A POPE, Gen'l Passenger Agent. "THE FISHING LINE." TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. THE TROUT season begins May 1 and ends Sept. 1. THE GRAYLING season opens June 1 and ends Nov. 1. BLACK BASS, PIKE, PICKEREL and MUSKELGONGE also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his trip to his friends or club by express as he for packing fish can be had at nearly all points. TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods are Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the sea-on of 1882 by new buildings and additional tables. During the SEASON ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen. Dogs, Guns and Fishing Tackle Carried Free at owner's risk. In our aim to make sportsmen feel "at home" on this route. For Tourists' guide a handsomely illustrated book of 160 pages sent free. Time Cards, Flyers and further information, address:

A. B. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

GUNPOWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DUPONT'S GUNPOWDER MILLS, established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:
Dupont's Diamond Grain.—Nos. 1 (coarse)
to 4 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.
Dupont's Eagle Ducking.—Nos. 1 (coarse)
to 3 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.
Dupont's Choke Bore.—Specially adapted for
"Choke Bore" Guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 7 and No. 8,
No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and
1 lb. canisters.
Dupont's Eagle Rifle.—A quiet, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. canisters and 6 1/2 lb. kegs.
Dupont's Rifle Fg.—"Sea-Shooting."—
FFG and FFG 1/2 for long-range rifle shooting,
the FFG and FFG 1/2 for general use, burning
strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb.
canisters, 6 1/2, 12 1/2 and 25 lb. kegs. Fg. coarse, FFG
fine.
Dupont's Sporting, Mining, Snurprise and Blasting
Powders of all sizes and descriptions, special
grades for Export. Also Rifle, Cartridge, Mus-
ket, Cannon, Mortar, Minnie, Hexagonal, Cubical
and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
quantity or proof.
Agencies in all the cities and principal towns
throughout the United States. Represented by

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."
They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

BEST HEXAGONAL SPLIT BAMBOO FISHING RODS,

As was proved at the Fly-Casting Tournament at Coney Island, June 23.

First prize in Champion Class was won with one of our 10 ft. 9 oz. Bass Rods; length of cast, 75 feet.
First prize in Amateur Class was won with one of our 11 ft. 9 oz. Fly Rods; length of cast, 6 1/2 ft. The
Sea World Special Prize was won with one of our 13 1/2 ft. 10 oz. General Rods; length of cast, 75 ft. Our
rods are considered superior to all others by those who have seen or used them. Send stamp for cata-
logue, with Mass. Fish and Game Law.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square can-
isters of one pound only.
Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6 1/2 lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot-guns.
Hazard's "Duck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and "very
clean," shooting remarkably close and with great
penetration. For field, forest or water shooting it
ranks any other brand and is equally serviceable
for muzzle or breech-loaders.
Hazard's "Kentucky Rifle."
FFG, FFG and "Sea Shooting" FG in kegs of
25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands for
ordinary sporting and the "Sea Shooting" FG is the
standard 1/2 lb. Powder of the country.
Superior Mining and Blasting Powder.
GOVERNMENT CANON and MUSKET POW-
DER; also, SPECIAL GRADES FOR EXPORT OF
ANY REQUIRED GRAIN OR PROOF MANUFAC-
TURED TO ORDER.
The above can be had of dealers, or of the Com-
pany's Agents, in every prominent city, or whole-
sale at our office.

ANSWERS TO CORRESPONDENTS..... 356

RIFLE AND TRAP SHOOTING..... 357

YACHTING AND CANOEING..... 357

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between amateur sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C. London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, December 1.

WHOM THE GODS WOULD DESTROY they first make mad. The modern reading is that the lawyers first make mad the assassins whom they would not have hung.

DR. COUES.—We learn that Dr. Elliott Coues has resigned his commission as Assistant Surgeon in the army with the intention of devoting himself to literary and scientific pursuits, in accordance with his life-long tastes and habits.

THE ELIXIR OF LIFE.—Two years ago there came in the FOREST AND STREAM's mail one day a letter from a Pennsylvania town, in which the writer assured us that he had discovered a wonderful secret, which was nothing less than a way to prolong human life indefinitely. Our correspondent, in short, claimed to be able to tell us how we might live for ever. The letter was written in a cramped, almost illegible hand, and was altogether quite a curiosity. We were too busy at the time to bother with this man who had the secret of living for ever; but to a second letter we replied. We received no further word from him, but we kept his name and address in mind. In looking over a stray copy of a Pennsylvania paper by the merest chance, the other day, we came across a notice of this man's death. Strange, was it not! And his secret of how to live for ever died with him.

ANGLING AS AN ART.

HOW few there are outside of the brotherhood of the angler who know of what the angler's art consists, or have even a faint conception of the pleasure which it brings its devotees. To the outer world "fishing" is illustrated by the lazy fellow holding a string off the corner of the dock and sleeping between bites. Some have tried it, and becoming disgusted, declare that they might angle if the fish would only bite all the time, but they could not wait for them. Take such a man to a pretty lake, put him in a boat with yourself, and rig his tackle. Show him where the pike are aye lie among the lily-pads, and how to cast for them. Watch him and see the feeble interest developed by the fresh air and change of scene—but not at all by any belief in your story about a mythical pike among the lilies. Keep your eye on him until he gets a strike, and see him turn pale and then flush with excitement at the thought of the "monster" which he lost by striking too soon. A lecture on the habits of the pike is now in order; and he learns that this fish seizes its prey and rushes to a secluded spot to gorge it; and must be allowed to "poach it" before striking. Verily, he thinks, there is some art and sport in this, after all.

It is as difficult to explain the pleasures of angling, with its anticipations, hopes, fears and thrills, as it is to describe how a watermelon tastes. Those who have experienced these emotions know, and the deeper they get into the mysteries of angling the more they enjoy it and the greater its claim to be an art appears. What veteran angler but can recall the taking of some wary old trout, which for seasons had lurked in a favorite pool and spurred the flies and worms of dozens of skilled fishers, until at last it fell a victim to a peculiar fly, presented so artistically that even this wary trout, educated in the wiles of man by many a sharp sting from his steel, was deceived into believing it to be a living insect. Ask such a veteran if angling is an art, or if it is merely luck.

Chance enters into angling merely enough to give it zest. The day may be stormy, the fish are not feeding, or many other things may happen which have not been foreseen, but the angler has become more or less of a naturalist, and his perceptions have been quickened by failures until he is able to reduce these chances to a minimum. He knows the likely pools in the trout stream and the probability of success at certain hours. This is where the standard joke of the country boy with his alder pole and string has its rise. The boy is familiar with the stream and catches more fish than the stranger with better rig, but the angler can soon give the urchin long odds.

Angling is the only sport which does not pall upon the taste with age. In fact, it increases with it, and some of the most enthusiastic fishers are men who have passed three score and ten. It is a sport which leaves no taint upon its devotees, but, on the contrary, brings them health and renewed vigor. It has changed somewhat since the days of Izaak Walton, especially in America, and is not so "content-plative" as in his time. In England still-fishing from punts, for bream, barbel and dace, is followed yet, for want of gamier fish; but the American angler, after graduating from the perch and "sunnies" of the mill pond, aspires to the capture of the pike, black bass, striped bass, trout, and such fish as must be cast, or trolled for, and which fight hard. Let him who thinks it idle sport cast the minnow or the fly for half a day and note the effect upon the tired muscles of his arm, and then say if he has been idle. Let him wade a trout stream, knee deep for the same length of time, and then judge if he has had more leisure than his system can bear.

Give the boys fishing rods, and good ones at that. Never mind the talk about catching as many fish with a sapling as with a fishing rod. This comes from men with no appreciation of the niceties of the art—and can be answered by saying that a net will take more than either. The angler loves fine tackle, the finer the tackle the more enjoyment; and it is as natural as that a man should like a handsome carriage when an ox-cart is stronger, or he can travel as many miles in a lumber wagon. The pleasure that comes from holding a trusty rod, made to the verge of lightness consistent with strength, which kills a fish with its elasticity, is as far superior to a stiff pole, which throws a fish into the treeps before the angler feels the electric thrill of the struggle, as the sun is superior to a farthing rushlight. The angler

with the best tackle gets more enjoyment out of a day's fishing than he who captures more fish with coarser tackle.

PISTOL SHOOTING.

NEXT to fish stories may be ranked pistol shooting by talk. It seems so easy to claim all sorts of posterous performances with this small arm that many give way to the temptation and display their ignorance by their assertions. Even those who ought to know better and will discourse glibly of the parts and make up of the weapons, show how cleverly they can be cocked and snapped, and describe all the minutæ as they would the details of a puzzle, when questioned as to the work and the record of the arms are silent.

There are so many tricks of marksmanship that the descent is readily made from what merely seems improbable to what is absolutely impossible. If a skulking emigrant robber is arrested in the West, we are at once treated to most marvelous stories of his skill with the pistol, whereas in fact the skill lies with the fabricator of the printed account. We have it that the favorite pastime of these Western highway-men is to take line shots at one telegraph pole from the next one. At an average distance of fifty-five yards such hits are barely possible, but to say that they are repeated again and again is to give the assertion the aspect of a fish story.

There are to-day in the city of New York as fine pistol shots as anywhere in the world. In a single show case are targets and hits actually made over known distances and under match conditions, with every detail accurately recorded, which cannot be duplicated in any other city. Occasionally one of these paper shooters ventures into the company of these record-makers and soon learns what may and what may not be done. There is room for great and varied amusement in pistol shooting, but there seems room for far more brag and assertion.

THE ONEIDA LAKE POACHERS.

GEORGE A. CROWNHART, Cicero, N. Y., who has been so active in assisting the Game Protectors of the State of New York in the prosecution of the violators of the laws on Oneida Lake, has recently been outrageously fined by a local justice of the peace for his good work. About two weeks ago he was going from his hotel at South Bay on the lake in the little steamer which has been used to destroy the nets of the poachers. He intended to return the steamer through the canal to Syracuse, where it is owned. On the way he saw some net set in violation of the law, and took them up and destroyed them. This happened to be done on Sunday, and for this he was complained of by the owners and was fined \$100 for Sabbath breaking by a justice of Oswego county whose sympathies must have been on the wrong side. Perhaps the nets belonged to his cousin, perhaps they were owned by his uncle, or may be his brother had an interest in them. We only wish we knew the name of this legal luminary that we might embalm it in ink.

Another splendid specimen of a protector of poachers is an agent of the American Express Co. He has baited the villains who assaulted Lindsley while engaged in destroying the nets in the lake. He offered Mr. Crownhart money to stop enforcing the law in this locality and to keep Lindsley away from the lake. His excoise, as written to one of his superior officers, is that if he does not receive and ship the fish, which are illegally taken, they will be loaded in wagons and driven across to another Express Co., at Syracuse, and so his office would lose the freight, on which he has a percentage.

SHORE BIRDS.—Under this title five chapters have been collected into a little book of convenient form. They are: "Haunts and Habits" and "Range and Migrations," being the article by Mr. William Hapgood, "Range and Rotary Movements of the Linnæole," published in this journal Oct. 20, 1881; "A Morning Without the Birds," from Mr. Roosevelt's "The Great South Bay," in our issue of Oct. 6, 1881; and the editorial articles which appeared last year entitled "By Snipe," and treating of "Nomenclature," "Localities" and "Baits and Decoys." We believe that these chapters in their present form will be welcomed by sportsmen and naturalists. The book will be sent postpaid for 15 cents.

THE IRISH-AMERICAN GALLERY MATCH.—The proposed international gallery match which was to have taken place on the 24th ult. has been indefinitely postponed, and for the very novel reason that an American team cannot be gotten together. The conditions called for an "off-hand" match, and then Mr. Rigby, on behalf of the Miniature Rifle Club of Dublin, defined off-hand shooting to be that in which the left arm was entirely clear of the body. The hip-rest, or the bracing of the elbow of that arm against the body, was not to be allowed. The New York shooters were not prepared for this. Many do shoot in that way, but to have the position enforced upon them as a condition they were not prepared for, and to secure special attention to this style of holding is the object of the call issued by Mr. Conlin. There is no disposition to abandon the match. On the contrary, it is likely that it will lead to an offer from the New York shooters to a general shooting trial, in which pistol shooting will form an important part. The old established firm of Rigby ought not to shrink from a test of these neat little arms so comforting in cases of wounded honor. Conlin's gallery boasts of a fine lot of the old duelling pieces and a match with this style of arm would bring up hosts of reminiscences. Meanwhile the off-hand match waits, and we doubt not that before many weeks the four American gentlemen who are chosen will cable "Ready" and another victory will be placed to the usual credit. It is unfortunate that it did not take place on the 24th as intended, for apart from the fact that it was a national holiday here, it was the 18th anniversary of Mr. Conlin's entry into the gallery-shooting business.

THE LETTER OF OUR CORRESPONDENT "Jacobstaff," to be found in another column, and the accounts of the good fowl shooting uow to be had at Currituck, suggest a word of caution to gunners bound for that point. It is said that an impression has got about that the Kitty Hawk Club, having so much property, will be somewhat lax in protecting it, and that gunners can hope to have shooting from points belonging to this club. This impression is wholly an erroneous one, and should be corrected at once. No one should be allowed to go down to Kitty Hawk fancying that the same shooting is open now that they have been accustomed to enjoy in years past. All the most desirable points in the vicinity of Van Sijke's are now the property of the Kitty Hawk Club, and all the lands of this association are posted and efficiently patrolled. The club has expressed the determination to protect its shooting most carefully, and prompt arrest, followed by rigorous prosecution, may be expected by any one who ventures to trench on its privileges.

It is scarcely to be expected that the gentlemen who have spent such large sums of money to secure these grounds should now throw them open to the public, and their determination to preserve the shooting is in every way worthy of commendation and imitation by other clubs.

THE EARL OF DUNRAVEN IN NOVA SCOTIA.—The game interests of the Province of Nova Scotia are in the hands of the Game and Inland Fishery Protection Society of Nova Scotia, having its headquarters at Halifax. The society is composed of gentlemen who really have at heart the enforcement of the laws. They have done good work, and sportsmen of the Province, as well as those who visit the country from abroad, have reason to respect the society's efforts and aims. We are glad to see that the law in Nova Scotia is enforced without discriminations. So famous a hunter as the Earl of Dunraven got into trouble there recently, because he neglected to comply with the very just provision of the game laws, which requires non-residents to take out a license to kill game. Incorrect reports of this affair having been printed, we take great pleasure in publishing to-day, from a responsible source, a true statement of the case.

THE MAINE MATTER.—In our remarks on the Maine Game Warden system, the other day, we certainly intended no reflection upon the Commissioners of Fisheries and Game of that State. We believe, as we said in our issue of Oct. 13, that they have given abundant proof of their activity and determined purpose in their work, and should receive the hearty support and co-operation of all true-minded sportsmen. We are also sure that Mr. Hubbard in his criticisms of the system, intended nothing personal regarding Mr. Stillwell. We are satisfied that Messrs. Hubbard and Stillwell both desire the same thing—namely, the impartial and thorough execution of the law, without respect to the residence of the offending party.

MORE QUAIL FOR SPRINGFIELD.—The sportsmen of Springfield, Mass., encouraged by the success which attended their efforts last year to restock the neighborhood with quail, are about to repeat the work done a year ago. They have purchased 500 quail, of which the first crop of 50 have already reached them. The birds will be kept in confinement through the winter and will be turned out in the spring. The success of their experiments with the wild rice has proved so great that they are now planting in the river and the ponds the roots and seeds of the wild celery.

AMONG THE SOUVENIRS recovered from the ruins of the Morrell storage warehouse, which was destroyed by fire in this city last October, is a valuable gold medal, the inscription on which shows that it was presented to Mr. George W. Smiley, as a prize for the mastiff "Nell," at the San Francisco Bench Show of 1878.

THE GLAD CHRISTMAS WEEK

IS COMING; and it is time to decide what presents you will then give to your friends. Permit the FOREST AND STREAM to suggest to its readers some of the suitable Christmas and New Year gifts, which mothers, daughters, wives, sisters, cousins, nieces and aunts may select for their sons, fathers, husbands, brothers, cousins, uncles, nephews—and for "the nearer one still, and a dearer one."

A HANDSOME SHOT-GUN.

Many first-class makers—comparisons odious.

AN ANGLING ROD.

See names of makers elsewhere.

A STANDARD RIFLE.

For game or target.

A CANON.

A double one means "you too."

A SHOOTING SUIT.

With a "housewife" for camp.

A TARGET PISTOL.

For winter evening practice.

A BOOK.

See list of those for sale by us.

A YEAR'S SUBSCRIPTION.

We need not specify to what journal. There is only one that "fills the bill," as the bird said of the grub.

Besides the appropriate gifts named above there are

A THOUSAND AND ONE THINGS

That a sportsman needs and will appreciate. We have not space to name them here, but they are mentioned in our advertising columns, and may be seen at the establishments of the dealers in sportsman's goods. Go and see them, and select for yourselves.

IN ANOTHER COLUMN will be found a suggestive question regarding the ethics of sportsmen. A correspondent asks: "Arc sportsmen, as a rule, so nicely adjusted in their moral attributes, when engaged in the pursuit of bay birds, as to resist the temptation to knock a black duck over, if he comes within range?" Now, without remarking that sportsmen are probably as "nicely adjusted in their moral attributes when engaged in the pursuit of bay birds" as they are when engaged in the pursuit of birds of any other description, we feel free to say that no man who looks at the question of game preservation in the proper light would kill one species of game in its close season while searching for another in its open season. We expect this sort of thing from the so-called pot hunters—that is, from men who are habitual poachers, and shoot game out of season—but certainly not from sportsmen of the better class. Who that respects himself would kill the half-grown ruffed grouse, while shooting woodcock in those States, where summer shooting is unheppily still permitted? Who would, at the same season, kill the mother quail, and leave the downy fledgelings to perish? The principle is the same in these examples as in the case cited by our correspondent. We should be loth to believe that there are many of our readers whose moral sense is so base as to make them approve such acts; and we conceive that thinking men, as a class, would, without exception, hold their hands in the face of such a temptation.

THE STORY OF THE WILD HOG OF HAMPTON is fast taking its place among myths and legends, along with the story of Apollo and the Python, St. George and the Dragon, and St. Patrick and the Snakes. It is fitting, then, that the authentic history of that famous chase should be put on permanent record in the files of this journal. As stated in the note accompanying the article, the narrative is substantially true, and its incidents will be recollected by many of our Massachusetts readers. Next week we will give an account of one of the famous hunts of pioneer days, the "Hinkley Hunt" of 1855.

THE EASTERN FIELD TRIALS meeting now being held at Robbins' Island is proving a great success. As will be seen from the account given in another column the attendance is large, the birds plenty, and much of the work done by the dogs is unusually good. The Derby was won by Mr. E. E. Hardy's Pollex with Florida second and Sensation, Jr., third. It is probable that the trials will last until to-morrow, and the details of the last two days must be looked for in our issue of next week.

THE PAPERS ON DOG TRAINING, written by our Kennel Editor, are meeting a cordial reception among dog owners in every part of the country. The best test of the merits of Mr. Hammond's system is a practical trial of them. Amateurs who will train their own dogs by this method will find themselves amply repaid for the time and trouble expended by the satisfaction and pride in the result.

A BOOK ABOUT BIRDS.—Mr. H. B. Bailey, of this city, has prepared a digest of all the ornithological matter contained in the first twelve volumes of this journal. This will shortly be printed under the title of FOREST AND STREAM BIRD NOTES. Further notice of the book and publication will be given later.

SQUIRRELS AS BIRD DESTROYERS.—Further notes on this interesting topic are in type and will be printed next week.

"THE CRUISE OF THE NIPPER."—In three parts. By Nessmuk. Part First next week.

The Sportsman Tourist.

LEAVES FROM A LOG-BOOK.

11.—THE FIRST DAY OUT.

IT had rained every day for more than two weeks, and the Gypsy's announced time of departure had been postponed day by day, and still there were no signs of fair weather. Every part of the cargo had been stowed for some time to take advantage of the first favorable weather, and every afternoon the Captain had waded through the mud to the river's bank to inspect the little craft lying in the boat house, mentally anaesthetizing October's showers as he thought of the fast flying autumn days that could be made so agreeable if the clerk of the weather would only permit. The Captain's impatience was shared by the crew, too, who would sit on the boat house floor, looking wistfully out of her brown eyes, while the water dripping off her liver-colored coat made her look like anything but the cleanly and ladylike cook she was. "Poor July! Was ever anything so abominable?" would be answered by a low waine, and a slight tap of the fall on the floor, indicating sympathy as plainly as if expressed in the choicest English, and far more satisfactory to the Captain than the "too bad" and "hard luck" of his bipedal acquaintances.

At last there came an afternoon when the sun found a small rent in the clouds and gave one peep through at the earth below. But he must have been disappointed at the dismal sight he saw, for he immediately withdrew his eyes and all was as dark again as before. But that one glance, and a puff of wind from the north accompanying it, made the Captain's heart leap joyously, and in a moment he and July were speeding up stream to the lodging house, where "store clothes" were exchanged for blue flannels, then back again to the river where the Gypsy's maker, Mr. William Jarvis, helped lower the boat into the water. The Captain was soon aboard; at the word "Come" the crew jumped lightly from the dock to her accustomed place between the Captain's feet, and the third cruise of the Gypsy was commenced.

At the first stroke of the paddle the sun shot another glance through the clouds, twinkled merrily for a moment, and then withdrew again. The solitary tortoise fell sideways off a log into the muddy water, and as the Gypsy passed, scrambled quickly up the other side to try to catch another ray from the sun. But his haste was useless, for the orb obstinately refused to show its face again. The high water and rapid current carried the canoe on at a high rate of speed, the captain's paddle being only useful to keep in the middle of the stream in rounding the curves. Past the coal docks, then through acres of marsh grass burned over by fire during the summer, and finally, between the breakwaters at the river's mouth, leaving the lighthouse to starboard, the canoe shot into the water of the beautiful Cuyuga. Ten miles to the north was an unobstructed view of the lake, showing white caps formed by the increasing puffs of wind. On the east was the club house of the Forest City Shooting Club, nestled in a clump of willows, and back of that the last cascade of Fall Creek, roaring and boiling with its unwanted volume of water. Prudence bade the captain hug the west shore, where the abrupt cliffs broke the force of the wind and rendered paddling less laborious; but he had hardly turned in that direction, when a "big" before squall" came a large drop of rain on the deck. This was followed by another and then another, and the Captain was compelled to hastily lift the cork seat, draw from beneath it a rubber coat, which he donned, and then the canoe's apron, which was buttoned on the deck around the well, and tucked in tightly around his body. "We won't turn back now, anyhow," thought the Captain, and with the rain dashing in torrents against his face he piled the paddle vigorously, and with a regular stroke drove the canoe against the oncoming waves. Some fishermen, sheltered by an upturned boat on the beach, laughed heartily at the solitary figure in the rain, and then invited him ashore to share their quarters. "Thanks, I am very comfortable," answered the retreating voyager, leaving the honest fishermen to wonder what "comfort" that crazy fool could find in breasting such a storm. "Where bound?" cried the skipper of a passing coal sloop. "Canada," shouted back the voyager. "Where'd he say?" asked the skipper, peering through the cabin window. "He said 'Canada,'" answered her husband, sentimentally, "but I guess he lied."

Meanwhile the storm showed no signs of abating, and for three-quarters of an hour the rain poured down in sheets; but at the end of that time there was a lull, and the Captain deemed it best to seek quarters for the night. Bushy Point jutted out into the lake close by, and the Captain made a landing on the lee shore. The apron was first carefully removed so as not to spill any water into the well, and only a few drops were found inside; then July started, jumping from her port-quarter, and received the customary caress; the Captain pulled the canoe up higher on the gravelly beach, lifted the large rubber bag of "plunder" from the stern, and then began rigging the Gypsy's "house." A bundle of odd-looking rods, tied together with cord, was produced from alongside the well and untied; an upright was fastened in slots made to receive it at the foremost part of the well; then a stout cord was run from a ring in the top of this upright to a ring in the mast. Along this cord, at regular intervals, were tied three crescent-shaped rods, bent toward the boat, the whole forming the frame for the tent. The rubber apron was laid out on the bottom of the canoe, dry side up, then the bag was opened and a summer carriage robe produced, which was laid over the apron; then a folded woolen blanket upon that; then the tent (of drilling, waterproofed by the sugar of lead and powdered alum recipe found in FOREST AND STREAM) was hung over the frame and buttoned down tight around the canoe. A coffee-pot (of two-cup capacity), a quart tin pail, a tin cup, spoon, knife and fork, two tin plates—one with edges turned up and a ball fastened on—were then taken out of the depths of the bag, which was afterward closed up water-tight and placed on the deck against the mast. The pail and coffee-pot having been filled with water from the lake, the cooking utensils were placed inside, and the Captain followed, feet foremost. Then a zinc box containing the spirit stove was taken from its place through the hatchway in the forward deck, filled with alcohol from the tin can, lighter candles placed on its zinc receptacle. The coffee-pot, with some of Borden's extract of coffee mixed with the water, was soon steaming over

the lamp, while the Captain produced from the hatchway a large, covered tin box, which, on being opened, disclosed several compartments, each with its own cover of tin, and containing eggs (packed in salt), sugar, tea, etc. As soon as the coffee was boiled the tin plate with the hall was "put over," a piece of butter dropped in (from a water-tight earthen jar, which can be lowered into cool water when in camp), and two eggs, one for the Captain and one for the crew, were broken on the plate and soon fried. A loaf of bread, in a tin box of its own, was brought out, and while the Captain ate his supper the tin pail of water was heating, with which the dishes were to be washed after the repast. Meanwhile Judy, who had been waiting patiently without, was fed with bread and egg cut up together, and served on the clean gravel by the boat's side. Although the Captain evinced a certain ignorance of the customs of the *estive* in smoking his briar-root while washing the dishes, that ceremony was nevertheless well done, and each piece of tinware was put away as shining and bright as a new silver dollar.

It was now fairly dark, and a slow rain commenced falling; so the two voyagers, after a race to the end of the point and back, crawled under the shelter of the little tent. Judy was soon asleep in her accustomed place, and the Captain, after lighting a candle and writing up the log for the day, unrolled the woolen blanket, straightened out the carriage robe for a mattress, and at seven o'clock at night, with the cork seat for a pillow, and leaning over the bottom planks of the boat but the thin lap robe, enjoyed as luxurious a bed as any darling of fortune on a couch of eider-down. The rain drops fell in a "patter-patter" on the tent over head, the wind made the branches of the trees creak and groan, and the monotonous "chug-chug" of the paddles of the tow-boat became fainter and fainter as she receded down the lake, the Captain of the Gypsy sank into a sweet slumber, not to awaken until

"The morn is up again, the dowy morn,
With breath all incense and with cheek all bloom,"

SENZO.

*It was not the general rule to cook under the shelter of the tent, having been done in this instance in expectation of a shower.

CARE VERSUS COOT.

CLOSE and continued application to regular routine of business, reinforced by unusual care, having succeeded in establishing their "first parallel" against our citadel of good digestion and sound sleep, we determined that "discretion was the better part of valor," and ran away. It is the story of this flight which is offered to other weary workers, that they, too, may appreciate the fact in its best sense, that

"He who fights and wins away,
May live to fight another day."

Having decided upon our "skeddaddle," it did not take long to determine upon the plan in general, and route in particular. Something out of office, into open air, away from care, to the full enjoyment of an absorbing pleasure! As we gave free rein to fancy and inclination, old scenes come rushing into view, the pulse quickened as we lived again in pleasant recollection the experience of days thus called to mind.

After due preparation—getting together the whole outfit and paraphernalia, which is more precious than so much gold or silver—the trusty eleven-pound ten-bore, clean and true and close as their outside lines of "hammerless" hotoken, due ammunition, the snipe guns, rubber cloth boots and trousers, sou'westers, Cape Ann oilers, and the whole business of flannels, heavy coats, cleaning rods, oils, etc., etc., we found ourselves toward noon on the 25th of October leaving the cars at Good Ground and looking around for "Syreno" and his "U. S. Mail" to take our traps to Pond-quoque, while we stretched our legs by walking the two miles of sandy road which intervened.

Of this mail wagon and its genial driver let us say naught but the soberest truth. Of modest look, appearing to have approached the "early candle light" of its usefulness, suggesting just a little shakiness, you are surprised to know that "thirteen men, all heavier than I be—and I weigh two hundred and thirty—has been carried in this 'ere waggin to-once."

After lurking doubt as to the strict accuracy of this statement is at once banished when the eye, leaving the vehicle in wonder, travels rapidly over "the team" and harnesses.

A hundred minor and indescribable something at once convince you that "Syreno" only told the truth. The discouraged and resigned flop of the ears, the subdued switch of the tails, the sleepy drag of the eyelids, the pokey gait, the protesting harnesses, with their bent buckles and substitutes and honorable scars—in fine, the speaking *tout ensemble*.

—Curbing our desire to ride in even such a distinguished official van, we walked for the exercise. If you do as we did, however, you lose an enviable chat with an enviable and solid old friend, Syreno Wells, stage driver and U. S. mail carrier.

"May he die fat!"

A swinging gait and heavy roads brought pedestrian and coach to our old friend Foster's together. And for comfortable house, pleasant rooms and good kitchen, and, best of all, for hearty, hospitable welcome to old friends, commend us to his good wife. While Capt. Casius demands him at stated seasons, she maintains the good standard of things at home with graceful ease of true hostess.

As we stretched ourselves before the roaring wood fire in the evening, having unpacked guns, and donned the flannels and garb of the hour, we chatted with her of all changes since last we talked, of the chances of birds, of the weather. We were surrounded with an atmosphere of comfort and rest and pleasure, which promised sound sleep, good digestion and full health without measure. May her life be long, and her friends double never less!

—Would that our pen could picture to each eye the group of old friends who dropped in later. Uncle Ed, George, Joe, and the philosopher, Gill.

Uncle Ed, the hero of many a season's gunning, and today as active and keen in his enjoyment of sport as he ever was, and always full of hopeful prognostications or consoling uncertainties.

George, his little boy. Nothing Casius-like here—no "lean and hungry look" about him. Fat as he is Jolly, and true to friend to needle to the pole.

Joe, whom everybody knows and everybody wants, whom the "children cry for."
—And Gill, the philosopher and orator, and whose tongue "lubricates by its unctuousity rather than irritates by its asperity," who can talk more to the square inch than—well, pen falls—words are inadequate.

There we sat, and as the fire burned, sending its white wreaths of smoke into the keen frosty night air outside, we in the warm glow within talked of seasons gone by and rehearsed the story of successful bags or more frequent disappointment, and laid our plans for the days to come.

The cooler weather, though unseasonably warm, and the hoped-for cooler wind, promised fair sport, if only the birds were in the bay. Many had been seen, and they were surely somewhere. Uncle Ed talked vaguely of "a big bunch" of broad-bills up in the North-east, but they had been shy in coming to stool and bags yet had been small.

Putting all arrangements into the hands of George and his father, (man whom no better fowlers are to be found along Long Island waters, we promised to be aboard by five o'clock next morning, said "good-night" all round, and, after one more observation of wind and weather, went up to bed, if not to immediate sleep.

Crawling in between the sheets, fancy found eyes which penetrated the darkness with which night had veiled the familiar scenes outside. We could see the lofty beacon of Shinnecock Light flashing its guiding rays far across the bar to trusting ships outside. We could see the Life-Saving Stations, away to the east and west, with their sleepless patrol pacing the sandy beach. We could see "The Island" within the bay, as well as "Hole in the Wall," "Goose Point," "Bunker's Bar," and the scenes of many an earlier day's exploit, while we thought we saw broadbill, coot and redhead in unconscious security taking counsel as to the morning's flight.

As our eyelids drooped we almost thought we could hear the monotone of earnest preparation over at "Lane's" for the morrow's start; but a smile broke over our faces, for we knew "old Yish" must start early indeed to interfere with our tried friends. And we slept. Slept, as not for a long, long time at home.

All too early came the rosy knock in the morning, but tumbling out of bed into ready and fitting habiliments, hot coffee, hot breakfast, and Mrs. Foster's beaming face started the day successfully, with guns well oiled with "dead-shot," ammunition bags and cases filled, and all things needful for a day's campaign, we fled out into the dark, each following his leader, before day gave any sign of breaking. The hoped-for wind was treacherous; only southerly, not southwest; only moderate and not fresh. But those comforting souls at the front talked bravely of possible change for the better during the day, and Uncle Ed "threw in his shirt" like a hero. What an anchor is Hope! Although we were off early we saw the dim outline of sails to the westward, and we knew that Lane's fells were all also early starters.

Shall we tell of all the secret counsel and commuings, the depth of profound skill and divination, the subtle knowledge of birds and haunts, that a little later planted our double battery in a certain place, and left us in our snug boxes surrounded by the most seductive of stools? Crumble this pen first.

Never were boxes tighter; never was a "rig" more deftly and skillfully set; never were two minds so determined on doing their whole duty; never were guns so carefully loaded and handled, as when we settled down, while the first bird—a glorious forerunner of coming scores—sped swiftly down the bay against the rosy sky of an awakening autumnal day.

The glory of sunrise! The beauty of early morn! With the ripple of clear water in one's ear, making melody while we watch the dawn in its sacred temple, what wonder the heart acknowledges Supreme Goodness, and pays its willing tribute of recognition and gratitude!

So as it grows lighter the birds begin to fly; singles, in pairs, and fair bunches. We watch them on their swift course, and enjoy all things together, discoursing of the chances, and waiting for the sun to rise, for we are law-abiding, and may not shoot until Old Sol's eye is fairly on us.

It is nearly sunrise, when we see a bunch of six or seven wheeling round to drop to stool. Discussing whether yet to shoot if the chance offers, all doubt is dispelled by the double "hoom" of two guns from another battery away to the east, and judging that the other fellows have caught sunrise in saving time, we rise and bring three with our first barrel and one with our second. A good opening for our first day's ducking in '81.

The hall has opened, and all day long the chances are taken with varying success. A brotherly rivalry between these two boxes lends addition zest to the sport, and individual scores are closely kept, while shouts to the "center" as the sails begin to secure the prizes drifting to the leeward, urge George or Uncle Ed to an unflinching effort to secure the sun total.

The speeding hours fly too quickly. No time can be lost, so much is sent for and eaten in battery, while comparison of shots and scores is made, and the wonderful kills, which every gunner knows are always made, are discussed with gusto.

A bunch of geese, high up, sailed over, and the first brat of the season was noted during the "nooning." After lunch history simply repeated herself, and when toward night we called in the tender, took up rigs and sailed homeward with a goodly pile of birds, we counted (we'll never tell exactly how many) broadbills, redhead, coot, one venturesome sprigtail; and each hammerless was credited with the same score of dead.

But of all batteries in the bay for that day—it came out later—we had the leading scores. In succeeding days the winner's brotherly shot him, and even brought to bay a solitary canvas-back.

And so was spent an entire week. On gunning days, always in battery, fair weather or foul, and one day proved a pouring rain—all day long—"off-days," bagging snipe and different bay birds, or taking long tramps back on to the hills flushing an occasional bevy of quail. Then we wished for "Ray" and "Pet," the faithful partners of our upland sport. How we slept! How we eat! We had found a panacea—better than bolus or draught.

All things temporal have their end, however, and the unwelcome hour came round to leave this heaven on joy and content and active quiet, for further scenes of sport which claimed our renewing acquaintance.

We had ordered "Capt. Bill" to have the yacht waiting at Sag Harbor, with full supplies for a week's cruise, and the time had come to go down and board her. So we again shook hands all round and left Pondquoque for another year.

Quick, peaceful spot! May your bells never fall, may your fowls always fry to have their end, however, and the unwelcome hour come round to leave this heaven on joy and content and active quiet, for further scenes of sport which claimed our renewing acquaintance.

Later, if this long story does not bring sleep to some waking watcher for FOREST AND STREAM, we may spin a yarn of our week's cruise through Gardner's Bay and around Montauk, which may not fall in this, if it does not excite appetite and good digestion.

A RECORD OF HONOR.

BY ANNE G. HALE.

"ANOTHER Victim of Hydrophobia" heads a paragraph in a bitten by a mad dog, and a couple of wretched calculations statements that we would suppose that even the meekest people carried diabolical intentions packed away in his innocent, flower-carried maddie, needing only fit opportunity for their fulfillment.

The evil that men do lives after them
The good is oft interred with their bones

wrote Shakespeare. True as this saying is in regard to human kind, it loses nothing if parodied thus:

The evil that dogs do with fur for eyes,
The good, if reproachless doth live at bones—
Is oft forgotten ere accomplished quite,

for such is the usual apportionment to the canine race. So frequent is the mention of any mischief that a dog does, and so exultant the tone in which his misdeeds are related in most of our public prints, that there is little space for noticing, and little heed paid to the many acts of fidelity and bravery that mark his career. His intelligence is granted, unquestioningly; but who that has taken the trouble to note has not been convinced that for one culpable deed blazoned abroad one hundred worth of commendation have passed without a word of praise—one thing that has been made out of our lives of honor, and which is very fortunate and praiseworthy is allowed to cancel all obligations on the score of the most intrepid bravery, the most complete self-abnegation?

It is refreshing to meet occasionally with some acknowledgment of the valuable services rendered by the useful and noble creatures. If such acknowledgments could be often made public the ill name that weighs so heavily on many of this much-maligned race would be removed, and something like justice be accorded to the general estimation which is so reasonable to suppose that these acknowledgments would be forthcoming, if some systematic arrangement of the matter were inaugurated.

An excellent method of setting the subject regularly before the public would be the establishment of a Record of Honor in the columns of Foster and Hale's Magazine, in which any person may be at liberty to place the name and praiseworthy deed of any dog. The information thus obtained and disseminated would be both interesting and valuable.

It is with some regret that I approve this suggestion. I will commence the Record by mentioning one dog who will always hold a green place in the memory of the little circle who know him.

1. Jack, who rendered several years of faithful service as a watch dog in my father's family. A combination of the mastiff and the granal, he was extremely sagacious and docile. Though occasionally showing high temper, he was very affectionate and gentle to all who treated him kindly. A change of residence for the family made it necessary for Jack to accompany necessary, greatly to the regret of those whom for so many years he had served so well. Soon after the change he sacrificed his life to a sense of duty; for to the last he was faithfully to his trust—brave old hero! He was night keeper of his new master's store. This store, which adjoined the house, took fire. In the dead of night the family were aroused by the barking of Jack's loud and continuous bark. He might easily have been put to rest, but he remained at his post and perished by suffocation.

2. A recent English paper says that a child about two years old was saved from drowning by two dogs—a retriever and a terrier. The child belonged to Thomas Harrington, head gamekeeper to Mr. Bell, of the Thirsk estate. It was left in charge of an older sister. The sister being busy, the child strayed to a pond a short distance from the house, and his absence was not noticed till the retriever ran into the house barking. The sister followed this dog who went toward the pond, where she found the terrier holding the child above the water.

3. An Irish setter, Jack by name, a noble animal, the property of a Romish priest in Newburyport, Mass., early last spring, by the sacredness of his own life by means of saving others. His master was absent from the city, and while he was absent, he had the care of the parsonage. Late in the evening the servants retired, leaving the dog in the dining-room below stairs. Toward morning one of them was awakened by the dog, who was dragging and pulling at bedclothes, and he had to get up to see what the chamber was filled with smoke, and the man had scarcely time to arouse the other servants before flames burst from the walls. Poor Jack went down stairs to his usual resting-place and soon ceased barking. When the fire was subdued his remains were found unburned. He had probably suffocated almost immediately after giving the alarm.

4. A tricolored St. Bernard, who bears the proud title, Don Pedro, was for a long time the pet of a friend and neighbor of mine, and his voice clear as a trumpet. He, however, in my view, is very discreet in the use of it; and, in a way of joke, sending its notes ringing and echoing all around the neighborhood, no one ever had reason to complain of the quantity or the quality of the music he has made. Being playful and affectionate to all who have to do with him, he has a great deal of fun, in sheer make-believe, apparently, having a strong inclination to play with a pretense of biting, one time per mad snake complaint that he was banished from city life. And so Don Pedro lived as he should with a worthy miller, and began to develop a fondness for bucolic pursuits, and a taste for the company of his master's cows and oxen as much as he had that of the city children, no only preferring their society by day but sharing their quarters through the night—a self-constituted guard and keeper. One night the miller was awakened from his peaceful slumbers by a great uproar in the barn, trampling and bellowing of the cattle, but, high above all, Don's voice as if in expostulation and entreaty. He quickly dressed and hastened to the stable, and there he found the oxen had broken from their stalls, and were gorging themselves with the contents of the trough. Don, as he was, aware of the danger, was using his utmost exertions of voice, teeth and feet to dissuade the culprits from their suicidal feast. Had he not aroused their master, who, with no little trouble, succeeded in rescuing them as soon as they were well away from the sacrifice of fat cattle the next morning.

5. On the 24th of last May a house and barn at Andover, Mass., occupied by Robert S. Hayes, were burned. Probably the fire was incendiary. About two o'clock in the morning the family were awakened by the outburst of a fire, and they were so surprised and brave they undoubtedly owe their lives, for everything in the house, even all the clothing, was burned, and, with the barn, nearly all the animals and farming utensils were lost.

It is a great misfortune that the owner of a merry little terrier, who I have had the pleasure of knowing for many years, was a sufferer from barks. "My friend has been sadly tried by this trick of her pet. But he is so affectionate in his disposition, and is such a comical bunch of good nature and intelligence, that his noise might easily be forgiven him. But, alas! some foolish, crabbed, spiteful specimen of humanity in a fit of the blue one day snatched my friend for keeping a troublesome dog. So his rollicking greetings are heard no more. At certain portions of the day Jolly little Prince must be begged, and his touching to see how readily at his master's word the uncomical scene that the discipline—a crash toward tightly rolled serves for the gag. This bundle he carries between his white teeth, holding it patiently till ordered to lay it aside, which at length he does in grateful silence. Though the dog is so obedient to his master, he pays no heed to such orders from any one else, and, as a matter of fact, the churl who stigmatized him as a "troublesome dog" gets a good share of growls and howls when he least desires them.

With these brief notices, our Record of Honor being now fairly opened, let us have enrolled there names of the noblest and bravest of hundreds of worthy dogs. Let them have their full measure of merit, and that with promptness

THE WILD HOG OF HAMPTDEN.

BY B. BOSFORD.

(The incidents narrated in this paper are substantially true. The story has been told in print before, and has been rewritten for the FOREST AND STREAM.)

I.

IT must have been between '48 and '50—particular dates not being necessary—that a little circle of friends made their headquarters in Wallace's saloon, a basement opposite C.urt square in Springfield, Mass. Here they often met to drift health to the community, compare notes and experiences, relate exploits, and not infrequently to all unite at once in discussion, when the weight of argument would be truly overwhelming. As these four persons figure largely in the story, a word of personal history seems necessary. One, a man of blood, a butcher, often sacrificed time instead of hogs when suckers, trout and pigeons were plenty; still his trade was a visible means of support. Another caught pigeons in early spring, shad in summer, and pigeons again after the Glorious Fourth; muskies, muskrats in the fall; in the winter, nothing. Another did—well, we give it up. The last of the quartette was the puny husband of a dashing milliner, and, of course, he was left to help the others. On the whole, they were an easy, vagabond set, a Springfield necessity under the circumstances, and, as is often the case in great events, doubtless raised to meet the emergency.

Somewhere in the lots above lived a man—sometimes called "Doctor"—broken in health and ambition, eking out an existence, if possible, more mysterious than either of the others. Sympathy drew him near, and sympathy and fellowship opened the circle and he was admitted. But a strange depression was at once apparent. Rufus leaned his chin on the back of his chair; Sol bit off the stem of his pipe trying to smoke; Ruel often brought his fist down upon the table with terrible force, but said nothing. By judicious questions and great caution the Doctor at last reached their confidence and the reason why they were so cast down. They had spent a whole summer in futile attempts to capture a hog. Traps, nets, pits, twitch-pots, stockades, alike availed nothing against the extreme caution of the creature. And to think a hog had done it! Had not Sol slain his thousands, and Ruel his —? But we forbear! Here they were obliged to acknowledge defeat with aggravations, and no wonder they felt bad. "Damit," said Ruel, "she escaped in that general stampede down hill we read of, and the same devil possesses her still and helps her on." "My friends," said the Doctor, "the case is truly discouraging, but not hopeless. There is not a creature on the earth that must not fall before human ingenuity and human skill united. You have here the nucleus of all jobs if cunning is to decide it, and the hardest if left to physical strength. You have before you a creature whose caution and endurance has no equal on this continent. Take renewed courage, for you will certainly fetch her at last." The meeting broke up, as it had so often done before, after a unanimous vote that "That Hog must be caught!"

As we can make but little headway without the principal figure, we will go back and bring her up.

Some two years previous to this time Captain H—, of the gun ship Medina, was "up the Straits," beyond the Dardanelles. While at some port in Asia Minor a native brought along a line of five wild pigs for sale. Now, to see fresh pork appreciated, go to a general in war time or to a sea-captain on a long voyage. Only think of it—roast pig and homeward bound! Without loss of time a bargain was struck and the pigs carried on board. But hopes are often raised to be broken, and disappointment lurks where we least expect it. The little wretches would neither eat nor sleep, and the Captain saw with regret one after another given to the sharks as they died, till, on reaching the port of Boston, one sole survivor remained. The idea of pork in that direction had entirely failed out, and skin and bones were consigned to the first friend willing to accept them. Soon exhausting both patience and perseverance, the pig was sent to Mr. Edward Cordis, of Longmeadow, a gentleman of leisure and means, that he might develop whatever might be hidden beneath that rough hide—and surely the chance grounds for improvement were most strikingly apparent.

The creature was placed in a pen, or high box, and showed just as fast as she grew her wild, untamable nature. And one mouthful of food would she take while a human countenance was in sight, but would plunge into a hole she dug into the earth, with the vain hope of hiding from a human eye.

There was a plank eighteen inches high running across the pen to separate eating and sleeping apartments. She would mount on the edge of this plank and walk for hours back and forth without stepping off—ever restless, ever moving, searching for a hole to escape or hide.

After she was one year old a domestic male hog was placed in the pen; she brooked no such insinuation, and flew at him with all the ferocity of her nature, and he was withdrawn to save his life. Another trial was made with a regular old brn-r, and they fought continually till he was taken out sadly demoralized.

After this his old hope of domestication or improvement was abandoned. The creature was kept and fed because—well, they didn't know what else to do with her. She had grown to the height of nearly three feet; long, lean, gaunt—not eight inches through the shoulders or hips—and such a snout! Look at the illustration.

And so the year went by. People would call, look awhile at the creature and go away. At last a neighbor, having filled his pockets with acorns, threw them into the pen. She eagerly devoured them—the first food taken openly while, in confinement.

The night following she went out of a window eight feet from a floor, by either a standing leap or climbing the wall—a question never settled, as two years afterward she went out where there was no hole to be made or afterward, demonstrating the presumption that she might or could have left through the key-hole or a crack in the boards just as well as by the window. At any rate, out she went and scooted for the nearest woods.

II.

The town of Longmeadow is divided into east and west sections by a tract of pine barren a mile or more in breadth, reaching from Pecowick Brook, near Springfield, to the Shaker Village, in Enfield, Conn. This tract of abandoned land is covered with sand-blows, sloughs, swamps and underbrush chaparral. Here the Hog took up her abode; here she lived three years, and here the Pigeoners first made her acquaintance. She would visit the pigeon stands at night, eat the wheat, disturb things generally, leave the smooth heads in heaps, so that a visit from the owners was necessary in the morning to put things right for the pigeons. This caused great unpleasantness—on one side at least—and had the meditations been half as effective as they were energetic, the Hog had been annihilated at once. Be that as it may, at the regular meeting the case assumed definite proportions, for they had each the same story to tell. The discussions were animated, the arguments conclusive, and the vote unanimously that this waste of wheat must proceed no further, and "That Hog must be caught."

About this time a wall came up from the Shakers of spoils not to be endured. "Ye and Nay" had heard that a "school-mistress was abroad," and now they had positive evidence of her proximity. They would plant potatoes through the day but to find them dug up at night by a creature of voracious appetite, while corn, beans and other "deposits" were removed unceremoniously. With proverbial philosophy they replanted again and again with the same results. Nothing was said aloud, but there were indications that pent-up feelings caused expressions the canons did not allow.

The first plan submitted was Hubbard's. He sunk two sugar "hogheads" (no pun was intended) in his pigeon-bed, one below the other, making a large well some ten feet deep, covering it with a trap to let her fall in while eating the bait placed in the centre, the whole covered with two inches of earth. The Hog came on to the bed, walked around the charmed circle night after night eating the wheat, but not one foot would she place on the trap or over the well, although smoothly covered with earth. At last this was voted "no go" and abandoned.

The next plan was Ruel's and Hubbard's together. They made a net of small cord, attaching it slightly to four poles like quilling frames, and suspended it by ropes to fall squarely upon the Hog's back, when, by a jump, she would carry the whole net with her and roll upon the ground, enveloped like a Sioux baby, and just as helpless. The thing was all figured out and the result certain. The net was set and the Hog went under it and, while eating in the centre, sprung the trap. The net had three feet to fall, while she had more than six feet to jump, but she cleared it in time, striking some ten feet outside. But this was only a slight mistake in figures. The net was raised higher, and, after a little coaxing, she again ventured under it; then they lowered it a little more and repeated the operation till it almost touched her back. The trap was again set, and the net fell squarely upon her. As though shot from a mortar she went through the net, making a large hole, but without breaking the slender attachments to the poles. What was said on viewing the premises the next morning is not recorded. Hubbard was too roughly broken at home to express on all occasions what he felt, and Ruel got relief somehow, for he came into the next meeting cool and collected.

The following winter an attempt was made to run the creature down with dogs and either capture or kill her: at any rate, to rid the farmers of an outlaw and relieve the Springfield field of disgrace accumulated until the camel's back was dreadfully warped. True, parties from Hartford, Worcester and intermediate places had hunted the Hog till fully satisfied. But then, they didn't know much; and how should they? "None of 'em ever seen a wild hog."

Notes from a journal kept at the saloon will best describe the hunt with dogs and the result:

Monday night at Wallace's.—The Hog started early and ran well, but the dogs pressed her so closely that she had hard work to keep ahead.

Tuesday night.—She kept clear of the dogs by doubling on her track, but evidently showed great fatigue.

Wednesday night.—She held out wonderfully, but was left near Pecowick Brook, a mile from Springfield, all beat out.

Thursday night.—Found her ten miles from where they left her the night before. The Doctor said she was getting stiff in the joints from lack of exercise, and had merely taken an evening walk to keep in trim.

Friday night.—"She runs like the devil," was about all that could be got out of them.

Saturday night.—"Damit," said Ruel, "I measured jumps to-day of sixteen to eighteen feet, and the brute runs better than she did Monday."

All hope of running down the Hog with dogs was given up; all plans thus far had proved abortive, and the depredations continued. When corn was green she would enter the fields and "eat like a hog." When the corn was out, not one ear would she eat in the field. She would come out of the woods only in the night, walk straight to a shock of corn, seize a bundle and retrace her tracks to the woods, and there, in a dark corner, eat it. She would mount a fence and walk like a cat upon it. Once only was her track seen around the pen of a domestic hog. One day a pack peddler crossing the woods was horrified to see a large black creature bound into the road behind him. Dropping his pack he "went for his life," and the Hog went for "hern." Looking over his shoulder the pack was mistaken for the Hog in pursuit. At any rate he told a terrible story of his escape.

We believe this the only view of the Hog obtained in the three years of constant warfare in which she lived. Invisibly to human eyes she would make tracks just as long as men or dogs chose to follow. She would leave the fleetest with laps of twelve to sixteen feet by actual measurement; she would double on her tracks, and then by a tremendous leap sideways default the surest hound.

III.

The next effort to capture the Hog was the third summer after her escape. This plan was to stockade around a depression in the ground made by digging out rabbits. She was decoyed to the place by scattering buckwheat from a pigeon-bed close by to a small heap in the hole at the bottom. Leaving a space for entrance, they began a stockade, right and left, of hard pins three to six inches in diameter around this depression, adding to it daily, and setting them over two feet deep in the earth. The plan captivated the Doctor in the outset, who said, "There is science in it and you will certainly catch her, because her hips while eating are full forty-five degrees higher than her head; consequently she must bring her hind feet down to her nose, then raise her head forty-five degrees before she can jump, which will be most certainly a little late to reach the opening. And another thing, when you close the stockade on the other side she won't go in"—as it proved. The opposite side opened, she again went in to feed.

They then closed the stockade some six feet high, and the entrance in the same manner, then hooped the whole and spiked all together. The Hog entered fearlessly so long as the way seemed clear beyond. The trap was so made that moving a little stick in the pile of wheat while eating would let fall both gates at once. A gun was lashed to the stockade which the fall of the gates would fire off.

Having got all things fixed, the friends took their station half a mile away and waited—waited—all night. But she would be hungry, and the next night would surely bring her. This sprung the Doctor, and the second night he lay in the woods with them, but no signal nor sign was heard.

The third night proved that she knew all the time "somebody was round," so the fourth night they all stayed at home. Between nine and ten the next morning the friends having over-slept from broken rest, approached the palisades, and seeing the gates down sprang forward with a shout, and mounting the palisades looked in, and then at each other. Ruel looked at Rufus and Rufus at Ruel. To say that they were astonished is a failure; blank amazement is a failure, and we doubt whether any language short of Feejee could

express their looks—there was no Hog there! Language failed entirely, wrath refused to explode.

Not so though the Hog a few hours before. She was undoubtedly surprised to see a gate shut in her face just as she was going through it, and more surprised to find one shut behind her at the same time. She probably took in the whole scope of the question at once. Caught at last, now to get out, and that immediately. Palisades fifteen feet high—no hope in that direction. The gates locked like Saurian teeth—no hope there. She went round the pen with a ditch two feet deep, throwing the earth to the centre and laying bare the stockades nearly to the bottom; then taking the weakest and only possible spot, drove her nose between the posts and literally "following her nose" forced her body out, the stockade closing entirely behind her.

The next meeting at Wallace's was "so solemn as a court of justice." Little was said, no speeches were made, and the usual vote was brought out only by peremptory demand of eyes and noses—and feeble at that. The truth was, a general demoralization had fallen upon them all. They even doubted the Doctor's philosophy, because he only said they would catch her, implying doubt of their ability to keep her when caught. They doubted everything. But sorrow and disappointment wear off in time, and the cause remaining still fresh and vigorous courage and hope again revived. "That Hog must be caught."

In the southern part of the Hog country toward the Shaker village was what was called the Big Swamp. On its eastern borders there was a tavern or public house where the comforts of life were always obtainable and where foreign parties made their headquarters and recruited strength after the fatigues of a chase.

As the hunt continued year in and year out, the unbelieving and profane began to point in derision at the place with the remark that a "stripped pig" in the barn was the only Hog in the neighborhood, and that the hunt was never off the premises; a vile slander as every one testified who hunted the Hog. But through evil as well as good report the Springfield band held to their first love and first resolution. The Hog still lived, and, dead or alive, "we shall fetch her as fast as Doc's dog said so," and if he don't know, who does? And, besides, there was a terrible weight of responsibility resting on them; their reputation as hunters was at stake. And then the "championship of America" rested entirely on their shoulders, and as men of principle, having a good hold of the plow handles, looking back wasn't there.

There was in all this time occasionally a man to be found "fighting on his own hook," and slyly endeavoring to hear off the honor of capturing or killing the Hog while the regulars were beating the bush. One hunter found himself in front of a switch-up which would have slung Hog or dog from a higher'n a kite had a fawn been put in it. There was also an exhibition of three hristles and a piece which Erskine carried in his walk; and often displayed to the less fortunate, and which he said he cut from her side at less than forty yards. Much of this credit, however, was due to the gun. Wasn't it a-rusher? "I saw him put into that iron a handful of powder, then a plug or wad, then sixteen huckshot, then another plug, then sixteen more huckshot, then another plug, making thirty-two fine rifle balls." Now if "unhitching" the three hristles in the direction of the Hog brought only the trophies mentioned, it was nothing to brag of much. Any man doubts the truth of this last assertion, we give him the full benefit of the doubts. We simply state what was stated to us; we would add, however, that it was and is considered derogatory to doubt each other's word. Isn't the man's word who "saw it done," more reliable than any number of men who did it? "saw" it? In this connection we must not pass lightly over an important part carried by a man in the edge of Somers in Connecticut. He was a thorough sportsman, and a good horse, kept the best hounds in the State, and if his purse had been large, he might have been a champion. It was fitting, therefore, that Sol should be elected general-in-chief, and as the "puss" afore-said was the only one in the company, the election virtually made him quarter-master, sutler, surgeon-general and head of the sanitary commission.

The last plan was matured with deliberation. They met on it; they "sot" on it; they slept on it, so that when unfolded to the public it was such an exhibition of generalship, human skill, and human endurance combined, as is only met in a military. When the plans were laid out, "the standard of the prophet" was raised, and a hundred stalwart men raised their arms. We do not mean guns, for a three-year's war had partly conclusively shown that in hunting this Hog fire-arms were an incumbrance. True, a good many shots had been fired into the swamps where the Hog might or might not have been, in the early years of the hunt; but now it had come to be believed that a man on a smart horse might "re-use the Hog country with tolerable safety.

It was about this time that a member of a party from Hartford, in the fall of 1874, was "struck by a straggler," and had the Hog been when his dog was, his might have been hurt. As it resulted, he told at night how his dog seized the Hog and was quickly dismembered in the contest.

But this is a digression. The hotel on the confines of the big swamp was turned into a camp and filled with men eager to do or die, as might be necessary. Two men were to start the Hog from her lair and pursue with "expedition," stamping out every track as they went. Parallel roads cross'd the Hog country from east and west, and in these roads sleighs were drawn, and forth and back the hunters carried their tracks crossed the road two fresh men were let loose and when the pursuers came up they were taken up to be dropped again or ambulated up to camp for repairs or exchange. You will see that by this method she was driven as no dogs could do it, and soon found there was trouble behind. She would shoot from pursuers but to find them close at her heels. She would double, twist, and repeat on her tracks but lost every time, while the call for tracks was incessant. At dark, the dogs, which were lighted and gleaming through the trees, with an occasional howl for each carried a horn-added terror to the fight. Tuesday and Tuesday night, Wednesday and Wednesday night, and Thursday, passed in this way—and Thursday, first at night, the pursuers caught a fair view of the Hog, the first, with one or two exceptions, in the three years preceding.

That night she made the most desperate efforts to confuse her pursuers—and she lost every time. Friday morning opened in a fog in full view, and the pursuit grew intense.

If he had from the fog, he was lighted, and gleaming through the trees, with an occasional howl for each carried a horn-added terror to the fight. Tuesday and Tuesday night, Wednesday and Wednesday night, and Thursday, passed in this way—and Thursday, first at night, the pursuers caught a fair view of the Hog, the first, with one or two exceptions, in the three years preceding.

That night she made the most desperate efforts to confuse her pursuers—and she lost every time. Friday morning opened in a fog in full view, and the pursuit grew intense.

Arrived in Springfield and remembering the stockade, a stall in a horse stable was hoarded up and the Hog placed in it, with a double guard outside—a modest insinuation that you don't catch us napping again.

opposite side, and she closed that in the same manner. This was several times repeated, to substantiate a rare phenomenon in natural history—the effect of hopeless terror. The dogs did not tear her flesh badly, in no case touching the functions of life; the exhausting chase could not have done so, but to these add fear, the most powerful emotion known to organic life, and you have an intelligent solution of the "why" she thus squatted on a handful of straw, closed her eyes—and in a few hours was dead. She was sadly scared to death.

Thus perished the Wild Hog of Hampden. The wrath of the Springfield band was assuaged.

The skin of the Hog was set up by the writer, and the stuffed effigy, grim, savage and threatening, was preserved in a glass case in Springfield for many years. Afterward it was taken to Boston, where it graced a private museum, until the great fire came; and it was destroyed in the flames.

There is a truth, broad and deep, underlying this story of the life, which the doctor wishes may never be separated from it. Here is the progenitor of our domestic hog at first, the most untable creature on the earth, just as the Creator blocked it out and left us to finish up. An article of food suited to men as wild and savage as itself, they seem to have followed down the course of time and progress of humanity, merging at last into the creature we now possess; just as we have passed from savage to civilized life. Six thousand years, more or less, was required in either case. The type is not lost, but we have made substantially a new creature. The rule holds good in all our domestic animals and fowls. By domestication we create, enlarge, heighten and increase the capacity of usefulness the orders of life below us. It is our part of the work of creation, just as active and efficient to-day as in the beginning, and successful just in proportion as we study and follow the immutable laws which in every case govern and regulate organic life.

Natural History.

HOW TO PREPARE BIRD SKINS.

A TEXAS correspondent writes: "Can you direct me how to remove and preserve the skins of birds so that they may be mounted by a taxidermist?" We can certainly give directions which will enable our correspondent, if he has patience and perseverance, to make skins which a taxidermist can mount, but we venture to say that his first essays at skin making will not be satisfactory. To unpracticed fingers a bird skin is a very delicate thing to handle, but use will soon give the requisite dexterity. Our method of skinning skins is as follows:

Fill the bird's throat with cotton, and plug nostrils and any large shot holes with the same. Place the specimen on its back on a table with the tail toward you. Break both wings close to the body. Separate feathers along the median line of lower breast and belly, and make an incision from the posterior extremity of the sternum to a little beyond the vent, taking care not to cut through the walls of the abdomen. Push the skin aside and raise it on one side until the knee joint is visible, using the handle of your knife and your fingers, and avoiding cutting as much as possible. Do the same on the other side. Cut off the legs at the knee, skin down carefully as near to the tail as possible, and then divide the vertebrae, taking great care not to cut through the skin. Stand the bird on the point of its breast, and push the skin down toward the shoulders, working it down evenly and using the knife little or not at all. Cut off wings at break, and continue to work the skin down until it has passed over the head, and is thus turned inside out. Pull out the delicate ear membrane with the finger nails and cut that behind the eye, taking care not to injure the eyelid. Remove the eyes, taking care not to puncture them; and having cut off the head, cut away the tongue and all the flesh from the skull. Break away the base of skull and remove brain. Cut away the broken end of the humerus, and flesh lying between the radius and ulna, loosening with the thumb nail the outer feathers from the latter. Skin legs down to tibio-tarsal joint, and remove the flesh. Powder the inside of the skin everywhere with white arsenic. Use plenty. Place a pellet of cotton large enough to fill it in each orbit, and with large birds wrap a little cotton around the legs. Turn the skin right side out again and draw out legs and wings into proper their position. Give the skin a few shakings and the feathers will fall flat in the proper places. Take a long wad of cotton about as thick as the bird's neck and carefully introduce it into the neck, making sure that it passes up into the skull and does not catch the skin and push that into the brain cavity. See that the neck is short and thick rather than long and slender. Introduce another little bit of cotton into the throat from below, to give that the requisite fullness. Fill the body with cotton until it is about the size of the bird in life. Do not get it too large. Close the opening in the belly by two or three stitches, or by a pin or two. Open the eyelids and pull the skin about the head and neck as may be necessary to give the head and neck a natural appearance.

To fix the wings in position is the most difficult part of the whole process. They must be placed close to the sides of the body, as the bird holds them when alive, and to get them in just the right position will take considerable practice. The wing must be pulled upward and backward, that is, toward the head and back of the bird, and the scapular feathers be brought forward over it. It should then be bent and placed close to the side, the feathers of the breast covering its border. If its position is right there will be no feathers standing on end near it; if wrong, the feathers will point half a dozen ways. It must be made right, or as nearly so as possible; for as it is left so it will dry, and then, after the other wing has been arranged, and any stray feathers that are out of place have been lifted into their proper position, the specimen should be placed on its back in a half cylinder of paper, pasteboard or tin, in such a way that its back will be properly rounded, and left to dry. Before leaving it, however, the feet should be crossed and tied together, the bill prevented from opening by a pin or a thread run through one nostril and the throat and tied. A label giving age, sex, locality, date of capture, collector's name, and any other items of interest, should be tied to the feet. Some collectors place the birds to dry in paper cones, others put a wide band of paper about the shoulders, and others still merely support the shoulders and wings by wads of cotton. A little attention paid to the skin while drying will pay for the trouble attending it.

BEECHNUTS AND WOODPECKERS.

LOOST GROVE, LEWIS CO., N. Y., NOV. 20, 1891.

Editor Forest and Stream:

In the issue of your paper, dated Nov. 17, 1891 (p. 307), is a brief note, headed "Habits of Red-headed Woodpeckers." Its author, "Sialis," writing from Bradford, Pa., speaks with surprise of finding red-headed woodpecker (*Melanerpes erythrocephalus*) engaged in picking beechnuts, and says that he was told by a wood-chopper that they were gathering winter's supplies. After some remarks upon the habits of a Western congener you append a note from Ned Buntline to the effect that he shot one of these birds in the act of picking beechnuts from the tree. Now, I am not aware that our species lays up provisions for winter's use, but I have long known that it fed extensively upon nuts, and published the fact some years ago. In my "Review of the Birds of Connecticut" (p. 66) you will find the following: In Northern New York (Lewis Co.) during certain seasons, "they subsist almost exclusively on beechnuts, of which they evidently are extremely fond, eating them apparently with equal relish, whether green or fully matured. It is truly a beautiful sight to watch these magnificent birds, together with their equally-abundant cousins, the yellow-bellied woodpeckers (*Sphyrapicus varius*), creeping about after the manner of the warblers among the small branches and twigs, which bend low with their weight, while picking and husking the tender nuts, the bright crimson of the head, neck and breast, the glossy blue-black back and creamy-white belly, together with the scarcely less striking colors of their yellow-bellied companions, contrasting handsomely with the deep-green foliage."

My field notes during the past ten years prove beyond question that the presence or absence of the red-headed woodpecker in Northern New York in winter is governed wholly by the beechnut crop of the preceding season, and is in no way dependent upon the severity of the winter. There is not a large yield of mast every year, but with us a full crop "happens round" pretty uniformly every other fall, at least such has been the case during the period (10 years) covered by my notes. It is also a fact that mild winters are apt to follow good beech-nut years.

According to notes kept by Dr. C. L. Bazg and myself, the species under consideration was abundant here during the winters of 1871-72, 1873-74, 1875-76, 1877-78, 1879-80, and 1881-82, and during the winters of 1881-82, the one still here in numbers, and will doubtless remain throughout the winter. Each of these winters followed a bountiful supply of nuts. During the alternate winters—1872-73, 1874-75, 1876-77, 1878-79 and 1880-81—they were either rare or did not occur at all. Hence with us a good squirrel year is synonymous with a good year for *Melanerpes*, and vice versa. Of course by far the greater portion of the beechnut crop falls to the ground and is buried beneath the snow, where it is inaccessible to the woodpeckers; yet enough nuts hang to the trees to furnish abundant subsistence to those species that feed upon them. Besides the red-headed and yellow-bellied, the hairy woodpecker (*Picus villosus*) and the downy (*P. pubescens*) eat largely of mast and are most numerous during beechnut years. C. HART MERHAM, M. D.

Editor Forest and Stream:

Since you last asked about the reheaded woodpecker eating nuts, an old woodchopper of this county has told me that he has often found the holes and nests of these birds, which winter here, full of beechnuts and seeds. He says the extreme cold so freezes rotten wood, grubs and all, that the woodpecker, like the squirrel, would starve but for the stores they lay up. They do not bud, as the ruffed grouse will, in cold weather, keeping in good condition on dried buds, etc.

In regard to the damage the red squirrel does to birds, etc., your other correspondent is right. The little crows are regular pirates. They kill and destroy everything in their way, and where they are plenty will drive gray squirrels away, though the latter are three their size. The gray is no fighter. The red is all for light. Yours truly,

NED. BUNTLINE.

Eagle's Nest, Nov. 19, 1891.

* Why many of your correspondents still persist in publishing natural history notes over some outlandish *nom de plume* is to me as incomprehensible as it is detestable. Such notes are often of scientific value, and you or I may be benefited by eminent naturalists if accompanied by the author's name, while as it is they are utterly worthless.

THE DIVINING ROD.

Editor Forest and Stream:

The Polytechnic Association, a branch of the American Institute, meets Thursday evenings, from September to June, room 24, Cooper Union Building, New York City, at the regular meetings of the Thursday evening, November 17, an excerpt was read from a Western newspaper, to the effect that so practical business men as the engineers of a large railroad were using a divining rod, presumably the ancient forked twig of witch hazel, to aid in determining where to dig for water along the line of the road.

The President thought it within the province of the association to compare notes on this matter. He did not know of any candid efforts to determine the efficiency or the fraud of this method. Thursday evening, November 17, an excerpt was read from a Western newspaper, to the effect that so practical business men as the engineers of a large railroad were using a divining rod, presumably the ancient forked twig of witch hazel, to aid in determining where to dig for water along the line of the road.

The President thought it within the province of the association to compare notes on this matter. He did not know of any candid efforts to determine the efficiency or the fraud of this method. Thursday evening, November 17, an excerpt was read from a Western newspaper, to the effect that so practical business men as the engineers of a large railroad were using a divining rod, presumably the ancient forked twig of witch hazel, to aid in determining where to dig for water along the line of the road.

Two gentlemen said they had known instances where what was called a divining rod had been used, and abundant underground currents found. They could not give particulars. The general result appeared to sustain the ancient notion.

Professor Keith had seen experiments in Colorado with a split stick of the required slenderness. They were not particular what wood was used, or its condition as to dryness. A skillful operator could make it point downward or upward at will, without any apparent change of his muscles.

Mr. Sutherland believed, with the last speaker, that all the magic about the alleged finding of water by the divining rod lay simply in the fact that some men, otherwise ignorant, had, by intuition or by practice, acquired excellent judgment in locating wells. They used the forked hazel simply as a blind.

Mr. J. W. Sutton had known an expert in this line in the Seneca River valley in this State, an ignorant, intemperate man, whose success was remarkable. The wells in that district were from fifteen to thirty feet deep, with great differences in the depth and productivity. It was particularly important to strike one of the strong underground streams. In some formations it is of little consequence where we dig. We would get water from sand on Long Island or Cape Cod, with about the same liberality in all situations.

That man had a great local fame. He used a slender crocheted twig of green wood, alleged to be witch hazel, about three feet long, the butt about one foot and the arms about two feet each. He held it by the small ends, one in each hand. It was sufficiently flexible to describe about a quarter circle by its weight. He walked solemnly and as steadily as his condition would allow, holding the simple twig before him with one fork in each hand, the butt end depending by its weight so as to bob around, say six inches lower than his hands. It was not easy to be certain that there was any marked increase in the descents or plunges of the free end at the place he would light on, but the operator seemed to feel or believe there was a difference, and he usually, and he believed universally, selected favorable places. A remarkably copious well near the public square in Waterloo, N. Y., was located by that man, using the forked twig and proceeding to be aided thereby.

ELK HORNS IMBEDDED IN WOOD.

PINEY FALLS, NOV. 19.

The skull of a bighorn imbedded in the trunk of a tree, as illustrated in your issue of November 3, reminds me of a somewhat similar circumstance, which was related to me in my younger days by an old Indian chief, who was one of the few wise counsellors of the Seneca Nation. Although an Indian, he was a man of rare abilities, and great perceptive faculties, and I may possess all the virtues of an Indian, with but few vices of the white man. He stood six feet in his mocassins, and was considered the best shot and one of the best hunters in all that region. When in his communicative moods I have listened with eager attention to his graphic and matter of fact descriptions of many exciting incidents which occurred during the eventful life of this old veteran of the forest. I shall not attempt to note down the particulars of a very interesting elk hunt, as related by the Indian, except so much as relates to a pair of horns, the substance of which was about as follows: He, with several other Indians, had killed a large elk with uncommonly large antlers, and having packed the meat, which they had to carry a long distance, each one having a heavy load, they were compelled to leave the horns, which were taken off with the upper part of the head, and placed or wedged in the forks of a stout sapling, four or five feet from the ground. Here they remained fourteen years, as he ascertained when passing that way again for the first time since they had left them. The wood had grown to more than double the former size, and still larger where the forks joined. The wood had grown entirely over the skull and had closed up around the butts of the horns, which gave them the appearance of having grown out of the solid timber. They were apparently sound, but were bleached out nearly to the whiteness of chalk. ANTLER.

NOTES ON *FULICA AMERICANA*—Vicksburg, Miss., Nov. 17, 1881.—The bird called "mud hen" at the north; "pull dock" here, and "Indian hen" at New Orleans, must be very prolific, or else their wonderful increase must be attributed to the fact that, being nearly worthless as an article of food, they are not killed off by hunters. Webster describes them as "a bluish-black wading bird (*Fulica americana*), common in the United States—the *Rallus crepitans* of the south." Just before leaving Lincoln, Nebraska, in the latter part of October, in a small lake or marsh near Ashland, I think I saw at least one thousand of these birds. They were so numerous and restless that they interfered materially with the shooting by our party at ducks. I came down here by river from St. Louis about the 1st of November, and found great flocks of them in the water the entire distance. Here the darkeys find them an easy prey to their old muzzle-loaders, and take them in out of the wet on all occasions as a sweet morsel. Last week a commission merchant here received a mud-hen in a coop of chickens that had been shipped him by Mr. Goforth from Delachite, a little town out in the pine woods on the railroad east of here. It being quite a curiosity several called to see the stranger. It seemed to be quite gentle, but had a warlike disposition, and delighted in pecking at any one who came near it. I wrote Mr. Goforth asking him to give me its history. He replied saying that it had been picked up on the roadside by a little boy, that it made no effort to get out of the way, that his son kept it in a coop three or four days, and then, as nobody there would eat it, he thought it would make a nice dish for Vicksburg, winning up by saying that as I seemed to like the bird he would try to send me some more. He said they were known out there by the name of "thumb-pinchers," the name no doubt originating from the habit of the bird of pecking at every finger pointed near its sharp white beak. What was this bird doing out among the pines on dry land, away from its watery element?—BURE H. POLK.

MICHIGAN NOTES.—Cadillac, Michigan, November 17, 1881.—*Editor Forest and Stream*: Deer hunting in this part of the State can be called a success so far this season on account of too much rain. A party of three of us spent three days in the woods, and succeeded in getting three the last day, two does and a buck. One of the does was a crotch horn and weighed about 100 pounds. I should judge about four years old and had apparently been dry for the last season. The first snow fell November 3, and was all gone by the 17th. A small flock of snow buntings was observed October 15; a fine snow owl seen October 23. The redpoll linnets came November 2, and on the morning of the 3d the first English sparrows rushed Cadillac. If the rain would only hold up the sport could be no more, for there is plenty of deer, ruffed grouse, gress and duck shooting. The black-backed woodpecker (*Picoides arcticus*) is a resident here, as is also the pileated woodpecker (*Lepidotes pileatus*). I have secured one specimen of a band-backed woodpecker (*Picoides americanus*). The pine linnet (*Chrysomitris pinus*) is now very common here. Last summer I found the snow bird (*Junco hyemalis*) and the white-throated sparrow (*Zonotrichia albicollis*) breeding everywhere in consideration. I think this is fine field for the ornithologist or sportsman. A. B. COVART.

Game Bag and Gun.

DEER AND PARTRIDGE.

NEAR THE ADIRONDACKS, Nov. 23, 1881.

Editor Forest and Stream:

It is only a short time since I returned from my yearly trip to the South-woods, as we call the Adirondacks here, where I have been since the first of August, most of the time in camp on the Sixteen-mile Level, above Blue Mountain, in the St. Regis district.

Owing to the uncertainty of getting my mail, I did not leave orders for the FOREST AND STREAM to be forwarded to me. I was nearly repaid for the loss, however, by having such a large quantity of good reading on hand at one time. I have been greatly interested in reading the reminiscences of hunting and fishing trips that have appeared in the late numbers. Nearly all in some part of them remind me of like experiences they themselves have gone through at one time or another in times gone by. I have been interested on the subject of rust spots in gun barrels. There seems to be a great variety of opinion as to the cause as well as to the best preventive. I think, as you first suggested, to be careful and use the barrels perfectly clean, and then use nothing but the best of oils is as good a preventive as any recommended.

Deer were plenty all over the St. Regis district when I came away. Any one wishing for a locality to still-hunt could not find, I think, within the Adirondacks, a better place to go the remainder of the season than to Blue Mt., and hunt in the tract of country south and west of there. There is a great tract of unbroken wilderness there which has been but very little hunted. It is the home of deer and other large animals found within the Adirondack region, and is a sort of reservoir of game, from which the districts on its borders, which are easy of access, keep up their supply as well as a place of refuge for the game when hunted to excess with dogs in those localities.

Those who may wish to go there to hunt will find as good and cheap accommodations at the Blue Mt. House as can be found anywhere at any establishment of the kind within the Adirondacks. The house is just on the northern border of the above tract of wilderness; and one could hunt over the northern part of it as long as he likes at night. There is also a splendid tract of country open to hunting sportsmen in extent, bordering on the river to the east of the Blue Mt. House, beginning only about three-quarters of a mile away, and reaching to Meacham Lake, some eight or ten miles across it. Partridges and squirrels are plenty near the house in any direction one may choose to go.

I was intending to say something about the fishing on the Level in August and also about the slaughter of deer there, through the early part of the summer, but I shall reserve that for another time.

Here in Northern New York, in Franklin county, at least, for the last two years, partridges have been unusually plenty. And we have all these agencies that have been mentioned as destructive—the pot-hunters, foxes, squirrels, hawks, owls, breach-loading shot-guns, etc., all except the "snare." During the forty years I have resided and hunted in Northern New York I have never yet seen a snare set for bird or animal. We have as cold winters as they do almost anywhere within the United States, and plenty of plenty that prey upon the ruffed grouse with the number of potatoes, and plenty of men and boys also; yet partridges are plenty, as the following figures will show:—There is a man here in Franklin county, who has been buying partridges for market ever since the season opened. He tells me he has bought and shipped already this season 2,000 partridges, and expects before the seasons over to get as many more. He had bought on the day I saw him (last Friday) thirty-two. He has promised to let me know how many he has received when it is done laying. A man living near this village has shot at old traps now and then a great number of potatoes this season with the help of a little cur dog he has. During the past month several partridges have been seen in the yards and gardens within the village. I scoured one up myself the other morning out of a yard in front of the school house here, as I was passing by. About a week ago, as a young man living in the village was dressing himself one morning, he saw a partridge sitting in an apple tree near his bedroom window. There happened to be a gun in the room already loaded, and being in a perfectly fair position, he shot the bird and had it cooked for his breakfast.

The 2,000 partridges bought up by the person referred to above were nearly all killed in the northwest portion of the county, over a territory about twenty-eight miles in extent. He has boys and young men shooting for him all over this part of the county, and goes round once in so often and picks them up. Out of the 2,000 bought, I don't think twenty-five were shot on the wing. We have shooters here who can cut off the head of a partridge four times out of five shots, but I know of none that can drop one on the wing twice out of five shots. No one about here thinks it is unsportsman-like to shoot a partridge when sitting or in any position they can get the chance. And I find all sportsmen that come here from abroad think the same after they get here.

I shall not attempt to account for the scarcity of partridges in many localities where they formerly have been plenty. But here I have always noticed, that if we had a cold and rainy season during the hatching time of the partridge, that they are always scarce the following fall. On the other hand, if the weather is warm and dry, they are always plenty, as has been the case here the last two seasons. Although the partridge, like the goose, when grown is a hardy bird, there is no bird more tender when first hatched, except the gosling.

Of course many partridges are destroyed every year as well as other birds by animals and birds of prey. But no year so late years than formerly, when the country was unsettled. So don't think the troublesome charge is limited. It may be, as you suggested, that partridges fly that troubles them in some localities. I have examined a number of partridges here, and have only found one that had the fly on it. The red squirrels were very plenty here last season and are so this year. There is one thing I don't understand, which is, that last year I found on the Sixteen-mile Level more spruce partridges than any other kind, but this year I have not seen the first one. What has become of them all I don't know; but they have either left for other parts, or have been destroyed in some manner. I found the bones and feathers last season of several near the creek that had been killed by minks, as I suppose. The mink tracks were plentiful around some I found on soft ground. But I cannot think the mink destroyed

them all. Good partridge hunting can be found now in the woods south of here, where they have not been hunted so much. Those near the settlements have become very wild, and when flushed fly a long distance before alighting. And I doubt very much that the man who is buying them here will get the 3,000 more he expects to this season. ADRIAN ONDACK.

THE HURLING GROUSE AGAIN.

NEW YORK, NOV. 25.

Editor Forest and Stream:

If your correspondent "L. I. F.," who writes from McDonald's Corner, N. B., will practice on ruffed grouse in the way that all of us who can hit them have done, he will soon learn to kill birds in such a style that his tutors in shooting will open their eyes to a new revelation of possibilities. Let me suggest to L. I. F. that the way to kill ruffed grouse is to shoot at them on sight and not to wait for a straightaway open shot.

When I first began to shoot them, it was in company with an old shooter, who averaged one ruffed grouse to every two shots, day in and day out, and he fired at every grouse that he saw, too, no matter whether the bird was just dodging behind a tree, or describing a corkscrew around a bunch of alders, or exhausting Euclid in geometrical curves. My instructions were to "always get at a bird on sight, no matter where he was, or whether there was any chance of my hitting him or not." These instructions I carefully followed, and now a good many years having elapsed, and a good many ruffed grouse having come to grief, it is a positive pleasure to me to have a grouse do his worst when he bursts forth from the brush. A good many shooters have seen your humble servant in the brush, and although they have often seen much better shots, they can nevertheless tell you that something is liable to happen to a grouse when he gets up within gunshot of

MARK WEST.

LORD DUNRAVEN AND NOVA SCOTIA GAME LAWS.

HALIFAX, NOVA SCOTIA, NOV. 21.

Editor Forest and Stream:

My attention has been called to an article in the *New York World* on the above subject, purporting to give the result of an interview with Earl Dunraven, which contains so many gross misstatements of facts, and misrepresentations as to the nature of the game laws of this Province, as to demand a reply. Lord Dunraven is reported to have stated that he was arrested for hunting without a license "under a law of one of the counties of Nova Scotia, and on the ground that he had failed to take out a county license, though he had applied for a general license for shooting in the Province." This is not correct. There are no game laws in this Province applicable to one county more than another, and there are no "county licenses," as Lord Dunraven well knows; for he is perfectly well posted in our game laws, and on a former occasion had to pay a fine for their breach. Our system of game laws is a very simple one, and easily understood by those who wish to do so. Game licenses are granted to persons not having their domicile in Nova Scotia who may wish to hunt therein, for which a fee of thirty dollars is charged for one year. This is a general license for the whole Province, and they are issued in Halifax, but for the convenience of sportsmen, who may enter the Province for sporting purposes at outlying districts, a number of licenses are deposited with the clerk of the peace of different counties in which the game districts lie, who are authorized to issue them. Under these licenses a sportsman can kill two moose and four eribon in any one year, and if he shall not have killed the prescribed number in any one district he can do so in any other, upon making affidavit before the game commissioner of the number he had previously shot. You will observe that Lord Dunraven says that he had "applied" for a general license, but he does not pretend to say that he had received it before he commenced to hunt, and his Lordship is a magistrate ought to know, that he had no more right to hunt without having a license in his possession than a liquor dealer has to sell, after he has applied for, but before a license has been granted to him. The truth is, that Earl Dunraven had no license to hunt whatever, until after he had left the county and gone to another, and was consequently liable to the penalty.

Now, as regards the mode of the collection of the fine, there was a blunder made in this case, by the game warden of the district who, having his assistant arrested under a warrant instead of following the very simple provisions of the law and suing him as for an ordinary debt. But the mistake of the official doesn't alter the fact that his lordship was guilty of a breach of the game laws, for which he was, and still is, liable to a penalty. The story about his having initiated proceedings in Halifax for false imprisonment is all nonsense. The noble earl gave Halifax a wide berth on his return, and if he had come here he would have found the proper legal papers awaiting him.

Now, a word to the *New York World*, whose editor (without probably ever having seen them), undertakes to assert "that the Nova Scotia game laws" (a copy of which I send you) "seem to be made less for the purpose of protecting the game of that interesting region than with an eye to making it impossible, for the stranger and the wayfaring sportsman to shoot anywhere in Nova Scotia without paying at every turn for the privilege." I would beg to inform the erudite individual, whose head appears to have been turned by the unwelcome honor of interviewing "a lion's lord," that the Nova Scotia game laws were framed by a body of gentlemen who are true sportsmen, whose sole desire was to devise means to preserve our game from threatened destruction, and not to make money out of strangers or anybody else; and I think, Mr. Editor, that upon reading them, you will agree with me that they will compare favorably with those of any of your States. As there is now no grant from the Legislature for the protection of game, a license system was adopted for the purpose of raising a fund to recompense in part the commissioners and wardens for their services, and to defray the expense of protecting the game generally, and I am sure no true sportsman would object to paying the small fee imposed, when he knows the purposes to which it is applied.

"Thanking you for the space you have given me, I am, A MEMBER OF THE NOVA SCOTIA GAME PROTECTION SOCIETY.

CALIFORNIA.—Gilroy, Cal., Nov. 16.—Gazze is booming in our country at the present time, and it is a very common occurrence for an amateur to bag from four to six dozen quails in one day. I have seen several at this time, and I have heard of bags ranging from one to five dozen per day near here. As for myself I have not had a turn at the snipe yet, but expect to within the next week.—H. M. B.

WILD FOWL SHOOTING ON LONG ISLAND.

NEW YORK, Nov. 23.

IT may not be uninteresting in view of your article of November 17, entitled "Wild Fowl on Long Island," to give you a few of the thoughts prompted by reading that article, and of my experience in search of sport near the locality mentioned. I spent a few days duck-shooting at a place between Great South Bay and Shinnecock Bay. In reference to this subject it will be necessary to state the condition of things existing in August last, when snipe shooting was in order on the "meadows." These meadows jut out into the bay from the sand-hilled beach that protects the shoal waters of the south coast of Long Island from old days they have existed for centuries, though situated in a shallow-ness affords an excellent bed for the growth of grass—cut grass—as it is called, upon which, as is well known to every shooter, the ducks in their spring and fall flights feed so greedily. This grass has a more luxuriant growth this year than is usual, ergo, the ducks are unusually numerous. It became evident to those experienced gunners living adjacent to this body of water, that there would be good shooting this fall, so, when August was ushered in, flocks of black and gray ducks were arising, also large bunches of teal, and while sniping parties were getting ready to shoot snipe, they did not disdain a shot at any duck that ventured within the range of their guns; and long before the duck law was "off" many a flagrant act of violating the game law was committed, and many a day witnessed a bunch of black ducks, teal or gray ducks as the result of the day's "snipe shooting." This shooting of wild fowl, before the season opens, I surmise, is indulged in wherever the ducks congregate, be it Long Island, New Jersey, Virginia or North Carolina, and the question is: Are sportsmen, as a rule, so nicely instructed in their moral attributes when engaged in the pursuit of bay birds, as to resist the temptation to knock a black duck over, if he comes within range? I do not offer this as an excuse for violating the law, but isn't it characteristic of a follower of the gun, when arrayed in his plumy of war, so to speak, to blaze away at anything that comes to his "blind"? The fact is, that so far as the waters confined in the shallow bays along the coast of Long Island are concerned, there will always be shooting; there will be "good sport" as there are in crops, but so long as there is good "feed" in these bays you cannot drive the ducks away. Shooting unintercepted will make them wild, which is a wise provision of nature, for if these birds were to remain gentle, and obligingly offer to come within easy gun-shot range, fly slowly, balance themselves in the air, or stand on their tails, while the sportsman takes aim, all the resorts of wild fowl would be thronged with ardent shooters, and the wild duck would soon be a dreary reminiscence—a halloved memory.

I think it a mistaken idea to make the breach-loader responsible for the scarcity of game. As well charge the multiplying reel with the destruction of trout or black bass. It is true one can get more shots with one breach-loader than with one muzzle-loader. But the bayman I am in the habit of engaging, when going duck-shooting and he is not an exception in this respect uses always two muzzle-loaders, and not infrequently three, and I know he gets as many shots as I do with my one breach-loader.

Am now, in summing up, I beg to present to you for your consideration, the following facts: Within a few hours of journey from this city is a spot I have been in the habit of visiting regularly every spring and fall for some years. Last fall the bayman referred to did not use five pounds of shot, and thought somewhat of selling his surplus stock of guns; this fall he has used nearly 100 pounds of shot, and is bound to have a breach-loader.

Last spring I went two days with a friend, and we brought back but six birds apiece; this fall I have seen more birds and got more, and I have not a single English snipe. On the 27th of October a gentleman got fifty-nine broad bills; on the 14th of November two gentlemen got seventy-one black ducks; on the 1st of November a party of eight gunners at Smith's Point shot 108 ducks. They made no effort to get a fifth of the wounded, mostly old squaws, broad bills, whistlers, etc.

I went down the 31st of October for a couple of days' sport and got about forty good birds. I went again November 15, 16 and 17, and brought back about sixty ducks, mostly black ducks, whistlers, and among them being three canvas-backs, two redheads, and four teal.

I missed the big day's score mentioned above, in the one instance by early a week, and in the other, I was a day "behind the fair." But I had royal sport, a healthful recreation, and returned both times rejuvenated, and while firmly believing in the wisdom of making close seasons for all kinds of game I maintain that legislation protects the wild fowl very little as the law now stands.

The true and only sensible legislation would be to enact laws abolishing "spring shot," and the beneficial results would simply repay the temporary disappointment, so that when the wild ducks and geese take their annual flight south in the fall of the year, the prospects for sport would certainly be increased, some forty fold, and some a hundred fold.

PHILADELPHIA SHOOTING NOTES—Nov. 23.—Owing to the great scarcity of upland game this autumn many of the Philadelphia sportsmen are devoting their entire leisure time to duck shooting; and we find at the leading gun stores the demand for large canvas-backs, teal, snipe, shot very materially increased. At Havre de Grace, Md. canvas-back ducks, which had not put in their appearance in very great numbers, have shown themselves in larger bodies since the rain of the 23rd and 24th inst., and during the following cold clear up. Brant, black ducks, blue bills, and a sprinkling of the other varieties of wild fowl are increasing in numbers in the bays along the New Jersey coast, but the continued south-easterly and easterly winds of last week made shooting in those waters poor, as it influenced the flight of all traveling flocks at great distances away from the best islands and points of ambush and decoying. Thus for this fall Canada geese seen to have left Bancroft and Tuckertons bays, N. J., in the lurch, for great bodies have passed "right along, very high in the air, not even answering a hook," said a native to me. Just now your correspondent thinks he could, with Capt. Coffin, of Berlin, Md., find and fool these very geese in Sibexport Sound, using the Captain's sirken boxes on the beach as a hiding place, and having his five wild geese decoys or honkers as persuaders.—Howso.

ILLINOIS—(Charleston, Nov. 23.)—Habit shooting is good. C. Calhoun and George Thrall bagged 18 the other day.—J. B. D.

"MAINE WARDENS AND VISITING SPORTSMEN."

MONSON, Me., Nov. 23, 1881.

Editor Forest and Stream:
I read with a great deal of interest both of the recent letters from two different gentlemen upon these subjects.

As I have the honor of an acquaintance with both writers, I can testify to the honor and integrity of each of them.

And although to some there may appear to be a conflict in regard to the facts which both have borne witness of, yet I believe the two accounts are substantially true.

There are many visiting sportsmen who are not as conscientious and honorable as is our esteemed friend, L. L. Hubbard, Esq.

There is a class of these men who are flagrant violators of all our game and fish laws. Their influence is bad. Their operations are often no more nor less than outright poaching.

And yet they help swell the vast amount of revenue which so many of our interior towns and villages annually receive by virtue of "sporting" in general.

But this should not be considered a mitigation of their hold infractions of the law, nor as a reason why their acts should be tolerated.

There are many men of Maine who entertain an honest desire that all of our laws relating to these important matters should be impartially enforced.

But we have a strong local public sentiment in nearly every county (so far as my knowledge extends) which is directly opposed to our laws, and the one great argument which they continually present is that in their enforcement the "sportsmen" are not prosecuted with the same ardor and to the same extent that our own citizens are.

They claim that there is an unfair discrimination made between these gentlemen and the Maine "yeomanry," which smells a little of the ancient "Forest Laws" of Old England.

I do not now, and never have, espoused the cause of these complainants. Every line that I have, in my humble way, written, and every word that I have ever uttered upon this subject has been such as in my judgment would aid in promoting a healthy public sentiment in favor of the enforcement of the laws with equal and exact justice to all; and I only refer to these facts now to show the reason why wardens and other officers of our State labor under difficulties.

Public sentiment is not yet up to the proper standard, and this demoralization is partly owing to the very facts set out in Hon. E. M. Stilwell's letter.

On the other hand, there are many disgraceful cases of willful negligence on the part of wardens and other public officers, just exactly as stated by Mr. Hubbard.

I rejoice that some able and experienced editors of your valuable journal have commenced a discussion of this question which is of such vital importance to the "Pine Tree State," as well as to the sporting world.

These evils exist. They are glaring. The doers of them seem to defy and scorn law and justice, and taunt and sneer at those who have the courage to advocate sentiments and opinions adverse to poaching.

The fact is that any poacher of game and fish who infringes upon the law of the State or who, in the words of one of the Forest and Stream's editorials, "takes trout or venison out of season, except to supply his necessities when beyond civilization, is a thief." This is true whether he comes from a far city with all of the rich paraphernalia of a "lord of the manor" or whether he be the most humble "native" who, with his cheap "set lines," catches his "pung load" of trout and hauls them to the village market to swap with the merchant for the barter and truck of the country store.

Neither class is above the law. Both should be so severely punished for the commission of these sins that future generations shall find out that poaching in Maine is a crime.

But what is the remedy most needed to-day?
I leave this question to be answered by others of your readers more able than myself.

BANGOR, ME., NOV. 23, 1881.

Editor Forest and Stream:
I departed from my usual custom when I replied to what I deemed a wholesome and sensible article of yours, and in respect I am proud of. My departure from my usual has met with that result which my experience had taught me to expect—personalities and unsustained assertions. I am again impelled to break away from my resolve, but my statement shall be short, and will be the last from me in response to any attack.

Two years since the Commissioners of Fisheries, with their warden, laid their duties extended by legislative act to include the game of the State, but my own friends made to enable them to execute the laws of their increased duties. The wardens are appointed by the Governor and Council, the law does not even requiring a reference to us of their qualifications. The law directs that their pay shall be fixed by the Governor and Council, and adds "provided that the whole sum paid to all the wardens shall not exceed \$1,500." My list of wardens from the Secretary of State's office at Augusta, a year since, contained fifty-three names. Many of these since been added, whose names even we are ignorant of. I have referred above to fish wardens, whose powers have now been extended to game. The game wardens are such have no salary by statute, their pay being one-half of the penalties when a party is convicted.

It is almost impossible to make out a case of hunting deer with dogs. The dogs can, and are, killed to great extent, but whence is to come the pay of the faithful warden for that duty? Men go into the forests with packs of hounds; we know they intend to hunt our deer, but what then? Men go into the forests, during the close time of our game, armed with both shot-gun and rifle. The "animus" is there the same as in the case of the hounds, and yet we are powerless in both cases. Occasionally one of our wardens is fortunate enough to obtain evidence upon which a conviction takes place, but never, we sincerely believe, with any discrimination as to summer tourists or citizens. Our native poachers, as a rule, kill only when they can market their game. They do not kill for the mere pleasure of the sport, but to get something of no novelty to them. If any of our native poachers are caught they do not run into print. Most of our poaching is done in cold weather by pot hunters. At other seasons they are employed as guides, or are illegally taking salmon, spearing or netting trout in spawning time, rarely, if ever, in any honest labor.

The oft quoted cases of "Mopong Lake," "Lead Mountain," "Citizens of Bangor," etc., have been answered again and again in the newspapers by complaints of loss of dogs. Faithful wardens have been arrested at these various places, and our work is being done. Must we advertise all our

movements, and thus defeat them, to protect ourselves from charges of partiality emanating from those whom our wardens have convicted? We do not think our Bangor citizens referred to credit us with much forbearance toward them.

We know no personality in arrests made. They are made entirely by the wardens, who are only accountable to us when charges are made and substantiated against them. There is no law by which we are bound to warrant to do work when there is no provision made for his payment. Our instructions by statute are "to examine into the working of the law." We have no power of arrest. The wardens have. They are expected, without a salary, to leave their occupations at home, and go into the forest at their own expense, and try and make out a case of hunting deer with dogs, in anticipation of the rich reward of one-half the penalty in case of conviction, and the very remunerative privilege of killing at sight any dogs found running deer.

We cannot admit the right of persons traveling strictly for their own amusement armed with shot-gun and rifle during the close time for our game, "to eke out the scant fare of camp table," by killing either our birds or our venison. For what other purpose do sportsmen ever take down their shot-guns or rifles? Surely not to shoot for market. We do hold all persons responsible for the acts of their guides and employees. Every one, however exalted his position, owes to society the moral tax of a worthy example for all those that look up to him; and there are none in this world so low down that they are not guides to some one humbler or weaker.

The Provinces of Nova Scotia and New Brunswick have found it not only necessary to protect their game from the utter extermination by stringent laws, but also by requiring a license fee of \$30 in the former, and \$25 in the latter Province, for the right of any visitor to hunt, trap or shoot. The result has been to precipitate upon us all those who formerly sought the amusement or profit of hunting, and increased means to employ and to efficient officers. This will all come in time. We are steadily progressing to a better system of fish and game laws. Are we expecting too much in looking to sportsmen, without distinction of residence, for aid and sympathy? We shall ever believe that with every true sportsman the law of *noblesse oblige* will prove the only true and reliable guide wherever he may go.

E. M. STILLWELL.

A NEW JERSEY PARTY IN THE SOUTH.

NEW'S, Jan Slyke's Landing, Nov. 23.
WELL, here we are; and ye gods! how it does rain! The fountains of the great deep are broken up, and it verily pours down in sheets. The gunners, and there are some eighteen here including our party from Jersey, are disconsolate. With lugubrious countenances they severally and often seek the sombre heavens and pray for a let up. Several have donned their rubbers and oil-skins, and essayed an attempt to cross the bay. But it is too moist, and the fowl will not fly well in a dead rain and no wind. There seems to be plenty of fowl here; and for several days the bay has echoed to the boom of the breach-loaders in every direction. There are a goodly number of geese and many canvas-backs. All are waiting for a cold snap they say. Two members of the Currituck Club on Friday last bagged to their two guns 107 ducks and twenty-seven geese. The good ship was as steady as a clock. The Old Dominion is the largest we believe in the list, a side-wheeler and rolls very little. Capt. Geo. M. Walker, commodore of the line, is too well known to be complimented by us. An old sea-dog from his boyhood, every inch a sailor and for nine years master of the S.S. Fulton plying with the Aragon between New York and Havre, he made many friends. He has been captain of the D. M. Pinker since she was launched, some ten years ago, and Courtsen and attentive to his passengers, they can say so far when he is in command. Jas. M. Gallagher (also a commodore, purser, has been with the line since its organization, fifteen years ago. We found him a gentleman and well posted in the duties pertaining to his position. How from small things great ones grow. The Old Dominion Line now has nine steamships running to Lewes, West Point, Norfolk and Richmond, besides five steamboats plying between Portsmouth, New York and west shores of Virginia, Albemarle and Pamlico Sounds of North Carolina. In the Old Dominion Commodore, commodore steward, we found that personage so necessary to the comfort, good feeling of passengers, the right man for the place, and all were more than satisfied with the good things he provided and in the way it was done.

The Old Dominion has an electric light on her bow, which is used when entering or leaving harbor or running up the James river to Richmond. She has a capacity of 5,000 candle power, and takes a six-horse power engine for the power. The Queen the Old Dominion first came into Norfolk with the light on in full force, there was somewhat of a commotion, especially among the drskeys. They thought they millennium had come, and they fell on their knees, many in the bottom of their boats, calling on the Lord to save them and take them to glory.

We reached Norfolk about 6 P. M. Sunday eve. Had a splashy trip throughout Sunday. We found George, the "boss" porter, awaiting us at the landing, and were soon at the Purcell House. Of course we had a good time there. Mr. R. T. James knows how to run a hotel, as his guest's always come a second time if traveling that way. Six A. M. found us on the Cygnet. With all the freight to carry, and at this time of the year the large number of passengers, it is astonishing to us that they don't put on a larger boat with some kind of accommodation. The Cygnet is a dirty little tub, about the size of the New York tug-boats, no state-rooms and but little room on deck, besides a small room, we believe, down below. As there were some twenty-five passengers, among them several ladies, and it proved a rainy day, you can imagine what a tedious time we had crawling through the canal and down the sound. We were j. Inel with our friend Boel, took the same dose with us, and they both over the next time they come they will come by cars and take the steamer "Hatteranger" at Norfolk and get off at Cain Deck, and then six miles across. So say we all of us.

Monday eve at 7 o'clock found us here at Mrs. Nye's; and in the evening we had business every inch of her, and there are several loches (weighs about 130), with an eye, like a hawk, and a tongue—well, Heaven help the man who objects at," when she is aroused. The Kitty Hawk Club found that out. And she says she is not through with them yet. But she does keep a good hostility; sets a good table, and is attentive personally to the wants of her guests. Looks after everything herself and is emphatically "boss of the ranch."

We made a short call at the Kitty Hawk Club. They are very pleasantly situated temporarily, some 400 yards from here. They expect to build a club house further south. We found Mr. for Bailey, in charge, backed up by Ed. Gray, who came down with us and made those wonderful shots with his new Scott gun. We saw him kill a grouse that we thought was fully 130 yards, and two crows at 80 and 100 yards. He used the thread cartridge. He is one of the enthusiasts in the shooting line, as good shot and good company as all true sportsmen should be. Bailey, the Major Dowd of the club, is a fine, soldier looking gentleman of education, and evidently enjoys the situation of which he is master. We were more contentedly sitting and invited to go down with them on Saturday over the grounds of the club, which extend some 250 miles south, embracing some of the best shooting points in the United States. More of this soon.

JACOBSTAFF.

HINTS ON HANDLING A GUN.

SHOOTING on the wing is a mechanical art like billiard playing, boxing or fencing. There will, of course, be degrees of excellence, but any one with the full use of his faculties and the ambition necessary to success in anything can acquire it.

The secret lies in the hand becoming subversive to the eye. The two must be connected as by electricity. The eye is never at fault; if it were there would be little hope of improvement, but any one may improve the quickness of the muscles of the arm. Look at the expertness of professional card players and conjurers in the art of manipulation. The same practice applied to the gun will make the brilliant shot.

One often hears it said "to be a good shot requires a quick eye." It matters not how quick the eye is unless the muscles are educated to act in unison with it. Every one can see quick enough. Let one bird out of a trap before five hundred people and they will all see it at the same time, but only the practiced shot can throw up a gun to his shoulder with accurate aim and simultaneously pull trigger before the bird has flown ten feet. Take the admit fence or boxer; he sees an opening and his practiced muscles obey the eye and send the thrust or blow home quicker than the unpracticed eye can follow.

Of what use then is the sight on a gun? Very little, as is seen by the successful way gunners kill ducks when it is too dark to see the sight or scarcely to see the barrels.

A sportsman should shoot game the same as an Indian shoots his arrow, by looking at the object with both eyes open. It may be done by closing one eye, but there is nothing gained by this.

There are two ways of shooting on the wing. One to throw up the gun to the shoulder and pull the trigger at the same time. This is termed "up shooting." The other, equally good and better to begin with, and more certain upon the whole, particularly in open shooting, is to follow the bird and when covered fire while the gun is in motion. When you pull the trigger the other hand has a tendency to stop. That misses the bird, but education will teach it not to stop, the same as we teach both hands a different action while playing on the piano.

E. B.

MUZZLE LOADER VS. BREACH LOADER.

SOMERVILLE, Mass., Nov. 8.

Editor Forest and Stream.

I would like to hear from some one who can give me a little bit of information through the columns of your much esteemed paper, if it is not asking too much. I will try to state the case so as to make it as plain as possible.

When a boy I had a small muzzle loading rifle with which, after some practice, I learned to pick a squirrel's head for a dead certainty. In loading, I always used a round ball and a greased linen patch. Whenever I pulled the trigger I knew (whether I looked at the target or not) where the bullet had gone. This I mean for distances short of fifty yards.

Well, about a year ago I purchased a new thirty-two calibre breech-loading rifle, thirty-nine barrel and about eight pounds weight, and as I think a well-made arm. It was rim-fire at the time that I bought it, chambered for the regular thirty-two long cartridge. Well, I commenced practice with it, and found that I could not depend upon it for close shooting, as it would, perhaps, pick out three spots of a playing-card and then a ball would go three inches above of the mark, or over or under. I was told that rim-fire cartridges were uncertain, so I sent to the factory where the gun was made and obtained a central-fire breech-loader for it. I then bought some central-fire thirty-two cartridges and went to shooting with them, with the same result. Both kinds of cartridges were made by the Union Metallic Co., of Bridgeport, Conn.

Then I gave up for a while, and thought that the fault was in myself, and that close shooting was one of the lost arts with me. But remembering that when I used to shoot with I used a muzzle loader and a round ball, I went to William Read & Sons, and obtained some No. 1 buckshot (which just fits a thirty-two calibre for muzzle loading, with a linen patch) and went at it again. After getting my sights "tuned," I found that by first putting in a central-fire shell and loading from the muzzle I could cut a spot on a card almost every time, and if I did "pull the gun off the mark," I knew it when I pulled.

I determined to test the matter thoroughly. I arranged a vise so that I could turn it on a pivot, and then clamped the rifle between the jaws in such a manner that I could load from either the muzzle or breech, and proceeded to make my tests. The following is the result of ten shots each, rim-fire and central-fire, breech-loading, and loading from the muzzle with round ball and patch, distance, twenty-five yards:

Breach-loading.—Rim-fire. Seven balls inside inch ring and three inches away to the left, and two about two inches high, close together. Central-fire.—Six balls cut each other out, one one inch below the others, one two inches above, and the other two about half an inch to the right and close together.

Muzzle-loading, with round ball and patch, the ten shots cut out a hole about as large as my thumb-nail.

I would add that the gun was not removed from his view and was swabbed clean after each discharge.

Now, what I would like to ask is this: Is muzzle-loading with round ball more accurate in its shooting than breech-loading with a slug or conical bullet? Or is it the fault of the cartridges made by the U. M. C. Co.? If the fault is in the rifle, why is it accurate with round balls loaded from the muzzle? Of course I refer to the naked enclaved bullet in breech-loading, and not to the patched ones as are used in long-range rifle matches.

IRON RAMROD.

REELFOOT LAKE.

THE number of gentlemen sportsmen who have gone to Reelfoot this year from Nashville, Columbia, Franklin, Bowling Green, and other parts of Tennessee, exceeds any ever known before.

Benjamin Buckner and Tom Waterman led the van from Nashville; they followed Messrs. Burt Bray, T. Morris, I. Cook and Bill Winans, from Bowling Green. On Saturday, the 19th, the aristocratic club of this city started, consisting of Col. V. L. Kirkman, Clarke Pritchett, Geo. W. Darden, J. P. Dronellard and John Thompson, Jr. Maj. Ben, Felix Mitchell, J. Palmer and John Nicholson leave on Saturday next. From Columbia and Franklin the list has been augmented by Alf. Hersely, Tom Perkins, Mr. Cliffe, Ed. Wheat, and several others. These gentlemen go fully equipped for both shooting and fishing.

Col. Kirkman's party got to his shooting box on the Lake, where every comfort and luxury that good taste and money can procure is provided. The other gentlemen have their boats, private stores and servants, though they stop at Carpenters, where they can be cared for in better than ordinary country style. The weather is now favorable for sport, and doubtless large bags and creels will reward them for the hard work they will have to perform.

Partridges (quail) are now plentiful in the market, though the price, fifteen cents each, is high for this market.

General Smedes has opened a restaurant in this city at which woodcock, snipe, ducks, choice fish, frog legs, venison and "pssum" appear on the bill of fare daily. The woodcock come from Cincinnati, and command one dollar each.

Groves in the Cumberland River are more numerous than usual at this season, but they are so wild as to evade the most skillful hunter.

Squirrels have almost entirely disappeared from the State; like the darkeys, they have exodused for a more genial climate.

J. D. H.

Nashville, Tenn., Nov. 17, 1881.

VALUE OF FIELD SPORTS.—The will of the late Ineslee A. Hopper, of Newark, N. J., who, for many years, was President of the Singer Manufacturing Company, gives all his property to his wife excepting his fishing-tackle, guns and other sporting implements. These he bequeathed to his sons, expressing his desire that they will cultivate a love for fishing and field sports. Of the intrinsic value of the outfit we are not told; but the advice we know to be worth thousands of dollars to young men. There are hosts of gray-haired veterans to-day who would not exchange pleasures found in field sports for a very valuable money consideration.

FOREST AND STREAM.

And those old "gray-haired veterans" are the healthiest men in the world. Some people have very curious ideas about field sports. They think if a man owns a gun and a dog, he is of no account. If he goes fishing once in a while, he is "neglecting his business," and "will never amount to anything." We can remember when, in this city, it was considered by some of the old fogies almost a crime to own a dog. We believe in hunting and fishing, and a breath of the glorious fresh country air, and the pleasures that Lord never made man to spend their whole lives cooped up in close, musty stores, and dingy little offices, so absorbed in the business of money making, that they absolutely shrivel up. Their souls come on; they keep them in school till their poor heads are literally stuffed with knowledge, then put them at some confining work, and then wonder why they are not healthy. If the youth asks for a gun, and says that he would like to go out some times and shoot a little, his father holds up his hands in horror, and tells him to come old, yellow, dried-up business man, who knows no God but money, and whose soul is so small that it would rattle around in a gazelle's ear like a pea in a filled balloon, says: "Look at Mr. Skintuldr, he never hunted a day in his life!" If ever we have a boy, we intend to get him a gun as soon as he is old enough to know how to load it properly, and a dog too if he wants it, and if he don't die and leave a vast estate for his children to wrangle over, he will have the satisfaction of actually being afraid to let it be known that they hunt, "for fear that the business men will think less of them." Let the business men think what they please. If a man supports his family and pays his honest debts, whose business is it if he wants to hunt, let him hunt, and the same in regard to fishing. We love both, and we don't care who knows it, and if we go shooting every day for the next seventeen years, it's nobody's business but our own. There are a lot of wooden-headed young squibs running round this town every night, who couldn't hit the court-house with a shot gun unless somebody aimed it and put it in a vice for them, and yet they play billiards, pool, cards and even throw dice, in an airy and graceful manner. Get one, when he is loquacious & e, loaded up with beer, and ask him if he ever hunts or fishes, and he will tell you "Oh no, pa says a man who hunts is no account." If some of the "pa's" around town would insinuate a little more love of honest manly sport, and of exercise in the good country air into the minds of their boys, they wouldn't wake up so often at midnight, and go down and find the night-guy still set, and then "wonder where Johnny is."—*Evansville Argus.*

CROWS FOR THE TRAP.—Camden, Nov. 26.—I notice in last week's paper an article by "Colin" in which he suggests crows as a substitute for pigeons for trap shooting, and saves to his knowledge it has never been tried. I have a friend who became a crack shot by shooting them from a trap. He lived on a farm where crows were plenty in winter, and he caught them in a pigeon net, baited with offal. Then he commenced shooting he would set the bird to the trap by a long cord, and he would open it, would pull him in and try again. Sometimes he would have as many as 150 or 200 crows confined in an old chicken-house, where they were fed and taken out as wanted.

A. A. B.

AN OLD TIME RIFLE.

OUR little party, hungry, tired and thirsty, stopped at the door of a small farm-house, which was beautifully painted by many a fier-e winter snow and blow, tempered and blended on the palette of time. We walk in, and while we are sipping the cider something is said of old guns, when our host at once joined in the conversation with spirit. He "had a rifle—note of our new-fangled things, open at each end or broken in the middle—to let in a charge, but a good sensible gun one could load to suit themselves, and could tell at which end the charge would come out." He led us up in an adjoining room, and we saw his return. At the first sound of approaching footsteps the end of a small round wooden rod appears at the door at which our old friend had disappeared. Following the same along with our staring eyes, we discover a black octagon barrel into which the rod runs. As the sound of steps draw nearer the end of the rod and barrel first discovered disappear somewhere in the opposite direction, and soon our worthy farmer appears grasping this little octagon pipe as if to steady himself as he walks. A hasty examination of the gun convinced us that it had been made by some of the past generations for a rifle. It was in a wonderfully good state of preservation, and seemed to be all in good working order, which led us to inquire if it could be fired now. "Why," he "guessed it could, and if they had had such rifles in the war, there would have been more killed. It had been ruled out of such and such shooting matches," owing to its never-missing qualities. In fact, we were led to suppose it was one of the mysterious pieces described in Nick Whiffles' yellow-covered novels. The writer was seized with a great desire to see it work, and, procuring some loose powder and removing the gun to a safe place, a few grains of powder were placed in the "pan" and the fire, drawn back. A pull at the trigger gave a snap, a spark, then a flash, much to our surprise as well as amusement. But this only marked the spark of curiosity into flame, and the powder would now do but a match with this ancient rifle. After much searching in old and dust-covered boxes, a quantity of bullets were found securely tied up in a time-worn, rusty bag, and, guided by the owner of the rifle, we proceeded to an open level field backed by thick woods, against which he proposed to shoot. We agreed to shoot one each and to be governed by the farmer's rules. He proceeded to step off one hundred yards or paces, we following with boards and timber for a target, which was quickly put up so as to present a face of about three feet wide by five feet high, with a white chalk mark in the centre. Our instructor loads the gun after his own fashion, as he is accustomed after some delay, such as loading the firing, making a priming pin, etc. Then the rifle was pronounced ready to shoot, and one of our number quickly fed the butts and prepared to shoot from a pile of timber, according to instructions from our leader, who wished us to shoot first. All ready—snap, dash, bang! and away sped the ball to some unknown, and we hope, uninhabitable quarter of the globe; ditto the next shot, and so on until all our party had shot, and it came the owner's turn. He took a long, deliberate aim, but an examination of the target failed to reveal any trace of where the ball had gone. Then he "knewed by the sound of that gun that something was wrong with it." As no one had yet hit the white face of the target, and every one seemed to have sent the ball the nearest to it, a second round had to be called, when some very lucky hits were made. It is not at all likely that any more shooting can be done in this vicinity, owing to the enraged farmers in the surrounding towns, who were badly frightened by bullets whistling over their heads, and until they heard of the match they thought that the Washington assassin had escaped from prison and gone up in a balloon and was being shot at by the whole nation.

North Andover.

"GORES AND SWINDLE"—University Club, 370 Fifth Avenue, New York, November 23, 1881. Editor Forest and Stream.—Should I not, my fellow-sportsmen contemplate a party at High Point, N. C., for quail shooting this season, perhaps the experience of myself and friend might be useful. We decided to visit that locality a short time since upon the mis-representations of a New Jersey man, who is now keeping the Bellevue Hotel at that Point. We were assured by this person that he had arranged to secure us the shooting over a large extent of country, whereas, on the contrary, we found nearly every farm "posted," and the nearly all the sportsmen in the most rural and inviting manner. Had it not been for the courtesy of one or two residents of the village we would have had no shooting at all. As a specimen of the innkeeper's rapacity, permit me to quote a few items from our bill: Board, 4 days for two, \$22.50; board for 3 dogs, \$4.50; fires in room, \$2; 3 lunches (when we did not dine at the hotel), \$4.50; corkage on wine, which we sent down from New York city and opened ourselves, 75 cents per bottle, etc. Comment is unnecessary.—W. E. C. M.

GUNNING ACCIDENT AT SPECIATA ISLAND.—Dr. Jos. W. A. Clarkson, a prominent Baltimore sportsman, met with quite a serious accident, while duck shooting at Simmons's fishing grounds, Speculata Island, Harford county, Md., on the 23d inst. He and Mr. Adam, of Adams Bros., Baltimore, were companions on the shooting trip. Dr. Clarkson was in a blind alone about fifty or sixty yards from the shore. Mr. Adams was in another blind on a point about 300 yards distant. Having two guns with him Dr. C. discharged the first at a flock of redheads that darted at his feet, and saying "I'll get you," he fired a second shot when he fell it down took up the larger one, both barrels going off. Part of his clothing was torn off, his ribs scratched and his right arm badly wounded. The blind was set on fire by the discharge, and thus attracted attention and brought relief. It is believed that Dr. Clarkson's arm can be saved, though at first it was feared amputation would be necessary. Strange to relate, this same arm blind where the accident occurred was the very one in which Mr. R. Q. Taylor, of Baltimore, lost an arm by the premature discharge of his gun some years ago.—*Hono.*

"THE OREGON TRAIL"—Did you ever read a little book entitled "The Oregon Trail?" My boy got it out of our school library. It contains an interesting and interesting account of the killing by the author and his friends, of numerous buffaloes for their tongues. It is very instructive and valuable reading for our boys, a good thing for our school libraries, and, if properly recommended, may train up a generation of pot hunters.

W. H. I. I. ["The Oregon Trail," if we mistake not, is by a distinguished historian, Francis Parkman, who would doubtless be amused at the criticism offered by our correspondent.]

CHEESAPEAKE BAY DOCKER.—Mr. Pierre Lorillard is on a duck shooting excursion in the Chesapeake Bay with a select party of friends in his steam yacht Radha. Fowl are in abundance in the Chesapeake Bay and adjacent waters.—*Hono.*

DEER AND BEARS.—Hornellville, N. Y., Nov. 27.—A great many deer have been killed near here this season. Eleven killed in one day at Cedar Run. Five were waiting at depot yesterday to be shipped. Geo. Humphrey and Will Harris killed two in one hour, but the specimens, only a few miles from here. One deer was killed last week inside the corporation limits. Hugh Jordan recently killed a monster bear which weighed 500 pounds. It is said this makes the twenty-ninth bear killed by him in this section. Mr. Jordan is a noted hunter and trapper.—J. OTIS FELLOWS

CORRIDOR FOR SHOOTING ST.—Northbridge, Mass., Nov. 7.—*Editor Forest and Stream:* Can you tell me where I can get the genuine Irish corridors of dead grass color. My tailor says he has looked over Boston and New York and cannot find it. I want to have a suit made by my own tailor after my own ideas.—H. T. W.

[We have been unable to find the goods.]

ANDRONDAKS.—The deer shooting at Upper Chauteaugy Lake, Ralph's Hotel, has been very fine, it is reported. We understand that Ralph's house is to be enlarged for next season.

LYLE QUAIL.—Ad Hall, Milam County, Texas.—*Editor Forest and Stream:* I can supply live quail to those desiring them for stocking purposes. My address is as above.—G. A. VINCENT.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

SALT WATER.
POLLOCK, *Polydactylus carbonatus*.
TARTAR or BLACKISH, *Tautoga onitis*.
WEAKFISH or SQUETEYE, *Cynoscion*.
CHANNEL BASS, Spot or REDFISH, *Sciaenops ocellatus*.

With very few exceptions, the game fish are those which do not confine themselves either to salt or fresh water, throughout the year, but visit one or the other, as their habits and taste, but principally the propagation of their species, direct them. These migratory fishes are, without any exception, the strongest, the boldest, and, as such, afford the best sport of their tribe; nor are they, for the most part, to be surpassed by any in excellence, firmness, and flavor, when in their best condition. Those fish which never visit the salt water at all, are unquestionably so much inferior to others of their own family which run periodically to the sea, that they are with difficulty recognized as belonging to the same order with their roving brethren; while of those none of which are known to leave the fresh water, but two or three kinds, are worth taking at all; and even these are not to be compared with the migratory, or the pure sea fish.—HENRY WILLIAM HERRERT.

PIKE FISHING ON THE LEHIGH.

THE Lehigh River at Bethlehem, Pa., affords excellent sport for the lovers of bass fishing, and quite a number of nice bass have been taken at this place during the present season, the largest weighing, I think, four pounds. But for a good day's sport and a fair string of fish (pike), Chain Dam, a station on the L. V. R. R., nine miles below Bethlehem, is no doubt the fishing place, par excellence, of the Lehigh. On that river we spent a day with the pike, the result (3 lbs.) is considered good for this part of the country.

At 5 A. M. we embarked at B. and started on our nine-mile trip, "Jim" seated in the bow and myself wielding the paddle. All went smoothly until we came to what is known as "Jones Island," where we prepared to meet our first difficulty in the shape of a quarter of a mile of rapids, and ugly ones at that, the water being very shallow, and running like a mill-race; but, nothing fearing, we pushed bravely on. When half-way through and while congratulating ourselves on our good luck in not getting stuck, we saw just in front of us an immense rock, partly submerged. In vain I tried to pass it, the current proved too strong, and with a bump and a scratch we were high and dry. After half an hour's work we were once more afloat and speeding onward. Having covered myself with glory in delaying the expedition half an hour, I resigned the paddle and changed places with "Jim," in the bow, and once more we glided on.

In nearing Freemansburg, we struck what we thought would prove a fishy place, so, casting the troll and letting out about twenty yards of line, we pulled silently past the place, waiting patiently for a rise. Suddenly we felt one, and with a quick twist we hooked, as we supposed, a pike. Our supposition proved correct, for on landing him, he proved to be a splendid specimen of this game fish and measured seventeen inches. We fished this spot for half an hour, catching two smaller pike, and left it, well satisfied, as we depended mainly on "filling our creel" at Chain Dam our destination.

Passing Freemansburg we reached our second rapids, which, although worse than the first, we passed without scratch, owing, no doubt, to the skillful manipulation of the paddle in "Jim's" hands. From this place to our third and last rapids, it was plain sailing, and the journey was passed in silence, excepting, now and then, certain uncomplimentary remarks concerning the rain, which had begun falling on our entering Freemansburg, and which was still falling "as though it had never rained before," as Jim remarked. The last obstruction consisted of a dam about three feet high, through the center of which was an opening eight feet wide. Through this the water rushed in one large volume, curving up at the bottom into a wave two feet high. Through this chute we passed in great style, and as our old tub would not ride over the aforesaid wave, we took the next best course and went through it, shipping, in the passage through, considerable water. After a mile of shallow water and aggravating ripples, we struck smooth water, and, passing Redington, we were in the water, and had before us one long, steady pull of three miles over the placid surface of the Lehigh at its finest point, from Redington to Chain Dam.

At three o'clock, exactly, we arrived at Chain Dam, having stopped to dine on "Turkey Island," a beautiful spot in the river midway between the two last named places. From 3 to 5 P. M. we trolled with good results; and as we slid swiftly by the shores of our trout-land, in the smoking car of the 6:15 train, we had no reason to complain of our "luck" on the eight-pound string of pike more than compensating us for our work in getting them; for it was work—not fun—in paddling a heavy flat boat nine miles through rapids and over long stretches of still water, in a driving rain storm, on a cold day, with the section of a broken car for a paddle.

PILOT-FISH.—I was very anxious to obtain a specimen of the pilot-fish (*Naucrates ductor*). Dr. Günther quotes with approval Dr. Meyen's opinion that the pilot feeds on the shark's excrement, but adds also that it obtains a great part of its food directly from the shark, in feeding on the parasitic crustaceans with which sharks and other large fish are infested, and on the smaller pieces of flesh which are left unnoticed by the shark when it tears its prey. On seeing a solitary pilot-fish near the vessel one day I attached a small net-line to a trout-line, and tried various baits, such as dried cod, herring and beef, without success. I, however, succeeded in hooking him with a small piece of pork fat, but unfortunately the point of the hook afterward gave way. Mr. Moseley, in his interesting book, "Notes by a Naturalist on the Challenger," says: "The pilot-fish often mistakes a ship for a large shark, and swims for days just before the bows, which it takes for the shark's snout." This, however, is not, I think, always the explanation of the pilot's appearance without its mate. Sharks are often known to accompany a vessel for days together, swimming unobserved beneath when the vessel is in motion, and only appearing during a calm. This I have been assured is the case by many sea-faring men and competent observers, and it may often account for the pilot's apparently solitary appearance.—*The London Field.*

NOVATING NEW JERSEY FISHERIES.—Seabright, N. J., Nov. 21.—The wholesale destruction of moss-bunkers by the crews of steam fishing-boats sent out along the northern New Jersey sea-coast by the owners of fish-oil and fertilizer factories caused a heavy loss to Monmouth county this year. It has been claimed by eminent lawyers that the State authorities had no right to enact laws prohibiting fishing in New Jersey waters by boats owned in other States, even if they did destroy fish that attract bass, cod and bluefish to the shore of New Jersey. In answer to a letter upon this subject, Spencer C. Baird, Commissioner of Fisheries, says: "It is generally believed that the United States has the right to regulate the sea fisheries off its coast within three miles, but the said right has not been acted upon by the general government, and it is probably within the power of New Jersey to enact reasonable legislation on the subject. The State of Maine has assumed this right by limiting prospecting for menhaden, etc., within a two-mile line." At the coming session of the State Legislature the question will be brought up for consideration. A bill prohibiting fishing by menhaden by the crews of steam vessels within two miles of the beach is being drafted for presentation to the Legislature.—*R.*

THE ANGLER'S NOTE BOOK.—A publication but little known on this side of the water is the "Angler's Note Book and Naturalist's Record" and yet it is of the highest order of merit. The book is a quarto issued monthly until twelve numbers are given, and then it is stopped until convenient to begin another series. The "Green Sides" so called from their cover, ceased with 1880, and now the number will be begun. The prospectus says: "The distinctive feature of this series will be the reproduction of the angling matter, ungarbled, from old, scarce and valuable books, and more especially from such as only deal incidentally with fishing, and which, though necessarily included in the libraries of great collectors, are forbidden, by consideration of space and expense, to those who content themselves with a modest gathering. Of the more important reprints copies will be taken, especially on Dutch and French papers. The price is not given, but that of the last was six shillings post free. It is published by W. Satchell & Co., 12 Tavistock St., Covent Garden, London, W. C."

MAINE FISHING NOTES.—Portland has packed about 100,000 lbs of mackerel this season, an increase of twenty-five per cent. on last year. Six large vessels recently loaded at Eastport within ten days with sardines for other fish. The Eastport Sardinia factories are busy; one week recently the workmen's pay-roll amounted to between \$12,000 and \$15,000; one boy earned over \$14 cutting fish, and several others \$4 to \$10. Small fishing is lively at Bangor; \$23,000 has been paid this season at Bangor as duties on cases containing lobsters from the provinces; the fish come in free, and the cans only pay a small duty. Persons are now employed in Rockland harbor trapping fishermen for the New York market; the fish are worth from \$3 to \$4 a barrel in New York. Some of the Maine fishermen are employed in the waters of Virginia.

A NEW REEL SEAT.—We have recently seen a new reel seat which we think is an improvement on the old-fashioned sliding reel. The reel is held in place by a flat, stiff brass double spring, which is bolted in the seat and held in place by a screw in the center. Each end of this spring bears against a ring which is fast in its place at either end of the reel seat, and to put the reel in position it is slipped under the forward one first and then moved back under the other. The spring is stiff enough to keep the reel in place at all times, and will allow reel-plates of different thickness to be used. It is patented by Mr. C. F. Orvis, of Manchester, Vermont, who will add it to all his rods in future.

WHERE THE TROUT HID.—I notice in my letter to Judge Caton, published by you Oct. 20, in one place where I said, this sediment is softer and not so white as the more solid part. You had it, not so white and the more solid part. Again, where I wrote I took an eight-pound white-fish near the ore dock, you have it near the one dock. There was but one dock at that time; there are three now. I think you were right about the trout hiding in the sediment as there is nothing else for cover in Trout Lake.—A. F. YORK.

THAT NINE-POUND FLY.—Escanaba, Mich., Nov. 15.—*Editor Forest and Stream:* That captions critic, "D," in FOREST AND STREAM, Nov. 10, must be off his feed. I think the rule of telling fish stories is not to fail below the mark. I have only to tell you that I have had in my net some nine hundred miles from the truth. He says, "one of our correspondents says, etc." I say it was not one of your correspondents.—A. F. Y.

Fishculture.

THE GOLDEN ORFIE OR IDE.

RECENTLY Mr. George Eckardt, Jr., now engaged in carp culture on a large scale near Cincinnati, O., received twelve fine golden orfs from his German breeder, a German carp culturist in Germany. This we believe to be the second importation of this fish into America, the former lot having been received by Professor Baird and sent to the ponds of the Maryland Fish Commission, at Druid Hill Park, Baltimore.

This fish is a purely ornamental one. It surpasses the gold fish in the depth of its golden scales, which shades off to white on the abdomen. It has been afflicted with almost as many names as it has scales. It is a cyprinoid fish related to the tench of England and to the "shiner" of New York, *Lucania lus.* To begin with its systematic nomenclature, the German name is Gold-Hechel and call it *Ibus melanatus*. It is the *Lenticulus* of Gneather; *Cyprinus idus* and *C. orfus* of Linnaeus, etc. For common names I have in different parts of Germany the following: Gold-orf, nerling, rolling, rus, urf, elft, surfel, in France it is called "l'orfe" and in England golden tench, at the *Finca rubra* it resembles the fish in question somewhat. In America it has been called "golden ide" and "gold orf." The former name has misled by its semi-antique, it has been thought to be golden-eyed, therefore the name of orf, and use the word, *Lenticulus*. The golden orf is an active fish, and from what we have seen of them in the aquaria of Germany, a smarter, handsomer fish than the gold fish for all purposes of ornament. It is said to have some common sense in its selection of water better than the gold fish, which is much abused in the ponds of the country. In a school of golden orfs in a fountain they present a gorgeous sight. We were also informed that the orf obtains its golden color soon after leaving the egg, which makes it more valuable to those who know how to display it. The young fish is not long in coming, few obtaining a golden hue before the second year, may not until the third, and some never assuming it.

We have no doubt of the complete success of this hardy fish in our country, and in fact those in Baltimore have thriven in the large ponds of the park, and use the word, *Lenticulus*, to come a general favorite. We think that Mr. Eckardt is assisted in business with Mr. Hugo Mulert, the dealer in aquaria, etc., of Cincinnati, who lately contributed a valuable article to our columns on the Chinese "Parrot-fish," *Macropodus*, which he had bred last year from an imported pair. True, the latter fish no country can keep all its good things within its borders, especially if it be a fish which a fish-culturist of another land has considered a desirable acquisition to the fauna of his own.

HOW MISSOURI CARP FEED AND GROW.

THE following is a specimen of many letters received by the U. S. Fish Commission, the distribution of carp. It was written by a gentleman in Missouri, and is so interesting, in our publication, we do not give his name. He is evidently enthusiastic enough to make his whole farm into a carp pond, if it could be done. We give it as it was written:

AUGUST 24, 1881.

Prof. S. F. Baird:
Dear Sir—After many months of hope and fear I am ready now to rise and explain. The carp which I received from you a year ago last June showed no sign until late this spring, when I saw one of them, that appeared, and I was glad to see it. I supposed that the rest of them had "gone up the spout;" so I fringed went to the station to get ten young ones for himself and also as many for me. These latter were about four inches long and in fact had just begun to appear. They were sent like bread upon the water, hoping to see them again. On many days that was about the first of June. On the 15th of June, while taking my usual walk around the pond, the water seemed to be moving in some mysterious way, and on looking, I saw a great multitude of little fish, so great that I no man could number them; the surface of the water was literally black with them.

O! Mr. Baird; no pen can write, no tongue express the joy and happiness I feel. Like the little negro, in telling his experience, he said he "felt as happy as if he angels were pouring 'lasses on his head.'" Well, I saw them three days in succession, and then knew it was no idle dream, so I told the neighbors the pleasing story, and they came to see the fish and rejoice a while with me, but many fish we saw. Day after day and night after night I looked upon my growing saw. When more fish came, and where was the happiness I had enjoyed? Was it all a delusion? A fraud? A snare? I got theague (you have done had 'em, haunt you?) and after going through those beautiful, healthy, life-restoring gymnastics of shaking, etc., walked one day, pensive and alone, around the pond, and I could not see the fish. I was not in the mood to see them. I had no more. The placid water became like a blue rolling caddron, lashed into foam by—shall I say it?—by the zephyr.

They were floating so high that their heads, tails and fins were visible chasing one another, and like birds in flight. I believe the least of them to be ten inches long, and think that the first twelve are all alive and fully two feet long. Three of them swam at my feet. I could have reached them with my hand, the head of one at the tail of another. They looked like some great sea-serpent. Yesterday I took some dry bread and soaked it in water. One of the big ones flapping out from the bank, where he was rooting, I dropped some crumbs. He came out and began to eat, and in less than ten minutes (I guess, because I could not count) I could not reach forty of them with a two-foot stick. There is no deception in this! I have seen them eat and seen them play and are more astonished at them than I.

The carp have rooted out the flags, or cat-tail, as thick as your wrist, and flags six feet tall are chawed off as though a calf had done it. Some of the neighbors say that the fish splash in the water so at night that they can't lead their mules up to the trough, and I would not be surprised to find the carp out in the cornfield some morning. Where did they come from? Are not those ten and twelve inches of last year's hatch? One-fourth of them is increased with fish, and I have seen them at the pond to a thousand hills. I will add six or eight cents to the pond this fall. What more can I do? Advise me, lest they eat me up, as they have the moss.

CARP FOR EASTERN PENNSYLVANIA AND SOUTHERN NEW JERSEY.

Editor Forest and Stream:
I have established a rendezvous at 607 Arch Street, Philadelphia, Pa., from which I am now distributing the Government Carp in Eastern Pennsylvania and Southern New Jersey. A few persons in attendance at the rendezvous on Wednesdays and Saturdays of each week. The demands for carp are numerous, but the supply will be equal to it. A large percentage of those receiving carp, however, might as well dump and accept of the carp, as to plant them where they place them—depraved ponds, mud-ponds, etc., devoid of suitable vegetation and already stocked with catfish, pike, bass and other predatory varieties. Commendable preparations are being made throughout South Jersey for carrying on carp culture, and numerous ponds have been constructed according to scientific principles and embodying all the latest improvements. In carp culture, as in any other business, perfect system is necessary in order to insure success. Without a systematic faith will be the best and most profitable.

[While we agree with our correspondent so far as to believe that mud-ponds may not be the best places for carp, we must say that they usually contain vegetation, and we find that gold-fish not only live in them, but that the litter about in lakes where all the fish are names abide, and where the gold-fish lives the carp will also, even though many of the young are devoured.]

WENONAH, N. J.

STOCKING NEW JERSEY WATERS.—In your issue of Nov. 17th last, your correspondent "Home," writing on the subject of stocking waters in New Jersey with black bass, says: "The superintendent of stocking all the ponds south of Mercer county has been delegated to Fish Warden Ore." This is an error. All stocking of New Jersey waters which is done by authority of the State is done under the direction and superintendence of the State Fish Commissioners, and they have not delegated their power to anybody.

HOLLAND FISHERIES.—We have received from Mr. C. J. Rotterdam, Supt. of Fisheries of Holland, his report for 1890. From it we learn that the turbot fishery was poor as compared with the previous year, and also that the fish were not of as good quality. The catch of other fishes, as whiting, sprat, herring and anchovy was not large. The shrimp fishery, which depends upon the English demand, was also poor; the shrimps were small and prices low. Oysters were fair in number and quality, owing in a great measure to culture. The report also includes one on the International Fishery Exhibition at Berlin last year, where the Netherlands excelled in the display of oyster culture.

FIXTURES.

BENCH SHOWS.

December 14, 16 and 17, at Lowell, Mass., Lowell Dog Show, Entries closed December 6. Chas. A. Abner, West Boxford, Mass., Superintendent.

December 15, 16 and 17, Atlanta, Ga., Dog Show. Entries closed December 6. Charles Lucean, Superintendent. Office at Heinz & Berkeles, Atlanta, Ga.

FIELD TRIALS.

December 6, at Grand Junction, Tenn., National American Kennel Club Field Trials, Secretary, Columbus, Tenn.

December 10 (or immediately after the close of the National Trials at Grand Junction, Tenn.), Pennsylvania Field Trials. Entries closed December 6. A. B. Clayton, Superintendent, Pittsburgh, Pa. Address will be Grand Junction, Tenn., after Dec. 10.

TRAINING VERSUS BREAKING.

IN TEN CHAPTERS—CHAP. IV.

WHEN our pupil has become so well established in the knowledge of what is required of him that he will, when at quite a distance from you, instantly stop at the signal of the upraised hand and retain his position until given permission to move, we will advance him another step, and teach him the meaning of that other sound of the whistle, that we have mentioned as being used to attract his attention. We always use for this purpose two very short, quick toots, with the second one following the first instantly. As the meaning of this signal is entirely different from the one that he has become accustomed to, so should the sound be also so different that he can never mistake the one from the other, nor for an instant be in doubt as to what is required of him when he hears the sound of the whistle.

As much depends upon first impressions, we will take good care that we start right, and that we let him hear the first sound of this signal at an opportune moment, and as we wish to teach him that this sound is only to attract his attention, we will be very careful that he is not looking toward us, but wait until he is at some little distance from us, and looking the other way. At the same time care must be taken that he is not particularly engaged about anything else; that he is not looking at you, or that he is not looking at the signal you should sound the signal in a short, sharp, quick way, but only loud enough for him to hear distinctly, and he will at once look around to learn what this means. At the instant he casts his eye in your direction, raise your hand as a signal for him to *To ho*. Be very sure that your hand is raised at the proper time, for, as we have remarked before, first impressions are very important, particularly in this lesson, and he should instantly see and obey your signal, thus learning—if this course is always pursued—that the two short blasts mean nothing but to attract his attention, and only wait to call his attention to something of importance that you wish him to do.

You will find it necessary to vary this or he will come to associate this signal with your command of *To ho*, and at once stop when he hears it. Now we wish to train him so thoroughly in this that, when we come, a little later, to teach him to quarter his ground, he will not slacken his speed at the sound, but merely turn his head in your direction, and quick as a flash obey whatever signal you may give him; therefore, when you sound this lesson, instead of raising your hand for him to stop, command him to charge. Of course you will see that he is near enough to hear you plainly. Perhaps it will be as well at the next trial to sound the long note as soon as he looks around, and call him in, not forgetting to abundantly caress and praise him when he performs his task in a pleasing manner. We think it a very good plan to always have in our pocket something good for him to eat, and when he minds this long note and comes in quickly, we reward him with a bit of something substantial as well as with fine words. This system of rewards must not be carried too far; practiced too often, but used occasionally when he performs his duties in a satisfactory manner; especially when he comes in at the sound of the whistle quickly and cheerfully, a little piece of meat will at least have no tendency to slacken his speed when next he hears this signal. This instantaneous, almost electric obedience and cheerful alacrity is most pleasing to witness, especially when hunting in company with others whose dogs may not be quite up to the standard in this respect. There is no paing should be spared to so perfect our pupil in this, so that when we come to practical work in the field his actions shall cause us no dispute nor reflect discredit upon our skill as his teacher.

There is one word more that our pupil should early become accustomed to, and it will be well to introduce it use almost at the beginning. This is the word *On*. You can say this word alone or, as many prefer, you can say *On on* or *He on*. Either or all are well enough, and your pup will understand meaning just as quickly even should you use it indiscriminately say all three, as it is the word *On* every time, and even if you should paraphrase it, as a well known sportsman is in the habit of doing, and order you dog to *Get on*, it will make no difference.

Let us charge you once more to be sure and issue all your commands in a decided manner, and always in your ordinary tone of voice; and do not fail to deliver each one with a falling inflection, for we never yet saw the man who issued his orders with a rising inflection but was sadly balked at the moment. By using this word, or any of the above variations, when you duck for him to take his food, he will soon understand its meaning if the word instantly follows the duck. Probably he will get the two mixed at first, but

as you practice him at *To ho*, he will soon learn what it means; for as he improves in this and becomes steady, he should be taught to point at gradually increased distances, and the word *On* should be used to move him up; and in a short time, if this is properly managed, he will carefully and obediently draw out to meet you for long distances. Great care must be had that you do not confuse him by seemingly contradictory orders, for he now thinks that your *cluck* and *On* mean one and the same thing, and in order to teach him the difference you must omit the *cluck* when you wish him to advance, and omit the *On* when you wish him to eat the morsel before him. This can be readily accomplished by placing the meat four or five feet from him, and after he has pointed it a short time tell him to *Go on*, and when he goes to it make a noise of encouragement, and then lead him to him as a sign that he may have it. We always partially omit the *On* after the *cluck*, as soon as he appears to understand its meaning, only using it enough to keep him from forgetting it, and as soon as we begin to teach him the difference we are very careful not to use either one in place of the other, until he has the lesson well learned and appears to thoroughly understand both signals, when we can safely mix them again; for oftentimes when shooting we may wish to move him on, especially when trailing ruffed grouse when the capture of the bird depends upon our absolute success, at least so far as words are concerned; therefore he should be taught to advance at the sound of the *cluck* as well as the word *On*.

When well accustomed to the restraint of the chain, he should be taught to come to heel and quietly walk by your side. We greatly prefer that our dog should keep this position with his head just opposite our legs, where we can see him without turning around, instead of having him behind us. In order to teach him this, quietly and well, you should procure a stick, about two feet long and an inch in diameter, and fasten a snap at one end of it. This you can easily accomplish with the aid of a bit of leather. Now spring the snap into the ring in his collar and take a little walk with him. We generally manage a few of these first lessons at his usual meal time by placing his dish of food at the proper distance where we take him in hand. He should know nothing of his dinner until you lead him to it. When all is ready take a firm hold of your end of the stick and walk along at your usual gait, cooing him to follow. Be sure that you intend to have him go. After one or two steps, and when you have got him well under way, you must say *Heel* to him, and repeat the word once or twice as you walk along. You cannot expect that his behavior will be entirely faultless upon the first trial, but no matter how he takes it, lead him straight to his dinner and at once unfasten him and let him eat. After a few lessons of this kind, he will become perfectly reconciled, and you can gradually extend the time of his walk and occasionally give him food at the end, and he will soon learn to keep his place without the aid of the stick. Then you can extend your walk, taking care to be very gradual in the increase of time, and to be very sure that he implicitly obeys you and does not leave his place for even so much as a second's time, until you bid him go on. If this lesson is thoroughly—now do not smile at my frequent repetition of this word, for it is a word that we are very fond of, and one that we wish to thoroughly impress upon your pupil in his education; the first lesson is thoroughly learned, you will be spared much trouble and worry in the future. Should you have occasion to walk the streets, you will not be obliged to whistle at every turn, and perhaps to wait and search for your dog, but you will know just where he is and what he is doing. Then how much better is it, when you come to the practical application of the knowledge, which you have been to so much trouble to impart and take your dog into the field, to have him quietly retain his position by your side instead of rushing wildly around at his own sweet will, and compelling you to shout yourself hoarse and to unstring your nerves in a continual struggle to keep him within bounds, thus placing you at a double disadvantage, for the continual noise not only frightens the birds, causing them to rise out of shot, but the constant worry of mind and strain upon the nerves is a very prolific source of unsteadiness in shooting.

Do not neglect giving your pupil plenty of practice at all his lessons, as well as the one just commenced; not wearying nor long continued practice, but just enough to keep him well up to his work. If you have a spare moment give him a little turn at *To ho*, ever aiming at perfection; and be sure to see that he does his work well, and never allow him to perform his task in a careless or slovenly manner. You should also practice him at *Charge*, until he will not only obey the order readily, but retain his position in a perfectly quiet manner until you shall bid him *Hold up*.

He should be taught to *Charge* when you are out walking with him; and he should be made to remain quiet, while you walk around, and in a short time you can go quite a distance, even out of his sight, and he will patiently await your return. Your orders should be given at unexpected times, when he is not looking for them. By this course you will teach him to be always ready to obey, no matter when or where he may hear the signal. He should also be taught to hold his position at *To ho*, while you walk around and away from him; for it frequently happens, when trailing birds, that you wish to go round to avoid a mud hole, or briar patch, or other hindrance, and when you return to him, you witness one in whose dog has become so well pleased in this pleasant accomplishment, you will be more than repaid for all labor expended in teaching it to him.

Many dogs will pay no attention to strangers, and appear to care for no one except their masters. Should your pup be inclined to notice others, and give you any trouble in this respect, you can very easily teach him better, by having some one call the dog to him, and give him a few light cuts with a switch; and by changing your assistant every time, and addressing him in different tones of voice, he will give you no further trouble. If your assistants will fondle him a little before administering the switch, the pup will all the sooner find out that it is better to have nothing to do with others than yourself, and will not bother you later by running to every one who may notice him.

DOG RECOVERED.—We take great pleasure in announcing that Mr. Wm. A. Rao has recovered his English setter bitch puppy, whose loss we noticed in your issue of Nov. 17th. The puppy, who is a fine specimen, is plausible. She is said to have come to the house about ten days ago and tried to get in, and after diving her away several times, they took pity on her starving condition and kept her. She may have escaped from her captor by means of a trap set for her. The puppy was carried off the hours at the Eastern Field Trial Dorby last week, is out of the mother of Mr. Rao's bitch.

EASTERN FIELD TRIALS.

POLLUX WINS THE DORBY.
FIELD TRIALS.
SENSEATION, JR. THIRD.
PELOVIC STAKER NOT YET DECLINED AS WE GO TO PRESS.

THE third annual meeting of the Eastern Field Trials Club commenced at Hobbs' Island on Thanksgiving Day. There were not so many present as we had hoped to see, although a goodly number of sportsmen from all parts of the country were in attendance. The weather had much to do with the non-attendance of many who put in an appearance later. Wednesday was a very rainy day, with a chilling northeast wind that cooled the ardor of many who did not care to leave their comfortable firesides for the bleak shores of the island, especially as the next day was our national holiday, and the national bird had charms for them that far outweighed the delights of a twenty-mile tramp after the dogs with no chance for a crack at the birds.

At a meeting of the Executive Committee Wednesday evening, Mr. W. A. Costar was unanimously chosen to fill the place of Judge in place of Mr. J. M. Kinney, who was unable through sickness to attend. It was voted to allow the owners of competing dogs the privilege of accompanying the stewards while their dogs were running. This is a very satisfactory arrangement, as it gives gentlemen a chance to obtain an excellent view of the different phases of the heats in which they are interested. After the meeting of the Executive Committee the members of the association joined in a discussion of the prospects of the publication of the second volume of the National American Kennel Club Book.

The meeting then adjourned and the President, Mr. Donner, appointed Mr. Stokes, of Philadelphia, to draw the numbers for the Dorby, and nine of the twenty-seven nominated gentlemen qualified as follows:

- Dr. F. Fleet Spier's black, white and tan English setter dog, St. Elmo II., nine months old. Same owner's lemon Belton English setter dog, St. Elmo I., eleven months old.
- Mr. J. H. Hedges' (now Mr. J. H. Goodsell's) lemon Belton English setter dog, Plantagenet, sixteen months old.
- Mr. A. E. Godfrey's red Irish setter dog, Gynnard, fifteen months old.
- Mr. White's lemon and white pointer dog Sensation Jr., ten months old.
- Mr. John Hecksher's lemon and white English setter bitch, Florida, sixteen months old.
- Mr. J. De L. Blackstone's lemon and white English setter dog, Royal Dale, seven months old.
- Same owner's black and white English setter, Glen Dale, eleven months old.
- Mr. E. E. Hardy's black and white English setter dog, Pollux, eighteen months old.

The following order was drawn to run in the following order: Sensation, Jr., and St. Elmo II. St. Mars and Glen Dale. Pollux and Gynnard. Plantagenet and Royal Dale. Florida. The Plantagenet appeared to be the favorite with the boys, as whippers of lightning speed, immaculate style and wonderful nose were floating in the air, and this, coupled with the thoroughbred look of the set, so completely captivated a majority of those who examined him. Among the many prominent sportsmen present, we noticed Dr. S. Fleet Spier, Mr. G. B. Watkins and Mr. E. A. Herzberg, of Brooklyn; Mr. James H. Goodsell, of Philadelphia; Mr. George H. Siders, of Philadelphia; Mr. John G. Hecksher, Mr. A. E. Godfrey, Mr. J. T. Worden, Mr. J. O. Donner and Mr. A. Taylor, of New York; Mr. E. E. Hardy, of Boston; Mr. F. Perkins, of Providence, and many other gentlemen whose names do not occur to us. The trial commenced on Thanksgiving morning, but owing to a storm it nearly ruined morning, while the northeast wind blew as it only east on the coast. Notwithstanding the war of the elements, there was a jolly gathering of sportsmen in the hospitable homes of the well to do citizens of New Suffolk, who were the hosts of the trial. A crowd of about a hundred people gathered long after all good sportsmen should have been sleeping the sleep of the just.

THURSDAY.

Thursday morning broke clear and dry, except that a light streak in the west was taken that there was hope of a good day. The start was to have been made at eight o'clock, but the weather was so threatening that this was delayed until ten, when a goodly number of sportsmen embarked on the sailboat "The Star," and proceeded to the island. The boat was telegraphed at the last moment that the steamer Calla which had been engaged could not possibly be here. The wind was fair and fresh, and "with a wet sheet and a flowing sea," we were soon at the island. The club who have recently purchased the island, and who are to have the building, have had the ground well and nicely graded in front, which adds much to the beauty and attractive appearance of the island as we approach the landing. Not much time was lost after we arrived, but as soon as everything was ready, the trial commenced. The first heat was the large barn that stands nearly in the centre of the island the president—Mr. Donner—announced that everything was ready, and the judges at once ordered the first brace of dogs cast off at 10.45.

SENSEATION, JR., AND ST. ELMO II.

Sensation, Jr., handled by his owner, Mr. Lanko White, of Bridgeport, Ct., and Dr. Fleet Spier's St. Elmo II., handled by Hart Heigert, were started in the large oval-field east of the barn. Sensation, Jr., started off at a fair rate of speed, displaying very good style, and hunted throughout the heat in a clear and intelligent manner, when we take into consideration that he is but ten months old, and has had but fifteen birds shot over him. Many of his motions remind us of his sire, particularly the way he has of "feeling" for the birds when he strikes them. St. Elmo II. was in good form, and hunted in a good way on ground in fine style, but soon commenced to lag, and before the finish plainly showed that he was all wrong. We examined his nose, and found it dry and hot, and should not be surprised if he were coming down with distemper. Beating the north side of the oval, he crossed the water, and then, with the exception of a skeleton nesty striped bass, by a hawk that we interrupted in his unholy repeat, nothing was found. Swinging again to the south along the fence, both dogs challenged when near the sportsmen, but nothing was found. Crossing the fence, and again swinging toward the north shore, Sensation ranged at good speed, but the buck wheat stubble unit near the beach, when he struck and dropped upon his belly, but soon moved on. A sparrow started under his nose, and he took one or two jumps toward it, but a bird from his handler steadied him, and a light breeze set the matter at rest.

The spectators thrust a few birds from the hedge. Jr. pointed nicely, and roared up to where they were started. He again pointed in hedge, but the bird flushed when handler spoke. Just here we found a hole in the fence, and several birds that had been let by the cold rain of the night before. A few yet alive were picked up by the spectators and put in their pockets, and when revived by the warmth were let go. Sensation, Jr., made a beautiful point in the woods. Mr. White flushed the bird to order, but it did not stay. It was evidently all over, as he had no life, and after a futile attempt to get him up to the last bird they were ordered up, and the heat given to the Jr. Down just an hour,

side the stem, and a job of 75 to 100 ft. on the foot is such a preposterous idea and such a mechanical incongruity that, whether we like it or not, we will have to conform to British experience and build a thoroughbred cutter for the occasion. It may not be flattering to our national vanity, but unless we pecked buccomb and took things square in the face, we may as well make our binds to us sound a thrashing from a foreigner next year as Schmeer, Mistral, Wave and others received at the hands of the little ten ton Medice this fall. To depend upon Gracie in a hard rough match with a cutter is simply to invite grotesque failure. To depend upon a new ship of ridiculous dimensions emanating from some "practical" genius is absolutely hopeless in view of recent experiences with the Fochontas. We are glad, therefore, to find that the leading members of the New York Yacht Club are alive to the occasion, and propose to lay down a grand ship of the cutter type this winter and to have her in the best of trim in the hands of a well-drilled crew in time to meet an invasion from abroad. Her success is the only hope left if we wish to retain the international trophy on this side of the Atlantic.

THE STATESMAN ANSWERS COMMODORE AND COOK.

Editor Forest and Stream:

I notice that both the "Commodore" and the "Cook" have written to FOREST AND STREAM, giving more or less praise to the Rice Lake canoes. Allow me to say that in Canada these canoes are considered to be greatly inferior to the Stevenson open canoes, and that at the Lake George meeting last year there were twenty-one Rice Lake canoes, the fifty canoes there present. The "Admiral" was a "Shadow," and will never use anything else. No higher testimony to the superiority of the shadow to all other canoes could be given. The Rice Lake canoe is practically obsolete.

THE STATESMAN.

HAPPY BOSTON.

THOSE who thought cutters would not become popular in America until winter rain outfits were discovering how poorly they judged the pulse of the yachting community, Lawley & Son, of South Boston, are to build a regular out-and-out Madrazo, 40 ft. on load line, 5 ft. beam, 9 ft. draft of water. The hull is full of new cutters, and we hear already of nearly twenty such craft in contemplation for next season. The good cause is booming!

YACHTING NEWS.

AMERICAN MODELS IN FRANCE.—Among the best yachts at Argenteuil, near Paris, belonging to the U. V. P., are: Miss Helen, five tons ravel, by Texier, 28.2 ft. by 4.4 ft. by 5.9 ft., all lead ballast, built 1879, belonging to M. Paul Leroy of Etolle; Etouppie, six tons schooner, by Le Marchand, 31 ft. by 5.3 ft. by 5.9 ft., belonging to M. de Salinville. Besides the above French built keel boats are the two English built cutters, Para, ten tons, and Thier, 10.2 tons, also the Jersey built Hela, 10.2 tons, by 5.3 ft., belonging to M. de Salinville. There are numerous French built centreboards, besides two Americans—viz. the Stone Yaukie, five tons, recently imported and considered a failure, and the New York cut boat, imported by M. L. More, over twenty years ago. The Paris boats are now consid-

ered far superior to either the old or new American models, as it seems that nearly all the small boats can beat the newly imported Yankee. Among the best centreboards are the cruising cutter Amazon, ten tons, 24 ft. by 13.1 ft., built 1876 by Texier, and the racing sloop Ines, ten tons, 30.1 ft. by 10.1 ft. by 2.6 ft., considered the fastest centreboard of her size in Europe; the Albatross sloop, seven tons, 30 ft. by 9.5 ft. by 2.6 ft., by Texier, 1880, a racer; Turbulent, ten tons, 32 ft. by 11.4 ft. by 3.6 ft., by Texier, and the Gondor, four tons, 20 ft. one-half tons, sloop, 36.8 ft. by 8.1 ft. by 2 ft., built 1880—perhaps the fastest of the whole fleet. Owses her name for her ingenious owner, M. Culbrette, who had sixteen sails made on purpose for her at Lyons, and who by means of that light material has been enabled to show an extraordinary amount of canvas. The only defect seems to be the extraordinary expense and the great care necessary to preserve the "canvas."—London Yachting Record.

SAN FRANCISCO YACHT CLUB.—A very successful season was brought to a close with a dance and lunch at the club-house, San-cello, Nov. 5, and a grand ball with the guests. Owing to the want of wind, only the Annie, Frlic and Aggie got under way for the cruise. As the winter months, with long calms and dicker airs, have settled in upon the Pacific coast, most craft have been laid up and stripped. Four new schooners, about 50 tons, are building, and will be shipped in time for next season. Yachting has become the leading sport in San Francisco, and is proving a space every year. In proportion to population the fleet of the Pacific is more numerous than that of any port of the country, New York and Boston excepted. There is Chicago, with half a million inhabitants, and scarce half a dozen craft fit to be termed yachts; there is Philadelphia and Baltimore with no more than a score between them, and a dozen lesser cities where a yacht has never been seen, one and all as advantageous to the population of the city as the building and sailing of the sea exhibited by the people on the California coast. Dr. Merritt, of the schooner Casco, has recently spent some time in the East and with his fondness for the sea, did not lose the chance to inspect some of the best of our metropolitan yachts. He is strongly in favor of keels, and thinks our small craft too much of the butterfly order. When he had not a few tons of lead on the Casco's keel the project was derided. Now, experience has taught him that the only mistake made was in not putting on just twice as much. The Casco has made a cruise of more than 1000 miles down the Mexican coast and among the South Sea Islands, during which the schooner behaved admirably and gained the good will of a number of young ladies who had taken passage with the Doctor.

PRESERVING SAILS.—Several inquirers are informed that there is no royal road to the preservation of sails. They require careful attention all the year round, plenty of airing, and should never be turned nor stowed in a damp. There is nothing which will effectually remove mildew, but yet none of them so effective as some extent by steeping in the well-known mixture of one pound sugar of lead dissolved in one gallon of soft water, then allowing the canvas to drain and again steeping in a solution of one pound of finely powdered alum dissolved in one gallon of soft water. For large areas use more in like proportions. Feints, bags and canvas coats may be made fairly water-proof by the same process. The articles should not be rinsed, but allowed to dry by exposing to the atmosphere. All methods of cleaning sails should be discouraged. The least hurtful is light scrubbing with soft brush, fresh water and castile soap, then sprinkling with dilute lime water and drying in the sun. Every

time sails are scrubbed the face of the canvas is worn down. It is better to use a soft brush and take time to the work than apply hard bristles and quickly ruin the sails. Our own plan is to have a row of gunboats, made of canvas with rubber soles, assorted sizes, ready in the gateway for the guests on a cruise, who are requested to slip the harness, fit and tumble their longshore freight cans down below, and coming over the side. Blackened shoes can generally be charged with more injury and dirt to sails, paint-work and mouldings than all other causes combined.

CUTTERS.—No better evidence of the increasing popularity of cutters could be asked than that the New York Herald deems it advisable to give its readers a column and one-half on the subject. The article which appeared in the Herald Thursday last was fairly well written, and as a lesson in cutters, what they are and why they are superior to sloops, deserves a word of praise. FOREST AND STREAM has for years been prominent in cutters, and it was only a question of time when our provincial prejudice would wear away against a type and type much superior to the raft of boom wavers. We therefore welcome the great help the good cause of honest boats has received through the medium of the Herald's article, which will do much toward making the general public familiar with a style of boat looked from our waters far too long through the narrow-minded prejudices of the old school which cannot see beyond its own little front yard gate.

SEA WANKHA YACHT CLUB.—At the general meeting, held at DeMonroe's Nov. 23, the following members were elected: Leopold Biltz, Jr., Wm. Hall, Thos. B. Brown, E. S. Latrobe, E. F. Post, Philip Little, Wm. Whitcomb, W. W. Tompkins and Paul Tuckerman. The Commodore reported that the yacht anchorage scheme a financial success, as seventeen yachts already availed themselves of the moorings inside the club breakerwater. The following very able committees were appointed to consider the main question: Dr. H. G. Piffard, John Hyslop, M. R. Schuyler, A. Cary Smith and W. E. Iselin. Notice was also given that, in view of the rapid increase in cutters, sections of Chapters' be selected from the regulations. The section refers to keeping logbooks and log books fast.

OSHKOSH YACHT CLUB.—The fourth annual hop of the club was held Thanksgiving Night at Turrot Hall and proved a brilliant success. The arrangements were perfect, and the gathering included all the prominent citizens of the neighborhood and their ladies. After the dancing an elegant supper served to bring to a close a very enjoyable evening, which has resulted in material benefit and moral support to the members of the yacht anchorage scheme. The committee in charge was composed of Commodore G. W. Rumell, Vice Com. G. F. Strout, Capt. A. H. Woodworth and Messrs. Frank Heilig, Charles Emery, W. B. Falck and Adolph Von Kaas.

MIXED.—Our French cousins, who have been tugging so long into the adoption of American models of late, now find themselves suddenly brought up with a round turn. Since the Madge took down our vanity a trifling our French admirers decidedly mixed, and their cherished belief that by copying our light drafts they were saving getting the weather gauge of the British has given away to a feeling of doubt, and they are now upon the ragged edge awaiting further developments and amusing themselves with a side show in sharples in the meantime.

ENOS JAMES & CO.'S HARD-HITTING GUNS.

We now offer a full line of ENOS JAMES & CO.'S Superb Breech-Loaders. What is the use of paying an absurd price for a gun made by some old maker when you can get a JAMES' GUN as good or better for half the money? Or what is the use of buying a gun bearing either a fictitious name or no name at all, when you can get one of ENOS JAMES & CO.'S guns with their name and guaranty for the same price?

We are sole agents at New York for the Colt Club Gun. We offer a small JOB LOT of the famous Webley Guns of all sorts at about half price.

Also a few choice Parker guns of latest style at special rates. Address

Physicians have prescribed 50¢ packages. For sale by druggists or mail, \$1. F. ROSSBY, 663 and 665 Sixth Avenue, N. Y. J

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate observation, investigation and research. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kenneb" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

BOUND VOLUMES.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve a unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4.; \$3 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

"THE FISHING LINE." TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER RESORTS AND GAME RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. THE TROUT season begins May 1 and ends Sept. 1. THE GRAYLING season opens June 1 and ends Nov. 1. BLACK BASS, BLUE PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakeslets of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. Time is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1892 by new buildings and additions.

During the season BROOK TROUT EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen. Dogs, Guns and Fishing Tackle Carried Free at owners risk. It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 100 pages sent free. Time Cards, Folders and further information, address

A. B. LBET, Gen'l Pass't Agent, Grand Rapids, Mich.

EACLE HOTEL. (Altitude, 2,550 feet.) ASHEVILLE, WESTERN N. C. L. L. HASSELL, PROPRIETOR. Open the year round. Rooms with open fireplaces. Some few stoves throughout. Average temperature 57 degrees. No better climate in the world. Send for circular.

Hotels and Resorts for Sportsmen.

Chesapeake & Ohio R'y.

THE ROUTE OF THE SPORTSMAN AND ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia, Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain rook, bass, pike, pickerel, etc.

The Route of the Tourist, through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts. The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsula Extension in the summer of 1891 affords THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL," and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Coast.

OLD DOMINION LINE.

THE STEAMERS of this line reach some of the finest waterways and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island and points on the Peninsula, City Point, James River, Currituck, Florida and the numerous country of Virginia, Tennessee, etc. The Norfolk Steamers sail Tuesday, Thursday and Saturday. Leaves Fall, Monday and Thursday.

Full information given at office, 47 Grosvenor street, New York. F. W. FULLER, G. E. & T. A., Richmond, Va.

Bromfield House, Boston.

EUROPEAN PLAN. THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL," and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Coast.

Wild Fowl Shooting.

MAKE HENS LAY

An English Veterinary surgeon and Chemist, now traveling in this country, says that tests of the Horse and Cattle Powders sold here are worthless trash. He says that Sheridan's Condition Powders are absolutely pure and innocuous. Nothing on earth will make hens lay like Sheridan's Condition Powders. These are the only true and purest food, sold everywhere, or sent by mail for eight letter stamps.

GUN POWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DUPONT'S GUN POWDER, since established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse)
to 5 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse)
to 5 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.

Dupont's Choice Bore.—Specially adapted
for "choke bore" guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 7 and No. 5,
No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and
1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. canisters and 6 1/2 lb. kegs.

Dupont's Rifle P. G.—"Sea-Shooting."
P. G. and P. F. G. The P. G. for long-range rifle shooting,
the P. F. G. and P. F. G. for general use, burning
strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb.
canisters, 6 1/2, 12 1/2 and 25 lb. kegs. P. G. coarse, P. F. G.
fine.

Dupont's Spotting, Mining, Snappers and Blasting
Powders of all sizes and descriptions. Special
grades for Export. Also Rifle, Cartridge, Muz-
ket, Cannon, Mortar, Mammoth, Hexagonal, Cubical
and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
grain or proof.

Agencies in all the cities and principal towns
throughout the United States. Represented by

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Cayce Island this year, at the New York State convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 500 competitors. Send for Catalogue.

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square can-
isters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6 1/2 lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 6 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest, or water shooting it
ranks any other brand and it is equally serviceable
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, PFG and "Sea Shooting" FFG in kegs of
25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
moist. The FFG and PFG are favorite brands for
ordinary sporting and the "Sea Shooting" FFG is the
standard Rifle Powder of the country.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.
Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsvendors throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by M. Terquem, 15 Boulevard, St. Martin, Paris, France. To clubs of three or more, \$3 each.

Advertisements.
Inside pages, nonpareil type, 25 cents per line. Special rates for unions, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.
Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, December 8.

THE MICHIGAN NON-EXPORT LAW, which provides that venison shall not be shipped out of the State, is said to be a dead letter. It is reported that the law is systematically evaded by parties who take the venison to small towns near the line and carry it thence in wagons out of the State, and here re-ship it. The law, if it can only be enforced, is an admirable one; we hope to see it carried out. There ought to be a like provision against exporting game from this country to Europe.

SPORTSMEN have always been legitimate game for the punters. Joe Miller (England, 1684-1783), had his crack at them: "A gentleman who had been a-shooting brought home a small bird with him, and having an Irish servant, he asked him if he had shot that little bird? 'Yes,' he told him. 'Arrah, by my faith,' replied the Irishman, 'it was not worth the powder and shot, for this little thing would have died in the fall.'"

THE ATTENTION OF SPORTSMEN is just now largely directed to the field trials of sporting dogs. We have spared no expense nor pains to present to our readers accurate and intelligible reports of these meetings.

HAIR-SNAKES AND THEIR EGGS.

IN the middle of September last Mr. F. W. H. Hahn brought us a hair-snake, *Gordius aquaticus*, which he found in a New Jersey brook. The animal was placed in a jar of water on our desk and began laying its eggs on the 19th, finishing on the 24th. The "snake" was seven inches in length and the knot which its eggs were tied in would if straightened out appear like a fine thread four or five yards in length.

This is the worm which is believed by many to come from a horse's or other hair, but in reality is a parasite of grasshoppers, crickets and water beetles. This worm is quite plentiful but escapes observation by its small size. Trout culturists find numbers of them knotted together on the screens of their ponds at the close of summer. No doubt these little animals destroy many noxious insects, for they are exceedingly prolific, and the insect in which they take up their abode is said to die without increasing its species; and Prof. Riley says that all the *Orthoptera* (grasshoppers, crickets, etc.) which came under his observation which contained a *Gordius*, nine in all, were females.

Prof. Leidy, in speaking of the variable *Gordius*, says: "I observed one nine inches in length by two-fifths of a line in thickness, commence laying eggs and continue the process very slowly and gradually during two weeks. They were extended in a delicate cylindrical cord, resembling a thread of sewing-cotton. At first it broke off, as extruded, in pieces about a foot in length, but toward the end of the process the cord appeared to be less tenacious, and broke off in pieces a few inches, and even a few lines in length. The pieces in the aggregate measured ninety-one inches; the thickness of the cord was about one-tenth of a line. The eggs are very minute, and in the cord were compressed together so as to be polyhedral. In a transverse section of the cord I counted about seventy eggs, and in the length of one-fortieth of an inch twenty-six eggs, which, by calculation, gives 6,624,800 as the whole number of eggs in the cord. The eggs, when isolated, assume an oval shape, and measure about the 1-750th of an inch long by the 1-1,000th of an inch broad. The development of the young from the egg is readily observed from day to day, and it takes about a month before the process is completed. * * * In about four weeks the *Gordius* reaches maturity, and escapes from the egg totally different in appearance from the parent."

Undoubtedly many of the young perish and fail to find a "host," but an animal which lays over six million eggs does not seem liable to become extinct soon. The eggs which were laid by our specimen have failed to hatch, and now, near Dec. 1, they are covered with a fungoid growth, resembling that which comes upon a dead fish egg. According to Dr. Meissner, the young *Gordius* enter their hosts at the joints of their legs and abdomens and become encysted in the muscular system instead of being intestinal parasites. They have also been found in the muscular portions of fishes, where they have probably obtained entrance through the destruction of some insect by the fish.

THE ANGLER IN WINTER.

THE Northern angler, whose business and whose purse allow it, practically knows no winter. He goes South. The Southern angler keeps it up all winter, in fact that is his best season, for the combined effect of heat and insects renders his summer fishing a most questionable enjoyment.

With these two classes our present article has taught to do. We write of the angler of the North whose lakes and streams are frozen and who, for various reasons, cannot spend two or three months in Florida. What can he do? Many of the bolder sort cut fish through the ice for the ever-hungry pike. Holes are cut, fires are built and the angler, well swathed in woollens, keeps his blood in brisk circulation by running from one hole to another to take out the fish which has notified him of its readiness to be so taken by hoisting the flag attached to the "toggle" at the upper end of the line; or he goes to see that the hole has not frozen over and that the line will run free. If the ice be free from snow he does this on skates and, although many affect to despise it as "hand-line fishing with no chance to play a fish," it is a good and a hardy sport, and we have enjoyed it many a time and oft, from Minnesota to New York. The cold air is exhilarating,

and the appetite is enormous. After a week of such fishing, in ordinary fair winter weather, a man returns "like a giant refreshed with wine."

This and smelt angling near the sea coast are about all that the Northern angler gets, unless he takes the lake trout in much the same manner; but the lake trout is not often found in the smaller lakes and is usually taken by professionals, in winter. The black bass in the North hibernates and so do most Northern anglers. Winter is the time that the tackle is overhauled, rods varnished, reels repaired and lines tested. The tackle maker receives orders for new rods, made to a specified length and weight, not to exceed a hair's breadth in the former nor a feather's avoirdupois in the latter, and the old lines are examined foot by foot for flaws that might lose the largest fish of the coming season. Pies are inspected and laid away in camphor or, better yet, in tightly corked bottles, to keep the moths away. The gut is looked at with a criticle eye, and the trayed parts cut out or rubbed smooth with India rubber.

What anticipations of glorious sport, the care of fine tackle brings! What memories of past achievements its contemplation conjures up! The cleaning and oiling of the smooth-running reel is a pleasure. Its sharp click recalls the struggle with a two-pound trout in the pool under the roots of the old sycamore; or the silent whirl of the multiplier suggests the fierce fight with the great bass, which was the envy of the local fishermen and the talk of the town for days after, and which was finally recorded in the pages of FOREST AND STREAM.

The Northern angler in his hibernation has these enjoyments, and others besides. He now looks back over the printed record of angling in all parts of the country in the pages above referred to, which he only had time to hurriedly scan in summer. He reads the angling books which he has bought during the summer, especially to be read during these long winter evenings; for your enthusiastic angler loves fishing books next to fishing, and always has a corner in his library where a goodly collection of them is to be found. With his slippers on, before a cheerful fire, pipe in mouth, the hibernating angler of the North takes in a world of quiet pleasure and learning from his books and his FOREST AND STREAM—pleasures which those who can fish all the year round know little of.

THE COST OF STUPIDITY.—A Boston correspondent sends us a newspaper slip recounting some thirteen accidents with fire-arms; and our friend suggests that few people are aware of the numerous exhibitions of carelessness in the handling of firearms, or the result of the injuries resulting therefrom. The cases mentioned in the newspaper cutting include the bursting of guns, the shooting of companions in the field, and fatal accidents caused by pulling the guns out of boats and over fences, with muzzles pointed toward the unfortunate victims. As we have pointed out before, these casualties are in almost every instance due simply to the sheerest stupidity and criminal carelessness of the handlers of guns. Every fall the diligent exchange editors of our esteemed daily contemporaries collect a long string of such accidents under the heading of "Sportsmen's Perils." This fall and winter will prove more than usually productive of such items, owing to the flooding of the country with cheap guns, which find their way into the hands of men and boys who are about as fit to handle guns as a two-year-old baby is to play with a can of nitro-glycerine. We may always expect that men will kill themselves by their own stupidity with guns, just as they manage to be run over by railroad trains, blown up by kerosene fire-kindling; or contrive to fall off from precipices, and down into wells; or are kicked by mules, or have their hands taken off by buzz-saws and threshing machines. When the millennium comes, and the lion lies down with the lamb, perhaps the shot-gun and the didn't-know-it-was-loaded idiot can lie down in safety together, too; and both get up again. But it must be remembered, as we have said before, that the number of persons who are injured by gunning accidents compared with the whole number of persons who use firearms is exceedingly small. The list of these accidents which do not result from sheer carelessness is still less important.

THE BEST HOLIDAY GIFT for a gentleman is a year's subscription to this journal.

THEODATUS GARLICK.

THE FATHER OF AMERICAN FISHCULTURE.

THE name of Theodatus Garlick, physician, artist and scientist, is a familiar one to most readers of the FOREST AND STREAM. It affords us much pleasure to present this week a portrait of the Doctor. It has been engraved from an ambrotype, taken when he was fifty-one years of age, and shows him as he appeared when at the busiest period of a well-occupied life. Before advertizing to Dr. Garlick's work in fish-culture, the following brief mention of his life will be welcomed.

Theodatus Garlick was born March 30, 1805, in Middlebury, Addison County, Vermont. His father was Daniel Garlick, a farmer, who married Sabra Starkweather Kirby, daughter of Abraham Kirby, of Litchfield, Connecticut, and sister of the Hon. Ephraim Kirby, who in 1804 was appointed by President Jefferson United States Judge for the Territorial District of Louisiana.

In 1816, young Garlick, then but a mere boy, eleven years old, left his home for the West, trudging on foot and carrying a knapsack. At Elk Creek, now Girard, in Erie County, Pennsylvania, he tarried two years, and then went on to Cleveland, Ohio, where he had a brother who was by trade a stone-cutter. Here he spent some years and became proficient in the art of carving and lettering on stone, afterward going back to his Vermont home to finish his education, which had been irregularly received at the common schools and under private tutors. In 1823 he again returned to Ohio, accompanied by his father and family.

In 1829, when at the age of 24, he entered the office of Dr. Ezra W. Glezen as a medical student, afterward continuing these studies under the direction of Dr. Elijah Flower, then a prominent physician and surgeon at Brookfield. After some years of assiduous study, and after attending full courses of medical and clinical lectures, he graduated at the University of Maryland, in the city of Baltimore, in 1834. For many months thereafter he had the benefit of close social and professional relations with Professor N. R. Smith, who at that date occupied the chair of Surgery in the Maryland University. Declining flattering inducements to remain in Baltimore, Dr. Garlick returned to Ohio and settled in what became the city of Youngstown, where he engaged in the practice of medicine and surgery; and following his tastes and talents he made of the latter a specialty. He spent eighteen years here, his fame as a skillful surgeon growing all this while, and then removed to Cleveland, Ohio, where he formed a partnership with Professor Horace A. Aekley. Here he was elected a member of the Board of Censors of the Cleveland Academy of Natural Sciences.

As a surgeon Dr. Garlick soon took high rank among the profession in that city, and of the country. He probably had no superior in that most superior branch of the art, plastic surgery. He performed numerous and most skillful operations of this class, both in the Cleveland and Medical College and elsewhere. One of the most important of these was in the case of a young lady who had lost nearly all of one side of her face and two-thirds of the upper and lower lips by "sloughing" of the parts. The whole side of the face was restored and the deformity removed by the perfect fitting of flaps which were cut up to supply the lost parts. Professor John Delemater declared that there was not a more difficult or a more successful case of plastic surgery on record, and placed its value in money at \$10,000. He performed the operation of lithotomy with unusual skill and success, in one case fracturing first and then extracting a stone which measured three and a half by four and a half inches; in shape like a cocoon. He successfully removed the half of the under jaw twice, disarticulating in each case, and twice tied successfully the carotid artery. He made some valuable improvements in the methods of operation for hernia, and for fistula in ano; introduced new splints and dressings for fractures, and applied the principle of anatomical models to animals and parts of animals, and especially to fishes.

Dr. Garlick had early developed a taste for art, and possessed much talent for sculpture. He began his work in this while in college, and subsequently made most creditable additions to this branch of American art. While at the Maryland Medical University he produced bas-reliefs in wax of five of the professors of the college, which were pronounced excellent likenesses. The statues in basso-relievo of General Jackson and Henry Clay, both of whom gave him sittings, were soon after completed. A life-size bust of Judge George Tod, of Ohio, was another of his productions, admired for accuracy and artistic merit.

His last work of art is probably his masterpiece, and has a peculiar interest because of the circumstances under which it was completed. It is a life-size bust of Professor J. Kirtland at the age of sixty, made in 1874. A disease of the spinal nerves of more than ten years duration, and which incapacitated him from standing without the aid of crutches, kept him closely confined to a lounge, and in a recumbent position, and while suffering acute pain, he modeled this ad-

mirable bust. The bust was modeled partly from an alt-relievo which he produced in 1850, and partly from sittings by the Professor. It was most truly a labor of love. No pecuniary recompense would have induced Dr. Garlick to undertake it. His deep affection for Professor Kirtland enabled him to persevere in it until its completion. Dr. Garlick made the first daguerrotype picture (a landscape) taken in the United States, and himself constructed the instrument and apparatus to take it in December, 1839; besides making in 1840 the first daguerrotype likeness ever taken anywhere without requiring the rays of the sun to fall directly upon the sitter's face—in other words, in the shade.

This talent as a sculptor was applied in a most useful way to the construction of anatomical models. He also made many valuable pathological models, which represented rare forms of disease. "These models were duplicated, and are to be found in the medical colleges of Cleveland, Cincinnati, Buffalo, Charleston, Toronto and elsewhere. They are considered to be superior to the works of the celebrated Anzoux of Paris.

THE PIONEER IN AMERICAN FISHCULTURE.

It is as the pioneer in American fishculture that Dr. Garlick's name will have the most enduring fame. Attracted by the reports of the experiments of Gehen and Remy in France, he at once recognized the practicability of artificially increasing some of our more valuable species; and, being an angler, naturally selected the brook trout to begin with. Associ-

THEODATUS GARLICK.

From an ambrotype taken at the age of fifty-one.

ating himself in this enterprise with Prof. H. A. Aekley, Dr. Garlick started for the Saut Ste. Marie to obtain adult fish for this purpose, in the month of August, 1853, while Prof. Aekley prepared a pond for their reception by making a dam below a spring on his farm, which was some two miles from Cleveland. The first attempt at transporting fish from the Saut Ste. Marie, nearly 500 miles, was a failure; but three subsequent attempts resulted in placing 150 trout in the pond. In September he made a trip to Port Stanley, Canada, and brought more. It was supposed that the journey would interfere with their spawning the same year, but in this the experimenters were agreeably mistaken. On the 20th of November the fish had so far progressed in nest making as to be ready to occupy the beds scooped in the gravel; and on the following day the Doctor caught and stripped the first pair of fishes so treated on the continent of North America. All the details of development, which are now so familiar to fish-culturists, were then veiled and unknown. Were the little eggs impregnated? Would they hatch?

It was forty-eight days, or not until Jan. 9, 1854, when the Doctor placed one of the eggs under the microscope and saw an unmistakable embryo. Thirteen days later a fish emerged from the egg, and the triumph was complete.

On the 14th of February Dr. Garlick described these experiments and their success in a paper read before the Academy of Natural Sciences of Cleveland, O., which was published in its proceedings, and from which the above facts are taken. In December, 1856, he exhibited microscopic views of the embryo trout before the same Academy at three different meetings, and showed the changes in the structure of the embryo at different ages.

In 1857 he published a book entitled "Fish Culture," which was for years the standard authority on the subject; a second edition, revised and enlarged, appeared last year,

and was reviewed in FOREST AND STREAM of Sept. 16, 1888. Dr. Garlick's early experiments in fishculture were published in the *Ohio Farmer* and at that time did not attract much attention outside of his own circle of acquaintance, nor did his experiments and successes strike the public as having any practical bearing upon the every-day concerns of life in the way of increasing the food supply, which was in no way scant in his State. Indeed they were rather viewed as a curious recreation of a gentleman addicted to scientific experiments, and as a harmless way of spending his time and money. Unfortunately for trout culture the Doctor was possessed of an ample income and therefore felt no necessity to enter into the breeding of fish as a business venture, nor to push it. He had demonstrated the fact that it was practically to breed fish and proved it his own satisfaction, as well as that of his neighbors; he had published the result of his work in both scientific and popular papers; and there the matter rested. Had he been a poor man his natural enthusiasm, added to his native energy, which in other things showed his great powers of pushing things to their farthest limits, would, even in that early day, have awakened an interest in the culture of fish which would have given it start that it did not acquire until fifteen years later.

Although he saw in the artificial breeding of fish a new and important industry he had no conception of the possibilities that he has been spared to see it assume. He has seen it pass from the stage of scientific experiment to an industrial

pursuit, and from that to become an important department in the internal economy of nearly every State in the Union by the appointment of Fishery Commissioners with State and National appropriations more or less ample for the propagation of food fishes. He has watched the interchange of fish eggs with foreign countries and the safe shipment of ova to the antipodes. He has seen the salmon restored to the Connecticut River, the trout successfully planted and grown on the Pacific coast, where they were unknown, until fresh shad ran a novelty in the markets of San Francisco. He has seen the fishes of the West firmly established in the East, until the trout of California has been perfectly acclimated there. He has noted the fact that the sea-fishes also have been propagated and that the cod and the Spanish mackerel can be increased by artificial means. Truly a grand retrospect for the pioneer in American fishculture, and a glorious record with which to close a busy and useful life.

During the past years of physical suffering with which Dr. Garlick has been prostrated, his mind has been clear; and now in his seventy-sixth year he watches the FOREST AND STREAM for new movements in fishculture. He has been an occasional contributor to its columns and has lately been much interested in the culture of carp, of which he has a pond and hopes to see them increase. He was a diligent student of natural history and other kindred sciences. Professor J. P. Kirkland was his first and only preceptor in natural history, and was his intimate friend and associate for more than forty years. In 1857 the Doctor described the large mouthed black bass of Ohio wates as *Oryzias nuptoma*, its specific name being his own and descriptive of its large mouth, a name so appropriate that it is unfortunate that it has to give way to the law of priority and be passed into the realms of synonymy.

When in health Dr. Garlick stood six feet two inches in his bare feet, and weighed 225 pounds. His magnificent physique and even, genial temperament enabled him to perform an unusual amount of work requiring endurance and patience. The brief outline of his life given above is the record of a busy, well-spent career, well rounded by notable achievements in different spheres of work; it is the sketch of a remarkable man.

Dr. Garlick has been married three times. His first and second wives were sisters and daughters of Dr. Elijah Flower, his medical preceptor. He had two children by his second wife, one son, Dr. Wilmot H. Garlick, and one daughter. In 1846 he married Mary M. Chittenden, his third wife, by whom he had one daughter.

WE ARE INDEBTED to the courtesy of Prof. Alfred M. Mayer, of Stevens' Institute, for the data respecting the relative velocities of a rifle bullet and of sound. The subject was brought up by the reported circumstances attending a target marker's death, it being asserted that the marker heard the sound of the rifle when fired, and then stepped out and was killed by the ball.

THE WIDE CORRESPONDENCE printed in our columns, today, is suggestive of the great variety of American game, and of the extensive territory open to sportsmen in this country. December is in many States the last month for general shooting; with the first of January comes the close of the season.

INVALIDS IN THE WOODS.—We are promised by our correspondent Nessmuk some pertinent facts about the Adirondacks and the people who go there to get well. The subject is of grave importance, and its discussion in our columns will be followed with interest.

The Sportsman Tourist.

IN THE "MASH."

LEAVES FROM A LOG-BOOK.—III.

CAYUGA LAKE gives a straight course for the canoeist of thirty-eight miles. On both sides, for nearly its whole length, are high cliffs and wooded hills, with numerous cascades and tumbling streams dividing them by ravines and gorges of a hundred or more feet depth. The only winds experienced are either due north or south, and are seldom fierce enough to endanger the voyager in the most diminutive craft. The hunter can bag a reasonable number of ruffed grouse or quail on its shores in season; ducks are quite plentiful, and fly-fishing for black bass or trolling for lake-trout is excellent.

At the foot of the lake, where its waters are emptied into Seneca River, begin the Montezuma Marshes, extending along the river for ten miles, and varying in width from one-half mile to two or three miles. Myriads of wild mallards make these marshes their spring and fall resting-place a few years ago, and black and summer ducks found it a safe breeding-ground; but railroads and city sportsmen, sink boxes and batteries, and the native, whose water-spaniels are trained to catch the young ducks before they are able to fly, have so decimated this numbers of birds that a whole day's work now will scarcely bring a score of ducks to bag.

The inhabitants of the marshes are a peculiar class of people—illiterate, poor, shiftless and lazy—and are isolated from the rest of the world as if dwelling on an island far out in the ocean. Their employment consists in "frying" fish in summer, and shooting ducks and cutting "flag" in fall, with perhaps the cultivation of a small garden to supply them with enough "taters" and "trinkets" to last through the winter. Few of them possess horses, the greater part of their going and coming being done by water; but on this element they are at home, and none can surpass them in the pursuits they are accustomed to.

It was nearly dark on the cool, October night when the canoe Gypsy, with Captain and Judy aboard, crossed the bay from Cayuga village to Mud Lock, and entered the sluggish current of the Seneca. The thirty odd miles that had been traversed from Bushy Point had been accomplished without fatigue, a friendly south wind having borne the little boat along at a good rate; but now the sail had to be lowered and slowed, and the feet and back braced for a steady paddle for two or three hours. There is a sort of weary-easy delight in traveling thus along, not knowing where fate will call a halt for the night's rest, a delight only experienced by two of the human kind—the canoeist and the tramp. The former has rather the better lot of the two, for he has a comfortable shelter to rest in, no matter where darkness overtakes him, while the tramp must needs make the best of it as he can, now in a barn, next under a haystack, or, perhaps, beneath the lute vault of heaven, with no shelter but the lee-side of a stump fence.

While the Captain is moralizing as above, the sun has withdrawn its large, bright disk from the horizon, and the noisy cackle of the head-hens betokens with an infallible certainty the speedy approach of darkness. Soon the outlines of the grassy shores become blurred and indistinct, and the stars and the new moon show brightly against the dark blue of the nocturnal sky. There are many cuts and channels through the morass, dividing it in every direction, but the Captain has hunted the marsh through many times and knows the channel well, so whistling a gay tune in time with the paddle's stroke, he threads the winding passages, turning here to avoid a shoal and there to escape the thicket, and with a fisherman's fyke as he skims along. No trout break the monotony of the dim vista, only here and there a tall stalk—driven into the mud to indicate the whereabouts of some "fish-ear"—rises grim and ghost-like, nodding its head with the surge of the current.

By and by the roar of falling water and a steersman's long-drawn "Go-o-o-on, Johnny," tell the Captain that he is nearing the Aqueduct, where the Erie Canal is taken across the river by a massive structure of stone masonry. The river flows beneath this structure through a number of arches, passable for a skiff except at high water, but unpleasant on account of the continual leakage and overflow from the canal above. For a moment the Captain pauses to don his waterproof coat and button the apron around the well, and then strikes out boldly for the most easterly arch, where there is less overflow than at any of the others. The water gurgles and whirls as it dashes through the passage, which looms up black and menacing ahead. The Captain hesitates to trust a wild and untried crew to escape the three-foot fall, with one stroke of the paddle to direct the canoe aright, he bows his head and shoots into the dismal cavern. The paddle is in use here, and he can only direct the canoe by pushing with his hands on the slimy wall above. A sheet of falling water seems as if it would burst through the light deck of the boat, and indeed nearly takes the Captain's breath with its force, but after what seems an age, but is really only a minute, the canoe dashes through on the other side, and the Aqueduct is passed.

Now a dim light, like a will-o'-the-wisp, is seen to glimmer faintly ahead, right in the centre of the marsh, and toward this the Captain makes his way. If his surmise be true, this light comes from the shanty boat of old John, the Hermit of the Marsh, who lives alone the year around in his old ark, fishing, hunting, trapping and battling with the mosquitoes and the "fever-n'-ager." To all mankind this old recluse is a surly, uncommunicative soul, allowing no one to set foot within his strange domicile, and his two dogs are effective sentinels in keeping him from being intruded upon, but the Captain knows him better than does the rest of the world, and recognizes under his rough and repelling exterior the instincts of a true lover and worshiper of nature, and a heart as noble and kind as ever throbbled in human breast. There must have been a bond of union felt between this old hermit and the young Captain, in that each loved the solitude of nature—the one partaking of it in his canoe, paddling whither he would through lake and stream, and the other floating here and there in his awkward craft, back and forth through the great, black marsh. At any rate, the Captain was so well known to have crossed the old man's threshold, and even to him the hermit was rarely communicative, and never demonstrative. Perhaps he had some secret romance in his strange choice of life, but the Captain never invaded the sanctity of his inner self, and his secret, if secret he had, died with him when he was buried in the Potter's Field, with none to mourn him but his two faithful dogs.

As the canoe approached the light, one of the dogs began bark a warning, and the light suddenly disappeared. The

Captain knew the hermit would not show himself, trusting to the dogs to keep intruders away, so he was compelled to hulloa to make his identity known. Instantly the glimmer of the light re-appeared, and in a moment the door of the cabin was opened and the ironed face and grizzled locks of the old man were illuminated by the lantern he held aloft in his hand.

"Down, Jim! down! Is that you, Cap'n?"
"Ay, John."

"Fall up alongside the little hook and hitch to the stake to your left. Don't get tangled in the fykes."
Not a word of greeting nor a shake of the hand did the Captain receive as he stepped into the low-roofed cabin, but the hermit quietly placed a shining tin tea-pot on the little round stove, while intently scanning his visitor from head to foot. At last the Captain spoke:

"I see, John, you have hauled your house out on land."
"Yes, I've hauled her out. She leaks at every seam, and all the pitchin' and patchin' I can do won't make her float again, so I've jest laid her up here, and here I guess she'll stay."

"But next spring's freshet will lift her off."
"She'll stay as long as I do, Cap'n, and we won't neither on us last till the ice breaks up."

The lantern, hanging from a hook in the roof of the cabin, gave light enough to show the scrupulous neatness that pervaded the hermit's quarters. Everything, from the mattresses of dried marsh grass in the one end of the cabin to the old-fashioned wood stove in the other, showed the painstaking care of the old man. The finished stock of a ten-pound muzzle-loader, made by William Greener, reflected the light of the lantern with dazzling brilliancy, as it hung on its wooden pegs. The simple articles of tin and earthenware necessary for the hermit's cookery shone on their shelf as if just from the shop, and bottles of root extracts and oils of his own collecting were ranged neatly in order on another shelf. A pair of fat-irons on the stove and some damp underclothing on the table showed that the old man was just about to do his week's ironing.

"Cap'n, you can get your own supper, for the irons is hot and the clo'es sprinkled, and I must tend to 'em. There's bread, grease and pickles in the chest, and pork in the harl outside, so you can help yourself."

"All right, John," and the Captain proceeded to prepare the meal. While searching outside for the pork barrel he saw that the hermit had a number of wild ducks—winged or wounded birds that he had carefully nursed to recovery—penning in an inclosure. He also discovered a fat pig on the farthest point of the grassy island, whose obesity was due to a liberal diet of fish, which he devoured with the greatest avidity.

"John," said the Captain, returning with his pork, and noticing a pair of mallards hanging near the door, "are many ducks about yet?"

"Not many," answered the hermit; "there's too many sportsmen for an honest man to bag any."

"What do you call a sportsman, John?"

"A sportsman is a city teler, Cap'n, who lives all his life in a brick house and knows nothing about a wild duck and less about a gun; who call every man that shoots a muzzle-loader and don't wear corodurus with brass buttons a 'pot-lunter,' and who fire at a bird forty rods away, not to kill it, but jest to hear his britch-loader hang; a man who wants a stove put up in his high-house to keep his dainty feet warm, and who cuds up his trip by gittin' drunk, rippin' up a fisherman's fyke nets and settin' fire to the mash with his Havany cigar."

"Your idea of him is partly correct, John, I've no doubt."

"Correct? I know it's correct, Cap'n. Before them fellers begun comin' here there was ducks and geese in plenty, and now they fly two miles high to pass over the mash. I've seen 'em, Cap'n."

"Then there's no use putting my gun together?"

"Well, I've hauled 'em pretty well just below in the cove, and mebbe we can get one or two in the mornin'."

The supper over, preparations were made for an early start for the docks next morning, and at a late hour the two men retired to rest on the hard-grass mattresses.

(TO BE CONTINUED.)

CRUISE OF "THE NIPPER."

IN THREE PARTS.—PART I.

SHE met me, by appointment, at Booneville. With surpassingly punctuality—considering her sex—she had arrived several hours before me. The express agent assured me that her conduct had been most exemplary.

The tourist, male and female, were just then thronging into the Wildermass from all sides. Everything on the Northern road brought its quota of seekers for pleasure, recreation or health. The Nipper was interviewed remorselessly. Well dressed ladies, neat young girls, and even children approached her irreverently. They examined her graceful lines. They made comments on her unknown owner, and invariably ended with lifting her gently by the nose, with exclamations quite irrelevant. No gentleman tourist passed her by without critical examination and comments. As they raised her carefully, they said:—if they were worldly—"Holy Moses! who's going to paddle that eggshell?" Dergymen said:—"I do declare! Is that intended to go on the lakes?" The ladies remarked, "Oh, my!" "Did you ever?" "Dear me!" "What a beauty!" etc.

None noticed the little gray-haired fellow, who, dressed in coarse blue flannels, smoking a clay pipe, dangling his short legs off the platform, and reading the last number of Forest and Stream, was quietly taking in the thing—until the agent pointed him out as the Skipper of the light craft they were admiring. He was immediately interviewed, and questions were frequent and fast.

"Do you expect to live in her on Raquette Lake?"

"Can you stand rough water?"

"Can you throw a line from her, and handle a good-sized fish?"

"Isn't she too frail?"

"And what is that little green canoe in the corner? She looks so small!"

The Skipper answered the last question first. The little green canoe is the Nessauk that was paddled last summer over 550 miles, came out tight and staunch, was taken 230 miles to northern Pennsylvania by rail, paddled on the rocky affluents of the upper Susquehanna, and is going back to the wilderness, still tight and seaworthy. The second question, Yes; she is frail. She is intended, both by her owner and builder, to be the lightest canoe of her dimensions ever built of oak, elm and cedar, with light spruce gunwale. (Here the Skipper showed a letter from her maker, Rushton, ex-

pressing doubts as to her strength, and giving pen and ink diagrams of the way she might be strengthened by bracing, thus, etc.)

"But," said the Skipper, growing enthusiastic, "she don't need strengthening. The two pairs of strips nearest the keel are of full thickness—3.16 of an inch. The third pair taper a little toward the gunwale, and the three upper pairs run light, very light. Her weight is sixteen pounds; length, ten feet, six inches; beam, twenty-eight inches; ribs at centre, eight inches; at stem, thirteen inches; rise, forty-five inches. Gentlemen, if any of you are canoeists, you know that you have no business to put weight on the upper strips of the gunwale. All weight in a light canoe must come on the keelson, and the first two, possibly three, pairs of strips. The Nipper is strong enough for me. As to throwing a line from her, she is the very best possible craft for fly fishing. You can make a tunc-ounce trout row you in any direction you please, until he floats helpless. I have done it in the Nessauk.

"As to rough water and squalls, I expect to stay as long as the average guide would the Adirondacks, and ride more steady and direct, sharp sea."

With expressions of sympathy and hopes that they might see the light canoe and her Skipper on the lakes, the tourists went off on the inevitable hackboards, and the Skipper began to organize for a cruise. It was necessary to make the first twelve miles of it overland, and the route was not pleasant. Hills, hollows, sand up to the hub, boulders, and six miles of corodury road. Such was the first twelve miles—as every man knows who has made the route from Booneville to Moose River.

The trip was made in and on a lumber wagon, with the canoes packed in straw and guyed with heavy twine, the Skipper kneeling on the port side and keeping a death-grip on the gunwale of the *The Nipper*, unmindful of the hemlock lee-board that was steadily abrading his spinal column. The charge for the tow was four dollars, with a stipulation that the horses should walk all the way. When the latter clause of the contract was enforced by the Skipper the disgusted driver relieved his feelings by a twelve mile stampede that would have struck a Missouri hulkwhacker with paralysis.

It is a weary trip that road from Booneville to the "Tanuary." But it has an end; and both driver and canoeist felt better when the two canoes made a landing on Tom Nightingale's porch, without crack or scratch. A double nip of whisky quieted the driver, while the hearty greeting of Jolly Tom, St. Holliday, Charley Phelps, Colonel Chnskin, and a dozen others, made the Skipper feel as though he had got home.

Moose River is not, by any means a bad place to stop at. The hotel is well kept, family very pleasant, and charges reasonable, let alone that pretty fair trout fishing may be had in several spring brooks, easily reached in an hour's walk. It took four days to work these brooks and a few spring-holes in the river, the result being a reasonable supply of fine brook trout, saving none under six inches.

The road from the "Tanuary" to foot of the Fulton Chain is rough, though no prudent tourist will send a light canoe in so high the back-boards, and boats are usually sent in from the river side of the Fulton Chain, by the assistance of guides. And even in this way they do not always get through safe. There was a fine new boat sent in that way last July, in which the guide contrived to knock an ugly hole. So the Skipper decided to send his duffle by hack-board to the Forge House, make the nine-mile carry through the woods to Jones', and paddle the twelve-mile stillwater to the lakes, which he did. In fact, he overdid it by taking the right-hand trail where within three miles of Jones', and carrying the *Nipper* over to the little Fall Lake. This lengthened his carry to twelve miles, but the visit to this one beautiful lake more than compensated for the extra labor. It was late in the afternoon when Jones' Camp was finally reached and the Skipper learned that the camp was bare of trout. Pork, potatoes and tea were indulged in to a moderate extent, and the night's rest which followed was of the soundest. The next day was spent in a faithful but vain attempt to inveigle a mess of speckled trout from their old haunts in the Moose; and it was remembered with regret that these same haunts gave a daily supply of trout on the previous season. Every where, so far, trout had been found less plenty than in the summer of '80.

A second night of sound sleep at Jones' Camp, and *The Nipper* was put afloat for the first time, her owner boarding her rather cautiously for a canoeist who had faith in himself and his craft. She proved marvelously steady, however, and a paddle up-stream of three and a half miles in one hour brought her to the carry around the foot-raft, and gave the Skipper the opportunity of his first landing. The first landing was easily made inside of four hours, and, once in the boat-house at Barret's, the cruise of the Fulton Chain was fairly commenced.

And here let us drop the third person singular, and pick up the eternal *Ego*, that I am as sadly weary of as my readers possibly can be.

At the Forge I met very many whom I knew last season; also, many who were visiting Brown's Tract for the first time. Among the latter were invalids of the Lung Disorder type, who did not seem very favorably affected by the damp, chilly weather, which prevailed during July and well into August of the past summer. As to the brigade of consumptives who came to the Northern Wilderness last summer in search of health, which they were destined not to find, I shall have something to say further on. Many were induced to come through reading a magazine article entitled "Camp Lou," and the disappointment felt by most of them was sad and bitter.

It was at 10 on the 16th of July when I paddled out from the Forge House for a rather excited cruise through the Fulton Chain, Raquette Lake, Forked and Long Lakes, the Raquette River, Tupper Lakes, and, by a circuitous route, back to the Fulton Chain. It was a very pretty programme, destined to be carried out only in part.

The afternoon was gusty and stormy. Black, wind-laden clouds went whirling across the sky with ominous speed, and I heard a guide remark, "Uncle Nessauk ain't a cushion to take this in." So I made my gunwale coat into a cushion and struck out. For a mile and a half up the channel the canoe flew along smoothly with the wind dead ast. Then came the open water of First Lake, white and spumy, with short, sharp seas, that I must take fairly abeam to the inlet, where I could see the waves dashing white over the large boulder at its mouth. I hesitated for a minute about trying for the inlet. But it was the trial trip of the *Nipper*. If she would swamp in a blow, better do it on one of the smaller lakes, and I pulled out. When fairly out of the roughest water her behavior surprised and delighted me ex-

ceedingly. She rose and settled on an even keel with a steady list. I should have scarcely looked for in a boat of twice her size, and threw off the steep, sharp seas like a duck. I thought then, and still think, that for a light, comfortable cruising cauce, under paddle, her model cannot be improved.

When about half way across the lake a low, ugly looking black cloud came up from the southwest, and when just over the lake let go a torrent of water that drenched me to the skin in three minutes. It was no time nor place for struggling into a gun coat, and I wended both hands on the paddle, so I took it as philosophically as possible. It ceased as I rounded the rock at the inlet, and I went flying up Second Lake with the wind astern, only dipping the paddle for storage way; and again there came a thunder-gust, with a down-pour of rain. But, as I could be no wetter, I rather enjoyed it.

Rounding the Eagle's Nest, I ran under the lee of the forest-crowned point and sponged out the canoe, for she was getting lily with the water that had fallen into her, and then paddled across to Third Lake camp. Perrie, with several companions, met me at the landing and gave me a woodland welcome, besides lending me dry clothes that I greatly needed.

I had the camp enlarged to thrice its former capacity, and filled to overflowing with boarders and tourists. Four of the inmates were suffering from pulmonary troubles, and did not seem to be getting much benefit from "balsamic breezes," or "ozone." Each one had his or her peculiar cough; the season had been wet and cold, and the bright, open air, that should be inseparable from a camp in the wilderness, was, for the most part, lacking. On the night of my arrival the wind shifted to northeast with a cold, drizzling rain, and in less than forty-eight hours after landing I had joined the little band of coughers, coughing oftener and louder than any of them. As I had made the trip to the woods for health mainly, this was most provoking. I thought it was only a surface cough, so to speak, but it was constant, hard and irritating. There were plenty of cough remedies in the house, and I tried them all, with little or no effect until I resorted to balsam, taken directly from the blisters on the balsam jar, soaked in sugar and allowed to percolate slow down the throat. This gave relief, and I mention it for the benefit of any future tourist who may get landed upon a cruise by a cough and cold.

By the 23d I was sufficiently recovered to assist at a dinner given at Dnnakin's Camp, on Fourth Lake, by Messrs. F. J. Nott, S. F. Fish and H. M. Crowell. The dinner was entrusted to Sam Dunakin as cook and purveyor, and it was a neat affair. The guests, estimated at six, turned out thirteen strong at the table, State Game Comstellator Dodge being one of the number, and I thought he looked a little glum as he tasted the "mutton" which had a rather gamey flavor, as though it "had lain in the roses, and fed on the lilies of life" (or of the lakes.) Whatever he thought, he said nothing, and the dinner was one of the pleasant episodes one never forgets. Our hosts were capable of good red wine, with a bottle of Martel at the finish. The trout were excellent and well cooked, and all three of our hosts sang glees in capital voice and good taste, aided by the game comstellator, who, by the way, struck me as being the right man in the right place. Just at dark I passed leisurely down to Third Lake with an impression that the 23d of July, 1881, would be a good day to mark with a white stone.

Next day I tried salmon trout at the huons, and brook trout at all the spring holes, with no success. In fact, the fishing on Third Lake, after the first of July, was not worth the trouble of putting a rod together or wetting a huuy-line.

NESMUK.

AUTOBIOGRAPHICAL FRAGMENTS.—III.

"NESMUK."

* * * And I remain yours sincerely, NESMUK, which means in the Narragansett tongue, or did mean, as long as there were any Narragansetts to give tongue, Wood-drake, or rather, Wood-drake.

Also, it was the name of the abietic young brave, who went to attend an away from the attic before I was five years old, and carry my name Nedpung and Jankamung lakes, day after day, until I imbued much of his woodcraft, all his love for forest life, and alas, much of his godnaured shiftlessness.

Even now my blood flows faster as I think of the rides I had on his well-formed shoulders, a little leg on either side of his neck, and a dead-grip on his strong, black mane. Or rode, "belly-bumps" on his back across old Jankamung, lugging him tightly around the neck, like the selfish little Eg that I was. He nee? He drove? I would as soon have thought to tire a wolf or draw a whale. At first, these excursions were not fairly concluded without a final settlement at home—said settlement consisting of a head-raking with a fine-toothed comb that left my scalp raw, and a subsequent interview of a private nurse, with "Par," behind the barn, at which a yearling apple tree sprout was always a leading topic. (My blood tingles a little at that recollection too.)

Gradually they came to understand that I was incorrigible, or, as a warden said of the cattle before I was, "given to run, and so they did not run away from school." I was allowed to "run with them dirty Injuns," as the aunt afore-said expressed it.

But I did run away from school, and books of the dry sort, to study the great book of nature. Did I lose by it? I cannot tell, even now.

As the world goes, perhaps yes.

No man can transcend his possibilities.

I am no believer in the supernatural; mesmerism, spiritualism, and a dozen other things are, to me, but as feints. By the same token I respect the force of the healthy, magnetic nature of that Ind an pass into my boyish life, as I rode on his powerful shoulders, or slept in his strong arms beneath the soft whispering pines of "Dunglas Woods."

Poor Nesmuk! Poor Lot! Fifty years ago the remnant of that tribe numbered thirty-six, housed, fed and clothed by the State. The same number of Dutchmen, under the same conditions, would have over-run the State ere this.

The Indians have passed away forever; and when I tried to find the resting place of my old friend, with the view of putting a plain stone above his grave, no one could point out the spot.

And this is how I happen to write over the name by which he was known among his people, and the reason why a favorite dog or canoe is likely to be called

NESMUK.

Natural History.

THE ENEMIES OF GAME BIRDS.

CADILLAC, Mich., Nov. 21.

Editor Forest and Stream:

In reference to your inquiry as to whether the nests of the ruffed grouse are destroyed by the red squirrel, I offer the following remarks. In the spring of 1868 I found the nest of a ruffed grouse, containing four eggs, and as I wished to obtain a set for my oological cabinet, I left the nest undisturbed for the mother bird to complete her laying. I used to visit this nest quite regularly, sometimes finding the mother bird absent, but frequently flushing her from the nest. She would allow me to approach within a few feet of her, and then with a whimper would leave the nest, and in some way generally manage to cover her eggs with the fallen leaves. I never came to a sure conclusion as to how this was done, but think it was accomplished by the use of both wings and feet.

On visiting the nest one day, I found it deserted, and the eggs, seven in number, showed plainly that they had been bitten into by some animal, not one egg had escaped being ruined.

Some four weeks after, and within a short distance of the former nest, I discovered a second, which I have no doubt belonged to the same bird. This nest contained seventeen eggs, and from their weight I knew that incubation was somewhat advanced, and I therefore left them undisturbed.

In visiting this nest about a week after, I caught a red squirrel in the act of destroying the eggs. On my near approach the "imp" took refuge in a tree close by, and with a chirp and a chatter seemed to defy me to stop his destructive work; but with a charge of No. 6 shot I brought him to the ground and put an end to his impudent behavior. On examining the nest I found that but four eggs had been broken. These I removed, and found that the young birds were nearly ready to leave the shell. My next visit a few days after, found the young hatched and gone. The red squirrel has also, for some reason, a decided dislike to the nests of the hummingbird (*Trochilus colubris*) and the blue-gray gnatcatcher (*Poliopelia caerulea*). At my old home at Ann Arbor, the gnatcatcher is one of the most common birds of the woodlands, and I generally found from a dozen to twenty nests every season, and often as soon as the nest was completed, I would find it destroyed by the red squirrel. In fact, I would again be at work, generally on the same tree; perhaps his nest would again be destroyed and then a new tree would be selected and a third nest built. I have known a single pair of birds to keep on this way until seven nests had been built. At first I referred this to various causes, thinking that perhaps the site chosen had not proved satisfactory, or that it was the work of the cowbird (*Molothrus peccator*), but at last, in the case of the seven nests, I discovered the cause and put a stop to it. It was the red squirrel.

In conclusion, I would say to Mr. Bishop, if there is any good done by the red squirrel let us hear of it.

ANOLPHE B. COVERT.

Ferrisburgh, Vt., Nov. 22.—Editor Forest and Stream.—Mr. Bishop's theory of the scarcity of ruffed grouse is novel and ingenious, but it seems to me that the same objection which "Verde Mont" makes to the hawk, fox and owl theory squelches this. There have always been red squirrels since any of us were born, and they were plentier twenty years ago than now, and so worse grouse. Have the squirrels all at once turned their attention to the destruction of young grouse? Almost every owl with now low destructive red squirrels are to the young of small tree nesting birds, but has any one ever seen them killing ground nesting birds? If they would kill young grouse, why not young chickens? They have been plenty about our house ever since I can remember, but I never lost a chicken by them that we knew of, though they have destroyed the young robins and blackbirds at a great rate.

I am glad that the FOREST AND STREAM has drawn the attention of sportsmen to this matter of the increasing scarcity of ruffed grouse, and I do not doubt that some one will get at the true cause, but I do doubt that any one has hit it yet. Meanwhile, I will stick to my theory of partial migration, a theory which is strengthened by the stories I hear of the plentiness of grouse among the back hills. R. E. R.

BOSTON, Mass., Nov. 20, 1881.

Editor Forest and Stream:

The inquiries in your paper regarding the gradual disappearance of the ruffed grouse, make any light thrown upon the subject of general interest to sportsmen and others. The enclosed item, copied from the Concord (N.H.) Monitor, may account for the scarcity in some localities. It is as follows:

"To sportsmen and ornithologists there have been several strange circumstances of late in regard to that favorite target for the hunter's aim—the partridge. A large decrease in their numbers has been manifest this season, but very few being shot, and those that have been secured have been scarcely more than skins and bones, and far from being the commonly delicious article of food. A large number have been found dead which have not suffered from the hunters' greed, something very unusual, and especially at this time of the year. A gentleman of this city, a few days since, carefully examining one which was found dead, found an explanation in the shape of three small ulcers upon the sides and top of the head, in each one of which was a small tick, which had made its way through the skull into the brain, causing death. An explanation of this singular pest by scientific gentlemen will be awaited with interest."

Being myself an Oxford and Androscoggin Counties, in Maine, partridge hunter, and having seen many grouse being found dead, their beaks upon examination disclosing ticks. One old resident and hunter had found quite a number, and attributed the diminution in numbers entirely to that cause. Last year it was the same, he said, and he, being a very observing man, and something of a naturalist, I think his observations in that direction of some value.

Mr. Bishop's letter in the last number of your paper mentions it to me a new enemy of the grouse. Squirrels, however, are very scarce in the localities mentioned above, and I do not think they destroy the birds, though probably crows destroy more or less.—J. N. D.

The ravages of the so-called wood-tick have been known to observing sportsmen for many years, although it was not until the early part of the year 1879 that the insect which causes so

much harm was satisfactorily identified and its habits described in the columns of FOREST AND STREAM. Since many of our present readers may not have seen the information then printed, we give a brief abstract of it. Any further observations which may have been made on this pest should be reported at once. There is no doubt that it is the most destructive enemy, except man, against which the ruffed grouse has to contend.

The so-called ticks are the larva of a fly, which we have called the partridge fly. It has no other English name but its scientific appellation is *Olfersia (Ctenota) americana*, Leach. It belongs to the family *Hyppoboscidae*, a group of flies usually found in or near forests and woods, of which the common small brown horse fly is one of the most familiar examples. The species included in this group are most of them very troublesome to horses and cattle, and feed on blood. The young of this insect are produced alive, and in their general appearance resemble ticks, but any one who closely examines one will see that it has but six legs instead of eight, which the ticks, as belonging to the *Arachnida*, all possess. These larvae are provided with a very fine delicate proboscis, through which they suck the blood of their unfortunate victims. They are produced alive, and it seems probable that the adult fly deposits the young on the neck or heads of the newly hatched grouse. Instances where young grouse, too weak to fly, have been caught with many of these parasites clinging to them are on record in FOREST AND STREAM, vol. XII., p. 25, Mr. Charles Baylies says:

"Some time in the fore part of June (1878) my dog started a flock of young partridges, perhaps one-third grown, one of which seemed to lag as though he were wounded. The dog caught it and brought it to me. I noticed several ticks (sic) on the side of its head, about as large as a No. 4 shot and about the same color."

We have ourselves seen one young grouse which had no less than thirty of the parasites on its head and neck. These varied in size from a pin's head to a No. 2 shot, and were plump, round and full of blood. It can readily be seen that no young bird could long survive such a drain as this. The one just referred to was picked up from before his dog's nose, the vermin removed, and the bird was then freed. Several times afterward we saw him, for he was readily to be distinguished from his brethren by his small size, and the last time he came under our eye he seemed, though small, as strong and well as any of the family.

Allied species of flies, which resemble *Americana* quite closely, have been taken on many hawks, owls and herons. The red-tailed hawk (*Buteo borealis*) is infested with a similar fly, belonging to the genus *Hyppoboscidae*, and I have found some resembling the partridge fly on the osprey, barred owl, long eared owl, marsh hawk, night heron and great blue heron. It does not seem probable that this parasite destroys the adult grouse, and if not, the damage that it does must be confined to the summer months when the young birds are its especial prey. That it destroys considerable numbers of birds can scarcely be doubted, but at the same time it must be remembered that it is no new thing and that the birds have always been subject to its attacks. When, however, the old birds, from any or any other cause, fail to rear their broods during summer, and are then killed off in fall, the prospects for much grouse shooting in that locality in the future cannot be said to be encouraging.

The adult form of the same or a similar fly we have often found on quail, although we have never seen the young birds with the larvae attached to them. It is scarcely necessary to say that the death of the bird is caused by loss of blood, and not by the insect boring into the brain, as is stated in the newspaper clipping quoted above. If you desire to look up more fully will find frequent references to it in FOREST AND STREAM from Volume XI. to the present time.

DEATH OF THE TAME PARTRIDGE.

WORCESTER, Mass., Dec. 1, 1881.

Editor Forest and Stream:

The item which appeared in your last number dated Oakland, Mass., and signed "E.," concerning the tame partridge at Coldbrook Springs gives a very wrong impression. One would get the idea that the party who did the killing knew the bird and wantonly slaughtered it, notwithstanding he was urged to do so by a "waster" or any other cause. In fact, the first, and only, learner of the sad death of this remarkable bird, and I give the facts as they were told me by one of the party who did the mischief, and who then did not know this sad thing as a tame partridge ever existed. A real estate broker, whose office is in Worcester, took two men, who are residents of the adjoining town of Shrewsbury, to Coldbrook Springs to look at the wood-lot at Parker's mills which has for the past three years been the home of this wonderful bird, when not in the immediate companionship of Mr. Parker in or about his mill.

The three men were looking over the lot when the bird appeared to them running about their feet. One of the party knocked the bird over with a stick, but, probably, it was not fatally injured. Just then it occurred to the broker that it might be the mother of a late brood of young who was trying to attract their attention while the chicks could hide, and for that reason begged him to try to save the bird alive, but no young ones could be found, and fearing the bird was injured past recovery, he rapped its head on the trunk of a tree. This broker has been a personal acquaintance for many years, and on meeting me after their return to Worcester, and, knowing me to be a sportsman, told me of their adventure with the bird with much eagerness, and then asked me if I had ever known anything like it or could give any explanation of the bird's actions. Before the story was through it was all plain to me, and I told him of the mischief they had done and what a sad loss it would be to Mr. Parker. And here let me say that I no more believe any one of that party would have killed Mr. Parker's pet, knowing it to be such, than that I believe any one would have done and killed his best horse. There is, however, this much for which I think them worthy of censure. Several days afterward these men asked Mr. Parker to show them the bounds of this wood-lot, and while out with them he spoke of his pet, and desired to show it to them and tried to call it for that purpose, and failing to do so expressed fears that something had befallen it. Under such circumstances not every one would have come out with the story. Still, in my mind, that would have been an odd thing to have now done. Mr. Parker feeds the loss of his pet very keenly, and, also, that the men treated him very unhandsonly in not telling him frankly of the mistake they had made. So much has been said of this bird in the papers and, so remarkable seemed the case that a great many people have visited it, especially the past year, many going a great dis-

tance. While Mr. Parker made no charge for showing the bird, hardly any one would allow him to leave his work without compensation, and in some cases parties paid him liberally. I am told that he has taken as high as nine dollars in a single day, so that he is not only that of a highly prized pet but a pecuniary one as well. Mr. Parker has the sympathy of sportsmen, and I might say of everybody. It has, however, been a common remark that it was a wonder that the bird had never met with any mishap. It had become so tame that it would sit on the shoulder and take bits of food from the mouth of a stranger, and sometimes he was almost an annoyance to Mr. Parker when about his work. Subject as he was to fall a victim to some stranger at any time it seems really wonderful that he should have existed so long.

[We are glad to receive the above letter. It seemed hard to believe in the existence of any miscreant, who, knowing the facts, would have wantonly killed Mr. Parker's bird. All that has been published since the bird's death has, however, conveyed the impression that advantage was taken of his tameness to kill the partridge. We are glad that it was not so.]

FISH AND FROG SHOWERS.

I **NDORSE** fully your editorial note relative to the above. What "people say" or believe has but little weight in scientific reasoning. It is generally "believed" that a hair from the tail of a horse, put in water, though merely an empty tube, can become endowed with life and have conveyed to it, in some mysterious way, all the organs necessary to the life and existence of an animal of its class. But who has yet met with the man who can state that he has with his own hands accomplished or brought about this miraculous transformation? That has himself plucked the hair, and watched it as it lay unanimated on the bottom of the vessel for days; that has seen its first wriggle, its subsequent general motion or locomotion, and its first meal? No! No! It is only another "Barnacle Goose" story; and how finally this latter was believed in by "the people" at the time!

There is, however, more truth in the matter of "Fish and Frog Showers" but here, likewise, "the people" have exaggerated their proportion of the mysterious and ridiculous. If a whirlwind has been known to catch up and carry heavy objects for considerable distances, we can readily believe that smaller and less weighty objects might in like manner be carried to very much greater distances. The red ashes of volcanic districts have been known to have been carried off many miles from their original location; so also the pollen of plants. In like manner small frogs and fishes have been so snatched up by a circling wind, and distributed along the track of the storm. But such events are rare and local and hardly worth discussing. They are not "showers" for they do not come from the clouds, but are rather drifts, similar to sand and dust drifts. Small toads come up out of the ground thickly during showers, so do earth-worms, but these creatures come out to meet the rain and do not come down with it. In fine, sir, I am every day experiencing the little dependence that is to be placed in "popular belief," which is an argument as unsound as it is unscientific.

Montreal, Nov. 28th, 1881.

HENRY G. VERNOR.

SUGGESTION ABOUT ACCLIMATION.

The following letters explain themselves:
To J. M. LE MOINE, Esq., President Literary and Historical Society, Quebec:

DEAR SIR—As President of a Society owning an extensive collection of birds as well as on account of the efforts you have made to increase and protect the game of Canada and to popularize the study of Natural History, I beg to draw your attention to the splendid specimen of the English pheasant, black-cock and capercalzie, which I have sent to your rooms for exhibition. You are no doubt aware that the capercalzie is a northern species, a denizen of Norway, living on the top of pine and spruces as lofty as our own; you are no doubt also cognizant of this fact that the Duke of Sutherland and the Earl of Erye have succeeded in adding to the Scotch fauna these magnificent birds, which are now re-introduced and bred abundantly in Scotland. Will no sportsman take the lead in a movement to introduce this bird and naturalize him in Canada? Awaiting for an expression of your views,

I remain, dear sir, yours respectfully,

A. WATTERS.

Quebec, 4th November, 1881.

To MR. A. WATTERS, Quebec:

DEAR SIR—I have pleasure in acknowledging the receipt of your letter of this date, advising me that you have sent on exhibition to our rooms some remarkably handsome English pheasants, black-cock and capercalzie, as specimens of the art of Scotch taxidermists, and asking my opinion as to the practicability of adding to our fauna the splendid game bird known as the capercalzie. It is now some time since I pressed this very subject on the attention of some of my sporting friends. The efforts of Col. Rhodes to introduce here the European house sparrow, show what energy and hard cash can do, and I trust the same success will attend the Colonel's praiseworthy efforts and expenditure to add the Messina quail to our Canadian moors and forests.

I have a dozen of the Colonel's Sicilian quail at present in my aviary. The breeding season being over when I got them, and am awaiting for April to let them loose, in order to test Col. Rhodes' theory about this migratory species.

The capercalzie, without being as delicate a bird to eat as our ruffed grouse, from its size, would be a very welcome addition to our fauna. In Canada he would find a climate, haunts, food and protection similar to what he meets with in the pine forests of the north—in Denmark. It is worth while trying, if he can be naturalized here. I hope yet to learn that some public-spirited sportsman will undertake the introduction of the noble bird, the capercalzie, and succeed here, as has happened in Scotland.

I remain, dear sir, yours most obediently,

J. M. LE MOINE.

Rooms of the Literary and Historical Society, Quebec, 4th November, 1881.

With respect to the above, Colonel Rhodes, of Quebec, writes to the FOREST AND STREAM that the importation of Messina quail has not been an entire success. He has turned them loose at Quebec and at Tadoussac, and they have been freed at Sherbrooke and at St. John's.

Colonel Rhodes has seen two nests of quail, with nine eggs each, and one nest hatched eight young birds, which he saw just as they were born, but he never saw the young

birds again, so he concludes that they perished in the wet weather which followed. The Colonel is of opinion unless Messina quail can be turned out to hatch about the same time as the Canadian grouse (*Perdix*, viz., the first week in June—they will not raise a brood in Canada; and unless young birds can be raised, migration into the country in the spring need not be expected.

There is no doubt that these quail migrate in the autumn, as they remain about the farm until the first of September. The hen birds, when accidentally killed, are full of eggs, so the plan appears to be to place them in a climate where the young birds can grow to maturity, or to winter over a lot of quail and turn loose in the spring. This experiment Mr. Le Moine is now following, and we must hope he will succeed.

Colonel Rhodes is under the impression about 15,000 Messina quail have been turned loose in the North, and that no person has caught or killed one of these birds in the spring.

Game Bag and Gun.

A NEW JERSEY PARTY IN THE SOUTH.

CONCLUDED.

THANKSGIVING DAY proved moist in the forenoon, but it stopped raining about 1 p. m., and some fair shooting was done.

Friday was a better day. Mr. Pray, of the Kitty Hawk, on Rattlesnake Island, bagged 71 red-heads to his own gun, but he was largely helped by a double battery lying to the southwest about three-quarters of a mile, and the red-heads were driven toward him in large numbers. Capt. Bill Henry Walker and his partner Dixie in the battery gathered 102 brace red-heads, and 4 brace of wig-tails. The undersigned and partner on the same day killed a couple of geese, besides a score of common ducks. They style everything here common, with the exception of canvas-back and teal-boat. Widgeon, sprig-tail, mallard, black-duck and teal with us are considered fair ducks, but here they are of little account, some of the market men even refusing to shoot at them, especially when the other two are around. To tell the truth we (that is the subscriber) were glad to bag any of the above variety.

We had out five of Nye's wild geese decoys, but as they had not been used for a year they were very tractious, flittering and pulling at their straps continually, and when geese were in the air, instead of hooking and coiling their tallow buns down, like the trained geese of Bill Lane at Sun-cook Bay, they shut up as tight as the festive clam, and were as much after a while we took the old gander, and asked him down around a point out of sight of his fellows, and immediately we had noise enough, and had it been as good a day as the day before (they always say that, you know), we would have made a big bag.

Previous to this little arrangement of the big gander Dr. Burdett had killed a widgeon flying over our stools, and it had dropped behind us about fifteen yards and lodged in the grass. Some seventeen or eighteen geese were seen approaching to the westward, and our five decoys set up a hooping and popping which, though almost deafening us, Ah! that is the thing they'll fetch them this time. The long line of distended necks stretched out, and seemed to be lowering to us. Now they are dropping. We'll get a shot, sure. Just then increased terror among our decoys caused me to turn my eyes toward them, and I saw that they were indeed in a terrible state, their necks stretched out even with the water, cackling and thrashing about in what seemed to be an extremity of terror. A moment more a rush of wings and a dark cloud seemed passing over our heads. Upon looking up a monstrous gray eagle was seen scooting across our decoys. It was but the work of a moment for the doctor and your subscriber to raise, and let him have a couple of barrels (No. 5), and another one No. 2, with no perceptible effect, as he only went off screaming, but as he flew we noticed something drop and strike the water just outside our decoys. "The scoundrel has dropped a duck," I said. "Yes," replied the doctor, as he glanced backward, "the blasted pirate had my duck." The thief had come in behind us close to our backs and scooped up the bird. If we had only seen him at it, a seven-foot bird from tip to tip would, ere long, have graced the table of the Jersey City Heights Gun Club.

Saturday found the wind still in the north-east, the bay low and the weather warm. Great rafts of wild-fool, geese, swan and ducks of various varieties lay out on the bars. A south wind would fill up the bay and drive these birds for food around and along the points on shore. Several more gunners had arrived, and the tide had come in to all (19 in all) in the morning on Monday evening, showing the effect of a short "ad" of Nye's, in the FOREST AND STREAM, and there was a scramble very morning for the best points. Nye missed it largely when he allowed the Kitty Hawk Club to get possession of Long Point and Rattlesnake Island. They are really good points, and the best the Kitty Hawks have here, but Nye has yet several points equally as good, and better, perhaps, when colder weather comes; but he ought to have held to that one.

We heard of some of the clubs in New York were very much exercised lest some of the J. C. H. boys should shoot over some of their points. Let them rest their souls in peace, the J. C. H. don't propose to intrude themselves on any one's premises, and while your correspondent was there, Major B., with E. P., the secretary of the club, to back him, were too well posted in their duties to the club to extend any invitations to foreigners, no matter what the previous promises or indebtedness may have been. The Kitty Hawk Club have laid out a sum of money in the way of a station and further down, and they are entitled to all it is worth.

In the neighborhood of Van Slyke's are other clubs known more or less to fame. The well-known Currituck Club (Gen. Hancock, who was a guest here, had some good shooting at a point opposite us last week). "The Lighthouse Club," "The Crow Island Club," "The Palmer Island Club" and "The Monkey Island Club," all were buying powder in larger or smaller quantities, and they were excited and re-echoed to the 10,000 rds. the fire was on.

Sunday we were down at the landing (no gunning here on this day) listening to Capt. Bill H. Walker's stories—he is the big shot and best gunner in the bay, so said—when a large canoe was discovered coming across the sound. It proved to contain, besides the boatman, Judge Tuffs and Mr. Keeler, of Boston, members of the Monkey Island Club.

Being Sunday they had come visiting, also, I believe, to get a little corner for baiting their canvas-back grounds. As we wished to see what of the country we could and we learned that Monkey Island was only about four miles from Jasper Wharf, another famous fishing resort like unto Nye's, we made a bargain with the boatman with the very courteous consent of Messrs. Tuffs and Keeler, to take us over with them. So after dinner we bade good-bye to Mrs. Nye (don't her dear heart "I there are far worse nor she"—if you don't cross her) and Thos. Hall and your humblest avowed embarked. We left big-hearted, as well as big-bodied, Ben Payne, Capt. Johnson, Dr. Burdett and that practical joker, Al Heritage, waving their hats on the wharfs as we sped across the bay.

We found Messrs. Tuttle and Keeler most pleasant fellow voyagers. Upon reaching Monkey Island we were cordially invited to land and visit their club house, while the boatman changed our things to a lighter craft. We entered the club house. Ah! what a sportsman's home was here. We were introduced to the other two members of the club, Mr. Ricker and Mr. R. H. Bishop, of New York. The club has but four members, all bachelors, we believe, and men of ample means. They have an ample club house, large gun-room in the centre, with old fashioned wood fire-place; four bedrooms at the four corners. Only four persons are ever allowed at the club at one time. If one member is sick or cannot come, he telegraphs or lets the others know somehow and they cast lots who shall take a friend. They have ample out-buildings, dining-room, kitchen, cellars, etc., etc., and the best points for canvas-backs in the whole bay. And don't they take comfort, those four jolly souls! The club keep a record of all their day's shooting during the season or year, and it is a paying institution financially it seems. We were kindly allowed to look over their last year's work. We do not remember the number of swan, geese and canvas-backs they brought to bag, but each man's count for each day was faithfully kept; and besides the large number they sent North to their friends, the number they allowed their steward to send to market brought them \$651, while their expenses in all were but \$430, leaving a net gain of \$221; and they live well too. They are gentlemen who, we hope, may live long to enjoy their well-earned good things.

We reached White's in due time, found the water here as usual, and very poor shooting. Several gunners were on hand waiting for leading wind and a fair canvas-back fill of the bay and set the fowl flying. Mr. Sanders, collector of the Port of Albany, with his friend, ex-District Attorney for Albany County, Mr. Hotaling, had been there several days, but with the exception of one day, when they bagged 130 ducks, they had poor shooting, getting only some fifteen or twenty birds each day, which is called there poor business. We tried the snipe one day, but found it hard work. Looked over the several fine points Mr. White has when there is shooting, and six o'clock Tuesday morning found us howling across the bay for Nott's Island, where we took the dirty little "Cygnets" again for Norfolk, at which place, after that tedious ride through the canal, we arrived in time to take the steamer Virginia, of the Bay Line, for Baltimore. We regretted very much there was no Old Dominion Line boat until the evening of the next day, Wednesday. We had half a mind to stay over in Norfolk; but as the weather was yet warm, and we had a box of ducks, besides some geese and swan, that we wished to present to our friends, we were glad to get home as soon as possible.

There are three desirable routes to the shooting grounds of Currituck: 1. Old Dominion Line to Norfolk, then little "Cygnets" through canal and bay to Nott's Island, where if you send word in advance John White will meet you and carry you across four miles to his place; or go in Cygnets ten miles further to Van Slyke's. 2. After arriving in Norfolk by steamer you can take cars to Elizabeth City, then steamer Harbinger, a nice boat and very pleasant trip to town dock (this keeps a good history here), then across country six miles to Nye's. 3. Or you can go by cars to Baltimore and then by Bay Line to Norfolk, or continue on through the State by cars to Snowden Station and then across country seventeen miles to Nye's. This trip can be made, they say, from New York to Nye's in twenty-four hours, but I reckon it a rather hard thing across the sand seventeen miles. Many of the Currituck Club take this route. Our next venture shall be the Old Dominion to Norfolk, cars to Elizabeth City, then steamer Harbinger, or to town dock and Bridgeton, as it is sometimes called, then for a dollar across country six miles to Nye's. The Harbinger is a pleasant boat; the living is good, and the Captain is said to be "one of them." May we meet him next year. JACOBSTAFF.

THE MELLOW HORN.

THERE is nothing so sweet, soft and graceful to me, as the notes of a fine fox-horn, when sound'd by one who knows what he is about. There is as much individuality in the notes given by different horns as there is in the human voice. This is very much the case, also, with the report of shot-guns and rifles. I can tell the report of an instant of any gun I ever owned. This I have done upon a wagger. The horns purchased from the shops are generally an shamification from their inception. The best horns are homemade. Procure a fine taper horn, as straight as you can get it naturally; do not have it scraped too much; and do not have the mouth-piece too sharp, nor the hole in it too large. The best horns are not over ten or eleven inches long. They can be heard further when squealed; are mellow and sweeter every way. I have found that the skin off the fore-leg of a wild cat with a broken horn, and single-armed men, dressed in piers, down one-third of the horn and neatly fitted, keeps the horn from jarring, and is a good thing, and need not be unsightly. Hunting-dogs and horses, either of them, can have a beautiful gloss put upon their coats very quickly, when not in work, and otherwise in fine condition (when fitting for the bench or prize ring) if mixed with generous feed in quality and quantity (combined with accurate grooming) a small quantity of flax-seed, or better, flax-seed meal be given. The latter must not be rusty. R. M. CONWAY.

ONE-ARMED GUNNERS.—Several one-armed gunners have made themselves famous. Some time ago we recorded a plover-shooting man named Green, who had lost an arm. Visitors to Havre de Grace would be familiar with the exploits of Wm. E. Moore, who has but one arm, and is among the best duck shots of that locality.

TEXAS.—Houston, Nov. 23.—Ducks and snipe are plentiful quail and chickens very scarce in this locality, but water and mud make it unpleasant sporting. Out of twenty-three days of this month about nineteen of them have been rainy.—WANDERER.

2. Should the bird, when flushed, gradually rise and suddenly dart upward, look for him on the nearest evergreen to where you saw him last; but if he at once rises to the top of the tree and then shoots off like an arrow, don't waste time looking after him, for he is a strong flyer and is way to some distant cover.

3. Should the bird fly up to a steep hillside it will alight on the ground.

4. But if from a hill to the level below, then look for your game well up in some tall hemlock or spruce, standing firm and immovable, on a limb near the body of the tree.

5. If the bird flies from one hill or knoll across a ravine to another hill, it will alight on the ground.

6. When flushed on a side hill and it flies off to the left, it will alight on the ground; but if it flies away to the right, it will alight on a tree-top, or to the right into a low evergreen or dark covert.

7. If it flies down a ravine and you observe it turn to the left, look for it in a low thicket on the bank; but if it turns to the right, look for it in a low evergreen.

8. If it flies by the point of a knoll it will usually double around it, to the left, will seek some covert under the bank; but should the point be to the right, it will alight in some evergreen not high up.

Remember, the shorter the distance the bird flies before alighting the more ready he is again to take to flight. If he trees immediately after being flushed he will take the most prominent limb in view, and, unless your dog holds his attention, will be away when he perceives you approaching; but should he fly some distance and be well followed up by your dog at once jump and cry, he will select some large hemlock or spruce and alight on a limb near the body of the tree, hug his feathers close and stand as motionless as a knot.

Try to get a side shot at him as it is surer than a front or back one. When approaching, if possible get a tree between you and your bird. If there is no cover, walk along in a careless manner as though you did not see him and intended passing by, and when within range shoot the instant you stop or he will be off like a bullet, unless your dog is keeping his attention fixed on him by incessant barking.

I do not claim the above rules to be infallible, but have found them to be generally correct in the settled districts that I have shot over in Northern Vermont and the Canadas. The gun used should be a No. 2, and a better one, if a rifled grouse are, late in the season, very tenacious of cover, and often, after they are shot through and through, will fly a long distance before dropping. As to the breed of dogs for this sport, I would recommend the red collie; they are very intelligent, with good voice and fair nose, with light, foxy movements, which make them well adapted for this work—treating grouse. The young sportsman should try all fair wing shots, and as he occasionally is successful in bringing his bird down he will gain confidence and become a more expert shot and as he grows older will quite likely deny shooting rifled grouse otherwise than when on the wing.

STANSTEAD.

SHOOTING GROUSE ON THE WING.

SOMEVILLE, MASS., Dec. 7, 1881.

Editor Forest and Stream:
I have just read the issue of Dec. 1, as is "sound as a nut" on the subject of shooting grouse on the wing, and I repeat it. Shoot at them on sight; let them have it, hit or miss. It seems as if this noble bird was possessed of something more than instinct, for if it is a possible thing for him he will surely put something between you and himself when he starts on his electrical trip through the brush. A bunch of brush, the top of a pine, hemlock, spruce, or a large rock, or even the butt of a large tree will answer his purpose; for I suppose he thinks that if he is out of sight he is out of mind. Now, my experience has taught me that it is almost useless to attempt to follow him with a "head," for long before I can take sight on him he has landed in Canada or some other place; and especially if it is a quartering shot to the right. When a partridge starts, I look to see which way he is going, and as they generally rise from the ground I throw my gun up to my face (instead of dropping it to the line of aim) and keeping both eyes open, shoot in ahead of where I last saw him. I am governed by the distance that he is from me as to how far ahead I shoot; but perhaps two or three times, if a quartering shot, as he has just started. His ring behind a tree-top or bunch of bushes is just what suits me, for when I see him going I know just what to shoot at. Now, although this manner may not be the best for open field shooting, I have faith to believe that there is none better for partridges in thick cover. What kept me back in the dark a long time was the use of fine shot. I used to shoot No. 8 and No. 10 at them, and in a while I would kill one when an open, straight-away shot offered; but how many, many times I have fired at them as they were going behind a tree-top, and would see the leaves and twigs fall. The shot struck just where I intended to have it, but the grouse would go on unconcerned as though there had been no shot in the gun; that is, apparently, but I have sometimes found them dead afterward. It is a self-evident fact that to cut down fifteen or twenty feet of bushes or tree-top, you must use heavy shot and plenty of powder besides. In the next place, it wants shot heavy enough to smash any bone in the bird after going through the brush, so as to drop them then and there, and not let them go away and die after long suffering, to be caught by vermin. After using fine shot a long time, I commenced using No. 4. The result was, that the first day I used it I killed four single birds dead in succession, and winged the sixth bird so that I soon got him, making five out of six. That converted me from fine shot for covert shooting. I now use a nine-pound, ten-gauge breech-loader, with 44 drams charge Lightning powder, and 1 1/2 oz. No. 5 chilled shot, and thence, to use the current slang, often literally "rubble to the racket" of IRON RAMBOLD.

HAVRE DE GRAVE DUCKING—Christiana, Pa., Nov. 23.—Since the 1st of November I have made many strolls for rabbits. Find them very scarce. Not one bird have I seen. I spent four of the first days of ducking at Havre de Grace with Broomfield and Collary. We bagged over seven hundred ducks, most all were of the red-head species. Black-heads were not shot. That is why "Hono" found them so scarce in market. They do not bring the price that the good variety bring, and gunners do not shoot them. They were, they were, they were, and so were blue-pate and blue wings. Black ducks were also very plenty. Canvasbacks would not dart to the boxes. The bushbackers got some, and stole lots of red-heads from the box-shooters. They should have a law passed to prevent its occurrence another season.—G. P.

DEER IN MASSACHUSETTS.

ALLEN'S, POCESSSET, MASS., NOV. 30.

THE open season for deer hunting closes with us to-day, and for the last three days little rest has been given to either dogs or game. As yet I have heard no estimate of the number killed, but I think it falls below the amount of last season. One man last year brought two hundred fresh hides, and he could not have got near all of the deer killed, as many are sent off whole.

A great many have been shot this season that could hardly have seen a snow storm in their lives, they were so small. It seems to me that a law which prohibited the killing of fawns, might tend to preserve the deer. Among the deer stalkers of Scotland the aim was not for hinds and fawns, but for stags. Killing these did not lessen the number of fawns in a season, and deer did not decrease as fast as where all are shot that are within range. Of the large number killed this fall very few are found with more than two or three points on their horns. A large number have no horns whatever; for does, and fawns too small to have any, are killed oftener than bucks. Fawns are often killed with the mothers, and one was shot near this village, the live weight of which was twenty pounds—no larger than a turkey cock. Sportsmen, while quailing, lower their gun without firing when the old bird rises from the cover followed by a half-fledged brood of young, the product of a second or third nesting. Why not spare the fawns as well? The hunter whose first deer weighs but twenty pounds has little to be proud of in the way of game.

The deer in this State are found mostly in the towns of Sandwich, Falmouth and Marshpee; a few may be found in Plymouth and Barnstable. Should the Cape Cod Canal be built, those in Plymouth would be isolated from those on the Cape. They used to be plenty in Plymouth woods till the fires burned over so much territory that neither foot nor cover was left.

The question of hunting with hounds has been ably discussed in the *Forest and Stream*. If deer hunting should be the only method, I have never heard of any jacking or torching. Still-hunting is out of the question on account of the dense thickets of scrub oak. The way with us is to surround one of these thickets and send in the dogs. I have known as many as nineteen men in one party, whose shares in a twenty pound deer would be a mouthful apiece.

MERKINS.

[We heartily second the suggestions of our correspondent that the killing of these fawns should be stopped. Such business is simply disgraceful.]

STATE PIGEON TOURNAMENTS.

NEW YORK, NOV. 21.

Editor Forest and Stream:
I not only agree with you fully in your views as to the pigeon tournaments of State Game Protective Societies, but I foresee the disruption of the association in this State if the present programme at its convention is continued. The idea of an association for the prevention of game acting in concert will disgust legislators, and thus destroy the very instrument by which it is prepared to attain their ends.

I was one of the dozen men who instituted the association, and was its president, but I retired in consequence of the abandonment of its purpose of organization.

CHAS. H. HASWELL.

A STILL-HUNTER'S ADVENTURE—Molra, Franklin county, N. Y., Nov. 29.—*Editor Forest and Stream:* A report has reached here that a man by the name of William Merriek, of the town of Brandon in this county, was, while still hunting deer, on the 17th, in the vicinity of Deer River, shot at by some person and slightly wounded. Merriek's account of the affair is that he was following the trail of a deer when he found struck in on the same trail he was following, which he shot. A moment after he heard a noise in the woods to a little one side from where he was standing. He went to find out the cause, and came to a ledge of rocks having a cliff-like face on one side, and leaning forward to peer over he had hardly put his face where it could be seen from the base of the cliff, when a gun was discharged from that point, the ball passing along his cheek and through the rim of his hat, without doing any more serious injury than a slight scratch of skin on his cheek. The muzzle of the gun was so near his face that the powder blasted and burned it considerably. The discharge came so sudden Merriek was dazed or stunned by it, so that before he could recover to pursue or even observe his assailant the latter had disappeared and eluded detection. It is reported that the owner of the dog is known and conjectures are made as to the man who fired the shot. But as nothing that is reliable is known as yet, the name is withheld. Some of Merriek's neighbors, it is reported, think that the story was fabricated by Merriek himself, and that he was that he made up the above story to create a sensation. I am not personally acquainted with Merriek; therefore, will not express an opinion as to the truth of his story. I have only heard of him as being one of a number of still-hunters that hunt deer in that vicinity and make a practice of shooting all dogs that they find chasing deer.—ADRIAN ONDAK.

GETTING OVER THE FENCES.—The movements of a young city sportsman never fail to furnish amusement for his older and more sedate companions. His freshness and vigor in the morning create a laugh, and when he crawls along and wants to lie down after a few hours' hunting, smiles are exchanged at his expense. His manner in taking fences is characteristic. The first he reaches with one hand on the top characteristic. While the gun is held high in the air. The second fence calls out a leap which shows considerable less spring. The third is taken with one foot on the lower rail. The next is climbed over with a lively sort of a scramble. He sedately climbs the fifth, lies upon the next and rolls over it, sits a little while on the seventh, crawls under the top rail of the eighth, the middle rail of the ninth, the bottom rail of the tenth, hunts for an opening in the eleventh, and possibly refuses to take the next until he has reached the twelfth. His stretching himself full length on the ground for a while, and hunting, which commenced with a bold dash through all the rose-brier patches and thickets in the first few fields, is now confined to the cow-patches and open places, and he is willing to let his companions start all the game, or even to second any motion to give up and take to the roads, shame alone preventing him from making the proposition.

shoes are cut through at the toes and the bottoms of his trousers worn to fringe in the contact with the briars and twigs in his early rushes; his hands are bleeding, and the back parts of his knees feel very much like giving in; but let a rabbit start or a quail flush, and all the troubles are instantly forgotten, and he is as alert as his oldest and most seasoned companion, but as soon as the excitement is over he relaxes again and shudders at the thought of the next fence.—*ANON. ORK CAL.*

RANGELY NOTES—Raugley, Nov. 25.—Still-hunting thus far has not been satisfactory, the light falls of snow wholly disappearing or forming a crust, making it too soon. Soon after the first snow, some four weeks ago, D. T. Haines and Rufus Crosby, noted guides and hunters, who had been trapping near Arnold's Bog, started a caribou which the first named hunter wounded, but failed to get, owing to melting of snow. Since then they have shot a large buck with unusually fine antlers. Haines got in the first shot with Winchester rather high in the shoulder. The buck ran near Crosby who gave him a charge of buckshot, one of which entered the eye and brain, bringing him down. Last Tuesday Elmer Snowman, while hunting in company with the above named parties near the same place, shot a two-year-old caribou, shooting twice with a light sporting eighteen-inch .32 calibre rifle, hitting at each shot, grassing him while on the run. As it went the air is redolent of broiling steaks of said caribou. Thanks to the generous hunter who also brought me a share of the one shot by Messrs. Haines and Crosby. Last Wednesday was enjoyed by the local sportsmen in a grand hunt with seven on each side, explained by A. J. Haley and Charles Neal, Haley's side winning by thirty points in a total count of nearly five thousand. Sharp practice was charged by the defeated party, nevertheless I enjoyed a capital supper at the expense of the latter at the Oquossoc House. On the day preceding the grand hunt a party of a dozen or more with several dogs chased a three-footed bear till dark unsuccessfully. Bruin, though heavily handicapped, could take care of himself on a long chase. He had been hunted the two preceding days by a party of three and a dog.—WARFIELD.

PHILADELPHIA NOTES—Nov. 30.—The season thus far for upland shooting has been a total failure, as was prophesied. All our sportsmen going out from Philadelphia and choosing their grounds in New Jersey, Delaware and Maryland, report equal scarce. Those who happened to strike the light of woodcock had sport, but this was but of short duration. We have not a new gentleman to start in December for North Carolina, where birds suffered less last winter. Duck shooting at Havre de Grace is moderately good. The fowl are fast learning the difference between a body of their own kind and a flock of stools or decoys, and do not give the shooting they did earlier in the month. Ten brant were killed at Barnegat and Tuckerton Bays last week.—HOMO.

NORTHERN MICHIGAN—Washington, D. C., Dec. 1.—Have just returned from a month's trip to Northern Michigan. Found game plenty in neighborhood of Reed City and to the northward. Had only one slight tracking snow up to Nov. 22, which lasted two days and was duly improved, about thirty deer being killed in that vicinity. The new Michigan law in regard to not shipping game out of the State is a dead letter, as venison is shipped to the little towns near the State line and taken across the line in wagons and re-shipped to all parts of the country.—T. F. E.

MASSACHUSETTS—Linu, December 3, 1881.—Birds are quite plenty along all the shores of Massachusetts now; mostly cut and old wives, some widgeon, and now and then a broad-bill. One of our gunners shot fifteen last Wednesday in an hour. An unknown man shot a white-winged teal on the marshes a few days since. I never saw one, but take the word of older gunners than myself. The geese are flying this week quite plenty, but fly too high.—S. M. S.

THE SHREANDOAH VALLEY.—Deer, "pheasants" (ruffed grouse) and turkeys are more abundant this year in the Shreandoah Valley than for a long time. It will really be those of your readers who are lovers of deer and turkey hunting to seek their ground somewhere in this valley. Your correspondent saw a letter from Wilcox Mills, Va., to-day, in which it is stated that quail were comparatively plenty there, notwithstanding the snows of last winter.—HOMO.

WOODCOCK NEAR HARTFORD—Hartford, Conn., Nov. 29.—On Tuesday, Nov. 22, a friend and myself killed several woodcock within ten miles of Hartford. They were large, fat birds, and in better condition than any I have seen this season. While I have occasionally shot a straggler later than this, I have never in twenty years' experience known so many woodcock so late as Nov. 22.—WM. M. HUNSON.

A CORRECTION—New York, Dec. 5, 1881.—*Editor Forest and Stream:* In issues of Dec. 3 and 7 I advertised Greener Hammerless, 22, 608, as winner of Anybody Cup at the Westminster Kennel Club reception. I am informed I was mistaken as to the gun, and that it was a gun of another maker. I describe the correction to be made.—HENRY C. SQUIRES.

MISSOURI.—Columbia, Dec. 2.—Our game is usually plentiful, i. e., the smaller varieties—turkeys, prairie chickens, quails, grouse, etc., and to be prevented from killing the same in season or out of season, our sportsmen (?) would look upon as a restriction of their rights, and inconsistent with the freedom of an American citizen.—O. B. R.

A WHITE DEER.—Number Four, Nov. 23.—A white deer was brought out of the woods after a few days ago. It was all white but the head, which was the ordinary color. It was caught in the water after being driven by hounds.—MUSSET.

NEW BRUNSWICK—St. Martins, Nov. 23.—Game is very scarce here. Ruffed grouse nearly all gone. Caribou very scarce. Ducks have been plenty, but are now all gone south.—H. V. S.

WASHINGTON TERRITORY—Fort Walla-Walla, Nov. 9.—Sharp-tailed grouse are more plentiful than I expected to find them, and fair bags have been made.—C. BANDIER.

NEW JERSEY—Wenonah, Nov. 21.—As I reported to you last spring, the destruction of quails was almost universal in this region.—MILTON P. FIBBER.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

Table with columns for FRESH WATER and SALT WATER, listing various fish species like Yellow Perch, Rock Bass, and Smelt.

Not shall I leave thee unnoticed in my discourse, O Thymanthus (grayling), whose name is given thee by a flower; whether the waters of the Tieton there, or those of the pleasant Arctics a flower thou art.

ANGLING IN CALIFORNIA.

SAN FRANCISCO, Nov. 15, '81

Editor Forest and Stream:

Angling as an art is fast increasing on this coast, and where one man indulges in the tackle, and practiced legitimate angling five years ago, I see are twenty now.

There is excellent angling in our bay for smelts, perch, tomcod, etc., and this is a favorite amusement of clerks and others who cannot go to the salmon rivers of the north, nor to the nearer trout streams.

Trout fishing in San Mateo County, in the Pescadero and Purisima creeks has not been good for some years, and the fishing in the Lagunitas, in Marin county, is almost a thing of the past.

WORM AND FLY-FISHING BY NIGHT. We take the two following stories from "My Life as an Angler," by William Henderson, a book published by W. Satchell & Co., London, which we noticed in our issue of May 5.

One evening in June, when seated by the fireside of the inn at Weldon Bridge, Charlie and I fell into a discussion on night fishing, with worm for trout in warm weather, and we agreed that it would be well to give it a trial and ascertain how far our views were correct.

The fact that the hook is so far below the surface, in proceeding only the waters where they fit causes our protective laws to be looked upon as of a somewhat venial character.

Trout fishing in San Mateo County, in the Pescadero and Purisima creeks has not been good for some years, and the fishing in the Lagunitas, in Marin county, is almost a thing of the past.

One night when at Gernsack, in the Blackfoot Forest, a strange fancy took such strong possession of me that I felt constrained to bow to it. The night was pitch dark, and distant thunder gave the proverbial warning that all fishing was out of the question; still, mad as the idea seemed, I determined to make one essay in front of the hotel.

It would appear that a California salmon, arrived at maturity, has been taken in this State. Major J. W. Wilson, former President, now Chief Engineer of the Western N. O. Railroad, informs me in a letter of Nov. 25 that he enjoyed one on Thanksgiving Day, which was over twenty inches long, and weighed about five pounds.

It would appear that a California salmon, arrived at maturity, has been taken in this State. Major J. W. Wilson, former President, now Chief Engineer of the Western N. O. Railroad, informs me in a letter of Nov. 25 that he enjoyed one on Thanksgiving Day, which was over twenty inches long, and weighed about five pounds.

Railroad, informs me in a letter of Nov. 25 that he enjoyed one on Thanksgiving Day, which was over twenty inches long, and weighed about five pounds.

cluded that a passing stick had struck my hook. Another cast of the line, and there was no room for doubt, a heavy fish was pulling violently. It was long before the strength of the current allowed me to land my prize, indeed it was only by the lightning's flash that I could judge where or how to do this.

ANGLING LITERATURE.—Should any one be inclined to wonder at the fascination which this literature exercises over its votaries we would have him reflect that in the plain, almost rustic simplicity of the best books on the subject those charms of wood-land and river scenery which are so dear to the wandering fly-fisher are faithfully reflected.

WHITFISH TAKE THE FLY.—MIRA, N. Y., Nov. 30.—I noticed an article some time ago in the FOREST AND STREAM in regard to whitefish taking the fly or bait. We have a fish in the lakes in the Adirondacks that is called whitefish.

THE CARP AS A FOOD FISH.—PHILADELPHIA.—Mr. Richard Holliday, of Queens Co., Md., has presented to Col. Hughlett, State Fish Commissioner, thirty-two German carp, raised by him for distribution in the Potomac and Wisconsin rivers.

THE LATE S. A. KILBOURNE.—In the window of the publishing house of Charles Scribner's Sons, in Broadway, we have noticed a fine crayon portrait of the late Mr. S. A. Kilbourne, the celebrated artist, whose delineations of our game fishes have so often been noticed in our columns.

FISH CULTURE. I have caught them in Chateaufort Lake many a time with a hook, and have frequently caught them with an angleworm when fishing for trout there. About the last of August, I think it was, they used to take the fly which we called the "shad fly," and we could take large numbers of them in this way.

FISH DISTRIBUTION IN NEW YORK. ROCHESTER, N. Y., Nov. 25. The N. Y. State Fish Commission are now ready to receive orders from any parties in this State wishing to stock public waters with salmon trout, brook trout, California mountain trout, black bass, rock bass, Oswego bass, yellow perch and bullheads.

CALIFORNIA SALMON IN NORTH CAROLINA. MORGANTON, N. C., Nov. 28. It would appear that a California salmon, arrived at maturity, has been taken in this State.

EDITOR FOREST AND STREAM: It would appear that a California salmon, arrived at maturity, has been taken in this State. Major J. W. Wilson, former President, now Chief Engineer of the Western N. O. Railroad, informs me in a letter of Nov. 25 that he enjoyed one on Thanksgiving Day, which was over twenty inches long, and weighed about five pounds.

Railroad, informs me in a letter of Nov. 25 that he enjoyed one on Thanksgiving Day, which was over twenty inches long, and weighed about five pounds.

I have other evidence of the presence of salmon in that stream, as they were taken and eaten last year. Major Wilson, however, is better acquainted with the fish than I am, and in a fresh state than most of our citizens, and his statement is more conclusive.

CARP IN TENNESSEE.—Nashville, Nov. 24.—Within the limited confines of a double bath-room your humble correspondent is confined, watching the faithful delivery of 1,500 German carp, received here this morning by Col. Geo. Ekers from the National ponds at Washington, D. C.

CARP FOR MASSACHUSETTS.—The result of the experiment of the Hodon Gun Club or Webster to stock the ponds in that town with carp will be watched with interest. The five cars received from the United States Fish Commission arrived safely, and the young carp will be kept in private ponds until they are large enough to be eaten by the pond and bass, which will be transferred to "Channingbamonyamony," or "Big Pond."

IMPORTATION OF TENCH.—On the 2d of this month Capt. Auguste Briand, of the French steamship St. Germain, presented to Mr. W. A. Conklin, Superintendent of the Menagerie at Central Park, New York city, twenty tench—Tench vulgaris. The fish had been twenty-five days from the ponds in France and the passage had been stormy, yet they were in good condition.

MORE CARP FOR NEW YORK.—Commissioner Blackford has received from Washington the second thousand carp fry for distribution in the State. The fry are now being hatched and are nearly exhausted. Mr. Wm. L. Allen, of Newark, N. J., has received from Mr. Blackford several lots for ponds in Morris county, N. J., which he has forwarded to those owning them.

DEATH OF A FRENCH FISH CULTURIST.—Mr. A. Colombe, Administrateur-Directeur of the Societe Anonyme Francaise, died a few weeks ago. The S. city is largely interested in fish culture in both France and Belgium and has a capital of 200,000 francs. It was to this society that Prof. Baird sent 100,000 eggs of the German tench in the winter of 1878-79, and other fish which have been received by the well-known Societe d'Acclimatation.

THE KENNEL. FIXTURES. BENCH SHOWS. December 14, 15 and 16, at Lowell, Mass., Lowell Dog Show. Entries close December 12. (has. A. Andrew, West Exford, Mass., Superintendent.)

FIELD TRIALS. December 10 (or immediately after the close of the National Trials at Grand Junction, Tenn.)—Pennsylvania Field Trials. Entries close Dec. 5 at 9 A. M. J. R. Stanton, Secretary, Pittsburgh, Pa. Address will be Grand Junction Tenn., after Dec. 1.

THE EASTERN FIELD TRIALS.—II. (The report of the Trials last week contained a summary of the running up to Tuesday night and the result of the first heat. We give this morning a more detailed account of the running on WEDNESDAY.)

When the morning broke everything was enshrouded in dense fog, but as we left the dock, the sun broke through, and just before we reached the island, a nice breeze sprang up from the southwest, clearing us with prospects of a fine day.

We landed at 9:45, and Monarch and Lizzie were at once used off in the lot just east of the Club House. Monarch had been very sick the night before, but appeared to be better, although his work showed that he was far from being himself.

When the morning broke everything was enshrouded in dense fog, but as we left the dock, the sun broke through, and just before we reached the island, a nice breeze sprang up from the southwest, clearing us with prospects of a fine day.

THE JUDGES

were Hon. Jas. M. Thompson, Covington, La.; Col. Jas. Gordon, Fort Jones, Miss.; Marion Bankston, Amite, La.

ALL AGED STAKE.

ENTRIES.

Mr. George Smith, of New Orleans, enters red Irish setter dog Branch—(Plunkett-Steel)—4 years old. Mr. Chas. B. McGinnis, of New Orleans, enters Gordon setter—(Rupert-Whip)—5 years old. Mr. Jno. K. Reynard, of New Orleans, enters Llewellyn setter bitch Flossey—(Baker-Dash)—2 years old. Mr. J. W. Jackson, of Opelousas, La., enters red Irish setter dog Mark—(Thorstein-Thack)—3 years old. Mr. W. O. Percy, Thibodaux, La., enters pointer bitch, Dot of Dixie, solid red—(Hoyden-Whit)—2 years old. Mr. Edmond Odell, of New Orleans, enters pointer bitch, Queen, lemon and white—(Pat-Nelie)—5 years old. The dogs were drawn 1 run in the following order: Mark and Queen. Gordon and Vick. Dick and Flossey. Flossey and Dot of Dixie.

THE RUNNING.

MARK AND QUEEN.

The first brace down, Mark handled by Jackson and Queen by Odell, were thrown off in a swale, at 12:30. Both dogs went away slowly. The swale and unencultivated garden beyond were both drawn blank. Passing through a small cornfield they entered a stanch place. Mark refused to back and went in. Queen ordered forward the handler failed to find anything in front of her. In a cornfield beyond, Mark dropped on a point, coming suddenly down wind. Queen brought up, backed in good form. The birds were flushed by Jackson, and Vick by Odell. At the report of the gun, Queen broke shot and retrieved on her own. On being ordered on, Mark retrieved the other bird, but it had style, failing to deliver to handler's hand. Going on Mark flushed single bird in crab grass and dropped to wing. Two coveys having been flushed by Queen, the birds were taken back, and drew the sedge cover without a bird. Two birds were flushed in same cover by Jackson. A cottonfield, with crab grass cover, was now drawn. Both dogs pattered and seemed unwilling to work. Mark came to a point, but nothing could be found in front of him. Going back both dogs were right over two birds in a swale. Queen brought up, backed over a fence Queen flushed two birds in thick cover, and several others were either walked up by the handlers or flushed by the dogs. In a thicket of scrub oak Mark found and pointed a single bird, which flushed some time after the dog had established his point. The brace was then ordered up, and Mark declared the winner of the heat. Down 3 hours and 15 minutes.

GORDON AND VIO.

Gordon, handled by W. W. Titus, and Vio by Jno. B. Watson, were then put down in a cottonfield. Both dogs showed fair style and pace. In briars on the edge of the field Gordon drew to a point on a covey in grass and sedge. He was flushed before handler had time to get to him. Gordon dropped to wing. On being ordered on, he made a point on a single bird. Titus finished, shot, and missed, Gordon dropped to shot, Vio remained steady. Coming up a swale at full speed, Vio dropped suddenly on a beautiful point on a fresh covey. Gordon covered, and if there had been a pack of birds he would not have passed but failed to locate the birds which were in front of Vio and lay very closely. The birds were walked up by the handlers, but not shot at. Going on, Titus shot and killed single bird flushed by spectators. Vio broke shot and retrieved on her own, hitting badly. A bird was then flushed up and gun fired. Gordon sent to retrieve, did so in the most approved style, sitting on his haunches and delivering bird into handler's hand. Dogs ordered up, judges declared Gordon winner of the heat. Down 3 hours and 15 minutes.

SECOND DAY.

BRANCH AND DICK.

Branch, handled by F. P. Watson, and Dick by Jno. G. Watson, were put down in pine woods at 9:45. Going half a mile, Branch pointed, but when ordered on failed to find birds. A covey was flushed some distance away, and the dogs put down on scattered ground. Branch pointed a single bird, but Dick brought up to back, refused, went ahead and pointed same bird. F. P. Watson finished, shot, bird fell some distance away. Dick broke shot, but Branch remained firm. Ordered on, both dogs pointed a wounded bird retrieved by Dick's handler. Dick ordered to retrieve, did so in bad style. Branch then pointed a single bird, which flushed before him, the dog dropping to wing. Dick then made a stanch point, but moved up of his own accord. Neither dog showed much style or speed during the running. At 10:50, dogs ordered up to back, did so, but Dick was shot, but was allowed opportunity to back and retrieve.

FLOSSY AND DOT.

Flossey, handled by Reynard, and Dot by Percy, were thrown off in same cover at 11 o'clock. Flossey immediately found and pointed single bird, and Dot backed in good shape. Branch, brought up to back, refused. Reynard finished and killed the bird. At the report of the gun, Flossey broke shot, but Dot dropped. Ordered to retrieve, Flossey did so splendidly. The bird was then thrown for Branch to retrieve, which he did in a wretched way, mousing it fearfully.

Ordered on, Flossey dropped on a splendid point, the bird flushed, but Flossey continued to point, and Dot backed up to back and could be found. Going along, a gray fox, flushed by the judges, galloped away through the waving grass.

"Laird Ho" My Kingdom for a pack of hounds. We were all in the mood for a hunt, and if there had been a pack of hounds on hand, the Louisiana Field Trials would probably have been organized, or dissolved, into a fox-hunt. After an almost interminable tramp through the pine woods, Flossey found and pointed a small covey, which flushed before the judges came into view. Ordered to retrieve, Flossey did so in good style. Percy moved on, crossed a fence and located the birds. Reynard finished, and killed, both dogs dropping to shot. Dot ordered to retrieve, did so in very good style. Going after the scattered birds, Dot found and pointed a single bird on the margin of the bayou. Flossey came up to back, did so, but Dot was shot. She had passed Dot, and catching sight of her in the bushes, turned her head and backed with her tail toward the other bitch. Percy finished, but did not shoot. Both dogs remained firm. A bit further on, Flossey dropped on a point, but the judges ordered her to retrieve, which was done without flushing the covey. Brace ordered up, and Flossey given the heat. Down one hour and five minutes.

THE JUDGES

The Judges declared Branch winner of heat between him and Dick.

MARK AND QUEEN.

Mark best Queen. Gordon best Vio. Branch best Dick. Flossey best Dot of Dixie.

MARK AND GORDON.

Mark, winner of first, and Gordon, of second heat, were put down at 12:35, and worked up to the cover from which Flossey had been called up.

Gordon immediately flushed and dropped to wing. The dogs were then sent over the fence after the scattered birds. Inside the field Gordon pointed, and then moved on. Then, in a dense thicket, Gordon pointed a fresh covey from a log, and Mark backed. This was the first time that Gordon pointed on same bird. Ordered on, back dropped on a single bird, and Gordon backed. Jackson finished and snarped, having failed to put shell in his gun. Mark then pointed single bird, which was flushed, but not shot. Then Gordon dropped on a point, and Mark coming up, refused to back, but went ahead and came to point on same bird. Titus finished and killed, and both dogs broke shot, but dropped at command. Mark retrieved the bird very badly, refusing to deliver to handler. The bird was then thrown and gun fired, and Gordon to order retrieved it seawards artem. Going on, Mark flushed single bird. The brace ordered up at 1:30, Gordon winning the heat.

BRANCH AND FLOSSY.

Branch and Flossey, each winner in a preceding heat, were ordered down at 1:35. Branch at once came to point. The bird was flushed and shot, when Branch broke shot, but dropped at command. Flossey, who had to retrieve, did so fairly. Branch pointed "stink bird," and Branch backed to order. Keeses of half-hen was then taken for lunch. Dogs were thrown off in pine woods at 2:45. Here Flossey ranged splendidly, showing fine style and pace. Branch came to point on a covey, and held it for a long time while Branch was brought up to back. He refused, came alongside and pointed. Reynard shot and killed, and Flossey broke shot, but dropped to order. Ordered to fetch she retrieved the bird in a creditable manner. Going on, she flushed a single bird, but did not shoot. Branch then pointed a single dog dropped to shot. Branch then pointed single bird, which flushed after he had established his point. Soon after Flossey pointed single bird, and Branch backed her. Ordered to finish, Branch shot and killed the bird. Both dogs were unsteady, and showed disposition to break shot. Branch retrieved bird in bad shape. The brace was then ordered up, and the heat given to Flossey. Down 35 minutes.

SUMMARY SECOND SERIES OF HEATS.

Gordon best Mark.

Flossey best Branch.

GORDON AND FLOSSY.

Gordon and Flossey were then put down to run for first place. The cover was the same—thin sedge grass, in pine woods. Both started at a rattling pace, showing good style and action. After a gas-on-place tramp for half an hour, Flossey pointed a single bird, and Gordon coming up, backed her in grand style. The bird was flushed by Reynard, but not shot at. Ordered on, Flossey came to another point on single bird, and Gordon backed. The bird was killed by Reynard and retrieved by Flossey. Gordon then pointed a single bird, dropping on his belly in the grass, and Flossey coming up pointed bird over his head. Titus finished and killed, both dogs being somewhat unsteady under the gun. To order Gordon backed to order, and Flossey backed to order. He pointed, but moved on, and roared the bird some distance, but could not locate it. The Judges, following, flushed the bird to one side. Flossey then pointed, Reynard finished the bird, but his gun failed to fire. The dogs were then ordered up at 4:30, and Flossey declared winner of the heat and best place.

GORDON AND DOT.

After consultation the judges selected Dot of Dixie to run with Gordon for second place. The dogs were thrown off at 4:40 on same heavy of scattered birds. Gordon pointed a single bird, which Titus finished and killed, the bird being retrieved by Gordon, and Dot then pointed "stink bird." Ordered on she pointed a covey in grand form. Arched and flushed, but not shot at. Sent after the scattered covey, the dogs came to a point simultaneously, fifty yards apart. The birds were flushed, but not shot at. Both again pointed in sedge-grass ten yards apart. Three birds were flushed, but not shot at. Gordon backed over same ground, Gordon pointed and pointed a single bird, which was flushed but not shot at. Gordon then flushed a single bird, and Dot, not to be out-done, followed suit. Night coming on the dogs were ordered up, after being down 35 minutes.

THIRD DAY.

Gordon and Dot were thrown off at 10:30, in open pine woods, with sedge-grass cover, and a few scattered birds. The dogs were then sent over the fence after the scattered birds. Inside the field Gordon pointed, and then moved on. Then, in a dense thicket, Gordon pointed a fresh covey from a log, and Mark backed. This was the first time that Gordon pointed on same bird. Ordered on, back dropped on a single bird, and Gordon backed. Jackson finished and snarped, having failed to put shell in his gun. Mark then pointed single bird, which was flushed, but not shot. Then Gordon dropped on a point, and Mark coming up, refused to back, but went ahead and came to point on same bird. Titus finished and killed, and both dogs broke shot, but dropped at command. Mark retrieved the bird very badly, refusing to deliver to handler. The bird was then thrown and gun fired, and Gordon to order retrieved it seawards artem. Going on, Mark flushed single bird. The brace ordered up at 1:30, Gordon winning the heat.

The brace was then ordered up, Gordon winning the heat and second place. Down forty-five minutes. After consultation the judges declared Dot entitled to third place.

FOR SECOND AND THIRD PLACES.

Gordon best Dot.

Dot best third.

NEW ORLEANS GUN CLUB STAKE.

ENTRIES.

Mr. John K. Reynard, of New Orleans, enters Spot, liver and white pointer—(Douglas-Dick-Vic)—1 year old. Mr. Chas. H. Fontaine, of Arcola, La., enters lemon and white pointer Hec—(Dasher-Dick)—1 year and 2 months old. Mr. J. W. Jackson, Opelousas, La., enters liver and white pointer Lorn—(Faust-June)—2 years old. The dogs were drawn to run in the following order: Spot and Hec. Lorn a bye.

THE RUNNING.

Spot, handled by Watson, and Hec, by Fontaine, were put down on covey of scattered birds at 11:30. Spot immediately drew to a firm point, but his handler failed to find bird in front of him. A cornfield was then drawn, and Hec flushed a covey in some briars on the edge of a yard. Crossing over, Hec dog pointed the same covey in the same place. Hec was flushed, but could not be seen by the handlers. Spot then found and pointed a single bird and Hec backed to order. The bird was flushed by Watson, but not shot, and both dogs charged to order. Working on, Spot pointed another single bird, which Watson flushed and shot at, but failed to kill. Both dogs were steady under the gun. A dead bird was then thrown by hand, and a gun fired. Hec sent to retrieve, did so indifferently. The same performance, with a fresh bird, was gone through with for Spot's benefit, when he retrieved the bird fairly well for a novice.

The dogs were then ordered up, and Spot declared winner of the heat. Down one hour and 45 minutes.

Hearing some rapid firing near by, the judges, thinking it was some of our party, went over with the dogs and handlers. They met a native hunter, who was shooting. He knew most of the crowd and hailed us with, "What the thunder are you fellows doin' out with all them switch-tail pointers?" "Goin' to kill every bird in the country?" "Old Fay here can just knock the tops off the whole lot of 'em, if he had his master, and always sets the tarral foot when he gets in company."

Fay was a superannuated specimen of a setter. His eyes were dim with age; his front knees sprung, and judging from certain "laid marks" on him, he was a dog of remarkably sedentary habits, yet Fay was like a single cat—a good deal better than he looked. Lorn was put down with Fay to work some of the wire edge off, before running with Spot. Fay immediately pointed a single bird. Mr. Bank finished, shot and winged the bird. Fay broke shot and retrieved in gallant style. I thought he had swal-

lowed the bird whole, but he brought him in alive. "You should teach your dog to charge, Mr. Bank," remarked one of the judges "Charge thunder!" said he. "You just shoot off a gun and you'll see how he charges; he will get to a bird by the time it strikes the ground, every time." Ordered on, Fay came to a point. The birds flushed and shot at, and Fay "charged" again over the hills and far away.

LORN AND SPOT.

Fay was then taken up and Spot put down. He soon pointed a single bird. Lorn brought up to back, went ahead of the other dog and finished. Watson shot and killed, and Spot sent to retrieve, did so badly. Ordered on, Lorn flushed a single bird. Spot then pointed. Lorn called up to back again, went ahead and finished. Watson shot and missed. The dogs were sent ahead again, both showing good style and pace. Spot pointed a single bird, which was flushed and killed by Dr. Young. Sent to retrieve, Spot did so in good style. The dogs were then ordered up, and Spot declared winner of the heat. Down thirty-five minutes.

Hec AND LORN.

Hec and Lorn were then thrown off. A large covey got up, whether flushed by the dogs or not could not be ascertained. Following the Hec, Lorn flushed, and Lorn two ducks in rapid succession. The handlers then agreed to divide honors, and to draw for the first and second prizes. Fontaine won first and Jackson second prize. The dogs were down fifteen minutes.

SUMMARY.

Spot best Hec.

Spot best Lorn.

Hec and Lorn drew for places, Hec taking second, and Lorn third.

FIFTY STAKES.

The puppy stakes were run near Arcola owing to the scarcity of birds on the grounds near Amite.

ENTRIES.

Mr. John K. Reynard enters Spot, liver and white pointer, whelped December 20, 1880. (Dick-Vic). Mr. G. S. Watson enters Dash, black setter, whelped May, 1881. (Dash-Di).

Mr. J. S. Harris enters Hec, lemon and white pointer, whelped July 14, 1880. (Hec-Di).

Mr. Edward Fontaine, Jr., enters Cliff, lemon and white setter, whelped May, 1880. (Dolb, dam unknown.)

Mr. J. G. Watson enters tip, solid liver pointer, whelped December 20, 1880. (Dick-Vic).

They were drawn to run as follows: Dash and Hec. Spot and Cliff. Tip a bye.

DASH AND HEC.

Dash, handled by G. S. Watson, and Hec, by Henry Fontaine, were cast off in open pine woods at 11:30, on a covey of scattered birds that had been flushed by spectators. Dash soon flushed a single bird. A field was then drawn blank. In a field beyond, the dogs were put down on a covey of scattered birds. Dash soon found and pointed a single bird, and Hec backed in good style. The bird was flushed and shot by Watson. Dash ordered on again pointed a single bird. The brace were then ordered up and decision reserved.

SPOT AND CLIFF.

Spot, handled by John G. Watson, and Cliff, by Fontaine, were then put down on same birds. Spot immediately drew to a firm point, but his handler made a false point. After drawing several fields and a long stretch of pine woodland, Cliff flushed a covey. Then Spot found and pointed a single bird, and soon after drew, and came to a point on a large covey. The birds were flushed by Watson, and shot at, when Spot broke shot. Sent to retrieve, Spot declared the winner of the heat. It was also decided that Dash had won first heat.

SUMMARY FIRST SERIES OF HEATS.

Dash best Hec.

Spot best Cliff.

DASH AND TIP.

Tip was then cast off with Dash in sedge grass cover, in an uncultivated field. Tip soon found and pointed a covey in good style. John Watson finished the birds, shot and killed, but Tip broke shot. Ordered to retrieve, he pointed dead bird, and then retrieved in good style. In the woods beyond, Dash came to a point on another covey. The birds were flushed but not shot at. Dash then finished three single birds in rapid succession, and chased. A bird was then thrown, and a gun fired, and to order Dash retrieved the bird in splendid style. The dogs were then ordered up, and the Judges declared Dash the best.

SPOT AND DASH.

Spot and Dash were then put down on a covey of scattered birds. Spot soon pointed single bird, and Dash brought up to back refused. Spot then pointed another bird. The bird was flushed and killed by Dr. Young, and Spot retrieved in fair style. Dash then pointed a single bird, and Spot backed to order. Spot then pointed a single bird, and Dr. Young and Hec killed, and Dash to order retrieved it. Ordered on, Spot pointed again and bird was flushed and killed. Then Dash pointed. The bird was killed by Watson and retrieved by Dash. The dogs were then ordered up and Spot declared winner of the heat. After consultation the Judges gave Dash second and Tip third prize.

SUMMARY.

Dash best Tip.

Spot best Dash.

Spot wins first, Dash second and Tip third.

PERSONAL.—Among the many good men and true we met at the Field Trials we will mention: H. M. Pathe, Geo. Smith, Jno. N. Reynard, Edward Odell, Chas. B. McGinnis and Geo. Wyclif, Han, of New Orleans; J. G. Watson, F. P. Watson, Henry Fontaine, Grandison Watson and John G. Curry, of Arcola; Howard Williams and Marion Bankston, of Amite; J. W. Percy, of Thibodaux, and J. W. Jackson, of Opelousas, and last though not least "Arch" Watson, the mighty truck hunter of Greensburg.

In conclusion I would say that the gentlemen composing the New Orleans Gun Club deserve great credit for the manner in which they have, in the face of so many difficulties, gotten up those trials. Success is sure to crown their efforts when such men as Odell, Reynard and Fontaine are at the fore. My thanks are due and I hereby tender them, to all those true sportsmen whom I was fortunate enough to meet at Amite.

DAM OF ST. ELMO II.—In our issue of Nov. 24, we spoke of the breeding of Prairie Rose as unknown to us. We have since learned that she is by Berghaus's Bake out of Whitman's Pearl. Prairie Rose won second in the nursery stakes at Nash ville in 1878. Rose is black and white in color, and is said to be highly intelligent, and was an excellent dog. She is the property of Mr. F. L. Sheldon, of Rahway, N. J.

CANINE FIELD TRIAL VISITORS.—We had the pleasure last Friday of looking over a number of canines just back from Robbins' Island on their way to Grand Junction. Among those who accompanied the Ewer, Geo. D. Dyer, and who are at this time in the Grange Dale, Dashing Monarch, Plantington, Daisy Laverack, Ferida, Jennie and Jennie II. With these there were Mr. Donner's Victory, by Ranger II, out of Star and St. John by Ranger out of a native bitch.

THE LOWELL SHOW.—We learn that the U. S. Cartridge Company have offered to the Lowell Bench Show a 6 h. Smith & Wesson revolving rifle, .32 calibre, with an automatic ejector, as a special prize for the best pointer in the show, open to all. Prospects for the success of the show are said to be excellent.

THE NATIONAL FIELD TRIALS.

(Special Telegram to Forest and Stream.)

GRAND JUNCTION, Tenn., Dec. 6, 1881. The meeting of the National American Kennel Club now being held here promises to be a great success. Large numbers of sportsmen, representing almost every section of the country, have assembled here, and the greatest interest in the coming contests is manifested on all sides. The place is admirably chosen for the running of the trials, and there seems no likelihood that, as was the case last year, the elements will interfere with the successful carrying out of the programme of the meeting. At present the weather is delightful, and from all that we can learn birds are to be found in great abundance on grounds chosen for the scene of the contests.

Many leading dog lovers are here, and all those assembled here look forward with high hopes to an agreeable meeting.

We have examined many of the dogs which are to compete, and certainly a finer-looking lot it was never our good fortune to inspect. Many of the cracks have made records for themselves in one place or another, and it is expected that when they meet, some marvelously fine work will be done.

THE DERBY.

Of the forty-eight entries for the second annual Derby of the National American Kennel Club, which closed April 31, fifteen qualified. These were as follows:

- Clarence K. Drane's Adair, black and white setter bitch, whelped July 1, 1880, by Pride of the South out of Cammie.
- Mr. P. H. Bryson's London, blue Belton setter dog, whelped July 22, 1880, by Gladstone out of Gips.
- Mr. D. Bryson's Bessie T., black, white and tan setter bitch, whelped April 7, 1880, by Gladstone out of Floy.
- Mr. J. H. Dew's Glida, blue Belton setter bitch, whelped April 7, 1880, by Gladstone out of Floy.
- Mr. D. C. Sanborn's Gertrude, white, black and tan setter bitch, whelped June 4, 1880, by Gladstone out of Nellie.
- Mr. David McK. Lloyd's Mack Laverack, lemon Belton setter dog, whelped April 2, 1880, by Thunder out of Peersess.
- Mr. Jos. J. Snellenburg's Lu Laverack, lemon Belton setter bitch, whelped April 2, 1880, by Thunder out of Peersess.
- Mr. Jos. J. Snellenburg's Pet Laverack, black and white setter bitch, whelped April 2, 1880, by Thunder out of Peersess.

Mr. Edward E. Hardy's Clair, black and white setter dog, whelped May 15, 1880, by Dash III. out of Diana.

Mr. Edward E. Hardy's Pollux, black and white setter dog, whelped May 15, 1880, by Dash III. out of Diana.

Mr. Clarence K. Drane's Dashing Novice, white, black and tan setter bitch by Dash II. out of Novel, whelped July, 1880.

Mr. E. F. Stoddard's Lady Friend, red Irish setter bitch, whelped May 7, 1880, by Bob out of Friend.

Harvard Kennel Club's Bess, black and white setter bitch, whelped May 24, 1880, by Dash III. out of Countess II.

Mr. W. B. Gates' Tom Paine, white and ticked setter dog, whelped June 4, 1880, by Gladstone out of Sanborn's Nellie.

Mr. Ed. J. Carr's Shadow, black, white and tan setter bitch, whelped Sept. 11, 1880, by Lincoln out of Daisy Dean.

These are a fine lot of dogs and promise to make the Derby of 1881 an extremely interesting event.

The drawing for the running resulted in the placing of the dogs in the order given below:

Mr. Clarence K. Drane's Dashing Novice against Mr. Jos. J. Snellenburg's Pet Laverack.

Mr. E. F. Stoddard's Lady Friend against Mr. R. H. Bryson's London.

The Howard Kennel Club's Bess against Mr. J. H. Daw's Glida.

Mr. Ed. J. Carr's Shadow against Mr. Jos. J. Snellenburg's Lu Laverack.

Mr. Edward E. Hardy's Clair against Captain Patrick Henry's Adair.

Mr. David McK. Lloyd's Mack Laverack against Ed. D. Bryson's Bessie.

Mr. D. C. Sanborn's Gertrude against Mr. W. B. Gates' Tom Paine.

Mr. Edward E. Hardy's Pollux a bye.

FIRST SERIES.

The attendance on Monday, the first day of the trials, was swelled by the addition of a large number of late arrivals, so that the number of spectators on the ground when the first brace was put down was large.

DASHING NOVICE AND PET LAVERACK.

The contest between Dashing Novice, sixteen months old, and Pet Laverack, twenty months old, was very interesting, and beautiful work was done by both dogs. Dashing Novice, however, had the best of it, and was finally declared the winner of the heat.

LONDON AND LADY FRIEND.

The next brace put down were London, about eighteen months old, and Lady Friend, sixteen months old, London being declared the winner.

BESS AND GLIDA.

The contest between Bess and Glida was a superb piece of work, and excited a fever of enthusiasm in the hearts of all present. The two bitches were very evenly matched, and the contest was a close one, resulting finally in a well-earned victory for Bess.

SHADOW AND LU LAVERACK.

Shadow not yet fifteen months old, and Lu Laverack twenty months old, were now put down. This heat was not particularly noteworthy, though fair work was done, Shadow winning.

ADAIR AND CLAIR.

When Adair, seventeen months old, met Clair, eighteen months old, we were given another exhibition of most excellent work. The contest was a close one, but the victory at the last remained with Adair.

GERTRUDE AND TOM PAINE.

Gertrude, eighteen months old, and Mr. W. B. Gates' Tom Paine, her litter brother, were next cast off. The heat resulted in favor of the bitch, who won without much trouble.

SUMMARY FIRST SERIES OF HEATS.

- Dashing Novice beat Pet Laverack.
- London beat Lady Friend.
- Bess beat Glida.
- Shadow beat Lu Laverack.
- Adair beat Clair.
- Gertrude beat Tom Paine.
- Pollux a bye.

SECOND SERIES.

The running of the first series of heats had proved so interesting that great things were expected when the winners of the previous heats should come together.

DASHING NOVICE AND POLLUX.

The race between these two cracks, it was thought, would be a grand struggle. Dashing Novice had already shown on this ground what stuff he was made of, while behind Pollux was his record just made as winner at the Eastern Field Trial Derby. The expectations of those present were not disappointed, for the heat was a good one. Both dogs seemed to feel that much was expected of them, and their work was worth taking a long journey to see. Both showed good speed and style, but Dashing Novice won, though his victory was by no means an easy one.

BESS AND LONDON.

were now cast off, and after a short heat, the former won.

SHADOW AND ADAIR.

were then put down, the former winning.

SUMMARY OF SECOND SERIES OF HEATS.

- Dashing Novice beat Pollux.
- Bess beat London.
- Shadow beat Adair.
- Gertrude.

THIRD SERIES.

The list had now narrowed down to four and the heats were run with the following result:

SUMMARY THIRD SERIES OF HEATS.

- Dashing Novice beat Bess.
- Shadow beat Gertrude.

FOURTH SERIES.

Dashing Novice beat Shadow without much difficulty, and therefore won first prize. After some consultation the judges concluded to let Bess and Pollux run in order to decide which should compete with Shadow for second place.

BESS WON.

ALL-AGED STAKES.

The following are the contestants in the All-Aged Stakes: Harvard Kennel Club, Bessie by Dash III, out of Countess II.

Mr. C. B. McGinnis' Gordon, by Rupert, out of Whip. Harvard Kennel Club's Dash III.

Mr. J. J. Snellenburg's May Laverack, by Thunder, out of Spyl.

Mr. H. Martin's Maxwell, by Luke, out of Rena. Harvard Kennel Club's Countess May.

Capt. Patrick Henry's Breckenridge.

Mr. George Knowles, Jr.'s Kinnikinnick, by Reed's Druid, out of Bessie Lee.

Mr. J. C. Higgins's Dashing Monarch.

Mr. Geo. G. Ward's Maud W., by Gladstone, out of Juno. Mr. A. M. Waddell's Lad, by Lincoln, out of Daisy Dean. Capt. C. E. McMurdo's Pindce, by Dash III, out of Doll II.

Mr. Wm. G. Best's Leta.

Mr. E. A. Givens' Minerva, by Lincoln, out of Nellie. Mr. J. R. Statton's Belton III, by Belton, out of Floss. Mr. D. C. Sanborn's Nellie, by Balton, out of Dimple. Mr. McIntosh's Biz, by Dash, out of Florence.

Mr. D. C. Sanborn's Count Noble, by Count Windeem, out of Nora.

Mr. J. R. Hendrick's King Dash, by Balton, out of Floss. Mr. E. Orgill's Rush, by Flake, out of Lilly.

Mr. Wm. A. Buckingham's Grouse Dale.

Mr. R. T. Vandervoort's Tom by Bang out of Peg. Mr. D. Bryson's Peep o' Day, by Gladstone, out of Clip. Mr. T. F. Taylor's Dashing Rover by Dash II, out of Norna.

Mr. J. O. Green's Trix, by Birkley, out of Ruby.

These were drawn so run in the following order:

DRAWN TO RUN.

Bessie against Gordon. Dash III against May Laverack. Maxwell against Countess May. Breckenridge against Kinnikinnick. Dashing Monarch against Maud W. Lad against Pindce. Leta against Minerva.

Belton III against Nellie. Biz against Count Noble. King Dash against Rush. Grouse Dale against Tom. Peep o' Day against Dashing Rover. Trix a bye.

BRACE STAKES DRAWING.

The result of the drawing for the Brace Stakes was as follows:

Count Noble and Nellie. King Dash and Belton III. Dashing Monarch and Grouse Dale. Countess May and Dash III.

There is a very large attendance of sportsmen, representing different parts of the country. Birds are scarce, but the work done is fair. The weather is hot to-day, with a rain storm threatening. The Pennsylvania Field Trials Stakes are filling well.

At a meeting of the National American Kennel Club in the evening, Capt. Patrick Henry was chosen President, with Messrs. Luther Adams and J. J. Snellenburg, Vice-Presidents; Mr. D. Bryson, Secretary and Treasurer. Executive Committee, Messrs. Theodore Morford, D. C. Burgenhall, E. C. Nichols, M. C. Campbell, and Major J. M. Taylor; Board of Appeals, Messrs. C. H. Raymond, Anthony Higgins, T. C. Martin and Dr. Jno. Fowler, Jr. Committee on Rules, Messrs. J. J. Snellenburg, C. B. Whitford, and Patrick Henry.

It was voted to hold the trials of the Club here next year if the birds are then plenty.

GOOD DOG STORY.—The following clipping is from the Boston Journal of Nov. 30. If true, the story is most remarkable: "Mr. C. D. Daggett, of this city, is the owner of a little Scotch terrier about ten years old, which has given proof of the possession of something greater than instinct. On Monday morning the dog disappeared and nothing was heard of it until yesterday morning, when Mr. Daggett received a postal card from the Homeopathic Hospital on West Concord street informing him that on the previous evening the dog, which wore a collar bearing the owner's name, had presented itself at the dispensary with a broken leg. On asking for his dog Mr. Daggett learned that the little creature got to the hospital at about five o'clock and barked at the door until admitted. When it was found that he had a broken limb the matter was taken in charge and proper surgical attention was given, the dog being promptly admitted. The question arises as to how the dog, which is not known to have been at the hospital at any previous time, happened to go there on this particular occasion."

TRAINING VERSUS BREAKING.

IN TEN CHAPTERS—CHAP. V.

WHAT is more pleasing to the eye of the sportsman than the evolutions of a well-trained dog as he systematically quarters his ground? With what satisfaction and pleasure we gaze upon his graceful motions as with head high in air he gallops across the wind, ever turning at the signal on the promptings of his own good judgment, and crossing just in front covers the whole ground! Pardonable, indeed, is the pride of the sportsman who possesses such an animal, for well we know how rare it is to see this performance in perfection.

Many dogs seem to possess a sort of instinct for this, and without any special training will quarter their ground very fairly; while others appear to have no inherent sense of the matter, but will beat straight ahead in whatever direction they are started, and neither turn to the right nor left, no stop until they find scent, or are recalled by the whistle. Should your pup prove to be of the former class, thank your lucky stars for the kindly fortune; but relax not your efforts to so train him that his performance shall be faultless. On the other hand, should he display no aptitude for this, do not despair, for with proper training he can be taught to acquit himself very fairly, so well, in fact, that his performances will compare favorably with those of a large majority of other dogs that he may meet in the field.

Before commencing his lessons in quartering your pupil should walk around the building of the word "On," and readily move forward on hearing it. He will also have acquired some knowledge of the meaning of the motion of your hand as indicating the direction that you wish him to take from the practice that you have given him at "To ho." For when you have thrown the piece of meat for him to point, he has noticed that this motion is invariably in the direction that he saw the meat thrown, and as he is possessed of reasoning faculties of no mean order, he has figured it all out as has arrived at correct conclusions in the matter, and you will find upon trial that he will readily start in the direction you wish him to take at the first word of "On."

While instructing him in this branch of his education we may as well improve the opportunity to get his head in the air where it belongs, for when we get in the field with him we shall find this accomplishment to be very desirable; indeed, I always adopt this plan from the first in his practice at "To ho" unless he is naturally high-headed; and even then it can do no harm. You must be sure that he is well adapted to the lesson, and should be taught before you attempt to teach him this. Then when he is very hungry take him into a large yard, or a still better into some open field, where he will be free from interruption by any one, and having provided yourself with two kinds of meat (as mentioned in his first lesson at "To ho") and also with two or three sticks about two feet long and as thick as your finger and sharpened at each end, you are ready to commence operations. You should always enter the field from the leeward side as in actual hunting; and after making your pupil charge, you will walk away from him about twenty yards. Do not go directly up wind but diagonally across; thus if the wind is west you will go to the northwest or southwest, as you may prefer; and after impaling a piece of meat upon the end of one of the sticks, set the other end in the ground just firm enough to remain in position. I think that it is better to set it in a bunch of grass or low bushes, that it may be hid from his sight, as it is time to teach him that he must depend upon his nose. If there are any bushes, you can easily carry with you a few leafy twigs or if in winter a few bare twigs, and then knock down one or two in front to hide it from view. In this way you may have one or two more pieces at some little distance from the first one and also from each other, taking care to put them so that you can work up wind toward them, and be sure that you do not forget their location.

Now return to your pupil and praise and pet him for his good behavior in remaining quiet, and reward him with a bit of the same kind of meat that is on the stick. After he has eaten it, and is intently watching for more, take another piece of the same kind and let him smell of it; and then make him lieve throw it in the direction that you wish him to go, which should be at an angle from the meat upon the stick; thus, if the stick is northwest from you, make the motion toward the north, which will take him across the wind and also bring him near enough to the meat to smell it when he gets opposite it. Carefully watch him and the very instant that he strikes the scent you must make him "To ho"; then walk up to him and praise and pet him, but make him hold his position while you advance and pick up the stick and take the meat there; then return to your pupil and put it in your pocket, taking good care to have a good view of the whole performance. Now abundantly reward him with praise and give him a piece of the other kind of meat to eat.

After a few moments' rest you can proceed to give him the next piece in the same manner, and if he shows no sign of weariness you can continue to the third. Beyond this I do not think it advisable to go at the first lesson, nor even so far if he shows the least sign of having had enough of it. Indeed, in all his lessons and practice it is much better to stop far short of satiety than to weary and perhaps disgust him with too long continued application. Your own good judgment will generally tell you when to stop, and you will find that five minutes, or even one minute's practice, that leaves your pupil in a happy frame of mind induced by the bestowal of your well merited praise is much better than an hour's that finds you both fatigued out and disheartened by the failure to accomplish satisfactory results. We have learned by experience that the shorter the time devoted to his lessons the better, provided that he is practiced every day several times if you like, and a satisfactory performance of his task obtained.

After a few lessons of this kind, if he goes through the performance in a satisfactory manner, you can venture a little further and try him with a turn by making the motion in the wrong direction. Be very easy and go careful now, for much depends upon starting right. When all is ready wave your hand in just the opposite direction from the one that you have been accustomed to, and when he has taken two or three strides, sound the two short notes with your whistle, and at the instant he turns his head toward you, wave your hand in the other direction and proceed as in former lessons. Should he be both to turn, you must use good judgment and get him used to it without getting him discouraged; perhaps by making him "To ho" when he refuses to turn, and then sending him in the new direction you will get safely over the difficulty. But it is seldom that you will have any trouble with your pup in this respect, for you will have had several thoroughly instilled into his mind that he must obey. You have often been surprised to see how readily our pup would

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLCATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and please their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate observation, investigation and research. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and pisciculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fisciculture," edited by a practical and well-known pisciculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family centre-table, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

BOUND VOLUMES.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve a unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. To clubs of three or more, \$3 each.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

Wanted.

A POPE, Gen'l Passenger Agent.

"THE FISHING LINE"

TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES.

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

THE TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1. BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily find traps of all kinds and his friends or club "at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FISH WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1892 by new buildings and additions. During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at our risk. It is our aim to make sportsmen feel "at home" on this route. For tickets, Guide Book and prospectus, send for 60 pages sent free. Time Cards, Folders and further information, address

A. B. LEEB, Gen'l Pass'r Agent, Grand Rapids, Mich.

EAGLE HOTEL. (Altitude, 2,250 feet.) ASHVELLE, WESTERN N. C.

L. L. HASSELL, PROPRIETOR. Open the year round. Rooms with open fireplaces. Some few stoves. Finest scenery in the U. S. Average winter temperature, 37.7 deg. No better climate in the world. Send for circular.

Hotels and Resorts for Sportsmen.

TO SPORTSMEN: The Pennsylvania R. R. Co. Respectfully invite attention to the SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of shipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED WITHOUT failure or injury.

THE LINES OF Pennsylvania Railroad Comp'y also reach the best localities for

Gunning and Fishing in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the rate of 25% reduction in all the principal cities to KANE, KENOA, BEDFORD, CHENSON, RAESTON, MINNEQUA, and other well-known centres for

Trout Fishing, Wing Shooting and Still Hunting.

Also to TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST, renowned for SALT WATER SPORT AND FISH AND WATER.

L. P. FARMER, Gen'l Assn. Agent. FRANK THOMSON, Gen'l Manager.

Chesapeake & Ohio R'y.

THE ROUTE OF THE SPORTSMAN AND ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA.

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties all game animals, deer, bear, wolf, turkey, wild ducks, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Cubs, fishing tackle and one dog for each sportsman carried free. The Route of the Tourist, through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East; and at Richmond, Va., from the South.

The completion of the Peninsula Extension in the summer of 1891 affords THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL" and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

H. W. FULLER, G. P. & T. A., Richmond, Va.

GUNPOWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR GUNPOWDER IN USE!
Dupont's Gunpowder Mills, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:
Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.
Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine) burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.
Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 5, No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and 1 lb. canisters.
Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6 1/2 lb. kegs.
Dupont's Rifle E.g. "Sea-Shooting."—FFG and FFG, 7 lb. E.g. for long-range rifle shooting, the FFG and FFG, for general use, burning strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb. canisters, 6 1/2, 12 1/2 and 25 lb. kegs. E.g. coarse, FFG, fine.
Dupont's Sporting, Mining, Snrping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Molar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.
Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y., N. B.—Use none but DUPONT'S E.G. or FFG. for long-range rifle shooting.

CURTIS & HARVEY'S

DIAMOND GRAIN.

Nos. 2, 3, 4, 5, 6, 7 and 8. Superior Rifle, Enfield Rifle, and Col. Hawker's Ducking. W. STIMP, 61 Cedar St., N.Y. Agent for the U. S.

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 300 competitors. Send for Catalogue.

The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 89 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, December 15.

A DISGRACE TO JOURNALISM.—We have never felt called upon to notice the malicious attacks, which certain journals have from time to time made upon the FOREST AND STREAM, or upon individuals connected with the paper. This course has proved so satisfactory that we propose to continue it. We are impelled to make a single exception to it now by our indignation, which all who know the facts share with us, at the nature of certain articles, published as leading editorials, in a New York sporting paper. These articles have been onslaughts upon the character of one individual—he a sick man, on his dying bed. We make this simple statement, that the facts may be understood by the friends of the assailed man and by the public. There is no need of comment. If their own consciences have not already told them, we shall not attempt the unwelcome task of showing the authors of these gross attacks that their impotent attempts to blacken the reputation of a dying man have been outrageously indecent, as brutal as indecent, and as cowardly as brutal—a disgrace at once to journalism and to mankind.

AN ADDED INTEREST attaches to the story of the "Hinkley Hunt of 1818," given last week, from the fact that Garfield's birthplace was just eighteen miles east of the hunting ground; and at the time of his birth the country was still a howling wilderness.

THADDEUS CRANE BANKS.

AFTER a lingering illness, Thaddeus Crane Banks, Business Manager of this journal, died of consumption at his residence in Brooklyn, Wednesday morning, December 14.

It is with the profoundest sorrow and a sense of personal bereavement that we make this announcement. To all in this office, Mr. Banks was much more than a business associate; he was an intimate personal friend, for whom, during the years of our business connection with him, we had come to feel the warmest affection. This feeling had become deepened and intensified by our solicitude for him during the past weeks, after it had become only too evident that his death could not be long averted.

Thaddeus Crane Banks was born at Danbury, Conn., January 5, 1829; and was therefore at the time of his death almost fifty-three years of age. Like so many other successful newspaper men, he had, before entering the publishing world, already achieved a decided success in other fields of labor. He was by profession a dentist, and for more than twenty years held a very high place in his profession in this city. With the unremitting devotion to his work, which was characteristic of the man through all his life, he applied himself so closely that his over-taxed constitution gave way, and his failing health obliged him to surrender the place of distinction which he had attained, and to abandon for the time his office work. He removed to Wallingford, Conn., where he soon won the respect of his fellow-citizens by the public spirit which he displayed; and he was twice sent as representative of his district to the State Legislature.

In 1871 he undertook the business management of the *American Sportsman*, and began its publication at West Meriden, Conn., the editor being the late Wilbur F. Parker. Mr. Banks remained with the paper after its removal to New York, where it was published as the *ROD AND GUN*. In 1877 when the *ROD AND GUN* and the *FOREST AND STREAM* were combined, he continued in business control of the paper; and held the position up to the time of his death. He brought to the exacting demands of newspaper life great business energy, with an unwavering devotion and enthusiasm, which compelled success in whatever he undertook. It is very largely to the untiring labors and the business ability of T. C. Banks that the present position of the *FOREST AND STREAM* is due. His whole thought was given to the paper and its welfare. During the last months of his life, although wholly unfitted for any work, he came daily to the *FOREST AND STREAM* office, overcoming by his determined will-power the weakness of his condition, and through his interest in the paper keeping up his strength and courage. His patient face and silent, gentle bearing among us, touched the hearts of all who saw him, and prompted, almost unconsciously on our part, a feeling of tenderness for our friend.

Mr. Banks had traveled extensively over this country and abroad; and was widely known in newspaper circles, and among public men. He had hundreds of warm personal friends who will mourn his death.

The funeral will be held from his late residence, 453 Lafayette avenue, Brooklyn, next Sunday, Dec. 17, at 2 P. M.

THE CHILDREN'S AID SOCIETY (George J. Coe, treasurer, No. 123 Broadway) has issued its annual appeal for Christmas-time contributions. The appeal deserves, and we trust may receive, a hearty response.

DOG TRAINING.—The sixth chapter of the regular series of articles on this subject now running in our Kennel department is unavoidably deferred until next week.

THE FIELD TRIALS.

LAST week we gave our readers a synopsis of the running at Robbins' Island, from Wednesday morning to the Friday. The weather was all that could be desired, and much better than the most sanguine dared to hope for. The attendance, while not so large as we had expected, was very fair, and composed of well known sportsmen from all parts of the country. The character of the work performed by the dogs was, in many instances, superior to anything of the kind that has ever been witnessed at Field Trials in this country. The handlers, with one or two exceptions, worked their dogs in an artistic, as well as sportsmanlike manner; in fact, to our eyes, they were ideal sportsmen, who appeared to be not only conscious of the faults as well as the merits of their own dogs, but who could also see, and were quick to acknowledge, superior merits when shown by their competitors. In very many instances the one who lost the heat would be the first to indorse the decision of the judges.

The Derby brought out a rare lot, and never before, in this country, were so many young dogs shown whose performances would show so high an average. The All-Aged Stakes had many starters who had before appeared in public, as well as a number of new aspirants for fame, and the quality of the work shown would in many instances compare favorably with that of any previous meeting. The judges were particularly fitted for the position, and more competent and fair minded gentlemen it has never been our good fortune to meet. Upon the whole, the meeting was a very successful one, and we congratulate the Eastern Field Trials Club upon the abundant success that has crowned their efforts. We were not a little disappointed that the Members Stake—which should have been the prominent feature of the meeting—did not bring out a larger number of competitors, and after witnessing the magnificent heat between Brock and Bessie, we were more than ever convinced that this event—if properly supported—would do more to popularize these Trials than all the other stakes combined, and we trust that the next meeting will show at least twenty-five starters to compete for the honor of winning the Members Stake.

Of the Louisiana Field Trials not so much can be said. It was the first meeting and the entries were but few in number, and the character of the work was as a whole by no means remarkable. With two or three notable exceptions, the dogs run failed to distinguish themselves. Gordon, however, owned by Mr. McGinnis, has since made for himself an honorable record as the National Trials, and there were other good dogs shown at Amite and Arocla.

The National Trials have brought out what we may call the very best canine talent in the country, and the work done at Grand Junction appears to have been in all respects worthy of praise. Dashing Novice, Boss and Shadow in the Derby, Peep o' Day, Nellie, Breckenridge and Lad in the All-Aged Stakes are all good ones. King Dash liss not now to make his reputation as a field dog, nor has Bolton III. The Pennsylvania Trials opened on Monday, and with every prospect of being successful. We refer our readers to our Kennel columns for details of the running, which is still in progress. Next week we shall give details of the heats throughout.

REAL OFF-HAND SHOOTING.—The letter from a Worcester rifleman, published last week, represents very fairly the opinion on this whole question of short cuts to high scores. There is too great an ambition to see high figures, and not enough care to see that these stand for excellent personal endeavor. The Englishman who shoots at 200 yards lying on the ground has no right to compare his score with those made on our rifle ranges, where the men stand erect; and so, in only a smaller degree, the score of a man who shoots with the left arm free of the body should take precedence over a record made with the hip-rest. We want a test of men in rifle shooting, and not a gauge of how far clever trickery has been made available.

THE EARL OF DUNRAVEN IN NOVA SCOTIA.—We have received from the Earl of Dunraven a communication in reference to his experience with the Nova Scotia game laws. The letter reaches us too late for insertion this week; it will be published in our next issue.

VICIOUS MILITARY PRACTICE.

IN his work of securing a team of American military shots to compete with the English volunteers at Wimbledon, General Wingate is meeting with some difficulty. It does not seem to be one of men nor of means, but of rifles. Under the delusion that big scores in matches meant good marksmanship, those who shoot military rifles have been gradually turning them into mere shooting machines. Chambers have been lengthened to admit cartridges with heavier charges of powder, special ammunition and special bullets have come into play; trigger pulls have been toned down to nearly the hair trigger point, and then to meet the trials of a balling wind, there have been fine foresights and wind gauges added, until the rough and ready military rifle has become admirably adapted to the production of big scores and as thoroughly unadapted to the wear and tear of a camping life. The men have found that the use of a wind gauge on a rifle was a ready way of receiving high scores, and now when they are brought face to face with the English regulations, which require an untampered military sight, there is a disposition to shuffle out of a match with the English Volunteers.

This is not a desirable position for an American rifleman to find himself in, for the proposed match with the Englishmen entirely out of the question, it shows that our system of practice is defective. Such practice as we have been having is of next to no value in giving our men the drill necessary to make them efficient in the varied circumstances of a soldier's life. Of what use is it to stop at the mere permission to alter the sights? Why not permit more weight in the gun? Why not extend the license of tampering into the fixing of telescopic sights? Pistol-grip, too, would help the piece, if the making of good target records were all that was to be required of it. In short, the weapon may be made such an excellent machine for manufacturing bullseyes as to be useless for any purpose in practical warfare. In how many cases would a soldier find himself so circumstanced as to be able to bring his wind gauge into use? The enemy is not a fixed iron slab at a known distance, and sighting shots cannot be had. Snap shooting is required, and unless the practice on the range leads to excellence in that style of marksmanship, it is little more than a sort of useless sport, very entertaining for those engaged in it, very healthful, but very aimless.

The British rifleman has been falling into short cuts to high scores, and the sight of a soldier standing and shooting from the shoulder is something of a rarity on Wimbledon Common; still there is more reason in this innovation on range practice than in our American falling of turning out big scores at the sacrifice of the very foundation purpose of all work before the butts—the making of men able to hit anything at any rifle range, and to do it on call too.

BYE-WAYS OF THE NORTHWEST,

NINTH PART.

NEAR the head of Jervis Inlet and hidden by lofty mountains, which on all sides wall it in, lies Princess Louise Inlet, the gem of all the beautiful inlet country. Bute is grand and majestic, Loughborough is picturesque and charming, and Jervis combines the beauties of both, but the scenery of Princess Louise surpasses that of any of the others. Its entrance is but a few yards in width, and, except at high and low water, the tide rushes along between the stern walls of granite in a rapid of great swiftness. The entrance passed, we caught a glimpse, on either side, of towering hills, and then plunged at once into a twilight, rendered more obscure by a thick white mist which hung low over the water. Out in the main inlet the sun had been shining bright and warm, but here we were in a gloom almost like that of night. Although we were passing along close under one of the banks of the inlet we could not see the trees, whose branches stretched out over the water above our heads, but moved blindly along almost within our length of the shore. The sun does not penetrate this narrow gorge until it is high in the heavens, and there was something very solemn in the darkness and utter silence of the place. The men seemed awed by the strangeness of the situation, and only occasionally spoke, and then in suppressed tones. No sound was to be heard except the regular dip of the paddles. For perhaps an hour we moved on through this mist, and at the end of this time a sudden brightening of the sky above us showed that the sun's rays were beginning to dissipate the gloom. The mist rose slowly, and there appeared, first, the trees on the beach, then, immediately back of them, the piled up rocks which formed the talus at the foot of the precipice, and at last, as the clouds of vapor rolled higher and higher, like a gigantic curtain, the black vertical cliffs and the snow-clad peaks of the mountains. Smooth as a polished mirror, and like a mirror reflecting with unvarying fidelity the towering heights about it, the inlet was suddenly spread out before us, and its wonderful beauties, heightened by contrast with the recent obscurity, were unfolded to our appreciative eyes. No word was spoken for some little time. The Indians stolidly continued the movements of their paddles, but those of the white men were idle. Immediately before us was a wide basin, which we were entering from a channel less than a quarter of a mile in width. An unbroken line of snow, here close at hand and there miles away from us, patched toward its lower border with occasional masses of dark green or gray, surrounded us to the

north, south and east. Nearer the water's level were the sombre grays or browns of the mountain rock, dark and forbidding. Still further down the slope, the scanty and ill-nourished timber grew in scattering clumps, or by single trees, reaching to the verge of the sheer precipices that overhung the water's edge. To the south and to the east the hills rose sharply and continuously, there being no opening between them until the snow level was reached, but toward the north-east this wall had been broken down, and a wide, but precipitous, valley, the ancient bed of a tremendous glacier, stretched away for miles toward the snowy heights of the interior. Down this valley, among, over and under enormous rock masses, whose harsh and rugged outlines were softened by no appearance of verdure, poured, in a series of foaming falls, a large river, the course of which could be traced far back toward the heights. Here it became no more than a delicate white thread, and at length it was impossible to distinguish it from the snow drifts which were to be seen in every ravine. Still further toward the north, the mountains again become precipitous—overhanging precipices rise from the water's edge, and the rocky slopes which surmount them bear a few trees. Above, extensive snowfields stretch away toward Mount Albert, showing here and there through their whiteness the sky-blue color of some ice river slowly plowing its way down the slope. The rugged and massive peaks of Albert stand clearly out against the blue background of sky, and are flanked by others, not so high but equally impressive. A bare needle of granite rises to the east of the main peaks nearly to the same height which they attain, and still further to the east a towerlike mass, its turrets ornamented with dark green spruces, attains an almost equal altitude.

The enormous cliffs, under whose shadow the canoe passes, are patched with lichens of various colors, so that sometimes the granite looks as if it had been painted. One of a vivid canary yellow, seen on the lower side of the overhanging rocks, catches the reflection of the sun from the water, and brightens the rock to a likeness of hammered gold. Trickling from narrow crevices, the water has carried out iron solution, and given to the granite beautifully shaded tints of yellow, red and brown. Here and there a pale green fern has thrust its roots into a seam in the rock and has spread out its feathery frondage before the cold gray background. Mosses of rich brown, gold color, and velvety green grow wherever they can gain a foothold; the brilliantly-colored rock crevices with its tiny rosettes the cold, hard stone, and the delicate *Campylopus*, undismayed by its arctic surroundings, waves its bells cheerily in the passing breeze. Just here at least there was no want of color. But as a whole the scene was one of forbidding harshness. The absence of any considerable masses of vegetation, the cold gray of the mountains, the presence everywhere of ice and snow, give to the whole an unspeakable sombreness and gravity. Everything is cold, hard and repelling. There is no warmth, no brightness, and but little life—and yet I think Princess Louise Inlet the most beautiful spot in the world, in its own peculiar way.

The inlet is about four and one-half miles in length, by less than one-half in average width, being narrowest near its mouth and widest at its head. In general terms it may be said to resemble more nearly in its essential characters some of the Norwegian fjords than do any of the other inlets of the northwest coast which I have visited; yet it differs from the fjords of Norway in that from it you have constantly in sight snow and ice-covered mountains.

Like all the others, this inlet was formed by glacial action, and the traces of the ice river which cut this deep channel in the solid rock of the mountains are still plainly visible. During the ages which immediately followed the close of the Tertiary period the whole of northern North America was covered with an enormous ice sheet thousands of feet in thickness. The whole of British America, a considerable portion of the Rocky mountains, all New England and a very large portion of the middle States were for ages buried beneath this frozen mass. In the White mountains the upper surface of this stupendous glacier was at least 6,000 feet above the sea level, while still further to the northward, it is estimated that it was not less than 13,000 feet in thickness. This enormous mass had a general slant, but more or less constant, motion southward—a motion permitted by the now well-known plasticity of ice, and due to the constant pressure of the mass behind. The movement was to the southward, because there the ice was constantly melting and disappearing, while to the north it tended constantly to increase in thickness. To the north there was no escape, for its movement in this direction was blocked by an unyielding ice mass which became more and more thick and immovable as the Pole was approached. Urged on by this ever-increasing pressure, the ice sheet moved steadily southward, creeping up high mountain slopes, and then, when their summits were reached, overtopping them, and pushing its way down on the other side. No better illustration of the movement of such a body can be given than the one employed by Professor Dana, who says: "If stiff pitch be gradually dropped over a horizontal surface it will spread and continue so to do, so long as the supply is kept up; and if that surface rises at an angle in one direction, and there is no escape in any other, it will first fill the space to the level of the edge, and then drop over and continue onward its flow. So glaciers, if their accumulation is adequate, may go across valleys and over elevated ridges."

It has been clearly established that ice has a certain degree of plasticity. Thus, it can be made by simple pressure to copy a seal or mould, like wax. Dr. Kane speaks of a table of ice, eight feet thick and twenty wide, supported only at the sides, which in two months became so deeply bent that its centre was depressed five feet, and this while the temperature was constantly below the freezing point. It may also be made to take the shape of a long cylinder, by pressing it through a round hole. In such cases, even if the ice is broken by pressure, it unites into a clear mass by freezing along the fractures, when their sides are in contact. The glaciers of to-day are the remnants of the ancient ice sheet that once covered the northern portions of both continents. They are simply rivers of ice of varying thickness and extent, having their origin above the level of the perpetual snows, by which they are fed. The grandest glaciers of the temperate zone are those of Switzerland, but one must travel to arctic climes to behold the most stupendous exhibitions of these ice rivers. A glacier, in its origin, consists merely of compacted snow, but as it advances down the mountain side it is gradually changed by pressure into an ice-like mass, and as it reaches a point where there is alternate melting and freezing it becomes truly ice. Now, as we know that the glacier tends constantly to move in the direction of least resistance, and as the momentum of such an enormous mass is something almost inconceivably great, we can see that its course will be in a bed not unlike that of a river. A glacier is an enormous plow, which cuts a furrow both wide and deep. In its course it at once scrapes away all the surface soil and the loose stones, reaching down to the bed rock against which it continually grinds, and wears itself away. The glacier, in its course, takes up and carries with it gravel, pebbles and boulders of different sizes; and these, whether torn away from the sides of the bed, or dropping on to the ice from overhanging cliffs, soon sink through the ice to the bottom. Here they are rolled along, crushed beneath the weight of the superincumbent mass, against or into the rock over which it is passing. In this underlying rock long scratches and scorings are thus made, its irregularities of surface smoothed and planed off, and sometimes its surface highly polished. In glacier regions such surfaces are frequently seen, as well as the smoothly rounded knolls of rock, called *roches moutonnées*, or sheep-backs. The debris carried along in and beneath the glacier is constantly being ground up, like the wheat between two mill-stones, and the water of the stream formed by the melting ice, is charged with the pulverized rock. Such streams are, therefore, usually more or less milky in color, and can be recognized by this character far away from their source. The water of Bute Inlet, down to and beyond its mouth, has this peculiar character, and thus warned us of the glaciers near its head long before we came within sight of them. At the lower extremity of the glacier are vast heaps of earth and stone, deposited there by the melting ice. Such heaps are called terminal moraines. Some of these moraines are of great size, and very many of them bear the scars and scratches, which tell plainly the story of the hard knocks to which they have been subjected since they were first torn from their beds.

Everywhere along the cliffs of the inlets the marks of the erosive force of the old glaciers had been visible, but they were nowhere better seen than on Princess Louise and Jervis Inlets. High upon the rocks the deep scorings appeared, long continuous scratches, which told of the slow passage of some enormous mass of rock, held by the ice close to the wall-like side of the channel, and pressed against it with a force, of the magnitude of which we can form no conception; smooth rounded depressions showing where a mass of granite had been held, and slowly turned over and over until it had excavated a hemispherical cavity eight or ten feet wide and nearly as deep; and down near the water's edge flattened rounded surfaces, smoothed and polished by the prolonged friction of the ice. At the mouth of Princess Louise is a low rock, rising ten or twelve feet above the water, on which are half a dozen parallel horizontal grooves, two feet or more in depth, and extending along its whole length. The cliffs on the north-west bank of Jervis Inlet, above the mouth of Princess Louise, are everywhere smoothed and ground away by the action of the ice. The scorings, which are constantly seen, are often of great length, and from four to six feet in height. Many of them curve very gradually, and they are often semicircular-shaped, and terminate in a rounded depression. Opposite Moorsam Bluffs is along, low point, on which the ice markings are admirably shown. The rock rises from the water at rather a steep incline in a series of steps, showing the *roches moutonnées* on a gigantic scale. The granite is blackened with a growth of lichen, and from the crevices in it spring mosses undergrowth and some small pine timber. The enormous masses of rock look like the backs of so many sleeping elephants.

At the head of Jervis Inlet is a small camp of Hanchetchin, or Hanchtsin, Indians. The only man at the village was an old fellow whom we found mending his canoe on the beach with a stone hammer of most primitive type, and who could speak neither Chinook nor any other language at the command of the members of our party. We held animated dialogues with him, in which the burden of our speeches was an inquiry as to whether he had either potatoes or salmon to sell. What he replied will ever remain a mystery. Hanset, who was the orator of the day on our side, would hopefully reply, after hearing the old man through: "Wike nika kumtun nika wahwah," (I don't understand your language).

At last, in despair, some one caught up a potato and threw it at the old fellow, and as he picked it up it was beautiful to see his perplexed expression clear away and the light of intelligence and satisfaction irradiate his countenance. He shouted a series of orders to the *Klotochmans* at the houses, and we soon had a lot of excellent *sepiolites* at the canoe. I purchased here a two-pronged salmon spear, which I thought might prove useful later, as the fish were now running up into the fresh water streams in considerable numbers. We camped a mile or two down the inlet, and as we were about to start next morning, we received a visit from the *Sivashes*, who brought some more potatoes and a lot of salmon just taken from the water. They also brought a *potlatch* of berries, presumably in return for a piece of tobacco that I had given the old fellow the evening before. From here two days run brought us to Twin Falls on Hotham Sound, near the foot of which we camped. These falls are by measurement of the Professor's aneroid barometer 1,510 feet in height. They are much more impressive when viewed from the water at a distance of a mile or two than when seen from a point nearer at hand. The enormous timber obscures the view when the falls are approached too closely, and although you are deafened by their roar only an occasional glimpse of the water is to be had. The river which supplies them flows from a depression on the top of the mountain, and just as it leaps over the cliff is divided into two streams by a large island. A great body of water passes over the fall, the river being a very considerable stream. We estimated the first leap of the water at 600 feet clear, the succeeding ones being less high, perhaps from 300 down to 150 feet.

The next morning we made a late start, and before moving I spent an hour or two leaning over the side of the canoe and watching the occupations of the different marine animals which were moving about at the bottom of the shoal water near the shore. There were hundreds of little crabs, the largest about the size of a silver half dollar, clambering about like so many goats over the rocks, and apparently feeding on the vegetable matter that grew upon them. They walked slowly about plucking the food with their curiously swollen white claws, using the right and left alternately, so that while one was holding the food to the mouth, the other was gathering a fresh supply. They seemed wholly absorbed in what they were doing, their jaws moved continuously, and altogether they had a most business-like and methodical aspect. The largest of these animals were of a deep purple color, while the smaller ones seemed to be almost always of a dull grayish green, which corresponded very closely with the hue of the rocks on which they fed, and is no doubt in a measure protective. They seemed to get along very peaceably together, though, once in a while, if a small crab came too near a large one, the latter would make a threatening dash at his neighbor, which would at once retreat with many defensive demonstrations of its claws. Then there were the curved white tubes of the marine worms, fixed to the sides of many of the stones; some of them deserted and empty, while from the mouths of others protruded a cluster of deep, crimson tentacles, the whole looking like some beautiful white-stemmed flower. If the red cluster was cautiously approached and touched, it was instantly withdrawn, and the tube appeared empty. Five minutes later, perhaps, a small spot of red would slowly be noticed far down in the tube, the arms would gradually appear, and resume their flower-like appearance. The barnacles which covered the rocks above a certain line were not the least interesting of the living creatures which were to be seen here. At those stages of the tide when the water did not reach them, the shells remained closed and showed no signs of life; but as soon as they were fairly covered, each little pair of valves opened and the tiny arms were extended and swept through the water with a regular motion, which ceased only when they had grasped some morsel of food which was floating by. When this took place, the arms were quickly drawn into the shell, the valves closed and the animal remained quiescent for some little time. It was interesting, too, to watch the sea urchins or, as they are sometimes called, sea eggs, and the star-fishes as they moved about over the bottom. Both progress very slowly; the sea urchins, perhaps, the more so of the two. The latter advance by a continuous motion of their long ambulacral spines, and can make journeys of considerable length, though apparently so ill-provided with organs of locomotion. If one be turned over on its back on a flat rock, it can readily right itself by means of the same gradual but continuous movement of the spines. If removed from the water they have a continuous motion of the mouth and soft under parts as though striving to obtain air. These sea urchins are eaten by the crows and ravens, which find them uncovered at low water, and, carrying them up into the trees, remove the soft body by breaking away the shell about the ventral aperture. These shells I have found thus broken on the ground in the forest, half a mile from the water's edge, and often covered with the long white Spanish moss. The star-fishes move much more rapidly than the sea urchins. They progress mainly by means of the suckers with which their arms are provided, but also to some extent by hooking their arms around the angles of the rocks and thus pulling themselves forward for short distances. These animals are found along this coast in great abundance and variety. I saw them black, brown, yellow, orange red and purple, and ranging in size from the diameter of a five-cent piece up to ten inches. They seemed to be most abundant just about low water mark, though by

no means confined to any particular depth. They are frequently seen clinging to the rocks where they have been left bare by the tide, and when a great cluster of the large red or purple ones are seen collected in an angle of the rock against the shining black mussels and the brown seaweed, the effect is very pretty. In Princess Louise Inlet we saw in the early morning great numbers of the smaller starfishes clinging by one or at most two arms to the rocks, it being then low water, and these, whether from cold, or whatever other cause, appeared to be half dead and were shrivelled up and stiff. When placed in water, however, they soon revived and became apparently as well as ever.

From our camp at Twin Falls our course for a few miles was southeast, and passing between Captain and Nelson Islands, we entered Agamemnon Channel, and early in the afternoon came out into Malaspina Straits. A fresh breeze was blowing and, as it was fair, we made sail and bowled swiftly along, camping at evening on the mainland a little beyond Merry Island. Our next camp was on Bowen Island, where we were nearly burnt out. We had been looking vainly for a good spot to camp and, at last, in default of anything better, had pitched upon a little bay, full of driftwood, but where we could at least be certain of water. The rocks rose steeply from the water's edge and we were obliged to make up our beds on the beach, not feeling at all sure that the rising tide would not disturb us before morning. We found a little level spot where there was barely room enough for four to sleep, and spread our beds here, the camp fire being made against a large drift log near at hand, and as we were all pretty tired after our long day's pull we went to sleep soon after supper. How long afterward it was that I was awakened by the sound of dashing water I do not know, but when I looked out from under my blankets I saw the great log glowing like a furnace, and Charley, very lightly clad, dashing water over it at a great rate. It was soon extinguished and our only loss was some of the kitchen utensils, but had it burned a little longer our blankets would have been scorched and we ourselves would have been thoroughly warmed. Yo.

The Sportsman Tourist.

IN THE "MASH"—CONCLUDED.

WHEN the Captain awoke it was not yet daybreak, but the Hermit of the Marsh was already astir, and the fumes of hot coffee and bacon were borne to the Captain's diatories. After a hurried wash at the river the breakfast was dispatched, and preparations were made for a try at the ducks. The captured fowl in the pen were shod with a "hook," to which was attached to a cord for anchoring them, and then placed in the bow of the duck-boat; the two men with the guns, accompanied by a single dog, embarked, and the light, shallow craft was pushed off.

"Here we are," said John, after they had poled through the marsh a short distance.

"But where is your blind?"

"I will show you when the stools are out. Put the big one on the outside, so—anchor first. Now t'other, not too near, or they'll get tangled. Put the mallard drake in the corner and string the others well out. Now for the blind."

The blind was a marvel of architecture, built of marsh flag and large enough for the boat to be drawn within it. The opening at which the entrance was made was closed up by an ingeniously constructed mat of flag, plaited together, so that the shooters were wholly concealed, while from without it presented a similar appearance to the surrounding morass.

"There comes a bunch of ducks," said the Captain, as the first gray streaks in the east made the surrounding region visible.

"Them's blue-bills," said the hermit; "they won't stoop to live decoys. They alius fly before the other ducks do in the mornin'."

Soon a large flock of black-duck came working up the river. The stool ducks instantly set up a loud calling, and the flock in the air swerved from their course and swooped down to join their supposed friends. As they wheeled up wind to sight two reports came from the blind, and then two more, and seven fine birds floated helplessly in the water, while a cloud of feathers sailed off with the wind over the marsh.

"A lucky shot," said the Captain.

"Humph! ort to got more out o' that bunch. How much lead you shootin'?"

"An ounce and a quarter."

"Better put in half an ounce more. Them on your side carried off all you give 'em."

"But half an ounce more would kick me out of the boat."

"No business to have such a pop-gun, then. You can't shoot ducks with less than ten pound of iron, and no use to try."

Just then a solitary blue-hill skimmed by at a good sixty yards' distance, and the Captain, drawing a quick sight, pulled trigger, and, as if to disprove his companion's words, the duck fell to the water, stone dead.

"Humph!" growled the hermit; "accidents don't prove nothin'. I can drop ten times that length by puttin' my shot into a linen rag, and poundin' it home tight. But I can't do it every time, and the man don't live high Mosquito Pint that can."

Several more difficult shots were accomplished by the lighter gun, however, and the old man finally admitted that it was "a powerful good gun for a pop-gun." At length, with two dozen birds in the boat and several lying wounded among the grass, the latter being afterward brought to bag by the sagacity of the retriever, the Captain declared himself satisfied with the sport, and the boat was poled back to the shanty.

As several miles had to be paddled before a village could be reached where the Captain might ship the ducks to his friends at home, the Gypsy was soon made ready for the voyage, old John was supplied with sufficient tobacco to last him through the winter, a hasty good-bye was said and the canoe resumed its voyage. As he rounded a turn in the channel, the Cap-

tain looked back, and saw the Hermit of the Marsh wielding an axe as he cut the wood to prepare his noonday meal. The ducks sat on their haunches in silence near him, the wonderful pig lay in the mud near the shore and the ducks gabbled as they fought among themselves for a few kernels of corn. This was the last time the Captain was ever to look upon the old man, for before the ice left the river in the following spring he succumbed to the combined efforts of age, rheumatism and old age, and was laid beneath the ground. I kind-hearted, simple old John! May his spirit live forever in the happier land, where the dull vestments of an outer garb are not suffered to conceal the purity and goodness of the heart within.

The canoe now travelled through what was at one time the great hunting ground of the Senecas and Cayugas, situated on each side of the river known to them as *Thiashero*, "River of the Rushes." Many remains of Indian villages and forts are still to be seen, and the whole country around is rich in such relics as arrow-heads and spear-heads, stone tomahawks, kettles, pottery, etc. The branches of the Five Nations dwelling in this region were far advanced, comparatively, in agriculture and domestic arts, before the white man invaded their country. They cultivated maize in abundance, beans and some sort of peas, and their implements for hunting, fishing and cooking were of a superior kind to any used by other tribes. A few miles east of Howland's Island, near what are known as "Hickory Island Riffs," the remains of a well-built stone cel-weir could be seen a few years ago, before the sea-mud-dredge was put at work to enlarge the channel. This cel-weir was built so carefully and thoroughly that it had withstood the annual spring floods for ages, and its plan of construction was not at all behind that used by fishermen to-day.

Cross Lake (*Indina Te-anig-oo*), which the Seneca River crosses near its southern end, has many circumstances of interest connected with it. Here have been found stone implements for turning up the ground, carved pottery and pipes, curious spear-heads and other relics in abundance. It was here, according to tradition, that the Indian deity who presided over fish and streams (*Qi-on-ya-wat-ha*) died after he had relinquished his title of deity, and assumed the name of *Hi-a-wat-ha*, or Wise Man. It was he who cleared the streams so that cones could pass through them, and he who taught the Iroquois to cultivate corn and beans. It was he, too, who advised the union of the original five tribes into that powerful confederacy of the Five Nations, which the whites found so difficult to subdue. The tradition of the formation of this confederacy, as told by the Onondagas, is one of the most beautiful legends of his-tory. Although never in print, to the writer's knowledge, it is well worth embellishing in verse, and is a poem even as told in the rough gutturals of the Indian's broken English. Longfellow has taken the wise man of the Senecas for the hero of his well-known poem, "Hiawatha" (which is pronounced *Hee-oo-wat-ha*, not, as elocutionists have it, *Hi-a-wat-ha*), but the poet's account of this character differs widely from that of the Indians' tradition, and the writer hopes in some future number of this paper to give the version of the latter as it was told to him.

All this has little to do with the voyage of the canoe, Gypsy, although the Captain's thoughts, as he paddled through this historic region, were all upon the traditions and lore of this ancient people, the Romans of the Western Hemisphere. With every dip of the varnished blade a new idea was brought to the mind. On that round hill was a Seneca or Cayuga village. On this eastern shore of Cross Lake, near the old spring, is where the great *Hi-a-wat-ha* had his lodge, with his beautiful daughter and his white canoe. At this shallow "riff" the warriors of the confederacy forced the river to confront their enemies from the north, and perhaps even here was fought one of the bloodiest battles of their conflict.

Passing Cross Lake we shoot down the rapids of "Jack's Riffs," and eight miles further reach the village of Baldwinville. Here the voyage of the Gypsy is interrupted for a few days, while the Captain pays a visit to some hunting friends residing near by, and here we will leave the little craft for the present, reserving for another time the chronicle of the renewed voyage down the Seneca and Oswego rivers to the Great Lake, and close around the shore of old Ontario to the St. Lawrence River and Canada.

SENEXO.

CRUISE OF "THE NIPPER."

IN THREE PARTS—PART II.

THE NIPPER was up for a rather extended cruise, to start July 3. I quote a brief entry from my journal, under date of July 23: "Slept later than usual, and on rising found my gun missing. The missing 'riff' the warriors of the confederacy around the lakes, trying to trace it. It was near Blue Mountain in the dnfil of Mr. Durant and his guide Moody—taken by mistake." The guides assured me it would come back by the first boat coming from Blue Mountain, or, perhaps, the Raquette. The mistake was a most natural one. The knapsack was of oiled ducking, black, not heavy, and easily taken as a part of the oilcloth goods that hung on the same large nail. I was fain to wait with what patience I could.

De passed, and the knapsack did not come back. I put the time in by climbing the hills—Blue Mountain especially; paddling, botanizing, digging blisters of the fir trees for the few drops of balsam contained in them, and fishing for lake and brook trout—with little success. I interviewed guides and tourists, studied maps of the Wilderness, and strove—in vain—to keep dry. To give an idea of just what the weather was like at this time, I will give a few brief quotations from a journal kept faithfully on the spot:

13th. Got up early. Gale and heavy rain. Frequent showers wind mainly from the north.

14th. Heavy wind and cold rain from the North, every one shivering with cold. Five people in the house with hard, chronic coughs. Bark, bark, all night.

15th. Rain, rain; blow, blow, from the north, as usual. Cough, cough. Five of us keep it up. Two will most likely never be better.

16th. Like the 13th, cold and misty. Rained all night.

20th. Put on a gun coat, to k my little batchel, and went for the woods. Made a fire, and would roast an ox, and got nearly dry on the ox. Still raining. Rained all night. Fine. 'Tisn't the most favorable weather for lung diseases; not the healthiest region, I should say. Parties who come for health are every day going out, disgusted and sick. Still the camp is full.

21st. John D. Fraser visited us. He has been taking views of the scenery in Brown's Tract, and taking them well. But

what American pays for American skeeches? Let him go to Switzerland or the Rhine. He painted, artistically, a name on my canoe; I was hurried back so that he did not have time to do it, and I would as soon have a wife's daughter without a name as an unnamed canoe. Still it rains, and still we miserably cough night and day. Is it cherty? Do we feel exhilarated? "Like the Grand Turk?" as Mr. Quill remarks. Not to any great extent, I should say.

22d. Weather a little better. Pictor myself. Dinner at Sam Dunakin's. Warner. Wind S. W., and showers during the night.

23d. Already noted.

24th. Paddled to Forge house. Wet again. Am wet all the time. The whole Wilderness water-soaked.

25th. Just a repetition of 24th for rain and wind. Tried the spring holes just before and after sundown—with the usual luck. Guides, boats and parties coming and going all the time.

26th. More parties and more rain. Many going out disgusted. Tried fly-fishing again—with no luck.

27th. Weather better. Am making up a blanket-roll, and getting ready for a good start to-morrow, if it is clear.

28th. Rain again. Paddled on the day, but cleared off in the afternoon, and I started for a cruise at 6 a. m. rather late, as I found; got, with stopping at Ed. Arnold's for a visit, and loitering on the way, night overtook me long before I reached the head of Fourth Lake. Here I found a roaring torrent coming down the inlet from Fifth Lake, which after an hour of hard work I was unable to stem, and so drifted back into Fourth Lake, where I paddled around until midnight, finally landing on an island where Fred Hess has a good house and camp. Here he lives, with his family; but happening to be absent just then, could not welcome me, so I made myself welcome to his open camp, found a lamp and a good bed, lighted the one and took possession of the other, managing to put in a few hours of solid sleep before sunrise. Started early, and tried the inlet by daylight; but the current was too swift, and I was forced to back down and take the carry to Fifth Lake. Found the fishing camp at the foot of the lake partially submerged and untenable. Last year it was a fine camp to stop at; but the State has seen fit to back up the water in Sixth and Seventh Lakes with a ten feet head. The present season the water is higher, and the pent-up waters were rushing downward to the Black River, to turn mill-wheels and swell the profits of some manufacturer or corporation having influence at Albany.

Making the three-quarter mile carry from Fifth to Sixth, I landed at the dam, and rested for a time to take in the desolate scene.

The water at and above the dam was clogged with rotting vegetation, slimy tree-tops, and decayed, half-sunken logs. The shoreline of trees stood dead and dying, while the mass of decaying vegetable matter was sickening. Last season Sixth Lake, though small (fifty-three acres), was a wild, gassy place, and the best of the chain for boating. Its glory has departed. None care to stop there longer than is necessary. Seventh Lake, containing 1,600 acres, is the second largest lake of the chain, and lies but a trifle higher than Sixth. There is no rapid water and no carry between the two, and a dam that raises the water eight or nine feet in the Sixth will raise it almost as high in the Seventh. The channel up to Seventh was as plain as a highway last year, and pleasant to sail. The present season the channel was wiped out, the forest of balsam, spruce and hemlock, converted into a dismal swamp of dying trees, foul, discolored waters, and foul smells; while the channel has puzzled more than one guide who had been used to the route for years. However, by the help of a few blazed trees and fallen timber, with short sections cut out of the trunks for the passage of boats, I contrived to keep the channel and drenched into the once pleasant Seventh, only to find it a scene of desolation and decay. All along the shores the timber was dead, lying, and the odor of rotting vegetation was not suggestive of "ozone," or balsam laden breezes.

As you enter the Seventh by the outlet, turn to port, follow the shore for 100 rods, and you will find an open, free-for-all bark camp. It has been there for many years, and many are the names and dates carved on the squared logs of which the sides are built. I expected to find Sam Dunakin, with Doctor Nott and party here, but they had left, though their fire was still burning. So I stopped for a rest and dinner. Across the lake, looking up the high rocky point, you could see, last season, a white, long strip of clean sand-bank. Just back of the beach was a hedge-like row of green shrubbery, some fifty yards long, and just here came in the stream of Eighth Lake—the inlet of Seventh. This, too, is all changed. Beach, hedge and inlet are all drowned out, and the dense forest, for a long distance, is under water on either side. This is bad; for the open spaces among the trees are easily mistaken for the inlet by a stranger, while the tortuous channel is hard to follow and the landing still more difficult to find, and thereby I came to grief; for, taking an after-dinner nap, I must have slept too long. The afternoon was cloudy, and my watch, that very useful companion of the lone tourist, had got wet, and, though keeping up a feeble semblance of life, had become utterly reckless as to any proper division of hours and minutes. The hands pointed to half-past two. The hands lied.

Probably it was nearer half-past five when I paddled leisurely across Seventh Lake, and, after losing half an hour looking for the inlet, started up the blundering flight. I ought to have found the landing in less than one and a half miles; but I went on and on, until the roar of the rapids admonished that I had gone too far up stream. Also, I had lost the marked trees which the guides have blazed to indicate the route. So I turned and paddled back, looking carefully for some sign of a landing. None was to be seen. I skirted along the north shore, as near it as I could get, and got into a fearful mess of dead logs, submerged tree-tops and snags, but, no landing. All at once darkness shut down on that miserable, dismal forest, like a wet blanket. A heavy black cloud showed in the southwest, and thunder began to grow ominously. And now for the open channel; for any place, where dry ground may be found, with a chance to put up the shelter tent. Too late. One end of the canoe was fast on a floating log, and the first attempt to back off resulted in sticking the other end in a scraggy tree top, while the log stuck tighter than a brother. I began to look like an uncomfortable scrape. The canoe was lumpy up, stem and stern, and the furrows just that usually precede a thunder-storm were now in the forest, like a wet blanket. A heavy black cloud showed in the southwest, and thunder began to grow ominously. And now for the open channel; for any place, where dry ground may be found, with a chance to put up the shelter tent. Too late. One end of the canoe was fast on a floating log, and the first attempt to back off resulted in sticking the other end in a scraggy tree top, while the log stuck tighter than a brother. I began to look like an uncomfortable scrape. The canoe was lumpy up, stem and stern, and the furrows just that usually precede a thunder-storm were now in the forest, like a wet blanket.

almost incessant, and the thunder was highly creditable for a country of such lakes.

I unjoined the paddle, and, using the single blade, got free of that execrable log. Then I worked free of the old tree-top, and, aided by the flashes that lighted the whole forest momentarily, got out into clear water, but quite idiotic as to the points of the compass. So, as there seemed nothing better to do, I sat still and watched the strange, wild scenery, as shown in different colors by electricity. There were white flashes that appeared to dash all over the forest in a broad, white glare of light, with no distinctive color. Pale-blue, zinc, zinc chains, that gave a peculiar ghastly light among trunks and limbs, and orange colored bolts that seemed to my eye like round globes of fire. These last struck twice within a short distance of the canoe—once, a tree that stood in the water, and once on dry land. I could tell by the sound of the shattered tops, as they plashed into the water, or clattered to the ground. Comfortless as the situation was, it was a grand display, also—a little unearthly and a trifle scary. It was some satisfaction to reflect that I was insured in two companies, and a random bolt or a tumbling tree might be worth a dollar to the owner.

The storm lasted an unconscionable time, but was followed by a bright, clear night, and when I had made out the north star, I slowly worked down the channel, got into the lake, and made the camp again just as the eastern sky began to show streaks of light. There was plenty of dry kindling wood in the camp, and a rousing fire was in order, with a pint of strong, hot tea, broiled pork, bread and potatoes. Thanks to the waterproof shelter-tent, I was capable of a dry blanket, shirt and drawers, so, hanging my wet clothes to dry by the fire, I smoked myself snugly in blanket and tent, lay down on fragrant browie, and slept the sleep of the just man.

It is not to be supposed that a man, far on the wrong side of fifty years, can take an all-night soaking in a wicked storm, seated in a 16-lb. canoe, where, to rise, or even turn round, may mean a drowning—can turn out, after needed sleep, with a general disposition to throw haid-springs, or perform feats of muscular agility. I awoke at about 10 A. M. on the morning of July 30, lame and sore, unwound myself from blanket and shirt, and, to my great relief, but to my great grief, made some strong coffee, and tried my best to make a cheer of the thing. It wouldn't do. The miserable dead-line of timber was about the only cheerful outlook; it was a long distance either way to human habitation or to human sympathy, and—I was just mad. I leaped down to the sodden beach, sat down on a soaked log, and "nursed my wrath to keep it warm." I cursed the weak, selfish policy (if it deserves the name) that is turning the finest valley region on the face of the earth into a disgusting marine nuisance. I cursed the miserable, illogical localities who, from high positions, sing the praises of the Adirondacks, as a finer, more romantic lake than the Swiss Alps; begging that it be kept as a "State Park—an inheritance for our children's children," while, from the other corners of their mouths, they explain how the waters that, by nature, seek the St. Lawrence, may be dammed, backed up and turned, to flow into the Hudson. (See Vexplanck Colvins' reports, which I have before me.) Now, let any man, with as much brains as a hen-turkey, be in charge of Colvins' reports, and, from high positions, sing his suggestions as never practically carried to their consummation. * * * But, enough for the present. "An' if the bear sit' branks be spared" I will ventilate this subject by another year, quite to the satisfaction of all those who advocate the damming of lakes and rivers, regardless of health, recreation and the preservation of a region the like of which does not exist on the surface of this globe.

More anon. NASSAUX.

A WESTERN TRIP IN A HUNTING CAR.

DOUBTLESS many of your readers are more or less familiar with the plan for an annual hunt of certain members of the Worcester Excursion Car Company, and have heard or read of their success in the Great Northwest for five or six years. At the risk, then, of repeating some things which you may have already published, I will ask you to allow a little space to what I opine may be at least a rarity in your columns—a lady correspondent that I may record some particulars of this fall's hunt. It was my good fortune to be a member of the hunting party which left Worcester on the 27th of September last in the new and beautiful car, the "Jerome Marble." I can readily see the look of surprise on the faces of some who wonder who could have been so foolish as to take ladies on a shooting trip. And why not, pray? We enjoyed it, our husbands approved it, and although we could not shoulder a nine-pound gun all day, day in and day out, as the gentlemen did, we frequently carried our lighter breech-loaders, and climbed the hills and scaled the rocks, and crossed the plain, and tried to make the car a pleasanter and happier home for the gentlemen than it would have been had we been left at our own houses. We gained information, pleasure and health. Our husbands say they enjoyed our company, and we are already agreed to one thing—if we are fortunate enough to have the opportunity, we are going again.

Two new cars were completed by the Jackson & Sharp Company for the W. E. C. Co. on Sept. 15, the "Jerome Marble" and the "Charles B. Pratt." As you have heretofore printed a description of the "City of Worcester," the original car of this company, I will not burden you now with a description of the new and improved vehicles, but as the result of three years' experience. The main saloon—which is parlor, dining room and dormitory in one—is large, airy and even luxurious. By a new arrangement of berths, the room in daytime bears no signs of them. Beds, framework, mattresses, pillows and curtains are all stowed away elsewhere in lockers. A large private stateroom, containing a cabinet bed, may be used in cases of sickness; but, fortunately, it is not often in demand for that purpose. Of the reading room, the ample wardrobe, lockers and dressing rooms, the comfortable kitchen, porter and refreshment rooms, the roomy lockers beneath the car for provisions, and, and, and, and of the three attendants—porter, cook and waiter—accompanying each car, you have heard before. Every one of these beautiful cars is indeed a home on wheels.

Both the "Marble" and "Pratt" were chartered to hunting parties long before their completion, the former to start from Worcester, the latter from Philadelphia. The "Pratt" party was composed of gentlemen alone, and as the wives of some of its members were given places on the Marble, the latter party will start in the new car, and returning on the same route met frequently first in Chicago and afterwards at the hunting grounds. As I have said, we left Worcester on Sept. 17, going to Chicago direct by way of Hoosac Tunnel. Here we tarried long enough to learn the more re-

cent reports from the prairie chicken country, and decided to go on the Minnesota Division of the Northwestern R. R.

At Redwood Falls we remained a week, and were very successful, as well as at Canby, considering the moist condition of the prairie. The unusually severe rain storms of the summer and early fall made chicken shooting more like work and less like sport than under ordinary circumstances. Chickens were plenty, and notwithstanding the discomforts of getting them on account of the water, we had more than our fifteen ravens' appetites required, from the day the first one was killed until we left them for larger game.

Somewhat earlier than we originally intended we left the Northwestern Railroad for the Northern Pacific, starting from its eastern terminus, St. Paul, on Oct. 3. We found geese and ducks in great quantity and variety wherever we stopped. At Troy Farm, D. T., gray geese were very abundant. One of our party, its youngest member, shot sixteen in an afternoon with less than a quarter of a mile from the car. He did not bring them all in at one carry, but brought all he could and returned for the rest. Our baggage car was by this time so overcrowded with game that we decided to cross the Missouri and spend a few days in sight seeing.

The bridge between Bismarck and Madan is not completed, and we were ferried across the river on the N. P. Transfer boat. Starting from Madan early in the morning, we went directly to Little Missouri Crossing in the heart of the wonderful Bad Lands.

I would gladly attempt a full description of this curious country if I felt that I could do so without doing meagre justice, without encroaching too much upon your space. The strata of black and red and gray, the scorched pines, the weird, desolate appearance of a city ruined by fire, the yawning canyons, varied in their colors by the green cedars, the red scorria, the neutral tilted clay and rocks, and the brown and black clinders and ligute, and, stranger than all, the hissing, burning pits, themselves the cause of all this devastation, are things which once seen will never be forgotten. By the courtesy of the officers at Cantonment "Bad Lands," we were enabled to ride nearly an mile from the track, over the rough country to a group of burning pits. And as if to make our surroundings even greater picture of ruin, we were shown, as we crossed it, the trail made by Custer when he went to his death. The largest of the pits which we visited was half forty feet deep, and wide enough to enable us, while standing on its brink and looking into the white-heated mass of burning lignite and taking clay below us, to feel that we were indeed looking into the jaws of hell, and that we could not be quenched. In reply to our inquiry, "How long have they been burning?" we are told to imagine for ourselves, for the space already burned over is twenty-five miles wide by a hundred and sixty-five miles in length, and we instantly conclude that the fire was not lighted by one of our race. Pieces of scorria taken from the pits while hot and fragments of petrified wood from the neighboring plain were among the relics gathered and preserved by those of our party who cared for them.

On our way to our camp and the ground covered with snow when we reached Glendive, Montana, on the evening of Oct. 11. It was only a scare, however, for the warm sun of the next two days left the ground bare and dry again. At Glendive we had our first view of the now famous Yellowstone, and through the kindness of the Northern Pacific Construction Company our cars were taken to the then extreme end of the track at O'Fallon, giving us a ride of nearly forty miles along the beautiful bank of the river. O'Fallon is distant from New York over two thousand miles, and we had not a single mile of track between us and our destination the same day to Glendive, our gentlemen decided to accept an offer of wagons and escort from the Commandant of the military Post for a buffalo hunt. We ladies could not well share in this sport, and willingly agreed to remain at the car. A three-days' camping outfit was soon ready, and early Thursday morning, under the guidance of five mounted soldiers, all but one of the gentlemen started for a point thirty-five miles northwest.

Just at the appointed time and while we were looking for the car on Saturday afternoon they came in sight, loaded down with all the beef they could carry, and with the hides and some of the heads of the eight buffalos killed on Friday. This was indeed success, even beyond our most sanguine hopes, and we will not soon forget the kindness of the officers of the Post, to whom we are so greatly indebted.

After leaving Glendive, on our return trip, we halted at Keith and South Heart, at this season the best points on the route for antelope. I could almost say we saw thousands of them on our way, but I will not say so, as I do not remember the same day to Glendive, our gentlemen decided to accept an offer of wagons and escort from the Commandant of the military Post for a buffalo hunt. We ladies could not well share in this sport, and willingly agreed to remain at the car. A three-days' camping outfit was soon ready, and early Thursday morning, under the guidance of five mounted soldiers, all but one of the gentlemen started for a point thirty-five miles northwest.

After stopping at Steele and Crystal Springs, where ducks and geese were so plenty that it seemed almost like murder to kill them, we came back to Minneapolis. A special engine took our cars to Fort Snelling, giving us time to enjoy the magnificent view from the Fort tower up and down the Mississippi, and up the Minnesota, and a charming view to the Falls of Minnehaha. One of our party having become so fatigued with the country that he declared he was not ready to return home, had us good-bye at St. Paul, with the avowed intention of returning to the buffalo country.

After our return home we had our first experience for the entire trip, including everything, were about five dollars per day. Can you imagine a more delightful vacation?—HENRIETTA.

OSPREY OR EAGLE—STEVENS PLAINS, ME., Nov. 20.—Editor Forest and Stream: I notice a communication in the last issue of your paper, signed "W," giving an account of an eagle taking a pike from a mill-pool. "W" calls the bird an eagle, then osprey, and then eagle again. Now, I never saw an eagle, neither *A. carolinensis* nor *H. leucophaea* take fish in that manner, but have repeatedly seen the osprey, *P. carolinensis*, do so. I suppose "W" meant osprey when he said eagle. If not, I would like to ask if it is a common habit of the eagle to procure his food in that manner? The shooting in this part of the State has been very poor this fall; no ruffed grouse to mention, squirrels fairly plentiful, and a few rall about make up the list. Have seen but one flock of geese, and that a small one. I have seen several of the fish hawk, but it may have been *H. ustulatus leucophaea*, the white-headed eagle. On the Pacific coast we have seen the latter seize fish in the water, though we believe it to be unusual for them to do so.

AUTOBIOGRAPHICAL FRAGMENTS.—IV.

BEING EXTRACTS FROM AN EDITOR'S CORRESPONDENCE.

* * * I first saw the light in the ancient county of King George, lying between the Potomac and Rappahannock rivers, Maryland. In this country is a variety of game, nourished by a good supply of food and protected by a splendid cover. My fathers before me were lovers of the chase, and I presume that from them I inherited my predilections in that direction. Had I the time I might tell you how my great-grandfather, while struggling in the water, into which he had been drawn by an immense sturgeon which he had just hooked, opened a knife with his teeth, cut the line, and saved his life.

I could tell you how my father killed wild ducks with a stone, when he was deprived of a gun by his father, who considered him too fond of hunting.

I could tell you how this same parent of mine bagged forty foxes in one season with his faithful hounds, Sportsman, True Boy, Stormer and Countess. How he quizzed a greenhorn who undertook to point out to a disappointed hunting party the exact spot where a fox was to be found. The greenhorn, in fact, knew nothing about it, but the fox was found there, just where he had said it would be.

The gun with which my father performed many notable feats of marksmanship was an old flint-lock. It kicked so hard that it one day knocked out two of his front teeth. Of this untoward event I always had a lively recollection when charging the old piece, and how my heart would flutter when I was about to pull the trigger! Many a miss was due to the snapping of that clumsy flint-lock; and I will remember the wonder excited by my first sight of a percussion-lock.

Were I not admonished by these twinges of pain (for you know how I suffer from insomnia) I should have to relate for the Forest and Stream some of the bright and dark days of my life as a sportsman. I could tell you how a companion once killed an elk at Mare's Island Navy Yard, Cal., with buttons torn from his vest at the moment. There used to be acres of geese and ducks in that same country; and once, at Mare's Island, I killed thirty-four sand-snipe at a shot. * * *

Natural History.

THE RABBIT NUISANCE IN NEW ZEALAND.

THE common English rabbit (*Lepus arizonensis*) has for the last seven or eight years increased so alarmingly in certain parts of these islands, as to make the question of their future effect a serious one for the whole colony. Originally introduced by private individuals, and turned out here and there in small numbers, they now promise, unless effectually suppressed within a short time, to work something approaching ruin to the pastoral interest in localities where they have taken hold, if not over the whole country. The question was taken in hand by the Legislature in 1876, and since that time four statutes have been passed, each giving more extended powers to the officers appointed, enabling them to compel property owners to take steps to clear their land of the pest. Until this year, however, no provision was made for the clearance of the vast areas of unoccupied Crown lands and native reserves, which formed perfect hot beds for the propagation of rabbits, and rendered the efforts of adjacent owners and occupiers almost futile. The Rabbit Inspectors have now power to take such steps as they may deem necessary in respect of such land, and the expense is to be met by an annual vote of Parliament. In the case of all other lands, the Government is empowered to levy an annual rate of not more than a twelfth of an acre within all districts proclaimed under the provisions of the statute, which rates are recoverable in a court of law, and are to be expended in paying the officers appointed under the statute, and other necessary expenses. Owners and occupiers of land are compelled, under a penalty, to take efficient steps to clear their property of rabbits on receiving notice to that effect from the Inspector of their district; and continued neglect of such notice gives the Inspector a right to take whatever steps he may deem necessary for the destruction of the rabbits, and to recover the cost, summarily from the defaulting owner, in addition to the penalty.

The statute, moreover, exempts from taxation all dogs certified to by an Inspector as kept solely for the purpose of destroying rabbits; and imposes a penalty for the destruction or capture of ferrets, weasels or such other animals as may be officially proclaimed to be the natural enemies of the rabbit. With such a trenchant measure at his heels, we may fairly hope that the hitherto retarding progress of this enterprising little rodent will receive a salutary check.

Various methods have from time to time been adopted for destroying rabbits wholesale. Small armies of men are still employed on many sheep-runs for no other purpose than this. Dogs, guns, and wheat or oats steeped in oil of rhodium and phosphorus, are the most effective means employed; the latter with but little injury to sheep, though a few are occasionally poisoned.

Some idea of the serious aspect which the rabbit question has assumed may be gained from the following particulars, which are taken from the evidence given before a select committee of the House of Representatives appointed for the purpose:

Three sheep runs in the middle island, of 50,000, 40,000 and 19,400 acres respectively, have been totally abandoned.

Ten other runs, with an aggregate area of about 490,000 acres, have been within the last year or two abandoned and since relet at a gross rental of £209 per annum; whereas their original rental reached close on 23,290. Some of these are let to rabbits, a more numerous and profitable sheep to be found on them. The effect on the sheep-growing capacity of the colony may be gathered from the statement in the official returns for 1878 and 1879, which show that in the latter year the colony possessed only 11,405,339 sheep, as against 13,069,338 for the previous year, being a deficit of 1,663,940. The departmental returns for 1880 and 1881 are not yet compiled; but it is estimated on good authority that the deficiency in numbers will have now reached 2,000,000, and that the loss to the colony of the wool may be calculated at £500,000 per annum. The same official returns show the number of rabbit skins exported from the colony during 1878, 1879, 1880 and the first quarter of 1881, to be 38,250,270, of the value of £159,110; and, as the evidence given before the committee seems to bear out the conclusion that not more than one rabbit is found for every ten killed, some idea may

be formed of the swarms of the little pest with which the colony is infested.

That New Zealand should, notwithstanding this heavy handicap on one of its main industries, continue to flourish and progress, is a striking proof of its natural advantages and resources, and of the energy and enterprise of its population. *Dunedin, N. Z., Nov. 3, 1881. L. M.*

HABITS OF WOODPECKERS.

HOOSIER HALL, Ind., Dec. 1, 1881.

Editor Forest and Stream:
In a communication touching upon the food, etc., etc., of squirrels, which appeared in the FOREST AND STREAM of November 10, I stated that the woodpeckers were busily laying up their winter's store of beech-nuts, to which statement you put an interrogation point.

That woodpeckers are red-headed kind in particular—do not depend exclusively upon insect food for their subsistence, and that they do lay up stores of nuts in autumn for use in winter's bleak days, is a fact with which I have been familiar for many years, and considered it an accepted fact by all observers of the habits of these birds.

In the early summer time, when the cherries and various kinds of berries are ripe, no bird is found a more persistent frequenter of the trees and vines than the red-headed woodpecker. In the summer and fall, when the apples hang ripe and tempting in the orchards, the woodpecker always the fat wood-worm to gnaw away beneath the tree-bark in peace and safety, while perched on an apple hanging to some slender bough, swinging in the mellow breeze, he gorges out mouthfuls of the juicy fruit.

Then in autumn, when the acorns, beech nuts and chest-nuts ripen, this red-capped raver goes to work with a will, and from rosy morn till dusky eve busily gathers and hides away in holes and crevices in the trees generous stores of nuts, on which he fasts during the dreary winter days.

A few days since I examined an old beech-stump or stump some forty feet long, with the sap-wood soft with decay and full of burrows and tunnels made by the wood-worm, which had recently been prostrated to the earth, and found *pints* of beech nuts stowed away in the holes and cracks. From one hole, originally made by a wood-worm, but enlarged by the woodpecker so that at the surface the hole barely admitted a nut, but deeper in widened out sufficiently large to chamber two or three, I extracted six plump nuts, and the circumference of the tree was perforated with hundreds of just such store-houses. In some of the holes I noticed the hull of the nut remaining, the bird having pecked away the seed and removed the sweet kernel. The treasures secreted in this old tree evidently belonged to one bird, for, so far as my observations go, each bird selects a tree for its operations, and defends it bravely against all comers.

The cunning squirrel, who loves nuts better than the birds do worms, frequently while in search of provender discovers the hidden treasures of the woodpecker, and in attempting to secure the booty he soon discovers that he has a first-class fight on hand, and after the ferocious bird has rained down on his unprotected peak a shower of fiercely-delivered blows with its ivory-pointed beak, the squirrel suddenly remembers that he has important business elsewhere, and departs on the double quick. This very day I witnessed a fight between a red-headed and a golden-winged woodpecker, caused by the latter bird trying to steal some of his red-headed brother's treasures, and he was compelled to abandon his pillaging operations, and beat a hasty retreat, although much the larger bird of the two.

An inch auger-hole in a gate-post, standing near my house, was selected by an ambitious red-headed woodpecker as a likely place for storing away a few nuts for future reference, and after cramming the hole full of nuts the bird plugged it up with a piece of bark. Wishing to test his watchfulness I removed the bark and the nuts. On the following day the bird discovered his loss, and after considerable fussing and scolding, went to work again, and refilled the hole and sealed it up with a piece of tough bark.

When the beech-nut crop fails, few, if any, red-headed woodpeckers winter over in these parts, but when the crop is abundant, as it is this season, hundreds remain the winter through and brighten and cheer the desolation of the forests with their presence and voices. *E. BEKKE.*

FERRISBURG.

I am surprised to learn that the red-headed woodpecker is a winter resident as far north as Lewis Co., N. Y. In all my winter tramps in the woods for the past thirty years I have never once seen him nor any woodpecker but the hairy and downy, which are common, and the pileated, which is not common. One day—since the first of this month—I thought I heard the peculiar tree-toad-like note of a red-headed, and I never before heard it so late in the season.

Thompson, in his Vermont, puts this bird down as a migrant, and, as concerns this State, he certainly is not a winter resident. *R. E. R.*

VICKSBURG, Miss.

Information is asked for by your correspondent, "Ned Buntline," as to the habits of the red-headed woodpecker. This bird is migratory in its habits; makes its appearance in this section early in the spring, stays the summer and fall months, and disappears in cold weather. Some, however, spend the winter with us, and are seldom scarce, as they repair to the dense forest for protection from the cold. Their appearance in the spring needs no herald to introduce them to your notice. The first intimation of their coming will be signalled by a great hammering on the top of some dead tree, and if the male bird can find a shivered piece of timber to vibrate to his hammering, he is in the height of his glory. This is the season for mating, and there can be witnessed a pantomime of love-making not surpassed on the stage. Should the male bird be successful in winning a companion, he will busily engage in building a house for their future abode. In this they never make a mistake; no architect is consulted, no plan is agreed on, no alterations are made in any building they undertake, each being by nature a perfect architect. They raise two to three broods of young a year and generally about five young in each brood. They are great insect feeders, but have a wonderful appetite for fruits, nuts and corn. The first fruit that ripens is the native black mulberry, of which they are exceedingly fond. Then come the winter berries, grape, peaches and apples. As soon as the Indian corn is in a state to eat, they take to the fields and feed on that. In the fall months they eat black-berry, hackberries, beech-nuts and acorns. The beech-nuts and acorns they gather and store away for future consumption. Faithfully do they apply themselves to the task of pecking every nook, crack and hole with these fruits, and

when driven from their homes to seek a temporary shelter in warm places, they know by instinct that they will still be in store for them on their return. But the blue-jay stays behind, and when the woodpecker is far off in his sunny home, steals from the larder of a more provident bird. The woodpecker, the provider; the proacher, the jay. And often have I, when listening to the receding notes of a peck in full cry, or when listening to the faint strut of a distant gobbler, been vexed by the incessant hammering of these little birds. But yet, "Ned," I love them still. I love them because they are so affectionate to their mates. I love them because they are so kind to their young. I love them because they rid my premises of insect pests. I love them because their incessant noise relieves the monotony of a bachelor's life. *LOWMEDES.*

STANLEY, New Jersey, Dec. 6, 1881.

When returning from school the other day, I noticed a young red-headed woodpecker (*Meanerpes erythrocephalus*) on a post, busily pecking at something. He allowed me to approach quite close to him without flying. When I went up to the post I found that he had been eating acorns. He had excavated a small hole in the top of the post, in which he placed the acorns, so they would not slip when he cracked them. There was a crack in the post, in which he had put another acorn. It must have been his habit to eat his food there daily, for the ground was strewn with shells. *HARRY PAGE.*

THE COLORING OF RUFFED GROUSE.

NEW YORK, Dec. 9.

Editor Forest and Stream:

In your issue of Dec. 8, "Stanstead" gives "Eight Rules for Treering Grouse." It seems to me that if a person who had hunted grouse in any part of the country, except Northern Vermont and Canada, should try to make a bag of birds according to the eight rules, he would meet with very poor success. I have hunted grouse more than any other bird, and, as a naturalist, have studied their habits very closely, but should not dare to give any set of rules, because each individual bird is liable to change his mind after he starts, and only a thorough knowledge of the ground, and of the habits of the grouse, will enable one to find birds successfully.

Although "Stanstead's" rules are undoubtedly very good for his locality, they would not answer for Connecticut, where it is a rare thing for a grouse to alight in a tree; nor in parts of Maine where I have hunted, and where it was the exception for a bird to alight on the ground. Most of my shooting has been in New York and Pennsylvania, in localities where grouse were so plentiful that it was not worth while following one up, nor trying to find him if he went into a tree; but "Stanstead's" rule 1st is exactly reversed in these two States. He says "When this bird has been flushed on level ground, should he fly swift, and low out of sight, he will frequently swing to the left, and alight on the ground." Now, according to my experience, a bird that flies low always alights in a tree at the end of his flight, but a bird that flies high alights on the ground.

Every hunter who has enjoyed a thorough experience with the ruffed grouse knows how the habits of the bird vary in different localities. But now let us bring up a new subject in regard to local variations, and that is the variation in color of ruffed grouse from different sections of the country. This is a subject that I tried to have discussed in the FOREST AND STREAM several years ago, but no one seemed disposed to answer.

In New England I have found the prevailing color of the grouse to be of an ashy gray. In Pennsylvania the color is tawny, almost approaching a red in some specimens. In eastern New York both red and gray birds are found, but gray is the principal color. In western New York this is reversed, and a gray bird is the exception. If we draw a line on the map, then, from Boston to Pittsburgh, we shall find that the ruffed grouse at the Boston end to be of a dead gray. As the line passes through New York the gray will merge into the tawny type, and at the Pittsburgh end of the line we shall not find any grouse that are not red.

I have not had an opportunity to examine large quantities of grouse from other States than those mentioned, but have examined hundreds of specimens from the States in question. Neither age nor sex seems to have any influence in this color distinction, any more than they have in determining the color of the mottled owl (*Scops asio*). If care should be taken to take the tail of the bird displays the type better than any of the other feathers; and if they will carefully notice the birds in their respective sections of the country, and not speak from memory, we shall have contributions on the subject that will be valuable to the naturalist and interesting to the rest of hunting mankind. *MARK WEST.*

AN EAGLE'S FOUR WITH GEASE.—Our correspondent, Jacobstaff, last week related an experience with an eagle, which we supplement here with an extract from the Little Rock, Ark., correspondence of the St. Louis *Globe-Democrat* of Nov. 23. He says: "A gentleman from Stone county gives the particulars of a remarkable incident which he witnessed while crossing White River on the ferry just above the mouth of Sycamore Creek. When nearly half way across the stream an enormous eagle swooped down on a flock of geese which were swimming in the river some eighty rods below the ferry. The eagle, upon observing the birds, approached instinctively dived under the water just as the bird struck the waves. Baffled in the first assault, the eagle flew slowly upward, and when the geese came to the surface darted downward again, and burying its talons in one of them attempted to bear it away. The goose struggled violently, while its companions swam around it uttering shrill cries, and the persons on the ferryboat watched the strange scene with keen interest. Once the eagle lifted its prey clear out of the water, and secured on the point of carrying it to the mountain cliff that rose grandly in the sky on the other side of the stream, but the struggles of the goose forced the eagle downward. When water was again reached the goose made a supreme effort and plunged below the surface, dragging the eagle after it, and causing the latter to loosen its hold and rise upward with a fierce scream. The eagle next attacked another goose, but with the same result, being compelled to relinquish its hold when its intended victim plunged beneath the surface. The water once again became fully strewed with geese, at the end of which time the eagle gave up the fight, and, rising, soared away to the mountains westward, while the flock of geese swam further down the stream. None of the flock were killed, but the water in the vicinity was dyed with blood, and the surface of the stream was covered with feathers for a considerable distance."

SNOW GEESE IN THE DELAWARE.

Editor Forest and Stream:

I have lately received a letter from Mr. Wm. Dutcher, of your city, making inquiry relative to the yearly presence in great numbers of the snow goose in the neighborhood of Bombay Hook, Delaware Bay. In my communication to you a week or so since, I stated that "duck shooters say the yearly flock of snow geese that appears in the Delaware, below Bombay Hook, has not yet shown itself." This may lead persons to think the flock makes a regular autumnal appearance there. I should have stated the yearly flock of snow geese that makes its appearance every spring in the neighborhood of Bombay Hook has not shown itself this fall. Further inquiry leads me to believe it is only seen in great bodies in the spring, and for the benefit of those interested in the movements of this fowl I would state that, to my knowledge, ten years ago an occasional brace or two of snow geese, shot in our bay, could be found at the game dealers of Philadelphia. I generally purchased them whenever I found them, and no one seemed to know what they were, or of their delicacy when served for the table. About four or five years ago two of our most expert professional duck shooters, John McCullum and John Brown, were down the Delaware, below Bombay Hook, and finding ducks very scarce came across immense flocks of snow geese. Not being acquainted with the fowl, but knowing that it belonged to a goose family, they paddled on them, got several shots, and filled their skiff. This was in the spring of the year, either the last of March or 1st of April. The birds were sent to Philadelphia, but could not be sold, hardly given away. Mr. John Krider and Mr. Abbott got a number of skins; at least your correspondent saw them at Krider's store. The flock has yearly made its appearance since then, so I am told by these gunners, but are not molested. Last spring, Capt. A. H. Clay, of Philadelphia, one of our best amateur duck shooters, found them in the same neighborhood, and, not being the fowl resorted to the burned meadows to feed on the young grass just shooting up, cut out from an inch and a half board several profile decoys, and painted them white. From an impromptu blind he got several shots, and killed some of the fowl. He stated to the writer that where the geese started from the bay (where they were sitting in immense flocks) for their feeding grounds, the noise their gabbling made as they flew in almost deafened him, and instead of coming to him in small parties, in some cases he would have the better shooting, the great body seemed to take its flight in two divisions, and thus became alarmed together when shooting began.

Capt. Clay told your correspondent, for a long distance along the shore the grass had been so pulled up by the fowl in their feeding as to resemble the roofings of swine.

If I am not mistaken, the writer saw among the skins of the snow geese which were killed in Delaware Bay at Krider's, those also of the white-fronted goose. Of the information I give of the former I am positive. I know of no local summer at Bombay Hook, but Mr. Dutcher can get all additional information he may desire by addressing "Capt. A. H. Clay, care John Krider, Second and Walnut streets, Philadelphia; or of John McCullum and John Brown at same store," either of whom, or both, would be glad, I think, to procure good specimens for Mr. Dutcher next spring. HOMO.

"THE TAME QUAIL "BOB"—Editor Forest and Stream: N. D. Eting, of Huntington, W. Va., has a quail domesticated, so tame indeed that he can be carried through the streets upon an umbrella. Mr. E. will take him into the middle of the street and let him roll in the dust. A crowd will gather and vehicles pass, but "Bob" goes on with great gusto and nonchalance, taking his dust bath with a chuckle of perfect satisfaction. He was taken to the woods one day, and he called up another bird that was piping in the fence, and offered him battle. The conflict was sharp, but Mr. E. parted them before victory was decided. In fighting the quail strikes as the barnyard cock does while holding on with the bill. Mr. E. has had several quails, but could not tame them as thoroughly as he has "Bob."*

A BRANT READILY TAMED.—Mr. Franklin Satterthwaite, at present shooting in Virginia, writes in a private letter, of the 5th inst., to one of the editors of FOREST AND STREAM who has had a little experience in domesticating wild fowl, and wishes to try again. "I have two crippled brant for you. Both are wing-tipped and one of them took food from my hand on the second day of his incarceration in an old pigeon, where they are kept. They are beauties and I have become much attached to them. They will be shipped to you soon. They eat corn, cabbage, grass, etc. The weather has been too warm for the geese to come, but ducks and brant are plentiful."*

A NEW SUB-SPECIES OF LOXOTILIA.—In the current volume of the Proceedings of the United States National Museum, Mr. Geo. N. Lawrence has described a new variety of *Loxotilia portoricensis*, collected in the island of St. Christopher, W. I. This bird, to which the sub-specific name *grandis* has been given, was taken by Mr. Ober in May 1880. It resembles *L. portoricensis*, but is larger, the bill, as a rule, markedly so. Mr. Lawrence's investigations of the birds of the West Indies Islands have been most valuable contributions to our knowledge of American ornithology.

A DUCK'S APPETITE.—Toms River, Ocean Co., New Jersey, Dec. 1, 1881.—A friend of your correspondent at Manahawken, in this county, owned a Muscovy duck two years old, which had never had a "square" meal. Desiring to ascertain the storage capacity of the duck my friend gave it an unlimited quantity of corn. The duck succeeded in consuming two quarts of the whole amount, and then lay down and died.—N. H. B.

A QUAIL'S MOMENTUM.—Editor Forest and Stream: Some idea of the solidity of the quail and his velocity in flight may be conceived from the fact that a man riding on the cars was struck in the face by one of these birds, and was killed as if by a stone. He arose to his feet, and asked to know who had knocked him down. It was shown the quail that had fallen at his feet, which he picked up, and in passion hurled it to the ground.*

LOADING FOR GAME.—Much diversity of opinion prevails as to the correct loading for different kinds of game. It is a subject upon which we should like to hear the experience of gunners.

Game Bag and Gun.

THE VALLEY QUAIL AS A GAME BIRD.

THE THREETHREADED "QUAIL-GANNERY."

SACRAMENTO, Cal., Dec. 1, 1881.

Editor Forest and Stream:

Reading in your interesting journal of last week an editorial paragraph concerning regular shipments of vast quantities of American game to Europe, reminds me of the fact that strong legislation will be necessary one of these days to prevent the extermination of the quails of this State. That these birds are yet numerous in some places, is due only to the fact that ours is but a young State as yet, and sparsely settled. The thirst for slaughter is rapidly growing, however, and where one will in California to day, he will find that the pot-hunter and representatives of that class of shooters, whose sole idea of sportsmanship is to kill the greatest number of birds in the shortest possible time, have been there before him.

When the writer came to California, twenty-seven years ago, game of all kinds was abundant—quails particularly so—everywhere. To-day one must go at least twenty miles from this city, to the nearest foothills of the Sierras or Coast Range Mountains, in order to find enough of these birds to make even a reasonable bag in a day. Formerly the birds could be found any where, even in the valleys, where they frequented the bushes along the watercourses, and mornings and evenings could be seen running in the public highways in flocks. But, like the deer, they are yearly being driven into the less frequented places, and even when found in any considerable numbers, it is generally where the cover is so thick that it is difficult to hunt them successfully. This is the case in central and northern California, while in some of the southern counties they are said to be still very numerous. But even there the plumbers have commenced their nefarious work by resting the birds by wholesale, and sending them to the San Francisco market. Here they are offered for sale at from 75 cents to \$1.25 per dozen as long as they will keep; and when they begin to spoil they are disposed of to itinerant peddlers, who hawk them about the streets for about 50 cents per dozen. This fall the newly organized State Sportsmen's Association took this matter in hand, and caused the arrest of several parties engaged in the business of trapping, who were prosecuted, convicted and severely punished for their disregard of the law. Still it will be difficult to prevent the depredations of the quail for the market, as the trappers can pursue their illegal calling in such out-of-the-way places that it will be next to impossible to hear anything against them. The result will be that in a few years we will hear no more of flocks of quails numbering from 500 or 1,000 in the counties of Santa Barbara, Los Angeles, San Diego, San Bernardino and elsewhere in the southern parts of the State.

This brings me to the matter suggested by the paragraph in the FOREST AND STREAM, above alluded to. It is said that there are persons who have actually in contemplation the starting of a quail gannery in this State. This is an establishment for canning quails! Of course, in order to keep such an institution running during the season, every locality frequented by the birds would be scoured by the pot-hunters and trappers; the conscienceless emissaries of the creatures who would enrich themselves at the expense of robbing the people of the State of their choicest game birds. From quail-gannery they would come in a short time to shipping the birds out of the State by rail, and I can see no way in which to prevent such a result, except by the Legislature awakening to the importance of the occasion, and making it a penal offence for any person to do otherwise to engage in quail canning or quail exportation. With proper care the quails in California can be so protected as to furnish excellent sport—even a reasonable market supply—for at least another generation, and at least in some parts of the State; and it behooves the sportsmen of California to take an active interest in the matter.

The California quail is not a stranger to some of our readers in the Eastern States, as many of them have visited our State and enjoyed the rare sport of hunting them. I refer, of course, to the "valley" quail, the other species known as the "mountain" quail being rarely met, with except in the higher mountains, close to the snow belt. The former is a very game bird; that is, he is wary and cunning. It has been asserted that he will not fly well to the dog, and this is true to some extent, but is not the rule. A great deal depends upon circumstances. If you can get the birds on favorable ground, where the cover is low and the brush is not too thick, and the undergrowth sparse, the bill—after a first flushing—lie so close that a staunch dog might point one of them for half a day, and often the hunter has to kick them out of their hiding places.

One day last fall, while enjoying an afternoon's hunt in a little wood, on the ranch of a friend a few miles down the river from here, my dog, running very fast, came suddenly upon a quail crouched by a little sprig of oak, in the grass. The dog was running so fast and came so suddenly upon the bird (the day was warm and the ground very dry, so that the scent was very slight), that when he drew up his nose was probably not more than six inches from it. Whether unduly excited by the proximity of the bird, or whether the latter made a movement of some kind, I know not, but the dog so far forgot himself as to make a spring and catch it, bringing it to me unhurt. This I proved by giving it wing until it had reached twenty or thirty yards, when (of course) I brought it down.

That the bird give out a strong scent there can be no doubt. About three years ago I was out duck-shooting about three miles from Iowa, when a storm came up and I was forced to seek a vacant shanty in a neighboring pasture, in which there were fifteen or twenty acres of trees, wild-rose, thickets and cockle-burns. While waiting for the shower to pass over, I heard some quails calling near by, and changing my No. 6's for 8's soon made off toward where the "no-you-don't" notes were coming from. I had not gone far through the briars and wet grass before my setter, which had ranged close to my right side, was then coming toward me (against the wind) came to a beautiful point. It had been worked but a very few times on quails and I was not a little surprised to see him stand so well. I walked toward him, and when within about fifteen yards flushed a quail almost from under my feet and in a direct line with his point. The bird flew over the dog and I killed it, the dog retrieving. As soon as he reached the same spot, however, with the bird in his mouth, he stopped, sniffed the air a second or two as if to make sure, and then came to another staunch point as before.

I advanced a few steps and flushed a bird (the one he had first pointed) at least ten yards in front of him. This was worth more than a cartload of ducks would be, and so I confined my attention the rest of the afternoon to that field. The ground was moist, which must have increased the birds' scent, as the dog made upwards of thirty points within a couple of hours, there being two or three coveys and quails on the place. In one instance he caught a bird that had been nearly fifteen paces distant and thirty feet from the ground, in a tree.

This convinced me that, under favorable conditions, there is no bird that affords better sport for the gunner, nor prettier work for the dog, than the blue valley quail of the Pacific slope. Of course we cannot hunt them in stubblefields, nor in cornfields, as our friends east of the Rockies do their quails and prairie chickens, and we have to go a good distance from some of the towns to find them at all; but when they are found they will give the best of shots, enough to do to brag them. I hope to see them introduced in the Middle and Southern States some day, and then you can try them yourself. N. E. W.

OLD TIMES AT MONTAUK.

PHILADELPHIA, Dec. 3.

In a recent issue of your paper I notice a communication from Isaac McEllan, of Shelter Island, in which he speaks of Great Pond, a once famous shooting locality situated on Montauk, the extreme eastern end of Long Island. It is some twenty years since I visited there, but at that time it was a paradise for sportsmen, and one of the very best points for wildfowl shooting on the coast.

Montauk proper contains some 9,000 acres, if I remember correctly, and when I knew it was one vast grazing ground, or at least so much of it as was known as the Indian Field. The land was owned principally by farmers in the adjacent towns of East Hampton, Amagasset and Bridge Hampton, and at stated intervals the cattle were driven on and off, and these drivings were the great events of the season in that locality. The ride from Sag Harbor to East Hampton was delightful, and from there to Amagasset tolerably so, but across Napeague Beach and on to the light-house it was a terror, as many an upset would fully prove. The light was kept by Pat Gow, and he "entertained" in the most hospitable manner. Judge Abraham T. Ross, of Bridge Hampton, was a regular visitor there, and Hubbard Fordham, Henry Preps, Henry Hantling and Daniel Z. Bellows could be depended on to respond at short notice when Gow sent a message to them at Sag Harbor that game was abundant. It was told of Judge Ross, that he was trying an important case when Fordham sent word into court that geese were on Montauk in great numbers, when the Judge suddenly discovered that important papers were missing and the case must lie over for one week; and it was positively ascertained that in a half hour's time he was seen cleaning out his gun in the back-yard. These gentlemen were enthusiastic sportsmen of the old school, and were a credit to the sporting fraternity in their day and generation; but they have passed away.

One of the institutions in those days on Montauk was old Ptinam, a negro, who lived with Gow; and to hear him describe the acres of geese and duck he had seen and the swarms he had brought through them with his old flint-lock was really a treat. For he had told the stories so often that he believed them himself.

Referring to the pond again, I was not aware the salt water had been let into it, and if the present owner, whoever he may be, will put an end to it he will be amply repaid; and I would really like to see the experiment tried of sowing it, or at least a portion of it, with wild rice. I don't, however, if there is ever a return of the old drift, for it is this incessant hammering, this constant dropping, that wears away the stone, and the fowl naturally seek pieces of greater safety and away from the centres of civilization.

The breech-loader may not be directly responsible, but its advent among sportsmen has increased their number by thousands; and who would think of going into a sick-box with a muzzle gun, or how many city sportsmen especially would go to Bill Lane's, for instance, and go through the old process of loading with frozen fingers and shivering bodies. The game would not be worth the candle after using a breech-loader for one season, and in fact is hardly worth the candle now in many localities, as I was lately and along the New Jersey coast. See no cure for that, except to abandon all shooting until the fowl get wotted back again, and then pass laws suitably protecting them, and another thing, enforce the law. The business of some world no doubt suffer, and the pleasure of many of ours would be curtailed, but the results obtained would, I think, most amply compensate for the temporary restriction. Years ago the shooting about what is now Atlantic City was most excellent for duck and snipe, but now, when game ventures to alight in any one of season—there is a charge of lead after them from all points of the compass, and if they succeed in running the gauntlet they draw a blue line for

Some better world in depth of wood embraced,
Some happier island in the watery waste,

and one that cannot be reached in thirty minutes by rail, with a smoking-car full of gunners. I have visited every shooting locality from Montauk Point to Cobb's Island, Va., and I hear the same old story of what used to be before the shooting had become such a favorite pastime, and before the "electric light" of the time had become a habit of life had become so common. We must go slow, gentlemen, or we shall soon have no shooting worth the name at all.

I will close by asking, what has become of your old-time correspondents "Engineer," "Forty-five," "Straight Bore," "Glean," etc., etc. They were easy and graceful writers, and their letters were read with much interest, and I think it high time they were stirred up and given to understand that they must come to the front or be read out of reach.

PINK EGG.

CARRIOW KILLED WITH A 32-CALIBRE REVOLVER.—Buffalo, Dec. 4.—Editor Forest and Stream: The Quebec Daily Telegraph, under date of November 18, contains a sworn affidavit by Francis Kennedy and Elias McRae, of Douglastown, Province of Quebec, wherein they certify to the killing by Smith & Wesson 32-calibre revolver, at a distance of forty-two yards, of a caribou of 175 pounds weight after being dressed. The caribou was shot through the heart to the great astonishment of the hunters, who probably never dreamed of the great power of the revolver of that calibre. The scene of the occurrence was near five miles from Gaspé Basin, one of the best hunting grounds for caribou, as the country about Gaspé is an immense and almost impenetrable wilderness.—CHARLES LINDEN.

REDUCING EXPANDED SHELLS.

SOME time since I had an English breech-loading 12-gauge gun, in which I used paper shells. Being desirous of using brass ones I got 430-cal-plated ones, and after firing them in the gun they came out with difficulty, and after closely examining them I found they were not in perfect shape, and upon looking at the chambers of the gun noticed for the first time that they were not bored true.

I disposed of this gun and kept the shells; and shortly after bought a "factory-made" American gun, of which the chambers were bored true; but I found these shells would not enter this gun, although I tried in many ways, by dressing down with emery, and subjecting them to the action of acids, to a length and not again in this way. I had a piece of steel bar, 3-inch thick, put in the face-chuck of a lathe, and a very slightly tapered and polished hole put through the bar of such size that a new shell which had never been fired, would, after being oiled, enter the larger end of the hole about half an inch if introduced with considerable force and with a boring motion. Then, taking the shells and smearing them with oil and driving them in at the larger end of the hole (with a mallet of wood, up to the flange, I extracted them with a wooden plug (of slightly less diameter than the inside of the shell), in which was bored a 1/4-inch hole so that it would not strike the anvil seat. I put this in the shell and drive the shell out, using the wooden mallet. Shells which are treated in this way are reduced to their original dimensions. It often happens that a person using brass shells in his gun has allowed them to be fired in another gun, and upon attempting to use them again has found them to be expanded so as to be useless; to all such this communication may have some little value.

I would state that the charge made for making this "sawge" was twenty-five cents; and as labor is cheaper over on your side it could probably be done for less.

Coyote.

THE MOBILE GUN CLUB DINNER.

MOBILE, Ala., Dec. 1, 1891.

Editor Forest and Stream:

The first annual side-hunt of the Mobile Gun Club, Nos. 27 and 28, resulted in a tie, each side scoring 476 points. The dinner was, therefore, a joint affair. The editor of the Register has described it so well that I will let him tell the story for me.—J. F. S.

The report incidentally is as follows: Last Wednesday night the spacious and elegant dining-room at the Battle House presented a memorable and not to be forgotten appearance. On each side and across the head of the room forming three sides of a hollow square, were long lines of tables laden with every variety of game in profusion and served and prepared by masters in the art of gastronomy. There were seats for one hundred and twenty participants, the Gulf City Gun Club had invited guests.

At 9 o'clock sharp, the doors were opened and the seats quickly filled. Attention was first paid to the tempting display spread before them and the manner in which the edibles were attacked showed the persistent and due appreciation. The waits of the inner man having been satisfied the dining was commenced by Mr. H. P. Vass, whose remarks were noticeable for their exceeding brevity. Judge Semmes came next and roused the first hearty laugh of the evening. Capt. W. J. Brainard was the next brief speaker, after which the Hon. R. B. Owen spoke in deserved praise of the club and its object in furthering that most important condition, "a sound mind in a sound body." W. B. Holt was next called on, but not being ready, gave place to Dr. T. S. Seales, who spoke in a commendable and congratulatory words upon the success, the gratifying success, of the scheme of a gun club, of which he was one of the originators, who had believed in its ultimate success from the start. He was proud of the Gun Club, and now that its success was an assured fact, he hoped its future would continue as bright and prosperous. He concluded by calling on one of the invited guests, General James Gordon, of Pontotoc, Mississippi. General Gordon responded in eulogistic terms of the members of the Gun Club and the magnificent spread that was spread at the annual hunt. After indulging in some reminiscences he called on another invited guest, Mr. Fontaine, of the New Orleans Gun Club. This speaker alluded to the time when some of the members of his club met those of the Gulf City Gun Club, and handsomely acknowledged that they found their fowmen worthy of their steel. One of this gentleman's allusions brought up C. J. Semmes, who made a very neat point, and then called on one of the members of the Club, General J. W. Burke, who gave a very interesting description of his first hunt after wild geese and his remarkable success. Some of the most interesting and modern Nimrod, Mr. Joseph Sten, but he bore his blushing honors very meekly, and could not be persuaded to talk. Captain Billy Brainard took the witness stand, and in glowing words described the adventure of his party on the Spray, how they embarked at 6:30 on Saturday night, bound for Hickory Ridge, and how every hour after that so nothing happened. Near half the night had gone before they reached the bridge, and still they sailed. Next morning a little before daylight, the pilot of the motor launch, after indulging in some surprise and delight (?) they were at the railroad bridge, having sailed up the river, turned around and came back again, without knowing it. Then they burst their water gauge, ran the Spray full head on a big sand bank, and still they had not reached that promised land, Hickory Ridge. This was a very sensational narrative and it was greatly appreciated. One of Captain Brainard's moving allusions brought up Captain Rachenstein, sometimes known as Old Hook, who asked for information on some incident of the trip. Captain H. P. Vass called upon the representative of the Register, but that representative was fortunate in securing the assistance of Dr. Seales, who, after a few remarks, called on Mr. Dreisbach for an account of his trip after game and his party, and the trouble they had with a magnificent freight conductor. Mr. Dreisbach narrated their troubles and showed that they had gone further, hunted harder and had more trouble than ever before, all to the glory of their side. Judge Semmes had some questions asked them. Dave Layton was vociferously called for. Not heeding the suggestion to "get up on a chair," Dave deliberately perpetrated a succession of puns which brought down the house and successfully retarded the career of the smoke of the explosion. Then Recorder Owen had some questions to ask the tax collector, which were decidedly personal, and which brought Major Shellfield all p standing. He also narrated some of their troubles

and aggravations in the State of Alabama. He finally alluded to a game man who with them, all game, and wanted to hear from Mr. D. H. Lay, who gave another chapter in the adventures of their party and what was done on that memorable occasion. And then allusions were made to the telegraph man and what he did, and this brought up Mr. C. A. Holt, who gave an outline of their trip after game down toward Fort Morgan, of the sand banks down there, and any duck ought to be shot who was fool enough to try to live there. He expressed, confidently, a belief that he would not go in that direction at the next annual hunt. Capt. Wm. H. Williamson was the next speaker, and he spoke of the predicament of the hunters getting where there were signs of game, only to be stopped because there was a church within four miles. And then that march in the swamp, the sight of a bird, the first shot for twenty-three years and the safe escape of the would-be victim.

Under the inspiring influence of the Roederer the talk became more general, and Mr. E. Carré, Captain Williamson, Dr. Seales (who told how Vass shot his deer), H. P. Vass, Judge Semmes, T. T. Dorman, L. H. Kennolly and Dorman all took part. The entertaining description of Mr. Fontaine's fox hunt, by that gentleman, was one of the most entertaining things of the whole evening, and brought out enthusiastic roars of applause. He certainly deserved to score 500 points for that.

The three hours' session was then adjourned over sincere wishes for many happy returns of the annual hunt of the Gulf City Gun Club.

MENTO.

Gun Club Gumbo.

Tenderloin of Flounders, en Carouche.

Vol au Vent, à la Russovite.

Roast Wild Turkey, with Water Cresses; Mallard Ducks, stuffed with Olives; Saddle of Venison, Currant Jelly Sauce. Broiled Squirrel, à la Maitre d'Hotel; Gray Ducks, Poivrade Sauce. Mashed Potatoes, Baked, à la Villars; Timbale of Macaroni, à la Reine.

MORE ABOUT TURKEY CALLING.

WILLIS, Texas, Nov. 18, 1891.

Editor Forest and Stream:

I am in camp now in the woods, have a good staunch cabin "by the lake," probably for the winter. We feast daily on venison, ducks, squirrels and fish. So far I am happy, but I see that your correspondent "Keouk" is not, and he calls on me to help him call his turkey.

In the first place he must make a "caller," or "call," such as I will describe presently; then he must go to school (a turkey school) with the young turkeys, as I did, and grow up with them, to learn their language, otherwise he will not succeed. If he has a flock of tame turkeys about his house let him get up at daybreak and go and sit down a short distance from their roost and watch them. Let him notice everything they do, and he will be much interested, if not edified, with their performances. Wild ones act in precisely the same way.

In the fall and winter, when turkeys are in flocks, they usually roost in the same tree, or in several trees close by. At the dawn of day you will hear them begin by occasional "clucks," then, shortly afterward, frequent yelpings before they fly down. Sometimes the old henfirst, and at other times a young one or two, will begin first. This you cannot always tell, for the notes from either are not always the same; however, experience will teach you. But if you will learn the "cluck" note, and begin when they do, it will attract their attention to you, and if kept up more frequently than they do, they will be more apt to pitch down near you, when they come down off the roost. You must "cluck" and yelp, too, at intervals, and at the same time.

The "cluck," when well made, is an excellent call note, accompanied with the "yelp," and if you make both well (as I do), and use proper judgment at same time, you cannot fail to meet with success in getting all the turkey roasts you wish.

Some will tell you to yelp once or twice or three, but I tell you to yelp and cluck as often as you please, or as loud or low as you like, it makes no difference as to number of times so you do it well, not almost like a turkey, but just like a turkey.

If it be in the spring of the year, in gobbling season, then you have to use the best turkey lure. You must put in your best skill, and if you use good yelping, clucking and plenty of patience, you will out-gener the cunningest old gobbler that ever came from an egg.

Use a rifle to shoot him with, a .38 cal. Wesson or Remington or Ballard—all good. Don't shoot an old gobbler with a shot gun. If I thought you would I would not tell you a word about calling him up.

The turkey call, in my opinion, is the best turkey call that was ever made. I am, in fact, the inventor of the instrument myself, and if you will practice it right and take notice what you want to produce with it, you can soon become expert in the art.

I take the smaller bone of the second joint of the wing of the turkey hen. Cut it off square and smoothly at each end. I use a file in cutting off and in squaring and smoothing the ends. Clean out the inside and outside nicely. Then get a seasoned or dry cane reed just that the round end of the bone will fit snugly into the hole into the round point about three quarters of an inch and wedge it snugly with white pine wedges, but not tight enough to split the cane. Let this piece of reed be about two inches long, which must then be inserted into another piece of reed just large enough for it to enter. Then begin back from the joint three quarters of an inch and pare down sloping toward the bone, both joints alike, and wrap nicely with a waxed thread. Let each section of reed be one and a half or two in the long. The wrapping of the joints by the joined parts strong and air-tight, which is essential in making clear notes. When completed the instrument should be six or seven inches long.

Now if "Keouk" does not understand, then write to me at once and let him give me his name and address and I will make and send him one.

Now, when the call is made after this method, try to yelp and cluck with it. Place the bone end in your lips and "pucker" and—goodness! I don't know how to tell you to do with the reed, but go to yelping, that's all. Practice as you would a flute or fiddle until you have learned, then you will never forget it. The following is a rough penning of the "call" as best I can draw it in the woods where I am. It

gives the design, and it seems that any one could make it. In order to "cluck," place the tip of the bone against the end of the bone-mouth-piece, and by a quick suck and jerk of the tongue you can learn the cluck. I make any note that the turkey does with the use of this instrument. I call like old hen or young hen, young gobbler or old; cluck like either as a call note, or "put" like either as an alarm note. I have used every contrivance that I ever heard of, but I have yet to find anything but the real turkey that can equal this call, and I have yet to find an old gobbler that I cannot bring with it. I will put myself on one side of an old gobbler and let another man with all the "fixes" he ever saw, put himself on the other side, with a live turkey hen to boot, and if the old chap is an hour or two in making up his mind which to go to, I will give my gun if I don't get him. I made one of these things for a friend in Mississippi once and taught him how to use it, and have been sorry ever since. The first spring after I made it he killed nine old gobblers with it, and has been making havoc among them ever since. He broke up my "roostin' ground," so I left the country; but I did the same service for my brother out there, and he is now a stand-off for the other man, and even beats him a little, for my brother can gobble just like a turkey, and Smith, the other fellow, can't—that's all. C. L. JORDAN.

A MISSISSIPPI CAMP HUNT.

Editor Forest and Stream: Thinking, perhaps, that some of your many readers might like to hear from this section of the country, I shall try and drop you a few lines which may fall in a fertile spot or land in the waste. A party of some eight or nine of us left on the 13th for our annual camp hunt, and only one who has participated in these jaunts can appreciate the pleasures that such an anticipatory, except the missionary, who is the draught-horse of the trip; and unluckily this has fallen to the writer's lot twice in succession.

A merrier or happier party never entered a forest than ours as into the sombre woods we defile, and with blowing of horns and the deep baying of hounds we plod our weary way along, till, near night, we draw up to a deep bayou, where we select a camp ground. After a refreshing night's rest, ere the golden orb of day has begun to tinge the eastern horizon, we are up, and after a cup of coffee and a few cracks we are on our feet. After a short ride through some cane we enter the hunting grounds. Scarce had we debouched ere the thrilling notes of our noble hounds reached far through the stilling aisles, and the heart of many a timid deer beat responsive to its sweet and stirring sounds. Only a few minutes after three or four shots are fired, and we have a beautiful doe stranded on the brown and sere grass. But we have no time to tarry. On we go to a regular fusillade, to find two boys with the buck axe, worse frightened than the noble monarch that they had endeavored to bring down. With the dogs all gone, we try it breathing; and after a little while we see a monster black bear, too fat to run fast, and our bear hunter on horse-back in hot pursuit. After a spirited run of fifteen minutes and after several shots the bear finally succumbs to the inevitable, and lies prostrate and lifeless. He weighed six hundred pounds gross and cut four inches of fat. Some of the boys return to camp with him, while the rest go on. After a ride of an hour we are satisfied to return to camp having bagged three large bucks, which are killed by the boys, jumping from their beds in such a way as to give the hunter a bad Monday's work.

Tuesday morning breaks upon us, beautiful, calm and cold; and after a tasty breakfast we are off again, and during a most enjoyable day we bag three large bucks and one fine gobbler. On our return at 4 P. M. we find our chief cook, Stephen, "a cullud gemman," ready with dinner. It was undoubtedly, under the circumstances, the best dinner that I ever sat down to. Our menu was as follows:

Beef Steak, Roast Liver Fried.
Venison Steaks, Breaded.
Venison Braised Meat.
Biscuits, Corn Cakes, Coffee.

Our dinners and breakfasts were just about the same, with the addition of fried and broiled squirrel and fried turkey. Wednesday, Thursday and Friday passed in the same way as the above, and after a most pleasant week we had bagged the small number of thirteen deer, two bears, three turkeys, one otter and forty-seven squirrels. We kept an account of game that we saw. There were seen fifty-three deer, five bears and nineteen droves of wild turkeys, with smaller game not counted. We arrived home safe and sound, tired and dirty on Saturday, the 19th. J. K. W. Como, Miss., Nov. 23, 1891.

TENNESSEE GAME NOTES.—Spartanburg, Dec. 4.—Now is the time that the Foxglove and Strawberry should have chosen to ventilate the 'possum question, as there never were more of them than this winter and of a finer quality. William Hobbs, the champion 'possum hunter of this section, gave one to Col. Geo. F. Akers last week which weighed eight and three-quarter pounds dressed. To-morrow he will be served to a select few of our old pencil drivers. Charley Holtester's noted chef, "Jinks Mullens," has been entrusted with the parillin', pepperin', tellerin' and lakin' of it. The chief reporter of the American Sportsman for ten days saw one in the mountains in preparation of the savory dish. The tail of the beast was amputated with a view of making a dog-whistle of it for Joe Clarke or Jack Bently, whichever succeeds in killing the first bird on the wing. Col. R. M. Edwards leaves in a few days for the mountains of East Tennessee in quest of bear and panther. The colonel says that quail shooting is too tame sport for him. All my reports from Redfoot Lake state that ducks and geese are more abundant than ever known; but birds of this kind are shipped from there to this place and I have seen a number of fine fat deer in market lately, but they come from a gentleman's preserve a few miles from town. Yesterday in the market house was a fine display of quail, squirrels, rabbits, possums and a few wild turkeys. I regret to say that the majority of the quail brought here for sale have been trapped or netted.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

FRESH WATER.

Black Bass, Micropterus salmoides and M. pallidus. Muskellunge, Esox nobilior. Pickerel, Esox reichertii. Pike or Pickerel, Esox lucius. Pike-perch (wall-eyed pike) Stizostedion americanum, S. gireum, etc.

Yellow Perch, Perca flavescens. Striped Bass, Morone lineatus. White Bass, Morone chrysops. Rock Bass, Ambleloides, (Two species). War-mouth, Channobryus gulosus. Crappie, Pomoxys nigromaculatus. Bachelor, Pomoxys annularis. Chubb, Semotilus corporalis.

SALT WATER.

Smelt, Osmerus mordax. Sea Bass, Centriscus arcturus. Pike-perch, Morone rockfish, Morone chrysops. White Perch, Perca americana.

Pollock, Pollachius carbonatus. Tautog or Blackfish, Xystocheilus opacitatus. Weakfish or Squeteague, Cynoscion regalis. Channel Bass, Spot or Redfish, Sciaenop ocellatus.

The fisherman has a harmless, preoccupied look; he is a kind of vagrant who nothing fears. All his approaches are gentle and indirect. He tunes himself to the meandering, soliloquizing stream; he addresses himself to it as a lover to his mistress; he woos it and stays with it till he knows its hidden secrets. Where it deepens his purpose deepens; where it is shallow he is indifferent. He knows how to interpret its every glance and dimple; its beauty haunts him for days.—JOHN BURROUGHS.

ANGLING QUOTATIONS.

AS long ago as our issue of October 13 we published an editorial article headed: "Are They of Any Use?" In it we referred to the choice extracts from brothers of the angle which had then headed our columns of "Sea and River Fishing" for six months previous. It was, in sort, a wall of despair at the fact that during that time none of our readers had ever acknowledged their existence in any way whatever, and was intended to find out if they had read them, and if it was really of use to continue thumbing volumes of forgotten or forgotten lore in order to pick out the plums.

We have had several responses to that article, some of which have been published, and one, on a postal card, which said in the most laudable manner: "Quotations well selected. First rate. Keep on. Read 'em first thing." That was encouraging and to the point. It was written by a man who never writes a word for publication and who will read his first printed words with surprise.

The most comforting and valuable ones, on this subject, we have just received from our long-time correspondent, Mr. S. C. Clarke, the veteran angler whose frequent valuable contributions to our columns would, if collected, make a most instructive and readable book on fishing in Southern waters. Mr. Clarke not only writes encouraging words to us, but, what is of greater value, sends some quotations for use; some of which are new to us. He writes: "You complain of the want of recognition of your ingenious collection of matter for the fishing column of your paper. To show that I appreciate the industry therein displayed, I send a few extracts from a note-book in which I put down all that I find relating to angling in the course of my reading. Perhaps you may find something among them fit for your purpose."

In Plato I find this on angling: "Then you and I have come to an understanding, not only about the nature of the angler's art, but also about the definition of the thing. One half of all art was acquisition. One half of this being the kind which strikes with a hook upward, is the kind which is denoted angling.—ARISTOTELICUS. (The Sophist, V. 1. p. 58. Jowett's translation.)

Who has not seen the scourge rise, Leared and caught by fraudulent lies? MARTIAL.

Around the hook the chosen fur to wind, And on the back a speckled leather bind. ARIAN.

The above quotations show that fly-fishing was known to the ancients.

Give me nine angling; 'twill to the river, there I will retire tawny-lined fishes. ANT. AND CLEOP., Act II. Sc. 5.

The pleasantest angling is to see the fish cut, with his golden ornaments, the silver stream, And greedily devour the treacherous bait. MUCH AD ABOUT NOTHING, Act III. Sc. 1.

Which seems to refer to fly-fishing. (Other quotations sent by Mr. Clarke are reserved for the head of the column.)

FRESH WATER FISHERIES AT THE BERLIN EXHIBITION.

WE have received Part III. of the Official Report of the International Fishery Exhibition at Berlin, 1880, by Dr. A. Metzger.

We have already reviewed Part I., Pisciculture, and Part II., The Sea Fisheries, and have yet to notice two parts more, Fishery Products and Water Animals, and the scientific portion of the exhibition. In the report now under consideration, as in all the other official reports, the exhibit of Germany occupies the largest part of the book, making forty-eight octavo pages in the fresh-water fisheries, while the remaining thirty-nine are devoted to the exhibits of Switzerland, Italy, Sweden, Norway, Denmark, Holland, Great Britain, Russia and the United States, averaging less than five pages each.

Among the singular methods of taking river fish in nets is the "Stockergang," used on the upper part of the river Weiser. It has long pouches, much like the fingers of a glove (fig. 1, p. 9), and the "Loak" (fig. 2, p. 12). The latter is like a three-cornered dip-net with a long handle; one side is opened and provided with leads and is pursued by a line running up the handle; it is only used for small bottom fish, called barben, or barbel in English. Traps for salmon, eels and lampreys are figured. In the Italian Department, a "frog rod" was shown, being a simple rod and short line (hook?) with a piece of frog skin, or parchment, on the end.

In Sweden the salmon fisheries are the most important, twenty-four streams yielding about 1,175,000 yearly. In Norway are only thirty species of fish, namely, 8 salmonoids, 12 cyprinoids, 3 percoids, 2 sticklebacks, and a cottoid, a pike, eel-pout, eel, and the small river lamprey. Of the salmonides, the salmon, lake-trout and brook-trout are generally distributed, and from the principal part of the

inland fisheries, there being no less than nine thousand salmon fisheries, whose catch amounts in the aggregate to \$500,000. The salbling is found in the north, where they are of interest by their habit of migrating like the salmon, from the rivers to the sea. The southern limit of this habit is the Sjoman in Northern Helzeland (Nordland), south of this they are only known as a fresh-water fish, never visiting the sea. The grayling is found in great numbers south of the Dove, in the streams of the Oesterdalen and Gudbrandsdalen, north of the Dove, it occurs in the streams of Fiumarkn.

The fresh water fisheries of Denmark and Holland are not very important. Great Britain showed some salmon traps (salmon putchers), of wicker-work, of which, in 1874, 255 were licensed at 2s. 6d. each. At the mouth of the Severn, and in the Bristol canal, millions of small eels (elvers) are taken in spring, as they are ascending from the sea, on their montee, and are sold from one to two-pence per pound; or offered boiled and pressed into cakes in the neighborhood of the traps.

Very interesting plates (figs 12, 13, pp. 80, 81), are given of taking the "Weisslachs," Coregonus leucichthys, in Russia, through the ice. The fish, which comes from the Caspian Sea, is only found in the Volga during December and January. A tripod is erected, and a pole with one end weighted is swung on it like a well-sawed. A toggle is erected near the hole and the light end of the pole, with a line and hook, is bent down and caught under the toggle. A fish bites, and, on the principle of a rabbit snare, he loosens the toggle, and is swung up in the air by the weight at the other end of the pole.

The gill-nets, pounds, and seines of the United States are described and illustrated, but no mention of the angling exhibit is made. The illustrations and typographical work are most excellent.

AN ANGLER'S GUIDE.

WE find on our table a small "Angler's Guide" published in England. The book appears to be very largely an advertisement of the fishing tackle house of G. Little & Co., whose prices list forms an appendix. It is a handsome little work, and the twelve pages of colored lithographs of flies are finely executed on heavy paper. The famous "Alexandria" and minnow flies, whose work has been so deadly in some waters of England as to call forth protests against their use, are illustrated. This reminds us that it may not be out of the place here to say that a prominent dealer in fishing tackle, who is also a skillful angler, told us that he did not consider the "Alexandria" particularly killing, in American waters.

The illustrations of tackle are very fair, but those of the fishes we cannot speak highly of; the salmon and the grayling are particularly and remarkably bad. A table of the "fence months," or close seasons; the weights under which the different fishes must not be taken; the power of river-keepers; and the different fishing stations, with names of fishermen, railway fares, etc., are given. Also the tollage on boats; annual tolls; ordinary times of high water at the different stations, and much other information.

"[This Angler's Complete Guide and Companion; being a Practical Treatise on Angling and its Requirements, with beautifully executed illustrations, in colors, of the artificial flies for the different months, and the various stages of the life of the most necessary tackle. By G. Little. (scrolled) London: Published by the Author, 15 Potter Lane, E. C. W. Case, Hogarth House, 9 and 11, Bride's Avenue, West End, Market Place, Bedford, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100.]

TENNESSEE FISH NOTES.

NASHVILLE, Dec. 9.

THE carp sent here on Thanksgiving Day by Professor Baird, to Col. Geo. F. Akers, has been distributed; upward of fifty persons were supplied.

A gentleman, whose name I could not learn, received here a few days since five hundred salmon-trout for his ponds. They were in fine condition, measuring from four to six inches long.

I understand that the ponds are splendidly built, and fed by a fine system of overhead springs in the country. This is a move in the right direction.

Mr. William McConnell and son received the right from the Fish Commissioner of Middle Tennessee, Col. Geo. F. Akers, to seine Red River for a number of bass to stock a series of ponds they have built near here, and which they propose to exploit as a business. The same parties say that they intend constructing a hatchery, and do things on a grand scale. *Nous verrons.*

Our fish market on Saturday was very handsomely supplied. On the stall of Andy Meadows were at least twenty varieties of fish, from the diminutive "sun perch" to the superb "salmon." Oysters of excellent quality are being brought here from Mobile and Biloxi, in addition to the enormous quantities from Baltimore. If some of our female ancestors, who a century or less past wore oyster shells as jewelry, could wake up and see the cart loads of the then great curiosities, they would want no better evidence of our progressive state.

The Cumberland Angling Club are determined to have a nice place to amuse themselves. They have a very large pond, well stocked with game fish, within four miles of town, on the banks of which they have erected a handsome club house, and where every comfort will be provided the members. A carp pond has also been dug, and is now stocked with the little fish sent out here lately.

Another association is being formed with a view of imitating the above, and from what I hear their ponds will be something grander than any yet built here. The season is now over for angling in our waters, and the Washingtonians have gone into winter quarters, there to spin yarns and make plans for the next spring's campaign.

J. D. H.

FLYING-FISH AND CONORS.—Perhaps the most toothsome denizen of the sea (or air) is the flying-fish. Barbadoes is the place to get them—say the husband women, bring out ready-cooked flying-fish alongside newly arrived shrimps among their stock in trade of bananas, shells, guava paste and pepper-punch. The Barbadian fishermen catch them at night by means of a net spread after the fashion of a sail in their boats, and it is no uncommon occurrence for one or more to fly in through the open ports of a vessel at sea when she is low in the water or rolling gently. Every one knows the big conch shells—some as large as a man's hat—which are brought home from abroad, and stuck about in all sorts of inappropriate places, from graters to greenhouses; and every one has heard that in many lands they are blown like

from to summon cattle or used as war trumpets; but everybody does not know what delicious soup the original inmates of those shells serve to make. Sea, as well as land, slugs are used for this purpose, too.—Chambers' Journal.

NIGHT FISHING.

WASHINGTON, D. C., Dec. 12, 1881.

Editor Forest and Stream: I saw in your paper of the 8th an article on night fishing for trout in England, in which I am much interested, although not a trout fisher myself, as there are none of these fish in this vicinity. I will give you what I know of fishing at night for "rock," or striped bass. This experience is entirely confined to fishing off the Anconetia or Navy yard bridge, spanning the Eastern Branch of the Potomac on tide water.

Rock fishing commences here in the month of July and ends with cold weather, generally in November. The rock caught in the early part of the season are of small size, say from five to eight inches long; but in the latter part of the season they increase to fifteen and sixteen inches. Of course, I change hooks, commencing in July with a No. 2 Aberdeen, a charming little hook for small fish. The best bait is a young smelt, about three inches long, but as the rock always goes for the head of the bait, I have caught small ones with smelt which were too large to be swallowed. As to the best time to fish, I have found a half-flood tide to half-draw ebb tide the time; as the rock likes the swift water most.

I have found that in very clear water, and particularly after a bright moonlight night, the fish would very seldom take the hook in the daytime, and, therefore, have tried night fishing, which, on account of the gas lamps on the bridge, is not a very unpleasant task. I would place myself directly under one of the lamps for two reasons: first, to be able to bait my hooks well; and, second, to fish in the water illuminated by the light, and in this manner have been very successful on dark, but never on moonlight nights, the moonlight enables the fish to feed over the whole river, while at dark night they seem to come to the lights of the bridge to see and find their food.

One morning I went to the bridge at four A. M., just in time to see the lamps extinguished, and leaving me in total darkness. I commenced fishing, but could get no strike until daylight appeared over the hills in the East, after which time they bit lively, enabling me to carry a fine lot of fish home for my breakfast.

From what I have seen I don't think rockfish can see, or will feed in the dark. I hope this argument may be kept up, as angling is my greatest pleasure, and requires a small amount of exertion, and is very interesting if treated as a science. C. A. K.

VORACITY OF PIKE.—The following story, which we take from the London Sporting Times, illustrates not only the rapacity of the pike, but also the entire truthfulness of one writer for the English sporting press. It can, no doubt, be relied upon. He says: "A curious incident happened at Warner's Welsh Harp last week. Mr. George Botham, the popular lessee of Croydon racecourse, who has been staying at Warner's, was out early with his gun and shot one of the bobtail blue rocks which had escaped the batue of the previous day. The rock fell in the water, and, on approaching the spot, the well-known shot was surprised to see an enormous flock of some 200 pike draw the bird under water and disappear; but this was not all, for on the edge of the water were a sow and pigs looking out for their maternal meal in the shape of dead bait left by the fishermen. One of the youthful porkers, anxious to secure a fish floating at a little distance from the edge of the water, stepped in, when he was seized by an enormous pike, who dragged him out of his depth, where he was joined by another member of the finny species. Then came the tug of war; and the pig being fat, and one of Warner's own breeding, was wedged so tight into the mouth of both pike, that, unable to breathe, they were choked, and in the struggle were both dragged ashore by the worthy Oxfordshire farmer.

WHITEFISH TAKE THE HOOK.—Niagara, Canada.—In regard to whitefish taking bait I will say that some three years ago several were caught off the steamboat wharf here, I think it was in May. The small boys who caught them were fishing for herring, using minnows for bait.—W. S. L.

ORIGIN OF THE NAME SALMO.—Scaliger has the following line, which shows the origin of the name of the genus Salmo: Et salmo pikeus aversa frequens guttis, And painted Salmo with his golden spots.—C.

Fishculture.

DISTRIBUTING CARP IN TENNESSEE.

THE trials of a Fish Commissioner, who not only serves with out pay, but also without a dollar of money from the State to work with, is set forth in the following correspondence, which, with the preliminary remarks, we take from the Nashville American:

Within the last few days, Col. George F. Akers, State Fish Commissioner, has distributed between eleven and twelve hundred German carp to at least fifty different persons, who, owning suitable ponds, propose engaging in the cultivation of this excellent variety of food fish. The instructions received from the United States Fish Commission being positive as to the number of fish to be given to each applicant, and the character of ponds into which they were to be placed, only a comparatively small number of persons could be supplied. These circumstances were the prime causes for the vexations to which the good-natured Colonel was subjected. Scarcely a single applicant failed to want more fish than his quota, and but few who were not dissatisfied at not getting them. Then the question of sex gave rise to much discussion, to say nothing of the thousand and one explanations demanded as to the mode of breeding, feeding and the general management of them. These vexations, however, were more than counterbalanced by the many indignant remarks, opinions and incidents connected with the task of distribution. One writes me, in regard to the matter that was acted upon by the carpward here; and that his (the pair) must be held on to till he comes fur 'em; and that he can't give his family till his youngest gal gets over the mumps. Another wrote: "I have a pond in which there are five varieties of fish—white perch, minnow perch and buffalo. The latter kind is immense, and I caught one weighing twenty-four pounds. Herring as the carp grows bigger than that I wanted to try a few of 'em."

"They instructions from Washington with regard to my fish," writes another.

Antliche Berichte über die Internationale-Ausstellung [Zu Berlin 1881. (Seit der Society III. Internationales Fischeri) von Dr. A. Metzger, mit in den text gedruckten Holzschritten, | Berlin, Verlag von Paul Parey, 1881.

PENNSYLVANIA FIELD TRIALS.

SPECIAL TELEGRAM TO FOREST AND STREAM.

GRAND JUNCTION DEPOT, Dec. 14.

The Pennsylvania field trials commenced on Monday morning, Dec. 13.

MEMBERS' STAKES.

The Members' Stakes were first run, for which only six competed, with the following result:

SUMMARY FIRST SERIES OF HEATS.

May Laverack beat Skip.
Belton III, beat Pat Laverack.
Biz beat King Dash.
The heat between Biz and King Dash was hotly contested, and lasted three hours.

In the second series May Laverack and Belton III, were put down together, but as Mr. Styrton had not handled Belton, and could not control him, the dog was withdrawn, thus giving the heat to May Laverack and Biz divided first, and King Dash took second.

ALL-AGED STAKES.

In the All-Aged Stakes, which were begun on Tuesday morning, thirteen dogs were put down to run, as follows:
Dashing Monarch against Gordon.
Olie against Dash.

Maxwell against Count Noble.
Grouse Dale against Ned.
Belton III, against Nellie.
Mack I, against August Warwick.
King Dash, a bye.

DASHING MONARCH AND GORDON.

The first brace race on Tuesday morning were Dashing Monarch and Gordon, who were put down at 8:15. Monarch had the best of it all through, and was declared the winner at 9:20, after being down an hour and five minutes.

OLLIE AND DASH.

Ollie and Dash were next put down, and after running an hour and a half, during which some very fair work was done, the former was declared the winner.

COUNT NOBLE AND MAXWELL.

At 11:15 Count Noble and Maxwell were cast off. The heat was a long one, lasting two hours, Count Noble winning.

GROUSE DALE AND NED.

The next brace to run were Grouse Dale and Ned, who were put down after lunch. After half an hour's running Grouse Dale won, having performed some excellent work.

NELLIE AND BELTON III.

The heat between Nellie and Belton III was by no means a brilliant one. Nellie won. Down two hours.

WARWICK AND MACK LAVERACK.

At 4:15 Warwick and Mack Laverack were put down. Mack was sick, and at the end of twenty-five minutes' running, he was withdrawn, leaving Warwick winner of the heat.

SUMMARY FIRST SERIES OF HEATS.

Dashing Monarch beat Gordon.
Ollie beat Dash.
Count Noble beat Maxwell.
Grouse Dale beat Ned.
Nellie beat Belton III.
Warwick beat Mack Laverack.
King Dash, a bye.

SECOND SERIES.

In the second series Dashing Monarch and King Dash were put down, but after running half an hour, were ordered up, to go down again Wednesday morning.

HINTS ON THE CARE OF FIELD AND FOX DOGS.

Editor Forest and Stream:
The following observations the writer has found of use:

PUPPIES AND POUTRY.

It is often the case that pointer and setter puppies are very destructive to young poultry. I have never seen a pointer or setter which turned out to be anything, which did not, when a puppy, kill young chickens. If they do not "nuzzle" to. Such whelps are a terror to all good house-wives who raise poultry. To break all such, place around the neck of the offender a collar made of a soft cotton rag. Pass through this collar a bit of whip-cord; hold one end of the cord in your hand and attach the other to the leg of an old hen which has a clutch of newly-hatched chickens. Draw the old hen (game hen preferred) up to the pup. Stop up both of your ears and look. Repeat next day if necessary.

DOGS THAT WILL NOT FOLLOW.

It often happens that young timid, bird dogs wish to follow their owners when they are not going shooting and are not wanted. They are, consequently, a nuisance and a great back ache at the end of a hunt. I have known, after such treatment, when the sportsman did wish to hunt his dog would start off merrily, and after going some fifty or a hundred yards stop and sit up on his hind end as though he had grown right there, and no entreaty or threat could induce him to follow or to obey.

To remedy this trouble, call the young dog to you before you start, and feed him lightly, mount your horse and bid him in a cheery voice, "High boy." After you have seen him start with you, "Remember Lot's wife," and never look back to see if he is following you; if you do, you will stop him as surely as though you had used your gun upon him. The solicitude the sportsman feels causes him to look and see if the dog is following, the dog, seeing his master look back at him, remembers former dealings and is afraid to follow further, and so sports is spoiled.

HOW TO REMOVE LICE.

Lice upon dogs are very hard to get rid of. I think black setters far more liable to them than any other dogs. A dog has not always to be poor or scratch much to cause one to suspect these vermin. There is, however, a very funny, feathery louse the animal gives himself (when once seen is never forgotten) which is very suggestive of this trouble. A simple solution of quassa, made from the chips by steeping a day and boiling, applied with a stiff brush every other day for four days, is a dead shot.

RED MANE.

The red mane is the scourge of all dog owners. I have never failed to effectually and speedily eradicate it by immersing the affected animals in a blacksmith's slack-tub frequently.

When bird dogs or fox dogs are out on their feet today, (which is often the case when first put to full work) wash their feet every chance you get in hot liquor or stale buttermilk. It is very comforting and curative, especially if you let the poor devil lap his foot bath after the operation is completed.

FOOLISH RETARD.

And now, with regard to fox hounds. If one hunts them regularly and observes them closely, many things may be learned about them. It is often the case when hounds are trailing hurriedly and gathering their trails rapidly, one may be seen to mount the stump of a felled tree, and then the "butt cut" of the tree, and proceed on their way. When this is observed, get yourself ready to ride, for it is fifty dollars to certify you will bounce your self in less than two minutes by the watch. Upon the other hand, should the dog get on the lap end of the tree and trail toward the stump, there is no immediate chance of catching him. The dog will mount the "butt cut" of a tree, he walks toward the lay end, looking for a place to lie down. At daylight, however, or an hour before, upon the first sound of hound or horn, the old fellow will get up, stretch himself, listen

a moment or so, mount with haste the lap end of the tree, give his brush, as he walks the stump, several quick whisks, and in a moment is "gone away." They delight in an elevated start, even should they seek the end of the chase a dirty hole, or be overtaken by a draggled, sloshy deuce.

KEEPING HOUNDS.

Many of our sporting journals speak of keeping hounds as though there was a world of expense attending it. This may be the case to some extent about cities. There attaches, of necessity, no such expense in the country, and such articles have a tendency, with regard to young country fellows, to throw a damper upon this sport, which men love a sport which gives a youngster a sure seat in the saddle, and imparts endurance, health and manliness.

(Nov. 30.—Since mailing you on the 26th inst. the notes on Care of Dogs, etc., in your issue of the 24th, came to hand, containing recommendation of a decoction of quassa to be used upon dogs for fleas. I observe also in chapter III. (same name) under "Training versus Breaking," an application of game hen to pug is commended to cure the latter of too great a fondness for young chickens. Now, for four persons should think I have been stealing the thunder of others, I write this note, knowing if my article is used I will be set right. With regard to the use of quassa for fleas, I will also state there is nothing better when used as an injection upon your hunting horse, if he is ever troubled with the little white internal worms which came them so much annoying, and make them to spoil their tails by rubbing. R. M. C.)

DAISY.

DAISY had not a long pedigree, but she had that which is better in both man and dog, meritorious qualities of her own. She would not have been a kennel dog, and she would have been prevented that, but in the field she easily outdid those dogs who for mere display would have ranked her. And yet I have never seen a prettier or more trim little dog. "She is a delicate, dainty little creature," said a gentleman one evening as I lifted her into the wagon after the day's shooting—and she is.

She was not one of those dogs that "never make a mistake" (I have yet to see one), but I know from actual comparison that she would find more birds in a day than these same infallibles. On my very first day, she was careful in the extreme, and when she had gone over a field and had pretty sure she had secured the birds in it had been found. Possessed of a remarkably acute nose, I have seen her come to a stiff point long before her companions were aware of the presence of game. She was unusually staunch.

One day I tested her on a fence which she had to jump, and she remained behind for some ten minutes. Without turning round, she came as an eye to see where I was, she kept her point, standing till the strain on her nervous system became too great; then she quietly dropped upon her haunches, and in this position kept her point till I called her.

As a retriever she had few equals; if she saw a bird fall or even supposed it to be wounded, she would find it no matter how long it required. I have seen her point a live bird with a dead one in her mouth. To shoot over such a dog is a high pleasure to any one who appreciates such qualities; and that pleasure was mine last winter.

The extreme cold of the past winter forced me to seek the more genial climate of Southern Georgia. I never in any of my trips in search of sunshine had so enjoyable a time as I did during three months spent there. Every one seemed to try to do something to promote my happiness, and they succeeded. To no one am I so much indebted as to my friend W. He was a friend in need, in deed and always. And while I know that I should of friend him did I mention his name in any way, but he had to put on record my appreciation of his goodness to me. It was this kind friend who loaned Daisy to me. For three months she was my constant companion, and to her sterling qualities as a field dog I am indebted for many days' sport and much needed health. To her intelligence and kindly, affectionate, I might say sympathizing disposition, I am indebted for the pleasantest brute companionship I ever knew.

The other day there came to me a letter, which, I am not ashamed to say, made a choking in my throat. It ran: "I know that I have here and now said a little of the sympathy with me over the death of dear little Daisy the other day. I did not wish to see a personal loss, and I cannot help the wish that death may not be the end of so much intelligence and affection as were combined in that little dog. There comes back to me very vividly many incidents connected with her, and I do not wish to see her again. My sorry residence was not a happy one, but kindness and good did it work, and while not losing her love for her master and mistress—she was the special pet of the latter—she soon learned to know me and her best friends. At night she was chained to her kennel and I was not allowed to go in to see her, and she would look at me as she would at a hero. She would then come to the door of my room and patiently wait for admission. When the door was opened, with a single bound she would land upon my bed, put her nose under my chin and give me a friendly human sigh of relief and satisfaction. Remarkably intelligent at other times, she would do nothing sufficient to displease her from the bed. She would nestle as close as possible, and then actually hold her breath as though to make me think she was not there.

And that Daisy utterly refused to make the acquaintance of the village dogs, but when her timidly were away, she greatly enjoyed a frolic with them. At such times she was apt to lose sight of me, but she seemed to know that I was certain to be found sooner or later at the post office; and I have known her to sit quietly on the steps all day waiting for me. I did not wish to see her, but she would come with a rush, her every look and motion indicating the joy she felt at seeing me again. When she learned that I was willing to romp with her she would often come with a challenge in her eye and posture, and great was her enjoyment when the play began.

As innocent of evil as any little child, she often attempted to play with the pigs we found during a ramble. Now, the pig of the South has not the fear of dogs before his eyes, nor yet the love of them in his heart, and Daisy's kindly overtures were not taken in the spirit in which they were made; the pig, much to her disgust, would charge upon her. She never seemed to understand why the pig would not play with her.

It was a delightful thing to see her manifestations of delight when I took her out on a walk. When she was out for an hour or even when I went for a walk only. Putting all her feet together like a bucking horse, she threw her whole body three or four feet into the air, while her eyes seemed to be made of light.

When I took her up from home she absolutely refused to leave the room in which she was, and generally insisted upon climbing into my lap, and though much less comfortable in that position than on the mat by the fire, there she would remain. While continuing to be fastened to the kennel at home, she would cry pitifully if I was not near, and generally insisted upon my going when disposed of for the night unless she was allowed to lie at my chamber door.

Only once was she downright disobedient, but she showed her penitence so plainly, and tried so hard to make amends by her manner, that I took no notice of the matter. She was in such circumstances were as follows: While snipe shooting by some ponds I found some ducks, of which I killed three. Daisy was sent up after them. She poked up one and immediately dropped it; nothing would induce her to touch it again. Calling her out, I punished her and sent her back to the kennel. She was in such a shallow water by the duck, and looked at me as if to say, "What are you going to do about it?" I loaded, threw little sticks, but Daisy never moved. When I had her come to me she rose, and slowly walked to the pond, and sat down near to me, looking at me in the most careful manner; still I gave no heed to her; she came closer. I then spoke to her in a kind tone, when she ran to me

and looked and acted her penitence and affection as plainly and completely as did ever a man. For the remainder of the day she was better than the best.

One day on coming to an annually high fence, I grasped her collar and helped her over; from that time on she made me help her over it as was her former habit.

And now this bright, affectionate, intelligent and most useful little dog is gone. She will never again fondle upon those who care for her. She will never again delight us by her performance in the field, or by her affection at home. We miss her, miss her sadly. "No living" creature that lives will share Daisy's place. "In my own heart there is an echo near akin to that which is felt at the loss of a human friend, for Daisy was to me more than a mere adjunct to my field sport and recreation; silent though she was, her companionship was a perpetual delight, and I feel, as I close, that my imperfections which has not done half justice to the best little dog I ever knew. C. B.

GERMAN HUNTING DOGS.

THE sportsmen of Germany have a great many different descriptions of dogs for their hunting, which are altogether unknown in this country. The Schweiss hund is a most useful aid to the forester, for he is gifted with a marvellously keen nose, and can take the track of a deer two or three days old, and work it up with infallible certainty. These dogs are much like the English bloodhound in appearance, but do not stand quite so high. They have very musical voices, and are trained to give tongue when they find the wounded animal, whether it be dead or alive. Sometimes they are trained to bark and bark only, and to keep it up. They will follow the wounded animal either by the warm blood, or the day following will take the trail and follow the cold blood until the quarry is either found dead, or started again. These animals are so trained, that they will distinguish the track of the stag from that of the hind, but to train them to do this point is not an easy matter, and requires more patience and care than most men have. The Leicht hund was, however, formerly used in Germany for this purpose, and was thus a valuable assistant to the forester in tracking and finding the stag. It is a dog of a forest, to learn just how many stags had gone into it, and how many had come out, the dog standing or dropping at each stag's track crossed.

"Perhaps the most curious of all dogs," said a German sportsman to us recently, "is the Dachsbaud"—a tiny animal scarcely bigger than a toy terrier, will not infrequently tackle a badger several times his own weight. These little dogs are sometimes very useful adjuncts to a bear-hunt. They will chase the animal, and if he is tired, they will even bite him, making an interesting and dangerous sport, bear having no fear of his tiny persecutor. In doing, merely threatening the little dog when it comes too near, and the hunter, led to the spot by the noise, is enabled to get within shot and fire, before his presence is discovered by the growl.

The best packs of dogs for hunting the boar consist of a lot of mongrels; those which have been used by the swineherds being preferred. At the close of the season they are separated and are boarded at the different farms on the estate. One farmer employs the dog with him in watching his hogs; another uses his as a cattle dog, and a third makes a house dog of the one in his charge. When the season opens they are collected for use. These dogs are not bold enough to seize the boar, a proceeding which would result in immediate death, but they follow and worry him, and at the same time make noise enough to keep the hunters informed of their whereabouts.

KENNEL NOTES.

We wish to impress upon the minds of those who send us items for our Kennel Notes, that to avoid mistakes all names should be printed in plain letters, as we find it very easy to make mistakes where this is not done. We would also like to be informed whether the animal is male or female, and to know the date of birth and the breed to which they belong, whether pointer, setter, or bulldog. A careful study of the notes in this number of the paper will show just what is wanted. Our aim is to have everything correct; but until contributors will take the necessary trouble to conform to the above request we cannot answer for the mistakes that may occur.

NAME CLAIMED.

Toy—Claimed by W. B. Todd, Vermilion, Ohio, for black, white and tan beagle bitch, whelped August 18, 1888, by Darwin (bred by Gen. Rowett) out of Lady, she by Gen. Rowett's dog Rock out of Baker's champion Old Fan.

Toy—Claimed by W. H. Todd for a black, white and tan beagle bitch, whelped April 27, 1888, by champion Leo (Warrior—Rosey) out of Ringlet (Warrior—Rosey).

Toy—Claimed by W. H. Todd for a white, black and tan beagle bitch, whelped July 16, 1888, by champion Leo (Warrior—Rosey) out of Maud (Spot—Mille).

Toy—Claimed by W. H. Todd for a white, black and tan beagle bitch, whelped May 7, 1888, by champion Leattler (Warrior—Rosey) out of Leo (Darwin—Lady).

Toy—Claimed by W. H. Todd for a white, black and tan beagle bitch, whelped July 7, 1888, by Leo (Warrior—Rosey) out of Maud (Spot—Mille).

Toy—Claimed by W. H. Todd for a white, black and tan beagle bitch, whelped May 4, 1888, by Leattler (Warrior—Rosey) out of Leo (Darwin—Lady).

Toy—By Mr. Wm. B. Mershon, East Saginaw, Michigan, for his Gordon setter dog, whelped May 25, 1881, by Norman out of Maria.

Toy—By Mr. J. M. Edwards, Wheatland, Pa., for his red Irish setter dog puppy, formerly Perfecto, whelped August 8, 1881, by champion Rory O'More out of Clander's Gay (champion Elcho—champion Fredy).

Toy—By Mr. J. S. Reynolds, Poughkeepsie, N. Y., for his white and tan terrier dog, four months old, by Mr. Thos. Orgill's imported Nip out of same owner's imported Nettie.

Toy—By Mr. J. S. Reynolds, Poughkeepsie, N. Y., for his black, white and tan fox terrier dog pup, four months old, by Orgill's imported Nip out of same owner's imported Nettie.

Toy—By Mr. J. S. Reynolds, Poughkeepsie, N. Y., for his black, white and tan fox terrier dog pup, four months old, by Orgill's imported Nip out of same owner's imported Nettie.

Toy—By Mr. J. S. Reynolds, Poughkeepsie, N. Y., for his black, white and tan fox terrier dog pup, four months old, by Orgill's imported Nip out of same owner's imported Nettie.

Toy—By Mr. J. S. Reynolds, Poughkeepsie, N. Y., for his black, white and tan fox terrier dog pup, four months old, by Orgill's imported Nip out of same owner's imported Nettie.

Toy—By Mr. J. S. Reynolds, Poughkeepsie, N. Y., for his black, white and tan fox terrier dog pup, four months old, by Orgill's imported Nip out of same owner's imported Nettie.

Toy—By Mr. J. S. Reynolds, Poughkeepsie, N. Y., for his black, white and tan fox terrier dog pup, four months old, by Orgill's imported Nip out of same owner's imported Nettie.

Toy—By Mr. J. S. Reynolds, Poughkeepsie, N. Y., for his black, white and tan fox terrier dog pup, four months old, by Orgill's imported Nip out of same owner's imported Nettie.

Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

- C. H., Harrisburg, Pa.—The gun is a full choke.
- DROOP.—We never heard of India-rubber decoys.
- W. T., Danbury, Conn.—The address asked for is care this office.
- H. D. C., Midland Park, N. J.—The articles will be printed in book form.
- F. M. H., Ranocosa, N. J.—The rabbit season in your State closes Dec. 21.
- T. V. S., Jr., Little Rock, Ark.—The address of the firm is Birmingham, Tenn.
- SQUARE DEAL.—The subject upon loading is one upon which we have invited criticism.
- B. C. HILL.—Your inquiry will be answered upon return of our kennel order from the National Field Trials.
- O. W. BELMONT.—If the disfigurement is so serious as we infer from your note we would take off the two inches in any case.
- W. MOF., New York.—The stock has a good reputation. You will have to wait about two weeks, when we will give you particulars.
- G. W. H.—We have repeatedly refused advertisement of firm you mention, because we thought such refusal for the interest of our readers.
- "MILLS"—Will a Western correspondent, who some months ago sent us an article on game protective methods, please send address to this office?

HALL, Syracuse.—The man is a second-hand book dealer. Try "Florida's" outlets for known "Gales to the Turf" for the year 1892 will be on a much larger scale than the previous editions.

14 D. W., Dover, N. H.—Dealer in foreign stamps is Jno. W. Adams, 146 Fulton st., New York. Dealers in scotch-saw patterns, Adams & Bishop, 46 Beekman st., New York.

KRICK'S GUN.—Mr. H. C. Crickmore, of the World, 31 Park Row, New York, has the only known "Gales to the Turf" for the year 1892 will be on a much larger scale than the previous editions.

J. N. W., Frederick, Md.—Of the "cheap John" guns you mention I have no rate and another note. If you were to send us such an order about the farm write to some of the respectable dealers for a second-hand arm.

J. L., Rochelle, Ill.—Does choke-boring a gun enlarge the gauge? For instance, if I get a No. 10 choke-bore, will it take a No. 10 shell same as before, or will it take a No. 9? Ans.—It takes a same size of shell as before.

F. N. W., New York.—What are the charges at Havre de Grace for duck shooting? Ans. The charges for whole equipment, with boats, and a gun, is \$10.00. If you wish to go on a party of 10, the shooting there at the end of this month will depend upon the weather.

GENNER, Bangor, Me.—The New York agents of the gun say that they never have known of one of their lamiated steel or twist barrel guns bursting. The guns, they say, are made of the best material, and are all proved with more than twice the usual force.

W. E. P., West Lebanon, Ind.—The American guns will not get more shaky than the others without excess rick. The names you mention as put on guns by no one, except the makers, are not names of the manufacturer. The guns are of inferior grade.

PHILADELPHIA CORRESPONDENT.—The revolver which is advertised as a free presser premium by the New York firm is a cheap and undesirable affair. The "Ivory handle" is a cheap and inferior imitation, the handle really being of wood painted to resemble ivory. It is a sham from the word go. Beware of it.

C. A. F., Milford, Mass.—Joseph Manton was a famous English gunmaker, and his guns were of the highest quality. They were made by John Manton. The Mantons guns are now rare, and much prized by their possessors. We saw one the other day, a muzzle-loader, which had been bought by a friend at an auction in this city.

CHERRYCK, Hudson, N. Y.—The arm you inquire about is sold at the "extraordinary low price" because it could not be sold at a legitimate price by its manufacturers and has been in consequence turned over to the "Johannes" who are the only ones to get the gun purchasers. The claims made for the arm are about as sensible as those printed on the opposite page of the circular setting forth the wonders which it will perform.

K., Troy, Pa.—1. Are the Creedmore rules and those of the National R. A. the same? 2. Is it the rule to add 3 to the score of open shots in shooting with globe and peep sights? 3. How do they count the score in case of a tie? Ans. 1. At Cherryck you will find open shooting grounds at Mrs. Nye's and at White's. Last week's paper, article "A New Jersey Trial in the South," for information about this. 2. At New Jersey the shooting is done with peep sights for match, birds, etc., with quail, turkeys, deer, etc. See issue of July 25, 1891. At New Bern stop at boarding-house kept by Miss Sarah West, \$1.50 per day, \$3 per week, \$25 per month. You will be all right so far as open season goes.

J. W., Foxboro, Mass.—Last winter I sent on to Washington for German carp, received the barrels filled them out, and sent them to our representative, but have heard nothing since from them. Now I do not care to try that way again, but are there out some of those fortunate ones, whose carp are multiplying by the million, who would be willing to part with a few of them for a consideration? Ans. No doubt there are members of Congress who do not forward applications for carp. There are none for sale. If you recollect, we have often published the names of the dealers in the Fish and Game Market, New York City, was the Eastern agent for the distribution of carp and we have announced each new lot that has received. Various clubs and you will get the names of the dealers in carp from New York and return the can, or pay two dollars and keep it. The fish are safely shipped, without an attendant, every week.

Rifle and Trap Shooting.

RANGE AND GALLERY.

GYMNASTIC MARKSMANSHIP.

THE San Francisco Alta California, of December 2, contained the following response to Dr. Carver's last manifesto:

DR. CARVER:—In response to your sweeping challenge emanating from London (I beg pardon, in regard to fifteen years), through his representative, the undersigned, challenges you to a competitive trial of skill in marksmanship for the sum of \$5,000, the affair to take place in London at such time and place as you may determine, and other fit and proper methods to be governed solely upon scientific principles, and accepting your line of shooting with his own, and yourself adopting his with yours; such shooting as with mirrors and other fit and proper methods to be wholly ignored as unworthy of recognition from a scientific standpoint. As this is to be simply a trial of skill, the various classes of shooting to be included in the trial, and the trial, jointly, must be confined to twenty shots each, as no further number is necessary to demonstrate skill in marksmanship, anything over being merely indicative of physical force.

In much of the nature now contemplated—viz., of simple skill in marksmanship—the tireless feat of breaking 10,000 glass balls would be of no use and not legitimately comparable with the purpose of the occasion, also unworthy of the enormous prolongation of time consumed in its essay. As you have introduced the horse as

THE STREAMS OF NEW ENGLAND are drying up. Proof: the fact, noted by President Wilson at a recent meeting of the New York and New England Railroad Companies, that in Massachusetts "many mills which have depended upon water for their motive power have been obliged to stop during dry seasons, and most of them are now putting in other machinery, and will in the future rely upon coal as their motive power." This is of interest to transportation lines and coal companies, and also to anglers. With dams, sawdust and the cutting down of forests, and unseasonable fishing and netting, the fish have been pretty well depleted already. Now that the water supply is growing less the fish will go too.

THE MONTHLY MEETING of the New York Game Protective Association was held at Pinard's last Tuesday evening. The counsel of the Association, Mr. Wagstaff, reported that there were no cases of violation of the law now in his hands. The Secretary, Mr. Cuthbert, read letters and complaints from many parts of the State. Complaints were made against some of the State game protectors, but they were in such an indefinite shape that we cannot reproduce them. Mr. Roosevelt, the president, spoke in the highest terms of the rainbow trout of California, extolling it beyond our native species. At 11 p.m. a supper was served, at which fish and game predominated.

OUR ADVERTISERS.—We invite attention to the notices of leading firms in our advertising columns. The principal houses of the trade are there represented. We rigidly discriminate against unreliable dealers in firearms, and thereby make the respectability of all who use the advertising columns of the FOREST AND STREAM relied upon by readers and purchaser.

WE REPEAT IT because it is the truth, and will bear repetition: A year's subscription to this journal is the best possible holiday gift for a man, old or young. Send it to your friend and prove for yourself if our advice is not right.

THE LATEST THREATENED OUTRAGE is a California "quail canny." If such an engine of bird destruction is got up, the sportsmen of that state may as well sell their guns and dogs, and look for some other form of recreation than shooting.

ONE OF THE WORSEST HUNTING CARS will go to Florida this winter with a party of excursionists. An account of the last Western trip of the "Jerome Marble" is given by a correspondent to-day.

THE SPIDER'S POISON.—Boston, Sept. 10.—A short time ago I saw a grasshopper minus a hind leg struggling in the web of a large spider in a fence corner. The spider rushed from his silver tube, but, not knowing the size of his guest stopped, and for about ten minutes remained at a standstill. I was called away for a short time, but when I returned I found a smaller spider biting the grasshopper, while the owner of the nest stood by awaiting the result, and apparently urging the other on. A friend suggests that perhaps the large spider had not the means of poisoning his victims, and called in the other as one would a policeman to take care of the intruder.—V.

TRYING TO RHYME "TARRAPIN."

A question grave disturbed the land,
To know if the beautiful Tarrapin
Was fish or game. Some took the stand
That it was game, although no hairy skin
Had it. But I, for one, contend
That it is a fish with here a fin.
And if these lines the prize should win
Just send it along, sir,

CLARA FLYNN.

A DOMESTICATED WILD TURKEY.—Devil's River, Tex., Dec. 3.—Visiting a contractor's camp a few days since, my attention was called to a domesticated wild turkey hen, which was captured when a chick a day or two old. It was caught last June on the Mucres River, and for a few days was very timid. Being allowed to run about the camp, it very soon became accustomed to its surroundings, and is now thoroughly domesticated. It was very much attached to a young man in the camp; would follow him about, feed from his hand, jumping into his arms, and showing the greatest affection for him. Since the departure of the young man the turkey seems quite lost and disconsolate, running about the camp calling for its lost friend in its most plaintive notes. It will make an excellent decoy to bring some old gobbler to bay. This is the first instance we have of a turkey being so tame and being domesticated. I have known of the eggs being hatched under a hen and of all the brood running off as soon as they were old enough. Isn't it something unusual?—Geo. W. POLK.

A. J. M., Bridgeport.—How can I brown my gun-barrels? They rust very easily in my hands. Ans. We should advise you to send your barrels to a competent gunsmith. Like most other things in which practice makes perfect, browning of gun-barrels is best done by those who make it a part of their business. If you want to try it yourself, you may follow this formula: Make a preparation of tincture of muriate of iron, one ounce; nitric ether, one ounce; sulphate of copper, four scruples; run water, one pint. Securely plug up the barrels, leaving the plugs of sufficient length to be used as handles. Thoroughly clean the barrels with soap and water; cover with a thick coat of slacked lime, and when dry remove with an iron wire scratch brush; this is to remove all dirt and grease. Then with a rag apply a coat of the fluid, and allow it to stand for twenty-four hours, when a rust will have appeared. Then immerse the barrels in boiling water, after which scratch them well with the scratch brush, repeat the process until the color suits, which will be after three or four applications. When the process is completed, let the barrels remain in lime water until neutralized by acid which may have been generated. Do not touch the barrels themselves during the operation.

HOLIDAY PRESENTS.—Skates, Finest Quality Cutlery, Fine Opinel Knives, and other articles, at the lowest prices. Write to the best makers, with latest improvements at lowest prices.—Ans.

Fanny Fern—Eloho—Dr. Wm. Jarvis' (Claremont, N. H.) red Irish setter bitch Fanny Fern whelped Dec. 1 three bitch puppies by champion Eloho.
Little Pet.—Mr. E. F. Merrellott's English pug bitch Little Pet has whelped 6—4 dogs and 2 bitches—by Mr. John Harper's imported English pug bitch.
Lella.—Mr. F. H. Andrews' (Charlotte, N. C.) Llewellyn setter bitch Lella (Leicester-Kirby) whelped Dec. 1, nine—5 bitches and 4 dogs—by champion C. T. Waterhouse, Merrimack, Mass., has sold the Gordon setter Nov. 29, 8—6 dogs and 2 bitches—by Mr. W. A. Rea's English setter dog Belmont. Two bitches black and white, three dogs white with lemon spots, two dogs lion with white feet and one lion with some white. Two dogs seen dead.

SALES.

Racer.—By Mr. J. N. Dodge, Detroit, Mich., to Mr. W. H. Todd, of Versailles, Ohio, the celebrated stud dog haced by Italy (Sam-Dolly) out of Jini (Warrior-Rossey) Racer is two years old past, past, was bred by Gen. Robert, and is fine in bagee points and an excellent stock dog. Mr. T. proposes to use him in his stud for a while.
Nelly B.—By the Centreville Kennel, to Messrs. Hurion and Colevill, Millbury, Mass., the black, white and tan beagle bitch Nelly B, three years old to be by Dan out of Katie. She is thoroughly broken.
Fanny.—By Mr. Isaac Phelps, of New York, to Mr. E. F. Merrellott the one year old red, white and ticked setter bitch puppy Fanny.
Vivette.—C. T. Waterhouse, Merrimack, Mass., has sold the Gordon setter bitch Vivette out of Whip (Gypsy-Stoddard's Duke) by Duke of Louisa Vale (Graec-Grouse) to Mr. C. H. Thomas, Duxbury, Mass.
Roussotte.—By Mr. Leroy Z. Collins, Lancaster, Mass., to Mr. A. V. Bennett, Hyde Park, Mass., the imported St. Bernard dog Roussotte (Monarque II-Bosmit).
Belle.—By Mr. W. H. Todd to Mr. C. E. White, Cleveland, Ohio, the beagle bitch Belle, by champion Rattler, (Warrior-Rossey), sis out of (Darwin Lady)—Belle was white, black and tan.
Sara.—By Mr. H. Todd, to Joel H. Ridgeway, Penn., the white, black and tan beagle dog Sara, by champion Rattler, out of sis (Darwin Lady).
Fidley.—By Mr. H. Todd, to Garrett Sharrock, Bucyrus, Ohio, the white, black and tan beagle bitch, Fidley, out of Vic (Darwin Lady) by champion Rattler, (Warrior-Rossey).
Lula.—By Mr. H. Todd, to S. E. Smith, St. Paris, O., the white, black and tan beagle bitch, Lula, out of sis by champion Rattler.
Sam.—By Mr. H. Todd, to L. O. Bird, North Easton, Mass., the white, black and tan beagle dog, Sam, by champion Lee out of Maud Sister.
Panic.—By Mr. W. H. Todd to Capt. D. M. Morris, Peoria, Ill., the white, blue and tan, called blue-pied, beagle dog Panic out of Besse (Warrior-Rossey) by champion Rattler.
Sis.—By Mr. W. H. Todd to A. K. Barnes, Wakeman, O., the white, black and tan beagle bitch, Sis, out of sis by champion Rattler.
Eloho-Vivette whelp.—By Dr. Wm. Jarvis, Claremont, N. B., to Mr. John Good, West Lebanon, N. H., a red Irish setter dog puppy by Eloho out of Vivette.
Eloho-Rose whelp.—By Dr. Wm. Jarvis, Claremont, N. H., to Mr. Geo. W. Farwell, wd. of the same place, a red Irish setter dog puppy by champion Eloho out of Rose.

MISSED.

W. H. Pierce's (Cortland Kennel, Peekskill, N. Y.) red Irish setter bitch champion Gussie, due to whelp Nov. 13, has missed to Larry.

DEATHS.

Reno III.—Eugene Hale Ritter—Mr. E. Merrellott's black pointer bitch Reno III, has lost by death the litter of pups—eight in all—six dogs and one bitch—by same owner's fiver and white stud dog Eugene Hale.

BRED.

Rose-Fido—On November 25 Dr. Wm. Jarvis' champion Rose to his champion Fido.
Fanny-Sasha Pedro.—Mr. E. F. Merrellott's (New York city) white, red and ticked setter bitch Fanny to same owner's red and white stud dog Sancho Pedro.

EVOLUTION IN PAPER CHALLENGES.

THE curious catalogue of performances with the rifle, which is given in the challenge to Dr. Carver from the representative of the Indian boy, Otto, seems to reach the very top notch of absurdity in the way of these paper pronouncements. They are gradually growing into an interesting department of the literature of rifle shooting, and each one is more bombastic than the preceding ones. Why it is necessary to combine flip-flap with marksmanship we fail to see; but since the thing has become epidemic, we think it only fair to give notice to young Otto and others of his ilk that we have a champion carefully laid away on paper, who, while riding at full speed on the wild horse of Tartary, catches a loaded rifle shot at him from a 15-inch Rodman cannon, springs through a ring of fire, pulls the trigger of the rifle, making the bullet carom on a soap-bubble floating a thousand feet high. The bullet then enters through the chimney of a factory hard by, caroms again on a revolving fly-wheel and knocks the eye out of the Goddess of Liberty on a three cent piece in the engineer's pocket. If Otto cares to enter such a trial we shall expect him to supply the engineer, the chimney, the Rodman gun and the wild horse of Tartary. We will furnish the soap-bubble and the three-cent piece.
Dr. Carver just now is engaged in an animated quarrel with the members of the London Gun Club, and has been firing some pretty spicy paper bullets at them. We hope he may find time to pen an acceptance to the Otto effort.

OUR CHRISTMAS NUMBER

Will be published next Thursday, Dec. 22. We have prepared for our readers upon that occasion a rich fund of entertainment; and we hope that the FOREST AND STREAM may add to their holiday pleasures. Among other contents of that number we may mention the following:

- THE BIG BEAR OF HERMOSEA.
 - A RIVERBIRD ROMANCE.
 - THE CRUISE OF THE NIPPER—III.
 - A TALE OF WACOMAW LAKE.
 - SPORT AS BRAIN-FOOD—I.
- Besides these there will be the usual compliment of good notices in the several departments of the paper.

SOUTHERN GAME GROUNDS.—Very many sportsmen are now seeking information about the resorts for sport at the South. Will Southern sportsmen, who are familiar with such localities, oblige by supplying us with data for publication?

THE NEW ZEALAND rabbit plagued farmers, whose woes are told by our Dunedin correspondent, would doubtless welcome "cannery" down there. Cannot the California quail canners be induced to emigrate?

NEW NONPAREIL.—Mr. Clapham is to send a new nonpareil boat to England, probably for experimental purposes.

GRACE.—Is to have more lead. At last the so-called practical school is giving in adhesion to the value of weight—something they should have understood long ago. The light displacement fallacy is well nigh smothered.

HULL YACHT CLUB.—Has now 180 members and 53 yachts, and last year, for the September matches, distributed \$46 in cash prizes. A new clubhouse is to be erected in conjunction with the Duncanson Y. C. is effected, which at present does not seem likely. Corinthian ideas are to be encouraged in every way.

SOLD.—Sloop Franca has been sold to Mr. Morris Ketcham, Jr., and will hereafter host the Savannah burgee. Rumor has it that Phig, Elsworth is clipping out a block for a new schooner for Mr. Pringle; also one for Mr. Howell, of the Atlantic Y. C.

MANXING.—A new circular has been issued by this well-known and popular yacht agency, giving a long list of yachts of all kinds now in the market. It would be hard to please any one who cannot find in the list just what suits his fancy and his pocket. Send to him for a copy.

TYPE.—The battle of type has got across France, and it has even been proposed to exclude the centred from French rallies together. The French yachts, built in imitation of our American boats, have been so roundly beaten by British cutters that French ardor in favor of the light-draft machine is cooling off.

EASTERN YACHT CLUB.—The membership is growing fast; it now numbers over 400 names. The club promises ere long to become the largest in America. Its clubhouse at Marblehead has proven a great success. Schooner Stive, steamer Adelta, sloop Viking and cutter and cutter sloop are being added to the fleet since publication of the last club pamphlet.

BOLUS.—This is the name of Mr. S. A. Wood's new schooner, now fitting out for of 231 dead weight. She is from a model by Mr. A. C. Gray. The hull is of iron, and is that does not fancy butrous, and his new ship shows more depth than usual, still we think another foot of hold and a reduction in beam could have been indulged in. The schooner is 85 ft. over all, 35 ft. on the line, 22 ft. in extreme beam, and 9 1/2 ft. deep with about 7 ft. water.

NEW RIG.—The schooner Dream, of Boston, will come out as a sloop next year, for which purpose she is being fitted. She is from a model by Mr. A. C. Gray. The hull is of iron, and is that does not fancy butrous, and his new ship shows more depth than usual, still we think another foot of hold and a reduction in beam could have been indulged in. The schooner is 85 ft. over all, 35 ft. on the line, 22 ft. in extreme beam, and 9 1/2 ft. deep with about 7 ft. water.

NEW YACHTS.—There are not slow in San Francisco to appreciate a good depth, dearrise and an easy hulk. Successive yachts had down by California builders are improvements upon their predecessors in this respect. Geo. Farmer, of Oakland, has a noble 47 ft. schooner planned. Light topsides and low ballast are better understood on the Pacific coast than in New York. This new schooner has a bent oak frame and plenty of through fastening, making the hull light and strong. She has much dearrise and a slow hulk, which will insure good rough water qualities. Wm. Stone, 'Ogden's favorite builder,'

NEW SCHOONER.—Alonso Smith is under way with a three-masted schooner for Col. Josiah Porter, of New York. She is 51 ft. on deck, 21 ft. beam and 9 ft. hold, with 7 ft. in water. Smith has produced some of our best yachts, and the Hilda is one of his notable first ones. His boats are characterized by more depth and hold than customary, which we consider a good point. Yachts from his yard are well put together and built in a stronger fashion than about the city water-front, where the art of both modeling and building was never at a lower ebb than now.

ALL THE GO.—The board is nearly dead. The Boston yachts Rosetta and Titania will shed their fins and come out with deep backbones and low weights. Weiber will do the job. It is said that Rosetta are to receive long overhangs by Smith, of South Boston. Schooner Little Horn is to have the benefit of an iron keel, and will mashhead the yellow and black diagonal cross of the Hull Y. C. next season having her home the property of Mr. Theo. Phelps. Commodore Mansfield, Washington Village Y. C., is to have a new 22 ft. cat, with a keel, of course.

THAT CUTTER.—In the words of the immortal hero, whose name just at this juncture I fail to recall, "We have met the enemy, and we are his." The blasted Britishers have sent one of their non-sensical lead-mines over to New York—and beaten us. Their sending the cutter Madge over was bad enough, but their beating us was adding insult to injury. I am metaphorically clad in sackcloth and diamond-dusted with ashes; but, like Beau Brantôme, who was consoled himself with the reflection that his wife had at least paid him the compliment in desiring him to do so for the handsomest man in London, so I console myself with the thought that they sent us over the heat they had, at any rate.—Correspondence San Francisco Olympian.

OBITUARY.—In the death of Col. H. G. Stebbins, which took place Dec. 10, the yachting community loses one of its foremost men, and we an old family friend. Col. Stebbins was born in 1811, and after launching into business for himself at an early age, assumed a leading position among New York's best citizens. From 1842 to 1870 he was Commodore of the New York Y. C., an office which he filled with credit to himself and the club. After experience in a number of small craft, he bought his abode, George Stebbins' famous yacht, and rigged her as a schooner, after her return from British waters, where she had been badly beaten by English cutters while yet rigged as a sloop. In 1865 he transferred his colors to the new schooner Phantom, one of Joe Van Dusen's best, and in her won a number of prominent races. In later years he retired from active sailing, but maintained a lively interest in the sport.

NEW YACHTS.—There are not slow in San Francisco to appreciate a good depth, dearrise and an easy hulk. Successive yachts had down by California builders are improvements upon their predecessors in this respect. Geo. Farmer, of Oakland, has a noble 47 ft. schooner planned. Light topsides and low ballast are better understood on the Pacific coast than in New York. This new schooner has a bent oak frame and plenty of through fastening, making the hull light and strong. She has much dearrise and a slow hulk, which will insure good rough water qualities. Wm. Stone, 'Ogden's favorite builder,'

has also a nice little two-sticker of 45 ft. length well along. She is built "on spec," but is pretty certain to find a purchaser. San Francisco is fortunate in being too far away to purchase discarded New York rattlers for the sake of the low figures at which they are offered. Commodore Harrison proposes to keep his yawl Frolic in commission all the year round.

CANOE PHOTOS.—Mr. S. R. Stoddard, of Glens Falls, N. Y., sends us a fine notion of canoe photos. They refer to an important event in canoeing history. One of the photos is a fine broadside view of the "official" Sludown, with her originator, Commodore W. L. Alden standing by her side. The Sludown is now the most popular model in America, and in a few short years has been spread all over the country, strictly on her merits. Commodore Alden will receive the gratitude of future generations for the fortunate way in which the most desirable points wanted in a canoe for general service have been incorporated in the now universal Sludown pattern. There is also an excellent photo of the venerable canoe Elywate, showing her haul out on the beach, tent erected, and her owner, Col. Norton, snugly reclining inside, looking a pleasant canoeing letter to Forest and Stream. Another photo of the cat and shore, with innumerable canoes of all styles and sorts, some with their rigs ready for a breeze, gives an excellent idea to strangers of the great meet on Lake George last year, and the free and easy fun the canoeist may partake to the benefit of mind and body.

CUTTERS.—The Olympian believes in progress, and it is really glad to see that the New York skimmers have been beaten by a deeper type of boat. The New York skimmer is utterly worthless in any place where there are rising seas and strong breezes. They have never been successful here in San Francisco Bay. Here we have to build deeper and stiffer boats. On every occasion where the light-draft New York type has been pitted against a California built boat, in a breeze, the New York type has gone to the wall. We here do not believe in the New York type. We need all seaworthy boats. All of our boats are given some considerable dearrise and draught. Boats are not wanted here which have to lose everything and let go the port hulk when a 25 mile breeze comes on. We have to stand worse winds than that eight days out of ten in summer in the channel. We are glad to see our worthy and esteemed contemporary, Forest and Stream, come out plainly and admit that Madge is not a type which should be built here. Forest and Stream has made a strong fight for cutter rig and model, and when this extreme proved his assertions, which were doubted by his contemporaries, it has seen fit to reason to rejoice with exceeding gratification. Many of its sailing readers no doubt thought the yachting editor "stopped over," to use an expressive phrase, but now he has confessed the judge an undesirable type, we are disposed to forgive extravagant expressions and attribute them to excess of zeal. For we know said editor to have practical knowledge of the subjects on which he writes, which is more than can be said of all who have given their views on the subject. We think, moreover, that he is laboring simply to improve a type of boat which all builders or people of experience think should be improved. It is working to raise the standard of both yachts and yachtsmen to something more worthy of the great sport. We cannot fail to admire his persistence and hope his efforts toward "bonst boats" will bear fruit.—San Francisco Olympian.

TELEGRAPH POLES AND WILD ANIMALS.—

Some interesting facts are brought out in a paper by M. C. Nielsen, of Christiania, on the impression produced upon animals by the resonance of the vibration of telegraph wires. It is found that the black and green woodpeckers, for example, which hunt for insects in the bark and in the heart of decaying trees, often peck inside the circular hole made transversely through telegraph posts, generally near the top. The phenomenon is attributed to the resonance produced in the post by the vibration of the wire, which the bird mistakes as the result of the operations of worms and insects in the interior of the post. Every one knows the fondness of bears for honey. It has been noticed that in many of our districts they seem to mistake the vibratory sound of the telegraph wires for the grateful humming of bees, and, rushing to the post, look about for the hive. Not finding it on the post, they scatter the stones at its base which help to support it, and, disappointed in their search, give the post a parting pat with their paw, thus showing their determination at least to kill any bees that might be about it. Indisputable traces of bears and about telegraph posts and scattered stones prove that this really happens. With regard to wolves, again, M. Nielsen states that when a vote was asked at the time for the first great telegraph lines, a member of the Storting said that although his district had no direct interest in the line proposed, he would give his vote in its favor, because he knew the lines would drive the wolves from the districts through which they passed. It is well known that to keep off the ravages of hungry wolves in winter the farmers in Norway set up poles connected together by a line or rope, under which the wolves would not dare to pass. "And it is a fact," M. Nielsen states, "that when, twenty or more years ago, telegraph lines were carried over the mountains and along the valleys, the wolves totally disappeared, and a specimen is now a rarity." Whether the two circumstances are casually connected, M. Nielsen does not venture to say.—Nature.

Trout, Bass and Salmon Flies.

Table with 2 columns: Fly type and Price per dozen. Includes items like Small and medium trout, Same, extra fine, Double gut trolling, Large trout, Same, extra fine, Small Bass, etc.

Any fly tied to order, 50c. per dozen extra, unless one gross of a pattern is ordered, when no extra charge will be made. All "jungle-cock" flies, 50c. per dozen extra.

We have over five hundred patterns in stock, and can tie any pattern to order. Prices are given per dozen; we do not sell less than one dozen, but will give any assortment in the dozen. All our flies are tied on our celebrated Spring Steel Sproat Hooks.

Discount to the trade only. Orders received from persons residing in cities in which dealers keep a full line of our goods will not be filled at any price.

ABBIE & IMBRIE, 48 Maiden Lane, New York.

ENOS JAMES & CO.'S HARD-HITTING GUNS.

This cut exactly represents JAMES & CO.'S GREAT GUN, called the "TRIUMPH." Every Trigger of Trap Gun is choice-bored and targeted.

We now offer a full line of ENOS JAMES & CO.'S Sundry Breech-Loaders. What is the use of paying an absurd price for a gun made by some old maker when you can get a JAMES' GUN as good or better for half the money? Or what is the use of buying a gun bearing either a fictitious name or no name at all, when you can get one of ENOS JAMES & CO.'S guns with their name and guaranty for the same price?

We are sole agents at New York for the Colt Club Gun.

We offer a small JOB LOT of the famous Webley Guns of all sorts at about half price.

Also a few choice Furrer guns of latest style at special rates. Address H. & D. FOLSOM, P. O. Box 1,114, 80 WARREN ST., NEW YORK.

THE SNEIDER.

THE ORIGINAL American Hammerless GUNS WITH HAMMERS ON OUR GRIP AND BOLT; AND DOUBLE GRIP ACTIONS. SIZES FROM 4 TO 20. Muzzle-Loaders Altered to Breech-Loaders. Pin-Fire Guns Altered to Central-Fire. Stocks Bent to Any Crook. GUNS BORED TO SHOOT CLOSE. Send for Illustrated Catalogue.

Clark & Snelder, 314 W. PRATT STREET, BALTIMORE, MD.

3 KINGS CIGARETTES

COMPOSED OF TURKISH, VIRGINIA and a small portion of choice PERIQUE—a mixture not found in any other cigarette.

By WILLIAM S. KIMBALL & CO., Peerless Tobacco Works, ROCHESTER, N. Y.

J. & W. TOLLEY, KEEP'S SHIRTS.

PATENTEES of the "PERFECTION" HAMMERLESS GUN. PATENTEES of the "GIANT-GRIP" ACTION. Makers of high-class guns only to the individual orders of gentlemen who cannot content themselves with a gun taken down from the shelf of a gun-store.

Illustrated lists, photos and directions for measurement sent on application.

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUICATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future.

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and ichthyology; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known pisciculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family, readable, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve an unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. To clubs of three or more, \$3 per year each. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE Trout, Crayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS OF THE NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equal, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

THE TROUT season begins May 1 and ends Sept. 1. THE GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakesets of this territory. Every Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing can be had at nearly every station.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1882 by new buildings and additions.

During the season HOUD TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Anglers.

Guns, and Fishing Tackle Carried Free at Angler's risk. It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEST, Gen'l Pass Agent, Grand Rapids, Mich.

GUNPOWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DUPONT'S GUNPOWDER, since established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

- Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.
- Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 4 (fine) burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters.
- Dupont's Choice Bore.**—Specially adapted for "Choice Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 5, No. 1 being the coarsest. Packed in 1/2 lb. kegs and 1 lb. canisters.
- Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 5 lb. kegs.
- Dupont's Rifle E. g. "Sea-Shooting."**—Fig. and F.F.G. 1 lb. Fig. for long-range rifle shooting, the Fig. and F.F.G. for general use, burning strong and moist. Packed in 1/2 lb., 1 lb., and 5 lb. canisters, 1/2, 1 1/2 and 25 lb. kegs. Fig. coarse, F.F.G. fine.
- Dupont's Sporting, Mining, Shipping and Blasting Powders** of all sizes and descriptions. Special grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by
F. L. KNEELAND, 87 Beaver St., N. Y.,

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came out conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others." They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Manufacturers of

HEXAGONAL SPLIT BAMBOO FISHING RODS,

REMOVED TO 153 MILK STREET,

We are obliged to have more room in our factory and greater facilities for manufacturing our goods to meet the increasing demand. We have received the highest award and silver medal at the Mass. Charitable Mechanics' Association Fair for our superior goods. SEND FOR CATALOGUE.

Ammunition, Etc.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse), 1 1/2 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 and 1/2 lb. canisters and 5 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFG, FFG and "Sea Shooting" FG in kegs of 25, 12 1/2 and 6 lb. and cans of 5 lbs. FFGs are packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,
85 WALL STREET, NEW YORK.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. To clubs of three or more annual subscribers, \$3 each. Remittances should be sent by registered letter, money-order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by Sm. Terquena, 16 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, December 22,

IF YOU HAVE A FRIEND who sometimes goes fishing or shooting, or "would go if he only had the time," show him a specimen copy of the FOREST AND STREAM. Any issue of the paper will do for this. Some publishers make tremendous exertions to get up specially attractive numbers at this season, and then spread them broadcast over the land as "specimens" of the regular all-the-year-around issues. That is not our plan. We try to turn out a tip-top paper just fifty-two times every year. That is the fair, honest way, and it pays. If you file your papers, and do not wish to break the file, send us the name of your friend and we will furnish him with a copy.

THE EARL OF DUNRAVEN, in a communication published in another column, explains that his recent misadventure in Nova Scotia was due wholly to a natural misconception by him of the requirements of the statute, and that instead of having intentionally disregarded the law, he had, as he thought, fully complied with it.

We had a pleasant call last Tuesday from Mr. Edmund Orgill, who had just returned from a shooting trip in the South.

THE THIRD CHAPTER of the "Cruise of The Nipper" is unavoidably postponed until next week.

A MERRY CHRISTMAS!

THE spicy odor of mountain spruce boughs greets us. Christmas-tide is at hand! THE FOREST AND STREAM joins in the universal salutation of good cheer. A Merry Christmas to you all!

This is the festival that has the strongest hold on the hearts of civilized men, and the widest acceptance among them. It is the season when charity scatters its gifts with most lavish hand, when kindly sentiments move every heart, enmities are forgotten, and good feeling is universal. At this time does the message of peace and good-will, first breathed nearly two thousand years ago, beneath the quiet starlight over the sleeping hills of Bethlehem, seem to have a real force, which is binding on each one of us. At this time we are shown the tenderest, the most loving aspect of human nature.

And it is now, at Christmas, that we remember, though perhaps unconsciously, that our forefathers were dwellers in the forest. Their lives were spent beneath the green woods and the open sky, and their camps were pitched by the running brooks or the peaceful lakes. To-day we recall that time by going forth into the woodland and bringing thence sweet-smelling branches, green leaves and bright berries to adorn our homes at this, our greatest festival.

Fragrant are these evergreen boughs, with tender memories of the past. Their woodland perfume pervades the house and brings fest-rushing recollections of the Christmas circles of other days. Again, in the early morning light do we see the dear familiar faces from which we parted long ago, and hear again the well loved voices now stilled for ever. Beneath the outward merriment of the day these deeper influences prevail; happy is he who yielding to them finds new courage and a manlier heart for the struggles of the year to come.

To each one of our readers this Christmas will bring the memories of happy anniversaries past and others hoped for; and to each one we offer our heartiest good wishes and a

MERRY CHRISTMAS.

THE FIELD TRIALS.

THE last of our report of the National Trials at Grand Junction, as well as a complete description of the Pennsylvania State Trials, will be found in our Kennel department this week.

The National Trials were the most successful that have ever been run in this country, and will compare favorably with anything that the world has ever seen. We heartily congratulate the members of the National American Kennel Club upon the abundant success that has crowned their efforts. Much of this success is due to the indefatigable labor of the President of the association, Mr. P. H. Bryson, who has expended much time and labor in arranging the details, both before and during the meeting. There was no lack of birds, and the grounds are extremely well adapted for the holding of the Trials. Many prominent sportsmen from all parts of the country were present, and the utmost good feeling was manifest throughout the meeting, and all appeared to thoroughly enjoy the occasion. A large number of the most noted dogs in the country competed for the very valuable prizes offered, and the laurels there won were well earned and we warrant will be proudly worn.

The Pennsylvania Trials were very successful so far as the number of entries and quality of the dogs were concerned, but coming as they did immediately after the National Trials there was not so large an attendance as there would have been had more time intervened. Great praise is due the energetic members of the Association for planning and so successfully carrying through this important meeting.

The judges, without exception, were well qualified to perform their duties, and, although we could not quite agree with one or two of their decisions, we believe them to be thoroughly honest and to have impartially awarded the honors without fear or favor. The wide-awake proprietors of the Stonewall House, Messrs. Peoples and Branum, were equal to the occasion, and the hungry crowd were provided with well cooked and well served food.

We should, perhaps, state that our report of the Trials is

not compiled from the decisions of the judges, nor from hearsay, but that we carefully watched the different phases of each heat, and noted at the time the performance of each dog just as we saw it, seeking to chronicle the history of the running simply as history, extenuating nor criticising aught save as our instinct as a sportsman prompted. To those of our readers who have never attended a Field Trial the many false points and flushes will perhaps seem to indicate that the quality of the work done was not of a very high order; and they may perhaps be led to think that had they but been there, with their own Dssh or Sport, quite a different record would have been shown. While not in the least disparaging the good qualities of the many Dash's and Sport's scattered throughout the country, we are free to confess that, although we once entertained the same belief, we have seen reasons to change it, and among the many really good dogs that we have seen afield we fail to recall one that we should deem it safe to back as a winner at a Field Trial. Not perhaps that in an ordinary day's shooting Dash and Sport might not acquit themselves as well or better than the first prize winner, but this is not a Field Trial by any means, and when we take into consideration the accessories that are inseparable from these public trials, we can only wonder that the record reads so fair. In reading our report and criticising the work therein described, there are many things that should be taken into consideration. Perhaps the most prominent of these, and for which great allowance should be made, is the high strung, nervous temperament of our canine pets, which is subjected to a far greater strain than when they are quietly taken out for an ordinary day's shooting; for the noise of the crowd, and the presence of many other dogs exercises anything but a steady influence upon their excitable nerves. The tramping and talking of the spectators also scares the birds, making them wild and less likely to lie to the dogs. This will account for many of the false points, which are undoubtedly often made to the scent of a frightened bird, who has just taken flight unseen. Many of the flushes would not be scored, were it not for the noise which puts the birds upon the alert, and causes them to rise before the dog has a chance to locate them. Then again the handlers are not always quite so cool and collected as they should be, and we have ever found that there is nothing more conducive to unsteadiness in a dog than to have his master go to pieces. Let us then give due credit to the dogs which pass through this very trying ordeal and acquit themselves fairly well; for the chances are that away from the excitement attending a public trial, they would prove themselves to be excellent animals. As we have before mentioned not the least of the benefits derived from the Trials is the greatly improved manner in which the dogs are handled, and the consequent lesson that the spectators are quick to learn and apply, to the manifest improvement of their own style. This, in itself, were nothing else accomplished, would stamp the Trials as a wonderful success. But a still greater good has been wrought in the vast improvement of the quality of the companions of our sports. Gentlemen who attended the Trials go home with more exalted ideas and broader views of matters pertaining to the sports of the field, and are no longer satisfied with the mediocre performances of the animals who have heretofore shared their outings, but at once institute radical changes and rest not until they achieve something approaching Field Trial form. Thus our Field Trials are accomplishing their mission, and the whole-souled sportsmen who so generously support and sustain them are reaping their reward, as with a pardonable pride they rejoice at the abundant success and brilliant future of our American Field Trials.

CANOE AND CAMERA.—A most timely book for the holiday season is Mr. T. Ledgwick Steele's "Canoe and Camera," the third edition of which has just come from the press. This is the most artistically and elaborately illustrated volume of the kind published in this country. The present edition contains a large map of the Northern Main regions, including the canoeing routes of the Main, St. John's, the Aroostook, and the East and West Branches of the Penobscot. Mr. Steele has been engaged several years in the preparation of this map, and sportsmen tourists owe him a debt of gratitude for his thorough work.

MAGAZINE RIFLES FOR THE ARMY.

AN important duty devolves upon the Board and officers now in session at Governors' Island, who have been charged by Gen. Sherman with the recommendation of a magazine gun for the use of the U. S. Army. It is not intended to make any sweeping change in the armament of our soldiers until the whole subject of repeating weapons has been more thoroughly worked up by our inventors; any change or step in the arming of the troop must be of a tentative character. That the magazine gun is the coming piece for the ordinary soldier is regarded as a foregone conclusion by the leading military authorities of every Commonwealth possessing an armed force. A dozen commissions are now free to face with the problem of selection. It is a sort of competition between the nations as well as between the arms, and the verdict of the representatives of one nation is eagerly looked to by the examining boards of other nations. Especially will this be the case with the report of the Board now in session here. America has gained the front rank in the making of small arms, and the rifle championship, now resting with the American team, shows that she can shoot as well as invent. Nations desiring to buy a supply of these weapons come to America as the readiest and best market. The "rain of lead" at Plevna was fired from rifles made in Connecticut, and from the same State hundreds of thousands of stands of arms have gone to other nations of Europe, to the States of South America, and even to far away Japan. The leading magazine model, pushed for adoption before the German authorities to supplant the breech-loading Mauser, is a pirated copy of a gun invented by a Lieutenant of the U. S. Army. It was displayed at the Centennial Exhibition, and there a German Jew of a mechanical turn of mind saw it, and stole the idea for reproduction at home.

The modern rifle has had a marked effect in modifying the art of war. The skirmish line has taken the place of the old movement in force, and the necessity for accuracy of marksmanship on the part of every soldier is every day becoming more imperative. The rising problem, too, is one of supply. The breech-loader gave the men an opportunity of rapid firing, and this they improved to such an extent as to make the supply of ammunition to the fighting line an important question. With magazine guns the consumption of ammunition runs up to alarming proportions, and to meet this difficulty the German Army authorities are adopting the "firing discipline." In this the fighting unit is represented by a skirmish line of a dozen men under an officer. Instead of random firing, as now under an engagement, the men shoot only on special orders of their officer. The intention is to prevent the men from falling into the error of an excited fusillade. The same object as this novelty in discipline is aimed at in the requirement that all arms shall be adapted to use as single breech-loaders as well as magazine guns. In that way the use of the reservoir for shots can be delayed until the supreme moment, when a dozen seconds in as many seconds is an element of victory.

FLYING SQUIRRELS.—English misapprehensions of American geography are proverbially gross and frequent. We are always pleased, then, when an English press really does display familiarity with the subject, as is the case with an esteemed London contemporary. Speaking of the animal plagues of Winnipeg, which our readers will remember is up in Manitoba, *Land and Water* tells us that in the autumn, "the time when the [Winnipeg] cotton and corn seeds were ripening and maturing, myriads of squirrels left the woods and attacked the cotton and cornfields; they tore open the balls of the cotton plants, ate all the seed, and scattered the cotton on the ground; they devoured the kernels of the corn and then scampered off to Mississippi and Tennessee, where they met with a warm reception, and were shot down by hundreds." Now, from Winnipeg to Mississippi, the distance is, as the crow flies and the squirrel scampers, only a trifle over 1,200 miles, and to an American squirrel, as any man who has ever hunted them knows, a little "seamper" of 1,200 miles is the merest play. He can go very fast and very far, when he once makes up his mind to travel away from a man with a rifle. Indeed, we have seen squirrels that in going from Manitoba to Mississippi would take in Mount Washington and Pike's Peak on the way, and then not get up fiction enough to set the Michigan woods on fire.

DEATH OF A FISHERY PIONEER.—We regret to chronicle the death of Mr. Aaron S. Vail, of Smithtown, Long Island. Mr. Vail owned a fine trout-stream; and he entertained many prominent men in days past. Danie Webster and Henry Clay fished in his stream and partook of the hospitalities of his table. Mr. Vail engaged in trout-breeding when he first heard of it, about 1846, and his ponds are mentioned in Norris' "American Fish Culture," published in 1875, as among those of the early trout culturists.

MICHIGAN SPORTSMEN'S ASSOCIATION.—The seventh annual session of the Michigan Sportsmen's Association, for the protection of Fish, Game and Birds, will be held at East Saginaw, commencing Tuesday, January 17, 1882, at 10 o'clock A. M. Every sportsman's and game protection club in the State is earnestly requested to send five delegates, and in localities where no club has been formed sportsmen are cordially invited to attend. One of the results of the last session was the present game law.

The Sportsman Tourist.

THE BIG BEAR OF HERMOSA.

IT was evening, and our late dinner was over. Pipes, and a tin-eup full of mild grog soothed the fatigues of a ten hours' hunt, and steeped our souls in blissful balm. The day's sport had been good—two elk and five deer the net result—and we felt that we had a right to loaf and refresh our souls. The day was dying, a peaceful death, and behind us the gray cliffs of Wailua were slowly darkening in the fading light. Out of the valley below we heard the voice of the Hermosa, as it babbled to the spruces which leaned above it, or chafed at the cold rocks which barred its passage. It was one of those hours when the hunter, if he be anything more than a purveyor of meat, or a killer of deer, feels as if he stood within the very presence of the great Mother herself, and knows the radiance of "that light which never was on sea nor land." Half unconsciously, I repeated the drowsy words of the Lotos-Eaters:

"The charmed sunset lingers low adown
In the red West; the mountains gleam the pale
We see far inland; and the winding vale
And meadow, set with slender galingale.
And here are cool mosses deep,
And thro' the wood the ivies creep,
And in the stream the long-leaved flowers weep,
And from the craggy ledge the poppy hangs in sleep."

Roused by the murmur of the words, Ignotus took his pipe from between his teeth long enough to languidly remark, "Somebody coming down the trail."
"How do you know?"
"Hear 'em."
"Foot or horseback?"
"Horseback."
"White or red?"
"White; horses shod."
"Know who they are?"
"The May boys, I reckon. Camp over on the Larriweep. Hunting. Taking meat down to the ranches."

As he spoke, a horse's head came round the shoulder of the bluff, a quarter of a mile above, and in a few minutes, three horsemen stopped on the trail, while we sauntered slowly down to them.

"How?"
"How?"
"Which way?"
"Down to Trippe's with meat. What luck?"
"Pretty fair. And you?"
"So so. Deer gettin' scarce. Cussed Utes burnin' off the woods. Say, you boys want some fun?"

"Depends. What kind?"
"Well, Slippery Dick's back, up here at the head of Hermosa. Crossed his trail just this side of Batteres Spring. There's a chance for ye, Tenderfoot, if you want sport. Reek on he'll give ye enough of it. So long. Go to be gone! Give ye a dollar for his skin, when ye get it. Yamaoi! Pia-a-a!" and they clattered down the trail.
"Slippery Dick? Who the mischief's he, Ignotus?"
"He's a she."

"A she? What kind of a she?"
"A she-bear, and a dead-end too, if all accounts are true," and he went on to tell me, how, for several years, hunters had reported that they had found, now and then, the trail of a bear, so large as to be phenomenal—how she would be found one day on El Conquistador, and the next on Dos Hermanos, fifty miles away—how she seemed to bear a charmed life, minding a .44-bullet no more than a flea-bite—how, at uncertain intervals, some unlucky prospector, pale-faced and knee-kneed, would stumble into camp with incoherent jargon of the dumrattest biggest bear 's ever see; "big as all nut down, and savage 's I be!"—and how Fat O'Brien, who had killed more bears in Nevada than ever Grizzly Adams himself, swore, after being tried by her for a day and a night, "that the hid of her was s big as a flour barrel, and the claws of her like rapping hobs, an' whin she rached fer me, as I clim the tray, be jabers, she made the bark fly, fifteen fut from the ground, sor."

Making all due allowance for exaggeration, Ignotus was inclined to believe that there was a monstrous bear which had his haunt in that section of country—that she was an exceedingly cunning old beast, as well as fierce and dangerous—that to kill her would be a feather in the cap of any hunter—and finally, warning with the subject, that, if I said so, we'd move camp up to the head of Hermosa, and see if we might not "be lucky enough to get a crack at her."

As I would have gone to the mouth of the pit, or even further, with Ignotus, and as, besides, I "thought no small bear of myself" as a bear-bunter, having actually slaughtered two or three small cubs by my own unassisted prowess, I gladly agreed to the proposal.
"Ever see any of those explosive bullets?" asked Ignotus after a pause.

"Yes, why?"
"Wish we had some of them; they'd come in mighty handy, if we should happen to have a see-aneer with the old lady."

After cogitating a while—"Got your loading outfit with you?"

"Yes."
"Let me see your bullet moulds."
"These produced and inspected."
"Got any of those .33 cartridges you use in your grouse rifle?"
"Why? What do you want with them?"
"Make our own bun-shells, by thunder!"
"How?"
"Get 'em out, and I'll show you."

And show me he did, in a way I will endeavor to explain. My moulds were of the Sharps pattern. .44 calibre, conical bullet, lead pointed in front, small end. Covering butt of bullet, a plate which uncovers. So much explanatory—now for detail. Taking a .33 rim-fire cartridge, be cut off the bullet, flush with the shell then, finding a nail, be filed it down, leaving on the head, (till it was just the size and length of his prepared cartridge. Inserting this into the lead-hole in the moulds he unscrewed the butt-plate, poured in his melted lead, shook out the bullet, extracted the nail, inserted his .32 cartridge, and lo! an explosive bullet. Trial proved them to be a grand success. If a bone were struck, they never failed to explode, and a second shot was seldom needed. By a lucky chance, I once dropped one into the shoulder of a large cinnamon bear, at three hundred and fifteen

yards, and he dropped as if struck by a flash of lightning. They are had of deer or elk, as they spoil so much of the meat but for Ursus they are just the thing.

Early dawn sees us toiling up the rocky trail which leads to the head of Hermosa. Nonad though I have been for the greater part of my life, I cannot leave a place where I have comfortably settled down for even a day, without feeling a slight touch of regret.

The camp-fire becomes a sacred hearth, and one does not take away with him in the morning all that he brought the night before. Somewhat he leaves behind—invisible, intangible, but none the less real. A part of his true self, of the "inner me," as Emerson would term it, is caught and retained by the branches of the tree under which his bed has been made, by the boughs on which he has lain, by the air which he has breathed, and by the sky which has arched above him. As we rode along, there came into my mind some verses which the Rhymer had read me a few days before, and which expressed so well my present mildly regretful feelings, that I offer no further apology for presenting them here.

Ah! happy he
Who 'neath the greenwood tree,
Doth loose his mind from every carking care!
Nail gross exuvie, which from him fall away,
And leave revealed his bestor self, divinity fair!

Green forest boughs,
Under a fir-tree house,
Bring sweeter sleep than Sybaritic couch;
And simple hunter's fare, with walk of spacy air,
Excels all Capuan feasts Lucullus dare avouch.

Each baser thought
From crowded cities brought
Upon these breezy heights doth pale and die,
The dull and puzzled brain grows clear and strong again;
The alling, purblind soul sees Truth with clearer eye.

Ah! blessed school
Where Wisdom plays the fool,
And Nature grants perpetual holiday!
Where volunured lore is none, save tree and brook, and stone,
And he doth win the highest prize, who spends his time in play!

Each charmed spot
Where I hath been my lot
To pitch white tent, and lake nonad;
Some tender memory hath, some bounty eued aftermath
Of sweetly fragrant thoughts that blow o'er in my breast.

A balanced good—
Here in the play wood
New thoughts, new hope, and never life I find;
And yet, O deile heart! when comes the time to part,
Somewhat of thought, of hope, of life, is left behind.

A paradox
At which the dullard mocks!
Who whacks my riddle, bin I hall as wise.
That which I spend, I have, and what I take, I leave;
If mine the Sybil's tongue, be yours the Seer's eyes.

At the very head of the canyon was a little circular park of perhaps ten acres, where bubbled up the spring which fed the head waters of the Hermosa, and here we pitched our tent.

The remainder of the day was devoted to reconnoitering, and after supper we developed our plan of battle. Half a mile below us was an extensive patch of wild parsnip, and here our friend Richard had left his sign manual in profusion, the night before. We felt certain he would return to-night, as the wild parsnip is to a bear, what Cherystones or Saddle-rocks are to a New York Alderman. From this ursine super-room there were but three passes leading to the rocky fastnesses, where, we felt assured, he had his lair. Of these, one was the canyon itself, and that was blocked by our tent and camp-fire; the others led respectively, to the crests of Wsuta on our right, and El Conquistador on the left. We would each occupy one of these, and it would go hard, if one or the other did not succeed in intercepting the prey, as he wended his way homeward in the morning twilight.

The jewels that sparkle in the sword-belt of Orion had not yet lost their lustre, when I was singly encamped in my ebosen blanket. Joseph Cook would have pronounced the position "proudly selected, and langly strategic." Backed by a hill a hundred feet in height—my flanks defended by perpendicular escarpments of rocks—in front, the vertical banks of the gulch which was the only outlet on that side, from the canyon below—I was equally well situated for attack or defense. From my eyrie, I had a clean sweep of the gulch for a thousand yards below, while screened from observation by the boulders which left convenient peep-holes between. The only access to my mountain fortalice was by a narrow path from above, so steep, that, having with difficulty descended, I had serious doubts as to whether I should ever be able to return. Strong in the possession of explosive bullets and an impregnable position, I felt that I was equal to twenty bears, even should they all attack me at once. I hoped that Slippery Dick, like myself, loved the sterner side of Nature, and would therefore choose the path to Conquistador with all its gloom and grandeur, rather than the softer approaches to Wailua, where Ignotus had posted himself. Besides, the death of one bear, though he were the largest in all the San Juan, would add but little to his fame, while to me it would furnish a blast, with which "to fill the sounding trumpet of fame," for many a year. (In justice to Ignotus I must say, that when he found that all the signs pointed to our enemy's having his den on Conquistador, he insisted on my taking that stand for my own.)

Wrapped in my blanket, and propped comfortably against the rock, I prepared myself for the due observance of a hunter's vigil. The air was keen and frosty, with just stinging enough in it to stir the sluggish blood, and redolent with those woody odors that only the trackers of the wilderness know. There was the balsamic odor of the spruce, giving a tingling tingle to every vibrating nerve—the aromatic fragrance of the wild celery, like a faint aroma from the Spice Islands, and the far off Celebes—the quiet, domestic smell of the lavender grass, recalling tender memories of Eastern homes, and the opening of ancient bureau drawers, from which are brought, by loving hands, the old-fashioned garments of those who now wear the shining robes of Light—and, reinforcing and at times overpowering all, wafts of the cloying sweetness of the wild buckwheat, stirred by the wind, as it flows in the valley, a thousand feet below, phantom of forms dimly marked the line of the hurrying brook, and, faintly audible from those lower depths, came, like the stir of a mighty congregation, that in

describable surrusus which precedes the thrill of a waking world.

The stars were losing their fiery lustre, and now shone with a pale glow, like the "brightening" on the surface of molten silver. Slowly they faded, one by one, slipping out quietly, like lesser beauties from a ball room, till only Venus, Mars and Sirius were left. These still shone on in regal splendor, but they, too, yielding to a power greater than their own, scarcely yet gracefully withdrew from the unequal contest, overpowered but not subdued—as the haughty Maria Theresa turned her back upon the Magyar Diet. Over beyond Waluta, the olive of the sky changed to a steely gray—then to a faint pink, such as tints the petals of the wild sweet-brier, and then to a roseate bluish which climbed higher and higher, till the whole Eastern firmament glowed with Tyrian splendor.

Over grass came that strange dush, and over linn and heather, over hill and over dale, and over gulches brown; And each scattered cloulet, crossing, drifted like a scarlet feather Torn from the folded wings of cloulets, before they settled down."

On the rock-side opposite, the cones came out to greet the dawn—a yellow butterfly floated past on noiseless wing—in the spruce woods below, a Canada Jay pitched the note for a raucous chorus which split the silence of the hills—and the night, with its sweet silence, was gone, and "jocund Day stood tiptoe on the misty mountain-tops."

Taking my glasses from their case, I swept the hill-side opposite—distant a mile—the crowd of the rocks, unless—the circling glass is arrested for a moment, and—yes, that brown spot in the lee of yonder porphyry boulder, proves to be Ignotus, keeping faithful watch. But what has become of our expected prey? He surely must have quit his banquet of succulent roots ere this, for the Sun god's chariot has fairly left the gates of Aurora, and his couriers are stretching away, in the full burst of their speed, toward their Hesperian goal.

Confound Slippery Dick, anyway! He's foiled us, as usual, and here the flutter of a white handkerchief from across the canyon signals that the watch is over. I rise from my rocky lair, and, stiff, cold, hungry and cross, join Ignotus in the valley below. By mutual consent, we turn our steps toward the parnip bed, to see if Dick has breakfasted. Yes; the trampled steus, the debris of rejected tubers, and the freshly trodden soil, steaming in the morning sun, proclaim his recent presence. Gone, but where? We give it up, as an unguessable conundrum, and start to camp, for breakfast and a nap.

A brisk walk of ten minutes brings us in sight of the clump of trees where camp is pitched, but where is the tent?

A hundred yards further, and from Ignotus' lips breathes forth softly, the half sun question—"Who's been here, since I've been gone?" The tent is down and torn to ribbons—the flour sacks rent from top to bottom and their contents strewn upon the ground—the mess-chest overturned—sugar and bacon missing—and a wild conglomerate of canned goods, plates, cups, knives and forks, blankets, spare socks and shirts, coffee pots and frying pans, and a hundred odds and ends of camp impedimenta scattered about in every direction. Into a nitro-glycerine factory exploded here, or an East Indian typhoon dropped down upon us?

A single word breaks from my comrade, but it is as expressive as all of Garcilasso's seven hundred and twenty-nine volumes. It is simply the name of that place which Bob Ingersoll and the Revised Version both ignore, but the Ananias Mananath of Holy Church conveys not more weight of obprobrium with it, than that one monosyllable. Turning, I see him gazing intently at something on the ground, by the stream, which I am joining him. I recognize, at a glance, the cause of his outburst. There it lies, in the marshy ground before us; a track, huge, uncouth, grotesquely human, broad as the two hands, and as long as from the ulnar condyle to the metacarpus. A glance telegraphs from brain to brain—"Slippery Dick!" Another telegram and answer dash to and fro— "I shall follow him!" "And I'll lead on!"

A few biscuits gathered from the wreck which streus the ground, and we press on up the canyon. Ignotus' blood is up—the old Berserker stirs within him—his tenderest feelings have been outraged, and heart's blood alone will wash out the stain upon his honor. "Wrath in his port, and vengeance in his eye," he leads the way, sure-footed as the cimarron, untiring as the gray wolf—and as stern and fatal as the wool-shod Nemesis. Woe to the dastard who hath heaped such foul scorn upon a freeman's head! By the thunderbolts of Jove, dearly shall he pay for his morning's pastime! We are him, not enough. O Glorious Richard! that by the spear of the warrior we were favored for three long hours, in futile amush for thee, but that thou must needs flatter the dove-cotes of Corioli, when the Volscians were absent? "Better that a mill-stone were tied around thy neck, and thou wert cast into the uttermost depths of the sea," than to have violated the sanctity of our tabernacle.

Up, still up, till the head of the gulch is reached, and we stand among the splintered crags and wind-swept tors that mark the crest of Hermosa pass. Here it behooves us to move cautiously, for, fence with vengeance though we are, we do not care, upon this broken ground, to come too close to a savage grizzly. Silently we work our way over and between the shattered rock-masses, until we look down into the Canon del Christo upon the other side. Ha! what is that brown mass, a thousand feet below? By the spear of the great Nimrod, we have him at last! "Try him," whispered Ignotus, unselfish, even at this supreme moment.

It is a long shot, but I rest my heavy Sharps upon a jutting point, clear to the sights, and fire. A jet of white dust, twenty yards the other side, tells me I have overshot. At the crack of the gun, he turns, catches sight of the smoke, and with a "woof!" of snarling rage, charges straight for us. Another cartridge is slipped in, the rifle pitched to the shoulder, when Ignotus knocks up the barrel. "Hold on! Wait till he gets abreast of that rock there"—about twenty yards away—"and then aim steady, and we'll both take him between the eyes. Steady, I tell you—if we don't fetch him, first pop, one of us will have to go home alone!"

His coolness is contagious, and I drop my gun to the hollow of my arm, and watch our enemy as he comes shambling up the pass. His red eyes gleam with savage hate, as he plunges onward, his sickle-like claws ringing against the porphyry rocks, every hair bristling with rage, and that vengeful "woof! woof!" tearing the air at every step. Every second he grows in size. Now he's as large as a year-

ling steer—now, as a log school-house, and now, as he comes abreast of the designated rock, he looms up as large as the "Tribune" building.

"Ready!" whispers Ignotus, and the rifle barrels drop to an aim.

"Fire!" and the reports are simultaneous. There hardly comes to our ears that indescribable "thud!" which tells us that the bullets have struck flesh, before the bear rears to his full height, stands one moment clear cut against a blue background of sky, then crashes prone upon the ringing rocks. A long-drawn yell—the Dakota war-whoop—puls from the throat of Ignotus, and the death-song of the "Big Bear of Hermosa" shrills from peak to peak, and startles the slow-winged eagle hovering above our heads.

There it lies, a huge, uncouth, inert mass of gray fur, gleaming teeth, and savage brawn and muscle. Over the fiery eye creeps the gray film of death—from the cavernous mouth lolls up the red tongue, flaked with foam—while the white slaver dripping from the massive jaws, relieves the scarlet of the blood that splashes slowly down upon the rocks. From the gaping wound in the centre of the low forehead, a thin stream of blue smoke tells that the explosive bullets have done their deadly work. The fierce man-slayer, the terror of the mining camps, the incarnation of brute ferocity and savage hate, has succumbed to the superior knowledge and deadlier skill of his biped consin, and another victory is scored in the never-ending warfare of Mind vs. Force. Animal cunning against human skill—the instinct of the beast against the reason of man—thews and sinews arrayed against explosive bullets—fangs and claws opposed to breech-loading rifles—what chance has Ursus as against Homo? It is the old story of the oxen cudgel and the snail rapier—the green turban and Ceur de Lion's battle-axe—of Montezuma against Cortez, and of Caliban against Prospero.

The course of the unfortunate, has succumbed to the superior knowledge and deadlier skill of his biped consin, and another victory is scored in the never-ending warfare of Mind vs. Force. Animal cunning against human skill—the instinct of the beast against the reason of man—thews and sinews arrayed against explosive bullets—fangs and claws opposed to breech-loading rifles—what chance has Ursus as against Homo? It is the old story of the oxen cudgel and the snail rapier—the green turban and Ceur de Lion's battle-axe—of Montezuma against Cortez, and of Caliban against Prospero. The course of the unfortunate, has succumbed to the superior knowledge and deadlier skill of his biped consin, and another victory is scored in the never-ending warfare of Mind vs. Force. Animal cunning against human skill—the instinct of the beast against the reason of man—thews and sinews arrayed against explosive bullets—fangs and claws opposed to breech-loading rifles—what chance has Ursus as against Homo? It is the old story of the oxen cudgel and the snail rapier—the green turban and Ceur de Lion's battle-axe—of Montezuma against Cortez, and of Caliban against Prospero.

I shall not say how much our victim weighed—what was the girth of his mighty fore-arm, or the length of the ivory scimitars that arched his huge splay feet. Enough, that Ignotus, who had killed more than one bear since '49, after looking upon the vast proportions spread out before him, expressed himself in the words of Holy Writ, "Lord! now tell us from thy servant, when shall we have peace."

Some envious souls there were in Argentum, "I would fellows of the baser sort," who declared that it was not Slippery Dick at all, though they magnanimously admitted "he wur a pretty far-sized bar, fur a tenderfoot to help to kill."

Be that as it may, that night we slept the sleep of the just, having avenged our ravaged camp, and wiped out the stain upon our honor; and thenceforth Slippery Dick has been missing from his accustomed haunts, and no more does the picturesque prospector start in dread as the harmless rabbit hops across his path, starting each rattle in the leaves, or the tread of "The Big Bear of Hermosa." H. P. U.

A RIVERSIDE MEMOIR.

LEAVES FROM A LOG-BOOK—VI.

A KINGFISHER darted from the limb of a dead tree with a downward swoop, chattering noisily as it flew. A muskrat rolled lazily off the bank into the river, and made a hundred bubbles rise where it sank. And Barry Newton sat upright in his canoe with a start, recovering from the drowsy reverie that the warm, still summer day had cast over him, and plied the double-bladed paddle with more vigor. A muscular, well-knit pair of arms they were, too, feathered the spruce blades with such a neat turn, and the whole figure was not one whit behind them in development; while the ruddy skin and clear, blue eye told of the out-of-door exercise that this young man had always enjoyed.

"It can't be many miles further to John's," mused he, as he turned a bend in the river and peered anxiously ahead. "John wrote that after I reached Pleasantville I would pass under four bridges, and would then be abreast of his domain, with the mansion to the west of the river. And now, I have passed under four—no, three bridges, and the other's not in sight; and it's getting late, and I'll soon have to look out for an inn to spend the night. I wonder what sort of a place John has got. Old and sombre, probably, like himself. And he married! I'd sooner thought of old Prexy's markish butt marrying than John Sanders. Such a staid, awkward old 'digger' he was when he used to preach to me about my sophomoric escapades. I don't think I shall fancy his wife. Some sedate, blue-stocking, with eye-glasses and a dismal countenance, knowing all about the minutiae of the extra-curricular quantities that she does about—'Hello! what's that. Something in the water. It's a dog—no, by Jove, it's a girl, and she can't get out,' and the paddle flew like lightning, as the canoe was turned toward the struggling object. With a few quick strokes he was brought alongside, and the light drapery was grasped by one strong hand, while with the other the canoe was pushed ashore. Stepping out upon the bank Barry Newton laid his burden, now insensible, upon the grass.

"Well, this is a go. Nice looking girl, half drowned; no house in sight, getting towards dusk. Wonder what I'd better do. If she's drowned I ought to let's see—roll her on a barrel, I think. But the water there surely isn't deep enough to drown any one. She must have been walking close to the river, and the bank caved in. More scared than hurt, I guess."

Just then the girl opened a pair of large brown eyes and fixed them on the young man. For a moment she hesitated, as if collecting her thoughts, and then, trying to rise, she said, with a blush and a half smile, "I was awfully frightened in the water, and—you must have fished me out."

"I did that service for you, miss; and now, if you will tell me in which direction we can soonest find a house, I will wrap you up in a blanket from my boat and carry you there."

"My own house is just across the field, and can be seen after passing the grove of cedars; but I am quite able to walk if you will aid me with your arm, and I would not ask that if the fall had not quite taken away my breath, and I still tremble from the fright. I am not a bit brave, as you see."

"Your trembling is from cold more than fright, I imagine. But you must let me get you a wrap from my boat," with which Barry Newton made a hasty trip to the canoe, took a warm blanket from its recesses, and hastened back to wrap it around the young girl's shoulders.

"There, now, I fancy you will be a little more comfortable. But let us hasten, for standing in wet garments is not conducive to health."

"Dear me, I don't know what my mother will say at my latest adventure," laughingly said his companion, as they hurried across the field. "And I know I deserve a sound spanking for being so careless. But I was so wrapt in watching your pretty boat that I did not notice how frail a support you beneath me. My absurd fright was utterly inexcusable, considering that the water was not deep enough to drown me. It must have afforded you great amusement."

The eyes that glanced up at the young man, so emphatically repudiated the idea of being amused at her misfortune, were certainly the most bewitching eyes he had ever seen. And he noted, too, that his companion was not the immature girl he had at first thought her to be, but a young woman of at least eighteen, of short stature, but of a rounded figure, beautiful in its symmetry, that lost none of its charm by being so faithfully depicted in the damp and clinging garments.

"Here we are at last," said the little lady, as they approached a neat stone mansion, nestled among some shady oaks, "and there is mamma watching for me."

A middle-aged lady, with a pleasant face surrounded by waving hair slightly tinged with gray, stood on the porch, looking with some astonishment at the approaching couple, and making a loss to deny, beyond the meaning of an Indian blanket of the one, and the blue flannel costume of the other.

"For mercy's sake, Fanny, what has happened?" "Only another of my ridiculous adventures, dear mamma. You see, my love for the water led me too close to the river, and the bank gave way and I went. And this gentleman was good enough to fish me out."

"Bless me, child, you are in a frightful state. Run to your room at once. And you, sir, I dare say my daughter hasn't so much as thanked you for your kindness,—she is such a thoughtless creature. Pray come in and let me offer you some refreshment. Are you from Pleasantville?" "My name is Newton, madam," replied Barry, "and I am traveling alone upon the river in a canoe. I hoped to reach the house of a friend to-night, but fear I shall not. I am grateful for your kind invitation, but beg of you to excuse me, as I must hasten on to find an inn before dark where can lodge to-night."

I beg you not to think of such a thing, Mr. Newton. Our home is at your service for a lodging to-night, the inn at the next village is a very good place, and I do not think of, and I shall never forgive me if I let you go without giving her a chance to thank you for 'fishing her out,' as she calls it."

"But—" "But me no buts, sir," pleasantly said the lady, "I insist."

"Well, I agree, on one condition: that my canoe be given a place also. The stable will do for it."

"Your canoe shall be sheltered, of course. Michael, help Mr. Newton to carry his boat from the river. I shall expect you directly, sir."

Half an hour later found Barry Newton in a room in the mansion going rapidly into the reflection of his substantial, fastidious guest in the glass. After performing a hasty toilet and giving himself as presentable an appearance as he was able, he descended to the drawing room, where he was so kindly greeted by Mrs. Gardiner and her daughter that he was soon at his ease, and forgot his boating togethery in the free, informal and home-like hospitality accorded him.

By the time tea was over Barry Newton felt himself completely at home, and thanked his lucky star that he had been led to the pleasant country house. The daughter played and sang charmingly, and Barry's old college songs, sung in a clear, strong voice, were very agreeably appreciated, so that the evening passed very quickly, and it was quite late when bedtime was announced. Barry found it quite impossible to address the daughter as "Miss Gardiner," for her small figure, merry laughter, and naive, child-like manners made that appellation sound too stilted. In introducing her Mrs. Gardiner had merely called her "Fanny," so Barry easily dropped into "Miss Fanny," and as it did not seem disagreeable he continued thus to address her.

Not at all a common girl, thought the young man, as he lay that night on the soft couch in his room, listening to the rain that had begun falling in a measured "rat-tat" on the roof. "In fact, quite an uncommon girl. She's just like a child in her ways, but she's a clever, pretty little thing, and she's got a—something, I don't know what, but it's just deucedly captivating. I wonder if she knows many men. Of course she don't, though, in this out-of-the-way place. The mother spoke of 'my son,' who seems to be away at present, and Miss Fanny said she wished 'John' were at home. This 'John' must be the young man who was here a steady party, that showed no sign of abating. The Gardiners would not listen to Barry's proposal to depart in the storm, and insisted so strongly on his remaining that he could not refuse. It must be confessed, too, that the prospect of spending a day in the delightful society of Miss Fanny was very agreeable to contemplate. During the morning, while Mrs. Gardiner was busy directing the household affairs, Barry and Miss Fanny were discussing the canoe trip, and the farmer was relating some amusing incidents that had occurred during his trip.

"And who is this friend that you are on your way to visit, if it be not impertinent to ask?"

"His name is John Sanders," said Barry; and then he continued, without noticing the start which the mention of the name had caused Miss Fanny, "he is an old college chum, and the best fellow in the world, but he's an odd sort of stick, so old-fashioned and precise in his ways, and as uninteresting a specimen of humanity to those who do not know him well, as any I have met in a week's journey. At college he was always the butt for our practical jokes, being ready to credit our most extravagant tales. He has lately been married, and to some staid creature like himself, I imagine,—probably some old maid that no one else would think of choosing."

The little lady's face was now blood-red, and her eyes sparkled strangely. But she caught a little, and replied composedly, "I believe I have heard of him; and, if I am not mistaken, his residence is not a great way from here." Then, without an excuse, she rose in a twinkling to the room where she was dressed very pleasantly, notwithstanding the storm without, and at its close Barry was still more enchanted than before with the vivacious Fanny. When, therefore, the next morning showed the storm still at its height, it was without great difficulty that he was persuaded to remain yet another day.

"But to-morrow will be Sunday," said he, and I must

INQUIRIES ABOUT THE SNOW GROUSE.

NEW YORK, Dec. 17, 1881.

Editor Forest and Stream:

Permit me to thank "Homo" through the columns of your valued paper for his detailed answer in this week's Forest and Stream to a note of inquiry I recently sent him relative to snow geese (*Anser hyperboreus*) on the Delaware.

In the early part of October I received from Wm. Lane, Good Ground, L. I., a very fine specimen of the snowgoose, and immediately became interested in the species, owing to the diversity of opinion regarding it.

The older authorities generally, I think, make the snow (*A. hyperboreus*) and the blue goose (*A. carolinensis*) one species, while the later authorities seem inclined to separate them. I should like to enquire whether any of the readers of the Forest and Stream have ever had blue geese in captivity until it changed its plumage to that of a snow goose. I have one such record from a very responsible source. I should like also to get its Atlantic coast distribution. We hear of it in great numbers at Chincoteague and Currituck, but on Long Island it is extremely rare.

Any facts on either of the above points will be appreciated, whether received through the columns of the Forest and Stream, or direct. WILLIAM DITCHER, Member Linnean Society of New York.

320 Broadway, N. Y.

HORSE HAIR SNAKES.—I would not bother you with this note but to help disabuse the "popular mind"—or rather no scientific mind ever entertained it—as to the theory that horse hairs turn into snakes, as referred to by Mr. Vennor in your issue of Dec. 8. He asks if any one ever saw the miraculous transformation, and, of course, he will never get an affirmative answer. In the fall of 1875, S. L. Wilkinson, Esq., postmaster here, put two so-called hair snakes in a fruit jar, and placed them in a window exposed to the sun. He thought nothing of them for several days, but, on examining them again, found the jar literally alive with little "serpents" about three-quarters of an inch long, no larger than a fine human hair, and pure white in color. There was literally thousands of them present, and there were several knots of them in the bottom of the jar. As hundreds saw the parents and baby snakes, it would be difficult to make the old story go down in this place.—J. J. STRANAHAN.

Chagrin Falls, O., Dec. 10, 1881.

[The supposed "little serpents" seen by Mr. Wilkinson were probably broken fragments of the egg chain, and not young at all. The individual eggs are very minute, and the newly hatched young would scarcely be visible to the naked eye. On the other hand, the chain of eggs exactly resembles what our correspondent describes above.]

HOW TO CATCH A TARANTULA.—Three years ago as I was starting off on a camping trip to Mt. Diablo, Cal., I met a Mr. Perkins, who was deeply interested in natural history, and especially in spiders. Knowing that tarantulas were numerous in that locality, he, in a half-joking way, asked me to bring him back one. As luck would have it, the very next day I saw a large tarantula sunning himself on the hot sand of the road. How to catch him puzzled me for some time. I cut a long twig and poked him with it. He crawled and bit at it furiously. This gave me an idea, and tying a piece of twine to the twig and making a noose at the other end, I managed to slip it over Mr. Tarantula, gave it a jerk, and had him fast. The way he doubled himself up and kicked was very ludicrous; but knowing that his bite was as deadly as a rattlesnake's, I took good care to keep him at arm's length. On reaching camp, I put him in a box, twine and all, and a few days later delivered him to my friend alive and in perfect condition. He had managed, however, to free himself from the twine. He was a monster in size, and with legs extended would cover a dessert-plate. I heard from him a year ago; he was still alive and seemingly content in captivity.—JURIS P. Boston, Dec. 11, 1881.

THE SPARROW CURSE IN AUSTRALIA.

It is not so very long since the question of the usefulness or injuriousness of the English sparrow was discussed at length in the columns of Forest and Stream. The importance of the question fully warranted the ample space then given to it, and the testimony offered on the opposing side was very full, and came from all classes and professions. Agriculturists and ornithologists alike gave their views, and many of our leading scientific men presented the results of their observations on the habits of the bird in America.

The evidence presented made it quite clear that on this continent the sparrow, which was imported for a certain specific purpose, has not fulfilled the expectations that were indulged in about him when he was first brought to these shores. It had been supposed that he would be of the greatest service to us, as a destroyer of insects. It was shown that he lives almost entirely on grain, seeds, buds and fruit. Dissections of many individuals, made during the late summer and early autumn, failed to show any considerable amount of insect food in the birds' crops. Moreover, from the testimony of farmers and fruit-growers, it appears that the sparrows do a great amount of damage to fruit-trees, as well by feeding on the buds in early spring as by eating the ripening fruit later in the season. Ornithologists and observers generally, with but few exceptions, agreed in stating that the sparrow is quarrelsome to the last degree, and that by its pugnacity and its numbers it drives away from the localities, where it abounds, our native birds which are more beautiful, sweeter-voiced, more useful, and in all respects more desirable than the sparrow. North America is not the only foreign country into which this bird has been introduced.

Imported into Australia, they have so increased and multiplied, and have proved such a curse to the farmers, that the Government has been obliged to take active measures for their destruction. To this end, a commission was appointed in August last by His Excellency Sir William Jervois, "to inquire into and report upon the alleged injuries caused to fruit-growers, gardeners, farmers and others by sparrows, and to consider the desirability of taking steps for their destruction, and to report upon the best means to be employed therefor." The Commission was also instructed: "Without delay to report to me (the Governor) the result of your (the Commissioners') investigations in the matters aforesaid."

The progress report of this commission, issued in September last, shows a terrible state of affairs brought about by these wretched little birds. An analysis of the testimony taken is as follows, and shows:

Natural History.

THE ENEMIES OF GAME BIRDS.

RUTLAND, Vt., Dec. 10, 1881.

Editor Forest and Stream:

I have been greatly entertained by reading the various communications brought out in your columns in response to my inquiry some weeks since, as to what had become of the ruffed grouse. Your suggestion of ticks seemed to me, on the whole, the most rational, and I have been investigating it as I have had opportunity. Not having bagged a bird since November I have had no opportunity for a personal examination; but from conversation and correspondence with sportsmen in various parts of the country I am growing to believe that that is the real secret of the trouble, although the authorities are not agreed. An old Adirondack friend, a guide of long experience, writes me that he has never seen a tick on a grouse, although he has found them on owls, hawks and eagles. Others tell me that they have often overheard them on old birds, but never found the young of the birds under such circumstances as to warrant an indictment against the tick. One gentleman told me that he shot a bird only this season that was so emaciated that he made examination for the cause and found the sides of the head and neck infested with burrowing insects, which I suppose must have been the insects in question. Others have told me that they had often observed them, but never before suspected them of being destructive to either old or young birds.

The various theories that have been advanced seem to me to be not well sustained. Hawks, owls, skunks, weasels and squirrels are all much more abundant a year ago than now. If they, or any of them, are the destroyers, the grouse ought to be more plenty now, for their natural enemies are welligh exterminated, in this country at least.

The theory of your Ferrisburg correspondent that they were, to some extent, migratory in their habits, and have gone to the back-lying towns and to the mountains, is not, I fear, tenable. They are not, I think, migratory birds in any sense, and so far as being abundant in the mountain towns is concerned, you will recollect that my first letter on this subject was brought out by the fact that an expedition to a mountain town where they were said to be in great numbers, and where they are certainly not hunted to any extent, was entirely barren of results. It is easy to hear of a place where they are plenty, but let your correspondent verify the reports and tell us about it on his return.

A fact of great interest to us here has just transpired. A large bevy of quail is known to exist in the town of Sunderland—some fifty miles south of this place. Whether the birds came naturally to that place and bred there, or whether they were brought there, is not certainly known as yet. I suspect the latter, however. Still, we hope that it may prove that they are working their way northward, and that they may become naturalized among us.

By the way, it is difficult to keep quail in confinement over winter? I have a place for importing some hundred or two, and liberating them in the spring; not with any great idea that they will winter here, but in the hope that they will breed here and give us a little shooting in the autumn, after the woodcocks are gone. I wish some of your correspondents who have had experience in keeping them in confinement would give us the benefit of their experience and some hints how to treat them. VERDE MONTZ.

AMESBURY, MASS., Dec. 1881.—Editor Forest and Stream: Precinct indications this season so far point favorably for a mild and open winter; snow buntings and shrikes have not put in their appearance yet. Within a week I have seen a flock of robins numbering sixty or seventy, and to-day I saw two. Several flocks of quail have been started here this fall, but very few have been shot. The disappearing of the ruffed grouse within the last three years so rapidly, without any apparent cause more than that of past years, is something that should interest every sportsman; and I have been pleased very much to see the notes bearing on it in your journal. Five years ago ruffed grouse were plenty compared to what they are now; and a crack shot could bag fifty in a season's shooting. This season the number can be counted on the fingers. During my rambles the past three seasons I discovered three nests of the ruffed grouse, containing respectively, eight, ten and eleven eggs, within five hundred yards of my home; and I had the pleasure of seeing that they all hatched and left a nest of shells. Now the question to me is, where did all of these young grouse disappear to? Did they die before they matured, or were they captured by some animal or bird of prey? In my opinion two animals most destructive to the feathered tribe are the mink and the weasel. Their work is so silent, their range of territory so large, and their eagerness of search so complete, that I believe that they destroy more game around those parts than all the hawks, owls and foxes put together.—JNO. O'L.

RANGELY, M.—Editor Forest and Stream: Of the grouse brought in here fully ninety per cent are old cocks. If the red squirrel theory is correct, this preponderance can be accounted for, as the female while nesting would be most subject to attack. While hunting last spring in York county, New Brunswick, the woods fairly swarmed with red squirrels. Lately I have received letters from there mentioning great scarcity of ruffed grouse.—WARFIELD.

THE COLORING OF RUFFED GROUSE.—Williamatic, Ct., Dec. 18.—In your issue of the 15th I noticed an article by "Mark West" referring to the different coloring of the ruffed grouse in different localities. My observations are that it is owing entirely to the absence or prevalence of sunlight. In the spruce and hemlock forests of Maine you will find this bird of a very dark grayish color when seen at a distance, but on examination you will find its color to be the richest blending of brown, gray and black, shaded and tinted in a most exquisite manner, the colors being remarkably bright and clear; but in the hard-wood districts, where the bird is more exposed to the sun, you will find its color faded and bleached. This is true particularly of Pennsylvania and Virginia, where the bird has but little clove cover and much more sunlight. The bird is bleached and faded in color to such an extent as to destroy all the delicate shades and tints above referred to.

In Virginia, where I have shot many a one, they are so nearly the color of oak leaves as to make it almost impossible to see them when sitting among the leaves.—CLIFFORD.

my clearing which I never allowed to be disturbed, because I loved myself to see and to show visiting friends, sometimes as many as eighteen and twenty deer in sight from my porch at once. They seemed to know they would not be harmed near the house, for I never shot any within a mile, in any direction, on the house.

I had six men engaged to trap fur for me in the winter of 1859. And in the month of October all of that year, with my double-barreled rifle, made by Lewis, of Troy, I shot sixty-three deer, hanging the venison up frozen in my meat house to use as we wanted, smoking and drying my hams, to use on the tramping lines, several of which were over forty miles long, the men carrying provisions to last out and back as they rat over their route.

When I wanted grouse, all I had to do was to walk to a birch or beech ridge and find them in flocks. A dozen or more would tree at once, and by keeping up a jolly whistling, I have held their attention until a half dozen heads had been decapitated with my rifle. I never used a shot gun while in that region, yet scarce a day passed, when I felt like it, that I did not have pleasant or duck on the table.

The old guides and hunters in that section still talk of my rifle-shooting, which, with my well-known modesty, I acknowledge, was not bad, considering my almost daily practice, year in and year out.

But this paper is long enough. NED BURLINKE.

A CRITICAL EVENT.

A JEWELLED young innp came down from the North On a steep autumn day; His sandals shod with a silver woor, His mislague shield was sunbeam proof, While high at his back he carried a sack Full of orushes and tints of the morning.

He grasped a brush of a dery hue And swept it along the vales; But the critical trees all quivered and said, With a breeze of contempt, "It is red, brick red!" As he gave to his wrist a singular twist, The broad leaves would most adorning.

Nothing daunted he seized a different tint, With an artist's eye to his work; But the trees complained that 'twas all dun gold, And made them yellow, sere and old; So he started, a-lack! on a different tack, Their acres of wisdom scouring.

For his sack disappeared, and his pencil turned To a lance of polished ice; And he smote each leaf of the difficult trees A death blow straight through the "silver-de-freeze" Of their carping eyes, and to Paradise He carried their robes with the dawnting.

J. P. T.

A DECEMBER DAY.

AND now the bleak December day Frowns grimly on the landscape gray The rosy clouds that flush'd or ewelle The vaulted air-fields with their smile, And cast their soft reflected shade O'er upland height and bowery glade, Have faded, and a sombre vald Shrouds the horizon, cold and pale.

The woods that late I lov'd to tread When spring-time blooms were o'er them shed; When earliest leaves would clap their hand Responsive to the wind's command; When, wak'd in the dew-droxy sleep, The first wood-sticks would peep, And a faint, tremulous tint of green, Would quiver o'er the vernal scene; And later, when the summer woods Were dense through all their solitudes, And scarce a chequer'd ray might fall Athwart the forest's leafy wall.— Those grand old woods, now brown and bare, Stand shivering in the bitter air, Despoil'd of all their garlands brown, Of flowing robe, or royal crown, Disrobd, disorder'd, like monarch dead, Lie the kings dethroned, like grandeur's dead! Each knotty bole of oak and elm Wears curtains bright and icy helm, Russet'd in armor, sleekly bright, Like plated mail on harness'd knight; And on each crystal sprig and spray, They, jewels of the frost display.

The brook that late in laughter stray'd With dimpl'd pool or full cascade, Where late the angler's footstep trod, The flower-enamell'd, mossy sod, Now pallid, lifeless, mute and cold, Lies corpse-like in the icy fold. The river, border'd by fair trees, That leant to catch their images, Lies silt'd to iron shore to shore, Where now the wild-owl flocks no more.

Yet merry is the winter day With jingling bells and joyous sleigh; With skater's laughter, and the bright Gay carols of the Christmas night.

Shelter Island, Dec. 1. ISAAC McLELLAN.

A WALKING CLUB has been organized in the Nassau Boat Club, for the purpose of making pedestrian excursions into the suburbs on stated days, weather permitting. The second autumn walk took place on Sunday, 11th inst., from the rendezvous at One Hundred and Thirty-first street and Fourth avenue, the following named gentlemen taking part: C. E. Goodhue (acting as scout in the absence of Capt. W. A. Lenthall), A. P. Gould, Charles Badgley, John Jewitt, Seymour Hall and G. W. Scott. The course led them to New Rochelle, where a heavy dinner was partaken of at the Huguonot House, and thence to West Farms station, from which place a train conveyed to this city. A bowling class has also been formed, limited to twenty-five members, fourteen gentlemen having thus far joined. Alleys have been secured at 74 Third avenue. It is the intention of the club to engage the use of a gymnasium for the winter months.—H. W. LIVINGSTON.

First.—That the sparrow is established over an area of the colony comprising Adelaide and its suburbs from the sea-coast eastward well up into the hills; southwards to Happy Valley, Coronand Valley and Willunga; northwards to Allendale, and far on—though we hope as yet detached—at Beetaloo, near Wirrabarra. In the south-east, Mr. G. G. G. reports the centre of a flock of 1,000. It is also reported that the responses of songsters within the foregoing area cry for relief from sparrow depredations as if from a pest; and with what reason the following statements, as examples, may show: From Mr. John Chambers, of South Richmond: "In a short space of ten days, I have seen a total of 1,000 of these birds. They straggled all the five of five trees. They kept low fifteen acres of income during summer." From Mr. Tuden, of Salisbury: "This season they (the sparrows) took £30 worth of fruit;" and from Mr. Wilcox, of Lower Mitcham: "Has three times this season sown peas, and they have each time been destroyed by sparrows."

III. That the species of sparrow domineering in South Australia damages or consumes fruits, cereals and vegetables. Its fecundity is astonishing. A few to-day, are thousands next season. Its work is done on a magnitude despairing to the cultivator, and under conditions he cannot control; for the seed is taken out of the ground, the fruit-lod of the tree, the sprouting vegetable as fast as it grows, and the fruit ere it is ripe, and, therefore, before it is housed.

IV. That the cultivations attacked by sparrows, are as follows: Of Fruits—Apricots, cherries, figs, apples, grapes, peaches, plums, pears, nectarines, loquats and olives. Of Cereals—Wheat and barley. Of Vegetables—Peas, cabbages, cauliflowers, and garden seeds generally.

V. That the means of defence tried against sparrow depredations have been scarecrows, traps, netting, shooting, poison of phosphorus, arsenic, and strychnine applied through grain, bread, and bran with sugar. The results are totally stated as being unobtainable, which may be due to the mode of administration rather than to defects in the means employed.

VI. To the above expedients the following are suggested by our correspondents, namely:—The tender of rewards for sparrows' eggs and heads says: "A few to-day, are thousands next season, and poisoned water in summer. It is further declared that the united action of all property holders, including the Government, in infested districts, is essential to effective results."

Second.—Without reference to ulterior measures, which may be induced by the above, we have no fault to find, their object in tending this Progress Report is to submit for the approval of your Excellency the propriety of at once setting to work one useful means applicable to the breeding season now commencing, namely: A system of sparrow-egg and head bounty, which, through responsible agents readily accessible in the various sparrow districts; and we suggest, as a trial, that the rate of payment should be 6d. per dozen for sparrows' heads, delivered; and 2s. 6d. per 100 for sparrows' eggs, delivered.

Third.—We have sought proof of his insectivorous habits, but a yet with little result.

Signed by the Commissioners.

The testimony of the individuals who were examined by the Commission is unanimous in condemning the bird as most destructive to vegetation. No man speaks of them as "fifty times worse than rallois." No good word is said for the birds. To give some idea of its character we append some extracts from the testimony—

Joseph Barnes says: "Great damage done to fruits—apricots, grapes, figs and plums."

Mr. John Chambers, South Richmond, testifies: Sparrows have thoroughly established themselves in his orchard and garden. Calculates that he grows annually one and a half tons of grapes, but last season he was reduced to half a ton in the same space of time. They also took nearly all the figs from five trees, and nearly all the plums. Had cabbages growing under the plum trees which were infested with aphids, but the sparrows never went near them. In November he sowed a patch of peas and lucerne, and in the last week of the year they fed down during the summer. They have also destroyed a bed of peas as soon as they appeared above ground, and is quite sure that if they are not destroyed it will be no use attempting to grow anything. Has tried poisoned bait, barley, and other means, but all have failed. Has also been told by Main & Geyer's; but, like crows, sparrows soon smell powder. Untied station should be enforced to destroy them.

Mr. C. J. Coates, North Adelaide, states that having heard that the sparrows destroyed noxious insects, he had made a careful examination of the sparrows which he had killed, and found every month in the year, but their crops had never shown any insects; they were generally filled with fruit or grain. Last October his roses were covered with aphids, other shrubs with the nearly winged, and his pear trees with *phylloxera* *pyra* and other insects. Sparrows attempt to feed on them, but they are never poisoned with phosphorus and strychnine, but the birds have refused to take it. Suggests the levying of a sparrow tax to pay for sparrow heads and eggs.

Augustus Davies, Beaumont: Sparrows are in thousands in his locality, and destroy cherries, apricots, figs, American plums, olives, pears, grapes, and also eat small patches of grain which have been left to ripen. As to destroying grub, etc., he says the damage done by grubs last year in his garden was greater than done before, and the trees are covered with nettles. They are poisoned with arsenic and strychnine, and also poisoned water, but the birds soon get knowing and avoid it. Traps and scarecrows have been tried, but are useless. Suggests poisoning, and also a repeal of the Gun License Act. Is certain if they are allowed to increase unchecked they will become a regular curse, and the crops will suffer enormously.

C. L. Dulous, Lindero: Sparrows are in his neighborhood by tons of thousands. They destroyed half his grapecrop—say two tons per acre—and other fruit in proportion. They eat up of poisoning wheat, and the property trying sugar of lead in water in summer time. His neighbor informs him that they have destroyed all his cauliflowers and cabbages—attacking the little shoots as they spring up. Has not seen them take aphids, for he had some cauliflowers covered with aphids. Last year the sparrows never touched them. Thinks the sparrow-hawk should be introduced, and the small predatory birds should be protected and fostered.

Thos. Gill, Glen Osmond: Strongly urges immediate action to destroy sparrows during the present pairing season. The injuries caused by sparrows to the trees are reversed with netting. They are eating grain at sowing and harvest time, it being estimated that fully one-third has been lost; to vigorous, by eating grapes wholesale; to gardeners, by eating off peas directly they appear above ground; and, consequently, by driving away and frightening away the insects which are necessary to the success of the farmer's and most effective method of destroying them.

S. A. Milne, Drimmmer: Year by year sparrows are becoming more numerous, and are now seen in droves. They live in hedges, and make a mid-day noise which is very annoying. They are very noisy, which he had sown for seed. The sparrows took the corn; he only had the straw. They have done extensive damage in the garden, destroying the stone fruits wholesale, more especially grapes. They have driven away smaller insectivorous birds which would be of great service. Last year he sowed wheat with the most effective means of destroying them, and hopes active measures will be taken to get rid of them.

Henry A. Price, Mount Gambier: Sparrows have thoroughly established themselves in his neighborhood. It is needless to attempt growing fruit under the trees, as they are covered with nettles. They destroyed his cherries, plums and apricots before they were ripe, and garden seeds are scratched up and eaten as soon as planted.

Last season, planted one particular seed four times before he reached the plants, and the trees were covered with grubs. The feathers tried to thread. They pull up young plants, and eat the heads off young and tender shoots. At present they are about the farms in thousands, living principally on grain, and must reduce the yield of crops. No systematic steps have been taken to destroy them. Has tried poisoning with sugar of lead, but it has failed for a few days, after which the sparrows would not touch the pois-

oned grain. Then tried traps, but they soon got too knowing for them. Thinks much action is absolutely necessary to keep them down, and is also of opinion that destroying the eggs and netting the old birds by every landowner at breeding time would greatly diminish them. When in flocks a considerable number may be shot.

James T. Ralph, Marion, Sturt: Sparrows have established themselves in his neighborhood for years, and the district is now infested with them. He has a fruit garden of four and a half acres, the produce of which was nearly all eaten by sparrows. From one and a half acres which he did not have more than 150 lbs. of grapes. Cherries, apricots, peaches, pears, figs and plums were also destroyed by these birds. Had a paddock of seven acres, surrounded by a prickly hedge, which proved a good harbor for sparrows, and for ten feet from the hedge, the corn was taken by the sparrows, even when without plants being sown, and the seed taken from them. The only means taken to destroy them has been shooting by himself and neighbors; but this has little effect. He suggests the distribution of poisoned wheat before the fruit season sets in, and also the destruction of their nests. He states that many persons who are dependent on rain water are very much inconvenienced by the pollution of the water by sparrows, which build in the spouts and gutters.

The extracts from the testimony of the forty-two witnesses examined by the Commission during the first four weeks of the past winter, will give a rapid and fair idea of the way in which practical horticulturists look upon the sparrow in Australia. The testimony given was unanimous that the sparrows did not destroy insects when other food was accessible.

Game Bag and Gun.

TWO COLD DAYS AT THE CLUB HOUSE.

THANKSGIVING DAY bloomed at the usual hour; and we turned out of our snug beds to find the thermometer showing about eighteen above, and the wind half gale from the westward. Six members gathered at the breakfast table, and after some discussion decided to carry luncheons and have the Thanksgiving dinner after the day's shoot. (His bodied ill for turkey—think six men sitting down to turkey after a long day's work in the cold.)

Breakfast dispatched, there was hustling and hurrying, cars must be covered, cardigan jackets under the heavy shooting coat, gun coats of olive color, Mr. G. overcoats, ski jackets, etc., transform us into odd looking creatures, together with the variously costumed punters, make a party that would astonish our uninitiated city friends. Boats laden with decoys, blinds, ammunition pails, guns and other needs, complete the picture—six boats only from the hundred that fill the capacious loch house.

Nearly an inch of ice covered the shallow waters of the marsh and bay, so our shooting must be confined to the open waters of the river, down which we pull some three miles. This is an easy task as the "wintery blast" is all in our favor. We indulged a hope that it would hold or change before night. We did not envy those who took punters; for the exercise being a complete countercheck to the piercing winds. Some of the party were stationed under the lee of the high grass along the shore, avoiding the wind. Not so fortunate we; our blind was in an open space, with water on one side and ice on the other, where the wind had full sweep, but by pulling out often to retrieve we managed to keep comfortable, except the feet, which although covered with a pair of woolen socks and hip boots, ached with the cold.

Only twenty decoys were used, and these became nearly useless on account of the ice which accumulated on the heads, and the great winds of ice on the sides, causing some to turn wrong side up and all to have anything but a natural appearance. If you have never handled decoys in such weather it will be useless to try to convey an idea of the work it is, in the almost irresistible wind and with icy fingers, notwithstanding rubber gloves, the long anchor lines to wind up, would say to the beginner don't stop to wind up each line, but drop several of the decoys into the boat quickly, leaving the anchors to hang over the guavale until you have pulled into shallow water, where you can hang on to an oak stump into the mud or to your blind, wind the cords at your leisure and warm your hands for a new start.

Shooting was not as good as we had hoped, several holes being still open (unfrozen) in places inaccessible to beings without wings. The blind had been shot out of for many days, and the ducks were shy of it. The bag to one gun was only forty-four in two days, composed of red-heads, mallards, dusky ducks, pintails, shorelets, widgeons, blue-bills, butter-balls and ruddy ducks. These were got by "sky-scraping" and some water-scraping, shooting probably one hundred and fifty shells. Many chances were lost by pulling out after ducks rather than letting them drift away down against the edge of the ice, where the wind had kicked up a little sea, making it unpleasant and not wholly safe to work a small skiff, for the water would swish in, freezing to everything and sometimes binding the oars in the locks. This is one of the objections to fancy rigging. A good plan or that can be feathered and pulled quickly inboard, being as good as anything. Outriggers are also unbandy when pulling in and out of a blind often.

During part of the first day we took pains to drop ducks on the ice; this was a mistake, the ice being heavier than we had thought, taking nearly an hour to break a channel around the dead bird.

We took occasion to try coarse shot, 2's, 3's and some B's; but were only confirmed in our long habit and opinion that 5's are, day in and day out, (after September,) the shot for ducks. When a duck is crippled and within forty yards, we prefer 7's or 8's, which are very likely to puncture the head. Mem.—Two charges of 2's were fired at a winged duck, at, perhaps, forty yards; both lifted him off the ice; he laid his head down to a charge of 7's.

A blue-bill swung in within twenty-five feet of the blind; the thought was, while pressing the trigger, "he will be down all to pieces, so give him a tip of his bill and catch his head." Not so. He turned tail at the first barrel, and a clean miss was scored with both. Speaking again of shot—if one could always tell what his next chance would be, or had always time to change shells, the 1's or B's would add materially to the bag, but taken all in all but few of these sizes should be carried, and used as the exception rather than the rule. No. 4's are, to me, an abomination. I have no confidence in them, and find that several of my friends have the same feeling.

The second day was even colder and more windy than the first, and pulling up the river each night was a terry. Shooting half a dozen quails, over Sancho, in the morning, and the journey home consumed the third day. A day or two, and

accumulated business is worked off; cold and fatigue are forgotten and the desire to go again is as strong upon us as ever.

By the way, we had a discussion upon the subject of guns. A gun of American make—of long standing—received the very highest praise for shooting qualities. One gentleman, who has an extended shooting acquaintance, affirmed that nine-tenths of the guns used by clubs in this country were of this make, and although he was then shooting his fine English gun, he preferred his American gun by long odds, except in the matter of plungers. "If it only had solid head plungers," he would ask for no better gun. In confirmation of this idea, plungers were broken in two of these guns that day.

MR. H. T. ABLE.

INDIAN METHOD OF CATCHING MUSKRATS.

NEW WESTMINSTER, British Columbia, Nov. 1881. A MOST ingenious and successful method of catching muskrats (*Fiber tibeticus*) is practiced by the Indians in the interior of British Columbia, and as I believe the particular mode is one that is peculiar to them alone, I thought it worthy of being communicated to your paper so that a more extended knowledge of it might be obtained.

When the lakes are frozen up, the Indians repair to one that contains muskrat houses. They go with a large number as they can muster; the more people the larger the catch, as the necessary operations cannot be successfully carried on by a few. The boys and girls, as well as the squaws, play an important part in these hunts. Say a lake contains a hundred houses and the number of hunters and "huntsresses" are fifty. About forty of the houses are broken open, and is a comparatively easy matter. The muskrats leave these houses, and taking to the water under the ice, swim away to the other houses, which, of course for the time being, are tenanted by neery double the usual number of muskrats. The Indians being provided with sufficient of the downy substance that envelopes the seal vessels of the bag, known as the cat-tail (*Cypera latifolia*), which resembles in a high degree the pulce of commerce, strew it on top of the ice in the bottom of the broken houses. Then a person is stationed at each broken house, armed with a stick or spear as the case may be, and the remaining ten Indians proceed to break open the other sixty houses as rapidly as they can and with as much noise as possible. The poor rats, by this time thoroughly frightened at this new invasion, desert their new quarters and, accompanied with those with whom they took refuge, retrace their former route. The downy part of the cat-tail on the surface of the water prevents them from seeing the Indian stationed there, and they pop up into the openings in the ice that lead to their former homes; and, blinded for the moment by the down which adheres to them, they are completely at the mercy (?) of Mr. Mrs., Master or Miss Lo, who either spears them or knocks them on the head, throws them out on the ice and gets ready for the next.

If the colony is not too large almost all the animals will in this manner be secured, the only individuals escaping being those that take refuge in the underground burrows in the banks of the lake.

Thus it is that the plant [the root, leaves and stalks of the cat's tail form the greater part of the materials of which the muskrat houses are built] that affords the muskrat the material for shelter from the rigor and inclemency of the weather, at the same time supplies the medium to the genus *homo* to insure its destruction. It is a curious and interesting thing that we have supposed and believed to be our best friend proves to be our greatest enemy.

MOWITT.

A TRUE TALE OF A DUCK PASS.

ST. PAUL, Minn., Dec. 10, 1881. WINTER has again settled down upon us, and we can but gossip of the happy days and bright evenings of the shooting season. Sometimes I think it is even better so, for our enforced confinement sends us out when the season again opens, with bright hopes and new determination to enjoy more fully the gallant sport we so delight in. And after all, is not the retrospect one of the greatest enjoyments of the sportsman. All the dangers, annoyances and fatigues are forgotten, and there only remains the memory of the lucky day, the happy shot, the well-aimed creed, sent in the light of anticipated repetition; and then the savor of those merry nights, just tired enough to enjoy a rest, the sparkling story, and the jolly laugh re-echoed round the circle. Ah! the sportsman, could not each of you fill a volume and yet leave the half untold?

But to the gossip. Here in our fair city are to be found a band of sportsmen, than whom none more enjoy and appreciate the forest, stream and prairie, and who, in kindly, hearty feeling, cannot be excelled. As in the fall months the principal and best sport is duck and goose shooting, their attention is largely directed to that class of game, and I think we could fairly stand our ground on a "pass" with any like number of duck shots in the country. Notable among those *Commodore DeVear* are the Island Pass Club, who include some of our best men and shots, and who own a most "happy hunting ground" at Rice Lakes, the ducking ground, "pat excellence," nearest to our city. A comfortable and commodious house, with excellent attendance, is not the least attraction of the Island Pass Club, and most of the members, have been constant visitors to it for the last fifteen years, some for more. Ah! the memories of this and "other days."

Oh! for a collection of the "tales of the duck pass" told within those walls on those merry nights; they are worthy of the pen and genius of Mark Twain. But this is not gossip, and so for a true tale of a duck pass.

Among the most recent, yet kindest and brightest, members of the club is the Rev. R. W. Matthews, called by the members aside, "Pious B." Matthews, a clergyman, who is passionately devoted to field sports. He, therefore, gives his well-earned leisure to the hunting field, finding, no doubt, "sermons in stones and books in running brooks." Now, unfortunately, our dominion's practice on the pass had not equalled his precepts, nor indeed his own opinion of his shooting abilities, and, as a result, while his theory was perfect his game bag was light, and his elegant imported retriever was rapidly forgetting how a dead duck looked; indeed, our friend had become somewhat disheartened and, in reaction of the Island Pass Club, and most of the members, and that he would give up shooting and retire from the club. But this would never do, he was too much of a *bon comrade* to lose, even if he could not bring down his bird; so some of the club spirits of the club got together and it was

arranged that Mr. H. E. Thompson, one of the best shots, should invite our friend to a quiet afternoon on the pass. Now "Bob" shoots a light 12-gauge with 4 drs. of powder and 1 oz. of shot. Thompson finds a number 8 with 7 drs. far more enjoyable. The realer can now see how easy it was to put the scheme in execution. T. stationed himself quite close to the Rev. "B." and as duck after duck appeared would manage to shoot almost if not precisely, at the same time, and would the gravely inform the astonished Dominic that he, "Bob," had killed the bird, which almost invariably fell upon the discharge. T would, of course, once in a while, shoot a bird in an opposite direction, or make a double, in which case he would claim one of the birds. The sport went on, until the light ceased, when a count was had. Rev. Matthews' pile counted thirty-nine, Thompson's eleven. A more astonished and delighted clergyman never existed. The secret would have been well kept had that night, in arguing that the capacity to hit a bird on a very sharp one, and not as pitched, our friend cited his large bag of that day, and admitted that whenever he fired he closed his eyes, saying, however, that, "before closing them, he carefully determined the exact locality of the bird." Respect for the cloth saved him from the wiper super penalty, but not from the laughter which followed the discovery. He now devotes himself to a pet deer, kept at the lodge, to whom he has taught many tricks, their joint gamboling a source of much amusement to the members. MARK NORTH.

THE EARL OF DURVAEN IN NOVA SCOTIA.

HALIFAX, N. S., Dec. 8, 1881.

Editor Forest and Stream:

I see in the Halifax Morning Chronicle of this date an extract containing a letter headed, "Lord Durvaen on the Nova Scotia Game Laws," and signed, "A Member of the Nova Scotia Game Protective Society." I am sorry to find some editorial remarks hereon, which I consider it my duty to leave such a letter unnoticed, but, as it may mislead some of my brother sportsmen in the States, I think it better to make one or two remarks concerning it.

Your correspondent asserts that I am perfectly well-posted in the Nova Scotia Game Laws, and on a former occasion had to pay a fine for their breach. The *scquitar* that because a man is fined for the breach of a law, he must, therefore, be well acquainted with it, is somewhat peculiar. The letter says: "Our system of game laws is a very simple one, and easily understood by those who wish to do so." In proof of the simplicity of the system, and of the ease with which it can be understood, "A Member of the Nova Scotia Game Protection Society" immediately falls into a serious error, and, strangely enough, makes precisely the same mistake that I did. He says: "Game licenses are granted to persons not having their domiciles in Nova Scotia, who may wish to hunt therein, for which a fee of thirty dollars is charged for one year; this is a general license for the whole province (the italics are the writer's), and is equally valid in Halifax counties." This statement is entirely incorrect. On the back of my license, I find the following: "Extract from Chap. 24, Statutes of 1879: No person not having his domicile in the province of Nova Scotia shall be allowed to kill, or pursue with intent to kill any of the animals or birds included in the term game as defined in this act without having first obtained a license for the purpose signed by the provincial Secretary and chief Game Commissioner from the Clerk of the peace of any county in the district where the same is to be used and have effect, and the same shall be void in all other counties, from any Clerk of the municipalities within such district."

(The italics are mine.) It appears, therefore, that it is necessary that a license should be taken out in the district in which it is to be used. In consequence of my ignorance of this peculiarity of the law, an ignorance shared, I am consoled to see, by a member of the Game Society of Nova Scotia, I got into difficulties. In common with him, I entertained the belief that a general license for the whole province could be obtained in Halifax, and acted on that belief. I entered Nova Scotia from St. John, New Brunswick, by way of Annapolis, telegraphed from St. John to Mr. James Scott, of this city, to send stores to Caledonia, and to obtain and send with them licenses for myself, and my friend, Mr. Jennings. I received a reply from him to the effect that the stores would be sent next morning by express, and that the licenses would follow by mail. Acting on this advice, I went into the woods in the full belief that my license had been obtained. On former occasions, on which I had adopted this course, had received my licenses in Halifax, and I was aware that any alteration had been made in the law, and the license applied for in Halifax, a fact which the authorities must have known, for the warden who took out the warrant against me told me he was aware of it. The money was tendered, but it could not be issued for the reasons mentioned in the above quotation from the act of 1879. Of this fact I received no notification whatever.

Your correspondent is also in error in stating that if the bearer of a license shall not kill the prescribed number of animals in any district he can do so in any other, upon making affidavit before the Game Commissioner of the number he previously shot. The affidavit must be made before a Clerk of the peace. "A Member of the Nova Scotia Game Society" credits me with superhuman attributes, and declares that on my return I gave Halifax a wide berth. How a man can return to a place, and at the same time give it a wide berth, is difficult to understand. At any rate, I did not perform that complicated manoeuvre, for I went straight to Halifax from Queen's county, where the arrest took place. Your correspondent is right in saying that I am a little better looking upon it as a mere probable blunder. He would probably consider it merely a blunder on the part of a sheriff to hang a man without waiting for the ordinary formalities of trial, conviction and sentence. Such loose views as to individual liberty are not accepted by Englishmen in general. I do not know how far familiarity with the process of being arrested might breed contempt for it, but as far as I am concerned, the experience was novel and disagreeable. I entertain the strongest objection to being arrested for a fine before a fine is imposed. Whatever peculiar views your correspondent may entertain as to the courtesy due from man to man, I think he must allow that even "a live lord" has a right to be treated in a legal manner.

The explanation which your correspondent gives of the motives of the Game Preservation Society is totally uncalled for. No one supposes that their object is to make money out of strangers. No one can regret more than I do that their efforts to preserve the game of Nova Scotia from threatened destruction have not met with greater success. Their object is to make money for the purpose, and is inadequately understood. I believe one or two convictions

have been obtained against inhabitants for killing large quantities of moose out of season by illegal means; but as a rule the law is a dead letter as far as the natives of the province are concerned. More especially is this the case in respect of the number of moose and caribou that may be killed. The rule is openly broken in all directions. It is considered only to refer to strangers, and is absolutely and avowedly inoperative against natives. In such cases strangers and residents ought to be on an equal footing; as regards licenses the case is different.

I have heard Nova Scotians call in question the wisdom of a policy of taxing the importation of foreign capital by demanding license fees from strangers, who spend a good deal of money among the poorer classes at a time of year when labor is difficult to obtain. They think that it tends to deter sportsmen from visiting the country. But it is not likely that any man who could afford to come to this country from Europe or the States to spend an autumn holiday would object to paying for the privilege of shooting, and as money is required for the purposes of the game societies, I think a system of licenses affords a legitimate means of doing so. Whether it should be restricted to strangers only is a matter for consideration.

Should you or any of your acquaintances be going into the woods you would do well to take with you a copy of the game laws, the problems contained therein would beguile the long hours of the winter nights. It remains to be seen what will take out his license in the county or municipal district in which he proposes to pursue moose; but, if he pursues his moose into another county or district he is liable to a fine if he does not get his license indorsed. The county lines are not very clearly defined in the principal forest; it would not much mend matters, however, if they were. A man might pursue a moose and wound him in one district and be compelled to follow it into another to kill it. The proper course, I presume, for him to adopt on arriving at the county line would be to go to the trap, pack up his traps, and go out to settlements, which might take a couple of days or so. He should then proceed to the residence of the Clerk of the peace, which would take a day, and having got his indorsement on the license should return to look for the moose, which would occupy several days more. But by this time the moose would be dead and the meat spoiled, and for allowing it to spoil the hunter is liable to a heavy fine. It may be said that such a case would involve a mere technical breach of the letter of the law. That is true, but it would not be so in the opinion of the magistrates. It appears moreover by the act that if a game warden, who would be half the fine should choose to take action in such a case, the magistrates would have no option.

I leave it to you, sir, to judge whether the game laws are remarkable for the extreme simplicity claimed for them, and whether you are quite correct in stating, that, in the letter of "A Member of the Game Protection Society," you were "publishing from a responsible source a true statement of the case."

DURVAEN.

A NEBRASKA DEER HUNT.

O'NEILL CITY, Neb., Dec. 1, 1881.

Editor Forest and Stream:

Nebaska sportsmen evidently do not appreciate your valuable journal as they ought; at least, they do not make use of your columns to tell of one of the best game countries in the west. One of the most interesting and popular features of any paper is the correspondence. This is particularly the case in the case of the Forest and Stream, and I am sorry to cast reflections on the ability of its corps of editorial writers, but simply because the lover of true sport likes to read of the exploits of his brethren, even though he himself is hundreds of miles from the scene of action. This being the case I will tell of a week's hunt just made in the sand hills of Northern Nebraska by Mr. Ed. S. Kinch, an old hunter, recently of Edinburgh, Pa., Mr. Charles Shepard, a jolly railroad contractor on the S. C. & P. R. R., Mr. Merritt, a disciple of Blackstone, located at Penitentiary, this State, and the writer, who, being a *Frontier* newspaper man, knows how to fully enjoy a good hunting trip.

Well, the party left O'Neill, which is the county seat of Holt county, on the night of Thanksgiving, going by rail to Long Pine, the present terminus of the S. C. & P. Long Pine is 75 miles west of O'Neill in the unorganized territory, is only about two months' old, and is an ideal frontier town, where saloons, railroad men, and the festive and much-liked about cow-boy take the prominent parts in the theatre of life. It is, indeed, a red-hot place, and getting hotter every day. There is a large number of these cowboys hanging about, and several times they have visited the town, and at each visit several have been killed, the citizens grabbing their guns and revolvers, and banging away with great recklessness and indiscriminately.

From Long Pine we took a livery, and a twenty-mile ride over the beautiful rolling prairie brought us to Plum Creek, a fine stream of pure, soft water, running in a very deep gulf, either bank being lined with pine, cedar, oak, and cottonwood, and a favorite resort for both white and black-tailed deer. Just now, however, they are very scarce along the creek, the railroad graders and settlers having driven them back into the sand-hills. It was necessary to get back into the hills, and so Shepard rigged up his wagon with cover, and loading an ample supply of grub, blankets, cooking utensils, etc., the party pulled out. Reaching the head waters of the Plum, the boys took a tramp in the adjacent hills, and when night came and all had returned, it was found that Shepard had bagged a fine black-tailed buck fawn. This was encouraging, and we turned in for the night, dreaming of deer innumerable. The coyotes sang a terrible racket, but we managed to get a good night's sleep just the same. Bright and early all hands turned out, and, after bracing up with coffee and bread, the boys struck out full of hope. At noon all had returned. Kinch was the only one that smiled. "Boys, fetch up the mules; I have some work for you." And he did. About two miles from camp he had struck a bunch of five deer, two bucks, two fawns and a doe, and he had done some of the best shooting on record. He killed every one of the fine firing fawn shot from his Winchester. This was the total for the day, but it was enough to make us all happy, though perhaps a trifle envious of the lucky Pennsylvania. The afternoon and evening was devoted to dressing the game. It was estimated one of the bucks (a black-antler) would dress over 200 lbs.

The next morning early we pulled stakes and headed southwest to the Sand Hill Lakes. Three of us struck out on foot. In a couple of hours the report of a double-barreled aimed shot-gun was heard, and in a few moments the figure of a man appeared on the point of a high hill gesticulating in a frantic manner. It was the newspaper man. As it was

not far, Shepherd headed the mules that way, and soon all heads were gazing in admiration on a magnificent buck and doe, both having succumbed to the call of the 12 lb. Scott breech-loader. If an editor was ever proud it was this one, and don't you forget it. We load our shells for deer hunting with 6 1/2 grams of powder, and 12 buck-shot encased in a portion of No. 12 paper. This will carry 100 yards before breaking and with the accuracy of a rifle ball.

During the afternoon Merritt got a shot at a doe and broke one of its forelegs. After considerable chasing he was again shot and brought down.

That night we camped by one of the several lakes about twenty miles southwest of Plum Creek. The next forenoon Shepard got another fawn and a doe. The rest of us had no luck. Kinch's five, it seemed, was his allotment. Although we hunted here two days we failed to make another score, and time being up, we started homeward. We had got about half way when the keen eye of the lawyer detected a bunch of deer feeding on the side of a hill about a mile distant. Hurriedly unhitching the mules we proceeded to surprise the unsuspecting enemy. Three of us made a circle so as to get on the side favorable to the wind, and one struck out straight toward them. The sequel we are all ashamed of, and will make it brief. There were eight deer and although we all had fair shots, not one was successful. The buck fever raged high. The writer fired two shots at a fine doe not very far distant, and never raised a hair. He was out for the game, not for the sights of his gun. We all returned to the wagon—disgusted, each one cursing his neighbor for his own ill luck.

We now pulled straight for the Plum, where we arrived in due time, from there returned to Long Pine and took the cars for home. Everything considered, it was an enjoyable trip and we are determined to repeat it in the near future.

W. D. MATTHEWS.

P. S.—Hallock, in the *Greenlee*, says that black-tail deer are only found in the thick brush on the Pacific coast, and that they are not good eating. We differ with him. Here we find black-tail in the sand-hills, far away from timber, and they are, if anything, superior to the white-tail as an article of food.

[This is not the true black tail, but the mule-deer, which is one of the most delicious of the *Cervidae*.]

DEER IN THE ADIRONDACKS.

Editor Forest and Stream:

In the "Cruise of the Nipper," published in your last issue, mention is made of a dinner given at Dunkin's Camp, on Fourth Lake, Fulton Chain, in July last, and that State Game Protector Dodge was one of the guests. The "glum looks" of the officer, as he tasted the gamy flavor of the "mutton" (?) mentioned by "Nesmuk," must have meant something, for suit was brought against Dunkin for having venison in possession during the close season. Others, who thought it a good joke on Dodge to invite him to eat "crooked meat," have also had an opportunity to tell what they know about eating venison in July. The gentlemen mentioned by "Nesmuk" are royal good fellows, and entertained their company grandly on the occasion spoken of; but they were setting a bad example by putting venison on their bill of fare at that time, and had the State officer allowed it to pass unnoticed, it would have established a bad precedent, for no matter how flagrant a violation might have occurred, after that he would have been powerless to enforce the law. The majority of the guides on the Fulton Chain are anxious to have the laws for the protection of fish and game enforced. They realize that to perpetuate their occupation the close season must be respected, and that class of guides were glad to see the case mentioned above prosecuted.

Protectors may be fastened and flattered into shutting their eyes to open violations, but that is not the record of the officer referred to in this article. Wherever he has found a case he has prosecuted it, no matter whether it hit a friend or foe, but always, too, with the best of feeling, with no ill-will or malice on his part, but simply a performance of his duty. During the last year he has brought, or caused to be brought, between twenty-five and thirty cases for violations of the different sections of the game laws, and his work is having quite a visible effect. Although the violations probably can never be wholly stopped, any more than violation of all other laws, yet it is already evident that there begins to be a general feeling that the laws are going to be enforced, and the open high-handed disregard of the law we have been so long accustomed to in the Adirondacks, already begins to be a thing of the past. I hope that the good work may continue, and that the State force may be reorganized, so that it will be still more efficient. ZACK.

NEW YORK, Dec. 12.

Editor Forest and Stream:

The suggestions made by your correspondent "Musit" in regard to the laws for protecting deer are most excellent. I judge him to be a man of great experience and thoroughly acquainted with the habits of deer.

We want laws for better protection of deer in the Adirondacks, adjacent territory, and other regions of wilderness of this State, and laws that will provide for an increase of the deer supply instead of otherwise. Considerable correspondence was elicited through the publications of "communications" to your valuable paper last year and good information obtained. Sufficient, however, has been the experience of the best hunters of this State and the regions referred to above to make their suggestions of the law we have been so long accustomed to in the Adirondacks, already begins to be a thing of the past. I hope that the good work may continue, and that the State force may be reorganized, so that it will be still more efficient. ZACK.

I see "S. S. N." comes to the front with anxiety, in a letter published Nov. 3. Perhaps he would be too exacting; but that some changes should be made is very evident to all who feel an interest in prolonging sport. The sale of venison is to be permitted this winter to our markets, as it was last, in open violation of the law. If so, there will be a necessity for more

such patrolling, as "Musit" speaks of, than the private purses of individuals will be able to care for or the State protectors possibly attend to. Although the illegal killing of deer can better be prevented by them than it is now or has been attended to in the past by anybody. Duties of our Fish and game protectors in attending to fish protection must become less important at a season when deer need the most looking after, owing to the lateness of the season and a great deal of fishing with nets being stopped by fresh water freezing over. Should our laws receive attention this winter, it is to be hoped that provisions will be made for the State protectors to have more adequate means for thoroughly attending to the protection of game, and especially of deer. The number of offenses committed is not enough money is provided for their use, and not severe enough punishment meted out to violators. In my opinion imprisonment should be connected with fining.

Withdraw the privilege of hounding certainly during August and October, if it cannot be stopped entirely, that the deer may get some rest. A deer driven in August, even if not killed, is, without doubt, very much injured, for there seems then to be almost no limit to his powers for going. Consequently great heat is induced, to be followed by a shock upon plunging into water, which in itself is very injurious to the health of any animal. No sensible man would compel or allow his horse to plunge into cold water after a fifteen-mile fast drive, and then allow him to lie down, without expecting permanent injury. It is quite as bad for deer; they will always go to water and plunge in, their instinct telling them there is no other way to get rid of the hound after which they seek some secluded spot and lie down. A guide told me last summer, he found in the middle of a lake a dead deer, without a wound anywhere. No doubt there was consequent upon taking to water before hounded. A comparison might be made in the hounding of deer in warm water to driving a beef creature a long distance just before killing it, the meat in either instance is very poor food.

It is getting to be a recognized fact that the chances are very much against capturing deer by their "taking to water" before hounds during warm weather at specially good runs, and sportsmen are more inclined to stay out of the woods with hounds until cold weather sets in, and the deer are fat enough to give a short race, then the destruction that takes place is enormous. Some men get ashamed of killing deer, and others never do, but pursue them as long as their time holds out. Consequently, as a matter of benefit to the preservation of deer, I hope the warm-weather driving will be stopped, and the time for driving in cold weather be very much shortened.

It is my opinion that those who are strong advocates of driving will admit that hounding tends more to deplete our stock of deer than any other legal method of killing them; and I believe they will heartily uphold a law that will, without doubt, tend to the preserving, and the increase of our most noble game.

WOLLAT.

THE DUCK RIOT AT GUNPOWDER BRIDGE.

BALTIMORE, Md., Dec. 8, 1881.

Editor Forest and Stream:

On yesterday I visited Gunpowder Bridge on the line of the P. W. & B. R., for coat shooting. I took the 7:15 A. M. train and reached the Bridge about 8 o'clock. As I got on the Bridge and saw to my surprise, about sixty or seventy gunners, I picked out a position about 200 yards west of the bridge. A pair of coots came up, and without suggestion, about twenty shots were fired to the two birds, one of which I think is a happy cot yet, and the other one, not so fortunate, was killed. About a dozen different men claimed it. The language and wrangling of the parties concerned would, to my notion, become anybody but brother sportsmen. I patiently sat a half-hour or so before I got a shot. Finally, there came along a single black mallard, when taking out one of the shells loaded with No. 6 and putting in No. 8 shot I put it on him, and it was, I think, a pretty long shot for a No. 10 gun. I then he came as dead as a stone. Soon I had another shot at a cot, which I killed with both barrels. I had good shooting for a while, my ducks being gathered for me by a man in a bateau, whom I had engaged for the purpose.

By the time I had been there—about one or two hours—I noticed five or six gunners inching up to me, and at last they were close to me. There was one man, who belonged to a ducking shore in the Hollow below, sat himself down about thirty feet from me. He had a man by the name of John in a skiff waiting on him. Presently a cot came over to me to the right, when I killed him; and on looking for my duck this man yelled out at the top of his voice: "That's my duck; get him, John!" This thing happened regularly five or six times in succession. I finally made up my mind to move away; but I tell you, sir, everywhere one would go the words of "My duck" would ring out above all others. I noticed three men from Baltimore. They had ninety-two coots, and I was told by them that they had shot away 550 shells and had killed ninety-two coots. I think that there is about one duck killed for every twenty shots fired; and if the thing is not stopped the shooting on Gunpowder will be one of the things passed by.

I got eleven coots and one mallard, and the man with his man John on coming in had seventy-seven coots, about two-thirds of which were killed by other parties, but claimed and gathered by him. I tell you, a good claimer is better than a good shot on the bridge. The shooting on the Bridge is a fair representation of a battle field. There are great many good ducks in the river—canvass-backs, red-heads and black heads; also a great many marsh-ducks at the head of the river. I think that when I go down again to get ducks at the Bridge I will have a man John, and do more claiming and less shooting.

CHEE. A. PEAKE.

BALTIMORE, Md., Dec. 12, 1881.

Editor Forest and Stream:

Do not let yourselves be deluded by Ches. A. Peake's letter in a late issue about duck-shooting on the Gunpowder Bridge. The danger attending the sport is great, and the most successful gunner is the object of envy on the part of those who, although they do not know how to shoot ducks, nevertheless take their stand in close proximity to a first-class shot, and then put in their modest demands every time a duck falls. The passing trains of cars, the slippery timbers of the bridge, forty or fifty guns, many of them in very inferior condition, the excitement of the sport, the presence of the gunners—all these strike me as very decided impediments to amusement. Some time since a man was caught between two trains on the bridge and so jammed and battered that he may be an invalid for life. Another one had a shot put through his hat.

There have been several sportsmen par excellence on the bridge this season. The leading one was formerly a member of the Carroll's Island Ducking Club, where he was considered one of the best overhead shots on the Island. He generally shoots a No. 12 or No. 10 at coots, and a No. 8 gun at larger fowl. He is now a member of a club composed of gentlemen who formerly shot with him at Carroll's Island. Ches. A. Peake's vision is evidently bad, and his information worse. I advise him, as he does not understand duck-shooting, not to take the part of a bad-tempered critic, but to possess his soul in patience until experience may come to his aid.—J. S.

LONG ISLAND WILDFOWL.

GREENPORT, L. I., Dec. 11.

Editor Forest and Stream:

There are plenty of coots and old squaws in Peconic and Gardiner's bay, and off Montauk and Napeague Bay, and on Ram Island shoals. Captain Bill Ross, the experienced skipper of the best yacht out of Greenport, has just called in at my room after a recent cruise with a party of gunners from New York and Massachusetts, and says they had a good many fowl by sailing on them, but that the water and weather were too rough to set batteries or use decoys. The better sort of fowl, such as black-duck, whistlers, widgones and broad bills are more plentiful in these waters, especially round Gardiner's Island, than they have been for years. This is owing, it is thought, to the fact of the Great Pond at Montauk being now filled with grass, the chosen feed of duck and geese. When the fowl find plenty of good feed in that once favorite pond they are numerous in all this region, or such seems to be the case now. A large house for the accommodation of sportsmen and others is about to be erected at Montauk, near the Great Pond, and the building of several cottages is to take place in early spring; at least such is the report here. As the fowling, fishing, and snipe and grouse shooting have been always so excellent there, it will be a great resort for gunners, who have neglected the place for the last few years. ISAAC McLELLAN.

NEWS FROM RICHMOND.

RICHMOND, Va., Dec. 3, 1881.

Editor Forest and Stream:

We are now in the midst of the open season for hunting quail and most of the other kinds of game in this State, and the season will continue in the Eastern counties, embraced in the tide-water region, till the first of February; but the past month, open in law and in fact, may be considered the height of the season. From this city many parties have gone out on little excursions for a day, or for several days, in all directions in the country around, seeking recreation and pleasure—not to speak of the profit—in the most manly, noble and agreeable of sports that a gentleman can engage in, viz., shooting quail, or partridges as they are commonly called in this State. On one train one bright morning we saw three separate parties, numbering two or three persons in each, armed with the best equipment, bright English twists and highly bred and highly trained setters and pointers, made the writer regret that a different mission was taking him from the city. These parties all got off at different stations short of thirty miles from the city, and each of them, doubtless, had a fine day's sport, for, on inquiry as to their luck on our return, we found that one gentleman bagged twenty partridges that day, but he was an exceptionally fine shot.

Although there was a dry summer, and thus the conditions favorable for breeding and raising, from all the information we gather from several quarters, and from our own experience in the field, we find that birds are scarce. This is the greatest obstacle to the huntsman's sport; and while it affords delight, not offered by any pastime or diversion that can be named, to drop a partridge as it goes with "winged swiftness," following the likeness of lightning through the air, when that pleasure is to be attained at the expense of weariness of the flesh, hunger and seven leagues of hooted land, the amateur is much disposed to answer his friend who presses him to go on such a pastime as did the Frenchman his English host, who thought to entertain him by proposing a fox hunt, "Ah, Monsieur," said he "I have been."

Whether an increase of this feathered tribe will be promoted by stricter man-protective laws, or by traps and snares set to catch the hawks, foxes and such enemies as they have ever present with them; or by both means, are questions for discussion. Our own opinion is that nine months out of the year, the best sufficient "protection," which a law can willingly give to its user, but which that premium should be placed upon hawks, bids and foxes' scalps.

There are many devotees of the gun and dog here, and they are of a character for gentility and sterling business qualifications that makes it thoroughly respectable; and as to dogs, great interest has been manifested within the past few years, and with the requisite training, many are owned that would doubtless make their mark at national benches or trials. By the way we dropped in to see Mr. F. E. Taylor to-day. He was just back from the Eastern Field Trials at Robbins' Island, where he had spent a delightful, though laborious, week, acting as one of the judges. We are glad to observe the high commendation so universally bestowed upon the decisions of the judges at this Trial, and it is very gratifying to Mr. Taylor's friends, considering how difficult a matter it is to give anything like satisfaction to all; but we who know him—how high-minded and conscientious he is, and how intimately versed he is in dog-lore—feel that it must needs have been so.

COLORS.

KANSAS LARGE GAME—Cimarron House, Cimarron, Gray Co., Kan., Dec. 13.—This place is on the Atchison, Topeka and Santa Fe R. R., nineteen miles west of Dodge City, on the north bank of the Arkansas River. With a field glass almost every day antelope can be seen from the hotel porch coming in to water on the south side of the river. They are so plenty that I can buy carcasses at two dollars a piece, and can kill one or more any day at the cost only of getting tired. I saw forty in a day's hunt within ten miles of town last week. I killed only one. I use a Winchester rifle—model of '76—calibre .45, 60 grains of powder, straight shell. It is the best antelope gun I ever owned. Twelve buffalo were seen within the forty-miles limit on Dec. 3, but the aggravating thing will get a little outside at times. They can be found in the woods on the hills on the west side of town, and kill mistakes occasionally to feed their dogs. There are more than 1,000 wild horses within seventy-five miles of Cimarron. Hunting buffalo is hard work and involves camping out several nights on bare prairie, but you can hunt antelope and camp at the hotel.—W. J. D.

ON THE CHOICE OF A GUN.

It is a great mistake to believe that in buying from a first-class maker you are paying a fancy price for mere name. You are really not doing so. The money represents the actual value of the gun, the prime cost of which leaves, at the low prices of the present time, compared with those of fifty or sixty years ago, a very unremunerative return. One reason why some sportsmen fancy that fine guns are inordinately dear, is the supposition that they are, or can be, made in unlimited numbers. A high-class gunmaker can no more turn out an unlimited number of guns, than an artist can of pictures. The moment he tries to increase his business by undue means, down goes the quality. For a year or two he flourishes and makes large profits; but Nemesis is at his heels. His former reputation goes down with accelerating speed. I write from facts occurring from year to year, and am not talking a fanciful picture. Guns are simple things to look at, but are far from being so in reality. Give ten men the same materials and they will produce ten different guns in quality, style, mount, apparent weight (!), and shooting powers. I quote from a remarkably talented monograph on breech-loaders by "Glean." "It is no economy to buy a low-priced gun, because it will soon become useless. . . . On the question of price I have some very decided opinions. To my mind, there should be something higher to a sportsman than his gun than a mere tool, with which to work. A fine gun is the work of an artist. . . . I advise the sportsman as to the purchase of his gun—'Let it be as costly as thy purse can buy.'"

Sportsmen apt to fancy that gun-making is a free and easy "sporting" kind of affair. It is, on the contrary, one of the most exhausting and responsible of professions, many gunsmiths breaking down in health in middle life in consequence.—From Douglass' "Shooting: Its Appliances, Practice, and Purpose."

A MINISTERIAL GAME DEALER.—The Rev. Halsey W. Knapp, of the Laight Street Baptist Church, has resigned his pastorate. The members are anxious that he should continue, and have not yet accepted his resignation. Mr. Knapp is a very remarkable man. Like Paul, he labors with his own hands, but his occupation is not like that of the apostle. Mr. Knapp is a butcher and is to be found every morning at his stand in Washington Market. No better purveyor of meat is there. What he does not know about turkeys and beef is not worth knowing. In the afternoon he is doing pastoral work or studying in his large and handsome library at home. He is a good speaker and magnifies both callings.—New York Observer.

A SMALL GUN.—Bergen Point, N. J., Dec. 15.—This piece is a double-barrel breech-loading pin-fire shot-gun, 30 bore. The barrels, which are 24 inches long, are of the finest laminated steel. The stock is of rosewood, rather short, and very handsomely carved. The locks are also very finely engraved, as is the action, which is the original Lefaucheur. This gun formerly belonged to Prince Murat, of Bourbonville, who gave it to Dr. Coleman, of Trenton. It is now in the possession of Mr. B. T. Kissam, who claims that it is one of the oldest breech-loaders in America.—C. N. D.

A PRACTICAL SUGGESTION.—Perth Amboy, N. J., Dec. 1881.—Editor Forest and Stream: In the interests of game preservation in this State allow me to suggest, through your columns, that if those who have occasion to drive over country roads at this season would carry a gun, they might kill the large hawks, which are the quail's worst enemies. Hawks do not seem to fear a horse and wagon, and may be easily approached and shot from a vehicle. The death of one hawk means the life of several coveys.—A SPORTSMAN.

VELOCITIES OF RIFLE BULLET AND OF SOUND.—Bethlehem, Pa., Dec. 10.—Editor Forest and Stream: I notice in your last edition a letter from Prof. A. M. Mayer, concerning the velocities of rifle bullets. Allow me to add my experience. In 1873 I did some marking at long ranges, and noticed that the bullet got to the target a trifle ahead of the sound, at 800 yards, just with it at 900 yards and at 1,000 there was less than one-half second difference between them, the sound being ahead.—J. S. D.

HOW TO KILL WOUNDED WILDFOWL.—In answer to the inquiry of your correspondent "Bay Ridge," the best way to kill wildfowl wounded in the head is to take the bird in the left hand, placing the thumb and fore-finger under the wings, just back of where they join the body, and bringing a strong, steady pressure on the body. This will cause death in a very short time, without ruffling a feather.—EARLYBIRD.

BRINGING DOWN THE GRIZZLIES.—Bozeman, Montana, Dec. 7.—Have just come in from my annual hunt. I spent a very enjoyable summer and fall. Killed twenty-four grizzlies, nineteen of them in a little over one month. I killed what I maintain bison, elk and mountain sheep were required for meat and bait. I always prefer to tackle bear alone, as one man is as much as I care taking care of and the above does not include any killed by my men.—P.

MALDEN GUN CLUB.—Malden, Mass., Dec. 11, 1881.—At the annual meeting of the Malden Gun Club, Dec. 5, 1881, the following officers were elected for the ensuing year. President, F. T. Noble; vice-president, J. Buffum; secretary, C. H. Lanegan; treasurer, A. H. Jones. The club numbers some forty-five members, and is in a flourishing condition.—C. H. L.

"I KNOW," said a little girl to her eldest sister's young man at the supper-table, "that you will join our society for the protection of little birds, because mamma says you are very fond of larks." Then there was a silence, and the Lünburger cheese might have been heard scrambling around in its tin-hox on the cupboard-shelf.—Norristown Herald.

IN ISSUE DEB. 8TH in article "Shooting Grouse on the Wing," "once in a while I would kill one when an open straightaway shot offered," was incorrectly printed "and in a while;" "44 grains Orange Lightning powder," was incorrectly put "charge Lightning."

CERRITOS—Watterson, Va., Dec. 10.—Have returned from Cerritos with nineteen other disguised sportsmen. Didn't averse one duck a day's expense. Expenses \$5 a day. Query, does duck shooting pay?—CHASSER.

FLORIDA PARTY.—Companions for a Florida trip are desired by a Philadelphia gentlemen, whose advertisement appears elsewhere.

THE FUR MARKET QUOTATIONS are given on page 416.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

Black Bass, Micropterus salmoides and M. paludis. Masagoose, Esox nubilus. Pickereel, Moxo reiculatus. Pike or Pickereel, Esox lucius. Pike-perch (wall-eyed pike) Stizostedion americanum, S. griseum, etc.

Yellow Perch, Perca flavescitlis. Striped Bass, Roccus merula. White Bass, Roccus chrysopterus. Rock Bass, Ambloplites, (Two species). War-mouth, Channobryttus glivosa. Crappie, Pomoxys nigromaculatus. Sunfish, Pomoxys annularis. Chub, Simulitis corporalis.

SALT WATER.

Smelt, Osmernus mordax. Sea Bass, Centropristis atraricus. Striped Bass of Rockfish, Roccus inermis. White Perch, Morone americana.

Pollock, Polachius carbonarius. Trout or Blackfish, Tautoga onitis. Weakfish or Squetague, Cynoscion regalis. Channel Bass, Spot or Redfish, Scetopom ocellatus.

But he that shall consider the variety of baits for all seasons, and pretty devices which our anglers have invented (peculiar lines, false flies, several slights, etc.), will say that it deserves like commendation, requires like study and perspicacity as the rest, and is to be preferred before many of them.—BURTON, Anatomy of Melanchohy.

ANGLING IN IDAHO.

BELLEVEUE, Wood River, Idaho Territory.

In your late lists of fish in season in September, you should have had, to make it complete, what are called trout in this region, which are now in their prime. I am told that they have been successfully crossed with the speckled trout of the Adirondacks, and they resemble in all but the bright colored spots. There seems to be three distinct varieties, differing in form and color of meat.

The largest variety weighing from one to five pounds, sometimes six. I now mind of one this season, murdered with giant powder, that weighed nearly eight. It looks in every respect, except the bright colored spots, like those caught in the dead waters of the Adirondacks, very short in proportion to its weight; very dark in the back; changing to reddish brown on the sides. The flesh when cooked is a deep flesh color.

The second, which are called silver trout here, do not, in this river at least, seem to grow to weigh over one-half to three-fourths of a pound, the most of them less than six ounces. They are long and slim, with hardly any spots on their sides; dark on the back, with bright silvery sides; flesh as white as the purest snow, and when first caught are of the most delicate flavor imaginable. They take a fly readily, and when hooked spring clear from the water and try to shake themselves loose, as I often have seen bass when trolling in Eastern waters.

The last variety, called here "mountain trout," and found in the spring brooks, are from four to six inches long; dark in the back with yellowish sides, and having, in addition to the dark spots, a dark band about one-fourth of an inch wide and half to three-fourths of an inch apart, running about two-thirds the way up their sides, and are equal to the regular speckled beauties of the East.

None of these trout have the white tips to pectoral fins, and all have very fine scales. The first two named species spawn in the spring. I am inclined to think that the latter do also, as in those caught now there are no signs of eggs.

This, the Wood River country, was the Eden of the Banocks. Its rivers swimming with trout; elk, deer and antelope were abundant; bears more than plenty, mostly cinnamon and bald face, with occasionally a grizzly to make it interesting; and otter, beaver and mink are found on all the streams. In another season the scream of the "iron-horse" will waken the echoes of these valleys and send the game into the impetuous mountains, to be secure for a while from the ever-onward march of the white man.

Notwithstanding the stringent game laws enacted by the Territorial Government, the use of giant powder early in the season has, in one season, cut off more than half the supply of the trout in this valley, and another such slaughter next spring will destroy the fishing almost entirely.

I found accidentally this last week that there are plenty of the small fish in this river which were mentioned in a late article in your paper, "Do Garter Snakes Eat Fish?" They are perfectly identical with those of mountain streams in New England and your own State, and I have often used them very successfully two or three times since. G. B. F.

SHAKESPEARE AND THE CARP.

SOFTENBODY, N. Y., Dec. 19.

Editor Forest and Stream.

I was much interested in the quotations from Shakespeare on fly-fishing, from Mr. S. C. Clarke, in your last issue. I now send you the following from the Antiquary:

Among fresh-water fishes the carp was held in high esteem in Shakespeare's time as a fish easy to rear and keep in preserved fish-ponds, and so readily available for the table. He mentions it twice:

Here is a pair of fortune's, Sir, or of fortune's cat (but not a musk-cat), that has fallen into the unclean fish-pond of his displeasure, and, as he says, is mudded withal. Pray you, Sir, use the carp as you may.—The Third Ent. Well, Act I., Scene 2.

Polonius. See you now;

Your bait of falconhood took the carp of truth.—Hamlet, Act II., Scene 1.

There is a peculiar fitness in Polonius's comparison of his own worldly-wise deceit to the craft required for catching a carp—for the carp was proverbially the most cunning of fishes. "The carp is a deynytous fysh, but there be few in Englande, and therefore I wryte the lasse of hym. He is an evyll fysh to take." "The carp is the queen of rivers," says Walton; "a stately, a good, and a very subtle fish." And it is the fact that the brain of the carp is six times as large as the average brain of other fishes.

SACRED FISH.—In Northcote's "Account of the Roman Catacombs," it is stated that: "In the Catacombs at Rome the fish is the most sacred symbol, the most important perhaps of all, and certainly as ancient as any. Origin speaks of our Lord as figuratively called 'The Fish.' 'We little fishes' of Tertullian, 'are born in water, after the example of Jesus Christ, our fish.' The fish was the recognized conventional sign for Christ. Hence we find a multitude of little fishes in crystal, ivory, mother-of-pearl, in the graves of the Catacombs—some of them with holes drilled through the head, to be worn round the neck."

SWEDISH POPULAR BELIEFS.

The teeth of large fish should be burnt, in order to be lucky in fishing.

One ought to tell no one when one goes out to fish, and not mention whether one has caught many or few.

Nor should any stranger see how many fish one has taken.

When one rows out from land to fish, one must not turn the boat against the sun.

Pins found in a church and made into fish hooks catch the best.

If a woman passes over the rod, no fish will bite.

Stolen fishing tackle is lucky, but the person robbed loses his luck.—Thorpe's Northern Mythology.

AMERICAN BROOK TROUT IN GERMANY.

In a recent letter from Mr. H. Hasck, the celebrated fish culturist in charge of the Government hatchery at Hurlingen, he tells us that he has had poor success in obtaining impregnated spawn from the fontinalis this year, for the reason that among all his fish he had not one male. He says: "Salmo fontinalis is not an American trout, but an American char. I have found that out by making hybrids with our German trout, Salmo fario, using a female of the former and a male of the latter species. The result was nearly nothing. The fontinalis is a river char, and not a sea char, more beautiful than our trout."

Mr. Hasck is right in calling our fish a char, although the popular name is too well fixed and endeared to Americans to ever be changed. The definition separates it from the true trout. It is for this reason that in the revision of the Salmonidae by Gill and Jordan new genera were made for both our Eastern brook and lake trout. The genus is changed from Salmo to Salvelinus for the brook trout, and to Cristallinomer for the lake trout. Therefore, if the nomenclature is accepted they become Salvelinus fontinalis and Cristallinomer namaycush. The common brook trout of Europe is Salmo fario.

THE ANGLE IN MISSOURI.

St. Louis, Mo., Dec. 13.

Editor Forest and Stream:

Years ago there was excellent fishing, for such fish as our State was blest with, but now the sport is almost a forgotten one which many who formerly enjoyed it. The nets have ruined our streams for several years past, and either lack of law, or of its enforcement is the main cause of the present barrenness of our waters. True, there have been fishing-clubs, but they have lacked influence because they have contented themselves with their own enjoyment, and lacked the public spirit necessary to carry on a fight with the violators of the law.

It was hoped that the appointment of Fish Commissioners would either remedy or at least alleviate the evil, but it has not done so. The Fish Commission propagate, but do not protect. They do good enough work in their way, but are powerless to stop the wholesale depletion of the waters which has been going on for years, until those who do it look upon it as interfering with their vested rights to forbid them to use nets at all times and in all places where fish may be found.

Murdoch Lake, about thirty miles south of this city, is a splendid sheet of water, and fishing is tolerably fair there. The same may be said of King's Lake. Both these lakes have their fishing-clubs, and their waters are protected partly by the clubs and partly by the state, but the latter make it impossible to haul a net in some parts of them. Murdoch Lake is probably the best of the two. These clubs do little or nothing in the way of propagating, or of enlisting the Fish Commission in the work, but simply fish. It contains black bass which are as gamey as those of any waters, dog-fish, catfish and croppie. This last is a fine little fellow, and well worth cultivating. E. B.

ANGLING FOR ALBATROSS.—In January, 1879, when off Cape Horn, on the ship Twilight, we were becalmed for some hours. A great many albatross had been following and circling round the ship, and "The Rime of the Ancient Mariner" having no effect on our non-superstitious minds, we determined to secure by the same means a "Chips" immediately rigged up a hook and line, baited it with a piece of pork attached a float about a foot from the hook, and threw it over. After fishing (would you call it fishing?) for some time without success, the hook being very large and pulling out of the birds' mouths, we gave it up as a bad job and went to dinner, leaving the line hanging over the stern. Hardly were we seated at the table when we heard a shout from the man at the wheel. We rushed on deck and found that an albatross had taken the bait and was severely hooked. He was as gamey as a twenty-pound salmon, but we finally got him aboard and releasing him from the hook, allowed him to waddle about the main deck, he being unable to fly over the bulwarks. After examining him fully, he was killed, preserved and mounted by "Chips," who, like most ship-carpenters, was a regular jack-of-all-trades. I brought him to Boston with me, and he makes a pretty little ornament for a small room, as he measures 7 feet 8 inches or 8 feet 7 inches (I cannot remember which) from tip to tip. In color he is like a white on the body, with the exception of some pink markings on the throat. There are also some gray streaks on the wings. That night a heavy gale began, which lasted until the next afternoon. Killing an albatross and storms have always been associated, regardless of the fact that the albatross is only found in stormy latitudes. In the "Encyclopedia Britannica," (9th edition—subject, Albatross) it is said that these birds sometimes measure 17 feet from tip to tip. This hardly appears possible, and I think it must be a mistake, as mine is only half that size and is as large as any I have seen.—JAMES P. Boston, Dec. 13.

LET THE ICHTHYOPHAGI LOOK TO THEIR LAURELS.—The famous Ichthyophagus Club, of this city, has a rival across the sea. Food and Health says: "If ever a small but heroic federation of philanthropic enthusiasts was fairly entitled to the epithet of civilly and substantially an article with a few additional and omissions, under the head of 'Fish poles and Fishing.'" I now wish to say that all the statements in the Call in regard to the quantity of game and fish formerly taken in and around what is now the city of Newark were grossly exaggerated, and those in the Times were still more so. Also that the account of my exploits with the rod and gun in company with Mr. Herbert, or "Frank Forester," as he was called, were an entire fabrication. I never hunted nor fished with him in my life, nor did I ever tell any person that I had done so. The remarks concerning the character and habits of Mr. Herbert, which followed in the account of the interview, were pure fabrications. I hope that I would be the last man to attempt to traduce a man so well known as "Frank Forester," especially after his death.—CHARLES F. MURPHY.

THE COMING TROUT.—At the recent meeting of the New York Association for the Protection of Game, President R. B. Roosevelt said of the rainbow trout of California (Salmo iridea) that they are twice as strong as our Eastern brook trout, and twice as rapid growers, often reaching a weight of eight to ten pounds in California, while in our waters they grow to four and five, while the S. fontinalis is growing to less than half that weight. The complaint against them, said Mr. Roosevelt, is that they are too gamey—they smash light tackle with their tremendous rushes, and the angler must be especially prepared for them. They can be easily introduced into our trout streams, will live where our trout will, and in some places where they will not. "They are the coming trout! They are perfection!"

THE MANUFACTURE AND CARE OF GUT.

REDDITO, England.

Editor Forest and Stream:

In your issue of Nov. 17 I notice the correspondence respecting silkworm gut. I have for the last thirty five years purchased and sold large quantities, and always have at my works an extensive stock, which has had my personal supervision, my firm having in Murcia, Spain, a manufactory of silkworm gut. I have been in Murcia superintending the manufacturing and have discovered two causes which make gut brittle, and have instructed our manager in Murcia to see as to the process of the gut to improve upon them the importance of keeping the gut out of the sun.

The great evil is this: After the worm has been drawn out it is put in the sun to dry, and the great heat of the sun takes the moisture out of the gut and makes it brittle. I also discovered another danger in the manufacture of it. In bleaching it, if the bleaching-oven is too hot, and the gut is too long in the oven, it makes the gut brittle. If gut is made without an excess of heat it will be more pliable; consequently, more strong. I have never found gut get brittle by keeping. The best way to keep it is in wash-water. If large quantities, in drawers or rooms which are not over-heated. Some tackle dealers will expose gut, gut leaders, etc., in their windows. The sun gets on it and consequently takes the nature out of it and it becomes hard and brittle.

The cause of flat gut is disease in the worms. Healthy worms produce round gut. The manufacture of gut is very simple. The gut from the worms is hought from the small country people who breed the worms in their houses. The first process in making is to put the gut in a furnace with water, a little soda and soap. After boiling a short time the outer skin comes off. It is put in a tub and comes out white, after it is put in the bleaching ovens. Then girls rub it straight with wash-leather, holding one end in their teeth. The next process is to sort out the different strengths. It is then rubbed again; counted into bunches of one hundred, then a man puts in the red jute on each bunch, and then ties it in bundles of one thousand.

This may interest your readers and prevent gut being spoiled by exposure to the sun. S. ALLOOCK.

A CARD FROM MR. MURPHY.—Newark, N. J., Dec. 16.—

Editor Forest and Stream: I wish to urge your columns to correct some errors and exaggerations which have appeared in the newspapers as having come from me, knowing that in this way the sportsmen of America will see the retraction and that they will not hold me guilty of such absurd exaggeration, or of attempting to cast a slur upon a brother sportsman who has long been dead. It is now some six weeks ago since a reporter from the Newark Sunday Call visited me and held a long conversation on shooting and fishing in the old time. He took no notes, but relied on his memory for facts concerning the old anglers and fishermen; and his memory must have distorted my conversation wonderfully. I gave him merely a plain statement of facts, showing how much more plentiful fish and game were in the early day than at present; and as for Mr. Herbert (Frank Forester) I merely said that I knew him well. I was surprised at the way the interview appeared in the Call under the heading of "Reminiscences of an Old Sportsman." Perhaps I would not have thought it worth while to refute the article, had not the New York Times, of Sunday, December 16, published substantially the same article with a few additions and omissions, under the head of "Fish poles and Fishing." I now wish to say that all the statements in the Call in regard to the quantity of game and fish formerly taken in and around what is now the city of Newark were grossly exaggerated, and those in the Times were still more so. Also that the account of my exploits with the rod and gun in company with Mr. Herbert, or "Frank Forester," as he was called, were an entire fabrication. I never hunted nor fished with him in my life, nor did I ever tell any person that I had done so. The remarks concerning the character and habits of Mr. Herbert, which followed in the account of the interview, were pure fabrications. I hope that I would be the last man to attempt to traduce a man so well known as "Frank Forester," especially after his death.—CHARLES F. MURPHY.

THE FISHLESS PASSAIO.—The Passaic River, New Jersey, formerly contained many valuable fish. It was especially famous for shad, smelt, striped bass and white perch. Since it has been used as a sewer for all kinds of chemicals the fish have died, and now there is to be little fish, which a Newark newspaper thinks may improve the fishing. The Call says: A score of years ago the project of building a dam across the river at Bellevue would have met with the stoutest resistance from all Newark anglers and fishermen. Now scarcely a word will be heard in remonstrance. Gas-tar, lime and various chemicals flowing from our sewers have been thorough in the

work of destroying the bass and shad fishing in the Passaic, and it is scarcely worth while for net-owners or anglers to speak against the project of building the dam. On the other hand, the fishing above the dam may be greatly improved. Black bass and other strictly fresh-water fish will thrive in the clear water and afford even better sport than the striped bass in their best days, and the shad will still have a chance of pms log up if they will consent to hang around the gates until low tide.

INFORMATION ON SALMON FISHING.—I want some information about the salmon fishing of Newfoundland and Labrador. If you have a reader who is familiar with these sections I should be greatly obliged to place any information he would be able to gather there as salmon in the rivers of those countries, and if so, whether they rise to the fly, and if so how to reach the ground and all about it. I have been so unfortunate as not to secure any fishing in the Canadian waters, and the good streams have all been taken up, and I am informed.

VERDE MONTZ.

MOUND-BUILDING FISHERS.—In our issue of June 23, 1881, we published a communication from our valued correspondent, D. H. B., Syracuse, N. Y., on stone-lugging fish. He gave an account of the mounds of fish of ten or twelve fathoms in length, which would be carried stones in its mouth and heap them up. This, no doubt, had some connection with an increase of its species, and could hardly have been for the purpose of a monument to its ancestors, nor to erect a mound to preserve the archives of the great family *Cyprinidae*. In our remarks we hinted that the fish might be either *Semotilus corporalis* or *S. bullaris*. A specimen was sent, and we inclined to consider it the latter species. It was sent to Prof. G. Brown Goode for further identification and he decides that it is *S. bullaris*. This fish is a truly game fish and is the largest of our Eastern cyprinids, often reaching fifteen or eighteen inches in length. It rises to the fly, as does its congener the "the corporal," but does not occur in sufficient numbers to be angled for especially. It is popularly known as "fall-fish," "chub," "dace," and sometimes "roach." It is a beautiful fish, with large shining scales, and in the breeding season, has bright red fins. Its habit of stone-toting was new to us, and on looking up its written history, we find no mention of it.

GRAYLING FISHING.—Jesse, in his "Angler's Rambles," in speaking of grayling fishing, says: You will always see any person who is a stranger to grayling fishing, and I may add, many who have fished for them all their lives, when the stream is low and very clear, betake themselves to the stream and curis, from the idea that their fish will see their line in the water. Let them do so; they will, perhaps, catch a few trout and some such grayling. But go yourself to a deep, clear part of the river—never mind if there is no wind, and the sun is hot—use the finest gut you can procure (even if you have to give a guinea a knot for it), and two flies, and, when you have thrown your line as light as a gossamer, let it sink eight or ten inches. You will not see a rise, but a slight eir in the water, which, by a little practice, you will understand quite as well, and, when you strike, you will have the pleasure of finding a pounder, or more, tugging away at the end of your line.

KILLING FISH WHEN CAUGHT.—Caledonia, N. Y., Dec. 16.—Much has been said upon the subject of killing fish when first caught, but only a few anglers practice it. Of all the persons who visit my trout ponds and fish in the creek here, not one in ten do it, although most of them will admit that fish are better for the table, and keep better, by being killed instead of suffocating in the air. There are differences of opinion as to the best method of killing fish when on the stream. I think the best and quickest is to take the fish in the right hand and strike the back of the head a quick, sharp blow on the top of your rod. If you do this, you will strike the head before removing the fly or hook from its mouth. When you break the trout's neck, it spolls the fish for a nice show on the table, as the head will in some cases come off when you dress them, but will always do so when cooking.—J. ANNIS, JR.

NIGHT FISHING.—Baltimore, Md.—A friend and myself have on several occasions, during the past summer, chosen dark nights and taken the late train to Bush River, Harford county, this State. Our preparations consisted of lowering an ordinary railroad canteen from the bridge to a height of one foot above the water. Our lines contained a spreader, two hooks, and a cork about ten inches above the hook. Our bait was shrimp. We cast our lines in eight feet of water, the corks floating on the edge of the canteen's light reflection. The fish, attracted by the light, came around, and we were kept busy from 10 until 4 o'clock in the morning, when by actual count we had bagged 359 fine white perch, some measuring between 10 and 15 inches. I have found in night fishing for perch the hook is as good, and some-times better, than fishing by day.—J. R.

THE RAINBOW TROUT.—We are permitted to publish the following: Danville, N. Y., Dec. 12.—To Seth Green, Esq., Superintendent Fishery Commission: During the past season we have taken special pains to protect the California Mountain trout, pointed by our fish during the past three years. The young trout were received from the State Hatching House at Caledonia. It has been understood that none should be killed by members of clubs. The fish are doing splendidly and are taken three miles above where they were planted, weighing over one pound each. A friend took one in Gouverneur Creek last July, the specimen after being out of the water eight hours, eighteen and one-half ounces. He did not know what it was until I told him. There is no doubt about their being the trout to take the place of our old natives.

JOHN HYLAND.

CLARK'S HATCHERY.—At the hatchery of Mr. Frank N. Clark, assistant to the U. S. Fish Commission, at Northville, Michigan, there are 22,500 *S. fish*, 125,000 brook trout, 150,000 eggs and 60,000 eggs of the lake trout. He will soon make some shipments to Germany.

A CHALLENGE ACCEPTED.—Marlboro', Mass., Dec. 19, 1881.—Editor *Forest and Stream*: At a meeting of the Marlboro' Sportsmen's Club held the 16th inst., it was voted to accept the offer of the Fall River Gun Club, published in a late issue of the FOREST AND STREAM, to shoot a team match at glass balls. In accordance with that vote I have to transmit to you our acceptance of that offer. Teams to consist of from eight to fifteen men each, at the option of the Fall River Club, and a match to be shot upon our grounds in this place, as such as the U. S. Fish Commission. We also voted to accept the challenge of the Worcester Sportsmen's Club to be shot at this place, Jan. 13th next.—HARLAN S. FAX, Secretary Marlboro' Sportsmen's Club.

Fishculture.

GROWTH OF TROUT IN WISCONSIN.

MILTON, WIS., Dec. 9.

Editor *Forest and Stream*:

I send you the following history of my experiment for the purpose of demonstrating the ease and facility with which barren or depleted streams may be stocked with beautiful fish.

About four miles south-east of the city of Ripon are two large streams, which may be called the "fry" and "the trout" streams, through the city and, after supplying power to several mills, empties into Green Lake, about four miles west of the city, running by the stream, about fifteen miles. In the spring of 1881 I proposed to stock the stream with brook trout, but not with much discouragement from the wise ones of this locality. One said that the water was hard and trout would not live there. Another claimed that the drain of the basins into the stream would kill them in twenty-four hours. Others, again, were certain that the dace and chub would devour every one of the fry, and that it was fooling away time and money in putting trout in there.

Notwithstanding all this, in April, 1880, I procured from the State Hatchery, at Madison, 20,000 brook trout fry, and planted them in the springs and left them to live or die, to fight the battle of life and forage for themselves. In the summer of 1881 I inquired of those living on the stream about the trout. Nobody had seen them. Some said there was not a trout in the stream; others slowly shook their wooden noddies and said, "We told you so; sorry for you, but you should have taken our advice. I told you that trout would not live here. I felt worse than you did. I had lost my mother. What was to be done? To suck up my nose and not only a loss of time, money and wind in procuring the fry, but also a pretty good share of self-esteem, and shattered my faith in Prof. Baird and other dunces. That would never do; so I resolved to brace up and keep a stiff upper lip. I told the doubting Thomases to keep their shirts on and wait until November and we would see what we would see.

In the 28th of November, 1881, I made a visit to the spring where the fry were placed, and the trout were found as follows: I expected to find some trout there about eight inches long, and there, within four feet of me, were great magnificent fellows fourteen inches long that would weigh over a pound each. The spring contained a few trout from ten to twelve inches long, and in their brilliant costume, got up to regard me; so I resolved to brace up and keep a stiff upper lip. I told the doubting Thomases to keep their shirts on and wait until November and we would see what we would see.

It concentrates beyond question that our waters are admirably adapted to the trout, and if our too ardent fishermen can be restrained for another year Silver Creek will be fully stocked with these beautiful and delicious fish. A. COOKEY.

Fish Warden Green Lake Dist.

CAMP.

WASHINGTON, D. C., Dec. 5, 1881.

Editor *Forest and Stream*:

I came to this city on a business trip a few days since and found Dr. Hassel, superintendent of the carp ponds near Kipp's Island, west of Babcock Lake, was draining off the water by direction of Prof. Baird, of the Smithsonian Institute. It was found that the increase of fish had been very great during the past season. It was estimated that fully as many have hatched as were discovered in Babcock Lake when it was drawn off, and the number is estimated to be upward of 100,000.

Prof. Baird is sending these young fish off to all parts of the country, very much to the South State, where the temperature of the water is higher and more uniform, and they consequently grow faster. Dr. Carey, State Fish Commissioner of Georgia, was present at the drawing off of the pond. He takes much interest in the breeding of the carp in his State, and says it has been in every way successful.

Superintendent Hassel is making some great improvements in and about Kipp's Island and through his labors Prof. Baird will be able to distribute more carp yearly, as many old fish will be added for stock purposes. Several hundred were lost from the ponds last spring, owing to a freshet, and many were washed into the Potomac-River. Capt. Knight, a well-known fisherman on the river, was present and stated that carp are now frequently caught about the river flats among the grasses and that they are delicious for the table.

Two car loads of carp were shipped last Monday night for New York and New Jersey for stocking the ponds of numerous gentlemen of those States.

I met while here Mr. H. J. Fenton, of Windsor, Conn. He is the superintendent of the Connecticut State Fish Hatcheries, and was on his way homeward with carp for his State. He has already distributed 1,000 and gets altogether 1,500. Distribution was made in lots of 39 to applicants all over Conn. In the autumn of 1880 he distributed about 800 about 3 inches long. Some of these fish are now 10 inches.

At the Conn. Hatchery, at Fenton, there are now 480,000 trout eggs, 300,000 Penobscot salmon eggs, and of land-locked salmon fully 275,000 ready for State purposes at Twin Lakes. Mr. Fenton tells me a land-locked salmon was lately taken at the planting of 1878—that weighed 4 lbs. 2 oz.

Mr. F. and myself attended the Guiteau trial together, but I assure you the fish question interested us much more than the gabbling of the cranky assassin.

Why do not the Pennsylvania men who wish to try the experiment of growing the carp make application for a few fish before they are gone? Home.

THE GERMAN FISHERY ASSOCIATION.—We have circular No. 6 of the Deutsche Fischerer Verein for November, 1881. From it we take the following notes: Mr. Schuster reports having taken 23,000 eggs from four four-year-old California salmon which he reared, and which had never left the ponds of his breeding establishment at Frensdorf, in the Kingdom of Bavaria. His report of the society, writes that they received eggs of the quinnat salmon, *Oncorhynchus tshawytscha*; the land-locked salmon, *Salmo salar* var. *seborgi*; the brook-trout, *Salvelinus fontinalis*, and the minnow-like *Coregonus albina*, from America the past year. With the exception of all brook trout, all came in good order. Some from Mr. Annan had endured exposure and met with considerable loss; others from Mr. Stone arrived safely. The use of sawdust as a packing material for eggs is not approved. When the fresh fish is inclined to live and thereby was considerable loss in sending eggs of the quinnat salmon from Geestemünde. Carp fry, at Valenciennes, were fed with blood at first and then with bread, and in the 12th of July were from five to six centimeters long. At Summerlin they were fed with bread; at Falmouth with ground meal (Belgian) and with potatoes; at Valenciennes with potatoes, wheat cake and with "water-pot" (a water plant of some kind). At Dessau the old carp are fed with nuts' eggs, bread, barley, potatoes, blood and refuse meal. Carp, goldfish and the golden shiner are particularly fond of oil-cake, and large pieces can be thrown to them. I have not succeeded in getting as rapid growth in carp in a small space with artificial food as in larger waters where there is more range and plenty of food.

EGGS FOR GEIMANN.—Several lots of eggs are either on their way or are being sent to Geimann, the proprietor of the North German Lloyd steamer *Mash*, took out 20,000 eggs of the lake trout, *Cristiöoner namaynashu*, from Prof. Baird to the Deutsche Fischerer Verein. They came from the hatchery of Frank N. Clark, Northville, Mich., and were re-packed by Mr. Mather, of FOREST AND STREAM.

On the 21th the Oeder, of the same line, will take out 300,000 eggs of white fish, *Coregonus albus*, from Prof. Baird, to the same destination, also from Mr. Clark.

QUINNAT SALMON IN GERMANY.—In a private letter Mr. von Behr, President of the Deutsche Fischerer Verein, writes that the California salmon, from eggs sent by Prof. Baird this year, are doing capably. He says that Mr. Schuster knows not how to deal with the fry with which his tanks are swarming until he deposits them in the Danube.

FOOD OF CARP.—Those of our readers who are interested in carp culture will read with interest the report on feeding them in Germany, under the head of "The German Fishery Association." We give a translation of Mr. von Dum Burne's report of the management of this fish in different parts of that country.

The Kennel.

THE NATIONAL FILM TRIALS—CONTINUED.

BELTON III. AND NELLIE.

Wednesday morning a start was made at half-past seven, and fifteen minutes later Belton III. and Nellie were put down, just east of the Fortification, to run out down, to run out down, to run out down, to run out down. Belton did not commence very well, as he soon ran into a small bevy and flushed them. Following them into some sprouts, Nellie made a point, which Belton backed off indifferently. The bird was flushed to order, and missed. Nellie soon found another point, which she pointed to order, and missed. She then pointed, to order, winged a bird that Nellie failed to find. She again pointed, and Belton backed, a little better this time. Short, to order, killed, and Nellie retrieved nicely. Out in the open, Belton did not get a point, but he did get a point, which he pointed to order, and missed. Belton pointed, and Nellie, coming up in the tall grass, also came to a point. Short flushed to order, and his gun missed fire. Belton again flushed, and the dogs were ordered up and Nellie awarded the heat. Down altogether one hour.

BIZ AND COUNT NOBLE.

Biz, handled by Mr. McIntosh, and Count Noble, handled by Sanborn, were at once cast off. Great interest was felt by all in the result of this heat, as Biz is considered one of the crack dogs of Pennsylvania, and the Count is well known as a good one. In fact, many who had seen his work confidently expected him to come to the front. Both dogs went at a good rate of speed, but Biz was the fastest. He pointed to order, and Nellie quartered, Biz scored the first point on a bird that flushed almost as soon as he stopped. He remained steady, and carefully feeling the wind, he drew on a few steps, and again pointed and held the birds a long time. Mr. Sanborn withdrew the Count, who finally came and backed in good style. Biz was flushed by the spectators, and followed, and two or three of them were put up by the spectators, but the dogs failed to find any of them. A spin was now taken in the open, where all could see the dogs, and compare their merits. Biz had the advantage in range, and was clearly in the lead. The legs of Count. He also ranged fully as wide, and quartered as well. Turning back to where the birds were first found, and going east, Biz pointed, and then roared very carefully. Count took the same course a little to his left. Both roading on, Count first detected the birds, and Biz, who had been pointing the same line, dropped to point just as a single bird rose. Sanborn, to order, flushed a large bevy, and killed neatly. This work was simply perfection. Moving on, Count scored a flush. Both then quartered a large field of sedge grass in grand style, doing exceedingly nicely. Biz was the fastest, and pointed to order, where he pointed in good style. Biz came up and swung round behind him, and pointed just as the birds—which were seen running—rose. Both were steady to wing. Count was flat and Biz drove the birds. Count drove the birds to a point, which Biz refused to back. Sanborn flushed a single bird which he hit hard, but did not stop. Count again pointed, just as two birds rose. A little further on, he flushed a single bird, and a few yards further he ran into, and flushed, a bevy, dropping to wing nicely. Biz now roared a little too close, and flushed and dropped at once. The rest of the bevy flew on up wild. These finishes were all down wind. The dogs were then ordered up, and the judges, after comparing notes, awarded the heat to Biz. Down just one hour.

This heat was greatly admired, as it is not every day that one has a chance to see so good a dog as Count Noble beaten.

RUSH AND KING DASH.

Rush, handled by Aldrich, and King Dash, handled by Short, were put down at 10:30. Rush is the well-known champion small pointer, and was drawn finer than we ever saw him. He ran fast and hit Robbin's Island, but was so grossly fat and unsteady that he did not make any great advantage. He was unfortunately killed in falling in with King Dash, who is a little slower, but as he warned by his work he showed a much faster gait than he had in his previous work. King Dash was the faster, and flushed, and only a lark was found in front of him. Rush, when going at speed through a cornfield, suddenly brought up all standing on a very stylish point, but moved on into the woods and again pointed staunchly, but as nothing was found he scored a false point. Following him, King Dash, who was the judge, flushed a bevy, both dogs got to near a bird, and it flushed, Dash crouched as the bird got up, and Rush was fairly steady, but did not drop to wing. Dash roared a bird very fast, but getting too close, scored another flush. He soon drew to a good point, but the bird flushed wild. A little further on, both pointed single birds. Short failed to order, and Dash retrieved. He then flushed a bevy, and Rush pointed on trail and roared very well up to where they got up. On a little further, Dash dropped in a gamey point on a fresh killed rabbit, which was called a "fall" by the spectators, and he swung to the left, and made a beautiful point, which was backed by Dash; both roared, Dash shed, and the bird flushed. Both now pointed false. Both pointed again, but the birds flushed wild. Dash drew on and the birds got up all around him. A bird was flushed, and the bird tried to get up, but the bird, both dogs did very well. They were now ordered up, and the heat awarded to King Dash. Down two hours.

DOX AND GROUSE DALE.

Dox, another pointer, handled by Mr. Vaudorvert, and Grouse Dale, the winner of first prize at Robbin's Island, were now put down in some sprouts. Going but a short distance, both dogs pointed the same point, and then Grouse Dale did a fine bird. He was found in front of Dox. Grouse Dale had a bird, which got up almost as soon as he stopped. Then out near the edge Dox pointed, and his bird did the same. Then Grouse scored a flush. A little further on, Dox came to a good point, and Grouse backed a little further. Dox moved on and roared to order, and his bird followed. After which they were put down in a cornfield at 1:30 and worked through to some woods where Dox pointed false. Grouse coming up started a hare, which ran close to Dox, and both dogs took on a hare two jumps toward it, but stopped to order. Moving on, both dogs pointed a fine point, which was backed by Dox. The bird was started some little distance behind them. Then on across an open lot and into another piece of woods, which were drawn blank, we crossed a valley into some sprouts. When near the top of the opposite side, Grouse made one of his magnificent points on a large bevy. Dox came up, but did not

back, but swung for the scent and also pointed in good style. Tallman, to order, flushed the birds, and killed one. Both dogs returned steady. Don retrieved. To retrieve, did so fairly with some help from his handler. Following these birds, Grouse found first and made another grand point, while Don either backed or pointed, we could not tell which, but were inclined to think that he pointed. Tallman, to order, killed very neatly, and Grouse retrieved. This was of an excellent work. Turning back through the sprouts both challenged, but moved on to some timber, when some birds flushed wild. Turning down wind Grouse did a fine piece of work. He roared a short distance, and located a bird in good style, displaying good judgment. Tallman, moving up, flushed the bird. Swinging round to get the wind, and working back Don scored a good point, also down wind. The birds were flushed to order by the handler and missed. Grouse soon pointed again, but the bird flushed almost at the same instant. He soon pointed again, but this was a false point. The birds had evidently run, as he roared on them. A little further on Don pointed, and Grouse moved up to him and also pointed. Some very fine roading was now done by both dogs, but the pointer had the good luck to locate the birds. By swinging to the left, he got wind of a large bevy and drew to a staunch point just over a ditch. Grouse meantime roading them out, but before he got up to them they had gone, and with them his chance of victory, as they were now ordered up, and Don declared the winner. Down altogether two hours and five minutes. This was a hard heat, but we will finish the performances of the dogs were watched with absorbing interest.

PEEP 'O' DAY AND DASHING ROVER.

Peep 'O' Day, handled by Wallace, and Dashing Rover, handled by A. Winter, were put down in a cornfield in a valley at 8:30. Peep started off at a slashing gait, ranging well and moving very gracefully. Rover is also a very good moving dog, but was clearly out of his head. He soon pointed some distance from a large bevy, and Rover brought up to back, refused and moved on ahead for several yards, and came to a beautiful point, which he soon broke, and going on scored a bad flash. Winter shot and missed and Rover broke shot, but stopped after a few jumps. Following the birds, Peep dropped to point, and Rover brought up to back, backed out and went away a few steps, where he stood still, but his tail was moving. Wallace winged a bird, but as it could fly a little, Peep was not allowed to retrieve it. Rover was now withdrawn and Peep declared the winner at 3:55. Down twenty-five minutes.

MAXWELL AND TRIX.

Maxwell, handled by Short, had not run, as his competitor, Countess May, had been withdrawn, and he was cast off with Trix, who had a bye. She was handled by Winter. At the word Maxwell was off like a rocket straight away and soon lost to sight. He was found after a long search, and started again when he ran over a knoll out of the sight of the judges, and flushed a bevy. He then settled down and went much better. On the hillside he made a false point which Trix refused to back. Then a turn was made and we started toward home, but nothing was made, the birds being out of the wood. On reaching the hotel, Trix was withdrawn and Maxwell declared the winner of the heat.

This ended the first series of heats with the following result, as published last week.

FIRST SERIES—ALL-AGED STAKES.

- Bessie beat Gordon.
- May Laverack beat Dash III.
- Maxwell beat Countess May (withdrawn).
- Breckenridge beat Kimminknick.
- Maud W. beat Dashing Monarch.
- Lad beat Pindee.
- Countess May beat Nellie and two birds.
- Nellie bo Belmont III.
- Biz beat Count Noble.
- King Dash beat Trish.
- Don beat Broncksted.
- Peep 'O' Day beat Dashing Rover.
- Maxwell beat Trix (withdrawn).

SECOND SERIES ALL-AGED STAKES.

BESS AND MAY LAVERACK.

Friday morning the same route was taken as on the first day, and Bess and May Laverack were cast off at 8:05 in the cotton field. Both went very well, but Bess appeared to be in the best form and ran an excellent heat. Don did some as well in her heat, with Dashing Notice on Tuesday we cannot but think that the result would have been different. Working through the cotton and cornfield, in search of the bevy previously found here, the dogs did not swing quite far enough to the north, and the birds were starting to appear. Bess and May Laverack were out in front of the sprouts, and the rest flew east into the woods. Swinging round into the edge of the sprouts, both dogs pointed just as the birds flushed. May being a little ahead. Moving on May challenged, and Bess backed, then both roared a short distance, and May established a point, but Bess backed nicely, and two birds were flushed, but not shot at. A little further on, May pointed false, and Bess backed. Working east, Bess made a beautiful point, and May called up, went round her, and we thought, pointed instead of backed. Moving on into the wood, May pointed, and Bess backed. Roading up, Bess scored a flash. Turning round, Bess made a grand point, while May was stopped to order, but moving on she scored another flash, two or three birds getting up all around her. Bess remained steady. They were now ordered up, and the heat awarded to Bess. Down thirty-five minutes.

BRECKENRIDGE AND MAUD W.

Breckenridge and Maud W. were at once put down in a field of sprouts and corn, and working to the east, Maud dropped a beautiful point. Breck called up to back, passed by without seeing her, but as he turned back, he caught sight of her, and backed nicely. Dr. Ware killed to order, and Maud retrieved fairly. This was a very pretty performance. A little further and Breck dropped, and Maud backed very gracefully. Capt. Henry flushed the bird but missed. Maud came to a point soon after, and Breck came up and half pointed, but both handlers moved close to the dogs, and Maud became a little untidy and flushed four or five birds. We thought the handlers to blame for this. Maud then swung out to some woods and roared a capital point on a fresh bevy. Breck came around behind, and dropped also on point. This was good work. Capt. Henry flushed to order and missed with his gun. A little further on, Breck pointed a running bird, and Maud being the first to see it, called up to order, which he did. Maud backed the first point, but went on to order, when Breck moved, and passed by the bird, which was flushed to order in front of Breck. Maud, now ranging at speed, flushed a bird that she should have pointed, and the judges, after comparing notes, awarded the heat to Breck. Down thirty-five minutes.

LITA AND LAD.

Lita and Lad were now cast off in the spruce and woods, and after a short spin, were sent into the corn, where Lad, going at speed, struck the scent of a large bevy and dropped, as if shot, on a point, which he held until Lita was brought up to back, which she did fairly. The birds were flushed to order, and one killed, which Lad retrieved very well. Following the birds, Lita was challenged, and moved on, when Lita made a good point, which Lad backed. The bird was killed, and Lita went to retrieve, but not finding it readily, Lad moved up and came to a point, just as a bird got up. Both got scent of the dead bird, and moved toward it, but Lad retrieved it first. This was a pointed heat, as the birds flushed, and a moment later Lad did the same. Lita now roared nicely a short distance, and dropped on the point. Lad backed, but nothing was found, and they were ordered up, and Lad awarded the heat. Down twenty minutes.

NELLIE AND PEEP 'O' DAY.

Nellie and Biz were at once put down. Both ranged and pointed in grand style. Biz soon swung to the left, and made

a very handsome crouching point, which he held some time for Nellie to come up, but as she did not come Mr. McIntosh flushed to order and killed, Biz drooping nicely to wing. The bird was very much flushed. Biz was not retrieved. Then crossing the railroad, Nellie challenged and roared up to a bevy that was feeding, and pointed in grand style. Biz went around her and the birds, but showed no sign. Nellie again pointed, while Biz roared to her left and half pointed, but no bird was found before him while one was flushed to order for Nellie. Biz now pointed in a patch of pine trees, and Nellie to his left pointed at the apex of the same patch. Sautborn flushed to order and killed, and the bird fell close to Biz who retrieved it nicely. Both then roared running birds, one of which got up wild before Biz, while Nellie passed by a bird that was flushed behind her. She roared grandly into the woods, and established a point, but the dry leaves were so much for Biz, who roared too close and flushed two or three times, while Nellie remained staunch. He was at last brought up to her, but failed to back or wind the bird, which was flushed to order a few yards in front of her. The heat was then awarded to Nellie. Down forty-five minutes.

KING DASH AND DON.

King Dash and Don were put down at 10:40. Across the gully both challenged, but nothing came of it. After a long time, Don again challenged in some sedge and roared a short distance, when he swung to the left and caught it again in grand style, but the countess was not retrieved. Don soon got another good point, which Dash backed nicely. Mr. Vandervoort flushed to order and missed. Swinging round by the railroad and up a swale, both challenged, and Don roared in fine style up to a bevy and was backed by Dash. The birds were flushed very nicely, and Short killed. This was good work, as the birds were down wind, and Don showed excellent judgment in landing them. Going on, Don scored a flash, but soon came to a point, and Dash dropped very nicely to back. The bird was flushed to order, and Short winged it. Don sent to retrieve, but failed to do so, and when he started on, he ran into the bird, and retrieved it unharmed. Across the gully, Dash made a splendid point at the edge of some brush, and Don backed him, but as Short moved up, Dash upset his chances by making a wild flash. They were now ordered up, and the heat awarded to Don. Down a half hour and an hour. We now went to lunch which was awaiting us at the cotton gin.

PEEP 'O' DAY AND MAXWELL.

At 1:05 Peep 'O' Day and Maxwell were put down at the head of the gully to the east. When near the fence, Peep pointed false. The spectators flushed a bevy on top of the hill, which flew into the woods. Working toward them, Peep pointed under a tree-top, and one bird flushed very nicely. Capt. Henry flushed to the other side, and made a beautiful point, and Max backed in good style. Wallace slashed to order and missed, both dogs remaining steady. Then over the hills and through the fields, Peep showed the best pace and much the best style. Across the railroad, Peep drew to a point on a large bevy. Max backed and then went in ahead. He was a little untidy, but finally pointed. The birds were flushed to order, and one was killed. Following on, Max made a good point at a tree-top, when a bird flushed wild, but he remained staunch until his bird was flushed to order. This was very good. Peep finished a bird soon after at the same place, which bird was thrown up and shot at for Peep to retrieve, which she did well. They were then ordered up, and the heat awarded to Peep 'O' Day. Down nearly an hour.

SUMMARY SECOND SERIES OF HEATS.

- Bessie beat May Laverack.
- Breckenridge beat Maud W.
- Lad beat Leta.
- Nellie beat Biz.
- Don beat King Dash.
- Peep 'O' Day beat Maxwell.

THIRD SERIES.

BRECKENRIDGE AND BESS.

This ended the second series, and Breckenridge and Bess were put down at 2 o'clock. At the first heat of the third series in some woods. Running along the railroad, Breck made a beautiful point, the dogs flushed a bevy. Bess dropped to wing nicely, and Breck was fairly steady. Swinging round to get the wind, Bess challenged at a tree-top, while Breck tumbled off a log on a staunch point, and the scene being a very pretty one. Capt. Henry flushed to order and killed very neatly, and Breck retrieved very well. Then across the railroad Breck dropped on a point, which Bess backed. Roading a short distance, he dropped again. The bird then got up. Moving back into the woods both pointed false, and then out into the open, where they were ordered up. Then across the field to the bird, which was sent to run ahead. Bess, ordered on, scored a flash, and both dogs dropped to wing. They were then taken up, and Breckenridge awarded the heat. Down an hour and a half.

LAD AND NELLIE.

Lad and Nellie were at once put down and worked across the open. Lad pointed at a bunch of brush, where Nellie took a sniff and went on, and Lad charged and pointed on also. Nellie quartered very wide across the wind to the left, and pointed a nice bevy, which she held until we came up, when Sautborn flushed the birds to order. Meantime Lad found and pointed a bevy, which he was flushed by Dew, when he killed one, when Lad broke shot, but at the same time, he flushed a second bird, and Nellie drew to a splendid point on a bevy. Lad, called up to back did not see her, and crossed in front and dropped on point as if shot. Dew flushed to order, and made a very neat double. Nellie flushed a bird up to her, which she retrieved very well. Then Peep, then swinging back the judges compared notes and awarded Nellie the heat. Down one hour.

PEEP 'O' DAY AND DON.

Peep 'O' Day and Don were put down at 3:30. Working through the woods into a large field of weeds, Don challenged and roared to order, which Peep backed. Don pointed a flash of him. We could not see which pointed first, but thought that Peep had killed it. The birds were flushed to order by Wallace, who backed, and Peep retrieved nicely. Moving on south, both challenged, and Don called toward a bevy that flushed wild. He appeared to be all right, but he was flushed by Peep, who had dropped to and on which he should have backed. Then Peep flushed one in the briars. Don now made a blunder by roading a trail the wrong way in a cornfield. The judges flushed the bevy behind him. Peep pointed in the briars, and held her birds for Don to be called up to her, which he did very well. A little further on Peep flushed. Don then scored a false point, which Peep backed. He then pointed a hare, and Peep again backed. They were now ordered up, and the heat awarded to Peep 'O' Day. Down one hour.

SUMMARY THIRD SERIES OF HEATS.

- Breckenridge beat Bessie.
- Nellie beat Lad.
- Peep 'O' Day beat Don.

FOURTH SERIES.

NELLIE AND BRECKENRIDGE.

This concluded the third series, and Nellie and Breckenridge were cast off at 4:30 for the first heat of the fourth series. Breck at once scored a false point, and Nellie, a few minutes later, did the same thing, and Breck backed. Nellie then swung round, and flushed a single bird, which he flushed to order. Then Peep flushed and her birds, which were now flushed to order, and Capt. Henry killed one, which Nellie retrieved. She then made a grand point, which Breck backed, and the bird—a cripple—was caught. Breck then flushed a single bird in the swale, and Nellie was

awarded the heat at 5 o'clock. Down half an hour, this left Nellie and Peep 'O' Day the only ones in to compete for the first prize.

NELLIE AND PEEP 'O' DAY.

Saturday morning they were put down at 8 o'clock in a field of weeds east of the cotton gin. Both soon challenged where birds had evidently been feeding, but the second dog was not allowed to work out. A little further east they again struck what we thought the trail of the same bevy. Nellie, a little ahead, roared on, and Peep swung around her and dropped flat, Nellie free-jugstiff at the same time. Both then roared on, and a dog was seen as if they had a light alone would undoubtedly have flushed the birds, but the handlers crowded ahead, and a flush was the result. Swinging to the left Nellie was lost, but soon found, flat on her belly. Peep came up and backed nicely, and three or four birds were, to order, flushed, and very cleverly missed by Sautborn with both hands. Crossing a hollow Nellie ran up a single bird. Nothing more was found here, and the dogs were worked cast through a large field of weeds and sedge, which was drawn blank. Then turning north both dogs challenged, and Nellie turning to the whistle, ran into a large bevy and flushed them. This was a little to the north and partly behind the judges, who had the sun in their eyes, and as larks had been getting up all around, they did not notice that these were equal. We had only a glimpse of them, and also thought them larks, but just then we obtained a view of Sautborn's face and all was as plain as day, and was at once scored her a flush, and the judges as being on a lark. Following these to the east, across a gully, Nellie went up the bank and a single bird flushed in front of her. She at once stopped and remained steady, while the bird flew a few feet ahead, and soon after she started up behind her. She undoubtedly thought that more birds were to be seen by when the first one got up, and showed good judgment by remaining quiet. Down the gully Nellie challenged at what proved to be the trail of a large bevy. While roading them out one bird jumped and flew a few feet ahead, and soon after a stranger dog flushed and flew back over the crowd, but she stuck to the point and finally established a grand point, which Peep backed nicely. Sautborn flushed the bevy, to order, which settled in some weeds and sedge beside a gully. Peep here made a bad flash, putting up a large bevy, but a short distance, and Peep was ordered up, and before he drew a short distance across the gully. She did not chase, but followed the bird, and as she went up the bank the bird again flushed. Working on up the gully, Peep made a magnificent point, which she held for a long time, while Nellie was called up to back, which she did not do, but went in and stole the point, and the birds were flushed, to order, and both dogs were steady to wing. They were now ordered up, and the heat awarded to Peep 'O' Day, who was declared the winner of the first prize, at 3:40. Down one hour and forty minutes. Both handlers had hedged in the early part of the heat by agreeing to divide the stakes, no matter which won.

DON AND MAXWELL.

Dashing Rover having been withdrawn, Don and Maxwell were the only ones remaining who had been beaten by Peep, and they were at once cast off to decide which one should compete with Peep for second place. A wide circle was made to the north before anything was found, when a large cotton field and cornfield, which had never failed us, Don swung to the right, and would not be called off as he had struck scent, which he stuck to and located a bevy very well indeed. They were flushed, to order, and one bird flew but a short distance, and dropped down again while the rest went on. Don then drew a nice point on the stand, which Mr. Vandervoort flushed, to order, and missed. This was all first class work. Then a wearisome tramp was taken without result, except that Max dropped on point to a hare. After a long time, Peep drew to a point, and the railroad was crossed, and which flew into the woods along the gully. Beating through the woods nothing was done except that Don pointed a hare. Working along near the gully Max pointed a single bird, which Don backed indifferently. Short flushed to order and missed. The birds were now ordered up, and the heat awarded to Peep 'O' Day. We could not reconcile this decision with the result as we beheld them. Down two hours and a half.

NELLIE AND MAXWELL.

Nellie and Maxwell were put down at 12:15 to compete for second prize, but after running 10 minutes Maxwell was withdrawn and Nellie given the heat and declared winner of the second prize. We now went to lunch, and Lad and Breckenridge, who were the last two dogs beaten by Nellie, divided the third prize.

SUMMARY FOURTH SERIES OF HEATS.

- Nellie beat Breckenridge.
- Peep 'O' Day beat Lad.
- Peep 'O' Day was first, Nellie second, and Breckenridge and Lad divide third.

BRACE STAKES.

NELLIE AND COUNT NOBLE.

This ended the All-Aged stakes, and immediately after lunch the Brace stakes were commenced by Sautborn's Nellie and Count Noble. Peep 'O' Day was cast off at 12:30. Peep was ordered up, and the brace was to run a short time, in order that Mr. Durgenthal, who was obliged to leave on the train, might mark on the range, quartering style and speed of each brace which could be put down against the necessary complete their score on birds. Count Noble was the winner of the brace, which was a large cotton field, where some elegant work was done. Both were nearly perfect in quartering, turning to the whistle and obeying signal of hand very well. Both showed fair speed. Across the road, Nellie flushed a single bird, and a signal point, which Count Noble scored, and dropped to back when near her, but she moved on and flushed a bevy, which she should have pointed, as she had the wind. Then on over a rise both disappeared, and when we came up were pointing, but nothing was found. Nellie now pointed once or twice and was backed, but they moved on each time. Count made one or two jumps for a hare, but stopped to order. Count then made a capital point, which Nellie backed. The bird was flushed to order, but the gun missed fire. Count was not quite steady, but dropped to order, and soon made another point, but nothing was found, where when the spectators were ordered up, Count had pointed a single bird in a bush, and they were ordered up.

GROUSE DALE AND DASHING MONARCH.

Grouse Dale and Dashing Monarch were at once put down. Working through the woods to the open field, both showed good speed and ranged and quartered fairly. They then swung to some brush, and Monarch backed in grand style, and on a little further Grouse made a magnificent point, which Monarch backed very fairly. Then Monarch pointed, and Grouse backed. Just here the handlers and judges were ordered up, and the heat awarded to the trail, which, we have no doubt, they would have tracked out, as the spectators, coming up, flushed a large bevy close by, which flew into the woods ahead, where Grouse soon found them and made one or two signal points, which Monarch backed in grand style. The bird was flushed to order by Tallman and missed. Grouse then flushed a bird down wind and dropped to wing. Ordered on, another got up close by. Monarch pointed close to the fence, and Grouse laced him fairly. Tallman flushed to order and killed. They were then taken up, and the heat awarded to Grouse Dale, who was put down and worked through to the large field to the north. He at once dropped flat almost as soon as they were started, but nothing was found. Out in the open both showed up very speedy, ranging very well and quartering well. Nothing was found for some time, when Dashing Notice went in and flushed a bevy, and they were then. Following the birds into the woods nothing could be done with them, as they got up wild. Turning back, Belmont pointed a nice bevy in a bushy corner and King backed. Short flushed to order and killed. They were then taken up, and the heat awarded to Grouse Dale and Dashing Monarch third. This ended the N. A. K. C. F. T. of 1891.

The following is a complete list of the winners in the National Trials:

SUMMARY DERBY WINNERS.

- 1st, Dashing Novice.
2d, Bess.
3d, Shalow.
4th, Glida.

The 4th prize was a very handsome silver cup presented by Mr. Geo. H. Will, of Red Bank, N. J., as a Consolation Cup.

SUMMARY ALL-AGED STAKE WINNERS.

- 1st, Peep 'o' Day.
2d, Nellie.
3d, Breckenridge.

RACE STAKE.

- 1st, King Dash and Belton III.
2d, Count Noble and Nellie.
3d, Dashing Monarch and Grouse Dale.

PENNSYLVANIA STATE ASSOCIATION FIELD TRIALS.

GRAND JUNCTION, TENN.

MEMBERS' STAKE.

The Pennsylvania State Association Field Trials commenced on Monday, Dec. 12, at Grand Junction, Tenn., on the grounds where the National Trials had been so successfully run the week before.

Capt. A. E. Woodson, Mr. Jas. H. Dow and Mr. Wm. Tallman acted as judges.

May Laverack (Thunder-Spot), lemon Belton setter bitch, whelped May 11, 1879. Owned by Mr. J. Snellenburg, New Brighton, Pa.

Pet Laverack (Thunder-Peersa), lime Belton setter bitch, whelped April 2, 1880. Same owner.

King Dash (Belton-Stayton's Floss), liver and white setter dog, whelped June 5, 1875. Owned by Mr. J. R. Hendricks, Pittsburg, Pa.

Belton III (Belton-Stayton's Floss), black, white and tan setter dog, whelped June 5, 1878. Owned by Mr. J. K. Stayton, Pittsburg, Pa.

Max (Dash-Flores), red Irish setter dog, whelped June 12, 1878. Owned by Mr. J. S. McIntosh, Pittsburg, Pa.

Skip (Dog Whip-Daisy Dale), black, white and tan setter dog. Owned by Mr. J. R. Hendricks, Pittsburg, Pa.

They were drawn to run in the following order: May Laverack and Skip, Pet Laverack and Belton III, King Dash and Max.

MAY LAVERACK AND SKIP

were put down for the first heat at 9:15. May is a sweet moving little bitch and catches her points in a very taking way.

She swung ahead in the sprouts and got the first point, which Skip hacked, but was a little misdeaf. Skip dropped to order.

A bird further on Skip made a false point, which May backed rather indifferently. Skip was then withdrawn and May declared the winner of the heat after being down only fifteen minutes.

PET LAVERACK AND BELTON III.

were then cast off. Pet very soon dropped on a point and was handsomely backed by Belton, but nothing was found and Pet scored a false point.

It was half an hour before anything else was found, when Belton found a very and pointed them in good style. Pet dropping flat to back as soon as she saw him. The birds were flushed to order, and one was killed by Mr. Snellenburg, while Mr. Stayton missed.

Pet retrieved the bird fairly. Belton was soon pointing again and Pet backing flat on her heels. Mr. Stayton ordered to order and killed neatly with his second barrel.

This was very pretty although Belton was not quite steady to wing, but at once became quiet to order. When ordered to retrieve he failed to find and flushed a bird while searching for it, and when the handlers, moving to the left, he saw the bird back and ran.

Belton, however, was not quite steady to wing, but at once became quiet to order. When ordered to retrieve he failed to find and flushed a bird while searching for it, and when the handlers, moving to the left, he saw the bird back and ran.

Belton, however, was not quite steady to wing, but at once became quiet to order. When ordered to retrieve he failed to find and flushed a bird while searching for it, and when the handlers, moving to the left, he saw the bird back and ran.

Belton, however, was not quite steady to wing, but at once became quiet to order. When ordered to retrieve he failed to find and flushed a bird while searching for it, and when the handlers, moving to the left, he saw the bird back and ran.

BIZ AND KING DASH

were now put down; and Dash after a few jumps dropped on point, but nothing was found and he scored false point.

Moving on he again pointed and Biz jolled him, when both moved on. Biz swung around to make a false point, to a beautiful point on a very just as a single bird started. Dash was close by and both remained steady while the bevy flushed a little wild.

Gang on, Biz challenged on trail of a single bird but got it the wrong way, and roared to the end; and he failed to find it.

They were then taken up for lunch, and again put down; but the scent was very poor, as the dry wind was very unfavorable, especially in the middle of the day, and it was a long time between birds.

Dash was the first to find, but it was not until he had swung back and ran that he had used one of them but missed him as nearly as any of the professionals could have done.

Dashing Monarch, Llewellyn's Dash II-Countess Moll, entered by Mr. J. C. Higgins.

Grouse Dale, Waters' Grouse-Daisy Dale, entered by Mr. Tallman.

Warwick, light red setter, 4 years (unknown), entered by Mr. S. S. Brown, Pittsburg, Pa.

Warwick, orange and white setter dog, 3 years old (Leicester-Petrel), entered by Messrs. Tallman and Martin.

Ollie, black, white and tan setter bitch, 5 years (Dan-Petrel), entered by Messrs. Tallman and Martin.

TUESDAY.

Tuesday morning the All-Aged stakes were commenced at 8:15 by casting off.

DASHING MONARCH AND OGDON

just east of the old fort, near the pines. Monarch was handled by Martin and Gordon by Titus. Both dogs appeared to be feeling well, Monarch especially, showing by his more animated movements that he was feeling better and that he was more himself than he had previously shown either here or at Robbins' Island.

Gordon was also going well, and was the first to find. Swinging into the thick scrub oak he dropped on a capital point to a bevy. Monarch at once backed him in his own grand style.

The birds flushed wild and were at once followed. One was seen to flush wild, and Monarch pointed where it got up, but soon moved on and located a half dozen birds, which he pointed magnificently and Gordon backed him very gracefully.

Monarch flushed the birds to order but did not shoot. Swinging into the pines, Monarch again pointed, but this time he was not so steady to wing as he was nicely. Titus then put up a single bird and Gordon dropped to wing.

though he had been shot. Working down into a ravine, Gordon dropped suddenly on point to a single bird and remained steady as a rock, although the bird ran away down wind between the corn rows in plain sight of him. He was trying to get a bird, and speaks well for his training, as just then Monarch swung round below him and, catching the scent, made one of his magnificent points, which Gordon honored by partly rising and backing him handsomely.

This was the grand work, but a little too exciting for both handlers, who flushed the bird to order and missed him again. They were now ordered up and the heat awarded to Dashing Monarch at 9:20. Down one hour and five minutes.

OLLIE AND DASH.

Ollie, a litter sister to the celebrated Gladstone, handled by Martin and Mr. Brown's Dash, handled by Short, were at once cast off close to the pines and worked east. Ollie is said to be a capital field dog, and is well known about Pittsburg as a setter.

He has a very gamy look and is very strong and in a many way that is very taking. Short trained him, but has not handled him for a long time. The honors were equally divided on the first find, as both dogs pointed a very nearly the same amount.

The birds were flushed to order in a kind of one while Short missed with both barrels. Both dogs were steady. Ollie ordered to retrieve, did so very well indeed. Following the birds, Dash made a capital point, but running on was steady by Short, when he again stopped and Ollie backed him. Nothing was found, however, and he was scored a false point.

Soon after, Ollie going down wind flushed a single bird, and instantly dropped on a beautiful point to the rest of the bevy, who lay until flushed to order, when both handlers killed. Dash retrieved very well. They were then ordered up and the heat awarded to Ollie at 11 o'clock. Down one hour and forty minutes.

COUNT NOBLE AND MAXWELL.

Count Noble, handled by D. C. Sanborn, and Maxwell, handled by Short, were then put down at the celebrated hays and between the dogs, handlers, judges and reporters, the birds were put up all around.

At each rise the dogs would drop to wing, but they failed to locate any of the birds, for which they could not be blamed. Count Noble, however, flushed a single bird. Both dogs then started a bird, which ran away to the margin of the pasture of Max, who was uneasy, but steadied down to order and backed Count very handsomely, who remained steadfast.

In fact, the Count was so sure of his bird that it was with great difficulty that Sanborn could get him to shoot. He was prepared to move, but alas! the bird had moved before him and he failed to find it and scored a false point.

Both dogs were evidently demoralized from their wretched start, and for some time no good work was done by either. Both soon dropped on a false point. Working on, Count Noble, however, flushed a single bird, which he pointed nicely and Count backs. A little further Max again drops on point and Count backs. This time a bird was flushed to order and the Count took two or three noble jumps after it, but at once dropped to order.

Max soon after dropped very nicely to a bevy and Count backed him in his own grand style. The birds were flushed to order and one was killed, which Max retrieved in good style. Count then pointed a single bird, but moved on past it, and it was put up a moment afterward by the spectators.

Both then pointed and roared alike, and Count Noble was awarded the heat at 1:05. Down two hours. A move was then made for lunch.

NEED AND GROUSE DALE.

At 2:10 Ned, handled by Morgan, and Grouse Dale, handled by Tallman, were turned loose and worked west. Ned showed good speed and ranged very well, but was quite untidy and no match for his partner.

Morgan was the first to find but he walked into the bevy and scored a flush. Both handlers shot and a bird was killed, which Ned retrieved fairly. Working on Grouse Dale scored a false point, which Ned backed and retrieved.

Ned, however, pointed a single bird in grand style, which Tallman flushed to order, but failed to kill. In the meantime Ned pointed a bevy very nicely at a long distance, but he drew on too close and scored a flush. Morgan shot and missed; Ned dropped to shot. The dogs were now sent to where a single bird had been marked down.

Grouse caught the scent and made a magnificent point, which Ned refused to honor, but went on and put up the bird. Working south Grouse again pointed and Ned again went in and flushed. They were then ordered up and Grouse Dale was awarded the heat at 3:50. Down forty minutes.

NELLIE AND BELTON III.

Nellie, handled by Sanborn, and Belton III, handled by Short, were at once cast off in the woods. Belton challenged, but soon moved on. Working through into a cotton field, Nellie dropped very nicely to a single bird, and Belton dropped to order.

Sanborn walked in and backed her. Belton pointed a single bird in grand style, which Tallman flushed to order, but failed to kill. In the meantime Ned pointed a bevy very nicely at a long distance, but he drew on too close and scored a flush. Morgan shot and missed; Ned dropped to shot.

The dogs were now sent to where a single bird had been marked down. Grouse caught the scent and made a magnificent point, which Ned refused to honor, but went on and put up the bird. Working south Grouse again pointed and Ned again went in and flushed. They were then ordered up and Grouse Dale was awarded the heat at 3:50. Down forty minutes.

WARWICK AND MACK LAVERACK.

Warwick, handled by Martin, and Mack Laverack handled by Short, were at once put down. Warwick was quite ready to be going to a track as fast as he could, but the excitement notwithstanding this drawback, he went very well.

FIRST SERIES ALL-AGED STAKES.

Dashing Monarch best Gordon.

Ollie best Dash.

Count Noble best Maxwell.

Grouse Dale best Ned.

Warwick best Max Laverack.

King Dash a bye.

KING DASH AND DASHING MONARCH.

King Dash who had a bye, handled by short, and Dashing Monarch were put down at 4:35 to run the first heat of the second series. Both started off in grand style, Dash getting over the ground at good speed while Monarch ranged very well with his head well up, most notable fact, he had had a hair-cut in the season.

Except a slight challenge by King nothing was done; and they were taken up at five o'clock to go down again in the morning.

WEDNESDAY.

Wednesday morning was cold, damp and cheerless, with every indication of rain. In fact the dense mist was quite as wet as rain would have been, but a start was made, and at 9:30 Dashing Monarch and King Dash were again put down in a cordial attempt to complete their unfinished heat.

Monarch was still "a coming" and let himself out with that abandon which so captivated all who saw him at Robbins' Island last year. Dash also went well and some fine ranging and quartering was done in the open fields.

Working on through some woods, Monarch swung round and straightened out on one of his magnificent points. Dash passing between him and the birds, caught the scent and dropped on a beautiful point; flushing the birds to order, but handlers greeted the birds very meekly. Both dogs dropped to shot, and both retrieved in good style. This performance was truly a gem and not excelled by anything that transpired during the meeting.

One gentleman remarked that he was almost sorry that he had witnessed this performance, as his future sports in the field would be marred by the knowledge that he had had the honor of seeing it. Working over the hill and through some woods a single bird flushed a little wild just ahead of Monarch, who at once croaked and then pointed another, while Dash backed him in good style.

Martin put up the bird to order and secured a kill. Both dogs dropped to order and Dash retrieved very nicely. Both dogs pointed, but Dash drew a trifle too close and got a flush. Swinging to the north, Monarch forged ahead into a swale and made a grand point to a large bevy which was flushed to order, but not shot at. The dogs were then ordered up, and the heat awarded to Monarch at 10:50. Down one hour, altogether one hour and fifteen minutes.

This heat from start to finish was about as near perfection as possible, and both dogs covered themselves with glory, and achieved honors worthy of the noblest of hounds.

COUNT NOBLE AND OLLIE.

were now ordered down and cast off at 10:55. They worked over the hill, where some birds had been marked down. Count found first and dropped to a single bird, Ollie backing him very gracefully. Sanborn flushed to order and missed. Count straightened out and instantly dropped on another point.

When this bird got up he made a jump of two, but as at once dropped to order. Working on to a swale Count, while going at speed, carelessly flushed a bird, and soon after scored a false point, which Ollie backed. Swinging to the east some fine ranging was done by both dogs. Count showing the most speed and ranging the best.

of second place were equally divided between Grouse Dale and Warwick, Martin and Tallman taking the Parker. The third was awarded by King Dash and Belton. This division was, perhaps, as equitable as could have been made, but we would have preferred to see it run out, as the day was a capital shooting day, and we would have seen some excellent work; but the baulders had got tired and wanted to see the end of it and go home.

THE DERBY.

ENTRIES IN THE DERBY.

Pet Laverack, Lug Laverack, Dashed Prince, Mack Laverack, Bessie T., London, Hector (formerly Tom Payne), Gertie, Kinnikinnick.

The pedigrees and owners of these have already been given. Christmas Hill, lemon and white pointer dog, whelped June 9, 1880 (Lack of Edonhall-Ready Money), entered by Mr. R. T. Vandervoort, Pittsburgh, Pa. Ned, Red Setter, whelped April 14, 1880 (Con-Nan), entered by Mr. R. H. Bailey, Canton, Ohio. Nettimah, Gordon setter dog, 11 months' old, Malcolm-Dream III., entered by H. Cossand, Fall, Mo. Foromoni, black and white setter, whelped July 26, 1880 (Dashing Monarch-Fairy III.), entered by Mr. H. B. Harrison, Tilsenburg, Ont. Lug, black and tan setter, whelped May, 1880 (Shafto—) Jora Laverack, black and white setter (Young Laverack-Petrel II.), entered by Mr. J. B. Hoy, Pittsburgh, Pa.

By mutual agreement of the exhibitors, the rules were waived and the judges—Capt. E. A. Woodson and Mr. Jas. H. Dew—were requested to select the winners after seeing the dogs down long enough to judge upon their merits. Starting from the hotel at 9 o'clock, the dogs were put down at 9 o'clock, Lug Laverack having been withdrawn.

GERTRUDE AND LUG.

Gertrude, handled by Sanborn, and Lug, handled by Short, were the first brood to run. They were cast off in a patch of scrub and worked through there and the pines, and a field of weeds east to the old field, which they went south, when the pointed Gertrude made a little way, and then swung south. Gertrude then made a point, but soon moved, and was steadied by Sanborn, who saw the birds in front of her. She then held her point in fine style, while Lug backed rather indifferently. A large bevy was flushed to order and both dogs brought down their birds, neither of which was found, although a long time was expended in looking for them. Then the bevy was followed. Lug pointed a hare, and a little further on Gertrude ran into a portion of the bevy and flushed them, although she had the wind and was close to the birds, which she did not seem to blame, as she was a little behind. Swinging into the sprouts Lug pointed, but Gertrude flushed a little too close and put up the bird, and soon after flushed another one. They were then taken up at 9:50. Later in the day a bird was thrown in the air, and a gun fired for them to show they were equal as retrievers. Both acquitted themselves very well.

FOREMAN AND MACK LAVERACK.

Foreman, handled by Stafford, and Mack Laverack, handled by Short, were then put down. Both are very stylish, good moving dogs, and are possessed of a fine turn of speed, and will, undoubtedly, be the best dogs that the best dog would win. Working through a large field of weeds, Foreman started a hare, which at once gave chase to Mack, who was ahead and going at speed, but the hare had the legs of him and soon passed him. Both dogs were perfectly steady through this very trying ordeal. A little further on both dogs challenged where birds had been feeding. Mack swung the pig t way, and catching the scent instantly stopped on a grand point with his head high in the air. Foreman, brought round to back caught sight of him and crouched, but at that instant he wended the birds and slightly turning his head in their direction also pointed in capital form. This was splendid and the beautiful attitudes of the dogs were greatly admired. Flushing the birds to order, Stafford scored a killed and shot a male, Foreman retrieving the bird fairly. Moving on, Short made one or two flushes, one of which he killed, but it fell a long distance, and was not found. Working through some thick woods, Foreman put up a bevy which flew into a gully where they were followed, but not much was done and the dogs were ordered up after being down an hour, and a bird thrown for Mack to retrieve, which he did.

NETTIMAH AND PET LAVERACK.

Nettimah, handled by Titus, and Pet Laverack, handled by Short, were now put down among the scattered birds. Both moved very careful, and Pet challenged once or twice, and then dropped on a beautiful point. Short flushed to order and missed. Moving on very carefully, Pet again dropped almost on top of a bird, which he pointed very nicely, and then being the gun he hit with the result. In going through a bare field Nettimah put up a single bird, and soon after another one rose. Both dogs were steady to wing. A bird was then thrown for each dog, and both retrieved very well. They were then ordered up after being down forty minutes, and the next brace called.

KINNIKINICK AND RED NED.

Kinnikinnick, handled by Stafford, and Red Ned, handled by Morgan, were cast off at 11:35, and worked north. Both showed good speed, but Ned, we thought, a little the fastest. Kin showed challenge and roared a short distance, but the spectators flushed the birds which were very nice. Ned commenced with a very nice point very much as Ned retired to back and the bird was flushed to order, but not shot at. Ned again flushed and soon repeated the offense. Working down the ravine, Kin got a grand point on a nice bevy. Ned dropped to order, and the birds were then flushed to order and missed. Capt. Woodson deserves the credit for finding this bevy, as the dogs had been over the ground, but insisted upon closer work and sent them in again, when the birds were found. A bird was now thrown, and both retrieved well. Kin very well indeed. They were now ordered up after being down thirty five minutes, and the last brace were put down at 12:15.

DASHING MONARCH AND XMAS BILL.

Dashing Novice, handled by Sanborn, and Mr. R. T. Vandervoort's imported lemon and white pointer dog, Xmas Bill, eighteen months old, by Lack of Edonhall out of Ready Money, handled by Morgan. Novice commenced with a very nice point very much as single bird in a ploughed field, and a little further on in the same field, she redeemed herself by nicely pointing another one on the bare ground; Bill backed her and Sanborn put up the bird to order and winged it. Some time was spent trying to find the birds and the dogs were ordered up, when Novice swung round on a beautiful point, which Bill backed very nicely. Novice then moved on, and picking up the lost bird, retrieved it unharmed. We then went to lunch, after which they were again put down and worked through some wood into a cultivated where both challenged, and Novice taking a cast along the fence, struck the scent and dropping to a sitting-post, pointed a bevy that were in the next field, Bill backing her. Morgan flushed to order and killed a bird, which Bill retrieved fairly. They were now ordered up, and the judges decided that

DASHING NOVICE AND KINNIKINICK.

were the best two, and ordered them down to run for first and second places. They were at once cast off and worked toward where a bird had been marked down, but they passed by it and it was put up by Mr. Dew; then turning east into some prairie where the bird was, Kin and the dog were ordered up, and Novice then pointed and Kin backed nicely. Sanborn put up the bird to order

but did not shoot. Beating through the aprons, Kin pointed a single bird in the open just at the edge. When the judges rode up a bird got up out in the field, and Stafford, thinking that it was the bird that his dog was pointing, moved up and flushed a bird right under the dog's nose, when several others got up all around. This was an exhibition of first-class work, both animals showing off to great advantage. The judges decided that Dashing Novice was fairly entitled to the first prize and Kinnikinnick to the second, and ordered Mack Laverack and Pet Laverack as the next best to run for third place, but Short, who handled them both, divided the honors equally between them at 2:40 a. m., time ended the Field Trials of 1881.

The following is a list of the winners in the Penny Lyvaia State Trials.

MEMBERS' STAKE.

1st, Biz and May Laverack divided. 2d, King Dash.

ALL-AGED STAKE.

1st, Count Noble, Dashing Monarch and Nellie divided. 2d, Grouse Dale and Wash which divided. 3d, King Dash and Belton III. divided.

DERBY.

1st, Dashing Novice. 2d, Kinnikinnick. 3d, Mack Laverack and Pet Laverack divided.

ATLANTA DOG SHOW.

ON reaching here it was most difficult to find accommodation, the "Kimball House" being full to overflowing, and cots in requisition every night. This, of course, was owing to the vast multitudes from all parts of the States visiting the Exposition, which, as the time draws near for closing, appears to attract more and more interest.

The show was arranged for by the managers of the Exposition, but at the seventh hour taken hold of by a few energetic gentlemen, lovers of field sports, who, with the aid of Mr. Lincoln, knew no such word as fail, and through downright energy and pluck they succeeded in drawing together, for their numbers, a most creditable collection. Mr. Berke, Capt. Heyward, Col. Hoge and others were indefatigable in their exertions to make it a success, and Major Taylor being secured to occupy the position of Judge, with associates from the immediate vicinity, gave the utmost confidence to exhibitors that the best dog would win. Among prominent admirers we noticed Professor Legare, of Wall-halla, S. C.; Mr. Orgill, of your city; Mr. Vandervoort, of Pittsburg, Pa.; Mr. Vance, of Chattanooga, Tenn. (the last three gentlemen having been at the Grand Junction Field Trials); Judge Hopkins, of Thomasville, Ga.; the Messrs Foster, of Madison, Ga.; Dr. Holmes, of Rome, Ga.; Mr. Willard, of Jonesborough, Ill., and many others.

Class 1—English Setter Dogs.—Brought out five entries, Mr. Taylor's of Richmond, Va., being first, with his recent importation, Dashing Rover. This dog, under the care of Mr. Winter, was directly from the Grand Junction Field Trials, and was thus out of show form; still his good points brought him to the front. The second prize went to Ben, Jr., owned by Mr. Woodward, and he was closely pressed by Mr. Veal's Mountain Dew, etc.

Class 2—English Setter Bitches.—Brought the same number of entries into the ring, a very nice class, too. Mr. W. Legare's entry, Vic, a beautiful little bitch, of splendid black, white and tan markings, or it might be called mottled, and of high on to perform form, took the judges' eye for first. She is of the Llewellyn strain. The second was awarded to Dr. T. B. Legare for his Videau, who was also a beautiful animal, Kate Claxton and Duchess of Devonshire, each gaining a v h c, well merited the mention, as did also Opal, gaining a h c.

Class 3, 4—English setter dog and bitch puppies contained but two entries in the former and none in the latter. Class 5—Irish Setter Dogs.—The only entry Captain, owned by Mr. J. C. Vance, was awarded first prize. Captain is a good specimen of the Irish setter.

Class 6—Irish Setter Bitches.—Three entries; all good. We thought at first that Trix, owned by Mr. Green, of Boston, would carry off the blue ribbon, and were surprised to see Major Taylor give her a v h c only, and award first to Gypsy Queen, belonging to Mr. Vance, of Chattanooga, and the second to Mr. Chapman's Pink. On close examination we could not indorse the judges' decision, finding Trix both long and weak in quarters.

Class 7—Irish Setter Dog Puppies.—Two entries, the prize being awarded to Mr. Vance's Comanche.

Class 8—Irish Setter Bitch Puppies.—Three entries, and prize awarded to a promising youngster belonging to Mr. Edmundson, of Washington, Ga., named Daisy.

Class 9—Gordon Setter Dogs.—Five entries, and all dogs of considerable merit. The first was awarded to Judge Hopkins, of Thomasville, Ga., for his Scott, a dog of unusual quality and power, having such a back and lon as we have not seen in many a day. As Judge Hopkins proposes to send Scott to the next N. Y. Show, he will be again heard from. The Messrs. Willard captured second prize with a young Grouse dog named Lang, and a v h c was given to the Gordon Kennel Club, of Locust Valley, N. Y., for Rakc.

Class 10—Gordon Setter Bitches.—But two entries. The first prize was awarded Messrs. Willard Bros. for Toot, a nice specimen. Second money to Gordon Kennel Club for Mab II.

Classes 11, 12—For Gordon Setter Puppies.—No entries. Class 13—Georgia Setters.—This class was for the best setter dog bred and owned in the state. Two entries. Prize awarded to Capt. Heyward for his Sport, a very strong, useful dog.

Class 14—Georgia Setter Bitches.—Three entries and prize awarded to Mr. C. Fairbanks' Sadie.

Class 15—Georgia Setter Puppies.—Prize was awarded to Lee, owned by Miss Ann C. Dixon.

Class 16—Pointer Dogs over 55 lbs.—Five entries, and probably the best and most closely contested class of the show. The first premium was finally awarded to Prof. W. W. Legare's lemon and white Rab; the second to Mr. Vandervoort's liver and white Don (who recently distinguished himself at the Grand Junction Trials); v h c to Mr. Orgill's lemon and white Riot; v h c to Mr. H. B. McComb's St. George, who was afterward claimed at catalog price.

Class 17—Pointer Bitches over 55 lbs.—One entry. Belonging to a beautiful lemon and white bitch, belonging to Prof. W. W. Legare, was awarded the premium.

Class 18—Pointer Dogs under 55 lbs.—Eight entries, among which were some of note. The first and second honors were awarded Mr. Edmund Orgill's Rush and Random; v h c to Mr. Appold's, of Baltimore, Md., for Bravo;

h c to Mr. Fambro's, of Atlanta, Chance, and Judge H. W. Hopkins for Nip. Mr. Berke's Ralph was commended.

Class 19—Pointer Bitches under 55 lbs.—Four entries and all good ones. The first prize was awarded to Mr. Orgill's Rue; for second place it was a squeeze between Judge Hopkins' Peggy and Mr. Vandervoort's Luck, the former, however, secured second honors, and Luck took v h c. Luck although best-n for second money, is a very handsome little bitch.

Class 20—Point r Puppies Dogs.—This was a walkover for Mr. C. B. Hargrove's Senny.

Class 21—Pointer Puppy Bitches.—Prof. W. W. Legare's brace were the only ones to compete.

Class 22—Water Spaniels.—No entries.

Class 23—Field Spaniels (dogs or bitches).—The Hornellsville Kennel Club had no competitor against Beedick, who took the premium.

Col. Frank E. Howe, of Boston, showed (not for competition) his beautiful large-sized black spaniel Jet. Jet is a rare specimen, whose satin coat showed the best of care, and one cannot be surprised at the Colonel being so fond and proud of him.

Class 24, 25—Small Cockers and Puppies.—No entries. Class 26—Foxhounds.—Seven entries, and among them some grand dogs. The first prize was given to Mr. A. W. Foster's Jim Skinner, a splendid specimen, showing more points than any dog we have seen. In conversation with Mr. P. Ester he remarked that he kept an imported "greyhound" to cross in with his hounds occasionally, as they would not give a pin for dogs that had not plenty of gun in them. 3d prize was awarded to Forrester, owned by Mr. Smith, of Atlanta; h c to Lead, owned by Mr. Perkinson, and c to Hop, owned by Mr. Echols, of Rome, Ga.

Class 27—Foxhound Puppies.—No entries.

Class 28—Beagle Dogs.—Two entries; both very fine; belonging to Judge Hopkins. First prize was awarded to Ned.

Class 29—Beagle Bitches.—Crock, owned by Judge Hopkins, was the only entry and was well worthy of the first prize.

Class 30—Foxterriers, Dogs.—One entry. Prize awarded to Nipper, owned by Mr. W. Graham, of Rome.

Class 31—Foxterriers, Bitches.—No entries.

Class 32—Greyhounds.—Prize awarded to Mr. L. H. Foster's Jim, a fine dog and only entry.

Class 33—Scottish Deerhounds.—None.

Class 34—Collie Dogs.—Five entries. First awarded to Mr. Wm. M. Jones' Tobie. Second going to Mr. Wm. C. Parks' Fritz.

Class 35—Mastiffs.—Two entries. The first prize given to Turk, owned by W. R. Smith, of Atlanta, and it is seldom that a finer specimen of this noble breed is put on exhibition anywhere. Lady, owned by same party, scoring second.

SPECIAL PRIZES.—Professor Legare took the premium for the best setter in show with his beautiful Llewellyn Vic. For the best pointer, it was divided between Rush and Rue, both owned by Edmund Orgill, who also took the special for the best brace of dogs in the show with Rush and Random.

SUMMARY.

The prizes were principally \$25 for the first and \$10 for the second, below are the awards:

Class 16—Pointers over 55 pounds.—First, Rab, W. W. Legare, of Washington, Ga.; second, Ben, Jr., Butler Woodward, owner, Red Clay, Ga.; commended, Mountain Dew, J. Sam Vale, Rome, Ga.

Class 17—Pointer bitch dogs.—First, Vic, W. W. Legare, Wall-halla, S. C.; second, Videau, T. B. Legare, owner, Camden, S. C.; commended, Opal, Butler Woodward; Kate Claxton, R. I. Hampton, owner; Rome, Ga.; Duchess of Devonshire, W. W. Foster, Madison, Ga.

Class 5—Irish setter dogs.—First, Captain, J. C. Vance, Chattanooga, Ga.; second, Pink, John P. Chapman; Trix, J. O. Green, owner, Boston, Va.

Class 7—Irish setter dog puppies.—First, Comanche, J. C. Vance, Chattanooga, Ga.

Class 8—Irish setter bitch pups.—First, Daisy, W. L. Edmundson, Washington, Ga.

Class 9—Gordon setter dogs.—First, Scott, H. W. Hopkins, Thomasville, Ga.; second, Lang, Gordon Willard Bros., Jonesboro, Ga.; Raks, Gordon Kennel Club, owners.

Class 10—Gordon setter bitches.—First, Toot, Willard Bros., Jonesboro, Ga.; second, Mab, Gordon Willard Bros., owners.

Class 13—Georgia raised setters.—First, Sport, W. I. Heyward, Atlanta, Ga.

Class 14—Georgia raised setter bitches.—First, Sadie, C. Fairbanks, Atlanta.

Class 15—Georgia setter pups.—First, Lee, Annie Dixon, Atlanta, Ga.; second, over 55 pounds.—First, Rab, W. W. Legare, Wall-halla, S. C.; second, Dan, R. T. Vandervoort, Pittsburg; H. E. Orgill, New York; St. George, H. B. McComb, Memphis.

Class 17—Pointer bitch dogs over 50 pounds.—First, Beloua, W. W. Legare.

Class 18—Pointer dogs over 55 pounds.—First, Rush, Edmund Orgill, second, Random, W. W. Legare, and Nip, H. W. Hopkins, Thomasville; Ralph, J. Berke, owner, Atlanta.

Class 19—Pointer bitches.—First, Rue, E. Orgill; second, Peggy, H. W. Hopkins, Thomasville; third, Vandervoort's Luck, Rome, Va.

Class 20—Pointer dog pups.—First, Senny, C. B. Hargrove, Rome.

Class 23—Field spaniels.—First, Beedick, Hornellsville Kennel Club, Hornellsville, Va.

Class 26—Foxhounds.—First, Jim Skinner, A. W. Foster, Madison, Ga.; second, Forrester, Dock Smith, Atlanta; Lead, A. M. Perkinson, Atlanta; H. Water Echols, Rome.

Class 29—Beagle dogs.—First, Ned, H. W. Hopkins, Thomasville, Ga.; second, Beagle bitches.—First, Crock, H. W. Hopkins, Thomasville.

Class 32—Collies.—First, Tebe, William Jones, Atlanta; second, Fritz, W. C. Sparks, Atlanta.

Class 35—Mastiffs.—First, Turk and Lady, both owned by R. W. Smith, Atlanta.

Class 37—Newfoundlands.—O. C. Edmund's dog, Miscellaneous.—W. O. Sparks' bitch Lucy, and J. M. Elliott's Siberian bloodhound.

PENNSYLVANIA ASSOCIATION.—At the annual meeting of the Pennsylvania State Field Trial Association, held at the Stonevale House, Grand Junction, Tenn., Dec. 12, the following gentlemen of Pittsburg were elected officers for the ensuing year: President, J. Palmer O'Neil; Vice-president, Wm. A. McIntosh; second Vice-president, J. R. Henricks; Treasurer, D. McK. Lloyd; Secretary, I. R. Stoyton. Executive committee: B. W. Orton, Edward Gregg, R. T. Vandervoort, Howard Hartley, J. W. Fish, W. C. Bringer.

PITTSBURG BENCH SHOW.—There will be a bench show at Pittsburg, Pa., commencing March 7, 1882. Chas. Lincoln will superintend, and liberal premiums will be given. We hope to be able to give all particulars next week.

KENNEL NOTES CROWDED OUT TO NEXT WEEK.

HOLIDAY PRESENTS.—Skates, Finest Quality Cutlery, Fine Opera Glasses, Parlor Mirrors, Air Pilots, Spirit Mirrors, Outing Caps, and all Broadway, above 2d st. All goods by the best makers, with latest improvements, at lowest prices.—Ado.

Messrs. Bonner, Fels & Co., of 37 Beaver street, this city, are offering some very choice champagne, suited for the holidays. The firm's wines have earned a high reputation, and their brands are favorites.

YACHTING NEWS.

NEW STEAMER.—Mr. Egbert T. Smith is to have a brig-rigged steam yacht, to be called Tanager.

LOW BALLAST.—Cutter Neva, of Boston, will have her ballast on her keel increased from 1,100 to 3,000 lbs.

MORE CUTTERS.—Mr. E. M. Paddock, of Philadelphia, is to have a racing twelve tonner from Lawley & Son, of Boston.

STILL ANOTHER CUTTER.—D. J. Lawlor, Chelsea, Mass., is about to lay the keel for a smart dink deck cutter, 28 ft. long, 14 ft. beam and 5 1/2 ft. water. His last year's Alga is evidently taking.

NEW CUTTER.—A gentleman of Boston, having found his 28 ft. dink deck cutter such a success last season, is anxious to build a larger one this winter, and will sell his last year's ship. Bon-a-fide inquiries will be sent him through our care.

NEW SCHOONERS.—Capt. William Smith, of Bayport, L. I., has a new schooner in frame. Palmer, of Noank, Conn., is soon to be busy with a big one for Mr. Miller of the Pro-spero. She is to be 97 ft. over all, 22 ft. water line, 23 1/2 ft. beam and 9 1/2 ft. hold, with 7 ft. 9 in. water.

LETHEA.—This schooner has been bought by Mr. Henry C. Ward of this city from Mr. J. W. Chandler of Boston. She was built by J. T. Marsh, Patuxent River, Md., in 1874, for General Sargent of Baltimore. Over all, 65 ft.; water line, 55 ft.; beam, 15 1/2 ft.; hold, 6 1/2 ft. and 4 1/2 ft. water without board.

ELECTRIC MOTORS.—A boat with electric motive power is in course of construction at one of the yards on the banks of the Seine. It is to be eighteen feet long and five feet wide. The proprietor, Mr. Teller, proposes to cross the Channel in it—namely, from Boulogne to Folkestone. If it is successful he will be able to claim the distinction of having inaugurated the application of electricity to maritime traffic.

MEASUREMENT.—We are in receipt of an alarming array of letters concerning measurement. A number have been published already. Several more appear this week, and others will be printed

in our next issue. A great many, however, must remain unpublished, as they are in the main repetitions or variations of ideas brought forward by others. While we appreciate the ready answers from every one, we must ask those whose letters do not appear to bear with the apparent want of consideration, as space is so limited, and answers to their communications can be gathered from the remarks appended in review of those published.

MEASUREMENT.—It would seem as though this subject had been worn threadbare; not so, however. It should be kept continually before the yachtsman's eyes, until some plan of measurement shall be adopted and framed in a common-sense form. We refer our readers to some of that kind of talk from the indomitable fighter, E. Knab, of Forest and Stream. He says:

"We must not seek measurement rules to tax what gives speed in the result or finished boat, but what gives speed before the shape and elements of the boat have been determined upon; and this is the amount of bulk given the builder to handle, thereby leaving him a free choice in every respect as to dimensions, location of bulk, and one and all the relations of boat, ballast, sails, resistance, weather-lines, etc. Only in this way is an absolutely logical comparison of results possible."

He gives us the whole thing in a nutshell. The genius of the draughtsman who has spent years of toil in scientific research, whose lines and figures "do not lie," if faithfully carried out, is eternally crippled by false ideas and rules of time allowance and measurement. Give two men a pound of putty apiece, and let each mold his boat to suit himself, no matter how loopy, wide or deep their designs may be. "Either extreme" will then be found faulty.—Philadelphia Echo.

NO DANGER.—It is an axiom with practical designers that a really good boat can carry the tax on her bulk much sooner than risk her qualities by seeking to evade a proper payment. The effect of a bulk rule to prevent an excess in the use thereof—there is such a thing as having too much bulk even in a cruiser for her good—on the one hand, and on the other offers no inducement to cut down below the best, allotment, for then the boat loses faster in qualities than the saving in tax would make up. We have designed many boats of all types and know this to be true, for we would never venture to spoil an effective design for the sake of a trivial saving in tonnage. Under a bulk rule the best racer is also the best cruiser.

A success in the first respect implies a right proportioning of bulk—neither too much nor too little—and such a boat is likewise the most profitable as a cruiser. She does not lose her qualities by being too bulky, nor does she fall short by not being bulky enough.

NEW YORK YACHT CLUB.—At a meeting last Thursday the report of the America Cup races was received and adopted. Resolutions of thanks were returned to the owners of the Albatross and Gracie. Commodore Kane offered the following resolutions, which were passed:

WHEREAS experience has proved that the terms and conditions of the deed of gift under which the New York Yacht Club acquired the America's Cup are inadequate and not sufficiently defined to meet the intentions of the donors, therefore be it

Resolved, That the club return the said cup to Mr. George L. Schuyler, the surviving donor thereof.

Resolved, That the secretary, when communicating the foregoing resolution to Mr. Schuyler, be directed to express to him the unabated interest felt by the members of the club in this national trophy, and to state to him that should he decide again to offer it as a challenge cup, under such new conditions as may be necessary to carry out the intentions of the donors, the New York Yacht Club would esteem it an honor to be again selected by him as its custodian, and that no effort on their part would be spared to retain it against all comers or to regain it if lost.

Resolved, That a committee of five be appointed by the Chair to hand Mr. Schuyler the communication of the Secretary, and to consult with him as to the terms deemed necessary to accomplish the original designs of the donors in the event of his deciding to again present the cup to this club.

The Chair appointed ex-Commodors S. Nicholson Kane, Commodore J. R. Waller, J. Frederic Tams, J. H. Bird and ex-Commodore W. H. Thomas as the committee to wait on Mr. Schuyler. Vice-Com. Smith offered the following, which was unanimously passed: WHEREAS the members of the New York Yacht Club have heard with deep regret the death of ex-Commodore Henry C. Stebbins and his offer, or exchange for first class breech-loading guns; and that through his death they have been deprived of a kind friend and of one whose former services to the club will always be gratefully remembered.

Best Quality Braided Fishing Lines. G. G. GUNTHER'S SONS

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Kife and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family entertainable, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve a unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$3 for six months. To clubs of three or more, \$3 per year each. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

The Kennel.

A POPE, Gen'l Passenger Agent. "THE FISHING LINE." TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS OF THE NORTHERN MICHIGAN. The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. The TROUT season begins May 1 and ends Sept 1. The GRAYLING season opens June 1 and ends Nov. 1. BLACK BASS, BLUE PICKEREL and MUSKOGEE also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends, and the fish can be had for packing fish can be had at nearly all points. TAKE YOUR FAMILY WITH YOU. The scenery of North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the season of 1882 by new buildings. THE SEASON ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen. Dogs, Guns and Fishing Tackle Carried Free at owners' risk. It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Routers and full information, address

A. B. LEST, Gen'l Passgt Agent, Grand Rapids, Mich. NOTICE TO SPORTSMEN. SHOOTING IN CURRITUCK SOUND, NORTH CAROLINA.

Hotels and Resorts for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co. Respectfully invite attention to the SUPERIOR FACILITIES afforded by their lines for reaching most of the FISHING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT PORTS, avoid the inconveniences and dangers of reshipment, while the excellent cars which run over the smooth steel track enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF Pennsylvania Railroad Company also reach the best localities for Gunning and Fishing in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities in PHILADELPHIA, HARRISBURG, CRESSON, HARRISBURG, MINNEAPOLIS, and other well-known centres for Trout Fishing, Wing Shooting and Still Hunting.

Also to TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FISH AND FEATHERS. L. P. FARMER, Gen'l Assa. Agent, FRANK THOMSON, Gen'l Manager.

Trout Fishing, Wing Shooting and Still Hunting. Also to TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FISH AND FEATHERS. L. P. FARMER, Gen'l Assa. Agent, FRANK THOMSON, Gen'l Manager.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1828, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (course) to 4 (fine) unequal in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. cans.

Dupont's Eagle Ducking.—Nos. 1 (course) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigroon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. cans and 1/2 and 1/4 lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 1/2 lb. kegs and 1 lb. cans.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. cans and 1/2 lb. kegs.

Dupont's Rifle.—Nos. 1 to 5. Shooting. Nos. 1, 2, 3, 4, and 5. Nos. 1 to 5. Shooting. Nos. 1, 2, 3, 4, and 5. Shooting. Nos. 1, 2, 3, 4, and 5. Shooting.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y., N. B.—Use none but DUPONT'S Fg. or Ffg. for long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

The Hazard Powder Co., MANUFACTURERS OF Gunpowder

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (course). Unsurpassed in point of strength and brilliancy. Packed in square casters of one pound each.

Hazard's "American Sporting." Nos. 1 (fine) to 6 (course). In 1 lb. cansisters and 5 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 6 (course). In 1 and 5 lb. cansisters and 5 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFG, FFG and "Sea Shooting" Fg in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 1 lb. FFG is also packed in 1 and 5 lb. cansisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" Fg is the standard rifle powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.
Thursday, December 29.

THE CLOSE OF THE YEAR.

WITH the first day of January comes the close game season in most of the Northern and Western States. It need not mean, however, a cessation of sport by those whose circumstances will permit them to follow the birds to the South. Our game columns from time to time describe rare hunting grounds beneath the Southern sky. The American hunting territory is so wide and varied that a sportsman may, and without shooting the nesting birds, follow the pleasures of the field all the year through.

The shooting during 1881 has not been of the best. Several causes transpired to lessen the game supply; the unusual severity of the winter of 1880-81 decimated the birds in several States; other localities were affected by the summer's drought; and the extraordinary open weather of the present season has precluded fine sport with the ducks. The year has witnessed a great pigeon shooting tournament, which in magnitude will probably never be equaled in the future. There has also been wrought a notable change of sentiment regarding the propriety of such wholesale pigeon slaughters by ostensible game-protective societies; and in this respect it may be said that in 1881 the cause of true manly sportsmanship has made a decided advance.

To the angler the past year has, in most parts of the country, been an average one. The Southern sea coast angler always has a good season, and a great variety of fishes to choose from. The Northern salt water fisher is more dependent upon the migration of his favorites, and some of them

were late in coming last spring. The bluefish did not appear until late, and it was feared that there would be none. In August they came more plentifully, and in September blue-fishing was good along the coast of New Jersey, Long Island and Massachusetts. Other salt water species were rare, and sheephead scarce. A few minor inventions in tackle have appeared, and the usual crop of new reels. In fresh water the season has not been good, but as in most places the fishing is gradually growing poorer, year by year, perhaps it was as good as could be expected. The Adirondacks are being skinned by the trout-hog, and the grayling are nearly numbered with the past. The progressive fishcultivist has noted several discoveries, the most notable being the hatching of the Spanish mackerel; and fishculture has spread over new territory, and some fish commissions have been created in States which heretofore have not had such useful officers. In the States where fishculture is older, the ravages of the poacher have been partly compensated for by an increase of fish for this free American to kill out of season. But for the work of the fishcultivist he would long ago have poached the last one. Altogether it has been a fair year for the angler.

In the matter of Natural History events the year has not been without interest. Ornithologists have to thank Mr. Robert Ridgway for his new check list of North American birds, which is the most important contribution recently made to the subject. A number of additions have been made to the North American avifauna. The first volume of New England Bird Life has made its appearance. Among the papers published in these columns Mr. Hapgood's essay on the Migration and Range of the *Limicola* is especially noteworthy, as being a suggestive discussion of the intricate problem. The march of science during the year 1881 has not been retarded by any lack of earnest workers, nor by any lack of diligence and enthusiasm on their part.

There have been an unusual number of important events in the kennel world. The bench shows and field trials have been more numerous than in any previous year, and also more decidedly successful. The performances of the competing dogs have been of a high character, and the meetings have been noticeably free from the trickery and jockeying which has in former years marred some such occasions.

The year in rifle shooting circles has been a busy one, though we have had no great international match to dazzle the general public with its show and bubb. The year opened with Creedmoor, the parent range of the country, free of debt, and the Association in possession of an establishment and plant that it would require \$50,000 to replace. In the country at large there has been an abundance of target practice. Our files will show records of shooting from Albany, San Francisco, Milwaukee, Boston, New Orleans, New Bedford, Newport, Washington, Chicago, Baltimore, Cincinnati, Pittsburgh, Cleveland, and many other points. Several of the State Rifle Associations have done good work in carrying out annual meetings. The fall meeting at Creedmoor brought together a good company of contestants, with scores in some instances beating the record in the staid matches. In small-arm shooting the pistol tournament of the past winter in this city was a great success; but somewhat of a rebuff was met when the off-hand shooters found themselves unable to meet the challenge of John Rigby, of Dublin, on his own terms. The year closes with a good prospect of a military shooting by our American Guardsmen at Wimbledon next year. There is no good reason why a strong team should not go over next July, and add another to the series of American triumphs with the rifle. The year 1881 has shown any retrogression. The score list of the year will show that the riflemen of the country have not lost their cunning.

The year has been especially fruitful in yacoting. Not only have we had an international match for the old honored trophy won by the schooner "America" in 1851 from a British fleet, but, through the visit of the cutter *Madge*, we have been taught some most valuable lessons in the science of building and the art of sailing. These lessons, it is true, will bear fruit in the future rather than at once. Yet their import is none the less worth chronicling now as belonging to the season just closed. Great strides have been made in the knowledge of the principles governing naval design, and

much old fogysm and many musty misapprehensions have passed away. The peculiar antipathy to wholesome depth, keels and low ballast, as well as hasty rigs, which has so long characterized our yacht builders, now bids fair to give way to a more intelligent understanding of the whole problem. In the future safe, seaworthy boats, with sailor-like rigs, seem destined to displace the dangerous oversparred light draughts of earlier days. In congratulating the sailing public upon the turn of the tide, now fairly set in, favoring the able ship in preference to the machine, FOREST AND STREAM may justly claim to have contributed in no mean share toward bringing about the healthy reform.

This is not a season for review only. Anticipation paints pleasant pictures of pleasures to be realized in the months of the coming year. May the fields and streams of 1882 be of pleasantness and peace.

FORUM, FIELD AND FLOOD.

WE find in the last number of the *Hour* an appreciative sketch of Hon. John E. Develin, of this city, a gentleman who has won distinction at the bar and in legislative halls. He is also well known to members of the craft as an expert and enthusiastic follower of field sports. "While leading a busy professional and political life," says the sketch, "Mr. Develin has found time to indulge the love of field sports inherited from his father. He is a true sportsman, ready at any moment to shoulder gun or rod and start for the woods, the prairies or the streams. There is something remarkable about the rapidity and facility with which he merges from dusty law books and complicated authorities to plunge into the midst of his favorite sports; or chains up his setter and throws aside his birds to resume the study of intricate legal problems with which he is soon to puzzle a court or astonish a jury." Mr. Develin has also rendered valuable service to the cause of game protection; several of the wisest provisions of the law were originated by him and carried through the Legislature largely by his personal influence and exertions. For his labors in this field credit and honor are due him from the great body of sportsmen who have been benefited thereby.

Our esteemed and evidently well-meaning but mistaken contemporary thinks to add to its praises of Mr. Develin by depreciating the present standard of American sportsmanship, that by the contrast his may appear the more creditable. "Between gamblers, cockney huntsmen, glass ball breakers, and gentlemen riders," says the *Hour*, "American sportsmanship has reached a low ebb, at least in this part of the country." All of which is simple nonsense. The truth is, that never before in the history of this country, or of any other country for that matter, has the standard of sportsmanship been so high as at the present time. Never have the legitimate field sports of rod and gun been accorded greater dignity than now, nor has the ideal sportsman's character ever been nobler and worthier. That man must be willfully blind who fails to recognize the vast and radical difference which to-day distinguishes the great host of American sportsmen from the "gambling fraternity." The sportsman who seeks his recreation in the field and along the stream knows as little of pool-rooms, faro-dens and sawdust walking-match swindles, and has as little sympathy for them, as the gambler knows and feels for sunshine, forest aisles and purring brook. And the public—which in some things is wiser even than newspaper editors—is fast coming to find this out. The public is ready to accord the manly sportsmanship of the day its due; indeed, it has already done so. Instead of being at a low ebb, the tide of sportsmanship is at that flood which is leading on to fortune.* The *Hour* could have turned a neat compliment for the subject of its remark, had it said, as with propriety it might have done, that the tone of sportsmanship is at present exceptionally high, and that among the worthiest exponents of its spirit and practice, Mr. Develin holds a distinguished rank.

By the way, now that the *Hour* has employed the term "true sportsman," will it rise and explain what it understands the expression to mean? Meanwhile, we refer our contemporary and our readers to the admirable picture of "The Ideal Sportsman" given elsewhere.

* If any ambiguity attaches to the fortune, the reader is respectfully referred for a solution to any of the sportsman's goods stores.

AMATEURS AND EXPERTS.—It is but a narrow mind which would estimate the value of a day's field shooting by the number of birds brought to bag, or of a day's fishing by the quantity of trout or bass in the basket by sundown; and so it is but poor judgment which rates a man's standing as a "whole-souled, genial sportsman" by the number of times out of a hundred shots that he can kill his bird, or by the number of fingerling trout he can land, as against his neighbor's count. As long as a man commits no offenses against the written and unwritten laws of the field, and earnestly tries to enjoy and appreciate the health-giving and purifying influences surrounding him, while at the same time promoting the enjoyment of his companions, so long is the merest beginner as fully entitled to fellowship in the guild of sportsmen, as the greatest expert of the day. Not that we would have him always a beginner, in point of skill. What is worth doing, is worth doing well, fully as much in field sports as in anything else; but the disposition of some so-called sportsmen to frown upon a would-be shooter because he was not born a crack shot, cannot be commended. The scoffers forget that they ever were beginners themselves, as some grumbling and gouty old gentlemen forget that they ever were boys, when the young people annoy them. Skill in field sports is gained by enthusiasm and practice, but enthusiasm in some cases grows up with the youth, and in some cases comes to the man with the sudden discovery that he somewhat enjoys a branch of sport which he would have equally enjoyed before, if he had known anything about it. In the latter case, give the man a chance, and in these days of improved guns and tackle, neat and well balanced, he will, urged on by enthusiasm and encouraged by practice, in all probability become as expert as any amateur could wish, and a thoroughly "good fellow" in all appearance, as well as at heart. We wish to see more, every season, of the fifteen-penned, deck-bound, care-worn men of this busy age, taking a few days of recreation, from time to time, among the brooks and by the ocean, in the fields and the mountains, and returning to their labors with minds and bodies renewed and strengthened; fully able, in their increased power, to more than make up for the few days passed away from business. If a man's sense and bodily health are unimpaired, and he is inclined in that direction, he can scarcely be too old to become a sportsman, in deed as well as in thought. It should, therefore, be a matter of pride, with those who are already members, to welcome him to the fraternity, rather than to repel him by criticisms upon his inexperience.

A GREAT SPORTSMAN'S ROUTE.—Hon. Hinton Rowan Helper, of St. Louis, ex-Minister from the United States to the Argentine Republic, author of that once famous book, "The Impending Crisis of the South," is now in this city on business connected with the projected "Three Americas Railway," planned and promoted by him, intended to run from Manitoba through the North, Central and South Americas, longitudinally to Patagonia. What a glorious "sportsman's route," on a large scale, this line will be when finished! Think of the varieties of game, large and small, to be met with throughout the entire length of the route, and the untold possibilities of "stopping off" to fish in the Amazon! Certainly, for a sportsman with spare time and a lumpy purse, no one trip could furnish more varied attractions or greater changes of scene and action. "Dogs, guns and fishing tackle carried free," of course. We can imagine the enthusiastic "thorough sportsman" leaving the Northern terminus with a baggage car filled with the entire sporting department of a beach show, all kinds of tackle from a split bamboo flyrod to a set of explosive harpoons, and everything in firearms, from a twenty gauge hammerless to a Gatling battery. "Going to Buffalo to shoot buffaloes, ah, y'know," would be nothing to it!

THE WIMBLEDON CHALLENGE. As we go to press a communication has arrived from the Secretary of the National Rifle Association of Great Britain, informing Gen. Hancock, the President of our National Rifle Association, that the Council of the British organization will welcome a team of American Guardsmen at Wimbledon next summer. A special sub-committee has been appointed, and they are now busy arranging a scheme for the competition, which will be submitted to us in a short time. In our next issue we will publish the letter in full.

THE RULING PASSION.—A curious letter came to the FOREST AND STREAM office the other day. It was written by a deaf mute, who had seen an advertisement of this paper and wrote: "I want to know if you have pictures of lions, tigers, elephants, and any animals or beasts in that illustrated weekly journal," and in the letter to us was inclosed another one to a gun dealer, asking for an illustrated catalogue, that he might look at the pictures of guns. There is the ruling passion.

DOES THE COLLEGE AMATEUR PRESS represent the student life of the day? Baseball, cricket, foot-ball, lawn-tennis and boating appear to be the most prolific topics of discussion. These, with growlings at the faculty, slangy "grinds," and downy love poems make up the average college paper. Are athletic sports and flirtations the absorbing occupations of American college students?

"DON'T HULLA BEFORE YOU'RE OUT OF THE WOOD," says the wise old saw, and there are still two more momentous days left in 1881, but—who will care for Mother Bhipston now!

BYE-WAYS OF THE NORTHWEST.

TENTH PAPER.

THE next morning we passed Point Atkinson and into Burrard Inlet, and by noon were at the little town of Granville. We made a brief stop here to purchase some supplies, and then passed on, reaching Hastings an hour or two later. Here we were cordially welcomed by Mr. Fannin, who agreed to accompany us to the head of the North Arm. Our arrangements were soon made, and the canoe started off again, while I remained behind, to follow in a single canoe with Fannin and the Sitwah Seammux, whom we intended to get as guide. When we went to the rancherie, however, we found that our worthy friend, and all his brother Indians, were hopelessly drunk, as a *Kootchman* had died the day before, and they had been mourning for her. They would remain drunk as long as their whiskey lasted, so it was useless to wait for Seammux. We, therefore, took our things aboard Mr. Fannin's light canoe, and started for the head of the Inlet, which we reached the next day.

On our way up the Arm, we met several canoes loaded with salmon, which the Sitwahs had caught with spears and gaffs in the river which empties into the inlet at its head. One of the canoes had a four pound trout, which had been speared. Here, too, I noticed, for the first time, a number of great holothurians, or sea-cucumbers, lying on the bottom. One of these being brought to the surface with the spear, proved to be ten or twelve inches long; an unsattractive creature, brown in color and studded with great warts. The Indians eat them, as they do also the octopus, and pronounce them excellent; but none of our party seemed inclined to try them. We paddled up Salmon River nearly to the first jam of logs and camped on a sand bar. A little later, in the light canoe, we started up the river on an exploring tour, which, however, did not carry us beyond the jam. As we were passing through this our attention was drawn to the immense school of salmon slowly swimming round and round in the deep pool under the logs. In this pool, which was, perhaps, twenty feet wide and forty long, were swimming slowly about or lying quietly near the bottom, four or five hundred salmon, each of which weighed from eight to ten pounds. As the canoe passed over them they would make a rush to one side or up stream, but would almost immediately return to their former position. The water was clear as crystal, and looked about six or seven feet deep, but, in reality, was over eighteen, and our sixteen foot salmon spear was not nearly long enough to reach the fish upon the bottom. The sight of these splendid salmon excited the members of our party not a little, and the spear was in great demand. It was an instructive and amusing sight to see the learned, scientific light of our number, a mathematician of high attainments, a man who is supposed to take pleasure only in measuring the angles which the various faces of a crystal make with one another, and to whom the mysteries of differential calculus are rather more simple than a chapter in one-syllabled words would be to the average man—it was an instructive and entertaining sight, I say, to see the Professor stroched out at full length on his face on this jam of logs, his eyes glued to a crevice through which he watched the fish below, while his right hand grasped eagerly at the air above him, and his lips repeated these words: "Oh, please let me have the spear for just a minute; they are so thick here that I know I can't help catching one if I only thrust it at them." But although the Professor made many a thrust, as did all the others, the total result of the afternoon's work was one single salmon. Afterward, however, when the depth of the water had been measured and a longer handle rigged to spear and gaff, we caught all the fish we required.

We had hoped to have had a day or two of hunting on the North Arm of Burrard Inlet, but during the three days of our stay there it rained constantly. The woods were so wet that travel through them was extremely uncomfortable, while the mountains were shrouded in a dense white mist. Once we climbed part way up one of them during a lull in the storm, but it was impossible to see fifty yards ahead of one, and hunting was out of the question. So one morning, we carefully broke camp, and paddling down to Hastings, unloaded our baggage, and paid off and dismissed the Sitwahs. The next day we bade farewell to the beautiful Inlet, and took our departure for New Westminster.

There is something wonderfully impressive in the forests of British Columbia. The gigantic trees, straight and symmetrical, like the pillars of some great cathedral whose dark green roof spreads out far above us, and whose height cannot be measured in feet, awe the traveler by their size and their regularity. The stillness is unbroken. No voice of bird or beast is heard to disturb the solemn quiet of the scene, only sometimes the sad moaning of the winds among the lofty branches, or the whispered echo of the salt waves breaking unceasingly against the iron bound cliffs is felt though scarcely heard. Occasionally, it is true, as in contemplative mood you yield to the influences of the silence, and give yourself up to the melancholy reveries to which the surroundings incline you, the intense quiet is broken by the harsh chatter of the red squirrel, or the hoarse, ill-omened voice of the raven, far more in keeping with your surroundings, may be heard. But as a rule these woods are voiceless. The cedars, the firs and the cypresses are swathed in a funeral drapery of moss, which hangs in long, motionless festoons from the branches. To find bits of color we

have to look carefully among the undergrowth, where we can detect bright berries and particolored lichens, while the ground is covered with the brown and withered foliage of the evergreens, the accumulations of many a long year.

The sawmills and logging camps of Burrard Inlet and of Washington Territory are too important to be passed over without some mention. One may see among the gigantic red woods of California individual trees which are much larger than those of this northern country, but, so far as I know, there are on this continent no forests where the timber will average so large as it does here on the North-west coast. The two most important species, as they are the largest, are the Douglas fir (*Pseudotsuga Douglasii*), and the cedar (*Thuja gigantea*). It was informed that the largest tree of the first named species, which had been cut for the mills on Burrard Inlet measured 318 feet when felled, and was 9 feet in diameter at the base inside the bark, and a stick of timber sawed at Hanson & Atkinson's mills, at Tacoma, Washington Territory, measured 96 feet in length by 14x22 inches. The cedar grows quite as large as the Douglas fir, but not as tall. The largest tree that I saw measured eleven feet in diameter, six feet from the ground, and in the hollow in its butt, three or four men could have slept very comfortably. These trees are usually felled by cutting through them some distance above the ground. This is done because the hole of the tree at its base is knotty and unfit for timber, and is thus much harder and more difficult to chop through than it is a few feet farther up the stem. The chopper begins operations by cutting a notch six or eight inches deep in the tree trunk, three or four feet from the ground. Into this he drives a "paddle," a piece of timber four or five feet long, four inches wide and strong enough to support a man's weight. Standing on this "paddle" he then cuts another notch, a few feet higher up, into which he inserts a second "paddle," and mounting to this one, draws out, if necessary, the one below, and drives it in again still higher up. Almost all the stumps that one sees in these forests bear the marks of the position of two "paddles." I am informed, however, that of late years another method of felling these trees has been adopted, by which the chopper is saved much of his labor. Four holes, opposite one another, are bored with a large auger in the bole of the tree, and in each of these a fire is kindled, which burns, it is said, without any further attention, until the tree is so weakened that it falls of its own weight. A man can fell trees in this way much more expeditiously than with the axe, and two or three hundred trees can be felled before they begin to fall. It would seem that this method is, however, open to serious objection on the score of wastefulness. Aside from the danger that the fires thus started are likely to spread, and may burn over a considerable extent of country, much of the timber felled in this way must be lost. An expert chopper, with an axe, can lay the top of a tree within a yard or two of where he wishes to, but when the trees are burned down they will of course be as likely to fall one way as another, and there would thus be more danger of their being broken, or of their falling in places where it might be impossible to get them out. The timber when felled is stripped of its branches and dragged to the water, and from time to time a steamer calls at the different camps, makes up booms of logs, and tows them to the mills.

These mills are curiosities to one who has been accustomed to the sawmills of the East, where nothing but small timber is sawed. Starting with the ordinary sawmill machinery, with which all are familiar, a process of evolution has gone on, which has developed the appliances by which these enormous sticks can conveniently be handled and sawn, so that at present the sawmills of the Pacific coast are unlike any thing to be seen elsewhere on this continent. One mill at Port Ludlow, W. T., which, when we passed it, was only just being completed and not yet in operation, is five hundred feet in length.

The vast extent of the forests and their general accessibility to water has made lumbering on this coast extremely profitable in the past, but already we hear complaints that the timber lands are all taken up, and that the loggers have to go farther and farther back to find sticks that are worth cutting. These complaints, however, are heard mainly south of the boundary line. The vast forests of British Columbia are as yet almost untouched, and with reasonable care in cutting the timber, should yield lumber enough to supply the west coast of America for many years to come. The mills at Moodyville in Burrard Inlet can saw sticks 120 feet long by 7 in diameter, but at the time of our visit they were handling what they called "small logs," which were only about four or five feet in diameter.

It was pleasant on reaching New Westminster once more to meet our friend Mowitch and his charming family and receive his cordial welcome. Once more we sat on his piazza and watched the mountains of Pitt River glow, pale, and then grow black as the sun went down; again beheld the glories of Baker as its pure white peak first glistened and faded, and then again grow rose in the afterglow and once more became blue, hazy and indistinct, until at last, as the clear stars one by one appeared and the constellations took shape in the heavens, and night resumed her sway, the grand mountain stood for a while like a spectre and then was gone from our sight. So keen a sportsman as Mowitch could not let us depart from New Westminster without suggesting a hunt, and I was by no means loth to listen once more to the music of the hounds. So by four o'clock next morning the Professor, who had never killed a deer, Mowitch and I were

tramping briskly along toward Mirror Lake. A thick mist curtained the landscape, and we missed the wonderful sunrise that I had hoped for; even the treetops were not visible. Arrived at the lake, Mowitch started off to put out the dogs, while I cut an armful of hemlock boughs for the canoe, and before long, with the Professor amidships, firmly grasping his trusty rifle, and Mowitch and I wielding respectively the steering and bow paddles, we passed out on to the surface of the lake. The fog still hung low over the water, and though the upper air was rosy, the rays of the sun had not yet pierced through the white vapor which hid the surrounding forest on all sides except that from which we had just pushed off. From out of the still whiteness which surrounded us came from time to time the bell-like voices of the hounds. The trumpet-like notes of Captain, the shriller tones of Diana, the short, sharp bay of Wallace and the excited ravings of Dolores, blended and softened by the distance, formed a quartet whose melody was most sweet. And as I knelt in the bow of the canoe, and bent my ear to catch their "musical discord," it seemed to me that indeed—

"A cry more tuneful
Was never holla'd to, nor cheered with horn."

So for a while we waited, and as we sat there, the sky grew brighter and gradually the mist disappeared, and the dark green of the woods was once more seen. The clamor of the hounds had died away, and now the voices of forest and lake began to be heard. The shrill piping of a cross-bill sounded from a tree-top, and was replied to by the grating notes of a rollicking company of Steller's jays that were foraging among the branches of an enormous fir. Faintly from the direction of Lake Burnaby was borne to ear the mournful quavering cry of a loon, and a great white-headed eagle, who from his perch on the summit of a blasted fir overlooked the scene, threw back his head and laughed a shrill answering scream, and then unfolded his enormous wings and floated out of sight. From the other side of the lake came a series of mysterious sounds, a splashing in the water and a breaking of small twigs, which made us suspect that a hoaver was hard at work behind a fringe of low willows. Further on in a little bay was a tiny grebe dallying with his breakfast. He evidently believed that life was made for enjoyment, and dawdled over his meal like a man of unlimited leisure. When he had satisfied his appetite he went through an elaborate series of evolutions connected with his toilet, and then, deliberately clambering upon a bunch of floating vegetation, turned his breast to the sun and in meditative mood closed his eyes. I was wondering whether he was merely ruminating, and really thought best with his eyes shut, or whether as a matter of fact he had gone to sleep, when I felt the canoe shake and, turning my head, saw Mowitch dipping his paddle in the water, as he motioned toward the bird that I had been watching. Without the slightest sound the little vessel moved toward the grebe, but when we were within twenty yards of him, I heard once more the faint cry of the hounds and turned to listen for them, and when I again looked for my feathered friend he had vanished. Silently, and without making a ripple in the water, he had disappeared beneath its surface. We moved slowly on, and reached the end of the lake, and just as we were about to turn, a low groan from the stern caused me to look round, and there, two hundred yards distant, was a deer swimming away from us, parallel with the shore, and not twenty yards from it. Although the chances of our getting a shot were infinitesimally small, we turned the canoe and started in pursuit, but before we had made half the distance, the animal turned in toward the bank. Mowitch, for the sake of the hounds, most anxious that the deer should not escape, called out "Try him, Yo." The canoe was still darting along as I raised the heavy rifle, and fired at the delicate head that was cleaving the lake's surface, now within a few feet of the shore. As I lowered the gun, I saw the water splash high from about the mark, the deer reared nearly half its length out of the water and then for a few seconds lay floundering on the surface. I could scarcely believe that I had killed, but for a moment it looked so. Then the animal recovered and crawled slowly out of sight into the long grass. In a few seconds we were at the spot, and as the canoe shot by a little passage way that led through the meadow toward the shore, both the Professor and I saw the deer lying in the water. The channel was but a foot or two wide, so that we had but a glimpse of our game, but it was enough. I shouted exultantly to Mowitch, "There lies dead." If I had omitted the last word of this sentence I should have done better. Better still, however, if I had quietly backed the canoe and fired another shot, for when Mowitch stepped ashore with drawn knife to cut the animal's throat, it sprang up, almost under his hand, and danced derisively through the high grass off into the forest. I think we all felt a little foolish. I felt particularly so, but the idea that a deer should quietly lie down less than ten yards from the spot where it had been shot at, had never crossed my mind. I was confident that it had been hard hit, and proposed going to the lower end of the lake, where Diana was now to be seen, and getting her, to put her on the trail again. But at this moment old Captain made his appearance on the shore and started to swim out toward the canoe. We paid no attention to him, however, so he went back, and started along the bank after us, and presently his sonorous tones told us that he had crossed the trail, and was off again after the deer. It was not long before I saw behind a little point, a ripple that showed that the deer was again in the water, but before we could get sight of it, it had once more sought the shore. Dolores, however,

now took the trail, and in a short time, we had a beautiful view of the deer advancing over the meadow with long, graceful leaps. Once more it plunged into the clear waters of the lake, and now for the last time. It struck out boldly for the opposite shore, but the light craft propelled by sinewy arms gained rapidly upon it. As its feet touched the bottom we were not a dozen yards away. When clear of the water a shot was fired, but did not check its speed; another report rang out on the still air, a small red dot appeared in the blue coat behind the shoulder, and the animal, after half a dozen bounds, fell dead on the meadow. We leaped ashore and while two stepped up to the spot where it lay the third man lifted the canoe well up on the bank and then joined his comrades. We carefully looked over our quarry, but there were only two holes in the glossy skin, one where the ball had entered and one at the point of exit.

While galloping the game the good dogs came up one by one, and were gratified with a hearty meal of the warm meat. Then with our deer we sped swiftly back to the landing place. To pack the animal out to the road did not take long, and soon Mowitch and meat were put on the stage for town, while the Professor and I started with the hounds to do the four miles afoot. Yo.

The Sportsman Tourist.

CRUISE OF "THE NIPPER"—III.

THE 30th of last July was a bright day along the Fulton Chain, clear and cloudless. The shelter tent and blanket were made into a snug roll, the canoe lay hidden from the heat in the shade of a thicket, and everything was ready for the start to Raquette Lake, when two sharp-dressed Long-lakers darted from the thicket into the placid Saranac, and I recognized "Slim Jim" and Fred Riveit, with parties bound to the eastern side. Seeing me on the shore they came to a halt, and Jim saug out, "Come on, Uncle Nessuk, go through with us to Raquette."

"You'll outrow me. I'll get left."

"No, we'll keep company; come along," said Jim.

"Can you wait five minutes," I asked.

"Yes, fifteen of them," answered Fred.

"These gentlemen would like to see your canoe work; come on," said Jim.

It struck me that the guides had got the idea. They had been at it all the season, and knew just where to strike the landing that had eluded me the evening before. So I launched out and soon laid them alongside. The gentleman who headed the party was much interested and pleased with the canoe. He asked many questions and was a little sceptical about her weight, and the three youngsters who composed the balance of the party were enthusiastic. Their questions "little meaning" little relevancy bore, but the guides made some queries with meaning in them. For instance, Fred asked, as he cautiously picked up his oars, "Did the storm keep you awake last night?" And I, remembering that my little hatchet had gone on to the Raquette, answered stoutly, "Not a bit; never slept better in my life."

As the guides took up the easy, effective stroke that sends the Long-lakers through the water so speedily, I crept under Fred's counter, took the draw of his waist, and made the inlet without making a ripple. Then I said, "Boys, your boat can and ought to beat an paddle on open water, but when you come to these crooked channels, outlets and inlets in the form of the letter "S," where you have to look over your shoulders right and left to see the course, and pull first to starboard, then to port, why you see the paddle—the double blade—has rather got the bulge on you." We had stopped under a huge cedar for a modest nip, for which the leader of that party has my thanks, and as Jim and Fred very quietly resumed their oars, a meaning glance passed between them. They said nothing, but I thought it as well to lay aside extra clothing, split my hands and settle down to work. For the first half-mile the odds were rather in my favor. The water was deep, channel crooked and the chances for cutting off bends and "going as you look," rather made an easy thing of it. Then the course grew straighter and less distinct. The swift Long-lakers drew rapidly away, and I saw them turn a bend forty rods ahead. I tried to cut off the bend and ran on to a sudden log. Backed off, took the channel and put all the steam I had at command, but in vain. I was left. I paddled up the stream until I lost the blazed trees which mark the course, stopped, listened a moment, and then used my spare wind in a long, loud la-whoop. An answer came from the swampy forest far to the left, where I found the party landed on a shaky sort of corduroy platform, which is the landing now. They were waiting for me, they said. And Fred remarked, "A double blade does take the skates on these crooked channels. Notice how he hits the corners and went the way he looked?" Boys, I hope that wasn't "sarkus." I have faith to think you wouldn't make fun of grayhairs!"

I like to see the guides organize for a "carry," and I watched Jim and Fred as they prepared for the trip over to Eighth Lake. First, the "party" was loaded up with fishing rods, guns, pack-baskets, gun blankets, and the usual impediments of the average tourist, and started over the carry looking like a crew of pack-peddlers. When they were out of sight, Jim remarked loudly, "We can take it easy; they ain't going to hurry." Then he and Fred tied in oars, seats, etc., snugly and neatly, made the neck-yokes fast at the balancing point, and then, inverting the lightest boat, Jim held the stern high in the air while Fred crept under and adjusted the neck-yoke nicely to his muscular shoulders, saying, "All right; let go," which Jim did; and the inevitable blue boat, with the pair of sturdy legs beneath, disappeared rapidly up the trail. Jim raised his own boat, and said, "Think you can hold her up?" I thought I could, and did, though, balancing on point at the stern, and weighing over 100 lbs., she was a lift. And then Jim quietly seized my blanket roll and hung it on his broad shoulders without comment, before shouldering his boat. It was a kindly thing to do, and like his generous nature; but I was ashamed, and raised a feeble remonstrance; he went away with a long, quick stride, paying no heed, and I thought of honest old Jack Falstaff, that Prince of Deadbeats—"Hal, an thou seemest me down in the fight and bestirre me, why so; 'tis an act of friendship." Was I best?

I organized my own canoe for the carry, and tried to overtake the party, but the guides walk fast. I found them at

the clean, sandy landing; and it was a relief to see the fresh, green shores, wholesome waters and healthy trees of Eighth Lake, after an experience of Fifth, Sixth and Seventh. At the Eighth the leader of the party began to feel hurried. He wished to reach Bennett's Landing on Raquette in time for the little steamer to Bine Mountain, and guides always follow the wishes of employers so far as they can. I saw I was likely to get left; but, meaning to keep up as far as possible, I paddled out with the party, and rather got down on the double blade. The guides went in for an ash breeze. The distance is less than 1½ miles, and they led me to the landing just about 100 rods. Yes; the Long-lakers are fast—but cranky and uncomfortable to ride in.

As you strike the landing at the head of Eighth Lake, there is a path, leading along the shore to the right, which leads you to a cool spring. Here the guides, having seen the party off, stopped a few minutes for a lunch. Let me comment that spring, with its bright, cold water and resful surroundings to any lone canoeist who may happen to strike the landing at the head of Eighth Lake. Again the boats and canoe were shouldered. Jim, as before, toting my blanket-roll. Again the guides beat me over the carry, though they stopped for a rest and I did not—and when I arrived at Brown's Tract Inlet, guides and boats had disappeared. I was in no hurry. The carries were all made, and six and a-half miles of paddling lay between me and Ed. Bennett's. The day was fine. The wind just brisk enough to be lively, and I recalled Bennett's about, three-quarters of an hour behind the guides.

Going over the Inlet I was interested by the movements of the fish that lay basking near the surface among the lily-pods, and darted off with a splash and swirl as the canoe neared them. A man with oars would hardly have seen this. But, paddling silently down stream, looking the way I went, I probably started more than a score of good-sized fish, without being able to decide on the species. I intended to return and try them, both with fly and bait, but failed to do so; though I certainly shall, if I find myself there in the summer of '83. I thought they might be the same as the guides wanted, there were no shad in Raquette Lake. I found Bennett's hotel crowded with tourists and sportsmen, and was unable to get a room, or even a bed. But the bark-roofed guide camp, "For guides only," had a bright fire in front, with balsam browse for bedding, and was preferable to a close room. I took up my quarters there while on the Raquette, and had no cause to regret it. As to the fare, whoever has stayed with Ed. Bennett knows that his table would rank as first-class anywhere. And there is no pleasanter lake than Raquette in the North Woods. It is the largest; the water is clear, and the shores, while being well-wooded, are mainly rocky. Large as the lake is, I should not know where to paddle to get more than a mile from the nearest land. The numberless bays, coves, indentations and islands, make it difficult to describe on paper; and even the best maps fail to give just the correct idea of it.

I do not know a better place to investigate the now popular bass question. In the summer of '80 the small-mouth had got a pretty strong foothold, and was evidently making his way. A few were being taken with spoon and bait. His increase for the next twelve months was no marvelous. Starting from Bennett's landing with an hour's sun, and paddling to the mouth of the Marlow I could get all the sport I wanted, and more fish than I needed before dark. I used an 8oz. rod and the scarlet ibis fly, with silver body, as the best. But a brown hackle was also killing. And the gold-bodied ibis is about as good. The breeze, taken as a cast, and no others are needed. Arthur Gavan, an Anglo-Canadian sportsman and enthusiastic bass fisherman, and used a powerful rod with minnow or spoon. His favorite ground was the mouth of South Inlet and adjacent shores. He was nearly always successful. I liked the mouth of the Marlow and the rocky shores below, with the islands in front of the hotel. There was not much to choose. His fish averaged about twice the size of mine, and I could take about two to his one. On the whole, I should say the bait fisherman had the best of it. The guide's complaint, that the bass has destroyed the lake trout, would have any point had there been any lake trout worth mention to destroy.

I took a lively interest in the tourists, or boarders, who had worked their way into the wilderness for health, and not for sport. There were many of them on the waters of the Raquette, and more on the Saranac. News travels fast in the woods. Every day that I was on these waters I saw guides and tourists from almost every route you can mention. I heard that more than a dozen consumptives had already died on the Saranac. In particular, a certain gentleman, who had been in the woods, had been ordered to die at home among friends and relatives.

Paul Smith had said he would, by five hundred dollars, rather the article entitled "Camp Lou" had never been written. I saw for myself that parties who had sought the Adirondacks for health, were sick, disfigured, and only anxious to get away anywhere that dryness, warmth, and rest were easily attainable. I was interviewed and questioned time and time again as to the healthfulness of the mountainous region about the headwaters of the Susquehanna; and truth compelled me to say that all my observation and experience led to the conclusion that the high lands about the headwaters of the Delaware and Susquehanna afforded more hope of healing to the sufferer from pulmonary disease than the damp, cold high lands of the Northern Wilderness. That some unexpected and surprising cures have happened in both regions is certainly true.

And it is equally true that the Northern Wilderness is unfavorable to boating and wooding facilities, and hardly to be excelled for scenery. All this is most attractive, and it is not to be wondered at that the average tourist much prefers a wild region, where, by making short carries, he can travel hundreds of miles by water.

But, as regards the single question of health, I can name half a dozen localities, easily reached in one day from New York, where I would rather take my chances as a consumptive patient, than in the Adirondack region. One spot, in particular—unhallowed and little known, within twenty-two miles of where I write—has struck me often as the healthiest resort I know of in these United States, for weak or diseased lungs. I allude to the high plateau between Little Pine and Otter Pine Creeks. A flat-iron-shaped section of country, dry, sterile, breezy, and well supplied with living springs of the purest and coldest water. Gamy too, so far as hares, grouse and deer can make it so. No boating; but Little Pine and Otter Pine afford good trouting. There is the healthiest resort I know of in the Adirondack office. It is a little hotel, where permanent board may be had for four or five dollars per week, with plenty of fresh eggs, and best of butter and milk. But it is out of reach of mar-

kets to a great extent. If this short notice should lead any individual to seek "Oregon Hill," Pa., as the hamlet is called, I feel bound to add, as an inducement that may have weight with naturalists, that you may secure a fine specimen of the rattlesnake on almost any hot summer day.

At Raquette Lake I met Mr. Durant, in whose boat my knapsack had gone off. I accosted him; and before I could make any inquiries, he smiled and said, "I guess I know what you are going to say. Your knapsack is over at my camp. You can get it in two or three days." I found the camp well-furnished summer residence, and the genial proprietor quite capable of keeping not only guides and boats, but a neat little steam yacht. Money is a good thing—when one knows how to use it. I found the knapsack all right, to the last fish-hook, and was more than glad to get it. When I had it well-packed with blanket, shelter-tent, hatchet, tinware, etc., I felt at home again, and went over to Leavitt's on Forked Lake, bound down the Raquette River, and—just where the notion might take me. At Leavitt's I found some guides whom I knew the previous season, and got some useful notes and points on routes, carries, etc. Also met the Justice of the Peace who issued the warrant for Charles Parker, the man who caused such a scandal in the Long Lake region last summer. I gave a summary of that unhappy affair in FOREST AND STREAM last August, and it is pretty well understood now that it throws no stigma on the "guide class."

Forked Lake is one of the most beautiful sheets of water in the wilderness, and a healthy, delightful region for a summer camp, of which there are several on eligible points—well-furnished summer residences, owned by men of taste, wealth and leisure, who have the good sense to take their families to the forest for three months or more, rather than to such resorts as Long Branch, Newport, etc. It is especially quite as expensive; but, I should say, worth the cost.

It was a most delightful morning in August. I got an early breakfast and launched out for Long Lake, intending to stop awhile with Mitchell Sabatis and investigate the fish question, of which I had heard a good deal in connection with this fine sheet of water. It is said that two guides who had been prosecuted for crusting deer, stocked the lake with pickerel out of revenge, and that the pickerel have exterminated the salmon trout. And now there are black bass in the lake, which, in turn, are demolishing the pickerel. Such is the tale as it was told to me.

I doubt it. I do not believe that any fresh water fish can exterminate the agile, shark-nosed pickerel. Though it is fair to add the testimony of Mr. E. Rose, who has a fine summer resort on Silver Lake, Susquehanna county, Pa., as a life-long sportsman. "I have certainly plenty of pickerel in that lake every year," he says. "The lake was stocked with small-mouthed bass; and now he assures me the pickerel are gone. The bass has cleaned them out. Maybe, I dunno; I dunno. I cannot believe that the small-mouth whips the pickerel in fight. But he may starve him out."

From Leavitt's to the outlet of Forked Lake are four miles of as pretty water and scenery as a tourist could ask. If you are a canoeist don't swing over to port for the sake of an open channel. Keep near the right shore, and when you open the course to the left you will have a mile or so of heavy paddling among the lily-pots, but you will cut off considerable distance, and the double-blade works in lily-pads, while oars tangle up. You will be interested, too, in seeing at every open space fair-sized fish drop away from the canoe, leaving a funnel-shaped swirl on the surface, and you will be puzzled, as I was, to name the fish. I am sorry I did not put the rod together and try them with the fly; but I promised myself to do that when I came back. When you reach the landing at the outlet, take the double-blade apart, turn the stems to the right, and you have a fine, open, straight, four-mile run for the carry, and then spend an hour following along the bank and taking in the rapids, with the scenery on either side. If you have an eye for nature the time will not be lost. The carry is one and a half miles, and a man who lives there will drag your canoe across for a dollar and a half. As you can carry it in thirty minutes more safely, you had better trust your own shoulders.

As you reach the foot of the carry you launch again for an easy trip of one and a half miles; and another and a shorter one, then a mile or more of the easy, rocky, and a carry of 100 rods, and you strike the head of Long Lake. It is four miles to the landing at Kellogg's, and a little less to Mitchell Sabatis' landing. To make the latter you turn to the right on sighting the bridge at Kellogg's, and steer to the right end of the sandy beach before you. Take the steep path that leads up from the landing, and Auntie Sabatis will take care of you. She has been doing that sort of thing for a good many years. What the famous Indian guide, Mitchell Sabatis, is in the woods, his wife can supplement him as camp-keeper.

I found no tourists at the Sabatis house, but it was not lonely. Two noisy children, a son and his wife, with eight grandchildren pretty nearly of one size, made it quite lively for Grandma Sabatis. She managed the household well, and kept the unruly youngsters in order to a degree that won my admiration. I was glad to meet the son, Ike Sabatis, whose acquaintance I had made in the summer of '80, and was sorry that Mitchell was away guiding. I should have been pleased to meet Ike's suggestion that we go down Long-Lake floating; but, alas, we were both on the sick list. Ike was suffering from a severe attack of cholera morbus, and I had been growing weaker every day since leaving the Forge House, coughed almost incessantly, and had sweating spells every night. I lost appetite. My knees jekknifed going over the shortest carries, and I began to realize that I might get laid by the heels in the middle of the wilderness, hundreds of miles away from home. I have little feeling for myself or any other man, as a sick patient. But no man can transcend possibilities, and, as it happens, sickness does come to us all, soon or late. The muscular young guide, Ike Sabatis, was on the back. The next young guide, Hall and Staunton, were far gone with consumption. The water in a dying condition, at the Long Lake settlement. All the same I was abashed of the physical weakness that steadily leached me off from day to day, and did my level best to beat it, but in vain. I kept my feet, however; fished, excused in the woods, paddled down to Kellogg's every day, and picked up all the information possible.

Not a day passed that I did not hear of a death in the Baraque region, from consumption. Landlord and guides looked serious at these reports, and tried to dissuade them. They said, "They are past help when they came in." They should have staid at home." Perhaps; but it does not go to prove that a residence in the North Woods is a cure for lung diseases.

It was on the sand-beach, in front of Kellogg's, that I met a young invalid of the feminine persuasion, who interested me

more deeply than any human being had ever done on so short an acquaintance.

It was a perfect morning. The lake was like a mirror. I had paddled down without particular aim or object, and was drawing the canoe up the beach, when I noticed a little girl, walking with cat-like tread up and down the shore, and humming an opera catch softly to herself.

Suddenly she stepped up to the canoe, raised it by the stem, turned it to port and starboard, read the name, and said sharply, "Humph! 'Susan Nipper.' Dickens. 'Master Doubey is a permanency: 'Miss Edith is temporary.' Why don't you name her Miss Edith? She looks sufficiently temporary?"

She was about the first one who had recognized the name, and I looked her over with more interest. Why, she was a woman! Hair and eyes like an Indian princess—weight and size like a girl of ten years. A thin, attenuated form, a bright glow in either cheek, and a sharp, intellectual expression, with the worn, womanly outlines, told the story. She pushed the canoe afloat, drew it back and forth, hauled it up on the beach, and in a low, soft voice, "Oh, I should so like a ride in it—would you like to let me?"

"Dare? My dear young lady, can you trust yourself?"

"I am used to boats and water; we have a guide and a good boat," she answered, "but I would like to ride in it." So I took the old handkerchief with its stuffing of hemlock browse and ferns that serves me for a seat, placed it well forward; made the shelter-tent and blanket into a comfortable lean-back in the bow, and seated her as I would an infant. Got in carefully myself, with the old grass coat between the keelson and the terminus of my spinal column, and paddled cautiously up and down the shore in three feet of water to test her sea-going qualities. She was steady and immovable as a sand-bag.

Then she said: "You see I am safe? Now cross the lake, and land me in the woods."

I did. When we were more than half way across there came a loud "halloo," from the landing. She opened her large black eyes, waved her sailor hat, and settled back, saying, "It's my father. He will understand."

I landed her on the beach just where the ferns and spruce were thickest, spread tent and blanket on a dry sunny spot, and left her to herself. For an hour she reclined on the improvised couch, or gathered the trifling ferns and lichens of which young ladies are so fond, and then she said, quite as though I had been her guide: "Now take me back to my father. I am tired—so tired." So I landed her on the clean, white beach, where *patrifamilias* was impatiently poking the sand with his gold-headed cane, and resigned my position as amateur guide. She held out her little hand at parting, saying, "I trust you will understand me? I am a dying girl. Let me do as I please, now. I have left conventional fetters and forms behind, with a good deal more that I value once—but no matter. Good-bye." Was there a little romance connected with her case, I wonder?

As the old gentleman seemed nervous, I thought it a good time to leave, and went up to the village to call on Ike Sabatis. Found him much better and disposed to go down the lake floating. Thought, "I could 'put me on to a liver.' But no man who is liable to have coughing spells at a minute's notice is more likely to scare three deer than to get a shot at one, so I declined, and paddled around the point to the grove near Sabatis' landing, where I spent hours, sitting on a log—a style of amusement in which I was fast becoming an adept—bidding fair to rival "Old Phelps." Indeed, it was getting to be my "best hold."

And here while listlessly watching the calm, clear water, I witnessed one of the little incidents that the lone tourist who knows the value of silence never after picks up. It was only a couple of little fish, a bull-head four or five inches long, and a bass much smaller. The former was working his way laboriously along the beach, his nose at the surface and his rudder gone, while the bass was spitefully nipping him at the counter. It was evidently a hopeless case for the bull-head; and such a piece of uncalculated cussedness on the part of the bass that, unthinkingly, I seized a stick of flood trash and made a vicious clip at him. As often happens in this world, the innocent suffered while the guilty rascal in this case, the bull-head, may be grow to a four-pounder, to be worried and tormented along that same beach, with a sharp hook in his gills. NEMMUK.

(The continuation of "Nemmuk's" narrative, detailing the further incidents of his story at Mitchell Sabatis', forms a stirring story of Adirondack life. It is given below.)

A NIGHT RACE AGAINST DEATH.

AFTER dark, as I was smoking by Auntie Sabatis' gale, two brisk-stepping young guides came hurriedly by through the yard and made for the landing below the hill. They carried a sharp-stemmed Long-Lake and a lantern. They were bound on a night trip to Raquette Lake and return, to be back before sunrise; for young Staunton, the sick guide, lay dying, and his one wish was to see and know a favorite brother before crossing the Dark Carry. And the doctor had said that, if the brothers were to know each other again on earth, the meeting must take place before another sunrise.

It was rather a manly, plucky thing to make a night cruise of between thirty and forty miles, mostly in a fog, and with four carries, two stretches of rocky, torturous current and two lakes, all to be "doubled" in the darkness. The lantern would only be available on the carries. On water the course is better seen without it. I followed the guides to the landing, and watched them with interest as, bending to oar and paddle, they disappeared swiftly into the darkness.

Then I went up to the house, consumed the time waiting up plug and snoring till half past twelve. But how the guides absent brother somehow got in on my nerves. I mentioned that I would like to know just how the sick man was getting on; if he was likely to pull through the night. "You'll know," said Auntie Sabatis, "when any one dies here, the bell is tolled as soon as a man can get to it, night or day."

I went to my room. The night was very warm, and I was unwell and weak. I am not nervous. I have no sympathy or pity for nerves in my own or others. But how the dread of that bell did worry me. I pictured to myself the guides racing over the course in the foggy summer night, going quickly over the slippery carries, one carrying the boat, the other lighting the path with glimmering lantern; rowing swiftly across long stretches of water by the shimmer and glitter of starlight; reaching the camp on an island in Raquette Lake, only to find George Staunton gone off, floating with his "party." I thought of the "ride from Ghent to Aix," but that race was on horseback. The strain

of muscle came heaviest on "Roland." Here, the Roland was a cranky, narrow Long-Laker, and the muscle was of World War type. I walked the room, smoked and listened. A stroke of that bell would have made me stagger like a drunken man. But it came not.

At midnight I turned in for a few hours of drowsy, feverish unrest, and at 3 A. M. I dressed and walked down to the landing, where I made a fire against the rock used as a washing station by the House of Sabatis, lighted a pipe, and resumed my favorite exercise of sitting on a log. The fog still hung over the lake, thick and dark.

Then came faint, dull streaks of light, gray and brown, from the east. It grew lighter, gray and brown turned to dull yellow. "Owl's Head" began to be visible. The fog grew denser, brighter, and began to rise in well-defined line from the foot of the water, like the lifting of a blanket, and from under that blanket darted a sharp-stemmed regulation Long-Lake, the same oars and paddle playing with unabated vim, but with three men instead of two. She came to the landing with a swift, silent rush, and, before she was fairly still, an athletic young man sprang to the beach and took his way through the gravel toward the settlement at a seven-knot gait. I had no need to ask if it were George Staunton. It was less than a half mile from the landing to where his brother lay dying. Now, suppose, just as he came in sight of the house where his brother lay that the bell should give his nerves a trial with its first, fearful death-announcing clang! Would he stagger some? Would he sort 'o' swerve off to port, and sit down on a log, faint, and white as sick? It might be. It was painful. I took out my watch, as he disappeared in the fog. I said, "He will be there in five minutes." The minutes passed. One guide said, "How long?" "Six minutes," I answered. "Six minutes is enough to get there," he said. I still held the watch. Ten minutes passed. "He is there," I said; "has been there five minutes." Then the guides tied in oars, paddled and seats, took up lantern and boat and started for the little hamlet, called on the maps "Long Lake P. O."

I never did and never shall like the Long-lakers. They are swift, but frail, weak, cranky, and tiresome to ride in. Nevertheless, as the fogged guide, husked and dead, instinctively raised my old felt hat to the craft that had run an all-night race against death—and won. NEMMUK.

GROUSE SHOOTING IN NEWFOUNDLAND.

BY D. W. PROWSE.

THIS year's campaign of fishing and grouse shooting over the dogs is ended. It has been a very wet and cold summer with a stormy autumn, and at present (November) there is every appearance of a hard winter. The fishing during the summer has been much affected by the weather.

From all quarters I have heard bad accounts of the sea-trout fishing, as compared with former years. Captain Kennedy, R. N., ("Mariner" of the London Field), had some good fishing; and one clergyman, quite a novice at the gentle craft, landed thirty salmon in the Salmonier River, landing also two or three. The falling off in the fishing in St. Mary's and Placentia Bays was attributable, no doubt, in a great degree to the exceptional weather this season. Partially, however, it is due in some places to the barbarous practice of barring the rivers with nets. Several parties have been fined and their nets confiscated. This doubtless will have a good effect. The thanks of all sportsmen are due to the learned, active and assiduous Stipendiary Magistrate of St. Mary's for his exertions in pushing violators of the law. May Sir James Harvey's praises be sounded through the whole American continent.

Caribou shooting in October was splendid sport. "Mariner" and his party killed seven stags in Hall's Bay. Two young sportsmen killed three deer in one day within about thirty-five miles from St. Johns. Two other sportsmen at the head of La Poile Bay, on the southern coast, had fine sport with the caribou. Sir Rose Price and several other deer hunters have been shooting in the interior, and all, I believe, have been very successful.

It has been the best year larger than usual this year, and that there were more than the average number of coveys in most localities; but owing to wet, cold and stormy weather, and the prevalence of cold winds in October, shooting was not good, and heavy bags the exception. The willow grouse is *par excellence* the game bird of Newfoundland, delicious to eat, and still more delightful to shoot. In the interior, and especially on the southern and western parts of the island, ptarmigan abound on the rock, bare hills. They are so abundant, and so tame, that they afford very little sport. But the willow grouse, they stand well to the dogs; and when flushed the covey rises with a whirr and rapid flight that tries the nerves considerably. Grouse shooting is my favorite sport. I love the wild, wind-swept barrens, the hard exercise; and I delight to watch the sagacious working of good setters.

Grouse shooting in the old country is the pastime of princes and potentates, and though only a small brown bird *Tetrao lagopus* is a political power in the land, Parliament rises in his honor, and be rises for the pleasure of sporting M. P.'s. Any one who has witnessed the stirring scenes on the Scotch lines about the 10th and 11th of August, will never forget the teams of splendid pointers and setters, the endless gun cases, and the eager sportsmen, all bound north for the laud of the bonnie heather. Punch has a comical picture of an irate Station Master at a small Scotch station, addressing an over-driven porter, who is vainly striving to hold half a dozen eager setters: "Now then, look alive with thy dogs, whenever you see a bird." Porter—"Look, they're eating their tuckets, an' dinna ken fa' the 'rag' gen' tae." Far different from the Scotch grouse shooting with the gaitered and well-got-up sportsmen, the garbs of old Gael, the gillies, and all that, is the Newfoundland sport. Here there are no limits or restrictions to the shooting, no beats, no fences; the whole unbounded barrens are your own; the fisherman, who is your guide, gillie and gamekeeper, may not look so picturesque in his old canvas clothes as his Highland competitor, but for fine physical health, for endurance for quickness of eye and skill in striking, I will back my countryman, on his native heath, against the bravest Saundie that ever scratched himself in the early dawn, or drank raw whisky. In the matter of drunks my stalwart fisherman, too, could fairly hold his own with the MacTavishes; but his choice is quite distinct; his taste in liquor is tropical; it is caused by commerce. He sends the tigger fish, and his colored brother returns the southern rum, mellow Jamaica, or fiery St. Jago. With the younger generation temperance has made great progress; but the older fishermen commonly regard the teetotaler as a harm-

THE SEVEN PONDS AGAIN.

Camps Beams, Me., Dec. 12.

BACK to the old Rangeley once more after a month's cruise, and not in the woods as usual at this time of year, but on a twenty-two ton steamer yacht, all the way from Augusta, Me., to Norfolk, Va. I had a great weather here from the start, a week ago in Norfolk. The twenty miles of sleeping from Phillip to Rangeley is as good as I ever saw. To-morrow I start for Parmanchee Lake to join my friend Danforth on our annual still-hunt. The condition of the snow and weather is strongly against success. I am going just the same, however, and as John has about a peck of mail that has been coming along for the last two months, which I shall take to him, he no doubt will be glad to see me.

In looking over my Forest and Streams that have collected during my absence I find a letter about seven months old. "J. W. T.'s" reply to it. Surely, it is not the most affectionate answer that I ever received from a letter; and, lest Mr. T. should think that I finished me this time, I will "lutter" again, though it brings another and a more deadly volley. He handles his weapon with ease that speaks of long experience, but his imaginary powder, it seems to me, is a little smart for his face. In this case possibly he might do more execution with a little lighter charge, and before he shoots again, perhaps it would be for his advantage to know that I have no interest whatever in the Seven Ponds, camps, boats, roads, or any of the things that the Seven Pond travel touches. My route is by steamboat on Moxeelake and Rangeley Lake and my camps are Camps Beams on the same lake.

I really seemed to me that some one ought to say a word or two in favor of the Rangeley route. It is a long one, but the least used to be a way to get to Seven Ponds from there. As Mr. T. prefers the rail car to the stage coach, suppose we start from where the car leaves us. He has generously allowed me thirty-one miles from Seven Ponds to Rangeley, and the twenty miles to the horse camp. This makes a total of fifty-one miles. By the other route he has given us eighteen miles from Seven Ponds to Mr. Smith's house. Now, adding the fifty miles from Smith's house to the rail car at Farmington, we have sixty-eight miles, a difference in favor of the Rangeley route of thirty-seven miles. I will not say that I am sure that the ten or eleven miles from Tim Pond to Seven Ponds will probably hold out according to the time it took Mr. T. to walk it last summer. If I remember right he was until well into the afternoon doing it. He probably is not a great walker.

Since we have been so confidentially reminded that our Rangeley fishing "needs rest," I will say that the fish have been having a rest for the last four years. During this time the Union Water Power Co., of Lewiston, who control these lakes, have kept them a little higher than nature intended them to be; and the trout have been making a change in their location since then; and perhaps "Steve" has not found just the place, since the change, where he is sure of one every time he "chucks a bng." The Fish Commissioner says that the fish are increasing. Guides generally say they are increasing, and from what I have seen by taking notice of the different spawning grounds and the spawning seasons for the last nine years I should surely say they were increasing. The waters of our lakes are wide and deep, and the several fish that live on are plentiful enough to warrant a good fishing in the Rangeley lakes for years to come, in spite of the increase of travel. There are many ponds woven in with our lake, and in some of them I have seen as good fishing as I ever saw at Seven Ponds.

Many thanks to Mr. T. for so kindly inviting me to his cabin. If it ever comes in my way I will surely call, and I should be glad to be introduced to him, to his loved ones and to his friends; and I would also be most happy to see the entire circle at Camps Beams. I would again "manifest my amiable spirit," and they should have the best the camps afforded. I would tell them all the interesting stories I could think of, and, as business is business, the charges would be two dollars per day apiece. I am sure we should be the best of friends. CARR, F. C. BARBER.

Natural History.

THE POISON IVY.

THERE is one danger to which people who spend much of their time in the fields and woods are exposed, which is not generally appreciated. There are a few native plants that are so poisonous that contact with them is to many people productive of severe and long continued suffering. The best known, as they are the most injurious of these plants, are two species of the genus *Toxus*, and very many individuals are susceptible to their baneful influences.

We have known men who believed themselves unable to approach within several yards of either the poison ivy or the poison sumac without being very painfully affected, and it is quite common to find many farmers and workmen, individuals who have been severely poisoned from standing in the smoke of the burning brush. As a natural consequence of the different degrees of susceptibility to the poison in different individuals, it follows that, while to some contact with these plants brings intense and long continued suffering, to others there results only a trifling and temporary inconvenience, while some people are not at all affected by it.

Sportsmen are especially exposed to danger from this source, for in traveling through the brush they are extremely liable to come in contact with these plants, and that at a season when, the leaves being off, they are not so readily recognized as when in full foliage.

In a recent article in Harper's Young People, Mr. A. W. Roberts contributes some interesting information on the Poison Ivy, from which we quote below:

"Poison ivy, poison oak and mercury vine are the common names for one and the same vine, found climbing up the trunks of trees on hill, board and stone fences, over rocks in bushes, in meadows, in woods, in meadows, in fact, everywhere and anywhere it can secure a foot of ground, no matter how poor, or how much exposed to the scorching rays of the sun, this wretched vine prospers, happy and contented to spread out its poisonous arms hidden beneath its glossy and graceful foliage."

Rhus Toxicodendron.
This plant, which is the more abundant of the two poisonous species, is often found growing in great profusion on the seashore. "Here, when the ivy has a chance to climb up trees or bushes, up it goes, throwing out its aerial rootlets in all directions. In this way it grows away from any support in the sand which is being constantly displaced by the strong ocean winds, it then grows stout, erect and bush-like. Under these peculiar circumstances of growth it has received the name of poison oak, and was supposed by many botanists to be a separate variety, though in fact the poison ivy and oak are one and the same thing. When the stem of the poison ivy is wounded, a milky juice issues from the wound. The leaves, after being separated from the vine, turn black when exposed to the air."
The stem of the ivy is nearly smooth in texture; the aerial rootlets, which start from all parts of the stem, are of a bright brown color when young. The masses of berries when unripe are of a light green color; when ripe, of an ashen gray. Below the mass of this year's berries are gener-

ally to be found those of last year. The leaf has a smooth and somewhat shiny texture, and curves downward from the midrib. To many people the slightest contact with the leaves of the ivy will produce poisoning. I have known of instances where persons in passing masses of ivy vine, particularly when the wind was blowing from the vice toward the passer-by, became severely poisoned. One of our most beautiful native vines, the so-called Virginia creeper, which frequently grows side by side with the ivy, is often mistaken for it and blamed for the evil doings of its neighbor, and yet is an innocent and beautiful vine. The Virginia creeper has a leaf consisting of five lobes, which are distinctly notched, and which curve upward from the midrib. Instead of aerial rootlets like the ivy, it has stout tendrils more or less twisted and curled, often assuming the form of a spiral spring. These tendrils are provided with a disk, by means of which an attachment is made to any object within reach. The stem has the appearance of being jointed. The berries are large, and grapelike in the form of the cluster, and when ripe are of a deep blue color, with heavy bloom. In the fall of the year the leaves turn to a deep red and brownish red color.

"The poison-sumac, swamp sumac, or dogwood, is ten times more severe in its poisoning qualities than the poison ivy. It grows from six to ten feet in height in low, marshy grounds. The berries are smooth, white or dun-colored, and in form and size closely resemble those of the ivy.
"This sumac is terrible in its effects, often causing temporary blindness."

The poison oak, or poison dogwood, as the *Rhus venenata* is indifferently called, sometimes grows to a height of not less than twenty feet, and becomes as thick as the calf of a man's leg. It does not always grow in swampy ground, being often found on knolls and moderately elevated ridges. It is a plant which once known will always be recognized, as its foliage and its mode of growth are very characteristic.

The leaves are 7 to 10 pinnate, and bear, in shape, a general resemblance to those of the hickory, but are smaller. The bark is smooth. Some persons are so easily affected by this plant that a leaf drawn across the hand will leave a red streak, resembling a scratch, on which blisters will almost at once appear.

This variety is not a vine but a shrub or small tree, and early in the fall the leaves of this plant assume very beautiful tints of red and yellow, and from their attractive colors they are often plucked to adorn country houses. We have known of a number of terrible cases of poisoning which resulted from this carelessness. In one instance, which came under our immediate observation, three ladies, who in September had gathered branches of these brightly colored leaves, held them, during their walk back to the house, close by their faces, as a protection from the afternoon sun. As a result of this, all three were so severely poisoned as to be confined to their beds for six weeks. The berries, too, are sometimes gathered for the purpose of home adornment, and give rise to similar poisoning. Instances are on record where people have been poisoned by sleeping in a room in which a cluster of these berries hung. We give a figure of the berries of this species.

Many remedies have been suggested for this poisoning, but most of them are either ineffectual or so slow in their action as to be practically worthless. A solution of 60 grains of sulphate of zinc in 8 ounces of water was recommended some years ago in the Forest and Stream as very effective, but we have had no personal experience with it. Another remedy is said to be to eat the leaves and berries, but this is an experiment that we fancy most people would hesitate to try. An infusion of the bark of the tamarach (*Larix*) is another popu-

lar medicine. The most effective and speedy treatment that we have ever seen tried is the following: As soon as the "blisters" appear, paint them and the surrounding parts with the tincture of iodine as strong as can be borne; then puncture the vesicles, dry up the moisture with a cloth, and dust freely with rice powder, sometimes called shaving or baby powder. Of course, different remedies may be used with varying effects, according to the susceptibility of the system of the patient to the poison, but we have found this very efficacious.

The poisonous sumachs are not without a certain economic value. From the leaves of *Rhus Toxicodendron* a strong indelible ink is made, and from the juice of a poisonous sumach which grows in Japan a beautiful lacer varnish is manufactured. The fumes of this juice are said to be so potent that Europeans passing the factory are poisoned by it, and it is even stated that those who handle the varnished good are likely to suffer.

A QUEER FOX.

CLINTON, Ct., Dec. 15, 1881.

Editor Forest and Stream:

Very recently Mr. George Buell, a gentleman living in our neighborhood, killed a peculiar looking animal that has bothered me to classify. At the first glance no one would hesitate to say it was a fox; and, doubtless, that is just what it is; but a closer examination would incline one almost to believe, if such were possible, that it is no very distant relation to a woodchuck. Let me give a careful description of the animal, as I saw it, after Dr. A. H. Stevens, who is a skillful taxidermist, had set it up. The comparison is made with a specimen of the common red fox:

The general shape was that of a fox; the body was round and fat, and the size about two thirds of that of a full-grown fox; legs rather short; ears more rounded than those of a fox; the tips blunt. The whole back, sides, shoulders and flanks were a mottled gray, caused by the hairs being each black and white above the fur, beginning white and ending black—the hairs of the red fox beginning white above the fur and ending yellow. Down the tail, the upper side was a jet black, running to the very end, and instead of being round and bushy, like a fox's tail, was like that of a setter dog; in fact the tail looked more like that of a setter dog than it did that of a fox. Back of the ears the color was a continuous red down to the shoulders on either side. The fur was not so reddish gray, caused by the same reason as the mind of the hair of a woodchuck. The gray color of the body extended down to the feet. In short, as in the red fox, the reddish yellow is the predominant tint, and shades off into the other colors; in this animal the woodchuck gray predominates, and there is but little of reddish yellow color, except the under side of the tail.

We should like to know if you or any of your readers can tell what kind of a fox the above-described animal is, as we have never seen one like it before in this country?

Mr. George Buell, mentioned above, has quite a record as a fox killer. Some years ago a fox jumped on a fence in front of him as he was about to water his horse. The fox hesitated a moment on the fence, when Mr. Buell hurled a brickbat at him, and struck him just back of the head, and killed him. That, perhaps, was the first fox ever killed in this way; and Mr. Buell's friends thought to equip him with a sling and leather bag, but we believe that his modesty made him decline the honor. C. W. R.

[May this specimen not have been a gray fox (*Urocyon cinereo-argenteus*), but if so, how about the tail?]

THE ENEMIES OF GAME BIRDS.

NEW RUSSIA, Dec. 17th, 1881.

Editor Forest and Stream:

Your Ferrisburg correspondent R. E. R. says: "If squirrels kill young grouse, why not chickens?" One of my neighbors who lives near a grove, informs me that hearing one day an outcry in a coop of young chickens, he went out and found a red squirrel attacking them. It had already killed one or two. He drove it away three times, but each time it succeeded in killing some of them. A shooting friend also informs me that he found a grouse's nest of a dozen eggs, each egg bitten into by what he thought was squirrel's teeth.

Now, it is nonsense to think that they destroy tree-testing birds and would not do the same for those that nest on the ground.

When red squirrels are about as thick as we generally see them, the harm they do to the grouse may be classed with hawks and foxes; but when they get to be as thick as house flies, one to every square rod of woodland, as they do sometimes, and take it upon them to move through the country in May and June in a half-starved condition, then look out for your grouse crop. It will not take a very shrewd guesser to foretell what the next autumn's shooting will be.

I should think the tick might destroy some grouse where the soil is hard, clay for instance, because they have no soft dust to wallow in. Grouse wallow in the dust as persistently as barn-yard fowls. They do it to free themselves from vermin. I have never observed any ticks on the ground in this part of the country, but it being a sandy region may have something to do with it. BALNBRIDGE BISHOP.

THE DECREASE OF RUFFED GROUSE—Sherbrooke, Canada.
The decrease of ruffed grouse is also a matter of interest to us. I don't know but we can kill as many in a day now as we could five years ago, but we certainly have to go further. Out of twenty-one grouse picked up last month, only one was a female. Do you any of your readers attach any significance to this fact?—CANADA.

RESTAURANT NATURAL HISTORY.—In front of a popular restaurant in New York City there hangs a young caribou one and a half years old. An explanation is placed on the wall following truthful legend, which we give verbatim, capitals and all: "Caribou. Native of Greenland. Captured in the Neighborhood of the wreck of the Jeannette. Procured for this Hotel Direct. These Animals the caribou are not of their Peculiarity as Relative to their Mode of living, being nothing but Water Ice & Snow visible to the human Being For their Sustenance."

TAME QUAIL.—Chicago, Ill., Dec. 20.—I have a tame quail at home, which was caught last June just after being hatched. He runs at liberty through the house and will respond to a whistle readily.—TEN BORA.

ENGLISH AND AMERICAN SONG BIRDS are the subject of an article by John Burroughs in the January *Curcifer*.

THE WEIGHT OF GRAY SQUIRRELS.

ABINGDON, Va., Dec. 17, 1891.

Editor Forest and Stream:

While out walking one afternoon last week I shot two gray squirrels. One of them struck me as being unusually large, and when I returned home I weighed them both. One, which I considered a little above the average in size and condition, weighed sixteen ounces, the other drew down the scales to twenty-four ounces. This was gross weight. It seems to me that twenty-four ounces is an unusual weight for a gray squirrel, and I would like to hear something of the experience of your correspondents on this point. Both the squirrels had ivory markings on the sides, and the larger had also rather a broad yellow stripe extending from a little below the shoulders to the root of the tail. Do gray squirrels and fox squirrels ever cross breed? If so, this might account for the increased size. In all other respects the squirrel resembled the common gray squirrel. WILL. [May not the heavier animal been a fox-squirrel? They vary much in size.]

ABOUT WILD TURKEYS—Harrisburg, Pa., Dec. 17.—Editor Forest and Stream: "Keouk" has sent his name and address to Mr. C. L. Jordan, who has so kindly given his views to the readers of your paper on the 15th inst. on "Callers and Turkey Calling." I should like to have some more information about wild turkeys. Are they in plumage and markings the same as the tame turkey? The wild turkeys that I have shot all had reddish legs and chestnut brown in the extreme end of their tail feathers. Those that I see hanging in front of restaurants have black legs and white in the extreme end of the tail feathers. Do wild turkeys have black legs and white tails? How is a person to distinguish? Will some one tell us through the columns of the FOREST AND STREAM. I am told that wild turkeys carry their tails over the ground like tame turkeys do, and that if you will one can be distinguished while among tame ones. How is this, and who will tell us?—KNOX.

Wild turkeys have reddish legs and chestnut-tipped tail feathers such as "Keouk" describes. The black legs and white tipped tails appertain to the domesticated bird.]

BLACK SQUIRRELS—Kingston, Ont., Dec. 19, 1891.—Editor Forest and Stream: A friend of mine has had a pair of black squirrels in his possession for three years, a very handsome pair they are too, and very tame. Have you, or any of the readers of FOREST AND STREAM, ever known of their breeding in captivity? The owner alluded to is anxious to have the opinion of those who have kept them caged. I have, I think, something of a *Sciurus niger* in the way of a black chipmunk, which is exceedingly rare. I kept him alive for a time, when he died. I mounted him and have him now in my collection of stuffed birds and animals. Some years ago a friend of mine here had a white one.—JAMES COLWELL.

THE IDEAL SPORTSMAN.

You ask "What is the American sportsman?" Verily, a hard question to answer. I think I know what he ought to be, and what, if I mistake not, FOREST AND STREAM is endeavoring to make him.

This ideal sportsman is, first, a thorough-going business man—whether his business be banker, merchant, teacher or author—and not a loafer, dead-beat, pot-bummer. He is honest to the core; his word is as good as his bond, and he hates lying, dishonesty and fraud, as the Devil hates holy water. Next, he is cheerful and good-tempered, being the happy possessor of a sound mind in a sound body—sunny-dispositioned, careful to avoid giving needless offense, and not prone to take it, where none is meant.

He is a votary of art and science—not a mere dilettante—having a genuine love and admiration for the true and beautiful, wherever found. He is kindly and merciful, and abhors giving needless pain, impaling even "a worm as though he loves him;" and kills, when he must, without needless torture, and in a way which would make even his victims grateful, could they but know it. He is not a two-legged bog, keeping selfishly to himself any chance-discovered trout-stream, but rejoicing to share such bonanzas with kindred sports; not a son of the horse-leech, crying for "more, more," but ready to stop when he has had a fair day's sport; not a sneaking pot-hunter, slaughtering coveys of overweening victims upon the ground, nor a professional shot, mangling half-starved pigeons, dizzy from long condiment, as they are hurled into the air from a rotary catapult; but a lover of fair play, willing to match his keenness of sight, his coolness of nerve, his endurance of fatigue and his subtleness of wood-craft against the speed of the hurling grouse, the wariness of the trout, or the sagacity of the red-deer. He is a gentleman, not a butcher, and makes of hunting and fishing a noble pastime, and not a money-getting trade. He takes to the field, not because he loves to kill, but because of the healthful influences with which a hunter's life surrounds him. He is, emphatically and above all, a lover of Nature, and rejoices more in the study of her subtle woods than in the blood of slaughtered victims.

Moreover, though he has never touched brush to pellets, yet the glory of the scarlet leaf, the tapering lines of the fir-tree shaft, the swaying slenderness of the ground pine, the silvery meanness of the birchen bark, and the tender green of the budding larch, all satisfy and delight his artist's eye.

Though he never sang a note in his life, yet he has a musician's ear, and the sighing of the wind in the tree-tops, the babble of the waterfall, the tinkle of the rain-drops on the leaves, the plunge of the surf upon the shore and the shrilling of the wind through the rigging of his boat, are to him the gamut of a higher melody than Donizetti or Beethoven ever knew.

Guiltless of ever having attempted to rhyme one word with another, yet the tender beauty of the dawn, the lustrous radiance of mid-moon, and the solemn glory of the starry night, the sober splendors of the russet uplands, the ineffable majesty of the heaving ocean, and the ston loneliness of wind-swept mountain crags, rouse within his soul thrills of true poetic rapture.

Such, then, is our ideal American sportsman—honest, alert and wide-awake—manly, tender and true—artist, musician and poet—in fine, "Ood's last, best work, a gentleman."

Some few such I know—would that their number were greater—and of such, I am glad to feel, FOREST AND STREAM endeavors to be the true mouth-piece and exponent. H. P. U.

Game Bag and Gun.

THE A. B. C. OF WIND-SHOOTING.

SOMERVILLE, Mass., Dec. 16.

NOTICE in the last issue of FOREST AND STREAM that a correspondent asks why he does not kill ruffed grouse on the wing. I will try to give a few more hints on grouse shooting. Let us commence at the beginning and suppose that we are about to initiate a boy in the art of wing shooting. In the first place he wants a gun that he can handle easily and not too heavy. Great care should be taken that the gun "fits" him. This he will ascertain by grasping it with both hands and throwing it up to his shoulder, as if to fire it. If the eye catches the centre of the rib and the "bad" all right, the gun will answer, if not, probably the stock is not crooked enough. I do not recommend too much crook or drop of stock. Another important point is to ascertain the right length of stock.

We will suppose that the gun is selected and our first lesson commenced. We will now direct our conversation to the boy in question. Go out by yourself where you can put up some object about the size of your hat, say about twenty yards away. Then take your position and commence to throw up your gun to your shoulder, and, keeping your eyes open, see how near you can bring the bead in line with your eye and the object at the instant that the butt-plate touches your shoulder. Try this a few times and then rest a few minutes. Then try again, but do not fatigue yourself. After you can throw the gun up to the mark with your eyes open, shut up both eyes and throw the gun up to your shoulder in the same manner as before, and the instant that you feel the butt touch your shoulder open both eyes and see where your gun is pointed. Keep up this practice until you can throw your gun into line with any object that you may select, whether it is above, below or on the same level with your eyes. One thing I wish to impress upon your mind in particular as the greatest help in shooting grouse in cover, always bring the muzzle of your gun up on your bird from below if rising, and down if falling. All right. Don't try to shoot on the "drop," as it is termed, for then the gun is falling and the bird is rising, and you have twenty chances to miss where you have one to kill.

After you are perfected to a satisfactory degree in the practice of throwing your gun up to some object, take a piece of paper about two feet square, and with some tacks fasten it up on an old shed, barn or old building, where you will do no damage, and then step back twenty or thirty steps and load your gun, cock it and hold it in position with the muzzle toward the ground at an angle of about forty-five degrees. Fix your eye on the target, shut both eyes and instantly throw up your gun and fire, keeping your eyes closed until after the discharge. If your practice has been faithfully performed before this you will probably find the paper riddled with shot, and if you do not you will readily see where the charge did strike, which will help you to remedy it at the next fire. When you can hit that paper (with a moderate degree of certainty) with your eyes closed you have more than "half the battle," for you have mastered the "hang" of the gun, and the rest is comparatively easy after a little practice.

Supposing now that you can throw your gun up in line with any object that you wish to, we are about ready to start for the woods, but before we go it is necessary to give some attention to our ammunition, for as much depends upon good ammunition and having the gun properly loaded as it does upon having a good gun. Much has been said and written upon the subject of loading guns, and hardly any two think alike. But there is much to be said, and the best powder that you can get, if it does cost a little more. The difference in the shooting will more than repay you; besides, poor powder injures the barrels of your gun, causing them to rust and spot. Use good powder and plenty of it; use the best plunk-edge wads, two or three of them over the powder, and one over the shot. Don't use paciboard wads any way. If you wish to cut your own wads, cut them from soft, spongy, clean leather, and lubricate them well with tallow and plunk-edge.

In the early part of the season No. 6 shot (chilled) is good for grouse. Later, say in November, you will want No. 4, for grouse will carry away a big load of fine shot, and seemingly mind nothing about it. If you use a muzzle-loader, use nothing but the best water-proof caps. Having our ammunition all right, we will now see if we can find a grouse to try your hand at, so will walk along down to the woods. Now, remember, when a grouse starts, nine times out of ten he will start from the ground. If he is going straight away from you, throw up your gun so as to shoot a little over where you see him, and by the time you get up you will be discharged, he will have flown right into the shower of shot. If he starts toward the right or left, throw up your gun so as to shoot a little high and in advance of him, say from one to three feet; you must use your judgment about that, and be governed by the speed of the bird and the surroundings, etc. Follow the bird with your eyes and your hands will unconsciously follow your eyes with the gun. I have to make more allowance for speed when a bird is flying to the right than I do when it is going to the left. I know that way, my boy, you see that in. We are now here we are in the brush. You go ahead with your gun and I will follow and pick up the birds. What? "Shall not get any?" That will never do. You must have confidence in yourself. Make up your mind that you will get the first bird that starts; and when one does start, if you can see him, let him have it, if there is even a ghost of a chance of killing him. Now we must stop talking, for the sound of the human voice will scare grouse as much as any thing that I know of, and—*Quik, gate, quik. His wings are down.* Well done, my boy, excellent! Good, but you did not need to fire the second shot, for the first barrel fixed him so that he will never drum any more old legs. Fortunately for you, your first shot was a straight away. I am not surprised that you look pale, feel faint, and tremble all over like a leaf, for such joy as is felt by a boy when he knocks over his first ruffed grouse (this kind of game birds and one of the most difficult to kill on the wing), is probably never felt again this side of those "happy hunting grounds" in the rainbow future.

Now, my boy, you are a little better off than you were in the brush, but this wing shooting is like swimming; after you have once taken a few strokes, you will never be drowned, no matter how deep the water is, if you have a fair chance; and after you have once killed a ruffed grouse on the wing, you will be astonished to see what confidence you will have in yourself to kill the next. And if you do not bring him down you will still live in hope, and with patience, perseverance, and practice as often as it can be made convenient, you will

sooner or later be killed by your friends a "crack shot." I have not tried to write up some fancy theory on wing shooting, and could not if I should try, but the above hints are taken from my own practical experience of twenty-five years in what I call my specialty—hunting partridges. My first bird was killed in exactly the same manner as I have described. IRON RAMBRO.

THE HURLING GROUSE.

TREBING CO. WING SHOOTING.

McDONALD'S CORNER, New Brunswick, Dec. 16.

Editor Forest and Stream:

Where shall we draw the line between sport and murder? This question was suggested by a communication in a recent number of your paper, signed "Ruffed Grouse," in which the writer denounces, in language which seems to me rather epithetic, the practice of "murdering" grouse while they are in trees. After drawing a picture of the poor whisky-punishing tree-shooter, which must have strained his imagination considerably, he assures us that "if any one is conscious that the coat fits him well, he is welcome to the use of it." All of your readers, I think, take the latter phrase at its face value, and recognize it as a foolish parent's warning to his child, and not as a warning against personalities, and also as an over-convenient parry to shield from "returo dro." I always suspect the manufacturer of a garment of the sort of talk—the pattern from a reversible article that was originally made from the same measure.

Are tree-shooting and "whisky-guzzling" necessarily associates? Not much. It is absurd to try to fasten the vice of intemperance on any particular class of hunters, and an argument that needs better ground than necessary to sustain it is a little lame. Of the grouse-shooting readers of FOREST AND STREAM, I will venture to say that fully one-third will openly declare that they "pull trigger" on a ruffed grouse (in the open season) wherever they see him; and among them you will find as little whisky drinking, "if they muscle" and "be foregone brain" as among the same number of self-respecting wing-shooters.

"I am no orator, as Brutus is," but I would like to see this subject thoroughly ventilated, even though I be carved up in the process by some able knight of the quill.

If, after three days' patient manœuvring, I have the sight of my antiquated Snider full on a caribou standing one hundred yards away, on a barren, mist I jump the animal and try to shoot him on the run? Would it be "murder" if I sent that ball to his heart (if I could), or would it be more sportsmanlike to run the risk of wounding him and allowing him to suffer for days, or of missing him altogether? If the latter is the proper method, I would like to know the name of the person who practices it, yet any one who has tried both will admit that you can hit a running caribou in the open as easily as you can a flying grouse in thick cover. Some may say, "We don't still-hunt grouse; your comparison is illogical." We are not discussing the question of difficulty of approach, but that of "sport ex. murder." Which is the "murderer," the man who shoots the head off a grouse in a tree, or the wing-shooter who mangles him, leaving him to end his sufferings some hours or days later? Do not wish to be understood as advocating tree-shooting, nor do I usually try anything that rises within range, nor do I accuse those who advocate the shooting of grouse solely in this way, of writing in the interest of ammunition factories. The questions I wish to see answered are simply these: Why should we be partial to the grouse? (What is sauce for one gender is usually considered good for the other.) Secondly, is every man a "murderer" who shoots at game which is not in motion? If so, it is time there was a radical change. Let the editors of sporting papers speak out. Let the sportsmen of America stand up and make a crusade against raking shots at ducks in the water, the shooting of any bird when not on the wing, and short-range rifle-shooting at any animal not in motion. Let him that is without sin cast the first stone; and then, instead of applying a seven-by-nine practice to several square miles of theory, let us stand up for "the right," and practice what we preach. Again I say, give the sportsmen of America light on this subject, and let us know just what is expected of us.

I was interested in the letter of "Stans'ed" which appeared in a recent issue. He has evidently "been there" often, and his advice is "solid." "Try all fair wile-zots," and perhaps in the course of time you will shoot them in no other way. An old sportsman whom I once knew used to say that "a chance shot would kill the Devil." I don't vouch for the truth of the assertion, neither do I believe in a material devil upon whom the sight of a gun would be brought to bear; but I think it is well that you should shoot a little at a flying grouse, and the letters of some who kill them (that of "Iron Harry," for example) serves to strengthen this theory. I have been to the woods twice since I read the advice of "Mick West" "to shoot on sight." On the first day I hit one, but he dropped in a bog, and, as we had no dog, we scored 0. On the second occasion we took our dog and made him work near us. My brother scored one on a "pot shot," and I can assure you that a big fir-bird which an old fellow took a boner for "fall" was fearfully mangled by the author's "O's" attempts as we waded our way home might be embodied in the following parody:

What? I wish to remark,
And my language is plain,
That for being a mark,
For slitting his eye-chain,
The "burring grouse" is peculiar;
When some I am free to maintain.

Had I not already written too much, I would tell you a true tale of what befell one of our crack shots who was attempting to scoop in a flying partridge, but as it is, I am satisfied by wishing all Forest and Streamers a merry Christmas and a happy New Year. L. I. F.

FRANKLIN, New York.

Editor Forest and Stream:

I agree with "Ruff d'Grouse," where he says: "It is the very skill and nerve required to bag grouse in difficult places that afford the fascination of the sport and build up the muscle and tones up the system," and as far as myself is concerned I could convince him that I am no "slouch shot" in cover or open field, and can snap-shot as many in close timber or thicket, without the gun to the shoulder, as the best of them I have ever met. But in the Eastern and in some of the Middle States and Canada, where abundance of thick timber and brush preclude the possibility of wary

shooting and grouse are abundant, and die of old age and natural causes, and are certainly "good for man to eat," then cockers are a pleasant aid in preventing a few from going to waste. Stop the snoring and trapping of grouse, and the clearing of timber, and grouse will always hold their own in spite of the gun or treble cocker. I have watched this in sections where cockers and guns were out almost continually during the open season, and even some few years I have known them to grow more and more plenty each year. We can readily perceive that "Ruffed Grouse" is an advocate of setters or pointers, but we hope he will not show the disposition of the "dog in the manger," and wish us not to use the legitimate cocker because he does not choose to.

He tries to impress upon you that we are "pot hunters." 'Tis true that we put our birds in the "pot" and do not send them to market, or willfully destroy or let them go to waste by spilling on our hands. But are we to suppose that "Ruffed Grouse" has never put any in the pot, or is doing the opposite from what we are with our birds? We certainly hope not. The very best of our honored present and old time sportsmen that have had extensive experience with ruffed grouse all acknowledge that shooting this bundle of witchcraft and feathers upon the wing, or over shells or treble cockers is as sportingly legitimate and exciting as any sport with the gun known, and is not "pot hunting" in any form of its definition. M. P. McKos.

LOADING FOR GAME.

LOADING FOR GAME.—Much diversity of opinion prevails as to the correct loading for different kinds of game. It is a subject upon which we would like to hear the experience of gunners.—FOREST AND STREAM, Dec. 15, 1881.

No two gunners will agree, probably, as to just what constitutes the most killing charge for any given kind of game, in a 16, 12, 10 or 6 gauge gun.

Of course all will agree that different gauges require different charges of powder, because a 6 gauge will but a "squib" in a 6 gauge gun, and an over-load for a 20 gauge, 34 drachms of No. 1 (fine) powder in a 20 gauge gun would, with a corresponding quantity of No. 3 shot, increase the recoil without increasing the penetration; besides, the powder would not all burn before leaving the gun (which will account for the decreased penetration), while 34 drachms of No. 3 (coarse) in a 6-gauge gun, with a corresponding charge of No. 8 shot, would be little more than a "squib," producing but slight recoil and poor penetration. It is also clear that different gauges require different charges of shot as well as of powder. As to some extent the charges of both powder and shot should vary in the same gauge as the sizes vary from fine to coarse.

Powder and shot should be weighed, not measured, if great accuracy be aimed at; for, bulk per bulk by measure, the coarse graded powder (No. 3) will weigh about 1.9 more than fine (No. 1), and it will be found about the same between coarse and fine shot (No. 1 and No. 8).

In order to answer your inquiry correctly, or rather with an approximation of what might be fairly considered the correct loading for different kinds of game, it will be found necessary to take into the account: 1st, gauge of the gun and its weight; 2d, size of the powder and shot; 3d, weight of the powder and shot, and 4th, the size and toughness of the game and the distance off (assuming that to be from 55 to 60 yards, according to the size of the shot used).

Keeping these points in mind, and omitting to particularize each kind of game, but grouping them according to their size and toughness, I give the result of over forty years' experience, trusting you may do some good and lead to further and more scientific investigations.

FOR 10-GAUGE GUN.

1. For large game, such as deer, turkey, geese, etc., use 32 to 44 drachms of fine, and No. 3 (coarse) powder, and half and half, with one pink-edge wad or one felt wad over the powder, and 1 1/4 to 1 1/2 oz. shot, from No. 1 to B. B.'s inclusive, with one Baldwin wad over the shot, the wads in metallic shells to be two sizes larger than the gauge of the gun; in paper shells one size larger if metallic moulds are used in loading, to prevent the bulging and enlargement of the paper shell.

2. For medium-sized game, such as canvas-backs, mallard, red-head, dusky-ducks, wildgeese, gadwall, pintail, and birds of that class, when in full plumage, use 4 to 4 1/2 drachms of fine and coarse mixed powder, as in No. 1, and same kind of wads; with 1 1/4 to 1 1/2 oz. shot, from No. 5 to No. 2 inclusive, using your judgment in choosing about the proper size of shot for the kind of shooting, whether canvas-back, etc., on points, or mallard, etc., over decoys.

3. For small game and birds that usually lie close, such as snipe, woodcock, teal, quiver, gallinule (rail), pinnacled and rounded grouse, plumper ducks, etc., etc.: 4 to 4 1/2 drachms mixed powder, as in No. 1, wads the same, with 1 1/4 to 1 1/2 oz. shot, from No. 9 to No. 6 inclusive, judging always which is the proper sized shot for the work in hand, say 9's and 8's for snipe, woodcock, etc., and 7's and 6's for grouse, etc.

From a great number of trials it is found that in a 10-gauge gun, 32 drachms of mixed powder (1 and 3), with 1 1/4 oz. shot, will produce the maximum initial velocity and penetration of which the gun is capable, and probably will give the best average pattern.

FOR 12-GAUGE GUN.

1. For shooting large game: 28 to 3 drachms of mixed powder, Nos. 1 and 2 (Oriental, for instance), one pink-edge or felt wad over the powder and one Baldwin over the shot (in all small gauges two wads over the powder increases the recoil and adds but a trifle, if any, to the penetration and pattern), with 1 oz. of shot, from No. 1 to B's inclusive.

2. For medium-sized gun: 8 to 8 1/2 drachms powder (mixed 1 and 2), with 1 oz. of shot from No. 5 to No. 2 inclusive.

3. For small game and close-lying birds: 3 1/2 to 4 drachms mixed powder (Nos. 1 and 2) and 1 oz. shot from No. 9 to No. 6 inclusive, 8's best.

FOR 14, 16 AND 20-GAUGE GUNS,

and for medium and small game, load with 2 1/2 to 3 1/2 drachms No. 1 (fine) powder, and 1 oz. shot for 14 gauge; 2 1/2 to 3 drachms No. 1 powder and 1 oz. shot for 16 gauge; and 2 to 2 1/2 drachms No. 1 powder and 3/4 oz. shot for 20 gauge.

FOR 6-GAUGE GUNS.

1. For large game: 4 1/2 to 5 drachms No. 3 (coarse) powder and 1 1/2 to 1 3/4 oz. shot from No. 1 to treble 8, G, using two pink-edge wads or one felt wad over powder and one wad over shot, two sizes larger than gauge of gun.

2. For medium game: 5 to 6 drachms of No. 3 (coarse)

powder and 1 1/2 to 2 oz. shot, from No. 8 to No. 2 inclusive, wad the same as in No. 1.

These charges may not always produce the greatest initial velocity and penetration, but it is confidently believed that, taking into the account the penetration and pattern, they will be found, in the long run, the best and most killing charges. The impact of three or four shot with less velocity will be more likely to kill than one or two shot with greater velocity. It should be borne in mind that there is found to be a difference of from 15 to 25 per cent. in favor of metallic shells over paper, in penetration and pattern combined.

Heavier charges have been and may continue to be used, but the chief result will be more noise, greater recoil and black-and-blue shoulders, without any increase of pleasure or bag. D. W. Cross.

Cleveland, O.

AN ARKANSAS GAME COUNTRY.

IN looking over notices of the many game resorts of our country I see nothing from this region, which is, I think, the best of all for general sport. By this region I mean the lower White River country, or Arkansas and Prairie counties, Arkansas. The Memphis and Little Rock Railroad traverses Prairie county from east to west, making it easily accessible to the Memphis and Little Rock sportsmen, therefore it is becoming somewhat popular. But yet immense quantities of deer, bear, turkey, chickens and quail have been brought to hog their this season.

But the region for sport par excellence is Arkansas county, immediately south of Prairie county, and lying between the junction of the White and Arkansas rivers. This is a region seldom reached by outside sportsmen, and game of all kinds abounds. The county is about half prairie and half timber, and abounds in nearly all the game found in any of the older States, except ruffed grouse. Here we have bear, deer, panther, beaver, wildcats, opossums, coons, rabbits, two kinds—turkeys, geese, ducks, prairie chickens, quail, squirrels and minks in great abundance. In December, January and February ducks and geese swarm on the prairies and in the great hays, lakes and lagoons of the White and Arkansas river bottoms, in countless millions; and sandhill cranes on the prairies in February—all these making a variety of sport great enough to please all.

The large bays and lakes (old river channels) in the White River bottoms, deep, clear pools, abundant in black bass and other game fishes, and the beautiful White River, the finest stream on the continent, navigable for 700 miles, contains both these and great blue or channel catfish. This patient follower of "old Izak" can satiate himself with his favorite sport.

The winter climate of this region is the finest on the continent; its people are hospitable, glad to see and kind to visitors. This town of Crockett's Bluff, founded by the descendants of the ancient and renowned Col. David Crockett, is the centre of the fine game region. The old town has come to seed and dried up since the war, but still good accommodations can be had here at reasonable prices. The old Crockett family is worthily represented by Col. "Bob" Crockett, a "chip off of the old block," a pleasant, genial, hospitable gentleman. He has in his possession the old Crockett rifle, presented to his grandfather, Col. Davy, by five hundred young men of Philadelphia, while he was member of Congress from Tennessee, and other mementoes. This old rifle is yet one of the finest deer guns in the nation.

The best hunting season here is from December until March, and we are sorry to say that they kill deer here as late as April, and then again in June. But the deer are so plenty that the people are forced to kill them in self-defense. (Don't mistake my meaning, please; deer don't "bite," but they eat up their field peas and watermelons.) But this kind of deer murder should be stopped. Arkansas needs, and needs very badly, stringent game laws.

This county is at this time the best stock country on the continent—that is, for cattle and hogs. They neither of them now need any care whatever, and generally remain fat the year around. Cattle have the prairies in the summer and the immense cañons to winter in. Hogs have the immense mast of nuts, acorns, persimmons and berries, and even this season, when all of these were almost an entire failure, the hogs (great herds of them) are in fine condition—many of them fat enough for good pork. Land is very, very cheap here. The climate is as healthy as in any of the Western States where the soil is very rich. Crockett's Bluff can be reached by the White River steamboats from Memphis, by very pleasant trip boats first-class—or by railroad to De Wall's Bluff and then to Crockett's Bluff by White River boats.

One fine male one shipment of 183 deer from this region by one boat, besides other game. BYRNE. Crockett's Bluff, Arkansas county, Ark., December, 1881.

FLORIDA WINTER NOTES.

JACKSONVILLE, Dec. 20.

FOR three months the weather has been out of joint—but seasonably. It has not cleared off, and it is probable that in the future we shall have a dry atmosphere, a bountiful supply of sunshine, and the glorious winter weather for which Florida is famous.

Ducks have appeared in great numbers on the St. Johns river, below this city. As usual, quail are very plentiful in every portion of the State.

Last week I enjoyed several pleasant visits from the great canoeist, Mr. Bishop, of Lake George, N. Y. He is accompanied by his estimable lady, and they intend indulging in a boat trip of some weeks on the Indian River. On Tuesday last, too, Dr. Henshall, the great authority on black bass, called on me. He, in company with his wife, started on Saturday for Titusville. On arriving at that point they will take possession of a small schooner, and will devote over three months to a cruise around the coast from Indian River to Cedar Keys. The Doctor promised that he would write up for your columns certain portions of the Southwest Coast that I have not described.

This city has long been famous for its superior hotels, and it affords me pleasure to state that the National Hotel, in Bay street, has been purchased by Mr. Nathaniel Webster, of Gloucester, Mass., and has been named the Everett. It has been repaired, extended and refurbished, at an expenditure of over \$90,000. The house, containing 120 large bedrooms, is supplied with luxurious furniture. The ladies' parlor has been supplied with gorgeous fittings and a grand piano. The house fronts the south, and from its spacious veranda

a charming view of the St. Johns is obtained. Nearly every room is supplied with an open fire-place, and the entire house is heated by steam. Filtered rain water will be used for domestic purposes. The building is substantially constructed of brick, and for the safety of patrons every modern appliance has been secured and introduced, embracing fire hose on every floor and Bahcock fire extinguishers. The hydraulic elevator was built by Moore & Wyman, of Boston, and it is supplied with safety appliances which render accidents impossible. The Everett has been leased by Mr. Everett Webster, of Gloucester, Mass., and Mr. William P. Davis, late of the Carleton Hotel, of this city. Mr. Davis, Sr., will give his personal attention to the business, which will be a sufficient guarantee that guests will not be disappointed. The names of the parties connected with the hotel are: Day clerk, J. W. Potter, late of Highland Home Hotel, Martha's Vineyard; night clerk, W. S. Bigelow, late of Sea Foam House, New Haven, Conn.; cashier, W. F. Young, Fitchburg, Mass.; \$3 to \$5 per day. From what we know of the proprietors and the superior fittings we can confidently recommend the Everett to the favorable notice of the readers of FOREST AND STREAM.

On several occasions we have referred to the advantages of the Southwest Coast of Florida as a winter resort for canoeists. Two weeks since Mr. Moore, editor of *Harper's Young Folks*, called, and I furnished him with necessary information. He launched his canoe, Psyche, at Ellaville, and descended the Suwanee River. At last accounts he was at Cedar Keys, en route for Charlotte Harbor, the Caloosahatchie River, Lake Ocheechee, Kissimmee River, Indian River, and St. Johns River to this city. AL. FERRO.

SANFORD, Fla., Dec. 15.—Quail are fairly plenty in this vicinity. There are, to my knowledge, at least four coveys within half a mile from our place, four miles out from the town of Sanford.

Ducks and snipe are reported as plenty on the river, and yesterday several deer were brought into town from the surrounding country.

The heavy rains of the past week or so have kept me from taking any trips. I have, however, managed to get some quail around the place. By the way, I had quite an interesting experience the other day. My dog stopped at a clump of palmetto, and I gave it a kick, expecting there was a bunch of quail there. Immediately the dog made a jump and landed on a large skunk. The skunk came up to the mouth and held on. I whistled at the dog and killed the skunk. I think there is no danger from rabies in the dog, as I have had several dogs bitten by skunks with no bad results. TRUMP.

LORD DUNRAVEN AND THE NOVA SCOTIA GAME LAWS.

HALIFAX, Nova Scotia, Dec. 24, 1881.

Editor Forest and Stream:

SIR—In your issue of the 23d inst. you publish a letter written by Lord Dunraven, which is intended as a reply to some remarks of mine on a public notice in your paper on the subject of his lordship's arrest in Queens county some time since for a breach of the game laws, which requires some comments from me.

I observe that a Halifax morning paper, the *Herald*, characterizes his lordship's letter as a "very clever one," and laments that "a gentleman of such distinguished literary ability, and one whose influence in England is very great, should have been subjected to such an unpleasantness as being arrested for a breach of our game laws, and hopes that he will not give our people a bad name."

Now, I have no wish to cast any reflections upon the noble Earl's ability, both as a mighty hunter and a writer of several very interesting works, which I have read with much pleasure, but in this letter I submit that his cleverness is only exhibited by his aptitude for special pleading, and his attempts to evade the real points at issue between us, as I shall endeavor to show.

His lordship charges me with falling into the same error as he did in supposing that the game licenses are good for the whole Province and are issued in Halifax. I did say so, and I now repeat it, and will prove that I am correct. It will be remembered that I was combating the assertion made by his apologist, the *New York World*, that the only mistake his lordship made was in not taking out a county license, and I stated that no such licenses were issued under our laws. The assertion that the game licenses are issued in Halifax is proved by the fact that they must be signed by the Provincial Secretary and Chief Game Commissioner, and who reside in Halifax. It is true, as I stated in a former letter, that for the convenience of sportsmen entering the Province, in remote districts, a certain number are deposited with the Clerks of the Peace or municipalities, from whom they can be procured without reference to headquarters. That a license is good to hunt "over the whole Province," as I asserted, is easily proved. The Province is divided, for the purpose of the act, into six districts, each comprising several counties, over which are appointed a Commissioner and several Wardens. A hunter is allowed to kill in any one season two moose and one caribou—two animals in all—so that it might happen that he could kill one in each district of the Province under the same license, taking the precaution to make affidavit before the Clerk of the Peace in the district to which he removes of the number of animals he is yet entitled to kill. And here it appears that not having the Act by me when I wrote my first letter I committed the error of stating that the affidavit should be made before the "Game Commissioner," a not very material point. Having thus, I think, clearly shown that it was correct in my view of the law upon these two points, I pass on to the real question in this case, which his lordship very conveniently winks out of sight—viz., was he, or was he not, guilty of a breach of the game laws of this Province by hunting without a license of any sort?

Out of his own mouth I will convict him. He says that he was "telegraphed to his agent in this city (Mr. James Scott) to send his stores to Cheladonia and several Wardens, who are appointed a Commissioner and several Wardens, and he received a reply that the licenses would be sent by mail, and that, acting on this advice, he went into the woods (he went) in the full belief that his license had been obtained." Suppose that he had killed moose the next day, and that something had happened to prevent Mr. Scott from getting or sending the license (which was really the case), would he not have been liable to a fine for a breach of the Game Laws? Surely his lordship, as a magistrate, ought to know that he was not justified in hunting under a prospectus, and in this case purely *imaginary*, license. And his excuse that he was ignor-

ant of the fact that he ought to have procured his license in the district is a very lame one, indeed. *Ignorantia legis neminem excusat* is a maxim that his lordship ought to be familiar with. He could easily have rectified his error by inquiry of the Clerk of the Peace or Game Commissioner (who resides at or near Galadonia) or any Warden. His lordship was clearly liable to a fine for hunting without a license, a word as to the way he was dealt with. He complains that he had not all the formalities of "trial, conviction and sentence," and asks if it is right to hang a man without these preliminaries. Certainly not. But this is a very different case, and his lordship having been caught *in flagrante delicto*, I do not think there was anything to try. A clause in the Game Laws (Sec. 29) reads that "every holder of a license must produce the same when required so to do by any Justice of the Peace, Game Commr. Sinner, or Warden, or officer of the Game Protection Society," so that if his lordship, being a non-resident, was found hunting, and could not produce his license when called upon, I am inclined to think he could be fined on view, as is done under the Fishery Act. However this may be (and I am only expressing my own opinion), I believe, upon reflection, that his arrest under a capias was not illegal. The section (31) relating to the collection of penalties, reads:

"Any penalty imposed by this Act may be recovered in a summary way, *in the name of a private debt*, in the name of any person who may sue for the same."

Now, in the case of a private debt, any person can take out a capias against a debtor by swearing that he is about to leave the county, etc. That could have been easily and properly done in this case, and then his lordship could have given bail, and had his trial if he wanted one. And this right to arrest by capias is a very necessary one in order to carry out the law—for what would be the use of issuing a *warrant* to a resident person so to do before the day of trial, would be out of the county—so that anyway I fail to see where the "hush treatment" comes in. There are several other points in his lordship's letter which I would like to remark upon, but this letter has already grown too long—one let me briefly allude to. He says that "no one supposes that the obje of the Game Society is to make money out of strangers." He forgets that his champion, the New York *World* (inspired no doubt by its interview with him), very incoherently remarks that "the object of the game laws of this State is to restrict the sports of those who are not entitled to them by the wayfarer sportsmen than the preservation of the game, and compares the officials of the law to the vipers who infest Niagara Falls demanding money from hunters at every turn," and one of the objects of my first letter to the FOREST AND STREAM was to correct this misstatement, so calculated to injure the character of our game officials among sportsmen abroad.

I am sorry that his lordship holds the opinion that our Game Laws are not adequate for the purpose and inadequately administered." The statement that the law is a dead letter as far as the natives (under which term, I suppose, he includes Indians and other Nova Scotians) are concerned is not correct. I know of many prosecutions and convictions of residents—so much so that the poor backwoodsman (for whom there might be some excuse if they killed more than the prescribed number of animals for food for their families) complain that they are punished, while, too often, the gentlemen sportsmen, who kill for pleasure, escape with but no punishment. I am free to admit that there may be imperfections and discrepancies in our Game Laws. All that I can say is that a great deal of care and attention were bestowed upon their preparation by the gentlemen who framed them, and that their sole desire was to endeavor to put upon the statute book a law suitable to the requirements of the country. In conclusion, I would invite his lordship to join our society. A contribution of ten dollars will make him an honorary member, and he will thus be assisting the funds of a very useful society, and at the same time be able to give us the benefit of his varied experience as a sportsman in amending and removing whatever incongruities may exist in the present Game Laws of this Province.

A MEMBER OF THE NOVA SCOTIA GAME PROTECTION SOCIETY.
Halifax, N. S., Dec. 10, 1881.

THE POT-HUNTING SON OF HAM.

HEARNE, TEXAS, Dec. 3, 1881.

Editor Forest and Stream:

I am indignant. The cause of my wrath is this: One day this week, two fellows came into town, each with a covered wagon or "prairie schooner;" and they were peddling live quail, which they claimed to have trapped, to the number of thirteen hundred in four days. Now, at one time I was a boy; and that boy dearly loved to set traps and catch quail, and I think I know enough about it to know that this exploit of catching thirteen hundred in four days is manifestly impossible. They must have used nets and driven the quail into them. Is there no way in which this wholesale destruction of game birds can be stopped? Is there no law to protect them from these wretched pot-hunters? Why don't our Legislature do something to protect the game while there is plenty here to protect; and not as some of our sister States have done—visit until the game is all destroyed, and then make laws to protect birds that are extinct or very nearly so? "An ounce of prevention is better than a pound of cure." If laws were made and enforced now, while game is plenty, there would still be plenty for generations to come.

Another thing that is driving the game away, though destroying comparatively little, is the negro with his old army musket. He is very numerous in Texas, and especially so in the vicinity of the Brazos river. He is not afraid of very nearly so. "An ounce of prevention is better than a pound of cure." If laws were made and enforced now, while game is plenty, there would still be plenty for generations to come.

When he finds where a covey of quail "use," he takes his gun, and goes out early in the morning or late in the evening and watches for them. As soon as he gets them as nearly as a bunch as possible, he "turns loose" his old cannon. When he "comes out" and finds his gun hasn't "busted," he takes what he has killed, never getting what have only been crippled and hobbled off to die, and goes to town to sell his booty.

It is one of the evils with which this country has been afflicted ever since the war. You can't get rid of him, nor drive him away from him. He is in every clump of bushes in the country. If you ask information of him about game, he tells you willingly all he knows to be a lie. But he can't shoot on the wing, and he never owns any dog but a manny cur. Pointers and setters and their workings are a mystery to him, and I hope they will remain so.

I wish some of our Texas sportsmen would look into this making and trapping business, and see if it cannot be removed by law. Please bring it before them in your valuable paper, and stir them up.

When I wrote you last, we had promise of a fine season, but since then it has turned warm and no wild fowl are stopping here at all. Quail and deer are plenty; but no snipe.
B. C. H.

WASHINGTON, Dec. 18.—Having an office near the river, and being compelled by business to remain there after dark, I have noticed something which is contrary to all law—the gunning of ducks at night by the aid of a light fixed in the bow of the boat. The ducks being attracted by the light, swim up quite close to the boat, and are then easily killed with an ordinary gun. This practice is one which, I believe, is quite new in this vicinity, but which has existed and been stopped in Chesapeake Bay. Upon inquiry I have found this shooting is done by two negroes, who use sail-boats.—H.

NEW YEAR IN THE WOODS.

ON the First of the Year every fish, bird and beast, Protected by law, sat down to a feast; 'Twas a Thanksgiving Dinner, hence all of them came, As the time had expired for taking of game. First came Mr. Bass and his wife, Mrs. Deer, Mr. Gobbler, and Mrs. Wild Turkey were there; Then came Mr. Ruffed Grouse, and pretty Miss Quail, With Mr. Buck Rabbit, and Miss Cotton Tail. Mr. Fox Squirrel, Miss Grey Squirrel and Black Squirrel, next came, With Woodcock and Snipe, too numerous to name, Mr. Pickered and Lady, and beautiful Miss Trout. And old Mr. Black Bass brought Widow Pike out. When all had arrived and the cloth had been spread, And the guests were all seated, Mr. Duck rose and said, "It affords me much pleasure to see you all here. At our annual reunion this first of the year. Yet many old friends, it grieves me to say, I miss at our Thanksgiving dinner to-day. Let us all return thanks that our lives have been spared," Cotton Tail said, "Amen! for I nearly was snared." "And I," said Wild Turkey, "came near to my end, And an thankful that I have escaped being penned." Mr. Woodcock, Miss Quail and Miss Snipe all said that they were thankful to have escaped the Hawk and the Cat. Mr. Ruffed Grouse was thankful the Fox and the Mink Had left him alive, for he really did not think Several times through the summer and fall of the year That he never would live to meet with them here. Buck Rabbit declared the Owl was his foe, And would watch him at night wherever he'd go. He was glad he was living to give thanks to-day, And now wished to hear what the squirrels might say. Mr. Fox Squirrel, Mrs. Black Squirrel, and also Miss Gray, Declared they had nothing before them to lay, Except that through vigilance strictly applied, They had managed thus far to keep their tails safe. The Pickered, the Bass, the Pike and the Trout, Had various things to be thankful about. They'd escaped the fish basket, the net and the seine, The Fish Hawk, the Heron, Kingfisher and Crane. In addition to these they'd escaped all along, The angler who caught fish not four inches long. When all had given thanks then Mr. Buck said, The Pot-hunter was always his greatest dread. That while to the sportsman he'd lay down his life, And so would his daughter, his son and his wife, He trusted that Pan, the god of the chase, Would spare all his kindred the shenic and disgrace Of being killed by a hunter to fill up his purse. For certainly nothing on earth could be worse. When the repast was finished a motion was made, That "a premium on scalps of destroyers be laid, Whether Pot-hunters, Foxes, Cats, Weasels or Mink, Or on Owls or on Hawks, for we really do think. That if ten dollars per scalp were laid upon these, All sportsmen could find game wherever they'd please." A motion to amend was indignantly spurned. The first motion passed and the meeting adjourned.

SANCIO PANZA, No. 2.

TENNESSEE GAME NOTES.—Nashville, December 21.—John Nicholson has just returned from Redfoot Lake. He reports ducks and geese abundant, and a large number of sportsmen to shoot them. Many of these gentlemen are from Indianapolis, Springfield and Cincinnati. The hotel at Idlewild is admirably kept, and the shooting close by is the best on the lake. This point is most easily reached from Union City, where Messrs. Cardwell or Williams will only be too happy to give visitors all the facilities within their power. Our market is now overstocked with game; quail are down to a dollar per dozen and rascals from twenty-five to fifty cents, according to size. Venison only brings two cents per pound. Wild turkey the same. Two novices in field sports went out last week, and although they emptied one hundred and seventy-five shells, only brought home a highland turtle and two woodpeckers, the other killing shot taking effect in their dog. John Burkholz said very justly, "Ten wools better stany in ze haub, abee de next die day pin gillin zum veller, and den dey pin getting in ten benedictinary." Fox hunting has been magnificent this fall; game plentiful, and neither as if made to order. William Hobbs still keeps up his nocturnal chases after 'possums.
J. D. H.

TEXAS—Abilene, Taylor Co.—Antelope, wild turkey and quail are quite plentiful in this vicinity.—W. S. H.

STATE PIGEON TOURNAMENTS.

Editor Forest and Stream:

I most heartily endorse your views in relation to the slaying of pigeons at the meetings of the "Game Protective Societies" of our country. With you, I think these societies at their annual meetings can find enough to engage their time by taking active measures for the protection of our game. But, not then let there be consistent in the eyes of the world among the flag of game protection, and raise in its stead the flag of game destruction. It has long ago been written that we cannot serve two masters, and this is as true to-day as it was then.

I find in my travels, wherever I go, that the public sentiment is emphatic against these pigeon slaughters, and yet more decided against netting pigeons under any circumstances whatever. They speak the truth when they say these birds are becoming very scarce under this awful netting system, and that the time has now arrived when it should be stopped by stringent laws in every State and Territory of the Union. I heartily endorse these sentiments.

Game societies should never forget that nearly all the sporting grounds of our States are the private domains of the people, and that it is to them we are indebted for all the sporting amusements we enjoy. Hence, we should not be blind to the privileges we receive at their hands, nor deaf to their righteous judgment. For myself, I believe in the kindness of the people, and I would I treat them with ingratitude by ignoring their wishes.

Besides, these shooting matches are cruel and barbarous. I allude more particularly to the one held last year, where, under the banners of "game protection," over 40,000 pigeons are said to have been killed. These were specially netted for this occasion, and nearly 2,000 miles away, in the deep and secluded forests of the Indian Territory, bordering on Texas, where they had collected in great numbers to build their nests, to lay and hatch their eggs and to feed and raise their young. Here, among the Indian villages, they would have been safe from the barbarism of the treacherous net. Had not the greedy white man followed them there to gobble them up by thousands while they were upon their feeding grounds and seeking food for their young. Here the unsuspecting parent birds were caught and huddled into coops and carried away in wagon loads for over 100 miles, through the rough forests, and over the yet rougher roads, to the nearest railroad, and from thence they were carried as prisoners of war to Coney Island, there to await in debility and sickness their coming fate.

It is to be presumed that the young of these birds numbered at least 2,000. These were left to perish with hunger in their nests. Day after day, in their lonely nests, with mouths wide open, they anxiously await the usual return of their watchful parents to give them food. But they wait and fast in vain. The parent birds do not return. So, the young birds pine away from the stress of hunger and thirst, until death finally comes to their relief. Now, all this is no fancy sketch of mine, but is a fact and half an hour's reality, and may it be received and treasured up as a lesson, pointing to that humanity of feeling and action which we should all observe and follow as the rule of our lives. Especially should this be the case with all who profess to be true sportsmen. Our motto of "game protection" is good, and it is up to us to build it up.
H. W. MERRILL.

New Rochelle, N. Y.

INDIANA—Angola, Dec. 27, 1881.—The first thing in last issue that struck me was "Real Off-Hand Shooting." Now, I have attended some of these rifle shooting matches here in the country, and find they all short from rest. That does not show any ability or nerve on the marksman's part, but only the quality of the gun. I like to see them stand up like men and hold their arms free from their body and shoot at a good distance and come as near the centre of the mark as they can. That shows both the nerve of the man and the qualities of the gun. I should like to hear through your columns from some of the "coon-hunters. There is plenty of "coon here, and a few bits from some of the "older heads" may add some improvement on my way of catching them. Quail and squirrels are scarce here; a few rabbits and turkeys in the swamps. I killed one of the latter on Saturday last that weighed 8 lbs., with a 14 bore muzzle-loader, using double B's, which I think is a little too heavy to shoot well in that size gun.—E. R.

AN ECHO OF THE CHEAP GUNS.—Quebec, Quebec, Dec. 15, 1881.—Editor Forest and Stream: God speed you in your war against cheap guns. One thing you do not mention, that is, that the "Saxxon" is a few shillings more than several different names. The "Zulu" and the "Ranger" are identical with the "Saxxon." We have them here in the hardware stores. They are awful. But what surprises us most is that such high-class publications as the *Century Magazine* will advertise them. They may not burst for some time; but they will kill, there is no doubt of that. And what a swindle to say they are well-made and finely finished. They are the roughest, vilest, meanest, meanest looking earth-quack-handled ever made. One advertisement says they were made for the French army, another for the Zulus. Strange that even the Zulus wouldn't have them.—CANADA.

ANDRONAUX WINTER NOTES.—Moira, Dec. 26.—We have had no snow here yet. Winter returns as October. It is favorable for deer, and if we don't have a late spring they will be likely to come out in better condition than ordinarily. The open weather also prevents crusting, which is better still. Beechnuts are very plentiful also, and all kinds of animals and birds that feed on them cannot fail to have plenty of food. Partridge are quite plenty about here yet, and a good stock will be left over to breed next season. I do not hear they are hunted to any amount since the open season closed. The fact is, that they would hunt them do not care to unless they can sell them for market and they dare not do that. Besides, they could not find buyers now. A. C.

ONTARIO DEER—Belleville, Ont., Dec. 3, 1881.—Deer hunters have been very successful this season, despite the destruction of large tracts of woodland by the bush fires. One party of four from this city got five deer, and another party of three got a big number, in ten days' shooting. A party of two from Henderson, N. Y., shot seven deer in as many days, and fifteen deer were got by a party from Campbellford. The method of hunting pursued here is chasing into lakes with hounds, and the game do not seem to diminish in numbers.—R. S. B.

ELKS FOR GERMANY.—Canada hunters have been for several months engaged in collecting for Mr. Hermann Reiche, the Chatham street dealer in birds and beasts, elks for exportation to Europe. A shipment of twenty-three Canadian elks, intended for zoological gardens and private purchasers in Germany, arrived by railroad last Monday, and will be forwarded to Bremen in the steamer Gen. Werder. The arrivals are mostly good-sized, though young specimens, without antlers. Several of the old ones had antlers two inches in diameter near the base. But for convenience of transportation the antlers had been sawed off. The elks have evidently suffered from confinement and their long journey. Each one is encased in a narrow wooden cage, which permits him to stand upright or to lie down in a cramped position. They are still easily frightened, and start restlessly when approached. Their large, lustreous eyes shine like polished agate, and seem to cast appealing and reproachful looks upon their attendants. Two men are kept busy looking after the comfort of the animals.

THE MAINE HOUNDING CASE.—We are in receipt of a letter from "Old Tug" reasserting and confirming by the testimony of the game wardens his charges made in a former letter, that the Howe parties, from Merrimack, Mass., hunted deer in Maine last summer. We have also a letter from Mr. Howe, of which the only important point is this: "Old Tug" charges the Shoppen brothers with acting as guides and assisting us in violating the laws of the State. This certainly is unjust and untrue. I have no knowledge that these men have ever acted in the capacity of guides to any party, certainly not to ours. They merely met us with their teams and took us to camp and returned home immediately." The matter has already been given sufficient prominence in our columns, and we must, therefore, decline to devote further space to it.

SOME NEW JERSEY NOTES.—Hackettstown, N. J., Dec. 18, 1891.—Quail are very scarce. The notes from your correspondent printed last spring are about correct, as I think there is not one covey now where there were five last season. Ruffed grouse are almost exterminated. I have seen but five individuals this season. I should like to ask if it is usual to find the partridge fly on the birds at this season of the year? The three birds that I have killed have all had from one to three on them, being the first I ever saw. Rabbits are not as plentiful as usual this season. Woodcock gave us no summer shooting worth speaking of. There were a few light birds this fall in November, but the writer was not fortunate enough to find any. Foxes are very numerous. Quite a number have been killed, and tracks can be found within ten minutes walk of town in the snow. My catters have started several.—DALY.

IN A QUIK SAND.—Perth, Ont., Dec. 1891.—When out shooting this fall, and after a noble buck, the canoe upset, and I was plunged into a species of quicksand, through which I could not swim far, and the result was that I remained in the ice-cold water for three hours and nearly lost my life. When I first upset I fired my repeater three times at the deer while I was in the water, but the slimy matter getting into the barrel burst it, so that in getting a new one I chose a Winchester Express, which, in my humble opinion, is the best repeater made for deer hunting.—RIVLIX.

CHICAGO NOTES.—Chicago, Ill., Dec. 20.—We are having fine rabbit-shooting here now, although there is no snow on the ground. I was out yesterday and bagged seven rabbits, three fox-squirrels and four ruffed grouse. Quail are scarce. Duck-shooting is over. There is a half an inch of ice on the marshes at present. Several good bags of Canada geese were made last week. One man shot eight, and another five last Saturday afternoon within fifteen miles of the city.—TEX BOW.

KILLING WOUNDED WILDFOWLE.—St. Louis, Mo., Dec. 18, 1891.—In your issue of 15th inst., your correspondent "Bay Ridge" asks how wildfowl wounded in the head may be speedily put to death. Many years ago the writer shot ducks in Maryland and experienced the same difficulty in killing ducks so wounded, but found an easy way out. Hold the duck's head under the surface of the water and it will soon cease to breathe.—TALBOT.

A BIG DEER SCORE.—Cleveland, O., Dec. 1891.—Our club grounds in Sandusky Bay yielded grand sport this season. 8,000 game ducks were registered up to Dec. 3. Of that number I had the good luck to bag 1,416, a large number of which were canvas-backs and red-heads.—C.

OFF FOR VIRGINIA.—Mr. G. W. Bassford and Messrs. H. B. Hall and Albert Hall, visit Virginia next week on a grand shooting trip. They take with them the noted dogs Chick and Iron Duke, and expect to have a good time.

WE ARE REQUESTED by the inventor of the new air gun, mentioned in these columns the other day, to say that he has in consequence of that notice been overwhelmed with more letters than he can possibly attend to. When the gun is ready Mr. Chamberlain will announce that fact in our columns.

NORTH OF LAKE ST. JOHN.—A correspondent wishes information about the country north of Lake St. John, Province of Quebec, Canada. Can any of our readers give some particulars about the country, its game, etc.?

BOSTON, Dec. 24.—Good attendance of marksmen and weather; conditions were fairly good, wind northwest, but some trouble with the ice on the ground, covered with snow. The birds made are appended:

Table with columns for bird species and counts. Includes 'Sharpshooters' Match' and 'Handicap Match'.

CARVER VS. GORDON.—London, Dec. 29.—A pleasant shooting match for 2500 marks, 100 pigeons each, came off to-day at the Union Gun Club Grounds, Hendon, between Dr. Carver and Mr. Gordon. The latter stood at twenty-four yards, and was restricted to one or two shots at each bird. Dr. Carver shot 10 birds, Mr. Gordon killed sixty-eight birds and Dr. Carver sixty-seven.

Sea and River Fishing.

Table titled 'FISH IN SEASON IN JANUARY.' with columns for 'FRESH WATER' and 'SALT WATER' listing various fish species.

The merring fly I see him cast, That as a roscel falls his soft, A dash; 'a whirr! he has him fast! We try, how that struggle lost Confuses and calms us out. Unflattered he calls as the sky Looks on our trout comedies, This way and that he lets him fly A sunbeam shuttle, then to die Lands him, with cool aplomb at ease."

J. R. LOWELL. THE SOUTH SIDE SPORTSMEN'S CLUB.

WE recently had the pleasure of visiting the grounds of the celebrated South Side Sportsmen's Club, of Long Island, and of inspecting their lakes, streams and fish hatcheries. Although the Club has extensive grounds and pays some attention to stocking them with birds and animals, it is mainly interested in fishing, and especially in trout fishing. The Club was formed in 1868. Mr. Jones Rogers was elected President and served one year. From 1867 Hon. J. K. Hackett presided, until his death, in 1879. Since then Mr. James Bankard has been its presiding officer. There are 879 acres now belonging to the Association, and it is favorably situated, being surrounded by neighbors who hold large lots of land and are equally interested in this question. Mr. W. H. Vanderbilt, one of the members of the Club, owns 700 acres adjoining the grounds, and on other sides are Mr. Lorillard with 1,000 acres and Mr. C. R. Robert with 1,400 acres. The Club is now in treaty for 1,400 acres more, which, if obtained, will extend their line to the railroad, and thus make a tract of 5,379 acres, including that of their neighbors, which is effectually protected from promiscuous shooting and fishing. Of the land now owned by the Club, fifty acres is water, mainly in two lakes, and they have four streams which make four and a half miles of trout brooks.

Fishculture was begun on a small scale in 1877. Its success has so marked that it has gradually increased, and is now largely carried on under President Bankard, assisted by the Secretary, Mr. R. Redmond. Those who are familiar with the grounds will remember the old ponds and hatchery below the club house. They will find them well filled, and ten or a dozen new ones above the large lake, a new hatchery and ponds farther up the brook, where the fishcultivist, Mr. Riley, lives. Both hatcheries are filled with eggs, about four hundred thousand being at present on the screens, and the season is not yet over. Some fish are already hatched, and spawn was taken during our visit.

The Club numbers 100 members, and no more can join until vacancies occur. The capture of trout was limited to twelve per day to each person, without regard to weight of the fish, until the past season, when the number was restricted to eighteen. This rule is adhered to, notwithstanding that the lakes are full and the surplus is sent to market. Last year \$2,000 worth were sent to market, and this year Mr. Blackford, of Fulton Market, has ordered 2,000 pounds for the first day of the coming season. As the trout openings South Side trout are preferred by buyers, and many New Yorkers believe that no trout in the country equal those of Long Island.

Table with columns for year, fish count, and weight. Shows data for 1876-1881.

Among the trout in the breeding ponds near the house is a rainbow trout, one year and a half old, which will weigh a pound and a half. It was taken up in a net for our inspection. Also a quinnat salmon of about two pounds weight, and now five years old, which ourselves hatched in the New York Aquarium in November, 1876. A fine lot of rainbow trout occupy one of the breeding ponds above the lake.

The grounds are well kept, and quail are fed in severe weather, many having been killed by the severity of the past few winters. Attempts have been made to breed deer, and this work will be continued. We spent a most enjoyable day, and hope again to visit the beautiful and interesting grounds of the South Side Club.

NEW LAW IN STEUBEN COUNTY, NEW YORK.—The County Supervisors of Steuben county, N. Y., at their last session, passed a law prohibiting all fishing in the Canisteo River and its branches above the village of Canisteo for a period of three years. Thirty thousand California or rainbow trout were planted last year (1891); this year (1892) we are to have 60,000 more California and brook trout planted. Four years ago I was instrumental in having our beautiful river (that is what Canisteo means in Indian dialect) stocked with black bass, but the heathen would not give them a chance to increase, and actually speared them in their spawning beds, when I made a complaint to our game constable; he would not prosecute, as he was afraid it would hurt his trade. I shall run for game constable myself this year (1893).

—J. OTIS FELLOWS. ANGLING NOTES will be found in the letters of "Nesmuk" and "Byrnie." It is not always convenient to classify matter strictly, and anglers will often find in other columns matters of special interest to the craft.

ANGLING NOTES FROM CANADA.

SHREBROOKE, Quebec, Dec. 15, 1891. Editor Forest and Stream: Whited-bay will certainly take the fly in Lake Mackinaw. We saw the m caught so last June. But what do you say to suckers taking the fly? We did not see that, but had it on good authority that two had been caught at the outlet of the lake with the fly.

In this lake is a species of sucker of which I would like to know the name. It is about the same shape as the common sucker, but marked with irregular patches of bright red. We saw them in small groups of half a dozen or so among schools of thousands of common suckers on their way up the inlet to spawn. We caught some from trout from among these schools of suckers, that had been feeding on sucker spawn. Do the suckers eat the trout spawn?

We are now living in anticipation of next fly time. June will see us fighting mosquitoes and black flies, and enjoying ourselves generally, for there will be the big trout to throw all other flies into the shade. What if we can't open our eyes half way! What if our necks are so raw that we can't turn from north to northeast without lifting our feet? Trout fishing makes it all heaven, and a fried half-pounder served on a chip is a sure cure for fly sickness.

What do you or your readers use as a culetage? We use oil of tar and olive oil. We have used cod tar and olive oil, but don't anticipate using it any more. Almost anything will do for a day's fishing, but the Canadian trout fisher in June wants something that he can keep on night and day for a week at a time without having it taking the skin off! What can you recommend? CANADA.

TENNESSEE FISH NOTES.

NASHVILLE, Dec. 21. FROM the demand being made on Capt. F. W. Green for Gernan carp, raised in his pond, it would appear that the mania for cultivating these fish is still on the increase. I look forward to grand results from this class of pisciculturists, satisfied as I am that they would not pay one dollar per pair for the fish, unless their ponds were properly prepared and free of other varieties.

As to those distributed by Col. Akers, although that gentleman took all the precautions possible, may have found their way in unsuitable ponds, to say nothing of the ones which died from inanition.

A great many fine bass have been taken lately from Reelfoot Lake, one gentleman having caught twenty-one a few days ago within an hour. I fear the pot hunters in this State have begun their depredations again. A large number of "jacks" have been sold in our market recently, and I am confident that they were caught in nets.

White perch seem to thrive remarkably well in the ponds of this State where any have been placed. They form excellent food and are quite game. Squire W. A. Knight proposes stocking several ponds next spring with game fish, and I hear of several other gentlemen who contemplate doing the same. Any live man could come to this section of country, and in a few years make a fortune out of the fish culture business. In this State, in any creek, water abundant and transportation facilities unsurpassed.

Mr. Wm. Woods, of Maine county, told me on Saturday that the increase of fish in Duck River within the last two years was astonishing. Almost any day he could take as many as would supply his table in a couple of hours.

J. D. H. FISHERY PRODUCTS AND ANIMALS AT BERLIN.

PART IV. of the Official Report of the International Fishery Exhibition at Berlin, 1890, by Dr. H. Dohrn, is before us.* This report, which is accompanied by an appendix containing an account of the pearls, by Mr. F. Friedlander and Dr. H. Nitsche, is uniform in size and appearance with its predecessors and comprises ninety-two pages. It gives an account of the sponges, corals, medusa, hydroid, polyps, anemones, echinoderms, worms, crustaceans, insects, mollusks, fishes and their products, birds and mammals. Those which are useful to man naturally receive more attention in the report, but most products are noted. The elegant display of amber (which formed an interesting feature; and its production constitutes an important industry in parts of Germany) receives little attention. The leeches also are neglected on at least, dismissed with the notice that anatomical specimens were shown by Professor S. Richiardi, of Pisa. The report shows that Dr. Dohrn has viewed the collection with the eye of a mere naturalist, and has little regard for the uses to which an animal may be put to benefit man. This, in our opinion, is the wrong view to take of a collection gathered to illustrate the fishery resources of the different countries in this report. In the next one, No. V., the scientific division, this course is to be expected, but from the report on "Fishery Products and Water Animals," we expected a treatment from the standpoint of a political economist, and not from a natural history point. We expected to learn how leeches were reared and sent to market, how sponges were prepared and amber fished for, with statistics of the value of the fisheries, etc., and in this we are disappointed.

Under the head of "Fish of all Kinds and from all Zones," Dr. Dohrn enters more into the commercial aspect of the case, and under the title of "Fish-oils and Other Fish," he gives the statistics of Norway. Among the mammals we find merely a list of them regard to their commercial value or of the processes of preparation of their products, and the report is a very unsatisfactory one.

The appendix is much better and the report on the pearls by S. Friedlander and Dr. H. Nitsche, is much more complete. The color of pearls, we learn, is very variable and is affected by locality. They are white, blue, yellowish, brown and deep black, with brilliant reflections in the sea pearls, while the fresh-water pearls are mainly luteo-colored with but small brilliancy. Pearls vary in value from their shape as well as color, and the round ones are most highly prized, and next to these, the pear-shaped. The river pearls have small value, and do not approach the beauty of the oriental ones.

The exhibit of pearls at Berlin was a most extraordinary and beautiful one. Of the three rarest strings of pearls in "Antique Berichte über die Internationale Fischerei-Ausstellung zu Berlin 1890. [Beal of the society.] IV. Fischerei products und Wasserthiere von Dr. H. Dohrn. [in deutsch] perlin von S. Friedlander und Dr. H. Nitsche mit 100 den text gedruckt holzschnitten. — Berlin: Verlag von Paul Parey, 1891.

point of beauty, there was noted: One string of white Pash pearls, worth \$25,000; one yellowish or gray-colored string of oriental pearls, worth \$20,000, and one black string, worth \$30,000. Single pearls of rare sizes, shapes and colors were seen, and their value was great.

In Japan pearls are found in several species of mollusks which do not yield them in other waters. They occur in a species of scallop, *Pecten gemensis*, in *Arca subarenata*, *Cytherea pectinifera*, *Tapes semiostralis*, *Habotis gigantea* and a snail. There are statistics and chemical analyses of waters where pearls are found, and much valuable and interesting information in the appendix.

MAINE WHITEFISH TAKE THE HOOK FREELY.

Editor Forest and Stream:

I note from time to time, in letters from your correspondents, the taking of whitefish with baited hook mentioned as a rare incident. A speck of the whitefish is found in many of the lakes of Maine, in the St. John, New Brunswick, and on up to the Arctic regions. Your Western whitefish is much larger than ours, weighing from two and one-half to an occasional six pounds; with us it seldom exceeds one and one-half pounds, the average being one pound. In Moosehead Lake it is taken with a baited hook alone, in fact no other mode of taking it is permitted. A summer seldom passes without some of these beautiful fish being taken on the fly by anglers who are fishing for trout. It spawns in the autumn, about the same time as the trout. It is in good eating condition for the table in March, having had time to recuperate from casting its ova, and is then taken in considerable numbers through the ice, with hook and line.

My colleague and myself have taken as many as seventy-five in five hours' fishing. They are a very delicious fish, preferable, I think, even to trout. The same foregone conclusion exists in regard to this fish not taking bait as with the famous blueback trout, *Salmo ogusssa*, of the Rangeley lakes, when the real fact is that they may both be readily taken by this mode of angling, in their proper seasons, if fished for "grunts" or "lakers," like they are only netted, indeed, no other way of taking them is known or believed in; the result is that they are only brought to market when full of spawn and least fit for the table. In Maine it is a rarely beautiful fish, more delicate in its outline and coloring than the fish of the Western lakes, a very dainty biter, and to be fished for with a small hook and minute bait, owing to the size of its mouth. The bait is kept in constant motion by slowly hitting and falling the hand about a foot, and when a slight obstruction is felt, as if hooked into a small fish, or a grass, strike quickly and you have your fish. As we have said, it has a very small mouth, and hence its peculiar mode of biting.

It is the custom with our Moosehead Lake fishermen to roast a cusk in the ashes, the flesh of which is very white when cooked, and then rub it between the hands into the hole in the ice, to attract the fish. Others anchor a bullock's lights or liver on the body of a large cusk, well slashed with the knife, as an attractive ground bait. That coarse, fleshy fish, the toque, or "laker," feeds largely on the whitefish, and is apt to visit our favorite fishing grounds in pursuit. We then assume a heavier line and coarser hook with a larger bait, a live chub if possible, and soon capture and send him where we hope the assassin Giteute will soon be conigned to a limpon lue. We think the Western whitefish may be taken if fished for, as easily as our own. We propose to introduce our Eastern whitefish into all our lakes so soon as we can afford the proper apparatus for hatching the ova. Unlike our trout the young fry are too delicate, as is also the parent fish, to be transported. They must be hatched where they can be allowed to swim directly into the waters they are intended to stock as soon as hatched.

E. M. SWILWELL.

A FISH IN AN OYSTER SHELL.

ZANESVILLE, Ohio, December, 1881.

Editor Forest and Stream:

For the edification of your readers and to satisfy my curiosity, I send you herewith a cut or drawing of a small fish, species unknown to the writer. From this and the meagre description I am able to give I hope you will explain to your readers to what species it belongs, and how you account for the peculiar and extraordinary position in which it was found.

The drawing was made by laying the fish on the uncolored slip of paper, and with pencil I proceeded to take the outline, making it life-size. The dorsal fin, you will notice, is continuous to the caudal fin, and the anal fin the same. The pectoral fin appears to be larger and longer than in fish of its size. There is a full row of fine teeth on the upper jaw, and on the lower jaw about one half the number of teeth less. The head is of a dark green color, with black spots or dots, as you will notice in the cut. The pectoral fin is also covered with black dots nearest the head. The body is of a darker hue, nearly black on the back, and gradually changing into a fish yellow toward the belly. Seven or eight lines or streaks of white run on each side of the body, parallel with the spinal column, from head to tail.

It came into my possession in a very extraordinary manner. During the first week in November last I called at one of our oyster dealers for shell oysters, and noticed it lying in a half shell on the counter. Expressing my surprise at it as a curiosity my friend C., the dealer, presented me with the same, and had his son, a fine lad of about seventeen summers, relate to me how it was found. The boy was out oysters, which had arrived from Baltimore, and in handling them one attracted his attention by a hollow sound. His curiosity being aroused he and a colored help proceeded to open it the usual way with a shucking knife. Falling in this they finally succeeded by the use of a hammer and visorous pounding, and in the shell found enclosed this fish. It was not alive, but in an excellent state of preservation, and floating in dirty-looking fluid like water. No oyster or anything else was found in the shell.

The shell is nothing different from that of a common oyster shell after the oyster is taken out. It has the dark spot on the inside to which the oyster is usually attached. I preserved both.

I have been a reader of ROD AND GUN, and then of FOREST AND STREAM for many years, and do not remember of having read of anything similar. No doubt many of your readers, like myself, are anxious to know several things connected with this matter. First, to what species does the fish belong? Second, how came it in the shell? Third,

why was the shell so hard to open after the oyster had been devoured, if it all?

ALCIBIOMON.

[Your figure is imperfect, having no ventral fins, and your description does not say whether the fish has scales or not. We think you recognize the "toad fish" or "oyster fish," *Labridius lais*, a scaleless fish common to the muddy bottoms of the Atlantic coast. The following is a partial description from "The Fishes of New York," by DeKay: "Body thick and rounded before, attenuated and compressed behind. Head broad, depressed; its width equalling its length. Skin without scales, * * * lateral line obsolete. Facial outline sloping. The eyes large, lateral, but with an almost vertical aspect, and nearly covered with a fleshy membrane. Opercle with three concealed spines. Numerous cirri about the head and mouth, and a series of from five to seven cirri on each side of the lower jaw."]

DeKay described what he supposed to be another and smaller species, but which is now known to be identical with the former, and in his description ("Two-spined Toad Fish," *B. celatus*, p. 170) he says: "This little fish, which I have never known to exceed the above dimensions (1 in.), is usually found on muddy bottoms. It has frequently been brought to me between the two valves of an oyster." The fish must have entered when small and found it a good hiding place. When an oyster dies its shells often remain fixed in position.]

EFFECT OF MOONLIGHT ON FISH.

KEY WEST, Fla., Dec. 14.

Editor Forest and Stream:

Some time since I mentioned the belief prevalent here that moonlight spoiled fish, and you suggested that experiments be made to determine the question. I have acted upon the idea, and can positively say, from the result of experiments that moonlight does not *always* spoil fish. That it *never* does, I can not say. I purchased five small fish, called here "grunts," freshly caught, and preparing them all in the same manner as is always done to keep them over night, I kept some of them in the house, hung some out of doors where there was no shade or protection, and the moon could shine on them all night long, and hung the rest up out of doors where they would be subject to the influence of the night air, but out of the influence of the moon.

The next morning all were equally good, and could not be told apart, either before or after cooking. This was about two nights after full moon. Some say that it should have been tried while the moon was on the increase; but, as I have already said, I am satisfied that moonlight does not spoil fish *always*.

Still, from the testimony of many old fishermen with whom I have conversed, I am fully convinced that fish do many times spoil when left on deck or hung up in the moonlight, while those below, out of the moonshine, keep well. What the cause of this is remains to be found out. Whether it is the night air, the heavy dew, or some other atmospheric influence can not be positively said. The fishermen naturally say it is the moon, that being the most prominent phenomenon. Whether it is a factor or not, and what the other factors are, I intend to find out if it can be done by any experimenting within my power.

NIGHT FISHING.

WASHINGTON, Dec. 20, 1881.

Editor Forest and Stream:

Touching the above subject I beg to add that I have had, and seen others have, very good success in night fishing for trout in California streams—notably in the Merced River—by candle or lantern light, better, perhaps, than in the same places in day time. The process there was to set a good lamp at the edge of the water and use worms for bait. The California trout, as a rule, are not educated up to the point of rising to the fly; at least, so far as my experience and observation go.

I have also tried night fishing for trout with the fly—never with worms or other live bait—in the Maine Lakes, but always without success in those waters.

FOOD OF THE ANGLER FISH.—New York, Dec. 19, 1881.—*Editor Forest and Stream:* Last week a strange fish was seen struggling on the water off New Rochelle, and was shot. It was a large angle fish, and on being opened a coot and a gull were found in it, in their natural condition.—F. O. DE LRYE.

[We ascribed on one occasion at New Haven, Conn., at the autopsy of a large specimen of the angler fish (*Lophius*), which contained no less than seven large coots. He was, as they say out West, "plum full."]

Fishculture.

THE "GOLD-ORF."

(*Idus melanotus auratus*.)

THE "Orfe" also "Ladies' Fish," is distinguished by its beautiful orange colored back and its body scales, which glitter like silver. To give to the gold fish, their young looking about in large schools, even when leaving the eggs present a remarkably beautiful appearance. Having a thickness of about two lines and a length of one-half to one centimeter, their color being a bright red with a black head, the easily frightened school swim with lightning-like rapidity from one place to the other.

There is scarcely a fish which as an ornamental fish, so satisfactorily meets all the demands made of it as the *Idus melanotus auratus*, which, in summer and winter, is constantly seen near the surface of the water. It does not winter like the carp and perch, and never makes the water muddy. Ever restless, the "orfe" constantly swims near the surface to seek its food, and even when ice thickly covers the pond red spots indicate that this active fish is alive.

Gold fish, gold tench and carp only occasionally rise to the surface of the water, while they seek their food at the bottom and thus make the water muddy.

It is certain that a fish which immediately on leaving the egg answers its purpose as an ornamental fish so completely is preferable to the gold fish, which does not so soon assume a brilliant color.

In the year 1858 Gesener wrote, in his "Natural History," that the "Orfe" enjoyed a high reputation as an article of food, especially when fried, particularly in the months of April and May. Formerly to sell the "Orfe" was only given when it had reached a certain size, as they were considered an excellent food for the sick and, consequently, it was desirable not to let the species die out. This fish was also considered a wholesome and strengthening food for women in confinement.

The "gold-orfe" is native of Germany, and sought after by keepers of aquaria on account of their beauty. We have imported a few specimens of this new fish to America, from which we intend to propagate.

Cincinnati, O. HUGH MILLBURN.

EGGS FOR GERMANY.—The North German Lloyd steamer ODER, which sailed on Saturday, the 24th inst., took out the following lots of eggs:

- 300,000 whitefish eggs for you Behr, Berlin.
- 12,000 whitefish eggs for F. Busse, Grestenau.
- 20,000 brook trout eggs for G. Ebrecht, Grestenau.
- 12,000 brook trout eggs for G. Ebrecht, Grestenau.

The whitefish eggs were sent by Prof. Baird from the ponds of Frank N. Clark, Northville, Mich. The brook trout eggs were sent by Mr. Livingston Stone from the ponds of Mr. W. L. Gilbert, Plymouth, Mass.

CARP FOR PENNSYLVANIA.—Philadelphia, Dec. 24.—In a show window on Arch street, near Sixth, Philadelphia, an Assistant to the Fish Commission has in an aquarium a number of carp on exhibition. They are attracting great attention, and many more are demanded than can be supplied. The great trouble in the neighborhood of Philadelphia will be to prevent conditions from inducing this fish into ponds where there are gold fish; the two varieties will cross and the result of the cross will be an inferior fish to the C. S. Ponds should be laid out for breeding of the carp alone.—C. S. WESTCOTT.

The Kennel.

TRAINING VS. BREAKING.

IN TEN CHAPTERS—CHAP. VI.

RETRIEVING is an accomplishment that nearly all sportsmen place a high value upon, and even its opponents generally become quick converts to the practice as soon as they are fortunate enough to own a dog that is well-trained in this indispensable branch of canine education. We have often been amused at the sudden change in the mind of some of these out-spoken adversaries of the practice upon their acquisition of a really good retriever. How quickly their fears that it will make him unsteady vanish; how soon their belief that it will ruin his nose takes flight, and henceforth the system has no stronger advocate until they get another worthless animal. We do not propose to argue the question here as to whether retrieving is detrimental to the dog or not, but will, instead, state that it is our firm belief that if a dog is properly trained in the first place, and kept up to his work as he should be, no possible harm can accrue either to his nose or steadiness; and that in no single instance where evil results have ensued was it the fault of the practice or the dog, but entirely the fault of the man; for the dog is certainly not to blame for breaking shot and chasing the "big" broken bird when his master sets the example. Neither should he be blamed for repeating the indiscretion. Here we can see that the check cord and spiked collar could be used to very great advantage, but we should by no means test his efficacy upon the neck of a dumb animal.

We will now resume our lessons, reserving further remarks upon this very important subject until we come to actual work in the field. We do not think it advisable to commence teaching our pup to retrieve until he has shed his puppy teeth, and his permanent set are pretty well grown; for until this time his mouth is generally more or less inflamed, and his first teeth are sharp as needles; and we may not hope to succeed in achieving that dainty, delicate mouth—that is so indispensable to the good retriever—until we have done this. If we wait until his gums are bared and he has become somewhat accustomed to his new teeth. He will also have acquired all the more experience with the added days, and will all the more readily understand what you require. We shall now derive no little benefit from our so-called "fancy training." In fact, should our pupil possess no natural taste for retrieving, we shall find it almost indispensable; and should he prove never so hard-headed and never so headstrong, we shall find it equally indispensable. We will say the same fancy training we shall be able to bring him safely through, and that you doubting fears will disturb our mind when we send him for his first bird.

Our pupil should be well up in all his lessons by this time, and so perfect at *To ho* that he will not only "draw" on a piece of meat one step at a time, but he must be also so well trained that when you cluck to him as a signal that he may eat it, he will, after taking it in his mouth instantly, at your command *To ho*, hold it perfectly still and deliver it into your hand without any hesitancy. If this has been thoroughly taught him, one-half your task in teaching him to retrieve is accomplished, and you will find it an easy matter to complete his education; for you will have no trouble in inducing him to take a single step toward you when he has the piece of meat in his mouth; and by using great care that you do not tax his patience too much by an undue haste to perfect him too soon, he will, in a short time, readily take two or three steps, and with proper care and good judgment on your part he will soon learn to readily bring you the smallest bit of meat from across the yard, and to deliver it into your hand intact.

We must again caution you to go very slow, and to be satisfied with a very little progress. In this lesson special care must be had that each successive step is well and thoroughly learned before proceeding any further. Thus, when you have succeeded in getting him to take a step or two toward you, do not try him at a longer distance until he has had considerable practice at it, and with readily made the step or two at the word "*bring*;" or you can use the word "*fetch*," if you prefer, but do not use more than one of them, at least until your pupil is further advanced. Of course you will have taught him to come to you when called, long before this, and by prefacing your call with the word *bring*, or *fetch*, it will not be long before he will understand its meaning; but until he does understand it and comes readily at the word, do not increase the distance.

Do not be greatly disappointed if, in learning this, some of them will give you scarcely any trouble and from the first appear to know just what you want and take delight in

bringing anything you may throw for them; while others seem to be stupid and will never bring anything, or will bring accord. The first is a natural retriever and will be easily taught, and also easily spoiled. The last, although harder to teach, will make nearly as good a retriever as the former if the proper course is pursued. We very much dislike that a pup should retrieve before his mouth is all right and his permanent teeth well grown; for this propensity, if indulged before this time is very apt to give you a hard-mouthed dog. Hence, for this reason, we never encourage a pup to bring anything while he is playing. In fact he should never for a moment be allowed to think that he is at play while under instruction in any of his lessons, for there is nothing that is so conducive to bad behavior and disobedience as this. Therefore, make him realize that when you require him to do anything you mean work and not play.

Do not forget that he must never be allowed to eat the piece of meat that he has held in his mouth or brought to you, but that he must be rewarded with something different. This is a very important point, and you will find it very useful in perfecting the catch-mouth, that all adults so much. You may also insist on instant obedience to every command to drop. This can be obtained at the outset by practice with your hand, clasping his muzzle as we have before described, and this must be resorted to should he show the slightest inclination to hesitate or roll the morsel around in his mouth; for we are aiming at perfection and must be satisfied with nothing short.

When your pupil has become so proficient in this that he will pick up a piece of meat and bring it a few steps and deliver it safe into your hand, you should take a piece of cloth and loosely wrap up the meat inside of it, and commence as in the first place by putting it in his mouth and proceeding as in your first lesson at this. He will probably understand what is required and very soon perform as well with this as he did with the bare meat; but should he not like this, you must proceed with the same painstaking perseverance that we have endeavored to impress upon your mind as being of the utmost importance, until your end is attained. You will find that a piece of old cotton cloth that is clean and about as large as your pup's head will serve the purpose. You should let him see you wrap it around the meat, that he may the more readily understand your object, and if he gives you any trouble you must be very careful that you do not try to force him too fast. Perhaps you will find it expedient to leave the meat partially exposed until he understands what is wanted. Or you can merely tie a shred of the cloth to it for a while, and very gradually increase the amount until you have it entirely covered. Your knowledge of his disposition will aid your judgment in so limiting his lessons and in so conducting his new experiments that he shall not become disgusted or sulky, thus giving you no end of trouble. Your aim should be to so handle him that his lessons shall prove a source of enjoyment, and he be ever anxious to receive your instructions. Thus you can easily accomplish by a proper system of rewards when he does well, and by lavishing upon him untended caresses and praise when giving his lessons. To bring about this result you may find it advantageous to be chummy of your caresses at other times and to reserve your words of praise for a few hours of practice; but this will be necessary only in extreme cases.

When our dog brings in his birds in the faultless manner that we have been at so much trouble to teach him, we shall want to see him deliver them into our hand in the same faultless style. And to secure that end we will teach him to come with his captive directly in front of us and to sit on his haunches with his head well up and quietly await our pleasure. Proceed to do this by calling him up in front of you, and placing one hand upon his hip and the other under his chin, gently, but firmly, and so that he may feel you hold up his head, at the same time telling him to "sit." This will be enough for the first lesson, and by continuing in this manner he will soon sit at the word, and then you can give him the order every time that he brings the piece of meat, taking care that he sits directly in front of you every time and remains quiet for a second or two before delivering it; and in a short time he will become so accustomed to this that he will do it of his own accord. We prefer that our dog should bring his birds in the good old-fashioned way, by taking them into his mouth. This becomes necessary only when the bird is only wing-broken, and to our mind it is far more preferable at all times. Especially is it so when among close lying birds; for with the bird in his mouth, back away from his nose, he will not be nearly so apt to flush game that may be in his path. Still we have trained dogs to fetch the bird by one wing, which is easily done by taking half a dozen of the stiff wing feathers of any game bird, or if these cannot be had, those of a fowl will answer. These should be braided together and then sewed in place with stout pack thread. This braiding and sewing is to give him a hold with his teeth so that he will not be obliged to grip them, thus giving him a hard mouth. This should be regularly used after he has learned to bring his piece of meat. Perhaps it would be well to tie a bit of meat to it first, and when he will bring it readily, a small stone that will weigh two or three ounces should be attached to it, and as he improves you can gradually add to the weight until it approaches the weight of the bird, say nearly half pound. Care should be taken to make the stone sit in the good shape you can try to get it to come apart. We do not recommend this style, but as many think that it is quite an accomplishment, we give our method, which has proved successful. Should you wish to adopt this course you should confine your practice entirely to this bunch of feathers, and when he brings it readily you should vary the performance by attaching different articles instead of the stone—your knife, for instance, or a bunch of keys or a bit of wood, and by always making him bring by taking the feathers in his mouth, so he will readily learn to bring his birds in the same manner. If you show him how with a few of his first ones by placing the wing in his mouth, or perhaps the mere showing him the wing will be sufficient.

Should you decide for the old-fashioned way, you should procure a soft ball. We have found a ball of lampwick to be the best possible thing that could be devised—it is soft and just about the right size. This should be stitched through and through, so that it will not unravel, and after he brings his bit of meat in good shape you can try him with it. You will find that the best plan to pursue is to commence at the beginning, and place it in his mouth as you did the first piece of meat, and to pursue the same course by asking only one or two steps, until he gets accustomed to it. And be sure and do not try to accomplish too much at once, but go no faster than your pupil's progress will warrant. When you think that it will answer to order him to pick it up and bring it to you, watch him very closely, and if there is going to be any trouble, and he does not seem inclined to

pick it up readily, you must instantly go to him and place it in his mouth, and be content to let him bring it this way for this time, and wait until he has brought it, and then try him by tying a piece of meat to the ball, and he will soon learn what is required and give no further trouble when he brings his ball readily. You should procure some feathers—from the body of a game bird if possible, but those of a fowl will do very well—and commence by sewing two or three of them on the ball; and as he becomes accustomed to them you should add more until the surface is entirely covered. This will accustom him to feathers, and he will not refuse to take a bird in his mouth as we have known some dogs do to that were really good retrievers. We should not advise you to require your pupil to bring anything except his bit of meat and this ball; until he does this in good form and appears to fully understand what you require. Then you should gradually accustom him to bring other articles—a half sheet of newspaper crumpled into a ball the size of your fist is a good thing to practice him on, always remembering to commence with anything new, by first carefully placing it in his mouth and requiring him to bring it but a few feet the first time. This may seem needless to you, but you will find it necessary with some dogs, and we have ever found that the best results have been obtained by strictly following this course, no matter how intelligent our pupil may be, nor how willing to bring anything that you may wish him to.

THE CLUMBER SPANIEL.

HALIFAX, Nova Scotia.

Editor Forest and Stream:

In looking over the prize lists of bench shows held in different parts of the United States, I notice an entire absence of classes for clumber spaniels. For the Western States, where a large proportion of the hunting is done on clear ground, I can well understand that the setter and pointer would be the favorite, and perhaps the more useful animals; but in the Eastern and Middle States I should suppose that one of the clumber would have made a name. Whether it be that they are not used on account of the scarcity of good specimens of the breed, or that they are not suitable for the grounds shot over, I am at a loss to determine. It certainly cannot be that they are not suitable for the woods, for they are known to other dogs take precedence of them for their sagacity, docility, keenness of scent and general usefulness in the field. It can hardly be that the covers are not suitable, for many of the hunting localities of the Northern States must be similar in character to those of the clumber, and the latter is well adapted to being to the front is the want of good specimens of the class to make the breed known, and for it to take the place it should in the front rank of sporting dogs.

In Nova Scotia, for cock and snipe shooting, they are the most valued, and long experience has taught the sportsmen here to prefer them to any others. A clumber can be used where a setter or pointer would be almost useless; and in a country where a dog has to endure the extremes of heat and cold and to beat his swamps and wet cover, and to find his way out into the open, the clumber stands ahead for strength and endurance. For putting up a cock from a close thicket of alders in August, or in retrieving a duck from a half frozen pond in November, he is equally at home.

In training there are no dogs known to me more easily taught their work or more tenacious of what they have once learned; and, in comparison to a setter or pointer, or even their sisters and rivals—the cockers—the training of a clumber is mere child's play. This is a great advantage, for a sportsman may devote time and money to the training of a retriever dog for the next season, much of the labor has to be gone over again, or the dog sent out into the country to be kept up to his work. For residents of cities, or where the want of a good run would soon ruin a setter or pointer, the clumber would be quite at home and thrive where the others would languish.

An idea was at one time held that this breed was delicate and more liable to disease than most sporting dogs. Such is not now the case. If it was ever so, some cause, such as in-breeding, has become the terrible enemy of the breed. The clumber is a good kennel, and without the introduction of new blood, such results would be natural; but since the breed has been more generally distributed no such evil has shown itself. I have been induced to write these few lines in hope that some of your readers may have been so much excited by the clumber as to inquire for particulars, through the columns of your valuable paper, how they have suited in the United States, and why, so far, they have not been shown at any of the great bench shows; or, if shown, they have taken no prizes. An information tending to improve the sporting facilities or make known any new feature in the breeding or introduction of good sporting dogs, will, I know, be acceptable to you and to the readers of your paper.

NOTES AND NEWS.

A gentleman residing in 135th street, in this city, has in the yard of his residence, an admirably arranged kennel for city use. The building is of wood, substantially jointed and roofed, and occupies the full width of the yard at the rear of the house. It is about six feet front from front to back. The doors in the centre of the front, opening into a plain, square room. On the left hand is a door of slats, leading into the sleeping apartment, which is furnished with a bunk or bench raised from the floor, and runs against the rear wall. Opposite the bench is a window, with shutters and a sash. On the right hand side of the main room is a closet for the storage of kennel traps, dog biscuits, brooms, feeding dishes, etc., and in the rear is a door opening into the vacant lot. The entire building is painted about twice a year, reduces the size of the yard but little, and furnishes excellent quarters for a small number of dogs. Of course, portable benches could be placed in the centre room if necessary. It would, perhaps, be better to have all benches portable, so that they could be moved into the open air, be scrubbed and cleaned. Ventilation through the roof would also be an improvement. In fact, many alterations and improvements would be suggested to the mind of any dog-keeper erecting another such building, but the general idea of the structure, as it stands, is good, and we would be much pleased to hear of many more exactly like it rather than to find our city-kept sporting dogs in the parlor, fed with cakes by the children, in the man-servant's bedroom, in the cellar, in the usual bow-legged canning barrel, or in the flea-breeding and never-cleaned "dog-house."

The catalogue of the English Kennel Club Bench Show this month, at Alexandria, contains a list of about two hundred and eighty. A list of exhibitors is appended, comprising one hundred and eighty. An exhibition of paintings, drawings and prints of dogs and sporting subjects was given in connection with the dog show.

The annual meeting of the Eastern Field Trials Club, for the election of officers, will occur on Thursday, January 12. The place of meeting is not yet announced.

Mr. George T. Leach, winner of the FOREST AND STREAM and Members' Cups, at the Eastern Field Trials, is shooting in North Carolina, over the winning dog, Brock, and Hitter sister, Sunbeam.

The managers of the Westminster Kennel Club propose to purchase, in February next, at the expiration of their present lease, the property now occupied by them, comprising seventy acres, with club-house, kennels, etc., at Babylon, Long Island. The club has also the exclusive right of shooting over several farms adjoining the club property, extending about one mile to the

northward, and enjoys a five years' lease of a fine trout pond of several acres, five miles to the eastward. Important additions to the buildings are in progress, and will be completed by January 1. The kennels have been enlarged and are to include a canine hospital, properly drained and paved with concrete. The entire kennel buildings will form three sides of a square, the fourth side facing southwest, and surrounding the sun, thus furnishing a bright but sheltered yard for the dogs. A small house for the accommodation of gunners has been erected on the trap-shooting grounds. It is arranged with movable front, facing the traps, so as to admit sunshine in winter, or to be cool and shaded in summer. The trap-shooting grounds are among the finest and most pleasantly situated in the State. The dogs are all in fine condition now, particularly Chambliss Sensation. The club is composed of seventy members, of which number it is at present 60. On Monday, January 9, the next meeting of the Board of Managers will be held.

"Hello, Smith! Fine dog you've got there. Ever get a prize at a show?"

"Yes, but he won at a trial."

"At a trial! Indeed? You don't say so? I suppose he bit some man, and you didn't have to pay any damages. Must have had a mighty smart lawyer? Who was he?"

"We are happy to state that Mr. Smith is now rapidly recovering from this terrible blow to his feelings, and that his friends expect to see him on the street again within a few days."

THE WELCH BENCH SHOW.

The exhibition of dogs at Jackson Hall, Lowell, Mass., on the 14th, 15th and 16th inst. was largely attended, the visitors and exhibitors expressing themselves well pleased with the management and arrangements. It is considered by all to have been one of the best shows which have taken place. About one hundred and fifty dogs were on exhibition, under the superintendence of Mr. C. A. Andrew, of West Roxford, and the judgment of Mr. George Walton, of Boston. The following is the prize list:

English Setters—1st, Grouse, D. P. Waters, Salem, Mass. This is the sire of Bunkingham's best winner Grouse's 1st, 2d, Leah, H. McLaughlin, Boston, Mass.

Irish Setters—1st and special prize (silver medal), presented by J. C. Plunkett, of Lowell, for the best winner in the show, Dash, Thos. W. Plunkett, of Dan. W. Bagshaw, Lowell.

Pointers—1st, Tom, C. T. Bailey, Dedham, Mass.; 2d, Ruby, Bacon Kennel, Boston, Mass.

Setter Puppies, under one year—1st, Lady Jessica, William E. Quinn, Dedham, Mass.; 2d, Spruce, same owner.

Pointers—1st and special prize (Smith & Weston revolving rifle, offered by the United States Cartridge Company), for the best pointer in the show. Snipe, Dr. F. C. Plunkett, Lowell; 2d, Polo, E. C. Allen, Dedham, Mass.

Pointer Puppies—1st, Zouave, W. F. Todd, Portland, Maine; 2d, Dash, Irving Tenney, Haverhill, Mass.

Spaniels—1st and special prize for the best spaniel in the show (silver medal, presented by Dr. F. C. Plunkett), Judy, Thomas J. Egan, Halifax, N. S.; 2d, Lingo, same owner.

Pointers—1st and special prize (Smith & Weston revolving rifle, offered by the United States Cartridge Company), for the best pointer in the show. Snipe, Dr. F. C. Plunkett, Lowell; 2d, Polo, E. C. Allen, Dedham, Mass.

Field Spaniels—1st, Ponto, J. H. Maginness, Lowell; 2d, Brandy, J. R. Stepanak, Lowell.

Pointers—1st and special prize for the best foxhound in the show (cavalry shooting coat and cap, presented by O. A. Richardson, Lowell), Rough, W. H. Hope, Lowell; 2d, Joker, Michael Stanton, Lowell.

Beagles—1st, Roxey, N. Elmore, Cranby, Conn.; 2d, Missio, same owner. This dog was also awarded the special prize (a handsome collie pup, presented by Charles A. Andrew, West Roxford), for the best beagle of beagles.

Fox Terriers—1st, Albert, Fred W. Flech, New York; 2d, same owner.

Staffordshire Bull Terriers—1st, Knap, Clipp G. Porter, Draught, St. Bernard's—1st, Jack, E. N. Wood, Lowell.

Newfoundlands—1st, Rover, D. C. Halloran, Lowell; 2d entry of John McKeen, Lowell.

Yorkshire Dogs—1st, Gullies—1st, Rox, J. Lindsay, Jersey City, N. J.; 2d, PUNCH, Charles Morgau, Bordentown, N. J.

Collie Pups—1st, Madie, Benj. F. White, Dedham, Mass.; 2d, Lassie, same owner.

Bull Terriers—1st, Silk, James Mortimer, New York; 2d, Squib, George B. Loring, Boston, Mass.

Bull Dogs—1st, Blister, James Mortimer, New York; 2d, Bonnie Boy, Bacon Kennel, Boston, Mass.

Black and Tan Terriers—1st, Billy, Charles A. Andrew, West Roxford, Mass.

Sky Terriers—1st, withheld; 2d, Schneider, J. F. Arlin, Lowell.

Yorkshire Terriers—1st, Tattors, Bacon Kennel, Boston, Mass.

Scottish Terriers—1st, Puck, C. A. Andrew, West Roxford, Mass.; 2d, same owner's entry.

Dalmatian or Coach Dogs—1st, Spot, F. W. Worthen, Chelmsford, Mass.

Greyhounds—1st, Sharper, Bacon Kennel, Boston, Mass.

Spitz—1st, withheld; 2d, Prince, Mrs. William Holland, Lowell.

Dobermans—1st, Blister, James Mortimer, New York; 2d, Bonnie Boy, Bacon Kennel, Boston, Mass.

Pugs—1st, bitch entered by Mrs. R. W. Sargent, Kittery, Maine.

Miscellaneous—Setter and Spaniel Cross—1st, entry of Charles A. R. Dimon, Lowell. Trick Dog—1st, Spance, F. E. Robbins, Lowell; 2d, entry of Charles H. Whitehead, Lowell. English Pug Pups—1st, entries of Mrs. R. W. Sargent, Kittery, Maine.

A special prize for the person making the largest number of entries (a collie pup presented by I. K. Fells, Natick, Mass.) was awarded to J. P. Barnard, Jr., Boston, Mass.

A special prize for the best brace of collie dogs (a pair of silver velvet shawls, presented by August Peis, Lowell) was awarded to Benjamin F. White, Dedham, Mass., for Lassie and Madie.

Second special prizes were awarded to D. P. Waters, Salem, Mass., for the best pointer, and to William F. Todd, Portland, Maine, for Pointer Pup Zanetta; and to Thomas J. Egan, Halifax, N. S., for spaniel Lorie. A third special prize was awarded to C. T. Bailey, Dedham, Mass., for black and tan setter Tom.

The English Bull Terrier, which has won two hundred shillings for the best kennel of dogs owned and exhibited by one person, was awarded to J. P. Barnard, Jr., Boston, Mass.

The Irish setter Elcho III was on exhibition, but not competing.

RETREVING—Boston.—Editor Forest and Stream: I have a thoroughbred Irish setter, will broken for the field, except that he will not retrieve a bird. In fact, he will not hold anything in his mouth for me. I have exhausted every knowledge I possess, but in vain. I have endeavored, whipped him in fact, doing everything that I have ever heard of to teach him this, and cannot do it. I purchased him as he is now two and a half years old. Will some of your correspondents who have had experience with these dogs tell me to do with this dog or, at least, give some reason for his dog's perverseness in this, when he is quick to learn and ready to do almost anything else that he is told? If so, they will confer a favor upon one of the constant readers of FOREST AND STREAM.—NONPARE.

THE DOGS ARE SPILLED FOR RETREIVING BY WHIPPING THEM FOR BITING THEIR BIRDS. Mr. H. I. Torry, of Palmer, Mass., can teach him to retrieve, and we would advise you to communicate with him.]

CORRESPONDENTS.—Our time has been so taken up with the Field Trials for the last few weeks that we have found it impossible to properly attend to the correspondents who have favored this department with their communications, and we beg their kind indulgence for yet a little season, until we get things straightened out.

Forest, Prince 2d, Mr Lavrence Booth, Duke of Edinburgh; 2d, Mr William Bunsley, Lady Flora.
 Class 115. Toy Terriers (smooth haired, dogs and bitches)—1st, Mr Tom Sullivan, Spain; 2d, Mr George Tilly, Janet.
 Class 116. Toy Terriers (rough haired, dogs and bitches)—1st, Mr Thomas Greenwood, "Fleekle"; 2d, Mr Alfred Anst, Princess.
 Class 117. Extra class, for any unclassified foreign dogs—1st, Mr W. C. Vaughan, Sir John Franklin, Ex-Quintan.

NAMES.—Berkerville, Pa., Dec. 22.—*Editor Forest and Stream:* I do not suppose that any honorable gentleman or breeder would, with purpose and forethought, appropriate the property of another—and I write this not in any spirit of recrimination, but only in the hope that it may lead to the finding of more care on the part of breeders in the future.

In your issue of December 15, 1881, my friend, Mr. William H. Todd, of Vandalia, Ohio, has been especially unfortunate in this selection of names for animals both kept and sold. Certain names become—and of right—private property. No one should be allowed to take names from Messrs. Fowler, Powell and Elmour. "Spot" is the special property of Messrs. Chandler and Baker—the name as well as the famous old dog.

"Belle," winner of the first at Pittsburg's last show, should surely remain unchanged by author; and there is the same impropriety in claiming "Lily" as another prize winner at the same show. I am very well satisfied that Mr. Todd would correct all this, by private appeal, only then I would fail to reach the many who are making "confusion worse confounded" by using, for their own ends, the names of dogs well known either as prize-winners or of the authors.

[We know just how it is ourselves, and cannot blame our correspondent for complaining of this. We are confident that no one would knowingly select names for his puppies that of right belong to other animals of the same breed. Breeds cannot be too careful in this respect, especially when the name appropriated belongs to an animal who has a well-earned reputation, and we trust that in the future not only the breeders of beagles, but those who breed other dogs, will select names for their youngsters that will not lead to mistakes on the dog for another.]

WARWICK AND OLLIE.—An error appeared in our report of the Pennsylvania Field Trials, which we demand prompt correction. In this report, Warwick and Ollie were spoken of as being entered in the Old Trials by Tallman and Martin. This is incorrect. Warwick and Ollie are the property of Mr. H. W. Gagne, of Wilmington, Delaware, and were loaned to E. J. Martin, by whom they were run at the Pennsylvania Trials.

THE HORNELL COCKER KENNEL.—Mr. J. Otis Fellows, of Hornellville, N. Y., requests us to say that he is the sole proprietor of the Hornell Cocker Kennel, and that no other person is in any way connected with it.

ATLANTA BENCH SHOW.—The special prize of the Atlanta Bench Show for the best brace of dogs exhibited, which was won by E. Orrell with his pointers, Bush and Random, was an elegant lemon-colored bitch, purchased, presented by Mr. Geo. G. Stedling, of New York.

PEDIGRES.—We are indebted to a large number of our readers for pedigrees of their dogs, for which they will accept our thanks. We often find them very useful, and should be pleased to receive others that we may place them on file for future reference.

BYRON FOXHOUNDS.—The address of owner of Byron strain of foxhounds,

KENNEL NOTES.

We wish to impress upon the minds of those, who send us letters for our Kennel Notes, that to avoid mistakes all names should be printed in **PURST LETTERS**, as we find it very easy to make mistakes where this is not done. We also would like to be informed whether the animal is male or female, and to know the date of birth and the breed to which they belong, whether pointer, setter, or bulldog. A careful study of the notes in this number of the paper will show just what is wanted. Our aim is to have everything correct; but until contributors will take the necessary trouble to conform to the above request we cannot answer for the mistakes that may occur.

NAMES CLAIMED.

Grassie—Fly.—Claimed by Mr. Philip W. Schuyler, of Saratoga Springs, N. Y., for a black, white and tan setter bitch, whelped May 15, 1881, by Chorus Dale out of Fly (champion Drake—Lima).

Spang—Strandy.—Claimed by Mr. H. W. Kingston, New York city, for liver and white pointer bitch, whelped Dec. 10, 1881, by Grassie out of Strandy.

Bess—Strandy.—Claimed by Mr. H. W. Kingston, New York city, for liver and white pointer bitch, whelped Dec. 10, 1881, by Grassie out of Strandy.

Frankie.—Claimed by Mr. Fred H. London, Rock Hill, S. C., for lemon and white pointer bitch, whelped May 15, 1881, by Foster (Key-City Signal—Hinnette) out of Bess (King Philip—Ada).

Gracie—By.—Claimed by Mr. Wm. Jarvis, Claremont, N. H., for an all red Irish setter dog, whelped June 13, 1881, by champion Echo out of Nora.

Gracie—By.—Claimed by Mr. Wm. Jarvis, Claremont, N. H., for an all red Irish setter bitch, whelped June 13, 1881, by champion Echo out of Nora.

Shot.—By Mr. Clarence A. Parman, Westville, N. Y., for his liver and white pointer bitch puppy, whelped May 15, 1881, by champion Frank out of June (London's Sander—Heddings Kate).

Royal.—By Mr. W. A. Coster, of Plattsburgh, L. I., for his pointer bitch puppy, whelped May 15, 1881, by champion King out of June (London's Sander—Heddings Kate).

Belle.—Claimed by Mr. H. M. Brooks, New York, for lemon and white pointer bitch, whelped May 15, 1881, by champion King out of June (London's Sander—Heddings Kate).

Black and white.—Claimed by Dr. Edward J. Forster, Boston, Mass., for black and white setter puppies whelped Sept. 23, 1881, by Claid (Colby—Jule) out of Zou (Drake—Daisy).

Schiller.—Drove and Bess—Claimed by Mr. W. L. Percival, Palo, Mich., for beagle puppies by sport out of Fallfair.

Snag.—Claimed by Mr. W. L. Percival, Palo, Mich., for pointer puppy by sport out of Bess.

Nabina.—Claimed by Mr. M. B. Bradford, Springfield, Mass., for black and white setter bitch, whelped Oct. 8, 1881, by owner's Pete (King—Smith) out of Nabina (Wm. Jarvis—Claremont).

Fritz.—Claimed by Mr. A. C. Collins, Hartford, Conn., for liver and white pointer dog, whelped Aug. 1, 1881, by Dr. Layman's (London's Sander—Heddings Kate) out of Fritz (London's Sander—Heddings Kate).

J. Frank John's Loch (Doane's Tom—Gay's Fanny) (imported Fitz-Gibbon)—**Prize.**—Mr. John N. Nickerson's (Hedding, Conn.) brown and white bitch Fan (Zig—Boly) to his liver and white dog Prize (Prize of the Irish Setter Club).

Whelped—Dick Laverack.—Mr. Halley Harrison's (Thimbury, Ont.) black, tan and setter bitch Twilight (Gladstone—Morsley) to his Dick Laverack.

Whelped—Dick Laverack.—Mr. Halley Harrison's (Thimbury, Ont.) black, blue and tan setter bitch Dawn (Gladstone—Clip) to his Dick Laverack. Dawn is litter sister to Peep of Day, winner of the All-England Show.

Lilly—Bessie.—The Baltimore Kennel Club have bred their lemon and white pointer bitch Lilly (Sana—Lilly) to Mr. E. Orrell's Rocket, and the litter sister to Lilly (Sana—Lilly) to Mr. E. Orrell's Rocket.

Countess Nellie—Hedding.—The Baltimore Kennel Club have bred their Countess Nellie (Hedding—Lena) to their Hedding.

Whelped—Sensation.—Mr. Charles Heath, Newark, N. J., bred his liver and white pointer bitch Lily, Dec. 15, to the Westminster Kennel Club's Sensation.

Whelped—Chief.—Mr. Fred. E. Lewis' (Tarrytown, N. Y.) red and white Irish setter bitch Nipp (Doctor—Bessie) to Mr. Max Wenzel's red Irish setter bitch Chief (Doctor—Bessie).

Whelped—Caradoc.—Prof. H. B. Roney's (East Saginaw, Mich.) imported bloodhound bitch Juno (Hugo—) to owner's imported Caradoc (Forester—Maythorne).

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Bonfanti (Ned—Daisy) whelped Dec. 15, seven-and-a-half (one since died) by owner's Norfolk Jack.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Whelped—Mr. J. H. Winslow's (Haltmore, Md.) cocker spaniel bitch Black Bee whelped Dec. 15, seven-and-a-half (one since died) by the Hornellville Kennel Club's Ion III.

Yachting and Land Yachting.

MEASUREMENT.

Editor Forest and Stream.—The subject in the minds of most yachtsmen at present is the question of measurement. I hope you will allow me a word or two in its discussion.

It is a well known fact, let me announce myself a "enter man," and so no fondness for the subject, influences my better than length. The load water-line is the fairest standard for racing measurement. Of all systems, except, perhaps, a displacement one, a bulk rule seems to be the most correct. It was first proposed by Mr. A. C. S. Palmer in FOREST AND STREAM two years ago. A few examples will easily explain this. Can you name a more undesirable boat for a real sailor-boat than the "Tidal Wave" built by Mr. Burgess? It is a heavy water-line measurement, for to add the overhanging length is, as lately well put in the London *Field*, about as sensible as to add half the length of the bowprit beam to the depth. 3.35 cubic contents, 4.12. The *Vesta*, of only 39.50 ft. L., 24.5 ft. S.D., has 350 cubic contents of 10.50 ft. beam, the *form* you suggest in your last issue. *Tidal Wave* is 24.5 beam, 10.25 depth, with cubic contents 14.84, or 140 tons. Intrepid, 10.50 water-line, 24.4 beam, 11.5 depth, 14.52 cubic contents, or 140 tons. These examples can be added, and are unnecessary to show the inherent faults of the cubic contents system. Surely, most people would call *Tidal Wave* the largest of the craft mentioned, and *Intrepid* the smallest. It is a fact that *Tidal Wave* is 40 tons smaller than *Intrepid* and 40 tons smaller than *Palmer*. These absurd results come chiefly from measuring the size of the hull above water, so that a yacht of 100 tons will give but a whif of a ton's weight for sailing purposes. It would probably hurt the fairer's present measure.

Would you not wish, if you owned the *Madge*, to give her, say, six inches of extra beam for sailing purposes? It would probably hurt her speed somewhat—Capt. Ducean told me it would cost him to do so—and yet it would increase her cubic contents by some 100 feet. If you own the *Intrepid*, you may as well add the cubic contents of the water-line, if it is most undesirable to a depth, however measured, as a factor in measurement, for it is taxing the most important element of speed, and thus of success.

I find less fault with any rule taxing beam, because it cannot be dodged, and because beam does not add necessarily to a boat's good looks. It is a fact that the *form* does add to the weight of the boat, and therefore to the size of crew and cost of maintenance. If the beam is to be taxed, it must be but very lightly, otherwise the narrow-boat is so taxed as to simplify water-line measurement, the chief objection is that it will produce such monstrous craft as *Fantia* or *Elephant*. I do not believe, for my part, that well designed, narrower boats will be built, and that the *form* will be taxed. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success.

Even should we be driven to *Fantia* for racing it will be no worse than to be forced into *Madge* or into *Intrepid*. Both shallow and narrow, *Intrepid* is a craft of the *form* type, and the gentleman must smile at the hope of a universal cubic contents rule!

In fact, we must remember that whatever system of measurement we adopt, it will be a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success.

The examples of yachts in the N. Y. C. Instance do not, to our mind, prove the case of our correspondent. In the first place, what is the *form* of the *form*? It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success.

It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success.

It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success.

It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success.

It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success. It is a fact that the *form* is a factor in measurement, for it is taxing the most important element of speed, and thus of success.

OWEN WANTED.—Mr. E. S. Douglas, 34 S. Clark street, Chicago, Ill., wants snowy and great-horned owls that are not too badly torn by shot. He offers a dollar apiece for them and will pay express charges.

E. G. Jr., Albany, N. Y.—We send you by-laws of sportsman's club. There is no National Sportsman's Club. There was a National Association, but it is practically dead.

may be imported for you by the Orange Judd Co., of Broadway, New York. It ought not to cost over \$2. It is hardly applicable to American fishes.

excellent scores have been recorded. C. Marshall has gone to the front with a total of 285, while H. Gray and C. Goodwin are tied for second place, each with a total of 274.

Table with columns for names and scores. Includes sections for 'Experts' Pistol Match', 'Amateur Pistol Match', 'All Comers' Match', and 'Amateur Rifle Match'. Lists names like J. H. Williams, E. F. Richardson, and C. Marshall with their respective scores.

W. T. D., Uniontown, Pa.—Please give the proper treatment for red birds. I have caught several and, after being caged for a short time, died, with what some persons here term gaps.

W. R. O., Norwalk, O.—In one of our rifle galleries three prizes are offered; each one worth or allowed as many targets as he chooses, but not more than one prize.

WALLINGFORD, Conn., Dec. 19.—The following is the score of a match between Ned Post and James Brogden, 100 balls cad trap, shot Dec. 19 (cad rotary trap) at Wallingford, Conn.

ABBEY & BROS.'S "Highest Quality" Spring Steel English Hand-Made FISHHOOKS. Table with columns for sizes (10-0 to 1 & C) and prices. Includes text: 'FOR SALE BY ALL FIRST-CLASS DEALERS IN FISHING TACKLE. DISCOUNT TO THE TRADE ONLY.'

NOTICE! Advertisements received later than Tuesday cannot be inserted until the following week's issue. Rates promptly furnished on application. HOLAIBIRD Shooting Suits. Write for circular to UPTHEGROVE & McLELLAN, VALPARAISO, IND. YOUR MONCRAM. On receipt of \$5.00 we will forward to any address...

3 KINGS CIGARETTES MILD, FRAGRANT, HIGH WROUGHT, AND Particularly Agreeable. 9 FIRST PRIZE MEDALS. By WILLIAM S. KIMBALL & CO., ROCHESTER, N. Y. Peerless Tobacco Works.

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLCATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future.

I.—FAINTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Cones, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord, with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORK.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve a unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$3 for six months. To clubs of three or more, \$3 per year each. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

The Kennel.

FLEAS! FLEAS! WORMS! WORMS!

A BANE TO FLEAS—A BOON TO DOGS. Steadman's Flea Powder for Dogs. THIS POWDER is guaranteed to kill fleas on dogs or any other animals or money returned, it is put up in patent boxes with sliding pepper box top, which greatly facilitates its use. Simple and efficacious.

Price 50 cents by mail, Postpaid. Areca Nut for Worms in Dogs. A CERTAIN REMEDY.

Put up in boxes containing ten powders, with full directions for use. Price 50 cents per box by mail.

Both the above are recommended by ROD AND GUN and FOREST AND STREAM.

A POPE, Gen'l Passenger Agent.

"THE FISHING LINE." TAKE THE Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER HEALTH AND GAME RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if not the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. THE TROUT season begins May 1 and ends Sept. 1. THE GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, FINE PICKEREL and MUSCALONGE, also abound in great numbers in the many lakes and tributaries of this territory. The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

Take your family with you. The scenery of the North Woods and Lakes is very beautiful. The air is pure, and the climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1882 by new buildings and additions.

THE SUMMER TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk. We endeavor to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. True Cards, folders and further information, address

A. B. LEET, Gen'l Pass' Agent, Grand Rapids, Mich. NOTICE TO SPORTSMEN. SHOOTING IN CURRITUCK SOUND, NORTH CAROLINA. A daily line of conveyances is established by Mr. M. H. Snowden between Snowden Station, Elizabeth City and Norfolk Railroad and Currituck Court House on the Sound.

Hotels and Resorts for Sportsmen.

TO SPORTSMEN: The Pennsylvania R. R. Co. Respectfully invite attention to the SUPERIOR FACILITIES

afforded by their lines for reaching most of the FISHING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and delays of re-shipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF Pennsylvania Railroad Com'ry also reach the best localities for

Gunning and Fishing in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to LANR, RENOV, BEDFORD, GILES-ON, REEVEN, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting and Still Hunting.

Also to TUCKERTON, BRACH HAVEN, CAPE MAY, SQWAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT FISHING AND FEATHERS.

FRANK THOMSON, Gen'l Assn. Agent, FRANK THOMSON, Gen'l Manager.

Chesapeake & Ohio R'y. THE ROUTE OF THE SPORTSMAN AND ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA.

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Allegheny Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their vast fields of game and fish, deer, bear, wild turkeys, wild trout, grouse, quail, snipe, woodcock, mountain duck, bass, pike, pickers, etc.

Guns, fishing tackle and one dog for each sportsman carried free. The Route of the Tourist, through the most beautiful and picturesque scenery of the country.

The C. & O. R'y is reached by rail at Huntington, Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East; and at Richmond, Va., from the South.

The completion of the Peninsula Extension in the summer of 1881 affords THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL," and establishes a continuous rail line, via Richmond, Va. and Huntington, Va., between the mouth of Chesapeake Bay and the PACIFIC OCEAN.

H. W. FULLER, G. P. & T. A., Richmond, Va.

GUNPOWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
Dupont's Gunpowder Mills, established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse)
to 4 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse)
to 3 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. cans, 100 lbs. and 12 1/2 lb. kegs.

Dupont's Chocho Bore.—Specially adapted for
prairie and upland shooting. Burns slowly, strong and
solid; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of 10 grains, only No. 1, and No. 2,
No. 1 being the coarsest. Packed in 6 1/2 lb. kegs and
1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. canisters and 6 1/2 lb. kegs.

**Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.**

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square can-
isters of one pound each.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6 1/2 lb. kegs. A fine grain, quick and clean, for up-
land rifle shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 6 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting it
ranks any other brand and it is equally suitable for
muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FPG and "Sea Shooting" FG in kegs of
25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
solid. The FFG and FPG are favorite brands for
ordinary sporting and the "Sea Shooting" FG is the
standard Rifle Powder of the country.

FOREST AND STREAM.

Thursday, January 5.

FLORIDA TOURIST.—Many sportsmen are visiting Florida this winter. The game along the beaten paths of travel has been so depleted that there is very little sport now to be had. But the recently constructed railroad lines and new routes to the southern and western parts of the State have opened up new game countries, where abundant reward awaits the tourist. Our issue of December 3 contained a description of the Kissimmee River country, which is now among the best game districts of the State.

THE REMARKABLE ACCOUNTS which we have published of duck-shooting performances, gone through with by gunners on the Gunpowder Creek Bridge near Baltimore, should, it seems to us, have a tendency to make self-respecting sportsmen forswear the locality. If a man cannot get the birds which he kills without fighting for them, he had better give up using the gun where such annoying squabbles are likely to take place.

THE WALKING MATCH MANIA has run its course. There are spasmodic rag-tag-and-bob-tail attempts to revive the nest scheme of whedding the public money into "the management's" pocket. One such sorry attempt was made in this city last week, with the usual dismal ending financially.

THE INTERNATIONAL MATCH OF 1882.

WITH the receipt of the courteous note from the Subcommittee of the Council of the National Rifle Association of Great Britain, given in our columns of this date, everything seems to promise well for a good contest at Wimbledon during the coming summer. Where there is a will there is a way, and certainly there is desire enough on both sides to have a match. The British rifleman is just now under a cloud. He had for years been vaunting his superiority with the rifle, and then somehow seemed to stumble and make a bad break of it when he met the American marksman on his own range, and had no better fortune when the Yankee crossed the sea to meet him. He had, extending over a period of four years, a series of matches in which the picked shots of the British Empire—first pitted against us in teams made up from the separate nationalities, and later in a magnificent team sent out by the National Rifle Association itself—were all defeated after full, fair trials before the butts; but all these contests were at long range. They were fought with special rifles by a set of civilian shooters, and were, in a certain degree, artificial tests. They simply showed how proficient men could become in a certain art, but that art had its sole aim and purpose in accomplishing good scores. The long-range shooters are but a drop in the bucket to the great sea of marksmen. If rifle-shooting had no other purpose in being than score-making at the target, then it would soon die out, but if the scores thus made are tests of a proficiency in the real use of the rifle for war or sporting purposes, the practice at the butts takes rank as an important pointer. The coming match, in place of being a struggle between men who represent less than ten per cent. of the entire body of range-habitues, will be one in which the great majority will be interested as possible contestants; and there ought to be, and no doubt will be, a corresponding popular interest in the match. It will be fought out with military rifles, and the result will be taken as a verdict upon the weapons which have been put into the hands of our troops. These weapons have been selected by boards of public officers, and have been provided at public expence by the outlay of large sums. While it is, of course, possible to have bench tests and private trials of the competing rifles, the general public will, very naturally and rightfully, view a public test in a set trial by marksmen as far more satisfactory. It is the man and the gun that become one acting whole, and it is to try that unit that matches on the range are organized.

The entire detail of the match has not yet been settled, but within a few days or weeks at most the conditions of the proposed contest will have become known. They should be severe and stringent enough to make the test a thorough one, and if the match could be extended over several days it would seem that enough variations in weather conditions would be secured to give the shooters equal chance of striking their favorite wind, or sky, or light, etc. In any case there ought to be no hesitation on the part of our American shots in accepting any fair set of conditions, though they may differ somewhat from the rules under which we have been accustomed to shoot. There will be an abundance of time if it be not wasted to bring together a strong team of American National Guardsmen armed with an American made rifle to contest with good prospect of success with any team that may be pitted against them. To be sure, our National Guardsmen, numbering, perhaps, through the whole country, less than 50,000 men, and having in the most favored instances about half a dozen years' drill, will have to meet the pick of over 500,000 men who have been assiduously trained in rifle shooting for twenty years past. We have somewhat of a record with which to compare our ability with theirs, and that will not discourage us. We have every reason to believe that our rifles are just a good trifle better than the best that have been turned out of the English armories, and as for familiarity with perplexing conditions of the weather elements our riflemen have little to learn. At any rate, be the chances ever so much against us, the courteous challenge must be accepted, and promptly, and the match fought over to whatever conclusion fate may bring. We have a plucky example in the acceptance of the challenge of the Irish team in 1873 by the American Rifle Club. At that time we had neither rifles nor men. Now we know just what we are

to do in order to win, and are not rushing blindly forward to stumble upon good luck. Whatever we get in the way of honors must be won, and won by hard, systematic work.

The attempt of the directors of our Association to secure a team has developed some curious facts about the tendency of our rifle practice. When the Creedmoor Association was started on paper in 1871 the rules of the N. R. A. of Great Britain were adopted entirely. With the opening of practice on the range in 1873 these rules were put in operation, and from that time on there has been a constant changiog and tinkering of the regulations, until now it seems that it will require concessions on both sides to bring about anything like a fair regulated match. The British riflemen have abandoned position in shooting, as we knew it ten years ago, and shoulder shooting has become obsolete. Here it has been strictly insisted upon, and, we think, very wisely, keeping in view our distinction that rifle shooting is something more than the making of a certain score, and is rather the preparation for some real work in another field. An overwhelming percentage of the shooting in war and hunting is necessarily done from the shoulder, and so many arguments can be brought to sustain the desirability of retaining this style of marksmanship that our American directors will be very loath to make the concession of "any position" at any distance to the British marksmen. But the question of position may be agreeably arranged, giving to the Britishers plenty of time to become proficient in off-hand work, much more readily than the matter of rifles may. Our Association have been too lax in the matter of the manipulation of rifles. The files of the FOREST AND STREAM will bear testimony to our protests against the turning of the rifles, especially of military weapons, into more shooting machines. The Board of Management of the British Association have all along insisted on treating a military weapon as such, and would no more allow each man to exercise his own individual judgment in changing it than they would allow each soldier to interpret the tactics according to his own ideas. A wind gauge on a military gun is an anomaly. It has no business there, and its only *raison d'être* is that it may, in the hands of one accustomed to it, and under the quiet work of the range, after, perhaps, the requisite sighting shots, etc., enable the marksmen to show a good string of bull's eyes; but then to assume from this that he is any the better soldier is so manifestly absurd that no one will for a moment press it. We will have the same charge that the test was a purely artificial one, if fought out with these mongrel rifles, as we had against the old long-range weapons, and it will be much better founded, too. That good scores may be made without the use of this "hubber hole" to high aspirations is shown in the fact that two of the best military marksmen at Creedmoor, Messrs. Dolan and Van Heusen, have resisted the temptation to employ it. It is possible they fired to overcome any difficulty of strong winds, by "holding off." They have trained their individual judgments, instead of relying on a device which, under a good coach, reduced their function to that of merely holding on the bullseye. Our own judgment would be in favor of the off-hand holding and the use of a practical military rifle as such.

The proposition for the match has met with the heartiest approval from the press of the two countries. There is a disposition to help on the contest in every possible way. The fact that this is to be a match with military rather, than with small-bore rifles, gives much satisfaction. The scribbling contingent of the British shooting men have opened their batteries and are firing suggestions with the utmost freedom, and all sorts of curious conditions are urged for adoption. None such are needed; the simpler the rules are made the better, so that every non-shooting citizen may know and readily understand just what the champions of his country are trying to do. In its issue of Dec. 1, the *London Telegraph*, speaking of the match, says:

We have become accustomed to the presence among us, from time to time, of American riflemen, and our own picked shots have reason, more than once, to entertain for their Transatlantic rival the highest possible respect. Hitherto, however, competition between the marksmen of the United Kingdom and the United States has been limited to the match rifle, a delicate and very complicated weapon of very little practical value except in so far as the improvements to which it is continually subject tend to further the better construction of fire-arms generally. Efforts are now being made across the water to send to Wimbledon from America next year a strictly military team, composed of members of the National Guard,

armed with a military weapon. The expense will be considerable, and the difficulty of selection great; but these are obstacles which the energy and patriotism of our Transatlantic kinsmen are sure to overcome. The Volunteers of this country may reckon, therefore, upon a doughy foe next July, and have need to do their best, lest the laurels of the rifle range follow those of the race course. Whatever the result, the representatives of the American National Guard are certain to receive a cordial welcome and all the admiration their skill may deserve. The contest will do good service by giving additional distinction to the military rite, as compared with the small bore, and will tend to increase the practical character of the doings at Wimbledon. In this respect there is much room and urgent need for reform. Fancy shooting is all very well in its way, and no one wishes to discourage it, but Wimbledon should be first and foremost a tournament of military marksmen, competing as far as possible under military conditions. These requirements will be distinctly met by the advent here of American soldiers.

ANOTHER SWINDLE EXPOSED.—The daily papers announce the arrest of a swindler who has been advertising extensively in the newspapers his Solargraph watches. Just what these watches are we do not, of course, know, but we remember a few weeks since, when the advertisement was offered to us, wondering whether it was possible that this man could find any people foolish enough to respond to his advertisement, and smiling in admiration at the impudence of the fellow in bringing it to us. Another amusing incident in connection with advertising, is the wonderful unanimity with which our contemporaries, esteemed and otherwise, have, all on a sudden, dropped the flaming notice of apent preservative, which has, up to within a short time, occupied a large portion of their advertising space. This advertisement was brought to us in due course, but like hundreds of similar things, it failed to find a place in our columns. One reason for the high estimate put on the advertising space of the FOREST AND STREAM by its patrons is the fact that it is so well-known that all possible care is exercised to prevent the appearance of anything that can be questioned. That we take especial pains to keep our advertising pages clear is not at all to our credit. We are only performing our plain duty; but that this action is appreciated by advertisers is shown by the eagerness of Chichester rifle companies, Saxon, Zulu, and Champion gun men and other preyers upon the unwary, to find a corner in the paper. That they will not succeed in this, our readers may feel sure. These men know the advantage of being seen in good company, and this, added to the advantage of the paper's circulation and influence, makes them most anxious to advertise their spurious wares with us. We can afford to let the business of these men go by, and to steer very wide of anything that has a doubtful appearance. We do not pretend to be infallible, and once in a while we get caught, but we venture to say that there is no newspaper in the world which has a cleaner record in this respect than the FOREST AND STREAM. We examined, the other day, a truly curious breech-loader—we forgot what it was called, but it belonged to the same class with those mentioned above, but with another name—and found it a marvel of elusiveness, rude work, and last, but most important, of insecurity. Men may safely enough buy cheap fishing-rods, solargraph watches, or even send a three-cent stamp for a superb steel engraving of Washington, Jackson or Lincoln, but we warn our readers against cheap guns. To be swindled out of one's money by some cunning device only hurts one's feelings, but to have one's hand or head blown off, is a more serious matter.

MR. A. ALFORD, who has been with E. Remington & Sons, of this city, for nearly fourteen years, has severed his connection with that firm to assume the management of the Greenfield Tool Co., of which he is the President. The firm title is Alford, Ward & Davenport, their establishment being at 85 Chambers street. Mr. Alford is widely known among sportsmen, whose best wishes will go with him in his new work.

DOGS ARE PROPERTY IN INDIANA.—We are indebted to an Indianapolis, Ind., correspondent for memoranda of an important ruling by Judge Howk, of the Supreme Court, of Indiana, declaring that "dogs are property of value." Following close upon similar action by courts of other States, the decision is full of promise for the future protection and safety of "man's unselfish friend." The abstract of the decision is as follows:

9,780. Henry Kinaman, versus the State. Lagrange, C. C. Howk, J.—Appellant was prosecuted for maliciously killing a dog. The affidavit charged that said killing was "to the damage of the property in the sum of twelve dollars." It is claimed that a dog is not necessarily an animal of value, and that the affidavit was bad because it did not charge the dog to be of some value to the owner. Under the law of this State dogs are taxed as property, and any article which the law subjects to taxation is prima facie an article of value. (60 Ind., 295; 62 Id., 362.) The affidavit was sufficient. On the trial the court permitted the State to ask a witness, and compelled the witness to answer, whether the latter was not on bad terms with the prosecuting witness. This was not error. (See Whart. Crim., Ev., 8 ed., §447; 1 Greenl. Ev., §450-455; 64 Ind., 400.) One of the instructions given by the Court was as follows: "It is not sufficient for the State to prove that the defendant killed or injured the dog merely, but the evidence must show beyond a reasonable doubt that the defendant maliciously or mischievously killed or injured it." This instruction was erroneous. The charge against appellant was that he killed the dog and this charge told the jury in effect, that if he injured it, that was sufficient. Judgment reversed.

The Sportsman Tourist.

THE HUNTER IN AFRICA.

THE hunter roams'd far in the broad Afric land,
Where the pallans and gnus are gathered in band,
And the cryx and springboks and sable harleboost
Over green boundless pastures collect to the feast;
Where the herds of wild elephants crash thro' the woods,
And the black rhinoceros wallows in floods,
Where the lion and leopard devastate the plain,
And hyenas and jackals feed on their slain;
Where the stately giraffe and swift antelope
Sweep the vales at the base of the grand mountain slope.
How fair are those woodlands, those pastures of green,
Where the timbered d'haags wave an emerald screen,
So deep in their gloom, that scarce may the light
Pierce the roof of the grove with pencillings bright.
There boundless the iron-wood forests extend
And the lofty acacias gracefully bend,
And mimosa and willows and fragrant white-thorn,
Whose rich yellow blossoms the woodlands adorn,
Where gay blooming flowers embroder the grass,
And birds of rare plumage and sweet melodies pass.

In the belt of the woods, with their green colonnades,
The fern and the passion-flower brighten'd the glades.
O! noble game of this African land—
The lion, the leopard, the elephant grand,
The wild boar and buffalo sweeping the plain,
Their measureless pastures, their endless domain.
The hunter takes rifle, then summons his men,
Bechuannas and Bushmen, from mountain and glen;
Tall, stalwart and lithe as leopards in fight,
Some true as the steel, some trembling with fright.
He bids them take knife and sharp assagai
When the herd of wild elephants threaten the way.
Bull elephants, arm'd with tusks so strong,
That trample and crush as they thunder along,
So majestic in stature, colossal in height,
It is peril and death to meet them in fight.

In these vales and ravines and forests of green
The foot-paths of elephants thickly are seen,
Where for ages untold these monsters have trod,
And whose white, bleaching bones still sprinkle the sod,
And jagged and broken the skulls and horns around,
Where mimosa thickets overshadow the ground;
Where the yellow-wood, cedar and iron-wood grow,
Crown'd with vine wreaths perennial, a wonderful show.

"Tis Jao, the lion, is monarch of all!
Whose roarings terrify the Bushmen appal!
When you meet him alone in the forests beyond,
Beware when at night he stalks forth from his lair,
How majestic in death—the cybals of his roar,
The great, rounded head, once rhythmic in fire,
The vast, massive arms, the black shaggy mane,
The sharp crooked claws, blood-red with the slain;
The powerful jaws, the symmetry fine,
In beauty so perfect in every line;
And you feel that the noblest of prizes is won
When he lies grim in death, the spoil of your gun.

Ah! hear him at night when all nature is still
And darkness and silence hoid forest and hill;
Hear his low, growling moan, his full, solemn roar,
Now muffled, now hoarse, like the surge on the shore;
Hear the roar of two troops that meet at the brink
Of the forest-shat fountain its crystal to drink.
Hear the roar of defiance, so fierce, so intense
That it defends and damps the terrified sense,
Then say if the thunder that rolls in the sky
Hath a tone so sublime as this menacing cry!

Greenport, Dec. 17. ISAAC McLELLAN.

IN THE FORESTS OF YUCATAN.—I.

THE scene of this mild adventure is laid in the interior of Yucatan, which the writer visited last March. After a great deal of rough riding in strange vehicles we reached a town in which resided an American, a naturalist-and-collector, who was practicing as a physician. He had invited us to go on a grand turkey hunt, but we were detained on the road at every town we passed by the hospitality of the inhabitants, and especially by the General of the district, who gave a ball every night in our honor. It was at the end of the third performance of this kind that I fled my party and the story opens.

After the last ball the good General insisted upon remaining and ascertaining the quality of the balance of the Doctor's three dozen of beer; and at 8 A. M., seeing that it was likely to be an all night session, I crept into the kitchen and took possession of one of the hammocks. This kitchen was the usual structure devoted to that use in Yucatan, of loose poles driven into the ground, forming a square pen, topped by a roof of thatch. Lorenzo Azabiz, who owned the house the Doctor hired, and who piloted me to this retreat, had a "rancho" in the logwood district, which he invited me to visit, promising plenty of flambeaus and wild turkeys. We were to start early in the morning, before the Consul and John would be stirring, and as the ride was to be a long one, had made good our escape from the General in order to gain a few hours' sleep. Two old women and a boy occupied this apartment, but the latter was unceremoniously ejected from one of the hammocks, which Lorenzo and I appropriated. Perhaps the reader is not acquainted with the Yucatan way of sleeping, two in a hammock, and I will proceed to enlighten him.

As the first one lies down in the hammock, he carefully takes up only one-half, measured longitudinally, leaving the remainder for his friend. This the latter occupies, with his feet toward and parallel with the other's head, so that the two are packed "heads and points" like sardines. This leaves a kind of partition between the sleepers which effectually separates them; though if one is inclined to kick in his sleep the other must guard well his nose. In any event a person who at first is a little object to this style of sleeping, and prefer sleeping amply fashion, acrosswise the hammock. But when one abandons himself to the guidance of a stranger, upon whose hospitality he is dependent, he must promptly check any qualms of his sensitive soul, and be duly grateful for what he can get.

It was so cold that I awoke several times during the brief space we occupied the hammock and tried to remember that

this was what they term the "hot" season. From the great flat surface of rock exposed to the rays of a powerful sun during the day in Yucatan, and the extremely rapid radiation at night, a degree of cold is sometimes reached that produces nocturnal freezing. During the hot, dry season the cool nights are in most cases refreshing contrast to the heated atmosphere of day, and induce a wet slumber if one is properly guarded from extremes of temperature.

At about seven in the morning we were off for the logwood camp, by the way of the town of Olan. This inverted C with which Olan is spelled, is a necessity arising from the retention of the ancient Maya names, and has the power of "Ts," the word, consequently, being pronounced 'Tsalim. Don Alonzo could speak excellent Spanish, but what availed that to me when I was but in my first lessons in that language? He could not speak English, but he had a new "Ollendorf," and with this and my "conversation book" in our hands, we rode through the cool woods, startling the birds with our blunders and laughing at our mutual mistakes.

After an easy ride of four short leagues we arrived at Olan, entering its principal street between low, white-walled houses. Going to a house near the great square we tied our horses and I paid the man who brought my luggage two or three twenty-five cents—for his services and four "reals" for the horse, and he returned to T'imax. We are provided with breakfast in a "tenda"—a shop—and while we are eating the proprietor plays on a guitar. After a siesta in a hammock, drowsily watching a girl with graceful figure, clad only in a snowy "nipil," combing for an hour her abundant tresses, I am taken out and introduced to the President, as the learned naturalist, author and discoverer, el Senor Don Federico. By him I am promised seven Indians with whom to make an excavation in the great mound. I should explain here, that Olan is celebrated for its great aboriginal mound, four hundred feet in length and fifty in height. This occupies one side the great plaza of the town, and towers above the church and principal buildings, which were all built of stone from its ruins. It was visited by Stephens and carelessly examined by him, a somewhat fanciful sketch of it being given in his second volume on Yucatan. He attached great importance to it as being the centre of a population at the time of the first visit of the Spaniards, quoting Herrera in confirmation that the first Spaniard who saw the ruins hereof was a youth of the Race of the Choles, then a Christian, and he had a new Captain Francis de Montejo, who received and entertained them.

From the summit of this mound the country for leagues around can be seen, and the eye ranges over a vast extent of scrub, with no village in sight but the one about its base. A second mound lies north of this one, running east and west, while this larger and contiguous one has its longer axis north and south. The limits of these great mounds once greatly exceeded that present area, as dressed stone can be seen in the streets, in position, a long way distant, and made of great rocks run out into the street. Under guidance of Don Juan we climbed the smaller mound, and some little boys commenced to throw out the dirt and stones from a small hole in the top. They soon brought out fragments of pottery and plaster, the former finely glazed and tinted, the plaster colored bright red, drab and green, and all the tints fresh as if put on yesterday. After the adult Indians arrived, the work was exhausted, and a room disclosed, filled with debris from above. It was to be ascertained, in a way similar to the "Akabau," at Ahé. They opened it sufficiently to show its shape, but did not find any more pottery or plaster, which was evidently above and outside the building. So I caused the earth to be removed from the top, and soon revealed great pieces of stucco, showing bright colors and elaborate ornamentation and design; not enough to satisfy me, though I was obliged to desist jiggling before finding much, as the sun was setting. Its last rays shone directly into the chamber we had opened. Half the men and boys of the village were gathered by this time, and all assisted eagerly at the work, even the President and schoolmaster. I paid the Indians a "real" apiece, and the boys a "medio," and all were delighted. The ruins of a building upon this mound would seem to indicate the use of these vast accumulations of earth as foundations for palaces or temples. In a flat country, like Yucatan, it would be necessary to elevate the public buildings in this manner in order that they should be seen from a distance. Though the ruin of the structure was so complete, no satisfactory outline could be obtained, its stones, covering all sides of the mound, and large trees and agaves growing upon the summit, yet it seemed to have been composed of successive platforms, each one covered with a thick layer of cement or plaster. Stephens did not visit it, but states that the padre, a young man of thirty (when he was here, forty years ago), remembered when a building still stood here, with open doorways, pillars in them, and a corridor all around, and was called "el Castillo." Fragments of the stucco, some of the ornaments and sherd of pottery I collected and sent to Merida, intending them for Professor Baird, of the Smithsonian Institution; but the best of them were ground to powder in transit, and this opportunity lost of ascertaining their analogy, or dissimilarity, to the decoration of the ruins.

Alonzo and I occupied a hammock in a large empty building belonging to Don Juan, and slept again in the Yucatan manner, the feet of each in the proximity of the other's head, which, almost as compact a style as the denominated "spoon-fashion." We were to start at four the next morning, but didn't arise till five, and though I expected to get on our journey by sunrise, it was nine o'clock before we left the town. This might have been expected, for the day before it was to have been "muy temprano"—very early—and we left T'imax three hours behind time. No one was stirring in the plaza, but a baker's shop was open, with the usual knot of men in cotton pants, shivering in their "sarapes," and here we got a cup of chocolate. While waiting for my horse, we visited the old churchyard, a walled-off corner with orange trees in it. It must have been formerly used as a cemetery, for there were heaps of boxes—wine cases, brandy and soap boxes—full of dead men's bones, and in a recess in the church wall were arm and leg bones, and grinningskulls that seemed inclined to dispute our entrance. Don Juan took us to see an old stone with a strange inscription on it—probably, as he said, the work of Indians, under Spanish direction—and he told us a wooden cross which was raised from it the boxes of bones. Having thus been cheerfully fortified for the journey, I thought Alonzo would start, but he hugged here and there, buying meat and bread, till eight o'clock, then we mounted our horses, bade our friends "adieu," and rode down the street to a hut, where he asked for breakfast. This consumed another hour, though the "Mesitza" girl worked hard to prepare it for us, being hindered by the admiring and

amorous Alonzo, who haunted the kitchen, teasing the pretty cook for a caress. Her mother, a wrinkled old lady, leaning that I could not speak Spanish, pulled a dolorous countenance and called me "pobrecito" — poor little fellow—and wanted to know why I could not speak Spanish. I said I couldn't speak "Castillano." We finally got fairly strident over stunts at the cross of San Jose, near a big cypress tree, and turned into a narrow trail that was, its whole length, very stony, or "my piedragozo." This led into the forest, forming part of the belt that lines the eastern and northern coasts of Yucatan, the trees gradually increasing in size and becoming more open as we advanced. Birds grew more numerous, especially the queer bird called the road-runner—very sore-cumbersome species of cuckoo, or the chapparral cock. We had to walk over the rocks, the road very slippery, very little soil covered the coral rock, which was full of holes, caves and "senotes," nearly all leading to water. At noon we halted at a small "senote," where there was an opening in the rock about three feet long and two feet wide, down which our Indian went and got a calabash full of pure water. A team of pack mules came up just then and their owner sat down with us and joined in a "Yucateco refresco." Into the calabash of water Alonzo put a big ball of corn mixture and of the *Meliza* in the morning, and stirred it up with his fingers. When of proper consistency it was passed to me, and drinking of it I found it sweet and refreshing. This is prepared by the women, of maize, spiced and sweetened, and is in universal use in Yucatan and Southern Mexico, forming, with water, a pleasant and strengthening drink. We drank all around from the same calabash, they mounted and went on again. The great woods were open at times, sweet, clean and inviting, and the leaves lay on the ground as in autumn in the North; but I had no stomach for them, desiring to reach the end of a ride that promised to be interminable. Late in the afternoon we reached a change in the dry, hot road, an "aguada," or small pond, and here, at a sign from Alonzo, I got off my horse and crept toward the water with my gun. Through the bushes I saw a gallinule, a beautiful bird, which I shot, and immediately after another that flew up at the report of the gun. These Alonzo secured by wading into the dark pool, though he had sore feet, and our Indian, though bare-legged, refused to do. The "aguada" was deep, its bed covered with lilies and water plants, and fringed with an abundance of dead small shells. My friend had hitherto ridden perched upon two packs of luggage, while I had used his horse, while the Indian carried a great load on his back, supported by a band passing across the front of his forehead. We both dismounted here and pursued the rest of our way on foot, and shot a "chachalaca," a kind of pheasant, and from a little gun of an "aguada" we put up three large ducks. The gallinules, Alonzo tells me, are "cacharos preciosos," or very precious birds, and they are, indeed, a rare species and valuable addition to my collection. The whole character of the forest changed at or this—the "aguadas" were more frequent, and the entire country appeared as though at times submerged. Of this, in fact, my friend assured me, adding that when he came here last June, where he had his camp—now dry land—was entirely under water.

I was very weary when we at last reached a meadow, in which some horses were feeding, and was told that we were near the "rancho" — the "rancho" was a large open field, from which, from the name of which I was led to expect a small farm—proved to be nothing more than a collection of four huts of palm-leaf, merely a roof to shed the rain, with open ends and sides. They were on the southern rim of a lovely "aguada," surrounded by palmetto and deciduous trees. A pile of logwood, thatched with leaves, a bush house of palm leaves, and a leaf roof over some hollow logs that served as bee-hives, completed the establishment. A dozen horses, with loads of wood, had evidently just come in from the forest.

On the road we had met a train of mules, each with a great plank, fifteen feet long and two wide, lashed on each side, one end projecting beyond his ears, the other dragging on the ground. This is the only way in which Western Yucatan can get its timber, all the west and central portion being covered with scrub or second growth.

About twenty Indians and Mestizos, with bare bodies and rods, sandals and coarse outasses, were lounging about as we rode in. Three Indians were of a very valuable and busy about their household duties. Upon a large plank, four feet wide, supported on four logs, were two "metates" with rollers used for grinding corn for tortillas, and in addition to this there were a few tubs, a grind-stone, and all the things necessary to a camp in the forest. From pole to pole, under the thatched roofs of the open huts, were stretched hammocks of Sisal hemp, and two great mosquito bars told their own tale of insects at night.

We rode into this logwood camp, and I was invited to a hammock while they went over the business, for Alonzo had been gone some time. I noticed one man, a "Mestizo," who had an uneasy look, and one woman, a "Mestiza," who was comely and had an anxious look, though a very sympathetic one, as they say here "my sympathy." Of the other women one was fat and restless and the other old and honest. They all worked well, not interrupting their labors for a minute.

Supper was soon ready. After the fashion of the country we first washed our hands in a calabash, and five minutes later that same calabash was brought in full of water to drink.

Poor Alonzo had but two bowls besides calabashes, for he was only camping, and no knife, fork or spoon, so I took my jack-knife while they ate with fingers and "tortillas." Our companion was a Spaniard, lately from Europe, a pleasant, black-eyed young man, who was sent by a firm there to look after their interests in the logwood. There were no chairs, of course, and we sat in hammocks, and the food was placed on a box of cedar, and as we ate, more and more in fact, were crowded out of the box, handed to us on a cloth by the cook, and taken by us and clapped down on the table. Quite a pile was heaped up before we left, and these were taken and warmed over for the men. After eating, a calabash was passed round full of water for rinsing the mouth. The proper way is to fill the mouth with water, and, after inserting the finger and scrubbing the teeth, to spit it out. This custom prevails throughout Mexico, even in the houses of the rich. Coffee and cigarettes, the only food, in fact, were enjoyed all the time. By this time darkness had settled down and some of the men retired to their hammocks. Though surrounded by strangers and some with not very pleasant faces, I left all my arms outside the mosquito bar, as I retired, conscious that, as they as well as myself were safe. Later in the season, in the Highlands of Mexico, I would have sooner slept without my blanket than without

my revolver, for the people of Yucatan are as honest and true as the Aztecs arc treacherous and faithless. After a second coffee we all sought our hammocks, where Alonzo and I reclined smoking and chatting. I was anxious to go on to the coast for flamingoes, but my host told me that I could not do so, as I was at his disposal, which remark rather irritated me, until he added, with a smile, "and I am at yours, also." I had got accustomed to this, polite insincerity, however. On the way, I asked him if the horse he rode was his and he replied, "Si señor, y de nated, tambien."—"Yes sir, and yours as well." After that I ventured but one more question of the kind, and that was when in the house of the young lady who had prepared our breakfast, I asked if she was his sweetheart. The customary reply came readily to his lips:—"Si, amigo mio," and yours also."

I had fallen asleep, as soon as the insects feasting on me-ticks, sand-flies, fleas and chinchés—would permit, but soon awoke suddenly, conscious that Alonzo had darted out from under the bar and was in angry expostulation with the man with the evil eyes. This man, early in the evening, had gone raving to his hammock, and after crying three avuile he had come tearing out and seized his woman, she with the pretty face, dragging her away from her work. She had submitted, though expecting a beating, merely glancing at her toru "nipil," but one of the men jumped at him as he drew her along, and quieted him for a while. Now he had broken out afresh, threatening to kill Alonzo if he did not immediately pay him his wages, and brandishing a great "machete" furiously. Alonzo was in nowise frightened, but sprang at him like a jaguar, promising him a beating that would answer for his wages. And I have no doubt the Indian would have got it, though my friend is a little man, for in gillam he had flown at a man who talked insolently to him, slapped his face as he pounded him well, until he ceased from talking. So they had it out in talk and piled fresh fuel on the fire as though they intended to be at it all night, making my hut as light as day. The fight ended, Alonzo quietly entered the mosquito bar, which was made large enough for two hammocks, and ordered coffee and cigarettes for two. When he asked me to enter he said in Maya, "Kom in," which is the equivalent in that language for come in. There are also other words similar in sound and signification to ours. In the morning, after coffee and cigarettes, we went into the woods to inspect the logwood—the "palo lina" or "palo de Carapche"—which the men had cut during Acosta's absence. It was then very hot, though the night had been freezing cool, as we entered the logwood forest. The logwood tree, "hematoxylon campechianum," grows to a height of 20 or more feet, is rough and gnarled, with one trunk that divides soon from the ground, with ob-ovate leaves.

The wood they had cut lay in little heaps where they had cut it, and was trimmed of all the little bark and white outer wood and was in color from light red to dark purple. One of the men had a steel yard with him, and this was hung from a tree and the wood piled on a suspended platform and weighed, four "arobas" or 25 pounds, at a time. This was noted down, with the name of the man who cut it, and we passed on to the next, being engaged in this way several hours. The horses were then led up and a load of four "arobas" packed on each and carried to the camp.

The sun was blazing hot, butterflies played about us, birds sang in the thin-folaged trees, and a native quail, or "faisan," got up at intervals. We saw one deer, "venado," and one turkey, "pavo del monte," but not near enough for a fair shot. There were many caves and depressions in the limestone surface, with water in them looking cool and inviting for a bath, but numerous adders swimming across them rendered them less attractive. Thousands of dead snails lay in windrows, but not a live one was to be found, though I searched diligently under dead logs and leaves. The logwood was brought into camp and slacked, whence it will be carried to the port of gillam and shipped. There seems to be vast quantities of it, but it is in remote sections where it is difficult and expensive to get it out. As we returned to camp, my friend was taken with cramp in the stomach, and howled and cried, and the man with whom he had quarrelled in the morning was the first to hasten to his aid. I suspected then it was but a ruse to bring about a change of sentiment through sympathy. In the evening Alonzo brought out a big bag of silver which he had brought to pay the men with, and proceeded to divide it that purpose. I admitted the pluck of my little friend, but did not let him be brow-beaten into paying it out before he was ready, though in apparent danger from the Indian with the bad-looking eyes. We walked out in the cool of the evening toward the "aguadas," or ponds; the birds were still and a quiet brooded over the lovely place, except for the cries of the gallinules in the marsh. One of these birds Alonzo shot, and waded into the water waist-deep to secure it. Sometimes the simplest thing will awaken thoughts of home when in a strange country where the scenery is different, and mine were carried back to the North by the sight of a group of cat-tail flags, growing as in Northern meadows.

The industry of the Indian women of Yucatan is a matter of wonder. From long before daylight till late at night, after we had retired to our rest, they were toiling at the "metates," grinding corn for the morrow. It is the most laborious of occupations to work the stone roller over a smooth slab of stone all day long. I saw two girls in Tuxmax who worked twelve hours a day at "metates" grinding castor beans for candle, at the rate of "eight cents per day." Our women were kept employed unusually late that night in cooking up a store of tortillas for our journey next day, for we were to go to the coast for flamingoes.

WILD CHERLEY.—A very valuable description of the wild celerly is given elsewhere. We understand that several attempts have been made to transplant the seed. Mr. Cross having very kindly furnished the seed. The results of these trials will be awaited with interest.

QUAIL IN CONFINEMENT.—Many clubs will be interested in the report published elsewhere of the Springfield Gun Club experience in keeping live quail for stocking purposes. We hope that other persons who have tried keeping quail will add what information they may.

A Book containing much information about guns is Greener's new work on the Gun and its Development. We can still furnish copies to those desiring them. Price, \$7.50.

ONE DAN'S HUNT IN BRITISH COLUMBIA.

(The following extracts from a private letter written to our correspondent, "Yo," and by him furnished to us for publication, will be read with interest by our readers. The scene of the hunt is a locality which, though not very far distant from the settlements, is yet seldom penetrated by the white man, and where, as will be seen, the game is abundant and tame.)

BURRARD'S INLET, British Columbia, Nov. 25, 1891.
EVER since your departure from Burrard's Inlet I have felt to annoy at my failure to furnish you a day's sport with the goats that I could not settle myself down to work until I had got some sort of satisfaction. While I was considering whether it was best to make the trip alone with Seammux, the door opened, and in walked a fellow in a red shirt, his hat on the back of his head, and a Ballard rifle slung over his shoulder; and as he reached out his hand I recognized Dick G., an old companion who had been with me last year trapping up the coast. So, with Seammux and a younger Indian, Sillicum by name, the party was made up, and leaving the hotel at daylight one morning, we took our way up the North Arm. We went as far as a point on our left, at the foot of the big island, which, if you remember, is near the head of the inlet. At the time of your first visit up the Arm I think I pointed out to you, from the deck of the steamer, a bare peak on which a considerable bank of snow was lying. It was at the foot of this peak that we landed, and dividing our blankets and grub into two packs for the Indians to carry, we commenced the ascent at half-past twelve, noon, and after five and a half hours' traveling, pitched our camp within the timber, a few hundred yards below the barc summit. The Indians advised this, lest by camping in the opening our camp fire might warm the game of our presence.

The next morning by daylight we had devoured our breakfast of bacon, codfish and coffee and leaving the timber behind, we passed up a beautiful grassy lane to the summit. We had scarcely reached this, when a dense fog enclosed us in every direction. It was so thick that objects two hundred yards distant were totally obscured. This was aggravating, the more so as appearances indicated a continuation of this state of things all day.

The air was chilly, and as we had left our coats below, we were obliged to unpack our blankets and wrap them around us. And in this state, grumbling at our luck, we moped the *delate* *Malhatana* (from spirits) in the fog.

Presently the chatter of a flock of red crossbills (*Chrysomitris americana*) came up from the tops of the pines just below us, and I looked at the old Indian, thinking this might be an indication of clear weather. But the stoical savage gave no sign, and I was about to ask Dick's opinion on the subject, when out of the murky darkness flitted two birds, which I identified as Bohemian waxwings (*Ampeles garrulus*). This was a chance I could not let slip; so, picking up my shotgun, I was about starting in pursuit when the old Indian caught me by the arm, telling me, "if I fired a shot I would forfeit the chance of seeing a goat that day. So I let them go; but had I known as much about mountain goats then as I learned a few hours later, I would have secured the birds if I had been obliged to fire a dozen shots to do it.

At half-past eleven, a slight breeze sprang up, a few faint shafts of light penetrated the darkness, and then, as if by magic, the great bank of fog rolled away, the sun burst forth in all its splendor, and daylight was with us. We were now enabled to determine our position, and found we were on the summit of the divide between the North Arm and Seammur Creek, a broken and uneven back bone, made up of sharp ridges, deep ravines and level stretches as smooth as if graded by human hands, and everywhere, except on the very tops of the rocky ridges, was heather—"beautiful, sweet scented heather"—over which we moved as noiselessly as if treading on carpet. We now picked out a place for a permanent camp, leaving our grub and blankets there, and then started out on our hunt. At every step we came upon fresh signs of the game, but for a while the Indians appeared puzzled as to which way to steer; for, although the country was quite open and the eye could reach for miles in any direction, yet the broken state of the ground was such that goats might be within a few hundred yards of us, and still out of sight.

At length Seammux left us and started down the side of the ridge. Seammux had but hardly got two hundred yards away when he turned and shot at a goat falling back. Surprised the game to be at least three or four hundred yards away, we hastily scrambled down after him, but what was our surprise upon reaching him and peeping over the clump of cypress, behind which he was standing, to discover four goats within thirty yards of us.

There was a clear open field for a running shot, did they attempt to escape, and feeling confident that my Winchester was good for two of them before they got beyond its range, I took them in an open view to watch their actions. But there was none of that startled look about them which we always notice with deer and animals of that kind at the approach of danger. There was no throwing up the head for a moment, and then a bound as if a whirlwind had undertaken to pack them out of your sight. On the contrary, these silly brutes appeared to look at us from under their eyebrows—trotted off about a dozen yards to the right, then wheeled and retreated their steps. I felt almost ashamed to shoot, but hearing the level of Dick's barrel falling back to its place, I opened fire, and with four shots we dropped the four within fifty feet of where we first discovered them.

Just here a rather laughable incident occurred. I had laid down my rifle and was instructing the Indians how to take the skin off, when, as Dick took hold of one of his goats by the horns to drag it to a level place to skin, the animal suddenly sprang to its feet and started down the hill. I turned to pick up my rifle, but before I reached it Dick had grappled with the animal, and they both, falling on the slippery heather, rolled down the hill at least fifty yards.

When they reached the bottom the life was out of the goat, and Dick so bespattered with blood, that he looked as if he had just escaped from some of the disturbed districts in Ireland.

It was past one when we had the pelts off, and feeling somewhat hungry we decided on making our noonday meal of mountain goat. So, building a fire, we soon had choice slices of mountain kid broiling—Indian fashion—before it.

The final finished up my rifle to Seammux, but had come without a gun) and taking my shotgun started toward the top of one of the ridges, on the lookout for ptarmigan, while Dick and the two Indians moved along the bottom to a gap which cut through this same ridge, about a quarter of a mile from the point at which I was ascending. Before reaching the top I turned to get a look of the country behind me, and just here I picked up a little experi-

ence concerning at least one mountain goat, which I wanted, when the Siwash stopped me from shooting the goat. I was on the top of a ridge which ran from right angles with the one I was on—the two being separated by the gap before mentioned—I discovered a large buck goat poking along on the very edge.

The side of this ridge appeared to me to be almost vertical, and its height about seven or eight hundred feet. About half way between it and the one I was on, the smoke of our camp fire curled up and drifted off in the direction of Seasmour Creek.

But this goat didn't care anything about camp fires, he was going to come down the side of that ridge if he broke his neck in the attempt; and so I sat down to watch him. His distance from me was not over five hundred yards, and with my glass I could watch every move he made. About thirty yards below him, growing out of the side of the cliff, was a bunch of broad leaf plants, which the Indians had told me were a favorite food of the mountain goat. This spot appeared to be the objective point in his operations, and carefully he worked his way down, till he reached it, when he commenced feeding.

Just then I was startled by a *kak-kak-kak* just above me, and looking up, discovered a flock of ptarmigan not twenty yards off. There were eight of them, and I shot them all, firing seven shots, and yet that goat stood there the whole time, as unconcerned as if he was a thousand miles away. And still he must have heard the shooting, because Dick, who was double the distance off and nearly in the same direction, heard every shot. I felt somewhat disappointed in picking up my birds and seeing they were the black tail instead of *Lagotis leucurus*. There were also in the last stage of summer plumage, and scarcely fit for specimens to mount. Hanging my game on the limb of a cypress, I reached the top of the ridge, and found I commanded a view of the opening into which my companions had gone through the gap, and I at once began to look round for them. Presently I discovered two dark objects beneath the shadow of a spreading pine, with the aid of my glass, I made out to be Dick and the younger Siwash, while further on, near the foot of the opposite ridge, was Seammux, creeping along as if on the look-out for some animal ahead. The younger Indian got up and started back toward the gap, and just then I heard a shot in the direction of Seammux, but before I could bring my glass to bear on the spot, a dense fog rolled up the opening and enveloped the whole scene in darkness. Then came another shot, and another until I counted nine shots in quick succession. I became alarmed, thinking probably that my companions had stumbled on to a mountain bear. I was at the point of starting down the ridge, and through the gap to join them. A voice of Dick came up through the thick fog, "Catch 'im alive," and then a hearty "haw-haw-haw" from the same individual, satisfied me that nothing very serious was wrong. So I resumed my seat and waited for the fog to lift. It rolled away, however, almost as suddenly as it came, and I then discovered Dick and Seammux lending over some animal, which, with the aid of my glass, I made out to be a goat. I turned to look for my friend on the side of the cliff. He was sitting in the same place looking away, but another had come upon the stage. A dark object was creeping toward the white one. It was the young Siwash. Stealthily he picked his way along the side of the ridge, until he got within what appeared to me fifty yards of his prey. Then he halted, a puff of smoke shot out in front of him, the goat sprang backward, in full turned completely over, and fell, a distance of full five hundred feet, to the bottom.

In a short time the young Indian joined me, bringing, with him the mutilated skin of the unfortunate goat. Ever since that start I have had a little misgiving as to the fate of the two Indians, who were on the part of Seammux, because I had engaged the young Indian as guide, and all points as to routes and the chances for game were referred to him. I did this out of spite, simply to punish the old fellow for the way he acted during the time of your visit here. He, however, missed no opportunity to sneer at any proposition of the young fellow made, and now it was Seammux's turn, and, as he seated himself beside me, he asked if I had heard the shooting in the valley below. I replied that I had, and he said, "Well, that was a fine shot. With a bit of cunning you can see his greasy face he answered, "*Klonas sogers*" (Perhaps it was soldiers). It turned out that Seammux had fired the same shot at one goat, and the young Indian had stood by and laughed at him. In the meantime Dick had brought down her goat, which made seven, more than we could manage. So I gave the order to shoot no more, to pick up our skins and head for camp.

It was five o'clock when we reached a spot about three hundred feet above our camp, and looking down and seeing the mountain rising just as we left it, we decided to rest before going down the slope. We had scarcely seated ourselves when Seammux, pointing across the valley in the direction of Seasmour Creek, exclaimed, "*Nika tun-tem spa?*" (I think that's a bear.) All eyes were turned in the direction, and, sure enough, a dark object was discovered, which, with my glass, I made out to be a large black bear, and with it, three pretty good sized cubs. They were in the bottom of a ravine, the mouth of which entered the valley directly opposite where we were sitting, and was about a hundred yards in width. The bear was sitting on the ground at least fifty feet high; that to the left timbered, the one on the right, with the exception of one solitary tree, bare. But that tree proved afterward to be in a very favorable position, for the wind coming from the left, the approach had to be made up the slope on which it stood.

After all there is a good deal of murder in the shooting down of a wild animal. At least so it has seemed to me in very many cases of my own experience. This one I am about to relate in particular. Here is a wild animal enjoying the freedom of a wilderness almost unknown to man. There is no cautionness—no thought of danger—because there is no animal of her surroundings that she dreads. She strolls leisurely along, stopping now and then to pick up some choice root or caress a favorite cub. The sun is sinking lower and lower behind the hills. The shadows of approaching night are creeping higher and higher up the opposite slope. She stretches her great length on the heather covered ground, and placing her head between her paws, quietly waits the time to rest. But, lo! from the lips of a human being, and, as if seized with the dread of some terrible danger, she raises her head and, turning it in the direction of the sound, the object for which that whistle was given is attained and the next instant a bullet from a Winchester rifle crashes through her skull. She springs to her feet, and uttering the most piteous wail I ever heard from the lips of human or beast, drops dead at the

feet of her three cubs, who a moment after share the fate of their mother. This was murder in the first degree.

We had not been hunting but seven hours and a half, and had bagged seven goats, four bears and eight ptarmigan, the most successful day's sport I ever was engaged in.

That night, as we sat round the camp, I took out my notebook, and by the light of our fire wrote down your name as the one by which this camp should be known. The Indians, who were watching me, and, Indian like, having a curiosity for everything in the shape of paper and writing, asked what I had put down; and when I told them, the old fellow's face lighted up, no doubt with kind remembrance of his trip with you up Salmon Creek, and your killing of the bear, and he replied "*Klosh koga?*" (Very good). JOHN FAIRBANKS.

DOWN WITH THE FLOOD.

Now had the season returned when the nights grow colder and longer, And the retreating sun the sign of the Scorpion enters. Birds of passage sailed through the laden air from the ice bound, Desolate northern bays to the shores of tropical islands.

SAM and I were waiting for this. It was the fall; and up to the first week in November the weather had been so mild as to offer no inducements to make the big, long-talked-of trip for ducks down the Savannah River. We had every thing ready. Two large boats had been built under Sam's special direction and skill, made strong to undergo hard usage—one built to shoot from, the second to carry all the plunder, comprising food for ourselves and two darkies, cooking utensils, extra clothing and ammunition. We went in comfortable style, in the plenitude of time, and anticipated sport in every sense of the word. An added pleasure was the possession of two new 10-bore Scotts, fresh from the Reads; we had tried these guns and found nothing lacking in pattern and penetration. We just knew that any mallard, or any individual of the duck species that would get up within two hun—one hund—well, call it eighty yards, was just so surely dead, if these guns were held right on to. Even our two Fifteenth Amendments appreciated those heavy 10's, and as they gazed on their soft Danesens barrels and fine proportions, the grimace of delight and anticipation of future duck feasts. Alex said, "If dem guns fails to brunt what dey's aimed at, dey'll bring sunfin else, su." Joe remarked that "We's gwon jes to scopp all de ducks in de Savannah."

The boats must be hauled six miles before launching, and so an early start must be made. At 4 A. M. we were under way.—two wagon loads of plunder, boats, shotguns and jiggers. The town was asleep as we passed silently out and beyond. At 8 A. M. we were eating breakfast on the banks of Horse Creek, four miles from where it empties in the Savannah. A wood-pile was close to the bank. With the rope in my hand I was hunting for a place to tie the boat which I was to take charge of. I stepped between that infernal wood-pile and the brink, and slightly lost my balance. Grasping an innocent and deceptive stick on top to regain my lost equilibrium, it slid—so did I—we both slid, and I swam!

No time to lose. I plunged. The boat was surely pulling me down stream. I grasped a rock. Then came Sam to the rescue. I felt myself in his strong hand, and I was lifted clear of the water and landed high, if not dry; but I bravely hung to that rope.

It was a most exciting run down the rapid Horse Creek. Alex had taken several nips from a mysterious flat bottle. This was unfortunate, because Alex steered my boat. He ran the dangerous points scientifically and successfully for a while. Finally we rounded one very nice place and came within twenty or another, when he turned the boat's prow to the right, and the next instant we were heading for a large tree top bending over the water some two feet from the surface. I seized a paddle, but too late. I had only time to dodge. Looking back I beheld a sight. Alex had stood up and caught the limbs, thinking to arrest the speed of the boat, if not to stop it altogether. But he had calculated beyond his strength; he might as well have tried to stop a freight car going ten miles an hour. He hung desperately to the tree until he was nearly as high as much of his weight in the boat, as possible. The boat pressed him up against the tree and then slid from under him, the last impulse being to cause the thoroughly frightened darkey to turn a complete somersault over the limbs. For one awful moment he hung suspended, head down and eyes as large as trade dollars, and then, with a yell of fear, he dropped into the ice-cold water fifteen feet deep, with a current ten miles an hour. What must have been his thoughts, when hung between sky and water, he himself only knows. He could not swim, and he was in the fact, the boat had struck the shore and was wedged in the bank. I was incapable of doing anything; if it had been my last hour I must have had that laugh out. I stood up and laughed. I lay flat and laughed, I knelt and laughed, I hung over the mess-chest and roared. Alex came up a sober uigger. Fortunately, his first grab was at the side of the boat and he scrambled in. I could not do anything, for I was rendered helpless by his fearful look, as he sat there soaked and shaking.

We at once reached the Savannah, and that night made camp just below Sudsbur Ferry. The river was low. We pitched the tent on the sand quite near a cornfield, which was on higher ground. This was Wednesday night. As supper was announced it began to rain. All night it poured. It came down in buckets all day Thursday and Thursday night. Friday opened gloomy. It was rainy most of the time, but not that steady, discouraging downpour. That afternoon Sam shot some nice birds, the first game he had shot since Monday night, we turned in, and soon all was quiet. I woke up once at 12:30 o'clock, and heard, or thought I heard, the rushing of water. I remember the bed felt mighty comfortable, and then went to sleep again. I was aroused by a tramping of feet outside, and exclamations of amazement and almost of fright, "Dick, Dick, get up! Kick Joe and Alex out. The river is rising. We will have to work for our property and perhaps for our lives. The water is within ten feet of us." Up in an instant, I roused

the boys, and they made a rush for the boats, through water that came up to the wrist. Each one seized a rope, cut it from the stake and dragged the boats up until they grounded. Following our traps, we dumped everything promiscuously into the boats. Sam brought the last haul, his gun case and the frying pan. But he forgot the pot-hooks, and I was only when the water was four feet deep over our recent camp that those venerable hooks were remembered—and those relics of bygone days rest in peace at the bottom of the Savannah.

A miserable crew we were. It was two in the morning; the rain came down and the river came up. All through those dreary hours we were showing the craft toward the head of the canal. As the water came up, it was a black, cold, wetful night. At dawn we struck the oar-field bank, and after some trouble got a fire started. All was then changed. Gloomy faces and fears departed. Joe soon had breakfast under way. The aroma of coffee was wafted to our nostrils, and soon we were cheered by a hot breakfast, and then we cast off and away we sped booming down the river with the flood. It was magnificent. Alex, with strong and steady hand, guided my boat as it rushed on. My spot of observation was the top of the mess-chest. Sam's colossal figure loomed up ahead in the other boat. Swiftly we went on past bending willows, likely places for ducks—past forests, grand and beautiful trees, whose tops were sixty and eighty feet in the air, stretching out their giant arms for yards; great cypress knoop, the impetuous canebark, and for reaching swamp—on, on, we rushed, with the rapid flow of the river, the water now clear out of its banks and the flood spreading out into lakes where it encountered the low lands. At about nine o'clock Silver Bluff was sighted and soon thereafter we made a landing. We conversed a short time with some of the natives who had come down anticipating the little steamer from Savannah, and from what we could glean, coupled with Sam's experience, found it about useless to go further, as what ducks there were on the river would most probably be away back in the woods, and consequently impossible to get at.

Dropping a half-mile further down the stream we found a splendid camp ground, with plenty of wood and water. At this time it had been raining intermittently, but as night closed in, the sun shined brightly.

Sunday morning broke bright, with only a few clouds, and by noon old Sol came right out and stayed there. Camp was immediately turned inside out to dry. During the day we received visits from the gentleman on whose land we were camped and others of the neighborhood, and accepted an invitation from a planter living some two and a half miles distant to join him in a quail shoot on the morrow. The next morning Mr. H. sent us miles to ride up to his house. Arriving, we were most cordially welcomed. We started out with four negroes, two dogs, five shooters—all the nule-back but the canies. Striking the field back of the house, we found a covey at once, and when the dogs pointed each shooter discovered, leaving his mule with his attendant. At these five birds fell. We had the covey well scattered and were just in for good sport when the rain began pouring again, and we were forced to retreat to the house, where the rest of the day was spent with our host. The sitting-room was filled with neighbors and friends of Mr. H. and friends of Sam, and all being game, the seat legs were piled in the fire-place, and as the flames lit up the room, we sat in a circle around the pleasant warmth, and stories of the field and river were in order. Every man there was a sportsman, and each had "the best dog in the country," and such yarns as were told. Veracity was pretty well adhered to until we sat down to dinner, eight of us, and each individual entertained upon his personal recollections and imagination amid roars of laughter. Some of the participant's in that day's festivities have "passed beyond," but their memory lingers with us still.

Thursday morning we break camp, the river being at a fair stage for the shooting. Sam sits in the forward seat, I immediately behind, Alex at the stern with the paddle, and Joe in command of the provision ship. On we go. The boat glides by the bending willows with scarcely a ripple. Mark's seven mallards spring from under a thick bunch of willows twenty yards in advance. I rise to cover my bird. The boom of Sam's 10 bore awakes the echoes, followed by mine right and left. Four ducks are the second spawl an old Drake is the third, sixty yards away. Alex's strong arm sends the drake close to the willows. The fowl fly within eye range, and as the guns are brought up they clump, but only three go on. Joe retrieves the fallen.

We made camp at 4 P. M.; and strung in a log thirty-seven ducks, mostly mallards and teal, a few black backs making up the total. Dinner was served at about 6 o'clock, the camp fire heated up the pipes filled, and we lay on our beds in an instant. It had a amazing amount of a good preacher. The time wore on to nearly 9 o'clock. Suddenly a low moan is borne to us from up the river. All of us are hushed to silence. It grows louder, louder, louder. The woods echo and re-echo the sound. The steamer from Savannah is coming. We pile on the logs and wake our camp fire blaze. We will let them know that we are here. She rounds the point above with many a light, pouring great clouds of smoke and sparks from her stacks, and sweeping swiftly and gracefully onward is soon a host of us. The passengers see the great fire and cheer. We yell in reply. Soon the little steamer is lost to sight. Presently all sounds cease, and we turn in for the night.

Onward we go, 175 miles down the river, with good sport and fine cold weather all the way. We reach our boats at Burton's Landing and take steamer for Augusta. The trip lasted three weeks. I gained seven and three quarter pounds. Sam was so frightened at what people said of his increased adipose that he would not go near the scales. We both felt better. The business of the day did not drag, and outside of business we had something pleasant and profitable to think of. DICK SWELLBURN.

ONE of Mr. Van Dyke's most charming works is his "Filtration Camp," a story of shooting in Southern California, where game is abundant and out-door life is a delight throughout the whole shooting season. There is a thread of romance running through the details, which renders it very attractive. We have a few copies left, which we can furnish at \$1.50 each.

Fritz has named his dog *No Sequitur*, because it does not follow.—*Detroit Free Press*.

Natural History.

SOMETHING ABOUT WOLVES.

"BEEN camping out among the bears and wolves," was the remark of my young friend and sportsman, Bill Sykes, who had just returned from a two weeks' cruise in the mountain range.

Ab, glad to see you again, if you have had a tussle with the critters and come off with a whole skin and—

"Hold on, there, you know as well as I that I never saw a wolf, nor more than one bear, which was chained to a post and kept walking back and forth, and came as a near perpetual motion as anything I ever saw. Come, now you old antediluvian, sit down and tell me something of the nature and habits of wolves, not those little nasty prairie wolves, them I know. Now, if I had lived in the days of my great-grandfather Sykes I should—"

Yes, yes, you had lived in the days of your great-grandfather you would have known more about wolves than you do now. I knew old Sykes right well when I was a boy. He caught wolves when the scalps brought \$600 bounty each, and he accumulated more money than I ever knew any other Sykes to do since, and paid the whole amount for a large tract of land which in after years became very valuable. She was robbed of her cubs about the first days of June in each year, the old wolf generally keeping out of gunshot distance, even while being robbed of her young. There are comparatively few wolves killed by gunshots. Instinct seems to have taught them the potency of firearms. When they are shot, as sometimes happens, they are almost sure to escape unless broken down or struck in some vital part. I once followed a wounded wolf for days when it seemed to me that every drop of blood had run out of him; and the second day of the chase I thought he ran as he had before.

The wolf is rather cowardly, and would generally prefer to run from a dog rather than fight. But he is a powerful fighter when he does fight. Notwithstanding some reports to the contrary, I believe that there never was a dog that could master a full-grown wolf. There are few dogs that will attempt to fight a wolf, and when they do they are badly cut up if not killed outright. The bite of a wolf is not like the bulldog grip, but is a succession of snaps, which are about as quick as lightning. The wolf leaps back and forth over the dog, his jaws snapping like a scudtrap, and the dog is cut up with knives in less time than it takes to write it. Wolves will occasionally run down a deer, but it is a rare thing that they hunt that way. They have a more easy method, which is to get on the windward side of the deer while lying in his bed and creep up cat-like and pounce on him before he fairly makes the first bound, as has been frequently ascertained by the tracks in the snow. Wolves were more often caught in steel traps than any other way. It requires great skill and patience to succeed in trapping them, as they are shy and wary. The wolf is not going to run into any pens or deadfalls, nor slip his neck into any noose or snare.

I have seen two animals, the progeny of a cross between the dog and the wolf. They were ill-looking nondescripts, which were neither wolves nor dogs; and were the most vicious, surly, ill-natured brutes I ever saw. It became necessary to keep them chained before they were fully grown; and they proved a decided failure toward improving the breed of either wolf or dog.

The dismal howl of the wolf is what we often see written and often hear quoted; but I contend that there is nothing dismal about it. I would be willing to travel some distance to hear a concert gotten up by a half-dozen wolves. Not that I claim any very sweet melody for the sounds except that they would bring back to my memory pleasant reminiscences of other days.

The wolf, like the Indian, is fast disappearing before the march of civilization, and we may safely predict that at no very remote period they will be counted among the extinct races.

Piney Falls, Tenn., Dec. 27.

THE DIVINING ROD.

MOUNTAINS OF SOUTHERN KENTUCKY, Dec. 10, 1881.

IT was by a curious coincidence that not a week before I was reading your FOREST AND STREAM of Dec. 1, in some column of which I found allusions to divining rods and supposed relations between beechnut crops and winters—the only instances of those identical items which came under my immediate cognizance—had been discussed. A night spent with an old friend took me off my accustomed route to your town and past the spot where I had seen the water-wizard's manipulations of his rod. This was so vividly impressed upon my boyish memory that after a lapse of thirty years I located the well (now filled), though the house had been razed and the road changed. Arrived at town I met my old schoolmate and old friend, now living in Central Kentucky, who while on a visit to me in July, 1859, directed my attention to the remarkably heavy beech crop, and after informing me that a certain native of the mountains had a few days before told him that such a crop always forebodes a "hard winter," added: "Now, let's remember and watch that." The winter of '59-'60 did not counterpart in severity in the memory of the oldest observer.

Dr. Carter, an observer, that mild winters are apt to follow good beechnut years in New York. The reverse obtains here.

Not only retain an abiding faith in the approximate infallibility of the divining rod in locating the meanderings of subterranean streams, and no believer doubts that volume, course, depth, abundance and divergence can be accurately determined by the aid of the rod in peculiarly gifted hands. It is averred that the bark has been wrenched from the divining rod in particularly gifted hands, when crossing the course of subterranean streams, and sudden and violent dips of the switch have proclaimed underground rivers. I am

not positive as to accuracy of memory in associating the introduction of water-witching with the time that spiritualistic phenomena were so intensely absorbing a theme in our community, but remember well that about the time the Foxes were so interestingly notorious, developments of mediumistic gifts with the rod were scarcely a secondary amusement. In this famously spring-watered country, wells and cisterns are few, and he is thought rash who essays a well without appeal to the water-wizard's rod. Professional well-diggers waded the wad in my boyhood, but principally amateurs practiced the art now. A peach-tree twig, three to four feet long, and straight, used in one hand by some, forked and a prong held in each hand by others, was the popular wad when the practice was in its glory a score and a half of years ago.

I suppose I was ten years of age when I visited the farmer, for whom a water-wizard was at the time digging a well on contract—no water no pay, but board whether or no. The peach-tree twig, forked and held in both hands, had located the confluence of two strong streams, at a certain depth, in the most convenient hollow, so far below which the old gentleman had tediously blasted his way through expending strata of limestone that he made daily appeals to the rod in hope of new revelations, or detection of some miscalculation. After showing me the persistent but deceptive movements of the rod, he placed it in my hands for trial. My recollection is that I was led in his courses, and that I agreed that his interpretations of indications were in perfect accord with mine. A gentleman who has lived on an adjoining farm for more than forty years told me that the hole was abandoned, filled, and a spring half a mile away is still the dependence of that farm house, no owner having had the enterprise to dig a cistern. My observation has been that topography is a prime motor with all operators left to their discretion—a natural fallacy, in view of the illiteracy of the average wizard.

Some years ago a charlatan gravitated into our neighborhood, in whose hands the divining rod performed such wonders in the estimation of many concerned within prescribed bounds that many believed him either a wizard or a charlatan; and he had a soft time sponging his board and a few dollars, till a skeptical old farmer, in discussing his abilities, led him to a climax from which he could not decline a proposed wager without virtually confessing himself an impostor. The old gentleman was to conceal a half-dollar in a field of growing corn, within agreed limits, which, by aid of the divining rod, the wizard was to find on first trial. He was accurately led in the bottom, and so strong was his faith in the sudden deflection of the treacherous rod—where the keen eyes of the rascal discovered a very slight disturbance of the surface—led the unsuspecting to exclaim: "Here it is." But it was not there; nor could repeated efforts locate it, so skillfully had the old man concealed the coin and "set his traps." That was the last performance of that magician in that locality.

A neighbor began building a new house last spring, near a point where one of our popular amateurs had located a strong, superficial spring in the bottom, and so strong was his faith that he sold off that portion of his farm on which was the house and surroundings and pushed the new house up much faster than he did the well down. Result: After digging much below the indicated depth and drilling four feet deeper, without sign of anything to drink, he availed himself of a lucky chance to sell out, and invested in a perpetual spring, of which he had some knowledge.

I know of no statistics by which conclusions can be reached as to the comparative value and success adopted by the water-wizards, and comparisons made of successful and failures, but there is a preponderance of failures in this limestone region. Some persevering individuals, confident of water at insignificant depths, in their disappointments have obstinately pushed on till artesian depths, coupled with pecuniary stress and insufficiency of human power to run the hoisting apparatus, constrained suspension of operations. Allusions to water-witchery is all-sufficient in most such instances to earn a cordial rebuff or thrashing. In the new year I visited a Kentucky faith in the divining rod is extinct, and the party who decides upon it well selects a point most convenient to the cook-room, and puts a well-borer to work, though the nearest alluvium is ten thousand feet below his site.

KENTUCKIAN.

PORT ROYAL, TENN.

Editor Forest and Stream:

In the FOREST AND STREAM of Dec. 1, I notice an article, headed "The Divining Rod." Evidently the writer of the article thinks the divining rod a delusion and a humbug. I have no more to say regarding that science of quackeries, and can do so clearly and satisfactorily demonstrated. I can show you several men down here who can convince the most skeptical that the rod is not a fraud. I can show you a man who can not only locate underground streams with the rod, but will manipulate the rod in such a way that it will point as unerringly and indicate the direction that underground streams flow as the mariner's compass points toward the north. The divining rod is no more of a humbug than the mariner's compass. All rivers and creeks are fed by subterranean water, and his unerring rod located face indications of their existence. Now, I know a man who, with a rod, can find every underground stream that flows into a surface stream. You might see him down in California, or any strange place, might lose him in the "continuous woods where rolls the Oregon, and hears no sound save its wave dashings," and he would find every underground stream in the neighborhood and trace them from source to mouth. I have seen him do that very thing—I have seen him put to the severest test by skeptics, and never failed in a single instance to demonstrate clearly and unmistakably that the rod is not a fraud. Carry him to a well, and in an instant he will show you the direction the stream flows that sustains the well, and the side on which it flows into the well. Carry him within, say, a quarter of a mile of a spring that "he knows not of," and with the rod he will find it. Where his rod indicates that there is water, dig and you will find it. I sit now within a few hundred yards of two new wells falling water that has its unerring rod located. When people want water below the surface they send for him. He never fails to find it. My father once put a rod man to a severe test. He claimed that with his rod he could locate deposits of precious metals as well as water. My father thought him and his rod a fraud. He thought he would test him. He said to him, "Please walk with me to my business house and work your rod, and see if you can find water." Now, the rod leading to my father's house ran parallel with a creek for some distance, and he knew the existence of several creeks crossed the creek and ran into the creek, and he wanted to see if the rod

would indicate them. He found every stream and traced them to the water's edge. He could not have been guided by surface indications, for there were none; for at the time the creek was flooded, and the streams flowed beneath the surface. My father is now a believer in the rod. Some years ago a certain journal in our State discussed the rod question quite elaborately pro and con. Correspondents had it up and down. The rod men offered to let large sums of money on the rod. The anti-rod men would cry "fraud," "humbug" and "delusion," but did not dare come to the scratch with money. Then the editor came out and said the "rod" thing was a fraud and a delusion." But, remember, the editor was a pompous, conceited individual, with A. M., Ph. D. stuck to his name, and had learned and forgotten more than the balance of mankind knows. Because they do not know the whys and wherefores in regard to the workings of the rod, many people are ready to cry "humbug." Does any one know why the needle points unerringly toward the North Pole and guides the mariner across the trackless ocean? There must be a cause, and when we see the effect must we write it a humbug because we do not know the cause? Effects are more obvious than causes. Intelligent people contend that the science of astronomy is a humbug and a delusion. Can it not be easily demonstrated? It can. So can rhabdomancy. BRD.

THE SNOW GOOSE AND BLUE GOOSE.

PHILADELPHIA, Pa.

Editor Forest and Stream:

I have read Mr. Dutcher's communication to you in reference to the snow goose (*Anser hyperboreus*) and the blue goose (*Anser carolinensis*) in last number of your journal. I am quite sure an examination of adult and young specimens of both will convince one that they are an entirely different species. I have to-day visited our Academy of Natural Sciences in Philadelphia, and last week the Smithsonian collection at Washington, and find the full plumaged adult bird of *A. hyperboreus* is no larger than specimens of the young of the same species, yet the latter is of entirely different color, being a dull bluish or lead color, while the young of *A. carolinensis* is much smaller, and has the bill shorter and the laminae less prominent. In color I find the latter darker and of a more solid shade than the young of *A. hyperboreus*—gradually, as it grows older, assuming the brown hue and attaining the white head and rusty markings of the parent bird—while the young of *A. hyperboreus* changes from its bluish or pale-lead colored markings as it grows older to the lighter hue, and at last dons the snowy plumage of the full feathered bird.

Prof. Elliot Coues informs me he deems the species undoubtedly distinct. Prof. Baird likewise inclines to the same belief, and my friend, Mr. Spencer Trotter, writes me: "*Carolinensis* is certainly a distinct species from *Hyperboreus*. From specimens I have examined in the collection of the Philadelphia Academy of Natural Sciences, the blue goose was apparently smaller and very differently marked than the young of the snow goose." It has struck the writer, in his examination of specimens of the *Anser* family of this continent, that very possibly species of the varieties which exist and have become numerous, and bear marked peculiarities of plumage, may be prolific crosses of older known species. Without venturing an opinion, it struck me that a full plumaged blue goose would be just what the result of a cross between *Anser albifrons* and *Anser hyperboreus* should be.

I will take this opportunity of stating to Mr. Dutcher that the bodies of snow geese that yearly appear in Delaware Bay make their appearance in the spring, and not in autumn, although occasionally a stray bird is killed in the fall and winter.

Another variety of the snow goose exists which should not be confounded with *A. hyperboreus*. It is named by Cassin *Anser albatrus*, and is much smaller and more delicately outlined than the first named. They are plumaged alike in every respect, save that in the smaller variety the rusty head markings are seldom as distinct as in the larger; in fact, adult birds are often found without it.

Since writing the above I would mention that I met John McCullum, one of the market shooters who has posted himself as to the habits of the snow goose, and he told me that winter before last (it was a remarkably open one, it will be remembered) the bodies of snow geese remained in Delaware Bay, beyond Bombay Hook, until spring, and that they are there now. Daniel Wells, a professional gunner, well and favorably known to all Philadelphians, is at Bombay Hook at this writing, in charge of Mr. Chas. Matthews' yacht, and several of the news articles in the presence of the snow geese. McCullum is about going down the river, and could readily procure for Mr. Dutcher all the specimens desired. Using McCullum's words, "The geese are not all of one color. Some are pure white, with red hills and feet, and black tips to their wings, and russet-colored heads; and some are of a light gray, with black bills and feet." Doubtless there are many grades of plumage in these flocks at Bombay Hook.

It is an opportunity now presents itself for collectors who wish specimens. A letter addressed to John McCullum, care of J. W. Kridler, Second and Walnut streets, Philadelphia, will reach him.

I was not aware that the snow goose appeared on our bay excepting with spring, and have so written it, but the information received to-day assures me that it is now a regular spring and autumn resident, and that in mild and open winters they remain with us until breeding season, when they move to more northern regions. The attraction seems to be the immense meadows which border the lower Delaware River and Upper Bay, in which they feed, and from the fact that they have not been molested owing to an ignorance regarding their merit as a food, and a consequent slow sale for them at the poultryer's, it is safe to suppose their numbers have gradually increased. It may be that among them the *A. carolinensis* and possibly the *A. albifrons* can be found.

O. S. WESTCOTT.

ZOOLOGICAL SOCIETY OF PHILADELPHIA.—Editor Forest and Stream: I was under the impression that the want of identity between the blue goose (*Anser carolinensis*) and the snow goose (*A. hyperboreus*) had been clearly settled, but the question is again raised in your correspondence column of last week. Permit me to say that in September, 1875, the Zoological Society procured eight specimens of the former species in company with several of the snow geese still living, and have since the no change except possibly that the dark coloring has become slightly intensified. I cannot speak from personal observa-

tion, but authorities seem to agree that the young of the above species, and probably also *A. albifrons* resemble each other to a greater or less extent. As all ornithologists know how difficult it is to identify immature members of many closely allied species without a long series of specimens for comparison, any single element of the supposed change from one of these forms into the other should be accepted with much caution, particularly when it can be shown that a considerable number of individuals, at least seven years old, have not gone through the transition.—ARTHUR ERWIN BROWN.

THE SPARROW PEST.—South Norwalk, Dec. 23, 1881.—Your article on the sparrow course in Australia should be read by every farmer and fruit grower in America. It cannot fail to open the eyes of the most ignorant to the destructiveness of this importation from old England. As you have already given much valuable space to this subject, I will make my remarks as brief as possible. I have three large bird houses on my place, each house containing seventy or seventy-five compartments, making 225 nesting places. They were formerly occupied by bluebirds and other birds. The sparrows have driven all these entirely off my place. For six months in the year every compartment in these houses is occupied by them in breeding, and the backs of nearly all signs over the stores in the town are used by them for that purpose, causing much annoyance to the owners. To say that the sparrows are very prolific is simply drawing it out. Within a few years they have increased to an alarming extent, and if not checked will become more numerous than the leaves on the trees. A general war of extermination should be waged on them by every one. The past two years they have destroyed every grape on my arbor, picking each berry on a bunch as fast as it ripened. I have a friend whose peach buds were all destroyed by them, they not leaving one on a tree. They commenced nesting in bird houses as early as February, and I shall shoot them off as fast as they go to them. In the fall and at this season of the year they collect in large flocks and offer good opportunities to make "pot shots." My humble servant has made some heavy ones by scattering cracked corn and oats near the thick shrubbery, where they come to roost at sundown in large flocks. I have an 8-hore gun, and with 2 oz. No. 10 shot, backed by six drachms of powder, one barrel directed on them while feeding, the other just on the hop, this arm will do more to exterminate them than anything else I know of. They are very cunning, and after one or two pot shots of this kind will not alight on the ground to feed within a long distance of where the shots have been made. Poisoned grain and water will not work to any great extent, as they soon take the hint. Shooting them, breaking up their nests, and offering a bounty for their scraps and eggs will be the only way to get the upper hand of this most destructive of birds.—H. B.

THE WHITE-HEADED EAGLE AS A FISHERMAN.—Stout City, Ia., Dec. 10, 1881.—Editor *Forest and Stream*: To corroborate your reply to "Jack" in your paper of the 15th, with reference to the fishing propensities of the bald eagle, I have to advise that during the past fall, when on a hunting and bird observing tour on Lake of the Woods, B. A., my companion, Mr. George Mitchell, informed me that many times he had watched the eagle of that section catch fish. Oftentimes the fish would be so large—his estimate of six to eight pounds—as to be almost too heavy for the eagle to carry off. In 1874 on the Big Lake, a tributary to the Lake of the Woods, Mr. Mitchell killed a very large eagle whose head was just turning gray, and which was shot while in the act of killing a fish it had just caught, my informant having witnessed the catching. Mr. M. has, for a number of years, been a resident of this lake country, and who lives at Rat Portage, on the north end of the lake, and is well acquainted with the habits of the osprey and other birds of that section, and having confidence in his statements, and from the description given me, I am convinced that the fishers this gentleman has so many times noticed are none other than our Big Lake Washington emblem of the Nation—*Haliaeetus leucoccephalus*.—D. H. TALBOT.

Game Bag and Gun.

THE CARE OF LIVE QUAIL.

SPRINGFIELD, MASS., December, 1881.

Editor *Forest and Stream*:
I have lately received from gentlemen in different localities many letters making inquiries about quail; and though I would be glad to answer each one in detail, it would take more time than I have to spare; and the fact that I have been for over a year under treatment for my eyes, and am still under strict orders from physicians to use them "little as possible, and for only necessary work," compels me to ask, through courtesy of *FOREST AND STREAM*, the privilege of answering some of the many questions, and giving such information as a little experience has taught me, and she is said to be a wise teacher.

A correspondent asks: "Will they breed in confinement?" I have never tried the experiment, and do not think it would succeed with birds taken wild. Birds hatched under chickens are said to be easily tamed, and I learn upon good authority that a farmer, only a few miles from here, now has quite a brood that live and feed with his chickens and are equally tame. I am told that his mowing machine killed the old bird last summer. He caught the young, took them home and put them with his chickens. I shall drive out, my first opportunity, and learn the truth of it: think it will prove that he took the eggs and hatched them under a domestic fowl, as the young, even when very young, are hard to catch. It seems reasonable to believe that, these birds will mate in the season.

Do they become tame if kept in a white? No; not by any method of handling I have ever practiced. On the contrary, those that I liberated last April had been kept, most of them, through the winter, and though fed and watered every day, grew more wild the longer kept. Same is the case so far this year.

Can I keep them in a barn? Should advise not, for unless their wings are trimmed they will soon batter their brains out. Better not to mutilate them in any way; but if so, pull out the flying feathers from growing. It may have to be done more than once in a season, and they will grow out if they are cut but they will not grow until after the moulting season; and if the birds are liberated in this condition they will soon be prey for the skunk (their worst

enemy) as they must walk to their resting place for the night and leave a trail easily followed, instead of making a flight to it, as is their custom. I speak of skunks as their worst enemy. These vermin are constantly running about, night and day, and if they cannot find the old bird on her nest, they will suck the eggs. Hawks are also very destructive in winter. I have seen, on six occasions, one or two hawks in the neighborhood of a nice bay of quail, which would dwindle day by day until only a few feathers were left to tell the story. The birds are a shining mark on the snow while feeding, and getting terrified, become an easy prey for the hawk.

"How much do they cost?" This must be guessed at, as it cannot well be estimated. Shippers usually charge \$2 per dozen. Not more than half a dozen, which makes the cost \$4. Add, perhaps, \$1 transportation charges, and you have something near first cost. The best success we ever had was to save forty out of a shipment of fifty birds. Of the last lot received forty-five were sent; sixteen were dead when received, and at the end of four days only nine were alive. None died after the first week; they then grew fat and strong. Why this mortality at first I cannot explain. The cages indicate rather good handling by transportation companies. Possibly a little water put in for them to drink during the four or five days' journey would help them, but perhaps it is too much to ask, as the companies are only paid for carrying. The fact is that the cage this last lot of birds came in was the same one sent us from Messina with 300 birds in. They were over two months on the way, and not one in the whole lot died, or was in any way disabled. It looks as if the native birds were very weak or the expressmen very strong.

One correspondent says he would prefer not to buy the birds before March or April, even if they cost more, as he has no suitable place to keep them. Last year we could not get any after February, as the season was such they could not be taken. One must recollect that the spring is earlier in Tennessee than in Massachusetts. A few hours' work will make cages to keep them in, and the barn, if no cats or rats are around, is as good as any place to keep them. The boxes I have used are about five feet square, and seven inches deep, with holes bored in side and ends, and covered with lath, leaving spaces of about an inch, with feed trough at one end extending whole length. These boxes will keep fifty birds each comfortably. Give them fresh water every day and feed mixed seeds, rye, oats, wheat, buckwheat, cracked corn, etc. Put in clean sand occasionally, and bay-seed; sweepings from barn floor are excellent for them. Be careful when making box that it does not exceed seven inches in depth, for it is in flying up that they do themselves the greatest injury, and they are liable to be panic stricken any hour of the night. What causes the alarm I do not know, but have frequently, on hearing the commotion, gone into the room and turned on the gas when all would quiet down, but dirt and feathers would be found flying from every cage, and a good many sore heads in the morning.

A correspondent from a hill town of Hampshire county, this State, asks if they would probably eat seeds from the weeds and support themselves. They probably would, unless something else was provided, but only until they could find some locality furnishing grain stubble. They are great travelers, and will go until they find feeding grounds to suit. The thing for him to do is to sow broadcast on ground, not cultivated, grain of the kinds, which will come up. Do not cut it. See that it is sown near running water and good harel or alder cover.

When liberating the birds see that they are well distributed. Don't put many in a place; two pairs is better than more. We have attained best results in this way, and put them about a mile apart. WM. M. WILLIAMS.

MARIETTA, Ohio, Dec. 26, 1881.

Editor *Forest and Stream*:
In your issue of Dec. 22, your correspondent "Verde Monte" asks if it is difficult to keep quails in confinement. I am a lover of birds and have had some experience in just this thing.

Two years ago I bought ten quails and put them in a cage which I had made for them, 24 feet long, 7 feet high and 6 feet wide. A small part of it was tight or inclosed—the front and open part shut in simply with laths 7 feet long and 1 inch apart. The quail were very wild and would fly from end to end in a full rush against the laths; but they soon learned that by running along them, they could get in and out. I kept them all the winter and until midsummer, when I opened the door and let them out.

They became in a measure tame or at least quiet and I enjoyed very much their answer to my call of "Boh White." When I came home at noon I would rap upon the window-sill looking out upon their cage; they would jump up on the perches and answer me back as I softly whistled their beautiful notes—and very beautiful creatures they were.

I fed them scrumptious, corn, wheat, and kept a cake of cracklings or residue from the lard kettle all the time in the cage. I remember with what avidity they ate the seventeen-year locusts we gathered for them during the summer.

A box filled with straw or some covert place is necessary for them to hide and rest in. I have had a new cage, half tight and half open and a very much better one made this fall, in which I have at present twelve beautiful quails, and I expect in a few days twelve more. I have also a wire cage (woven wire) about 10 feet square and 13 feet high in which I have kept ten birds for several months. During the fall I kept them in Shelbyville, Tenn., for live quail, and the birds came all right. I hope soon to get more from the Indian Territory and also from Kansas. H. B. S.

A GAME CHRISTMAS TREE.—Buffalo Farm, Forest County, Pa., Dec. 24.—A wide spreading apple tree in front of the old farm house. Suspended from the limbs are eight deer-fawn fawns, one yearling spike, one three-yearling and a four-yearling buck, and one large doe. The live white and gray rhabbits, as they are called here; numerous black and gray squirrels and ruffed grouse; also the skin of a porcupine. This fully describes our Christmas tree. I will say to the many readers of your valuable paper that we cooked and eat the porcupine, and found the meat nicely flavored, and I think wholesome. I have never known of the "porkey," as we call it, being used as an article of food, and would like to know if others have tried it. It is quite numerous and sweet. Falls all the year, but the best is after the very dry months. There have been but six deer killed within a radius of ten miles, by different parties, all still hunters. I have heard of no dogs as yet, and think it would not be healthy for any in this section. Our party, of three, use Sharp's, Winchester and auxiliary rifles.—LAUGHLIN OWL.

UNDER THE SHADOW OF WHITE TOP.

UNDER THE GREENWOOD TREE, }
Washington County, Va., Dec. 24, 1881.

AS our open season for game is drawing rapidly to its end, and with the closing year, perhaps a few notes from this remote corner, overshadowed by the mighty White Top, king of all the Virginia mountains, may not be unwelcome to the *FOREST AND STREAM*.

In most localities west of the Blue Ridge quails have been less numerous than usual, no doubt chiefly owing to the cruel cold of last winter, as the past inhabiting season was exceptionally favorable. Here and there, however, a well sheltered valleys it has been possible to make a good bag. A few days ago, four gentlemen of this neighborhood, all square and honest shooters, bagged fifty-one quail and five hares before 12 o'clock, when the weather grew so stormy as to drive them from the field, and all four confessed to having shot badly, and to having done great injustice to their opportunities. Ruffed grouse (called here pheasants) are very abundant, but it is no child's play to beat the ground where they "do mostly congregate." He is lucky or skillful indeed who makes back on a hill ponds and on the various branches of the Holston River, perhaps because, so far, we have had no winter. One swan "*rasinaria avis in his terra*," a straggler from some passing battalion, lost, no doubt, and perplexed in the extreme, has been shot on a neighboring mill pond, the "first seen here for many years." There are a few wild pigeons, and the woods are fairly alive with gray squirrels, that time-honored delight of the ancient countryman with a gun taller than himself, or a mountain rifle carrying a bullet of a hundred and forty to the pound, wild turkeys and hares are scarce, but are to be had by the persevering. Two hares were killed ten days ago on the slopes of old White Top.

The last deer hunt of the local club would have been most enjoyable, even without the trophies which marked its success. Those who only see the mountains in the glow of summer know less than nothing of what their height is; and on this occasion, landscape, weather, noble dogs, the presence of charming and gracious ladies, all combined to make a perfect scene, long to be remembered. The meet was on a height, crowned with grand old oaks and overlooking the lovely valley of the Holston. Our leader

"Glew an inspiring air, that dole and thicket rung,
The hunters call to Fawn and Bryad knock,
The oak-grown sisters and their chaotic-eyed queen,
Sisters and sylvan nymphs, all in a row,
Peeping forth from their alleys green."

and away, away flew the hunt, the "notes of the mellow horn by distance made more sweet" mingling with the ringing echoes of hoof and hound. 'Twas enough to quicken a groves image into life. The trophies of the day were two bucks, one to the gun of W., the other to that of R., both of them crick shots and good sportsmen; and if any of the readers of *FOREST AND STREAM* think it nothing to knock over a deer from the saddle at 50 or 80 yards, while both hunter and hunted are going at racing speed, and every muscle is quivering with the excitement of the chase, why, all I have to say is "Let them try it." But I might say of such sport as good old Walton said of something else, "This is too good save for very honest men."

Later I will send you notes of our late sojourn on one of the great sora marshes of the coast, with its mixture of all sorts of sport. DESIGN.

STATE PIGEON TOURNAMENTS.

BY CLOAN.

THE indorsements you have already received of your views in condemnation of wholesale pigeon shooting have been so numerous and strong that probably any other is superfluous, but yet I would like to add my concurrence, which has been unwisely delayed. I never could understand how such a practice came to be tolerated at the meetings of sportsmen's conventions. I never could understand how any competition for gain, bringing with it the usual concomitants of gambling for money, could be considered a branch of sportsmanship or an adjunct of field sports.

It has been a task arduous enough, in all conscience, to educate the American public up to the point they have now reached as to sportsmen and game preservation. And even yet, outside of a few large cities, I fear that by the majority of the people, the name sportsman is held to mean a sporting man—i. e., a gambler, and that having gone that far in nomenclature, they generally go a little farther, and associate the name with criminal practices.

It has been the effort of your paper and of your co-laborers to remove this prejudice and ignorance, and to endeavor to inculcate a knowledge of the benefits to be gained to the individual from out-door life, and the good to be derived by the masses by the supply of cheap and nourishing food.

But how fatally are these efforts counteracted by the annual meetings of some of the clubs. There are gathered together ostensibly the very pick and flower of sportsmen, presumably the best representatives of the game and fish preserving sentiment, and the highest attraction offered in the contest at the traps, with either money or money's worth at stake, to be contended for with all the carelessness of gladiators. Bitter-humors, jealousies and disappointments are not a few instances, the only results of this strife. Charges of foul play have been too frequently made, and, if not proved, have nevertheless been believed and constantly reiterated.

This is not the way to promote high sportsmanship in this country. We may talk as we please of the open air, the beautiful sky, the green fields and the sparkling brooks, which bring bloom to the cheek and vigor to the frame, but these will be of no avail if it is supposed that to be a sportsman is to have a perversion of the moral tone, worse may be than physical disease.

We should draw the line here as it drawn is in England. There they have no such difficulties as we have as to game preservation. Consequently there do not exist all any associations similar to ours, formed for such purposes. There is no need of them. There are many gun clubs existing, however, of high and low degree, all devoted to prize shooting, and men of title and men known to be fine field sportsmen, have been known to them.

And it is distinctly understood and accepted, that when they go to the gun clubs to shoot, they go there, not as sportsmen or as game preservers, but solely and simply to win money by their skill with the gun, precisely as they would go to a card club to win money by their skill with cards, and they are estimated accordingly.

gun maker's name, and he will make you a gun that will do it every time, guaranteed. Above all, be sure that your powder is good; not necessarily expensive.

In concluding this brief paper I should state that the charges named above are for guns weighing from 7 1/2 to 8 1/2 pounds. But I am sure that I have given the maximum of shot for any gun that a gentleman ought to use. Pot hunters have their peculiar guns and they lead them to suit themselves.

But I have found several very surprising things in my experiments, "things which," as Lord Dundrory says, "are past a fellow's finding out."

With 3 drams of powder and 1 oz. of shot I obtained nearly or quite as good penetration at a target as I did from 3 1/2 drams of powder and 1 1/2 oz. shot.

Who will rise to explain? In the old muzzle-loading days a man who would use 4 drams of powder was considered as a mere pot hunter, and, indeed, the jar, smoke and general discomfort produced as a general thing, the use of more than three drams. Now, the addition of more the pot hunter, which takes more than half the recoil, and a better idea of making guns, have improved the modern breech-loader so that but little improvement can be asked by the most exacting.

If sportsmen will try the above named charges, now that most good guns are bored alike, I think that they will be satisfied that they have obtained the true charge for game shooting.

ST. CLAIR.

Editor Forest and Stream:

In your last issue (which, by the way, let me say in your correspondent's judgment, is the best number he ever read) is an article on "Loading." I was very glad to see it, and hope the subject may now be fully discussed as you invite. In your gun you had an assistant, who when I spent my 14 days hunting. He used an 8 lb. muzzle loader 12 or 14 gauge. Once I asked him, How do you load? "I always load the same; I would put in the same charge to shoot a robin as I would to shoot a bear," was his reply. This friend had the most uniform success in killing any hunter I ever knew. He was very careful about his gun, and equally so in the selection of his ammunition, and never varied the amount of powder nor the quantity of shot, but would use different sized shot as others do. His theory was, that when the capacity of a gun was found as to the quantity of powder it would use to best advantage, to never vary from it. I have had the opportunity of late to test a No. 12, 9 lb. breech-loader with different charges, and as I experiment, lean to the belief that my friend above alluded to was right. I have followed in many instances suggestions made in your journal—to use "plenty of powder"—using from three and one-half to four and one-half drams to one ounce and one and one-eighth shot. I expected to get greater penetration from four and one-half drams and one ounce than from three and one-half drams and one eighth, but they have failed to discover it. The recoil coming from the larger charges was not at all unpleasant, but somehow both at target and at game three and three-quarter and one and one-eighth has done the best work even at sixty yards. Why there should not be a decided difference in penetration with four and one-half drams and one ounce, over three and three-quarters and one and one-eighth, is something I cannot account for. Your valued correspondent speaks of "impaction" in his article—that he considers a number of shot driven with a very low velocity more valuable than two or three shot at higher speed. Perhaps he is right, but much of our game must be shot for at long-range, and penetration seems the great essential. So far as my experience has gone, I think guns of the game weight, bore and make, differ very much as to the kind of loading each needs to bring out its very best qualities. (Why this is so, let the gun-makers tell us.) What that load shall be is no easy thing to determine, both as to how much powder, how much shot, and the size, how coarse the powder shall be, how many wads to use on the powder, how hard to press them down, etc., etc., but I leave this subject to able hands, and trust to see the whole matter thoroughly ventilated.

QUINCY, KY.

Editor Forest and Stream:

All the varieties of game we have here are geese, ducks, quail, and quail. There is in the spring plenty of snipe and a few woodcock. For all but the last two my favorite charge is 3 drs. Hazard sea-shooting and 1 oz shot. In my gun, which is a modified choke, I have no use for any shot larger than No. 6. I once, while after geese, loaded some shells with 1/2 drs. powder, and 1 1/2 oz. No. 1 shot. I found my old 3 drs. and 1 oz. No. 6 charge much more effective. My gun is a Parker, and on the card was this target: "3 3/4 drs. powder, 1 1/2 oz. No. 6, 45 yards, 24 in. circle, 140 pellets in circle." I cannot get that pattern, but the gun is entirely satisfactory. Now my experience affords me that the 3 drams and 1 oz. is the best charge. With 3 1/2 drs. and 1 oz. I do not get as much penetration as with 3 drs. In this part of the country we can never tell what will be next to shoot at, whether a grouse with his rapid whiz, a squirrel with his tough skin, or a quail or woodcock, and we have to load to meet the wants of them all. I have owned and shot No. 10, No. 12 and No. 14 guns, and in none of them would the big load of powder and shot fill my bag as well as the lighter ones. In the 10-bore I only used 1/2 dr. and 1 oz., the same in 12 bore, and 3 drs. and 1 1/2 oz. in the 14-bore. The game is wild and much shot at in these parts, and it requires a nice shot to get any game.

MIDDLETON, Conn., December 24, 1881.

Editor Forest and Stream:

In your issue of the 17th inst., you invite the relation of experiences of our readers in loading for game. I think that some of your correspondents will give their ideas as to the proper proportion of powder to different sizes of shot.

I have known the theory advanced and plausibly supported, that the charge of powder should be less with large shot than with small. This theory is, I think, contrary to the generally-received idea, but its supporters urge that the greater momentum of large shot will give them sufficient penetration, even with long distances with small charges of powder, while large charges will scatter the shot too much to be effective at long-range, and the argument seems reasonable.

I find that the best method of keeping a gun clean is to use refined benzine, or water and a little oil, such as is sold for use on sewing machines.—STANBROOK

FOUR QUAIL AT ONE WING-SHOT.

Editor Forest and Stream:

Perhaps you may consider these two incidents of a recent day's sport of sufficient merit for publication in your "valuable paper." Tuesday, Dec. 20, was a beautiful day for our sport, and I took advantage of the opportunity and enjoyed a fine day's shooting. Although late in the season, the day was as pleasant as in October, and all that remained to make it equal to an October day was the bright-hued foliage on rough winds lately cast. I had been informed where I could probably start a bevy of quail, and upon reaching the desired locality my setter, Scout, made a fine point in a stubble, and then commenced tracking, finding the birds in the centre of a low swale adjoining. It was a large bevy, and we raised them with good success. They then scattered in the edge of a wood. My dog worked well, finding two or three single birds and then made a staunch point in a little opening. I stepped in ahead of him and flushed four birds, which flew between hunches of brush. And here comes the almost incredible part of my story; but a young man that was with me at the time will corroborate the following: As the four birds gathered in their flight, between the brush, I fired, and with the contents of one barrel killed every bird. Two birds fell where they were when I shot, about three rods distant, and the other two fell further on, but perfectly dead. The gun I used is modified choke, and, considering the short distance, I think the shooting was remarkable.

The other incident which I mentioned above was not as disastrous to quail as the foregoing one, but was quite laughable. My dog made a good point, after the birds were well scattered in the edge of the wood. The bird lay close, rising almost under the dog's nose; it flew right into his mouth. Scout led the bird until, in my excitement, I commanded him to "close." He obeyed, and the imprisoned quail made good his escape, notwithstanding the volley of shot we sent after him.

I wonder if any of your readers ever did better than to raise four birds and kill every one with a single shot, at short range? NIMROD.

MOODUS, Conn., Dec. 26, 1881.

KILLING WOUNDED WILD FOWL.—Deering, Me., Dec. 26.

Editor Forest and Stream: To kill wild fowl that have been wounded in the head, I have found the following to answer as well, if not better than any other way, and I have tried them all. Take a long and rather slim-bladed knife, open the birds bill and run the blade up through the roof of the mouth into the brain. A little practice will enable you to touch the brain, or shoot through it. "Early Bird" does not wish to practice on a living specimen, let him take a dead bird. Split the head open from the top down; then open the bill and introduce the knife, and he will see at once where to put the steel. I should hardly want to try to press the life out of an old drake with my thumb and forefinger as "Early Bird" suggests.—JACK.

Answers to Correspondents.

R. L.—Rabbit season in New York State will close Feb. 1. Rip.—The "poison story" was published in this paper long ago.

W. N. L., Belaire, Mich.—Wild rice may be procured of Mr. Chas. Gilchrist, Fort Hope, Ont., or of Mr. Richard Valentine, Jamesville, Wis.

W. B., Portage La Prairie, Manitoba.—The gentleman you refer to is the regular accredited American agent for the guns, and has a wide reputation for square dealing.

J. B. T., London, Ont.—I would infer from the pattern that the gun was a choke-bore. 2. See our game columns of last week and to-day for hints on loading of different game.

G. H. B., Watertown, N. Y.—Where can I purchase cartridges for a Snyder sporting rifle, English manufacture? Ans. Made by T. M. Cartridge Co., and for sale by New York dealers.

YOUNG NATURALIST, Greenville.—Manton's Taxidermy without a Teacher will help you to learn to make up ornithological specimens. For information as to where to get Dr. Coues' works see our Natural History columns.

W. A. F., Lenoxville.—See hints on loading in our game columns last week and to-day. Buck-shot should be chambered to fit the choke of the gun. This may be done by pressing a wad down into the choke and pulling the shot on it.

DEVIAND, Abingdon, Va.—The rifle felt best on the market, and the company manufacturing it were compelled to close out for what they could get. The breech-action is clumsy. Should advise you, if you want a rifle, to get a bolt-action rifle. The cost is immaterial compared with the superiority.

SUBSCRIBER.—I have a half-setter half-shepherd puppy, both parents full blood. Will he make a squirrel dog, bird dog, or can he be made to follow rabbits? Ans. Your dog may—if properly taught—make a good pointer, and a good retriever. He should be a better retriever than a pure blood retriever. He should make an excellent farm dog.

W. E. M., N. Y.—In a rifle shoot on three prize does it follow that in shooting off the winner has third and his competitor fourth? or does the winner of the fourth prize remain undisturbed? This applies to match with our cash prizes. Ans. See answer to W. R. C. in our last issue. Draw up your conditions before shooting, then there can be no dispute.

E. P. T., Norfolk, Va.—What can I do to make my dog go into briar patch? He is highly bred, fine pointer and is thoroughly broken in in all other respects. But I cannot coax or make him go into the briars. Ans. We have ever found—four dogs was possessed of life and courage—that he will go into the briars, but he will not go into the briars unless he is driven into them. The example and showed him the way, instead of remaining outside and trying to send him in. You will probably find this course successful, especially if you take care to bribe.

W. H. T., Watson, O.—Will you hurt the shooting qualities of B. L. shotgun, 28 in. bore, by firing a shot midway in the barrel, which is 20 in. long? Or will it not do me well to choke after cutting off? 4. What effect? 5. In chinking are the barrels bored or contracted at the muzzle? 6. My gun muzzle heavy? 7. What is the reason? 8. Is it a cylinder-bore. 2. From 2 to 10. 3. If you want it to shoot closer, 4. 30 or 34. 5. See Game Bag and Game Column of last week.

F. M., Summit Station, O.—1. Do you think a 12-gauge, 28-inch barrel, 9 lb. gun, a well-proportioned one? 2. What length chamber and shell would you advise for such a gun? 3. Will a 28-in. barrel shoot as close and hard as a 30-in. barrel? Ans. 1. Right point would be in better proportion than the one you mention. The length of chamber is usually determined by the maker, and would be probably 28 in. if you wish to load with heavier charges it might be made 28 in. 2. Practically. 3. The English gun mentioned has good reputation.

G. E., Milton, N. C.—1. Out on a turkey hunting expedition some days ago I carelessly placed my gun on the ground where it was struck by lightning, being a few inches from the barrel, which is very perceptible from the inside and out. I have shot several times since and do not think the shooting qualities of the gun injured, but it is disgusting. 2. What kind of powder and what number you think best suited for my gun, 15-bore, 30-inch barrel, choked, breech-loader? I have been using F. G. and Dupont's F. G. and in both I find it to be better than the other. Ans. 1. You gun can be righted by a competent gunsmith without injuring it in the least. 2. Try Osgood ducking No. 5, or Dupont's ducking No. 2.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

Table with 2 columns: FRESH WATER and SALT WATER. Lists various fish species like Yellow Perch, Rock Bass, etc.

A PICTURE of the best visiting the present, as time glides on, making more perceptible the cruel changes which come to mortal strength. How now do his feet touch the heath? Not as of old, with a bound, but with slow and unsteady step, supported on the one hand by his stick, while the other carries his rod. The breeze quiver moves his locks, no longer glittering with the light of life, but dimmed by its decay. Yet are his shoulders broad and unbent. But his presence is somewhat softened down, but not gone. He surely will not venture into the depths of the water, for only one on the bank sitting with his feet on the water, laughing at his daughters' horror, and obstinately continuing the sport in spite of all remonstrances. At last he gives in and retires. Wonderful to say, he did not seem to suffer from these imprudent liberties.—The Last Cast of "Christopher North," in a Memoir of John Wilson.

GAME FISHES.

IN our issue of November 24 we noticed the work entitled "Game Fishes of the United States," basing our remarks mainly upon an inspection of the truthful and elegant plates by Mr. Killohourne. The character and importance of this work demand that the text accompanying the plates should receive more than a passing notice, for, instead of being a mere compilation of what others have written, as is too often the case in fishing books, Prof. Good has given us much new material from his studies of fish life and habits. The fact that the text was prepared by him is a sufficient guarantee that this portion of the work is of a high order. The descriptions of the fishes and their habits were originally intended to be subordinate to the plates, and, with this in view, they are limited to two pages for each fish pictured, which Prof. Good has filled with matter mainly new. Wisely omitting discussions of tackle and other questions over which anglers dispute, and which can be found in detail in any angling work, he has taken higher ground and given an array of facts and observations on the life history of the fishes of which he treats that places this book far above any popular work on the subject ever published. He has kept it as free from technical terms as possible, in order to make it truly a work for the people, and yet he has not impaired its value for scientific readers.

In the introduction we are told that a definition of the term "game fishes" is particularly difficult, and that Isaac Walton's usage may be taken as a basis. He discourses so lovingly upon the matter, and with so much of the spirit of our day and nation. The meaning of the term varies from year to year, and few would be likely to share the enthusiasm of Capt. John Smith, perhaps the first patron of this art on this side of the Atlantic, who wrote in 1616: "And is not pretty sport to pull up two pence, six pence, and twelve pence, as fast as you can hale and veer a line?" A study of the American authorities shows opinions much at variance in their choice of fishes to be considered "game," and after forming our own views Prof. Good proposes the following: "Game fishes are those which, by reason of their cunning, courage, strength, beauty, and the speediness of their fish, are sought for by those who angle for sport with delicate fishing tackle." It was the design in preparing this book that twenty species only should be illustrated, and after consultation with several prominent anglers the selection was made. The fishes chosen belong to both salt and fresh water and to several families. No technical descriptions are needed with the admirable pictures of Mr. Killohourne, but the habits and geographical distributions are the prominent points in the essays. Acknowledgment is made of assistance from Prof. Baird, Mr. Charles G. Atkins, Dr. Tarleton H. Bean, Mr. Eugene G. Blackford, Mr. J. Matthew Jones, Prof. David S. Jordan, Mr. Fred. Mather, Mr. James W. Milner and Mr. Berard Phillips. Other acknowledgements appear in the body of the work.

THE EASTERN SALMON AND RED-SPOKED TROUT.

Part I. contains plates of the salmon and brook trout. The plates of all the fishes are of uniform size, 2 1/2 x 3 inches, and we have before spoken of them as being the best illustrations of fishes yet made. The salmon (S. salar) inhabits the North Atlantic and its tributary waters far beyond the Arctic Circle. One hundred years ago Mr. Killohourne had the habits and geographical distributions are the prominent points in the essays. Acknowledgment is made of assistance from Prof. Baird, Mr. Charles G. Atkins, Dr. Tarleton H. Bean, Mr. Eugene G. Blackford, Mr. J. Matthew Jones, Prof. David S. Jordan, Mr. Fred. Mather, Mr. James W. Milner and Mr. Berard Phillips. Other acknowledgements appear in the body of the work.

The Eastern brook trout, or, as often called in localities, "speckled trout," "mountain trout," etc., is now called Salvelinus fontinalis by Gill and Jordan; the former nomenclature was introduced by Gill and Jordan; the former nomenclature was introduced by Gill and Jordan; the former nomenclature was introduced by Gill and Jordan.

"Game Fishes" of the United States [by] J. A. Killohourne [Text by] G. Brown Good [New York: Published by Charles Scribner's Sons, 157 N. 4th St., New York, 1891. Copyright 1891, by Charles Scribner's Sons.]

ture having been *Salmo fontinalis* of Mitchell, a name which has become so popular that it will be regretfully laid aside. Our crimson-spotted trout belong to that group of the salmon family known in England as "charrs," characterized by the minute size of their scales, and by the arrangement of the teeth on the vomer, a small bone in the roof of the mouth. The name of the genus (*Salvelinus*) was formed by Willouby in 1846, from *Salbing*, the German name of the *omble chevalier*, a European species very like our blackbacked trout, and has since been used as the specific title of this fish. The *Salmo salvelinus* of Linnæus. The exact range and boundary of the habitat of this trout has not been well defined. No man has had better facilities for determining this than Prof. Goode, from his connection with the United States Fish Commission and his position as curator of the national museum. It is, however, a boundary that has been extended, and will be further widened by the efforts of fish-culturists. Prof. Goode gives its range as between the latitudes 32° and 55 degrees in the lakes and streams of the Atlantic water-shed in the mountain sources of a few rivers flowing into the Mississippi and the Gulf of Mexico and in some of the southern affluents of Hudson's Bay. Its range is limited by the western foot-hills of the Alleghanies, and nowhere extends more than three hundred miles from the coast, except about the great lakes, in the northern tributaries of which trout abound. At the South they inhabit the Georgia trouts of the Chattahoochee, in the southern spurs of the Georgia Alleghanies and tributaries of the Catawba in North Carolina. They also occur in the great islands in the Gulf of St. Lawrence, Anticosti, Prince Edward's, Cape Breton and Newfoundland, temperature being the chief factor in determining their range. Prof. Goode regards the question of the identity of the brook trout and the Canadian sea trout as settled in the affirmative by competent authorities, and we are inclined to believe that no one who has followed the discussions of this subject in FOREST AND STREAM and other papers has not decided in like manner. The author gives much valuable information on the temperature at which trout thrive, their coloration, etc., and drawn from sources which show that he has attentively studied the literature of the *fontinalis* as well as the fish itself. The picture is one of the gems of the work, and one that despite the copyright has been followed by many who wished to illustrate a leaping trout when fast hooked. No words can express its beauty.

THE SPANISH MACKEREL AND THE DRAPE BASSES.

Two new species with the Spanish mackerel, *Cybinus maculatum*, and its congeners. Up to a few years ago this was considered a most mysterious fish, and at the time when Prof. Goode writes in this work: "No one has yet discovered their breeding grounds." It was true. During the only day, however, Messrs. Earl and McDonald have not only made this discovery, but have hatched the young. When Mitchell described the fish, sixty-five years ago, he summed up all that was known of it in these words: "Comes in July." "The Spanish mackerel visit the North only as marauders," writes Prof. Goode, but he would probably qualify that statement now in the light of the investigations of the past year, for now that we know that they breed in the Chesapeake we may not be surprised so far north as Maryland. Mr. Goode has dissected them in the waters of Martha's Vineyard Sound, in July and August, only to find that the spawning season was past. This fully accords with the fact that Earl found ripe fish in Chesapeake Bay in June and July, 1890. In addition to Kilbourne's fine plate Mr. Goode gives a drawing in the text, and also of two allied forms.

The black basses were written of when their scientific nomenclature was in dispute, if indeed it can be said to be settled now, and we are given *Morone saxatilis* (Raf.) of Gill and Jordan for the *big mouth*, and *M. chalcodon* (Gill) for the small mouth. The different local names of these fishes are given in full, together with their distribution. According to Prof. Goode both species are widely distributed over the Atlantic slope of the continent, and dwell together in the great lakes and in the upper part of the St. Lawrence and Mississippi basins. The small-mouth is found as far north as latitude 47, and west to the Wisconsin; while southward it ranges to latitude 33, where it is found in the head-waters of the Chesapeake and other rivers. The latter being the only instance of its presence in a stream emptying east of the Alleghanies, into which it is not known to have been introduced. The large-mouth ranges further to the West and North, occurring in the Red River of the North, in latitude 50. It abounds in all the rivers of the South from the James to the St. Johns, and in the lower reaches of the streams and bayous of Texas in latitude 27. The small-mouth found its way into the Hudson in 1825, or soon after, through the New York canal, where it was introduced by the fisherman by man into hundreds of lakes and rivers. Their habits of spawning are described; and it is stated that a large-mouth was caught in a lake at Gainesville, Fla., which weighed nineteen and one-half pounds. Mr. Kilbourne's picture is of a later species, but is turned on its side so that the distinguishing character of its dorsal fins is not readily seen, and the printer has brought out stripes on the side which were not in the original. Two correct figures, drawn by Mr. H. L. Todd, of the Smithsonian Institution, which are approved by Prof. Gill, show the specific characters of each fish.

THE STIPED BASS AND THE RED SNAPPER.

Part three opens with the fish called striped bass in the North and rockfish in the South, *Morone chalcodon*. It would be difficult to give anything new with regard to this well known and familiar fish, but its kindred of the great lakes, *Morone chalcodon*, and of the Lower Mississippi River, *Morone chalcodon*, are illustrated. The former's plate is evidently taken from some specimen, but is mistaken. The red snapper, *Lutjanus blackfordii*, is a new fish to Northern anglers, whose range, as now understood, is limited to the coasts of Georgia, East and West Florida and Alabama. They bite at a white rag, and according to Norris take a silver or pearl squid. It has long been a favorite fish in the South, and Dr. C. J. Kenworthy is quoted as furnishing valuable memoranda of a trip on which many were caught. Strangely enough this fish had no scientific designation until 1876, when it was found by Goode and Bean, and belonged to a well known genus, and was described by them and given its specific name "in compliment to Mr. Eugene G. Blackford, of New York city, whose enthusiastic labors have greatly aided all students of American Ichthyology, and who has aided at least ten species to the fauna of the United States." The red snapper frequents coral reefs and feeds on corals, prawns, squids, and the shells of small fishes, such as mullets, etc. Kilbourne's picture shows this highly-colored fish in its natural life, and it is a fine specimen. Part four gives these well known fishes. The bluefish, *Pomatomus saltatrix*, is the "Taylor" of Southern waters,

THE BLUEFISH AND THE YELLOW PERCH.

It is found all along our coast, within the temperature limits, but strangely it does not occur in the Bahamas. Their history, as first appearance on our coast some fifty years ago, and subsequent increase to their present numbers, is a curious one and is given in detail, as well as instances of the rapacity of this ravenous fish which may be said to be shark like in its destructiveness. Kilbourne has a life-like portrait.

The yellow perch, *Perca flavescens*, is too well known in all our Eastern ponds to need description. It is the common perch of England. We would here call Prof. Goode's attention to his statement: "Three species of fresh water pike the pike the perch and the turbot—are common to North America and Europe." We have not the slightest doubt that he wrote burbot [*Lota*], which would be correct, and this is of course a printer's error. The yellow perch is one of the first trophies of the juvenile angler, and the fish here is represented by Kilbourne as taking a "red this," cast by an unseen fisherman.

THE MACKEREL AND THE WEAKFISH.

Part five is devoted to these fishes. The history and commercial value of the mackerel form an interesting chapter, while Kilbourne's superb picture of a freshly-caught fish is one of the finest bits of painting in the work. The iridescent tints are strikingly beautiful.

The weakfish is called sea trout in the South, and squeteague, or shortened into "squit," in the East. There are two species, *Cynoscion regalis* and *C. carolinensis*, which are common, and another, *C. nothus*, which has been observed at Charleston and about Florida. The range of the first is from Cape Ann to the mouth of the St. John's River, and possibly to the Gulf of Mexico; that of the second from the Chesapeake to the Gulf and Lake Ponchartrou. Like many other fishes it is known by many local names, among which is that of the "bluefish" from Southern New Jersey to Virginia, while the Indian names of chick-wig, squeteague and scicoteague prevail in New England. Its natural history is not well understood. Kilbourne's plate is of its Northern form, and is excellent.

THE POMPANO AND THE SEA BASS.

Part six gives a description of the Pompano, a fish but little known in the North; and of the sea-bass or Southern blackfish. The pompano, *Trachinotus carolinus*, has gradually acquired favor among New York epicures within a few years. It has been a deserved favorite at New Orleans for a long time, where it is usually called "pompeynose." It is a lot of water, appearing in only local numbers, among which is that of the "bluefish" from Southern New Jersey to Virginia, while the Indian names of chick-wig, squeteague and scicoteague prevail in New England. Its natural history is not well understood. Kilbourne's plate is of its Northern form, and is excellent.

THE KINGFISH AND THE SHEEPSHEAD.

Part seven opens with the kingfish, or barb, *Menticirrhus nebulosus*, and its relative, the whiting. The kingfish is found about oyster beds, where it feeds upon the worms and crustaceans which lodge among the shells. It has a barbel on its lower jaw which is very sensitive, and which assists it to find its food on the bottom. It bites readily at a half of shrimp or soft clam. The Southern limit of the kingfish and the Northern limit of the whiting are not yet defined, but both species were collected by Dr. Yarrow and Prof. Jordan at Cape Hatteras. Kilbourne has caught their peculiar expression, as well as the color of freshly-caught fish. Those who have only seen this fish on the market slabs might consider Kilbourne's color too light.

The sheepshead, *Achochrocyx probatocephalus*, must not be confounded by our inland friends with their worthless fish of the same popular name in the great lakes. It is one of the finest of marine table fishes, and is often sought by the angler. Its common name is appropriately given on account of its sheep-like dentition. It is common to the coast in summer, south of Cape Cod. "It feeds with a grazing motion upon barnacles and shells, particularly young oysters, as they grow, attached to stones and the piles of wharves. With its incisor teeth, reinforced by heavy jaws and strong muscles, it can easily nip off thick clusters of mollusks, and burrow through the shells in the great lakes. It is more than that of gathering." Kilbourne's sheepshead is contemplating a group of mussels, and the broken shells below show how they are crushed.

THE LAKE TROUT AND THE HONITO.

Part eight begins with the great lake trout, *Cristiomer namaycush*, a fish that sometimes reaches a weight of one hundred and twenty pounds. They are usually found in the same lakes with one or more kinds of whitefish, whose slow, helpless movements render them an easy prey. Prof. Goode considers it probable that this fish may have been developed from the brook trout, as its affinities are with the latter more than with the salmon. Its dentition is smaller, and its burrowing to the lakes in North America which were surrounded by streams inhabited by trout, make it appear possible. The lake trout, like the brook trout, shows a tendency to variations in form and color, so much so that each lake has its fish with distinctive marks, and which the local angler stoutly maintains to be a distinct species. The late James W. Milner was inclined to combat the theory that this fish fed largely upon young whitefish, and Prof. Goode quotes him at length. Kilbourne presents to our view a fine specimen lying upon a bank.

The honito, *Sarda palamys*, and the tunnies, form the accompanying chapter. We do not know why Mr. Goode selected this fish, which is as uninteresting as a fish can be, unless it was because Kilbourne had made a good picture of it.

THE RED FISH AND THE GRAYLING.

Number nine is of interest to both the salt and fresh water angler, containing accounts of noble fish in both sea and stream. The redfish, branded drum, red drum or bass of the South *Sciaenops ocellatus*, is an important game and food fish from the Chesapeake to the Mexican boundary. The fish is sadly in need of a characteristic name of its own, for although it is called "red fish" in the general market, it is called "drum" and is not distinguished by the fisher-

men from the large fish called by that name over a wider range. In the Carolinas and Florida we meet the name "hass" and its variations "red hass," "red bass," "sea bass," "reef bass" and "channel hass." The latter name only refers to large specimens taken in the channels, to distinguish from small "school hass" in shallower waters, and has been mistaken for a distinctive name. The redfish grows to forty pounds or more, and their food and habits are much like those of the striped bass. Kilbourne shows a freshly-caught specimen in all its beauty.

The grayling of Michigan, *Thymallus tricolor*, is a fruitful theme for account of the few years since this fish was discovered in the United States. Dr. Parker, of Grand Rapids, Mich., described them as *Thymallus michiganensis*, and an early day, but neglected to properly publish the name, and so it has been supplanted by one given later by Cope. We do not quote the date given, knowing it to be an error of the printer. There are two other species; one in Montana, named *T. montanus*, by Milner, and Richardson's *T. signifer*, of the Arctic region, about Mackenzie's River. A pen drawing of the latter is given and its enormous dorsal fin flares out like a comet and is eyed like a peacock's tail. Of the Atlantic species Prof. Goode writes: "There has been much discussion over the claims of the grayling as a game fish, and also its excellence for food. It has many admirers and detractors. The enthusiasm with which it was greeted ten years ago has somewhat subsided, and it seems doubtful whether a vote of the guild of American anglers would now place it in the first rank of noble fishes." We very much dislike to believe this, and are disposed to attribute the subsidence of the enthusiasm to the scarcity of the fish, now nearly extinct, and the distance to its habitat. We certainly have not abated in our worship (that's the word for it in our case) of this graceful fish. As for Kilbourne's picture we think it fully equals his trout in beauty and truthfulness. We expected to be disappointed in this picture, and were prepared to be severely critical, but we do not know where to begin to find fault with it.

THE PACIFIC AND ATLANTIC SALMON AND THE MUSKELLUNGE.

Part ten, and last, opens with an account of the cutthroat salmon, by Livingston Stone. Mr. Stone's long experience in gathering the eggs of this fish entitles him to be considered very high authority upon its habits. Mr. Stone tells us that the fish is restricted in its distribution to the North Pacific, and its range extends from the Bay of Monterey to the Arctic Ocean, and the coasts of Northeastern Siberia. It is taken in the largest quantities in the Sacramento and the Columbia, these being the largest rivers of the American continent, and in smaller streams from California to British Columbia. The largest known specimen was taken in the Columbia River, and weighed eighty-three pounds. It readily takes a hook in fresh water, but does not so readily take the fly. Nothing is known of its ocean history; it goes to sea at certain times, and returns, but where they go, how they fare, or what motives guide their course no one can tell. When they first appear in the rivers they are deep-sea fish in their stomachs and often have took much of such food as lobsters. Mr. Stone gives a most interesting account of the life history of this salmon in fresh water, which is unfortunately too long for our space. He has qualified his former statement, that they all died after spawning, which was so severely criticised some years ago when made, by saying: "Under this head I will only say that it is probably true that those that spawn near the ocean return to the ocean and recover their vitality, but those that pass the United States station on the McClellan River in the summer never do." In investigating this subject Mr. Stone took testimony of all the white men who have lived or worked on the river, and all the Indians he could reach. Kilbourne's picture is a fair one, representing a salmon with a hook in his jaw, and head and tail out of water. The tail is somewhat foreshortened.

The muskellunge (as Prof. Goode chooses to spell it), *Esox nubilus*, and its relatives the pike and pickerel form a short chapter. These fishes have been generally described in America, although the muskellunge (as we prefer to spell it) has some friends and supporters. In Europe the common pike, which is identical with our lake pike, or "great northern pickerel," *E. lucius*, is thought to be game of the highest character. We do not like Kilbourne's picture; the fish was evidently a small, slim one, and he has exaggerated its snaky character by curving it in a singular manner.

A "Catalogue of the Game Fishes of North America" follows, in which the places where they are usually angled for, in the order of their relationships, and are given by a "Provisional Map, showing the Geographical Distribution of the Game Fishes of Eastern North America." In this Prof. Goode, by a system of differently colored lines, shows on the map the distribution of each fish treated of in the work, according to the latest authorities. This map exhibits at a glance the limits occupied by each fish, and one gets a comprehensive view of the ranges of each species.

We have before spoken of the "Game Fishes of the United States" as a great work which will take rank in future with Audubon's "Birds of North America," Wolf's "Wild Animals," and Gould's "Rumming Birds," in point of artistic and scientific value, and will add that it is one that will increase in value with time. As only a limited number were printed and the stones destroyed, the present edition will be the only one. It is not only an article of luxury but a necessity to the angler who hopes to keep up with the intelligence of the age.

THE ROUTE TO NEWFOUNDLAND.—The following information is kindly furnished by a gentleman who has recently returned from Newfoundland: Steamers of the Allan line run fortnightly from Baltimore to Halifax, N. S., and to St. Johns, N. F. From Halifax, steamers go fortnightly through the Strait of Cans to Sydney, C. B., and from Sydney the tourist can reach St. Pierre de Miquelon in the George Shattuck, which leaves Halifax once a month for that port. The steamer Curlew makes fortnightly trips between St. Pierre and St. Johns, and once a month she calls at Sydney, C. B. From St. Johns the northern ports of Newfoundland can be reached fortnightly by the Plover, which during the months of July, August and September goes as far as Battle Harbor, Labrador, connecting with another steamer (this year the Kite) which touches at very many of the fishing ports of Labrador, as far north as Cape Harrigan. From St. Johns, the Neptune, makes irregular trips during the summer months between St. Johns and the northern ports of Newfoundland. Information should be obtained early in spring from the agents of the various lines to enable the tourist to make his plans.

QUEEN VICTORIA'S birthday present to the Crown Princess of Germany was a marble statuette of the dog of the late Prince Waldemar, by Mr. Bohm.

SALT WATER VS. FRESH WATER FISHES.

THE issue of FOREST and STREAM for Dec. 1 contains as a motto for its fishing columns an extract from the writings of H. W. Herbert, which affirms that "with very few exceptions, the game fish are those which do not come themselves out to salt or fresh water, but visit one or the other as their habits or taste direct them."

This seems to be one of the generalizations of that great writer, who, however, was familiar only with the fishes of New England and the Middle States, as known in his time.

Recent investigations show the incorrectness of these statements.

Professor Jordan in a late work describes of bass, 7 species; perch, 4 species; pike, 2 species. Total, fourteen species of game fish found east of the Mississippi and north of North Carolina, which inhabit fresh water exclusively. Besides these there are several species of *Salmonidae*, which live wholly in fresh water; the lake trouts of Northern New York and New England, as well as two species in the great lakes.

West of the Mississippi, in the waters of the great plains and the Pacific slope, are other game fish which never visit the sea.

Mr. Herbert also affirms "that those fishes which never visit the water at all are unquestionably so much inferior to others of the same family which run periodically to the sea, that they are with difficulty recognized as belonging to the same order with their roving brethren; while of those none of which are known to leave fresh water, but two or three kinds are worth taking at all, and even these are not to be compared with the migratory fish."

Either Mr. Herbert had never tasted the brook trout of Wisconsin and Michigan, the silverside, the black bass, the muskogue, the great Northern pike, the pike-perch, and whitefish of the great lakes (referred by many to be the best of fresh water fishes), none of which visit the sea—or he might have brought with him his British prejudices.

Another of Mr. Herbert's theories was that there were no large trout in America, and that trout in this country were confined to small streams, and never occurred in rivers of any size. He had never fished the Maine lakes, the Penobscot, or the Magalloway—the Restigouche or the Nouvelle in Canada—or the big rivers of Lake Superior. His experience was confined to the trout of New York and New England. As far as that went his writings and descriptions are valuable, and as one of the earliest of our sporting writers, especially so, but he did not live to know the works of the new school of American observers and writers upon natural history and field sports. Perhaps they also will appear obsolete in 1920.

SILK WORM GUT.

THE color and quality of gut is a most important topic of consideration to the angler. It may have the best of rods and the strongest of lines, but if the gut that composes his leader, or "casting line," as it is called in England, be of poor quality, or contain one poor strand, his whole outfit is rendered worthless. In gut the first requisites are strength and pliancy, and it is not easy to judge of these. The color is important, many people being in the habit of regarding the gut invisible to the fish, which see it from below against a cloud, a tree, or a clear sky. Some of the coloring processes employed render the gut brittle. There have been lengthened discussions on this subject in the London Field, which are still being carried on, and we propose to quote from them for our readers, without expressing any opinion on that point.

Mr. Francis Francis says: "I quite agree with your correspondent as to stained gut—viz., that, a deep stain makes it brittle and more apt to be cut in the water than gut which is unstained. If you want to prove this, get some strands of gut stained of various shades, take a glass shade such as you put over ferns, etc., half fill it with water, lay the strands on the surface of the water, and then look at them from below with only the sky for a background, and I doubt if you will ever stain gut again. The color which is affected by many anglers, particularly some of our Winchester friends, is perfectly absurd. I have seen it often almost black; and as they use very fine-draw gut, it is almost impossible to tie it in a knot if kept very dark, and when an oak water you can do so at any distance off. If it is not colored at all, the palest salmon color is sufficient. If you can only do the exceeding brightness of new gut, it would be far better than any stain. I have heard of waxing the gut slightly, but though that would dim it and waterproof it slightly, would it not materially add to the weight?"

Another correspondent, Mr. John L. Moulans, of Scotland, writes: "Fine fishing, go where you may, is necessarily in our day, more especially on open public rivers. I have been charged with long unwarmed light, delicate casting powers of English anglers, but most unjustly so. On the contrary, I have had occasion frequently to admire and envy the skill and deftness which several of these fishermen exhibited on reaches of water difficult to approach and dangerous to kill in. But then I said to myself, 'Matters are pretty even; here in Scotland we have little or no private water on any river of importance; our best fly reaches are daily waded through and fished over by hundreds of anglers. The same thing is repeated during the long summer nights; and although our streams present more rough broken water than the British rivers, where the current is more sluggish and canal-like, still we on the Tweedside have to deal with trout as wary and wide-awake, as well fed and willful, as any down south.'"

"Such being the case, two questions naturally present themselves: Of what color and quality should my gut consist? These two points deal with the whole subject raised by your correspondents. A third one might be suggested—the length of each casting line. I would briefly refer to the first—viz., color.

This is a much disputed point. For salmon fishing I consider stained gut quite superfluous, though its use is perfectly harmless. What does a salmon in its sober senses take a gaudy parson or a glittering Jock Scott for, and why? Let this matter be settled before we become over-finished in our notions of dyeing. I have seen a Galashiels weaver, coming down over a salmon 'lie' after it had been carefully fished some half-dozen times, hook and kill the capricious brute which had obstinately rejected the most tempting looking lures noseless to one of E. J. J. J.'s dyes stained gut was; that weaver's tackle was a caution to behold. There was no disguise about the gut. It was double twisted, old, worn, frayed and unstained. Yet I saw from the high bank, with the forenoon sun glaring upon the water, the dainty

little fish of 11lb. swiftly shoot upward from behind the stone where she lay, and, regardless of the white, stringy-looking gut walloping over her nose, take down the quiet composure of a trout at a wing.

"As regards trout fishing, the matter is a much more difficult one to settle, if it ever will be settled, which I doubt. Mr. Brander prefers opaque gut, while 'Cornubian' argues in favor of the unstained material, because it "is far less observable in the water than the stained," having tested it on the Uak; and, in *The Field* of the 19th, Mr. Francis lends the weight of his wide experience in upholding this clear gut theory. I cannot, in the limits of a letter, enter fully into the discussion here opened up. I trust others will give the result of their experience, and we are not the same as you."

Your correspondents, in their strictures against the use of stained gut, fall into the common error of trying to prove too much. Granting, for a moment, that unstained gut, as a general rule, is superior to the dyed material, I would ask: Are there no exceptional cases in which the latter is not only preferable but absolutely necessary if you want to kill? I hold there are. And these instances are so numerous and critical that I am constrained, in the absence of further proof, to refer them all to one head, general rule, universal in its application and true in all circumstances. In every condition of water, weather and sky, whether clear or discolored, still or broken; calm, wet or windy; bright or dull, stained gut is an essential. This rule, however is constantly violated by indiscreet anglers. Some stain their gut over-strength; others, the great majority, use colors which, when the gut is drawn through the water, must convince the astute trout that the deception is too 'thin.' The great thing to be aimed at is to get a dye which will harmonize with that dark grayish-bluish light which floats between sky and water when seen from the trout's point of view. Opaque gut cannot give you this, still less can clear gut. Accordingly, we must resort to staining. Logwood, coppers, coffee and tea, however skillfully combined, produce too strong a dye. After long experience I have come to the conclusion that, to obtain that light gray slate shade, a mixture of walnut and ink, well diluted, is about the nearest approach one can make in the present state of matters. Mr. Francis' test of stained gut, by placing it in a large glass globe filled with water, is not to the point. The color of the water in a river, with its rapid current, its swirls and eddies, its combination of shade, sunshine, and shadow which trees and hills and passing clouds help to deepen or soften—these and many other circumstances of river life render the comparison one sided and the test fallacious.

"In fishing a stretch of not over-deep fly water, you observe an exceptionally heavy trout leisurely feeding in mid-channel. The sun is not over bright, the current is not too swift, but nicely broken; an odd fly is only coming down now and again just so long to whet his appetite and disarm his suspicion; the cast is not a long one, and you are eager to draw blood; the case is now on its trial—stained vs. unstained gut. What will the verdict be?"

We will continue this subject from *The Field* and other papers, and would invite our correspondents to give their views. It will be seen that there are two questions at issue—the best color, and the dye which does not impair the strength of the gut.

PIKE FISHING THROUGH THE ICE.

LEWISTON, ME., JAN. 1.

Editor Forest and Stream: The people of our State there is none more vigorous nor exciting than that of taking the pike, or pickerel as we call it, through the ice. It is one of those sports which have an exhilarating effect upon the human system, and instead of fatigue one feels refreshed the day after.

Pickered bite well after the ponds have just frozen over, and the fishermen like to get on the ice about as soon as it will bear their weight. Talk with an incorrigible angler for half an hour and you will generally find him full of old stories and corner superstitions and traditions of the forest and stream. One of the current beliefs is that the first time a green hand goes out he is bound to have good luck. Another tradition is that pickered sometimes swim or seep on a down grade, and that when they have their noses pointed toward the bottom, you can't catch one, if your pickered bit were peaches and cream.

The piscatorial belief in the influence of the signs of the almanac is profound. And prior to any old fisherman generally consults his almanac before he catches his bait. "When the signs are in the belly they'll hit well every time. I don't know what the meaning of it is, but I s'pose they're h'many," said a veteran whom we consulted on the zodiacal question. Fish will not bite well when they are spawning. Their many traits afford a wide range of study. "Fish are dead-end country critters," is the way the aforesaid veteran sums up his philosophy.

When the pickered fisher finds the signs and the weather fair, he takes his dip-net and goes down to the river after live minnows for bait. These foolish little fish are attracted into the fine meshes by meal liberally fed to them. The pickered doesn't relish dead food, and must be caught with live bait. The fun of pickered fishing is in your ability to have so many strings a-going at once. Twenty-five is a fair number, although two men can fish with 40.

Outting the holes through the ice is fun, if you have a sharp chisel and the ice isn't over four inches thick; but when you have two feet of solid ice frozen under you, and an old axe with which to penetrate it, it's more like business. Two men generally go together, and one sets the sickles and arranges the lines while the other cuts the holes. The man who sets the lines first gets the bottom and adjusts his bait about two feet above it—more or less, perhaps, according to his own idea of the correct thing. The lines are attached to poles set in the ice at an angle of about 45 degrees, over the holes. Each line is also looped over a bob secured loosely on the pole, so that when a pickered bites and darts off, the hole is turned and forms a cross with the longer stick, thus signaling to the fisherman.

One of the ways of the pickered is to chew his bait a little while, and this is in favor of his catcher. When the pickered begin to bite before the lines are all set, as they frequently do, the excitement is at its pitch. "There goes one!" shouts one man. "There's another!" shouts his chum, dropping his axe and running to pull him up; and when the 25 or 40 lines are all in and are pulling sharp, who then wouldn't be a pickered fisher? Lewis.

FRANCIS AND LOBSTER. No. Maiden Lane, this city, publish a book, "HUTCHINSON'S RECIPE BOOK FOR 1882. It is just the kind of note-book that almost everybody wants."

Fishculture.

MAINE LOBSTER CULTURE.

WHITING to Mr. E. M. Stivell, one of the Maine Commissioners of Fisheries and Game, Professor Spencer F. Baird says: "There is a very great promise of success in cultivating lobsters on a large scale by inclosing them in small salt water bays, where there is a free circulation of water, and the eggs of the lobsters can be prevented by grading or netting. They can be bred, as I understand, very largely upon clams, and will not only grow very rapidly under such circumstances, but carry on the propagation of the young. The young can either be kept in the inclosure or go out to sea, and increase rapidly. The greatest objection to the most feasible way of solving the problem in regard to the depletion of lobsters along the coast of Maine and the Provinces, is there any provision in the fishery laws of Maine by which an individual undertaking this work can prevent unauthorized persons from going in and rearing the benefit upon the individual cultivator actually owns or leases the adjacent shore? Of course no man will be willing to go into the business unless he can be protected, and if there is no provision in Maine; as there is in Massachusetts, by which the Fish Commissioners can lease a pond to particular individuals for the purpose of propagating fish and secure to them thereby exclusive rights in the waters, it would be well to have such a provision, with the understanding that it be applied to salt waters as well as to fresh. If the experiment proves as successful as I confidently anticipate, the interest of the State, as there are hundreds of localities where such ponds could be established to the best advantage. Of course I suggest no interference with high seas navigation."

TROUT AND SALMON IN NORTH CAROLINA.

RALPHIGH, N. C., Dec. 22, 1881.

Editor Forest and Stream: I captured two specimens of *salmonidae* in Mill Creek, McDowell county, differing from the brook trout, *Salmo fontinalis*. I recently forwarded them to Prof. Baird, and I have received from him to-day the following letter: "Washington, D. C., Dec. 22, 1881. Dear Sir:—I have reports that the two specimens you forwarded me on the 24th of November, the smaller one of 7 1/2 inches is the land-locked salmon, and the one of 8 inches is the California trout, *Salmo viridanus*. Yours truly, Spencer F. Baird."

On above specimens are of the planting of 1850, and it affords me great pleasure to record the fact that they are flourishing in North Carolina. Mill Creek contains but few brook trout, but is of the same pure character of most of the head streams of Western Carolina. Over two hundred land-locked salmon were taken in the same stream in the same place, but the fish were all returned to the water alive from the traps, and the latter (13 in number) torn out and destroyed by individual citizens by authority of S. G. WORTH, Sup't Fisheries.

STICKLEBACK BREEDING.—Cincinnati, O.—To articles which have been published on the stickleback I am able to add the following: A water temperature of 60 to 70 degrees F. seems to be the most favorable during breeding time. After the female has deposited the eggs and left the nest the male chases her away from the nest and enters it himself, remaining in it from two to three weeks. During this time he closes the hole of the nest with his female left the nest and takes his position before the entrance, fanning the eggs day and night, only leaving them to take a little food. He takes the eggs out of the nest from time to time to assort them, carrying away the bad ones and placing the good ones back into the nest. During the first four days he takes out 100 to 150 eggs in one deposit of a female is from 30 to 40, and about five such deposits are made into different nests in intervals of about a week. Only two-thirds of them, however, become young fish. Considering that one female lays 400 to 500 eggs, the number of young that survive is not large. The stickleback is a very intelligent fish. The first stickleback that engaged in nest building in one of our aquaria, when he had completed building, had no other chance to get material than by stealing it from the nest of the other. To that effect he made himself appear too busy to notice anything else than his own affairs. But as soon as the other stickleback left his nest to "make improvements on it" or to "go courting" to the other end of the tank, he snaked through the cavity of the rockery—taking advantage of every stone or plant to hide behind and keeping close to the bottom of the tank. He would then return just as carefully over the same road to his own nest, which was one-third time as far as if he had used the straight road. Once he was caught in the net of stealing and a foul fight followed, which lasted about five minutes and was fatal to the female, who took part for the thief and drove the other back to his estate. The twelfth day after the eggs are deposited the young fish make their appearance. The old ones should now be taken away from them, as they will eat them, and placed in another aquaria, where they will be safe. The young fish should be introduced in their new home when they commence to build a new nest; but now not so much pains are taken in constructing it. Perhaps that in higher temperature the eggs would need less protection. In accordance given by other authors I find stated that sticklebacks are very sensitive to the sun, and that the sun can strike them. We have just found the contrary. Our experiments extend over three seasons: during that time we have raised hundreds of young sticklebacks, of which some are yet alive, now being one year old.—H. H. McLEWY.

AMERICAN CARP IN SCOTLAND.—Douglas Hall, near Dalbeattie, Scotland, Dec. 10.—Editor Forest and Stream: You will be pleased to hear that the leather carp which Professor Baird so kindly sent to the care of Mr. E. G. Richardson, of Glasgow, for me, has not only survived, but is now swimming about in a large tank inside the hatching-house of the Solway Fishery, where they will have to remain till my brother can have a suitable pond made for them outside. The temperature of the water here varies from 38 to 50 degs., at 10 degs. below zero. There is no mystery about carrying carp, I only wish soles and turbot would travel like them. The *s. s.* "Sevith" came right through those fearful gales, Wednesday, Nov. 23, the wind blew with hurricane force and we had to "heave-to" for 22 hours; the wheel-house was struck, and the boats carried away across the deck, knocking down the chimney-stack of the donkey-engine; four seamen were disabled, one having two ribs broken, another awfully cut about the head, and the other two injured. Yet while all this was going on the carp were not harmed in the least. The water was stirred up during the voyage, and aerated the water twice daily; also gave them a little oatmeal and boiled potatoes occasionally. Dr. W. ARMISTEAD.

"VANITY FAIR," the well-known smoking tobacco manufactured by Messrs. Wm. S. Kimball & Co., Rochester, N. Y., maintains its superiority over all other brands. It is of uniform excellence, and the smoker can always count on finding his "Vanity Fair" just right. There are several different brands, giving grades of strength, to suit the varying tastes of those who use the weed. The "Vanity Fair" has won lots of prizes at exhibitions, and deserves many more.

YANKEE.

BY JEROME BURNETT.

CONCERNING dogs—you ought to know
"The pointer we call Yankee;
He's smart and sharp and full of 'go,"
And never dull nor cranky.

Bring forth the gun, he leaps to life
In all his proud condition;
He's eager for the joyous strife,
The soul of animation.

Say but the word, he's right with you,
Whatever the wind or weather,
He'll take the field and work it through,
And never miss a feather.

And when he strikes the subtle trail,
You'll watch him every minute,
His action shows he cannot fail,
Because his soul is in it.

Then when the steady point is made,
The climax he intended,
No workman better knows his trade—
"This art and nature blended.

The rigid form, the foot upraised,
The breast that's gently swelling,
The beaming eye so often praised,
Of rarest sport are telling.

A picture list, here rudely done,
Of wondrous combination,
A pose of grace that e'er has won
Our greatest admiration.

It tells of one that's true and tried,
As friend we have no dearer;
Whatever may come, whatever betide,
No love can be sincerer.

He's taught us much that men receive
Their doubt with faith to leave,
For knoweth him we can believe
That good dogs do to heaven.

TRAINING VS. BREAKING.

IN TEN PARTS—CHAP. VI.—CONTINUED.

SHOULD you desire that your dog become proficient in the fancy department of this accomplishment, there is no end to the tricks that you may teach him; but until he is fairly proficient in bringing his bit of meat and ball, you should confine your practice strictly to these; for although he may understand you and readily bring anything that you may ask him to, you will find it the better way to grow slow and sure, ever bearing in mind that anything that is worth your while to teach him, should be taught in a thorough manner, that he may not forget it should it happen that he should go a few days without being called upon to perform it.

We like our dog to carry, as well as to fetch, and deliver his bird to our companion who has shot it; and we wish him so well trained that he will carry any article and lay it down at the word "drop" in any place that we may designate. This he may be taught to do understandingly if you pursue the proper course with him. To teach him this, you will require an assistant, who should be one of your own family, or some one that the dog is well acquainted with. When you give the first lesson, your assistant should be a few feet from you. Calling your pupil to you, give him his ball and bid him "carry" it, at the same time motioning with your hand in the direction that he is to go. Your assistant should not say a word, but should merely hold out his hand for the ball, and when the dog delivers it, he should praise and pet him a little, while you should make much of him, and if he has performed the task in a pleasing manner, reward him with a bit of meat. After a few lessons of this kind, the distance can be gradually increased and he will soon carry as far as he can see your assistant. If there is any difficulty in getting him started right, let your assistant take the ball and send him to you, until he understands what is wanted, which he will do after a few lessons. Of course, you have told him to "drop" every time that he delivers anything to you, and as he knows the meaning of the word, it will be an easy task to teach him to lay down his ball or bit of meat in any place that you really wish him to. In order that he may learn to do this in a proper manner and readily drop his burden at the word, and instantly leave it without regret and come to you, we will commence at the beginning and give him the order for the first time when he is close to us, and with our hand extended as if to take it. As soon as he opens his mouth the hand should be instantly removed and the article allowed to drop on the ground. At once praise and pet him and give him to understand that this is all right. On no account must you pick up the article or he may be led to think that he should have delivered it into your hand as usual, nor should you allow him to pick it up, but at once call him away and interest him with something else. This will be enough for the first lesson. This should be repeated until he appears to understand what is required, before you attempt to increase the distance. Your pupil must be made to understand that when he hears the order to drop he must instantly lose his hold, and leaving the article, at once obey whatever signal you may give him. You should so teach him that when coming in with anything that you have ordered him to bring he will at the word drop it and wheel at the motion of the hand in any direction that you may indicate. You will derive no little benefit from this accom-

plishment should you ever get in a "hot corner" on a duck pass, and not only save yourself much worry, but also spare your dog much labor, by bidding him drop his dead bird and first secure the water for one, which may make good if its escape unless attended to at once. The same thing often occurs in quail shooting, and many birds are lost that might be brought to bag, did your dog but understand this fancy training.

The careful reader will readily understand that our so-called "fancy training" is in reality not so useless as some would-be critics would have us believe; but is a part of our system whereby we not only bring out our pupil a "killing" dog but we make of him an intelligent companion and elevate him to our own plane, as it were, and thus the wonderful development of his reasoning faculties we not only greatly increase his capacity for intelligently entering into the enjoyment of the ever changing phases of our woodland sports, but we greatly add to our own pleasure in witnessing the marvelous manifestations of reason and intelligence that he will display in his encounters with some wary patriarch of the forest, whose tricks and subtleties will outvie the wily strategems of a Tallyrand.

There are many things that you can readily teach your pupil after you once get him fairly started on the road for the more you teach him and the more pains you take with him the more readily will he understand what you wish. You must use great caution when you begin teaching him to bring anything that is new to him; and be very sure that he will understand your orders before you issue them. This point is worthy your careful consideration and you should strive to make yourself perfectly understood at all times. This you can easily do by closely watching his disposition and the workings of his mind as he performs his tasks. Some dogs are possessed of remarkable reasoning faculties and appear intuitively to understand just what you wish, while others are slow to learn and require more time to develop their latent powers. From personal experience we are well satisfied that the former require to the full as much painstaking, careful handling as the latter in order to perfect his education, and make of him a steady, reliable dog. Therefore, unless you wish to see explicated the truth of the old saying "quick learning, quick forgotten," go slow, and be very sure that you stop in each lesson, until he has learned, before you advance any further. You should never ask your dog to bring anything that will tax his powers too severely, especially should this rule be observed until his education is complete. Your judgment will tell you better than to bid him bring the crossbar or a piece of eustard pie; you should likewise refrain from asking him to bring you anything that is hard or bulky, at least until he has arrived at maturity and is well established in all his lessons. Many good retrievers are ruined by allowing them to bring articles that they are obliged to grasp hard in order to hold on to. For this reason we never allow our dog to bring our knife nor anything of the kind, for just so sure as this is allowed just so sure will the dog acquire the habit of pinching his birds.

We once owned one of the best retrievers that we ever saw. In an evil hour we bade him carry into the house the earthen plate from which he had eaten his dinner. After this it became the regular thing for him to do at every meal, but also that finally, delicate morsels, such as our pride and boast, was no longer, and after this every bird that he brought that was not stone dead, would show the marks of his teeth. We are well aware that there is a great difference in dogs in this respect, and that we occasionally see one that will bring anything that he can drag along and at the same time he will hardly ruffle a feather of a struggling bird; but for fear that you may not possess such a paragon we advise you to be very careful about trying any experiments that may ruin your dog, especially when there is no practical benefit to be derived that is at all commensurate with the risk that you run. Your hat and gloves and slippers, you can safely allow him to bring you, and it will take but little time to teach him this if you carefully follow the instructions that we have given. You can even teach him by constant practice to distinguish between them so that when you send him for either one he will make no mistake, but, understanding your order, bring the article you wish.

In order to teach him this you should first accustom him to bring each article in the same place, and then to fetch him his name. Take, for instance, your hat, and after placing it in his mouth, bid him "bring the hat," and be sure to use the same language every time that you practice him at this. The same course should be pursued with the gloves or any other article that you may wish. After he has had practice enough to bring readily the article desired you can place several articles close together. Put your hat and gloves with his ball and other light articles, then order him to bring the hat, should he be in the first trial, as he is, is very likely to do so, must praise and pet him. As you talk to him you should speak the word "hat" in order to impress upon his memory the meaning of the word. This should be done in an intelligent manner, perhaps by saying he "is a good dog to bring the hat," just as you would talk to a boy. Should he pick up his ball, or any other article, at once tell him to "drop," and repeat the order for the hat, and do not allow him to bring you anything else. After he brings the hat readily every time, you may change to something else, your gloves for instance, but as he has learned the meaning of the words and brings the articles readily, do not place the hat near them, nor where he can see it, as it may confuse him. When he has become accustomed to the gloves you can place the hat with them and he will soon understand which to bring. This course should be pursued with each article, and in a short time he will understand the meaning of the words; and when you send him for any article that you have thus taught him the name of, he will seldom make a mistake. While teaching your pupil to retrieve, you should never allow yourself to become careless, nor let him do this work in a slovenly manner. Always insist upon a perfect performance of his task, for if he is once allowed to depart from the accustomed manner that you have taught him he is sure to get the impression that this is right and pleasing to you, and you will have a harder task to set him right than you would to have kept him straight in the first place; and worse than this, he will be very likely to forget what he has learned, and you will not get just what you want; therefore, firmly insist upon implicit obedience to your orders, and never allow yourself to deviate one iota from the course that you have marked out.

We have ever found that all intelligent dogs are very prone to look to their masters for guidance and instinctively to take their cue from them as to their behavior. You should take every advantage of this trait, and by cool and collected behavior, under all circumstances, strive to impart to your pupil a steadiness that will ever be to you a source of pride.

This trait is especially to be cultivated when trying to make a careful, tender-mouthed retriever. You should always handle with the greatest care any article that you are teaching him to bring. There appears to be something in the carnal mind of a dog in which it is so potent that is potent to impress upon his mind a corresponding carefulness in taking hold of it that is not apparent when the object is roughly thrown upon the ground; and we have frequently taken pains to go, and with ostentatious care lay the article down instead of throwing it, and have in this way succeeded in obtaining the best of results, especially when our dog was a little inclined to be rough or hard-mouthed.

There is one rule that we have carefully observed for many years that we can assure you that it is of a worthy four considerations. We never allow a pup to retrieve a bird his first season, until we have first handled it, and found that it was stone dead. You should allow him to point it for a short time and then daintily pick it up; and, after smoothing out the feathers very carefully, lay it down in front of him, taking care that he can see your every motion. Now retreat a few steps and very quietly bid him "bring dead." By pursuing this course you will improve, not only his mouth, but his steadiness as well; and also give him a chance to be acquainted with the dead bird, in the same manner as a live and a dead bird; and so render him less liable to make a mistake by pouncing upon a close-lying bird that chances to be near where he has marked the dead bird down.

Having intimated in the first chapter that we are in favor of using the whip when it is needed, we will briefly explain. As we have before stated we never use the whip until our pupil's education is complete, and there is no occasion to resort to it even then, unless our orders are willfully disobeyed. When we find that our pupil is willful, and deliberately refuses to perform his task, we occasionally give him a lesson that he will never forget. We are very careful to select an occasion for punishment when the order disobeyed is of a passive character, like *To ho* or *Charge*, as better results are obtained than when the command is of an active nature. Provided with a heavy whip, we take the opportunity when our pupil is very much engaged about something that will be pretty sure to cause him to disobey, and give him the order to *Charge*. If we are positive that he plainly understands and willfully refuses to obey, we instantly take him by the collar in such a manner that he cannot bite nor break away, and repeating the order, strike him once with all our force. Retaining our hold, we calmly wait without speaking, long enough to slowly count ten. We then repeat the order and blow simultaneously. This we continue until our judgment tells us that he has had enough. You may depend upon it that a dozen blows thus administered will accomplish more in the way of reform than a hundred whippings as generally inflicted, for your pupil not only knows why he is punished but he has plenty of time between the strokes to reason it all out, and he will surely come to the conclusion that you really want him to change when you give the order; and that the best thing that he can do is to instantly obey. Unless he is uncommonly stubborn, you will find that one or two such whippings will last him his lifetime. You must be very careful to issue your commands in your ordinary tone of voice; and on no account must you display the least sign of anger or impatience; and as soon as you are through with the punishment, give him a few kindly words to him in order to let him understand that you are still his loving friend. As soon as he recovers a little, you should repeat your order, which he will at once obey, when you may pat and praise him without stint, thus indelibly impressing upon his mind that the way of the canine transgressor is hard and that obedience will bring a sure reward. We very much dislike to punish a dog; but if this has to be done, we greatly prefer that the lesson should be given before the dog enters the field, as the lesson which is imparted may prevent the necessity of resorting to this extreme when among the birds.

GERMAN HUNTING DOGS.

NEW YORK, Dec. 23, 1891.

Editor Forest and Stream:

I saw in your paper of the 15th Dec. a short description of the German dog, the schweisshund, and their use. Thinking that you would be interested to know of the German description of the dogs used in Germany for sporting purposes.

The English setter and pointer are used as well as in the United States, but you will find very few retrievers. There are in Germany the similar breeds of the *schweisshund*, *pluescher*, *saupe*, *woodcock* and other shooting, called *kurzhaar*, *langhaar jagdhund* (smooth-haired) and *lang haariger liebescher jagdhund* (long-haired). The former is very like the English pointer, with which he shares the derivation from the old Spanish pointer, but is much more like the field, as the kind very much improved, which are much in fashion now, are, however, almost as strong as they are, and the well known champion Wagg, winner of many prizes at English and German dog shows, who was considered in England a typical dog of his race, looked very much like a German smooth-haired jagdhund. The color of these smooth-haired dogs is liver, white and liver, or white and black. Of the long-haired dogs, liver, white and liver, red, or black and white. They have coarser hair than the English setters. Both kinds are used for the same purposes. They will, if of a good breed, point as well as any English pointer or setter, and range as speedily as they do, but are very obedient to their handler. This is of special advantage when in search of pheasant or woodcock in a thick cover, where, to order, they will only range a short distance from their handler. Both kinds are very hardy, and can do their work in very warm weather, needing very little water in comparison to the English setters and pointers. The long-haired jagdhund will also do the work of the water spaniel, being in a very fond of the water, and being a very good swimmer, and can be used for bitter cold weather, or even the ice covering the surface, but will go into the water anywhere you send him to stir up some wild ducks hidden in the reeds, or to retrieve a wounded or dead bird. Both kinds will sit for hours doing the work of the schweisshund, following the foot to follow the passing game, but when ordered will retrieve anything you can carry, or kill a wounded fox. I have seen some of the smooth-haired kind, which are a little stronger in their loins, retrieve a big hare, carrying it on its back, and being able to walk. They will follow you when walking on deer, going in the most cautious manner, avoiding any noise which would frighten away the deer, and, if properly broken, will not run after the deer after you have shot. I saw some of these dogs long employed in the forest, doing the work of the schweisshund, following the foot to blood of a deer. But this quality is found rather seldom, and only if the dogs are used for a long time in the forests. They are extremely courageous, and will defend their master against any assault by man or beast, and will attack any other animal. Notwithstanding this they are a very friendly and gentle animal, and are good playmates for children. During the last fifteen years the German breeds have been much mixed with English blood, but for the last five years much has been done to keep the German race pure, and the result is a breed especially called "Verein zur Veredlung der Hundzucht in Deutsch-

land," has done a great deal for our dogs, through giving good prizes for dog shows and field trials and by founding a stud-book.

As a specimen of the schweishund is sufficiently described in your paper of the 15th Dec. I need only add that they are especially bred in the "Doister," the mountains in the south of the ancient Kingdom of Hanover, and in the "Harz," the timber-covered mountains in the centre of Germany, where plenty of foxes are met with. In these two countries are renowned as good trainers of those dogs, which become very wild if inappropriately treated.

The dachshund is employed to hunt the fox and the badger. At the close of the day, the fox and the badger are shot in Germany, except in some very small sections, the fox is not spared for this purpose, but is killed whenever found to preserve the other game, to which cunning Reynard does much damage. In spring, when a fox hole is found with a litter of young ones, you send the dachshund in at one of the openings after closing the other one with stones, earth or nets. If the bitch is in the hole the dachshund will attack her and drive her to the central chamber of the hole, where she will defend her puppies. The dog will either kill her, drag her to daylight and afterward the young ones, or he will make such a noise by constantly giving tongue that you will be enabled to dig through the earth just to the point where the fox is lying in order to kill him and take the puppies out. If several old foxes are in one hole you will generally need several dogs, because the foxes will drive you away from them come tumbling back to daylight, covered with blood and half suffocated, and after recovering for half a minute, again enter the hole, more eager than ever to attack their natural enemy. Sometimes the fox retreats and tries to go to daylight, where he is either shot or driven into a hole, where he is again driven in the same manner, but you must only use the most courageous dogs for this purpose, because the badger is much stronger than the fox and would kill the dog immediately if he is not very skillful and bold; and, in the second place, the badger will, if not content with occupying the hole, dig out, and then drive you further into the earth and, in a short time, put so much earth between him and the dog that the latter, though also digging, cannot follow him. In some mountainous parts of Germany the dachshund is also used to do the work of the schweishund, for he is griffed with very keen nose in some of his parts, able to drive wild boars out of thick covers. The dachshund is a very odd looking fellow with his long head, body and tail and his short, crooked forelegs, which enable him to dig so well. On account of their queer looks they are much ridiculed in England, but in Germany they are of a finer color or black than here. The breeding of the dachshund of good qualities is much encouraged by a club in Berlin, which gives valuable prizes for dachshund trials.

Greyhounds—the English breed—are much in use in some parts of Germany for the purpose of hunting foxes and badgers. They are very few packs of foxhounds, harriers or beagles to be found. The strongest pack is a royal pack of foxhounds kept near Berlin for the purpose of hunting wild boars, which very often give a good run and a good fight at the kill. Various smaller packs are kept, especially by the officers of some cavalry regiments, to follow the drag.

Various other kinds of home and foreign bred dogs, as, for example, the French griffon and other French breeds, are used in Germany, but they are found very seldom. I may, therefore, mention in this short account of the sporting dogs used in my country.

[From a Special Correspondent.]
ALEXANDRA PALACE DOG SHOW.

London, Eng., Dec. 14, 1881.

Editor Forest and Stream:

The week between Birmingham and the London winter show came to all of us as a very much needed rest for men and dogs alike, and in the quiet times we were glad to turn our attention to the many interesting articles which have appeared of sound raised by our canine friends in angry protest against such long and undesired confinement, and also the no less constant and energetic disputations and protests loud and deep (what you call "solid") uttered by exhibitors and forming a surging sea of conflicting opinions, which, alas! have not been the subject of argument in the columns of our newspapers. That there always will be difference of individual estimates of the actual and relative merits of exhibited live stock is a state of things arranged for by Providence and for which all those who run dog shows or in any way take money out of their pockets ought to be especially thankful; but I must say, the more I see of dog shows, the more convinced I am that there was a standard of excellence for each breed accepted and dogs judged by it on the point system, instead of as now by rule of thumb—every dog having his own standard, and the standard of one as very different from that of another. The expediency of the occasion requires—we should find less that is inexplicable in awards of prizes and after discussion of such awards would then rest on an intelligible basis, and on that very account such arguments would lose much of the authority which they at present command. It is a common maxim must devoutly to be wished.

As at many of the Kennel Club's previous shows, the exhibition suffered somewhat from very unfavorable weather—rain, fog and snow being with us during the entire time. The central hall of Alexandra Palace, however, was so arranged that the dogs had at least a much better place in which to hold a dog show than Curzon Hall, at Birmmington. In fact, nothing much better could be desired, for this time of year, than the accommodations furnished at the Palace. Besides the dogs, an interesting exhibit of models of paintings, of the "Deltanian," a very attractive ornament to the hall. The conveniences for judging were very satisfactory, four ranges having been provided (one more than formerly) in which all of the classes were judged on Friday, the 9th inst., except two—Dandie Dinmonts and collies—which went over to Saturday.

The rings in which Bassets and dachshunds were judged were furnished with platforms, designed to enable the judges to properly examine the peculiar formation or "crook" of the dogs' legs and feet. Of the twenty-nine classes of dogs, twenty-five were judged and ninety-five put in an appearance, some of these, however, being entered in more than one class. The feeding of the dogs was in charge of Messrs. Spratt, who provided the entire show with their new patent biscuits, which differ from the old style in the addition of beetroot, designed to prevent the attacks of constipation, to which dogs in confinement, as at shows, are so liable. They seem to have been very successful in accomplishing the desired result, as the dogs remained, in almost all cases, in a normal state of health, in so far as it could be controlled by their food.

The management was in charge of Mr. John Douglas, who gave thorough satisfaction, in the capacity in which he acted, as did also Mr. H. B. James Stephen, as Secretary. The judges were: Rev. Wm. G. B. Woodhouse, Mastiffs, St. Bernards, Newfoundland, Bourdeaux, extra classes and Skye Terriers; Rev. S. T. Mease sub Rev. W. J. Mellor for Dandie Dinmonts; Mr. W. P. Ackright for Pointers, Cocker Spaniels and Sheepdogs; Mr. A. Fitzroy for Fox Terriers (smooth and wire-haired) and Bedfords; Mr. H. Shayer for Bull Terriers, Cocker Spaniel, English Setter, Deltanian, Pomranian, Poodles, Bull Terriers, Smooth-haired Terriers and Harl-haired Scotch Terriers. Mr. H. Maplebeck for Black-and-tan Setters and Yorkshire Terriers, Pugs, Maltese, Blenheim Spaniels, King Charles Spaniels, other Toy Spaniels, Italian Greyhounds and Toy Terriers; C. Cooper for Irish Setters; Rev. W. Seargenton for Retrievers; Mr. A. Byron for Dachshunds; Rev. A. L. Willett and Major Willett for Irish Water Spaniels, Sussex Spaniels, black and other field Spaniels; Mr. H. G. Musters for Deerhounds and Greyhounds; Mr. R. Krell for Basenounds and Irish Terriers; and Mr. W. Oliver for Bull Dogs.

In the Bloodhound champion class, Napier, being the only contestant, received the card. My opinion of this dog I wrote you upon the occasion of his recent appearance at Birmingham.

There is, therefore, no occasion for further comment concerning him here. Mr. Mark Denton's Nestor, who was awarded merely v.l.c. at Birmingham, was well placed here, receiving first prize in the open dog class, and second prize in the bitch class, with excellent legs and feet, and bids fair to win many prizes at future exhibitions. Mr. E. Nichols' Vampire, winner of second, is a litter brother to Nestor, by Holo ex Diana, and shares many of his good points. In the bitch class, Mr. L. G. Morrell's B-lindona was awarded first prize, and second prize, respectively, in the class of first card, last June, being given an extra third. Norma and Regency were the remaining exhibits, of an excellent class, and were very deserving of the h.c. which they received. Puppies were a very ordinary lot, not deserving of any individual criticism.

In champion Mastiffs, the prize went to Dr. L. S. F. Winslow's Crown Prince, a famous winner by his six- to seven-year-old pup already carried off eight first prizes and six silver cups. In the open class for brindle dogs (a color I think, almost unknown in Mastiffs, on your side of the Atlantic), the aged Union was an easy star, his only opponent, Banner, on the contrary, wanting age and development.

The class for brindle bitches, embracing six, was a remarkably even lot, in size, color and conformation, and the awards were rightly placed, throughout, the exhibit being a fine one. In the open dog class, (other than brindle) Pontif was correctly placed first; for although he is rather small, he is well built, and has an excellent head, and muzzle of the proper type. The award of second to Nero was very generous and justly disapproved of, as, with the exception of the head, he is good in neither head, body nor legs. Cedric the Saxon should have been placed second, with Chief Justice third. Othello, Lord Darley, and Bosco II, merited their v.l.c. In bitches, other than brindle, another very even and admirable lot was shown, most of the exhibits being full of quality. If Mr. Burgess' Isis was the best, she was, certainly the whole, although it may be considered that her body, legs, and feet are much superior to her head, which, although furnished with a good broad skull, and the proper sort of ears, (small and laid), and a broad skull, he is good in neither head, body nor legs. Duchess of Connaught was in the proper position, as second. Hecla, winner of third, I did not like, as she added water to size to many faults in head. I should have preferred either Lena, The Lady Rowena, or Sybil, for the last mentioned was the best of the three. In the open dog class, the winners in both, a son and daughter of champion Crown Prince, deserving their places.

St. Bernards showed the winner in the champion dog class to be Mr. E. C. Joplin's Cadwallader, who, although won, although we have seen him in better places, and second prize in the open dog class, is also a grand animal. In champion bitches, Mr. J. Valentine's Ida was properly given the card. The open class for rough-coated dogs was really splendid, evident superiority being visible in the head and neck of the winner, who, although not better in head than The Duke (second prize), but in the superior in body qualities and bone. Save received third prize, for which he was hard pressed by two or three of the v.l.c. dogs, of which there were twenty-one out of the entire class of twenty-six, and this is a very good record. In the open dog class, honor were distributed so freely that many in a measure lost their value. Messrs. Towley and Carr's Bollinza brought their first prize in the rough-coated bitch class. She is a grand bitch, but might be a trifle better in coat. Second and third well given, the first going to the winner of the open dog class, the latter to the dog, Dunstan deserved the first prize which he received, although he has no dew claws, and second was correctly awarded to Bruce. Smooth-coated bitches were headed by Silber, a very good one, but a trifle light in jaw, with Irons a good second. The class, as a whole, was very good, and the winners were well placed, the dogs being a very promising lot, of great quality, and the bitches very fair.

Of Deerhounds a small lot was shown, of no great merit. Mr. Stiles' Red Rover, both in the open dog and bitch class, was awarded the prize. The judging in the open class was satisfactory.

In Champion Pointer Dogs Mr. R. G. Lloyd Price carried off the prize with his grand dog Wagg, who is well advanced in years, and his dog, which should have given place to Bang II, the Birmingham winner.

In Champion Bitches Mr. G. Tilghman won with Lilac, who was v.l.c. at Birmingham in the champion class, for bitches under fifty pounds, but on this later occasion beat Maggie, winner at Birmingham. Of the champion prize for bitches over fifty pounds, which is accounted for by the fact that Maggie is beginning to show her age. The open classes here were divided by color instead of by weight, being "liver and white" and "other color." In the former, the winner, showing. For the other, an unobtainable reason Don of Devon, winner at Birmingham at Birmingham in the large dog class, was given merely h.b. here, a wonderful decision regarding dogs so good in nearly all points. He was the best in the class, and so should have been, but with Leo, Birmingham, the winner, second, and Don II, who was given second, not sharing the money prizes at all. In the liver and white bitches, the winner fairly earned her place; second should have gone to Daphne, who was given v.h.c., but was good enough to win a first prize at Birmingham. Duchess of Devon, who took second, was a very good dog, and a very good class. Only one dog other than liver and white was entered, and the prize was withheld for want of merit. In bitches the magnificent Beryl won, with ease. She also took the breeders' prize. Puppies (any color) showed good class, excellent quality, and very few faults. Good class also shown in the open dog class, that she will probably develop into a Devonshire line show bitch.

In the champion English Setter Dog class, Mr. Lewelin had a very even with Goude, and in the absence of the only other entry, Royal Gok; and, in the champion bitch class, the same gentleman won easily with Puzzle, who has an excellent head and coat. In the open dog class, another winner for the same kennel, with Prince Royal, who deserved the honor. Second and third were correctly given, both Sir Allister and Count Paragon being very well formed and excellent dogs. Royal Rock, the Birmingham winner, got v.h.c., which he well deserved. Cleve, a.c., is a very attractive young dog, but was shown in poor coat. Mr. Lewelin again won in the open bitch class, with the field trial winner, Nova, who was very good, and in the open dog class, a dog fault with in any other points. She was fully entitled to her place as was the second prize winner to Mrs. Coaness Rose who was worthy of her v.l.c. In English Setter Puppies, the winner, Ery, is a very grand dog, with perfect head, good legs and feet, and a wonderful body appearance. In the open dog class, the high sickness of loin and want of spring in his ribs. A brace from Mr. Lewelin's kennel, Pet Boudha and Pearl Bondin, second and v.l.c., were very beautiful animals, and well deserved their honors.

In the Ayrack Setter, first prize went to Mr. T. B. Bowers' Comet, a judgment I cannot coincide in, as besides suffering from chort in the head, he has a slack loin, also bad hindquarters and hooks. Meg Marville, who was placed second at Birmingham and was very good, was a very good dog, but was not by any means a prize winner so heavy in the head. The class was not by any means a great one.

In the Black and Tan Setters, in the dog class, Mr. Jacobs' Marquis secured his sixth. Fausto victory. In the bitch class, the best dog, in head, of the heavy type, and poor in coat. The third prize winner, Banger I, much the same as the second, and which tamed on the hindquarters, besides. Young Jack, v.l.c., might have been a better dog, but was not by any means a prize winner, as he has both size and quality. Mr. Jacobs won again, in the bitch class, with Kate, a daughter of Champion Duke, and winner at the last Alexandra Palace show. She is a little light in tan, the second prize winner, staying very good, and in the open dog class, was placed second. Beld, third prize winner, is bad in ears, they

being too high up on her head, and having a white chest, she should have been in the black, tan and white class, as should also Jewess, v.l.c. In the puppies, a very poor lot, the only fair specimen being the bitch, which was given a v.l.c.

In the Black, tan and white class, Marquis II, won, although early in coat and having too much length of tail. Gypsy Girl, a pretty bitch, should have had first place. Rupert, second prize, is too heavy and coarse. In the champion dog or bitch class, (three entries) the awards were satisfactory, but as the class was a very even one, some persons would have preferred to see Count in first place. In the open dog class, the awards were not good. Sir Peter, who had been merely named for being in the class, in color, was given first prize. First and second should have gone to the order awarded to Ganymede and Young Palmerston, both v.l.c. Ennis was correctly placed third, but Bogardus, second prize, might well have been left out of the money, as he is early in coat, not good enough in color, and his ears are set on high. Viscount Palmerston, an unnoted one, is a dog of excellent quality. In the bitch class, Polly, the winner, has good color and shape, but was hard pressed for her place by Sheela, the second prize winner, and Hubs, third prize, the contest being very even. In the puppies class, Handy Andy, first prize, and Ennis, who took third prize in the open dog class and second in this, were very nearly matched, next best being Derry, h.c., from the same kennel.

In the champion class for black Spaniel, the beautiful bitch Squaw, shown by Mr. T. Jacobs, gained the prize, also the extra prize of £5, for the best field Spaniel, in any class, exhibited by the breeder. She is considered the best black Spaniel ever shown, and is but one of Mr. Jacobs' very fine lot, as he also bred Zulu, who was the best dog in the class, and was the winner of the second prize winner. Boverley Dog, v.l.c., is poorly feathered, has white on his chest, and is somewhat short in body and high on his legs. In the open bitch class, first went to Boverley Dog, undoubtedly the best, although furnished with a topknot, which is quite against her. Second, second prize, was given to the bitch, who was heavy in whelp, and I am sorry to hear that she died, at the show, on Tuesday morning. Skye, v.l.c., I preferred to Leah, for second place, as she is a good one, with the exception of a slight fault in her coat, which, a good one, won in the class for Spanish and other, under fifty pounds.

In the Fox-terrier classes, some fault was found with the decisions of Mr. A. Fitzroy, but considering the extreme difficulty of his task, and the fact that infallibility cannot be expected, at the best, I think I had better say nothing more. The most of my confidence. He certainly spared no pains in the performance of the task allotted to him.

The special cups offered by the Fox-terrier Club were awarded as follows: Grand Challenge Cup (Smooth): Brokenhurst Bally, who was the winner of the two challenge cups, was also won by this dog. Challenge Cup for best Puppy owned by a member of the Fox-terrier Club: Corcoran Bill. Cup for best Dog owned by a member of the Fox-terrier Club: Diamond Duck.

The Third One, or Prodiges Stakes: First, £18; second, £15; third, £10 10s.; and fourth, £7 10s. There was a class for each sex. Same prizes in each class.

In the Dog class, Towler won; Oercoer Bill, second; Diamond Duck, third, and Inland, fourth.

In the Bitch class, Rander won first; Olivette, second; Hatchment, third; and Onus, fourth.

In the Spaniel and Terrier classes, numbered fifty-nine, one of the largest and best exhibits ever shown in London. The breed has given a champion class now. The judging of Messrs. Moss and Mellor was generally held throughout.

PRIZE LIST.

- Bloodhounds—Champion, E. C. Joplin's Napier. Open—Dress V. M. Beaufroy's Nestor; 2, E. Nichols' Vampire; 3, E. Brogus's Havers; 4, L. G. Morrell's Maltravers; 5, R. Ray's Noddeman; L. Smith's Lawley; Captain W. Clayton's Lulu; Mr. D. G. Parry's Oscar; 11, W. G. Parry's Dick; 12, E. Nichols' Isis; 13, E. Nichols' Isis; 14, E. Nichols' Isis; 15, E. Nichols' Isis; 16, E. Nichols' Isis; 17, E. Nichols' Isis; 18, E. Nichols' Isis; 19, E. Nichols' Isis; 20, E. Nichols' Isis; 21, E. Nichols' Isis; 22, E. Nichols' Isis; 23, E. Nichols' Isis; 24, E. Nichols' Isis; 25, E. Nichols' Isis; 26, E. Nichols' Isis; 27, E. Nichols' Isis; 28, E. Nichols' Isis; 29, E. Nichols' Isis; 30, E. Nichols' Isis; 31, E. Nichols' Isis; 32, E. Nichols' Isis; 33, E. Nichols' Isis; 34, E. Nichols' Isis; 35, E. Nichols' Isis; 36, E. Nichols' Isis; 37, E. Nichols' Isis; 38, E. Nichols' Isis; 39, E. Nichols' Isis; 40, E. Nichols' Isis; 41, E. Nichols' Isis; 42, E. Nichols' Isis; 43, E. Nichols' Isis; 44, E. Nichols' Isis; 45, E. Nichols' Isis; 46, E. Nichols' Isis; 47, E. Nichols' Isis; 48, E. Nichols' Isis; 49, E. Nichols' Isis; 50, E. Nichols' Isis; 51, E. Nichols' Isis; 52, E. Nichols' Isis; 53, E. Nichols' Isis; 54, E. Nichols' Isis; 55, E. Nichols' Isis; 56, E. Nichols' Isis; 57, E. Nichols' Isis; 58, E. Nichols' Isis; 59, E. Nichols' Isis; 60, E. Nichols' Isis; 61, E. Nichols' Isis; 62, E. Nichols' Isis; 63, E. Nichols' Isis; 64, E. Nichols' Isis; 65, E. Nichols' Isis; 66, E. Nichols' Isis; 67, E. Nichols' Isis; 68, E. Nichols' Isis; 69, E. Nichols' Isis; 70, E. Nichols' Isis; 71, E. Nichols' Isis; 72, E. Nichols' Isis; 73, E. Nichols' Isis; 74, E. Nichols' Isis; 75, E. Nichols' Isis; 76, E. Nichols' Isis; 77, E. Nichols' Isis; 78, E. Nichols' Isis; 79, E. Nichols' Isis; 80, E. Nichols' Isis; 81, E. Nichols' Isis; 82, E. Nichols' Isis; 83, E. Nichols' Isis; 84, E. Nichols' Isis; 85, E. Nichols' Isis; 86, E. Nichols' Isis; 87, E. Nichols' Isis; 88, E. Nichols' Isis; 89, E. Nichols' Isis; 90, E. Nichols' Isis; 91, E. Nichols' Isis; 92, E. Nichols' Isis; 93, E. Nichols' Isis; 94, E. Nichols' Isis; 95, E. Nichols' Isis; 96, E. Nichols' Isis; 97, E. Nichols' Isis; 98, E. Nichols' Isis; 99, E. Nichols' Isis; 100, E. Nichols' Isis.

"In the winter sloops are almost useless for our fishing business, and schooners, as they are commonly rigged and modelled, are not much better; so we want to try the way to see if a boat so rigged will be able to stay out longer and to work over the grounds more easily in bad weather."

YACHTING NEWS.

MEASUREMENT.—Mean length, however, is received with derision by many in America; and our writer, bolder than the rest, pronounced it "foliose." We need not apply any indigestible adjectives to this Transatlantic suggestion, as a similar proposal has been made in this country. But, at any rate, there will be no harm in showing that there is no more reason for including the counter in a length measurement than there is the length of bowsprit. Each is used to extend a sail; but the counter, whilst forming a sort of outrigger for the mainsheet, also provides some extra deck room. The idea, however, sometimes prevails that the counter, when the boat is heeled, helps to support the boom, or gives additional power in some way by adding to the stiffness of the boat. It is almost needless to say that a counter could not help to support the boom any more than a life buoy on deck could; and if the counter is made so full and heavy that it becomes immersed as the boat is heeled, and thereby adds to the volume of the "wedge" of immersion, the boat had much better be without the counter at all, as the counter would tend to aggravate the boat's pitching in a sea, throw her out of trim, check her speed, and make her generally unhandy. The fact is, in designing a boat which has a counter, the greatest care is taken to provide against its becoming immersed as the boat heels; and the supposition that "power" can be gained by immersing the counter involves the absurdity that the buoyancy of the boat can be made greater in the heeled position than it is in the upright. This would be an entirely unknown achievement in hydrostatics, and is simply an impossibility. There is not the smallest doubt that the counter is included in any expression for the rating of boats of yachts in competitive sailing, it should be length on the load water-line, as that length cannot be exceeded by any conceivable means so as to impart additional power to the boat. For many years length from stem to stern in a line with the gunwale was used on Southampton water and other places; but there was no objection to this, as, owing to the slight step and sternpost, length so taken was the same as length on the load water-line. Now, however, for the sake of small additional comfort, and for greater convenience in working the sheets aft, a counter has been introduced on many of the boats in the South Sea; to put a penalty upon them would be almost as absurd as taxing a man for having a spring mattress in his berth instead of two inches of hair and a deal board.—London Field.

COLORS.—The new club of small yachts be formed according to the plan of Commodore Franklin, and before the regatta this week, how would it do to call it the Corinthian Yacht Club, and adopt for a burgee a blue field with yellow (gold) wreath of laurels, as bestowed upon the victors of the Corinthian games held by the Greeks in ancient times? We have heard enough upon the red, white and blue triangles with stars interjected here and there. A flag with some idea in its composition would seem more appropriate as well as more easily distinguished from the usual ones. As it is, most flags of our yacht clubs are unmeaningly copied patterns—one commonplace borrowed from another—and very confusing in their similarity of plan or shade. There should be some derivation to club colors, conveying a distinctive meaning, a trade-mark of character, locality or purpose, so to speak, and not the tiresome repetition of variegated patches and bars of three prime colors.

EXHIBITION OF SPORTING ARTICLES.—It is intended soon to hold an exhibition of articles used in sports in London. The show is to include everything appertaining to yachting and sailing. This suggests the advisability of instigating a similar exhibition of yachting appliances here. Could not some club take the matter in hand? A collection of models, drawings, books, miniature craft, all kinds of articles in use—such as binoculars, slide lights, logs, fittings, amids of boats, canoes, prizes, photos, historical records, etc.—grouped together in a hall would be pretty certain to attract a paying number of visitors. The surplus profits obtained might be devoted to the furtherance of the sport in some public way. By this means, if properly managed, the general public might have its interest drawn prominently to the most fascinating, instructive, useful and manly of all sports.

NEW YORK CANOE CLUB.—The following officers have been elected for 1882: Commodore, C. Boyer Vaux; Vice Commodore, Chas. P. Oudin; Secretary and Treasurer, W. P. Stephens; Bayonne, N. J.; Executive Committee, William Whitlock and C. L. Norton; Regatta Committee, C. K. Moore, F. E. Ward, W. M. Cook, Fred Reed and W. P. Stephens; House Committee, Dr. E. B. Bronson and Win. Whitlock.

WHEN.—Mr. C. G. Y. King, well known as one of the leading canoeists of the Clyde and as a writer over the cognomen of "Wren" has arrived in this city and may remain with us permanently. It is that case his Clyde canoe will be shipped to him and a welcome addition made to our fleet, bringing about very interesting trials between the most advanced style of Clyde canoe and our native productions.

ATLANTIC YACHT CLUB.—The Atlantic Yacht Club have finished their new anchorage basin at 187 Huddle. The club's new steam launch Atlantic is about finished, and next season will run daily between the club house at Hay Ridge and the dock of the Sea Beach Pier, between the pier and passenger boats, near by.

NEW NONPARIELS.—Mr. Clapham, of Roslyn, L. I., is getting out the frames for two 50 ft. nonpareils. He has just shipped one of 23 ft. to France to race with the 50 ft. ballast boats. She has a 29 ft. mast, 5 ft. in. at partners and a 29 ft. boom.

SAN FRANCISCO YACHT CLUB.—Commodore Asbury has returned his thanks to the club for the friendly attentions bestowed during his recent visit to the California coast.

THE OTHER SUNDAY evening, down at the village of Greensboro', Md., religious services in the church were greatly disturbed by the persistent pursuit of a coon by a dog in the immediate vicinity. The colored portion of the congregation was greatly excited, and when it became evident by the barking of the dog that the coon was in a tight place there was a general exit from the church, and on the following day one of the colored brethren was smacking his lips over "roast coon and plenty of grabby."

ABBEY & IMBRIE'S "Highest Quality" Spring Steel English Hand-Made FISHING TACKLE.

TWO WEEKS ago 600 partridges were received by Mr. Churchman, Secretary of the Delaware Game Association, at Wilmington, Del. They came from Danville, Va., and will be distributed in lots of twelve, six males and six females, among the Delaware farmers. Another lot of 1,000 arrived subsequently and will be similarly distributed. It will be some years until the bird again becomes numerous in Pennsylvania if like efforts are not made to propagate it.

Table with columns representing different sizes of fishing tackle (10.0 to 7.0) and rows of numerical data. Includes text: 'FOR SALE BY ALL FIRST-CLASS DEALERS IN FISHING TACKLE. DISCOUNT TO THE TRADE ONLY. Orders received from persons residing in cities in which the dealers keep a full line of our goods will not be filled at any price. 48 Maiden Lane, New York.'

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future.

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishcultivist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family, readable, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve a unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. To clubs of three or more, \$3 per year each. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

GUNPOWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!
Dupont's Gunpowder Mills, established 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse)
to 4 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse)
to 3 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. canisters and 6½ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted
for "choke bore" guns, and particularly for frui-
tie and upland shooting. Burns slowly, strong and
moist; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 1 and No. 3,
No. 1 being the coarsest. Packed in 6½ lb. kegs and
1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. canisters and 6½ lb. kegs.

Dupont's Rifle Fg.—"Sea-Shooting."—
FFg. and FFFg. The Fg. for long-range rifle shoot-
ing, the FFg. and FFFg. for general use, burning
strong and moist. Packed in ½ lb., 1 lb., and 5 lb.
canisters, 6½, 12½ and 25 lb. kegs. Fg. coarse, FFFg.
fine.

Dupont's Sporting, Mining, Snapping and Blasting
Powders of all sizes and descriptions. Special
grades for Export. Also Rifle Cartridge, Aus-
trian, Cannon, Mortar, Mammoth, Hexagonal, Cubical
and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
grain or proof.

Agencies in all the cities and principal towns
throughout the United States. Represented by

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 900 competitors. Send for Catalogue.

Manufacturers of

HEXAGONAL SPLIT BAMBOO FISHING RODS,

REMOVED TO 153 MILK STREET,

We are obliged to have more room in our factory and greater facilities for manufacturing our goods
to meet the increasing demand. We have received the highest award and silver medal at the Mas-
sachusetts Mechanics' Association Fair for our superior goods. SEND FOR CATALOGUE.

Ammunition, Etc.

The Hazard Powder Co.,
MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square can-
isters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6½ lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters
and 6½ and 12½ lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting it
ranks any other brand and it is equally serviceable
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG and "Sea Shooting" FG in kegs of
25, 12½ and 6½ lbs. and cases of 5 lbs. FFG is also
packed in 1 and ½ lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands for
ordinary sporting and the "Sea Shooting" FG is the
standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON and MUSKET POW-
DER; also, SPECIAL GRADES FOR EXPORT OF
ANY REQUIRED GRAIN OR PROOF MANU-
FACTURED TO ORDER.

The above can be had of dealers, or of the Com-
pany's Agents, in every prominent city, or who-
sale at our office.

ANSWERS TO CORRESPONDENTS..... 477

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. To a club of three annual subscribers, three copies for \$10; five copies for \$16. Remittances should be sent by registered letter, money-order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States and Canada; and is on sale in Europe by The American Exchange, 440 Strand, W. C. London, Eng.; and by Em. Terquem, 16 Boulevard, St. Martin, Paris, France.

FOR SALE BY NEWSDEALERS EVERYWHERE.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, January 12.

BOSTON BENCH SHOW.—The energetic sportsmen of the Massachusetts Kennel Club have decided to hold a bench show at Boston next May, commencing on Tuesday the 9th and continuing four days. Well knowing that the gentlemen who have the matter in charge will be content with nothing short of a first-class show—with all that this implies—we heartily congratulate the sportsmen of the country upon this opportunity to see and compare the most prominent dogs from all sections, as well as many new aspirants for fame and for the privilege of enjoying the generous hospitality of the whole-souled sportsmen of the old Bay State.

THE INTERNATIONAL MATCH.—No new steps have been taken in the matter of the visit of a band of American National Guardsmen to Wimbledon in July next. On this side the water there is a willingness to have the match, but there is a desire to wait until the conditions under which the Englishmen would like to have the match fought have been received and examined. The Eastern States are coming forward with promises of assistance in the way of men and money, and if a proper care is taken in pushing the matter of the match, there is no doubt but that the visit will be made and an interesting contest ensue.

BOUNTY FOR SPARROWS.

FOLLOWING closely upon the recommendations of the report, which we noticed a week or two since, of the injury done to the agriculturist by the English sparrow in Australia, comes the news that the government has offered a bounty for these birds. A premium of sixpence a dozen for the heads, and of 2s. 6d. per hundred for the eggs, ought to have some effect in reducing their numbers, and thus relieving the farmers of the burden with which they are now saddled. The testimony printed in the article above referred to gave a very alarming idea of the amount of damage that these wretched birds may do, but it is to be hoped that they may never so increase in this country as they have in the Australian colonies. Traps, nets and poison seem ineffectual to check their increase or their depredations, and to destroy them in any large quantities by shooting is scarcely practicable. Here, in North America, they have severe winters to contend against, which, of course, check, to some extent their increase, and the severe cold undoubtedly kills more or less of them every season. The small hawks and the shrikes, which are the natural enemies of the sparrow, kill a few, and would do good service if they were encouraged during the winter months. The sparrow-hawk and the sharp-shin and the mottled owl are too small to do any serious injury to our game birds, while the shrike, although sometimes killing our smaller song birds, is in reality one of the farmer's best friends. Its food, and the same may be said of the sparrow-hawk and the screech-owl, consists very largely of insects injurious to vegetation, and of field mice.

We certainly have no pity for the sickly sentimentality which expresses sympathy with the sparrow grasped in the strong claws of these birds. As well shed tears over the capture of the rat that is taken in the trap set in your corn crib. Sparrows are vermin just as rats and mice are, and should be destroyed whenever it is possible. It is to be hoped that the energetic measures put forth by the Australian government may succeed in ridding this flourishing colony of the plague of sparrows, and although we can imagine that the bounties paid out on this account will at first be heavy, we cannot doubt that they will prove to have been well expended.

THE MENHADEN QUESTION.

A LITTLE fish is the menhaden, and its importance is not at all commensurate with its size. It is, indeed, one of our most valuable coast fishes. It not only gives employment to thousands of men and fleets of steam and sail vessels, in the oil and fertilizer interest, but indirectly it is one of the greatest sources of fish food, as it feeds many of our best fishes. It has also entered into politics in the State of New Jersey, where the fishermen near the coast favor a law prohibiting the capture of the menhaden by steam vessels, on the plea that the fishes which formerly fed upon them are forsaking the New Jersey shores on account of the present scarcity of this favorite food, which has been nearly destroyed by the purse-net.

There exists also a Menhaden Association, which is composed of the owners of steamers and other vessels engaged in the capture of the fish, and the proprietors of the "factories," as the oil works are termed. This society meets yearly in New York city, usually in the month of February, and discusses questions of interest to the business and often listens to essays from men of science. This society is also troubled about the decrease of the menhaden, and at the coming meeting will probably consider plans of remedy.

We would respectfully call their attention to the following facts: The capture of the menhaden, for manure only, begins with the appearance of the first fish in the bays of Long Island and elsewhere. The fish then contain little or no oil, and would not yield enough to pay for their capture; but they are carted off and plowed under the soil for manure. This continues all through the spawning season, and, in fact, as long as the fish remain upon our coast. Any fishculturer could preach a sermon with this for a text. Any farmer could tell what the result would be to his poultry yard if he killed every fowl on sight, all the season. The Menhaden Society know this as well as either the fishculturer or the

farmer. But the society is composed of individuals; each individual says to himself: "If I don't catch the fish some one else will, although I know it to be destructive to my interest."

What is the remedy? Let the Association obtain concurrent legislation in all the States, on the coasts of which the menhaden are captured, forbidding the taking of the fish for any purpose whatever before the middle of July or the first of August. Then will the fish fulfill their destiny in increasing their species, and consequently their numbers; and waxing fat, they will furnish food for our valuable fishes and also oil in increased quantities for the factories. Such a law, and this only, will restore the menhaden to their former abundance and remove all complaints against the use of the purse-net.

THE INVASION OF THE GERMAN CARP.

THE introduction of the carp from Germany has been a fruitful topic for the past two years, and it promises to be more so in the next two years. There are several reasons for this. The fish grow fast and they are new. The same may be said of the rainbow trout of California; and yet they have not made the stir that the carp have; and those persons who only look at the surface of things suppose that the reason lies in the fact that the carp is a fish for the farmer to grow in his duck-pond, while the trout is a fancy fish for the epicure, and demands a spring brook.

The fact that the carp is a monarchical emissary in disguise is not perceived.

We now publicly throw off the mask from the disguise, and will show how this foreign-born fish threatens the liberty and permanency of American institutions, and how if this fish is not immediately expelled from our land our Republic is in danger. The object of the introduction of the German carp is to furnish cheap food for the coming swarm of Chinamen who are spawned along the coast of Asia and, having almost rendered California uninhabitable, are now preparing to overrun the Middle and Eastern States. It is well-known that the carp can be cheaply grown in great quantities in water that is now useless, and which will support nothing else. Carp can be grown on a large scale (no levity intended) at two cents a pound. The Chinese bred the carp, it is alleged, before the Germans did. A Chinaman can live on carp and rice and work for so near nothing, that a low grade of decimal approaching the infinitesimal, will represent his day's wages. It is most significant that this introduction of carp did not take place until some years after the abolition of slavery in the United States. It is also worthy of note that the carp thrives best in the most Southern States where labor has formerly been cheap. But the carp can be cultivated very cheaply even in Vermont, and will furnish a cheap food to a frugal Chinaman in every State.

At first the introduction of this fish was regarded by all as a great boon; and enthusiastic fishculturers, who saw no ulterior object in its introduction, regarded it as of great economic value to our people in the way of cheap food, and we must admit that we thought the same, so carefully was the Chinese project covered up. This imported imperialism may drive our native grass from their hayous and the catfish from the sloughs by quietly devouring the vegetation on which these native species indirectly depend. Every true American must feel his blood tingle at the thought. True, the grass are worthless, but they are American. Certainly the gross catfish are eaten in all their oleaginous rankness by the native American of African descent and are despised by the epicure, yet they were hatched beneath the banner of freedom and should not be crowded from the enjoyments of life by a fresh importation, even though that imported fish comes under the disguise of an edible fish which has the merit of cheapness.

We will admit that this view of the subject is new even to ourselves, and came as a sort of inspiration when we learned that the United States Fish Commission had proposed to invade the Trans-Mississippi with the carp; and that Colonel McDonald left Washington on the night of January 3 with a car-load of them, and that thousands more are to follow by express to stock one thousand ponds and lakes in the great interior of the continent the fertile fields of which are destined to support a dense population. It then flashed upon

us that this was but a preparatory step to a flood of Chinese cheap labor, and that it was a step which threatened the very existence of our people by making food so cheap that the Mongol would set up a "washee" on every quarter section.

Oh, for the lungs of a stump orator to exclaim in stentorian tones over the land where the buffalo now grazes in quietude and the wolf howls in solitude "Beware the introduction of this cheap food which is but a prelude to an invasion by a cheaper people!"

THE NEW YORK OBSERVER has reached the green old age of sixty years, having entered upon its sixtieth volume last week. It carries its years with dignity and strength; and to-day is the most able journal of its kind in the world. The IRENEUS Letter in the current number recounts some interesting facts in the history of the paper. "Very few are now living who subscribed for the *Observer* in 1823. Many who as children read it then, are its constant readers. A few of the original subscribers survive. Four families are now residing in 37th street, in this city, to whom the paper has been going in the same name from its first number. Rev. Calvin Yale paid his sixtieth subscription last week, and, more remarkable still, he began with the *Boston Recorder*, six years before the *Observer* was begun. Mr. Cunningham, now our Superintendent of printing, was a boy in the office in 1823, and he has been in it ever since. He remembers the first line he set up at the desk." The life of a good paper is not measured by the span which limits the career of the men who make it. Men may come, and men may go, but the paper goes on forever. The *Observer* has the wisdom and experience of old age; it has also the vigor of young blood; and time will be when these first sixty years will be accounted its youth.

PSYUDONYMS IN NATURAL HISTORY NOTES.—The point advanced some time ago in our natural history columns by Dr. Merriam, and again referred to this week by Dr. Fisher, is, undoubtedly, well taken, and deserves the serious consideration of our contributors. The value of any published note on natural history depends on its authenticity, and this cannot be determined unless the name of the author is given. We should much prefer to have all our contributors on this subject sign their articles with their full names, for there are numerous observations recorded each year in the columns of FOREST AND STREAM which are of great value, and might prove of much importance to naturalists, were it possible for them to learn more of the topics recorded and the individual by whom the record is made. The matter, of course, is one which each writer must decide for himself, but in the interests of science we hope to see the plan advocated by Drs. Merriam and Fisher, generally adopted by our natural history contributors. There is no reason why articles outside of this special department should not be signed by pseudonyms, and we have no desire that any change in the manner of signing should be made.

BARON ERNEST LAGRANGE, of FRANCE, well known to readers of our Paris contemporary *La Chasse Illustrée*, and a prominent sportsman in his country, has come to America for a two-years' stay, to visit some of the famous game grounds of this country, of which he has heard so much. Accompanied by J. U. Gregory, Esq., Naval Agent at Quebec, Canada, Baron Lagrange called at this office last week on his way to Florida. They propose going into the Kissimmee game country, the charms of which we may believe will, in due time, be eloquently described in *La Chasse*.

PITTSBURGH BENCH SHOW.—Mr. Edward Gregg, the President of the Pennsylvania Poultry Society, under whose auspices the coming bench show at Pittsburg will be held, writes us that the prospects for a large show are very flattering. They have already received many applications from prominent sportsmen for a place in the hall for their dogs. Mr. Charles Lincoln is there, and the premium list and entry blanks will soon be ready and may be had by addressing the Secretary, Mr. C. B. Elben.

NEW YORK BENCH SHOW.—The Westminster Kennel Club will hold their sixth annual bench show in April. The date will be determined at a meeting of the club this week. Full particulars will be found in our next issue.

FLORIDA.—Dr. C. J. Kenworthy's "Climatology of Florida," contains just the information that very many people are seeking now. It may be had from the author, whose residence is at Jacksonville, Fla.

KILL THE OWLS; kill the hawks; kill the foxes; kill the skinks; kill the red squirrels. Remember that this destruction of vermin means something toward the preservation of the game supply.

MUZZLE-LOADING RIFLES are discussed in our game columns to-day. Mr. Van Dyke will find many to agree with him as to the muzzle-loader's accuracy at short range.

THE FLORIDA CATTLE GROWERS.—Can any of the readers of the FOREST AND STREAM furnish information about the life of the stock growers of South Florida?

SECRETARIES OF GAME ASSOCIATIONS will confer a favor by notifying us of the coming meetings of their societies.

The Sportsman Tourist.

IN THE FORESTS OF YUCATAN.—II.

THE glassy surface of the "aguada," soon after dawn, reflected the rosy hues of the sky, and the sun crept slowly up, dissipating the coolness of the night, and before seven it was very hot. The sand-flies came out and enlivened us, while the birds commenced their cries. I dressed and went out. Coffee was ready and cigarettes; and after taking breakfast we were ready to start for the coast. We were to have started "many temprano"—very early—but the sun climbed higher and higher and still the horses were munching their corn and my friend still unprepared. It is always "mañana"—to-morrow—in this country; "mañana temprano"—early to-morrow; but is over "mañana" and never "temprano." The people lose the best hours of morning and work in the heat of the day.

Across the "aguada" there was a strange bird called the "maniro" or "sailor" that uttered a succession of harsh cries for hours. The woods were full of birds of certain species, such as orioles, flycatchers, blackbirds, doves, and a host of others. I shot a very beautiful trogon with a yellow breast, and parrots were crying out all the time. "Temprano" meant ten o'clock, when the sun nearly blistered our backs, yet even then Alonzo wanted to know if I would not like to wait till later.

The trees that composed the wood we first entered, many of them, supported great nests of the white ants, which looked at a little distance like black bees. We passed through a broad area covered with wild "tamequac"—sandal-wood—showing where the plants come from whence the plantations are stocked. Near some lovely "aguadas" was a new "ranchito" with a nice-looking girl preparing tortillas, and some hundred rods beyond we saw an Indian mound of shells. An hour later I saw a man-o'-war bird (*Aethya aquila*) and felt that, from this sign, the sea could not be far off; nor was I mistaken, for we soon struck a sandy plain with small sand pebbles and espied the great lagoon that connects with the sea.

Mangroves and stunted trees had been features of the landscape thus far, but a mound of green cocoa palms now rose up and relieved the monotony. This was the "cerro" or hill—we were looking for, a shell-heap made by the ancient Indians, covered and surrounded with a few hundred cocoa palms. Here were two small thatched adobe huts, dilapidated and dirty, within which were two Indian women cooking some fish. They had but little corn and nothing else but fish, but they brought a great fish called "hisa," which had been broiled on the coals in its own fat, and this was delicious. It was, as it lay split open, nearly two inches thick, and we ate and relished exceedingly great flakes of it. These women had never seen a spoon, knife or fork, and as we had none with us, we used our fingers and tortillas, each taking his turn at the fish and gravy. Fortunately, we had hundreds of coco nuts at hand, and were not obliged to drink the nasty coffee they boiled for us, but had, instead, the refreshing water of the cocos. A man came along as we finished our cigarettes and we engaged him to take us in his boat to a point up the lagoon where there were, according to him, "muchos maniros." This "cerro" is at a point where the lagoon meets the sea, called "Boca de Olla" and "Punta Arenas"—or point of sand. There are here long sand-bars and shoals, and naturally the fish congregate here by millions and the sea birds by thousands. A wall of mangroves comes down to the border of the lagoon, and beyond the sand point is the open ocean. Flocks of pelicans, sea gulls, terns, cormorants, "peeps," plover, snipe, herons, egrets and spoonbills were flying, wading and swimming in and about the water. Here, it is said the flamingoes come by hundreds on the bar, about a gunshot from the mangroves and the palms; but they were not there then, they would come that night or "mañana." The man poled the boat up the lagoon, disturbing hundreds of snipe and sandpipers, to a point where the stream narrowed and where the mangroves came down to the water's edge forming solid green walls with the placid water between them. These trees were dotted with white herons and cormorants, and at a place where there was a spring—a spring of fresh water bubbling up in this salt water lagoon—we put up a hundred ducks and two dozen spoonbills—"patatea ejido"—which were roosting on the trees.

Having shot some of these birds we tried to land, but the mud was so soft and we sank so deep that it was impossible, and we had to leave them there. Leaving the main channel we entered a narrow water lane, where many egrets and night herons, with broad boat-bills, flapped across our bows. The mangroves were in bloom, the small concealed flowers being hardly perceptible. At last we reached the point where the flamingoes ought to have been, but where they were not, a broad mud flat, where they always have fed till to-day. Disappointed, we turned the boat about, after causing it to be pushed over the mud as far as possible, and returned.

The sun was down then and the water smoother, and all the little water birds and the greater ibis and herons were going to roost, some on the sand bars, others on the trees. Our dinner, when we reached the hut, was the same as our breakfast—a large broiled fish laid out on a palmetto fan—which we ate by the light of an attenuated candle stuck near by on a "manate" table. The interior of the hut was dark, with smoke, dried fish were stuck up all about, nets and other paraphernalia of a fisher's hut hung in the corners, and one end was filled by a great pile of coconuts. Into the six hammocks, hung side by side in the centre, ten people at once at once as night came on, though Alonzo and I, in virtue of our silver, had a single one each. I slept easily because they told me the flamingoes would come in the night and we must get up at midnight and hunt them. Insects of some kind—I could not tell what nor how many, save that I knew they were numerous and at intervals were crawling over me all night. The hammock next to me was occupied by an old woman with two babies, and she, with the men and boys on either side, was smoking and spitting all night. It was very dark, and the wind was howling through the spaces of the hut all through those weary hours,

Perhaps the reader may recall the accounts given of the wonderful beach water spring in the Atlantic States, on the Florida coast, known forty years ago "as the northern coast of Yucatan," says Humboldt, "at the mouth of the Rio Lagartos, 4000 feet from the shore, springs of fresh water, with spots of shells, rise to the salt water. It is probable that from some strong hydrostatical pressure the fresh water, after bursting through the banks of calcareous rocks between the water of the sea and the level of the salt water." Florida and Yucatan are of similar geological formation, hence the appearance of these springs on the coast of both peninsulas.

and in the morning there was a perfect "norther" and the long leaves of the cocoa palms were lashing their trunks in fury. At sunset the Indians told us the flamingoes would come at midnight, then at dawn, and when daylight came they were on an island two leagues off, and would appear "mañana." When I heard this last I knew the case was hopeless, and prepared to depart. The only sight of flamingoes we obtained was early in the morning, when two long lines appeared over the water far at sea, distinguishable miles away from their bright color. Forty years ago Mr. Stephens and Dr. Cabot had similar fortune to mine in this same locality, having been lured here from the port of Chum by the stories told them of the abundance of ibis and flamingoes, and having returned empty-handed. Then, as now, "Punta Arenas" was simply a station for fishermen, and had but a single hut. I perfectly agree with the distinguished traveler that, "for mere sporting, such a ground is not often seen, and the idea of a shooting lodge, or rather hut, on the shores of Punta Arenas for a few months in the season presented itself almost as attractively as that of exploring ruined cities."

COZUMEL, AND THE ISLA MUGRES.

STEPHENS was then on his way back from an extended exploration of the ruins of the island of Cozumel and the east coast of Yucatan, and perhaps, as this is the first point we shall reach in that direction, it will be well to interpolate a short description of that portion of Yucatan. The first point at which the Spaniards under Cordova landed upon the then unknown kingdom of Mexico was at its northeastern extremity, now called Cape Catoche. An Indian chief invited them ashore, saying "Coo-Escoteo," which signifies come to our bay, and it was from this that he gave it the name of Punta de Cotoche. It was determined by us to accept the invitation, says the old chronicler, observing the proper precaution of going all in a body, and by one embarkation, as we received the shore to be lined with Indians." They were attacked by these, the first acquaintances of the new country, and fifteen of the company wounded. "These warriors were armed with thick coats of cotton, and carried besides their bows and arrows, lances, shields and slings; they wore ornaments of feathers on their heads.

Near the place of this ambushade were the buildings of lime and stone, wherein were idols of clay, with distasteful countenances, and several wooden chests, which contained similar idols but smaller; some vessels, three dields, and some imitations of birds and fishes in alloyed gold. The buildings of lime and stone, and the gold, gave us a high idea of the country we had discovered. On our return to the shore we had the satisfaction to find, that while we were fighting with our companions on shore, the Indians had taken care of the chests and their contents, which he had, with the assistance of two Indians of Cuba, brought off safe to our ships. Having re-embarked, we proceeded as before, reaching to the westward." The island of Cozumel was discovered the next year, 1518, on the voyage of Grijalva, and for it Cortez set sail in 1516. "There was," says Bernal Diaz, "on the island of Cozumel a temple, and some hideous idols, to which all the Indians of the neighboring districts used to go frequently in solemn procession." These idols were of the same shape as those seen at Yucatan, and substituted the crucifix in their place, which the Indians finally consented to accept. Here they heard of two Spaniards of captivity among the Indians, one of whom they rescued and proved of great service afterward as an interpreter. North of the great island of Cozumel is Isla Mugres, about six miles from the coast, five or six miles in length by half a mile wide. Here some of the sailors of Cortez were taken on shore, and found in the town, hard by four temples, or idols, in which represented human (male) figures of large size, for which reason we named this place Punta de las Mugres." They thought the island a cape, or point, and called it Point of the Penasiles. When Stephens in 1842 did for Isla Mugres and Cozumel, in a superficial manner, the learned archeologist, Dr. Le Plongeon, has also done more thoroughly and satisfactorily. In a communication to Stephen Salisbury, Jr., of Worcester, in 1878, he gives a complete survey (the first) of the Isla Mugres, locating the ancient buildings, the shrine, or temple, and the altar. The valuable discovery by the Doctor was made there of a terra cotta female figure, which formed the front of a "brasero," or incense burner. It was of excellent workmanship, and valuable, not only from this fact, but owing to the extreme rarity of works of ceramic art in and near the peninsula of Yucatan. The Doctor's description of Mugres is so delightful that I cannot resist quoting it, especially as the book in which it is embodied not accessible to the general reader. "The village of Dolores built on the beach of the pretty little bay, where the fleet of fishing snags from Havana, as the pirates of old, had a sure shelter from the violence of the stormy northers that dash the waves against the iron-bound shores of the eastern side of the inlet, producing a terrific and deafening noise. The houses are snugly ensconced in a thick grove of cocoa trees, whose evergreen foliage shields them from the scorching rays of the tropical sun. Three streets run north and south, the principal street, the middle one, half a mile in length, covered with deep sand, as are all the others, leads in a straight line to the necropolis. The dwellings, with but very few exceptions, are mere thatched huts. The walls are made of palisades of trunks of palmetto trees. They are stacked inside and out and then whitewashed. Among the five hundred houses of which the village is composed, a dozen may have their walls of stone and mortar, but all are covered with the leaves of the palmetto trees. Each hut is separated from the next by a courtyard. In some the owners, with great patience and labor, try to cultivate in the sandy soil a few rose bushes and other flowers of stately appearance, of which they are very proud. The interior of the houses is the same for the rich as for the poor, consisting of a large single room, which serves during the day as parlor and reception room. It is converted at night into a common sleeping apartment by hanging hammocks from the rafters which support the roof. Oftentimes an old sail, hung across the room, divides it into two apartments, and serves in lieu of a curtain. The articles of furniture are few and old (fashioned—some wooden chairs and tables, supported on pedestals to isolate them from the damp floors of 'huetun' (lay for concrete) and the shining of 'patoates,' containing the wooden statuette of the patron saint of the family, before which is constantly burning a small lamp. A coarse hammock or two, together with 8-ling nets, ours,

See also Proceedings of the American Antiquarian Society, for 1878 article entitled "Terra Cotta Figure from Isla Mugres."

masts, sails, and divers other tackle, complete the list, not forgetting a few cheap colored lithographs of the Virgin Mary, and some saint or other.

"The inhabitants are, as a general thing, a fine set of people. The men, mostly of Indian race, speaking among themselves the Maya language, are sinewy and athletic. The women, of Mexican height, are handsome, graceful, not over shy and rather starchy.

"I carefully surveyed the ruins and made photographs of the 'temple,' which shows that it has suffered from the hand of time since the visit of Stephens. He, however, locates it at the south end of the island, while Stephens erroneously places it at the north. The building is twenty-eight feet long and fifteen deep, of stone. The interior is divided into two corridors, the ceiling has the triangular arch, and according to both Le Plougeon and Stephens, it gives evidence of being the work of the builders of the main land. Portions of the structure have been used for building purposes, but to-day, says the doctor, the people obtain stone from a large ruined city on the main land opposite Mngeres, where they go with fear and trembling, lest they should meet with Indians from Tulum and be made prisoners.

"A very happy confirmation of the statement of Diaz that these people burned incense was made here. "Desiring to varnish the negatives, in order to carry them safely home, I put some live coals in the bottom of the incense burner, and entered the shrine to be protected from the wind, when I saw a slight puff arose from among the coals, and a sweet and delicious perfume filled again the antique shrine as in the days of its splendor, when the devotees and pilgrims from afar used to make their offerings and burn the mixture, carefully prepared, of styrax, copal, and other aromatic resins on the altar of the goddess." The northern and eastern shores, especially the latter, are dotted with ruins, a cordon of ruined villages, cities, temples and palaces is drawn along the coast. "None more interesting has been described than the City of Tulum, which Stephens identifies, with much show of reason in his support, with the great city of Tulum and stone seen by his first Spanish visitors. Here he found a grand 'castle' and extensive buildings, some with roofs of beams still supporting a crust of mortar. Buried in a dense forest he found sculptured stones, altars, watch-towers, paintings, stucco work and a beautiful style of architecture.

"The whole northeastern portion of Yucatan is a wilderness, a section of country that was once teeming with people and full of populous cities. It is almost unknown and it is to-day not important, as Stephens identifies, within this secluded region may exist, unknown to white men, a thriving, aboriginal city, occupied by relics of the original race, who still worship in the temples of their fathers."

"From this long detour to the north, let us return once more to Puntas Arenas, where I left my friend Alonzo ready to renew the search for flamingoes. He was determined to find some and to put me within gunshot of them, even if we had to go to the Rio Lagartes, fifteen leagues away, for he had promised the Consul he would. But I was determined to leave for Yilan and civilization, as by another day's delay I might miss the steamer down the coast and be hindered another week before I could return to Yilan. Finding me obstinate, he yielded gracefully, and to his already numerous favors added the crowning one that I should take his horse to ride, while he returned to the rancho. Then he embraced me and patted me on the back, commended me to the old Indian who had been our guide, and started on his walk of three leagues to the rancho, while I turned his horse's head westward and we parted to meet no more. My guide, a withered and wrinkled old man, mounted astride a little stallion, between two packs, and his legs hanging down by the sides of the neck, led the horse, which I found to be a good one, but this was an ill-starred trip, for we had not been ten minutes on the trail before my horse got stuck in soft mud of the shore and rearing up fell over on me, pinning one leg in the soft ooze. How I escaped from the wildly floundering animal is something I do not understand to this day, but I remember scrambling over the mud like a crab, on hands and knees, and afterward picking up cartridges, silver and a broken watch chain, while my guide captured the horse. As he being scared, I again mounted, experiencing much trouble after this, for the horse, much fatigued by his sojourn, started and fell to trembling at every soft place in the sand. At the frequent sloughs I was obliged to dismount and pound the horse with the branch of a tree from behind, while the old Indian dragged him ahead from in front. There were two long leagues of this kind of traveling and we were much rejoiced when some straggling huts announced the approach to the seaport of Yilan. A large portion of the way was through a mangrove forest, where I had good opportunities for shooting birds, but I was so fatigued that I sent out and down its aerial shoots for a foothold in the water and a friendly border of the sea, and the entire absence of such shoots and lateral supports back a little distance on firm land. At the Puerta—a collection of thatched houses and a half-completed church—we sought for breakfast, and seeing a nice-looking girl in a doorway I asked if we could get it there. She said, yes, and gave me some tortillas and frijoles, but the table was guiltless of plate, knife or spoon, though it was clean. After breakfast I reclined in a hammock in an inner room, while the young girl swung in another a few feet distant, with a plump babe of a year or so on her back. She was hardly fourteen, large and finely formed, with lovely oval face and large dark eyes. She looked so young and childlike, despite her maturity and maternity, that I could hardly believe her the mother of such a bouncing child, and asked if it were really hers. "Si, señor," she answered, slowly raising the lashes from her beautiful eyes, "es mio."—It is mine—and she added with a charming frankness that was new to me, and yours too," had intended saying something new in Spanish before she gave me this answer, but such an excess of politeness as an offer of joint paternity in a child I had never seen before that hour, fairly overwheeled me, and I silently withdrew, settled my bill, mounted and rode away. The two leagues between the port and Yilan proved more soon gone over, and I slept that night in the "casa" of Don Juan "el Viejo"—of Mr. John, the old man. "Manyaná temprano," was the order I gave my Indian for the morrow, and for a wonder he appeared at daylight. We were delayed for about half at the "tienda" of Don Juan, the younger, who, while I sipped the drink and ate my "pan dulce," or sweet bread, played for me on the guitar.

"It rained at intervals as we rode toward Timax, but the air was pure and sweet with the odors of flowers, and the many birds in the thickets enlivened our journey, so that we arrived at our destination without fatigue. I was in season to go the rounds with the doctor among his patients of the village, and was pleased to find that he had lost but three

during my absence, and had only two in a critical condition. One man, who had been expected to die of a prostrated drink, the Doctor had physicked in vain, and this morning had mixed up some powerful calomel pills, quietly remarking, "If these don't do the business that Indian will land in his checks before noon." They did not kill him, and my friend thereby added another laurel to his wreath, and had another opportunity to extend his fame as a *medico*. I could not help reciting those classic lines of the poet:

They prepared some pills of hydrargyrum
And their patient yielded to the golden cone.

"The last day of my stay the Doctor naturalist arranged for a grand "poor" or turkey hunt, and early in the morning, after giving his patients some quieting medicines, we galloped out to a rancho, ten leagues distant. It was almost entirely abandoned, being solely in charge of Indians. The mayord or head man had on, like all the rest, simply a breech-cloth, hat and sandals, and carried a machete of great knife. His skin was hard, brown and polished. These poor people had nothing to eat except roots from the woods and what they could kill. The corn crop of this year had failed, and half the population of Eastern Yucatan were subsisting on roots, small game, lizards and snakes. Speculators had got control of American corn, though every steamer was bringing vast quantities to Yucatan, and many people were starving in consequence. We wait an hour under a large *ciebro* tree—a silk cotton—while an Indian knocks down some coconuts, and brings us paw-paw fruits as large as pumpkins, which taste like milk musk melons. Then we are taken across a large *milpa* or field, in the blazing sun, and posted in a wood, while our Indians range about to beat up the game. In the dry dead woods, which in this dry season much resemble our Northern woods in autumn, we waited for hours. My only visitors were a brown and golden humming-bird, a chachalka and some inquisitive blue jays; but the Doctor got a shot at a flying gobbler, which escaped, and that ended the hunt. We walked back to the rancho in the heat, covered with garzapatas or ticks, that are so small as to be hardly visible, yet bite like red ants. In the evening we strolled through the town, seeing many pretty faces, as at that time the ladies appear and sit in their doorways and chat and smoke.

"The next morning the Indians brought in three turkeys, the result of our inciting them to hunt for them, and among them was one fine old gobbler, whose plumage was resplendent with sheen of polished copper and gold, who had two buckshot through the lungs. This was undoubtedly the one the Doctor shot, and which the wild Indians had traced out after our departure. This magnificent bird, representing the finest of his race, the Doctor presented to me as a souvenir of the occasion, and his assistant aided me in skinning and preserving him. Small game, lizards and snakes, and ocellated turkeys, having killed and bugged over one hundred. All were shipped to Paris, to a large dealer in bird skins, who supplied the museums of Europe. Never before had so many been sent to the museums, and even now there are not a dozen in the United States. Since my departure the Doctor has returned to his home in the North. If he can be prevailed upon to prepare his adventures for publication, the record of his three years' sojourn in the solitary forests of Yucatan, the world will be delighted with the richest mine of forest and aboriginal lore ever opened to the public.

"The *correo*, or mail coach, left at two in the afternoon for Merida, with myself and two Yucatecos as passengers. In learning that they were Yucatecos we naturally inferred that they were gentlemen, as they were, and that they would linger at every possible point on the road, which they did, first at "Acah," where there had been a bull-fight—a "toro"—and then at a dance. We reached the town-house of the General at nine in the morning, stayed with him an hour or two, and parted with him with an affectionate embrace, and arrived at Motul at dark. Here my companions ordered supper, refusing to let me pay for it or share in the expense, saying that I was a stranger and their companion, and that it was their duty to see me through. It is the custom here, before eating or drinking, to offer what you have before you to the people about and they thank you, but don't accept.

"We changed rooms at Motul and galloped nearly the whole distance to Merida, stopping at Merida and soon to the catch our limbs and smoke. As there were four of us, including the driver, the "volan" was full. There was no room for reclining, and we were cramped in unnatural positions throughout the long twenty leagues. It was one o'clock in the morning, by the dim light of a waning moon, that we entered the silent suburbs of the capital, and waked the echoes of the silent streets by driving furiously to the plaza.

ONER.

MY FIRST ROGUE ELEPHANT.

DINBLED, Ceylon, 16th Nov., 1881.

I SUPPOSE that long since you have given me up and I have fully made up your mind that my oft repeated promises to write to you and give you a full, true and particular account of men, animals and things in general in this far away isle was never going to be fulfilled. Well, I plead guilty of delay, but better late than never, and I'll promise faithfully to make up for lost time and tell you exactly how we live and "how it's done." "One touch of nature makes the whole world kin." So from the East I will touch you up in something I know is common to us both—viz, the love of the sport, and try and relate briefly and succinctly my most interesting and high from here and the price of coffee is low how I had that never-to-be-forgotten joy of shooting my first elephant.

"It is early morning. The pale light just beginning to show itself eager to throw off the dark mantle from the land and expose all its loveliness. Brighter and brighter it grows. The delicious cool breeze is wafted through the jungle and over the small strip of patna (or open ground), on which we were encamped—laden with all the "spicy aroma" of Ceylon's Isle, as Bishop Heber sings, but where he carefully adds, "only man is the more morning grows still brighter, that faint 'shimmer' of the atmosphere, which betokens, however cool the morning, a day of intense heat, warns us all that it is time to be on the track of that old rogue that we have been following up so assiduously for the last two days.

"The jungle cocks have done crowing. The tent is struck and safely packed in the bullock cart; and Appahuni, our Cingalese servant—a man tall and gaunt, but singular to say, not cadaverous looking; on the other hand, like all Cingalese,

he has the appearance "as to" a certain part of his body of a well fed elderman—has received his last orders "to be sure and be ready by ten at latest, at that strip of patna behind the village; and that if he is not there he will get the 'snack,' as sure as his name is Appahuni." "Suah, suah! certain I be there; master hungry; master want breakfast! Why I be there by ten. All the same it is odds on Appahuni not being there by ten to-day. But, suah, if you come on Mr. Rogue it is equal odds on our not being there.

"Now, Jack, have you got that rill: all right to-day? You know it was all that beastly carriage that made us lose the foot yesterday; and if we don't get him to-day, I'll be hanged if I'm going to tramp after him any more, but go in for small game. Much better fun."

"All right," replied Jack, "there is no fault with the old gun to-day; but as you couldn't hit a haystack at a yard, I don't exactly see what it matters to you."

"All the same, mon and jaks, as I happen to be the one that is to have the honor of carrying, and I hope firing with the said gun, and as elephants, and especially this old boy are rather apt to charge sometimes, and, moreover, as I happen to be at the present moment in the possession of good health and very full of life, I don't see why I should not be a 'leete partikler' about this 'ere shot-gun, do you?" "Oh dry up, and let's get along," was the rude remark to my very natural appeal.

"Now, Monsieur, lead on. Strike right over there and hit that bit of jungle at the corner, and I'll go over here, while you, Jack, take the centre and meet at the big rock, and *coo-ee* if you hit the trail."

"Off we started, each to our several points, with the gun bearers bringing up the rear, each bearer with a spare gun and ammunition, we going like human sleuth hounds, eagerly looking out for tracks. Soon we were in the jungle. Dense masses of undergrowth and creepers, thick as a man's wrist on either side—undergrowth so thick that if you went off the road, it would take a sharp cut out through it, and even with a knife one could hardly make one's progress in a day than the crew of an abandoned ship are said to make in the Arctic regions. The jungle is teeming with life. "Twitter, twitter, twitter," right and left, above, and, I was going to say, below, and I don't think I would be exaggerating if I did add it. No matter, however, tempting though—no matter if the graceful "cock" comes with a "whirr!" over your head and you get a chance of a shot that makes your fingers itch to pull the trigger—you mustn't fire if you are after big game, not Monsieur Rogue. Elephant is just as cute as you can make him. It is really marvellous how such an enormous beast as his Lordship is can keep himself so quiet and be so hard to find. I have known an elephant to come right down through a coffee plantation where the trees are planted about five by four, and be being so minded has hardly broken a single branch. But, let my gentleman be in a different mood and woe-betide the place he has set his elephantine mind on destroying. There won't be much of that crop to assess on.

"Presently a long *coo-ee* was sounded to my right, and pressing on I soon found myself at the edge of the jungle we had been passing through—a strip of patna before me, and Jack just beginning to give another vigorous *coo-ee*!—on my right. "Don't make such an infernal roar, you idiot. You would frighten any elephant within ten miles." "He's here! He's here!" said Jack, jumping like a maniac, and indicating a small island of jungle just in front and surrounded on all sides by patna; "I saw him just going in. Heavy foot on the trail, it is no doubt of it now. There they were with the ground hardly yet recovered from the pressure of the huge carcass. In fact, as we looked, one little sprig of grass slowly raised itself and once more renewed its life.

"Now, Jack, he's there sure enough, and it is your turn for first shot. He won't turn on his tracks, so you whip round to the other side with your gun bearer, and I and the rest will beat through here. But, mind you, *coo-ee* loud, if you miss him, for then he is sure to turn, and I must look out."

"Here let me explain that the great difficulty and danger in shooting a rogue elephant, or, in fact, any elephant, lies in this: that there is only one really vital spot in the body of the Ceylon elephant, and that is just above the trunk. It is about seven inches in circumference, and I believe you might discharge a mitrailleuse into other parts of his body without doing any further harm than perhaps giving him an attack of indigestion. When an elephant charges, he raises his trunk to the position of this vital spot, and it is just above the trunk that is about fifteen to twenty yards off, he lowers his trunk and head simultaneously and comes straight at you. This is your time; and woe betide you if you miss and are not quick on your legs. If you have a quick and steady bearer, you may have a chance of a second shot, but it is only a chance, and it is odds on the bearer having bolted before you have fired your first shot.

"But to resume, Jack had hardly got round to the other side, and I had not yet begun to beat when I heard a shot. A loud *coo-ee*, followed by something that sounded like "Look out for yourself," proclaimed that Master Jack had missed; and that the man "that couldn't hit a haystack at a yard" ran a pretty good chance of killing his first elephant, or his first elephant killing him, a case of paying your money, etc.

"Soon I heard a crash a little to the left of me, and I quickly retreated further from the jungle, and placed myself, with my hands behind me, opposite to where I heard the crashing of the bushes. A deadly silence followed—not a sound. A white man, standing like a statue, with the butt of a heavy elephant rifle at his hip ready to present, and a bronze statue behind with a rifle in his hands, eagerly bending toward the white statue—patna around—the brilliantly green jungle in front—and, above, the clear blue sky. I remember thinking this at the time, and what a good photograph it would make; and all the time I was, to tell the truth, in a mortal "funk." "Not that I thought of 'bolting,' for my nerves were so braced up that I don't think I could have run if I had tried, but I had a sort of feeling that I would not be angry with M. Le Rogue if he went another way. In less time than I have taken to write this there was another crunch! crunch! crash! of the jungle, this time on the right, followed by a trumpet loud enough to wake the dead, and out came the huge brute and made right at me, his trunk waving in the air, and a hoogh, hoogh! coming out of his open mouth. On he came, and just as he was about to reach my feet, he was checked by the trunk of my rifle to the "present." One glance along the shining barrel, a strong pull on the trigger, and what was two seconds before an infuriated "roque," by whose side, in point of height, Capt. Bates would have looked a pigmy, now came with a run to the ground, and lay a huge inanimate mass at my feet,

* This turkey is now in the museum of Wheaton Seminary, North, Massachusetts.

Alas for Casar! I am not ashamed to say that when I did see him tumble the high-strung nerves of the bold hunter gave way, and that it was not until Jack came round and we had loaded him in some good "Scott" that I had the power to join Jack in his way dance round the slain.

After that all went to work with a will to cut off his head in order to preserve his skull and his tail, which went to use as the trophy, and his feet to be made into footstools, with polished ivory toes or liquer stands. I have eaten elephants' feet, but take warning by my experience, and when you have the chance, don't. Dreams! Why, sir—but I can't detail them all, only this, if you want to know what it is to fall over a precipice, to be murdered yourself, or be hung for murdering some one else, trial, judge, black cap and all thrown in, then eat elephants' feet—well-baked and with some native pudding to follow.

It may appear cruel to shoot such a noble animal as the elephant, so docile and sagacious as he is in captivity, but one must remember that only "rogues" are liable to be shot, and that all others are strictly preserved by the Ceylon Government, who capture and tame them, and then utilize them in the Department of Public Works, where their sagacity in moving and placing in position huge blocks of stone is simply marvellous and must be seen to be believed. A "rogue," I may here explain, is an elephant which, from some cause or other, has been ostracized by the rest of the herd and wanders about by himself. He is the terror of a native village and does an incredible amount of damage to their crops, so his removal is as much to be desired as it is that of the man-eating tiger.

And now all our operations are ended. The sun is beginning to beat down with its full strength on our devoted heads. We send a boy up a coconut tree to send down a fresh, cool nut full of delicious milk, and, after one more toast, we return to camp to breakfast, and in the after "snooze" I dream of again shooting my first elephant.

SHUKARRE.

Natural History.

BIRDS OBSERVED IN CENTRAL DAKOTA.

DURING THE SUMMER OF 1881.

BY W. L. ABBOTT.

1206 CHESTNUT STREET,
Philadelphia, Dec. 29, 1881.

THE following is a list of birds taken on a trip through central Dakota, during the past summer, by Jos. C. Krider and the writer. We arrived at Huron, on the Dakota River, July 15, and remaining there about a week, started out with a team on a trip to the Missouri River, through the region known as the *Coteau des Missouris*. First stopping at the Westington Hills, twenty-five miles west of Huron, we traveled north and west for about one hundred and twenty miles to the Bourbeuse River. From there we went westward until we reached the Missouri, at a point about ten miles south of Grand River Agency. Thence we kept southward along the Missouri, past Fort Sully to Siding No. 8, on the Dakota Central Railroad. Then, following the railroad line back, we reached Huron, August 9. The whole journey occupied sixteen days, much of it through country as fertile as the desert of Sahara. We saw a few traces of deer and antelope, but none very fresh, and did not see a mammal larger than a prairie dog on our whole trip. Back from the Missouri and north of the railroad (Dakota Central) water was scarce, and the country generally very barren. In some places there was nothing to be seen for miles except bare, gravelly hills, without a blade of grass. In the absence of larger game we lived mostly upon upland plover and sandpipers, the first of which were generally very abundant.

1. *Harpophycus rufus*—Thrasner. A few met with near the Missouri, above Fort Sully.
2. *Sitta canadensis*—Red-bellied nuthatch. We noticed a single individual of this species fifteen miles west of Huron, many miles from timber; it was running up and down the sides of a railroad cut, apparently perfectly at home.
3. *Troglodytes aedon parkmanni*—Western house wren. Common in the Westington Hills, twenty-five miles southwest of Huron.

4. *Colistrotus stellaris*—Short-billed marsh wren. Taken at Huron and in Hand county.

5. *Neocerys spraguei*—Thrasner sky lark. Generally common in the hard soil when on the ground, so that we took very few specimens. Their song could be heard in almost any place, however barren, especially in the mornings, the bird itself being scarcely visible as a tiny speck in the sky. The song does not seem to me to be inferior to that of the European sky lark, the only objection to it being its briefness.

6. *Dendroica aestiva*—Summer yellow bird. Common in the Westington Hills.
7. *Lanius ludovicianus excubitorides*—White-rumped shrike. Quite common near Turtle Creek Siding, on the railroad (Dakota Central).

8. *Petrochelidon lunifrons*—Eave swallow. There was a large colony under the eaves of the round-house at Huron, and we found them throughout our route, often in places that were many miles from cliffs or anything else that could afford them nesting places.

9. *Hirundo erythrogastra*—Barn swallow. Common along the Missouri.

10. *Ottila riparia*—Bank swallow. A number met with about twenty miles southeast of Grand River Agency.

11. *Empidonax virens*—Rough-winged swallow. A few noticed at same place with last.

12. *Centropus ornatus*—Chestnut-collared bunting. One of the commonest birds, and abundant in the most barren localities; and of the specimens were in extremely worn and bad plumage.

13. *Centropus bairdi*—Baird's bunting. Very common everywhere, excepting in the neighborhood of the Missouri. We did not see any within twenty or thirty miles of this river. The specimens were mostly in fresh and good plumage.

14. *Pooecetes gramineus confinis*—Western bay winged bunting. Common at Huron.

15. *Coturniculus passerinus*—Yellow-winged sparrow. Very common at Huron and along the railroad line.

16. *Chondestes grammacus*—Lark finch. A flock met with fifty miles north of Fort Sully.

17. *Zonotrichia querula*—Harris finch. A male seen at Turtle Creek.

18. *Spyella pallida*—Clay-colored sparrow. Common near the railroad.

19. *Melospiza fasciata*—Song sparrow. Common in the bushes by the Dsk to River and near the Missouri.

20. *Passerina amoena*—Lazuli finch. A male taken near Swan Lake, Missouri River.

21. *Sylvia americana*—Black-throated hunting. Common wherever a few tall weeds were to be found on the prairie.

22. *Calamospiza bicolor*—Lark hunting. Very common everywhere. The males had nearly all lost their black breeding plumage by the first week in August. They were shy near Huron for some cause, but we found them nearly always quite tame in other places.

23. *Dolichonyx oryzivorus*—Bobolink. Everywhere abundant.

24. *Molothrus ater*—Cowbird. Common and extremely tame, coming about the camp within a few feet of us to forage for crumbs and scraps.

25. *Spizella monticola*—Yellow-headed blackbird. Common in many places along our route.

26. *Agelaius phoeniceus*—Red-shouldered blackbird. Common.

27. *Sturnella neglecta*—Western meadow lark. Very abundant.

28. *Icterus spurius*—Orchard oriole. A few seen by the Dakota River.

29. *Bascocephalus cyanocephalus*—Brewer's blackbird. Common about Fort Sully, and near the line of railroad we met with vast flocks of blackbirds of which this species formed the majority.

30. *Corvus corax carolinensis*—American raven. One seen near Huron.

31. *Corvus frugivorus*—Crow. We saw a few at the mouth of the Okaloja Creek, Missouri River.

32. *Ereophila alpestris leucolama*—Shore lark. Generally common. I think all the shore larks we met with belonged to this pale colored form.

33. *Tyrannus carolinensis*—Kingbird. Not so common as next.

34. *T. verticalis*—Arkansas flycatcher. Very common. Wherever there were a few trees or bushes to be found, this species was sure to be present. At Huron they were not so common as the kingbird.

35. *Empidonax pusillus trillii* (?)—Traill's flycatcher. A flycatcher which apparently belonged to this species was seen in the Westington Hills.

36. *E. leuciventer*—Yellow-bellied flycatcher. A single specimen taken thirty miles southeast of Grand River Agency.

37. *Chlorodites populi heryi*—Western night hawk. Very common everywhere.

38. *Melanerpes cyaneus*—Red-headed woodpecker. Common along the Missouri, near Swan Lake.

39. *Colaptes auratus*—Plicker. Not very numerous; obtained a male at Swan Lake that had the red cheek patches of *C. mexicanus*. Other specimens, some from Northern Iowa, show red feathers in greater or less amount in their cheek patches.

40. *Ceryle alcyon*—Kingfisher. A female shot on Turtle Creek.

41. *Coccyzus erythrophthalmus*—Black-billed cuckoo. Met with in the Westington Hills.

42. *Spizella socialis hypogaea*—Burrowing owl. We met with a small colony near the mouth of the Little Cheyenne, and a large one in a very large dog town on Medicine Creek. They were very shy and hard to shoot.

43. *Hierofalco mexicanus polygynus*—Prairie falcon. Very numerous along the line of the railroad about August 10.

44. *Troglodytes sparverius*—Sparrowhawk. Common near the Missouri, less so near the railroad.

45. *Circus hudsonius*—Marsh hawk. The commonest hawk.

46. *Buteo borealis*—Red-tailed hawk. Common.

47. *B. borealis calurus*—Western red-tail. Several hawks of this variety met with about fifty miles southeast of Grand River Agency.

48. *B. swainsoni*—Swainson's Buzzard. A female taken on Medicine Creek.

49. *Archibuteo lagopus sancti-johannis*—American rough-legged hawk. A female shot on Medicine Creek.

50. *Cathartes aura*—Turkey buzzard. Several seen at Huron.

51. *Ectopistes migratoria*—Wild pigeon. One seen in the Westington Hills.

52. *Zenaidura macroura*—Carolina dove. Numerous along the Missouri and near Medicine Creek, and in places many miles from timber.

53. *Pipilo fuscus columbianus*—Sharp-tailed grouse. Said to be common along the Missouri and at Huron, but we only met with one specimen.

54. *Botaurus lentiginosus*—Bittern. One seen at Huron.

55. *Nycticorax nycticorax*—Night heron. Several seen near Huron.

56. *Oxyechus vociferus*—Killdeer. Common.

57. *Gallinago media wilsoni*—Wilson's snipe. Several met with thirty miles west of Huron.

58. *Mareca americana grisea*—Bay-breasted snipe. Common near the railroad.

59. *Actropalana himantopus*—Stilt sandpiper. One specimen taken.

60. *Actropalana maculata*—Jack snipe. Common.

61. *A. minutilla*—Least sandpiper. On August 7, thirty miles west of Huron, we fell in with vast flocks of sandpipers of many species, this being the most numerous. All kinds were very fat and unfit for specimens.

62. *Limosa fedoa*—Marlin—Several taken forty miles southeast of Grand River Agency.

63. *Totanus melanocollis*—Greater yellow legs. Common.

64. *T. flavipes*—Lesser yellow legs. Very common.

65. *Symphyla semipalmata*—Willet. Less common than either of the last two species.

66. *Rhyacophilus solitarius*—Solitary sandpiper. Rather common.

67. *Bartramia longicauda*—Upland plover. Abundant everywhere.

68. *Tringoides rufescens*—Buff-breasted sandpiper. We met with one flock near the mouth of the Little Cheyenne.

69. *Tringoides macularius*—Spotted sandpiper. Not common.

70. *Nunentius longirostris*—Sickle-billed curlew. We met with large numbers about thirty miles southeast of Grand River, in company with flocks of marlin and willet; they were mostly young birds, and extremely tame and unsuspicious.

71. *Steganopus Wilsoni*—Wilson's phalarope. Met with once in a slough in Walthworth county.

72. *Sororia carolinensis*—Sora rail. Common in all the sloughs about Huron.

73. *P. noveboracensis*—Yellow rail. One met with in Walthworth county.

74. *Bernicla canadensis* (?)—Canada goose. A flock of

geese that seemed to be of this species were seen forty miles west of Huron.

75. *Anas boschas*—Mallard. Generally common.

76. *Querquedula discors*—Blue-winged teal. Common.

77. *Lopholytes cucullatus*—Hooded merganser. Two young ones seen west of Huron.

78. *Pelecanus erythrorhynchos*—White pelican. Three seen in a slough in Walthworth county.

79. *Larus* (sp. ?)—We saw a flock of gulls on a sand bar in the Missouri River, but were unable to determine the species.

80. *Sterna forsteri* (?)—Forster's tern. A tern that was probably this species was seen flying over Medicine Creek.

81. *Podilymbus podiceps*—Carolina grebe. Rather common.

THE RED SQUIRREL.

A WELL-KNOWN inhabitant of our "forest primeval" is the red squirrel or chickaree (*Solarius leucostictus*). In those parts where the spruce and pine clothe the country for miles around, it is especially numerous, and may be seen jumping from bough to bough, stopping meanwhile to nibble at the cones and scatter their parts over the ground beneath. A merry, sociable little fellow he is, too, loving to come near the farmer's house, and even to the very door; how running with a nut in his mouth along the walk, then suddenly surprised by the opening of a door, scurrying off to the nearest tree and quickly appearing at the summit.

Let the frost be ever so severe, and the snow storm rage in all its fury, our little friend takes his daily rounds in search of something wherewith to please his appetite. It may be a nut, or tasty fungus, or a pine cone, it matters little which, he quietly takes his seat in some cozy nook—generally in the angle formed by the junction of a bough with the trunk. Here, with his back pushed up against the sheltering tree, and tail held like an umbrella above his head, the red squirrel munches away, heedless of the gale which roars through the forest. He is a fearless and confident creature, for often and often have I tried to get as close as possible to one when thus occupied, and sometimes have succeeded in getting my face within two or three feet of his, and as long as I remained quiet he would continue his repast, as if aware that the eye of one who would not willingly injure was upon him.

In summer time the red squirrel makes a nest in some convenient spot—the hollow of a tree, or outside on the bench. In the latter situation it is made of a rounded form of sticks, with a small hole for entrance at the side. I have also known one to rear its family of six young ones in an old nail box, left on a beam in a barn a little distance from the house.

This squirrel will sometimes change its usual color to black, and skins of this color are sometimes sent from Labrador.

I find it much more numerous some years than others, and can account for this by stating that it occasionally migrates from one district to another. During sunny days in early spring these squirrels, amorously inclined, chase each other from tree to tree, uttering a peculiar screaming noise while in pursuit.

A more cleanly little creature could scarce be found, and well would it be if the dirty, swarthy Indian who traverses these never-ending forests would take a lesson of neatness from this humble denizen of our northern woods.

MATTHEW JOSIAS.

Fern Lodge, Waterville Station, N. B.

THE ENEMIES OF GAME BIRDS.

FARMINGTON, Vt., Dec. 31, 1881.

Editor Forest and Stream:
Mr. Bishop's novel theory of the disappearance of ruffed grouse will certainly not hold for this region, for red squirrels are no plentier here than they were thirty years ago. They are not "as thick as house flies," nor is there "one to every square rod of woodland," yet, for some cause, our grouse seem doomed to destruction.

The decrease in their numbers is very noticeable this year, for many times since the last of October I have ranged through miles of woodland while fox hunting without flushing more than two or three in a day's tramp, whereas ten years ago I should not have thought it remarkable to have flushed thirty. Four years ago, after several seasons of scarcity, they suddenly became quite plenty, and this greatly strengthened my belief in their partial migration. But now it seems as if I must give this up—which I am exceedingly loth to do, as it is like giving up the grouse—for "Vernie Moore" tells us that he has been to the back-towers where they were reputed plenty and found them even scarcer than about Rutland. It looks as if the tick must be the villain who is murdering our grouse, and if so, how is he to be circumvented? If he is the same fellow that infest owls and hawks, may it not be that the scarcity of his old victims has driven him to getting his living off the grouse? Not an unpleasant change for him, one would think, but very bad for the grouse and for us.

"Canada" finds only one female in a score of twenty-one killed in November. The nesting bird is, of course, most likely to fall a victim to the prowling fox, the owl and the hawk, and very likely the tick would take kindness to a quiet bird, but this will not account for the lack of females in this year's broods. Will "Canada" please tell us whether there were more old birds than young among those he killed? This grouse question is a puzzling one, and if we find that our theories will not hold when discussed we must give them up. Mr. Bishop dislikes to give up his—as I do mine. I would like to believe that chick was correct, for the squirrels might be exterminated and the grouse might come back to the old haunts, where cover and food in plenty await their return; but alas and alas, if it is the tick. I do not see the nonsense of thinking squirrels destroy tree-nesting birds much more than ground-nesting ones. Which are the most conspicuous? And where do red squirrels mostly keep, on the trees or on the ground? Compare the number of robins' nests, black-birds', vireos', hairbirds' and other common tree-nesting birds' nests you have found with those of the bobolink and the meadow lark both found in the open fields, with nothing but the oven grass to hide them. The squirrel does not stand so good a chance as a man does of finding a ground nest; a much better one of finding and getting at a nest built in a tree.

R. E. ROBINSON.

NEW YORK, Dec. 29, 1881.

Editor Forest and Stream:

The decrease of our game birds seems to be meeting with considerable attention in your columns, and it is well that it is so. This matter cannot be discussed too much. Allow me

to quote a few lines from a letter just received in connection with this subject. The letter is from Fishkill, N. Y., and dated Dec. 27: "Something is playing the mischief with game birds about here. Early in the fall there were a good many quail and grouse—more, in fact, than for four or five years before—but all at once they were gone. A number were found dead in the fields and forests, but I have not been able to account for it, as I have only seen one with any mark on it, and that looked as if a weasel had killed it. It was a grouse and in fine condition, with no ticks or flies on it."

My friend goes on to say that hawks are unusually numerous and this, I think, is the reason of the disappearance of the birds. When we think of the many enemies our game birds have, as enumerated in your many letters, it is a wonder that any live over. In the first place, there are the hawks and owls, always on the watch from one year's end to the other. A pair of hawks will stick to a bevy of quail day after day, and if not disturbed, will use up a bevy, sometimes, to the last bird. Then there are the weasels, minks, skunks, cats, crows, foxes, etc., all of which are on the alert for quail and grouse from the year through—say nothing of the constantly increasing number of pothunters, armed with the deadly choke-bore breech-loader, and all this destruction is assisted by pot-hunters, nets, traps and severe winters. Plies and disease I have left out of the question.

Now, when you think of all the poor birds have to contend against, no wonder they constantly diminish while their enemies constantly increase. If every sportsman would do his share toward protecting, restocking and feeding game and killing vermin this might be remedied, but talk is cheap and will not help the birds much.

I have just returned from a shooting trip to Virginia and the quail are scarce there also. A hard winter and an immense number of hawks are the causes. Almost daily we found the hawks at work on a bevy of quail. W. HOLBERTON.

PROVIDENCE, R. I.—During my annual vacation for a short time in Vermont, in October, I found ruffed grouse in places where there were none last year; and since the red squirrel question came up it brings to my mind that in 1880 the rods were very plenty and the grouse very scarce; this year, more grouse and less rods. Sportsmen can draw their own conclusions. On Monday, October 24, I killed a ruffed grouse that had in its crop twenty-seven white oak acorns (*Quercus alba*), several rose grapes and one of the red partridge berries. Was not that rather a large meal? All the birds that I found, if they were not killed at the first flush, were invariably found in a tree at the end of first flight and afterwards. I think this a fashion with Vermont grouse. I join the call for a law to prevent the export of game.—J. H.

PSUDONYMS—Sing Sing, N. Y., Dec. 31, 1891.—Editor Forest and Stream: It has always surprised me that so many of your correspondents still persist in using a pseudonym *non de plume*, initials and the like, especially in matters relating to natural history. *Non de plume* may be tolerated in articles which are of no scientific value, but in natural history, where all facts should be endorsed by their writer, it is unfortunate that so many still adhere to the use of an assumed name. Many notes which would be of great value and interest, even to professional naturalists, have to be thrown aside as worthless, on account of their anonymous or pseudonymous character. The only reason that I can see why they are used is either from modesty or fear of ridicule on the part of the author. I can only say that writing a truth no one should be ashamed or fear ridicule for the simplest thought or original observation is an addition to our knowledge, and hence thankfully received. I was glad to see that Dr. C. Hart Merriam, in a footnote to one of his articles, commended their use.—A. K. FISHER, M. D.

WRIGHT OF GRAY SQUIRELS.—HENDERSON, N. Y., Jan. 3, 1893.—Editor Forest and Stream: I noticed in your issue of Dec. 26 "Will," your Virginia correspondent, asks for information concerning the weight of gray squirrels. I shot one this fall that weighed 28 ounces. It was a common gray squirrel, but extra large for this section. We often kill those that "Will" describes and call them a cross between the black and gray; they are generally quite large.—GRAY SQUIRREL.

Game Bag and Gun.

NOTES FROM WORCESTER, MASS.

Jan. 3, 1893.

Editor Forest and Stream: In almost the entire month of December the ground remained bare and the weather exceedingly mild and tempting to the sportsman. We have, in common with sportsmen all over the country, been wailing and lamenting the scarcity of partridges, at the same time relentlessly pursuing the few remaining ones, even up to the last hour of the last day in which shooting was legal, more partridges having been killed in December than in any other two months of the shooting season, and during the last few weeks a much larger number of them birds have been killed than in the early part of the season. We shall settle for this season's next year and it will hardly be becoming to lay it all to the partridge fly, ticks, red squirrels, etc. However, there are a few birds left, and if the "pest," whichever or whatever he be, will let them alone we shall have some birds next year. The woodcock flight commenced about Sept. 20th and continued much later than usual, a few stragglers being killed in this vicinity in December. Not so large bags were made as in seasons when the weather turns suddenly cold and the birds come with a rush, but those of us who keep a record of our shooting find that the footings on woodcock are fully up to the average. A good many quail lived over last winter, and during the summer seemed to be nesting well, but when the time for shooting arrived not many were to be found. A few good bags have been made, but they certainly cannot be said to have been plentiful. Worcester county is not good quail ground anyway, and when we make a business of quail shooting we must go either to Cap Cod or Connecticut.

The fox hunters are having a regular picnic. As a good many foxes have been killed since the list appeared in the FOREST AND STREAM a few weeks ago, I will give a revised list as it stood on Jan. 1. Our party are residents of Worcester, with the exception of Mr. J. M. White, who is the general proprietor of the Tourlettole House in the adjoining town of Millbury. The old veteran, Mr. N. S. Harrington, is now in his sixty-eighth year and likes the sport just as well as ever. Six years ago, while out fox-hunting, he fell and shot him-

self in the foot, necessitating amputation at the instep, and was obliged to lie by about a year, but "blood will tell," and as soon as his foot was well enough to allow it he was at it again, with all the old relish, and can now put in a good day's work at either bird or fox-hunting. He has proved himself "no slouch" this season, having already killed S. J. M. White and partner 19 John A. Slocomb 13, W. S. Perry 7, Horace Adams 7, E. T. Balcom 3, Henry Locke 3, A. B. F. Kinney 1, J. K. Thayer 1, E. H. Smith 1, L. Rand 2—a total of 65.

Now that the bird shooting season is over it begins to be lively at the club house on Friday afternoons. The team is now in practice for the match which is pending with the Marlborough Club, and which is to come off on our grounds on Jan. 13. The two clubs have already shot five matches, three of which have been won by the Worcester Club. The new rifle club is in a flourishing condition and hold their weekly shoots at the new range at Lovell's Grounds, where they have recently erected a cozy club house. They number about thirty members. K.

A VIRGINIA PHEASANT HUNT.

SOUTH WEST, Virginia, Jan. 2.

"RUFFED GROUSE" seems to have raised the "in-jin" in some of your correspondents in his denunciations of what he calls the "murder" of the king of game birds; and some of the goodnatured fellows are coming back at him with a friendly vim. Now, this ought not to be; because a moment's reflection will demonstrate that "Ruffed Grouse" sees the insufficiency of game protection laws, and wishes to inculcate the practice of shooting pheasants (as well as other birds) on the wing for their protection; and if he succeeds they will be effectually protected. But suppose a person does not just want to have his gun crack in a crazy manner all the time, but wants to broil (or stew if he likes better), this delicious bird, how then? I'm going to tell you, in confidence, how I proceeded to hunt the other day, and if it should leak out, pray let "Ruffed Grouse" restrain his wrath.

During the week of holidays, some beautiful days came for hunting pheasants; and I concluded a happy thought, excuse myself from my partner. Entering an office one morning, I said, "Henry, don't you think it a shame to have an old father as near as I have, and not spend a day or two during Christmas with him. I'll go and see the old gentleman, if I can be spared." "Certainly, I'd go," said he. "Soon gun and traps were ready. Horse saddled, and my little iron-works red setter whining, barking, tumbling and springing around my horse's head. Into the saddle I got, and a ride of seven miles, through a muddy road, brought me to the old gentleman's." "Hello, boy!" said he. "Tell the truth, did you come to see me or to hunt?" "Truth? well, both." After dinner the old gentleman says: "Up the branch yard, in the hollows, in the laurel, mountain tea and green briars, they say there is a gang of pheasants, but, son, I've grown too old now to hunt and walk with you in the rough. I will go up the path and get a tenant living near the grounds to show you." Up the path we go. A walk of a quarter mile brought us to the gap in the ridge—and down to this gap along the edge came a ravine, fenced on each side high by tall sandstone cliffs—on which grows the rough-barked birch, the fragrant and lithe hemlock and the dwarf ivy. Down the ravine comes the mountain branch, gurgling under occasional windows of ice, trickling over tiny falls; the ice tipped ferns touching the current and dancing to the little ripples—all inclosed with frequent groups of rank laurel. Say, you've seen all this kind; do you remember how your blood shot through your veins? How you could hardly suppress a yell!

I cannot wait until my father sends my guide, but up the ravine I start. My headstrong little dog is brought to heel. No listless sneaking behind with him, but he takes an oven chance by my side, half crouching, his feet hardly tipping the ground, tail straight, mouth half open, eyes only displaying excitement. Say he don't know as well as I do what I am after? My gun is cocked and at a position for quick work. Up the hollow we continue stealthily, when a stick snaps behind and I turn to greet my evening's companion. "Wait till he comes up, and hold your fire!" says he for a hearty shake, he hugs to his shoulder his squirrel rifle. The hummers of my gun are down. Just as we grasp hands, *whirr, whirr, whirr*, up flies a pheasant like a streak of lightning. I wheel. Just one lock has time to click. Bang! the vicious crack, round and round swings the bird and to the ground it comes. Rover don't understand whether it is down safe or not, so out of abundance of caution he runs up and puts his paw upon it. Now, under all the circumstances this was a fair victory shot.

After modestly, a shower of flattery from my companion, off we go again. Three hundred yards tramp, dog still at heel. "Look yonder! see that pheasant sitting by that tree," says my man. There it was, sure enough, looking precisely like the leaves, tail tucked, neck stretched. My gun comes up, and he lay "murdered" on the ground. We turn for home, and as we neared the old side of the farm, my companion told me that a brood of pheasants had, in the last year, been raised in a thicket near by. A notion from the brood he had, and he had gone to the spot. See how cautious. He gallops up to a log, puts his forefoot on it and looks around. Maybe he'll be laughed at for using his eyes as well as his nose. Presently he gets windward of the thicket and proceeds, not to quarter, but to go where his experience (or reason, perhaps), his taught him to believe a pheasant is apt to be. We truce upon the ground and watch his movements by keeping under the boughs of the brush. There he stands, his body half-curved. "What's that dog stopped that way for," said John. "Oh! he's waiting his reply and down we creep, but before we get near, *quet, quet! quit!* whirr! whirr! whirr! One lights in a tall birch sapling, another two hundred yards away in a tall oak, among the still hanging dead leaves, two fly up the knolls on the branch. A sharp, foxy bark from Rover, and the bird in the hush looks down at him. Maybe you think a setter is a dumb dog; any way he holds that bird's attention until I "murder" it. Now for the one in the oak. Whistle and rattle along in the brush and he won't let us see his mountain deer. "Whist! then" This bird is "murdered," too. Oh we go after the two on the knolls of the branch. "Careful, Rover," I caution him as he trails with the wind. He stops and seems to reason that if he proceeds he will flush, so he quits the track, comes back and circles around some distance, gets against the wind, then turns and half trots, and gallops back carefully, with head high. See now quick he turns his head to the left, cranes, draws and stops still, with one foot up. "Too brusky for me to flush and kill, John. I will go to the

opening at the branch, where you can drive him across as you flush." He was accordingly flushed, and through the brush just the wrong way he went, and he wasn't murdered worth a cent.

Now for our last bird. Its hiding place is approached, and Rover gallops off to come back to us against the wind, which he does in a careful pace. His hind feet fly off a shock log, but just in that position he stands pointing straight toward me. I stoop, peep under the thick brush and see the bird sitting on a fallen limb, two feet off the ground, right between me and the stanch little dog. Who in thunder can kill that bird on the wing when you can't raise the gun to your shoulder, much less turn it? Should I flush it idly and make my business canine believe I am joking with his stands? Not much. I crawled till I got out of the range of the setter statue and "murdered" this fellow. My excited comrade, the executioner of many a deer, turkey and pheasant, could contain himself no longer, and a hearty whoop rolled from his broad lungs, breaking the dusky stillness of the closing day; and as I followed the reverberations up the rugged steps, I raised my hat to the forest wilds in reverential thanks, and a whispered "good evening."

So, to be honest, I kill these birds on the wing and consider it a feat highly honorable in myself; I kill them from the tree and consider the feat highly honorable in my dog; I kill them on the ground for fear I won't kill any at all; and in neither of these ways do I ever have time enough to kill more than myself and a genial friend or two can eat. This is the honest truth—if it hangs me. It may be unbecomingly sport, but if it be treason, make the most—I beg pardon. Am I benighted? GRAEME.

THE RIFLE OF THE FUTURE.

FALL BROOK, Cal., Dec. 1891.

IN THE FOREST AND STREAM for Dec. 1, a correspondent signing himself "Iron Ramrod," under the heading of "Muzzle-Loader vs. Breech-Loader," asks the following questions: "Is muzzle-loading with a round ball more accurate in its shooting than breech-loading with a slug or conical bullet? Or is the fault of a factory-made cartridge? The fault is in the rifle, why is it more accurate with round balls loaded from the muzzle?"

These questions are based upon experiment with a .32 cal. rifle, which, when loaded from the muzzle with round ball and patch, far excelled its best shooting with either rim fire or central fire cartridges. I have myself tried the same experiment with different rifles and always with the same results, and the answer seems to me easy enough.

During the many years that breech-loading rifles of the best quality have been upon the market, and at low prices, too, a large class of hunters have persisted in adhering to the old muzzle-loader. It has been the custom among those who deem themselves advanced, to denounce this class as fools or old fogies, and lavish unqualified praise upon the breech-loader. Unfortunately, however, for this theory of their action, that class consists largely of men who have thoroughly tried the best breech-loaders, and men like Major Merrill, who know just exactly what they are talking about, and it is useless to deny that this class is on the increase. I know several who belong to it. And one of the most successful and skillful hunters of my acquaintances this year laid aside the most popular of repeating rifles, bought an old single-barreled muzzle-loader, and has killed more deer with it than he has killed in any year before, and has done it with one-fourth of the shots formerly required to get the same number with the breech-loader. He says no one can ever again talk breech-loader to him.

Although myself a firm friend of speed of fire, I cannot shut my eyes to the fact that in the breech-loader I have ever tried—and I have tried many—this advantage is attained at the expense of some accuracy. Those who have never shot a muzzle-loader may talk of the breech-loader's accuracy. But he who has never shot a muzzle-loader, knows not what accuracy is. The man who has grown up with the breech-loader is only a callow youth, who knows nothing of what a rifle can do.

For very long the ball necessary for me ahead, because the extremely long ball necessary for a long flight cannot be fired from the muzzle by the best system of patching. The patch will wrinkle too much if put on in the ordinary way and, if patched as for the long range breech-loader, it cannot be fitted tightly enough to the grooves. But I believe it impossible to make a breech-loader that at short range will excel the muzzle-loader; and I believe there is now nothing that will equal it. You may talk about the "muzzling" this or "never-failing" that; the makers may baptize it "Old Sureport" or "Old Centre Splitter," or whatever they like, but this is no matter. It is a matter of fact that a rifle loaded at the breech against one loaded from the muzzle to be fired 100 times with dead rest and telescope sights at a hole the diameter of the bullet at 50 yards distance. I admit that some breech-loaders shoot splendidly; that they will throw few wild balls, and those but slightly out of the way; but for every time one will hit a silver dollar at 50 yards the muzzle-loader will hit a silver dime by its side; for every one that will cut into the edge of the same bullet hole you may find a muzzle-loader that will shoot into the hole without cutting it at all.

By muzzle-loader I here mean a rifle loaded from the muzzle with grease patch in the old style, with the bullet left in the grooves near the bottom. It may be an old-fashioned muzzle-loader or a modern breech-loader. There will be no difference in the results, provided, of course, that the breech-loader is well made and is not choked at the muzzle—as many very uselessly are made. It must also be well fitted to the muzzle, so as not to cut the patch. The two modes of loading might almost be predicted without experiment. In loading from the muzzle the ball is wedged gently to its place in the barrel; all parts of the bullet yield about alike; the patch prevents any scraping off of the lead or cutting by the edges of the grooves. It is pushed gently to its place at the bottom, and—mark now an important point—it is left in the exact place from which it is to start. It goes out exactly as it went in, without a bruise, jam or smash upon any side, and being pushed without any leaning of the barrel, it is straight. When loaded from the breech the ball lies below the place where it is to be fully and firmly adjusted to the grooves. Instead of being pushed gently into that place it is dashed into it with tremendous force, and it is thrown across an intermediate space in which it rarely if ever fits tightly enough to prevent a slight wobble, even in case the ball should leave the carriage on a line true with the axis of the bore of the rifle. Several results may follow. The ball may be induly thickened or "upset" by the blow of the powder against the dead weight. The patch (if it has one) may be stripped,

cut, frayed, or have an edge doubled over by collision with the shoulder of the chamber or the place where the barrel first tightens upon the ball, which even if bevelled would, under such violent speed, have nearly the effect of a square shoulder.

It is also nearly impossible for the ball to adjust itself so freely to the grooves as when it is fired slowly and gently. Thrown in at such a speed, if its point be turned a fairly breadth from the centre line of the barrel, one side will strike the grooves first. That side is sure to be bruised, and the opposite side of the butt of the ball scars the same fate. It may go out of the barrel in this way, with its point deflected from the line of flight; or it may be bounced and jammed nearly into place by bouncing against the other side of the barrel. But two things are certain. First—That the ball in the barrel is left in the grooves this is what happens. Second—When fired below the grooves and passing over an open space that is wider than the ball in order to reach them this must occasionally happen.

There are other causes of the superiority of the muzzle-loading rifle to the common breech-loader as generally treated by its owner. But space allows consideration only of this one which is, by far, the most important, and is, in fact, the only fundamental difference between the two. The problem for the rifle maker of the future is this: How to adjust the ball fully, firmly and gently to the grooves before it is fired, so that it will retain the gas advantage of rapidity of fire. The accuracy of the breech-loader keeps even pace with the approach to this. The long-range rifle owes its accuracy mainly to its ball being pushed in so far before firing, and the 22-cal. owes its accuracy to the extreme lightness and lack of momentum in its bullet. It cannot jam so badly as a heavy one.

Until such an invention comes to the front, there is one sure way to accomplish the same result, viz.—Load from the muzzle whenever you have plenty of time. This plan I now follow with my double rifle. I load in a loading-rod. I never make it shoot as well as any sporting breech-loader I ever saw. But its very best performance when loaded from the breech is nothing compared with its work when loaded from the muzzle, than it is the old muzzle-loader in every respect, and with all its advantages. I keep it loaded with two round balls patched from the muzzle in the ordinary way. I carry a rat in a long pouch like a quiver over my shoulder, and a few bullets and patches. In my belt I carry some shells loaded in the ordinary way for coating and, and for feeding into the muzzle-loading. These bullets and shells are loaded to the end with powder and wads. When there is no need of haste in loading, I take out the rod, wipe out the gun and, loading from the muzzle, push a ball nearly to the shoulder. Then putting a wad in the breech, I put in the blank cartridges, close the gun and then push the bullet gently home. If one of those balls fails to hit, I know positively that the fault is solely and exclusively my own, for, fired from a rest, they will all enter the same hole at forty yards.

The wad, I speak of putting in ahead of the blank cartridge, is to insure the stoppage of the ball before it comes to the slightest looseness in the barrel at the shoulder. So necessary is this that if the ball drops a trifle too low, or where there is the slightest widening or beveling at the shoulder, its accuracy will be at once affected.

In this way the round ball and the old-fashioned one, two of the best balls in the world for 100 and 250 yards, respectively, can be shot as well as from a muzzle-loader. These balls, as well as a cylindrical one with very short boring, it is nearly impossible to get away from a breech-loader without great care in loading. And that the truest and swiftest ball ever known for from 200 to 300 yards—cannot be shot at all. It is impossible to get a ball with so short a bearing delivered true into the groove with a violent jam.

Any breech-loading rifle, if cut straight, bevelled a trifle at the muzzle, and furnished with a ramrod can thus be given all the advantages of the muzzle-loader without losing any of the advantages of the breech-loader. A ramrod should be carried any how, for wiping, and for a jointed rod, and good enough, and can be carried in a pouch hung to the cartridge-belt behind. The first section may be used as a "starter," a counter-nick for being put on the end of the handle. If I were a rifle-maker I should quickly have on the market a muzzle-loading breech-loader of this sort. Any rifle and any action will do. Then the hunter can put in a handful of powder behind an express or light conical ball, and have the highest velocity attainable. He can have one shot or two shots if he has a double gun that will forever and eternally go where the gun is pointed, and not occasionally where it is.

If "Iron Ramrod" will try a few more rifles in the same way he will find that the fault is not in the rifles, all of which are now cut well enough, not in the factory ammunition, which is now made as nearly perfect as possible, not in the bullets, all of which will always go well when loaded from the muzzle, and often badly enough when loaded from the breech. Everything else being equal, of course the difficulty lies in the ball being violently smashed into place. This may be partly, though not entirely, remedied by excessive handloading. I have noticed as high as forty per cent. of the shells steady increase in accuracy, but still there was a tendency to occasional wildness of flight.

The repeater has advantages that will always commend it to many, and it will always be a popular rifle. But there is a large class of hunters who demand absolute precision. Probably no repeater will ever shoot well enough to suit them. For such I believe the rifle of the future will be the combined breech and muzzle-loader. And many of this class will rest satisfied with nothing short of that numerous breech-loader, built just like a shot gun, next, light and well balanced, having a ramrod beneath the barrels. Use shells with moveable anvils, so that nothing but a bit of stick is needed to de-cap and re-cap them, and such a rifle is good any where where powder and lead can be obtained. It will cut a squirrel's head as neatly as the old Kentucky rifle, and will be, if recoil be made even, a short range, express and mid-range rifle to your pleasure, and still can be fired as fast as a repeater. This is my *best ideal* of a hunting rifle. I can hardly conclude without saying to that numerous class who own a choice breech-loader (one of those that "shoots exactly where you hold it," I have seen lots of them and owned them myself,) that if he wants a little conceit taken out of him, let him try it against itself, loaded both ways and fired fifty times at a hole of its own calibre at fifty yards, with telescopic sights. But see that it is not choked-bore too much, that the muzzle is not sharp enough to cut the patch, and that the ball does not get into the shoulder in the least.

T. S. VAN DYKE.

CAMDEN, N. J., Dec., 1881.

There has been considerable discussion from time to time,

about the relative merits of the breech-loading and muzzle-loading rifles for short range hunting and target practice. The long range theory has been clearly demonstrated by the wonderful success of our national teams, against the crack shots of other nations armed with muzzle-loaders—the breech-loaders invariably winning, and making a better score when both kinds were shot by one person.

For short range—from fifty to one hundred yards or even under—the champions of the muzzle-loader claim much finer shooting than can be done with any breech-loader. If we carefully consider the conditions to which the average breech-loader is subjected, we have no cause to wonder that it does not go quite as well. In the first place it has a much greater charge of powder than is necessary for one hundred yards, the conical or cylinder-conical bullet, gives a greater recoil, disturbing the aim by getting a fine bend on any thing, and the high block on which the fore sight is set, cannot be caught as easily by the eye for snap-shooting.

The muzzle-loader, on the other hand, had low sights, the front one being the broad knife-blade style, made of silver or nickel, and in the rear was one of the Rocky Mountain pattern in the shape of a buck horn. The muzzle-loader also could have the powder charge regulated in a second for the distance fired at, and the round patched bullets gave no recoil, holding the shooter at rest to make a dozen cut in the same hole at forty yards. The advantages of round balls are so apparent at short range in shooting small game and in fancy marksmanship that I have often wondered why cartridge companies do not make their shells of the regulation sizes, filled with half the ordinary load of powder and a round ball, of course I refer to rim-fire, as those who shoot central fire rifles can reload them in any desired way. Many do not do so though, because they imagine nothing is better than conical and cylinder shaped bullets, often saying that only muzzle-loaders are good for round balls and the patch must be used invariably with them.

Some years ago I had a small muzzle-loading rifle, taking one hundred balls to the pound, and which, when loaded carefully, was very accurate at close distances. This I tried against a Ballard and Maynard rifle with their conical bullets, and it beat them badly, but as soon as the cartridges of the latter were loaded with round balls there was no apparent difference between them all in accuracy. Lately, I have tried round balls with extremely light charges of powder, in a regular .45 calibre Government cartridge shell, giving excellent results at the distances where they were used. Using a paper wad over the powder, and bullets fitted to the pound slightly greased, I loaded, for fifty or under, with five grains of powder, at one hundred feet ten grains, and at fifty yards fifteen grains.

These loads made no perceptible recoil, the charge of five grains, in fact, could be fired in the house, as it was not any longer than a Flobert rifle.

The round balls and small charges of powder will prevent pistols from rebounding as much as they do now, besides allowing persons to aim directly at an object instead of a foot or two below it, which is now necessary, as any one knows who has shot with a revolver of modern times. I loaded the shells of a Smith & Wesson improved .44 calibre with half the usual load of powder, and a round ball, fifty-five to the pound. There was no kick to the weapon then; it shot up to fifty yards nearly twice as well as before, and could be aimed directly at the mark. With these cartridges on one occasion it struck an ordinary telegraph pole off-hand three times in succession. If my friends, who are with the factory made ammunition it would not hit more than three out of five. Pistols more than rifles would be benefited by shorter size cartridges, instead of the long ones now in use, which have more powder than is necessary to kill a man when held straight, besides giving so much recoil that it has to be aimed almost at persons' toes at fifty feet to hit him in the head. There is a special short size .33 calibre cartridge made, which I have fired in a rifle and pistol with favorable results, but the bullets seemed to be too small for the barrels of other than the particular pistol it is intended for, and, of course, will not carry as far as it might.

In conclusion, I wish to say that if more persons favoring muzzle-loading rifles would load with round balls and slight charges in their breech-loaders, letting us know what are the results, there would be a change of opinion in those who admit the convenience of the breech-loader, but doubt its accuracy at short ranges.

COLIN.

TREEING VS. WING-SHOOTING.

ГЛАВНОЕ МЯСО, Vt., Dec. 31, 1881.

Editor Forest and Stream:
Now that the grouse have become so scarce that one can hardly get three shots in a ten hours' tramp, it is late in the day to learn how to shoot them, but I like "Iron Ramrod's" idea of shooting with both eyes shut. When one gets the hang of doing this successfully he may reasonably expect to become a fair wing shot on ruffed grouse even in such cover as they are often found in here, that is among low evergreens and thick white birch and poplar spruces, where half the time the bird will precede one of having bushes in view and the thick clatter of its flight through the maze of branches. If one could learn to shoot straight at the neck, and had a gun that would drive its charge of shot through fifteen or twenty yards of brush, he might decide to have a grouse do its most in such places. But for my part, with my lack of skill, I would rather have the grouse make it as easy for me as possible, and would not think him running what a life insurance agent would count any great risk at that.

Our wise forefathers have made it unlawful to use dogs in the hunting of grouse, making no discrimination between curs and cockers or setters and pointers, so in Vermont the law-abiding sportsman must find and flush his own birds, and the law-abiding pot-hunter must hunt his. Yes, most gentlemanly sportsmen, if shooting ruffed grouse sitting makes one a pot-hunter, such an anomaly as a law-abiding pot-hunter does exist. Without shame I confess myself such a one. I shoot ruffed grouse wherever I find them, on trees or on the ground, and blaze away at them on the wing, and they give me a chance sometimes getting them offener too. But though I had carried a gun more years before there was any law for their protection in Vermont than I shall again this side the happy hunting grounds, I never yet shot one out of season, nor did I ever kill any game bird, animal or fish at any time or in any manner prohibited by the laws of the land. But for all that I suppose I am a pot-hunter. It is time some one arose to explain the inconsistencies of sporting rules; to tell us why it is more sportsmanlike to shoot into a hole at ducks sitting on the water than to single grouse on a tree. Why it is legitimate sport to shoot a deer or a hare before

hounds, and an outrageous act to kill a fox under like circumstances. Why ducks and snipe may be shot in spring and other game not, just because some of the ducks and snipe do not happen to breed among us. Why it is a mainly and noble spirit to crust-hunt a moose, and not, as it is certainly not to crust-hunt a deer, and why it is fair to call a moose and not fair to call a wild turkey, or fair to fool a fish with a feathery semblance of a fly, and unfair to fool him with a bit of metal that to him seems a minnow, and so on and so on, almost without end. As L. I. P. says, "give us more light." I like his and M. P. McKoon's manly letters in the last FOREST AND STREAM. In my opinion all the difference in practices of those writers and those who kill their ten-out-of-six grouse on the wing, and like to have them go in the worst pieces, is that the first tell just what they do, and the others—well, if they ever do find themselves and "murder" a treed grouse, he can't tell of it, and they don't.

R. E. ROBINSON.

CAPERCAILLIE FOR AMERICA.

NEW YORK, Dec. 28, 1881.

Editor Forest and Stream:
Several years ago I suggested, through the columns of FOREST AND STREAM, the experiment of introducing the Capercaillie into our Michigan and Maine pineries, where I believe it would thrive and multiply largely, as it is a much harder bird than our native wild turkey and much slyer. Our Canadian cousins are likely to take the initiative in so laudable an effort, as the following extract from the Quebec Chronicle shows:

"An application was made at the last monthly meeting of the Literary and Historical Society, by Mr. Adam Waters, on behalf of a Scotch taxidermist, to exchange the duplicate bird skins belonging to the Society for fine specimens of the Scotch game, such as Scotch grouse and partridge, black cock, pheasants, capercaillie, etc. The Society had much pleasure in giving its fullest concurrence to a movement calculated to still enlarge the collections in its rooms. Though the museum of the Society was twice destroyed by fire, it has attained such dimensions as to render it very valuable for the study and identification of species. It is to be hoped measures will soon be taken to increase its locale so as to be in a position to exhibit the large denizens of Canadian forests. The moose, caribou, wapiti, red deer, long-tailed deer, etc., would make a splendid group. Mr. Waters made a further request that the Society should obtain its countenance and help in the likely to be a rich and successful introduction of the capercaillie in our Northern pine forests. The capercaillie is a large and beautiful game bird of the size of a turkey. It is found in the Northern portions of the European Continent, flourishes even in the intense cold of Siberia, where Mr. Waters stated it was observed and noted by our respected fellow-citizen, Dr. Rowan. It existed of yore in Scotland, and was some years back re-introduced by the Marquis of Breadalbane and Earl of Fife. It lives on spruce, larch, and fir, in winter—oaks and other insects in summer, and roots on the summit of the loftiest forest trees. If the capercaillie and Messine quail can be added to our fauna, it will indeed be a great achievement. Mr. Waters thought \$50 or \$60 would suffice to bring over a large number of capercaillie eggs in April next, to be hatched under the domestic turkey or placed in the nest of the Canadian grouse. The Society was appealed to as being interested in Natural History pursuits and asked to allow a subscription list to be deposited on its tables in order to raise the necessary funds for an experiment. We commend the success to our veteran sportsmen—Col. Ribbles, Charles Temple, Mr. Gregory, Messrs. Dobell, Becker, W. Joffrey, Col. D'Orsonnes and others."

Why not join forces with them and thus insure the success of the undertaking beyond a peradventure of doubt?

G. M. FAIRCHILD, JR.

DEER HUNTING IN ARKANSAS.

A DOUBLE.

LAST evening I shot a "spike" buck, at about seven 1/2 yards, with my 5-horn, 13 pound gun, charged with 8 hrs. of powder and 3 oz. of No. 3 buckshot. This gun is choked especially for buckshot, and shoots them closer than any gun I have ever seen. I can put an average of twenty-two No. 8 buckshot in a foot square at 40 yards. She shoots larger sizes in the same proportion, and when loaded as she was last night, she makes a fine fly. But as she was loaded for the brush at a lively mix. I saw he was hit very hard, but as it was getting dusk, and the White River bottom is not by any means a pleasant place to get lost in, and as the ground was strange to me, and I was a long way from camp, I concluded to let him go until morning. This morning I took his trail and found him about two hundred yards from where I shot him, hung him up, and concluded to "haze" a trail to a lake two miles away. I traveled along, marking the trees with my hatchet, and when within about four hundred yards of the lake, while going along without any care whatever, I saw three deer raise up in a patch of green briars to my left, about eighty yards away, and moved diagonally to my right behind a tree top. I sprang forward quickly and softly a few steps, expecting them to "lope" off in the direction they started, but I saw nothing of them. Stepping a few paces further, I saw four deer gazing at me. Two of them were near breast—a large doe and a yearling—about sixty yards away. I brought the old gun to bear on them so as to give each as much amount of lead. The yearling buck dropped in his tracks with a broken neck, and struck with several other shot. The doe started off with the others, but soon fell behind, and I knew she could not go far, but still went out of sight. I took her trail, and so on found her dead, not over one hundred yards from where she was shot. She had one shot square through the butt of her head, a shot through her buck just behind the shoulder, her left fore leg broken in three places and a shot through her neck. She was very fat, and the best I ever had, weighing 145 pounds after disemboweling.

This shows that the right kind of a shot-gun is deadly to deer, and that a deer can get over a good deal of ground carrying a big load of lead. The buck shot last evening had a thigh broken and four shot through the body—one of them through the lungs. He had lived quite a time after lying down. These incidents prove also how tame the deer are here, in these immense white river bottoms. The buck, last evening, I thought I might have shot as he stopped at the edge of a low brush eighty yards away, and would, diagonally about ten steps, so as to bring him in sight. When I shot, another

deer, that could not have been forty yards away, bounced off at the report of the gun. In both these instances I was walking down the wind. I think neither of the deer last evening knew anything of me until the report of the gun. At least the one I shot did not, for he had his head down eating when I shot. So far as I have observed, the deer in the White River bottoms, across the river from Arkansas county, are not so wild nor so hard to approach as the wild domestic hogs occupying the same ground. There are large tracts of heavy timber, and the best of deer ground over there that, perhaps, a human being does not pass over once a year.

Owing to the very mild winter so far, ducks and geese have not come down this far very plentifully yet, but they are now coming with a rush. January and February are the prime months for sport here.

Crockett's Bluff, Arkansas county, Ark., Dec. 20.

CARTRIDGE CARRIERS.

CARTRIDGE belts, vests and bags are the usual appliances employed in the field for the conveyance of cartridges, to say nothing of the ordinary pockets. Bags and pockets are, I think, the least satisfactory. Belts and vests with attachments for shells should be light, and when empty, should take up the least possible amount of space. Having experimented with most of the contrivances in the market, the writer has abandoned them in favor of a simple and inexpensive appliance that any one may make for himself. To make a cartridge vest, procure two or three dozen $\frac{1}{4}$ inch curtain rings at a cost of five cents a dozen and, with strong linen thread, sew them to the front of an old vest. These rings will take a 12 gauge paper shell, being large enough to permit the body of the shells to pass through, but not the rim. Of course, when the cartridge is removed for use, the ring falls flat against the vest and occupies a minimum of space. Thirty of these rings weigh about three-quarters of an ounce.

To make a cartridge belt, make or obtain a plain belt of suitable material and sew the rings to it, or perfectly attach them with shoe button fasteners. This arrangement fulfills the requirements of lightness, cheapness and minimum space when not in use, and to me has proved very satisfactory in the field. I inclose sample of ring and fastener used.

H. G. P.

RUST SPOTS IN GUN BARRELS.

CINCINNATI, O.

I wish to take one more turn at the wheel which has been at work of late trying to grind the rust spots out of gun barrels, and give the crank a gentle turn, for I respect the various experiences and opinions as presented in your columns. I have noticed very plainly that, while one sportsman could find nothing but coal oil that would keep his gun in desired condition, another was positive it would not do. There have tried neither medicine and have got wet with success, while there undoubtedly still remain a few whose experience would be directly to the contrary. Often have I gone to my tent after dark, tired and hungry, and before I would give any attention to satisfying my appetite, would get out my wiping rag, tow, rags, sperm oil and vaseline, and go to work; would rub ar derub and clean my gun and lay it away carefully, and then in the morning take a peep through the barrels and find a spot here and there, which I gave credit to not quite enough digestion the night before. Now, my way is to wipe off the outside and oil properly; break the gun and oil breech piece, plungers, and, in fact, clean the outside, but do not touch the inside of the barrels, and I am positive that my gun is in as good condition today as it was when I first tried the experiment.

The information that I obtained from an old Californian (as per FOREST AND STREAM, Oct. 20, 1881) was from Col. Horace Park, a resident gunsmith of this city, with whom I am well acquainted and know to be a man with great experience and a superior hand. Herewith a very interesting letter, which he has kindly written at my request, and I hope it will be of benefit to brother sportsmen.

FRANK N. BEUBE.

COLUMBUS, O.

Editor Forest and Stream:

Gun barrels made of clean, refined, homogeneous iron will not get the "measles." My theory, from observation, is that the finer the grade of barrels, as our manufacturers grade them, the more they are to "sweat," as I call it. Take the Cheik-Damascus barrels (so-called), that is, the barrels with the fine, beautiful, curly figure. In the manufacture of such barrel the maker must use great care in welding—that is, nurse it carefully with the hammer so as to preserve the curl regular. As a result, the iron is not so close grained as it would be if spalked down right hard with the hammer, without reference to the shape of the figure, as in the common barrel. Of course all understand that the different figures and colors in gun barrels are made by a mixture of steel and iron, or different kinds of iron. In case of steel and iron being used, the iron—being softer—will rust easier, leaving the steel brighter, clearly showing the figure of the barrels. If nursed too much in welding, the figures will not be so perfect; but in case of steel twist, or any irregular twist made of small scrap iron and steel, such as needles, fish-hooks, nails and screws, the forgots are put under a heavy hammer, and so thoroughly incorporated as to almost make the iron of one nature and texture. Gun barrels made in this way will not spot under ordinary care. The discoverer of this, the various correspondents that the finer the barrel and the more the care, the more they spot. I believe that conclusion is almost an axiom; but some of your correspondents, on their dignity, appeal to "common sense" to prove such is not the case. If a farmer would daub his plow with a mixture of common blasting powder and water he could leave his plow in the fence or under with no fear of their rusting. The real cause of spots in gun barrels are various.

I believe, with one of your correspondents, that the grades of powder, that are called the best have more or less to do with it. The cheaper grades of powder, in our days of adulteration, have incorporated in them more or less soda in some shape. In blasting powder, soda is used altogether instead of nitre; and soda is known to be one of the best rust preventives we have. Any machinist who has ever used a solution of sal-soda for drilling, or as a drop on the tool when turning shafting, knows the same will not rust even if allowed to lie about the shop or yard for a month or two. The ordinary sal-soda is, of course, the higher to the one of your correspondents chaps, and I believe to be the lower grade of powder and found a cure for the rust business.

I believe, in all business, results are what men are after. I have used, in comparison, the very best grades of powder, from C. & H. down, and have found by actual experience that just as good results are obtained from the lower grades of our best powder crackers.

I am a Californian; referred to by Mr. Beebe, and the fact referred to, that carrying your gun after shooting without cleaning until the gun is to be used again would preserve the inside in good condition, was first brought to my attention in California at Lawson's Meadow, on the head waters of the North Fork of Feather River, where I was prospecting. In going to the meadows I found the slough and bayous literally covered with ducks of all kinds. With my rifle I could make poor headway with the ducks. I went to Mr. Knight (who was running a ferry and the only man living in the meadows at the time) and asked if he had a shot gun. He had not; but thought there was in his woodshed an old army musket that some 49er had left there. He did not know what condition it was in, as he had not seen it for several years. This was in 1856. We went in search of it, and finally found the old musket buried in chips and dirt. I, being a mechanic and iron-worker, took off the lock and with a little repairs found that it would work, but it was badly eaten with rust. The outside of the barrels was coated with rust and the stock nearly rotted off. I took off the barrel and with a hammer and iron wedge succeeded in getting the breech pin out; it took but a moment to wash out the gun, and, to my astonishment, with the exception of two or three inches of the muzzle-end, the polish was as perfect as on the day the gun left the U. S. Arsenal. The gun had been banged about, without cleaning, for four or five years. The perfect condition of the inside of this musket led me to the conclusion that the proper thing to do was to leave a gun, after shooting, without cleaning—a practice which I have followed ever since and never have had any trouble with rust nor do my barrels ever lead.

Another sure test that a gun will not rust if left after shooting, was furnished at the Licking Company reservoir near here, last winter. "Johnnie Webb" as he is familiarly known, an old and expert hunter who lives at the reservoir, was out shooting, a year ago last fall; and by some mishap he capsized his boat and lost his gun, a Parker fine twist. He did not find the gun until late this summer after the water was very low. The gun lay in the water and mud over six months. The outside of the barrel was rusty and rotten away until it resembled an old rusty file, but the inside after being wiped out was bright as the day it was lost in the water. I overhauled this gun myself, so I know.

There is no preparation that I know of that would have as well preserved the gun as the burnt powder did, and it confirmed my experience that it is safe to put away your gun without cleaning the inside; the outside must be looked after. One of the best ways to prevent rust on the outside, is to take a piece of heavy chamois skin and rub into it well some mercurial ointment; wipe off your gun properly and carefully, and you will have no trouble with the outside.

Now, for the benefit of those very nice men who say to leave your gun without cleaning after shooting, is a very shiftless, slovenly way of doing things, I will say that if some ingenious man would get up a preparation of the residue of burnt powder, put it up in very small bottles, and labeled in gilt letters, some outlandish name, ending with "rust preventive," these men would buy it at the rate of fifty cents per bottle, and go to the trouble of wiping out their guns with it, and swear it was perfection.

No man, using a medium grade of powder, will ever have any regret for putting his gun away without cleaning the inside if he will try the experiment.

Will some one, familiar with the manufacture of powder, give some items through the columns of FOREST AND STREAM, as to whether the best grades are strictly nitre, saltpetre and charcoal, and whether the lower grades contain soda in any form; if by using soda gun barrels will be better protected from "scabbing." I think it would be well to know it. These discussions are valuable; let the good work go on.

CALIFURNIAN.

FLATBUSH, L. I.

Editor Forest and Stream:

During the last twenty odd years I have handled a number of muzzle loaders and breech-loaders. It is with pride and pleasure that I can claim that I have yet to record my first trouble with the rust. But I always give first-class care to my guns. During the muzzle-loading regime, often after a light day's work, when I had fired my gun only four or five times and intended shooting the next day, I have laid the gun aside after carefully wiping off the outside, and inside as far as the load, with moderately greased rags, and have repeated this for a week or two, as this was in dry mountain air—and never experienced any bad results. The reason I write so positively is that, even against the gunsmith's instructions, I would insist on having him once a year, in my presence, remove the breech pins, and the barrels were given a careful examination by myself and gunsmith. Since the adoption of the breech-loader, in consequence of its manifest and vast superiority, I can at my pleasure look through the tubes. I have made the following rule: Immediately on my return from a shooting trip I feed my dog before he becomes stiff from the breech-loader, where it is so easily taken, there is no excuse for delay. My method is this: I take a rag soaked with common kerosene, pump out the barrels well, and leave all the oil in the barrels I can; I put something down to protect the floor and stand my gun muzzle down ward until after supper, when I take up my gun again and swab it out with a dry, clean rag. Then I look through the tubes at a strong light and, if perfectly clean, put in a rag greased with the best winter-strained sperm oil. Then I rub the gun carefully over with a greased cloth and scrub the iron furniture, especially that which is engraved, with a stiff toothbrush soaked in sperm oil; oil the stock well and place away in the driest spot in the house—alongside the kitchen chimney is a first-class place, as it is always warm and dry summer and winter. If this plan is closely followed I don't think you will have any more complaints from this plague than the writer.

BLACK NED.

BINGHAMTON, N. Y.—*Editor Forest and Stream:* I now use the following method and have no trouble. First with a bit of new flannel, jampaned, loosen the dirt and wipe clean. After the pieces of rag are longer soiled, wipe with a piece of dry cloth, then rub thoroughly with one of the ordinary waxes at swabs, filled with either pure sperm oil or what is perhaps better, petroleum butter, or cosmo-line. Finally, put some mercurial ointment on another wool swab

and give the barrels a heavy coating inside. In a week or so, remove the coating and put in fresh. Your gun will; ow keep without rusting indefinitely.

I have tried putting away my gun with the dirt in the barrels, and it works well, sometimes; but since I never ruined my new Col. in that way, I have quit. In my opinion, the rust is largely induced by the powder dirt, apart from the moisture, and there is undoubtedly a great difference in powder in this respect. I have used several brands since adopting this method and now have no trouble.

Although the above looks rather formidable, it rarely takes over ten minutes to clean my gun. The object is to get the gun perfectly clean and to mix no dirt with the oil left in the barrels. I am assured by a friend who has used the above method for many rust except years, that he never had a gun from neglect.—C. E.

FLORIDA SHOOTING AND FISHING.

PALATKA, Florida, Jan. 4, 1882.

Editor Forest and Stream:

I have not written you for a long time; have just located here for the winter. Palatka is a very pretty place, almost all orange grove, sixty miles above Gainesville, 2 1/2 south, good hotels, no better in the State, and good boarding-houses. A new railroad, called Florida Southern, has just been opened nearly a hundred miles, and all through a new country full of game and fish, making it a real sportsman's paradise. The road now runs down nearly to Ocala and across to Gainesville. I have been over the road twice. The country is full of ponds and lakes filled with ducks, waders and fish. The birds rise in clouds as the ears go along. Just the place for collectors and naturalists as well as sportsmen. One place we pass called Pat's Prairie, only a few years ago was a nice, dry farming land, covered with cattle and crops. It was drained by what is called a sink-hole. That filled up and the prairie turned into a lake nearly twenty miles long, and six miles wide, water now over the telegraph poles, now a great feeding-place for water birds of all kinds. Orange Lake near the road was swarming with birds, and no end to the fish, and if I should write you the size of the haek bass the colored men has to sell, you would say it was a fish story.

I have bought a season-ticket to go out on the road at any time or place, good until May 1, for only fifteen dollars. Cars run twice a day to Gainesville, once down toward Ocala. Take the morning-train out, and back on the evening train gives a good day's shooting and fishing. No good stopping-places on the road, unless you go to Gainesville or Ocala. A small light-boat or canoe for the ponds would be useful. Quail are very plenty, but a good dog would be required.

GEORGE A. BOARDMAN.

THE GAME AND TRESPASS LAWS—Sutton, Mass., Dec. 28.—

The Auburn Grauge, Patrons of Husbandry, of Auburn, and the Millbury and Sutton Farmer's Clubs, of Millbury and Sutton, held a joint meeting here to-day. Hon. H. L. Bacon, of Millbury, presided. One subject discussed was the Game and Trespass Laws—Are They All That the Interests of the Farmers Requires?" Mr. S. Paysou Perry, of Auburn, in a paper which he read, took the ground that the present law was enacted through the influence of sportsmen. At certain times of the year the farmer cannot kill game on his own land without being liable to a fine of \$20 and costs. He claimed that the object of the game laws was not for the protection of the society but the selfish interests of sportsmen. Hon. James M. Cook, of Sutton, a member of the State in 1870, did not agree with Mr. Perry. He was in favor of a law which prevented the killing of game at the time of breeding, and even farmers should not have the right to kill them at that time, even on their own land. He took the ground that the present law was as much for the interest of the farmer as for the sportsman. Rev. Hiram A. Tresey, of Sutton, referred to the laws of England, where the farmer in many instances received damages from the sportsman who robs over their farms. He was in favor of the farmers standing up for their rights; make the law for sportsmen weaker and the trespass law stronger. Mr. John McClellon of Grafton, denounced the present law; it was all wrong. Sportsmen, as they were called, had been on his land, torn down a rod of stone wall for a rabbit. They had also cut down valuable trees to get squirrels. Down in his own town, he said, so though the sportsman did not care what they did, to secure the game. The discussion ended at the noon recess.—C.

MARSHALL'S CREEK, Monroe county, Pa.—Our prospects are very good in regard to the Marshall's Creek Sportsmen's and Shooting Club. Several gentlemen from different parts of the county have showed their willingness to become members by sending their names. The members propose organizing early in January to make arrangements for a supply of quail to liberate on our preserve, as quail are the only game that has been scarce this season on our club grounds. I would take charge of the first consignment of quail and care for them.—E. D. HUFFMAN.

MEDINA, N. Y., Dec. 30, 1881.—A party of four from this vicinity have just returned from Chesapeake Bay duck hunting; they report moderate success. A white owl was brought in; our taxidermist to be mounted, a week ago. It was a beautiful female specimen, shot fourteen miles northwest of this place, near Lake Ontario. Grouse and woodcock shooting has been very poor in this locality this fall. Black and gray squirrels have been moderately plenty. The writer and a friend went to the swamp, hunting pigeons last October. Thirty were bagged in a few hours, more wild pigeons than have been brought into town in several years.—SAL NITZER.

AN AMERICAN SHOOTING GROUNDS IN SCOTLAND—I learn from Baltimore that Mr. W. L. Winans of that city has taken the extensive farm of Koekein, on the Chisholm estate, and almost the whole estate of Kintal belonging to Mr. J. T. Mackenzie, of Glenmuick, Scotland. These grounds are all now under sheep, but Mr. Winans will convert them into a deer forest. Mr. Winans's shooting grounds now extend from the west to the west coast in a straight line. The length is sixty miles. He is having plans prepared for an extensive shooting lodge, which, it is said, will be one of the largest and most handsome in Scotland. Truly, our countrymen cannot be outdone when abroad.

Homo.

THE LEHIGH VALLEY.—A friend writes of his last shoot of the season in the Lehigh Valley, Pa. "We closed the season yesterday with a nice bag of birds, five pheasants and about twice the number of quail. There are some birds left over where we were, and if there are no deep and continued snows we may look for good shooting next year. If the snows come we have made arrangements to have the quail trapped and housed. The pheasants can take care of themselves, and there are lots of them. The winter has been so open they have just come down off the mountains into their winter quarters since the late rain and cold snap of last week. We never followed covcys when they went into the woods, and that they invariably did on first flight. Vixen is looking well, and, I think, will come out all right." I have taken to pointers lately, and "Vixen" is a jewel. Nobody shall hear a word more of her until she is ready for the field, and then I wish to show her work.—HOMO.

A SOUTHERN EXCURSION.—Messrs. Leve and Alden, 207 Broadway, New York, announce a personally conducted Southern tour, from January 23 to March 25, 1882, visiting most of the prominent southern cities and winter resorts. Nassau, P. Matanzas, Cuba, Cayes of Bellama and Yumuri Valley, Havana and surrounding country, Vera Cruz, Mexico City, New Orleans, the Mississippi River, Vicksburg, Memphis, St. Louis, and many other places of interest, returning thence by rail to New York, comprising sixty-one days of first-class traveling, including palace cars, hotels, carriage rides, fees for passports, etc., for \$450. An interesting pamphlet containing full particulars of the trip may be obtained by mailing a postal card to the above address.

A WHOLESOME FIRE-ARM LAW—Philadelphia, Miss., Dec. 8, 1881.—Our State has a law to prevent the careless handling of fire-arms, which I think is a step in the right direction. According to this law any person who shall intentionally point or aim any gun, pistol or fire-arm, at or toward another, except in self-defense, or in the lawful discharge of official duty, shall be punished by a fine of not more than five hundred dollars or imprisonment in the county jail not longer than six months, or by both. If the gun should be discharged while pointing it in this manner the fine and imprisonment is doubled, and if the person aimed at shall be maimed, killed or injured, the person pointing or aiming the fire-arm shall be punished by imprisonment in the penitentiary not exceeding five years. This law reaches the "thought-it-wasn't-loaded" class.—FOREST FIELD.

MARSHBUSHES COAST SHOOTING.—Lynn, Mass., Dec. 27, 1881.—No gunning here just now to amount to anything. Thomas Stanley, of Swamscott, has shot 425 coots this season, and is not done yet. The best day's work was put in by Harry Proctor, he getting thirty-eight coots in thirty shots. J. Porter Thomas, one of the most successful gunners alongshore, has not been out but twice this season; "too much shot in the air to be perfectly comfortable" is his reason; and on a good morning when the birds are here there is a fusillade. I should think they would drop dead from fright. The most of us have set aside our guns, waiting for summer and the shore birds, and in the meantime to read and enjoy our numbers of FOREST AND STREAM.—T. M. S.

CAZENOVIANI IN FLORIDA.—Cazenovia, N. Y., Dec. 31.—Will THOMAS, George Atwell, Seymour Brown and George Brown are camped a quarter of a mile from Titusville, Florida, awaiting the arrival of Mr. M. E. Card, who leaves this place next Thursday to join them there. They intend to build a boat and to do the Indian River country. Mr. Card has been there before, and the boys are anticipating fine sport with him for guide. They write home even now some good-sized stories about fishing and hunting. It makes one a little uneasy to think about the fun they will have.—HAMBLETT.

CHAS. A. PEOCKE.—The "Chas. A. Peocke" who wrote the letter referring to the Gunpowder Bridge duck shooting, in our issue of Dec. 8, 1881, was not the "Chas. A. Peocke" whose letter on the same topic appeared in our issue of Dec. 22. The person in question is the first writer by virtue of his profession, and his claim to it cannot be out-claimed by another, as the ducks at Gunpowder appear to have been.

THE REMINGTON ARMS are among the most approved patterns and grades of rifle and shot-guns. The firm manufactures a great variety of long range target and game rifles, and shot-guns to suit varied tastes. The name of Remington is one which has gained a high honorable place among American manufacturers; and their goods are first-class.

TORONTO, Canada, Dec. 31.—Several gentlemen in the Bay of Quinte interested in sporting matters have formed a club to be known as the "Bay of Quinte Sportsman's Club." Messrs. G. M. King, P. J. M. Anderson, R. J. Bell and D. R. Leavens were appointed to prepare a constitution and by-laws.

ILLINOIS—SAYABRA, Dec., 1881.—Duck shooting has been unusually good this fall, bags of twenty and sixty to one gun have been the usual average; as high as 150 to one gun have been made for one day. Snipe have been scarce, owing to the high water overflowing the low ground. Winter mild. No ice in the river.—S.

CALIFORNIA.—The Sportsman's Club of California offers a reward of \$50 for the arrest and conviction of any person engaged in violating any portion of the game laws of the State of California, applying to game fish and game birds. No reward shall be paid unless the fine imposed shall be at least \$50, or the imprisonment at least thirty days.

ILLINOIS—Charleston, Dec. 29, 1881.—On the 27th inst. five business me of this city and one farmer left for Bay Bridge, Arkansas, for one or two months' hunt. They were C. Swarts, B. Hazelton, A. N. Bain, James Skidmore, Daniel H. Calvert and Jacob Linder.—J. B. D.

SHERBROOK, Canada.—We have read the articles on "Gun Mosaics" with some interest, but what we are looking for is something that will keep a gun in good condition in camp, where it may lie all night in the rain. Blue ointment is our favorite protector.—CANADA.

THE NEW JERSEY SHERTZENS CORPS, Capt. A. B. Hardekopf, will have their nineteenth annual ball on Jan. 18, 1882, at Odd Fellows' Hall, Hoboken.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

FRESH WATER.

Pickering, *Esox reticulatus*. Yellow Perch, *Perca flavescens*. Pike or Pickerel, *Esox lucius*. Warmouth, *Chromis virgatus*. Pike-perch (wall-eyed), *Pike*. Crappie, *Pomoxis nigromaculatus*. *Silozetich americanus*, etc. Bassholer, *Pomoxis annularis*.

SALT WATER.

Snelt, *Osmorus mordax*. White Perch, *Morone americana*. Striped Bass or Rockfish, *Morone*. Pollock, *Poliachius carbonarius*. *linetaus*.

Carga, dice and tables pick thy purse, Drinking and drabbing bring a curse; Hawking and hunting spend thy ehnik, Bowling and shooting cost in drink. The fighting-cock and the horse race Will stink a good estate apace. Angling dith bodies exercise, And maketh souls holy and wise By blessed thoughts and meditation. This, this is angling, the best of health, profit, pleasure mixt together, All sports to this not worth a feather.

NAPOLN NOTTOLÉ, in *Darlers' Delight*, 1655.

NIGHT FISHING ONCE MORE.

AN attractive feature of FOREST AND STREAM to me is the conversation which runs through its columns upon topics which do not relate to the rapacity of landlords, or the knavery of guides, or the rejoinders and counter-charges of the parties concerned. One of these topics is night fishing, lately discussed. By some of the editors the feeding of fish after dark with hook and line seems to be thought a dis-courtesy. Assuming that others of your readers besides myself like these secular "experience meetings," I will tell a part of what I know of night fishing.

When a boy of ten—*eh! fugues!*—now a quarter of a century gone—my summer days were spent at a farm in Cape May county, New Jersey. In front of the house, and across the main road which formed the dam, lay a large mill pond. The country is nearly flat, and the ponds in that region are formed by making a low dam across a cedar swamp. The water is thus backed over a large tract, and makes a broad, shallow pond, furnishing water power sufficient to drive a small saw-mill three-fourths of the year. After the newly-made pond has reached a head, the best of the cedar and swamp timber is cut off four or five feet above the water, leaving the stumps standing high and thickly over the whole surface. Here and there are clumps of cedar bushes growing greenly out of the water, and shadowing dark pools where lean and hungry pike lurk to snatch fiercely the chance of pork abandoned over the surface by the urchin who has secured the saw-mill saw, the only boat. Pike and catfish are the only fish abundant.

The daylight was not long enough for me in those days. Every evening after supper, and at the end of a long day's pursuit of pike, I, equipped with a short line with a cedar pole tied to one end, and a square piece of pork to the other, would meet the village boys on the dam, and, standing close together, we would begin an hour's "catlin"; as they called it.

The first operation was to call the fish. This we accomplished (or thought we did) by throwing him in air, a riddle which, falling vertically, would "chug" into the water with a noise similar to the rise of a catfish. We would then throw in our lines, and when a pul was felt, by a dexterous jerk throw the fish upon the bank, the bait leaving his mouth as he passed through the air. I tried, at the first, using a hook, but found that the greater part of my time was passed in very unpleasant surgery upon the slimy vermin. That summer ended "catlin"; and with it my first experience of night fishing. There is another and more profitable kind which furnishes the best sport piscatorial to be found in this region during the month of June.

Any one who has passed over Delaware Bay will recollect Ship John Lighthouse, which rises like a gigantic black rocket-head, or top of a campanile, sheer out of the centre of the bay, about midway between Bombay Hook, in Delaware, and Ben Davis' Beach, in New Jersey. Upon the latter beach is a comfortable hotel, or excursion house, called "Sea Breeze," distant an hour and a quarter's drive from Bridgeton. In early June, and a month before the weak fish, or sea trout, begin to take bait on the oyster beds in the lower bay, they bite ravenously at times, during the day time, at Ship John Light, but the night fishing is almost invariably good during pleasant weather. At that season I sometimes drive down to Sea Breeze toward evening, and after supper, with a party of friends, pass over, in the comfortable sail boat belonging to the hotel, the five miles' sail to Ship John, tie to the iron cylinder, and fish until midnight.

At this part of the Delaware the tide runs with great speed and power, and the eddy formed by the lighthouse furnishes a harbor and resting place for the trout, and, it may be, a refuge from the porpoises which abound in the channels on either side. At all events, the eddy is at times swarming with these beautiful lilac-sided trout, which are of much larger size than those caught later in the season. The fishing is good only during the months of June and September at Ship John. During favorable weather the fish bite very rapidly. Upon some nights small trout are taken, but usually they run not less than two nor more than four pounds. Moonlight or darkness seems to make little difference, although the former, of course, is more agreeable to the fisher. The best fishing, both for size and numbers, is when the schools are swimming at the surface and the bait is allowed to float.

The huge sombre lighthouse, with its crimson eye glowing angrily above; the great, shadowy forms of the ships steaming or sailing in the channel close by, and the sounds, too, weird and merry both; the rush of the tide around the immense cylinder to which our boat is moored; the impatient sigh of the porpoise; the steady grating burr-r of the fish beneath the surface; and last and pleasantest, the joyful screams of the ladies of our party, as fish after fish, and simultaneous fishes, are pulled struggling into the boat, make an experience which shows that night fishing, if it does not rise to the dignity of sport, is truly an amusement.

F. S. J. C.

ANOTHER TALE OF AN ALBATROSS.

IN a late number of FOREST AND STREAM is an account of the capture, with hook and line, of an albatross, of which the dimensions were 7 ft. 8 in., or 8 ft. 7 in., from tip to tip, which the writer thinks of average size. This was off Cape Horn.

In July, 1836, while off the Cape of Good Hope, returning from China, these birds being abundant about the ship, I captured one with hook and line which measured 10 ft. 6 in. from tip to tip of the wings, and I saw many of larger size, perhaps from 12 to 15 feet.

To haul in a bird as large as a swan, with ten feet expanse of wings, is a very precarious—was too much for me, and, finding I was more likely to go overboard than the bird to come aboard, I called for help, and we turned the albatross loose on deck. On account of its great stretch of wing the bird cannot rise from a plain surface, and when it takes to flight has to start from the top of a wave. So it was safe on deck, where it remained, sullen and savage, snapping with its strong hooked bill at all who came near.

Our colored steward had brought with him from Batavia two of the large Javanese game cocks, which stand two feet high and are very pugnacious. One of them had killed the other a few days before, and there was nothing on board for the survivor to fight with. So John turned it out of its coop, and it attacked the albatross on sight—perhaps the first instance of a battle between birds of such different climes, habits and species.

The albatross, squatting on the deck like a great goose, took no notice of the cock at first—perhaps did not understand what he was after—but when it received two or three digs with the spur it slowly raised itself to its feet, darted out its long neck, and seizing its antagonist with its beak, proceeded to devour it, and it which would have done had not John come to the rescue. As it was, the game cock retreated, with his comb out, and quite crestfallen. The next day the Captain ordered the albatross to be made into sea-pie: it was rather tough and fishy, but served as a change from salt beef, and the crew, not being familiar with Cole-ridge, enjoyed the dish.

We also caught in the same way a small species of gull called the Cape pigeon, and the stormy petrel, or Mober Carey's chicken. At that time canned provisions had not been added to sea stores, the pigs and poultry were soon exhausted, and we were glad to eat anything unskilled. People on shore may inquire: "Why not catch fish?" being ignorant that in mid-ocean there is a desert barren of all life, and that anywhere off soundings few fish are to be found.

Diomedea exulans can hardly be called a game bird, though it made game of our game cock—nor can it be hunted among the game fishes, though fishy—and taken with hook and line. S. C. C.

GAME FISH.

IN the issue of FOREST AND STREAM for October 27, 1881, I was pleased to see, under the caption of "Sea and River Fishing," a quotation from the writings of Mr. Hallock on the above subject, and considered them very timely.

The fish there described should belong solely to the pot-fishers who so wontonly use the sportsman's privilege and privilege to kill good fish and bad indiscriminately, and sadly deplete the waters that have been stocked by the State or private enterprise, and who do not deserve the name of anglers.

It would be well if such fishermen—if men they can be called—could be confined to the dark and sluggish waters where catfish and other ignoble fishes abide, and there, and only there, made to disport themselves at will, leaving the clear streams and bright waters for the true brothers of the angler.

There is no denying the fact that the preservation of good fishing waters and the re-stocking of others will henceforth receive the close attention of legislative bodies and of angling clubs, and all interested in the "gentle art" should be alive to their interests, now that the law-makers—and, in too many cases, law-marrers—of several States are about to convene.

Fine fish and fine tackle make fine sport, and how best to secure all three should be the present problem of all sportsmen. Although shooting and fishing are so unlike, they have much in common, and their devotees should be close allies and ever ready to help each other in the preservation of game and in the keeping of their several crafts above reproach. Every sportsman is, in a certain sense, a Chevalier Bayard, and should eschew all ignoble ways and means as well as all abuses of their rights and privileges.

Every angler, shooter and huntsman, I am sure, will be glad that they have such a helper as the FOREST AND STREAM, and to make the paper of wide interest and benefit all should strive. Personal incidents and adventures in field and by water should be sent to its columns, that all and many may share a pleasure once enjoyed by the takers of an "outing."

Wishing all sportsmen a happy New Year, I may follow the above suggestions and write more anon. O. W. R.

SCIENCE AT THE BERLIN FISHERY EXHIBITION.

NUMBER FIVE of the official report on the International Fishery Exhibition in 1880 is before us. This is the last of the series, which when bound will form an attractive and instructive volume.

The report opens with a consideration of instruments for investigating the waters, those of the Royal German Admiralty coming first. Plummet for shallow and deep-sea sounding of various patterns and most complicated forms, which would puzzle a landsman to even guess what such intricate machinery might be used for; thermometers for deep sea, surface, hot springs, etc.; apparatus for bringing up water or specimens of the bottom; ground nets; stream gauges for surface and bottom, appear in great variety. These are followed by implements from the scientific observation station at Kiel, where devices for obtaining the specific gravity of waters and more deep-sea thermometers are shown. Carl Bamberg, of Berlin, showed several implements: and the hauling for a compass is illustrated. P. Dorffel, Berlin, showed an aneroid for specific gravity and a plummet.

A stream gauge from M. J. Arrivison, Stockholm, and implements for deep sea-sounding and searching the bottom,

*Antliche Berichte über die Internationale Fischerei-Ausstellung zu Berlin 1880. [ed. of the society.] V. Wissenschaftliche Anstalten [von J. L. Assmus; E. Friedländer; Dr. O. Hermann; Dr. F. Heide; Dr. G. H. Müller; Dr. H. Thomsen; Dr. H. W. W. Müller; in den text gedruckt] Holschmid. — Berlin: Verlag von Paul Parey, 1881.

together with similar exhibits by Eisner David, completed the Swedish exhibit. In the Netherlands exhibits were nets for the capture of small life near the surface or beneath it; ground drags and oyster catchers.

In the display of the United States we notice that the Coast Survey made a creditable exhibition. Sigbee's apparatus for deep-sea sounding is figured and described as one that saves time and labor. It appears to be a complicated machine to the uninitiated and two full-page views of it are given. Sigbee's apparatus for bringing up specimens of water is figured. Dredges, oyster-swabs and "tangles," and similar implements, together with Prof. Hillgard's apparatus for determining the specific gravity of the water, receive commendation.

Under the head of Meteorological and Signal Apparatus appear implements from the lighthouse at Hamburg; John Holmes, Regent's Park, London; the Meteorological Council, London; and Otto Bohne, Berlin. Reflecting instruments, compasses, balancas, ships' glasses, etc., were represented by E. Spruener, Berlin; G. Heckelmann, Hamburg; A. Oerling, Berlin; H. Haecke, Berlin; J. Wancuffch, Berlin; L. Reimann, Berlin; Voigtlander & Soa, Vienna and Braunschweig; Picht, Bros., Rittenow; A. Meissner, Berlin; and T. Wegener, Berlin. Many useful and curious implements appeared in this collection. The display of microscopes was also interesting and the report on them is well made up.

The history of the fisheries occupies considerable space and includes that of many nations. It descends at the ages of stone, bronze and iron, those of Germany receiving much attention. The ancient hooks of Switzerland are illustrated and their history is the most interesting of all. No mention of the fine collection of Esquimo and Alaskan wooden and bone hooks, which appeared in the Smithsonian collection, is made.

Chemical and physical experiments follow, and include analyses of water, the flesh (of fish of fat and lean kinds), sea fish, etc., and of many nations. The biological investigations continue the above analyses in comparison with beef, the development of the herring, by A. W. Malm, Director of the Museum of Nat. Hist., Gothenburg; the eel, by Dr. Hermes, model of the zoological station at Naples. Notice of the large chart by Professor Goode, of the U. S. Fish Commission, showing the distribution of the important coast fishes of the United States. Statistics then precede an article on the injury to fish from infected sewers, with analytical specimens.

The transportation of live fish is, in Germany, not entirely a fish-cultural question, as in America. Fish of fresh waters are taken to market and sold alive, hence the separation of the question of their transportation from the fish-cultural department. The firm of Busse & Co., Berlin, have a steamer with a well in it to bring live fishes from the coast of Sweden and Denmark to Stettin. Mr. Schuster, Freiburg, showed a cask with air-pump for transporting fry. Dr. Hermes, of the Berlin Aquarium, exhibited a large apparatus, consisting of one great tank, which overflowed into a small one in the rear, from which the water was pumped into a third tank standing on the two lower ones, from whence it flowed again into the first.

Botany of the waters is followed by an account of the amber fisheries, which we missed from former reports. A good description of the amber industry and the elegant display at Berlin will be found in FOREST AND STREAM of June 3, 1890, from our staff correspondent at the Exhibition. The literature of the fisheries of the different nations is referred to by the titles and dates of the works and includes general zoology, the lower animals, fishes, aquatic mammals, fishery products, packing, etc., the in-land fisheries and pond building, sea fishes in general, descriptions of implements, oyster and lobster fisheries, angling and fly fishing, culture of water animals and the literature of scientific explorations relating to the waters, history of fisheries, biography and catalogues. So extensive was this literature that the more titles cover forty pages with double columns. The history of the Berlin Fishery Exhibition is a history of the fisheries of the world from pre-historic man down to the year 1890.

MORE GAME PROTECTORS NEEDED.

Dec. 24, 1891.

Editor Forest and Stream:

As our Legislature will soon convene it is not improvable the usual number of changes and amendments to our game laws will be presented for consideration; and, therefore, it seems a suitable time now to protest against any such action, except possibly to make penalties larger and punishment more certain for infringement.

The laws are now sufficiently plain and guarded to accomplish their designs if they be enforced, but by whom they will be enforced is the unsolved problem, and the one thing lacking to preserve and protect game and fish, not for amateurs alone, but for the many, the laboring class, who have neither time to spare, nor money to spend, in going from their homes for recreation or pleasure.

To accomplish this and to make the laws something more than dead letters, I would suggest, instead of using the annual appropriation made for the propagation and distribution of fish, that the sum be used in securing the services of thirty State Game Protectors, at a salary of \$250 each, to be located in such counties as naturally would most need their services, and the selection of these men be made by local protective clubs, and the appointments made by the Governor.

It seems to me, with such a number of men distributed over the State, and acting under the advice and surveillance of local clubs, having a direct interest in protection of game and fish in their immediate vicinity, there would be an effective work done that has never before been accomplished, and a result attained that would meet with general satisfaction and approval.

It is simply absurd to make annual appropriations for hatching and distributing fish, only to have them, in fact, when grown to maturity, illegally caught, as they now are, and will continue to be, unless laws protecting them be stringently enforced.

There is no chance for an argument about this. The depletion of waters by many portions of the State, and the disappearance or scarcity of game are incontrovertible evidence that laws are of no consequence in the eyes of poachers and marketmen. They must be made to respect and obey these laws. Therefore, let us this year have the appropriation for the thirty game protectors.

STRAUBER.

SALMON AS PICKER POOD.—A pickerel (*Esox*) was recently taken in Lake Auburn, Maine, which had several salmon in

its stomach. The latter were of three inches in length. The fishermen about there think that a pickerel fed upon salmon ought to be finely flavored.

ANOTHER ROUTE TO TIM POND.—New Britain Conn.—There is another good route which I have before spoken of. Leave the railroad at North Anson and proceed by stage or private team through North Newportland and Dead River and Flagstaff to the Smith farm. The scenery is grand. There are good pickerel ponds near North Newportland and Flagstaff, and good trout ponds, not far from Parsons' Mt. Bigelow House at Dead River. Parsons' sold me last August that he was about to put up cabins at "Corry Pond," not far from his hotel. I have not my notes by me, and cannot state the number of miles. The guests at the hotel told us the trouting would be good. There is an excellent place for a few hours' trouting on this road, just before going upon the so-called "horseback," and all along the road from here to the Mt. Bigelow House ruffed grouse are very plenty. As we rode along the banks of Dead River we found ducks on the water. There appears to be everything along this route in the spring and summer, and when we get to Smith's, six miles takes him to the Tim Pond cabins, and ten or eleven more to the Seven Ponds, by a forest road out wide enough for a buckboard wagon with a span of horses.—J. W. T.

HOW CAN THE OYSTER SUPPLY BE MAINTAINED?—The consumption of the oyster is constantly increasing, and as the demand increases so will the disposition to fish the beds, and, should there be any failure of the supply, the increased price consequent upon that failure will induce even more exhaustive fishery; and it will become so great, if it has not already, that only strict protective laws, rigidly enforced, will be sufficient to protect the beds, and prevent the destruction of the industry. There is, however, another means of maintaining the fecundity of the beds which merits consideration. During the summer of 1870, Professor W. K. Brooks was successful in securing, by artificial means, the fertilization of the eggs of the female, and in producing the offspring for some time. Though, owing to various unforeseen combinations of natural causes, and to the accidents incidental to all tentative work, he has not been successful in maintaining the embryos until such a time as they could be deposited upon the beds with a certainty of survival, yet he has accomplished sufficient to show that the impregnation of the female cells can be easily and certainly achieved by a very simple process; and, as probably the greatest loss of the young is due to the failure of the ova to meet the male fluid at the proper time, any method which will secure such contact and protect the embryos, for even a limited period, is of great value, and well worthy of the attention of those interested in the preservation of the oyster-fishery. Any protection afforded the young oyster assures the maturity of a great number, and, as the beds are falling from a want of reproduction, due to the absence of mature oysters, any method which will insure the maturity of an abnormal number should be brought, if possible, to a point of practical benefit.—LIEUTENANT FRANCIS WINSLOW in *Popular Science Monthly* for December.

NEW ENGLAND FISHERIES.—We have received the seventh annual report of the Boston Fish Bureau from its Secretary, Mr. W. A. Wilcox. It opens with an interesting history of New England fisheries which is followed by the report, with nine pages of statistics which give "large catches and 'stocks' by the mackerel fleet in New England waters—season of 1881." "New England fleet catch of codfish, as reported to the Boston Fish Bureau." "New England catch of mackerel—amount of inspected barrels packed at home ports, as reported to the Boston Fish Bureau." "Receipts of fish by Boston dealers from foreign and domestic ports," and "Massachusetts catch of mackerel for 73 years." The record for the past year has been the most successful one for years. The loss of life and property has been great, as usual, nearly all falling on the Gloucester bankers.

A HANDSOME GIFT.—Winsted, Conn., Dec. 17, 1891.—*Editor Forest and Stream:* I wish to acknowledge through *FOREST AND STREAM* the present of about four volumes of your valuable journal from C. C. Boszwick, of Hudson, N. Y., which completes my set from the start.—FRANK D. HALLERT.

TRYING TO RHYME TARRAPIN.—IV.

There is an old lady, named Sara Pin,
She's trying to rhyme the word tarrapin.
And she'll sing, dance and shout;
She'll not, I'm sure, she don't care a pin.
Good day.

Somerette, Mass. LION HAMROD.

Fish Culture.

CANADIAN FISICULTURE.

THE following paper, the facts in which were gathered from the annual reports of the Canadian Fish Commission, was prepared and read by Mr. E. B. Miller, of the Michigan Fish Commission, at a recent meeting of the Commissioners of that State, at Detroit, December 29, 1891.

There are now erected ten hatcheries in the Dominion; the first one was erected by Mr. Samuel Willard, the Superintendent of the fish breeding establishment, at his home in New Castle, Ont., in 1863. Two more were constructed for each of the years 1873, 1874, 1875 and 1876, and one in the year 1880.

The running expenses of these hatcheries for the year 1890 was \$29,169 61, (our entire appropriation for that year was only \$5,000). The Canadian work for that year was as follows: Total number of fertilized eggs put down, 26,212,000, of which there were white fish, 1,000,000; salmon, 4,384,000; lake trout, 4,600,000; brook trout, 125,000. There were hatched and planted same year, 21,520,000 fry.

During the time the Canadian Commission have been engaged in this enterprise, over 200,000,000 fertilized eggs have been laid down in their hatcheries. The total number of live fish planted during these years I am not able to state.

The value of the fish taken in the northern districts of Ontario in 1879, was \$367,134, being an increase over the previous year of over \$200,000, and that for 1880 speaks as follows:

"The yield of fish in this division continues to show a steady increase; and for the present season being considerably in excess of any previous year. Overseer Doolan feels no hesitation in attributing this happy result to the breeding operations of the Sandwich hatcheries, and that the most credit is due to this year as the fry put in the Detroit River and which are now coming into maturity. The yield would have been greater had not cold

weather taken every one by surprise, and interfered with the fishermen's operations."

The Canadian catch of whitefish in the Detroit River division of fishery was 45,800 in number, in 1879, 77,700, in 1880, 103,500; showing a remarkable increase in the number of fish taken, which is attributed by the people following the business to the plants made by Canada and Michigan as appears by a voluntary statement made December 3, 1880, and signed by between thirty and forty of the principal fishermen and dealers on the Detroit River.

It will appear by the foregoing, gathered from official reports, that our brethren in the Dominion are zealous, active and successful in this enterprise, and appear to have funds provided by the Government to do much more than they are able to accomplish. We have, however, as appears by reference to our books, planted since the commencement of the work in 1873, nearly 100,000,000 of living fishes in Michigan waters. Judge Potter, Superintendent of Fisheries in Ohio, in the first report of that State made in 1875, speaking of the work accomplished by Canada and Michigan, says: "Lake Erie may be so replenished with the whitefish as to bring its consumption within the reach of all, and instead of ten cents, it will ultimately be afforded for three cents per pound." The same gentleman, three years later, in his annual report, rejoices thus: "There is no uncertainty about the whitefish, their multiplication by artificial means is reduced to a certainty, whitefish for the last season have been sold at the fisheries at an average of three cents per pound, a little more than the cost of raising."

These and other facts in the increased output of whitefish in waters planted, encourage our Commission to continue the enterprise to the full extent of our financial capacity.

COLORADO.

DENVER, COL., Dec. 31, 1891.

Editor Forest and Stream:

Our last legislative assembly made an appropriation of \$5,000 from the State Treasury for the establishment of a fish hatchery and to begin the business. That was in February, and in three months passed before a location was made, but that was finally accomplished in the latter part of the summer by the donation of ten acres of ground eight miles north of this city. It is near Platte River, but far enough away to be safe from frosts, and embraces about two-thirds bottom land and one-third bluff, or second bottom, about thirty feet above the bottom. About ten feet above the foot, in the side of the bluff, a great number of springs break out, supplying an abundance of water, at least for the present season, the temperature is as tender as 51 deg.

A few rods from the foot of the bluff is a long, narrow pond, filled with vegetation and admirably adapted for carp, but, unfortunately, it is now filled with catfish, wall-eyed pike and other native fishes, and it will be pretty hard to get them out. The pond is about 100 feet long and 15 feet wide. A dam has been removed to the ground and placed for the present in a very small pool near the springs, but it is too small and will be too cold for them in summer.

Between the bluff and the pond is a natural grove of cotton-wood and box elder trees, and the hillside is covered with wild plum and other shrubs. About one hundred feet from the springs Commissioner Sisty has erected a frame building about 25 by 35 feet, in which are arranged sixteen hatching troughs of the latest improved pattern. Early in the present week he laid down the first trout spawn (100,000 from New England) and will add a like number weekly for the next three weeks. He has placed in charge a practical fish-culturist—Mr. Bogart—from our Eastern hatchery. So we will soon see what can be done toward the new mountain fishery. The hatchery is a pleasant office is provided in the front part of the hatching-house, and Mr. Sisty says he can get through comfortably with his present plans upon the money provided him until the next meeting of the Legislature, January, 1893.

There is a man carp sent here and distributed to private parties are reported as doing remarkably well, but the public stock, I am sorry to say, have not grown to be whales by a long shot. First, they were kept for a time in a spring pool at the foot of the bluff, and they degenerated in the stream. A pleasant office is provided in the front part of the hatching-house, and Mr. Sisty says he can get through comfortably with his present plans upon the money provided him until the next meeting of the Legislature, January, 1893.

SALMON CULTURE IN MAINE—1891.

IN published extracts from the forthcoming report of the State Fish Commissioners for 1891, furnished by Hon. E. M. Stillwell, we find facts of interest relating to the hatching of salmon at Mr. Atkins at Grand Lake Stream. It appears that they form a successful and profitable business. The contributions to the Grand Lake Stream fund were as follows: Maine, \$300; dividend, 100; New Hampshire, 100; Vermont, 50; Massachusetts, 50; Connecticut, 50; total, 500; dividend, 100,000 eggs; United States, \$1,450; dividend, 230,000 eggs. Total money \$3,000; total eggs, 360,000 (net).

Total number of eggs taken at Grand Lake Stream is..... 800,000
Losses estimated at..... 100,000
25 per cent. reserved for hatching for benefit of Grand Lake Stream..... 200,000

Net dividend..... 600,000
With regard to the salmon culture on the Penobscot we gather from State papers the following: For this year's work, the contribution of Maine to the Bucksport and Orland works was \$2,000; dividend of salmon eggs, 1,980,000, all of which are to be contributed and hatched in the rivers mentioned below. The contributions to the Orland works were as follows: By Maine, \$2,000; dividend of eggs, 1,980,000; by Massachusetts, \$500; dividend of eggs, 270,000; by Connecticut, \$300; dividend of eggs, 162,000; by the United States, \$1,757; dividend of eggs, 950,000. Total—\$4,557; dividend, 2,462,000 (an advance having been already made for 100,000 less).

This much we have gathered from newspaper extracts taken from the coming report, which we will review when received. From private sources of information we learn that the facilities for hatching salmon are greatly improved in the year. At Grand Lake Stream they have built a hatching house covering about 1,450 square feet of ground, on a side hill close by the lake, with facilities for a fall of nine feet between the upper and lower troughs, which will insure well watered water, and there are now facilities for developing three millions of eggs.

At Bucksport-Orland they have built a cement aqueduct 1,500 feet long, with a 4-inch bore, and have now at command copious supplies of both brook and spring water, sufficient to serve many millions of eggs. The water is treated in the usual way, and water, and obviates the necessity of shipping the eggs in December, as had to be done with a large number of them last season. Mr. Atkins expects now to begin shipments in January and finish in March.

There has been most extraordinary weather up to the end of December—warm, with rain. It is thought that its result on the spawn at Grand Lake Stream will be to retard the hatching if anything. There has been a great deal of snow and ice water mingling with the ordinary supply, which is largely spring water.

FISICULTURE IN SCOTLAND.—The extracts from a letter written by the gentleman who brought the furbot and sole to America and took out carp in return will be read with interest, as in the letter he gives a glimpse of his brother's fish-culture. It is as follows: "I have been to the fish-culture at Hall, Dalkeith, Scotland, 6th December, 1891, and read as follows:—

Professor S. E. Baird; You will be pleased to hear that the

twenty-five leather-earp have been safely landed, after a very stormy voyage. The gale was a very severe one, and on Wednesday, November 23, the wind blew with hurricane force, and we were obliged to "heave to" for twenty-two hours. The boats were very hard indeed, and the ship, on during the night which disabled the four seamen on watch; one had two ribs broken and another his head badly cut; the other two were lamed. The wheelhouse was "stove in" and the galley gulged in. One boat was carried away on deck, breaking down the chimney stack of the donkey. Through all this storm the carp did well. The temperature of the water was 50 degrees F. at New York, and during the voyage varied from 54 to 62½ degrees. I also fed them with a little oatmeal and potatoes four times. The temperature of the water here at this time of year is about 44 to 50 degrees, which, I suppose, will be rather cold for the carp. I give them a little oatmeal but think they don't touch it. My brother is much pleased with the carp, and would wish me to thank you for all your kindness. He will value these fish very much, remembering how he came to the fishery. We have got our fish-hatching house up now and a few hatching troughs with *Schnee* oecosis ova in, but the ponds outside will be laborious work. The hatching house is 80 feet long by 30 feet, and built of granite. The first fry pond is just finished, and is 60 feet by 4 feet. The bottom is made of concrete and the walls built of granite and Portland cement (three of sand and one part cement). This makes a capital pond.—A. WILSON ARMISTEAD.

THE EFFECT OF CULTURE ON THE SPawning TIME OF TROUT.—The following is a translation of a communication by Mr. Muller, of Teichschdorf, to the *Fischerei Zeitung*, of Stettin: "During the past year the time occupied by the spawning of my trout (in Stettin) was, on an average, five weeks. Year by year it becomes more apparent that artificial culture has changed their habit in this respect. Before I began stocking with artificially bred fry the time of spawning was divided into two periods, part of the fish spawning generally about the 1st of October and occupying from nine to ten days, and the rest of the fish spawning afterward, sooner or later according to temperature. If the frost were early they spawned sooner, but if the weather continued mild the spawning covered a long time. Those which spawned first were the brighter colored ones with reddish tints, while the late and very dark ones were the duller. Year by year, however, "Now we find the fish all come up together to spawn, and this last season they could be seen on the spawning beds every day for five weeks. As a consequence the later ones used the same beds as the first and thereby much spawn was lost. This cannot be done, and the result is an advantage for the reason that if a flood should occur during the time of first spawning all the eggs in the stream would be lost but would be replaced by a later deposit."

FISHERY ON LONG ISLAND.—The lease for the Cold Spring property has been signed by Mr. John D. Jones and his brothers, and by the Fish Commissioners of the State of New York, and the lease will be in force on the 1st of January. The Fish Commissioners is talked of in order to determine when to begin and what to do.

Mayor Grace, of New York, is having a trout preserve to coat 50,000 built on his place at Great Neck. Trout ponds are also to be built on the farm of General Lee, near the city. There are several of the ponds on the south side of the island that have been depleted by eels and pike the Gorman carp have been introduced with success.

William Farman, who for many years has owned trout preserves at Masspel, owing to his heavy losses at the hands of poachers, has moved his establishment and fish to the Smithtown river, where he has created several hatching shanties. He is having a boat built to take his fish alive to the New York market.

CONNECTICUT SEELL FISHERIES.—The Commissioners on shell fisheries of the State of Connecticut will soon issue their annual report on the fisheries of the State. At a recent meeting of the Commission Mr. Bogart, their Surveyor for the Commission, stated to the members that the coast to the State of a survey of some sixty acres of ground made recently was about 320, while the revenue was only \$5.50. In large tracts, however, there was a very large quantity of oysters. In the case of the State, in the State. B. E. Cutts, of the United States coast survey, has sent the Commission 100 bottles containing samples of the sound bottom at different points in the oyster grounds of the State, and also three packages of oyster shells, showing the growth at one, two and three years from the time of spawning. The specimens of soil were dredged up from the United States steamer Palmarus last summer, and are expected to prove valuable in showing the relative productiveness for oyster growing of different kinds of bottom.

A STATE ASSOCIATION PROPOSED.—It is proposed to form a fisheries association for the State of Ohio, and we have received the following call, which has also appeared in some of the local papers: *Editor Forest and Stream:* As fish culture is growing rapidly within this State and others, it seems advisable that those already engaged in this profession, as well as others who take an interest in fish culture, should form an association which should be organized and supported in a private as well as in public waters within this State, by collecting facts regarding pisciculture, protection or cultivation of our own good varieties, introduction of new ones, and arranging for the culturists interests. The members of this association should be invited to please communicate their ideas on the subject, and oblige, yours truly, HIRSH MULBERT, 507 Race street, Cincinnati, O.

DEATH OF A FISH COMMISSIONER.—We regret to learn that Mr. J. H. Dinkins, Fish Commissioner of Texas, died recently from the effects of injuries received by falling under a moving railway car while attempting to board it. Mr. Dinkins was a prominent citizen of the State, and respected in every respect. He was an efficient and active fish commissioner and an enthusiastic sportsman. He had already accomplished much in the way of awakening the people and the Legislature of Texas to the importance of pisciculture. His usefulness was just beginning to be felt. His wife is a loss to his State.

TRUCK CARP. A blue variety of carp is cultivated in Germany and France. It has lately become a favorite, and is called by some the best of all carp. On Saturday last the North German Lloyd steamer *Donau* brought a car containing a dozen specimens to Mr. Blackford. That gentleman afterward learned that they were from the ponds of Mr. Eckardt, at Lubbechen, and intended for Professor Baird.

TROUT EGGS FOR GERMANY.—The steamer "Hosel," of the Bremen line (North German Lloyd), which sailed on Saturday, the 6th inst., took out 15,000 brook trout eggs for Mr. F. Danse, Geestemünde, this being the second shipment made to Mr. Buse this winter by Mr. Livingston Stone.

NEW PUBLICATIONS.

THE ART INTERCHANGE publishes colored plates from time to time, and these plates, besides being of great value to the artist, are an excellent attempt to raise the standard of art appreciation among readers by the use of full titles and simple captions. The colored birds accompanying the Holiday issue is an admirable example of the art interchange. The plates are in the form of a card, and are for a hand-made wood panel or china plaque. The Christmas number is further enriched by an extra double sheet supplement containing a large and beautiful illustration. Published at 14 Nassau street, New York. \$2 a year.

"COUNTRY PLEASURES." by George Miller. Published by Roberts Bros., Boston. The author has looked at nature with the eye of a painter and the soul of a poet, and his chronicle of a year's rest in the woods of Marlow's Fossinate Shepherd, who invites his love to come and

All the pleasures prove That hills and fields and woods of steep mountain yields.

Mr. Miller's work is merely a transcript from a diary of a year spent

in the country. It represents impressions and moods of mind induced by the scenes portrayed, with special reference to that little nook on the southeastern side of Lancaster, where this cartoon, whose every phase is represented in the picture is situated. The book is rich in quotations, and the author has not only been an appreciative observer himself, but a keen student of other gifted readers of nature, and from their words he has culled our new world metaphors and beside one of our hard cold trees, the pages brought with them a delicious odor of the forest, while the splash of the water in the mountain brook added much to the effect of the scene. As to her poetic moods the book will be a volume to be read and read again.

THE LIVE STOCK JOURNAL ALMANAC FOR 1893.—We have received from the publishers, Cassell, Petter, Galpin & Co., the above-entitled volume. It contains, in condensed form, but conveniently and attractively arranged, much matter that will be found useful to the farmer, the stock raiser, the dealer and the country gentleman. The work is attractively produced in illuminated paper cover. It can be furnished by mail from this office, on receipt of the price, fifty cents.

October. National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

TRAINING VS. BREAKING.

IN TEN CHAPTERS—CHAP. VII.

IN the preceding chapters all of our work has been of a preliminary character. We have expended much time and patience in order to perfect our pupil in the rudiments of the education that is so indispensable to that pride of the sportsman's heart, nor had dog. Long ago we thought our pet was just about perfection in the performance of his duties and we have anxiously awaited the coming of the crisp October days that we might put to the test our hopes, and, by a actual trial in the field, demonstrate how much of wisdom pertains to the course that we have pursued. Do we live among the forest-crowned hills, the home of the lordly ruffed grouse; long ago we have located several broods of these regal birds, and as we have paid them an occasional visit, how our blood has warmed up, how our nerves have thrilled as we fondly dreamed of the sport in store for us when the falling leaf should proclaim that

The hunter's glorious days have come,
The best of all the year;
When through the woodland shades we roam
With royal sport and chase.

Should our love be toward the setting sun on the broad prairie, whose vast expanse teems with numberless broods of the toothsome chicken, with ever-growing delight and satisfaction have we witnessed from day to day the added strength of the whizzing pinion, and with ever-increasing impatience at laggard time's slow flight have we awaited the dawn of the auspicious day that brings such wealth of joy to the sportsman's heart. Or, perchance, our hopes of happiness are turning to the pride of the stubbles, the gamy, beautiful quail. How eagerly have we beaten the feeding grounds, and as we have roved, and our eyes have been upon our sight, how have we, with throbbing pulse, watched the flitting wings, and carefully marked their flight as they settled in the friendly cover or upon the distant hillsides. What visions of little bounding forms suddenly transformed into living statues, mingled with flashing brown sprites, the crack of the gun, and the cloud of feecy feathers floating in air, have filled us with anticipated satisfaction, as we thought of the pleasure in store for us when the early flocks should call us forth to the field, and our thoughts of that long-billed aristocrat of birds, "woodcock" and "partridge" alone engage our thoughts. Well, we know their sure hiding place, and as we have paid them our debt and seen them dart through the openings, and heard their querulous whistle, how have we thought that the serene and yellow leaf would soon be here to bring to us most royal sport. Do not look upon this as a digression, for we dearly love the pursuit of every one of these favorites; and we hope that you, dear reader, like ourselves, will so train your dog that, no matter which of our lines are such, you may please sport in success.

Our favorite sport since we have had the pursuit of that best of all game birds, the magnificent ruffed grouse, and we have ever found, when our dog was anywhere near perfect in circumventing this most wary bird, that but few days, or perhaps hours, of practice were required to make him equally adept in the pursuit of any of the others. Many writers pronounce this beautiful bird unfit to train a dog upon; they rail against his subtle cunning, and are unstinted in condemning his swiftness of wing; and they will give you columns in the management of his preternatural wisdom, which they miscall "wildness and vagabondage" and will keep your young dog away from the ruffed grouse's haunts. Notwithstanding the evident sincerity of these writers, we must beg to differ from their views, and can only regret that their knowledge of the habits of this king of birds is not equal to their skill in framing sentences for his vilification.

Having decided to give our pupil his first practical lessons with this most potent instructor as our co-worker, let us "hie away to the fields with eager dog and trusty gun," and test the sport so long anticipated. Our pupil should be kept at least until we reach the usual haunt of the birds, who he should be encouraged to go on. Let him go where he pleases, taking care only to keep him within bounds and always under your eye, that you may see just what he is doing. Do not bother him with any orders, if you can possibly avoid it; above all, do not make him beat each particular corner that you may think desirable, but rather allow him to take the lead and to have his own sweet will, content to follow him until he has gained some little insight and become somewhat accustomed to the new life just opening before him. See with what eager pleasure he follows the hidden notes of the covert, how his eyes gracefully motion tell of joy; how his sparkling eyes mirror his delight; but look, and proudly feast your eyes upon the welcome sight, he has discovered that something is in the wind and the "heaven-born instinct" within has frozen him rigid as the rick by his side. Choke down that rising lump in your throat; quiet the quick throbbings of your heart; and, while blessing your good fortune, be cool and collected, for

never more need of cool, deliberate action than now. Your dearest foe is near, and faltering eye or trembling hand will insure his triumphant escape and cause you unwelcome discomfort. Do not hurry, but, with deliberate haste, walk forward and force a rise; calmly now, and, as though on parade and about to shoot at a chip tossed in air, coolly bring your gun into position, glance along the trusty barrel's end, with "eye of faith and finger of justice," "cut loose," and fortune grant you aim be true. The chances are greatly against your obtaining a close shot at the first rise, unless among young and unsophisticated birds; but shoot you must, nevertheless, even should the flashing game be far beyond your reach or, as very often happens, entirely out of sight, for we have not done with him yet; and most potent is the sound of gun and whistle of the hunting lead to drive from his crafty brain the wisdom that causes him to shun our close acquaintance. Should your shot prove deadly and the conduct of your dog be all that you could wish, with a loving pat and kindly words, lead your pet straight to your victim and as soon as his sensitive eye locates the bird, at once pet and praise him without stint and talk to him as to an intelligent companion. After a few seconds you should pick up the bird in a dainty manner, and while carefully smoothing out the feathers, allow the dog to sniff the grateful perfume, but on no account let him mouth it, nor poke his nose among the feathers, thus teaching him that the greatest care must be taken that not a feather should be displaced.

When your pup first shows sign that he has scent, do not on any account speak to him nor make any sign, but allow him to act his own pleasure. Should he go through the trying ordeal to your satisfaction, congratulate yourself that you are possessed of a wonder; should his earnest inclination overpower his innate sense of duty and cause him to become unsteady and flush the bird, you must at once call him in and place him as near as may be in the exact position that he occupied when he should have pointed, and commanding him to *to do*, give him the command that you are displeased with the performance. If you have killed the bird, and can readily find it, you will add to the force of this lesson if you oblige him to retain his position while you go and bring it to him, and as you hold it a foot or two from his nose, repeat your command of *to do*. This, you will find, will cause him to be more careful in the future. Should he become demoralized at the rise of the bird and give chase, do not despair, but calmly say *to do*, and if he disregards the command, let him go, and be thankful that he has any ambition, something to accomplish with the knowledge that in a short time you will eradicate the fault, while the virtue will remain and afford you great satisfaction in the future. When he returns you should at once replace him in the position from which he broke, and make him *to do* for a short time, while you talk to him about the enormity of the offence. It is not advisable to shoot when he starts to chase, as, should you kill, he may seize the bird and handle it too roughly for his future good. Neither does the sound of the gun exercise a steady influence up on his excited nerves. Above all else, do not fail to keep perfectly cool yourself under all circumstances, and to issue all your commands in your ordinary tone of voice, for there is nothing so conducive to unsteadiness in your dog as his knowledge of the fact that you are demoralized, and he is sure to become possessed of this knowledge almost before it is apparent to you. Therefore earnestly strive to retain your self control, for without that you can never succeed in turning out a steady dog.

Should your bird escape the first flight, let no common occurrence prevent you from immediately following him up. Do not undertake this in a half-hearted manner, but put your whole soul into the work and rest not until you have again routed him. Give him a shot as he rises, and if he again escapes be not discouraged, but with renewed efforts try him again, secure in the knowledge that, can you but find and keep him moving—although he may be the wisest and, consequently, the wildest grouse of them all—at last your reward is sure; at last, utterly demoralized by the relentless persistency of your pursuit, he has changed his tactics, and waits for you to pass. Fatal mistake! The keen-nosed dog, more eager at each successive defeat, again becomes stung and unerringly indicates the bird's hiding place. Now is the supreme moment. With nerves of steel—hardened by the excitement of the long continued chase—you literally kick him from his retreat and coolly bring him down. What satisfaction is in your heart as you smooth his beautiful plumage. What light is in your eye as you gaze upon his plumed form. What pride in your breast as you proudly display the prize so gallantly won. A glance at the speaking countenance of your four-footed friend tells you that he, too, is happy; and, our word for it, a few days among these crafty birds will do more to develop the hunting sense of an intelligent animal than thrice the time devoted to the pursuit of any other game.

CANINE AILMENTS.

WE give below chapter fifteen of the appendix to Vero Shaw's Illustrated Book of the Dog which will be found to contain much valuable information regarding the course of treatment to be pursued in some of the most common cases of illness and accidents which are liable to befall our "dumb friends." This appendix is a treatise on Canine Medicine as compiled by Dr. W. Gordon, and should be in the hands of every breeder, as many of the prescriptions are invaluable. This number concludes the series of this valuable addition to the canine literature of the day. We should have published many of the more important articles contained in this work, had not our price been so exorbitant. It is our intention, however, to give our readers from time to time such selections as we deem of interest to them. The work can be had of the publishers, Messrs. Cassell, Petter, & Co., New York.

ABSCESSES, DISLOCATIONS, FRACTURES, WOUNDS, STRAINS, ECCHYMOSES,

Abscesses may be defined as matter or pus generated and collected in any of the glands or tissues of the body. They are met with in all regions of the body, and are sometimes small and sometimes very large. They are usually very painful, and in some situations may be highly dangerous, from the effects of their pressure on important organs.

The causes of abscess are numerous; the presence of some foreign body, as a thorn, may give rise to it, or the deposit of unhealthy matter from constitutional reasons. In dogs I have very frequently given rise to large abscesses by the use of Dr. Gordon's (there is swelling, a glazed and glittering appearance of the skin, which is considerably reddened, and there is great pain and tenderness, accompanied with heat, and the dog is more or less restless, and sometimes delirious, and finally it bursts. Mammary abscess is common in the teats of a bitch, frequently occurring there is a milk in them that is not removed, at about the time she would have had pups had she been in whelp.

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCUCLATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve an unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$3 for six months. To a club of three annual subscribers, three copies for \$10; five for \$16. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if not the best in the world, for trout, grayling or fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. THE TROUT season begins May 1 and ends Sept. 1. THE GRAYLING season opens June 1 and ends Nov. 1. BLACK BASS, FINE PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home as he for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the season of 1882 by new buildings and improvements.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen. Dogs, Guns and Fishing Tackle Carried Free at owners' risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated covers, titled "Map of the Time Cards, Folders and further information, address:

A. B. LEST, Gen'l Pass't Agent, Grand Rapids, Mich.

NOTICE TO SPORTSMEN.

A daily line of conveyances is established by Mr. H. Snowden between New Sweden Station, Elizabeth City and Norfolk. Rapid and Currituck Court House on the Sound, leaving Snowden on arrival of Norfolk train connecting with Baltimore steamer and returning to Norfolk on the same train for at noon Baltimore steamer. Time between New York and Currituck Court House, south bound, twenty hours; north bound, twenty-four hours. M. H. KING, Gen. Manager Elizabeth City & Norfolk R. R. Co.

Hotels and Resorts for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.

Respectfully invite attention to the SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT PORTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF Pennsylvania Railroad Com'py also reach the best localities for

Gunning and Fishing

In Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVA, BEDFORD, CRESSKILL, EASTON, MINNESKA, and other well-known centres for

Trout Fishing, Wing Shooting and Still Hunting.

Also to TUCKERTON, BEAVER HAVEN, CAPE MAY, SQWAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AND FISH AND FEATHER.

For P. F. FARMER, Gen'l Ass't Agent, FRANK THOMSON, Gen'l Manager.

Chesapeake & Ohio R'y.

THE ROUTE OF THE SPORTSMAN AND ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Allegheny Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc. Guns, fishing tackle and dog dog for each sportsman carried free.

The Route of the Tourist,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts. The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsula Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL," and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., to the mouth of Chesapeake Bay and the Pacific Ocean.

H. W. FULLER, G. P. & T. A., Richmond, Va.

OLD DOMINION LINE.

THE STEAMERS of this line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobscook Island and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk, Chesapeake, Baltimore, Thursday and Saturday. Leave, Bell, Monday and Thursday. Full information given at office, 197 Greenleaf street, New York.

Bromfield House, Boston.

Publications.

THE FARMER'S ANNUAL HAND-BOOK
FOR 1882
Compiled by H. P. Armsby, Ph. D., Professor of Agriculture in the Chemistry in the State Agricultural School; and E. H. Jenkins, Ph. D., Chemist to the Connecticut Agricultural Experiment-station.

It is the object of this little book to bring together, in a convenient, portable, and cheap form, much information of great practical value to the farmer, but which is scattered through various books, bulletins, and reports. It aims to be to agriculture what the engineer's and mechanic's hand-books are to engineering and mechanics—a book accurate enough for the library, handy enough to be carried every day in the pocket, and cheap enough for all.
It contains a diary for the year, and numerous tables, the most of which are:
The average purity and vitality of American seeds as found in the market; directions for estimating the amount of manure produced on the farm; frequency and duration of heat in farm-animals; suitable age for weaning.
Calendar for determining the period of gestation of farm and domestic animals—mares, ewes and she-goats, sows, birches, and cats—largely based on the observations of American cattle-breeders.
The stock-breeder's register, containing columns for entering name or mark of the animal, when set, if a cow, when dry; from — to —, when due, date of coming in, sex of young; remarks.
Tables of the composition of fertilizers and fertilizing materials as sold in the American market, compiled from American analyses, with remarks and explanations.
Feeding standards for farm-animals; tables of the composition of fodders and feeding-stuffs, compiled chiefly from American analyses; tables of average digestibility of fodders and feeding-stuffs.
The above is but a part of the contents of this most useful little volume.
16mo, cloth. Price, 50 cents. For sale by booksellers; or will be sent by mail, postage prepaid, on receipt of price, by
D. APPLETON & CO., Publishers,
1, 3 & 5 Bond Street, New York.

GUNPOWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DUPONT'S GUNPOWDER MILLS, established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:
Dupont's Diamond Grain.—Nos. 1 (coarse)
to 6 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.
Dupont's Extra Ducking.—Nos. 1 (coarse)
to 6 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.
Dupont's Chocho Bore.—Specially adapted for
"Chocho Bore" Guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
moist; does not choke or burn on the barrels; gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 7 and No. 8,
No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and
1 lb. canisters.
Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. canisters and 6 1/2 lb. kegs.
Dupont's Rifle Fg. "Sea-Shooting."—
Ffg. and FFG. The Fg. for long-range rifle shooting,
the Ffg. and FFG. for general use, burning
strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb.
canisters, 6 1/2 and 12 1/2 lb. kegs. Fg. coarse, FFG.
fine.

Dupont's Sporting, Mining, Surrex and Blasting
Powders of all sizes and descriptions. Special
grades for Export. Also Rifle, Cartridge, Musket,
Cannon, Mortar, Mammoth, Hexagonal, Cubical
and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
grain or proof.

Agencies in all the cities and principal towns
throughout the United States. Represented by
F. L. KNEELAND, 87 Beaver St., N. Y.

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."
They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 300 competitors. FOREST AND STREAM.

Thursday, January 19.

PISTOL SHOOTING.

THE doubt with which some of the correspondents of the FOREST AND STREAM met the assertion that the story of the cowboys of the West and South-west hitting telegraph poles from sixty yards off was somewhat of a myth, opens the question as to what may fairly be done with these small arms.

The subject is very barren of record. We have pistol shooting displays in plenty and, probably, in one case in this city may be seen as fine a showing of *bona fide* targets as can be met with anywhere in the world. Each record has upon it, too, the exact conditions under which it was made, and those conditions were the best possible for the production of high scores.

The pistols used in gallery practice are made specially for such employment, with ten or twelve inch barrels, single breech-loaders and carefully balanced, with sights open, but capable of the finest adjustment. It is very rarely the case that peep sights are employed, but they may be if thought desirable. With such a weapon the good holder may rely on securing satisfactory results. Using the short .22 calibre cartridges these pistols afford an endless amount of amuse-

ment at a very limited cost, and up to moderate distances are unexcelled. With them shots may be grouped by ten or a dozen on spaces to be covered with a silver half dollar. It is such shooting as this that stands recorded in our weekly accounts from the shooting galleries.

But there is another class of small arms, and they outnumber the gallery shooting machines one hundred to one. They are the revolvers of all classes that are turned out in such immense numbers from the various factories. They are marvels of strength, ingenuity and cheapness, and in many cases are as inaccurate as they are pretty to inspect and handle. What these weapons will do under careful test is very wide of an unknown quantity. A few days ago the question was put to the agent of one of the most popular and generally regarded as the best of this class of weapons, whether any test was made of them before shipment from the factory, and the idea of trying a pistol for accuracy seemed to strike him as a novel one. With him a pistol was a pistol, and having been carefully made, as he knew this particular brand of revolver to be, he could not conceive how it could be anything but an accurate and exact shooter. There is a great deal of pot-luck work in the pistol manufacture, and the majority of those turned out are blank failures when called upon to do any hitting, even at the most moderate distances. Taking, for instance, the regulation distance of 12 paces or 36 feet; over this any pistol worth the making ought to shoot with the utmost exactness.

We have received many letters from correspondents speaking of fine scoring done; and we should be pleased if the writers would send on a target of 10 consecutive shots fired strictly off-hand at 12 paces distance. We will measure the string and publish the results. In each case particulars of the sort of pistol used ought to accompany the score diagram. In this way something practical in the way of record may be arrived at as showing what the various classes of small arms will do. We have seen 10 shots from a smooth bore dueling pistol, carrying a ½ ounce ball, crowded on the space of a trade dollar, but this was fine holding and the weapon was of a capital make. What is wanted is some determination of the average value, as shooting implements of the million odd pocket-poppers of every description which are scattered here and there over this land.

THE DELAWARE FISH COMMISSION.

ONE of the last to enter upon pisciculture, as a State industry, was Delaware. A reason for this might be found in the fact that the culture of salt-water fishes has but just begun, and her fisheries are mainly in salt and brackish water. With the exception of the Delaware River on her Eastern borders she has no large rivers; and her small streams, which mainly flow into that river and the great Delaware Bay, are short.

But little interest had been taken in the culture of fish in Maryland, until the appointment of Col. Enoch Moore, Jr., as Commissioner, on the 22d of April, 1881. His appointment was for two years, and the sum of three hundred dollars was appropriated to carry on the work, allowing the Commissioner \$2 per day for each day of actual service. This fall Col. Moore received and distributed 3,000 German carp, mostly to private ponds, and, such is the desire of the people for more, he has over fifty applications for them, which he cannot fill until next spring. This is a very good showing for the few months during which Col. Moore has been in office, and shows how an energetic man can awaken public interest in this subject, even with such an insignificant appropriation, by merely taking hold of it.

Since the appointment of a Commissioner an interest in the good work seems to have sprung up in all parts of the State, and in the city of Wilmington a piscicultural club has been formed, called "The Delaware Piscicultural Association." Its officers are: Dr. E. G. Shortledge, President; Hon. Mayor John P. Almond, Secretary; S. N. Pusey, Treasurer. This society has for its object the stocking of the streams with food and game fishes, and they have one pond of seven to nine acres with a few carp in it; one pond of three-fourths of an acre, containing 30 leather and 29 scale carp, which will spawn this coming spring. From these small beginnings we expect a future for pisciculture in the State of Delaware.

OSCAR Y^o WILD GOETH a-ANGLING.

THE advent of the English esthete Oscar Wild has nearly turned the heads of the ultra-impressables of New York; and we felt flattered when a highly-perfumed note, in an envelope which exceeded in glory the cover of *The Century*, invited us to a little lunch and fishing excursion.

We missed the lunch and hastened to Pier 42, East River, the spot designated as the one to be honored by the poet, artist and piscator. It was a bright morning; and the end of the pier was occupied by little Patsy Hooligan, and a few friends of his own age, seven to nine, who were fishing from the string-piece. The sun, glancing brightly upon the liquid surface of a passing mud-scow, caused Mickey Gilhooly to turn his face to avoid its glare, and looking up the dock, he exclaimed: "Hi, Patsy wots this a-coming down the dock?" Patsy turned quickly, and dropping the broken barrel-hoop which did duty for a rod, simply exclaimed: "Well, I'll be blowed!" We also turned and saw a tall form enveloped in an ulster which reached to his shoes, a sunflower stuck in his button-hole, hair down to his shoulders, and a general lankiness which, to our trained optics, plainly denoted the esthete, even if he had not been accompanied by "twenty love-sick maidens," each with her waist under her arms, or none at all, and decorated with daisies, lilies, cat-tails and other emblems of the Renaissance.

We lifted our hat as we bade him "good morning," feeling that its nine dollar's worth of Broadway style paled before the artistic seal-skin cap with beaver trimmings, which surmounted the esthete's dome. The maidens exclaimed in chorus: "O, isn't this the utermost verge of the uted?" Patsy Hooligan picked up a stump of a Third Avenue cigar and chewed the end in meditative silence, as became a disciple of the gentle Izaak. The gulls flitted toward Blackwells Island, and the breeze laden with the spicy odors from Hunter's Point played with the flowing locks of Oscar the Wild.

The poet produced a rod made by Keats & Co and a reel by Walt Whitman, and using a silk lily for a fly proceeded to cast. The maidens folded their hands and sighed. Patsy Hooligan whispered to Mickey Gilhooly. We caught the words: "She's a-lying on top of a spile down under dere; slip down and fix it." "Won't you give me away?" asked Mickey. "Naw, what dye yer take me fur?" scornfully answered his preceptor; and the younger of the two disappeared up the pier, and then down under it.

The gulls screamed and the water lapped merrily against the pier. We were wrapt in admiration of the beauty of the scene when one of the rapturous maidens exclaimed: "A hite!" The poet's eye and his reel, both in fine frenzy rolling betokened resistance on the plant rod, which bending under the weight of its prey seemed a sentient thing of life enjoying the struggle. The maidens clasped their hands firmer. We held our breath. He landed on the pier at our feet, his feet and the forty feet of the maidens, a drowned kitten, which was not a recent one. The gulls laughed, the maidens flushed twenty blushes, and the odors of Hunter's Point subsided in deference to superior force. We ordered a horse-car, on the "belt line" and gave directions to drive to Fulton Market, pondering in the meantime upon the uses of the cat-tail in decorative art, and sorrowing that on Pier 42, there was only one to divide between those twenty-one persons of refined and elevated tastes.

THE ST. NICHOLAS GUN CLUB has recently been organized. Its membership is limited to the members of the well-known St. Nicholas Club of New York. The new organization starts out with a roll of sixteen names, and includes some experts with the shot-gun. The management is in excellent hands, and the club's future most promising. A novel feature of the published set of rules is the provision of some blank score leaves bound up with the book to serve as a permanent record of the scores made during the year. We welcome the St. Nicholas Gun Club to the long list of similar societies of business and professional gentlemen, who seek relaxation from their work in the manly sports of the field.

A MACHINE FOR TESTING GUNS has been devised by Mr. F. G. Farnham, who publishes a description of it in this paper. We understand that it answers its purpose most admirably. It is a very important addition to this class of machines.

BYE-WAYS OF THE NORTHWEST.

ELEVENTH PAPER.

THE year 1881 will long be memorable in the annals of British Columbia salmon fisheries. As indicated in a previous letter, a good run was looked for in the river this season, but up to the middle of July no fish had been taken. The boats had, however, been drifting for them for a week previous, and the presence at the mouth of the river of great numbers of bonaparte gulls, or, as they are called here, hoolachan gulls, was regarded by the fishermen as a sure sign that the fish were at hand. About the twentieth of July salmon began to be taken, and it was not long before the run had so increased that it became impossible for the canneries to use all the fish caught, and a portion of the boats were taken off. Early in August the catch was from 75,000 to 80,000 fish per diem, with only one-half the boats employed. The canneries were all run at their fullest capacity, and the enormous catch was the talk of the town. At all hours of the day and night some of the steamers employed in collecting the fish from the small boats which do the drifting, were tied up at the wharves, unloading their glittering freight, and great piles of the shapely fish were to be seen at the landing-places all along the river. No matter how fast these piles were removed, they were almost at once renewed. The fish were mainly the sockeye salmon and averaged from eight to ten pounds in weight, but there were not wanting specimens of the quinnat, the so-called spring salmon of the Fraser, which ran from fifty up to seventy, and even eighty and one hundred pounds.

The nets used in the capture of the fish are ordinary drift gill-nets with a 5-7-3 inch mesh, about forty meshes deep and one hundred fathoms in length. They are cast off in the usual manner and drift down stream with the current, meeting the advancing salmon which are swarming up the river. From Ewen's cannery I procured a record of the catch of a few of the boats on one or two average days, which is as follows:

August 9, five boats took 970 fish.

August 9, six boats took 1,067 fish.

August 10, six boats took 1,492 fish.

August 11, six boats took 1,593 fish.

Which gives an average of about 244 fish, or rather more than 2,000 pounds to the boat. All the canneries employ steamers to patrol the fishing-grounds, and as soon as a boat has a load, it proceeds to its steamer and transfers its catch, the fish being counted as they are received. In this way no time is lost by the fishermen, who are enabled to keep their nets in the water almost all the time. When the steamer has a full load, she proceeds to her wharf, where by means of iron forks and pikes, the salmon are tossed on to the platforms. A steamer will land from 8,000 to 20,000 fish each trip. All the canneries are at the water's edge, and the fish are no sooner landed, than the work of preparing them begins. An Indian throws them into a large tub of clear water, from which they are taken one by one, by a woman who places the fish on a table before which she stands, and with a large knife removes the head; she then slides it along to a man who, by a single cut of his knife, removes the entrails, and cuts off the fins and tail. The offal is pushed aside into a gutter which leads into a chute, and that into the river. The fish is now passed on into a tub of clean water, and after being washed is carried to the cutting table. Here there is a man armed with knives about four inches apart, which cuts the fish into lengths, and the pieces are then placed in the cans, which are filled up even with the top. These are then passed to another set of workmen, who put on the covers, and then go to the solderer. Several new inventions have been recently patented for soldering on the covers, so that the rendering of each can perfectly air-tight occupies but a small fraction of a minute. Twelve dozen soldered cans are placed in a shallow tray made of strap iron, and this tray is suspended by a chain in a vat of boiling water. The cooking occupies but a few minutes, and on its removal from the water, the rack is placed on a table, and a Chinaman with a small wooden mallet taps each can on the top. The expansion of the contents has made the cover bulge outward, and by tapping it with the mallet the operator is at once able to determine whether the soldering is perfect, and the can air-tight, or not. If on being tapped, the cover yields noticeably, it is evident that there is an escape for the air, and the can is rejected. The operator then reverses his mallet, which is armed on the other end with a small tack, and with a light blow punctures each can, allowing the escape of the air and steam confined in it, and often of a portion of the juices of the fish. As soon as this is done, another workman seals up this aperture with fresh solder, and the cans are ready to be labeled, boxed, and shipped to a market. The amount put up at this cannery was about 500 cases each day, each case holding, on an average, ten fish. The run of sockeye salmon lasts usually from four to six weeks, and during this time the factory is run from four o'clock A. M. to seven or eight o'clock P. M., and the work goes on without interruption on Sundays as well as week days.

Notwithstanding the enormous numbers of fish which are caught, it was said by old fishermen that in their opinion not one out of ten thousand of those that enter the river were taken. That the proportion of escaping fish is large,

can be inferred from the great numbers that are secured, and that without any special effort, by the Siwash and others further up the river. Two million fish is a very small estimate for the number taken to supply the New Westminster canneries during the fishing season, yet further up the river the salmon are scooped up in purse nets by the Indians almost as fast as the net can be swept through the water.

An excursion up the Fraser River to the town of Yale, the head of navigation of the lower Fraser, had been planned by Mowitch, and taking one of the comfortable river steamers, one afternoon, we set out with a charming party of friends. The river near its mouth is very muddy, thus resembling the Missouri, but as progress is made up its course, it becomes less and less turbid until when Yale is reached, the water, though not yet limpid, has lost its muddy appearance and is beautifully green like that of Niagara. The current is everywhere very rapid, and at certain points, where the channel is narrow and the banks steep, its violence is so great that it seems as if it would be impossible for the vessel to overcome its force. The valley of the river for some distance above New Westminster is rather broad and the bottom extensive and covered with a superb growth of large cottonwoods. The mountains are not very high, seldom exceeding 4,000 feet, and only occasional patches of snow are to be seen on them. Their sides are for the most part very steep, and we saw frequent evidences of extensive landslips, which had laid bare great areas of dark-red rock, which served as beautiful contrasts to the prevailing dark-green of the foliage. Sal's Peak is a noteworthy mountain of great beauty, and Silver Peak, another fine mountain, takes its name from a silver mine which has been opened near its summit. In many places along the river are to be seen the evidences of the mining operations which began here twenty years ago. The gravel and sand bars, and often long stretches of the bottom land, were in many places mere piles of cobblestones, which had accumulated after the finer sand and the soil had been washed for the precious metal which it contained. Many of the bars had been worked over a number of times; all of them twice. Here, as in most other sections of the country where placer mining has been extensively carried on, the white man had gone over the ground at least once, and had been followed by the more patient and persevering Chinaman, who found in the abandoned claim enough to reward his industry.

On the way up the river I talked with a Mr. Hunter, a civil engineer of great experience, who had secured a grant from the Dominion Government for a mining enterprise of great interest to me. From Quesnelle Lake a river of the same name runs to join the Fraser, and its bed is supposed to be very rich in gold—so rich that it is said that the Chinamen, anchoring their boats in the river, and dredging up the dirt from the bottom, make good wages from washing it. Mr. Hunter has obtained the right to mine this river, or so much of it as he can make accessible by turning the water from the bed, so that it can be reached and worked in the usual way. His plan is ingenious, but very simple. He proposes building a dam across the river near Quesnelle Lake, by which, during three or six months of the year, the water can be held back in the lake, so that the volume flowing through the river channel shall be greatly diminished. Of course, the practical success of the scheme depends on a good many contingencies, but if the dirt is as rich as is supposed, it seems likely to be very profitable.

During our passage up the river we passed at frequent intervals the fishing camps of the Siwash, and could see that they were taking great quantities of fish. Their drying stages—thickly hung with the bright-red flesh of the salmon—stood out in bold relief against the green of the deciduous trees or the cold gray of the rocks. Only a small portion of each fish is saved by the Indians, the greater part being thrown back into the river. By a single slash of his knife the Siwash cuts away the whole belly from the throat back to a point behind the anal fin and extending up on the sides as far as to where the solid flesh begins, and this portion he retains, throwing the whole shoulders, back and tail into the river again. The Indians of the coast, however, save the whole fish.

The method employed in taking the salmon is sufficiently simple, and yet owing to their abundance very effective. A purse net is arranged to run by means of wooden rings on a wooden oval, about four feet long by three in breadth, to which a long handle is attached, the frame resembling that of a gigantic landing net with an oval ring. When the implement is to be used a string is pulled, which spreads the net, and it is swept through the water with a slow motion, against the current. The string which holds it open is passed by a loop over the little finger of the left hand, and, as soon as the fisherman feels anything strike the net, is loosened, the rings run together, and the object is held securely in the bag. The fish, in their efforts to stem the current, pass close to the steep banks, where the force of the water is least and the eddies help them along. The fishing is for the most part done from stages, which are built of poles and extend a few feet beyond the rocky points which here and there project out into the stream. The right to occupy these points descends from the father to the oldest son of the family.

A short distance below Yale is the town of Hope, a small settlement beautifully located in the wide bottom. It is from this point on the river that the trail for Kootenay, distant about 500 miles, starts, and all the mail and express

matter goes by this route to this inland settlement. Hope was founded during the early days of the mining excitement, and when it was thought that the diggings of the Fraser were inexhaustible. Great expectations were entertained of the future importance of the place, and an active speculation was carried on in building lots. But the tide of emigration passed on as the washings on the lower river ceased to pay; Hope was left behind, and the owners of town lots will be obliged to wait long for the return of the money invested in them.

We found Yale an orderly and respectable town. It was on a Sunday that we reached there, and that the Sunday after pay day, and yet we saw no fighting on the streets, and but few drunken men, probably not more than one in twenty. It is from this point that the Canadian Pacific R. R. is being built eastward, and this is thus the supply point, and the locality where all the laborers employed on the road congregate during holidays. Liquor saloons, of course, abound, and at frequent intervals one stumbles over a drunken man who is sleeping off the effects of his potations unheeding of the clamor that is going on about him. Yale is cosmopolitan. You may see here men of all races, but English, Scotch and French predominate. There are a few Germans and Scandinavians and some Americans. Of course Indians are numerous, as are also Chinamen. Negro cooks and washerwomen jostle Mexican packers and mulcters, while mixed bloods, whose parentage can scarcely be conjectured from their countenances, abound. From this point stages run to Lytton, where the river is again practicable for steamers, and this is the route taken by those who go to the mines at Caribou.

I had learned that there was at Yale a taxidermist who had quite a collection of bird skins, and as soon as the town was reached I set out to find him. In this I was unsuccessful, but I managed to obtain access to his collection, which was in some respects interesting. Among the species noted were the cat bird (*Galeoscoptes carolinensis*), Maryland yellow throat (*Geothlypis trichas*), evening grosbeak (*Heisterphona esperitina*), pine grosbeak (*Pinicola enucleator*), a species of *Leucosticte*, snow bunting (*Plectrophanes nivalis*), black-headed grosbeak (*Zamelodia melanocapilla*), lezuli finch (*Passerina amoena*), white-tailed ptarmigan (*Lagopus leucurus*), in winter plumage, gray snipe or d wick (*Macrorhamphus griseus*) in summer dress, and many others. After looking over the birds, which, however, had to be inspected through glass, owing to the absence of the owner, I walked along the railroad track two or three miles up the river and into the canon. The scenery here is very beautiful, the stream rushing along between high mountains, which rise steeply from its very banks.

Just above Yale, at the entrance of the canon, is a large rock, or, perhaps, more properly, a small island, which divides the current into two streams of nearly equal size. About this rock there is told an Indian legend of some interest. The salmon fishing has always been the most important event of the year to the Fraser River Indians, as it provides them with their winter food, and, indeed, with provisions for almost the entire year. The advent and capture of the first salmon of the season was, therefore, eagerly looked for, and in old times was celebrated with solemn religious rites. This first fish was regarded, not as the property of its captor, but as belonging to the Good Spirit. It was, therefore, as soon as caught, taken to the Chief of the tribe, and delivered into his keeping. A young girl was then chosen, and, after being stripped naked and washed, crosslines in red paint, representing the meshes of a net, were drawn upon her body, and she was then taken down to the water's edge, and, with solemn ceremonies, the net was washed off. This was supposed to make their nets fortunate. Prayers were then made to the Deity, the salmon was cut up, a small portion sacrificed to him and the remainder divided into small pieces, one of which was given to each individual of those present. The story of the rock runs somewhat in this way. One season the first salmon caught was taken by a woman, and she, being very hungry, said nothing about its capture, but devoured it at once. This was neither more nor less than sacrilege, and for the crime she was changed by the Great Spirit into this rock, which was placed where we now see it, to remain for ever as a warning to wrongdoers. Some believe that, although changed to stone, she still retains her power of thought and feeling, and that each year she is obliged to endure the misery of seeing, re-enacted about her, the scenes in which, as a child, a young girl, and, at last, a mother, she had taken part. Each year, too, she must see her people change, little by little, their habits; each year perceive their numbers lessening, and the land that once was all theirs passing into the hands of strangers to her race and to the soil. Already the thunder of the blasting has shaken her, although so steadfast, already the scream of the locomotive and the rattle of the paddle wheel have sounded in her ears. Some day an enterprising engineer, who wishes to improve the navigation of the Fraser, will introduce a charge of dynamite into some crevice of the rock, and the poor sinner, whose punishment has surely by this time expired her crime, will pass from our sight and at last find rest.

At a point above the first tunnel, an old Siwash was fishing with a purse net, catching a salmon at every sweep that he made. I clambered down the rocks to his stage, and, after watching him for a while, borrowed his net and fished while he dressed those already caught. In about five

minutes I caught as many salmon, each of which would weigh about ten pounds.

The next morning at three o'clock the steamer started down the river and by ten we were at New Westminster. Here we had to part with our friends Mr. and Mrs. H., whose kindness to us, strangers, I can never sufficiently acknowledge. Then we passed on down the river and across the island dotted waters of the gulf; through the narrow passages, where the Indians were still catching their herrings; out again into the straits, whence were to be seen white, majestic Rainier, and the snow-capped peaks of the Olympian Range, and then around Clover Point and into the snug little harbor and Victoria was reached.

A day of hard work enabled us to pack up our traps and take the steamer next morning for Tacoma. All our friends in Victoria had been so kind to us that it was a real pain to me to leave the town. Never have I met more charming or more cultivated people than in this far-away place, and certainly never were strangers more hospitably and genially received than the three whose wanderings I am detailing. But good-byes have to be said, although I think that they are repeated more regretfully each time that the word has to be used, and the traveler who feels a lively sense of gratitude for kindnesses conferred upon him, by those on whom he has no possible claim, uses the word with a deep appreciation of its meaning which most people would never understand. He has perhaps been received into the home and, although never seen before, been treated as an old acquaintance or as a family friend, and he must, if his spirit be at all sensitive, be deeply touched by treatment such as this. Money can procure ease and comforts wherever he goes, but it can never furnish that friendly solicitude for comfort and well-being which is so grateful to the heart of the stranger in a strange land.

The sail over the blue waters of Puget Sound is delightful, but too short, and the evening finds us at Tacoma. A day was spent here, part of which we devoted to an excursion to a rich coal mine at Carbonado, thirty miles distant, since purchased by Colonel Crocker for the Central Pacific Railroad. The branch of the Northern Pacific R.R. which we took passes through a country of great beauty and fertility. Near Puyallup the principal agricultural industry is hop growing, and it is said that 2,000 S.Washes come in every year to help harvest the crop. In 1879 the growers received, we were told, 40 cents per pound for their crop; in 1880 the price had fallen to 19 cents, and in 1881 it was estimated that they would get 16 cents, but even at this price there is a fair margin of profit. The houses for drying the hops are a feature of the land-cape. There is a large stove factory at Puyallup. Much of the land along the track is cultivated, but as the mountains are approached we pass through valuable tracts of timber land. At Carbonado is a sawmill where splendid timber is put out. On our return to New Tacoma we met a number of gentlemen, enthusiastic fishermen and hunters, who gave us valuable hints in regard to our proposed trip over the lines of the N. P. R. R., hints which when adopted, as they afterward were, added greatly to the interest of our journey eastward.

From here we proceeded by rail to Kalama and thence by steamer to Portland, the sail between these two points being marvellously lovely. At one time we could see from the steamer's deck no less than six enormous snow-clad peaks from nine to over fourteen thousand feet in height. These were Mrs. Rainier, St. Helens, Adams, Hood, Jefferson and the Three Sisters.

Portland we left early next morning, and proceeded, on a very comfortable steamer, up the Columbia. The river is magnificent, and the lava country, through which it has cut its way, is very beautiful. For the first few miles the bottom is wide and the hills are distant, but after a while we enter a stretch where there is no bottom land, and the river flows between walls of rock. We lounge on the steamer's deck and lazily watch the changing features of the scene. The long grass, over which the maturing touch of summer has passed, shines yellow on the gently undulating curves of the hills which sweep upward from the river banks, but in the shadow of the numberless walls and piles of lava it is brown and dull, without the glimmer and sheen which it takes in the sunlight. The country is open and park-like, the slopes, dotted with dark spruces and pines, which grow most thickly in the ravines and on the steeper hillsides. Their dark foliage and the paler greens of the deciduous trees and shrubs at the water's edge are the only pronounced colors of the landscape. Except these, there is only the dark gray of the rock piles and the yellow of the ripened grass. Over all a dome bluer than the serenest of Italian skies, a hot August sun and a purple haze that veils the more distant hills and, while not hiding them, softens their sharper outlines and gives to them a vagueness and a dreamy indistinctness which add to their loveliness by calling in the imagination to aid the eye. The beds of lava between which the river hurries are the most striking characteristics of the landscape and are, indeed, the real reason of its beauty. Without them it would be almost commonplace. A sheet of lava of great thickness covers the whole face of the country and appears everywhere, taking the peculiar forms which characterize crooked volcanic rocks. The vertical bluffs which rise from the water's edge are composed sometimes of a breccia which, weathering easily under the influence of wind and water, has assumed a thousand fantastic shapes, seeming sometimes like columns, or like statues, or obelisks, or great ovals set on end. Or we see

a precipice composed of small, basaltic columns, which easily break up, and, falling out in small cubical fragments, form a high talus at the base of the cliff. Sometimes the columns are of large size, and these offer a greater resistance to atmospheric influences, so that there may be no visible wearing away, and the bluff rises bold and bare from the water that dashes against its base. Often bold headlands extend out into the very river, crowned with a fringe of graceful evergreens, and from these rise rounded, smoothly-sloping hills covered with the yellow grass, and above these are lofty, frowning bluffs. Along the bank of the river the O. R. & N. Co. are building a railroad, and thousands of blue-clad and broad-hatted Chinamen are busily at work on it. At the Cascades we took the train which carries us seven miles around the rapids, and then, boarding another steamer, proceeded, until, just at dusk, we reach the Dalles. Here again we change from steamer to rail, reaching Walla Walla early next morning. This is a charming town of 5,000 inhabitants, with a delightful climate and a fertile soil—a veritable garden spot.

ALL HANDS ASLEEP.

LEAVES FROM A LOG-BOOK—VII.

SHE was built—no matter where—by an old oysterman; and, as to her age, it isn't quite the polite thing to inquire a female's time of life, so the Captain forbore asking this question. She was hearty and strong, however, was Peggy, and cheap as dirt; and if bulk gives speed, as our friend of the yachting page declares it does, she should have been a clipper. But whether it was the model, or the barnacles on her bottom, or the undersize of her sails, or the faulty handling of her skipper, certain it is that the Peggy's pace was a very moderate one, and she was more famous for a steady, sober plodding along in all weathers, than for any

good-bye at the dock, and, verily, his words were not without reason. As the hooked end of Crah Point was passed and the open ocean lay before us, the breeze freshened considerably and the topsail was lowered. The little eight-foot life-boat that served as a dingy, which hitherto had lain to the windward of the house, was shoved into the water, and its painter made fast to the Peggy's stern. Then the Captain leaped back against the dandy mast on the first long leg out to sea and smoked his pipe, while he watched the porpoises playing and the distant sails of a fleet of fishing vessels on their voyage home. There is something soporific in thus sitting silently steering under the rays of the summer sun, with the light waves plashing around, and only enough wind to rock one gently up and down as in a cradle, and soon the Captain began to feel a drowsy sensation stealing over him. An inmate facility of sleeping anywhere and under any circumstances, which was a very happy possession in most cases, was here very unwelcome. For a while the somnolent sensation was pleasant, and the Captain abandoned himself to a dreamy reverie, but as his head nodded forward there came a sudden "rat-tat" from the loosed jib-sheets, and, awaking with a start, he found the Peggy rounding to; so, bringing her to her course again, he sat up straight, and began to puff vigorously on the brier-root to keep awake.

It was no use, however, and again the head dropped forward on the breast, the pipe fell from the lips, and the lone sailor was in another doze. This time the Peggy kept her course, and worked her way gradually further and further out into the open ocean. A party of young people, passing in an open yacht, saw the sleeping steersman sitting at his post, but took no more notice of the passing craft than to remark the peculiar rig, so seldom seen in those waters. A lumber schooner passed so near as to endanger the safety of the little smack, and the angry skipper bailed with a gruff, "You blasted lubber, haul off! 'D ort to run you down!" But the Captain of the Peggy gave no answer, and had the lumber vessel sailed away still burling maliciously back at the solitary voyager. And on and on went the Peggy, and further and further out to sea, and still the Captain slept. At length he dreamed. He seemed to hear a rocky island, searching for a harbor for his little smack. None appeared, and every moment the waves were growing fiercer. He would certainly be lost. A huge, jagged rock was dead ahead. He seized the helm to change his course. The tiller would not stir. He gave it a sudden wrench. It broke in two, and he fell over with the force of the shock. The hissing waves engulfed him, and as he struggled vainly to combat them he awoke. The tide had turned, the Peggy had rounded to, and a wave had "splashed" against the Captain's face. Rubbing his eyes and looking around with amazement, he saw the faint dark line of the shore far away. He looked at his watch. He had been aloft four hours, and during the greater part he had slept.

But now work must be quick, for the hours of daylight are passing quickly, and there are low growlings of thunder away off in the West. The Peggy is put about, and away we speed for shore. If we can make Cornerstown Harbor before dark we are all right. If not, we may be lost. Let us examine the chart. Cornerstown lies in a bay midway between two points, Rodney's and Henderson's. These are nine or ten miles apart. The Peggy's nose is headed for one of these, but the question is, which one? If Rodney's, we must bear off to the southward to find the harbor. If Henderson's, we must change our course northward. The distance already sailed cannot be accurately calculated, because the wind has doubled its force since the start, and it is impossible to tell how long its present strength has been kept up. From the distance out at sea the captain is led to believe that Rodney's Point has been passed and that Henderson's is the one in view. There is no craft of any kind in sight, so information from that quarter cannot be expected. A nearer peal of thunder warns that hesitation is dangerous, and the prow of the smack is turned immediately northward, though not discern the expected harbor as the Peggy howls along. The wind has increased to half a gale, and with reefs turned in on every sail the smack still heels fearfully. A sudden wave dashing into the cockpit wets the chart, and its lines are rendered almost illegible. The Point is left a mile behind, and still no signs of the harbor. The Captain begins to feel that he has mistaken his bearings, but it is too late to turn back now, and hoping that by some chance he may find a safe anchorage, he keeps blindly on. A great black cloud, obscuring the light the darkness seems almost like that of night. It is now a certainty that the Captain has taken the wrong course, so, determining to prepare for the worst, the Peggy is laid to, ship's lamps lighted, hatches all tightly closed, heavy coat donned and some of the water in the cockpit pumped out. By the time all this is done the gloom of night has fallen on the water, and, avoiding the perils of an unknown shore, the Captain steers boldly for the open sea.

One of the dangers of a summer thunder shower is the perplexing way the wind has of blowing now this way and now that, and then seemingly from every point of the compass at once. It was this waywardness that troubled the Captain, the sails being at one moment distended to their utmost, and in another moment flapping wildly as he tried to "catch" the new direction of the wind. The whale-boat's compass used on the Peggy had to be scanned by a lantern held between the Captain's knees, and after gazing for a moment at this bright light it was impossible to see a boat's length ahead in the darkness, and the rain, which beat down into the face at an angle, made looking out ahead so

spasmodic bursts of speed in certain winds. After the old oysterman had made such alterations in rig, cabin, etc., as the Captain demanded, and cleaned, to the best of his ability, the interior, which was redolent with the odor from many years' hauls of fish and oysters, the Peggy was, withal, quite a trim little ship, and, before completing his first cruise in her, the Captain conceived a lasting affection for the easy-steering, comfortable-handling, and safety-assuring old smack.

The tide was ebb in Cob Creek as the Peggy dropped down toward the sea, floating slowly, while the Captain cooked his dinner on the spirit-stove near the cabin door, occasionally peering over the bonse to see that her nose was right. The sails were loose, ready to hoist, ropes and rigging coiled or belayed in place, and everything prepared as carefully as if the Peggy were a man-of-war, or fitted out to find the Northwest Passage. And with good reason. The Captain, crew, supercargo and all were one man—a so-called consumptive at that—and where the sailing, cooking, —ay, and the scrubbing, of a twenty-two foot two-master depends on so small a crew, there are many things to be carefully pondered that would receive but slight attention were there a man or so "before the mast."

As we—the Peggy and Captain—drop down through the mouth of the creek and into the bay, a slight whiff of air is felt as we clear the range of the forest of hackmatacks, and preparations are made for action. The little mizzen is first hoisted and the halliards made fast. Then the jib runs up, the Captain not leaving the cockpit to hoist it. Now the Peggy begins to feel the breath of the light land breeze and, as the mainsail is hoisted, ripples the water from her bow with a musical gurgle. With such a light zephyr we can use all sail, and, as we are anxious to see how our hitherto untried topsail will work, that, too, is sent aloft, and the Peggy has donned her "racing rig" complete.

The voyage is to be made through waters entirely unknown to the Captain, but the chart shows a plenty of harbors along the coast, and the sea-going qualities of the little smack are so well-known that but little anxiety is felt for the possible dangers to be encountered. "She'll find her way all by herself," said the old oysterman, when the Captain bade him

uter failure. Occasionally a bright arch would shoot across the heavens for a moment, then all would be pitch dark, the air and water blended in one color, lumpy black. The red light of a passing vessel became suddenly visible within bailing distance, and the Captain cried out, "Hello! Where's Conoverton?" "God knows!" came back over the water, and the red light passed away in the darkness. The little dingy behind began beating like a battering ram on the side of the Peggy, and the Captain crept back to secure it in a different way, steering the while with his ankle pressed against the tiller. Finally the wind settled in a southwest direction, and although it blew a hurricane the little fishing smack stood up to it bravely; and the crew, gradually becoming accustomed to the state of affairs, began to feel a sort of pleasure in thus flying along at full speed over an unknown course, and even essayed to light his pipe in a momentary lull of the storm. But the matches were all damp, and only spluttered without lighting, so he had to content himself with shouting a gay song to the accompaniment of the roaring elements. The storm had lasted over an hour, when straight ahead there appeared a line of light on the water. "Boaters!" shouted the Captain, instantly putting the helm to starboard. But they were not breakers, being instead the reflection on the water of the summer full moon, which had just shown his face at the ragged edge of the black thunder cloud. Now the force of the storm was nearly spent, and the clouds were fast passing away; but the wind asserted its right to stay awhile longer, and the waves still rolled angrily. As the moon shone out with all its brilliancy the Captain saw, to his astonishment, that the smack was only a short distance from the shore, when he had thought her to be far out to sea. And did not that hooked point of land and that forest of hackmatacks have a sort of familiar look? It was, it surely was, the bay at the mouth of Coho Creek—the same place from which he had started the afternoon before. He was aware of this as the Captain gave a shout of joy, and running the Peggy into the well-known channel he soon had a safe anchorage, and with everyting made snug, was soon lying comfortably in the little cabin, sipping a hot glass of grog to take the chill off.

"I told ye," said the old oysterman, when the Captain afterwards related to him the adventure. "I told ye that 'er smack could find her way all alone by herself; an' you needn't tell me she didn't know what she was doin' when she brought you straight home out of 'at gale." SENROA.

MEMORY IN LIONS.

DURING the month of September, 1869, whilst residing in Natal, South Africa, I came into possession of a fine pair of lions, about one year old, and as they were exceedingly tame and good natured, I had a large cage especially constructed, and was constantly in the habit of going in and romping with them. It was always my custom to go inside the cage and feed them from hand, and January, the Kaffir who brought the meat, never failed to take a stand in front of the den, in order to see the last of "N'kos," whenever the lions should see it to add him, by way of dessert, to their regular diet of fresh beef. He always met me, on my exit from the rear of the cage, with the astonished ejaculation of "Wau!" and I never could succeed in convincing him that that some sort of sorcery had been exercised.

In the year 1870 I was suited with the "diamond fever," which was raging throughout South Africa, and leaving my lions with a friend, with directions to sell them, I started with January and a Basuto pony, used as a pack animal, on a weary tramp of 550 miles to the "Fields." Having repeatedly traveled with wagons over the road before, the whole country was well known to me; consequently, I was frequently able to leave the main road and make short cuts across the country, so doing we would often pass in the neighborhood of Kaffir huts. So sure as one happened to be seen some little distance off our path, January would suddenly remember that it was the residence of a brother, or some other relative, and would ask leave to pay a passing call. Generally I would stop, light my pipe, enjoy a whiff and allow the pony to graze while the ceremonious visit was being made. Immediately after the arrival of my henchman at the kraal I would notice that there would be a sudden emptying of all the huts, whose inmates would assemble in clusters and view me with all the indications of awe and fear. In the meantime January would harangue the crowd for a short time and then return, reporting how much pleased his relative had been to find him traveling in such good company. These visits finally became so frequent that I began to suspect January either of eluding consanguinity back to Ham, or of using me, for some purpose best known to himself, to advance his own interests. A few nights after my suspicions were aroused, and January hid during the day in a several ceremonious visits, I was lying rolled up in my blankets with my attention was attracted by his suspicious movements about the expiring fire. Feigning sleep to throw him off his guard, I saw him cautiously procure from underneath his only garment—an extremely dilapidated and abbreviated woolen shirt—several pieces of shriveled meat, which he proceeded to grill over the coals. Knowing the perfect care which all Kaffirs have for meat, even in a pure condition, there was but little difficulty in arriving at a solution of the visiting mystery. Springing to my feet I made the prisoner and made him acknowledge that he had been exhibiting me to his people, and that he had some relatives relating the wonderful things he had seen me do with the lions, and threatening his end with dire evil if they did not instantly seek my good will by sending as a present a bit of meat. From that time forward there were no more relations of our road; and whenever I thought January needed meat, a bit of hind (red antelope meat) was handed him from the small store carried in the pony's pack.

A few months after my arrival on the Fields, my friend, in whose care I had left the lions, came up also, and informed me that they had been sold to some party, who wished to take them to England. After some two years' fruitless digging, I started overland to Cape Town en route to Australia, whilst January turned his face homeward, in company with some returning ox teams, instead of N'kos.

In October, 1873, I reached Melbourne, and the day after my arrival very unfortally found my way to the Zoological Garden. It was a fine Sunday afternoon, and after wandering around the grounds for some time, my attention was attracted by a crowd of people, in front of a large den standing close under a huge eucalyptus tree. On going up and looking into it, I saw that it contained a pair of splendid lions, which, on a closer inspection I was sure were my old South African pets. In order to test the matter, I drew back until I reached the outer edge of the group, and concealing myself behind a slanting umbrella, held by one of the visitors, I

called out to my old friends, as I had been accustomed to do before leaving Natal. Both animals instantly sprang up and began rapidly pacing to and fro, anxiously looking out between the bars, as if they were endeavoring to ascertain from whence came the sound. Finally the female reared up and looked for some time over the heads of the visitors, but the umbrella screened me, and I gradually worked away unseen for some distance, when I met a keeper, whom I accosted, remarking that the Society were in possession of a pair of fine lions.

"You may well say that, sir."
 "How did you get them?"
 "I brought them from South Africa."
 "But how did you get them from South Africa?"
 "I went up in the interior and got the natives to catch them in pitfalls for me."
 "My friend, the natives of South Africa are not in the habit of catching lions in pitfalls. Moreover, I am positively certain that those lions were not on my property."
 "Beg pardon! but you must be mistaken."
 "Do you really think so? Let's go back to the den and I will convince you that I am right."

I instantly began to retrace my steps with the keeper following, and looking very much as if he had "caught a Tartar." On getting up to the rail in front of the cage, I found that both lions had lain down and were dozing. On calling their names, they again hounded up, and I, in spite of the frantic efforts of the keeper to prevent me, and the terrified ejaculations of the visitors, scrambled over the rail, ran up to the bars, and, no doubt in the eyes of many of the spectators, made a great fool of myself in fondling and caressing my old pets. At length the keeper ventured to approach and say:

"Be kind enough not to hlow on me, sir?"
 "I will keep quiet under one condition."
 "What's that, sir?"
 "That you never attempt to tell that pitfall story again."
 "I'm bluffed if I do, as I've managed to tumble into the blasted thing myself."

By this time it had been noised around the garden that something unusual was going on at the lions' den, and in a few moments the space in front of it was filled with people, all anxious to see the Yankee play with the lions. After satisfying their curiosity I got the venacious keeper to pilot me to the office of Mr. de Soof, Secretary of the Society, who kindly informed me that the animals had come direct from Natal, in a vessel laden with sugar, the Captain having purchased them from the party who originally intended to take them to England. FRANK J. THOMPSON.

Zoological Gardens, Cincinnati.

MINNESOTA GAME RESORTS.

THE first point is Sauk Centre, a quiet little town of about fifteen hundred inhabitants. It is 117 miles from St. Paul, on the line of the Great Northern and Manitoba Railroad. This town lies at the foot of Sauk Lake from which it derives its name, and is in the very heart of a splendid prairie-chicken country. Sauk Lake abounds in game fish of a superior quality, is nine miles long, and its sandy banks afford fine shelter for the snigler. There are some five sail hoists on the lake, notably one owned by E. J. Harrison, who is a true lover of the rod and gun. One can find plenty of sport on this nice little sheet of water—fishing, ducking (in the fall large numbers of ducks congregate here), yachting, bathing and picnicking.

Westport is ten miles due west of Sauk Centre, and here is where one will find the ducks and geese in quantities to suit. Between this point and Sauk Centre is a broad prairie country, partly settled, and with plenty of grain fields wherein *Tetra capidus* hovers in with plenty undisturbed by the sportsman's gun. You can enter any of these fields and rest assured no one will disturb your "piece of comfort" while you make the prairie ring with the brock-lark's brazen voice. A man can be had at Sauk Centre for \$3.50 to take you out to this place, where you can then find both wild and tame farmer, who will show you every attention. Board, \$3.50 to \$5 per week.

Birch Bark Lake lies twelve miles east and north of Sauk Centre, and is one of the most attractive resorts, especially for "variety hunters," or those who desire to fish a little, hunt a little, sail a good deal, and have a general good time, driving dull care away.

The lake in question extends on all sides by a wide waterway, where the red deer bounds lightly in his wildness, where the grave yet fierce-looking "bruin" meanders leisurely over hill and dale; where the partridge rises on whirring wings, and fits like a shadow away from his strange intruder; where the plunge of the pickerel, as he makes a grab at some lesser than he, is heard, coupled with a nice little waterfall which sings a wild, soothing lullaby, and where I nearly baptized myself and companion in "running" the rapids.

Swan Lake, proper, is situated twenty miles northeast of Sauk Centre and four miles southwest of Pillsbury, Todd county. It is a broad expanse of bright, blue water, about four and a half miles long and from one-half to three-quarters of a mile wide. Immense beds of wild rice form a very attractive lure for the wary old mallard, blue-wing teal, canvas-back and "whistler." The bank on the east side is heavily timbered. In this forest are found plenty of deer, bears, panthers, squirrels, etc. At this lake my old friend, Frank Lockie, who is a true lover of all the beauties of nature and a genuine sportsman, and who has had some capital sport with rod and gun. On one trip he killed sixty-seven ducks, and we did not count those that went away, either; only the dead ones which were brought to boat. Mr. Locke still resides there and could, no doubt, entertain a party of four.

Bass Lake derives its name from the endless quantities of black and striped, or calico, bass, with which it abounds. In company with a gentleman I took forty as fine bass as ever one saw, in about seven hours' time. Some of these beauties weighed as high as 8 lbs. They are "clean grit" and will make a reel sing the time merrily. This lake lies one mile east of the one above-mentioned, and is about a mile long by one-half mile wide. It is very deep, and on the east bank may be found a limpid stream of ice-cool water away up on the bluff above and overlooking the lake. There I have lain and enjoyed the view of the surrounding scenery; or have read, and drank the cooling spring water and listened to the merry rattle of the dashed over moss-covered stones and finally to mingle with the waters of the lake. This would be a grand place for some wearied business or professional man. Here he might refresh and lighten life's heavy burden. It would be necessary to take a boat at this point, for there

were none on the lake but an old Indian's dug-out when we were there. The proper way for a party to get to this point is to come direct to Sauk Centre, and then hire a team and go out by the way of Round Prairie.

Rice Lake is about ten miles northeast of Long Prairie, and twenty-eight miles north from Sauk Centre. It is a large sheet of water, well supplied with wild rice, whence its name. Messrs. A. W. Shells, of Todd County Argus, and W. C. Brower, editor of Sauk Centre Tribune, in company with several other gentlemen, spent a most enjoyable time here among the ducks last fall. All would have passed pleasantly enough had it not been for W. C. B.'s unucky plunge into the lake, with the mercury a "little low." But more than one hundred ducks were brought to lag by the party in a very short time. We think that any one desiring to visit Rice Lake would find capital sport, and if they wanted a jolly good boy along, let them take Arth.

Goose Lake is situated in one of the best sections of country I know of for the pursuit of this magnificent game bird. It is 8 miles northeast of Sauk Centre, and is 123 miles from St. Paul, on the M. St. P. & M. R. R. The sportsman should leave the train at Sauk Centre and hire a team. He could go nearer by rail, but would not be likely to get so good an overland rig at West Union, the nearest place by rail. A camping party could have a grand time by hiring a team and go for a two weeks' sojourn in this splendid resort. I have killed many a wry old "honker" here, and sent many a "whistler" to his long home. Around this lake is a good settlement, and plenty of stubble fields, fairly alive with prairie chickens and mallard ducks. There are other smaller lakes in this vicinity which abound in ducks of all kinds. No fish worthy of note are found here.

The Ashley River heads in West Port Lake, and winds around among hills, through valleys and level prairies, for a distance of about fifteen miles, the bends taken into measurement, and finally empties into Sauk Lake at a point about a mile above the town site of Sauk Centre. The way I do this river after ducks is to take a good working skiff with a team up to West Port; there launch the boat, and with a good pilot, or in fact any one who can keep a boat in the centre of the stream, paddle and float down, keeping a sharp lookout for ducks in the bend and bays. In some places the boats will require a little "working" in order to progress properly. In this way one may go for a distance of fifteen miles or more and find most excellent shooting all the way, and without getting fatigued, meeting your team at Sauk Centre in the evening, or next day if you choose to hire by the way. First class shooting is to be had. Your boat is back where you started from with little or no trouble.

Some of my best ducking I have had in this very river, where, at times, they flew so fast I hardly had time to throw out the empty shells; and I did most of my shooting on the wing.

I have given a brief sketch regarding several important points, and by the great variety of every reader will see I have written in the sportsman's interest only; as I have no "axe to grind" or any desire to visit these places can do so and will find my figures facts, not fiction. I have been as explicit as possible. DELL.

Natural History

DO CROWS HOLD COURTS?

Niagara Falls, N. Y., Jan. 1891.

GOAT ISLAND, as the little world both know, is the island which divides the falls of Niagara. It is now, and has been time out of mind, a great roosting place for crows. Thousands of these dusky scavengers roost there every night, scurrying off in all directions with their discordant crowing at the first streak of daylight, but always returning at dusk every evening no matter how stormy the weather or how far they have strayed during the day in search of food. It is curious to notice how cunningly they find one of their "holes" until they get over to the island, where of course they are protected, no one being allowed to shoot there. There, feeling themselves perfectly safe, they seem to call a meeting, appoint officers and call the roll, each member answering to his name separately, after which they all join in a chorus flitting from limb to limb, and gradually quieting down for the night. I have never seen them start in the morning, but have no doubt they go through some such regular routine.

One evening last fall, while on the Island, I noticed three crows in a row on a limb of a tree, two of them being terribly noisy, the other quite quiet, but looking sick; his feathers seemed all to grow the wrong way and a more miserable looking crow it would be impossible to imagine. I came to the conclusion that the middle crow had been shot at and wounded, or was sick, and the other two were looking after him. After a while I noticed the two outsiders make a start to fly, like starting for a race, but as the sick one, which was in the middle, did not start, they immediately came back to roost. This they repeated several times, the centre crow not appearing to pay any attention to them. Suddenly the two crows commenced to behave the sick one with beak and wings, until he screamed most piteously, and on the next trial there was a good start, and the three crows flew away together in a line as they had sat on the tree. I have thought much about this incident since, but could never satisfactorily explain it to myself until I noticed the following clip from an English paper, which has concerned me with the matter of the powers of the law and the third culprit. The extract says:

"I have just now an authentic case of curious intelligence or instinct in birds, which I have verified for the benefit of my readers. A clergyman living in Yorkshire tells me that in the spring of a few years ago he and his daughter were walking in some fields, where the crows were busy in the trees building their nests. Always noisy at this time, they were more than usually so on this occasion, and a number of the latter coming home to dinner stopped to see what was the matter. Close by the gate where my friend stood he saw about a dozen crows engaged in the most noisy and violent gesticulations, and on the branch of a tree at hand sat two crows, with a third dejected and miserable-looking crow between them. When the clamor had in some degree subsided, a crow stepped forward from the crowd and seemed to address those seated on the trees—when, quick as thought—the two side crows flew up on the unfortunate wretch between them, and with their beak dealt him such a blow on the head that he fell dead without a single flutter. After this act of justice, as it undoubtedly was, the birds ceased to make any sound and then flew off as if satisfied.

"This tale is corroborated and supplemented by an incident

of a similar kind, seen by a lady whom I knew, who was present at a court-martial in a field of crows, formed in the same way; and the execution of the criminal took place in a precisely similar manner. Who shall say that gregarious birds have not their judges and juries, and each of laws by which their colonies are regulated, as well as condign punishment for transgressors?" P.

THE MISTLETOE.

THE mistletoe of England (*Viscum flucosens*), of which mention is made so frequently in ancient superstitions and legends, is a true parasitic plant, that is, it not only grows on trees, but penetrates their bark and draws its support from the sap of the tree. In this respect it differs from the parasitic mosses, ferns, fungi, lichens and orchids, that are to be found growing on trees, but which obtain their support from the atmosphere; these are simply lodgers, while the mistletoe demands both board and lodging.

The word mistletoe is of Anglo-saxon origin, and is derived from the word mistlestan—mistle, different, and stan a twig, a prong, a shoot of a tree. The mistletoe belongs to the natural order of Larnatiaceae, which contains more than 400 known species, mostly tropical evergreen shrubs that are parasitic in their habit, some having showy and odorous flowers.

The mistletoe, when very young is succulent, but as it attains age becomes woody. Its repeatedly forked branches form a pendant bush of from one to fivefeet in diameter. The mistletoe is very brittle and breaks readily at its joints, particularly so after it has been separated from the tree on which it grew. At each of the joints on the terminal branches grow a pair of opposite sessile, thickish, nearly nerveless leaves, which vary from narrowly oblong to obovate, but are always entire and obtuse. The flowers are deciduous, inconspicuous, of a light green color, and are situated at the ends of the terminal branches (see Fig. 1). The male and female flowers (Figs. 2 and 4) are borne on separate plants.

The berries are about the size of currants (Fig. 3), are white and semi-transparent in color, and contain a very viscid juice. Birds, when feeding on the berries, reject the seed which, becoming attached to the bark of the tree, in time takes root. In this way the mistletoe becomes disseminated. In establishing the seed artificially a small section of the bark is raised and the seed is placed beneath it. To hide the seed away from birds and small animals, it is planted on the under-side of the branch. No matter in what position the seed may be placed, the radical, which in ordinary plants extends downward, will, with the mistletoe,

toe was considered the most potent of all substances as a cure for diseases, an antidote for poisons and a charm against all evil powers, and was distributed to the people and carried about their persons.

Another powerful talisman these enterprising and cheerful Druids greatly valued was the egg of a serpent, which, according to Pliny oozed out of the mouths of serpents when knotted together, and when supported in the air by their co-operative hissings was the propitious moment in which to seize it or otherwise it lost its magic virtues; but he who attempted to so seize it must suddenly dart from his hiding place and catch it in a napkin, mount a horse (the first one he could get on top of, no anxiety as to who owned it) and gallop off at full speed until he had placed a river between himself and the serpents.

The only uses to which the mistletoe is now applied in England are for feeding cattle when a scarcity of other food prevails, and in the manufacture of bird-line, which is produced in the following manner: The berries and bark are placed in boiling water for several hours until the viscid and adhesive material contained in them is extracted. This is strained through a cloth to get rid of the woody portion,

FIG. 2.—MISTLETOE OF SOUTHERN STATES

after which it is concentrated by evaporation, when the substance assumes a consistency like that of dissolved caoutchouc. This substance is known to chemists as viscin. The bird-line when used is smeared on the branches of trees, a live or stuffed bird being used as a decoy. When a bird alights on the charged branches it sticks fast, and as it beats with its wings they also become defiled with the bird-line so that its wings become useless to a greater or less degree. Only the vilest of pot-hunters and bird catchers use it. It is the most utterly ugly, dirtiest of dirty mean ways of catching small native birds.

The mistletoe in England is in great demand during the Christmas holidays, both for the purpose of decoration and from the custom that if a gentleman discovers or can beguile a lady under the "mistletoe bough" he is entitled to a kiss from her. This is a very ancient custom which has been handed down from the feudal times.

Some years ago the mistletoe was considered a valuable remedy for epileptic fits, blind-falling and other ailments; but it has passed out of use of late years.

The mistletoe of the Southern states differs from the English not only in having both the male and female flowers on the same plant, but also in the form of the leaf, which is stouter, shorter (see Fig.—) and of a more yellowish-green color. This variety was first described by Nuttall, who made a new genus for it—*Phoradendron*—"a tree itself." We have many species of *phoradendron*, the commonest being *P. flucosens*, which ranges from southern New Jersey to Illinois, Texas and Mexico. In Texas the mistletoe is so abundant on the mesquite trees that their natural foliage is hidden. Some years ago a Mrs. Millington made known a minute variety which she found growing on the black spruce in Warren county, New York, it being scarcely more than an inch long, but so plentiful as to injure the trees. In the cider-producing districts of England the mistletoe is so abundant on the apple trees as to cause great injury to the crop, often absorbing the entire juices of large trees in a few months and causing their entire destruction.

Few people are aware that large quantities of the English mistletoe are sent to this country during the two weeks preceding Christmas. This mistletoe is handled by the large dealers in the Christmas greens which are used for the decoration of churches, stores and private dwellings during the holiday season. From the hands of the wholesale dealers it passes to the retail florists, who dispose of it to their customers of English birth and extraction, at the rate of from one to two dollars per bunch. This season the dealers were stuck with the mistletoe because the English shippers did not send it here in season. It is not safe stuff to handle unless it reaches our markets from ten to twelve days before Christmas. It should be packed in a light but solid and firm case, and shipped as soon after being gathered as possible, so as to avoid its becoming dry and brittle before reaching Northern markets.

The Southern mistletoe was a drug on the market this season on account of its being nearly destitute of berries, a condition caused by the very dry season in some parts of the Southern States. The Southern mistletoe is sent North with the leaves of the palmetto and other palms, as well as large quantities of Spanish moss.

I find that very few people know the history of the mistletoe and the strange legends and superstitions associated with it, and very many persons are surprised when told that in the South and West it is so very abundant that it is often destructive to valuable trees. A. W. ROBERTS.

QUESTIONS ABOUT WILD TURKEYS.

SPARHILL, N. Y., Jan. 1, 1893.

Editor Forest and Stream:

This year while hunting in south-eastern Virginia, I had the pleasure of killing specimens of at least two different species of wild turkey, viz: The "mossy-head" or "branch" turkey and the "red-legged" or "great woods" turkey, as they are called. I had heard for several years that there were at least two separate kinds, but until this fall I had never seen any save the red-legged. The "mossy-head" is one-third smaller, and on its head are many small feathers, which give it the appearance of being moss-grown—whence its name. They frequent, principally, the sides of branches and "bold fields," but are sometimes found in the big woods with their congeners, the large one, whose head is smooth, with pink markings, and whose legs are of a much brighter pluck or red. These are generally found in oak or large pine woods, and call much more freely than the mossy-head and are a bolder bird in every respect. There is also considerable difference in their note.

My experience was as follows: During the month of November, having some spare time, I ran down to Sussex and Greene counties, South Va., to try deer and turkey shooting for a few weeks; having heard that in that region the deer were quite plenty and that, although the turkeys were getting scarce, still there were quite a number to be found.

One Sunday afternoon found me at "Pleasant Shade," the hospitable residence of Col. Spratty. As Monday was Court day and his son (Masser Willam, as he was called by the darkies) having to attend, there was nothing special on hand. The day opened rainy; so I did not go out until after dinner, when, taking the turkey dog, who was also good for geese,rels, Sam Barrow and myself started for the woods. We had not gone more than a mile from the house when we heard the dog bark. "Down," exclaimed Sam, "there are the turkeys." Hardly had we crouched when, sailing over the tops of the pines, came two large birds, which I declared to be a gobbler and a hen. Bang—bang, went both barrels; the hen sailed on untouched, but the gobbler pitched down, about 200 yards off. The underbrush was quite thick, and, although we hunted thoroughly, we could not find him; so giving up the search we went back to where the hen was flushed and built a blind. There, hiding ourselves, we yelped and yelled until dark, but no response came. Very downcast were we when we went back to the house, but the Colonel told us they were probably "mossy-heads," and that they would call to-morrow morning about daybreak. So before day Masser Willy and I were in the blinds. Mr. Spratt, who is a fine turkey hunter, had not made more than four or five yelps, when an answering whistle told us a young bird was coming through the woods. One little chuck brought the bird up, there was a report and some feathers flew, while on the ground lay a fine young gobbler. Flouring the bird we again hid ourselves, and in about ten minutes he called up a pair, which were killed.

About a week after that Messrs. Buford and Spratty proposed that we should go in search of a gang of hybrids that were in the neighborhood. These hybrids are said to be a cross between the large and small varieties. They have some of the markings of the large kind, and also some "moss" on their heads. Originally there were a gang of 12, but only ones in that piece of woods, but four or five years ago they got crossed. We found them without much trouble, and killed two on the flush and one from the blind. The following week our same party got on to the "red-legs." We were riding through a bottom when old B-pops gave tongue. Jumping off our horses, we fired at the birds as they came over our heads. I had the good fortune to drop an old hen, and Mr. Buford two young gobblers. The old hen was a beautiful bird, weighing fully 15 lbs. with a richly bronzed plumage, a plump on her smooth head, bright legs, and, what to me was strange, a heard some 50 in. long. Judging from the beard, they decided she was at least 10 or 12 years old. Thus, you see, I have met two distinct kinds, with a cross between the two, inhabiting one locality. Now, will you please inform me how many varieties there are, for I have heard it claimed by some who profess to be well up in the fauna of our country, that there is but one variety, and yet, as I have just told you, I have seen two.

[Ornithologists recognize but one species of wild turkey in the Eastern States. This is what our correspondent calls the "red-leg." We should be glad to hear more on this subject from turkey hunters at large. A cross between the wild and the domestic turkey occurs to us as a possible explanation of the foregoing statement.]

PHILADELPHIA, January 8, 1893.—Editor Forest and Stream: E. Gray Pundleton sent us last week a white wild turkey, which he shot near Berkeley Springs, West Virginia. It was beautifully marked with stripes of black, and is considered very rare. This week he sent us an old gobbler, weighing 20 lbs., which was as singularly marked as the white one. It was the most brilliant bronze, shined down to a blue green, and here and there on the breast and wings were pure white feathers, giving the bird a most peculiar appearance. The tail, which is very large, has a white feather on each side of it. The beard is but six inches in length. Are not these very old specimens of genuine wild turkeys?—VICTOR.

RED-HEADED WOODPECKER IN VERMONT.—Ferrisburgh, Vt., Jan. 7, 1893.—Editor Forest and Stream: I must correct a statement which I made a few weeks ago that red-headed woodpeckers never winter here. To-day I saw quite a party of them, probably a family, and shot one. It does not quite agree with Wilson's description of the bird's plumage at any age, and the legs are gray and the middle of the bill brown color. But I suppose there is no question that it is a red-head. I never before saw one here in winter, but this has been an uncommon winter. I send you today, and they were quite plentiful till the cold weather set in, about the first of the month. They are not often seen here after the 1st of December. R. E. R.

HAIR SEAL AND PORPOISE SKINS.—The skins of the hair seal (*Phoca vitulina*) are now used for covering many articles of ornament, especially albums and books. The hair is left on, and its irregular spotted surface presents a handsome effect. They have also been used for ladies capes and muffs. The tanned seal skin is also extensively employed in the manufacture of ladies hand bags and belts, and for pocket books, cigar cases and other small articles, and is also imported from England and are exceedingly strong and durable. They will outwear two pairs of shoes so says the shoemaker of FOREST AND STREAM.

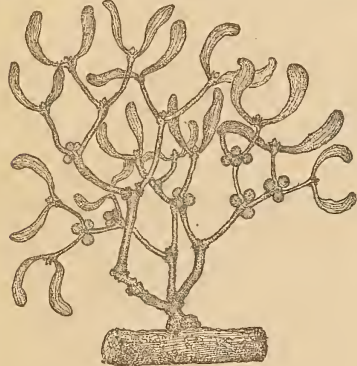

FIG. 1.—ENGLISH MISTLETOE.

always reach to the surface of the bark without reference to sunlight, heat, gravitation or other influences. So strong is this habit, that the radical is often obliged to curve itself over before reaching the bark on which to attach itself. The attachment is effected by an expanding or flattening out of the end of the radical into a disc, which gives a firm hold after which roots are developed from the disc, and penetrate the bark till they reach that part of the tree containing the most sap and juices. Numerous in England often establish young specimens of the mistletoe on apple and other trees by means of the artificial propagation above described, and dispose of the trees to dealers in the most northern parts of Scotland and England, where the mistletoe is not a native. The superstitions and legends associated with the mistletoe

FIG. 2. FIG. 3. FIG. 4.

by the ancient Britons and Germans were many. By the ancient order of Druids its collection was attended with great solemnity and religious display and form. In England the mistletoe is more rarely found growing on the oak than upon any other tree, although this fact is contrary to popular belief; hence, that which was found growing upon the sacred oak was considered more powerful, and was regarded with greater honor and sacredness than that which grew on other trees. As soon as it was discovered, the Druids assembled about the tree and a banquet and sacrifices were prepared. These sacrifices consisted not alone of the carcasses of animals; living human beings, also, were offered up on the sacred altars. A priest robed in white vestments caught the sacred mistletoe in an immaculate white cloth as it was detached from the oak onough with a sickle of solid gold, after which two milk white heifers were hastily dispatched and roasted in the way of a burnt offering, the rest of the day being spent in rejoicing, prayer and feasting. By the Druids the mistle-

THE CAUSE OF RUST IN GUN BARRELS.

Editor Forest and Stream:

I have followed the correspondence on "Rust in Gun Barrels" with careful attention. It has the great merit of throwing light upon the subject from many different standpoints, and, I believe, will have the ultimate result of producing not only a cure but also a preventive against these "measles of the gun." Now, to arrive at this much desired result, the nature and the causes of this disease must first be studied and understood, then the remedies may be looked for and properly applied.

And here I would wish to direct attention first to the fact that many spots in the barrel are produced by scales of lead adhering to the iron, especially toward the breech; these, of course, can be removed by brushing and friction, and I shall not refer to them hereafter. But the rust spots, which are the result of an oxydation or corrosion of the iron, and which invariably produce unevenness and roughness of the barrel, will form the subject of my remarks. The following observations will assist us in arriving at some definite conclusions:

1. The iron which is used in the manufacture of guns does not oxydize or rust in dry air. In moist air, and especially in changing the amounts of water in the air—sometimes moist, sometimes dry—the iron oxydizes from the surface, and the rust or oxyde is left on the iron, will gradually be eaten, as it were, until nothing but rust is left.

2. Water, when free from air, corrodes iron but little; and when it is in its natural state and temperature it not only contains considerable quantities of air but also carbonic acid gas, as well as saline matter. This will assist materially the rusting process.

The above two points will at once suggest the rule of preventing the access of air and water to the metallic surfaces of the iron, and indeed all the different varnishes, oils and rust preventers are in first line based upon the principle of covering the metallic surface with a thin covering, which will protect the iron from contact with air and moisture. It is, of course, of first importance that such oils and rust preventers do not decompose themselves in contact with the metal; and oils which are liable to produce in any instance free acids are to be strictly excluded, or else the process of oxydation or rusting might be going on quicker than in moist air or water. Perfectly neutral bodies, which are not liable to any decomposition under the given circumstances, are the best rust preventers, and I could suggest nothing better than solutions of pure paraffine in benzine. The fats and oils contain fatty acids, which are liable to produce an acid reaction under influence of warmth and air, and this, once commenced, does not prevent rusting or corrosion. I believe that the presence of substances in such fatty matters which are liable to oxydation, and probably more so than iron, would prevent the corrosion of the latter at the expense of the substance in the fat, and the good effects of blue umcennum, which is an intimate mixture of mercury and animal fat, is most likely caused by such circumstances.

I have already indicated that it is not only the air which is apt to carry oxygen to the iron, but that also other substances are apt to do so; and I pointed out that oils and varnishes, which under any circumstances can do so, should be, and may easily be, avoided.

I now come to the consideration of the effects of the remnants of discharged gunpowder upon the gun barrels; and, as it appears that this question can be investigated, I will endeavor to explain what I think of it. No doubt some of our sportsmen friends will at their views corroborated by what I say; some may still continue to adhere to their own explanations, but I hope all will do me the justice of finding my remarks pertinent and made for the good of the fraternity.

"Californian," in your last number, has already referred to the possible difference in the composition of gunpowder and the effect thereby produced upon the gun barrel. I am not aware that any manufacturer uses soda saltpetre; in my opinion they do not—only potash saltpetre, and that as free as possible from all other salts and impurities. It appears, however, that, except in reference to its containing soda and moisture, all analyses of gunpowder have lost their significance after it was once ascertained that our suppositions in regard to the composition and the process of decomposition in the explosion of gunpowder were wrong. It was generally supposed in theory that gunpowder should be composed of one atom of saltpetre, one atom of sulphur and three atoms of carbon, and that, as a result of its explosion, three atoms carbonic acid, one atom nitrogen, as gas, and one atom desoxidum sulphuric should be formed. Instead of this the powder gases contain, besides carbonic acid and nitrogen gas, considerable quantities of carbonic oxyde gas; a part of the charcoal remains unburned, and, besides potassium sulphide, the residue contains large quantities of potassium sulphate and carbonate. This process, within certain limits, is also quite independent of the grainage of the powder, and, therefore, not much is gained by analysis or external examination of the powder. These may be considered as facts, and I have, therefore, always used one brand of powder after finding it good, and would even stick to that against all other judgments.

According to the above, the residue which is left in the barrel after discharge, consists of potassium sulphate, sulphide and carbonate. If this residue is left dry, it will remain unchanged; if left in moist air, it will change, form sulphurous acid and corrode the barrel; the charcoal, which is always left in it, will act as an absorbent of air, moisture and carbonic acid gas from the atmosphere, and thereby serve as a medium, keeping more or less porous, the residue distributed over the iron, and will accelerate the exchange of oxygen between potassium sulphide and the iron. This can be in some way experienced, if iron is left with powder residue and water or moist air together. It is also palpable that some little time will elapse before the chemical process will commence. It seems, therefore, to be the right way to clean the gun barrels from this residue.

That some powders are worse in this respect than others, and some barrels resist the corroding influence of the undischarged powder, and that some powder residues are soft, others hard, and the best methods of preventing their action on the barrel, would form an interesting subject of further discussion.

Dr. VOLNEY.

Editor Forest and Stream:

If the subject is not threads here let me add any note of testimony; and as to make an opinion of any weight the length and time spent in forming it should be given. I am sorry to say that I have gained what will next summer be forty-two years experience. In your last number your corre-

pondent "C. E." hit it exactly; leaving the dirt from shooting on the barrels will protect them from rusting "sometimes," and sometimes it won't, and when it does not your gun is ruined. One of mine nearly was for I discovered this discovery long ago, and I am just lazy enough to make the most of every labor-saving arrangement. So I work the others against putting too much faith in it. I notice the uncertainty it caused by the grade of powder, as "Californian" says, or not, I cannot tell; and as I generally use common powder, having been cured of the weakness for expensive ammunition when I was quite youthful, I hardly think that is the reason. Let your readers try the experiment, but do not trust their guns to it too long at a time. The better plan is to get a warm nook in the house, say the corner by the kitchen chimney, and put up a closet. Keeping guns dry is, in the salt air near the coast, the only preventive of rust; and, my friends, "I don't you forget it."

ROBERT B. ROOSEVELT.

DUCK SHOOTING ON MORICHES BAY.

I HAD looked forward to having a duck shooting expedition all through the fall, at some point on the eastern end of Long Island, where or when I had not yet determined, when I received from my friend, J. S., the following characteristic letter: "Moriches, L. I., Nov. 6, 1881.—My Dear Mr. Hunter: I have been out on the bay to-day, and have seen a very large number of ducks flying about. The prospects look very good, indeed. Bishop has plenty of room and is anxious to see you."

This settled the question, and the following afternoon found me with packed valise in one hand and gun in the other, on the way to the Long Island Railroad station. Securing a seat in the train, I resigned myself to the situation, knowing that when one has occasion to travel on this marvel of intricate railroads one is in constant anxiety lest he should be landed at a station miles away from his destination. But by a stroke of good fortune, backed by frequent inquiries of the conductor, at the end of a three hours' journey I reached Moriches in safety, and huddling into "Sylph's" ancient vehicle yclept a stage, awaited shiveringly the end of my expedition, which proved to be the cosy quarters of John Bishop.

This worthy host was at once farmer, landlord and guide, and by hook or by crook managed the three occupations with both credit and profit.

We were awakened at three o'clock the next morning. The birds had started from the south, and the early part of the night, but had not changed a whit, and a day of fog hung over the bay. Nothing could be heard save the dull booming of the surf as it broke on the outer beach. Before break of day we were on our way making good speed for our landing—Doctor's Point—a piece of land jutting out into the bay about a mile. In choosing the best points these baymen, whose power of perception is wonderfully acute, always prefer a lee shore, so that when the wind is from the northwest, which is considered to be the best quarter, they select a point on the lee side of the bay, and string out decoys to the leeward side of the point with their heads to windward.

Having arranged the stools in a duck-like and life-like a condition as possible, but which the fog caused to loom up twice their natural size, we encamped ourselves in the bottom of the boat and awaited the breaking of day. Suddenly to the westward there was a bright flash, and a second after another, followed by two dull, muffled sounds of "ploong! ploong!" of guns, we knew the ball had opened. The morning voice of Bishop, "Look out, here they come from the eastward," the next moment showed, as painfully raising our heads above the gunwales of the boats, a bunch of ducks, which proved, on closer inspection, to be broadbills. They rapidly approached, and, with almost the velocity of a cannon ball, swooped over the decoys and were off, but not without leaving three of their companions behind, one dead and two crippled so badly that they were soon dispatched. Presently, a large flock of old squaws, numbering perhaps several hundred, started on their resting place, first out on the bay, by a passing flock, came swinging by just out of gun shot. The guide, seeing they were likely to pass by without noticing the stools, performed the curious action of kicking his feet up into the air, and at the same time uttered, in a semi-falsetto voice, "how-ab-ablik," which he afterwards assured me was the cry of the old squaws. The ducks, perceiving this strange feat, and at the same time catching sight of their supposed friends snugly nestled in the sheltered cove, changed their course and came to investigate, but, finding a point of interest, they came to a halt, and followed their course for an instant and discharged their contents, and four ducks, arrested in their rapid flight, leave the flock and fall heavily to the water, rebounding from the shock, and lay on their backs stone dead. The fusillade is now general, as far as can be heard. Away to the westward, in the neighborhood of Smith's Point, comes the faint ploong! ploong! of a double report (a peculiar sound on water), and soon after a flock of whistlers appear, their low tremulous whistle proclaiming their species. Rising from the cramped position which the cautious gamester naturally assumes to remain unseen, we pour a volley into their rank, and have the satisfaction to see three drop.

Five o'clock in the afternoon found us with decoys packed away on the way back to headquarters, with fifteen broadbills, three sheldracks, seven coots and ten old squaws. Early the following morning we were on another point, in consequence of the wind having shifted to the north and blowing great guns. Not a cloud, nor a duck, could be seen in the sky, and the guide, accompanied us with old squaws and local incidents, of which you believe have quite a lot to fall.

He told, in his quaint way, of an old gunner of Moriches, who had owned, for the greater part of his life, a muzzel-loader, but his curiosity having been so excited by a city friend, who had extolled the merits of the breech-loader, that he was at length persuaded to purchase one. One morning he set out on the bay, bringing both guns with him for the purpose of seeing for himself which the merits or demerits of each lay. Presently a flock of old squaws came flying by. He leveled the breech-loader at the leader and fired—a very fair aim, he thought—but, greatly to his surprise, they only wagged their long-tail feathers, and cried out, as if in derision, "How dry're you!" Again another bunch flew by, and the derisive cry rang out as they flew off unharmed. The blood of the old bayman was now fairly boiling. Muttering a word which is not found in polite reading, he flung the breech-loader in the bottom of the boat, and snatched the muzzel-loader. "Scream and Blazes," he affectionately termed his old gun, just as he leveled it at a bunch of four passing by, and, to his extreme delight, saw

them all drop. Surveying them with grim satisfaction, as he picked them up, he exclaimed, "Now, d—n ye! how dry're you!"

Our second day's sport proved as barren and monotonous as yesterday's had been fruitful and exciting. But along toward 3 P. M. a black duck passed by, and, yielding to increased ballist in the shape of No. 4 shot, set his wings and dropped far out in the bay. Bishop showed out and got it, but it was difficult to tell whether he would be in the return, as he battled against wind and tide, and reloaded me of a picture of Ajax defying the tempest. Darkness put an end to an unsuccessful day's shooting; for on counting the spoils we found we had only a green-winged teal and a black duck. Nothing daunted by the ill-success of the previous day, we were again at our post the next morning. Now, fortune—that fickle goddess—again smiled, and before noon we counted twelve good ducks; but as it was necessary that we should take the afternoon train for home, we reluctantly packed away the decoys, and, "casting our lingering, longing look behind," at places rendered charming by our short association, we bade farewell to duck shooting till next year.

GOLDEN EYE.

WING SHOOTING VS. TREEING.

ASHFIELD, MASS.

Editor Forest and Stream:

First, as to the "whisky." It was mentioned incidentally and no issue sought on that point; but since L. I. F. insists on it, I would say that whoever it may be in his section, wherever you find a downright pot-hunter here, the amount of whisky drunk is only limited by the supply; but I had not supposed that either the FOREST AND STREAM or its teachings was particularly acceptable to this class. Next comes the caribou comparison. Yes; when a scatter-gun is invented that handles easily and possesses the power to make it as certain of riddling a caribou at twenty rods as a modern choked breech-loader is of finding game by grouse at a few yards, and when the caribou has the alarming habit of squatting and lying in pointing dogs after a short flight, then, by all means, start him up before you shoot and give him a chance, by a lucky jump sideways or behind some friendly bush, to escape your deadly fusillade.

As to the term "murder," the sense of honor and fair play possessed by the true sportsman should intuitively inform him when sport ceases and murder commences. Is it not surprising, that, while the terms "trout boys," "quail murderers," "buffalo butchers," etc., are constantly found, without eliciting any rebuff from the sporting fraternity, the instant a voice is raised to prevent the extinction of the king of game birds by the most disgraceful hatchery a tremendous opposition is encountered? What would be thought now of the sportsman who should send in for publication a full set of elaborate rules with valuable suggestions for the most successful method of huddling quail for a murderous shot, or for netting trout in the most killing style, and framed after the manner of our late directions for the most deadly method of grouse?

And yet, good friends, 'tis not a few years since that they were all lurchered alike to fill the capacious maw of the pot-hunter. He has swallowed almost the last one of the quail and trout, and a few grouse alone have escaped by their superiorunning. Doubtless when, in a few years, he has—if unchecked—reduced the grouse in like manner he will hardly have the stomach to reply while we all stonour about the "honor" of the "manner of their taking off," and talk loudly of their proceeds as we now sit in relation to trout and quail.

The fact is that New England is in the same fix that our northern brethren soon will be. We have comparatively few grouse left, and an army of shooters coming on; and after all our efforts to get them started shooting in a sportsmanlike style, it is hardly to be wondered at that we regard with little favor efforts to proselyte them to pot-hunting. No one that lacks the amount of pluck and esprit de corps necessary to prefer fair play before "baz," need ever expect to acquire much skill in wing-shooting; or ever to taste the slight esthetic delight that fully possesses the true sportsman as he views his hard-earned spoils.

While we desire to deal justly in our discussions, we must say that a disposition to boast of slaughtering treed birds and giving minute directions for the best methods of accomplishing the same, plainly indicate which side is favored and are about in the same vein as that "solid" advice to our boys, viz., "try all fair wing shots, and perhaps in the course of time you will shoot them in no other way," though of course you will fill up the bag with all the "pot-shots" possible. That's training for wing-shooters with a vengeance. Why! it reminds me of the advice that an old sharper gave his sons: "Boys, get money honestly, if you can; but boys, get money anyway." Wouldn't it be a curious temperance reformer that would tender the following "solid" advice: "Boys, drink all the whisky you can get, and occasionally take a drink of water, if handy; and perhaps in the course of time you will drink nothing but water."

Boys, I give you a motto which (though the pot-hunter might not consider it "solid") is a faithful embodiment of through a wide and varied experience of twenty-five years has brought to me much solid pleasure. It is, *Take no sitting shots!*

Emblazon it on your banners. Practice it invariably, and you will never regret it. RUFED GROUSE.

CAMBRIDGE COUNTY, PA.

Editor Forest and Stream:

Some weeks ago I wrote a short article, which appeared in FOREST AND STREAM, in answer to L. I. F., who had in a previous issue supported the theory that a man was an artist who could kill one ruffed grouse in twenty wing shots. I have noticed in almost every subsequent issue, correspondence bearing pro and con on this subject.

I do not wish L. I. F. or any one else to imagine that I would not shoot a ruffed grouse sitting, whether on ground or tree, for I most undoubtedly will, and always have done so, whenever an opportunity afforded itself. L. I. F. and myself differ on one point only, I believe, and that is the number of grouse which may be killed on the wing, out of a given number of shots. I have never been so far north as New Brunswick and an out at all acquainted with the character of the cover wherein lie the whirring grouse. L. I. F. and friends so frequently fall to kill when on the wing; but my shooting is mostly confined to the ridges and spurs of the Allegheny Mountains, where the grouse are almost invariably found in thickets of hemlock and laurel.

It is writing of this article I decided to keep a record of my shots at grouse during the remainder of the open season and report the same.

Sea and River Fishing.

FISH IN SEASON IN JANUARY.

Table with 2 columns: FRESH WATER and SALT WATER. Lists various fish species like Pickerel, Rock Bass, and White Perch.

THE ANGLER'S DREAM.

The earth is sad—mist dark and gray / Enfold her ancient breast; / The waves, all wearied with their play, / Have tumbled into rest, / And silently the god of Day / Is sinking in the West.

Now dead delights, like ghosts, arise / Within my haunted brain; / The tender blue of April skies— / The sound of April rain— / The foaming break—the gentle rise— / The princely poulder stain!

Then fade the flowers from my sight, / O'ershadowed is the stream, / As yonder through the waning light / I see the pier-lamps gleam / And in the dead November night / I waken from my dream!

F. B. DOVETON.

In the London Sporting and Dramatic News.

THE ALEWIFE IN INLAND LAKES.

IN the autumn of 1880 interesting accounts were published of the exhibitions which a man gave on Keuka, Seneca, and other lakes of western New York, showing his method of trolling for salmon trout. His successful bait was the mysterious alewives, or "sawbellies," about which there is so much speculation, the problem being how they got into those waters.

So far as appeared, this man obtained the indispensable bait by catching a salmon-trout with a hook baited with a young pickerel, opening the trout at taking the alewives out of its stomach. Then he proceeded to troll with the bait thus obtained, and kept up his supply of it by opening every fish that he caught. As a young sucker with which to take the first salmon is not always obtainable by the average fisherman, it may interest some of your readers to learn of a more direct method of procuring the alewives. This is by fly fishing for them late in the evening.

Last July, one evening, I was catching large minnows for bait from a dock on the shore of Seneca Lake, using a fly-rod with the smallest of flies. When it had become so dark that the minnows ceased to take the flies, I began to catch alewives, and soon had five. The next evening, at the same hour, I tried for them again, and took fifteen in a short time. They continued to take the flies after it was dark.

These lively little interlopers are not welcomed with universal heartiness by the sportsmen on Seneca Lake. It is true that they furnish an excellent food for the game fishes, but the supply is so lavish, so recklessly prodigal, that the salmon-trout and the glass-eye-pike are sadly surfeited, and regard with supreme indifference the most attractive lures of the angler. This is one reason they give in explanation of their inability to capture these fish. If this were all, it would not be so bad. Naturally enough, the alewives, too, have excellent appetites, and they are charged with satisfying them with the spawn of their persecutors. It may be a question of "the survival of the fittest," and so far the alewives seem to be having the best of it. It is certainly a fact that trolling for salmon-trout and glass-eye-pike on Seneca Lake has become practically abandoned. Salmon and gill nets are largely accountable for this, but still the conviction remains that alewives have damaged the fishing.

Up to within a few years past every grass patch in the lake was full of yellow perch. They have all disappeared excepting a few stragglers. Happily the black bass hold their own, and better still, are on the increase. They protect their spawning beds and have it all their own way with the multitudinous alewife. They, too, devour the little stragglers without stint, but nevertheless are always ready for a tussle with the angler properly equipped with fine tackle and experience.

KANADISAGA.

COLOR OF GUT.

"THE FOREST CITY," Ontario, Jan 9, 1893.

Editor Forest and Stream: I observe in your issue of 5th inst. an article upon "Color in Fishing Gut." This is a question upon which men will never agree as long as there is a piece of gut to be had. There is, however, one color which I do not think has ever been tried and which has just suggested itself to me, viz., "green." In all paintings of water scenery the water is represented as being of one or more of the various shades of green, excepting, of course, in sepia and neutral tint pictures. As the past and present artists of Europe and America were and are, without doubt, deep students of nature in that respect, their adoption of green in its various shades in representing water (with the afore-named exceptions) would tend to prove that such is its normal or natural color, and that those who indulge in the noble art of fly-fishing would do well to color their "leaders" with a green tint.

I have fished in many waters in Ontario (in its western section), from the clearest pond to a turbid stream, and have used both blue-tinted and white gut for "leaders," and never found that I caught more or less with one than the other. It is the flies that the fish see, not your casting line or leader, and it is the fly only that he goes for, which is easily proved by casting your "leader" over the water without any flies on it; the entire absence of "flies" will solve the problem. Our salmon trout are of such a variable temper that while in some days rising to the flies as fast as you can throw your line, on other days the most delicate tackle and skill will not lure them from their cosy beds at the bottom of the stream.

rifle, 12-inch barrel, 32-calibre. "L. I. F." will accept my thanks for his kind expression regarding my former letter. Yes, I have been there many times, and trust that I may be spared to go there many times again. To "Mark West" I would say that every hunter knows and every naturalist should know that all wild birds and animals have certain fixed habits according to their several species, and a thorough knowledge of their peculiar habits make the hunter and trapper successful in their vocation.—STANSTEAD.

SHOOTING IN THE SOUTH.—I have just returned from a two week's shooting trip to Georgia, and can report finding ducks fairly plentiful. I went up the Savannah River about twenty miles and got seventy-two ducks, mostly bluebill, spoonbill and mallard in four days' shooting, and did not work very hard either. The weather was very warm, and, consequently, the ducks not flying well, or I should have made a much larger bag. I did not try for deer, though from reports should judge they were very plentiful this year. Quail and doves abundant everywhere. The best way to shoot the Savannah is to hire a ducking skiff (about 50 cents per day), go up the river, say 150 miles, and drift down. There is a steamer up the river every Tuesday and Friday at 6 P.M. A dozen decoys are useful, but most of the shooting has to be done by sculling up on the ducks. You can hire a darkey to go with you at from 75 cents to one dollar per day. I had a very intelligent fellow that knew every nook and turn of the river and where to find the ducks. A trip of this kind is inexpensive, compared with Currituck, or even Cobb's Island, and, to my thinking, is quite as enjoyable.—JURIS P.

ASTRIDE OF A STAG.—Murphy's hero has been outdone by a European rival. In the London (Eng.) Telegraph we find the following: Since the Azapega people unwillingly refuse to doat the wildest Tartar steed of his period, few such surpassing feats of horsemanship have been recorded in the pages of history or romance as that which publicity has been recently given by the majority of our Hungarian contemporaries. Perhaps horsemanship is scarcely the correct term to apply to this extraordinary performance: deermanship would probably be the more appropriate word. The other day, while a noble stag of ten was being hotly chased by the Kaposztaszegyer hounds—a subscription pack—one Karl Poros, a discharged hussar, managed to bring the terrified animal to a standstill in some close cover through which it was forcing its way, and, by an almost superhuman effort of strength and agility, to vault upon its back. After several desperate but unsuccessful attempts to dislodge its rider from his seat, the stag, stimulated anew to flight by the cry of the fast-approaching hounds, resumed its course, but it soon broke down under the weight of its unaccustomed burden and gave up the ghost through sheer exhaustion and terror. Poros was found by the huntsmen sitting on the wounded carcass of the stag, which he had literally ridden to death and resolutely claimed as the just reward of an achievement unprecedented in the annals of the chase. [The FOREST AND STREAM office boys suggests that Poros should have fired that name at the stag, Kaposztaszegyerexyzetc.]

KILL THE OWLS.—Canal Fulton, Starke county, O.—I believe a true sportsman takes as much pleasure in killing all enemies of game as he does in killing game. All owls are great enemies of game, killing them while they are asleep and then sleeping in the day in hollow trees away out of sight of the hunter. I have discovered a way to shoot them. When I learn that an owl has located in the woods I get on a horse and take my gun and ride around through the woods where I think the owl are in a hollow tree, examining carefully every tree that has a hole in it. I don't talk any, but don't care how much noise the horse makes, as that is what I want the owls to hear. This excites their curiosity and then they will crawl up and look out to see what is going on and give you a chance to shoot them. I one time caught a screech-owl in a hollow tree that showed his inquisitiveness by crawling up to look out to see what was going on. It was five feet from the ground. I reached in and pulled him out, and he had a quail in his talons half eaten that was just killed the night before. I suppose the quail was as heavy as the owl.—G. H.

MIDENA, N. Y., Jan. 12.—Our taxidermist has just received, to be mounted, and is a fine fox, killed three and a half miles southeast of Albion. It is a fox large specimen, and weighed ten pounds. This reminds me that a fox was shot a few weeks since inside of our village corporation. He was seen to enter a drain, the mouth of which was afterward closed by a flat stone, and one of the covering stones taken up a few rods beyond. He was shot and killed. It was taking a rather mean advantage, but the killer felt justified by the number of chickens he and his neighbors had lost. A gray fox has been seen several times prowling around. Rabbit hunting has been good so far this winter, a great many being killed on the light snows we have had lately.—SAL NITER.

GEORGIA.—MOON.—Middle Georgia has had a very short crop of game this season, our principal birds (quail) being scarcer than we have ever known. Some sections that have formerly had quantities of birds have been this year almost destitute. Though the weather has been warm, we have had a good supply of ducks. The writer had an excellent opportunity of testing the much discussed "hot or cold odorous" subject yesterday, and after a trial, was of the opinion "twas six for one and half a dozen for the other."—J. H. J.

BE CAREFUL where you drop your cartridges. Some person left one on the floor of A. G. Jackson's residence at Jericho, Long Island, and when Louisa Seada, the colored servant, put the sweepings into the kitchen stove last Friday morning, the cartridge exploded, whereby she lost the sight of an eye. We have heard of a case where a "22 short" got into a box of smoking tobacco and thence into a smoker's pipe, giving him a great fright and a narrow escape.

KANSAS.—Cimarron, Gray Co., Kan., Jan. 2nd.—This is a good time for antelope here, as the fires have burnt off the prairie for miles north of here and bunched up the antelope near the river. Cattlemen from 100 miles south report buffalo plentiful, but in bunches of four and five coming in from the southwest. The head of the herds were just 120 miles from here on the 23th. They shall go down to them on the 25th, to be gone from here in two or three days. When I come back will report progress.—W. J. DIXON.

I find that I have shot at fifty-six grouse, fifty-four of them on the wing, and two sitting.

Of this number shot at on the wing, I killed sixteen; and killed both of the sitting shots.

The greatest number killed consecutively on the wing, was three.

I shot most of the time a ten-pound 10-gauge, full choke, hammerless gun. I loaded with 44 drams Orange lightning powder No. 6 and 1 1/2oz. No. 5 of 6 shot, the former late in the season.

I believe that one pellet of No. 5 shot late in the season, when ruffed grouse generally rise wild, will do more execution than half a dozen No. 8's; for, as a late contributor remarks, they are a hardy bird and carry away, very frequently, quite a weight of lead, if a bone in the wing or neck is not broken.

I am, if shooting a ruffed grouse sitting be the criterion, a pot-hunter. But I shot over a brace of setters and seldom get the opportunity to kill them in this manner. I may be wrong, but I do not believe that shooting an occasional grouse on the ground or in a tree will constitute the shooter a pot-hunter. I imagine that an individual who systematically prepares himself for the slaughter of ruffed grouse by "treing" them and then deliberately, "with malice aforethought," kills them, deserves the name of pot-hunter and the condemnation of every lover of the "hunting grouse."

OTTO.

MUZZLE AND BREECH.

Editor Forest and Stream: Editorially you remark that Mr. Van Dyke will find many to agree with him as to the muzzle-loader's accuracy at short range. Possibly so, but, notwithstanding his preposterous claim as to the merits of his muzzle-loading rifle, the persons who still use them, as a rule have not made their "first visit to town."

Admitting his "dime" shooting at 50 yards, won't a ball that hits a half-dollar every time from a breech-loader, at same distance, answer every purpose on game at 200 yards and over?

He claims a cone ball "cannot be shot at all." Now, I have put one out of 10 naked cone bullets from a breech-loading Maynard into an 8-inch bulseye at 200 yards, off-hand, and can send him the proof, if he wishes it.

Would that he could sit behind a glass and see where Charles, Richardson and Jewell plank their 380-gr. cylindrical every time on an iron target, 200 yards away. One visit at Walnut Hill (Mass.) will take the conceit out of him that the intimate is in others, and show him how to shoot the "rifle of the present."

Mr. Van Dyke further says that "the extremely long ball, necessary for a long flight, cannot be loaded from the muzzle by the best system of patching." Now, it is a notorious fact that, at Creedmoor and elsewhere; long range breech-loading rifles have had the bullet put in from the muzzle and fired with as good results as though entered at the breech with the shell.

He states also that the ball, put in at the muzzle, cannot be fired tightly enough for the grooves. How is it, then, that scores of 234 are made with long range rifles carrying bullets that can be pushed through the barrel by a rod, with scarcely a pound pressure?

It is evident that Mr. Van Dyke has something yet to learn about rifles. From his description one would think a breech-loading rifle barrel to a thermometer, with its bulge at the bottom for a ball to wallow in before starting on its journey.

LOADING FOR GAME.

Macon, Mo., Jan. 9.

Editor Forest and Stream: Your correspondents fail to give weight, length and bore of gun, leaving the reader to guess at these very important features. An article stating that 34gr. powder and 1/2oz. of shot is the proper load for ducks, is about as vague as it can well be. I shall confine my views on the subject of loading for game, to guns suitable for general shooting, viz.: 12 gauge, 23 to 24 lbs.; 10 gauge, 24 to 25 lbs.; length of barrels 20 inches. For the 12 gauge, for general shooting, use 4dr. Orange duck powder No. 4 grain, 2 pink edge wads on powder, with one black edge on shot, all one size larger than bore of gun. 1oz. of shot, No. 8, for quail, pinhead d and ruffed grouse, squirrels and rabbits; No. 9 for snipe and plover. For duck shooting use 4dr. same powder, and 1 1/2oz. No. 5 shot in first barrel and same quantity of No. 7 in second, shells loaded same, as to wads. For the 10 gauge use 4dr. same powder and 1 1/2oz. shot same sizes as 12 gauge for general shooting, and 5dr. and 1 1/2oz. of shot for duck shooting.

Always use wads one size larger than bore of gun in paper shells, and two sizes larger for brass shells. I have found out by experience that trying to economize in powder is not economy. In loading as above mentioned the shells containing No. 3 shot can be used for duck shooting very well if you run out of shells loaded for that purpose. The most absurd idea about loading that I ever read or heard of is advanced by a correspondent from El Passo, Ill., signed "No. 12 Bore," in issue of January 5. No. 12 Bore says he uses 2 1/2hr. powder and 1 1/2oz. of No. 4 shot (4w spurts). Such a load may be all right "down in Egypt," but would hardly pass muster in this part of the country, especially in the timber along the Chariton River.

The chapter on guns and loading in Capt. Bogardus' book "Field Cover and Trap Shooting," is about as practical as anything that has ever been written on the subject, and by a practical man too. The tallow question mentioned by No. 12 Bore is rather odd, notwithstanding No. 12 Bore says he thinks it is not generally known. It is time thrown away and does no good. Wire cartridges are expensive and are no better than lead ones in a breech-loader, and very little better in a muzzle-loader. BORDER RUFFIAN.

VERMONT.—Sheldon, Jan. 6.—The ruffed grouse are very scarce in this vicinity, and the few killed have been all old birds. We have had the sport on the hooch-ridges, where we have made some heavy bags of gray squirrels, with a few black ones for variety. Foxes and rabbits scarce. Red-headed woodpeckers are very plenty here this season, and I believe, a winter resident with us. In your issue of Dec. 15 I see that a caribou was killed near Gaspe Basin with a 32-calibre revolver. For some years past several of the moose and caribou hunters near Campbellton, N. B., use while hunting this large game the "Frank Wesson" pocket

From my experience of about fourteen years, during which I have never used bait for trout or black bass fishing, I am satisfied that color of gut has nothing to do with success or failure. The right kind of flies for the day and the requisite skill is all that is necessary, together with good tackle, to insure good sport in trout or bass fishing.

Some years ago I made a beautiful pond supplied by a spring creek of the purest water, about half a day's drive from home, which I often frequented. This pond covered twenty acres of ground, and I could nearly at all times catch trout in it, having carefully observed their habits and haunts. On arriving there one afternoon, I was told by my care-taker that a "colonel" from Buffalo had, without leave or license, gone to fish up the creek. From the description my man gave of his "findings," I did not think he could commit grave havoc among my pees, so I let him alone, and did not rebuke his impertinence. He made his appearance on the banks of the pond some two or three hours later, in company with a companion of languid appearance, complaining of dreadful luck—"nary trout." They were equipped in high boots, and had grand rods, immense fish-baskets and lovely "kinky" flies. I examined the ends of their lines, and found each had a nondescript fly perfectly useless, tied on to the ends of their lines by a piece of gut three inches long. I sympathized with their misfortunes, pointed out the very best places, and bade them go and enjoy themselves. By this time I had about sixty fine trout. On leaving the pond at dusk, I heard that the two had departed for their "ancestral halls" disgusted.

Whether "color" had anything to do with their want of success, I leave you readers to judge. They were decidedly "green." C. O. D.

A PERFECT DAY.

I TAKE my rod this fair June morning, and go forth to be alone with nature. No business cares, no roar of the city, no recitals of other's troubles and woes which make the lawyer a human hyzometer, no doubts nor fears disturb me, as drinking in the clear sweet air with blissful anticipations, I saunter through the woods toward the mountain lake. As I brush the dew from the bushes around me, I spy in a glade, golden flowers glowing on a carpet of pure green, mingled with snowy stars of white blossoms; with their fragrance comes the liquid bell-like voice of the swamp-robin, hidden from curi us eyes. Soon, seated in my boat, I paddle to the shade of a tall, dark hemlock and rest there, lulled by the intense quiet. Ever and anon as I dreamily cast my ethereal fly, a thrill of pleasure electrifies me, as it is seized by a voracious trout.

I have large classed trout with flowers and birds, and bright sunsets, and charming scenery, and beautiful women, as given for the rational enjoyment and delight of thoughtful men of esthetic tastes. And if

"By deeds our lives shall measured be,
And not by length of days,"

then a perfect life has been lived by many a noble trout whose years have been few, but who, caught by the fisher's lure (to which he was predestined as aforesaid,) has leaped into the air, and shaken the sparkling drops from his purple, golden, crimson, graceful form and struggled to be free, to the intense pleasure of the artist who has brought him to basket, where he belonged.

Thus resting, and floating apparently between the translucent crystal and the blue air, silent, I have felt the presence of a spirit who inspires me with pure thoughts of matters far above the affairs of daily life and toil of the universe, and what lies beyond the blue sky, and of the mind and soul of man, and his future after death.

I love the mountains, and the meadows, and the woods. Later, satisfied but not sated with fair provision of corn and wine, and oil, and my creel well filled, the shadows lengthen, and the day begins to die.

Some day I shall hear no more forever the birds sing in the spruce shadows, and the blue air, silent, I have felt the presence of a spirit who inspires me with pure thoughts of matters far above the affairs of daily life and toil of the universe, and what lies beyond the blue sky, and of the mind and soul of man, and his future after death.

Filled with such thoughts, I regret that I cannot express them like the poet, whose name I know not, but whose words I well recall:

"God-bye, sweet day, good-bye!
I have so loved thee, but I cannot hold thee;
Departing like a dream, the shadows fold thee.
Sweet thy perfect beauty fades away;
Good-bye, sweet day!"

Good-bye, sweet day, good-bye!
Dear were the golden hours of tranquil splendor,
Sadly thou yield'st to the evening tender,
Who wert so fair from thy first morning ray.
Good-bye, sweet day!"

Good-bye, sweet day, good-bye!
Thy glow and tints of smiles and tones and glances
Vainly at my heart and soul's mind still advances
Ah! could'st thou yet a little linger stay.
Good-bye, sweet day!"

Good-bye, sweet day, good-bye!
At thy first glim's my grateful heart remembers
The white I wear, thy sunbeams' shimmering embers
Fle to the West beyond the twilight gray.
Good-bye, sweet day!"

As the balmy breathing night wind begins to blow, I turn my back upon the silver glancing of the moonlight on the rippling waves of the fairy lake, and step bravely into the darkness of the woods, where I cannot see the places where my foot shall fall, but I know that others have safely passed it before, and that I shall find comfort and home at the end.

Geo. W. VAN SICKER.

DIRECTIONS FOR COLLECTING AND PRESERVING FISH.

BY TAILLON H. BEAN.

1. Wash the fish thoroughly in water to remove the slime and dirt that are almost invariably present upon them, not omitting the inside of the mouth and the gills. In cleansing fish that have a tough, scalesless skin, or such as have the scales firmly fixed, use a stiff paint brush or a scrubbing brush; for thin-skinned fish, and such as have deciduous scales, a softer brush must be taken. Some fish are covered plentifully with tenacious mucus that is with great difficulty removed by water alone; in such cases a solution of two tablespoonfuls of alum in a pint of lukewarm water will be found efficacious.

2. It is often necessary to preserve fish that are stale, or partially digested and offensive to the smell. Such examples may be thoroughly disinfected by the use of the disinfecting solution of chloride of soda. Use a tablespoonful of the solution in one pint of water. With this wash the gills, and pour it into the mouth and stomach, allowing it to return by the mouth.

3. Inject alcohol in the mouth and the vent to preserve the viscera. Make small incisions in the belly and in thick parts of the body, to allow the alcohol to permeate the tissues. It is nearly always desirable to remove the liver, stomach and intestines from large fish, and to preserve these separately, numbering them so as to correspond with the fish from which they are taken.

4. It is a good plan to keep freshly collected fishes in weak alcohol for a day or two; a mixture of two parts of 95 per cent. alcohol to one of water will answer for this temporary immersion. Some species are exceedingly soft and flabby, falling to the bottom of a glass jar or other receptacle, becoming partly imbedded in their own mucus, and rapidly disintegrating in consequence. Such specimens should either be suspended in the alcohol by a thread or string from the neck of the jar or the hook sometimes found on the inside of the stopple, or a bed of excelsior or muslin should raise them from the bottom. These are necessary precautions which will prevent many losses. After the fish have been kept for two or more days in the weak alcohol, transfer them to a mixture of three parts of 95 per cent. alcohol to one of water. Ordinarily this latter will preserve specimens that are not crowded too much at least three months. Some, of course, will remain in good condition still longer; but, generally, three months will reduce the preservative power of the liquid so far as to make a renewal of alcohol necessary. The tendency with many collectors is to overcrowd specimens, and, as a result, museums frequently receive a lot of half-rotten material which is too valuable to be thrown away and is yet always a source of trouble and disappointment. A jar, tank, or case of any kind should never be expected to accommodate more than half its own bulk of fish, and even this proportion will require watchfulness to avoid loss. If a collection freshly caught is to be shipped to a distant museum or private collection, observe the directions about cleansing the fish and preserving the viscera separately if needful, and then use nothing weaker than a mixture containing three parts of 95 per cent. alcohol and one part of water. A good mixture which will carry fish in any condition is the following: 95 per cent. alcohol, 1 pint; alcohol, 8 quarts; water, 1 quart; glycerine, 1 pint; borax, 1 ounce. There is nothing better, however, than the mixture of three parts of alcohol and one of water.

5. The extensive collections of the United States Fish Commission are usually packed in copper tanks, which are lined within. The lid of the tank is made to screw in the top, and its diameter is always as great as the dimensions of the top will allow. The tanks (called Agassiz tanks) are made to contain 4, 8, or 16 gallons. Strong chests, of a size large enough to accommodate a 16 gallon tank, are used for shipping; the hinges and hasps of these chests are riveted on; handles are screwed on at the sides, and each chest is furnished with a strong lock. The chest may contain one 16-gallon tank, or two of 8 gallons, or four of 4 gallons, or one of 8 gallons and two of 4 gallons, as may best suit the convenience of the collector. When several tanks make up the complement it is usual to separate them by thin wooden partitions.

Cases made of ordinary tinned sheet-iron are much more generally used than the expensive copper cans, and they will answer well enough if the joints are perfectly tight and the top is securely soldered on.

Oak kegs, holding about 10 gallons each and provided with iron hoops, are capital containers for large fishes, and they will stand the wear and tear of railway travel better than most other receptacles.

Glass preserving-jars may be shipped long distances with comparative safety, but they must be protected, by inverting them, to insure tightness. A catalogue is to be kept by the band should be wiped dry; wrap the jars in strong paper and pack them in some material that will prevent breakage.

When corked bottles are used, tie a piece of bladder securely over the cork. Where seals and sea lions occur, the throat, as prepared by the Aleuts for example, will be found an excellent covering. It is necessary to wet the membrane to make it pliable. Whenever jars, bottles, or any other small containers are filled with fish which are not provided with tin tags, write plainly with a lead-pencil on heavy Manila or writing paper the name of the place where the fish were taken, the date of capture, and the name of the collector. Put a label of this kind inside of each bottle; it will remain legible for years.

6. Each specimen should be provided with a numbered tin tag, which is to be fastened, whenever possible, by means of a string passed through the right gill-opening and out at the mouth. When the string must be tied around the body or tail of the fish it should be fixed securely and yet without wounding the fish. A catalogue is to be kept by the collector, in which the numbers corresponding with those on the tags must be entered, with notes as to place, time, and mode of capture, and other particulars which will be more fully mentioned further on. Wrap each fish separately in common coarse muslin (the coarser the better), and tie the ends securely. Do not tie the string so tightly around the body of the fish as to make furrows and wrinkles in the skin. If tin tags are not at hand, a label written firmly on stout paper with a lead-pencil should be wrapped inside the covering of the fish. It is necessary always to fill the receptacle in which specimens are packed—a bottle or jar may be either filled with alcohol or the specimens may be wrapped in muslin. It is not a good plan to put tow, excelsior, or cotton-wood on top of fish, as it presses them close together and prevents a free circulation of alcohol between them. For long journeys it is desirable to secure better protection than the

muslin wrapper alone affords. This may be gained by placing beds of excelsior or thin wood shavings between the layers of fish and at the bottom and top of the case.

A plainly-written card placed at the top of the box, so as to be seen when the lid is removed, telling its contents as to by whom it was sent, will save much trouble when the collection is unpacked.

7. Notes of color, taken from fresh specimens, should be sent with them if the fish are to be described in the museum. The collector should also preserve in his own hooks a record of life-colors under the catalogue numbers corresponding with the tin tags fastened on his fish. He can then obtain the identification of his species by their numbers and publish his observations upon them at his own pleasure.

8. Local names of fish should always accompany the specimens when obtained.

9. It is desirable to know whether or not the species is abundant; whether different sizes of the same fish are found; whether they associate in schools or not; whether they are permanent residents or migratory; if migratory, by what routes they come and go; whether they form an important article of food; what they feed upon and what species prey upon them; the depth and character of the bottom on which they occur; the mode of capturing them; the uses made of them, and the various products which they go to form—in short, everything bearing upon the life history, or the economic applications of the species should be noted in detail.

10. Before washing the fish look them over for external parasites; examine the gills and the inside of the mouth carefully, as these are favorite situations; these parasites often furnish a clue to the migrations of the fish. Remove them if they can be taken off entire, if not, let them remain, and call attention to their presence in your shipping notes. Preserve the parasites in vials or bottles, and provide them with labels stating from what fish they came and in what situation they were found.

To preserve fish indefinitely in glass jars, observe the following directions: First, select a jar of the proper size to accommodate the specimen amply, without bending or distorting it in any way; put in the fish with the tail down in nearly all cases; the tail may often rest upon the bottom of the jar, or the fish may be suspended from the hook which is now found in the stopple of the modern museum jars; cover the fish completely with the alcoholic mixture referred to in the closing sentence of paragraph 4; discoloration of the alcohol is not a matter of great importance, as it may be renewed; fishes in alcohol will never make a good show unless the liquid is kept clear and clean. A label giving the name of the fish, place of its capture and name of its captor should be tied on the neck of the jar by means of a piece of narrow tape passed through holes punched in the ends of the paper. The jars must have accurately ground glass stopples. It is best to use no kind of sealing wax to coat the joint of the stopple; simply wipe the glass perfectly dry, close the jar properly, and there will be little danger of evaporation. Do not let the direct sunlight strike your jars, and keep them well removed from stoves, registers and the like.—Proceedings U. S. Nat. Museum.

NEW ENGLAND FISHERIES.

OF the numerous industries of New England that of fisheries is no doubt the oldest, and possesses much of historical interest. Others than those which particularly engaged in it. At numerous times much has been written of it, yet its history, particularly the statistical portion, is much broken, many of the old records having been destroyed with no copies in existence. As early as 1678 we find the abundance of fish in the waters of Massachusetts Bay had attracted attention in Europe. The Pilgrims going from Leyden to England in that year to solicit consent of King James to their going to America, the King inquired, "What profit might arise?" The brief reply was simply, "Fishing." To which King James responded, "So God have my soul, 'tis an honest trade; 'twas the Apostles' own calling." The request was granted. To the fisheries the credit is given of saving the infant colony from starvation, that the first free schools were supported with an income from the fisheries, that the government has always recognized the patriotism, bravery and important services rendered the navy in time of need by the fishermen, are all matters well known. With the growth of the country nearly all ports toward and into the large fleets engaged in fishing, with numerous vessels engaged in foreign trade, of which fish products formed a large proportion. For many generations the business was carried on in its primitive way with no marked change until quite recently.

Of late years many new industries have sprung up that in size far surpass that of the fisheries. A large number of ports have given up the business, others have but few vessels. The business is gradually being concentrated to a few ports, the export business with the exception of an occasional cargo confined to Boston.

Although fewer ports and smaller fleets are engaged at present, the business continues of importance, with probably as many fish caught at present as at any previous time.

The many new ways of preparing the catch for the market gives employment ashore to a large number of persons, the increased facilities for a catch making good any decrease in the number of vessels, with fully as many persons employed ashore and ashore as at any previous time with twice as much sail.

Before turning to the present it may be of interest to note a few of the changes and contrast the past with the present.

In the past, as at the present time, Boston was known as the chief port of distribution for all the varieties of salt water fish found in New England or Provincial waters. Here in olden time the fishermen came with their products, selling the same to the grocers or from the vessel and taken inland by teams that came from New London, New Hampshire, and other parts of the country loaded with grain, pork and other provisions. Dry fish was handled loose or tied up in bundles, while mackerel and other pickled fish were shipped in barrels, halves or quarters. For many years the catch was made in the most primitive manner, for cod and other ground fish the hook and hand line only being used; the mackerel catch was taken by the gaff, or by "drailing," the latter mode by having poles suspended from the side of the vessel, with hook and line attached, the vessel being under sail or no catch was made; and the hook and hand line, or "digging." With these few appliances a large amount of business was annually carried on, the catch, with the exception of the Grand Bank cod fleet, being equified chiefly to the New England coast.

Although Boston was the great point for a market and the distribution of the catch, there was not a single exclusive

FLORIDA FISH AND GAME.—Gainesville, Fla., Jan. 7.—Have been here at the Arlington, kept by J. B. Wislar, where I have gained more comfort than at any other point outside of Jacksonville. Have good bass (white mouth) fishing at Six Sink, two and a half miles out. Quail abundant a few miles in the country. Was out fishing yesterday and took with reel and live bait some beauties, none under three and a half pounds; some six and one thirteen pounds. This is not guess work, but verified by that which is often a delusion and a sham—the pocket scales.—J. S.

wholesale salt fish store in the city until 1870. In that year Mr. Ebenezer Nickerson opened the first store of the kind, it being located on Long Wharf. For fifteen years this was the only store engaged in the business. In 1870 two other firms were started. From this commencement the business grew, the grocers giving it up to those exclusively engaged. New firms started from time to time, as the business increased.

From the first settlement of Boston up to 1835, the fresh fish business was only carried on in a retail manner, by boats lying at the docks and teams standing about the market; ice was not used, and the canning of fish had, probably, not been thought of. During the summer season the trade was confined to a near-home demand. During the winter it was teared inward as far as Albany and Montreal. The catch came from Massachusetts Bay and was supplied by the small fishing vessels from this and neighboring ports. During cold weather, in a frozen state, it was brought to market by teams from Cape Ann and ports between. The oyster business was of small importance, and carried on from two small boats covered in iron used for storing below, and stored above. The oysters mostly came from Cape Cod, never from south of New York, and from July to September no oysters were sold in Boston. As the demand for fresh fish increased, better facilities were needed to handle the catch, and the first wholesale fresh fish store was opened on Long Wharf in 1835, Messrs. Holbrook, Smith & Co. being the pioneers. Their business was mostly during the winter and spring months; through the warm weather it was confined to pickled, dry, or smoked fish. In 1853 this firm moved to Commercial Wharf, being the first firm so engaged on that wharf, and at the present time, it is the headquarters of the trade, with thirty-five wholesale firms in the immediate vicinity.

Up to 1845 the catch of ground fish was solely by hook and hand-line. About that year the trawl was first introduced by fishermen that had used, or seen them use off the coast of Ireland. During 1850 the net fishery was introduced, with good result, by the U. S. Fish Commission. At the present time all three of the methods are used by the market-fishermen. In the mackerel trade the most severe competition at various methods, and the most exclusively used. Its use is said to date from 1855, although it did not come into general use for a number of years.

As we have previously alluded to the decrease in the number of vessels engaged in the catch as not necessarily causing a like decrease in the amount of the industry or of the products, it is of interest to note, with only one exception, the largest catch of mackerel on record, as inspected in Massachusetts, was in 1871. In that year with the hook and line 9,235 barrels were taken from 129 vessels, hauling from thirty Massachusetts ports, with eighty-seven vessels from other States, a total of 940 vessels manned by 9,993 fishermen. During the past year with the purse seine a catch of 391,677 barrels was made with a fleet of 298 sail from Massachusetts, New Hampshire and Maine, and with 4,253 fishermen engaged. We do not propose to discuss the question, as to the benefit or injury to the business by the new mode of capture, only to show that the success is as productive at the present time, with half the number of vessels engaged, as in past years.

The canning of fish of almost every alternate variety, has yearly grown of importance, and is now of large proportion. This branch of the business dates only from 1845, in which year the canning of lobsters and shell fish began in Maine—for some time the only State that packed fish in tin cans. It has been but a few years since the canning of fish began in Boston, yearly increasing in amount. Boneless fish, now well known, and neatly packed in packages of from five to thirty pounds each, is found in all the leading grocery stores in the city, and in the Pacific States. The large dry fish dates back many years, but but little attention given to it for a long time. Of late years the demand from the fertilizing factories for the refuse left from cutting lessening the cost of preparation, with the cleanly manner of packing on the market and the saving in freight, has made it justly popular with the trade. The demand yearly increases. Its preparation, with the canning of fish, gives employment to a large number of men and women.

It hardly seems possible that an article so universally used and so well known to the fish trade forty years ago. At the present time no market fisherman would think of starting on his trip (except in winter) without ice, any more than without bait or seine. During 1845 vessels first began carrying ice to sea with them, and dealers to use in packing fish for shipment; previous to that date its use was considered injurious to the fish. At the present time about 20,000,000 pounds are annually used by vessels and dealers. Through its use, fresh fish are now shipped at all seasons of the year, as far as land is concerned.

As far back as we had any record of the fishing business, we find the use of nets of some kind in taking the catch. In past years those used by the New England fishermen were mostly "home made." During the winter or stormy season the fisherman, with wife and family, found plenty of work in making nets. Of late years their use in the various branches of the fisheries has largely increased. They are now nearly all factory-made, of a great variety, including the fine flax-thread net of the shad fishery, the larger seine of the mackerel and menhaden, the large draw net of the northern fisheries, as well as numerous other varieties.

Two large factories in this city give employment to some five hundred persons, mostly girls, furnishing most of the seines and nets used on the western lakes and rivers, as well as the Atlantic coast fisheries, with some demand for export.

The first factory in Boston was started in 1842; from that date until 1865 the nets were all hand-made. In the latter year machinery was first introduced in their manufacture in this city, and a new era was exclusively used. The machinery introduced to the various home branches of the fishing industry. Another branch largely represented in Boston is that of the Provincial catch cut, to the Boston market for sale. Our tables of monthly receipts will show the amount of the past year, which is less than the average of late years, caused by the partial failure of their catch. The earliest record of the importation of mackerel that we had is of seven barrels in 1821. From that date up to 1831 only a few hundred barrels were annually imported. In the latter year, 4,352; increasing up to 1841, to 9,837. From that year until 1849 the records were destroyed by fire. In the latter year it had increased to 129,565 barrels; and yearly, from that date, from 50,000 to 100,000 barrels of mackerel, with a large amount of all the other varieties of fish caught in the Provinces, find a ready market in Boston.

The late Capt. T. J. Jones is credited with being one of the first pioneers in the importation of fish from the Provinces, being engaged as master of the Boston and Halifax mail packet from 1835 until 1844.

W. A. WOOD, in Report Boston Fish Bureau.

INFLUENCE OF THE MINK.—Mr. James Annin, Jr., the well-known trout culturist of California, N. Y., calls our attention to the following paragraph, on the depredations of minks in trout streams, taken from the Hartford, Conn., *Companion*: "Since the decline in the price of mink furs these animals have been but little sought for or trapped, and the result is that they have increased to such an extent as to seriously impair the trout fishing, and in some of the smaller ponds and streams that will not support fish, they have been entirely wiped out and exterminated by the mink." Mr. George Wright, of this county, has this season caught nine of these pests in the streams in this vicinity, the largest of which weighed three and a quarter pounds and measured twenty-seven inches from tip to tip." Commenting on this, Mr. Annin writes to us: "I fully agree with the article, and think, from my own observation, that the trout brooks suffer as much from the depredations of the mink during the close season as they do from the legitimate fishing of the angler during the open season. My opinion is that if the State offered a bounty for the offenders the trout would be more numerous.—J. ANNIN, JR."

Fishculture.

THE GREAT GERMAN FISH HATCHERY.

WE translate the following partial account of the Government fish-cultural establishment at Hueningen (Kaiserliche Fischzucht-Anstalt) from the *Deutsche Woche*. In the province of Alsace (Germany) we again find of the German Empire, is situated a fish-cultural establishment at Hueningen. This institution is scarcely six miles from Basle, Switzerland, and about the same from the frontier of Baden, close by the great Rhine-Rhone canal, and was for twenty years prior to the year 1870 a private establishment. By degrees it has become the greatest fish-cultural establishment in the world.

It was from a German brain that the first idea of fishculture sprang, it being the discovery of Lieutenant Jacoby, who pursued his studies with a view to the improvement of the artificial fish-bearing, was its publication. Therefore, a poor fisherman of the Vorges, named Lemu, some twenty-five years later, has the credit of re-discovering it. The name "fishculture" (*fischzucht*) was devised by Professor Costa, and the usage of the press made it so lasting that the French Government could not change it, but used it of necessity. It is not our intention to give a complete description of fishculture in this article, yet we deem it necessary to remark concerning it that artificial fishculture is an art of the highest importance to the political economical. The name of fishculture is an unenviable nickname, as can readily be seen, if the object of producing cheap and valuable fishes is not lost sight of. The farmer does not speak of artificial horse or sheep culture; neither should the fish-culturist. The so-called artificial culture of fishes is merely complete fertilization and following of the processes of nature, and the more complete the following the better the success.

At a certain time of the year the fish begin their migration to seek a proper place to deposit their spawn, with some fishes, as the salmon, this migration is often considerable. Others merely come from the deeper waters to the shallows and deposit their eggs, either on the water plants or in the gravel. We will, however, confine ourselves to the habits of the different species of trout. Late in autumn the male and female ascend the streams to the rapids, and there the proper spawning place, where the female makes a nest in the gravel with her tail, which, in the case of large salmon, is from four to five feet long. In this nest she lays her eggs, which are immediately fertilized by the milk of the male. The female then covers the nest with gravel, and she lays them. The embryo develops, and in six or eight weeks a creature emerges from the egg, which would not be thought, by one unfamiliar with it, to be a fish. The young fish resembles a narrow thread, in which the eyes are the most prominent part, and on the under side of the central hinge a pear-shaped, or globular-shaped, disproportioned bag, the yolk-sac or umbilicus. This sac is gradually absorbed, and the embryo grows and assumes more the shape and appearance of a fish, until in about six or eight weeks it has disappeared, and the little creature is a perfect little fish, previous to this it feeds on food. During these weeks of egg and embryo life it is exposed to many dangers. Among the enemies to the eggs may be named trout, small fish of other species, which destroys the eggs and embryos in great numbers, and the fish, after hatching, is attacked by leeches, water mites, and rats. If they escape those enemies, they are then exposed to others as they enter into fishhood. In the culture of trout, the fish are caught when fully ripe and the eggs pressed from the female; from a single trout, from ten to twelve are applied. After this they are placed in the hatching troughs, when they are protected and hatched.

The buildings at Hueningen consist of a central building, 140 feet long by 85 feet wide, and several out-buildings, each 150 feet long by 35 feet wide, and a large water supply tank, which is with water from a spring, which is brought in a conduit of mason work. Four turbine wheels, propelled by the Rhine-Rhone canal, pump continual streams of crystal water, twenty feet high, into the spring tank, and their action is sufficient to supply the tanks and lead pipes into all the buildings. The eggs lie thinly extended upon glass rods. Part of these rods lie in cement canals and part in earthenware boxes, and part of them in large ironing troughs 40 feet long.

At Hueningen only the best of fresh water fishes, its winter-spawning ones, or those of the salmon family, to which belong the salmon, lake and brook trout, salmon trout, salbling, "felchen" (a species of *oreogonus*), the Danube salmon (*salmo hucho*), and the grayling. The eggs of the last-named are obtained in the spring and their eggs are difficult to transport in the warm weather. Many hybrids have been used as between salmon and trout and salbling and trout, and they made excellent quick-growing fish.

From ten to twelve million eggs of the above-named fishes represent a capital of many thousand thalers. The eggs are obtained from many portions of Switzerland and South Germany.

MOHICAN FISH-CULTURE.—Detroit, Jan. 12.—We have about 23,000,000 whitehead eggs in the jars, and a number of eggs were never seen. The eggs were kept in the jars until they were laid on the 25th of May to June 1. Last year we did not close the hatchery until the 6th of June, and no one ever saw such a fine lot of young whiteheads as they were. There were no sick, poorly colored ones, and they were all active and almost all sold.

At the brook trout hatchery at Paris, Mecca county, we have between 300,000 and 400,000 trout eggs, all doing finely. Come up and see us, for we have some more good stories to tell, although I don't think they are quite as good as Judge Potter's was, at Chillicothe, a year ago. You will doubtless remember that to your dying day.—SCOTT.

REPORTS OF FISH COMMISSIONS.—The winter meetings of the Legislatures of the different States bring their annual crop of Reports of Fish Commissioners. FOREST AND STREAM receives a copy, and often two copies, from each State, for notice and review. We want to thank the single copy, and the minister gets credit to those who are thoughtful enough to send a duplicate. In after years it is almost impossible to obtain copies dating a few years back, and their value increases with time. Those who are fortunate enough to possess complete sets of the reports of any one State, or of several States, should prize them highly. In reviewing it is often convenient to clip parts of a page entire, and this applies it for preservation. Therefore while they are plenty, as they always are at time of issue, we cast this hint for a duplicate upon the waters of the Fish Commissioners.

EGGS FOR FRANCE.—Prof. Baird shipped, on Saturday, the 14th, by steamer Rhein, of the Bremen line, 250,000 eggs of the whitefish and 20,000 brook trout eggs for the Societe d'Acclimatation. They came from the United States hatchery at Northville, Mich., which is in charge of Mr. Frank N. Clark, and were re-packed at New York by Mr. Mather. They will be landed at Southampton, England, and sent across the channel. The North German Lloyd has been very successful in carrying boxes of fish eggs, their captains taking a personal interest in them, having been dined at the Hotel de Ville, and the French Government is large to go in the ice room. The liberality of this line in forwarding eggs and fish for the U. S. Fish Commission and the German Fishery Association, free of charge, and thereby contributing to the grand work of international exchange of valuable fishes, is worthy of great commendation. It is one of the best and safest lines on the ocean.

December, National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

TRAINING VS. BREAKING.

IN TEN CHAPTERS—CHAP. VIII.

HOW rare it is to see a strictly first-class dog. Good ones I may find in abundance; but the paragon, who has no failings and all the virtues, is—albeit well heard of—seldom seen. Glimmering here and there the many years that we have ardently followed the delightful sports of the field we can call to mind but few among the many dogs that we have seen and that come up to our standard of excellence, and those, almost without exception, received their early training among the ruffed grouse. There is something pertaining to the pursuit of these most cunning birds that is potent to sharpen the wits and develop the intelligence of your dog that you will fail to find accompanying the pursuit of any other game. It is for this reason that we endeavor to give our dog his first lessons in the field upon this bird. We are well aware that more than one writer of renown strongly condemns this best of birds as totally unfit to train a dog upon, taking the ground that they are so very difficult to bring to bag that the dog becomes discouraged. We know that the reverse of this is true, for we have given scores of youngsters their first tuition among these noble birds, and we have yet to see the one who showed the first indication of anything of the kind; on the contrary, we have ever found that—after one or two successful encounters with these most wary birds—the matter now long and unaccountable as our puppi's ardor was not checked in the least, but seemed to increase with each successive defeat.

As we have before remarked, it is better that nothing be said to your dog upon his first introduction to game, at least so long as he does nothing wrong, as this is an entirely new experience to him, and should you bother him with orders he may become confused and fail to perform nearly as well as he would if left entirely alone. Great care must be taken that he is not kept too long at work, and we have ever found that the best results were obtained when we have taken our dog home after an hour or two, or even sooner, when his performance had been satisfactory. We have often taken him home at the end of a few minutes even, when everything had gone just right and we had by abundant praise and caresses impressed indelibly upon his mind that his behavior was pleasing to us, thus leaving him to ponder over the matter in a happy state of mind that would cause him to look forward with eager anticipation to future enjoyment of other blissful hours when the bird is instead of the dog on our side, possibly being obliged to take him off at a time when something of a disagreeable nature had occurred that would exert a depressing influence upon his susceptible mind and, perhaps, cause him to dread or, at least, to feel indifference about repeating the performance. After one or two outings, and he has become somewhat accustomed to his new experience, you can safely commence to teach him as to what he may and may not do; you can in a measure control his range and dictate as to the direction in which you wish him to take, using great care that you do not restrain him too much at first, but start very slowly and by easy steps gradually teach him to look to you for guidance; and if you pursue the proper course he will soon obey your lightest word as readily as when taking his regular lessons at home. This result can be obtained in this manner much sooner and much better than by trying to control him and to make him do everything just right from the start, only bear in mind that when you do order him to do anything insist upon prompt obedience every time.

Among the first things that you should endeavor to instill into his mind is the knowledge that he must "work to the gun." This can be very easily accomplished if you will pursue the proper course. In the first place, under no circumstances should he be allowed to flush the birds. Not so much perhaps that it will make him nosedead, for many dogs can be taught to flush their birds to order without detracting from their steadiness, but such a course we have ever found decidedly unsteady the wary grouse and renders them less liable to be close than when they are worked up by the hunter. This is also the case, although in less degree, with the quail. With the woodcock we do not believe that it makes much difference, yet we would advise under all circumstances, no matter how great the temptation, your dog be not allowed to flush his bird, for many really good dogs are ruined by this practice, besides, as a rule, the more killing, as well as sportsmanlike way, is to walk up your bird. This practice you will find soon make you a better shot than you can ever hope to be if you constantly keep in the openings and trails of the channel, there to be obtained. Your dog will also improve much faster if you pursue this course, for he will instinctively realize that you are with him body and soul, and consequently he will put forth his best efforts and soon learn the grand secret of "working to the gun." This very valuable trait is rarely found in a dog unless the gun has first set the example by working to him. Ponder this well and try to realize what the thoughts of your dog must be when you leave him on his point and, sneaking off to one side, or perhaps to his rear out of sight, hid him up the bird which he knows full

will by experience will fly into the cover instead of out. We always require our dog while young to staunchly hold his point until ordered on. He will easily learn to do this if you steady him a few times and do not allow him to stir until you are beside him. This, if rightly managed, will prove a very killing trait, but unless the proper course is pursued your dog is apt to acquire the very bad habit of making false points. Great good judgment is required to so conduct his training in this that if may prove a source of pleasure instead of disappointment. Your knowledge of his disposition will aid you in adapting the right course to accomplish the desired result.

As soon as you observe that he has sent command him to to *to*, and keep him on point until you are nearly beside him, when, without stopping, you must duck to him to go on, accompanying the duck with a wave of the hand, and walk just behind him until he again stops. Should he be unwilling to move on at your first order, you must not stop, neither should you pass by him, but keep stepping, even if you have to put your feet in the same place, and again duck, or perhaps you may have to speak to him. Should he still remain staunch, the chances are that the scent is strong, and that the game may be close by, in which case you should advance and flush the bird, and if the conduct of your dog has been irrefragable, kill if you can, but on no account must you shoot unless his behavior has been all that you could wish; for one of the most important lessons to impress upon his mind is that, just so surely as he does not perform his part in a proper manner, just so surely no birds will be in a second day to be shot. If his performance has been worthy, to pot and praise him, while, on the other hand, if no bird has been found, you should return behind him and order him on, and let him know that this is not the proper way, but that he must move on until he is near the bird. This is rather a delicate matter, and often requires nice discrimination to determine just what to do, for there is not a second to be lost in deliberation, and instant action should be taken; for if you hesitate your dog may become addicted to making false points or potting, and, if he will, he will be a better to scoop an occasional flush. Should he flush a bird by moving up, or, or if you have ordered him on, you must instantly check him, and bring him back to the place where he should have remained staunch, and keep him at *to ho* a short time, while you check him for the offence. After a few lessons of this kind—perhaps, even, on the second occasion—you should order him on a little before you reach his side, and at each succeeding time you should do this still further away, until he will, at the option of the hand, move on when you are at quite a distance from him. If he is possessed of a reasonable amount of intelligence, and you pursue the proper course, he will soon understand just what you wish, and always stop at the first indication of scent and look at you for the signal to go on, instead of following up the trail, perhaps out of your sight, and oftentimes causing you no end of trouble to find him. He will also soon learn to move on of his own accord when the scent is not just to suit, provided he knows that you can see him and are coming his way. This, which is accomplished by having him shoot in thick cover, or by beating the snipe meadows, while it may work no possible harm either on the prairie or stubble. Of course, we cannot give instructions that will cover every case, as there are so many different circumstances connected with the events of a single day, and the dispositions of the different animals are also so widely dissimilar that it is impossible for us to give anything more than a general outline of the course to be pursued. We take it for granted that the reader is of an intelligent nature, and that his own good sense, coupled with the intuitive knowledge that he must possess of the disposition and intelligence of his pupil will safely tide him over any minor difficulties that may occur.

QUARTERING, STYLE AND SPEED.

HERE has been much written on quartering, which is one of the most essential points in a dog's education. The question is carried to extremes, and the result is a system of quartering, wide ranging, style and speed, are fine to the eyes of sportsmen, but it is not so fine when your dog, one of those grand quarters, passes by the birds, not being near enough to get scent. You come along and find a bird, and you are obliged to get into the thick cover, the angles are too great, for quartering against wind. They would do better for down wind work. Still, for down wind work, it is far better to send your dog directly from you and let him quarter the ground on his return. It is not long ago when two grandly broken pointers were doing as fine quartering as one would wish to see (providing they liked wide ranging). When they had completed their work, their handler had bagged sixteen birds. After witnessing the quartering at this point, I was struck with the intelligent notion of sending in all of the birds in such wide ranging; and for the novelty of it I cast my voice of dogs off and quartered the field more closely. The result was twenty-five birds, and all the birds my dogs found were full boxes, excepting two birds. In localities where birds are hunted a great deal, they become wild, and rise at the least noise. When driven to cover they lie very closely. In this case it requires close and careful work for a dog to obtain points. This great speed through long grass, weeds and brush, and such the birds and they will rise before a dog is close enough to obtain a point.

I now have two dogs of good, fair speed. They are broken to quarter closely, and when they come to cover they are as stealthy as cats. I have yet, for the first time, to see a man drop their nose to the ground for a trap on game. I have often seen them cover one hundred yards, or more, before establishing their point, on running birds in open cover.

This wide ranging and great speed is not needed even in our own shooting (although it is needed in the morning and evening, and the best midday shooting will be found in the grass. The principal part of the grain being cut with reapers leaves the cover short, and at midday the birds lie very close. Where is the sportsman that goes out for pleasure, that wishes to follow his dog at a racehorse speed? If this is pleasure, or sport, tell me what is used work? Where is a sportsman that cares to keep a trapper so as to have his dog under control for a few days sport each year? If speed, stanchness, bucking, retrieving, are all that are needed for field work, there is more to be desired, less to style and speed, and see if it does not prove more satisfactory to the average sportsman. A racehorse does not need style to win his race, why should a dog? Dropping to shot and wing is not needed, and is not used in a large part of our sport. In shot or frozen ground, I have seen them with their chests braced and bleeding, from dropping to shot and wing. As for retrieving, a dog will mark the dead bird far better if standing than by dropping. Even nervous dogs will remain more quiet, if they are allowed to stand, than if they are ordered to retrieve.

Just carefully peruse the work of the field trials of 1891. See if there were not birds flushed by the judges and spectators, that should have been found and pointed by the dogs, had the ground been thoroughly quartered. Look at the comments on state "A" hunters, with great speed. They even go so far as to state "A"

had most pace and style, and could only lose the race by bad work on game," and this being run true to decide which should have first money, each dog showing equal obedience and work on game; the losing dog being credited with good speed and work in his previous heats. In this final heat they were equal in obedience. The losing dog, credited with points and one back, the winning dog one point and one back. Face your own race; one field trial or two are supposed to be run as every-day work with dogs in the field, but they are getting far from it. Do sportsmen want points on game, or style and speed?

We do not have considered this style and speed question, and shall sell our setters, regardless of their field qualities, as style and speed scores more than grand field work; and we will purchase some thoroughbred greyhounds, that have style and speed, and have a catch game, and their lack in nose will make a cross with the bloodhound, or foxhound (as we can hardly give up the idea of a good nose), then we will have the whole business by the heels, style and speed, and will be called stay-aways no more. Old Fogey.

PITTSBURGH DOG SHOW.

THE show which is to be held here March 7-10, promises to be a great success, judging from the great interest that is already being taken in it. The sportsmen here are determined to do their best to excel last year's show, and you know that was a good one. The first list will be ready by the first of the next week. It embraces nearly all breeds of dogs, and gives champion classes to setters, pointers, fox terriers, collies, slye terriers and pugs.

A separate class has been made for the first time in this country for pure Laverack setters—dogs and bitches. The special prize will be a good one, the following have already been pronounced:

A double barreled breech-loading shot gun, given by Parker Brothers, through their agents, Messrs. J. Palmer O'Neil & Co., Pittsburgh, value \$125, for the best English setter dog or bitch. A case of traps for catching English setter dogs with the best field trial record. Donor does not compete.

A friend of field trials gives \$20 each for the setter or pointer (dog or bitch) that has the best field trial record, the record only to be considered in the case of English setter dogs.

A member of the society donates a handsome whistle, value \$10, for the best matched pair of English setter dogs, color and quality to be considered.

Prizes will also be given for the best kennel of five English setters, five Irish setters, five Gordon setters, five pointers.

W. J. R. Henricks, of Pittsburg, donates a very fine automatic musical cabinet, with music, value \$50, for the best three English setters (dogs or bitches), to be bred and owned by the exhibition. Entries close Feb. 25.

Chas. J. M. Taylor, Lexington, Ky., will judge setters and pointers. Chas. LINCOLN, Supt. Address, Lock Box 303, Pittsburgh, Pa.

EASTERN FIELD TRIALS CLUB.

AT the annual meeting of the Eastern Field Trials Club on Jan. 10, the following officers were elected for the ensuing year: President, J. O. Donner; Vice-Presidents, Dr. H. F. Aten and Mr. James H. Goodsell; Treasurer, Mr. Washington A. Costar; Secretary, Mr. Fred N. Hall. Board of Governors—W. A. Costar, Dr. Green, J. von Leupoldt, Dr. H. F. Aten, H. Walker, W. B. Williams, A. Bachmann, William M. Williams, George E. Brown, B. W. Danforth and H. Hamilton. Mr. S. T. Hammond was elected an honorary member.

THE BYRON HOUNDS.

GASTON, N. C., JAN., 1892.

Editor Forest and Stream.

I note your inquiry to the address of gentlemen owning Byron strains of foxhounds and furnish the information with pleasure. W. E. Broadnax, Esq., White Plains P. O., Brunswick county, Va., has a full pack of very superior Brysons. This present season the scarcity of red foxes in this vicinity has not afforded sufficient opportunity to test fully their merit for that species. I put the past season he caught every red fox he started and in fine style, rarely making a break from commencement to close of the chase. His present pack has been recruited by the addition of several in A. Stevens' pack, and they are, in my opinion, greatly to his physical powers and style. The older dogs' places have been supplied by these young Brysons, several of them by my Logan and out of my Fannie, and all of them the descendants of my Watchman or his brother Arctio. I have heard that all the grey foxes in Broadnax, and never saw run recruits display more promise.

My own pack is Bryson, and before the distemper made its appearance in it, was as full of promise as a red fox pack as any I ever owned. But that terrible disease has well nigh swept off all the young ones, among them Duke and Blamless. Every dog in my pack except these, are now suffering. Envy, with a litter of Logan and Blauder puppies will soon follow Drayer and the others. Fannie is well and has thus far escaped. I send her in the morning (Feb. 1) to be covered by one of Broadnax's Bryson young dogs. Little doubt exists that shows my appreciation of Broadnax's recruits and the Byron strain.

The Hon. John E. Keena, Charlottesville, Va., has three copies of my best and purest strain of Brysons. They are, however, too young to breed from. Dr. G. C. Archer, W. H. Jackson, Belle Meade, Tennessee, I have finished several, but learn they died, at least the last did. I was not advised of the fate of Leader, the full brother of the Peerless Vainly, as "Pious Deities" despatched her, or of Telegrapher, both Brysons and dogs of real value. I presume they were put in the stud and largely patronized.

It may be inquired what treatment the distemper dogs had. None—none. I never use remedies in this disease, having for many years discovered that in a large part, the only treatment is under nature's operations. T. G. T. [We are under great obligations to our valued correspondent, T. G. T., for the above, as several correspondents are anxious for the information.]

NOTES FROM NEW BRIGHTON.

New Brighton, Pa., Jan. 5, 1892.—I had a few days' mixed grouse shooting (young birds) over a Thimble run, out of a Rob Roy—Ditch. It seems strange to me that these speedy ones accustom themselves to our heavy cover shooting. The Pittsburgh dog show promises to be a grand success. No town in America can boast of an equally extensive and good dogs as the Smoky Village. I am negotiating for a pure Laverack from across the big fish pond, and shall probably have him here by March 1. I think I can show five good ones in Prince Lera, Pat, Lun and May Laverack. I hope the Eastern and National trials will be held in this town. I had intended running in several states East, but had to go South for a

little preparatory work. Martin & Tallman deserved a great deal of credit for bringing their dogs South and meeting the world's best on their native heath. McIntosh is 'putting his best legs' on it. I hope Mr. Goodsell will exhibit his kennel at our show, as well as other New York and Eastern gentlemen.—LITTLE D.

A STRANGE POINT.—Gainesville, Fla.—A gentleman was telling me a story of what he saw a few days ago. It was a strange occurrence. He was riding out with a friend and took his dog and gun with him. Coming to a field, he sent his dog over, and in a short time he came to a point. Sent his friend over with gun to take a shot, who upon going up could find nothing. The gentleman then went to the point, and found his dog lying on the ground, but the dog refused to do it, and barked. The gentleman, fearing that it was a rattlesnake, backed off. The owner of the dog then took the gun and went up to the dog, and after looking some time he saw a large hawk which had thrown himself back, and with eyes flashing, and wings and claws extended, was awaiting the attack of the dog. The gentleman reached out and took the hawk by the wing, and to show his friend that there was nothing the matter with him, threw him up in the air, and, as he sailed off, brought him down at the second shot. The hawk was a very fine specimen of its kind, and was so close that the hawk was afraid to fly for fear the dog would spring upon him. What say you?—I. SURROS.

DOG HOUSES.—In your paper of December 29, you speak of "the dea-breeding, never-cleaned dog houses." Why should it be so? Some twenty years ago I first made my dog houses in this way. I saw the lowest quality of dog houses, and they were over its size and proportion and ventilating arrangements as required. The top is lifted off in a moment, and with all ease. The bedding thrown out, the box emptied and cleaned, the whole scalded out with boiling water, and exposed to the sun and air to freshen and dry. Tarred paper, laid as an overlay on the floor, or two thicknesses on the floor, under the bedding, makes protection against dampness and against vermin as well. The lower or box part might be an iron casting. Simple as this is, and satisfactory as it has worked, I can not say I have never seen a dog house so constructed. When first it was adopted, it was ridiculed, but I had rather offer it as my contribution towards giving to every name cleanly comfortable shelter.—A. B. A.

NAMES.—Vernillion, Erie co., Jan. 10.—Editor Forest and Stream: Noting Mr. Cameron's communication in Dec. 29th issue, I "plead guilty" to the charge, but must do so on the ground of ignorance. I have never seen an overcoat of any color, or name, or net being "posted" on the custom among dog-fanciers. I may have overheard upon their rolls of property, not being aware that there was "patent" on names or anything of the kind. I named my dogs just as I happened to, but did not intend to name them after any other name. I have an oversight in ignorance of what the others names were. It is difficult to keep track of all the names. This being the rule, it will be well for the Editor to keep a list and post those who enter if they have a name belonging to another. Well, I can suggest "Sport" to "Spoodle" and "has" has changed; I did not intend for "Dally," and "Dally" is her name. "Lulu" may be called "Lucy." I did not suppose it different with dogs than with Hereford cattle, as we frequently find several animal of same name in herd book. Yours truly, W. H. DON.

WHO OWNS HER?—Editor Forest and Stream: I have a long and white setter bitch, given to me by a person named Thompson, whose name she is found both in Entral, and he believes she was lost from one of the Anchor Line boats last August by some gentlemen going shooting. She had on, when found, a very nice nickel-plated collar. She is a very nice animal, very affectionate and dry. I have seen her several times, and she is in good health, and also has a piece of her tail. Mr. Thompson says he advertised her in the Buffalo papers. If any sportsman that you know of has lost her, he can get her by writing to my address, John H. Mason, Niagara Falls, Canada.

PITTSBURGH.—At the annual meeting of the stockholders of the Western Pennsylvania Young Men's Association, the following officers were elected for 1892: President, Edward Greig; Vice-President, J. Palmer O'Neil; Secretary, C. E. Elben; Treasurer, C. A. Stevens. Directors—J. R. Stuyton, Thomas Booth, John R. Henricks, Joseph J. Sneddenburg, W. C. Myer.

UP FOR DOG STEALING.—Lynn, Mass., Jan. 16.—James Archer and W. P. Perkins, for the larceny of a dog of the value of \$25, the property of Cassius M. Allen, last week, had their cases set for trial upon payment of one-half of the costs, amounting to \$6 92 each. Archer appealed, and was held in \$100 to prosecute his appeal.

QUEEN BESS.—Mr. Thompson's (Foxboro Mass.) bitch Queen Bess, was recently run over by a heavy team and both fore-legs badly fractured. They were set, and she is doing well, and although hopes are entertained of her complete recovery.

COOKERS.—Mr. O. E. Scott, of Schenectady, N. Y., is intending to go spring to enlarge his kennels, and to breed cockers extensively.

WILLARD, BROS., of Jonesborough, Ill., send us pictures of their Gordon setters, also a capital likeness of Chantilly Grouse, for which they will please accept our thanks.

KENNEL NOTES.

NAMES CLAIMED.

Belle II.—By Mr. F. H. Cannon, New Haven, Conn. for white, black and tan beagle bitch, whelped Oct 29 by King (White—Lily) out of Belle (White—Lily).

Ringold.—By Mr. F. H. Cannon, New Haven, Conn. for white, black and tan beagle dog, whelped Oct 15, 1891, by Fitts (Rattler—True) out of Lily (Indo—O-Bess).

Queen Bee and Bess.—By Mr. Austin L. Sewell, New York, for black and tan setter bitches, whelped May, 1891, by Kitrus out of Carthage, and by Mr. J. J. Donovan, Boston, Mass. for chestnut and white blood English setter bitch by Fainsman S. Smith's Dash out of Campbell's imported Flora.

Lady Gay.—By Mr. Gordon, Brookfield, Mass., for red Irish setter bitch whelped by Elcho II. out of Brock's Fin.

Shy and Mopsy.—By Mr. S. E. Gordon, Brookfield, Mass., for Saxe border bitch (Saxe and dachshund).

Queen Bee.—By Mr. Wm. G. Kraneis, Lancaster, Pa., for orange and white setter bitch whelped May, 1891 (Cath—Penny).

Dilly.—By Mr. Adlin Jameson, New York, for black and tan setter bitch whelped May, 1891, by Dilly's Ranger—White Lily).

Brian Down.—By Mr. John Good, West Lebanon, N. H., for red Irish setter puppy by champion Elcho out of Noreen.

BRED.

Diannond—Ripple.—The Conestoga Kennels (Lancaster, Pa.) orange and white and mottled setter bitch Diannond (warwick—Belle) to their white and mottled Ripple (Irish of the border—Sax)—89, Jan. 5, 1892.

Belle Robin Hunt.—The Conestoga Kennels (Lancaster, Pa.) English setter bitch Belle Robin Hunt (white—Lily) to their white and mottled Ripple (Irish of the border—Sax)—89, Jan. 5, 1892.

Barry.—Mr. Geo. Lyman's (Yonkers, N. Y.) red Irish setter bitch John J. Barry (Tilly) to Mr. W. H. Pierce's (Beekmantown, N. Y.) Larry (Irish—Rose), Jan. 5, 1892.

Queen Bee.—By Mr. O'More.—The Bory O'More Kennels (Abany, N. Y.) red Irish setter bitch Nora O'More (Kennedy—Tilly) to their Roy O'More (Hunt)—89, Jan. 5, 1892.

Queen Bee.—By Mr. O'More.—The Bory O'More Kennels (Abany, N. Y.) red Irish setter bitch Nora O'More (Kennedy—Tilly) to their Roy O'More (Hunt)—89, Jan. 5, 1892.

Roy—Kingwood.—Mr. N. Emore's (Oranby, N. Y.) black and tan setter bitch Roy (Kingwood) to Mr. Wm. G. Kraneis' (Lancaster, Pa.) Dec. 1, 1891.

Queen—Kingwood.—Mr. N. Emore's (Oranby, N. Y.) black and tan setter bitch Queen (Kingwood) to Mr. Wm. G. Kraneis' (Lancaster, Pa.) Dec. 1, 1891.

Mail—Kingwood.—Mr. John A. Patterson's (Lowell, Mass.) beagle bitch Mail to Mr. N. Emore's (Oranby, N. Y.) Dec. 1, 1891.

Grace—Noyah.—Mr. J. A. King's (New York) liver and white ticked pointer bitch Grace (Noyah) to Mr. Wm. G. Kraneis' (Lancaster, Pa.) Dec. 1, 1891.

Stentley—Prince of Orange.—Mr. John Davidson's (Monroe, Mich.)

CANOE LALOO.—Scale, 1/4 in. = 1 ft.

FLAG OFFICERS.

Editor Forest and Stream:

May I inquire if you wish the simple ownership of a vessel with two masts, costing say \$1,000, seems to constitute a claim for the position of a first officer in one of our first class yacht clubs, while the owner of one-masted craft, costing from \$150 to \$200, are not mentioned in connection with such officers. It has always surprised me to contemplate New York yachting to note that the addition of a mast should seem to draw the line between a ship admitted to races apparently on suffrage given only the virtue of the club silver locker, and generally held down upon its club business, and a vessel, though perhaps smaller, yet generally slower, which merely by the possession of one additional spar is admitted at once into the very innermost circle of the port and the opinion of her owner quoted by the press as that of a prominent yacht man, although he may be only in the green and salad days of his first season.

We are just as curious as our correspondent to know what a person's bank account or his social prominence really has to do with his fitness for the Commodore's berth. We should like much greater pride in our flag officers were they selected for a well established reputation as experts in a yachting affairs, whether they owned a dug-out or a 60-ton schooner. As yet our candidates display by some very unwholesome at the sport constitutes a stronger recommendation than a life's service at the helm. Some day a higher standard will prevail.

TONNAGE.

Editor Forest and Stream:

I HAVE been several times non-plussed at statements in your column which give you have given the displacement of a small boat, and thus rated it as a half-tonner, like the Dodge, or as a tonner, like the Elvira. Now, it has seemed to me that the range of vision that a small boat is not longer, as you say, are the dimensions of the Dodge, it is impossible for this craft to be rated at a half-tonner.

Our correspondent is hardly to blame for his failure to understand English tonnage. The dodge is called "half-a-tonner" principally because she is not half of the kind. The foreign rule considers only beam and length, hence a dory but narrow boat, may often gauge by the rule much less than a similar boat which happens to be broader though shallower. However, displacement tonnage is not the same thing as measurement tonnage. The former signifies so many tons weight, the latter so many cubic feet of space, or hundred cubic feet being allowed to the ton. The two kinds of tons bear no fixed relation to each other, hence yachts may vary in displacement tonnage—that is, in weight—yet have the same measurement tonnage—that is, the same cubic contents of bulk—or they may have equal displacement and measure differently. Sometimes the displacement tonnage will exceed the tons of volume, and vice versa. The British method of obtaining yacht tonnage being faulty, because it omits measuring deck depth, and no yacht tonnage rule having yet been promulgated in America, the size of yachts expressed in tons is still only a matter of approximation and guess work. To obtain the true tonnage, as proposed by FOREST AND STREAM and partly followed by the New York Y. C., the yachts should be gauged to the outside of the plank and then divided by 100. This will differ from the mercantile ship tonnage, as the latter includes only in its stowage room. As yachts compete on the water, the modification of ship tonnage is necessary as well as to obviate cheating the rule by trick celling, floors, etc. The general adoption of a correct yacht tonnage rule throughout the world is much to be desired, but with the error the misapprehension concerning the subjects of allowing time and the balance of vested interests the millennium will not be reached for some time. The error of gauging the bulk is a simple operation, a number of cross-sections are taken, their areas found by one of Sterling's rules involving only common arithmetic. These areas are again put through the same formula, and the volume sought. We may here long give an article. Thus, I propose some short-cut way of arriving at the same end.

BELLEVILLE LETTER.

Editor Forest and Stream:

DESPITE the extraordinary mildness of the season, all the yachts here and breakouts have long been in winter quarters. It is hardly necessary to say that the winter quarters are not the best, but what few indications there are give evidence of at least the usual degree of liveliness.

Mr. J. M. Fox (Captain R. G. Y. C.), one of the most enthusiastic of our yachtsmen, has a great improvement in his sloop Gracie (11 tons) last season by drawing in her stern and lengthening her keel. Not yet finished, she has run her lengthened keel by 3 inches and 19 inches to her length an inch, by cutting out her overhang. The craft will now rate as 12 tons, and will take a lot of beating from that of her own size.

Mr. John Addison is lengthening his little Minnie A., and will increase her tonnage from 1 1/2 to 2 tons. She is a smart little clipper, and will put the best of her class to their places, especially in a blow. This little craft carries but 40 lbs. of ballast, and has a small but comfortable cabin, in which four men can bunk.

Mr. Wm. Clark has disposed of his 5 ton sloop Pinareo, and will build a 25-foot schooner, after Captain's plan. His next project will be to attack to this dew-stripper as the first of her kind in these waters.

Cuthbert has as yet no orders for yachts, but has commenced preparations for building a 120-foot steamer for parties in Chatham, New Brunswick.

You are sound on the measurement question. Keep on until those who don't wish to see are convinced. PORT RACK.

YACHTING NEWS.

MEASURING OVER ALL.—Lieut.-Col. Dugmore writes to the London Field that Americans would probably not object to racing against British cutters on an AVOUL measurement. Well, most likely they would not. In fact, they would not ask for anything "softer." They would just like to meet a ton foot overhang on a cutter with the three foot hull-stern of the sloop, thereby gaining the difference of seven feet on the load-line and a proportional increase in beam and depth for nothing. Lieut.-Col. Dugmore's proposition amounts to sailing a twenty-ton cutter against a twenty-five-ton sloop on even terms. Sloops won't object, but would the owners of cutters like the idea? Our British cousins have suffered much from senseless tonnage laws, but if they try to adopt the length rule, even in their small boats, they will be jumping out of the frying pan into the fire. What does Lieut.-Col. Dugmore think of matching a boat 3 ft. load-line, 3 1/2 ft. over all, 9 ft. beam, 5 1/2 ft. deep and 6 ft. draft on even terms with another of same length over all, but 23 1/2 ft. load-line, 15 ft. beam, 6 1/2 ft. deep and 9 ft. draft? That is the anomaly he might expect to witness if his ideas were acted upon. It is an anomaly we are sorely afflicted with in America, with the result that the boat of moderate proportions, good sloop model and snug rig is rapidly being driven out of existence, and the bulky boat prevails because she wins upon the greater water-carrying power, greater bulk, and the consequent greater displacement and sail. The above-mentioned boats will compare in size as 375 and 2,881. By over all measurement a boat is permitted to sail on even terms with one just half her size! We commend this to the consideration of Lieut.-Col. Dugmore and others, on both sides of the Atlantic, who may think as he does. How long would the small, snug, well-shaped boat survive under such injustice? Load-line length is empirical and had enough in its effects on type, but mean length and over all length ought to be beyond the pale of even momentary consideration, some people imagine that our American sloops are the outgrowth of climate and shoal water. This we have always deemed rank nonsense. They are the outgrowth of starting local measurement rules, evidenced by the fact that in type now going on wherever those rules have been modified or consigned to the oblivion they deserve.

SEAWANAKA YACHT CLUB.—At the annual meeting the board of trustees reported for the year closed an income of \$4,518.83, which, with balance from previous year, amounted to a total of \$5,117.72. The disbursements were \$1,033.50, leaving balance on hand of \$2,881.42. The club's roster 26 members and 144 ft. of sail. Perking, the second in rank numerically in New York waters. The fleet consists of 16 schooners, 40 sloops and cutters, 20 open boats, 6 steamers and 2 canoes. The Committee on Measurement reported no progress as yet. Messrs. C. E. Hallow, R. C. Cornell, Clark Dewing and Jas. H. Jones were elected at the meeting. The ballot for officers for the coming year resulted in the following: Commodore, C. Smith Lee; cutter, Orville, 30 tons; Vice-Commodore, Edward Walsh Humphrey, schooner, Albatross, 25 tons; Rear Commodore, John C. Burton, sloop, Wawa, 12 tons; Treasurer, W. B. Simonds, sloop, Cutler, 10 tons; Yollande, 15 tons; Treasurer, W. B. Simonds, sloop, Cutler, 10 tons; Regatta Committee: Louis F. Bayard, Francis de Luzac, Alex. H. H. Sargent, Wm. L. Sargent, Nelson H. Sargent, Jr. The regatta given at the next meeting a harvest in name to the Seawannaka Yacht Club Y. C. would be offered. In retiring, Commodore W. A. W. Stewart made some appropriate remarks and entered upon a defence of the Y. C.'s course in connection with the flag race, his views, perhaps, but not necessary, as no deserving attention has called the conduct of the club into question. The Commodore rightly concluded that the flag race was a failure, and that it was not a fair one. He is not uncompromisingly to the reverse. That the Seawannaka Y. C. is in a high water with the better elements of society is shown by the creditable success of the club in the following races: Commodore, C. Smith Lee, of the world's cruise is evident, as the club ranks second in metropolitan matters, with an enviable future before it.

IRON YACHTS IN SAN FRANCISCO.—From the following it will be seen that San Francisco has the plant and ability to turn out iron vessels of fair tonnage, should any aachtsmen feel inclined to try an experiment in that direction. The iron steamer Water nymph, built by the Electric Iron Works, to a net of 34 ft. 6 in. length, 10 ft. 6 in. beam, 10 ft. 6 in. draft, was launched on the 10th of December. She is the largest iron steamer built in this port, and her model is very handsome, her lines indicating speed and seaworthiness. Her principal dimensions are as follows: Length, 65 ft.; beam, 11 ft.; draft, 7 ft. She is fitted with two high-pressure engines, 85 and 100-horse-power, and a boiler of 100-horse-power. Her hull is of iron, and she is fitted with decks of corded plate 5/16 in. thick. Her house is iron, and the tank holds 100 gallons of water. The hull is of iron, and she is fitted with a single masted rig. The style in which she is built and equipped reflects great credit upon her builders.—S. F. Olympian.

WATERPROOFING CANVAS BOATS.—The following is the receipt given by Captain John Richards, R. N., to a set of canvas, or set of life boat and canoe combined, which he built of canvas. One gallon of the best boiled linseed oil, 1 1/2 lb. of white lead, 1/2 oz. of beeswax, well mixed and rubbed into the canvas, and on the surface. After two coats of this mixture, the fluff must be removed from the outer surface of the canvas with the sand paper and the surface rubbed smooth with a horse wood rubber water. The principal directions are as follows: The canvas must be rubbed with the oil and wax composition and another rubbing, finishing off with a coat of paint of the color desired and a coat of varnish. If this be done properly, and if the canvas is well rubbed with the oil and wax composition, the strength of the canvas will be considerably increased, and the Canvas can be always made to look well by rubbing her over with a light coating of linseed oil.

POINTING A MORAL.—See the Cutter. How beautiful she is, Can a Cutter sail fast? We should smile. Can a Cutter beat a sloop? Rather. Do the sloop men acknowledge the cor? The sloop men do not deny it, they tell the men what they say. They tell the woppers. They say their sloops were not the best, but don't say which are better. They know they—that is, they know they will woppers, but it's anything to heat a Cutter, even with telling woppers of the most bated kind.—Forest and Stream Printer.

ONE LESSON.—What is a machine? A deep, safe, cool, seagoing boat with low ballast and handy rig. The cutter is a machine.—Popular Errors.

ANOTHER LESSON.—What is a real yacht? A flat, jerky, shoddy, hot, dangerous, overpowered, slow, leewardly boat which dare not sail at night and cannot get to sea and has the rig of a lighter. The sloop is a real yacht.—Popular Errors.

OUR EXPERIENCE ALSO.—From *Honors* for January we take the following: Mr. Lapham had sent us a small, a square-headed cut (top) sail. The dimensions had been left to him, merely mentioning that the yacht was a cruiser. When the sail arrived we thought it at first rather formidable. However, Mr. Lapham was right—the sail was not the least too large, and so it is. A small gaff-top sail on a cruiser is, it seems to me, of no use. On a day that you cannot carry a good-sized sail you are better without a top-sail at all, and would probably get along faster as well as more comfortably with the topmast loused, and in light winds you want a sail that will do some work.

THIRD LESSON.—Ten feet of water in America is not as deep as ten feet of water in England, hence our boats must be of lighter draft. This is the reason why our best 10 ft. sloops will draw 9 ft. and the English cutters of 10 ft. will draw only 9 ft.—Popular Errors.

FOURTH LESSON.—Our climate is hot; we must have cool boats. We build them wide, with light roofs on deck, exposing large areas to the sun's rays, making the cabins infernal ovens of a hot summer day. To make them still cooler we seldom have skylights overhead in small yachts, but are content with one or two little bulleers forward. The English have a climate cold and rugged, hence they build their boats deep down in the water, obtaining a refreshingly cool cabin, which they ventilate thoroughly by large skylights. The American sloop is hot like a garret. The English cutter is cool like a cellar, hence the American sloop is much better adapted to our tropical latitudes, especially in April, May, September and October, when the thermometer is never known to fall below 60.—Popular Errors.

FIFTH LESSON.—Americans have not the money to spend on yachts like Englishmen, hence we prefer boats which take only ten ballast. This is the reason why every first class American yacht is ballasted with lead.—Popular Errors.

SIXTH LESSON.—Our summer winds are light when they are not strong, and we have ugly falls very frequently. Hence we use as few a large, unwieldy sails as possible. Because we have short crews we use low-booms and make it difficult to reef and a single jib impossible to reduce quickly. For the sake of safety in equals we also prefer to have our boats cupizable, and never have live preservers. We use low-booms and make it difficult to reef and a single jib impossible to reduce quickly. For the sake of safety in equals we also prefer to have our boats cupizable, and never have live preservers. We use low-booms and make it difficult to reef and a single jib impossible to reduce quickly. For the sake of safety in equals we also prefer to have our boats cupizable, and never have live preservers.

SEVENTH LESSON.—Americans like comfort. For this reason we build small boats without cabins, or lead toss sand bags aboard, so that the sun may scorch us and the rain drench us, and when the crew gets too hot we go home to town, and get our beds under the night air. For comfort we also make our yachts so buoyant and cocky that they jump you off your feet at every pitch and threaten to toss you over the side at every roll. The harder Englishmen cares nothing for comfort, hence he builds his boat so as to be easy and mild mannered in a sea and to steer with the little finger.—Popular Errors.

SAN FRANCISCO YACHTING.—George Farmer's 40 ft. schooner is now all planked up and celled. Her ceiling is put on in an opposite corner from the planking, running diagonally across the skin. This gives a strong job of the work. The little boat will probably be one of the best sea boats on the bay. She has dead-rise enough to admit of lead being put in her keel. Stone is getting along nicely with the new 6 ft. schooner which he is building. Stone is to be turned over to her owners by the first of March. Not a single die yacht has been ordered for next year, notwithstanding there has been a great deal of talk about big yachts. One of the prominent sportsmen of the city has made up his mind to build a 60 ft. cutter before long. Plans for a 60 ft. sharpie with yawl rig have been sent to San Francisco by Mr. de Witt.

CRUISE CLUBS.—The London Cruising Club seems to be a fair success and promises well for the future. The first annual dinner, Dec. 5, brought members together in London from all over the British Isles, and a brilliant affair. Commodore Rowell had charge of the dinner. It was suggested that a club yacht of 20 tons be purchased for the benefit of non-owners. Cruises made by the members are to be published in the club's responses.

LETTERS.—The 7-tonner for which G. L. Wilson, of Glasgow, is getting out the lines will be 80 ft. load line, 7 ft. beam and 5 ft. draft. She is for Mr. Auchincloss, of New York. The 20-tonner is being got out and celled by Commodore Rowell and will be 11 ft. 5 in. load, 11 ft. 8 in. beam and 5 ft. 8 in. draft. We are sure Mr. Auchincloss' little vessel will make a host of converts here.

EAST RIVER YACHT CLUB.—Has elected the following officers for 1882: Commodore, Matthew Charles; Vice-Commodore, James C. Addison; Secretary, John Hoyer; Treasurer, Edward Grissom; Ventrurer, John D. Isbell; Regatta Committee: John D. Smallfield, E. E. Hallow, John B. Gerard, George Balzer, Edward B. Chalmers and John Hughes.

THE NEW CLUB.—We have received about twenty names for the new club devoted to small yachts, so that success may be deemed certain. In our next issue we will have something to say of the scheme is deserving of support and why all interested in floating property have something to gain by the establishment proposed.

ROYAL CANADIAN YACHT CLUB.—The club's annual ball Jan. 15, was a brilliant affair. Commodore Rowell had charge of the arrangements, assisted by Mr. J. Weir Anderson, the club Secretary. The ball-room, at the Horticultural Gardens, was handsomely decorated and dancing kept up till the early hours of morn.

A GREAT RACE.—See the yachts! How beautiful they are! What is that speck on the horizon? It is a Cutter which the sloops are trying to catch. Will they succeed? Not much.—Forest and Stream Printer.

YACHTERS' YACHT CLUB.—Now numbers fifty-five members and twenty-three boats. The officers were published in last issue.

SUNBEAM.—This little Boston sloop is receiving a 1,700 lb. keel, and the Dolphin is to have 1,500 lbs.

SPRING BALANCES.

THE AMERICAN "GEM," weighing 8 lbs. by 4 ozs., 15 cents each.

ABBEY & IMBRIE, 48 Maiden Lane, New York.

CARVER—London, Jan. 17.—In the three days' shooting match at 1,000 birds, between Dr. Carver and Mr. Bingham, begun yesterday, the former to-day scored 237 birds, and the latter 244, making the total for the two days : Dr. Carver 373 birds, and Mr. Bingham 367.

The Maxwell ranch contains 1,700,000 acres of New Mexico land, and the Atchisou, Topeka and Santa Fe Railroad passes through it. The man whose name it bears got it by marriage and by purchasing various interests. He has put it into an English stock company, and a fence is being built around it, preparatory to the raising of blooded stock on a large scale.

There is a great deal of fox hunting in the western part of Massachusetts, particularly in Franklin county, among the mountains. This winter has been a good one for the chase, the mild temperature having caused the foxes to appear freely. Trapping is not generally practiced, but the chasing is done afoot, with hounds, and a run of ten or twelve miles is not uncommon for a brisk pedestrian. The men who engage in the sport make a pretense of doing it for profit, but as the skins sell for only 50 cents to \$1.50 each, and cost a day or two of hard work, it would seem to yield rather inadequate remuneration.

ADVERTISEMENTS.

Transient advertisements, 25c. a line for first insertion, and 20c. a line each time thereafter.

Eight words to the line; fractions of a line count as a full line.

Advertisements received later than Tuesday cannot be inserted in the issue of that week.

SIMPSON'S NEW FISHING TACKLE CASE.

A want long felt for by sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material and handily ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its perfection. Size:—box: Length 12, width 7 1/2, depth 4 1/2 inches; trays (4): Length 1 1/2, width 4, depth 1 1/2 inches; top tray: Length 1 1/2, width 7, depth 1 1/2 inches. Three partitions in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-rook, and each case packed in a neat box and sent on receipt of \$4.50. To Clubs taking six at one time, \$34.00. Send for Catalogue of FISHING TACKLES AND SPORTSMAN'S GOODS.
R. SIMPSON, 96 Fulton Street, New York.

50 CENTS FOR 100

Enclose two three-cent stamps with your address and we will return you by mail three elegant portfolios suitable for framing, each 12 by 9 1/2 inches—1 Oil Picture, 1 Steel Engraving, 1 Photo Plate—samples of our Publication worth fifty cents in any form.
Address, H. C. PORTER, 15 East 14th Street, New York.

50 CENTS For Sale

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCULCATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future. The FOREST AND STREAM will preserve the reputation it has earned for being:

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishculturist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kennel" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Bible and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

III.—ADAPTED TO THE TASTES OF ALL.

Among the hundreds of correspondents of the FOREST AND STREAM are Business Men, Lawyers, Physicians, Clergymen, Army and Navy Officers, Naturalists, Pioneers, Trappers, Prospectors, College Professors, Tourists, Civil Engineers, Artists, Editors of other papers; young men who have not yet struck out for themselves, and old men who have retired; in short, members of every trade, profession, and occupation.

Farmers and Farmers' Boys constitute a large class of our readers. They will find the FOREST AND STREAM ever disposed to reconcile the seemingly conflicting but really identical interests of respectable sportsmen and reasonable land-owners.

IV.—INDEPENDENT.

The position of influence now occupied by the FOREST AND STREAM imposes upon the paper responsibilities which it has no wish to shirk. The organ of no clique, it will be perfectly free to criticize everything inimical to the interests of the highest and manliest sportsmanship. Its attitude on all important questions within its field is well understood. For the benefit of advertisers and readers alike, it will also, as in the past, expose and denounce all dangerous frauds. Advertisements of doubtful character will not be admitted to its columns on any terms.

V.—COURTEOUS.

The FOREST AND STREAM will have no room in its columns for personalities and bickerings. Its editors have neither taste nor time for "mud throwing." They do not share the opinion, held by some other journals, that blackguardisms and indecencies are essential characteristics of a sportsman's paper. Readers who want that sort of thing must look for it somewhere else than in the FOREST AND STREAM. *Verbum sap.*

VI.—BROAD IN SYMPATHY.

The FOREST AND STREAM will ask for, and strive to win, the continued support of readers in every part of the country. It never has been narrow in spirit; nor has it ever held itself up as the organ of any one "section." The paper is, and will be, American, in the broadest, highest and best meaning of that term. Every State, Territory and Province on the Continent, with many foreign countries beyond, are represented in our list of contributors and subscribers. The very wide geographical distribution of the friends and correspondents of the FOREST AND STREAM is a sufficient guarantee of the variety and excellence of its contents.

Literally and figuratively it is true that

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 600 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve a unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. To a club of three annual subscribers, three copies for \$10; five for \$16. Remit by post-offices money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine) burns slowly and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/4 and 1 1/2 lb. kegs.

Dupont's Choice Bore.—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives such a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6 1/4 lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of No. 7 fine grain, for pistol shooting. Packed in 1 lb. canisters and 6 1/4 lb. kegs.

Dupont's Rifle E.—"Sea-Shooting."—FFg, and FFfg. The Efg. for long-range rifle shooting, the FFg and FFfg. for general use, burning strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb. canisters, 6 1/4, 12 1/2 and 25 lb. kegs. Efg. coarse, FFfg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions, special grades for EXPORT. Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet powder, U. S. Government Standard, powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by E. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S Efg. or FFfg. for long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 300 competitors. The Hazard Powder Co., MANUFACTURERS OF Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/4 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/4 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12 1/2 and 6 1/4 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

ANSWERS TO CORRESPONDENTS..... 517

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. To a club of three annual subscribers, three copies for \$10; five copies for \$16. Remittances should be sent by registered letter, money-order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C. London, Eng.; and by Em. Terquem, 16 Boulevard, St. Martin, Paris, France.

FOR SALE BY NEWSDEALERS EVERYWHERE.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.
Thursday, January 26.

"WE, THE PEOPLE."

AND why not? Why shall not we, the people, demand of our representatives at Boston, at Albany, at Lansing and Springfield and San Francisco and all other seats of legislation, the due protection of our, the people's, interests, by the conservation of our game and fish?

Laws prohibiting the destruction of game in its breeding season and of fish on their spawning grounds are not for the advantage of any narrow class or clique. They are for the good of us, the people.

Take this broad, tenable ground: the greatest good to the greatest number. Let there be no misapprehension about it, no popular misconception of the "game laws" and consequent indifference to their importance and justice.

The only "class legislation" in game laws is in this, that such statutes are provided to protect the people from the ravages of certain lawless classes, whom nothing short of stringent laws stringently enforced can keep within bounds. These classes, as set forth in a communication elsewhere, comprise "the wolf," the poacher slaying the whole year round, the unscrupulous guide, the would-be "Nimrod," and the unprincipled hotel purveyor of game out of season. Queer company here; lawlessness makes strange bedfellows—the unkempt riff-raff of the "settlement" elbows

the city greenhorn greedy for gore. Class legislation? Yes, just as the statutes against highway robbery and murder are "class legislation."

Look at the other side. Who are the men most earnest in the endeavor to secure that protection which nature demands for the game of our fields and forests and the fish of our lakes and streams? They are business and professional men, tradesmen and mechanics, property owners and farmers—the respectable portion of the community—the people.

On the one side is respectability, thrift and worth; on the other, lawlessness, shiftlessness, vagabondage. There is no disputing the correctness of this classification. The lines are distinctly drawn.

Then how are we to account for this everlasting, annual wrangling over game laws; the constant tinkering of the old laws, the substitution of new, and the total disregard of all, both old and new? There are several partial explanations. One is, that the issue has not been clearly defined. The people have been deceived by this false cry of "class legislation," they are blind to their own interests, their apathy is deep, and from it they can be roused only by the persevering efforts of those who recognize the demands of the hour. Again, it is most unfortunate, that in some States the societies which, with much sounding of trumpets, have appeared before the public ostensibly to accomplish this very work, have proved recreant to their purposes, belied their professions, and worked incalculable injury to the cause so compromised. How best to overcome this apathy and prejudice is the difficult problem which must be solved before we can have any adequate system of game protection. The signs of the times are not discouraging. Progress is the report from one State and another; for the people are awaking, surely, though it may be slowly, from their indifference, and the right men are guiding the movement.

THE BRITISH CHALLENGE.

THE formal terms of the match under which the British marksmen would like to try conclusions at rifle shooting with the militia men of this country are now before us. They propose a trying test, as severe a one as American rifles may well be put to, and those who go to Wimbledon in July next to uphold the credit which American riflemen have already gained abroad must be very proficient indeed if they hope to make a good stand against the experts who throng that common on the suburbs of London year after year. The word has been passed throughout the ranks of the half million volunteers of England and the Kingdom asking for the best and most tried men. This is not a match to which the National Rifle Association of Great Britain in its official capacity gives little or no support, as were the long-range international contests. Instead, it has its origin in a meeting of the Council of that organization. The whole shooting interest of Great Britain is backing the proposed competition, and it is in fact a test of the work which has been going on for a score of years past at Wimbledon and a hundred tributary ranges throughout the country. To be beaten would require a very good excuse to escape the charge of unfaithful stewardship on the part of these managing functionaries.

But apart from any thoughts upon the possible outcome of the match, it is fairly now within our province to discuss the conditions as they have been laid before us. We have heretofore pointed out our faith in the standing position and in the duty of the American Committee to insist upon some shooting from a fair off-shooter attitude at some stage of the match. That view, it seems, struck the committee favorably, and the cable acceptance of the conditions does so with the proviso that the 200 yards range shall be shot from a standing position.

A curious sort of disturbing element seems to have been flung into the matter by the demand for a guarantee that a British team shall visit this country next year. There was no call for any such demand. If the visiting team should win a victory, there ought to be no need of a second invitation to have a team of British Volunteers on our ranges in 1883 looking for a chance to wipe out the defeat. If our team should return the defeated one, then the full measure of retaliation and vindication will not be had until an American Militia team returns as victors from Wimbledon range.

Many contingencies may arise between now and the proper date for a match in 1883, which would make this exacted guarantee to send a team and our implied guarantee to receive such a squad extremely inconvenient and awkward to carry out. Of course there is much in the past which will make this demand for something like reciprocity in the matter of visits appear just. We have our long-range record to look back to, and a contemplation of the present status of the International small-bore championship does not reflect very favorably upon the vaunted British pluck. The "Palma" to-day rusts in its vault because British manufacturers cannot turn out a weapon accurate enough, or British marksmen organize a team perfect enough to capture it. Still we must bear in mind that the invitation of the British Rifle Council is for a single match to be shot next July. While we sincerely hope and feel confident that it will be but the first of a series of annual trials before the butts, there is nothing to indicate that those who framed the invitation had any such idea, and the American Committee impugn the motives of their fellows across the water when they tack on such a demand to their acceptance of an admirably concise set of conditions.

Simple though they be, these conditions contain much to be studied. They open up an entirely new field of effort to many who thought themselves excellent military shots. The long range shooting must be carefully studied, and here we think that the experience gained by the long range men with their finer rifles will stand in good stead. There is no reason why team shooting with military rifles should not have as excellent an organization and the same perfection of detail which marked all, and more particularly certain of our old time winning teams. These match conditions carry with them all the rules and regulations of the English Rifle Association, and in the matter of targets it must be borne in mind that the sub-divisions are quite different from those in vogue here, and this difference will be apt to give the American marksmen practicing on our home targets following the Creedmoor model a wrong and deceptive idea of their progress and ability. In rifles, too, it will be the easiest thing possible to stumble over some obscure clause of those complex Wimbledon regulations which may work considerable annoyance, which is readily convertible into bad scores. There is ample time now, not only to look over our own field of selection, which is poor enough at best, but the opening of the season for out-door practice should find us thoroughly up in all the minutiae of the conditions likely to come up as controlling the fight. It is especially important for our American shooters to find out just where our friends, the enemy, may be. It is not easy to make comparisons since oblong targets on the other side destroy all continuity of record, while on our side we have bunted in vain to find a record of twelve men at one time using military rifles over the three long ranges. Still there is a sort of guide in the reports of the Queen's Match at Wimbledon, and a study and tabulation of these will show us how far we are behind. American pluck has done much on this subject in the past. The great impetus to modern rifle practice on this side the Atlantic grew out of the acceptance of a challenge when the accepters had neither men nor rifles to make the semblance of a fight. We have shown what may be done in the way of overcoming great obstacles in the past; there is a great one before us now. We shall be disappointed if it be not in time surmounted, but we are certain it will not be overcome except with hard, well directed effort.

THE CONNECTICUT COMMISSION.

THE terms of two of the Fish Commissioners of Connecticut have expired, and it pleases us to learn that Dr. William M. Hudson has been re-appointed by the Governor to fill his own vacancy. Dr. Hudson has been connected with the fish commission of his State since its formation, and has been its most active member. During this time the commission has accomplished much good work and is now in condition to do much more, having the experience of many years to guide them. The re-appointment of Dr. Hudson is for four years, dating from August 26, 1883. He will no doubt, accept the burden, for his heart is in the work which he has seen develop from a very small beginning to its present status, with no indication of its having reached its maximum. In this appointment the Governor has done wisely.

GAME PROTECTORS.

SOME of the New York game protectors have shown themselves to be great frauds. Others, like agent Dodge, have done efficient and faithful service. These men were not well selected. Localities which stand most in need of such officers were entirely neglected. The number of game protectors is insufficient.

Is it expedient to increase the force?

No, if Tom, Dick and Harry are to draw the salaries of the office, and wink when anything is said to them about moving their lazy stumps from the stove.

Yes, by all means, if the right men can be appointed, who will do their duty, or who can be made to do it.

It has been suggested that the usual State fishculture appropriation be assigned for protection of the fish already on hand instead of for propagation of more, to go into the poacher's net. It is not advisable to cut off the funds for the maintenance of the regular work of the hatching house. But it is highly essential that both propagation and protection, should be adequately provided for. An increased fund should be assigned for the game and fish protective machinery of the State. The force of game constables should be trebled. But we don't want public money thrown away on sarks; there must be some way of holding the game protectors to account.

Unless this matter is taken in charge by the proper parties, and carried through by a well-matured and effective plan, the people of New York State will be no better off after the Legislature adjourns than they are now. We publish to-day a second letter on the subject. The writers are in earnest. They are backed by influence. Why can they not themselves form the nucleus around which shall gather the influence necessary?

If the great body of men in this State who are interested in these matters could be brought together to act in unison, they could ask and receive anything they wanted at Albany. What hinders such a union of strength?

WAR RELICS.—An interesting chapter might be written on the manufacture and sale of different hog relics. A Chattanooga correspondent tells us of an enterprising genius dwelling on the famous Lookout Mountain, Tenn., who has struck a veritable lead mine. He buys up old lead, molds it into bullets, which are fired against the rocks, then gathered up again and smeared with mud. These eloquent "relics of the war" are then disposed of to curiosity-seeking visitors at ten cents apiece. We have in our possession several genuine war bullets, which we gathered ourselves from the rocks and fields, or dug out of the trees of Lookout Mountain. Bombshells, bayonets, an occasional rusted musket barrel, and such souvenirs of the strife often rewarded our expeditions. During our stay on the Mountain a paper-weight formed of such bullets was sent to the poet Whittier, to which he responded with some graceful verses. We trust that the good man may never be imposed upon by the base counterfeit relics of these degenerated times. What a mean, lying thing a manufactured war relic is! And what a mean man it takes to make and sell them!

THE WOLFE SHOOTING CASE.—Some weeks ago we reported the case of a young man named Wolfe, one of the thought-it-was-n't-loaded idiots, who, as a good joke, fired a charge of buckshot into the young lady upon whom he was calling, in Peru, New Jersey. Much to the astonishment of her surgeons the girl recovered; but Wolfe is not yet out of trouble. He was arrested last week and is now committed to be held on a charge of atrocious assault pending the action of the Grand Jury. We shall watch this case with some interest. Things have come to a sorry pass if criminal carelessness of this kind is allowed to go unpunished.

AN ADIRONDACK PARK.—In another column will be found the announcement of a most important movement to protect from vandalism a portion of the great North Park of this State. It is said that corporations have no souls. The State of New York certainly has no soul to appreciate the importance of taking care of her great sanitarium regions; and it is, therefore, a most fortunate thing that private citizens are found who will come forward to undertake the work neglected by the State.

THE BELGIAN DEVIL.—A few weeks ago we gave an account of a machine called a Belgian devil, which was used by the fishermen of Belgium for cutting the nets of others in the North Sea and letting the fish into a net of their own which followed the vessel. A bill has just been introduced into the Belgian Chamber making it a penal offence to manufacture, sell, take on board or use engines for cutting or destroying fishing nets at sea. The fishermen of England and Germany have been sufferers from this practice and have made complaints.

DOG PORTRAITURE.—We have recently been shown an oil portrait of the Willoughby pug "Buster," the property of Mrs. C. Berdan, of Hackensack, N. J. The picture, which is exceedingly well done, is the work of Mr. W. Holberton, who is to be congratulated upon the life-like expression he has succeeded in giving to the portrait. As every one knows who has ever tried to paint a dog, the constantly changing expression of the dog's face renders the task a most difficult one.

OFF TO THE SOUTH.—Dr. S. Schoonmaker sailed last week for his annual Florida tour, and promises to give the readers of FOREST AND STREAM some notes. Messrs. E. M. Messenger, of the Bromfield House, Boston, Morrill and Bonnell, of the same city, and D. Greeley, of Nashua, N. H., make up a Florida party. They will stop in North Carolina for a while and will not return to the North before March.

DEATH OF MR. ROCKWELL.—Those who knew Mr. Henry E. Rockwell, for many years the Secretary of the United States Fish Commission, will be pained to learn that he died suddenly of heart disease at his residence in Washington at eleven o'clock on Sunday night last. Mr. Rockwell was seventy-one years of age and was a kind and genial gentleman.

A NEW RIFLE FIRM.—The Marlin Fire Arms Co. has been organized at New Haven, Conn., with Chas. Daly, president; J. M. Marlin, treasurer; and Joseph J. Sweeney, secretary. The company holds the patent of the Marlin arms, which they will manufacture.

TRAINING VS. BREAKING.—The marked favor with which the earlier chapters of this series was welcomed, has been followed since by many demands for them in a permanent form. To meet this demand, the papers will be republished as a book. Due notice of its issue will be given in these columns.

READY NEXT WEEK.—The Forest and Stream Publishing Company will publish, February 2d, "Shooting: Its Applications, Practice and Purpose." By J. D. Douglass. The volume will be handsomely printed on fine paper and bound in cloth. Price, \$3. See further announcements next week.

A NATIONAL SPORTSMEN'S ASSOCIATION is proposed by the Michigan Association. There was once a national society, which has never been formally disbanded. For all that we know to the contrary, however, it is dead.

THE MICHIGAN ASSOCIATION held its annual convention last week. A full report from a special correspondent will be published in our next issue.

JUST as we go to press we are handed the following copy of a dispatch received to-day (Wednesday), by General Wingate:

LONDON, January 25.—Wingate, N. R. A., N. Y.—We accept standing 200 yards. Return match must remain open question.—HALF-O-D.

GAME PROTECTION FOR THE PEOPLE.

ORDNESBURG, N. Y.

Editor Forest and Stream:

"Syracuse," in your issue of the 13th inst., has struck the key note of game protection. His utterances are a condensed elaboration of the whole subject—of its justification and the means to make it effective. They express the revival from a languishing interest of large numbers whose efforts in the past have met so indifferent success as to have generated a sense of disappointment and disgust, without even the sorry alleviation of the thought that during their lives, at least, the game of the State may not be wholly exterminated.

I believe the utterances of "Syracuse" are the culmination of sentiments which in the last half dozen years have been surely enlisting popular support. Assuredly, their expression follows, and is the outgrowth of a fact generally understood by all, that the question has come to be one of protection or extermination. The issue is at last clearly defined. It cannot be further delayed.

Shall we enforce the laws and protect and perpetuate the game in our forests and streams for the good of all, or shall we utterly abandon it to the wanton destruction of the few who make a trade of lawlessness, and by indiscriminate slaughter in their wretched vocation, scandalize every sentiment of duty, humanity and decency?

And, just here, something more than mere general statement is demanded. It should be borne in mind that the public has come to be fully informed and appreciative of the great abuses existing, and of the methods and times of their perpetration. Indeed, the offending classes (and of them only do I speak in this letter) and their methods have been so ostentatiously paraded as to produce with the most indifferent a sense of outrage and resentment.

Count first the class of persons living in the vicinity of, or hanging about the skirts of our forests, whose acres—when they possess any—are abandoned to thistles in the indolence of lives demoralized for mainly industry by years given to the vagabond business of hunting and fishing. They prey with the voracity of the wolf upon forest-life, struggling for existence with the severities of season and weather, and make their villainy most telling when the game is least capable of self-protection. Their slaughter is indiscriminate and wholesale; and the "groceries" for which they exchange spoils are a new incentive to its repetition. Hides are so much apiece, though there be not meat enough on the carcasses to stay a stomach in the stripping.

"Wolf!"—indeed the name is already utilized. "He is a wolf," already stigmatizes the creature—captain of one to half a dozen dogs, who in the months of spring and early summer makes havoc on the land and in the water. By every known appliance he slays mothers bearing young, or tenderly nursing their off-pring by their sides—kills day and night; for the shades of night which invite forth to the water's edge the mother doe, and seem to protect as with a mantle her tender kids, are by torch and shot-gun made the most certain helps to slaughter.

"He is a wolf," stigmatizes the "cruster," the wretch who tracks the frozen snow, hunts out the nearly starved deer, incapable of flight or resistance, and, impatiently huddled together for what protection that should give them, and with club and axe knock out their brains.

Why has it never occurred to the caricaturist to present, with the mastery of his art, the salient features of this sport to general appreciation? Never mind the scandal it would fasten upon "sportsman's associations," "game protective

associations," and their carnivals at the trap and in the tavern, but give the details to the public—the people—for it is true and of universal application that "the eyes of the ignorant are more learned than their ears." This hushness of the night-hunter and the cruster is of a species of horror that would not escape the merest tyro in its exposition.

Count, again, by hundreds, others of a class scarcely less iniquitous, the masters of as many dogs, who habitually and intentionally violate the law by killing game and fish in the close season, and, in St. Lawrence county (where that iniquity, hounding, is forbidden at all times), by dogging deer to the water, to be there slaughtered for the amusement of those who can pay them for it.

These classes constitute the bulk of the army of guides. Their equipment—each a boat, dog or dogs, and a knife. In camp they are servants of all work, devoted to the tastes and wishes of their employers by presents, promises and pay. Nominally, but unjustly, classed with them are men whose instincts and feelings are averse to all this lawlessness and outrage, and who will bravely and earnestly second any efforts for reform.

As generally happens in the gradations of society, another class of persons is equally guilty with the guide, and without his excuse. This is the tourist class, those who resort to the woods to violate the law for pleasure and amusement. An army without taste for, or knowledge of, wood-craft, generally alien to the best sentiments and passion that covets forest-life for its proper and peculiar value and fascinations; and in their experience there, the victims of delusive hopes; of a thousand and one annoyances and of impositions they never know and so never appreciate. Fashion is the hane of this class. It is fashionable to go to the woods; once there, what can they do—what appreciate? Why, the chase, and "the chase" for them is the poor panting game driven by dogs to the extreme of endurance, and then made the victim of an instinct that seeks safety in the water, there to be murdered, utterly feeble, and helpless and forlorn.

To discriminate and appropriate the odium of this business is impossible. It is of such a grade of utility as renders all principals—though detested at taches in the inverse order in which they shall be named—dog, guide, *per se* tourist.

Count again another class, the proprietors of public houses kept along the line of the forest-lakes and rivers. What a loss of caste to be without fresh venison steak in any season! And count with the offenders in this class the guides and others retained about their establishments in the close season for to discriminate and appropriate the odium of the woods, who supply the tables with "mountain mutton."

Quite a formidable combination, you perceive—formidable in its interests, connections and dependencies, but formidable to the better sentiment of the community only in that absolute indifference, which it is a consolation to know has passed away.

The institution of the game constable was a gratifying evidence of public attention properly directed, and so, too, is the popular condemnation of that method in practice. Away with the whole bunch of local game constables. As a class they wink at, stand indifferent, or pander to the violation of the law, and this disgraces its administration. Officials representing the State and its citizens, uninfluenced by local influences of fear, favor, affection or reward; appointed to office in the interest of local protective effort, and recommended by integrity and capacity rather than by political partisanship, are the proper guardians of the public interests in the protection of game.

It is desirable that "Syracuse" should make annual appropriations for hatching and distributing fish only to have them illegally caught" with impunity. An insouciant theory that, which spends the people's money for purposes rendered abortive from laxity in administration. The veto of the bill that passed the last Legislature amending the game laws was a positive service to game protection. It was a rebuke to the chronic listlessness that regales itself with the ridiculous notion that to pass laws is to protect fish and game. It virtually and truthfully asserted the adequacy of laws as they are, and commended their vigorous enforcement. And to this end any legislative aid in the creation of executive officers necessary will not be withheld.

That a larger number of State game protectors is required is unquestioned. That the whole northern section of the State—a forest border and peninsula of hundreds of miles, a region of mountain, lake and stream containing the principal fish and game of the State—was ignored, as were principal markets of illicit trade, is an indication of the inefficiency of the present corps of game protectors. Such abuses may be prevented in the future. Let us ask for thirty more game protectors. Their services, with the surveillance of local clubs, will organize a public sentiment of obedience to law, and secure for the fish and game in forest and stream a protection like that of our cattle in the pastures. "Syracuse" suggests "local clubs," not "local sportsman's associations," and you observe there is an absence in his letter of any word or thought that associates game protection with class or class privileges. He pleads for all—the people. Let us relegate the word sportsman and its derivatives to the knights of the turf and their congeners. It has contracted an odium—it has. It suggests class, class privileges and something worse. Besides, it has no proper significance to, no large affiliation with, the broader and better purposes and results of game protection which concerns the people in some of their broadest and best interests.

In the crusade against the poachers let us say "We the People." Why not? We have the solemn fiat of their sovereignty written on the public statutes denouncing penalties and imprisonment upon the destroyers of their game, and we have the duty of every good citizen to do what he may to bring offenders to justice.

There should be nothing in the purposes of those discharging a public duty like vindictiveness or gratification of personal resentment. There has been hitherto an indifference, an inattention to the enforcement of the game laws which has amounted, practically, to toleration. The first purpose in the re-organization of the game protection, and in the cooperation of all for the common benefit. To this end general amnesty should be extended. Let the offences of the past be remembered only in aggravation of the offences of the future.

Let us recapitulate:

1. The enforcement of the laws for the protection of fish and game for the common good.
2. The organization of local clubs devoted to that interest.
3. Legislation authorizing the appointment of additional game protectors, to be recommended by local interests most desiring their services.
4. General amnesty for all past offences, and so the co-operation of all for the common benefit.

In these purposes "Syracuse" will be supported by ORDNESBURG.

The Sportsman Tourist.

SIX WEEKS ON THE HEADWATERS OF THE YELLOWSTONE.

AUGUST FIRST found Ned and myself leaving the Union Pacific train at Rawlins. We had already engaged Tom Sun and Lew Simmonds, two well known Rocky Mountain hunters, as guides, with eight ponies—four for saddle and four for pack animals. As there was a space of sixty odd miles between Rawlins and Tom's ranch on the headwaters of the west ranges of mountains lying between the headwaters of the Yellowstone and the North Platte. What a novel and exhilarating ride was that, the clear bright atmosphere and views of the rugged and peculiar scenery of the Rockies. We camped for the night in an old deserted log hut, and slept the sleep of the tender-foot after his first day's effort to keep pace with the hardened native. Within a few miles of the railroad we began to see antelope—singly, in pairs and in herds; and it was the exception rather than the rule to be out of sight of this game during our ordinary trip. Occasionally a jack-rabbit would start out from under our horses' hoofs like a flash, and gracefully bound away over the sage-brush. Occasionally we would find a covey of sage-hens, which would lazily fly a short distance and alight. Next morning, bright and early, we were again in the saddle. We encountered a number of shallow alkaline lakes filled with wild (Canada) geese, but so tame were they that we easily approached on our horses within fifty or seventy-five yards of them. About 5 p. m. we arrived in sight of the ranch and the beautiful valley of the Sweetwater.

That day's preparation and rest at Tom's mountain home, we took up our line of march for the Rattlesnake range, where we were promised elk, mule deer, and perhaps a grizzly or two. For a long distance our course lay up Sage Creek; but toward noon of the second day we struck into the fort-hills. From this time forward Excelsior was the motto forced upon us. "Onward and upward," over rocky cliffs and through deep canyons, until at last, as it seemed, that we could no longer sit on our saddles. Tom's welcome word to halt was thankfully heard in a most lovely spot in a shady grove of balsams, beside the clearest of tripling, laughing rivulets, 9,000 feet above the sea level, where nature, in all her virgin purity, reigns supreme. Old tired dwellers in the whirling, dusty, fever-stricken city, what would you exchange for a few breaths of this life-giving mountain air? For a drink of this pure and sparkling water? But why waste words on you? Few of you would appreciate it. Habit has so enslaved you that the best gifts of God to man you turn away from, preferring the idols you have set up.

"Why you?"
 "When I am about to relate sounds like a 'big whooper' to an Eastern man, and I do not expect to be fully believed by any one who has not been placed in similar circumstances; but, nevertheless, it is true to the letter, every word of it. We had eaten heartily and arranged our tents for the night and had sat down to smoke our fragrant pipes when strange noises broke the stillness of the twilight hour. 'What's that?' exclaimed the ever-waivering Ned. 'Calves,' replied Tom, as he gave an extra puff from his saccharine. 'Calves?' echoed Ned in astonishment. 'What; a herd of calves way up in these mountains?' 'They are God's own cattle,' says Uncle Lew, solemnly. 'Come,' says Tom, 'I will show them to you,' and, proceeding a little way up the stream, we suddenly came upon a herd of cow elk with their calves feeding quietly on the mountain side. After feasting our eyes upon them until the shadows of night shut them from our view we returned to camp. 'What's that?' learned to our wardrobe, and I, in surprise before Uncle Lew at any new sight or occurrence, as our critical guide's statements of excellence seemed wholly to depend on the tenderness or non-tenderness of the pedal extremities. So we said nothing, but wrapped ourselves in our blankets and 'lay down to pleasant dreams.'

As the first rays of the morning sun kissed the surrounding mountain peaks Tom, Ned and myself were in the saddle. Proceeding up the canyon about three miles, we left our horses and had gone a few hundred yards when the peculiar sound of a gun was heard before greeted our ears. 'Don't move,' says Tom; and we stood like statues awaiting the coming band, which approached us on a slow walk, firing past us within forty yards, apparently without fear. Occasionally one would stop while and look at us curiously, as much as to say, 'What kind of elk are you, anyhow?' There might have been two hundred in this band, more or less.

Now the reader undoubtedly begins to query something in this wise: Didn't you get a hint to stop? If so, what a pair of blockheads you must have been to have let all of this fine game go by without firing a shot. Let me explain. It is true neither Ned nor myself fired a shot at them, and this is the part of my story that I fear will be looked upon with a great deal of incredulity; but I assert one more that not a gun was fired at this family of elk. I think the reason was that while gazing in wonder at this magnificent pageant a side show was going on in our rear. Another herd had approached the vicinity of our horses and was already firing, they had stampeded. We ceased so much confusion that we returned to look after our horses. Another reason why we did not kill any of the elk was the fact that one animal would easily supply our larder for a week at least, and we were satisfied that we could get one whenever we wished, which we did in the course of the day, as we came upon a large band lying down, looking in the distance like a vast herd of mules. Ned selected a fine bull, whose antlers will one day grace his special home in Connecticut. I dare say one shot from his Winchester did the work effectually. We cut out from the timber, sirloin and tongue, hung the huge antlers on the limb of a tree, and returned to camp well satisfied with the day's sport.

We spent several weeks in this delightful mountain camp, taking great pleasure in studying the habits of the numerous large animals we found so plentiful, for as to hunting them, we were not so cruel as to slaughter them for the mere sake

of slaughter. Whenever we wished a change of diet from elk tenderloin to rosy venison, a cow horse would always enable us to bring down a fat buck in the middle of the week. Did we long for mutton, a trip to the highest surrounding mountain peaks, would be almost sure to gratify that inclination. Antelope were always at hand. Sage hens were not favorites with us, their flesh partaking too strongly of the sage flavor, excepting the young chicks, which were very fair eating. But the willow grouse, covays of which we often found, were delicious. We met in this vicinity no grizzlies, although their 'sign' was frequently apparent.

One day, while riding up the bed of a stream flowing down a canyon, we observed far up the mountain side a large band of cow elk, apparently very much disturbed from some cause. A portion of them would suddenly be thrown into confusion, and running down the mountain incline for a short distance would there as suddenly stop and go to feeding again. Then another portion of the herd would go through the same manoeuvre. As this process was gradually bringing the whole band in our direction, we tied our horses, and walking to a good point of observation, awaited the result of this singular proceeding. As they were very much distant it took some time before they arrived near enough for us to determine the cause of their agitation. At length we observed the largest bull elk we had yet seen, running from one end of the line to the other, and driving the cows after the manner of a Texas cow-boy. Gradually they approached the stream, where the cows drank copiously, when the old patriarch seemed satisfied and drove them no further. Admiration for the sagacity, indomitable perseverance and fatherly care of his flock was uppermost in all of our minds as we stood gazing at this magnificent creature. But must I write it? Yes; for this is a true narrative. These thoughts in my mind gradually changed to those of a selfish desire to become the owner of his antlers. It took but a moment to level my rifle at his heart. At the report, he jumped into the air and fell to his knees, then gathering himself up, ran into a thicket, tangled undergrowth of willows on the margin of the stream. Without thought of the consequences that might ensue I ran in after him. I soon found myself entangled in the brush-wood and could proceed but slowly. Suddenly, I was surprised to see him come from the ground, where he was lying hidden, not a dozen feet from me. With glaring eyeballs and an angry shake of the head, he was about to make a rush upon me. Retreat was impossible; and I knew that with a single bound he would be upon me. I lost no time in putting in my work. The 'pump handle' on my .76 model Winchester 'flew lively,' and the noble animal sank to the ground. His antlers, which measure five feet and one inch in length, now grace my office in Chicago, and I will cheerfully show them to any of the readers of this sketch. To preserve a and prepare them for transportation on pony-back, Tom first skinned the neck and head, unjointed the neck, cleaned the flesh from the skull and, with a small saw, which we always carried with us, divided the skull between the antlers, through the tip of the nose into two equal parts. The two sides could then be laid and tied together, taking up comparatively but little space. The taxidermist easily bolted the two portions together into their natural positions.

One lovely afternoon as we were returning to camp we came in view of a very large bull lying down in a small grove surrounded by a large and compact nut-tree area. At the suggestion of Tom we rode up as nearly as possible to them, then put our ponies into a lively gallop in their direction, whooping and yelling at the top of our lungs. We succeeded in stampeding them, and with frantic efforts they attempted to rush across the plain, but their proximity to each other retarded their movements to such an extent that we were soon riding in the midst of them. Then their condition was indeed comical. The more frightened they became they more they seemed to grope for the ground. It was to avoid such them with our feet and hands, and they would respond to a lively kick with the most ludicrous sounds, exclamations and efforts to escape us. At last they seemed to appreciate the condition of affairs and began to scatter, and as soon as they had sufficient space to fully use their spring limbs, they quickly left us behind.

After becoming enraptured with the sport in this vicinity we broke camp one morning and started for the buffalo range, lying between Rattlesnake and Snake River. Mountains. Passing up a Tom's ranch, we left our trails and replenish our depleted quartermaster's department. Then, taking a more northwesterly direction, we passed 'Devil's Gate,' a huge perpendicular chasm of solid rock, several hundred feet high and half a mile long, nearly meeting at the top, through which the Sweetwater flows. We saw, to the once famous 'Independence Rock,' a landmark of the old emigrant trail. This rock is perhaps two hundred feet high, and is egg-shaped, covering several acres of ground. Its sides are so steep that the highest elevations we can approach it a jack-rabbit was flushed and started up the steep incline of the rock. By hallooing and bring our guns we frightened the animal so thoroughly out of his wits, that in his spasmodic efforts to get away he made for the highest point of the rock, often slipping and sliding backward. It was most amusing to watch his gyrations, but at length he mastered all difficulties and disappeared over the crest.

That night we camped on the banks of the North Platte, near the Great Platte Canyon. The river being low we had no difficulty in fording it. The next day's ride was over high mountains, through deep gorges and through lovely green valleys. We arrived toward evening at the head of Horse Creek, which is formed by a large warm spring, the waters of which are impregnated strongly with sulphur and iron. Here we concluded to make our permanent camp, as we had already seen fresh buffalo signs. The next morning we mounted our ponies and started out in quest of buffalo. On arriving at the top of the highest elevations we were in view of an extensive plain, where the Wind River Mountains visible in the far distance. Dark spots here and there broke the monotony of the plain, which our field-glass resolved into various sized herds of buffalo, quietly feeding on the sparse bunch-grass. The nearest haunch of them were perhaps three miles distant, and consisted of twenty or thirty bulls. These we determined to approach, which we were easily able to do by keeping behind an intervening ridge, with the wind in our favor. Tying our ponies, we crawled on our hands and knees to the top of the ridge, within one hundred yards of the nearest buffalo. Their huge bodies presented so large a target that it seemed almost impossible to miss them. At a signal, Ned fired at the one to the left, and myself at the one to the right. To our astonishment and chagrin neither of them fell, but with the remainder of the herd started at their peculiar gait down the mountain side. We emptied our magazine into them—twenty-four shots—and but two were apparently crippled, one of which we easily

approached and shot. We found afterward that it required close marksmanship to kill buffaloes. With his tongue and hoofs we went back to camp satisfied.

In this locality we found few elk, but plenty of mountain sheep, antelope and mule deer. One day, while out alone, I spied a herd of sheep on an opposite ridge, and being anxious to get a shot at a big ram, I tied my horse in the ravine and commenced scrambling up the steep ascent in their direction. I had proceeded about half way when I was brought to a standstill by the loud and not to be mistaken warning of the rattlesnake, observing almost at the same instant, and within a few inches of my nose, a large speckled snake coiled ready to spring. Two smaller specimens lay near him. It is needless to say that I 'fell back,' as McClellan used to word it in war times. In fact I was totally demoralized and disorganized, but managed to get to my pony and to camp without further incident. 'Buffalo veal' Tom declared to be the most delicious of all game food, so we determined to capture a calf. We found this undertaking one of considerable labor. Starting out one morning we hunted several hours without sighting a calf of the requisite fatness. At last, however, Ned and myself obtained a fine specimen of the desired kind. We found that our ponies we joined him in the chase. It was long and exciting. Finally Ned brought it down by a lucky aim, and it was after dark that night when we arrived in camp; but the veal was excellent.

One morning during the first week in September, we awoke to find that a light snow had fallen during the night. Tom observed that this would be a good day for bears. This was a sufficient hint. I saw Ned's eyes sparkle as we rode away from camp, and he seemed to pay but little attention to Tom's warnings, 'not to shoot at a grizzly, unless he was near a tree which he could climb.' We proceeded to the recess of an elk, which several days before we had observed. Previn had visited. Sure enough he had been there the night previous, and his great tracks in the snow were visible some distance away. They led down the steep declivity of the canyon to a little stream bordered with willows. As we found it difficult to follow him on horseback, we tied our ponies and proceeded on foot down the canyon, Tom following the trail in the willows, with Ned and myself on either side. We found all about dead and convenient trees in our eagerness to get a shot at grizzly. Tom even forgot to warn us of our danger. We followed along in this way perhaps three-quarters of a mile, when with a crash through the bushes he appeared before me, not over eight or ten yards away. He saw me and quickly turned back. As he did so, I made a snap-shot at his huge broad side. The next instant he disappeared in the willows again. A moment later, I heard the discharge of Ned's rifle on the opposite side. When the echoes, repeated from the surrounding rocks, had died away, all was once more still. Tom and myself were soon at Ned's side, but the bear was nowhere to be seen. Advancing cautiously, we soon found him lying dead beneath a projecting rock, over which he had evidently fallen. My shot had entered his stomach, Ned's had broken his neck. 'Lucky shot that,' said Tom, and we both appreciated the remark. We found that he had killed a large grizzly, which would weigh 800 or 1,000 pounds. We carefully took off his hide, preserving his ears, nose and claws with the skin. To kill a grizzly was our greatest ambition. We had now accomplished this, and were ready to go back to civilization.

On our journey back we came in view of quite a large herd of cow elk. Wishing to test the greatest failing of these animals—viz., their unbounded curiosity—I allowed my companions to keep down the valley, while I skirted around to their rear. I approached them very cautiously, and observing them all facing and intent on the peak trails below. I gradually crept nearer and nearer to them, till I stood almost under the nearest one with my gun. I stood motionless some time until my party was out of sight, when slowly one of the elk turned its head and looked at me. What passed in that elk's mind I cannot positively assert, but it certainly seemed to me to look as if it were ashamed of itself. Some all of the band were looking at me, appearing as foolish as if they had been caught stealing chickens. After a short observation, the leader concluded it was time to get out of that silly predicament, and he made off, followed by the whole band.

Another incident, worthy of notice, happened in this unfrequented region. Our party had stopped to lunch near an old spring, when we observed a herd of antelope at some distance. Their curiosity prompted them to come within two or three hundred yards of us. Then they all stopped but one, a fawn about two-thirds grown, which continued to approach until it was within a few feet of us, being apparently unconscious of danger. This was the only case of unlimited confidence we had on our entire trip. We raised our rifles in good health and spirits, and were soon again engaged in the great struggle of humanity after the 'almighty dollar.'

H. L. STOKY.
 Chicago, 1892

AUTOBIOGRAPHY OF MUNCH, STANDWELL.

A 'REMINISCENCE' OF THE WAR.

WHEN the war began I was a very gallant soldier; in fact, I could not talk most anybody before the racket commenced in earnest. I even made a verbal contract with Bill Terry, the tanner in our settlement, to furnish him with five hundred of the enemies hides, of my own killing, to make saddle skirts for the cavalry.

Just before the serious fighting began I applied for the authorship of the regiment and got it. During our first engagement (the 'Pink') I was busy laying in a stock of goods. After the battle of Cold Harbor I rode down to the field, partly from motives of curiosity and also to see how the 'boys' fared. When I discovered my regiment lying on their arms on the battlefield one of the 'boys' yelled out, 'Bill, this is a good chance for you to get them five hundred hides for Bill Terry. He won't know who killed 'em.' About the same time I heard a shell burst in the distance and, concluding that my visit was not properly appreciated by the 'boys,' I turned my face toward the city, and traveled on the 'spur of the moment' the whole way.

Shortly after this I was out on a private foraging expedition. Riding along the road I arrived at the summit of a hill overlooking a valley through which a small stream ran. Looking down the hill I saw, at the ford below, a man washing his hands. I thought, from his general appearance, that he was one of the enemy. With this reflection I exceedingly quaked and trembled, for I had heard very equivocal sounds in a cornfield behind me, and was making up my mind to get away from that vicinity, not knowing but that they might be enemies

also. I dismounted and concealed my horse imperfectly in the sparsely growing bushes on the roadside and laid myself as flat as a pancake in a fence corner. Pretty soon I heard the ominous sounds of the approaching enemy as his boots crunched through the gravel. I had flatter and flatter; but, suddenly, a shot came to me, my horse kicked at a fly and snorted. The enemy's attention was immediately directed toward my quarter and, as I had raised my head up a little way, he caught sight of me. In an instant I heard "click—click," and saw him cover me with his pistol. I was armed with a large Colt's revolver heavily loaded with—mud. I had previously brought this weapon into position but, at the critical moment, from long disuse and want of attention, it refused to "click." My extreme terror lent me a sort of fitful courage, and I yelled out, "You are my prisoner! Surrender!"

His reply was somewhat chilling to my nerves. He rose and said, "Not by a darn sight. Come out of that. I see you've got a horse, and I want one; so bring him out or I'll put a bullet through you."

I managed to untie the horse and lead him out, although my eyes were altogether turned toward my adversary, whom I now perceived to be a Confederate officer. He asked, "What command do you belong to?" I told him. "The—Miss. Regiment, Peabodys' Brigade?" I had just brass enu left after my capture to— "Well, Colonel, you got the bulge on me that time—I thought you were a Yankee. What is your command?" He said, "I am Major Jones, of Gen. McGruder's staff." I saluted him. He said further, "I will ride your horse to camp. Go down into the swamp, there about a mile, and you will find my horse, badly lamed. He caught his right fore foot in a crack in the grape-vine bridge over the Chokmahony, and wrenched it badly. Lead him to headquarters." Which I accordingly did.

The next day I was taken very ill with rheumatism, and, after an examination of three weeks' duration, the surgeons gave me a certificate of discharge, as being unfit for active duty. That was in 1863.

I went home and spent the remaining years of the war in dodging the conscript officers and practicing the art of using a crutch and limping. I did this with such assiduity and perseverance, that, though the local conscript officers suspected the genuineness of my injury, they could find no plausible ground to impouch it, until I was taken to a country frolic, where there were a few of the "boys" on a fairground, and a busse full of rustic beauties (beaux were at a high premium). I set for me my usual prudice as to drink a little too much "pine-top" whisky, and, being very fond of dancing, which passion, from long restraint, came out strongly now, I threw aside my crutches and fairly surpassed the execution of "Sam O'-hant-ris" which in Alloway Kirk. My crutches were left that night at the house of festivity, and I got home some four miles away, without any clear recollection of the *modus operandi*, except some glimmering impressions of a foot race which I ran against one of the "boys," who volunteered to wager "the best 'possum dog in four States against a durned polecat" that he could beat any man in the party to Mr. Thompson's lane. We all started, and I won the "possum dog," but "Lumpy" Pecvy, the proposer of the race, forgot to send him over.

The next day I was waited upon by three very brilliantly-uniformed conscript officers, but was too unwell to get up. It was not rheumatism, however, but headache from the previous night's debauch. The officers, seeing how I was affected, said they would call again when I was better. After their departure I sent my little brother on a mule over to the scene of the previous night's festivities to get my crutches, and the next day, when the officers called, I was stumping around as usual, very lame. One of them observed, however, that my dodge had become entirely too thin; that he had seen "Baggy" (my brother) bring home the crutches, and, moreover, had seen myself in full chase around the yard after a chicken, to be killed for dinner.

After that disclosure I yielded to their pressing invitation and joined a squad bound for the conscript camp at Meridian. But I took my crutches with me, and there were several other pairs in my squad.

While in camp at Meridian, it was ludicrous to witness the clumsy attempts at deception by "greenies." I have seen three men walking abreast, all limping in different ways, and now and then limping on the wrong foot in the most awkward efforts to appear lame. In passing a private.

After remaining in this camp for five weeks we were disturbed by the approach of General Sherman and his army from Vicksburg. All conscripts, paroled soldiers and other troops were ordered to march to Demopolis, Alabama. I was decidedly opposed to marching on foot, and so was of course too lame to walk, so I was mounted on a spare mule. When a few miles out from Meridian I witnessed an incident which afforded me much amusement. Capt. Hoskins, of "Hoskin's Battery," was somehow leading the horse of one of his lieutenants, his butt try being on ahead. In passing a quartermaster's depot, where much confusion prevailed, on account of the hurried departure, he saw a number of small "valise" saddles, such as are used on "old" horses in artillery teams, being thrown away. He secured half a dozen of them and tied them on to the horse he was leading. When he came up with me it was at a place where a regiment of Texas soldiers were encamped on the roadside. One of them yelled out, "Mister, mister, mister!" Capt. Hoskins, desiring to recognize the title, being completely at loss, though he was sure of a "sch," he answered, "What'll you have." Texas replied: "The next time your saddle has young ones, I wish you would save me one!" Hoskins moved on as fast as he could, amid general applause.

Not to return to my own patriotic adventures. That night I took occasion to make a moonlight march alone, and making a detour southward some twenty miles, the next day I marched westward, passing through the country in the character of a scout who had lost his horse. I soon got another one, which I actually lost, however, before reaching home. In crossing Pearl River on a ferry-boat the horse became frightened, and got overboard. His hind foot got caught in the bridle rein, and he was drowned.

I remained at home in comparative tranquillity until the "surrender." I afterward moved to another neighborhood where I was but little known, and by dint of a judicious application of "cheer" and "brass" I soon became a "prominent citizen." It is my chief delight to entertain a crowd of admiring friends by telling my heroic exploits during the war, when I was "in command" of such a company, at "Kennesaw Mountain," or "ordered my regiment to defend behind a rail fence on the turnpike, near Nashville," etc. In this way I have acquired several titles, from "Captain" up to "Colonel."

I am now Clerk of the Court, Captain of the Militia Company, Double Extra Past Grand Chancellor of the Red Plume Division of the Knights of Hocus Pocus, and Superintendent of a Sunday School. Besides all of this, I was Chairman of the Committee on Resolutions when President Garfield was shot, and my arrival and departure are duly announced in the local paper. Likewise, my name is on a plus list of very antiquated style voted to me as the most popular game man (save the mark) at a country bazaar. Very truly your friend,
MUNOR. STANDWELL.

Natural History

ENEMIES OF GAME BIRDS.

FISHKILL ON THE HUDSON,
Jan. 10, 1892.

Editor Forest and Stream:

Notwithstanding the many theories of your many able and interesting correspondents, whose articles I always enjoy reading, I cannot bring myself to believe that migration or the grouse fly are the causes for the decrease of game, but the more I observe during my rambles through the woods, the more firm am I in my belief that birds of prey and carnivorous animals are the cause. Any day I can go for a tramp in the woodlands and find in the remote corner of a fence or at the foot of a tree, the feathers of a grouse or quail that has made a repast for a hawk, owl, skunk or some other of the many enemies which the game birds have. The nests of the grouse and quail are also built in places which, at the period of incubation, afford every opportunity for the prowling fox, weasel or skunk, not only to pounce upon the old bird on the nest, but to destroy the eggs or young birds. The rusty-crowned falcon or sparrow hawk is the worst on quail of any bird we have, but the red-tailed buzzard and, in fact, all the birds belonging to the family *Accipitridae* live almost entirely on game and small birds. Not only do the hawks, which are mostly diurnal birds of prey, stick to a covey of quail or brood of grouse all day, but the owls, which are nocturnal, together with the small carnivorous animals that do their hunting at night, pick up large numbers, while roosting. Hawks are very abundant about here, but during the last year the sportsmen have shot a good many. I have made several trips to the mountains for no other purpose than to shoot hawks and owls. When I first began my shooting career, some twelve or fifteen years ago, I shot most of the time in Connecticut, where ruffed grouse and quail were very plenty. I have often, when tramping through those forests, found piles of feathers and bones of birds, and often, too, seen a hawk go skimming along only a few inches above the ground and suddenly dart into a bunch of quail that were huddled together in the high grass or low underbrush, but I thought nothing of it then—game was plenty. I was out after hawks and did not take the trouble to shoot them; and then I had at that time my duck-lodging, and did not want to take so much trouble as to waste time in shooting a few less birds and have to reload; and then if I were loaded with fleas for woodcock and saw a hawk perched on some tree I could not kill him, so would not shoot. But now, I carry a few shells loaded for his especial benefit, and I would again say, let every sportsman do this, and by watching the poachers and each doing all he can, we may yet have some sport with the ruffed grouse and quail. Gao. F. Alden.

McDONALD'S CORNER, N. B., Jan. 3.

Editor Forest and Stream:

In answer to Mark West's query, concerning coloring of ruffed grouse, I give the result of my observations, which have been confined to this Province. Of course it is only necessary to give the prevailing tint, as the markings are the same, I believe, everywhere. In the females I have noticed no difference in color, they being uniformly of a tawny red on the back, with yellowish brown throat, and quite dark breast markings. The back feathers of what we usually term the young cocks are of a deeper, duller red than those of the female; the breast markings clearly defined but pale; the throat of a pale yellow, and the tail feathers entirely free from red. The "old boomers," or gray-backs, are of an ashy gray hue, with the same markings. That they are old cocks I have not the remotest doubt, as they are larger, have larger ruffs, and are the only sort that I have found drumming out of season; and, furthermore, I have never heard of a "gray back" grouse chick being shot. Now I must mention the occurrence of the destruction of grouse by that distinctive parcel of cunningness, the red squirrel, I believe Mr. Bishop is right, for I, like him, have noticed that grouse are almost scarce where squirrels are plentiful, this year being a notable example. The cause never dawned on my mind, and I never was aware of Mr. Chicaire's bird nesting proclivities till the summer of '76, when I visited my old friend Charlie Perkins at Woodstock. Having a bone in my right hand broken, I had little else to do but watch what was going on in the trees which surrounded the house, and I soon saw that the squirrels were champing at the birds' nests. I loaded a six-pound Richards muzzle-loader, and allowing the forestock to rest on my right arm near the elbow, I paced the butt to my left shoulder and fired with my left hand. In this way I "ground slowly, but I ground exceedingly small." Last summer, after stealing everything available on the farm of our neighbor, Mr. J. McD. Bolyea, the little pirates proceeded to depopulate the pigeon-loft, and would have succeeded but for the family shotgun. As to the goodly droves, there are a good many in a squirrel hole, and a convenient hiding target, at which the small but can hurl any missile he listeth, thereby developing the muscles of his right arm, and preparing him for future operations against that disturber of midnight repose—the Thomas-cat. One squirrel will last longer as a target for stones than any other animal I know of. L. J. FLOWER.

New York, Jan. 12, 1892.—In a recent number I see you mention that the sparrows and sharpshin hawk are not injurious to game birds. I have repeatedly seen both of these hawks after quail, often hunting in couples. I have also known the sparrow hawk to kill the English snipe. I do not know anything about screech owls, excepting that one that I had in confinement in a barn managed to get out one night and his way into a pigeon loft where it killed six pigeons and then left for parts unknown. I think if I were a quail I would give "Breer Screech Owl" a wide berth.—W. HOLBROOK.

It seems illogical in the highest degree to charge the diminution of our game birds solely to the attacks of predatory birds and mammals. We can see no reason why these

vermin should have so increased within the past few years as to exterminate in certain localities the resident game birds. There is no doubt that they do much damage, and should be destroyed at every opportunity; but that they are the main cause of the scarcity of grouse and quail we do not at all believe. Nevertheless, we think that a premium put upon their heads by sportsmen's clubs would lead, to a certain extent, beneficial, and would have the effect of reducing their numbers. The sparrow hawk, sharpshin and mottled owl may occasionally pick up a young quail shortly after the hatching, but we have never seen anything to lead us to believe that this was the case. Moreover, in a course of bird collecting, extending over more years than we care to name, we have never found in the stomachs of the three species mentioned the remains of any bird larger than a robin. Of course, this is only negative testimony, and, as such, is of no value if opposed to facts, if facts can be adduced; if it is a matter of opinion only, each man will naturally hold to his own view.]

PARTIAL LIST OF MAMMALS FROM SOUTHERN LAKE GEORGE, N. Y.

The following list of mammals was formed from observations taken around the southern end of Lake George, in Warren Co., N. Y. As this part of the lake is now a favorite summer resort, most of the large mammals, especially the wilder species, have moved entirely from the vicinity, or else have retired to the more wooded sections on the eastern and northern parts, where the rough mountain sides afford them a safe retreat. The arrangement of species followed is that given in Jordan's Manual of Vertebrates, 1880.

Felis concolor. Linnaeus. Cougar, American Panther. The last record I can find of this formidable animal being seen in this locality, was one shot by Moses Dickinson, November, 1853.

Lynx rufus. (Guldenstadt.) Raf. Wildcat. I can find no positive record of a wildcat being seen here for a number of years, though there are reports of their having been seen.

Vulpes vulgaris. Fleming. Red fox, common fox. Very common. A number killed every winter.

Mustela americana. Turton. Sable, pine marten. Rare. More and more so each year.

Urocyon vulgarius. Cuvier. Least weasel. This species is probably less common than the following and occurs regularly, but I have never seen it.]

Putorius ermineus. Cuvier. Common weasel, ermine. Not uncommon. In this locality they all turn white in winter.

Putorius lasion. Gapper. Mink. Common. Especially along the lake shores. They kill great numbers of muskrats.

Mephitis mephitis. (Shaw.) Baird. Common skunk. Common. They do great good in destroying various insects, but at times they are quite destructive among poultry.

Lutra canadensis. Salmo. American otter. Seen every year, especially in winter.

Ursus americanus. Pallas. Black bear. Several were killed through the year 1880 and I know of at least two in 1881, one of which was seen swimming in the lake, and killed from one of the steamboats.

Procyon lotor. (L.) Storr. Raccoon. Very common.

Caryacus virginianus. Gray. Red deer. Rare. Still quite common in the northern end of the lake.

Megotis leucotis. Say. Little brown bat. Very common. Seen every summer evening.

Atalapha noveboracensis. (Eximien) Coles. Red bat. Not uncommon.

Sotela aquaticus. (L.) Fischer. Common Mole. Not uncommon.

Condylura cristata. (L.) Desmarest. Star-nosed Mole. Specimens seen.

Blarina brevicauda. (Say) Baird. Mole shrew. Common. Often seen dead along the roadside.

Scotoperus voluella. (Pall.) Geoff. Flying squirrel. Common.

Sturnus niger. Linn., var. *ludovicianus.* Fox squirrel. I shot a fine specimen of this species in 1872 or 1873, the exact date I mislaid. M. W. W. Lockhart informs me he saw one about the same time. I do not think it was an escaped animal.

Sturnus carolinensis. (Audouin.) Gray squirrel. Black squirrel. Common. The black form was unusually common this past year.

Tamias ludovicianus. Pallas. Red squirrel. Common.

Tamias striatus. (L.) Baird. Chipmunk. Common everywhere.

Arctomys monax. (L.) Gmel. Woodchuck. Common.

Ostrea fiber. L. Beaver. Long since passed away, though some of their dams are still visible.]

Zapus hudsonius. (Zimmermann.) Opossum. Jumping mouse. Not uncommon, though hard to see resembling a frog with its jumping through the long grass.

Mus domesticus. Pallas. Common rat. Common.

Mus musculus. L. Common mouse. Common.

Hesperomys leucopus. (Raf.) LeC. Deer mouse. Common. Good climbers, making their homes often in old bird nests.

Eutamias rutilus. Pallas. Var. *Gapprei.* (Vigou.) Opossum. Red-backed mouse. Dr. A. K. Fisher writes me that he has taken this mouse at Lake George.

Arctomys niger. (L.) Mead. Woodchuck. Common.

Fiber zibethicus. (L.) Cuvier. Muskrat. Common.

Erethizon dorsatum. (L.) F. Cuvier. Porcupine. Common. They have a habit of cutting off branches of oak trees, then going to the ground and eating the acorns.

Lepus americanus. Erxleben. Northern Hare. Common.

Lepus sylvaticus. Bachman. Gray rabbit. Rare. A few were to be seen along the plank road leading to Glenn Falls. Mr. Cusmer Shaw informs me he has seen them at Thompson's. OLIVER B. LOCKHART.

AMERICAN QUAIL FOR EUROPE.—On Monday last, a FOREST AND STREAM reporter saw, at the store of Messrs. Chas. Reiche & Bro., in this city, a fine, strong lot of about one hundred and fifty quail (*Ortyx virginianus*), which were intended to be shipped to Germany. This firm sends many of these birds abroad for public gardens of natural history, for private collections and to be turned out on the estates of noblemen and gentlemen. Large shipments are also made of wild turkeys, other game birds and song birds. A pair of common American deer were awaiting shipment, while among the arrivals were a pair of the German red deer. The order for American quail to be sent to Europe are reported to be in excess of the supply, and Messrs. Reiche say that they are unable to fill domestic orders.

HABITS OF WOODPECKERS.

HERE in ARKANSAS Co., Ark., in the heavy timber of the river bottoms, we find the winter home of all our nattering woodpeckers and creepers. Here "mast" is always abundant; for if one thing or a dozen things fall, there are a dozen others that are a woodnut, giving food in plenty. Nearly everything in the woods and field has failed here, this year, and a full crop, except the seeds of the great white sweet gum, and the seeds of the so-called tupelo gum. But there are seeds enough on the white gum to feed all the woodpeckers, mice, squirrels, jaybirds, robins and other beasts and birds—to nearly everything seems to eat them—that may wish to dine.

The red-headed woodpecker is here in full force, and busy from early morning until dark; storing up in the cracks in the bark of trees, and in holes in the dead trees the little nuts of this season's crop; and the jaybirds and fox squirrels are having lots of fun and good "grub," stealing his hidden treasures.

This bird and the great lazy fox squirrels are at continual warfare, and I have tumbled many a one from a woodpecker's tree while he was stealing his dinner by leaving my attention attracted to him by the noisy warfare which the redhead made in defending his property. The gray squirrel which is by far the most numerous squirrel here, does not seem to peck on the stored provender of this bird. If he does so, it does not give any notice. But the fox squirrel, I think, notices the redhead, and as soon as he cracks a nut and is away, darts up the tree in search of it. But if Mr. or Mrs. redhead discovers him in the act, they rush in with a sharp beak and great valor, and generally force him to lead a retreat empty handed, or without the coveted nut. The jaybird gathers and stores up "mast" for himself, but seems to take great delight in robbing the woodpecker.

The woodpecker, or *Picus* family, is a rather queer one, for we have the sapsucker (*Sphyrapicus varius*), a woodpecker seemingly expressly provided for pecking into trees after worms, that we think never does so at all, but pecks into them for and lives chiefly or entirely on the inner bark, or young sap wood, of the tree. Then we have this red-headed one that has still more curious habits, one of which, so far as I know, no naturalist or any of your correspondents have noticed, namely: in late summer and early fall he diligently plays the role of a fly-catcher. At that time of year he will perch on the tip of a dead branch of a tall and, often, a solitary tree, and dart and catch passing insects. "We boys" used to have a great deal of fun pecking into trees after worms. We would take small pebbles and throw them up over the tree; the red-head would see them coming, dart out to catch them, and sometimes caught the stone on the side of his head, and tumbled to the ground.

The red-headed woodpecker does not store up food for his winter supplies alone, for I have seen them store up cherries in July, and I have observed them in the fall storing up food in Illinois, where they do not winter. This bird is a provident fellow. If there is an excess of food to-day he industriously stores up some for future use in time of scarcity. But this is all both, for birds and animals that have the instinct for storing up food, do it any time of year, if they find a surplus of such food as they are very fond of.

There is still another point about our red-head friend—does he or does he not peck into trees after worms and insects like most other woodpeckers? Naturalists have, I fear, accepted it as a fact that he does this, without proof. I will not say that he does not do so, but I will say that I do not believe he does. I think him, like the sapsucker, an abnormal bird, like the true woodpeckers in every way, but without their food habits.

This is a glorious region for the ornithologist to winter in. Here he can see every day great numbers of hundreds of species of interesting migratory birds that further north he only catches glimpses of when on their spring and autumn migrations, and can study their habits at leisure. All of them are now in their very best clothes, or rather in their wedding garments. Some, to be sure, will put on a few more extras and plumes on their wedding day, and will be a little more gay in early spring, but their coats are now very fresh and perfect.

Crickett's Bluff, Arkansas Co., Ark., Jan. 10th, 1882.

HABITS OF WOODPECKERS—Indianapolis, Ind., 1882.—From personal observation I am sure that woodpeckers store away nuts for winter use. Many times in the hazy days of autumn, I have watched their busy motions as they flitted from the convenient dead tree to the small twigs of the beech tree, there obtaining a nut, and returning again to put it into some crevice or knot-hole; and many a squirrel have I seen now and then chattering and scolding when he approached too near their storehouse. As to squirrels storing nuts I am in doubt. I have often, when a boy, gone out with the men on the farm when felling trees to obtain the nuts from the cracks and holes where they had been placed by birds; but I do not remember ever finding nuts stored where they would be found if placed by squirrels. Besides, who ever saw a squirrel with a nut in his mouth, that did not, upon arriving at the first convenient place, proceed to eat it at once? S. H. M.

"ANIMAL MYTHS OF THE IROQUOIS"—Piney Falls, Tenn.—Editor Forest and Stream: While reading an article in your issue of Nov. 17th, under the title of "Animal Myths of the Iroquois" the supposition occurred to me that perhaps many foolish superstitions are saddled on to the Indians which poor Leo never dreamed of. During the last 60 years I have known a few of the Iroquois with some of the Nation of Indians, and also their manner of life, habits, and their (so-called) pagan rites and ceremonies, which a portion of them still adhere to. Now, in regard to that story as related to your correspondent on the Cattaraugus Reservation by a grandson of Cornplanter, I must say that I never was aware that any such traditional or imaginary superstitious notions were ever promulgated among them. I knew the Cornplanter (the name of course originated among the white people), and I knew his two sons John and Chance O'Fallon, the name which was adopted by the old man in honor of a white man that name, an especial favorite whom he chanced to meet during Sullivan's raid at Brady's Bend. Those sons were men of better sense than to credit their sons any such simple nonsense. Perhaps such stories might have circulated among the small children, and gained about the same credence that we give to Mother Hubbard's or to Mother Goose's tales. Those tribes of the Senecas knew but very little concerning the "ancestral" tales as they are called in the ethnological almanac. They had no fabled gods, spirits, nor did they worship any heathen Deities. They believed in

the one Great Spirit, the Na-ven-ne-u or Wa-con-dah, the creator of the universe. The average Indian is a close observer, he has keen perceptive faculties and pretty correct ideas of the workings of nature's laws, is slow to believe in any theories which he cannot fully comprehend. ANTLER.

BALTIMORE, JANUARY 17.—My friend, Mr. John Hartner, who is a crack shot, took a stroll yesterday with his dog and ran just in the rear of his own house, which is situated at the head of the marshes of Harris's Creek, when, upon his dog coming to a point, he was surprised to see a (Wilson's) jack snipe get up. He shot and killed his bird, and in a very short time killed five snipe, of which number he presented a pair to me, and I enjoyed them for my breakfast this morning. You would, too, be surprised to see how fat and plump they were at this unusually early time. This, I think, is the earliest I have known snipe to be killed. The idea of killing snipe yesterday, and on awakening this morning finding an old-fashioned snow-storm, makes me feel for the poor birds, for if they have many companions come with them and it should freeze up and get cold, it would be hard for them. J. P. Y. H.

[The above note was accompanied by the bill of a Wilson's snipe just taken from the bird. The date seems to us unusually early for Baltimore, but it must be remembered that until within a week we have had no cold weather at all to move the birds S. W.]

WINTER BIRDS—Hornellsville, N. Y., January 10.—Saw a kingfisher yesterday; it may be the same one that was here all last winter. Saw also a few shrikes or butcher birds. On the 19 I noticed a meadow lark. He looked as large almost as a pigeon. J. ORS FELLOWS.

BAT RIDGE, L. I., Jan. 23, 1893.—A flock of about thirty wild pigeons made their appearance here on the 23, (Sunday). Several were killed and I found them to be very plump and in fine feather. This is a rare visitation at this season with us. BAT RIDGE.

Game Bag and Gun.

THE QUAIL SEASON IN VIRGINIA.

ALL things considered we have rarely ever known a poorer season for birds than the one that has just closed in this section. It has not been so much scarcity of game, either has it been due in the main to the abundance of rain that began to fall heavily as soon as all appeared as if it was over, but the one cry from all quarters has been scarcity of cover.

Owing to the terrible droughts of last year the weeds that generally clothe the stubble fields after harvest with a dense growth were to a great extent scorched up as soon as they appeared above the ground, while the demand for pasture was so great that when the slight showers of early autumn fell the half-famished stock kept short on area of ground three or four times as great as in ordinary years is the case.

In thinly settled and infertile countries the sport, I hear, has been fair, the amount of stock being insignificant and covert more abundant.

I never recollect to have been so utterly at a loss to locate coveys as at this season. In ordinary years, as every quail hunter knows, the experienced sportsman or the experienced dog, even in an unfamiliar section, can guess pretty much at a glance where the coveys, if there are any, will probably be lying hid.

This year you might hunt the few patches of "rag weed," that in spite of everything clothed some unusually damp or fertile piece of ground, and seemed created as harbors of refuge for the birds that in the breeding season had seemed so motionless; but the chances were ten to one you would hunt in vain, and when as you were walking in disgust through some piece of woodland, with gun half cocked, and peering between the tree stems in search of some inviting looking country beyond, up would spring a covey and give you, perhaps, an awkward "sight" at forty-five yards through an eye bush. This kind of thing, sometimes fortunately in a more modified form, has been the history of the quail season of '81 in our section. The most untiring sportsmen have become disgusted. What birds there are, and there is no reason to suppose them scarcer than usual, have clung to the wood with a tenacity unprecedented, and vaguely hunting the woodlands of Virginia with the best of dogs, would only be to illustrate the familiar "saw" of the haystack and the needle. Most of us have had occasional hits of fun, an hour or two's good sport here and there, though thirty birds is the largest total in a day I have assisted in making—a very poor show even for the part of the country from which I write, which is distinctly second rate as a bird region.

The failure of the mast in the mountain has driven a good many "b'ars" into civilization, and the immense size of the tracks has been a wonderful topic of conversation to the negroes who, I notice, always confine their sporting ambitions in that direction to "trucking," and having quite satisfied themselves that the forest is as "big game" a man's, prudently refrain from further pursuit of sagacious truth. I see people inquiring through your columns whether it would be possible to procure birds in Virginia by netting. I don't know anything about the letter of the law in regard to that, but I should strongly recommend the gentlemen in question to turn their attention elsewhere. The consequences of such an attempt in this part of the country would be very disagreeable to the netters.

Wild turkeys are, I hear, fairly abundant, though I have not heard of many being shot.

There are two good packs of foxhounds within 12 miles of where I write. One has killed over twenty foxes—many of them red—at ready this year.

The mountain streams got so terribly low last fall we began to get very nervous about the trout. I was glad to hear, however, from a friend a day or two ago that he had camped late in September on a stream well known to me. That two years ago was nearly denuded of trout, and that he saw thousands of them in the pools. This winter so far has been most favorable for the young fry. A taste of the joys of West Virginia trout fishing experienced last summer has, I am afraid, rather overshadowed in my estimation our inferior though beautiful streams. Nature is at present in her most defiant state. The pen is handier than the rod or gun. The red roads are deep in that tenacious mud which a great pen

has made historic. The mountains are hid ten in rain clouds. The trees drip unceasingly. What little energy our dusky brethren possess is also in a moribund condition. Regardless that meal is a dollar and over per bushel, they choke the village streets with their lazy forms and cannot be hired for money so soon after their X-mas debauch. Are the South mountain and the Southern farm a far over to stager about under a load of keys and padlocks and to spend a third of their time in locking and unlocking bolts and bars? But enough of this. In sporting matters the Ethiopian is harmless or nearly so. The "phizz" of his half-loaded mustel, it is true, is occasionally borne to one's ears upon the breeze; but Sambo is not much on the wing, for if he were his area would soon be circumscribed by a few cross-logs around town. I would not curtail the rights of any man, black or white, but a laboring class without land or money or education, and with nothing but their muscles to depend on, can't go to themselves or their country by looking about with an army musket. In other countries and sections where honesty, thrift and morality exist in the corresponding class, constant work, outside a few legitimate holidays, is regarded as necessary to make an honest livelihood. Here amid idleness waiting to be filled and employers waiting to be served, these numbers of the earth and obstructors of I approve not, at a moral depth which, poor wretches, they cannot help, pay to burlesque the "gentleman as large." IRISWOOD.

WITH THE BIRDS IN TENNESSEE.

PORT ROYAL, TENN.

Editor Forest and Stream: Well, I will own up and admit that "12-Bre" of El Paso, Ill., beat me squirrel shooting. He says: "I do not think 'Bitch' uses enough shot." I gave as my load $\frac{3}{4}$ of an ounce of shot, and he gave as his load $\frac{1}{4}$ ounce. He forgets that I was using a 13-gauge gun.

I give the score of part of two days' squirrel shooting. Dec. 24—Load, 24 drams powder, one ounce No. 4 shot; 13-gauge gun—011010000. Dec. 27.—Lad, 24 drams powder, one ounce No. 7 shot; 13-gauge gun—1111. This is the poorest score I ever made. On the 24th I used a strange gun, "12-Bre's" score shows that he made eighteen kills in twenty-four shots. I have beaten that. I have killed sixteen out of eighteen shots; thirteen squirrels and one fox out of sixteen shots, and eleven squirrels without a miss. I know some of the readers of FOREST AND STREAM will laugh when they read the above score and say "Why did that fellow send that score to FOREST AND STREAM? I never would have said anything about it, particularly the four consecutive misses. I would have put some of the scores in the FOREST AND STREAM of Dec. 15 said: "Let me put it down in FOREST AND STREAM that heavy charges of powder and shot, and large shot for small game are a humbug." Let me repeat it here, particularly the large shot part of it. Look at my score with No. 7 shot.

On the 24th December I had good sport if I did make a poor score. After firing the third shot I heard a squirrel in the direction of the road, and I turned and went that way. Soon I heard the wheels of a buggy. The driver stops and gets out. His back is turned toward me, and I do not see me. I recognize him. It is friend P. He is in a dense forest, where he thinks no human eye sees him. This is the 24th December. He is an inveterate drinker, and I suppose he is drinking. No; he does not stagger. There! he goes to the buggy and takes out something. It is a jug. He takes it off some distance, conceals it behind a log; he gets into the buggy and drives off. Curiosity prompts me to go and look. Yes, there is the jug, behind a log, and covered with leaves. It is half full of whiskey. I was tempted to pour out the vile stuff, but did not. I saw him late that evening, and he was intoxicated. There, what is that rustling in the leaves before me? It is a covey of quail. There, they all rush under a clump of briars and huddle together, can even distinguish the white heads of the cocks. I cocked my gun; not for a pot-shot, however. I advance and they run to a thick patch of briars. I follow, but do not get a shot when they rise. Late in the evening I walk them up near the same place, and let fly my barrels. Did not ruffle feathers in the marshes. I have spent in that forest all alone in my glory, squirrel hunting.

I spent part of the Christmas holidays with friends in Robertson county at quail and grouse shooting. We had royal sport. Ruffed grouse used to be very numerous here, but for a long time they were supposed to be extinct. But on farms that have been protected they have again appeared. We heard of several coveys on a farm that has been protected for fifteen or twenty years. After a ride of several miles we found a covey on a farm. I was in the saddle and said: "Here's the place. In October I saw them all around here." Yes, it looks like a good place—a dense forest of 400 or 600 acres. He on Sport and Daisy. Our setters beat the woods as if they were used to that kind of hunting. This is their maiden effort after quail. Ditto all four of the hunters except our guide. We heard the ground "in abrest" about twenty paces apart. Ed is on the left, then "Birds," then Tommy and George. All at once Ed's gun rings out keen and clear and breaks the stillness of the forest. "What is that?" is shouted all around the line. "Ed shot!" Ed shouted and away went Reynard like lightning. "Pogue take the luck," said Ed; "I had No 10 in my gun. Give me some larger shot, B'rd." Hardly had he loaded when out burst a grouse with a roar and a whirr that completely upset our nerves and bewildered us. But George on the right was cool and worked it down. We beat toward it, but it got up wild as a hawk, and we did not get a shot. Then we best in the direction it flew for some distance without raising it. Then returned to where it rose and examined the "lay of the load." I then mentioned certain suggestions that a writer in FOREST AND STREAM made at the night and put shot of grouse, and told them that from the lay of the load, I had doubled turned to the left. We advanced, and up it rose not twenty paces before me, and I let fly the left barrel, but scored a zero. "There, he dropped in that tree top on the ground," they all exclaimed. We hurried on, and soon Daisy was on a staunch point. She had him fast. We surrounded the tree-top and when he shot out like a bullet I threw my gun in position to draw on him, but Ed was too quick for me, for with one of those marvelous snap-shots, for which he is famous, he cut the bird down with his little fourteen-gauge muzzle-loader. Ed is the crack shot of his county, and has killed more quail than any five men of his age in the county, but this is his first grouse, and he shook with a "back ache." We are all terribly excited and elated. We then best in an easterly direction and emerged near a large stubble field. We were now on what was, in ante-bellum days, the largest tobacco plantation in the world. It con-

ains 18,000 acres, and its owner was the largest tobacco grower in the business. He owned slaves by the hundred. "Look what large barns for housing and curing tobacco," said our guide: "I made the boards to cover that house, and it required 14,000 to cover it." "Listen," said one of the party. "Some fellow has started that fox," and in the distance we could hear the musical notes of a peck of hounds in full cry after Reynard. It reminded me of a scene in "The Chase," in Scott's "Lady of the Lake":

"The deep-mouthed blood-hound's heavy bay,
Resounding up the rocky way."

Then we heard the roar of a gun, and was sure Reynard had felt something larger than Ed's No. 10's; but it turned out to be a ducky shooting at rabbits. We then turned and beat toward our horses. Near where we had before flushed the first one we now flushed several more. They go in every direction. We advance and soon Daisy is on a point. The grouse pulls up wild, and Ed shoots but misses. Then a large covey of quail burst from an old fallen tree-top, and then bang, bang, bang, on all sides, and two "bite the dust." I advance and lay by both barrels, but get no meat. Every few seconds we "start" a covey, at and over us. George has not fired his old musket yet. Up goes a grouse and Tommie "turns loose" both barrels, but Mr. Grouse sails on "alle saanee." We work him down on the hill beyond. Soon we are there, and old Sport has him hard and fast. In a fallen tree-top again. With a roar and whirr he bursts from his cover and cleaves the air, and when above the tops of the scrubby oaks that cover the hill-side, simultaneously three scribbles ring out and the bird falls as dead as Baebeus. Then each man rushes up and swears he killed it. Then a young man with two large horns strapped to him (he was after Reynard) appeared upon the scene and said: "Yes, there was a covey of 8 of these birds, but I killed 3 of them." That terminated the hunt. Dear reader, if you are not already tired of this story I would say that if a certain stream flooded by the recent rains was fordable, I would be with those friends to-night to give the grouse a round to-morrow. George has not shot his musket yet.

BIRD.

A DAY'S SHOOTING IN CALIFORNIA.

WE are a long way off out on the western edge of the continent with two great mountains west and east of us, the snow-capped Sierras and the plain separating us from the East, our former home. The dear old associations that are photographed so endearingly upon our memory crowd back into vivid remembrance as we write. How we treasure up the bright recollections of our happy home away over there in New England. What a joyous boyhood we lived out in it and how little did we anticipate the building of a new one for ourselves here on the Pacific Ocean, that always seemed so far away, when we were told about it at school and had the great intervening space pointed out to us on the map. Recollections are not all that come to us, however, from the morning side of the "Rockies," for we are well within the reach of the FOREST AND STREAM, whose weekly arrival is always looked for and never fails to bring with it much of pleasure.

Our State is a hunter's paradise! Within one hundred miles of her largest city can be had for the seeking game of every description—including bear. The tastes of any sportsman, whether he choose gun or rifle, can be gratified within four hours' ride from the center of San Francisco. We return to our camp in the mountains and along the shores of the lake and can always be found in season sunning themselves on the slugs running in land and are easily reached in small boats. Large game frequents the foot hills that form the first line of elevations one must surmount in traveling from high water marks toward the Sierras.

Late in the afternoon I left town, with the popular manager of the O.idental Hotel, a brother of Mr. Weatherbee, of the Windsor in New York, and rode out on the Central Pacific thirty-five miles to Susan, a town of considerable importance and very conveniently near the lake or marsh lands for wildfowl. Sam P. met us on our arrival and reported birds in large numbers. Next morning we were up a long two hours before the sun and on our way to the creek, where the boat was lying and our guide waiting for us. All our traps were carefully stowed away, and we pulled on to the main slough, a wide, deep creek, fringed with tule ten or twelve feet high on either side. A long, tedious pull of three miles was at last finished. The oars were taken in, the boat pulled up, the guide going to the shore with his net in hand. We stationing himself in the bow, and I just behind him. The boat's head was pointed up a narrow branch slough and we made ready, for the fun was shortly to begin. "No noise now. Look out," Sam called out. Slowly and stealthily we begin to penetrate toward an open basin that lies a short distance ahead. The muffled oar makes no sound as it moves back and forth through the water, under the stern, and propels us steadily forward. We hold our breath in eager expectation; our guns fully cocked, and our position for prompt use. Just the other side of this next bend lies the open sheet of water. It does not spread over more than an acre or two, and is almost sure to be covered with birds. Oh, the glorious eagerness of that minute! The delicious sensation of impatience to see at once the birds we almost know are there. The boat moves out from behind the tule that has hidden it and we take in at a glance the whole space. What a heaving of wings and feet on the water! What a whistling and frantic endeavor to get out of harm's way! Here those wings are seen at recess. "Out, out, out," give them four barrels of No. 7 and pick up seven widgones, three mallards and two teal. Not so bad, even though there were so many to shoot at. We turn about now, get a duck or two as we seal back to the main slough, and then go on our way, till, reaching other branches or small creeks, we shoot them up and down with varying success.

The geese up toward the wheat-fields come down to the edge of the marsh all making a tremendous racket, for all the world like the shouting of a whole regiment full of boys' boys on to the bank that is bereft free from tule, jump quickly ashore, and as the geese rise, give them a double shot; but the distance is great and the shot small, and we get but two. Did you ever hear the horrible din that ten thousand frightened geese make? We do not exaggerate in the slightest degree when we insist that there rose from the ground before us at least this number. These flocks are famous for size; and the farmers who have a great deal adjoining the marshes are always ready to defend the crops against the terrible destructiveness of these birds.

Before finishing up the day we took a turn at the snipe.

The only birds we started were what are here known as English snipe. They are not quite so large as the Eastern bird so called, but very similar in appearance. They jump up one at a time, and fly but a short distance, and when the day is favorable, one need not hunt over more than five or six acres to secure a bag.

When we came to determine the result of our day's sport we found that we had secured ducks including mallard, widgones, teal, spring, and canvas-backs, two geese and twenty-one snipe. The quantity seems large, but our success was not unusual. We have friends who average about this quantity for every day's shooting the season through.

Mallards can now be bought in San Francisco markets for \$2.50 per dozen; teal, \$1; spring-teal, \$1.25; widgones, \$1; canvas-backs, \$3.25; quail, 25 cents, etc. These figures certainly point to an over-supply of birds. If you are seeking for a hunting ground where game is never wanting, that is accessible and free from the discomforts of winter cold, this is the time and place to go a long way off, and it costs much time and money to get to it, you never will a lover of sport in the field regret having crossed the country to pitch tent with us.

E. B. C.

FLORIDA SHOOTING.

SANFORD, Fla., Jan. 19.

Eight miles from here up the St. Johns the ducks, chiefly widgones and coots, are found in large numbers. I have gone to the grounds several times, and always got a few birds; though, having no decoys, have made no large bags.

Toward dusk and in early morning the birds are constantly flying, and the possibilities of making large bags seem fair. The last time I went up the river I took blankets and camped in the large Speir grove on the bank of the river. This grove, with its large orange trees and clean, dry ground makes a fine spot to spend the night, and in the morning one can start out fresh and rested to try the ducks.

When I started out in the morning I came across a small flock of coots and tried the effects of a thread-wound cartridge at one hundred yards. Result: Three coots—one minus his head, which I found several feet from his body. The next time I fired was at a flock of curlew sitting on the bank about ninety yards away. The distance was too long for an ordinary cartridge, so I again shot a thread-wound, but it mangled the bird dreadfully. Should think they could be used at deer with success. Has any one tried it? Three days ago I was after quail, when my pointer stopped near a bunch of grass, when, to my horror, I saw a large rattlesnake coiled and ready to strike the dog. I fired immediately and hit the snake about a couple of feet from his tail; the charge of shot passed so near the dog's head that he seemed stunned for a second and the snake's head vibrated as if to strike, so I shot again and blew off its head. I had just counted the rattles on the monster's tail—there were eleven rattles and a hutton—when I heard something crawling through the grass and saw another rattler approaching the dog. This one was not so large, having six rattles, and a button. In quail shooting here it behooves one to use one eye in looking for snakes; keep the other on the dog's movements and walk by faith.

I understand that all the game laws for Florida have been repealed, and that there is now no restriction on any kind of shooting. Am I correct? TRUMP.

[Yes.]

ARKANSAS TRAPPERS.

CAMP ON LITTLE RED RIVER,
Jan'y 10th, 1892.

Stimulated by an inordinate desire of experiencing woodcraft in its wider sense, Chas. E. Conruff, Joe McCluskey and J. Smith Stimmel, of Greene county, Ohio, left their homes early in November for a winter's campaign in White River swamp. Being unacquainted with the nature of the country, they required several weeks to gain any knowledge of the best localities, therefore their trapping operations have been somewhat limited, still both sport and catch have been entirely satisfactory. It was not until early in December that it was the writer's good fortune to join the "jolly trio."

From close observations, I must say that "coon and mink, the principal trapping here, are scarcer than the best trappers have known for several years, from the fact we suppose that the acorn crop is almost a total failure. But what varmints are captured are very fat—making our supposition less probable. Signs also show they have emigrated eastward, but in next month we anticipate a fair catch.

Practical trapping has the same basis as any other business. One cannot make good success at it unless favorable opportunities are at hand, hence the amateur should not imagine too much in the catch, nor paint camp life in too bright colors. None but the genuine sportsman can find pleasure in camp life for an entire season. The Arkansas apparently are beyond a doubt natural woodsmen, for they apparently can extract every particle of pleasure in camping and its appendages. Lengthy tramps, perhaps carrying a venison, a pack of furs, or any load that it may fall to our lot to carry, serve only to give impetus to our weary steps, or relish to a dinner of boiled hams, roast 'coon, hot coffee, "sow belly," etc. We enjoy flu sport, deer hunting, when our "run" of traps do not require our entire attention, frequently seeing ten and fourteen each day. I do not mean that that number is brought into camp, but we have venison sufficient to supply ourarder, and several pairs of antlers, of which any buck would feel proud, ornament the ridge pole of our tent. Whether or not gun wads increase in value from ten cents to one dollar, more similar ornaments shall occupy like positions.

Our operations in the future will be confined to the vicinity of the mouth of this river, which is the best trapping section in this section, as it is in the wilderness. Perhaps our camp will not be as attractive to the near citizens. We shall have a chain of some thirty lakes to trap, a good many for deer and the heavy eme brakes for hares. Then we shall expect to send extraordinary reports of trapping and hunting, and probably an account of an exciting bear hunt. J. Lee Smedley, a practical trapper and fur dealer, Dugdale, Lee, will join us shortly for hunting and trapping for several weeks. He comes down solely for sport.

One of our party has killed a gray eagle measuring 7 feet 8 inches from tip to tip of wings when spread. This was the largest bird any of the party has ever seen, and in consequence each one has a part of the bird as a curiosity.

The weather this season has been very mild, which has a tendency to depreciate value of furs.

WALTER D. CHILDRERS.

GAME IN OREGON.

EUGENE CITY, Or., Jan. 6, 1892.

Editor Forest and Stream.

Owing to long-continued and heavy rains this fall our sportsmen have spent less time than usual among the fowls. On the prairies, in the stubbles and through the marshes there are countless thousands of mallards, teals, spring-tails and widgones. Decoys, snik boats and like contrivances for the slaughter of ducks are unknown, yet a great many are shot at fly-ways as the ducks pass to and fro from their feeding places. Canada geese and snow geese are not so plentiful as early in the fall, but still afford fair shooting. Feeding altogether on grain they became very fat. Snipe shooting is poor, as all the meadows are overgrown and probably will not be first-class till spring. Hundreds then may be shot in a day on the green flats a few miles from town.

Ruffed grouse are pretty well thinned out near by, but back in the sparsely settled districts they are plentiful and fifty a day to a single gun may be bagged. Not one out of a hundred of these birds killed are shot on the wing, but with the aid of a small dog of doubtful pedigree they are treed and potted, sometimes several off the same tree or bush.

The past season was very favorable one for our only kind of quail—the mountain quail. As they are shy and generally found in thick cover, very few are shot, yet dozens of them are trapped and sold. Should any one wish to try the experiment of transplanting these beautiful birds to the East they would find no trouble in obtaining a good start of quails at a low price.

In the mountains deer are being slaughtered by hundreds, in many cases solely for their hides. Already, where herds of the white-tail could once be seen, they are now exterminated, and unless the legislature passes suitable and strict laws, deer hunting in this State will be a sport of the past.

I was out shooting one day last week and got eleven ducks and geese. With a full choke Fox gun, one goose was perforated with 36 No. 4 shot while passing low over head.

J. S.

A DEER CHASE ON LOOKOUT MOUNTAIN.

CHATTANOOGA, Tenn.

HAD you been sitting on the bluff at Rock City, on the brow of Lookout Mountain, on Wednesday, the way, is a "park" now, last Wednesday, you would have seen some very pretty music made by nine hounds after a four-year-old buck. The deer had been caught previously and allowed to recuperate his strength and energies, when it was published far and wide among lovers of such sport that he would be turned loose at Hawkins' Spring, and everybody and his dogs were invited. At the appointed time there assembled some twenty or twenty-five gentlemen, a few of whom brought the best dogs of their packs. Joe Dobbis brought four, "either of which could catch him." Frank C. Ulrich, two; Ed Tally, one; Tom Bradley, one, and two other gentlemen one each.

When all was ready the buck was driven out of the "park" at the end of a lane, some seventy-five yards from where the dogs were held; and Mr. Hawkins shouted, "Let 'em loose." Dobbis' Lead got a sight of the deer and was off after him in a jiffy. Crutchfield held his dogs longer, saying, "I want to give Dobbis' dogs a good start." Lead seemed to understand that the buck was circling around the field, and endeavored to head him off. He thus gained about fifty yards the start of the rest of the pack. Crutchfield's dogs took the trail, not having had a sight, and were off—all being lost to sight but not to sound. We started to follow, but perceiving the circle that was being run, retraced our steps and waited at the other end of the lane. Here they came in full cry, Dobbis' Lead still ahead, closely pressed by Crutchfield's Pan. It was a glorious sight, and the sport of every man present seemed to have entered into the sport, for not a sound could be heard but the cry of the dogs and an occasional halloo from Dobbis or Crutchfield, who followed the hounds. Just as they crossed the road up came Tom Bacon with his pack, all tied, but with heads up and ears well forward. They showed their eagerness to "go in." Upon being questioned as to why he did not "put them in," Bacon quietly replied that "some folks say Dobbis' dogs kill sheep, and I won't run with him." After about four or five miles, some being faster than others, but still giving good music, the deer took the creek, which, from recent rains, had become flooded, and the dogs gave up, all except Crutchfield's Guess and Tally's Muse. Soon after crossing the creek Guess overtook him and caught hold of the lane, checking him so that Muse caught at the throat, but seized a piece of hanged instead of the hide. Guess let go his hold to go to the help of Muse, when her hold on the damel broke loose and off went the buck into a lane down the lane, over the fence into Martin's yard, where he was again caught by two curs in the yard. They were beaten off, as were also Guess and Muse, and it was found that the deer wasn't at all hurt, but only scratched; so we was taken back to the park; and when he gets over this one we will have another chase out of him.

The deer seem all to be leaving the mountains and flocking into the valleys, and in one or two instances they have taken up with the cattle in pastures in the weight of farm houses. About six weeks since I saw one quietly grazing in a deep ditch within a hundred feet of the fence. Another was killed with elus by a party who were fishing about three miles above town while it was crossing the river; and on yesterday I received word from a friend across the river, within sight of town, that a fine buck had been seen for two or three days successively in his pasture, and that he wanted me to bring over my dogs. How do you account for their becoming tame? It is not from fear, as you may reckon, for the winter has been very mild, and at the time the grass is as green as in spring, and many of the trees are budding.

Do foxes ever take water? I have heard divers and sundry opinions, but would like to hear some facts.

I. C. LODOR.

[It is not an unusual thing for a pursued fox to take to the water. We recall several such instances that have come under our own observation. We should like to hear from Col. Tucker on this point. Another favorite stratagem of the fox, when pursued in winter, is to lead his pursuers on to the thinnest kind of ice, over which he can skim in safety, and when called over the water he will swim. As a species Reynard always makes for the rugged edge of a whirlpool, and many a ducking has he given the hounds in this way. We know of some instances in which valuable hounds have gone under the ice and been lost in this way.]

twenty shots (breach-loading) only thirteen were where they ought to be; one goes three in, to the left, three two in, and the other three not quite so bad.

I can't think with Mr. Van Dyke that there was "no fault with the rifle, no fault with the factory ammunition." One or the other or both must have been wrong somewhere. If both were without fault, this wild shooting at such a short distance could not, in my opinion, be caused simply by the bullets being directed with their axis at a slight angle to the axis of the barrel.

Too much grease on the bullets will frequently cause uneven shooting, particularly in cold weather. The standard fixed ammunition does not always fit all rifles alike. The No. 1 buckshot with patch might have fitted the bore just right, while some of the conical bullets might not have been large enough to receive any impress from the lands, thus going out without revolving. However it may have been in this particular case I am confident of it; I can't take any one of five or six thousand masses of rifles, 32 cal., 30 in. barrel, and with standard fixed ammunition made by the W. R. A. Co., place 95 out of 100 shots inside of a ring, three-fourths of an inch in diameter, at 25 yards, loading at breach and firing from immovable rest. The other five shots will go within an inch of the centre of the other shots. N. E. M.

CAUSE OF A PREMATURE EXPLOSION.

SOMERVILLE, Mass., Jan. 2, 1882.

Editor Forest and Stream: I have a few words that I would like to say about gun accidents. Not about the idiots who "didn't know it was loaded," nor the ones who were careless with firearms. But there are instances where accidents are seemingly unavoidable, and I once came near being a victim of such one. In old sportsman—and a good one, too—with whom I used to hunt once said to me, "Talk about gun accidents; I tell you it is all carelessness. A gun never goes off without some cause or other; and a man who gets hurt with one is a careless fellow, to say the least." This I always supposed to be true, and, as I have always made some pretensions to carefulness in handling firearms, have never had a premature discharge.

As to the story. Early in September last a trusty companion, whom I shall call Jack, and your humble servant, started for New Hampshire for the purpose of gathering in a few birds and having a good time generally. We stopped with an old man who lived alone on a farm away from "town" about three miles. One morning Jack and I had been out to try the grouse. We had been out perhaps an hour or so when it began to rain and we went back. We had just reached the house when it commenced to rain in earnest, and as we were wet Jack requested to remove his charge before he entered the house. I was wiping out my right barrel and Jack had his gun laid across his knees and was wiping the outside of the barrels when there was a deafening report and the room was filled with smoke, glass rattled from the window and things seemed lively for an instant. "Jack, are you hurt?" I exclaimed. "No," he replied. "Then what on earth is the matter?" "I don't know," said he; "only the gun went off in my hands." Jack declared that it was at half-cock and, as I knew him to be a man of truth, I was at a loss to account for the accident. "Will the gun go at half-cock?" asked I. "Try it," Jack half-cocked it and could not pull it off. I tried, with the same result.

Here was a pretty mess of it; a hole through the door and beyond, in the next room, a window smashed, and, worst of all, a gun that would "go off" without a cause. I was not satisfied; I wanted to know the reason why that explosion occurred, and I went to work to find out, if possible, the reason. Upon examining it I found that the right or left-hand trigger was a little too long, and just touched the guard, so that when the hammer was raised the trigger could not get forward enough to let the "sear" catch properly and, consequently, down went the hammer and the explosion followed. We removed the guard and filed off the end of the trigger and it was all right. Now, this gun was not an old, worn out thing; it was not one of the pot-metal guns that are sold for two or three dollars. It was purchased just before we started and bran new; it was made by one of the best-known English gunmakers, and I felt that it was no better than criminal carelessness on the part of the workman to let a gun go away from the factory in such a dangerous condition. So I would advise all men who own or handle guns to look and see if the triggers clear the guards all right, and this precaution may save some one a limb and possibly a life. If the gun had been made with rebounding locks such an accident would never happen. Too much cannot be said in favor of rebounding locks, as far as safety is concerned; and, if I could not have them replaced, I would not have them there from my gun at the full value of the same. For this, I consider the rebounding lock safe, and safety is something that I aim at. The older I grow the more afraid I am of my gun.

The old gentleman that we stopped with was away from the house at the time of the accident, but the "good-natured old soul" took a common sense view of it, and we had no trouble in fixing the damage with him.

I would add, in conclusion, that I never saw ruffed grouse so scarce as they were then. We were up there a week and saw only two. And that they were young ones said "poor as crows." This was at Hancock, N. H.

We had some fun with hedge hogs, and, as Jack had never seen one before, it was amusement for him to send a charge of No. 4 Newcastles shot at them and see the quills fly. We killed seven while we were there. IRON RAMROD.

THE CAYUGA COUNTY LAW—Cortlandt, N. Y., Jan. 1882.

The restriction placed over sportsmen forbidding the shooting of ruffed grouse and quail in Cayuga county for the term of three years has been repealed. It proved too much of a luxury to hunters that disregarded all game laws, besides an aggravation to the founders. Can the supervisors pass a special act in regard to this matter when it is provided for in the State game laws?—H. M. [Sec. 37 of the law provides: "It shall be lawful for the boards of supervisors of any county, at their annual meeting, to make any regulations or ordinances protecting other birds, fish, or game, than those mentioned in this act; and also for the further protection of such birds, fish, or game as are in this act mentioned, except wild deer, and to this end to prohibit hunting or fishing in particular localities or waters lying wholly within their respective counties for limited periods and during certain months of the year, and to make any regulations and penalties for the violation thereof, and adopt all necessary measures for the enforcement of such punishments and collection

of such penalties; and such regulations and ordinances shall be published in the papers of the county in which the session laws are published, and a certified copy thereof shall be filed in the office of the clerk of the county."]

THE HUNTERS' TRAIN.—Last Sunday morning's train on the South Pacific Coast Railroad consisted of four cars of hunters, all filled, including those who went up the evening previous, and of whom we returned on Friday evening, amounting to nearly two hundred and fifty. Debarcation begins at Alvarado, and a few drop off at Newark and Mowry's, but a large majority leave the cars at the draw bridges, and none go beyond Alviso. Those who go up to spend the night have had shanties erected near the road wherein they can comfortably lodge and be ready for their sanguinary work by the crack of day.—Alameda Argus.

A gentleman connected with a leading Eastern sportsman's journal, and who is evidently familiar with the hunting grounds about San Francisco, sends us the above, in a letter, with the following comments:

"Only think of it! two hundred and fifty pot-hunters, each armed with an old musket, a tin can of powder, a bottle of shot (and doubtless two bottles of whisky) let loose every Sunday during the winter to blaze away at every living thing, be it sand-peep, cat, hen, or whatever else may show itself within range of their gunshots. This is not exaggeration, but a true sketch of the Sunday hunters seen in California. Remember, also, that this is only one of the dozen grounds near San Francisco that are thus overrun. Shooting should be stopped on Sunday. I do not put it on any other moral ground than that it is an easy and pretty effective way to prevent the decrease of game birds."

Our friend is partly right and partly wrong. He is right, at least, in deprecating the better-skillet style of shooting that such an array of wild hunters are apt to indulge in when they find themselves let loose upon the fields and marshes. Of course they cannot all be gentlemen, nor most of them likely to have much consideration for the rights of the country people over whose lands they roam. But we doubt whether they kill so many ducks that the number will be noticeably depleted the following season. These birds are migratory, and each year's new broods seem to be quite as numerous as the preceding one. The Alameda marshes are convenient to the metropolis, and so long as "the army" confines its operations to that section, comparatively little harm can be done. But we can readily understand how disastrous might be the result if this motley brigade, when it swarms about, happened to alight on a section frequented by the native quail. In that case we might well contemplate the situation with alarm. As for the Sunday exodus, it is probably that that is the only day in the week on which these men, or most of them, can leave their business or labor to indulge in rural recreation. In such case their action can be regarded with a considerable degree of leniency. At all events, if no stones were cast at them until by some one who is himself without sin of that kind, the shower of rocks would not, we opine, be an alarmingly heavy one.—Sacramento, Cal., Dec.

BRASS AND PAPER SHELLS—Philadelphia, Jan. 7.—Editor Forest and Stream:

As it seems to be generally admitted that brass shells are superior to paper ones in the matter of penetration and pattern, it would be interesting to know precisely what the percentage of gain is, and as Mr. Greener has probably fired as many experimental shots as any man in the world will get out of his gun, taking as an example a 9 to 10 gauge 10 gauge gun, using as a uniform charge 4 1/2 drams powder and 1 1/2 oz. No. 4 shot, with 32 inch barrels and choke bore. Also will he state what the highest possible pattern is at 40 yards, using the above charge and No. 4 shot, soft or chilled. Another thing would be advise the use of brass shells unless the fore end of the barrels are especially heavy to withstand the strain consequent upon driving No. 8 wads through them and quite likely Ely's best or hardest felt. In other words, is there not great danger of the barrels bulging at the choke if wads are used two sizes larger than the gauge of the gun, as would be the case in using brass shells. I would not be afraid of this using the Parker, Colt, or almost any American made gun, as they are left heavy at the muzzle with a view, I presume, to the danger suggested, but with most of the English guns I could, though they will no doubt stand any wad the paper shell would take without bulging. For field shooting I regard brass shells as a first-class nuisance, but, for duck shooting, or any other shooting where the great expense of using heavy wads, they are par excellence and that they are superior to paper ones in penetration I have no doubt, but just how much is a question I will ask.—PINK LEGS.

COLUMBIA COUNTY, West Winsted, Conn., Jan. 9, Editor Forest and Stream:

Three weeks ago I had the pleasure of a trip into Columbia county, N. Y., partly for sport and partly for business. On the way stayed overnight at Great Barrington, and had the pleasure of a talk with Mr. C. H. Sage, a noted sportsman, and doubtless well-known to many of your readers. His dog "Zoe" is a beauty to look at—and doubtless a grand field dog. Mr. Sage is a genial, pleasant man to meet. Partridge, in the region of East Chatham (where Mr. Granville Hills' dog "Tillie," was unfortunately shot last fall), are not so plenty as in former years. Yet, in a day's tramp, by hard work, can pit up twenty or thirty birds. I am fully converted to the practice of using heavy shot, say 4's or 5's, in shooting grouse. Heretofore I have used No. 4's. These may kill in an open shot; and will, if you hold on the bird and shoot within a reasonable distance, but they will not now down a pine tree and then kill. I go on the principle of shooting at every bird that rises within gunshot. It's a poor shot that is afraid of missing. The grouse is the noblest game-bird in these parts. He is a royal fellow! I love to see one holl out of a cover in front of a dog, and then I love to employ both barrels at him, and then, perhaps, watch him go right on like an army with banners. You have the sport of hunting him up, plucking him and shooting again. I also had the pleasure of visiting Hudson and some of the sportsmen there. If appearances go for anything, Hudson may be proud of her sportsmen. They are gentlemen. Mr. Granville Hills is the owner of us fine a pair of red Irish pups as one can find in a week's travel. Daisy and Snap, 5-mo.'s old, out of Tillie by Max Wozzpa's Chief. It was a treat to see their intelligent and accurate performances. Killed in the region of Winsted, Conn., are not numerous, but the prospect for next fall is good. Very few have been found.—REXELTON.

DONGING DEER.—Aaron Taylor, of the "Bog" was arrested by Officer King, of this village, on Wednesday of last week, upon a warrant issued by Justice Bugbee, charging

Taylor with pursuing deer with dogs in the South Woods. Mr. Taylor appeared, in common with a great many other persons, to be of the opinion, that dogging deer was not prohibited by law. At the trial, which took place on Thursday and Friday, the evidence was plain enough to justify a conviction, which "Squire Bugbee did not hesitate in awarding, and Mr. Taylor was fined \$25 or the alternative of twenty-five days in jail. Mr. Taylor, having the money, as indicated he ought, for according to his own statement he had killed, with the aid of his dogs, \$75 worth of venison the previous week, forked over the fine and was allowed to depart. This conviction is a seasonal one, and it is expected that others will immediately follow, for the ice being once broken, evidence in other cases will be more easily obtained. This is the first conviction in the county, we believe, under the new law, but it is not likely to be the last prosecution. Enough should follow this to break up the unlawful practice of pursuing deer with dogs in St. Lawrence. It was mainly through the efforts of Assistant District Attorney Ellsworth that Taylor was arrested and brought to trial.—Canton, N. Y. Advertiser.

WISCONSIN SHOOTING GROUNDS—Chippewa Falls, Wisconsin, Jan. 17.—A mouse was killed by the "boys" at one of the lumbering camps to the north of us a week or two since.

The animal is said to have been a large one, the antlers having a spread of over three feet. Moose were years ago plenty in this State, but to see one like this now is rare. Deer have been numerous the past season, and large numbers have been killed, mostly by professional hunters. This section offers a good field for sportsmen in search of such game, as well as having a liberal supply of the smaller varieties in the catalogue of game animals and birds. The section of country between the Wisconsin Central and Northern Wisconsin roads is mostly wilderness, and abounds in game and fish. A railroad is being built from here northwest to strike the Northern Wisconsin some seventy miles up, affording another means of transportation.—BADGER.

MICHIGAN'S FIRE-ARM LAW—Grand Rapids, Mich., Jan. 21, 1882.—Editor Forest and Stream:

In your issue of Jan. 12th last (vol. 17, page 470), under the caption, "A Wholesale Sale of Fire-Arms," you give an abstract of the law of Mississippi to prevent the sale of fire arms. It gives me pleasure to know that one more State has fallen into line. In 1869 Michigan enacted a similar law, which may be found on Page 86 of the transactions of the Michigan Sportsmen's Association for 1881. It seems strange that the various societies for the Prevention of Cruelty to Animals should be so solicitous to keep sportsmen from killing pigeons for food, and yet have no care as to how much they shoot themselves or others by carelessness. Perhaps man is not so much value in their eyes as the low animals. I hope similar laws will be enacted and enforced everywhere.—E. S. H.

THE GEDDES CLUB—Geddes, N. Y., Jan. 19.—The Geddes Shooting and Fishing Club held their third annual meeting Tuesday, January 17, 1882, at the office of E. M. Klock.

The following officers were elected for the ensuing year: President, Edward Eault; Vice-President, Vincent Case; Secretary, George G. Cotton; Treasurer, Edward M. Klock; Executive Committee, Edward E. Eault, Harace Bronson, William H. Surrill. The treasurer reports the club in a prosperous condition, all debts paid and some \$50 in his hands. The club has forty-two active members. We have held monthly game ball shoots for a gold medal (the property of the club) to belong to the member who wins it three times in succession, but so lively has been the competition that but two members have held it twice in succession in two years. We find this has done much to keep our club together and interested. We have your paper on file, and it is read with much interest, and sometimes provokes a good deal of discussion.—GEDDES SHOOTING AND FISHING CLUB.

A NATIONAL ASSOCIATION—East Saginaw, Mich., July 20.—Editor Forest and Stream:

At the seventh annual meeting of the Michigan Sportsmen's Association, held in this city Tuesday and Wednesday of this week, the Secretary was instructed to confer with the secretaries of other State associations, with regard to calling a meeting of representatives from as many States as possible to take action towards forming a National Sportsmen's Association. We therefore request the secretaries of the different State associations, as well as all other parties interested, to send their names and addresses to the undersigned as soon as possible, so that this excellent idea may take definite form at once.—WM. B. MERRON, Secretary Michigan Sportsmen's Association.

LAKE GEORGE SPORTSMEN'S ASSOCIATION—Chicago, Jan. 18, 1882.—The annual meeting of the Lake George Sportsmen's Association of this city was held last Tuesday evening at 49 South Clark street, Vice-President Gillespie in the chair.

The members present were Messrs. W. G. Payson, H. B. Foss, E. S. Douglas, E. T. Martin, F. Barnard, S. and W. Woods, H. Goodman, Perry, White, Burroughs, Kimbark, Jones, Worthington, Thomas, Peach, Hunt, Darling, and Farmer. Professor R. A. Twitche was elected President for the ensuing year. A. Twitche was elected President and Secretary. Mr. White Treasurer, Mr. Hunter Assistant Secretary, Directors, Turtle, Martin, Woods and Foss.—TEN BOS.

TENNESSEE—Port Royal, Jan. 14.—The quail season does not expire in our State until March 1, but there will not be much shooting done from now on. A few more ground final shoots will wind up the season. We will have a fine lot of birds left over for breeding. I went to a pond last Saturday duck shooting and in route flushed several fine coveys. I bagged four. I intend to give the ducks a round late this evening. If I had a boat I could make fine bags. I intend to get a boat, and anticipate the sport. What a fine evening that is for squirrels! But never mind; I will give them a round soon. I do dearly love the sport.—BIRDO.

DESPOILING THE ADIRONDACKS.—The Ilon (N. Y.) Citizen remarks:

"Some wealthy Boston tanners have purchased the hemlock bark on 25,000 acres of timber land in the Adirondack region, and purpose soon to strip the bark. We thought the region was contracted to preserve the great northern wilderness for the purpose of promoting the rain fall of the State, and of supplying the Erie Canal and Hudson River with water enough to float boats. We can't spare hemlock bark for tanning purposes any longer. Let some one invent a substitute."

LENGTH OF BARRELS—Red Bsk., N. J., January 23.—"Butter Ball" wants to know why a No 12, 23-inch barrel cannot be made to shoot equal to a 30-inch. I have used both lengths in a 12-gauge and find the 28-inch gives equal shooting in every respect, and is preferable, as you can get on a bird much quicker in the cover. The short barrels will take finer powder, and should they be bored the same as the 30-inch, no perceptible difference will be found in the targets.—WILD.

INDIANA—Indianapolis, Jan. 14.—Shooting in this region this fall has not been good. Have never known quail so scarce. The long continued cold weather and deep snow of last winter destroyed both quail and rabbits. Woodcock shooting was unusually good during early part of the season. I obtained woodcock on each of my first three trips after quail, finding them in crows' nests and unexpected places. I and a friend obtained the finest pair of woodcock I have ever seen, during a day after quail in the latter part of October. We had them prepared and mounted by Jack Besley, a noted taxidermist, of Lebanon, Ind. They are beauties.—S. H. M.

THE UNKNOWN GUN CLUB, of Brooklyn, held its annual meeting on Friday evening last. The following officers were elected for the ensuing year: Henry Knebel, President; John Schlemmer, Vice-President; Henry van Staden, Sr., Treasurer; Henry Baruth, Secretary. It was agreed to shoot for two prizes at every match on the classified plan, at Dexter's, on the fourth Thursday of every month. The first shoot will be on Thursday, January 26, at pigeons and glass balls.

FOX HUNTING.—Hornellsville, N. Y.—A great many red foxes are being shot here this winter. Fox hunting here is all done on foot. The hunters all want slow dogs. They say that a fast dog will run a fox out of the country.—J. OTIS FELLOWS.

DOUBLE WADS WANTED—Indianapolis.—By the way, why don't one of our enterprising ammunition manufacturers make a suitable prepared gun wad thick enough, so that one will do over powder, and save the trouble of always having to put two in? A box of wads might consist of one-half thick wad to go over powder and the other half still thinner than those now in use to go over shot.—S. H. M.

EAST SAGINAW, MICH., GAME PROTECTION CLUB.—President, A. H. Mershon; Vice-President, William J. Loveland; Secretary and Treasurer, William B. Mershon. Executive Committee.—A. H. Mershon, George L. Remington and H. B. Roney.

BROOKLYN GUN CLUB.—The following officers were elected last week for the ensuing year: President, George W. Fort; Vice-President, John M. Gill; Secretary, A. Elmendorf; Treasurer, Dr. Monroe. Executive Committee.—Messrs. Walter, Appel, Creed.

VIRGINIA—Charlottesville, Va., Jan. 19.—Game is very scarce, and almost all the land for miles around is posted, so that there is a poor chance to break dogs or to keep them in practice.—J. T.

PORT JEFFERSON, L. I.—January 17th. We have plenty of ducks here this winter. I go after them every day that the weather will permit. I have just returned from a month's shooting trip in South Carolina, where I found game very plenty.—W. H. R.

Sea and River Fishing

FISH IN SEASON IN JANUARY.

| FRESH WATER. | |
|--|--|
| Pickered, <i>Boox reticulatus</i> . | Yellow Perch, <i>Perca flavescens</i> . |
| Pike or Pickered, <i>Esox lucius</i> . | War-mouth, <i>Channorythys gulosus</i> . |
| Pike-perch (Walker's), <i>Pike</i> | Croppie, <i>Pomoxis nigromaculatus</i> . |
| <i>Stizostedion americanum</i> , <i>Pike</i> | Bachelor, <i>Pomoxis annularis</i> . |
| <i>gracile</i> , etc. | |
| SALT WATER. | |
| Smelt, <i>Osmerus mordax</i> . | White Perch, <i>Morone americana</i> . |
| Striped Bass or Rockfish, <i>Bocosa</i> | Pollock, <i>Polyichthys americanus</i> . |
| <i>tinectus</i> . | |

ARMEN cap-a-pie with baskets, bags and rods, The angler early to the river ponds; At night his hooks the woeful trout pronounce, The jigging bait a ton, the fish an ounce. (Putnam's *Valde Accurat*, for Trout Fishes, London, 1880.)

HALCYON DAYS.

AN EXPERIENCE MEETING INVITED. MEMORIES of a lonely camp, a picture of a weather beaten tent beneath a giant pine, the midnight music of waves upon a pebbled beach, all these come floating up to-night on the bosom of the storm wind and with them the remembrance of a duty unperformed. As the writer in August last mournfully unjoined his rod at the close of his tenth annual sojourn in the mountains amid the bass, it was the determination to forthwith share the pleasures of the tale of ten years with his brethren of the angler. Instead of so doing he has been content to fatten on the pabulum of "Nessmuk," content to dwell with that gray-haired chief in shodds almost a counterpart to his own, either fit for the gods. True, Nessmuk has been a Niurod, a veritable Ulysses, so far as wandering goes, while the writer has listened nightly to the whisperings of the same cives in the roof tree, yet the inmost currents of the soul have flown in the same channel; the same kisses from breeze and shower have wafted to their bronzed faces; the same artist hand has flung before them the glories of the morning, the wanders of cloud and peak that stood "sunset finished," and the shadows that would have defied the genius of a Rembrandt even to recall. "All life is not the same life," yet there is that "touch of nature" which makes many lives one, those alone, however of the Great M-ther. And, were Rabbi Ishmael to perform the task imposed upon him in song of finding one, who, for a single day, had been happy, had been happy with naught to mar the perfection, we believe that he would pass two names, at least, to the Recording Angel.

Of those ten sojourns with tent and rod—of a month in each year passed in the solitude of the mountains, with sport unrivalled with the bass—and that, too, not one hundred miles from New York—much might he said. It was only now and then that the faint, far off whistle of a locomotive reminded him that a great civilization was throbbing beyond those mountains and far below, and recalled us from barbaric lapses. Indeed, we would have been content for the nonce to have known that the shadow on the dial had gone back to the time when the squat Laplander was master of Europe.

There is an "old, old story," as dear to the angler camper as to women, and, like that of the latter, to be told only to the chosen few. In the present instance, that story must be deferred to some future day, when the veterans shall be finished of the record of the summer, or, perchance, Nessmuk shall have completed his loved confession.

So, to pass this by, and to bring forward the result—our experience—for the profit of the gentle craft, we are compelled to record that for some, to us unknown, cause, bass refuse to take the fly, and more especially the bait, with the avidity of the days when no ponds and lakes were first stocked. Especially is this the case in Orange county, N. Y. Time was when the angler with a fair assortment of bait—for instance, crayfish, minnows, black crickets or with the spoon—was certain of his sport. This has changed, and the sport is growing poorer year by year. Not that our waters are depleted, for some of our ponds are literally alive with black bass, yet they refuse all bait. Now and then a pair of five-pounders will be the reward of a day's fishing, which pleasing episode will not be repeated for, perhaps, a month of daily fishing. There may be exceptions to this state of things, but they are rare. Greenwood Lake seems to be falling into line with the rest, as regards black bass. We mention this resort that we may be corrected, if, in error, by some one of the many readers of FOREST AND STREAM who frequents its waters, and whose experience may differ from ours. Up to the season just passed, we believe there has been some fair sport had there, but the present season has not been so. Within a radius of ten miles, no less than that number of ponds, or, rather, small lakes, most of them with rocky shores, have been stocked with bass for twelve or fifteen years. During the first five years the sport was excellent. Then came a gradual falling off until, now, in one of them, at least, it is almost nil. Yet, in this pond, great numbers of bass can be seen at times, ranging from three to five or six pounds; so the ready answer "fished out" has no application here.

The writer, during the ten years above mentioned, has devoted his leisure, almost exclusively, to black bass fishing; and has his favorite spots, which afford good sport, and are to him what a certain clump of alders in a run is to a valued correspondent of the Game Bag and Gun department of THE FOREST AND STREAM. Still, the general condition above outlined, remains to us a mystery. Can some brother of the angle explain it?

It may be presumptuous in a stranger, upon his first entrance into the columns of FOREST AND STREAM, to call an "experience meeting," but the compaction of many a night by the camp fire, read by flickering torch, bids us seek the truth. Whether it lies "in the bottom of a well," pent up in the brain of the editor, or reposes in the experience of some gentle craftsman, let us surmise forth. And if an "experience meeting" may be opened, will not some "contemplative man" tell what he knows about "signs"; to what extent luck has been had in the teeth of all unfavorable ones; what, if any, he has found infallible. Let Nessmuk lead, and "he who left half told," the memories of a pleasant week with bass at a Pennsylvania lake, with the two boys, "jine in," and let no one be "backward." Let us hear from "Kingfisher."

The breath of spring will soon be wafted to us on the gales; soon rods will again be jointed and camp fires, in the mountains, blaze and burn as of yore; again, reposing on her bosom, her children will commune with the Great Mother and, Anteus like, arise new born. Speed the day and he, who can carry with him, as food for contemplation, new thoughts, be they but vagaries or living truths, superstitions, trusted in by gentle anglers—now dusk—in the long ago, or the new light which, day by day, comes to progressive man; he who has these ever with him—whether in the early guise of the Nipper, or in the bye-ways of the Northwest, or "the Streets of Yucatan," and flies and traps not in vain, though night finds him chilled and drenched on a lee shore, or without a string or with an empty creel. WAWAYANDA.

SOUTHERN SEA-FISHES IN 1875.

THE extracts given below from the log-book of that rare old piratical hussar, Captain Dampier, were handed us by Mr. Frank Endicott, the well known lithographer of this city, and the President of the Richmond County Game Association. They are valuable for many reasons, one of which is the showing of how the names of some fishes were spelled in those days, especially the vulgar name of *Megalops thersoides*, which was tarpon, now changed to tarpon, and occasionally to tarpon. The latter spelling seems to have only a few followers.

What glimpses of freebooting pleasures "as he sailed, as he sailed," the extracts call up! Rich galleons laden to the scuppers with the gold of the helpless old Dons, silks and jewels and pieces of eight, and solid emeralds and gilded breastplates and rapier, with little quaintly flaged and studded with precious stones, and other like æsthetic plunder which is not to be had in these degenerate days. It moves us to make the office boy walk the plank out of the third story window, and only considerations for the fat apple woman below, to whom his descent in that manner would be particularly disagreeable, prevent it.

The extracts show that the old captain was a keen and accurate observer in his description of the tarpon and of the methods of its capture. This is probably the earliest mention of this fish and therefore should not be overlooked by future writers upon it. The hook is entitled "A Collection of Voyages by Capt. William Dampier, Anno, 1675; London. Printed for James and John Knapton, at the Crown in St. Paul's Churchyard, 1720." Vol. 2, part 2; Chap. 1, pp. 12, 13, furnish the following, which we give, spelling, capitals, and all:

BAY OF MEXICO (Coast of Yucatan).

"The Tarpon is a large sleek Fly shaped somewhat like a Salmon but somewhat flatter. 'Tis of a dull Silver Colour with Scales as big as a Half Crown. A large Tarpon will weigh 25 or 30 Pound. 'Tis good sweet wholesome Meat and the Flesh solid and firm. In its Belly you shall find two

large Scallops of Fat weighing two or three Pound each; I never Knew any taken with Hook and Line; but are either with Nets or by striking them with Harpoons, at which the Moskito Men are very expert. The Nets for this Purpose are made with strong double Twine the Meshes five or six Inches square. For if they are too small so that the Fish be not taken thereon, the presently draws himself a little backward, and then springs over the Net. Yet I have seen them taken in a Sain inside with small Meshes in this manner. After we have inclosed a great Number, whilst the two ends of the Net were drawing ashore, ten or twelve naked Men have followed; when a Fish struck against the Net the next Man to it grasped both Net and Fish in his Arms and held all fast till others came to his Assistance. Besides these we had three Men in a Canoa in which they moved swiftly after the Net; and many of the Fish in springing over the Net, would fall into the Canoa. And by these means we should take two or three at every draught. These Fish are found plentifully all along that shore from Cape Catoch to Trist, especially in clear Water, near sandy Bays; but no where in muddy or rocky Ground. They are also about Jamaica, and all the Coast of the Main; especially near Carthagena."

Again, in speaking of the natural productions of the Bay of Carthagena, he says: "The Lagues, Creeks and rivers are plentifully stored with great variety of Fish (viz.) Mullets, Snooks, Ten-pounders, Tarpons, Cavallies, Parricots, Gar-Fish, Sting-rays, Spanish Blacklir, with many others."

AN ADIRONDACK PRESERVE.

MESSERS. George W. Cotterill and Joel B. Ehrardt, of Champlain county, in this city, are the promoters of an important undertaking, designed to convert a large portion of the Adirondack region into a game preserve of a character in many respects superior to any other in that section of country. Mr. Cotterill secured last week from the land board of the State, at Albany, a grant of thirteen thousand acres of land in Hamilton county, embracing Township 40, within which is situated almost the entire extent of Raquette Lake, the largest and most remarkable of the Adirondack lakes, being a length of twelve miles, sixty-six miles of coast, and an elevation of 1,731 feet. This large tract of land is heavily timbered, and it is the intention of the sportsmen into whose charge it has now passed to preserve the forests in all their primitive grandeur, furnishing cover for the large game now abundant on the property.

It is their desire to do all in their power to check the destruction of the natural timber supply, the protection of which is highly important, not only to meet future demand, but to insure the continued existence of large and valuable bodies of water which now irrigate the lands through which their tributaries and outlets pass.

There is at present no intention of creating any club-house or public gathering place in connection with this preserve, the design being to furnish sites to those who may become members of the association on which to erect their own private camps, supply stores being located at convenient points from which everything necessary of camp supplies, provisions, ammunition, tackle, and even dogs and guns may be procured. It being the interest of the guides to protect the property of the sportsmen, and to convert a large part of their life into a means of subsistence, they earn their living, any furniture or other goods left at the camps from season to season, will be found undisturbed, upon the return of the owners. There are on the lake in the season from forty to fifty of these camps, already in the occupation of those who have previously used them will remain undisturbed, so long as they use their privileges with the spirit of sportsmanship, and join with the new association in its efforts to preserve and perpetuate the resources of that grand game region. In addition to the land already secured from the State, large tracts now privately held will probably hereafter be joined to the property of this association, either by purchase or by the admission of the present owners to the new club.

Raquette Lake is one of the greatest of black bass waters in the Adirondacks; in fact the supply is so large that the minnows, upon which the bass feed, are becoming very much reduced in numbers, causing the bass to devour one another the larger upon the smaller. In consequence of this, part of the bass will be allowed to pass in the lower lakes. The method of fishing for bass by anglers in this lake, differs greatly from that usually pursued. The usual plan is to either troll with a spoon, or to cast or sink a fly. Bass seldom rise to the fly, and when they fly is sunk, the bass caught are chiefly small fish near the shore. The proper way is to troll with live bait, a ten ounce rod, with twenty or thirty feet of line, and a nine-foot gut leader. The bait must be toughened by being placed in a perforated box in the lake, where they should be allowed to pass three days, at the end of which, a large proportion of them will be found to have died; but those remaining will exhibit greater vigor than when first caught. The hook must be placed through the lips of the bait; there should be a light wind, enough to cause a ripple on the water; and then the angler, seated in his flat-bottomed row boat, which should be of green color, can, with the assistance of a man to propel the boat, capture many fish of three pounds, or nearly that, in weight, by sinking the bait on the surface of the water. There should be a well in the stern of the boat divided into two compartments, one for the game fish and the other for the bait, and both should communicate, by perforations, with the water of the lake, so that the bait may be kept lively and the bass fresh until the angler's return to shore. In this manner fishing can often be enjoyed throughout an entire day, so long as there is a ripple on the surface of some part of the lake, and the wind is not too strong.

There are also both lake and brook trout to be found here. The former are usually caught by still-fishing at a spot previously baited, and marked by a buoy; the privilege of fishing at that point being considered to belong only to the person who has pre-empted it in this manner. Lake trout are often caught weighing twenty pounds each.

Deer are very plentiful, one man having killed nineteen on the shores of Raquette Lake within two months. Ruffed grouse are also found in large numbers, and various kinds of ducks on the lake.

Raquette Lake is an important thoroughfare, all persons going by water to the upper lakes, Forked Lake, Long Lake, Little Tunper and Great Tunper Lakes, etc., having to pass through Raquette. There are now two hotels on Raquette Lake, one of which is on the land embraced in this tract.

ANGELERS should read the announcement of Thomas H. Chubb's new patent reel-plate. See our advertising columns.

NIGHT BOBBING FOR BULLHEADS.

THE article of F. S. J. C., in the FOREST AND STREAM of January 13, on "Night Fishing," carried me back a half-century...

In a certain town in the county of Dutchess, there is, or was, a shallow pond of dark water—containing perhaps twenty acres—nearly covered with lily-pads, fringed all around with alders, boggs and muck...

The owner of the pond had an only boat, flat-bottomed, clumsy and leaky. But when not wanted by the "Ryder boys," it was towed to parties from abroad...

If the first party were from a long distance and there was no moon, they would bathe themselves to the "hay-mow" and wait for daylight, but not always to sleep.

In taking bullheads on that particular pond, hooks were never used.

"What, never?"

Well, hardly ever!

"What, then?" does the reader ask "Why, boys."

"And what is a hole?" some fly-caster may wonder. It is about two feet—more or less—of angle worms strung on a line of thread. Boreh was not a power in the days of Ling Syre...

In other ponds where eels were numerous they were often taken in the same manner.

When the hobs gave, out the nak d fingers were sometimes used instead, with equally good success, as to catching the bullheads, but it was not so pleasant for the bobber the next day—by which time the bitten and scratched fingers would be itamed and painful.

The great advantage of the hob over the hook is, that with the former the handling of the fish, hence no wounds from their horns—a thing of no small account when fishing in the dark—as all can testify who ever attempted to dislodge a hook from the internal arrangements of a bullhead by the sense of feeling only.

I am aware that bobbing is not exactly the scientific way of taking fish, but I doubt if the most expert fly fisher gets more enjoyment or one-tenth the rollicking fun we had in those far-away days.

Now, a few words to the scientific and I will lay aside my pen—for the present.

Thirty years and more ago bullheads were very numerous, and taken in large quantities at various points on the Hudson River: catfish were unknown. Today catfish abound all along the river, but not a bullhead has been taken in years, to my knowledge.

The questions are: What has become of the bullheads? and where have the catfish come from? It is quite possible the Erie Canal may have been the artery that brought the latter from the Western lake to our streams.

But what has become of the former?

Will some one be good enough to reply? J. H. D.

Poughkeepsie, N. Y., 1882.

COOKING CARP.

SEND you the following recipe, which has been given to me by the foremost of chefs of the German Fishculture Association, who has watched with interest the introduction of German's pet fish into American waters...

I leave the language of the receipt, just as it came, with its slightly foreign turn of phrase that gives it a quality somewhat akin to the dialect as found in the old English cookery books. By it we should judge that the carp is not a temperance fish, and the combination of ginger and black seems novel. The receipt reads: "Carpus in Polness Manner.—Wash the carps, gut them carefully, and cut them to pieces. After having done this, you spread the bottom of a stew-pan with little slices of some onions, with parsley roots, laurel leaves, cloves and slices of a lemon. Then you put the fish upon this, and a piece of ginger-bread, some butter and gail, and pour half a bottle of Hook and half a bottle of wine over the whole that the fish is perfectly covered by it. The fish, having sufficiently boiled, you take it out of the pan, sift the fish-soup, and appreciate it to your taste. For a fish of three pounds this receipt will do; for a bigger carp you must take more wine." ROBERT B. ROOSVELT.

CRAB FISHING.—Philadelphia—Could some of your friends give some points concerning crab fishing? I am told that in the absence of trout, it is fair sport.—P. A. B. The crab, *Libinia*, often grows to a good size, and is a fish much relished by anglers in America. Many of our brooks contain them. They are often called "drees." NEWARK, N. J., Jan. 23, 1883.—The Essex Fishing Club have elected the following officers for the ensuing year: Francis Wismer, President; Job Lork, Vice-President; John H. Hugel, Rec. Secretary; Abraham H. Crane, Fin. Secretary; David Thompson, Treasurer.

A WORD TO ANGLERS.

KILL YOUR FISH WHEN CAUGHT.

I HAVE lately read in several papers accounts of vacation trips in pursuit of plasure and of game, both fin and feather, and it has pained me to know that any would-be sportsman could land a fish and then write of his watching the same in its dying leaps and gasps with such delight as some seem to have possessed.

Every true angler will kill his fish at once—even before taking the hook from its gills, when practicable. This may be done easily in one of three ways, varying according to the size of the fish captured. 1st, by bending the tend of the fish over the thumb nail of the left hand, thus breaking the vertebrae; 2d, by severing the vertebrae (in the same place) by a knife; or, 3d, by striking the head of the fish with a bludgeon.

For years I have practiced one of these methods, as the kind and size of the fish might require, and when the captive was consigned to the creel, there was no annoying flopping to remind me of the death throes going on therein, had I not given the fish a gentle quietus before continuing my sport. To kill the fish when caught is not only merciful, but it also assures a better state of the flesh when upon the table, and once practiced will always be continued.

The flesh of a fish well conditioned for the table, however it may be cooked, should be firm and free from any indication of sliminess. If a fish be left to die a lingering death the flesh will be flabby, more or less tainted in flavor and, to the cyonous angler, unfit for the palate or the stomach. Therefore, my honest angler, kill your fish at once and thank Heaven that you can enjoy such a dainty, toothsome dish as your skill and mercy rewards you with!

As apposes to the subject I am minded to copy some lines styled "Ad Lectorem," by the author and to be found prefaceing the contents of "The Art of Fishing on the Principle of Avoiding Cruelty," by the Rev. Oliver Raymond, LL. B.:

"Gentle reader, if this name Fits your character, no blame Will you cast on this endeavor— Fishing sports from pain to sever.

"Nor captured fish, e'en death denied, Gasp by the water-side, Left in agony to die, Shall disgrace your hand and line, 'Mercy, so our poet sings, Like the dew on earthy things Falls from Heaven's embosom'd Man below with her sweet grace.' I will then entreat her well While she detains us with me to dwell And our love will I cherish In her search beneath the water. In a subterranean world, Sweet companions, side by side, Where, amidst their cozy beds, Rewards entice our idle threads, And joyful fishes in her sea Their benefactress, Mercy, My sin, then, do not judge absurd, But come with us and make a third; For Mercy first, then you and I, With ground bait, minnow, red and fly."

The author of the above work on fishing advocates the killing of birds before striking, as well as the killing of fish immediately on being landed. In some contemplated papers on angling I may take occasion to quote from other works not always accessible to the casual reader, and doubly interesting now that the snow covers the earth, and from our beloved pastime we rest in reality, though, by the blessed aid of the mild and hazy, we can take an ideal fishing day in spite of the litter blast and "eager" air. O. W. R.

THE FISHERMEN'S AID TO SCIENCE.

COLLECTING SPECIMENS UNDER DIFFICULTIES.

WASHINGTON, January 16, 1882.

NO CLASS of men in the United States have shown more intelligent appreciation of the work being done by the U. S. Fish Commission, and the direction of Professor H. F. Baird, than the fishermen of Gloucester, Mass. This has been amply demonstrated by the large collections which they have made for scientific purposes, during the past three years, presenting them as a free gift to Prof. Baird, who furnished the means for the proper preservation of the same. Thousands of specimens of fish and invertebrates have thus been added to the Smithsonian collections, among which are many new to science, besides others new to the fauna of North America. These fishermen participate on fishing lures, and in seines and gill-nets on the fishing grounds off the East coast of America, all the way from the capes of Virginia to Greenland, and so expert have many of the fishermen become in collecting "curios," as they term them, that they readily notice any forms which they have not previously seen, and are thus enabled to procure such as are most valuable to naturalists.

It has happened, however, that among the collections made by the fishermen, and the still more extensive ones of the fish commission, from gravid slime eels (*Misgonyx glutinosus*) have been taken. Prof. Baird is, therefore, anxious to obtain some specimens of this species with eggs fully developed. Accordingly a letter was addressed to one of the Gloucester captains, by a member of the commission, asking if he would make some collection of slime eels, should he find any with eggs in a ripe condition. The following reply, which has been recently received, shows the interest still felt in this work, and graphically depicts the difficulties often encountered by the fishermen in making collections.

The name of the writer has been suppressed for obvious reasons:

"GLOUCESTER, January 10, 1882.

"DEAR SIR: I write in answer to your letter of Dec. 27th, and the slime eel question. Shortly after I received your letter I went out on a hulloke trip, and when the dorics were ready to set the traps I gave orders to save all the slippery eusses they caught. But when the men were all on board again I found only one eel among all the dorics, and, intending to keep him until I got some more, I hid it on the house for the time being. That night there came on a heavy gale from the northwest. It came without warning, commencing at 8 p. m. and lasting until about daylight. We were in a tight place, when it began, and had to scurble for dear life. I set out to run for Provincetown, but it came on so thick with snow that I soon gave that up; reefed our sails, and stood off shore; being at that time close on to Peaked Hill Bar."

"We came down from whole sail to two reefs, then to two reefed foresail and jib; then to two reefed foresail and 'hob' jib, and at last, to two reefed foresail. It was not

howling about that time then my name is not C—. I would not have cared if I had had less room enough, but I was jammed against the Cape Cod. When I looked for that slimy euss after the breeze was over he was not there. But never mind, I will get some for you yet. Yours, etc. W. C."

It is to be hoped that the efforts of the gallant captain may meet with success, and that thereby the researches of scientists may be aided, and the time and habits of reproduction of the "slippery euss" be better understood than they are at present. J. W. C.

On account of the thick glutinous slime that covers the body of the *Misgonyx* they are an object particularly disgusting to the fishermen.

A dangerous sand bar, which extends out a distance of half a mile or more from the east side—generally called the "back side"—of Cape Cod. There is no worse place on the coast of the United States for a vessel to be caught in during a heavy northerly gale, as is evidenced by the numerous wrecks that occur in the locality.

STRENGTH OF GUT AND HAIR.—I was a witness the other day as to the truth of an assertion that silkworm gut of upwards of thirty years old could be produced that would raise a weight of 18lb. avoirdupois; and a single strand of hair, of a cinnamon color, that would lift a weight of 2lb., and, it would appear, was equal to lift a far greater test; but, out of admiration for so admirable a bit of stuff, I tried "halt!" The latter was from a stallion of three years old. Both gut and hair had been preserved in an old parchment pocket case, and I saw Mr. W. H. Miller, of Lowell, Mass., give credit for the keeping of gut or hair free from its atmosphere, and not in any dry place, is the whole secret of their lasting strength. The gut in question was not stained, and he attributes much of the weakness of the gut of the present day to the processes used to alter its color. I ought to say that in the formula of the preparation given by me for the preservation of gimp, I inadvertently omitted half a pint of boiled oil to be added to the quarter of a pint of gold size, and a tablespoonful of carriage varnish. In the making up of the tables and flaps, the loops and triangles of books ought to be left until the last, and whipped the last thing, or the preparation used for the previous purpose would dissolve the wax and loosen the hold. By all means avoid bicarbonate of platinum, which is a most seductive but evanescent lure, ultimately destructive. The complaint of the weakness of the gut of the present day I take to be due to the process used to stain it. For, by steeping it in boiling ink and water, the combined fibres of the silkworm which compose the gut are separated, by melting the substance of wax which causes their more perfect adhesion.—GRAYVILLE, In London Field.

Fishculture.

REPORT OF THE CONNECTICUT COMMISSION.

THE Sixteenth Annual Report of the Fish Commissioners and First Report of the Shellfish Commissioners of the State of Connecticut to the General Assembly, January Session, 1882, is before us. The two reports occupy 122 pages and two maps.

The Fish Commissioners, by act of the last General Assembly, were constituted a Board of Commissioners on Shell Fisheries, so that while the work of the two commissions is distinct the same individuals compose them. The Fish Commissioners report that the demand for the fry of brook trout is greater than the supply, and that 100,000 more would be needed to meet the demand, but that only 350,000 were obtained. Of these 70,000 were accidentally lost. This loss fell upon the contractor, who had agreed to furnish them at a given sum per thousand; 277,000 were distributed, however.

The whole number of land-locked salmon eggs received from Grand Lake Stream, Me., for the year, was 496,500. Of these 350,000 were sent to the hatchery of Mr. H. J. Fenton, at Poquonoc, and 146,500 to Mr. George Jelliffe, at Westport.

There was no appropriation for *Salmo salar*, but Prof. Baird kindly presented the State with 250,000 salmon fry, which he suggested should all be planted in one place. In accordance with his suggestion they were all placed in the Farmington River, a branch of the Connecticut, in the town of Groton. A letter from the Chief of Fishery, published in *Science*, Dec. 2, 1881, in which he describes the pens for keeping the salmon until the spawning time, and gives the estimated number of eggs which each of the States which contribute to the support of the two establishments may receive.

Shell-hatching operations were entrusted to Messrs. Chalker and Rix, who were similarly employed last year. They turned out 2,228,000 fry into the Farmington River, and at the same time Prof. Baird, at the request of U. S. Senator Joseph H. Hawley, sent 1,000,000 more to the Delaware River, which were planted in the Connecticut. Attempts to hatch sand in sea water were again unsuccessful. We will quote the operations at length in a future article.

Statistics show that 81,760 more shad were reported caught in 1881 than in 1880. The pound nets took more and the gill nets and seines less, but all of the latter did not report their catch. The interest in the German carp is increasing. An important list of fish commissions, which leaves out Arkansas, Indiana, Nebraska, Texas and Wyoming closes the ichthyological portion.

The commissioners of shellfisheries cover a period of seven months, during which time, only, they have existed. Much preliminary work was necessary in surveying and mapping the grounds within the jurisdiction of the State. Mr. James P. Baldwin, graduate of the Sheffield Scientific School, was appointed engineer of the board at the beginning of the work, and Mr. Charles A. Baldwin, clerk. The latter was succeeded, after one month, by Mr. Frederick Bolsford. The board has regular sessions on Monday of each week, and has recently on other days, at their rooms in the city of New Haven. It was a difficult and delicate matter to divide the oyster areas under State jurisdiction from those under the jurisdiction of towns, and of removing the meridian lines from points where town division lines touch high-water marks, and to the ocean. New York has no such jurisdiction. There was some latitude allowed in the rule prescribed for running the shore line, and while it was desirable to reserve for State jurisdiction all territory which could be claimed lawfully by the commissioners and the selection to a ready agreement.

Since the 1st of May about 20,000 acres of oyster beds have been designated by the commissioners, one-half of which will be paid for by the report of the State, and the other half, \$5,000,000 having already been collected and paid into the State treasury.

Much difference of opinion prevails among oystermen as to how the grounds shall be taxed, some advocating none at present, or at least a merely nominal one, because the State is now expending large sums of money in the purchase of the grounds, and the oystermen are already paying a tax in form of a license to be paid by all who cultivate beds, while a third class advocate a tax on the annual product of the beds. Much valuable information concerning the oyster trade is embodied in the report and some remarks upon the subject are given in the report.

A new colored "General Map of the Oyster Grounds of the State of Connecticut," and a sketch of the triangulation of the coast-points, together with a report of the engineer, form of application for grants, etc., and other matter relating to the fisheries, close this exceedingly valuable report.

The Kennel.

FIXTURES.

BENCH SHOWS.

March 7, 9 and 10. Pittsburg, Pa. Bench Show. Chas. Lincoln Superintendent, Entries.

May 9, 10, 11 and 12. Boston, Mass. Third Bench Show of the Massachusetts Kennel Club, Edward J. Forster, Secretary; Chas. Lincoln, Superintendent.

FIELD TRIALS.

September. National American Kennel Club Field Trials on Prairie Chickens. Jos. H. Dew, Columbia, Tenn., Secretary.

December. National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. Dr. Fry, Memphis, Tenn., Secretary.

TRAINING VS. BREAKING.

TEN CHAPTERS—CHAP. IX.

IN the previous chapters we have carefully refrained from saying anything about the great benefit to be derived from having a trained dog to assist you in perfecting your pupil in his lessons. We have purposely pursued this course in order to show the new beginner that he can safely rely upon his own resources, and surely bring his pupil through all this, without any assistance. Nevertheless we have ever found that an old dog that is well trained and steady is of great importance in perfecting the pupil in the rudiments of well as the higher branches of his education; and we cannot forbear devoting a little space to the subject. In the first place our canine co-worker should be thoroughly trained and quick to obey; he must also be very intelligent and of a good disposition. You should let the two associate together from the first, and they will soon become attached to one another, unless the old dog is usually steady. We do not recommend that the pup should receive any guidance from the old dog until he is sufficiently grounded in his lessons to understand what is required of him. Thus, in teaching him *To ho*, after he will go through the performance fairly, we take the old dog into the pen with him, and after they have had a little time at play we take the pup in our arms, and making sure that he sees all that is going on, we place two pieces of meat on the ground about two feet apart, and calling up the old dog, make him, at the word *To ho*, point to the first piece. He then walks around a little, and the pup still in our arms, taking care that he can see the performance all the time. We then place the pup with his nose within a few inches of the second piece, and telling him *To ho*, make him wait a few seconds, and then cluck as a signal that they can each eat their piece. This has a wonderfully steadying effect upon the pup, especially when you come to prolong the time a little, for he, seeing that the old dog is perfectly staunch and steady, will soon learn to emulate him. He will also acquire the very important habit of remaining steady when in the company of other dogs;—this we consider of great importance, and under all circumstances we accustom the pup to doing his work in the presence of his companions, even if we have to impress the services of a car and chain him in one corner of the pen. If this latter course has to be adopted, it is not necessary that it should be commenced until our pupil is somewhat advanced in his education, as the only object in view is to accustom him to perform his duties in the presence of other dogs, and to lay the ground work of that steadiness when among strangers that is so pleasing to us. So particular are you in training that you invariably train our pup to point a piece of meat and stand perfectly staunch, while his companion takes the bit and eats it. This he will readily learn to do if you unconditionally reward him with another piece. If he is well trained in this he will not annoy you by going to pieces should half a dozen dogs rush in upon the bird that he is pointing.

After our pup is well acquainted with the old dog and has become accustomed to the chain, they should be coupled together for a short time each day until he gets used to it. We shall find further on that this will be a great help to us. The coupling chain should be short with two good swivels. Men persons make a mistake in having the coupling chain too long. Four inches is plenty long enough when your dog is anywhere near of a size, and you will generally find it long enough under any circumstances. Should the old dog be very high headed the chain can easily be lengthened an inch or two. After they go well together for our pup has learned the meaning of *To ho* and minds that you will find that it will be of great benefit to him to practice him when coupled to the old dog, for the example of the latter will steady him, which is a matter of great importance, and once his mind is thoroughly impressed with the idea that he must hold his position, even when in fear that his companion will secure the tempting morsel, it will be comparatively easy to keep him up to his work. We will also learn to remain quiet at charge with much less trouble if you coupled to the old dog. As he grows older and you commence to lengthen the chain that he must remain in this position, we should by all means recommend this course; indeed we have found that the services of a well trained, steady dog are invaluable all through until our pupil's education is complete. As we have before remarked the assistance of the old dog should never be called in requisition until our pupil has been taught his lesson and is somewhat proficient in its performance, then he can understandingly view the old dog as he performs the task, and if he is reasonably intelligent he will soon learn to imitate his steps. We shall also find, if our pup is inclined to work too close to us when quartering his ground, that the example of the old dog will soon cause him to increase his range. We much prefer that our pup should range freely of his own accord, but should he not quite please us in this, we couple him to the old dog and practice them together until we obtain satisfactory results. Great caution must be observed in this and the lessons must not be too frequent nor too long continued, or our pupil will lose his independence and become very indolent in making any attempt to cut out the work which will seriously detract from his usefulness in the field.

As it is very desirable that our dog should possess a fair amount of speed, we should so conduct his exercise that when we come to cut him loose in the field he will not pester and poke, but at once strike a slashing gait and with head well up, take to his work like a veteran. Many dogs can never become fast, but if you have followed the instructions in selecting your pup that we have set down, and have secured a well formed one with plenty of life and spirit, the odds will be no trouble in bringing him out a fairly speedy animal; indeed, we have taken in hand old dogs that were decidedly slow, and in a few weeks by judicious management, have succeeded in turning them out astonishingly fast. Of course, we cannot give instructions that will enable you

to infallibly produce a speedy animal, but if you will intelligently follow our plan, you can easily succeed in accomplishing your purpose. Do not forget, in your anxiety for speed, that a fast dog with a slow nose is nearly worthless; therefore, before you attempt to force the pace, you should thoroughly satisfy yourself that your pupil's olfactory organs are all right; you can form a nearly correct opinion upon this point by carefully watching him while he is at play, and taking note of each time that he "winds" anything that attracts him, and paying close attention to the distance he is from the object. This, though not an infallible test, will generally give you a very good idea of his powers. Should he appear to have a quick sensitive nose and you desire to quicken his gait, try the following plan, and our word for it, if you pursue the proper course, you will be astonished at the improvement he will show in a few lessons. When commencing these lessons you should select for exercise ground a large open field, and if the surface is undulating, it will be all the better, for when the old dog disappears over the knolls it will make the pup all the more eager to join him. When you arrive at the ground you should let the old dog go, and let him lead the way, and you should follow him, taking great care not to overdo the matter by keeping him under restraint too long, nor on the other hand should you let him go until he is in the proper frame of mind to put forth his best efforts when he hears the welcome signal. If you have acquired such knowledge of his disposition and temper as you should have done, you will be sure, by closely watching him, to hit upon just the right instant when his impatient feelings are at their greatest height to give him the word to go on. If this order is given in an eager tone, accompanied with a quick step or two forward, you will find that your pup will at once start with an eager rush and put forth his best efforts to catch the old dog. You should carefully watch him, and as soon as he slackens his speed, call him in at once and keep him at heel until he is again impatient, when you can repeat the performance. If this course is understandingly pursued, your pup will soon learn that in order to have his liberty he must not pester, and he will in a short time astonish you with his greatly improved gait. The speed of almost any dog can be improved in this way, but the result will be obtained with your dog in a much shorter time, if he has a high strung nervous temperament. With such a one a properly handled marvelous improvement is sure to follow.

You will also find that the example of the old dog will be productive of much good, when you commence accustoming your pup to the signals and sounds of the street, you will be spared much trouble in way-wising him by coupling them together when taking a walk through the streets, especially if you are in a city where each sign and sound is new to your pup, for he will not only acquire his companion's air, but will also thereby acquire confidence, but he will soon learn that he cannot bolt should anything strange occur, and in a short time he will become steady and behave like a veteran.

Backing is an accomplishment that affords us much pleasure—in fact, one-half of our enjoyment, when shooting over a brace of dogs, is, in witness, the faultless performance of a well-trained animal, as he instantly honors the point of his companion. This accomplishment is inherent in many dogs, and is as natural to them as the instinct of pointing. Yet, there are many first-class animals who will not back a companion's point, but will work forward until they obtain the scent. This is always unpleasant, and often not only mars our enjoyment of the sport, but the practice is very apt to unsteady the other dog, especially when the dog that should back thrusts his nose a little ahead, which he is very prone to do. "The dog that will remain perfectly steady and staunch while his companion repeatedly practices this, is, indeed, a treasure, and worthy fairer treatment. That your pup will not back, you can readily ascertain, as all you can rest assured, if you have carefully followed our instructions in his early training and will intelligently handle him when he first goes into the field with a companion. As we have often remarked, first impressions play a very important part in the future behavior of your dog, therefore you should be very careful that nothing occurs that will give him any wrong ideas. The first time that you take him out with another dog, they should be well acquainted, if possible, or at least have time to play together until they become somewhat used to each other. You should be accompanied by a friend, who should have the care of the other dog, while you keep your pupil close to heel until the other dog finds and comes to a point. Be very careful now, and as soon as your dog catches sight of him, raise your hand and bid him *To ho*, and on no account must you stir so much as a finger, but remain perfectly quiet and staunch, as though you were also backing, until your companion has flushed the bird. Your example will have much to do in perfecting his steadiness, and you will find that after a few lessons of this kind, even should he be somewhat of a natural inclination to back—he will understand what is required, and instantly back of his own accord as soon as he catches sight of a companion's point.

FIELD TRIALS.

HEAT SYSTEM VS. SHREWSBURY SYSTEM.

WE publish the following from *Land and Water* and would suggest that the writer, in having charge of the amendment of our own Field Trial Rules should carefully read and consider the changes advocated:

"Mr. George Brevin, who, it will be remembered, purchased Dash (see Mr. Brewin's), was won several times by a dog at the Kennel Club Field Trials, these always conducted on the heats plan of judging, has of late declared himself in favor of the Shrewsbury system. Moreover, he has been powerful enough to get a committee of the kennel club elected to look into the question.

Perhaps, before going into the subject, it will be best to show wherein the two systems of judging differ, for field trials have become of late years an institution of the greatest importance to sportsmen when engaged on the moors, and few are the kennel-club trials that are held in the country, but the latter are something by—it may be only indirect—crossing with the blood of field trial winners. In both systems of judging the mode of bringing together the contending dogs by what is called "the draw" is the same. The names of every dog in the stakes is written on a separate slip of rolled paper and placed in a hat. They are then drawn out by lot, and every two coming together run together in the stake, the judges being the same in each case. Here the likeness between the two systems ends. In the Shrewsbury system, as we have before remarked, the judges, they are first, award the prizes then and there, without having given any verdict between any two dogs which, according to the draw, have run together. Everything is optional with the judges. As a matter of fact it generally happens that the judges award the prizes to the dog that has the best of the trial, and also see many of the dogs down a second time generally.

In the heats plan, as the contending braces are taken up, the judges are bound to deliver a verdict, and when the cud has been

run through once, every unbeaten dog, that is half the number of the original stake, together with the bye or odd dog (should the number in the stake have been an uneven one) are paired in the order in which they have previously run, and the judges again go to work as if they had never seen any of the dogs before, and again the same thing is done until every dog has had a trial. The result of the work they have done in their former competition, but judging between the two dogs before them in circumstances of place, time, atmosphere and scent, which are alike for both. The whole of this dog trial is having the same trial, the same time, the same place, and the same judge, and the same order of course, first prize falls. In awarding the second and other prizes two systems have been adopted, neither less than the other a part of the heats plan. One is that the last dogs turned out of the stake take second, third and fourth prizes according to the number of dogs in the stake when they were turned out; the last dog turned out, of course, taking second prize. The other way of awarding these prizes, which has also been used at the kennel club heat system trials, and which seems to be more tempered with justice than the other, is this:—The first dog to be discovered, then the last dog, turned out of the stake has to form a stake, and run it out, on the heats plan, against every dog previously met and beaten directly by the winner of first prize. The same thing happens to the second prize, except that it is every dog of the stake that has been met and beaten directly by the winner, or if there are more than three prizes to be given, which in our opinion never ought to be.

The Kennel Club has adopted the heats plan as its own, and has made it up as superior to the Shrewsbury system, where it was argued, and very justly, that the best dog of the day for scent, might do the worst work of any dog in the stake. Such a thing has happened more than once. The organs of the Kennel Club have been taken from the Shrewsbury system, and greatly supplied to that of Shrewsbury, and people were forcibly reminded that they there paid a big entry fee for the pleasure of running their dog before the judges, without the satisfaction of a contest with the result, and without ever knowing what the judges thought of their pet and his work. The Shrewsbury system of dog running under favorable circumstances of time, place, atmosphere might be highly thought of; while others, better, were never asked for again. The Kennel Club made rather too much of these circumstances, which do not exist in the Shrewsbury system, and to anything like so great an extent as it has sought to be made to appear; for although the best dog has not always won, certain it is that no bad one has ever done so.

We venture to say that, had the heats system been attacked by the Kennel Club, and the Shrewsbury system been adopted by the Kennel Club, but the gentleman who gave the name of an estate on which to hold its trials, the Kennel Club would have defended every particle and offshoot of the system as a settled question, with more brightness than Mr. John Bright himself at the time he ventured to stand up for the Shrewsbury system, and for the same reason, because both are of a party that has settled a question, and the reputation of both depends upon the respective questions remaining settled. It is a happy union, therefore, that the Kennel Club are forced to a consideration of the merits of each, and a conclusion in favor of the Shrewsbury system; for, so identified with the heats system has everything of the Kennel Club Field Trials become, and so committed to it is the club, that otherwise no discussion would have been possible in the club itself. Now, we do not see good reason why the Kennel Club should give the four objections against the heat system enumerated by Mr. George Brevin. They are as follows:

1. It is very unfair to the second best dog in the stake, if, as is often the case, it is drawn against the absolute winner. Under circumstances of this kind, the second best dog, by being beaten, while an inferior animal creeps into what should have been another's place.
2. As we witnessed last week, the waste of ground and time entailed in running together two inferior dogs, it may be for more than one dog, and the result may be decided by a single trial, it is the best, but really and truly which is the worst of the brace.
3. The injustice done to a dog that has had an hour's trial and won it handily, being made to run against a comparatively feeble one in his previous good work, and to risk his credit.
4. The luck of the draw, in which a dog actually wins a tie, however bad he may be, without being slipped.

The first of these objections is no argument against the heats system; it is simply an objection to the mode of giving second prizes to the dog that has the second best of the stake, and not at others. It is an objection (with which we never agree) to giving second prize to the last dog beaten by the winner, instead of to the best dog beaten by the winner, discoverable by the formation of a separate stake, as described above, and which of course is with good reason, the best of the system, especially of the Kennel Club. The only exception taken to it has been founded on the time it takes to carry it out. This is not much and can be overcome. In a sixteen dog stake it takes fifteen contests to decide first prize, three to decide second, and from two to five to decide third.

Mr. Brevin's second objection deals with the question of waste of ground and time, and I will take this objection with reference to time alone, as the two, time and ground, can easily be shown to be inseparable, and so far as concerned, the waste of ground of great length of time the heat system has always been made to occupy that has been its own fault; and this year, with singularly protracted trials, resulted in Mr. Brevin's protest. All other points being in the balance of the Shrewsbury system, either regarded from the view of a sportsman, or from the view of a sportsman to a certain extent who the game is going; or from the view of an exhibitor, who knows his dog will have an exactly equal chance of doing himself credit, toward winning, as every other dog in the stake, and who has no concern with the result, whether he has had ground or good, so long as he has won, or both, as it, of course, always is, and as it is not, and cannot be, under the Shrewsbury plan. Now, it appears to us that without in the least breaking away from the heats system, as a system, and while retaining every advantage of that system, especially the greatest of all, which is that no dog is turned out of the stake only because he has done bad work (it may be without a possibility of doing better), but only because he is beaten by another dog, we may have a better way with exactly the same changes, it appears to us that a great saving of time can be effected by having the judges more power in two directions. First, give them power to keep both competitors in the stake, instead of as under the Shrewsbury system of turning both out. Second, give them power to keep the whole brace in the stake, instead of as under the heats plan, and in any pairing they choose for a trial, to run in that stake, always retaining the power of keeping both competitors in the stake to run against different dogs of the judges' own choosing in the next course of heats. The advantages of the Shrewsbury system would be as follows:—First, the judges would run through the list of dogs as drawn and on the field card, noting not only the work of each dog as compared with its antagonist, but they would keep an eye on the general form of the dogs as they run, and watching for any combination of two or three of the judges' own choosing to be next course of heats. The advantage of obtaining of speedy results. The judges would stop those "give-in-and-also trials," which, under the present rules, have been known to occupy the best part of a morning, stop them so soon as they saw so speedily decision could be arrived at whether the dogs had suited one another or twenty; to go down with other runners in the next course of heats, either better or worse (according to their opinion), as they had suited above or below the average of the dogs in the stake.

Mr. Brevin's third objection seems to me to require less attention. However great an evil it may be for one dog to run longer or longer than another, I think old sportsmen will agree with me that it would be a still greater evil to attempt to judge between dogs run at different times of the day, in good scent and on good ground, and on one ground, in good cover and in no cover. Those who have had their own dogs run do not know me enough that the best dogs in the world pass by at such periods of the day, and they know also that some bits of the moor and some fields are never held even. Why, the

accidental flight of a falcon, or even a hawk, over a bit of ground, will make the greatest difference to the birds and the ability of the dogs to find them. Clearly, every accident should be taken to avoid, and the same, though not entirely, to be avoided. However, with the modifications of the laws system which I have suggested, these long runs need only occur when the two last dogs left in to fight it out for a prize as nearly equal as possible. The objection (No. 3) raised by Mr. Bly is, although not entirely removed, is now reduced to a minimum, and, as much as possible, in fair competition of pointers and setters at work.

The fourth objection, "the luck of the bye," would, I think, entirely disappear. The only use of the bye was—first, to keep a dog fresh and second, to give the dog a chance to get a dog out. With short trials instead of long ones, and with second and third prizes run off, as they should be, there would be no advantage gained by a bye.

Those who do not remember the essence of so much loss of time at trial trials will discover, on reference to the reports of the meeting, that it was lost by protracted trials between dogs which never got into the end of the stake, many of which might have been disposed of in five minutes, had they been properly matched by the judges with some dogs which were good enough to get the best out of it. If the time had been saved in this way, there would have been lots of time to have run off the minor prizes, and we should have come to the end of the stake very much quicker into the bargain. A change of the rules in this direction would, as an accompanying change, a change in the time given for bringing up dogs when called for, as there would be many more trials, so would there be more time lost in bringing up fresh dogs; unless this was looked to, a quarter of an hour or twenty minutes, as it is now, is absurdly long.

FALCON.

ON IMPORTING DOGS.

WE present, below, a statement of the charges of the various steamship lines to this port on dogs carried by them; also important information as to Custom House regulations regarding imported live stock.

Allen line, Love Alden, agents, 207 Broadway, New York, carries from either Londonderry, Galway or Queenstown, Ireland; Glasgow, Scotland, or Liverpool, England; to Portland, Boston or Baltimore in winter, or to Quebec in summer, at a uniform charge of 45 for cargo, dog, feeding and attendance. Dogs are placed in charge of the steward during the passage.

Anchor line, Henderson Brothers, agents, 7 Bowling Green, New York, carries from Glasgow, Londonderry, Dublin, London or New York-France at a charge of five guineas on each dog, three guineas on each dog, for passage only. The animal is usually placed in charge of the cook, with whom private arrangements must be made in regard to feeding and attendance, there being no settled scale of prices. Transatlantic, Louis de Began, agent, 6 Bowling Green, New York, carries from Havre, France, to New York. On each dog shipped as freight the charge is 125 francs, or if with a passenger, 50 francs. This includes food in either case, and in the former at attendance also.

North German Lloyd Line, Oelrichs & Co., agents, 2 Bowling Green, carries from Bremen and Southampton at a charge of twenty dollars on each dog, which includes food; but a private arrangement must be made with the cook, the steward or some other employee on the vessel regarding exercising and tending the animal.

National line, F. W. J. Hurst, manager, 69, 71 and 73 Broadway, New York, carries from Liverpool, Queenstown and London to New York, charging from three to five guineas on each dog, which is put in charge of the cook, and to him an additional fee, not stated, must be paid for feeding and attendance.

State line, Austin, Baldwin & Co., general agents, 58 Broadway, New York, carries from Glasgow, Belfast and Liverpool to New York. Two guineas on each dog, plus five guineas each. The steward takes charge, usually, and with him an arrangement must be made, on terms mutually agreed upon, as to feeding and attendance.

White Star line, R. J. Curtis, agent, 97 Broadway, New York, carries from Liverpool to New York at a charge of 45 on each dog, which sum includes feeding and attendance, no extra fee being demanded. The butcher takes care of dogs on the ship.

Inman line, John G. Dale, agent, 31 and 33 Broadway, New York, carries from Liverpool to New York for three guineas each. The details in all other particulars are the same as those regarding the State line, printed above.

Wilson line, Sanderson & Son, agents, 39 South William street, New York, carries from Hull to New York, for £1.10, which dog, which is placed in charge of the steward. Meat is furnished by him, but it is requested that two pans, for food and water, and a supply of dog biscuit be sent with the dog.

The American, Red Star, Cunard, Monarch and Guion lines will not carry dogs.

In any case a steamship company liable for the death or injury of a dog during a voyage, except when actual intent, negligence or carelessness, on the part of the company or its servants, can be proven. All of the rates given above must be paid before shipment, and are (with the exception, noted) for dogs shipped as freight, not in charge of passengers.

On animals imported for other than breeding purposes the United States customs duty is twenty per cent. on the value. To import free of duty it is necessary for the consignee to appear before the United States consul, to be examined, to be examined, purchased, and make affidavit that the animal is to be used, in this country, for breeding purposes. For this the Consul's fee is from \$2.50 to \$3.50. Upon arrival of the animal, the consignee must make affidavit that, in his opinion, as to such quality, as to breed, here, the animal is of the breed named. The consul must make his appraisal or examiner's judgment upon this opinion, after seeing the animal, and in case he agrees therein, the animal is admitted free of duty. In any case certain custom house fees, for examination, etc., must be paid, but these are comparatively nominal. Matters may be very much expedited by having the importation consigned to some really reputable custom house broker, who will attend to all necessary details upon its arrival, and then send it on to the purchaser.

In cases where the dog is to be used, etc., it is well to have an understanding that the payment will be made upon the arrival of the dog; and even where no payment, other than the freight charge, is demanded by the carrier or its servants, it will be to the advantage of the purchaser to have the shipper make the best possible arrangement to get the dog to arrive in good condition. This will probably prevent neglect, at least; but imported dogs as often suffer from over-feeding, on board ship, as anything else.

BLOCK AND COUNTERS.—Mr. Geo. T. Leach, of this city, who imported and owns this fine pair of setters, requests us to say that Brock is not out of Countess as some of the sporting papers have published, but that they are both from the same litter, and, as was stated by us in our issue of Nov. 24, by Mr. Brock out of the puppy, Mr. Dunbar. Brock will be remembered as the winner of the Members' Cup and also the FOREST AND STREAM Cup for the best dog owned and handled by an amateur at the late Field Trials on Hobbs' Island. The importance of recording correct pedigrees and pedigrees of dogs, especially for breeders, cannot be overestimated, and owners and breeders should see that mistakes when they occur are at once corrected.

FERRIS-POLLUX MATCH.—Mr. E. I. Martin writes us that owing to the constant demand upon his time in caring for the valuable puppies just arrived, it will be impossible for him to write above the names of the dogs and their owners. This note was inadvertently omitted from our last issue.

At a meeting of the Westminster Kennel Club Nov. 10, the following named gentlemen were elected members: Mr. A. Wright Smith, Mr. Henry Nichols, Mr. D. T. Worden and Mr. John G. Heckscher.

PITTSBURG DOG SHOW.

WE have received the premium list of the bench show to be held at Pittsburgh, Pa., commencing March 7. Judging from the number and value of the special prizes offered the sportsmen of that vicinity are determined that the show shall be a success.

The show will be held under the rules and regulations of the National American Kennel Club. Dogs will not be received before 7 A.M. Monday, March 6, nor after 8 A.M. Tuesday, March 7. Premium lists and entry blanks can be had at this office and at the office of Mr. J. Palmer O'Neil, or by addressing the Superintendent, Mr. Chas. Lincoln, P. O. Box 303, Pittsburgh, Pa. The B. & O., Adams and Union Express Companies will carry and return dogs for fare one way.

PREMIUM LIST.

- 1 Champion English setter dogs, \$20.
- 2 Same for bitches.
- 3 English setter dogs (except pure Laveracks), \$20, \$10, \$5, silver medal.
- 4 Same for bitches.
- 5 English setters (pure Laverack pedigree), \$20, \$10.
- 6 Same for bitches.
- 7 English setters (puppies, under 12 mos., dogs), \$7, \$5.
- 8 Same for bitches.
- 9 Champion Irish setter dogs, \$20.
- 10 Same for bitches.
- 11 Irish setter dogs, \$20, \$10.
- 12 Same for bitches.
- 13 Irish setter puppy, dog or bitch, \$1, \$5.
- 14 Champion Gordon setter dogs, \$20.
- 15 Same for bitches.
- 16 Gordon setter dogs, \$20, \$10.
- 17 Same for bitches.
- 18 Gordon setter puppies, dog or bitch, \$1, \$5.
- 19 Champion pointer dogs, under 45 lbs., \$20.
- 20 Same for bitches, under 50 lbs.
- 21 Pointer dogs, over 45 lbs., \$20, \$10.
- 22 Same for bitches, over 50 lbs.
- 23 Pointer dogs, over 55 lbs., \$20, \$10.
- 24 Same for bitches, over 60 lbs.
- 25 Pointer dogs, over 65 lbs., \$20, \$10.
- 26 Same for bitches, over 70 lbs.
- 27 Pointer puppies, dogs, \$7, \$5.
- 28 Same for bitches.
- 29 Irish water spaniels, dog or bitch, \$10, \$5.
- 30 Black spaniels (large size) either sex, \$25 lbs., \$1, \$5.
- 31 Same small size, under 25 lbs.
- 32 Cocker spaniels (other than black, either sex, \$10, cup valued at \$5).
- 33 Spaniel puppies, either sex, \$5.
- 34 Foxhounds, either sex, cup valued at \$5.
- 35 English beagles, either sex, \$10, \$5.
- 36 American blooded foxed beagles or Basset hounds, either sex, \$10, cup valued at \$5.
- 37 Beagle puppy, either sex, \$5.
- 38 Dachshunds, either sex, \$10, cup valued at \$5.
- 39 Same for bitches, under 50 lbs.
- 40 Same for bitches.
- 41 Fox terrier dogs, \$10, \$5.
- 42 Same for bitches, under 50 lbs.
- 43 Fox terrier puppies, cup valued at \$10.
- 44 Greyhounds, \$10.
- 45 Mastiffs, \$10, cup valued at \$5.
- 46 St. Bernards (rough coated), silver cup valued at \$10.
- 47 Same for St. Bernards (smooth coated).
- 48 Newfoundland dogs, over 50 lbs., \$10, cup valued at \$10.
- 49 Champoo collies, champion medal.
- 50 Collie dogs, \$10, \$5.
- 51 Same for bitches, under 50 lbs.
- 52 Collie puppies, silver medal.
- 53 Bulldogs, \$10, silver cup valued at \$5.
- 54 Bull terriers, \$10, silver cup valued at \$5.
- 55 Rough haired terriers (except Skyes and Yorkshires, cup valued at \$10).
- 56 Champion Skye terriers, champion medal.
- 57 Skye terriers, \$10, cup valued at \$5.
- 58 Yorkshire terriers, \$10, cup valued at \$5.
- 59 Champion pig dogs, \$10, cup valued at \$5.
- 60 Pugs, \$10, cup valued at \$5.
- 61 Black and tan terriers, over 6 lbs., \$10, cup valued at \$5.
- 62 Fox terriers, under 6 lbs., \$10, cup valued at \$10.
- 63 King Charles spaniels, cup valued at \$10.
- 64 Italian greyhounds, \$10.
- 65 Poodles, large and small, cup valued at \$5.
- 66 Same for small size under 10 lbs.
- 67 Miscellaneous—any breed of dogs not assigned, two prizes, \$5 each.
- 68 Tick dogs, \$25.

NOTE.—All dogs receiving awards will receive the Secretary's certificate of merit.

SPECIAL PRIZES.

- Silver medals will be given for A, best kennel of five English setters.
- B, best kennel of five Irish setters.
- C, best kennel of five Gordon setters.
- D, best kennel of five pointers.
- E, best kennel of five cocker water spaniels.
- F, best kennel of five collie or field spaniels.
- H, for best English setter, dog or bitch, Messrs. Parker Brothers offer through agents Messrs. J. Palmer O'Neil & Co., of Pittsburgh, a double-barreled breech-loading shot-gun, value, \$125.
- I, for best three English setters, dogs or bitches, bred and owned by exhibitor, J. H. Henricks, offers an automatic musical cabinet, with music value, \$100.
- J, for best Laverack setter dog, open class, Edward Greig, President of the Association, offers handsome gold medal, value, \$20.
- K, for setter or pointer (dog or bitch) that has the best field trial record, the record only to be considered, a prize given by Society of \$20 cash.
- L, for brace of English setter dogs with best field trial record, J. J. Snellenburgh, of New Brighton, Pa., offers pair of silver dog collars, value, \$10.
- M, for best matched pair of English setters (regardless of sex) color and quality to be considered, J. R. Henrieks donates handsome gold whistle, value, \$10.
- N, for best English setter dog, under two years old J. J. Snellenburgh offers English cutdory or fustian handout suit, value, \$40.
- O, for best native English setter dog, without Laverack, Lovell or field trial blood, J. J. Snellenburgh offers canvas suit, value, \$12.50.
- P, for sporting dog or bitch that is exhibited in the best bench show condition, J. J. Snellenburgh offers one hundred professional trainer's jacket, value, \$15.
- Q, for best dog or bitch puppy, sired by the Laverack dog, "Thunder," owned by Messrs. J. O'Neil & Co., Pittsburgh, Pa., donate fine dog collar, white and whip.
- R, for best English setter, stud dog, to be shown with two of his get, a silver cup given by Crogan & Morz, Pittsburgh.
- S, for best English setter, brood bitch, to be shown with two of her progeny, Dr. Mark D. Loy offers cash prize of \$10.
- T, for best Irish setter dog, J. S. Hoopes, Esq., New Brighton, donates handsome silver cup, value, \$25.
- U, for best Irish setter, stud dog, to be shown with two of his get, silver cup, given by Messrs. J. O'Neil & Co., Pittsburgh, Pa.
- V, for best Irish setter, brood bitch, to be shown with two of her progeny, E. A. Elliott offers flowers, plants and trees to value of \$5.
- W, for best Gordon setter, dog or bitch, Ladin & Rand, through agents J. Palmer O'Neil & Co., of Pittsburgh, offer one Orange lightning powder; value, \$20.
- X, for best Gordon setter, stud dog, to be shown with two of his get, a cello-stand.
- Y, for best Gordon setter, brood bitch, to be shown with two of her progeny, silver butter dish, by J. R. Reed & Co., Pittsburgh, value, \$5.
- Z, for best pointer (any weight) J. M. Tracy, artist, through J. Palmer O'Neil & Co., offers series of pictures of field scenes; value, \$20.
- Ad., for best pointer bitch J. Palmer O'Neil & Co. donate 100 lbs. of Zureks dog biscuit.

- BB, for best pointer puppy Geo. H. Part, artist, New Brighton, Pa., offers a small oil painting (house subject).
- CC, for best pointer dog puppy under six months old silver cup, value, \$5.
- DD, for best pointer stud dog, to be shown with two of his get, silver-plated vase, Plato Co., Pittsburgh; value, \$10.
- EE, for best pointer brood bitch, to be shown with two of her progeny, silver cup.
- FF, for best cocker spaniel, dog or bitch (owned and entered by a member of the American Cocker Club), the American Cocker Spaniel Club offers a prize of \$10. (Members entering for this prize must add to their signatures N. A. C. C. O.)
- GG, for best fox terrier, dog or bitch, Wm. A. McIntosh, Pittsburgh, offers \$10, or medal or cup at option of winner.
- HH, for best collie, dog or bitch, Logan & Strohbehn, New Brighton, Pa., donate a fancy umbrella stand; value, \$5.
- II, for best bull terrier, G. T. Wacker, offers a silver cup \$10.
- JJ, for best sky terrier, H. Beck, box cigars; value, \$5.
- KK, for best collection of non-sporting dogs owned and entered by one exhibitor, C. C. Barr, box cigars; value, \$10.
- LL, for best Yorkshire terrier a handsome useful fancy article is offered by Paul Hacke.
- MM, for best bulldog Frank A. Walker, New Brighton, Pa., donates grooming set.
- NN, for best toy or pet dog owned and exhibited by a lady in non-sporting division, P. P. Bedford, Pittsburgh, offers elegant after-dinner coffee service.

BLOODHOUND IMPORTATION.—We are pleased to notice the importation and mating, by a Western gentleman, of a pair of British bloodhounds, bred from a bloodhound, if not entirely, but known within the limits of the United States. Our readers will perceive, from our reports of English shows, that this breed holds a very prominent position on the show bench abroad, and for the same reason that a great attention has been given to the breeding of the breed here—namely, that however little use, other than breeding, these animals may be put to, they possess valuable qualities which may be inherited into other breeds by judicious crossing—the pure bloodhound should command a share of attention on this side of the Atlantic. But there is no reason why this dog should not become a highly useful member of our society (especially in the suburbs of cities and in some portions of the West), as well as an impressive and dignified companion, as his fitness for the position of guardian of property cannot be doubted, and a remarkable number of his uses are to be noted. If put upon the scent within a few hours, he would be found useful in cases of burglary, horse stealing, etc. An enormous insurance premium, as in the case of the bulldog, that this dog has a natural tendency to exhibit a savage disposition, and that his temper is not to be trusted. With regard to this point, it would probably be noted that, firstly, a mongrel-bred animal would show an unevenness of temper and untrustworthiness of disposition not natural to a pure blood specimen; and secondly, if the early training of the animal were properly attended to, and the pup were made a trusted companion and friend, and his temper handled not too severely, he would be, in his maturity, as gentle and as inspiring of confidence as that of any dog of the larger breeds. We learn from our English exchanges that the famous bloodhound Morgan which was instrumental in bringing to justice the Blackburn murderer, has been despatched to Dun Echt, the authorities hoping that the wonderful instinct of this animal may lead to the discovery of the missing body of the late Earl of Crawford and Zetland.

A COASTING DOG.—Cortland, N. Y.—When driving through the country a few days since I witnessed the remarkable performance of a coasting dog. Two boys had taken their place upon the front seat of a horse-drawn sled, and the dog, sitting upon the rear, the dog maintaining his position upon the sled in their rapid descent down a steep hill. Upon coming to a stand still a collar was placed about the dog's neck, and he ran back up the hill, drawing the sled and manifesting considerable impatience until the boys arrived and released him from the harness, when he was first again to take his place for another ride upon the huskled sled.

NATIONAL AMERICAN KENNEL CLUB DERBY 1882.—The following entries have been received. (Entries close April 1, 1882.)
Dr. A. F. McKinney, Forest Hill, Tenn., enters black, white and tan setter bitch "Kate D.," whelped April 18th, 1881, by Count Noble out of Peep o' Day.

Wm. B. Gates, Memphis, Tenn., enters black, white and tan setter bitch "Carrie," whelped April 18th, 1881, by Count Noble out of Peep o' Day.
D. Bryson, Memphis, Tenn., enters black, white and tan setter dog "Chickawaw," whelped April 18th, 1881, by Count Noble out of Peep o' Day.
D. Bryson, Sec., Memphis, Tenn.

KENNEL NOTES.

We wish to impress upon the minds of those, who send us items for our Kennel Notes, that to avoid mistakes all names should be printed in **RUNNER LETTERS**, as we find it very easy to make mistakes where this is not done. We also would like to be informed whether the animal is male or female, and to know the date of birth and the breed to which they belong, whether pointer, setter, or bulldog. A careful study of the notes in this number of the paper will show just what is wanted. Our aim is to have everything correct; but vital contributors will take the necessary trouble to conform to the above request we cannot answer for the mistakes that may occur.

NAME'S CLAIMED.

- Mollie T.—By Mr. Henry Page, New York, for white and orange setter bitch, whelped Aug. 16, 1881, by Thunder out of owner's Lou (Rodrick) Dhu—Mina.
- Yvonne.—By Mr. Henry Page, New York, for blue heifer English setter bitch, whelped Aug. 16, 1881, by Thunder out of owner's Lou (Rodrick) Dhu—Mina.
- Yvonne.—By Mr. H. Dr. Dean, Baltimore, Md., for red Irish setter bitch puppiet by Elcho out of Lady Helen.
- Pointer.—By Mr. G. H. Thomson, Philadelphia, Pa., for red Irish setter dog, whelped June 11, 1881, by Mr. Smith's Grizzle out of Mr. Baker's Niece.
- Brown Bass, Brunette and Beryl.—By Horrell spaniel Club, Horrellville, N. Y., for three setters, whelped Nov. 8, 1881, by their champion Benedict out of Prince.
- Birds.—By Horrell spaniel Club, Horrellville, N. Y., for black and tan spaniel dog, whelped Nov. 8, 1881, by their champion Benedict out of Prince.
- Birds.—By Horrell spaniel Club, Horrellville, N. Y., for chestnut and tan spaniel dog, whelped Nov. 8, 1881, by their champion Benedict out of Prince.
- Black Thorn.—By Horrell spaniel Club, Horrellville, N. Y., for black spaniel dog, whelped Nov. 8, 1881, by their champion Benedict out of Prince.
- Duke Owen.—By Mr. P. E. McMaster, Sloatsville, Wis., for white and liver spotted English setter bitch, whelped Sept. 9, 1881, by Joe (St. Elmo—Mina) out of Duke (Duchess) (Daisy's) Victor—Blue baby.

SIMPSON'S NEW FISHING TACKLE CASE.

A wait long felt for by sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his Spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors who have investigated its perfection. Size—Box: Length 14, width 7 1/2, depth 4 1/2; trays (4): Length 7 1/2, width 4, depth 1 to 1 1/2 inches; top tray: Length 11 1/2, width 7, depth 1 1/2 inches. Three partitions in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, stickers, spoons, reels, fly-book, and each case packed in a neat box and sent on receipt of \$4.50. 70 Clubs taking 50¢ at one time, \$3.00. Send for catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS, R. SIMPSON, 96 Fulton Street, New York.

1882. FOR FIELD, CAMP AND HOME! 1882.

THE WEEKLY JOURNAL OF THE ROD AND GUN.

DEVOTED TO THE INTERESTS OF SPORTSMEN, AND THE INCULCATION IN MEN AND WOMEN OF A WHOLESOME INTEREST IN

OUTDOOR RECREATION AND STUDY.

The conductors of the FOREST AND STREAM point with much pride and satisfaction to the past and the present of the paper, and pledge their readers that the same high standard of excellence will be maintained in the future.

I.—ENTERTAINING AND INSTRUCTIVE.

The "Sportsman Tourist," "Game Bag and Gun," and "Sea and River Fishing" departments will contain sketches of travel, camp life and adventure; accounts of shooting and angling excursions; hints, helps, and experiences; poetry, stories, humor; impartially written reports of all meetings, etc., etc., etc.

"Natural History" will be so conducted as to stimulate habits of observation and study. Among its contributors may be mentioned Prof. Spencer F. Baird, of Washington, D. C., the Secretary of the Smithsonian Institution, who is so well known as the first authority in the country on ornithology and fishculture; Dr. Elliott Coues, U. S. A., and Prof. J. A. Allen, of the Museum of Comparative Zoology, the distinguished writers on birds and mammals; Professors Jordan and Gill, eminent in ichthyology; Dr. Yarrow, the authority on reptiles; Prof. Marsh, of Yale College, the writer on fossils, and Prof. Eaton, the botanist. Hundreds of other names, scarcely less well-known, might be added to the list.

"Fishculture," edited by a practical and well-known fishcultivist, will receive frequent contributions from the officers of the U. S. Fish Commission at Washington. This department will prove indispensable to every farmer and country gentleman who can own a fish pond for profit or pleasure.

The columns devoted to the "Kenne!" will be filled with matter of interest and practical worth to sportsmen and dog fanciers. "Rifle and Trap Shooting" will furnish reports of all important events in the shooting world. "Yachting and Canoeing" will remain in charge of a specialist, its editor being a graduate of the U. S. Naval Academy at Annapolis, and a practical naval architect, thoroughly informed in every branch of his profession. Due attention will be given to canoeing, as its growing importance demands.

II.—HIGH IN TONE.

The tone of the FOREST AND STREAM is exceptionally high. It is edited for men of healthy minds in healthy bodies. Its reading and advertising columns will be clean. Its pages will sparkle like the mountain stream in the sunlight, and its contents will be redolent of the exhilarating fragrance of the forest. Primarily intended for gentlemen, it is also a paper for the family circle, and one which the entire family, old and young, read with pleasure and profit. The best guarantee of its thoroughly high character is afforded by a reference to a list of those who write for it.

THE SUN NEVER SETS ON THE FOREST AND STREAM.

CONTRIBUTIONS AND CORRESPONDENCE.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

A LIBRARY OF PERMANENT WORTH.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each. Seventeen such volumes have already been published. We furnish handsome file binders (price \$1.25) which hold twenty-six numbers. Each volume when completed may be returned to us for binding, the cost per volume being \$1.50. At this slight additional expense each reader may preserve an unique library of substantial and permanent value.

SUBSCRIPTIONS MAY BEGIN AT ANY TIME.

Per year, \$4; \$2 for six months. To a club of three annual subscribers, three copies for \$10; five for \$16. Remit by post-office money order, draft or registered letter. Give name, town, county and State.

Address FOREST AND STREAM PUBLISHING CO., 39 Park Row, N. Y. City.
