53,074,-015; 1921 (nine months), \$11,732,676. Other manufactures of rubber, 1918, \$16,233,783; 1919, \$23,383,769; 1920, \$32,362,882; 1921 (nine months), \$11,623,993. These articles are exported to practically all parts of the world, with United Kingdom, France, Cuba, Argentina, and Sweden leading as purchasers.

*Important changes in classification.*—The special provision for manufactures of rubber known as druggists' sundries has been eliminated, and special provision made for automobile and bicycle tires, and molded insulators and insulating materials, wholly or partly manufactured, composed wholly or in chief value of india rubber or gutta-percha.

*Suggested changes.*—Automobile and bicycle but not motor-cycle tires are specially provided for in paragraph 1437. Automobile tires (in par. 369), but not bicycle or motor-cycle tires (par. 371), are expressly excluded. Apparently motor-cycle tires should be included in paragraph 1437 and bicycle and motor-cycle tires in terms excluded from paragraph 371 or the exclusion of automobile tires be dropped from paragraph 369 to avoid possible conflict of classification.

## PARAGRAPH 1438.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1438. Manufactures of ivory or vegetable ivory, or of which either of these substances is the component material of chief value, not specially provided for; manufactures of mother-of-pearl, shell, plaster of Paris, and india rubber known as "hard rubber," vulcanized

H. R. 7456.

SENATE AMENDMENTS.

or unvulcanized, or of which these substances or any of them is the component material of chief value, not specially provided for; and shells and pieces of shells engraved, cut, ornamented, or otherwise manufactured, 30 per centum ad valorem.

ACT OF 1909.

PAR. 464. Manufactures of \* \* \* ivory, vegetable ivory, mother-of-pearl and shell, plaster of Paris, \* \* \* and vulcanized india rubber known as "hard rubber," or of which these substances or any of them is the component material of chief value, not specially provided for in this section, and shells engraved, cut, ornamented, or otherwise manufactured, thirty-five per centum ad valorem.

ACT OF 1913.

PAR. 368. \* \* \* Manufactures of india rubber \* \* \* commonly known as druggists' sundries, 15 per centum ad valorem; \* \* \*

PAR. 369. \* \* \* manufactures of ivory or vegetable ivory, or of which either of these substances is the component material of chief value, not specially provided for in this section, 35 per centum ad valorem; manufactures of mother-of-pearl and shell, plaster of Paris, \* \* \* and vulcanized india rubber known as "hard rubber," or of which these substances or any of them is the component material of chief value, not specially provided for in this section, 25 per centum ad valorem; shells engraved, cut, ornamented, or otherwise manufactured, 25 per centum ad valorem.

MANUFACTURES OF IVORY OR VEGETABLE IVORY.

(See Survey N-21.)

*Description and uses.*—Manufactures of ivory have included numerous articles, useful and ornamental, such as toilet articles, statuettes, and piano keys, the demand for the last being so great that imitation products must be drawn upon to meet requirements. Manufactures of vegetable ivory embrace handles for umbrellas, toilet articles, small trinkets, etc. (Buttons of vegetable ivory, see par. 1410, p. 1105.)

*Production* figures are not fully available. In 1914 the output of ivory, shell, and bone work, not including combs and hairpins, was valued at \$1,896,000, from 54 establishments, with \$1,160,000 capital and 795 employees. In 1919 the number of establishments was reported at 44, with production valued at \$2,817,000. Japan, England, Germany, and France are important manufacturers of animal and vegetable ivory products. Shell manufactures (mother-of-pearl and other) are important in England, France, Germany, and Asiatic Turkey.

*Imports* in 1914 of manufactures of animal and vegetable ivory amounted to \$51,697. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$17,959	\$6,286	35
1919.....	32,214	11,275	35
1920.....	140,314	49,110	35
1921 (9 months).....	52,992	18,547	35

*Per cent.*

*Export figures are meager.* In 1918 the exports of ivory and manufactures thereof and scrap amounted to \$175,458, of which exports valued at \$136,131 went to Canada. Later export statistics are not shown.

MANUFACTURES OF MOTHER-OF-PEARL AND SHELL.

(See Survey N-21.)

*Description and uses.*—Manufactures of mother-of-pearl and shell embrace handles of various articles, such as knives, opera glasses, toilet articles, etc., art and inlay work, and buttons (pearl buttons—par. 1410).

*Production data are combined under the Census classification "Ivory, shell, and bone work," shown above.*

*Imports in 1914 of manufactures of shell and mother-of-pearl amounted to \$91,218; of shells engraved, cut, ornamented, or otherwise manufactured, to \$38,987. France, Japan, and England are the leading sources. Later statistics follow:*

<sup>1</sup> From Philippines, free.

*Exports.*—None recorded.

MANUFACTURES OF INDIA RUBBER KNOWN AS "HARD RUBBER."

(See Survey N-21.)

*Description and uses.*—Hard rubber differs from soft or pliable rubber in its sulphur content and in being cured or vulcanized at a higher temperature; it is used in bowling balls, razor handles, fountain-pen barrels, combs, etc.

*Production data are not shown separately, being included with other manufactures of rubber.*

*Imports* amounted to \$376,906 in 1914. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$2,513	\$628	<i>Per cent.</i> 25
1919.....	4,624	1,156	25

1921 (9 months).....	84,853	21,213	25

*Exports.*—None recorded.

*Suggested changes.*—See General Notes on Paragraph below.

#### MANUFACTURES OF PLASTER OF PARIS.

(See Survey B-2.)

*Description and uses.*—Plaster of Paris is a cement obtained by the pulverization and partial calcination of gypsum. It is used as a hard-finish plaster for walls and ceilings; in surgery for making casts to inclose fractures, and for making impressions for dental plates in which teeth are set; for casts of sculpture in round, high, and low reliefs; replicas of archæological objects; and life and death masks.

*Production* data for miscellaneous manufactures of plaster of Paris are not shown.

*Imports* amounted to \$36,172 in 1914. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$1,315	\$329	<i>Per cent.</i> 25
1919.....	1,85	(1)	(1) 25
1920.....	7,495	1,874	25
1921 (9 months).....	10,056	2,514	25
	27,092	6,523	25

<sup>1</sup> From Philippines, free.

*Exports.*—Not separately recorded.

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—Manufactures of papier-mâché have been placed in paragraph 1303.

*Suggested changes.*—The words “vulcanized or unvulcanized” after “hard rubber” might be omitted, as probably all hard rubber is vulcanized.

## PARAGRAPH 1439.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1439. Electrical insulators and other articles, wholly or partly manufactured, composed wholly or in chief value of shellac, copal, or synthetic phenolic resin, not specially provided for, 30 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

[Classable according to component material of chief value.]

[Classable according to component material of chief value.]

## ELECTRICAL INSULATORS AND OTHER ARTICLES.

*Description and uses.*—Synthetic phenolic resin is of comparatively recent development. In addition to serving for electrical insulators it is used in the production of a variety of articles, some of which are brush backs and handles, beads, advertising novelties, penholders, mouthpieces for pipes, etc.

*Production.*—No data are available.

*Imports and exports.*—Not shown. Imports before the war were principally from Germany.

*Important changes in classification.*—New specific provision.

## PARAGRAPH 1440.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1440. Moss and sea grass, eelgrass, and seaweeds, if manufactured or dyed, 10 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 78. Moss and sea grass, eelgrass, and seaweeds, if manufactured or dyed, ten per centum ad valorem.

PAR. 372. Moss and sea grass, eelgrass, and seaweeds, if manufactured or dyed, 10 per centum ad valorem.

MOSS, SEA GRASS, EELGRASS, AND SEAWEEDS MANUFACTURED OR DYED.

(See Survey N-22.)

*Uses.*—Dyed sea moss is prepared for florists' use or for ornamental purposes. Eelgrass has been used in filling mattresses, cushions, etc., and sheathing houses. Seaweed ashes formerly supplied much of the alkali that was used in soap and glass making and for the preparation of iodine. In its raw state it was and still is used as a fertilizer. As a rule, however, cheaper sources of most of the materials furnished by seaweed have been discovered.

*Imports* in 1914 of moss and sea grass, eelgrass, and seaweeds, manufactured or dyed, were valued at \$55,624, mainly from Germany. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....		\$2,329		\$233	10
1919.....	51,377	6,044	\$0.12	604	10
1920.....	56,400	15,282	.27	1,328	10
1921 (9 months).....	36,853	8,510	.23	851	10

Imports in 1920 were \$35,718 from the Netherlands and \$13,561 from Germany.

Exports in 1914 of moss amounted to \$51,006 of which \$32,663 went to Canada; and of seaweed to \$40,592, practically all of which went to Hongkong. Exports of moss for the calendar years 1918, 1919, and 1920 amounted, respectively, to \$91,667; \$91,475 and \$115,346, Canada being the principal importing country.

### PARAGRAPH 1441.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1441. Musical instruments and parts thereof, not specially provided for, pianoforte or player actions and parts thereof, cases for musical instruments, pitch pipes, tuning forks, tuning hammers, and metronomes, music wire, strings for musical instruments, composed wholly or in part of steel or other metal, all the foregoing, 35 per centum ad valorem; tuning pins, \$1 per thousand and 25 per centum ad valorem; violins, violas, violoncellos, and double basses, of all sizes, wholly or partly manufactured or assembled, \$1.50 each and 35 per centum ad valorem; unassembled parts of the foregoing, 35 per centum ad valorem.

ACT OF 1909

ACT OF 1913.

PAR. 467. Musical instruments or parts thereof, pianoforte actions and parts thereof, strings for musical instruments, not otherwise enumerated in this section, cases for musical instruments, pitch pipes, tuning forks, tuning hammers, and metronomes; strings for musical instruments, composed wholly or in part of steel or other metal, all the foregoing, forty-five per centum ad valorem.

PAR. 135. \* \* \* all other wire not specially provided for in this section, shall pay a duty of not less than thirty-five per centum ad valorem; \* \* \*

PAR. 373. Musical instruments or parts thereof, pianoforte actions and parts thereof, cases for musical instruments, pitch pipes, tuning forks, tuning hammers, and metronomes; strings for musical instruments, composed wholly or in part of steel or other metal, all the foregoing, 35 per centum ad valorem.

PAR. 114. \* \* \* all other wire not specially provided for in this section, \* \* \* 15 per centum ad valorem; \* \* \*

PAR. 366. Manufactures of catgut, or whip gut, or worm gut, including strings for musical instruments; \* \* \* not specially provided for in this section, 20 per centum ad valorem.

## MUSICAL INSTRUMENTS.

(See Surveys N-23 and FI-17.)

*Description.*—These articles include all musical instruments except phonographs, graphophones, etc., covered in paragraph 1442.

*Production* in 1914 was valued at \$92,573,000; manufacturers numbered 719, with capital of \$134,848,000 and 39,387 wage earners. Of the total value of products that of organs amounted to \$6,297,000, pianos to \$62,775,000, materials for organs and pianos to \$19,876,000, and other musical instruments (excepting phonographs, etc.) to \$3,625,000. Germany, Austria-Hungary, France, and Italy are important producers. In 1919 the production was valued as follows: Pianos, \$107,245,000; organs, \$6,118,000; piano and organ material, \$36,052,000; and musical instruments, n. e. s. \$14,266,000.

*Imports.*—In 1914 imports of musical instruments and parts of, including steel or metal strings, were valued at \$1,967,733. Imports, before the war, were supplied chiefly by Germany, but about one-half of the total in 1918 came from Japan. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
PIANOFORTE ACTIONS, AND PARTS OF.

<sup>1</sup> From the Philippines, free of duty.

*Exports* in 1914 were valued as follows: Organs, \$555,743; player pianos, \$335,299; all other pianos, \$1,416,888; piano players, \$177,683; perforated music rolls, \$127,626; all other musical instruments, and parts of, \$745,392. Organs were exported chiefly to England; player pianos to Canada, Australia, England, and Italy; all other pianos to Canada and England; piano players to England; music rolls to England and Canada; all other to Canada, Germany, and England. Later exports for calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Organs.....	\$113,062	\$174,647	\$296,942	\$122,414
Player pianos.....	1,272,210	1,656,519	3,472,632	1,096,758
All other pianos.....	1,949,708	3,001,994	5,261,071	1,062,858
Piano players.....	45,567	57,664	46,399	19,628
Perforated music rolls.....	160,511	294,742	409,913	210,673
All other and parts of.....	1,134,636	1,698,317	2,361,610	951,155
Total.....	4,675,694	6,883,883	11,848,567	3,463,486

In 1920 the principal destinations of exports were as follows: Organs, England and British South Africa; player pianos, Australia, Spain, Cuba, Argentina, and Peru; all other pianos, Australia, Argentina, Cuba, and British South Africa; music rolls, Canada and Australia; all other musical instruments, Canada, England, and Australia.

*Important changes in classification.*—The provisions for player actions and parts of, music wire, tuning pins, and violins, violas, violoncellos, and double basses are new.

*Suggested changes.*—Page 166, line 20, of H. R. 7456: Strike out comma after “instruments.”

#### PARAGRAPH 1442.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1442. Phonographs, gramophones, graphophones, and similar articles and parts thereof, 30 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 468. Phonographs, gramophones, graphophones, and similar articles, or parts thereof, forty-five per centum ad valorem.

PAR. 374. Phonographs, gramophones, graphophones, and similar articles, or parts thereof, 25 per centum ad valorem.

#### PHONOGRAPHS, GRAMOPHONES, ETC.

(See Survey N-23.)

*Description and uses.*—The essential parts of a phonograph are a funnel for receiving the sounds, a diaphragm which vibrates with these sounds and to which is attached a point, and a covered cylinder with which the point makes contact. The Edison diaphragm is iron, the point metallic, and the cylinder covered tin foil. By revolving the cylinder the recorded sound is reproduced. The graphophone applies

the phonograph principle of sound record and reproduction, but substitutes a wax cylinder. The term "graphophone," however, is being supplanted by "phonograph." The gramophone is a machine having a disk instead of a cylinder.

*Production* in 1914 was valued at \$27,115,916. The number of machines was 515,154, valued at \$15,290,491; and records and blanks, 27,221,290, valued at \$11,111,418. Parts of machines, materials, and supplies, not included in finished instruments, amounted to \$356,935, and all other products to \$357,072. In addition, phonographs, etc., valued at \$66,531, were made in establishments engaged primarily in the manufacture of products other than those covered by this industry. Eighteen establishments made phonographs, graphophones, etc., with capital of \$33,771,000, and 9,381 employees. In 1919 there were 167 establishments with value of products amounting to \$158,668,000.

*Imports* of phonographs, graphophones, etc., in 1914 amounted to \$147,384, over one-half of which came from Germany. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$322, 188	\$80, 547	<i>Per cent.</i> 25
1919.....	578, 518	144, 629	25
1920.....	817, 965	204, 491	25
1921 (9 months).....	427, 552	106, 888	25

In 1920 imports from Germany amounted to \$115,826, from Switzerland to \$583,070, and from Japan to \$73,074.

*Exports* of machines and records and materials in 1914 amounted to \$2,512,320, principally to Canada, England, Australia, Cuba, and Argentina. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Phonographs, etc.:				
Number.....	64, 459	66, 157	87, 571	26, 974
Value.....	\$1, 906, 052	\$2, 490, 719	\$4, 130, 312	\$1, 287, 683
Records and accessories, value.....	\$2, 276, 357	\$3, 702, 668	\$3, 746, 387	\$1, 646, 683

*Suggested changes.*—The phrase "and parts thereof" is apparently intended to apply to phonographs, etc., as well as to similar articles. A comma inserted after "articles" would bring this out more clearly.

Phonograph disks but not master records have been held to be parts of phonographs. (*American Express Co. v. United States*, 4 Ct. Cust. Appls., 279, of 1913; G. A. 7182, T. D. 31351, of 1911.)

## PARAGRAPH 1443.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1443. Rolls: Calendar rolls or bowls made wholly or in chief value of cotton, paper, husk, wool, or mixtures thereof, or stone of any nature, compressed between and held together by iron or steel heads or washers fastened to iron or steel mandrels or cores, suitable for use in calendering, embossing, mangling, or pressing operations, 25 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

[Classable according to component material of chief value.]

[Classable according to component material of chief value.]

## CALENDER ROLLS OR BOWLS.

*Description and uses.*—Calender rolls or bowls vary in size, some being as large as 20 inches in diameter and 100 inches long. In manufacturing the rolls great accuracy of work is required to make the surface truly cylindrical. They are used in the textile and paper industries, in the manufacturing of linoleum, artificial leather, etc. as integral parts of calenders, embossing, and mangling machines. Stone rolls are generally used on the presses of a fourdrinier type of paper-making machine. The rolls are set in the machines in series through which the fabric or other material is passed for the purpose of imparting a glaze or polish, or other finish.

*Production* data are not separately available from official sources. The industry is an important one, as these rolls are essential parts of the machinery used in the above-mentioned industries. In the hearings before the Committee on Ways and Means of the House of Representatives a list of eight manufacturers is given as large producers of these articles.

*Import and export* data are not shown.

*Important changes in classification.*—This provision is new.

*Suggested changes.*—The correct spelling is "calender."

## PARAGRAPH 1444.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1444. Rosaries, chaplets, and similar articles of religious devotion, of whatever material composed, valued at not more than \$1.25 per dozen, 15 per centum ad valorem; valued at more than \$1.25 per dozen, 30 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

[Classable according to component material of chief value or as articles "designed to be worn on apparel or carried on or about or attached to the person."]

[Classable according to component material of chief value or as articles "designed to be worn on apparel or carried on or about or attached to the person."]

## ROSARIES, CHAPLETS, ETC.

*Description and uses.*—A rosary as used in religious worship is a series of beads strung on a metal chain in combination with a flat metal piece of diversity in design together with a cross. The smaller rosaries are sometimes known as chaplets. The beads are made of a variety of materials—wood, glass, metal, bone, etc.—and the cross is usually composed of metal.

*Production.*—The value of rosaries produced in the United States is not shown in official statistics. Practically all of the rosaries made in this country are composed of precious metal, or of precious metal in combination with beads of semiprecious or imitation precious stones.

*Imports.*—The value of imports is not shown in official statistics. It is estimated by an importer that they amount to \$300,000 annually. France, Holland, Czechoslovakia, Ireland, Germany, and Italy are the sources of imports.

*Exports.*—Not shown in official statistics.

*Important changes in classification.*—Rosaries and chaplets are separately provided for. They are now dutiable according to component materials, except where they come within paragraph 356 of the act of 1913.

*Suggested changes.*—Beads in imitation of pearls or precious or semiprecious stones of any kind, the duty on which is 40 or 45 per centum ad valorem under paragraph 1403, could be imported strung as rosaries at 15 or 30 per centum, according to value, and after importation separated from the cross or crucifix and used for other purposes. This result might be avoided by providing that the rate of duty on rosaries shall not be less than that on the beads.

---

 PARAGRAPH 1445.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1445. Sponges, 15 per centum ad valorem; manufactures of sponges, or of which sponge is the component material of chief value, not specially provided for, 25 per centum ad valorem.

## ACT OF 1909.

## ACT OF 1913.

PAR. 79. Sponges, twenty per centum ad valorem; manufactures of sponges, or of which sponge is the component material of chief value, not specially provided for in this section, thirty per centum ad valorem.

PAR. 68. Sponges: Trimmed or untrimmed but not advanced in value by chemical processes, 10 per centum ad valorem; bleached sponges and sponges advanced in value by processes involving chemical operations, manufactures of sponges, or of which sponge is the component material of chief value, not specially provided for in this section, 15 per centum ad valorem.

## SPONGES.

(See Survey A-19.)

*Description and uses.*—Sponges are collected principally in the Mediterranean and Red Seas and waters of the West Indies, Florida, and Central America. The finest are obtained from the Mediterranean, the next in quality from the Red Sea.

Crude sponges are prepared by maceration in cold water for several days followed by beating to break up and remove concretions. The better grades are treated with a dilute solution of hydrochloric acid to remove remaining calcareous matter and then, if desired, are bleached by chemical means.

*Production.*—Most of the crude sponges marketed in this country are from the Florida fisheries. The product of these fisheries in 1913 was valued at about \$735,000, a little over \$615,000 in 1914, and over \$920,000 in 1917. In 1918 there was a decrease to about \$623,000. This decrease was due partly to the high price of fish, which induced those engaged in sponge gathering to take up fishing. Tarpon Springs, Fla., is the center of American sponge production. New York is the principal distributing center. In 1920 there were sold at the exchange at Tarpon Springs, Fla., 409,746 pounds of sponges, valued at \$678,209. This is estimated to be about 90 per cent of the output of the Florida fisheries.

*Imports* of crude sponges have averaged a little more than half the domestic production since 1913, and in that year were valued at \$289,642. Imports of chemically treated sponges have been much less, amounting to \$38,300 in 1914 and \$58,797 in 1916. Imports of manufactures of sponges amounted to \$73 in 1914. Crude sponges come mostly from the British West Indies, Cuba, and Greece. Later statistics follow:

Calendar year.	Value.	Duty.
SPONGES, CRUDE.		
1918.....	\$523,480	\$48,940
1919.....	462,898	42,869
1920.....	658,360	61,029
1921 (9 months).....	171,652	.....
SPONGES, BLEACHED AND ADVANCED BY CHEMICAL PROCESS.		
1918.....	\$19,313	\$2,895
1919.....	11,798	1,754
1920.....	40,842	5,987
1921 (9 months).....	19,161	.....
MANUFACTURES OF SPONGES.		
1920.....	\$6,831	\$1,025
1921 (9 months).....	882	.....

*Exports, 1910-1914, inclusive, averaged about 200,000 pounds, with a value of a little less than \$200,000, and dropped in 1917 to 116,131 pounds, valued at \$129,063. Exports are principally to Canada and England. Later statistics for calendar years follow:*

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	85,957	371,602	146,575	78,899
Value.....	\$147,519	\$328,131	\$217,812	\$104,914

*Important changes in classification.*—The distinction between sponges trimmed and untrimmed in paragraph 68 of the act of 1913 and between sponges bleached and otherwise advanced in value by chemical process is not made in H. R. 7456.

*Conflicting provisions.*—Rubber bath sponges have been held not to come within the provision for sponges but within the provision for manufactures of india rubber. (*Smith Co. v. United States*, 149 Fed., 1022, of 1906.)

#### PARAGRAPH 1446.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1446. Violin rosin, 10 per centum ad valorem.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 469. Violin rosin, in boxes or cases or otherwise, twenty per centum ad valorem.

PAR. 375. Violin rosin, in boxes or cases or otherwise, 10 per centum ad valorem.

#### VIOLIN ROSIN.

(See Survey FL-17.)

*Description and uses.*—Violin rosin is a good grade of rosin cast in the form of cubes or embedded in pieces of wood to facilitate its application to the bow of stringed musical instruments, such as the violin.

*Production.*—It is of comparatively simple manufacture, and the United States is the largest producer, but figures are not available.

*Imports* of violin rosin in 1914 were valued at \$11,688, about 52 per cent from Germany and 32 per cent from France. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$2,803	\$280	Per cent. 10
1919.....	4,765	476	10
1920.....	6,255	625	10
1921 (9 months).....	5,657	566	10

*Exports.*—None recorded.

*Important changes in classification.*—The phrase “in boxes or cases or otherwise” has been omitted as unnecessary.

## PARAGRAPH 1447.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1447. Works of art, including paintings in oil or water colors, pastels, pen and ink drawings, and copies, replicas, or reproductions of any of the same; statuary, sculptures, or copies, replicas, or reproductions thereof; and etchings and engravings; all the foregoing, not specially provided for, 15 per centum ad valorem.

## ACT OF 1909.

PAR. 470. Paintings in oil or water colors, pastels, pen and ink drawings, and sculptures, not specially provided for in this section, fifteen per centum ad valorem; but the term "sculptures" as used in this Act shall be understood to include only such as are cut, carved, or otherwise wrought by hand from a solid block or mass of marble, stone, or alabaster, or from metal, and as are the professional production of a sculptor only, and the term "painting" as used in this Act shall be understood not to include such as are made wholly or in part by stenciling or other mechanical processes.

PAR. 416. \* \* \* engravings,  
\* \* \* etchings, \* \* \* all the foregoing wholly or in chief value of paper, and not specially provided for in this section, twenty-five per centum ad valorem  
\* \* \*

## ACT OF 1913.

PAR. 376. Works of art, including paintings in oil or water-colors, pastels, pen and ink drawings, or copies, replicas or reproductions of any of the same, statuary, sculptures, or copies, replicas or reproductions thereof, and etchings and engravings, not specially provided for in this section, 15 per centum ad valorem.

## WORKS OF ART, N. S. P. F.

(See Survey N-24.)

*Description and uses.*—For most practical purposes works of art may be classified as follows: (1) Products of the fine arts, properly so called, intended solely for ornamental purposes, and including paintings in oil and water colors on canvas, plaster, or other material, and original statuary of marble, stone, or bronze. (2) Minor objects of art, intended also for ornamental purposes, such as statuettes, vases, drawings, etchings, etc., which are susceptible of an indefinite reproduction from the original. (3) Objects of art which serve primarily an ornamental and incidentally a useful purpose, such as painted or stained-glass windows, tapestry, paper hangings, etc. (4) Objects primarily designed for a useful purpose, such as ornamental clocks, higher grades of carpets, curtains, etc.

The list of articles included under this paragraph is restricted by paragraphs 1685 to 1689 inclusive. The greater number of works of arts are entered free under those paragraphs.

*Production* data on works of art are necessarily incomplete. Under the classification "Statuary and art goods" the Census gives data covering the manufacture of such articles as statues, vases, urns, flower boxes, fountains, pedestals, church statuary, bronze statuary, and papier mâché articles. In 1914 these were valued at \$3,910,000, and in 1919 at \$4,982,000.

*Imports* of works of art in 1914 were valued at \$766,464, mainly from France, Italy, England, and Germany. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918.....	\$76,058	\$11,409	<i>Per cent.</i> 15
1919.....	<sup>1</sup> 182,546	<sup>1</sup> 27,381	15
1920.....	<sup>1</sup> 525,953	<sup>1</sup> 78,890	15
1921 (9 months).....	<sup>1</sup> 270,940	<sup>1</sup> 40,641	15

<sup>1</sup> Includes small amounts from Philippines and Cuba.

The principal countries of origin in 1919 and 1920 were Italy, France, Sweden, and England.

*Exports* in 1914 of paintings and statuary of all kinds were valued at \$1,415,302, going mainly to France, England, Canada, and Germany. Later exports, by calendar years, have been as follows: 1918, \$341,035; 1919, \$1,150,015; 1920, \$1,640,701; 1921 (nine months), \$756,552. In 1918 Canada, Cuba, Spain, and France were the principal purchasers, and France, Canada, and Cuba in 1919 and 1920.

#### PARAGRAPH 1448.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1448. Peat moss, 50 cents per ton.

ACT OF 1909.

ACT OF 1913.

PAR. 471. Peat moss, one dollar per ton.

PAR. 377. Peat moss, 50 cents per ton.

#### PEAT MOSS.

(See Survey N-22.)

*Description and uses.*—Peat moss consists largely of various species of sphagnum (bog moss). It is used for stable litter, potting plants, packing materials, and for insulation. Peat moss is an excellent absorbent, hence its value for stable litter. Gardeners employ it for covering and moistening the roots of plants because it readily absorbs moisture from the air. It may also be used as stuffing for mattresses.

*Production* of small quantities of peat moss of unknown value was reported after the outbreak of the war, practically all having been imported previously. Peat and peat moss are produced chiefly in the northern sections of the world. In warm regions the decay of vegetable matter is, as a rule, too rapid to permit of extensive bog moss deposition. Russia, Germany, Ireland, Norway, Sweden, France, Austria, Denmark, Holland, Canada, and the United States have very large deposits. Peat moss has been more systematically utilized in Holland than in any other country. The American deposits remain almost untouched.

*Imports.*—In 1914 imports were about 9,580 tons, valued at \$57,670—8,900 tons from the Netherlands and about 500 tons from Germany. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
	<i>Tons.</i>				<i>Per cent.</i>
1919.....	414	\$16,345	\$39.48	\$207	1.27
1920.....	2,466	36,201	14.68	1,233	3.41
1921 (9 months).....	2,284	16,577			

*Exports.*—None recorded.

### PARAGRAPH 1449.

H. R. 7456.

SENATE AMENDMENTS

PAR. 1449. Pencils of paper, wood, or other material not metal, filled with lead or other material, pencils of lead, crayons, including charcoal crayons or fusains, and mechanical pencils, not specially provided for, 50 cents per gross and 25 per centum ad valorem; and in addition thereto, the following cumulative duties: Caps or protectors, whether separate or attached to pencils, and pencils prepared for caps or protectors, 25 cents per gross; pencils stamped with names other than the manufacturers', 50 cents per gross; slate pencils, not in wood, 25 per centum ad valorem.

### ACT OF 1909.

PAR. 56. \* \* \* crayons, including charcoal crayons or fusains \* \* \* not otherwise specially provided for in this section, thirty per centum ad valorem; \* \* \*

PAR. 199. Articles or wares not specially provided for in this section, composed wholly or in part of \* \* \* metal, and whether partly or wholly manufactured, forty-five per centum ad valorem.

PAR. 448. \* \* \* articles of every description, finished or partly finished, \* \* \* composed wholly or in chief value of silver, German silver, white metal, brass, or gunmetal, whether or not enameled, washed, covered, plated, or alloyed with gold, silver or nickel, and designed to be \* \* \* carried on or about or attached to the person, valued at twenty cents per dozen pieces, one cent each and in addition thereto, three-fifths of one cent per dozen for each one cent the value exceeds twenty cents per dozen; \* \* \*

PAR. 472. Pencils of paper or wood, or other material not metal, filled with lead

### ACT OF 1913.

PAR. 63. \* \* \* crayons, including charcoal crayons or fusains \* \* \* not specially provided for in this section, 15 per centum ad valorem; \* \* \*

PAR. 167. Articles or wares not specially provided for in this section; if composed wholly or in part of platinum, gold, or silver, and articles or wares plated with gold or silver, and whether partly or wholly manufactured, 50 per centum ad valorem; if composed wholly or in chief value of \* \* \* other metal, but not plated with gold or silver, and whether partly or wholly manufactured, 20 per centum ad valorem.

PAR. 356. \* \* \* articles valued above 20 cents per dozen pieces designed to be worn on apparel or carried on or about or attached to the person, such as and including \* \* \* like articles; all the foregoing and parts thereof, finished or partly finished, composed of metal, whether or not enameled, washed, covered, or plated, including rolled gold plate, and whether or not set with precious or semiprecious stones. \* \* \*

## ACT OF 1909.

or other material, and pencils of lead, forty-five cents per gross and twenty-five per centum ad valorem; slate pencils, covered with wood, thirty-five per centum ad valorem; all other slate pencils, three cents per one hundred.

## ACT OF 1913.

or with imitation precious stones, \* \* \* 60 per centum ad valorem. \* \* \*

PAR. 378. Pencils of paper or wood, or other material not metal, filled with lead or other material, pencils of lead, 36 cents per gross, but in no case shall any of the foregoing pay less than 25 per centum ad valorem; slate pencils, 25 per centum ad valorem.

## LEAD PENCILS AND SLATE PENCILS.

(See Survey N-22.)

*Description and uses.*—Pencil leads are made of a mixture of fine graphite and clay. The wood used is usually cedar, although pine or other wood is sometimes used for the cheaper grades. Pencils of paper are made by wrapping the lead in narrow strips of paper, portions of which can be unwrapped as required to expose the lead.

*Production.*—In 1914 there were 14 manufacturers of lead pencils, with a capital of \$10,670,000, 4,330 employees, and wages of \$1,944,000. Materials cost \$4,564,000, and the product was valued at \$8,328,000, a moderate increase over 1909. In 1919 there were 12 establishments with an output valued at \$24,134,000. The industry is based on abundant domestic supplies of the two essential raw materials—pure graphite and an excellent cedar readily adaptable to machine processes. The industry is an extensive one in England and Germany.

*Imports* in 1914 of pencils of paper or wood or other material, not metal, filled with lead or other material, and pencils of lead were 188,644 gross, valued at \$512,579. Imports in 1914 of slate pencils covered with wood were 850 gross, valued at \$83, and of other slate pencils, 2,158,700 gross, valued at \$1,416. On the basis of value about one-half of the pencils came from Germany in 1914; the rest largely from England. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
----------------	-----------	--------	-------------	-------	------------------------

## PENCILS OF LEAD AND PENCILS OF PAPER, ETC., FILLED WITH LEAD.

	Gross.				Per cent.
1918.....	12,023	\$4,815	\$0.40	\$4,537	94.22
1919.....	18,258	7,679	.42	6,821	88.83
1920.....	75,032	168,635	2.25	43,297	25.67
1921 (9 months).....	63,875	140,543	2.20		

## SLATE PENCILS.

1918.....		\$3			25
1919.....	844	1,000	\$1.20	\$252	25
1921 (9 months).....	641	682	1.06	170	25

The small imports in 1918 were chiefly from Japan. In 1919 and 1920 Germany was the chief source. In the latter year large amounts chiefly of high grade pencils formerly imported from Austria were received from Czechoslovakia. In the same year lead pencils amounting to 59,476 gross and valued at \$150,789 were dutiable at 25 per centum ad valorem as the specific rate of 36 cents per gross amounted to less than the 25 per centum required as a minimum.

*Export statistics of pencils and pencil leads are combined.* In 1914 their value was \$533,944, of which \$246,872 worth went to North America, mainly to Canada and Mexico; \$188,834 to Europe, chiefly to England; \$49,553 to Oceania; and \$46,762 to South America. Exports in later calendar years have been valued as follows: 1918, \$2,497,208; 1919, \$3,565,347; 1920, \$3,849,221; 1921 (nine months), \$1,669,572. The chief countries of destination were England, Canada, Argentina, Brazil, Mexico, and Spain.

*Important changes in classification.*—See General Notes on Paragraph below.

#### CRAYONS.

(See Survey A-15.)

*Description and uses.*—Crayons are composed of charcoal, clay, or chalk, and mineral waxes colored with various pigments. They are used for drawing and writing on various materials and also for artists' purposes. Ordinary white crayons used for the blackboard are composed chiefly of chalk (calcium carbonate). Black crayons other than charcoal are made of clay and lampblack. "Fusains" is an old and practically obsolete term for charcoal crayons. Crayons used for drawing on lithographic stones are commonly made of wax, lampblack, soap and resins. The ordinary wax crayons are composed chiefly of paraffin wax colored with various colors and dyes.

*Production.*—The materials necessary for the manufacture of crayons are available from domestic sources. In 1914, under artists' materials, the Census Bureau reports a production of crayons valued at \$181,000 by 11 establishments with a capital of \$325,000. It is doubtful whether this includes ordinary crayons used for schoolroom work. Production figures for later years are not separately reported.

*Imports* in 1914 were valued at \$18,000; in 1915, at \$15,000; in later calendar years as follows: 1918, \$11,093; 1919, \$12,218; 1920, \$10,145; 1921 (nine months), \$16,431.

*Exports.*—None recorded.

*Important changes in classification.*—See General Notes on Paragraph, below.

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—There are new provisions for mechanical pencils and for cumulative duties. The qualification "not in wood" for slate pencils is also new.

Crayons, including charcoal crayons or fusains, are new for this paragraph, having formerly been provided for in the chemical schedule.

*Conflicting provisions.*—There is a possible conflict between the provision in paragraph 18 for chalk in sticks and the provision in this paragraph for crayons, with especial reference to white crayons for blackboard use, which might be regarded as chalk in sticks.

Paragraph 1449 might be held to embrace mechanical pencils made of or plated with precious metals.

*Suggested changes.*—The provision in paragraph 18 for “Chalk or whiting or Paris white: \* \* \* put up in the form of cubes, blocks, sticks, or disks, or otherwise, including tailors’, billiard, red, and manufactures of chalk not specially provided for,” belongs more properly in the sundries schedule (14), since these articles, unlike chalk or whiting or Paris white, ground, bolted, or precipitated, or in the form of putty, are not chemicals, oils, or paints, to which schedule 1 is restricted. This fact, together with the possible conflict above set forth, appears to render advisable a change in paragraph 1449 and elimination therefrom of the provision for “crayons, including charcoal crayons or fusains.”

If these changes should be made, a paragraph might be inserted after paragraph 1450 to provide for chalk or whiting or Paris white other than the chemical kind, and for crayons. Such a provision might be worded as follows:

Chalk, crayons, not colored, [rate]; all other crayons, including charcoal crayons or fusains, not specially provided for, [rate]; billiard chalk, [rate]; tailors’ chalk, [rate]; and manufactures of chalk not specially provided for [rate].

If this proposed paragraph is adopted, the words “crayons, including charcoal crayons or fusains” in line 6, page 168 of H. R. 7456 should be stricken out, and the words “or put up in the form of cubes, blocks, sticks, or disks, or otherwise, including tailors’, billiard, red, and manufactures of chalk not specially provided for,” in lines 1 to 3, page 6, should also be stricken out.

If the change suggested under paragraph 1450, namely, insertion of the words “or crayon leads” after the word “colored” and before the comma in line 17, page 168, should be adopted, the words “crayon lead,” followed by a comma, should be inserted after the word “lead” in line 5, page 168.

This paragraph imposes duties of 50 cents per gross and 25 per centum ad valorem on mechanical pencils not specially provided for; paragraph 352 imposes duties of 45 cents per gross and 20 per centum ad valorem on mechanical pencils made of base metal and not plated with gold, silver, or platinum; paragraph 1428 imposes a duty of 55 per centum ad valorem on articles like various articles therein named, valued above 20 cents per dozen pieces, designed to be worn on apparel or carried on or about or attached to the person, composed of metal.

If it is desired to classify mechanical pencils made of or plated with precious metals under paragraph 1428 rather than under paragraph 1449 the words “and mechanical pencils, not specially provided for,” in lines 6 and 7, page 168, should be stricken out.

## PARAGRAPH 1450.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1450. Pencil leads not in wood or other material, 6 cents per gross; leads not exceeding six one-thousandths of one inch in diameter and commonly known as refills, 10 cents per gross; colored, copy or indelible leads, 60 cents per gross; and, in addition thereto, on all the foregoing, 20 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 473. Pencil leads not in wood, or other material, black, three-fourths of one cent per ounce; colored, one and one-fourth cents per ounce; copying, two cents per ounce.

PAR. 379. Pencil leads not in wood or other material, 10 per centum ad valorem.

## PENCIL LEADS.

(See Survey N-22.)

*Description and uses.*—Ordinary black pencil leads are of pure graphite, or graphite mixed with clay. Colored leads are composed of suitable pigments combined with clay, chalk, or wax. Indelible or copying leads consist of a coal-tar dye mixed with graphite. Refills are sticks of lead used in mechanical pencils. They are generally of smaller diameter than the lead used in the pencils of wood or other material where the lead is permanently fixed.

*Production.*—Graphite is first ground very fine and mixed with a little water and the required amount of clay, then squeezed through dies by hydraulic pressure to form continuous leads; these are cut into the desired lengths, dried, and finally burned to expel moisture. The amount of clay in the lead determines the hardness. Figures of production are not available. Most of the pencil manufacturers make their own leads, but some of the smaller ones are dependent for their supply of leads upon the imported article.

*Imports* in 1914 of pencil leads not in wood were valued at \$109,146, which was less than in preceding years. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Gross.</i>				<i>Per cent.</i>
1918.....		\$2, 190		\$219	10
1919.....	55, 436	25, 741	\$0.46	2, 574	10
1920.....	113, 600	39, 892	.35	3, 989	10
1921 (9 months).....	447, 150	84, 286	.19	8, 429	.....

*Export* figures are combined with those of pencils. (See par. 1449, p. 1199.)

*Important changes in classification.*—The provisions for leads not exceeding six one-thousandths of 1 inch in diameter, and commonly known as refills, and for colored, copy, or indelible leads are new.

*Suggested changes.*—The limitation on the size of lead known as refills (six one-thousandths of 1 inch) would appear to render this provision of doubtful value, as most refills are in excess of this size, possibly six one-hundredths or sixty-one thousandths was meant.

As colored pencil leads are usually sold as crayon leads, it is suggested that the words "or crayon leads" be inserted after the word "colored" and before the comma in line 17, page 168.

---

PARAGRAPH 1451.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1451. Photographic cameras and parts thereof, not specially provided for, 30 per centum ad valorem; photographic dry plates, not specially provided for, and photographic and moving-picture films, sensitized but not exposed or developed, 20 per centum ad valorem; photographic-film negatives, imported in any form, for use in any way in connection with moving-picture exhibits, or for making or reproducing pictures for such exhibits, exposed, whether developed or not, and photographic-film positives, imported in any form, for use in any way in connection with moving-picture exhibits, including herein all moving, motion, motophotography, or cinematography film pictures, prints, positives, or duplicates of every kind and nature, and of whatever substance made, 30 per centum ad valorem: *Provided*, That upon the importation of photographic and motion-picture films or film negatives taken from the United States and exposed in a foreign country by an American producer of motion pictures operating temporarily in said foreign country in the course of production of a picture 60 per centum or more of which is made in the United States the duty shall be 25 per centum ad valorem, and the Secretary of the Treasury shall prescribe such rules and regulations as may be necessary for the entry of such films or film negatives under this proviso: *Provided, further*, That all photographic films imported under this Act shall be subject to such censorship as may be imposed by the Secretary of the Treasury.

ACT OF 1909.

ACT OF 1913.

PAR. 108. \* \* \* optical instruments \* \* \* all the foregoing not specially provided for in this section, forty-five per centum ad valorem.

PAR. 474. Photographic dry plates or films, not otherwise specially provided for in this section, twenty-five per centum ad valorem. Photographic film negatives, imported in any form, for use in any way in connection with moving-picture ex-

PAR. 380. Photographic cameras, and parts thereof, not specially provided for in this section, photographic dry plates, not specially provided for in this section, 15 per centum ad valorem; photographic-film negatives, imported in any form, for use in any way in connection with moving-picture exhibits, or for making or reproducing pictures for such exhibits, exposed but not developed, 2 cents per

## ACT OF 1909.

hibits, or for making or reproducing pictures for such exhibits, and moving-picture films not developed or exposed, twenty-five per centum ad valorem. Photographic film positives, imported in any form, for use in any way in connection with moving-picture exhibits, including herein all moving, motion, motophotography or cinematography film pictures, prints, positives or duplicates of every kind and nature, and of whatever substance made, one and one-half cents per linear or running foot.

## ACT OF 1913.

linear or running foot; if exposed and developed, 3 cents per linear or running foot; photographic-film positives, imported in any form, for use in any way in connection with moving-picture exhibits, including herein all moving, motion, motophotography or cinematography film pictures, prints, positives or duplicates of every kind and nature, and of whatever substance made, 1 cent per linear or running foot: *Provided, however,* That all photographic-films imported under this section shall be subject to such censorship as may be imposed by the Secretary of the Treasury.<sup>4</sup>

PAR. 576. Photographic and moving-picture films, sensitized but not exposed or developed [Free].

## PHOTOGRAPHIC GOODS.

(See Survey N-25.)

*Description and uses.*—Dry plates are sensitized plates of which the sensitive films are hard and dry, so they may be packed away, and, if protected from light, used afterwards to make negative or positive pictures. Moving picture and other photographic films are made chiefly of pyroxylin (cellulose nitrate), coated with an emulsion of sensitizing materials. Cellulose acetate, being noninflammable, is also used, especially for moving-picture films, but has disadvantages and is usually more expensive. Photographic films are generally furnished in rolls or packs of six or twelve films each and are used in the familiar hand camera. Moving-picture sensitized films unexposed are furnished in long strips, and are used both for exposure in the camera and for printing additional positives. Photographic film negatives show the lights and shades in nature exactly reversed. An exposed film is one that has been used in the camera; a developed film or negative is one on which the chemical changes necessary to cause a latent image or picture to be visible have been induced or, in the case of a negative, the proper density has been assumed to admit of reproduction by a process of printing. Photographic film positives show the lights and shades as in nature and are usually printed from negatives. Moving-picture films are made about 1,000 feet in length and each picture is  $\frac{3}{4}$  by 1 inch in size or 16 pictures to the foot.

*Production* of photographic apparatus in 1914 was valued at \$4,273,000. Of this amount cameras were valued at \$1,254,000; motion-picture machines, at \$1,820,000; and all other apparatus and parts, at \$1,199,000. Manufacturers numbered 87, with capital of \$4,397,000, 2,016 employees, and wages of \$1,289,000. Materials cost \$1,535,000, and value added by manufacture was \$2,738,000. The manufacture of flexible photographic films for motion pictures is now a very large industry. Pyroxylin is made by nitrating cotton waste. A solution is made of pyroxylin and camphor in a mixture of wood alcohol, amyl acetate, and other solvents. This is spread out on a smooth surface, such as a revolving metallic drum. When dry, the film is stripped off, slit into the desired width, and cut into

<sup>4</sup> The act of July 31, 1912, chapter 263, forbids importation of any film or other pictorial representation of a prize fight.

lengths. For moving pictures, strips about  $1\frac{3}{8}$  inches wide and 1,000 feet long constitute one reel. The output in 1914 of photographic materials (plates, films, etc.) was \$34,768,000, by 59 establishments, with capital of \$31,991,000, 6,658 employees, and wages of \$4,256,000. Materials cost \$10,004,000, and value added by manufacture was \$24,764,000. In 1919 the value of apparatus produced was \$9,420,000 and of materials \$110,332,000. Seventy establishments were engaged in the manufacture of apparatus and 168 in the manufacture of materials.

Imports of photographic goods in 1914 were valued at \$2,913,292, distributed as follows: Cameras and parts of, \$261,547; dry plates, \$150,442; films sensitized but not exposed, for moving pictures, 46,174,377 linear feet, valued at \$934,788; other films sensitized but not exposed, \$168,827; negatives for motion pictures, developed and not developed, \$418,481; positives, prints, etc., 19,501,264 linear feet, valued at \$979,306. Germany was the chief source of cameras. Films sensitized but not exposed and film negatives were chiefly from France, Belgium, and Germany; and positives, prints, etc., from England, France and Italy. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.

<sup>1</sup> From Philippines, free.

The chief sources of imports in later years were: Cameras and parts of, England and France in 1918 and 1919, Germany in 1920; for 1918-1920, dry plates, France and England; films sensitized but not exposed, for motion pictures, France, England, and Belgium; other films sensitized but not exposed, Canada; film negatives, England, France, and Canada. Positives, prints, etc., came largely from England, France, and Japan in 1918 and 1919, and from England and Germany in 1920. For 1921 complete data of imports by countries are not available, but the entries at the port of New York, the principal port of entry of these articles, show that Germany leads in exports of cameras and parts of, England in dry plates, France and Germany in negatives, and Germany and France in positives, prints, etc.

*Exports* in 1914 were: Cameras, \$664,006 (going chiefly to England); motion-picture films not exposed, 153,359,550 linear feet, valued at \$4,264,722; exposed, 32,690,104 linear feet, valued at \$2,282,924 (going chiefly to England, Canada, and Australia); other sensitized goods, \$1,348,216 (going chiefly to England); other photographic apparatus, \$183,660; all other picture goods, \$688,272.

Exports since 1917, by calendar years, have been as follows:

	1918	1919	1920	1921 (9 months).
Cameras, value.....	\$1, 108, 388	\$1, 648, 410	\$3, 548, 433	\$2, 138, 302
Motion-picture films not exposed:				
Quantity (linear feet).....	71, 548, 779	120, 041, 912	62, 956, 626	31, 015, 483
Value.....	\$1, 745, 384	\$2, 680, 263	\$1, 706, 248	\$848, 607
Motion-picture films exposed:				
Quantity (linear feet).....	79, 388, 387	153, 237, 260	175, 191, 635	111, 585, 493
Value.....	\$4, 731, 382	\$8, 066, 723	\$7, 892, 198	\$5, 105, 974
Other sensitized goods, value.....	\$2, 616, 434	\$4, 208, 181	\$5, 981, 340	\$4, 934, 482
Other apparatus, value.....	\$782, 177	\$2, 105, 061	\$3, 218, 805	\$1, 454, 733
Other picture goods, value.....	\$1, 345, 174	\$1, 939, 924	\$3, 084, 628	\$1, 075, 909

The chief countries of destination in 1919 and 1920 were: Of cameras, England and France; of films unexposed, England, Italy, and France; of films exposed, England, Canada, Australia, and France; of other sensitized goods, photographic goods and apparatus, England and Canada.

*Important changes in classification.*—The first proviso is new. Photographic and moving-picture films, sensitized but not exposed or developed are transferred from the free list of the act of 1913 (par. 576).

*Conflicting provisions.*—Paragraph 29, with reference to manufactures of pyroxylin, provides "That all such articles, whether or not more specifically provided for elsewhere, shall be dutiable under this paragraph." This would appear to be in conflict with the provision for motion-picture films, as these films are made generally with a pyroxylin base.

This paragraph provides for photographic cameras and parts thereof not specially provided for, while paragraph 228 provides for photographic and projection lenses not specially provided for.

*Suggested changes.*—Page 169, line 18 of H. R. 7456: Strike out comma between "provided" and "further."

## PARAGRAPH 1452.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1452. Pipes and smokers' articles: Common tobacco pipes and pipe bowls made wholly of clay, valued at not more than 40 cents per gross, 15 cents per gross; valued at more than 40 cents per gross, 45 per centum ad valorem; pipe bowls commercially known as stummels; pipes, cigar and cigarette holders, and mouth-pieces for pipes, cigar and cigarette holders, all the foregoing of whatever material composed, and in whatever condition of manufacture, whether wholly or partly finished, or whether bored or unbored; pouches for chewing or smoking tobacco, cases suitable for pipes, cigar and cigarette holders, finished or partly finished; cigarette books, cigarette-book covers, cigarette paper in all forms, except cork paper; and all smokers' articles whatsoever, and parts thereof, finished or unfinished, not specially provided for, of whatever material composed, except china, porcelain, parian, bisque, earthen or stone ware, 45 per centum ad valorem.

## ACT OF 1909.

PAR. 475. Pipes and smokers' articles: Common tobacco pipes and pipe bowls made wholly of clay, valued at not more than forty cents per gross, fifteen cents per gross; other tobacco pipes and pipe bowls of clay, fifty cents per gross and twenty-five per centum ad valorem; other pipes and pipe bowls of whatever material composed, and all smokers' articles whatsoever, not specially provided for in this section, including cigarette books, cigarette book covers, pouches for smoking or chewing tobacco, and cigarette paper in all forms, sixty per centum ad valorem.

## ACT OF 1913.

PAR. 381. Pipes and smokers' articles: Common tobacco pipes and pipe bowls made wholly of clay, 25 per centum ad valorem; other pipes and pipe bowls of whatever material composed, and all smokers' articles whatsoever, not specially provided for in this section, including cigarette books, cigarette-book covers, pouches for smoking or chewing tobacco, and cigarette paper in all forms, except cork paper, 50 per centum ad valorem; \* \* \*

PAR. 356. \* \* \* articles valued above 20 cents per dozen pieces designed to be worn on apparel or carried on or about or attached to the person, such as and including \* \* \* cigar holders, \* \* \* cigarette holders, \* \* \* and parts thereof finished or partly finished, composed of metal, \* \* \* 60 per centum ad valorem. \* \* \*

## "PIPES AND SMOKERS' ARTICLES."

(See Survey N-26.)

*Description and uses.*—The chief material used in the manufacture of pipe bowls is brier wood or brier root imported mainly from France and Italy. Other woods, as well as clay and meerschaum, are also employed. Pipe stems are made of reeds, wood, hard rubber, and for composition. The materials needed in mouthpieces for pipes and cigar and cigarette holders include hard rubber, bakelike, celluloid, ivory, and amber. The pipe bowl and the stem together form the stummel.

Cigarette paper is a light white paper for making cigarettes, used by both the cigarette factory and the smoker. By far the greater

part goes into factory-made cigarettes. It is made usually from flax and hemp products. American consumers say that the imported product is much superior to the domestic. The cigarette paper consumed in the United States comes mainly from France.

*Production.*—Data cover a great variety of pipes, cigar and cigarette holders, but not cigarette paper, books, and book covers. There were 47 manufacturers of tobacco pipes in 1914, with capital of \$3,232,000, 2,354 employees, wages of \$1,188,000, cost of materials \$2,308,000, and product valued at \$4,220,000. This is a decline in the industry compared with 1909. New York leads in the industry with more than half the domestic output. In 1919 there were 56 establishments engaged in the manufacture of tobacco pipes with a product valued at \$11,554,000.

The estimated annual production of cigarette paper in the United States from 1918 to 1920 was as follows:

	1918	1919	1920
Amount (pounds).....	2,033,000	1,629,000	2,219,000
Value.....	\$2,000,000	\$1,600,000	\$2,200,000

This production represents roughly from one-fifth to one-third of the total cigarette paper used in the United States, the remainder being imported.

*Imports* of cigarette books, cigarette book covers, and cigarette paper in 1914 were \$795,429, excluding \$35,729 for manufacture in bonded warehouse and for export. They were mainly from France and Austria-Hungary. In 1914 imports of pipes and pipe bowls of clay were valued at \$35,676; and all other articles, including pipes and pipe bowls of other material, all smokers' articles, n. s. p. f., and pouches for smoking or chewing tobacco at \$524,386, excluding \$10,621 for manufacture in bonded warehouse and for export, mainly from Austria-Hungary, England, and Germany. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
CIGARETTE BOOKS, CIGARETTE-BOOK COVERS, AND CIGARETTE PAPER IN ALL FORMS EXCEPT CORK PAPER.			
1918.....	\$6,722,534	\$3,361,208	50
1919.....	7,722,102	3,861,010	50
1920.....	4,692,064	2,346,022	50
1921 (9 months).....	3,339,909		

COMMON TOBACCO PIPES AND PIPE BOWLS OF CLAY.

1918.....	\$4,716	\$1,179	25
1919.....	15,852	3,963	25
1920.....	12,091	3,023	25
1921 (9 months).....	10,455		

PIPES, PIPE BOWLS OF OTHER MATERIALS, AND ALL SMOKERS' ARTICLES, N. S. P. F., AND POUCHES FOR SMOKING OR CHEWING TOBACCO.

1918.....	\$132,733	\$66,364	50
1919.....	170,097	83,044	50
1920.....	693,353	346,537	50
1921 (9 months).....	557,677		

*Exports.*—None recorded.

*Important changes in classification.*—The phrase “in whatever condition of manufacture, whether wholly or partly finished, or whether bored or unbored” brings unfinished parts within the provisions for pipes and smokers’ articles.

The provision covering tobacco pouches has been enlarged to include partly finished as well as wholly finished articles. The same is true of all smokers’ finished articles whatsoever, and parts of. n. s. p. f., except such of these latter articles as are composed of china, porcelain, parian, bisque, earthen, or stone ware, which are exempted from the provision for smokers’ articles, n. s. p. f.

Cases suitable for pipes, cigar and cigarette holders, finished or partly finished, are for the first time specifically provided for.

*Conflicting provisions.*—This paragraph conflicts with paragraph 1428. Both paragraphs provide specifically for cigar and cigarette holders. The former provides for these articles of whatever material composed and in whatever condition of manufacture, wholly or partly finished, or whether bored or unbored. The latter provides for articles such as cigar and cigarette holders of metal, whether finished or unfinished articles, valued above 20 cents per dozen pieces and designed to be worn on apparel or carried on or about or attached to the person.

There is also a conflict between this paragraph and paragraph 29 in respect to smokers’ articles such as cigar and cigarette holders and mouthpieces for pipes, cigar and cigarette holders composed of compounds of pyroxylin.

*Suggested changes.*—The provisions in this paragraph for “cigarette books, cigarette-book covers, cigarette paper in all forms, except cork paper,” might be transferred to the paper schedule.

---

### PARAGRAPH 1453.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1453. Plush, black, known commercially as hatters’ plush, composed of silk, or of silk and cotton, of the qualities and widths used generally in the making of men’s hats, 10 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 477. Plush, black, known commercially as hatters’ plush, composed of silk, or of silk and cotton, such as is used exclusively for making men’s hats, ten per centum ad valorem.

PAR. 382. Plush, black, known commercially as hatters’ plush, composed of silk, or of silk and cotton, such as is used for making men’s hats, 10 per centum ad valorem.

HATTERS’ PLUSH.

(See Survey L-1.)

*Description and uses.*—Hatters’ plush, under this paragraph, refers to black plush 22 inches or more in width, with a soft silk “pile” that will iron down to a glossy surface and hold its color under the heated iron. It was primarily used for men’s silk hats, but is now a favored material for women’s high-grade hats and for other purposes.

*Production.*—American manufacturers have attempted to make hatters' plush, but, according to hat makers, with unsatisfactory results as to color. It is stated that domestic millinery plushes, closely resembling hatter's plush, are extensively made with a black that stands the heat of ironing. Plush manufacturers and hat makers, however, disagree as to the possibility of producing in this country, with the same rate of duty as for other plushes, the quality demanded for men's silk hats.

*Imports* of hatters' plush come almost exclusively from France, from 1895 through 1909 averaging only \$46,000 in value. The increase, beginning in 1910 and rising to \$170,777 in 1914, and to \$445,070 in 1917, was largely due to the vogue of this material for women's hats and for other purposes. No phraseology so far adopted seems able to prevent imports of hatters' plush nominally designed for men's hats from being used for other purposes. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1913.....		\$57,097		\$5,710	10
1919.....	121,604	463,224	\$3.81	46,322	10
1920.....	84,004	641,548	7.64	64,155	10
1921 (9 months).....	147,337	539,939		53,993	10

*Exports.*—Not recorded.

*Suggested changes.*—As the variety of uses to which hatters' plush can be put is steadily increasing and as it seems impossible to confine the import to plush actually used in making men's hats, it is suggested that this paragraph be omitted with the intent that it be dutiable with other silk plushes under paragraph 1206.

## PARAGRAPH 1454.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1454. All thermostatic bottles, carafes, jugs, and other thermostatic containers, of whatever material composed, constructed with a vacuous or partially vacuous insulating space to maintain the temperature of the contents, whether imported with or without a jacket or casing of metal or other material, shall pay the following rates of duty, namely: Having a capacity of one pint or less, 10 cents each; having a capacity of more than one pint, 20 cents each; and in addition thereto, on all of the foregoing, 30 per centum ad valorem; parts of any of the foregoing not including those above mentioned, 35 per centum ad valorem: *Provided*, That all articles specified in this paragraph when imported shall have the name of the maker and beneath the same

## H. R. 7456.

## SENATE AMENDMENTS.

the name of the country of origin legibly, indelibly, and conspicuously etched with acid on the glass part, and die stamped on the jacket or casing of metal or other material, in a place that shall not be covered thereafter: *Provided further*, That each label, wrapper, box, or carton in which any of the foregoing are wrapped or packed, when imported, shall have the name of the maker and beneath the same the name of the country of origin legibly, indelibly, and conspicuously stamped or printed thereon.

## ACT OF 1909.

[Classable according to component material of chief value. Those of blown glass dutiable under paragraph 98 at 60 per centum ad valorem.]

## ACT OF 1913.

[Classable according to component material of chief value. Those of blown glass dutiable under paragraph 84 at 45 per centum ad valorem.]

## THERMOS BOTTLES.

*Description and uses.*—Thermos bottles consist of double glass bottles, the smaller one enclosed within the larger, the two being fused together at the neck, but separated otherwise by a vacuum. Owing to their construction they preserve for a considerable period the temperature of the contents as at the time when placed in the container.

*Production.*—Official statistics are not available, the value of the product being included with blown and pressed glassware. It was stated at the hearings before the Committee on Ways and Means that the average production in this country would amount to about 6,000,000 bottles, the thermos bottle complete, or 12,000,000 if consideration is given to the fact that they are double bottles.

*Imports* are not shown in official statistics. Germany, Japan, and England export thermos bottles to the United States.

*Exports.*—Not shown in official statistics.

*Important changes in classification.*—This is a new provision.

## PARAGRAPH 1455.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1455. Umbrellas, parasols, and sunshades covered with material other than paper or lace, not embroidered or appliquéd, and walking canes, 35 per centum ad valorem; handles and sticks for umbrellas, parasols, or sunshades, finished or unfinished, 30 per centum ad valorem: *Provided*, That no article provided for in this paragraph shall pay a less rate of duty than the rate provided for the component material of chief value.

## ACT OF 1909.

PAR. 478. Umbrellas, parasols, and sunshades covered with material other than paper or lace, fifty per centum ad valorem. Sticks for umbrellas, parasols, or sunshades, and walking canes, finished or unfinished, forty per centum ad valorem.

## ACT OF 1913.

PAR. 383. Umbrellas, parasols, and sunshades covered with material other than paper or lace, not embroidered or appliquéd, 35 per centum ad valorem. Sticks for umbrellas, parasols, or sunshades, and walking canes, finished or unfinished, 30 per centum ad valorem.

## UMBRELLAS AND CANES.

(See Survey N-27.)

*Production.*—Most umbrella sticks are now made of steel, but those for parasols are usually of wood. For walking canes woods of many varieties are used, mainly reed, rattan, bamboo, and malacca.

In 1914 there were 265 establishments, with a capital of \$9,469,496, about 5,300 employees, wages of \$2,895,783, cost of materials \$8,592,000, and products (umbrellas, parasols, canes, and parts thereof, including toy parasols) valued at \$13,813,353. In 1919 the production of umbrellas and canes in the United States was valued at \$22,199,000.

*Imports.*—In 1914 imports of umbrellas, parasols, and sunshades covered with material other than paper or lace not embroidered or appliquéd were valued at \$108,493, a part of which, valued at \$69,563, were covered with material composed wholly or in part of silk. "Sticks for umbrellas, parasols, or sunshades" amounted to \$5,844. "Sticks for walking canes" amounted to \$100,576. Umbrellas, parasols, and sunshades are imported principally from Germany, England, Japan, Spain, and France. Later imports have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
----------------	-----------	--------	-------------	-------	------------------

## UMBRELLAS, PARASOLS, AND SUNSHADES, COVERED WITH MATERIAL OTHER THAN PAPER OR LACE, NOT EMBROIDERED OR APPLIQUÉD.

	Number.	Value.	Unit value.	Duty.	Per cent.
1918.....		\$19,830		\$6,940	35
1919.....	12,236	21,145	\$1.73	7,268	35
1920.....	45,363	88,249	1.94	30,887	35
1921 (9 months).....	45,775	49,122	1.07	17,192	35

## STICKS FOR UMBRELLAS, PARASOLS, OR SUNSHADES.

1918.....		\$1,410		\$423	30
1919.....		10,044		3,013	30
1920.....		22,378		6,713	30
1921 (9 months).....		13,587		4,076	30

## STICKS FOR WALKING CANES.

1918.....		\$7,726		\$2,317	30
1919.....	1,599,307	25,446		7,633	30
1920.....		75,005		22,500	30
1921 (9 months).....		33,456			30

TAMBOURED, EMBROIDERED, OR APPLIQUÉD PARASOLS.<sup>1</sup>

1918.....		\$1,616		\$970	60
1919.....	791	1,799	\$2.27	1,079	60
1920.....	1,565	5,326	3.40	3,135	60

<sup>1</sup> Dutiable under paragraph 358, act of 1913.

In 1920 imports of umbrellas, parasols, and sunshades not embroidered or appliquéd, covered with material composed wholly or in part of silk amounted in value to \$62,207, and covered with other material except paper or lace to \$25,042.

*Exports of umbrellas and parasols were valued at \$29,903 in 1914, since which time they have greatly increased, and considerable quantities have been shipped to Cuba, Spain, Mexico, Brazil, England, Canada, and Australia. Later statistics of values of exports in calendar years are as follows: 1918, \$529,013; 1919, \$681,137; 1920, \$746,401; and 1921, nine months, \$220,466.*

*Important changes in classification.*—Walking canes have been classified with umbrellas, parasols, and sunshades, whereas in the 1913 act (par. 383) they are included with "sticks for umbrellas, parasols, or sunshades, and walking canes, finished or unfinished."

Handles, finished or unfinished, for umbrellas, parasols, or sunshades are specifically provided for in the provision relating to sticks.

A proviso has been added to the effect that no article provided for in the paragraph shall pay a less rate of duty than the rate provided for the component material of chief value.

*Suggested changes.*—Paragraph 1455, H. R. 7456, apparently provides for finished canes only, as the provision relating to "sticks" and "handles" is limited to those for umbrellas, parasols, and sunshades.

The proviso to this paragraph would not only involve difficulties of administration in determining the rate of duty on the component material of chief value in the case of such materials as cotton and silk and mixtures of cotton and silk, but also destructive analysis of coverings.

The separation of walking canes from the provision for handles and sticks for umbrellas, etc., involves administrative difficulties, as they are often imported in small lots and large variety. These difficulties would be avoided by having the same rate of duty on this class of merchandise.

#### PARAGRAPH 1456.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1456. Waste, not specially provided for, 10 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 479. Waste, not specially provided for in this section, ten per centum ad valorem.

PAR. 384. Waste, not specially provided for in this section, 10 per centum ad valorem.

PAR. 660. Rags, not otherwise specially provided for in this section [Free].

PAR. 586. Rags, not otherwise specially provided for in this section [Free].

#### WASTE.

(See Survey N-27.)

*Description and uses.*—Waste refers to remnants and by-products of small value that have not the quality or utility either of the finished product or of the raw material. (223 U. S. 501, of 1912.)

*Imports.*—Imports classified under waste, n. s. p. f., do not cover all of the waste imported. Fur waste, although dutiable under this paragraph is separately shown as such under imports of furs. Imports of waste not elsewhere specified amounted to \$990,014 in 1914, principally from England, Germany, Japan, France, and Canada. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
1918 .....	\$487,942	\$48,790	10
1919 .....	1,403,399	140,321	10
1920 .....	1,081,457	108,146	10
1921 (9 months) .....	314,844	.....	.....

Per cent.

*Exports.*—None recorded.

### PARAGRAPH 1457.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1457. White bleached beeswax,  
15 per centum ad valorem.

ACT OF 1909.

ACT OF 1913.

PAR. 506. Beeswax [Free].

PAR. 412. Beeswax [Free].

#### WHITE BLEACHED BEESWAX.

(See Survey FL-7.)

*Description and uses.*—Beeswax is secreted by the common bee, *Apis mellifica*, as a product of digestion. It serves the bee with material for building up the honeycombs. (For crude wax, see par. 1676, p. 1461.) White bleached beeswax is produced from the natural crude material by processes of refining and bleaching, the operation requiring special machinery and skilled labor. Manufacturers state that the labor expense is at least one-third of the production cost. The bleached wax is employed in the manufacture of cosmetics and ointments, in the modeling of heads and forms for window and store display, and for similar uses. It is also used, both pure and as a component wax, in the better grades of candles. Beeswax for pharmaceutical products must conform with the specifications of the United States Pharmacopeia.

*Production* data are not available from official sources.

*Imports* are combined with those of crude wax (par. 1676, p. 1462). In a brief filed before the Committee on Ways and Means of the House, with reference to white bleached beeswax, it is stated that imports of this article constitutes 50 per cent of the domestic consumption.

*Exports* are not separately recorded. Those shown under beeswax and probably all of crude wax amounted in 1914 to 96,215 pounds, valued at \$27,292. Later exports by calendar years have been as follows: 1918, 165,382 pounds, valued at \$63,244; 1919, 210,046 pounds, valued at \$63,244; 1920, 632,811 pounds, valued at \$294,592; 1921 (nine months), 80,650 pounds, valued at \$24,608.

*Important changes in classification.*—This provision is new, the provision on the free list of the act of 1913 (par. 412) being for "beeswax."

## PARAGRAPH 1458.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1458. That there shall be levied, collected, and paid on the importation of all raw or unmanufactured articles not enumerated or provided for, a duty of 10 per centum ad valorem, and on all articles manufactured, in whole or in part, not specially provided for, a duty of 20 per centum ad valorem.

## ACT OF 1909.

PAR. 480. That there shall be levied, collected, and paid on the importation of all raw or unmanufactured articles, not enumerated or provided for in this section, a duty of ten per centum ad valorem, and on all articles manufactured, in whole or in part, not provided for in this section, a duty of twenty per centum ad valorem.

PAR. 82. Sumac, ground, three-tenths of one cent per pound.

## ACT OF 1913.

PAR. 385. That there shall be levied, collected, and paid on the importation of all raw or unmanufactured articles not enumerated or provided for in this section, a duty of 10 per centum ad valorem, and on all articles manufactured, in whole or in part, not provided for in this section, a duty of 15 per centum ad valorem.

PAR. 7. \* \* \* ammoniacal gas liquor, 10 per centum ad valorem.

PAR. 81. \* \* \* unmanufactured carbon, not specially provided for in this section, 15 per centum ad valorem;  
\* \* \*

PAR. 285. Istle or tampico, when dressed, dyed, or combed, 20 per centum ad valorem.

PAR. 618. Sumac, ground, \* \* \* [Free].

## ARTICLES NOT ENUMERATED OR PROVIDED FOR.

(See Survey N-27.)

*General.*—In any case where an unenumerated article bears no statutory similitude to one that is enumerated the article falls within this paragraph.

*Imports* in 1914 of unmanufactured articles under this paragraph were valued at \$3,763, of manufactured articles, at \$52,249. Later statistics follow:

Calendar year.	Value.	Duty.	Ad valorem rate.
RAW OR UNMANUFACTURED ARTICLES.			
1918.....	\$36,652	\$3,665	10
1919.....	70,529	7,053	10
1920.....	134,989	13,499	10
1921 (9 months).....	77,331	7,733	10
MANUFACTURED ARTICLES.			
1918.....	\$88,705	\$13,306	.....
1919.....	722,865	108,430	.....
1920.....	1,274,473	191,171	.....
1921 (9 months).....	786,267	.....	.....

*Suggested changes.*—As this is the ultimate catch-all clause, it would naturally follow rather than precede the similitude provision (par. 1459).

## PARAGRAPH 1459.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1459. That each and every imported article, not enumerated in this Act, which is similar, either in material, quality, texture, or the use to which it may be applied, to any article enumerated in this Act as chargeable with duty, shall pay the same rate of duty which is levied on the enumerated article which it most resembles in any of the particulars before mentioned; and if any nonenumerated article equally resembles two or more enumerated articles on which different rates of duty are chargeable, there shall be levied on such nonenumerated article the same rate of duty as is chargeable on the article which it resembles paying the highest rate of duty; and on articles not enumerated, manufactured of two or more materials, the duty shall be assessed at the highest rate at which the same would be chargeable if composed wholly of the component material thereof of chief value; and the words "component material of chief value," wherever used in this Act, shall be held to mean that component material which shall exceed in value any other single component material of the article; and the value of each component material shall be determined by the ascertained value of such material in its condition as found in the article. If two or more rates of duty shall be applicable to any imported article, it shall pay duty at the highest of such rates, but this provision shall not apply to articles on the free list.

## ACT OF 1909.

PAR. 481. That each and every imported article, not enumerated in this section, which is similar, either in material, quality, texture, or the use to which it may be applied, to any article enumerated in this section as chargeable with duty, shall pay the same rate of duty which is levied on the enumerated article which it most resembles in any of the particulars before mentioned; and if any nonenumerated article equally resembles two or more enumerated articles on which different rates of duty are chargeable, there shall be levied on such nonenumerated article the same rate of duty as is chargeable on the article which it resembles paying the highest rate of duty; and on articles not enumerated, manufactured of two or more materials, the duty shall be assessed at the highest rate at which the same would be chargeable if composed wholly of the component material thereof of chief value; and the words "component material of chief value," wherever used in this section, shall be held to mean that component material which shall exceed in value any other single component material of the

## ACT OF 1913.

PAR. 386. That each and every imported article, not enumerated in this section, which is similar, either in material, quality, texture, or the use to which it may be applied, to any article enumerated in this section as chargeable with duty, shall pay the same rate of duty which is levied on the enumerated article which it most resembles in any of the particulars before mentioned; and if any nonenumerated article equally resembles two or more enumerated articles on which different rates of duty are chargeable, there shall be levied on such nonenumerated article the same rate of duty as is chargeable on the article which it resembles paying the highest rate of duty; and on articles not enumerated, manufactured of two or more materials, the duty shall be assessed at the highest rate at which the same would be chargeable if composed wholly of the component material thereof of chief value; and the words "component material of chief value," wherever used in this section, shall be held to mean that component material which shall exceed in value any other single component material of the

## ACT OF 1909. ACT OF 1913.

article; and the value of each component material shall be determined by the ascertained value of such material in its condition as found in the article. If two or more rates of duty shall be applicable to any imported article, it shall pay duty at the highest of such rates.

article; and the value of each component material shall be determined by the ascertained value of such material in its condition as found in the article. If two or more rates of duty shall be applicable to any imported article, it shall pay duty at the highest of such rates.

## ARTICLES NOT ENUMERATED WHICH BEAR A SIMILITUDE TO ENUMERATED ARTICLES.

(See Survey N-27.)

*General.*—In determining the classification of any article not enumerated in any part of the tariff, the first inquiry is whether it bears a similitude to any enumerated article. The requirement of the clause is whether there be similitude in any one of the four particulars—material, quality, texture, or the use to which the article may be applied. The similitude must be substantial, not referring merely to adaptability to sale as a substitute for an article which it resembles, but referring rather to its employment or to its effect in producing results. Reference to an article in general terms is enumeration within the clause. Where a provision expressly excludes merchandise of a specific description, such merchandise is not subject through the similitude rule to the duty imposed by such enumerating clause upon articles which the excluded merchandise shall resemble. The similitude clause contemplates similarity and not identity between the related articles.

In determining the component of chief value, the value of the several materials shall be determined as of the time when they have reached such a condition that nothing remains to be done upon them by the manufacturer except putting them together to make the complete product. The component material of chief value is the component material exceeding in value any other single component material of the article.

While it is the rule that the component material of chief value is that single component material which exceeds in value any other single component material, Congress makes exceptions to the rule by providing that two or more component materials may be considered together. Such an exception is made in paragraph 256, tariff act of 1913, by the language "cotton or other vegetable fiber and india rubber," which means that, for this purpose, the value of the cotton or the value of the other vegetable fiber is to be added to that of the india rubber. The exception, however, does not extend to the rest of the paragraph so as to make it include articles the component material of chief value of which is cotton and other vegetable fiber, but not cotton or other vegetable fiber. (*Chin v. United States*, 11 Ct. Cust. Appls., —; T. D. 38932 of 1921.)

The value of component materials is to be taken as of the date of exportation and not the value or cost of the materials at the time they were purchased by the manufacturer. (G. A. 8307, T. D. 38191, of 1919.)

The highest-rate rule will be resorted to only in a clear case. (*Woolworth v. United States*, 1 Ct. Cust. Appls., 120, of 1910.)

*Important changes in classification.*—The clause "but this provision shall not apply to articles on the free list" has been added.

## FREE LIST.

H. R. 7456.

SENATE AMENDMENTS.

### TITLE II.

SECTION 201. That on and after the day following the passage of this Act, except as otherwise specially provided for in this Act, the articles mentioned in the following paragraphs, when imported into the United States or into any of its possessions (except the Philippine Islands, the Virgin Islands, and the islands of Guam and Tutuila), shall be exempt from duty:

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1501. Acids and acid anhydrides: Chromic acid, hydrofluoric acid, hydrochloric or muriatic acid, nitric acid, sulphuric acid or oil of vitriol, and mixtures of nitric and sulphuric acids, valerianic acid, and all anhydrides of the foregoing not specially provided for.

#### ACT OF 1909.

PAR. 1. Acids: \* \* \* chromic acid, two cents per pound; \* \* \* sulphuric acid or oil of vitriol not specially provided for in this section, one-fourth of one cent per pound; \* \* \*.

PAR. 482. Acids: \* \* \* fluoric, hydrochloric or muriatic, nitric, \* \* \* and valerianic [Free].

PAR. 687. Sulphuric acid which at the temperature of sixty degrees Fahrenheit does not exceed the specific gravity of one and three hundred and eighty one-thousandths, for use in manufacturing superphosphate of lime or artificial manures of any kind, or for any agricultural purposes: *Provided*, That upon all sulphuric acid imported from any country, whether

#### ACT OF 1913.

PAR. 387. Acids: \* \* \* chromic, hydrofluoric, hydrochloric or muriatic, nitric, \* \* \* sulphuric or oil of vitriol, and valerianic.

[Mixtures of nitric and sulphuric acids covered by the provision for nitric acid in par. 387 of the free list. *Aetna Explosives Co. v. United States*, 9 Ct. Cust. Appls., 298, of 1919.]

<sup>1</sup>Supplies for American Red Cross donated abroad exempted from duty by act of Aug. 31, 1918, chap. 165, until one year after end of war.

## ACT OF 1909.

## ACT OF 1913.

independent or a dependency, which imposes a duty upon sulphuric acid imported into such country from the United States, there shall be levied and collected a duty of one-fourth of one cent per pound.

PAR. 3. \* \* \* chemical compounds, mixtures, and salts, \* \* \*, not specially provided for in this section, twenty-five per centum ad valorem; \* \* \*. [Covering mixtures of nitric and sulphuric acids.]

[No corresponding provision for anhydrides.]

## CHROMIC ACID.

(See Survey A-18.)

*Description and uses.*—The so-called chromic acid of commerce is chromic anhydride or chromium trioxide. It is a strongly acid substance crystallizing in scarlet needles, used in electric batteries, photography, as an oxidizer in analytical and manufacturing chemical operations, in tanning leather, etching copper, bleaching, and for hardening microscopical preparations.

*Production.*—Chromic acid is produced by treating sodium or potassium dichromate with concentrated sulphuric acid.

*Imports* in 1914 were 7,211 pounds, valued at \$1,195, all from Germany. Since 1917 they have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	9,512	\$1,857	\$0.19
1920.....	1,100	90	.08
1921 (9 months).....	1,040	411	.39

*Exports.*—Statistics not available.

## HYDROFLUORIC ACID.

(See Survey FL-1.)

*Description and uses.*—Commercial hydrofluoric acid is a solution of the pure acid in water. Its principal use is for etching and marking glass. The raw materials used in its manufacture are fluorspar and sulphuric acid, both produced in this country. It must be shipped in bottles of wax or lead. "Fluoric acid" is an obsolete term for hydrofluoric acid.

*Production* in 1914 by nine establishments was 7,209,248 pounds, of which 5,373,657 pounds were sold for \$325,540. In 1919 (preliminary figures), 5,675,400 pounds, valued at \$440,200 were produced.

*Imports* have been less than one-tenth of 1 per cent of the domestic production. Before the war they were mostly from Germany. Imports are not recorded since 1918.

*Exports.*—Statistics not available.

*Important changes in classification.*—"Fluoric" in paragraph 387, act of 1913, has been omitted as an obsolete term for hydrofluoric acid.

## HYDROCHLORIC OR MURIATIC ACID.

(See Survey FL-1.)

*Description and uses.*—Commercial hydrochloric acid is a solution of varying percentages of hydrogen chloride and water. When pure it is colorless, but the commercial grades usually contain traces of such impurities as ferric chloride, free chlorine, or organic matter, which colors the acid yellow. Impure hydrochloric or commercial acid is often called muriatic acid. The acid is very corrosive, dissolving metallic oxides and many metals forming chlorides. It is on the market in strengths ranging in density from 18° to 22° Baumé. In Europe it is used for the production of chlorine. In the United States it is employed for the production of chlorides of many metals, purifying bonechar, in dyeing and printing cloth, for preparing carbonic acid, in the manufacture of many coal-tar dyes, in pickling iron and steel, in the production of glue, and for many other purposes.

*Production.*—Hydrochloric acid is manufactured commercially by four processes: (1) In America, by the action of niter cake on common salt (sometimes modified by the addition of sulphuric acid); (2) in Europe, as a by-product from the manufacture of salt cake (Leblanc soda process); (3) as a by-product in the chlorination of organic materials, chiefly of coal-tar origin; and (4) synthetically, by the combination of hydrogen and chlorine from electrolytic cells. The domestic production in 1918 was about 140,000,000 pounds of 100 per cent acid. In 1919 (preliminary figures) production was 294,260,000 pounds (strength not stated), valued at \$4,312,300.

*Imports* in 1914 were less than one-tenth of 1 per cent of the domestic production. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	3,450,425	\$31,330	\$0.01
1919.....	4,029,820	44,831	.01
1920.....	5,254,348	69,745	.01
1921 (9 months).....	842,700	8,646	.01

*Exports.*—Statistics not available.

## NITRIC ACID.

(See Survey FL-1.)

*Description and uses.*—Nitric acid is a highly corrosive, inorganic acid. In a concentrated form it rapidly destroys organic matter, while in a dilute state it attacks most metals forming metallic salts. It is sold in several standardized strengths expressed in degrees Baumé (specific gravity), which depend entirely upon the relative proportion of acid and water. The color of the commercial acid varies from water white to deep red. Nitric acid is used in the manufacture of nearly all explosives and coal-tar dyes, sulphuric acid (lead chamber process), pickling liquors, pyroxylin plastics, pyrotechnics, imitation leather, rubber substitutes, insecticides, and the salts of many metals.

*Production.*—It is made commercially by three distinct processes (1) from nitrate of soda and sulphuric acid, (2) by passing electric sparks through air, and (3) by passing ammonia and air over red-hot platinum. The nitrate-sulphuric acid process is the oldest, and is still the chief domestic source of nitric acid. The second and third processes have resulted from the large war demand for the acid and because of insufficient raw materials (chiefly nitrate of soda, which is imported from Chile). The United States produced 78,589 short tons of nitric acid in 1914 and 634,817 short tons of 100 per cent acid in 1918. In 1919 (preliminary figures) production was 19,440 short tons, valued at \$2,976,100.

*Imports* for the calendar years 1918 and 1920 are as follows:

Calendar year.	Quantity.	Value.	Unit value.
1918.....	<i>Pounds.</i> 17,444,895	\$1,254,572	\$0.07
1920.....	47,754	4,180	.09

*Exports* since 1917 (for calendar years), chiefly to Canada, Mexico, and Cuba have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	39,584,858	501,568	716,914	119,030
Value.....	\$23,231,892	\$73,006	\$96,109	\$18,131

*Important changes in classification.*—Nitric acid is largely used in the form of "mixed acid," consisting of nitric and sulphuric acids. A mixture of 20.16 of sulphuric acid and 72.28 of nitric acid, the remainder water, was held by the Board of General Appraisers to be a mixture within paragraph 5 (G. A. 8235, T. D. 37927, of 1919), but the Court of Customs Appeals held the proper classification to be under paragraph 387 as nitric acid, the sulphuric acid to be treated as a part of the packing of the goods for shipment. (*Aetna Explosives Co. v. United States*, 9 Ct. Cust. Appls., 298, of 1919.) Affirmed in Supreme Court on writ of certiorari.

In view of this judicial construction, a provision for "mixtures of nitric and sulphuric acids" was added. (Reclassification Report, p. 97.)

#### SULPHURIC ACID.

(See Survey FL-1.)

*Description and uses.*—Sulphuric acid is the most important single commodity in the chemical industry. The strong acid is a comparatively heavy (about twice the weight of water), oily liquid, practically colorless and odorless. The strong acid exhibits powerful dehydrating properties and is intensely corrosive. Sulphuric acid may be either "chamber-process acid" or "contact-process acid," according to the method of manufacture. The strengths commonly recognized and dealt in commercially are 50, 60, and 66 per cent, monohydrate, and oleum. The chamber process yields impure acid not over 60 per cent in strength, whereas the contact-process acid is pure and concentrated. Sulphuric acid has diversified uses, but by far the greatest is in the

production of commercial fertilizers. During the war large quantities were consumed in the production of explosives.

*Production.*—Sulphuric acid is made by oxidizing sulphur dioxide to sulphur trioxide and absorbing the fumes or gases in water or weak sulphuric acid. The sulphur dioxide is obtained as a by-product from zinc and copper smelting, or by burning iron pyrites (sulphur ore) or brimstone. The domestic production was about 4,705,000 short tons of 100 per cent acid in 1918 and 2,400,000 short tons in 1914. The large increase in 1918 was caused by the great demand in the manufacture of explosives. The production in 1919 (preliminary figures), on a basis of 62 per cent acid, was 3,296,270 short tons, valued at \$35,638,200.

*Imports* since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	11,374,400	\$176,223	\$0.01
1919.....	14,746,049	116,725	.01
1920.....	10,817,784	87,979	.01
1921 (9 months).....	3,784,320	38,874	.01

*Exports* before the war were less than 0.2 per cent of the domestic production. For the calendar years 1918–1921 they have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	80,294,643	21,295,522	28,987,342	10,071,432
Value.....	\$1,278,027	\$489,966	\$738,188	\$229,853

The countries of destination are chiefly Mexico, Argentina, and Cuba.

#### VALERIANIC ACID.

(See Survey FL-1.)

*Description and uses.*—Valerianic or valeric acid is an oily liquid with a disagreeable odor. It is obtained by the oxidation of amyl alcohol or by distillation of oil of valerian. It is used medicinally for hysteria and nervousness.

*Imports* in 1914 were 1,164 pounds, valued at \$755, all from Germany. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	487	\$1,469	\$3.02
1919.....	240	899	3.74
1920.....	460	1,379	3.00
1921 (9 months).....	435	1,342	3.08

*Exports.*—Statistics not available.

## ACID ANHYDRIDES.

*Important changes in classification.*—As the chromic acid of commerce is in the anhydrous form, the proviso "and all anhydrides of the foregoing," has been added. This change will include all the anhydrides of the acids on the free list as well as the acids and will avoid possible conflict with paragraph 1.

## PARAGRAPH 1502.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1502. Aconite, aloes, asafetida, cocculus indicus, ipecac, jalap, manna, marshmallow or althea root, leaves and flowers, maté, and pyrethrum or insect flowers, all the foregoing which are natural and uncompounded and are in a crude state, not advanced in value or condition by shredding, grinding, chipping, crushing, or any other process or treatment whatever beyond that essential to proper packing and the prevention of decay or deterioration pending manufacture: *Provided*, That no article containing alcohol shall be admitted free of duty under this paragraph.

## ACT OF 1909.

## ACT OF 1913.

PAR. 483. Aconite [Free].  
 PAR. 503. Asafetida [Free].  
 PAR. 538. Cocculus indicus [Free].  
 PAR. 559. Drugs, \* \* \* not advanced \* \* \* [Free]. [Covered aloes and pyrethrum or insect flowers.]  
 PAR. 594. Ipecac [Free].  
 PAR. 597. Jalap [Free].  
 PAR. 620. Manna [Free].  
 PAR. 623. Marshmallow or althea root, leaves or flowers, natural or unmanufactured [Free].  
 PAR. 480. \* \* \* unmanufactured articles, not enumerated \* \* \* ten per centum ad valorem, \* \* \*. [Covered maté.]

PAR. 388. Aconite [Free].  
 PAR. 405. Asafetida [Free].  
 PAR. 454. Cocculus indicus [Free].  
 PAR. 477. Drugs, \* \* \* not advanced \* \* \* [Free]. [Covers aloes and pyrethrum or insect flowers.]  
 PAR. 516. Ipecac [Free].  
 PAR. 519. Jalap [Free].  
 PAR. 541. Manna [Free].  
 PAR. 544. Marshmallow or althea root, leaves or flowers, natural or unmanufactured [Free].  
 PAR. 552. \* \* \* vegetable substances, crude or unmanufactured, not otherwise specially provided for in this section [Free]. [Covers maté.]

[For discussion, see paragraph 32, p. 92.]

## PARAGRAPH 1503.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1503. Agates, unmanufactured.

## ACT OF 1909.

## ACT OF 1913.

PAR. 485. Agates, unmanufactured [Free].

PAR. 390. Agates, unmanufactured [Free].

## AGATES.

(See Survey N-1.)

*Description and uses.*—Agate is a variety of quartz which is peculiar in that it consists of bands or layers of blended colors. Certain varieties are distinguished, as ribbon agate, fortification agate, moss agate, star agate, zone agate, clouded agate, etc. Most commercial agate is artificially stained, so that stones naturally unattractive come to be valuable for ornamental purposes. Agates are used in rings, cups, beads, boxes, handles of small utensils, burnishers, pestles, mortars, and trivial ornaments, and in delicate mechanisms, such as bearing-surface pivots and knife edges of weighing apparatus.

*Production.*—Numerous localities yield agates. They are abundant in trap rocks of the Lake Superior region. Wood agate, or agatized wood, is found in Colorado, California, and elsewhere in the West, the famous "silicified forest," known as Chalcedony Park, in Arizona, being most noted. Foreign agates are found mainly in Uruguay and Brazil; these were formerly sent to Germany, where their polishing was an important industry.

*Import values* of agate from 1907 to 1914 ranged between \$247 in 1912 and \$934 in 1907. Imports wholly disappeared shortly after the outbreak of the World War, because of the blockade of Germany, whence came the principal supply.

Imports for 1920 (calendar year) were 42,235 pounds, valued at \$1,764; for 9 months of 1921, 192,487 pounds, valued at \$12,962.

*Exports.*—None recorded.

## PARAGRAPH 1504.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1504. Agricultural implements: Plows, tooth or disk harrows, headers, harvesters, reapers, agricultural drills and planters, mowers, horserakes, cultivators, thrashing machines, cotton gins, machinery for use in the manufacture of sugar, wagons and carts, and all other agricultural implements of any kind or description, whether specifically mentioned herein or not, whether in whole or in parts, including repair parts.

ACT OF 1909.

ACT OF 1913.

PAR. 476. Plows, tooth and disk harrows, harvesters, reapers, agricultural drills and planters, mowers, horserakes, cultivators, threshing machines, and cotton gins, fifteen per centum ad valorem: *Provided*, That any of the foregoing, when imported from any country, dependency, province, or colony which imposes no tax or duty on like articles imported from the United States, shall be imported free of duty.

PAR. 391. Agricultural implements: Plows, tooth and disk harrows, headers, harvesters, reapers, agricultural drills and planters, mowers, horserakes, cultivators, thrashing machines, cotton gins, machinery for use in the manufacture of sugar, wagons and carts, and all other agricultural implements of any kind and description, whether specifically mentioned herein or not, whether in whole or in parts, including repair parts [Free].

## AGRICULTURAL IMPLEMENTS AND MACHINES.

(See Survey FL-3.)

*Description and uses.*—The articles of this paragraph may be classified as (1) agricultural implements, including cotton gins, (2) machinery for use in the manufacture of sugar, and (3) wagons and carts. The first includes implements used in plowing, planting, reaping, and preparing crops for use in their raw form or for manufacture. The cotton gin, as its function is merely to separate the seeds from the cotton fiber and not to convert either into a more highly developed product, is an agricultural appliance similar to a threshing machine. Sugar machinery belongs to a different category, as its purpose is to refine a raw product into one more highly developed. Wagons and carts, even when used in agricultural operations, obviously form a distinct group.

*Production.*—The United States leads in the manufacture of agricultural implements. In 1914 the total value (exclusive of cotton gins) was \$164,086,835, divided as follows: Plows and cultivators, \$38,662,037; planters and seeders, \$12,188,757; harvesting implements, \$39,581,286; seed separators, \$13,096,289; all other products, including parts for all classes of implements, \$59,121,201; amount received for repair work, \$1,437,265. The output of cotton gins was valued at \$4,901,680, and of sugar-mill machinery at \$1,971,546. Wagons and carts amounted to 533,601, valued at \$34,506,942, of which farm wagons, including carts and trucks numbering 384,663, were valued at \$19,708,423. In 1919 the country's output was as follows:

	Number.	Value.
Plows, harrows, and cultivators.....	2,634,000	\$65,329,000
Planters and seeders.....	495,000	17,490,000
Hayrakes and tedders.....	104,000	4,772,000
Mowers and reapers.....	379,000	40,170,000
Other harvesting implements.....		9,283,000
Threshers.....	20,000	16,593,000
Other seed separators.....	87,000	5,772,000
All other agricultural implements and parts.....		64,106,000
All other products.....		68,500,000
Cotton gins.....		8,632,000
Sugar-mill machinery.....		13,249,000

*Imports.*—Imports are small compared with exports. They consist, however, of a large number of classes and may be grouped as follows:

	1918 (last 6 months).	1919	1920	1921 (9 months).
Cotton gins:				
Quantity (number).....	50		81	2
Value.....	\$6,798		\$15,589	\$7,652
Drills and planters:				
Quantity (number).....	9	54	134	30
Value.....	\$827	\$5,671	\$19,873	\$3,653
Harrow, tooth and disk:				
Quantity (number).....	12	672	1,551	150
Value.....	\$417	\$13,062	\$60,970	\$6,970
Headers, harvesters, and reapers:				
Quantity (number).....	23	2,067	875	7
Value.....	\$3,750	\$444,229	\$167,610	\$8,285
Horse rakes:				
Quantity (number).....	20	11	33	7
Value.....	\$615	\$298	\$2,829	\$155
Mowers:				
Quantity (number).....	47	37	1,744	22
Value.....	\$2,617	\$1,531	\$141,594	\$790
Plows and cultivators:				
Quantity (number).....	867	3,414	12,094	1,762
Value.....	\$15,595	\$174,744	\$1,166,461	\$172,982
Sugar machinery:				
Value.....	\$10,240	\$12,224	\$100,979	\$87,885
Threshing machines:				
Quantity (number).....	40	1,314	1,026	143
Value.....	\$14,483	\$1,274,053	\$850,375	\$121,898
Wagons and carts:				
Quantity (number).....	76	94	94	65
Value.....	\$4,301	\$5,966	\$8,614	\$3,795
All other agricultural implements:				
Value.....	\$412,355	\$1,423,890	\$3,181,679	\$1,183,309
Total agricultural implements: Value.....	\$472,007	\$3,355,668	\$5,716,573	\$1,597,374

During the first six months of 1918 there were imported into the United States agricultural implements and parts of the same to the value of \$255,229. After July 1, 1918, the imports of agricultural implements were divided into 11 classes as tabulated. Canada is almost the only source of supply for all classes of agricultural implements except sugar machinery, which comes principally from France, although also from the United Kingdom, Germany, and Sweden.

*Exports.*—Exports for the calendar years 1918–1921 may be divided into the following classes:

	1918	1919	1920	1921 (9 months).
Cotton gins and parts of:				
Quantity (number).....	511			
Value.....	\$113,317	\$295,746	\$433,589	\$105,139
Planters and seeders.....	\$849,070	\$693,698	\$810,679	\$421,177
Tractors, except steam:				
Quantity (number).....				2,134
Value.....				\$1,971,848
Parts of tractors except engines.....				\$870,987
Hay rakes and tedders.....	\$562,664	\$605,427	\$755,310	\$436,980
Mowers and reapers.....	\$5,228,407	\$10,494,723	\$10,165,670	\$5,056,616
Plows and cultivators.....	\$8,705,989	\$10,511,348	\$13,003,023	\$5,575,786
Sugar-mill machinery.....	\$9,468,511	\$13,805,940	\$22,786,977	\$14,135,808
Threshers.....	\$2,034,713	\$1,660,168	\$3,260,990	\$5,420,514
Wagons:				
Quantity (number).....	5,624	7,743	10,784	8,712
Value.....	\$519,787	\$750,326	\$1,222,567	\$841,131
All other agricultural implements.....	\$8,508,818	\$9,527,727	\$10,514,829	\$7,038,455
Parts of agricultural implements.....	\$6,959,503	\$7,702,403	\$7,767,137	\$7,877,326

The principal countries of destination are Canada, Argentina, France, Cuba, the Philippine Islands, British India, and the United Kingdom.

## PARAGRAPH 1505.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1505. Albumen, not specially provided for.

## ACT OF 1909.

## ACT OF 1913.

PAR. 257. \* \* \* albumen, \* \* \* provided for in this section [Free].

PAR. 392. Albumen, not specially provided for in this section [Free].

PAR. 486. Albumen, not specially provided for in this section [Free].

## ALBUMEN.

(See Survey G-11.)

*Description and uses.*—Albumen belongs to the nitrogenous organic substances known as proteins, constituents of both animals and plants. Egg albumen (par. 713) and blood albumen are the common commercial forms. Blood albumen is a by-product of slaughterhouses (large-scale production). Albumen may also be obtained from milk, and there is a so-called "vegetable" albumen. It is used as a mordant in dyeing and calico printing, in the leather industry, in gums and adhesives, as a clarifying agent for the preparation of photographic papers, and in medical foods.

*Imports of albumen in 1914* were 382,589 pounds, valued at \$58,175, about 75 per cent coming from Germany. They declined during the war and amounted to only 671 pounds in the fiscal year 1918. Imports since 1917 follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	1,378	\$858	\$0.62
1919.....	885	288	.33
1920.....	44,331	24,984	.56
1921 (9 months).....	8,503	3,395	.....

*Exports.*—Statistics not available.

## PARAGRAPH 1506.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1506. Ambergris, castoreum, civet, and musk, grained or in pods.

## ACT OF 1909.

## ACT OF 1913.

PAR. 489. Ambergris [Free].

PAR. 528. Castor or castoreum [Free].

PAR. 533. Civet, crude [Free].

PAR. 631. Musk, crude, in natural pods [Free].

PAR. 639. Oils: \* \* \* crude and rectified ambergris, \* \* \* [Free].

PAR. 49. Ambergris, \* \* \* musk, grained or in pods, civet, \* \* \* all the foregoing not containing alcohol and not specially provided for in this section, 20 per centum ad valorem.

PAR. 442. Castor or castoreum [Free].

## AMBERGRIS.

(See Survey A-14.)

*Description, uses, and production.*—Ambergris is supposed to be undigested matter present in the intestines of unhealthy whales. This substance is found floating on the sea, especially in the Southern Hemisphere. It is usually found in small fragments, but sometimes in large pieces, weighing 200 pounds. It was used chiefly in perfume manufacture, but its use has largely decreased in recent years, as synthetic substances have become available at a fraction of the cost of the natural article. The supply of ambergris is irregular and uncertain.

*Imports* since 1918 have been small, the maximum being 19 pounds during the first nine months of 1921.

*Exports.*—Statistics not available.

*Important changes in classification.*—Ambergris is dutiable under paragraph 49, act of 1913.

## CASTOREUM.

(See Survey FL-2.)

*Description and uses.*—Castoreum is a product derived from the beaver. It was formerly used as a drug, and is now chiefly employed in the manufacture of perfumes and cosmetics.

*Production.*—Castoreum is collected in Canada by fur trappers. Supplies are also furnished by Russia, but have greatly declined in recent years.

*Imports* of castor or castoreum for 1911-1918 averaged 14,085 ounces, valued at \$5,616. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Ounces.</i>		
1918.....	24,704	\$7,985	\$0.32
1919.....	39,306	11,779	.30
1920.....	7,720	2,491	.32
1921 (9 months).....	6,700	1,533	.23

*Exports.*—Statistics not available.

## CIVET.

(See Survey A-14.)

*Description and uses.*—Civet is a secretion contained in a pouch of the civet cat of Abyssinia. It is a semiliquid yellow substance, becoming brown on exposure to the air. It has a strong odôr and is used exclusively for perfumery. Substances which resemble civet are now produced synthetically and are available in liquid and crystalline form.

*Imports* of civet in 1913 were 11,269 ounces, valued at \$15,557, and were admitted free of duty. In the fiscal year 1918 the imports

were 9,766 ounces, valued at \$11,877, yielding a revenue of \$2,375. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	Ounces.				Per cent.
1918.....	9,322	\$11,560	\$1.24	\$2,312	20
1919.....	17,688	19,552	1.11	3,910	20
1920.....	11,312	18,678	1.65	3,736	20
1921 (9 months).....	4,150	5,984	1.44	.....	20

*Important changes in classification.*—Civet is dutiable under paragraph 49 of the act of 1913.

*Suggested changes.*—Change comma to a semicolon after “civet” and strike out “and” before “musk” because musk alone of the articles named in paragraph 1506 comes in as grained or in pods.

#### MUSK.

(See Survey A-14.)

*Description and uses.*—Musk is a dried secretion from the preputial follicles of the male musk deer. The chief source of supply is Tibet, China. Musk enters commerce in two forms, either in the dried sacs or pods as taken from the deer, or the pods are opened and the musk removed, when it is known as grain musk. An “American musk,” the sacs of the common muskrat, have been used as a substitute. Owing to its high price, musk is one of the most frequently adulterated perfume materials. An imitation musk is prepared from coal tar. Musk is of chief value as an ingredient of perfume and is said to add strength and persistency to vegetable essences.

*Production.*—The musk deer is a small animal found in the mountains and table-lands of Central Asia. The animal is taken for its hide and musk, chiefly the latter. China, which imports musk from Tibet, consumes about half of the world’s total output. Shanghai is the principal export market. The value of the 1915 musk crop was \$266,000, and in 1916 there were shipped 25,160 ounces, valued at \$407,000.

*Imports.*—France has usually been the largest importer of Chinese musk, but in 1915 the United States stood first, taking about one-fourth of the year’s product.

The import of crude musk in natural pods in 1913 was 12,994 ounces, valued at \$124,855; in 1918 (fiscal year) it was 5,516 ounces, valued at \$33,970, and yielded a revenue of \$6,794. The import of grain musk in 1913 was valued at \$7,699 and yielded a revenue of \$769; in 1917 it increased to \$63,304 and yielded a revenue of \$12,660; and in 1918 (fiscal year) declined to \$29,246.

Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
----------------	-----------	--------	-------------	-------	------------------

## MUSK, GRAINED.

	Ounces.				Per cent.
1918.....	891	\$3,154		\$631	20
1919.....	1,465	5,596	\$6.28	1,119	20
1920.....	3,666	7,382	5.04	1,476	20
1921 (9 months).....		45,066	12.29		

## MUSK, IN PODS.

1918.....	7,969	\$136,610	\$17.14	\$27,322	20
1919.....	10,780	156,110	14.48	31,222	20
1920.....	13,502	242,041	17.93	48,408	20
1921 (9 months).....	2,542	29,790	11.72		

*Important changes in classification.*—Musk is dutiable under paragraph 49, act of 1913.

## PARAGRAPH 1507.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1507. Any animal imported by a citizen of the United States, specially for breeding purposes, shall be admitted free, whether intended to be used by the importer himself or for sale for such purposes, except black or silver foxes: *Provided*, That no such animal shall be admitted free unless pure bred of a recognized breed and duly registered in a book of record recognized by the Secretary of Agriculture for that breed: *Provided further*, That the certificate of such record and pedigree of such animal shall be produced and submitted to the Department of Agriculture, duly authenticated by the proper custodian of such book of record, together with an affidavit of the owner, agent, or importer that the animal imported is the identical animal described in said certificate of record and pedigree. The Secretary of Agriculture may prescribe such regulations as may be required for determining the purity of breeding and the identity of such animal: *And provided further*, That the collectors of customs shall require a certificate from the Department of Agriculture stating that such animal is pure bred of a recognized breed and duly registered in a book of record recognized by the Secretary of Agriculture for that breed.

The Secretary of the Treasury may prescribe such additional regulations as may be required for the strict enforcement of this provision.

Horses, mules, asses, cattle, sheep, and other domestic animals straying across the boundary line into any foreign country, or driven across such boundary line by the owner for temporary pasturage purposes only, together with their offspring,

## H. R. 7456.

## SENATE AMENDMENTS.

shall be dutiable unless brought back to the United States within eight months, in which case they shall be free of duty, under regulations to be prescribed by the Secretary of the Treasury: *And provided further*, That the provisions of this Act shall apply to all such animals as have been imported and are in quarantine or otherwise in the custody of customs or other officers of the United States at the date of the taking effect of this Act.

## ACT OF 1909.

## ACT OF 1913.

PAR. 492. Any animal imported by a citizen of the United States, specially for breeding purposes shall be admitted free, whether intended to be so used by the importer himself, or for sale for such purpose: *Provided*, That no such animal shall be admitted free unless pure bred of a recognized breed, and duly registered in the book of record established for that breed: *And provided further*, That certificate of such record and of the pedigree of such animal shall be produced and submitted to the customs officer, duly authenticated by the proper custodian of such book of record, together with the affidavit of the owner, agent, or importer that such animal is the identical animal described in said certificate of record and pedigree: *And provided further*, That the Secretary of Agriculture shall determine and certify to the Secretary of the Treasury what are recognized breeds and pure bred animals under the provisions of this paragraph. The Secretary of the Treasury may prescribe such additional regulations as may be required for the strict enforcement of this provision. Cattle, horses, sheep, or other domestic animals straying across the boundary line into any foreign country, or driven across such boundary line by the owner for temporary pasturage purposes only, together with their offspring, may be brought back to the United States within six months free of duty, under regulations to be prescribed by the Secretary of the Treasury: *And provided further*, That the provisions of this Act shall apply to all such animals as have been imported and are in quarantine, or otherwise in the custody of customs or other officers of the United States, at the date of the passage of this Act.

PAR. 397. Any animal imported by a citizen of the United States, specially for breeding purposes, shall be admitted free, whether intended to be used by the importer himself or for sale for such purposes: *Provided*, That no such animal shall be admitted free unless pure bred of a recognized breed, and duly registered in a book of record recognized by the Secretary of Agriculture for that breed: *And provided further*, That the certificate of such record and pedigree of such animal shall be produced and submitted to the Department of Agriculture, duly authenticated by the proper custodian of such book of record, together with an affidavit of the owner, agent, or importer that the animal imported is the identical animal described in said certificate of record and pedigree. The Secretary of Agriculture may prescribe such regulations as may be required for determining the purity of breeding and the identity of such animal: *And provided further*, That the collectors of customs shall require a certificate from the Department of Agriculture stating that such animal is pure bred of a recognized breed and duly registered in a book of record recognized by the Secretary of Agriculture for that breed.<sup>2</sup>

The Secretary of the Treasury may prescribe such additional regulations as may be required for the strict enforcement of this provision.

Horses, mules, and asses straying across the boundary line into any foreign country, or driven across such boundary line by the owner for temporary pasturage purposes only, together with their offspring, shall be dutiable unless brought back to the United States within six months, in which case they shall be free of duty, under regulations to be prescribed by the Secretary of the Treasury: *And provided further*, That the provisions of this Act shall apply to all such animals as have been imported and are in quarantine or otherwise in the custody of customs or other officers of the United States at the date of the taking effect of this Act.

<sup>2</sup> Par. 15 of the emergency tariff act of 1921 reads: "Cattle and sheep and other stock imported for breeding purposes shall be admitted free of duty."

## ANIMALS IMPORTED SPECIALLY FOR BREEDING PURPOSES.

*Production.*—Swine: In 1919, there were 2,050,000 pure-bred swine in the United States, 3.5 per cent of the total number. Over half were in the Middle Western States. The leading breeds were the Duroc Jersey, Poland China, Chester White, and Hampshire. Cattle: Three per cent of the cattle in 1919, or 1,982,000 were pure bred. Somewhat over half were beef breeds, of which the principal ones were the Hereford, Shorthorn, and Aberdeen Angus. The Holstein Friesian and Jersey breeds made up over 80 per cent of the pure-bred dairy cattle. Sheep: Of the total number of sheep, 1.3 per cent were pure bred, the principal breeds being the Shropshire, Rambouillet, Merino, and Hampshire Down. Horses: Less than 1 per cent of the horses on farms are pure bred, the Percheron and the Belgian being the favorite breeds.

*Imports.*—Statistics previous to 1914 are available as to the number of pure-bred cattle, sheep, and hogs imported, but as paragraph 619 of the act of 1913 provides for the free entry of all domestic live animals suitable for human food, certificates of pure breeding were not required for these animals until May 28, 1921, when the emergency tariff act became effective. In 1913, 2,024 pure-bred cattle—the Guernsey, Jersey, Shorthorn, and Ayrshire being the principal breeds—806 pure-bred sheep, and 29 pure-bred hogs were imported. The year 1913 was an average one for the importation of pure-bred horses before the war, a total of 2,990 entering. Of these, 1,482 were Percherons, 977 Belgian draft horses, and 185 of the Shire breed. In 1913, 576 pure-bred dogs and 24 pure-bred cats were imported.

Imports declined during the war, only 180 pure-bred horses entering in the fiscal year 1918, as compared with 1,210 during 1914. Certificates of pure breeding were issued for 260 animals in 1918 and 1,860 in 1914. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Horses for breeding purposes:				
Number.....	387	123	144	135
Value.....	\$359,060	\$219,469	\$464,554	\$285,821
Asses and burros for breeding purposes:				
Number.....	21	3	7	.....
Value.....	\$1,765	\$420	\$140	.....
Dogs for breeding purposes:				
Number.....	62	189	387	353
Value.....	\$7,167	\$36,347	\$57,497	\$48,134
All other animals for breeding purposes: <sup>1</sup>				
Number.....	.....	29	167	88
Value.....	\$26,557	\$752	\$30,176	\$956

<sup>1</sup> Does not include cattle, sheep, and swine for breeding purposes, imports of which after 1913 were not separately reported.

*Exports.*—Statistics not available.

*Important changes in classification.*—Black or silver foxes were specifically exempted in order that the proposed specific duty of \$350 per animal should apply to all foxes, including breeding animals, to insure that none but high-grade breeding stock should come in and that American breeds should be thereby improved.

The free-entry period for domestic animals straying or driven across the boundary into a foreign country for temporary pasturage only has been extended from six to eight months.

*Suggested changes.*—The exception of black or silver foxes in lines 22 and 23, page 174, of H. R. 7456, would come better after "breeding purposes" in line 20. The final provision, carried down from previous acts, may be eliminated as unnecessary.

### PARAGRAPH 1508.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1508. Animals brought into the United States temporarily for a period not exceeding six months, for the purpose of breeding, exhibition, or competition for prizes offered by any agricultural, polo, or racing association; but a bond shall be given in accordance with regulations prescribed by the Secretary of the Treasury; also teams of animals, including their harness and tackle, and the wagons or other vehicles actually owned by persons emigrating from foreign countries to the United States with their families, and in actual use for the purpose of such emigration, under such regulations as the Secretary of the Treasury may prescribe; and wild animals and birds intended for exhibition in zoological collections for scientific or educational purposes, and not for sale or profit.

#### ACT OF 1909.

PAR. 493. Animals brought into the United States temporarily for a period not exceeding six months, for the purpose of breeding, exhibition or competition for prizes offered by any agricultural, polo, or racing association; but a bond shall be given in accordance with regulations prescribed by the Secretary of the Treasury; also teams of animals, including their harness and tackle and the wagons or other vehicles actually owned by persons emigrating from foreign countries to the United States with their families; and in actual use for the purpose of such emigration under such regulations as the Secretary of the Treasury may prescribe; and wild animals intended for exhibition in zoological collections for scientific and educational purposes, and not for sale or profit [Free].

#### ACT OF 1913.

PAR. 398. Animals brought into the United States temporarily for a period not exceeding six months, for the purpose of breeding, exhibition or competition for prizes offered by any agricultural, polo, or racing association; but a bond shall be given in accordance with regulations prescribed by the Secretary of the Treasury; also teams of animals, including their harness and tackle, and the wagons or other vehicles actually owned by persons emigrating from foreign countries to the United States with their families, and in actual use for the purpose of such emigration under such regulations as the Secretary of the Treasury may prescribe; and wild animals intended for exhibition in zoological collections for scientific and educational purposes, and not for sale or profit [Free].

#### ANIMALS FOR EXHIBITION, TEAMS OF IMMIGRANTS, ETC.

*Imports.*—Separate figures are not available for animals imported temporarily for the purpose of breeding, etc.; they are included in the figures for pure-bred animals given in paragraph 1507. Statistics for animals of immigrants show no steady movement of increase

or decrease. The average number of horses during 1914-1918 was 1,157, valued at \$114,238, and the average of animals of all other kinds was 50, valued at \$3,504.

Wild animals intended for exhibition, etc., imported in the fiscal year 1918 were valued at \$7,052, and the average value for 1914-1918 was \$12,783.

Imports for the calendar years, 1918-1921 follow:

	1918	1919	1920	1921 (9 months).
Teams of immigrants, etc.—Horses:				
Number.....	329	819	583	294
Value.....	\$67,045	\$86,995	\$66,049	\$28,240
Teams of immigrants, etc.—Asses and burros:				
Number.....	13	55	60	35
Value.....	\$1,215	\$5,580	\$7,945	\$3,590
Teams of immigrants, etc.—All other:				
Number.....	24	10	15	4
Value.....	\$3,040	\$1,680	\$1,720	\$400
Wild animals, etc.:				
Number.....		191	256	25
Value.....	\$542	\$1,466	\$8,466	\$3,666

*Important changes in classification.*—Birds are added to the provision for zoological collections because of an interpretation restricting "animals" for tariff purposes to quadrupeds.

#### PARAGRAPH 1509.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1509. Antimony ore and needle or liquated antimony, but only as to the antimony content.

ACT OF 1909.

ACT OF 1913.

PAR. 173. \* \* \* antimony ore, stibnite and matte containing antimony, but not containing more than ten per centum of lead, 1 cent per pound on the antimony contents therein contained: *Provided*, That on all importations of antimony-bearing ores and matte containing antimony the duties shall be estimated at the port of entry, and a bond given in double the amount of such estimated duties for the transportation of the ores by common carriers bonded for the transportation of appraised or unappraised merchandise to properly equipped sampling or smelting establishments, whether designated as bonded warehouses or otherwise. On the arrival of the ores at such establishment, they shall be sampled according to commercial methods under the supervision of government officers, who shall be stationed at such establishment, and who shall submit the samples thus obtained to a government assayer, designated by the Secretary of the Treasury,

PAR. 144. \* \* \* matte containing antimony but not containing more than 10 per centum of lead, 10 per centum ad valorem; \* \* \*.

PAR. 396. Antimony ore and stibnite containing antimony, but only as to the antimony content [Free].

## ACT OF 1909.

## ACT OF 1913.

who shall make a proper assay of the sample, and report the result to the proper customs officers, and the import entry shall be liquidated thereon, except in case of ores that shall be removed to a bonded warehouse to be refined for exportation as provided by law, and the Secretary of the Treasury is authorized to make all necessary regulations to enforce the provisions of this paragraph; \* \* \*

## ANTIMONY ORE AND NEEDLE ANTIMONY.

(See Survey C-17.)

*Description and uses.*—The most important antimony ore is stibnite or antimony sulphide. Other important commercial antimony metals are (1) valentinite or antimony oxide and a related form, senarmonite; (2) antimony ocher; (3) jamesonite or lead antimony sulphide.

Besides the use of antimony ores as raw materials for the metal antimony, commercial antimony products, such as antimony pigments and liquated antimony sulphide, are obtained in the smelting process, the latter used directly in the manufacture of safety matches.

Crude, or needle antimony, is a product obtained by subjecting natural sulphide ore to a red heat, thereby melting (liquating) the valuable mineral, which is drawn away from the valueless constituents. Antimony is used chiefly in alloys, especially type metal, Britannia metal, and babbitt metal. Needle antimony has military uses, is a common source of the oxide and salts of antimony, and is used in safety matches.

The provision in paragraph 396 of the act of 1913 for stibnite containing antimony was declared to describe a natural product called an ore and was held not to include a product derived from an ore by liquation. Liquation was defined as the extraction of a metal from its ore by heating it enough to fuse the metal but not enough to fuse the other contents; this was adjudged a smelting operation. The merchandise there in issue was found to be commercially known as "antimony crude," and was held to be a matte within the meaning of that expression in paragraph 144 of the act of 1913 and dutiable accordingly under paragraph 144 of the act of 1913 rather than exempt from duty under paragraph 396 as antimony ore or stibnite containing antimony. (*Harshaw, Fuller and Goodwin Co. v. United States*, 11 Ct. Cust. Appls., —; T. D. 38634, of 1921.)

*Production.*—The production of antimony ore was negligible until the industry was stimulated by extraordinarily high prices during the war. Domestic deposits are widely scattered and of doubtful importance. In 1916 the output was estimated at 4,500 tons, and in 1917 at 1,060 tons. On account of the low price of antimony, the domestic production of the ore has, in recent years, practically ceased. China is the leading producer of antimony ore, furnishing fully 60 per cent of the world's supply. The ore, however, is obtained in many other countries.

Needle antimony, like antimony ore, is also imported in varying amounts. During the war a small antimony smelting industry developed, operated almost wholly on imported ore. The annual requirements of antimony prior to the war were roughly 7,000 tons, of which about one-third was supplied by silver lead smelters and the

remainder from imports consisting chiefly of metal. During the war the consumption of antimony increased to about 20,000 tons, of which slightly more than one-third was derived from antimonial lead and antimony metal smelted here. The production of antimonial lead in 1920 amounted to 12,535 short tons, valued at \$1,963,255. The antimony content was 2,033 short tons.

China dominates the antimony situation by its large and cheaply mined deposits. The Chinese companies, together with a few Japanese smelters who also treat a portion of the Chinese ore, contribute approximately 60 per cent of the world's output.

*Imports.*—Imports of antimony ore in 1914 amounted to 26 gross tons, valued at \$1,245, practically all of which came from China. Imports for more recent years may be divided into two classes, shown as follows:

Calendar year.	Quantity.		Value.	Duty.	Ad valorem rate.
	Tons.	Pounds.			

ORE AND STIBNITE CONTAINING ANTIMONY.

					<i>Per cent.</i>
1918.....	3,003	2,849,728	\$177,731		
1919.....	887	818,401	54,477		
1920.....	1,526	1,363,441	70,285		
1921 (9 months).....	190	196,107	11,682		

ANTIMONY MATTE CONTAINING NOT MORE THAN 10 PER CENT LEAD.

1918.....		1,666,111	\$113,258	\$11.26	10
1919.....		556,418	19,202	1,920	10
1920.....		2,750,147	123,902	12,390	10
1921 (9 months).....		325,005	9,588		

*Exports.*—Statistics not available.

PARAGRAPH 1510.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1510. Annatto and all extracts of, archil or archil liquid, cochineal, cudbear, gambier, litmus prepared or unprepared, saffron and safflower; all of the foregoing not containing alcohol

ACT OF 1909.

ACT OF 1913.

PAR. 494. Annatto, roucou, rocoa, or orleans, and all extracts of [Free].

PAR. 539. Cochineal [Free].

PAR. 550. Cudbear [Free].

PAR. 575. Gambier [Free].

PAR. 615. Litmus, prepared or not prepared [Free].

PAR. 642. Orchil, or orchil liquid [Free].

PAR. 663. Saffron and safflower, and extract of,<sup>3</sup> and saffron cake [Free].

PAR. 694. Terra japonica [Free].

PAR. 399. Annatto, roucou, rocoa, or orleans, and all extracts of [Free].

PAR. 455. Cochineal [Free].

PAR. 469. Cudbear [Free].

PAR. 492. Gambier [Free].

PAR. 536. Litmus, prepared or not prepared [Free].

PAR. 564. Orchil, or orchil liquid [Free].

PAR. 31. \* \* \* saffron and safflower, and extract of,<sup>3</sup> and saffron cake, 10 per centum ad valorem: *Provided*, That no article containing alcohol shall be classified for duty under this paragraph.

PAR. 630. Terra japonica [Free].

<sup>3</sup> Extracts of safflower and saffron are not articles of commerce.

## ANNATTO.

(See Survey A-8.)

*Description and uses.*—Annatto (arnotto, rocoa, orleans, roucou) is a natural dye derived from the seed shells of the *Bixa arellana*, a shrub native to Central America, Guiana, East and West Indies, and India; it is also extensively cultivated. Bixin, the important coloring constituent, is soluble in alkaline solutions, partly soluble in water and more soluble in alcohol. Annatto is used as a yellow coloring matter for oils, butter, cheese, and margarine.

Annatto is imported in a partly dried condition in rolls wrapped in Banana leaves weighing 2 to 3 pounds and in cakes weighing 8 to 10 pounds.

*Imports* during 1910-1918 averaged 629,217 pounds, valued at \$47,163. The following table shows the imports since 1917:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	655,250	\$68,961	\$0.10
1919.....	356,432	19,972	.06
1920.....	1,004,129	40,108	.04
1921 (9 months).....	470,580	16,498	.04

## ARCHIL AND CUDBEAR.

(See Survey A-8.)

*Description and uses.*—Archil and cudbear are purple dyes derived by chemical processing from certain lichens (genus, *Rocella*) growing in the Cape of Good Hope, Norway, Sweden, South America, Azores, Cape Verde Islands, and other islands. The red or blue dye is sold in several forms (1) as an archil paste; (2) cudbear, which is archil paste dried and ground fine; (3) archil extract; (4) as "archil liquor" of several degrees of strength.

The lichens contain colorless phenols (orcein being the most important), which by oxidation in alkaline solution give the coloring matter. Archil and cudbear are used for bluish reds on wool, silk, and feathers.

*Production.*—The shredded lichen is digested with ammonia solution and air at about 60° F. for several days, yielding first blue archil paste, or, if the action is continued, red archil paste. After removal of the lichens from the paste it is known as "archil liquor." By drying and grinding the archil paste prepared from *Lecanora tartarea*, a purple powder results known as "cudbear."

*Imports* of archil for 1910-1918 averaged \$52,439. Imports of cudbear, 1910-1918 averaged 35,082 pounds, valued at \$3,602. Imports since 1917 are given in the table on the following page.

Calendar year.	Quantity.	Value.	Unit value.
ARCHIL.			
	<i>Pounds.</i>		
1918.....		\$56,284	
1919.....	372,606	42,085	\$0.11
1920.....	547,384	58,682	.11
1921 (9 months).....	516,194	77,664	.15

CUDBEAR.			
1918.....	54,447	\$9,411	\$0.17
1919.....	33,391	4,150	.12
1920.....	50,170	8,463	.17
1921 (9 months).....	19,470	2,890	.15

## COCHINEAL.

(See Survey A-8.)

*Description and uses.*—Cochineal is the only important dye of animal origin. It consists of the dried body of the female insect *Coccus cacti*, which is native to Mexico, Guatemala, the Canary Islands, and Java. The difference in the color of the dye (gray or black) is caused by variation in the method of killing the insect. The ground insects are used directly as a dye which has a small application for scarlets and reds on textiles and for scarlet color lakes. As it is nonpoisonous, it is used as a food dye.

*Production.*—The insects are collected alive and killed by exposure to the dry heat of an oven or by being inclosed in a bag and immersed in boiling water or steam. After being killed the insects are dried and ground to a powder. There is no domestic supply.

*Imports* of cochineal for 1910–1918 averaged 205,738 pounds, valued at \$82,222, and came chiefly from Mexico. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	237,402	\$116,660	\$0.49
1919.....	116,014	52,029	.45
1920.....	202,808	81,979	.40
1921 (9 months).....	19,393	5,086	.26

## CUDBEAR.

(See Archil, p. 1236.)

## GAMBIER.

(See Survey A-8.)

*Description and uses.*—Gambier (yellow cutch, cubical cutch, cube gambier, and, formerly, terra japonica) is the solid extract prepared from the leaves, shoots, and twigs of the Indian shrub *Uncaria gambier*; it is native to the East Indies, Cochin-China, eastern Asia, and is grown in Malacca, Bintang, and Singapore. It contains from 30 to 40 per cent tannin and a coloring matter, and is used both in

tanning and dyeing. It appears in the market as "block gambier" (of 200 pounds each) and "cubed gambier," about three-fourths of an inch in diameter. The liquid extract prepared from the imported block contains 25 per cent tannin.

*Production* of gambier extract in 1914 was 704,763 pounds, valued at \$26,400; in 1919 (preliminary figures) 1,006,000 pounds, valued at \$87,200. These figures must represent imported solid extract, dissolved and sold as liquid extract, as gambier is not native to the United States.

*Imports* of gambier for 1910-1918 averaged 16,187,035 pounds, valued at \$880,129. Imports since 1917 are shown below:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	8,755,270	\$949,971	\$0.11
1919.....	4,744,651	432,499	.09
1920.....	10,095,325	806,583	.08
1921 (9 months).....	4,132,306	172,187	.04

## LITMUS.

(See Survey A-8.)

*Description and uses.*—Litmus, a coloring matter closely related to archil, is obtained chiefly from the lichens *Lecanora tinctoria*, *L. orinca*, and *Rocella tinctoria*, which occur abundantly in Scandinavia and the French Pyrenees. The commercial product consists of calcium carbonate or sulphate mixed with the coloring matter and pressed into cubes. It is used in chemical laboratories as an indicator in determining the acidity and alkalinity of solutions. It has had application as wine vinegar color.

*Production.*—Litmus is prepared by fermenting the lichens in the presence of ammonium or potassium carbonate, and mixing the coloring matter obtained with lime or gypsum. There is no domestic production.

*Imports* of litmus for 1910-1918 averaged \$252. Imports since 1917 are shown below:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	4,252	\$3,407	\$0.80
1919.....	1,587	1,479	.93
1920.....	6,490	4,169	.64
1921 (9 months).....	593	420	.71

## SAFFRON.

(See Survey A-8.)

*Description and uses.*—Saffron or saffron valencia consists of the dried petals of a plant (*Crocus sativus*) native to Asia. It contains an aromatic oil known as saffron oil and a yellow and a red

coloring matter. It is cultivated in Spain, France, and Austria. For convenience in shipment it is sometimes pressed into cakes known commercially as "saffron cakes," or sold loose as "hay saffron." Saffron is used to color and flavor foods, especially pastries, and in medicine. An imported article known as "American saffron" is really safflower (see *infra*). It has been successfully grown in the United States, but was unprofitable on account of high labor cost.

*Production.*—No domestic production.

*Imports.*—The average annual import of saffron and safflower during 1913-1918 was valued at \$83,952 and yielded a revenue of \$8,395. Imports since 1917 are shown below:

Calendar year.	Quantity.	Value.	Duty.	Unit value.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....		\$70,032	\$7,003		10
1919.....	23,663	106,951	10,695	\$4.52	10
1920.....	21,664	127,579	12,758	5.89	10
1921 (9 months).....	22,622	42,914		1.90	

*Important changes in classification.*—Saffron and safflower and extracts of saffron and safflower and saffron cake are dutiable under paragraph 31 of the act of 1913. The words "and extract of, and saffron cake," have been omitted from H. R. 7456; the extracts are not articles of commerce and saffron cake is the form in which saffron is usually imported.

*Suggested changes.*—It is suggested that the words "in any form" be inserted after the word "safflower," so as to include saffron and safflower in any form and remove any doubt as to the inclusion of the extract of either saffron or safflower if it should be imported and of saffron cake.

#### SAFFLOWER.

(See Survey A-8.)

*Description and uses.*—Safflower, known as American saffron or false saffron, is the name given to the dried flowers of a thistlelike plant (*Carthamus tinctorius*) native to southern Asia, but cultivated in Europe, China, India, Persia, Egypt, Mexico, and South America. It contains, besides two unimportant yellow coloring matters, a small amount of a red color called carthamin, the only constituent of value. An extract of carthamin is sold as a thin aqueous paste or a dried powder and is called safflower extract, or safflower carmine. Roasted cobalt ores and other cobalt pigments, sometimes called safflower, should not be confused with the vegetable color. Safflower is a weak dye of no importance in textile dyeing. It is used as a red color for cosmetics, toilet articles, artists' colors, artificial flowers, and medicine.

*Imports* are combined with saffron, *supra*.

*Important changes in classification.*—Safflower is dutiable under paragraph 31, act of 1913. See also saffron, *supra*.

## PARAGRAPH 1511.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1511. Antitoxins, vaccines, viruses, serums, and bacterins, used for therapeutic purposes.

ACT OF 1909.

ACT OF 1913.

PAR. 704. Vaccine virus [Free].  
[No corresponding provision for the other commodities.]

PAR. 400. Antitoxins, vaccine virus, and all other serums derived from animals and used for therapeutic purposes [Free].

## ANTITOXINS, VACCINES, VIRUSES, SERUMS, AND BACTERINS.

(See Survey FL-2.)

*Description and uses.*—The sale and propagation of the biological products, antitoxins, vaccine virus, serums, etc., are controlled by the Public Health Service. They are defined in the act of July 1, 1902, as follows: (1) A virus is a product containing the minute living cause of an infectious disease. (2) A serum is the product obtained from the blood of an animal by removing the clot or clot compounds and the blood cells. (3) An antitoxin is a product containing the soluble substance in the serum or other body fluid of an immunized animal which specifically neutralizes the toxin against which the animal is immune. The use of vaccines began with Jenner's discovery in 1796, that the vaccine from cowpox conferred immunity against smallpox. Other important products are diphtheria antitoxin, antityphoid vaccine, and antianthrax, antidysenteric, anti-tetanus, antipneumonia, anticholera, and antirabic serums.

*Production.*—There were 98 manufacturers of biological products in 1914, with an output valued at \$6,223,475. In 1919 (preliminary figures) there were 94 plants with an output valued at \$15,876,400.

*Imports.*—Before the war Germany, France, England, and Switzerland supplied the bulk of imports, in 1914 valued at \$19,019, and decreasing to \$6,009 in the fiscal year 1918. Imports since 1917 were valued at \$5,732, \$6,982, \$10,097, and \$3,027 in the calendar years 1918, 1919, 1920, and in the first nine months of 1921, respectively.

*Exports.*—Statistics not available.

*Important changes in classification.*—Bacterins have been mentioned specifically for the first time.

## PARAGRAPH 1512.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1512. Arrowroot in its natural state and not manufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 496. Arrowroot in its natural state and not manufactured [Free].

PAR. 402. Arrowroot in its natural state and not manufactured [Free].

## ARROWROOT.

(See Survey G-33.)

*Description and uses.*—Arrowroot is a tuberous plant, which belongs to the family maranta. It yields a fine, easily digested starch, which is used in the bakery trade for pie filling and biscuits, and elsewhere for ice-cream powders, food for infants and invalids, and in the preparation of pharmaceuticals. It is also used in the textile industry for finishing.

*Production.*—No true arrowroot is produced in this country. A product called Florida arrowroot is produced in the Everglades region of Florida. It is the pith of the stem of the wild sago palm plant generally known as Coonti. In 1919 the annual production of the Florida arrowroot starch was about 850,000 pounds. The true arrowroot tubers are sometimes imported and the starch manufactured from them.

*Imports of crude arrowroot in 1914* were 8,615 pounds, valued at \$316. Considerable refined arrowroot starch is imported, amounting in 1914 to 179,056 pounds, valued at \$20,041, of which 106,392 pounds, valued at \$6,377, were of the St. Vincent variety (British West Indies). Statistics for the calendar years 1918-1921 follow:

Crude arrowroot.	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	49,392	840,600	745,142	2,540
Value.....	\$10,184	\$33,699	\$50,516	\$368

## PARAGRAPH 1513.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1513. Sulphide of arsenic.

ACT OF 1909.

ACT OF 1913.

PAR. 497. Arsenic and sulphide of arsenic, or orpiment [Free].

PAR. 403. Arsenic and sulphide of arsenic, or orpiment [Free].

## SULPHIDE OF ARSENIC.

(See Survey FL-6.)

*Description and uses.*—The chief ores of arsenic are the two sulphides, orpiment (yellow sulphide) and realgar (red sulphide). Orpiment is used in dyeing to reduce indigo, and in leather manufacture for removing the hair from skins. Realgar is used as a pigment, and for making a white (Bengal) fire used as a signal light.

*Production.*—The production of sulphide of arsenic is included under that of white arsenic (par. 1).

*Imports of "arsenic, and sulphide of, or orpiment"* were 4,148,928 pounds, valued at \$169,614 in 1914. Considerable yearly variation is shown. Prior to 1914 England, Germany, and Canada supplied most of the imports; since then, Mexico and Canada. Imports consist

chiefly of white arsenic. Imports since 1917, chiefly from Japan, Germany, and Canada, have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	9,683,738	\$340,600	\$0.09
1919.....	4,302,355	316,687	.07
1920.....	8,160,089	684,016	.08
1921 (9 months).....	5,447,196	455,019	.08

In the classification of imports arsenic and sulphide of, or orpiment, have been confused with arsenious acid or white arsenic (par. 1). Therefore the figures for the one should be considered in conjunction with the other.

*Exports* of domestic arsenic are not stated. Imported arsenic and sulphide of arsenic, or orpiment, were reexported from the United States in 1918 to the amount of 193,600 pounds, valued at \$27,840.

*Important changes in classification.*—The provision for “arsenic and sulphide of arsenic, or orpiment,” in the act of 1913 (par. 403), has been changed to “sulphide of arsenic.”

*Suggested changes.*—Metallic arsenic should be specially provided for in a paragraph following 1509, if exempt from duty, or in a paragraph following 376, if dutiable. It is not the same as, but is manufactured from, white arsenic or arsenious acid, which is provided for in paragraph 1.

#### PARAGRAPH 1514.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1514. Articles the growth, produce, or manufacture of the United States, when returned after having been exported, without having been advanced in value or improved in condition by any process of manufacture or other means if imported by or for the account of the person who exported them from the United States; steel boxes, casks, barrels, carboys, bags, and other containers or coverings of American manufacture exported filled with American products, or exported empty and returned filled with foreign products, including shooks and staves when returned as barrels or boxes; also quicksilver flasks or bottles, iron or steel drums of either domestic or foreign manufacture, used for the shipment of acids, or other chemicals, which shall have been actually exported from the United States; but proof of the identity of such articles shall be made, under general regulations to be prescribed by the Secretary of the Treasury, but the exemption of bags from duty shall apply only to such domestic bags as may be imported by the exporter thereof, and if any such articles are subject to internal-revenue tax at the

## H. R. 7456.

## SENATE AMENDMENTS.

time of exportation, such tax shall be proved to have been paid before exportation and not refunded; photographic dry plates and films of American manufacture (except moving-picture films), exposed abroad, whether developed or not, and photographic films light struck or otherwise damaged, or worn out, so as to be unsuitable for any other purpose than the recovery of the constituent materials, provided the basic films are of American manufacture, but proof of the identity of such articles shall be made under general regulations to be prescribed by the Secretary of the Treasury; articles exported from the United States for repairs may be returned upon payment of a duty upon the value of the repairs at the rate at which the article itself would be subject if imported, under conditions and regulations to be prescribed by the Secretary of the Treasury: *Provided*, That this paragraph shall not apply to any article upon which an allowance of drawback has been made, the reimportation of which is hereby prohibited except upon payment of duties equal to the drawbacks allowed; or to any article manufactured in bonded warehouse and exported under any provision of law: *Provided further*, That when manufactured tobacco which has been exported without payment of internal-revenue tax shall be reimported it shall be retained in the custody of the collector of customs until internal-revenue stamps in payment of the legal duties shall be placed thereon: *And provided further*, That the provisions of this paragraph shall not apply to animals made dutiable under the provisions of paragraph 1507.

## ACT OF 1909.

PAR. 500. Articles the growth, produce, or manufacture of the United States, not including animals, when returned after having been exported, without having been advanced in value or improved in condition by any process of manufacture or other means; casks, barrels, carboys, bags, and other containers or coverings of American manufacture exported filled with American products, or exported empty and returned filled with foreign products, including shooks and staves when returned as barrels or boxes; also quicksilver flasks or bottles, iron or steel drums used for the shipment of acids, of either domestic or foreign manufacture, which shall have been actually exported from the United States; but proof of the identity of such articles shall be made, under general regulations to be prescribed by the Secretary of the Treasury, but the exemption of bags from duty

## ACT OF 1913.

404. Articles the growth, produce, or manufacture of the United States, when returned after having been exported, without having been advanced in value or improved in condition by any process of manufacture or other means; steel boxes, casks, barrels, carboys, bags, and other containers or coverings of American manufacture exported filled with American products, or exported empty and returned filled with foreign products, including shooks and staves when returned as barrels or boxes; also quicksilver flasks or bottles, iron or steel drums of either domestic or foreign manufacture, used for the shipment of acids, or other chemicals, which shall have been actually exported from the United States; but proof of the identity of such articles shall be made, under general regulations to be prescribed by the Secretary of the Treasury, but the exemption of bags from

## ACT OF 1909.

## ACT OF 1913.

shall apply only to such domestic bags as may be imported by the exporter thereof, and if any such articles are subject to internal-revenue tax at the time of exportation, such tax shall be proved to have been paid before exportation and not refunded; photographic dry plates or films of American manufacture (except moving-picture films), exposed abroad, whether developed or not, and films from moving-picture machines, light struck or otherwise damaged, or worn out, so as to be unsuitable for any other purpose than the recovery of the constituent materials, provided the basic films are of American manufacture, but proof of the identity of such articles shall be made under general regulations to be prescribed by the Secretary of the Treasury: *Provided*, That this paragraph shall not apply to any article upon which an allowance of drawback has been made, the reimportation of which is hereby prohibited except upon payment of duties equal to the drawbacks allowed; or to any article manufactured in bonded warehouse and exported under any provision of law: *And provided further*, That when manufactured tobacco which has been exported without payment of internal-revenue tax shall be reimported it shall be retained in the custody of the collector of customs until internal-revenue stamps in payment of the legal duties shall be placed thereon.

[Amended by the act of July 27, 1911 (T. D. 31784), by striking out the words "not including animals" and adding the following proviso:

*And provided further*, That cattle, horses, sheep, and other domestic animals straying across the boundary line into any foreign country or driven across such boundary line by the owners for temporary pasturage purposes only, together with their offspring, shall be dutiable, unless brought back to the United States within six months, under regulations to be prescribed by the Secretary of the Treasury, in accordance with the provisions of paragraph 492.]

duty shall apply only to such domestic bags as may be imported by the exporter thereof, and if any such articles are subject to internal-revenue tax at the time of exportation, such tax shall be proved to have been paid before exportation and not refunded; photographic dry plates or films of American manufacture (except moving-picture films), exposed abroad, whether developed or not; and films from moving-picture machines, light struck or otherwise damaged, or worn out, so as to be unsuitable for any other purpose than the recovery of the constituent materials, provided the basic films are of American manufacture, but proof of the identity of such articles shall be made under general regulations to be prescribed by the Secretary of the Treasury; articles exported from the United States for repairs may be returned upon payment of a duty upon the value of the repairs at the rate at which the article itself would be subject if imported under conditions and regulations to be prescribed by the Secretary of the Treasury: *Provided*, That this paragraph shall not apply to any article upon which an allowance of drawback has been made, the reimportation of which is hereby prohibited except upon payment of duties equal to the drawbacks allowed; or to any article manufactured in bonded warehouse and exported under any provision of law: *And provided further*, That when manufactured tobacco which has been exported without payment of internal-revenue tax shall be reimported it shall be retained in the custody of the collector of customs until internal-revenue stamps in payment of the legal duties shall be placed thereon: *And provided further*, That the provisions of this paragraph shall not apply to animals made dutiable under the provisions of paragraph 397 [Free].

## ARTICLES RETURNED AFTER EXPORT.

*Imports* of returned articles in 1914 were valued at \$17,612,711, and for later calendar years as follows: 1918, \$22,771,874; 1919, \$44,779,370; 1920, \$96,797,484; 1921 (9 months), \$47,626,104. About 50 per cent of these returned articles are from Canada, with large amounts also from England, France, and Belgium. To some extent there are imports from practically all countries.

*Important changes in classification.*—The requirement in lines 10 and 11, page 177, of H. R. 7456, that the importer must also have been the exporter, is new.

## PARAGRAPH 1515.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1515. Asbestos, unmanufactured, asbestos crudes, fibers, stucco, and sand, or refuse containing not more than 15 per centum of foreign matter.

ACT OF 1909.

ACT OF 1913.

PAR. 501. Asbestos, unmanufactured [Free].

PAR. 406. Asbestos, unmanufactured [Free].

## ASBESTOS.

(See Survey N-20.)

*Description and uses.*—The term "asbestos," as commonly used, includes half a dozen minerals all having a well-developed fibrous structure but differing in chemical composition and in some physical characteristics. The most important of these minerals commercially is chrysotile, or serpentine asbestos. About 95 per cent of the asbestos used in manufacturing is chrysotile which commands a better price than the other fibrous minerals on the market. Amphibole asbestos is generally found in shorter fibers and its special use is in chemical laboratories and works where resistance to the action of acid is demanded. Crocidolite, or blue asbestos, is a special variety of amphibole asbestos differing from the others in appearance and in that it is more fusible, whereas an important property of other forms of asbestos is that they all resist even very high temperatures.

The fundamental property of any asbestos mineral that distinguishes it from all other minerals is that it is separable into fibers similar in many respects to cotton, wool, and other articles of vegetable or animal origin. The use depends on the length and fineness of the fiber, on its resistance to the action of heat and chemicals, and on its insulating value as a nonconductor of heat and electricity. Suitable asbestos of high grade is spun or woven into ropes and fabrics for safety curtains, mats, mattresses, upholstering, firemen's suits and gloves. Much high-grade asbestos is employed for friction facings in brakes and for packings. Low-grade asbestos is utilized for numerous purposes, which may be classed in three groups—building, insulating, and miscellaneous.

Asbestos is employed in building in many ways: In mixtures with cement to make fireproof shingles or slates; with Portland cement to make a protective surface on metal sheathing; in the form of asbestos paper for weather and sound proofing and also for fire-protection purposes. It is used widely for fireproof plaster, for floor tiling and in the manufacture of paints. Asbestos lumber and millboard are employed for many structural purposes.

Some of the many miscellaneous uses are for boiler and steam pipe coverings, fire brick, acid filters, lead-fume collectors, stove mats, cooking-utensil linings, etc.

"Asbestic," which consists merely of roughly ground serpentine residues, or very finely ground asbestos, commonly called "floats," is suitable for the manufacture of plaster cement, fireproof brick, and similar articles.

"Unmanufactured" asbestos as it comes on the market has been separated from adhering rock and consists of fibers graded according to length. The longer fibers that can be picked out by hand are sold as "crude." Crude asbestos is divided into (1) a high-class material with fibers over three-quarters of an inch long, used for the best grades of materials, and (2) fibers shorter than three-quarters inch but suitable for spinning and weaving. The remaining rock is sent to the mill and mechanically crushed and separated into three grades of "mill stock," according to the length of fiber. Mill stock is rarely suitable for weaving but can be made into pipe coverings, insulating materials, shingles, lumber, paper, and other articles.

*Production.*—Asbestos is mined in the United States, chiefly in five States—Arizona, California, Georgia, Maryland, and Oregon. Georgia has for many years been the largest producer of asbestos in the United States, although the more important product has come from Arizona. The latter is high grade, containing a large proportion of spinning fiber, and much of the fiber, because of its freedom from iron, is superior for electrical and some other purposes to most of the asbestos found in other countries. The Georgia fiber is valuable only for paints, cements, coverings, and similar articles, and can not be used in spinning.

Canada produces over 85 per cent of the world's total supply of asbestos. In normal times Russia is the second largest in order of production. During the last few years South Africa, including Rhodesia and the Union of South Africa, has produced increasing amounts annually, exceeding, it is believed, the output of Russia since 1916.

*Asbestos, unmanufactured—Production in United States.*

Year.	Short tons.	Value.	Year.	Short tons.	Value.
1914.....	1,247	\$18,965	1918.....	1,002	\$124,687
1915.....	1,731	76,952	1919.....	1,361	251,265
1916.....	1,479	448,214	1920 <sup>1</sup> .....	1,710	1,154,000
1917.....	1,683	506,056			

<sup>1</sup> Estimated.

*Asbestos, unmanufactured—Production in principal foreign countries, in short tons.*

Country.	1916	1917	1918	1919
Canada.....	133,439	135,502	141,465	153,069
Russia.....	<sup>1</sup> 9,030		<sup>1</sup> 6,614	
Union of South Africa.....	4,656	6,219	3,674	3,933
Rhodesia.....	6,158	9,563	8,574	9,740
Australia.....	( <sup>2</sup> )	( <sup>2</sup> )	( <sup>2</sup> )	2,005
Cyprus.....	( <sup>2</sup> )	( <sup>2</sup> )	( <sup>2</sup> )	<sup>3</sup> 1,491
India.....	( <sup>2</sup> )	( <sup>2</sup> )	( <sup>2</sup> )	435
Italy.....	90	94	88	
Total.....	153,373	151,378	160,415	

<sup>1</sup> Estimated.

<sup>2</sup> Statistics not available.

<sup>3</sup> Exports.

*Imports.*—In 1914 imports of unmanufactured asbestos were 76,524 tons, valued at \$1,678,736, practically all from Canada. Statistics for the calendar years 1918–1921 follow:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	122,946	120,777	149,605	43,330
Value.....	\$6,337,608	\$7,369,685	\$9,120,253	\$2,201,970

Imports are chiefly from Canada, British South Africa, Portuguese Africa, and England.

*Exports* for the calendar years 1918–1921 are as follows:

	1914	1918	1919	1920	1921 (9 months).
Quantity (tons).....	109	622	999	549	401
Value.....	\$5,050	\$51,053	\$157,416	\$141,071	\$99,587

Exports go chiefly to Italy, Germany, Japan, and France.

*Important changes in classification.*—All the paragraph after “unmanufactured” is new.

*Suggested changes.*—There is doubt whether the limitation of 15 per centum of foreign matter relates only to the refuse or includes other forms of asbestos. If the intention is to restrict it to refuse, the word “or” should be changed to “and”; if it is intended to relate back to the beginning of the paragraph, the word “and” before and the comma after “sand” should be stricken out, a comma inserted after “refuse,” and “or” changed to “and”; if it is intended to apply to sand and refuse, the comma after “sand” should be stricken out and the “or” changed to “and.”

#### PARAGRAPH 1516.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1516. Azides, fulminates, fulminating powder, and other like articles not specially provided for.

ACT OF 1909.

ACT OF 1913.

PAR. 434. Fulminates, fulminating powders, and like articles suitable for miners' use, twenty per centum ad valorem; all other not specially provided for in this section, thirty per centum ad valorem.

PAR. 490. Fulminates, fulminating powder, and other like articles not specially provided for in this section [Free].

#### AZIDES, FULMINATES, AND FULMINATING POWDERS.

(See Survey FL-18.)

*Description and uses.*—Fulminates, metallic salts of fulminic acid, are violent explosives. The chief commercial product is fulminate of mercury, although fulminate of silver is of some importance. Commercial mercury fulminate is a gray or brown sandlike powder, used as a detonator for high explosives, and to some extent in percussion caps and primers to ignite gunpowder and other low explosives. Fulminate of silver is extremely sensitive to shock when dry, and may be exploded by rubbing when in a moist state. It is, therefore, too sensitive for use as an ignitor or detonator, but is used in small and safe quantities in toy fireworks.

Lead azide is an important detonator. It is more stable than mercury fulminate. It is generally used with tetryl and trinitro-toluene.

*Production.*—Mercury fulminate is manufactured from purified metallic mercury, nitric acid, and alcohol. The product is purified by washing with water. Statistics are not available.

*Imports* of fulminates and fulminating powders suitable for miners' use from 1910 to 1917 ranged from \$226,352 in 1910 to \$21,961 in 1912. Since then imports have been negligible. Imports of other fulminates, fulminating powders, and like articles from 1910 to 1914 were negligible, and from 1915 to 1917 they were between \$110,000 and \$230,000. Statistics for the latter follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$247,940	.....
1919.....	7,340	15,705	\$2.14
1920.....	207,298	479,416	2.31
1921 (9 months).....	18,600	37,200	2.00

*Exports.*—Statistics not available.

*Important changes in classification.*—Azides are specifically provided for.

#### PARAGRAPH 1517.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1517. Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single yarns made of jute, jute butts, seg, Russian seg, New Zealand tow, Norwegian tow, aloe, mill waste, cotton tares, or other material not bleached, dyed, colored, stained, painted, or printed, not exceeding sixteen threads to the square inch, counting the warp and filling, and weighing not less than fifteen ounces per square yard; and waste of any of the foregoing articles suitable for the manufacture of paper.

ACT OF 1909.

ACT OF 1913.

PAR. 355. Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single yarns made of jute, jute butts, or hemp, not bleached, dyed, colored, stained, painted, or printed, not exceeding sixteen threads to the square inch, counting the warp and filling, and weighing not less than fifteen ounces per square yard, six-tenths of one cent per square yard.

PAR. 644. \* \* \* and waste bagging, and all other waste not specially provided for in this section, including \* \* \* old gunny bags, used chiefly for paper-making [Free].

PAR. 408. Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single yarns made of jute, jute butts, seg, Russian seg, New Zealand tow, Norwegian tow, aloe, mill waste, cotton tares, or other material not bleached, dyed, colored, stained, painted, or printed, not exceeding sixteen threads to the square inch, counting the warp and filling, and weighing not less than fifteen ounces per square yard; \* \* \* and waste of any of the above articles suitable for the manufacture of paper [Free].

## BAGGING FOR COVERING RAW COTTON.

(See Survey J-7.)

*Description and uses.*—Cotton bagging is the coarse, loosely woven jute fabric used for covering raw cotton. The best domestic grades are made of yarn spun from jute butts—the ends of the fiber laid aside as being too coarse for the manufacture of burlap. Six yards of the bagging are customarily used in wrapping the bale as it comes from the gin. For export, compress labels—patches of greater weight than ordinary bagging—are added at the time of compression to equal the purchaser's allowance for tare, making an average of seven yards of material for wrapping the average bale. The bulk of the domestic production consists of grades made from jute butts mixed with various proportions of old bagging, cordage, and mill waste; has about two warp threads and two weft threads per square inch; and weighs two pounds to the linear yard of 45-inch width. Second-hand bagging, rewoven bagging, and wrapping made by cutting twilled sugar bags, constitute an increasing proportion of the total consumption.

*Production* of new and rewoven bagging, which fluctuates yearly with the size of the cotton crop, amounted in 1919 to 75,205,000 square yards valued at \$3,554,000. The cotton crop, including linters, in 1920 was 13,879,916 bales of 500 pounds each, requiring 97,000,000 yards of material. The proportion of the various types of bagging used in covering the 1920 crop was: New bagging, 48 per cent; imported bagging, 6 per cent; sugar bag cloth, 10 per cent; rewoven bagging, 8 per cent; and second-hand bagging, 28 per cent. Consumption of new bagging in 1920 was much lower than usual; this is accounted for by the increased consumption of bagging for wrapping which had been used before. All but two or three per cent of the new bagging produced in the United States is the output of two companies, who are the world's leading manufacturers of bagging.

*Imports* are small as compared with domestic production. During the fiscal years 1911–1920 they averaged 7,196,000 square yards, valued at \$542,952. In the calendar year 1920 they amounted to 7,261,904 square yards valued at \$730,719. Prior to 1918 the United Kingdom supplied from 60 to 80 per cent annually of imports, and British India practically all the remainder. Since 1918 British India has supplied about two-thirds of the imports. Imports of bagging from India have not been large in the past, because the demand for burlap and sacking bags has claimed the full Indian capacity. They are likely to increase in the near future, however, as the two domestic companies which dominate the American bagging trade are each constructing a mill in India, and each has already moved abroad a part of the machinery formerly operated in this country. Indian bagging is employed for covering the best grades of American cotton and is superior to the bulk of domestic bagging, since it is made entirely from jute butts, and is woven with more threads to the square inch. Bagging imported from the United Kingdom consists to a large extent of second-hand bagging and of old

bagging suitable only for re-manufacture. Imports for the calendar years 1918-1921 are as follows:

	1918	1919	1920	1921 (9 months).
Quantity (square yards).....	1,028,717	8,799,488	7,261,904	3,125,722
Value.....	\$146,288	\$948,234	\$730,719	\$284,822

*Exports* are not recorded.

*Suggested changes.*—This paragraph embraces certain textile materials and concludes with a provision for the waste of any of those materials suitable for the manufacture of paper. As provision is made in paragraph 1641 for waste bagging, and for old gunny cloth and old gunny bags used chiefly for paper making, the words in lines 15 and 16, page 179 of H. R. 7456, "and waste of any of the foregoing articles suitable for the manufacture of paper" should be omitted.

### PARAGRAPH 1518.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1518. Barks, cinchona or other,  
from which quinine may be extracted.

ACT OF 1909.

ACT OF 1913.

PAR. 505. Barks, cinchona or other  
from which quinine may be extracted  
[Free].

PAR. 410. Barks, cinchona or other,  
from which quinine may be extracted  
[Free].

### CINCHONA AND OTHER QUININE BARKS.

(See Survey FL-2.)

*Description, uses, and production.*—Cinchona bark, from a tropical tree, is used in making quinine and other alkaloids, and also as a crude drug. Its medicinal uses are those of quinine (see par. 1639); the crude bark has considerable vogue in proprietary preparations. Several commercial varieties exist. Barks, other than cinchona, from which quinine may be extracted were formerly of some importance in commerce, but are now rare. Cinchona trees are native to South America, notably Peru, Bolivia, Ecuador, and Colombia, formerly the only commercial sources of the drug. But owing to extensive collection of the wild plant, wasteful methods, insufficient planting, and cultivation on a large scale in Java, those countries now supply only negligible amounts of the drug. War scarcity has renewed interest in South American cinchona, and new supplies of considerable importance are reported to be awaiting exploitation. Cinchona of modern commerce comes almost wholly from Java, where its cultivation is extensive and is fostered by governmental aid. Various commercial grades from different species of cinchona trees are known, the alkaloidal content having been considerably increased by plant breeding and seed selection. Java formerly exported chiefly the crude bark, but has recently developed quinine factories, and exportations of crude quinine now tend to exceed that of cinchona bark. The industry is controlled by an association of planters and producers through commercial agreements with manufacturers and importers.

Considerable plantations of cinchona also exist in India, the product being manufactured into alkaloids by Government factories. Indian supplies are almost wholly consumed within that country or handled by the British Government. Recent experimental cultivation of cinchona in the Philippines is reported as promising satisfactory future results.

*Imports* of cinchona bark averaged 3,441,991 pounds, valued at \$290,909 for 1909-1913, and 3,447,367 pounds, valued at \$653,837 for 1914-1918. The Netherlands, having control of the island of Java, the principal source of supply, furnish approximately 99 per cent of the imports.

Imports since 1917, chiefly from the Netherlands, England, and the Dutch East Indies, are as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	3,356,508	\$760,777	\$0.23
1919.....	5,981,293	1,075,748	.18
1920.....	4,067,746	1,526,130	.38
1921 (9 months).....	1,015,557	330,502	.32

### PARAGRAPH 1519.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1519. Bells, broken, and bell metal, broken and fit only to be remanufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 508. Bells, broken, and bell metal broken and fit only to be remanufactured [Free].

PAR. 413. Bells, broken, and bell metal broken and fit only to be remanufactured [Free].

#### BELL METAL.

(See Survey C-19.)

*Description and uses.*—The constituents of bell metal are copper and tin, the tin averaging about 20 per cent, but varying according to the size, tone, volume, and impulse desired. Radical changes have taken place in the kinds of metals used and in the variety of bells manufactured. Among other materials commonly used are amalgam, iron, steel, smoke brass, smoke glass, silver, and silver-plated metal.

*Production.*—No accurate statistics are available covering only the material mentioned in the paragraph. However, the domestic production of bells in 1914 was valued at \$970,000, and in 1919 at \$985,000.

*Imports* in the fiscal year 1918 amounted to \$1,689, and for the calendar years 1918-1921 were as follows:

Bell metal.	1918	1919	1920
Quantity (pounds).....		49,304	101,149
Value.....	\$1,485	\$4,830	\$18,984

*Exports.*—None recorded.

## PARAGRAPH 1520.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1520. Bibles, comprising the books of the Old or New Testament, or both, bound or unbound.

ACT OF 1909.

ACT OF 1913.

[No corresponding provision.]

PAR. 414. Bibles, comprising the books of the Old or New Testament, or both, bound or unbound [Free].

## BIBLES.

*Description and uses.*—The term Bible is sufficiently familiar to make unnecessary any lengthy statement relating to description and uses. As usually understood, it comprises 39 books of the Old Testament, and 13 books of the New Testament, constituting the canon, to which are sometimes added certain Apocryphal books both of the Old and New Testaments.

*Production.*—The American Bible Society gives the production of Bibles and Testaments in 1912-13 as 2,203,265 volumes.

*Imports* of Bibles in 1914 were valued at \$135,218. The value of imports in the calendar years 1918-1921 has been as follows: 1918, \$259,305; 1919, \$263,073; 1920, \$345,968; 1921 (nine months), \$226,776.

*Exports.*—Not segregated.

## PARAGRAPH 1521.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1521. All binding twine manufactured from New Zealand hemp, manila, istle or Tampico fiber, sisal grass, or sunn, or a mixture of any two or more of them, of single ply and measuring not exceeding seven hundred and fifty feet to the pound.

ACT OF 1909.

ACT OF 1913.

PAR. 507. Binding twine: All binding twine manufactured from New Zealand hemp, manila, istle or Tampico fiber, sisal grass, or sunn, or a mixture of any two or more of them, of single ply and measuring not exceeding six hundred feet to the pound [Free]: *Provided*, That articles mentioned in this paragraph, if imported from a country which lays an import duty on like articles imported from the United States, shall be subject to a duty of one-half of one cent per pound.

PAR. 415. All binding twine manufactured from New Zealand hemp, manila, istle or Tampico fiber, sisal grass, or sunn, or a mixture of any two or more of them, of single ply and measuring not exceeding seven hundred and fifty feet to the pound [Free].

## BINDING TWINE.

*Description and uses.*—Binding twine is used in the harvesting of wheat and various other cereals. Although manila, New Zealand hemp, istle, sunn, and sisal can be used, an overwhelming portion of binding twine is normally made from Mexican sisal or henequen, the

bulk of which is produced in Yucatan and has been marketed, in the past, under the control of an association of henequen producers known as the *Comision del Reguladora del Mercado de Henequen*. In the fall of 1919, however, this company was liquidated by order of the Mexican Government. Virtually all the manufacturing of binder twine is by machinery. The long, slender sisal leaf is cleaned by automatic scrapers, and the fiber is extracted mechanically and gill-spun directly from the sliver by a special machine.

*Production.*—The world's annual consumption of binder twine is over 150,000 tons, about 90 per cent of which is manufactured here and in Canada. Of the domestic output, about 55 per cent is produced by one company, 25 per cent by another, and the remainder by smaller companies and State penitentiaries. Domestic production, not including that of penitentiaries, amounted to 319,236,000 pounds in 1914 and 238,795,000 pounds in 1919. The value of the production in the same years was \$24,195,000 and \$46,256,000, respectively. About 5 per cent of the total in 1914 and 1919 consisted of twine made from manila. Domestic consumption averages 250,000,000 pounds a year.

*Imports*, as compared with domestic production, consumption, and exportation, are small, ranging normally from 4,000,000 to 10,000,000 pounds annually, that is, from 2 to 3 per cent of the annual production and about 10 per cent of exports. In 1920 imports were twice as large as usual and exports about half their customary size. Canada supplies practically all the imports. The imports of binder twine for the calendar years 1918–1921 have been as follows:

	1918	1919	1920	1921 (9 months)
Quantity (pounds).....	10,476,259	12,709,592	17,045,728	4,431,096
Value.....	\$2,308,231	\$2,696,416	\$3,143,825	\$768,254

*Exports* of binder twine in 1914 were 109,418,420 pounds, valued at \$9,426,625; these went chiefly to Canada (34,585,860 pounds), Argentina (13,632,648 pounds—a low year), Russia (29,740,158 pounds), the United Kingdom (7,553,877 pounds), and France (6,979,224 pounds). Canada, with two-thirds of the total, and Argentina, with one-eighth, were the leading consumers of American binder twine in 1920. Exports in the calendar years 1918–1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	98,311,229	68,764,147	55,182,843	55,232,802
Value.....	\$22,136,268	\$13,383,847	\$8,366,699	\$8,049,763

*Suggested changes.*—Binding twine is usually made from sisal or henequen; manila is the next most important material. The provision with additions and omission of unnecessary words might accordingly be changed to read:

Binding twine manufactured from sisal, henequen, manila, New Zealand hemp, istle, sunn, or other vegetable fiber, or a mixture of any two or more of them, of single ply and measuring not exceeding seven hundred and fifty feet to the pound.

## PARAGRAPH 1522.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1522. Bread: *Provided*, That no article shall be exempted from duty as bread unless yeast was the leavening substance used in its preparation.

ACT OF 1909.

ACT OF 1913.

PAR. 244. \* \* \* bread, \* \* \* twenty per centum ad valorem; \* \* \*. PAR. 417. \* \* \* bread, \* \* \* [Free].

## BREAD.

*Description and uses.*—This paragraph provides for ordinary commercial bread.

*Production.*—In the census year 1919 the production of bread and bakery products was valued at \$1,406,145,000.

*Imports* are not separately stated. They are largely from Canada.

*Exports* are not separately stated.

*Important changes in classification.*—The limitation in the proviso is new and is designed to allow free entry of ordinary commercial bread, but not of other baked articles (see par. 734) which enter into an extensive foreign commerce.

## PARAGRAPH 1523.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1523. Bismuth.

ACT OF 1909.

ACT OF 1913.

PAR. 511. Bismuth [Free].

PAR. 418. Bismuth [Free].

## BISMUTH.

(See Survey FL-6.)

*Description and uses.*—Bismuth, one of the minor metals, is soft, reddish-white, and highly crystalline. It is a component of many easily fusible alloys which are used in manufacturing automatic fire sprinklers, electric fuses, and solders. Since it expands on solidifying from the molten state, it is used in some form of type and in metal bearings. The principal uses of bismuth, however, are in certain medicines and to some extent in the manufacture of cosmetics.

*Production* is about 300,000 pounds annually, practically all as a by-product from the smelting of lead, copper, gold, and silver ores in Utah. Bolivia produces most of the bismuth of the world; some ore is also produced in Australia and Tasmania, which is mostly refined in Great Britain. Considerable bismuth ore has been produced in conjunction with tungsten in China which promises to be of increasing importance.

*Imports* of bismuth were 133,190 pounds, valued at \$241,448 in 1914. Imports come chiefly from Great Britain, but since 1915 some bismuth metal has come from South America, and still more recently China has become a principal source of supply. Statistics for the calendar years 1918-1921 follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	116,999	57,607	72,771	77,915
Value.....	\$344,292	\$55,179	\$161,877	\$90,949

*Exports.*—None recorded.

### PARAGRAPH 1524.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1524. Fish sounds, crude, dried or salted for preservation only, not specially provided for.

ACT OF 1909.

ACT OF 1913.

PAR. 512. \* \* \* fish sounds, crude, dried or salted for preservation only, and unmanufactured, not specially provided or in this section [Free].

PAR. 419. \* \* \* fish sounds, crude, dried or salted for preservation only, and unmanufactured, not specially provided for in this section [Free].

### FISH SOUNDS, CRUDE.

(See Survey A-9.)

*Description and uses.*—Fish sounds, or the swimming bladders of fish, are used to manufacture isinglass. These are usually obtained from the sturgeon (par. 39).

*Imports* of crude fish sounds for 1908-1918 averaged 384,990 pounds, valued at \$97,519. Imports since 1917, chiefly from Canada, England, and Hongkong, have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	232,804	\$56,890	\$0.24
1919.....	112,385	16,160	.14
1920.....	126,219	28,365	.22
1921 (9 months).....	18,694	5,983	.32

*Exports.*—Statistics not available.

*Important changes in classification.*—The words "and unmanufactured" are omitted as unnecessary.

## PARAGRAPH 1525.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1525. Blood, dried, not specially provided for.

ACT OF 1909.

ACT OF 1913.

PAR. 257. \* \* \* dried blood, when soluble, one and one-half cents per pound.

PAR. 420. Blood, dried, not specially provided for in this section [Free].

PAR. 513. Blood, dried, not specially provided for in this section [Free].

## DRIED BLOOD.

(See Survey FL-5.)

*Description and uses.*—Dried blood is used chiefly for its nitrogen content in the manufacture of fertilizers. This slaughterhouse product enters commerce on the basis of its ammonia content.

*Production* of dried blood, chiefly in the meat-packing industry, was about 40,000 tons in 1914. Figures for 1919 are not available.

*Import* values of dried blood decreased from \$446,698 in 1911 to \$80,145 in 1913. The value was \$391,816 in 1914 and \$196,600 in 1916. Argentina has provided the principal foreign supply.

Imports since 1917, chiefly from Argentina, Uruguay, and Australia, have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$638,670	.....
1919.....	11,004,248	379,754	\$0.03
1920.....	14,525,791	575,455	.04
1921 (9 months).....	4,690,427	141,968	.03

*Exports.*—Statistics not available.

## PARAGRAPH 1526.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1526. Bolting cloths composed of silk, imported expressly for milling purposes, and so permanently marked as not to be available for any other use.

ACT OF 1909.

ACT OF 1913.

PAR. 514. Bolting cloths composed of silk, imported expressly for milling purposes, and so permanently marked as not to be available for any other use [Free].

PAR. 422. Bolting cloths composed of silk, imported expressly for milling purposes, and so permanently marked as not to be available for any other use. \* \* \* [Free].

## BOLTING CLOTHS.

(See Survey L-3.)

*Description and use.*—Silk bolting cloth is a strong, fine, gauze-woven silk fabric used for sifting flour or other finely pulverized materials. For fine sifting it is absolutely necessary. Flour mills use 75 per cent of the bolting cloth, and kindred industries, or those extracting grit from some chemicals, the remainder.

*Production.*—Silk bolting cloth is not produced in the United States. It is successfully made only on hand looms, and in Europe its manufacture is a household industry, Switzerland is the chief source of this article.

*Imports* normally average about \$250,000 in value. In 1914 they were \$266,338. The record value of imports in 1918 was due partly to higher prices and partly to advance purchases looking to a long-continued war. Later statistics for calendar years are shown as follows:

	1918	1919	1920	1921 (9 months).
Quantity (yards).....		150,886	228,730	123,797
Value.....	\$1,119,543	\$589,621	\$868,832	\$384,563

## PARAGRAPH 1527.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1527. Bones: Crude, steamed, or ground; bone dust, bone meal, and bone ash.

ACT OF 1909.

ACT OF 1913.

PAR. 463. Manufactures of bone, \* \* \* thirty-five per centum ad valorem; \* \* \*

PAR. 515. Bones, crude, or not burned, calcined, ground, steamed, or otherwise manufactured, and bone dust or animal carbon, and bone ash, fit only for fertilizing purposes [Free].

PAR. 423. Bones, crude, \* \* \* ground, steamed, \* \* \* and bone dust or animal carbon, bone meal, and bone ash [Free].

BONES, BONE DUST, BONE MEAL, AND BONE ASH.

(See Survey FL-5.)

*Description and uses.*—Bones contain from 35 to 50 per cent of phosphate of lime and from 4 to 4½ per cent of nitrogen and are valuable as a fertilizer. They yield glue, gelatin, and grease when treated with steam or boiled with water. When highly heated away from the air, bone oil and other volatile products are obtained, and bone char, which is used for decolorizing liquids, especially sirups, remains. When burned in the air, bone ash (principally phosphate of lime) is obtained, and used directly as a fertilizer, in assaying, in china manufacture, and as a source of phosphorus. Bone dust and bone meal as fertilizers are obtained by grinding bones which have had most of the fat extracted.

*Production* of ground bone in 1914 was 25,139 tons, valued at \$593,226; of raw bones (fertilizer), 64,590 tons, valued at \$1,603,353; of steamed bone fertilizer, 55,067 tons, valued at \$1,178,959. Figures for 1919 are not available.

*Imports* of bone dust, bone ash, and bone meal in 1914 were 41,450 long tons, valued at \$1,034,636. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
BONES, CRUDE, BURNED, CALCINED, GROUND, OR STEAMED.			
	<i>Pounds.</i>		
1918.....		\$486,824	
1919.....	47,996,545	707,720	\$0.01
1920.....	169,564,367	2,835,349	.02
1921 (9 months).....	43,667,343	674,891	.02
BONE DUST OR ANIMAL CARBON, BONE ASH, AND BONE MEAL.			
	<i>Tons.</i>		
1918.....	5,098	\$153,349	\$30.08
1919.....	5,948	182,785	30.73
1920.....	17,793	908,130	51.04
1921 (9 months).....	15,607	623,864	39.97

*Exports.*—Statistics not available.

*Important changes in classification.*—The words “burned, calcined,” modifying bones (par. 423, act of 1913), were dropped in Committee of the Whole House because of possible conflict with bone black or bone char, paragraph 66.

## PARAGRAPH 1528.

### H. R. 7456.

### SENATE AMENDMENTS.

PAR. 1528. Books, engravings, photographs, etchings, bound or unbound, maps and charts imported by authority or for the use of the United States or for the use of the Library of Congress.

### ACT OF 1909.

### ACT OF 1913.

PAR. 516. Books, engravings, photographs, etchings, bound or unbound, maps and charts imported by authority or for the use of the United States or for the use of the Library of Congress [Free].

PAR. 424. Books, engravings, photographs, etchings, bound or unbound, maps and charts imported by authority or for the use of the United States or for the use of the Library of Congress [Free].

### BOOKS, ETC., IMPORTED BY AUTHORITY, ETC.

*Description and uses.*—The items mentioned in paragraph 1528 are all of a character to be dutiable under paragraph 1310 and become free of duty only because they are to be put to the specific uses mentioned in paragraph 1528.

*Imports* in 1914 were valued at \$20,698. The values of imports in the calendar years 1918–1921 have been as follows: 1918, \$34,122; 1919, \$63,171; 1920, \$79,472; 1921 (nine months), \$12,699.

## PARAGRAPH 1529.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1529. Hydrographic charts and publications issued for their subscribers or exchanges by scientific or literary associations and academies, and publications of individuals for gratuitous private circulation, not advertising matter, and public documents issued by foreign Governments.

## ACT OF 1909.

PAR. 517. \* \* \* hydrographic charts, and publications issued for their subscribers or exchanges by scientific and literary associations or academies, or publications of individuals for gratuitous private circulation, and public documents issued by foreign governments [Free].

## ACT OF 1913.

PAR. 425. \* \* \* hydrographic charts, and publications issued for their subscribers or exchanges by scientific and literary associations or academies, or publications of individuals for gratuitous private circulation, not advertising matter, and public documents issued by foreign governments [Free].

## HYDROGRAPHIC CHARTS, ETC., ISSUED BY SCIENTIFIC ASSOCIATIONS, ETC.

*Description and uses.*—The items mentioned in paragraph 1529 are of a character in themselves to be dutiable under paragraph 1310. They are to be admitted free only when they fulfil certain specific conditions stated in this paragraph (1529).

*Imports.*—Paragraph 425 of the act of 1913, in addition to the items enumerated in paragraph 1529 (H. R. 7456), provides for the free admission of "books, maps, music, engravings, photographs, etchings, lithographic prints, bound or unbound, and charts, which shall have been printed more than twenty years at the date of importation." The several items are not segregated, but the total importations under paragraph 425, act of 1913, in the calendar years 1918–1921 have been valued as follows: 1918, \$519,425; 1919, \$1,393,440; 1920, \$1,937,210; 1921 (nine months), \$1,008,866.

*Important changes in classification.*—The items mentioned above under "Imports" have been dropped from the free list and become dutiable under paragraph 1306 or 1310. (See par. 1685, p. 1480.)

*Suggested changes.*—Restoration of the provision for engravings, etchings, and lithographic prints is sought by counsel for the American Federation of Arts.

## PARAGRAPH 1530.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1530. Books, pamphlets, and music, in raised print, used exclusively by or for the blind; Braille tablets, cubarithms, special apparatus and objects serving to teach the blind, including printing apparatus, machines, presses, and types for the use and benefit of the blind exclusively.

## ACT OF 1909.

PAR. 518. \* \* \* books and music, in raised print, used exclusively by the blind [Free].

## ACT OF 1913.

PAR. 426. \* \* \* books and music, in raised print, used exclusively by the blind, \* \* \* Braille tablets, cubarithms, special apparatus and objects serving to teach the blind, including printing apparatus, machines, presses, and types for the use and benefit of the blind exclusively [Free].

## BOOKS, ETC., USED FOR THE BLIND.

*Description and uses.*—The items mentioned in paragraph 1530 are of a character in themselves to be dutiable under paragraph 1310 and other paragraphs. They are to be admitted free only when used exclusively by the blind or to teach the blind.

*Production.*—No data available.

*Imports* of books in raised print for the blind in 1914 were valued at \$1,452. Imports in the calendar years 1918–1921 have been valued as follows: 1918, \$309; 1919, \$1,689; 1920, \$1,043; 1921 (nine months), \$1,944.

*Exports.*—Not listed.

---

 PARAGRAPH 1531.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1531. Any society or institution incorporated or established solely for religious, philosophical, educational, scientific, or literary purposes, or for the encouragement of the fine arts, or any college, academy, school, or seminary of learning in the United States, or any State or public library, may import free of duty, not to exceed two copies of any book, map, music, engraving, photograph, etching, lithographic print, or chart, for its own use or for the encouragement of the fine arts, and not for sale, under such rules and regulations as the Secretary of the Treasury may prescribe.

## ACT OF 1909.

## ACT OF 1913.

PAR. 519. Books, maps, music, photographs, etchings, lithographic prints, and charts, specially imported, not more than two copies in any one invoice, in good faith, for the use and by order of any society or institution incorporated or established solely for religious, philosophical, educational, scientific, or literary purposes, or for the encouragement of the fine arts, or for the use and by order of any college, academy, school, or seminary of learning in the United States, or any state or public library, and not for sale, subject to such regulations as the Secretary of the Treasury shall prescribe [Free].

PAR. 427. Books, maps, music, engravings, photographs, etchings, lithographic prints, and charts, specially imported, not more than two copies in any one invoice, in good faith, for the use and by order of any society or institution incorporated or established solely for religious, philosophical, educational, scientific, or literary purposes, or for the encouragement of the fine arts, or for the use and by order of any college, academy, school, or seminary of learning in the United States, or any State or public library, and not for sale, subject to such regulations as the Secretary of the Treasury shall prescribe [Free].

## FREE IMPORTATIONS OF BOOKS BY SOCIETIES, ETC.

*Description and uses.*—The items mentioned in paragraph 1531 are of a character in themselves to be dutiable under paragraph 1310. The free admission provided for in the paragraph depends: (1) Upon the character of the importing institution. (It must be for religious, philosophical, educational, scientific, or literary purposes or for the encouragement of the fine arts. Among such institutions are specifically mentioned colleges, academies, schools, seminaries of learning,

State and public libraries.) (2) The number imported. (The concession is limited to two copies.) (3) The use to which the importation is to be put. (It must be for the use of the importer and not for sale.)

*Imports* under the provisions of the corresponding paragraph in the act of 1913 (par. 427) were valued at \$3,994,869 in 1914. Imports in the calendar years 1918-1921 have been valued as follows: 1918, \$181,027; 1919, \$330,817; 1920, \$338,690; 1921 (9 months), \$378,420.

---

### PARAGRAPH 1532.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1532. Books and libraries of persons or families from foreign countries if actually used abroad by them not less than one year, and not intended for any other person or persons, nor for sale, and not exceeding \$250 in value.

ACT OF 1909.

ACT OF 1913.

PAR. 520. Books, libraries, \* \* \* \*  
of persons or families from foreign countries, all the foregoing if actually used abroad by them not less than one year, and not intended for any other person or persons, nor for sale [Free].

PAR. 428. Books, libraries, \* \* \* \*  
of persons or families from foreign countries, all the foregoing if actually used abroad by them not less than one year, and not intended for any other person or persons, nor for sale [Free].

### BOOKS AND LIBRARIES NOT FOR SALE.

*Description and uses.*—The items mentioned in paragraph 1532 are of a character in themselves to be dutiable under paragraph 1310, and their free admission is conceded only on the condition that they are (1) imported by persons or families from foreign countries, (2) that they have actually been used abroad by them, for a period not less than a year, (3) that they are not intended for any other person or persons, (4) that they are not for sale, and (5) that they do not exceed \$250 in value.

*Import statistics* are combined with those of personal effects of citizens of the United States dying in foreign countries, and household and personal effects, etc., of persons emigrating to the United States. They are shown under paragraph 1631, p. 1409.

*Important changes in classification.*—The provision for “usual and reasonable furniture, and similar household effects,” has been omitted. A further limitation is in the value of the books and libraries, which is set at \$250.

---

### PARAGRAPH 1533.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1533. Borax, crude and unmanufactured, and borate of lime, borate of soda, and other borate material, crude and unmanufactured, not specially provided for.

---

“Usual and reasonable furniture, and similar household effects” dutiable according to materials, or possibly free under pars. 1678, 1685, or 1689 in H. R. 7456.

## ACT OF 1909.

PAR. 11. Borax, two cents per pound; borates of lime, soda, or other borate material not otherwise provided for in this section, two cents per pound.

## ACT OF 1913.

PAR. 429. Borax, crude and unmanufactured, and borate of lime, soda, and other borate material, crude and unmanufactured, not otherwise provided for in this section [Free].

## CRUDE BORAX AND BORATE MATERIALS.

(See Survey A-1.)

*Description and uses.*—Borax, crude, “tinkal” or biborate of soda, was formerly the main source of borax in California. Borate of lime, or the mineral colemanite, which is now the chief source of borax and boric acid, occurs extensively in California. Other borate materials are boracite, a borate of magnesium from the Stassfurt deposits of Germany; sassolite, a native boracic acid from volcanic springs of Italy and California; ulexite, a borate of lime and soda occurring in California and Nevada; and pricelite, a borate of lime occurring in Death Valley, Calif.

*Production* of crude borax materials has about doubled in recent years. In 1913 it was 58,051 tons, valued at \$1,491,530; in 1917, 108,875 tons, valued at \$3,609,632. Subsequent figures are not available. Chile, Italy, Turkey, and Germany also are other sources. The United States supplies about one-half and Chile one-third of the world's demand.

*Imports* of borate materials have been less than 0.01 per cent of domestic production. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	10,000	\$50	\$0.005
1919.....	550	25	.04
1920.....	5,050	100	.02
1921 (9 months).....	4,480,000	100,000	.02

*Exports* of crude and unrefined borax, chiefly to Japan, Canada, and England, in 1920 (first year shown) were 14,325,037 pounds, valued at \$1,206,936, and for the first nine months of 1921, 2,705,392 pounds, valued at \$191,616.

*Suggested changes.*—Change “and” to “or” between “crude” and “unmanufactured.”

## PARAGRAPH 1534.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1534. Brass, old brass, clippings from brass or Dutch metal, all the foregoing, fit only for remanufacture.

ACT OF 1909.

PAR. 521. Brass, old brass, clippings from brass or Dutch metal, all the foregoing, fit only for remanufacture [Free].

ACT OF 1913.

PAR. 430. Brass, old brass, clippings from brass or Dutch metal, all the foregoing, fit only for remanufacture [Free].

## OLD BRASS AND DUTCH METAL.

(See Survey C-19.)

*Description and uses.*—Brass is an alloy of copper and zinc, the proportions of which vary, ordinary brass containing 30 to 40 per cent zinc. Dutch metal is a variety of brass with a zinc content of about 20 per cent.

*Production.*—The brass within the terms of this paragraph is scrap recovered from the many industries employing new brass material. The battle fields of Europe furnish large amounts. Definite figures concerning the country's output are unavailable.

*Imports.*—Imports of brass in 1914 amounted to 7,220,296 pounds, valued at \$765,319. For later calendar years they were as follows:

Brass, old brass, and clippings.	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	12,228,988	15,865,946	45,363,942	13,572,172
Value.....	\$1,773,789	\$2,157,043	\$5,244,715	\$1,017,459

In the fiscal year 1918, 32,731,025 pounds, valued at \$5,643,382, were imported. This large increase was due to war necessities. Until 1912 Germany and the United Kingdom were the chief sources of supply. After 1912 Canada became the principal contributing country.

*Exports.*—In 1914 exports amounted to 25,738,845 pounds, valued at \$2,714,202. Statistics for the calendar years 1918-1921 follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	4,909,820	1,321,767	2,060,468	4,212,866
Value.....	\$799,318	\$176,028	\$254,189	\$261,111

Prior to 1918 exports went chiefly to the United Kingdom, Germany, and France. In 1918 they went chiefly to France, Canada, and Cuba. In 1919 and 1920 the countries of destination were the United Kingdom, Canada, Japan, and Mexico.

## PARAGRAPH 1535.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1535. Brazilian pebble, unwrought or unmanufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 522. Brazilian pebble, unwrought or unmanufactured [Free].

PAR. 431. Brazilian pebble, unwrought or unmanufactured [Free].

## BRAZILIAN PEBBLE.

*Description and uses.*—Brazilian pebble is a colorless and transparent variety of quartz. Its most valuable application is in spectacle lenses, as it is harder and less easily scratched than glass. In recent years lenses of high-grade optical glass have supplanted those of pebble to a great extent.

Imports of Brazilian pebble in 1907 were valued at \$7,967; in 1917, at \$138; and in 1918, at \$8,642. Later imports have been negligible.

*Exports.*—None recorded.

## PARAGRAPH 1536.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1536. Bristles, crude, not sorted, bunched, or prepared.

ACT OF 1909.

ACT OF 1913.

PAR. 523. Bristles, crude, not sorted, bunched, or prepared [Free].

PAR. 432. Bristles, crude, not sorted, bunched, or prepared [Free].

## BRISTLES, CRUDE.

(See Survey N-4.)

*Description, uses, and production.*—See paragraph 1408, p. 1103.

Imports of bristles, crude, not sorted, bunched, or prepared, in 1914 were 27,036 pounds, valued at \$25,280, nearly all from Germany and Russia. Later statistics for calendar years follow:

Bristles, crude.	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	31,987	75,848	124,136	14,817
Value.....	\$65,061	\$102,191	\$286,467	\$59,634

Imports were chiefly from China in 1918, from Japan and China in 1919, while in 1920 England led in exports to this country, with China and Japan following. Exports from England are transshipments, London being the chief point of distribution of Chinese bristles.

*Exports.*—None recorded.

## PARAGRAPH 1537.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1537. Bullion, gold or silver.

ACT OF 1909.

ACT OF 1913.

PAR. 524. Bullion, gold or silver [Free].

PAR. 436. Bullion, gold or silver [Free].

## GOLD AND SILVER BULLION.

(See Survey FL-20.)

*Description and uses.*—Bullion is uncoined gold and silver bars and plate; it varies in degree of fineness. The name is also applied to uncurrent coin (coin received only at its metallic value). In the United States, however, the term bullion is rarely applied to coin. Gold in bars answers some of the monetary purposes of coined gold.

*Production.*—The country's output of gold in 1913 amounted to 4,271,562 troy ounces, coining value, \$88,301,023, and in 1920 (preliminary figures) 2,395,017 ounces, coining value, \$49,509,400. The silver production in 1913 was 67,601,111 troy ounces, commercial value, \$40,864,871, and in 1920 (preliminary figures) 56,564,504 troy ounces, commercial value, \$57,420,325.

*Imports* in 1914 of gold were 1,237,812 ounces, valued at \$24,206,047; and of silver 28,387,924 ounces, valued at \$16,548,213. Imports in later calendar years were as follows:

	1918	1919	1920	1921 (9 months).
<b>Gold:</b>				
Quantity (troy ounces).....	1,906,494	1,614,651	16,193,577	21,002,904
Value.....	\$38,911,037	\$33,183,373	\$326,260,835	\$430,764,187
<b>Silver:</b>				
Quantity (troy ounces).....	22,835,317	7,990,171	7,945,711	9,400,091
Value.....	\$20,619,195	\$8,382,030	\$7,874,136	\$5,648,726

The imports of bullion gold in 1918 came mainly from Canada, Colombia, and Mexico; in 1919 from Canada, the United Kingdom, and Belgium; and in 1920 from the United Kingdom, France, and Canada. The principal contributing countries for silver bullion were Mexico, Canada, and Honduras.

*Exports.*—Exports of gold in 1914 amounted to 2,101,244 ounces, valued at \$43,058,031, and of silver to 89,813,522 ounces, valued at \$52,180,453. Exports for the calendar years 1918-1921 follow:

	1918	1919	1920	1921 (9 months).
<b>Gold:</b>				
Quantity (troy ounces).....	390,468	5,912,786	1,852,974	35,779
Value.....	\$8,052,578	\$122,055,164	\$38,281,357	\$736,248
<b>Silver:</b>				
Quantity (troy ounces).....	240,124,122	176,780,153	62,519,339	26,726,076
Value.....	\$236,411,329	\$186,533,723	\$70,228,057	\$16,846,458

The principal countries of destination for our exports of gold were Japan, China, British India, Chile, Mexico, and Peru; and of silver, China, Hongkong, British India, Canada, and the United Kingdom.

## PARAGRAPH 1538.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1538. Burgundy pitch.

ACT OF 1909.

ACT OF 1913.

PAR. 525. Burgundy pitch [Free].

PAR. 437. Burgundy pitch [Free].

## BURGUNDY PITCH.

(See Survey FL-2.)

*Description and uses.*—Burgundy pitch is a resinous substance chemically allied to crude gum turpentine. It is used in medicine, chiefly in plasters, for varnish making, coating or lining beer barrels (in Germany), and for other technical purposes.

*Production.*—It is obtained principally in Finland, the Schwarzwald (Black Forest), Austria, and the Bernese Alps.

*Imports.*—Before the war the imports of Burgundy pitch averaged about 1,000,000 pounds, valued at about \$40,000. In 1915 imports were 131,967 pounds, valued at \$4,051; in 1917, 25 pounds, valued at \$3; and in 1918, 100 pounds, valued at \$12. In 1919 the value was \$470, and in the first nine months of 1921, \$157.

## PARAGRAPH 1539.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1539. Cadmium.

ACT OF 1909.

ACT OF 1913.

PAR. 526. Cadmium [Free].

PAR. 439. Cadmium [Free].

## CADMIUM.

(See Survey FL-6.)

*Description and uses.*—Cadmium is a heavy white metal, resembling tin in many of its properties. Unlike most other metals, it has an extremely low melting point, and forms brittle, but readily fusible, alloys with other metals. Besides its use in fusible alloys, it is employed in dentistry, in glass coloring, and in making cadmium sulphide (cadmium yellow); also as a solder, and, to some extent, as a substitute for tin.

*Production.*—Cadmium, a by-product of the zinc-smelting industry, is recovered largely from the treatment of various residues and fine dust at zinc and lead smelters. Prior to 1907 Germany was the sole producer, the output in 1913 being 81,993 pounds of metallic cadmium. The domestic output in 1918, with six plants, was 127,164 pounds, valued at \$188,203, and could be largely increased if there were sufficient demand. In 1920 the output was 129,283 pounds, valued at \$151,261. Germany and the United States, with England a small contributor, practically supply the world's cadmium output.

*Imports.*—Cadmium is imported as metallic stick and as the pigment, cadmium yellow. Cadmium metal is free of duty; the pigment is dutiable under paragraph 63 of the act of 1913. In 1914, imports of metallic cadmium from Germany amounted to 1,543 pounds, valued at \$1,239. There were no imports in 1918, 1919, and 1920. During the first nine months of 1921 imports amounted to 101 pounds, valued at \$216.

*Exports.*—Statistics are not available, but it is known that domestic cadmium, including the refined metal and crude residues containing cadmium, was exported in large quantities during the war. During the last quarter of 1916, 39,188 pounds, valued at \$61,889 were exported. More than one-half of the metal was shipped to France, and about one-third went to Italy.

---

### PARAGRAPH 1540.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1540. Calcium: Acetate, chloride, crude; nitrate, and cyanamid or lime nitrogen: *Provided*, That when any country, dependency, or other subdivision of government imposes a duty on calcium acetate imported from the United States, an equal duty shall be imposed upon such article coming into the United States from such country.

#### ACT OF 1909.

PAR. 3. \* \* \* all chemical compounds, \* \* \* not specially provided for in this section, twenty-five per centum ad valorem; \* \* \*

PAR. 581. \* \* \* calcium cyanamid or lime nitrogen [Free].

#### ACT OF 1913.

PAR. 440. Calcium, acetate of, brown and gray, and chloride of, crude; \* \* \* and calcium nitrate [Free].

PAR. 499. \* \* \* calcium cyanamid or lime nitrogen [Free].

#### CALCIUM ACETATE.

(See Survey A-2.)

*Description and uses.*—Formerly there were two grades, the "brown calcium acetate," made by adding lime to the crude pyroligneous liquor obtained from the distillation of wood, and the "gray calcium acetate," now the only commercial grade, made by adding lime to the acetic-acid solution obtained by purification of the crude liquor formerly used in making brown acetate. The chief use of calcium acetate is in the manufacture of acetic acid and acetone. (See pars. 1 and 3.)

*Production* of calcium acetate for sale in 1914 was 163,521,577 pounds, valued at \$2,138,909; an additional 2,562,946 pounds was consumed in the plants where produced. In 1919, according to preliminary figures, 152,064,000 pounds were produced, valued at \$2,682,200.

*Imports* are not shown separately.

*Exports* were over 40 per cent of the domestic production in 1909 and 1914. Exports in 1914 were 68,160,224 pounds, valued at

\$1,560,933; and because of demands for war purposes decreased to 12,959,222 pounds in 1917. Prewar exports were chiefly to Belgium, Germany, the Netherlands, and Italy. Exports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	15,682,813	16,362,929	23,309,469	12,971,575
Value.....	\$758,622	\$410,646	\$647,284	\$283,711

*Important changes in classification.*—"Brown and gray" are omitted as unnecessary after "calcium acetate." The proviso is new.

#### CALCIUM CHLORIDE.

(See Survey FL-8.)

*Description and uses.*—Calcium chloride is a white, solid substance which dissolves readily in water. The crystalline product when dissolved produces a strong cooling effect. When dry it rapidly absorbs moisture from the air. It is produced principally as a by-product in the manufacture of salt from brine, or from the Solvay soda process, and is one of the cheapest chemicals. It is used in refrigerating and antifreezing solutions, as a drying agent, and for the prevention of dust on roads and drill grounds.

*Production* of calcium chloride from natural brines increased from 19,403 short tons in 1914 to 30,503 short tons in 1917. Enormous quantities are produced in solution as a by-product in the Solvay process, and the output is greater than the consumption. In 1919, according to preliminary figures, 74,699 short tons, valued at \$1,043,300, were produced.

*Imports* are not listed separately.

*Exports.*—Statistics not available.

#### CALCIUM NITRATE.

(See Survey A-18.)

*Description and uses.*—Calcium nitrate or nitrate of lime is a nitrate fertilizer material, and is used only for this purpose. It contains 13 per cent of nitrogen as against 15.5 per cent of nitrogen in nitrate of soda, with which it competes. It absorbs moisture readily and deteriorates in quality on exposure to the air, necessitating shipments in casks instead of bags. For these reasons it is not generally favored as a fertilizer material.

*Production.*—Calcium nitrate is produced by combining nitric acid, produced synthetically from atmospheric nitrogen, with lime. It comes chiefly from one Norwegian company, whose output is about 90,000 tons. Considerable quantities are made in Germany. A calcium nitrate plant in North Carolina, opened in 1912, operated a year or two, but found a more profitable market for its electrical power.

*Imports* in 1914 were 275 long tons, valued at \$10,773, from Norway. Subsequent import statistics are not available.

*Exports.*—Statistics not available.

## CALCIUM CYANAMID OR LIME NITROGEN.

(See Survey FL-5.)

*Description and uses.*—Calcium cyanamid or lime nitrogen is a nitrogenous fertilizer material. Its preparation from calcium carbide is one of the successful methods of nitrogen fixation. Prior to the war it was used chiefly as a fertilizer material. It can be converted into ammonia, which in turn is oxidized to nitric acid, a property made use of in our munitions program. It can also be converted into sodium cyanide. (See par. 1654.)

*Production.*—Cyanamid is produced by passing a current of nitrogen over heated calcium carbide. The crude product is usually known as lime nitrogen. It is then ground, treated with water and a small amount of mineral oil, and packed in bags. Prior to the war we produced no calcium cyanamid. The Government constructed a plant of 220,000 tons capacity at Muscle Shoals, Ala., nearly complete and in operation when the armistice was proclaimed. Canada (plant of American Cyanamid Company, Niagara Falls) produces 64,000 short tons a year, largely exported to this country. The industry has had its greatest development in Europe.

*Imports* were 29,536 tons, valued at \$1,590,004, in 1914 and 44,146 tons, valued at \$1,951,104, in 1917. Imports since 1917 are as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Tons.</i>		
1918.....	45,209	\$2,208,326	\$48.85
1919.....	62,121	4,294,058	69.12
1920.....	71,311	5,542,198	63.70
1921 (9 months).....	6,798	542,102	.....

*Exports.*—Statistics not available.

## PARAGRAPH 1541.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1541. Cash registers, linotype and all typesetting machines, sewing machines, typewriters, shoe machinery, sand-blast machines, sludge machines, and tar and oil spreading machines used in the construction and maintenance of roads and in improving them by the use of road preservatives; all the foregoing whether in whole or in parts, including repair parts.

## ACT OF 1909.

## ACT OF 1913.

PAR. 197. Cash registers, \* \* \* linotype and all typesetting machines, \* \* \* sewing machines, typewriters, \* \* \* thirty per centum ad valorem; \* \* \* *Provided, however,* That all \* \* \* tar and oil spreading machines used in the construction and maintenance of roads and in improving them by the use of road preservatives, shall, if imported prior to January first, nineteen hundred and eleven, be admitted free of duty.

PAR. 441. Cash registers, linotype and all typesetting machines, sewing machines, typewriters, shoe machinery, \* \* \* sand-blast machines, sludge machines, and tar and oil spreading machines used in the construction and maintenance of roads and in improving them by the use of road preservatives, all the foregoing whether imported in whole or in parts, including repair parts [Free].

## CASH REGISTERS, TYPESETTING, SEWING AND OTHER MACHINES.

(See Survey FL-3.)

*Description and uses.*—The uses of these machines are well known, except perhaps that of the sludge machine—a device for drying sludge emanating from sewage and for separating the particles—and the sand-blast machine—an apparatus for forcibly projecting sand (by air or steam) for engraving or cutting glass, stone, etc. The United States is the world's greatest producer of these machines.

*Production* is shown for 1914 and 1919 as follows:

	1914	1919
Cash registers and parts.....	\$15,935,069	\$31,038,000
Linotype and other typesetting machines.....	7,634,631	15,197,000
Sewing machines.....	21,710,643	48,946,000
Typewriters.....	20,516,532	43,313,000
Shoe machinery.....	5,949,300	7,459,000

Production in 1919 of sand-blast machinery was valued at \$686,000 and of road-making machines at \$13,915,000.

*Imports*, including cream separators, in 1914 amounted to \$863,627. Imports for later calendar years may be divided into five classes, as follows:

	1918	1919	1920	1921 (9 months).
Cash registers.....	\$800	\$597	\$324	\$3,037
Linotype and all typesetting machines.....	14,351	7,007	19,371	4,379
Sewing machines.....	98,245	225,541	345,519	356,500
Typewriters.....	17,287	7,577	14,068	9,060
Shoe machinery.....	4,114	5,262	18,497	11,652

In addition to these importations there came into the country in 1918 (calendar year) sand-blast machines valued at \$3,630, and in 1920 sludge machines to the value of \$1,590.

*Exports* for the calendar years 1918-1921 are vastly greater than imports and may be tabulated as follows:

	1918	1919	1920	1921 (9 months).
Cash registers:				
Number.....	4,399	18,400	20,945	8,081
Value.....	\$763,317	\$4,080,588	\$5,472,620	\$1,965,907
Cash registers, parts of, value.....	\$101,254	\$294,938	\$469,450	\$237,606
Typesetting machines, value.....	\$1,284,672	\$3,932,544	\$4,958,757	\$2,817,958
Sewing machines, value.....	\$8,138,590	\$12,774,124	\$15,581,843	\$5,764,197
Typewriting machines, value.....	\$7,049,339	\$17,391,118	\$25,041,809	\$9,760,192
Shoe machinery, value.....	\$1,359,955	\$2,839,828	\$2,653,039	\$1,536,644
Road-making machinery, value.....	\$696,522	\$987,912	\$1,327,752	\$765,365

The principal countries of destination for these exports are the United Kingdom, Canada, Japan, Argentina, and France.

*Important changes in classification.*—Cream separators, which were on the free list in the corresponding paragraph of the act of 1913 (441), are omitted and are thus made dutiable (probably under par. 372 for machines) unless they should be held to come within paragraph 1504 as agricultural implements.

## PARAGRAPH 1542.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1542. Cerium, cerite or cerium ore.

ACT OF 1909.

ACT OF 1913.

PAR. 530. Cerium, cerite, or cerium ore [Free].

PAR. 445. Cerium, cerite, or cerium ore [Free].

## CERIUM AND CERIUM ORE.

(See Surveys C-1 and C-22.)

*Description and uses.*—Cerium is a soft, steel-gray metal occurring in more than sixty minerals. Of the entire list of cerium-bearing minerals, two may be regarded as commercial sources. These are the phosphate (monazite sand, par. 1616) and the silicate (orthite). Cerite, a hydrous silicate occurring in Sweden, was for some time the only commercial source of cerium compounds. Monazite sand, the most important cerium ore, is mined for its content of thoria, which is used in incandescent gas mantles. Cerium is a by-product and is obtained in excessively large amounts. No commercial use has been found for the pure cerium metal, but certain of its alloys and compounds have a fairly extended range of application. The quantity consumed, however, is only a small fraction of the production. Incandescent gas mantles, besides thoria, contain 1 per cent of ceria. Certain cerium alloys, e. g., pyrophoric alloys, throw off glowing particles when scratched by a hard metal, a property utilized in automatic cigarette and gas lighters. Other alloys are used as reducing agents and as deoxidizers in the manufacture of high-grade iron and steel castings. Cerium fluoride is used extensively in carbon electrodes for "flaming" electric arc lamps. Cerium salts are also used in medicine.

*Production* statistics of cerium are not available, but consumption of monazite sand indicates an output of at least 250 tons of ceria (cerium oxide). At least 10,000 tons of ceria are estimated to have accumulated at the gas-mantle factories.

*Imports* of cerium, cerite, and cerium ore are small and of no significance. They were valued at \$10,712 in 1914 and at \$5,260 in 1918 (fiscal year). They came entirely from Austria in 1914. There were no importations in 1919 and only \$30 worth in 1920.

*Exports.*—None recorded.

## PARAGRAPH 1543.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1543. Chalk, crude, not ground, bolted, precipitated, or otherwise manufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 531. Chalk, crude, not ground, bolted, precipitated, or otherwise manufactured [Free].

PAR. 446. Chalk, crude, not ground, bolted, precipitated, or otherwise manufactured [Free].

## CHALK, CRUDE.

[For discussion, see par. 18, p. 61.]

## PARAGRAPH 1544.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1544. Chromite or chrome ore.

ACT OF 1909.

ACT OF 1913.

PAR. 532. Chromate of iron or chromic ore [Free].

PAR. 448. Chromate of iron or chromic ore [Free].

## CHROMITE OR CHROME ORE.

(See Survey FI-28.)

*Description and uses.*—Chromate of iron, or chromic ore, is more properly called chromite, chrome iron, or chromic iron ore. It is used chiefly in making ferrochrome and is also used in bichromate of potash and sodium. It is of prime military importance.

*Production.*—In 1918 production was estimated at 79,000 tons from about 350 mines operating mostly in the Western States. About 90 per cent of domestic chromite was produced in California; most of the remainder came from Oregon, with some from Wyoming, Maryland, and other States. Domestic resources are insignificant compared with the large high-grade deposits in New Caledonia, Asia Minor, Rhodesia and Russia. Prior to 1914 only a small fraction of the domestic requirement was produced in the United States; the large war demand, however, and high prices induced an increased output. Owing to the poverty of the domestic deposits, their widely scattered locations, and the long distance of most of them from market, the greater number of the mines can not operate at a profit under normal conditions. Hence the country's output since 1918 has been very small.

*Imports* of chromite in 1914 were 85,892 tons, valued at \$777,166; in 1918 (fiscal year), 77,863 tons, valued at \$1,555,861. Prior to 1914 imports came chiefly from Portuguese Africa, New Caledonia, and Turkey in Asia; in 1918, mostly from Portuguese Africa, French Oceania, and Canada. For later calendar years they have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	100,224	61,404	150,275	79,335
Value.....	\$2,892,825	\$1,381,497	\$1,921,824	\$599,589

*Exports.*—The lack of manufacturing facilities in the United States caused the export of the entire chrome output to England in the early years. In 1845 domestic works were established for making chromium salts; by 1850 these fully supplied the home market, and exportation of the ore ceased. In recent years no exports have been recorded.

*Important changes in classification.*—The terminology is changed from "chromate of iron or chromate ore" to "chromite or chrome ore."

## PARAGRAPH 1545.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1545. Coal, anthracite, bituminous, culm, slack, and shale; coke; compositions used for fuel in which coal or coal dust is the component material of chief value, whether in briquets or other form: *Provided*, That when any country, dependency, or other subdivision of government imposes a duty on such articles imported from the United States, an equal duty shall be imposed upon such articles coming into the United States from such country.

ACT OF 1909.

PAR. 428. Coal, bituminous, and shale, forty-five cents per ton of twenty-eight bushels, eighty pounds to the bushel; coal slack or culm, such as will pass through a half-inch screen, fifteen cents per ton of twenty-eight bushels, eighty pounds to the bushel: *Provided*, That the rate of fifteen cents per ton herein designated for "coal slack or culm" shall be held to apply to importations of coal slack or culm produced and screened in the ordinary way, as such, and so shipped from the mine; coke, twenty per centum ad valorem; compositions used for fuel in which coal or coal dust is the component material of chief value, whether in briquettes or other form, twenty per centum ad valorem: *Provided further*, That on all coal imported into the United States, which is afterwards used for fuel on board vessels propelled by steam and engaged in trade with foreign countries, or in trade between the Atlantic and Pacific ports of the United States, and which are registered under the laws of the United States, a drawback shall be allowed equal to the duty imposed by law upon such coal, and shall be paid under such regulations as the Secretary of the Treasury shall prescribe.

PAR. 535. Coal, anthracite, and coal stores of American vessels, but none shall be unloaded [Free].

ACT OF 1913.

PAR. 451. Coal, anthracite, bituminous, culm, slack, and shale; coke; compositions used for fuel in which coal or coal dust is the component material of chief value, whether in briquets or other form [Free].

## COAL AND COKE.

(See Survey FL-10.)

*Description.*—Peat is the first stage of coal formation, followed by lignite, subbituminous, bituminous, semibituminous, semianthracite, and anthracite. With this series the percentage of volatile matter declines and that of fixed carbon increases. In 1913 the coal reserves of the world were estimated by the International Geological Congress at 7,397,553,000,000 tons, divided as follows: America, 5,105,528,000,000 tons; Asia, 1,279,586,000,000 tons; Europe, 784,190,000,000

tons; Oceania, 170,410,000,000 tons; and Africa, 57,839,000,000 tons. The bulk of the American reserves was within the United States.

Fine or refuse coal, often constituting one-third of the product, is called culm in the case of anthracite coal, and slack in the case of bituminous. Certain kinds of bituminous coals are termed coking coals, because upon distillation of their volatile matter they yield a hard, strong, coherent, carbonaceous residue called coke. Four tons of good coking coal yield about three tons of coke. Briquets are brick-shaped masses of fine coal with some cementing material.

*Uses.*—Anthracite is now used for the most part in household heating. Bituminous coal, in addition to this use, is employed largely in manufacturing operations, on railroads, and as bunker coal. Coke is the fuel principally used in the manufacture of pig iron. Lignite is commonly used only when better grades of coal are either not obtainable or are too expensive. In many parts of Europe peat is a domestic fuel. Briquets are manufactured out of fine coal for consumption in the home.

Distribution of bituminous coal, by industry, in 1915 was as follows:

	Per cent.		Per cent.
Industrial steam trade.....	33.0	Steamship bunker tidewater.....	2.0
Railroad fuel.....	28.0	Used at mines.....	2.0
Domestic and small steam trade..	16.0	Steamship bunker, Great Lakes... .	.3
Manufacture of beehive coke.....	9.3	Manufacture of coal gas.....	1.0
Manufacture of by-product coke... .	4.3	Special uses.....	.1
Exported.....	4.0		

*Production* of coal in the United States in 1913 amounted to 569,960,219 short tons out of an approximate total for the world of 1,478,000,000 tons. Great Britain in the same year produced 321,922,130 tons; Germany, 305,714,664 tons; Austria-Hungary, 59,647,957 tons; France, 45,108,544 tons; and Russia, 37,188,480 tons. During the World War, European production declined, but the domestic output reached 684,710,000 tons in 1918, estimated to be valued at \$1,801,500,000, more than one-half the world's output. In 1920 the country's estimated output of coal was as follows: Anthracite, 89,100,000 short tons; bituminous, 556,563,000 short tons; coke, 51,888,000 short tons; and fuel briquets, 567,192 short tons. Practically all the anthracite coal is mined in Pennsylvania, the bituminous, mostly in Pennsylvania, West Virginia, Illinois, Ohio, Kentucky, Indiana, and Alabama. Nearly half of the coke is produced in Pennsylvania. Other important coke manufacturing States are Ohio, Alabama, Indiana, and Illinois. The workman in American mines increased his annual aggregate output of bituminous coal from 431.53 tons per employee in 1882 to 896 tons in 1916 and nearly 1,000 tons in 1918. His production of anthracite coal rose from 363.55 tons in 1882 to 547 tons in 1916. The output per man of workmen in European mines substantially declined during the war. The relative effectiveness of mine workers in different countries may be stated as follows:

*Short tons produced per employee per annum.*

United States (bituminous) (1916).....	896.0	Germany (1909).....	257.0
United States (anthracite) (1916).....	547.0	Austria (1918).....	259.0
Australia (1913).....	594.8	France (1909).....	<sup>5</sup> 191.0
Dominion of Canada (1913).....	566.5	Belgium (1912).....	<sup>5</sup> 173.8
Transvaal (1913).....	518.9	Russia (1908).....	<sup>5</sup> 141.0
New Zealand (1913).....	497.5	British India (1912).....	124.2
Orange Free State (1913).....	333.3	Japan (1909).....	99.0
Natal (1913).....	280.4	Cape of Good Hope (1913).....	78.8
South Rhodesia (1913).....	263.3		
United Kingdom:			
1914.....	262.4		
1920.....	203.0		

Coal and coke are produced more abundantly and cheaper than elsewhere in the world in the Eastern States. Cost of transportation is a large factor in the price, and hence in regions remote from the coal-producing areas (California, for instance) it is often cheaper to import than to use the domestic product, the cost of water transportation being less than that of rail.

Pulverized fuel (coal) is gaining importance and its consumption in the cement industry is estimated at 12,000,000 tons annually. When pulverized the coal is fed to the furnace by blowers adjusted to supply the coal dust and air in the ratios for best combustion; this makes available low grades of coal otherwise unusable. The method is applied in metallurgical and power-plant use, and has been tried experimentally in locomotives.

Coal is bought by large consumers on standard tests, e. g., its heating power (British thermal units), ash, volatility, etc. The best coal will yield about 14,500 British thermal units per pound, but is salable at 10,000 units or lower. Fuel oil averages 18,000 to 19,800 units per pound and is a rapidly increasing alternative for coal. Four barrels may be roughly taken as equaling a ton of coal, and coal producers have shown some concern regarding the competition of this fuel, especially that of the oil imported from Mexico.

Import values in the fiscal year 1918 aggregated \$6,414,218 divided as follows: Anthracite \$18,390; bituminous and shale (1,366,876 tons), \$6,076,048; slack or culm (34,325 tons), \$100,503; coke (29,097 tons), \$218,997; composition coal or coal dust, \$280. Imports for the calendar years 1918-1921 may be divided into the following five classes:

	1918	1919	1920	1921 (9 months).
Anthracite coal:				
Quantity (tons).....	33,158	73,945	28,346	7,161
Value.....	\$203,798	\$522,419	\$257,835	\$82,395
Bituminous coal:				
Quantity (tons).....	1,280,264	891,816	1,096,649	767,275
Value.....	\$6,634,240	\$4,892,696	\$6,714,149	\$5,156,451
Slack or culm coal:				
Quantity (tons).....	20,815	11,354	14,950	22,379
Value.....	\$60,428	\$57,990	\$19,527	\$123,975
Coke:				
Quantity (tons).....	26,936	14,720	36,735	17,963
Value.....	\$221,880	\$140,653	\$403,175	\$231,429
Compositions, component material of chief value coal or coal dust:				
Quantity (pounds).....		272,200	112	
Value.....	\$3,077	\$1,050	\$9	

\* Metric tons.

Nearly all the imported material comes from Canada and enters through the customs districts of Montana and Idaho, Massachusetts, Washington, San Francisco, Maine, and New Hampshire, most of which are within easy reach by water of the Canadian coal fields and remote from our own leading coal areas.

*Exports* greatly exceed imports. In the fiscal year 1918 exports of anthracite were 4,840,187 tons, valued at \$29,844,947; bituminous, 21,051,979 tons, valued at \$81,980,218; and coke, 1,337,321 tons, valued at \$10,155,047. Exports for the calendar years 1918 to 1921 are divided into three classes as follows:

	1918	1919	1920	1921 (9 months).
<b>Anthracite:</b>				
Quantity (tons).....	4,435,543	4,443,391	4,824,776	3,236,282
Value.....	\$29,215,689	\$36,668,131	\$45,538,100	\$35,067,069
<b>Bituminous coal:</b>				
Quantity (tons).....	19,956,009	17,958,514	34,390,254	17,473,625
Value.....	\$78,664,856	\$83,708,842	\$304,273,241	\$106,755,909
<b>Coke:</b>				
Quantity (tons).....	1,506,986	640,139	821,252	198,251
Value.....	\$11,861,408	\$5,128,119	\$9,993,665	\$2,115,157

The principal country of destination is Canada. Shipments, however, are made to Cuba and Argentina, and in late years have gone to Italy and France.

*Important changes in classification.*—Proviso is new.

#### PARAGRAPH 1546.

H. R. 7456.

ACT OF SEPT. 8, 1916, TITLE V.

PAR. 1546. Coal-tar products: Acenaphthene, anthracene having a purity of less than 30 per centum, benzene, carbazole having a purity of less than 65 per centum, cumene, cymene, fluorene, methylanthracene, methyl-naphthalene, naphthalene, which after removing all the water present has a solidifying point less than seventy-nine degrees centigrade, pyridine, toluene, xylene, dead or creosote oil, anthracene oil, pitch of coal tar, pitch of blast-furnace tar, pitch of oil-gas tar, pitch of water-gas tar, crude coal tar, crude blast-furnace tar, crude oil-gas tar, crude water-gas tar, all other distillates of any of these tars which on being subjected to distillation yield in the portion distilling below one hundred and ninety degrees centigrade a quantity of tar acids less than 5 per centum of the original distillate, all mixtures of any of these distillates and any of the foregoing pitches, and all other materials or products that are found naturally in coal tar, whether produced or obtained from coal tar or other source, and not specially provided for in paragraph 25 or 26 of Title I of this Act.

Sec. 500. That on and after the day following the passage of this Act, except as otherwise specially provided for in this title, there shall be levied, collected, and paid upon the articles named in this section when imported from any foreign country into the United States or into any of its possessions, except the Philippine Islands and the islands of Guam and Tutuila, the rates of duties which are prescribed in this title, namely:

#### FREE LIST.

Group I. Acenaphthene, anthracene having a purity of less than twenty-five per centum, benzol, carbazol having a purity of less than twenty-five per centum, cresol, cumol, fluorene, meta-cresol having a purity of less than ninety per centum, methylanthracene, methyl-naphthalene, naphthalene having a solidifying point less than seventy-nine degrees centigrade, orthocresol having a purity of less than ninety per centum, paracresol having a purity of less than ninety per centum, pyridin, \* \* \* toluol, xylo, crude coal tar, pitch of coal tar, dead or creosote

## H. R. 7456.

## ACT OF SEPT. 8, 1916, TITLE V.

oil, anthracene oil, all other distillates which on being subjected to distillation yield in the portion distilling below two hundred degrees centigrade a quantity of tar acids less than five per centum of the original distillate, and all other products that are found naturally in coal tar, whether produced or obtained from coal tar or other source, and not otherwise specially provided for in this title, shall be exempt from duty.

Group II. \* \* \* carbazol having a purity of 25 per centum or more, \* \* \* 15 per centum ad valorem, \* \* \* [and 2½ cents per pound].

[No corresponding provision for the other commodities.]

## ACT OF 1909.

PAR. 536. Coal tar, crude, pitch of coal tar, and products of coal tar known as dead or creosote oil, benzol, toluol, naphthalin, xylo, \* \* \* cresol, \* \* \* all the foregoing not medicinal and not colors or dyes [Free].

PAR. 15. \* \* \* all other products or preparations of coal tar, not colors or dyes and not medicinal, not specially provided for in this section, twenty per centum ad valorem. [Covered acenaphthene, carbazole, cumene, cymene, fluorene, methylanthracene, methylnaphthalene, pyridine, anthracene oil, and all other materials or products.]

[No corresponding provision for the other commodities.]

## ACT OF 1913.

PAR. 452. Coal tar, crude, pitch of coal tar, \* \* \* or other tar, dead or creosote oil, and products of coal tar known as anthracene and anthracene oil, naphthalin, \* \* \* and cresol [Free].

PAR. 22. Coal-tar distillates, not specially provided for in this section; benzol, \* \* \* toluol, xylo; all the foregoing not medicinal and not colors or dyes, 5 per centum ad valorem. [Covered acenaphthene, carbazole, cumene, cymene, fluorene, methylanthracene, methylnaphthalene, pyridine.]

PAR. 21. All other products or preparations of coal tar, not colors or dyes, not specially provided for in this section, 15 per centum ad valorem.

[No corresponding provision for the other commodities.]

## COAL-TAR CRUDES.

(See T. I. S.-6, 11, 22, and 23.)

*Description and uses.*—In the manufacture of coke in by-product ovens and in the production of coal gas for city lighting and heating, one of the by-products is coal tar, which yields by distillation or other simple methods of treatment (sublimation and washing with acids and alkalis) a class of substances known as coal-tar "crudes." These substances are included in this paragraph.

The most important crudes are benzene, toluene, naphthalene, and anthracene. Other crudes include xylene, cumene, carbazol, the cresols, and pyridine. These crudes after purification are used in the preparation of coal-tar intermediates (par. 25); the latter, in turn, are used in the manufacture of dyes (par. 26). In addition to the crudes, certain pitches, related to coal tar, are mentioned in this paragraph. Pitch is used chiefly for road making, roofing, shingles, tarred felt, building paper, and for many minor uses, such as compounding with rubber, sealing dry batteries, and as a fuel.

Complex mixtures made from coal tar by fractional distillation appear in commerce under the names solvent naphtha, light oil, dead oil, creosote oil, anthracene oil, and pitch. Solvent naphtha is used mainly as a solvent for paint, rubber cements, and other materials. Creosote oil serves on a large scale for the preservation of wood (telegraph poles, fence posts, railroad ties, and paving blocks).

*Production* of the coal-tar crudes is given in the Tariff Commission's report, "Census of Dyes and Coal-Tar Chemicals," 1917-20.

*Imports* of crudes have increased from \$1,241,407 in 1918 to \$5,512,258 in 1920, and for 9 months of 1921 were \$4,371,765.

*Exports* since 1917 by calendar years are shown in the table below. Exports of benzol have been chiefly to Italy, Belgium, and France, while "all other coal-tar distillates" have gone principally to England, Switzerland, and Japan.

	1918	1919	1920	1921 (9 months).
Benzol:				
Quantity (pounds).....	33,294,577	14,238,419	13,174,268	64,161,598
Value.....	\$1,904,360	\$535,132	\$927,940	\$2,744,346
All other coal-tar distillates (value).....	\$5,867,830	\$1,103,750	\$6,962,249	\$426,255

*Important changes in classification.*—Some of these crudes were dutiable in 1913, but all are exempted from duty in 1916, carbazol and anthracene, however, being limited in 1916 to such as have a purity of less than 25 per cent. (See also par. 25.)

*Suggested changes.*—Page 183, line 10, of H. R. 7456: Change "removing" to "the removal of" to agree with paragraph 25, page 8, line 20.

#### PARAGRAPH 1547.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1547. Cobalt and cobalt ore.

ACT OF 1909.

ACT OF 1913.

PAR. 537. Cobalt and cobalt ore [Free].

PAR. 453. Cobalt and cobalt ore [Free].

#### COBALT AND COBALT ORE.

(See Survey FL-6.)

*Description and uses.*—Cobalt is a white, malleable, tough metal similar to iron and resembling nickel in many of its properties. In the form of its oxide it imparts a beautiful blue color to pottery and other glazes. Research for developing its uses has opened up a most promising field for the metallic form, especially in the alloy, stellite, and as a valuable component of special high-grade steels.

*Production.*—Practically the entire world supply comes from the silver ores of Cobalt, Ontario. It is converted in Canada into metal or oxide. There are deposits of low grade associated with the disseminated lead ores of Missouri. These complex ores were worked for nickel and cobalt from 1907 to 1909, and produced 83,394 pounds

of cobalt oxide in the latter year. The plant remained idle until 1917, when it was remodeled for the production of lead, copper, and nickel, cobalt being a by-product. In 1918 cobalt ores were mined in Idaho, the production being 55 tons of concentrates carrying 17.74 per cent of cobalt (19,514 pounds) from 4,000 tons of ore. The annual Canadian production in 1916 and 1917 was slightly in excess of 1,000,000 pounds.

*Imports* of cobalt and cobalt ore prior to 1919 were grouped with zaffer (roasted speiss or crude oxide). The percentage of metal imports has tended to increase relatively to that of the crude material. In 1914 imports of cobalt and cobalt ore and zaffer amounted to 197,009 pounds. For later calendar years imports are shown as follows:

	1918	1919	1920	1921 (9 months).
Cobalt ore:				
Quantity (pounds).....	1 504,391	17,045	13,039	6,625
Value.....	\$628,099	\$2,832	\$4,794	\$191
Cobalt metal:				
Quantity (pounds).....		60,511	143,603	35,102
Value.....		\$141,450	\$326,864	\$96,859

<sup>1</sup> Includes zaffer.

*Exports.*—None recorded.

### PARAGRAPH 1548.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1548. Cocoa or cacao beans.

ACT OF 1909.

ACT OF 1913.

PAR. 540. Cocoa, or cacao, crude, and fiber, leaves,<sup>6</sup> and shells of [Free].

PAR. 456. Cocoa, or cacao, crude, and fiber, leaves,<sup>6</sup> and shells of [Free].

### COCOA OR CACAO BEANS.

(See Survey G-32.)

*Description and uses.*—The seeds of the tropical cacao tree are the cacao beans or crude cocoa of commerce, from which are obtained cocoa, chocolate, cocoa butter, and cocoa shells. In the producing countries the seeds or beans are separated from the surrounding pulp of the large pods, cured by several simple processes, and packed in bags of 130 to 160 pounds. The manufacture of cacao products is a technical industry conducted chiefly in America and Europe. Of the content of the bean, the stimulant theobromin constitutes about 2 per cent; fat, over 50 per cent; and albuminoids, starch, and ash, the remainder. (For manufactured products, see par. 776, p. 806.) Cocoa shells, the husks of the seeds, removed in the process of manufacture, are virtually a waste in this country. In Europe they are used as an ingredient in cattle feeds, in the extraction of theobromin and cocoa butter, and in adulterating chocolate-cocoa products.

<sup>6</sup> Not an article of commerce; possibly confused with coca leaves (par. 33, H. R. 7456).

*Production.*—No cacao is produced in the continental United States and the insular output is not important. Until 1890 virtually the entire supply was from the American Tropics, but the West-African colonies of Great Britain and Portugal (Gold Coast and San Thome-Principe) produced about 40 per cent of the world crop (650,000,000 pounds) in 1915; of this world supply the United States imported about 30 per cent.

*Imports.*—During 1914–1920 the value of cacao imports ranged from \$20,000,000 to \$54,000,000. European countries have a large re-export trade. Detailed statistics for the calendar years 1918–1921 are as follows:

	1918	1919	1920	1921 (9 mnths).
Quantity (pounds).....	359,853,178	391,249,274	343,679,841	251,127,961
Value.....	\$37,916,035	\$57,976,644	\$54,309,612	\$18,434,065

*Important changes in classification.*—The specific provision for cocoa shells has been omitted. They would probably be classified as a crude vegetable substance (par. 1617). The provision for cocoa leaves has also been dropped, since there is no commerce in such leaves. Apparently these were confused with coca leaves, the source of cocaine, for which provision is elsewhere made (par. 33). The provision for cocoa fiber, likewise has been dropped; here, apparently there was some confusion with the fiber derived from the coconut, commercially termed coir, which is provided for in paragraph 1551. The term "cocoa or cacao, crude," has been changed to the more general commercial term "cocoa or cacao beans."

#### PARAGRAPH 1549.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1549. Coffee.

ACT OF 1909.

ACT OF 1913.

PAR. 541. Coffee [Free].

PAR. 457. Coffee [Free].

#### COFFEE.

(See Survey G-31.)

*Description and use.*—Coffees are characterized as "strong" and "mild," with subclasses. The product of Brazil is strong, and that of all other countries mild. Strong coffees are chiefly consumed in the United States; Europe prefers the mild types.

*Production.*—In 1919 Porto Rico yielded approximately 53,000,000 pounds and Hawaii about 20,000,000 pounds. Under the most favorable conditions these islands could hardly produce one-fourth of the 1,000,000,000 pounds required for domestic consumption. Most of the Porto Rican product is shipped to Cuba and Europe. American consumers prefer other varieties. Of the world production, about 2,500,000,000 pounds, Brazil supplies over two-thirds. Through valorization the Government of Brazil exercises a controlling influence over the markets of the world.

Imports of coffee, about three-fourths of which come from Brazil, exceed 1,000,000,000 pounds, valued at about \$100,000,000. The bulk of the Colombian and Venezuelan product is exported to this country and used for blending purposes. Imports for the calendar years 1918-1921 are shown below:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	1,053,876,247	1,333,455,443	1,297,439,303	985,075,219
Value.....	\$99,476,716	\$261,248,507	\$252,450,649	\$100,968,461

Exports of green coffee are almost entirely from Porto Rico. Some Hawaiian coffee moves to Canada and to Asia. Exports of roasted coffees are chiefly to Canada and Mexico, and to markets wherein the United States has preferential treatment—Cuba, the Philippines, and Panama. Exports for the calendar years 1918-1921 are as follows:

	1918	1919	1920	1921 (9 months).
Coffee, green or raw:				
Quantity (pounds).....	43,031,687	28,289,105	34,785,574	27,174,162
Value.....	\$6,365,160	\$7,295,511	\$9,223,966	\$4,464,674
Coffee, roasted or prepared:				
Quantity (pounds).....	1,694,928	6,062,449	1,971,869	858,568
Value.....	\$296,642	\$1,521,070	\$579,608	\$228,872

### PARAGRAPH 1550.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1550. Coins of gold, silver, copper, or other metal.

ACT OF 1909.

ACT OF 1913.

PAR. 542. Coins of gold, silver, copper, or other metal [Free].

PAR. 458. Coins of gold, silver, copper, or other metal [Free].

### COINS.

(See Survey FI-20.)

*Description and uses.*—Coins are stamped pieces of metal used as media of exchange. The metals most commonly used are gold, silver, and copper. As the coins of different peoples usually vary in size, inscriptions, etc., they circulate in international trade to only a limited extent, trade balances between nations being adjusted mainly by gold and silver bullion.

*Production.*—No statistics.

Imports of coins in 1914 were valued at \$89,064. Prior to 1914 coins came mainly from Germany and England. The imports in the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Copper coins.....	\$2,112	\$1,130	\$3,791	\$5,313
Other coins, except as money.....	1,354	5,650	17,590	21,783

Exports of United States coins in 1914 were valued at \$7,208. Nearly all the exports went to Cuba. No exports are recorded for later years.

## PARAGRAPH 1551.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1551. Coir, and coir yarn.

ACT OF 1909.

ACT OF 1913.

PAR. 543. Coir, and coir yarn [Free].

PAR. 459. Coir, and coir yarn [Free].

## COIR AND COIR YARN.

(See Survey FL-16.)

*Description and uses.*—Coir or coconut fiber is a coarse and stiff but elastic fiber obtained from the fibrous shell of the coconut produced in Ceylon, British India, and other tropical or semitropical countries. For the preparation of the fiber, the unripe nuts are steeped in sea water for several months, after which the fruit is beaten and washed away with water. The residual reddish brown fibrous mass is decorticated by tearing and hackling into fibers about 10 inches in length. The coarsest fibers go into brushes; those that are very short and curly are used for packing and upholstery stuffing; the longest are spun (usually by hand) into coir yarn, for use in making mats and cordage.

*Production.*—Coir is not produced in the United States, as it is a tropical product. Coir yarn is almost wholly imported. British India is the main producer of coir and coir yarn. That country's statistics show, for the year ended March 31, 1920, total exports of unmanufactured coir to have been 789,152 pounds, valued at about \$34,000, of which over half went to the United Kingdom and about 3 per cent to the United States. In the same year British India exported manufactured coir (excluding rope) to the extent of about 38,000 tons, valued at about \$4,156,000, three-fourths of which went to the United Kingdom and about 8 per cent to the United States.

*Imports* in the fiscal year 1914 of coir or cocoa fiber were 1,095,360 pounds, valued at \$13,114; and of coir yarn 8,554,032 pounds, valued at \$391,496. Imports are largely from British India. Since 1917 they have been as follows:

Calendar year.	Coir fiber.		Coir yarn.	
	Quantity.	Value.	Quantity.	Value.
	<i>Pounds.</i>		<i>Pounds.</i>	
1918.....	295,680	\$10,290	5,685,758	\$346,579
1919.....	327,000	4,247	2,475,635	160,782
1920.....	846,720	41,173	5,634,257	355,889
1921 (9 months).....	763,840	26,235	1,768,790	103,336

*Important changes in classification.*—See paragraph 1548, p. 1280.

## PARAGRAPH 1552.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1552. Composition metal of which copper is the component material of chief value, not specially provided for.

## ACT OF 1909.

## ACT OF 1913.

PAR. 545. Composition metal of which copper is the component material of chief value, not specially provided for in this section [Free].

PAR. 460. Composition metal of which copper is the component material of chief value, not specially provided for in this section [Free].

## COMPOSITION METAL (COPPER CHIEF VALUE).

(See Survey C-19.)

*Description and uses.*—Composition metal is commonly limited to Muntz's metal. This is a kind of brass made of three parts copper and two parts zinc. It differs from common brass in being malleable when hot. Being cheaper and more easily rolled, it has displaced copper as sheathing for vessels—its chief use. It is also used to an increasing extent in the manufacture of extruded rods and other shapes. Other special alloys of copper have been included under this paragraph.

*Production.*—No statistics.

*Imports* of composition metal, n. s. p. f., in 1914 were 1,035,357 pounds, valued at \$169,154. Prior to 1914 imports were mostly from Germany, France, and Cuba; since 1914 they have been chiefly from England and Cuba, although in 1921 Germany again began to be an important source of supply. The importations for recent calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	208,170	355,982	4,235,647	902,352
Value.....	\$44,253	\$64,028	\$518,171	\$98,837

*Exports* for the calendar years 1918-1921 were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	186,260	364,089	454,306	20,188
Value.....	\$60,128	\$110,032	\$117,290	\$4,427

The principal countries of destination were the United Kingdom, Brazil, Italy, Philippine Islands, China, Canada, and Japan.

## PARAGRAPH 1553.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1553. Copper ore; regulus of, and black or coarse copper, and copper cement; old copper, fit only for remanufacture, copper scale, clippings from new copper, and copper in plates, bars, ingots, or pigs, not manufactured or specially provided for.

## ACT OF 1909.

PAR. 544. Copper ore; regulus of, and black or coarse copper, and copper cement; old copper, fit only for remanufacture, clippings from new copper, and copper in plates, bars, ingots, or pigs, not manufactured or specially provided for in this section [Free].

## ACT OF 1913.

PAR. 461. Copper ore; regulus of, and black or coarse copper, and copper cement; old copper, fit only for remanufacture, copper scale, clippings from new copper, and copper in plates, bars, ingots, or pigs, not manufactured or specially provided for in this section [Free].

## COPPER AND COPPER ORE.

(See Survey C-19.)

*Description.*—The principal copper-bearing minerals are native copper; cuprite or copper oxide; malachite or green carbonate of copper; azurite or blue carbonate of copper; chalcopyrite or copper pyrite; bornite or peacock copper; chalcocite or copper glance; chrysocolla or silicate of copper; tetrahedrite, a copper-antimony sulphide; enargite, a copper-arsenic sulphide; and covellite or cupric sulphide.

Important terms referred to in production and trade: Black copper, an impure metal made in the blast furnace from oxidized ores. It always contains one or more metals other than copper and generally from 1 to 3 per cent sulphur. Blister copper, the final product of direct copper-ore smelting, copper ranging from 96 per cent upward. Casting copper, made from blister and scrap, analyzing 99 to 99.75 per cent. Cement copper, obtained by precipitating from solutions usually by scrap iron. Copper scale, the oxide or scale formed on the surface of the copper when in the annealing furnace. Concentrate, the valuable mineral product resultant from mechanical treatment of ore. Converting, a special treatment for the oxidation and reduction of matte to blister copper. Electrolytic copper, produced by electrolytic refining methods. Lake copper, from the native copper mines of the Lake Superior district. Matte, the intermediate product resultant from smelting sulphur-bearing ores, consisting of copper, iron, and sulphur, usually running 25 to 55 per cent copper. Refining, the further treatment of blister copper to produce a commercially pure (99.8 per cent) copper. Smelting, the reduction of ores or concentrates in furnaces by heat and fusion. Regulus is practically synonymous with matte, although its meaning is also extended to cover any metallic mass that separates by gravity from supernatant molten slag. Copper in plates, bars, ingots, or pigs is copper cast in various forms in the smeltery or refinery. The common shapes are ingots (for casting), caked (for making sheets), and wire bars (for rolling or drawing into rods and wire).

*Uses.*—Copper, because of its low cost, high electrical and thermal conductivity, its great tensile strength, and the ease with which it may be worked, is consumed in large quantities in the manufacture of electrical and mechanical apparatus, alloy metals, munitions of

war, coins, shipbuilding, and in architecture and other arts. Its more important alloys are bronze (copper with tin), brass (copper with zinc), and copper nickel alloys (including natural copper nickel or monel and nickel silver, the latter also containing zinc).

*Production.*—The production of copper may be discussed in its three stages—mining, smelting, and refining. The United States, which produces more than half of the world's copper, mined in 1914, 35,175,541; in 1917, 58,482,694; and in 1918, 62,304,767 short tons. The ore yielded each year an average of about 1.6 per cent copper. Ore deposits in the United States consist mainly of: (1) the so-called porphyries, with horizontal deposits lying near the surface, as in Utah and Nevada, yielding about 1 per cent copper; (2) deep mines, as in Michigan and at Butte, Mont., yielding 2 to 5 per cent; (3) massive but irregular ore bodies located mainly in Arizona; and (4) pyritic ore bodies, as in Tennessee and California, often profitable even when low grade because both the sulphur and the copper are recovered. About 35 per cent of our copper is produced by the first group; 30 per cent by the second; 25 per cent by the third; 5 per cent by the fourth; and 5 per cent by all others. The smelter production from domestic ores in 1914 amounted to 1,150,137,192 pounds; in 1918 to 1,908,533,595 pounds (fine); and in 1920 to 1,209,061,040 pounds, valued at \$222,467,000. In 1918 the principal producing States in order of their importance were Arizona, Montana, Michigan, and Utah. Other States or regions whose smelter production was large were Nevada, New Mexico, Alaska, and California.

Refinery production of new copper in 1920 amounted to 1,182,423,240 pounds, divided as follows: Electrolytic, 1,010,240,867 pounds; lake, 153,483,952 pounds; castings and pig, 18,698,421 pounds. In 1914 the production totaled 1,533,781,394 pounds, of which 1,210,423,189 pounds represented the output from domestic raw materials. The production from domestic raw materials was classified as follows: Electrolytic, 991,573,073 pounds; lake, 158,009,748 pounds; castings and pig, 60,840,368 pounds. The value of the total output of the country in 1914 was \$152,968,000. In addition to the figures given, 256,000,000 pounds of secondary copper were produced.

*Organization.*—There is a marked tendency toward large scale production in the manufacture of copper. This tendency is most conspicuous in the refining stage and is more pronounced in the smelting than in the mining stage. In 1917, of the 1,000 mines then operating 31 produced over 85 per cent of the total output of the United States. Smelters operated on a larger scale than did the mines, and 10 electrolytic refineries, mainly in the hands of five groups of producers, have a capacity of 2,780,000,000 pounds a year. The advantages of large scale operations are such that no small producer can enter the field.

*United States in relation to world production and consumption.*—Because of our great refineries and large interests in Canadian, Mexican, and South American mines about one-third as much copper is now imported for refineries as is produced at home. The developed reserves of copper ore in this country stand in about the same relation to the developed reserves in other countries as does American production to foreign production. These reserves insure for the next 10 years at least a copper production in the United States that will maintain its present relative dominance over all foreign countries.

The principal foreign producers and their output in 1918 were as follows: Japan, 94,286 long tons; Chile, 84,493 tons; Mexico, 74,336 tons; Canada, 51,860 tons; Peru, 44,094 tons. The corresponding production of the United States for the same year was 852,678 tons.

The United States is also the largest consumer of copper. In 1913 the American consumption amounted to 1,085,000,000 pounds, and European consumption to 1,514,240,000 pounds, in which Germany led and England and France followed. In 1918 the consumption of new copper in the United States was 1,661,000,000 pounds, and of new and old copper in 1917, 2,083,000,000 pounds.

*Imports.*—Imports of ore and concentrates in 1914 were valued at \$9,715,426 with copper contents of 84,439,395 pounds. This ore came from Canada, Mexico, Chile, and Cuba. Matte and regulus, coarse metal, and cement were imported in 1914 to the value of \$3,346,452 with copper contents of 23,051,051 pounds, of which more than one-half came from Chile and the remainder mainly from Peru and Canada. The imports of copper in the form of pigs, ingots, bars, and plates in 1914 amounted to 273,124,725 pounds, valued at \$39,551,093. These imports came mainly from Mexico, Peru, Canada, and Spain. For the same year the imports of old or scrapped copper, copper scale, and copper clippings amounted to 6,590,923 pounds, valued at \$815,465 coming mainly from Canada and Cuba. Imports for later calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Copper ore:				
Quantity—				
Tons <sup>1</sup> .....	279,455	247,029	233,557	174,756

Copper, refined, unmanufactured, ready for manufacture, ingots, wire bars, cakes, and cathodes:				
Quantity (pounds).....	37,325,386	35,156,180	108,743,298	59,234,184
Value.....	\$9,062,380	\$7,996,380	\$20,394,924	\$7,884,477
Copper, old or scrapped, fit only for remanufacture, copper scales and clippings:				
Quantity (pounds).....	1,918,758	4,217,310	10,950,233	2,627,583
Value.....	\$347,475	\$643,769	\$1,292,912	\$187,194

<sup>1</sup> Gross weight.

<sup>2</sup> Copper contents.

Exports of copper are chiefly in the refined form ready for manufacture and consist of ingots, plates, wire bars, etc. They greatly exceed imports. For the calendar years 1918-1921 they have been as follows:

	1918	1919	1920	1921 (9 months).
Copper ore:				
Quantity—				
Tons <sup>1</sup> .....	29,378	2,601	1,237	1,355
Pounds <sup>2</sup> .....	2,387,275	507,846	248,712	299,150
Value.....	\$578,165	\$95,930	\$48,601	\$38,705
Concentrates, matte and regulus:				
Quantity—				
Tons <sup>1</sup> .....	4,220	402	157	389
Pounds <sup>2</sup> .....	872,564	160,821	192,194	60,970
Value.....	\$211,392	\$32,611	\$30,802	\$8,000
Copper, unrefined, blister and converter copper, etc.:				
Quantity (pounds).....	14,687,823	1,674,411	1,843,293	109,630
Value.....	\$3,825,606	\$360,089	\$362,101	\$17,321
Copper, refined, unmanufactured, ready for manufacture, ingots, plates, etc.:				
Quantity (pounds).....	690,027,891	438,160,818	551,226,793	417,553,939
Value.....	\$178,831,041	\$95,636,546	\$108,175,735	\$55,790,475
Copper, old or scrapped, copper scales and clippings:				
Quantity (pounds).....	257,403	449,804	577,319	382,632
Value.....	\$60,733	\$74,104	\$99,564	\$42,593

<sup>1</sup> Gross weight.

<sup>2</sup> Copper contents.

Prior to the war our exports of copper in the form of pigs, ingots, and bars went mainly to Germany, France, the Netherlands, and England. In 1914 exports in these forms amounted to 864,602,721 pounds, valued at \$128,137,408, of which 274,065,914 pounds went to Germany, 163,586,230 pounds to France, 162,983,424 pounds to the Netherlands, and 130,012,812 pounds to England. During the war period our copper plates went largely to France, the United Kingdom, and Italy. During the years 1920 and 1921 Germany has been taking an increasing proportion of our exported copper.

*Important changes in classification.*—Copper in rolled plates has been transferred from the dutiable schedule by omission of the specific provision therefor in paragraph 147 of the act of 1913 from paragraph 378 of the bill H. R. 7456.

#### PARAGRAPH 1554.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1554. Copper sulphate or blue vitriol; copper acetate and subacetate or verdigris.

ACT OF 1909.

ACT OF 1913.

PAR. 9. Blue vitriol or sulphate of copper, one fourth of one cent per pound.

PAR. 3. \* \* \* salts \* \* \* twenty five per centum ad valorem; \* \* \*

PAR. 706. Verdigris, or subacetate of copper [Free].

PAR. 421. Blue vitriol, or sulphate of copper; acetate and subacetate of copper, or verdigris [Free].

## COPPER SULPHATE AND COPPER ACETATE.

(See Survey FL-8.)

*Description and uses.*—Blue vitriol, or sulphate of copper, is used chiefly as an insecticide, especially in grape culture. It is also used in calico printing and dyeing; to prevent rotting of timbers; for the preparation of copper pigments; in copper plating solutions, in electric batteries; and for destroying algæ growths in public water supplies.

Verdigris is a basic acetate of copper, of a green or bluish green color. It is used principally as a pigment for oil and water colors.

*Production* of blue vitriol is largely as a by-product from copper refining, the output in 1914 being 37,152,351 pounds, of which 34,411,443 pounds were produced by refineries. Refinery production was 42,086,107 pounds in 1915, 55,622,345 pounds in 1916, and 50,007,856 pounds in 1917. Production in 1919 according to preliminary figures was 35,288,000 pounds, valued at \$2,285,550.

Production statistics for copper acetate or verdigris are not available.

*Imports* of blue vitriol have been less than 1 per cent of domestic production. Imports of verdigris in 1914 were 19,009 pounds, nearly 95 per cent from France; 81,005 pounds in 1916; 50,216 pounds in 1917.

Imports for the calendar years 1918–1921 are shown below:

Calendar year.	Quantity.	Value.	Unit value.
COPPER SULPHATE.			
	<i>Pounds.</i>		
1918.....	28	\$5	\$0.18
1919.....	16,545	2,825	.17
1920.....	558,450	32,329	.06
1921 (9 months).....	316,458	16,560	.05
VERDIGRIS.			
1918.....	22,732	\$8,219	\$0.36
1919.....	35,780	13,039	.36
1920.....	22,091	4,806	.22
1921 (9 months).....	5,506	954	.17

*Exports* of blue vitriol, principally to European and South American countries, steadily increased from 1910 to 1917, when they amounted to 28,128,190 pounds. Exports for the calendar years 1918–1921, chiefly to Argentina, Canada, and Mexico, have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	14,477,339	9,140,673	3,783,409	3,110,487
Value.....	\$1,395,946	\$928,291	\$306,899	\$195,030

Export statistics for verdigris are not available.

## PARAGRAPH 1555.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1555. Coral, marine, uncut, and unmanufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 546. Coral, marine, uncut, and unmanufactured [Free].

PAR. 463. Coral, marine, uncut, and unmanufactured [Free].

## CORAL, MARINE, UNMANUFACTURED.

(See Survey N-1.)

*Description and uses.*—Coral is derived from the skeleton of the coral polyps. It is fairly hard, has the brilliancy of agate, and polishes like gems. The principal varieties are red, black, clear white, dull white, and, the most prized, delicate rose, or flesh color.

*Production.*—The greater portion of the precious coral entering commerce is produced on the shores and islands of the Mediterranean, though considerable quantities are found on the Persian Gulf, in the Philippines, and elsewhere.

*Imports* of coral in 1914, mainly from Italy, were valued at \$192; for later calendar years they were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....		265	188	1,220
Value.....	\$86	\$1,306	\$1,389	\$1,988

## PARAGRAPH 1556.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1556. Cork wood, or cork bark, unmanufactured, and cork waste, shavings, and cork refuse of all kinds.

ACT OF 1909.

ACT OF 1913.

PAR. 547. Cork wood, or cork bark, unmanufactured [Free].

PAR. 464. Cork wood, or cork bark, unmanufactured, and cork waste, shavings, and cork refuse of all kinds [Free].

## CORK BARK AND CORK WASTE.

(See Survey N-4.)

*Description and uses.*—Corkwood or bark is derived from an evergreen oak common to southern Europe and northern Africa. The trees are stripped at intervals of nine years, each yielding about 45 pounds of commercial bark varying in thickness from one-half inch to 2 inches. Cork waste is the residue from the cutting of natural cork articles, and also the forest waste or refuse remaining after the selection of the commercial bark. (See paragraph 1412 for uses.)

*Production.*—Portugal leads in cork production, with Spain a close second. The estimated output of the former in 1913 was 100,000

tons, and Spain produced 78,000 tons in 1912. About 85 per cent of the total product of the world is absorbed by the manufactures of France, Great Britain, Germany, and the United States. No cork bark is grown in the United States.

Import values of cork wood, waste, shavings, etc., since 1910 ranged between \$3,000,000 and \$4,000,000, except in 1915 and 1911, when they were \$2,762,895 and \$4,274,810, respectively. Imports during the calendar years 1918-1921 were as follows:

	1918	1919	1920	1921 (9 months)
Cork wood or bark, unmanufactured:				
Quantity (pounds).....	22,560,059	28,286,942	53,927,976	14,711,163
Value.....	\$1,297,635	\$1,802,506	\$2,596,600	\$725,443
Cork waste, shavings and refuse of all kinds:				
Quantity (pounds).....	72,421,740	131,641,699	169,549,364	59,165,662
Value.....	\$1,233,009	\$2,558,556	\$3,741,730	\$1,066,015

Almost all of these imports are from Portugal and Spain.

### PARAGRAPH 1557.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1557. Cotton and cotton waste.

ACT OF 1909.

ACT OF 1913.

PAR. 548. Cotton, and cotton waste or flocks [Free].

PAR. 467. Cotton, and cotton waste or flocks [Free].<sup>7</sup>

### COTTON AND COTTON WASTE.

(See report on American Raw Cotton Industry.)

#### RAW COTTON.

*Description and uses.*—The domestic cottons are short-staple upland, long-staple upland, American-Egyptian, and sea-island. The short-staple upland is under  $1\frac{1}{8}$  inches in length and can be spun only into coarse and medium counts, but it is the most widely used cotton grown. Long-staple upland runs from  $1\frac{1}{8}$  to  $1\frac{3}{8}$  inches, together with a small amount in longer lengths, and is mainly employed in counts from 40s to 100s. Sea-island cotton is the longest, finest, and silkiest, and the best quality can be spun to 400s or finer. It varies in length from  $1\frac{1}{4}$  to  $2\frac{1}{2}$  inches, with an average of about  $1\frac{3}{4}$ . American-Egyptian cotton is a recent development of acclimated Egyptian long staple. Production is now confined to the Pima variety, with a staple length of about  $1\frac{5}{8}$  inches; this is used mainly in the manufacture of tire fabrics.

*Production.*—Cotton ranks second to corn as the most valuable crop grown in this country. The total value of lint cotton produced in the United States was \$591,130,000 in 1914; \$2,030,960,000 in

<sup>7</sup> Seven cents per pound imposed by par. 16 of the emergency tariff act of May 27, 1921, on cotton having a staple of  $1\frac{1}{8}$  inches or more in length.

1919; and \$1,067,240,000 in 1920. The following table gives in bales of 500 pounds net weight the American output and estimated world production of commercial cotton as reported by the Federal Census:

Year.	World.	United States.	
	Bales.	Bales.	Per cent.
1914.....	23,768,000	15,437,955	64.9
1917.....	17,343,000	10,812,701	62.3
1918.....	17,940,000	11,520,367	64.2
1919.....	19,330,000	10,924,435	56.5
1920.....	18,810,000	12,859,030	68.4

The domestic acreage for all varieties was 36,832,000 in 1914; 36,008,000 in 1918; 33,566,000 in 1919; and 35,504,000 in 1920. The acreage and estimated yield for 1921 is the smallest in 20 years; This is due to the fall in the price of cotton, to insect pests, and to unfavorable weather conditions.

Production of short-staple uplands, under  $1\frac{1}{8}$  inches in length, constituted 91.2 per cent of the total in 1919 and 90.2 per cent in 1920; as compared with 7.5 per cent and 8.3 per cent, respectively, in the same years for cotton  $1\frac{1}{8}$  to  $1\frac{1}{4}$  inches in length; and 1.3 per cent and 1.5 per cent, respectively, for cotton over  $1\frac{1}{4}$  inches in length.

The United States is not only the largest producer of short-staple cotton under  $1\frac{1}{8}$  inches in length, but also of long-staple cotton of  $1\frac{1}{8}$  inches or more. In 1920 the United States produced 1,317,000 bales of the latter as compared with about 1,000,000 bales in Egypt, the next largest source. Cotton of extra-long staple, such as  $1\frac{3}{8}$  inches and above, is produced most largely in Egypt. The American production of extra-long staple is relatively small; it consists mainly of American-Egyptian and a small amount of long-staple upland. The production of sea-island, which was 117,559 running bales in 1916, was reduced by reason of the boll weevil to 1,868 running bales in 1920.

The production of American-Egyptian cotton, which was inaugurated about 1912, had increased by 1920 to 91,965 bales of 500 pounds each. This cotton was produced on about 240,000 acres of irrigated land in the Southwest. Maricopa County, Arizona, with about 185,000 acres in cotton, was the main center. The Department of Agriculture states:

The market for the 1920 crop of this type of cotton was badly demoralized by the suspension of production of tire fabrics and in part by unprecedentedly large imports of Egyptian cotton early in the year. As a result of adverse marketing conditions the acreage planted to Pima cotton was much reduced. It is now estimated that the acreage in Maricopa County, Arizona, for 1921 will be about 70,000, with possibly 10,000 acres in other irrigated valleys in Arizona and California.

India ranks second in the production of cotton, followed by China, Egypt, Russia, Brazil, Mexico, Turkey, Persia, and Peru.

Imports in 1914 were 246,699 bales (500 pounds gross), valued at \$19,456,565. Imports in later calendar years were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (500-pound bales).....	223,167	350,717	599,989	<sup>1</sup> 128,090
Value.....	\$41,624,080	\$71,886,290	\$138,743,695	<sup>1</sup> \$14,538,664

<sup>1</sup> Includes 6,008 bales, valued at \$754,451, of cotton dutiable under the emergency tariff act because of extra-long staple ( $1\frac{1}{8}$  inches and above).

General imports in 1921, by months, were as follows:

Month.	Quantity (equivalent 500-pound bales).	Value.	Month.	Quantity (equivalent 500-pound bales).	Value.
January.....	24,024	\$3,397,802	July.....	3,452	\$320,685
February.....	28,095	2,917,069	August.....	5,630	733,024
March.....	27,282	2,743,354	September.....	6,361	526,040
April.....	18,730	2,204,697	October.....	31,269	3,476,655
May.....	10,105	1,152,511	November.....	51,440	6,039,454
June.....	10,542	1,312,639	December.....	61,006	8,078,213

There are many types of cotton, and in spite of its enormous surplus production the United States finds it necessary to import certain varieties from abroad. These cottons, of special characteristics, are supplementary rather than competitive, and in general are higher in price than the domestic product. They may be classed as (1) Egyptian, (2) Mexican, (3) Chinese and Indian, and (4) Peruvian. Imports, by countries of production, during crop years ended July 31 are recorded by the Bureau of the Census as follows:

[Bales (equivalent 500 pounds).]

Crop year.	Total.	Produced in—					
		Egypt.	Mexico.	China.	Peru.	India.	All other countries.
1921.....	226,341	87,168	88,155	14,722	22,597	8,489	5,210
1920.....	700,214	485,004	65,343	57,185	63,426	14,358	14,898
1919.....	201,585	100,006	54,434	10,871	25,230	2,893	8,151
1918.....	221,216	114,580	35,726	38,964	19,692	7,096	5,158
1917.....	291,957	199,892	32,858	36,063	11,069	3,860	8,215
1916.....	437,574	350,796	30,098	35,792	10,909	4,214	5,765
1915.....	382,286	252,373	85,180	25,631	10,353	7,845	904
1914.....	260,988	138,579	80,285	20,772	12,627	7,849	876

It is seen that Egyptian cotton is normally the main import. This cotton enters chiefly for use in making tire fabrics, probably less than 20 per cent of the total being employed for other purposes, such as the manufacture of thread, lace, knit goods, and fine cloths. The record imports in 1920 were due mainly to the apparently insatiable demand for tire fabrics in the fall of 1919 and early part of 1920.

The Mexican cotton is nearest to the American in its characteristics and is partly good-staple cotton from the Laguna section and partly longer-stapled cotton from the Imperial Valley of California Baja. At a number of border points Mexican cotton is brought into the United States for ginning. This cotton is exported as American cotton or used to supplement our shortage of long-staple cottons.

The Chinese and Indian cottons are harsh and of short staple. They are used as filling in cotton blankets, to which they impart a special feel.

The Peruvian cotton imported is mainly "Rough Peruvian" tree cotton, sometimes called "vegetable wool." This is not used in cotton manufacture, but is imported for mixing with wool, and the price depends on the price of wool and the supply of Rough Peruvian rather than on the price of cotton.

*Exports.*—Prior to the war, raw cotton was normally the leading export of the United States. Exports in 1914, excluding linters, were 9,521,881 bales (equivalent 500 pounds), valued at \$610,475,301. Later exports for calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (500-pound bales).....	4,096,307	6,709,972	6,310,541	4,393,288
Value.....	\$665,242,273	\$1,135,360,540	\$1,134,790,044	\$316,220,673

The United Kingdom is the largest purchaser. Japan now ranks second, followed by France, Germany, and Italy, and then by smaller users such as Spain, Belgium, and Canada. Prior to the war exports considerably exceeded domestic consumption; in the years 1915-1919 consumption exceeded exports.

## LINTERS.

*Description and uses.*—Cotton linters are the short fuzz left on cotton seed after the lint is removed by ginning; they are removed by a special machine in the cottonseed oil mills before the seed are crushed. In some cases every vestige of fiber is removed by a third process, the product being called "delinters" or "hull fiber." Linters are used for batting; wadding; stuffing material (in mattresses, comforts, horse collars, and upholstery); absorbent cotton; mixing with shoddy; mixing with wool in hatmaking and in fleece-lined underwear; low-grade yarns (for wicking, twine, rope, and carpets); and cellulose for making artificial silk, paper, and explosives. The demand for the last-named purpose, i. e., making guncotton and niter powder, predominated during the World War.

*Production,* in equivalent 500-pound bales, amounted to 856,900 in 1914, 929,516 in 1918, 607,969 in 1919, and 440,313 in 1920. High war prices made it profitable to scrape this fuzz from the seed most completely, as much as 150 to 200 pounds being obtained from a ton of seed. Ordinary commercial usages require a better grade, hence a lower yield results.

*Imports.*—None are recorded. The production of linters in other countries is very small. Egyptian seed is clean and flossless after ginning, as are also sea island and some other types. Indian cotton seed has a thinner hull than American upland cotton seed and is fed to cattle or crushed for oil without removal of the linters.

*Exports* were 225,690 bales, valued at \$3,665,017, in 1915; and in 1917, the maximum year, 473,948 bales, valued at \$24,110,815. Exports were 140,043 bales, valued at \$8,880,517, in 1918; 25,384 bales, valued at \$1,010,712, in 1919; 48,086 bales, valued at \$1,618,872, in 1920; and 59,025 bales, valued at \$943,907, in the first nine months of 1921.

## COTTON WASTE.

*Description and uses.*—Waste is made at every machine process as cotton passes through the mill. A larger percentage of waste is made in the manufacture of fine yarns than of coarse, but the average is estimated at 15 per cent, of which 12 per cent is reworked into inferior products or otherwise utilized and 3 per cent lost in the form of sand and moisture. There are two kinds (1) soft waste, which has no

twist and is made at machines up to the spinning frame, including such types as motes, card fly, flat and cylinder strips, and roving waste; and (2) hard waste, having some twist, which is made at the spinning frame and subsequent machines, including such types as spinning waste, cop bottoms, reel waste, and twister waste. Hard waste must be torn up into its original fibers by a special machine before it can be reworked; soft waste needs only to be cleaned before reworking. Cotton waste is used as filling in making cotton blankets, flannelettes, cheap trousering, towels, etc., and as both warp and filling in making sacks, scrubbing cloths, dishcloths, etc., also for candle and lamp wicks, wadding for surgical purposes, guncotton, etc. Flocks, short fibers removed from cloth during the brushing and napping, are much less important than many other types of waste.

*Production* of cotton-mill waste in 1914 amounted to 634,396 bales (equivalent 500 pounds), valued at \$14,417,000, and in 1919 to 609,640 bales, valued at \$35,741,000. This is the amount sold and does not include that reworked in mills where produced.

*Imports* in 1914 were 53,411 bales (equivalent 500 pounds), valued at \$1,288,105. Later imports by calendar years were: In 1918, 2,535 bales, valued at \$94,123; in 1919, 4,249 bales, valued at \$216,878; in 1920, 18,185 bales, valued at \$947,542; and in the first nine months of 1921, 7,364 bales, valued at \$253,239. Imports, mainly of hard thread waste for machine wiping, come principally from England, Canada, Italy, and Japan.

*Exports* in 1914 were 134,501 bales (equivalent 500 pounds), valued at \$4,566,769. Later exports by calendar years were: In 1918, 93,737 bales, valued at \$9,488,664; in 1919, 114,636 bales, valued at \$12,411,704; in 1920, 115,754 bales, valued at \$12,368,596; and in the first nine months of 1921, 49,830 bales, valued at \$2,155,238. Exports, mainly of soft waste for remanufacture, are sent in largest quantities to England, Germany, Canada, and Italy.

*Important changes in classification.*—The word "flocks" has been omitted because this is a cotton waste of little importance and is included in the term "cotton waste."

*Suggested changes.*—Page 184, line 17: Insert a comma between "cotton" and "and."

#### PARAGRAPH 1558.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1558. Cryolite, or kryolith.

ACT OF 1909.

ACT OF 1913.

PAR. 549. Cryolite, or kryolith [Free].

PAR. 468. Cryolite, or kryolith [Free].

#### CRYOLITE OR KRYOLITH.

(See Survey FL-24.)

*Description and uses.*—Cryolite is a natural double fluoride of sodium and aluminum. It is used chiefly in the aluminum industry where it is now being partially displaced by fluorspar. Cryolite is also used to some extent in opalescent glasses and enamels. It was

formerly employed for the manufacture of soda, but this is now made much more cheaply from common salt.

*Production.*—The entire world's supply of cryolite comes from one deposit in Greenland. It is found in other localities, notably around Pike's Peak, Colo., but not in commercial quantities.

*Imports* of cryolite in 1914 were 2,157 long tons, valued at \$47,435. There is but one importer in North America. At least one-fourth of the imports are reexported to Canada. Imports since 1917 are as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Tons.</i>		
1918.....	1,950	\$97,500	\$50.00
1919.....	2,131	106,956	50.19
1920.....	3,864	193,638	50.11
1921 (9 months).....	3,287	208,686	63.49

### PARAGRAPH 1559.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1559. Metallic mineral substances in a crude state, and metals unwrought, whether capable of being wrought or not, not specially provided for.

#### ACT OF 1909.

PAR. 172. \* \* \* barium, calcium, \* \* \* sodium, and potassium, and alloys of which said metals are the component material of chief value, three cents per pound and twenty-five per centum ad valorem.

PAR. 183. Metallic mineral substances in a crude state, and metals unwrought, whether capable of being wrought or not, not specially provided for in this section, twenty per centum ad valorem; \* \* \*.

#### ACT OF 1913.

PAR. 143. \* \* \* barium; calcium, \* \* \* sodium, and potassium, and alloys of which said metals are the component material of chief value, 25 per centum ad valorem.

PAR. 154. Metallic mineral substances in a crude state, and metals unwrought, whether capable of being wrought or not, not specially provided for in this section, 10 per centum ad valorem; \* \* \*.

### METALLIC MINERAL SUBSTANCES AND METALS UNWROUGHT.

(See Surveys C-16 and C-22.)

*Description and uses.*—The terms “metallic mineral substances” and “metals unwrought” apply to metals in their native state or in a crude or raw condition and not elsewhere provided for. The former term has been interpreted to embrace such merchandise as aluminum foundry ashes, zinc dross or galvanizers' skimmings, tin dross, and meteoric iron. At one time considerable doubt existed as to the precise meaning of “metals unwrought” and judicial decisions limited the applicability of the term to metals capable of being wrought or imported for the purpose of being worked up into useful articles commercially profitable. In the acts of 1909 and 1913 the phrase “metals unwrought” was given a wider application by the additional words “whether capable of being wrought or not.” In H. R. 7456 this term covers barium, calcium, sodium, and potassium, which are specifically mentioned in paragraph 143, and arsenic metal,

which is specifically mentioned in paragraph 403, of the act of 1913. It also includes alloys not specially provided for, except ferro-alloys (par. 302), nickel silver (par. 377), and those of chief value of aluminum (par. 374), copper (par. 1552), gold (par. 1537), lead (par. 389), magnesium (par. 375), and nickel (par. 385). Natural platinum alloys are provided for, but artificial alloys would come under this designation, as would also pyrophoric alloys when not cut into sizes or classed as ferrocerium. In addition to the above, there are about 27 different rare or noncommercial metals that would come under this paragraph, if imported.

*Production.*—Except for certain white metal alloys, statistics for which are not available, the output of these products is not very large, either in this or foreign countries.

*Imports* of the alkali metals have been derived mostly from Germany, except sodium, which is also imported from Scandinavian countries. Imports of arsenic metal, mainly from Germany, are included with those of sulphide of arsenic (par. 1513). Of the imports of unspecified metals, white metal in various forms from Canada is the main item. Statistics since 1917 by calendar years are as follows:

Calendar year.	Quantity.	Value.	Duty.	Equivalent ad valorem.
----------------	-----------	--------	-------	------------------------

METALS, UNWROUGHT OR IN CRUDE STATE, N. S. P. F.

	Pounds.	Value.	Duty.	Per cent.
1918.....		\$73,514	\$7,339	10
1919.....	2,920,530	93,670	9,365	10
1920.....	4,886,318	178,411	17,841	10
1921 (9 months).....	3,560,064	71,358		

BARIUM.

1919.....	100	\$163	\$41	25
1920.....	51	62	15	25
1921 (9 months).....		668		

CALCIUM.

1919.....	21,622	\$3,918	\$979	25
1920.....	71	60	15	25
1921 (9 months).....	2,226	2,651		

POTASSIUM.

1921 (9 months).....	15,232	\$594		25
----------------------	--------	-------	--	----

SODIUM.

1919.....	5,600	\$684	\$171	25
1921 (9 months).....	67,288	2,832		

*Exports.*—None recorded.

*Important changes in classification.*—The provisions of this paragraph were in dutiable schedules of the acts of 1913 (par. 154), 1909 (par. 183), 1897 (par. 183), 1890 (par. 202), and 1883 (par. 215). Barium, calcium, sodium, and potassium and alloys of which these metals are

the component materials of chief value, are transferred to this paragraph from paragraph 143 of the metal schedule of the act of 1913.

*Suggested changes.*—This paragraph includes arsenic metal, which is not specifically mentioned, although white arsenic, the raw material from which it is made, is dutiable under paragraph 1 of H. R. 7456. This paragraph, furthermore, exempts from duty metals made dutiable by H. R. 7456, notably tin and antimony, when such metals are alloyed with other metals.

### PARAGRAPH 1560.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1560. Cuttlefish bone.

ACT OF 1909.

ACT OF 1913.

PAR. 553. Cuttlefish bone [Free].

PAR. 472. Cuttlefish bone [Free].

#### CUTTLEFISH BONE.

*Description and uses.*—Cuttlefish bone, or cuttle bone, is the internal plate of the cuttlefish, a friable, calcareous substance formerly much used in medicine as an absorbent, but now chiefly for polishing wood, paints, varnish, etc., and in tooth powder. It is fed to canaries for the lime it contains.

*Imports* of cuttlefish bone in 1914 were 309,540 pounds, valued at \$56,051, and during the calendar years 1918–1921 they were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	212,298	338,875	444,565	90,512
Value.....	\$55,753	\$136,932	\$106,191	\$19,099

*Exports.*—None recorded.

### PARAGRAPH 1561.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1561. Glaziers' and engravers' diamonds, unset; miners' diamonds.

ACT OF 1909.

ACT OF 1913.

PAR. 555. \* \* \* glaziers' and engravers' diamonds not set [Free].<sup>3</sup>

PAR. 474. Glaziers' and engravers' diamonds, unset, miners' diamonds [Free].

PAR. 556. Miners' diamonds, whether in their natural form or broken, \* \* \* any of the foregoing not set, \* \* \* [Free].

<sup>3</sup> See note, par. 1429, p. 1148.

## GLAZIERS' AND ENGRAVERS' DIAMONDS, ETC.

(See Survey N-1.)

*Description and uses.*—Glaziers' and engravers' diamonds, unset, and miners' diamonds are usually of an amorphous variety, brown, gray, or black in color. Small uncut diamonds, preferably from crystals with a natural curved edge, are employed by glaziers for cutting glass. While bort may be used for engraver's purposes, it usually requires manipulation or advancement. Minute fragments or splinters of bort are also used for making fine drills, employed for drilling small holes in rubies and other hard stones and for piercing china, porcelain, glass, artificial teeth, etc. Rock drilling, in which a rotary drill armed with impure diamonds is used, is the most important industrial application.

*Production.*—See paragraph 1429, page 1149.

*Imports* in 1918 of glaziers' and engravers' diamonds, unset, and miners' diamonds, amounted to \$1,049,975. Increases have occurred since 1914 when the imports amounted to \$101,839. Recently the largest imports have come from Brazil; substantial amounts, however, are also received from England, France, and the Netherlands. During the calendar years 1919-1921 imports were as follows:

	1919	1920	1921 (9 months).
Quantity (carats).....	25, 279	61, 214	10, 838
Value.....	\$984, 381	\$1, 527, 753	\$364, 442

*Exports.*—None recorded.

## PARAGRAPH 1562.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1562. Drugs such as barks, beans, berries, buds, bulbs, bulbous roots, excrescences, fruits, flowers, dried fibers, dried insects, grains, herbs, leaves, lichens, mosses, logs, roots, stems, vegetables, seeds (aromatic, not garden seeds), seeds of morbid growth, weeds, and all other drugs of vegetable or animal origin; all of the foregoing which are natural and uncompounded drugs and not edible, and not specially provided for, and are in a crude state, not advanced in value or condition by shredding, grinding, chipping, crushing, or any other process of treatment whatever beyond that essential to the proper packing of the drugs and the prevention of decay or deterioration pending manufacture: *Provided*, That no article containing alcohol shall be admitted free of duty under this paragraph.

## ACT OF 1909.

PAR. 559. Drugs, such as barks, beans, berries, \* \* \* buds, bulbs, bulbous roots, excrescences, fruits, flowers, dried fibers, dried insects, grains, \* \* \* herbs, leaves, lichens, mosses, nuts, \* \* \* roots, stems, spices, vegetables, seeds (aromatic, not garden seeds), seeds of morbid growth, weeds, \* \* \* any of the foregoing which are natural and un-compounded drugs and not edible and not specially provided for in this section, and are in a crude state, not advanced in value or condition by any process or treatment whatever beyond that essential to the proper packing of the drugs and the prevention of decay or deterioration pending manufacture [Free]: *Provided*, That no article containing alcohol, or in the preparation of which alcohol is used, shall be admitted free of duty under this paragraph.

PAR. 504. Balm of Gilead [Free].

PAR. 666. Salep, or salop [Free].

## ACT OF 1913.

PAR. 477. Drugs, such as barks, beans, berries, buds, bulbs, bulbous roots, excrescences, fruits, flowers, dried fibers, dried insects, grains, \* \* \* herbs, leaves, lichens, mosses, logs, roots, stems, vegetables, seeds (aromatic, not garden seeds), seeds of morbid growth, weeds; any of the foregoing which are natural and un-compounded drugs and not edible and not specially provided for in this section, and are in a crude state, not advanced in value or condition by shredding, grinding, chipping, crushing, or any other process or treatment whatever beyond that essential to the proper packing of the drugs and the prevention of decay or deterioration pending manufacture [Free]: *Provided*, That no article containing alcohol shall be admitted free of duty under this paragraph.

PAR. 409. Balm of Gilead [Free].

PAR. 592. Salep, or salop [Free].

## DRUGS, NOT ADVANCED.

[For discussion, see pars. 31 and 32 on pp. 89-96.]

## PARAGRAPH 1563.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1563. Dyeing or tanning materials: Fustic wood, hemlock bark, logwood, mangrove bark, oak bark, quebracho wood, wattle bark, divi-divi, myrobalans fruit, sumac, valonia, nutgalls or gall nuts, and all articles of vegetable origin used for dyeing, coloring, staining, or tanning, whether crude or treated solely for proper packing or prevention of decay or deterioration pending manufacture; all the foregoing not containing alcohol and not specially provided for.

## ACT OF 1909.

PAR. 559. \* \* \* woods used expressly for dyeing or tanning; [Free] \* \* \* *Provided*, That no article containing alcohol, or in the preparation of which alcohol is used, shall be admitted free of duty under this paragraph.

PAR. 557. Divi-divi [Free].

PAR. 632. Myrobalans [Free].

PAR. 705. Valonia [Free].

PAR. 499. Articles in a crude state used in dyeing or tanning not specially provided for in this section [Free]. [Covered hemlock bark and logwood.]

[No corresponding provision for sumac.]

## ACT OF 1913.

PAR. 624. Tanning material: \* \* \* nuts and nutgalls and woods used expressly for dyeing or tanning, whether or not advanced in value or condition by shredding, grinding, chipping, crushing, or any other process; and articles in a crude state used in dyeing or tanning; all the foregoing not containing alcohol and not specially provided for in this section [Free].

PAR. 475. Divi-divi [Free].

PAR. 553. Myrobalans fruit [Free].

PAR. 618. Sumac, \* \* \* unground [Free].

PAR. 639. Valonia [Free].

## DYEING OR TANNING MATERIALS.

(See Survey A-8.)

[The crude dyeing and tanning materials of this paragraph are discussed under Extracts, par. 36, p. 105.]

*Important changes in classification.*—Dyeing has been added to the heading. The following important tanning materials are mentioned for the first time in this paragraph: Fustic wood, hemlock bark, oak bark, logwood, mangrove bark, quebracho wood, and wattle bark.

*Suggested changes.*—Many of the dyeing or tanning materials provided for in this paragraph may be imported in different forms. For example, sumac is imported as "ground" and "unground," and the woods, such as quebracho wood and logwood, may be imported in logs or in chips made from the logs. The phrase "whether crude or treated solely for proper packing or prevention of decay or deterioration pending manufacture" might exclude advanced forms from this paragraph. If so excluded, they might come within paragraph 1458 as unenumerated articles. The products in paragraph 1563, whether crude or advanced by chipping and similar processes, are used as raw materials for the manufacture of tanning and dyeing extracts, which are dutiable under paragraph 36. If it is desired to include these articles, when shredded, ground, etc., in this paragraph, the phrase "whether crude or advanced in value or condition by shredding, grinding, chipping, crushing, or any similar process;" might be substituted for the words "whether crude or treated solely for proper packing or prevention of decay or deterioration pending manufacture;" in paragraph 1563.

## NUTGALLS OR GALL NUTS.

(See Survey A-1.)

*Description and uses.*—The term "galls" includes a variety of plant excrescences caused by the puncture of insects for laying their eggs, or less frequently induced by fungi. Oak galls or oak apples or Aleppo galls are induced on certain species of oak by the gall wasp. The bud swells to the size of a hazel nut. The green galls are of a higher quality, while the white galls, from which the insect has escaped, are inferior. The best oak galls contain 50 to 60 per cent tannin. They are gathered in southern Europe and Asia Minor, particularly in Greece and the Levant.

The Chinese and Japanese galls are produced on the *Rhus semialata*. They are light, distorted, covered by a velvety down, and contain about 70 per cent tannin or tannic acid, which is extracted from them. (See Tannic acid, par. 1, p. 15.)

*Production.*—No domestic production.

*Imports* of nuts and nutgalls for 1908-1918 averaged about \$230,000. The imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$832, 983	
1919.....	579, 891	135, 985	\$0. 23
1920.....	4, 034, 872	975, 610	. 24
1921 (9 months).....	465, 976	81, 897	. 18

*Suggested changes.*—Nutmalls or gall nuts are not primarily used for dyeing or tanning as are the other articles in this paragraph and might therefore be provided for in a separate paragraph immediately before paragraph 1620.

---

PARAGRAPH 1564.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1564. Eggs of birds, fish, and insects (except fish roe for food purposes): *Provided*, That the importation of eggs of wild birds is prohibited, except eggs of game birds imported for propagating purposes under regulations prescribed by the Secretary of Agriculture, and specimens imported for scientific collections.

ACT OF 1909.

ACT OF 1913.

PAR. 560. Eggs of birds, fish, and insects (except fish roe preserved for food purposes): *Provided, however*, That the importation of eggs of game birds or eggs of birds not used for food, except specimens for scientific collections, is prohibited: *Provided further*, That the importation of eggs of game birds for purposes of propagation is hereby authorized, under rules and regulations to be prescribed by the Secretary of the Treasury [Free].

PAR. 478. Eggs of \* \* \* birds, fish, and insects (except fish roe preserved for food purposes): *Provided, however*, That the importation of eggs of game birds or eggs of birds not used for food, except specimens for scientific collections, is prohibited: *Provided further*, That the importation of eggs of game birds for purposes of propagation is hereby authorized, under rules and regulations to be prescribed by the Secretary of the Treasury [Free].

PAR. 674. Silkworm eggs [Free].

PAR. 601. Silkworm eggs [Free].

EGGS OF BIRDS, FISH, AND INSECTS.

GENERAL.

This clause prohibits the importation of eggs of wild birds, except for propagation. The purpose of this legislation is to prevent decimation of flocks of migratory birds or fowls; also to check imports of eggs of undesirable or harmful species.

SILKWORM EGGS.

(See Survey L-1.)

*Description and uses.*—Included in this provision through the elimination of paragraph 601 of the act of 1913, are the eggs of the mulberry butterfly, from which silkworms are artificially hatched after a lapse of about 10 months, during which the eggs are kept in some form of cold storage. These worms feed for about four weeks and then spin the cocoon, the spinning process taking about three days. After 12 to 18 days in the chrysalis stage within the cocoon the adult insect emerges. With most of the races there is but one generation each year.

*Imports* of silkworm eggs during the period 1911-1917 occurred in only two years and were insignificant; 1911, \$6; 1917, \$353. These imports were made in the course of unsuccessful attempts to establish

the raw-silk industry in the United States. Imports during the calendar years 1918-1921 were as follows:

	1918	1919	1920	1921 (9 months).
Eggs of birds, fish, and insects.....	\$120,131	\$5,268	\$9,729	\$418
Silkworm eggs.....	26,795	8,952	1,848	854

*Important changes in classification.*—Specific provision for silkworm eggs in the act of 1913 (par. 601) has been dropped because of their unimportance. The proviso combines two provisos in paragraph 478 of the act of 1913; the word "preserved" has been dropped in connection with fish roe, since it has given rise to litigation; the limiting provision regarding eggs has been changed to those of wild birds, and the regulatory work transferred from the Treasury to the Agricultural Department.

### PARAGRAPH 1565.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1565. Emery ore and corundum ore.

ACT OF 1909.

ACT OF 1913.

PAR. 561. Emery ore and corundum [Free].

PAR. 479. Emery ore and corundum, \* \* \* [Free].

#### EMERY ORE AND CORUNDUM ORE.

(See Survey B-3.)

*Description and use.*—Emery and corundum prior to the invention of artificial abrasives were the most important abrasive materials. Corundum is a natural crystalline mineral composed of aluminum oxide. Emery is an impure form of corundum. They are used in making emery cloth and paper and are manufactured into grinding wheels by mixing with suitable binding materials.

*Production.*—The chief commercial sources of emery ore are the Greek Island of Naxos and the Province of Smyrna in Asia Minor. Emery is produced in the United States, chiefly in the Peekskill district of New York and in Pittsylvania County, Va. The domestic production in 1914 was 485 tons, valued at \$2,425; in 1917, 16,315 tons, valued at \$173,589; and in 1920, 2,327 tons, valued at \$21,685.

Canada, which was formerly the chief source of corundum, has produced little since 1913. There are important deposits in India and South Africa from which considerable quantities were imported into this country during the war. The crude ore is usually shipped to Glasgow for refining and then reexported to this country. The domestic production in 1917 (all from North Carolina) was 820 tons, valued at \$67,461. In 1918 production increased, but during 1919 and 1920 the domestic output has been practically nil.

*Imports.*—Imports since 1917, by calendar years, are tabulated as follows:

	1918	1919	1920	1921 (9 months).
Emery:				
Quantity (tons).....	4, 956	8, 302	5, 398	4, 781
Value.....	\$148, 228	\$235, 596	\$222, 321	\$168, 588
Corundum:				
Quantity (tons).....	1, 721	3, 099	2, 828	908
Value.....	\$174, 382	\$286, 440	\$297, 518	\$101, 974

*Exports.*—None recorded.

*Important changes in classification.*—“Ore” was added to confine corundum to the ore.

### PARAGRAPH 1566.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1566. Enfleurage greases, floral essences and floral concretes: *Provided*, That no article mixed or compounded or containing alcohol shall be exempted from duty under this paragraph.

#### ACT OF 1909.

PAR. 639. Oils: \* \* \* jasmine or jasimine, \* \* \* enfleurage grease, liquid and solid primal flower essences not compounded \* \* \* [Free].

#### ACT OF 1913.

PAR. 46. Oils, distilled and essential: \* \* \* jasmine or jasimine; \* \* \* 20 per centum ad valorem: \* \* \*.

PAR. 49. \* \* \* enfleurage greases and floral essences by whatever method obtained; \* \* \* all the foregoing not containing alcohol and not specially provided for in this section, 20 per centum ad valorem.

### ENFLEURAGE GREASE AND FLORAL ESSENCES AND CONCRETES.

(See Survey A-14.)

*Description and uses.*—Enfleurage greases and pomades are greases or fats saturated with the odoriferous essential oils of certain flowers resulting from the enfleurage process in perfume manufacture. This process is described under paragraphs 54 and 56. The pomades contain only a small portion of odorous substances and the greases and fats employed (usually lard or tallow) will turn rancid in time. Such objections have led to improved methods of recovering these delicate essential oils by means of volatile solvents, described under paragraph 54. The so-called flower concretes or floral essences are made by this method in southern France.

*Imports* of enfleurage grease, not containing alcohol, in 1913 were 92,446 pounds, valued at \$124,195, and were free of duty.

*Imports* of flower essences, liquid and solid primal, in 1913 were 9,440 pounds, valued at \$470,684, and were free of duty. Floral essences imported in 1917 were valued at \$406,136 and yielded a revenue of \$81,227.

Imports of the above materials since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate. <sup>(10)</sup>
<b>ENFLEURAGE GREASES.</b>					
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	22,737	\$223,965	\$9.85	\$44,793	20
1919.....	11,935	100,296	8.40	20,059	20
1920.....	24,330	236,030	9.70	47,206	20
1921 (9 months).....	6,073	55,319	9.11		
<b>FLORAL ESSENCES.</b>					
1918.....		\$89,210		\$17,842	20
1919.....		50,657		10,131	20
1920.....		220,099		44,020	20
1921 (9 months).....		131,298			

*Exports.*—Statistics not available.

*Important changes in classification.*—These products are dutiable under paragraphs 46 and 49, act of 1913. Floral concretes are mentioned specifically for the first time.

### PARAGRAPH 1567.

**H. R. 7456.**

**SENATE AMENDMENTS.**

PAR. 1567. Fans, common palm-leaf, plain and not ornamented or decorated in any manner, and palm leaf in its natural state not colored, dyed, or otherwise advanced or manufactured.

**ACT OF 1909.**

**ACT OF 1913.**

PAR. 563. Fans, common palm-leaf, plain and not ornamented or decorated in any manner, and palm leaf in its natural state, not colored, dyed, or otherwise advanced or manufactured [Free].

PAR. 480. Fans, common palm-leaf, plain and not ornamented or decorated in any manner, and palm leaf in its natural state, not colored, dyed, or otherwise advanced or manufactured [Free].

### PALM-LEAF FANS AND PALM LEAF.

(See Surveys N-11 and N-21.)

*Description.*—Palm-leaf fans are made from sections of the spreading leaf of several varieties of tropical palms.

*Production* data are not separately shown in official sources.

*Imports* in 1914 of plain and not ornamented or decorated palm-leaf fans were 617,135 dozens, valued at \$57,992, practically all from China, with a few from Hongkong and Japan.

Imports of natural palm leaf were valued at \$14,801 in 1914, mainly from China, Hongkong, Germany, and Cuba. Statistics of imports for the calendar years 1918-1921 follow:

	1918	1919	1920	1921 (9 months).
Fans, common palm leaf:				
Quantity (dozen).....	112,087	230,171	373,693	269,066
Value.....	\$21,849	\$38,128	\$99,835	\$49,334
Fans, natural palm leaf (value).....	\$4,621	\$27,125	\$22,202	\$3,450

Imports of palm-leaf fans for 1918-1921 are almost wholly from China and Hongkong.

*Exports.*—None recorded.

### PARAGRAPH 1568.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1568. Ferrous sulphate or copperas.

ACT OF 1909.

ACT OF 1913.

PAR. 19. Copperas, or sulphate of iron, fifteen-hundredths of one cent per pound. PAR. 462. Copperas, or sulphate of iron [Free].

### FERROUS SULPHATE (COPPERAS).

(See Survey FL-8.)

*Description and uses.*—Ferrous sulphate or copperas is a by-product obtained by evaporation from the "pickling solutions" used for cleaning iron plates and wires before galvanizing, tinning, or enameling. Copperas is used principally as a mordant in dyeing, for the purification of water, and in the manufacture of black inks and pigments containing iron; also for the production of rouge, for the purification of coal gas, for the precipitation of gold in metallurgical processes, and for refining glycerine.

*Production* is almost entirely by iron-working companies, and nearly equals consumption. The output in 1914 was 92,478,823 pounds—60,113,880 pounds from wire mills, 13,158,859 from rolling mills, and the remainder from chemical plants. The production in 1919 (preliminary figures) was 119,611,000 pounds, valued at \$1,046,900.

*Imports* in 1914 were 45,737 pounds from England. No imports are reported for 1916-1921.

*Exports.*—Statistics not available.

*Important changes in classification.*—"Sulphate of iron" has been changed to "ferrous sulphate," as this is the chemical designation of copperas, which is the only important sulphate of iron.

## PARAGRAPH 1569.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1569. Fibrin, in all forms.

ACT OF 1909.

ACT OF 1913.

PAR. 566. Fibrin, in all forms [Free].

PAR. 482. Fibrin, in all forms [Free].

## FIBRIN.

(See Survey FL-15.)

*Description, uses, and production.*—Fibrin is a protein substance which is formed when blood coagulates. It is obtained by beating blood with sticks to which the fibrin clings. It is also obtained by washing all of the coloring matter out of lean meat. It is not an important article of commerce.

*Imports* of fibrin have been very small, the maximum being valued at \$54, in 1910. None are shown since 1916.

*Exports.*—Statistics not available.

## PARAGRAPH 1570.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1570. Fishskins, raw or salted.

ACT OF 1909.

ACT OF 1913.

PAR. 568. Fishskins [Free].

PAR. 484. Fishskins [Free].

## FISHSKINS.

*Description and uses.*—Many fishskins have industrial uses. Those of flatfish make excellent gloves and upper leather; sole skins make purses; thornback skins are excellent substitutes for sandpaper in cabinet-making; eelskins make serviceable suspenders; siluroid skins are made into gloves in Canada; salmon skins make a leather as tough as wash leather; while the skins of sharks and skates are used for polishing.

*Production* statistics are not available.

*Imports* of fishskins in 1914 numbered 226, weighed 171 pounds, and were valued at \$174. Imports for the calendar years 1918-1921 were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	65,163	204,337	328,495	154,624
Value.....	\$2,507	\$4,697	\$8,020	\$5,140

*Exports.*—None recorded.

*Important changes in classification.*—"Raw or salted" is added.

## PARAGRAPH 1571.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1571. Flint, flints, and flint stones, unground.

ACT OF 1909.

ACT OF 1913.

PAR. 569. Flint, flints, and flint stones, unground [Free].

PAR. 486. Flint, flints, and flint stones, unground [Free].

## FLINT.

(See Survey B-3.)

*Description and uses.*—Flint, flints, and flint stones are used in pebble and tube mills for grinding minerals, ores, cement, and other materials. Foreign pebbles are crushed and used as "flint" in the ceramic industry.

*Production* of pebbles for grinding has been stimulated by the war; the supply has been collected along the beach in San Diego County, Calif. Minnesota, Nevada, and Pennsylvania have also been producers. Artificial stones have been produced by mechanically rounding pieces of hard stone. Statistics showing grinding pebbles and tube-mill linings sold by producers in the United States, 1918–1920, are as follows:

	1918	1919	1920
Quantity (short tons).....	12,469	9,448	10,924
Value.....	\$129,485	\$85,302	\$77,823

*Imports* of flints and pebbles for grinding have been chiefly from Denmark, France, and Belgium, and values decreased from \$479,146 in 1914 to less than \$200,000 in 1917. Of the 1917 import, 47 per cent was used in grinding gold, copper, and other ores, 25 per cent for grinding cement, and 17 per cent for ceramic materials. Imports for the calendar years 1918–1921 were as follows:

Flint, flints, and flint stones, unground.	1918	1919	1920	1921 (9 months)
Quantity (tons).....		17,677	23,782	6,026
Value.....	\$135,636	\$250,096	\$338,630	\$87,800

*Exports.*—None recorded.

## PARAGRAPH 1572.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1572. Fossils.

ACT OF 1909.

ACT OF 1913.

PAR. 570. Fossils [Free].

PAR. 487. Fossils [Free].

## FOSSILS.

*Description and uses.*—Fossils refer to traces, remains, or relics of the forms of plants or animals found buried in deposits or impressed on stratified rocks. They are valuable aids in the study and investigations of the sciences of biology, geology, physiography, and paleontology.

*Imports* of fossils in 1914 were valued at \$1,278, and for the calendar years 1918–1921 as follows: 1918, \$135; 1919, \$85; 1920, \$265; 1921 (nine months), \$155.

*Exports.*—None.

## PARAGRAPH 1573.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1573. Furs and fur skins, undressed.

ACT OF 1909.

ACT OF 1913.

PAR. 573. Furs, undressed [Free].

PAR. 491. Furs and fur skins, undressed

PAR. 574. Fur skin of all kinds not dressed in any manner and not specially provided for in this section [Free].

## FURS AND FUR SKINS, UNDRESSED.

(See Survey N-10.)

*Description and uses.*—The domestic pelts most commonly used in wearing apparel and other manufactures of fur are muskrat, skunk, opossum, and raccoon. Others used in large quantities are fox, wild cat, lynx, otter, beaver, badger, mink, and civet cat (a skunk species). Many furs are so finished and dyed as to retain little of their original appearance. Wholesale prices vary widely; ordinary muskrat or skunk skins often sell for 50 cents each, while silver-fox skins have sold for \$1,000, and Russian sable as high as \$1,200 each.

*Production.*—The value of furs sold at the New York and St. Louis sales (including many imported furs) during 1919 was about \$35,000,000; this sum is a conservative estimate of domestic production values. Furs of the smaller fur-bearing animals marketed annually are very large in number. The settlement of the country has not tended to decrease these animals, although the larger animals are quickly exterminated. The total number of seals killed in the Pribilof Islands in the whole period from 1867 to 1909 numbered nearly 4,000,000; in the period from 1910 to 1918, 88,770 was the total number killed; in 1918, 34,890; in 1919, about 26,000. The Government has encouraged projects of fur farming, which are, however, not yet yielding extensively.

*Imports.*—Some of the most important furs imported are muskrat, marten, fisher (similar to the marten), otter, beaver, and wolf, from Canada; sable, ermine (from the stoat), kolinsky (similar to our mink), wolf, and squirrel (sought because of its large pelt and thick fur), from Russia; rabbits in large quantities from Australia and New Zealand, the fur used for fur-felt hats, and the "nutria" (from the coypu), for the same purpose, from South America; the marmot fur from northern Europe; chinchilla from South America

(now temporarily prohibited from Chile); and skins of lynxes, leopards, bears, wolves, etc., from many parts of the world. Imports by countries show the fur markets rather than the sources, most furs coming here indirectly. The largest prewar import of furs and fur skins, undressed, was in 1912, valued at \$17,339,198, and was only slightly less in 1913. During 1914 and 1915 imports declined 50 per cent. The sources, in order of importance in 1913, were Germany, England, Canada, Belgium, France, and Russia. During later calendar years imports were as follows:

Furs and fur skins, undressed.	1913	1919	1920	1921 (9 months).
Quantity (number).....		144,255,022	130,370,538	53,902,693
Value.....	\$32,077,182	\$69,289,879	\$84,390,218	\$28,708,416

England, Canada, and Australia were the leading countries of origin for later years. In 1920 the values of imports from the leading sources were, England, \$16,221,385; Canada, \$13,096,720; Australia, \$12,196,461; France, \$3,397,765; China, \$10,566,781; Japan, \$5,307,387.

*Export* values of raw furs, mostly common varieties of small pelts, were \$7,866,242 to the United Kingdom and \$2,099,925 to Canada, in 1918, the total for that year being \$10,799,532. Exports in 1917 about equaled those of 1911. The largest were in 1913—sealskins, \$188,700; all others, \$17,276,203. Later statistics for calendar years are: 1918, \$9,214,067; 1919, \$16,313,726; 1920, \$26,273,307; 1921 (nine months), \$8,831,549. England, Canada, France, and Germany are the leading countries of destination, England in 1920 taking \$13,795,433 and Canada \$6,188,406.

*Suggested changes.*—Inasmuch as silver or black fox skins, undressed, are specifically provided for in paragraph 1420, the words “and not specially provided for” might be added to this paragraph.

#### PARAGRAPH 1574.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1574. Goldbeaters' molds and goldbeaters' skins.

ACT OF 1909.

ACT OF 1913.

PAR. 579. Goldbeaters' molds and goldbeaters' skins [Free].

PAR. 496. Goldbeaters' molds and goldbeaters' skins [Free].

#### GOLDBEATERS' MOLDS AND SKINS.

(See Survey N-19.)

*Description and uses.*—Goldbeater's skin is the outer coat of the cæcum of the ox when such membrane has been prepared for the goldbeater. A goldbeater's mold is a collection of about 850 leaves of parchment, vellum, and goldbeater's skins, each of a double thickness, fixed on a metal mold, and between which flattened pieces of gold are placed to be hammered out to the full size of the leaf.

*Production.*—None.

*Imports* of goldbeater's molds and skins in 1914 were valued at \$26,634, nearly all from England and Germany. Later statistics follow: (Calendar years) 1918, \$16,024; 1919, \$11,050; 1920, \$41,086; 1921 (nine months), \$47,351.

### PARAGRAPH 1575.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1575. Grasses and fibers: Istle or Tampico fiber, jute, jute butts, manila, sisal grass, sunn, and all other textile grasses or fibrous vegetable substances, not dressed or manufactured in any manner, and not specially provided for.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 578. Grasses and fibers: Istle or Tampico fiber, jute, jute butts, manila, sisal grass, sunn, and all other textile grasses or fibrous vegetable substances, not dressed or manufactured in any manner, and not specially provided for in this section [Free].

PAR. 497. Grasses and fibers: Istle or Tampico fiber, jute, jute butts, manila, sisal grass, sunn, and all other textile grasses or fibrous vegetable substances, not dressed or manufactured in any manner, and not specially provided for in this section [Free].

PAR. 540. Cocoa, or cacao \* \* \* fiber \* \* \* [Free].

PAR. 456. Cocoa, or cacao \* \* \* fiber \* \* \* [Free].

#### ISTLE.

(See Survey FL-16.)

*Description, uses, and production.*—Istle, otherwise known as Tampico fiber, a hard fiber, is obtained from the leaves of several plants found chiefly in the tablelands of northern Mexico, but also in the West Indies, Central America, and British Guiana. The fiber is extracted from the leaf stems by a crude method of stripping and scraping. The filaments are hard and stiff, and smooth and yellowish white in appearance. They are an admirable substitute for animal bristles in brushes, and are also used in basketwork, in the cheaper grades of twine (e. g., lath twine), and in baling rope. Mexican cotton is usually baled with hand-woven istle bagging of wide mesh. During the war, on account of the difficulty in obtaining jute butts from British India, an American company developed yucca—one of the group of istle plants growing in New Mexico and Arizona—and used it extensively in the production of bagging for covering the domestic cotton crop. With the close of the war, this company discontinued the manufacture of yucca, as jute butts could be imported at lower cost.

*Imports*, exclusively from Mexico, in 1914, were 10,658 tons, valued at \$1,032,417. Imports for 1918-1921 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	32,015	20,840	23,555	6,741
Value.....	\$3,714,401	\$2,523,330	\$3,334,526	\$562,894

## JUTE AND JUTE BUTTS.

(See Survey FL-16.)

*Description and uses.*—Jute produced exclusively in British India, is the cheapest and, next to cotton, the most extensively used commercial fiber. Unsuitable climatic conditions and lack of cheap labor have rendered ineffective the attempts made to grow jute in other countries. A pound of woven jute burlap prior to 1914 commanded about two-thirds the price of a pound of raw cotton. The causes for its low price are: (1) Heavy production per acre; (2) exclusive cultivation in a part of the world where labor is cheap; and (3) the ease with which the fiber can be prepared for spinning. The fiber is relatively weak and is difficult to bleach, but because of its abundance and cheapness it has become the world's leading wrapping and sacking material. Jute cloths are used in sacking grain, coffee, raw sugar, nitrates, etc.; and in covering raw cotton; as a foundation for linoleum, floor oilcloths, and asphalt roofing; for tarpaulins, coat paddings, wall decorations, and carpeting. Inferior grades of rope and twine also are made from jute. After the crop has been either pulled or cut the fiber is produced by retting, beating, stripping, washing, and drying. It is then sorted according to quality into bundles of rejections (the lowest grade); cuttings or jute butts employed for the manufacture of cotton bagging; and into several grades of long jute, used in producing burlap.

*Production* in British India of jute (including jute butts) averages per annum about 8,000,000 bales of 400 pounds each. The production in 1920 was 8,292,184 bales from 2,508,673 acres. A constantly greater portion of the raw material is consumed yearly by Indian mills and exported as burlap and twilled bags. Calcutta, the greatest manufacturing center, exports about half the world's consumption of jute fabrics. Dundee, Scotland, which ranks second, produces materials of a higher grade.

*Imports* in 1914 were 49,036 tons of jute, valued at \$3,923,225, and 41,112 tons of jute butts, valued at \$1,933,796. Imports for 1918-1921 have been as follows:

Calendar year.	Jute.		Jute butts.	
	Quantity.	Value.	Quantity.	Value.
1918.....	<i>Tons.</i> 53,579	\$5,700,791	<i>Tons.</i> 17,835	\$761,868
1919.....	44,426	7,446,335	17,906	938,144
1920.....	49,443	7,880,290	46,596	1,812,515
1921 (9 months).....	32,833	4,146,507	13,936	437,429

## MANILA.

(See Survey FL-16.)

*Description, uses, and production.*—Manila or abaca, the world's leading raw material for rope making, is obtained from the leaf stalks of a plantain tree native to the Philippines. The plants are cut near the ground, the overlapping leaf sheaves are stripped off, and the strips are drawn by hand under a knife held by a spring

against a piece of wood. The knife scrapes away the pulp, leaving the fiber clean and white. After drying, it is bunched and is then ready for export. Because of its great lightness, strength, and durability (especially in water) manila has become the chief material for making hawsers, ships' cables, and other marine cordage; and for well-drilling cables, hoisting and transmission ropes. In 1919, the domestic output of manila rope and cable amounted to 130,419,000 pounds, or 60 per cent of all the rope and cable manufactured in that year. About 5 per cent of the domestic output of binder twine is made from manila. In the Philippines, manila is used to some extent for weaving fabrics for clothing. Manila paper is made from disintegrated manila rope.

*Imports* of manila in 1914 were 49,685 tons, valued at \$9,779,539. The Philippines are practically the only source, shipments of manila constituting from 24 to 49 per cent of the total value of exports from the islands during 1914-1920. Imports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	78, 470	68, 536	67, 466	27, 328
Value.....	\$29, 223, 787	\$19, 255, 282	\$20, 515, 491	\$5, 271, 245

#### SISAL.

(See Survey FL-16.)

*Description and uses.*—Sisal is a name given to a number of related tropical fibers. The Mexican variety, known as henequen, is produced almost exclusively in Yucatan and, prior to the fall of 1919, was marketed under the control of an association of producers known as the Comision del Reguladora del Mercado de Henequen. At that time, however, the assets of this company were ordered liquidated by the Mexican Government. In early 1922, Yucatan enacted legislation imposing a production tax on henequen, and limiting the planting areas for 1922. Henequen fiber is extracted from the leaves of the henequen by special decorticating machines which scrape the fiber clean of its pulpy covering and wash it in running water. It is hung in the air several days to dry and then baled for the market. It is used in twines, cordage, and low-grade rope. Approximately 80 per cent of the world's supply of binder twine is made from Yucatan henequen and about 90 per cent of the Yucatan crop is shipped to this country. In binder twine only slight competition is offered by manila (see above), New Zealand flax, and maguey. The two last named are either too costly or are limited in available supply.

*Production.*—The large measure of dependence of wheat and other grain production of the world upon a raw material coming almost exclusively from one small state has led to energetic measures to extend cultivation to other countries, with the result that sisal is now being raised commercially in British East Africa (the former German East Africa), the Philippines (where production of maguey, a similar plant, is increasing), Hawaii, Java, India, the Bahamas, and Cuba. The Secretary of Agriculture stated in 1916 that there is no other fiber in large quantities suitable for binder twine and that the increas-

ing production in the Bahamas and Hawaii is chiefly in grades too good for economic use in twine.

Imports in 1914 were 215,654 tons, valued at \$25,860,729. Later imports for calendar years are as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	152,001	144,542	180,759	96,598
Value.....	\$54,932,082	\$39,553,701	\$33,535,294	\$12,059,645

*Suggested changes in classification.*—Since the term “sisal grass” is seldom employed in the trade to designate the fiber from which binding twine is made, it is suggested that the word “grass” be eliminated and the word “henequen,” preceded by a comma, be inserted after “sisal.” Both sisal and henequen are members of the agave family, used for similar purposes, and are difficult to distinguish from each other. They are, however, sometimes distinguished in statistics. The insertion of the word “henequen” would assure inclusion of both in the paragraph.

#### NEW ZEALAND FLAX.

(See Survey FL-16.)

*Description and uses.*—This fiber is obtained from the leaves of a swamp lily (*Phormium tenax*) native to New Zealand. It is also cultivated on a small scale in Australasia and in some European countries. The fiber is white, soft, lustrous, and tougher than either flax or hemp, but resists water poorly. It is used principally in cordage, twine, and to a small extent for floor matting, although the best fiber can be woven into a cloth resembling linen duck. When employed in binder twine, baling rope, and cordage it is usually mixed with sisal or manila.

*Production.*—This fiber is not produced in the United States. In New Zealand in 1919 there were 49,867 acres devoted to its cultivation. Exports from that country during 1910-1919 ranged per annum between 20,000 and 35,000 tons, about half of which went to the United Kingdom. Exports in 1919 were 22,347 tons of fiber and 3,262 tons of tow.

Imports in 1914 were 6,171 tons, valued at \$716,953, over one-half direct from New Zealand, and most of the remainder via transshipment from the United Kingdom. Imports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	13,912	6,720	6,032	879
Value.....	\$4,867,576	\$1,640,755	\$1,034,407	\$146,951

#### SUNN.

(See Survey FL-16.)

*Description and uses.*—Sunn, sometimes called sunn hemp, while not a true hemp, closely resembles soft hemp; it comes from southern

Asia and tropical Australasia. The fiber, obtained from the stalk by a system of retting similar to that employed for flax, is lighter in color, stronger and more durable under exposure than jute, but not so strong as hemp. It is used mainly in cordage and to some extent for calking ships.

Imports in 1914 amounted to only 16 tons, valued at \$1,388; the average for three previous years, however, was 131 tons, valued at \$9,896. Imports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	3,903	1,758	1,036	226
Value.....	\$650,280	\$290,249	\$138,897	\$20,534

#### KAPOK.

(See Survey FL-16.)

*Description and uses.*—Kapok is a vegetable down procured from the seed pods of a tree—the kapok—indigenous to Java. The fiber is soft, silky, and lustrous, but too brittle for spinning. The natives gather the pods, separate the fiber from the seed, dry it, and export it to countries where, owing to its resilience, it is used for filling mattresses, pillows, cushions, and for upholstering; and because of its low specific gravity, for the stuffing of life preservers. The demand for this use has greatly increased, especially during the war. The bark of the kapok tree is used for tanning purposes, and kapok seed is crushed for oil to be used in soap, the residue being a stock feed.

*Production.*—The bulk of the world supply of kapok is from Java, with 68,129 producing acres in 1911. Annual exports during 1914-1918 ranged between 9,107 and 10,836 tons, with the Netherlands and the United States receiving the bulk.

Imports in 1914 were 1,825 tons, valued at \$441,109. Imports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	9,576	10,972	9,881	6,486
Value.....	\$2,820,474	\$3,673,285	\$3,847,610	\$1,930,225

#### RAMIE.

(See Survey FL-16.)

*Description and uses.*—Ramie, often called China grass, is a stem fiber extracted from the ramie plant of Asia, particularly China, by decortication (scraping away the gum which holds the fibers together), a very laborious hand process. The fiber can not be separated from the woody tissue by a simple retting as in the case of flax or hemp, but only by means of elaborate mechanical treatment. It has, in general, the same uses as flax and hemp, often being mixed with them, but is more tenacious, has greater elasticity than flax, and a luster almost equal to silk. Ramie lacks the elasticity of wool and silk, and the flexibility of cotton. While the strongest and most durable of vegetable fibers, its use has been curtailed by the cost of

degumming satisfactorily, and by the difficulty of spinning fine counts, owing to the fibers' lack of coherence. These difficulties are gradually being overcome. The leading use of ramie in the United States and in the United Kingdom is in manufacture of gas mantles. In the United States ramie fabrics have appeared on the market in the form of blouses and upholstery materials.

*Production.*—Ramie is grown in large quantities in Africa, India, and in China, the finest qualities coming from China. American imports have been largely from Formosa (prior to the war, via Hamburg). Ramie can be produced here, but the labor cost, even with special decorticating and degumming apparatus, makes economic production impossible in competition with the Far East.

*Imports* in 1914 were 55 tons, valued at \$10,745. Imports for the calendar years 1918–1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	3,204	759	156	161
Value.....	\$612,244	\$225,960	\$44,351	\$50,500

#### CRIN VEGETAL.

(See Survey FL-16.)

*Description and uses.*—Crin vegetal, sometimes called vegetable fiber, or vegetable horsehair, is made from the leaves of a wild dwarf palm. Algeria and Madagascar are the leading sources, exporting about 50,000 tons annually. The leaves grow abundantly and are picked by natives, treated and slightly dried, and sold to export firms on the seacoast. After a few days' exposure to the sun they are packed into bales weighing 200 to 265 pounds. The leaves are separated by a comb into long, flexible filaments, which are twisted into a rope. The fiber is used chiefly for stuffing furniture and mattresses. It is also used to some extent for brushes and brooms.

*Imports* were not separately stated in 1914. In 1912 they were 334 tons, valued at \$12,960; in 1915, 220 tons, valued at \$4,333. Imports for the calendar years 1918–1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	33	30	80	.....
Value.....	\$9,180	\$7,081	\$9,462	\$21

#### BROOM ROOT.

(See Survey FL-16.)

*Description and uses.*—Broom root, a fiber of great strength, is obtained from a number of plants growing wild in eastern Mexico and in Central and South America. The broom root used in this country comes chiefly from Mexico, and is often called Mexican whisk. Mexico has recently withdrawn its export duty on broom. The wavy roots of the grass—some 9 to 12 inches long, and, when cleaned, a pale yellow—are used in brushes and brooms, especially clothes-

brushes, carpet, and velvet brushes. The greatest defect of this fiber is a tendency to become brittle and break.

*Imports* of broom root in 1914 were 144 tons, valued at \$36,035. Imports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	777	1,610	1,197	161
Value.....	\$211,582	\$697,263	\$546,048	\$94,152

#### OTHER FIBERS, N. S. P. F.

(Not specially provided for in paragraph 497 and not usually stated separately in import statistics.)

Maguey is a term used for a number of varieties of agaves, but more specifically for the so-called century plants that grow wild and abundantly in Mexico, and are now cultivated successfully in the Philippines. The fiber is produced by macerating leaves in water, rubbing, scraping, and drying. Maguey is fine, elastic, and of special value for rope subject to sudden strain. It is used in Europe and America for ships' ropes and cables, brooms, and mats. Exports from the Philippines, which have increased in recent years, totaled in 1920 10,638 tons, valued at \$1,363,750, with shipments to the United States amounting to 1,667 tons, worth \$190,657.

Mauritius hemp, a hard fiber of the aloe family, is produced chiefly on the island of Mauritius (Indian Ocean) and in Africa. It is softer and whiter than other hard fibers, and is used chiefly for mixing with manila and sisal in medium grades of cordage. The annual output of the island of Mauritius is about 2,500 tons.

Piassava is a very elastic fiber, extracted from a species of palm, chiefly in Brazil and Liberia. The finest fibers are used for cordage, for which purpose they are excellent because of their resistance to water; the coarser fibers are used for brooms, baskets, and brushes. The world production has been as high as 5,000 tons.

There are a number of other fibers imported on a small scale. Kittul, often confused with piassava, is of special value in machine brushes for polishing linen and cotton yarns, brushing velvets, etc.

*Imports* in 1914 of other textile grasses or fibers, unmanufactured, not specifically enumerated in import statistics, were 9,125 tons, valued at \$845,260. Imports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	6,473	2,889	4,595	3,568
Value.....	\$1,435,004	\$564,603	\$561,980	\$596,455

#### GENERAL NOTES ON PARAGRAPH.

*Suggested changes.*—To secure (1) an arrangement in the approximate order of importance of the fibers and grasses falling under this classification, and (2) to give specific mention to certain fibers heretofore not specified, but which should be separated in statistics, it is suggested that this paragraph be changed to read as follows:

Grasses and fibers: Jute, jute butts, manila, sisal, henequen, istle, New Zealand hemp, sunn, kapok, ramie, crin vegetal, maguey, Mauritius, piassava, and all other textile grasses or fibrous vegetable substances, not dressed or manufactured in any manner, and not specially provided for.

### PARAGRAPH 1576.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1576. Guano, basic slag, ground or unground, manures, and all other substances used chiefly for fertilizer, not specially provided for.

ACT OF 1909.

ACT OF 1913.

PAR. 581. Guano, manures, and all substances used only for manure, including basic slag, ground or unground, \* \* \* [Free].

PAR. 499. Guano, manures, and all substances used only for manure, including basic slag, ground or unground, \* \* \* [Free].

### GUANO AND MANURES.

(See Survey FL-5.)

*Description and use.*—Guano is the decomposed excrement and carcasses of marine birds mixed with the remains of fish. It is used as a fertilizer and contains both nitrogen and phosphoric acid and an appreciable amount of potash.

*Production.*—The principal deposits were on the Chincha Islands off the coast of Peru. These original deposits, estimated at 10,000,000 tons, became exhausted about 1868. In recent years shipments have been made from new deposits on the same islands. Other important commercial sources have been Patagonia and the Ichaboe Islands, off the coast of Africa.

*Imports* in 1910 were 52,330 long tons, valued at \$845,765; in 1917 3,563 long tons, valued at \$73,398. In 1917 and 1918 the imports were chiefly from Mexico.

Imports of all other substances used only for manures were 197,165 tons, valued at \$4,241,285 in 1914. Import figures for 1918-1921 are shown below:

Calendar year.	Quantity.	Value.	Unit value.
GUANO.			
	<i>Tons.</i>		
1918.....	8,206	\$280,544	\$34.19
1919.....	7,017	255,995	36.48
1920.....	53,790	4,583,313	85.21
1921 (9 months).....	1,320	72,299	54.77
ALL OTHER SUBSTANCES USED ONLY FOR MANURE.			
1918.....	48,039	\$1,810,158	\$37.68
1919.....	72,558	2,716,060	37.43
1920.....	141,510	6,762,140	47.78
1921 (9 months).....	49,692	1,986,478	39.98

Imports of guano are chiefly from Norway, Chile, and England.

## BASIC SLAG.

(See Survey FL-5.)

*Description and uses.*—Basic slag is a by-product obtained in the manufacture of steel from phosphatic pig iron by the basic process. It is used as a fertilizer material for its phosphoric-acid content, which is from 15 to 19 per cent. Its trade names are "basic cinder," "basic slag meal," "Thomas slag," or "Thomas phosphate powder."

*Production.*—Large quantities are produced in Germany, France, Belgium, and England; the European production in 1913 exceeded 4,000,000 long tons, Germany producing about 50 per cent of the total. Very little is produced here because of the comparatively low phosphorus content of American iron ores.

*Imports*, prior to the war, reached a maximum of 15,124 tons, valued at \$146,477 in 1913; then decreased to 2 tons, valued at \$54 in 1918, and have been negligible since then.

*Exports.*—Statistics not available.

## GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—"Used only for manure" has been dropped and "used chiefly for fertilizer" and "not specially provided for" have been added.

## PARAGRAPH 1577.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1577. Gums and resins: Amber and amberoid, arabic or senegal, damar, kauri, and other copals; dragon's blood, kadaya, sandarac, tragacanth, tragasol, and other gums, gum resins, and resins, not specially provided for.

## ACT OF 1909.

PAR. 488. Amber, and amberoid unmanufactured, or crude gum, gum Kauri, and gum Copal [Free].

PAR. 20. Drugs, such as \* \* \* gums and gum resin, \* \* \* one-fourth of one cent per pound, and in addition thereto ten per centum ad valorem: *Provided*, That no article containing alcohol, or in the preparation of which alcohol is used, shall be classified for duty under this paragraph.

PAR. 559. Drugs, such as \* \* \* gums, gum resin, \* \* \* not advanced \* \* \* [Free].

PAR. 558. Dragon's blood [Free].

## ACT OF 1913.

PAR. 36. Gums: Amber, and amberoid unmanufactured, or crude gum, not specially provided for in this section, \$1 per pound; arabic, or senegal,  $\frac{1}{2}$  cent per pound; \* \* \*.

PAR. 500. Gum: Amber in chips valued at not more than 50 cents per pound, copal, damar, and kauri [Free].

PAR. 27. Drugs, such as \* \* \* gums, \* \* \* advanced \* \* \* 10 per centum ad valorem.

PAR. 477. Drugs, such as \* \* \* gums, gum resin, \* \* \* not advanced \* \* \* [Free].

PAR. 476. Dragon's blood [Free].

## AMBER AND AMBEROID.

(See Survey A-9.)

*Description and uses.*—Amber, a fossil resin occurring in small lumps, is found principally in East Prussia. It is picked up along the shore of the Baltic, and is obtained by mining. It varies in color from pale yellow to red, brown, or even black, and may be transparent, translucent, or opaque.

Amberoid is produced from small bits of amber, with or without other resins, such as copal and camphor, by heating them and forcing into a solid cake by hydraulic pressure.

The finest amber and amberoid are made into beads and ornaments and mouthpieces for pipes and cigar holders. Bits and chips make a high grade but expensive varnish.

Amber is now being replaced for ornamental articles by artificial products resembling amber in appearance and properties, but differing greatly in chemical nature. These so-called "synthetic phenolic resins" (par. 26) are made by the chemical combination of phenol with formaldehyde or hexamethylenetetramine. They are chemically more stable than amber. "Bakelite," "Condensite," and "Redmanol" are such substances. Their domestic manufacture has increased greatly in recent years, with the claim that they are equal to or better than amber for most purposes. One variety is plastic and used largely for electrical insulators and various molded articles; the other is nonplastic, is the more expensive, and alone competes with amber. They are dutiable at 30 per cent plus 5 cents per pound under the act of September 8, 1916.

*Production.*—The United States produces no amber, though small, but not commercial, quantities of fossil gum resembling amber appear in Maryland, New Jersey, and Marthas Vineyard.

*Imports* come from the Baltic. In 1913 they were 35,645 pounds; in 1914, 22,485 pounds. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	25	\$222	\$8.88	\$25	.....
1919.....	768	4,278	5.57	768	17.95
1920.....	15,013	41,556	2.77	15,013	36.13
1921 (9 months).....	2,425	16,798	6.93		.....

*Important changes in classification.*—Amber and amberoid unmanufactured, or crude gum, is dutiable under paragraph 36, act of 1913. H. R. 7456 exempts from duty all amber and amberoid. The words "or crude gum" in the act of 1913 have been omitted as amber is not known under this name.

#### ARABIC OR SENEGAL.

(See Survey A-9.)

*Description and uses.*—Gum arabic is a natural exudation obtained from several species of trees of Africa and Asia. It is used for sizing fabrics, in calico printing, water paints and calcimines, mucilage and match manufacture, water colors and confectionery. The finest grades are used in pharmacy and medicine. Materials serving similar purposes include dextrin, starch, gelatin, and glue. A somewhat similar mucilage is derived from Irish moss. Another class of gum used in part for similar purposes includes tragacanth, tragasol, and kadaya.

Imports in 1914 were 2,867,544 pounds; in 1916, 7,613,880 pounds. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	6,115,190	\$1,237,379	\$0.20	\$30,576	2.47
1919.....	7,076,663	950,859	.13	35,383	3.72
1920.....	6,764,199	787,574	.12	33,821	4.29
1921 (9 months).....	5,959,214	524,588	.09	.....	.....

*Important changes in classification.*—Arabic or senegal gum is dutiable under paragraph 36 of the act of 1913.

#### GUMS, COPAL, DAMAR, KAURI.

(See Survey FL-17.)

*Description and uses.*—Copal is a class name commercially applied to several widely distributed gum resins capable of use in the manufacture of oil varnishes. The most important copals for this use are damar, kauri, Congo, sandarac, and Manila. Other gums of lesser importance are pontinak and East Indian. There are three kinds of commercial copal, classified according to hardness: (1) Hard or true, which includes Zanzibar, Mozambique, and Madagascar copals; (2) medium hard, which comprises the West African copals; and (3) soft, which includes American animé, kauri, Manila, and Borneo copals.

A true copal is a hard resin of high melting point exuded from several varieties of trees indigenous to the East Indies and the East Coast of Africa. The fossil gum is found in irregular lumps buried in the ground or it is sometimes taken directly from the tree. Hard copal is the hardest of all resins, except amber, and is the most valuable for varnish making. Damar is the term applied to all gums and resins which exude from trees and solidify rapidly on exposure to air. The resin derived from the true damar of the botanists is the varnish-maker's Manila copal. Commercial damar, so-called, is derived mostly from Dipterocarpus trees, Shorea, Hopea, Vatica, Drybalonops, Vateria, Doone, and other species, and is called Batavian, Borneo, or Singapore damar, depending upon its origin. Kauri is a resin obtained from the *Dammara australis*, a yellow pine indigenous to the northern island of New Zealand. Of the three varieties, fossil, bush, and recent, the fossil is the best grade. It is a white resin, softer than true copal, but harder than rosin, used in the manufacture of varnish.

Imports for 1914-1918 averaged as follows: Copal, 18,369,252 pounds, valued at \$1,185,454; damar, 7,182,848 pounds, valued at \$635,500; kauri, 7,915,759 pounds, valued at \$1,196,889. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
DAMAR.			
	<i>Pounds.</i>		
1918.....	6,508,707	\$701,488	\$0.11
1919.....	4,772,059	578,915	.12
1920.....	10,702,188	2,162,313	.20
1921 (9 months).....	1,916,757	297,544	.15

Calendar year.	Quantity.	Value.	Unit value.
KAURI.			
1918.....	5,960,795	\$905,025	\$0.15
1919.....	4,474,441	674,642	.15
1920.....	11,579,529	1,720,962	.15
1921 (9 months).....	2,241,715	457,780	.20

COPAL.			
1918.....	21,260,769	\$1,635,894	\$0.08
1919.....	11,079,693	829,419	.07
1920.....	47,052,548	5,712,308	.12
1921 (9 months).....	7,582,612	728,998	.09

#### DRAGON'S BLOOD.

(See Survey FL-17.)

*Description and uses.*—Dragon's blood is a red, resinous substance exuded from the ripe fruit of several species of small palms growing in Siam, the Molucca Islands, and the East Indies. It is marketed either in the form of small oval drops or in long cylindrical sticks, and is used in pharmacy, but principally in coloring varnishes.

*Production.*—Dragon's blood is separated from the fruit by rubbing, by shaking in bags, or by exposure to the vapor of boiling water. It is collected by the natives.

*Imports* of dragon's blood varied between 12,034 pounds, valued at \$5,513 in 1911, and a maximum of 48,026 pounds, valued at \$19,137 in 1917. Subsequent imports are given below.

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	27,260	\$10,167	\$0.37
1919.....	13,326	10,420	.78
1920.....	18,938	12,649	.67
1921 (9 months).....	16,564	6,534	.37

#### KADAYA, SANDARAC, FRAGACANTH, FRAGASOL, AND OTHER GUMS AND RESINS.

*Description and uses.*—Sandarac is a resin obtained from a small evergreen tree which is indigenous to Northwestern Africa. It is also obtained in Australia from a similar tree and is known as "white pine resin." Sandarac is used chiefly as a varnish resin and to some extent in dental cements and as an incense. Tragacanth is a gum exudation obtained from various species of *Astragalus*. Commercial supplies are obtained from this tree in the mountainous regions of Asia Minor, Syria, Armenia, Kurdistan, and Persia. It is used chiefly for sizing textiles. Kadaya and fragasol are other important gums which are imported in large quantities.

*Imports* of tragacanth during the period 1910-1916 ranged between 1,000,000 and 1,500,000 pounds annually, and increased greatly in

1917. Imports of tragasol in 1910-1917 were between 800,000 and 1,200,000 pounds annually. Since 1917 imports have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.
TRAGACANTH.				
	<i>Pounds.</i>			
1918.....	173,540	\$80,746	\$1.10	.....
1919.....	223,277	135,311	.57	\$13,531
1920.....	1,479,133	1,589,811	1.08	.....
1921 (9 months).....	943,776	1,342,985	1.42	.....
	186,557	221,293	1.19	.....
TRAGASOL.				
1918.....	711,644	\$44,502	\$0.06	.....
1919.....	179,930	10,458	.06	.....
1920.....	627,314	26,139	.04	.....
1921 (9 months).....	561,194	18,845	.03	.....

<sup>1</sup> July 1-Dec. 31, free. (Abstract 42058.)

<sup>2</sup> Jan. 1-June 30, dutiable.

Imports of kadaya and sandarac are shown for 1914, only, when they were: Kadaya, 866,535 pounds valued at \$42,703; and sandarac, 55,365 pounds, valued at \$9,332.

Imports of other gums and gum resins in a crude state increased to 4,963,000 pounds in 1916 valued at \$259,000. In 1917 they amounted to about 1,290,000 pounds. Since then imports have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.
	<i>Pounds.</i>			
1918.....	1619,047	\$111,557	\$0.17	.....
1919.....	3,126,678	452,053	.14	\$45,205
1920.....	4,208,290	721,722	.17	.....
1921 (9 months).....	1,066,437	169,877	.16	16,988
	5,867,586	957,378	.16	.....
	321,286	16,761	.05	1,676
	8,836,430	519,188	.06	.....
	233,675	8,922	.03	.....

<sup>1</sup> Free.

<sup>2</sup> Dutiable at 10 per cent. (T. D. 36548.)

*Important changes in classification.*—Kadaya, sandarac, tragacanth and tragasol are mentioned specifically for the first time. As the provision for gums in paragraph 27, act of 1913, has been omitted, a provision for "other gums, gum resins, and resins, not specially provided for" has been added to this paragraph. (Reclassification Report, p. 50.)

*Suggested changes.*—As the words "and other copals" embrace none of the gums or resins preceding "damar," it is suggested that a semicolon be substituted for the comma after "senegal."

## PARAGRAPH 1578.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1578. Gunpowder, and all other explosive substances, used for mining, blasting, or artillery purposes, not specially provided for.

## ACT OF 1909.

PAR. 435. Gunpowder, and all explosive substances used for mining, blasting, artillery, or sporting purposes, when valued at twenty cents or less per pound, two cents per pound; valued above twenty cents per pound, four cents per pound.

## ACT OF 1913.

PAR. 501. Gunpowder, and all explosive substances, not specially provided for in this section, used for mining, blasting, and artillery purposes [Free].

## EXPLOSIVES.

(See Survey FI-18.)

## GENERAL.

Explosives are used principally for blasting, signaling, pyrotechnics, and for military and sporting purposes.

Blasting explosives include mainly black powder, nitroglycerin preparations, and the so-called "permissible explosives," which have passed certain tests of the Bureau of Mines and are regarded as safe for use with proper precautions in coal mines.

Military explosives include propellants (smokeless powder), primers, high explosives for filling shells, torpedoes, hand grenades, etc.

Ammonium nitrate (par. 7) is extensively used as a constituent of both blasting and military explosives.

## BLACK POWDER.

*Description and uses.*—Black powder consists of an intimate mixture, usually 75 per cent potassium nitrate, 15 per cent charcoal, and 10 per cent sulphur. It is used principally for mining, blasting, and sporting purposes; also to some extent in fireworks.

*Production* of blasting powder in 1914 was 207,423,675 pounds, valued at \$8,459,113, not far from the average since 1900. The black blasting powder used in 1917 was 277,118,525 pounds. Other high explosives for blasting purposes, exclusive of permissible explosives, amounted to 262,316,080 pounds; permissible explosives were 43,040,722 pounds. Production in 1919 (preliminary figures) was as follows: Blasting powder, 184,675,000 pounds, valued at \$12,168,500; gunpowder, black, 11,730,000 pounds, valued at \$2,096,600; permissible explosives, 26,496,000 pounds, valued at \$4,736,000.

*Imports* were not shown separately in 1917, but since that time those of gunpowder and all explosive substances, n. s. p. f., for blasting, mining, or artillery purposes have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	25,690,394	\$12,886,196	\$0.50
1919.....	12,420,796	6,336,518	.51
1920.....	22,564	5,404	.24
1921 (9 months).....	20,321	2,826	.14

*Exports* of gunpowder, including smokeless powder, prior to 1915 averaged about 1,000,000 pounds annually, and for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	229,377,058	6,751,799	43,907,793	694,980
Value.....	\$179,648,156	\$5,990,744	\$38,368,157	\$373,491

Countries of destination are chiefly France, Colombia, and Canada.

#### SMOKELESS POWDER.

*Description and uses.*—Nitrocellulose, or guncotton, is the base of all smokeless powders. It is prepared by treating cotton under certain conditions with a mixture of nitric and sulphuric acid. In making smokeless powder the nitrocellulose is mixed with alcohol, ether, and a stabilizer. After these are thoroughly incorporated the mixture is pressed into the desired shape by hydraulic pressure and when dried is ready for use. Cordite is a smokeless powder made from a mixture composed of nitrocellulose, nitroglycerin, acetone, and vaseline. Smokeless powder is used almost entirely for military purposes, and to some extent for sporting purposes.

*Production* of smokeless powder in 1914 (including that by the Government) was 12,684,072 pounds, increasing enormously during the war. In 1919 according to preliminary figures smokeless powder was the item of chief value in "all other" explosives, the output of which was 53,476,700 pounds, valued at \$24,164,200.

*Exports* far exceed imports. During the war large quantities were supplied the Allies. Figures are combined with gunpowder, *supra*.

#### NITROGLYCERIN AND DYNAMITE.

*Description and uses.*—Nitroglycerin is a heavy, oily liquid, obtained by treating glycerin with a mixture of nitric and sulphuric acids. It is very sensitive to shock and is a violent poison. Dynamite is made by absorbing nitroglycerin in some porous substance, such as infusorial earth, sawdust, or powdered mica. Nitroglycerin is used at present in the liquid state only for "shooting" gas or oil wells. Its greatest use is in making dynamite and other high explosives. It is sometimes used in medicine as a heart stimulant.

*Production* in 1914 of dynamite was 223,667,630 pounds, valued at \$20,553,653. In the same year 65,302,883 pounds of nitroglycerin were produced, of which 3,785,474 pounds were sold as such for \$950,611. In 1919, according to preliminary figures, 220,995,500 pounds of dynamite, valued at \$38,763,400, and 56,361,200 pounds of nitroglycerin were produced, of which an amount valued at \$3,439,000 was sold as such.

*Imports.*—Statistics not available.

*Exports* of dynamite in 1914 were 14,464,601 pounds, valued at \$1,587,184; in 1916, 19,561,654 pounds, valued at \$3,656,653. Statistics for the calendar years 1918-1921 are as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	18,204,644	11,173,528	15,641,981	5,648,774
Value.....	\$4,845,888	\$2,370,016	\$3,210,481	\$1,141,714

Countries of destination are chiefly Mexico, Chile, and Peru.

#### NITROSTARCH.

*Description and uses.*—Nitrostarch is used as a constituent of some high explosives. It is made in much the same way as nitrocellulose, by the treatment of starch with nitric and sulphuric acids. Tapioca starch and cornstarch are the ones most used. During the war nitrostarch was used largely in hand grenades. It can also be used with good results for blasting purposes.

*Production, imports, and exports.*—Statistics are not available.

### PARAGRAPH 1579.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1579. Hair of horse, cattle, and other animals, cleaned or uncleaned, drawn or undrawn, but unmanufactured, not specially provided for.

ACT OF 1909.

ACT OF 1913.

PAR. 583. Hair of horse, cattle, and other animals, cleaned or uncleaned, drawn or undrawn, but unmanufactured, not specially provided for in this section;  
\* \* \* [Free].

PAR. 503. Hair of horse, cattle, and other animals, cleaned or uncleaned, drawn or undrawn, but unmanufactured, not specially provided for in this section  
[Free].

#### HAIR OF HORSE, CATTLE, AND OTHER ANIMALS.

(See Survey N-12.)

*Description and uses.*—The long hair from the manes and tails of horses is used as a filling, usually with a cotton warp, in making haircloth. (Haircloth dutiable under par. 1426.) It is also used in making fishlines, straining cloths, and for violin bows. The short hair (and that from the tails of cattle) is curled and used in upholstery work. (Curled hair dutiable under par. 1425.) The hair of cattle and other animals is a tannery by-product, used in felt for roofing and for covering steam pipes. Mixed with wool waste or cotton, it is made into coarse yarns for carpets, horse blankets, and the cheapest grade of tweeds. Cattle hair is also used as binding for mortar and plaster.

*Production* statistics are not available. Most of the cattle hair required is of domestic production; the horsehair is largely imported.

*Imports* of horsehair for bows of violins are shown separately. These amounted in 1914 to \$8,279, and to \$13,473 in 1916. Imports of other horsehair were smallest in 1914 and 1915, being, respectively, 3,776,227 pounds, valued at \$1,668,484, and 3,543,358 pounds, valued at \$1,501,085. In prior years the average was about 4,000,000 pounds,

and in 1916 and 1917 imports reached more than 6,000,000 pounds. Cattle and other animal hair in 1914 amounted to 15,506,745 pounds, valued at \$1,051,874. Imports have decreased since then. Horsehair came chiefly from Argentina, with large amounts also from China, Canada, Italy, England, Uruguay, and Mexico. Cattle and other animal hair comes from practically the same countries, with Canada leading. Later statistics of imports for calendar years are tabulated below:

	1918	1919	1920	1921 (9 months).
Horsehair for bows of violins and other instruments, value.....	\$74	\$24,829	\$17,661	\$1,794
Horsehair, all other:				
Quantity (pounds).....	2,900,913	3,993,405	4,893,247	2,417,503
Value.....	\$1,010,172	\$1,618,683	\$2,184,603	\$997,281
Cattle and other animal hair:				
Quantity (pounds).....	3,464,447	4,546,791	6,770,368	2,667,126
Value.....	\$304,268	\$343,699	\$1,218,099	\$365,114

Argentina continued to lead in shipments of horsehair, but Germany, in 1920, led in cattle and other animal hair, with Argentina second and Canada third.

*Exports* of horse, cattle, and other animal hair are combined in the trade statistics. These were valued in 1914 at \$1,085,038. The United Kingdom was the largest purchaser, with Germany, Belgium, and Canada following in the order named. Later statistics for calendar years follow: 1918, \$680,766; 1919, \$1,551,276; 1920, \$1,327,546; 1921 (9 months), \$437,694.

## PARAGRAPH 1580.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1580. Hide cuttings, raw, with or without hair, ossein, and all other glue stock.

ACT OF 1909.

ACT OF 1913.

PAR. 584. Hide cuttings, raw, with or without hair, and all other glue stock [Free].

PAR. 504. Hide cuttings, raw, with or without hair, and all other glue stock [Free].

### GLUE STOCK.

(See Survey A-9.)

*Description and uses.*—This paragraph includes all kinds of hide cuttings and all other material used as glue stock. Most hide stock is produced by tanners as waste pieces or trimmings, fleshings from the flesh side of the hide, and “skivings,” or scrapings from the hair or grain side of the hide.

Green or packer bone and country bone, chiefly butchers' offal and junk bone, are used as glue stocks. Ossein is the bone residue after the mineral matter has been dissolved out by acid. Sinews come into markets from slaughterhouses as fresh or green salted. The

bones, skins, and heads of fish are also used for preparing glue (par. 39).

*Production.*—Statistics not available.

*Import values of hide cuttings and other glue stock increased from \$1,605,432 in 1910 to \$2,158,514 in 1914, chiefly from Europe. Imports for the calendar years 1918-1921, chiefly from Argentina, Uruguay, and England, have been as follows:*

	1918	1919	1920	1921 (9 months)
Quantity (pounds).....	9, 106, 446	13, 780, 637	36, 868, 101	23, 000, 135
Value.....	\$448, 165	\$978, 514	\$2, 238, 958	\$1, 336, 469

*Exports.*—Statistics are not available.

*Important changes in classification.*—Ossein is mentioned specifically for the first time.

### PARAGRAPH 1581.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1581. Rope made of rawhide.

ACT OF 1909.

ACT OF 1913.

PAR. 585. Hide rope [Free].

PAR. 505. Hide rope [Free].

#### RAWHIDE ROPE.

(See Survey N-18.)

*Description and uses.*—Rope made of rawhide is composed of strips of untanned hide, twisted into cords and ropes. It is very hard and tough. It is the material from which rawhide or so-called "cowhide" riding whips are made.

*Production data are not separately shown in official sources.*

*Imports of hide rope in 1914 amounted to \$10. Statistics for the calendar years 1918-1921 follow:*

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....		2, 411	810	225
Value.....	\$2, 505	\$857	\$10	\$43

*Exports.*—None recorded.

*Important changes in classification.*—The phraseology of this paragraph has been changed so as to restrict its provisions to rope actually made from rawhide. The provision in former acts for "hide rope" has been held not limited to rope made from hides, but inclusive of rope known as hide rope made from material other than hides, and used for tying hides. (G. A. 8336; T. D. 38390, 1920.)

## PARAGRAPH 1582.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1582. Hides of cattle, raw or uncured, or dried, salted, or pickled.

ACT OF 1909.

ACT OF 1913.

PAR. 450. Hides of cattle, raw or uncured, whether dry, salted, or pickled, shall be admitted free of duty: \* \* \*.

PAR. 506. Hides of cattle, raw or uncured, or dry, salted, or pickled [Free].

## HIDES OF CATTLE, RAW OR DRIED, ETC.

(See Survey FL-19.)

*Description and uses.*—Cattle hides are employed principally in shoe leathers and in belting, harness, upholstery, case, bag, and strap leathers. The tanning and finishing processes give a wide variety of leathers. Hides vary greatly in character, depending upon the condition under which the animal is reared, its breeding, age, sex, and many other factors. Animals raised without shelter, obtaining their subsistence largely from roughage, produce tough, close-grained hides. Cattle of good breeding, given good care and concentrated feeds furnish fine-grained, but frequently weak, hides. Domestic hides are commonly "packer" or "country," the former taken off at the stockyards, the latter at small slaughterhouses. Packer hides, as a rule, command the higher price because of greater care in the removal. Kips are usually young cattle hides, weighing from 15 to 25 pounds, but East Indian kips are small cattle hides.

*Production* of cattle hides numbers about 12,000,000 annually, averaging about 50 pounds each.

*Imports.*—In 1913 we imported 268,042,390 pounds of cattle hides (green and dry)—about 82,000,000 pounds from Europe, 86,500,000 pounds from South America, 77,300,000 pounds from North America, 15,200,000 pounds from Asia, and 7,200,000 pounds from Australasia and Africa. The imports are classified into (1) dry cattle hides and (2) green or pickled cattle hides. During the war imports of dry cattle hides rapidly increased, but Argentina remained the chief source of supply. Russia was practically eliminated by 1917, and shipments from China and South American countries, especially from Brazil and Colombia, increased.

Imports of green or pickled cattle hides also increased rapidly, but not in the ratio of the dry hides. In 1913 our principal sources for green or pickled cattle hides were Argentina, Canada, France, Russia in Europe, and Mexico. One result of the war was to cause South American hides to find an increased market in this country.

Imports of cattle hides for the calendar years 1918-1921 are shown in the following tables:

	1918	1919	1920	1921 (9 months).
Dry (12 pounds and over):				
Quantity (pounds).....	35,155,106	96,175,601	59,150,408	9,326,213
Value.....	\$10,254,045	\$34,360,222	\$21,092,121	\$1,741,718
Green or pickled (25 pounds and over):				
Quantity (pounds).....	185,432,280	310,965,319	216,174,099	134,642,852
Value.....	\$41,708,075	\$91,223,542	\$64,383,203	\$17,360,629

In 1920 the imports of dry cattle hides from Argentina were 24 per cent of the total; those from Colombia were 14 per cent; China, 8 per cent; British India, 7 per cent. The bulk of cattle hides, green or pickled, came from Argentina (46 per cent); those from Uruguay amounted to 12 per cent; Canada, 11 per cent; and Brazil, 6 per cent.

*Exports* of cattle hides in the fiscal year 1918 were valued at \$1,953,700, Canada, the only country to which we exported cattle hides in any quantity, taking an amount to the value of \$1,497,454. The table below shows exports during the calendar years 1918-1921:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	2,338,147	16,995,932	11,485,466	12,181,705
Value.....	\$681,951	\$6,290,356	\$3,761,142	\$1,361,803

In 1920 China received 50 per cent of the exports; Japan, 17 per cent.

☐ *Suggested changes.*—If all hides are to remain on the free list, this paragraph might be combined with par. 1653.

### PARAGRAPH 1583.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1583. Hones and whetstones.

ACT OF 1909.

ACT OF 1913.

PAR. 586. Hones and whetstones [Free].

PAR. 507. Hones and whetstones [Free].

### HONES AND WHETSTONES.

(See Survey B-3.)

*Description and uses.*—Hones and whetstones, formerly made only from natural quarried rocks, are now made from artificial abrasives (par. 1415), which are fast replacing the natural stones.

*Production* of oilstones (including hones and whetstones) and scythestones from natural rock decreased from \$207,352 in 1913 to \$115,178 in 1915, and then increased to \$168,704 in 1917. Arkansas is the chief producer of oilstones, whetstones, and hones; Ohio leads in scythestones; but New Hampshire, Vermont, and Michigan also contribute important quotas.

*Oilstones and scythestones sold by producers in the United States, 1918-1920.*

	1918	1919	1920
Quantity (short tons).....	1,010	1,463	1,144
Value.....	\$189,033	\$235,943	\$231,747

*Imports* for the calendar years 1918-1921 are shown in the following table:

	1918	1919	1920	1921 (9 months).
Number.....		149,375	641,353	208,787
Value.....	\$6,075	\$12,199	\$56,416	\$29,025

*Exports*.—None recorded.

#### PARAGRAPH 1584.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1584. Hoofs, unmanufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 587. Hoofs, unmanufactured  
[Free].

PAR. 508. Hoofs, unmanufactured  
[Free].

#### HOOFS, UNMANUFACTURED.

(See Survey FL-5.)

*Description and uses*.—The hoofs of neat cattle yield a pale yellow oil, called "neat's-foot oil," almost wholly olein, the liquid part of fat, as distinguished from stearin, the solid portion. It is a fine lubricant and is extensively employed by manufacturers as a leather dressing. Hoofs are used in making buttons and novelties.

*Imports* are combined in official statistics with horns and parts of, shown under the succeeding paragraph (1585). They come principally from Argentina, Canada, and Uruguay.

*Exports* are shown combined with horns and parts of.

#### PARAGRAPH 1585.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1585. Horns and parts of, including horn strips and tips, unmanufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 589. Horns and parts of, including horn strips and tips, unmanufactured  
[Free].

PAR. 511. Horns and parts of, including horn strips and tips, unmanufactured  
[Free].

#### HORNS AND PARTS OF.

(See Survey N-21.)

*Description and uses*.—Horns and horn strips and tips are used principally for making combs, knife handles, buttons, and various novelties, such as napkin rings, etc.

*Production* statistics are not available. The domestic output comes largely from the packing plants. They are sorted in three grades for sale to the button trade.

*Imports* are shown under the classification, "Hoofs, horns, and parts of, unmanufactured." In 1914 these were valued at \$254,872. They are chiefly from Argentina, Uruguay, England, and Norway. Imports for the calendar years 1918-1921 are shown below:

	1918	1919	1920	1921(9 months).
Quantity (pounds).....		2,451,826	11,190,838	1,712,001
Value.....	\$199,958	\$133,127	\$540,597	\$94,051

*Exports* of hoofs and horns were valued at \$102,705 in 1913 and at \$61,180 in 1914. In later statistics (calendar years) exports, including bones, have been as follows: 1918, \$307,671; 1919, \$370,634; 1920, \$270,146; 1921 (nine months), \$80,634. Japan is the chief purchaser.

### PARAGRAPH 1586.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1586. Ice.

ACT OF 1909.

ACT OF 1913.

PAR. 590. Ice [Free].

PAR. 512. Ice [Free].

ICE.

(See Survey FL-6.)

*Description and uses.*—Ice, natural or manufactured, as a refrigerating and preserving agent has extended the market for perishable foodstuffs, stimulating their production and stabilizing prices as between the seasons of plenty and of scarcity.

*Production* of manufactured ice in 1914 amounted to 21,043,063 tons, valued at \$62,192,413, an increase of more than 150 per cent over the output of 1904. Over 50 per cent was reported by New York, Pennsylvania, Missouri, Illinois, Ohio, Texas, and California. In 1919 the value of production was \$136,873,000.

*Imports* of ice in 1914 were 32,093 tons, valued at \$16,340, coming wholly from Canada. Imports for the calendar years 1918-1921 were as follows:

	1918	1919	1920	1921(9 months).
Quantity (tons).....	60,709	66,627	55,092	8,063
Value.....	\$33,956	\$94,272	\$40,503	\$6,382

*Exports* in 1914 were 14,183 tons and in 1917 were 17,642 tons, valued at \$29,795 and \$37,965, respectively, going to Canada and Mexico. Exports for later years are not recorded.

## PARAGRAPH 1587.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1587. India rubber and gutta-percha, crude, including jelutong or pontianak, guayule, gutta balata, and gutta siak, and scrap or refuse india rubber and gutta-percha fit only for remanufacture.

## ACT OF 1909.

PAR. 591. India rubber, crude, and milk of, and scrap or refuse India rubber, fit only for remanufacture, and which has been worn out by use [Free].

PAR. 582. Gutta-percha, crude [Free].

## ACT OF 1913.

PAR. 513. India rubber, crude, and milk of, and scrap or refuse india rubber, fit only for remanufacture [Free].

PAR. 502. Gutta-percha, crude [Free].

## INDIA RUBBER, JELUTONG OR PONTIANAK, AND GUAYULE.

(See Survey FL-17.)

*Description and uses.*—Milk of india rubber, or latex, is a white or cream colored, more or less viscous, liquid obtained by "tapping" various tropical trees, creepers, and shrubs. Crude india rubber is coagulated from this milk of rubber by exposure to smoke, by heating, or by treatment with organic acids. Many trade names describing crude india rubber according to botanical source or country of origin are employed in commerce. The physical properties giving rubber its value are its pale color, high tensile strength, strong adhesion and cohesion values, great elasticity, pliability, impermeability to water and gases, high insulating powers, ability to take up powdered minerals and form a homogeneous mass, and its low specific gravity.

Jelutong or pontianak is a low-grade rubber coming chiefly from Borneo. It is obtained from the latex of *Dyera costulata*. When the prices of crude rubber were high the rubber content of pontianak was extracted and large quantities of it were utilized.

Guayule is a Mexican rubber which has come into use in recent years. It is obtained from the cells of the bark of a shrub peculiar to the arid regions of northern Mexico and southern Texas. It is practically the only rubber found in the United States.

*Production.*—The chief crude-rubber producers are Brazil, Ceylon, the Malay Peninsula, Africa, Mexico, Central America, and the Indies. Rubber is obtained both from wild forests and from cultivated trees. In 1913 one-half and in 1918, 90 per cent of the production came from plantations. The world's annual production of crude rubber has increased from 54,000 tons in 1900 to 290,000 tons in 1918.

*Imports* of india rubber, crude, and milk of, have increased from 110,101,091 pounds, valued at \$92,956,013, in 1912 to 390,338,533 pounds, valued at \$203,122,748, in 1918 (fiscal year). Imports of india rubber, scrap or refuse, fit only for remanufacture, decreased from 44,479,429 pounds, valued at \$3,675,824, in 1913 to 10,584,494 pounds, valued at \$827,778, in 1915; the maximum import since 1915

was 17,665,403 pounds, valued at \$1,187,113 in 1917. Imports of the above materials since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months)
India rubber:				
Crude and milk of—				
Quantity (pounds).....	326,844,645	535,942,721	556,546,136	257,254,996
Value.....	\$146,693,308	\$215,821,132	\$242,795,773	\$50,896,241
Scrap or refuse—				
Quantity (pounds).....	8,143,157	9,916,506	12,060,531	1,947,994
Value.....	\$553,462	\$582,929	\$821,478	\$77,097
Reclaimed—				
Quantity (pounds).....	420,117	890,719	603,216	175,408
Value.....	\$99,085	\$142,690	\$88,128	\$16,510

In recent years the imports of crude india rubber have been chiefly from the British Straits Settlements and the Dutch East Indies; and those of scrap or refuse india rubber mostly from England, Canada, and France.

Annual imports of jelutong or pontianak from 1910 to 1914 ranged between 45,000,000 and 50,000,000 pounds, valued at more than \$2,000,000. During the period 1914–1918 they decreased to between 15,000,000 and 30,000,000 pounds. Later statistics for the calendar years 1918–1921 follow:

	1918	1919	1920	1921 (9 months).
Jelutong or pontianak:				
Quantity (pounds).....	10,210,364	18,662,702	12,705,923	1,616,437
Value.....	\$399,510	\$2,213,964	\$2,068,501	\$171,823

Annual imports of guayule during 1909–1913 ranged from 10,000,000 to 20,000,000 pounds, with a value between \$3,000,000 and \$10,000,000. During 1914–1918 they have ranged from 1,475,804 pounds in 1914 to 5,116,165 pounds in 1915. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Guayule:				
Quantity (pounds).....	314,986	3,204,224	1,698,859	130,170
Value.....	\$111,305	\$760,690	\$345,985	\$26,945

Exports of india rubber, scrap and old, have varied in value from \$598,287 in 1914 to \$235,811 in 1918 (fiscal years). Exports from 1918–1921, calendar years, follow:

	1918	1919	1920	1921 (9 months).
Scrap and old india rubber:				
Quantity (pounds).....	2,931,929	8,292,053	10,468,538	5,191,080
Value.....	\$287,883	\$508,993	\$788,097	\$276,588
India rubber, reclaimed:				
Quantity (pounds).....	2,904,234	5,070,632	4,909,214	774,788
Value.....	\$502,176	\$839,938	\$828,694	\$100,395

Exports in 1920 of scrap india rubber were chiefly to Japan, Canada, and France and of reclaimed india rubber chiefly to Canada, Scotland, and England.

*Important changes in classification.*—Jelutong or pontianak and guayule have been mentioned specifically for the first time.

#### GUTTA-PERCHA, BALATA AND SIAK.

(See Survey FL-17.)

*Description and uses.*—Gutta-percha is the product obtained by coagulating the latex of certain species of trees (*Palaquium* and *Payena*) native to the Malay Peninsula and Archipelago. It is a grayish white substance possessing great suppleness, but little elasticity. In many of its properties gutta-percha resembles india rubber and is often mixed with it. When vulcanized with sulphur it forms a very hard substance. It is used chiefly as an insulator for underground electrical wiring; in golf balls; temporary fillings for teeth; driving belts; rings, valves, and washers for pumps and hydraulic presses; boot soles; acid cements; tissue for mending clothing and for surgical work; and also for other minor purposes. Gutta balata and gutta siak are similar to gutta-percha in properties and use.

*Production.*—The latex is removed from the trees by making incisions in the bark. It coagulates on exposure to the air, and is then removed and purified by washing. It is also extracted by mechanical processes from the leaves and twigs, but this product is a poorer quality.

*Imports of gutta-percha, crude, increased from 181,294 pounds, valued at \$95,690 in 1908, to 2,751,839 pounds, valued at \$327,039 in 1916. Imports of gutta balata during 1910-1914 averaged about 1,500,000 pounds annually, valued approximately at \$800,000. From 1915 to 1918 they have exceeded 2,500,000 pounds annually. Later statistics for calendar years follow:*

	1918	1919	1920	1921 (9 months).
Gutta-percha, crude:				
Quantity (pounds).....	983,256	6,495,818	7,129,127	1,592,024
Value.....	\$213,589	\$1,068,698	\$1,520,309	\$251,313
Balata, crude:				
Quantity (pounds).....	1,552,038	1,628,134	2,384,114	1,165,504
Value.....	\$838,545	\$937,038	\$1,260,043	\$708,233

Imports since 1918 of gutta-percha have been chiefly from the British Straits Settlements, the Dutch East Indies, and England; and those of balata almost wholly from Mexico.

*Important changes in classification.*—Gutta balata and gutta siak have been mentioned specifically for the first time.

## PARAGRAPH 1588.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1588. Iodine, crude.

ACT OF 1909.

ACT OF 1913.

PAR. 593. Iodine, crude [Free].

PAR. 515. Iodine, crude, \* \* \* [Free].

[For discussion of iodine, see par. 42, p. 127.]

## PARAGRAPH 1589.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1589. Iridium, osmium, palladium, rhodium, and ruthenium and native combinations thereof with one another or with platinum.

ACT OF 1909.

ACT OF 1913.

PAR. 595. Iridium, osmium, palladium, rhodium, and ruthenium and native combinations thereof with one another or with platinum [Free].

PAR. 517. Iridium, osmium, palladium, rhodium, and ruthenium and native combinations thereof with one another or with platinum [Free].

## THE PLATINUM METALS.

(See Survey FL-20.)

## IRIDIUM.

*Description and uses.*—Iridium is found in platinum ores; as osmiridium, a native alloy of iridium and osmium, in varying proportions; and in the form of native alloys with the other platinum metals. It is a white, steel-like metal, brittle when cold, and somewhat malleable at white heat. The principal sources of these ores are the Ural Mountains, Australia, Colombia, and Borneo. Platinum iridium alloys, which are harder and more resistant to acids than platinum, are used in the manufacture of standard weights, knife edges of balances, and in other articles to preserve them from atmospheric corrosion. Osmiridium is used in the manufacture of the iridium tips for gold pen points.

*Production* increased from 193 ounces in 1914 to 10,042 ounces in 1917, and decreased to 3,875 ounces in 1918 and to 418 ounces in 1920.

*Imports* of iridium were 3,619 troy ounces in 1917. For the calendar years 1918 to 1921 they were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (troy ounces).....	1,106	5,808	4,718	1,181
Value.....	\$126,282	\$975,174	\$726,502	\$264,513

*Exports.*—None recorded.

## OSMIUM.

*Description and uses.*—Osmium, one of the metals of the platinum group, is found native, alloyed with platinum and iridium. It is the heaviest known substance, having a specific gravity of 22.48. Formerly it was used in filaments of electric lamps, but has now been replaced by tungsten. It is used slightly in medicine and silk dyeing.

*Production.*—No statistics.

*Imports* in 1917 were 400 troy ounces of osmium and 259 troy ounces of osmiridium. Later statistics follow:

Calendar year.	Osmium.		Osmiridium.	
	Quantity.	Value.	Quantity.	Value.
	<i>Ounces (troy).</i>		<i>Ounces (troy).</i>	
1918.....	2,339	\$132,097	427	\$46,321
1919.....	593	39,517	1,374	112,403
1920.....	129	8,738	4,473	450,241
1921 (9 months).....			1,789	222,124

*Exports.*—None recorded.

## PALLADIUM.

*Description and uses.*—Palladium is the lightest metal of the platinum group. While found native alloyed with small amounts of platinum and iridium and 5 to 10 per cent of gold and silver, the chief supply comes from the nickel-copper ores of Ontario and the electrolytic refining of copper. Alloyed with gold and silver, palladium has found considerable use as a substitute for platinum in the manufacture of laboratory ware, in jewelry, and for dental and various industrial purposes. It is also added to platinum to make a lighter alloy capable of receiving a brilliant polish. Palladium is used for coating various surfaces, e. g., reflectors of searchlights and divided scales on various scientific instruments.

*Production* was 4,024 ounces in 1918 and 4,309 ounces in 1920.

*Imports* in the fiscal year 1918 were 1,317 ounces. For calendar years 1918 to 1921, inclusive, they were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (troy ounces).....	240	3,739	6,944	7,787
Value.....	\$36,853	\$250,777	\$612,248	\$446,847

*Exports.*—None recorded.

## RHODIUM.

*Description and uses.*—Rhodium occurs with the other metals of the platinum group and as an alloy with gold as rhodium gold or rhodite, a mineral found in Mexico. It is a white, hard, malleable metal. With platinum it forms an alloy used in making thermocouples, crucibles, dishes, and as a catalyst.

*Production* was 48.5 troy ounces in 1917.

*Imports* were 32 troy ounces in the fiscal year 1914 and 49 ounces in 1918. For the calendar years 1918-1921 they were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (troy ounces).....		222	2,053	609
Value.....		\$30,474	\$217,385	\$53,359

*Exports.*—None recorded.

## RUTHENIUM.

*Description and uses.*—Ruthenium, a hard, brittle, infusible metal, is associated with metals of the platinum group. It is very rare and has not been used commercially to any great extent although employed occasionally in dyeing solutions for silks.

*Imports* in 1915 were 90 troy ounces. For the calendar years 1918-1921 they were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (troy ounces).....			29	152
Value.....			\$2,640	\$4,268

*Exports.*—None recorded.

## PARAGRAPH 1590.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1590. Iron ore, including maniferous iron ore, and the dross or residuum from burnt pyrites.

ACT OF 1909.

ACT OF 1913.

PAR. 117. Iron ore, including maniferous iron ore, and the dross or residuum from burnt pyrites, fifteen cents per ton: *Provided*, That in levying and collecting the duty on iron ore no deduction shall be made from the weight of the ore on account of moisture which may be chemically or physically combined therewith.

PAR. 518. Iron ore, including maniferous iron ore, and the dross or residuum from burnt pyrites; \* \* \* [Free].

## IRON ORE.

(See Survey FL-2.)

*Description.*—Commercial iron ore contains from 25 to 70 per cent of iron. The American iron ore as mined averages over 50 per cent. Manganiferous iron ores are either those which contain iron greatly in excess of manganese and which are smelted directly to a manganese cast iron containing 1 to 4 per cent manganese, or those in which manganese equals or is in excess of the iron and which, with other iron ores, are smelted to a similar product or low-grade ferroman-

ganese. The waste cinder of pyrite burners is also a source of iron. After the iron pyrites have been used by sulphuric-acid manufacturers the calcined residue is collected, the copper removed, and the material sintered for reclamation of the iron.

*Production* of iron ore in 1913 amounted to 61,980,437 long tons, or approximately 40 per cent of the estimated world total. In 1917 it was 75,288,851 long tons, and in 1920, 67,604,465 long tons. Minnesota, Michigan, Alabama, New York, and Wisconsin are the principal producers, Minnesota yielding over half the output.

Next to the United States the leading sources of iron ore in 1913 were Germany (26,771,598 gross tons), France (21,572,835), and the United Kingdom (15,997,328), production materially declining during the war. With the transfer of Lorraine to France after the close of the World War that country now ranks next to the United States as the world's greatest producer of iron ore.

The greatest iron-ore fields of the world are (1) the Lake Superior district; (2) the Lorraine ore field of northeastern France, Luxemburg, and southern Belgium; (3) the magnetite deposits of northern Sweden; (4) the ore fields of Oriente, Cuba; (5) the ores of Bell Island, Newfoundland; and (6) the ore region of southern Brazil. In each of these fields the potential yield of iron is estimated to exceed 1,000,000,000 gross tons. The Lorraine field is advantageously situated with reference to coal and limestone and is near some of the most important markets of the world. The iron content of Lorraine ore, however, is only about 30 to 35 per cent, while that of Lake Superior ore averages over 50 per cent. Brazilian and Swedish iron ores have a high iron content, averaging from 55 to 65 per cent, but are mined in countries with a very limited supply of coal. The Brazilian field contains the most extensive known deposit of "low phosphorus" ore, used largely in the manufacture of ordnance material.

*Imports* in the fiscal year 1913 amounted to 2,246,861 gross tons, valued at \$7,035,185. In the fiscal year 1918 imports aggregated 871,854 gross tons valued at \$3,144,072. For the calendar years 1918 to 1921 they were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	789,375	476,461	1,273,456	295,710
Value.....	\$3,488,921	\$2,385,689	\$4,963,654	\$999,720

Over half of the imported iron ore comes from Cuba and the remainder largely from Spain and Sweden. A large proportion of the imported ore enters the United States through the customs district of Maryland.

*Exports* of iron ore in the fiscal year 1913 amounted to 1,221,387 gross tons, valued at \$3,684,443. In the fiscal year 1918 these exports amounted to 1,185,769 gross tons valued at \$4,877,380. Exports for the calendar years 1918-1921 were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	1,256,383	996,569	1,145,037	230,228
Value.....	\$5,535,090	\$4,308,746	\$6,198,927	\$1,194,806

The bulk of the exported ore goes to Canada. In 1920 some exported ore moved to Mexico and Sweden.

*Important changes in classification.*—In H. R. 7456 iron ore, including manganiferous iron ore and the dross or residuum from burnt pyrites, has been retained on the free list as in the act of 1913, but separated from "iron in pigs, iron kentledge, spiegeleisen," etc., which have been placed on the dutiable list.

### PARAGRAPH 1591.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1591. Ivory tusks in their natural state or cut vertically across the grain only, with the bark left intact.

#### ACT OF 1909.

PAR. 596. Ivory tusks in their natural state or cut vertically across the grain only, with the bark left intact. \* \* \* [Free].

#### ACT OF 1913.

PAR. 369. Ivory tusks in their natural state, or cut vertically across the grain only, with the bark left intact, 20 per centum ad valorem; \* \* \*.

#### IVORY TUSKS.

(See Survey N-21.)

*Description and uses.*—Ivory tusks are mainly those of the African elephant, these constituting the best part of commercial ivory. Other sources are the tusks of fossil elephants found in Russia, Siberia, and Alaska, and the teeth of the whale, walrus, and hippopotamus. The latter are inferior to elephant tusks, which are considered true ivory.

*Imports* in 1914 amounted to \$480,516, valued at \$1,315,325. They were chiefly from Belgium and England, the chief markets for African ivory. Later statistics follow:

Calendar year.	Quantity.	Value.	Duties.	Unit value.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	376,908	\$758,196	\$151,639	\$2.01	20
1919.....	347,531	862,010	172,402	2.48	20
1920.....	615,845	2,184,164	436,833	3.55	20
1921 (9 months).....	85,700	273,065			

In the later years large quantities were shipped direct from the Belgian Congo and Egypt, although England and Belgium remained the chief markets.

*Important changes in classification.*—Transferred from the Sundries schedule (par. 369) of the act of 1913.

## PARAGRAPH 1592.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1592. Jet, unmanufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 598. Jet, unmanufactured [Free].

PAR. 520. Jet, unmanufactured [Free].

JET, UNMANUFACTURED.

(See Survey N-1.)

*Description and uses.*—Jet is a compact, soft, light coal of a lustrous black color, hard and solid enough to be turned in a lathe and made into various ornamental articles. It occurs here in many localities, but is not systematically worked. It is found in Austria-Hungary, France, Germany, Spain, and England. It has been displaced by black-colored chalcedony and anthracite. Owing to the high polish taken, it finds use as material for dress trimming, mourning jewelry, toys, buttons, and personal ornaments.

*Imports* of jet are small and irregular, having been recorded from 1907 to 1918 in three years only. In 1907 they were valued at \$27 and later statistics for calendar years are as follows: 1918, \$316; 1919, \$1,199; 1920, \$371; 1921 (nine months), \$992.

## PARAGRAPH 1593.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1593. Joss stick or joss light.

ACT OF 1909.

ACT OF 1913.

PAR. 599. Joss stick or Joss light [Free].

PAR. 521. Joss stick or joss light [Free].

JOSS STICK AND LIGHT.

(See Survey N-8.)

*Description and uses.*—Joss sticks are reeds covered with paste made from the dust of odoriferous woods, or cylinders made wholly of the paste. They are used by the Chinese to burn before their idols, as slow matches in measuring time at night, and for lighting pipes, and are widely used by other peoples as deodorizers.

*Imports* of joss sticks in 1914 were valued at \$6,888, nearly half from Japan and the rest from China and India. Later statistics for calendar years follow: 1918, \$29,510; 1919, \$32,328; 1920, \$41,089; 1921 (nine months), \$17,015.

*Suggested changes.*—See paragraph 1656, page 1438.

## PARAGRAPH 1594.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1594. Junk, old.

ACT OF 1909.

ACT OF 1913.

PAR. 600. Junk, old [Free].

PAR. 522. Junk, old [Free].

## OLD JUNK.

*Description.*—"Junk" in the ordinary meaning consists of worn-out and discarded material (in general) that may be turned to some use. It consists principally of old rope, chain, iron, copper, parts of machinery, and bottles gathered or bought up by tradesmen known as "junk dealers."

*Production.*—No statistics.

*Imports* since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....		2,834,501	637,967	606,203
Value.....	\$48,059	\$46,175	\$21,742	\$11,328

*Exports.*—None recorded.

## PARAGRAPH 1595.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1595. Kelp.

ACT OF 1909.

ACT OF 1913.

PAR. 601. Kelp [Free].

PAR. 523. Kelp [Free].

## KELP.

(See Survey A-16.)

*Description and uses.*—The name kelp, originally applied to the ash obtained by burning seaweed, has now been extended to the seaweeds themselves, particularly to those yielding potash, iodine, and other valuable products. Kelp is used principally for the production of potash salts and iodine, although acetic acid and acetone may be thus obtained. Dried and ground kelp is sometimes used as fertilizer.

*Production.*—Little kelp was used here until 1914, when the shortage of potash salts caused large quantities along the Pacific coast to be utilized. There were 10 plants manufacturing potash and other products from kelp during 1917 and 1918, and their output was about 4,300 tons per year. Most of these plants have now shut down, owing to the lower price of potash.

*Imports* of kelp have been small and irregular and probably refer to the ash.

*Exports.*—Statistics not available.

## PARAGRAPH 1596.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1596. Kieserite.

ACT OF 1909.

ACT OF 1913.

PAR. 602. Kieserite [Free].

PAR. 524. Kieserite [Free].

## KIESERITE.

(See Survey FL-22.)

*Description and uses.*—Kieserite is a natural mineral composed of magnesium sulphate combined with one molecule of water of crystallization. It is slowly soluble in water, which property serves as a means of separating it from the other salts naturally occurring with it. Kieserite is found chiefly at Stassfurt in Germany and Hallstatt and Kalusz in Galicia. It is used mainly as a raw material in the production of Epsom salts (par. 47), from which it differs only in the amount of water contained.

*Production.*—At Stassfurt, kieserite is found along with other salts. The latter are readily soluble in water and therefore on washing are removed. Kieserite is packed in molds and by purification is converted into Epsom salts.

*Imports* of kieserite for 1910-1914 averaged annually 6,455 tons, valued at \$21,043, entirely from Germany. No imports are recorded since 1918.

## PARAGRAPH 1597.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1597. Lac, crude, seed, button, stick, or shell.

ACT OF 1909.

ACT OF 1913.

PAR. 605. Lac \* \* \* crude, seed, button, stick, and shell [Free].

PAR. 526. Lac \* \* \* crude, seed, button, stick, and shell [Free].

LAC, CRUDE, SEED, BUTTON, ETC., AND SHELLAC.

(See Survey FL-17.)

*Description and uses.*—Crude lac is probably another term applied to stick lac, the crudest form of lac resin. The lac-encrusted twigs are dried and cut into sticks, in which form the lac is sometimes supplied to the consumer.

Seed lac or grain lac consists of stick lac which has been ground and crushed, and which has had the wood twigs removed. It may be in two grades, (1) seed lac containing the lac dye, and (2) washed or bleached seed lac from which the lac dye has been taken by bleaching or by extraction with water. Seed lac is used as a raw material in the manufacture of the best grades of shellac.

Button lac is a form of shellac made by allowing melted and strained lac to drop onto a flat surface, forming large rounded cakes.

Shell lac, or shellac, is seed lac which has been cooked, cooled, and rolled into thin sheets. Commercial grades may contain orpiment or rosin, which is added to impart certain properties to the shellac. Rosin present in quantities exceeding 3 per cent is usually considered an adulterant. Shellac is used as a binder in the manufacture of such composition goods as buttons, dominoes, poker chips, and phonograph records; as an insulator in electrical work; in sealing wax and shoe dressing; and, when dissolved in alcohol, as a quick-drying varnish (spirit varnish), and in paints for ship bottoms. We produce about one-half the shellac varnish of the world and are the chief consumer.

*Production* is restricted to the preparation of bleached lac from the imported products. The domestic output of bleached lac in 1914 was 8,654,514 pounds, valued at \$1,806,802, and in 1919 (preliminary figures), 8,799,190 pounds, valued at \$5,955,700.

*Imports* of crude lac, seed, button, and stick, before 1913 averaged less than 500,000 pounds. These greatly increased during the war—in 1915, 1,126,167 pounds, valued at \$88,293; in 1916, 3,485,975 pounds, valued at \$291,176; in 1917, 5,473,174 pounds, valued at \$637,846. Imports of shellac for 1908–1918 averaged about 21,000,000 pounds, valued at about \$4,000,000.

Imports since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Lac, crude, seed, button and stick:				
Quantity (pounds).....	571,972	1,813,537	2,636,096	250,551
Value.....	\$153,336	\$382,713	\$993,268	\$76,553
Shellac:				
Quantity (pounds).....	18,657,717	24,426,403	28,587,107	19,490,483
Value.....	\$9,029,139	\$11,869,246	\$23,088,576	\$9,717,756

*Imports* are chiefly from British India, England, and Japan.

*Exports*.—Statistics not available.

*Important changes in classification*.—Lac dye has been omitted since it is no longer an article of commerce.

#### PARAGRAPH 1598.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1598. Lactarene or casein.

ACT OF 1909.

ACT OF 1913.

PAR. 607. Lactarene, or casein [Free].

PAR. 527. Lactarene or casein [Free].

#### CASEIN OR LACTARENE.

(See Survey FI-15.)

*Description and uses*.—Casein is a white, ashless, nitrogenous substance found in the milk of mammals as a colloidal suspension or emulsion in combination with calcium. It is soluble in concentrated acid and alkalis. About 3 per cent of the solid matter of cow's milk

is casein and represents about 80 per cent of the entire milk protein. Casein has a great many commercial applications, including the manufacture of waterproof and coated paper, paints and artists' colors, plastics, electric insulators, foods, medicines, paint remover, shoe polish, photographic plates, mucilage and cement, and dressing and color-fixing mediums in textiles.

*Production.*—It is prepared commercially from skimmed milk by precipitating the protein with a dilute mineral acid and filtering, washing, and drying to a powder. The powder is packed in air-tight containers, with formaldehyde added to prevent decomposition. Milk sugar is obtained as a by-product. Casein is also made by precipitation with ferments, such as rennet. In 1914 about 18,600,000 pounds were produced in the United States and were valued at approximately \$1,000,000. Since then domestic production has decreased somewhat, owing to a smaller available supply of skimmed milk, together with higher wages, increased freight rates, and other causes. In 1919 (preliminary figures) 16,615,076 pounds were produced, valued at \$2,188,787.

*Imports* of casein for 1910–1918 averaged about 10,000,000 pounds, valued at about \$1,000,000. Before the war it came chiefly from France, but during the war Argentina furnished the bulk. Imports since 1917 by calendar years, chiefly from Argentina, England, and Brazil, have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	7,083,976	17,076,936	21,238,822	7,978,393
Value.....	\$964,766	\$2,009,791	\$2,431,666	\$742,225

*Exports.*—Statistics not available.

#### PARAGRAPH 1599.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1599. Lava, unmanufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 608. Lava, unmanufactured  
[Free].

PAR. 529. Lava, unmanufactured  
[Free].

#### LAVA, UNMANUFACTURED.

(See Survey B-3.)

*Description and uses.*—Lava, rock of volcanic origin, varying greatly in composition and texture, has some specific uses, e. g., for making millstones and for filtering acids. Basaltic lava of vesicular texture is used for beater rolls and bedplates, which compete with steel or bronze rolls in the preparation of paper pulp. The largest use of such rocks is for crushed stone.

*Production.*—A small amount, used for beater rolls, is produced in the extreme Northwestern States. (See par. 235, p. 350.)

*Imports* of lava average about 50 tons a year, and are used for beater rolls. (See par. 235, p. 350.)

## PARAGRAPH 1600.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1600. Leather: All leather not specially provided for; harness, saddles, and saddlery, in sets or parts, except metal parts, finished or unfinished; leather cut into shoe uppers, vamps, soles, or other forms suitable for conversion into manufactured articles; and leather shoe laces, finished or unfinished.

## ACT OF 1909.

PAR. 450. \* \* \* *Provided*, That on and after October first, nineteen hundred and nine, grain, buff, and split leather shall pay a duty of seven and one-half per centum ad valorem; \* \* \* that harness, saddles and saddlery, in sets or in parts, finished or unfinished, composed wholly or in chief value of leather, shall pay a duty of twenty per centum ad valorem.

PAR. 451. Band, bend, or belting leather, rough leather, and sole leather, five per centum ad valorem; dressed upper and all other leather, calfskins tanned or tanned and dressed, kangaroo, sheep and goat skins (including lamb and kid skins) dressed and finished, other skins and bookbinders' calfskins, all the foregoing not specially provided for in this section, fifteen per centum ad valorem; \* \* \* skins for morocco, tanned but unfinished, five per centum ad valorem; patent, japanned, varnished, or enameled leather weighing not over ten pounds per dozen hides or skins, twenty-seven cents per pound and fifteen per centum ad valorem; if weighing over ten pounds and not over twenty-five pounds per dozen, twenty-seven cents per pound and eight per centum ad valorem; if weighing over twenty-five pounds per dozen, twenty cents per pound and ten per centum ad valorem; \* \* \* leather shoe laces, finished or unfinished, fifty cents per gross pairs and ten per centum ad valorem; \* \* \* *Provided*, That leather cut into shoe uppers or vamps or other forms, suitable for conversion into manufactured articles, and gauffre leather, shall pay a duty of ten per centum ad valorem in addition to the duty imposed by this paragraph on leather of the same character as that from which they are cut.

PAR. 461. Harness, saddles, saddlery, in sets or in parts, finished or unfinished, thirty-five per centum ad valorem.

## ACT OF 1913.

PAR. 530. All leather not specially provided for in this section \* \* \* leather cut into shoe uppers or vamps or other forms suitable for conversion into boots or shoes; \* \* \* leather shoe laces, finished or unfinished; harness, saddles, and saddlery, in sets or in parts, finished or unfinished [Free].

## BELTING AND SOLE LEATHER.

(See Survey N-15.)

*Description and uses.*—Belting and sole leather are produced from cattle hides by processes identical up to the finishing process. Both are frequently made in the same tanneries. Vegetable tanning is the older and slower process, but the qualities which it imparts make the leather superior, with some minor exceptions, for the purposes under consideration, to mineral-tanned leather. Mineral tanning is usually done in “drums;” vegetable tanning in both vats and “drums.” Drum tanning is a quicker process than vat tanning. Chrome salts are usually employed in mineral tanning and sometimes, as in the case of sole leather for army shoes, the leather is tanned by the quick mineral or “chrome” process and then given a comparatively brief vegetable tanning called “vegetable retan.”

*Production* of sole leather in 1914 was valued at \$116,188,059; belting leather, at \$8,369,584. In 1919, the former was valued at \$227,809,736 and the latter at \$37,275,668. The sole-leather industry has grown rapidly from a value of approximately \$55,000,000 in 1899, the belting-leather industry from a value then approximating \$7,000,000. Pennsylvania was the most important producer of sole leather, with a value of \$50,485,259 in 1914, nearly one-half the total output. Michigan was second, with \$12,641,509; West Virginia, \$9,035,266; Wisconsin, \$7,646,946; Virginia, \$7,535,199; and New York, \$7,184,838. Pennsylvania in 1919 still ranked first with an output of \$101,041,783, followed by West Virginia with \$20,429,088, and New York with \$19,662,132. The larger part of the product—\$117,522,076—was of oak tannage. Proximity to the supplies of oak and hemlock bark formerly determined the location of the belting and sole leather tanning establishments. The use of quebracho and bark extracts and other imported and domestic vegetable tanning materials now renders location of less importance.

*Imports.*—Out of an import value, in 1912, of more than \$1,000,000 for belting and sole-leather, \$821,640 came from England; in 1913, England sent us \$1,239,447 worth out of \$1,652,460, and Canada over \$100,000. In 1916 out of more than \$3,000,000 worth, Canada sent \$2,782,226 worth, and England only \$131,113. In 1917 imports were valued at \$2,443,785, Canada supplying \$1,600,279 worth, and England \$74,329. In 1920 England sent to this country sole leather valued at \$979,117, and Canada an amount valued at \$604,529. Detailed statistics for later years are shown as follows:

Calendar year.	Quantity.	Value.	Unit value.
SOLE LEATHER.			
	<i>Pounds.</i>		
1918.....		\$1,784,579	
1919.....	1,954,356	1,286,133	\$0.66
1920.....	3,470,559	2,301,783	.66
1921 (9 months).....	2,106,977	774,724	
BELTING LEATHER.			
1918.....		\$39,873	
1919.....	177,135	236,253	\$1.33
1920.....	242,777	326,023	1.34
1921 (9 months).....	204,999	156,337	

Exports of belting leather were valued at \$1,105,168 in 1913, and at \$3,122,841 in 1917. The exports of sole leather, \$8,804,955 in 1913, increased by 1917 to \$39,026,278. In 1920 the principal markets for sole leather were England and Japan. France, Cuba, England, and Canada were the largest importers of our belting leather in 1918. In 1920 the largest quantities were sent to Canada and Argentina. Detailed statistics for later calendar years are as follows:

	1918	1919	1920	1921 (9 months).
Belting leather:				
Quantity (pounds).....			192,682	64,124
Value.....	\$2,097,877	\$7,241,260	\$228,577	\$41,035
Sole leather:				
Quantity (pounds).....	26,748,035	122,660,993	24,429,639	8,651,236
Value.....	\$14,164,982	\$54,871,639	\$11,983,902	\$3,329,029

## UPPER LEATHER.

(See Survey N-16.)

*Description and uses.*—The principal varieties of upper leather are “calf and kip” (kipskins are the hides of small cattle), “goat and kid,” “sheep and lamb,” “side upper” (cowhide), and miscellaneous kinds (including horsehide, buckskin, kangaroo, and cabretta). Cowhide leather is divided into “sides” and “splits.” A “side” is one-half of a hide, full thickness. “Splits” are made by splitting the hide into two thicknesses, the outside layer being the “grain” and the inside layer the “flesh split.” Calfskin is one of the best materials for men’s and boys’ wear, as it is stronger and firmer than kid, the latter being used extensively for women’s and children’s shoes. Sheepskin is used for the linings of shoes and for the uppers of cheap grades of shoes and slippers. Cordovan leather is horsehide.

*Production statistics of upper leather for 1914 and 1919 follow:*

	1914		1919	
	Number	Value.	Number.	Value.
Skins:				
Calf and kip.....	15,869,401	\$41,812,734	11,697,427	\$92,600,678
Goat and kid.....	29,874,538	26,113,234	51,508,678	143,509,682
Sheep and lamb.....	16,794,641	10,885,175	8,878,352	15,313,551
Cabretta, kangaroo, and wallaby.....	3,730,260	4,198,017	6,973,855	14,456,577
Sides:				
Horse leather (other than patent).....	406,741	1,360,103	1,720,507	10,561,999

All other.....		2,042,390		2,073,163
Total:				
Skins.....	66,268,840	\$119,350,792	79,058,312	\$399,412,933
Sides.....	8,652,705		18,413,580	

About one-half of the cowhides and calfskins used in upper leather three-fourths of the sheepskins, and practically all of the goatskins are imported. During the war, imports of hides and skins greatly increased in quantity and value, and the change in trade currents was very marked. Chrome tannage, an American invention which

became commercially effective between 1895 and 1900, revolutionized the leather industry. "Vegetable tannage", in vats, required from four to six months, and involved much hand labor. Chrome tanned skins are prepared in less time and quantity production is the rule. Chrome salts are "worked" into the hides while they are being tumbled about in huge drums. Chrome-tanned leather does not resist water (under some conditions) as well as the vegetable tanned article, and therefore the "vegetable retan" is sometimes given. Foreign countries also employ the chrome process, but not as extensively as the United States.

Imports of upper leather in 1911 were valued at \$284,247; in 1912 \$201,741; and in 1913, \$182,562, of which Germany sent us \$93,189, France \$45,080, and England \$33,291. In 1914 imports amounted to \$2,621,585, nearly 50 per cent coming from England, about 20 per cent from France, and somewhat less from Germany; Canada supplied an amount valued at \$200,000. Imports from 1915 to 1917 are shown as follows:

	1915	1916	1917
Calf and kip upper leather.....		\$1,031,699	\$1,140,729
Goat and kid upper leather.....		908,989	946,262
Sheep and lamb upper leather.....		664,394	1,153,523
"All other" upper leather.....		331,786	257,335
Total.....	\$3,039,770	\$2,936,868	\$3,497,849

Most of the goat and kid upper leather came from France until 1918, when more than 50 per cent came from British West Africa. In 1919 France again sent the largest portion of these imports, a value of \$136,625 out of a total of \$227,514. In 1920 England sent nearly half of the imports of goat and kid upper leather.

France and England have been the leading sources of sheep and lamb upper leather, although in 1918 the largest imports came from Italy. British India led in 1919, but in 1920 England sent over half of the \$845,785 worth imported, while British India ranked second with \$62,016, and France third with \$57,901.

About 90 per cent of the calf and kip upper came from Canada in 1918. In 1920 the amount from that source was slightly over 40 per cent of the total value, and England sent over 25 per cent. Imports of the various classes are shown as follows:

Calendar year.	Quantity.	Value.	Unit value.
CALF AND KIP.			
	<i>Pounds.</i>		
1918.....		\$888,776	
1919.....	406,372	1,149,293	\$2.83
1920.....	572,908	1,431,566	2.50

UPPER LEATHER, N. S. P. F.			
1918 .....		\$283,241	
1919 .....	307,099	638,343	\$1.88
1920 .....	473,047	764,152	1.61
1921 (9 months) .....	301,799	447,278	

*Exports* of upper leather are mainly of goat and kid leather, the leading variety being glazed kid. Glazed kid is not strictly what the name would indicate, but is, rather, "glossy" kid. Chrome tanning was first applied to kid, then calf, and finally to side and sole leather. About 75 per cent of the world's output of this upper leather is made in the United States. Exports of goat and kid upper leather were small in 1895; by 1900 they had grown to \$1,909,914 and by 1913 to \$19,573,000, making up the greater part of the exports of upper leather. Exports of goat and kid upper were 106,000,000 square feet in 1913 and 88,000,000 square feet in 1917. European countries took large quantities of upper leather for army shoes during the war, and we also gained many neutral markets. England, France, and Germany had been the distributors of our upper leather, but during the war direct buying became the rule. In 1913 England received about \$7,000,000 worth of our goat and kid upper leather; Germany, about \$3,000,000; the Netherlands, \$1,745,000; Argentina, \$1,413,000, and Russia, France, Denmark, and Australia each over \$500,000. Total exports were about \$19,000,000. In 1917, of more than \$30,000,000 of exports, England took over one-third and Denmark \$3,613,000, other markets being Russia, France, Canada, and South America. In 1920 England, the chief customer, took a value of \$15,570,299, Denmark \$4,818,120, and France \$2,239,028. Our chief markets for calf upper leather in 1913 were England, France, Germany, Canada, Brazil, Argentina; in 1917 exports increased to \$8,229,038 (quantity in 1913, 9,765,000 square feet; in 1917, 19,390,000 square feet). A similar expansion took place in other varieties of upper leather. England, France, Portugal, and Brazil took the largest quantities of calf upper in 1920.

Exports of upper leather for calendar years are shown as follows:

	1918	1919	1920	1921(9 months).
Calf and kip:				
Quantity (square feet).....	15,538,326	49,417,005	16,023,910	6,958,699
Value.....	\$7,919,776	\$31,819,238	\$12,244,734	\$2,775,708
Goat and kid:				
Quantity (square feet).....	24,335,031	104,377,890	54,911,165	16,360,930
Value.....	\$9,728,323	\$57,920,607	\$35,240,181	\$5,502,017
Cattle sides:				
Quantity (square feet).....	7,028,084	50,481,517	121,566,654	14,993,078
Value.....	\$1,868,435	\$11,531,143	\$8,935,744	\$1,341,882
Upper leather, n. s. p. f., (value).....	\$8,076,984	\$24,229,206	\$12,166,975	\$1,595,724

<sup>1</sup> Total of "grain and finished splits" and "wax and rough splits."

#### HARNESS LEATHER.

(See Survey N-15.)

*Description and uses.*—Harness leather is made of cow hides and is principally of the "bark-tanned" variety. Only 5,320 out of 2,777,312 "sides" of harness leather tanned here in 1914 were of the chrome variety. It is treated by the bark process because of the better resistance to water of leather so tanned.

*Production.*—The equipment of a tannery for making harness leather is not highly specialized and the manufacture is frequently combined with tanning of other heavy leather. The industry has not grown as fast as many other branches in recent years, probably because of the automobile. The output in 1899 was valued at \$16,712,056 and in 1909 at \$24,802,734; but it decreased to \$20,969,169 in 1914. In 1919 the output of harness leather was valued at \$24,085,406, the number of sides tanned being 1,710,769, of which 915,714 were of oak tannage, 423,389 of hemlock, and 371,666 of union. Saddlery leather to the amount of 102,594 sides, valued at \$986,012, was also produced. Wisconsin, California, Ohio, Pennsylvania, New York, Indiana, Maryland, and Michigan ranked in order as to value of output in 1909. In 1914 Wisconsin led and Ohio, Michigan, California, New York, Pennsylvania, and Indiana followed in order of importance. The tanning of harness leather is less localized than that of some other kinds, and the manufacture of harness and saddlery is widely distributed.

*Imports* of harness and saddle leather were practically negligible for 1913-1915. In 1916 they were valued at about \$200,000; in 1917 \$1,205,493, largely from Canada. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$4,931,638	.....
1919.....	1,308,919	849,739	\$0.65
1920.....	511,263	405,377	.79
1921 (9 months).....	632,873	279,944	.....

*Exports.*—None recorded.

## PATENT LEATHER.

(See Survey N-16.)

*Description and uses.*—Patent leather is a leather treated with a preparation of lampblack, linseed oil, and other ingredients. Several coats are spread on and polished down with pumice stone. The leather is further blackened with a fluid black mixed with turpentine. It is then dried, varnished, baked, and hardened by exposure to the sun. Patent leather was formerly all "vegetable tanned" and finished on the flesh side. France and Germany were the leaders in manufacture. Chrome tanning was introduced about 1895. All chrome patent leather is varnished on the "grain" or hair side, which formerly distinguished American patent leather from that of foreign countries. The latter have now adopted the American method to a considerable extent.

*Production* has increased rapidly; the output of all patent leather was valued at \$15,590,812 in 1914, and at \$26,355,238 in 1919. Of the latter amount, cattle sides made up \$21,379,305.

*Imports* in 1913 of patent, japanned, varnished, or enameled leather were valued at \$200,832. In 1914 they increased to, \$735,468, and in 1915 to \$1,388,242. In 1916, after trade with Germany ceased, imports fell to \$69,485; they were \$115,022 in 1917. In 1920 Canada exported to us \$185,075 worth of patent, japanned, varnished, and enameled leather and Switzerland an amount valued at \$123,385. Detailed imports since 1917 are shown in the following table:

Calendar year.	Quantity.	Value.	Unit value.
SIDE, UPPER.			
	<i>Pounds.</i>		
1918.....		\$173,685	
1919.....	96,551	316,510	\$3.23
1920.....	39,948	186,118	4.66
1921 (9 months).....	21,987	64,611	
ALL OTHER.			
1918.....		\$23,375	
1919.....	13,507	34,272	\$2.54
1920.....	66,785	229,946	3.44
1921 (9 months).....	13,546	31,892	

*Exports* of patent and enameled leather have increased greatly, in 1900 being valued at \$101,708; in 1910, at \$367,601; in 1914, at \$1,675,667; in 1917, at \$7,150,097. In 1920 the largest quantities were taken by France, England, Italy, and Australia, in the order named.

Exports of patent leather since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (square feet).....			21,693,810	12,379,363
Value.....	\$4,205,603	\$18,480,619	\$17,643,464	\$4,489,729

## CASE, BAG, AND STRAP LEATHER.

(See Survey N-16.)

*Description and uses.*—Case and bag leather may be either chrome or vegetable tanned, but most strap leather is vegetable tanned. Cowhide, tanned with oak bark, is principally used for these leathers. "Splits" are used for all three kinds, but a much heavier split is used for strap leather, which usually is made out of the full thickness of the hide. The best quality of case and bag leather is bark-tanned calfskin or grain splits of cowhide. "Case, bag, and strap" is not a rigid classification. Leather suitable for making shoe uppers is also used for traveling bags and suit cases. Some sheep leather may be used either for bags or bookbinding, while strap leather may also be used for light soles, arch supporters, etc.

*Production* of case, bag, and strap leather in 1914 was 1,004,581 sides, valued at \$5,383,255. In 1919 the number of sides tanned for this purpose was 1,225,577, and the value of the product \$11,880,766. Of this quantity Pennsylvania produced 415,413 sides, valued at \$4,377,532.

*Imports* of case, bag, and strap leather were \$29,638 in 1915, \$56,314 in 1916, and \$43,017 in 1917. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$162,100	
1919.....	189,285	159,437	\$0.84
1920.....	95,385	109,133	1.03
1921 (9 months).....	83,668	66,228	

*Exports.*—None recorded.

## UPHOLSTERY LEATHER.

(See Survey N-16.)

*Description and uses.*—Upholstery leather is made principally out of whole cowhides, finished on the grain side, or out of cowhide splits. Cowhides are sometimes split into as many as five thicknesses. The "buffing" or thin outside split is sometimes used for bookbinder's leather and sometimes for upholstery; the "slab" or inside split is used for very cheap leather; while the second, third, and fourth splits, as well as the grain, may be used for upholstery leather.

*Production* of upholstery leather increased in value from \$5,748,387 in 1899 to \$14,328,358 in 1914, largely due to automobile requirements. In 1914, 654,053 hides were made up into whole-hide grain upholstery leather, valued at \$8,172,698, and 1,104,561 hides into "splits," valued at \$6,155,660. In 1919 production was \$32,224,644, of which whole-hide grains numbered 933,921, valued at \$18,262,372, and whole-hide splits made from 1,507,741 hides were valued at \$13,962,272. New Jersey ranked first in manufacture and Ohio second.

*Imports.*—None recorded.

Exports of "carriage, automobile, and upholstery leather" were valued at \$107,430 in 1913, \$38,937 in 1916, and \$97,054 in 1917. Exports since 1917 by calendar years have been in value as follows: 1918, \$163,541; 1919, \$415,848; 1920, \$740,477; 1921 (nine months), \$131,555. The principal countries of destination in 1920 were Italy and Canada, the former taking \$302,503 and the latter \$126,004 in value.

## FANCY LEATHER.

(See Survey N-17.)

*Description and uses.*—Fancy leather is used for pocketbooks, cardcases, music rolls, belts, bag linings, hat sweatbands, and novelties. It is made principally of sheepskin, although considerable calf and goat skin and light splits or skivers of cowhide are used. Some genuine seal, walrus, and alligator skins are used, but much sheepskin and cowhide split leather is finished and embossed to resemble the former kinds. Russia calf, one of the high grades of fancy leather, is calfskin tanned by a special process with quebracho, hemlock, or some other vegetable tanning material; it was originally tanned in Russia with birch bark, which gave it a peculiar odor, now imitated by spraying birch oil on the grain. Other fancy leathers are morocco, pigskin, and alum-tanned (or "tawed") sheepskin.

*Production of fancy leather* in 1914 was \$8,775,968, more than half of sheep and lamb skin. In 1919 the total decreased to \$5,974,293—sheep and lamb to the number of 1,104,798 skins, valued at \$2,414,076, making up the largest item.

*Imports of "fancy leather including morocco, seal, and fancy calf for fancy leather goods"* were valued at \$199,217 in 1914, \$263,971 in 1915, \$529,937 in 1916, and \$639,602 in 1917. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	83,964	\$12,076	.....
1919.....	64,432	365,271	\$4.35
1920.....	38,718	297,982	4.62
1921 (9 months).....		159,541	.....

*Exports.*—Not separately stated.

## BOOKBINDER'S LEATHER.

(See Survey N-17.)

*Description and uses.*—Calfskin, cowhide skivers and buffings, sheep, goat, seal, and pig skins are used for bookbinders' leather. The grain splits of sheepskin are also thus used, while the flesh splits are utilized for chamois. Morocco leather (goatskin tanned with sumac) is one of the popular bookbinding leathers. The sheepskin used for binding law books is tanned with quebracho or some other vegetable tannin and finished on the grain without dyeing. Pigskin makes a durable leather of rather coarse grain. Russia calf (described under fancy leather) is much used for binding expensive editions.

*Production* of bookbinders' leather increased from a value of \$1,688,413 in 1899 to \$2,450,155 in 1909, but decreased to \$1,362,673 in 1914. In 1919 the value (\$3,463,841) was almost three times as great as in the latter year. This was made up of 327,390 hides, valued at \$2,467,486, skins of sheep and lamb numbering 389,953, at \$727,151, and 60,224 other skins, at \$269,204. New Jersey produces more than 50 per cent of the supply.

*Imports and exports* of bookbinders' leather are not separately stated.

#### ROUGH LEATHER.

(See Survey N-15.)

*Description and uses.*—Rough leather is made from cattle hides and is generally vegetable tanned, as the chrome tanned becomes so hard, if kept in the rough, that it is difficult to work over. This leather is unfinished, and is sold by the manufacturers to others who dress it for belting, upper, bag, and fancy, etc. The leather is sold either whole or split, the hair sides being known as "rough grains" and the flesh sides as "rough splits." Some tanners, particularly those manufacturing heavy oak leather, trim off the shoulders of hides and tan these for "rough." Rough leather is really an intermediate product, the leather made therefrom being known as "belting," "upper," "case, bag, and strap," etc.

*Production* amounted to \$10,180,949 in 1904, to \$6,335,599 in 1909, to \$4,494,985 in 1914, and \$3,712,687 in 1919. The decrease in the amount of rough leather made is due partly to the commercial use of tanning extracts, which makes location near supplies of bark no longer necessary. The small country tanneries, which used such bark, were not equipped to finish leather, but sold it in the rough. The number of such establishments has decreased. The production of 1919 was divided into: Rough grains, 95,528 sides, valued at \$499,098; rough splits, 1,050,908 whole sides, valued at \$1,370,595; and 172,385 butts, valued at \$250,849. Other rough leather, 206,379 sides, valued at \$1,592,145.

*Imports.*—Prior to 1919 the greatest amount imported in any year was in 1917, when the value was \$337,841. Great Britain is the immediate source of the bulk of this leather. Competition also comes from imported leathers of the kinds into which rough leather is made by the finishers. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$229,445	
1919.....	2,601,681	1,753,727	\$0.67
1920.....	4,557,962	2,581,984	.57
1921 (9 months).....	1,861,370	647,437	

*Exports.*—Figures not given separately.

## SPLIT LEATHER.

(See Survey N-16.)

*Description and uses.*—Split leather is made from cattle and horse hides. For certain uses the whole hide would be too thick, and therefore it is often split into three to five thicknesses. It is largely used in the glove and shoe industries, and also in straps, belts, cases, bags, harnesses, upholstery, and soles. Splits are frequently sold in the rough and finished by concerns other than those doing the tanning.

*Production* of finished splits is much greater than of the rough splits. In 1919 finished splits (n. e. s.) amounted to \$16,459,665, of which over \$13,600,000 was of cattle and over \$2,760,000 of horse butts and fronts. The production of rough splits was \$1,621,444. (See Rough Leather.)

*Imports* of split leather, unfinished, in 1914 were \$163,960; of finished, \$85,616. During the war these declined, the former amounting in 1916 to \$5,668 and the latter to \$8,664. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
<b>SPLIT LEATHER, UNFINISHED.</b>			
	<i>Pounds.</i>		
1918.....		\$43,724	
1919.....	1,320,076	662,332	\$0.50
1920.....	67,999	34,300	.50
1921 (9 months).....	33,869	14,477	
<b>SPLIT LEATHER, FINISHED.</b>			
1918.....		\$10,797	
1919.....	14,560	32,912	\$2.26
1920.....	52,951	114,161	2.16
1921 (9 months).....	14,131	21,818	

*Exports* are not separately stated. A large quantity is finished into wax splits for upper leather and exported.

## ROLLER, APRON, PICKER, AND LACE LEATHER.

(See Survey N-17.)

*Description and uses.*—Roller leather is so-called because used on the rollers in textile machinery. It must be degreased and smooth, to avoid breaking the threads. It is usually made of oak-tanned lambskins. Apron leather is also used in textile machinery and is vegetable tanned and curried and degreased to make it soft and pliable. Picker leather, another kind of "textile" leather, is made of heavy cow hides, bark or alum tanned, and dressed with oil to render it pliable. For lace leathers, which are used in making lacing for belts, footballs, etc., bark tanned cow hides are also used.

*Production* of lace leather in 1919 was 491,077 sides, valued at \$2,532,074. Production of "textile" leather, which includes roller, apron, and picker leather, in 1919, was 263,060 sides, valued at \$666,762.

*Imports* are largely from Great Britain where there are about 30 firms which make roller leather and about 50 which manufacture picker bands.

*Exports*.—Not given separately.

#### COLLAR, SKIRTING, AND LATIGO.

(See Survey N-17.)

*Description and uses*.—Besides leather known as "harness and saddle," there are other leathers employed by the harness maker. Skirting leather, collar leather and latigo are made from light cow-hides. The first goes into the straps and lower parts of saddles; latigo is tanned for pliability and is generally used for hame straps and halters.

*Production* of skirting in 1914 was 311,646 sides, valued at \$2,082,963. In 1919, skirting and collar together were valued at \$5,998,656, and the quantity tanned was 581,410 sides.

The production of latigo was \$219,757, and the number of sides was 20,631.

*Imports and exports*.—None recorded.

#### HAT-SWEATBAND LEATHER.

(See Survey N-17.)

*Description*.—Skivers of skeepskin are generally used by the hat manufacturers for hat sweatbands. These may be tanned by several processes, though sumac is largely used, or, if white bands are desired, an alum tannage is employed. The leather is then finished by plain glazing or embossing.

*Production* in 1919 of leather for hat sweats was valued at \$2,712,512; the number of skins tanned was 1,351,522.

*Imports* of hat sweat leather come mostly from Great Britain.

*Exports*.—None recorded.

#### JERKIN LEATHER.

(See Survey N-17.)

*Description and uses*.—Jerkin leather is used for coats for sportsmen, aviators, etc. It is generally made of suede-finished veal skin or sheep skin tanned particularly for softness. Some buckskin is also used for soft shirts for hunters. Considerable leather is used for garment trimmings and for women's hats.

*Production, imports, and exports*.—Statistics not available.

#### WELTING LEATHER.

(See Survey N-17.)

*Description*.—A large part of the welting leather used in the shoe industry is made of oak-tanned shoulders. It is cut into suitable widths and sold by the yard.

*Production* of welting in the United States in 1919 amounted to 206,699 sides, valued at \$1,929,846.

*Imports.*—Not separately recorded.

*Exports* go to several of the shoe-manufacturing countries. Branches of one of the largest manufacturers of welting in the United States have been established in Switzerland, Norway, and South America.

#### PACKING LEATHER.

(See Survey N-17.)

*Description and uses.*—Packing leather is used in hydraulic presses, fire extinguishers, water and gasoline pumps, elevators, and many other kinds of machinery. Oak-tanned leather is much used for the purpose.

*Production, import, and export* statistics not available.

#### GOATSKINS, TANNED BUT NOT FINISHED (SKINS FOR MOROCCO LEATHER).

(See Survey N-17.)

*Description, uses, and production.*—Goatskins, tanned but not finished, constitute an intermediate product, and are finished after importation, generally into bookbinding, fancy, or shoe upper leather. (See Upper, Bookbinding, and Fancy Leather.)

*Imports* in 1914 amounted to \$1,737,329, of which \$993,156 was from England and \$595,437 from British India. The total value greatly increased in 1916 and 1917—to \$4,575,500 in the former and \$8,453,941 in the latter year. By 1920 it had declined to \$1,520,193, of which England shipped us \$1,177,068 and British India \$297,741. Detailed statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$314,096	
1919.....	2,495,365	3,335,051	\$1.34
1920.....	1,079,000	1,520,193	1.41
1921 (9 months).....	188,053	171,872	

*Exports* are in the finished leather. (See Upper leather, p. 1349.)

#### SHEEPSKIN LEATHER (NOT ELSEWHERE SPECIFIED).

(See Survey N-17.)

*Description and uses.*—Sheepskin is used not only for gloves, shoes, books, hat sweatbands, and fancy articles, but also for cases, bags, and upholstery.

*Production.*—Production figures have been given for the sheep and lamb skins included under glove and upper leather, bookbinding and fancy leather, and hat sweatbands, but in addition to those classes there are three other groups of sheepskins enumerated by the Census Bureau; these are "skivers," "fleshers," and "shearlings" (on which there remains a certain amount of wool). Production of skivers in

1919 was 6,847,119 pieces, valued at \$9,374,475; of fleshers, 5,968,230 pieces at \$2,160,873; of shearlings, 544,440 skins at \$1,338,838.

*Imports* of fleshers and skivers come largely from Great Britain.

*Exports*.—Not separately recorded.

#### HOG AND PIG SKIN LEATHER.

(See Survey N-17.)

*Description and uses*.—Leather of hog and pigskin is used not only for gloves, but for cases and bags, fancy articles, seats of saddles, leather breeches, footballs, football pads, helmets, straps, belts, and puttees. It is characterized by toughness and durability.

*Production* of hog and pigskin leather, aside from that enumerated in the census under glove leather, amounted to 333,763 skins, valued at \$781,521.

*Imports* of this leather and the articles made therefrom are from Great Britain.

*Exports*.—Not separately recorded.

#### HORSE, COLT, ASS, AND MULE LEATHER.

(See Survey N-17.)

*Description and uses*.—Horse butts and fronts are tanned and used for various purposes. A large proportion goes into shoe upper (see Upper leather, p. 1347) and a considerable portion into gloves (see Glove leather, p. 1163). Horse leather is the most nearly waterproof of any leather produced, and it also takes a high polish. It was used largely during the war for military equipment, gaiters, etc. Ass and mule skins are known as "shagreen," when tanned.

*Production* of horse leather, aside from that made for gloves and shoe uppers, was 136,937 sides, valued at \$605,394, in 1919. The tanning of horsehides in the United States has been a development of the last quarter of a century, the war giving it an added impetus. The production of colt, ass, and mule leather was 70,157 skins, valued at \$595,654.

*Imports and exports*.—Not separately recorded. Imports are small, and formerly came mostly from France.

#### "ALL OTHER" LEATHER.

(See Survey N-17.)

*Production*.—In addition to the varieties described in this paragraph (1600) there are specialties and miscellaneous kinds, the production of which, in 1919, was valued at \$8,798,321. The domestic output of "all other" leather, the imports for consumption and the exports of "all other," are not strictly comparable but the figures are useful when taken in connection with those which have been given above in this paragraph 1600.

*Imports*.—In Foreign Commerce and Navigation, the following classes of leather are named under imports for consumption: Belting, case, bag and strap, chamois skins, enameled upholstery, fancy, glove, goatskins tanned but not finished (skins for morocco), harness and saddle leather, patent, pianoforte and pianoforte-action, rough, sole,

split, upper and leather cut into shoe uppers or vamps, or other forms suitable for conversion into boots and shoes.

The imports given in the table below are made up of those not thus enumerated. It will be noted that imports of some of the kinds of leather described above in paragraph 1600 are not separately mentioned; these are upholstery, bookbinders', roller, apron, picker and lace leather, collar, skirting and latigo leather, hat sweat, jerkin, welting, packing, fleshers and skivers of sheepskin, hog and pigskin, horse, colt, ass, and mule leather. Not all of these are imported, however, and a few varieties not named may be included in "all other" imports for consumption.

Imports of leather and tanned skins, n. s. p. f., were valued at \$3,003,361 in 1914 and \$4,066,251 in 1917. England, Germany, and Canada formerly supplied the greater proportion. In 1919 England was the chief source, followed by British India, France, Scotland, Italy, and Germany. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$793,633	
1919.....	10,190,211	8,585,230	\$0.84
1920.....	7,604,123	6,546,503	.86
1921 (9 months).....	2,601,887	1,600,751	

*Exports.*—In Foreign Commerce and Navigation, the following classes of leather are named under exports of domestic merchandise: Belting, carriage, automobile and upholstery, glove, patent, sole, and upper.

The exports given below are made up of the kinds not enumerated. The majority of those described under this paragraph (1600) are not enumerated in the exports, while not all of the different kinds described are exported.

Exports of "all other leather and tanned skins" amounted to \$3,614,370 in 1913, to \$8,664,227 in 1916, and to \$6,370,790 in 1917, Canada, England, and France being the principal recipients. Exports since 1917 have been by calendar years as follows: 1918, \$3,992,116; 1919, \$13,476,716; 1920, \$7,492,754; 1921 (9 months), \$1,406,640. In 1920, Canada took \$1,092,586, Cuba \$818,084, France \$529,244, and Russia in Europe \$423,237.

#### HARNESS, SADDLES AND SADDLERY, IN SETS OR IN PARTS.

(See Survey N-18.)

*Description and uses.*—These products are principally stirrups, saddles and traces, wagon and carriage harness, horse collars, bridles, lines, and straps. The different varieties of harness may be roughly classified into light and heavy—the former driving and the latter work harness. Saddles also may be classified as light and heavy.

*Production.*—The manufacture of harness and saddlery is widely distributed throughout the country. The output was valued at \$33,702,563 in 1899, \$42,054,842 in 1904, \$54,224,602 in 1909, \$53,558,612 in 1914, and \$83,699,050 in 1919. In 1914 seven States—Ohio, Indiana, Illinois, Wisconsin, Iowa, Missouri, and Texas—each manufactured harness and saddlery valued at between \$3,000,000

and \$5,000,000; nine States, from \$1,000,000 to \$3,000,000; and nine other States from \$500,000 to \$1,000,000 each. In 1919 Missouri led with an output of \$9,449,706, followed by Texas with \$7,817,750, and Illinois with \$7,032,469. The increasing service of motor trucks and automobiles, perhaps, explains the arrest of the industry. The increase in 1919 was mostly in value.

*Imports*<sup>9</sup> of harness and saddlery were valued as follows: 1913, \$66,988; 1914, \$123,516; 1915, \$227,858; 1916, \$156,147; 1917, \$120,416; 1918, \$459,671; 1919, \$229,621; 1920, \$442,562; 1921 (nine months), \$192,786.

*Exports* of harness and saddles were valued at about \$786,000 in 1913-14, but increased to \$17,460,519 in 1915, due to war needs. France, England, and Russia took almost all of this total. Exports decreased to \$7,529,720 in 1916, Russia taking \$3,117,269 worth. Later exports by calendar years have been as follows: 1918, \$692,291; 1919, \$1,142,852; 1920, \$2,273,244; 1921 (nine months), \$639,520. In 1919 and 1920 values of \$649,884 and \$1,441,460, respectively, were exported to Cuba.

*Important changes in classification.*—The words “except metal parts” in connection with saddlery are new.

LEATHER CUT INTO SHOE UPPERS OR VAMPS, OR OTHER FORMS SUITABLE FOR CONVERSION INTO BOOTS AND SHOES.

(See Survey N-18.)

*Description and uses.*—The “upper” includes all of the shoe except the sole and heel. The “vamp” is the part of the upper which comes next to the sole. There are separate establishments engaged in the manufacture of “cut stock,” i. e., soles, heels, etc. This industry has grown remarkably, and specialization has resulted in a better product. Uppers, however, are cut in the shoe factory.

*Production* of boot and shoe cut stock was valued at \$7,531,635 in 1879, \$23,242,892 in 1899, \$44,661,497 in 1909, \$59,964,523 in 1914, and \$161,203,310<sup>10</sup> in 1919. The number of establishments was greater in 1889 than at present.

*Imports* in 1914, the first year after shoe uppers and vamps were made free, were valued at \$77,835; in 1915, at \$158,626; in 1916, at \$60,730; in 1917, at \$74,698. In later calendar years imports have been as follows: 1918, \$86,388; 1919, \$389,453; 1920, \$301,285; 1921 (nine months), \$337,259. The proportion of shoe uppers and vamps imported is small compared with domestic consumption.

*Exports.*—Not separately recorded.

*Important changes in classification.*—Specific mention has been made of “soles.” “Suitable for conversion into manufactured articles” has been substituted for “suitable for conversion into boots or shoes.”

<sup>9</sup> Statistics, 1913-1917, are for fiscal years; 1918-1921, calendar years.

<sup>10</sup> This figure probably includes a small quantity of cut stock not used in the boot and shoe industry. Some leather is cut for bookbinders, etc.

## LEATHER SHOE LACES.

(See Survey N-18.)

*Description and uses.*—Leather shoe laces of the highest quality are frequently made from porpoise hide. Considerable quantities are also made from calfskin and cowhide.

*Production* statistics are lacking. Nine companies located in Massachusetts, Rhode Island, New York, and New Jersey have as their principal product leather shoe laces. The value of their output was approximately \$125,000 in 1914.

*Imports* of leather shoe laces, finished or unfinished, in 1913, were valued at \$7,722; in 1914, at \$16,464; in 1915, at \$5,958; in 1916, at \$2,316; in 1917, at \$3,878. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Gross pairs.</i>		
1918.....	3,100	\$6,747	\$2.18
1919.....	790	4,945	6.26
1920.....	10,165	46,210	4.55
1921 (9 months).....	1,759	7,020	.....

*Exports.*—None recorded.

## PARAGRAPH 1601.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1601. Boots and shoes made wholly or in chief value of leather.

ACT OF 1909.

ACT OF 1913.

PAR. 451. \* \* \* boots and shoes made of leather, fifteen per centum ad valorem: \* \* \*

PAR. 530. \* \* \* boots and shoes made wholly or in chief value of leather; \* \* \* [Free].

PAR. 450. \* \* \* that all boots and shoes, made wholly or in chief value of leather made from cattle hides and cattle skins of whatever weight, of cattle of the bovine species, including calfskins, shall pay a duty of ten per centum ad valorem; \* \* \*

## BOOTS AND SHOES.

(See Survey N-18.)

*Description.*—The five principal kinds of shoes are the Goodyear welt, the McKay, the turned, the pegged or the nailed, and standard screw. Goodyear welt is considered the most comfortable. The peculiarity of this kind of shoe is the narrow strip of leather called welt-ing, which is the joint or connecting link between the upper and inner sole (which are sewed together) and the outsole. The welt, projecting, forms the upper part of the "ledge" or "shelf" around the edge of

the shoe, and when the outsole is stitched on, the welt and outsole are stitched through. By the McKay process the upper, inner sole, and outsole are all sewed together at one operation. They are stitched "through and through" so that the stitches appear on the inside of the shoe, making it less comfortable; the McKay shoe also has less elasticity than the Goodyear welt. In making the turned shoe, the upper is sewed to the sole inside out and then turned. Slippers, women's light shoes, jockeys' boots, and other kinds of light-weight footwear are made in this way. Pegged or nailed shoes and standard screw shoes are made in the cheaper grades for rough and heavy wear.

*Production* of boots and shoes in 1914 was valued at \$501,000,000; in 1919 at \$1,159,171,395. The United States is the greatest shoe manufacturer, the United Kingdom second with an output equal to about one-third of our own. The industry in this country is marked by the greatest specialization. In some less advanced industrial countries it is still largely in the handicraft or "putting-out" stage, and even in England, France, and Germany many factories continue to produce all grades of men's, women's, and children's shoes. The United States leads in the production of shoe machinery, which is also extensively used in Europe. A consideration in export trade is the distinctive character of American styles. These are copied abroad, some foreign manufacturers branding their shoes "American made." New England leads in production, about one-half of the boots and shoes being made in Massachusetts, whose output in 1919 was 116,944,000 pairs, valued at \$442,466,236. Lynn, Brockton, Haverhill, and Boston are important manufacturing centers. New York ranks second among the States with a product valued at \$190,461,359, followed by Missouri with a value of \$109,193,423, and New Hampshire with \$73,870,588. The Middle West is developing the shoe industry very rapidly.

*Import* values in 1914 were \$407,231, England, Germany, and Canada supplying the largest quantities; in 1917 they were \$275,280, of which \$121,426 came from Canada and \$101,249 from the United Kingdom. In 1920 there were 191,435 pairs, valued at \$789,934, shipped principally from England, Canada, and France. Imports range normally between \$200,000 and \$500,000, a fraction of 1 per cent of domestic production. Statistics for the calendar years 1918-1921 follow:

*Boots and shoes.*

	1918	1919	1920	1921 (9 months).
Men's and boys':				
Quantity (pairs).....	68,042	53,117	147,578	46,110
Value.....	\$304,390	\$179,802	\$655,345	\$225,094
Women's and misses':				
Quantity (pairs).....	36,153	8,159	34,102	14,227
Value.....	\$40,146	\$45,829	\$122,598	\$34,754
Children's:				
Quantity (pairs).....	10,938	439	9,638	44,388
Value.....	\$8,771	\$359	\$11,748	\$56,201
Slippers:				
Quantity (pairs).....	152,544	178,338	287,486	195,316
Value.....	\$113,025	\$119,530	\$222,570	\$123,610

*Exports* of boots and shoes in 1910 were valued at \$12,408,575; in 1914, at \$18,229,714; in 1920, at \$67,144,542, while slippers were valued at \$538,517. Before the war the United States ranked next to the United Kingdom in exports of boots and shoes, but the positions have since been reversed. Our exports are widely dispersed. In 1920 Cuba took over half of the exports of children's shoes, about one-third of those of men's, and those of women's to a value of over \$3,000,000. Denmark, France, Italy, Norway, Sweden, England, Mexico, Russia in Asia, and British South Africa purchased the largest quantities of men's footwear; Denmark, Norway, England, Canada, Mexico, Cuba, and British South Africa the greatest number of women's shoes.

Detailed statistics for the calendar years 1918-1921 of exports of boots and shoes are shown as follows:

	1918	1919	1920	1921 (9 months).
<b>Women's:</b>				
Quantity (pairs).....	4,292,747	5,891,753	5,064,472	1,378,165
Value.....	\$9,710,984	\$18,196,352	\$20,099,141	\$3,949,683
<b>Men's:</b>				
Quantity (pairs).....	5,565,924	11,928,156	7,711,310	4,803,317
Value.....	\$18,458,808	\$50,709,841	\$39,175,975	\$15,013,841
<b>Children's:</b>

<b>Slippers:</b>				
Quantity (pairs).....	235,028	328,172	227,662	51,561
Value.....	\$335,048	\$535,752	\$538,517	\$80,649

### PARAGRAPH 1602.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1602. Leeches.

ACT OF 1909.

ACT OF 1913.

PAR. 609. Leeches [Free].

PAR. 531. Leeches [Free].

#### LEECHES.

(See Survey FL-2.)

*Description and uses.*—The medicinal leech (*Hirudo medicinalis*), used in surgery for abstracting blood from patients, is a European fresh-water annulate worm with stomach pouches to hold the blood.

*Production.*—Leeches are imported from Europe, chiefly through London and Paris. An uncultivated variety occurs in the United States, but is not commonly used in medicine.

*Imports* of leeches averaged \$6,380 for 1909-1917. Imports in 1917 were valued at \$16,899. Since 1917 they have amounted to \$6,913, \$13,421, \$11,086, and \$4,488 in the calendar years 1918, 1919, 1920, and the first 9 months of 1921, respectively.

## PARAGRAPH 1603.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1603. Limestone rock asphalt; asphaltum and bitumen.

ACT OF 1909.

ACT OF 1913.

PAR. 90. \* \* \* limestone rock asphalt, fifty cents per ton; asphaltum and bitumen, not specially provided for in this section, crude, if not dried, or otherwise advanced in any manner, one dollar and fifty cents per ton; if dried or otherwise advanced in any manner, three dollars per ton; \* \* \*.

PAR. 534. Limestone-rock asphalt; asphaltum, and bitumen [Free].

## ASPHALTUM AND BITUMEN.

(See Survey FL-7.)

*Description and uses.*—Asphalt may be obtained by powdering and heating limestone-rock asphalt, and, in like manner, from bituminous sand and sandstone. Asphaltum is composed of sand, water, and bitumen and occurs in liquid, viscous, or solid deposits or lakes, those of Trinidad and Venezuela being commercially notable. Bitumen designates a number of inflammable mineral substances, ranging from liquids to solids, including petroleum, maltha, asphalt, elaterite, wurtzilite, albertite, grahamite, gilsonite, and ozokerite. These materials are widely used in making pavements, roads, and roofing. Those high in paraffin content are used in making varnishes. The demand for both natural and manufactured (oil) asphalts is large, although the use of the latter has predominated since 1907.

*Production* in 1914 was 77,588 net tons, valued at \$630,623, as reported by 11 operators in Utah, Texas, Oklahoma, Kentucky, and California. The output in 1917 was 80,904 net tons, valued at \$735,924. Oil asphalt totaled 674,470 net tons, valued at \$7,148,122 in 1914, and 1,347,422 net tons, valued at \$15,176,504 in 1917. In recent years Mexican petroleum has been the chief source of petroleum asphalt, which has replaced Trinidad and Bermudez (Venezuelan) asphalt to a considerable extent.

In 1920, 700,496 tons of petroleum asphalt valued at \$11,985,457 were produced in this country from domestic petroleum, and 1,045,779 tons valued at \$14,272,862, were produced from Mexican petroleum.

The domestic production of all other asphalts in 1920 amounted to 198,497 tons, valued at \$1,213,908.

*Imports* of limestone-rock asphalt, asphaltum, and bitumen in 1914 were 180,689 long tons, valued at \$918,387. The bulk of this tonnage of which Trinidad supplied 49 per cent and Venezuela 36 per cent, consisted of natural soft asphalt. Since 1917 imports have been as follows:

Calendar year.	Quantity.	Value.	Duty.	Unit value.	Ad valorem rate.
LIMESTONE-ROCK ASPHALT.					
	<i>Tons.</i>				<i>Per cent.</i>
1918.....	30	\$2, 528		\$8. 43	
1919.....	656	5, 576		8. 50	
1920.....	1, 238	11, 665		9. 42	
1921 (9 months).....	8, 099	147, 932			

## ALL OTHER ASPHALTUM AND BITUMEN.

1918.....	102, 398	\$624, 967		\$6. 10	
1919.....	93, 673	609, 923		6. 51	
1920.....	113, 417	1, 055, 951		9. 31	
1921 (9 months).....	87, 495	838, 145			

## MANUFACTURES OF ASPHALTUM AND BITUMEN.

1918.....		\$15, 064	\$2, 260		15
1919.....		3, 919	588		15
1920.....		1, 209	181		15

Imports of "all other" asphaltums and bitumens have been chiefly from Trinidad, Tobago, and Venezuela.

Exports in 1914 were 49,831 long tons, valued at \$1,131,086; in 1918, 22,065 long tons, valued at \$548,745. Canada was the chief buyer. Exports since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Asphaltum, unmanufactured:				
Quantity (tons).....	19, 739	35, 900	46, 166	32, 681
Value.....	\$577, 654	\$1, 103, 930	\$1, 356, 116	\$948, 890
Asphaltum, manufactures of, value.....	\$577, 936	\$606, 918	\$842, 074	\$479, 681

The countries of destination are chiefly Canada, England, China, and Japan.

*Suggested changes.*—The hyphen between "limestone" and "rock" has been omitted and should be inserted.

## PARAGRAPH 1604.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1604. Lemon juice, lime juice, and sour orange juice, all the foregoing containing not more than 2 per centum of alcohol.

ACT OF 1909.

ACT OF 1913.

PAR. 610. Lemon juice, lime juice, and sour orange juice, all the foregoing containing not more than two per centum of alcohol [Free].

PAR. 532. Lemon juice, lime juice, and sour orange juice, all the foregoing containing not more than 2 per centum of alcohol [Free].

## LEMON, LIME, AND SOUR ORANGE JUICES.

(See Survey A-1.)

*Description and uses.*—Lemon, lime, and sour orange juices yield citric acid, the constituent which gives these juices their sour taste. The juice has more bulk than citrate of lime, the usual form for shipping citric acid (par. 46) and, because of its fluid condition, is more difficult to transport. The juice may be dilute as expressed from the fruit or it may be concentrated by boiling.

*Imports* of lemon, lime, and sour orange juice are relatively unimportant compared with the imports of other citric-acid materials. The import values increased from \$110,860 in 1914 to \$180,088 in 1917. Imports since 1917 by calendar years were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....		2,949,867	1,918,989	450,590
Value.....	\$165,277	\$536,723	\$264,147	\$70,176

*Exports.*—Statistics not available.

*Suggested changes.*—There appears to be an inconsistency in making the limitation as to alcoholic content in this paragraph "not more than 2 per centum," while the dividing line between the two classifications of other fruit juices in paragraph 806 is one-half of 1 per centum, the alcoholic content provided for in the first part of that paragraph being "less than one-half of 1 per centum."

## PARAGRAPH 1605.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1605. Lifeboats and life-saving apparatus specially imported by societies and institutions incorporated or established to encourage the saving of human life.

ACT OF 1909.

ACT OF 1913.

PAR. 612. Lifeboats and life-saving apparatus specially imported by societies incorporated or established to encourage the saving of human life [Free].<sup>11</sup>

PAR. 533. Lifeboats and life-saving apparatus specially imported by societies and institutions incorporated or established to encourage the saving of human life [Free].<sup>12</sup>

## LIFEBOATS AND LIFE-SAVING APPARATUS.

*Imports* under this classification are negligible. They were not separately shown until 1918 (calendar year) when they were valued at \$19. In 1919 and 1920 their value was \$399 and \$793. No imports are shown for 1921.

*Exports* not shown in official statistics.

<sup>11</sup> Miners' rescue appliances, designed for emergency use in mines where artificial breathing is necessary in the presence of poisonous gases, to aid in the saving of human life, and miners' safety lamps, exempt from duty under par. 628, act of 1909, dutiable under H. R. 7456 according to material of chief value.

<sup>12</sup> Miners' rescue appliances, designed for emergency use in mines where artificial breathing is necessary in the presence of poisonous gases, to aid in the saving of human life, and miners' safety lamps, and parts, accessories and appliances for cleaning, repairing, and operating all the foregoing, exempt from duty under par. 550, act of 1913, dutiable under H. R. 7456 according to material of chief value.

## PARAGRAPH 1606.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1606. Lithographic stones, not engraved.

ACT OF 1909.

ACT OF 1913.

PAR. 614. Lithographic stones, not engraved [Free].

PAR. 535. Lithographic stones, not engraved [Free].

## LITHOGRAPHIC STONES.

(See Survey C-15.)

*Description and uses.*—A compact, fine-grained, porous, slaty variety of limestone is used for lithographic purposes. Substitutes of aluminum, zinc, or rubber plates are satisfactory for many classes of ordinary work, but stone is preferred for maps, halftones, and other fine-grade lithography.

*Production.*—This stone comes chiefly from Bavaria, with small amounts from Belgium, England, Italy, and Canada. Kentucky produced 40,000 pounds in 1916, the first domestic stone, but difficulties arising from poor transportation facilities and quarrying conditions reduced the 1917 output to 5,832 pounds; and, as far as can be learned, the output ceased entirely in 1918. From 2½ to 27 cents per pound were realized on this product. In normal times the price of Bavarian stone is 5 to 6 cents a pound for 10 by 12 inch slabs of good grade and 1½ cents for poorer grades.

*Import values of lithographic stones for 1908-1913 averaged \$96,940; in 1914 they were \$71,086. Bavaria contributed 90 per cent and Belgium 7 per cent. Imports in 1915 were valued at \$26,751; in 1916, at \$1,742; in 1917, at \$555. Imports since 1917 by calendar years have been as follows:*

	1918	1919	1920	1921(9 months).
Quantity (pounds).....		464,914	786,119	272,030
Value.....		\$216,293	\$63,733	\$32,976

Imports since 1918 have come principally from Germany and the Netherlands.

## PARAGRAPH 1607.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1607. Loadstones.

ACT OF 1909.

ACT OF 1913.

PAR. 616. Loadstones [Free].

PAR. 537. Loadstones [Free].

## LOADSTONES.

(See Survey FL-21.)

*Description.*—Loadstone is a variety of magnetite or magnetic ironstone which has the power of attracting iron. It is obtained mainly from Magnet Cove, Ark., though abundant elsewhere in the United States.

*Production.*—No statistics.

*Imports* of loadstones in 1873 were valued at \$238. From 1874 to 1897 import statistics of loadstones were combined with those for magnets. After 1897 loadstones were again listed separately. In 1918 loadstones, the first importation since 1906, were valued at \$60. There have been no later imports.

## PARAGRAPH 1608.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1608. Manuscripts, not specially provided for.

ACT OF 1909.

ACT OF 1913.

PAR. 621. Manuscripts [Free].

PAR. 542. Manuscripts [Free].

MANUSCRIPTS, N. S. P. F.

(See Survey M-8.)

*Description and uses.*—Modern usage considers any group of pages, whether written by hand or typewritten (not mimeographed), a manuscript.

*Production.*—No data available.

*Imports* in 1914 were valued at \$180,194; for the calendar years 1918-1921 they have been valued as follows: 1918, \$115,084; 1919, \$160,258; 1920, \$216,551; 1921 (9 months), \$59,884.

*Important changes in classification.*—"Not specially provided for" is new.

## PARAGRAPH 1609.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1609. Marrow, crude.

ACT OF 1909.

ACT OF 1913.

PAR. 622. Marrow, crude [Free].

PAR. 543. Marrow, crude [Free].

CRUDE MARROW.

(See Survey FL-15.)

*Description and uses.*—Marrow is the fatty substance filling the cavities of most bones, and may be red or yellow. The yellow marrow contains the larger percentage of fat, and is used in pharmacy

and for making pomades. Horse marrow is employed in the manufacture of soap. Red bone marrow is sometimes used as a medicinal food in cases of anæmia.

*Imports* of crude marrow in 1910 were 60,971 pounds, valued at \$1,376; in 1911, 10,670 pounds, valued at \$327. No imports are given between 1911 and 1918; those since 1917 by calendar years are as follows:

	1918	1919	1920
Quantity (pounds).....	23, 182	232, 960	97, 601
Value.....	\$4, 684	\$17, 738	\$8, 548

*Exports.*—Statistics not given.

#### PARAGRAPH 1610.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1610. Mechanically ground wood pulp, chemical wood pulp, unbleached or bleached: *Provided*, That whenever the President shall ascertain as a fact that any country, dependency, province, or other subdivision of government forbids or restricts in any way (whether by law, order, regulation, contractual relation, or otherwise, directly or indirectly) the exportation of, or imposes any export duty, export license fee, or other export charge of any kind whatever, either directly or indirectly (whether in the form of additional charge or license fee, or otherwise), upon printing paper, wood pulp, or wood for use in the manufacture of wood pulp, he may by proclamation, declare such ascertainment setting forth the facts; whereupon, and until said proclamation shall be revoked, there shall be levied, collected, and paid upon mechanically ground wood pulp and chemical wood pulp, unbleached or bleached, when imported either directly or indirectly from such country, dependency, province, or other subdivision of government, a duty of 10 per centum ad valorem, and, in addition thereto, an amount equal to the highest export duty or other export charge imposed by such country, dependency, province, or other subdivision of government, upon either an equal amount of wood pulp or an amount of wood necessary to manufacture such wood pulp, or an amount of printing paper ordinarily manufactured from such wood pulp.

## ACT OF 1909.

PAR. 406. Mechanically ground wood pulp, one-twelfth of one cent per pound, dry weight: *Provided, however,* That mechanically ground wood pulp shall be admitted free of duty from any country, dependency, province, or other subdivision of government (being the product thereof) which does not forbid or restrict in any way the exportation of (whether by law, order, regulation, contractual relation, or otherwise, directly or indirectly) or impose any export duty, export license fee, or other export charge of any kind whatsoever, either directly or indirectly (whether in the form of additional charge or license fee or otherwise) upon printing paper, mechanically ground wood pulp, or wood for use in the manufacture of wood pulp: *Provided further,* That if any country, dependency, province, or other subdivision of government, shall impose an export duty or other export charge of any kind whatsoever, either directly or indirectly (whether in the form of additional charge, or license fee, or otherwise) upon printing paper, mechanically ground wood pulp, or wood for use in the manufacture of wood pulp, the amount of such export duty or other export charge shall be added as an additional duty to the duty herein imposed upon mechanically ground wood pulp when imported directly or indirectly from such country, dependency, province, or other subdivision of government. Chemical wood pulp, unbleached, one-sixth of one cent per pound, dry weight; bleached, one-fourth of one cent per pound, dry weight: *Provided,* That if any country, dependency, province, or other subdivision of government shall impose an export duty, or other export charge of any kind whatsoever, either directly or indirectly (whether in the form of additional charge or license fee or otherwise) upon printing paper, chemical wood pulp, or wood for use in the manufacture of wood pulp, the amount of such export duty, or other export charge, shall be added as an additional duty to the duties herein imposed upon chemical wood pulp when imported directly or indirectly from such country, dependency, province, or other subdivision of government.

## WOOD PULP.

(See Survey FL-38.)

*Description and uses.*—Wood pulp is a mass of cellulose fibers obtained from wood, either nearly pure cellulose, as in chemical pulp, or mixed with other constituents, as in ground wood pulp. There are two different kinds of wood pulp, mechanically ground and chemical. Mechanically ground wood pulp is obtained directly from the wood

## ACT OF 1913.

PAR. 649. Mechanically ground wood pulp, chemical wood pulp, unbleached or bleached \* \* \* [Free].

by grinding it, in the presence of water, on a grindstone. It is inferior in quality to the chemical wood pulp, other constituents of the wood remaining as impurities. It is only about 55 per cent cellulose. Because of this fact and because the fibers are too short and stiff to felt together properly, it can not be used alone in paper making. It must be used in conjunction with some other form of pulp, usually chemical wood pulp. Chemical wood pulp is pure or nearly pure cellulose obtained by "cooking" small chips of wood in some chemical solution until the pitch, resin, and other impurities are dissolved. There are three kinds of chemical wood pulp—sulphite, soda, and sulphate—the sulphite being the most important commercially. The fibers of cellulose obtained by any of the three chemical processes are of greater length and more pliant than those obtained by the grinding process.

Spruce is the most important wood for the manufacture of wood pulp, furnishing over 54 per cent of the total domestic consumption. Other woods of importance are hemlock, balsam fir, poplar, jack pine, and yellow pine.

By far the most important use of wood pulp is as a raw material for paper. Newsprint paper is manufactured from ground wood pulp and sulphite in the proportion of about 4 parts of ground wood to 1 of sulphite. Book paper contains a larger proportion of sulphite and the higher grades may contain rag or other kinds of pulp. Sulphate is used chiefly for wrapping paper. Even the fine papers, such as bond and ledger, though preferably made from rag pulp, often contain sulphite.

There are also several minor uses for wood pulp. It has been made the basis of laces, yarns, textiles, artificial silks, paper clothing, and papier-mâché. Treated with chloride of zinc, it will yield vulcanized paper, which may be laminated and pressed into tubs, pails, and other containers.

*Production.*—The total production of wood pulp in the United States increased from 1,921,768 tons in 1904 to 3,799,835 tons in 1920. From 1916 to 1919 production was nearly stationary, averaging about 3,400,000 tons per year. It increased, however, 13 per cent in 1920. In this slow recent development of the wood-pulp industry may be seen the growing difficulty of obtaining raw material, owing to the depletion of the pulpwood forests. The 1920 production by kinds was: Ground wood, 1,578,300 tons; sulphite, 1,576,676 tons; soda, 431,971 tons. The principal wood pulp States are, in order of importance, Maine, New York, Wisconsin, New Hampshire, Pennsylvania, Minnesota, Michigan, and Vermont. Pulp may be manufactured as an independent industry and sold to paper manufacturers or others, or the manufacture of pulp and paper may be conducted in the same establishment. The tendency is in the latter direction.

*Imports.*—Domestic production falls far short of supplying the demand. During the past decade imports have varied from 17 to 23 per cent of domestic production and the relative importance of imports is increasing. The chief source is Canada, supplemented by smaller imports from Norway, Sweden, Finland, and Germany.

The quantities of wood pulp of all kinds imported for consumption into the United States increased from 423,217 short tons in the fiscal year 1910 to 782,357 short tons in 1917. There was a falling off in the calendar years 1918 and 1919 to 578,605 and 636,017 short tons

respectively. Imports of wood pulp (free under the act of 1913) have been for the calendar years 1918-1921, as follows:

	1918	1919	1920	1921 (9 months).
Mechanically ground:				
Quantity (tons).....	165,955	180,583	208,168	91,093
Value.....	\$4,720,971	\$5,117,316	\$13,881,596	\$3,080,939
Chemical unbleached sulphate:				
Quantity (tons).....	105,666	130,278	164,207	68,937
Value.....	\$7,954,923	\$9,084,537	\$17,210,196	\$6,046,716
Chemical unbleached sulphite:				
Quantity (tons).....	226,619	214,243	307,908	100,872
Value.....	\$16,989,556	\$17,979,170	\$37,489,636	\$8,536,178
Chemical bleached sulphate:				
Quantity (tons).....	3,410	4,594	14,923	941
Value.....	\$303,235	\$394,765	\$1,924,850	\$77,643
Chemical bleached sulphite:				
Quantity (tons).....	14,962	38,174	114,020	54,147
Value.....	\$1,511,807	\$4,472,593	\$18,961,907	\$6,308,335
Total, all kinds:				
Quantity (tons).....	516,612	567,872	809,226	315,990
Value.....	\$31,480,492	\$37,048,381	\$89,468,185	\$24,049,811

*Exports of wood pulp are insignificant as compared with either domestic production or imports. The maximum ratio of exports to domestic production in any year since 1910 has been 1.2 per cent. From 1910 to 1915, inclusive, annual exports averaged about 12,000 short tons and from 1916 to 1920, inclusive, about 34,000 short tons. Since 1914 the most important countries of destination of exports have been Canada, Japan, Argentina, the United Kingdom, and Brazil. Exports for the calendar years 1918-1921 have been as follows:*

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	19,932	35,765	28,541	19,567
Value.....	\$1,733,872	\$3,048,491	\$2,947,267	\$1,433,907

*Important changes in classification.*—Wood pulp is conditionally exempted from duty.

*Suggested changes.*—Paragraph 402 on page 77 of H. R. 7456 does not harmonize with paragraph 1301, page 137, paragraph 1610, page 189, paragraph 1659, page 196, and paragraph 1683, page 200, with respect to restriction upon exportations to the United States.

Paragraph 402 apparently leaves to the Secretary of the Treasury determination of the fact whether any country, dependency, province, or other subdivision of government during the 12 months immediately preceding importation of logs of fir, etc., maintains any embargo, prohibition, or other restriction.

Paragraph 1301 authorizes the President to enter into negotiations with any country, dependency, province, or other subdivision of government forbidding or restricting in any way the exportation of printing paper, wood pulp, or wood for use in the manufacture of wood pulp, with a view to the removal of the 10 per cent additional duties imposed in that paragraph on printing paper.

Paragraph 1610 provides that whenever the President shall ascertain as a fact that any country, dependency, province, or other

subdivision of government restricts in any way the exportation of printing paper, wood pulp, or wood for use in the manufacture of wood pulp, a duty shall be levied on mechanically ground wood pulp and chemical wood pulp, unbleached or bleached.

Paragraph 1659 likewise imposes a duty on standard newsprint paper whenever the President shall ascertain as a fact that any country, dependency, province, or other subdivision of government forbids or restricts in any way the exportation of printing paper, wood pulp, or wood for use in the manufacture of wood pulp.

---

### PARAGRAPH 1611.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1611. Medals of gold, silver, or copper, and other metallic articles actually bestowed by foreign countries or citizens of foreign countries as trophies or prizes, and received and accepted as honorary distinctions.

ACT OF 1909.

ACT OF 1913.

PAR. 624. Medals of gold, silver, or copper, and other metallic articles actually bestowed as trophies or prizes, and received and accepted as honorary distinctions [Free].

PAR. 546. Medals of gold, silver, or copper, and other articles actually bestowed as trophies or prizes, and received and accepted as honorary distinctions [Free].

---

### MEDALS AND TROPHIES.

(See Survey FL-20.)

*Production.*—No statistics.

*Imports.*—The importation fluctuates in amount from year to year; the range during the period 1909-1917 being \$1,220 in the fiscal year 1917 and \$54,469 in 1910. Imports in recent calendar years were for 1918, \$5,541; 1919, \$10,376; 1920, \$19,460; 1921 (9 months), \$6,571.

*Exports.*—None recorded.

*Important changes in classification.*—The phrase "by foreign countries or citizens of foreign countries" is new.

---

### PARAGRAPH 1612.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1612. Meerschaum.

ACT OF 1909.

ACT OF 1913.

PAR. 625. Meerschaum, crude or unmanufactured [Free].

PAR. 381. \* \* \* meerschaum, crude or unmanufactured, 20 per centum ad valorem.

## MEERSCHAUM.

(See Survey N-26.)

*Description and uses.*—Meerschaum is an opaque mineral of white, gray or cream color, and is light enough to float on water. It is a silicate of magnesium sometimes associated with magnesite and described by mineralogists under the name of sepiolite. It occurs in irregular nodular masses varying in size from that of a walnut to a cubic foot or more. The common kinds are used in the manufacture of porcelain, and the fine grades in the manufacture of pipes, cigar and cigarette holders, and other smokers' articles.

*Production.*—Most of the meerschaum of commerce is obtained from Asia Minor. It is also found in Greece, Moravia and Morocco, and to a limited extent in France and Spain. It is reported to have been found in the States of Pennsylvania, South Carolina, Utah, California, and New Mexico, although apparently not in sufficient quantities for commercial exploitation.

*Imports* of meerschaum to the United States were formerly almost all from Austria-Hungary, to which the output of Asia Minor was sent and distributed to various countries. In 1914 the value of imports was \$102,803, of which 97 per cent came from Austria-Hungary. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....		\$488		\$98	20
1920.....	5,385	27,078	\$5.03	5,416	20
1921 (9 months).....	1,045	3,806	3.64		

In 1920 practically the entire importation was from Turkey in Europe.

*Important changes in classification.*—Transferred from the sundries schedule (par. 381) of the act of 1913, and "crude or unmanufactured" omitted.

## PARAGRAPH 1613.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1613. Mineral salts obtained by evaporation from mineral waters, when accompanied by a duly authenticated certificate and satisfactory proof showing that they are in no way artificially prepared and are only the product of a designated mineral spring.

## ACT OF 1909.

PAR. 627. Mineral salts obtained by evaporation from mineral waters, when accompanied by a duly authenticated certificate and satisfactory proof, showing that they are in no way artificially prepared, and are only the product of a designated mineral spring [Free].

## ACT OF 1913.

PAR. 548. Mineral salts obtained by evaporation from mineral waters, when accompanied by a duly authenticated certificate and satisfactory proof showing that they are in no way artificially prepared and are only the product of a designated mineral spring [Free].

## MINERAL SALTS.

(See Survey FL-22.)

*Description and uses.*—Mineral salts are obtained by evaporation of natural mineral waters and are principally medicinal. The product of this evaporation may contain a variety of salts, depending on the source of the water.

*Imports* of mineral salts have been quite variable—in 1913, 103,337 pounds, valued at \$35,420; in 1914, 82,569 pounds, averaging about 50 cents per pound. Imports decreased to 425 pounds in 1916 and in 1918 were 4,699,735 pounds, with a very low value per pound. This great increase and low price was due to the fact that most of the imports consisted of magnesium sulphate from British Columbia, valued at about \$5 per ton. Imports since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	3,566,346	1,237,730	833,206	13,262
Value.....	\$10,231	\$12,339	\$13,572	\$8,545

*Exports.*—Statistics not available.

## PARAGRAPH 1614.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1614. Minerals, crude, or not advanced in value or condition by refining or grinding, or by other process of manufacture, not specifically provided for.

## ACT OF 1909.

PAR. 626. Minerals, crude, or not advanced in value or condition by refining or grinding, or by other process of manufacture, not specially provided for in this section [Free].

## ACT OF 1913.

PAR. 549. Minerals, crude, or not advanced in value or condition by refining or grinding, or by other process of manufacture, not specially provided for in this section [Free].

## MINERALS, CRUDE.

(See Survey FL-28.)

*Description and uses.*—The most important minerals coming under this general designation are vanadium ores and feldspar. Ores of tantalum, titanium, uranium, zirconium, molybdenum, and other ferroalloys now come in this group although molybdenite has received special mention under paragraph 302 of H. R. 7456.

*Production.*—Practically all of the ores and minerals included in this group are produced in the United States but complete statistics are not available.

*Imports.*—The largest single class of ores imported in this group is vanadium ore which comes mainly from an American-owned

mine in Peru but also from South Africa. Zirconium has been imported principally from Brazil. Tantalum imports in 1921 were derived from England while other steel hardening ores come from Canada and various other countries. Canada, owing to her large shipments of feldspar, is also the chief source of "all other crude minerals." The imports under the various designations for later calendar years may be tabulated as follows:

	1918	1919	1920	1921 (9 months).
Tantalum:				
Quantity (pounds).....				6,785
Value.....				\$1,327
Titanium:				
Quantity (pounds).....	1,606			
Value.....	\$221			
Uranium-radium ores:				
Quantity (pounds).....	157		396	250
Value.....	\$4,840		\$1,110	\$446
Vanadium ores:				
Quantity (pounds).....	1,772,215	6,026,005	20,673,296	10,307,540
Value.....	\$5,333	\$67,846	\$1,080,935	\$543,061
Zirconium ores:				
Quantity (pounds).....	3,216,659	11,023		120,120
Value.....	\$77,250	\$332		\$2,700
Steel hardening ores, all other:				
Quantity (pounds).....	5,456,170	5,343	729,934	674,025
Value.....	\$5,637	\$4,227	\$53,254	\$17,318
Minerals, crude or not advanced in value or condition, etc., n. s. p. f. (value).....	\$529,764			
Crude minerals, all other:				
Quantity (pounds).....		58,661,099	105,022,003	83,324,096
Value.....	\$130,597	\$178,535	\$488,302	\$223,557

*Exports.*—None recorded.

#### PARAGRAPH 1615.

SENATE AMENDMENTS.

PAR. 1615. Models of inventions and of other improvements in the arts, to be used exclusively as models and incapable of any other use.

ACT OF 1909.

ACT OF 1913.

PAR. 629. Models of inventions and of other improvements in the arts, to be used exclusively as models and incapable of any other use [Free].

PAR. 551. Models of inventions and of other improvements in the arts, to be used exclusively as models and incapable of any other use [Free].

#### MODELS OF INVENTIONS.

*Imports* in 1914 were valued at \$41,333, and in later calendar years as follows: 1918, \$5,315; 1919, \$9,909; 1920, \$6,547; 1921 (9 months), \$11,068.

*Exports* not shown in official statistics.

## PARAGRAPH 1616.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1616. Monazite sand and other thorium ores.

## ACT OF 1909.

## ACT OF 1913.

PAR. 183. \* \* \* monazite sand and thorite, four cents per pound; \* \* \*

PAR. 154. \* \* \* monazite sand and thorite; \* \* \* 25 per centum ad valorem.

## MONAZITE SAND AND THORITE.

(See Survey C-22.)

*Description and uses.*—Monazite sand is a dull-brown, crystalline mineral consisting chiefly of the phosphates of cerium and thorium. It is mined in Brazil and India and formerly was obtained to a small extent in North and South Carolina. This sand usually contains about 25 per cent of cerium and 5 to 10 per cent of thorium. It is used primarily as a raw material in gas mantles. Since the mantle is made up of 99 per cent of thoria to 1 per cent of ceria, and since there are no present uses for more than a fraction of the surplus ceria, the value of monazite depends upon its thoria content.

Thorite and thorianite are less important minerals from which thorium may be recovered. They contain from 50 to 75 per cent of thoria, but are comparatively rare, leaving monazite sand the chief source of thorium.

*Production.*—Domestic deposits of monazite sand occur in the beds of streams, and are mined and concentrated as in placer gold mining. This is an expensive and laborious process, not well adapted to large operation and usually carried on by farmers during spare time. About 20 years ago certain Brazilian sea beaches were found to contain monazite that could be cheaply exploited, and later monazite especially rich in thoria was discovered in India; American producers could not compete with either. The domestic output of monazite in 1905 was 1,352,418 pounds, valued at \$163,908. No production was recorded for 1913 and 1914. In 1915 and 1916 paucity of imports caused a slight revival, which in 1916 amounted to 76,872 pounds, about 5 per cent of the imports. Subsequent figures are not available.

*Imports* of monazite from 1909 to 1913 averaged about 1,300,000 pounds, valued at \$114,000. Imports since 1917, chiefly from Brazil, British India, and Canada, are as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				
1918.....	2,994,515	\$204,661	\$0.07	\$51,165	25
1919.....	632,568	48,768	.08	12,192	25
1920.....	1,814,482	141,678	.08	35,382	25

*Important changes in classification.*—Transferred from par. 154 of the dutiable list of the act of 1913. The phrase "and other thorium ores" replaces "thorite."

PARAGRAPH 1617.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1617. Moss, seaweeds, and vegetable substances, crude or unmanufactured, not specially provided for.

ACT OF 1909.

ACT OF 1913.

PAR. 630. Moss, seaweeds, and vegetable substances, crude or unmanufactured, not otherwise specially provided for in this section [Free].

PAR. 552. Moss, seaweeds, and vegetable substances, crude or unmanufactured, not otherwise specially provided for in this section [Free].

PAR. 540. Cocoa, or cacao, crude, \* \* \* shells of [Free].

PAR. 456. Cocoa, or cacao, crude, \* \* \* shells of [Free].

MOSS, SEAWEEDS, AND VEGETABLE SUBSTANCES.

(See Survey N-22.)

*Description and uses.*—Sea moss is used in making mattresses and for upholstering. Certain varieties of mosses and seaweeds are used here for food by the Japanese and Chinese. "Vegetable substances, crude or unmanufactured," include such products as hulls of the pea, cotton seed, mustard seed, and oat seed, used in cattle feed; also dried grass and leaves, afterwards dyed and used for millinery purposes. Holly branches are also included, being imported for Christmas decorations.

*Production* of moss is world-wide. Seaweeds are extensively distributed in the ocean and may be found from tide level to considerable depths. It is estimated that about 14,000,000 pounds of sea moss are used annually in the United States for mattresses and upholstery, and in paper making.

*Imports* of moss, seaweeds, and vegetable substances were \$246,196 in 1914. Canada, Japan, and France were the chief sources, supplying about 70 per cent. Considerable amounts formerly came from Germany. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....		8,362,717	7,929,129	4,212,699
Value.....	\$302,912	\$338,756	\$480,839	\$307,286

The value of imports from Japan are much larger than those from Canada and France, although the quantity is smaller. In 1920 Germany was an important source, being exceeded only by the three countries named above.

*Exports* of moss increased from \$51,006 in 1914 to \$91,667 in 1918 (calendar year), about 85 per cent going to Canada. Statistics for later calendar years follow: 1919, \$91,475; 1920, \$115,346; 1921 (9 months), \$42,429.

## PARAGRAPH 1618.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1618. Needles, hand sewing or darning.

ACT OF 1909.

ACT OF 1913.

PAR. 633. Needles, hand sewing and darning [Free].

PAR. 555. Needles, hand-sewing and darning \* \* \* [Free].

## HAND-SEWING AND DARNING NEEDLES.

(See Survey C-15.)

*Description and uses.*—Besides ordinary hand-sewing and darning needles, there are included by Treasury decision harness, sail, mattress, and upholsterers' needles, which are classed as hand-sewing needles.

*Production.*—Hand-sewing and darning needles are not domestic products. Manufacturers explain that the large capital required yields more certain returns in other enterprises. There is not sufficient inducement for American capital to risk competition with the long-established English and German industries. American manufacturers would be handicapped by lack of raw material, as the wire for the finest quality of needles is made by but one or two mills in England. Hand labor seems essential for many operations. The English needle passes through the hands of about 32 workmen and is subject to about 18 different processes. As every workman requires special training, much skilled help is necessary, which, if available at all in the United States, would so increase the cost of the article as to make competition impossible. Practically all the hand-sewing needles used here are made in England and in Germany.

*Imports* of hand-sewing and darning needles in the fiscal year 1918 amounted in value to \$533,969. For the calendar years 1918-1921 they have been as follows:

	1918	1919	1920	1921(9 months).
Quantity (thousands).....		758,957	1,299,393	638,862
Value.....	\$776,087	\$984,119	\$1,546,890	\$798,545

The greater part of the imported material comes from the United Kingdom. In the years 1918 and 1919 there was a considerable importation from Japan. During 1919 and 1920 the importation from Germany was growing relatively more significant.

## PARAGRAPH 1619.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1619. Newspapers and periodicals; but the term "periodicals" as herein used shall be understood to embrace only unbound or paper-covered publications issued within six months of the time of entry, devoted to current literature of the day, or containing current literature as a predominant feature, and issued regularly at stated periods, as weekly, monthly, or quarterly, and bearing the date of issue.

## ACT OF 1909.

## ACT OF 1913.

PAR. 634. Newspapers and periodicals; but the term "periodicals" as herein used shall be understood to embrace only unbound or paper covered publications issued within six months of the time of entry, devoted to current literature of the day, or containing current literature as a predominant feature, and issued regularly at stated periods, as weekly, monthly, or quarterly, and bearing the date of issue [Free].

Par. 556. Newspapers and periodicals; but the term "periodicals" as herein used shall be understood to embrace only unbound or paper-covered publications issued within six months of the time of entry, devoted to current literature of the day, or containing current literature as a predominant feature, and issued regularly at stated periods, as weekly, monthly, or quarterly, and bearing the date of issue [Free].

## NEWSPAPERS AND PERIODICALS.

(See Survey N-24.)

*Description and uses.*—The items mentioned in paragraph 1619 are of a character in themselves to be dutiable as printed matter under paragraph 1310. They are admitted free of duty only when they conform to certain specifications given in some detail in the paragraph.

*Imports* of newspapers and periodicals in 1914 were valued at \$363,807. Imports in later calendar years have been valued as follows: 1918, \$313,392; 1919, \$322,311; 1920, \$347,479; 1921 (nine months), \$237,118.

*Exports.*—Statistics not available.

## PARAGRAPH 1620.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1620. Nuts: Crude in the shell and broken coconut meat or copra, not shredded, desiccated, or prepared in any manner, and not specially provided for; palm nuts and palm-nut kernels.

## ACT OF 1909.

## ACT OF 1913.

PAR 635. Nuts: \* \* \* palm nuts and palm-nut kernels; \* \* \* broken cocoanut meat or copra, not shredded, desiccated, or prepared in any manner [Free].

PAR. 557. \* \* \* broken coconut meat or copra, not shredded, desiccated, or prepared in any manner; palm nuts and palm-nut kernels [Free].

## COPRA, PALM NUTS, KERNELS, ETC.

(See Survey A-11.)

*Description and uses.*—Copra is the dried, broken kernel of the coconut, and is the chief form of the commercial product from which coconut oil is expressed. (See paragraph 756.) Palm nuts are from palm varieties indigenous to western tropical Africa, and valuable for the palm oil they yield. The kernels are a distinct article of commerce. The meal left after extracting the oil from the kernels has a small value as feed for cattle.

*Production.*—Of the relatively small Florida and Porto Rican production of coconuts only the culls are marketed as copra. On the other hand, the Philippine crop (1,510,000,000 nuts in 1920) is in large part turned into copra either for crushing in the islands or for export.

There is no domestic production of palm nuts or palm kernels.

*Imports* of copra amounted to 44,459,158 pounds, valued at \$2,395,105, in 1914. Practically all of the 1914 importation came from Oceania (including the Philippines). In 1920 the Philippines furnished 10 per cent; Australia and other British Oceania, 43 per cent; Dutch East Indies, 14 per cent; and French Oceania, 11 per cent.

Statistics for the calendar years 1918-1921 follow:

	1918	1919	1920	1921(9 months).
Quantity (pounds).....	430,499,328	257,915,789	215,188,461	129,286,526
Value.....	\$26,255,527	\$16,544,613	\$14,187,178	\$5,060,401

Imports of palm nuts and palm kernels in 1913 were valued at \$4,872, and in 1914 at \$23,127. Statistics for the calendar years 1918-1921 follow:

	1918	1919	1920	1921(9 months).
Quantity (pounds).....		5,610,056	8,329,034	65,003
Value.....	\$384,215	\$288,586	\$484,730	\$5,802

British Africa furnishes 95 per cent of the imports.

*Important changes in classification.*—This paragraph takes the place of a part of paragraph 557 of the act of 1913; marrons and coconuts were transferred to schedule 7 (pars. 755 and 756).

The word "crude" qualifying "marrons" and the words "in the shell" qualifying "coconuts" in paragraph 557 have been retained and combined in the phrase "crude in the shell," following the word "nuts" in this paragraph. No reason is apparent for this combination of parts of provisions.

*Suggested changes.*—"Copra" as the trade name might be substituted for "broken coconut meat or copra, not shredded, desiccated, or prepared in any manner, and not specially provided for."

The word "nuts" beginning this paragraph should be changed to "oil-bearing seeds and nuts" if the provision is to be given its full scope of exempting from duty oil seeds and nuts, unless no seeds shall be added to this paragraph. (See paragraph 760.)

Unless specific provision shall be made for perilla and sesame seed, and for tung nuts, the raw materials of the oils that are free of duty under paragraph 1626, they will be subject to duty as seeds not specially provided for.

## PARAGRAPH 1621.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1621. Nux vomica.

ACT OF 1909.

ACT OF 1913.

PAR. 636. Nux vomica [Free].

PAR. 558. Nux vomica [Free].

NUX VOMICA.

(See Survey FL-2.)

*Description and uses.*—Nux vomica, the dried ripe seed of an Asiatic tree, is extensively used in medicine and in the manufacture of its alkaloids, of which strychnine is of chief importance.

*Production.*—It is derived from a wild tree of India and the surrounding regions, the only important source of strychnine.

*Imports* of nux vomica for 1909-1918 average 2,714,812 pounds, valued at \$61,447. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	4,107,167	\$310,403	\$0.08
1919.....	3,750,838	240,446	.06
1920.....	3,069,994	208,234	.07
1921 (9 months).....	2,509,381	218,748	.09

## PARAGRAPH 1622.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1622. Oakum.

ACT OF 1909.

ACT OF 1913.

PAR. 637. Oakum [Free].

PAR. 559. Oakum [Free].

OAKUM.

(See Survey FL-14.)

*Description and uses.*—Oakum, a tarred preparation of soft fibers, is divided according to its chief uses into marine oakum and plumbers' oakum. Marine oakum, made of old tarred ropes and, for the most part since 1914, of domestic hemp tows, is employed for calking or packing joints or timbers of wooden vessels and the deck planking in steel ships. Plumbers' oakum, made from jute wastes, principally old waste bagging, is used for calking all kinds of pipe.

*Production* of oakum in 1914 and in 1919 was limited to six establishments, the total output of which was valued in 1914 at \$359,000 and in 1919 at \$983,000. Prior to 1915 it is estimated that the annual domestic production of marine oakum amounted to about 100,000 bales of 50 pounds each, and of plumbers' oakum to about 85,000 bales. In 1919 the output was estimated at 210,000 bales of marine oakum and 60,000 bales of plumbers' oakum.

*Imports* in the period 1910-1914 averaged 1,446,000 pounds yearly and exports 1,351,000 pounds. Since 1917 imports have been small, whereas exports have shown a marked increase. Consumption of foreign oakum is limited to the higher grades of marine oakum, which are practically all supplied by the United Kingdom and Russia in Europe. Imports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	199	35,840	6,074	73,775
Value.....	\$25	\$3,500	\$1,000	\$8,833

*Exports.*—Nine-tenths of the exports consist of the lower grades of marine oakum shipped to Canada, Mexico, and South America. Exports in the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	2,958,154	2,720,369	2,828,617	1,065,531
Value.....	\$439,301	\$364,510	\$355,088	\$104,851

### PARAGRAPH 1623.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1623. Oil cake and oil-cake meal.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 638. Oil cake [Free].

PAR. 560. Oil cake [Free].

#### OIL CAKE AND OIL-CAKE MEAL.

(See Survey A-11.)

*Description and uses.*—The process of crushing various vegetable seeds and nuts to extract the oil, leaves a compressed mass known, when unground, as oil cake, and when ground, as oil-cake meal. This residual cake is chiefly derived from cotton seed, flaxseed, soya beans, corn, peanuts, and rapeseed. It is not only a valuable feedstuff for dairy, poultry, and other live stock, but also an important vegetable fertilizer, entering extensively into international trade.

*Production.*—The United States, through its great cottonseed-oil, linseed-oil, and corn-product industries, is the largest producer and exporter of the oil-cake by-product. In 1914 the production of cottonseed cake and meal was 2,191,610 tons; of linseed cake, about 600,000 tons, and of corn-cake meal close to 75,000 tons. In 1919 the production of cottonseed cake and meal was 2,260,007 tons valued at \$124,498,598; of linseed cake and meal, 409,141 tons valued at \$26,435,210.

*Imports* during 1911-1920 ranged from 10,000,000 to 230,000,000 pounds, with values varying from \$100,000 to \$4,600,000, coming principally from the Dutch East Indies and Philippine Islands

(coconut cake); China and Japan (soya-bean cake); Mexico (cottonseed cake); Canada and the United Kingdom (linseed cake). Most of the imports move to the Pacific States. Statistics for the calendar years 1918-1921 follow:

*Oil cake.*

	1918	1919	1920	1921 (9 months).

1920.....	109,336	1,522	228	15
1921 (9 months).....	20,280	451	.....	.....

*Exports* in normal years were about 2,000,000,000 pounds, valued at over \$21,000,000, cottonseed cake and meal ordinarily comprising about three-fourths of the total and linseed cake most of the remainder. The trade was greatly reduced during the war. Later statistics for the calendar years 1918-1921 are as follows:

	1918	1919	1920	1921 (9 months).
Cottonseed cake:				
Quantity (pounds).....	1,384,250	394,625,721	314,018,114	285,309,654
Value.....	\$32,412	\$12,918,900	\$8,818,176	\$5,102,315
Cottonseed meal:				
Quantity (pounds).....	10,283,046	233,507,445	26,027,868	111,621,760
Value.....	\$256,068	\$7,262,043	\$730,841	\$2,020,665
Linseed or flaxseed cake:				
Quantity (pounds).....	45,392,709	327,922,678	223,286,040	403,782,446
Value.....	\$1,115,129	\$11,656,844	\$7,638,696	\$9,139,157
Linseed or flaxseed meal:				
Quantity (pounds).....	40,561,673	25,828,805	12,338,937	18,338,584
Value.....	\$1,134,142	\$846,387	\$404,004	\$392,455
Corn-oil cake and meal:				
Quantity (pounds).....	69,370	963,980	130,613	4,131,472
Value.....	\$2,966	\$26,874	\$3,963	\$68,996
Coconut-oil cake and meal:				
Quantity (pounds).....			528,170	7,805,353
Value.....			\$13,784	\$84,936
All other oil cake and meal:				
Quantity (pounds).....	9,371,706	104,379,153	13,232,720	34,364,204
Value.....	\$244,733	\$3,329,643	\$402,085	\$559,730

*Important changes in classification.*—Oil-cake meal has been added; it differs from oil cake only in being ground.

#### PARAGRAPH 1624.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1624. Oils, animal: Spermaceti, whale, and other fish oils of American fisheries, and all fish and other products of such fisheries.

ACT OF 1909.

ACT OF 1913.

PAR. 639. Oils: \* \* \* and also spermaceti, whale, and other fish oils of American fisheries, and all fish and other products of such fisheries; \* \* \* [Free.]

PAR. 567. Fish, fresh, frozen, or packed in ice, caught in the Great Lakes or other fresh waters by citizens of the United States, and all other fish, the products of American fisheries [Free].

PAR. 561. Oils: \* \* \* and also spermaceti, whale, and other fish oils of American fisheries, and all fish and other products of such fisheries [Free].

[For discussion, see par 49, p. 140.]

#### PARAGRAPH 1625.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1625. Oils, distilled or essential: Anise, bergamot, bitter almond, camphor, caraway, cassia, cinnamon, citronella, geranium, lavender, lemon-grass, lime, linaloe, neroli or orange flower, origanum, palmarosa, pettigrain, rose or otto of roses, rosemary, spike lavender, thyme, and ylang ylang: *Provided*, That no article mixed or compounded or containing alcohol shall be exempted from duty under this paragraph.

ACT OF 1909.

ACT OF 1913.

PAR. 639. Oils: Almond, \* \* \* anise or anise seed, \* \* \* aspic or spike lavender, bergamot, \* \* \* caraway, cassia, cinnamon, \* \* \* citronella or lemon grass, \* \* \* lavender, \* \* \* limes, \* \* \* neroli or orange flower, \* \* \* attar of roses, \* \* \* rosemary or anthoss, \* \* \* thyme, origanum red or white, \* \* \* [Free].

PAR. 3. \* \* \* distilled oils, essential oils, \* \* \* twenty-five per centum ad valorem; \* \* \*

PAR. 46. Oils, distilled and essential: \* \* \* almond, bitter; \* \* \* anise or anise seed; bergamot; \* \* \* caraway; cassia; cinnamon; \* \* \* citronella and lemon-grass; \* \* \* lavender, and aspic or spike lavender; limes; neroli or orange flower; origanum, red or white; rosemary or anthoss; attar of roses; thyme; \* \* \* all the foregoing oils, \* \* \* and essential and distilled oils and all combinations of the same, not specially provided for in this section, 20 per centum ad valorem: *Provided*, That no article containing alcohol shall be classified for duty under this paragraph.

OILS, DISTILLED OR ESSENTIAL.

ANISE OR ANISE-SEED OIL.

(See Survey A-12.)

*Description and uses.*—Anise-seed oil is distilled from anise fruit or the fruit of the star anise. The fruit yields from 1½ to 3 per cent of oil. The plant is indigenous to Asia Minor and Egypt and is also cultivated in Russia, Spain, Malta, Greece, Bulgaria, Chile, and India. The chief use of anise-seed oil is as a flavoring agent, especially in cheap grades of candy. It is used to some extent in medicines as a carminative and stimulant.

*Imports* prior to the war had reached a maximum of 127,501 pounds, valued at \$173,078 in 1913, and decreased to about one-third of that quantity in 1914. During the following years the imports increased, until in 1917 there were imported 266,686 pounds, valued at \$150,849, which yielded a revenue of \$30,169. By far the greater quantity of anise oil imported is the oil of star anise seed from China. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	72,033	\$63,476	\$0.88	\$12,695	20
1919.....	148,849	156,982	1.05	31,396	20
1920.....	290,241	246,682	.84	49,336	20
1921 (9 months).....	76,995	35,700	.46	.....	20

*Exports.*—Statistics not available.

*Important changes in classification.*—Anise oil is dutiable under paragraph 46, act of 1913.

BERGAMOT OIL.

(See Survey A-12.)

*Description and uses.*—Bergamot oil is obtained from the fresh rind of the fruit known as the bergamot orange or the bergamot lemon. An oil of an inferior quality is obtained by distilling the

crushed rind with steam. Oil of bergamot possesses stimulating properties when taken internally. It is employed as a perfume in hair tonics, and in dusting powders and ointments to disguise the unpleasant odor of certain drugs. Bergamot oil is sometimes adulterated with orange oil and turpentine.

*Imports* in 1913 were 64,259 pounds, valued at \$310,835, and were free of duty. In 1914 imports decreased to about 50 per cent of the normal prewar imports, but since have been about equal to imports in 1913. Imports since 1917 are as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	58,581	\$245,999	\$4.20	\$49,200	20
1919.....	69,171	298,457	4.31	59,691	20
1920.....	60,744	243,226	4.00	48,645	20
1921 (9 months).....	31,287	135,018	4.31		.....

*Exports.*—Statistics not available.

*Important changes in classification.*—Bergamot oil is dutiable under paragraph 46, act of 1913.

#### BITTER ALMOND OIL.

(See Survey A-11.)

*Description.*—When bitter almond kernels are expressed they yield a bland fixed oil which is known as sweet almond oil. (See par. 45.) The residue from this expression when ground and distilled with water, yields the bitter oil of almonds. The bitter almond oil does not exist in the kernel, but is produced by the action of water on amygdalin, a constituent of almonds; it is also obtained by distilling the seeds of peaches and apricots. Bitter almond oil consists of about 85 per cent of benzaldehyde, which can be prepared synthetically from coal tar. The synthetic product has largely replaced the natural oil, and has a more uniform composition.

*Imports* of bitter oil of almonds in 1913 were 10,442 pounds, valued at \$25,629, and were admitted free of duty. The imports during the war declined considerably. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	1,375	\$13,983	\$10.17	\$2,797	20
1919.....	2,512	15,261	6.08	3,052	20
1920.....	4,374	20,548	4.70	4,110	20
1921 (9 months).....	4,181	11,472	2.74		.....

*Exports.*—Statistics not available.

*Important changes in classification.*—Bitter almond oil is dutiable under paragraph 46, act of 1913.

## CAMPHOR OIL.

*Description and uses.*—Camphor oil is a by-product of ordinary or Japanese camphor, from which it is obtained by distillation with water. The first crude distillate is then subjected to a second fractional distillation. Its chief uses are in medicine and as a source of safrol (par. 56). In the Far East it is used as an illuminating oil.

*Production* is confined almost wholly to Japan, although a small amount is produced in China, the Malay States, and Mauritius.

*Imports* since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	236,025	\$21,248	\$0.09	\$4,250	20
1919.....	401	116	.29	23	20
1920.....	41,958	7,844	.19	1,569	20
1921 (9 months).....	5,567	2,333	.41		.....

*Exports.*—Statistics not available.

*Important changes in classification.*—First specific mention of camphor oil, which is dutiable under the provision for "essential and distilled oils" n. s. p. f., paragraph 46, act of 1913.

## CARAWAY OIL.

(See Survey A-12.)

*Description and uses.*—Caraway oil is obtained by steam distillation from the caraway fruit, which yields from 4 to 6 per cent of oil. The oil is distilled chiefly in England, Holland, Germany, and Morocco. It is used medicinally as a stimulant and carminative, and to impart an agreeable flavor to other pharmaceutical remedies.

*Imports* had decreased prior to the war from 60,007 pounds in 1910 to 10,107 pounds in 1913. Imports further decreased in 1914 to about 3,500 pounds. In 1915, 18,107 pounds were imported, valued at \$20,730, yielding a revenue of \$4,146. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	1,097	\$6,522	\$5.95	\$1,304	20
1919.....	4,261	14,622	3.43	2,924	20
1920.....	8,167	19,746	2.42	3,949	20
1921 (9 months).....	800	896	1.12		.....

*Exports.*—Statistics not available.

*Important changes in classification.*—Caraway oil is dutiable under paragraph 46, act of 1913.

## CASSIA OIL.

(See Survey A-12.)

*Description.*—Cassia oil is distilled from the bark, leaves, and twigs of the plant *Cinnamomum cassia*, which is indigenous to Cochin China, and is also cultivated in other parts of China. The oil consists chiefly of from 75 to 85 per cent cinnamic aldehyde. This product can be made synthetically from coal tar, and synthetic cassia oil is now a common article of commerce.

*Imports* are combined with those of oil of cinnamon, which it greatly resembles.

*Important changes in classification.*—Cassia oil is dutiable under paragraph 46, act of 1913.

## CINNAMON OIL.

(See Survey A-12.)

*Description.*—Cinnamon oil is distilled from the bark of the Ceylon cinnamon tree (*Cinnamomum zeylanicum*). The oil is usually distilled from an inferior bark of insufficient value to pay the export tax. The bark yields from one-half to 1 per cent of oil.

Cinnamon leaf oil is an essential oil distilled from the leaves of the same plant. It differs from oil of cinnamon in that it contains very little cinnamic aldehyde and from 70 to 90 per cent of eugenol.

*Imports.*—The combined imports of cassia and cinnamon oil in 1913 were 123,645 pounds, valued at \$97,438, and were admitted free of duty. Imports decreased somewhat during 1914 and 1915, and in 1917 increased to 153,244 pounds, valued at \$130,112, and yielded a revenue of \$26,022.

Imports for later years follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	99,454	\$125,629	\$1.26	\$25,126	20
1919.....	168,626	277,280	1.64	55,456	20
1920.....	175,589	265,061	1.51	53,012	20
1921 (9 months).....	35,594	36,657	1.20	.....	.....

*Important changes in classification.*—Cinnamon oil is dutiable under paragraph 46, act of 1913.

## CITRONELLA AND LEMON-GRASS OILS.

(See Survey A-12.)

*Description, uses, and production.*—Citronella oil is distilled from "Indian grass," chiefly in the southern part of Ceylon. It is a pale-yellow oil which possesses a powerful odor, and this property, along with its low price, accounts for its extensive use as a cheap soap perfume. It is also used as a protection against insects, chiefly mosquitoes. Lemon-grass oil is obtained by distillation from two varieties of grass grown in Ceylon, the Straits Settlements, Malabar, and

Cochin China. Ceylon and Singapore are the chief centers of cultivation of the grass and of the production and exportation of the oil. It is used chiefly as a perfume, especially for the cheaper grades of soaps. It is also used to adulterate oil of lemons.

Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	783,045	\$319,734	\$0.41	\$63,947	20
1919.....	572,202	280,498	.49	56,100	20
1920.....	1,012,050	737,047	.73	147,409	20
1921 (9 months).....	634,637	263,862	.41		

*Important changes in classification.*—Citronella and lemon-grass oils are dutiable under paragraph 46, act of 1913.

#### GERANIUM OIL.

*Description and uses.*—Geranium oil, or rose geranium oil, is distilled from several varieties of the plant *pelargonium*, and is used in compounding perfumes.

*Production.*—The plants are cultivated and distillation is carried on in Algeria, southern France, Spain, Italy, Corsica, and Provence.

*Import statistics* are available for 1914 only, when they were 63,414 pounds, valued at \$146,933.

*Export statistics* are not available.

*Important changes in classification.*—First specific mention; now dutiable under the general provision in paragraph 46 of the act of 1913.

#### LAVENDER AND SPIKE LAVENDER OILS.

(See Survey A-12.)

*Description and uses.*—Oil of lavender refers to a volatile oil distilled from the fresh flowering herb *Lavandula vera* and other species growing on the higher slopes of the Alps. Several grades of this oil, differing greatly in price, are on the market. In France a large part of the commercial oil is obtained from the wild plant by means of portable stills. The English oil, which is obtained exclusively from cultivated plants, commands a much higher price than the ordinary commercial or French oil, as only a small amount is produced. Commercially the English oil is frequently designated as oil of garden lavender. Oil of lavender is employed chiefly as a perfume and as a flavoring agent for certain pharmaceutical preparations. It is rarely employed in medicine.

Spike lavender oil or spike oil is distilled from the flowering *Lavandula spica*, which grows in the lower mountainous regions of France, Spain, and Italy. Spike oil is a common adulterant of oil of lavender and is occasionally distilled with true lavender. It is also used by artists in the preparation of varnishes. Spike lavender oil is much cheaper than true oil of lavender.

*Imports* of lavender and spike lavender oil in 1913 were 227,013 pounds, valued at \$482,779, admitted free of duty. In 1914 and 1915, imports were about one-third of those in 1913; in 1916, 198,205 pounds, valued at \$271,815, yielding a revenue of \$54,363. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	98,602	\$214,759	\$2.18	\$42,952	20
1919.....	141,970	263,038	1.85	52,608	20
1920.....	135,268	351,947	2.60	70,389	20
1921 (9 months).....	71,050	138,419	1.95	.....	.....

*Important changes in classification.*—These oils are dutiable under paragraph 46, act of 1913.

## LEMON-GRASS OIL.

(See Citronella oil, p. 1389.)

## LIME OIL.

(See Survey A-12.)

*Description and production.*—Expressed lime oil is obtained by mechanical means from the peel of the fresh fruit of *Citrus limetta*. It is produced in Italy chiefly during the months of December and January. This oil closely resembles oil of lemon. A distilled lime oil is also produced, chiefly in the West Indies, and is the usual lime oil of commerce. The expressed Italian oil is much more valuable than the distilled West Indian oil.

*Imports* in 1913 were 13,075 pounds, valued at \$15,025, and were admitted free of duty. The imports during the war showed a decrease only in 1915. Since 1917 they have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	9,978	\$19,230	\$1.93	\$3,846	20
1919.....	46,367	51,430	1.10	10,208	20
1920.....	46,993	89,420	1.90	17,884	20
1921 (9 months).....	38,042	72,148	1.97	.....	.....

*Exports.*—Statistics not available.

*Important changes in classification.*—Lime oil is dutiable under paragraph 46, act of 1913.

## LIGNALOE OIL.

*Description and uses.*—Linaloe oil, or as it is more commonly known, linaloe oil, comes on the market in two different varieties, Cayenne, and Mexican. The former is distilled in French Guiana, and the latter in Mexico, both from woods of uncertain botanical origin. They are used in compounding perfumes.

*Production.*—Production is confined to French Guiana and Mexico.

*Imports* are shown for 1914 only, when they were 4,171 pounds, valued at \$10,926, chiefly from Mexico.

*Exports.*—Statistics are not available.

*Important changes in classification.*—First specific mention; now dutiable under paragraph 46, act of 1913.

*Suggested changes.*—The spelling generally used is "linaloe," not "lignaloe." This oil is also known in commerce as "Bois de Rose." In order to be certain of including this product the provision might be changed to "linaloe or Bois de Rose."

NEROLI OR ORANGE FLOWER OIL.

(See Survey A-12.)

*Description, uses, and production.*—This oil is obtained by distillation from fresh orange flowers and is produced exclusively in the southern part of France. The best grade of neroli comes from Nice. This oil is used almost exclusively in perfume. A form of orange flower oil is used to a certain extent as a flavoring agent in sirups. The odor of orange flower oil is due to methyl anthranilate, which can be made synthetically from coal tar. Methyl anthranilate was produced in the United States during 1920 by six firms. A synthetic product which is sold under the name of neroli is used largely as a perfume by soap makers.

*Imports* of neroli, or orange flower oil, in 1913 were 38,365 pounds, valued at \$171,932. During 1914 and 1915 the imports decreased to about 14,000 pounds, and during 1916 and 1917, were only slightly less than the imports in 1913. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	22,173	\$70,683	\$3.19	\$14,137	20
1919.....	25,076	123,060	4.91	24,612	20
1920.....	36,946	181,141	4.90	36,228	20
1921 (9 months).....	22,684	51,612	2.28		

*Exports.*—Statistics not available.

*Important changes in classification.*—This oil is dutiable under paragraph 46, act of 1913.

ORIGANUM OIL.

(See Survey A-12.)

*Description.*—Origanum or marjoram oil closely resembles oil of thyme and is obtained by distillation with water from two species of origanum native to Europe and America. The two oils recognized in commerce are Trieste oil, which is dark, and Smyrna oil, which is light colored. This difference in color accounts for the tariff description "red or white."

*Imports* of origanum had increased under exemption from duty prior to the war to 8,822 pounds, valued at \$8,502 in 1913. With the ex-

ception of 1914, the imports during the war showed a remarkable increase—54,671 pounds, valued at \$45,859, and yielded a revenue of \$9,171 in 1917. Since 1917 they have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1915.....	200	\$143	\$0.72	\$29	20
1919.....	6,853	13,406	1.96	2,681	20
1920.....	13,896	27,032	1.95	5,406	20
1921 (9 months).....	2,160	4,569	2.17	.....	20

*Exports.*—Statistics not available.

*Important changes in classification.*—This oil is dutiable under paragraph 46, act of 1913.

#### PALMAROSA OIL.

*Description and uses.*—Palmarosa oil, or Turkish geranium grass oil, is distilled from Motia grass, which grows extensively in India. Its chief use is in the compounding of perfumes. The odor and properties are somewhat similar to geranium oil.

*Production.*—Distillation is confined wholly to India. The name Turkish geranium oil came into use through the commercial introduction of the oil via Constantinople.

*Imports* are shown for 1914 only, when they were 1,052 pounds, valued at \$1,351.

*Important changes in classification.*—First specific mention; now dutiable under the general provision in paragraph 46, act of 1913.

#### PETTIGRAIN OIL.

*Description and uses.*—The oil of pettigrain of to-day is distilled from the leaves and young shoots of the bitter orange. It is used in the compounding of perfumes.

*Production.*—The best pettigrain oil is distilled in the south of France, a certain amount also in Algeria and Spain. An oil of less perfume value, but one which forms the bulk of the oil of commerce, is distilled in Paraguay.

*Imports* in 1914 (the only year for which statistics are available) were 634 pounds, valued at \$1,114.

*Important changes in classification.*—First specific mention; now dutiable under the general provisions in paragraph 46, act of 1913.

#### ROSE OIL OR OTTO OF ROSES.

(See Survey A-12.)

*Description, uses, and production.*—Attar or otto of roses is a volatile oil distilled from fresh rose flowers. Of the numerous varieties of roses, only a few are used in the preparation of the essential oil. A large part of the attar of roses is obtained from the Balkan Mountains. The important center of the industry is Kezanlik. Roses are also cultivated in the southern part of France in the

neighborhood of Grasse, Cannes, and Nice. The French flowers, however, are used chiefly for the preparation of rose water and rose pomades. In recent years extensive rose plantations have been established in Germany near Klein-Miltitz. There is also a small production of attar of roses in Algeria.

As rose oil is expensive, the probability of adulteration is always great. The principal adulterants are palmarosa oil and true geranium oil. Rose oil is used chiefly in the preparation of high-grade toilet perfumes and is also employed in medicine for perfuming cerates, ointments, and lotions.

*Imports.*—The imports of attar of roses in 1913 had reached 133,325 ounces, valued at \$791,370, admitted free of duty. The imports since 1913 have been considerably less, and in 1917 declined to a minimum of 11,235 ounces, valued at \$85,673, and yielded a revenue of \$17,134. This decrease in imports has been due to war conditions which have demoralized the rose industry in Bulgaria. Import statistics since 1917 follow:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Ounces.</i>				<i>Per cent.</i>
1918.....	21,299	\$160,556	\$7.54	\$32,111	20
1919.....	52,931	497,021	9.39	99,404	20
1920.....	67,224	480,327	7.15	96,065	20
1921 (9 months).....	7,310	55,239	7.56	.....	.....

*Exports.*—Statistics not available.

*Important changes in classification.*—This oil is dutiable under paragraph 46, act of 1913.

#### ROSEMARY OIL.

(See Survey A-12.)

*Description.*—Rosemary oil is distilled from the flowering tops of the rosemary plant. There are two commercial varieties, Italian or Dalmatian oil, which is distilled after the flowering season is over, and a French oil, which possesses a finer odor and is distilled from the fresh flowering tops. English oil, which is produced from cultivated plants, and the Spanish oil are of minor commercial importance, although the English product brings a much higher price than the other oils.

*Imports* of rosemary oil showed a large increase, from about 50,000 pounds in 1910 to 284,144 pounds, valued at \$100,930, in 1913, being admitted free of duty. The imports during 1914, 1915, and 1916 were only about one-third those of 1913. Imports since 1917 are as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	87,972	\$45,341	\$0.51	\$9,068	20
1919.....	152,138	77,465	.51	15,493	20
1920.....	219,226	193,102	.88	38,620	20
1921 (9 months).....	22,018	18,119	.82	.....	.....

*Important changes in classification.*—This oil is dutiable under paragraph 46, act of 1913.

## SPIKE LAVENDER OIL.

(See Lavender oil, p. 1390.)

## THYME OIL.

(See Survey A-12.)

*Description and uses.*—Thyme oil is distilled from fresh flowering tops of the thyme herb which grows wild in the mountains of southern France. Small quantities of oil are produced from the cultivated herb, but this source is of little commercial importance. The Spanish thyme oil is probably derived from a species of origanum. It has been a common practice to export thyme oil from France to England, whence it is reexported to the United States as oil of origanum. Thyme oil closely resembles oil of origanum; being much cheaper, it has been substituted largely for the latter.

Thyme oil is used chiefly for veterinary preparations and as a cheap soap perfume. The French oil is the most valuable. There are two commercial varieties, known as red and white. The former grade is a crude distilled oil and, when properly rectified and purified, gives the commercial white thyme oil. The yield of oil varies from 0.5 to 2.5 per cent.

*Imports* prior to the war increased from about 50,000 pounds in 1910 to 138,972 pounds, valued at \$105,296, admitted free of duty in 1913. Imports since 1917 are as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	107,739	\$122,241	\$1.14	\$24,448	20
1919.....	115,456	171,459	1.49	34,292	20
1920.....	77,227	151,631	1.96	30,326	20
1921 (9 months).....	51,078	74,006	1.47	.....	20

*Exports.*—Statistics not available.

*Important changes in classification.*—Thyme oil is dutiable under paragraph 46, act of 1913.

## YLANG-YLANG OIL.

*Description and uses.*—Ylang-ylang or Cananga oil is the product of the distillation of the flowers of *Cananga odorata*, a native of Ava and Tenasserim, and is generally distributed and cultivated throughout southern Asia, the East Indies, the Philippines, and Reunion. The Philippine oil is said to be the finest in quality. It is used in compounding perfumes.

*Import statistics* are not available.

*Important changes in classification.*—First specific mention; now dutiable under the general provision in paragraph 46 of the act of 1913.

*Suggested changes.*—This oil from Java and neighborhood is known commercially as Cananga oil. In order to be certain of its inclusion the words "or Cananga" might be added after "ylang-ylang."

## PARAGRAPH 1626.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1626. Oils, expressed or extracted: Croton, palm, palm-kernel, perilla, sesame, and sweet almond; olive oil rendered unfit for use as food or for any but mechanical or manufacturing purposes, by such means as shall be satisfactory to the Secretary of the Treasury and under regulations to be prescribed by him; Chinese and Japanese tung oils; and nut oils not specially provided for.

## ACT OF 1909.

PAR. 639. Oils: Almond, \* \* \* croton, \* \* \* nut oil or oil of nuts, \* \* \* olive oil rendered unfit for use as food or for any but mechanical or manufacturing purposes, by such means as shall be satisfactory to the Secretary of the Treasury and under regulations to be prescribed by him; \* \* \* palm, palm-kernel, \* \* \* sesame or sesamum seed or bean, \* \* \* [Free].

PAR. 3. \* \* \* expressed oils, \* \* \* twenty-five per centum ad valorem; \* \* \* [Covered oils not specifically mentioned in 1909.]

## ACT OF 1913.

PAR. 561. Oils: \* \* \* croton, \* \* \* palm, palm-kernel, perilla, \* \* \* and olive oil rendered unfit for use as food or for any but mechanical or manufacturing purposes, by such means as shall be satisfactory to the Secretary of the Treasury and under regulations to be prescribed by him; Chinese nut oil, nut oil or oil of nuts not specially provided for in this section; \* \* \* [Free].

PAR. 45. Oils, expressed: \* \* \* almond oil, sweet, 5 cents per pound; sesame or sesamum seed or bean oil, 1 cent per pound; \* \* \*.

## CROTON OIL.

(See Survey A-11.)

*Description and uses.*—Ordinary croton oil comes from the seeds of *Croton tiglium*, a native tree of the East Indies and cultivated in various tropical countries. The oil is amber color, has a nauseating odor, biting taste, and (often adulterated with castor oil) is used as a powerful purgative. It is produced in large quantities in India and in Great Britain by pressing or by extraction with volatile solvents. The chief uses are in medicine.

*Imports* have been small; prior to 1916 between 4,000 and 6,000 pounds, since decreasing greatly. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	1,000	\$1,075	1.08
1919.....	900	1,283	1.43
1920.....	3,578	3,776	1.06
1921 (9 months).....	2,002	2,054	1.02

## PALM AND PALM-KERNEL OIL.

(See Survey A-11.)

*Description and uses.*—Palm oil is obtained from the outside fleshy portions of the ripe fruit; palm-kernel oil, from the kernels of the seeds. Forests of palm trees grow on the west coast of Africa, practically the only source of supply. Another species of palm is cultivated in South America, the West Indies, Java, and North

Burma, but its yield of oil is commercially unimportant. The native process of extracting palm oil is exceedingly crude and only a small portion of the oil is recovered. The residue, palm kernels, is usually shipped to Europe or America, where the oil is extracted. Both palm and palm-kernel oils are used extensively in soap making—27,345,000 pounds of palm oil and 4,762,000 pounds of palm-kernel oil in 1917. The total United States consumption in 1919 was 18,450,532 pounds of palm oil and 2,517,105 pounds of palm-kernel oil; in 1920, 24,791,212 pounds of palm oil and 2,671,112 pounds of palm-kernel oil; and for the first 9 months of 1921 (preliminary figures), 15,967,164 pounds and 1,862,505 pounds, respectively. Palm oil mixed with cottonseed and mineral oils is used in the manufacture of tin plate to protect the iron sheets from oxidation before being immersed in the molten tin. Fresh palm-kernel oil is used in vegetable butter substitutes and for other edible purposes.

*Production of palm-kernel oil from imported kernels in the United States since 1911 has been as follows:*

Year.	Quantity.	Year.	Quantity.
	<i>Pounds.</i>		<i>Pounds.</i>
1912.....	3,200,000	1918.....	3,784,000
1914.....	402,000	1919.....	2,517,105
1916.....	8,619,000	1920.....	2,671,102
1917.....	6,453,000	1921 (9 months).....	1,327,382

*Imports of palm oil in 1914 were 58,040,202 pounds, valued at \$3,858,001, and 27,405,231 pounds, valued at \$2,527,301 in 1918. Prior to 1916 England furnished about 90 per cent; but in 1918 British West Africa shipped us 90 per cent. Imports of palm-kernel oil in 1914 were 34,327,600 pounds, valued at \$3,087,343, declining to 18,618 pounds, valued at \$2,583 in 1918 (fiscal year). Imports prior to the war came chiefly from Germany and England. During the war England became the chief crusher and in order to retain this industry she has instituted a system of preferential export duties on palm kernels from British West Africa.*

*Imports since 1917 have been as follows:*

Calendar year.	Quantity.	Value.	Unit value.
----------------	-----------	--------	-------------

## PALM OIL.

	<i>Pounds.</i>		
1918.....	20,993,085	\$1,651,241	\$0.08
1919.....	41,817,945	4,317,324	.10
1920.....	41,948,224	5,430,310	.13
1921 (9 months).....	18,688,145	1,156,390	.06

## PALM-KERNEL OIL.

	<i>Pounds.</i>		
1918.....	33,564	\$4,855	\$0.14
1919.....	1,929,493	142,523	.07
1920.....	1,693,740	238,399	.14
1921 (9 months).....	1,581,717	127,741	.08

*Imports of palm oil have been chiefly from England and West Africa, and of palm-kernel oil from England and Belgium.*

*Exports.—Statistics not available.*

## PERILLA OIL.

(See Survey A-11.)

*Description and uses.*—Perilla oil is obtained by crushing the seed of *Perilla ocymoides*, an annual plant indigenous to China, Japan, and the northern parts of India, where it is cultivated for its seeds, the oil being used for edible purposes. It is used as a substitute for linseed oil in paints, varnishes, linoleum, and printing inks when market prices are favorable. It is not produced in the United States.

*Imports of perilla oil* were 65,509 pounds, valued at \$5,504 in 1916. Imports since 1917 follow:

Calendar year.	Quantity.	Value.	Unit value
	<i>Pounds.</i>		
1918.....	921,740	\$121,858	\$0.13
1919.....	4,742,739	723,622	.15
1920.....	7,581,555	1,216,291	.16
1921 (9 months).....	615,464	45,068	.07

## SESAME OIL.

(See Survey A-11.)

*Description and uses.*—This oil is obtained from the seeds of the plant *Sesamum indicum*, L., which is grown principally in East India, Java, Siam, China, and Japan and in the countries bordering the Mediterranean. Sesame could be grown in the southern United States, but the harvesting requires a great deal of hand labor.

The seeds yield from 30 to 50 per cent of a thin yellow oil which is odorless, has a pleasant taste, and does not become rancid on exposure. The best qualities are used as table oils or to adulterate olive oil, the poorer grades as fuel or soap stock. It is one of the staple food oils of southern Europe.

*Production.*—The production from imported seed has increased greatly since 1914, as shown in the following table:

Year.	Quantity.	Year.	Quantity.
	<i>Pounds.</i>		<i>Pounds.</i>
1914.....	30,000	1917.....	304,000
1916.....	129,000	1918.....	299,000

*Imports for 1914* were 1,389,648 pounds, more than half of which came from Germany. In 1915 they were 341,545 pounds; in 1917, 73,846 pounds. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equiva- lent ad valorem.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	2,354,927	\$356,516	\$0.15	\$23,549	6.61
1919.....	4,722,484	694,241	.15	47,225	6.80
1920.....	806,935	162,538	.20	8,069	4.96
1921 (9 months).....	74,191	10,783	.14		

*Exports.*—Statistics not available.

*Important changes in classification.*—Transferred from the dutiable list (par. 45) of the act of 1913.

#### ALMOND OIL, SWEET.

(See Survey A-11.)

*Description and uses.*—So-called sweet almond oil is expressed from sweet and bitter almonds, since both oils are practically identical and can not be distinguished by chemical means. The cake resulting from the cold expression is ground and distilled with water, thus producing bitter oil of almond. (See par. 1625.) Sweet almonds yield on an average about 44 to 55 per cent of oil, while bitter almonds yield about 38 to 45 per cent, though it may be as low as 20 per cent.

The oil is pale yellow, with a pleasant mild taste and little odor. It does not readily become rancid. Owing to its high price, almond oil is freely diluted with other similar oils, chiefly peach-kernel and apricot-kernel oil. Genuine almond oil is sold under the name of "almond oil, true."

Almond oil is used principally for pharmaceutical purposes and in the manufacture of high-class toilet soaps.

*Production.*—The principal countries producing almonds are Morocco, the Canary Islands, Portugal, Spain, France, Italy, Sicily, Syria, and Persia. Figures for the domestic production of the oil are not available, but it is probably inconsiderable. Some almonds are raised in California, but are mostly used for other purposes.

*Imports* for 1913 amounted to 152,300 pounds. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Equivalent ad valorem.
	<i>Pounds.</i>				<i>Per cent.</i>
1918.....	15,017	\$11,586	\$0.77	\$751	6.48
1919.....	46,288	38,991	.84	2,314	5.94
1920.....	56,907	28,405	.50	2,845	10.02
1921 (9 months).....	31,312	14,380	.46		

*Exports.*—Statistics not available.

*Important changes in classification.*—Transferred from the dutiable list (par. 45) act of 1913.

#### OLIVE OIL.

(See Survey A-11.)

*Description and uses.*—Denatured olive oil, also known as "olive oil foots" and "sulphured olive oil," is a very low-grade oil extracted from the third and sometimes the fourth pressing of the olive cake or pomace. Some volatile solvent, such as gasoline or carbon bisulphide, is employed in the process. This oil is used in the manufacture of castile soap, in wool spinning, and for lubricating and illuminating purposes. (See edible olive oil, par. 50, p. 155.)

*Production.*—The annual domestic production of crude and virgin olive oil was 438,694 pounds in 1919 and 779,470 pounds (preliminary figures) in the first nine months of 1921.

*Imports* are declining—in 1907 they were 1,845,702 gallons. Imports since 1917, chiefly from Spain, Italy, and England, have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Gallons.</i>		
1918.....	7,812	\$6,763	\$0.87
1919.....	287,654	443,190	1.54
1920.....	105,839	214,044	2.02
1921 (9 months).....	413,195	360,145	.87

*Exports.*—Statistics not available.

#### CHINESE AND JAPANESE TUNG OILS.

(See Survey A-11.)

*Description and uses.*—The term “tung oil” describes two similar fatty oils, but differentiated commercially as Chinese or Japanese tung oil. Both are also known as wood oil and nut oil. Chinese nut oil is obtained from the seeds of an indigenous tree yielding about 40 per cent of oil on pressing. Cold-pressed oil is known as “white tung,” chiefly from China. Hot-pressed oil is known as “black tung.” The Japanese oil is obtained from the fruit of a similar tree grown in the southern part of Japan. Both the Chinese and Japanese tung oils have largely replaced linseed oil in waterproof varnishes. The consumption of tung oil in 1919 was 34,166,655 pounds; in 1920, 46,381,235 pounds; and for the first nine months of 1921 (preliminary figures), 24,403,902 pounds.

*Imports* of Chinese nut oil have been about 5,000,000 to 6,000,000 gallons; in the fiscal year 1918, 4,818,740 gallons, valued at \$4,038,072. Over 90 per cent is from China, Japan supplying a small part since 1916. Imports of all other nut oils have varied greatly; in 1915 a maximum of 216,707 gallons, valued at \$83,994, falling to 18,423 gallons, valued at \$18,203, in the fiscal year 1918. Later imports of Chinese nut oil are as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Gallons.</i>		
1918.....	5,700,663	\$6,388,715	\$1.12
1919.....	7,180,346	8,120,529	1.13
1920.....	9,031,620	11,077,271	1.22
1921 (9 months).....	2,060,307	1,378,564	.67

*Important changes in classification.*—The phrase “Chinese nut oil” (par. 561, act of 1913) has been changed to “Chinese and Japanese tung oils,” to remove doubt as to the inclusion of peanut oil within the term “nut oil.” (Reclassification Report, p. 118.)

## NUT OILS N. S. P. F.

*Description and uses.*—This provision would include any expressed or extracted oil produced from the kernel of a nut. Candle nut or Lumbang oil, which is closely related to Chinese and Japanese tung oil, is obtained from the tree *Aleurites moluccana* in the islands of the Pacific, West Indies, and in Brazil. It is a drying oil suitable for use in paints. Shea-nut oil is a semisolid fat which resembles coconut and palm oil and is used largely in soap. It is obtained from nuts of a tree appearing in large areas on the West Coast of Africa and in the French and English Sudan. About 2,000 short tons of this oil were produced from imported nuts in the United States in 1916. The oil offers possibilities for future development.

*Imports of nut oils, n. s. p. f., since 1917, have been as follows:*

Calendar year.	Quantity.	Value.	Unit value.
	<i>Gallons.</i>		
1918.....	125,760	\$155,389	\$1.24
1919.....	123,305	157,968	1.28
1920.....	111,127	131,082	1.18
1921 (9 months).....	29,510	30,423	1.03

*Exports.*—Statistics not available.

## PARAGRAPH 1627.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1627. Oils, mineral: Petroleum, crude, fuel, or refined, and all distillates obtained from petroleum, including kerosene, benzine, naphtha, gasoline, paraffin, and paraffin oil, not specially provided for.

## ACT OF 1909.

PAR. 639. Oils: \* \* \* petroleum, crude or refined, including kerosene, benzine, naphtha, gasoline, and similar oils produced from petroleum [Free].

PAR. 645. Paraffin [Free].

## ACT OF 1913.

PAR. 561. Oils: \* \* \* petroleum, crude or refined, and all products obtained from petroleum, including kerosene, benzine, naphtha, gasoline, paraffin, and paraffin oil; \* \* \* [Free].

## PETROLEUM AND PETROLEUM PRODUCTS.

(See Survey FL-17.)

*Description and uses.*—The provision for petroleum covers crude petroleum and its refined products, including kerosene, benzine, naphtha, gasoline, paraffin oils, and paraffin.

*Production.*—The refined products are obtained by separating the crude oils by means of fractional distillation; these may be modified by the methods of distillation and the points of separation of the distillate. These fractions are usually purified by treatment with sulphuric acid, caustic soda, and washing with water. If a large yield of gasoline is desired a "dry" or destructive distillation (cracking) is employed. Marketed crude petroleum increased steadily from 8,801,404,416 gallons, valued at \$127,899,688 in 1910, to

14,083,255,242 gallons, valued at \$522,635,213, in 1917. This country is the largest producer and supplies 66 per cent of the world's demand. In 1917 Oklahoma produced 34.26 per cent; California, 16.49 per cent; and Kansas, 12.84 per cent of the output. Texas, Illinois, West Virginia, Pennsylvania, and Ohio rank in the order named. Mexico is the world's second largest producer, supplying in 1919, 87,000,000 barrels, or 16 per cent of the world's output.

Domestic production of crude petroleum since 1913 and of gasoline since 1916 has been as follows:

## CRUDE PETROLEUM.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	<i>Barrels.</i>			<i>Barrels.</i>	
1914.....	265,762,535	\$214,125,215	1918.....	355,927,716	\$703,943,961
1915.....	231,104,104	179,462,890	1919.....	377,719,000	.....
1916.....	300,767,158	330,899,868	1920.....	443,402,000	.....
1917.....	335,315,601	522,635,213	1921 (7 months).....	276,910,000	.....

## GASOLINE.

Year.	Quantity.	Year.	Quantity.
	<i>Gallons.</i>		<i>Gallons.</i>
1917.....	2,850,546,423	1920.....	4,882,546,699
1918.....	3,570,312,963	1921 (7 months).....	2,993,185,362
1919.....	3,957,857,097		

*Imports* of crude mineral oil or petroleum increased from 843,-080,788 gallons, valued at \$11,779,938 in 1914, to 1,348,419,493 gallons valued at \$18,039,207 in 1918. Over 95 per cent of the imports in 1918 was from Mexico, in quantity equaling 10 per cent of domestic production in 1917. Benzine, gasoline, and naphtha imports have varied considerably—in 1915, 7,920,424 gallons valued at \$762,556; in 1916 only 7,738 gallons; 11,069,898 gallons valued at \$1,473,027 in 1918, chiefly from Peru and Mexico. Imports of "all other refined" mineral oil increased from 1,796,092 gallons, valued at \$430,664 in 1914, to 43,927,718 gallons, valued at \$2,406,-754 in the fiscal year 1918. In later years the bulk of the imports has consisted of crude oil from Mexico.

Imports of petroleum products since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
----------------	-----------	--------	-------------

## CRUDE MINERAL OIL.

1921 (9 months).....	76,820,800	5,220,143	.06

*Exports* of domestic petroleum products in the fiscal year 1918 were 2,677,036,228 gallons, valued at \$298,329,051, about 50 per cent fuel and gas oil. The exports in 1917 were 2,651,118,349 gallons, or about 19 per cent of domestic production. Exports of crude mineral oil, chiefly to Canada, increased from 146,477,342 gallons, valued at \$6,812,672 in 1914, to 185,069,674 gallons, valued at \$9,288,979 in 1918. Exports of fuel and oil gas increased notably, from 475,143,205 gallons valued at \$13,747,863 in 1914 to 1,223,283,641 gallons valued at \$61,137,607 in 1918, going chiefly to the United Kingdom and Canada. Exports of illuminating oil decreased about 50 per cent from the export of 1,157,283,310 gallons, valued at \$74,500,162 in 1914, and have been chiefly to Europe. Exports of lubricating oils, including paraffin oil, have been principally to Europe, and increased from 196,884,696 gallons, valued at \$27,852,959 in 1914, to 269,673,770 gallons, valued at \$66,162,117 in 1918. Exports of gasoline, largely to Europe and Canada, increased from 151,611,537 gallons, valued at \$21,699,475 in 1914, to 260,880,122 gallons, valued at \$61,642,859 in 1918. Exports of all other naphthas (exclusive of gasoline) increased from 40,840,730 gallons, valued at \$5,653,210 in 1914 to 209,029,477 gallons, valued at \$52,739,227 in 1918. Exports of residuum decreased

from 113,370,245 gallons, valued at \$1,907,715 in 1914, to 881,875 gallons, valued at \$96,480 in 1918. Exports for the calendar years 1918-1921 are as follows:

	1918	1919	1920	1921 (9 months).
Mineral oil, crude:				
Quantity (gallons).....	205,829,030	248,821,453	337,883,081	282,713,392
Value.....	\$12,084,250	\$14,805,546	\$28,990,444	\$16,623,459
Mineral oil, refined or manufactured, fuel and gas:				
Quantity (gallons).....	1,200,750,319	584,849,605	827,594,250	665,747,675
Value.....	\$66,615,743	\$30,818,877	\$54,888,724	\$38,674,097
Illuminating oil:				
Quantity (gallons).....	491,109,815	979,155,147	870,665,033	532,771,294
Value.....	\$50,354,414	\$119,024,479	\$133,290,080	\$73,278,844
Lubricating oil—paraffin:				
Quantity (gallons).....	7,059,121	10,300,005	1,987,380	317,922
Value.....	\$1,454,327	\$1,795,612	\$847,695	\$136,374
All other lubricating oil:				
Quantity (gallons).....	250,258,132	264,495,161	400,134,079	195,044,813
Value.....	\$74,148,728	\$83,347,739	\$154,758,909	\$69,914,253
Gasoline:				
Quantity (gallons).....	351,967,164	259,783,919	395,384,262	207,370,236
Value.....	\$85,225,574	\$61,756,864	\$104,992,832	\$50,235,099
All other naphthas and light products of distillation:				
Quantity (gallons).....	207,401,691	112,349,038	245,925,485	196,103,040
Value.....	\$54,368,166	\$30,290,030	\$70,547,541	\$53,548,501
Residuum:				
Quantity (gallons).....	244,474	32,999,699	19,268,812	7,973,664
Value.....	\$14,298	\$1,834,285	\$1,040,987	\$157,813

*Important changes in classification.*—The phrase “and all products obtained from petroleum,” paragraph 561, act of 1913, has been changed to read “and all distillates obtained from petroleum,” so as not to include chemicals manufactured from petroleum. (Re-classification Report, p. 119.) Specific provision has been made for “fuel” petroleum.

#### PARAGRAPH 1628.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1628. Ores of gold, silver, or nickel, and nickel matte; ores of the platinum metals; sweepings of gold and silver.

ACT OF 1909.

ACT OF 1913.

PAR. 643. Ores of gold, silver, or nickel, and nickel matte; sweepings of gold and silver [Free].

PAR. 565. Ores of gold, silver, or nickel, and nickel matte; ores of the platinum metals; sweepings of gold and silver [Free].

#### ORES OF GOLD, SILVER, NICKEL, AND PLATINUM.

(See Surveys FL-20 and C-23.)

#### GOLD.

*Production.*—The recovered output from domestic ores and gravels in 1918 amounted to 3,320,784 fine ounces, valued at \$68,646,700, and in 1920, to 2,395,017 ounces, valued at \$49,509,400. The producing States number about 20, and extend throughout the country. In 1920 over one-half of the output was from California, Colorado,

and Alaska. Production has steadily declined since 1915, when it was 4,887,604 fine ounces, valued at \$101,035,700. Foreign production in 1917 was valued at \$339,839,500, nearly one-half from South Africa; Australasia, Russia (including Siberia), and Canada were the other large producers. Foreign output in 1918 was \$312,278,000.

*Imports* of gold and base bullion in 1914 were \$11,001,406, and in recent calendar years have been in value as follows: 1918, \$16,251,930; 1919, \$16,744,430; 1920, \$16,984,171; 1921 (9 months), \$30,935,441.

*Exports* of ore and base bullion (almost wholly to Canada) amounted to \$459,943 in 1914 and in recent calendar years have been as follows: 1918, \$206,674; 1919, \$20,719; 1920, \$11,260; 1921 (9 months), \$77,413.

## SILVER.

*Production.*—The recovered output from domestic ores and gravels in 1918 amounted to 67,810,139 fine ounces, valued at nearly \$1 per ounce. The producing States are widely distributed and number about 20; chief among these are Montana, Utah, Idaho, and Nevada. The production in 1918 was somewhat smaller than in preceding years. In 1920 the country's output was 56,564,504 ounces, valued at \$57,420,325. The total foreign output in 1917 was 92,252,300 fine ounces, produced chiefly in Mexico, Canada, and Peru. Foreign production in 1918 was 129,584,800 fine ounces.

*Imports* of silver in ore and base bullion in 1914 were \$11,439,423, and in later calendar years were as follows: 1918, \$44,877,920; 1919, \$74,073,332; 1920, \$69,845,999; 1921 (9 months), \$30,461,909.

*Exports* of silver in ore and base bullion amounted to \$136,721 in 1914 and for later calendar years have been as follows: 1918, \$18,248; 1919, \$6,693; 1920, \$16,522; 1921 (9 months), \$13,851.

## NICKEL ORE AND NICKEL MATTE.

*Description and uses.*—Nickel matte is the product of the smelting of nickel sulphide ores.

*Production.*—Nickel ore is not mined in this country, and but little nickel matte is produced. Canada is the largest producer, supplying more than one-half of the world's output. New Caledonia also has extensive deposits, which formerly dominated the nickel industry, but are now second in importance. Almost every country has workable deposits, but none so extensive as Canada and New Caledonia.

*Imports.*—In 1914 the nickel content of ore and matte (consisting almost exclusively of matte) was 43,532,278 pounds, valued at \$6,109,547. Imports in later calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Nickel ore:				
Quantity—				
Tons <sup>1</sup> .....		7, 878	917	
Pounds <sup>2</sup> .....		10, 431, 602	1, 541, 237	
Value.....		\$1, 959, 729	\$145, 723	
Nickel matte:				
Quantity—				
Tons <sup>1</sup> .....		15, 179	31, 733	1, 497
Pounds <sup>2</sup> .....		18, 871, 626	40, 044, 871	2, 023, 681
Value.....		\$3, 820, 651	\$8, 318, 149	\$432, 538

<sup>1</sup> Gross weight.<sup>2</sup> Nickel content.

In addition to this importation, ore and matte containing 73,193,205 pounds of nickel, valued at \$11,517,546, were imported in 1918. The bulk of this imported material came from Canada.

*Exports.*—Nickel ore and nickel matte are not exported. The exports of nickel and nickel oxide in 1914 amounted to 28,895,242 pounds, valued at \$9,403,709, and for later calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	17,469,500	3,810,656	1,215,232	425,439
Value.....	\$6,927,041	\$1,697,544	\$574,845	\$103,244

These exports have gone largely to Belgium, Japan, the United Kingdom, Switzerland, France, and Italy.

*Suggested changes.*—See General Note on Paragraph, page 1407.

#### ORES OF THE PLATINUM METALS.

*Description.*—In its native state platinum is invariably associated with small amounts of rhodium, osmium, iridium, palladium, iron, copper, or gold.

*Production.*—Statistics of production are either not available or are unreliable, because ores of platinum in the United States, produced primarily for their platinum content, are insignificant in quantity. In this country platinum is produced from placers and from the residue obtained in refining gold and silver bullion, and copper and nickel mattes. In 1918 the value of domestic platinum yield was estimated at \$5,452,900. Foreign platinum comes mainly from Russia and Colombia.

*Imports.*—Ores of platinum metals are entered according to their platinum content. The 1914 figures show imports amounting to 831 troy ounces, valued at \$30,341. Imports for later calendar years, largely from Colombia, have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (troy ounces).....	168	173	1,141	1,196
Value.....	\$10,559	\$15,868	\$114,149	\$76,090

*Exports.*—None recorded.

#### SWEEPINGS OF GOLD AND SILVER.

*Description and uses.*—Sweepings of gold and silver are chips of these metals from engraving, filing, turning, and polishing jewelry, and are invoiced as jeweler's sweeps. Particles of gold find their way to the floors of jewelry establishments, and are swept and saved until a sufficient quantity is obtained to warrant shipment to reduction plants. Their only use is conversion into metallic gold and silver.

*Production.*—No statistics.

*Import value* in 1914 was \$175,043. For the calendar years 1918–1921 imports have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....		350,801	543,888	482,022
Value.....	\$678,974	\$465,291	\$650,516	\$495,517

The leading contributing countries were Canada, Argentina, Brazil, and the United Kingdom.

*Exports.*—None reported.

#### GENERAL NOTE ON PARAGRAPH.

*Suggested changes.*—"Or" before "nickel," in line 20, page 192, might be changed to "and" to agree with the "and" before "silver" in line 21. Substitution of a semicolon for the comma before "nickel matte," and omission of "and" in line 20 would separate the matte from the ore.

#### PARAGRAPH 1629.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1629. Parchment and vellum.

ACT OF 1909.

ACT OF 1913.

PAR. 646. Parchment and vellum  
[Free].

PAR. 568. Parchment and vellum  
[Free].

#### PARCHMENT AND VELLUM.

(See Survey M-3.)

*Description and uses.*—Parchment is the skin of sheep, goats, calves, and other young animals prepared and polished with pumice stone to serve as a material for writing or drawing. Vellum is a fine grade of parchment formerly prepared only from calves, kids, and stillborn lambs, but now the term is applied to any fine grade of parchment. Before the art of paper making was perfected, parchment was one of the most important writing materials. Most ancient manuscripts are on parchment. At present parchment is used to a limited extent for the same purpose, especially for college diplomas, but it is also used in the manufacture of a number of small articles, such as bags, baskets, belts, card cases, pocketbooks, portfolios, and satchels.

*Production.*—No data available.

*Imports* of parchment and vellum in 1914 were valued at \$54,800; in later calendar years they have been valued as follows: 1918, \$17,425; 1919, \$49,583; 1920, \$144,113; 1921 (nine months), \$52,062.

*Exports.*—Not recorded.

## PARAGRAPH 1630.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1630. Pearl, mother of, and shells, not sawed, cut, flaked, polished, or otherwise manufactured, or advanced in value from the natural state.

ACT OF 1909.

ACT OF 1913.

PAR. 647. Pearl, mother of, and shells, not sawed, cut, polished, or otherwise manufactured, or advanced in value from the natural state [Free].

PAR. 570. Pearl, mother of, and shells, not sawed, cut, flaked, polished, or otherwise manufactured, or advanced in value from the natural state [Free].

MOTHER-OF-PEARL AND SHELLS, NOT SAWED, ETC.

(See Survey N-21.)

*Description and uses.*—Mother-of-pearl is the hard, pearly, internal layer of several kinds of shells, especially of pearl oysters, river mussels, and abalone shells. These shells are found in the greatest perfection on the coasts of Ceylon, in the Persian Gulf, and in the Australian seas. Shells of the mollusk have been found in the Mississippi River and tributary streams, and to a small extent in some other American rivers. Mother-of-pearl is used largely in the arts, particularly in inlaid work, knife-handles, and toys, and very largely for buttons.

*Production.*—Practically all domestic mother-of-pearl is derived from mussel shells in the Mississippi River and its tributaries, and in 1914 amounted to 8,539 tons of shells, valued at \$148,960.

*Imports* of mother-of-pearl in 1914 were valued at \$1,253,742, and of other shells not sawed, cut, flaked, polished, or otherwise manufactured, at \$572,423. Australia furnished between 50 and 60 per cent. Large amounts are also received from England, French Oceania, and Dutch East Indies. These countries, with the addition of Panama, which is an important source, furnish the greater part of the supply of other shell. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Mother-of-pearl:				
Quantity (pounds).....		5,772,977	7,629,951	2,191,780
Value.....	\$1,741,666	\$1,609,904	\$2,460,677	\$1,475,478
Other shells:				
Quantity (pounds).....		2,195,821	1,020,839	220,725
Value.....	\$286,900	\$494,528	\$272,663	\$61,333

*Exports* consist of the native fresh-water pearl shells, and in 1914 were valued at \$164,559. Germany was the leading purchaser. England, Canada, and France also took large quantities, and were the chief purchasers in later years. The total exports by calendar years were as follows: 1918, \$113,859; 1919, \$574,575; 1920, \$412,045; 1921 (nine months), \$206,586.

## PARAGRAPH 1631.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1631. Personal effects, not exceeding \$300 in value, not merchandise, of citizens of the United States dying in foreign countries.

## ACT OF 1909.

## ACT OF 1913.

PAR. 648. Personal effects, not merchandise, of citizens of the United States dying in foreign countries [Free].

PAR. 571. Personal effects, not merchandise, of citizens of the United States dying in foreign countries [Free].

## PERSONAL EFFECTS OF DECEASED CITIZENS.

*Imports* of personal effects of citizens of the United States dying in foreign countries are combined in the trade statistics with household furniture, wearing apparel, tools of trade, etc., of immigrants. In 1914 their value was \$5,019,950. More than half was from Canada, the remainder largely from England, France, and Germany. For later calendar years they were as follows: 1918, \$3,972,564; 1919, \$8,447,404; 1920, \$10,949,525; 1921 (nine months), \$6,264,609. With the exception of Germany, the countries from which these articles came were as above.

*Important changes in classification.*—The limitation to \$300 is new.

## PARAGRAPH 1632.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1632. Phosphates, crude, and apatite.

## ACT OF 1909.

## ACT OF 1913.

PAR. 651. Phosphates, crude [Free].

PAR. 574. Phosphates, crude [Free].

PAR. 495. Apatite [Free].

PAR. 401. Apatite [Free].

## PHOSPHATES, CRUDE.

(See Survey FL-5.)

*Description and uses.*—Crude phosphates are phosphate rocks consisting principally of calcium phosphate. They occur in rock formations of various forms, such as hard rock in beds between layers of sandstone, shale, or other sedimentary rocks; as pebbles in stream deposits; and as a residuum from the decomposition of phosphatic limestone and other rocks containing phosphates. Basic slag (par. 1576), obtained from the smelting of iron ore containing phosphorus, is extensively used as a fertilizer. Crude phosphate rock is used principally as a fertilizer either directly with no further treatment than grinding, or changed to the acid phosphate by treatment with sulphuric acid or by some other means.

*Production.*—The United States produces more crude phosphate than any other country, northern Africa (including Tunis, Algeria, and Egypt) ranking second. Florida yields the greater part of our output. The total domestic production for 1910-14, inclusive, averaged a little less than 3,000,000 long tons, but fell off somewhat during the war on account of decreasing exports to Europe. The output (phosphate rock sold) in 1918 was 2,490,760 long tons, valued at \$8,214,463; in 1919, 2,271,983 long tons, and in 1920, 4,103,982 long tons, valued at \$25,079,572.

*Imports* of crude phosphates have been less than 1 per cent of production and decreased from 23,551 long tons in 1914 to 6 tons in 1918. There were no imports during the calendar years 1918 and 1919; in 1920 there were 63 tons, valued at \$2,090 and for nine months of 1921, 3,535 tons, valued at \$43,960.

*Exports* amounted to 1,477,871 long tons, valued at \$10,617,835, in 1914, but sharply declined to 269,364 long tons, valued at \$1,742,697, in 1915. Later exports of phosphate rock by calendar years are shown as follows:

	1918	1919	1920	1921 (9 months).
High-grade hard rock:				
Quantity (tons).....	57,771	215,039	344,896	149,380
Value.....	\$445,419	\$2,261,852	\$4,496,457	\$2,160,799
Land pebble:				
Quantity (tons).....	64,559	128,860	693,355	405,195
Value.....	\$303,758	\$904,308	\$5,593,814	\$3,571,149
All other:				
Quantity (tons).....	21,125	34,832	31,461	3,831
Value.....	\$163,308	\$401,822	\$479,904	\$72,018

Exports of "high-grade hard rock" have been chiefly to Germany, Denmark, and Belgium, and of "land pebble" to England, Spain, and Scotland.

#### APATITE.

(See Survey FL-5.)

*Description and uses.*—Apatite is a naturally occurring crystalline mineral consisting of calcium phosphate combined with calcium fluoride, chloride, or carbonate, sold on a basis of 75 to 80 per cent of calcium phosphate. It is usually treated with sulphuric acid to form "superphosphate" for fertilizer purposes, but has certain objections which favor the use of other phosphate materials.

*Production.*—The chief deposits of apatite are located in Canada and Spain. Domestic production data are not available.

*Imports* of apatite in 1913 were 2,930 tons, valued at \$22,535. Data are not shown from 1914 to 1918 (fiscal years). Imports since 1918 have been small; the maximum was 142 tons in the calendar year 1920.

*Exports.*—Statistics not available.

## PARAGRAPH 1633.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1633. Plants, trees, shrubs, roots, seed cane, seeds, and other material for planting, imported by the Department of Agriculture or the United States Botanic Garden.

ACT OF 1909.

ACT OF 1913.

PAR. 652. Plants, trees, shrubs, roots, seed cane, and seeds, imported by the Department of Agriculture or the United States Botanic Garden [Free].

PAR. 577. Plants, trees, shrubs, roots, seed cane, and seeds, imported by the Department of Agriculture or the United States Botanic Garden [Free].

PLANTS, TREES, ETC., IMPORTED BY THE DEPARTMENT OF AGRICULTURE, ETC.

*Description and uses.*—The materials here included represent plants, trees, seeds, etc., brought in by the Government for experiment and study, and cover a wide range of plant material.

*Imports* of plants, trees, shrubs, roots, seed cane, and seeds were valued at \$32,000 in 1914, and at \$47,643 in 1915. Imports since 1917 by calendar years have been valued as follows: 1918, \$5,781; 1919, \$4,334; 1920, \$5,685; 1921 (nine months), \$7,554.

*Exports.*—None.

*Important changes in classification.*—This provision has been extended to "other material for planting."

## PARAGRAPH 1634.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1634. Platinum, unmanufactured or in ingots, bars, plates not less than one-eighth of one inch in thickness, sponge, or scrap.

ACT OF 1909.

ACT OF 1913.

PAR. 653. Platinum, unmanufactured or in ingots, bars, plates, \* \* \* sponge, or scrap, \* \* \* [Free].

PAR. 578. Platinum, unmanufactured or in ingots, bars, plates, \* \* \* sponge, or scrap, \* \* \* [Free].

PLATINUM.

(See Survey FL-20.)

*Description and uses.*—The crude mineral called platinum is frequently alloyed with iridium, rhodium palladium, and iron or other metals. In this country the metal is produced mainly from the residue obtained in refining gold and silver bullion and copper and nickel mattes. It is now of great industrial and military importance and is practically indispensable in the chemical industry. Some of its important uses are in the contact process of making concentrated sulphuric acid, in the delicate parts of the ignition system of inter-

nal-combustion engines, in instruments of precision, in photographic paper, in dentistry, and for jewelry.

*Production* of crude platinum was 450 troy ounces, valued at \$20,250, in 1914, and 710 troy ounces, valued at \$35,490, in 1916. California and southwestern Oregon are the principal sources in this country. The domestic output in 1914 was less than 1 per cent of total net imports of platinum and its manufactures. Known deposits do not indicate that the United States will ever produce a substantial part of the platinum supply. World production is small and steadily declining. In 1914 Russia produced 241,200 troy ounces, or 92.57 per cent of the world's total; Colombia, 17,500 troy ounces, or 6.72 per cent; all other countries, 1,848 troy ounces, or 0.71 per cent. In 1916 Russia supplied but 63,900 troy ounces, or 71.05 per cent; Colombia, 25,000 troy ounces, or 27.80 per cent; and all other countries, 1,032 ounces, or 1.15 per cent. The Russian output, even prior to the political disturbances in that country, was decreasing owing to the gradual exhaustion of the mines. In the United States the metal is derived largely from the residues obtained in the refining of gold, silver, copper, and nickel. Reports from refiners to the Geological Survey indicate a recovery from these sources of 36,015 troy ounces of the metal in 1920.

*Imports* of unmanufactured platinum were 38,953 troy ounces, valued at \$1,418,280, in 1914; 47,669 ounces, valued at \$4,245,334, in the fiscal year 1918. Imports of platinum manufactured into ingots, bars, plates, sheet and wire, sponge, or scrap were 54,932 ounces, valued at \$2,444,951, in 1914; 3,093 ounces, valued at \$261,906, in the fiscal year 1918. Imports of vases, retorts, and other apparatus, vessels and parts of, composed of platinum, for chemical uses were valued at \$82,000 in 1914 and at \$2,530 in the fiscal year 1918. Total imports of platinum and manufactures of platinum, including a small quantity of ore, were valued at \$3,982,708 in 1914, and at \$4,578,812 in the fiscal year 1918. In 1914 the chief sources of our unmanufactured platinum, in order, were Germany, Colombia, and the United Kingdom; in 1918, Colombia and Russia in Asia. More recently supplies have come mainly from Colombia, because of the fact that Russia, owing to her political situation, almost ceased production. Imports of the manufactured forms included under this designation were derived in 1914 from Germany, France, and the United Kingdom, but since the war the United Kingdom has been the main source. The statistics for the calendar years 1918-1921 are as follows:

	1918	1919	1920	1921 (9 months).
Platinum, unmanufactured:				
Quantity (ounces, troy).....	45,665	47,774	56,671	30,738
Value.....	\$4,134,181	\$4,540,485	\$5,936,719	\$2,035,638
Platinum, ingots, bars, plates, sheets, etc., sponge, and scrap:				
Quantity (ounces, troy).....	9,130	6,603	23,148	11,598
Value.....	\$805,015	\$672,956	\$2,423,631	\$822,636

Exports are small, and those of unmanufactured platinum amounted in 1914 to 273 troy ounces, valued at \$12,977. Practically all of this export went to Canada. Exports of manufactured platinum in 1914 were valued at \$71,172, of which about 75 per cent went to Canada. In later calendar years exports have been as follows:

	1918	1919	1920	1921 (9 months).
Platinum, unmanufactured:				
Quantity (troy ounces).....	119	610	1,302	3,172
Value.....	\$13,511	\$75,066	\$177,115	\$235,872
Platinum, manufactures of, (value).....	\$23,562	\$54,529	\$111,014	\$63,184

The unmanufactured platinum went largely to Canada, Japan, and the United Kingdom.

*Important changes in classification.*—In H. R. 7456 platinum unmanufactured or in ingots, bars, and plates, not less than one-eighth of an inch in thickness, sponge or scrap, are retained on the free list; but platinum one-eighth of an inch in thickness or less, and in the forms of sheets and wire and vases, retorts, and other apparatus, vessels and parts thereof, composed of platinum for chemical uses, are omitted from this paragraph and therefore transferred to the dutiable list.

*Suggested changes.*—“Sheets” are omitted.

Page 193, line 9, of H. R. 7456: Insert “or” between “bars” and “plates.”

Page 193, line 10, of H. R. 7456: Change “or” to “and” between “sponge” and “scrap.”

## PARAGRAPH 1635.

### H. R. 7456.

### SENATE AMENDMENTS.

PAR. 1635. Potassium chloride or muriate of potash, potassium sulphate, kainite, wood ashes and beet-root ashes, and all crude potash salts not specially provided for: *Provided*, That for a period of five years beginning on the day following the passage of this Act there shall be levied, collected, and paid, on the actual potash (potassium oxide) content of all the foregoing, a duty of 2½ cents per pound for the first two years; 2 cents per pound for the third year; 1½ cents per pound for the fourth year; and 1 cent per pound for the fifth year: *Provided further*, That thereafter the said potash content shall be free of duty.

### ACT OF 1909.

PAR. 655. Potash, crude, or “black salts;” \* \* \* sulphate of potash, crude or refined, and muriate of potash [Free].

PAR. 604. Kyanite, or cyanite, and kainite [Free].

PAR. 502. Ashes, wood and lye of, and beet-root ashes [Free].

### ACT OF 1913.

PAR. 580. Potash: Crude, or “black salts;” \* \* \* sulphate of; \* \* \* and muriate of [Free].

PAR. 525. Kyanite, or cyanite, and kainite [Free].

PAR. 407. Ashes, wood and lye, and beet-root ashes [Free].

## POTASSIUM CHLORIDE (MURIATE OF POTASH).

(See Survey A-16.)

*Description and uses.*—Potassium chloride is known commercially as muriate of potash. When pure it is a white crystalline solid readily soluble in water. It occurs as sylvite (or sylvine) and also as carnalite, a mixed chloride of potassium and magnesium, in the Stassfurt and other salt deposits of Europe. Large quantities are made from Stassfurt carnalite, and it is also obtained from kelp and the liquors left from the manufacture of salt from sea water. The chief use of the crude substance is as a fertilizer. It is also a crude material in the preparation of caustic potash and potassium chlorate by the electrolytic process.

*Production.*—Some potassium chloride has been produced here since the war. In 1918, 30,127 tons of the crude salt were obtained, and in addition 6,559 tons of low-grade potassium chloride.

*Imports* in 1914 were 234,855 tons, valued at \$7,925,781, decreasing to 606 tons in 1917 and to 596 tons in 1918. Previous to 1916 imports were almost entirely from Germany, in 1917 mostly from Japan and Scotland. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Tons.</i>		
1918.....	379	\$102,109	\$269.42
1919.....	20,716	1,783,916	86.11
1920.....	121,602	12,703,858	104.47
1921 (9 months).....	36,818	3,329,914	90.44

*Exports.*—Statistics not available.

*Important changes in classification.*—Provisos are new.

## POTASSIUM SULPHATE.

(See Survey A-16.)

*Description and uses.*—Potassium sulphate (pure) forms crystals which are soluble in water and have a bitter taste. It is used principally in the crude form as a fertilizer; also in making potassium carbonate by the Leblanc process, in potash alum, and by glassworks. It is manufactured largely from crude German potash salts; also by heating potassium chloride with sulphuric acid, hydrochloric acid being produced at the same time.

*Production* of sulphate of potash was 6,672 tons of the crude salt in 1918 and 4,882 tons in 1919.

*Imports.*—Formerly the supply came from Germany. Imports in 1914 were 45,139 tons, declining to 661 tons in 1917, mostly from Japan. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Tons.</i>		
1918.....	90	\$15,329	\$170.32
1919.....	1,263	188,592	149.32
1920.....	15,184	2,343,431	154.33
1921 (9 months).....	4,258	385,570	90.55

*Exports.*—Statistics not available.

*Important changes in classification.*—Provisos are new.

## KAINITE.

(See Survey A-16.)

*Description and uses.*—Kainite, a complex salt consisting of sulphate of potash, the sulphate and chloride of magnesia, and water of crystallization, is a natural mineral found abundantly in Europe. It is used in the crude state (ground) as a fertilizer.

*Production.*—All of the domestic supply is imported.

*Imports* of kainite have been almost entirely from Germany—in 1914, 526,112 tons, valued at \$2,579,619; in 1916 only 64 tons. Imports since 1918 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Tons.</i>		
1919.....	51,274	\$921,481	\$17.97
1920.....	372,019	8,212,621	22.08
1921 (9 months).....	53,589	1,349,122	25.18

*Exports.*—Statistics not available.

*Important changes in classification.*—Provisos are new.

## WOOD ASHES.

(See Survey A-16.)

*Description and uses.*—Wood ashes become of commercial importance only where there are extensive forests and large sawmills, where the wood waste is burned for fuel at the mills and the ashes are sold. Wood ashes are sometimes used directly as a fertilizer on account of their potash and phosphorus content. The lye obtained by leaching is strongly caustic. It is used in the making of soap or is boiled down and crude potash salts obtained. Beet-root ashes are also sometimes used as a fertilizer.

*Production.*—During the war there was a revival of the wood-ashes industry, owing to the shortage of potash. The output from this source in 1919 was 358 short tons of actual potash; valued at \$202,714.

*Imports* of wood ashes have varied in value from \$27,884 in 1914 to \$55,226 in 1917, and \$47,932 in 1918, since which time statistics are not available.

*Exports.*—Statistics not available.

*Important changes in classification.*—Provisos are new.

## PARAGRAPH 1636.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1636. Potassium cyanide.

ACT OF 1909.

ACT OF 1913.

PAR. 64. \* \* \* cyanide of potassium, twelve and one-half per centum ad valorem.

PAR. 580. Potash: \* \* \* cyanide of; \* \* \* [Free].

## POTASSIUM CYANIDE.

(See Survey A-18.)

*Description and uses.*—Potassium cyanide is a white crystalline solid, readily soluble in water, and extremely poisonous. Sodium cyanide, much cheaper and having a higher percentage of cyanide, has practically replaced potassium cyanide, which is made either by fusing potassium ferrocyanide with potassium carbonate and carbon, or by fusing cyanamid with potassium chloride and carbon. Its principal use is for the extraction of gold and silver from their ores; also for fumigation (notably that of citrus fruits), as a solvent for electroplating baths, and as a flux in assaying and metallurgy.

*Production.*—Separate figures are not available, but before the war the domestic output did not supply the demand. While imports were cut off, the demand was supplied by the production of sodium cyanide instead of potassium cyanide.

*Imports* prior to 1913 averaged more than 2,000,000 pounds (over 90 per cent coming from Germany), declining to a minimum of about 44,000 pounds in 1916. In 1917 the imports were mostly from Japan. Imports since 1917 are shown below:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	24,280	\$10,278	\$0.42
1919.....	1,176,345	68,848	.06
1920.....	14,448,887	1,088,247	.07
1921 (9 months).....	3,596,798	304,358	.08

*Exports.*—Statistics not available.

*Suggested changes.*—See Sodium cyanide, paragraph 1654, p. 1435.

## PARAGRAPH 1637.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1637: Professional books, implements, instruments, and tools of trade, occupation, or employment in the actual possession of persons emigrating to the United States owned and used by them abroad, not exceeding \$250 in value; but this exemption shall not be construed to include machinery or other articles imported for use in any manufacturing establishment, or for any other person or persons, or for sale, nor shall it be construed to include theatrical scenery, properties, and apparel; but such articles brought by proprietors or managers of theatrical exhibitions arriving from abroad, for temporary use by them in such exhibitions, and not for any other person, and not for sale, and which have been used by them abroad, shall be admitted free of duty under such regulations as the Secretary of the Treasury may prescribe; but

## H. R. 7456.

## SENATE AMENDMENTS.

bonds shall be given for the payment to the United States of such duties as may be imposed by law upon any and all such articles as shall not be exported within six months after such importation: *Provided*, That the Secretary of the Treasury may, in his discretion, extend such period for a further term of six months in case application shall be made therefor.

## ACT OF 1909.

PAR. 656. Professional books, implements, instruments, and tools of trade, occupation, or employment, in the actual possession at the time of arrival, of persons emigrating to the United States; but this exemption shall not be construed to include machinery or other articles imported for use in any manufacturing establishment, or for any other person or persons, or for sale, nor shall it be construed to include theatrical scenery, properties, and apparel; but such articles brought by proprietors or managers of theatrical exhibitions arriving from abroad, for temporary use by them in such exhibitions, and not for any other person, and not for sale, and which have been used by them abroad, shall be admitted free of duty under such regulations as the Secretary of the Treasury may prescribe; but bonds shall be given for the payment to the United States of such duties as may be imposed by law upon any and all such articles as shall not be exported within six months after such importation: *Provided*, That the Secretary of the Treasury may, in his discretion, extend such period for a further term of six months in case application shall be made therefor.

## ACT OF 1913.

PAR 582. Professional books, implements, instruments, and tools of trade, occupation, or employment in the actual possession of persons emigrating to the United States owned and used by them abroad; but this exemption shall not be construed to include machinery or other articles imported for use in any manufacturing establishment, or for any other person or persons, or for sale, nor shall it be construed to include theatrical scenery, properties, and apparel; but such articles brought by proprietors or managers of theatrical exhibitions arriving from abroad, for temporary use by them in such exhibitions, and not for any other person, and not for sale, and which have been used by them abroad, shall be admitted free of duty under such regulations as the Secretary of the Treasury may prescribe; but bonds shall be given for the payment to the United States of such duties as may be imposed by law upon any and all such articles as shall not be exported within six months after such importation: *Provided*, That the Secretary of the Treasury may, in his discretion, extend such period for a further term of six months in case application shall be made therefor.

## PROFESSIONAL BOOKS, IMPLEMENTS, ETC., OF IMMIGRANTS.

*Import statistics are combined with those for personal effects of citizens of the United States dying in foreign countries. They are shown under paragraph 1631, page 1409.*

*Important changes in classification.*—The limitation to \$250 is new.

## PARAGRAPH 1638.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1638. Pulu.

## ACT OF 1909.

## ACT OF 1913.

PAR. 657. Pulu [Free].

PAR. 583. Pulu [Free].

## PULU.

*Description and uses.*—Pulu, or vegetable silk, is the soft, elastic, hairlike, yellowish brown scale found on the upper part of the stem and at the base of the leaves (frond stalks) of a certain tree fern, which grows chiefly in the Hawaiian Islands. It is used for stuffing mattresses, cushions, etc., and is never spun.

*Imports.*—The only imports recorded since 1913 were in 1919, when they amounted to 24 tons, valued at \$4,920.

*Suggested changes.*—Pulu is a minor fiber and imports are so small that no reason is apparent for a separate paragraph. Without specific mention pulu would come within paragraph 1575, which provides for grasses and fibers not specially provided for.

---

 PARAGRAPH 1639.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1639. Quinine sulphate and all alkaloids and salts of alkaloids derived from cinchona bark.

ACT OF 1909.

ACT OF 1913.

PAR. 658. Quinia, sulphate of and all alkaloids or salts of cinchona bark [Free].

PAR. 584. Quinia, sulphate of, and all alkaloids or salts of cinchona bark [Free].

## QUININE AND OTHER CINCHONA ALKALOIDS.

(See Survey FL-2.)

*Description and uses.*—Quinine or quinia, the principal alkaloid of cinchona bark, is one of the most important medicinal articles. Quinine sulphate (sulphate of quinia) is the most widely used among some 50 salts of quinine. Other alkaloids in the bark are quinidine, cinchona, and cinchonidine. Recent extensive use in certain proprietary preparations has increased their importance.

*Production.*—Quinine is prepared from cinchona bark in Java, India, the principal European countries, and America. Java, the chief source, is a Dutch dependency, and exportation of cinchona bark is restricted to Holland. The processes of manufacture are varied, but generally the alkaloids are liberated by treating the ground bark with soda or lime and subsequently extracting with a suitable solvent. The details of the processes are guarded as trade secrets. Only two domestic firms manufacture quinine on a commercial scale, and statistics are not available. The total alkaloids in cinchona bark run from about 5 per cent to occasionally 7 per cent. The 10-year average import (3,444,008 pounds) would, therefore, be equivalent to about 2,750,000 ounces of alkaloids, of which 2,000,000 ounces may be reckoned as quinine. These figures may be somewhat in excess of the actual amount, for considerable quantities of cinchona bark are used for other purposes.

*Imports* of quinine for 1909–1918 averaged 1,855,193 ounces, valued at \$451,469, while imports of cinchonidine averaged 146,617 ounces,

valued at \$20,239. All other alkaloids and salts averaged 375,533 ounces, valued at \$80,890. Imports since 1917 are as follows:

Calendar year.	Quantity.	Value.	Unit value.
QUININE SULPHATE.			
	<i>Ounces.</i>		
1918.....	1,987,333	\$1,067,766	\$0.54
1919.....	2,299,285	1,426,912	.62
1920.....	3,605,521	2,421,961	.68
1921 (9 months).....	755,288	508,129	.67
CINCHONIDINE.			
1918.....	131,272	\$28,360	\$0.22
1919.....	35,000	15,290	.44
1920.....	122,032	42,093	.34
1921 (9 months).....	8,048	4,590	.57
ALL OTHER ALKALOIDS OF CINCHONA BARK.			
1918.....	320,889	\$197,810	\$0.62
1919.....	1,614,604	190,230	.12
1920.....	1,454,436	556,213	.28
1921 (9 months).....	1,293,270	174,150	.14

*Exports.*—Statistics not available.

*Important changes in classification.*—The phrase “derived from” has been inserted, as there are no “salts of cinchona bark” as provided for in paragraph 584, act of 1913. (Reclassification Report, p. 121.)

### PARAGRAPH 1640.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1640. Radium, and salts of, and radioactive substitutes.

ACT OF 1909.

ACT OF 1913.

PAR. 659. Radium [Free].

PAR. 585. Radium and salts of, radioactive substitutes \* \* \* [Free].

### RADIUM.

(See Survey FL-22.)

*Description and uses.*—Radium is a metallic element formed by the disintegration of uranium, and is therefore always present in minute amounts in uranium ores, the source of radium. The largest known deposits of uranium ore are in the United States. Radium is never employed as a metal, but always in the form of its compounds. The principal uses are in luminous paints, and for therapeutic purposes, especially the treatment of cancer. As the ratio of radium to uranium in any ore is only about 1 to 3,000,000, and as most uranium ores are low grade, the amount of radium that can be obtained from 1 ton of ore is extremely small. Uranium ore in sufficient quantity to be of commercial value occurs only in a few localities.

*Production.*—The United States produces more radium than all other countries combined. Data for separate years are difficult to

obtain; but domestic production in 1918 was between 21 and 22 grams in the form of salts of high purity. This was much the greatest production for any single year.

*Imports* were largest in 1914, valued at \$59,816, nearly 90 per cent from Germany. No imports are shown for 1918. Subsequent imports are combined with those of radioactive substances.

#### RADIOACTIVE SUBSTITUTES.

(See Survey FL-22.)

*Description and uses.*—The only known substitute for radium is mesothorium, obtained as a by-product in the manufacture of thorium nitrate. It can be very satisfactorily substituted for radium in luminous paints and to a limited extent therapeutically.

*Production* is quite small, but at least two companies have begun its preparation as a by-product in the manufacture of thorium nitrate for gas mantles. Data are as yet not available, but the production of mesothorium never can be very great.

*Imports* of radium, salts of, and radioactive substances since 1917 are shown below.

Calendar year.	Quantity.	Value.	Unit value.
	<i>Grains.</i>		
1918.....	10	\$274	\$27.40
1919.....	13	11,651	896.23
1921 (9 months).....	807	3,027	3.75

*Exports.*—Statistics are not available.

#### PARAGRAPH 1641.

##### H. R. 7456.

##### SENATE AMENDMENTS.

PAR. 1641. Rag pulp; paper stock, crude, of every description, including all grasses, fibers, rags, waste, including jute, hemp and flax waste, shavings, clippings, old paper, rope ends, waste rope, and waste bagging, and all other waste not specially provided for, including old gunny cloth, and old gunny bags, used chiefly for paper making, no longer suitable for bags.

##### ACT OF 1909.

PAR. 644. Paper stock, crude, of every description, including all grasses, fibers, rags (other than wool), waste, including jute waste, shavings, clippings, old paper, rope ends, waste rope, and waste bagging, and all other waste not specially provided for in this section, including old gunny cloth and old gunny bags, used chiefly for paper making [Free].

##### ACT OF 1913.

PAR. 566. Paper stock, crude, of every description, including all grasses, fibers, rags, waste, including jute, hemp and flax waste, shavings, clippings, old paper, rope ends, waste rope, and waste bagging, and all other waste not specially provided for in this section, including old gunny cloth and old gunny bags, used chiefly for paper making [Free].

PAR. 649. \* \* \* rag pulp [Free].

## RAG PULP.

(See Survey FL-38.)

*Description and uses.*—Rag pulp is essentially a mass of cellulose fibers obtained from rags. Before the process of manufacturing pulp from wood was discovered it was the most important raw material for manufacturing paper and is still important, especially for the better grades, such as bond, ledger, and writing paper, and even some of the higher grades of printing paper. The process of manufacturing rag pulp involves the collection, sorting, cleaning, and shredding of the rags. They are boiled with milk of lime or caustic soda and treated in a "rag engine" or "Hollander," after which the pulp is ready to be manufactured into paper.

*Production.*—The manufacture of rag pulp is not carried on as a separate industry. Paper manufacturers using rag pulp produce it as a part of the continuous process of paper making. Some idea of the importance of rag pulp may be gathered from the quantity and value of rags consumed, which in 1914 amounted to 361,667 tons, valued at \$12,151,288, or about 6.8 per cent of all paper stock consumed.

*Imports of rag pulp in 1918, calendar year, were 139,469 pounds, valued at \$1,557. In 1919 they were 262,987 pounds with a value of \$5,611. No later statistics are given.*

*Exports are not recorded.*

*Important changes in classification.*—In the act of 1913 rag pulp is admitted free of duty by paragraph 649 in connection with wood pulp of all kinds. In H. R. 7456 it is still admitted free of duty but is associated in paragraph 1641 with paper stock of all kinds.

## PAPER STOCK.

(See Survey M-4.)

*Description and uses.*—The tariff wording is self-explanatory. It is not possible to make a thorough differentiation according to the kinds of finished paper into which paper stock enters, for almost every kind of paper employs a great variety of raw materials.

The principal kind of grass used is esparto grass, imported from Spain and Algeria. This grass makes a high-grade, light, fluffy, book paper. It is little used in the United States, however, being consumed principally in the United Kingdom. Other kinds of grass, such as saw grass from Florida, are of minor importance. There is probably no grass in existence that could not be made into paper, if sufficient energy were expended on it; but most grasses yield too little cellulose to be commercially useful as paper-making material. "Fibers" is a general term applicable to anything of a fibrous texture. It should be emphasized, however, that except for some asbestos and negligible quantities of other fibers only vegetable fibers are used. Rags enter into almost all kinds of paper except newsprint, wrapping, and hanging paper, although certain grades of a great many other kinds of paper contain no rags. They are not always absent from the kinds of paper mentioned. The best rags are new linen cuttings, although new cotton cuttings make

an excellent quality of paper. New linen and cotton cuttings have their most important use in making the best qualities of writing, bond, and ledger paper. Old rags of light color which have been carefully sorted and cleaned are much used in making writing paper, book paper, tissue paper, and all sorts of specialties. Heavy, coarse, colored rags are one of the important constituents of sheathing paper, roofing felt, and other coarse, heavy papers, and are used to some extent in making paper boards. Woolen rags are not used. Waste of jute, hemp, and flax and waste bagging and gunny cloth are often employed to make a heavy, strong paper; for instance, manila wrapping paper. Old paper enters into paper of all kinds. Ninety per cent of paper boards are made of waste paper. A good deal is used in making building papers and felts and cheap wrapping paper. Waste paper is used, usually in small proportion, in making book paper and other papers of relatively high quality. Considerable quantities of straw are consumed in the manufacture of paper board, and also to some extent in making certain kinds of paper. Straw-board manufacture is in Holland a definitely developed industry.

*Production and consumption.*—There can hardly be said to be an industry producing paper stock. Paper stock is either a waste product or a by-product, except in certain minor instances. The principal processes in the preparation of paper stock are the concentration in central places of waste material from localities throughout the country, baling or bagging it, and transporting it to the consumer. In 1914 the following amounts of paper stock were consumed in the United States: Old or waste paper, 151,000 tons, valued at \$19,161,000; rags, 362,000 tons, valued at \$12,151,000; manila stock, 121,000 tons, valued at \$4,046,000; straw, 308,000 tons, valued at \$1,676,000.

*Imports* of these various fibers, grasses, and wastes amounted in 1914 to 294,121,145 pounds, valued at \$4,667,156. The chief sources are Germany, the United Kingdom, British India, Belgium, France. Imports for the calendar years 1918–1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Rags, other than woolen:				
Quantity (pounds).....	3,785,878	94,608,067	273,007,172	71,246,116
Value.....	\$142,574	\$3,180,767	\$9,719,968	\$1,353,863
Grasses, fibers, waste, including jute, hemp, etc.:				
Quantity (pounds).....	71,370,117	77,586,204	159,496,483	57,774,211
Value.....	\$1,996,690	\$2,623,934	\$6,783,558	\$1,342,325
Waste bagging, old gunny, cloth and gunny bags, waste of plain-woven fabrics of single jute yarn, etc.:				
Quantity (pounds).....	16,618,559	47,964,766	76,966,489	14,783,180
Value.....	\$623,148	\$1,374,383	\$2,008,170	\$224,883

*Exports* during the calendar years 1918–1921 were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	32,241,306	54,541,361	84,666,468	25,481,307
Value.....	\$670,342	\$1,533,013	\$2,718,929	\$494,102

*Important changes in classification.*—The words “no longer suitable for bags” have been added in order to prevent free importation of bags still usable as containers. The provision for “rags not otherwise specially provided for” (par. 586, act of 1913) has been omitted.

*Suggested changes.*—Page 195, line 4 of H. R. 7456: Insert “and” before “no”.

### PARAGRAPH 1642.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1642. Rennet, raw or prepared.

ACT OF 1909.

ACT OF 1913.

PAR. 662. Rennets, raw or prepared  
[Free].

PAR. 588. Rennets, raw or prepared  
[Free].

#### RENNET.

(See Survey FL-15.)

*Description and uses.*—The rennet extracts of commerce are preparations from the stomachs of unweaned calves (also of various other animals). Such extracts contain rennet in dilute and impure form. The chemical ferment contained in rennet is prepared in more concentrated state in the form of tablets or powders. Rennet is valuable because of its property of curdling milk, which makes possible the manufacture of many kinds of cheese.

*Production.*—Statistics not available.

*Imports* of rennet, raw and prepared, in 1918 were valued at \$62,173, one-half from Denmark, the rest from Sweden, Canada, and Spain. There was a considerable decrease during the war, the average value for 1911-1915 being \$114,809. Before the war Denmark was first and Germany second in exportation to this country. Imports after 1917 are shown as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$78,590	
1919.....	102,686	146,542	\$1.43
1920.....	213,532	141,266	.66
1921 (9 months).....	37,592	13,468	.35

*Exports.*—Statistics not available.

*Important changes in classification.*—“Rennet” and not “rennets” is the proper usage.

### PARAGRAPH 1643.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1643. Rice cleaned for use in the  
manufacture of canned foods.

ACT OF 1909.

ACT OF 1913.

[No corresponding provision.]

[No corresponding provision.]<sup>3</sup>

<sup>3</sup> Dutiable at 1 cent per pound, par. 9, emergency tariff act of 1921.

## RICE, CLEANED, ETC.

(See Survey G-5.)

*Description, uses, and production.*—It is asserted by some manufacturers of canned foods that domestic rices are not satisfactory for certain canned foods, notably soups, because of disintegration under high steam pressure, and that Patna rice, grown largely in the Province of Bengal, is the most desirable for this purpose. Since 1915, practically no Patna rice has been available and the best grades of domestic rice have been used.

*Imports* were not separately stated prior to the passage of the emergency tariff, act of May 27, 1921. Imports for consumption for the period May 27 to September 30, 1921, amounted to 5,612 pounds valued at \$234.

*Important changes in classification.*—Rice cleaned for use in the manufacture of canned foods was dutiable under par. 193 of the act of 1913 and is dutiable at 1 cent per pound under paragraph 9 of the emergency tariff act of May 27, 1921.

*Suggested changes.*—The provision, although primarily intended for Patna rice, gives free entry to any form of rice whether of good or poor quality. The term "canned foods" is a broad one. The provision might be replaced with "Patna rice," which is a definite commercial grade.

## PARAGRAPH 1644.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1644. Sago, crude, and sago flour.

ACT OF 1909.

ACT OF 1913.

PAR. 664. Sago, crude, and sago flour  
[Free].PAR. 590. Sago, crude, and sago flour  
[Free].

## SAGO.

(See Survey G-33.)

*Description and uses.*—The sago is a tropical palm plant produced chiefly in the East Indies. It is not grown in the United States. From the pith of the stem is obtained crude sago, which is further manufactured into sago flour and "pearl sago." Sago flour is made by grating and then kneading over a strainer the pithy trunk of the sago. If the dough or paste is worked through sieves and allowed to fall on hot plates, pearl sago is formed. The sago flour is used for sizing, filling, and finishing textiles, while the "pearl sago" is used almost entirely for food purposes in desserts and specialty dishes. Uses of sago are almost identical with those of tapioca flour.

*Imports* of sago and sago flour in 1914, mostly from the Straits Settlements and the Dutch East Indies, were 9,970,717 pounds, valued at \$160,924. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	18,393,647	2,900,936	4,812,018	3,021,709
Value.....	\$593,762	\$169,198	\$243,709	\$73,176

In 1920, 80 per cent of the imports of farinaceous substances came from the Dutch East Indies.

### PARAGRAPH 1645.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1645. Sea herring and tuna, fresh, frozen, or packed in ice.

ACT OF 1909.

ACT OF 1913.

PAR. 272. \* \* \* herrings, fresh, one-fourth of one cent per pound; \* \* \*.

PAR. 483. \* \* \* all other fish not otherwise specially provided for in this section [Free].

PAR. 273. Fish, fresh, \* \* \* frozen, packed in ice \* \* \* three-fourths of one cent per pound \* \* \*.

### SEA HERRING AND TUNA.

*Description and uses.*—About 90 per cent of the sea herring that form the raw material of the Maine sardine industry is taken in Canadian waters by Canadian fishermen. A large part of the tuna caught in Mexican waters is used in the tuna canning industry of southern California. The domestic output of canned tuna ranks next to canned salmon in quantity and value.

*Production statistics* are not available.

*Imports of herring, fresh, frozen, or packed in ice,* amounted in 1913 to 1,327,723 pounds, valued at \$37,718.

Imports of tuna come only from Mexico; they are included in statistics for "all other fish, fresh, frozen, or packed in ice." Later calendar year statistics for imports of herring follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	9,770,251	5,627,719	8,019,514	4,579,851
Value.....	\$278,520	\$122,874	\$158,591	\$105,102

*Exports.*—Not separately stated.

*Important changes in classification.*—A new provision. The term "sea herring" has been employed to differentiate the salt-water herring (sea herring) from the so-called "Lake herring," the name inappropriately applied to ciscoes, caught in the Great Lakes.

## PARAGRAPH 1646.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1646. Selenium, and salts of.

## ACT OF 1909.

## ACT OF 1913.

PAR. 480. \* \* \* articles manufactured, in whole or in part, not provided for in this section \* \* \* twenty per centum ad valorem.

PAR. 585. \* \* \* selenium and salts of [Free].

PAR. 3. \* \* \* chemical \* \* \* salts \* \* \* twenty-five per centum ad valorem; \* \* \*.

## SELENIUM AND SALTS OF SELENIUM.

(See Survey FL-22.)

*Description and uses.*—Selenium is an element with properties similar to sulphur and usually occurs in copper ores; production is as a by-product of the electrolytic refining of copper. Selenium appears on the market as a black or red amorphous powder, and during 1918 sold for \$2.75 to \$3.75 per pound. Its chief use is as a decolorizer for glass and also, as a substitute for manganese compounds, in the manufacture of ruby glass. The various salts and compounds of selenium are of no commercial importance.

*Production* since 1916 is given below:

	1917	1918	1919	1920
Quantity (pounds).....	39,630	103,694	60,025	92,141
Value.....	\$70,000	\$206,540	\$125,966	\$175,508

If the market conditions warranted, the domestic production could be greatly increased.

*Imports* of selenium and its salts in 1914 were valued at \$372; of this amount 97 per cent came from Germany. The value was \$59 in 1915, \$302 in 1916, and \$2,236 in 1917. Imports in the calendar years since 1918 have been small—114 pounds, valued at \$239, in 1919, and 1,106 pounds, valued at \$2,099, in the first nine months of 1921.

*Exports.*—Statistics not available.

*Important changes in classification.*—Selenium and salts have been given a separate paragraph.

## PARAGRAPH 1647.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1647. Sheep dip.

## ACT OF 1909.

## ACT OF 1913.

PAR. 669. Sheep dip [Free].

PAR. 596. Sheep dip [Free].

## SHEEP DIP.

(See Survey FL-8.)

*Description and uses.*—"Sheep dip" is the term used for materials applied to cattle, and in which sheep are dipped to destroy parasites and vermin, such as ticks and lice, or to cure skin diseases, such as scabies. The principal kinds of sheep dip are (1) lime-sulphur solution, which consists of lime combined chemically with sulphur in the form of a polysulphide, for scabies, and, the same materials mixed with arsenical solution, for sheep ticks; (2) nicotine or nicotine sulphate, a by-product of the tobacco industry, made by extracting the nicotine from the stems, etc., and when mixed with lime-sulphur solution, employed for scabies, lice, and ticks; (3) creosote oil (dip oil), obtained from coal tar, and containing from 20 to 25 per cent tar acids mixed with rosin soap, for scabies, lice, and ticks; (4) arsenical dips, mixtures of arsenious sulphide, sodium arsenite, and sulphur, for ticks and other vermin; (5) cresylic acid dip, containing about 50 per cent cresylic acid and a suitable oil, such as linseed or soya-bean oil.

*Import values of sheep dip during 1908-1918 averaged \$22,802. Later imports have been as follows:*

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$22,538	
1919.....	146,803	12,346	\$0.08
1920.....	70,168	5,150	.07
1921 (9 months).....	59,340	8,596	.15

*Exports.*—Statistics not available.

## PARAGRAPH 1648.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1648. Shotgun barrels, in single tubes, forged, rough bored.

ACT OF 1909.

ACT OF 1913.

PAR. 670. Shotgun barrels, in single tubes, forged, rough bored [Free].

PAR. 597. Shotgun barrels, in single tubes, forged, rough bored [Free].

SHOTGUN BARRELS, SINGLE TUBES, FORGED AND ROUGH BORED.

(See Survey C-14.)

*Production.*—No statistics.

*Imports of shotgun barrels in single tubes, forged and rough bored, in 1917 were valued at \$39. In 1914 they aggregated \$171,198 in value, of which amount \$163,861 came from Belgium. Later statistics for calendar years have been as follows:*

	1919	1920	1921 (9 months).
Number.....	30,667	168,202	6,666
Value.....	\$37,863	\$155,034	\$8,184

*Exports.*—None reported.

*Suggested changes.*—Gun-barrel molds not in bars, a cruder form than barrels and single tubes, forged, rough bored, are dutiable under paragraph 304 of H. R. 7456.

---

### PARAGRAPH 1649.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1649. Shrimps, lobsters, and other shellfish, fresh, frozen, packed in ice, or prepared or preserved in any manner, and not specially provided for.

ACT OF 1909.

ACT OF 1913.

PAR. 671. Shrimps and other shellfish [Free].

PAR. 598. Shrimps, lobsters, and other shellfish [Free].

### SHRIMPS, LOBSTERS, AND OTHER SHELLFISH.

*Description and uses.*—Included under "other shellfish" are oysters, crabs, clams, scallops, squid, abalone, crawfish, and others of little importance. This paragraph also includes prepared and canned shellfish, not specially provided for.

*Production* of shellfish amounted to 444,024,000 pounds, valued at \$22,218,000, in 1908 (latest figures available for entire country). The most valuable single product of the world's fisheries, the oyster, in the yield of which America is far in the lead, constituted 52 per cent of the shellfish caught in 1908, and 71 per cent of the total value. In that year 46,593,000 pounds of oysters were used for canning, the product being valued at \$3,428,000. About 70 per cent of the oysters were gathered in Maryland, Virginia, Connecticut, Louisiana, New York, and New Jersey, while about 85 per cent of the canned product was reported by Louisiana, Mississippi, Maryland, South Carolina, and Georgia. In 1908 lobsters represented 3 per cent in amount and 9 per cent in value of the shellfish catch; shrimp, 4 per cent and 2 per cent; crabs, 12 per cent and 4 per cent; and clams, 4 per cent and 9 per cent. Maine reported 65 per cent of the lobster catch; Massachusetts, 16 per cent; and Rhode Island, 9 per cent. The canning of lobster has disappeared under restrictive legislation necessitated by the very rapid diminution of the supply. In 1919 a total of 717,636 cases of oysters, valued at \$3,510,119, were canned in the United States. The canned shrimp product in 1919 amounted to 322,076 cases, valued at \$1,864,793, and canned clams to 157,843 cases, valued at \$772,870.

*Imports* of shrimps, lobsters, and other shellfish in 1914 were valued at \$2,408,377 and in 1920 at \$6,345,233. In 1920 imports of crab meat were 30 per cent of the total; of canned lobsters, 24 per cent; of lobsters, all other, 45 per cent; and of shrimps and other shellfish, 1.3 per cent. Practically all the lobsters came from Canada, and the crab meat from Japan. About 90 per cent of the shrimp and other shellfish were from Japan, Canada, Hongkong, and Mexico. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Lobsters, canned:				
Quantity (pounds).....	2,491,123	1,687,137	3,224,761	1,321,825
Value.....	\$1,009,545	\$1,058,418	\$2,231,627	\$925,633
Lobsters, all other (except canned):				
Quantity (pounds).....	4,517,546	5,636,059	6,193,180	7,350,233
Value.....	\$808,712	\$974,312	\$1,115,898	\$1,169,633
Shrimp and other shellfish and turtles, value..	\$461,128	\$749,388	\$831,640	\$539,107

Export values of shellfish increased from \$989,860 in 1914 to \$1,970,171 in 1920; of oysters, from \$666,432 in 1914 to \$871,072 in 1920. "All other shellfish" represent the remainder. About 60 per cent of the oysters went to Canada, while Australia, Argentina, England, and Mexico also took considerable amounts. The United Kingdom's oyster imports declined during the war from about 25 per cent to less than 1 per cent of our exports.

Exports of shellfish for the calendar years 1918-1921 were valued as follows:

	1918	1919	1920	1921 (9 months).
Oysters.....	\$413,203	\$665,694	\$871,072	\$363,897
All other shellfish (except oysters).....	1,006,681	1,207,694	1,099,099	518,580

*Important changes in classification.*—"Fresh, frozen, packed in ice, or prepared or preserved in any manner, and not specially provided for," is an addition. "Not specially provided for" was inserted to exclude "crab meat," which is provided for in paragraph 722.

### PARAGRAPH 1650.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1650. Silk cocoons and silk waste.

ACT OF 1909.

ACT OF 1913.

PAR. 673. Silk cocoons and silk waste [Free].

PAR. 599. Silk cocoons and silk waste [Free].

### SILK COCOONS.

(See Survey L-1.)

*Description and use.*—The silk cocoon is the envelope of slender silk filament spun by the silkworm around its own body. Both raw silk (par. 1651) and waste silk are obtained from the cocoon.

*Production.*—There is no cocoon production here. (See par. 1651, p. 1430). Imports, except those which are occasionally made for scientific purposes, are of pierced or imperfect cocoons unfit for reeling (par. 600) and of value only as silk waste.

Imports, in the fiscal year 1914, were 1,413 pounds, valued at \$1,118. Later imports for calendar years are recorded as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	160,118	852,474	239,298	76,843
Value.....	\$218,152	\$486,636	\$314,737	\$68,891

## SILK WASTE.

(See Survey L-1.)

*Description and use.*—Silk waste comprises those pierced or imperfect cocoons, and parts, such as the outer and inner layers, which can not be reeled; also “mill” wastes created in throwing and weaving raw silk. It is used almost wholly in making spun silk yarn (see par. 1202, p. 1011). Under this paragraph come also exhausted noils—that is, short waste silk left over after dressing, or dressing and combing, and which are too short [two inches is taken as the dividing line (Abstract 39083, of 1916) between exhausted and long noils, the latter covered by paragraph 1201], to be redressed or combed. They are employed in making noil yarn on mule spindles for use in wool and silk mixtures and in time of war in making cartridge-bag cloth.

*Production.*—The only domestic production is that which consists of mill waste, mostly a by-product of throwing, sometimes estimated as one-eighth the quantity of waste imported.

*Imports,* exclusive of cocoons given above, rose from 5,960,109 pounds, valued at \$3,102,892, in 1914, to 8,552,168 pounds, valued at \$7,148,276 in the fiscal year 1918. Imports for the calendar years 1918–1921 were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	15,602,445	9,795,083	9,378,939	3,994,996
Value.....	\$13,610,865	\$12,033,647	\$15,714,446	\$3,600,858

The extraordinarily large import in the calendar year 1918 was due to the war demand for silk to be used in making cartridge-bag cloth. The large import since that time bespeaks the notable expansion of the spun-silk industry since 1914. The principal source of waste silk now is China, with Japan a close second. The import from France, which until 1912 was the chief source, is small. Our supplies from Europe are derived chiefly from Italy.

*Exports* are not recorded.

---

 PARAGRAPH 1651.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1651. Silk, raw, in skeins reeled from the cocoon, or rereeled, but not wound, doubled, twisted, or advanced in manufacture in any way.

## ACT OF 1909.

## ACT OF 1913.

PAR. 672. Silk, raw, in skeins reeled from the cocoon, or rereeled, but not wound, doubled, twisted, or advanced in manufacture in any way [Free].

PAR. 600. Silk, raw, in skeins reeled from the cocoon, or rereeled, but not wound, doubled, twisted, or advanced in manufacture in any way [Free].

## RAW SILK.

(See Survey I-1.)

*Description and uses.*—Raw silk denotes those silk filaments reeled from the cocoon into skeins, and those which have been rereeled. The bulk of silk fabrics and articles is made from raw silk, which is woven directly into fabrics or “thrown” (twisted) into yarn and then woven, knitted, or braided to make fabrics and articles.

*Production.*—Raw silk is not produced on a commercial scale in the United States. For centuries attempts have been made to produce silk in America, but without permanent success. The raising of cocoons and the reeling of silk require, even under the most advanced methods, a prohibitive amount of tedious work by hand. Even in France, with its cheaper labor, the production of raw silk is declining, notwithstanding Government subsidies; and the still cheaper labor of Italy is falling against oriental competition. Japan and China, with abundance of the cheapest hand labor, are the principal producers.

*Imports.*—The United States is the largest manufacturer of silk and as this industry expands, imports of raw silk increase. Imports in the fiscal year 1914 were 28,825,828 pounds, valued at \$97,844,150. Imports for the calendar years 1918–1921 are as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	32,939,823	44,872,633	30,080,129	32,978,206
Value.....	\$180,513,311	\$329,354,385	\$285,007,474	\$183,064,594

Japan is the main source, followed by China. Imports from European countries are small.

*Exports* are nil as silk is not raised here.

## PARAGRAPH 1652.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1652. Skeletons and other preparations of anatomy.

## ACT OF 1909.

## ACT OF 1913.

PAR. 675. Skeletons and other preparations of anatomy [Free].

PAR. 602. Skeletons and other preparations of anatomy [Free].

## SKELETONS, ETC.

*Imports* of skeletons and other preparations of anatomy in 1914 were valued at \$15,958, and for later calendar years as follows: 1918, \$3,229; 1919, \$4,291; 1920, \$6,701; 1921 (9 months), \$9,957.

*Exports* not shown in official statistics.

## PARAGRAPH 1653.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1653. Skins of all kinds, raw, and hides not specially provided for.

## ACT OF 1909.

PAR. 676. Skins of all kinds, raw (except sheepskins with the wool on), and hides not specially provided for in this section [Free].

## ACT OF 1913.

PAR. 603. Skins of hares, rabbits, dogs, goats, and sheep, undressed [Free].

PAR. 604. Skins of all kinds, raw, and hides not specially provided for in this section [Free].

## SKINS, RAW, AND HIDES N. S. P. F.

(See Survey FL-19.)

*Description and uses.*—The principal products embraced in this paragraph are the pelts of the calf, sheep, buffalo, goat, horse, colt, ass, kangaroo, and deer. Calfskins are used chiefly for shoe uppers, upholstery, case, bag, and strap leathers, and, to some extent, for bookbinding and light leathers. Sheepskins are used for shoe linings, gloves, and fancy leathers; goatskins, for shoe uppers, glove, book-binding, and fancy leathers; and buffalo hides, to make heavy sole leather. Horsehide serves for shoe uppers and heavy glove leather, and coltskin for shoe uppers. Kangaroo skins are used for fine shoe upper leather and deerskins for shoe uppers, glove, and piano-action leather. More of these skins are used in shoes than for any other one purpose. The imported hides and skins are divided into two classes—"dry" and "green or pickled." Pelts taken off in localities remote from favorable means of transportation and in warm climates, often have to be dried to reduce the weight and to prevent deterioration. A 12-pound "dry" hide equals a 25-pound "green or pickled," hide. They must be softened again, however, for tanning.

*Production* here is about 50 per cent of the calfskins used in domestic tanneries; about 25 per cent of the sheepskins; a very few goatskins, horsehides, and deerskins; and practically no buffalo or kangaroo skins.

*Imports.*—Russia was the greatest source of supply for hides and skins before the war. Reexports from Europe were large, colonies or protectorates sending them through home countries. The war closed many of these routes and imports from South America, Africa, and Asia increased enormously. Of dry calfskin, in 1913 Russia in Europe supplied \$8,000,000 worth, more than one-half the imports. In 1913 Germany was the leading source of green or pickled calfskins, but European Russia, the Netherlands, France, and Canada were also important, with a total value of \$11,202,956. Of dry goat-skins British India was the chief source; of dry sheepskins, European Russia and England; and of green or pickled sheepskins, England.

Other principal imports of hides and skins were: Buffalo hides, principally from British India, valued at \$2,790,009 in 1913; horse, colt, and ass skins in 1913 valued at \$2,234,581, principally from Russia in Europe, and kangaroo skins, almost always exclusively from Australia, valued at \$719,188 in 1913.

Later statistics for calendar years for raw skins of all kinds and hides n. s. p. f. are shown as follows:

Hides and skins.	1918	1919	1920	1921 (9 months).
Buffalo, dry (12 pounds and over):				
Quantity (pounds).....	5,779,483	15,619,738	9,483,786	1,682,540
Value.....	\$1,537,182	\$3,463,457	\$2,721,204	\$315,919
Buffalo, green or pickled (25 pounds or over):				
Quantity (pounds).....	1,393,463	1,892,149	1,759,648	102,313
Value.....	\$380,961	\$511,966	\$502,186	\$29,448
Calf, dry:				
Quantity (pounds).....	5,383,279	42,325,180	16,902,653	9,430,950
Value.....	\$2,175,470	\$20,914,313	\$9,979,730	\$2,383,926
Calf, green or pickled:				
Quantity (pounds).....	2,093,402	22,230,341	18,229,633	28,647,784
Value.....	\$717,367	\$12,738,819	\$9,270,931	\$5,966,419
Goat, dry:				
Quantity (pounds).....	53,458,173	111,133,387	69,869,332	39,411,904
Value.....	\$28,626,610	\$85,827,011	\$82,410,287	\$15,429,291
Goat, green or pickled:				
Quantity (pounds).....	9,057,918	22,522,563	10,335,304	4,540,036
Value.....	\$1,865,306	\$9,729,448	\$6,229,955	\$722,474
Horse, colt, and ass, dry:				
Quantity (pounds).....	868,742	15,973,766	5,043,439	554,092
Value.....	\$183,003	\$3,633,399	\$1,619,774	\$74,856
Horse, colt, and ass, green or pickled:				
Quantity (pounds).....	4,128,814	12,077,113	11,802,968	2,848,240
Value.....	\$536,682	\$3,612,468	\$2,635,555	\$245,909
Sheep, dry:				
Quantity (pounds).....	21,549,713	43,560,327	29,832,904	11,647,179
Value.....	\$7,517,651	\$21,288,088	\$17,395,159	\$2,797,158
Sheep, green or pickled:				
Quantity (pounds).....	31,422,331	41,471,500	52,857,541	22,829,835
Value.....	\$10,047,914	\$15,232,461	\$20,800,980	\$3,452,908
All other: <sup>1</sup>				
Quantity (pounds).....	5,444,532	8,538,477	8,386,335	3,143,710
Value.....	\$2,269,884	\$3,962,201	\$4,720,305	\$888,277
Total hides and skins (including cattle hides and fish skins):				
Quantity (pounds).....	361,232,399	744,689,828	510,156,545	268,962,272
Value.....	\$107,822,657	\$306,502,092	\$243,769,410	\$51,414,072

<sup>1</sup> Except those listed and cattle hides and fish skins.

Of the total imports of all hides and skins in 1920, including cattle hides, Argentina shipped 20 per cent, British India 14 per cent, China 12 per cent, Australia, New Zealand, and British South Africa 10 per cent, and Brazil 8 per cent.

Exports of hides and skins are comparatively small, as we draw on foreign countries for large quantities of raw material for our tanneries. Statistics for the calendar years 1918-1921 follow:

	1918	1919	1920	1921 (9 months).
Calfskins:				
Quantity (pounds).....	2,213,293	4,654,335	1,139,633	4,191,902
Value.....	\$866,512	\$3,217,625	\$679,698	\$874,704
Horsehides:				
Quantity (pounds).....	51,471	467,420	655,017	112,131
Value.....	\$13,864	\$135,176	\$142,706	\$12,614
All other hides and skins:				
Quantity (pounds).....	499,148	2,805,964	4,121,781	3,316,368
Value.....	\$215,493	\$1,252,164	\$1,619,340	\$511,601

In 1920, 85 per cent of the exports of calfskins and 80 per cent of the exports of horsehides were to Canada. Exports of other hides and skins were to France (32 per cent), England (17 per cent), and Canada (16 per cent).

*Important changes in classification.*—Paragraph 603 of the act of 1913 for skins of hares, rabbits, dogs, goats, and sheep, undressed, is merged in this paragraph with paragraph 604.

*Suggested changes.*—It is suggested that if hides and skins be retained on the free list, paragraph 1582 be combined with this paragraph, as follows: "Skins of all kinds, raw, and hides, raw, uncured, or undressed, or dried, salted or pickled, all the foregoing not specially provided for."

### PARAGRAPH 1654.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1654. Sodium: Cyanide, nitrate, sulphate, crude, or salt cake, and niter cake.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 3. \* \* \* chemical compounds, mixtures and salts \* \* \* twenty-five per centum ad valorem; \* \* \*.

PAR. 677. Soda, nitrate of, or cubic nitrate [Free].

PAR. 77. Sulphate of soda, or salt cake, or niter cake, one dollar per ton.

PAR. 605. Soda, \* \* \* cyanide of, sulphate of, crude, or salt cake and niter cake, \* \* \* nitrate of, or cubic nitrate [Free].

### SODIUM CYANIDE.

(See Survey A-18.)

*Description and uses.*—Cyanide of soda, or sodium cyanide, is a salt of prussic acid, and, taken internally, is very poisonous. It has largely replaced the potassium salt, because cheaper. It is used in the "cyanide process" of extracting precious metals from their ores; in fumigating citrus fruit, raw imported cotton, and grain elevators; in electroplating, especially with gold and silver; and in case-hardening of iron. For fumigating purposes sodium cyanide is on the market in the shape of an egg weighing 1 ounce; the trade name is "Cyanegg."

*Production.*—Cyanide of soda is produced by the Castner process from metallic sodium, ammonia, and coke; and also by fusing cyanamid (par. 1540) and salt. Prior to 1917 all of the cyanide produced here was by the Castner process, and the output was controlled by a single firm.

*Imports* were 6,063,659 pounds, valued at \$934,354 in 1915. Imports since 1917 chiefly from Germany, England and Czecho-Slovakia, have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	69,279	\$12,615	\$0.18
1919.....	5,174,831	305,426	.06
1920.....	7,500,495	1,091,443	.14
1921 (9 months).....	6,489,406	633,219	.10

*Exports.*—Statistics not available.

*Suggested changes.*—It has been represented to the Tariff Commission that it would be advisable to classify all cyanides under one paragraph. This suggestion has also been made by a domestic manufacturer during hearings before the Senate Finance Committee. (See pp. 1109-1118, hearings before Committee on Finance, Tariff Schedule 1, H. R. 7456.) The various cyanides are used for practically the same purposes. It is their cyanogen (CN) content, and not their metal content, which is of importance to the consumer. Therefore, this classification is logical. If the committee desires to adopt this suggestion, the following paragraph will accomplish the purpose:

Cyanides: Potassium cyanide, sodium cyanide, all other cyanide salts, and all combinations and mixtures of cyanides, — per centum ad valorem.

If this paragraph is inserted in H. R. 7456, the provisions for potassium cyanide in paragraph 1636 and for sodium cyanide in this paragraph should be omitted. In view of the widely varying prices of different cyanide compounds, it is believed that they will be best covered by an ad valorem duty. The percentage of cyanogen in the compounds varies greatly according to the process of manufacture. A crude sodium cyanide made from calcium cyanamid contains between 40 and 50 per cent of sodium cyanide, whereas purer grades contain 95 to 98 per cent sodium cyanide.

#### NITRATE OF SODA.

(See Survey A-18.)

*Description and uses.*—Nitrate of soda, cubic nitrate or Chilean saltpeter, when pure is a white crystalline salt readily soluble in water. The commercial product, of grayish-white color, is of two qualities (1) a fertilizer grade, which contains from 91 to 95 per cent of sodium nitrate corresponding to about 15 per cent of nitrogen; (2) a refined grade, with 96 to 97 per cent of sodium nitrate, used in the manufacture of nitric acid and other chemicals. Normally the larger part is consumed in fertilizer, but during the war the chief use was for explosives.

*Production.*—The only natural deposits of nitrate of soda of commercial importance are in Chile, whose output since 1910 approximated 3,000,000 tons annually, temporarily declining to about 1,000,000 in 1915. The Chilean Government levies an export duty of \$11.19 per ton, from which it derives more than \$32,000,000 per year, or over 50 per cent of its total revenue. Prior to the war over 80 per cent went to Great Britain, Germany, and the United States; Great Britain received annually about 1,000,000 tons. During the war virtually all of the Chilean nitrate was sold to the British and United States Governments.

*Imports* prior to 1916 were between 500,000 and 600,000 long tons per year. During 1916 and 1917 over 1,000,000 tons were imported each year. In 1918 all imports came from Chile. Those since 1917 are as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Tons.</i>		
1918.....	1,847,660	\$90,216,935	\$48.83
1919.....	407,559	19,558,963	47.99
1920.....	1,321,892	63,121,035	47.75
1921 (9 months).....	344,929	16,463,000	47.73

*Exports.*—Statistics not available.

*Important changes in classification.*—"Cubic nitrate," used in connection with sodium nitrate, has been omitted.

#### SODIUM SULPHATE CRUDE, OR SALT CAKE AND NITER CAKE.

(See Survey A-18.)

*Description and uses.*—Salt cake, sulphate of soda, crude, is the impure sodium salt of sulphuric acid, and is obtained chiefly by chemical processes. It is used in the manufacture of inferior grades of glass, especially bottles, and for the manufacture of sodium sulphide, Glauber salt, and ultramarine. In Europe, salt cake is used in making soda ash by the Leblanc process. Niter cake is a by-product in the manufacture of nitric acid (sodium nitrate-sulphuric acid process). It consists chiefly of sodium acid sulphate, with a varying amount of sodium sulphate and free sulphuric acid and other impurities, and was used as a substitute for sulphuric acid during the war for such purposes as acidifying soap stock, acid wash, regenerating plaster, acidifying phosphate fertilizers, bleaching paper pulp, preparing muriatic acid, recovering grease, removing oxide and scale from steel and for any other purposes where a weak mineral acid is required.

*Production.*—Salt cake is obtained (1) from natural deposits or brine lakes, (2) as a by-product in the manufacture of muriatic acid, and (3) in Europe by the Hargreaves-Robinson process using salt, sulphur dioxide, air, and steam. In 1914 over 110,000 short tons of salt cake were produced here. Niter cake is obtained as a by-product in the manufacture of nitric acid from nitrate of soda. The demand for nitric acid during the war multiplied the production of niter cake many times.

Production of salt cake and niter cake in 1919 and 1920 was as follows:

	Salt cake.	Niter cake.
1919—Quantity (short tons).....	129,042	83,402
Value.....	\$2,019,460	\$271,424
1920—Quantity (short tons).....	178,770	308,638
Value.....	\$2,049,102	788,544

*Imports* of sulphate of crude soda, or salt cake, and niter cake since 1911 have been unimportant.

*Exports*.—Statistics not available.

*Suggested changes*.—Transpose "crude" and "sulphate" and strike out the comma after "crude" and "sulphate" so that the paragraph will read:

Sodium: Cyanide, nitrate, crude sulphate or salt cake, and niter cake.

---

PARAGRAPH 1655.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1655. Specimens of natural history, botany, and mineralogy, when imported for scientific public collections, and not for sale.

ACT OF 1909.

ACT OF 1913.

PAR. 678. Specimens of natural history, botany, and mineralogy, when imported for scientific public collections, and not for sale [Free].

PAR. 607. Specimens of natural history, botany, and mineralogy, when imported for scientific public collections, and not for sale [Free].

SPECIMENS OF NATURAL HISTORY, ETC.

*Imports* of specimens of natural history, botany, and mineralogy in 1914, mainly from Germany, Canada, England, and the Netherlands, were valued at \$47,524. Imports for later calendar years have been as follows: 1918, \$35,539; 1919, \$52,775; 1920, \$86,577; 1921 (9 months), \$37,980.

*Exports* of specimens of minerals in 1914, mostly to Germany and England, were valued at \$39,496; in 1915, mainly to France, England, and Canada, at \$49,800. Specimens of natural history, valued at \$14,075, went largely to Germany, England, Belgium, and Canada in 1914. Similar exports in 1915, chiefly to England and Canada, were valued at \$9,057. No data for 1918 or later years are available.

---

PARAGRAPH 1656.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1656. Spunk.

ACT OF 1909.

ACT OF 1913.

PAR. 680. Spunk [Free].

PAR. 608. Spunk [Free].

SPUNK.

(See Survey N-8.)

*Description and uses*.—Spunk is a kind of tinder made from a species of fungus found on old trees. It is also called punk, amadou, black match, pyrotechnical sponge, and German tinder.

*Production* data are not available.

*Imports* are negligible. They amounted to \$377 in 1912, the highest since 1908. In 1920 (calendar year) their value was \$54; in 1919, \$101; and in 1918, \$12.

*Exports*.—None recorded.

*Suggested changes in classification*.—This provision for “spunk” and the provision for “joss stick and joss light” (par. 1593, p. 1340) have been the subject of considerable litigation. Both paragraphs might be eliminated and the commodities relegated to the paragraph for unenumerated articles, to avoid confusion with articles such as firecracker-lighters, and mosquito and incense sticks.

PARAGRAPH 1657.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1657. Spurs and stilts used in the manufacture of earthen, porcelain, or stone ware.

ACT OF 1909.

ACT OF 1913.

PAR. 681. Spurs and stilts used in the manufacture of earthen, porcelain, and stone ware [Free].

PAR. 609. Spurs and stilts used in the manufacture of earthen, porcelain, and stone ware [Free].

SPURS.

*Description and uses*.—Spurs (also called stilts) are small pieces of refractory clay ware employed to support articles while they are being fired or baked in a saggar. A saggar, or segger, is a pot or case of fire clay used to inclose fine or delicate ware when placed in the kiln. The spur prevents the pieces from adhering to each other or to the pot.

*Imports* of spurs and stilts in 1914 were valued at \$1,599. Later statistics for the calendar years 1918–1921 follow:

	1918	1919	1920	1921 (9 months)
Number.....		1,800	193,828	475,822
Value.....	\$1,094	\$88	\$1,858	\$2,975

*Exports*.—None recorded.

PARAGRAPH 1658.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1658. Stamps: Foreign postage or revenue stamps, canceled or uncanceled, and foreign government stamped post cards bearing no other printing than the official imprint thereon.

ACT OF 1909.

ACT OF 1913.

PAR. 682. Stamps; foreign postage or revenue stamps, canceled or uncanceled, and foreign government stamped post cards bearing no other printing than the official imprint thereon [Free].

PAR. 610. Stamps: Foreign postage or revenue stamps, canceled or uncanceled, and foreign government stamped post cards bearing no other printing than the official imprint thereon [Free].

## STAMPS, ETC.

*Description and uses.*—Foreign postage and revenue stamps and foreign post cards are imported in considerable quantities for collectors. For the most part these stamps are canceled and have no value for mailing purposes. Nevertheless, they have a commercial value because of the demand by collectors, which value is independent of the denomination of the stamp and is based on its rarity.

*Production.*—Foreign stamps and post cards are presumably not produced in the United States.

*Imports* in 1914 were valued at \$73,156. About one half of these came from England, the rest largely from Switzerland and Germany. Imports in the calendar years 1918-1921 have been valued as follows: 1918, \$13,338; 1919, \$47,232; 1920, \$231,922; 1921 (nine months), \$155,786.

*Exports.*—None recorded.

---

PARAGRAPH 1659.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1659. Standard newsprint paper:  
*Provided*, That whenever the President shall ascertain as a fact that any country, dependency, province, or other subdivision of government forbids or restricts in any way (whether by law, order, regulation, contractual relation, or otherwise, directly or indirectly) the exportation of, or imposes any export duty, export license fee, or other export charge of any kind whatever, either directly or indirectly (whether in the form of additional charge or license fee, or otherwise), upon printing paper, wood pulp, or wood for use in the manufacture of wood pulp, he may by proclamation declare such ascertainment setting forth the facts; whereupon, and until said proclamation shall be revoked, there shall be levied, collected, and paid upon standard newsprint paper, when imported either directly or indirectly from such country, dependency, province, or other subdivision of government, a duty of 10 per centum ad valorem, and, in addition thereto, an amount equal to the highest export duty or other export charge imposed by such country, dependency, province, or other subdivision of government, upon either an equal amount of printing paper or an amount of wood pulp or wood for use in the manufacture of wood pulp necessary to manufacture such printing paper.

## ACT OF 1909.

PAR. 409. Printing paper (other than paper commercially known as handmade or machine handmade paper, japan paper, and imitation japan paper by whatever name known), unsized, sized, or glued, suitable for the printing of books and newspapers, but not for covers or bindings, not specially provided for in this section, valued at not above two and one-fourth cents per pound, three-sixteenths of one cent per pound; valued above two and one-fourth cents and not above two and one-half cents per pound, three-tenths of one cent per pound; \* \* \* *Provided, however,* That if any country, dependency, province, or other subdivision of government shall forbid or restrict in any way the exportation of (whether by law, order, regulation, contractual relation, or otherwise, directly or indirectly) or impose any export duty, export license fee, or other export charge of any kind whatsoever (whether in the form of additional charge or license fee or otherwise) upon printing paper, wood pulp, or wood for use in the manufacture of wood pulp, there shall be imposed upon printing paper when imported either directly or indirectly from such country, dependency, province, or other subdivision of government, an additional duty of one-tenth of one cent per pound when valued at three cents per pound, or less, and in addition thereto the amount of such export duty or other export charge imposed by such country, dependency, province, or other subdivision of government, upon printing paper, wood pulp, or wood for use in the manufacture of wood pulp.

## ACT OF 1913.

PAR. 567. Printing paper (other than paper commercially known as handmade or machine handmade paper, japan paper, and imitation japan paper by whatever name known), unsized, sized, or glued, suitable for the printing of books and newspapers, but not for covers or bindings, not specially provided for in this section, valued at not above  $2\frac{1}{2}$  cents per pound, \* \* \* [Free].

## NEWSPRINT PAPER.

(See Survey M-2)

*Description and uses.*—See paragraph 1301, page 1045.

*Production* in 1914 was 1,313,284 short tons, valued at \$52,942,774, and in 1919, 1,324,000 short tons, valued at \$98,560,000. The chief centers of the industry are found in the Northeastern and Lake States. In 1914 the distribution by percentage was as follows: New York, 37; Maine, 26; Wisconsin, 10; Minnesota, 8; all other States, 19. The chief problem confronting the industry is the problem of raw material. The depletion of pulp-wood forests is causing increased dependence upon importations of pulp wood or wood pulp. The year 1920 was noteworthy as the year of the alleged "newsprint famine," yet, according to figures collected by the Federal Trade Commission production exceeded that of 1919 by 137,451 short tons, and imports, as shown below, exceeded those of 1919 by 101,952 short tons, while exports were less than those of 1919 by

14,378 short tons. Total consumption, therefore, exceeded that of 1919 by 453,781 short tons.

Imports of newsprint in 1914 were 278,071 short tons; valued at \$10,765,108. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months)-
Quantity (pounds).....	1,193,034,042	1,255,782,140	1,459,687,393	1,125,405,412
Value.....	\$35,023,092	\$43,685,109	\$68,598,505	\$61,067,054

Under the act of 1913 printing papers were classified for tariff purposes as (1) printing paper valued at not more than  $2\frac{1}{2}$  cents per pound, and (2) printing paper valued at more than  $2\frac{1}{2}$  cents per pound. By the act of September 8, 1916, the dividing line was changed from  $2\frac{1}{2}$  cents to 5 cents and by the act of April 23, 1920, from 5 cents to 8 cents. This division by price corresponds roughly with the division into newsprint and book paper and is made the basis of the above table.

The ratio of imports to total domestic production increased from 11 per cent in 1913 to 48 per cent in 1920. Up to 1920 from 98 per cent to more than 99 per cent came from Canada, or from Canada, Newfoundland, and Labrador. Small amounts came from Norway and Sweden. Beginning with 1920 there have been increasing percentages from European countries—specifically Norway, Sweden, Finland, and Germany. For the first 10 months of 1921 the percentage from Canada was reduced to 83.1. For the same period the percentage from Germany was 5.4; from Finland, 3.0; from Norway, 2.5; from Sweden, 5.3; and from all other countries, 0.7. Because of the increasing demand for newsprint and the depletion of the pulp-wood forests we are becoming increasingly dependent upon importation for our supply of newsprint paper.

Exports of newsprint in 1914 were 44,483 short tons, valued at \$2,177,483. Exports for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	193,477,853	220,535,014	91,777,916	26,533,636
Value.....	\$7,978,296	\$10,091,951	\$5,970,127	\$1,830,763

Export trade in newsprint, which in 1919 amounted to 8 per cent of domestic production, fell off to 3 per cent in 1920 and the decrease continued in 1921.

*Important changes in classification.*—See paragraphs 1301 and 1610, pages 1046 and 1372.

## PARAGRAPH 1660.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1660. Statuary and casts of sculpture for use as models or for art educational purposes only; regalia and gems, where specially imported in good faith for the use and by order of any society incorporated or established solely for religious, philosophical, educational, scientific, or literary purposes, or for the encouragement of the fine arts, or for the use and by order of any college, academy, school, seminary of learning, orphan asylum, or public hospital in the United States, or any State or public library, and not for sale, subject to such regulations as the Secretary of the Treasury shall prescribe; but the term "regalia" as herein used shall be held to embrace only such insignia of rank or office or emblems as may be worn upon the person or borne in the hand during public exercises of the society or institution, and shall not include articles of furniture or fixtures, or of regular wearing apparel, nor personal property of individuals.

## ACT OF 1909.

## ACT OF 1913.

PAR. 661. Statuary and casts of sculpture for use as models or for art educational purposes only; regalia and gems, where specially imported in good faith for the use and by order of any society incorporated or established solely for religious, philosophical, educational, scientific, or literary purposes, or for the encouragement of the fine arts, or for the use and by order of any college, academy, school, seminary of learning, orphan asylum, or public hospital in the United States, or any State or public library, and not for sale, subject to such regulations as the Secretary of the Treasury shall prescribe; but the term "regalia" as herein used shall be held to embrace only such insignia of rank or office or emblems as may be worn upon the person or borne in the hand during public exercises of the society or institution, and shall not include articles of furniture or fixtures, or of regular wearing apparel, nor personal property of individuals [Free].

PAR. 611. Statuary and casts of sculpture for use as models or for art educational purposes only; regalia and gems, where specially imported in good faith for the use and by order of any society incorporated or established solely for religious, philosophical, educational, scientific, or literary purposes, or for the encouragement of the fine arts, or for the use and by order of any college, academy, school, seminary of learning, orphan asylum, or public hospital in the United States, or any State or public library, and not for sale, subject to such regulations as the Secretary of the Treasury shall prescribe; but the term "regalia" as herein used shall be held to embrace only such insignia of rank or office or emblems as may be worn upon the person or borne in the hand during public exercises of the society or institution, and shall not include articles of furniture or fixtures, or of regular wearing apparel, nor personal property of individuals [Free].

## STATUARY, ETC., FOR USE AS MODELS; REGALIA, GEMS, ETC.

(See Survey N-24.)

*Imports* of statuary and casts of sculpture for use as models, etc., in 1914 were valued at \$442,844. Later imports by calendar years have been as follows: 1918, \$99,822; 1919, \$238,840; 1920, \$307,652; 1921 (nine months), \$365,624.

*Exports* of all works of art are shown under paragraph 1447, page 1196.

## PARAGRAPH 1661.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1661. Stone and sand: Burrstone in blocks, rough or unmanufactured; quartzite; rottenstone tripoli, and sand, crude or manufactured; cliff stone, freestone, granite, and sandstone, unmanufactured, and not suitable for use as monumental or building stone; all of the foregoing not specially provided for.

ACT OF 1909.

PAR. 683. Stone and sand: Burrstone in blocks, rough or unmanufactured; cliff stone, unmanufactured; rotten stone, tripoli, and sand, crude or manufactured, not otherwise provided for in this section [Free].

ACT OF 1913.

PAR. 614. Stone and sand: Burrstone in blocks, rough or unmanufactured; rotten stone, tripoli, and sand, crude or manufactured; cliff stone, freestone, granite, sandstone, \* \* \* unmanufactured, and not suitable for use as monumental or building stone; all of the foregoing not specially provided for in this section [Free].

## BURRSTONE.

(See Survey B-3 and par. 234, p. 349.)

*Imports* under this classification by calendar years amounted to: 1918, \$17,370; 1919, 81 tons, valued at \$8,996; 1920, 114 tons, valued at \$9,007; and in 1921 (9 months), 67 tons, valued at \$3,075.

## QUARTZITE.

*Description and uses.*—Quartzite is a sandstone which by the deposit of crystalline quartz between its grains has been compacted into a solid quartz rock. As distinguished from sandstones, quartzites are free from pores and have a smooth fracture. Quartzite blocks may be used in tube mills for crushing and grinding ores, cements, and for other metallurgical and chemical processes. They are too hard and splintery to be used as building stones to any large extent.

*Production.*—Statistics are not given separately for quartzite. In the following table are shown total domestic sales of quartz including vein quartz, pegmatite, and quartzite.

	1918	1919	1920
Quantity (short tons).....	71,740	63,332	68,190
Value.....	\$259,330	\$373,571	\$320,350

*Imports and exports.*—None separately recorded.

*Important changes in classification.*—The provision for quartzite is new.

## ROTTENSTONE AND TRIPOLI.

(See Survey B-3.)

*Description and uses.*—Rottenstone is a siliceous stone, the residue of a siliceous limestone whose calcareous matter has been removed by the solvent action of water. The term tripoli designates two products similar in properties, uses, and chemical composition, but

different in geological origin; the name being applied to: (1) A light, white or yellowish, porous, and generally purely siliceous rock which has resulted from the leaching of the calcareous matter from very siliceous limestone or highly calcareous cherts, and is therefore synonymous with rottenstone; (2) diatomaceous earth or kieselguhr. A deposit of a fine, white, siliceous powder composed chiefly or wholly of the remains of diatoms or minute aquatic plants, occurs in Tripoli, and enters the trade as tripoli or tripolite. These materials are usually loose and powdery, but in some cases are more or less firmly coherent. They are used chiefly as an abrasive for polishing purposes, scouring soaps, and soap powders; as absorbents, chiefly for nitroglycerin in making dynamite; as a filtering medium, packing material, and heat insulating material.

*Production.*—Illinois has been the chief producer of tripoli, although the output of eastern States (Pennsylvania, for example) is higher priced, and is sold for polishing preparations. Western States lead in the output of diatomaceous earth. Statistics of production are given in the following table:

	Tripoli.		Diatomaceous earth.	
	Quantity.	Value.	Quantity.	Value.
	<i>Short tons.</i>		<i>Short tons.</i>	
1914.....	17, 218	\$142, 428	11, 012	\$109, 899
1918.....	1 19, 982	1 199, 854	2 2, 965	2 24, 947
1919.....	1 24, 292	1 181, 541	42, 642	531, 960
1920.....	1 40, 233	1 569, 677	61, 922	1, 079, 693

<sup>1</sup> Ground and otherwise prepared.

<sup>2</sup> Excludes California product used for filters and as insulating and fireproofing material.

*Imports* of tripoli and rottenstone increased in value from \$20,004 in 1914 to \$37,573 in 1916, but decreased to \$14,551 in 1918. They have been chiefly from England, Canada, and Germany. Later statistics for calendar years follow:

	1919	1920	1921 (9 months).
<b>Tripoli:</b>			
Quantity (tons).....	412	305	208
Value.....	\$10, 620	\$7, 720	\$5, 675
<b>Rottenstone:</b>			
Quantity (tons).....	21	526	39
Value.....	\$1, 925	\$8, 603	\$2, 365

#### SAND, CRUDE OR MANUFACTURED.

(See Survey B-7.)

*Description and uses.*—Besides familiar uses, sand is employed as an abrasive in sand blasting, in making glass, and to form molds in casting iron and steel.

*Production* of sand and gravel increased from 66,846,959 tons, valued at \$21,158,583 in 1911, to 82,041,388 short tons, valued at \$65,661,605 in 1920.

The following table gives kinds, quantities, and values of sand produced in 1914 and 1920:

	1914		1920	
	Quantity.	Value.	Quantity.	Value.
	<i>Short tons.</i>		<i>Short tons.</i>	
Glass sand.....	1,619,649	\$1,568,030	2,165,926	\$4,748,690
Moulding sand.....	2,751,209	1,756,383	5,128,075	7,504,759
Building sand.....	24,003,962	7,988,774	26,539,365	17,956,635
Grinding and polishing sand.....	1,084,871	652,388	1,132,810	2,037,079
Fire or furnace sand.....	318,560	187,467	400,953	724,456
Engine sand.....	1,262,790	307,548	1,754,897	1,435,163
Paving sand.....	3,580,171	1,121,999	5,920,328	1,050,952
Filter sand.....			83,983	106,320
Other sands.....	3,331,236	782,773	649,805	634,560
Railroad ballast.....	2,116,429	322,740	9,081,815	2,887,573
Gravel.....	39,212,858	9,398,897	29,183,431	23,575,418
Total.....	79,281,735	23,846,999	82,041,388	65,661,605

<sup>1</sup> Railroad ballast sand.

<sup>2</sup> Exclusive of railroad ballast.

*Imports* of sand in 1918 were valued at \$135,140, and were chiefly from Canada. Later statistics for calendar years 1919-1921 follow:

	1919	1920	1921 (9 months).
Quantity (tons).....	533,465	1,995,254	558,597
Value.....	\$126,586	\$912,282	\$592,852

*Exports* of sand and gravel increased from \$132,221 in 1915, to \$552,409 in 1918, 90 per cent or more going to Canada. In 1920 (calendar year) the value was \$669,945.

#### CLIFFSTONE UNMANUFACTURED, ETC.

*Description and uses.*—This is a hard chalk, used to some extent in the manufacture of paint, paper, and rubber, and as a filler on wood.

*Imports* in 1914 were 9,079 tons, valued at \$11,046; in 1918, 5,306 tons, valued at \$10,293; in 1919 (calendar year), \$17,447, and in 1920, \$13,334.

#### FREESTONE AND SANDSTONE UNMANUFACTURED, ETC.

(See Survey B-11 and par. 235, p. 350.)

#### GRANITE UNMANUFACTURED, ETC.

(See Survey B-11 and par. 235, p. 352.)

*Imports* in 1914 were valued at \$24,134, and in 1918 at \$4,400, including all freestone, sandstone, granite, and limestone unmanufactured and unsuitable for building or monumental use. In 1920 (calendar year) they were valued at \$97,199.

*Exports* of all unmanufactured stone (including marble) averaged annually, for the fiscal years 1914-1918, about \$500,000. For the calendar years 1918-1921 they have been as follows: 1918, \$552,261; 1919, \$770,392; 1920, \$774,442; 1921 (nine months), \$425,614.

## PARAGRAPH 1662.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1662. Strontianite or mineral strontium carbonate and celestite or mineral strontium sulphate.

ACT OF 1909.

ACT OF 1913.

PAR. 685. Strontia, \* \* \* and strontianite, or mineral carbonate of strontia [Free].

PAR. 615. Strontia, \* \* \* and strontianite or mineral carbonate of strontia [Free].

## STRONTIANITE AND CELESTITE.

(See Survey FL-22.)

*Description and uses.*—Strontianite, the natural carbonate of strontium, is of little commercial value; it is a rare mineral not generally found in deposits of commercial size. The more abundant ore and the one more used is celestite, the natural sulphate of strontium. Before 1915 very little strontium ore was used here, most of the compounds consumed being imported. With the war, there was an increased demand for strontium salts to be used in signal lights and this, combined with the embargo placed by England on all strontium compounds, compelled their domestic manufacture. Strontium compounds are used principally in red lights (the nitrate) and in the refining of beet sugar (the hydrate), and are employed to some extent in medicine.

*Production.*—In 1916 the domestic output of strontium ore was 250 short tons, not all marketed; in 1917, approximately 4,035 tons, over 70 per cent of consumption. Most of this was celestite. In 1918 the production was 400 tons of strontianite, but no celestite was produced, and in 1919 and 1920 none was recorded. The Western States are the principal producers.

*Imports* listed as "strontia, oxide of, protoxides of strontian, and strontianite or mineral carbonate of strontia" in 1913 were valued at \$474; in 1915, at \$7,268; in 1917, at \$21,184. Imports of salts of strontium in 1914 were 1,834,733 pounds of the nitrate, 55,134 pounds of the carbonate, 16,189 pounds of precipitated sulphate, and smaller amounts of other salts. Imports since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$2,459	
1919.....	1,225,952	3,380	\$0.003
1920.....	1,659,083	15,479	.003
1921 (9 months).....	1,212,758	4,393	.004

*Exports.*—Statistics not available.

*Important changes in classification.*—"Strontium" is substituted for "strontia," and "protoxides of strontian" is omitted. Celestite, or mineral strontium sulphate, is specifically mentioned for the first time.

## PARAGRAPH 1663.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1663. Sulphur in any form, and sulphur ore, such as pyrites or sulphuret of iron in its natural state, and spent oxide of iron, containing more than 25 per centum of sulphur.

ACT OF 1909.

PAR. 686. Sulphur, lac or precipitated, and sulphur or brimstone, crude, in bulk, sulphur ore as pyrites, or sulphuret of iron in its natural state, containing in excess of twenty-five per centum of sulphur, and sulphur not otherwise provided for in this section [Free].

PAR. 81. Sulphur, refined or sublimed, or flowers of, four dollars per ton.

ACT OF 1913.

PAR. 617. Sulphur in any form, brimstone, and sulphur ore as pyrites, or sulphuret of iron in its natural state, containing in excess of 25 per centum of sulphur [Free].

## SULPHUR.

(See Survey FL-18.)

*Description and uses.*—Sulphur or brimstone is a free chemical element found in the vicinity of volcanoes, active and extinct; it also occurs in nature in chemical combination with other elements, the most important compounds being the sulphides of iron, copper, lead, and zinc. Crude sulphur as mined in the United States is often 99 per cent pure. It is used chiefly in the production of sulphur dioxide, which in turn is used for digesting wood pulp, the manufacture of sulphuric acid, the bleaching of silk and straw, the preservation of beverages and foods, and the manufacture of sodium sulphite and bisulphite. Sulphur also serves to vulcanize rubber, in the manufacture of matches, carbon disulphide, sodium thiosulphate, and other chemicals; in the vulcanization of corn and linseed oils, for combating fungus diseases of plants, and in making lime-sulphur solution for spraying trees and for sheep dip.

*Production.*—The leading producers are the United States, Italy, Japan, and Chile, in order. The domestic output of sulphur increased from 327,634 long tons in 1914 to about 1,350,000 tons in 1918, owing to the large demand for sulphuric acid, which could not be supplied by either imported or domestic pyrites, previously used as the raw material. The large deposits in Louisiana and Texas, discovered in 1865, became commercial sources in 1903. The substance is mined in the United States by sinking a pipe to the deposits and forcing superheated water through another pipe to melt the sulphur, which is forced to the surface in liquid condition through the first pipe. This comparatively cheap method (reported by the Federal Trade Commission as costing about \$6 per ton in 1917), places the industry of this country in a dominant position.

The sulphur mined and shipped in the United States since 1914 is shown below:

Year.	Mined.	Shipped.	Approximate value.
	<i>Long tons.</i>	<i>Long tons.</i>	
1914.....	417,690	341,985	\$6,214,000
1915.....	520,582	293,803	4,959,000
1916.....	649,683	766,835	12,246,000
1917.....	1,134,412	1,120,378	23,987,000
1918.....	1,353,525	1,236,709	27,868,000
1919.....	1,190,575	678,257	10,252,000
1920.....	1,255,249	1,517,625	30,000,000

*Imports* since the development of the domestic industry have been small. Since 1917 they have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
SULPHUR, LAC, OR PRECIPITATED.			
	<i>Pounds.</i>		
1918.....	48,712	\$7,850	\$0.16
1919.....	54,268	6,621	.12
1920.....	93,889	22,576	.24
1921 (9 months).....	17,757	2,412	.....

SULPHUR, REFINED.

	<i>Tons.</i>		
1919.....	50	\$15	.....
1920.....	35	2,530	\$50.00
1921 (9 months).....	35	2,311	.....

SULPHUR, CRUDE.

1918.....	55	\$1,692	\$30.76
1919.....	79	1,997	25.28
1920.....	46	1,722	37.43
1921 (9 months).....	2	113	.....

*Exports* of sulphur, chiefly to Canada, increased from 45,595 long tons, valued at \$864,808 in 1910, to 177,548 long tons, valued at \$3,595,512 in 1917. Exports of crude sulphur for the calendar years 1918-1921 have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (tons).....	131,092	224,712	477,450	211,540
Value.....	\$3,626,638	\$6,325,552	\$8,994,350	\$3,368,315

Canada, France, and Australia are the principal markets for sulphur from this country.

## PYRITES.

(See Survey FL-18.)

*Description and uses.*—The term “pyrites” generally refers to disulphide of iron, but more recently it has been used to designate a variety of sulphide minerals. Ordinary grades of “pyrites or sulphuret of iron” contain from 43 to 48 per cent of sulphur. An ore containing less than 35 per cent is seldom used for making sulphuric acid, as it will not support its own combustion. Commercial transactions in pyrites are based on a unit, 1 per cent of sulphur per ton of ore. The chief use of pyrites is for the manufacture of sulphuric acid. Prior to the war about 1,250,000 tons were consumed here annually.

*Production.*—Spain and Portugal possess the largest deposits, supplying about 75 per cent of the total consumption. Spanish ore, especially from the Rio Tinto mines (the important Spanish mines are controlled by French and English capital), has long been considered the best for manufacturing sulphuric acid; its pyrites contains about 3 per cent copper, and the residue, after the copper is extracted, is still suitable for making sulphuric acid. Spain's production of copper mineral and iron pyrites normally was between 3,000,000 and 5,000,000 tons. Domestic production of pyrites, which in 1913 was 341,338 long tons, valued at \$1,286,084, increased during the war by about 35 per cent, primarily from existing mines rather than new deposits. Prior to 1915 Virginia led, yielding about 50 per cent; California followed, increasing her output for 1914–1918 to nearly that of Virginia.

*Imports of pyrites for 1910–1917 averaged about 980,000 long tons, with 1,244,662 long tons in 1916, the maximum. They furnished about 70 per cent of our consumption. Imports of pyrites from Spain and Portugal in 1918 were limited to 600,000 tons, owing to scarcity of shipping, the actual imports being 496,792 tons. Imports from Canada in 1917 were about six times the prewar volume. Imports since 1917, chiefly from Spain, Canada, and Cuba, are shown in the accompanying table:*

Calendar year.	Quantity.	Value.	Unit value.
	<i>Tons.</i>		
1918.....	496,792	\$2,741,676	\$5.52
1919.....	388,973	2,176,565	5.59
1920.....	332,606	1,660,832	4.99
1921 (9 months).....	142,427	589,643	4.13

*Exports.*—None separately recorded.

*Important changes in classification.*—“Spent oxide of iron,” when containing more than 25 per centum of sulphur, has been added to this paragraph since it is used as a source of sulphur. “Brimstone” is omitted because covered by “sulphur.”

## PARAGRAPH 1664.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1664. Tagua nuts.

ACT OF 1909.

ACT OF 1913.

PAR. 596. \* \* \* vegetable ivory in its natural state [Free].

620. Tagua nuts [Free].

## TAGUA NUTS.

*Description and uses.*—Tagua nuts, also called corozzo nuts, are from a palm in the Peruvian Andes and other parts of South America. The kernel is so hard and white that it is fittingly called vegetable ivory. It is used in the manufacture of buttons, umbrella handles, and small trinkets. The refuse from these manufacturing operations is used to make lactic acid (par. 1). The coquilla nut, from another species of palm, also supplies a kind of vegetable ivory with like uses.

*Imports* of tagua nuts in 1914 were 26,736,148 pounds, valued at \$883,055—10,413,539 pounds from Ecuador, 7,917,433 pounds from Colombia, and 5,209,774 pounds from Panama. Imports since 1917, chiefly from Ecuador, Colombia, and Panama, have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	41,142,099	\$1,323,494	\$0.03
1919.....	31,779,090	1,172,080	.04
1920.....	49,690,478	2,550,697	.05
1921 (9 months).....	20,001,279	685,296	.....

## PARAGRAPH 1665.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1665. Tamarinds.

ACT OF 1909.

ACT OF 1913.

PAR. 688. Tamarinds [Free].

PAR. 623. Tamarinds [Free].

## TAMARINDS.

(See Survey FL-2.)

*Description and uses.*—The tamarind is the fruit or pod of a leguminous tree. The pods are hard externally, but contain a juicy, pleasantly acid pulp. The fruit is used as a table preserve and in confections. A cooling laxative drink is made from the pulp.

*Production.*—The tree is a native of tropical Africa, but is found in Australia, India, South America, Mexico, and the West Indies.

*Import* values of tamarinds were \$4,211 in 1914 and \$7,038 in 1918. They reached \$21,606 in 1919 (calendar year) and declined to \$1,516 during the first nine months of 1921.

## PARAGRAPH 1666.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1666. Tapioca, tapioca flour, and cassava.

ACT OF 1909.

ACT OF 1913.

PAR. 689. Tapioca, tapioca flour, cassava or cassady [Free].

PAR. 625. Tapioca, tapioca flour, cassava or cassady [Free].

## TAPIOCA, TAPIOCA FLOUR, AND CASSAVA.

(See Survey G-33.)

*Description and uses.*—Cassava is a shrubby plant, native to tropical America, but grown extensively in the Dutch East Indies, Central America, the West Indies, Africa, and to some extent in southeastern United States. There are two principal types. The bitter cassava of Brazil contains considerable volatile poison, but this is dissipated by heat and the washing of the grated roots. The sweet cassava, or manihot, is cultivated, principally in Florida, for the starch, which is used in the textile and other industries. Cassava bread and cakes are made from both varieties. Pearl tapioca is formed when moist cassava starch is properly heated upon an iron plate. The granules rupture and agglomerate into irregular pellets which become hard and translucent when cooled. The flour is used chiefly for food preparations, for the manufacture of cassava dextrin (envelope gum), and for finishing in the textile industry.

The flake and pearl tapioca is made into material for puddings and other desserts.

*Production.*—Florida produces some cassava which is largely used for forage purposes.

*Import figures* for these various items are not given separately. Imports of tapioca, tapioca flour, and cassava or cassady in 1914 were 71,304,728 pounds, valued at \$1,590,614, practically all coming from the Dutch East Indies and the Straits Settlements. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months)
Quantity (pounds).....	62, 170, 509	95, 652, 649	99, 286, 119	31, 943, 719
Value.....	\$3, 260, 575	\$5, 014, 316	\$5, 634, 283	\$1, 226, 054

In 1920 the bulk of the imports of farinaceous substances came from the Dutch East Indies and amounted to 80 per cent of the total.

*Exports* are not separately stated.

*Important changes in classification.*—The word "cassady" has been dropped; it is erroneously used for cassava.

## PARAGRAPH 1667.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1667. Tar and pitch of wood.

ACT OF 1909.

ACT OF 1913.

PAR. 690. Tar and pitch of wood [Free].

PAR. 626. Tar and pitch of wood [Free].  
 PAR. 452. \* \* \* pitch of \* \* \*  
 wood \* \* \* tar, \* \* \* [Free].

## TAR AND PITCH OF WOOD.

(See Surveys A-2 and FL-17.)

*Description and uses.*—Tar and pitch of wood are products obtained from the destructive distillation of wood. When tar is distilled, tar oils are produced and a residual product known as wood pitch is obtained. Tar is used in the manufacture of ropes, in the paint industry, and in making tar soaps. Pitch is used for calking wooden ships and for coating silos to render them impervious to moisture. Wood creosote is obtained from heavy tar oils by a refining process.

*Production* of tar by the wood distillation industry in 1914 was 2,965,354 gallons, of which 1,476,797 gallons were sold, valued at \$145,984. The production of wood creosote in 1914 was 2,073,057 pounds, valued at \$38,872. The figures for 1919 are not available.

*Imports* of tar and pitch of wood have been annually less than 1,000 barrels since 1911. Since 1917 they have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Barrels.</i>		
1918.....	49	\$233	\$4.76
1919.....	135	347	2.57
1920.....	451	2,393	5.31
1921 (9 months).....	593	3,433	.....

*Exports* of tar, turpentine (crude gum turpentine), and pitch in 1914 were 351,353 barrels, valued at \$568,891, decreasing in 1916 to 67,963 barrels, valued at \$291,731. Subsequent figures are not available.

## PARAGRAPH 1668.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1668. Tea not specially provided for, and tea plants: *Provided*, That all cans, boxes, and other immediate containers, including paper, and other wrappings of tea in packages of less than five pounds each, and all intermediate containers of such tea, except mats, shall be dutiable at the rate chargeable thereon if imported empty: *Provided further*, That nothing herein contained shall be construed to repeal or impair the provisions of an Act entitled "An Act to prevent the importation of impure and unwholesome tea," approved March 2, 1897, and any Act amendatory thereof.

## ACT OF 1909.

PAR. 691. Tea and tea plants: [Free] *Provided*, That nothing herein contained shall be construed to repeal or impair the provisions of an Act entitled "An Act to prevent the importation of impure and unwholesome tea," approved March second, eighteen hundred and ninety-seven, and any Act amendatory thereof.

PAR. 195. Cans, boxes, packages, and other containers of all kinds (except such as are hermetically sealed by soldering or otherwise), composed wholly or in chief value of metal lacquered or printed by any process of lithography whatever, if filled or unfilled, and whether their contents be dutiable or free, four cents per pound and thirty-five per centum ad valorem: *Provided*, That none of the foregoing articles shall pay a less rate of duty than fifty-five per centum ad valorem; but no cans, boxes, packages, or containers of any kind, of the capacity of five pounds or under, subject to duty under this paragraph, shall pay less duty than if the same were imported empty; and the dutiable value of the same shall include all packing charges, cartons, wrappings, envelopes, and printed matter accompanying them when such cans, boxes, packages, or containers are imported wholly or partly filled with merchandise exempt from duty (except liquids and merchandise commercially known as drugs) and which is commonly dealt in at wholesale in the country of original exportation in bulk or in packages exceeding five pounds in capacity: *Provided further*, That paper, cardboard or pasteboard wrappings or containers that are made and used only for the purpose of holding or containing the article with which they are filled, and after such use are mere waste material, shall not be dutiable unless their contents are dutiable.

## ACT OF 1913.

PAR. 627. Tea not specially provided for in this section, and tea plants: [Free] *Provided*, That the cans, boxes, or other containers of tea packed in packages of less than five pounds each shall be dutiable at the rate chargeable thereon if imported empty: *Provided further*, That nothing herein contained shall be construed to repeal or impair the provisions of an Act entitled "An Act to prevent the importation of impure and unwholesome tea," approved March second, eighteen hundred and ninety-seven, and any Act amendatory thereof.

## TEA.

(See Survey FL-34.)

*Description and uses.*—The tea plant is an evergreen shrub of tropical and subtropical climates. Its tender leaves compose the tea of commerce; the older woody leaves, and tea dust, waste, siftings, and stalk are used for the manufacture of caffeine, for adulterating purposes, and in making brick and other low-grade teas.

*Production.*—The bulk of commercial teas may be divided into three general classes according to methods of preparation—black, green, and Oolong (an intermediate type). Subclasses such as

Orange Pekoe and Souchong indicate the gradation from the fine leaf bud to the expanded and woody leaf. Virtually the entire supply is produced in densely populated regions of the Orient having ample supplies of cheap labor. Producers are organized into strong guilds and associations, which regulate the trade and conditions of production. Definite figures of production are not available, but the annual combined exports of producing countries for 1909-1913 approximated 750,000,000 pounds. British India contributed about 34 per cent and Ceylon about 25 per cent, almost exclusively black teas; China about 26 per cent (chiefly green teas); the remainder came from Japan proper, Formosa, and Java. The plant is successfully grown in South Carolina and Georgia, local needs being supplied by tea gardens. Physical conditions are not so favorable as in the Orient, and the absence of cheap labor appears to be an insurmountable handicap to commercial production.

Imports of tea for 1910-1920 averaged about 100,000,000 pounds, valued at from \$17,000,000 to \$30,000,000. Over one-half came from Japan proper and the British East Indies, about one-eighth from China. The remainder consisted chiefly of Indian and Ceylon tea, most of which was reexported from England (about 14,000,000 pounds) and Canada (1,600,000 pounds). Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	130,355,602	80,740,578	90,698,805	46,848,092
Value.....	\$28,582,387	\$20,108,045	\$24,739,494	\$8,473,092

*Exports.*—None recorded.

*Important changes in classification.*—The clause regarding tea containers has been amplified and strengthened, because many fancy and valuable boxes, etc., used as immediate containers, enter free of duty.

*Suggested changes.*—The importation of tea plants is negligible; they are subject to quarantine regulations. If it should not be desired to exempt from duty such as may come in, the words "and tea plants" might be stricken out of lines 16 and 17, page 198 of H. R. 7456. In such case, any importation of tea plants would probably come within the provision for "all nursery or greenhouse stock, not specially provided for," if the change suggested under paragraph 752, page 751, should be adopted.

There is a possibility that the words "in packages," in lines 18 and 19, page 198, of H. R. 7456, may be interpreted to mean that only immediate containers packed in intermediate containers would come within the proviso. This possible objection might be met by changing the proviso to read:

"*Provided*, That all cans, boxes, and other immediate containers, including paper and other wrappings, of less than five pounds of tea, and all intermediate containers of such tea, shall, when imported with tea, be dutiable at the rate or rates chargeable thereon if imported separately."

In any event, the words "except mats," in line 20, page 198, of H. R. 7456, should be stricken out, since tea in packages of less than 5 pounds is not imported in mats.

## PARAGRAPH 1669.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1669. Teeth, natural, or unmanufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 692. Teeth, natural, or unmanufactured [Free].

PAR. 628. Teeth, natural, or unmanufactured [Free].

TEETH, NATURAL.

(See Survey N-21.)

*Description and use.*—The teeth of some animals were formerly used in dentistry; only the manufactured article is now used. There is little, if any, commercial demand for natural teeth, except perhaps for decorative purposes.

*Production* data are not available.

*Imports* of teeth, natural or unmanufactured, in 1914 were valued at \$197. Statistics for later calendar years follow: 1919, \$703; 1920, \$2,185; 1921 (9 months), \$18,501.

*Exports.*—None recorded.

## PARAGRAPH 1670.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1670. Tin ore or cassiterite, and black oxide of tin: *Provided*, That there shall be imposed and paid upon cassiterite, or black oxide of tin, a duty of 4 cents per pound, and upon bar, block, pig tin and grain or granulated, a duty of 6 cents per pound when it is made to appear to the satisfaction of the President of the United States that the mines of the United States are producing one thousand five hundred tons of cassiterite and bar, block, and pig tin per year. The President shall make known this fact by proclamation, and thereafter said duties shall go into effect.

ACT OF 1909.

ACT OF 1913.

PAR. 695. Tin ore, cassiterite or black oxide of tin, \* \* \* [Free] *Provided*, That there shall be imposed and paid upon cassiterite, or black oxide of tin, and upon bar, block, pig tin and grain or granulated, a duty of 4 cents per pound when it is made to appear to the satisfaction of the President of the United States that the mines of the United States are producing one thousand five hundred tons of cassiterite and bar, block, and pig tin per year. The President shall make known this fact by proclamation, and thereafter said duties shall go into effect.

PAR. 631. Tin ore, cassiterite or black oxide of tin, \* \* \* [Free] *Provided*, That there shall be imposed and paid upon cassiterite, or black oxide of tin, and upon bar, block, pig tin and grain or granulated, a duty of 4 cents per pound when it is made to appear to the satisfaction of the President of the United States that the mines of the United States are producing one thousand five hundred tons of cassiterite and bar, block, and pig tin per year. The President shall make known this fact by proclamation, and thereafter said duties shall go into effect.

## TIN ORE, CASSITERITE, OR BLACK OXIDE OF TIN.

(See Survey FL-35.)

*Description.*—Cassiterite, or oxide of tin, is the ore of tin. It is also known as black tin, stream tin, tin stone, etc. Black oxide of tin in the meaning of this paragraph is tin dross containing no lead; it is also commercially known as black-grain tin, scuff, and tin ash. In the import statistics "cassiterite" is erroneously classified with the artificial oxide or dross.

*Production* in the United States is insignificant. The recovery of tin from domestic ores in 1920 was only about 20 tons and in no year have more than 100 tons of metallic tin been obtained from ore mined in American territory; the small annual output is derived almost wholly from Alaska. Tin ore is mined in southeastern Asia, including the Malay Peninsula, Siam, China, and the Dutch East Indies. Bolivia is also a large producer and, from the standpoint of the American smelters, the most important, as Bolivian ore is the only tin ore that can be brought in any large quantity to the United States. Export duties on tin ore produced in territories under British control effectually prevent the smelting of such ore outside of the Empire.

*Imports* of "cassiterite, or black oxide of tin," in 1914 amounted to 19,549 pounds, valued at \$3,022. In the fiscal year 1918 they amounted to 29,014 pounds, valued at \$8,994. Imports of tin ore in the fiscal year 1918 were 13,960 long tons, valued at \$8,626,281. For the calendar years 1918 to 1921 imports of tin ore and black oxide have been as follows:

	1918	1919	1920	1921 (9 months).
Tin ore:				
Quantity (tons).....	13,014	31,602	30,647	12,123
Value.....	\$8,975,764	\$20,318,778	\$18,775,926	\$5,113,796
Tin, black oxide of, or cassiterite:				
Quantity (pounds).....	29,014	2,188	1 42	1 10
Value.....	\$8,994	\$547	\$19,236	\$4,412

<sup>1</sup> Tons.

*Exports.*—None separately recorded.

*Important changes in classification.*—The rate conditionally imposed in the proviso is two cents per pound greater on bar, block, pig, and grain or granulated tin (provided for in paragraph 386, H. R. 7456) than on cassiterite or black oxide of tin.

## PARAGRAPH 1671.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1671. Tobacco stems not cut, ground, or pulverized.

ACT OF 1909.

ACT OF 1913.

PAR. 696. Tobacco stems [Free].

PAR. 632. Tobacco stems [Free].

## TOBACCO STEMS NOT CUT, ETC.

*Description and uses.*—Tobacco stems are the midrib or stem of the leaf. When the cured leaf is used as wrapper or binder for cigars or in making chewing tobacco, etc., the midrib or stem (about 25 to 30 per cent of the leaf) is removed to reduce the weight and cost of transportation. Stems are manufactured into snuff and low grades of smoking tobacco, are a source of nicotine for insecticides, and fortify weaker tobaccos. They contain considerable potash and nitrogen and are extensively used as a fertilizer.

*Production* of stems as a by-product is large, exceeding 50,000,000 pounds in 1917 and 1919. About 20,000,000 pounds are annually used in tobacco manufacture.

*Imports* of tobacco stems normally averaged about 1,000,000 pounds. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	1,817,205	664,993	878,155	2,150,002
Value.....	\$15,275	\$7,284	\$6,386	\$16,273

*Exports* of stems (including trimmings) in the years immediately preceding the war averaged approximately 2,000,000 pounds, principally to the Netherlands and Germany. Statistics for later calendar years follow:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	2,955,443	10,764,971	12,237,908	4,713,050
Value.....	\$318,384	\$547,281	\$634,882	\$213,673

*Important changes in classification.*—There is a new limitation to tobacco stems not cut, ground, or pulverized.

## PARAGRAPH 1672.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1672. Turpentine, gum and spirits of, and rosin.

## ACT OF 1909.

## ACT OF 1913.

PAR. 700. Turpentine, spirits of [Free].

PAR. 635. Turpentine, Venice, and spirits of [Free].

PAR. 699. Turpentine, Venice [Free].

PAR. 385. \* \* \* unmanufactured articles not enumerated \* \* \* 10 per centum ad valorem, \* \* \*

PAR. 559. Drugs, such as \* \* \* gums, \* \* \* not advanced \* \* \* [Free].

PAR. 477. Drugs, such as \* \* \* gums, \* \* \* not advanced \* \* \* [Free].

## TURPENTINE AND ROSIN.

(See Survey FL-17.)

*Description and uses.*—Turpentine, strictly speaking, is the oleo-resin exudation of coniferous trees, but the term is also applied to the oil or spirits of turpentine which is obtained by distilling the crude gum. Venice or Venetian turpentine is the crude gum exudation of the European larch (*Pinus larix*). The larger part of the commercial article sold as Venice turpentine, is a factitious product made by dissolving rosin in spirits of turpentine. Spirits of turpentine, treated with caustic soda and redistilled, is known as "rectified spirits of turpentine" and has medicinal uses. Wood turpentine is oil of turpentine obtained from pine wood by destructive or steam distillation. Oil of turpentine is chiefly used in the manufacture of paints and varnishes. It is also used as a solvent for rubber and other gums and in making synthetic camphor.

Rosin is the brittle resin remaining after the turpentine is distilled. In commerce it is graded and sold according to color. The chief uses are as a size in paper making and in the manufacture of lead and manganese resins, which are used as paint driers. It is used also in soap making and in the textile industry.

*Production.*—Over 97 per cent of the oil of turpentine is produced from gum turpentine, the remainder from wood. The gum turpentine industry in 1914 was capitalized at \$20,745,000; there were 1,408 establishments, employing nearly 35,000 persons, with products valued at \$20,990,191. Oil of turpentine amounted to 27,648,939 gallons, valued at \$10,740,327 and rosin 2,944,900 barrels (280 pounds each), valued at \$10,572,300 in 1914. In 1919 (preliminary figures), 1,214 establishments produced 19,271,000 gallons of spirits of turpentine valued at \$21,918,100, and 2,272,100 barrels (280 pounds each) of rosin valued at \$34,695,000. The turpentine and rosin industry is located in the South Atlantic and Gulf States adjacent to the pine forests of those regions. Florida leads with about 45 per cent of the total output; Georgia follows with 22 per cent. The United States is the largest producer, with France ranking second.

*Imports* of turpentine are less than 1 per cent of the domestic production. Imports since 1917 of spirits of turpentine and crude rosin have been as follows:

Calendar year.	Quantity.	Value.	Unit value.	Duty.	Ad valorem rate.
SPIRITS OF TURPENTINE.					
	<i>Gallons.</i>				<i>Per cent.</i>
1918 .....	302	\$468	\$1.55		
1919 .....	1,662	422	.25		
1920 .....	43,385	51,976	1.20		
1921 (9 months).....	8,393	5,325	.63		
ROSIN, CRUDE.					
	<i>Pounds.</i>				
1918 .....	210,443	\$10,113	\$0.05	\$1,011	10
1919 .....	96,044	3,810	.04	381	10
1920 .....	141,635	7,204	.05	720	10
1921 (9 months).....	1,913	130	.07		

Exports of spirits of turpentine prior to 1915, were between 15,000,000 and 20,000,000 gallons, or about 60 per cent of the domestic production. During the war they decreased to about 8,000,000 gallons. The United Kingdom, prior to 1915, received about 35 per cent of the exports and during 1916 and 1917 about 60 per cent. The Netherlands, Germany, and Belgium were the other large consumers. Exports since 1917 by calendar years are as follows:

	1918	1919	1920	1921 (9 months)
Spirits of turpentine:				
Quantity (gallons).....	3,717,093	10,672,102	9,458,423	7,188,968
Value.....	\$2,276,523	\$10,448,234	\$14,586,302	\$4,470,490
Rosin, crude:				
Quantity (barrels).....	779,027	1,209,627	1,164,328	637,301
Value.....	\$7,551,262	\$20,433,970	\$19,468,705	\$3,446,079

Exports of turpentine go chiefly to England, Canada, Argentina, and Australia while rosin goes chiefly to England, Brazil, and Argentina.

*Important changes in classification.*—Gum is substituted for "Venice" and gum turpentine is specifically mentioned. First specific mention of rosin.

#### PARAGRAPH 1673.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1673. Turtles.

ACT OF 1909.

ACT OF 1913.

PAR. 701. Turtles [Free].

PAR. 636. Turtles [Free].

#### TURTLES.

(See Survey FL-32.)

*Description and uses.*—The best known varieties of turtles are the edible terrapin and green turtle, highly prized for soup making. The hawksbill turtle furnishes the tortoise shell.

*Production* in 1908 (latest figures available) amounted to 1,088,000 pounds, valued at \$40,000, of which the States of Illinois, Louisiana, and Florida reported about 65 per cent.

*Imports and exports* are not separately stated. (See par. 1649, p. 1428.)

#### PARAGRAPH 1674.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1674. Uranium, oxide and salts of.

ACT OF 1909.

ACT OF 1913.

PAR. 703. Uranium, oxide and salts of [Free].

PAR. 638. Uranium, oxide and salts of [Free].

## URANIUM COMPOUNDS.

(See Survey FL-22.)

*Description and uses.*—Uranium is one of the rare metals. Its ores are not abundant and occur in workable quantities in only a few localities. The most important ores are pitchblend, an oxide, and carnotite, a mineral containing potassium, vanadium, and uranium. Uranium minerals and salts contain and are the source of radium. The most important compounds of uranium are the oxide, the nitrate, the acetate, the double ammonium-uranium carbonate, and sodium uranate. Uranium is used only in alloys, principally steel. The compounds are used for coloring glass and enamels, in china painting, as a mordant in dyeing and calico printing and to some extent in photography and medicine. Uranium ore is used chiefly for the production of radium. Uranium compounds may be obtained from the residue and may, therefore, be considered as by-products of the radium industry.

*Production.*—This country is the largest producer of uranium ores and uranium products and salts, and in case of adequate demand, the output could be increased by utilizing residues that now go to waste. Separate figures for uranium compounds are not shown. Ferrouanium (par. 302) is produced by at least one company, but the output is small, as the use of this alloy is largely in the experimental stage.

*Imports* of uranium compounds in 1913 were valued at \$21,435; in 1914, at \$5,782; and in 1917, at \$3,018. Before the war they came largely from Germany. In 1918 (calendar year) the imports of uranium oxide and salts of uranium were valued at \$1,309, and in 1920 at \$1,318, with none in 1919, or 1921 (nine months).

*Exports.*—Statistics not available.

## PARAGRAPH 1675.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1675. Vegetable tallow.

ACT OF 1909.

ACT OF 1913.

PAR. 580. \* \* \* vegetable tallow, \* \* \* such as are commonly used in soap making or in wire drawing, or for stuffing or dressing leather, and which are fit only for such uses, and not specially provided for in this section [Free].

PAR. 498. \* \* \* vegetable tallow, \* \* \* such as are commonly used in soap making or in wire drawing, or for stuffing or dressing leather, not specially provided for in this section [Free].

## VEGETABLE TALLOW.

(See Survey FL-15.)

*Description and uses.*—“Chinese vegetable tallow” obtained from the hard fat which coats the seeds of a Chinese tree, is the most important vegetable tallow, and is used largely in soap making, which industry employed 6,417,000 pounds in 1917.

The consumption of Chinese vegetable tallow was 3,654,682 pounds in 1914, 3,157,215 pounds in 1920, and for the first nine months of 1921 (preliminary figures) 2,339,108 pounds.

*Imports and exports.*—Statistics are not available.

*Important changes in classification.*—The restriction to vegetable tallow, “commonly used in soap making or in wire drawing, or for stuffing or dressing leather,” has been removed.

---

PARAGRAPH 1676.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1676. Wax, animal, vegetable, or mineral, crude.

ACT OF 1909.

ACT OF 1913.

PAR. 707. Wax, vegetable or mineral [Free].

PAR. 641. Wax, vegetable or mineral [Free].

PAR. 506. Beeswax [Free].

PAR. 412. Beeswax [Free].

ANIMAL, VEGETABLE, AND MINERAL WAXES.

(See Survey FL-7.)

*Description and uses.*—The waxes of this paragraph are substances which in physical properties resemble beeswax (see par. 1457) and are mixtures of compounds containing carbon, hydrogen, and oxygen. Vegetable waxes are obtained from the fruit, leaves, or stems of many plants, a small number only being of commercial value. The principal vegetable waxes are carnauba, candelilla, Japan wax; myrtle or bayberry, and Cochin China or cay-cay. Chinese or insect wax, though classed as a vegetable, is really an animal wax. The mineral waxes, similar to paraffin (par. 1627), come from natural bituminous substances; the most important are ceresin and montan.

Carnauba wax is obtained from the leaves of a palm growing in Brazil. The wax coats both the upper and lower surfaces of the young leaves, and is removed therefrom by beating the dried leaves over a cloth. It is then purified by wetting with a little water. It is used in making hard candles, leather polishes and floor waxes, and certain varnishes, in phonograph records, and for adulterating beeswax. Mixed with paraffin, ceresin, or beeswax, it increases the hardness of these substances.

Candelilla wax occurs as a secretion covering all parts, except the roots, of a plant growing abundantly in northern Mexico and southwestern United States. It is obtained by boiling the plant with water and skimming off the melted wax. It can be used for making varnishes, insulating material, shoe polishes, floor wax, dental molding, compositions, sealing wax, waterproof papers, lacquers for metals, and in other waxes to raise the melting point.

Japan wax, one of the most important vegetable waxes, comes from the berries of certain species of *rhus* in Japan and China. The wax is obtained by crushing the berries and pressing out the wax, extracting it with volatile solvents, or by boiling with water. The crude wax is of a greenish color, but may be bleached in the sun. It is used in polishes, floor waxes, and for currying leather. Japan wax is essentially a by-product of the lacquer industry, the tree exuding a lacquer for which it is principally cultivated; the wax is prepared only in India and China.

Myrtle or bayberry wax is obtained by boiling the berries of various species of *Myrica* with water. Owing to chlorophyll it is green in

color but can be bleached on exposure to sunlight or air. Its principal use is in candles.

Cochin China wax or cay-cay is obtained from the seed kernels of a tree growing in Cochin China. Its principal use is in candles.

Chinese or insect wax is a secretion of an insect, cultivated for the purpose, which feeds on a certain species of Chinese tree. It is yellowish white and crystalline, odorless and tasteless, and is used as a polish for furniture and jade ware, as a sizing for paper, silk, and cotton goods, and as exterior coating for candles.

Ceresin (ozokerite paraffin) is a mineral wax obtained from the natural bituminous substance ozokerite. The best-known deposits of ozokerite are in Galicia; it is also found in Roumania, Utah, Argentina, and the Orange River Colony. To obtain ceresin the crude ozokerite is stirred constantly while being heated with sulphuric acid. The resulting material is decolorized with char and filtered through a filter press. Ceresin thus obtained is yellow, but can be made white by further refining. It is largely adulterated with paraffin wax and bleached rosin, and is used in candles, as a constituent of wood fillers and floor polishes, in insulating compounds, for making black shoe polish, and as an adulterant of beeswax.

Montan wax is obtained by extraction from certain lignites found in Saxony and Thuringia. The crude wax is brown in color, but by distillation with superheated steam may be obtained nearly white. It is used as a substitute for carnauba wax in polishes; in place of ceresin in insulating materials; for phonograph records; and, mixed with tar, for waterproofing roofs.

Imports of mineral waxes varied from 8,123,243 pounds, valued at \$586,076 in 1910, to 5,352,362 pounds, valued at \$439,376 in 1912. In 1914 the imports were 8,086,422 pounds, valued at \$543,103, decreasing to 1,708,514 pounds, valued at \$135,920 in 1918 (fiscal year). The largest imports were formerly from Germany and Austria-Hungary; in 1917 and 1918, mostly from British India. Imports of vegetable waxes for 1910-1915 averaged about 5,000,000 pounds annually, but increased in 1916 to 9,727,312 pounds, valued at \$1,580,530. Imports of the above materials since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
MINERAL WAX.			
	<i>Pounds.</i>		
1918.....	1,809,459	\$147,805	\$0.08
1919.....	3,748,080	454,840	.12
1920.....	4,272,341	499,758	.12
1921 (9 months).....	5,962,216	415,665	.07
VEGETABLE WAX.			
1918.....	9,815,527	\$3,659,146	\$0.37
1919.....	10,813,939	3,809,635	.35
1920.....	6,553,512	2,168,410	.33
1921 (9 months).....	5,143,482	901,149	.17
BEESWAX.			
1918.....	1,613,224	\$603,993	\$0.37
1919.....	2,366,632	891,606	.38
1920.....	4,143,031	1,418,023	.34
1921 (9 months).....	1,820,870	375,273	.21

Imports of mineral wax are chiefly from England, British India, and Germany; vegetable waxes, from Brazil, Japan, and Mexico; and beeswax from Portugal, England, and Canada.

Exports of beeswax since 1917 by calendar years have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	165,382	210,046	632,811	80,650
Value.....	\$63,244	\$92,285	\$294,592	\$24,608

Countries of destination are chiefly Russia in Europe, European Turkey, and Canada.

*Important changes in classification.*—Animal wax, crude, has been mentioned specifically for the first time.

### PARAGRAPH 1677.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1677. Disks of soft wax, commonly known as master records, or metal matrices obtained therefrom, for use in the manufacture of sound records for export purposes.

#### ACT OF 1909.

#### ACT OF 1913.

PAR. 462. Manufactures of \* \* \* wax, or of which these substances or any of them is the component material of chief value, not specially provided for in this section, twenty-five per centum ad valorem; \* \* \*.

PAR. 367. Manufactures of \* \* \* wax, or of which these substances or any of them is the component material of chief value, not specially provided for in this section, 10 per centum ad valorem; \* \* \*.

#### MASTER RECORDS, ETC.

*Description and uses.*—Disks of soft wax, commonly known as master records, are the initial stage in manufacturing phonograph records. On the wax surface the needle of the recording machine impresses vibrations caused by the sounds which are to be reproduced. The disks are subjected to electroplating which results in a metallic duplicate, except that in one case the lines are etched into the surface and in the other they are in relief. From this electrotype another is taken which is an exact counterpart in metal of the wax record, and from this second electrotype metal matrices are made for turning out the commercial record. Neither the wax disk nor the metal counterparts are actually used, nor are they suitable for use, on phonographs or graphophones.

*Production* data are not separately shown, as these are not commercial articles, but stages in the process of manufacture.

*Imports* are not separately shown. The wax disks were formerly imported as manufactures of wax.

*Exports.*—None.

*Important changes in classification.*—This is a new provision.

*Suggested changes.*—The limitation to use in the manufacture of sound records for export purposes is difficult of administration since records may be used instead for domestic purposes.

If the provision should remain as it is now worded, specific authority for the Secretary of the Treasury to prescribe regulations would facilitate administration by inserting the words "shall be admitted free of duty under such regulations as the Secretary of the Treasury may prescribe" after the word "purposes."

---

### PARAGRAPH 1678.

H. R. 7456.

SENATE AMENDMENTS

PAR. 1678. Wearing apparel, articles of personal adornment, toilet articles, and similar personal effects of persons arriving in the United States; but this exemption shall include only such articles as were actually owned by them and in their possession abroad at the time of or prior to their departure from a foreign country, and as are necessary and appropriate for the wear and use of such persons and are intended for such wear and use, and shall not be held to apply to merchandise or articles intended for other persons or for sale: *Provided*, That in case of residents of the United States returning from abroad all wearing apparel, personal and household effects taken by them out of the United States to foreign countries shall be admitted free of duty, without regard to their value, upon their identity being established under appropriate rules and regulations to be prescribed by the Secretary of the Treasury: *Provided further*, That up to but not exceeding \$250 in value of articles acquired abroad by such residents of the United States for personal or household use or as souvenirs or curios, but not bought on commission or intended for sale, shall be admitted free of duty.

ACT OF 1909.

ACT OF 1913.

PAR. 709. Wearing apparel, articles of personal adornment, toilet articles, and similar personal effects of persons arriving in the United States; but this exemption shall only include such articles as actually accompany and are in the use of, and as are necessary and appropriate for the wear and use of such persons, for the immediate purposes of the journey and present comfort and convenience, and shall not be held to apply to merchandise or articles intended for other persons or for sale: [Free] *Provided*, That in case of residents of the United States returning from abroad, all wearing apparel and other personal effects taken by them out of the United States to foreign countries

PAR. 642. Wearing apparel, articles of personal adornment, toilet articles, and similar personal effects of persons arriving in the United States; but this exemption shall include only such articles as were actually owned by them and in their possession abroad at the time of or prior to their departure from a foreign country, and as are necessary and appropriate for the wear and use of such persons and are intended for such wear and use, and shall not be held to apply to merchandise or articles intended for other persons or for sale: [Free] *Provided*, That in case of residents of the United States returning from abroad all wearing apparel, personal and household effects taken by them out

## ACT OF 1909.

shall be admitted free of duty, without regard to their value, upon their identity being established, under appropriate rules and regulations to be prescribed by the Secretary of the Treasury, but no more than one hundred dollars in value of articles purchased abroad by such residents of the United States shall be admitted free of duty upon their return.

## ACT OF 1913.

of the United States to foreign countries shall be admitted free of duty, without regard to their value, upon their identity being established under appropriate rules and regulations to be prescribed by the Secretary of the Treasury: *Provided further*, That up to but not exceeding \$100 in value of articles acquired abroad by such residents of the United States for personal or household use or as souvenirs or curios, but not bought on commission or intended for sale, shall be admitted free of duty.

## TRAVELERS' WEARING APPAREL, ETC.

*Important changes in classification.*—The allowance accorded to returning residents of the United States for the free entry of personal and household effects and souvenirs and curios is increased from \$100 to \$250.

*Suggested changes.*—With the increase from \$100 to \$250, there would probably be more tourists crossing the border to buy articles in Canada for bringing into the United States without payment of duty. Would it, therefore, not be well to name a minimum time, say two weeks, for persons to remain in the foreign country in order to get the benefit of the proviso?

## PARAGRAPH 1679.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1679. Whalebone, unmanufactured.

ACT OF 1909.

ACT OF 1913.

PAR. 710. Whalebone, unmanufactured [Free].

PAR. 643. Whalebone, unmanufactured [Free].

## WHALEBONE, UNMANUFACTURED.

(See Survey N-21.)

*Description and uses.*—Whalebone is a light, flexible, strong, elastic substance obtained from the plates that serve as teeth in baleen whales. These plates vary in length from a few inches to 10 or even 12 feet. Chemically the substance is composed of albumen, hardened by phosphate of lime. From it are made bristles for brushes and stuffing for mattresses; knobs for canes, umbrellas, and parasols; whips and artificial flowers; and, formerly, this material was used for umbrella ribs, and ribs for stiffening corsets and waists. It has been supplanted by steel in umbrellas, while gutta-percha, celluloid, featherbone, and similar materials are used in dressmaking.

*Production.*—Alaska, Washington, and British Columbia in 1914 produced 2,800 pounds, 3,000 pounds, and 10,000 pounds, respectively; in 1915, 120,717 pounds, 15,000 pounds, and 31,000 pounds;

in 1916, 26,624 pounds, 10,000 pounds, and 60,000 pounds. In 1918 the Alaskan output was 9,250 pounds.

*Imports* of whalebone, unmanufactured, in 1914 were 9,524 pounds, valued at \$11,781. Later statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	42,289	\$25,901	\$0.61
1919.....	9,371	6,659	.71
1920.....	2,779	1,251	.45
1921 (9 months).....	231	5	.....

*Exports* in 1914 were 35,034 pounds, valued at \$58,165—23,525 pounds to France and the balance to Germany; in 1917, 40,717 pounds, valued at \$53,717, chiefly to England, France, and Canada. Statistics for later years are not shown.

### PARAGRAPH 1680.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1680. All barbed wire, whether plain or galvanized.

ACT OF 1909.

ACT OF 1913.

PAR. 135. \* \* \* barbed fence wire, three-fourths of one cent per pound, but the same shall not be subject to any additional or other rate of duty hereinbefore provided; \* \* \*.

PAR. 645. All barbed wire, \* \* \* [Free].

BARBED WIRE.

(See Survey C-8.)

*Production* of barbed wire in 1914 was 343,693 tons, and in 1919 341,130 tons, valued at \$30,895,600. The capacity of the country has been regarded as 50,000 tons per month and the normal output as 30,000. Under war demands the output rose to 40,000 tons per month. Pennsylvania, Illinois, Ohio, and Indiana are important producing States. Imports in 1914 formed only 0.002 per cent of production; exports, 26 per cent. In 1919 imports formed about 0.0001 per cent of the domestic output; and exports, about 30 per cent.

*Imports.*—The largest recorded import was 247 tons, in 1916. In the fiscal year 1918 imports were 67 tons. For the calendar years 1918–1921 they were as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	132,390	88,930	1,761	600
Value.....	\$3,215	\$5,002	\$105	\$49

*Exports.*—The largest export was 407,952 short tons in 1916. Since 1917 by calendar years they have been as follows:

	1918	1919	1920	1921 (9 months).
Quantity (pounds).....	526,586,382	227,250,082	290,550,449	50,488,570
Value.....	\$23,492,540	\$11,354,297	\$16,056,346	\$2,889,376

The exported material goes mainly to Brazil, Argentina, Canada, and Australia. During the war there was a considerable exportation of barbed wire to France, Italy, and the United Kingdom for war purposes.

*Important changes in classification.*—"Whether plain or galvanized" has been added.

### PARAGRAPH 1681.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1681. Witherite.

ACT OF 1909.

ACT OF 1913.

PAR. 711. Witherite [Free].

PAR. 646. Witherite [Free].

### WITHERITE.

*Description and uses.*—Witherite is a mineral consisting chiefly of barium carbonate. It is sparingly distributed, England and Germany having the only deposits that can be mined economically. It is used principally as a mineral filler in the rubber industry and to some extent in the manufacture of barium chemicals. (See pars. 11 and 64 for other barium products.)

*Production.*—A deposit of witherite was discovered in California in 1914, but it has not proved to be of commercial importance.

*Imports* of witherite in 1914 were 1,223,936 pounds, valued at \$7,927, entirely from England. Latest statistics follow:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....	723,676	\$14,134	\$0.02
1919.....	224,000	4,739	.02
1920.....	3,020,304	61,284	.02
1921 (9 months).....	968,384	19,801	.02

*Exports.*—None recorded.

## PARAGRAPH 1682.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1682. Wood charcoal.

ACT OF 1909.

ACT OF 1913.

PAR. 10. Charcoal in any form, not specially provided for in this Act; \* \* \* twenty per centum ad valorem.

PAR. 447. Charcoal, \* \* \* [Free].

## WOOD CHARCOAL.

(See Survey A-2.)

*Description and uses.*—Wood charcoal is the charred wood remaining from the destructive distillation of hardwoods for the production of wood alcohol, acetic acid, and other derivatives. Considerable amounts are also made in ordinary charcoal pits, where the volatile products are not recovered. The chief uses of wood charcoal are as a decolorizing and filtering medium in the chemical industries, in the manufacture of gunpowder, and for many other purposes.

*Production* of wood charcoal in 1914 amounted to 44,828,000 bushels, valued at \$2,829,600, and in 1919 (preliminary figures), to 48,499,000 bushels, valued at \$8,231,400. Michigan and New York are the largest producing States.

*Imports* since 1917 have been as follows:

Calendar year.	Quantity.	Value.	Unit value.
	<i>Pounds.</i>		
1918.....		\$34,464	
1919.....	1,914,628	45,259	\$0.02
1920.....	9,115,825	140,395	.01
1921 (9 months).....	620,053	8,185	.01

*Exports* of charcoal, chiefly to Canada, increased from \$25,310 in 1910 to \$155,470 in 1917. Statistics for subsequent years are not available.

*Important changes in classification.*—First specific mention of wood "charcoal."

## PARAGRAPH 1683.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1683. Wood: Logs and round, unmanufactured timber, firewood, handle bolts, shingle bolts, gun blocks for gunstocks, rough hewn or sawed or planed on one side, sawed boards, planks, deals, and other lumber, not further manufactured than sawed, planed, and tongued and grooved; clapboards, laths, ship timber; all of the foregoing not specially provided for: *Provided*, That if there is imported into the United States any of the

## H. R. 7456.

## SENATE AMENDMENTS.

foregoing lumber, planed on one or more sides and tongued and grooved, manufactured in or exported from any country, dependency, province, or other subdivision of government, which imposes a duty upon such lumber exported from the United States, the President may enter into negotiations with such country, dependency, province, or other subdivision of government to secure the removal of such duty, and if such duty is not removed he may by proclamation declare such failure of negotiations, and in such proclamation shall state the facts upon which his action is taken together with the rates imposed, and make declaration that like and equal rates shall be forthwith imposed as hereinafter provided; whereupon, and until such duty is removed, there shall be levied, collected, and paid upon such lumber, when imported directly or indirectly from such country, dependency, province, or other subdivision of government, a duty equal to the duty imposed by such country, dependency, province, or other subdivision of government upon such lumber imported from the United States.

## ACT OF 1909.

PAR. 712. Wood: Logs and round unmanufactured timber, including pulp woods, firewood, handle bolts, shingle bolts, gun blocks for gunstocks rough hewn or sawed or planed on one side. \* \* \* ship timber \* \* \* all the foregoing not specially provided for in this section [Free].

PAR. 201. Sawed boards, planks, deals, and other lumber of whitewood, sycamore, and basswood, fifty cents per thousand feet board measure; sawed lumber, not specially provided for in this section, one dollar and twenty-five cents per thousand feet board measure; but when lumber of any sort is planed or finished, there shall be levied in addition to the rates herein provided, the following:

For one side so planed or finished, fifty cents per thousand feet board measure; for planing or finishing on one side and tonguing and grooving or for planing or finishing on two sides, seventy-five cents per thousand feet board measure; for planing or finishing on three sides, or planing and finishing on two sides and tonguing and grooving, one dollar and twelve and one-half cents per thousand feet board measure; for planing and finishing on four sides, one dollar and fifty cents per thousand feet board measure; and in estimating board meas-

## ACT OF 1913.

PAR. 647. Wood: Logs, timber, round, unmanufactured, hewn or sawed, sided or squared; pulp woods, \* \* \* firewood, \* \* \* handle bolts, shingle bolts, gun blocks for gunstocks rough hewn or sawed, or planed on one side; \* \* \* sawed boards, planks, deals, and other lumber, not further manufactured than sawed, planed, and tongued and grooved; clapboards, laths, \* \* \* ship timber, \* \* \* all the foregoing not specially provided for in this section [Free].

## ACT OF 1909.

## ACT OF 1913.

ure under this schedule no deduction shall be made on board measure on account of planing, tonguing, and grooving.

PAR. 205. Clapboards, one dollar and twenty-five cents per thousand.

PAR. 207. Laths, twenty cents per one thousand pieces.

## LOGS, LUMBER, AND TIMBER.

(See Survey FL-37.)

*Description and uses.*—Logs include the cut trunks of trees not further advanced in manufacture than is implied by the removal of branches. Common lengths are 16 and 32 feet. Logs of smaller diameters, designed for use in the manufacture of wood pulp are frequently known as pulp wood. Short logs, designed for the manufacture of shingles, handles, heading, staves, etc., are often known as bolts. When slender and of considerable length logs are known as poles. The terms timber and lumber overlap. Timber is the broader term including at the one extreme a stand of growing trees of merchantable size and at the other the same trees sawed and squared for building purposes. Ordinarily the pieces of smaller cross section, such as boards, planks, deals, clapboard, and laths, are known as lumber, while the term timber is applied to the pieces of larger cross section, such as studding, floor beams, and rafters. The larger pieces of timber may be hewn with an axe or adze, though now sawing is more common for timber of all sizes. The gun blocks described in the paragraph are self-explanatory. Clapboards are pieces of lumber with a wedge-shaped cross section and are used for the siding of buildings. Laths are thin strips of lumber, left rough, to be nailed to walls and ceiling, with spaces between adjacent laths in order to hold the plaster.

*Production.*—All forms of logs, lumber, and timber are derived from forests. The total stands in the United States are now estimated at about 460,000,000,000 board feet of hardwoods, 390,000,000,000 feet of eastern softwoods, and 1,364,000,000,000 feet of western softwoods. The forests have been much depleted, the present stand being only about one-half of the original.

The annual cut for the United States was about 34,552,100,000 board feet in 1919 and 44,509,800,000 board feet in 1909. These figures show a decline of about 10,000,000,000 board feet in the decade. One reason for the decline is the great and increasing use of substitutes—iron, steel, reinforced concrete, brick, etc.

The States of greatest importance in production in 1919 (figures in billions of board feet) are Washington, 4.96; Louisiana, 3.2; Oregon, 2.6; Mississippi, 2.4; Alabama, 1.8; Arkansas, 1.8; North Carolina, 1.6; Texas, 1.4; California, 1.3; Florida, 1.1; Wisconsin, 1.1; Virginia, 1.1. It will be seen that the South and Pacific Northwest constitute the regions of most importance.

Of the total cut (1919) about 37.8 per cent was yellow pine; 17.1 per cent, Douglas fir; 7.8 per cent, oak; 5.1 per cent, western yellow pine; 5.1 per cent, hemlock; 5 per cent, white pine; 2.8 per cent, spruce; 2.5 per cent, maple; 2.5 per cent, red gum; 1.9 per cent, cypress; 1.6 per cent, chestnut; and 10.8 per cent other species.

Classified by utilization it is estimated that of the total cut 78.4 per cent is consumed as lumber; 5.1 per cent as hewn ties; 3.1 per cent as pulp wood; 1.4 per cent as round mine timber; 1.6 per cent as fencing; 0.6 per cent as poles; 1.7 per cent as shingles; 1.7 per cent as vehicle stock, handles, woodenware, and furniture; 1.5 per cent as veneer logs; 0.8 per cent as tight staves; 0.3 per cent as tight heading; 0.6 per cent as slack staves; 0.4 per cent as slack heading; 0.2 per cent as hoops; 0.2 per cent as piling; 0.9 per cent as laths; 0.7 per cent for distillation; 0.3 per cent for tanning extract; 0.1 per cent for excelsior; and 0.4 per cent is exported. A quantity nearly equal to the amount used for hewn ties is annually lost by fire (4.3 per cent) and about the same quantity (4.8 per cent) is lost because of insects and disease.

The lumber industry includes five stages: (1) The ownership of standing timber; (2) logging, or cutting trees into logs, and delivering them to the sawmills; (3) manufacturing logs into lumber, including seasoning, surfacing, and finishing into special forms; (4) wholesale lumber distribution; and (5) retail distribution. The logging and milling branches rank first among manufactures in the employment of labor—736,000 employees, or 10½ per cent of wage earners in all manufacturing industries; they are third among manufacturing industries in value of annual product, \$1,156,000,000 in 1909. Retail establishments numbered 42,000 in 1914, with 126,000 employees. The manufacturing and retail branches have a combined investment of over \$2,000,000,000. A summary of data for sawmills and planing mills (1914) shows 33,070 establishments, 576,000 wage earners, \$1,283,378,871 in capital, \$301,925,792 paid in wages, and \$1,022,982,811 value of products. The States, ranked in importance with reference to value of output in millions of dollars, are: Washington, 78 (i. e., \$78,000,000); Louisiana, 62; Arkansas, 39; Wisconsin, 37; Mississippi, 36; Michigan, 34; Minnesota, 32; North Carolina, 30; Oregon, 27; West Virginia, 24; California, 23; Texas, 23; Virginia, 23; Maine, 22; Tennessee, 22; and Alabama, 21. This includes only States with an output exceeding \$20,000,000 in value. The industry is important, however, in many other States.

*Imports and exports* are made comparable in the following tables as far as data will admit. Pulp wood is not separately listed in the export trade. Paving posts, railroad ties, telephone, trolley, electric-light, and telegraph poles (not included because dutiable) should be added in order to obtain the imports and exports of wood only slightly advanced beyond the round-timber stage. Canadian percentages of exports and imports are given because of their importance and because it is with Canada that the most serious tariff problems arise. Over 90 per cent of the total log and lumber imports are from Canada. About 20 per cent of the total log and lumber exports are to Canada; the remaining 80 per cent are widely distributed, nearly all countries receiving part of their lumber supply from the United States. The chief purchasers in normal times are the United Kingdom, Mexico, Cuba, Germany, the Netherlands, France, Argentina, Panama, and the West Indies. The kinds of wood entering the export trade, with value in millions of dollars (1914), are: Yellow pine (long leaf, short leaf, and other), 23.1 (i. e., \$23,100,000); oak, 10.6; fir, 8.7; gum, 2.2; redwood, 1.9; white pine, 1.6; poplar, 1.4; spruce, 0.5; cypress, 0.4; and

all other, 6.9. Imports for the fiscal years 1914 and 1918 are shown in the following table:

Item.	1914		1918	
	Quantity.	Value.	Quantity.	Value.
<b>IMPORTS OF LOGS AND LUMBER NOT FURTHER ADVANCED THAN FINISHED BOARDS.</b>				
Logs, round timber (M feet) .....	148,938	\$1,657,605	65,394	\$815,247

*Important changes in classification, etc.*—See General Notes on Paragraph, page 1475.

#### PULP WOOD.

*Description and uses.*—The item, pulp wood, appearing in paragraph 647 of the act of 1913 but omitted from H. R. 7456, is of sufficient importance to call for separate treatment. Pulp-wood logs differ only from other logs in that trees of a smaller diameter may be more profitably cut for pulp wood than for saw timber. Such logs are manufactured into wood pulp, mechanical or chemical, which in turn is the raw material for the greater part of the output of paper. The most important woods are spruce, hemlock, balsam fir, poplar, jack pine, and yellow pine, though other species are used.

*Production.*—The consumption of pulp wood in the United States in 1920 was 6,114,072 cords. Of this quantity, 1,241,444 cords were imported, almost exclusively from Canada. Exports are not segregated, but as they are small, the difference, 4,872,628 cords, represents approximately the domestic production. It will be noted that imports represent about 20 per cent of the domestic consumption. The States of chief importance in the consumption of pulp wood are Maine, New York, Wisconsin, Pennsylvania, New Hampshire, Minnesota, and Michigan, these seven States accounting for nearly 80 per cent of the entire consumption. In a general way, except for the large importation from Canada, the pulp wood is produced in the States in which it is consumed. It thus appears that the production and consumption of pulp wood are industries concentrated in the northeastern and middle northern portions of the country.

*Imports.*—As shown in the above paragraph, the domestic output falls far short of meeting the demand. The relative importance of imports has been increasing, and owing to the approaching exhaustion of American pulp-wood forests is likely to increase in the future at accelerated ratio. The last statement must be qualified. The Canadian provinces permit the exportation of pulp wood only when cut on privately owned lands, and this source of supply is also approaching exhaustion. The increasing importations in the future may be wood pulp and paper rather than pulp wood. Pulp wood may be imported rough or with the bark removed by the processes of peeling or rossing. Importations for the fiscal years 1914 and 1918 are shown in the following table:

Form.	1914			1918		
	Cords.	Per cent.	Value per cord.	Cords.	Per cent.	Value per cord.
Rough.....	198,414	19.8	\$6.04	240,491	18.0	\$9.15
Peeled.....	599,299	60.0	6.40	964,804	72.4	9.63
Rossed.....	201,936	20.2	8.61	128,579	9.6	12.04
Total.....	999,649	100.0	.....	1,333,874	100.0	.....

Later statistics for the calendar years 1918-1921 follow:

	1918	1919	1920	1921 (9 months).
Pulp wood, rough:				
Quantity (cords).....	240,491	241,420	260,914	222,075
Value.....	\$2,200,923	\$2,315,059	\$3,241,523	\$2,843,698

*Exports.*—Statistics not available.

*Suggested changes.*—See General Notes on Paragraph below.

#### GENERAL NOTES ON PARAGRAPH.

*Important changes in classification.*—Some of the articles specifically provided for in paragraph 647 of the act of 1913 are made dutiable in H. R. 7456. They are hubs for wheels, posts, heading bolts, stave bolts, last blocks, wagon blocks, heading blocks, and all like blocks or sticks, rough hewn, sawed, or bored (par. 406), pickets, palings, and staves (par. 407), and shingles (par. 408). Car blocks are made dutiable (par. 406), but oar blocks are not mentioned. Other commodities specifically provided for in paragraph 647 of the act of 1913 and not mentioned in H. R. 7456 are pulp woods, kindling wood, hop poles, hoop poles, ship planking, broom handles, sawdust, and wood flour.

The proviso to paragraph 1683 is new.

*Suggested changes.*—The proviso to this paragraph conditionally makes dutiable lumber planed on one or more sides and tongued and grooved, but makes no provision for lumber planed on any side or sides and not tongued and grooved.

Some of the articles omitted from paragraph 647 of the act of 1913 might be specifically provided for in H. R. 7456. The most important appear to be broom handles and wood flour.

There is doubt whether the words "rough hewn or sawed or planed on one side" in lines 23 and 24, page 200, are intended to apply only to "gun blocks for gunstocks," or to include as well the other preceding specific enumerations. If the intention is to limit the qualifying phrase "gun blocks for gunstocks," a semicolon should be substituted for the comma after "timber" and after "shingle bolts," in line 22, page 200, and "and" should be inserted before "shingle bolts" in line 22. A semicolon in place of the comma after the word "side" in line 24, page 200, would also be advisable.

## PARAGRAPH 1684.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1684. Woods: Sticks of partridge, hair wood, pimento, orange, myrtle, bamboo, rattan, india malacca joints, and other woods not specially provided for in this section in the rough, or not further advanced than cut into lengths suitable for sticks for umbrellas, parasols, sunshades, whips, fishing rods, or walking canes.

## ACT OF 1909.

## ACT OF 1913.

PAR. 713. Woods: \* \* \* sticks of partridge, hair wood, pimento, orange, myrtle, bamboo, rattan, reeds unmanufactured, india malacca joints, and other woods not specially provided for in this section, in the rough, or not further advanced than cut into lengths suitable for sticks for umbrellas, parasols, sunshades, whips, fishing rods, or walking canes [Free].

PAR. 648. Woods: \* \* \* sticks of partridge, hair wood, pimento, orange, myrtle, bamboo, rattan, reeds unmanufactured, india malacca joints, and other woods not specially provided for in this section, in the rough, or not further advanced than cut into lengths suitable for sticks for umbrellas, parasols, sunshades, whips, fishing rods, or walking canes [Free].

## STICKS OF WOOD IN THE ROUGH.

*Description and uses.*—Partridge, named from a wavy pattern in the grain, is the variegated wood of certain South American and East Indian trees, used mostly for umbrella handles and walking sticks. The name is also given to an extremely heavy, hard, dense, dark-brown wood from Brazil, used in marquetry.

Pimento (*Pimenta vulgaris*), both the black and the red, belongs to the myrtle family found in Jamaica, Trinidad, and St. Lucia; it is also called allspice, baywood, and Jamaica pepper. It attains a height of 50 feet and a diameter of 20 inches, is imported in the form of timbers 20 feet long by 12 inches square, and is used for posts, fences, sleepers, naves and felloes for wheels, and for umbrellas and walking sticks. Bay rum is distilled from the leaves, which have a strong, pleasant smell. The berries are known as a spice. Oil of pimento is obtained by distillation from the fruit.

Orange (*Citrus aurantium*), familiar for its fruit, is also used as a cabinet wood, in turnery, and in a superior grade of toothpicks. The wood is of great beauty, has a fine grain, compares with boxwood in hardness, and is scarcely distinguishable from lemon wood (*Citrus medica*). The chief sources are southern Europe, Asia, America, and Africa.

Myrtle wood (*Fagus betuloides* and *Fagus cunninghami*) is derived from the Victorian or Tasmanian beech found in Tierra del Fuego and Tasmania. It attains a diameter of from 3 to 4 feet. The wood has a silky luster and is used in bedroom furniture.

The bamboos (*Bambusææ*) are giant grasses, including some 20 genera and 200 species. They are tropical plants, but may be grown in California and along the south Atlantic coast, and are of surprisingly rapid growth, Florida stalks having attained a height of 72 feet in a single season. The foliage consists of delicate ostrich-like plumes. The stems, upward of 70 feet high, with a diameter of 4 to 6 inches,

are broken by knots or joints. The Chinese eat tender bamboo shoots with bamboo chopsticks; paper is made from the fiber and pencils from small joints in which are inserted tufts of goat's hair. The hard siliceous exterior is impervious to water, while the fresh, uncured stems may be bent to many purposes. It is used for masts, cables, rafters, chains, flutes, rattles, posts, poles, utensils, troughs, pipes, roofing, balloon frames, and incandescent lamps. A common use in this country is for fishing rods.

Rattan, reeds: (See par. 411, p. 580.)

India malacca joints: Canes from various species of the genus *Calamus*, as *Calamus scipionum*, *Calamus latifolium*, and others, are imported from the Orient as malacca joints or canes, used as walking sticks or umbrella handles.

Hair wood: No information secured.

*Production.*—Orange is grown for fruit in the United States and the bamboo may be grown in Florida and California, but for the most part the woods mentioned in paragraph 1684 are imported woods, not growing in the United States. No data as to the orange and bamboo that may be grown for wood are obtainable.

*Imports.*—Red cedar, mentioned in paragraph 648 of the act of 1913 but dropped from the enumeration of woods in paragraph 1684, shows the following imports for the calendar years 1918–1921:

	1918	1919	1920	1921 (9 months).
Quantity (M feet).....	2,527	8	206	.....
Value.....	\$44,031	\$675	\$22,385	.....

Imports of certain cabinet woods in the rough, enumerated in paragraph 648 of the free list of the act of 1913 but transferred to the dutiable list in H. R. 7456, will be found in connection with paragraph 404. Imports (calendar years) of the items remaining in paragraph 1684, i.e., sticks of partridge, hair wood, pimento, orange, myrtle, bamboo, rattan, india malacca joints, and other woods, in the rough or not, further advanced than cut into lengths suitable for sticks for umbrellas, parasols, sunshades, whips, fishing rods, or walking canes, have been by calendar years as follows: 1918, \$152,923; 1919, \$206,264; 1920, \$675,101; 1921, (nine months), \$271,844.

*Exports.*—None recorded.

*Important changes in classification.*—The following items, enumerated in paragraph 648 of the free list of the act of 1913, have been transferred to the dutiable list, paragraph 404 in H. R. 7456: Spanish cedar, lignum-vitæ, lancewood, ebony, box, granadilla, mahogany, rosewood, and satinwood, in the log, rough, or hewn only. Red cedar (*Juniperus virginiana*) timber, hewn, sided, squared, or round, in the free list (par. 648) of the act of 1913 is dropped from specific mention altogether in H. R. 7456, but logs of cedar are provided for in paragraph 402, and timber hewn, sided, or squared otherwise than by sawing (not less than 8 inches square) and round timber used for spars or in building wharves, in paragraph 401. Red cedar in the form of round unmanufactured timber, not included in the foregoing, or such cedar sawed, would apparently be admitted free under paragraph 1683, but the latter would be subject to the dutiable proviso for certain lumber.

Cabinet woods not specifically enumerated, in the log, rough or hewn, have also been omitted, thus falling within the general provisions.

*Suggested changes.*—Page 201, line 25, of H. R. 7456: Insert a comma after “for.”

Page 201, line 25, and page 202, line 1, of H. R. 7456: Strike out “in this section.”

---

### PARAGRAPH 1685.

#### H. R. 7456.

#### SENATE AMENDMENTS.

PAR. 1685. Original paintings in oil, mineral, water, or other colors, pastels, original drawings and sketches in pen and ink or pencil and water colors, artists' proof etchings unbound, and engravings and woodcuts unbound, original sculptures or statuary, including not more than two replicas or reproductions of the same; but the terms “sculpture” and “statuary” as used in this paragraph shall be understood to include professional productions of sculptors only, whether in round or in relief, in bronze, marble, stone, terra cotta, ivory, wood, or metal, or whether cut, carved, or otherwise wrought by hand from the solid block or mass of marble, stone, or alabaster, or from metal, or cast in bronze or other metal or substance, or from wax or plaster, made as the professional productions of sculptors only; and the words “painting” and “sculpture” and “statuary” as used in this paragraph shall not be understood to include any articles of utility, nor such as are made wholly or in part by stenciling or any other mechanical process; and the words “etchings,” “engravings,” and “woodcuts” as used in this paragraph shall be understood to include only such as are printed by hand from plates or blocks etched or engraved with hand tools and not such as are printed from plates or blocks etched or engraved by photochemical or other mechanical processes.

#### ACT OF 1909.

PAR. 717. Works of art, including paintings in oil, mineral, water, or other colors, pastels, original drawings and sketches, etchings and engravings, and sculptures, which are proved to the satisfaction of the Secretary of the Treasury under rules prescribed by him to have been in existence more than twenty years prior to the date of their importation, but the term “sculptures” as herein used shall be understood to include professional productions of sculptors only, whether round or in relief, in bronze, marble, stone, terra cotta, ivory, wood, or metal; and the word “painting,” as used in this Act, shall not

#### ACT OF 1913.

PAR. 652. Original paintings in oil, mineral, water, or other colors, pastels, original drawings and sketches in pen and ink or pencil and water colors, artists' proof etchings unbound, and engravings and woodcuts unbound, original sculptures or statuary, including not more than two replicas or reproductions of the same; but the terms “sculpture” and “statuary” as used in this paragraph shall be understood to include professional productions of sculptors only, whether in round or in relief, in bronze, marble, stone, terra cotta, ivory, wood, or metal, or whether cut, carved, or otherwise

## ACT OF 1909.

be understood to include any article of utility nor such as are made wholly or in part by stenciling or any other mechanical process; and the words "etchings" and "engravings," as used in this Act, shall be understood to include only such as are printed by hand from plates or blocks etched or engraved with hand tools, and not such as are printed from plates or blocks etched or engraved by photochemical processes. \* \* \* [Free.]

## ACT OF 1913.

wrought by hand from the solid block or mass of marble, stone, or alabaster, or from metal, or cast in bronze or other metal or substance, or from wax or plaster, made as the professional productions of sculptors only; and the words "painting" and "sculpture" and "statuary" as used in this paragraph shall not be understood to include any articles of utility, nor such as are made wholly or in part by stenciling or any other mechanical process; and the words "etchings," "engravings," and "woodcuts" as used in this paragraph shall be understood to include only such as are printed by hand from plates or blocks etched or engraved with hand tools and not such as are printed from plates or blocks etched or engraved by photochemical or other mechanical processes [Free].

ORIGINAL PAINTINGS, ORIGINAL DRAWINGS AND SKETCHES, ARTISTS' ETCHINGS AND ENGRAVINGS AND WOODCUTS UNBOUND, ORIGINAL SCULPTURES OR STATUARY, ETC.

(See Survey N-24.)

For *description and uses* of works of art, original paintings, etc., see paragraph 1447, page 1195.

Imports of works of art, etc., in 1914 were valued at \$11,303,541. Later statistics for calendar years follow:

	1918 .	1919	1920	1921 (9 months).
Original paintings in oil, mineral, water, or other colors, pastels, original drawings, sketches in pen and ink, etc.....	\$1,579,859	\$108,964	\$6,270,348	\$4,107,851
Artists' proof etchings unbound, and engravings and woodcuts unbound.....	84,151	392,879	588,388	266,123
Original sculptures or statuary, including not more than two replicas or reproductions of same.....	58,148	108,964	171,889	103,136

*Exports* of art works are shown under paragraphs 1447.

*Suggested changes.*—Page 202, lines 10 and 18 of H. R. 7456: Strike out the word "paragraph" and insert "Title and in Title I."

Page 202, lines 5 and 6, of H. R. 7456: Substitute "pen and ink, pencil or water colors, in whole or in combination," for "pen and ink or pencil and water colors," if it is desired to exempt from duty all such sketches; otherwise the provision should be so worded as to exclude sketches or designs of utilitarian or industrial nature.

It is represented to the Tariff Commission that artists' proof etchings to be admitted without payment of duty must be signed in pencil, and that omission from the bill H. R. 7456 of the provision in paragraph 425 of the act of 1913 for etchings printed more than 20 years at the date of importation will exclude from free entry artists' proof etchings unbound, printed before the practice of signing artists' proofs arose (25 years ago). Such etchings of high merit as artistic productions would be dutiable although more modern signed artists' proof etchings would be exempt from duty under the bill as passed by the House of Representatives.

It has been represented to the Tariff Commission that engravings, etchings, and lithographic prints, bound or unbound, which shall have been printed more than 20 years at the date of importation, should be exempted from duty, which, if desired, could be done by insertion of the provision followed by a comma and the words "and all" before "hydrographic charts" in paragraph 1529, page 1259.

### PARAGRAPH 1686.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1686. Works of art, drawings, engravings, photographic pictures, and philosophical and scientific apparatus brought by professional artists, lecturers, or scientists arriving from abroad for use by them temporarily for exhibition and in illustration, promotion, and encouragement of art, science, or industry in the United States, and not for sale, shall be admitted free of duty, under such regulations as the Secretary of the Treasury shall prescribe; but bonds shall be given for the payment to the United States of such duties as may be imposed by law upon any and all such articles as shall not be exported within six months after such importation: *Provided*, That the Secretary of the Treasury may, in his discretion, extend such period for a further term of six months in cases where application therefor shall be made.

ACT OF 1909.

PAR. 714. Works of art, drawings, engravings, photographic pictures, and philosophical and scientific apparatus brought by professional artists, lecturers, or scientists arriving from abroad for use by them temporarily for exhibition and in illustration, promotion, and encouragement of art, science, or industry in the United States, and not for sale, shall be admitted free of duty, under such regulations as the Secretary of the Treasury shall prescribe; but bonds shall be given for the payment to the United States of such duties as may be imposed by law upon any and all such articles as shall not be exported within six months after such importation: *Provided*, That the Secretary of the Treasury may, in his discretion, extend such period for a further term of six months in cases where applications therefor shall be made.

ACT OF 1913.

PAR. 653. Works of art, drawings, engravings, photographic pictures, and philosophical and scientific apparatus brought by professional artists, lecturers, or scientists arriving from abroad for use by them temporarily for exhibition and in illustration, promotion, and encouragement of art, science, or industry in the United States, and not for sale, shall be admitted free of duty, under such regulations as the Secretary of the Treasury shall prescribe; but bonds shall be given for the payment to the United States of such duties as may be imposed by law upon any and all such articles as shall not be exported within six months after such importation: *Provided*, That the Secretary of the Treasury may, in his discretion, extend such period for a further term of six months in cases where application therefor shall be made.

WORKS OF ART, ETC., IMPORTED TEMPORARILY, ETC.

(See Survey N-24.)

*Description and uses.*—See paragraph 1447, page 1195.  
*Import and export statistics* are not separately shown.

## PARAGRAPH 1687.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1687. Works of art, collections in illustration of the progress of the arts, sciences, agriculture, or manufactures, photographs, works in terra cotta, parian, pottery, or porcelain, antiquities and artistic copies thereof in metal or other material, imported in good faith for exhibition at a fixed place by any State or by any society or institution established for the encouragement of the arts, science, agriculture, or education, or for a municipal corporation, and all like articles imported in good faith by any society or association, or for a municipal corporation, for the purpose of erecting a public monument, and not intended for sale nor for any other purpose than herein expressed; but bond shall be given, under such rules and regulations as the Secretary of the Treasury may prescribe, for the payment of lawful duties which may accrue should any of the articles aforesaid be sold, transferred, or used contrary to this provision, and such articles shall be subject at any time to examination and inspection by the proper officers of the customs: *Provided*, That the privileges of this and the preceding paragraph shall not be allowed to associations or corporations engaged in or connected with business of a private or commercial character.

## ACT OF 1909.

PAR. 715. Works of art, collections in illustration of the progress of the arts, sciences, or manufactures, photographs, works in terra cotta, parian, pottery, or porcelain, antiquities and artistic copies thereof in metal or other material, imported in good faith for exhibition at a fixed place by any State or by any society or institution established for the encouragement of the arts, science, or education, or for a municipal corporation, and all like articles imported in good faith by any society or association, or for a municipal corporation for the purpose of erecting a public monument, and not intended for sale, nor for any other purpose than herein expressed; [Free] but bonds shall be given under such rules and regulation as the Secretary of the Treasury may prescribe, for the payment of lawful duties which may accrue should any of the articles aforesaid be sold, transferred, or used contrary to this provision, and such articles shall be subject, at any time, to examination and inspection by the proper officers of the customs: *Provided*, That the privileges of this and the preceding section shall not be allowed to associations or corporations engaged in or connected with business of a private or commercial character.

## ACT OF 1913.

PAR. 654. Works of art, collections in illustration of the progress of the arts, sciences, agriculture, or manufactures, photographs, works in terra cotta, parian, pottery, or porcelain, antiquities and artistic copies thereof in metal or other material, imported in good faith for exhibition at a fixed place by any State or by any society or institution established for the encouragement of the arts, science, agriculture, or education, or for a municipal corporation, and all like articles imported in good faith by any society or association, or for a municipal corporation, for the purpose of erecting a public monument, and not intended for sale nor for any other purpose than herein expressed; [Free] but bond shall be given under such rules and regulations as the Secretary of the Treasury may prescribe, for the payment of lawful duties which may accrue should any of the articles aforesaid be sold, transferred, or used contrary to this provision, and such articles shall be subject, at any time, to examination and inspection by the proper officers of the customs: *Provided*, That the privileges of this and the preceding paragraph shall not be allowed to associations or corporations engaged in or connected with business of a private or commercial character.

## WORKS OF ART, ETC., FOR EXHIBITION, ETC.

(See Survey N-24.)

*Description and uses.*—For works of art for exhibition, see paragraph 1447, page 1195.

*Imports* of works of art imported for exhibition in 1914 were valued at \$936,642. Later imports by calendar years have been valued as follows: 1918, \$241,737; 1919, \$84,139; 1920, \$172,210; 1921 (nine months), \$232,337.

*Exports* of art works are shown under paragraph 1447.

---

 PARAGRAPH 1688.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1688. Works of art, productions of American artists residing temporarily abroad, or other works of art, including pictorial paintings on glass, imported expressly for presentation to a national institution or to any State or municipal corporation or incorporated religious society, college, or other public institution, including stained or painted window glass or stained or painted glass windows imported by houses of worship, and excluding any article, in whole or in part, molded, cast, or mechanically wrought from metal within twenty years prior to importation; but such exemption shall be subject to such regulations as the Secretary of the Treasury may prescribe.

## ACT OF 1909.

PAR. 716. Works of art, productions of American artists residing temporarily abroad, or other works of art, including pictorial paintings on glass, imported expressly for presentation to a national institution, or to any state or municipal corporation or incorporated religious society, college, or other public institution, except stained or painted window glass or stained or painted glass windows, and except any article, in whole or in part, molded, cast, or mechanically wrought from metal within twenty years prior to importation; but such exemption shall be subject to such regulations as the Secretary of the Treasury may prescribe [Free].

## ACT OF 1913.

PAR. 655. Works of art, productions of American artists residing temporarily abroad, or other works of art, including pictorial paintings on glass, imported expressly for presentation to a national institution or to any State or municipal corporation or incorporated religious society, college, or other public institution, including stained or painted window glass or stained or painted glass windows imported to be used in houses of worship, and excluding any article, in whole or in part, molded, cast, or mechanically wrought from metal within twenty years prior to importation; but such exemption shall be subject to such regulations as the Secretary of the Treasury may prescribe [Free].

## WORKS OF ART, OF AMERICAN ARTISTS, ART WORKS FOR PRESENTATION, ETC.

(See Survey N-24.)

*Description and uses.*—For works of art, productions of American artists, see paragraph 1447, page 1195.

*Imports* of works of art, productions of American artists residing temporarily abroad, etc., in 1914, were valued at \$287,418. Later statistics for calendar years follow:

	1918	1919	1920	1921 (9 months).
Art works, production of American artists residing abroad.....	\$25,863	\$228,795	\$224,591	\$92,039
Art works, pictorial paintings on glass, etc., imported for presentation to institutions or societies, excluding articles wrought from metal within 20 years.....	92,966	272,811	163,921	250,687

*Exports* of art works are shown under paragraph 1447.

*Important changes in classification.*—In this paragraph the stained or painted glass windows are required to be imported *by* houses of worship. In the act of 1913 (par. 665) they are required to be imported *to be used in* houses of worship.

## PARAGRAPH 1689.

## H. R. 7456.

## SENATE AMENDMENTS.

PAR. 1689. Works of art (except rugs and carpets), collections in illustration of the progress of the arts, works in bronze, marble, terra cotta, parian, pottery, or porcelain, artistic antiquities, and objects of art of ornamental character or educational value which shall have been produced more than one hundred years prior to the date of importation, but the free importation of such objects shall be subject to such regulations as to proof of antiquity as the Secretary of the Treasury may prescribe.

## ACT OF 1909.

## ACT OF 1913.

PAR. 717. \* \* \* works of art (except rugs and carpets), collections in illustration of the progress of the arts, works in bronze, marble, terra cotta, parian, pottery, or porcelain, artistic antiquities, and objects of art of ornamental character or educational value which shall have been produced more than one hundred years prior to the date of importation, but the free importation of such objects shall be subject to such regulations as to proof of antiquity as the Secretary of the Treasury may prescribe [Free].

PAR. 656. Works of art (except rugs and carpets), collections in illustration of the progress of the arts, works in bronze, marble, terra cotta, parian, pottery, or porcelain, artistic antiquities, and objects of art of ornamental character or educational value which shall have been produced more than one hundred years prior to the date of importation, but the free importation of such objects shall be subject to such regulations as to proof of antiquity as the Secretary of the Treasury may prescribe [Free].

## WORKS OF ART, 100 YEARS OLD.

(See Survey N-24.)

*Description and uses.*—For works of art produced more than 100 years previous to importation, see paragraph 1447, page 1195.

*Imports* in 1914 of works of art produced more than 100 years prior to date of importation were valued at \$22,302,626; mostly from France, England, Germany, and Italy. Later statistics for calendar years are as follows: 1918, \$6,023,673; 1919, \$15,119,614; 1920, \$20,256,347; 1921 (nine months), \$7,482,250.

*Exports* of art works are shown under paragraph 1447.

*Suggested changes.*—Importations under this provision in the act of 1913 (par. 656) run into the millions in value, those in 1920 amounting to \$20,256,000. Every importation must be examined in its entirety and occasionally experts are called in to assist the examiners in determining the question of antiquity. In 1919, apart from the work in the collector's office, 8 to 10 examiners and from 25 to 30 employees in New York devoted a large part of their time to the examination of such importations. A provision reimbursing the Government for the heavy expenses incurred might be given consideration if there shall be no restriction upon importation incorporated in the bill. A definite date instead of 100 years might also be advisable; 1820 would be especially appropriate for furniture and might be applied also to other articles enumerated in the paragraph.

---

 PARAGRAPH 1690.

H. R. 7456.

SENATE AMENDMENTS.

PAR. 1690. Zaffer.

ACT OF 1909.

ACT OF 1913.

PAR. 718. Zaffer [Free].

PAR. 657. Zaffer [Free].

## ZAFFER.

(See Survey FL-6.)

*Description and uses.*—Zaffer is the name given to an impure variety of cobalt oxide obtained by roasting speiss or carefully picked cobalt ores. This name is often loosely applied to mixtures of zaffer proper with silica, oxides of iron, manganese, etc. It is used to produce a blue color in porcelain painting and in enameling pottery.

*Production.*—Little, if any, zaffer is produced in the United States.

*Imports* of zaffer are included with those of cobalt and cobalt ore (see par. 1547, p. 1279).

LISTS OF ARTICLES TRANSFERRED FROM THE DUTIABLE SCHEDULES AND THE FREE LIST, RESPECTIVELY, OF THE TARIFF ACT OF OCTOBER 3, 1913, MODIFIED BY THE ACT OF SEPTEMBER 8, 1916, TO THE FREE LIST AND DUTIABLE SCHEDULES OF THE BILL H. R. 7456, AS PASSED BY THE HOUSE OF REPRESENTATIVES JULY 21, 1921.

LIST NO. 1.

Articles transferred from the dutiable schedules of the act of 1913 to the free list of the bill H. R. 7456.

Act of 1913, paragraph.	Commodity.	H. R. 7456, paragraph.
49	Ambergris not containing alcohol. Civet, and musk grained or in pods, not containing alcohol.	1506
144	Matte containing antimony but not containing more than 10 per centum of lead.	1509
31	Saffron and safflower, and extract of, and saffron cake.....	1510
	Carbazole having a purity of between 25 and 65 per cent, and anthracene having a purity of between 25 and 30 per cent [Group II, act of 1916.]	1546
147	Copper in rolled plates.....	1553
143	Barium, calcium, sodium, and potassium, and alloys of which said metals are the component material of chief value.	1559
154	Metallic mineral substances in a crude state, and metals unwrought.	1559
46	Oils, jasmine or jasmine.....	1566
49	Enfleurage greases and floral essences, not containing alcohol...	1566
36	Gums: Amber, and amberoid, unmanufactured or crude gum; arabic or senegal.	1577
369	Ivory tusks in their natural state, or cut vertically across the grain only, with the bark left intact.	1591
381	Meerschaum, crude or unmanufactured.....	1612
154	Monazite sand and thorite.....	1616
46	Oils, distilled and essential: Anise or anise seed, bergamot, almond, bitter; caraway, cassia, cinnamon, citronella, lavender, lemon-grass, lime, neroli or orange flower, origanum, red or white; attar of roses (otto of roses in H. R. 7456), rosemary or anthoss, aspic or spike lavender, thyme. In addition to the foregoing, camphor, geranium, lignaloe, palmarosa, pectigrain, and ylang ylang oils, mentioned specifically on free list of H. R. 7456, are dutiable under paragraph 46 of the act of 1913 as essential and distilled oils, n. s. p. f.	1625
45	Oils expressed: Almond oil, sweet, and sesame or sesamum seed or bean oil.	1626
193	Rice cleaned for use in the manufacture of canned foods..... (Par. 9 of the emergency tariff act imposes a duty.	1643
385	Rosin.....	1672
367	Disks of soft wax, commonly known as master records, or metal matrices obtained therefrom, for use in the manufacture of sound records for export purposes.	1677
367	Manufactures of wax.....	1677
642	Personal effects of returning residents of the United States: Exemption raised from \$100 to \$250.	1678

## LIST NO. 2.

Articles transferred from the free list of the act of 1913 to the dutiable schedules of the bill H. R. 7456.

Act of 1913, paragraph.	Commodity.	H. R. 7456, paragraph.
SCHEDULE I.		
387	Acids: Acetic or pyroligneous, arsenic or arsenious, phosphoric, prussic, silicic.	1
393	Alcohol, methyl, or wood.....	4
449	Chromium, hydroxide of, crude.....	5
547	Sugar of milk.....	5
561	Ichthyol oil.....	5
395	Ammonia, sulphate of, perchlorate of, and nitrate of.....	7
440	Calcium carbide.....	15
	Cresol containing 5 per cent or more of tar acid, and distillates which yield 5 per cent of tar acids between 190° and 200° C. [Group I, act of 1916.]	25
	Quinolin [Group I, act of 1916].....	25
501	Explosive substances of coal-tar origin used for mining, blasting, and artillery purposes.	26
538	Madder and munjeet, ground or prepared, and all extracts of...	26
409	Balm of Gilead, when advanced.....	31
592	Salep, or salop, when advanced.....	31
388	Aconite, when advanced.....	32
405	Asafetida, when advanced.....	32
454	Cocculus indicus, when advanced.....	32
516	Ipecac, when advanced.....	32
519	Jalap, when advanced.....	32
541	Manna, when advanced.....	32
477	Belladonna, digitalis, henbane, and stramonium, when not advanced.	33
624	Tanning materials: Extracts of quebracho, and of hemlock bark; extracts of oak and chestnut and other barks and woods other than dyewoods commonly used for tanning; all the foregoing not containing alcohol. Extracts of divi-divi, mangrove, myrobolan, valonia, and wattle mentioned in H. R. 7456 but not in the act of 1913.	36
526	Lac dye.....	36
515	Iodine, resublimed.....	42
433	Bromin.....	43
539	Magnesite, crude or calcined, not purified.....	47
498	Grease, fats, and oils such as are commonly used in soap making or in wire drawing, or for stuffing of dressing leather.	49
561	Cod and cod-liver oil.....	49
561	Coconut, cottonseed, and soya bean oil [Emergency tariff act of 1921 (par. 11) imposes a duty].	50
561	Birch tar, cajeput, and juglandium oil.....	54
569	Paris green and London purple.....	59
575	Phosphorus.....	60
447	Blood char, bone black or bone char, not suitable for use as a pigment.	66
580	Potash, carbonate of, hydrate of, when not containing more than 15 per centum of caustic soda, and crude nitrate of, or salt-petre.	75
594	Santonin and its combinations with acids.....	76
593	Salt.....	78
605	Soda, arseniate of, soda ash, silicate of soda.....	78
615	Strontia, oxide of, or protoxide of strontian.....	82
616	Strychnia or strychnine and its combinations with acids.....	83

Articles transferred from the free list of the act of 1913 to the dutiable schedules of the bill  
H. R. 7456—Continued.

Act of 1913, paragraph.	Commodity.	H. R. 7456, paragraph.
<b>SCHEDULE 2.</b>		
444	Roman, Portland, and other hydraulic cement.....	203
614	Limestone, unmanufactured.....	204
411	Bauxite or beauxite, crude, not advanced.....	207
450	Common blue clay and Gross-Almerode glass-pot clay, in cases or casks.....	207
629	Terra alba.....	207
621	Talcum, steatite, and French chalk, crude, unground.....	209
579	Plumbago.....	211
494	Glass plates or disks, rough-cut or unwrought, for use in manufacture of optical instruments.....	227
493	Glass enamel, white, for watch and clock dials.....	231
438	Burrstones, manufactured.....	234
470	Curling stones.....	235
<b>SCHEDULE 3.</b>		
518	Iron in pigs, iron kentledge, spiegeleisen, wrought iron, and scrap and scrap steel.....	301
518	Ferromanganese.....	302
540	Manganese, oxide and ore of.....	302
549	Molybdenum ore.....	302
633	Tungsten-bearing ores of all kinds.....	302
518	Iron in slabs, blooms, loops, or other forms less finished than iron bars, and more advanced than pig iron.....	303
613	Steel ingots, cogged ingots, blooms and slabs, die blocks or blanks, and billets, not containing alloy.....	304
509	Hoop or band iron or hoop or band steel, cut to lengths or wholly or partly manufactured into hoops or ties, for baling cotton or any other commodity.....	314
554	Horseshoe-nail rods.....	315
645	Galvanized wire.....	317
587	Railway bars, iron or steel, T-rails, punched iron or steel flat rails.....	322
554	Cut nails and cut spikes of iron or steel, horseshoe nails, hob-nails, wire staples, wire nails, spikes of iron or steel, and cut tacks, brads, or sprigs.....	331
554	Horse, mule, or ox shoes of iron or steel.....	333
612	Steel engraved forms for bonds, debentures, stock certificates, etc.....	341
555	Needles for shoe machines.....	343
573	Philosophical and scientific apparatus, etc., for institutions.....	360
578	Vases, retorts, and other apparatus, vessels, and parts thereof composed of platinum for chemical uses.....	360
441	Cream separators valued at not exceeding \$75.....	372
631	Tin in bars, blocks, pigs, or grain or granulated and scrap tin.....	386
572	Pewter and Britannia metal, old, fit only to be remanufactured.....	386, 389
637	Type, stereotype metal, electrotype metal, linotype composition, old, fit only to be remanufactured.....	389
470	Quoits, and curling-stone handles.....	393
550	Miners' rescue appliances, designed for emergency use in mines where artificial breathing is necessary in the presence of poisonous gases, to aid in the saving of human life, and miners' safety lamps, and parts, accessories, and appliances for cleaning, repairing, and operating all the foregoing.....	393
578	Platinum in sheets and platinum wire.....	393
612	Engraved steel dies and rolls, suitable for use in engraving and printing bonds, etc.....	393

Articles transferred from the free list of the act of 1913 to the dutiable schedules of the bill  
H. R. 7456—Continued.

Act of 1913, paragraph.	Commodity.	H. R. 7456, paragraph.
SCHEDULE 4.		
647	Timber, hewn, sided, or squared.....	401
648	Red cedar ( <i>Juniperus virginiana</i> ) timber, hewn, sided, or squared otherwise than by sawing.....	401
647	Round, unmanufactured timber when used for spars or in building wharves; logs (including pulp woods) of fir, spruce, cedar, and western hemlock (conditionally).....	402
648	Cedar, including Spanish cedar, <i>lignum-vitæ</i> , lancewood, ebony, box, granadilla, mahogany, rosewood, satinwood, and all forms of cabinet woods, in the log, rough or hewn only.....	404
647	Fence posts, hubs for wheels, posts, heading bolts, stave bolts, last blocks, wagon blocks, oar blocks, heading blocks, and all like blocks or sticks, rough hewn, sawed, or bored.....	406
647	Pickets, palings, and staves.....	407
647	Shingles.....	408
647	Kindling wood, hop poles, hoop poles, ship planking, broom handles, sawdust, and wood flour.....	414
SCHEDULE 5.		
591	Salicin.....	505
SCHEDULE 6.		
None.		
SCHEDULE 7.		
545	Fresh beef and veal..... (Par. 14 of the emergency tariff act imposes a duty.)	701
562	Oleo stearin.....	701
619	Cattle..... (Par. 12 of the emergency tariff act imposes a duty.)	701
622	Tallow.....	701
545	Fresh mutton and lamb..... (Par. 14 of the emergency tariff act imposes a duty.)	702
619	Sheep and all other domestic live animals suitable for human food..... (Par. 13 of the emergency tariff act imposes a duty on sheep.)	702
528	Lard, lard compounds, and substitutes.....	703
545	Fresh pork, bacon, and hams..... (Par. 14 of the emergency tariff act imposes a duty.)	703
619	Swine.....	703
419	Bladders and all integuments, tendons, and intestines of animals, crude, dried, or salted for preservation only.....	706
545	Meats of all kinds, prepared or preserved..... (Par. 14 of the emergency tariff act imposes a duty.)	706
547	Milk and cream..... (Par. 23 of the emergency tariff act imposes a duty.)	707
547	Milk and cream preserved or condensed or sterilized..... (Par. 24 of the emergency tariff act imposes a duty.)	708
416	Birds and land and water fowls.....	711
478	Eggs of poultry.....	713
619	Domestic live animals suitable for food.....	716
483	Fresh-water fish and all other fish not specially provided for.....	718, 719, 720, 721
435	Buckwheat and buckwheat flour.....	724
465	Corn or maize..... (Par. 4 of the emergency tariff act imposes a duty.)	725

Articles transferred from the free list of the act of 1913 to the dutiable schedules of the bill  
H. R. 7456—Continued.

Act of 1913, paragraph.	Commodity.	H. R. 7456, paragraph.
SCHEDULE 7—Continued.		
466	Corn meal.....	725
589	Rye and rye flour.....	729
644	Wheat, wheat flour, semolina, and other wheat products..... (Pars. 1 and 2 of the emergency tariff act impose a duty.)	730
417	Biscuits and wafers, when not containing chocolate, nuts, fruit, or confectionery.	734
640	Wafers, unleavened or not edible.....	734
488	Fruits, green, ripe, or dried (bananas).....	736
488	Berries, green, ripe, or dried.....	737
488	Fruits in brine (cherries)..... (Par. 27 of the emergency tariff act imposes a duty upon cherries, raw, preserved in brine (cherries), or otherwise.)	738
488	Fruits, green, ripe, or in brine (citrons and citron peel, crude or in brine).	740
563	Orange and lemon peel, not preserved, candied, or dried.....	740
488	Fruits, green, ripe, or dried, and fruits in brine.....	749
510	Hop roots for cultivation.....	751
595	Bulbs and bulbous roots, not edible. [This provision is omitted from H. R. 7456 and probably falls within the provision for "all other bulbs and roots" in paragraph 751.]	751
595	Coniferous evergreen seedlings.....	752
489	Fruit plants, tropical and semitropical, for the purpose of propa- gation or cultivation. [This provision is omitted in H. R. 7456 and such fruit plants probably fall within the provision for "other fruit vines or bushes" in paragraph 753.]	753
557	Marrons, crude.....	755
557	Coconuts in the shell.....	756
595	All flower seeds (sunflower).....	760
595	All grass seeds. [This provision covers all those seeds specifi- cally mentioned in paragraph 761 of H. R. 7456.]	761
595	Seeds: Cauliflower, celery, mangelwurzels, sugar beet, and flower seeds.	762
595	Seeds: Cotton, hemp, hoarhound, rape, Saint John's bread or bean, sorghum, and sugar cane, for seed. [These seeds are not specifically mentioned in H. R. 7456 and probably fall within the provision for "all other garden and field seeds not specially provided for" in paragraph 762.]	762
606	Soya beans. [No specific provision is made for soya beans in H. R. 7456 and they will probably fall within the provision in paragraph 763 for dried beans.]	763
581	Potatoes [conditionally]..... (Par. 7 of the emergency tariff act imposes a duty.)	769
434	Broom corn.....	774
389	Acorns, raw, dried, or undried, but unground.....	775
473	Dandelion roots, raw, dried or undried, but unground.....	775
595	Seeds: Cardamom, coriander, cummin, fennel, and mustard....	780
471	Curry and curry powder.....	780
634	Turmeric.....	780
SCHEDULE 8.		
None.		
SCHEDULE 9.		
Cotton having a staple of $1\frac{3}{4}$ inches or more in length, dutiable at 7 cents per pound under par. 16, emergency tariff act.		

Articles transferred from the free list of the act of 1913 to the dutiable schedules of the bill  
H. R. 7456—Continued.

Act of 1913, paragraph.	Commodity.	H. R. 7456, paragraph.
SCHEDULE 10.		
485	Flax straw, flax, not hackled or dressed, flax hackled, known as "dressed line," tow of flax and flax noils; hemp and tow of hemp, hemp hackled, known as "line of hemp,"	1001
408	Plain woven fabrics of single jute yarns, not bleached, dyed, colored, stained, printed, or rendered noninflammable by any process.	1008
SCHEDULE 11.		
650	Wool and hair..... (Dutiable under pars. 18 and 19 of the emergency tariff act.)	1101, 1102
651	Wool wastes.....	1105
SCHEDULE 12.		
None.		
SCHEDULE 13.		
481	Felt, adhesive for sheathing vessels.....	1302
530	Leather board or compressed leather.....	1302
567	Decalcomania paper, not printed.....	1305
425	Books, maps, music, engravings, photographs, etchings, lithographic prints, bound or unbound, and charts, printed more than 20 years.	1310
426	Books and pamphlets printed wholly or chiefly in languages other than English, and all textbooks used in schools.	1310
650	Paper twine for binding wool.....	1313
SCHEDULE 14.		
479	Crude artificial abrasives.....	1415
491	Silver or black fox skins, undressed.....	1420
422	Press cloths composed of camel's hair, imported expressly for oil milling purposes, and marked.	1426
495	Gloves, made wholly or in chief value of leather made from horsehides, pigskins, and cattle hides of cattle of the bovine species.	1433
443	Catgut, whip gut, or worm gut, unmanufactured.....	1434
576	Photographic and moving-picture films, sensitized but not exposed or developed.	1451
412	Beeswax, white, bleached.....	1457
618	Sumac, ground.....	1458
PERSONAL, HOUSEHOLD, OR PROFESSIONAL EFFECTS TRANSFERRED FROM THE FREE LIST TO DUTIABLE SCHEDULES ACCORDING TO THE NATURE OF THE ARTICLE.		
428	Books and libraries exceeding \$250 in value, and household effects, of persons from abroad. [See par. 1532, H. R. 7456.]	
571	Personal effects, exceeding \$300 in value, of United States citizens dying abroad. [See par. 1631, H. R. 7456.]	
582	Professional books, implements and instruments and tools of trade, exceeding \$250 in value, of immigrants. [See par. 1637, H. R. 7456.]	

# INDEX.

[Abbreviations: n. s. p. f.=not specially provided for; \*=more specially provided for in act of 1909 or 1913 than in H. R. 7456.]

## Manufactures—Continued.

	Paragraph of H. R. 7456.	Page.
Table damask—		
Cotton .....	910	876
Vegetable fiber.....	1012	925
Talc.....	209	283
Vegetable fiber—		
N. s. p. f.....	1019	938
Pile fabrics.....	1011	924
Table damask.....	1012	925
Vegetable ivory.....	1438	1183
Wax.....	1436	1178
Weeds.....	1437	1179
Whalebone.....	1437	1179
Wood.....	414	587, 589
Wool—		
N. s. p. f.....	1120	1002
Pile fabrics.....	1111	978
Samples of.....	1122	1005
Manures.....	1576	1317
Manuscripts, n. s. p. f.....	1608	1368
Maple:		
Japanese.....	404	561
Sirup and sugar.....	504	603
Map:		
Bound or unbound.....	1310	1082
For institutions.....	1531	1260
For use of United States or Library of Congress.....	1528	1258
N. s. p. f.....	1310	1082
20 years old *.....	1310	1081
Maraschino cherries.....	738	717
Marble:		
And manufactures.....	232, 233	342, 346
Works of art.....	1689	1484
Marbles, toy.....	1414	1117
Markings:		
Bottles, thermostatic.....	1454	1210
Carafes, thermostatic.....	1454	1209
Clock movements.....	367, 368	488, 493
Cutlery.....	354, 355	465, 469
Dental instruments.....	359	476
Dials, clock and watch.....	367, 368	488, 493
Dyes, packages containing.....	26	77
Jugs, thermostatic.....	1454	1209
Knives.....	354, 355	465, 469
Laboratory instruments.....	360	478
Nippers.....	361	480
Philosophical instruments.....	360	478
Pincers.....	361	480
Pliers.....	361	480
Razors.....	358	474
Scientific instruments.....	360	478
Scissors.....	357	472
Screws.....	338	442
Shears.....	357	472
Steel wool containers.....	334	438
Surgical instruments.....	359	476
Thermostatic containers.....	1454	1209
Watch movements.....	367	488
Marmalades.....	748	740
Marrons.....	755	756
Marrow, crude.....	1609	1368
Marshmallow root, leaves, and flowers:		
Advanced.....	32	95
Crude.....	1502	1222
Masks, paper, pulp, or papier-mâché.....	1303	1053
Masse, filter.....	1303	1051
Master records.....	1677	1463

	Paragraph of H. R. 7456.	Page.
Mat. stereotype matrix.....	1313	1088
Match boxes, metal.....	1428	1145
Matches.....	1417	1124
Importation, white phosphorus prohibited.....	1417	1123
Maté:		
Advanced.....	32	96
Crude.....	1502	1222
Mathematical instruments, metal.....	360	478
Matrices, metal, for sound records.....	1677	1463
Mats ( <i>see also</i> Matting):		
Bath.....	909	874
China straw.....	1020	940
Cocoa fiber.....	1021	942
Corticine.....	1018	936
Cotton *.....	1020	942
Dogskin.....	1420	1133
Flax *.....	1020	939
Goatskin.....	1420	1133
Hemp *.....	1020	939
India straw.....	1020	939
Japan straw.....	1020	940
Jute *.....	1020	941
Linoleum.....	1018	935
Oilcloth, floor.....	1018	935
Rattan.....	1021	943
Straw.....	1020	940
Vegetable fiber, n. s. p. f.*.....	1020	939
Wool.....	1118	998
Matte:		
Antimony *.....	1509	1233
Copper ( <i>see also</i> Regulus).....	388	535
Lead-bearing.....	388	536
Nickel.....	1628	1405
Matting:		
Cocoa fiber.....	1021	942
Cotton *.....	1020	939
Rattan.....	1021	943
Straw, China, Japan, or India.....	1020	939, 940
Vegetable substances *.....	1020	939
Mazzard cherry, stocks, cuttings, etc.*.....	753	752
Meal:		
Bone.....	1527	1257
Corn.....	725	689
Oat.....	727	693
Oil cake.....	1623	1383
Rice.....	728	695
Rye.....	729	698
Measurers, time.....	368	493
Meat:		
Coconut—		
Not shredded.....	1620	1380
Shredded.....	756	758
Crab.....	722	681
Extract.....	705	644
Fresh.....	701-704, 706	629-649
Fresh, prepared, preserved, n. s. p. f.....	706	645
Inspection of.....	706	645
Reindeer.....	704	642
Slicing cutters.....	356	471
With vegetables.....	773	803
Mechanisms:		
For measuring flowage of water, gas, electricity, etc.....	368	493
For regulating speed of arbors, drums, disks.....	368	493
Time-measuring, and cases.....	368	494
Medals as trophies.....	1611	1373

	Paragraph of H. R. 7456.	Page.
Medicinal—		
Chemicals in small packages.....	21	65
Preparations—		
Alcoholic.....	22	67
Mercurial *.....	16	57
N. s. p. f.....	5	31
Medicinals, coal-tar.....	26	81
Meerschaum.....	1612	1374
Melada and concentrated melada.....	501	591
Melibiose.....	505	607
Melitzitose.....	505	608
Menhaden oil.....	49	142
Menthol.....	48	137
Merchandise ( <i>see</i> Articles).		
Mercurial preparations.....	16	57
Mesh—		
Bags and purses, metal.....	1428	1145
Metal.....	1428	1145
Meta-bisulphite, sodium.....	78	238
Metacresol.....	25	73
Metal—		
Alloys ( <i>see</i> Alloys).		
Antimony.....	376	515
Articles or wares, n. s. p. f.....	393	551
Babbitt.....	389	538
Bell, broken.....	1519	1251
Britannia *.....	389	538
Bronze in leaf.....	379	522

Clock.....	368	494
Watch.....	367	489
Moving-picture films.....	1451	1203
Mowers.....	1504	1223
Muck bars.....	303	376
Mufflers:		
Cotton.....	917	893
Embroidered,* etc.....	1430	1155
Silk.....	1209	1033
Mugs:		
Crockery ware.....	212	290
Porcelain.....	213	295
Mules.....	714	666
Straying across boundary line.....	1507	1229
Mule shoes.....	333	438
Multiflora roses, seedlings and cuttings of.....	752	749
Mungo.....	1105	958

	Paragraph of H. R. 7456.	Page.
Munjeet and extracts *	26	79
Muntz or yellow metal sheets, etc.	378	517
Muriate:		
Ammonia *	7	37
Potash.	1635	1414
Muriatic acid.	1501	1219
Mushrooms.	766	791
Mushroom spawn *	762	783
Music:		
For institutions.	1531	1260
For the blind.	1530	1259
In books or sheets.	1310	1082
Twenty years old *	1310	1081
Wire.	1441	1187
Musical:		
Instrument—		
Cases.	1441	1187
Strings, gut *	1434	1174
Strings, metal.	1441	1187
Instruments and parts.	1441	1188
Musk:		
Artificial.	26	76
Grained or in pods.	1506	1228
Muskets *	364	484
Muskets, muzzle-loading.	364	484
Mustard:		
Ground or prepared.	780	819
Seeds.	780	819
Mutton, fresh.	702	635
Muzzle-loading muskets, shotguns, and rifles.	364	484
Myrobalan (myrobalan *):		
Extract.	36	110
Plum stocks, cuttings, etc.*	753	752
Myrobalans fruit.	1563	1299
Myrtle, sticks.	1684	1476
Nail files.	354	465
Nail rods.	315	403
Nails.	331	433
Naphtha.	1627	1401
Naphthalene (naphthalin *):		
Melting 79° or above.	25	73
Melting below 79°.	1546	1276
Naphthol *	25	73
Naphthol, alpha and beta.	25, 26	73, 76
Naphthylamine (naphthylamin *).	25	73
Naphthylenediamine (naphthylenediamin *).	25	73
Naphtol. ( <i>See</i> Naphthol.)		
Naphtolsulfoacids and salts of *	25	75
Naphtylaminsulfoacids and salts of *	25	75
Napkins, cotton.	911	878
Napkins, lace.	1430	1153
Narcissus bulbs.	751	745
Narrow wares. ( <i>See</i> Small wares).		
Natural history specimens.	1655	1437
Neck ruffings.	1430	1153
Needle books and cases.	343	449
Needles:		
Crochet.	343	450
Darning.	1618	1379
Embroidery machine.	343	449
Hand-sewing.	1618	1379
Knitting.	343	450
Knitting-machine.	343	450
Latch.	343	450
N. s. p. f.	343	451
Sewing-machine.	343	450

	Paragraph of H. R. 7456.	Page.

The first part of the document  
 discusses the general principles  
 of the system and the  
 various methods of  
 application. It is  
 divided into several  
 sections, each dealing  
 with a different aspect  
 of the subject. The  
 first section is  
 devoted to the  
 history of the  
 system, and the  
 second to the  
 theory of the  
 system. The third  
 section is  
 devoted to the  
 practice of the  
 system, and the  
 fourth to the  
 results of the  
 system. The fifth  
 section is  
 devoted to the  
 conclusions of the  
 system. The sixth  
 section is  
 devoted to the  
 appendixes of the  
 system. The seventh  
 section is  
 devoted to the  
 index of the  
 system. The eighth  
 section is  
 devoted to the  
 bibliography of the  
 system. The ninth  
 section is  
 devoted to the  
 notes of the  
 system. The tenth  
 section is  
 devoted to the  
 errata of the  
 system.

The second part of the document  
 discusses the general principles  
 of the system and the  
 various methods of  
 application. It is  
 divided into several  
 sections, each dealing  
 with a different aspect  
 of the subject. The  
 first section is  
 devoted to the  
 history of the  
 system, and the  
 second to the  
 theory of the  
 system. The third  
 section is  
 devoted to the  
 practice of the  
 system, and the  
 fourth to the  
 results of the  
 system. The fifth  
 section is  
 devoted to the  
 conclusions of the  
 system. The sixth  
 section is  
 devoted to the  
 appendixes of the  
 system. The seventh  
 section is  
 devoted to the  
 index of the  
 system. The eighth  
 section is  
 devoted to the  
 bibliography of the  
 system. The ninth  
 section is  
 devoted to the  
 notes of the  
 system. The tenth  
 section is  
 devoted to the  
 errata of the  
 system.
