Publications

A BOOK OF OUT-DOOR SPORT.

CAMP LIFE IN THE WOODS;

AND THE TRICKS OF TRAPPING

AND

Trap Making.

Containing Comprehensive Hints on Camp Shelter, Log Huts, Bark Shanties, Woodland Beds and Bedding, Boat and Canoe Building, and Valuable Suggestions on Trappers' Food, etc. With Extended Chapters on the Trappers' Art, containing all the "Tricks" and Valuable Bait Recipes of the Profession; Full Directions for the Use of the Steel Trap, and for the Construction of Traps of all Kinds; Detailed Instructions for the Capture of all Fur Bearing Animals; Valuable Recipes for the Curing and Tanning of Fur Skins, etc. By W. HAMILTON GIBSON, Author of "Pastoral Days." Illustrated by the Author. 12mo, Cloth, \$1.

I can't imagine a country boy, an American boy, who would not go without his dinner for a month if in this way only he could obtain this wonderful book, and that paper is hard-earned, and may even be in dread of its Timothys, who will not buy this book for his boys, and for his father, a man is a boy until he is fifty years old.—THE REV. HENRY WALKER BECKER.

Since the days when my father taught me to make and set traps and dead-falls, I haven't felt such a feeling of bliss in any of the matter as I have in looking over this brilliantly illustrated and charming book of Mr. Gibson's. The Rev. EDWARD EGGLERON, D.D.

GUN POWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! Dupont's EXPLOSIVE MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

- Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequal in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. cans.
- Dupont's Eagle Ducking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. cans for retail and 15 lb. kegs.
- Dupont's Choke Bore.**—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrel; gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 5, No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and 1 lb. cans.
- Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. cans and 6 1/2 lb. kegs.
- Dupont's Rifle No. 5.**—A Shooting. Fig. and F.F. Fig. '1' are for long-range rifle shooting, the Fig. and F.F. Fig. for general use, burning strong and moist. Packed in 1/2 lb., 1 lb. and 5 lb. cans, 6 1/2, 15 and 25 lb. kegs. Fig. coarse, F.F. Fig. fine.
- Dupont's Sporting, Mining, Snapping and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard, powder manufactured to order of any required grain or proof.

Agents in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use note book DUPONT'S Fig. or F.F. for long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others." They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Manufacturers of the

BEST HEXAGONAL SPLIT BAMBOO FISHING RODS,

As was proved at the Fly-Casting Tournament at Coney Island, June 28.

First prize in Champion Class was won with one of our 10 ft. 9 oz. Bass Rods; length of cast, 75 feet. First prize in Amateur Class was won with one of our 11 ft. 8 oz. Fly Rods; length of cast, 6 1/2 ft. The Sea World Special Prize was won with one of our 11 1/2 ft. 10 oz. General Rods; length of cast, 7 1/2 ft. Our rods are considered superior to all others by those who have seen or used them. Send stamp for catalogue, with Mass. Fish and Game Law.

Ammunition, Etc.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 4 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square cansisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. cansisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Puck Shooting."

Nos. 1 (fine) to 3 (coarse). In 1 and 5 lb. cansisters and 6 1/2 and 15 lb. kegs. Burns evenly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFG, FFG and "Sea Shooting" FG in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. cansisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON and MUSKET POWDER; all SPECIAL GRADES FOR EXPORT OF ANY REGULATED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

ANSWERS TO CORRESPONDENTS..... 217

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The editors cannot be held responsible for the views of correspondents.

Subscriptions.
 Subscriptions may begin at any time. The subscription price is \$4 per year; \$4 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 44 Strand, W. C., London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.
 Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.
 Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.
 Thursday, October 13.

MAINE MOOSE MURDERERS.—We publish in another column a letter from one of the Maine Commissioners of Fisheries and Game, in which he questions the practicability of bringing the Maine game wardens. As to the integrity of the Maine game wardens we have no means of judging, beyond the correspondence which has appeared in these columns; but whatever may be the faithfulness or unfaithfulness of the wardens, the Commissioners of Fisheries and Game of that State have given abundant proof of activity and determination. They should have the co-operation of all sportsmen who wish to see the laws enforced. Mr. Stilwell says he is ready to prosecute the Portland moose killer. Now let some of the indignant Portland sportsmen, who have sufficient grit, give the Commissioners the facts in the case. As Mr. Stilwell pertinently suggests, the best kind of indignation is that which bears some fruit. At the sitting of the County Court at Farmington, last week, the Grand Jury found a bill against Dr. A. A. Robinson for having killed a yearling moose. He is reported as saying that "if convicted, he will make his case a test of the constitutionality of the law; if he is fined \$100, he will willingly pay \$5,000 to make the test." We advise the Doctor to keep his money. There is nothing unconstitutional about the law, and money spent in trying to prove the opposite is simply thrown away.

STATE PIGEON TOURNAMENTS.

THIS is a subject which has come into decided prominence during the past year. We have, however, purposely deferred its consideration in these columns, because the question is one which should be discussed fairly and impartially on its merits, and not solely in its relation to any single particular occasion or society. The State pigeon shooting tournaments of 1881 are past; those of 1882 are yet a long way off. This, then, is a fit time to consider the question which has engaged the serious attention of many sportsmen throughout the country. It is this: Is the wholesale trap-shooting of pigeons a proper employment to consume the time at the various State conventions of sportsmen?

To answer this candidly, it is necessary to look the facts squarely in the face. Briefly stated, they are as follows:

1. State associations are formed for the purpose—so their titles, constitutions and professions declare—of advancing the interests of sportsmanship and for securing the better protection of fish and game.
2. Annual conventions are held by each association, to which delegates are sent from the several clubs composing it.
3. These delegates are those who are most expert as trap shooters.
4. Professional trappers are hired to trap tens of thousands of pigeons on their nesting grounds. These birds are packed in crates and conveyed to the places designated for the conventions.
5. The only business accomplished at the conventions is the shooting of these pigeons, dividing the prizes and arranging for the next shoot.
6. Many influential sportsmen who have a warm interest in matters pertaining to the advancement of sport, withhold their support and presence from the State trap-shooting tournaments. The number of prominent men thus holding aloof is yearly increasing.
7. Not only do these conventions accomplish absolutely nothing in the right direction, but more and more than this, they have a positively bad influence in their effect upon public opinion. Instead of fostering by their transactions a popular appreciation of the dignity of field sports, and a public sympathy with the spirit and objects of just game laws, they bring the term "game protection" into ridicule and contempt. The only time the public hears anything of these societies is when its ears are saluted by the fusillade of their guns at the pigeon traps. The outside world never dreams of the existence of these State associations for the protection of game, except when they pose before it as exterminators of wild pigeons. The influences of these conventions upon those who participate in them is also questionable. In one State at least the annual tournament is tending more and more every year to a money-making affair. One of the State tournaments of 1881 was, to all discoverable intents and purposes, a grand money-making scheme on the part of the clubs under whose direct management it was held. The speculation failed, because the public could not be induced to pay gate-money to witness the immense and business-like slaughter of pigeons. The convention was barren alike of dividends for the stockholders in the scheme, and of any single good result which should legitimately have followed a game society's convention.

Those are the facts; but in regard to them very diverse views are held. It is argued, on the one hand, that the pigeon is not a game bird; that there is no sufficient reason why it should not be utilized for trap shooting; that it is no more cruel to kill one pigeon than one quail, nor twenty thousand pigeons at the trap than twenty birds in the field; that when the number of congregated shooters is taken into consideration the average number of pigeons per man is not excessive; that no other form of amusement can be substituted for the trap-shooting of live birds; and that without some such attraction the conventions would not be held.

On the other hand, there is a growing conviction among an annually increasing number of sportsmen that this yearly slaughter of thousands of birds is essentially cruel, unmanly and unworthy of the societies which practice it; that the average shooting afforded by these birds, which have been cooped up and starved for so long a period before they are finally put into the trap, and thrown weak, dazed and helpless into the air, to the spot where the gun was pointed be-

fore the trap was sprung, requires no special skill, that trap-shooting is largely trick shooting; that the motives of those participating in the State shoots are mercenary; that in their eagerness to secure prizes the pigeon shooters are nothing more nor less than "mug hunters;" that if pigeons are not game birds, game associations certainly have no business to trap and shoot them by wholesale; that pigeon shooting is an infatuation with which these game societies are so filled that they wholly fail to do their legitimate work; and that, if pigeon shooting were abolished from the annual conventions, the State associations would receive large accessions of influential supporters, and would then accomplish the ends for which they are professedly organized, but which have not been gained.

Another objection to these large pigeon shooting tournaments is one wholly apart from any sentiment, and is recognized by both parties; that is, the growing scarcity of the birds, the consequent difficulty of procuring a sufficient supply and the increased expense. During the past year this objection has presented itself with more force than ever before; and has in some instances practically put a stop to proposed tournaments.

This question of shooting pigeons, or not shooting pigeons, is one which demands the candid and deliberate consideration of those who have at heart the perpetuity and usefulness of our State sportsmen's associations.

The question is not whether pigeon shooting is in itself cruel; it has nothing to do with ordinary pigeon shooting as a form of amusement for individuals and clubs.

The point at issue is simply whether by dispensing with these vast annual trap slaughters of birds, the associations of sportsmen in various States can not accomplish better results, more successfully further the common interests of their clubs, attain a greater prestige and wield a more potent influence.

We invite an expression of views.

ARE THEY OF ANY USE?

WITH our issue of April 14, we began to head our columns of "Sea and River Fishing" with choice quotations from standard writers on angling. We have ransacked our brains in the hottest of city weather, and thumbed volumes of learned and entertaining authors to obtain quotations which should embody some appropriate sentiment or enforce some axiom which we especially wished to enforce upon the attention of our readers.

We are discouraged. Disappointed at what we believe to be a lack of appreciation. Not a word of censure or praise has it brought forth, not a line of commendation has it elicited. The sweetness has apparently been wasted upon the desert air. No one has ever referred to the quotations in any manner whatever. If they had only said that they were bad!

These quotations—gems we have thought them—appear to us to have contained the cream of angling sentiment, epigram, wit and learning. Some of them have embodied erroneous statements as well, but they have not called forth a word of remonstrance. Why this is so we know not, but have several times been on the point of abandoning the practice of heading those columns with the quotations of thought of anglers gone before, on account of the labor of looking up the passage which condenses the wit and learning of a volume, a work often requiring hours to select a paragraph which can be read in four seconds. But we won't. Not yet. We will continue for a while now that we have thus publicly called attention to what our angling readers may have overlooked. We want them to know that these things are weekly spread for them and have them educate their tastes up to them, the same as they have learned to love tobacco and raw tomatoes.

We have given quotations from Walton, Thad. Norris, G. Christopher Davies, W. C. Prime, Frank Forester, Edward Jesse, James Wilson, Cotton Mather, Dr. J. A. Henshall, J. F. Sprague, W. Wright and others well known in England and America. In fact we have prided ourselves on the aptness and richness of these extracts, and knowing that we number among our readers so many men of taste we have wondered if it was worth while to continue this labor, or if the pearls were cast before such an appreciative audience

that they were so rapt in admiration as to become insensible to such material objects as pens, ink and paper. Hence in writing this article we chose the heading which you see above.

SOME ONE TO BLAME.—In a Brooklyn shooting gallery last Saturday night, Harry Heatbote, a boy sixteen years old, attended to the targets. An unknown man had fired four shots, and Heatbote went to the end of the gallery to take down the target. While he was there the man fired the fifth shot. The bullet struck Heatbote in the right side of the neck, killing him almost instantly. After firing the shot the stranger coolly walked away. The proprietor of the gallery is to blame for this fatality. Rifle ranges may be constructed like that in Conlin's gallery, this city, in which such so-called "accidents" as this are utterly impossible; and the proprietor of a gallery, who neglects to provide his range with these appurtenances of safety, should be held criminally responsible for the consequences of his negligence. In Conlin's gallery access to the target is had only by pushing open a heavy iron door, which swings back upon the end of the tunnel and interposes itself between the target room and the firing point. This device insures absolute protection to the attendant who is arranging the target.

THE WILL OF THE LATE INSLEE A. HOPPER, OF NEWARK, N. J., who for many years was President of the Singer Manufacturing Company, gives all of his property to his wife excepting his fishing tackle, guns, and other sporting implements. These he bequeathed to his two sons, expressing his desire that they will cultivate a love for fishing and field sports. Of the intrinsic value of the sporting outfit we are not told; but the advice we know to be worth many thousands of dollars to young men. There are hosts of gray-haired veterans to-day who would not exchange pleasures found in field sports for a very considerable money consideration; and we know one gun and one dog and one fishing-rod which a small fortune could not buy.

SMOTHERED DOGS.—The misfortune which overtook the kennel of a Philadelphia gentleman, who exhibited at the London dog show, calls for strong language and vigorous action. This is not the first time that valuable dogs have been destroyed while being transported in railway baggage cars, nor until some better method than that now employed shall be adopted can we hope that it will be the last. The occurrence argues either very insufficient accommodations or gross carelessness on the part of the railway employes, and we trust that such decided action may be taken in this matter as will enable dog owners to feel more safe in the future, when forwarding their dogs by rail, than they can at present. We have not the details of the unfortunate affair, but hope to have them next week.

GUNS GIVEN AWAY.—The cheap gun speculator has appeared again. This time it is the "Saxon," an arm which, the advertisements tell us, all the "sporting papers" speak highly of. We dropped in to see the "Saxon" gun the other day and to inquire what "sporting papers" endorsed it. The man in charge scratched his head, and cited two or three European papers; but he could not specify the issues containing the "Saxon's" praises. The "secret" of the cheapness, he volunteered to us confidentially, was that these "shot-guns" were originally rifles made for the Zulu war, and afterward rebored and fitted to stocks to be sold to "farmer's boys" and "countrymen." It must be a very green chap who invests in the "Saxon." By the way, we should like to stand at a safe distance and see the agent of these arms shoot one of them off once.

MASSACHUSETTS GLASS BALL ASSOCIATION.—This flourishing organization is composed of sixteen clubs, and has a membership of six hundred. It holds two tournaments each year. Trap shooting in Massachusetts has quadrupled since the substitution of glass balls for pigeons. The Association's fall tournament began on the grounds of the Natick Sportsman's Club yesterday morning; and will be continued to-day.

MILBETT'S AQUARIUM.—We have received a colored lithograph of the Japanese gold fish, "Kingio," etc., to be seen in the aquarium of Hugo Mulcrut, 507 Race street, Cincinnati, O. It is well done. These fishes are sports of the ordinary gold fish, and are singularly supplied with extra tails, long tails, protuberant eyes, etc. Some of them are very beautiful.

THAT MYSTERIOUS LAW.—We have heard from time to time indefinite rumors of a law alleged to have been passed at the last session at Albany, prohibiting all shooting of game. Such a law exists only in the imagination of the wiseacres who originated the story, and who repeat it with all the mystery attending a conspiracy to murder Caesar.

GIBSON'S TRAPPING.—Mr. William H. Gibson has prepared another edition of his well-known work on trapping. The Harpers publish it. We will notice the book at greater length.

THE GAMBLING QUESTION propounded by a rifleman in our last issue has drawn out a response from Boston. The first shot is fired at Bunker Hill; it may yet echo round the world.

BY-WAYS OF THE NORTHWEST.

FIFTH PAPER.

TWELVE miles from where it puts off from the main Inlet, the North Arm ends in the narrow but heavily timbered valley of Salmon River. We ran up to the head of the Arm, and anchoring not far from the shore, landed and lunched under a superb Douglas fir. One of the mouths of the river emptied within a few steps of the spot where we were seated, and after lunch Mr. H took a rod to make a few casts, and try to capture some of the trout with which the river was said to swarm. Mr. Fannin, Scammux and I got into the Indian's canoe, and pushed off up the river, to see if we could not discover a white goat feeding on the mountain side. We did not expect, even if we saw one, to be able to kill it, but I had never seen this curious animal alive, and was anxious to behold it in its native wilds.

It was about low water when we left the steamer's side, and paddled up the river. The water near the mouth was nowhere more than a foot or two deep, and little riffles, or rapids, were encountered at every bend of the stream. In some of these the water was extremely shallow, so much so that it was quite impossible for us to get the canoe up them, while it was so heavily loaded, and all but Scammux were obliged, more than once, to land and walk around the rapids. It was a fine sight to watch the Indian as he stood with his pole in his hands preparing to drive the canoe up stream against the turbulent current. Quietly pushing along until he had almost reached the rushing water, he would set his pole firmly against the bottom, and leaning back against it, would send the little shell fifteen or twenty feet up the stream, and then, before its way had ceased, would have his pole again fixed in the bottom. Standing as he did in the stern, the nose of the canoe rose high out of the water, and looked, as it rushed forward, like the head of some sea monster whose lower jaw was buried beneath the surface. No matter how furiously the water rushed, nor how it boiled and bubbled on either side, the light little craft, held perfectly straight, moved regularly onward until, the rapids passed, we would step aboard again, and resume the paddles, which would only be laid aside for the poles when another rifle was reached.

Mr. Fannin had brought both his rifle and shot-gun, the latter for the benefit of any interesting birds that we might happen to see; while I had only my own rifle. All the guns were pretty wet, since the canoe sat quite low, and in the rushing and broken torrent of the rapids took in considerable water.

I have scarcely ever seen the dipper (*Cinclus mexicanus*) more abundant than it was on Salmon River. On every little reach of still water one or more would be started and would fly from rock to rock, bobbing comically at each point where it alighted, in the most grave and absurd fashion. Many of those which we saw were young not long from the nest, and were quite without fear, allowing the canoe to approach within a very short distance of them before they would fly. The young of this species are readily distinguishable from the adults by the color of the under parts, which is pale brownish on the breast, fading to a pinkish tinge on the median line of the belly. We also started a number of broods of young harlequin ducks, some of them almost able to fly, while others seemed to be just hatched. Whatever their age, they seemed abundantly able to take care of themselves, and they could always keep ahead of the canoe until they had rounded a bend, after which they would not be seen again. Everywhere along the stream grew the salmon berry bushes laden with mature or ripening fruit. This shrub (*Rubus spectabilis*) resembles in its manner of growth, and in its berries one of our Eastern species of blackberry, but its fruit when ripe is either red or yellow, berries of both colors growing on the same bush. They are pleasant to the taste, but have little substance.

We pushed on for some distance, up the stream without seeing any animal life larger than the ravens and eagles, which occasionally flew over us, going up or down the valley. At one point we saw where a bear had crossed the stream, and at another noticed some old deer tracks. At length, about two miles from the mouth of the river, we came to a long sand, or rather gravel bar, and landing on its lower extremity, we strolled along examining the hillside for the white goats that we hoped to see. The guns had been lying in the water, and we took them out of the canoe, Mr. Fannin holding his two down to drain, and then placing them against a stick of driftwood to dry in the sun. I took and wiped the water from mine as well as I could, and walked along with it in my hand. We had gone perhaps forty yards from the canoe, when Fannin and the Indian stopped, and began to scan the hills carefully while I walked on toward the upper end of the bar where there was a huge log, from which I hoped to get a better view than could be had from the water's level. Reaching the log I climbed on it and looked back at the others. As I did so I saw Scammux speak earnestly to his companion and point across the river, and in a moment Mr. Fannin turned toward me, gave a low whistle, and beckoned with his hand. Thinking that a deer had possibly shown itself in the brush, I dropped down from my perch on the log and ran toward them. I felt sure that it could not be a goat that they saw, for Scammux had evidently pointed to the opposite bank of the river, and the goats at this season are found only on the mountain sides. As I ran toward them the loose stones on the bar made what seemed to me a horrible clattering under

my feet, and I feared, forgetting the noise of the rushing waters, that, whatever it was that they saw, it would hear me and run off into the brush. When I was within about fifty yards of the watching pair, Mr. Fannin turned toward me again and made a gesture recommending caution, and, just as he did so there came in sight from behind a bush a fine bear. I had slipped a cartridge into my rifle as I started, and as soon as the animal appeared, dropped on one knee, and was about to fire. As the bear, however, was perfectly unconscious of our presence, I waited a few seconds for him to stand still, for, with two spectators, I was particularly anxious not to miss him. He was about one hundred yards off, and there would be no excuse for failing to hit him. He was gathering berries and was evidently giving his whole mind to it. Where the fruit hung low he would merely reach up his head like a cow picking apples from a tree, and winding his long tongue about the branch would strip the berries and leaves from it, leaving merely the bare stem; at other times he would stand up on his hind legs, and, reaching his fore paws to the higher branches, would pull them down to within reach of his mouth. Two or three times I was about to fire, but waited for a better chance, which came at last. For an instant he stood still facing me and I fired at the white spot in his breast. Just as I pulled he started to rear up for some berries above his head, but as the gun cracked, he thought better of it and whirling about lumbered off into the brush. He had disappeared almost before I had lowered the rifle from my shoulder. A moment later I stood by my companions and asked them, "Did I hit him?" Neither could tell, but the Indian offered to go across and see, if I would lend him my rifle. This I declined to do, and was about to wade the stream myself, when F. told me to wait, and sent the Scammux to fetch the canoe up to where we were standing.

While waiting for the craft I explained my refusal to let the Indian take my gun to go across for the bear. It would have been a regular Indian trick for him to have crossed, and if he had found the bear dead, or badly wounded, to have fired a shot and then claimed that he had killed it.

In a moment the canoe came up, and springing on board we soon reached the opposite shore. Mr. Fannin and I climbed up the steep bank and ran to the point where the bear had disappeared. We had hardly gone four feet in the bushes when we saw a broad leaf covered with blood, the thick drops, and further on a place where it looked as if a teacupful of blood had been spilled on the ground. The trail was a plain one. Mr. F. said: "I am afraid he bleeds too much," to which I replied: "If he will only keep on bleeding we will be sure to get him." By this time Scammux, having secured his canoe, came up, and we hurried forward on the trail. Once we lost it for a moment, but a low call from the Indian soon told us that he had found it again, and as we overtook him he stopped with an exclamation, and pushing by him I saw the bear lying a few yards away, curled up on his side with his paws over his nose. The Indian did not seem inclined to approach him, so holding my gun in readiness, I stepped up behind the brute and gave his back a push with my foot. What sounded very much like a snarl of rage was emitted from his throat, but it was really only the air escaping from his throat and wounds, as I pressed my foot on him. He was quite dead, the ball having pierced the white spot and torn his lungs to pieces.

With some trouble we lugged him out to the river bank, and dropped him off into the canoe; and soon after, as we could see nothing of any goats, we turned down stream and hurried merrily along by the dancing waters, took our way toward the steamer.

It was very exhilarating to fly down the rapids, dashing by the bank at almost railroad speed, giving now and then a stroke of the paddle to keep the canoe straight or occasionally to turn her when a threatening rock appeared under her bow, and seeing the rapids, that had been surmounted with so much difficulty, disappear behind us almost as soon as they were reached. It took us but a short time to run down to the mouth of the river, and we were soon alongside the steamer. We found steam up and everything in readiness for a start, and received the cordial congratulations of the whole company on the unexpected success of our short excursion.

As we were about to start, attention was called by the Indian to two very minute white specks high up toward the top of the mountain on the west side of the Arm. Glasses were at once in requisition, and after watching the objects for some time it appeared quite certain that the objects were goats. Although they were so far distant that no motion could be detected in them, it was apparent that they gradually changed their position, both with regard to each other and to surrounding objects. They were too far off, however, and the day was too far spent, to allow us to think of pursuing them.

Our sail down the inlet was no less beautiful than that of the morning. The shadows of the trees and of the mountains were so different from those we had seen earlier in the day, that the effect of certain portions of the scenery was wholly changed. On our way we saw on a little grassy point a bear feeding at the water's edge, but before we came within range he had taken the alarm, and a shot from one of the party, fired at a distance of four or five hundred yards, had only the effect of making him take a long look at us and then trot off into the brush.

Scammux told us, on the way down, a rather interesting

The Sportsman Tourist.

THE DREAMS AND THE STREAMS OF THE PAST.

THERE be dreamy days in summer time, when all sounds that come to the ear are like the droning of a nursery crane; when the bees, and the water-fall, and the tannery wheel, and the wind in the solemn pines, all seem to hit it off in unison, singing an overpowering lullaby that dulls the senses deliciously. It was on such a day as this that I wrote to the blessed old Judge (your sometimes correspondent "Fitz") to know when I could meet him on the stream, and be with him in some new old spot among the favorite resorts of other days; and hear from him again the tales of former plied, the recollections of famous catches and misses of the Past. Now, the Judge is a confirmed *trudator temporis acti*, and faithfully believes that there were more pretty girls, and big trout and fine fellows, in the good old days before the flood, than there are now or ever have been since that "critter went stoshin' around with his darned old ark scaring the fish and drowning folks." So just to humor him I dropped into the same vein; but, alas! the sleepy song of Nature overcame me, and I woke up with a start, only to find that I had mixed up the trout and the maiden in my verses in frightful fashion, and had produced a modern poetical mermaid worthy of Barnum:

Oh, the dreams and the streams of the Past!

What a charm when one fondly recalls How full was the former of Hope, And the latter of wonderful "hauls;"

You remember the maiden so coy, Who'd an eye like the blue of the sky— You think, with a spasm of joy, Of the day when you first cast a fly.

How her lips, like the roses, were red, How you worshipped the curve of her nose— You feel even now the sweet thrill As you "nipped" a half-pound that rose.

Pull the daintiest maiden was she That ever was tempted with bait— How speckled and glossy her sides, And how swift through the water her gait.

And the hair falling down from her gills Was so golden and flowing and free! Not a thought had you then of the chills, Though you waded in love to your knee.

You were filled with a sense of delight, As you fondled her dear dorsal fin; On rivals you looked with contempt, Those who fished with a tow-string and pin.

You remember the swift-whirl "swash" When she rose to your artificial cast, And how you were mad and said "Gosh!" As you missed her and lost her for last!

But now, looking back on it all, You can say, 'twixt the twinges of gout, "She dipped at the fly with her tail And was only a ingerting trout."

Oh, the dreams and the streams of the Past!

What a wonderful halo is this, That so crotches the creeds of old days, And e'en softens the pang of a mis!

THE MAJOR.

THE GREAT SOUTH BAY.

IN TWO PARTS—PART TWO.

NEXT morning's "snipe shoot" was another failure. Mr. Green hunted killy fish through the mud and water of the meadow, and the Commissioner discoursed on his favorite subject, the wonderful natural attractions of Long Island and the Great South Bay. On their way back to breakfast they got a few shots at an immense flock of oysters, and secured enough game for breakfast, dinner and supper. Bidding good bye to their friends of "Castle Conkling" and the Wawayanda, they headed further toward the west. Mr. Green had, since the beginning of the trip, made the yacht "lie to" alongside of any fishermen working their nets, and he had examined the pounds and interviewed all manner of bay-faring men. After we had passed Oak Island, with its club-house and promising snipe grounds, over which the Commissioner brea'd a parting sigh, and were bravely heading for Cedar Island, an indefinite spot where the Commissioner once, in early boyhood, had great sport and had lived since to manhood's prime in the hope of having it again, Mr. Green perceived two fishermen up to their waists in water "treading out clams." This singular employment, the like of which he had never seen before, argued an immediate explanation that was plainly beyond the limits of his credulity. He had started out the working of the oyster tongs and clam rake, and to the great surprise of the owner in each case, had taken lessons and had insisted upon working them himself, and had brought up clams and oysters from the vasy deep; but to believe that people just walked around in the water till they stepped on the rounded bivalves, and then picked them up with their hands was giving too much credit to the productiveness of even the Great South Bay. So he must go and see. We went, and the men confirmed all that he had heard of them as the bay with sheets eased off, and Mr. Green satisfied his doubts and learned "something new about clams." But the men were working in shallow water which was shoaler still around them, and hardly had we left them two hundred yards before the yacht, of light draft though she was, ran solidly aground on a sand bank. All manner of efforts were made to get her aloft; sheets were eased off and trimmed in; the jib and mainsail were worked at alternately; a long pole was used to try and "head her around"—but in vain. The yacht was fast and the tide was falling. Here was the predicament for an exploring party. The next twelve hours were evidently to be spent exploring a limited space of sand bar, but the Commissioner's equanimity was not to be disturbed. His golden rule of life had been "Don't Worry,"

and he was not going to forget his precept for all the fish in the Great South Bay. He calmly turned to the Superintendent and remarked: "Do you like to bathe?" "Yes," replied Mr. Green. "If so, now is the time to bathe, and salt water bathing is strengthening." So those two wise and rather stout men stripped off their clothes, and stepped overboard. Mr. Green was about disporting himself in the water, and had in mind the excellent chance that presented itself to practice a little "treading out clams," when the Commissioner remarked as calmly as before: "Now, if all hands will come to the bow, and get under the bowsprit we can shove her off." So it proved. It must have been a funny sight to any beholders, those stout, elderly and dignified gentlemen garmentless, working away at the Au Revolv to get her into water where she would be herself again; but lightened as she was, of a good deal of solid flesh she swung around easily, and made off so fast that they had to clamber aboard in haste, and Mr. Green was compelled to postpone the study and practice of the great art of "treading out clams" to a more convenient season. "Now," said the Commissioner when they were fairly under way again, "beyond this point I am not familiar with the bay, having forgotten about it, but I have my charts which I made in old times." "What!" exclaimed Seth Green, "don't know the way, and your man don't know it?" "Oh no, a man in the South Bay only minds his own business. If he fishes for clams he knows where the clams are, if he fishes a net he understands just where and how to set it, if he digs mussel or catches 'bunkers, mussels and 'bunkers are the extent of his knowledge. Why should he worry himself with vain things? My man worked in the middle part of the bay. Into the East Bay he has told me he went once. Into the West Bay, though but thirty miles from his home, he has never penetrated to penetrate. But I told you I can rely upon my charts." "Then," said Seth Green, decisively, "the sooner you begin to study them the better." "I remember," said the Commissioner, as he brought them out of the cabin to the waning light of day, "that there was a white house, which bore northeast and northwest or north-by-east or about that, from the opening in the bulkhead, but I forgot exactly which white house it was, and there seem to be several." "Perhaps," replied Mr. Green, with deepest "sarkassum," "it is the white house we passed an hour ago, or that one we are abreast of, or that one a mile ahead. As every body seems to paint his house white on this shore you have quite a choice." "Oh!" replied the Commissioner, innocent of the ill-concealed irony, "this was a large, white house, it is either that one in the distance or some one beyond." At this the Superintendent bounced around in restlessness. "Let's follow some other boat, that one ahead, she seems to be going our way." "It is a thousand to one she is not, there are villages all along the bay, and every cove is converted into a harbor. We shall find the house, but what troubles me is the course. I seem not to have marked it on the chart. I must have known it so well once." "And suppose we cannot find it, what then?" asked Mr. Green, anxiously. "Where can we make a harbor?" "Oh, we can anchor anywhere. The water is not over four feet deep where we are. But we can surely find the channel." It was staked out. So they took "heart at sight of every oyster stake, and cel pot stake and net stake in their course." "What is the bulkhead anyhow?" asked Seth Green, after a pause. "It is a strip of sand like a shallow sand bar, miles long, and dividing one part of the bay from the other. There is some way of passing around it, but I do not know how, and that would take us far out of our course, and nearly up to the mainland. We shall find the channel, never fear." This easy confidence was justified; they discovered the narrow passage, only a few feet wide, staked out in the middle of that long bar of sand, but the tide was running strongly against them, and as the wind also was ahead they found it impossible to make any progress, and were compelled to try to go around the obstruction. It seemed a long journey, and soon they had passed from the open bay and were threading their way through narrow channels, among marshy islands, but fortunately the tide was nearly full, and an ordinary flats were well covered with water. Night found them at last surrounded by islands in a part of the bay they were wholly unacquainted with, and with no other means than their own strength they did not want to anchor in the track of larger vessels, for fear of being run down in the night, as they had no lantern, but there was no help for it, and they dropped anchor in a blind creek. It had become dark, the wind was blowing hard, and there was damp, cold sleet falling. Hardly had the Au Revolv brought up on her cable than the Commissioner called out, "We are on an island, I can see the grass through the water." Fortunately they floated over it, and a fresh cast of the lead, that is a sounding with a long coil revealing good water, the anchor was dropped again and all hands went below tired, hungry and not altogether satisfied with their position for the night. A hearty supper, that panacea for all ills, swallowed, and to bed we go. "All's well that ends well." Daylight next day shows us that we could not have chosen better had we known every inch of the bottom of the bay. We were in the best water, and Point Look-Out, our immediate haven, was in full sight. We had only to go straight for it that is as straight as the innumerable intervening islands would permit. Point Look-Out is the easterly extremity of Long Beach, connected with the principal hotels by a local railroad which runs every hour to and fro over the sandy beach. The point is on the edge of an inlet which lately broke through, and already boasts of a hotel and a half dozen cottages. The hotel is admirably situated for families who prefer quiet to the noise of the great caravansaries. To gentlemen it offers the attractions of boating, tolerable shooting and fair fishing. There is left the party for a time, Mr. Green to interview the boatmen, study the habits of fiddler-crabs, chase minnows through the ditches, and learn all about the hatching capabilities of Hempstead Bay, as the South Bay begins to be called in this neighborhood. The Commissioner to sit on the piazza of the hotel, watch the ocean commerce through his glass, and expatiate upon the future glories of all the sand beaches that he betwixt his favorite island and the broad Atlantic. These important matters accomplished and I rejoined them, and once more we sped away back by another route into the

story relative to a certain Scallicum which once inhabited the North Arm of the Inlet, and in ancient times destroyed many Indians. This Scallicum was peculiar in form, being shaped like two fishes joined together at the tails. It used to lie stretched across the mouth of the North Arm, just under the surface of the water, with one of its heads near each shore. Whenever a canoe would attempt to pass up the Arm the monster would wait until it was directly over its body and would then rise to the surface, overturn the canoe, and with one or both of its heads devour the occupants. In this way it destroyed many Indians, for the North Arm was a great hunting ground and fish, game and berries abounded along the river. At last the depredations of the Scallicum became so terrible that the Squamish Indians had lost nearly half their tribe, and no one any longer dared to go up the Arm, so that the people feared that they would starve to death. Now there was a young man in the tribe who had seen his comrades' misery and pitied their misfortunes, and at length he resolved that he would sacrifice himself for his people, and would kill the Scallicum even if it cost him his own life. So one day he went about to his family and bade them all good-bye, saying that he was going away and should not come back for a long time. Then he went away into the mountains, and no one saw him more. He fasted for many days, and prayed to the good spirit, and at last, when he was very weak, he dreamed one night that a very large white goat stood near him as he slept, and spoke to him long and wisely. The next day the young man went up further into the mountains, and gathered certain roots and herbs, which he dried in the sun, and afterwards, building a fire, scorched them. Then he scraped them into a powder and mixed them with some medicine oil and rubbed the whole over his body—over his head and arms and body and legs. He left no part untouched. Then he walked down the mountain to the shore of the inlet and dived into the water. For five years he lived in the water, scarcely ever coming out on shore. In all this time he never spoke to a man. He was so much at home in the water that he could swim faster than a seal or a salmon, and at the end of that time his medicine was so strong that he could call the fishes or the seals to him, and lift them into his canoe. Now he was ready to fight the Scallicum, and, taking two spears, one in each hand, he swam to the mouth of the North Arm, and diving under the monster, thrust them into it. The fight was long and terrible, but at length the battle ended and the monster was dead. The young man was terribly wounded and expected to die. His wounds were so severe that he could not move, and he floated on the surface of the water like a dead salmon. As he lay there on the water he heard the sound of a paddle; and a canoe, in which sat his brother, stopped by him. The two recognized each other, and the brother lifted the wounded man into his canoe and took him to shore. The latter then told his brother to take him up into the mountains, and to gather certain roots and herbs, which he should first dry in the sun and then scorch in a fire. Then he told the brother to scrape them into powder and to mix them with the oil of a medicine fish, and to rub them over his whole body—to rub the mixture over his whole body, leaving no part of it untouched. This the brother did, and immediately the young man rose from the ground and walked about sound and whole. Then the two brothers went home to the village. Since that time the Scallicum has never been seen in the North Arm. This story, which I have thus briefly outlined, as nearly as possible in the Indian's words, was told by him at considerable length and with great particularity and detail.

We reached the town of Hastings about six o'clock, and at once took the stage for New Westminster. The next day I left for Victoria. Yo.

Camp on Loughborough Inlet, B. C.

ROUTES to the DUCKING GROUNDS.—As the season for duck shooting draws near, it is worth while to suggest to those who purpose visiting the South, during the season, how they can most conveniently reach their destination. We presume that about the middle of November the exodus for the shooting in South Carolina will begin, and the members of the various clubs, their friends, and those who annually go to Van Slyke's, will commence to move off. The famous shooting grounds on Currituck Sound have, by the completion of the Elizabeth City and Norfolk Railroad, been brought within twenty-four hours of this city, and recently arrangements have been made by which the route is somewhat shortened. Those who intend to visit Currituck can take the 3:40 P. M. train at New York, as per advertisement of the Associated Southern Railways in another column, reaching Norfolk at 9 o'clock A. M. They should leave the train at Snowden, which place is reached at 10:50, and proceed thence by private conveyance to Currituck Court House where they can take the steamer Cygnet for Van Slyke's and other landings. If for any reason the steamer should be detained, they can continue on overland to the shore. The charge for conveying passengers from Snowden to Van Slyke's will, we understand, be \$2 each. The agent at Snowden will furnish all necessary information. There is no hotel at Currituck Court House, but a good dinner can be obtained at Captain Walker's. We understand that by taking the all-rail route, via Richmond and Petersburg, one can leave New York about 9:30 o'clock P. M. and reach Snowden at 6:55 P. M. the next day.

broad waters. In the way and in one of the narrow channels we passed two yachts whose owners we knew; one of the latter shouted out something as we sailed by, which, as they appeared to be fishing, we took to be—

"We have just caught a sea bass of six pounds!"

"As this is very large for a sea bass Seth Green shouted back at the top of his voice—

"Hold him up and let us look at him!"

"Our friends got under way immediately, and taking a short cut headed us off, and we were all surprised when we learned that they had really said "they had a sick man aboard they wished we would take home." Mr. Green's answer must have seemed to them ironical if not heartless.

It was an intricate channel, but one vessel whose owner knew the way was our pilot, and we came safely and quickly through. As we emerged into the main bay through the narrow channel in the bulkhead the Commissioner drew Mr. Green's attention to the compass and a large white house looming up on the northern shore. "You see," he said, "it bears exactly northeast as I told you, and my charts are perfectly accurate."

"Then our friends informed us they were out of provisions and we invited them to sup aboard, and it was agreed to unite forces and go down to the easterly end of the bay together to fish and shoot, sending one boat to leave the invalid and get fresh provisions."

"We had a bottle of champagne, a biscuit, and we are out of champagne," said the Commissioner.

"What! out of champagne?" exclaimed the Superintendent, in alarm, "then it is time to send ashore for supplies."

What a supper we had! Canned goods are a poor substitute for fresh provisions, but we had fish and some birds which Seth Green had shot the day before and eggs and home-made butter and ice and still a couple of bottles of champagne. The Brunswick's ups are, by far, the best, and canned tomatoes are not excelled. Our man served such coffee, "hot—hot out of the pot," potatoes likewise, and all with the flavor of the fire in it, not tepid and half-sodden with waiting to be served, as is often the case in our city kitchens. The cooking was intelligent, for did we not oversee it and even without the splendid sauce of appetite? I cannot but say our supper was as good as any we should have got anywhere ashore. The highest science of French cookery can add no taste and produce nothing superior to a plain broil or roast.

One of our guests, the Doctor, taking deep interest in the slap-jacks which constituted our dessert, for our meal consisted both dinner and supper, determined to take their time of cooking which he thought had much to do with their excellence. He placed his watch on the table, "the makings" of a slap-jack was poured into the pan. He waited, regarding the dial face eagerly a few minutes, the slap-jack was done, and ready to be eaten.

"Grecious," said the Doctor as he accepted the dainty and proceeded to devour it, "my watch is not going; I forgot to wind it up last night."

Moral. Always wind up your watch when you are off yachting, and never time a slap-jack unless you know your time-piece is going.

It took us a long while to finish that meal, but when it was over, we parted company temporarily, one boat disappearing in the bazy darkness to the north, agreeing to rejoin us later on at the mine ground, and we, following the other on our course seaward. It was a beautiful night and a delightful moon had risen and was pouring a river of silver light over the leaden water. Also it rays the sails of our friend's yacht looked black; the wind was blowing fresh and we dashed along at headlong speed after those said that, like a phantom vessel, fled as fast as we pursued. Half an hour after with a free wind and all we wanted of it we followed our leader along the bay. It seemed as though every minute must bring us to the end that was looming dimly before, but it was not till eleven o'clock that we made out a lone sand-hill on the beach which was our landmark for the anchorage ground. Then we gladly furled sail, dropped anchor and went to sleep.

Fishing and shooting do not combine well. There was a net aboard for catching minnows, and after Seth Green and the Commissioner had arranged their blind and set out their decoys they went to fishing. The birds did not fly numerously, and our sportsmen supposed they could keep on the watch and not lose any flocks. They were convinced of their error when several blue ducks went by unobserved while they were deeply interested in catching "white-bait" or studying the sex or maturity of some newly captured killifish.

"When I was a boy," remarked Seth Green, gravely after such an occurrence had happened and they had dropped their net and let the minnows escape, and rushed for their guns just in time to be too late to use them, "When I was a boy and out shooting, and my ammunition ran low, I would often divide my last charge of powder and shot into two, and—I never killed anything with either of them."

The "white-bait" were out "spearing," quite a common, but very pretty fish of our northern waters. It is semi-transparent, and certainly looks "good enough to eat," and the Doctor assured us it was delicious, but the Commissioner had eaten it before, and his souvenirs were not favorable. However, we had that cooked and the barred-killifish, and the green-killifish, and the many varieties which are known generally as "minnows," from the Indian word *neemahong*, along the shores of Mattowax, the Long Island of the aborigines, and Seth Green ate of them all. His plan with a fish is very simple; first to catch it, then to smell it, for he says a very fish has its own peculiar and distinguishing smell, then to cook it to eat it. No matter what it may be, he is now repulsive it may look like. He once tasted jelly-fish, but reported that it was bad; in fact that red pepper was a salve for the taste it gave, and that when he had exhausted himself trying to remove the recollection with water he scrubbed his mouth out with sand. He tests the warmth of all water in which he fishes with his mouth, and can tell to a degree of the thermometer what it is, and he drinks a little to ascertain if it is salt or fresh, and if brackish exactly how brackish.

Our whitebait were certainly very sandy; they were too small and placid to need cleaning, but their stomachs were as full of sand as if they lived on nothing else. Seth Green insisted that they were a very sweet fish, what there was of them, a proposition to which the Commissioner gave a disgusted assent.

"A very sweet fish indeed," he said, "all of them which is not bones or sand, and that is not much."

I may say incidentally, that when there is a little red mud about the bottom of the spring, so in New York markets, what is usually passed off under the name, is a mixture of all sorts of young or small fish, among which the

spearing holds a prominent place, and that it is about as miserable a substitute for real whitebait as cooked clams are for cooked oysters. Of course this fact was well known to our party, but the beauty of spearing was misleading some of them, as beauty has misled some of us more or less during our lives.

Seth Green had always been an admirer of a central-fire action gun, and in the way had the Commissioner wasted his eloquence in explaining and contending that no improvement had ever been in the action of the original LeFaucheur pin-fire breech-loader. Out of regard for his guests' views he had had an old Parker gun, which he had discarded, revamped and refurbished, and delivered it and a lot of old cartridges into the hands of the Superintendent, who has the reputation of a first class shot, and knows it. In the course of the shooting he had made a few misses, although indeed very few, and during a lull he opened a number of his cartridges to find out if they were loaded properly, and gave the result of his investigations to the Commissioner at the dinner hour on the following day without reserve. As the entire party dined on the Au Revoir for sociability, he had quite an audience as he commenced:

"When I first came to the seashore I was treated very hospitably, and the Commissioner was so good to me that he gave me a fire-lock to shoot bay snipe with, while he used a breech-loader. I have never forgotten his kindness. This thing has done better for me, he not only lends me an old gun that he has given me, but he gives me a dozen cartridges in his case—but he never gives me all the old cartridges that have been loaded since he first tried to learn to shoot. I opened them and found some loaded with number two shot, others with number tens, some had two drachms of powder in them and others had five, and the bigger the shot the less the powder. Why! They were of all sizes from an inch long to three, and as for powder, well, just look at that."

Hereupon he drew out of his pocket a cartridge cut open so that the powder which was seen to be packed into a solid mass of brown material more like road dust than good powder.

"There, just look at it and tell me if anybody can be expected to kill game with that?"

The Commissioner was taken aback, but while the company were laughing he recovered his composure.

"Certainly," he replied calmly, "Mr. Green is right. I always make it a point to gratify the wishes of my guests whenever I can. Mr. Green shoots with a central-fire snap-action gun, and I have a few of them that I can lend you a snap-action gun. I had it put in order especially for him. I never would work for me, but I hoped it might do better for him. Anyway it is his choice. And as for the cartridges, I know better than to use them, but I don't object to his shooting away all the old ones which I was foolish enough in my youthful days to load. Besides," the Commissioner added expansively in conclusion, "they furnish a good excuse for missing. Where would any of us be without an excuse for our misses, and so Mr. Green has certainly needed an excuse he is lucky to have so good a one. It was really a most delicate attention on my part in furnishing him with something upon which to place all blame."

In spite, however, of this pleasing and gracious way of putting it, the Superintendent was evidently discouraged, and either found the snipe too scarce or his ammunition too poor, for after that he devoted himself almost wholly to experiments. There were no more fish to capture, and he felt like Alexander on his business. He was a bold man and a few days later he had a boat with a central-fire snap-action gun in it pronouncing it not good, but six degrees colder than the bay water and quite drinkable. "There," he said, bringing some in a cup to the Commissioner, who was patiently waiting in the blind for that "flight" to begin which he had expected for so many years, "taste that; if a man had nothing better he could get along on that. Try some more of it," as the Commissioner made grimaces after taking a mouthful which he had promptly ejected, "you did not get a good taste. It is easy to spit it out if you don't like it."

"No thank you," replied the Commissioner, "I've been splitting ever since the first trial. I prefer ice cream."

Having exhausted the fluvial and piscatory resources of the spot, Seth Green explored the neighborhood. He went off among the sand-dunes, took a look at the ocean, pulled up flowers and plants, studied the coarse grasses, and finally returned with two large bushes which he planted like trees behind the Commissioner and himself to serve as a shade between them and the rays of the hot sun, which at times came down rather fiercely usually settling down and announced his conclusion as follows:

"In bay snipe-shooting that fellow I met at Point Look-Out was about right. He said, 'You must have the wind southwest, then you must have had a storm, and next day the bay must be cloudy, and last you must have luck to kill bay-snipe.' Let's go to fishing again."

Then the party separated, and the Au Revoir once more made her lovely journey along the bay. Fire Island was revisited and Saunauie's Hotel, the fashionable resort on the beach in front of which the Au Revoir went helplessly aground, and bating even in the presence of all the guests on the piazza and the travelers by the Babylon steambath which came by at the time, and who to keep interest in the proceeding, was in vain, and she had to stay there till the tide rose. Those on board were beginning to be worn out by their long cruise and unaccustomed labor and went to bed, having first carried an anchor out into deep water. In that part of the bay where they were, the tide runs with great violence and rapidly, and is a easy to get into a hot and sticky red mud, and to get anchor, and then to carry out to sea. The Commissioner doubtless was dreaming of such possibilities when he asked to find the yacht had a slow heavy roll just like that she would have in the swell of the ocean after it had broken on the bar. The horrors of an unexpected trip to sea at midnight, without preparation or a knowledge of the position of the boat, burst upon him and he darted from the cabin with the speed of half his half-century, and dashed to the deck, where he was met by the Commissioner and the Superintendent, who were both in a hot and angry mood. Should he anchor with the spare anchor, would he have time to get the sails up, could he tell where he was so as to keep in the channel and out of the breakers? If the yacht struck and filled it would be a most certain death, as the tide runs over the bars and the surf beats upon them with a violence too great for even the most expert swimmer. In the daytime there would be a chance of escape or rescue, but at night there would be no one to see or to help, and the consequences would be such as to give a man's brain to revolve a list of possibilities, but when the Commissioner reached the deck and found the yacht still lying at her anchor and the "silver moon" gazing placidly in the fullness of her

splendor down upon the tranquil waters, he was more than relieved. The motion of the vessel had been caused by the swell from the breakers that at high tide comes in over the bar and reaches some distance up into the channel way. All he had to do was to haul in part of the cable so that the yacht would swing clear of the shoal at low water, and once more return to his comfortable though limited sleeping accommodations, after no more than was nearly over. A visit to the eastern end, and an examination of the endless eel-pots which there take the place of gill-nets completed the investigation into the advantages and disadvantages of the Great South Bay as a breeding-place for sea fish. Nature had done much for it, but man had treated it as he seems to insist on doing with all common property. Generation after generation had taken all they could get, regardless of the future or of keeping up the supply. Extravagance and waste had produced the results that are sure to follow them in private or public matters. It was clear that if the waters of Long Island were to be restocked with fish in satisfactory abundance, the work would be one of time and difficulty, and need a co-operation from the residents which it might not at present receive.

It seems that in this land of freedom it is impossible to save or restore any natural source of wealth, unless it can be converted into private property, or until it shall first be so utterly ruined as to be of no value to anyone. Our people have yet to learn that it is much easier to save a fishery from ruin by timely protection than it is to restore it after it has been exhausted by abuse and neglect.

On shore, the fresh water fisheries were found to be in not much better condition. Some ponds, like those of Mr. Lorillard at Islip and the South Side Club, had been brought to a high standard of productiveness by artificial assistance, but most of the ponds and streams had been poached and fished and neglected till the famous trout of this most favored island had almost disappeared. The trout were found to be sold at a dollar a pound. No part of the world do trout grow so rapidly. Nowhere is there a more abundant supply of food for them nor do they attain higher delicacy of flavor. The visitor can scarcely travel a mile without crossing a beautiful pellucid brook fed by springs of the best temperature for these dainty and exacting fish, and containing unlimited food and perfect spawning beds. No one who has not given a careful study to the subject can realize the advantages where the trout are raised in the ponds which here and there have been built on them contain. There are, in the first place, the countless minnows which run into them from the bay, and will find their way along distance from brackish water unless prevented by some obstruction. There is no better food for trout, and a hatchery can be made to raise trout for market at a good profit where these can be obtained. There is the salt and fresh water shrimp, and many trout on this island have the habits of the trout of Canada and migrate to and fro between the fresh and salt water.

The fresh water shrimp, although smaller than those of the bay and darker colored, are exceedingly abundant in all the ponds. The ephemeral and other flies are numberless in certain seasons, and fill the air like motes in the sun or snow-flakes in a storm, and it is found that fish feed on flies grow faster and attain a higher flavor than any others. Many of these flies pass the grub state in the water enclosed in houses which they build of sticks or stones, or in holes, and are devoured in myriads by the voracious trout. They feed throughout the winter, and when the water is obtained abundantly in winter, when most kinds of food are scarce. Often, on disturbing an old log that has lain a long while in the bottom of a pond, an inky looking current will flow from it. This, on examination, will be found to be composed of so many insects that it seems to be actually black. Of course, the first requisite to raising animals is to have food for them, and fish need feeding, although many persons act as if they doubted this, precisely as much as land animals. Either the abundance of food or something in the nature surrounding the conditions of the fish causes the trout of Long Island to grow easily twice as fast as those of the interior of the State. A fish raised at Caledonia, in the State hatchery, and well fed and cared for, that in fifteen months after birth, say by June or July of the year following, weighs one-quarter of a pound, has grown fast and done well; whereas a trout in the preserves of Long Island will in the same time have acquired a weight of half a pound and occasionally of three quarters.

In spite of all this the trout of the ponds of the mountains of the entire island from Greenpoint to Montauk, except where they have been artificially stocked, has so far depreciated and diminished as to be scarcely worth following for pleasure or profit. The day of its utter extinction is indeed so near at hand that many owners of what were once valuable trout preserves, are talking of introducing black bass, or have already done so. To these I wish, however, to give a word of warning if it shall be in time to save their trout and perhaps those of their neighbors, for black bass are a precarious and roving disposition, and will devour all of the noble fish that cross their path. I wish to say to them that there is a far finer and gamier fish which can be obtained from the State hatchery, a fish which may yet replenish our trout streams without loss at any point, the mountain trout of California.

These fish are very handsome, so much so as to be named scientifically the "rainbow trout;" they take a fly as readily and with more of a rush than their Eastern brethren; they fight harder when hooked, and are better on the trot; they can be raised in ponds more readily, will bear confinement with less loss, and will grow twice as fast. To a man who has a good trout brook I might not recommend an experiment, but the owner of water suitable for trout should not degrade it to black bass when he can obtain that nobler game fish the California mountain trout.

The examination was over, Seth Green with his usual indefatigableness of search after improvements had made all manner of original arrangements of fishing gear, had suggested new modes of catching minnows and oysters, had advised a change in the size of the twine for nets, had tried all methods of improving the speed of the Au Revoir, had advised the building of new and unheard of styles of boats, and had thrown out ideas which, if followed, would have occupied the attention of the inhabitants of Long Island for a generation, but to the incredulity of the Commissioner he admitted, as he was about taking his departure, that:

"After all that the people in every locality have generally found out and practice the best methods of doing what it is necessary for them to do."

ROBERT B. ROOSEVELT.

FROM CANADA TO TEXAS—Fall River, Mass., Sept. 30.—We are very much pleased with the returns from our advertisement of the gun cleaner in your paper, as we are receiving responses from Canada to Texas.—CLIMAX MFG. CO.

A GLANCE AT YUCATAN.

It is now nearly a year since I last wrote the FOREST AND STREAM, then from the north coast of South America. To be truly patriotic I should wait till the next Fourth before writing again. But I cannot. For months past I have felt impelled to write you, even as I would an old friend, and a leisure hour near the time of mail closing gives me the opportunity.

Perhaps I am assuming too much in inferring that the readers of your paper may still take an interest in the travails of an old correspondent, but I will try to drop enough information en route to make it worth their while to give a moment's attention. Leaving New York February 10, on board one of the fine vessels of the Alexandre Line, by the 20th we were off Progreso, coast of Yucatan, having touched at Havana on the way. My destination was Mexico, but Mexico is a republic of goodly size, and includes in it, as a State, the two peninsulas of Yucatan. Possessing ruins of old cities of vast size and great antiquity, a people of gentlers, and interesting birds, it did not take long for Yucatan to draw me hither. Consequently, I left the steamer and a delightful company of fellow-voyagers, the certainty of a good table and pleasant companionship, for the (to me) unexplored wilderness of Yucatan and the uncertainty of a favorable reception. Fortunately for me, and to the credit of the portion of the human family inhabiting this part of the world, I met with pleasant people and good cheer from the first. And I wish to remark here that my four months in Mexico, up to date, have been spent (in part) in a rough portion of the country, in lonely rides, in solitary walks and wild mountain climbing, yet I have not experienced a bad reception anywhere. The salutary influence of a revolver well displayed may have played a part in this, but I will give the people credit for better intentions towards travelers than they generally get.

To return to Yucatan. The only port is that of Progreso, where the steamers touch weekly in going to and from Mexico, Progreso, or Vera Cruz. The climate is generally healthy, but not even the residents; that, as its name indicates, it is a progressive place, everybody admits. Its importance rests upon the fact that all the *henequen*—the Sisal stem—of the State is shipped here, mostly to the United States.

To readers of FOREST AND STREAM it may be more interesting as a grand winter resort for waterfowl of many kinds—herons, ducks, coots, snipe, plover, etc. A great lagodon stretches into the coast line, like many of those of Florida, but shallow. There are mangroves, and here principally is found the best shooting. By going up the coast one hundred miles, one may find thousands of flamingoes, spoonbills, curlews and sea birds; but the whole country is more interesting to a naturalist than to a sportsman. Twenty-five miles inland is Merida, the capital of Yucatan, as it was formerly that of the ancient kingdom of the Mayas, the Indians inhabiting this peninsula.

To my great delight I found here, as United States Consul, a gentleman interested in my pursuits—one who gave me a more cordial greeting than one generally receives from the representative of his country abroad. Seeing from my letters that I was not intent upon wringing from the natives any cash tribute, and was only prowling about seeking what might devour, in the shape of birds and ruins, the Consul invited me to make the consulate my headquarters while I stayed. This I gladly did, not only because my stock of Spanish was not enough to go round and the natives persistently refused to understand me, but because my host was one of the most delightful of companions. Mr. Louis H. Johnson, of New York, who represents the United States in Yucatan, seems a man peculiarly fitted for the position he occupies, as Consul in a land of antiquities; for he is intensely interested in their study, and has had much experience in researches in other countries. He was a member of the Transit of Venus expedition, has been all over the world in various voyages, and has now brought all his accomplishments to this out-of-the-way corner of the world and settled himself down to the study of the ruins of Yucatan. Speaking in English fluently, he does not encounter that difficulty in his official duties to beset most consuls when they are appointed to a foreign country. He has even in contemplation the translation into English of a dictionary of the Maya language—the ancient tongue of the inhabitants of Yucatan.

From this it will appear that our government has got the right man in the right place for once, and if any stranger is landed in Yucatan, so I was, without knowing a person there, and speaking very little of the language, he will hearily welcome an American, and will strike the consular seal. In the six weeks that I was there I saw some grand deal of Yucatan, though the necessity of being in constant communication with Northern newspapers prevented me from indulging in long hunting trips. Among the most noteworthy of the many excursions into the interior was that to the ruined city of Uxmal, situated sixty miles from Merida, on the confines of the territory now abandoned to the hostile Indians. Among these magnificent ruins (exceeding anything that I have seen in Central America) we spent several days and nights, wandering in the old "Palace of the Governor," and hunting the dense, scrubby forest for birds. Dr. Le Plongeon, whom I had the great pleasure of meeting in Merida, the eminent archaeologist who discovered the great statue of *Chaac mol*, is now camped in those ruins, in company with his talented wife. He has discovered, he is quite confident, the key to the hieroglyphs on the walls of Uxmal, Chichen Itza and Mayapan, the three great cities of the ancient Yucatan, and is following up his clue with all the ardor of a young man in the pursuit of wealth. For his acquisitions will constitute wealth to the world of greater amount than the earnings of a life-time. The only vehicle used in these excursions is a *cocheco*, peculiar to Yucatan, in which the traveler reclines on a mattress while the three mules attached drag him over rocks and in and out of ruts at a terrific rate.

Another very important trip was to *Ake*, where the ruins are colossal, and which should be seen by every student of American antiquities. This is peculiar in their grandeur and significance. For they are done in one or three days. In fact, making Merida the center, one may visit all the most interesting portions of Yucatan in excursions, varying in length from two days to two weeks. Of course, if one would hunt the extensive forests of the east or visit the fascinating islands of Cozumel and Las Mujeres, a must take more time.

Merida itself, once a seat of ancient civilization, repay a visit. The ruins are of the Aztec and Aztec, and are of few weeks' stay. There is one thing, the Spanish is spoken, and indifferent fare is dished up, nothing

and no information is given; but the Consul helps to induce some resident of Merida to open a hotel by another season, where the tourist may be cared for, and to furnish facilities, in the way of guides and conveyances, to the many interesting points. If he can carry out this plan there will be afforded the winter tourist a new field for pleasure, which may be enjoyed without any discomfort. The steamers stopping at Progreso will make connection with the railroad—now nearly completed, and to be finished this summer—which will bring Merida within an hour's ride, and from that old city the various journeys should be made. Should any one contemplate visiting Yucatan this coming winter they should first write our Consul there for further information. The climate of Yucatan is very hot, and travel over the level roads is mostly made at night, in the *cocheco*, and this was the way in which most of our trips were made. Unlike Mexico, Yucatan has no robbers nor murderers, all the people are honest, and life is perfectly safe, except in the country of the hostile Indians. The people are hospitable to all strangers. There is not a hotel in the peninsula outside the largest cities. You have only to drive into the first hacienda you come to, and you and your mules, or horse, and attendants, are provided for at once and cheerfully. In one long trip of eighty miles that we made into the interior for the purpose of hunting the magnificent ocellated turkey, we were hindered by the hospitality of the people to such a degree that our purpose was entirely defeated. The first forty miles were accomplished by traveling all night, but soon early morning came the chiefs of the towas seized and fetted us for three days and nights, feeding us by day and sending giving balls in our honor by night. At last, despairing of any game, if this were kept up, I broke away from the party and went off with a Yucatan alone, we two, into the logwood forests of the coast, where I found more birds, but no less hospitality.

Had I time, I could relate more regarding Yucatan, but will reserve the rest for another letter.

Natural History.

ARIZONA FOOD.

TUCSON, Arizona, September 14. BENIGHTED people, who have not enjoyed the advantages of education or revelled in the delights of Arizona fare may imagine this a desolate country, where the "wild game" must be hunted out in a corpse bag, trusting to the hospitality of the desert for jerky or pemmican. Fortunately the railroad, the telegraph and newspapers are dissipating this ignorance, and spreading abroad a more correct estimate of the desert land, which this year has been flooded with water. Rain, rain—"the rain it raineth every day."

LARGE GAME.

The Cinnamon bear is found in the mountains between the Rio Grande and the Colorado, and is neither so scarce as the grizzly nor so gross as the black bear.

The deer flirts his tail on all the mountain slopes, and is fair game after the 15th of September. The bucks are already being taken in, and on account of the abundant rains and the freshness of the grasses the meat is exceptionally sweet this year.

The antelope may be found on all the mesas or table lands, feeding as daintily as a lady, in droves of fifty or sixty, and an expert hunter, prepared with a red shirt and dried helmet of the antelope's skin, may easily take a dozen a day.

A similar antelope is found here resembling the Persian gazelle.

In early times the mustang was frequently killed for food, and the steaks and tid-bits over a camp fire were infinitely superior to an old dry horse at a French restaurant.

Pecaries were abundant formerly, and, saving the musk, were not bad in flavor. They are scarce now.

The mountain goat is scarce and hard to catch, but some may yet be killed on desolate mountain peaks.

Jacksn rabbits are abundant, and during the winter very fat.

The weevils propagate as rapidly as elsewhere, and are an easy prey.

Silver grey foxes abound, and the Pima Indians enjoy a fox chase as much as the English gentry—they hunt both on horse and foot—merely for the sport.

The opossum is found in the Gila and Salinas river bottoms, and is cooked with sweet potatoes grown on the soil. The raccoon is also found in the river bottoms.

The wild turkey abounds on the streams and the divides along the Gila River, and to the north of it feeding on the nuts and grass seeds which give it so fine a flavor.

Whether it is the aboriginal bird of America, or strayed from the Spanish Missions matters not much to the eater, but I am inclined to think from the strong flavor and the color of the feathers that it is the genuine wild bird. Its weight far exceeds the domestic turkey.

The top-knot quail is a native of Arizona, and I venture to assure that two good sportsmen can fill a wagon in one day along the Gila River bottoms.

As the agriculture of the country increases these birds increase in numbers, and at this season are very fat from the native seeds, the mesquite bean and the fields of grain.

The absence of celery prohibits the enjoyment in any canvas-back duck, but the teal duck is not scarce about.

The world for food and flavor. Mallards are in any numbers. Doves are in season now, and can be secured in any numbers.

The Syrian dove—the very same species I believe that were sold "two for a farthing" at the temple of Jerusalem—was in the cottonwoods of Arizona. They were not more than a third the size of the dove of the Ark.

Wild pigeons are abundant in the mountains (Colorado cañons) is named for them. They are killed on the Colorado river, and eaten as Colfist in the swamps, and as large as Red-birds are abundant.

Red-birds are abundant in the mountains from January till June.

Curlews—links land and swamps are favorable to snipe, and abundant in the season.

Phalaropes (chenetes) exceed all others in numbers and speed powers. The trees are literally black with them in the spring, and their music is the joy of the morning.

The chapparel cock (paisano) is a very delicious bird, but hard to kill, its motions are so rapid. These birds are the natural foes of the rattlesnake, and build a coral of cholla (cactus) around him, and irritate him until he lashes himself

to death against the thorns by which he is surrounded. Blue-jays, red-hirns, whippoorwills, robins, sparrows, hawks, crows, eagles and such are abundant.

Last summer I domesticated some humming birds in the San Catalina mountains, and fed them on the honey from the flower of the Magay.

FISH AND FROGS.

We cannot boast much of fish on account of the intermittent streams, but in the Eastern Gila, the Verde and tributary waters speckled trout can be taken equal in favor to any country, on account of the purity of the water and food. Carp are being introduced into the mill-ponds, lakes and cienegas, so that we shall soon have a supply of phosphorescent food.

Terrapin is found in the swamps, and no finer stew can be made on the Chesapeake than we have here in this "ancient and honorable Pueblo."

Frogs are found in abundance, and of exceptionally good size and flavor. Aviraia is the choice frog ranche of the country, and some Frenchmen and Chinese earn quite a good living by gathering them for the restaurants at a dollar a dozen—cooked a la bon delaine.

REPTILE FOOD AND DOGS.

Reptile food is abundant, but is not relished much by Americans. The Indians roast a rattlesnake, and the meat is quite to chicken.

The Gila mosen (*scorpion*), so called by the Mexicans from ejecting a poisonous saliva, is the most horrible reptile in Arizona—"Gila horrit lensend."

The Papago Indians being scarce of animal food make great use of the lizards, which abound on the Western deserts, and, boiled or roasted, they are not bad food.

The prairie dog may be classed as a rodent and is very fair food, living in towns of their own in strange companionship with the owl and the rattlesnake.

Ground squirrels are abundant.

WILD VEGETABLE FOOD.

Vegetable food is unique—the most curious production is the fruit of the *Cercus giganteus*, which is gathered by the Indians and the Mexicans. The tree grows from forty to sixty feet high and the fruit is gathered with poles, with a fork and a hook at the end, the juice is expressed for molasses, and stored in earthenware jugs, the pulp is pressed for winter bread.

The mesquite tree, an acacia growing from latitude 35 deg. N. to the tropics and from Texas to California, produces an annual crop of beans, an average tree yielding about ten barrels. They are gathered for horses and mules. The Indians pound them into bread, and I have known them distill into very fair whisky. The tree also exudes a valuable medicinal gum.

The Paloverde produces a wild pea which is very tender and delicate.

The indigenous potato carried by Sir Walter Raleigh from the Orinoco to his estates in Ireland (since become so famous and fruitful as the Irish potato) is found on the hill sides, and after severe boiling is palatable.

The sweet potato grows in the salt deserts of the West and has been classified by Prof. Torrey as *Arenubronia sonora* (the sand food of Sonora). It is a parasite, gathering sustenance from a sponge-like fungus at the top. The Papago Indians gather and roast this vegetable, which has a very delicate flavor from the purity of the sand and atmosphere.

FRUITS.

As to domestic fruits, the Spanish missionaries introduced pears, peaches, apples, apricots, grapes, pomegranates and many delicious qualities; but the orchards were nearly all destroyed by the Indians.

The American or new planting orchards in ever favorable location, and if the Indians do not destroy them again, "we shall enjoy the fruits of the earth."

The Visnager (a cactus) makes an excellent preserve, equal to citron.

The roasted magney has long been a favorite food with the Indians. The juice fermented is *yuque*; distilled, *mescol*; refined, *tekele*.

It is a very intoxicating beverage, not susceptible of adulteration. Old mescol is worth \$1 a gallon; makes an excellent hot punch.

SEA FOOD.

As to sea food we shall soon have access to the Gulf of California (the *Melanchroa* of the Pacific), by railway, and other cities are well supplied by food for the brain. Prof. Zanthus reported to the Smithsonian Institution, some years ago, a highly different variety of fish in the gulf. I have seen turtles that could fill a cart, and have cut oysters from the jungle in the *stuary* of Navochists.

The pearl oyster has been gathered there for more than two hundred years.

Sea birds will soon be added to our bill of fare. The shell-fish of the gulf is already good and abundant; but no doubt will be improved much by cultivation and preparation.

NUTS, ETC.

Walnuts, acorns, wild grapes, blackberries, currants, manzanita apples, prickly pears and tuns-birds are found in their respective localities, and all are used as food. The manzanita and juniper fruits especially attract bruin.

The flowers of the Occuillo are a great delicacy to the antelope.

The American aloe (magney) grows abundantly in the mountains (Sylvestre), and is cultivated in the plains of Arizona and Mexico. This wonderful production was accurately described 2,000 years ago by the Chinese, when they visited this Continent. A translation of the book called "Fusang" can be had from Trubner & Co., London.

COOKERY.

Cookery has improved vastly with the new population, but I doubt if a more savory dish can be prepared by any of our French or Chinese immigrants than the "tatams" of the Aborigines. This is the head of a beef, deer or sheep crooked entire, in the ground, surrounded by stones and covered by a camp fire—taken out in the morning, stripped of the skin and carved, with the brains dressing. It is a dish for a king. The Mexican dish of *lomates* (hashed turkey, chicken, pig or beef), rolled in a corn husk, with red peppers and corn, roasted, is a turn and even hot, is good.

A dinner given here last Sunday to General Williamson has provoked this, and I venture to say, St. Democico himself would have been astonished at some of the viands. The wines were from France.

CHARLES D. PORTON.

[Although some of the statements of our correspondent are quite opposed to generally accepted beliefs, we think better to publish his article as it comes to us without any extended comments.]

shooting. The foxes are not numerous enough to do them much damage, and the winters are no more severe than formerly. There is plenty of cover and plenty of food. Now, what has become of the birds? Is it a natural and gradual extinction of the species? It looks like it; but if it is not, what is the trouble. With woodcock it is different, for during the time they are big enough to fly they are pursued most relentlessly, and the majority of them have been run the gamut of all the guns in the country. South after in the South during the winter months, and in the North (in most States) during the summer, they are almost never at rest.

About the grouse? Well, I give it up. I cannot explain it satisfactorily to myself. What do you say about it?

VERDE MONTE.

[The weights given in the books are supposed to be, as nearly as possible, the average for the species. While many woodcock might only weigh six ounces, or thereabouts, there are others that weigh ten. Though, to be sure, these last are *rara avis in terra nigroque similium ovio*. Verde Monte's letter is one which demands the thoughtful consideration of our readers. We confess that we are unable satisfactorily to account for the scarcity of ruffed grouse, under the conditions which he mentions. We have seen the birds almost exterminated from a district by snaring, and it is well known that when this has taken place such a depopulated section fills up very slowly. An enemy of the ruffed grouse, to which no sufficient amount of attention has been given, and against which we know of no remedy, is the partridge fly. The larva of this fly destroys, we have no doubt, many thousands of young grouse annually, and when the young of a family have been killed in this way, and the parents shot off, it can readily be seen why there are no birds. In a level country the ruffed grouse are, to a considerable extent, stay at home birds, and do not wander nearly so far as the quail. A piece of woods, from which the birds have all been shot off, may remain for a long time without any tenants.]

MAKING A FIRE WITHOUT MATCHES.

A RECENT story in the FOREST AND STREAM, entitled "Our Last Match," reminds me of a similar adventure that befel me, except that I had not even a match to start a fire with.

For the information of some of your readers who may wish to find themselves in similar circumstances I will describe the way I started a fire.

Late in October, 1868, I was with a party of the Fourth Infantry camped near the junction of Box Alder Creek and the North Platte River, a few miles above Ft. Fetterman. Our work having been stopped by a light fall of snow, I started out over the rolling plain south of the river for antelope, and after tramping for several hours, secured a fine buck, dressed the hind-quarters and shouldered them, with one hand resting on either shoulder and the legs passing forward on each side of my neck, in which position one can carry such a load with comparative ease. I could plainly see the belt of timber along the Platte in the north, and south the Black Hills were in plain view, each distant five or six miles, while on my right occasional glimpses of the Box Alder Valley could be seen between the bluffs. Under such circumstances the thought of staying out all night never occurred to me. I took a direction that I knew would take me to camp in less than two hours and started.

I had noticed a storm in the south and soon it overtook me. It was the wet kind, a storm to be out in, rain and snow together with high wind. I noticed that a few feet from the direction I was going, and my view was so obscured that I could not see over one hundred yards before me. The rain froze as it fell; and soon I was covered with ice, while the ground had become so slippery that walking was very difficult and tiresome.

I did my best, however, going with the wind at my back until I thought it time to strike the river, but by this time I was so nearly exhausted that I could do so only with a gun, a compass, but feeling secure about my direction, I did not take the trouble to open my ice-covered coat to look at it.

I finally thought that if the swell I was then ascending did not lead down to the river I would stop and look at my compass. The ground here were strewn with large rocks, different from anything I had seen so near camp as I supposed myself to be. This excited my suspicions and I looked at my compass, which seemed at first to be out of order, but just as I was about to turn back to the river, I saw that the instrument was all right, that the wind had changed and I had changed my course with it. Instead of being near camp, I was among the loose rocks and broken lands just at the foot of the Black Hills. I also realized that night was very near, with camp at least ten miles away. I could never find my way in such a dark night; and in my exhausted condition could not walk so far even to save my life. I had no matches and for a few minutes thought my last hunt was over. I cursed myself for not having matches, and then for being so foolish as to go so far from camp without being sure of my way. I now thought antelope shooting a delusion and bitterly regretted that my love for sport had put me in such a scrape. I also thought that I would be reported as a deserter, and that my friends would always suppose I had deserted and was afraid to make myself known to them. While such thoughts as these were passing through my mind, I was looking for a sheltered place among the foot hills, thinking I would get some brush and make a nest as it would not freeze.

I soon found a place to camp, and about the same time the thought of getting fire with my rifle struck me. I remember having, when my gun was taken, seen gun wads take fire and smoulder away until burned up. Tearing out the cloth lining from my cap, I put a small rag of it into the gun and fired into a log, holding the muzzle close to it. I expected to find a smoking rag in the bullet hole, but was disappointed. Next, I removed a bullet from a cartridge and wrapped up part of the bullet in a rag, and then, stuffed it into the shell, loaded and fired. This glowed a few seconds, and then, by blowing, I raised my hopes, and then went out, leaving me very nearly discouraged. My case was now desperate. I had not noticed the cold when walking, but began to realize that there had been a great change in the weather and that I must have a fire or freeze to death. My fingers were so cold and stiff that I could hardly get the bullet out of another cartridge, but I succeeded in doing so, and then put some of the powder in a rag, and holding it in the palms of my hands held it around it till it was hot, and then, by blowing, I saw that when fired as before it took fire, and then, by blowing it a few times, it blazed up and burned long enough to kindle some light wood. I soon had a large fire and melted the ice from a lot of brush with which I made a bunk; and after eating a large ration of broiled antelope, lay down and

slept. After three hours I awoke nearly frozen and rebuilt the fire, and then passed the rest of the long night in a series of short naps and expeditions after wood.

I started for camp at daybreak, and on the way got within fifty yards of three antelope before I saw them. I killed them all before they got out of range. This, with a single shot Springfield rifle, caused me to reconsider my decision of the night before, and think that after all antelope shooting is worth all it costs. E. G. JANTA.

IS SWEEPSTAKE SHOOTING GAMBLING?

BOSTON, Oct. 10.

Editor Forest and Stream:

The question put by the Jamestown "Rifleman" in your last number, asking whether the shooting by a number of members of a club in a sweepstake contest may be construed into a violation of a rule of the club prohibiting "gambling," opens up a very interesting topic.

There seems to be some doubt in the mind of the inquirer and an suspicion that there may be an infraction of the rule unwittingly practiced. If it be taken that this form of sport is gaming or gambling, using the words interchangeably, then there are a great many bands of gamblers scattered over the country, and it follows that the members of these many clubs are grudgingly and unanimously in error, for it is absurd to suppose that there would be a title of the trap practice had done if it were granted that every sweepstake shoot was now a form of gambling. Supposing that the amount made up by the contributions of the several contestants is a wager, then in common law it is considered to be a legal contract which the courts are bound to enforce; for a wager is good and sufficient grounds for a suit, unless it be on a subject which is illegal or contrary to public policy, good morals, or the peace of society, or which affects the feelings or interests of third persons.

To claim that a sweepstake match is a gambling proceeding simply because the issue is uncertain, would make too broad a promise for an over business man, and it becomes measurably a gamble. We are not gifted with prophetic vision, and if using our best judgment we go into an enterprise, whether that venture be the knocking over of a dozen pigeons from a trap or the despatch of a fleet of vessels across the ocean, we are not gambling. If money or other consideration is staked on the issue of an event entirely beyond the control of either of the wagers it may fairly be regarded as a gambling performance, unjustifiable in any way, and property not to be collected through the machinery of the courts. Thus, for instance, A and B are horse breeders. Each uses the best of his ability to produce an animal capable of the highest speed. It would be entirely proper for these two breeders to test the results of the labor by a competition-race, and to place a valuable consideration on the result of the race. Of course the result is uncertain, as every other in our human economy is uncertain; but if A has shown the best breeding ability he will win, barring accidents. He really backs his knowledge of the subject of horse breeding when he backs his horse; and B does the same. A and B to a certain extent control the result of the race. But let C be a mob of outside betters, and D another company of wagers, placing money on the horses of A and B respectively, and they become a mere company of gamblers. The result of the race is one to which they contribute nothing, no point of public policy is served by having them take part in the race, and they deserve only repression at the hands of the law, not because what they are doing is in itself vicious, but because it has been shown time without end that the practice leads to pernicious results.

Now, bring the same condition of affairs to the rifle field or before the trap. A has secured a fine gun, he has, he thinks, devised an improved method of loading cartridges. He has arranged the sights of his gun in a superior manner. He has, in short, looked carefully over the many points of minute which go to make the accurate result in marksmanship. He has been using his judgment and manipulation on the same problem. C and D, on the other hand, are theorists, engaged, and they meet to test their theories. Of course, the result is an uncertainty, but each wishes that the best man may win, and that best man is in the long run the marksman who has most successfully overcome the many obstructing influences, which culminate in a "missed bird," where any other result follows it is due to an accident, and does not vary the general rule.

For an outsider to "bet" on the result of such a sweepstake shooting is no more than pure gamble as though he allowed the disposition of the wagers to depend on a throw of dice. There it is wholly a matter of chance; a child may win. One who has thrown dice for half a century, and no public good can come of the placing of money on such a chance. In shooting, the conditions, the motives and the consequences are entirely different. There is a positive gain in having the contest take place. When the Irish team met the American marksmen in 1874, they were convinced, to the extent of \$500, that their muzzle-loaders fired from the prone position were superior to the breech-loaders, and in position, of their antagonists. It may have been a gambling transaction in the opinion of some, for there was the uncertain issue and the money stake, but the result has shown the Irish marksmen that they neglected important and governing elements in accurate long-range work, and, therefore, it was not on their part purely a matter of chance, but of erroneous judgment and lost opportunity.

There are many fine-drawn distinctions to be noted about this interesting subject. One would regard the ordinary sweepstake match in the nature of a gambling transaction, while the sweepstake money here paid in as dues of a club, and then these members voted to offer the total dues as a prize in a shoot open to club members only, then the affair is not to be regarded in the light of a gamble—which seems to me merely a way of whipping Old Nick about the stump.

By keeping strictly in mind the distinction between controlling, even in a measure, the issue of an event, and having absolutely no part in guiding it or in the deciding conflict, we may readily see what a gambling party is, and what it is to be regarded as legitimate sport, properly encouraged. Leaving entirely the question whether fairly conducted games of chance for money, discreetly and moderately engaged in, are not proper forms of amusement and stimulation, we have a broad domain of competition such as that of the rifle club and gun club, where the money stimulus leads to the best results; and to style these contests as "gambling" is to display a narrow and ignorant ignorance of very plain differences of morals and motive to a large and over-sensitive prudery, and to insult a large body of our best sportsmen.

BUNKER HILL.

THE TRAP SHOOTING OF PIGEONS.

LINCOLN, Neb., Sept. 24.

Editor Forest and Stream:

There seems to be a growing sentiment strongly adverse to the practice of using live pigeons at shooting matches, and the day is probably not far distant when the slaughter of the innocents will be regarded as too barbarous to afford sport for gentlemen. Outside of the sporting class it is already so regarded. There are very few non-sporting people so callous that they can look upon the sight of dazed and half-sick pigeons being sprung from a trap and then shot down, wounded and bleeding, without feelings of pity for the poor birds and disgust for the heartless shooter.

Now and then we read a scathing criticism upon some gunner, who strolls upon the sea coast and tumbles over the harmless gulls, to see how many of the poor things he can lay upon the beach without a miss, and we readily see the justice of the criticism, and often conclude that the man is a heartless fellow and no true sportsman. The shooter of pigeons, which are prisoners till they are sprung from the trap, often barely tries to fly, in the estimation of many people, a greater cruelty than he who wantonly bangs away at birds in the air, simply to keep his hand in. In the one case the birds are often enfeebled from long confinement in crowded coops, and drop upon the ground near the trap; while in the other they are in health and have a far greater chance of escaping the murderous shot. That the one practice is not universally regarded as bad as the other is perhaps because custom has somewhat quieted our scruples with reference to trap shooting.

There is not much skill in shooting sick pigeons. The shooter has his eye on the very spot where the bird is thrown into the air, and he directs himself the moment the prey is to appear, so that the chances are all in his favor and against the bird. Big scores at the trap do not show corresponding scores in the field, and it is in the field a man would prefer to make good scores. Very often men whose records at the trap are No. 1 make miserable failures when they try their hands on game. In such cases the murderous practice on pigeons has been devoid of any good results. Practically, as much better wood would have resulted from shooting at chips thrown in the air.

There are parties belonging to the club here who decline to shoot at pigeons. It is against their better nature; and when pigeons are to be the sacrifice they withdraw. It is to be hoped that this feeling will spread throughout the country and create a healthy sentiment against the wanton destruction of a harmless bird. Inanimate substitutes are abundant, some of them decidedly superior to the average pigeon used in matches, and their cost insignificant in comparison with the cost of pigeons.

Humanity clearly demands the abolition of pigeons at shooting matches, and it is to be hoped that the day is not far distant when it will be decidedly unpopular for any club to use them. It seems strange that barbarity and sportsmanship should have gone so long hand in hand. B. H. P.

MISSISSIPPI NOTES.

Editor Forest and Stream:

SARDIS, Miss., October 1.

To-day opens the season for quail, deer and wild turkey in Mississippi, and from all indications and reports we will have a very good season for quail and turkey. As to deer I cannot say much now. The drought, which has been so universal this summer, has been an advantage to quail and turkey; no heavy rains to drown them out, and very few drizzly days to prevent a drive the half-grown birds into the nets, and consequently we have more birds than for several years. A great many of the old birds, too, have their second brood far on the road to maturity. I say second brood, of course I do not know positively that some are a second brood, but merely judge from the size of the birds. Some covets I notice are full grown, to all appearances, while others can hardly fly a hundred yards. Can you tell me whether quail ever raise more than one brood a season or no?

While the drought has been favorable for the birds, it has, at the same time, been destructive to the fish. The small lakes in Tallalotha River bottom have nearly been drained by sciers. So long has it been without rain that these lakes have gone down very low since being cut off from the river, many of them have become so shallow that the negroes go into them with long seines and drag out all kinds and sizes of fish. Nearly any Saturday a party of colored individuals can be found dragging some of these lakes. Not only do the negroes indulge in this barbaric-like work, but I know of a colored man who drives the half-grown birds into the seines, and consequently we have more birds than for several years. A great many of the old birds, too, have their second brood far on the road to maturity. I say second brood, of course I do not know positively that some are a second brood, but merely judge from the size of the birds. Some covets I notice are full grown, to all appearances, while others can hardly fly a hundred yards. Can you tell me whether quail ever raise more than one brood a season or no?

I have tried to shame them for such "niggerly" sport, but of course they are hardened to shame. I believe that they would have gone for the quail a month ago, had they not known that if they did, and myself and one or two others have found it out, they would certainly be interviewed by the district attorney on the subject.

I anticipate a grand time soon down on Pecan and Bear lakes. I am going to try to be the first one in the glorious hunting ground this season, and I have arrangement made with a friend, Mr. A. F. D. Goodwin, living just in the edge of the canebrake, to let me know when a party starts in around the lakes for bear so I can be on hand, and he will keep his word.

Duck shooting would be good on Tallalotha River in the winter, were it not for the almost numberless boys and negroes that line the river banks with single-barreled cheap (\$2.50) shot-guns, from the time crops are "laid by" until they are planted again. Thank fortune, they can't shoot on the wing and, therefore, are no drawback to quail-shooting, unless they trap them during a snow.

Last spring, for several days, I noticed that what I pronounced to be a Virginia rail had taken quarters in the grape-vines and grass in my garden. I watched it closely with the hope that it would make my garden its permanent home. It had a habit of seeking shelter in a pile of brush and corn-stalks near the grape-vines when disturbed. But alas one morning the house-out came stepping up with the bird in its mouth. The entire household turned out to capture Thomas and get the bird, and after a long and spirited chase, the cat dropped his breakfast; and as the "gude wemen" picked the last bone for her breakfast, she said it was real good, and she wished the cat would bring one in every morning. I send you the scalp which I saved. Can you tell me what it is?

W. H. C.

[The scalp is that of a Carolina rail (*Porsma villosa*). Quail often raise a second brood.]

ONE OF THE OLD FELLOWS.

TWO of our sportsmen, Geo. B. and Billy W., are "high-up" authority on duck shooting. They corner on round-shooting as "sold" as their corner on Goose Lake, where they bag the mallards. No one is too old nor too young, neither too rich nor too poor, to presume to duck-ducking before obtaining the advice of the above named messieurs in regard to all the minutiae of successful duck shooting. A piece of advice in the mind never fails to insure dead ducks in the bag. A word from them is worth the quack of a dozen mallard.

Last Tuesday they were snugly ensconced on their favorite point when a seely looking party, with a gun and a yellow dog, emerged from the brush and began reconnoitering.

"Wonder if that old relic intends to pop here?" "Yes; he probably will locate his corporeity near here, blaze away every time we shoot and then exclaim in the stereotyped phrase, 'There! I downed that fellow.'"

"Do you 'tumble to' his old fuss? See where the stock is worn with friction against the side of Noah's ark." "Ha! ha! I 'tumble to' it quicker than any duck ever will."

"Hold," said Billy, "I've an idea," and approaching the Ancient Party he said: "Going to try your luck, eh?" "Yes, I thought on't."

"Ever shoot much?" "Some; squirrels and sich in Alabammy."

"Say, I'll give you a point, seeing you're a stranger; see that point over yonder? 'Tbat's a good place to shoot from." "Yes, just the place I was going to tackle."

Returning, Billy said, "I've got the old fossil anchored down there where a duck will never fly unless it's a crazy one—Buzard! see that mallard tumbler?"

Sure enough, the old gun had spoken. The duck grated and fell with a kersplish. The "yaller dog" plunged in and quickly retrieved it, and the Ancient Party finished reloading in time to repeat his feat on the next flock, and so on till night, when he gathered up eleven mallards, and as he passed our fellows he said, "Stranger, you were kind to put me on that point. How've you made it?"

"Oh, we came up to go in swimming but found the water rather too chilly." Mo. Menomonic, Wis.

REMINISCENCES OF FORTY YEARS.

THIRD PAPER.

I HAD an extraordinary day with the wild fowl in 1862. My companion was my old friend Robert Henry, then 33 now of the extensive dry goods firm of William Barr & Co., St. Louis, Mo. We were on the Darden prairie, a low flat bottom, mainly and full of snipe. Many ponds were at that time caused by the overflow of the Mississippi. These ponds were in many places two miles in circumference, and they were all frozen with the exception of one of the deepest, where immense bodies of wild fowl had congregated—ducks, geese, brant and swan.

We arrived at the scene at daybreak. I planted myself behind some brush and rushes and began shooting right and left, as fast as I could load and discharge my muzzle loader. The birds fell and still others came from their feeding grounds, among the cornfields a few miles away, to this unfrozen piece of water. This continued all day.

I had never shot a brant nor a Canada goose before this day. My first shot at brant was at four of these birds, which were skimming around and around the pond without settling down. They passed me all together, their four heads in line, about forty yards out. I shot the four, bringing them to the ground with the first barrel. So my first brant shot was a good one. An hour later I heard a welcome honk, and looking round saw two immense Canada geese coming straight for me and about ten yards high. "I lay low" until my double barrels were in their work, and there were my first Canada geese, a double shot.

That same day, while I was standing on the ice, I shot a large goose some sixty yards above me, aiming almost perpendicularly. Down came the goose, plump within two yards of where I was standing, and went right through the ice, which was thick enough to bear my weight of 150 pounds. You may judge if he must not have been a tough old gander.

The total count of that day's shooting scored 163 ducks (Mr. Henry will have it that it was 173), 17 brant and geese, with one gun (Mr. Henry too insists that there were seven—seven brant and seven geese); however, it was tall work. The wagon load of game went to Springfield, Ill., where I was then living.

In September of the year 1864, my old friend, George Holman, of the Holman Opera Troupe, shot with me at Dawson, ten miles from Springfield, Ill. Between half-past three and half-past five or six o'clock that afternoon, in a stubble field of ten acres, we killed 64 pintailed grouse, and the next day 67. The splendid birds were all full grown, and we did not miss a double shot in the lot; still, one could hardly miss such birds as full fledged prairie chickens, rising right under your nose. The secret in prairie chicken shooting, as in other shooting, is keeping cool; if you grow excited, plenty of the birds will fly off unnoticed.

In these reminiscences, which include some of my many years' shooting, I have given the shots exactly as they occurred. From them sportsmen of the present may realize something of the great abundance of game in the past.

WILLIAM KING.

LIVE QUAIL WANTED.

KEYPORT, N. J., October 3.

Editor Forest and Stream:

A friend and myself purpose making a trip to Virginia this winter. Our main object is to negotiate with parties for from three to four thousand quail to be let loose next spring in this county, one thousand of which our club (the Karitan) will retain for this special vicinity. The rest we will try and distribute with other clubs at actual cost. As we also go for the gunning season, our time and expense in the matter is our loss and their gain. Now, can you tell us the best, or more likely local, in said State where we can "kill the two birds with one stone"? 2d. Can you give, or procure, names of parties in the South whom we could correspond with to this end, and from whom we could procure the trapped quail?

The few quail let loose here last spring, we have reason to believe, have done well, and several pair have brought out full broods within our town limits.—FRANK.

A VIGOROUS LETTER FROM MAINE.

Editor Forest and Stream:

I very rarely notice any assertion made in a public print knowing as a rule that they are made by irresponsible persons, and are usually untrue of the time. But the respectability of the source from which a remark is quoted from a "lover of the dog and gun" over the signature of "Hono" entitles it to correction as an error. I give the text as taken from the letter:

"Well, after all, all you need do is to give one of the Game Warden three or four dollars, and he will take you to a moose. Eight dollars a month is not enough wages to keep them interested in their duties, and they will be true to this."

I know of none of our wardens in the State of Maine upon whom this is not a gross libel. There are always numbers of loose, respectable loafers banging around our places of summer resort seeking work as guides, who are willing to commit almost any crime for the price of rum and tobacco. That they may represent themselves as wardens is very possible, but I do not know of a single warden in the State who is open to the charge made.

Our wardens are appointed by the Governor and Council, and it has been the custom with but rare exceptions to refer to these appointments to the Commissioners of Fisheries and Game. There have been exceptions, but even the names of such appointees we do not know. If any of them have been guilty, it requires but to present the evidence to the Commissioners, and both dismissal and punishment will rapidly follow. I have yet to learn that any one deserving the characteristics of manhood or honesty will bring even a drunken poacher or pot-hunter to break the laws of his State, as worthy by he would hire a clerk to rob his master's till.

Neither can I refrain from expressing my indignation at the slighting opinion given from other States to whom should look for aid and sympathy in protecting our fish and game, who are allowed all the privileges of our own citizens in our streams and forests should, while here as our State's guests, break our laws and become poachers, and tempt others to assist them in their very dirty path of amusement. Two arrests have been made this very week of summer visitors, for killing deer and caribou during close time. Penalties and costs have been paid and they have gone home. Wardens are in pursuit of other parties, as others have fled the State, whose laws and hospitality they have abused. As to the Portland moose killing offense, the indignation of sportsmen is best shown in giving the name of the offender and the evidence of the offense. The end is not yet, and will not be reached until the penalty is paid. S. W. STILLWELL.

MONROE COUNTY NOTES.

ROCHESTER, N. Y., Oct. 8.

Editor Forest and Stream:

The summer of 1881 has not been a very eventful one to the sportsmen of this city, and since the return of the Monroe County men from the Coney Island tournament there has been no event of much note to record in the line of sport. I feel, however, under a sort of obligation to contribute a few facts now and then that may be of interest to some of your many readers and contributors as their communications interest me. This was a great and undoubtedly not many moon ago, and is now, although the best corner has been cut away, the snipe grounds drained and club houses built on the shores of the bays where wild fowl did most abound, lucky or skillful and well-posted members of the shooting fraternity occasionally have very successful shoots. I have seen several good bags of woodcock since the opening of the season. On two occasions I had the second-hand pleasure of examining bunches of the brown beauties (not "speckled beauties") containing twelve brace each. The same men who shot these birds have brought in a great many woodcock in bunches numbering half a dozen or so at a time. The boys who have the sport of shooting so many of these much admired members of the game family are not only good shots, but so circumstanced that they can attend to their ordinary business, and at the same time shoot two or three times a week if they please. Their trade brings them in contact with farmers, and they are thus enabled to learn where game may be found as soon as it appears. Their record of woodcock killed this season must aggregate a great many more than any other. The severest part of winter does not seem to have done any harm to the ruffed grouse in this neighborhood, for I understand that the birds are even more numerous than in other years, and some good sport has been had among the coveys (Squirrel shooters, too, report that their favorite object of pursuit is unusually abundant this year in this and adjacent counties.

There has been a good flight of teal on Irondequoit Bay during the last week or two; and their ranks were thinned out by an army of snipe, one of whom asserts that he killed twenty-two blue-winged teal with two shots. Blue-bills and red-heads have also appeared on the bays and ponds of this county bordering Lake Ontario, and from now until ice covers the water the boom of the duck gun will be heard incessantly along the shores of the many wild fowl resorts within four to fifteen miles of this city.

A few gray plover have been shot in the wheat fields hereabout, but they do not, as in former years, come in numbers enough to promise a good day's sport, and they are usually picked up as incidentals to woodcock or partridge shooting.

The first snipe I have seen this fall were shot the past week, and it is reported that they are to be found in fair numbers on the marshes around the bays. One of my acquaintances bagged fifteen a day or two ago, and as I have a standing invitation to have a day at the ducks or snipe with him, near his home in Greece, I anticipate some sport in the near future, for there is no kind of shooting I enjoy more than duck or snipe shooting, if the birds are to be found in fair numbers. If fortune smiles I may let you hear of how the field was fought and won. E. R.

A HORNELLSVILLE MAN IN WYOMING.—A Hornellsville, New York, sportsman, has been trying the game of Wyoming Territory. In a private letter, expressing of what he had kindly permitted to publish, he says, under date of August 1, describing a trip from Evanston toward the United Range: Attempted to cross the ford and go into camp, as we saw a storm coming up. We got nicely into the middle of the river, when the horses concluded they had gone far enough. They could not be budged an inch. The driver stood up and belabored them until he brought the clare on one of them, but they did not even wink at it, and once in a while when he would put in an extra hard blow you might discern a smile

pass over the gills of the old gray, for he doubtless thought he did not wish to brush his eyes. We about then it began to rain, and how it did pour. So we pulled off our boots and socks and waded to the shore; but even then the bakers would not move. Then it began to hail, which made it interesting. The hail kept coming harder and harder, and how I did take them on my shoulders. When it let up the hail stones were over an inch deep. Then the river began to rise until it had risen over a foot. For fear the wagon would go down stream, we had to lug everything up on to the bank. The horses would not pull the empty wagon out, so we all had to get hold of the wheel and shove horses and all out. We loaded up, went a mile and camped. We sent the driver and one of the boys back after another team; they returned at noon the next day, and we started on. We got up into the timber Thursday afternoon, and saw three deer that night, but could not get a shot at them. The next morning, while climbing over a windfall of old trees, I scared out a big elk, but of course was in a position where I could not shoot, as I was using the gun to help me over the logs. In the afternoon I went into a hole of the length of the rifle, or as near as I could measure with my hands, forty-nine inches from nose-tip to tip of tail, and weighed from fifty to sixty pounds. I had just made up my mind to take his hide off, when I discovered another wildcat in the bushes working that way. Not daring to trust to a rifle shot, I skipped out. Had I shot, and only wounded him, I would have had a lively tussle; I would probably have got the worst of it, for they are bad medicine in this country. The next day we went down the river and struck camp near Fort Bridger. We had some fine chicken mauling, also some good trout fishing. Monday night, while making up for camp, the darkness came on and we got lost. We did not find our way to the camp ground until about midnight. We had some chicken shooting most every day. We were soaked to the skin with rain almost every day, which was unpleasant.

H. A. T.

LONG ISLAND SHORE NOTES.—Shelter Island, Oct. 9.—I write in answer to the inquiries of your friends that I would recommend them to go to Napeague Bay for a convenient harbor, and one which will be bandy for fowling in Gardiner's Bay. The fowl arrive there and remain there first, and later reach the shores of Shelter Island. The shooting here is very uncertain, and little can be done without the birds coming to the shore to be approached with rail-shoots. Much depends upon the supply of scallops, their natural food. I have not heard this season whether shellfish is plenty or scarce. I think at Gardiner's Bay, included between the mouth of Napeague, Gardiner's Island and Fire-place Point, is the best ground for fowl-shooting. Coot, old squaws, and sheldrake, and sometimes brant, are met there in great numbers. When the fowl are numerous around Shelter Island, the best place for them is on the flats, on the southeast side of Great Run Island, and there the sportsmen are sometimes very plentiful. The shooting is also sometimes good at Noyac Bay and Jessup's, or at Gibson's Bar. The golden plover have been very scarce at Montauk this year; but a friend of mine got three forty birds last week. I hear the bay-snipe shooting at Shinnecock Bay is now good, and Will Lane says the feed for them there is now good.—ISAAC McLELLAN.

NEBRASKA DUCK SHOOTING.—Lincoln, Neb., Oct. 4.—On the 12th of September last, Mr. Hallet and I drove by a small, narrow lake in the open prairie, two and a half miles from this city, and in walking along its margin knocked down two wood-ducks, a blue-winged teal, three rail and two snipe. All the fowling was done in the afternoon of a very clear, cool day, about barefoot, an old muzzle-loader across his shoulder and an even half-dozen blue-wings swinging at his waist. On our inquiry as to where he bagged his game, he replied, "In there," pointing to the lake. He then informed us that he crept up on them through the grass and got them all at one shot. "How many were there in the flock?" I asked. "These were all—I killed them all," he said, without seeming to feel that he had done anything particularly clever. A few days after this my friend and I got two shots into a flock of green-winged this morning lake, and our dog retrieved sixteen as the result.—B. W. P.

ENGLISHMEN'S AMERICAN HUNTING PRESERVE.—Among the details of the immense landed estates of an English duke just appearing in print, we find him accredited with the possession of 23,000 acres of wild land in the State of Colorado. As all these English noblemen are great huntsmen and desperately addicted to field sports, it appears that this duke comes to America to hunt over his own estates. What particular necessity there was of this might be a source of wonder to the average American citizen in view of the immense wildernesses of the West that are open to all the world as free hunting grounds; but it must be remembered that the one thing especially required by the English aristocratic hunting class in the States is land and game, and of these the Duke of Colorado in order to be able to hunt over his own grounds, and to be under no obligations to anybody else for his enjoyment. Many important considerations will readily occur to our thoughtful readers in this connection. We will only say that while the public lands of the United States are offered for sale to all who choose to buy at extremely low prices, of course foreign noblemen are as welcome to purchase as any other class. But in view of the enormous wealth of the European nobility and land-gentry, and of their comparative large numbers it will not be difficult to foresee the possibility of such a land monopoly for hunting grounds as might eventually become a positive evil, the more especially if upon these hunting grounds the exclusiveness of the English game laws were to be attempted seriously.—Germantown Telegraph.

GOSSIP ON VARIOUS SUBJECTS.—Prospectville, Pa., Oct. 8.—Editor Forest and Stream: "Pentagon" must have had a good time all to himself laughing at "Fecels'" explanation of "Left-eyed Shooting." Now let Mr. "Pentagon" do as "Fecels" says with the gun, give the good thing to me, or fails to change his mind, why he is either "left-eyed" or

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Table with two columns: FRESH WATER and SALT WATER. Lists various fish species such as Black Bass, Yellow Perch, and Rock Bass with their scientific names.

The enthusiastic angler is never content with minor achievements. His constant expectation is that every new cast will afford him some new conquest, and that the grand sport of to-day will be excelled by the grander sport of to-morrow.—GEORGE DAWSON.

TIM POND AND THE SEVEN PONDS.

ON August 18 I left my home in the wooden nutmeg State, on my fourth trip to Tim Pond. I spent the first night in Boston. The next morning I took the train which arrived in Farmington, Maine, about five o'clock the same day. I could have taken Clark's stage for Kingfield the same evening, and arrived at Kennedy Smith's farmhouse at about noon next day, but instead my friend Simon and I went to Tim Pond, about five miles from Kingfield. My gun and tackle, and what I had on my way, were left at Farmington Monday morning, the 22d. There had been heavy showers during the day and night of Sunday. The scenery was fine and the atmosphere very refreshing to one who had been cooped up in a hot dusty city for months. The ride of fifteen miles to West New Portland was one of comfort and pleasure. At this point we could elect to turn to the left and go by Kingfield, going up stream on the picturesque banks of the Carrybasset River, or deflect a little to the right and travel an excellent road on the banks of the same river down stream, the waters of which were swollen by the recent heavy rain fall. For nearly five miles we greatly enjoyed the leaping, rushing and wild foaming of these waters as we took the latter named route. Turning a little from the river banks and going about a mile further, we came to the pleasant village of North New Portland. And let me say right here, that if one takes the route from Boston via West Hartville and North Anson, he will come to this place after a ride of eight miles by a stage owned and run by Viles & Dison, who have an excellent reputation for good care and urbanity toward their customers. The passengers from N. Anson reach this village early in the evening, and the next morning are taken by the stage to Smith's Farm, a delightful drive. We dined at the Dirigo House, and all that has been said in praise of it and Fred. Viles, the proprietor, by your correspondent, "Simon" and I heartily endorse, and so no doubt would our horse and "Biz" if they could speak, for all had untiring and gentlemanly attention. Special consideration seems to be given to sportsmen visiting the ponds, lakes and mountains in search of trout game and recreation. The house has fifteen rooms. A shower detained us here two hours after a real good dinner. During this enforced stay we visited a factory, the machinery of which was driven by water power, and saw what I was glad to see, viz., that the vast amount of low price or no price lumber is being utilized, and labor of honest men receives good remuneration. At this factory, from cheap wood are made an enormous variety and number of boxes, which find a ready market in the large cities. Among other things we were interested in Plummer's patent beehives and honey boxes.

The shower over, we started on. The road was muddy at first, but I never weary of the wide view which has been described in your good paper that is well known "Down East" and by the "rest of mankind," but the view from Lexington Plantation and "Horse-neck" is grand! It is called twenty miles from Viles' Dirigo House to Parson's Mount Bigelow House, at the foot of the southeast end of Mt. Bigelow. It is a large house for a country place, and we found a good one. It was nearly dark when we reached it. Soon we were glad to be seated in front of a blazing wood fire, for the night was wet and cold. Supper over, anon we retired to our rooms, and listening to the glad music of a near mountain stream, fell asleep to dream of the speckled charmers in Tim Pond, just beyond the mountains before us.

Early in the morning of the 23d we were astir. Anticipation was keen. Not much time was wasted in disposing of breakfast and preparing for the coming of our ride before entering into the river path, that leads to our destination. The air clear, cool and bracing, invigorating us as we rode along, with Mt. Bigelow towering on our left and Dead River flowing on our right. Does Switzerland have landscape more charming? A few miles on we came to the "crossing," but the ferryboat was on the "other side." So "Simon" used his stentorian lungs most lustily, for no "living, human being" could be seen. Presently a buxom country lass responded to his call, and with truly manly vigor loosed the boat, came for our command, and in amazonian style landed us on the desired shore. At 10 o'clock, having accomplished our ride of seventeen miles, and having passed through Flagstaff, with a nice look at the residence of Miles Standish, an alleged descendant of the captain known to history, we found ourselves at the door of Smith's farmhouse. After some preparation, a dinner, with fresh trout on the menu, provided by the forethought of Edgar and his nimble wife, was devoured with avidity. A hitchcock team was then placed at our command. Carefully we placed the treasures we had garnered during months of study and research, and watched during the many miles of travel, in the box. Just as all was in readiness, with my trusty breech-loader and "Biz," I started ahead. The law covering ruffed grouse was not off, and the game was of a nondescript character for the most part. But no matter, all were in the liveliest mood of expectation and exuberance. When we had proceeded a mile or so Simon came, seated on his cushion, guiding "Rosinante" with great glee and gusto.

"both-eyed." I tried it and couldn't get an aim from the left shoulder at all. But "gun measles" is a better description, and I am interested in it too. Although not the owner of a breech-loader, I hope to be soon, and am saving up all these suggestions for future use. I am also acquainted with one of those old guns; it was a few inches over seven feet in length. I shot four or five foxes with it one winter in New England, some years ago. Unlike the Prince gun, it was not a kicker, but an easy gun to shoot, and as sure as the rest; but of course it was useless for quick shooting. I want to say one word of "Podgers'" that is, let him write. And there is another "quill shaver" out in Ohio who caught the big "longe," "Kingfisher," of course. Let us have an account of that trip. Glad you have gained the day in cutter vs. sloop; hope the flat-bottom folks will sleep better.—LE LOUP.

GENES, N. Y.—Editor Forest and Stream: In your last issue, on this subject, a Rockingham correspondent, "Teed," asserts that a person cannot shoot from his right shoulder with his left eye. I always shoot with my left eye and the gun at my right shoulder, and two to one that I can outshoot anybody in that manner. Often when out hunting I try to aim with my right, but cannot do it. I think that your correspondent must be mistaken, though I know not how it may be with him. I have seen only a few quail this season. Ducks are quite plentiful.—MERWIN.

BEST IN GUN BARRELS—Utica, N. Y.—Editor Forest and Stream: In your last issue I noticed an article from a correspondent on the matter of rust spots in gun barrels. Your remarks were to the point and true. If our friend will soak a rag in kerosene oil, and thoroughly rub his barrels after using the gun, and then use another rag dipped in equal parts of the best sperm and kerosene oils, he will find no rust, even laying his gun aside for one year.—J. B.

BOSTON, Oct. 6.—Editor Forest and Stream: I have often pointed out leaving my gun aside for a few days, and then looking inside the barrels, wondering why the inside of a gun barrel couldn't be plated, say with nickel, to keep away the rust, as well as the outside. Have you ever heard of its being tried inside a gun barrel?—H. J. T.

[This would be impracticable because the shot would soon wear a way the plating.]

VIRGINIA RUFFED GROUSE—Shadwell, Va., Oct. 8.—A friend and myself having just returned from a dog-training trip to Bath County, Va., I am happy to be able to report to you a grouse plentiful there. We were shooting over setters and had previously been hunted on quail, and after the first day the grouse both did very well; but I am of opinion that with two guns a team of really good cockers would have afforded us more fun. Single-handed I could get more shots with a clever setter. We put up at a Dr. Smith's, some eight miles from Millhoro Station, which can be reached conveniently by the Chesapeake and Ohio line. I mention Smith's boarding house as there are very few comfortable places in that neighborhood. The doctor is a very fine sportsman, and a clever and pleasant companion. Any one staying there can indulge in a choice collection of mineral waters, and enjoy cooler air than on this side of the Blue Ridge.—IBRX.

WISCONSIN CHICKEN SHOOTING—Menomonie, Wis., Oct. 8.—The chicken season here has been extremely good for the dickens. I do not think there has been a dry week since the 15th of August, and September was nearly a continuous rainstorm, consequently but few birds were killed. They are now too old and wary to come to bag. They have commenced to flock, and very large flocks are now numerous. Provided we have a good hatching season next year and do not have any weird come interference of our present law by legislators the shooting next season will be gilt-edge. While a train was running on the road from Wabasha to Dumhrota, Minn., a wolf was discovered on the track ahead of the engine. The throttle was opened, when his wolfish majesty was soon run down and killed.—MO.

INDIANA GAME NOTES—La Fayette, Ind., Oct. 4.—The show for quail is much better than we had hoped for from the severity of last winter; and I have heard that there are very plenty in parts where we had supposed none were to be found. In my excursions after chickens I have seen a great many. In the western part of this State and eastern Illinois, along the line of L. E. & W. R. R. We soon look for the tall flight of ducks and geese. Chickens are more numerous than for several years past. A great many woodcock have been killed on the Kankakee River. The crop of wild rice in the Kankakee marshes is unusually abundant.

GAME ABOUT AIKEN—Aiken, S. C., October 6.—Editor Forest and Stream: We have very fine quail shooting in this vicinity. It has always been a pleasure for me to place strangers in possession of this fine sport, as can be testified by numbers of good fellows from your own and other cities of the North. As this is a health resort in winter, it is unnecessary to speak of accommodations. Should you or any of your friends drop down this way, and know how the thing is done, will guarantee you the opportunity of making some of these lively birds "fold their wings," and should you not know how to do it, will show you how it is done by a "piny woods boy."—JIMEX.

READ BIRDS GONE—Philadelphia, Oct. 10.—Read birds and quail, after the cold spell of last week, were visibly decreased in numbers, especially the former. Only crippled bobolinks that can't get away can be now found on the marshes. Old weather prophets say when we do not have a "blue storm" in the fall we always have an early winter, and periodically blustering one, until the middle of January. The fine weather until the period when the vernal equinox is due, will make up for missing the autumnal one, as it happened this fall.—HOWO.

BAKING THE REED BIRD.—The editor of the Planter's Journal gives this method of baking the reed bird: Cleanse the bird and split and place each half of one in a hot scoured out half of a potato, then lay the segments of potatoes together, enfold in cloth or green corn husk, and place in a dish to bake. You can season as you wish before or after the baking, and when thus prepared, the delicacy is simply not know how to do it, will show you how it is done by a "piny woods boy."—JIMEX.

MIGRATORY QUAIL—Springfield, Mass.—The rooms of the Rod and Gun Club, of Springfield, are models of elegance,

the club having just changed their quarters to more comfortable apartments than were formerly occupied by the association. I was quite sorry to hear that the European quail imported by the club, and liberated a year or so since, have never been seen or heard of. Unlike those let out by the sportsmen of Portland, Me., which are known to have bred, the birds of the Rod and Gun Club are no known to have even returned, let alone to have hatched.—HOWO.

GAME IN THE NORTHWEST.—Mr. Howard Clark, of Philadelphia, not yet eighteen years old, writes as follows of a late trip he and two companions took to the Northwest: "I have been back from my trip about a week, and have had the best of luck. We got in three days 208 prairie chickens, and on a longer trip from headquarters twenty-one head of large game, eleven elk, seven black tail deer and three antelope. We were unfortunate in not getting any good heads, although I killed five elk myself."—HOWO.

A SERPENT and an eagle were struggling with each other in the throes of a deadly conflict. The serpent had the advantage and was about to strangle the bird. A countryman saw them, and running up, loosened the coil of the serpent, and let the eagle go free. The serpent, irritated at the escape of his prey, let fly his poison and injected it into the drinking horn of the countryman. The rustic, ignorant of his danger, was about to drink, when the eagle struck his hand with his wing, and seizing the drinking horn in his talons, carried it aloft.

This fable, which is more than 3,000 years old, teaches us that Asop, although not an American journalist, was not destitute of ability as a liar.—[Texas Siftings.]

AN ANCIENT POWDER HORN—A correspondent of the Sacramento Bee describes a powder horn "In the possession of Miss A. W. Bryan, made by her great uncle, Daniel Boone, a short time previous to his death. It is a large steer's horn, well scraped, and capable of holding about five pounds of powder. It has an antique look, and I was informed by Miss Bryan that the family had been offered one hundred and fifty dollars in 1876 to allow it to be placed on exhibition at the Centennial Fair, but the offer was refused for fear of losing the relic."

This paragraph has been going the rounds of the press. It started with the San Diego, Cal., Union, and bids fair to be copied until the end of time: "Van Dyke, of Fall Brook, lately came upon a wildcat and four kittens upon a large rock. He pulled trigger and the ball struck the nearest kitten in the neck, the splinters striking one in the ear, another in the breast, and the main portion passing on killing the mother cat. This was done with an ounce round rifle ball, with a gimlet hole bored in front, half-way through, so as to make it expand."

GOLDEN PLOVER IN THE WEST.—A correspondent wishes to know whether in former times the golden plover was not confined to the sea coast and if they had not been driven to migrate through the interior in comparatively recent times by the great increase of shooting along our coast. To which we reply that this bird is—and no doubt always has been—distributed over the whole continent, a closely similar form being found also in Asia.

CHICAGO NOTES—Chicago, Oct. 9.—We had three very cold days last week, and they brought the ducks down in thousands. Mr. George Ayer, of this city, returned from Wisconsin last week. He reports AI shooting there. Woodcock are plenty here, and quail are seen in the market again. If any of your readers want good deer and bear shooting let them go to Peshigo or Marinette, Wisconsin.—TEX DOCK.

FLORIDA COMPANIONS WANTED.—A gentleman and his wife who have spent one winter on the Gulf Coast of Florida propose returning there this season. They know where to go, and having been through one campaign are well-posted. They wish companions for the winter. Parties wishing to communicate with them in regard to the trip may address N. Norwood, this office.

INDIANA GAME.—A Fairland correspondent writes us: Woodcock not yet—too dry in our covers for his fastidious taste. The past dry season, we think, has been very favorable to breeding of quail; some early birds are now almost grown. We are expecting fine sport when the time comes. Squirrels are reported more numerous than usual, but that kind of shooting does not interest me, nor indeed any kind of shooting in which the need of a brace of well-broken setters is not felt.—W.

CAZENOVIA, N. Y., Oct. 8.—The Wendell Gold Badge was won by M. E. Card, at the club shoot, Friday, Oct. 7, by 10 straight at 27 yds. Thomas consoles himself by saying the badge still lingers in the trap maker's union. Birds a little more plenty. Smith and Crittenden bagged eight woodcock and three grouse, Oct. 6.—HAMMERLESS.

STAFFORD RAIL SOOERS.—South Norwalk, Conn., Oct. 7.—The season just closed for rail shooting at Stafford, Conn., has been a good one. The following are my scores: 7, 10, 50, 61, 39, 19, 53, 34, 73, 43, 4, 99, 35, 32, 135, 65, 20, 17, 23, 21, 17. Total, 865.—F.B.

CHARLESTOWN, MASS., Oct. 9.—Went out yesterday for the first time this season to look for birds, and found them very scarce; weather dry and warm, which may have something to do with it; saw but one woodcock; don't think they have arrived here yet.—C. T.

NEWPORT, R. I., Oct. 7.—This cold snap has brought along the birds quite plenty. Shooting on the marsh and big pond is very good. Teal, broad-bills and other small ducks plenty. Mr. La Forge shot two Florida railines on the pond, and reports them as being very plenty.—X. Y. Z.

GAME BIRDS IN TOWN.—A bevy of quail recently rested for a while in a tree on Main street, of Keyport, N. J., in front of Thomas B. Hoff's. Captain Macoutie informs the editor of the Weekly of that town, that a woodcock made its home in his garden for several weeks, a few years ago.

"GUYON" CALLED FOR—Escanaba, Mich., Sept. 21.—I think I am not alone in the wish to hear from "Guyon," again and often.—A. F. Y.

Address all communications to the Forest and Stream Publishing Co.

Just here the road was too much mixed with water, and I perched by the side of the John, and so we went into this dense forest, beautiful in its solitude. Now I rode and Simon went ahead with dog and gun, and here and there was an unlucky yellow-hammer, owl or hawk. Then for a time I would lead the way, when the water made it dangerous to go. There were in sight of the village of Six Cabins, one of the "Massachusetts," new this year. We were heartily greeted by about ten old comrades, and there were some fifteen guests strangers to us, but not strangers long. Conventionalities do not dwell in such a house.

I tried my flies that evening with only moderate success. The 24th was cloudy and the scarlet ibis was a favorite, so were other light colored phantoms—and we took all the enticing and efficient swimmers we desired. But as the weather became fair and hot our delusions would not lure the most solid denizen to the surface—it was but the "average" ones that left the cooler retreats to take our bright lures and gratify our greed. But when we dropped in the cool depths a more substantial morsel, even the wary and more weighty aristocrats yielded to an unwilling force. For an hour each morning and evening gentlemen and ladies enjoyed the sport, and helped to please our palates at the table—a good table of agreeable and nourishing food, with much variety for a good table. We had our satisfaction to men, women, and children. Ladies and children grandly and gladdened the cabins this year at Tim Pond. During the day they engaged in games, reading, writing, needlework, target shooting, hunting, visiting cascades, pieces of beauty and places of wonder and admiration, till the week was gone and Saturday night came. The Sabbath dawned in profound stillness, a stillness we never knew in our cities or villages. What grandeur in the hush of the depths of the woods! What solemnity of a Sabbath day in the solitude of unmeasured forests!

With Monday, the 29th of August, came a brisk stir in our little community, a colony were to embark for a new territory and new scenes. The promised realm is called "The Seven Ponds." A party had returned from them the 26th, and had given us glowing accounts of game, and shown us specimens of fine fish—and we were thrilled with the prospect of great sport. Soon after seven o'clock provisions, tackle, guns, dogs, horses, boats, hookboards stepped into our boat, prepared to start. Simon and I stepped into our boat, pushed off, crossing Tim Pond to the point where the new road leaves this lakelet for the Seven Ponds. The new road is in good condition for walking—but though Smith has expended much labor and money on it, and still had men at work, it was not in as good condition as the road from the Farm House to Tim Pond. The Buck-wagons were in our rear, and we were at liberty to fall back at any time, and ride if we chose to do so. But we so enjoyed the dense forest and ever-changing scenery that we slowly trudge on, resting now and then at the camps by the road. At the half-way camp, on the banks of a branch of Alder Stream, we partook of a light lunch. In seven hours we had put the ten miles behind us, and stood before the camp on the shore of L. Pond—one of the so-called Seven Ponds. Though the cook had not expected us so early, in an incredibly short time we were ravenously satiating an appetite aroused by a long walk, the solvent qualities of frequent light draughts from the purest mountain springs ever distilled in Nature's laboratory, and an atmosphere full of ozone, and no less aromatic by the fir tree, the cedar, spruce, hemlock and pine.

The cabins here are but temporary, and not so good as the comfortable, neat and convenient ones we left in the morning. Visitors have crowded upon Smith before he has had time to fully prepare for them, and we were obliged to rough it a little and pack rather thickly in the three camps. Smith has many laborers, and is preparing to put up a number of first-class cabins, not only for sportsmen but invalid seekers for health and recreation, on an eminence which commands a view such as artists seek. This high ground is now covered with slightly and healthful woods. On one hand at the base, from a mountain side, comes tumbling and laughing a clear, cool brook. Standing with the face about to the north, directly in front is seen the large sheet of water called Big Island Pond, the large green island adds beauty to its appearance. On the right, with towering peaks, is Snow Mountain; on the left are hills, or smaller mountains; away in the north or northwest is a grand range, called by the guides "The Mountains," said to be none on the Canada "line." It is a rare beauty to feast the gaze of poet, painter, sportsman, or the worn business man seeking rest. Next year I hope the new road and cabins will be completed according to plans made. My comrades and I have spoken for "rooms."

But it will take too much space and time to give even an abstract from my journal. So if your readers ask if we found trout, I answer yes, legions. Were they large? Yes, larger than in Tim Pond, but not so large as some found in the large lakes. One morning our cook told us that he should need twelve or fifteen pounds for the table that day. Simon and I went just off an inlet of a cold stream, within six rods of the landing, and in about an hour returned to camp with thirty-one trout, weighing sixteen pounds. This is a sample for size and quantity at "L. Pond." We could have caught an equal string by going a half mile or a mile distant to some inlet or feeding ground; or we could have gone to Big Island Pond, seventy-five rods to the north, and taken larger trout but less in number.

Is there good fishing every day? No. In August, when the day is bright and the surface is smooth and warm, all sportsmen know large trout will not "rise," assertions of proprietors to the contrary notwithstanding. Tim Pond is the most uniform in this regard any I have found. I think it may be because it is fed only by small, cold mountain streams, and the surface does not often become warm. There are some ponds to the east of the region of which I am speaking fed, as I am told, by large and more sluggish streams that furnish good fishing in spring and autumn, but very poor fishing in the warm seasons. Is there game here? After September 1st all the grouse were brought in that could be eaten. There were "swarms" of them! As my companion said, it was like going out into his farmyard and shooting his chickens, so tame and plenty were they. I never saw them so numerous; partridge broiled and partridge stewed were no drug with us. But no one must shoot more than the table required. As to large game, if being aroused from my morning nap two mornings by the screams of bears, and two other mornings by the snarls howl that none of us recognized; and if path had been trodden by deer and caribou, on their way to and from spring, are "indications," then there must be a large yield this year! Personally I have little knowledge or experience

in this line. The law was on at the time of which I speak, but I was told by one of the knowing ones willing to give "points," that a greuback bullet would "bring down" a guide and a deer most any night, and from a suspicious looking fellow on the shoulder of a guide passing my camp late one night I fear his point was too well backed. Yes, large game is abundant in this region, and large quantities are taken by hunters in the season.

Your issue of August 18th was handed to me while at the Ponds, and I noticed a sarcastic remark by your correspondent "B.," upon some words of mine in your number of August 11th. I trust my reply will be respectful and an aid to those recerver-seekers who, like myself, desire information. As "B." says it was a "short article," and has been in general terms to cover what might be amplified to fill a book, and yet, if one had read my previous articles, I think the words would not mislead. I write for the love of it and the rest-seeking, public, not for proprietors. I write of resorts I know about, having no reference to other places that may be different, as good or better. I did not mean to be understood that Indians had not fished in these ponds centuries ago; that lumbermen and hunters have never gratified a sharp appetite by taking trout from the ice-locked waters! Nor do I deny that a few sturdy, enthusiastic sportsmen, in my friend T. S. Steele, had with brains and guides, penetrated, through much endeavor, to some few of these ponds, to spend a day or two at a time. But how much did this deplete the number of trout? This is a wonderful group of lakes or ponds, and received its name when as well known as now. Then but seven were known, guides and hunters and trappers now say eleven, and if small ones are counted, even more belong to the group.

Mr. Douglas, who had his headquarters at Rangeley for some years, and has been guide, hunter and trapper for twenty-eight years in this region, gave me material for a map of these waters that is of much value. It has been suspected by other guides and hunters and "pronounced substantially correct. So far as I visited the region this topography is virtually right. Coming as I did to L. Pond first, I will make it a starting point. About sixty or seventy rods north is Big Island Pond; about sixty rods to the east of last named is a small pond called Rock Pond; two miles west of Big Island Pond is Little Island Pond, and across five rods north of this is Beaver Pond; sixty-five rods south of this is Long Pond. Again, one mile north of Big Island Pond is Northwest Pond number one; and about sixty rods west of this, Boundary Pond; one hundred rods from Northwest Pond number one is number two; and so I could go on and enumerate sixteen ponds that are properly in this one cluster, and only six miles say, northeast of this group, is the first in the group of Chaney Ponds. Now if it is a fact, as I have evidence from several witnesses, that these ponds have said location, but a fraction of them have not the lines of an occasional sportsman, may I not be pardoned for saying "These ponds are stocked with trout which have enjoyed their homes unmolested since the history of trout began, till now Kennedy Smith has opened a buckboard pathway for sportsmen to the waters where they dwell?" All agree that all of these ponds are as full of trout as in primitive years, and all agree that the first buckboard pathway to their shores was built by Kennedy Smith last season. So far as I know, all interested in the opening of such a medium of sport and health are grateful for the road. I have heard many on the ground and others, in Boston and New York, express their gratitude.

Some will know that there is a long, hard trail from Rangeley to this remarkable group of ponds, where a strong guide can take but a small pack of supplies, tackle, blankets, etc. The stay has been short, with but few comforts. Now the new road is good for walking, and one can ride on a rough road a part or all the distance. Even a Boston lady has had the courage to make it to tempt this season, and one or two buckboard wagons can be sent in with supplies each day, when the road and the cabins are complete, next year.

The "forest cure" is now prescribed by our best physicians; thousands are seeking such resorts, and do not wish to pass through fatigue, hardships and peril to gain them. It was a pleasant sight at Tim Pond to see a husband and wife in a boat, both gracefully "casting the fly." When we take our own fish on an about the correct way, it is practiced and greater pleasure enjoyed. We returned to Smith's Farm House, as we went in with a buckboard team as a tender—we alternately rode and walked, shooting many grouse on the way, leaving some at the cabins and some at the house. September 6 Simon and I bade good-bye to Smith and his family, feeling we owed them a large debt of gratitude for the great pleasure we had enjoyed and health received. They did all for our comfort and happiness willing minds and hearty consent. We took the route via the new roads, through Jerusalem and Kingfield. This new road is having a large sum of money expended on it, and is greatly improved. The hotel in Kingfield was burned last May, causing a great loss to the public and the village. We kept on to West New Portland, and passed the night at a good country hotel, called the Blaisdell House.

And now your readers have learned the way to the Seven Ponds via Tim Pond. I trust you understand the charms that have drawn me thence four times and Simon five times. We, and the large number from different cities and States, were around the camp fires the chill evenings, said we would meet here again and renew these friendships next year. Slowly and carefully I put in order and packed away my gun that had done so good service. As carefully did I unjunk my rod, that had been the admiration of so many and had given me such true pleasure—gently I folded it in its case.

New Britain, Conn., Oct. 8, 1881.

A TEN-POUND MASKELLONGE.—We received from Mr. G. M. Skinner, of Clayton, Jefferson county, N. Y., who is a sportsman, who he found in another place, a ten-pound maskellonge of ten pounds weight, packed in ice. He writes as follows: "This afternoon I sent you a ten-pound maskellonge, caught by myself on a spoon hook yesterday afternoon. Please accept it with my compliments. Day before yesterday I caught one of twenty pounds weight, which I sent to Boston, and the oarsman who was with me, John Purcell, on both days caught one of eighteen pounds, the day previous, Saturday, fishing with a Mr. Title. New York city, quite a good score, and I had a few more Maskellonges as well. I hope to be in the city the first of next week, and trust I shall have the pleasure of meeting you in the office. While regretting this fish is not larger, I can

assure you that we consider such sized ones as choice table fish."

ABORIGINAL FLY-FISHING.

SAN FRANCISCO, Cal., Oct. 1.

Editor Forest and Stream:

Yours of the 19th ult. duly received. I have just been writing for the *California* to be published probably next month, a description of the various ingenious methods adopted by the California Indians before their contact with white men, for the capture of fish and game, and I answer your question by making the following extract from it:

"The Indians of Kern River made use of an artificial fly for the capture of trout, and probably used it for ages before Europeans invented it for the same purpose. The hook of the 'spoon' form, but without a barb, was made from the shin bone of a deer. On the legs of the California deer, *Carpinus columbianus*, corresponding to the chestnuts or warts on a horse's legs, are also warts but covered with stiff long hairs of a darker color than those on the other parts of the animal. These warts and the hairs growing on them have a strong and peculiar scent of the deer, which is not easily removed or washed away. A small bundle of these hairs is neatly fastened at one end around the shaft of the hook, the loose ends pointing to the eye of the hook. With a neatly made line of Indian hemp (*Apocynum cannabinum*) and a white rod and the fly hook, the combined sport and business. The fly was thrown into the water and kept as near the surface as possible by continuous short jerks. Every motion of the hook in the water caused the loose ends of the hairs fastened to it to open and shut. At a short distance it would resemble the motions of a caterpillar in the water, that had dropped from an alder and was struggling to reach the shore. The Indians say that the trout can smell and are attracted by the scent of the deer hairs. This kind of fly is still used, but the hook is now made of telegraph or other iron wire."

I have no doubt it will retain its peculiar deer scent for years. B. B. RODRIGUEZ.

CANOEING IN NORTHERN MICHIGAN.

FROM THE HEAD OF CROOKED LAKE TO INDIAN RIVER.

IT has been but one short week since I returned from a seven weeks' trip in Northern Michigan, and if ever I did have a severe case of Northern Michigan heretofore, I now have an utterly hopeless relapse.

My friend Frazer, who writes to you asking "if a fisherman can be a Christian," was tempted to do so by the fishy stories which I told him of some bass fishing in Black Lake, all of which I will relate at its proper place, and all of which I, as a matter of course, am willing to affirm. I can only return the compliment to him by asking about what chances of a canoeist would be, who, on his maiden cruise, "paddles forty miles up a rapid current and against a head wind in one day."

Much of my cruise this year was over water traversed by many times before, but little of it, however, in a canoe, and after my craft was safely launched at the head of Crooked Lake and duly filled fore and aft with what to me were necessities, I hoist myself in and feel like a frisky young fellow on any rate. I need not bid that I acted as such, while my companions, Henry C. Louiss and B. B. Woodrow from Columbus, and our old hero from Cheboygan, Mich., Capt. David Smith, seem as pert as schoolboys. We start out with the understanding that we will stop at any point on our route that we may desire and as long as we wish, and let the distance traversed, or to traverse, be a secondary consideration. Paddling down Crooked Lake for a couple of miles, I call a halt at one of the grandest, coldest springs Northern Michigan boasts, and while spending a short time here a slight breeze springs up, taking advantage of which we will start and start for Pickett Lake about one mile and a half distant, directly across Crooked Lake, and then through a narrow little stream, where the beautifully clear water and the handsome large white pond-lilies, then in profusion, of which we each pluck a good, large-sized bundle to ornament the forepart of our cockpit, together with the pure bracing air, compel us to slide down in our canoes and hang our shoulders and elbows over the coaming and give expression to our feelings by emphatic, but at the same time appreciative, exclamations of delight. Finally, paddling on through this delightful little outlet, we enter the foot of Crooked Lake and with us set and a good strong wind to push us, we in a short time run the couple of miles we have to make, and pull up at our old camping ground, where we find springs enough and of different characters to suit the most fastidious. I gave this place special mention in a letter of mine to *FOREST AND STREAM* of May 15, 1879. We make camp, get up our tent, and some of my brother canoeists prefer their small canoe tents. I do not, but I have one of good comfortable size for four persons and all its or traps—and then we live socially in a good, comfortably sized room, and while Capt. (David Smith) volunteers to get us something warm, Petie (L. C. Louiss) hies himself out for ye gentle bass, in which he is soon followed by your humble servant, while Woodrow girds up his loins, and "goes out to look for a deer," all returning empty handed, but ready for something to eat, very prompt at such times. We sit down at our table and draw upon what we all stretch ourselves out upon our blankets with a glowing fire in front of our tent which soon sends us off to dreaming.

Up bright and early we all (with the exception of Woodrow, who "goes out to look for a deer") adjust our rods, and start for fish for breakfast, there being not a fresh bit of meat in the house. We fish on the right side and on the left side with the greatest care and attention. Try them with frogs, minnows, worms and flies and all to no purpose, until finally we succeed in catching one nice fat one, but we had two camps in broken and a return is made to Crooked Lake, crossing which to the head of Crooked River, we enter upon one of the handsomest streams, I doubt not, in America for a canoeist. The only drawback is that length is only about seven miles. The banks are lined to the water's edge with trees of high water woods; dotted here and there with the hand-omest cardinal flowers; lovely and fragrant large white water lilies, and the way is so clear that we can see through many tangles daring little and thither aroused by the commotion caused by our little fleet. Many of them we catch as we lazily float and easily paddle along. Paddling on through this properly named Crooked stream we amuse ourselves by occasionally shooting a duck or catching fish, and we reluctantly and ourselves at the mouth of the river and

entering Bart Lake. Here we hoist sail, and being favored with a slight but favorable sailing breeze we make the eight miles to the head of Indian River, where we pull up at the hotel, and prepare for a couple of days' stay. He we find quite a camping party, and among them the old veteran, "Senex" (Dr. Franklin), of Ann Arbor. Seems to me I have heard "Old Hickory," tough bass wood, or some such cognomen attached to him somewhere; at any rate he was there, wrestling with a tumble-down old yacht, and ready to tell some of the everlasting big stories about the whopper of a big bass that got away.

This point, to my mind, is the most central and best place in Northern Michigan to make headquarters from which one can radiate. After being comfortably located at the hotel, Capt. Pete and I light a cigar, take a comfortable chair on the porch, hoist our feet at a comfortable angle, the perfect picture of contentment, while Woodrow "goes out to look for a deer."

To be Continued.

AMPHIBIOUS FISHES.

MEIDA, Pa., October, 1891.

Editor Forest and Stream:

I send the following list of fishes which inhabit both salt and fresh water, as they are given by the late Prof. Miner, Prof. G. Brown Goode and Mr. Fred Mottler, in the paper read by the latter before the American Fish-cultural Association and published in FOREST AND STREAM of July 14:

- Sea trout, or weakfish (*Cynoscion carolinensis*).
- Channel bass, or redbait (*Sciaenops ocellatus*).
- Shark (species unknown).
- Tarpon (*Megalops thalassoides*).
- Garfish (*Belontiops* ?).
- Mullet (*Mugil chirocentrus*).
- Drum (*Pogonias chromis*).

I have caught all the above-mentioned fish in fresh water, on the west coast of Florida, except the tarpon, which I did not catch. I was once playing a sea trout with a light rod, when a tarpon seized the fish in its mouth, and then the novel scene was introduced of playing a tarpon with a 9 oz. fly rod. As we were nearly matched in size, the "odds" were rather in favor of the tarpon. I expected, of course, to lose my leader, but as the line was all drawn from the reel, the trout managed to escape from the tarpon. When I reeled in the fish, I found its sides well marked by the bite of the tarpon. The tarpon and drum do not go into the fresh water often, except in summer.

JOSEPH WILCOX.

BIG BROOK TROUT.

OSWEGO, N. Y. Sept. 1.

Editor Forest and Stream:

In FOREST AND STREAM of September 29, "Seven" records the capture by a New York city sportsman of a four-pound six-ounce trout, measuring twenty-one inches, in the Oswego-River Inlet to Cranberry Lake, St. Lawrence Co., N. Y., and adds that every one in the vicinity united in calling it the biggest trout caught there within the memory of the "oldest inhabitant."

Now the fish was a beauty and its captor has just reason to be proud of his "take," but the "oldest inhabitant" if a resident of that region for the term of half a dozen years only, must have an abominable memory. I have before me the life-size photograph of four brook-trout, caught by a party of gentlemen from this city in the inlet named above in May 1876. These trout weighed respectively five and three-quarter pounds, four and one-half pounds, three and one-half pounds and three pounds. In length, the fish spoken of by "Seven" overlaps the largest of this redoubtable four, as "Seven's" trout measured twenty-one inches while the speckled king of 1876 was but twenty and one-half inches in length.

These fish were taken during high water with bait and minnow-fishing.

Cazenovia, N. Y., Oct. 1.—Editor Forest and Stream: In the Oswego-River Inlet to Cranberry Lake, on the fifteenth or sixteenth of June, in the year eighteen hundred and sixty-nine, I caught a brook-trout twenty-two and three-quarters of an inch in length. Had no scales to weigh him, but Charley Marsh, the guide, said he would weigh five pounds, and on the length and weight of one caught by your correspondent I no longer doubt but that Charley was right.

WILL H. CRETCHEN.

A STUDY FROM LIFE.

THE subject of these lines is usually found in the bar-room of a country hotel. Old and weather-beaten is he, with the grime of toil upon his wrinkled hands and his aged form bent with the weight of years. He is conscious, in a dim, undefined way, that he has been hardly used; that in the battle with fate he has received some blows below the belt, which have effectually removed what little hope he may have had of winning the fight. And now, from the summit of his eighty years, he looks back over the long and dusty way he has trod with weary, aching feet, and drearily wonders how he has succeeded in climbing so high. Even now he can be seen at Martin's Hotel, on the Sangretoes road, in the taproom of that famous old hostelry, sitting in an arm-chair tilted back against the wall, his few scattered locks covered with the remnant of a straw hat; his Kentucky jeans trousers supported by one suspender, and his feet thrust stockinged into a pair of cowhide shoes. He has succeeded in finding, somewhere in the cavernous depths of his pocket, a bag which at some time in the dim past contained tobacco, and his trembling fingers search for the morsels which have accumulated in the corners, carefully placing them, when found, between his toothless jaw and the inside of his leather-like cheek, with an expression of intense satisfaction. After patiently listening to the conversation of a couple of anglers, who have just returned from a fishing trip to the Esopus, the fossil suddenly becomes instinct with life. "You fellows can't catch no fish," he vehemently remarks. "Why no?" mildly inquired one of the party. "Kase ye don't know how," and as he warmed to the subject and the blood began to flow in his mummy-like veins, he continued, patronizingly: "You don't see no usin' any new-fangled bait; no, Sir—none o' yer dolsels an' sich on my line when I'm arter bass; jis' giv' me a grasshopper an' I'll pull 'em out faster'n ye kin take 'em off'n the hook." The speaker, thinking he detected an incredulous look on the face of one of his listeners, confirmed his remarks by an appeal to

a friend: "I'll leave it to Silo Jones, over there. Say, Silo, ain't it so?" and Silo solemnly affirmed it was true as Holy Writ. The aged Walton went on, I see, a fuller sort of style-ish chap—down 'till the bridge yesterday, and he didn't have a fishin' pole no thicker'n my finger, with a little cork onto it, and when he hooked a fish that the darn fool stood turnin' the handle o' that little cork, and the fish ruinin' roun' an' roun', an' th' little fishin' pole bendin', an' I swear—Now ain't that the God's truth, Silo?" To which forcible interrogation Silas nodded vigorously—"if he didn't monkey an' monkey," continued the anticlimax, "fur forty night half an' our with that case bass after he got his flippers onto him. Now, that's what I calls cussed nonsense. None o' yer monkey'n' with a bass when he gets a-holt o' my grasshopper; I yanks 'em out if I loses a leg," and the bearded eyes of the ancient turned with a longing gaze toward the bar, and then toward his auditors, but seeing no indications of an answer to his mute appeal, he relaxed into semi-torpority again, until the departure of the fishing party roused him long enough to say: "I kinder think you fellers is jist like that darn fool I seen yesterday."—Kington Freeman.

LAKE SHEEPSHEAD—Fairland, Ind.—I inclose you a description of the lower jaw of an animal or fish—or something—the best informed in our vicinity cannot tell what, which we would like you to throw some light on, if my description is at all sufficient. The lower jaw was found by the little boy of Dr. E. N. Tull, of this place, under the house, where it had doubtless been dragged by cats or dogs, some dried remains of flesh still adhering to it. The impression inclosed shows the number of teeth, except those lost, to be about one hundred and twenty on the lower jaw. It measures three inches across condyles; width across teeth, two and one quarter inches; size of dental triangle, two and one quarter by one and one-half inches. It may be a very common specimen—too common to excite any interest in one who has made such things a study—but while we are qualified to identify anything that comes under the head of ornithology by the help of the *Cond. Key*, than that the assistance of your excellent journal—we do not have the books necessary to identify this specimen, which is evidently, from the number of teeth (two hundred and forty), if the upper jaw contains as many as the lower one, of the earth, and prepared to do a great deal of grinding.

[The jaw is that of a fish, one of the sciaenids, and is that of the lake sheepshead, *Haplochromis grunniens*.]

STURGEON AND CAVIARE.—It is claimed for Wilmington, Del., that it has the largest sturgeon fishing firm in the country, where it employs between thirty and forty nets on the Delaware River. A schooner is kept busy in the ice trade, and a steamer accompanies the boats. While the men are fishing the steamer moves from boat to boat, taking in the sturgeons as fast as caught, dressing them on the boat and taking the caviare from them. The stines in which the fish are caught are about 200 fathoms long, are 32 meshes deep, and are made of 32-cotton twine. The firm uses three tons of cotton twine a year. The season commences about April 1, and should close about July 1, so as to give the fish a chance to spawn. As it is, the river is fished clear up to the freezing time. Speaking of caviare, mentioned above, it should be stated that it is the spawn of the fish, and is a favorite sauce, particularly with the Germans. It consists simply of the fish eggs, properly cured, and epicures regard it very highly. Many hundred kegs are shipped to Germany each year. The firm, after much trouble, is able to put up the caviare very nicely, with a patent preparation.

A NEW TRIPLE HOOK.—We have been shown a new device for baiting a triple hook for bass and pike fishing. Two hooks are made on one steel wire and bent back to back, forming a ring for attachment to the line, in the usual manner, and the third one soldered between them. A needle to hold the bait has its point a trifle below the head of the hooks and runs up through the ring and is soldered on the opposite side, its farther end projecting under the union of the hooks and bent into a clasp for the needle, after the manner of the fastening of a brooch. The minnow or other bait is pierced by the needle and held in place by the clasp. It is made for Abbey & Imbrie, of 48 Maiden Lane, New York.

CAMP COOKED FISH.—The editor of the *Planter's Journal* says: "Our method of cooking fish in camp was to take out the entrails and then fill the cavity with seasoned dressing, the principal ingredient of which was roast or boiled hickory kernels or chestnuts. We then encased the fish in an inch of dough-like mud and placed it in the ashes to bake. When done the edges of the crust were broken and served as platters. The scales and skin of the fish stuck to the earth and the deliciously flavored and perfectly baked meat can be eaten from the improvised plates. This is a royal dish for use in camp."

HARPER'S FERRY.—A Baltimore correspondent wishes name of party at Harper's Ferry, or at Point of Rocks, who can furnish live bait for bass fishing.

Fishculture.

FISHERY CULTURAL NOTES.

MR. GALVIN FLETCHER, the newly-appointed Fish Commissioner of Indiana, has an appropriation of only \$1,000 to provide food for two million people. His term expires September 20, 1893.

The Richmond and Alleghany Railroad have decided to erect fifteen or more fishways over their dams on the James River, and they have adopted the McDonald plan of all of them. It may then be possible to have sand and other fishes again at the headwater of this river.

The New Jersey Commission are thinking of stocking the Passaic with black bass. They may do so this fall if the fry can be obtained, and the fish may be raised in a portion of the river which is not polluted by the drainage of Patterson and Newark, which contains much chemical matter in addition to ordinary sewage.

The United States Fish Commission set 400,000 quinnat salmon eggs to Germany by Steamship "Dona" on the 6th, and 100,000 to France by Steamship "Gauda" on the 12th. Of the former lot 250,000 were for President Von Behr, of the Deutsche Fischerei Verein and 50,000 for C. Basso, Goestomunde. Mr. A. Colombe, of Paris, received those for France. The eggs were sent by Mr. Livingston Stone from the U. S. Salmon Breeding Ranch on the McCloud River, California, to Mr. Fred Mather, of FOREST AND STREAM who repacked them in refrigerating boxes.

HOW DID THE FISH GET THERE?—Crockett, Tex., Oct. 9.—I was somewhat disappointed at not hearing some explanation in regard to the way the fish came in my pond. Now it is the same thing over. The time that I drained my pond it was perfectly dry for two or three weeks; then I stopped the flow and the water from the spring has been steadily accumulating since. I have not received any credit for my surprise and chagrin. I find that the pond is full of minnows from one-eighth to two inches long. I am fully convinced now that the eggs are either rained down or come from the spring water. I am convinced that one or the other is the case on account of the very small size of the fish. The water carp pond cannot be had in that part of the country.—R. C. S.

FISH COMMISSION REPORTS.—Two weeks ago we published a list of the reports of State Fish Commissions which were waiting from our files which were being prepared for binding. Since then we have received the first report of the State of New York, for the year 1890. Mr. S. B. Green is the author of the report, and for the same. It is exceedingly difficult to obtain back numbers and we appreciate the kindness. We will lack the following: Massachusetts—1st, 9th, 11th, 12th, 13th, 14th, Pennsylvania—1870 and all before; also 1872, '73, '76, '77 and '78. New Jersey—1st, 2d, 3d, 1876, and all since. We have reports of Virginia from 1875 to 1878, both inclusive, but none other. Any person having spare copies which they wish to put where they will do the most good, may send them to this office where they are needed for frequent reference.

FISH IN INDIANA—Lafayette, Oct. 10.—Yo have a chance now to stock our rivers with fish and keep the seines, and it is a stop in the right direction. There is a strong club being organized here to protect our fishing interests and stop all unlawful fishing. Our Fish Commissioner is the right man in the right place, and has a deep interest in that line of undertaking. If from now on we have no more of our unlawful fishing and no stock our streams without having them dragged with seines and dynamite, we might as well let all law aside and let people kill at their pleasure every fish that is to be found.—J. M. SARRIS.

November 25, Louisiana State Field Trials. Entries close November 1.
Edward Odell, Secretary, New Orleans, La.
December 5, at Grand Rapids, Mich. National American Kennel Club's Field Trials. Jos. H. Dew, secretary, Columbia, Tenn.

OUR LONDON LETTER.

Editor Forest and Stream:

On reading your issue of September 8 I was much struck by the very sensible letter on bull dogs, signed "Hemlock's Hero." I've owned as many bull dogs as any man, and have as many prizes as any man, and I can assure you that I am not a bit contrary, they were affectionate dogs—400 much so, in fact—for a bull dog, unless teased, will to a certain extent fraternize with any body. Many accuse them of stupidity. I deny that they are at all wanting in sagacity; on the contrary they can keep their end up, will do anything you wish them to do, and will stand up for you as bravely as any dog. I have had a bull dog who has been handicapped in the battle of life. Look at the class of men with whom he is generally associated, and a moment's reflection will cause his direct enemy to confess that it is wonderful that the bull dog has any instinct left after so many generations of his creature have been treated and confined as his have been. Sportsmen shrink from breeding from unbroken parents in the case of field dogs, because they say the progeny are less steady—not that they have less brains in their heads, but that they are less able to hold their own. The creature has had of proving himself superior to any other breed in intellect or whatever you like to call the faculty which dumb animals possess for showing their intelligence.

Another subject which interested me considerably was your showing up of a dog-dealer who was a variety of names. I don't know whether this is the same person who kindly referred an American gentleman to me as one who "would speak for him." I was horrified to receive a call from the purchaser, who told me that the show in London, he was to come to say he had a much better opinion of the dogs I sent out to him than he had, and that he would like to buy some more. I forgot. Eventually I satisfied my visitor that he had been hoaxed, and that I never sent a dog to the States in my life, nor did I intend doing so while connected with the press. In my experience, long as I have been connected with the press, I do not think it would be unfair for them to sell a least one dog and criticize his merits on the next. Added to which, dog-dealing and quill-driving don't mix at all.

Since my last letter two fair dog shows—Eastbourne and Dickenhead—have taken place. The latter contained nothing very much out of the ordinary run of dogs among those present, but Eastbourne was the first exhibition which I have visited where champions are barred from competition. The object of the promoters of this show is to show to the world that the dog is not a creature likely to receive if there was a probability of championship being. The result, however, in my opinion, is not encouraging, for it is not pleasant to see a lot of third-rate dogs figuring as winners of prizes when one knows their owners have better tackle at home, and would have brought out the best worth anything to do so. Granted that such regulations please the owners of indifferent types who wish to figure as possessors of first-prize winners, it is still worth while considering whether or not the breed of dogs is encouraged by first-rate specimens being kept out of competition. The quality of the dogs was nothing very high, and the exhibition received the full support of the Kennel Club and had a good prize list into the bargain.

Talking of the Kennel Club makes me think of the excitement which I alluded to in a former article, which was the result of their attack upon Darlington and other shows, who will not suffer the club to foist their rules upon them. Matters have not mended a bit since I last wrote, and there is to be a big show at Manchester next month, at which the Kennel Club rules will not be enforced. It may be mentioned that the Honorable Secretary of the Manchester fixture is a leading member of the Kennel Club, and others equally high in position in the club are judging. This all shows that they are not mainmains in their "fovoting" programme, and the question arises by whose authority was the expulsion of the Darlington and other resolute shows decreed? "This 'tis my city, 'tis 'tis true, but there has been a lot of a real importation into the case; and one distinguished member of the committee punished me by not speaking to me at a recent show, and he would have been just as well worth anything to do so. Granted that such regulations please the owners of indifferent types who wish to figure as possessors of first-prize winners, it is still worth while considering whether or not the breed of dogs is encouraged by first-rate specimens being kept out of competition. The quality of the dogs was nothing very high, and the exhibition received the full support of the Kennel Club and had a good prize list into the bargain.

Short-range Team Match.—

Table with 11 columns (names) and 11 rows of scores.

A TRAVELER in Texas writes to a Peeps paper:—"On the road from Stockton to Pinar there is not a tree in sight of the road—not one. A blanket thrown over a Spanish dagger affords the best shade to be found in that locality, though it is asserted that there is fine timber in the mountains, such as cedar, short leaf or spruce pine, live oak and some cottonwood. The springs are clear, sparkling and cold; the lakes on the stream are deep and everlasting water. The range cannot be exceeded in any country. There is very little stock in that country as yet. The Southern Pacific Railroad runs, or will run, through the place. Land is cheap."

The stings of bees, wasps, yellow-jackets, hornets etc., are not only painful but with some persons may be dangerous. If you can see the sting extract it with tweezers or by pressing a watch key over it. Apply soda, hartshorn, sweet oil, whisky or cologne. If there is depression give stimulants.

THE COLT CLUB GUN.

It should be remembered that while we are the chief distributors of the regular Colt Guns, we are sole agents in New York for the Colt Club Guns. The complete supremacy of these guns in pigeon and glass ball trap shooting is so well known that no word of commendation is necessary.

Every genuine Colt Club Gun has the rubber heel plate, with the words,

THE CLUB GUN

around a circle, within which appears the rampant Colt beautifully embossed. We are also agents for the celebrated guns of Ems James & Co., Birmingham, and Forehand & Wadsworth's Great Single Breach-Loader. Besides these we offer a small Job Lot of Wadley Guns and some choice Parker Guns on special terms.

Address H. & D. FOLSOM, 30 Warren Street, New York. P. O. Box 4,309.

MAKE HENS LAY
An English Veterinary surgeon and Chemist, now residing in this country, says that most of the Hens and O's it is possible to see are worthless. He says that Sherman's Cod Liver Oil is absolutely pure and medicinal valuable. Nothing on earth will make hens lay like Sherman's Cod Liver Oil. Do not mistake any other for the real one. Sold everywhere, or sent by mail for eight letters, 10c. S. J. JONES & Co., 17 Nassau St., N. Y.

FARRAR'S POCKET MAP of Moosehead Lake and the North Maine Wilderness, a valuable companion for the sportsman, hunter and lumberman. GUNPOWDER! Dupon's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Licking.—Nos. 1 (coarse) to 5 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting; with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs.

Dupont's Choke Bore.—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6 1/2 lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, or very fine-grained, for pistol shooting. Packed in 1 lb. canisters and 6 1/2 lb. kegs.

Dupont's Rifle E.g. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle-shooting, the FFFg. and FFFg. for general use, burning strong and moist. Packed in 1/2 lb., 1 lb., and 5 lb. canisters, 6 1/2, 12 1/2 and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Muzzle, Cannon, Mortar, Minnie's, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S Fg. or FFFg. for long-range rifle shooting.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S Fg. or FFFg. for long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierre Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Fly Rods; length of cast, 6 1/2 ft. The Sea World Special Prize was won with one of our 1 1/2 ft. 10 oz. General Rods; length of cast, 75 ft. Our rods are considered superior to all others by those who have seen or used them. Send stamp for catalogue, with Mass. Fish and Game Law.

Ammunition, Etc.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting." Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Pack Shooting." Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle." FFFg, FFG and "Sea Shooting" FG in kegs of 25, 12 1/2 and 6 lbs. and cans of 6 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRADE OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents, in every prominent city, or wholesale at our office.

ANSWERS TO CORRESPONDENTS..... 237

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.
Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newscasters throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C. London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.
Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.
Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, October 20.

Specimen copies of the Forest and Stream will be sent free upon application.

AMONG THE VALUABLE BOOKS destroyed in a large fire in this city last week was a copy of Audubon's Ornithology, owned by Mr. Cornelius Vanderbilt, and valued at \$1,200.

LIVE QUAIL WANTED.—Any one having live quail for sale, or in a position to secure a large lot of birds, will please communicate particulars to editor of this paper.

BACK FROM THE WEST.—Mr. John Davidson, of Monroe, Michigan, has just returned from a shooting trip in the Red River Valley in Minnesota where he had grand sport among the sharp-tailed grouse. He had with him a number of his well-known dogs which were Abess, Scottish Chief, Prince Charlie, Lauderdale and Champion Tramp.

THE PAST WEEK was signalized by a very interesting trial of speed at the grounds of the Gentleman's Driving Association, of New York, between St. Julien and Trinket. In the three heats trotted the horse won, but the speed shown by his competitor was such as to give the brightest promise, when we consider her youth, for her future on the track. The Gentleman's Driving Association numbers among its members many of our most respectable citizens, and its influence on trotting cannot fail to be of the greatest benefit. With such names as are found among the subscribers to this Association, it will take the same place in trotting matters as does the American Jockey Club in running racing.

CHANGE THE PROGRAMME.

THE annual meetings of some of the State game protective associations of this country are entirely taken up in the competitions to determine who can kill the greatest number of pigeons. The conventions are pigeon-killing tournaments, "Stat shoots." Nothing more.

The time has come for a change of programme. The interests of the associations, of the individual clubs which make up the associations, and of sportsmen in general, demand this.

A change of programme will bring to the associations the support of public opinion, which it is most desirable that they should have, but which they have estranged by the magnitude of their pigeon slaughters.

It will bring back into the active work of the associations many of the old members who have withdrawn from the annual convention since it was turned into a tournament.

It will add to the associations many sportsmen, not now members, who are in sympathy with the expressed aims for which the societies were formed, but not with the manner in which these purposes have been forgotten and are slighted. These men are ready, with their time, money, influence and personal effort, to join the associations whenever the latter by a change of programme invite such accessions of strength.

The change is due to the individual clubs which make up and support the State societies. These local clubs are each something more than pigeon-shooting clubs. Why should their true character not be recognized in the annual conventions?

This matter rests with the clubs; they can make the change if they see fit. Will they?

THE MIGRATIONS OF SHORE BIRDS.

SHORE BIRDS are a group which receive and deserve considerable notice at the hands of sportsmen. They are also extremely interesting to the ornithologist, by reason of their extended wanderings, the short period which they spend on their breeding grounds, and their varying course during the migration. The thoughtful and studious essay on the migration of the *Limicola*, printed in our Natural History volume, will be regarded by all ornithologists as an extremely valuable contribution to the literature of the migration of birds. The questions here discussed are those which have puzzled students in every country, and the flood of light thrown on the subject by Mr. Hapgood will be welcomed by all. To the careful thought and extended investigations, of which the present paper is the outcome, has been added the experience of a sportsman of many years standing. The combination is a happy one, and shooting and scientific men will highly appreciate the result.

HO! FOR FLORIDA!—Dr. Henshall informs us he is making up this party for cruising and camping in Florida this winter. He is going with Mr. Frank Strobar, who has a light-draft schooner, 34 feet long, and will visit all the inlets and rivers on the Atlantic and Gulf coasts of Florida, beginning at Titusville, at the head of Indian River, on the east coast, and ending at Cedar Keys, on the west coast. The trip will consume three or four months. Mr. Strobar is an experienced sailor, hunter, etc., and his charges will be moderate—one hundred dollars per month. This includes everything. Dr. Henshall will be accompanied by his wife, and would like another gentleman and his wife to be of the party. Three or four more gentlemen are yet needed to make up the complement. Any one who wishes to go must apply immediately, with references if required, to Dr. J. A. Henshall, Cynthia, Ky. The health of the party will be looked after by the Doctor without charge.

STEAM STEERING GEAR.—The New York Herald, with characteristic enterprise, struck a new course in daily journalism, when it gave to the public something of practical value in the shape of a series of articles on steam steering gear, and capped the climax, last Wednesday, with a number of plans and elevations, which would have been a credit to any engineering journal.

ALL COMMUNICATIONS should be addressed to the Forest and Stream Publishing Company, and not to individuals connected with the paper.

FIELD RIFLE PRACTICE.

THE Boer war, so short and decisive in its effects on British arms, is living on in the influence it is exerting upon rifle practice over the Scotch and English ranges. It has been discovered that an army composed of men, where every one in the ranks may be ornamented with a marksman's badge fairly won, may be defeated simply because they do not know how to shoot, or rather do not know how to apply the rigid class practice they have had at immovable targets over fixed and known distances to the rapid judgment and snap shooting of the skirmishers' line. It is not enough that men be able to do this or that amount of hitting under the conditions which usually hold on the rifle range. They must be able to determine distance and then guide their aiming accordingly, otherwise, pitted against a foe capable of so judging and aiming, they are practically helpless. Experiments upon our own ranges and recent imitations of the Creedmoor "Skirmishers' Match" on the Scottish ranges, show that the men are woefully deficient in this double practice. An average of one hit in ten shots at the figure of a man at indeterminate distances between 600 and 800 yards, was shown at the recent practice of a crack Scottish corps. Better results have been recorded on American ranges, yet the general marksman, who may do very fairly at known distances with a rifle properly sighted, is yet unable to cope with this more practical style of shooting.

To neglect the old formal class practice, however, simply because a lack is seen in another direction, would be a grievous error. Such class drill is the first requisite in a course of marksmanship. The men must receive a certain amount of theoretical instruction, and then, with the element of distance fixed, learn to cope with the various details of accurate hitting. The men become thus familiar with their arms, but to make the drill of troops in rifle shooting begin and end with class practice, would be to make them little better than raw recruits in the face of an enemy, drilled in fixing of distance as well as shooting over it when fixed. To be sure it would appear that this judging-distance drill was more important in the case of regular troops, liable to be called into miscellaneous field work, than in the ranks of the militia, where the main duty will in all probability consist in close-point-blank work in streets. Yet the perfect rifleman is he who can make the utmost of his weapon. To do this he must have this elementary practice well looked after. To attempt general and miscellaneous snap shooting before correct habits of holding and recording have been formed is worse than useless. Officers and men need constant and persistent instruction in this direction. It may not be the part of an officer to handle the rifle on service, but it is his duty to superintend, to instruct, to guide, and direct his men to attain the best results, and to care for them and their work in every respect. The *onus* of theoretical and technical knowledge of arms and their use is placed on the officers. Special marksmen will always exist, because of the special physical and mental conditions which make some men, in spite of themselves, shoot better than others, but there is no reason why the poorest member of a regiment, fit to serve, should not be able to shoot his rifle respectably, and this would point to the most earnest attention being paid to the old and recognized systems of drill on the range, while at the same time keeping an eye out to the necessity of the cultivation of a force of field riflemen whose quick eye, steady nerves and intuitive judgment, as to atmosphere and distance, wind and light, would render untenable any corner in which an enemy might be concealed.

MADGE.—The cutter has again given proof of her superior speed and excellence as a seaboat, this time pitted against the Shadow, a craft acknowledged to be without a peer in America. The first race was nominally lost, but owing only to a fluke of the most palpable sort. When the sloop and cutter had an even wind the cutter went to the fore every time. The second race was as fair a test as could possibly be wished, and the little cutter, sailing, against a sloop one quarter as large again, added still another win to her splendid record by scoring by more than twelve minutes over a thirty mile triangular course, thus proving again the superiority of fine form, large displacement and the cutter rig. Our reports of these races in the East will be found elsewhere, and are the most complete and reliable published.

BY-WAYS OF THE NORTHWEST.

SIXTH PAPER.

THE sail from New Westminster to Victoria is very beautiful. We hurry down the Fraser between the high walls of evergreens, with their background of gray mountains in the distances, and are soon upon the broad waters of the Gulf of Georgia. In whatever direction the eye is turned, it sees mountains backed by mountains. To the north are those of the mainland, the nearest ones comparatively low, while those beyond rise higher and higher, the most distant being crowned with snow; to the west is a stretch of timbered country, level at first, and then becoming more broken, ending at last in a wall of granite, with Mount Baker, the prominent feature of the landscape, reaching its sharp cone toward heaven. To the south lie the blue waters of the gulf, dancing and sparkling in the clear sunlight, with the myriad islands which dot its surface and give to the scene a wonderful variety, while beyond is the main shore of the United States with its ranges of snow-clad mountains, above and beyond which one may sometimes catch a glimpse of majestic Rainier. The high ranges of Vancouver Island are visible to the eastward, and on these, too, are white patches which shine in the sun.

We hurry along toward the island, noticing the distinctness with which the line is drawn between the muddy current of the Fraser and the clear waters of the Gulf. Something similar one sees at the meeting of the Missouri and the Mississippi, but it reminds one still more of the union of the Rhone and the Arve, where the waters of the one are blue and of the other muddy, as here. Two or three hours steaming bring us to the point whence we plunge in among the islands. The channel is a difficult one, owing chiefly to the furious tides which are constantly rushing backward and forward through the narrow passages. At times the vessel stands quite still, and all the pulsations of her powerful engines, all the splashings of her great wheel seems to add nothing against the rush of waters which swirl and eddy about her. Now she gains a little and moves very slowly onward, and then, caught by a favoring eddy, gives a bound like a frightened horse, and rushes forward only to be checked again by the almost resistless water. At certain points, two tides coming from different directions meet in the narrow passage and here the waters, piled up and foaming, boil and toss, as though mad with passion, they would overwhelm the rocky walls which confine them. Little chance would any vessel, however staunch, have in these whirlpools at certain stages of the tide, and indeed it is said that the last time the steamer Victoria—a vessel of two or three thousand tons burden—went through Plummer's Pass, she was whirled around like a top, and finally came out of the passage stern foremost.

The sail is a succession of surprises. You enter a passage a quarter of a mile wide and follow it through all its twistings and turnings, expecting as you make each change of direction to see the open water before you, and each time being disappointed. At last you come to what appears to be the end of the channel—a veritable *cul de sac*; the steamer's nose runs straight toward a vertical wall of rock, two hundred feet in height, and it seems as if the next moment she must crash into it, when, suddenly she sheers to the right, passes around a rocky promontory into another, and hitherto unnoticed channel, and in a moment glides smoothly out into the open water, and toward another group of islands. As we twist and turn through the labyrinth, we pass many camps of Indians, and see their owners fishing in the eddies, their canoes anchored behind low points of rock. They are taking the herrings, considerable schools of which lie in the comparatively quiet water in such places. The tackle employed would puzzle the average fly-fisher. A slender pole, from twelve to fifteen feet long, oval in cross section, being about one inch in diameter from side to side, and two inches from before backward, is studded along its edge, with a row of sharp nails about an inch long and two inches apart. The unarmed portion of the pole is held in the hands, and the Indian, sitting in his canoe, sweeps it vertically through the water, with exactly the same motion that he uses in paddling. The herrings are impaled upon the points, and the stroke is continued until the lower extremity of the pole is clear of the water. The instrument is then brought in board, and a tap on the side of the canoe loosens the fishes, which drop to the bottom of the craft. Every sweep brings up from two to half a dozen of the silvery fish, and as the Indian makes from twenty to thirty-five strokes a minute, it will be seen that, under ordinary circumstances, no very long time elapses before he has a bushel or two of herrings. The hoolichans, a very delicious little fish, somewhat smaller than the herring, and only found during the month of May in these waters, are taken by the same method, and in enormous quantities. When fresh this fish is said to be superlatively delicate eating, and I can testify to its excellence when smoked or salted. Besides their value as a food product the hoolichans furnish a most excellent oil, and of late years a very considerable trade has sprung up in this commodity, and factories for expressing it have been established at several points in the Province. The only bar to the success of this new industry is the short duration of the run, which lasts only ten days or two weeks. The fish are so fat that it is said that when dried they will, if lighted at one end, burn like a candle, and from this fact they are

often called candle fish. There is no doubt that, if prepared like sardines, the hoolichans would find a ready market.

The run from New Westminster to Victoria occupies but six or seven hours, and about 3 o'clock I found myself once more at the Driford House. As I had reached here just too late to catch the regular Alaska steamer, I was anxious to charter some small steam vessel on which to make the north trip. Several days were occupied in searching the wharves of the town and in telegraphing to other places to try and secure what was wanted, but all my efforts were unavailing. There were three or four small launches which exactly suited me, but in every case I found that they had been engaged for the fishing on the Fraser. The salmon commence to run about the 15th or 20th of July, and the run usually lasts a month or six weeks. Every four years, the fishermen say, there is a very heavy run, the next year thereafter a good run, the next it is poor and the fourth almost a total failure. This year the big run was expected, and all the canneries were making great preparations for the fishing. Every available boat and man had been engaged. The Indians, who ordinarily are paid a dollar a day, got this year two dollars, and even at this price could not be had in numbers sufficient to supply the demand. A steamer was not to be had for love or money, and it was evident that the hope of reaching Alaska must for the present be abandoned.

The next best thing was to take a canoe and proceed by that slow means of conveyance as far north as the time at our disposal would admit. Mr. H. had kindly given me a note to Mr. T., one of the Government officials, and through the kind offices of this gentleman, whose long residence in the Province and thorough acquaintance with the inhabitants and their mode of life enabled him to understand precisely what was needed, our canoe trip was made a success. Through his influence the Sergeant was given a month's leave of absence, and was allowed to go with us as interpreter, and, in one sense, manager of the expedition, and certainly no set of men ever fell more emphatically on their legs than did our little party when it was decided that the Sergeant should accompany us. He has lived long in the Province, knows the Indians thoroughly, speaks Chinook and several of the native dialects, is a man of retiring energy, always willing to do his share and more than his share of the work, good natured under the most adverse circumstances, and with no small fund of anecdote and humor—what a keen sportsman and a close observer of nature. He is one of the very best fellows with whom I have ever been in the field, and by the time that our trip was ended, had so endeared himself to each one of us that to part with him was a real pain.

By this time my two friends had reached Victoria from San Francisco, and our party was made up. For some little time after reaching Vancouver the Professor and the Admiral could think and talk of nothing but the woes that they had endured on their passage from San Francisco to Portland. I do not exactly remember whether it was eleven or fifteen steamers that they had "sunk, burned and destroyed" by the very simple, but, as it appeared, effective, method of taking passage on them for Victoria, but the number was large. When at last they did succeed in safely passing the Golden Gate, their sufferings had only commenced. To judge from the graphic narrative of the Admiral, that nautical hero's agonies during his voyage of four days resembled nothing so much as the sufferings on board a slave ship in the middle passage, or an old-time emigrant vessel, when the terrible ships fever had laid its blighting hand upon the passengers. The curses which were showered upon the Geo. W. Elder by my ordinarily mild-mannered and temperate friends quite made my hair stand on end.

By the Sergeant's advice we determined to take our canoe from Nanaimo, distant from Victoria about seventy miles. It was thought best, however, to procure all the necessities for the trip at Victoria, and a day or two was employed in getting together mess kit, blankets and other essentials. We also decided to take with us another white man, and engaged Arizona Charley, a Virginian, whose wanderings, after including almost the whole United States, had at last led him to Victoria. A most excellent man he proved himself, faithful, willing and good-humored. The Indians who were to constitute our crew, and on whom we fondly relied for the locomotive force of the canoe, we expected to hire at Nanaimo.

To one who has been accustomed only to the Indians of the Western plains and the mountains, the aborigines of the northwest coast are a surprise. In the vicinity of the settlements a blanket Indian is never seen, all of them wearing white man's clothing, including shoes and hats or caps. Very many of them work regularly, and lay up money, and for certain kinds of labor they are admirably adapted. They make good dock hands, longshoremen and fishermen, and are largely employed in the lumber mills and canneries. They are very strong, and are able to carry loads that a white man could by no means stagger under. They are almost brought up in canoes, and as all their journeys are performed in this manner, they are most expert boatmen. I have seen little children not more than three or four years old wielding a tiny paddle for hours at a time, and can well understand how it is that the adults can undergo so much work of this kind without manifesting the slightest fatigue.

In British Columbia an Indian is called a Siwash. This is a Chinook word which is evidently a corruption of the French *sauvage*, and the term Indian is rarely, if ever, employed.

The Siwashes of the coast are essentially a race of fishermen. Their main dependence is the salmon, of which enormous numbers are caught, and not only eaten fresh, but also dried for winter consumption. They do some hunting, and kill not a few deer and mountain goats, but they rely chiefly for food on the salt water fish. During the months of June and July, before the salmon have begun to run up the rivers, they catch them in the salt water with the trolling spoon in considerable numbers, but it is not until the fish reach the fresh water that they are taken in sufficient abundance to make it worth while to dry them for their winter provisions. The natives do considerable trading with the whites, and oil is one of the main articles of trade. The dogfish, a small shark, abounds in these waters, and is taken with the hook and line in great quantities. The liver is the only part used, and the worthless carcasses of the fish are left to rot on the shore, and furnish food for the ravens and crows. Porpoise oil is also a staple article of trade. The Indians are very expert at basket weaving, and some of their work of this kind is wonderfully well done. I have seen baskets that were perfectly water-tight, and in which one could easily boil meat or fish. They also make mats, both of reeds and of the bark of the cedar, which are both useful and ornamental. These are admirable to sleep on, and keep off the wet as well as a rubber blanket. From the bark of the cedar too they make ropes and lines which are strong and durable. The dwellings of the Siwashes are utterly unlike those of the Indians of the interior. They are, in fact, houses made of boards split from the cedar, and though not very tight, are sufficiently so to keep out the water, and to form a good protection against cold and snow. They are without floors, and the fire is built on the ground in the middle of the room, the smoke escaping through the crevices in the roof. In the villages of the Northern Indians one may see before each dwelling a long pole, set in the ground and most elaborately carved through its whole length. These poles, which are sometimes eighty feet in height, are, in fact, a sort of family tree, and the images carved upon them denote the ancestry of the owner of the house before which they stand. The carvings usually represent animals of one kind or another, somewhat grotesque to be sure, but still admirably carved. A bear will perhaps be the lowest figure on the pole, and on its head will be seated a man; above this figure a crow, then a fish, another man, a seal, a wolf, and so on, the figures being sometimes repeated, to the top of the pole. All these tribes are remarkable for their skill in carving. The prows of their canoes are often very highly ornamented, as are many of their utensils. They display great ingenuity in fashioning curious masks and rattles for their medicine dances, and many of their carvings in a black slate which they make use of for this purpose are wonderfully well done. I was shown a model of a large house, which was certainly one of the most elaborate and highly-finished pieces of workmanship that I have ever seen. Two large platters in the possession of a friend at Victoria were exquisitely ornamented in *alto rilievo*, and were also inlaid with small pieces of carved ivory. Any design which pleases them they will copy with the utmost fidelity, and bracelets hammered out from a silver dollar and ornamented with a spread eagle or some other design furnished by a white man are frequently seen.

Scattered along the coast are a very considerable number of small tribes, some of them consisting of not more than half a dozen families. Each of these tribes has a language of its own, and this language is often not understood by any of its neighbors. The Chinook jargon is the common tongue by which the Indians of one tribe hold communication with all other Indians and with the whites. This jargon is extremely limited as to its vocabulary, and has absolutely no grammar. There is no passive voice, no declension of nouns, no inflection of verbs. Drawn from the English, the French and a dozen Indian tongues, it serves, however, as a medium of communication between the whites and the aborigines.

I have said that the Siwashes are admirable canoeists, and must conclude this letter with a word or two about their vessels. They are of various sizes, varying in length from eight to eighty feet, and each one is made from a single piece of timber. The largest one of which I have heard is at the Bella Bella village. It is eighty feet in length, and is so deep that a man standing upright in it cannot be seen by one standing on the ground by its side. The canoes are roughly shaped and then hollowed out by fire. Then, by means of a piece of steel attached to a wooden handle, they chip the wood off in little flakes and reduce it to a proper thickness—about an inch or an inch and a half for a vessel thirty feet in length. They have no models and the eye is their only guide in shaping the canoes, but the lines are as invariably correct, and as graceful as could be made by the most expert boat-builder. There are two different types of canoes, the Chinook, which has a square stern and is approximately flat on the bottom, and the Northern, which is rounded-bottomed and has an overhanging stern. The former are the most steady in a seaway, and somewhat the most roomy, but on the other hand are much less fast than the Northern canoes, but both are perfectly safe. After being shaped, the gunwales of the canoe are slightly sprung apart, so as to give some flare to the sides, and are held thus in position by narrow pieces of timber, stretching across and sewed to them with cedar withes. The canoes are always made from the cedar, the superb *Thuja gigantea* of Nuttall, the wood of

which is light, easily worked and remarkably durable. The tree very closely resembles the common arbutus, so generally used for hedges here in the East, but in British Columbia it grows sometimes to a height of 300 feet, and often attains a diameter of seven or eight feet. I measured one stump that was eleven feet through eight feet from the ground. As instancing its durability I may say that I saw (we fallen log in the woods which was "straddled" by a Douglas fir two and one-half feet in diameter, and which was, to all appearance, as sound as if it had not been lying there a year. The stump of the fir rested on the log, and its roots stretched down on either side four or five feet before they reached the ground. The cedar log was covered with moss, and had lost most of its limbs, but on scraping away the green drapery and sounding and cutting into it, I could not discern that it was in the slightest degree decayed. It can readily be imagined, therefore, that such a wood supplies the best possible material for canoes built in this way. It has only one objection, and this is the case with which it can be split, and great care has to be taken to keep the vessels from receiving any knocks or rough usage. They are never allowed to remain on the beach within reach of the waves, but are always hauled up far beyond high water mark. I have known of a case where a canoe, not drawn far enough from the water, was found in the morning split from end to end. It is a work of no small magnitude to repair a craft in that condition, and too much care cannot be exercised in guarding the vessel from any rough usage. The canoes might be made much stronger if the Sitwahs would only put knees or braces of some kind in them, but this they never seem to do, although they are often seen in canoes owned by white men. The paddles are made of a species of maple, and are usually about four feet long, with a cross piece for handle, and a blade about four inches wide, terminating in a sharp point. They are light and easily wielded, but strong. The prows and sterns of the canoes are often carved and painted in red and white. Sometimes the larger canoes are rigged with one or more pairs of rowlocks on either side, and long cars of native manufacture are used, which, it must be acknowledged, help the vessel through the water much faster than the same number of paddles would. There is almost always a check in the bottom, well forward, to which a mast steps, by a tenon, leading up through one of the braces. The canvas is a lug spritsail, and of course can only be used when the wind is fair, or at most on the beam.

Camp on Bute Inlet. Yo.

The Sportsman Tourist.

ATLANTIC COAST SHOOTING GROUNDS.

KITTY HAWK BAY, N. C.

I HAVE lived during the entire summer on the North Carolina coast, and have become very familiar with the country and people from Whale's Head Light down to Cape Hatteras. I have spent most of my time on the ocean beach, with the exception of an occasional visit into the country along the various towns on the rivers emptying into the Albemarle, Pamlico and Currituck Sounds.

The elements are continually reshaping the coast—immense white sand hills that lie against the horizon like banks of snow are continually moving southwest from the ocean toward the sounds. The Kill Devil Hills, near Kitty Hawk, were until recently the highest of these, but now the Owen Hill, near Nag's Head, rears its white crest 100 feet above the ponds of fresh water that lie at its base. These ponds are clear lakes of dark, pure and lippid water, and lie between the sounds and the ocean. There are some twenty of these between Kitty Hawk and Nag's Head, some of them thirty to forty acres in extent, and full of black bass, elv and perch, some of the latter I have caught being twelve inches long and very sweet. The ponds are much frequented by visitors to Nag's Head during the summer, the woods near them affording good shade and pleasant drives. There are continually being brand new ponds that resort here for water. In dry times, and when dyes and mosquitoes are troublesome, they wade out until only their heads show above the water.

The ponies are lively little fellows, and scamper over the hills and along the beach at low tide at a lively rate, and are much better adapted for beach drawing than heavy up-country horses. A good pair of ponies can be bought for about \$125. They are easily kept and live to an old age. Once a year they are castrated and branded. The balance of the time they range as will from Cape Hatteras to Cape Hatteras. When away from the fresh ponds and they want water they dig wells with their fore feet near the sound and find good water eighteen inches below the surface. When the chill blasts of winter are too severe, they go to the woods about Kitty Hawk or find shelter under the lee of the sand hills.

Recently I visited Bodie's Island Light House to shoot beach birds and to fish for blue fish, which are found in great abundance about Oregon Inlet and in the sound in front of the light house. I went up into the light house after a toilsome climb up the 225 steps, and after an inspection of the apparatus at the top of the tower, I sat for two hours on the iron piazza outside and enjoyed the extended view afforded by my airy perch. I could see with a marine glass over twenty miles in every direction. In the east is the dark blue sea, with its billows rolling grandly towards the white pebbly shore, with all kinds of sail on their way north and south, on the west Pamlico Sound and Croton Sounds, Kasaan Island, Duck Island, Off Island, and the cluster of smaller islands near the inlet; north and south stretched the narrow strip of sand between the sounds and sea, with herds of cattle, ponies and sheep grazing on the green places. Curlew, brown banks, willet, sea chickens and gulls in countless numbers wheeled and dove below me, and the tide surged and ebbed the Oregon Inlet almost under my feet.

This is one of the best light houses on the coast. The lighting apparatus was made in France. The tower is built of brick and has a spiral staircase that starts from the ground without trembling, and yet so powerful is the wind at times that it sways and rocks in a manner trying to weak nerves.

In the winter millions of brant, swan, geese, duck and other fowl pass here in flight to their feeding grounds, and many of them are killed by striking against the glass that protects the light. Last year it was found necessary to put a frame work of iron in front of the glass to keep it from being broken by the heavy geese striking it. Several hundreds of fowl have been gathered from the platform some of which were killed during the night by flying against the frame that protects the light.

Oregon Inlet is gradually opening wider and deeper, and there is now five and a half feet of water on the inner bar, and ten feet at ebb tide. It is a mistake to say that Oregon Inlet is a great place for sportsmen, and there is good sport for rod and gun all the year. Spanish mackerel, sea bass, trout, drum, mullet, shad, blue fish, spots, croakers, diamond-back terrapin, sea turtle, chicken turtle, rock bass, all have their seasons, while the waters abound in oysters, clams and crabs.

In the fall and winter wild fowl frequent the islands near the inlet, and in the summer all kinds of beach birds are very abundant. It is said that snipe do not breed as far south as this, but I think it is a mistake. I have seen large numbers of young snipe on the marshes, and have found two nests that contained regular snipe eggs.

Near New Inlet are the feeding grounds of the black and white brant. These fowl are destined to be very popular when known among epicures. They are very large, nearly twice the size of a canvas back, and many consider them fully as delicate in flavor. They will be shipped in considerable quantity this winter no doubt, as they can be sent via the Elizabeth City & Norfolk Railroad so as to reach markets in Baltimore, Philadelphia and New York within twenty-four hours after they are killed. They "place" from Duck Island to Hatteras; are very plenty fronting the Jesse Etheridge tract, and about New Inlet and about Douglas Island, Pea Island, Jurymen Island and other islands along the coast and in Pamlico Sound. There are also great numbers of them about Gar Island, where there is a small club established called the Gar Island Club. This club, and the Kitty Hawk Bay Club, are the only clubs in Dare county, and are about the best shooting grounds in the county. The latter club is a monster affair, and they have bought every island, shoal and beach and woodland of any value for fowl, bird and deer shooting, not already owned by the Currituck county clubs, from Whale's Head down to Gar Island, except the property owned by the Nyses at Van Slyke's landing. They control some 300 miles of water front and probably over 200,000 acres of land and island. They have shooting for a very large number of sportsmen and their fishing rights are also valuable.

Very few persons who have not visited this country have any idea of the extent of fresh water navigation within the boundaries of Eastern North Carolina. The sand ridge dividing the sounds and the ocean is from 100 yards to three miles wide. This is low, but mostly dry, and just above high water. It is firm and solid. The Ocean beach is the finest for bathing I have ever seen—the slope is long, shallow and even, floored with a fine soft sand that feels like velvet under the feet.

The waves come up the gradual incline which makes the bottom reach the land with gradually diminished force, and I have during the past summer been out 200 yards from shore with delicate ladies, and the rollers came over them without violence or danger. The Gulf Stream approaches the shore nearer along this coast than anywhere else and the water is warmer. The sounds contain a greater amount of fresh water than any other area on the Atlantic coast. All this water is continually flowing into the ocean, carrying with it an immense amount of sand and dirt from the upper lands along the coast, some of which end in the mountains of Tennessee and Virginia, hundreds of miles distant. This sand or dirt is being constantly deposited within the outer reef, and replaces the sands carried on the sand ridge and blown into the fantastic shapes that characterize the sand dunes or hills.

The only inlet between this one and Oregon Inlet and Cape Henry was Old Currituck Inlet, which was closed in 1713, and New Currituck Inlet, south of it, was opened about 1725, and vessels of the same size of which build the mountains of Tennessee and Virginia, hundreds of miles distant. This sand or dirt is being constantly deposited within the outer reef, and replaces the sands carried on the sand ridge and blown into the fantastic shapes that characterize the sand dunes or hills.

The only inlet between this one and Oregon Inlet and Cape Henry was Old Currituck Inlet, which was closed in 1713, and New Currituck Inlet, south of it, was opened about 1725, and vessels of the same size of which build the mountains of Tennessee and Virginia, hundreds of miles distant. This sand or dirt is being constantly deposited within the outer reef, and replaces the sands carried on the sand ridge and blown into the fantastic shapes that characterize the sand dunes or hills.

There are no inlets in Currituck. At present the water is slightly brackish and is gradually filling up. Extensive shoals are being formed, on which grow the grass on which the countless numbers of ducks, geese and swan that frequent these waters feed.

Northern sportsmen began coming to this county some time before the war to shoot wild fowl. In 1858 Elias Wade, Valentine Hicks and Stephen Taper, of New York State, bought 1700 acres of beach and marsh land from Abram Baum at a cost of \$4,000, and organized the Currituck Shooting Club. This club has since bought some other property. In 1862 the club again bought a handsome club house on the beach, costing \$14,000, and some \$12,000. The club is composed of about sixteen members and the shares are limited to twenty-one, some of the members owning several shares.

In 1859 Peter Davis and John White organized the Palmer Shooting Club with twenty-five members, and leased the marshes of Josephus Baum, south of the Currituck Club. The war came on and bow shooting was suspended.

Soon after the war the Monkey Island Club was organized by H. T. White of Boston, and G. B. Meserole of New York City. This property was bought for an insignificant sum and would probably now sell for \$50,000 under the hammer.

In 1863 Arthur Emory, of New York, bought for \$5,000 17,000 acres of land from Abram Baum and organized the Light House Club, so called from its proximity to the Whale's Head Light House. This club has twenty-one shares, and their property is also valuable.

The Crow Island Club was organized in 1864. They own the islands of Mrs. Hatfield, for which they pay about \$1,000 yearly.

Regged Island Club, in Back Bay, is compose mostly of

New England men. Solomon House, of Boston, is President. They have first-class shooting.

The smallest club in these waters is the Little Island Club, in Back Bay. This property was bought by Ben Wood from Major J. J. Burrus for \$4,000 just before the war, and was sold by him to William R. Travers in 1875, for about \$8,000. Old Abe Baum calls this a "one man club." The owner is a rich and eccentric old gentleman, who lives in New York City, and from what the natives tell me he must be quite a character. His instruction to the men guarding his property is that if any man is found on his grounds with a freeloader to shoot him on the spot, and the law is to be run by the old-fashioned muzzle-loader. He has first-class shooting on his property for several sportsmen, but his is the only gun ever fired on the property, and as his islands are isolated and surrounded by shoals, thick with wild celery, the old gentleman can bag his 100 pairs of canvas-backs or red-heads any day without trouble. Old Abe Baum, native and to the manor born, as his forefathers have been for over two hundred years, says the reason Mr. Travers don't organize a club is "Case he is an opinionated old cuss, and no one can naturally agree with him and he can't naturally agree with no one."

Mr. Travers is said to be witty and sharp, and to have a slight impediment in his speech, which makes his sayings more pungent. On one occasion he was passing through Norfolk on his way North, after a season of hard shooting among the canvas-backs; and his clothes were somewhat worn and soiled, after several weeks of beach usage, and he did not look to ignorant eyes the educated, refined gentleman he really is. He was stopping at the Atlantic Hotel. It was some public occasion and the dining room was crowded. He saw only one vacant seat, which was at the right of a majestic Navy Admiral. The chair was tipped against the table to indicate that it was reserved, but Mr. Travers was hungry and did not stand on ceremony. Walking up to the vacant place he pulled back the chair and was about to sit down, when the head-waiter came to him in a flurry and, tapping him on the shoulder, said: "This seat is reserved, sir, for a gentleman."

Mr. Travers looked at the man and replied, "W-w-well, sir, he has e-c-c-come;" and took his seat, and quietly began scanning the bill of fare.

Once when beating down Currituck in a small schooner to take the Norfolk steamer, a northeast storm came up. There was only one man and a boy on board, and Mr. Travers was endeavoring to aid them shortening sail. While doing so he became entangled in the rigging. He had taken off his shoes so as to be ready for swimming for his life. He began to call loudly for assistance, but the raging tempest, the excitement of the position and his unfortunate impetuosity of speech made his words incoherent. The man at the helm at last got impatient and called out, "Sing it, Mr. Travers, sing it, sir." The old gentleman at once sang to the tune of "Drops of Brandy," "Oh! p-p-p-please let go the jib tackle; my b-b-big t-t-toe is caught in the block," and was at once relieved from his embarrassing position. JOHN BROSSON.

Natural History.

RANGE AND ROTARY MOVEMENTS OF LIMICOLE.

IT WAS in the month of April, 1868, that we made our debut as duck shooter on a Western prairie. Born and bred about within the sound of the breakers on "New England's rock-bound coast," we had been taught to believe that the shore birds—Limicolæ—were, with few exceptions, confined to the seaboard, and when we saw large flocks of several species of these birds feeding on the prairies we could scarcely believe our eyes, nor would anything short of a dead specimen in hand satisfy us of our errors. A golden plover (*Charadrius virginicus*, Borek.) was secured and found to be identical in every particular with the golden plover of the Atlantic coast, and, notwithstanding Prof. Baird had many years earlier declared their habitat to be "all of North America, and visiting also other continents," we could not somehow seem to realize the fact that they were so abundant at so great a distance from the sea shore. Other species were also observed, notably sickle-billed curlew (*Nunentus longirostris*, Wils.), Esquimaux curlew (*Nunentus lunatus*, Lath.), summer yellow-legs (*Tringa flavipes*, Vieill.), and pectoral sandpipers (*Tringa pectoralis*, Say.). We endeavored to glean from intelligent gunners some idea of the habits, migrations, etc., of these birds, but our labors in this direction were vain and futile. The fact was patent that no one cared to waste time or ammunition on such "small birds" as plover or curlew when deer, swan, geese, ducks and their congeners were abundant in every direction. Another very serious obstacle in the way of our inquiries was encountered, viz., synonymy. We found it very difficult to make ourselves understood when undertaking to describe a particular species, so very different are the local names of birds.

As a general rule, are quick, keen and intelligent, but not always literary people, and in the absence of scientific terms—some common platform upon which both parties could stand—our progress was very slow and unsatisfactory. We cannot always account for the origin or introduction and retention of such a diversity of common names for our feathered friends. It certainly is a great barrier to the acquisition of knowledge upon these topics. Names that are familiar as household words in one section are entirely unknown in another. In a further perplexity—as when two persons speaking different languages attempt to carry on a conversation. For instance, the first bird we have named above was not known in the West where we were located as a plover at all, but as a "prairie pigeon." The turnstone in Massachusetts is commonly called "chicken bird," but elsewhere "calico hawk." A pectoral sandpiper in our section is "hack snipe," and in others "kriekr," "grass snipe," etc. One often hears in the West, or even on Long Island, the name "Dowitcher," but that synonym would not be recognized in Massachusetts as referring to red-breasted snipe (*Mareca americana*, Leach), but if the bird was called "brown hawk" he would be instantly acknowledged. A "redbreast" (*Tringa ardens*, Linn.) is variously known as "robin snipe," "grayback" and "knot." The marlin of the West is the marble godwit (*Limosa fedoa*, Ord.) of the East, and so on ad infinitum. This unhappy state of affairs should no longer exist. We have monetary, railroad, religious and other references to harmonize conflicting interests or opinions, fix the English rule of law, and why not have a national or universal conference to establish a uniform nomenclature for our birds? Possibly the urbane individual who occupies the editorial chair of FOREST AND STREAM and ex-

crises a sort of autocratic influence over the sportsmen of this country would undertake to bring about this much needed reform. Whoever shall accomplish this will receive the gratitude of thousands of sportsmen, and his name would go down to posterity as a benefactor to the race. The past ten or fifteen years has witnessed a vast improvement in our sporting literature and knowledge of birds. The works of Baird, Brewer, Coues and the rest will ever stand as proud monuments of their labor and success. Much more is to be done. The field is still open. May we not hope the future will raise up laborers worthy to wear the mantle of their predecessors and to carry toward the work so nobly begun?

We puzzled over this matter of the shore birds for many years, trying to discover some satisfactory theory that would account for their movements and idiosyncrasies. Why should certain species divide, one part going up the valley of the Mississippi and the other via the Atlantic coast, to their Northern breeding grounds? Why should some numerous species all together follow the former and others the latter route? Again, why do some of them proceed by the one route and return by the other? The inquiry seemed to lead to the conclusion that golden plover, Esquimaux curlew, summer yellowlegs, and a few other species, did take the broad valley of the "Father of Waters" for a highway northward in spring, but that the great mass of the adults did not return by the same road. A few of each species of young, or such as do not breed, may follow the route indicated. Then it was ascertained that the above-named species did not appear on the Atlantic coast in spring-time, but that all of them were abundant in autumn, both old and young. With the birds, as with ourselves, food supply is of the most vital importance. If we study the habits of these birds in relation to the food we shall find, to some extent, that the species that travel up the Mississippi Valley are of the class that run about on the fields and prairies, and pick up such worms, grubs and insects as are found on the surface of the ground, while those that follow the seashore feed mostly on such marine worms and insect, as be buried in the moist sand and mud, which must be obtained by plunging in the bill and wrenching the savory morsel from its hiding place. But in order to study carefully the habits, food and peculiarities of the shore birds we must be among them, or with them—must seek some locality where they can easily be observed during the season of their migration—and, if the reader will go with us early in April to the easterly shores of New England, or to the coast of Virginia, or to the coast of the whole coast, and the one where most of the migrants that follow the coast must show themselves, we will take our stand there and "see what we shall see" of these birds as they pass all day. Of the swimming birds (*Natator*) and the other orders we have at present nothing to do, nor shall we speak of such waders (*Prallator*) as are not considered worthy the attention of sportsmen, or, in other words, our remarks will refer only to such of the waders as visit the sea shore, and will add something to our supply of food.

As winter waders, the buff-bills, *Agelaius phoeniceus*, Linnaeus, and the shore larks (*Ammodramus alpestris*, Forster), have barely bid adieu to the land of their sojourn and set out for their more northern homes, when the spring season is ushered in by the soft plaintive note of the piping plover (*Spizella melodia*, Cab.) and the shrill tones of the ring-necked (*Spizella socialis palmarum*, Cab.). The former is a summer resident, and inhabits its young within the doleful sound of the gull horn on Puller's Bay. Possibly the latter may have bred in the Carolinian times, but rarely, if at all, in later years.

They do not come to the beach, but to the mud and flats of the other shore birds, nor is either species very numerous. They lead an industrious life, running about upon the dry sand more than most of this order, and seem to feed on small fleas and such other insects as they find there. By the middle of April, in a forward season, will be heard the peculiar curved and insipid triple note of the winter yellowlegs (*Totanus melanoleucus*, Vieill.), and if we take a stroll down over the low marshes, we shall be likely to see a solitary individual, or a small flock, feeding on the little minnows that are so numerous along the ditches and marshy inlets at high tide. Sometimes they resort to the sand flats, but do not seem to pick up any food there; nor is this their usual feeding ground. They breed pretty much all over the country, and are common in winter as far north as the Carolinas.

Another early migrant is the red backed sandpiper or winter nipe (*Tringa alpina* var. *americana*, Cass.). Not numerous in spring, but quite so in fall. They are abundant at Lake Ontario and further west about the middle of May. They will be found in the marshes and mud flats, and points further south, where they are regarded as winter residents. They feed on the flats and around the lake shores, much the same as do sand-rings and other members of the group. In the Hebrides they mix with the golden plover and are called "plover's pages."

About the 10th of May the least sandpiper (*Tringa pusilla*, Wils.) comes gliding along trilling its cheerful, gleesome notes. There are two—possibly three—species or varieties of these graceful little creatures, commonly called "peeps." The above species is designated by the name of the olive or yellow bill and feet, and feeds around little pools on the marshes, or on mud patches. The other species, "sand peep" (*Tringa semipalmata*, Wils.) is larger, lighter color and more gregarious than his little cousin of the marshes; has black feet and bill, feeds on the sand flats and spits, though they sometimes go on to the marshes as do the others on to the sand flats. They retire at high tide with the other shore birds to the high beaches for safety or rest, but return as soon as the tide ebb sufficiently to allow them to feed. They are very industrious, running about, punching the mud, and feeding in search of food, devouring only the choicest specimens of worms or minute mollusks, always in a hurry, and by the first of June scarcely any will be seen in this vicinity.

The sandrider (*Calidris arenaria*, Ill.) is another numerous species, which arrives about the same time of the preceding. They are quite gregarious, feeding along the edges of tide-water much the same as the peeps, and exhibiting about the same nervous energy in searching for food. They may be seen in great numbers to near the dead whistling note of the red-breasted sandpiper (*Tringa canutus*, Linn.), which is hailed with delight by such gunners as enjoy slaughtering them at this season of the year. Usually they are in large flocks hurrying along, stopping but a few days to feed and rest. Nor will many be seen after the 1st or 5th of June. They have a peculiar "horsetoe" eggs, and display considerable ingenuity in discovering these delicate morsels, as they lie buried in the sand. In many parts there is no success in counting the number of eggs and plunging into the eggs with their bills. Turnstones seem well to do in this respect, often joining in the search, and when found, a few flightless ones to see who shall possess the prize. *Canutus* is

also feeds on the insects, fish-spawn and other glutinous substances found at low tide attached to eel grass and other aquatic plants. It is presumed they go very far north to breed, as they are abundant all the way from the Great Lakes to Cape Breton and the Magdalen Islands, or more to the eastward than most of the shore birds. The adult males begin to return about the 26th of July, followed by the females, and still later by the young, who do not all retire before the first of October.

Squatarola leucophaea, Ill., with as many aliases as a pick-pocket, is still a very clever little fellow, but hardly belongs to any family. They arrive about the 10th of May, not in large flocks, but singly or in groups of three or four individuals, feeding along the edge of the tide, or diligently turning over small stones or pebbles, exploring every nook and corner to find any tiny crab, flea or worm that may be secreted there. They are not particularly shy birds, and as they decoy well, are easily killed from blinds or stands, though the latter are so hard to use. They are very early in August they come straggling along back feeding much as in spring, nor do they ever go to the marshes or fields, except when driven by wind or tide.

The black-breasted plover—beetle-head (*Squatarola leucophaea*, Cuv.) is the largest of the plover family. The date fixed for their arrival in some sportsmen's calendar is May 10, though in a favorable season they appear a few days earlier. Their round, full note is the "sportsmen's joy," though we have for years protested against the slaughter of these noble birds just as they are on the verge of the breeding season. Every true sportsman must feel in autumn, when a fearful cove gets a few days' shooting in spring. Every year the "bay birds" are getting scarcer and scarcer until it is even now almost impossible to make a respectable "bag." One gets hardly enough to call it sport. Legislative authority has been invoked, but very little wisdom has been exhibited by that august body in framing laws to protect these birds. Often has a bluish mantled our cheeks, as we have been reminded of the stupidity of our Legislators in making it a crime to kill the least of the shore birds, a peep, while any pot-hunter may slaughter black-breasts, red-breasts, chicken birds, winter yellowlegs and Wilson's snipe to his heart's content without fear of molestation, all through the spring migrations!

At this season of the year all of the order are socially inclined, as it is their wooing and pairing season, when they are often in large flocks, easily decoyed, and then the serried columns are cut down; many, slaughtered by thousands, ruthlessly, by hands who, though they have conquered their better judgement. It requires no pretense to come and tell us that if we destroy the birds in spring time just as they are about to lay their eggs they will not return with the offspring in the fall. Beetle-heads do not go out to the fields or pastures, but keep down on the beach or sand flats, where they find an abundance of long, depressed worms with many legs upon which they feed. They are, as their food would indicate, more of a shore than inland bird, though very likely a few may wander away as far West as Iowa. The plovers in common with the other shore birds have to be hatched and hatched, i. e., run about in search of food as soon as hatched and, therefore, require much less attention from their parents than do *Altrices*. The paternal relative reposing great confidence in the energy and skill of his spouse to protect and nurse the callow brood, literally deserts his home and family, and wanders away back, the wretch, possibly to fall a victim to some breech-loader on Cape Cod at the very spot where in spring he was observed so attentive to his youthful bride on the Northern coast.

The willet (*Limophemius semipalmata*, Hart.) arrives often paired, toward the end of May. Not abundant. Breeds in this latitude and even much further south. They are scattered over the Western States down to the Gulf of Mexico and the West India Islands, where many of them pass the winter. They go on to the marshes at high tide, but feed along the edge of the water on minnows, crabs and marine insects. More of an inland bird, frequenting wet places on the prairies and around pond holes. Not regarded of much value for food. Occasionally we see these birds gadding (*Limosa fedoa*, Ord.) strolling about on the sand or mud flats, plunging their long, stout bills in up to their eyes in search of small worms that are teeming there in great variety. It is alleged that they devour small fish and fiddler crabs. They do not go to upland fields, but at high tide retire with their congeners to the sand dunes. Abundant in the neighborhood of Oregon Inlet, and further West in summer. Quiet in their manners, not flying about as much as some of the other waders. Were formerly quite plentiful in New England, but they have been scarce since the birds gadding. The other godwit (*Limosa Hudsonica*, Swain), better known here as "spot rump," is very rare in spring; has much the same manner and habits as the preceding, but is more likely to be caught out in an easterly storm, and driven on to our coast with golden plover; then his stalwart relative, *L. fedoa*, which would seem to indicate an Eastern or Atlantic route for their Southern migrations.

The vernal season will scarcely bring us acquaintance with sick-billed curlew (*Namnetus longirostris*, Wils.) though the larger species may occasionally be seen. These birds gadding go as far east as the Magdalen Islands or Labrador, come on to our coast in small flocks in the fall, and linger about the high beaches, dry marshes, and along the wind-rows of seaweed which have been washed up by the tide, where they gormandize on black crickets and flies which they are very expert in capturing. They are said to roost at night on these heaps of seaweed. They sometimes betake themselves to the sand flats where they occasionally indulge in a stray minnow, paltry crab, or juvenile insect. Well distributed over the continent, they are believed to breed as far south as Virginia. They are plenty all winter on Savannah River, and are there called "fish ducks" by the natives, but are not esteemed of value for table use. They feed there more on the marshes, and retire to adjacent islands to roost. Being heavy, clumsy creatures, they are, many of them, presumed to pass the winter within the territorial limits of the United States.

Toward the end of May a few short-billed or jack curlew (*Namnetus Hudsonicus*, Latr.) may be seen, like their congeneric relative with the long decurved rostrum, running about on the high beach, picking up black crickets, small snails and crabs. Both species have been scarce for many years.

Of the snipe family we have a beautiful representative in (*Macrorhamphus griseus*, Leach.) It is not numerous in spring, but is quite so in summer, and easily bagged. They are not here generally called, red-bellied snipe, but "brown back." They are believed to migrate into the mud and sand flats presumably to frighten out the insects and worms that lie buried there, so that they may be easily captured.

Very likely their sense of smell is so acute that they are able to strike at once their prey. Their sojourn in their breeding-ground is very brief, scarcely more than six weeks. The adult males begin to return in considerable numbers about the 10th or 15th of July, and by the end of August, both young and old have winged their way toward equatorial regions.

There is another beautiful plump little bird (*Tringa maculosa*, Vieill.) well-known on our coast in summer and autumn under various cognomens, as "Jack snipe," "braker," "grass bird," etc., but they are rarely, if ever seen in the spring. The advancing columns occupy the broad valley of the Mississippi, especially that portion of it lying nearest to sunset. As this interesting species is not a spring visitant at Cape Cod it hardly comes within the scope of these notes, and yet we cannot refrain from a passing remark particularly as there seems to be a wide discrepancy of opinion in relation to it. The best observers with whom we have come in contact declare there are two distinct species or varieties, though none of the birds recognize two. One is ever smaller, more delicate, and produces a finer, softer, gentler note than the other, which is more robust and utters a strong, shrill, trilling, whistling note. A casual observer would most likely pronounce them old and young, but there is such constant divergence as to preclude the possibility of harmony in one species. The habits of the two species are quite similar. Their usual place of abode is on the bare spots or amidst the short grass or mossy places on the marshes, where they seem to feed on flies, insects and mollusks, and become very fat, so much so that they are often called "fat birds." They rarely go to the sand flats or pastures, nor do they seem to be as sensitive to cold as some of the shore birds, and although they begin to be seen as early as the 20th of July, they do not all bid farewell to these friendly feeding-grounds till into November. They are abundant in Chile and other parts of South America.

There are a few other species represented at this point, such as buff-breasted sandpiper (*Tringa rubescens*, Cab.), curlew sandpiper (*Tringa subarquata*, Temm.), Bonaparte's sandpiper (*Tringa Bonapartei*, Seleg.), Semipalmated sandpiper (*Macropodema himantopus*, Baird), purple sandpiper (*Tringa maculosa*, Brunn.), and possibly a few others, including two or three of the Phalaropes, but none of these are in such numbers as to be attractive to sportsmen or receive any special notice in this connection. It will also be observed we have made no mention of golden plover, Esquimaux curlew or summer yellowlegs (*Totanus flavipes*, Bon.), simply because they are not constant visitants to our shores in spring, though they are occasionally seen, especially in Mr. C. A. very keen observer of the habits of these birds, informs us that during a period of seventy-five years himself and father had been in the field they had seen only three summer yellowlegs and but two golden plover in spring. Mr. B., who has been for forty years a gunner on this coast, has seen but one golden plover at this season.

But let us step over to the Mississippi Valley and take a stroll beside our intelligent friend and naturalist, Dr. N. of our lodge, Iowa, and listen to his discourse, and we shall doubtless find a different state of things. He says that he was early in spring, sick-billed curlew and marbled godwits arrived paired, breed in the neighborhood and disappear in July, or as early as the young are fledged and can take care of themselves, and are seen no more till the following spring. Undoubtedly portions of both species go to much more northern breeding-grounds. The offspring of the previous year arrive a little later than the adults, in flocks, and remain so all summer, as they do not propagate till the second year. The young are being raised by the same birds, who now feed on low ground or plain, very rarely in the water, while the godwits betake themselves to the fens or boggy places, where they can trace their long, stout bills into the soft mud for worms, after the manner of woodcock. Willet arrive singly or in small groups. Not abundant. Breed. The Hudsonian godwits come along in large flocks, sojourn for a brief period, and then push on further north to breed, nor are they seen again till the next year. Kill-deer (*Spizella socialis forsteri*, Cass.) called here a "dotterer," are abundant summer residents. In fact, they breed by general consent, and are common. The little sandpiper (*Tringa minutilla*, Vieill.) is also a summer resident and breeds. The white-rumped sandpiper (*T. Bonapartei*) is quite common, breeds here as well as further north, and returns with the two preceding. There are two of the dowitchers (*M. griseus*, Leach, and *M. socialis*, Law.). Both appear in closely-impacted flocks in May, tarry but a short time, when they are drawn to their northern and more secluded nesting places. The first-named makes a long trip northward in the fall, but the second, who the last named return by the same route they advanced. From the first to the tenth of May, just as the young and tender grass begins to grow, one may see immense flocks of golden plover sweeping along like an invading army. They are attracted to newly-burned prairie lands, which seem to furnish an abundance of little hard worms upon which they feed. They also frequent the newly-ploughed fields or those just sowed with wheat. They are less numerous now than they were forty years ago, when, as we are informed, the farmers of this region believed they destroyed a great part of the seed wheat, and poison wheat grains were scattered for the purpose of destroying them. As the birds do not belong to the gizzard tribe—Gallina—we doubt if the allegation can be sustained. They probably go to the freshly upturned fields in quest of larvae and grubs that are injurious to the wheat crop, and are really friends and co-workers with the farmer, as are most of the feathered brethren, rather than his enemies. They do not, however, tarry many days, but proceed on their way, and the last named return by the same route they advanced—"pale bells"—return by the valley route. Accompanying and mingling freely with the golden plover are the Esquimaux curlew, or dough birds, in great numbers. Their habits are very similar to those of their co-migrants, but they do not get so fat. Still they are slaughtered by thousands, barreled and shipped to Eastern markets. A few only of the young return.

Upland plover (*Actitis bartramiana*, Bon.) come paired, breed and retire early. In New England they bear their young on the grassy slopes of high hills, where they remain till the middle of July, when they retreat to the river bottoms, intervals, or dry salt marshes and plains, where they feed on grasshoppers and crickets till about the 15th of August, when they silently depart. Their line of march is not confined to the seashore, and both old and young of this species travel in company. They are a very shy bird, as any one who has attempted to hunt them will vouch, tasing, his utmost skill, and even then will most likely defeat the object of his pursuit. They are not particularly numerous, and are best shot in this section. Mr. T., informs us—and we insert this bit of secrecy here as *deceus* to our disappointed brethren who

have tried in vain to circumvent one of these wary creatures — but he hunts them "down wind," and as soon as one rises on his wing, he (C) dips close to the ground, and the birds' "bump" of curiosity is developed, about equal to that of ducks, and not seeing any one there apparently invades he has been duped, or, as we say, "fooled"; and not being willing to be laughed at by his fellows, who are feeding undisturbed over the fields, he approaches the spot from whence came his "scare," and as he comes "quidding" along (trilling his alarm note, when in the right place, the gun is seized and in a trice the victim falls nearly at the feet of the gunner. He instantly drops again and remains quiescent till the birds have recovered from their fright, when he proceeds as before. On one occasion he discovered a flock of these birds in a pasture of only a few acres on a hill, and in less than two hours, in this way, retreating and working the ground over several times, he killed the entire seven!

Winter yellowlegs appear in moderate quantities. Nest here and further north, and return. Summer yellowlegs (*Totanus flavipes*, Bp.), also arrive early in considerable numbers, but push on further North as soon as the season will permit. Their southern journey is mostly by some other and more eastern route. The red-backed sandpiper, *T. ruber*, better known here, is "Dunbar's" regular visitor, though not in large numbers; breeds further north. The little solitary sandpiper, "tip up," is common here as in most other parts of the country. Beetle-headed plover, red-breasted sandpiper, sanderlings and jack curlew, although occasional visitors in this locality, are not as abundant as they are further east. We are inclined to the opinion that most of these birds that pass down the valley of the Mississippi, being either immature or heavy flyers, as, for instance, a sickle-billed curlew or the godwits, spend the winter in the Gulf States, Mexico or Central America.

It must be apparent to the reader, from the foregoing, that certain species of shore birds pass up the Mississippi Valley in Spring, but do not return by that broad highway. It will moreover be seen that the species that do not return by that road are abundant on the Atlantic Coast in autumn. If these premises hold, the conclusion is inevitable, that they go very far North to breed, swing over to the eastern shores, where they reproduce, and then proceed on their Southern journey. We propose, therefore, to introduce some testimony in support of this hypothesis. To begin with, to the northward of the Great Lakes and to the eastward of the Rocky Mountain Range, a vast unexplored territory within whose bounds are mountains, valleys, prairies and marshes. Nesting away in the quiet bosom of the mountains or sleeping gently in the valleys are many lakes and ponds, sources of numerous rivers, possible highways for future commerce. Thither for countless ages the feathered migrants have wandered in search of the solitude, that entire immunity from dangerous contact with man, not accorded them in later years along our frontiers. Here, too, must be found abundance of food suited to the wants of both old and young. Possibly this may have something to do with their line of flight. If it should be found that this region produced food peculiarly adapted to their tastes they would very likely take the shorter route via Mississippi Valley to reach it rather than travel away round the Atlantic Coast, Labrador, etc., and moreover it is well known that most of the shore birds resort to fresh water lakes and marshes to rear their young. That they do populate the whole region reaching the Arctic shore in large numbers is attested by the numerous explorers who have visited that inhospitable country. For many years naturalists have recognized these birds as belonging to Arctic fauna. In July, 1871, near the mouth of Coppermine River Hearne writes: "In the pools saw swan and geese in a moulted state, and on the marshes some curlew and plovers." Alex. Fisher, in giving an account of Parry's first voyage, 1819-20, saw at Ballin's Bay, "Red phalarope and ring plover," and at Winter Harbor, lat. 74 47 min, 110 43, "Shuk a golden plover," and July 1, adds "A few prairie warblers, plover, sanderling and snow buntings were at all the land birds that were seen." Again, at the Melville Islands, June 12, "saw several golden plovers." Sir J. Richardson while at Wollaston Land wrote as follows: "On the first of June, bees, sandpipers, long-tailed ducks, eucowacs, eiders and king ducks and northern divers were seen." Again, May 15, "The yellow warblers feed on the alpine arbutus as did Black-bird the golden plover, whose stomachs also contained the fruit of the *Empetrum nigrum*." The Eskimo curlew, at this time feeds on large snipe. McClure, while the "Investigator" was packed in the ice at Prince of Wales Straits, lat. 70 deg., after making several excursions reported the following: "The plover and phalaropes and buntings here rear their young untroubled by man around the margins of petty lakes." Dr. Kane speaks of seeing snipe at Rensselaer Bay, June 16, 1851, also at Cornwallis Island, September 4, 1850. Dr. Hayes saw the same species at Port Foule, June 8, 1861. Mr. C. B. Cory, author of the charming little work on the "Naturalists in the Arctic Islands," informs us he has the eggs of the golden plover taken at the Northern extremity of Hudson's Bay, and that they are common there.

The above references will, we think, be sufficient to satisfy the average mind that the birds do reach very high latitudes in considerable numbers, and that they breed there. The curvating duty of udding, laying, incubating and rearing into the juvenile specimens such brief care and protection as the mothers' processes might be expected to bestow, seems to guarantee to them a journey to the fashionable watering place. Possibly the food they find so abundant, earlier, around the lakes or marshes, now gives out, or their tastes change and they banker after marine worms, or the berries of the coast, and they set out upon the journey to Ballin's Bay, Smith's Sound, or Labrador, where they again regale themselves in the fresh bracing air of that isolated region. There are hundreds of miles, up and down the coast of Labrador, of low plain lands, which produce great quantities of berry and grass. Some of these berries are not unlike our blue berries, but larger. They are called by the natives "gallow berries," and the birds that feed on them "gallow birds," probably a corruption of curlew. The berries are also called "rotten apples." Upon these berries the Esquimaux curlew and dough-birds feed. Dr. Coues, in his observations in Labrador, in 1860, says of these birds: "Their food consists almost entirely of the cowberry (*Empetrum nigrum*), which grows on the hillsides in astonishing profusion. It is small, called the bear-berry and curlew berry. It is a small fruit of a purple or black color, growing upon a procumbent-running kind of herb, the foliage of which has a peculiar moss-like appearance. This is their principal and favorite food, and the whole intestines, are more or less stained with the deep purple juice. They are also very fond of a species of small snail that ad-

heres to the rocks in immense quantities, to procure which they frequent the land-washes at low tide." Two birds as far south as Cape Cod, when shot, still have the anal and tibial (feather) glands enlarged. We are informed by Mr. Cory, by shipmasters and fishermen, who have often visited the coast of Labrador, that the birds come striding along down over the mountains and hills on to the plains in myriads to feed on these berries. There are no towns away up on the coast, but a few scattered Esquimaux huts, where the hardy fishermen go ashore to cure their fish, and it is during these visits that the observations are made. The old birds, after resting awhile, move on to the Gulf of St. Lawrence, Magdalen Islands, Newfoundland and Nova Scotia, and thence southward to give place to the young that must soon follow. Mr. Cory reports "young dough-birds are due here, Magdalen Islands, about 8th September; young golden plover come about 20th September."

A friend at Newfoundland writes, "Snipe, sanderlings and yellowlegs are plenty—the latter breed." Thinks the Esquimaux curlew breed at Labrador. They are so plenty the fishermen kill them and salt them up in barrels. They arrive at Labrador before they reach Newfoundland in millions, so that they darken the sky as they rise. Large flocks of sanderling and grass-birds arrive late in the fall. He believes the birds go to Prince Edward's Island, and thence to South America.

Another good authority remarks as follows: "At the Magdalen Islands millions of golden plover and dough-birds come every year, in August and September. They feed on the uplands, and go on to the high beach at night to roost. So plenty are they that on a dark night one with a lantern and stick may kill bushels of them." The same party reports seeing, in 1854, as late as October, on the coast from Chedoke to Dalhousie, immense numbers of these birds. Mr. E., an intelligent merchant of Boston, informs us he has visited Prince Edward's Island for nine consecutive years, and has failed but twice to get good shooting. They have a "flight" of birds there on an east wind just the same as at Cape Cod. Is of the opinion that birds feeding in a certain field this year, unmolested, will return the next year to the same field. In one day he shot green plover, Esquimaux curlew and summer yellowlegs in a field where, as he alleges, they take to feed on herds-grass seed. Many of the birds reach the Bay of Fundy by crossing the narrow belt of land from Straits of Northumberland.

If the birds strike boldly out to sea from Nova Scotia in a southerly direction, as it is very clear they do, it would carry them to the Lesser Antilles. Now, it is settled beyond a peradventure, that they do have a "flight" there just the same as at Newfoundland and Cape Cod. From the Barbadoes, the most windward of the Windward Islands, we have the most positive assurance of a "flight." One of the memorable events recorded in the annals of the island is "Sept. 12th, 1846, great flight of plovers." The U. S. Consul at that place writes us in reference to this matter, October 29th, 1878: "By all accounts the island was covered with them. They were killed in the streets with sticks." The following from a reliable source is so clear and pertinent we venture to quote entire: "I have seen none of the birds myself only what we call grassbirds, but by all accounts they come here the last of August and first of September till October, a few, but at no other time of the year. My own eyes have taken a dusky curlew, from Newfoundland and Nova Scotia. When they go back in the spring the trade winds are strong from N. E. and they are blown north to the westward, and strike Georgia and the Carolinas and so make their way North to go over it again." Further on he remarks: "I have seen some black-breasted plover and yellowlegs. They are very tired when they arrive here; so tired sometimes they can't stand up." Again, he writes, as if to corroborate his previous statement that they take a "bee-line" for the West Indies. "I was coming late to Boston from Europe one voyage and passed large flocks three hundred miles from land, going South, in September."

Capt. * * * informs our friend E. that one autumn he saw thousands of plover in the Gulf Stream nearly five hundred miles from land, skipping about and lighting in the water and on accumulated seaweed and other vegetable matter. He is quite sure the birds go by this route to South America. Other shipmasters have made similar statements. It may, however, be understood that when these people who are not conversant with "plovers" they are liable to refer to any of the marsh or shore birds. In order to make it more clear that most of the shore birds do visit the Barbadoes, we insert the following extract from the History of the Island, kindly furnished us by Capt. P., the Consul at that place. "The number of indigenous species (of birds) do not amount to fifteen. About forty species and varieties arrive toward the end of August, and merely alight on their passage to some more distant land. The most abundant during a period a southerly wind rain prevails, they alight, whereas fine weather tempts them to continue their progress. The greater part are then seen to fly very high, and to keep their course direct to the east. . . . The black-breasted plover (*C. Virginicus*) is the most numerous. The male appears about the 25th of August, and the female (young?) which is called in Barbadoes the "white-breast plover," after the flight of the males has ceased, about the middle of September." Here is a partial list of the migrants that come to the islands: "*Squataria hutchinsoni*, Linn.; *Tringa borealis*, Gmel.; *Semipalmarius*, Kaup.; *Streptopus interpres*, Linn.; *Numenius Hudsonicus*, Lath.; *Numenius Virginicus*, Gml.; *Totanus flavipes*, Gml.; *Totanus chloropygus*, Vieill.; *Tringoides macularius*, Gray; *Tringa bartramia*, Wils.; *Tringa canutus*, Linn.; *Tringa petolaris*, Selys; *Tringa pusilla*, Wils.; *Microthamphus griseus*, Leach; *Gullinago Wilsoni*, Bon."

On departing from the Windward Islands the birds take an easterly direction, which would, if persisted in, carry them to the Cape Verde Islands, a prevailing opinion among the inhabitants that the birds do indeed pass that way, nor do we presume the distance would be an insurmountable barrier. Other considerations oppose the conjecture. They would be likely there to meet allied European species and fraternize with them, and either be carried there or bring back those they met, and in course of time lose their identity; nor is any such return flight ever witnessed. The reason of their taking an easterly course in setting out upon the long voyage is, probably, to overcome drift of the "trade winds." If that is the case, they would be driven to Cape St. Roche, a distance of two thousand miles, with a quarter of current of fifteen knots on setting out, they must start up into the wind or they will impinge the continent far to the westward of their objective point. Any one who has ever seen a skillful oarsman cross a rapid stream must have observed that he always heads his boat up stream in starting,

or he would reach the opposite shore below the place intended. But the birds, in their migrations, are not circumvented in such a manner. In fact, the Lesser Antilles, the Windward embayments nearly the whole of the West India Islands. A letter from C. W. H., of Turk's Island, is of such general interest that we make from it a very liberal extract: "Golden plover, sometimes in large numbers, a few upland plover and curlew also arrive here from the North regularly about the end of August or first of September, and remain with us generally from four to six weeks, although a few stragglers stop a little longer. If these latter happen to be golden plover, after a short time they lose their yellow and pretty marked dark-mottled plumage, and don a gray suit of feathers, looking like quite a different bird from what they did when they first arrived here, and are then sometimes called 'gray plover.' These birds go South from us, and they evidently pursue some other route going North, as we never see them taking flight in that direction. I have often heard old sea captains remark that they saw flocks of these birds in the autumn going South, but never in a single instance have they met them going North at any time of year."

Mr. C. B. Cory, in "Birds of the Bahamas Islands," gives a somewhat different account of the habits of these birds of different varieties. He does not, however, recognize the godwits, curlew, *Tringa bartramia*, or *Tringa canutus*, as visitors of the Bahamas, nor are the former found in the Barbadoes catalogue. The godwits and sickle-billed curlew are rather clumsy flying birds, and it is possible very few reach these remote islands, but *Tringa bartramia* (Wils.) *T. canutus* and *Numenius borealis* are among the migrants whose "range" is the widest of all the shore birds, and we can't account for their non-observation on any other ground than by supposing that at the time of our arrival, late in December, these birds had mostly departed South. We had to rely on the authority of Dr. Bryant, Mr. Moore and others, for information of these birds during their migrating season, September and October. His winter observations lead him to believe that a few of several species each pass the winter on those lovely islands. He does not, however, seem to find any of them abundant at that season, except the two least sandpipers, nor do they, to any extent, remain on the islands to breed in summer. As a rule they all go North to breed, and a few go far to the South to winter. One straggler may be occasionally found in winter, even as far north as New England, but this is an exception to the general rule. Their return trip in spring is very far to the westward of these islands, and of course would not be observed at that season.

Mr. P. A. Ober, in his admirable work entitled "Camps in the Caribbees," enumerates seventeen species of these wanderers as "birds of the Lesser Antilles," all of which come from the United States. He does not seem to have met either of the godwits, *Tringa canutus*, *M. griseus*, or *Numenius borealis*. Why he did not meet with them is a mystery, especially the last named, which elsewhere travels in company with *C. Virginicus*, and is recognized by other authorities as a visitor to adjacent islands. Possibly at the period of their passage he was in the mountains securing some rarer specimens of that region. But most of the Linnicolæ do reach these islands, a part of them coming in a "bee-line" from Newfoundland, and a part coasting along down to the Carolinas, dropping off on the road as inclination or strength might dictate, and striking out southeast, till they reach the Windward Islands, where again they join the columns from the north. We would not as yet venture to say that the birds are collated to suppose that the birds that set out upon the lonely journey from Newfoundland or Nova Scotia would pass to the eastward of the Bermudas while those that pursue the easterly line, if caught out in a westerly gale, would be blown on to that group. A letter from a reliable gentleman (W. W. D.) residing on one of the Bermudas, informs us "the plover and curlew, before the country was so broken up for agricultural purposes, were quite plenty in large flocks about the marshes and salt-works at the time of our visit in December. Generally make their appearance about September and October. They always show themselves after a strong westerly gale." He also incloses Lieut. Dennison's list of one hundred and seventy-nine species of birds that visit the islands. The list is very complete and covers about all the migratory wanderers that visit the east coast of North America and West Indies, except winter yellowlegs, sickle-billed curlew and great marbled godwits. We would like now to take the reader back to Cape Cod; but he has not already had Cape Cod and its "birds" so much in his mind that he will not mind our taking him there. If for three or four days during the flight period there happens to be a strong nor'easter wind, attended by considerable rainfall or fog, we are almost sure to get a "flight" of birds. Possibly we could not better illustrate this than by the recital of an instance that occurred under our own observation. On the 29th of August, 1813, we made a trip to Chatham, Cape Cod, for the purpose of enjoying several days' plover shooting. The weather was fine, with a westerly wind, and birds very scarce.—In fact, the outlook for shooting was gloomy in the extreme. In a couple of days, however, the wind hauled to the eastward and blew fresh, attended by a dense thick fog and considerable rain. Toward evening of the third of September the deflected line of golden plover and Esquimaux curlew struck the shore and were at once driven to the fields or pastures. A few gunners happened to be there, and seventy-seven of the birds were bagged. All night long the birds could be heard crying and calling to each other for help. There were some eight or ten gunners present, and the excitement and confusion of course there was a great deal of excitement and confusion getting ready for the morrow's slaughter. Long before the golden light had tinged the eastern horizon the next morning, breakfast was dispatched, lunch baskets packed, ammunition snugly bestowed—there were no breech-loaders then—teams were at the door ready to take and distribute the parties in the various fields from one to four miles distant. Quite early the birds came rushing along in the wildest confusion, but very little attention was paid to the decoys or call notes. The decoys did not at all attract attention, and the birds bewildered and stared about as much as to say, "Where are we?" "What has happened?" Flock after flock went rushing along, pell-mell, as best they could in a gale of wind, till night fortunately overtook the weary birds and their pursuers. The parties drove back to the house one after the other, and soread out the contents of their "bags" upon the floor—two hundred and eighty-one golden plover and Esquimaux curlew together with a few bee heads! It was a most successful and memorable night. We would not vouch for the truth of all the stories that were told. A slight deviation, a little—just a little—exaggeration upon such an occasion is pardonable. There was about as little sleeping done in that house that night, as was ever done

in a house of its size. Well, teams had been ordered for the next day (Sept. 6th.), with every prospect of favorable results when, lo! the wind had shifted to the northwest! It was cool, crisp, and blowing, and serenely a bird to be seen anywhere. This little party will show how independent we are at this point upon an easterly storm for golden plover and curlew-shooting. It so happens that for years there will not be at the proper time a storm sufficient to throw the birds on to the land, and of course there will be no shooting during those years. In this instance, had the birds not been on the wing to the eastward of Cape Cod, they would not have been blown on to the land by a wind from that quarter. A change during the night would tend to escape "weedin winds and slaughtering guns," nor did they wait for daylight on their lunch. On departing they take a southeasterly course evidently to get back on to their line of travel as soon as possible. A "flight" of birds is liable to occur anywhere up and down the coast during the migrating season, when the wind and other conditions are favorable. Mr. S., afterward, "His Honor, the Mayor" of Portland, writes October, 1878: "There was the most immense flight of golden plover and Esquimaux curlew, on Sunday, the last of August. I ever knew on the coast, during the month of August, a flock following closely, they all disappeared." The same stories are told at Carrick Sound and other points along the coast. If then the duo of flight of these birds is due south from Newfoundland for a period of six weeks, and if during that time an easterly gale prevails the results will be as we have stated. Several trustworthy fishermen who are excellent sportsmen as well, and who have often been cod-fishing off Cape Cod's Banks, seventy miles east of Cape Cod, inform us they have frequently seen golden plover and dough birds there in large flocks, always mixed up together, going south, and for weeks, when not too foggy, there was scarcely a moment when one or more flocks were not visible. Captain B. wrote us from Cienfuegos, June 23d.: "On the passage (from Boston) May 27th, forty miles southeast from Nantucket, I saw, distant from the ship, not over one hundred and twenty yards, eight plover swimming very gracefully on the water. They took wing and shifted a few hundred yards further to the westward." He gives a very interesting account of the natural accumulation of these birds in the eddies at sea, and thinks the birds stop to rest and feed on the water and other marine animals, myriads of which make their homes in these bunches of seaweed. Again we quote from a letter of September 11, 1879: "August 12, sixty-seven miles southeast of Nantucket, I saw quite a large number of migratory birds....." I saw no large birds on the wing, but I passed several flocks of them sitting on the water, and other feeding or bathing. There were at least three kinds." We have cited the above very reliable authorities to prove that if these birds get weary on the long voyage of one or two thousand miles, from Newfoundland to the West Indies they can safely stop anywhere to rest as they are graceful swimmers.

We shall now attempt, very briefly, to follow our beautiful little winged wayfarers on their voyage to South America. The data on hand, however, are few and quite incomplete, and we have had to patch them out and fill up gaps and interspaces as best we could. We hardly know how to express to the reader, intelligently, the great difficulty of obtaining from any point of interest in South America, the most meagre information in relation to these birds. We have from several correspondents in various localities the most positive assurance that they know nothing at all about the birds, nor can they obtain from those around them any items of interest upon the subject. None of the books that have fallen under our notice give any detailed account of the migratory shore birds that visit the continent. From some books of travel, special papers read before certain societies, incidental remarks here and there, and from our own correspondents, we have been able to glean some information as to warrant the belief that these birds not only reach the continent in immense numbers, but that they cross the equator and pass as far south as Patagonia or Terra del Fuego. This theory is, however, purely conjectural and liable to great modification by further investigations. The evidence to sustain it is not as ample as that we had the satisfaction of presenting in support of the theory that the breeding-grounds of these birds embrace even polar regions, but by grouping and cementing the few scattered links of the chain is strong enough to sustain at least a portion of its own weight.

We know, then, very well that these birds *en masse* do leave the West India Islands in September and October, and where they go? Not northward, certainly, at this season of the year. We have, however, the most reliable testimony that they are very abundant in Guiana about the same time of their departure from the Antilles. Our friend Capt. B., who is an intelligent gentleman as well as an enthusiastic sportsman, was at Demerara with his ship about the end of September, 1877. While lying there his friends invited him to participate in a plover shooting excursion. In fact, he had several days of the great sport in the next year to be witnessed. Another voyage was made the next year to the same place, but he arrived six weeks later expecting to enjoy a repetition of the previous year's sport. He went to his friend and asked him if he could get a few days' shooting while his ship was taking in cargo. Mark the reply: "Why, Captain, you are too late! Had you been here a month earlier you would have had splendid shooting, as there was an extraordinary 'flight' of birds, but now they are gone." Our friend, intelligently, satisfied him that in September and October there is a "flight" of birds in Guiana, just the same as there is at Labrador, Newfoundland, Cape Cod and the British Isles. A letter from the ornithologist of the National Museum at Rio de Janeiro, under date of July 9, 1879, throws some light upon the subject. "I found *Charadrius pusillus*, Wils., on the island of Marajo in the month of December in flocks of about twenty individuals. Later I found it in the month of May in Rio de Janeiro and in December, 1878, near Rio de Janeiro at Jopopember in a small flock of twelve individuals. This bird seems to me to be one of passage in these parts, because in Rio de Janeiro, for example, they are known as migratory birds, appearing only in the wet season, and in other places they appear always in flocks of ten, twenty or thirty individuals." As the plover is accompanied in their departure from the West Indies by many other species, so we may infer that, notwithstanding they were not seen at Rio, still they were abundant in the vicinity. We are informed that during the migrating season these birds are plenty at the mouth of the Rio de Janeiro, and further south, and we are not quite clear that they do not breed there, but they certainly have time enough. Braut is not on their breeding grounds over three months, and *Anser bernicla* must require as much time to propagate as *Tringa pusilla*, a

valued correspondent (Prof. B.) writes January 8, 1881, from Concepcion del Uruguay: "All the *Limicola*, with the exception of *Fanillia argenteus* and possibly *Ithya leucosticta*, are migratory to a greater or less extent at this place." (The two exceptional species are peculiar to North America.) We must not forget that the seasons there are the reverse of ours—i. e., their autumn corresponds to our spring, their winter to our summer. All the *Limicola* introduced here have large, strong wings and are capable of sustaining long continued flights. In tracing these birds to the northeastern shores of South America we have left them in a hot place, not over six degrees north of the equator. Now, we do not suppose any of the shore birds—possessing as they do the means whereby they can put distance so rapidly behind them, will tarry for any great length of time in the torrid zone. Their natures seem to lead them to temperate, north temperate, or even frigid zones. They must pass at once from the chilling, repulsive blasts of our autumn across the equator to the attractive, wooing breezes of a Southern spring. They are very sensitive to heat and cold, and it is not in the nature of things that they should remain four or five months sweating under a tropical sun. A few may linger, as seen at Rio, down into December, but most of them must have "crossed the line" before the end of November. The fact that the people of the torrid zone are ignorant of the existence of these migrants is proof that they do not stay there during all the long Northern winter months. Those seen so late as December at Rio must have been the tail end of the autumn flight, nor would they be at all likely to abide as near the equator as the mouth of the La Plata, lat. 35 deg., but would push on still further south, even down to Cape Horn to bungle themselves in the cooling breezes of that region. Very few if any of these birds north, breed as near the equator as 35 degs. Most of them seem to be more ambitious to reach the seventeenth parallel. May we not then safely conclude, in the absence of positive evidence, that their habits south of the equator would correspond with their traits north? It is not very clearly established what route they take in passing from Guiana to Patagonia. Whether they follow the coast line and double Cape St. Rague, or take a shorter or more direct route across the country, is not so fully determined. The weight of evidence is in favor of the direct route. Some of the main branches of the Amazon river, very nearly to head waters, are the Paraguay, and these river valleys would seem to offer natural highways for our migrants. The birds seen at Concepcion would most naturally follow this route to that inland town. Then the mountain ranges are mostly parallel to this line and the birds seen at Rio de Janeiro may have flitted along down the valleys and water courses to that point. Some of the stronger winds, as *Charadrius virginicus*, *Numenius borealis* and *Totanus flavipes*, may follow the coast line, or they may diverge as they do in going north in spring, on a question of food, some taking the shore and some the inland route. Still there is a serious obstacle in the way of their following the shore. The "trade winds," which blow constantly from S. E., would belikely to drift them inland, and this possibly may account for their appearance at Concepcion. The same influence would bear upon them on their return trip, though it would not be a head wind. But the birds do return the next autumn, say, March and April, and do arrive on the northern shore of the Continent. From this it is not at all naturally expected that they would take the same route, which undoubtedly they would do were the disturbing causes, but in crossing the Caribbean Sea they meet the northern "trade winds," which blow at an average N. E. current of fifteen knots from the ninth to the thirtieth degrees of north latitude. Of course at either extreme there is very little, if any, observable current, not enough to impede the progress of the birds whichever way they might wish to steer. We have seen, however, by the letters from the Barbados and Turks Islands, that they do not come there in spring. They are forced by the trades down on to the east of Central America and Mexico, from whence they beat their way up across the Gulf, some reaching Cape Cod via the Atlantic coast, and some turning up the valley of the Mississippi, soon reach Fort Dodge, where they will be heartily welcomed by our friend, the Doctor, having completed their circuit as heretofore narrated.

W. HARGOOD.

IS THE TURTLE FISH OR GAME?

Editor Forest and Stream: A rino Potluckian is never appealed to in vain for at least an opinion; so, although not a member of the "Turtle Clan," I submit the following considerations. This is an excellent question for a lawyers' debate for reasons that shall appear—in the forum of science it cannot be answered. "Game" is not a scientific term for any group of animals; true, fishes may be game, and there are and may be many animals which are neither game nor fish. Terrapin are not "fish" in the scientific acceptation of this term, as they differ from the fishes in mode of breathing, in structure of their general formation, skeleton and otherwise. The respected Commissioners of Chesapeake and tributaries might claim jurisdiction over everything that moveth and liveth in the waters, and fairly avail themselves of the popular acceptation of the term "fish," which makes it include not only the "finny tribes" (even when they are game), but testaceous fish (as the oyster) and crustaceous fish (as the lobster), and the whale fish, and shark fish, and perhaps the walrus and seal, the giant cuttle fishes, the mermaid and great sea serpent, of the sea, and the various monster fishes obtainable in the Chesapeake, and also the Medusan jellyfishes—but not extending to a steamboat nor an iron-clad torpedo, nor a diving bell. A regard to the general public interests would induce a candid judge to commit the terrapin (which have neither fur nor feathers and differ from the usual kind of game, while they have many and close relations with their piscine friends and enemies) to the culture and protection of the respected Commissioners of the noble bay in question and its tributaries.

The above question reminds me of a "story." In a suit where Mr. Ambrose Clark and Mr. John Anthon were opposing lawyers, Mr. Anthon's client had a patent preparation for tanning leather, which was made of fish oil. Another party made much the same thing, only using whale's oil instead, and he was sued as infringing on the patent. The defence was that it was no infringement, as *whale* oil was not *fish* oil, since a whale is not a fish. Prof. Mitchell was called upon as an expert, who, after being highly bedegged by the lawyers, was asked: "What is a whale?" and he replied: "The lawyers," which was the answer. He replied: "What is one of those disagreeable animals which comes up before a box and

spouts?" The question, as far as I can learn, like that in the Virginia Legislature, has "not been decided to this day." KA-TOT-TOI-STA-KWAST.

The above letter was written previous to the publication of our last issue, and was therefore prepared before its author knew that the President of the Pot Luck Club had delivered the oracle from his tripod. After these lucid dissertations on the nomenclature or legislation—can plead ignorance of the turtle's place in nature—trace to this politico-scientific subject: Let us turn to metropolitan turtle-soup. Puck, our professionally funny E. C., has been investigating the culinary mysteries of a New York restaurant. The experience of the Puck man was as follows:

LEON SOPH.

An attenuated individual, with a great affluence of hair and a soft, seductive smile, gently swaggered into a restaurant down town not more than a week ago, hung his hat on a nail, took a seat, and commenced to drum for the waiter. The letter appeared in due time, and began to brush around the tumbler with a great deal of energy. The diner ordered some turtle soup, and while he was sipping it, chipped in: "Pretty good soup this; what's the vintage?"

"T. A. M. S." replied the waiter, as he prepared to hurl the check down like a boueanger.

"Mado of land-turtles?" inquired the festive guy.

"Land-turtles?" repeated the waiter in astonishment. "Yes, land-turtles," continued the diner—"these big, corpulent, speckled, French-nosed reptiles that walk around ryofills with initials and dates cut on their backs?"

The waiter assured him that he was positive that that was not the brand of turtle employed in the construction of their best soup in the city for ten cents a plate, including a roll.

"No, I suppose it is not," continued the guest: "I suppose it is not. I presume you use these little black, red-spotted specimens that infest woodland brooks and bird-stores at three for a quarter—these little polka-dot rascals that fly over corn fields, chirk full of meditation. I suppose you get them in quantities and open them like Little Neck clams, and spring the result on innocent people for terrapin. Does my intellect light on the scheme?"

The waiter didn't reply, and the guest went on:

"Perhaps you use snapping turtles. These fellows that grab at anything so hard that it makes them tired. These ignoble beasts that draw the skin over their eyes when you look at them, and who have skin enough for each eye to make an apron, sirings out all, and—"

"We use an iron turtle," broke in the waiter, who was tired of being guyed.

"An iron turtle?"

"Certainly, an iron turtle."

"To make turtle soup?"

"Why, of course; to make turtle soup, not to make lamb stew, or friandean of nightingale's soul, or an epigramme of tapiti's kidney."

"But," said the diner, "how do you make soup out of an iron turtle?"

"Why, we wind him up."

"Wind him up?"

"Precisely; he has a key-hole in his back, you wind to your right, until you can't wind any longer. Then you throw him into the soup, and the machinery starts, and he kicks and splashes round for hours. We have a few eight-day turtles that—"

"But where does the nutriment come from?" inquired the astonished guest in tones of excitement.

"Why, of course, chuck full of meditation. I suppose you eat beef, and the carrots, and the lemon."

"Then, what is the use of putting in the turtle?"

"Why, he furnishes the motion."

"What, motion in soup?"

"Of course; we throw him into the soup, and he splashes round with his great paddle feet."

"To tone the system with iron?"

"Oh, no, just to keep the soup from burning. It's a great deal cheaper to work the turtle than to hire a boy to do the stirring."

These the out-guyed diner left with a saful look, as though he had just come down stairs with some manuscript, and left a dozen series of editorial foot-prints all over him.—R. K. M.

We know, then, very well that these birds *en masse* do leave the West India Islands in September and October, and where they go? Not northward, certainly, at this season of the year. We have, however, the most reliable testimony that they are very abundant in Guiana about the same time of their departure from the Antilles. Our friend Capt. We are informed that during the migrating season these birds are plenty at the mouth of the Rio de Janeiro, and further south, and we are not quite clear that they do not breed there, but they certainly have time enough. Braut is not on their breeding grounds over three months, and *Anser bernicla* must require as much time to propagate as *Tringa pusilla*, a

A WORD OR TWO ON AN OLD STRIKER.—The dealers in firearms advertised in this issue of the FOREST AND STREAM are numerous. They are established firms, who do business year after year. There is no ring formed to maintain prices. The competition in the gun trade is strong. The firms, so far as our acquaintance goes, are possessed of business brains. All this means that no one firm can charge exorbitant prices for sportsmen's goods; which also means that a good gun can be bought of one of these standard dealers at the price fixed for that gun as the result of competition. The man who is possessed of average intelligence will, when he wants a gun, go to some of these regular established, respectable dealers. It is only a fool who will invest in the glowing, catch-penny advertisements in non-sporting papers of concerns which pretend to offer unheard-of largains in guns. Those men always seek to advertise in our columns and are as regularly refused that privilege; and with the advent of each new cheap-gun adventurer the FOREST AND STREAM'S mail brings frequent inquiries about the great bargains offered. Our reply to one and all is to buy their guns of reputable dealers and not to buy the \$25 guns for \$2.50.

AN ENGLISH ANTIQUARIAN has recently given some curious extracts from an old book, published in 1704, entitled, *Dictio narium Rusticum et Erbarium*, "A Dictionary of All Sorts of Country Affairs—Handicraft, Trading and Merchandizing." How do the following paragraphs strike our readers? "Shooting flying.—This being experimentally found to be the best and sweetest way of shooting. The gun most proper for the spot should be four foot and a half long in the barrel and of a pretty wide bore, something under a mureket." Under the head of "Fowling Piece" is the following: "That piece is even coated the best which has the longest barrel, being of five foot and a half or six foot long, with an indifferant bore, under barmebuss, tho' very Fowler ought to have them of several sorts and sizes, suitable to the game he designs to kill."

Game Bag and Gun.

FOREST AND STREAM GAME TABLE

OPEN SEASONS.

The seasons, in which it is lawful to shoot game in the several States and Territories, open as designated in the following table:

Table with columns: State, Deer, Woodcock, Quail, Ruffed Grouse, Pinnacled Owl, Wild-foal, Wild Turkey. Rows list various states like Ala., Cal., Col., Dak., Del., D.C., Idaho, Ill., Iowa, Kan., Ky., La., Mich., Minn., Mo., N.H., N.J., N.C., N.D., Pa., R.I., S.C., Tex., Va., W.Va., Wis., Wyo.

Alabama—Col. Sept. 1; Idaho, Aug. 1; Neb., Oct. 1; Nev., Aug. 1; Mex., Sept. 1; Utah, Aug. 1; Wyo., Sept. 1.
California—Col. Sept. 1; Idaho, Aug. 1; Neb., Oct. 1; Nev., Aug. 1; Mex., Sept. 1; Utah, Aug. 1; Wyo., Sept. 1.
Colorado—Col. Sept. 1; Idaho, Aug. 1; Neb., Oct. 1; Nev., Aug. 1; Mex., Sept. 1; Utah, Aug. 1; Wyo., Sept. 1.

mini of which may be ten or more miles apart, and consequently they are hunted most frequently on horseback. A well-trained dog is a sine qua non of the sport. In October, when the turkeys are young, they are easily killed; but later on, when they have become fully matured and have been hunted, is the time when skill, patience and caution are required. The best method of hunting and calling turkeys may be most satisfactorily explained by the following: My own experience, and I have hunted them in company with some of the most skillful and successful sportsmen in the South, and have killed within the last ten years not less than an average of ten a season.

The call which is superior to all others, when in experienced hands, is the larger bone of the second joint of a turkey's wing. This bone is first trimmed at each end, and then cleaned of all particles of flesh and marrow. One end is then inserted into a tube of cedar or elder, about as long and but little larger than a man's middle finger. The other end, to make the call, is placed between the lips and the air drawn.

About the first of December your correspondent and a companion started at early dawn on a turkey hunt. After proceeding a few miles from home we entered upon an old and extensive turkey range, and for several hours roared through oak woods and dense pine forests, over rugged hills and through swamps. Our dog, a well-trained Irish setter, knew as well as we did what we were after, and he paid no attention to smaller game, but all the while ranged in our front and to the right and left, frequently in a half circle away. It was mid-day before we saw any fresh signs of turkey. Soon after eating our lunch, however, we saw tracks, evidently made very recently. Carefully noting the direction in which the flock had gone, we pushed forward, cautiously scanning every opening and listening for the bark of our dog, which had disappeared in our front. At length we heard him bark, and soon saw above the tree tops several turkeys flying in different directions. The dog continued to bark, and we saw at intervals several other turkeys flying off. All this showed that the flock was good, and that the dog had performed his duty well and had scattered the flock so that they could not get together without yelping. Securely fastening our horses in a low dell, we cautiously advanced on foot, and were met by the dog, who instinctively retraced his steps to the spot where he had flushed the flock. We then proceeded to hunt around, within a radius of a quarter of a mile, to see that the flock were well scattered.

After proceeding a short distance a fine young gobbler flew out of a tree over our heads, and, both firing, we brought him down. We shot and heard several others fly, but beyond the range of our guns. It is our custom, in our dog work, selecting proper places, built our blinds. The location and construction of a blind requires as much skill and experience, as well as knowledge of the habits of the game, as any other part of turkey hunting. Both depend so much upon the nature and features of the ground that it is almost impossible to lay down any general rule. Other things being equal, the location must be near the spot where the flock was scattered, and the blind must be as like nature as possible. An inexperienced hunter may place his blind near the spot where the flock was scattered, but he will not know that he will not see a turkey, while an old hunter would place the blind fifty yards away and be eminently successful.

We made our blinds of small cedars which were abundant, selecting such as were not over three feet in height, sticking them in the ground in a circle about five feet in diameter, so as to resemble some natural clumps near by, and on a slight elevation. Mine was near the spot where the dog first flushed the flock, and my companion's some quarter of a mile away. In the location we saw several turkeys had gathered, and, having completed my blind, in which the dog had already curled up, I crept in and remained perfectly quiet for an hour. I then, with my yelp, gave three loud and distinct calls. For fully half an hour I waited, intently listening, only to be occasionally startled by some of the sylvan sounds with which woodsmen are familiar, but nothing fell upon my ear denoting the presence or approach of the game. I then gave another call—three notes as before—but in a low tone. The note caused me to turn my head cautiously, and there, within twenty steps of my blind, was a turkey, standing as straight as an arrow. Quickly throwing my gun to my shoulder I shot it through the lead and neck. Restraining my dog I waited again for fully thirty or forty minutes, and then gave another low call. This time I received an answer from two directions. Knowing that both turkeys would come with unerring instinct to the place where they had heard my call, I kept perfectly still. Again and again they yelped, and I shot them, one on one side nearer than the other, and some two came in my netting, and as they were passing the blind I shot, but was unable to get a shot at the other as it flew off. Fully another hour elapsed before I ventured another call, but in the interval I heard two shots from my friend in quick succession. I again yelped, and after listening for some time I heard a low chuck, the note frequently made by an old gobbler. He came up to a spot about one hundred yards from my blind, and stood for a moment perfectly erect, with every feather of his beautiful plumage ruffled and his head flung up in a long, low cry. I remained crouched and immovable, with one hand on my dog and the other on the gun for a long time, and there he stood, occasionally walking off a few paces and then coming back. As the sun was getting low and I saw he would come no nearer, I made a similar chuck to his own. He immediately started toward me in a run, and I thought I had him, but he suddenly stopped about seventy-five yards away as if he had discovered something wrong. He was in a state of borderless excitement, afraid to move, and on foot. I was debating whether I should take the risk of killing him with a charge of lead when, as if struck by a sudden thought, he crouched down, and stealthily crept away. I watched and waited sometime longer, but at length grew greatly chagrined, and thinking he had taken alarm at something about the blind, I drew a long breath and stretched out in the blind, making some little stir. As I did so I was startled by the well-known pat! behind me, and, glancing around, I saw that he had come up behind the blind, and when within ten steps had seen me without my discovering him. I sprang up with the gun to my shoulder, but as I did so he ran behind a tree, and kept the tree between himself and me, until beyond gunshot, when I heard him fly. Gathering up the dead game I then repaired to our horses, where I was soon joined by my companion who had also secured two.

Much has been said in regard to the number of notes to be made in calling. With any but young turkeys you should never make more than three notes at a time, and at intervals

of from thirty minutes to an hour. Old gobblers are more successfully brought within range by a chuck than any other note, except in the spring, when they will come to the yelp of the hen. The chuck is never made by the hen, but only by the gobblers, two or more of whom generally go together. It is a note that cannot be made by the hunter, except after careful observation and practice.

It is a note that cannot be made as tame turkeys answer the call, but they will not come with my experience or observation, and you must only imitate the wild turkey's call with certain restrictions. I am not speaking as to young turkeys, which are easily deceived, but of old and wary birds, the bagging of which does credit to the sportsman. With the latter the hunter must never undertake to give as many calls or notes even as the wild turkey frequently makes. If he does he will get no turkey for his pains, unless he has studded upon an inexperienced flock. One evening in the month of December a friend and I scattered a flock of eight or ten turkeys. It being late, we did not succeed in getting one to answer. So by light the next morning we were again in our blinds, which were some distance apart. By agreement I was to do all the yelping, the blinds being so situated that some of the flock would pass my friend in coming to my call. My first call was answered by the old hen, who came within seventy-five yards of my blind, in plain view, and commenced yelping loudly and frequently. She would sometimes make a dozen or more notes at a time that might have been heard a mile. Others answered her, and I heard my friend shoot once or twice. The report of the gun would startle her at first, but it was too distant to frighten her away. I then understood the situation, that my friend's blind was directly between her and the rest of the flock, and she was between him and me, thus none of her flock could reach her. She started off several times, but I succeeded finally in bringing her within a few feet of my blind and killed her. Her beard, the longest I ever saw on a hen, was at least eight inches in length. Had any one attempted to make half the number of calls that I did, the old hen did, they would have frightened off all the turkeys. Something artificial, like the notes would certainly have caused alarm. In my early days as a turkey hunter I frequently lost fair opportunities of bagging old turkeys by yelping too frequently and making too many notes at a call, and have always succeeded best when observing the cautions I have indicated.

Northside, Va.
THE DECREASE OF GAME BIRDS.

RUTLAND, Vt., Oct. 12.
Editor Forest and Stream:

In reply to your suggestion that the scarcity of ruffed grouse, mentioned in my letter of a recent date, might be attributed to the destructive work of the partridge fly, or the snares and traps of the pot hunters. I must say that the partridge fly is unknown to me. I have read of it and of its work, but never saw one, and never heard of one except through your paper, and I never saw a grouse that appeared to me to be infested with any fly, bug or other vermin, at least to the extent of injury to its health or strength. I have made some inquiry among our sportsmen and never found one who had ever seen one, or noticed its work. I must confess that I have been inclined to regard the stories of its ravages as somewhat sensational. Is it not a new, or comparatively recent, discovery? I never heard of it until within two or three years, I think, and yet I have been shooting these birds for many years, more years than I can tell, or even to this day, and I do not believe that the fly can be charged, in this State at least, with the scarcity which I complain. Nor can I believe that the snaring has much to do with it. Some five or six years ago a considerable number of birds were brought into our market which had been scarce, perhaps fifty in all, and all in one season; since that time I have no reason to believe that any birds have taken in this way in this vicinity. I have heard of no instances, nor have I seen or heard of, a hedge, or the remains of one, for years. My walks over the grounds most likely to be haunted by snares have been quite extensive, and I have also made inquiries of others, and an item of no offences in this line. Some other reason must, in my opinion, be sought.

Since I wrote last, inviting your correspondents to give us the average weight of their birds, woodcock and grouse, I have shot eight woodcock, the average weight of which was six and one fourth ounces, making the average weight of eighteen October birds five and eight tenths ounces. I am surprised to find them so small and am desirous to know if the lack of aviridopsis is peculiar to this section. The grouse I have shot during this month average a fraction less than eighteen ounces, which is also a surprise to me, for I thought they would have been heavier.

VERDE MONTI.
[We did not attempt, in our note appended to "Verde Monti's" previous letter, to explain why the birds are scarce in his particular section. It would be impossible to do this without knowing more fully than we do the conditions which prevail there; and even if we were familiar with the conditions, it is very likely that we should be unable to obtain satisfactory reasons for the scarcity. Under the circumstances we could only suggest possible causes, which we have known in other localities, to make barren covers once abounding in grouse. We are somewhat surprised that our correspondent should be ignorant of a parasite so abundant as the partridge fly, which infests both grouse and quail. That this pest—Olfrosia americana, Leach—is not a creature of the imagination, we can sorrowfully attest; we have repeatedly seen it, and have witnessed its very destructive onslaughts upon the grouse. Their deadly work is accomplished while the birds are too young and weak to recover from the loss of blood which these leeches exact. We do not imagine that the fly, in its mature state, works any serious harm, but the larva or tick, as they are called, as soon as they are produced, bury their heads in the neck of the grouse, and do not remove it until they are full-grown. A grown bird can generally survive the drain upon its vitality, as I sought we have more than once brought to bag old birds that were reduced to mere skeletons by these pests. We cannot define the geographical limits of the partridge fly, but presume that if "Verde Monti" will carefully examine each bird as soon as killed, he will soon be convinced of their existence.]

I regret not observing the many anxious expressions of interest and disappointment of sportsmen throughout the

WILD TURKEY HUNTING.

OF the numerous articles under this head, appearing at intervals in the FOREST AND STREAM, one published, a short time ago, over the non de plume of "Splasher," recently detailed the method of successful turkey hunting, so far at least as the South is concerned. It was interesting to all who are fond of the pursuit of this noble bird; and as I arrogate to myself the title of an adept in the art, I will venture a few suggestions and incidents of my sporting adventures when wild turkey hunting, which will probably interest "Splasher" and his readers.

In the part of the South in which I reside the flocks are few and far between, seldom containing more than twenty individuals; but within the last few years there has been a manifest increase, partly owing to forestry game laws, and partly to the growing up of old field pines in the worn-out fields. These pine forests are favorite resorts of the turkey, and afford them, at all seasons of the year, more secure roosting and hiding places than forests of oak and other deciduous trees. The rapidity of growth of the old field pine here is something wonderful, and has undoubtedly been of great advantage to many parts of the country. Districts are frequently seen densely covered with this growth, the trees in many instances averaging a foot or eighteen inches in diameter at the stump, which forty years ago were in cultivation.

When flushed in open fields or oak woods, in the hunting season, the turkeys go straight to the pines, and have a way of settling themselves in the lofty tree tops, so as to be perfectly screened from observation. In this part of the country the open season extends from October 15th to the 1st of February, and after November the birds become exceedingly wary, and it requires all the art of an experienced huntsman to bag them where they have been hunted. But one turkey, in the latter part of November and in December, is worth more than two or three in October, and to kill them, as a rule, requires ten times the practice and skill requisite when they are young. It is considered as decidedly un sportsmanlike to "bait" or trap turkeys, and no one but "coffee" or a white pot-hunter ever does anything of the kind. Turkey hunting here requires such skill, patience and knowledge of the habits of the bird that few sportsmen indulge in it; but this sport possesses such attractions that, when once initiated into the mysteries thereof, it discovers a fascination unequalled by any other sport to be had in the old Southern States. It is gratifying, too, to those sportsmen who, like the writer, dwell in a sparsely settled region, where the negro has a numerical superiority of two to one over the whites, to perceive that Sambo seldom develops any taste for this sport. In an export of hare and dove hunting and in his especial predilection to hunt "de possum and de coon" but partridge and turkey hunting are not in his line. Hence about all the harm he does to turkeys is his propensity to dig a log cabin in the pines, and squat in the midst of the old turkey ranges, which has the effect of driving the game from their accustomed haunts.

A flock of turkeys will frequently have a range, the ter-

country on the growing scarcity of our game birds, and at the same time the many honest attempts to solve the why and wherefore of this depletion, as well as the saving and increasing the present stock. I believe from these inquiries and predictions, the result of careful observations of sportsmen's experiences, that something will eventually produce a salutary and beneficial change. My experience has taught me, concerning the vexed question, to attribute this growing scarcity to three causes, viz., spring shooting, breech-loaders, and lastly, but not least, the emulation existing among members of the shooting fraternity for a public record of big bags. Of these three evils I deem spring shooting the most pernicious and destructive; secondly, I cannot too strongly deprecate this unsportsmanlike and reprehensible infatuation for wholesale slaughter and destruction. And why I mention the breech-loader is not because I am an advocate of the ancient muzzle-loader, but from the belief that if the breech loader is not used with judgment, it becomes an accessory in the gratification of producing this result of big score notoriety.—WASHINGTON A. CORNER, Flatbush, Long Island.

STATE PIGEON TOURNAMENTS.

NEW YORK, Oct. 13, 1891.

Editor Forest and Stream:

I am glad to see that you propose discussing thoroughly the question of pigeon shooting at the State meetings. I, as you probably remember, have always been opposed to it for a number of reasons, and give them now again.

In the first place, I claim that the name, "Society for the Protection of Game," used by the New York State Association, is a misnomer. They never have given the "Protection of Game" either time, attention or money. On the contrary, I claim that the action of the State Association has made them a laughing stock among real workers in the protection of game, and has injured them in the eyes of the public.

While I presume, there is objection to the shooting of a friendly match at pigeons with the rifle, or a contest in fly-casting, it should be a side matter, and should take place after the business part of the meeting; but I cannot see why pigeon shooting should receive prizes valued at thousands of dollars, while rifle shooting, fly-casting, etc., receive prizes of hardly any value at all. Better offer prizes to those who have protected game the best, and rewards for the conviction of poachers. I do not know how much money was spent last year, but I guarantee it was more than ever was spent on the protection of game since the Association has existed.

W. HOLBROOK.

WILKES-BARRE, Pa., October, 1891.

Editor Forest and Stream:

I have read your editorial carefully, and fully concur with the views expressed by you.

There can be but one opinion as to the effect of pigeon tournaments, in connection with the meetings of State associations. "No man can serve two masters" was written many years ago, and time continues to prove the truth of the adage.

Pennsylvania has not, and never has had, one of these tournaments, and I hope she never will. Since the organization of one State association, our meetings have been solely devoted to the interests of a game protective society.

It is true that we have had once or twice little social events, the day after our meetings, but nothing in the way of tournaments, so called.

There is nothing morally wrong in pigeon shooting I am not competent to say or judge, but as a means of enabling those, who have but little time for field practice, to keep in good shooting form is no doubt the truth; but when State associations have become so demoralized that the delegates are pigeon shooters, and nothing else, when the objects for which the associations were organized are so forgotten that the shooting becomes the all-absorbing topic and the chief end of the meeting, as you truly say, "it is time for a change of programme."

The fact of the matter is that the people look with distrust on "sportsmen" at the best, and we must depend ourselves in such a way as to gain the regard and respect of the community, or our usefulness is gone. If, therefore, we become bands of bird slayers, instead of bird savers, we engender distrust and cast opprobrium upon our cause, destroy our usefulness and invite violations of the laws we have passed—instead of making the name of "sportsmen" an honorable title, we only join ourselves to the band who "make their living by their wits."

B. F. DOBRANOS.

(From the Forest and Stream, Oct. 18.)

This is a subject which has come into decided prominence during the past year. We have, however, purposely deferred its consideration in these columns, because the question is one which should be discussed fairly and impartially on its merits, and not solely in its relation to any single particular occasion or society. The State pigeon shooting tournaments of 1891 are past; those of 1892 are yet a long way off. This, then, is a fit time to consider the question which has engaged the serious attention of many sportsmen throughout the country. It is this:—Is the wholesale trap-shooting of pigeons a proper employment to consume the time at the various State conventions of sportsmen?

To answer this candidly, it is necessary to look the facts squarely in the face. Briefly stated, they are as follows:

1. State associations are formed for the purpose—so their titles, constitutions and professions declare—of advancing the interests of sportsmanship and for securing the better protection of the game.
2. Annual conventions are held by each association, to which delegates are sent from the several clubs composing it.
3. These delegates are those who are most expert as trap shooters.
4. Professional trappers are hired to trap tens of thousands of pigeons on their nesting grounds. These birds are packed in crates and conveyed to the places designated for the conventions.
5. The only business accomplished at the conventions is the shooting of these pigeons, dividing the prizes and arranging for the next shoot.
6. Many influential sportsmen who have a warm interest in matters pertaining to the advancement of sport, withhold their support and presence from the State trap shooting tournaments. The number of prominent men thus holding aloof is yearly increasing.
7. Not only do these conventions accomplish absolutely nothing in the right direction, but more and worse than this, they have a positively bad influence in their effect upon public opinion. Instead of forming by their transactions a popular appreciation of the dignity of field sports, and a public sympathy with the spirit and objects of

just game laws, they bring the term "game protection" into ridicule and contempt. The only time the public bears anything of these societies is when its ears are saluted by the fusillade of their guns at the pigeon traps. The outside world never dreams of the existence of these State associations for the protection of game, except when they pose before it as extortionists. The increased participation of these conventions upon those who participate in them is also questionable. In one State at least the annual tournament is tending more and more every year to a money-making affair. One of the State tournaments of 1891 was, to all discoverable intents and purposes, a grand money-making scheme on the part of the clubs under whose direct management it was held. The speculation failed, because the public could not be induced to pay gate money to witness the immense and business-like slaughter of pigeons. The convention was barren alike of dividends for the stockholders in the scheme and of any single good result which should legitimately have followed a game society's convention.

These are the facts; but in regard to them very diverse views are held. It is argued, on the one hand, that the pigeon is not a game bird; that there is no sufficient reason why it should not be utilized for trap shooting; that it is no more cruel to kill one pigeon than one quail, nor twenty thousand pigeons at the trap than twenty birds in the field; that while the number of congregated shooters is taken into consideration the average number of pigeons per man is not excessive; that no other form of amusement can be substituted for the trap shooting of live birds and; that without some such attraction the convention would not be held.

On the other hand, there is a growing conviction among an annually increasing number of sportsmen that this yearly slaughter of thousands of birds is essentially cruel, unmanly and unworthy of the societies which practice it; that the average sportsman who kills these birds, which have been cooped up and starved for so long a period before they are finally put into the trap, and thrown weak, dazed and helpless into the air to the spot where the gun was pointed before the trap was sprung, requires no special skill; that trap shooting is largely trick shooting; that the motives of those participating in the State shoots are mercenary; that in their eagerness to secure prizes the pigeon shooters are nothing more nor less than "nug hunters"; that if pigeons are not game birds, game associations certainly have no business to trap and shoot them; that the shooting of pigeons is an infatuation with which these game societies are so filled that they wholly fail to do their legitimate work; and that, if pigeon shooting were abolished from the annual conventions, the State associations would receive large accessions of influential supporters, and would then accomplish the ends for which they are professedly organized but which have not been gained.

Another objection to these large pigeon shooting tournaments is one wholly apart from public sentiment, and is recognized by both parties; that is, the growing scarcity of the birds, the consequent difficulty of procuring a sufficient supply and the increased expense. During the past year this objection has presented itself with more force than ever before, and has in some instances practically put a stop to proposed tournaments.

This question of shooting pigeons or not shooting pigeons is one which demands the candid and deliberate consideration of those who have at heart the perpetuity and usefulness of our sportsmen's associations.

The question is not whether pigeon shooting is in itself cruel; it has nothing to do with ordinary pigeon shooting as a form of amusement for individuals and clubs.

The point at issue is simply whether by dispensing with these vast annual trap slaughters of birds the associations of sportsmen in various States cannot accomplish better results, more successfully further the common interests of their clubs, attain a greater prestige and wield a more potent influence.

We invite an expression of views.

WAY DOWN EAST.

Editor Forest and Stream:

In looking over some back numbers of the FOREST AND STREAM, I saw an article from an old friend whom I have known from my boyhood, a most perfect sportsman and without exception, the finest field shot I ever saw. When I say this, and it should come to his ears, I think I can hear him say, as I have heard him reply oftentimes to some person who was declaring that his dog was the best in the world, etc., "Have you seen them all?" I plead I have not seen all the shots, but I have seen a great many in the West and in the East, and I am sure you will agree with me. When I saw the article I thought that your readers down on this rocky-ribbed coast, who feel that they are particularly favored if they can, by hunting hard all day, get three or four brace of woodcock or grouse, would be pleased to hear of some of the bags made a few years ago; and knowing that my friend used to keep an accurate record of his shooting, the idea came into my head that I would ask you to use your persuasive influence and get him to allow you to print them, and if possible, split 'em up into two or three "Bell's, tips and shooting at Shelly, A-bley, Woodville and other places. I can jog my memory when it fails him, which I doubt ever will when shooting talk is going on. I am happy to say I graduated in the class of youngsters that he initiated into the art of shooting. I think I hear him say, "Pretty low in the class, wonder he got through at all," however, I have followed up his instruction of "Shoot away, they are in a darned sight more danger than you" pretty well, when there has been anything to shoot at. Down this way the cover is so thick that we have to, as a friend expresses it, "Shoot at the noise seven-tenths of the time." The person I refer to is James O'bhuy, of Cleveland, O. I hope you may induce him to give your readers what I am sure will be a pleasure to them, a chance to see what shooting used to be in Ohio; and now that we are all scattered and some dead, try and get him to tell us where that spot was where he got seventy-three woodcock in one day, for if I ever get back to Cleveland I want to try it.

Our shooting does not promise to be very great this fall in my neighborhood at least. The spring has been unusually sud-to-day, October 5, snow falling (twelve miles from here this morning it was two inches deep) so woodcock I am afraid will make but a hurried stop on their flight to sunny skies. Yet it may come off warm; if Vennor has predicted cold I am sure it will. Grouse are not plenty, and the cover is thicker than I ever saw it before. Hares are plenty, and we have right royal sport, after woodcock have gone, shooting them over baggies. Foot and sea-ducks are very plenty, but no one eating them, so they take at least, and there is not much

use in shooting them. I am told that in the northern and eastern part of the State deer are quite plenty. Moose are rarely seen. I see by your last article stating a moose was killed at King Lake, Sept. 15. Come, Mr. Stanley, teach this Dr. Porter a lesson, that those who come down here every year and put our game out of season may profit by it. The remarks made in Portland and made by Hono, that four dollars to a warden would take you to a moose, is undoubtedly the case with some. I have heard of one near Enfield, who acts as guide, proposing to furnish canoe, dogs, etc., for a party intending to hunt deer. I can only say to these gentlemen it is profitable for a while, but are you not killing the bird "that laid the golden egg?"

Some other time I may tell you of a poaching scrape or joke on one of our fishing sportsmen. WAD.
"Way Down East," Oct. 5.

ILLINOIS DUCKING GROUNDS.

CHILLICOTHE, Peoria Co., Ill., October, 1891.

Editor Forest and Stream:

If further proof of the usefulness of your paper were necessary the following may illustrate what advantage sportsmen take of its columns. Some time ago "J. W. B." stated in FOREST AND STREAM that he wished to be put in communication with a practical ducker in the West. I replied through your columns, offering to give him the desired information, but to my astonishment thirty-seven letters from all parts of the country, North, South, East and West, found their way to Box K. I replied to several of these, but as my time was limited, and as market shooters please don't print this "pot-hunters" are not usually sufficiently wealthy to secure the services of a private secretary, I resolved to ask your aid in letting your readers know what country I like.

Chillicothe is situated on the west bank of the Illinois River, and has about 1,000 inhabitants, good, bad and indifferent; and has probably more professional hunters among its population than any town of its size in the West. Of game we have almost all varieties—prairie chickens (not very plentiful), quail (any amount), woodcock, jack snipe, plover, ruffed grouse (supply limited), wild turkeys (do); and of water fowl, any quantity and of all kinds, from Canada geese to green-winged teal.

We have, however, no professional guides. One correspondent claimed that I advertised myself as such. If I did I was not aware of it, and am sorry to say that if such were the case FOREST AND STREAM received no consideration for the "ad." There is no one whose business it is to hire out beats and decoys. Still, our hunters are always willing to show any one around and help them to what sport is to be had; though, often very ungratefully, these amateurs will write them up as pot-hunters, men too lazy to work, useless to vagrants, etc.—see "Dydimus" in a late issue of FOREST AND STREAM. By the way, I feel sorry for "Dydimus." He pitches into the clubs, first, who buy lands for their own exclusive right, and when he gets worsted in his communistic arguments, he turns his heavy artillery on the unfortunate market shooters, from whom there is less danger of retaliation. Oh, fie, "Dydimus!" If you will only come "out West" and follow us day after day, we will show you that laziness is no component part of a Western real-sportsman's make-up, and we will show you that such sport as this, is a far better humor with yourself and the world in general.

The weather here has so far been unfavorable for ducking—too warm. The mallards have put in an appearance though there are thousands of blue-wings and some jack snipe. As to the number of ducks a gun can kill in a day, of course much depends on the individual behind the gun, but we consider from fifty to fifty a fair day, and bags of 100 to 125 are not at all rare occurrences. Our heaviest last fall was 215, and we had no wild rice. This year we had a magnificent crop, and the prospects for big bags are good. Twenty-five miles up the river from us there is a chain of lakes, with a hotel on the bank of one (Sanchewine) for the accommodation of hunters. The surrounding country is a grand one for wild fowl shooting, though on account of being advertised it is somewhat overstocked with shooters. The hotel is kept by one "Grubbs," who keeps boats and decoys for hire. His charges are \$1.25 per day for board and use of boat—decoys and pushing extra.

The whole of the Illinois River Valley, in the section, is one vast feeding ground for wild fowl, and one can hardly miss getting good sport at any point he may strike it. I have bunte it from one end to the other and know whereof I write. LUTW.

THE HURLING GROUSE.

MCDONALD'S CORNER, Queen's County, N. Y.

New Brunswick, Canada, Oct. 11.

I SEND you a few game notes from this far-off corner of "Kaucaukia." Duck shooting has been better here this season than at any time during the past five years, and some very heavy bags have been made—mostly "blacks" and teal—it being rather early for the month. Snipe and woodcock are scarce, but during the dimps of the season a few trials of the "hurling" were had. A number of snipe are shot in the evening, sportsmen expect soon to hear the musical "hark" of the wild grouse. During no season in the past fifteen years have ruffed grouse ("brch partridge," we call them here.) been so scarce as now, the fact being probably due to the long continued rains during the hatching season.

A correspondent, writing to your paper in 1890, says he would call an inn an artist who could kill one grouse out of six fired at while on the wing. I would be willing to grant that to any one who could make one successful flying shot in twenty at any grouse. Bret Harte says: "To keep your plow in the furrow when the cattle begin to 'rare' ain't no sure thing," but had he made the first line—"To 'draw a bead' on a partridge when once he gets in the air," the simile would have been far more forcible. I have hunted grouse ever since I could raise a gun—probably about sixteen seasons. During that time I have hunted with men who were nearly certain death if you duck, snipe, pigeon or cock, which attempted to get up within gunshot, but who tried a flying grouse there was always so much "trailed" that it was out of their way of locomotion for them. I do not say that the feat cannot be performed, but I would give five dollars to see it done, and twice that to do it myself, for it has been my one great ambition as a hunting fave, and I have always failed.

We have one consisting fact in connection with the scarcity of grouse this year—the roar of the pot-hunter's brass-banded musket resoundeth not in the land, for he is too comfortably shiftless to buy boats in which to shoot water fowl.

L. I. P.

RUST SPOTS IN GUN BARRELS.

COLUMBUS, O.—Editor Forest and Stream: There has been of late considerable correspondence in your columns in regard to gun rust messes and such. I have nothing to offer by way of recommendation for its extermination, as the inside of my gun barrels is handsomely freckled. What I want to know is this: What will be the effect on the inside of a pair of gun barrels if they are not cleaned out at all after shooting, but put away until the rust in the barrels turns to a dust or powder, as it will; then wipe out if you choose before using again? I have been informed by an old Californian that this was the way to take care of the inside of a pair of gun barrels. I have tried it and find it an exceedingly convenient way, to say the least, and so far am not able to discover that it has in the slightest degree been the means of more elaborately freckling the in-side of my shooters. I would be pleased to hear from some one, if any, who has tried this plan on a new gun.—FRANK N. BRENE.

CENTRAL MICH., Mich.—Editor Forest and Stream: I see that some of your correspondents go to lots of trouble to take care of their guns. Now I am the owner of a fine breech-loader, and have never used a drop of water to clean it with, yet will challenge any one to produce a cleaner or brighter pair of barrels than mine are, inside. In the first place I always clean my gun as soon after I return from shooting as possible, and use a good quality of sewing machine oil to clean out the burned powder and any particles of lead that may be in the barrels; and when they are bright I change the rags for other well saturated with this oil, and "augumint" (almost every hunter knows what that is); and push that through the barrels once or twice, and then put the gun in a dry place until I want to use it again. I find it always clean, without a particle of rust or dark spots on it in any place. Though I find lots of difference in powder, in the amount of labor required to clean out a gun. TOBACCO RIVER.

QUINCY, KY.—Editor Forest and Stream: I always use common coal oil to remove all residuum, and afterward thoroughly polish inside of barrels with an old flannel rag, using a hickory wiping stick, as I think jointed wiping sticks are injurious, the metal joints coming in contact with the delicate works of the breech. Water is an unmitigated nuisance in a gun barrel, as it is nearly impossible to get it out again, therefore I never put it in. Coal oil is a good preventive of rust, and is a good article to remove any dirt, therefore I use it and my gun always looks like a new silver dollar.—H. D.

A HAZY CONCLUSION.—Gilsey House, N. Y., Oct. 15.—Editor Forest and Stream: I have been fooled by finding an advertisement in your paper with regard to ducks and other game in Sullivan County. I have just returned from Eldred, where I spent three days in pursuit of game, and which I did not find, for the very good reason that there was none. All I got after my time was one woodcock and a meadow lark, which were all the birds I saw worth being a charge for. I had a brace of good dogs, and a good guide, who told me to never again go to any place on the strength of such advertisements. They are only catch-pennies, so I think I will most undoubtedly be a guide, as advertised. It would be well if you notify your subscribers not to be fooled as I was.—SOLD.

[We condescend with our correspondent on the harsh fate that overtook him in Sullivan County, but we beg leave to differ with him as to decidedly when he affirms that the note referred to was a "catch-penny," for we have the best of reason for believing the author of that note perfectly sincere and correct in his statement of facts. That our Gilsey House friend found no ducks in Sullivan County is—with all due respect to himself and his guide—no evidence that Sullivan County may not, after all, be a good place to go for the birds. Others have found them there, and others still will find more there. Let not our friend set all men down as liars because on three certain days in October, 1881, he found no ducks in Sullivan County, New York.]

RANGELEY NOTES.—Rangeley, Me., Oct. 10.—The reputation of the Rangeley Lakes for large trout has been maintained the past season. Several have been taken of six and seven, and one of eight pounds. The early fishing was at that could be desired, but for some reason midsummer yielded the poorest results ever known by the anglers. In fact, it is not our friend set all men down as liars because on three certain days in October, 1881, he found no ducks in Sullivan County, New York.]

DERB SLAUGHTER IN THE ADIRONDACKS.—A person has been convicted of the glaring defect of the present game law for the protection of deer. Hundreds, and I might truthfully say, thousands are being killed by driving them into the water with hounds. I would not deny the sportsman who visits the woods in October of needed venison for the camp. But deer are so easily killed in this way, that this clause in the law is subject to great abuse. Hundreds are killed and wasted, and also by pothunters who attempt to get them to market, and being heated by the chase, it is in an unmarketable condition when it arrives there during warm weather. It is not uncommon for parties to kill five or six deer a day. I have known a single party to throw away as many as twelve deer. Four times as many deer are killed in this way as by every other method, including crusting which is a kin to killing them when rendered helpless by being driven into the water. It is not deplorable that a law should stand upon our statute books that is so rapidly despoiling the Adirondacks of its most noble game.—MERRITT.

LIVE QUAIL WANTED.—Any one having live quail for sale, or in a position to secure a large lot of birds, will please communicate particulars to editor of this paper.

CALIFORNIA.—Goleta, Santa Barbara Co., Sept. 30.—Editor Forest and Stream: There was a large hatch of quail here this season, and as the new set out runners are quite numerous after the little beauties. They are the finest birds we have here, and therefore they are sought after by many. We also have plenty of deer, back in the mountains, where civilization has not driven them away. If we get any venison we have to go out camping, which is pleasant here at most times of the year. Myself and a friend took a week's hunt just after the deer law had expired, and succeeded in killing three four-pointers and two spike bucks. We returned home after having enjoyed six days of excellent sport among the antelope.—M. M. B.

SQUIRREL SHOOTERS are advised to have their grip-sacks ready and to read the daily papers. About once a week appear items like the following: "Union City, September 23, 1881.—Squirrels are crossing the Mississippi River south of Hickman fifty miles, in fabulous numbers. They are caught by the dozens by men in skiffs. They enter and pass through corn fields, destroying as they go. They are bearing to the country and hundreds are seen crossing the river, on the Tennessee River, below Point Mason. They are from the interior of Arkansas." "A merchant of White County, Ark., says that immense numbers of squirrels are overrunning the uplands of that State, and, in the absence of corn and nuts, are opening cotton bolls, eating the seed and scattering the cotton on the ground and among the trees. Great quantities of cotton were being wasted in this way."

A MOOSE ON THE TRACK.—An exchange says that a full grown moose of immense size was standing on the track of the E. & N. A. Railway, between Forest and Eaton, Me., one day last week, when a freight train came along. With its great body and heavy wide-spreading antlers, the animal presented an imposing sight. The engineer, carried away by the spirit of the chase, obeyed a sudden impulse and threw the throttle of the locomotive open in an endeavor to run into the huge animal. It is probably fortunate for the train that he was unsuccessful. This moose is supposed to be the last survivor of his race in Washington county.

CHICAGO GAME NOTES.—Chicago, Oct. 15.—Weather cold here at present, thermometer 65. Mallards coming south in thousands, ditto snipe. Every one who owns a gun is out on the marshes. Pigeons are plenty, I shot twenty-two just north of the city yesterday morning before breakfast. Mr. R. A. Turtle, the taxidermist, has some fine specimens of game birds in his rooms, mounted and in dead game cases. Geo. Camel, Sheridan's celebrated scout, was in the city last week, he predicts fine shooting in the "Far West" this season.—TEN BORE.

SHINNEBOK BAY.—Good Ground, L. I.—Ducks are now coming into the bay by thousands; there are already three or four large bodies sitting in the bay on the feeding-grounds, and more coming night and day. We expect to have the law repealed which prevents our shooting but three days per week on Tuesday 25th, so that we can shoot every day after the 25th of October. With plenty of feed and great numbers of ducks already here, we look for a good season.—WILLIAM N. LANE.

GREENO, N. Y., Oct. 10.—This has been a grand day for sport at Long Pond shooting ducks. There have been more ducks killed here to-day than I ever knew so early in October. Several men shot from fifteen to twenty species. I was there myself and had good sport. Snipe have been quite plenty. A friend of mine killed ten the other day. Woodcock shooting not very good yet.—A. E. R.

A FERRIS REWARD.—Ten dollars reward will be paid for the evidence which shall convict any person or persons, in Lowell, Mass., of the use of ferrets contrary to the provisions of law protecting wild game. Any one having such evidence may communicate with City Marshal, of Lowell.

TRAPPED QUAIL IN VIRGINIA.—Editor Forest and Stream: In your issue of October 13 "Frank" wants to know where to come in Virginia to get quail. It is against the law to trap quail in this State at any time.—W. O. W.

KENTUCKY, Quincy, Oct. 16.—There is an abundance of game in this locality. I flushed a flock of twenty quails yesterday. Ducks are coming in. Squirrels are excessively plenty, and are doing considerable damage to the corn crop on the hills. D.

VICKSBURG, Miss., Oct. 12.—On last Saturday afternoon I bagged eleven squirrels, after 3 o'clock, p. m.—MAROONER.

NEW ORLEANS, Oct. 12.—Quail are very plentiful within thirty miles of New Orleans. Teal, duck and venison in market.—S.

To our list of "Catalogues Received," issue of September 29, should be added that of Messrs. Jno. P. Lovell & Sons, Boston, Mass.

DROOY SWANS are wanted by a correspondent.

WARNING TO CORRESPONDENTS.—Editor Forest and Stream: Please warn your correspondents that I and many others of your readers always stop on an article the minute we come to the words "speckled beauties." We don't want to read any further.—YOURS, CAPTAIN.

BOND'S SEOTIONAL BOAT.—W. E. Bond, of Cleveland, Ohio, has made some very acceptable improvements in his boats since they were first brought out. From a common flat bottom skiff with stiff sides he has developed his idea into very handsome, well-fitted boats possessing light weight, speed, carrying capacity, beauty and durability, which are certain to retain for them their deserved popularity. The Bond boats are divided into three classes, ranging from 14ft. up to 16½ft. They have moderately narrow bottoms of well-seasoned, kiln-dried wood saturated with an oil cement, making them impervious to rot of any kind. The sides are of galvanized iron with just the right amount of dead rise on the bottom, and an easy turn to the hinge, in fact approximating to the usual sporting boat in form without the use of many ribs. The boats are taken apart and shipped, where hulkheads and connections are fitted for that purpose, and one end is stowed into the other for transportation. They have an excellent reputation among sportsmen, and are met with in all parts of the world.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER. FRESH WATER. Black Bass, Micropterus salmoides and M. pallidus. Masaculone, Esox nubilus. Pickerel, Esox lucius. Pike or Pickerel, Esox lucius. Pike-perch (wall-eyed pike) Stizostedion americanum, S. griseum, etc. Yellow Perch, Perca flavescens. Striped Bass, Morone chirocentrus. White Bass, Morone americana. Rock Bass, Ambloplites (two species). War-spoon, Choroscyttus gulosus. Spotted Bass, Micropterus nigromaculatus. Bachelier, Pomoxis annularis. Chui, Semotilus corporalis.

SALT WATER. Sea Bass, Centropristis striata. Striped Bass or Rockfish, Morone lineatus. White Perch, Morone americana. Bluefish or Taylor, Pomatomus saltatrix. Scup or Porpie, Stenotomus argenteus. Pollock, Polachtha carbonarius. Tautog or Blackfish, Tautoga onitis. Spanish Mackerel, Cynoscion maculatum. Weakfish or Squeteague, Cynoscion regalis. La Fayette or Spot, Liostomus xanthurus. Channel Bass, Spot or Redfish, Sciaenops ocellatus. Sheepshead, Achoeropus probatocephalus. Kingfish or Barb, Menidia menidia.

I give up fly-fishing; it is a light, voluble, dissipated pursuit. But the ground-bait, with a good steady float, that never bobs without a bite, is an occupation for a Bishop, and in no ways interferes with sermon-making.—SINNEY SMITH.

BLUEFISHING.

BLUEFISHING, by some anglers, is considered but little more sport, but the opinion is generally expressed by some party sportsmen, who never had the pleasure, excitement and hard work of pulling in a twelve pounder, and so continuing until exhaustion compels one to desist. There is no spot along the Atlantic coast that can surpass the Five Fathom Banks for bluefishing. On the 10th day of August, being at Cape May, and nothing on hand save the sole purpose of enjoyment, and passing along Washington street, in front of alphabetical Alderman Ware's office, I was accosted by Colonel James M. Scovel, an occasional contributor to your columns, with the request that I should accompany another limb of the law (Counselor Douglas by name) and himself on a little fishing excursion, to start that evening at 9 o'clock from Denzies's Pier. I consented, and, at the appointed time, was on hand with a basket of lunch, claret, etc. The Colonel and "Dug" (familiarily called) were provided and armed in the same manner.

After getting in a small yawl we pulled out to the little sloop "Vandalia," commanded by Captain Foster, whose crew, as well as their commander, sported the names of "Captain" to wit: Captains York and Rice, to whom we were introduced when we stepped on board.

Owing to the condition of the tide, we were informed that we would be compelled to lay at anchor until 1 o'clock. Upon receiving this information the Colonel turned in. "Dug" and I volunteered to keep the first watch, and the Captain and crew followed the Colonel to the arms of Morpheus. After being comfortably seated on a large coil of rope, lawyer-like, we began swapping yarns, and telling remarkable anecdotes of wonderful witnesses, and disagreeing on most propositions, for the sake of argument and to while away the time, which passed pleasantly, until the Counselor, with one bound, sprang to his feet, and shouted, "What's that?" I listened for a moment and heard a sound, faint at first and gradually growing louder, then sinking away in the distance until all was quiet. "My gracious!" shouted the Counselor, "we must have got adrift and I'd like clear out to the Banks, because I know I heard the automatic buoy on the north bank! Listen, it sounds like a mad bull rushing up the road!" And without further remark he rushed with "precipitation" that was calculated to end in the water, if he had not fortunately grasped the slide on the companion-way, and then shouted, "Turn out, Captain; we're adrift!" The Captain, followed by the crew, hastened on deck, threw his eagle eye (for he was blind in one eye) around the horizon, burst into a hearty laugh and said, "Why, you fool, don't you see the lights of Cape May City on your port side?"

Soon the following continued with but slight intermission, and the crew began to express themselves in a supercilious manner. At last Captain York went down into the cabin to light his pipe. Our ears again were saluted with a loud "halloo." He rushed up, and said, "Why, 'Dug,' you haint got the sense you was born'd with; it's Colonel Scovel a-snorin'!" Captains Foster and Rice moved to throw "Dug" overboard, but I persuaded them to let him live a little while longer. I suggested to grease the Colonel's nostrils with lard, which was done effectually, and he awoke with a loud snore, sweating eternal vengeance.

About 6 a. m. we reached the Banks just as old Sol was peeping from under the horizon, sending heavenward a perfect halo of glory, and making innumerable reflections on the bosom of the then placid Atlantic. Out with the trolling lines—one on each side with out-riggers, and one stern line—all hands eager for the sport. "Dug" with rags tied on every finger, and irrepressible Colonel with a pair of long-legged stockings on his hands in order to prevent the line from cutting. Your humble servant was assigned to one of the out-rigger lines, and had to wait for about five minutes for a bite, when, wia! went the line, as a big fellow rose to the top and tried to swallow the squid. Now commences the sport. The fish, feeling a powerful strain in a direction he don't hanker after, at last makes a break for the boat, and then what a lively time to haul in the slack; but perseverance, muscle and perspiration were a little too much for the voracious monster and, with one jerk, it was latched on the deck. Next the Colonel drew in a large fellow—"Dug" soon followed another, and so on, until I quit, perfectly exhausted.

The Colonel and "Dug" made a bet as to who would make the largest catch. Look varied first on one side and then on the other, until one of the crew of the lightsab was put on board (au old hand as the business) in order to be taken home. "Dug" immediately enlisted him in his service to draw in most of the line and would then catch hold and land the fish. The Colonel stood still for some time, as "Dug" gradually made the score advance, and at last broke nut with "How can you expect me to keep up with you when you have the United States Government, bone, sinew, muscle and the Treasury Department are at your back. In the whole course of my experience I never knew a political party to win who had such odds to contend against." "Dug" still kept on

scoring, and would have eventually been the Colonel had he not commenced to count two for one.

At last even the representative of the U. S. Government was exhausted and cried "quit." The lines were then pulled in, and the little rod beaded homeward under a press of all canvas and good southerly wind, which made the water foam and boil as he rushed through it at about nine knots. Douglas claimed that he beat all the rest—but with the aid of the lightship man—the matter remained in doubt. Still there was good humor all around, as we caught ninety-seven muskellere between sunrise and noon. Capt. York was the luckiest of the party. His stories kept the table in a roar. He would have discounted Billy Emerson had he gone on the stage and he regretted himself that the Cape May Camp Meeting had lost such a "stalwart" exponent when he first went down into the sea in ships. York's jokes were new, and his wit not destitute of Attie sail, nor was his cooking, for never did breakfast bacon taste so sweet as that cooked by "Yorky." One of his favorite songs was:

"A lady lived in Lexington and she was very stiv'ly, and in spite of all her lather she fell in love with a fishman, the great big-roguer with his blundering brogue, The whisky-devouring fishman," etc.

Well, all things have an end, and Walter Scott said, "a head and a foot, and she was dead." Capt. M. P. Jones the "looming bassions fringed with fire" made the sky glorious. Douglas saw the light-house and thought it was an evening star. He said he felt like a big snuff-box. One of ten boats Capt. Foster's Vandalia led the fleet. J. S. M.

CANOEING IN NORTHERN MICHIGAN.

II.—FROM INDIAN RIVER TO CHEBOYGAN.

WORD as to our fleet. Captain manages a good-sized but light clincher boat, sixteen feet long by forty inches beam, painted blue; and on him we impose our camp-chest, tent, and in fact everything else we can shed either by fair means or foul; and what Petie and I fall to get in Captain's net all we try to work off on Woodrow, who has a flat-bottom canoe, of a ducking-pattern, fifteen feet long by about thirty-five inches beam, painted green; while Petie and I each prep ourselves in a fourteen foot thirty-two inch beam lap streak canoe, varnished, and a cross between a Shadow and a Rice Lake, very staunch and seaworthy, and easy under paddle, and built to shoot and fish from as well, consequently has very flat lines, beam extending well to fore and aft. Our fleet does not, perhaps, move in as systematic order as a well-conditioned canoe club, but when it comes to fun, downright solid fun, we are right on deck.

In my last letter we were at Smith's Hotel, at the head of Indian River, where we enjoyed ourselves a couple of days shooting and fishing. Our companion, who "went out to look for a deer," was just as successful as heretofore, but we commence to think he has considerable sand, with the stickiness that he has thus far shown, we have faith that he will yet come out on the top of the heap, and reap his heart's desire.

The early morning finds us up and hustling around, as usual in pursuing our sport, and we all finally get our way in good order. We have before us Indian River, a stream about seven miles long, connecting Burd and Mullett lakes, and although not so crooked nor narrow as Crooked River, still a beautiful stream, and the acres and acres of wild rice (thanks to the Superintendent of the G. R. & I. Ry.) bring the ducks and rail in season in large numbers.

We slowly paddle along, fishing and shooting as we go, until Mullett Lake looms up, and as a stiff breeze is blowing we hoist sail and are off for a run of twelve miles across the lake, toward the head of Indian River, where we find a stream with white caps, looks a little rough. But we all boldly start off, finally bringing around in the lee of a point of land, where Captain and I wait for our lagging brothers who soon come up in good style, when we cruise along together as near as possible for a couple of miles, while the white-capped waves make our little canoes dance right merrily. Bringing up in a little cove we run ashore for dinner. What an appetite! How good this grand air and the exercise make one feel. Again we take to the water. Our wind has not abated in the least, and we are again paddling around, running along together for several miles, when we again swing around in the shelter of a very handsome point of land, called Dodge's Point, and take temporary possession of Mr. Dodge's spring. Petie and I have a liking for springs, we never let one go by default, if it lies anywhere near us, and we know it; have even been known to walk a mile through the woods to drink from a new spring. We voted Mr. Dodge's spring a grand success, and then off again. We now have just one mile to the head of Cheboygan River, and the wind blowing like a split.

We all get under the starting in good order, and without waiting for instructions to get all set up and start. Was it dusty? Well, I should think so; it blew in our faces, all over our clothes, and cleaned the decking as nicely as could be. 'Twas "Trim'er up and let'er go," which we did. We brought up in the head of Cheboygan River, all in good order—burn' a slight moisture—and as enthusiastic as it would be possible for canoeists to be after an exciting and pleasant run. At this point my canoe tried to climb over a ledge of a sideways bar, and before she got her sail over, and her bottom changed. I had before forewarned my canoe to be very gentle, as I thought broke to lead, and had no bad habits, but this little difference of opinion between what the canoe wanted to do and what I expect of her, led me to the conclusion that canoes, like many honest people, cannot be trusted entirely alone at all times to their own inclinations. We form a line of war, and paddle and sail along down Cheboygan River, the widest and deepest of the rivers on this inland route, and a very beautiful stream for navigation. It is eight miles long, the greater part of its distance very deep, and is the outlet to this inland chain of lakes and rivers emptying into the Straits of Mackinac. The lumbering interests here are very considerable, thousands and thousands of feet of logs lying in booms along the banks, in back water bays, or being towed by one of the numerous tugs there for that purpose, or as is quite frequently the case cut loose at the head of the river and allowed to float with the current to their destination, wherever it may be on the river, when they are again safely brought to a standstill by a line of booms, which across the river, and in a jam of this kind we barely escaped, finally bringing up at Cheboygan at supper time, all in good condition, when we make a raid on Mr. Spencer, of the Fountain City House, who takes us in and cares for us in the best possible manner. If ever you go to Cheboygan do not seek the Spencer House, but ascertain where the house kept by Mr. Spencer is, and if you don't get an A. No. 1 bed, a good, clean and well served table,

and a piece of beefsteak of the best (broiled over charcoal), that will just touch the right spot, I will be greatly surprised, and your experience will be decidedly opposite to what mine has been. Cheboygan is a thriving place of three thousand inhabitants, wide awake, and very nicely situated at the mouth of Cheboygan River, on the Straits of Mackinac, with Bois Blanc Island extending along for a number of miles directly opposite, five miles distant across the straits; and to the left far into the straits, a distance of eighteen miles, Mackinac Island can plainly be seen, and the old white fort and houses are quite prominent on a clear day.

We expect to stop here at Cheboygan for a couple of days, perhaps Woodrow "will go out to look for a deer," but the way time will generally be put in would be of little interest—the same old story. I draw the veil, and in my next look out for a black bass trip to Black Lake.

FRANK N. BEEZE.

WHITEFISH TAKE THE HOOK.

TROUT BURROW AT THE BOTTOMS.

OTTAWA, Ill., Oct. 11.

Editor Forest and Stream:

Your favor of the 8th inst. in reference to my article from Escanaba, published in the previous number of FOREST AND STREAM, is just received. I observe in this letter as well as in the editorial note at the foot of the article that the edit' understood me to state that the whitefish took the fly. This is an important mistake. If you will examine the article again you will see that I stated that the whitefish took the hook baited with a minnow when resting on the bottom.

I take the liberty of inclosing a letter from Capt. A. F. Young, a gentleman of much intelligence and observation, in confirmation of the fact that the whitefish take the hook baited with a minnow when lying on the bottom. Capt. Young also corrects my mistake as to the size of Trout Lake. As I had never visited the lake I derived my information from others, hence my mistake.

Capt. Young states a fact as to the habits of the trout in this lake, which I have repeatedly read from others, and that is that the trout there when alarmed secrete themselves or burrow in the light sediment at the bottom of the lake. This habit was so new to me that I did not venture to repeat it lest your readers might refuse to believe the other fish story. Now, when it comes with this additional indorsement I will not longer withhold my recollection. It may be that it is only my ignorance on the subject that made me skeptical, and hence I would like to inquire if there is any record showing that the brook trout are in the habit of secreting themselves in the mud or sedimentary deposit.

J. D. CATON.

ESCANABA, Mich., Oct. 9.

Hon. J. D. Caton:

I see in FOREST AND STREAM of Sept. 29 an article from you about Escanaba, etc. I would say that you have got Trout Lake a good deal too large. It is only one and one-half miles long by not to exceed sixty rods wide. I have seen the trout hide, as described by you, only that we do not see the white substance. The places where they congregate are in the deeper water of the lake. These pools are surrounded by banks of soft sediment, and when the trout become alarmed they dart into it at once, on the same level. You can plainly see the track of each trout by the air bubbles arising through the sediment. This sediment is softer and not so white than the more solid part, and it may become the same in time. There is not anything like sand about it. It feels like muck when you rub it in your hand.

In October, 1890, I took an eight-foot whitefish near the one dook. I had been fishing for bass and had got out of minnows, except two small ones, which I put on the hook, and laid down the rod while I fished with another one for pickerel with a spoon hook. Soon after I saw the tip of the rod going down and took it up and soon had a fine fat whitefish in the boat. Since then I have known the crew of the barge Fred Kelley to take many of them at the end of Dook No. 1, when all was quiet. I don't think the fish are about the docks looking for food. I think they are on their way to their spawning beds up the bay, and that they follow the banks looking along for gravel.

Young Hart can get all the small minnows he wants now. I see the water is full of them—or was on the 5th—about the docks. I hope the whitefish are not coming in yet. If they are, look out for winter rather early.

Mr. Parsonworth, of Green Bay, once told me that he went to Trout Lake with Judge Lord, of St. Louis, and while there the Judge took a trout with a fly that weighed nine pounds after he was dressed and brought out.

I regret very much that you did not get up here before you went home. Now is the time for large black bass on the banks, say four, five and sometimes six pounds each.

A. F. YOAK.

[We can assure Judge Caton that he is not alone in his ignorance of this habit of trout hiding in the bottom, after the manner of the flat fishes and the spotted eel of salt water. We never knew of it before, and can only account for it by supposing that there are no weeds, roots or other hiding places to secrete in. We regard his communication, as well as the one of Captain Young, of great value as contributions to the knowledge of fish life. I think it is one fact that whitefish take the hook is also a new one, and may lead to their being angled for in other places. This fish is not generally known as a feeder upon minnows, and the formation of its mouth would not lead one to suspect it. They are generally credited with feeding entirely upon small crustaceans and insect larva.]

THE BLUEFISH SEASON.—During the early part of the present summer the bluefish were comparatively scarce, but for the past month they have been plenty and of large size all along the coast, from Cape May to Buzzard's Bay. They were particularly scarce in June and July on the coast of New Jersey, and did not come in numbers until the present month. On the 24th of August fishing crew took over six thousand pounds of bluefish at once, the largest capture of New Jersey this year. Reports from Fish Island also say that the fishing has been excellent. Weakfish and other fish have been quite plenty, as well as bluefish.

BASS IN THE POTOMAC.—Camden Station, Baltimore, Oct. 14.—In answer to your correspondent's inquiry, would state that, on two days' notice, I can furnish boat, guide and fresh live bait in unlimited quantity. I would also state for

your information that the fishing at Point of Rocks was never better than at present, I myself having caught in two and one-half hours, fishing his A. N., one bass, weighing five pounds; one, four and one-half, and one four and one quarter, besides a number of smaller fish. Any further information upon the subject will be cheerfully furnished by addressing Frank Tucker, care of McClintock's Express, Camden Station, Baltimore, Md.

BASS FISHING ON BEAR LAKE, MICHIGAN.

WE had been lazily awing in the hammock at a reading room by our general hotelier, the traveling Passenger Agent of this city. By-the-by, this tent was the headquarters of all sportsmen visiting that region during the summer. We were fagged out, the intense heat in the city, with the thermometer reaching to 100 deg. in the shade, had just about exhausted us, and we were enjoying that sweet do-nothing so easily found up in this region.

We must have been half asleep, when the voice of our friend aroused us from our reveries.

"Phil in the morning," was inquiring for you. He is coming up here soon, and wants you to go to Bear Lake with him in the morning for some bass fishing."

This was enough to arouse us. Of all the me we wished to see, and feel his kindly greeting, was Uncle Phil, and the invitation to visit this beautiful lake caused the blood to bound through our veins. Dreams of a struggle with a mighty bass or a giant "long-noise," flitted through our brain in its midnight wanderings. This lake contained both, and we knew it.

Accompanied by the wife and a "elip of the old hook" we were scurrying past the Cushman House just as the conductor gave the signal "All aboard" for the early morning train; we swung on to the steps as it pulled out. Met Uncle Phil on the train and found quite a party going to Bear Lake.

A ten miles ride and we pulled up at McJores, starting off through a beautiful forest roadway to the lake. How refreshing this cool morning air to one just away from the hot city. It soon brought out all the good elements in our large party. Did we not just shout and sing like a lot of young "sixes" over the park. Did not those old woods ring again. Yet I am fain to confess some of the boys were grey-headed. Laugh who may. We had drunk at the fountain of eternal youth—the Pates had favored us—we were going bass fishing on Bear Lake!

A mile and a half walk brought us to a miniature landing and a still smaller steamer owned by Uncle Phil. Where to put us all was the question. Some of us were towed in boats behind, while the ladies were taken aboard the steamer. A part of our company was left at McJores. We went to Earle Island, certainly one of the best, and the most beautiful gem of the woods, and, securing some minnows of Frank Davis, we were soon casting our lines after the bass.

Bites came fast and furious, taking the minnows before we could hook the cunning fellow. We soon caught some good-sized ones, but they did not come up to our standard. We wanted something more than one-pounders, so carefully unhooking them we slipped them into the water again. We could catch all the fish we wanted that ran up to one and two pounds, but we wanted bigger fellows. We knew they were there, for we had seen some weighing four pounds, and picked that ran up to ten pounds taken from this lake. Soon our youngster made a strike and began scrambling. He had hooked a big one, and was fighting him bravely, when the fellow began the aerobic gyrations peculiar to bass. He jumped out of the water, and shook his tail at us in his mad endeavor to rid himself of the cruel steel that was piercing his mouth, and plunged for the further side of the boat. The youngster was losing his nerve. He could not play him longer, and was shouting, "Papa, I can't handle him," and was vainly trying to yank him into the boat. He reached over, gave his rod to me, but between us and a struggling fish we managed to let him slip into the lake again. The biggest fish caught that day. Isn't it funny? The biggest fish always get away!

We had some nice ones in our fish well. Those Mr. Davis came to get for dinner when we fished on, but a storm was gathering, dark clouds had been rolling around us, the mutterings of thunder could be heard in the distance, vital flashes of lightning lit up the darkening skies, and the clouds seemed to come rolling over the hills-tops down toward the lake. We pulled in our anchor and put for the house just in time to miss the drenching storm of rain. We went down to a fish dinner prepared by Mrs. Davis. In a few minutes the darkened heavens gave out blasts of lurid fire. You seemed to almost hear the "snap" of the lightning, while the roar of the thunder following almost instantly was deafening. The winds howled, the woods moaned, the rain came down in torrents and with it came the sleet and snow. The storm suddenly the wind abated, the blackened clouds unrolled, a dazzling ray of sunshine shot athwart the skies and over the blue-misted hills, forming on the dark background "a bow of promise" such as we never saw before, one end of the arc springing from the bosom of the lake, bringing forcibly to mind the oft-told story of the rainbow springing from the pot of gold full of many-tinted jewels.

Did this storm come up suddenly? So as suddenly did it go down; the winds and sunshine dried off the moisture, and we were soon out doors enjoying the sweet air. The storm had been terrifying while it lasted, but it showed the lake in its wilder moods, the beauty of its light and shades, the varying tints coming over its surface from the forest-crowned hills-tops, the voices of nature in the storm as well as in the calm, and above all the voice of its Creator.

It was a day well spent—one of solid enjoyment, one of reflection and adoration. We returned from the lake refreshed and invigorated, and met the remainder of our party at the steambath landing, some of them having good strings of fish. Twenty minutes of brisk walking brought us to the railroad, but no train came; the shadows lengthened, the stars came out and night setled down upon us. The air sensibly cooled and became nipping—the result of the storm. We were hungry, and so bought all the bread, butter and milk which the section boss's wife had in the house. We made two roaring fires and enjoyed ourselves. We sang all the old Irish songs, minstrel melodies, love songs, and even the Blue-tailed fly was well rendered, with scientific accuracy. We had a grand chorus. We had a grand chorus, so we had a grand chorus. How those old forest trees rang out the refrain of those sun-slinging songs! For five hours we waited the coming of that train, and finally learned there had been a big fire away down the line that even burned up the railroad ties and warped the steel rails so that new ones had to be put in, and we will guarantee that the railroad

never carried passengers that grumbled so little as we did, or were so uniformly polite when the conductor collected our fares. But we had been bass fishing all day; that explains it all. Fishermen—aye, ladies, too—that wield the rod and line are, as a rule, good-natured and polite.

NORMAN.

A FISHING CLUB REPORT.

WE are under obligations to Mr. Charles P. Etter for the "Log of Eleventh Annual Cruise of the Second Presbyterian Fishing Club, 1881." The club sails from Philadelphia, and the trip, on the schooner "Samuel Applegate," occupied from July 2 to the 13. The report is illustrated in the most joyful of manners, and the map of the bottom of Delaware River and bay, compiled from explorations of the club, is our plan.

The by-laws of the Second Presbyterian Fishing Club contain some new points, but we will not pick them out, as it would insult the intelligence of our readers to suppose them incapable of this. They are therefore given entire:

Article 1. Put up or shut up.

Article 2. No person shall be entitled to become a member of this club whose moral character will bear the slightest scrutiny.

Article 3. No member shall participate in any annual cruise of the club whose constitution requires more than eighteen hours rest out of the twenty-four.

Article 4. No member shall be allowed to eat any one meal more than three times, no matter how sea-sick he may be.

Article 5. Any member found washing his feet in the dish pan shall be reprimanded by the president; and in case of a second offence shall be expelled.

Article 6. Any brother who shall take more than one dose of fish-hooks during a cruise shall be compelled to throw up (his rig as a member).

Article 7. It shall be the duty of every member to observe to the fullest extent the golden rule (of the club)—viz., to do nothing himself that he can get anybody to do for him.

Article 8. Any member detected using charms, incantations or spells, such as spitting on his hooks, using asafetida or salt, taking a smile, or making use of any other superstitious to draw fish to his line, shall be given the grand bounce.

To follow the 2d P.'s up and down the river would be to give the cuttlelog, which occupies sixty-seven 12mo pages. A crab race was indulged in on the beach. Each man marked a fiddler crab, and at a signal all dropped them into the centre of a ring made in the sand of the beach, and the winning "horse" got over the line first. This crab race is illustrated, as are many other incidents, and while but little is said of the fishing, it is evident that the Second Presbyterian Fishing Club of Philadelphia, is a very lively party, at least when on their annual cruise.

POACHERS IN JAIL.

OUR readers have been kept informed of the doings of the lawless gangs which infest the counties of Onondaga and Oswego, in the State of New York, and how State Game Protector Dodge, of Prospect, has destroyed their nets and brought some of them to punishment. Mr. Dodge and Mr. Geo. Crownhart, proprietor of the Ocean House at South Bay, on Onondaga lake, who has assisted him, have become very unpopular with the sound-bills, and their lives have been threatened. Game Constable Lindley, of Canastota, has also incurred their displeasure, and it is said that a secret meeting was recently held by the poachers at West Vienna, at which it was decided that Lindley should die and Crownhart's holdings should be burned.

On the 7th, Lindley and O. E. Messenger went to Lower South Bay and started to drag the lake for nets. When well out in the lake they heard a signal given from a boat containing several men which had followed them from the bay. The signal was answered from the other side of the lake, and soon another boat containing five men rowed out to meet the other. A short conference was had between the boats, when all two men got into one, and rode up to Lindley and told him that if he had any business matters to arrange to do at once, as his time had come. Lindley heeded his revolver to Messenger, who sat in the stern of the boat, and he prepared his rifle, telling them that the first man that put a foot in his boat would be shot. The two boats again had a consultation, and in the meantime Messenger, who is an expert oarsman, changed places, and they pulled for shore. On the way they were rowed into several lines, but no damage was done. Upon reaching the shore they found their assailants prepared to meet them, formed in line on the bank. Messenger was allowed to pass the line, but upon Lindley's approach they drew their revolvers and told him he would not leave the spot alive. A gentleman who had watched the whole affair from a hotel near by ran down at this juncture and threw the leader one side, allowing Lindley to pass.

Soon after this Mr. Crownhart went to Syracuse and entered a complaint against the gang, most of whom resided near the mouth of the Onondaga river. On the 13th the officers were very successful, and brought seven of the murderous gang—namely, John Lord, Frank Shaw, George Watkins, Albert Shaw, William Laneaster, William Phillips and C. Phillips. Each man was ironed, after being routed out of his nice warm bed, and given a place in the carryall. They arrived in Syracuse about 4 o'clock in the morning, when they were placed in the court house cells. Judge Riegel held them all to bail in the sum of \$600 each to keep the peace. It is probable that some of them will furnish the required bond, but till that time will occupy a dungeon cell.

GOOD STRIPED BASS FISHING.—For the past week there have been some large striped bass, or rockfish, in market, some of which have been caught with rod and reel. Mr. E. P. Hutton, of New York, sent seven to Blackford & Co., which weigh, in the aggregate, 175 pounds. These fish were all caught by him, at Black Island, with rod and reel. The finest lot arrived on Tuesday morning last. They were also captured with the rod by Samuel W. Gould, of West Chatham, Mass. Of seven fish the smallest weighed twenty-six and one-half pounds, with entrails out, and the three largest weighed fifty, fifty-eight and one half and fifty-five one-half pounds each, without their entrails. The pound acts are also taking great numbers, and the markets are well supplied with *Micropterus salmoides* of large size.

Fishculture.

HOW THE DISTILLERIES DESTROY THE FISH.

ORANGE Co., Fla., Aug. 15.

Editor Forest and Stream.

I send you the enclosed letter from a Koutinsky paper graphically descriptive of one of the greatest nuisances that now afflict the Western portion of the United States. But the criminality of the great destruction of fish is only one of the things to be deplored on account of those infernal distilleries. Besides the stench arising from the cattle and hog-pens around them, thereby infecting the air with death-dealing malarial gas, the stock fed on the still slops are most diseased in many instances, or should be, beyond commercial value. As such is the case, the value of the food that it is said that if one-half of the diseased hogs die, which is not infrequently the case, the profits of the remaining half make it quite a profitable business. And all cattle so fed, it is said, will die, and disease is considered a sure profit for market. Yet hundreds and hundreds of them are being fostered constantly upon dealers and consumers in the North and East. This is a subject that most assuredly demands the attention of the National Board of Health.—E. M. MILES.

MINDAO, KY.—For nearly two years the fish in nearly every stream in the State have been destroyed. Every atom of interference in their behalf has resulted in the ignominious failure on the part of the people, and complete triumph of the whisky man. For some years under the auspices of a State Commissioner, the principal streams of the State have received new supplies of choice Western varieties of fish, and the State has expended much labor on the part of the paid servants of the State, as well as much that was contributed by private citizens who felt an interest in forwarding this great project.

But the work has come to naught, and every cent so appropriated has been lost. It is the result of the very successful work of the State Commissioner, and his equally industrious conductors throughout the State. By the hardest persuasion indifferent legislators have been induced to make laws restricting seining and other destructive methods of fishing, and then the people were left untrained to grow accustomed to observe the restraint of the law, and the numerous streams beginning to be peopled with choice native and foreign varieties of splendid fish, and the hopes of the commission and its friends were upon the point of being realized, the ignominious destruction put in their way, and the result of years of experience and labor is destroyed root, and branch, from one end of the State to the other. The same cry comes from Eastern, Southern and Central Kentucky.

The worm of the still, not content with its annual roll of victims of human kind, has also lost its innocent victims of the innocent inhabitants of the water, and the double-distilled poison, from the still and the dead victims of the water fills the air with its noxious vapors for many miles of territory along the fatal stream. The fish are diseased and die, and the water is so polluted as far below the source of poison. I have seen at one time, after a rise in the water, the banks of the Elkriver crowded with eddy-pools of dead and dying fish, weighing from an ounce to the magnificent black bass of four to five pounds. Thousands lie and rot about the banks, and disease and death is rampant along every mile and miles along the course of the stream. This is true of Elkriver is also true of our best streams all over the State, and last week the report came from Frankfort, that the Kentucky is also giving up its victims. Fortunately the seed Governor may now see his eyes and act upon this result. When the election of law was attempted to be vindicated last year at Lexington, and the jury assessed fines and the Judge granted injunctions against the distillers, our credulous Governor, in spite of remonstrances by many sufferers far down the stream, but within the track of its noxious influence, refused to act, and the work of death goes on. With the license this giving remonstrance is useless. The dear old Governor is quoted as saying that "still slop fattens the fishes," and is not a nuisance in any way. The people know better. The health of the State is ruined, and the laws are defied, and the money and time of the State Commissioner is wasted. Years will be required to repeople the streams with fish. Not only the native kinds will be a long time in being replaced, but the work of the Commissioner will have to be done *de novo*, if, indeed, it be worth while to attempt it at all. Not a single cent ought to be expended in this way until a proper relief is afforded, and the child's play of stocking streams and then destroying the fish should cease. Five hundred thousand dollars are paid annually by the citizens of the State for fish that could as well be produced at home. There is no absolute necessity for running stills down the streams. If whisky must be made, and no other disposition can be made of the slop and still from cattle pens than our most beautiful streams into noxious sewers, then let the fish and people seek other means of making whisky. The State Game Commission and the trial and jury and injunctions, etc., that cost the people money and leave us in the end the victims as well as the laughing-stock of the distillers. In Heaven's name let something be done.

VICTIM.

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

The report of the Commissioner from Norway on the Fishery Exhibition at Berlin is as follows: "It is a quarto of 325 pages and 24 plates containing 121 figures."

Mr. Wallen is not a practical fish culturist, and, therefore, is at some disadvantage in his report on this portion of the exhibition. He gets along fairly well in his illustrations made from implements exhibited, but his descriptions are done not so well, and in these of American invention he certainly could not have obtained his information direct. In fishways he does much better, illustrating the more important ones and describing them more perfectly.

The portion devoted to boats and implements of capture is very creditable, although one cannot help wondering why he selected the rather singular Japanese hooks for illustration to the neglect of the splendid collection of aboriginal and other hooks in the exhibit of the United States. It is to be regretted that the fish and products and fish preparations Mr. Wallen is at home. He has devoted much attention to this branch of the fisheries, and represented his country at the Philadelphia Centennial Exhibition, and paid especial attention to the modes of curing and preserving fish food.

FISHERIES OF THE GREAT LAKES.

The Census Bulletin No. 261 gives the statistics of the fisheries of the Great Lakes. In this Prof. Goode has arranged the tables in two series, grouping them by States and by lakes. We learn from Series A, that 5,950 fishermen who earn a livelihood on the lakes. Illinois, 2,100; Michigan, 355; Minnesota, 1,781; Indiana, 200; Indiana, 22; Ohio, 1,046; Pennsylvania, 114; and New York 922. In Series B these men are thus distributed among the lakes: Superior, 414; Michigan, including the fisheries of Mackinac, 1,111; Erie, 1,170; Ontario, 612. The same system of tabulating by States and lakes is carried out with the values of nets and other apparatus, steam boats, vessels, storerooms and wharves, etc. From the Bulletin we learn that the total value of the fishes taken in all the Great Lakes for 1879, based on the prices of fresh fish, was \$1,652,900.

"Den internationale fiskerudstilling [1] Berlin 1876 med seriffet hensyn til ferskvandskulturen, saltvandskulturen [2] produkternes tilberedning og forsendelse.] Med 12 tegninger paa 24 plader. [A] Produkter fra de nordiske og nordamerikanske fiskerier, herunder ogsaa de i Danmark og Norge fiskekulturens Fremgang. [B] Bergen i Norge's bogtrykkeri, 1881."

of which sum the largest yield was from Lake Erie. The yields by lakes were:

Table with 3 columns: Lake Name, Pounds, Superior, Pounds, Ontario. Rows include Erie, Michigan, Wisconsin, New York, Huron and St. Clair.

The amounts arranged by States were: Ohio, 24,924,300; Illinois, 2,937,500; Michigan, 24,013,100; Pennsylvania, 1,253,000; Wisconsin, 10,194,500; Indiana, 1,173,500; New York, 4,070,000; Minnesota, 176,000. Of the values of the different kinds of fish taken we learn as follows:

Table with 3 columns: Fish Name, Pounds, Value. Rows include Whitefish, Lake trout, Lake herring, Sturgeon, and Hard fish.

There are still other tables, as quantities and values of fish sold in a fresh condition, quantities and values of fish salted, frozen, smoked, and the quantities and values of caviare, shrimps and oysters. These are all represented in the double tables, as above noted, and give a complete and comprehensive view of the state of the lake fisheries. The work, like all that is done by Mr. Goode, shows great care in tabulating so as to show at a glance the resources of the lakes and States, the capital invested, and, in fact, gives a complete idea of the fisheries of the lake region.

THE FOOD OF YOUNG FISHERIES.

The investigations of Professor S. A. Forbes into the feed of birds and fishes have thrown much light on the subject. Especially among fishes have the results been surprising. That young garfish, *Lepisosteus*, fed upon *Zetematrona*, or the small long-like forms of life which are often in their smaller stages microscopic, was a new revelation. He has shown conclusively that snickers and other species supposed to be entirely harmless and not to interfere in any way with the growth of valuable fishes, enter into direct competition with the young of the latter, in the struggle for existence, by devouring their food.

We learn from his observations that there is no fish but either directly or indirectly, affects the increase or growth of other forms in the same stream or pond. Therefore, if a species does no good, it does harm. An adult snicker is nearly as long, inhabited by better fish to a limited degree by devouring the food which adults of other species might eat, as worms, etc., but its greatest injury is in the food taken by the young, which Professor Forbes has shown in his articles, in the Bulletin of the Illinois State Laboratory of Natural History and in Forest and Stream, does not differ as widely as does the food of adults. The young of all fresh water fish, even of such piscivorous species as the gars, eat the small forms of animal life known as *Zetematrona*, *Rhizopoda*, etc. The latter forms usually have shells, and the clank of the school-house birds usually have shells, and the young of some of the snickers have the intestines packed with tests of *Difflugia* and *Arcella*. Later Mr. Forbes sent two slides, with some of the intestinal contents for examination.

The slide with food from the intestine of the large scaled mullet, *Micropogonias undulatus*, from Mackinac Creek, contained the following species:

Difflugia globosula.—Shell of rather coarse sand, with larger grains around the mouth; mostly in the shape of the segment of an oval, with the oval part truncated. Most numerous form. The measurements of these shells from 0.09 to 0.19 millimeters long, 0.15 to 0.18 m. broad and 0.108 m. broad at oval end. Six other species were found, and Dr. Ledy said: "It is certainly an interesting observation of Mr. Forbes to discover that the young of snickers should eat the rotifer shells to obtain as nutriment their little stores of protoplasm."

The Kennel.

FIXTURES.

BENCH SHOWS.

September 27, 28, 29 and 30, at London, Ont., London Dog Show. Entries closed September 12. Chas. Lincoln, Superintendent, Tecumseh House, London, Ont.

October 14, 15 and 16, at Lowell, Mass., Lowell Dog Show. Entries closed October 6. Chas. A. Brown, V. S. Foxford, Mass., Superintendent.

FIELD TRIALS.

October 28, 29, 27 and 28 at Masonville, Fayette Co., Pa., via boat on Pittsburgh. Pounds 1000. First annual party. Entries close at Pittsburgh, Pa., October 15. I. R. Shayton, secretary. November 7, at Gilroy, Cal. Field Trials of the Kelly Rod and Gun Club. Entries close November 1. George W. Newman, secretary. November 24, Louisiana State Field Trials. Entries close November 1. Edward Odell, Secretary, New Orleans, La.

For Grand Junction, Tenn., National American Kennel Club's Field Trials. Jas. DeW. Seibert, Columbia, Tenn.

DOG DEALERS.

WE are in constant receipt of communications upon this subject, principally inquiries as to the standing and responsibility of these who advertise animals for sale in our columns. Occasionally we receive a bitter complaint from some one who has—

—or thinks he has—been cheated. Now there is a very simple remedy to be applied, that will at once do away with much of the hazy uncertainty accompanying the buying and selling of dogs, especially when the parties are strangers.

The remedy lies just here. In all transactions between buyer and seller, only the strict rules of business should obtain.

What should we think of a merchant who, seeing an advertisement of goods by a stranger, should send his check for the amount demanded without first satisfying himself that the advertiser was thoroughly responsible? How do you suppose his balance sheet would average on such ventures? We know that many men, who are considered sound upon most subjects, are entirely dull when any one says dog in their presence; and are easily persuaded to overstep the bounds of prudence in their eagerness to secure some canine paragon, whose perfections are glowingly described in a positively worded advertisement. There are also many men of indomitable and quiet lives, who, feeling the need of relaxation, naturally turn to the sports of the field and, all unused to the ways of business, and guileless of the wiles of a wicked world, exceedingly comply with the request of some unscrupulous scoundrel to "send the money" and "God, alas, too late, his man betray." Perhaps an idea of what is proper in the matter would induce them to make inquiry as to the reliability of the advertiser, but as into feeling of delicacy, that leads them to scrupulously avoid wounding the feelings or giving offense to their fellow men, restrains them and they become the dupes of designing knaves, who

know full well that beyond a letter or two of ill-proven gains; are safe from any attempt at recovery of their ill-gotten gains; and, emboldened by success, they continue their swindling operations as long as they can find victims. So great an evil has this become, and so great an extent have these dishonest dealers practiced their tricks, that in justice to honest dealers, summary measures should be at once adopted to put an end to their career. This can easily be accomplished if every one wishing to purchase will take the ordinary precautions that should be observed in any business transaction.

No honest dealer will object to the closest scrutiny regarding the animal he may offer for sale, nor to the fullest inquiry as to his own reliability and responsibility; and no fear of a possibility of wounding any one's sensibilities should deter would-be purchasers from fully satisfying themselves in these respects, of perfect immunity from becoming the victims of fraud.

Before purchasing a dog it is, if possible, very important that you should see him at actual work in the field or game, in order that you may know how he does his work, and learn just how far he has been handled. When this is not practicable, you should receive from his owner minute instructions as to the different words, signs and whistles used, as well as a full description of any peculiarities that he may possess, either natural or acquired. You will also find it greatly to your advantage to become well-acquainted with him before taking him into the fold, particularly if he is young, or has not had experience.

That the complaints of purchasers, who think that they have been cheated, are sometimes unjust or perhaps entirely without the pale of reason, we are well aware. It is often the case that persons who buy a dog are woefully ignorant of everything pertaining to his management, and because their recent purchase will not at once in a faultless manner execute their commands—which probably are couched in language which the poor animal has never heard in his life—they at once pronounce him worthless, and seizing their pen, they write us pages of vilification and abuse of the seller, who very likely is entirely honest and has sent them an animal which is just as represented by him.

Every one who has had much experience with dogs should know that, no matter how perfectly trained the dog may be, in the hands of a stranger, he the man ever so expert a handler; with perhaps the advantage of having witnessed the manner in which his former owner worked him, the animal will not acquit himself nearly so well as when under the eye of his accustomed master. This to one of slight experience is a prolific source of disappointment; and as first impressions are generally the most indelible, often ends in discarding a really worthy animal, whose only fault it is that he cannot at once "off with the old lead and on with the new."

Our remarks have been called forth by the receipt of numerous letters from correspondents in different parts of the country upon this subject. Many of them are too grossly personal and abusive to find a place in our columns, but nearly all of them tell the tale of carelessness that we have endeavored to point with the moral. We trust that our readers will profit by the advice here given, and that we shall have less occasion to allude to this subject in the future.

One word to those who appeal to us to redress their wrongs and we have done. While sympathizing with them and indicating that such things should be, while freely offering our aid to assist them so far as lies in our power, we wish it distinctly understood that we will not prostitute these columns to the use of any man or clique for the furtherance of purely personal ends, nor for quarrels of a personal nature. These matters should never offend the public ear, nor be paraded before the public eye.

It should be unnecessary for us to add that neither personal abuse nor billingsgate will be admitted here, but as we are occasionally afflicted with effusions containing both, we take this opportunity to inform the writers thereof that all articles partaking of this nature are speedily relegated to that bourne from which no manuscript ever returns.

FOX HUNTING AT SPRINGFIELD.

WORCESTER, MASS., Oct. 14, 1881.

Fox hunting and woodcock shooting with the hospitable sportsmen of Springfield, Mass., I must write you. Reaching the city on Tuesday evening, I found myself provided with the necessary implements for a participation in their sport, those gentlemen sought me out and rigged me completely, even to foot gear. Our first day was an enjoyable one, and the party was composed of the two Messrs. Hill, Dr. Williams and myself, our hounds, Don and Benny belonging to Mr. Hill, and good-natured Hory O'Moore, owned by Dr. Williams. I saw good-natured Hory O'Moore, for in all my experience I have never seen such a clever "folksy" foxhound as he is. With a disposition so foreign to the bound family, he is always out on a evening's career and a romp when not at work. We reached the ground late, and the day proving a dry, hot and muggy one, the scent of Reynard, made in his prowlings the night previous, soon found and taken by the dogs, was in an hour or two lost. We had misde for a time, however, and I was becoming sanguine that I had been started, so closely did the hounds rush and give tongue together. In our trap we put up several grouse, but with gunna loaded for the fox, we did not try feathers. One anecdote I must relate of Dr. Williams' Hory. Before he purchased him he was one of a number of hounds that had followed and led a fox. All but good-natured Hory were sent into the hole to draw Reynard out, but none brought him into daylight. At last Hory was put in, and, reaching the fox, looked jaws with him and drew him to the surface and then cleverly killed him. This was the only fox that was ever shot in the country. Hory was sent in again and repeated his first performance. What is most surprising in all this is that the dog in question is of the most gentle disposition and one that would be the last supposed to show so much courage.

Our first day's hunt was a blank one, but the second a fox was started 'bout eleven o'clock by Mr. Bill's Benny, and in company with his Don—Hory O'Moore having been left at home—Reynard was followed two miles and kept running through swamps, over fields and across meadows until killed by Mr. Bill just as he was going through a fence. While this chase was going on our correspondent was trying the woodcock, Mr. Harrington, with his setter Biran, and Dr. Williams, with his pointer Jim, having laid out a little work for me. We found but few woodcocks, and, consequently, but few were killed. A solitary English snipe was run near as and bagged, and a brace of grouse were put up wild and out of range. The day was a pleasant one, barring a shower in the afternoon. In my opinion the flight of woodcock have not come on yet, for we should have met them in the splendid cover that we corded had this week, and a brace of grouse were put up in order to put Mr. Longbill on his migrations. Springfield is full of your friends, Messrs. Editors, and are firm ones. I am now on my way homeward, trying hard to reach it in time to catch an open season.

While at Springfield I saw a charming pair of reds, owned by

Dr. McCallan. They are, I believe, out of Peg Woffington by old Echo. The brace are about a year old, dog and bitch, the bitch of a perfect red and darker than the dog, and not for sale. H. CROOK.

PENNSYLVANIA TRIALS.

WE have received the following circular from the Secretary of the Pennsylvania State Field Trials Association, and trust that we shall have the pleasure to announce next week that the amendments have been adopted, and that the trials will be run at Grand Union immediately after those of the National Association. We have no doubt that they would prove a success, as undoubtedly many sportsmen would enter their dogs for the double event. We are deeply interested in the welfare of the association, and shall await with no little interest a report of their action in the matter.

PITTSBURGH, Oct. 12.—A meeting of the association will be held at the store of J. Palmer O'Neil, Fifth avenue, Pittsburgh, on Saturday, October 22, 1881, at 10 o'clock, a. m., for the purpose of considering amendments to the constitution of the National Association. To examine grounds selected for the fall trials, reported at the meeting held the 12th inst., that there were no birds, and it would be impracticable to run the trials at Elizabethtown as already fixed up. At the meeting on the 22d inst. the propriety of running the trials at Grand Union was considered. The National Association and the Executive Committee will be held at the same place immediately on the adjournment of the above meeting.

I. R. SPAYTON, Secretary.

THE PROPOSED AMENDMENTS TO THE CONSTITUTION OF THE FIRST SECTION OF ARTICLE X. TO BE STRICKEN OUT AND ARTICLE MADE TO READ AS FOLLOWS:

Section 1.—The stakes to be run shall be a Derby, an All-Aged and Club stakes, to be open to setters and pointers only.

Sec. 2.—The trial to be first, second and third prize offered in each stake. The entry fees, forfeit value and nature of prizes; time for closing entries for All-Aged and Club stakes; time and place of holding trials, as well as all details pertaining thereto, shall be determined by the Executive Committee.

The Derby stake shall be run (to be run) on and after the first day of January of the previous year. Entries for the Derby stake of the year 1881 shall close on the 22d day of November, 1881, and entries for the Derby stake of any subsequent year shall close on the first day of April of the year the stake is to be run for.

The All-Aged stake shall be open to dogs of any age.

The Club stake shall be open to dogs of any age, but the dogs must be owned by a member of the association at the time of making the entry; and the trial to be run on the premises of the Club stakes dogs must be handled by their owners. Nothing in this shall be construed so as to prevent a member from purchasing a dog previously entered and handling him in the trials.

COCKERS AND TREED GROUSE.

FRANKLIN, N. X., Oct. 8.

Editor Forest and Stream:

I notice in Sept. 29 issue of Forest and Stream, page 175, "The Bodach," under the heading of "Cockers vs. Yellow Dogs," endeavors to give me a little thrust apropos to cockers being ruffed grouse and shooting ruffed grouse out of trees, etc. In the past I must say to "The Bodach," that from this I am led to believe that he has never enjoyed one of those glorious autumn day's sport among the mountain thickets of our Eastern and Middle States with the jolly, lively little cockers, where it is utterly impossible to work setters or pointers or get even a single wing close. While I do not consider it profitable to enter my opinion on those old veteran grey-haled and vary grouse (weighing sixteen ounces to the pound, if not more) live and dis the rare of old age and natural causes, and never reprehend our talcics or very systems and those savory and delicious old partridge pop-pins? Oh, no! This would not do to leave "The Bodach" to his Lordship's discomfiture when our systems require the mountain air and exercise and there is a lack of other game birds in these sections to supply the vacancy in our larder. Had the shooting of ruffed grouse from trees over the "walker dog" or over the "fistive cocker" the slightest tendency toward exterminating this wary old mountain boomer like the wicked snare or pen field shot wing world, I would as quickly rally to the vetoing of this mountain woodcock sport as I do to every illegitimate or unportantian act.

And now, Theodoric "Theod," I really do not think you need be alarmed as to "tripping over a well-broken brace at every turn," for the many to be found gladdening the hearts and hearts of American sportsmen to-day are not in dangerous tripping quite to each other. Believe, owing to this content being quite a good sized lot of arms, and I will be glad to see you and your young stock; so if you are unnecessarily sensitive over shooting ruffed grouse from the trees, all they will have to do is omit the teaching of that detested part of their education, and they will then have the most successful and sport-giving ruffed grouse and corker hunting country, broken cockers do not easily bought from their possessors, and many will not even loan them. I am led to believe that you are a staunch setter and pointer man, and that your inquiries must have been to setter or pointer men who were justly induced against their sprightly and intelligent little rival, the cocker, for I must have seen him in my neighborhood. If your young stock you would be able to find cockers that would not be worth following a day in the field but many years as well. I am glad that you have had the pleasure even of shooting over an good time since you came to this country, and hope that you may be lucky "tippie" over many more in the future and at last become a firm convert to our faith. I could have convinced you on the pot-pole score but a day or two ago, had I had the pleasure of your company at dinner, and should also have been delighted to have passed you a summons pleasant for your discretion, which I related to you how I took the conceit out of two of those old roosters in a dense hedge and birch thicket, treed by a pair of as nice cockers as you ever saw or as ever outwitted and New York State corker.

M. P. McKeon.

FOXHUNTING IN CANADA.—The Toronto Globe says that in Canada the sport of foxhunting is becoming more and more patronized in the neighborhood of large cities, and although owing to a dearth of foxes the drag has to be used, the chase remains almost as exciting and interesting as ever. In 1865 the Toronto Hunt trials were first held, and have since become an annual affair. The Hendrie, H. Godson and A. Smith, V. S. The kennels, which then contained about five couple of hounds, were situated on Bishop street, but as the city increased in size it became necessary to remove them to Elder street West, where they now are. The presence of the Third Lord Eussell, and his son Lord Hunt, and here, and their commanding officer, the late Col. Jenyns, was for two seasons an efficient M. F. H. At present the club numbers about forty subscribing members, with a pack of hounds numbering six couples. The pack was once again largely attended, several lady equestrians taking part in the run occasionally. The present officials are: Master, Mr. J. G. Wort's Hunte-man; Mr. M. A. Thomas, and Whipper-in, Mr. D. Coffin. John Phelps, a veteran sportsman, has had charge of the hounds ever since the inauguration of the club, and has performed all his exercises in a highly efficient manner. On Thanksgiving day the annual fall atopachases of the club will come off, and having proved successful in former years will, without doubt, prove the same this year.

PIERCE'S GUSSE.—Peekskill, N. Y., Oct. 10.—**Editor Forest and Stream:** In your correspondent's account of the London, Oct. 8th show, he states that you will let setter bitch Gussie, owner of special pup 2, was an inferior specimen. Now, in justice to Gussie, I hope you will allow me space in your columns to say a few words in her defence. She was in no show condition when I expressed her, having just shed out. Besides, she was in whelp to my Larry (Elcho) sex dog and no dog could fall in strangers' hands. This is the first time I ever heard Gussie spoken of indifferently in public or private. She was no "perlor ornament," kept merely for show, but a practical field dog and she worked very hard from the beginning to the closing of every shooting season since a puppy, and is known by many sportsmen as a remarkable bitch in the field. Dr. Rowe called her when at London a capital bitch and worth all the rest of the Irish setters exhibited. When exhibited in New York in 1880 one of the judges, Mr. Hugh Dalziel, told me she was one of the best blood Irish bitches he ever saw, and she then just returned from a hard winter's work in the South and was poor in flesh and coat, consequently she was given only a V. II. C. She was awarded first at Pittsburgh, January, 1881, beating some good ones, including three fine Elcho bitches.—Yours respectfully, Wm. H. PIERCE.

(We cheerfully publish the above, more especially as we remember Gussie as she appeared at the show her last year of capital form, but sadly out of condition, which greatly detracts from a dog's appearance, and will, no doubt, satisfactorily explain the criticism of our reporter.)

LONDON DOG SHOW.—At a meeting of the Committee it was moved by Mr. T. H. Smallman, and seconded by Dr. J. S. Niven, that the names of the dogs in the show be published, and that in every efficient manner in which he conducted the show and for making it a success. Carried.—JONES J. CONNOR, Secretary.

THE MEADOW BROOK HUNT.—The Meadow Brook Hunt had its most enjoyable meet at Minotau, Long Island, last Monday. Owing to the nasty weather, the field was not so large as it should have been. The first event was a drag hunt, which, with the exception of a slight break near the start, was well run and capitally ridden. The class of the "bagman" was not a success from the hunter's standpoint, although the pack would probable pronounce it a decided success, as they killed the fox in a few seconds. The next meet will take place to-day at Island Trees at 4 p. m.

FIELD TRIAL JUDGES.—New York, Oct. 15.—**Editor Forest and Stream:** I have read the letter of Mr. W. A. Coar in your issue this week, and I must say that I am greatly surprised that he should mention as one of the desirable qualifications of a field trial judge that he is a "pointer man." Now, although a pointer man, it strikes me that what we want is not a pointer man, nor a setter man, but a dog man, whose instinct will lead him to place the merits of the pointer and judge their merit entitles them to, regardless of all else.—PONTER MAN.

IMPORTANT SALE OF LAVERACKS.—We have received a letter from Mr. G. C. Goodell announcing the sale to Mr. J. H. Goodell of this set of the pure Laverack setters, Pointe, Petrel, Petrel II., Petrel III., and Fairy II. This is the most important sale of Laverack blood that has ever transpired, and we congratulate Mr. Goodell upon the acquisition of so valuable an addition to his kennel. Included in this sale are the young dog Plantagenet by Dashing Monarch out of Petrel.

FRONT.—Mr. W. A. Strother, Lynchburg, Va., writes us that his bitch Front has won I moved the start, and I greatly surprised that in our Kennel Notes last week. We obtained our information from the National American Kennel Club Stud Book. Is it possible that they could have made a mistake?

LOWELL DOG SHOW.—GRANBY, Ct., Oct. 15.—**Editor Forest and Stream:**—In looking over the "Frenchie Lists" of the coming show to be held at Lowell, I was surprised to find that a breed as numerous and well-recognized as the beagle is should not be assigned a class as other shows have done, but be included to enter class at all through the back door ("miscellaneous class") which is certainly very humiliating to that proud little dog who feels that he is justly entitled to a class of his own as well as his larger brothers—foxhounds—and dislikes to sneak in through an unguarded rear entrance.—N. ELKROK.

QUAIL FOR ROBINS' ISLAND.—The Eastern Field Trials Association have received their first consignment of quail to be turned out on a slight scale, and I must say that I am glad against the possibility of any lack of birds at the coming trials.

KENNEL NOTES.

* Breeder and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.

NAMES CLAIMED.

Diana Royal, La Gracia and Low Pass.—Claimed by Mr. S. B. Dille, of New York, and owned by Mr. W. C. Dille, of New York. A white liver and white bitch puppies by owner's Raker (Rake-Kate) out of owner's White Billy (Blue-Queen).

Four.—Claimed by Mr. S. B. Dille, Rosedale, W. V., for liver and white ticked pointer dog puppy by Ranger (Stake Kate) out of Bella Royal (Bov-Comess Royal).

Don Peter.—Claimed by Richard H. Moody for red and white dog by Mr. Charles Dill out of same owner's Beauty.

Larry.—Claimed by Mr. C. M. Shuhall, Cleveland, O., for red Irish setter dog whelped April 29, 1881, by Mr. McArthur's Dix (Dashi-Fox) out of Nora (Bov-Queen).

Sensation II., Lottie and Judge.—Claimed by Mr. F. Duerr, Orange, N. J., for lemon and white pointer dog and two white puppies by Mr. Charles Dill out of same owner's Beauty.

Wash.—Claimed by Mr. John M. Kinney for liver and white pointer dog whelped Sept. 5, 1881, by Mr. W. A. Costar's Don Royal out of Tabby.

NAMES CHANGED.

Midget to May.—Grandy, Conn., Oct. 10.—In compliance with Mr. Cameron's request I will change the name of beagle bitch Midget (Rattler-Flo) and now claim the name of May for her. W. L. FLOREN.

WHELPS.

Usay.—Mr. W. A. Costar's (Peekskill, N. Y.) black and white setter bitch Busy (Belton-Bramble) whelped 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100.

Clear.—The Borstal Kennel (Morristown, N. Y.) lemon and white pointer bitch Glean (Snapshot-Gypsy) whelped Oct. 14, twelve-six pups by Mr. B. G. Conville's Misch (Sensation-White's) Grist.

Opsey.—Mr. Chas. W. Nutting's (Lyons, Mass.) fox bound bitch Gipsy whelped six pups by Mr. C. M. Shuhall's (Cleveland) Larry.

Lottie.—Mr. T. M. Aldrich's (Providence, R. I.) black and white setter bitch Lottie (champion Drake-Mollie) whelped Oct. 8, six, two dogs and four bitches, by Mr. M. B. L. Bradford's Peto (Prait's Trim-owner's Smut).

BRED.

Beauty-Hero.—Mr. W. W. Nixon's (Leesburg, Va.) Newfoundland bitch Beauty (out of Dr. Shirley Carter's Hero).

Royal Pan-Cratch.—Mr. S. B. Dille's (Rosedale, W. V.) pointer bitch Royal Pan (Hanger-Lolly) to Mr. A. E. Goodfellow's Croxteth (Bang-Jung).

Minnie Sensation.—The Borstal Kennel (Morristown, N. Y.) champion pointer bitch Minnie (Sensation-Whisper) to Westminster's Champion.

Black Boss-Bud III.—Dr. J. S. Niven's (London, Oct.) black corker spaniel bitch Black Boss to Lachine Kennel Club's Bab III, Oct. 5, 1881.

Rose K. Victor.—Mr. Carl Klock's corker spaniel bitch Rose K. Victor's Mr. F. E. Hester's, Oct. 9.

Nell-Flora—Mr. C. Munnhall's (Cleveland, O.) setter bitch Nell (Sum-Flora) by Mr. Sheffield's Dan (Dan-Jiminy) Sept. 9.

Orange-Hite—Mr. C. Munnhall's (New York) has bred his Belle (Seaton) and winner of 1889, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

distances were 300 and 500 yards, 5 rounds at each, and the highest possible 50 points, with a Remington rifle, state model. In the following list of prize winners all the men received silver medals excepted. The scores were as follows: 1, W. F. Higgins, 41; 2, W. A. Kellogg, 37; 3, A. T. Jones, 37; 4, D. Channery, 37; 5, W. A. Kellogg, 36; 6, W. F. Higgins, 35; 7, W. A. Kellogg, 35; 8, A. T. Jones, 35; 9, W. A. Kellogg, 35; 10, W. F. Higgins, 35; 11, W. A. Kellogg, 35; 12, A. T. Jones, 35; 13, W. A. Kellogg, 35; 14, W. F. Higgins, 35; 15, W. A. Kellogg, 35; 16, A. T. Jones, 35; 17, W. A. Kellogg, 35; 18, W. F. Higgins, 35; 19, W. A. Kellogg, 35; 20, A. T. Jones, 35; 21, W. A. Kellogg, 35; 22, W. F. Higgins, 35; 23, W. A. Kellogg, 35; 24, A. T. Jones, 35; 25, W. A. Kellogg, 35; 26, W. F. Higgins, 35; 27, W. A. Kellogg, 35; 28, A. T. Jones, 35; 29, W. A. Kellogg, 35; 30, W. F. Higgins, 35; 31, W. A. Kellogg, 35; 32, A. T. Jones, 35; 33, W. A. Kellogg, 35; 34, W. F. Higgins, 35; 35, W. A. Kellogg, 35; 36, A. T. Jones, 35; 37, W. A. Kellogg, 35; 38, W. F. Higgins, 35; 39, W. A. Kellogg, 35; 40, A. T. Jones, 35; 41, W. A. Kellogg, 35; 42, W. F. Higgins, 35; 43, W. A. Kellogg, 35; 44, A. T. Jones, 35; 45, W. A. Kellogg, 35; 46, W. F. Higgins, 35; 47, W. A. Kellogg, 35; 48, A. T. Jones, 35; 49, W. A. Kellogg, 35; 50, W. F. Higgins, 35; 51, W. A. Kellogg, 35; 52, A. T. Jones, 35; 53, W. A. Kellogg, 35; 54, W. F. Higgins, 35; 55, W. A. Kellogg, 35; 56, A. T. Jones, 35; 57, W. A. Kellogg, 35; 58, W. F. Higgins, 35; 59, W. A. Kellogg, 35; 60, A. T. Jones, 35; 61, W. A. Kellogg, 35; 62, W. F. Higgins, 35; 63, W. A. Kellogg, 35; 64, A. T. Jones, 35; 65, W. A. Kellogg, 35; 66, W. F. Higgins, 35; 67, W. A. Kellogg, 35; 68, A. T. Jones, 35; 69, W. A. Kellogg, 35; 70, W. F. Higgins, 35; 71, W. A. Kellogg, 35; 72, A. T. Jones, 35; 73, W. A. Kellogg, 35; 74, W. F. Higgins, 35; 75, W. A. Kellogg, 35; 76, A. T. Jones, 35; 77, W. A. Kellogg, 35; 78, W. F. Higgins, 35; 79, W. A. Kellogg, 35; 80, A. T. Jones, 35; 81, W. A. Kellogg, 35; 82, W. F. Higgins, 35; 83, W. A. Kellogg, 35; 84, A. T. Jones, 35; 85, W. A. Kellogg, 35; 86, W. F. Higgins, 35; 87, W. A. Kellogg, 35; 88, A. T. Jones, 35; 89, W. A. Kellogg, 35; 90, W. F. Higgins, 35; 91, W. A. Kellogg, 35; 92, A. T. Jones, 35; 93, W. A. Kellogg, 35; 94, W. F. Higgins, 35; 95, W. A. Kellogg, 35; 96, A. T. Jones, 35; 97, W. A. Kellogg, 35; 98, W. F. Higgins, 35; 99, W. A. Kellogg, 35; 100, A. T. Jones, 35.

The disbursement was \$1,300. Dues due by the members to the corps reach the amount of \$610. During the past year the corps lost three members by death. A committee was appointed to make inquiries during the winter for a building for a barracks. The headquarters of the corps for the ensuing year will be in Hoboken, as a general rule changes every year, once in Hoboken and once in Jersey City.

GARDNER MASS., OCTOBER 13.—The members of the Gardner Rifle Club were out in force at the last shoot at Hackmeack Range. The corps was 200 yards, off-hand and seven shots at each target. The disbursement was \$1,300. Dues due by the members to the corps reach the amount of \$610. During the past year the corps lost three members by death. A committee was appointed to make inquiries during the winter for a building for a barracks. The headquarters of the corps for the ensuing year will be in Hoboken, as a general rule changes every year, once in Hoboken and once in Jersey City.

Orange-Hite—Mr. C. Munnhall's (New York) has bred his Belle (Seaton) and winner of 1889, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

On Saturday next there will be at Creedmore an "All Comers" Match, 300 yards, 5 rounds at each, 50 points at each target. The three highest scores (added together) to count; entrance fee 50 cents each, or five taken in one name at the same time for \$2; any rifle, but pistols not allowed. The prizes will be as follows: 1st, \$100; 2nd, \$50; 3rd, \$25; 4th, \$10; 5th, \$5; 6th, \$2.50; 7th, \$1.25; 8th, \$.625; 9th, \$.3125; 10th, \$0.15625. Numerical to be decided by lot. Twenty-eight cash prizes (\$100).

On Saturday, October 23, "All Comers" Match, second day of the annual scores will be taken. The prizes will be as follows: 1st, \$100; 2nd, \$50; 3rd, \$25; 4th, \$10; 5th, \$5; 6th, \$2.50; 7th, \$1.25; 8th, \$.625; 9th, \$.3125; 10th, \$0.15625. Numerical to be decided by lot. Twenty-eight cash prizes (\$100).

ALBANY, Oct. 13.—The pleasant weather drew together quite a number of local and other sportsmen for a regular shoot this afternoon. The first match called was a new life-membership match at 300 yards, which was put on the program with a view of being used for the end of the year. The prizes were as follows: 1st, \$100; 2nd, \$50; 3rd, \$25; 4th, \$10; 5th, \$5; 6th, \$2.50; 7th, \$1.25; 8th, \$.625; 9th, \$.3125; 10th, \$0.15625. Numerical to be decided by lot. Twenty-eight cash prizes (\$100).

At the conclusion of this match the competitors went to the 500 yards firing point to commence the eleventh competition in the Griswood match. When the match was called it was overcast and light rain fell. The competitors were as follows: 1st, \$100; 2nd, \$50; 3rd, \$25; 4th, \$10; 5th, \$5; 6th, \$2.50; 7th, \$1.25; 8th, \$.625; 9th, \$.3125; 10th, \$0.15625. Numerical to be decided by lot. Twenty-eight cash prizes (\$100).

F. Griswood Wild-Game Championship Match—500 Yards.

Next Thursday the John Hodge match at 300 yards and the Life-Membership match at 500 yards will be called. This is much interest on the part

would go clear through the sea, but she would score first, as easily as in a sprint, and how to score is the lesson she has come to teach us. The judges were in a hurry to get the boat started, and she started to make their line outside for a while, to show what was going on. The Hildreth's first line (both in and out) was there, however, and she started to make their line outside for a while, to show what was going on. The Hildreth's first line (both in and out) was there, however, and she started to make their line outside for a while, to show what was going on.

...the sea was nothing great is shown by the fact that the river steamer Day Star, with her two guards, found no trouble in giving the boat a good start. The boat was started by the Hildreth's first line (both in and out) was there, however, and she started to make their line outside for a while, to show what was going on.

scale, and Midge beats Wave by six. This ends the last of this year's races, and the cutter will now be laid up at Newport to scoop her hull and get a new spring. The boat was started by the Hildreth's first line (both in and out) was there, however, and she started to make their line outside for a while, to show what was going on.

THE TRIAL RACES.

POTR big sloops went down the bay last Thursday for a brush. The day was borned out in two races. The first was a trial race for the rest of the season to match against the Canadian Atlanta, because of her fast in ordinary weather and because she is well built and strong. The second was a trial race for the rest of the season to match against the Canadian Atlanta, because of her fast in ordinary weather and because she is well built and strong.

"THE CORINTHIAN YACHTSMAN."

OR Hints on Yachting. By Percy E. Biddis, C. Watson, publisher, 1110 Michigan, London. Under the above title Mr. Biddis already favorably known as author of similar guides through his excellent "How to" Model Yacht Building," has produced a book which will be welcomed by all interested in yacht ownership. The book is a very complete and practical guide to the experiences of an old hand and may be studied with profit even by those supposing themselves proficient. The volume opens with a history of the sport from its infancy, and in the chapters following the great similarity between the sharp and handsome entrance of the old Arab and the bows of the sloop America, something which has probably not escaped those who have visited the yards of the N. Y. C., where an English yachtsman, a close resemblance to the show, teaches a similar conclusion. The progress made in the art is touched upon, then the building and fitting of the hull, the fitting out, revving of gear, handling sails, etc. A number of such of this applies to the details of the cutter, these chapters would give our own sailors a long lift in the art they wish to acquire. It is only, however, a few pages that you may have no use for in the practice of our own waters. Especially commendable is the chapter on navigation, one most interesting feature of the sport may on this side of the Atlantic still prefer to exchange for yachts in the country or cards down below. Handling of yachts in races will prove of particular interest since the Midge has demonstrated that even our "professionals" are but infants in an art compared to the Italians. Taking care of yachts, cruising and a great many useful hints and devices combined into a book for which there is room abroad, and which would be a most valuable addition to the yachtsman's library. We commend it most highly to our readers.

EASTERN YACHT CLUB.—A sweepstakes, open to entries and prizes that will be given a most attractive course. Prizes, \$100 to the first and \$50 to second. Run as follows:

| Yacht | Act. Time | Cor. Time |
|-------------------------|-----------|-----------|
| Addie V. sloop..... | 1:18 | 0 38 |
| Vindex, cutter..... | 1:06 | 0 45 |
| Atlante, sloop..... | 1:00 | 0 37 |
| Active, cutter..... | 1:02 | 0 41 |
| Enterprise, cutter..... | 1:07 | 0 46 |

THE GLEAN.—When the high-flying accounts of the sailing of this Rhode Island cutter in English waters appeared in the Providence Journal we pronounced it a great success. The Glean would have been better. The Glean would have been better. The Glean would have been better.

ONE EFFECT.—A new schooner had just been laid down with a board. After the Midge races orders came to alter to a keel. The keel was altered to a keel. The keel was altered to a keel.

Answers to Correspondents.

NO NOTICE OF ANONYMOUS COMMUNICATIONS.

OLD SUBSCRIBER, Boston.—Please send your address.

M. H. M., Rush, Pa.—Use Persian insect powder cone in three or four days until you get rid of them.

M. C. Geneva, N. Y.—The firm have been presented by the postal authorities on the charge of having obtained money under false pretences.

W. L. N., Ripit, O.—What will rid my dog of fleas? Give me something besides the advertised remedies; I have tried quassa wood, but it does not seem to do the trick. Ans.—Try plenty of green walnut or hickory leaves in his bedding.

W. N. R., Ottawa, Ont.—We mentioned the "Saxon" gun last week. Do not invest in it. We have time and again warned the public that these marvelous bargains offered by speculators in the average field of the American people are not to be snapped at as a trout fly for a fly.

H. C. M., Railway.—In making rod fishing rods are several joints all tapered by hand, or as they run through a machine which gives them the proper taper. Ans.—The cheaper rods are turned in the lathe, and the hand tapered rods are turned in the lathe, and the hand tapered rods are turned in the lathe.

T. G., Wading River, N. Y.—I send you specimens of woodpeckers which are spilling my grapes. They perforate each berry which they touch. Do you know whether there are any other birds which do this? I enclose with them a very small specimen of their work. Ans.—The specimens sent are the yellow bellied woodpecker (Spizella pensilvanica), sometimes called the sap-sucker. They do a great deal of injury to the grape vine and to other fruit to a considerable extent on fruit and on the soft inner bark of trees.

J. M. J., New York.—My pointer dog, six years old, has been singularly afflicted for the past two or three years. At times he will not eat, and at times he will eat but not digest. He has lost weight, and you kindly inform me what the trouble is and prescribe for same? A wild bird roge from in the fresh-water ponds of Georgia. If so, the bird is a wild bird, and it is probably best to keep it in a cage. Ans.—I have no account of a wild bird being made, but presume that it would grow there. Now is the time to plant.

SPORTING LITERATURE.

Brooklyn, N. Y., Oct. 13, 1881.

Editor Forest and Stream: A project is on foot to erect a monument "in-arg-ant" that is commemorative of the genius and worth of "Frank Forester." This is to be surmounted by a life-size statue of "Will Wildwood," whose claims to the honor we think that all "true sportsmen" will acknowledge to be substantial and well founded. We would like to see the trade dollars roll in for the purchase of the statue and we want to have a big one. Will the Forest and Stream kindly give the scheme a lift? ADOLF BENT.

We admire Mr. "Wildwood's" looks exceedingly, and think his poetry is of the highest quality. The "Forest and Stream" has written. Of "Will Wildwood's" postural work we understand that Edgar A. Poe once warmly remarked that "his ("Wildwood's") genius was more conspicuous through his poetry than through his prose writings." We will gladly give our support to the project of erecting the monument to the memory of "Will Wildwood." The idea of making the "Forester" monument a pedestal upon which the "Wildwood" "arg" may be elevated is particularly happy. IRVINGTON, Va., Oct. 10, 1881.

Editor Forest and Stream: In thanking for your salutary remarks to the queer "cranks" who are passing before a small circle as the accepted "medicinas" of the spirit of our time, I know Herbert, admiral what was said, would be a most valuable addition to the yachtsman's library. We commend it most highly to our readers. OLD FRANK.

A CONFESSION.

HERE we have it at last. Says an excellent contemporary, trying his nose into it that all the Midge's victories were so many wins for the sloop. In fairness, however, the Midge should allow time to the Hildreth's first line (both in and out) was there, however, and she started to make their line outside for a while, to show what was going on.

...the sea was nothing great is shown by the fact that the river steamer Day Star, with her two guards, found no trouble in giving the boat a good start. The boat was started by the Hildreth's first line (both in and out) was there, however, and she started to make their line outside for a while, to show what was going on.

RUNNING-WATER NOTES.—We readily consent that the Muses had their birth and rearing in the neighborhood of certain springs and streams. This was a wise provision for their subsequent musical education, since it was intended, no doubt, that they should gather the rudiments from such congenial sources. The Greeks left us no account (as they well might have done) of the technical drill pursued by the nine sisters. However, we may suppose that they wrote off their scores from the fluent dictation of their favorite cascades and streams, and that they scanned, or "sang," all such exercises by the laws of liquid quantity and accent. Perhaps at the same time, the better to measure the feet and mark the cesural pauses, they danced, as they sang, over the rippled surface of the stream. Nor did the Muses alone love springs and running water, but it would seem that the philharmonic societies of their descendants have had their haunts in like localities; or was it mere chance that Homer should have lived by the river Meles (hence Meleagros), or that Plato should have had his retirement

PRINTING AND COMPILING, CHEAPER THAN CAN BE DONE BY ANY OTHER HOUSE IN AMERICA, which does the best work, and guarantees satisfaction. Also, VON CULIN PATENT SPIKE COLLAR AND BOOK.

E. & C. VON CULIN.

P. O. Box 22, Delaware City, Del.

FOR SALE, Llewellyn Setter Lady Flign; whelped 1878; color, B. and V. Tan; is a beauty; has no equal in this section on game; was broken on partridge, chickens, grouse and quail; is very fast, great endurance, staunch, best of nose, good kind disposition. Refer Chicago Field, April 12, 1879, for description of her in field on game. She is by Carlowitz and Queen Bess. For a hunter and breeder there are few like her offered for sale. Price, \$150. Some of her stock and pedigree will make a good Champion Gladstone, price \$50. Native lemon and white Setter Bligh, 3 years old, hatched on quail and snipe, is staunch, good nose, price \$75. 1 Gordon Setter Dog Jim, 15 months old, color B. and Tan, staunch on game, price \$50; Gordon Setter Bligh, sister to Jim, 18 months, will make a good runner, price \$35 (from noted dogs). Address H. B. VON DER SMITH, Lancaster, Pa. Oct. 20-11.

FOR SALE—A very handsome brace of orange and white setters, 17 months old; evenly marked; partly broken; have been hunted on quail and woodcock; full pedigree. They come from the best strains of pedigree dogs in the country. Owner's reason for selling them is so old to work them. Will sell very reasonable if taken at once. They are just right for this fall's shooting. For further particulars address THOS. M. SMITH, 90 Montgomery street, Jersey City. Oct. 20-11.

FOR SALE—Two handsome setter bitches, one white and orange, by champion Leicester (Moore's) ex Mills Belle, 15 months old; the other, Orange, by the native setter Prince out of Victoria Warwick-Polly, 15 months old, trained. Price, \$35 each. Address Dr. W. HUBBELL, Concord Depot, Campbell county, Va. Oct. 18, 1881. Oct. 20-11.

A VERY FINE NEWFOUNDLAND DOG, black and white, age 3 years; does some of the best work; is a good ducking dog and watch dog, and fond of children; price, \$35. Also a very fine setter bitch, very staunch, in the field, price, \$20. Address W. J. MORTON, Portsmouth, Va. Oct. 20-11.

PURE BLOOD TRIAL SETTERS FOR SALE. Leah by Royd-out of Lily H., born 1878; very handsome, blue B. Iron; Kate and Clara, blue and lemon Belton, 15 months old; Besse, blue and Ar. male, sister to Yeours. Countess, just right for trainer. For full pedigree and particulars address E. A. DIFFENDEFFER, 15 Sulphur st., Lancaster, Pa. Oct. 20-11.

WANTEN—To exchange a pointer dog eleven months old; fensation stock; yard broken; just right to take the field; (he is the finest young pointer I ever saw and I want to make a prize winner) for a young red W. Chesapeake Bay dog. DUCKS, Poughkeepsie, N. Y. Oct. 20-11.

FOR SALE, beautiful pair of bitch pups, liver and white, 3 months old; very healthy; out of Lou (gd. N. Y.) by Guss (gd. pup, N. Y.) (C. SEWELL, Tarrytown, N. Y. Oct. 20-11.

MANN'S Trolling Spoons.

Sixty varieties manufactured, suitable for Trolling for all kinds of fish that will take an artificial bait, and adapted for any lake or river in the United States.

Our Perfect Revolving Spoon is undoubtedly the best general spoon for taking fish ever offered to the public. Three sizes made—No. 30 for bass, pike, pickerel, or any fish under five pounds weight; No. 21 for large fish, and the best spoon ever made for salmon trout; No. 22 excellent for deep water fishing. Beware of imitations. None genuine except JOHN H. MANN'S name stamped on every spoon.

Sold wholesale and retail by the principal dealers in Fishing Tackle.

ORANGE JUDD CO.

PUBLISH THIS DAY,
New enlarged edition of Batty's "How to Hunt and Trap," Containing full instructions for hunting Buffalo, Elk, Moose, Antelope, Bear, Fox, Grouse, Quail, Partridge, Ducks, Woodcock, Snipe, and all the other Game, Waterfowl, etc. Also the Locality where Game abounds. The new edition is re-written, containing additional chapters on choke-boring and game localities, and is illustrated with many new engravings, 32 mo., tinted paper. Price, post-paid, \$1.50.
A new and Enlarged edition of Farm Homes, In-woods and Out-woods, By Mrs. E. H. Leland. Illustrated. This charming book has met with universal favor from every quarter. Mrs. Leland has shown in this volume that she is unquestionably one of the most talented and brilliant of lady writers on matters pertaining to the farm, garden and household. The work has met with universal favor. The enlarged edition of the work contains new chapters on "The Rearing and Training of Children," "Rules for Right Living," etc., etc. These fresh chapters are, if possible, more crisp, practical and interesting than the others already published. We have issued no former work which has received the universal recognition of the press, as has Mrs. Leland's "Farm Homes." Price, post-paid, \$1.50.

GUNPOWDER!
 Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S Gunpowder Mills, established in 1892, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:
Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. cansisters.
Dupont's Eagle Bucking.—Nos. 1 (coarse) to 5 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting; with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. cansisters and 6 $\frac{1}{2}$ and 12 $\frac{1}{2}$ lb. kegs.
Dupont's Choice Bore.—Specially adapted for "Choice Bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 5, No. 1 being the coarsest. Packed in 6 $\frac{1}{2}$ lb. kegs and 1 lb. cansisters.
Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. cansisters and 6 $\frac{1}{2}$ lb. kegs.
Dupont's Rifle E.g.—"Sea-Shooting."—FFG, and FFG, the FFG for long-range rifle shooting, the FFG and FFG for general use, burning strong and moist. Packed in $\frac{1}{2}$ lb., 1 lb. and 5 lb. cansisters, 6 $\frac{1}{2}$, 12 $\frac{1}{2}$ and 25 lb. kegs. Fg coarse, FFG, fine.
Dupont's Sporting, Mining, Supreme and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Bisset, Cannon, Morse, Mammuth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.
 Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. No. 15—Use none but DUPONT'S Fg. or FFG. for long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came out conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."
 They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Fly Rods; length of cast, 67 $\frac{1}{2}$ ft. The Sea World Special Prize was won with one of our 11 $\frac{1}{2}$ ft. 10 oz. General Rods; length of cast, 75 ft. Our rods are considered superior to all others by those who have seen or used them. Send stamp for catalogue, with Mass. Fish and Game Law.

Ammunition, Etc.

The Hazard Powder Co.,
 MANUFACTURERS OF
Gunpowder

Hazard's "Electric Powder."
 Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square cansisters of one pound each.

Hazard's "American Sporting."
 Nos. 1 (fine) to 6 (coarse). In 1 lb. cansisters and 6 $\frac{1}{2}$ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Black Shooting."
 Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. cansisters and 6 $\frac{1}{2}$ and 12 $\frac{1}{2}$ lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it runs any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
 FFG, FFG and "Sea Shooting" FFG in kegs of 25, 12 $\frac{1}{2}$ and 6 $\frac{1}{2}$ lbs. and cans of 5 lbs. FFG is also packed in 1 and $\frac{1}{2}$ lb. cansisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FFG is the standard $\frac{1}{2}$ lbs. Powder of the country.

TO NEW YORK GAME PROTECTORS.

GENTLEMEN: There are eight of you, and as your appointments seem to have been made without the slightest regard to your geographical distribution, it is unfortunate that not one resides south of Columbia County. Of course you can travel, and as you are all appointed for the State at large this would be no obstacle if your allowances were liberal enough to permit of constant motion. **FOREST AND STREAM** has steadily claimed that one of your number should be resident in New York city to watch the markets, and another on Long Island, the home of the poacher.

This not being the case we now call your attention to the following facts: Quail are systematically snared on Long Island from Oct. 20 to 30 in order to have a good number on hand for sale at the beginning of the season, Nov. 1. We would suggest that two or three of your number should attend to this matter, and if you will call at this office we will give you a list of the most prominent points for observation.

The professional fishermen on the Hudson continually violate the law prohibiting the capture of striped bass less than half a pound weight. This is the case especially between Yonkers and Peekskill. It is done openly every day at this season of the year when the small fish are numerous. It is sincerely to be hoped that you will take some action in this matter.

IN FRANKLIN, Essex County, N. J., a man named Wolf shot and fatally wounded a young girl of seventeen with a supposed unloaded shot-gun, which he pointed at her in joke. It is said that the murderer has not been arrested but "deeply deplors his rash act." It can scarcely be doubted that this young idiot, as well as all the other fools belonging to his class, know that a gun, whether loaded or unloaded, should never be pointed at any person or any thing, that it is not intended to shoot. The proper place for all such people is behind the gratings of a lunatic asylum. The sad part of the matter is that people who perpetrate such crimes are often not discovered to be unfit to have their liberty until they have accomplished the killing or maiming of some of their unfortunate friends. The man who has committed this act, while probably not guilty of murder, has, by the law of New Jersey, certainly committed manslaughter, and should be tried and punished for that crime.

We have preached the necessity of the most scrupulous care in the handling of firearms for, lo, these many years, and the more we have to do with them the more afraid of them in careless hands do we become. We have had in our time some rather narrow escapes from others, and nothing is more annoying to us than to see any one who neglects the care which we believe to be necessary in handling a gun. It is not, however, to sportsmen that accidents most often happen. They have, most of them, learned how to use the arms that furnish them with so much pleasure. It should be made a felony to point any firearm at a human being, and, to our notion, the hanging of the first half-dozen individuals found guilty of the act would have a marvelously salutary effect. We commend this subject to such of our readers as occupy chairs in the legislative bodies in the various States of the Union.

THE INTERNATIONAL RIFLE MATCH COMPANY.—During the past week a somewhat curious corporation has been brought into existence in this city. It is styled, the "International Rifle Match Company, Limited." According to the certificate of incorporation on file in the office of the Supreme Court, it is organized under the act of February 17, 1848, "to authorize the formation of corporations for manufacturing, mining, mechanical or chemical purposes." Under which of these several heads the new concern is to take place it would be difficult to say, unless it be that it is intended to "manufacture" bullseyes. One clause of the articles of incorporation declares, "The object and nature of the business for which said company is to be formed is the holding of Grand International Rifle Matches between the British, Scotch and Irish rifle teams and the best American marksmen, and the place thereof and the locality of its business are to be the County of New York." To carry out these laudable purposes a capital of \$30,000 is named in shares of \$100 each and three trustees are to manage the business of the

company for twenty years. The incorporators named are John H. Brown, Richard A. Saalfeld, George W. De Lano and Orlean H. Dodworth. The last named gentleman does not figure in the Directory, so we cannot give his business. The first name appears ten times over, so there is too much liberty of choice given. Mr. Saalfeld is a music publisher, and Mr. De Lano is a lawyer. We know nothing about the concern and care less. If international matches worthy of any respect and notice are to be fought in the future, it will be after the Britishers get over their dread of things American in a competitive way, and then by spontaneous, voluntary action, and not by the efforts of any set of rifle match dry-nurses.

FLORIDA GAME RESORTS.—We have in hand an excellent article on Florida game resorts from the pen of "Al Fresco." This will be printed next week; those who are contemplating a trip to Florida this winter should not fail to see it.

IS SWEEPSTAKE SHOOTING GAMBLING?

GAMING is defined to be "the act of playing a game for a stake." A game I understand to be any game, sport, race or contest.

By the early common law gaming was not illegal. As early as the reign of Henry VIII. statutes made certain forms of gaming illegal, and the courts refused to enforce contracts "contrary to public policy or good morals." Lord Mansfield, in 1778, refused to enforce a wager made as to the sex of the Chevalier D'Eon. The Court of Kings Bench, in 1790, sustained an action on a wager as to whether or not a wagon had been purchased. Thus there were lawful wagers and unlawful wagers; they were both wagers, however.

To-day we look upon gambling as unlawful, therefore it is fair and natural not to call that transaction gambling which the courts will recognize as a legal contract. Gambling may be defined to be illegal wagering or gaming. Would the courts to-day decide that the winner of a sweepstake is entitled to recover the stake from the stakeholder? If they would decide in the negative, then to shoot for a sweepstake is to gamble.

The English statute on gaming, 8 and 9 Vict., declares all contracts, by way of wagering or gaming, to be void, except "subscriptions, contributions, or agreements to subscribe or contribute for or toward any plate, prize or sum of money to be awarded to the winner of any lawful game, sport, pastime or exercise." In 1848 a case came up under this statute, in which it was decided that a foot-race was a lawful game, sport, etc., and if two men agree to run a foot-race, and each of them deposits £10 with a third person, the whole £20 to be paid over to the winner, that the agreement on which the money was deposited was legal, and that the £20 belonged to the winner.

On the understanding that competitive shooting is a lawful game, sport, etc., under the clause of exceptions in this statute, to shoot for a sweepstake would be legal, and therefore it would not be gambling. Under the Maine statute entitled "An act to prevent gaming for money or property," it was decided, in 1841, that money bet by the respective owners of two horses, and deposited in the hands of a stakeholder, and paid by the stakeholder to the winner, could be recovered by the loser. Under this statute, to shoot for a sweepstake would be illegal, and therefore it would be gambling.

The New York statute on this subject declares to be void "all wagers, bets or stakes made to depend upon any race or upon any gaming by lot or chance, or upon any lot, chance, casualty or unknown or contingent event whatever." Under this statute again, to shoot for a sweepstake would be to gamble.

The New York statute expresses, more or less accurately, the law as to gaming in many, if not in most of the States. Whether or not certain acts will constitute gambling is not a question of opinion or of abstract moral reasoning, but it is a question of law, and it depends upon the law of each State whether or not, in that State, to shoot for a sweepstake is to gamble. **W. B.**

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newscasters throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by Em. Terquem, 16 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, October 27.

THE UNPRECEDENTED DEMAND FOR FOREST AND STREAM during the past two weeks has taken us by surprise, and we sincerely regret that we were able to supply neither our friends who called for them at the office, nor the orders from new dealers. Notwithstanding the fact that an unusually large edition was printed last week, we have been since Monday without any copies. This state of things shall not occur again, as we have made arrangements to still further increase the edition printed, so that there shall be enough to go round.

EASTERN FIELD TRIALS.—The gentlemen having charge of the interests of the Eastern Field Trials will leave no stone unturned to secure a successful meeting. Although there are a large number of native birds on the island, five hundred quail from Indian Territory have been secured and will be turned down as soon as received. The first consignment has already been turned loose, and more are expected in a few days. The heart-breaking briar thickets are being "grid-ironed" with wide paths through their length and breadth, and will not give a tittle of the trouble caused last year. Everything now looks promising for a capital meeting, and, judging by the quality of the dogs entered and the well-known probity of the judges, we predict that the winners will have no easy thing, and that their laurels will be well worth the winning.

The Sportsman Courier.

PLOVER.

Charadrius marmoratus.

Now is the Autumn's rormal time. When woods are ting'd with Autumn's brush, When livery groves are bright with gold...

The silver fret-work of the roost Gleams in the early morning light; Batmy and brisk the air is toasting...

Where the salt meadows wide and far Sweep seaward to the sandy bar; Where pebbled inlet of the Bay Is riotous with the willow's plait...

But where thy rolling downs outspread, O wild Moutain! thy grassy plain; And where the Shinnec hills overlook The vast expanse of the main...

First a new speck across the sky, A cloudy shadow, drifting aer, But soon a musical, soft cry! And soon a myriad wings appear!

O, brother sportsman! has the earth Such thrilling charm to match with this— A moment with such rapture fill'd, An hour of such unbounded bliss?

Shelton Island, Oct. 3.

ISAAC McLELLAN.

MINNESOTA PIN AND FEATHER.

Editor Forest and Stream:

Your columns are searched so frequently for reliable information about game of different sorts and the localities of its greatest abundance...

The great northwest was an unknown land to me, and I longed for a sniff of its rare and bracing air. As the hart paneth after the water brooks...

The town of about 2,000 inhabitants is prettily locate l on the lower end of Saak Lake, ten miles long, from which, the day after my arrival, I took three pickerel and eight Oswego bass...

When the wind is in the North, do it go forth; When the wind is in the East, the fishes bite the least; When the wind is in the South, it blows the bait in the fishes' mouth; When the wind is in the West, the fishes bite the best.

My shooting at Saak Centre was done in company with Geo. M. Bishop, a merchant and sportsman, to whom I was indebted for many friendly attentions. We sallied out one morning for Westport Pass, famous for its morning and evening flights of ducks...

At any rate he decided to shake us up, and almost in sight of town, going down a little bank toward a big mud hole, adroitly managed to upset the wagon. But it was a

slow and easy performance, giving me ample time as I sidled "down and out" to deposit my gun on a dry and safe spot, and to arrange my corpus as a cushion for B., who made the spread and weight of his appreciation of my consideration felt without hesitation. Probably the reason for my forgetting to tell Mrs. B. of my tender care for her husband's person...

About five miles out we turned off the road into a wheat stubble and in a trice raised a covey of "chickens." We had equally good luck in nearly every similar field we traversed, and ought to have made double the score we did. My gun spent some time and much powder in getting used to the novel game, and Gipsy was balked and confused by B.'s old pointer, Dan, who, although a matchless duck retriever, is an infernal nuisance in the field.

Rice got out of his wagon once to find a covey he had marked down, and when Gipsy waded it, B. and I jumped out and walked up, as R. said his team would stand. Very soon after we began to fire. A considerable clatter at the rear turned our attention just in time to see the tail-board of our wagon disappearing at top speed over the brow of a ridge. R. and B. hastened out of sight in hot pursuit, while Dan, who would leave his master sooner than a fallen bird, busied himself bringing the slain to hand...

We arrived without further incident at Westport Pass in time for the evening shooting, but as my companions feared, the ducks were not flying. The long, narrow sparsely wooded ridge, between a lake on the south and an open marsh extending to an immense wild rice field to the north, is the finest vantage ground imaginable for the sport. Thousands of mallards in small flocks were constantly rising from the rice, circling around and dropping down again. We got a fine shot at evening, slept at a house near by, and tried our luck again in the early morning, but had no success.

Mr. Bishop's business requiring him to be at home at noon next day, we could not close the fields much on our return. We saw a good many geese in flight, and one lock heading toward us, we got out of the wagon to give them a passing salute. The old ones fled off, but the young ones kept straight on overhead, and we brought two of them to the ground. Our score was twenty-one pinnated grouse, four sharp-tailed grouse, two geese, three mallards, four broad-bills, one wood-drake and one jack rabbit.

My sporting experience was very brief, but demonstrated the game of this section affeld and affea to be plentiful, and its capture not at all difficult or arduous. If one is on "chickens" alone intent he should be there before September 1st. For ducks the best time is in October, and only as every sportsman would read—amusing, sketchy and illustrated. An artist would be indispensable—one with a dash of humor in his pencil. Then two others with some knowledge of yachting and camp life, and, above all, no cranky, notional chap, no eccentricities—a polite train for rudeness and selfishness. A party of four, with a determination to make such a trip pleasant, harmonious and profitable to health, and economical, could have a lovely time. The writer being an old camper, a yachtsman, and a swimmer, with his sort of life, would give the necessary time and attention to the outfit, aided by the suggestions of the other members of the party.

New York, Oct. 19, 1881. H. H. THOMPSON.

WHO WANTS TO GO?

New York, Oct. 11, 1881.

Editor Forest and Stream:

I have had a notion to go South and get rid of the cold weather, slush, snow, sleet and smiffles this winter; and the recollections of a pleasant phase of camp life about Tampa Bay, Florida, some years ago, comes to me suggestively. To go alone would be unsocial, dull and not to be thought of. To get together just the right kind of fellows is not easy to do, where harmony is such an essential element. I want but three others: and with a view to perpetuate the pleasant recollections, we would write a book, and such a one as every sportsman would read—amusing, sketchy and illustrated. An artist would be indispensable—one with a dash of humor in his pencil. Then two others with some knowledge of yachting and camp life, and, above all, no cranky, notional chap, no eccentricities—a polite train for rudeness and selfishness. A party of four, with a determination to make such a trip pleasant, harmonious and profitable to health, and economical, could have a lovely time. The writer being an old camper, a yachtsman, and a swimmer, with his sort of life, would give the necessary time and attention to the outfit, aided by the suggestions of the other members of the party.

The first thing to be considered is the proper kind of a boat for the purpose, and to get such a one it would be necessary to build not an expensive, but a cheap, roomy, light-draft centre-board craft, something of the sharpie order—say, thirty-five feet long, good freeboard, to give depth; a light-built cabin, with accommodations for four; a galley to come under cabin deck forward, lockers for storage, a roomy cockpit, schooner or yawl rigged.

Table with 2 columns: Item description and Price. Items include boat equipped with awnings, provisions for 4 men, one colored gentleman, freight on board, and tent and camp equipment.

The amount for provisions may seem small, but it must be borne in mind that the table can be beautifully supplied with fish and game, the \$200 representing principally groceries, and salt and canned meats.

Such a boat as we would build would be so admirably adapted to the waters and so efficient for almost any purpose that she would sell probably much nearer cost than the figures named. This boat, by the way, would be safe and staunch for outside runs from port to port in any ordinary weather, would be comfortable, dry and safe. The cabin deck would afford storage room for tent and poles, the lockers around the cockpit for camp cooking trays. Such a boat can be built and rigged for about \$400. The \$200 would be for galley and cabin outfit. Her light draft would permit of her being beached in front of the camp, and when afloat would afford a cosy home. The undersigned having had a weakness all his life for boats, and having built half a hundred of all sizes and types, flatters himself he knows what to build to all this bill to the letter. Has camped out, fished and hunted in Florida, and knows the requirements to make such an expedition a success. The thing he don't know how to do is to get along pleasantly with a selfish, disagreeable, lazy "crank," who will neither fish nor cut bait; and it is considerable of a lottery to draw four prizes—i. e., four fellows who can get along pleasantly and smoothly together, and every man to his allotted share of the work; for such an enterprise means hearty, healthy and vigorous occupation with plenty of time, however, when in camp, to enjoy the dolce far niente and sense of perfect rest far away from politics, telegrams, mortgages and double and payable. Just imagine the sense of utter freedom and untrammelled release of choikers, coats buttoned to the chin, narrow slacks, tight trousers and expense of a box at the theatre and suppers afterward at Delmonico's. No man can stay in New York at any such limited expense; to say nothing of getting rid of snow, ice, chills and slush of a winter in the city. Now, who says wig-wag to this "feeler" thrown out to see what will come of it, and whether four congenial fellows cannot be found to carry out the id— The writer will lodge his credentials with the editors of the FOREST AND STREAM. SIN BAD.

IN CURRITUCK AND DARE.

As the season for fowling draws near the natives, who have been during the summer engaged in trucking and fishing, begin to prepare for fowling. Boats are put in order; stool ducks are overhauled and repainted; an extra feed of corn is now and then given to the decoy geese so as to have them "hearty"; guns are oiled and repaired, and engagements made with managers of the shooting clubs, as "waiters" on the eluh sportsmen; and water dogs, that have had to shift for themselves all summer and have had a hard time fighting ticks and fleas, begin to receive some attention.

The favorite water dog here is the Chesapeake dog, as they are strong, intelligent and faithful, and are unsurpassed retrievers. They are just the color of wild grass in shooting season. Wonderful stories are told of their sagacity. Some years ago Mr. Bodine, of New York city, a veteran sportsman, Col. Wilson Hollowell, of Pasquotank county in this State, and a Mr. Cadwell, of Currituck, were shooting canvas backs on Morgan Island in Currituck Sound. Mr. Bodine went into a blind at the south end of the island, and as he was troubled with a tinge of rheumatism when exposed, Cadwell loaned him his Chesapeake bitch to bring in his birds. Col. Hollowell and Cadwell went to the north end of the island, about half a mile distant, and all three were soon hard at it and had good sport. It was very cold and the ice was very thick near the shore, and at last the bitch "Bonny" began to hang back when Mr. Bodine killed a bird, and it was only by speaking crossly to her that she would go into the water. After a while the dog disappeared after every shot, but soon came back bringing a canvas-back, and several times brought in two and laid them on the shore. He continued firing all day, and when the sun went down launched his skiff and started to take in the other sportsmen. He picked up quite a number of ducks that Bonny had failed to bring in, and on counting found he had about two dozen more ducks than he was entitled to, judging from his count and the amount of ammunition he had fired away. He was puzzled to account for the overplus, but thought perhaps chance shots had killed more than he had calculated upon. He soon reached the stands of Hollowell and Cadwell, and they got their traps together to embark in the skiff. But when they looked for their game they discovered that their thirty odd canvas-backs had dwindled down to about a dozen. Cadwell had waded out in long boots on the shoal and picked up the fowl as they were shot and had thrown them on the bank among the rushes. He began to swear, and abuse the unknown thief who had stolen his game. But when Mr. Bodine related his experience, and they called Bonny to accompany them on the beach, the name of the name of the man who was the real thief. She had run across the island after every shot that Mr. Bodine fired, and stolen a duck from the pile of the other sportsmen to avoid going into the cold, icy water.

A descendant of this same bitch, by the same name, is famous as a retriever, and has been known to bring in three dead ducks at a time and to dive in deep water after crippled ducks and bring out two at a time. She will count the ducks as they fall, and will not rest satisfied until she brings them in when sent out. She usually had her own little family of pups, which sold readily for ten dollars each to the native gunners. Wreck, another celebrated bitch of Albemarle and Chesapeake stock mixed, has been known to swim one hundred yards out into the ocean during stormy weather and bring in a crippled beach bird. Both these dogs have been secured by the Kitty Hawk Club for breeding purposes.

These dogs would be a good breed to attach to the Life Saving Stations, as they can easily be trained to bring in a line. I have seen them go out in the shoals and drive in the beach cattle and ponies when wanted by their owners. I presume this is the only country in the world where people use a boat and water dog to drive up their stock. Some of the hot game out two miles from shore and dive their heads under the water after the duck grass, which is very nutritious. Fish feed on it, and the native gunners tell me that the grass, which has almost disappeared near the shore during the late long dry weather, will grow up again as soon as the mullet season is over and it is too cold for cattle and ponies to feed on.

The season is very backward, on account of the dry hot weather, and very few ducks have made their appearance. But a few days of cold weather will bring them in their usual numbers, no doubt. The coming season promises to be a good one, I think. Very few native gunners will shoot this season for a living. Many of them have gone into the new life saving stations, and the Kitty Hawk Club has en-

gaged about thirty of them as "waiters" or boatmen, while the shooting points are all brought up by clubs. A few will shoot from batteries, but it is cold, hard work to lie on your back in a battery all day out in the open sound; and very few men are strong enough to stand many seasons of this kind of shooting. The Elizabeth City and Norfolk Railroad and Edenton Extension of the same have also drawn many of the Currituckers and Dareites to work on the road, as wages have been high and the contractors have paid ready cash, which is something new in the history of railroad construction in North Carolina, and the only road ever built in the State that has not begun by asking State, county or town aid before commencing work.

I recently went over the line of the road from near Currituck Court House to Edenton, carrying dog, gun and fishing-tackle, and found good sport and the study of the ways and manners of the people interesting. I was always welcome to every house, and my contributions of game and fish were always received with thanks and considered a full equivalent for a meal or lodging; and it was seldom I could prevail upon anyone to take any money. The houses are generally comfortable as the houses of the country are in the same means at the North. As the climate is so much milder of course they do not need such tight houses as the Northern farmers; and the open log stables would shock a fastidious Northern farmer's eye. But, perhaps, the people and stock are as healthy as they are North. Chills and fever is the prevailing disease, but it is of a mild form, and those who use rain or juniper water are free from malarial troubles. The people are prosperous also; and I doubt if debt is as general among them as among the same class North, and is usually found gathered about the post office or barroom of the southern village—a class of humans I do not admire. The taverns are characterized by dirt, fleas, bugs, greasy food, bad coffee, saucy darkey help and high prices. I advise all sportsmen traveling through this country to avoid the towns and stop with the farmers. The barrooms in the towns are fearful dens. Black and white drink at the same bar and on the same dirty green-glass tumblers. Ice is an unknown luxury, except in one or two of the larger towns, and there they employ the same dirty, fony bar tenders, as in the smaller towns, and my journey through the country the question of prohibition or its prohibition was arising in the minds of the people; and the giant minds of the village politicians were bared at work on the question. The election came off while I was in Pasquotank county, and the State went against prohibition by an overwhelming majority of about 150,000. The darkeys went against it to a man. They were told that it was an entering wedge to taking away their liberties, and that the Democratic Governor and other leaders of that party were in favor of the law. That was enough for them. In fact, it is an old tried principle with the average darkey to vote "Jes toder way" from old Mars, and den I know is kerect." On the morning of the day of the election on the prohibition question I overheard a conversation between a big darkey named Jim and one of the scions of the old chivalry. The scion was anxious to have some garden truck planted, and was trying to hire Jim to do it, but no inducements he could hold out would induce Jim to work on election day. He offered to double his wages. No, no. He consented to do it by promising a plug of tobacco to go. He strengthened up by a profit of a good dinner, and a drink at night. All to no purpose. At last the darkey impatiently said: "Boss, dis is 'lection day, and I can't miss neb' heah, nobow. Why, boss, I would leab a 'coon up a tree to go to 'lection." The scion knew that settled it; and went off sadly to plant his own truck.

I hear there are a goodly number of Democratic darkeys in the South, but have not yet found any. They are Republican to a man, and the darkey who has the courage to vote the Democratic ticket at a regular election must have considerable back-bone. I heard of a good story illustrating the feeling among them toward what they call "traitors." One of the villages they have two darkey churches, a Methodist and a Baptist, and there had been a strong contest among them as to which church should have the strongest membership. They had taken about all the colored people within a radius of several miles, and in their rivalry had not been very particular as to the character of some of the new members. At last one Jack Skinner, a desperate hard case, proclaimed the cause of joining the Baptist church, and he had violated all the Commandments several times, but some of the members of the church decided that they could pray off all his sins, and concluded to let him in on his promise to acknowledge all his numerous transgressions. It took several nights to draw them all out, and a heap of hard praying to wash them off. Some of his confessions caused some scandal, involving more or less the character of some of the "sistering" of the flock. But the elders were bound to have him whole record. At last he said he had had all his sins but one, and he never forgave an unpardonable sin that he had committed that was. The elders told him it must come out, and assured him that they would pray it off. He was very reluctant, and after laboring over him several hours, the old boss elder got impatient and gave Jack a cutt beside the head, and said: "See heah, yer, we can't fool wid you all night. Out wid it! Out wid it!" At last poor Jack faltered out that in the late election he had voted the Democratic ticket. This was too much. They could pray off all his sins but that. As soon as the elders saw there was a general yell of execration and a rush for him from all corners, Jack had to make a break for the woods to save his carcass, and has never been seen in that part of the country since.

It is amusing in traveling along the line of the railroad to hear the boasting and bragging of the people in the towns and villages. There are many Raymond Sellers, who see millions where a practical man could see only bankruptcy. Each town puts in a claim for future greatness, Currituck

Court House, which is about six miles from the roof, is to have a branch road to that point, and expects to cut off from Elizabeth City all her lower Sound trade. Here the sportsmen from Norfolk will come to breathe the pure air and bathe in the Sound. Stock and truck will all come through here. The suggestion that it is about a mile to deep water from shore is met by the prediction that Senator Matt Ransom will get an appropriation through the next Congress to have a ship ditch dug out to the main channel. "It would cost about a million dollars."

At Camden Court House they went with pride to their big oak, under which a whole Sunday-school picnic can find shelter; to the beautiful Pasquotank, whose dark waters are full of fish; to the rich swamp land, which only needs State aid to become a perfect Egypt. And then Matt Ransom will get a little appropriation of a quarter of a million to dig the river a little deeper from Elizabeth City up to the Old Dominion steamer can come here, and, presto, change! There you have your metropolis.

At Elizabeth City they call your attention to the splendid harbor, magnificent wharves, big stores, new process cotton factory, the ship-yard, steam mills, lower Sound trade, to the lines of steamers to Newbern, Washington, Roanoke River, and other points; to the fact that it is the terminus of the old Daniel Canal, which only needs the help of Senator Matt Ransom to secure an appropriation of about a million to be a ship canal; and where is the rival town that has any show with their city?

Ten miles further on we reach Hertford, where they claim they are nearer to the Alligator, Scuppernon River and the big fisheries on the lower Albemarle Sound, and Durand's Neck, the garden spot of eastern North Carolina. Here are forests of virgin timber near at hand. They point with pride to the new academy and float-bridge that proves the engineering talent of its people. They also used a small appropriation of a few hundred thousand to clear some dangerous obstructions out of the Perquimans River, but Matt Ransom will fix that at the next session of Congress.

Woodville, further on, puts in its claim to future greatness, as it is high and dry and a good country base of it. At Edenton, which is to be the grand terminus of the railroad, they laugh to scorn the claims of the other towns. Here all the trade of eastern North Carolina is to centre. Steamboats are to run to the Scuppernon, Roanoke, Cashir, Chowan, and Alligator rivers. They, too, have an academy and a harbor, which only needs the use of a bridge about half the time to keep a channel open to deep water in the sound. But Senator Ransom has promised to fix that matter. All these towns, however, need Northern capital and energy to develop their immense resources. The experience and judgment will be furnished on the spot. I understand that the railroad boom has struck the people on the other side of the Sound, and I shall make a tramp among them when the weather gets a little cooler.

In the meantime I shall remain on the coast, making my headquarters here in Kitty Hawk, which has the advantages of post office, telegraph, store, good fishing, shooting and a bracing air that is free from malaria. I wish to thank some one for the Annual Book of the Michigan Sportsmen's Association," which I find very interesting.

JOHN BRONXON.

A TRIP TO HATHAN BOG.

ON September 6 we left Sherbrooke, in the Province of Quebec, by the International train for Lake Megantic, on our annual hunting and fishing excursion. At Cookshire we met our genial friend, Charles Pennoyer, Esq., and Albert W. Pope, brother of the Minister of Agriculture, who accompanied us to the lake, where we were soon enjoying one of Jerry Ham's comfortable suppers. The distance from Sherbrooke to Megantic is seventy miles, over a first-class road, but as our train takes the lower part of the freight as well as passenger traffic, the trip occupies nearly five hours. Here we met Majors Ramage and McMillin, (the latter of the late Confederate service,) both jolly, whole-souled companions, and last, but not least, Captain John B. McDonald, known to every frequenter of the lake as "John Boston," to distinguish him from the numerous John McDonalds, with whom that part of Compton county abounds. John deserves more than a passing notice. He is the pioneer of Lake Megantic. On our first trip, twenty years ago, he was the only white man we met, and the only occupant of the lake shore, except old Pamee, an Indian, whose hut was near the head of the lake. Pamee has long since departed to the happy hunting grounds, but we recollect when the profusion of moose relics in the vicinity of his hut gave evidence of his prowess in the chase.

On the occasion referred to, John Boston, then Mayor of three townships, (the united townships of Hampden, Whitton and Marston,) was our guide, counsellor, and general factotum, and proprietor of the open "dug out" around the lake. He paddled his own canoe, when he could, but when the current of the Chandiere failed to run smoothly, had an utter disregard for pole and paddle and, with rope over his shoulder, took the towpath up the middle of the river. At such times he didn't wear kilts, they would have been superfluous, but you'd have been kilt with laughter to have seen John take frequent involuntary headers over the granite boulders. The river, however, they got the bolder he got, and we finally had the satisfaction of seeing the broad expanse of Lake Megantic. Time had dealt gently with John Boston. He appears hale and hearty as when we first knew him, when the flavor of the flatstoup on which we cooked our trout only seemed to increase his appetite. May he long continue so. When he has crossed the "one more river" many on this side will mourn his departure. Many of the old settlers in this part of the country bear the same name, and there are various ways of distinguishing them. Once, when holding an election at Winslow, fifteen miles distant from the lake, it became necessary to swear in one Angus McLeod as special constable, and as there were several of the same name on the voters' list, we asked him how we should distinguish him from the others. "Put me down Angus McLeod, P. S.," said he. "P. S., what's that for?" "Piper's son," said Angus, and the signature of "Angus McLeod, P. S.," appeared in the election returns. These old settlers are natives of the Hebrides Islands, and the Gaelic language is generally spoken. Some of them are toly ignorant of an English word.

The site of the present village of Agnes used to be our regular camping grounds for several years, and we venture to say there is scarcely a rod of it upon which our campfires have not been lighted, or a portion of our impediments placed. It lies at the outlet of the lake, upon both sides of the Chandiere River, and is the present terminus of the In-

ternational Railway, soon to be extended to Mooshead Lake, Me., and by connection with the Bangor and Pisataquis and other railroads, from a direct line between the Atlantic and Western Canada, and will effect a saving in distance of some three hundred miles as compared with existing roads. It contains the large steam saw mills of the Berlin Mills Co., of Maine, who ship a large quantity of lumber by rail. It also contains four hotels and several stores. The Priee of Wales Hotel, by Major McAnally, is very pleasantly situated upon the lake shore, and is liberally patronized by transient guests. The criterion, by Mr. Morrison, is also pleasantly situated upon the opposite side of the river. The trout fishing is good here in September, when the fish go into the river to spawn, and no prettier fish swims than one of these fresh run trout, with its bright crimson sides. The fishing last September was very good, and many catches of ten to thirty pounds to a rod were made in an hour or two from the vicinity of the railway bridge. In the swift water they afford excellent sport, being large and gamey, usually running from one to three pounds.

As the little steambog was not on hand we waited a day, and, as machinery has to be worked up to the head of the lake, distant twelve miles. Both sides of the lake are now settled, and though rough and stony near the shore the land is very good a little way back. The scenery is very fine, especially the background formed by Megantic Mountain near the head of Victoria Bay, and the view of the boundary-line mountains looking toward the head of the lake from the residences of Majors McNinu and Ramage. The trolling for lake trout or "lunge" is good in June and October, and the favorite trolling ground is off Sandy Point rather more than half way up the lake. Three or four years ago this point, in company with Capt. Thomas, of Wmbleton farm, we took, by trolling, over 300 pounds of dressed lunge in two days, lying by from ten o'clock until tree. The largest we caught weighed fourteen pounds. On the west shore near the head of the lake is the steam saw and grist mill, of J. E. Myers, the first mill erected at the lake. Mr. Myers is a French-Canadian with a New England experience, and a mechanical genius. Nearly everything connected with his engine and machinery he can make and repair, and is never stuck in providing anything that any ordinary mechanic can turn out in wood or metal. He is a Justice of the Peace, and has a sufficient knowledge of medicine to prevent him from poisoning himself or friends with any of the drugs or chemicals of which he keeps a liberal supply, and dispenses when required. His mill is used principally to supply local demand. Within a mile or two and back from the lake is the village of Piopolis formed by Papee Zoaves. Across to the head of the lake, and we drop anchor at the Pamee cary. A few rods above here, a Mr. Thut, of Toronto, is erecting a large and very substantial steam mill. He owns a tract of land between Megantic and Spider lakes. His lumber supply will be principally from Spider. In connection with his mill Messrs. McLeigh and Wright, spool and bobbin manufacturers, of Beebe Plain, will also run a mill for the manufacture of white birch, a large supply of which as well as poplar exists at Spider. The Messrs. Leonard, of Winslow, are cutting a quantity of poplar for shipment to the States. White birch sells for twenty-five to forty cents per cord standing. Mr. Thut has a large and just completed steambog with fifteen horse power engine for the use of his mill, but which will make regular trips through the lakes. A team here carried our traps across the Pamee portage to Spider Lake, a distance of one mile, for twenty-five cents per load, cheap at double the amount. Here we meet our guide, S. D. Ball, better known as "Dew," and, after a two-mile row, are singly installed in our own shanty, beautifully situated upon a point commanding a view of every part of the lake. Before us lie the boundary-line mountains, and from one part of the lake we can distinctly trace the boundary line over three separate mountain peaks, looking like a swath mowed through the forests.

Spider Lake (Indian name Maccaenamack) is from four to five miles in length, with deep bays or indentations, radiating like the legs of a spider. It abounds in bass and a species of white fish, the latter of which sometimes run two pounds weight, also cuss, chub and trout. The trout are found in the inlet or upper Spider River in a small stream on the north-east side of the lake, and in June in the lower river between Spider and Kush lakes. The general course of the lake is east and west or at right angles with Megantic. Between the two lakes as the stream runs lies Rush Lake, but as this course is some two or three miles longer it is seldom followed, a portage of three-quarters of a mile being necessary to reach Spider. There are now four or five settlers round Spider Lake so that to get large game it is necessary to go three or four miles up the river, but as some party had anticipated us in this we concluded to remain at our shanty, and spend a day in fishing and in preparing our traps. Every rod of land, the cloud shadows are chasing each other over the boundary mountains. The setting sun bathes in sunshine Big Megantic Mountain, and the twilight comes on so gradually that the transition from light to darkness is scarcely perceptible. The loons are calling each other on the lake, and regrettably we retire to rest, for if the loons know anything we shall have wind to-morrow, and we want to do some trolling before the lake gets rotten.

After several days' fishing and shooting with fair success, we concluded to go through to Hathan bog, in Maine, and Ball spent a couple of days in blazing a line and hauling through a small bog in the evening. The bog is a large tract of land of tobacco couldn't be shifted from one jaw to the other without danger of a capsiz. On the 19th we started from the upper river, and after a six-hours' tramp over the mountains reached the bog, distant four or five miles, about 3 P. M. Our party consisted of four men, owing to the difficult nature of the route, were unable to carry anything but provisions, light cotton tent, one blanket and firearms. Large game was plentiful, and it was necessary to keep very quiet. The tracks of deer and moose were everywhere. Every rod of ground in the vicinity of the bog and its inlet was tracked like a cattle pasture, and numbers of fresh-cut paths through the moss led to the water on all sides. We concluded to camp on the "burnt land," some two miles lower down, where we could pick up camp wood without being obliged to use an axe. While two of us took the range the other two, with the traps, took the boat through the bog and down the outlet. In doing so we were obliged to haul the boat over a very strongly constructed beaver dams, the upper one of which floods the bog to a depth of five feet, making a sheet of water about a quarter of a mile across, which was covered with lily-pads. These pads had been eaten by the moose through the whole extent of the bog. The lower dam, constructed some distance below the other, is very substantially built at a point where it has the support of two large granite boulders, and is evidently to prevent the tota

escape of water in the event of the upper dam being unable to withstand the pressure. Both these dams are covered with a dense growth of grass and bushes. Ball said the upper one was an old one when he built it, some fifteen years ago. Under each of these we cast some fine trout. One was pitched a little back and the other about two and a half miles above the uppermost of the chain of ponds in Maine. There five consist of ponds, and several minor ones, may be struck with in a circumference of a mile, namely: Arno d. Crosby, Mosehoun, Horseshoe and Hathian B. & C. All a pond with trout, while Arno d. and Crosby contain "lung." The waters of all unite and form the principal tributary of the chain of ponds. In rear of our camp stands the finest arctic ledge we have ever seen. Near the edge fissures extend to a depth of twenty thirty feet, with smooth perpendicular sides. God help the fisher—or any other man—who should fall into one of these fissures. Unaided, his chances of escape would be small, and he would be left with a scorpianus not made with hands.

At night two of us slipped up a jack-light and went back to the bog. The night was warm and perfectly still. The oozy of the owl and the alarm signal of the beaver were the only sounds. We had never heard the beaver before, and when the alarm was given so close that the water almost splashed over us, it caused a shift in the back and our hand took a better grasp of the rifle. It is given by slapping the tail paddle-like on the water, and the sound is similar to that of a twenty pound stone thro' into deep water. On our return we heard a large moose walking through the marsh of fish, occasionally stopping to feed or to snore. It kept just within the edge of the timber, and although we remained perfectly motionless, and were for ten minutes within one hundred feet, we failed to get a sight of it. We tried for two nights more to get a shot at it, but without success. On nearly every stream moose tracks were seen in which the water was still muddy. Several deer were also seen, one a very large buck, with antlers seven or eight pronged. One of our party was within shooting distance, and raised the sight of his rifle to three hundred yards. Afterward he managed to get some bushes between them and got within sixty yards, when he fired, forgetting to lower the sight. He then fired a second shot, the buck in each case merely looking round at the crack of the rifle. A third shot must have touched his ear, for giving his head a savage shake he started for the timber. The same day we had a head drawn up in another buck, standing in a tan-rack grove, and lost his shot by waiting for him to come out into the open, which he didn't.

Trout in the vicinity of our camp were abundant. On the last evening Ball took out over thirty in a few minutes with the fly, without moving the position of his boat. Our supply of bread and pork being exhausted, we took our back track on the 23d, making the distance from the head of the Fishan Bog to the Soldier in four hours, and reaching the Chaudiere at ten o'clock the same night, feeling that we had exercised enough for one day, and next morning at 9:30 were back in Sherbrooke. We shot some beautiful specimens of the Canada grouse on our return trip. To any one wishing to make this trip we would recommend our guide, S. D. Ball, whose post office address is Agnes Lake, Meganatic, P. Q. He charges two dollars per day. He has a perfect knowledge of the country, and can always lay out on good hunting and fishing. The trout on all these ponds take the fly well, and there is plenty of large game, the open season for which, in this Province, is from September 1 to February 1. It is now close season for trout and lung.

D. THOMAS.

THE "TARRAPIN" BEFORE THE HOUSE.

YORKTOWNS, Va., Oct. 17.

Editor Forest & Stream:

I see that the Pot Luck Club has spoken, and decided that the turtle is both fish and game—the most wonderful decision, and never equalled save in the sportsman's fables. When the birds of the air and the beasts of the field are hunted, the open season for them, but when wishing to take aid with it, passed himself, it alternately for a game and a bird, but being caught w. Mr. Christ Just for his life. After hearing all the testimony Mr. Daniel E. Owl, presiding, gave it is his opinion that the bat was both beast and fowl, and ordered his release—a decision that so pleased the bat that he took his bow with the owl in a hollow tree and their descendants dwell to other in peace and amity to this day.

While on this subject I send you a speech delivered in the Virginia Legislature in support of the members in support of the treaty that the terrapin is game, and I leave it to the sportsmen which is right—the President of the Pot Luck Club or the Virginia.

By the way, we ever call them turtles down here, but terrapins. Just here I may add that Colonel Bangardner, of Staunton, offers a bottle of his cele rated wisky, warranted sweet and strong, to the man that will make the best terrapin. "Terrapin"—the call of the FOREST AND STREAM to be the up.

Mr. Speaker: The speech I the Roman poplance cried to Mark Anthony and Marcus Brutus. I inclose it. Here it is:

Mr. Speaker:

A bill, having for its object the marking and specifying the close season for catching and killing turtles and terrapins, has just been introduced by the gentleman from Rockbridge who asks that it be referred to the Committee on Game, of which I have the honor to be chairman. To this disposition of the bill the gentleman from Gloucester objects, on the ground that turtles and terrapins are fish and not game, and the bill should be sent to the Committee on Fish and Oysters.

On Chesapeake Bay and its tributaries, says the honorable gentleman, turtles and terrapins are frequently captured many miles out at sea in nets or with artificial hook and line, as all other members of the finny tribe are, and, therefore, they are fish and nothing else but fish.

Sir, I have the profoundest respect for the gentleman's opinion. As a lawyer he has achieved not only a State but a National reputation; but even in opposing a bill's point against the shield of Pelides, take issue with him. Sir, I am no lawyer, I don't even understand enough of law to keep out of its meshes, but I will answer his sophistries with a few plain, unconvertible facts; and, as the old saw bath it, facts are a stubborn things.

Is the turtle a fish? I opine not. Down in the lowlands of the Potomac River, where I came from, the darkies have dogs trained to hunt terrapins, when they come up on dry land to deposit their eggs, and when they find them the cunning bark like the dog catching a squirrel, or had held a "pigeon." Now I ask the House did they ever hear of a fish being hunted with dogs?

Who does not know that a turtle has four legs, those legs feet, and these feet are armed with claws like a cat's, a panther's or a lion's? Has the gentleman from Gloucester ever seen a fish with talons? I throw not!

It is well known that a turtle can be kept in a cellar for us, as even months, with no water. Can a fish live without water? Yes; sir, it has grown into a proverb that it can't. And yet the gentleman says the turtle is a fish!

Do we not know that we may cut off a turtle's head and he wouldn't die until the sun goes down. Suppose, now, some modern Joshua should put his sword—which is as potent as th' burial's spear—at the sun, and command it to stand still in the heavens; why, Mr. Speaker the turtle could live a thousand years with his head off. And yet the gentleman says the turtle is a fish!

Zeus on his his fables of a race between the tortoise and the hare; and we are led to believe that it took place on dry land, the author n-were intimating that it was a swimming match. Did the gentleman from Gloucester ever hear of a fish running a quarter stretch and coming out winner of a silver cup?

I read but a short time ago, Mr. Speaker, of a man who had a lion, which he offered to bet could whip any living thing. The challenge was accepted, and the money put up. A snapping turtle was produced, which conquered the lordly king of beasts in the first round. Can the gentleman from Gloucester bring any fish from York River to do the same?

Again, the turtle has a tail. Now, what Nature intended him to do with that caudal appendage I cannot divine. He does not use it like our Darwinian ancestors, the monkeys, who swing themselves from the trees by their tails; nor like a cow or mule, as a brush in fly time; nor yet as our household pet dog, who was a welcome to u with his; nor, finally, does he use it to swim with. And, sir, if the gentleman from Gloucester ever saw a fish that didn't use his tail to swim with, then he has discovered a new and most wonderful variety.

Mr. Speaker, I will not take up the valuable time of the House by a further discussion of this vexed question. I will have only one more shot at the gentleman—to prove to him that the turtle is the oldest inhabitant of the earth. Last summer I was away up in the mountains in Giles County, some two hundred miles from the ocean. One day, sauntering leisurely up the mountain road, I picked up a land tortoise, and examined him. I saw some quaint and curious characters engraved on the horny shell on his back. Through lapse of time the letters were nearly illegible, but by dint of persevering efforts I deciphered the inscription, and read: *Adam—Paradise—Year One.*

Mr. Speaker, I have done. If I have not convinced every member on this floor except this gentleman from Gloucester that the turtle is not a fish, then I appeal to the wisdom of this house to tell me what in the name of common sense it is.

CHAS. BURR.

Natural History.

FORMER ABUNDANCE OF THE WILD PIGEON.

In connection with the discussion as to the desirability of continuing the practice, sanctioned by custom, of shooting great numbers of pigeons at the annual State sportsmen's club, and a few extracts from the writings of the older ornithologists will be of interest. The time has passed when any such vast hordes of migrating birds as were observed by Wilson and Audubon can be seen. In the Eastern States the P. seegeri is now not a very common bird, and in many sections its nest is regarded as a rare and desirable find by the oologist. Fifty years ago, on the other hand, it was not so. Pigeons were abundant in almost all sections of the country. If they were scarce in any place one year, they were likely to be plenty the next. Cooper, in his *Wild Geese and Ducks*, gives an account of their abundance in New York State, which we may assume not to have been exaggerated, since it is confirmed by the statements of other writers and of the fathers of American Ornithology—men, whom, when they wrote of what they saw, we cannot but believe.

We give a few citations from the writings of early authors which bear upon the former abundance of this species in the East. In Forre's *Historical Tracts* we find a paragraph printed from the observations of Gov. Thomas Dudley who wrote as early as 1675, "Upon the 5th of March, 1675, after it was faire day light, until about 8 of the clock in the forenoon, there flew over all the townes in our plantations a many flocks of doves, each flock containing many thousands and some so many that they obscured the light, that it passeth credit, if but the truth should be written, and he that was the more strange, because I scarce remember to have seen tenne doves since I came into the country. They were all turtles as appeared by diverse of them were killed flying, somewhat bigger than those of Europe, and they flew from the north east to the south west; but what it portends I know not."

Thomas Morton, an Englishman, speaks, in 1632 of "Millions of Turtle-doves upon the greene toughes: which eat pecking, of the full ripe pleasant grapes that were supported by the lusty trees, whose fruitfull loads did cause them to beid."

Over one hundred years later Richard Hazen, a surveyor, describes a breeding place of pigeons, which he observed in the Connec-ticut River, near the line between Massachusetts and Vermont, in the following language: "For five miles together the pigeons nests were so thick, that five hundred might have been told upon the beech trees at one time; and could they have been counted on the hemlocks, as well, I doubt not at five thousand at one time around."

Wilson says—"I had led the public road to visit the remains of the breeding place [before mentioned] near Shelbyville, and was traversing the woods with my gun, on my way to Frankfort, when about one o'clock the pigeons, which I had observed flying in the greater part of the morning, suddenly began to return in such immense numbers as I never before had witnessed. Coming to an opening by the side of a creek called the Bereson, where I had a more uninterrupted view, I was astonished at their appearance. They were flying with great steadiness and rapidity, at a height above gunshot, in several strata deep and, and so close together that could they have reached them, one discharge could not have failed of bringing down several individuals. From right to left as far as the eye could reach the number of the vast procession extended; seeming everywhere equally crowded. Curious to determine how long this appearance would continue, I took out my watch to note the time, and sat down to observe them. I sat for more than an hour, but instead of a diminution of this prodigious procession, it seemed rather to

increase both in numbers and rapidly; and, anxious to reach Frankfort before night, I rose and went on. About four o'clock in the afternoon I crossed the Kentucky River at the town of Frankfort, at which time the living torrent above my head seemed as numerous and extensive as ever. I was then in a large body of water, which continued to increase for several minutes, and then the again were followed by other detached bodies, all moving in the same southerly direction till after six in the morning. The great breadth of front which this mighty multitude preserved would seem to intimate a corresponding breadth of their breeding place, which by several gentlemen who had lately passed through part of it was stated to me at several miles. It was said to be in Green County, and that the young began to fly in March. On the seventeenth of April, forty-nine miles beyond Danville, and not far from Green River, I crossed the same breeding place, where the nests for more than three miles spotted every tree; the leaves not being yet out I had a fair prospect of them, and was really astonished at their numbers. *****

I have taken from the crop of a single Wild Pigeon a good handful of the kernels of beech nuts, intermixed with acorns and chestnuts. To form a rough estimate of the daily consumption of one of these immense flocks, let us first attempt to calculate the number of that were nested in the space of time passing between Frankfort and the Indiana Territory. If we suppose this column to have been one mile in breadth (and I believe it to have been much more), and that it moved at the rate of one mile in a minute, four hours, the time it continued passing, would have made its whole length two hundred and forty miles. Again, supposing that each square yard of this moving body comprehended three pigeons; the square yards in the whole space multiplied by three, would give two thousand two hundred and thirty millions two hundred and seventy-two thousand pigeons. It is almost inconceivable multitude, and yet probably far below the actual amount. Computing each of these to consume half a pint of mast daily, the whole quantity at this rate would exceed seventeen millions four hundred and twenty-four thousand bushels per day!

Nuttall's statements do not differ materially in general tone from those of Wilson and Audubon. He says: "To talk of hundreds of millions of individuals of the same species habitually associated in feeding, roosting and breeding, without alluding to the cause or causes of an operating cause in these gigantic movements, would at first appear to be wholly incredible." Further on he describes a roost in these terms: "As the sun begins to decline they depart in a body for the general roost, which is often hundreds of miles distant, and is generally chosen in the tallest and thickest forests almost divested of underwood. Nothing can exceed the waste and desolation of these nocturnal resorts: the vegetation becomes killed by their excoriation to the depth of several inches. The tall trees, for thousands of acres, are completely killed and the ground strewn with many branches torn down by the clustering weight of the birds which have rested upon them. The whole region for several years presents a continued scene of devastation, as if swept by the resistless blast of a whirlwind."

Audubon's account of the vast multitudes of these birds is not dissimilar from those already quoted. He says: "The multitudes of Wild Pigeons in our woods are astonishing. Indeed, after having viewed them for several days, I could not but be filled with admiration, and now feel inclined to pause and assure myself that what I am going to relate is fact. Yet I have seen it all, and that too in the company of persons who like myself were struck with amazement."

In the autumn of 1813, I left my house at Henderson, on the banks of the Ohio, on my way to Louisville. In passing over the Barrens a few miles beyond Hardensburg I observed the pigeons flying from north-east to south-west in greater numbers than I thought I had ever seen them before, and feeling an inclination to count the flocks that might pass within the reach of my eye in one hour, I dismounted, seated myself on an eminence, and began to mark with my pencil, making a dot for every flock that passed. In a short time finding the task which I had undertaken impracticable, as the birds passed in countless multitudes, I rose, and counting the dots then put down, found that 163 had been made in twenty-one minutes. I traveled on and still met more the farther I proceeded. The air was literally filled with Pigeons; the light of moon-day was obscured by an opaque and impenetrable haze, unlike melting flakes of snow, the continued huzz of wings had a tendency to dull my senses to repose.

While waiting for dinner at Young's, in, at the confluence of Salt River with the Ohio, I saw, at my leisure, immense legions still going by, with a front reaching far beyond the Ohio to the west and the beech-wood forest directly on the east of me. Not a single bird alight, nor a nut or acorn was that year to be seen in the neighborhood. They descended in a regular column, but different trials to ascertain a sequence in their flight that different trials to ascertain a capital result proved ineffectual; nor did the report disturb them in the least. I cannot describe to you the extreme beauty of their aerial evolutions, when a hawk chanced to press upon the rear of a flock. At once, like a torrent, and with a noise like thunder, they rushed into a compact mass, pressing upon each other toward the centre. In these almost solid masses, they darted forward in undulating and angular lines, descended and swept close over the earth with inconceivable velocity, mounted perpendicular to the sky, or they passed the river. Multitudes were thus destroyed. For week or more, the population fed on nothing else than that of Pigeons, and talked of nothing but Pigeons. The atmosphere, during this time, was strongly impregnated with the peculiar odor which emanates from the species. *****

It may not, perhaps, be our place to attempt an estimate of the number of Pigeons contained in one of those mighty flocks, and of the quantity of food consumed by its members. The inquiry will tend to show the astonishing bounty of the great Author of Nature. Let us take a column of one mile in breadth, which is far below the average size, and suppose it passing over us without interruption for three hours, at the rate mentioned above of one mile in the minute. This will give us a parallelogram of 180 miles by 1, covering 180 square miles. Allowing two pigeons to the square yard, we have one billion, one hundred and fifteen millions, one hundred

and thirty six thousand pigeons in one flock. As every pigeon daily consumes fully a pint of food, the quantity necessary for supplying this vast multitude must be eight millions seven hundred and twelve bushels per day. * * * * *

Person unacquainted with these birds might naturally conclude that such dreadful havoc would soon put an end to the species. But I have satisfied myself, by long observation, that nothing is so difficult as the extermination of our pests can accomplish their decrease, as they not infrequently quadruple their numbers yearly, and always at least double it.

FLIGHT OF BIRDS.

A SUBSCRIBER writes us from Belle Vernon, Pa., asking (1) what is the fastest recorded flight of a pigeon? (2) What is the fastest flight of any bird—a duck especially? (3) How far in front of a pigeon, 21 var's rise, bird flying across, would it be necessary to hold to drop the bird?

The rates of flight of the different species of wild birds have not, so far as we know, been measured, and it is difficult for us to see how this could be done. Various estimates have been made with different authors, but it must be remembered that these are merely estimates, and not measurements of speed. Speaking of the passenger pigeon (*Ectopistes migratoria*), Audubon says: "Their great power of flight enables them to survey and pass over an astonishing extent of country in a very short time. This is proved by facts well known in America. Thus, pigeons have been killed in the neighborhood of New York with their crops full of rice which they must have collected in the fields of Georgia and Carolina, these districts being the nearest in which they could possibly have procured a supply of that kind of food. As their power of digestion is so great that they will decompose food entirely in twelve hours, they must in this case have traveled between three and four hundred miles in six hours, which shows their speed to be, at an average, about one mile in a minute. A velocity such as this would enable one of these birds, were it so inclined, to visit the European continent in less than three days."

Writing of the common wild swan (*Cygnus americanus*) he says: "When traveling to a distance they proceed at a great height, with a steady and well sustained flight, though by no means so rapid as that of the trumpeter swan, this difference probably arising from the greater weight and larger extent of the latter." A little farther on he quotes Dr. Sharpless, of Philadelphia, as saying of the same species: "The swan, when migrating, with a moderate wind in his favor, and mounted high in the air, certainly travels at the rate of one hundred miles or more an hour. I have often timed the flight of the goose, and found one mile a minute a common rapidity, and when the wind was in a change of feeding ground, have been flying near each other, which I have often seen, the swan invariably passed with nearly double the velocity."

Of the black duck he says that he believes that it flies at a rate of seventy miles an hour, and of the golden eye (*Clangula islandica*) that he believes it "can easily traverse the space of ninety miles in an hour." Many additional citations might be made, but they would scarcely serve to determine the question.

In the last question of our correspondent we can only reply in general terms. The varying circumstances of flight and weather demand that a man in such cases must use his judgment according to the conditions under which each bird flies. One, two, or even three feet will sometimes not be too much to allow while in other cases the bird can be killed by holding at its head. We cannot do better than refer our correspondent to Prof. A. Mayer's exhaustive discussion of this subject, in an article printed in *FOREST AND STREAM*, Vol. 15, p. 247, Oct. 30, 1890.

The flight of our domestic birds has probably been more accurately timed than that of any wild species, since the records of the distances covered by homing or carrier pigeons are usually kept with care. Recently twenty-one pigeons were loosed by the Brooklyn Club, in Cresson, Pa., at 9:58 a. m., and of these the first to return, owned by J. Laubenberger, of South Brooklyn, reached its home at 5:29 p. m. The distance is 241 5-16 miles and the average speed of the bird was, therefore, at the rate of 941 yards per minute, or a mile in a little less than two minutes. Another bird owned by Mr. C. Pasfield reached Williamsburg, a distance of 243 miles at 5:40 o'clock, having traveled about ten yards per minute slower than the first. Of course in these rates while they give the average speed for this long distance, no allowance is made for stoppages and they are thus only general and not at all a measure of the time occupied in traversing a single mile.

During a race from Cresson, which was flown last June, the best time was 330 minutes for 243 miles, or at the average rate of 1,290 yards per minute.

COPPERHEADS IN NEW ENGLAND.

Editor *Forest and Stream*:
 LOONST GROVE, N. Y.
 In a note under a letter with the above caption, by "New England Boy," in *FOREST AND STREAM* for October 13, 1951, (pp. 208) you ask for "further information and details" concerning the occurrence of the copperhead snake (*Agkistrodon contortrix*) in New England. I suppose that it was generally known that this species is as common as the rattlesnake in certain mountainous parts of New England, notably about Mount Tom in Massachusetts. I have myself killed both species on this trap ridge. Mr. Street, who keeps the house on Mount Monadnock, has for many years exhibited both species alive in glass-covered cages. He captures them when they first come out in spring, at a place called, "Snake's Den," on the south side of Mount Tom. During the spring of 1951 I accompanied Mr. Street on his annual expedition after these pets. On the 27th of May he caught nine snakes, of which number five were copperheads and four rattlesnakes. On the following day we caught but a single copperhead at the same place, "Snake's Den." They are taken while coiled upon, or among the loose rocks, basking in the sun, with a pair of long-handled wooden tongs.—C. HART MERRIAM, M. D.

BRIDGEPORT, Conn., Oct. 17.

Editor *Forest and Stream*:
 I write in confirmation of the communication of "New England Boy" in issue of Oct. 13 in regard to "chunkheads" (copperhead snake). I have often seen and killed, or brought them home alive with the aid of a crooked stick and a piece of string, in the locality he mentioned. My boyhood was passed at the foot of West Rock, and while berrying or hunting we always kept a sharp lookout for "chunkheads." It

was not very uncommon then—twenty-five years ago—for some one to be bitten by them. I have known two persons who were so unlucky, both boys with whom I was acquainted. Whenever that happened, one of the Sperry's, of Sperry Farms, was sent for. He had a recipe, said to have been obtained from the Indians, which was a sure cure, provided the patient was not unable to swallow. I never knew of any one dying from a bite. The recipe was in my possession for some time, and can probably obtain it for you if you want it. It was also used for cattle and horses, but I think not with equal success, for I have known of their dying from bites. I think the species is being fast exterminated, as of late years I have heard nothing of them.—NEW ENGLAND BOY No. 2.

NORTHAMPTON, Mass., Oct. 14.

Editor *Forest and Stream*:
 We not infrequently find copperheads on the western side of Mt. Tom, near a marshy piece of ground. In the fall one is almost sure to find them under the cornstalks. On the top of the range is a basin which is usually full of water, and they are reported to be found there. I have looked for them carefully, but never have succeeded in finding them. Can send you a nice specimen if you would desire.—G. W. CERRTENEN.

[We should be very glad to receive a specimen.]

NEW YORK, Oct. 13.

Editor *Forest and Stream*:
 The chunkhead (*Agkistrodon contortrix*) is not at all uncommon in many parts of Connecticut and I believe that I have collected specimens of this species in Rhode Island. I haven't my notes at hand for reference.—M.

REPORT OF THE SOCIÉTÉ D'ACCLIMATATION.

WE have received, through the courtesy of M. Raveret Watet, Secretary of the Society, this interesting publication, from which we make the extracts given below:

"The observations made by M. Le Pautte, on the young California salmon, placed, for the sake of experiment, in the lakes of the forest of Vincennes, have demonstrated to you all the hardness of this species and its wonderful powers of supporting high temperatures. A salmon which can live without injury in water at a temperature of 25 degrees C. (C.), and which, besides, develops with great rapidity, is certainly a species very desirable for us to acquire."

"On the other hand, certain facts have been brought before you which prove that this species can live and reproduce its kind in fresh water without ever visiting the sea, and this fact indicates that its successful acclimatization would be easy."

"The very general depopulation of our water courses imposes upon us the necessity of laboring for their replenishment with fish by employing, so far as is in our power, species of native growth. This consideration gives an especial importance to the acclimatization here of the American trout (*Salmo fontinalis*), which develops much more rapidly than our indigenous trout. However, we may consider this species as already acquired by us, since Baron Hahn, in his fish-cultural establishment at Courances, has been able to accomplish its reproduction."

"The necessity of replenishing our covers, a need which is becoming more and more pressing, obliged us, a few years since, to consider the introduction of species of foreign origin better able to protect themselves than those which we now possess and which are manifestly disappearing. Among the partridges, the perching species have attracted particular attention. Besides the fact that these species are less likely to be taken in the traps and snares which our sportsmen make use of, their habits entirely forbid their nesting in a cleared country. These species need woods, thickets or hedgerows. Therefore, with them we need no longer fear the lamentable wholesale destruction of eggs which so often take place in the case of the French partridge at the time of the mowing of the artificial meadows. It is the duty of our society to try, one after another, the different foreign species until such shall have supplied to our country a partridge which shall be sufficiently able to resist the above-mentioned causes of destruction. The Chinese Quakik partridge (*Bambusicola thoracica*) seems completely to fill this want."

THE NUTTALL BULLETIN.—The first article in the October number of the *Bulletin*, from the pen of Mr. H. W. Henshaw, treats of Some of the Causes Affecting the Decrease of Birds, a subject in which all sportsmen and lovers of nature take a deep interest. Aside from the depredations of those animals, which may be termed the natural enemies of birds, Mr. Henshaw regards meteorological disturbances as the most destructive forces to which our migratory species are exposed. He does not think it probable that disease, as compared with other causes, plays any very considerable part in the destruction of birds, although, as he says, the evidence on this point is almost wholly negative, little or nothing being known about the diseases of this class in the feral state. Attention is drawn to the destruction of birds by telegraph wires.

Dr. Shufeldt, U. S. A., contributes to the present number an interesting etiological paper. Of the *Ossicle* of the Antibrachium as found in some of the North American Hawks, and Dr. J. C. Merrill some Oological Notes from Montana. Mr. Robert Ridgway's paper, on a Tropical American Hawk to be added to the North American Fauna, will recall to our reader's first announcement of the capture of *Buteo brachyurus*—then provisionally called *B. fuliginosus*—in the columns of *FOREST AND STREAM* in April of the present year. The question of the relationship of the two forms (*brachyurus* and *fuliginosus*) does not appear yet to be quite satisfactorily settled.

In a paper on *Podiceps occidentalis* and *P. Clarkii*, by Mr. Henshaw, we are furnished with a comparison of the two forms and a discussion of their relationship. Mr. Brewster's studies of two species of *Helminthophaga*, recently described, have brought out the extremely interesting fact that they are hybrids, and open a wide field for conjecture and speculation. *H. leucobromchialis*," Mr. Brewster concludes, is probably the result of the union of the male of *H. pinus* with the female of *H. chrysopygia* and *H. laevirostris*, of the male *chrysopygia* with the female *pinus*. Moreover, certain specimens we would need to indicate that the hybrids interbred with either *pinus* or *chrysopygia*.

The concluding paper in this number is an important one by Dr. C. Hart Merriam. It is a Preliminary List of Birds ascertained to occur in the Adirondack Region, Northeastern New York, and mentions 177 species.

Recent Literature contains reviews of several old and new works, and General Notes are full and interesting.

THE SMITHSONIAN CASTS.—The International Fishery Exhibition at Berlin last year demonstrated the fact that in the line of casts of large objects, Mr. Palmer, Modeler of the National Museum, had no superior. He is now engaged at Provincetown, Mass., in taking the largest one yet. It is that of a young whale, about thirty feet long. It was made of papier maché, which combines lightness with toughness, and superadds plaster for large objects. The cast is of only half of the whale. The other side is to remain open to show the skeleton, which will be in-erterd.

YELLOW LEGS IN SOUTH AMERICA—New York, Oct. 16.

Editor *Forest and Stream*: In Mr. Roosevelt's first paper, speaking of "hay snipe," he says they winter "away down South," nobody knows exactly where or how far. I can enlighten him. A few years ago I spent part of the winter on the southern coast of the Caribbean Sea—at Santa Marta and Siemega—and there I found our yellow-legged friends in the greatest abundance. The country between the mountains and the sea is flat, with many shallow ponds, and these ponds are fairly alive with waders of all kinds. They seem very tame there as they are not molest'd. On one occasion I was tempted—at Siemega—to shoot into a lot that was waiting about thirty yards off, and my negro boy went and gathered eighteen yellow legs. They were next to the largest variety and in splendid condition, but it resulted, as I feared, in useless slaughter, for they refused to cook them for me. The pigeon tribe, from the small-st dove (smaller than a robin) to a bird larger than our domestic pigeon, are so numerous that I could have killed hundreds in a day; but I refused to waste to shoot them, as the natives are utterly stupid, and will eat nothing in the way of meat but beef and fish.—H.

[In view of Mr. Haggood's recent article on this subject, the exact date at which our correspondent observed these birds would be of interest.]

BLUE RAIL—North Wood, Oct. 8.—I read in one of the late numbers of "our paper" an article on the rail, and failed to find a description of a bird that I killed last year on the St. Lawrence River, called there the "blue rail." Said bird was as large as a clapper-rail or salt water marsh-hen, only much heavier, plump, like a grouse, color slaty blue on back and wings, and blue-white underneath, legs and head very like snipe rail. This bird was in reeds, and acted just like all other rail.—Geo. L. APPLETON.

[We presume from your description that the bird was a Florida gallinule (*Gallinula galeata*).]

VIS MEROBATRIC NATURE.—Sherbrooke, Canada, Oct. 10, 1881.—I send you with this foot, or apology for a foot, of our ruffled-goose-shot to-day. The individual evidently left one of his limbs in a trap at some time, and thus has the *V's* *Volucra* *Natura* I can see for him. The bird was in first-rate condition. Four of us were out and had very pleasant day. I won't say how many birds were killed, for fear of making our American cousins jealous, but we had an average bag.—CANADA.

[The foot has been sharply cut off below the tarsal joint, and the end of the bone is as smooth as if it had been sawed off. The wound is not an old one, but is partially healed.]

Game Bag and Gun.

 VERMONT DEER LAW.—The Vermont law prohibits deer shooting in that State at all seasons until 1885.

RUST SPOTS IN GUN BARRELS.

Saint Joseph, Mich., Oct. 17.

Editor *Forest and Stream*:
 This matter of gun freckles (or rust, as it is called), is what I have long been studying about. I am glad the matter is discussed in the *FOREST AND STREAM*. None of the explanations are satisfactory to me, although I cannot explain the cause of them. One thing is certain, some poor quality of barrels in the hands of careless cleaners keep bright, while good barrels (laminated steel, fine), in the most careful hands at cleaning become freckled in spite of every precaution. I do not believe they are caused by rust as generally understood.

I have had experience with two guns, laminated barrels. The first gun soon began to show spots a few inches from the breech in one barrel. I worked to clean it and took every possible care and precaution to keep the gun clean and prevent more. But still they came, and kept coming, and extended three-fourths the length of the barrels. I became sick of the gun and concluded to get a new gun. I ordered one from Birmingham, England; specified every particular; in thirteen months it came, a perfect little gem. I was perfectly delighted with it. It was used daily and cleaned as soon as I entered the house, with all the care of a jewel. In a short time it showed a spot or two, and soon a few more. I worked to keep it clean, but still they came and went on two-thirds the length of the barrels, like a dose of sulphate of soda. They seem to stop at a point about three-fourths the length of the barrels.

Now, what I want to say, and to say emphatically, is that they were not caused by common rust. I know my gun was dried, and entirely clean. It could not be made cleaner. I know how to use and clean a gun as well as any living man. I pride myself on my gun. The world can't make me believe the spots come from the want of proper cleaning and common rust. Now, what causes them? Is it in the manner of manufacture of the barrels? Is it in the chemical action of the powder, lead or percussion in the caps? Who will explain? I know what I am writing when I say common rust did not cause the spots in my guns.

I now lack a few weeks of being seventy-one years old, can clean a gun and shoot some. Here are a few scores: The past week I was out for blue and green-winged teal. I made eighteen successive shots at single birds and killed fifteen. On the last day of snipe-shooting, I shot and killed an even dozen shots of snipe and 7 wild ducks, and that will do for me without glasses. You can judge if I can clean a gun as it won't rust. Who will explain my difficulty of gun freckles. They annoy me dreadfully, and still my guns shoot well. One weighs seven and a half pounds, the other seven pounds and eleven ounces. I wish they were lighter and inside brighter. LUTKON.

Brooklyn.—*Editor Forest and Stream:* I notice in the last issue of *FOREST AND STREAM* that some friend of Frank N. Beebe recommends him to leave the residuum from a discharge in the barrels of his gun until next using them, as a preventive against measles or rust. I had a friend, who in an evil hour recommended me to do the same, and as a consequence the breach and recoil block of my new "Colt" are badly rusted and I have tried in vain to remove it. Last July I paid Lake Hopalong, N. J., a visit in the hope of bagging a brace or two of woodcock and very carefully left my cleaning rag, rags and oil home, or I would not have been so anxious to take my friend's advice. The powder I used (Hazard's F. G.) seemed to leave a black pasty substance behind, which I was rather afraid of at the time, but concluded to risk it. I think the fulminate in the caps has more effect on the barrels than anything else, for the following reason. I was overhauling my gun and rifles, a few days since, to make sure they were not getting speckled, when a friend who had dropped in while I was at it accidentally discharged an empty shell which he was fitting in the gun. After removing the shell I carefully wiped it with a dry rag, oiled it and put it in its case. Something prompted me a few days after to look at that chamber. Shade of Moses! what had got into it? About four inches of the barrel was black, and it took an unlimited amount of wire brush and elbow-grace to get it clean again. My experience is that constant attention is the best preventive against rust. If I had a "Saxon" gun I might not think so.—G. B. H.

ATLANTA, Ga., Oct. 17.

Editor Forest and Stream:

I have noticed in several recent numbers a discussion on the subject of oil in gun barrels and the best means of preventing the same.

When I was a boy, my father, on a visit to Charleston, bought me a fine silver-mounted, muzzle-loading (of course) rifle. God gave me a good nerve and eye, and I became a fine shot, probably the best in my county. But I was heedless and careless, as boys are apt to be. The young men and boys with whom I hunted often complained that their rifles rusted in spite of wiping and oiling. I was in the habit of leaving mine, when returning from a hunt or shoot, without wiping or oiling, and with the powder-burn in it. My gun was always bright and clean when wiped out for use, and never showed *red rust* at all, and is free from it to-day, though in use thirty years; and never had a drop of oil in it all the time.

I was in the infantry of Lee's army during the war, and, having lost everything, had to work hard; and hardly fired a gun for a dozen years after the war ended. In fact, I lost my taste for guns and bullets. But latterly, having gone on the bench and leading a very sedentary life, the doctors advised me strongly to open air exercise. I bought a 28-bore breech-loader, and, I have, I think, the finest setter in the State; and soon the old passion for the field returned, and is with me stronger than ever.

But with years I fear I have not much improved in habits of care for my gun; and for the past four seasons I have always left the inside of my barrels, after a hunt, with the powder-burn undisturbed; and, in fact, left them so all summer, and it is literally true that when wiped out my gun is now as bright as a mirror. I am of the opinion that the *white* from powder-burn forms a coating which, more than any other known substance, will preserve a bright iron or steel surface from rust; and I give you the statement with leave to publish it over my own name, unless your own better knowledge shows you that I am mistaken.

GEORGE HILLBER.

Editor Forest and Stream: An old gun repairer and excellent hunter once said: "I never clean my gun when I put it away after the hunting season is over. It will keep in better order by letting the powder dry in the barrels than in any other way." I have practiced this method for years, and never had occasion to regret it. The difficulty is largely that of putting the gun away in a damp or wet condition. If put away dry and kept in a warm and dry place, I think there will be no rust found upon wiping out when the hunting season again arrives. Everything depends upon having the gun dry, and kept not only dry but warm, during the resting season. It is well that we cannot look into our old muzzle-loaders as we do into our breech-loaders; so many old scars would appear we would be frightened at the small appearance of our old favorites, and kept the spots and dirt out of our sight. I have found the best castor oil the best oil for a gun—for every part except the locks. It has a body that does not disappear readily, and will keep the barrels from rusting when in the rain longer and better than any I ever used.—

Monroe, N. C.—*Editor Forest and Stream:* "Spots in gun barrels" has brought out quite a number of receipts for its prevention. I have had no trouble in that line. I clean my gun thoroughly, and then swab the inside of the barrel with hard oil, using a wire brush for the purpose. I find after shooting two or three days that the gun is very little fouled, and no dry powder cake is about it, and with a wire brush and rag I can clean it bright as a dollar in five minutes. Try it—I be convinced.—COTR.

Boston, Oct. 16.—*Editor Forest and Stream:* After many years' experience with gun barrels I have come to the conclusion that the secret of the trouble is in the polishing of the barrels on the lathe. No matter how finely and carefully this is done it always leaves an immense number of small rings on the inner side of the barrels, the minute particles of the residuum adhere, and there the rust trouble begins. Let any of your readers who have trouble with their guns look into the barrels carefully and they will see these rings. I send you a piece of gun barrel split open to show this. The remedy for this is the draw polishing, but gun-makers do not care to do this, because it is a hard and long operation.—E. H. BURBANK.

New Britain, Conn.—*Editor Forest and Stream:* "For a protection against rust nothing simpler or better adapted to general use has been discovered than the compound of hard and resin recommended by Prof. Olmstead, of Yale College (author of 'Olmstead's Natural Philosophy'), and used by him for the preservation of scientific apparatus. Take any quantity of good lard, or to every half pound or so add of common resin an amount about equal to half the size of an egg, or less—a little more or less is of no consequence. Melt them slowly together, stirring as they cool. Apply this with a cloth or otherwise—just enough to give a thin coating to the metal surface to be protected. It can be wiped off neatly clean from surfaces where it will be undesirable, as in the

case of knives and forks, etc. The resin prevents rancidity, and the mixture obviates the ready access of air and moisture. A fresh application may be needed when the coating is washed off by the friction of beating stems or otherwise. There was talk of patenting this recipe at one time, but Prof. Olmstead decided to publish it for the general good." I take the above from my scrap book, but have forgotten where I first found it. I have used the compound for years on a fine gun and other highly-polished surfaces of steel and iron. It is as sure a preventive of rust as Prof. Olmstead claims. A thin film is produced which is a complete protection against moisture. The cleaning of this compound is improved by adding crude petroleum that has been well filtered. But to prevent rust the first essential, as some of your correspondents have said, is to thoroughly clean and dry the surface to be protected. If oxidation has begun, no matter how slight, a coat of linseed oil, baked on in a kiln, or best japan even, will not stop its action—it will continue its work and throw off the coating.—J. W. T.

Amesbury, Mass.—*Editor Forest and Stream:* Three years ago this winter I bought me a Parker gun, Damascus barrels, and a nice polish never used inside of gun barrels. It shined from the muzzle to the breech-loader. I got the best advice of friends who owned breech-loading guns, and used coarser powder, which some of our club boys were using. In less than three months my barrels were spotted badly in spite of the best of care; gun never remained over night without thorough cleaning. I carried a pocket cleaner, and after each discharge in the brush would draw it through the barrel. It was of no use. With the most thorough cleaning at night the barrels continued to rust or spot until they were so bad I had them rebored in about six months after first using gun. After reboring I shifted to finer grain powder of same grade, determined, if possible, to now retain the fine polish. It was the same old story, the spots began to appear, and at the end of six months more the gun was as bad as ever, using extra care in the meantime. Once more I had barrels bored out, feeling most disgusted with breech-loading gun in general, as the best part of the guns in our club spotted the same way, and it was the universal opinion of the club that it could not be helped. I continued to use the same powder, and the spots were not so bad, but the gun burning powder, moist, and would not take in muzzle, and was used by most of our boys. After another six months or thereabouts I had barrels again bored for the third time. I had made up my mind to re-bore as long as barrels would stand it, and then get another pair of barrels. At this time I came to the conclusion that the powder was the great cause of the spots, and calling to mind the length of time I used my muzzle-loading gun without spotting, I immediately procured some of the old powder, which always gave best of satisfaction. At the same time I was called to the fact that one of our boys who had continued to use the old powder after using breech-loading gun for year or more did not show the least speck in his barrels. I have continued to use this powder up to the present time in my breech-loading gun, and the barrels are in as good condition to-day as when they were last bored. In cleaning my gun all I am obliged to do is to just push through cotton flannel rag, and then another rag with sperm oil. I can clean the gun in this way after firing five or fifty shots, and without hot or cold water, inside of the barrel. In truth I have not used a drop of water in my gun for over six months, and the same polish is there without spot or blemish. Our club are mostly using this powder with best results, and some of them do not clean their gun for a week after using, and still no spots appear. I can assure you there is great satisfaction in looking through a smooth pair of gun barrels. I do not care a tinker for any powder manufacturer in this country. All I have written is for the benefit of sportsmen who see their guns rotting every day. Shift on your powder, for I will wager my gun against a box of caps that certain grades of powder will spot your guns. I take great pride in showing my gun barrel to the boys every chance I get, for they have not spotted for most a year now, and I tell you no elbow grease or eternal vigilance is required to keep barrels in prime condition. I will say nothing in regard to powder which I claim has spotted the barrels in our club so badly, for a great many sportsmen are using it, and like its shooting qualities very much, but I would say to those who complain of the spots—Change your powder. In truth the powder is not in spots, but your gun is badly. The powder I am using is Oriental Western Sporting F. G.—G. F. G.

THE HURLING GROUSE.

PENNSYLVANIA, October 22.

Editor Forest and Stream:

While reading your interesting issue of the 20th inst. my attention was called to an article, furnished by "L. J. P.," entitled "The Hurling Grouse." Among other things, he says, he "would be willing to grant that title (of artist) to any one who could make one successful flying shot in twenty at our grouse."

I reside in a portion of this State where the hawks, owls and hard winters do not give equal much chance to multiply; woodcocks are scarce, and there are no lakes or streams of sufficient size to attract geese or ducks in numbers to justify hunting them, and so ruffed grouse, whose hardy nature enables them to cope with all the enemies named above, are about all the game we have to amuse us during these delightful autumn days. Now, I believe, (I am open to conviction if wrong) that our grouse fly as swiftly and through as dense covert as do the Canada birds of the same species, yet I assure "L. J. P." that in this vicinity he would lose that five dollars every day he desired to see the operation performed of knocking a grouse over once in six shots; and the number of sportsmen in this and in the adjoining counties, who would bear the title "artist," if the test were only such as "L. J. P." would make it, would be amazing. I know that persons who shoot and fish some are pronounced by the heartless world prevaricators, to draw it mildly, yet I further assert, and can be borne out in the assertion, that I have seen three consecutive shots at grouse kill three grouse, these being at single birds, and have killed the same grouse once to kill, in my presence, eight grouse, single birds, in twelve consecutive shots, in the timber.

I do not presume that the last named gentleman is a better shot on other game than "L. J. P.," but, as I before stated, this noble bird is about the only game bird that he has practiced on, and this may account for his success in this particular branch of game shooting.

Ooro.

Specimen copies of the *Forest and Stream* will be sent free to any address upon application.

WORCESTER SPORTSMEN'S CLUB.

IN THE FIELD AND AT THE TABLE.

WORCESTER, MASS., Oct. 18.

Editor Forest and Stream:

The annual hunt of the Worcester Sportsmen's Club, for the game supper to be given by the losing side at the Bay State House, took place to-day. The schedule of game and count it was decided should be as follows: Ruffed grouse, 25; woodcock, 20; quail, 30; English snipe, 20; wild duck, 50; wild goose, 100; hawk, 50; owl, 50; fox, 300; coon, 100; rabbit, 15; gray squirrel, 15; mink, 100; weasel, 50; wild pigeon, 20. The captains of the two sides were Mr. A. B. F. Kenney and E. S. Knowles, and the result of the hunt was as follows:

| | |
|---|----------|
| E. S. KNOWLES'S SIDE. | |
| E. S. Knowles, 7 woodcock, 1 ruffed grouse..... | 163 |
| N. W. Rager, 7 quail, 3 woodcock..... | 249 |
| G. F. Enger, 3 quail..... | 60 |
| C. A. Allen, 1 quail..... | 20 |
| J. A. Cass, 2 gray squirrel..... | 30 |
| J. B. Brennan, 2 ducks..... | 100 |
| J. B. Garland, 2 snipe..... | 100 |
| O. W. L. Telf, 2 ducks..... | 100 |
| N. S. Perry, 1 fox, 1 ruffed grouse..... | 325 |
| P. A. Bennett, 1 rabbit, 1 ruffed grouse, 1 woodcock..... | 40 |
| M. E. Mann, 1 ruffed grouse, 1 quail, 1 rabbit..... | 100 |
| W. P. Houghton, 1 ruffed grouse, 1 quail, 7 woodcock..... | 300 |
| L. Holman, 1 ruffed grouse, 1 quail, 4 woodcock, 2 squirrel..... | 155-1715 |
| * The details of this score cannot be correct. | |
| A. B. F. KENNEY'S SIDE. | |
| N. S. Johnson, 3 ruffed grouse, 1 gray squirrel..... | 90 |
| W. N. Cole, 1 gray squirrel, 1 woodcock..... | 35 |
| S. Clark, 1 rabbit, 1 woodcock..... | 35 |
| T. Smith, 1 rabbit, 1 woodcock, 2 ruffed grouse, 1 gray squirrel..... | 100 |
| C. F. Darling, 1 rabbit, 6 woodcock, 1 ruffed grouse, 2 gray squirrels..... | 100 |
| R. B. Glavin, 1 woodcock..... | 20 |
| C. E. Mann, 1 ruffed grouse, 1 rabbit..... | 40 |
| G. McAlister, 2 quail..... | 40-550 |

It will be seen that Mr. A. B. F. Kenney's name is not in the list of those of his side, and has no score. This can be explained from the fact that Capt. Kenney went for foxes alone. His dog started the fox and ran it, but the gun missed fire, or the man behind the gun missed—one or the other—hence a blank score. Judging from the woodcock killed, their condition, etc., the fight must be just beginning to come in.

Your correspondent having been an invited guest of the Club can vouch for the following account of the supper, taken from the *Spig* of the following day:

The annual supper of the Worcester Sportsmen's Club was held at the Bay State House last evening, and, including the guests, just forty sat down at the table. The members of the Club assembled early in the evening in the parlors, and an hour was passed in recounting the many incidents of the hunt of the day, each telling of some fine shots made, or of the number of birds started that they failed to get. The guests of the evening were Mayor Kelley, Hon. C. B. Pratt, Hon. T. J. Hastings, John D. Washburn, Esq., Gen. A. B. R. Sprague, Col. J. A. Titus and Henry Woodward, Esq. At 8:30 the party proceeded in couples to the south dining room, where the supper was served. Landford Shepard had prepared the game brought in by the sportsmen in a manner to tempt the epicure, and presented the following menu:

| | |
|----------------------------|---------------------------------------|
| Roast Partridge, Larded. | Oysters on Half-Shell. |
| Broiled Woodcock on Toast. | Soup—Mock Turtle. |
| Broiled Quail with Jelly. | Stewed Squirrel, à la Maitre d'Hotel. |
| Fricassee of Rabbit. | Vegetables. |
| Ice Cream. | Charlotte Russe. |
| Assorted Cake. | Nuts and Raisins. |
| | Coffee. |

Ex-Mayor Pratt presided, and after the removal of the cloth called for order, and said he was happy to be on the winning side, as he knew he should be, and then introduced as the first speaker Mayor Kelley, who said he was present for the first time at the annual supper of the sportsmen of Worcester. He was surprised, as well as happily gratified, to see so many of the representative business men interested in the exciting sport of the field and cover. He regretted not being an expert in the use of the gun, but hoped before the next shoot that he might be.

Col. John D. Washburn was introduced as one who knew all "about it." He said he came to make a speech, but in the shape of the counsel for the fox, for whom he wanted 150 points granted on three different points; one on moral grounds, one in relation to civilization and good government, and the other in reference to the boot business, and he proceeded to illustrate each point in a humorous manner that kept the company in continual laughter, and all conceded the requested 450 points.

The next speaker was introduced as one who had been in jail for over four years—Sheriff A. B. R. Sprague—who said, although not a sportsman, he did have something to do with "birds." He related his early and brief experience in shooting, as a boy, at which he made no distinctive mark.

The president of the evening then said the club intended to petition the next legislature that they might be exempt from taxation, and therefore they had invited to be present with them one who had made taxation a study, and he then introduced Senator T. J. Hastings, who said he knew something of the value of the sport, and said the State would always keep open the rights of the forest and land and their treasures. The sport of hunting was a manly and healthy outdoor exercise, and he was glad to see so many interested in it.

Col. J. A. Titus was introduced, and said he looked upon the sportsmen of the city as a representative class of men. He asserted it a duty that man owed to himself and family to preserve vigorous health, and that could be obtained by the healthful recreation of hunting for game. He spoke of the need of revision in some of the acts of the legislature in regard to hunting and fishing, and to the trespass act. The latter he said was not right when honest and gentlemen sportsmen went out to hunt, for the malicious work done was by them, but by bad boys.

Mr. Henry Woodward was the next one called upon, but avoided the subject in a neat manner.

Rev. J. A. Cass was introduced, and said it gave him great pleasure to belong to so honorable a class of men as the Worcester Club, and to be able to have attended the hunt and the supper. The sport in this city was elevated to so high a position that it was an honor to belong to the club and to

join in their sports, which was productive of good health and physical development, and was a pleasant relaxation from business.

Capt. E. S. Knowles, the leader of the winning side, spoke in a sympathetic manner of his opponent, Capt. A. B. F. Kinney, and the true honesty with which he owned up to missing his fox while only four rods away, and closed by congratulating his side on their victory. Remarks were also made by Capt. A. B. F. Kinney, Samuel Porter and Chas. H. Bowker, and the exercises closed with the singing of Auld Lang Syne.

THE DECREASE OF GAME BIRDS.

HALIFAX, N. S., October 16.

Editor Forest and Stream:

If "Monte Verde's" letter had come from Nova Scotia I might, perhaps, offer some excuse for the scarcity of partridges this season, and as it is my excuse may be of some moment concerning Vermont.

In this Province, and I think within a radius of several hundreds of miles hence, the summer (?) just past has been one of the most wretched on record, and as the partridges of course depend upon the warm dry weather for breeding and rearing their young, the poor blue-nose *matefamilias* must have had a most serious time of it, during the months of June, July and August last, for we had anything or everything but summer weather—fog and rain being largely substituted for the sunshine vainly looked for from week to week.

That partridges are scarce in Nova Scotia this autumn is not the opinion of one or a few, but of every one whom I have met. Since this season began I have spent several days on some excellent spots of partridge ground without seeing, much less bagging, a bird.

I was told yesterday by an Indian, who had been some weeks in the woods after moose, that he never saw fewer partridges, and never knew them to be so scarce generally. I also have it from a gentleman in the country that he went over fifty miles of the "very best" partridge country without seeing a covey; he got a few birds, but they were all single ones over from last year. Another good evidence of their scarcity is that the Halifax market people are asking fifty cents per pair, which is just double the ordinary price.

Some may be at a loss to account for the absence of game this year, but anybody who noted the disastrous summer weather as I did cannot be surprised at so many complaints of flat bags. JOSEPHUS.

Editor Forest and Stream:

A few days ago, prompted by the beautiful weather and sharp frosts, I took a trip up the New Jersey and Northern New York Railroad, hoping to find a few woodcock. The foliage had just begun to turn, the air was clear and still and altogether it was as perfect an October day as a sportsman could wish for. I hunted through some splendid cover, dry swamps, with here and there a nice spring surrounded with good bogging ground and side hills covered with alders and scrub oaks, where coek love to lie and rest after their long flight from the North. I found only one solitary bird and not a single grouse. I was really sad to go through miles of such beautiful cover and not find birds.

"It is almost useless," as an old sportsman said to me this morning, "for one to keep a dog and gun nowadays." The deadly breech-loader and more deadly pot-hunter have about exterminated game birds in this part of the country. Every day, in and out of season, every inch of cover is gone over and over again by men and boys, determined to kill everything they see; and it seems impossible to prevent it. The farmers are too busy or indifferent, and justly fear to inform against poachers. The sportsmen who are really in earnest, are mostly engaged in the city, and are out during the close season. The societies for the protection of game are too apt to devote their time to pigeon matches, although there are some honorable exceptions, and it is only here and there that steps are taken to enforce the laws.

It seems to me that, with the exception of those tracts of land owned or preserved by clubs, the quail, grouse and woodcock are doomed throughout this section, and like the once plentiful pinnated grouse and wild turkey, bound to disappear. Yet with the unbounded cover we have, there should be plenty of game for all. All it requires is, that this senseless and selfish shooting and trapping in and out of season should be stopped; then sportsmen would be encouraged in turning out birds and restocking our desolate woods and fields. At present this is useless, for the game is killed before it has a chance to breed.

I think we all begin to see the necessity of stopping spring and summer shooting, for even the once numberless quantities of wild fowl and bay birds show a terrible falling off.

The laws should be so that no man should have an excuse to out on the uplands before Oct. 1 or after January 1, and all the Eastern States should combine on an opening day. I must confess that I really do not know where to go within a reasonable distance of New York for a day's upland shooting. Five years ago I could name a dozen.—HOLBROOK.

Editor Forest and Stream:

In a trip for wild pigeons in New York State we got twenty-eight within three miles of home. Found them as usual at their old game of picking up wheat on newly-sown grain fields. Not very many. And we left nine-tenths of them to mislead some other year. We were satisfied and gave them a rest. Continue your fight against the miserable trap shooting. Why would it be better to discontinue all spring shooting anywhere? Might as well kill off the hen in the spring as to be always harassing game in its breeding season or just before—nature's time for everything in the game line to multiply and replenish September to March is long enough season for shooting in our climate, and then put up the gun. Am glad to see your steady opposition to cheap guns. Every nigger in the land will have a breech-loader soon unless the flood of cheap trash is stopped.

NOTES ON GAME AND SHOOTING—Chester County, Pa.—

Editor Forest and Stream: The growing scarcity of our game birds is, in my opinion, not all due to spring shooting, breech-loaders and noxious traps for big game, although they have in a great measure been the cause of the scarcity. But I think it is due to the increase of sportsmen. Thirty years ago you could count sportsmen in Chester county by tens; now you can count them by the hundreds. Thirty years ago you could find only here and there one that could stop a bird on the wing; now there are any number of them. Then it was a rare thing for a farmer to shoot on the wing; now it is a common thing. Do not understand me to say that they are

all expert shooters, but they kill on an average, say ten birds.

Ten old birds ought, and will, in the following spring, bring forth at least forty or fifty young birds; thus you will see what becomes of the bird. Of course I can speak for Chester county only; it may be different in other places. I do not envy the farmer the sport, for no one has a better right to it. Game this year is very scarce, though the severe winter killed more than was shot; but our winters, as a general thing, are more mild than last winter was. Farmers and farmers' boys are shooting birds now. The law is off—of course they are at liberty to shoot them—but no true sportsman will shoot them this warm weather that we are having now, so they have it all to themselves. There is, as far as I can see, no remedy. Farmers will shoot birds as long as there is any; so will sportsmen. And let me say here, in answer to Mr. Beebe, that the farmers here take the same plan that the old Californian does, except they wash their guns at the beginning of the shooting season with pure water, wipe dry with rags, ram home a little powder (they all have muzzle-loaders), put on a cap and bang away; then their gun is ready for use, and as far as I can tell, their guns never get spoiled. Ruffed grouse are scarce here, but in the "forest" in Berks County they are plenty; but as "Wad" in your last number puts it, you have to shoot at the noise seventenths of the time, the forest is covered with thick scrub oak, the leaves dying and remaining on the trees until spring. Quail, as I have said before, are scarce. Woodcock have not yet arrived.—SNAP SHOOT.

[This is a subject of deep interest to sportsmen in every part of the country. The causes of the decrease of different kinds of game are many. We invite all persons having facts bearing on the question to give them to us.]

PLAN OF A SINK-BOAT.

THE WHEATLANDS, Oct. 1.

Editor Forest and Stream:

It will afford me pleasure to give your correspondent the dimensions for a sink-boat, but I hardly understand what he means by asking for dimensions of sink-boat "suitable for a man weighing 175 pounds," as the weight of man using it has nothing to do with size of sink.

The dimensions, materials, etc., to be used in constructing a sink-boat are as follows: The box in platform should be made of 3/4 inch best white pine, or still better, white cedar, if to be had. The ends of box should be of white oak, 1 1/2 inches thick. The box should be 5 feet 10 inches long, in the clear (this will accommodate any man not over 6 feet in height, as both his knees and neck are bent in lying in the position to shoot) 15 inches deep in clear and 23 inches wide, sides straight perpendicularly, but sprung together at ends to 14 inches at head and foot. Now, in regards to the depth of ends the simplest way is to make the box the same depth all over, but it is by no means the best

way. My own box is only 6 inches deep at head. The foot should be of full depth, viz., 15 inches. The reason I cut away the head of box is that the shooter, in lying down, has to have his eyes above the level of the box in order to watch the flight of the fowl, so that very little depth is required at the head. The box should be put together in the very best manner, as on its being perfectly tight depends the comfort of the shooter. Now make a 3/4 inch drain board to be in bottom of box, and the sink is completed so far as the box is concerned.

Around the box is built the "platform," as follows: Have two oak carriages cut out 6 feet long, 1 1/2 inches thick and 2 1/2 inches wide in the middle, tapering off to about 1 1/2 inches at ends with 1 inch spring or 1 1/2 at most. Now bolt these securely to ends of box, 1 inch below the top.

You are now ready to put on the platform or deck. This should be of 3/4 inch white pine or cedar, 5 feet wide and 10 feet long, the seams of deck to be well fitted together and especially made tight where it fits round the box, which will project above the deck 1/4 inch. On each end of deck nail on a batten of 1/2 inch strip, 3 inches wide, on under side of deck. At the head of platform is the head wing, which should be made of three 3/4 inch pine or cedar boards, each 12 inches wide, and fastened together by strong iron straps, with hinges at each board, and also where the wing joins the

platform. These hinges should be, so arranged as to give the board composing the wing free play to swing down at right angle with platform and to fold back on top of same, tacked loosely so as not to interfere with swinging. The wings, strips of heavy drill or duck (of color as nearly resembling as possible the water that boat is to be used in) over each creek between wing board and between inner wing board and platform. This completes the head wing. Side wings to be of 3/4 inch pine or cedar boards, two on each side, each board 8 or 10 inches wide and connected together and with platform by three heavy sole-leather hinges in such a manner as give free play with platform with the strips of drill or duck nailed over the joints as in head wing.

I neglected to state that in addition to the battens nailed under platform there should be one on each side of box amidships on under side of platform which should be braced to box by an iron ell. The ends of all these battens should project beyond the sides of the platform about an inch, so that the side wings will have something to rest on, as the leather hinges must be long enough to let them fold over the foot wing when the boat is folded up. The foot wing should be made like the side wings, extending across the foot of board and to the board at the head, with a box used as a foot. Connecting the wings at each of the four corners are triangular pieces of lead colored duck, or heavy drill, tacked to the wings and having a stout cord sewed to their outer edges, on which cord I use small cork to keep the corner-pieces on top of the water as much as possible.

Now for the leads. These consist of two rows of sheet lead from four to five inches wide, the inner row to be tacked round the edge of box along the inner edge of the lead in such a manner that the outer edge can be bent up to keep the sea out. The outer row of lead is nailed round the platform half way between the box and the edge of the platform all round. Paint box, platform and wings as near the color of the water in which the box is to be used as possible.

The sink is to be moored by two anchors, one at head and one at foot. For head anchor two holes should be bored at each earling, about 15 inches from each end, and a rope knotted through these holes making a "bridle" about 10 feet long. The anchor or shoat should be made fast to the bow of the boat. This lets the head of box ride free in a sea. For stern anchor bore a hole in the platform near the edge at foot and let the anchor rope pass through this. This enables the shooter to trip his stern anchor (which should be a light one) in case of a sudden shift of wind so that the box will swing head in.

This is the arrangement of my own box, though differing somewhat from those in use at Havre-de-Grace. There they use a light frame for side and foot wings, with drill or tie-ropes instead of lead. These platforms are generally larger also, the usual dimensions there being 12x7 feet, but after a trial of both I have found the board wings to be better than the canvas or drill, and I find the 6x10 platform quite large enough, and I use my box in much "wilder" water than they have at the head of the bay. I inclose a set of drawings which may help to explain my letter. I shall be always happy to assist you or your readers in all matters that relate to shooting or yachting, as I am devoted to both. I have one word for you, dear FOREST AND STREAM—Don't go crazy over Madge.

In the above sink about 200 pounds of weight in addition to the man will have to be used. We accomplish this by having iron decoys east, each weighing from 25 to 30 pounds. These are set in the platform with wooden decoys of about one-third the usual thickness. The bodies should not be more than 2 inches high and flat on the bottom. Use also light wooden decoys on wings, with a "stool" of about 200.

SINK BOAT.

DOGERRY IN THE FIELD.

MEMPHIS, Tenn., Oct. 18, 1881.

Editor Forest and Stream:

I inclose you a "true tale" on our Arkansas Prairie Club, and I was one of the "victims." GRINO.

Dr. Mitchell, Mr. Arthur Whentley, Judge Sam P. Walker, R. D. Jordan and Mr. Dave Poston, with some dozen others not necessary to mention in this chronicle, were of a party of huntsmen returning from the prairies in Arkansas on Sunday last. Being ahead of their companions they concluded while waiting for them to while away the time in shooting at a mark. Along came a justice of the peace and a constable and with many apologies for the necessity of performing a painful duty proceeded to take in the whole party for violation of the Sunday laws. These gentlemen protested that they did not know it was wrong, and they had never read the laws of Arkansas; but it was no go, the justice telling them that ignorance of the law would excuse no man. They then proposed to go to trial then and there, and if the justice concluded they had violated the law, after proof and argument, they would go to jail without any further trouble to him. The accommodating justice agreed to this, saying there was no statute in Arkansas against holding court on Sunday. The guilty defendants retired for consultation and elected Judge Walker for their lawyer, and unanimously agreed on Mr. Dave Poston for their witness. The attorney first argued that they were citizens of Tennessee and not subject to the laws of Arkansas, but the justice cut that off short by saying that it was too thin, as all persons were bound by the criminal laws of the State they were in. The attorney then argued that under the Constitution of the United States all acts of the Legislature were entitled to the same faith and credit in all the States as in the one making the law, and that corporations chartered in Tennessee might do business in Arkansas. The justice said this was so, but he did not see what that had to do with the case. The attorney then told the court that he proposed to prove by a witness that Dr. Mitchell and the witness himself belonged to the German Rifle Club, and the other defendants to the Blue Bluffs Club; that the two clubs were corporations, chartered under the laws of the State of Tennessee, and that their sole business was shooting at a mark; that the charter and laws of Tennessee allowed them to shoot at a mark on Sunday as well as any other day, and it was the constant practice to do it. The Attorney-General conceded that if the defendants had been hunting or shooting in the air, or at each other, they would have been guilty, but on the principle already conceded by the court they could not be convicted if they proved their facts, and the court would be bound by the facts and the facts by the witness for the defendants. After the case was over the court remarked that on the law and the facts as proved he must say that there had been no violation of the statute, as such a case was a clear exception to the statute, and in obedience to the Constitution of the United States he must release the defendants, but that the constable, as prosecutor, must pay the costs. Dr. Mitchell then per-

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

FRESH WATER.

Black Bass, Micropterus salmoides and M. pallidus. Mascalonge, Esox nubilosus. Pickerel, Esox americanus. Pike or Pickerel, Esox lucius. Pike-perch (wall-eyed pike) Stizostedion americanum, g. griesoni, etc.

SALT WATER.

Sea Bass, Centropristis striata. Striped Bass or Rockfish, Roccus lincolni. White Perch, Morone americana. Bluefish or Taylor, Pomatomus saltatrix. Soup or Forgie, Stenotomus argyrops. Pollock, Pollachius caeruleus. Tautog or Blackfish, Tautoga onitis. Spanish Mackerel, Cybium maculatum.

There are some kinds of fish, comely in appearance, bold biters, and rather successful tormentors of fine tackle, which are styled "game fish" and angled for as such, but which by no means deserve the name and reputation. Such customers may possibly "pass in a crowd," as the shabby get feel frequently do among the masses of human society. But the superior qualities and attributes of the true game fish are readily detected. Define me a gentleman and I will define you a "game fish," which the same is known by the company he keeps, and revealed by his dress and address, features, habits, intelligence, haughty food and manner of eating. The true game fish, of which the trout and salmon are frequent types, inhabit the fairest regions of nature's beautiful domain. They drink only from the purest fountains, and subsist upon the choicest food their pellucid streams supply. Not a say that all fish that inhabit clear and sparkling waters are game fish: for there are many such, of symmetrical form and delicate flavor, that take neither bait nor fly. But it is self evident that no fish which inhabit foul or sluggish waters can be "game fish." It is impossible from the very circumstance of their surroundings and associations. They may fish with tinsel and tawdry attire; they may strike with the brute force of a black-smith, or exhibit the dexterity of a prize-fighter, but their low breeding and vulgar quality cannot be mistaken. Their habits, their very food and manner of eating, betray their grossness.—CHARLES HALLOCK.

A 'H RTY-THREE POUND MASCALONGE.

HELLO, captain, which way?" This was the query he put to good-looking young man of about thirty on the 7th ins., as I was descending the bank of Lake Erie, in our fine city of Erie, with cars over my shoulders, trolling line and gaff hook in hand ready for a short row and troll. The person addressed was genteelly dressed, an entire stranger to me and I to him. He had a good rod and line, a bucket full of live minnows and crabs, and replied: "To break-water and thence to South Channel pier for bass."

Seeing my oars, trolling line and gaff, he looked as if he would greatly prefer riding to walking, the distance to his fishing point being three and a half miles by land and only two miles by water. I informed him that I was going out for a troll, and if he was willing to go as slow as I desired he was welcome to ride and I would land him at his destination. He embraced my offer and in five minutes more we were rowing in one of the finest bays anywhere to be found. The wind was too high for good trolling, and our course being east there was but little rowing necessary, only a little guiding of the boat. I took the oars for a mile, trolling all the time with the line in my teeth, in which manner I have landed many a fine mascalonge, pike, black-bass and walleye. In a few minutes we were at "the channel." The stranger, Mr. R., took the oars and my line was transferred from mouth to hands. I requested him to keep close to the channel and to row very slowly, as my wind was feeling rather unwell. Then, with my rod, which was carried in the knee-chaper, Bud N.'s spoon brightly silvered with tin and as brightly red inside, with ninety to a hundred feet of small line out, I tried my best to induce a bite, but doubtful of success owing to rough water.

Mr. R. had rowed but two or three minutes when I had a most decided and unmistakable strike, a bite like the pounce of a lion on a rabbit, and the instant it took the hook the fish showed its majestic form by a leap of four feet in the air. "Thunder!" exclaimed Mr. R., dropping the oars. "That's a big one, you'll never get him with that line." Attending to my line, I replied: "Yes, it's a large one; keep the boat steady—perfectly so, and wh never I bring it to side of boat haul in our from that side." Then I had that indescribable delight of the troller. Like a tiger hooked to the end of a small cord I had a mascalonge and a good one, fast to my small line, leaping, shaking, darting, diving, struggling desperately and like a hero to get loose. Hal' twas fine. It fought well, splendidly, took short splurges and long pitches of the boat, but the line taught all the time, only giving just slack enough not to strain the line too much, not knowing how well the fish was hooked. It took twenty minutes to get it within twenty-five feet of the boat, where it stopped for a moment, being two feet under the water, and where Mr. R., tremulous with excitement, had a good view of it, and where I, satisfied before, was fully convinced of its being a really large fish. I gave it no rest; worked it to side of the boat and struck it with gaff, but, owing to rough water and pitching of the boat, the fish slipped, and I missed it under the gills as I desired, but the side of its head was planed off. It turned quickly, made a splurge or dive of thirty feet, and during the next ten minutes it plunged and fought most gamely, going backwards and forwards, right and left, up and down, leaping out of the water twice, diving three times under the boat and as often brought back until finally, and I should say thirty minutes from taking the hook, I brought it to the side of the boat, gaffed and lifted it in. It made most vigorous leaps to get out, but I held on with the gaff until I passed the wire end of my strong fish rope through its chops, tied it to a rib in the boat and thus had it secure.

It particularly requested that it be kept at my end of the boat, and in fact its ponderous jaws, with their one and a half inch teeth, looked sharky. The three hooks were well fast near the junction of the jaws. It measured four feet

Rabbits are very numerous here this fall, and I anticipate some good rabbit shooting this winter. We have had ten steady days of rain this month, and everything is under water. A great many surf ducks have been killed on the inland rivers and marshes this season, which is an unusual thing here, as they are generally only to be found on the large lakes.—TAYLOR.

NOTES FROM ARKANSAS.—Van Buren, Ark., Oct. 19.—The celebrated poet and lawyer, Gen. Albert Pike, with Richard Thornton and others left this place Monday for a two week's hunt in the Choctaw Nation, I. T. The General says that this will be his last Arkansas hunt, but his many friends protest, and predict that he will come again. The weather has been extremely warm till within the last few days; there is now quite a change, and we hope for cooler still. The first mallard of the season was killed today by our Sheriff, Mr. Houck. Some small hags of teal have been made, but shooting as yet has been poor. With the approaching cool weather we expect to have royal sport. We have quite a number of splendid lakes within easy access of town, boats, etc., and are fully prepared to give the ducks a warm reception on their arrival.—DICK.

NOTES FROM THE MARCH 70 YORKTOWN.—Yorktown, Va., Oct. 19.—Found plenty of birds on the way down from Washington, but having been delayed by the death of the President had not sufficient time to shoot much where the laws permitted. Expect to have a pleasant march back, and to have a well provided mess. It is claimed that wild turkeys are unusually thick along the river near Hanover town, below Hanover C. H. Expect to be able to report as to facts at a future date. "Gircus" here almost a miserable failure, save possibly the military and naval, which has not yet come off.—U. S. A.

FLORIDA GAME.—Pensacola, Fla., Oct. 19.—Editor Forest and Stream: I notice in your "Answer to Correspondents" that you state that "in no part of Florida can a man make a living with his gun." It is a mistake; your informant was wrong. Evidence: Last week the Sheriff of this county and two other hunters took a trip to an old camp ground thirty two miles distant from the city by way of the railroad. They remained there two days, and the amount of game killed was viz, three deer, six turkeys and two hundred and forty-nine squirrels. Plenty of doves and partridges around the city. Weather still very warm.—NIO.

DEER HOUNDS IN MAINE.—It is reported that two or three gentlemen belonging in Bangor, together with a party from Boston, headed by a guide who lives in Yezzo, Me., a day or two since went out to Lead Mountain, near Union River, that State, to hunt for deer. The party had with them a pack of valuable dogs. A State law forbids the hunting of deer with dogs, and its violation so incensed the natives in the vicinity of the mountain that they all turned out and shot every one in the pack. One of the dogs, owned by a Boston gentleman, was valued at \$150.

CONNECTICUT NOTES.—Winsted, Conn., October 21, 1881.—Game in this section has been quite scarce this season, with the exception of woodcock, which have been as plenty as usual. I can report several fine strings. On Monday Messrs. Skinner, Bevins and Skinner bagged thirty-eight woodcock, and Tuesday Messrs. Skinner, Bevins, Skinner and Kirk bagged thirty more. Wednesday, Messrs. Camp and Beskerle bagged thirteen woodcock and two grouse. The above are the finest strings I have ever heard of being taken in this season.—CLIFTON.

COLUMBIA COUNTY, N. Y., Oct. 23.—I have spent the past week here in Columbia county as the guest of W. Bostwick and G. Hills, of Hudson, N. Y., and Dr. Jones, of East Chatham, N. Y., three as thorough sportsmen as ever pulled a trigger, and I must say nothing was spared that would add to the pleasure and comfort of myself and dogs. We have enjoyed some excellent woodcock shooting during the past week, especially on the 19th and 20th—the flight birds stopping here in goodly numbers.—W. H. PRABO.

INDIANA.—North Vernon, Oct. 17.—Fall fishing is not first-class. Several varieties of bass are the game fish. The extraordinary drought of the past summer was almost extermination to the finny tribe. Hundreds of yards of the creek beds were entirely dry. Here and there was a deep hole left with water enough to preserve a few fish. In shallow places hogs would overturn the stones where a stray fish might have found refuge, and gobbed it up. It was discouraging. We hope the fish may come up from the larger streams.—N.

NOTES FROM INDIANA.—North Vernon, Ind., Oct. 17.—The open season for quail and pheasants in this State is from the 15th of October to the 20th of December, and for wild turkeys from 1st of November to 1st of February. For the killing of a quail, pheasant or turkey out of season the penalty is \$3. Quail are not as numerous this year as in some other years. Turkeys and pheasants are always scarce.—N.

BOND'S ROWING GEAR.—We have in our office some samples of Bond's new rowing gear, which will be found to suit the wants of many. As a rule, canoes and sporting boats are too narrow to pull from the prow, and so an arrangement is required for rowing which can be got rid of when not in use. To this end W. E. Bond, Cleveland, Ohio, has devised a very neat arrangement, combining several advantages sure to be appreciated. The rowlock is supported in a light and neat iron outrigger. The legs of the latter are supplied with adjustable hooks, by means of which the outriggers are attached to suitable castings screwed to the gunwale inside, and their height regulated by a thumbscrew to suit each individual and the depth to which the boat may be sunk. They can be quickly unshipped or turned inward to drop down to the boat's side out of the way. The rowlock itself has a swinging brass band of semicircular section pivoted within the arms of the rowlock, so that raising the oar to feather is accomplished by this band swinging about its pivots, thereby obviating all noise in pulling, a fact which the hunter will not fail to value. This arrangement facilitates the art of rowing very much, and serves as a rest from which to "pull" without tiring the wrist. The workmanship of these outriggers is the very best, for they command strength with light weight and lightness. The shoulders of the rowlock are accurately fitted to those of the socket, and the latter, being two and one-half inches deep, prevents all rattling generally accompanying the swing of the oar. The gear ranges from eight inches to twelve inches in length and in price from \$3.50 to \$4, and can be had direct from the manufacturer, W. E. Bond, Cleveland, O.

NEBRASKA AS A HUNTING COUNTRY.—Lincoln, Neb., Oct. 21.—Last Monday, Messrs. Webster, Tomson, Hallett and I went out by the morning train to a small lake, or really a marsh, near Ashland, a small town twenty-seven miles from here, on the B. & M. R. R., and in a seven hours' shoot bagged 120 ducks and eight snipe. The lake was so full of weeds and rushes that a dog could not work, and we lost at least half as many ducks as we got. There were thousands of "mud hens," and these flying about continually bothered the party no little, especially when the sun went down, and made it difficult to distinguish them from ducks. The party waded out into the water, and took stands by the muskrat mounds that reared their heads above the water all over the lake. The day was cloudy and cold, clearing off half an hour by sunset, and giving us a glorious western horizon for closing the day's entertainment. All the ducks, but about ten, were of the larger species. I am beginning to think Nebraska is a better hunting ground than Mississippi.—B. H. P.

SULLIVAN COUNTY GAME.—New York, Oct. 21.—Editor Forest and Stream: I notice in your issue of the 20th that a party has been sold in going to Sullivan county for ducks and other game, wherein you disagree with him. I know all about it, and have visited Eldred twice. The first time was from an advertisement in your paper. I remained for a week or more, and did not even see a woodcock, or anything else, and got disgusted and came home. I tried it again, thinking perhaps luck was against me. This time I remained two weeks and saw but one woodcock and a few partridge, and a friend, myself and a guide, with an excellent dog, bagged in two weeks' time but seven birds, and bought all I could, which was six, making thirteen in all. The fact of the matter is there is no game up there.—S. P. GILLYERMO.

CAMPING OUT AT YORKTOWN.—One of the most attractive points around the exhibition grounds to visitors is the encampment hotel kept by L. Y. Jemess. It embraces fifty tents, accommodating from two to thirty persons each, all floored with planks at a sufficient elevation, and nicely furnished and airy, located on a hill several hundred yards north-west of the Exposition and accessible from the main entrance by Marlitta avenue and the Western and Atlantic Railroad. The site is of the best, and there is a first-class dining-room attendance from the encampment. The grounds were brought here from Warwick Woodlands, Greenwood Lake, Orange County, New York, a popular Eastern summer resort, built up by the Greenwood Lake Improvement Company, of which William O. McD. well, a Gotham banker, is President. In addition to the tents there are closed comfortable frame rooms for those who prefer them. The encampment is handsomely arranged, with broad avenues, and elevated plank walks. It is inclosed by a high fence, with only one entrance through the office, and is thoroughly guarded day and night. The novelty of this enterprise is attracting considerable attention, and it is extremely popular. The rates are the same as those of the Atlanta hotels, which has been reduced since the exposition opened, and it is specially to be commended for large parties or families.—Exchange.

THE "SAXON" GUN AGAIN.—New York, October 24.—Editor Forest and Stream: My attention has been called to an article in a recent issue of your valuable periodical, headed "Guns Given Away," in which it was stated: "It must be a very greedy man who invests in the 'Saxon.' Relying upon your good sense and justice, and in the hope that you will give the 'Saxon' a hearing, I beg to state that during the last month I have sent many hundreds of guns out of this office in reply to mail orders, and have sold a great many across the counter. Out of this number of guns I have had but eight guns returned, as my books will show, and have received many testimonials as to its merits. I do not pretend that a \$50.00 gun is equal to a \$40 gun, but I do pretend, and am willing to prove, that the 'Saxon' breech-loader is a good, strong, reliable weapon, shoots well and gives great satisfaction.—WM. HARRISON, President Saxon Importing Co.

[We wish to do Mr. Harding no injustice, and should have contented ourselves with the simple refusal of the advertisement of the "Saxon" gun which was offered to us, had we not been compelled by the wording of that advertisement in other papers to define our opinion of the gun in question. The advertisement falsely states that "the sporting papers generally join in praising the 'Saxon' breech-loading shot-gun as one of the most reliable sporting guns in the world." The sporting papers have not "generally joined in praising" the gun, and because of the assertion that they did, the FOREST AND STREAM took care to put itself on record as not praising it.]

The "Saxon" gun is one style of a large class of firearms which are, from time to time, worked off upon the public by means of specious and glowing advertisements. These guns, sold under many names, are all substantially the same thing, being old muskets which are converted into clumsy shot-guns. They are the same guns that were sold to the Southern negroes and at counter cross-road stores for \$5 or \$4, or less. The advertisements are all alike. We said that the person must be "green" who is induced by the advertisement of the "Saxon" to invest in the gun. We will explain why we said so. The advertisement asserts that the "Saxon" is a \$15 breech-loading shot-gun for \$5.50. This is not true; the grade of single-barrel breech-loading shot guns sold by reputable dealers is far superior to the "Saxon" which is, therefore, in no respect "a \$15 gun for \$5.50." The advertisement asserts: "Our regular price is \$15; in selling samples of the 'Saxon' at \$5.50 each we are making an enormous sacrifice." As a matter of fact the same kind of gun is furnished by New York parties to country storekeepers for \$2.75 wholesale, and retailed by them at \$4 or \$5. That is all there is to the "enormous sacrifice." The advertisement says "every part of it made of the very best material." The fact is that it is made of very common material. The advertisement says that "the improved patent breech makes it far superior to any other breech-loading shot-gun in the world." On the contrary, the action is as old one and has long been superseded by improvements. Etc.]

CHICAGO NOTES.—Chicago, Oct. 22.—The shooting has been very bad here since I last wrote you on account of the warm weather. I was down on the Calumet last Monday shooting. I bagged nineteen jack-snipe, seven kill-deer, six blue-wing teal, one wood-duck and eight mallards. Snipe are plenty, but ducks of all kinds are scarce. There is good shooting on Kankakee River. A party of twelve Chicago sportsmen left for there this morning, to be gone two weeks.

"Bibliotheca Piscicologica," 1855. Then Beaulieu's list in the American edition of "The Complete Angler," 1847. After this came "A Bibliographical Catalogue of Books on Angling," by Russell Smith, 1844. Then the greatest and best, by Thomas Westwood, 1861. This was followed by the "Bibliotheca Ichthyologica" of D. Mulder Bosgoed, in 1874. Mr. Westwood, by the way, is revising his great work, and we expect to see it before long.

Mr. Lambert has given an interesting little book, although far from attempting to give even the titles of all the works on angling. It gives some quaint extracts from old books and some poetical extracts.

AMPHIBIOUS FISHES.

MEDIA, Delaware Co., Pa., Oct. 23.

Editor Forest and Stream:

In addition to the list of fishes which I lately sent to you, which live in both fresh and salt water, I will add the longnose gar, *Leptostosteus osseus*. This fish is very abundant in the fresh water streams on the west coast of Florida. When beached in the shoal water of the Gulf of Mexico I saw many gar fish, which I feel confident were of this species. They did not seem to entertain any fear of the porpoises which were seen to swim near them. Alligators, however, are not so fastidious as the porpoises, as I once saw one of the former which had a large fish in its stomach. This species of gar is very retentive of life. I once made a drawing of one of them, which had been out of water eighteen hours, and even then it snapped its jaws several times. The small from them is very disagreeable and sickening. There are also two other species of gar fish in Florida, the short-nose gar, *I. platystomus*, and the spoonbill, or alligator gar, *Lithobranchia spatulata*, though these species are more rare.

JOSPH WILCOX.

PROPOSED ABROGATION OF THE FISHERY TREATY.

A MEETING was recently held in Gloucester, Mass., for the purpose of conferring with the Hon. Eben F. Stone, Member of Congress from that State, upon the fishery interests. The meeting was composed of fishermen, owners of fishing vessels and business men. Mr. Fitz J. Babson, Collector of the Port, presided, and among those present were: A. H. Clark and C. E. Haskell J. Martin, of the U. S. Fish Commission; Col. E. H. Appleton, J. O. Proctor, Esq., B. H. Corliss, Esq., Col. David W. Low, Capt. Chas. Dagle, Henry Cons, Collector House, of Newburyport; Messrs. W. A. Wilcox, of the Boston Fish Bureau, and others interested.

Mr. Babson stated that the object of the meeting was to give Mr. Stone an opportunity of learning the views of the people who are mainly interested in fishing, and to devise means to abrogate the treaty with Great Britain, which so far from a benefit is an injury to American fishermen. He referred to the treatment the fishermen had received from those of the Provinces, and proved by statistics that the American fisheries for cod and halibut are pursued on the ocean banks, entirely outside of any national jurisdiction. For the nine months of the present year, there had been caught on these banks, 19,688,800 pounds of codfish, and 2,972,900 pounds of halibut, 99,998 barrels of mackerel had been caught by our fleet, and with the exception of 43 barrels caught in the Bay of St. Lawrence, had all been taken from a benefit to American fishermen. He stated that the fishery has been worthless to the American fishermen on the British coast and in the Gulf of St. Lawrence.

This, he claimed, was also true of the herring, squid, capelin or other bait fisheries, as these fish cannot be taken by American fishermen, and are consequently bought by them like any other commercial commodity, the same as if no treaty existed. The monstrous valuation by the Halifax Commission of the British inshore fisheries, together with an equal amount resulted as duties by the United States to British fishermen, is a record of almost criminal blindness, which no nation can afford to perpetuate. He concluded by offering the following memorial, which was received with favor, as expressing the sentiment of the meeting.

To the Honorable Senate and House of Representatives in Congress assembled: This memorial respectfully represents that by act 33 of the treaty of Washington, the articles of said treaty relating to the fisheries, shall remain in force ten years from the date at which they may come in operation, and for a further period of two years after the expiration of the said articles, should it be the desire of the United States to terminate the same. Now, therefore, we, the fishermen of the United States, knowing and believing that the results of the said treaty have not only been detrimental to the interests of the United States, but unjust and monstrous in the valuation by the Halifax Commission of the British shore fisheries, and which the experience of the past ten years has shown to be valueless to American fishermen, do hereby pray your honorable body to cause notice to be given, at the earliest practical moment, of the desire of the United States to terminate the operation of the fishery articles of said treaty, and all other treaty provisions relating to the fisheries on the shores of Canada and Newfoundland, for the following reasons, to the end that the British and American fishermen may each in their own waters enjoy the right to take fish unmolested, and equal commercial rights in the waters of either country.

Colonel Stone then responded. He was pleased to meet such a large representation of the business men of the city, and fishing men, and the men who were masters of the fishing vessels. He had no idea of the immense cellular industries in connection with the Gloucester fisheries, which he had witnessed in his drives around the city, and in the mills he had made in company with Collector Babson during the day. It was almost a revelation, as his idea of the fisheries was that of the old-fashioned methods, where there had been no attempt at canning, or skinning and boiling, which was carried on so successfully in Gloucester, and formed such important industries. The abrogation of the Washington Treaty and again putting on a duty on foreign fish, did not seem so easy to him as it did to Captain Babson, as there were most other interests in the country opposed to this. We must meet a serious opposition from those who wish to get fish as cheaply as they can. He thought the question could be put in the shape of Protection to American Industry, and it could not be denied with any kind of grace. If protection be right in principle, it would be grossly unjust to neglect Gloucester. There is a similar fish industry on the lakes, where they are more interfered with, and by the abrogation of these interests, we may gain Western votes with which to carry our point. He hoped also that the

manufacturing interests extending so rapidly in the South, where heretofore there had no food, and the long food it necessary to ask protection. If he found difficulties, he also found encouragement, and should, if he had opportunity, do everything in his power for the renewal of the old duties.

Mr. B. H. Corliss reviewed the fishing business, its struggle, its decline in other places, the great sacrifices of life and property in its prosecution and the enterprise and courage exhibited by our people in carrying it on against so many obstacles. He spoke of the concessions which had been made to Great Britain, the neglect of our Government to send an armed vessel into provincial waters to protect the fishermen and look after their rights which unjustly assailed. In his opinion, we had now arrived at that point when we want the treaty abrogated, as the privileges we had from it were not worth a dollar.

Mr. W. A. Wilcox assured the meeting of his sympathy and heartily endorsed the remarks which had been made. These were his own personal views. He had visited the various fishing ports and the industry was well deserving of protection. Boston did not agree with these views; but he considered it his duty to endorse the policy.

Mr. A. J. Clark had visited all the fishing ports in the United States, obtaining statistics in the interest of the Fish Commission. There was a vast amount of information which would prove astonishing to the people. The statistics of Gloucester clearly proved the great disadvantages under which she has labored with this treaty in operation. Prof. Baird was of the opinion that it should be abrogated at the expiration of the time.

Other remarks were made by Col. David W. Low, John J. Pew, Esq., who were in sympathy with the meeting and endorsed the remarks made.

A committee of five, comprising Fitz J. Babson, B. H. Corliss, David W. Low, John J. Pew and James G. Tarr, were chosen to prepare a memorial, to be circulated for signatures in the various fishing towns and be presented to Congress.

That the fishery treaty should be abrogated there can be no doubt for both the American and Canadian fishermen demand it. To place the question fairly, we give the Canadian view, as expressed in the Toronto *Globe* of the 14th. It says: "The United States should pay Canada and Newfoundland \$5,500,000 for the right to fish in British North American waters for twelve years. The Washington treaty provided that the clauses giving fishery rights to the Americans and to the Canadians the right of sending fish and fish products into the States free of duty, should have force for ten full years, after the end of which period either party could, by giving two years' notice of a wish to end the agreement, bring it to a conclusion. For months have elapsed since the Canadian Government could have caused the Washington Government to be notified, yet no action has been taken. The matter should at once be attended to. At the rating of the Halifax Commission, the value of the concessions received by the States exceeded the value of the concessions made by them by the sum of \$458,333 each year. Consequently, Canada has lost over \$152,000 by the four month's delay of the Ottawa authorities. But that would be a very low estimate of the actual loss. The value of the fishery was very much in favor of the States, and a revaluation would, of course, give Canada increased compensation, even if the privileges claimed and exercised by the American fishermen were not in excess of those which the arbitrators reckoned on. But the fact is that the Washington Government in the Fortuue Bay affair put an interpretation on the treaty that gives the American fishermen privileges for which the award was not intended to pay Canada. That interpretation was more or less distinctly recognized as correct by the Gladstone Government, consequently a revaluation would give the Dominion a largely increased annual rental for the fisheries.

Though justice requires the earliest possible exclusion of the American fishermen from the enjoyments of rights for which their Government has not paid, there would be in this country some good-natured reluctance to take action if the Gloucester fishermen had not presumed to "bluff" the Dominion. Fondly imagining that they will be allowed to poach in British waters, they have been instructed by the notorious Boshoff to request the Washington Government to do as they required two years' notice. They hope to take fish where they please, and at the same time to exclude Canadian fish from the States by prohibitory duties. Not a moment should be lost in taking them at their word.

It may be doubted whether Canada should again agree to let the Americans enjoy admission to the fisheries for a sum to be fixed by arbitration. Perhaps the best course would be to rigidly keep the grounds for our own people till our neighbors agree to pay a fair money price named by the Canadian Government, or to enter into a commercial arrangement satisfactory to this country. Were that course taken the reposition of American duties on Canadian fish or fish products would not injure Canadian fishermen in the least, while they would be freed from competition, and thus enabled to extend their operations very greatly. But whatever course may ultimately be followed it is absurd that the Americans should be allowed to go on catching fish for which they have not paid. It is not now possible to prevent them exercising that privilege for four years in 1933, the notice would be immediately given that they will be allowed to take advantage of Canada no longer.

MAN-EATING SHARKS.—The Peninsula, Fla., *Gazette* of Oct. 15 calls for Anthony McDonald, sailor, belonging to the English ship "Forest Rights," was drowned on Sunday, while bathing near the Central Wharf. The mate of a vessel lying near went to his rescue as soon as it was known that he was in peril, but before reaching the spot the unfortunate youth had sunk out of sight. The body was dragged for, but not recovered until the next morning, when it was found to be horribly mutilated by sharks. Deceased was aged 18, aged 18, a native of Liverpool, and this was his first voyage. It seems to have been a great favor that he was shipmate. The body was left moored to a ship lying at the wharf, awaiting the arrival of a corner, who decided upon his arrival that an inquest was unnecessary. We are told that yesterday an immense shark—estimated to be more than fifteen feet in length—arose to the surface, and seizing the body instantly carried it under the wharf. Parties standing near took hold of the rope, and after a tug with the monster deprived him of his prey. This subsequent attack of the man-eater is conclusive proof that the unfortunate young man met a cruel and a cruel death in a shark's jaws. His head and one arm and one leg were gone, while a large gash was visible in his left side. This is the second death of the kind that has come to our knowledge within the year. The other was that

of a mate of a small vessel who was knocked overboard between here and Mobile a few months ago, and who was seized by one of these large fish, and carried below in the presence of his shipmates.

BAIT HOOKS WITH GUT LOOP.—Fort Wayne, Ind., Oct. 17. I have always had more or less trouble by the snaiting and entangling of my snelled hooks used in bait fishing for bass. Last spring I conceived an idea that, so far as I am concerned, after a thorough trial, has proved a success, and has been adopted by several of our local anglers that have seen the change. The "conceived idea" is as follows: I had the veteran angler Charles F. Orvis, of Manchester, Vt., for the two dozen sprout hooks with simply a loop of gut on the end, also a few one-inch snelled hooks, which I had made. The hooks are carried in an old fly book that I have converted into numerous pockets that hold two hooks each. The snells are carried in a single pocketbook of proper length. The advantages of this plan I claim to be as follows: We are in the habit of breaking more hooks than snells, and in this event the snells are cast away, while in my plan a new hook is only to be mounted, the snell being saved. Second, the snells cost more than the hook in the old plan, while a dozen of my style snells will outfit three or four times as many hooks, thus being a great deal cheaper. I inclose one of the hooks to convey my idea better. I think this plan original with WILLIS D. MAIER.

TROUT FROZEN IN A BLOCK OF ICE.—At the office of the Virginia City and Gold Hill Water Company, recently, was on exhibition a block of ice in which were frozen several trout. The ice was frozen by the company's ice machine on the Divide. The trout were almost as plainly visible as though they had been suspended in air. They were in natural attitudes, and appeared to have congealed without knowing that anything unusual was happening to them. As all their spots and colors were distinctly visible, and they stood immovable with tails and fins expanded, they would have formed a splendid study for an artist. Indeed, we think that here is a hint that painters of such subjects should not neglect. Bets were made that they would thaw out "alive and kicking," and the block of ice was accordingly placed in a tank and allowed to melt, but at last accounts the trout were lying on the bottom apparently quite dead. Artificial freezing was evidently too quick and sharp for them.—*Virginia City (Nev.) Enterprise*.

ANGLING FOR ALLIGATORS.—It is said that the unusual drought in Florida has had the effect of drying up Shiley Lake to such an extent as to leave only a few shallow spots here and there, and in these alligators sought refuge in large numbers, digging huge burrows into the ground. This has furnished great sport to the settlers in the neighborhood, who have gone in crowds to those spots, and fished with fine success for the enormous reptiles. The manner of catching them was to thrust long rods with hooks at the end into one of the cavernous burrows and stir up the occupants. One of the alligators would snap at the rod, a jerk would fasten the hook into the soft part of the lower jaw, and it would then be easy to draw the animal out and kill it with hatchets. It is not every year that such fishing can be enjoyed, even in Florida.

Fishculture.

THE MAYFISH OF GERMANY.

THIS member of the family, *Cyprin*, is a fish in size and general appearance like the shad of America. It does not, however, ascend the rivers in such great schools as does our own *Alosa sapidissima*, and attempts have been made to cultivate it. In a recent number of the *Fischerei Zeitung*, of Stettin, we find an article on it, of which we offer the following translation: "On a little town near Herr Marx, you dem Borne to a paper in Holland he says that for the past six years German fishcultivators have tried to cultivate the mayfish (Meisfish or die "Aiso," *Clupea alosa*), but the operations have not been as successful as those with the shad in America. In the last year the fishcultivator of the East Coast of America came to take the fish in the broad mouths of rivers and in the estuaries (at the head waters also, Eltorr Forest and Stream). In vain we seek such places in the Rhine between Coblenz and Heidelberg. Herr von dem Borne says if it was the fish are caught in Holland, at the mouths of rivers, with eggs mature enough for transportation. He says also that in America the fish are chiefly caught in the first half of the night, this being the time when they seek the eddies for spawning. "We find the same here," says Mr. Fischmeister Mueller, of Tschischdorf, who has had some experience in the culture of mayfish in the upper waters of the Rhine.

Will it be easier then to take the nearly ripe fish at the mouth of the river and preserve them until fully ripe than to try to take them at the upper part of the stream? From which it starts, and when near spawning and the nearer to the spawning places they are taken the ripier they must be. Perhaps they may also try to manipulate the spawning fish on the Weser with more success. However, the man in Holland answers Mr. von dem Borne's question by saying that ripe mayfish were caught in Holland at the mouths of rivers in June and July. Certain it is that the artificial culture of mayfish has not yet been a success.

FISHCULTURAL NOTES.

PROF. S. A. FORBES and party, from the State Laboratory of Natural History of Illinois, have done much satisfactory work with dredge and beam-trawl in Lake Michigan and the smaller western Illinois and Southern Wisconsin waters. They have obtained a large collection of the smaller life upon which the fishes feed and which has a direct bearing upon the existence of young fishes especially. They will soon complete their season's labor on Lake Michigan.

The Fish Commission of the State of Michigan has outgrown the little hatchery at Pokagon and moved to Paris, Mecosta Co., where it can conduct operations on a larger scale. At Paris there is a fine brook, running at low water 181 cubic inches, with a temperature of 68 deg. at the spring from which it starts, and often runs higher in the stream in the hottest days. Eighteen months ago Mr. Portman, the Superintendent, planted 1,000 brook trout fry in it, and since work has begun there has been taken 173 of them at the lower dam which were from eight to eleven inches in length. The new hatchery is 60 by 20 feet, and is nearly completed.

A shipment of live marbot and soles for the U. S. Fishery Commission is expected on the Canada steamer Parthian about the time of our going to press. They are sent by G. E. Jackson, a gentleman well known in England for his interest in fishculture, in charge of Mr. A. W. Arnstead, brother of Mr. Arnstead of the well-known trout ponds at Keswick. Our next issue will contain the result of the shipment.

We learn from Mr. James O'Keefe, who has spent much time in the Adirondacks this past season, that Mr. A. R. Fuller has established a hatchery for trout and is stocking some lakes in Franklin Co.,

N. Y., at his own expense. Mr. Fuller has a hotel near Meacham Lake, and others besides his guests rest where he shows. Mr. Fuller's enterprise deserves a hearty recognition.

Herr von Bell, President of the Deutsche Fischerei Verein, writes he has tried the bait with the eggs of California salmon, shipped on the 8th inst. by Mr. Mather, arrived in good condition.

HOW DID THE FISH GET THERE?

WASHINGTON, D. C., Oct. 16.

YOUR correspondent at Crockett, Texas, is still unable to account for the appearance of small fishes in his pond, which for weeks has been dry. His explanation may not be satisfactory, he cautions me to fill the bill.

Some years ago I went fishing for several seasons among some beautiful lakes in Northern Indiana, and more than once I was much bothered in getting minnows for bait. One fall, as I walked at the railroad station near one of the lakes, a gentleman came up to welcome me, and stated that he had lots of bait, and went on to say that he had caught a tubful of minnows in a pond near his house which had been dry the entire summer before. Like "R. C. S.," he didn't know how to account for it, but I endeavored to explain, and the explanation was accepted as entirely satisfactory. Heavy winter and spring rains left the pond full of water, and the water remained throughout the season, although the season before it was dry and the bottom baked hard by the hot sun. Ducks and snipes and many other birds came from the waters where fish were said to abound in the pond, leaving small quantities of the spawn of fishes that happened to adhere to their bodies. I don't believe in the "raining down" theory in accounting for the appearance of frogs, toads and fishes in unusual places.

EGGS OF CALIFORNIA SALMON.

THE following is the list of shipments of the eggs of the pinnet salmon, by Mr. Livingston Stone, in charge of the Department of the Pacific Coast, U. S. Fish Commission:

Table listing shipments of salmon eggs to various locations including Georgia, Maryland, Minnesota, Nebraska, Novand, New Hampshire, Pennsylvania, South Carolina, West Virginia, Canada, etc.

GERMAN FISHCULTURAL BOOK.

WE have received a small pamphlet called, "A Short Guide to Troutculture," by Friedrich Beck.

A few general directions are given and then follow the impregnation of eggs and their handling; breeding apparatus, with their prices; hatching in the open stream; care of eggs and the planting of young fish. The work is an elementary one and contains no new theories or experiments.

"Kurzer Leitfaden für Kunstliche Forellenzucht" | von | Friedrich Beck. | I. Vorstand des unterriethslichen Kreisfischerey Vereins zu Ehrenfelden. | Preis 20 Pfennige. | Verlagsort: Wurzburg, Druck der Thein'schen Druckerei. (Sturz) | 1881. | Nachdruck verboten. | 16 pp., pp. 31.

FIXTURES.

BENCH SHOWS.

December 14, 15 and 16, at Lowell, Mass. Lowell Dog Show. Entries close December 6. (Chas. A. Andrew, West Boston, Mass., Superintendent.)

FIELD TRIALS.

October 25, 26, 27 and 28, at Mason's and Fayette Co., Pa., via boat from Pittsburgh. Pennsylvania Field Trials. First Annual Derby. Entries close at Pittsburgh, Pa., October 15. I. R. Stoyton, secretary. November 1, at Citoy, Cal. Field Trials of the Citoy Rod and Gun Club. Entries close at Citoy, Cal., October 20. Secretary, W. S. Johnson. November 5, Louisiana State Field Trials. Entries close November 1. Edward Meek, secretary, New Orleans, La. November 7, Thanksgiving Day, at New Field Trials Club; third annual meeting at Hobbs's Island, Pecorie Bay, Long Island. Entries closed Oct. 1. Jacob Penn, secretary, P. O. Box 574, New York city. November 8, at Grand Junction, Pennsylvania. American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

FIELD TRIALS AND BENCH SHOWS.

WHAT the standard of excellence for the pointer and setter has been greatly elevated within the past few years no one who is a close observer will deny. It is not patent that there are hundreds of dogs scattered throughout the country whose beautiful forms and capital performances stand out conclusively that the spirit of generous rivalry and emulation born of our Bench Shows and Field Trials has wrought the wonderful improvement. But a few short years ago many true sportsmen could be found who honestly believed that Bench Shows were a delusion, and Field Trials a snare, and that they were but an artful means of advertising animals which could not be sold on their merits. All this is now changed, and with the exception of an occasional croaker whose disease is heronoric or the wall of the disappointed, we hear but words of commendation for these twin institutions that hand in hand have perseveringly labored for—and in so large a measure accomplished—the perfection of form and excellence in the field of the companions of our sport.

That still greater improvements and a still higher excellence will be attained in the near future we do not doubt, and to achieve this most desirable result let us all with willing hands do whatever lies in our power to promote the good cause. We are well assured that the coming trials on Robin's Island and at Grand Junction will be—both in the number present and the quality of the animals seen—far superior to anything that the world has ever seen, and we earnestly advise all who can do so to attend one or both of the meetings, and witness the proof of the "improvement" that they have accomplished, not only in the beauty of form and field quality of our pets, but the manner in which they are taught to do their work: for in nothing pertaining to Field Trials has the improvement been more manifest than in the training displayed

by the animals run. This in itself—were nothing else gained—should stamp the trials as a success, for nothing is more conducive to the sportsman's pleasure than to witness the pleasing performances of a well-trained, easily controlled animal, as he cheerfully and artistically performs his pleasurable task. Many able writers, some of them true sportsmen, have found a great deal of fault with the rules that govern the trials, claiming that owing to their imperfections gross injustice is often done. We will not discuss this matter here, but would earnestly entreat all who feel that a change for the better could be made to attend the meetings, and lend their influence to the speedy reform of so vital an element of success.

SAGACITY OF THE COLLEY.

IN those countries where close folding prevails and sheep are continually penned, there is little opportunity for the high training of the colley. In other districts the case is different, and Jogg, the Dutch shepherd, has well said: "Without the shepherd, the dog the mountains land of England and Scotland would not be worth sheep. It would require more hands to manage a flock of sheep, gather them from the hills, force them into houses and folds, and drive them to market, than the profits of the flock would be worth." At the "lock" is visited to "the burden," so the power of overcoming difficulties is developed by circumstances. Shepherds in the close-folding districts train their dogs to the performance of a few simple duties, and that is all. The sagacity on the Cumberland hills, on the contrary, have been compelled by necessity to train their dogs to do all that laborate care, and wonderful animals they have made of them—admirably are their sheep backs suited to the hurdens laid upon them.

In the course of walks with Cumberland shepherds I have seen what the services are which the dogs are called upon to render. Judging from results, there are few better dog breakers than John Scott, shepherd at Lamplugh farm, the Carlisle first-prize pastoral farm, observed by Mr. William Leathers. Herdicks are kept on the farm to the number of 12. "Our task was I say 'our task,' though the dogs did all the work—to collect the sheep and chase them to the fold before us to the very tops of the fells, for the sake of feeding all the land and changing the pasturage of the flock. The shepherd worked his dogs, two to the right hand, one to the left working them first by signs only, and sometimes by a few words spoken to a distant auditory, when the dogs were perhaps nearly half a mile distant, still in full view, bringing up the sheep from some neighboring fell-side. The dog would be sent to spread themselves far and wide over the ground that is open to the sheep, and would pick up like white stones in the distance, over a thousand acres of land. 'Get out, now!' cried the shepherd to one of his clever hounds, making a sign toward the sheep at the same time, and off went the dog at full speed, and in a few minutes he was back again. If they are pushed, they will bolt in all directions. The dogs know this, and they keep their distance, never running straight at the sheep, but keeping well outside of them, and some distance in the rear. The shepherd makes another signal. His dog is in a hollow, and he comes out, and he looks at the shepherd, and he watches his master, therefore, and expects to be informed whether he is required to beat the ground further or not. The signal comes, and off he bounds, but not quite in the right direction; he is running too fast, and he comes back, and he looks at the shepherd, and he shrill to his attentive ears, and further out he goes, or he will not quite stir as to the import of the message. He stops and looks round for the signal.

The youngest dog, only a twelve-month old, was the best in the field. He would be sent to a hill, and he would be sent to fetch any sheep that might be feeding there out of our sight. He went off at full speed, running to the right against the sun so as to bring the sheep round to the left, and through a gate ahead of the shepherd, and he would be sent to fetch any sheep that might be feeding there out of our sight. He went off at full speed, running to the right against the sun so as to bring the sheep round to the left, and through a gate ahead of the shepherd, and he would be sent to fetch any sheep that might be feeding there out of our sight. He went off at full speed, running to the right against the sun so as to bring the sheep round to the left, and through a gate ahead of the shepherd, and he would be sent to fetch any sheep that might be feeding there out of our sight.

The sheep dog possesses much the same form and character in every country. It is a dog of a fine, sleek, and glossy coat, and the body covered with shaggy hair, particularly about the neck. These are the characteristics of Sheep. His long tail, too, like that of his kind, is slightly turned upward, and is as bushy as that of a fox. He has none of those dirty tan-colored markings which are to be seen on some breeds of cattle—his coat is black, and the ring round the eyes. He is all black, with rather coarse hair, and a tall, spare figure. I have often seen handsome collies, but never better. There was a young sheep dog of his sort that accompanied the night-walker on his mountain journey from Westmoreland to London, and in returning to his journey. The following year he was found to possess such a knowledge of the road as enabled him to turn the sheep, when they attempted to run down the lanes and by-roads which had given so much trouble the year before.

An occasional accomplishment of Cumberland sheepdogs is that of finding sheep buried in the snow. John Scott has possessed dogs which, by their peculiar instinct, have been the means of rescuing hundreds of buried sheep. The snow drift sometimes covers the sheep beyond reach of the shepherd's snow poles; still, the dog detects their whereabouts. A dog has never been known to acquire the valuable gift which renders him a sheep finder, except when young. Mr. Dickinson gives a case in his "Farming of Cumberland," where a dog named Sheep was released, under the detecting nose of a young dog—almost certainly a Scotch collie—run upon the spot, while the older dogs stood listlessly by, leaving the honor of pointing out the sheep entirely to him. In the Martmas snowfall of 1867, being the heaviest of the present century, a flock of 400 hounds were sent out to find sheep buried in the snow. In recovering they had been turned upon the common "out-field" late in the evening, and overtaken by the sudden snowstorm from the sheltered portions of their run. Darkness came on, and the snow falling heavily, the flock was taken at disadvantage, and almost all of the sheep covered up beneath the walls of snow. Doisting from his gambols, he took a serious interest in a west was going on, smelling the ends of the probing poles and snuffing at the holes made. He was very properly left alone, so that his attention might be directed, and the final result of his patient puzzling as to the object of the operations was that the light broke suddenly upon him, and he commenced scratching eagerly in the snow.

He had at once become a sheep finder: and while the older dogs stood upon the snow, he dug out the sheep buried, barking and howling with delight at every release of the endangered Herdicks. The sheep lay generally in clusters, five or six together, and at each fresh recovery of a buried sheep of the kind the dog would scratch expertly at the ends of the walls of snow. In some cases he would be sent to find sheep buried in the snow. In recovering they had been turned upon the common "out-field" late in the evening, and overtaken by the sudden snowstorm from the sheltered portions of their run. Darkness came on, and the snow falling heavily, the flock was taken at disadvantage, and almost all of the sheep covered up beneath the walls of snow. Doisting from his gambols, he took a serious interest in a west was going on, smelling the ends of the probing poles and snuffing at the holes made. He was very properly left alone, so that his attention might be directed, and the final result of his patient puzzling as to the object of the operations was that the light broke suddenly upon him, and he commenced scratching eagerly in the snow.

exhaustion of the persons engaged, two hundred sheep had been extracted alive. On the following day, with the aid of the young dog, others were extracted—some living, many dead. At length all were extracted, but the last sheep did not come to light until the fourth day. It is recorded that the dog was sent to dig beneath a furze bush, or whin, as the plant is called in Cumberland, supporting life on the scanty herbage of this shrub.

The losses in Cumberland on the occasion of that dreadful storm were terrible, though they were very much mitigated by the aid of those farmers who possessed dogs endowed with the gift of "marking." The same shepherd indeed showed his intelligence in marking time as well as sheep. His master went constantly to the parish church, which was about a mile distant, and as constantly returned, so that the sheep were never in any particular spot, or third part of the distance home.

Another Cumberland shepherd acquired the power of retraining his master's sheep from the rising tide. Hesthorn Marsh, near Manchester Castle, is usually covered twice a day by the tide, and the slatp sheep deposited on it, with higher ground to retire to, if they had only possessed a grain of sense, were sometimes surprised and confounded by the tide. The dog's services were there required for the rescue, and thus he learned to avoid the expenditure of time and trouble by clearing the marsh of his own accord, by the rising of the tide. Mr. Walker of Gull, near Hesthorn, possessed a dog and a bull, the last-named creature being so unruly that he could not be ventured out to water without the strict guardianship of the dog. In the absence of the colley the bull was nearly taken out, and even so the dog's command was obeyed so thoroughly was he aware of it, that he never allowed wandering on the road. The bull was constrained to travel in a straight line, not swerving in the least. At the drinking place the thirsty animal would plunge his nose in the water, and the dog would sit on a stone near the water, and would not allow a young dog to drink. The letter had to satisfy his thirst at a single draught, for the moment he lifted his head home he must go, whether he had done or not.

Herdicks show much cunning in baffling an ill-trained dog. All goes well so long as the ground is easy for driving, but at the first opportunity some of the sheep, on one side or the other, will break away. The dog endeavors to head them, and in doing so they are still away in other directions, till the flock entirely breaks loose and nearly takes out a driver. Dog come on the scene, and the presence of the master spirit is soon discovered; the sheep are speedily subdued and brought to order. All difficulties in driving vanish in his presence. The wildest sheep, placed under his charge, know by instinct immediately that they must succumb, be they ever so numerous.

It is not surprising that the shepherds of Cumberland value their dogs. "He who strikes my dog strikes me," said one of them. The landlady of an inn told me that she found a sheepdog in her yard eating a leg of mutton. The dog was bit out with a certain amount of force, and was sent to the pound. The dog was bit out, but the herd was so offended that he never again entered her house. Cumberland shepherds have sometimes refused large offers for valuable dogs.—London Field.

ATTENTION! FOWLER'S VICTIMS.

Editor Forest and Stream: Noticing numerous articles in the FOREST AND STREAM in relation to the celebrated Connecticut dog dealer, Fowler, alias Cheater, alias Gleason, etc., I report as one of the deluded. Prior to his trip South, I bargained and paid him for a No. 1 pointer, and he was not to be had. I was disappointed, but he was not to be had and returned and announced business at the old stand of Fowler & Co., I proceeded to the land of wooden utensils, had the young man arrested, examined and bound over to appear at the next term of the Supreme Court.

We urge all victims of Fowler's rascality to apply to Mr. Burtford, who is ready to furnish him all possible assistance in giving the young man his dues.

No. 201 Madison ave., Albany, N. Y.

THE MILLY-WOODSON TROUBLE.—LANCASTER, Pa., Oct. 14. Editor Forest and Stream: I notice in your paper of the 13th inst. a letter about me, written by A. E. Woodson. I will give you our full dealings from beginning to end. In the fall of 1880 I received a letter from Mr. A. E. Woodson, Fort Laramie, Wyo. Ter., in which he requested me to sell him a dog, and he offered me \$50 on terms, but offered to send the dog C. O. D., provided he deposited the amount of express charges with the express agent. This he refused to do, and our correspondence ended. In the spring of 1881 I received a dispatch from him offering me \$150 for Gipsy Queen and Robin Hood. Gipsy I had advertised at \$125 and Robin at \$50. Gipsy I would not have sold to any one for one cent less, as she was in whelp. However, I made up my mind to let him have them, putting Gipsy in at her price and billing Robin Hood in at \$125. I telegraphed him to pay me \$150, but he refused to pay \$50, but he had sent the money to my banker. I waited on it, and finally it came, \$150, but as yet no money for the first dog, Royal. I at once had a large, light crane made, and shipped both Gipsy and Robin to him, directed to him, as he requested me to do, to his friend in Cheyenne. He wrote to me that he was in good condition, and I also sent along about thirty pounds of prepared food. I now was waiting for the money for Royal. Finally, fifteen days after the dispatch, his letter reached me, and contained an order on the bank for \$150, and I cut off by this time my mind. I was not satisfied with this, and I once wrote to him to ship both dogs back at once, and I would pay one-half expenses to get them back. He wrote he would keep them until they got over their journey, and he could tell better, but did not think I would suit him as his friend was in Cheyenne. He wrote to me that he was in good condition with Gipsy Queen, and that he would keep her, as he could do well with her puppies, but Robin Hood he would send back, and he demanded \$50 of me, which I refused to give, but told him to ship both dogs back, and I would send him the \$50. He refused to do so, and I demanded \$25, which is all he paid me for Robin, however. Robin came back, and I paid one-half expenses for the express charges. I then received a letter from him, stating I should not send any money until I heard further. Not being satisfied with this, I wrote to him to send me the amount I owed him. Some days after I received notice from my banker of a draft being there to the amount of \$43.60. I refused it, and drew one up myself for \$25, and sent it to him. I never received a letter from him whether he received it or not. Some few weeks ago I received

F. H. L., Rock Hill.—Will you please tell me what I can do for my eleven-month old Llewellyn setter? He has been poor ever since he was four months old. Can't get him to eat anything out raw meat, (he seems to prefer fish to anything else). I have treated him for worms but he does not improve. Gave him during the last five months: oil and turpentine, ground glass, worm oil and castor oil. He slobbers at the mouth a great deal and his mouth is very offensive. He seems to have plenty of life, but is very thin and poor. His nose is in good condition, cold and moist. I have given him four or five times a day for thirty days and could see no improvement. Ans. We fear that the powerful medicine you have given has seriously impaired his stomach. We should advise a generous diet with plenty of exercise and not a particle of medicine. See answer to W. F. B. in last week's issue.

NEW HAMPSHIRE'S MOUNTAINS.

IN his address before the New Hampshire Game and Fish League at its last meeting, Rev. Henry Powers spoke as follows regarding the resources which the State possessed in her mountains:

New Hampshire, by nature and by position among the States of the Union, is most uniquely and most admirably fitted to become the summer sanitarium and the pleasure ground of the nation, for she holds within her borders, as they cannot be found elsewhere, all the essential elements and advantages that are required for the making of such a sanitarium. She has for it, if not for general agriculture, the right soil and climate and scenery; lofty mountains and forest-covered hills, and beautiful lakes and rivers and valleys, and clear running streams and brooks. She has all the installations and appliances and products of the most advanced civilization and she is in the immediate neighborhood of, or in close connection with, by steamboat and railroad car, and telegraph and telephone, all the great centers of wealth and agriculture and population in the land. That such a sanitarium is needed by the people of our country is more and more apparent every year; that New Hampshire is marked out by a sort of natural fore-ordination to become such a sanitarium is fast growing to be the opinion of every section of the nation; that the people of New Hampshire are able to utilize their resources and their opportunities in this direction, and to an extent that they have scarcely dreamed of, is the firm persuasion of the best, the wisest and the most enterprising of their number, and that the prosperity of our rugged little State will depend very largely in all the coming time upon all her people sharing in this persuasion with them is the strong conviction which possesses my own soul, and which I would now impart, to your souls if it be not lodged there already.

The summer sanitarium of America. What is that? It is a place to which all sorts and kinds of men can go when they are sick or tired, or hungry for a sight of the fields and woods and mountains, or have a desire simply to change the customary surroundings and employments of their every-day existence in order that they may find that rest and comfort for the body, that peace and quiet for the spirit, and that new zest for all the things of life which shall henceforth have power to make them young and strong again. Such a place as this cannot be made by man alone; it must be shaped of God originally, and made grand and beautiful as well as useful to all His sentient creatures, through the mingling of all the primal elements of His visible creation.

But nature is at her best here in New Hampshire. All that the Great Architect of the universe could do most graciously to render our State attractive to the dwellers in every land He certainly has done. For scenes of simple beauty and variegated loveliness, alternating with the wildest sublimity, New Hampshire may well compare with the most celebrated resorts of Europe; hence we believe 'the time is not very remote,' says Prof. Sanborn, 'when the tide of European travel, like "the course of empire," westward shall take its way, and the valleys and pinnacles of our familiar mountains will echo with strange tongues, and become populous with visitors from the old world.' In my judgment, however, this time will never come until the people of New Hampshire shall have resolved to do their best for the development and the improvement of all these wondrous gifts. First, God must work, and then man, and the true sanitarium of America will be this bit of nature cultivated and transfigured until it shall form a fitting part of that nobler Eden of the coming time.

Do you inquire, then, how this transfiguration shall ever be brought about? The process is simple, and very practicable. Remembering that 'the physical basis of life' must be the first thing thought of, build roads and turnpikes around the lonely mountains, and hotels and boarding-houses in all the places where they are required; cover the denuded hills with forests; plant shade-trees in the villages and by the roadside, and lay out parks and pleasure grounds in all the cities and larger towns; fill the woods with game, the rivers and streams with fish, and the fields and gardens with beautiful shrubs and flowers. Let the Government of the State assist in this great work of upbuilding, and the people of the State be urged to invest their labor and their surplus earnings in private and public village and town improvements. Let the churches be repaired, the schools enlarged and multiplied, and all our people taught that their pecuniary as well as their other interests, are involved in these and such like changes, and the thing is done.

But, do you ask again, is it certain that New Hampshire can regain her lost prosperity in this way?—can increase her population and wealth, and improve the quality of her citizenship by efforts of this sort? Yes; for it has been done in the Republic of Switzerland, for example, in Europe. Switzerland, some years ago, found herself in much the same condition that New Hampshire was a generation since. She was losing wealth and losing population, and her ruin seemed inevitable at no very distant day. So the leaders of her different cantons came together in council and discussed the situation. The result was, they resolved unanimously that the Government of Switzerland should be requested to enter into partnership with the Alps, and that it should henceforth try to make them the foundation of the national prosperity. The Republic of Switzerland listened to this request. The government built roads and bridges and laid out many improvements. The people put up guest-houses, adorned their villages, and made the whole country as agreeable to strangers as they possibly could, and to-day there is no part of Europe making more rapid advances than this little commonwealth among the mountains.

Will it, may, then, to develop in like fashion the natural resources of New Hampshire? Why, gentlemen, it is pay-

ing already, and in dollars and cents, as no other business among us is paying. During the first quarter of this century the number of visitors to the White Mountains averaged about twelve each year. In 1860, Starr King tells us that 'not less than 5,000 persons make the ascent of Mount Washington every summer by the bridge paths.' It was estimated at the Summit House last summer that about 12,000 persons visited Mount Washington during the season, some 10,000 of whom went up by the railroad, and this is the way the stream of travel, now running toward our State, is rapidly swelling from year to year. More than \$4,000,000, it is thought, were brought into New Hampshire by the people who came here last season, a very much larger sum than was ever realized before. If, then, it be remembered that the profits of this traffic remain for the most part with us, and that by it a home market is created for all our farm and garden products, we shall not be surprised to learn that the number of abandoned homesteads is beginning to be diminished, and that our farmers' sons and daughters are less inclined to emigrate than formerly. And then, besides all this, there are men of New Hampshire birth who have made their fortunes in other parts of the world, that are now returning in constantly increasing numbers to their childhood homes that they may live in them the remainder of their days, and these men are ready to spend their wealth most generously in beautifying and adorning these homes, around which their earliest affections are clustered. The change for the better, therefore, in all those parts of our State which have been reached and watered by this Nile of travel, is quite marked already, and there is no reason to suppose that its limits have been attained as yet. Doubtless this stream of travel will increase continually, and the benefits also which flow from it will increase as the years roll on.

But it is time to say a word or two concerning the part which the members of this league should take in this effort to make New Hampshire a summer sanitarium. It is not too much to affirm, perhaps, that if there were no game in our woods and no fish in our streams, then the visitors we are the most desirous of securing, because they would help us the most in this effort at upbuilding, would not be so ready to come into our State. The fact is, that hunting and fishing are peculiarly the sports of gentlemen, for the conditions of their pursuit are uniformly fresh air, fine scenery, the exercise of skill and energy in mind and body, and loving communion with the works of nature. 'None are so able,' says Col. Theo. Lyman, 'to cope with great affairs, as those who on fitting occasion can take dog and gun and tramp all day long through the autumn covers, or wade a trout-brook of a June morning. Such are the English gentlemen who make laws in Parliament: such was Daniel Webster, and such would have been Horace Greeley, if he had not made the fatal mistake of "waiting forty years to go fishing." The special duty, then, of the members of this league is to do what they can to make these noble and delightful sports both universal and profitable in New Hampshire; to create a popular opinion, if possible, that shall be favorable to their pursuit; and also to secure the active and hearty co-operation with them of all our people in the endeavor to stock our fields and woods and lakes and rivers and brooks with the objects of the sportsman's delight.

THE FISHING LINE.

TAKE THE Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. THE TROUT season begins May 1 and ends Sept. 1. THE GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, LAKE PICKEREL and MUSCALONG also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his home by express sent free of charge.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and improvements.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and satisfactory train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at all points. It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book, 60 pages sent free. Time Cards, Folders and further information, address

A. B. LEEI, Gen'l Pass' Agent, Grand Rapids, Mich.

CAMP LIFE IN THE WILDERNESS.—Second

edition of the story describes the life of a party of Boston gentlemen to the Richmond and Rangeley lakes. It treats of "camp life" indoors and out, in an amusing and instructive and interesting manner. Illustrations. Price 25 cents. By mail, postpaid, 30 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newscasters throughout the United States and Canada; and is on sale in Europe by The American Exchange, 44 Strand, W. C. London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, November 3.

JOHN ALLEN BANKS.

IT is with deep sorrow that we here record the untimely death of a companion, who had for many years been associated with us in the work of this office. John Allen Banks, the eldest son of Thaddeus C. Banks, Business Manager of this journal, died at his residence in Brooklyn, last Saturday morning, October 29, aged thirty-one years. During his long connection with the FOREST AND STREAM, as its cashier, he made very many friends, who will here for the first time learn the sad tidings of his death.

Words are cold to express in any fitting manner our own grief at the loss of one who had become so endeared to us by the kindly intercourse of business and social life. His faithful discharge of duty, and his high character and strict integrity commanded the respect of all men with whom he came in contact; while his quiet, unassuming disposition, and gentle and courteous bearing won the esteem and love of those who knew him more intimately.

If the possession of such a character by those who are mourned can in aught temper the grief of bereaved friends, surely this comfort is left to those who are to-day sorrowing for the death of John Allen Banks.

The memory of our friend will hold a warm place in our hearts.

THE ONLY HONEST COURSE.

AMONG the letters, which we print to-day on the subject of State pigeon tournaments, is one from a member of the New York State Association for the Protection of Fish and Game. Its writer, who has taken an active part in recent conventions of the association, and whose views we invited because we believed them to be representative, says that he does not consider game protection "a matter of so much consequence that annual conventions are necessary to its success." He admits that nine-tenths of the members of the association attend the meetings for the trap-shooting; and he thinks that "the cause of game protection does not receive much assistance from the annual meetings."

That is frank, free, honest. It undoubtedly correctly represents the views of very many of the society members; and the writer puts his feelings in a manly, open way, in strong contrast with some of the letters we have published in the past from other members of the association, holding the same opinions, but lacking the courage to express them.

The letter signed E. R. may be taken as representing the true feeling of the great majority of the members of the New York State Association for the Protection of Fish and Game. They attend the conventions for pigeon shooting only, and do not think the subject of game protection to be of such importance that they need bother their heads about it. The other letters on this subject show how those who really are engaged in game protective efforts regard such societies.

From the letter of E. R., and from other letters of like tenor, sent to us by other members of the association, but "not for publication," we are reluctantly compelled to believe that the cause of game protection will, in the future, have little or no attention from the society in question. This being the case, one thing is certainly in order. A society which is ostensibly organized for one thing, and does something else, should be honest enough to have its true purpose appear in its name. This much at least is due to those who are in fact doing the work it ignores. A civil service reform club, which should spend all its energies in wire-pulling for public offices for its members, would not only at once lose the confidence of the public, but would work incalculable injury to the cause of civil service reform. A game protective club, which does nothing but annually shoot thousands of pigeons, not only destroys public confidence in the sincerity of its pretensions, but works great harm to the cause of game protection in general. Simple justice to the great body of sportsmen throughout this country imperatively demands that pigeon shooting societies call themselves pigeon shooting societies; and that the title of game protective society be confined to game protective societies.

This is surely the only manly, honest and just thing.

PISTOL SHOOTING.

THE practice of pistol shooting has received a wonderful impulse of late, and now the works where the finer grade of these firearms are turned out are crowded with orders. Accurate shooting with a pistol may be indulged in almost anywhere. A range of 50 feet is readily gained and a sheet of ordinary iron boiler plate, or even a backing of planking forms an admirable bulkhead into which to fire and on which to nail up the target. These may be the cheap paper diagrams or the sport may be varied by using any small object for a point of aim, and we know of no better use for a "ten-spot" than to set it up as a target to pick out the spots in 10 consecutive shots. The sport may be indulged in by old and young and by either sex. Ladies are often the best hitters, and while they make poor holders, as a general rule, they excel in a knack of catching the sight and pulling the trigger at the same instant, and in this way a very nervous person will often do very fine scoring.

The pastime is a comparatively cheap one, for the .23 cal. cartridges are now made so accurate and are so uniform in action that they may be relied upon by the most fastidious marksman. There is no sport so well calculated to develop a number of excellent qualities. The least relapse into dissipation at once works its effect in irregular shooting, and the shooter in the best physical condition, other things being equal, must win. It is an excellent test of the eyesight and

accustoms one to a quick fixing of the attention on a distant object. There must be a perfect control of the muscles and that ready relation between the eye, hand and brain which will be found serviceable in a thousand ways.

Those who have once taken up pistol shooting, and gained a clear idea of how to do it, rarely abandon the pastime. They become enthusiasts, and the sport is to them a hobby. They love to look upon the handsome little weapon as the synonym of exactness. They learn to know that, when allowed to do it, the pistol will work with the accuracy of a mathematical instrument, and this begets a love for it. We have stories of old hunters swearing by their long-toms, and old duellists and those accustomed to the use of the smaller arm become equally confident of its powers and precision.

In speaking of pistol shooting we do not wish to be understood as regarding those pesky little fomenters of lock-jaw, cheap-made "revolvers." These little instruments of death and devilment are whacked out at a single blow under the trip-hammer, and their only speciality, in which they are unexcelled, is the amount of noise they will kick up. A pistol to shoot with accuracy must be made with special reference to that point, and the ordinary cheap revolver is made with the single idea of getting up the showiest looking device for the least money. They are not weapons of offense or defense in any way, but merely dangerous devices, a constant menace to every body in their vicinity, and if in any way they could be stamped out of existence it would be a great boon. Fine work, or in fact work of any kind worth the pursuit, cannot be done with these instruments, and they are never seen in the resorts of the pistol-shooting experts. In future articles we shall give instructions in pistol shooting, describe the weapons used, quote past doings in scores and records, and try to measure the extent of this very popular pastime.

THE ATALANTA.

THERE is considerable difference between a good boat and a very good boat. The former represents an average production, the latter an exceptional. The Atlanta is a good boat, but in our judgment nothing more. It would be most agreeable to receive a stranger with open arms, and exclamations of surprise and admiration, but a regard for reputation as a good judge of yachts compels us to place the Atlanta only in the class of good boats of which fair performance may be expected, and which would certainly astonish us with an exhibition of extraordinary speed. The Canadians have shown a most commendable spirit of enterprise in sending a sloop from Belleville to race boats of a particular type which have been brought to greater perfection in New York than anywhere else in the world. They have contended bravely with many difficulties in so doing, but facts must be looked squarely in the face. These are that the Atlanta is more or less a chance production, the first large sloop ever put in frame by Cuthbert, but the third of anything like her tonnage. She has been built, rigged and fitted hastily. She is still incomplete, has had no fair opportunity of obtaining best trim, her sails are unstretched, gear all stiff and new, and the crew unacquainted with each other and the course they have to sail. On our side we have the pick of a large fleet, slowly brought near perfection by numerous opportunities for comparison, and the consequent modifications in successive attempts at modeling or alteration. Our sloops are in the best of condition, their crews have shaken down to their billets, skippers are well posted, sails comparatively flat, gear in good working order and the choice of representative boat not to be decided until the morning of the first race. Even assuming the model of Atlanta to be as perfect as the best we can produce, she has taken upon herself such heavy odds in other respects, that her opportunities for victory seem to be of a most doubtful kind. Atlanta is, however, to our mind not the equal in model of either Gracie or Mischief, and we must confess we deem our friends doomed to serious disappointment, for the chances of her taking the America Cup are practically hopeless, bar accident and fluke. If in spite of these predictions, the Canadian should prove able to "squander" our best, we will frankly acknowledge that we have more to learn about a yacht than hitherto believed, and we shall be chary in the future about an expression based, as this one of necessity is, upon a casual inspection of form and fittings.

IMPORTATION OF FOREIGN BIRDS.

U. S. S. SWATARA, Shanghai, May 25.

My Dear Captain:

An idea strikes me, by which, perhaps, we can render considerable service to the sportsman at home and also add to our own resources for amusement when on shore duty.

Consul-General Denny, here at Shanghai, is very much interested in the importation into America of game birds, and has already, at his own expense, sent over nearly a hundred brace of the Asiatic pheasant, which have been turned adrift in Oregon (his own State) and California. He is very anxious to continue this good work on a larger scale, but lacks the means to do it properly.

I believe there are some twenty odd varieties of the pheasant in China and most of them can be readily procured here in Shanghai. Of course the prices vary, the cheapest being the common ring-necked variety, costing perhaps one dollar per pair. Another beautiful game bird is the so-called Chefoo partridge, red-legged and red-billed, with black and white stripes on the sides. I have killed the same thing, minus the stripes, in Asia Minor. There is also the sand grouse, several varieties of snipe and woodcock, such as we never see at home, and, perhaps, of less importance, large numbers of the waterfowl species. I think, though, the mandarin duck, which you undoubtedly remember, would be a valuable acquisition, if only for his beautiful plumage.

Mr. Denny says he can have birds shipped as far as San Francisco free of charge, at least he has succeeded in doing so to this time, the captains of trans-Pacific steamers being amiable and public-spirited; but I doubt if this will hold good for much future work. He also says a good-natured gentleman in San Francisco, connected with the U. S. Fish Commission, will undertake to have them forwarded East free of charge by the Pacific railways. There remains then to be paid for the birds themselves, their food and the cages for their long journey.

What I propose is, that the sporting community in general be informed of these facts through the FOREST AND STREAM, and some plan be devised by which Consul-General Denny's gratuitously-offered services may be utilized. I may assure you here that he is a thorough sportsman himself and is only actuated by a desire to increase our home production of sport.

The FOREST AND STREAM is probably read in every gun club in the country, and I believe a subscription started under its auspices for such a purpose would have a great success. Certainly all true sportsmen would respond, for we have very few varieties of game birds in America, comparatively speaking.

The Japanese game birds are also within Mr. Denny's reach, now that there is such constant intercourse with Nagasaki, and we might add to my list the grouse and copper pheasant, which, I believe, are only found there, and the so-styled giant woodcock. Of the latter I killed a specimen last fall near Tokio which weighed, unpressed, 12½ ounces. I have also on board a stuffed copper cock, which I killed near Kobe in February last, the two tail feathers of which measure thirty-six inches. I assure you that these birds, in rising, give one an emotion such as our little quail or ruffed grouse rarely fail to produce, and it is merely a matter of association to secure for all line sport such as the fraternity wit not of in America.

The argument that these birds will not stand our climate is absurd. They are found in Japan from the Straits of Lacerone to Kagoshima and in China from Tartary to Canton.

Very truly yours,

W. W. FOLGER.

The above letter, addressed to Capt. L. A. Beardslee, was by him handed to us for publication.

We in America have never taken any decided step toward the acclimation of animals foreign to our continent, although a few spasmodic efforts have been made in the right direction, and one or two societies have been organized. Most of the attempts that have been made have resulted in nothing permanent. In fact, have almost fallen stillborn, and this mainly because they have been the efforts merely of individuals. The attempt to naturalize here the quail of Europe has been one of the most important steps that has been taken, if we except the introduction of Pacific Coast fishes into the waters flowing into the Atlantic. Neither of these attempts have so far proved successful. The quail bred beyond question, but whether they found in America some enemy to which they were unaccustomed, and which proved too powerful for them, or failed to discover here some food which was essential to their well being, or were unable to withstand the climatic conditions so different from those of Europe—whatever the cause they do not seem to have flourished, and are heard from far less frequently than should be the case if they were doing well. As for the California salmon, of which so many millions have been introduced into our Eastern waters, they have so far as is now known wholly failed to reappear. They are hardy, can support a high degree of temperature, are easily reared up to the time when they are turned out, but still of all those placed in streams connecting with salt water not one has been reported.

This is not an encouraging prospect, but there is a brighter side to the picture. Thus the California and eastern quail transferred from the widely separated homes to Salt Lake City and its vicinity, both seem to have done well and to be increasing in numbers. The English sparrow, introduced here and protected, has multiplied beyond the wildest hopes of its strongest friends and, in fact, has become an unmitigated nuisance. But with this sole exception, of all the European species freed on this side of the water scarcely anything is known, if we except the few specimens that have been brought into the taxidermists for identification. Skylarks, starlings, blackbirds and finches have all disappeared. A number of Asiatic birds have from time to time been imported to California, and are said to have done well, but unfortunately we lack any very definite information with regard to them. That many species of the Chinese and Japanese pheasants and partridges would do well on the Pacific coast seems extremely probable. There is such a

variety of climate there, that a locality suited to the wants of each species could without difficulty be found. One that loves desert wastes can be turned out near the sea coast to wander over the brown plains and the sand dunes; a forest inhabiting bird can be taken to the lower slopes of the mountains where the manzanita, the chapparal and the pine timber grow; another, accustomed to the cold and snows of the North, can have its liberty given it high up on the Sierras, where the climate most nearly resembles that of its native home. The habits of each species that is imported must be investigated so that an intelligent discretion may be exercised in liberating the birds. If this is not done, the labor and money spent to forward the project will be wasted. A fact well worthy of consideration in connection with the subject of importing such birds as are above referred to, is the immunity which tree-inhabiting game has from many predacious animals. Those birds which habitually pass the night on the ground are exposed to a multitude of perils from which those which roost in trees are exempted. Other things being equal, therefore, it would seem desirable to procure species which are perchers.

As to the probable cost of importing and successfully acclimating the different species of Japanese game, but little can be said at present. It is essential, however, that the species on which it shall be thought best to experiment should be brought over in numbers sufficient to insure, with reasonable care, the survival of a number of individuals for at least a year, so that they may have time to breed and to rear their young. The importation of ten or twenty pairs would only serve to furnish a free lunch to the foxes, wildcats, hawks and owls of the districts where the birds were turned out, and it is scarcely worth while to spend money and time for that purpose. To make such importations as would be necessary to insure success, to give the birds proper care and food for a few weeks after their arrival, to protect them as far as may be necessary from the ravages of winged, quadruped and bipedal enemies will cost some money; probably not less than one or two thousand dollars. With such an amount in hand we believe that the enterprise might be undertaken with fair prospects of success. We should be glad to see the experiment tried and to assist, so far as in our power, to carry it out. Can any of our readers tell us more about the birds spoken of in Lieut. Folger's letter?

ENGLISH FLY-CASTING TOURNAMENT

THE first contest of this kind ever held in England was advertised to come off on Oct. 22, weather permitting. It has been gotten up by Mr. Marston, editor of the *Fishing Gazette*, in aid of the funds of the Anglers' Benevolent Association. The grounds are Mr. Warner's Welsh Harp Fishery, Hendon, on the Midland Railway. The charge for admission to the grounds will be sixpence. The judges are J. P. Wheldon, of *Bell's Life*, and Alfred Jardine. The *Fishing Gazette* of Oct. 15 says that the final arrangement of the competitions is not yet definitely settled, but the following may be considered a general outline of the programme:

A prize for the longest cast with a double-handed fly rod.
A prize for the longest cast with a single-handed fly rod.
A prize for the longest cast from the reel, in the Nottingham style.

A prize for the longest cast with the line coiled at the feet, in the Thames style.

A prize for the longest cast with the forked stick, as practiced by the Welsh Harp, Elstree, and other bank anglers.

A prize for the longest cast with unweighted line baited with paste or cheese.

Other competitions will doubtless be arranged.
The judges will consider style of delivery of the flies or bait, and accuracy, as well as distance, and for this purpose the following scale of 100 points will be adopted:

| | |
|--|----|
| Distance across the wind..... | 20 |
| Distance with the wind..... | 20 |
| Style of delivery of flies and bait..... | 30 |
| Accuracy..... | 30 |

Competitors will be allowed to use their own rods, reels and lines, and, as some allowance will have to be made for length of rod, the American scale per foot will probably be adopted. The entrance fee for competitors will be fixed according to the value of the prize to be cast for, but will not exceed half-a-crown (about sixty cents). Competitors will stand on a tarpaulin, a fixed time being allowed in which to make the casts.

A number of valuable prizes are offered, Mr. Marston, of the *Fishing Gazette*, and S. Alcock & Co., of Redditch, heading the list with valuable rods. We hope that this first contest will be such a success that it will be repeated, for on this side of the water we recognize it as one of the most beautiful arts and a school for the youthful angler, who can then see the experts from all parts of the country and compare their styles. We will keep our eye out for the reports of this meeting.

"GUIDES."—In going into the country for a day's sport with rod and gun, use common sense in employing a guide—if one is needed. Do not pick up the average grocery store loafer and station hanger-on. These gentry are often most eager to serve, but in nice cases out of ten, as "guides" they are frauds. Give them a wide berth.

RUST IN GUN BARRELS.—A number of communications on this subject are postponed until our next issue.

MATCH CONDITIONS.

EVERY week we are called upon to act as arbiter in disputes over matches. The same knots are again and again unraveled, and yet riflemen and trap-shooters, yachtsmen and dog-owners go on drawing up slovenly conditions and preparing the way for future entanglements. It would seem that all the possibilities of confusion have by this time been discovered and mapped out, and all the loopholes of misunderstanding detected, but such is not the fact. The American eup in yachting circles has been lost in a continual fog of interpretations, and the "Palma" among the shooting men has been enveloped in a smoky atmosphere of explanations and amendments. There is a loose use of language and a desire to sacrifice perspicuity and exactness for the sake of brevity. Donors of prizes say one thing and mean another, and with a prize dangling within reach a competitor is apt to make rash claims and insist on wry readings of the plainest language. Young clubs would do well to take the hints for their match conditions from the work of older organizations, or else fix upon some impartial Bruns to deal out decisions, if not justice, after the act.

One of the most perplexing things to the ordinary contestant is "class-shooting," as understood among those who participate in trap and target work. It seems somewhat of a paradox that a competitor who has done good work in a match should go prizeless, while another, who scored a lower record, secures a reward. Yet the loser in a "shoot-off" has a chance of winning, and if he misses that opportunity it surely does not give him any claim of precedence over another possible prize winner who took no part in the "tie-shooting."

FARMERS AND SPORTSMEN.—The interests of farmers and decent sportsmen are identical. It is for the benefit of both that lawless ruffians, armed with impudence and shot-guns, should be suppressed. Scores of shooters, who in the cities and towns where they live are law-abiding because of their fear of the police, go out every season, and between seasons, trespassing on the farmers' lands, breaking down his fences, peppering his live stock with shot, shooting his pigeons and poultry, and conducting themselves generally in a manner that ought to land them in the State prison. This pestiferous horde is yearly increasing. The respectable portion of society may well ask if there is any remedy for this evil, and what that remedy is?

WHAT QUAIL ARE WORTH.—The value of these birds in the markets is often very slight, being from ten to twenty-five cents; their value while alive to the farmer is much greater. It has been claimed by a practical farmer that every quail raised on his land, from the time it is hatched until the winter following, is worth at least one dollar. In other words he believes that the insects which the bird destroys in this time would, if not interfered with, destroy crops to the value of a dollar. We believe that this is an under estimate of the direct benefit derived from the birds, and, of course, if the progeny of the insects destroyed were taken into account, the value of the quail's services would be enhanced many fold. Let farmers protect the quail.

LIVE QUAIL FOR STOCKING PURPOSES.—We are informed by Messrs. Ryall and Ledbetter, of Shelbyville, Tenn., that they can supply live quail for \$2 per dozen. Mr. W. W. McDowell, of Memphis, Tenn., also writes that he can perhaps secure some birds. We have ordered a number of quail for the Walla Walla, Washington Territory, sportsmen, who will attempt to introduce Bob White to that country. We advise those desiring birds to speak quick. As will be learned from a correspondent's note elsewhere, quail may be lawfully trapped in some parts of Virginia.

GREY VIRGINIANUS IN IDAHO.—Several years ago the Virginia quail was introduced near Boise City, Idaho, and since that time the birds have multiplied so rapidly that the coveys now are as large and as numerous as are often seen in the East. The success of this effort has induced the sportsmen of this region to consider the project of introducing the pinnated grouse, and it is probable that if the birds can be obtained the experiment will be tried with fair prospects of success.

A MICHIGAN DEER HUNT.—Messrs. D. N. Fitzhugh, of Bay City; H. B. Roney, of East Saginaw, and other members of the Michigan Sportsmen's Association, are now in the woods on a deer hunt. These affairs are always of the most thoroughly enjoyable character the participants aiming to make them social reunions. Our acknowledgments are due for a kind invitation to participate in the present camp hunt. The stern call of duty bids us stay in this noisy, crowded, smoke-begrimed, mud-paved, brick-walled, drizzle-drenched metropolis.

THE "CRUELTY" OF PIGEON SHOOTING.—We intended to be very explicit in our statement that, in voicing the sentiments of the great majority of sportsmen respecting the wholesale pigeon tournaments of State societies, we were not discussing the question of cruelty or non-cruelty of pigeon shooting in itself. The point at issue is whether societies calling themselves game protective have a right by their actions to injure the very cause they profess to serve.

BYE-WAYS OF THE NORTHWEST.

SEVENTH PAPER.

WE left Victoria early one bright Friday morning for Nanaimo. Our passengers might have been termed a mixed lot, and the hum of conversation that rose from the decks was euphatically polyglot. English, Irish, Scotch, French and Americans gathered on the upper deck, and Siwash and Chinamen, with a negro or two on the lower. Steaming by the island, yellow with ripened grass, and dotted with clumps of evergreens and patches of bare, gray rock, we startle from their feeding grounds many a flock of the pigeon guillemots, which with much noise and splashing take wing, or if they have delayed too long, and find the steamer too close upon them seek safety beneath the water's surface, whence they do not emerge until we are far beyond them. Here and there, as we move swiftly along, the placid waters are disturbed by the smooth, shining head of a seal, which gazes curiously at the advancing boat, and then vanishes to be seen no more.

Everywhere in the water we see floating the stalks of the giant kelp of the North Pacific, the *Neorossia luteoana*. This curious plant grows everywhere along this coast, among the islands and in the inlets. Its roots are attached to any small stone or even to the sand at the bottom, and the length of the stalk may be thirty or forty feet. At its base the stem is very slender, often scarcely as thick as a quill, but it increases by a very gradual taper, until near its superior extremity it may be nearly as thick as a man's wrist. At the termination of the stem, or stalk, is a globular swelling which varies in size, but is sometimes as large as a billiard ball. From a point on this enlargement opposite its attachment to the stem, a dozen or twenty long, ribbon-like leaves are sent forth, each being from one to six inches wide, from four to six feet long and fluted or ruffled along its edge for the whole length. The plant is brown in color throughout, and from the fact that it constantly responds to the motion of the water, has an uneasy, weird look, and almost seems alive. I could never see one of these round heads with its long *chevelure* of waving leaves without thinking of a drowned woman, floating face downward in the current, her long hair streaming out before her, and rising and falling with the waves. To another of our party the spherical swelling and the drifting leaves always suggested the octopus floating near the surface, with all his tentacles drifting ahead of him with the tide. The strength and toughness of this plant is something remarkable. I have seen a large canoe held at anchor by a single stalk of the kelp. It is necessary that the strain should be applied gradually, since a sudden pull is likely either to free the stone to which the roots are attached from its holding at the bottom, or to forcibly tear them from the object to which they are fastened. The Cape Flattery Indians select the most slender stems of the kelp, and make from them fishing lines on which they catch 200-pound halibut. Some of these lines are in the Smithsonian Institution at Washington. This plant frequently grows in thick beds, and the stems moving constantly in the current become after a time inextricably twisted and tangled, so that it is sometimes very difficult to force a canoe through or over them. Not infrequently they become wound about the screw of a propeller, so that it becomes impossible for it to move. The beds of the kelp form resting places for many birds of different species, and it is not unusual to see gulls and sand-pipers standing on them. Further south, off the coast of Southern California, I have often seen the great blue heron, the snowy egret, and other large birds resting, or walking about feeding on the beds of the kelp. There are two other species of seaweed which are valued by the natives of this coast, being utilized by them as food. Both grow between high and low water mark, and are bright green in color, but they differ markedly in the size of the leaf. One of these seaweeds is eaten while fresh, and the other is dried, pressed into bricks and used during the winter as an ingredient of soups and stews. On occasions of great feasts a few years back it was part of the duties of the young squaws to chew the dried seaweed until the particles were fine enough to be added to the different articles to constitute the dish, and which were already boiling in the pot. The same mode of preparation still prevails in the villages at a distance from the settlements. Near Victoria, however, the Siwashes have been educated up to the point of cutting up the dried vegetable with a pair of scissors, a tobacco cutter or a knife.

For hours we wound in and out among the islands, stopping occasionally at little settlements on the larger ones, and now and then slowing up to take on board a passenger, brought off from some little house which stood upon one of the green hillsides, half hidden among the trees. Some of these islands make excellent sheep ranges, and settlers who have gone into this business are said to have done very well at it. Deer, we were told, were abundant on almost all the larger island which are not too thickly settled. At Gabriola Island we stopped for a few moments to make a last effort to secure a steam launch which was owned by a settler there, but, owing to the fact that she had not been inspected within the year, it was impossible to make any arrangement with the owner, and we therefore returned to the steamer which waited for us in mid-channel. Reaching Nanaimo about 4 o'clock in the afternoon, we hired a large canoe and two Indians, and made arrangements to start at once. Supplies were purchased; an hour or two devoted to an inspection of the coal mines, which supply fuel for the whole of British

Columbia, and send, as well a considerable quantity to San Francisco and points on Puget Sound; the Indians were ordered to be on hand at daylight next morning, and then our preparations were completed.

For the benefit of those who may contemplate a similar trip, it may be worth while to give some idea of what our outfit consisted of; it being born in mind that our party numbered seven individuals, and was provisioned for a thirty days' cruise. Our arms were two rifles, two shot guns and four revolvers. Our kitchen utensils were one axe, with spare level, one hatchet, a file, two butcher knives, three camp kettles, of different sizes so as to "nest," made of block tin with riveted handles, coffee-pot, tea pot, bake-oven, bread pan, broiler, plates, cups, knives, forks, spoons, a small breaker, or keg, in which to carry fresh water. All our mess kit except the breaker packed very conveniently in a box of moderate size, which was covered so as to be protected from the water. The cover was provided with leather hinges. For provisions we took bacon, flour (two sacks), coffee (ground in 1 lb. tins), sugar (in a box), baking powder in small tins, beans, canned tomatoes, peas, peaches and jellies, pepper and salt, bottle of vinegar, pickles, a box of hard bread and a sack of potatoes. A box similar to the one mentioned above held all our eatables that were liable to injury by water, and was always covered with a reed mat. Besides the articles mentioned we had a fly 12 feet square made of light drilling, some mosquito netting, 100 feet of rope, some fine copper wire, saddlers' silk awl and wax, a quantity of plug tobacco, candles and, of course, ammunition, flies, trolling spoons, lines, a rod, soap, matches, and the numerous small articles that so often prove useful in camp, yet do not take up much room. Each of the party was provided with a suit of oil skins, which are better than rubber because lighter, not so apt to tear, and permitting some little circulation of air.

By four o'clock the next morning we were astir, and an hour and a half later, the canoe stowed and all hands on board, we pushed off from Nanaimo and were soon gliding over the waters of Departure Bay. The morning was not especially propitious for a start. The wind blew from the south-east in gusts, and the sun rose in a loose bank of clouds which, as the day advanced, became more and more threatening. Soon it began to rain, but as the wind was fair or nearly so, we spread mats and rubber blankets over the guns and blankets, and hoisting sail, moved along at a very good rate of speed. The islands, so numerous further to the southward, had disappeared, and to windward of us the open waters of the Gulf stretched away for twenty or thirty miles, with nothing to break the force of the breeze. To the north-east Texada loomed up, showing its high peak above the fog, and as we advanced other smaller islands, Denman and Hornby, became visible. The wind, which up to noon continually increased, kicked up quite a sea, and we shipped considerable water, for the canoe was heavily loaded and sat rather low, but all propositions to reduce sail were negatived. About two o'clock the wind fell and soon after the sky cleared, and for the rest of the day we worked at the paddles under a broiling sun. The canoe, steered by Jimmy, the youngest of our Indians, followed pretty closely the sinuosities of the shore, and our progress was not as rapid as it would have been had we cut across the bays and inlets by which Vancouver Island is indented. The Siwashes like to keep close to land, partly, I presume, in order to avoid the force of the tides, and also to be near a harbor in case of the sudden coming up of a storm. Gales often arise on this piece of water without giving any warning, and a sea rises almost as soon as the wind begins to blow.

During the afternoon I noticed a great many surf and velvet ducks (*Peleonetta perspicillata* and *Melanetta velutina*) and undoubtedly both these species breed in this neighborhood. The common seal was also extremely abundant here, and we saw many fishing along the shore. About six o'clock we reached the mouth of the Quahcum River and made camp, having traveled about thirty-five miles in a direct line from Nanaimo. This spot was evidently quite a favorite landing-place for the Siwashes, and some had been there within a few days, as their recent fires, lately cut tent poles and fresh tracks clearly showed. Some little distance back from the beach was an Indian house, in which were stored four canoes. After dinner the Sergeant and I, with Hamset, the owner of the canoe, paddled quietly up the river for a mile or two, and then, coming to a riffle which we could not pass, left the craft and went on through the timber. We saw no game whatever, and just before dark returned to camp. On the way down the Sergeant succeeded in killing a female merganser (*M. merganser*), a small flock of mallards were seen and half a dozen young hooded merganser (*Lophodytes cucullatus*.) Six o'clock next morning saw the canoe push off, and emerge from the mouth of the Quahcum. The day was bright and pleasant, with light winds which were at times fair and at others contrary. We worked pretty steadily through the day, and made about thirty miles by 4 o'clock, when we camped at Comox Spit two or three miles from the town. There is good water here, and a wide mud flat inside the spit, from which at low water excellent clams and mussels can be gathered. Just before reaching camp we ran through one of the largest rafts of ducks that I have ever seen. There must have been tens of thousands of individuals in it and when they rose from the water the whistling of their wings and the pattering of their feet upon the water reminded me more of the sound of a

gale in the rigging of a ship as she goes about, than anything I could think of. Little auks (*Alle nigricans*) pigeon guillemots (*Uria columba*) and glaucous-winged gulls (*Larus glaucoceus*)—were abundant. The little auks are almost invariably seen in pairs, and rarely attempt to escape the approaching boat by flying. As it draws near them, they call to each other with plaintive whistling notes, and swim about with a curious air of indecision as if they were really perplexed as to what they had better do. Suddenly, however, an idea strikes one of them and it turns away, there is a white flash on the water and the bird has disappeared, to be followed in a few seconds by its companion.

The following day we made the usual early start, camping at night in Oyster Bay at the mouth of a considerable river, which, however, is not down on the British Admiralty chart by which we were sailing. We named it Bird River. At the mouth of this stream the salmon were jumping in great numbers, most of them, however, being small ones not more than a foot in length. The Professor and I tried very faithfully to catch some but without success. Deer are plenty at this point, I concluded from the signs that I saw, but although I traveled through the timber for two or three hours I was unable to see any game or any tracks less than two or three days old. The Sergeant with his shot gun killed a few ducks. Just north of the mouth of the river are some extensive meadows, half a mile wide, which separate the forest from the beach. These meadows are intersected by tidewater sloughs, such as in Virginia would be called thoroughfares, there being a narrow creek in the beach near the western end of the meadow. On these open places the deer feed, and I found there numerous beds only a few days old. In the timber it is almost impossible to do any still hunting, for the undergrowth is very thick, and noiseless progress is almost impossible. The next day we were obliged to cross a channel four or five miles wide in order to get under the lee of Valdes Island. Both wind and tide were against us and the pull was a hard one. There were long periods when it did not seem as if we made a foot of progress. This is about the point, as laid down in the charts, where the opposing tides, one flowing from the north and the other from the south, meet, and we crossed some tide rips, which were very violent. The water was broken up into short chopping seas, and whirlpools of considerable size and depth were encountered at short intervals. The Indians, however, understood the co-currents of the current, and although the work was hard and slow we at last drew out of the current and turned north, following the shore.

About noon we stopped at a village of the Cape Mudge Indians where we purchased some dried salmon. Here, for the first time since I had been in the Province, I saw Indians clothed like Indians—that is, in a breech cloth and blanket. Near the rancherie is an extensive burial place. The bodies of the dead are usually placed in small board houses, from eight to ten feet square, although those of the poor are sometimes deposited in an old canoe, which is then covered over with boards. In front or at the side of these houses stand a number of small poles, ten or twelve feet high, to indicate the number of *potlaches*, or great feasts, that the dead man has given to his friends, each pole standing for a *potlatch*. Stouter and longer poles bore small images of canoes carved out of thin boards, and these show how many canoes the deceased has given away during his life. Near many of the tombs stood large crosses from eight to ten feet high, covered with white cloth. The Indians of this coast are most of them supposed to be Christianized, although it is exceedingly doubtful if the teachings of the good missionaries exercise any very potent influence over the daily walk and conversation of the average Siwash. Before several of the more pretentious tombs were to be seen somewhat elaborately carved images, and near many of them were large canoes, placed there, of course, for the convenience of the departed, that he may travel with comfort over the placid waters of the Spirit land where the salmon and the boohichans abound, and where the deer are always standing on the rocks waiting to be shot. In front of several of the houses in the village stood poles from forty to sixty feet high and curiously carved. One new one, not yet erected, bore on its extremity a sort of dragon's head.

The custom of giving *potlaches* deserves a word or two of explanation. The highest ambition of these Indians is to accumulate property in order that they may give it away. Wealth, in fact, seems to be the standard of rank among them. The man who gives away most is the biggest *tyhee*, or chief, and receives, as well, a material reward, for at subsequent *potlaches*, given by others, he receives a gift proportionate to the amount of his own *potlatch*. Therefore when an Indian has accumulated a lot of money, he is very likely to go off and buy a great quantity of crackers, tea, sugar, molasses, flour, calico and blankets, and then to invite all his friends, up and down the coast, to a *potlatch*. The feast consists of boiled deer meat and salmon, with the edibles already mentioned, and hoolichan oil. Every guest has all the crackers he can eat; there is perhaps a small canoe full of molasses. To each one is given so many yards of calico; part of the blankets are distributed among the important visitors, and the remainder are scrambled for by the young bucks. The ceremonies may last for a week, and when they are over the Indians go their several ways leaving the giver of the feast a poor man. When, however, the next *potlatch* takes place he recovers a portion of his wealth, and after a few more he is better off than ever—until he gives another one. Sometimes canoes are given away at these feasts, at other times guns or ammunition, and the

greater the gift, the more due the giver when the recipients themselves give potlatches. The word potlatch signifies a gift, or to give; thus, *potlatch* = it is a gift; *Nika potlatch wika* = I give it to you.

The shores of Valdes Island, at its southern end, slope gently up from the water and are grassy or dotted with groves of Douglas fir (*Pseudotsuga Douglasii*, Carrière), but soon after passing this stage they become much more bold and rise abruptly from the water in cliffs fifty or sixty feet in height. In the crannies and crevices of the rocks the pigeon guillemot were breeding in considerable numbers, and it was a pretty sight to behold them, darting in and out among the cliffs, sometimes clinging seaward-like with fluttering wings and wide spread tail to some little projection of the rock, or again flying without a pause into the little holes which seemed much too small to receive them. They were continually passing to and fro from the feeding grounds to their nests. Those returning to the water would fly horizontally out fifty or sixty yards from the shore, and would then drop vertically into the waves with a great splash and at once begin busily fishing again. Great numbers of Bonaparte gulls were seen on and over the water and a few Kittiwaks. Eagles and ravens were busy along the shore, so that the bird life here though not rich in species was extremely so in individuals.

Passing on we ran Seymour Narrows—a narrow channel through which the tide boils at from 8 to 10 knots an hour, making eddies, whirlpools and tideslips, through which it was hard to see how a small boat could live. Of course the tide was with us; had it been otherwise we should have been obliged to land and wait its turning. We went through without any trouble, and it was quite an exciting pull—the men all bare-headed and working with all their might at the paddles, each one pulling every pound that he was good for. It was essential, of course, that we should keep steerage way on the canoe, for if she once got caught in one of the whirlpools and began to twist around the consequences might be alarming if not disastrous. An occasional "Mamook" from Hamset, the bowman, kept us up to our work, and we darted by the shore at what seemed to me railroad speed. On the other side of the Narrows we met opposing currents against which we pulled for I think half an hour without, so far as I could see, making the slightest progress, but at last we overcame them and camped about two miles beyond the Narrows in a little bight which we called Fatigue Bay. After dinner the Admiral and I climbed a thousand feet or so up on to the hillsides and enjoyed the lovely view which lay before us up and down the channel. Berries were abundant here, and we saw some fresh bear trails. I noticed, among the trees, *Androsia* and the black-throated green warbler and the Louisiana tanager. Killed grouse were heard drumming, and the next morning one was brought into camp by Hamset, and proved, as might have been expected, a typical *Bonasa umbellus sabinæ*. On our return to camp we found that the Sergeant and the Professor had been fishing and had secured some "rock cod," *Sebastes*, curious rock or black fish with great staring eyes, which are only caught at great depths—100 fathoms, it is said—feeding on the bottom. When brought to the surface by the hook the bladder expands and is forced up into the throat and mouth of the fish, which is then unable to sink, and if taken from the hook and thrown back into the water struggles about and can easily be recaptured. Yo.

Camp on Ferns Inlet.

PAUL MORPHY, THE CHIEF PLAYER.

NEW ORLEANS, La., Oct. 15.

THE series of plays, that have taken place in this latterly, between the experts of the local club and eminent players of other places, indicate a vast and increasing interest, as well as improvement in this classical and elegant game. Some of the performances will forever remain on record as specimens of singular skill and remarkable intelligence of modern day players. There have not been any of the phenomenal features that mark the play as characteristic of the old-time prodigies, like Morphy et al., but still, study and acuteness of intellect and the cultivation of memory are more used in making the combination of plays that are marvelous examples of that mechanical expertness and clear-headed thinking, which stands forth as the most prominent features of present time chess playing. This is in each direct contrast to the former method, by which merely intuitive performers became noted for their performances, that the matter is worthy of record.

In this connection it is apropos to mention the condition and peculiarities of Paul Morphy, in whose name and career the world of chess players will always take a lively and intense interest. During the days of the tournament, Morphy occasionally passed under the gallery of the club, or on the opposite side of the street, staring up toward the open windows, the while talking rapidly to himself—sometimes in a quarrelsome way, and anon as if demonstrating some rare problem in his mind, but usually smiling and then walking rapidly away, shaking his head as if desirous of evading temptation.

His habits are comparatively methodical, and his presence has become daily one of the most familiar objects on Canal street. He is small in stature, has a large head, a notable brown, restless eye, that never looks at anything long at a moment. His tall body is nervously supported by the thinnest, attenuated legs that you could find in an hour's travel, and as he wears the tightest of pants, their shape and ethereal proportions are painfully apparent, notwithstanding their most invulnerable materialism. He walks in a slow and re-tless, to a bird-like way, that shows wonderful vitality and much muscular strength. A few years ago he dressed with exquisite taste and skill, wearing the noblest of coats and hats, the most fashionable trousers and boots, and always was inseparable from his little walking stick, that

was eternally kept in motion. Now he is comparatively shabby, often appears unshaved, and is rapidly taking on those impressive signs of age and quiescence of mental work, which makes a nonentity of a person. He continues his erratic perambulations daily on the streets, and seems constantly defining, less or chess problem, the details of which a ceter altered to any one but himself. His whole mentality of a life are wrapped in the idea that he is the greatest lawyer on earth, and has in consequence the most important legal case that ever demanded the finest talent of the age to solve. So he goes about defining to himself an imaginary court and jury, and the various problems and points of the case. His eccentricities have become familiar to every one that knows him, and hence his foibles are not noticed by them. But those who do know him, or those who do not, are sure to point him on the subject of chess. The mere proposition to him to play sets him wild with transports of anger. He, however, retains the most wonderful memory of great events and plays in the past, and, if referred to for opinion or authority, seems to take pride and pleasure in recounting the incidents and features of any famous game that he or others have played.

There is no doubt his mind is wrecked, and it is merely a matter of time to develop the utter annihilation of his intellect; yet we believe that it is not irremediable, and that if he could, by any means, be brought to take interest in chess, and kept from becoming excited on the subject, only using it as a restorative means of relieving and resting his brain, he might be returned to a comparatively useful life in some sphere of action among the world's busy workers in the hive of human industries. With his brain, rusting in all of its channels and cells, and dormant in its once best developed features, we cannot expect him to ever be anything else than a slightly wrecked angel, hovering on the confines of earth, and in the mysterious sphere of partial insanity, a condition which is neither life nor death.

DR. I. E. NAGLE, Editor *Planter's Journal*.

The Sportsman Tourist.

A TRANSFORMATION SCENE ON BARNEGAT BAY.

YEARS ago—I was going to say in its infancy, but the FOREST AND STREAM never had any babyhood; one day it appeared and there it is a grand old newspaper. In my early days I used to get an enlightening lecture from its readers upon the subject of wild-fowl shooting in Barnegat Bay, having for a quarter of a century made semi-annual pilgrimages to that locality in search of ducks, geese and snipe. Indeed, a part of my school days having been passed under the tutelage of "Frank Forrester" of fragrant memory, I had become so thoroughly imbued (heerectically, I mean) with the love of sport from hearing him interpolate his lectures upon the classics with his experiences in the field, that as a result of my school education I became an enthusiast, if not an adept, in all that pertained to sportsmanship, as Mr. Herbert in his field sports (then, as now, an accepted authority) devoted much space to wild-fowl shooting in Barnegat Bay, I naturally selected that locality, to use an Irishism, as my hunting ground.

By way of digression, let me here state that I have felt greatly aggrieved to notice among recent sporting writers a disposition to cast obliquely upon the memory of "Frank Forrester" and thus to parade his shortcomings, than to do justice to his wonderful talents and to the electric effect which his writings have had in inspiring young men to seek recreation rather in the field and by the river and the brookside than in the drawing room or the club. And here let me assert, as I have often before asserted, that as a classical scholar or as a cultured and accomplished gentleman, Henry William Herbert had few equals and no superiors; while as a sportsman or a sporting writer his reputation is too well established for any "knight of the quill" to attack him successfully or with impunity.

Made reckless, we started out to tell of the changes in Barnegat Bay made during the past few years, so here goes, and we promise that our garrulousness shall not again "shunt" us off the track.

In the good old days there were but four or five houses on Squan Beach from Point Pleasant to the inlet, a distance of thirty miles—"Jaakey Herbert's," "John Maxon's" (subs quently kept by his son-in-law, Bill Chadwick) "Orley's," "B. Bant's" and "Grant's," and the other occupants were chiefly upon the products of sea and gun or an occasional "wreck," supplied by the money left by sportsmen who came down in the spring, autumn and summer to shoot ducks, geese and snipe. Of education these people had none; the name of the D-ity they simply profaned with ut attaching any significance to it; and as to the affairs of the outer world, they were as profoundly ignorant as if they were Apache Indians. Still they were manly, honest and truthful, and full of courage and hospitality, as many a sixty-cent crew could testify.

The shooting days were simply superb—sixty miles of shoul water, with endless acres of feeding ground, harbored millions of geese, brant, ducks and snipe, and thirty fowl to a "point" was a gunner's fair average day's shooting in fall or spring; and the snipe shooting was un-uppassed. Of course the number of sportsmen was small, for in those days it took long to reach John Maxon's from New York as it would now take to go to Charleston, S. C. in three hours on a sambat to the Cape Port, and for a man's horse to Point Pleasant, the sand haul stop in a Jersey wagon to Point Pleasant, and then down the beach seven miles, with nayhap a wester whistling about your ears, or still worse, a south-easterly gale eating out your very vitals. As years wore on, however, the bay became more accessible by means of the Jersey S wharf, an old rattle trap railway, which brought us from New York, via Sandy Hook to Manchester, and thence ten miles by stage to Tom's River, doing the said seven miles to reach Maxon's. From the River we did a day's business, these journeys were always a source of great pleasure, and are among my pleasant reminiscences. Sportsmen are always socially inclined; indeed, "b-honimic" is a part and parcel of their stock in trade, and "the masonry" of their craft would render it impossible for two or three to be thrown together for any time without being mutually attracted; consequently, as we slowly crept over these dreary plain and waste, or beat about the stormy waters of the bay, we rapidly fraternized, and, as if by magic, a friendly and many a song and story beguiled and shortened our journeyings. We generally so managed to reach our gunning house in the evening, so as to be ready for

the early morning shooting, and our welcome by gunners and sportsmen, women, children and dogs was as boisterous as it was hearty.

Again, as we write, we are, in imagination, in the little old bar-room, surrounded by friends of by-gone days, sitting round the old gaily stove—a prize from a forgo ten week. There sit Tom and Hackett, and Stuart and Gwy. Bill David and Clark and Post, and J. M. Clark and Lillie, and Rowell and the rest, while in the outer circle are their gunners—Charley Stout, John Gaunt, P. to Suppen, John Harlow and Jimmy Loveland, scarce discernible through the tobacco smoke; the fire gas roaring without, and the heavy surf tumbling with deafening roar up the beach—the picture is as well defined as if painted on yonder wainscoting as they sit inspecting guns, clad like Norwegian pirates each and all armed with glowing pipe and flanked with smoking glass, while nestling at their feet, or lovingly wedged between their knees are their faithful canine friends. Van Dyk or Ruens would have revelled in the lights and shades thrown upon the scene by the uncertain glare of the old bin-nacle lamp or the fitful flame from the fire, as it roared up the good chimney.

Years pass by. Most of the old party have gone to the happy hunting ground, while the writer, sricked down, can only take down his old fowling piece, and while seeing that they are in condition, dream of the old days, while his hoary head and rheumatic joints walk with him, and, through his nose into his hands, give a rest to his mind, and stretch himself on his mat before the fire in christian resignation.

New sportsmen succeed the old, and increased facilities bring more gunners and less sport, and now the desire once more to look upon the old ground grows too strong to be resisted. Although the "read is bent" it is not broken, and Rip Van Winkle sets forth to visit the scene of by-gone sport, nor was the good Rip Van Winkle ever astonished if the sportsman being the worst of all changes, but a few weeks had made the General Railroad, of New Jersey, carried me to Point Pleasant in less than two hours. There I found large and spacious hotels, and at the head of the bay a large group of cottages intersected by streets and avenues. These houses are exceedingly picturesque, and situated on what was, when I last visited it, the most godforsaken sand barren I ever waded through. Between the bay and ocean is a sand spit, thirty miles long and not a thousand yards wide, veiled by a forest of trees, and now crossed by the Pennsylvania Railroad down by a point ten miles south of Point Pleasant, and thence it crosses the bay and goes away across country to Philadelphia, bringing it within less than two hours of two great cities.

The engineer of the road courteously invited me to ride with him on an open car, and pointed out the marvellous changes present and contemplated. Next the "Bayhead Co." the Directors of the Jersey Central, have purchased a tract of several miles, including Jaakey Herbert's well known homestead, and orders have gone forth to build it up. Next we whiz by "Bill Chadwick's," so-called, where that we could have shaken hands almost with the "yude wife," as she stood over the kitchen-fire, and all along the sea front we see sprinkled a succession of pretty cottages. Now we come to "Lavalette," a settlement of seaside cottages and of expensive hotels, and thence to "Orley's," conspicuous for its growth of trees and for its "Dry flat" on which millions of fowl feed, recently also purchased for the same purpose, and thence to "Sandy Beach," the ocean along its front, and the great Bay City's fame, and they now seek here new worlds of sand to conquer. Next we see an army of men with teams and scoops levelling a tract recently acquired by the Pennsylvania Railroad, as a site for excursion houses, etc., for, strange to say, this is the nearest ocean beach to Philadelphia by many miles, and here comes Seaside Park, where the railway crosses the bay and lakes, the main land to Philadelphia.

On inquiring the cause of the unparalleled activity we were informed that as a seaside resort it is looked upon as unequalled, having the ocean along its front, and a beach, by far three to five miles wide in the rear, consequently every breeze must be a breeze, no sweltering west winds such as Long Beach is cursed with, and being midway between the two great cities it is expected they will both avail of it.

But although on land all is changed, we find the great bay just as we left it, the shoal waters precluding the possibility of its ever being navigated by anything larger than a sailboat, it is just as deserted and just as full of gales. Clouds of geese and ducks are passing over the ocean from Atlantic City's fame, and they now seek here new worlds of sand to conquer. Next we see an army of men with teams and scoops levelling a tract recently acquired by the Pennsylvania Railroad, as a site for excursion houses, etc., for, strange to say, this is the nearest ocean beach to Philadelphia by many miles, and here comes Seaside Park, where the railway crosses the bay and lakes, the main land to Philadelphia.

Asking old Jimmy Loveland what effect all these changes, railways and improvements are going to have on the shooting, the old fellow pipes out, "Why, Capen, be that you? Why I'd a knowed you among a thousand. I'll take apple, Capen, I a us a tick to that. Do you mind last in a time we ab on New's-t-pint, me and you and Bill Hoffman? when we shot New's-t-pint canvas backs with two guns, and as many more on the second round; and how Bill Hoffman, he lay that a snurin' and never woke up till after it was all over? Well now, Capen, ab ut the shootin', my opinion is that these here duns won't make no difference—the toll will set a little further off shore, per-haps, but if it come soon to blow from the south and westward they'll show fast enough, and with sixty miles of feeding ground the Pennsylvania Bay in road haint got engines enough to frighten a bird, in fact there's more fowl on the dry flat this month than I ever shot before." "No, I won't take no 'apple, Capen, I've got to steer the Blatchford up the bay, and it is everlasting a blowin' from the norwest" SEXEX.

CENTRAL INDIANA GAME NOTES—Clowdale, Ind., Oct. 20.

—Our outlook for game was perhaps never better. It was thought by many that the unusual severity of the past few had almost exterminated the quail, but actually such is not the case. Being favored by outstanding grain during the winter and a remarkably long and dry summer, we have now at the commencement of the open season plenty of well-fed a strong flying birds, which promise to give right royal sport to lovers of dog and gun. Indeed, I believe quail to be more plentiful than for years past, and hopes to be able ere long to give you accounts of how the fields were fought and won. Squirrels are very numerous, and a easy found and brought to bag. But such shooting does not satisfy the sportsman. The rabbit "crop" gives promise of an unusually fine one, and will furnish an unto amount of fun for the irresistible snail boy with his nondescript dog and single-barreled muzzle-loader.—LA BELLE.

FLORIDA GAME RESORTS.

Editor Forest and Stream:

The time is rapidly approaching when sportsmen, invalids and tourists will flee from "huzzards" and seek the genial climate of Florida.

During the past summer the facilities for reaching Florida have been improved to such an extent that persons leaving Savannah were forced to travel via Live Oak, and from Lake City to Jacksonville over one of the roughest roads in the United States. With the enterprise so characteristic of the S. F. & W. Railway, that company has constructed a new line of road from Way Cross to Jacksonville. It is laid with heavy steel rails, and the road bed bridges and trestles are in excellent condition. The company have placed the road from Way Cross to Savannah in superior running order. The cars and engines are new, and the former are supplied with air brakes, patent buffers and couplers and are luxuriously furnished and supplied with every convenience and comfort. Time, at present, between this city and Savannah, seven hours and a half, but as soon as winter travel commences the running time will be reduced to six hours from Savannah and ten from Charleston; time from New York to Jacksonville, about forty hours. The other day the passenger agent informed me that they would exert themselves to accommodate sportsmen, and would transport and care for sporting dogs from Charleston and Savannah for one-fourth of passenger rates to this city and the lake. Mr. S. J. Taylor, of the Way Cross road has been constructed through a sparsely settled section, and quail are very plentiful. Sportsmen can depart from this city after breakfast, and by leaving the train from fifteen to forty miles from this point they can enjoy a day's shooting and reach this city by the evening train in time for supper. I have no official authority for stating that special rates will be made for such trips, but feel assured that satisfactory arrangements will be made to accommodate sportsmen.

The Florida Railroad Company have constructed a direct road from Ft. Maudslowi to this city, and the trip from city to city only occupies one hour and a half over an excellent road. It crosses Nassau River near Nassau Sound. On this river, sound and tributary streams excellent duck shooting will be found. Heretofore the region through which the road passes was inaccessible and in the neighborhood of the Nassau River deer and turkeys visit in respectable numbers. A number of my friends who reside near or have fished in the streams emptying in the sound have assured me that sea trout are caught in great quantities during January and February, and the fly-fisher can indulge in capturing these spotted beauties. Sportsmen can leave this city at 8:20 A. M., enjoy a day's shooting or fishing, and return at 8 P. M.

The Florida Southern Railway have completed a road leading from Palatka to Gainesville, and as a consequence have opened up a region studded with beautiful lakes. From the best information I can obtain I am warranted in stating that these lakes are stocked with bass and pickerel, and during the winter months they are visited by countless numbers of ducks.

Several years since, in one of my letters, I referred to a sportsman's paradise existing in the Kissimmee and Ochechobee region. In a late issue of the FOREST AND STREAM I notice that a party of sportsmen had acted on my suggestion and descended the Kissimmee to Ochechobee, down the Calceyatchee to the Gulf and along the coast and through the islands to Key West. Hitherto but few persons have ventured beyond Enterprise on the St. John's River, and to nearly all the country beyond has been a sealed book, but now the state of this extensive region are about to be unlocked. The South Florida Railway will have a line of road completed from Sandfort to Lake Tohopekaliga by the middle of November. A town has been laid off on the shore of the lake and named Kissisamee. At this point a hotel is in course of construction, and will be ready to receive guests by Dec. 15. At the southern end of Lake Kissisamee is an island named Brimhan; on this another hotel will be erected and opened on Jan. 1 for the special accommodation of sportsmen. This region is said to be a veritable paradise for hunters, and the adjoining country teems with deer, bears, wild turkey and ducks, with a few wolves and an occasional panther by way of variety. Of course the waters abound with fish, while the inevitable alligator is as yet too un-ophiticated to know how to dodge a rifle ball.

Two steamboats are in course of construction and will be completed by the time the hotels are opened, and will ply on the river between Tohopekaliga and Ochechobee.

The Kissisamee River and its lake and tributary streams are stocked with bass, and during the winter months, ducks frequent it in great numbers. I referred to Lake Istokpoga eighteen miles north of Lake Ochechobee. It is ten miles long and seven miles wide. The country around the lake is uninhabited and has not been visited by sportsmen. A few weeks since I interviewed one of the pioneers of this section, J. Lummerlin, Esq., who has visited this locality on a number of occasions in search of cattle. He assured me that the region abounds with deer, bears, turkeys and an occasional panther. Owing the presence of vast quantities of prickly pears (*Cylindropuntia vulgaris*) the Indians let this section "severely alone," and as a consequence, game is plentiful and easily approached. The thorns of the prickly pear cripple horses by piercing the fetlock joints, and cow-hunters avoid this region. If parties visit the section referred to, they should be provided with leather leggins or boots. Sportsmen need transport a boat to Sandfort, by rail to Lake Tohopekaliga, and there secure a tow behind a steamer to Istokpoga Creek. Owing to the fact that the Kissisamee is a shallow river by most of its course it is not navigable for boats. From the Kissisamee River the boat could be rowed up the Istokpoga Creek to the lake. We predict for early visitors to this lake superior fishing and excellent deer and turkey shooting.

My friend Col. H. was engaged by the Surveyor-General to survey some un-surveyed lands to the east of the Kissisamee and north of Ochechobee; and I requested him to keep a daily record of game noticed. I may remark that the noise produced by a wagon will startle deer and cause them to disappear before they are noticed, and when surveys are running their lines they have but little opportunity to look for game. But I will give you the figures furnished by Col. H. "Left Titusville on Indian River on March 2, 1881 for Fort Capron. 2d and 3d March saw no deer; 4th, saw no deer up to noon; afternoon saw 7 deer. Distance 50 miles south of Titusville; 5th, in travelling distance of 20 miles saw 50 deer; 6th, saw 30 deer; 7th, saw 18 deer and arrived at Fort Capron; 8th, 10 miles west of Fort Capron, saw 4 deer. Encamped on 10 mile ridge. At 4 o'clock, saw a buck, John Billy, sent him to the trap camp and a soon returned with a buck on 10th, in Township 84 S. R. 35 E. saw 3 deer, 11th, saw 8 deer and 1 turkey. John Billy (Indian) killed

4 deer near camp; 13th, saw 5 deer; 14th saw 4 deer; 15, saw 1 deer and 2 turkeys; 16th, saw 10 deer; 17th, moved camp to Ten Mile Creek. Caught a number of large black bass. A party of six Indians in one week at this point killed over 100 deer, and caught over 1,000 lbs. of bass. One Indian with snags (spears) caught in 2 hours 14 black bass; and killed nine deer stags; 20th, saw 4 deer, 1 turkey, 1 wolf; 23d, saw 6 deer, 6 turkeys; 23d, saw 9 deer; 24th, saw 5 deer; 25th, saw 4 deer; 26th, saw 6 deer; 27th, saw 4 deer; 28, saw 3 deer; 29th saw 3 deer, killed two with rifle; 30th, saw 8 deer and 4 turkeys (near Ochechobee); 31st, saw 12 deer.

April 1st, 3 deer; 2, 9 deer; 3d, 7 deer and 3 turkeys; 4th, 3 deer; 5th, 18 deer; 6th, 17 deer; 7, 9 deer and 3 turkeys; 8th, 19 deer and 1 turkey; 9th, 6 deer and 1 turkey; 10th, 1 deer; 11, h, 1 deer; 12th, 4 deer and 3 turkeys; 13th, 6 deer and 1 turkey; 14th, 1 turkey; 15th, 1 turkey; 16th, 1 deer and 1 turkey; 17th, 1 turkey. Caught a large quantity of black bass in Taylor's Creek. Hooked two alligators, books and lines too small to hand them. April 18th, 4 deer; 10th, 5 deer and 1 turkey; May 2d, 3 deer; 3d, 15 deer.

No further record kept of game. During the time the party were out they traveled over 600 miles, and saw but one rattlesnake, and this was a small ground rattler with two rattles. To illustrate the quantity of deer in the section adjoining the lower Kissisamee and Ochechobee I need but state that the Indians kill them for their hides, and with the proceeds supply themselves with comfortable clothing and the necessaries of life. As an evidence of how easily deer are approached, the Indians use a cheap rifle with a bore of .90. The rifles I saw in use by them would set at wholesale about seven dollars, and were of inferior quality.

If sportsmen are provided with a light and transportable boat they can ascend Fish Eating Creek from Lake Ochechobee to New Fort Centre. At this point the old military road leading to Fort Thompson will be noticed, and if this is followed for ten miles across swamps will be found from whom a team can be obtained to transport a boat and baggage to Fort Thompson on the Calceyatchee River. By descending this stream Punta Rasa will be reached. At this point the wanderers can take passage on one of Miller and Henderson's steamers to Cedar Keys or work the coast to the north in their boats.

Jacksonville, Fla., Oct. 17.

"ROUGHING IT IN RUBBER."

YANKTON, Dakota, Oct. 24.

Editor Forest and Stream:

Capt. Paul Boyton, of world-wide fame, reached this city Friday morning about 10 o'clock, "padding his own nose," all the way from Glenview on the Yellowstone River some two thousand miles above this place. He left here on 1 o'clock this p. m., a large concourse of people being assembled on the river bank to see him off. He took the water like a duck, paddled out a short distance with "Baby Mine," a little tin boat about thirty inches long, towing after him, three himself into an upright position in the water, took from "Baby Mine" a large detonating rocket, fired it with the cigar he was smoking as a good bye, and was off, cheered by the four hundreds of people.

The Captain had many narrow escapes from death during his voyage down the Yellowstone and Missouri Rivers from whirlpools, suck holes, snags and last but not least from the rifles of hunters, trappers, ranch men and Indians.

In one instance an Indian came down upon the bank and covered him with his rifle. The Captain rapidly hailed "Baby Mine" between himself and the redskin, shouted and blew his trumpet, but the fellow never dropped his gun until the Captain whirled right into the water, when with a loud yell he scampered off as though the devil was after him. Another time a trapper drew a ball upon him, but upon the Captain's hallooing to him, "I'm loaded to the racket" and I wished him "bon voyage" He had to be continually upon the watch for fear some fellow would puncture his suit if not his body with a bullet, but happily he escaped all dangers and reached here as before stated, Friday thoroughly tired, in the midst of a rain storm. He has about one thousand miles suit to navigate before he reaches St. Louis, his home port. We most heartily wish him success, for he made many friends while here and his gentlemanly manners and deportment, and we shall look anxiously for his projected book, "Roughing it in Rubber," in which he will detail his many trips in his suit down the many rivers of the world, in all voyaging some twenty thousand miles.

Capt. Boyton is accompanied by Mr. James Creelman, of the New York Herald. Mr. Creelman has one of the company's boats made by Osgood & Co., of Battle Creek, Mich., I believe, which he has reserved for himself at this place. I have, when interested in said firm, but in the interests of sportsmen generally, I can say that a boat that can stand the treacherous currents and snags of the Missouri River must be just what the fraternity of duck hunters have long wished for, a light, strong, safe portable boat.

It is easy enough to speak of the enterprise of the Herald, but what shall I say of the pluck of Mr. Creelman in making such a voyage; "he's got a nod," as our frontiersmen say, and plenty of it, for he can't swim. I. E. Waser.

GAME IS THE PROPERTY OF THE STATE—Baltimore, Oct. 29.—Editor Forest and Stream: A friend and myself have recently had a dispute as to the legal right to kill wild birds on his own land, even though the law forbid. Thus, the law of this State is that a state is prohibited to shoot, kill or have in your possession a partridge or partridges between December 25 and November 1. Now, my friend says that this is done to protect a man's birds from outsiders, and that at any time the man wished he would be at liberty to kill (on his own place) as many birds as he chose. I would be obliged to you if you would not only give me your own opinion on the subject, but also, if possible, refer me to some recorded case, either in this country or in England, which is applicable to the subject. My own opinion is that they are *Ferula vulgaris*, and the Legislature has a right to forbid him or any one else to kill them within certain months.—M.

[The common law relating to game, both in England and America, is based upon the principle that the wild game is the property of the State, and not of the individuals upon whose land it may be. The simple existence of the law is sufficient evidence for you to cite. If the partridges belong to the individual landowner, then the State has no right to say when they shall or shall not be killed.]

Natural History.

NEW ENGLAND BIRD LIFE.

THE present work is one which will prove very useful to collectors and students of ornithology, and will be convenient as a reference book to all who are interested in birds. Notwithstanding the fact that the birds of New England have been more carefully studied than those of any other section of our country, no satisfactory hand-book has, up to the present time, been published. This, of course, has not been due to any lack of men well qualified to compile such a volume, for indeed there are many by whom this work might have been undertaken with every prospect of having it done in such a way that it would be a real help to the student.

The different "lists" which have from time to time appeared have, many of them, been most valuable contributions to our knowledge of the birds of New England, and have reflected credit on their compilers. Some of them, indeed, have been models of their kind, but they were only what they professed to be; that is lists, and as such could never occupy the place of a complete history such as was needed. Samuel's Birds of New England is utterly without value as an aid to study, but in New England Bird Life we have a work which bears the stamp of Dr. Coues' authority, and which is brought up to date.

The preface of the work in hand states very clearly its purpose, and we cannot do better than quote from it as follows: "It is the object of the present volume to go carefully over the whole ground, and to present in concise and convenient form an epitome of the bird life of New England. The claims of each species to be considered a member of the New England Fauna are critically examined, and not one is admitted upon insufficient evidence of its occurrence within this area; the design being to give a thoroughly reliable list of the birds, with an account of the leading facts in the life-history of each species. The plan of the work includes brief descriptions of the birds themselves, enabling one to identify any specimen he may have in hand; the local distribution, migration and relative abundance of every species; together with as much general information respecting their habits as can conveniently be brought within the compass of a hand-book of New England Ornithology." It can be said that any portion of the plan here laid down has been neglected. The descriptions are so simple and clear that even beginners can comprehend them, while the lists of references to previous records give the work a value even to the most advanced student. A very valuable feature of the work is its Introduction, which includes General Definitions (of a bird and its parts) Preparation of Specimens for Study, The Subject of Faunal Areas and the Literature of New England Ornithology.

The volume before us is Part I, and carries us through *Otocoris*. Part II, to complete the work, is promised "as soon as practicable," which remark, we must say, has not a very encouraging sound.

The basis of the work is the manuscript of Mr. W. A. Stearns and Dr. Coues appears to be the "editio" but the volume before us almost everywhere gives the impress of the editor's hand, and indeed Dr. Coues expressly states that he has freely altered, amended and rewritten, and that he holds himself responsible for the accuracy of the work and for the views expressed in it. Mr. Stearns is, we believe, a careful observer and an enthusiastic student of ornithology, and whatever he has accomplished in his years of collecting in Massachusetts is to be found in these pages.

One who reads it may be said that the work is conceived and carried out in a very clear and happy style, and is, as far as it goes, eminently satisfactory. Of course it is open to criticism in some respects, and one of the most noticeable of these is, under the circumstances, the harshness with which the late Dr. Brewer is attacked. It should be remembered, however, that the paragraphs in which exception might be taken were probably written before the death of the gentleman against whom they were directed. New England collectors and ornithologists will probably decline to accept some of the statements, with regard to the breeding of certain species, which are given in the work, but the whole we may accept it as a valuable contribution to the literature of the subject, and offer to the author and editor thanks for a useful book.

THE TAME MASSACHUSETTS PARTRIDGE.

ORLANDO, Mass., Oct. 26.

IT was about one year ago that an article appeared in the FOREST AND STREAM about a tame partridge. The place where the bird was claimed to be was at Colebrook Springs which are I catched here. The story last year appeared to be well vouched for, and many were convinced that the partridge could be tamed.

The bird has reappeared in the same locality this year, and it has become tamer than last. It proves to be a male bird it has been watched parts of three open seasons, between August and January.

It was in December, 1879, that it was first noticed. At that time it was noticed to be abundant and like company, but no familiarity. Later on Mr. Parker, of the Lake Mills in a weasener secured its confidence, and could call it to him. It would light on his shoulder and eat from his hand. If he made an effort to handle it it would promptly fly away. Things went on in this way, the bird becoming more and more intimate, until he was the pet of the summer boarders at the Springs. Among them was a deaf mute who attracted the bird by clapping two pieces of bread together. The intimacy increased between them until one day the mute succeeded in catching him, and plucked out one of its feathers probably as a souvenir of the pet. This rude familiarity the partridge resented, and it was feared at one time that he would desert the locality, but it returned after a month's absence. After a while it again became intimate with those in the neighborhood of the Springs. It was seen frequently during last winter. When spring returned it mated and assisted in the raising of a good-sized brood. They were watched with interest and when an children deserted the home during the close season. The work of the flock, however, remained, and still responds to calls even of strangers in the locality. Sometimes it will fly into the carriage of a visitor when it is called. The bird is healthy and full-fed differing from others only in its domestic habits.

SKULL OF BIG-HORN IMBEDDED IN TRUNK OF PINE TREE.

Through the courtesy of Mr. J. W. Morse, Gen'l Passenger Agent of the Union Pacific R. R., we are enabled to present to our readers a very remarkable natural curiosity. This is the skull of a mountain ram imbedded in the trunk of a large pine tree. A reference to the cut will show very clearly the manner in which the skull was bound within the still growing wood. How the bone came to be so placed that it would be inclosed in the tree trunk is and must ever be a matter of conjecture. We can only guess about that, but as the matter stands it seems natural to conclude that the sheep's skull was hung upon the horizontal branch when the tree was a very small one, and that it is simply the natural increase in the size of the trunk which has buried the nose and face so completely. On the other hand the condition of the bone is so perfect, that it scarcely seems possible that it could have been exposed to the weather for so long a time as would be necessary for this to have taken place.

THE SONG OF THE MOCKING BIRD.

PALMERSTON, TEXAS, Oct. 12, 1891.

Editor Forest and Stream:

I note the discussion which has been going on in your columns some time, as to whether the mocking bird is a rarer bird of the song, or other birds, catching his notes from them by repeated hearings, or whether the notes spring up spontaneously in his throat without education from other birds. This bird has been my very intimate friend from the cradle up to the present time. I have never lived in a country where he was not decidedly numerous, and he is more numerous in Texas than any country I have yet seen. Our whole State is vocal with him, except those portions which are not yet inhabited by man. He don't like to live too far away from man. Whether this is because he likes to show off his musical talent before men, or because he believes they will keep the hawks away from him, I am not able to tell, but it certainly is a fact. I believe he is controlled by both reasons—the fear of hawks and the natural desire of all gifted creatures to show off their gifts before an appreciative public. Let him perceive in his free, wild stroll, that he has an audience of good-looking ladies and gentlemen, and he will almost burst himself with melody. He will plant himself before them in the most conspicuous place he can find, so that they can all see that it is he that is singing, and he will just let loose. In the ecstasy of song he can't hold himself still a moment. He will jump up and down, keep time with his feet, and when he gets a grand burst upon him, will rise up and soar around till the burst is over. In the way of song he is tremendous, indeed, and no one is better acquainted with that fact than he is himself.

As to the point in dispute, I agree with both sides, but more particularly with the side that believes he is an imitator. Nature has stuffed him so full of the musical genius that I believe he would sing anyhow—couldn't help singing something; but with all my extended knowledge of this bird I never heard one of them sing a song or make a note which he had not previously heard, or at least had excellent chances to hear. I have sometimes listened to them half the night singing within a few feet of my window, with that particular point in view, and heard from them no note which I had not frequently heard from other birds in the same locality or district. In order to sing a song they must first hear it and learn it, and in this respect they do not differ from the Adeline Patti or any of the prima donnas. If Adeline Patti had never heard any one else sing I believe much if she would ever have sung at all. I would not say the same of the mocking bird. As I said above, I believe he would sing something anyhow, but his repertoire will be rather confoundingly slim—like that of all other birds in the world except himself.

Here is a hint by which we can settle this matter, I think. In North Carolina where I was born and "raised" one of the most common notes of the mocking-bird is the plaintive or wailing note of the cat-bird. Now, the cat-bird, according to my observation, does not exist in Texas at all, and I have never heard the mocking-bird on Texas soil repeat the note of the cat-bird. Did any one ever hear the mocking-bird sing the notes of any bird which was not a native on the same soil with herself? I don't believe any one ever did. What say ye who are interested in bird notes?

As to the imitating faculty of the mocking-bird or his genius to learn songs by hearing them I never heard one who had learned to imitate the sound made by filing a saw, or to crow like a cock, or to cackle like a hen, as "Roy," of Detroit, has, but I was very well acquainted with one in Houston, Texas, who had learned to sing to perfection the little piece of music called "Scandal." He heard it from the boys on the street; it seemed to take his ear, and he could sing it with a naïveté that was refreshing. No one could sing or whistle "Scandal" half so well as he. I also knew another that could sing several notes of old familiar songs, which he had often heard, but I never knew one that could

take an operatic air and sing it through. There never has been a mocking-bird that could sing the *misere* of Traviata, or the drinking song of Traviata, and there never will be. There never will be one that can sing "Sweet Home," or the "Last Rose of Summer." N. A. T.

VERMIN ON QUAIL.—In the early part of the summer I discovered the nest of a quail, and never having seen the wee Bob White before leaving the nest I paid frequent visits to it in the hope of finding them hatching. But one day upon paying my visit I found nothing but a nest full of shells, and the nest covered with vermin such as are frequently found upon domestic fowls. Have never seen any on old birds that have been shot. Is the occurrence frequent? N. A. T.

COOPERHEADS IN NEW ENGLAND.—Hollister, Mass., Oct. 25, 1891.—Editor Forest and Stream: I have a fine specimen now in my possession of a little cooperhead, eight inches long, that I captured the 8th of September last, while gunning in the woods in Sherborn, an adjoining town situated twenty miles southwest from Boston. I started an old snake with a dozen or more little ones and struck the one I now have with my ramrod, stunning it so that I picked it up and put it in a bottle, and now have it alive in a glass-covered case. A friend of mine, who lives near a rocky woodland in this town, told me recently that he has killed two cooperheads this summer, about two feet long; and my father relates that they were quite common here twenty years ago, and that at that time he had quite a lively fight one day with two with a pitchfork, while making hay, they holding their ground well and making him work lively to kill them. We consider the cooperhead allied to the rattlesnake and its bite poisonous; but I am not certain, and would like to know if a snake as small as mine can bite or is poisonous, and if I can keep it over the winter without food, or if it will eat anything except mice or toads alive? Hoping to hear from you through your interesting and valuable paper, I remain, respectfully yours, W. N. POPE.

[The cooperhead is undoubtedly venomous, but I doubt if a snake as small as yours would be able to inflict any injury. It will probably live through the winter without food, but if you can induce it to eat its chances of living will be improved. It will not be likely to eat anything but live food.]

PTNSAM, CONN., Oct. 29, 1891.—Editor Forest and Stream: Yesterday, as I was walking up town with Mr. G. Leonard, Esq., I saw a good-sized snake lying under the hedge in front of Mrs. Leaven's residence. I secured a good stick and drove him out. I was surprised to see it was a vicious cooperhead. He flatted his head and struck at me, but I soon killed him. I was surprised to see a cooperhead so far North, but he was a real one and no mistake, fully two and a half feet long. Woodcock seem very large and in fine condition. Mr. Wilbur shot one the other day that tipped the beam at nine ounces. Rabbits are very plenty? Hoping to rascally follow here who shoots quail out of season, and too lazy to work, is in the woods about all the time, and has killed up nearly all the quail, and done it out of season, which can be proved.—G. F. W.

FRIGHTENED TO DEATH.—Chicago, October 26.—Editor Forest and Stream: A singular incident occurred in our boiler room a few mornings since. The fires had been started under the boilers, and as the wood was burning down coal was put in making a bright clear fire. Just at this time a rat popped out from behind the steam pump down into the fire-room and ran under the first boiler. We were standing against the room door and scared him—the bright light from the fire frightened him more; he came rushing out and tarred under the next boiler. We jumped into the room, swung to the asphalt doors and made him a prisoner. Catching up a broom we were ready for an attack, for we expected him to try to get out of

the ventilators. We saw him rushing around in the ash-pit for a moment and then lost sight of him. Stopping down we saw him prone on the ashes just giving his last kicks. Even then we thought he was playing "possum," but on reaching him out with the hoe we found him as dead as a nail. There was no evidence of a scorch or burn upon him, not a hair was singed, but he was really dead. We believe it died from fright. There was nothing under the grates to injure and the fires were not hot enough to affect it, hence cannot assign any other cause. We never believed it possible to seriously scare a rat before, for we have shot many of them when a boy.—NORMAN.

"YANKEE" AT THE SMITHSONIAN.—Smithsonian Institution, Washington, D. C., Oct. 27, 1891.—Editor Forest and Stream: The tortoise with "Yankee, 1862" cut on its plastron was received at the Institution on the 15th of October. The tortoise is at present in the care of our artist, Mr. Shindler, who has made a pet of it and reports that its condition is most flourishing.—Yours, very truly, GEO. S. HOBBS.

Game Bag and Gun.

* * For table of game seasons see issue of October 10.

THE NORTH SHORE OF LONG ISLAND.

NEW YORK, Oct. 28.

Editor Forest and Stream:

I have just arrived in the city after a journey, with horse and carriage, through Long Island, from Greenport to Astoria, and desire to furnish your readers with the information which I gained concerning the game prospects in the region through which I passed.

Ducks are coming into Gardiner's and Peconic Bays in great numbers, and many are already reported in the vicinity of Gardiner's Island, and also further up the bay around Robbins' Island. Black ducks, coots and "old squaws" are about the only kinds found here. Plover have been shot on Gardiner's Island in fair numbers, but no extraordinary bags have been made, so far as I have heard. Bay-bird shooting at and near Good Ground, on the south side, has been good, and the prospects for ducking are better than at the same time last year. Occasional flocks of yellow-legs or ring-necks make an appearance on the shores of Orient Bay or Pipe's Cove.

As regards quail, the prospects for the Eastern field trials are very promising. The number of birds now on Robbins' Island is estimated at fifteen hundred, but nevertheless still more are being turned out by the club. Robbins' Island, of 405 acres, was sold under foreclosure sale recently, and was purchased by the newly organized Robbins' Island Club. This will not interfere with the coming field trials in the least degree, as the two clubs are acting in perfect harmony in all that pertains to this year's trials.

A moderate number of quail can be found around Greenport, with increasing quantities as we proceed further westward, to Southold, Peconic and so on. Near Mattituck both quail and ruffed grouse are found, and at the quiet little hamlet of Wading River the eager sportsman is qualified to hear reports of woodcock, in addition to the two last named varieties of game.

As we approach Port Jefferson, we find that the quail have been reduced in numbers, by the severity of last winter, to a greater extent than in the more sheltered portion of the island, but ruffed grouse shooting is better than usual. At Mattituck, the Mattituck House is a good hotel. Wading River has no hotel, and is six miles from Manor, the nearest railway station. Raynor's Hotel is the house to stop at in Port Jefferson, as the proprietor is a thorough sportsman and a constant reader of the FOREST AND STREAM. At Smithtown, the Riverside Hotel of B. B. Newton, is a much-frequented resort for sportsmen. Here quail are few in number, but woodcock are found, a large flight of them being expected soon. Mr. Newton also has a large boarding and training kennel, among the numerous inmates of which are Dr. Allen's Glen and Ned (winners of the brace stakes at Robbins' Island, 1879), Sepoy, formerly the property of A. H. Moore, and many other prominent field performers. The scenery in this part of the island is very beautiful at this season of the year.

As we proceed to Centrepot, the prospect for quail grows better, but ruffed grouse are less known. At this place is located the boarding, breeding and training kennel of Anders L. Titus, one of the cleanest, best disciplined and most favorably situated kennels on the island. Among the dogs here are all those belonging to Mr. Henry W. Livingston, including his Ray, Rose and Baroak (latter now in handling for the field trials), his pointer, setter and collie puppies, besides others. West of here the game decrease

as we approach the city. The prospect for rabbits is good all over the island. Almost any of the towns along the north shore will furnish good duck shooting, notably Port Jefferson, heard very little of violations of game laws, and pot-hunting is chiefly done by one-day excursionists from New York and Brooklyn, shooting on the west end of the island.

W. K. ALL.

THE DECREASE OF GAME BIRDS.

FERRISBURG, Vt., Oct. 23.

I am particularly gratified to see pigeon slaughter at the traps being set in its proper light, and I am glad to have a better understanding of the matter. I am asking a question about the ruffed grouse that has long puzzled me. I have long ago, why they were becoming so scarce, but no notice was taken of my query. As "Verde Monte" says, the hawk, owl, fox and skunk theory will not do, for all these were plentier twenty years ago than now, and so were grouse. Four years ago grouse were plentier here than they had been for years, and so continued up to the breeding season of the next year, but between June and September they disappeared, and have continued scarce ever since, and this year are scarcer than ever.

Certainly this scapgoat of a fly or tick could not have made a way with them so quickly, and I know that there is no snaring here, unless the snarers have an invisible method of carrying on that practice. I am a stay-at-home bird and know but little of game around about except in my own neighborhood further than what I hear. When I hear, as I often do, of grouse being plenty in the mountain towns, I try to think the scarcity here is due to a partial migration, though I can see no reason for it, as there is food enough and cover enough here for no end of grouse. Is this tick the same lively winged rascal which is found on the great horned owl?

I am glad that L. I. F., of New Brunswick, is so honest as not to claim almost every grouse he shoots at on the wing. I'd like to tag around with one of these three-out-of-five men just for a day in our covers and see how they do it. It would be a trick worth seeing, though one might not learn to compass it.

A. WATSOOSE.

Oct. 28.—*Editor Forest and Stream:* While making a tour through some of the Southern States last winter, I stopped at a small place in Georgia where quail were very abundant, also many gunners from the North "not worthy of the name of sportsmen." These individuals hunted every day for no other purpose but to see who could bring to bag the most birds. They destroyed quail by the hundreds, and certain parties among them were so penurious that they would not allow any of the birds to be served at the hotel, but threw away all they could not themselves eat—a most outrageous piece of lunacy. So much increased were the people in the neighborhood at such wanton destruction and waste of game that most of the places were posted with notices prohibiting shooting; and a law was framed allowing only twenty-five birds to be shot with one gun. Also while in Florida I found that ducks had been and were being jacked on the St. Johns River. I also know that geese and ducks are treated likewise on the Great South Bay, L. I., by the oystermen and employees of the Life Saving Stations. In my opinion the desired notoriety for big bags is one cause for the decrease in upland game; and jack shooting aids very materially in the decrease of wild fowl.—S. P. G.

[We have heard before of this practice by the employees of the Life Saving Stations. Will some one having the facts please give them to us?]

Sportsmen about Greenwich, Conn., aver that the increase of foxes in that vicinity has had a marked effect on the game. Upon Mr. A. H. Lewis' farm, south of Naugatuck, there were hatched two large broods of partridges early in the season. Not one of the chicks or parent birds have been shot or trapped, yet this fall not one of either remains. In fact, however, in the places a large number of foxes, and the presence of these animals is doubtless the cause of the disappearance of the birds.

ADIRONDACKS DEER AND TROUT.

Editor Forest and Stream: "Mussett's" article in your issue of October 20th inst. on "Deer Slaughter in the Adirondacks" claims attention. Let us now begin and stir the matter up, and once more call the attention of our Legislators to what seems to them a herculean undertaking, preserving the trout and deer in the Adirondacks. Our laws regarding this subject are well enough if only enforced.

The present laws on the sta-ute book are, I think, due in a very great measure to the late Dr. Ely and to Dr. Roney, gentlemen of large experience in the Adirondacks and the oldest visitors there. In regard to the law to preserve trout no change is virtually necessary, but as to deer-hunting it gives too large a liberty, and if not curtailed in that liberty we may as well at once bid farewell to deer in the North Woods.

During August last one gentleman in one day killed five deer on Hitching's Pond.

Let me suggest a remedy for this destruction—namely, under a very heavy penalty stop deer-hunting for only two months, say September and October; stop hounding with dogs under a heavier penalty at all times; stop transportation under a still heavier penalty; and, if necessary, check criss-hunting by imprisonment and a heavy penalty also.

We need Game Commissioners through the Adirondacks every fortnight from June to November, and when it is fully understood that violators of the game law will be watched and arrested, then, and not until then, will the laws be respected and game preserved. We want up red tape in this matter, no fear and favor shown, but laws that will be enforced. Let hotel-keepers understand this in the woods, let sportsmen understand this, let guides understand this, and our game will be preserved if we can only have Game Commissioners who will attend to their duty by paying them well for it. The arrest of the guide at Lake Placid last winter for taking speckled trout was decidedly beneficial. Let the same enthusiasm be exhibited again in behalf of trout, and of venison also, at all times during the close season, and we can have no farther cause for complaint.

Why, venison was on the table at nearly every hotel during the last of June and during July. Where were our Game Commissioners to watch and arrest if this found? I pause for a reply. Guess it may be answered, "to much red tape and indifference, and no pay for the attempt." S. S. N.

ADIRONDACKS, Oct. 26, 1881.

Editor Forest and Stream: The past week has been very favorable for the deer hunters. I have figured up the number killed during the past week, ending Oct. 29, in this immediate vicinity, along the Beaver River and adjacent ponds, and find it to be forty-three deer. The country spoken of does not comprise one-tenth of the Adirondack hunting grounds, which are equally infested with hunters. If they have been as successful as hunters here, which we have no reason to doubt, this will make four hundred and thirty deer killed in one week.

One thing is noticeable, that of all the deer that have been killed in the Beaver River region, at least two-thirds have been does.

This is partially accounted for by the fact, that for two or three weeks before the commencement of the rutting season the bucks move about but very little, and are hid away in the most unaccessible thickets, and in mountainous regions of the Adirondacks, in thick undergrowth of evergreens near the summit of the mountains, and are mostly avoided by those that put out the hounds. It is safe to predict that the remaining open season for hounding deer will be more disastrous from the fact that the later in the season the more readily deer take to the water. When the ground is frozen, deer will run but a few minutes before the hound before taking to water.

MUSSET.

STATE PIGEON TOURNAMENTS.

THE TIME COMES FOR A CHANGE.

Following are letters from representative sportsmen in many different parts of the country. Their tenor shows that in our strictures upon the pigeon shooting tournaments by game protective societies we have but voiced the sentiments of the community. We commend these expressions of opinion to the consideration of all concerned. These letters show that public opinion is very strongly against a continuance of these great pigeon shooting gatherings.

OMAHA, Neb., Oct., 1881.

Editor Forest and Stream: I am glad to see you take the initiative against this inordinate turning of the sportsmen's associations of this country into machines for the slaughtering of pigeons at the trap. I hope every sporting paper and other papers will with one voice decry this fatal practice. Unless a reform is effected in short order our State associations will lose all power for good, and become barren of fruit in the purposes for which they have been organized. This reform should begin with the New York State Association, the mother of all the other associations in this country. This slaughter of thousands of pigeons that have been netted and cooped up for weeks or perhaps months, and then put into a trap, and thrown out to men to shoot at, is unsportsmanlike. The question of cruelty does not enter into the matter. It is no more cruel to shoot a chicken or a bullock than to kill them any other way, or to shoot one or one hundred.

The tendency of pigeon shooting is to deprave the moral sensibilities of the sportsman, and weaken the influences and usefulness of our game protective associations. They are beginning to be looked upon as mercenary institutions through this species of gambling—for it comes little short of that in its present prodigious form.

As originally instituted its purposes were to stimulate a laudable emulation among sportsmen in the use of the shotgun in wing shooting. But it has outgrown those objects, and has become debased and held in disrespect by a large number of honorable, high-calibered sportsmen to say nothing of that public sentiment that is beginning to show signs of disapprobation of the practice and distrust of the usefulness of our protective associations.

It is time for a change of programme, and the sooner it is effected the better it will be for the objects and purposes for which game protective associations were instituted, and for which only they should be continued.

B. E. B. KENNEDY.

ROCHESTER, N. Y., Oct. 25, 1881.

Editor Forest and Stream: Your request for my opinion on the subject of giving up pigeon shooting at meetings of the sportsmen's State convention somewhat tickles the vanity of the present writer, who would not venture to offer his opinion in the question unsolicited, and is far from supposing that his view one way or the other of its consequence.

From the expressions I have heard at recent conventions I am inclined to think that the country has seen a greater number of pigeons shot at a tournament than will ever again be shot at a State convention. This probable result may be due to various facts, and not solely to that sentiment against killing pigeons which is the active motive that urges some men to oppose pigeon shooting over traps. The difference in cruelty between shooting a bird thrown from a trap or one flushed in a marsh or woods has never been made so clearly manifest to me as to carry conviction that one was tolerably kind and the other without excuse and deserving condemnation. I can see without effort that there is a great difference in the surrounding and pleasure derived by the shooter in the respective acts, and that the field sportsman has very much of an advantage over the trap man, but the killing is the same, and a person who, from humane motives, opposes trap-shooting acts inconsistently in my view if he shoots at anything more sensitive than a glass ball.

The increased price consequent on greater scarcity cannot fail to diminish the number of pigeons that will hereafter be shot at meetings of sportsmen.

But I don't think that annual conventions, such as the New York State Association has held for years, can be successfully conducted unless something more exciting than discussion of game laws shall be held forth as inducements for delegates to attend. A few of the clubs might defray the expenses of delegates to a convention which would talk of game protection only, but I think nine-tenths of those who are met at ordinary State conventions would be absent if there were no trap-shooting.

As I look at it game preservation is not a matter of so much consequence that annual conventions are necessary to its success. State law based on the law of nature regarding breeding seasons must be the ultimate law on the subject, and I scarcely think it necessary to call a State convention to tell a Legislature that game birds should not be shot when hatching or fish when "rip." The natural history student ought to be the best counselor in such a case, and if he required the support or backing of the sportsmen—the latter

could give it without calling into play the cumbersome machinery of a State convention.

From these views you may guess that your correspondent does not think the cause of game protection receives much more assistance from the annual meetings. I certainly do not regard them as of material benefit toward that object, and I do not think many who attend the annual meetings differ with the view here expressed. I confess that my motive in attending the several conventions I have been at was solely for pleasure in which the hope of winning something of greater or less value had an influence. I appreciate the fact that the chances are against any one receiving a title of his expense in prizes, but the excitement of the contest is worth something, and if one does not carry off a prize that he can look at with satisfaction and transmit to posterity as tangible proof of his "nerve" and skill, at least he can recall incidents of the meeting with pleasure, and recount how many of the good shots of the State he "shot out" before he fell back. The glory of the strife cannot be valued in money, but it is none the less real, and I think has more to do in keeping the State Association together for its ostensible object, "the preservation of fish and game."

In this free expression of opinion I may be doing an injustice to many of my fellow sportsmen, but if I do I ask their pardon. I do not in this instance "assume a virtue" which I have not, and if any member of the jolly crowd I have met at State shoots were there for the purpose of preserving game I have wronged those honorable men, and shall do repentance meet when informed of my error.

The State convention at Niagara Falls in 1883 might try the experiment of shooting at some lifeless thing in place of pigeons, and thus get rid of the charge of cruelty, but if competition with the gun is given up altogether it will astound me if the interest in sportsmen's State conventions does not greatly abate.

E. R.

STAMFORD, Ill., Oct. 24.

Editor Forest and Stream:

I have long wished that pigeon shooting might be dispensed with at such meetings. The entire interest often centres on the pigeon match, and the real objects of the association are lost sight of. How often do we see thousands at the shooting grounds from day to day, while scarcely a corporal's guard is at the business meeting in the evening. I have scarcely known this to fail. As a class the men who are at such meetings for pigeon shooting are not the class of men who desire game protection, but are often there for illegitimate gains, and in that respect savor very much of the pot-hunter, whose motto is, "anything for money;" and while such men are very anxious that their neighbors shall respect game laws do not respect them only while in danger of being caught.

My ideas are that if game protection ever succeeds it will do so through the earnest endeavors of true sportsmen, who love sporting for its pleasures, and we must not look for much help from those who follow it for its gains in dollars and cents, the same class who patronize sportsmen's associations for the pigeon match.

J. L. PRATT.

BROOKLYN, Oct. 24.

Editor Forest and Stream:

I am most decidedly in favor of a change in programme at the annual convention of our State Association for the Protection of Fish and Game. The principal business of such gatherings should be to devise the best means to protect our game, and to take measures to have simple and reasonable laws enacted for that purpose. As far as my experience goes it has been only a side issue, and so much to one side that it barely came into the range of vision.

Personally I never shot at a pigeon from a trap, not from any uncertainty on the ground of cruelty, but because of the expense attending it, being only moderately endowed with this world's goods; but I must confess to a feeling of disgust, while viewing day after day the wholesale slaughter of the poor half-dead pigeons at the last tournament, and, for the life of me, could see neither sport nor the exercise of particular skill in it. A great amount of time and treasure have been expended to make the annual gatherings pleasurable for the boys; that is well, but we ought not to lose sight of the objects sought after by the pleasure of the society, and a speedy return to first principles is most desirable.

All that can be done by a small body of sportsmen, to which I have the honor to belong, to aid you in your laudable undertaking I think I can pledge will be done.

WALTON.

NEW YORK, October, 1881.

Editor Forest and Stream:

Allow a subscriber to your paper from its initial number to say that, in his opinion, it has never published any articles more sensible than the recent ones in denunciation of the annual pigeon hutchery, which has grown to be apparently the principal concern of the "New York State Association for the Protection of Fish and Game," if that be the title of the association. It is no wonder that Mr. Holberton considers this designation a palpable misnomer. The glaring perversion of late years of the purposes of the organization is simply monstrous, and I fall to see how the Forest and Stream can do otherwise than "cry aloud and spare not." Your columns of five years ago gave room to my modest protest against a departure, which no one then imagined could culminate, in a short period, in such a reprehensible spectacle as that afforded by the Sportsmen's Association of the Empire State at Coney Island last June. It seemed to me a heartless slaughter, nowise in the interests of true sportsmanship, and called to the support of Henry Bergh, in his efforts to suppress pigeon trap shooting altogether, scores of men who needed that sort of exhibition to open their eyes.

H. H. THOMPSON.

SENECA, Mo., October, 1881.

Editor Forest and Stream:

I do not think that I can do any better than simply endorse your very excellent and timely article upon this subject in your issue of 13th inst.

I wish only to emphasize, so far as I am concerned, my dissent at the propriety of any such procedure being classed as a sportsmanlike business or pastime.

Aside from such gatherings ever tending to the object and purpose claimed for them they absolutely militate against the preservation of either game or fish, and render the whole import of constitutions and by-laws nugatory, and our pretensions before the public a mere farce.

I object to these tournaments on the ground that they do not do, or even attempt to do, what the object of their creation implies.

I object, in the second place, because every thing connected with them, so far as I am informed, is contrary to and detrimental to the interest of any true sportsman in the land.

I object to them in the third place because the tendency is both morally and physically evil.

I like true sport. I am wedded to the woods and plains. My best inspirations come when wooed from the primeval forest, with nothing but the stillness of nature above me and the grand old archrival of heaven above me. I look upon any man who would slaughter any of God's creatures for the mere pleasure of destruction as an enemy of mine and a blot upon the face of creation.

Ah! yes, Mr. Editor, I like true sport. That pleasant and necessary relaxation from toil and worry and care that will enable us to think better, do better, live better. Speak again, you have touched the right chord. Next time speak a little louder so that all may hear.

DANVILLE, N. Y., Oct. 25, 1891.

Editor Forest and Stream:

Your editorial in issue of October 13, relative to pigeon shooting tournaments of State game protective associations, was something for which I have been waiting for years. In times past it has been my privilege through your columns to endeavor to agitate in a feeble way this subject, only to be bitterly opposed and frowned down by your correspondents; but now the thing has changed, and with FOREST AND STREAM for us who can be against us?

It is decidedly laudable to look over the minutes of the association with the para-foxical issue and try to extract therefrom anything of good to "the craft." So far the whole might, mind and strength of the gentlemen assembled have been concentrated on the daily shambles and the possibilities of winning a chamber set or baby carriage. It is to be hoped that your efforts may, by exciting the interest of sportsmen, bring about that result for which we so earnestly long—viz., a State association for the protection of fish and game, whose acts shall tally with its name, and whose deliberations shall tend toward perfecting our family game laws, and after perfecting them, enforcing them! The time has gone by when a wholesale pigeon shooting of the trap is looked upon by gentlemen sportsmen as a pastime worthy their attention, aside from the element of cruelty pervading it. There is something degrading, something suggestive of butchery and carnage that makes one feel that he is among an unfeeling band, notwithstanding the fact that some of the best fellows in the world step up to the score.

The "spoils system" that has crept into our State Association has heretofore made it a great source of revenue to the club that was successful in getting "the meet," all the surplus above expenses amounting oftentimes to thousands of dollars, not going toward forwarding the cause of game protection in our State, but into the private treasury of the lucky club under whose auspices the meeting was held.

Who have been the delegates generally to our State Association? Those who were renowned for their interest in the matter of game protection, or for their skill as the trap? I'll not engage to tell, but time has proven beyond doubt that game protective interests and pigeon slaughtering do not go hand in hand, and that those most interested in the former will not attend to it under the present state of affairs. If the knights of the eight-hour must meet and shoot at pigeons let there be a yearly field day when all who wish can take their fill of their chosen sport. But let the "New York State Association for the Protection of Fish and Game" get together decently and in order, feeling the weight of responsibility resting upon them, let them deliberate calmly and dispassionately upon the momentous questions of restoring, restocking and protecting our depleted coverts and streams, untroubled by the booming of the breach-loader and the cheerful cry of "Last bird!" If need be a day in glass balls may be profitably indulged in after the questions in convention have been solved.

So shall our good men and true be brought to the front; the game interests of the State be advanced; the pigeon be saved from annihilation, and what is better than all, the honor of the "New York State Association for the Protection of Fish and Game" be fully vindicated.

WHITEWATER, Wis., Oct. 26, 1891.

Editor Forest and Stream:

My attention has been called to your editorial regarding "Pigeon Shooting Tournaments." It is no question whatever in my judgment that the time has come for a radical change of programme on this subject. Your editorial states the facts so fairly and so plainly that any "wayfarer" cannot err therein. Associations, like individuals, must practice what they preach. If they are in good faith, as you note the cause. This practice of wholesale slaughtering these helpless live pigeons is positively cruel from first to last, and it disgraces the pretext, "Game Protective Association."

Hoping that through your efforts these harmless birds may have a proper hearing, and that every club will soon come to their rescue, I am yours for protection de facto.

GEORGE W. ESTRELY, President Black Hawk Club.

HOUSTON, Texas, Oct. 22, 1891.

Editor Forest and Stream:

In your October number of the 13th inst. you invite expressions of views on state tournaments and their effects. I think if clubs throughout the States would pay more attention in furthering the objects of their association when they meet, they could do a vast deal of good and then there would not be so much complaint about scarcity of game. But as it is now, the all absorbing theme is when to have our next shoot, and they do not think of the bad influence it brings to bear on the sportsman. My warning is to look up, as gambling projects and, as a general thing, they are no more or less. They encourage one to put up money and win or try to. Then they open up the field to pool sellers who take advantage and sell pools, and there are plenty to buy. Then another bad feature is that money is freely bet on the grounds the day the shoot comes off, and too often among those who have entered in the shoot. These tournaments are, as a general thing, individual money-making projects under the guise of association tournaments, and so long as they continue thus there will be a lack of support from the great many influential gentlemen, some of whom belong to the clubs and others who would belong if they were conducted in a different way. There are men who will drop from the roll because they are opposed to gambling in any way and they do not like to belong to anything that will countenance it, and when they go the club will decrease or stand still instead of increasing, until they barely have enough members to meet their expenses. If the men or clubs who get up these tournaments would only use their time and energy with one half

this vim to have laws passed and enforced to protect the game they then could feel proud of trying at least to further the objects of the association. But this must be the last thing they think of. I and many others would be glad to see less show and more deeds in that direction, and when clubs go to work in that channel they will see more interest taken, and by some whom they little thought take any interest in such things, and then, and not till then, will their membership swell, their treasury fill and themselves be in a prosperous condition. What is wanted to be seen is more work and less show.

[Our correspondent is partly in error. Betting and pool-selling are prohibited at the N. Y. Association meetings, and at the meetings of some of the other State associations.]

—PROVIDENCE, R. I., October 20.

Editor Forest and Stream:

I am glad to see that you are making an effort to stop the shooting of wild pigeons at the meetings of the so-called societies for the protection of game and fish.

These birds, as every one knows, are trapped at their nesting grounds, boxed up and shipped over a thousand miles, to a large percentage of loss, leaving their young starve in the nests. And all for what? That a party of shooters, sharp and mug hunters may be allowed to disgust all decent people with the name of sportsman and game-protecting association.

I believe the meeting the past summer, near New York, was a financial failure. It was a grand success as far as destruction of the birds they are agreed to protect.

I don't believe your labor will be difficult in this matter. I have no doubt those who were connected with this disgrace are heartily ashamed of it, and will sin no more. Let us use tame birds in limited numbers, if we must have trap-shooting, and but few will find fault.

N. D.

NEW JERSEY GAME AND FISH PROTECTIVE SOCIETY, Plainfield, N. J., Oct. 31.

Editor Forest and Stream:

Your editorial remarks, in issues of FOREST AND STREAM of October 13 and 20, regarding pigeon shooting tournaments of State Game Protective Societies, agree with my opinion of the matter. From what I have seen of such tournaments they are to be condemned as a cruel slaughter of sick birds and exhibitions of poor marksmanship. The money expended in providing "trophies" for such exhibitions would be much more profitably and wisely applied in stocking the State with proper game birds, and in protecting them from the raids of the pot hunter. I hope the time is not far distant when all such tournaments will be discontinued.

—W. L. FORRE, Secretary N. J. G. & F. P. S.

WHAT DOES IT ALL AMOUNT TO?

Editor Forest and Stream:

With all due respect for your superior wisdom and especially for your greater knowledge of the subject, I wish to suggest that a great deal of time and money is being wasted in the agitation of this question of game protection, which I say wasted advisedly, for what is being accomplished by all that is spoken and written on this subject, and how much better is game protected now than it was ten years ago? Perhaps you can inform if I am mistaken; it seems to me that each year the birds are becoming fewer in number, or at all events more difficult to find and secure. Your readers ask for explanations of the scarcity of game in different localities, without receiving any response. Where birds were once abundant they no longer exist.

Let me tell you frankly how I feel on this matter. I should be very glad if our game could be protected and so increased that one could have the opportunity of killing fifteen or twenty birds in a day near his own house. I believe that I would be willing to pledge myself never to shoot in one day more than the number above mentioned. Should I be able to keep my pledge? Of course, at present I think that I should, but suppose that I were coming home in the afternoon with my gun full of birds, and my dog were to stop on a levy of quail would I remember to hold my hand and let them go? I hope so, but I am not sure. I think that I should be more likely to shoot into them "just this once," promising that on another occasion I would stop short of my limit by as many birds as I killed now. The same would be true of many if not most men that shoot. They would be unable to stop until the opportunity for killing was past.

You cannot expect to accomplish any thing in game protection until you have made human nature something different from what it is. The cause of the scarcity of game is over-shooting and until men learn to practice self control in this, as in other matters the birds will become more and more scarce. Of course long before this time shall have come our game will be practically exterminated. The men who will stop when they have a certain number of birds are very few; the men who, if they have an opportunity, will refuse to shoot at a deer or decline to take a trout, out of season, are very few; but the men who will write columns about the folly and wastefulness of killing more than one needs are many and as for those who would reprobate and hold up to scorn any one who may violate the game laws, their name is legion. Ranting about protection and pot-hunters will never save our birds, but it is so much easier to rant than it is to make a little effort to put down law breakers and to control one's own desire to make a large bag that the ranters and writers are in an overwhelming majority. I suppose that there may be a few people who are willing to contribute time and money toward the enforcement of our laws, and who do so, but certainly it does not seem any one from such individuals. Probably if they have done what they can to further the cause and to strengthen the hands of the officers of the law, they have neither time nor inclination to spill ink on the subject.

I can write on this matter without passion, for it is really one which affects me personally very little. I belong to one or two shooting clubs, which own property, efficiently protected, where I shall always be able, so long as I retain my membership, to kill all the birds I want. If I wish to kill large game, I know where to go and get it. I therefore, really do not care particularly, except on general principles, whether good or bad game laws are passed, or whether the laws that are enacted are enforced or not. I trust that I am a sufficiently good citizen to desire to see the laws obeyed, just as in a general way I would like to see all men honest, general purity in politics, civil service reform honestly carried out, or the accomplishment of any movement that it is believed would benefit the race. But as far as my own shooting is concerned the thing does not touch me at all, and I can therefore view with a reasonable degree

of equanimity the killing of deer and birds out of season, and can admire the audacity of those marketmen who not only risk the loss of some of the game which they buy during close time, but even have the delightful impudence to advertise for trapped birds. After such an autumn as we have had such Arctic coldness is indeed welcome.

As I have said, however, the matter does not directly interest me, but it does seem a pity that birds should be so scarce along the Atlantic coast that most people cannot find enough to make it worth while to go out shooting.

Among a body of men which includes so many individuals of education and position as the shooting and fishing class, there must be no small number of brilliant intellects. We may assume that some of these acute minds have given considerable thought to the subject which so nearly concerns them, but if they have done so, it has apparently been without any result—certainly without appreciably increasing the number of our birds or rendering the obtaining of a day's shooting in any of our more thickly settled districts any easier than it used to be.

The innate selfishness of the human mind lies at the root of this matter, and until you can make sportsmen feel the respect for the abstract rights of others which they would have others feel for theirs, your labor is in vain. Not until the millennial day will the golden rule be practiced.

It is now eight years since you began preaching game protection, and I am bound to acknowledge that you have done it in a strong and honest fashion, which, while I do not agree with you, has compelled my admiration. You have, as I happen to know, converted some men who were accustomed to shoot out of season, and have probably endangered the rising generation, to a laudable desire to see laws enforced and birds protected; but, after all, will you be kind enough to tell me what adequate results are there—material results I mean—to show for all that you have said and done? Do not point, I beg, to the numerous game protective associations which have sprung up all over the land. I do not for a moment admit that they as a class can be spoken of with pride, for most of them have degenerated into mere pigeon shooting clubs and exert no influence in favor of the cause which you desire to forward. Can you show me that any real service to the game has been done by all that you have said in the years that have passed?

—SERRIO.

[Yes, we can show a great deal. Our skeptical friend will be partially enlightened on our next issue.]

IS HE A LUNATIC?

SARATOGA, N. Y., Oct. 23.

Editor Forest and Stream:

Will you grant a corner in your valuable columns to the "Universal Deer Protectve Association," of which I am President? The object of this association is the strict enforcement of the game law relative to deer. We would see that the deer laws in every State are carried out to the very letter. We confidently expect to revolutionize the public sentiment on this point, and to make our society a terror to the violators of the deer laws.

With this object in view, which I am sure you and your readers will heartily indorse, we propose to hold an annual buffalo bull shooting tournament. Arrangements have been made to secure as many buffalo bulls as possible on the winter range, and to ship them East in cattle cars in the spring. If the required number of bulls (say a thousand) cannot be procured, or if the percentage of loss in transportation seriously diminishes the supply, we shall have on hand a reserve of Texas steers to fill out the programme. The ferocious brutes will be securely penned and driven, one at a time, into the ring, where each contestant will have sixteen shots at it with a repeating rifle. Should the beasts be too much worn out by their long journey to stand up to be shot at a number of slugs, such as are used in blacksmiths' shops for iron, will be ready to hand to get the game into position. Further detailed conditions of the shoot will be sent to you in the season. The date of the convention will depend wholly upon the buffalo range, and we shall esteem it a favor if your Western correspondents will keep us informed of the movements of that game.

Everything promises well for the inaugural buffalo bull tournament of the "Universal Deer Protective Association," and it is confidently believed by the society that we can then be able to slaughter enough buffalo and Texas steers to convince the public that we are in earnest in our determination to enforce the deer laws.

A. D. HONACK.

DEER IN VERMONT.

WE are indebted to our Vermont correspondent for the following statement of the present Vermont deer law: A party of gentlemen in this county purchased and hunted in the mountains, some three years ago, about twenty deer, with the purpose of trying whether the forests could be restocked. So far as we know they are breeding and thriving. It is not known that they have been in any way molested, and it is known that they have bred and increased in numbers. It would be very unfortunate (for the culprit) and, as we misled as to seasons, should kill one of our deer.—VERDE MONT.

By an act of 1876 deer were protected until Sept. 1, 1880, at all times. By an act of 1878 this law was amended by extending the close time until "the 1st day of November, 1886." The penalty for killing or having in possession a wild deer or part thereof is \$50. This I find by examination of the State laws in the town clerk's office.—AWANOSOOK.

We are also indebted to Fred. E. Smith, Esq., of the Washington County Association.

COOKING BIRD DUCKS—Halifax, N. S., Oct. 23.—May I ask "Wad," in FOREST AND STREAM for 20th inst., why cooks and sea ducks are not eaten "way down East"? I have shot coot and sea ducks, and eaten them, too, and beg to make a few suggestions regarding them preparatory to their being cooked. When I go after ducks I put a sharp little ax and a block of wood in the boat and behind the birds as soon as I get hold of them. The birds are then taken off, and I get wonderfully greatly improves the meat. If I want them baked, I have them soaked in salt and water the night previous and a small lemon or onion put inside, which diminishes the strong taste wonderfully.—JOSEPHUS.

STAGE POWDER.—In a battle scene of the play of "Michael Strogoff" in a New York theatre last week, one of the supernumeraries was wounded in the leg by three wads from a musket. In a Bowery theatre an acrobat turned somersault over two chairs and a table, while in the air shoots off a gun. A great deal of gunpowder is burnt on theatre stages.

POT METAL GUNS.

BROOKLYN, N. Y., Oct. 15.

Editor Forest and Stream:

I write to see if something could not be done to prevent the shooting of those miserable and dangerous weapons known as "pot metal" guns. These guns are not only dangerous, on account of their liability to burst at the first shot, but what is still more alarming is that they are for sale by nearly every gunsmith in Brooklyn, where they can be bought for a dollar or two.

Last week a young lad named Johnson, living in my vicinity, bought one of these guns for a dollar, and went to shooting. At the first discharge of the gun the barrel burst just in front of the trigger-guard, where the lad placed his hand to steady the piece, blowing off his thumb and first three fingers, and so shockingly mauling his hand that it was necessary to amputate it.

Accidents like these are continually happening all over the length and breadth of this great land, but still these guns are offered for sale.

It is my opinion that dealers should be held as much responsible in keeping and selling these dangerous weapons as a druggist would be in knowingly and willfully mixing a poison in a medical recipe. HARRY HUNTER.

FARMERS AND SPORTSMEN.

NEW YORK, Oct. 28, 1881.

Editor Forest and Stream:

The other day, while out shooting—no, not shooting, but looking in vain for woodcock or snipe—I met a farmer who, at first, was inclined to order me off in very short order, but who thawed out after a while, unburdened his mind to me and poured out his wrongs in very much the following words. Said he: "We don't mind you fellows shooting so much, if you didn't do any harm; but some drive up, take down the fences or open gates and leave them so, letting the cattle out, and if we say anything, abuse and cuss us up hill and down valley. Why, while my corn was standing last summer, three fers drove up, opened their horns and drove right into the corn, and when I ordered them out, called me a blank blunk blunk blank blank. Then," continued he, "the rabbit-hunters come up here long before the law is up, kill everything, quail and all, and tear down our fences, and raise the devil every way."

I tried to explain to him that sportsmen did not do such things, and that it was just that class of paching loafers that caused all the trouble, not only killing off the game out of season, but causing continued ill-feeling among the farmers toward every one with a dog or gun. The true sportsman does not act like a hog when out, tearing down and destroying other people's property. They do more to increase and protect game than any other class. The farmers should combine with them to put down those who disregard the game laws and the rights of the landowners. I believe that a combination of farmers and sportsmen, such as you have advised, will be the only way in which we can restore the shooting; that, with the prevention of spring and summer shooting, may give us sport again. W. HOLBERTON.

WILD TURKEY CALLS.

THE sport of wild turkey hunting is enjoyed by no set of men more than by the hunters in and around Columbus, Mississippi. The success attending their annual camp turkey hunt attests their skill in this branch of sport, and the callers used by them as a general thing differ but little. The caller used by most of us is made as follows: Take a piece of dog wood or maple, say six inches long by one and a half inches in diameter, and with a small-sized bit bore a hole through it lengthwise, then with a tapering or hollow bit ream it out to the size of an inch and a quarter tapering to three eighths in. At the other end insert a piece made either of wood, or cane, according to fancy, for a mouth-piece. The tone of the caller depends largely on the size of the mouth-piece, and great care should be bestowed on this part of the caller. When the turkey note is perfected to suit the individual, the shape and finish can be arranged. A caller adapted to one hunter cannot be used by another, unless he is an adept in the business. Some hunters yelp by placing the caller in the centre of their mouth, while others yelp from the side. There are some notes which cannot be made from the side of the mouth, hence the importance of learning to yelp from the centre of the mouth.

In hunting, different notes will have to be made according to the game which you are in pursuit of. For instance, if a flock of turkeys were flushed, and it were necessary to kill the old hen, you would yelp like a young turkey, if a young one was desired, you would imitate the hen. And in pursuit of the gander and most noble of all birds, the gobbler, you would not yelp like either of them, but you would bring to your aid patience, "turkey sense," and all the cunning possible to capture him. If "Ke-uk" will read an article written by Dr. Rawlings Young, of Corinth, Miss., on hunting the gobbler, he will get an insight of the troubles which beset even the best of our hunters. LOWNDERS.

DAKOTA GAME.

YANKTON, Dakota, Oct. 26th.

WE are just in the time of our best water-fowl shooting. Geese and ducks until you cannot rest. I was riding out with some ladies a few days since, with my gun along to keep off the wolves and buffaloes, which many Eastern people suppose endanger life in this vicinity and when within one hundred yards of the city limits, I saw a flock of geese coming toward us. I sprang out, while the carriage drove on, and shot one from the road. Within a half mile further on, I saw a flock of the "snowy geese" (the other was a Canada goose) in a field. I crept up and, when within about one hundred yards, some one fired into the flock and killed five. As they rose, they came within about 80 yards, so that I killed one with a wire cartridge. Thus I got two fine young geese within a half hour. Large numbers of geese and mallard ducks are not every day.

In spite of the snow and floods of last winter and spring, the prairie chickens were never more plentiful than this fall, and I am told that the quail are thicker than ever. This is my information from gentlemen who know whereof they speak. I am surprised, for I fully expected that the flooded bottoms of the spring had about finished the few that the cold and snow of last winter had left alive. I never saw a country where so many coveys of quails could be found in a day as

we can along the bottoms of the Missouri River. These cottonwoods are covered near the river with dense growths of woodcock, willow and brush, in which quail find a splendid cover.

A large elk, weighing 475 lbs. dressed, was shot about six weeks since within 20 miles of this city, right in the midst of a thickly settled farming country, and shot too by a Russian, with a shot-gun. I had a steak of him—strong as bull beef. But what could have brought this fellow away down here? I. E. WEST.

SPRINGFIELD WOODCOCK SHOOTING.—After I left Springfield, Mass., I learned from the sportsmen of that city that the woodcock—I refer to the flight birds—made their appearance the very day following my departure. The ground Dr. Williams, Mr. Harrington and your correspondent worked out could not have been better for migrating birds to stop and tarry in. As I wrote you, I bagged two. The day after I left the same ground was hunted, and many new woodcocks were found and killed by Mr. Harrington. Oh, that I had waited! I am now almost a pointer man. Talk about the short-haired dog being unfit to work in a rough and rugged country, or that he is knocked up by briary thickets. Well, it may all be so, but the pointers of Springfield do not come under that class; and then they are so pronounced in their points. No "inching in," but firm as a boulder when the scent is satisfactory.—HOMO.

QUAIL DESTROYING SCOUTS.—San Francisco, Cal., Oct. 21.—Editor Forest and Stream: A curious state of affairs is revealed by extracts from a letter recently received by Mr. J. P. Spomer, Secretary of the State Sportsmen's Association, from Mr. G. F. Merriam, of Apex, San Diego county, this State. The writer says: "The game law, as it now stands on the statute, is one which cannot be obeyed in this end of the State without involving nearly a total destruction of crops. The quails abound here in vast flocks, as many probably as 5,000 at a time being seen together. They begin on our wheat and other grain as soon as it shoots up, and keep at it until it is put in the sacks. Very few of us pass a year without paying a tax to them of from five to twenty acres. They also destroy our garden vegetables. I have ten acres of Muscat grapes, which they took about all. We must trap or poison them, for shooting is of no avail. The law against shooting must remain a dead letter here. My next neighbor lost twenty-one acres of grape-vines by them. They ate every leaf and nearly all the vines more than a few weeks ago. Another has had to stand guard over his vineyard every night for four months, shooting every little while to scare them. Last year they utterly destroyed four acres of grape-vines for me. Now, what is to be done? We live so far away that none of your sportsmen will come here to clear out these nuisances. As it is now, we are obliged to use poison to get rid of the quail, which might as well be caught and sent fresh to market, to be eaten by men instead of buzzards and vultures. As the law now stands it works great injustice upon every farmer in this end of the State, and ought to be changed. Is your association willing to make a change, and, if so, what?" It is probable that the subject will come up for consideration at the next meeting of the society. GOLDEN GATE.

LOADING FOR DEER.—Editor Forest and Stream:

I have killed many deer with a muzzle-loading rifle, and I have found that by loading with two bullets, prepared as shown in the cut, I could kill the game much quicker than in any other way. With these balls I never had a deer run over thirty yards, and I have dropped several in their tracks. I put a powder charge in the muzzle, then a lead bullet with the neck trimmed flat, and a second bullet with the neck trimmed close; jar the gun to settle the powder and put the ball down on to the powder. Next I put in a ball neck down. If the balls are trimmed right they will not spread over two inches in fifty yards. A 10-lbs., 50-cal. gun, loaded with one hundred grains of powder and two balls would be very destructive under seventy-five yards. It is surprising how a deer will go to grass with two balls shot through him, say one inch and a half apart.—JOHN A. GAYLORD.

SULLIVAN COUNTY GAME.—Eldred, Oct. 31.—Editor Forest and Stream: I notice in FOREST AND STREAM of Oct. 29, that another gentleman has been sold by coming to Eldred. Now, I have no recollection of any man coming to my place by that name, but some have come who had bad luck. A party hunted deer last week here, and did not even get a shot, but I started several deer every day, and the last forenoon started four, and while twenty minutes' walk of my house. The fact is that they are so thick here that Dan Hallock caught one by the tail and killed it, and Dr. John Butler, of 102 East Twenty-second street, New York city, was an eye-witness to the affair. I will guarantee to start a deer any time next month (November) in less than two hours out from my house, or else I will pay all the expenses of any party coming here and staying one week. As for small game, William Hammond, of Thirtieth street, N. Y., came here and another gentleman from New York, and in the first two days bagged a half bushel of ducks, partridges, quail, woodcock and yellow-leg snipe. Saturday Mr. Hammond went home. He had one pair of black ducks, several other ducks, four yellow-leg snipe, four partridges and a lot of squirrels; all shot in two days. The man who can't find partridges, woodcock and duck here either is not much of a hunter or he gets the wrong kind of a guide. Partridges are not as plentiful as they were five years ago, but a man who can travel ten or twelve miles per day can get a ten or twelve birds. Deer are very plenty, more plentiful than for the last five years. I do not know this from one or two weeks' hunting, but from thirty years' experience in Pike and Sullivan counties. I have given gentlemen forty shots at partridges in one day, and only a few years ago. I believe I could raise forty birds to-morrow. Gentlemen who come to Eldred through my advertising should call and see me. Not all have luck. My dogs are not trained to catch birds.—J. M. BRADLEY.

SENSIBLE PROVIDENCE SPORTSMEN.—Providence, R. I., Oct. 26.—Editor Forest and Stream: Much has been said about the preservation of the quail in the columns of your journal. Sound advice has ever been given by correspondents, but I fear in the main it has not been followed. I must illustrate, however, what was done by a few sportsmen of this city and the success that resulted from their efforts. Last winter, we all know, was a very fatal one to quail, and you remember those interested in field sports were solicited

to have a care in feeding the half starved birds until the ground became bare and they were able to exert their own livelihood. Here in Providence, R. I., a few gentlemen—I say few, as but two or three interested themselves in the matter—furnished the editors of one of the daily papers that had a large country circulation one of the articles on the preservation of game that appeared in FOREST AND STREAM, and from this article another was penned and published in the daily journal. In it farmers were asked to take a part in saving what birds remained alive, and money was sent to several to purchase feed. Thus many became interested, and the consequence is that quite a respectable showing of coveys are reported this autumn, and the return this sport-makable few now have is a special indication from the sportsmen to enjoy good shooting. This is an illustration of what may be done all over the Middle and Eastern States during a winter of snows and sleet. The expense will be but trifling. Let us all try it next time.—HOMO.

ANOTHER OLD POWDER HORN.—Editor Forest and Stream: You last issue contains a paragraph relating to a powder horn made by Daniel Boone, which recalls to my mind an anecdote of somewhat similar import. I have a connection who lived in Maysville, Ky., a few years ago, whose great grandfather, Major Bowman, was a contemporary of Boone's, and who was an Indian fighter and bear-hunter in the pioneer days of Kentucky. This descendant of Major Bowman possessed an ancient powder horn, which had been owned and used by his ancestor, and had been handed down as an heirloom. During the late war it was "lost, strayed or stolen," but was fortunately recovered a few years after the close of the war. This gentleman was at that time editing a newspaper in Maysville, and as the powder horn had become notorious among his acquaintances he announced its recovery in a local paragraph, stating further that if any were curious to see it, they might do so by calling at his sanctum. He had at that time two very precocious boys, one five and the other seven years of age. The elder one was in the habit of casting his eye over the local paragraphs of the paper, and had no idea that one of his "great grandfather's powder horns." While playing about in the office, the younger boy found in some cranny a large jaw tooth of a horse, or some other animal, and asked his brother what it was. The elder boy looked at it gravely, and jerking his thumb over his shoulder toward his father, who sat at his desk, replied, "I guess it's his great grandfather's tooth."—MAROONER.

WOODVILLE DUCK SHOOTING.—Mottville, N. Y., Oct. 28.—

The two communications in your columns regarding "Game at Eldred, N. Y.," reminds me of my experience at another hunting ground—Woodville, N. Y. Last year I heard great stories of duck and snipe shooting at the marshes at that place, and went down last November. Stayed five days, got seven ducks, ten snipe and one partridge—about what I expected for one day's hunting. But the weather was too fine for ducks and it was too late for snipe, and my seeming failure was readily excused. Last April I watched for good duck weather, and, as it was near the first of May, dare not wait any longer, so I loaded my ammunition train and started again for Woodville. Stayed four days; result, five ducks; weather was too nice," they said. No wind to drive the ducks off the lake. Snipe began to arrive the day I went home. Well, my faith in Woodville as a good shooting ground was not entirely gone, and the weather signs being favorable, I went there on the 12th of the present month. Everything was lovely and the ducks flew low, and by Saturday, the 15th, I had shot thirty-four ducks, mostly red-heads, about forty snipe and plover and one partridge, and it was not first-class duck weather, either. So let our Eldred hunters take courage and try again. My experience in this matter is like the colored preacher's white brudder, "very ornatin." I have this much to say for Woodville—even if you get no game you will have a good time stopping at "Woods," a good, home-like place, free from drunkenness and confusion (usually found at such places), a good table, kind and obliging people about you. Boats are provided with decoys and fishing tackle, and "George" or "Uncle Steve" 't show you around. It is your own fault if you don't have a good time. NOVICE.

TRAPPING QUAIL IN VIRGINIA.—In your issue of October 13 "Frank" wants to know where to come to in Virginia to get quail. In your issue of October 20 "W. O. W." responds by saying: "It is against law to trap quail in this State at any time." I am sorry to say that "W. O. W." is mistaken. It is unlawful to trap wild turkeys at any time; but under the law as it now stands, contained in the acts of the General Assembly of April 2, 1879, and March 9, 1880, ("parties of quail") no one is censured by means of laws or traps of any kind between the fifteenth of October and the first of January of each year; except that in the fifty counties enumerated in the act of March 9, 1880, the open season extends from the first of November to the first of February of each year. So that "Frank" may get quail anywhere in Virginia from the first of November to the first of January. M.

BLACK HAWK CLUB.—Whitewater, Wis.—At the annual meeting of the Black Hawk Club of Lake Koshkonong, Wisconsin, October 21, 1881, the following officers were elected for the ensuing year: George W. Esterly, President, Whitewater, Wis.; George W. Peck, Vice President, Milwaukee, Wis.; W. S. Dalliba, Secretary, Chicago, Ill.; J. A. Partridge, Treasurer, Whitewater, Wis. This association is now in the running order, having a club house and other buildings for the comfort and pleasure of its members, located on Black Hawk Island, where canoe parties are invited to the furnished houses, owing to the fact that wild celery grows all over this lake luxuriantly, the lake being four miles wide and about nine miles long.

SHINNECOCK BAY.—Good Ground, L. I., October 31.—There are several large bodies of duck in the Bay, but so far have not afforded the usual shooting, owing to the unusually warm weather. Birds feed nights during warm and calm days, and are not so plentiful as they were immediately after the weather comes cooler. The three days' law is repealed and we can now shoot every day. Some geese have come into the bay, but we do not look for a flight until after November 8, when we shall have both brant and geese. We have had bay snipe up to this time fairly plenty, and at times in October very plenty. WILLIAM N. LANE.

HOW IT MAY BE DONE.—New York City, Oct. 11.—Editor Forest and Stream: The "5 Pits street" is selling quails as "termites," "high holders" on the bill of fare. If I mistake not, these birds come under the heading

of "woodpeckers," and are protected by the game laws. Cannot the ball be started rolling in some way against these restaurants? The majority of them in this city are continually infringing upon the game laws, and openly at that.—W. H. SNOW.

[The New York city society will be glad to have you give them any information about violation of the game laws. They employ detectives, and have regular counsel retained for the prosecution of such cases. Communicate with them.]

WRETHMINSTER, Oct. 23.—The great squirrel hunt, an annual event in this town, has come off and gone. The hunters were thirteen on a side. The collection which they brought in was a fine one. The game was of various descriptions all counting in the grand total. I. B. Howe's side counted 5,600, while E. B. Lyude's side, his opponent, was 4,600. Upon the return to the village the losing side paid for the oyster supper at Puffers' Hotel. The event was a pleasant one to all, squirrels, perhaps, excepted.

LIVE GROUSE WANTED.—A number of pinnated grouse are wanted for shipment to Idaho Territory, where they are to be turned out. Can any of our readers inform us where fifty or a hundred of the birds can be obtained and what their probable cost would be?

NEW JERSEY GAME.—New Hampden, Hunterdon Co., N. J., Nov. 1.—Quail in abundance—at least seventy per cent. of the usual quantity. Rabbits scarce. Wild ducks none. Pheasants and grouse very scarce.—G. C. A.

THE LOWELL BENCH SHOW.—As will be seen by a letter, published elsewhere, the managers of the Lowell bench show have enlarged their premium list, and will offer prizes to all recognized breeds. We are pleased to announce this, and trust that the enterprize shown by their action will meet its reward in a large entry and satisfactory numbers of visitors.

THE REASON WHY.—A respected correspondent is informed that the reason why we "do not reply to the low slurs on the FOREST AND STREAM made by certain journals" is that we have something better to do. We cannot stop our express train to silence the snarling of curs which run out to bark at us as we pass.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

FRESH WATER.

- Black Bass, *Micropterus salmoides* and *M. pallidus*.
- Brook Trout, *Salvelinus fontinalis*.
- Masagoone, *Esox nubilus*.
- Pickereel, *Rana reticulata*.
- Pike of Lake, *Esox lucius*.
- Pike-perch (wall-eyed pike) *Silozotilus americanus*, *S. priscum*, etc.

SALT WATER.

- Sea Bass, *Centropristis striata*.
- Striped Bass or Rockfish, *Morone chalcidus*.
- White Perch, *Morone americana*.
- Bluefish or Taylor, *Pomatomus saltatrix*.
- Scup or Porgie, *Stenotomus argyrops*.
- Follock, *Polydora carolinensis*.
- Tautog or Blackfish, *Tautoga onitis*.
- Weakfish or Squeteague, *Cynoscion regalis*.
- Chub or Bass, Spot or Redfish, *Sciaenops ocellatus*.

There are, however, many grades of fishers who, from using the hook, come under a strict definition of the term "angler," whom many of the noisy fellow who, each squirrel that he shoots at every bird that passes his boat, or each angler that chatters at him; or the obnoxious profane fellow whose impudence is a tangle in his line, or a snag that his hook has fouled, or the musketoon, or in fact any of the minor annoyances of fishing, finds vent in a continued string of blaspheming which disturbs the current of your thoughts, and the enjoyment of silence. Almost anything is preferable to a noisy, whooping man in the woods to one who enjoys the ripple of the stream, the sighing of the winds through the treetops, and the voices of nature, both animate and inanimate.—FRED MATHER.

TROLLING ON LAKE SUPERIOR.

OF the many kinds of field, forest and water sports in which one can participate in the Lake Superior Region, there are none which afford more enjoyment and interest than trolling for lake trout in the waters of the "big lake." During the months of September and October this fish comes in in immense schools to the islands and rocks adjacent to the main land. Here they remain several weeks, at least while the quincunial lasts; and here they may be caught in large numbers. While they are not generally captured with trolls by fishermen for exportation and trade, as nets are a saving of time and labor and are used principally for that purpose, still many resort to the line and spoon for sport and secure enough for family use during the approaching months of winter.

The writer had the pleasure not long since of accompanying a party of old sportsmen to the islands off Grand Marais and Agate Harbor, six miles in distance from the village of Eagle Harbor. Leaving the last-named place at a seasonable hour in the morning we were in due time at Silver Islet, and putting on shore everything we had brought with us in the shape of eatables and drinkables, pushed off, and, with appropriate cereanotes, inaugurated the business of the day. The Silver Islet above named must not be mistaken for Silver Islet on the north shore of Lake Superior, which contains the famed silver mine, as the former lies near the south shore of the lake off Keweenaw peninsula. The nomenclature of the early navigators and explorers of this lake and country was evidently very limited, as the same name is often given to several different objects. There is quite a number of Silver Islets, Grand Marais, Montclair rivers, Agate Harbors and Carp rivers, and unless one has lived in this region or studied carefully its geography, he is apt to be confused in ascertaining the exact locality of a place or thing.

We were provided with two boats, in each of which were two of our party and a man who rowed. Our lines were run out to the length of seventy-five or eighty feet, with two

strong hooks on each line and a spoon which would twirl with ease. Everything was propitious. A brisk breeze whipped the surface into short, broken breakers. With a light sea, the fishermen tell us, the best results are obtained in trolling, and my own experience coincides with their judgment. The main cause of apprehension and solititude, however, was the suddenness in the direction of the wind, which not infrequently takes place, and which, if sailors are not particularly vigilant, are apt to drift them from shore and to the not over-merciful and tender guardianship of this capricious lake. No misfortune of this kind, I am happy to say, afflicted us, and only an indisposition or reluctance on the part of the fish to take the deceptive lure could prevent us from being successful in our efforts. The day was somewhat cloudy, which was also favorable conditionally, and the air, although neither "eager nor 'nipping'" was bracing and sufficient to keep down the temperature of the blood during the animating exercise of catching and drawing in the trout.

Our course lay among and around the islets and rocks, which raised their craggy heads above the water-line, and also in the neighborhood of the many reefs and shoals which abounded. We were not many rods from the east end of Silver Islet when I felt a jerk on my line and, owing to the indifferent manner in which I held it in my hand, it was nearly wrenched from me. I certainly for a moment whether the mischief had been done by a fish or my hook had struck a rock I waited an instant, when all doubt was dispelled by two short, quick jerks upon the line. Immediately I arose from my seat and drew the trout rapidly toward me. As soon as he realized that he was captured he struggled vigorously for his liberty. At times he would dive fathoms deep apparently; again he would slacken the line and then with almost lightning rapidity, dart at right angles to the direction in which I was endeavoring to lead him. Once or twice he became apparently frightened and he pitched himself to be drawn along without resistance, his head visible above the water, and his large red mouth distended to its utmost capacity, but as I drew him near the boat he determined again to strike for freedom, and darted and struggled with all the energy and spirit he possessed. His plucky exertions of physical strength, however, were futile, and he soon lay secure in the bottom of the boat.

The above experience was repeated time and time again, and at noon when we entered the cove of the island to lunch, I secured as many as twenty fine trout. The others had had equally as good luck and it would have been amusing for one to observe how elated we were, and to hear us, as we sat eating, reciting the many and culminating incidents of the morning.

In rowing among the islets and over the reefs, we could not but mark the extreme transparency of the water, wherever the waves were not rippled by the breezy objects at a great depth were plainly visible. A bright tin-cup which was inadvertently dropped, could be seen as much, we judged, as twelve fathoms from the surface. When the lake is at a dead calm, which sometimes occurs, a boat appears suspended almost in mid-air. Not only is it very clear, but owing to its frigorific coldness and purity, it affords the finest drinking water in the world. Away from the influence of the shore and about ten or twelve feet from the surface, the temperature is only seven or eight degrees above the freezing point in the month of August. The great length of the winters and the formation of immense fields of ice refrigerate to such a degree the basins of water that the short season of warm weather in summer is insufficient to raise the temperature enough to admit of comfortable bathing.

We fished an hour or two in the afternoon and then rowed to Eagle Harbor. On our way we veered from our course slightly to pass under "the arch." This rock is isolated a half mile or so from any other object, and is something of a natural curiosity. It is ten feet or more in height with a passage-way of five or six feet so that a row-boat can easily go through it. It is quite a resort for gulls and as we approached they appeared to resent our encroachment upon their reservation by vigorously flapping their wings and screaming hideously.

Although we had taken during the day, with trolls only, about one hundred and fifty trout, some of them would weigh as much as twenty pounds, while none would go less than four pounds. They averaged about ten pounds each. A catch, therefore, of 1,500 pounds of *Salmo amethystus*, by a party of four in the space of four hours cannot be considered altogether incredible. These fish, when properly dressed and cooked make a delicious eating, and the incident along the shore often salt a barrel of the same for use during the long and dreary winter. Boiled salt lake trout is not by any means unpalatable as many a Lake Superioric can testify.

Pontiac, Mich.

A MODEL WHALE-BOAT.

ONE of the most interesting and valuable exhibits recently added to the fisheries collection of the National Museum is a full-sized American whale boat, complete in all its details, embracing all the numerous articles of outfit which are known to the whaler as boat gear and all the instruments of capture and killing used by the whaler. As well as a bomb gun, from which the explosive lance is discharged. This boat, with its entire outfit, is the gift of Messrs J. H. Bartlett & Sons, of New Bedford, Mass. The boat, as it now lies in the museum building, is fully equipped and ready to "go on to a whale." A whaleman that could not kill a fish with such an outfit had better join the "deck wallopers." The boat is of that style technically known as a twenty-eight foot boat, and from the markings, "L. B.," on the iron and other articles of boat-gear, it has evidently seen active service as a larboard boat in a whaling vessel, while the instruments themselves show every indication of having been used in killing whales. This boat, as is usual in this type, is sharp at both ends, the most remarkable feature being the acuteness of the angle of the stern, which is narrower than the lead, in order that the boat may be "sterned" when the whale has been struck, to avoid the lashing of the ponderous flukes of the infuriated or frightened animal. The most prominent instruments are the harpoons or irons, which are employed solely to fasten the boat to the whale when the hand lances are to be used. The first and second irons are "strapp'd" and in their proper positions in the boat-crotch. Notwithstanding the pot has hung,

Like the lightning-lead. View our harpoons of steel.

these instruments are not made of steel, but of the toughest and most pliable of soft iron, and can be bent into the most fantastic curves to gadden the boat. The hand lances may be found resting in the glance hooks, ready to be rasped by

the officer of the boat when he "works upon" a whale. The bomb gun, enveloped in its canvas covering on the starboard side, having inaugurated a more genteel and sportsmanlike method of killing whales, is ready to send a whizzing bomb lance on its aerial flight to a vital spot in the whale. The whale lines or tow lines are coiled in their respective tubs, which are known as the large and small tubs, the former being round and the latter of the improved style oval. The compass, with which a lost boat may find its bearings, slips under the cuddy; the head and stem knives for cutting a foul line are in their sheaths; the drag, or dring, to retard the motions of a wounded adult whale through the water, or it may be attached to a baby-whale, in which case the dam, with maternal instinct for the safety of her young, remaining by its side, vainly trying to assist in its escape, may be killed; the breaker, holding five gallons of fresh water, and the lantern-keg, slung over the cuddy, containing candles, matches, a lantern, hand bread pipes and tobacco for the crew; the piggion for hauling the boat; the bucket for wetting a hot line; the hatchet for cutting iron poles from a deceased whale, and the waif for locating its whereabouts. The mast, sails, paddles, oars and steering oar brace occupy their appropriate places, while the rudder is striced up as is customary when a whale has been struck, to prevent the fouling of the line. The logghead, around which the line swiftly glides, the chock through which the line runs, smoking, out in the wake of the running or soundings. The account is very clear, against which the harpooner braces himself when striking a whale, and the lion's tongue, so called by the Nantucket whaler, which braces the logghead and stern sheets, are to be found only in a whaleboat.

A CRUISE ON INDIAN RIVER.

NEW YORK, Oct. 31.

Editor Forest and Stream:
You printed last week my letter giving glimpses at the fishing and shooting in Minnesota. Below is a diary, received by me since from a nephew, who describes his recent trip down Indian River from Theresa, Jefferson County, N. Y., in a boat which he made himself. The account is interesting very much, as showing that our youngsters, with proper inclinations, need not go out of the State to find delightful routes for pleasant excursions, where plenty of game is to be had for the seeking. Indian River rises in the northernmost corner of Lewis County, and flows northeast into Black Lake, which outlets at Ogdensburg into the Oswegatchie River, an affluent of the St. Lawrence. It has a fall of about seventy-five feet at Theresa, and a sluggish current thence eighteen miles to Ropie Rapids. It was in this stretch I made my debut years ago in quest of *Bass nobiliss*, fitly named, for a nobler fish than in the maskanonge, in both game and table qualities, is not to be found in our inland waters. The first one that struck the rude spoon (of my own making) at the end of my 100 foot stern trolling line, elicited the "Hold on, Ben, I'm hitched" which my comrade, Dr. James Davison, felt me with for many a year afterward. Imagine my surprise to see the captive, when halfway to the boat, pop straight out of the water about two-thirds his length, stand on his tail and shake his head with great violence to get rid of the hook. This is a fact, although, for a fish story, not up to the mark of Mr. Bemant's statement in your columns that "it is not unusual for this monarch of the streams, when trying to free himself from a hook, to leap ten or fifteen feet above the water and shake his head like a mad bull."

The boys may be proud of their catch of seven maskanonge. A. H. THOMPSON.

DIARY OF A TRIP DOWN INDIAN RIVER AND THROUGH BLACK LAKE.

W. A. Fisher and myself started for a trip down Indian River Friday, September 9. We left Theresa at 7 A. M., with a slight breeze, enabling us to sail down to False Outlet. Thence we rode to Ropie Rapids, reaching them at 2:30 P. M. Had some trouble in running the rapids on account of low water, but passed over all right and made ready for our first carry—no trouble but a little head ache. At five made our carry at Ropie, and went on into Black Lake at 6:30. Until we had done this I had not been and had never forgotten the sport we had that day. We made Tea Island our camping ground, and soon had a tent pitched, a good fire burning and supper cooking. You can imagine our appetites and enjoyment of a night's rest on the boughs after such a day's work. We took three maskanonge and one bass on our way down.

Saturday, 10th.—Went out to hunt ruffed grouse after breakfast. A stray hungry dog came to us, and proved a good length standing. Got back to camp at three P. M. with three grouse, and had a royal supper of fish and fowl. While we sat in the open air after the meal a flock of ducks settled down in a bay across from our camp. We took after them and got two.

Monday, 12th.—Had an early breakfast, broke camp and started for the foot of the lake with a slight wind. Passed Edwardsville, a small place with two hotels and one store, at noon, and reached our destination, twenty-eight miles from Tea Island, at 4:30, killing three bass and three wood-ducks on the way. Pitched tent, and got supper before dark.

Tuesday, 13th.—Started at 9 for Henvelton, on the Oswegatchie River, five miles from camp, where we got a supply of provisions. We rowed back in an hour and a half, taking in out of the wet one pike.

Wednesday, 14th.—Went out hunting, and although it was a very hot day and the ground new to both we returned to camp at 5:30 P. M. with thirteen gray squirrels and one grouse.

Thursday, 15th.—Hunted most of the day, bringing in at 6 P. M. only four grouse.

Friday, 16th.—Went to Ogdensburg, seven miles from camp, on the St. Lawrence River. It is forty miles below Alexandria Bay, which is only twelve miles from Theresa, our point of departure. We rowed to Eel Weir Rapids, and walked the rest of the way. We could easily have carried around the rapids, rowed to Ogdensburg, sailed up the St. Lawrence to the bay and had our boat wheeled to Theresa. But we preferred to turn through the lakes and rivers.

Saturday, 17th.—Made a trip to Henvelton, catching two pike and three pickerel.

Monday, 19th.—Broke camp and started up the lake with a strong north wind which fell at noon, and we rested until 4 P. M. when a south wind sprung up enabling us to tack up to Tea Island.

Tuesday, 20th.—Started out early for a call on another camping party, and on our return found two men from Theresa waiting for us, as the dog would not let them land on the island—good dog that.

Wednesday, 21st.—Devoted the day to fishing and hunting, and bagged three bass, six pickerel, five squirrels and three grouse.

Thursday, 22d.—A severe thunder storm and high wind kept us in camp all day. The rain was needed as fires were raging all around us.

Friday, 23d.—Made an excursion to Pleasant Lake, three miles from Black Lake, into which its outlet flows. Shot six ducks and two squirrels. It rained in the afternoon.

Saturday, 24th.—Still raining, but we packed, and started up Indian River, reaching Miscalagoe Lake before noon, and camped there; bagging on the way four squirrels, eight ducks, ten pickerel and four muskanoon.

Sunday, 25th.—Rowed up the river to Red Lake, where we staid all night.

Monday, 26th.—Made an early start for home, breakfasted at Stony Point, and reached Theresa at 11:30 A. M., killing a couple of squirrels on the way. The whole trip of eighteen miles cost us \$10.00. Our score was seven muskanoon, nineteen pickerel, three pike, seven bass, eleven ruffed grouse, nineteen ducks and twenty-six squirrels—ninety-two head in all.

G. A. WALDRAT.

Theresa, N. Y., Oct. 23, 1881.

ROWING IN A CIRCLE.

AN EPISODE OF THE BIG TIME.

WE had gathered around the stove in the old boat house after a few hours of fishing, and under the influence of a well-brewed rum punch, were discussing the events of the day.

"Never taste this punch," said Ford, "without being reminded of a curious experience which happened to a friend of mine on this very stream, not many months since. If you'd like to hear the story, I'll tell it to you."

"We all, of course, assented."

"It was in October, about the middle of the month, and a first-rate day for bass. I started up the creek in my big boat with Jack Thaw and Charlie Titus, Ned and Herb Titus having gone on ahead in the little skiff. Well, we fished awhile about the old wharf just up above Eastown, and not far from the Buck pond, where I've taken many a fine pike and yellow perch, as late as the last week in November. We did pretty well at the wharf, Charlie Titus hooking a couple of bass back of fair size, and the rest of us a sprinkling of yellow perch. It was getting toward noon, however, and the tide was running out like a mill race, and coming pretty well up toward the flood. Jack Thaw proposed that we should go up above the old canal boat that drifted against the bank last spring, you recollect, and take some lunch before we started to fish on the turn of the tide. Of course, none of us were very loath to do that, for we knew that Jack had with him some bottles of punch mixture, brewed by himself, and that it was sure to be forthcoming as soon as lunch was spread. We pulled on up-stream pretty lively and made for an old pier-head above the stranded boat which was nice and grassy on top, with a half-dozen maples growing about thirty feet back from the water, just as handy and cosy a place for dinner as you'll find anywhere.

"We hardly got to the shore before we were hailed by a boat coming from the opposite direction, containing one man whom we did not recognize at first, as his back was toward us, and he was bending down, pulling in our direction with all his might and main. As he neared us, we saw that it was Rod Lamont. He pulled alongside and got out and joined us. I thought he looked a little fished when he landed, and he began to talk pretty freely, but I attributed this to the moment to the fact that we had not met for some time, as he'd passed several mouths in Europe since we'd last fished together."

"We had a capital spread. I opened some bottles of that Egg Harbor claret, the Martha and the other kind, and Jack Thaw mixed a punch that beat anything of the kind I ever saw him get up. Besides this, we had lots of bread and butter, boxes of sardines, shrimps and I don't know what all. Rod took several glasses of wine and closed in pretty lively on the punch, so that, by the time we'd got through and were ready to resume fishing, he didn't seem to care whether he fished or not. I laughed a good deal to see how he picked up the punch bowl and carried it over to his boat, putting it down on the bottom right in front of where he sat to row. Of course by that time the punch wasn't nearly so strong as it had been, because the ice in it had melted considerably and toned it down; but still there was plenty of strength left in it, and a good deal more material than I'd like to absorb, even if I hadn't taken anything beforehand."

"Well, we were all off, Rod in his boat and the rest of us as we had been in the morning. Pretty soon we found a place to pull in a little from the current, and threw in our lines where the water backed in from the creek and out of the reach of the strong tide. Our boat fished on in this way for about an hour, moving from side to side of the creek as the fish got to biting slow, and we supposed that Rod had pulled alongside the other boat and that they all were fishing together. But as we rounded a point we saw Herb and Ned Titus in their skiff and Rod about a hundred yards off by himself. He wasn't fishing, that was certain, for we could see him rowing to and fro along a distance of about fifteen feet, apparently trying to get into an old narrow channel that connected this part of the creek with that further toward the mouth and made a short cut down stream. If you noticed this morning, when you get about a mile or so above here the main stream makes a wide circuit of at least a mile and comes back to the point where we had been fishing, where the head commences. Just across this strip runs the channel that I spoke of, and it's generally pretty full of water, especially on a rising tide. As I say, we were wondering what Rod was doing, rowing up and down, now pushing his boat into the channel and then backing out again. Every now and then, however, I noticed that he'd stop rowing, and we could see his hand go up to his mouth, so that we were pretty well satisfied that he was getting outside of the balance of the punch. We were interested in fishing, and didn't pay particular attention to his antics, until finally we saw him rowing right through the channel, and supposed that he'd concluded to go on to the boathouse and wait for us there. Where we were we could only see for about half the distance through, as after that his boat was hidden by the reeds."

"We fished on for about half an hour after he left, and then put up tackle and started for home, Ned and Herb going ahead and we following slowly after. We rowed through the channel against a strong tide, and came into the main stream without seeing anything of Rod. We talked on pretty

slowly, as the current was unusually swift and the boats not very light.

"We were a little surprised not to have overtaken Rod on the way down, and this was somewhat increased when we passed the place where he'd hired his boat to find no indication that he had been there since morning. We then, of course, took it for granted that he'd gone on to the boathouse, and pushed ahead. When we got there Dickson told us that he'd seen nothing of either Rod or the boat, and added that every likely Rod was off his balance, as he had taken a pretty stiff glass of frog at the boathouse before starting to join us up-stream. Here was a quandary, and for some time we couldn't make up our minds what course to pursue. Inquiry at the tavern across the creek satisfied us that Rod must be still somewhere up-stream, and the only theory to account for his non-appearance was suggested by Charlie Titus, who expressed the belief that he had pulled through the channel, and when he got beyond it and into the main stream, that he'd forgotten to keep on against the tide, and had allowed his boat to drift with the current, which was then, of course, running in exactly the opposite direction from where he wanted to go. As it was about a mile around the bend to the point where he had first entered the channel, he must have got clear round and pretty close behind us, though out of sight, just as we rowed into the channel on our way home."

"By this time it was pretty dark and showed signs of a storm. Jack Thaw began to get uneasy, and had visions of Rod's body lying on the bottom of the creek, and kept fancying all the time that he saw his boat floating upside down and coming toward us on the falling tide. We talked the thing over for about an hour, I suppose, and finally Jack and I got out my big boat, and fastening a lantern on the bow, we gave Dickson the oars and all three of us started up-stream. The way Jack Thaw peered around in the dim light, looking as if he expected any minute to see Rod's face staring up at him from the water, made me feel pretty uncomfortable. I can tell you; and whenever a bass would jump out of the water he'd give a start that would almost upset us."

"It must have been about eight o'clock by the time we got to where the short cut entered the creek, where, if Charlie Titus was right, Rod must have made his first mistake and turned the wrong way. We'd looked under every projecting mass of roots, and poked the oars through every bunch of reeds and alders along both banks, and had seen no indications of Rod or the boat. We were getting pretty tired, and the wind about this time commenced to blow, while dark clouds were swelling overhead, and the waters hissed and splashed noisily against the boat."

"Suddenly Jack Thaw called to Dickson to stop rowing, that he thought he heard a voice. 'I'm a little dull of hearing, and whatever sound of the kind there was didn't reach me. But Jack insisted that we'd better pull in-shore, for there was evidently some one there needing assistance. Before doing so, however, he snuggled, 'Who are you, and what's the matter?' A faint voice, which none of us recognized, came back, 'I'm a stranger and in trouble.' This decided us, and we made for the place where we had first seen the boat above the water, and a corresponding height above the adjacent land. It was, in reality, a sort of levee to protect the fields from the tide. As our boat grated against the shore, Dickson took the lantern, jumped out and clambered up the bank. We could see him poking the lantern about in front of him, and presently he put it on the ground and, holding his sides with both hands, his body shook and quivered as if he was in a spasm."

"'What's the matter, Dick,' I shouted, 'Why don't you go down into the meadow and see what the poor devil wants?'"

"'Oh Lord, oh Lord!' he hallooed back; 'it's Rod. Come here and look at him.'"

"'Rod!' I said, 'it can't be; why, where's his boat?'"

"'I don't know,' he answered, 'but he's here, that's certain.' And with that he picked up the lantern and slid down the bank on the opposite side."

"For a few moments we could hear the murmur of voices, mingled with laughter from Dickson, which he seemed endeavoring to repress, the struggle and the splashing sound of mud and water, and finally two figures emerged from the meadow and appeared on top of the bank. By the light of the lantern we of course at once distinguished Dickson, but without the latter's previous announcement we would never have recognized in the torn and mud-covered object at his side the courtly and elegant Lamont. His face and hair were begrimed with ditch water and slime, his coat hung about him in tatters, and long strips of dirty cloth were all that remained of his vest. He came down the bank leaning toward the boat with the aid of Dickson's arm, he did not rather than set down upon the stern seat, and for some time maintained an obstinate silence, refusing to tell where he had been, or how he had reached the place we had found him. Finally, as we were about returning, he said that he had better not leave until we had got his boat, that he was responsible for it, but he guessed, though, it was a good way off. I asked him whether he'd tied it up anywhere, and he said that he'd hitched the rope around one of the ribs of the old canal boat, near where we'd hunched in the morning, and he supposed it must be there yet. I then asked him how far off he thought the place was. He said he guessed about six miles, because he'd been asleep in the boat, and when he waked up it was after midnight, and he'd been walking across the fields for two or three hours since. Of course we knew that it was only about eight o'clock then, but we said nothing, and pulled for the boat."

"As I mentioned, the old boat was only a short row from where we were, and we reached the place in a little over ten minutes. Rod was greatly astonished that we got there so soon, and insisted that it was the wrong place, and that we'd mistaken the boat. Jack Thaw, however, speedily convinced him to the contrary by reaching for and bringing out the punch bowl, which he held up before Rod, significantly remarking: 'Why, it's perfectly dry!' To this, however, Rod made no response, and we thereupon fastened his boat to the stern of mine and started to row back to the boathouse, as I said, as we did so, when he got excitedly exclaimed: 'Don't go that way. Don't go that way! I've been that way four times already and never got any farther than this. There's a kind of a whirlpool up there, and if you one get into it, you keep going round and round!' Jack explained that we didn't intend going in the direction he had indicated, but were merely heading up stream to get the boats clear of the shore before starting to row down. This seemed to pacify him, and we continued our way quietly, the light from the lantern in the bow shining brightly over the water."

"We had reached the place where the narrow channel I have

spoken of met the main stream, and were just crossing the point of intersection when Rod called to Dickson, who had the oars to stop. 'Now, look here, boys,' he said, 'this is a little too thin. You can't play this on me any longer. I came out of this channel into the creek by your instructions four times, and struck it foul every time. Don't you see that you've got to go through it from this side or I'll never get out? You gave me the wrong direction this afternoon and kept me fooling round here for the last six or seven hours. Now I want to go home, and the way to go is right through that cut—just the opposite way from what you made me take before.'"

"We tried to make him see that such a course as he indicated would be merely reversing the circle that he had been rowing in all the evening, and would bring us out always at the same place from which we had started. He couldn't or wouldn't see it, and began to get a little ugly. Fortunately Dickson had his pocket flask with him, and he passed it across to Rod, with the remark that if he took a look through that telescope he'd maybe see things in a different light. As you may imagine, this had the desired effect, and hardly a minute had elapsed before Rod was sound asleep in the bottom of the boat. We pulled back as fast as possible, and reached Eastown in time to take the 10:30 train. We rowed Rod at the boat-house, put some clothes on him and got him into the cars, where his somnolence continued until we reached home. Ever since that night, however, he has insisted that the only way we ever got back was by following his advice at the channel, and persists in asserting that if we'd gone on as we were when he stopped us, we'd be rowing the circle all the time."

"Ford," said Vermillion, as the former ceased, "do you say that story is true?"

"I do, and can prove the same by the testimony of living witnesses. And what's more, the thing got out around East-town and the neighborhood, so that Lamont never comes down here but what half a dozen fellows hail him with a 'Hello, Rod, how about that circular row on the Big Timber?'"

BASS IN THE POTOMAC RAPIDS.

WASHINGTON, D. C., Oct. 24.

Editor Forest and Stream:

Two friends and myself took a day among the bass in the rapids above Chain Bridge, on the Potomac, this week. The day was not good, being cool and variable, with gusty winds from the northwest. We found the water warm and the fish in the rapids and shoals. They took the minnow well but would not rise to the fly, and I have never been able to get them to do so late in the season. I used an eight-foot rod made of red cedar and iron wood, cedar butt and middle joint and tip of iron wood. I have used this rod for about six years. I made it myself, and this season cut down the middle piece and tip to the size of a very fine trout fly-rod, and it casts a fly remarkably well. I used a patent enameled oil silk tapered line, a single gut leader and single snell Sproat hook, casting the minnow just as if it were a fly, no float and no sinker.

Every man to his liking. I prefer this rig to all others, and also this method of casting the minnow to all others. I had the largest bass with great facility, and I find that they take the minnow or crayfish as though tendered to them, it seems to me, better than any other way. My rig is as light and as easily handled as a huggy whip, and answers perfectly well for bait or fly. I have often east ninnows there for bass, and caught and landed heavy fish with a very delicate ash and lancewood trout fly-rod. I have no doubt, however, of the superiority of iron wood to all other wood in strength and durability, and capacity to spring back to its place after playing a heavy fish. This opinion is backed by very large experience of rods and fish and fishing. I landed two small striped bass; the other gentlemen did not get any of them. Our party obtained a handsome string of beautiful fish, and returned to the duties of life's work, happier, and better men than if we had refrained ourselves from that most enjoyable and enjoyed day on the rapids. We had our guns along, and one of the gentlemen stopped a mallard from a passing bunch, which put itself on shore and crept among the rocks to be seen, of course, no more.

Before I stop let me say what I know about putting a crayfish on a hook. I pass the hook through the posterior thoracic ring on the back bringing out the point on the under side. I find a recently shed crawfish the most killing bait I have ever tried for bass when in rocky rapids, especially for large fish. If the crayfish has had his new crush on long enough to become once more dark and leathery in appearance it is by no means so taking.

The best minnow by long odds is a small catfish, which will live often a half a day on a hook. The fish do not mind the quality of the bait or best in the world. From October to December there is excellent fly-fishing in the Potomac rapids from Chain Bridge up to Great Falls. But few striped bass are now caught above Little Falls. We found the bass very gamey, and my two striped bass wonderfully so for their weight.

M. G. E.

THE INTERNATIONAL FISHERY TROUBLES.

WHEN the Toronto *Globe*, in its spite, spoke of the "notorious Batson," it undoubtedly meant Mr. Fitz J. Babson, Collector of the Port of Gloucester, Mass., and supposed that its article would effectually squelch that gentleman, both by the epithet and the misspelling of his name. On the contrary, Mr. Babson still flourishes, and in collecting the figures which will prevent another such treaty as that of Washington being agreed to by the United States. The facts are these: The British Provinces feel sore because, for five and a half million dollars paid by the United States, they had to allow the American fishermen to fish in their waters. The Americans are dissatisfied because their government has paid for privileges which they do not get, and which are worth nothing to them if they could get them. On the contrary, the British still flourish, and that, for \$5,500,000, the American fishermen were to have the privilege of fishing in the waters of British North America for twelve years, and that the Canadians should have the right to send fish to the United States free of duty, either government having the privilege of terminating the agreement by giving two years' notice. When the fishermen from the "States" went into the bays for bait they were met by local laws and wroth resistance, and the "three mile limit" was declared by lines running from one headland to headland, instead of following the coast line.

Both parties to the agreement are dissatisfied, and no

doubt the treaty will be annulled. The Americans had no statistics to show what the value of their markets were to the fishermen of the Province; but now, thanks to the labors of Professors Baird and Goode, they can show how many fish are yearly consumed, where they come from, and what their values are. The Toronto Globe may scold and call names, but it will require more than these to convince the people of the United States they were not egregiously taken in by the Halifax award, their fishermen having to fight to obtain that which has been paid for.

What the Globe denounces as "taking advantage of a technicality," in the proposition to abrogate the treaty after two years notice, is simply the plain following of the terms of the agreement. It was provided that the treaty should last ten full years, and then afterward two years notice might be given by either of the contracting parties, and at the expiration of that time it should no longer exist, thus making it actually last for twelve years. The term was to be dated from the time when the necessary legislation had been enacted by the Parliaments of Great Britain and the Dominions of Canada, the Legislature of Prince Edwards Island and the Congress of the United States. Although the treaty of Washington was ratified in June, 1871, the different governments did not enact the "necessary legislation" until some time after, the United States being last, the Act of Congress not being approved until March 1, 1873, the proclamation of the President being dated July 1, 1873. Therefore, the only rational construction to put upon this question is that the "full ten years" are to date from the President's proclamation, which gave effect to the treaty, and this will be on July 1, 1883. How this can be construed into "taking advantage of a technicality" is not very plain, but the Globe so denounces it. Its claim that the Canadian Government allowed the American fishermen to enjoy the privileges of the treaty after June 17, 1871, or as soon as it was ratified, seems hardly possible, for they have not allowed them all the privileges to this day, and as the Canadian proclamation was not made until June 7, 1873, it is liable to the suspicion that they never were in a hurry to confer these favors which have been so grudgingly bestowed since.

There is no use in quarrelling over the subject. Both sides are dissatisfied with the treaty and the only sensible thing to do is to live peaceably under it until the time comes when it can be legally terminated, and then to make a new one. But the Globe can rest assured that when the new one is made it will be very different from the treaty of Washington, and contain other provisions than those which ruled at the Halifax arbitration, where the benefits were all on one side. We hope that the Globe will cool off in the meantime, and stop calling names.

THAT MACKEREL BOU'T.

J. M. S. EXPLAINS.

I READ with much delight J. S. M.'s account of blue-fishing at Cape May with Capt. Foster, altho he is conspicuously inexact when he says that "I snored so loud he thought we were near the automatic buoy?" The fact is, it was Douglas who caused the right to reverberate with the *ore rotundo* sound of the snoring nostrils. Had these callow youths, these youthful apostles of Coke upon Littleton, attempted, as alleged, to grease the Colonel's nose with lard oil or any other kind of oil, they—J. S. M. and the Douglas "tender and true"—would have found themselves overboard—for it was a calm, still night—and tasting more overboard than they had either indulged in during the summer festivities at Cape May.

But, badinage aside, J. S. M. does not exaggerate the glories of blue-fishing. Twenty miles from land, a stiff breeze, and pulling in the fish as fast as one's poor lacerated fingers can haul them in, is sport which the Norse Kings might have drank in joyfully in Northern seas. I have caught the bounding salmon in the Bay of Chaleur, but it does not beat pulling in a game fish like a red drum weighing forty pounds. But of this I will tell you next week. The richness of Cape May as a fishing ground is only beginning to be appreciated.

P. S.—That Douglas did bribe the lightskip officer with a pocketful of cigars to hook and haul in his mackerel is one of the truths of history.

CORRECTIONS—Columbus, O., Oct. 29, 1881.—Editor Forest and Stream: In my letter in this week's FOREST AND STREAM you make me say, "Rip ran out of the water," etc. It should have been, "Rip ran out of the water," etc. In my letter of the 18th, eighth line from commencement, the word "to" is left out between "and all." In the middle of the article the word "Lounir" should be "Lonnis." Further down, the word "its" is left out between "that length"—"The only drawback is that its length is only," etc.; and about three-fourths of the way through, "He we find," etc., should have been "Here we find." These errors may be excusable, but they do seem to me to be a little thick. For Heaven's sake fix the thing so that if "Rip ran out of the water," he may have a chance to "Rip, rare," back again.—FRANK N. BREWER.

A NEW REEL.—We have seen a new reel for bass fishing, called the "O'Haver and O'Bannon reel." It multiplies ten times, and is claimed to be as smooth in its running as any made. It has a click and a break, both of which can be thrown in and out of gear by small levers. It is made by Warren O'Haver, Indianapolis, Ind., but has not yet been put on the market.

RARE FISHERY.—Last week Mr. Blackford had upon his stand in Fulton Market a "moonfish," *Parephippus faber*, which was caught in New York harbor near Governor's Island in a seine which was hauled up by the moonlight. This fish is seldom to be seen in New York waters. This week he had a Connecticut river shad which was taken at Saybrook, Conn., on Oct. 25, a rare fish at this time of year.

MONIEE, Ala., Sept. 29, 1881.

Editor Forest and Stream: When you good-natur'dly censure Mr. W. W. Wood for his false fights of "Forester" fancies, you are evidently unaware that this gish may be a matter of business to that gentleman. I understand that he is interested in the matter, and that he is perfectly justified in trumpeting his devotion to that writer. He is doubtless making a handsome thing out of it. But, alas! poor Yorick. That Herbert's fame should be thus employed to fill the purse of a speculator in his wares is indeed a sad commentary on the mercenary spirit of the age. Let me, at least, utter my protest against it.

A 30-YEAR'S ADMIRER OF "FORESTER."

Fishculture.

[Continued from page 150.]

EPOCHS IN THE HISTORY OF FISHCULTURE.

By PROF. G. BROWN GOODE.

OVI. 1878.—Captures of Planted Shad in California Rivers.—In the year 1878 over a thousand shad were caught in the Sacramento River, Cal., being fish planted in 1871 by Seth Green for the California Fish Commission, or of others sent in subsequent years by the U. S. Fish Commission. [Report U. S. F. C., VI., p. xxxvii.]

VI. 1878.—Capture of Planted shad in the Ohio and Mississippi Rivers and the Rivers of Alabama.—In the spring of 1878 several hundred shad, doubtless from those planted in 1872, were taken in Ohio River at Lovellville. These were derived from a deposit of 3,000 made by Seth Green in the Allegheny River, and by Wm. S. Hoar, at Columbus, N. Y., in 1872 in Lake Ontario, at the expense of the U. S. Fish Com. Others taken at Madison, Ind.; Mt. Carmel, Ill.; Stanboune, Ohio; Nashville, Tenn. Shad were taken also in the Coosa River, Ala. [Report U. S. F. C., VI., p. xxxviii-9.]

OVIIL. 1878.—The Successful Propagation of Cod.—In the fall of 1878 an experiment of propagating codfish was carried on by the U. S. Fish Com. at Gloucester, under the supervision of Mr. J. W. Milner and Capt. H. C. Chester. About 9,250,000 eggs were obtained and sent to Gloucester, N. Y., in 1878 in ice-chests to the harbor, where in the subsequent years young cod have been unusually numerous. [Rep. U. S. F. C., VI., p. xviii, p. 725.]

OVI. 1878.—Establishment of the Tennessee Fish Commission.—In February, 1878, Gov. Yates appointed three fish commissioners for the State. They were: W. M. McDowell, of Memphis; Geo. F. Akers, of Nashville, and W. T. Turley, of Knoxville. No money has been appropriated, and the Commissioners have done some work at their own personal expense.

OX. 1878.—Establishment of the Utah Fish Commission.—The Utah Fish Commission was created by Act of the Legislature, February 22, 1878. Albert P. Lockwood was appointed Commissioner. No money had been appropriated up to 1880.

OVI. 1879.—Invention of the McDonald Fishery.—In May, 1879, Col. M. McDonald, Fish Commissioner of Virginia, devised a form of fishway different in principle from all previous, by means of which the water from the dam is diverted down a straight incline sideways at an angle of 30 deg. without practical acceleration or retardation. U. S. Fish Com., 1879, p. 1.

OVI. 1879.—Invention of the McDonald Fishery.—In August, 1879, Col. M. McDonald, Fish Commissioner of Virginia, devised a form of fishway different in principle from all previous, by means of which the water from the dam is diverted down a straight incline sideways at an angle of 30 deg. without practical acceleration or retardation. U. S. Fish Com., 1879, p. 1.

OVI. 1879.—Establishment of the South Carolina Fish Commission.—A Fish Commission for South Carolina was created by Act of the Legislature, approved Dec. 23, 1878. On Dec. 23, 1879, it was continued under the direction of the Department of Agriculture, A. B. Butler, Commissioner. In 1879 \$800 was appropriated and \$661.00 was expended. No special appropriation has since been made, the expenses being met by the Department of Agriculture.

OVI. 1879.—Establishment of the Nebraska Fish Commission. CX. 1879.—Establishment of the Texas Fish Commission.

OVI. 1879.—Establishment of the Wyoming Fish Commission.—The Wyoming Fish Commission was established by an act passed in December, 1879, which provided for the appointment of a Commissioner and also delegates through out the Territory as he might choose to appoint, and appropriated \$1,600 for the purpose for the two years ending December, 1881. Henry B. Rumsey was appointed Commissioner, and he appointed Dr. M. C. Barckwell and Otto Gramm as deputies.

OVI. 1879.—Establishment of the Central Fishcultural Society.—This society held its first meeting at the Palmer House, Chicago, Oct. 1, 1879, in pursuance to a call by E. F. Shaw and P. Mather.

OVI. 1879.—The Building of the Fish-Hatchery, Fish-Hatchery, and the steamer Fish Hawk, built for the United States Government for the service of hatching fish on a very extensive scale, was launched at Wilmington, Del.

OVI. 1880.—The Successful Propagation of the Spanish Mackerel.—In June and July, 1880, the Spanish mackerel was successfully propagated with small quantities through the Territory as he might choose to appoint, and appropriated \$1,600 for the purpose for the two years ending December, 1881. Henry B. Rumsey was appointed Commissioner, and he appointed Dr. M. C. Barckwell and Otto Gramm as deputies.

OVI. 1880.—The Successful Propagation of the Spanish Mackerel.—In June and July, 1880, the Spanish mackerel was successfully propagated with small quantities through the Territory as he might choose to appoint, and appropriated \$1,600 for the purpose for the two years ending December, 1881. Mr. Armstrong lost most of his fish the second day out, as will be seen by the following table, and thinks that they were injured by the jar of the railway between the Aquarium at Southampton, where they had been confined for some time in order to acclimatize them to confinement, and Liverpool. His record is:

Oct. 14, 1881.—Temperature of water at Southampton Aquarium 53° 50; at Liverpool, N. Y., 67° 10; at Liverpool, N. Y., 67° 10. Shipped seventy soles and thirty-five turbot.

Table with columns: Temp. Water in Tanks (Morning, Afternoon), Specific Gravity, Died, Mornings, Afternoon, Soles Turbt. Rows include Oct. 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31.

Total died on voyage..... 87 29
Alive October 26..... 3 6
Total..... 70 25

On October 24 and 25 the tanks were not filled, owing to the high temperature of the sea, it ranging from 61 deg. to 65 deg.

It will be seen from this that the turbot sold the journey between Southampton and Liverpool was not so successful as was different. This is the fourth attempt to bring soles to America, Mr. Mather's venture in 1879 being a complete failure from the long journey from Southampton via Liverpool and London to Southampton by rail proving fatal to all these fish, which, being flat, could not stand the motion of the water in the tanks. In 1878, Mr. C. J. Moore, of the Derby Museum, Liverpool, and those Mr. Blackford deposited just outside Sandy Hook. See FOREST AND STREAM, Sept. 3, 1880, p. 187, 188.

Mr. Armstrong had his fish in two oval wooden tanks five feet six inches long, four feet wide, and two and one-half feet deep. These tanks were subdivided by cross-pieces into four spaces, to keep the soles from being crowded on one or right side. A rack was set on top of each, and while the water was only changed once a day, it was often circulated by lifting it into the casks on top and allowing it to run back through a rubber tube.

The turbot (*Halibut maximus*) is a soft-rayed flat fish, whose body is oval in shape, and whose color is brown or light blue. Without the tail its body is almost round. The common size of the fish varies from five pounds to ten pounds weight, although occasionally it attains to twenty pounds and sometimes thirty pounds. It is one of the most prolific fish known. One weighing five pounds will produce three hundred to contain a few weighing five pounds nine ounces, which contained 14-11,200 eggs. The majority of turbot are taken along the east coast of England and the coast of Holland. It is caught in trawls and also on lines, but is more common in the latter mode of catching. The sole (*Solea vulgaris*) is also a flat-rayed fish, similar to the usual eye, somewhat resembles the flounder. Its length varies from ten to twenty inches. Its color is a uniform dark brown above and a white below, the pectoral being tipped with black. To the British public the sole is the most popular of any fish which is known of their habits. They are caught in great quantities off the coast of England in the North Sea, where they breed. Both fishes are considered great delicacies in England. The turbot is always a central figure at a London assemblage, and is a fact of the most important nature in the estimation of the American sheephead (*Arosasus probolophorus*). The sole is one of the daintiest fishes in the world, allowing us to judge as before, and as a breakfast dish few things equal in delicacy a fried sole.

Mr. Armstrong had his fish in two oval wooden tanks five feet six inches long, four feet wide, and two and one-half feet deep. These tanks were subdivided by cross-pieces into four spaces, to keep the soles from being crowded on one or right side. A rack was set on top of each, and while the water was only changed once a day, it was often circulated by lifting it into the casks on top and allowing it to run back through a rubber tube. The turbot (*Halibut maximus*) is a soft-rayed flat fish, whose body is oval in shape, and whose color is brown or light blue. Without the tail its body is almost round. The common size of the fish varies from five pounds to ten pounds weight, although occasionally it attains to twenty pounds and sometimes thirty pounds. It is one of the most prolific fish known. One weighing five pounds will produce three hundred to contain a few weighing five pounds nine ounces, which contained 14-11,200 eggs. The majority of turbot are taken along the east coast of England and the coast of Holland. It is caught in trawls and also on lines, but is more common in the latter mode of catching. The sole (*Solea vulgaris*) is also a flat-rayed fish, similar to the usual eye, somewhat resembles the flounder. Its length

THEY DON'T LAUGH ANY MORE.—The idea that an English cutter, long, narrow, deep, lead keel, low rig, the very antithesis, in short, of the broad, shallow, overspurred Bloop, could beat the latter, was simply laughed at, and the one yachting editor, *he of Forest and Stream*, and certain of his contributors who usually uphold the doctrine that yacht building was a science and not a piece of guess work, that cutters were superior to sloops and cat boats, and that the day would ere long come when this would be made plain to all, were covered with ridicule and loaded with sarcasm.—*Harper's Chronicle*.

BUSINESS.—Bancroft, 90 tons, stands at the head of winning yachts of the first-class in the United Kingdom this year, having 11 firsts and 6 seconds to her credit in 56 races, the money value being \$1,400, which does not include the champion cup won at Kingston. The Latona comes next with 27 starts, 11 firsts and 4 seconds, of the value of \$200. The Yachandra is ninth, with 13 starts, 2 firsts and no seconds, representing \$170.

RIGHT MOVE.—Commodore Harrison, S. F. Y. C., proposes to give his support to small yachts on the Pacific, and intends to move in favor of open races, the rub supplying the prizes and the public the yacht. This is what yacht racing should have come to long ago.

NEW THIRTY.—We hear that some Toronto gentlemen contemplate obtaining around a thirty ton cutter on lines from Watson to race for the America cup next year, it still in our possession.

FOR CHARTER—A first-class gunning outfit, complete, for charter by day, week or season. Apply to MATHEW REYNOLDS, Havre de Grace, Md. Oct. 21.

Wanted.

WANTED.—Any person having a good strong single barrel choice 3 or 10 gauge, 10 to 15 pounds weight, long-barrel breech-loading duck gun can find a customer (if price suits) by writing to Lock Box 129, Hudson, N. Y. Nov. 17.

WANTED a breech-loading shot-gun No. 10 bore, 1/2 to 10 pounds, new or second-hand, for which I will pay a good price; must be guaranteed to shoot buckshot close and hard. Address, Lock Haven, Pa., Box 767. Nov. 17.

For Sale.

SECOND HAND.

One PARKER RIFLE, 10-bore, 28 in. Damascus barrel, good as new and in perfect order, and a fine shooter; original cost \$85. Price \$55.
One PARKER BROS. 20-bore, 28 in. of the very finest quality and made to order expressly for a trap gun to be used in the best clubs in U. S. Original cost \$300. Price \$150. This gun is perfect in every respect and shows no signs of use and is fully guaranteed as best made.
One W. & C. SCOTT'S 20 B., 10-powder, 10-bore, 30 inch, sib. weight, rebounding locks, handsomely engraved with fine and but little used. Price \$60.
One W. GREENE & B. L. single, 8-gauge, 4-inch barrel, 1 1/2 lbs. weight, double grip action, pistol grip, PAUCI B. L. end, entirely new. Price \$150.
One FOX B. L., 12-bore, 28 inch, 1 1/2 lb., pistol grip, first-class. \$45.
These guns will be sent C. O. D. for examination on receipt of \$5, to cover express charges, which amount will be refunded.

HENRY C. SQUIBBS, 1 Cortlandt st.

\$5 to \$20 per day at 1 Game. Samples worth \$5 free. Address STINSON & CO., Portland, Maine.

W. T. P., Elizabeth, N. J.—The brands of powder and shot are both of first quality. We have no reason to recommend one above the other.

A. A. M., Otsego, Oct. 25.—I would like the description of full-blooded cocker spaniels. 2. Who is a good party to buy from where I can get what I pay for? Ans. 1. For description of cockers consult back number 12 address our advertisers and read the article in our issue of Oct. 10 on dog dealers.

B. T. K. J., Springfield, O.—Is there anything that will remove fleas from dogs? Ans. Eternal vigilance is the price of freedom from the wicked flea, and only repeated applications of any of the various articles used will accomplish the end sought. A thorough washing once a week with whale oil or carbolic soap or frequent use of insect powder will have found of equal value, but a sure preventive we have yet to see.

D. C. R., Toledo, Ohio, Oct. 29.—Please inform me where seed of the wild celery plant can be had, how it is sown, and the most favorable time of year to sow. We propose trying to introduce this plant into some of our "duck pasture" at this end of Lake Erie, but we are not aware that the wild celery has ever been sown and artificially cultivated. Mr. D. W. Cross, 433 Euclid avenue, Cleveland, O., volunteered last spring to supply the seed to the readers of the FOREST AND STREAM who might wish to try the experiment. Write to him, and inform us of the success of your trial.

E. G., St. Paul, Minn.—1. Can a female wild duck be correctly called a mallard? 2. What is a mallard? 3. A says that a mallard properly speaking is the male of the duck. B says that the female is also a mallard. Which is it? Ans. Yes. 2. Mallard is the English name of a species of wild duck; the term does not have the significance it has in America. A female, or a young bird, is just as much a mallard as the adult male. In ornithology the term is always used to denote the species. A consultation of any work on birds will show that the name has as much a specific signification as widgeon, snoveller, or whist. & B wings.

Norris, Madison, Wis.—We have at this hatchery a pond of goldfish and many of them are of a most brilliant gold color, some a solid silver color, others a bronze, and again others partly turned—gold, silver and bronze. If you are interested in the raising of goldfish, please tell me at what age they usually change color. These are very large it appears to me, some weighing nearly half a pound.

Ans. All young gold fish are brown when hatched and some never change in color. Individuals in a pond will often show a great difference in time and degree of coloring. Some waters the young fish begin to color before they are a year old, and their progeny had not colored when their parents were placed and their progeny had not colored at three years old. It seems to depend on chemical properties about the water, or the water, or both. No one has experimentally mentioned far enough in this direction to determine exactly what is the cause of early and late coloration at these fishes.

A. G., Middletown, N. Y.—1. I have two bull terrier pups in England that I should like to have brought over here. Shall I be liable to customs duty if I do? 2. I want them for breeding stock. 3. What is the usual freight charges by steamer for such? Of course they would be in charge of my brother. 4. Can you give me the address of first second and third prize winners in small-sized bull terrier class (I mean under 25 pounds) at the last New York bench show. 5. Please insert the address of secretary of above show. 6. Dogs that are imported for breeding purposes are admitted free of duty. 7. There is no regular charge for animals when accompanied by an attendant, but it is customary to fee the official who has the matter in charge. 8. First, Pegasus, owned by Mr. L. F. Martin, Jr., Boston, Mass. Third, Huss, owned by Mr. L. F. Martin, see address above. 4. Address Mr. Robt. C. Cornell, 216 Broadway, New York City. We have mailed the work to your address.

W. P., Quebec.—I have a well-bred English setter about fifteen months old who runs away when he sees a gun. He is so frightened that he will start the minute he hears the click of the locks. Do you think he can be broken of it? I have taken him out several times and he will not bark. He barks well and is a good one. I have had him about six months, and the first intimation I got of his being frightened was from the breaker I gave him to. He sent him back and told me he could do nothing with him. Would you kindly let me know what to do with him? Ans. In the hands of an experienced trainer your dog would probably come out all right. The only question to be considered is will it pay as it will undoubtedly take a long time and require a large stock of patience to overcome the fault. We have cured several dogs of gun-shyness by coupling them to an old and experienced dog who loved the gun, and taking them into the open fields and shooting blackbirds over them, taking care to commence our shooting at some distance from them and calling them up at each shot to find the bird. The confidence will be restored and the pleasure of the old dog will often cure the younger in a few trials.

Spanish Silk Worm Gut.

THE GREAT REDUCTION in the quality of this article, and the increasing admixture of rough strands, has forced us to go into the manufacture of it for our own account. Our Mr. Imbrie has recently established in Murcia, Spain, where all the high quality gut is made, the most extensive and perfect factory of this article in the world. The grades named below will run at least 25 per cent. better than those of any other manufacturers.

| | Per Thousand. | | Per Thousand. | | Per Thousand. | |
|-----------------------------------|---------------|--------------------------------------|-----------------|-----------------------------|---------------|------|
| Corta | \$1 00 | Padron 1st Superior, 11 1/2 x 12 in. | 7 50 | Regular Superior, 10 inches | 12 00 | |

WILD RICE SEED \$2 per bushel, and no custom duties to pay. VALENTINE BROS., Jacksonville, Wis.

Sportsman's Goods.

5 Consecutive Ho's, 50 feet, off-hand. WILD HARRY, the Indian Scout, says that with a Five's Rifle or Jistol, at 50 feet, off-hand, he can knock the 'pots' out of a playing card in this way all day long. He is obliged to use these arms to do the great feat performed daily in Barman's Circus and elsewhere, bringing a bell every time through a quarter-inch hole; cutting the string from a clear hole in another person's mouth; piercing a dime held between another person's fingers; and numerous other difficult and wonderful shots. The only objection to these arms is that they shoot so well, are so handy to take apart and carry about in a trunk or bag, that every body wants them, and the makers have had to enlarge the factory and work nights to supply the demand, and even in the dull season cannot get match stock ahead. Send for illustrated price list to CHAS. FOLSOM, 106 Chambers St., N. Y.

Dealer in Fire-arms, Ammunition, and all Articles connected with the same, and sole agent for J. STEVENS & CO'S

Breach-Loading Arms. SINGLE GUNS: Plain, \$12.50; Twist, \$15.50; Laminate, \$17. Double, 22 cal., 24 in., \$20; 26 in., \$22; 28 in., \$24. 28 or 32 cal., 20; 21; 22. HUNTERS' PISTOL RIFLES: .22, .32, 36 or .44 cal., 18 in., \$18; 20 in., \$19; 24 in., \$21. POCKET RIFLES: .22 or .32 cal., 10 in., \$12.25; 12 in., \$13.25; 15 in., \$15; 18 in., \$16.50. GALLERY PISTOLS: Light, \$29; heavy, \$32.

New York, May 19, 1880. I avail of this occasion to inform you that the little pocket rifle that I bought from you six months ago is a perfect gem. On my last trip I had occasion to use it in the woods, and out of 100 shots I killed 57 birds, the largest size being a wild pigeon at a distance ranging from 100 to 250 feet. For accuracy and perfection I consider Stevens' rifle unexcelled. Hoping this statement will give you pleasure, I remain, dear sir, Yours, very respectfully, J. A. P. DONALDE.

THE SNEIDER.

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R. THE ONLY ROUTE TO THE Trout, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER RESORTS AND GAME RESORTS AND LAKES OF NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the abundance and great variety of fish contained. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1. BLACK BASS, BLUE PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakes of this territory. The sportsman can readily send trophies of his skill to his friends or club at home, as ice for packing fish can be had nearly all months. TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the season of 1892 by new buildings and additions. During the season BROOK TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk. It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address A. B. LEST, Gen'l Pass Agent, Grand Rapids, Mich.

A NEW, IMPORTANT BOOK ON FLORIDA.

FLORIDA FOR TOURISTS, INVALIDS AND SETTLERS: Containing Practical Information Regarding Climate, Soil, and Productions; Cities, Towns, and People; Scenery and Resorts; the Culture of the Orange and other Tropical Fruits; Farming and Gardening; Sports; Routes of Travel, etc., etc.

BY GEORGE M. BARBOUR. This is the most comprehensive and authentic book on Florida that has been published. The following testimonial is proof of its value and trustworthiness:

"It is known to the undersigned that the author, Mr. George M. Barbour, has traveled over almost the whole of Florida, under circumstances peculiarly advantageous for enabling him to acquaint himself with the varied resources of the State, and with the attractions it offers to the three classes to whom his work is addressed—Tourists, Invalids and Settlers. Our knowledge of his abilities as a writer on Florida subjects, and of the opportunities he has enjoyed in preparing his book, are such that we can commend it as an able trustworthy and comprehensive—greatly superior in these respects to anything hitherto published descriptive of the entire State and its soil and productions." W. D. BICHAM, Governor of Florida; George F. Drew, ex-Governor of Florida; Seth French, ex-Commissioner of Immigration; Samuel Fairbanks, Assistant Commissioner of Immigration.

With Map and Numerous Illustrations. 12mo, cloth. Price, \$1.50. For sale by all booksellers; or sent by mail, postpaid, on receipt of price. D. APPLETON & CO., Publishers, 1, 3 & 5 Bond Street, New York.

THE AND HOW TO USE IT TO KILL EVERY FAIR-WING SHOT. BY Gwynne Price, Vice-President Sportsman's Club, St. Louis, Mo., who defeated Bogaruss, "Trap Shooting," Pungestrap and Guss. Shooting Exposition. "American Field" says: "It possesses genuine merit." "Kennel & Field" says: "Every man that sees a gun should have it." Mailed for 25c, stamps or currency, by GWYNNE PRICE, St. Louis, Mo.

FARRAR'S POCKET MAP of Moosehead Lake and the North Maine Wilderness a valuable companion for the sportsman, hunter and lumberman. Lately corrected and revised, and now acknowledged to be the only correct map of this vast region. Neatly bound in cloth covers. Price, postpaid, by mail, 60 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

GUNPOWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. cans.

Dupont's Eagle Locking.—Nos. 1 (coarse) to 5 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. cans (Nos. 1 and 2) and 12 1/2 lb. kegs.

Dupont's Choke Bore.—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels; gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 1 and No. 2, No. 1 being the coarsest. Packed in 6 1/2 lb. kegs and 1 lb. cans.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. cans and 6 1/2 lb. kegs.

Dupont's Rifle & F.F.G. "Sea-Shooting."—F.F.G. and F.F.G. "The F.F.G. for long-range rifle shooting, the F.F.G. and F.F.G. for general use, burning strong and moist. Packed in 1/2, 1 lb. and 5 lb. cans, 6 1/2, 12 1/2 and 25 lb. kegs. F.F.G. coarse, F.F.G. fine.

Dupont's Sporting, Mining, Surveys and Blasting Powders of all sizes and descriptions. Special Grades for Export. Also Rifle, Cartridge, Muzzle, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y., N. B.—Ego none but DUPONT'S F.F.G. or F.F.G. for long-range rifle shooting.

Oriental Powder Mills,
BOSTON, MASS.

- Western Sporting,
- Wild Fowl Shooting,
- Falcon Ducking,
- SPORTING POWDER.

ALSO ALL GRADES OF

Blasting Powder.

Agencies at all Principal Points in the West.

THREAD-WOUND, LONG-RANGE

SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 60, 70 and 80 yards, giving close pattern and great penetration. 20 and 28 gauge. Send for circular.

20 Sent, Post-paid, for \$1.

The Parker Gun.

Again Victorious at the Late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

SHOW ROOMS, 97 Chambers St., N. Y.

PARKER BROS., Meriden, Conn.

Ammunition, Etc.

The Hazard Powder Co.,
MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound each.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
F.F.G. F.F.G. and "Sea Shooting" F.F.G. in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. F.F.G. is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The F.F.G. and F.F.G. are favorite brands for ordinary sporting and the "Sea Shooting" F.F.G. is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

This above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

ANSWERS TO CORRESPONDENTS..... 293

RIFLE AND TRAP SHOOTING..... 297

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C. London, Eng.; and by Sin. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, November 10.

Specimen copies of the Forest and Stream will be sent free to any address upon application.

STATE PIGEON TOURNAMENTS.—A number of communications on this subject are deferred to next week.

FLORIDA ARGONAUTS.—The story of the Florida expedition told elsewhere is one of the most interesting of the Florida papers published in this journal.

DOG TRAINING.—We begin to-day the publication of an important series of articles from the pen of our Kennel Editor. Mr. Hammond calls his system dog training versus dog breaking. It is aptly so styled, being a decided departure from the beaten path trodden by other writers in their treatment of this subject. His own methods, as here described, differ from the practice of the average dog-breaker. The author's practical success in following the methods he advocates is at once a source of pride to him and a sufficient proof of the merit of his system. The series of papers will extend through ten chapters. We invite for them the special attention of amateurs and veterans.

THE SHOOTING.

THE reports which we have received from various sources would seem to indicate that the season which has just opened will be a very favorable one for fowl shooting. It is perhaps too soon to pronounce upon this point, for, owing to the warmth of the weather up to this time, the birds have not made their appearance in as great numbers as usual, but we understand that on the Potomac, the Chesapeake and at Currituck the grass and celery is more abundant than it has been for years. In the years when there is plenty of food there are usually great numbers of fowl, and all the accounts which we have so far, up and down the coast, unite in stating that the feed has never been better than it is at present.

We hear that along the Connecticut shore the coots were plenty during October, and that the old squaws and broad-bills are on in some numbers. In Great South Bay, L. I., the shooting has been fair—say forty birds to a gun from a battery during the morning. These mostly redheads, broad-bills, coots and old squaws. At Havre de Grace, Md., the opening day showed fair bags, although the weather was had, being very still and misty. From 3,000 to 3,500 ducks appear to have been bagged. We need some sharp weather to start the fowl along before any really large bags can be hoped for. "Homo's" letter in another column gives a good general idea of what is being done on the Maryland shore.

From Virginia and North Carolina we have as yet no satisfactory reports. Sprig tails, black ducks, teal, and a few widgeons have been on there for two or three weeks, but the great body of the fowl have as yet failed to put in an appearance. We have made arrangements to have early advices of their advent to these grounds, and shall give prompt notice of the fact to our readers. We published, several weeks ago, a hint as to the best means of reaching the grounds in North Carolina, and it may be well to repeat it here. Those who intend to visit Currituck can take the 8:40 p. m. train at New York, as per advertisement of the Associated Southern Railways in another column, reaching Norfolk at 9 o'clock a. m. They should leave the train at Snowden, which place is reached at 10:50, and proceed thence by private conveyance to Currituck Court House, where they can take the steamer Cygnet for Van Slyke's and other landings. If for any reason the steamer should be detained, they can continue overland to the shore. The charge for conveying passengers from Snowden to Van Slyke's will, we understand, be \$2 each. The agent at Snowden will furnish all necessary information. There is no hotel at Currituck Court House, but a good dinner can be obtained at Captain Walker's. We understand that by taking the all-rail route, via Richmond and Petersburg, one can leave New York about 9:30 o'clock p. m. and reach Snowden at 6:55 p. m. the next day.

It seems likely that the exodus of duck shooters to points in North Carolina will be greater this year than ever before. Besides the members of the various clubs, such as the Kittyhawk, the Currituck, the Palmer Island, and others, many will go who are not club members. There is a constantly-increasing appreciation of the sporting advantages of these grounds, and now that they are brought within about twenty-four hours of New York, we may expect to see them more frequently visited than ever.

The large clubs on the Sound, no matter how much they are grumbled at by men who are not members, accomplish one very important thing which benefits all who shoot. They protect a great extent of feeding ground, on which comparatively little shooting is done. The fowl before long learn to know that they have a refuge on these grounds—a place where they will not be persecuted—and so they become more tame, and are not driven wholly away, as is often the case when they are constantly harassed at every point. If we take the Kittyhawk Club as an example, we can see how much good it will do in this way. It has, we are told, about 250 miles of water front, but there are only twenty-eight members, and even if we suppose them to shoot the whole season through, they could use but a very small portion of their ground, and on the remainder the fowl will be undisturbed.

Of the brush shooting we have, we regret to say, reports not quite so favorable.

In Connecticut and Rhode Island quail are said to be fairly plenty, and in Massachusetts much more so than usual, owing no doubt to the wise and liberal policy of the Springfield Rod and Gun Club which turned out this spring about 800 birds. These have spread up and down the river for thirty miles and have bred and done well. Quail have also been rather abundant on Long Island, but except on preserves, they have been pretty well killed off. In New Jersey, our correspondents report them scarce; in Pennsylvania they are more plenty. In the Southern and Western States they are reported as numerous. Ruffed grouse are scarce everywhere, if we may judge from the reports received from all sections. Woodcock are fairly plenty, and have only been on a short time. The best shooting will probably be within the next two weeks. We hear from Connecticut and Massachusetts that there was a good flight last week. Now is the time to go. One real cold snap will send almost all the birds along South, and advantage should be taken of the present good weather by all who can get a day or two off. The recent rains have made the work of dogs and men easier than it has been, and we shall expect within a couple of weeks to hear of some fair bags.

THE MAINE GAME WARDENS.

THE correspondence relative to the Maine game wardens is developing some facts which it is well for the public to know. In another column we publish a letter upon this subject; it comes from a highly respectable source; and unless the statement made therein can be disproved, the proof is conclusive that there is something very decidedly rotten in the present condition of affairs.

It appears to be pretty clearly established that some of the Maine game wardens are guilty of a gross dereliction of duty, which cannot be excused by attempts to shift the blame from residents to visitors and back again. It is clearly the duty of the wardens to apprehend and bring to justice all offenders alike, whether they live in Maine or have come from other States. But our correspondent affirms that some of the game officers are so covered with their own sins against the game laws that they dare not prosecute others from fear of being exposed themselves; or else they are deterred from their plain duty by the desire to shield their guilty relatives and friends.

This is just the state of affairs to be expected where the game wardens are appointed from the districts in which they are to serve, and from among the ranks of the guides.

The only way to secure a set of wardens who will not shrink from a fearless discharge of their duty is to put in men who are not hampered by their own misdeeds, nor by their relations to neighbors; and such men must have been, previous to their appointment, non-residents of the district in which they are to serve. A salary of eight dollars a month manifestly will not pay such men. An adequate State appropriation should be made for the purpose. The revenue accruing from "visiting sportsmen" is sufficient to warrant a proper provision for fostering it, by duly protecting the game attractions which support it. Protection of game is here not a matter of sentiment, but of business.

The rule applies to other States and counties which derive a revenue from the sporting public. The sooner we look at this thing in a common-sense light, the sooner will we have efficient systems of game protection.

DEPARTING from our usual custom this week, we reproduce from one of the magazines a sketch of life in the woods. "A Week in a Dug-out" is from the pen of a frequent and valued contributor to our columns, and is reprinted by us through the courtesy of both author and publishers. The interest of the sketch as printed in *Harper's Magazine* is famous. By the way, we venture to say that few readers of our illustrated monthlies appreciate the expense to which their publishers are put in providing such work as they supply month after month. The average cost of the *Harper's Magazine* illustrations alone for a single number is said to be \$5,000. Such a scale of expenditure and corresponding excellence could hardly have been dreamed of by the projectors of that magazine when they printed the first numbers. The magazine is now in its sixty-fourth volume.

THE ATLANTA RIFLE TOURNAMENT.

BY the card from the Secretary of the National Rifle Association it will be seen that it is possible for us to hold an attractive rifle meeting at the Gate City of the South during the coming month. The intention is a good one, and as the managers of the most successful display, now in progress in Atlanta, have made it a general one, and are working to make it an exposition of the South in all its material relations, the conduct of a rifle match is in entire accord with their plan. They have invited the Directors of the National Rifle Association to become the managers of this feature of the general display and that trust has been accepted. If this National Rifle Association were indeed national, there would be no trouble at all in this trusteeship, but it is really a local organization of use only in being well and widely known and being thoroughly able to manage a rifle meeting in all its multifarious details.

A wise step has been taken, though very tardily, in making a canvass of the riflemen of the country, in order that some previous estimate can be made as to the probability of success. What is wanting now is a full statement from the Fair managers as to what they can do and what they can offer in the way of prizes. We want also to hear from the riflemen of the South. Will they be represented at the proposed rifle meeting, and in what style of shooting do they care to meet the invited guests and competitors from other parts of the Union. On these and many other points it would be well if the Exposition Commissioners would speak promptly and fully. The prizes should not be "in kind." A prize of this sort is more than likely to become a white elephant in the hands of the winner. We do not take it that there is any idea of pecuniary advantage on the part of those who would undertake the journey from a Northern city to participate in the proposed tournament, but it is discouraging to know that the prizes are to be a collection of miscellaneous goods, which, though valuable intrinsically, are valueless to the riflemen securing them. Trophies would form excellent rewards. They would be at once artistic vouchers of the superior skill shown and mementoes of a pleasant visit. If the managers will make such an announcement without delay, we have no doubt that not only military teams will visit Atlanta, but private club teams as well, with a good following of marksmen to participate in the individual matches.

The importance of the meeting if held will be very great. There is need of just such a good exhibition of marksmanship as the visit of a few teams from New York regiments, and Eastern rifle clubs will afford to let the Southern gentlemen know how little they understand of target practice. We hear of a few good rifles going into the South. There are plenty of weapons such as they are after the "Saxon" type scattered about among the negroes. Many of the old settlers swear by old fire irons, and actually shoot from machines which ought long since have been laid away in the cases of a museum. There are a few good rifle clubs in the South. New Orleans is doing good work in military as in "any rifle" shooting. Mobile, too, has a live organization, but how rarely do we hear of any scores from Kentucky, the old-time home of the rifleman, and the remainder of the country does not give a sign of any rifle interest. A carefully-drawn match of the riflemen of the South vs. the riflemen of the North would send this neglect to foster a healthful interest in rifle-shooting home to many men of the Southern States. The military interests, too, would be stirred and improved. Every State in the Union should have a well-regulated militia establishment, and until that is brought about and rifle practice given a proper place in the tactics of this body of citizen soldiers, we are living in neglect of an important element in our national safety. A well-attended meeting at Atlanta would afford the text for every Southern newspaper on this topic. Many of our Northern States are neglectful enough, but others are attentive and afford commendable examples in this respect. What they can do would be shown before the huts at this winter gathering, and the contrast, we take it, would be so strong and the inefficiency of the representatives of the careless States so apparent, that for very shame something would be done, and good, thereby, grow out of the enterprise.

The time for preparation is short, but much can be done in a brief period with our present means of communication, and if a prompt and full statement comes at once from the exposition managers, we doubt not that before the winter holidays a memorable meeting on the old Georgian soil will have been recorded.

FARMERS AND SPORTSMEN.—A Massachusetts farmers' society took up this subject last week. A report of what was said is given elsewhere. We welcome all such public discussions of the matter. It is of vital interest to both parties. The more it is talked about the better. The farmer has rights which the sportsman must be made to respect. The sportsman has rights which the farmer must be made to respect. There are hogish farmers; and there are lawless gunners; the former can be mollified by fair treatment; the latter can be suppressed by rigorous measures.

CLUB CONSTITUTIONS.—We are in frequent receipt of requests for constitutions and by-laws suitable for newly organized game protective clubs. Societies are invited to send us printed copies of such forms that we may furnish them to new clubs.

CRUISING IN FLORIDA WATERS.—Mr. N. H. Bishop, the well-known author, is soon to undertake some extensive cruising on the Florida Gulf coast, and we hope to be able to report much definite and reliable news concerning that interesting and comparatively unknown portion of the Flowery Land. Mr. Bishop's letters describing his "Voyage in a Paper Canoe" down the Atlantic coast, which appeared in this journal originally, were so well received by the public and added so much that was novel and interesting to our stock of knowledge of Southern sea board life, that his intended observations will be eagerly read by the rapidly-growing unwhims proposing to make their home in Florida.

LAST WEEK we printed a communication in which the writer wanted to know what had been practically accomplished by all the talk about game protection. We had thought to devote some space in the present issue to showing him, and other carpers like him, that much has been done. But our columns are so filled with other timely matter, that we must leave him for the present to indulge in his sneers. Meanwhile, the world moves.

TOLEDO FISHING AND HUNTING CLUB.—We have received the constitution and by-laws of the Toledo, O., Fishing and Hunting Club, in whose roll of members we recognize many expert handlers of rod and reel. The membership of the society should make it influential.

The Sportsman Tourist.

FROM OKEECHOBEE TO THE GULF.

THE FLORIDA EXPEDITION OF 1881.

FOR camp life in winter Florida is unsurpassed in our country, so far as health and comfort are concerned. In the early winter rainy weather sometimes prevails in the northern portions of the State, but after the middle of January the climate of the peninsula is delightful. Who would not, then, if he could, leave the snow, slush and mud of our Middle States for a sky more blue and a sun more warm, "where the flowers ever blossom and the beaus ever shine." Under showers. The sun is warm—but not too warm; the air is pure from the ocean on either side. Here the invalid may rest; his racking cough is stilled, sweet and unbroken sleep comes to him once more, and, if he goes there in time, the fell destroyer, consumption, is robbed of his victim. I have a firm faith in the healing virtues of the climate, for experience has been my teacher.

In the winter of 1878 the writer descended the Kissimmee River from its source to the great and once mysterious Lake Okeechobee. The old "Forest and Stream" boat that carried the explorers sent out by this paper some years before to explore the river and lake, was then rotting at a wharf in Lake Tohopekaliga. On this trip the idea—not a new one—was conceived of an expedition down the Kissimmee, through the lake, and thence to the Gulf via the Caloosahatchee River. This it was my good fortune to accomplish the past winter as one of a party of five who met at the Duval in Jacksonville last January. Our supplies were laid in at this place, and after a visit to Al. Presco, who kindly gave us some valuable information concerning our route, we took the steamer for the Upper St. Johns. Arrived at Sanford, on Lake Monroe, the South Florida Railroad (narrow gauge) carried us and our effects to Orlando, where a team was in waiting to convey us to Lake Tohopekaliga, eighteen miles distant. We lingered among the beautiful orange groves and lakes about Orlando for two or three days, and reached the lake on the 15th of January. Our guide had preceded us and we found our boat in readiness. She was twenty feet long, had seven and a half feet beam, decked over about seven feet forward. Built of Florida rich pine, she was, of course, heavy, a poor model and an indifferent sailer, but staunch and strong. Many a hard lump we gave her, and she carried us where no boat had ever floated, excepting, of course, the canoe of Mr. Lo, the Seminole. On the 16th we sailed down the lake, which is a beautiful sheet of water, some fifteen miles in length and three to five in width. A number of settlements are on its shores, and game in its vicinity is scarce. The entrance to the river from the lake is narrow, the water is swift and the channel as crooked as a snake. Five or six miles brought us to Lake Cypress, through which we passed in the night, reaching Fort Gardner Island, on the shores of Lake Kissimmee, after midnight. Here we spent several days hunting with poor success, as the island is much frequented. Lake Kissimmee is a lovely sheet of water, about twenty miles long and five to ten broad. After leaving the island we camped on the eastern shore of the lake, where we found our first turkeys.

Here begins the Kissimmee Prairie, which extends to Okeechobee. In some places it is miles in width, in others the pine timber comes close to the river, while winds about in a vast marsh, from two to ten miles wide, occasionally touching the bluffs, if such the low banks may be called. On this prairie and in the adjacent pine timber deer were plentiful and venison steaks were soon frying in the pan. Procuring a team and wagon from the one settler near the lake, we camped ten miles east, where the water flows both to the St. Johns and the Kissimmee. Our boat was left on the shore, where we found her safe on our return. In this neighborhood than at any other point on our route. I had here my first experience in rifle hunting, in the most primitive style. Our guide took a rich pine stump, four to five inches in diameter and seven to eight feet long, and, splitting the larger end, inserted in the cracks splinters of fat pine. Lighting this end at the fire, and placing a good pad on his shoulder, he would carry it for miles through the woods, the blaze behind his back and a hunter after several minutes I called my first deer, and our first string of sparks that looked the size of a dime. At this point we experienced the difficulty of hunting in the flat woods, as we could hardly go half a mile from camp and find our way back without a guide. There are no landmarks, and to inexperienced eyes all portions of the forest seems alike.

Our next camp was on Braham Island, in the southern end of Lake Kissimmee. Wild turkeys were abundant here and we secured a number; they were in good condition and fine eating.

Leaving our pleasant camp on the island, we once more headed down the swift and tortuous stream, camping at night on the shores, and hunting morning and evening with varying success—most of the game being turkeys, ducks and snipe. Fort Gardner Island, Fort Marion above Okeechobee is the last and almost the only settlement on the river. Here, on the 10th of February, we had green corn for dinner from the garden of Mr. John Pearce, who lives on the site of the old station. In this neighborhood we spent several days waiting for favorable winds, which came at last; and on the evening of the 12th we reached the great lake, too late to find a camp on shore, so what sleep we got was on a pine hoard, and a hard one, too.

The next day we sailed along the northern shore of the lake, our objective point being the mouth of Fish Eating Creek, so often sought for but never entered by a boat from the lake since the Seminole War. Our camp that night was a narrow sandy beach, over which the wind breaks when the winds blow from the South. The next morning, the 14th of February, we were off bright and early, and by eight o'clock sighted Al. Presco's mark for the mouth of the creek—a dead cypress tree standing in the lake about a half mile north of the creek. The latter was found without difficulty and, to our joy, perfect open water was obtained in a few minutes, the water, but deep and full of very fine bass. In a short time we had fifty pounds of fish in the boat, some of the bass weighing ten pounds each.

It was our original plan to attempt to pass from the lake to the Caloosahatchee, leaving the former at a point nearly east of the head of the river; but we abandoned this on learning the terrors of the saw grass. We then thought of ascending Fish Eating Creek to New Fort Creek, there to fire a team to convey our boat across the prairie to Fort Thompson. On this plan, however, we failed. With an old saw-fender who was familiar with the shores of the great marsh on the west side of the lake. He thought it practicable to convey a boat from Fish Eating Creek through the comparatively open water that lay between the prairie and the vast field of saw-grass that stretched away for miles to the shore of the lake. This course we determined to adopt, and when our boat had ascended the creek to a point within sight of the prairie we left the open water and took to the marsh.

Here our trip began, and it was for nearly three days that our utmost endurance. One of our party was a middle aged gentleman, a dentist from Ohio; two others were young and robust Yankees from Massachusetts, full of the spirit of adventure, hardy and cheerful, nothing daunted by any fatigues or hardships. May I always have such companions for the wilderness. The other two were West Virginia farmers, one of whom lives to regret having called himself a "fool"—"when in that marsh"—"for coming to such a country." Here we felt as proud of the achievement as any of us when we finally called out of the Caloosahatchee into the Gulf; and so did our Doctor, who had been in favor of turning back from Fort Bassinger, when told by Mr. Pearce of that place that he had spent six days and nights in going two miles through the saw-grass between Lake Okeechobee and Lake Kickpochee. We had a guide who was man-of-all-work, a good hunter and sailor—also drunkard and ruffian when within reach of liquor. There was also a "gintling geimien" for cook, who was generally a mortal terror for snakes and tigers and "all the good things of life." The individual in question, in common with his race, a great lover for "possum." One night a great rattling among the dry leaves was heard near where some venison hung; a rush was made for the intruder and a fat "possum" was captured. Charley roasted him in most approved style, but he alone partook of the dish, and, notwithstanding his alleged love for it, I saw the next day a Mexican hazzard diving off the larger half of the roasted "possum." After that no more were cooked, though we had trouble to keep the rest from our flesh pots.

Well, we were in the marsh, it was morning, and our spirits were high; but at night, when a dejected and worn-out crowd gathered around the camp stove—which was set up in the boat for want of dry land—it seemed to be the opinion of some that we would never get out of that "marsh," as our cook called it. A night's sleep, however, refreshed all hands, though the bed was again of pine boards; and we resumed our march, as I may now call it, for the water was so choked with vegetation that we were compelled most of the time to wade, pushing the boat or prodding her by poles. Fortunately our Yankees had brought an Osgood folding canvas boat, 15 feet long. In her we placed a large part of the baggage and our dentist (narcipated by his office life and some surplus flesh for hard work), who looked something like Neptune, as with his long beard he sat enthroned in the little Osgood, amid a chaos of cracker boxes, venison hams and blankets—only in place of the trident he carried a notebook and pencil. This lightened our larger craft materially. In the morning, when the tide was high, and the water was estimated at twelve miles, we could see but one ray of hope; that was the timber line in front, supposed to border the Caloosahatchee. Dim and blue it looked, but it was the rainbow of promise to a forlorn and weary company.

To the east, as we advanced, was the marsh, stretching its dense growth of saw-grass to the lake shore, and beyond the great Lake itself. To the west, as far as the eye could reach, lay the Indian Prairie, dotted here and there with palmetto hammocks. In front, rising slowly on the horizon, as we neared it, was the line of timber.

This night we again slept in our boat. All hands dreaded the morrow, for we feared that after all of our labor and toil we should find the way closed; but as usual, when we had eaten and slept, our spirits returned, and we all went to work the next morning with a will, wading and pushing the boat. After two or three hours' work we began to notice that the spears of grass in the water seemed to lean in one direction, which indicated a current; and shortly afterward it could be plainly seen, about one o'clock we struck a little open stream of clear water, no wider than a cow trail at first, but deep and running swiftly. With joy we hailed it. Our labors were over. Though we did not then know it, we were at the very head of the Caloosahatchee, where the water first forms a running stream as it leaves Lake Kickpochee, a good sized lake separated from Okeechobee by from two to six miles of dense saw grass. This lake is deeper than Okeechobee, and receives a part of the overflow from it.

We now thoroughly anticipated that milder and most tropical scenery I had ever beheld. Immense flocks of bright plumaged birds were on either side. The clear water was alive with the finest bass, which we landed until weary of the sport. Alligators were plenty and large, receiving a due share of attention from the riders. In places the current was swift, and the river divided into many channels. Sometimes we seemed to be in a labyrinth out of which there was no escape. Tall reeds formed a wall on either side. Again, the river widened into beautiful lakes.

A fair wind bore us swiftly on, and at night we camped at

Fort Thompson, on the old military trail. We estimated the distance from Okcechohee to this point at twenty miles. At Fort Thompson we had our first and last sight of the roseate spoonbill, bagging eight of these beautiful birds. All sorts of water fowls, ducks, and snipe were plentiful, and our hunting for them was very amply supplied.

The river was so high that there was no evidence of the rapids which at low water obstruct the channel here, and which prevented "Al Fresco" from ascending further with his boat in 1874. On leaving this point we dismasted our vessel, as the overhanging live oaks obstructed the river for many miles; the banks were now well defined and high, covered with a dense growth of palmetto and live oak.

We reached Fort Myers on Sunday, Feb. 20, where we saw cotton trees in full bearing. We were most hospitably received by their owner, Major Evans, to whom we had a letter of introduction. At Fort Myers (eighteen miles from the mouth of the river) we laid in a fresh supply of provisions, filled our water keg, and betook ourselves to salt water, reaching Punta Rassa on the 21st. We spent several days around the harbor and among the beautiful islands, fishing, bunting and enjoying the fine oysters, and all of us, I think, remember these days as the most delightful of our trip. For more than a month it had not rained on us; we had warm and genial sunshine every day. What a contrast to the snow and blizzards holding sway in the north.

At Punta Rassa, after selling our boat, we took the steamer for Key West. We spent a day in Key West, where we saw at the custom house two large living manatees, and then we turned our faces once more to the northward, and on March 1 landed at Cedar Keys. At Jacksonville we parted, some going directly north, others staying to see something of the civilized part of Florida.

One thing led me say to sportsmen going to Florida: Carry your ammunition and fishing tackle with you from the north, and do not depend on buying these things at Jacksonville, as you will be charged three prices for them; and if all the dealers are like the one into whose clutches we fell, you will be swindled. We bought several kegs of powder of him, and he agreed that if we returned any kegs unopened, in good condition, he would take them back. I had one such, but our merchant did not know me now, and denied the whole thing. If the keg had been at home, a thousand miles away, all right; but it was an awkward thing to carry about. That denied him, and if any sportsman wants his name to be given to him.

The South Florida Railway is now completed to Lake Topolopala, so the trip to the head waters of the Kissimmee can be made by steamer and by rail. To go from Okcechohee to the Caloosahatchee by water should be attempted during high water; at other times it cannot be done. The trip may be made a very enjoyable one, although it is not without its hardships. The recollections of our expedition will always be among the most pleasant of memories with me. Okcechohee is a lovely shallow lake, with little life about it. There are said to be very few fish in it, and its waters are hardly fit to drink. There are but few spots on its borders where the navigator can land, and only one over which the water does not wash at times. Observation Island, in the southern end of the lake, is quite a resort for many birds that are valued for their plumage. Black ducks, blue and green winged teal, with many varieties of snipe, are found both on the Kissimmee and the Caloosahatchee. We had no success with the fly in fishing bass; nearly all were taken with worms or spinning minnows. These fish were very fine, equal to any I have ever seen at the north for the table, and greatly exceed in size any ever taken there.

No venomous snakes were seen by our party except the water moccasin. Our treatment by the people that we met along our route was hospitable and kind in the extreme. May I live to see them again.

THE SEVEN PONDS.

BY ANOTHER MAN WHO HAS BEEN THERE.

IN a late issue of the FOREST AND STREAM I noticed an article by J. W. T. under the heading, "Tim Pond and Seven Ponds." Now, if Mr. T. does not write for proprietors why should he try to convey the idea that it is such a long, hard trip from Rangely to Seven Ponds that only a few hardy sportsmen, with bravu guides, have ever penetrated these wilds? I can only imagine that the comfortable baggage boats come from there, that it may have been if he looked around the different ponds? It is true that our Seven Ponds' travel has increased much in the last two or three years, but for the past ten years the Seven Ponds have been as familiar to the sportsman visiting Rangely Lake region and to Rangely Lake guides as Tim Pond has been to the readers of the FOREST AND STREAM for the past year. Mr. T. mentions that a Boston lady has had courage to make the attempt this year. He don't say whether she succeeded or not. A lady from the vicinity of Boston made the trip from this way five years ago and spent some time at the Ponds, and came back all right. And I don't think she heard a bear scream while she was there.

I will tell you how to get to Seven Ponds via Rangely. I don't ask you to believe me, but just take the map of Maine and compare the distances. Leaving Boston on the 8:30 train from the Boston and Maine or the Eastern Depot, you change at Portland to the Maine Central, and at Farmington to the Sandy River Narrow Gauge, arriving at Phillipsburg at 11 o'clock. You then take your baggage to the hotel, where you spend the night. Leaving Phillips next morning at 7 A. M. on a good stage coach, a twenty miles ride over good road, where the scenery is fine, brings you to Rangely in time for dinner. After dinner, your baggage being changed from the stage to a strong wagon, you start for Kennebag Lake, ten miles distant. The first three miles is over a good road; after that, if you have not procured a horse and saddle at Rangely, you must walk. The time usually taken for walking it by sportsmen is two and a half or three hours. This brings you to the Pleasant Retreat House at the head of Kennebag Lake. Here you find good accommodations, and as good a table as is set before the sportsman anywhere in the Rangely region. Ed. Grant, Cornelius and Phinias Richardson are the owners. Phinias proprietor in a manner, that is satisfactory to all, while Grant and Corneal guide. Better guides and better fellows do not exist, and the stranger may rest assured that whatever they tell him about fish and game is the truth, whether the matter goes to the water or to the woods. To reach the Seven Ponds from the Forest Retreat House you take a boat and row down the lake, which is five miles, to a little way below the outlet, where you find a stream coming in on the right. Going up this stream for a mile and a half you come to Little Kennebag. Across this, one-half mile and up the inlet two miles further, you reach the

trail that leads to Seven Ponds. It is a good, hard-trodden path, and is eight or nine miles to the ponds. Guides very often go from the Ponds down to the boat landing and take a pack of eighty or ninety pounds and return the same day. Sportsmen this past summer have walked from the Ponds down to the boat landing, taking their boats to the Forest Retreat House, and then walked to Rangely the same day. There is a semi-weekly mail from Rangely to the Forest Retreat House, and Houton's team makes the trip daily, over in the morning and back in the afternoon.

I have given you a little idea of this "long, hard trail" from Rangely to the Seven Ponds; and, dear invalid, if you have not strength enough to walk these carries, don't, for the sake of the loved ones that you leave behind, imagine that you have strength enough to go another way where you have to ride on a buckboard. Reading about a buckboard ride and taking that ride on a new road through our rough mountainous country are two different things; and when, with a good spring, the buckboard comes down and strikes a stump directly under you, and you imagine that your backbone is sticking a good six inches above the top of your head, then you will realize the difference.

The Seven Ponds country is a great place for fish and game, whatever way you get there. Not many miles to the west of the Ponds, on the first day of last December, I brought down three cat on three successive shots; and two days later I saw my friend, John Danforth, of Parmacabee Lake, bring down two more near the same place. As soon as the snow gets deep enough for still-bunting John and I will be among them again.

I was once guiding a gentleman at Seven Ponds in the month of August. The lybuck was lost, but we happened to have two good sized bait hooks left; the ravellings from my rod launch sizzled made the body of one fly, and the feathers from an unhooked dipper duck, wound with black linen thread to finish it. They were the same kind of a body, but the rest of it was a mixture of dipper and black duck, crow, owl and anything that came handy that had feathers on it. The first fly we christened the Dipper, the last one the Seven Pond Killer—and it was a killer. They both took well, but the Killer was the best. With these we caught all the trout we wanted, and they had some wear to them.

What I started to say in a few words I have spun out into quite a letter, and I trust it will be excused by your readers, as it is from the forced pen of a woodsman, who is not a reformer. It is written at Camp Bemis, on the southern shore of the Moosehookmagnetic Lake, where a northwester gets about an eight-mile sweep; and it is showing us what it can do this time. It has been one continual roar for two days and nights. The wharf and rocks for twenty feet from the water along the shore are one sheet of ice. The steamboat is anchored around in the cove, and the sides of that are also covered with ice; and if it were not for keeping up a fire in her to prevent the boiler and pipes from freezing up and bursting, I should have been in bed long ago and you would not have been bothered with this year. It is true, you o'clock; I'll go out and fire her up once more and then turn in. I wish that the lumbermen and their supplies were safely landed in their logging camps, the steamboat boused and I myself at the Seven Ponds this minute. Good night.

CAPT. F. C. BARKER.

Camp Bemis, Rangely Lakes, Oct. 26.

AUTOBIOGRAPHICAL FRAGMENTS.—I.

BEING EXTRACTS FROM AN EDITOR'S PRIVATE CORRESPONDENCE.

Editor Forest and Stream:

Your letter was received several days ago, but I have been too busy to reply to it before. *Impromptu*—I am not a tramp, as you've had reason to suspect, but a respectable white citizen, as I mean to prove if I have time to call on you before I leave for Washington, which will probably be my future home.

To clear a little of the mist from your mind—caused by my sending you contributions from nearly every part of the earth—I'll treat you to a bit of autobiography. I was born in Bucks county, Pa., (where the chickens come from) about 110 years ago, with a gun in my mouth instead of a silver spoon (which was a blunder on my part), which I have used "between meals" from the first break after birth until the present time. The first gun I shot out of the wing was a crow; and from that proud time I have increased and multiplied till I grew into a No. 1 shot. In fact, my slaughtering industry was great enough to entitle me to a place in the State game protective association; but I killed birds to protect them from hawks and other sportsmen.

For some years past I have shed but little feathered blood, and I would like to shoot a duck to revive old memories, but alas! whenever one is seen he is immediately "protected" by some snip or State association. By the way, is the deer or some other fellow, that instigated members of legislatures to take all the sporting privileges from the mass of the people and give them to a few rich men? Is that a touch of democracy or aristocracy? (P. S.—The above is not autobiography).

I am by profession a , and in that capacity have traveled over all creation except the Garden of Eden and the North Pole (both doubtful places).

CHAPTER II.

What is of more interest to "Forest and Streamers"—I have had the reputation (over twenty years ago) of being one of the best shots in the West, and many a time and oft have they tried to wreath me into a match with the great shots of the country; but they servant was not of that stripe.

I once made a score of 13 out of 20 double birds, from a trap; and when I went to . I found my fame had preceded me, and I was as one hand and glove with the hunting club. One of the members asked me if I had ever shot English snipe. I told him I had killed as many as eight or ten in a day on the Bordenown meadows, at which they "smoked right out."

They then arranged for me to go with them up the country about sixty miles, to their great sniping ground, and from the fact that their best shot was along, I suspected that their object was to show me that I was not much of a shot; so I determined to do as they all did at that time—kill as many as I could and go in for the laurels, at the risk of being called "snipe hog" by posterity. At the end of our day's shooting I had 130, and their best shot had about eighty; so the matter of skill was settled. That was the only time I ever shot English snipe in the cover. Toward the close of the day they got frightened at the constant cannonade that one of them flew to the bit of woods and thick underbrush near the marsh, and from that time nearly every bird that was not killed followed him, till a great number had stowed themselves away there for safety, when I went for

them." The gunners all said it was folly, but I knew better. One man from Louisville said he could kill them there if I could, but he soon gave it up, and I had them all to myself; and I never had more satisfactory sport, for, at that time, the more diluient the shooting the better I liked it.

That ground is all owned by a club now, but I've had my share of it. The above is given in promise to try your patience, I hope I'll have time to call at the "Wood and Water" office before I leave. In the meantime I am not a tramp, but your very respectable and obedient servant, A.

THE COMING OF WINTER.

THE whirling dead leaves, blown unnumbered times around, Lie heaped, or loosely scattered over the ground; The cawing Crows now fly from field to field of stalk-of-corn And Owls sound out their sweetest notes from eve till morn. Look you! swiftly to the north the wild Loons wings its way, While on the Eastern Shore, Plover and Duck glide down the bay; Till marsh weeds are waving their heads in the breeze; Erewhile "Striped Wood Peens" vigorously taps the trees.

And to the northward look, and fix your gaze; See the honking Wild Geese wend their tortuous ways; Cull is the air, biting the Grangers' nose with its freeze, While Bears in their cavernous couches snore on at ease. But the Raccoon, where on earth, is he? Surely he dot not stay all winter up a tree! Woodchucks, Porcupines and Rabbits, too, there are Who snooze and gape, and tick smooth their hair; Little Osk-awah silently the tracks of deer pursue, Muttering as he spies the big foot marks of "Piper's shoes. Now the feathery snowflakes in countless millions fly, As 'Bunkum at his steeplebird sits, eating doganits and nine pins, Elkibits, bearsteak, roast coon and turkey bones, And on drinking so much ether that he fairly groans.

[From Harper's Magazine for November.]

A WEEK IN A DUG-OUT.

BY W. W. THOMAS, JR.

"A DIEU, Moreaud," said I, and we pushed out upon the lake in our dug-out.

"Au revoir, monsieur, et bonne chance," replied Moreaud from the shore; then lighting his pipe, he turned on his heel, and disappeared in the forest.

We were in the backwoods of Canada. We had left the last house of the pioneer habitant on the farther bank of the river, and were now fairly under way on our voyage of a hundred miles, through a forest as yet unmarred by man. Our route lay along the great natural thoroughfares of all wooded countries—the streams and lakes—and our vehicle was a dug-out.

But why a dug-out? Well, I take it that we fellows of offices, professions and books go camping out for much the same reason that Anteus touched the earth, and in that the latter was to our common knowledge the stronger do we become. Our servants have not yet decided, I believe, in what frail bark man first trusted himself upon the wave; but surely, next to the log *au naturel*, the dug-out log must have been the earliest means of transportation upon the water.

So, in selecting a boat for our trip, I had severely discarded the canoe and the bateau as too intricate, complex and civilized, and joyfully accepted the dug-out as nearest the bosom of nature. And now I floated away in my hollow log with all the zeal of an old cave-dweller with his paddle and fish-headed javelin.

Our dug-out, or pirogue, as the habitants call it, once stood a noble piece of the forest. It was a single pine log, twenty-six and a half feet long and two feet four inches wide, rudely hollowed out, and the ends roughly hewed into bow and stern, somewhat after the model of a bark canoe.

The crew numbered three, my two guides and myself. The guides were brothers, James and George Dall. George, the light and festive bachelor, paddled in the bow. James, the dignified, weightier father of a family, wielded his mighty paddle in the stern. Last amidships on a buffalo-robe, with fishing-rods and a light folding-piece on either side. Our plunger was stowed close behind me, and made a most acceptable backing.

Thus we sailed across Beaver Lake—a forest-girt pool dotted with lily-pads, and so shoal that we touched bottom with our paddles at every stroke. We gain the outlet, and glide into the dead water of Beaver Brook. Trunks of fallen trees reach out toward us from either sunny shore, their withered branches covered with long moss. Then the banks grow closer and higher, the current increases, and the stream changes into a rippling brook. The guides change their paddles for setting-poles. Faster runs the brook and shoaler grows the water, till at last, with a gratine jar—a sound I soon learn to hate—the dug-out grounds solidly on a pebbly bar in mid-stream.

The guides jump overboard, and haul and shove the pirogue ahead. This is hard work. I lighten it two hundred pounds by taking to the water myself, and abandon my luxurious seat on the buffalo-robe for a chilling wade in Beaver Brook.

We toil on, floating our wooden canoe through the deep pools, lifting and shoving her over the shoal bars. But worse than this is in store for us. Round a turn in the brook we come upon a mass of fallen cedars lying squarely across the stream. It would take too long to how a way through them, so, by putting out the last pound of muscle possessed by the entire crew, we lift, shove, pull and drag the pirogue over the jam.

Our afternoon was spent in dragging across bars and hauling over windfalls, with now and then the breathing-spell of a deep pool, over which we thankfully floated. This run would hog and destroy any other kind of boat. My respect for the dug-out was continually increasing.

While shoving over a fallen cedar a foot above the water, the pirogue sticks in the middle. As we draw breath for a fresh shove, Jim observes, gently: "A fine place for a camp on the bank up there to your right, sir. Plenty of good wood for the fire, too, sir." I look at my watch; it is half-past six. "Maybe we mightn't find so good a chance for a camp further down stream, sir."

I take the hint. Pirogue bags where she stuck. We unpack tent and needed stores, and pitch our camp on the pretty bluff.

Our tent was in form like a shed—a roof and two sides, but entirely open in front. I was seven feet wide, seven deep, and seven high in front sloping down to the ground behind. Made of the lightest duck, it weighed but a few pounds, and when not in use was rolled up and shoved into a bag twenty-four by ten inches. It was pitched on two upright poles, and stretched tight as a drum, and held in position by side and from guys or ropes.

This was our "house in the bush." Jim cut wood for the fire; George, spruce boughs for our bed. Tent is pitched, fragrant bed laid, fire crackling, and supper cooking before darkness comes on. We eat by the light of the flames, the forest gloom lightened by the bright circle around.

The guides chat with each other in French, and with me in the same tongue as long as I understand them, only changing to English when the expression of my face shows that they have got beyond my depth in French.

My companions turn to a good illustration of the vigor and tenseness of the French language, and its power to hold its own and increase when brought into contact with the English. Jim and George talk of pure English stock. Their parents were the children of British soldiers and their British wives, members of a military colony settled by England in this wilderness. The colony received many privileges, and its original members drew rations from the English Government as long as they lived.

But the Anglo-French settled around this colony of Britons. The two languages came into competition, and today the French is victorious, while the English has almost disappeared. My guides, the grandsons of British soldiers, although speaking English, prefer French, and always use it when talking to each other; while the children of J-mes, who married an Acadian, neither speak nor understand a word of our language, but use French exclusively.

Some fresh logs are thrown upon our birchen andirons; the great gray buck-log glows away, and the flames crackle and leap on high. We sit on the fragrant boughs of the spruce, and feel the fire that bars the whole width of the open tent, and fall asleep, watching the sparks course upward past the tall dark tree-tops, and lose themselves amid the stars of heaven.

The song of a bird awoke us. It was still dark; a dismal fog filled the forest. No sign of day was given to the eye, but the wild bird's song told us surely the day has dawned.

It was a plaintive little twittering—a lone voice of the lonely wood—that ushered in this August day. How different from the full chorus of a thousand songsters that heralds the dawn of a day in spring!

Soon dull gray light began to filter down through the dark gray fog. Then the song ceased. Dawn had come to our dimmer eyes.

The cheerful fire had turned into a feathery mass of white ashes, where one live coal glowed like a fiery eye. Over this George builds a co-honse of chips, and is soon rewarded with a blaze. I take a plunge into the stream, and before I am fairly dressed, G-ge calls to breakfast—buck wheat cakes smoking hot, fried fat pork, and a steaming cup of coffee. We eat, or jog, or pump, or hoc, and with tin plate in lap, make a royal meal.

"Will you have some maple syrup on yer cakes, sir?" "Of course I will; but where did you get this luxury?" "O, we reduce it, sir, with water from our block o' maple sugar."

Delicious syrup it was, too; and the buck wheats were no fancy, fragile, hotel affairs. Each cake was just the bigness of the frying-pan, and half an inch thick; light and palatable they were, though, and in the woods, I am sure you could cherish any animosity toward them on account of their size.

We struck camp, packed our traps, pushed the pirogue over the fallen tree, where it had hung all night, and poed down stream. It was but twenty minutes past seven. The river f-g broke in rifts overhead, and the warm blue sky looked through. The brook grew deeper; our dug-out-s w ill grated on the bars, but we pushed her over without jumping into the water, and poled on d-y shod and thankful. Soon a large brook poured on our right, and with its added volume we glided smoothly along.

Now the current becomes sluggish, the water dark and deep. We cut a rudder-scamp, through which the stream winds and twists like "the sinuous Songo." The alder bushes protrude into the water from either bank, their long stems interlock, and their branches form a plated leafy barrier across our pathway, the brook, which runs under the thickets, and washes as completely as if it flew into the bowels of the earth. Paddle and pole are useless; we lie flat on our backs, catch hold of the network of branches overhead, and pull the pirogue through the jungle that chokes the rivulet. We grope our way slowly. The boughs grate, rub and scratch over the canoe and ourselves, their leaves all dripping with the morning mist. I was the blindest sail I ever took. Better a "oungon o' log" on the open sea.

So we crawl on for a mile, threading the labyrinth of an alder swamp, then with a cheer shoot out into a rippling river thrice the size of our brook. The broad current lapses between pebbly beaches, a stately forest rises from either bank, wooded mountains tower subwart the vista of the stream, and overhead smiles the clear blue sky, into which the last r-gged vestiges of the fog are dissolving.

We stand erect in the canoe, stretch our necks and arms, devoutly thank for a clear sky and an open stream. Then we run the pirogue ashore on a gravelly bar, cast overboard a cargo of leaves, twigs and broken alder branches, bail out, and dive ourselves in the sun, and shove off down the Gateno River, dull hills past and fairer hills ahead.

The water was clear as crystal, yet of a tawny color, like dark amber. It rippled high yellow over pebbly bars, swirled dark and deep and brown round the broad crescent of a curving pool, then rippled on again. Our canoe slid along on its glassy current through a princely forest. The regular splash of the setting-poles into the water and their sharp grate against the gravel bottom were the only sounds that broke the restful calm. Soon Jim chants a quaint French song, and the poles swing in time to the tune. We glide through a wide interval, covered with rich tall grass and dotted with stately elms, which rise like Corinthian columns from the plain.

Now our river strikes a spur of the mountain, is deflected to the north, ripples through a stretch of forest, then opens out into a swampy evil, overgrown with tall rank reeds and grasses, through which the passing breeze waves like a running fire.

Jim ceases singing. The guides noiselessly show the poles away and take to the paddles.

"Are you ready, sir?" asks Jim.

"Ready for what?"

"Here might be a moose along here, sir, or a caribou, perhaps." Out springs my gun. "They comes down to

places like this in the summer, and wadea out into the water up to their necks, and browses round on the grass and lilies and the like o' that, sir; and if you paddle along quiet like this, maybe you'll get on 'em, but if they hears yer pole strike the bottom, never a one'll you sit whatever—they'll be off before ever you comes in sight. But we'll soon come to a banty chance for 'em now, sir, in a boggy to yer right."

"And who's the boggy?"

"That's an Injun name, sir; but maybe you've heard it called *logan*, or perhaps *poke-logan*. They's all Injun names for a place where the dead water backs up out of a river, and makes a kind o' shall-r pond like up into the grass and swamp. But look out, sir," added Jim, dropping his voice to a whisper—"we're right on it."

The pirogue drifted slowly past the mouth of a shallow lagoon, covered with lily-pads, fruited with reeds, and skirted by the forest. We intently watched every object as it slid into view by the narrow mouth of *logan*. Every instant I expected to see a branching pair of snipe arise with a splash as a moose bounded from water into cover. But the lagoon was passed without sight or sound.

Is it merely a coincidence that the sheet of water the Indian calls *logan* we name *lagoon*, from the Italian *laguna*?

As there are no moose, Jim and George take their poles again, and our long hollow log is propelled steadily through the still water of the broadening, currentless river.

Just as we were about to reach the edge of the water, head and neck raised in a perpendicular, and stiff as a skewer. He looked so oddly, standing bolt-upright, with his head pointing to the zenith, that, although we passed within three feet, we made no effort to catch him. I soon regretted that we had not added him to our supplies for the pot, so we hacked the canoe to rectify our error.

"It's a young 'un," quoth Jim; "he can't fly; that's why he was a prayin' with his bill up. This pole is the boy for him. Jest you look here and see me take him in."

As he spoke the water in front swung out of the bush and flew up stream. I at once shot him on the wing. Jim had turned his back on the bittens in disgust the instant he flew, and looking at me as I raised my gun and fired, exclaimed, "Mou Dieu, monsieur, what kind of a gun is that as goes off before you take aim? Was it an accident, sir, or did you fire at anything?"

"Look ahead," I answered.

Jim turned around, and now saw the bittens lying dead on the water's surface.

He picked him up with a mystified expression, and looking at me, asked, "Did you kill him, sir?"

"Yes."

"When you fired then?"

"Of course."

"And the bird a-flyin' through the air all the time! Well, sir, I never saw that thing done before, and you're the greatest hunter for a gentleman that ever came to these lakes."

Imagine, my sporting friend, who you can out down a dozen woodcock in cover without missing a shot, how remote those lakes must be where shooting on the wing was never heard of, and bringing down one lubberly bittens in the open is sufficient to establish one's reputation as a great hunter!

We soon saw a flock of shell-drake swimming on the river. As we drew near, they scampered away over the glassy surface at great speed, using their wings as paddles, and spabbling the water into spray. Each one left a double wake behind him, and all together they looked like a fleet of miniature shells, their stems racing down river, all steam and safety-valve tied down, and paddles whirling around in an king haste.

They will not go far. It is "out of sight out of mind" with a sheldrake. So we paddle cautiously down stream close to the bushy left bank, sure of finding our game wherever their fears left them. Reaching a height in the stream we lie down level with the sunwale. The long dug-out swings round the point as idly as a drifting log. We raise the sheldrakes swimming in mid-river. They eye our log suspiciously; they doubt, they fear, they draw together for another camper. This was the sportsman's opportunity for a raking shot. I stop three of them dead with a shot from the right barrel, and drop a fourth with the left as the flock scuds away out of danger.

As we pick up our game, Jim remarks, "The gun is better than the rod to-day, sir."

True enough. For though I had cast my most tempting flies over many a goodly pool as we glided down stream, not a trout had yet risen to the lure. Now we push on, the river-banks grow lower, the woods more open, glimmerings from a distance shoot between the tree trunks, little vistas penetrate the forest, till at last, rounding a turn, the broad expanse of Great Eagle Lake bursts upon our view—a broad sheet of silver water nine miles long, lying in the lap of wooded mountains, hasking beneath a summer's sun.

Looking at my watch I find it is but twenty minutes past ten, only three hours since we pushed off from our camp, yet we had run many miles of brook and river, and experienced enough of pleasure and adventure to fill an ordinary week.

But one thing we had not seen on the whole route, a single good camp ground—a fact to which Jim repeatedly called my attention, and which he well knew showed the wisdom of his last night's choice. We pulled ashore on the bank of this lake, stretched our limbs, took a lunch, bailed out, and soon were *en route* again. Selecting an attractive east of large fields, I trolled there far astern to entice, if might be, the unwary of the lake, and to give me a little more pleasure. There was a breezless summer day as we paddled down the Great Eagle. The lake lay like a mirror among the virgin hills. We could see nine miles over its glassy surface, to where a notch in the wooded hill crest betrayed the outlet. Mountains clad and plumed with forest primeval rolled up in giant undulations on every hand. No civilized habitation had ever desecrated this solitude. It had ever been free from the sound of the hammer as the Temple of Solomon. Unbroken wilderness, a blue-sailed lake, brimmed by the eternal hills, filled with the hush and best of a summer noon.

George and Jim, bow and stern, kept their paddles dipping in perfect time; the regular whisk of the keen blades through the water whirled broke the noontide calm, and seemed at last the monotonous lullaby of the lazy day. I was getting drowsy; my hand dooped ag-ainst the pack behind. Jim rolled up the end of the buffalo-skin for a pillow, and dozed to sleep on the beach yonder!" It was George's voice that spoke. I was wide-awake in a twinkling, and glancing in the direction of his raised paddle, saw

a black speck over a mile away on the narrow strip of beach between woods and water.

Can it be?—yes, it moves—a hear! Glorious!

The black dot passes down to the edge of the lake, pauses, moves along the shore, runs out upon a low sand-pit, and appears a silhouette against the bright water beyond. "See the cub with her!" whispers Jim. "But the cub stands motionless—a tuft of tall grass, while the bear vanishes over the cape."

The guides dip their paddles deep and strong; the pirogue glides swiftly, noiselessly over the mirror of water. Not a word is said. I proceed to get ready. My only fire-arm was a 7½-pound 12-gauge double-barrelled shot-gun—a light, handy piece for snipe and woodcock. I had brought it with me hoping to make an agreeable diversion in the fish and pork diet of camp life, in case we should fall in with duck or prairie-ge.

As I was loading cartridges with Nos. 6 and 8 shot at home a few days before, I thought, "What if I should see a moose, or bear, or caribou?—so I loaded eight shells with nine buck shot each. The shot were as large as pistol bullets, three of them exactly chambered in a No. 12 shell. I carefully placed them in three layers of three shot each, with a thin wad between each layer."

I drew my gun out of its case, slipped in a couple of the buck-shot cartridges, and put four more in my pocket. We were now close to the littler side of the cape. George lies down in front, the same as usual in the stern; pirogue moves ahead each by inch toward the point of the cape; I sit with gun full cock across my knees, my neck craned out, scanning every object on the further shore as it comes into view over the low sand-pit. Slowly we draw on round the cape; the whole further shore lies before us, but no bear. All was as silent as the sunshine.

As we sit speechless the chattering of a squirrel sounds from the forest. Instantly the guides nod to each other, and dip their paddles. Noiselessly the pirogue touches the beach. George picks up his axe and steps ashore. I follow with my bird gun. The squirrel still chatters angrily from the depths of the wood; George hears not a whisper, but his face is wreathed in the pleasantest and most fantastic grimaces, and he points continually toward the chattering with his axe.

A few stealthy steps, and we gain the edge of the woods. We peer in—nothing bear-like to be seen. Cautiously we press the branches aside, and silently creep on.

The forest is so dense, the sun's rays in the deep gloom of the woods I recollect I have in my shirt sleeves, and consider for a moment the probable resistance a thin woollen hunting shirt would offer to the claws of a bear.

The forest we had entered was a dense growth of cedars, mixed with spruce and pine. The tree-stood close together, with low branches, and were plentifully interspersed with windfalls, lying breast-high on rotten branches, and forming an admirable natural abatis against our advancing column of two armed with axe and shot-gun.

George moves on his back straight for the squirrel that still chatters and scolds and swears from the depths of the cedar jungle. I year to the right. We worm ourselves between the thick trunks, and under the tickler branches.

A low "Sil!" catches my ear. I turn toward George. "Here he is!" is written all over his face. He points directly ahead, then shakes his axe, and points and points again.

I look, stretch up and look, crouch down and look, but see nothing save some tree trunk and a broken twig. George grows impatient. He thinks I do not understand him.

"Le voici! Here he is!" he hisses. But Bruin hears as well as I. "Non le voit! There he goes!"

I hear a whine and a grunt that remind me of a menagerie, and through the thick cedar trunks and the dead branches of a fallen pine catch a fitting glimpse of shambling blackness.

I fire a snap shot, as I would at woodcock darting through the thick tops. The smoke hangs under the thick branches, and shuts out all before me.

"He's down! Nous l'avons!" yells George. The report of the gun has broken the spell of the forest silence, and George changes from a serpent to a tiger.

"No," he cries; "he's off again. Fire!"

I fire my left barrel through the smoke with "eye of faith," and crumming in a couple of fresh cartridges, George and I rush on, if any mode of progress through a tangled cedar swamp can be called a rush. We kick and wrest off the dry twigs and branches, scum over the fallen poles; but the bear? Nowhere a sign of him. Nothing but forest and sky.

George keeps on; I do my best to follow. He glides along like a cat, in one hand an uplitted axe, descending now and then to sever an opposing bough. He goes over the ground two feet to my one.

"Le voici, qui s'en va! There he goes again! Venez! Come on!" cries George; and I perform the speediest c-ming on of which I am capable. Slow enough it is, though.

Every few steps the tangled branches of a fallen cedar must be burst through, but on I press and scramble and tumble and crawl till George is reached. He stands on a prestrate tree, axe upraised, head bent forward and to one side—an admirable statue of alertness.

"Ecoutez! Listen!" he whispers.

A moment's stillness. Then a crackling, loud and near, up the hill-side. George jumps through the thicket, and springs up the slope like a flash.

Follow him? I could as easily flit up to heaven without wings. So I scramble on through the level swamp. It is said that he will tell us where he is, and we will follow. The burden of my two hundred pounds h-bumped me in this swamp race with a bear. Every tickler I crawled through, every windfall I scrambled over, told me, till at last I was forced to halt. With perspiration bursting from every pore, and breath only caught in gasps, I leaned against a tree and imagined the feelings of the losing horse in a race. My heart beat loudly as the drumming of a partridge, the whole forest seemed to reverberate with its quick thud, thud, and, and the blood leaped to head and temples till my brain was in a whirl.

While the trees were dancing before my reeling sight, I thought, "What an unlucky wight am I! After twenty years of small game shooting, to at last actually meet a bear in his haunts in the forest, get within thirty yards of him, on the point of gratifying one of the petambitions of my life, and then to haul away a couple of shots like a fool with the buck game, while my noble quarry coolly makes off, and I am left empty-handed!"

Worse than that the brute runs away so slowly that George sees him again and again—keeps up with him, in fact. Alas, my "too, too solid flesh!" Were I a light, nimble fellow like George, I might have shot a bear—yes, a half-dozen times over. And then my gun. What a fool, to

bring a little snip-gun into the woods in quest of the king of the fore-its, the best before which all others equal, from the At antic to the Mississippi, and then to fire away at his lovely game as I flip pull trigger on a woodcock! One bird missed, up I would another. But where shall I find another bear, which I have been all my life getting up with this first one? Then if I had only shot him, what yarus I would spin to my sporty friends.

"Le voci endear! Here he is again!" sounded George's voice, loud and clear, through the forest, and cut short my reverie.

My heart stilled and my brain staided in an instant. Again I sprang forward. "I may get him yet; I may retrieve my fortunes," thought I, as I dragged, crawled and pushed myself ahead through the underbrush.

George hears me crashing along, and shouts from the mountain-side, "He's makin' down by the lake. Right ahead of yer. Look out for him."

I scramble on, impelled by one single strong desire—to get one good fair shot at that bear.

I keep on and on. Not a word from George. At my right, through the leaves I catch bright glimpses of the lake sleeping in the sunlight. I slacken my pace. All is silent as a sanctuary. "Well, the bear is off, and George with him. I'll keep on slowly, cool off, and perhaps get my 'second wind' that we read about, whatever that may be." So I think, and myself up on a fallen cedar that lay breast-high across my route, swing my legs over, sit and rest for a moment, then resolutely drop down on the other side.

"Khar-r-r-r-r!" And from under a cedar only seven paces away a mass of blackness springs for me, sudden and swift.

I have not time to take a step. Had time allowed, there is no opportunity. The fallen cedar is at my back; I am pinioned between its branches. But no thought of retreat or dodging enters my mind. There is time but for one single instant that is shot. My gun is in my right hand, both barrels full cock. Instantly I pluck it to my shoulder, yet in this instant the whole forest seems, with the on-dashing black brute in the centre, is accurately and indubitably photographed on my sight. I see the bear leaping on all fours, hind quarters high, fore-shoulders low, head down and askew, snout turned to right, lip curled up like a snarling dog, teeth chattering, and black eyes gleaming with a devilish light. On comes the monster with his vibrating, grunting growl, *Khar-r-r-r-r-r!* As the gun swings up to my face, I glance along the barrels, and see the snapping teeth of the leaping brute within four feet of my gun muzzle. I fire. The bear falls forward with a heavy thud at my feet.

I lower my gun and, with finger on the left trigger, press the muzzle against the monster's head. He moves not. Every fibre of my being thrills with wild, intense delight.

"Dead!" I yell, with savage glee.

And from up the mountain-side comes George's answering shout, "Bravo, mon frere!"

And now comes George himself, crashing and bounding down the steep, and swinging his axe aloft. He jumps over our fallen foe, embraces me, dances about like a true Frenchman, shouting, "Bravo, mon frere! bravo, mon frere! Nons avous vaincu notre ennemi. Sacre! You old black devil, you! Voici—here you are, mort. Aha!" and grasping me with both hands, words fall and we give voice to the wild joy of victory in one long "Hullo!" that wakes the slumbering echoes of the summer lake. The veneer of a thousand years of civilization dropped from us like a garment, and the original savage, the fighting animal, the truman within, laughed with a zest that civilization knows not of.

Jim hears our shout from down the lake, catches its meaning, gleefully halloos in reply, and paddles swiftly to us in the pirogue.

"Here he is, Jim," quoth I. "Voici lours."

Jim peers over the shaggy brute, looks up, takes off his hat, and bowing toward me, says, with the air of a diplomat offering a sentiment at a royal banquet, "C'est bien bon, monsieur, beaucoup de pouvoir a votre bras, et meme plus a votre fun."

Taking Jim by the paws, we slid her down the bank.

"She'll weigh about four hundred," said Jim, reflectively, as we lifted her into the pirogue. "But then they're dreadful lean in summer. Late in the fall, now, she'd go another hundred, sure."

Jim picked up his axe out of the pirogue, stepped ashore, and heaved a smooth blaze on the trunk of a large cedar that leaned furthest out over the lake.

"We're in no hurry, sir," said he. "And 'tisn't every day as a gentleman kills a bear. So I thought that maybe you might like to write something about it here. And if ever you comes this way agin, you'll know just where you shot her. And if you never happen on the lake any more, well, other gentlemen and guides and trappers will be along, and I'd like to have them know what we done here this day. So maybe you'll put our names down with yours on the tree, sir."

With a smile at Jim's naive request, I wrote with lead-pencil on the smooth tablet of cedar this inscription:

BEAR POINT.

SHOT A BEAR AUGUST 31, 1920.

W. W. Thomas, Jr.,
George Dell,
James Dall.

I read it to Jim. He was delighted. Poor fellow, he had never learned to read.

We paddled to a shaded bit of pebbly beach, the bow of the dug-out almost submerged by the added load. Here the guides laid Bruin across two logs and, wetting their hunting-knives, commenced to strip off her black jacket.

The skin was stripped off at last, with claws, head, jaws and teeth carefully left on. Then we salted it thoroughly on the inside, rolled it up, bound it tightly together with elder withes and stowed it in the bows of the dug-out. The head, with ears still erect, looked backward and faced us. From the carcass we cut steaks enough for the trip, and wore soon on our course once more, paddling down the lovely lake.

"Yeh excuse me, sir," said Jim, "if I call to yer mind that the ro-day, then we had only how'd his gun is better than the ro'd to-day. Then we had only how'd his gun is better than la seigneurisse grinning at you from the bows," and Jim relapsed into silence in the happy consciousness that he had predicted the whole adventure.

The shadows lengthen, and the lake grows dark along the western shore. The rounded wooded hills present a peculiar softness of outline and surface. The forest which covered them seemed soft and yielding as tufted moss. One could imagine a giant hand squeezing these forest-clad mountains

as easily as a sponge. This tufted softness is a marked characteristic of our Northern woods. It is in noticeable ridges of maple interspersed with beech and birch.

I troll a cast of flies. Soon I am greeted with a rise, and reel in a half-pound trout. I take another, weighing a pound and three-quarters, and as we paddle past the mouth of a r-aring brook I hook a beauty that gives fine play, and brings down the scales to two and one-quarter pounds.

We reach the foot of the Great English after a nightfall and camp on a grassy plateau. Lying on our tent we could look out upon the whole expanse of the lake and hear the water rippling away through the outlet close beside us.

After a hearty trout supper the guides soon fell asleep, the stars looked down at themselves in the lake, the camp-fire shot its sparks upward, and I lapsed into a dreamland where bears of gigantic size and most grotesque shapes were jumping at me from behind every bush.

At earliest dawn Friday I was out with Jim in the pirogue, casting the foot of the Great English brook tolled over gray stones into the lake. White wisps of mist flitted like ghosts over the water and vanished up the mountain side. The trout rose briskly, and I caught two dozen before George called to breakfast.

In the forenoon Jim and I paddled up the western shore on a voyage of discovery. We found a large brook, but its outlet was too shoal for trout. We eaubt but one. Returning to our trout hole of the morning, I took two beauties at the first cast, one three-quarters of a pound, the other a pound and three-quarters. Soon after a pound trout and two chubs, one a pound, the other two pounds and a half, fasten at once to my three flies, and sally buckle and twist my little ten-ounce rod before I can sweep them into the landing-net, Jim holding out of the other end of the pirogue to receive them.

The inquisitive musquito and the investigating black-fly began to trouble us for the first time on the trip.

"Would you like a smudge, sir?" quoth Jim.

"Yes, we'll light one when we get to camp."

"But I'll show you a boat smudge, sir," Jim continued, shooting the pirogue ashore with one shove of his pole.

He pulls four long strips of bark from the nearest cedar. The strips are about four inches wide and three feet long. Jim lays them one upon the other, binds them carefully together with three elder withes, strikes a match, lights one end of the slender bark bundle, swings it a dozen times through the air, then places it at my side in the stern.

The lighted end projects a few inches over the water; there is no flame; the bark slowly smolders; thin wreaths of fragrant smoke rise as from a censer; the flies depart and musquitoes sing disconsolate beyond the charmed cloud of incense floating from the cedar.

"They smoke best when the bark is green," said Jim, removing his pipe, "and one like that will last you all day."

The trout rose briskly, sometimes leaping into air to meet the descending fly. The fishing was excellent, but I could not get absorbed in it. The bear was springing at me through it all, and even when I was casting the fly most gingerly I was shooting the bear over again a few feet.

The mist of morning had not all vanished; a few laggards hung tangled in the tree-tops two-thirds way up the mountain-side; others came to their rescue. The mists thickened; they fell like a pall down the mountain and hid it from view. This was a natural barometer, and a falling one. A fog spread over the lake, slowly clearing the sky, and before noon the pattering rain drove us to camp, not, however, till thirty ruddy trout lay gleaming in the bottom of the dug-out.

We brace up the guys of the tent and lie down within, tent and fire keeping us warm and dry through a pouring rain.

While discussing the broiled breast of a bittern at dinner, I bear a sudden rissling behind me, and discover two pretty spruce partridges tied by the legs to a tent stake.

"I saw 'em on a tree," explained George, "while you was off fishin', and I shot 'em."

"But how did you snare them?"

"With this," he replied, taking up an alder pole eight feet long, at the end of which dangled a slip-noose of twine. "They always sticks out their necks to look at you; so you can slip the noose over their heads and take 'em in very handily."

"We are indeed in the backwoods; even the game — are so unacquainted with man, they themselves look to us."

Our larder now presented a goodly variety. There were bear steaks, bittern, duck, partridge, trout and chub. Verily, one with rod and gun need not starve in the Canada woods.

At sunset the rain held up a bit, and I took a dozen more trout, bringing my basket for the day up to sixty-six, weighing forty pounds. Sixty-four of them I captured from one spot in the lake—at the mouth of the mountain brook. The guides carefully salt all the fish not needed for immediate use.

The clouds thicken with the darkness, and we fall asleep to the music of the rain pattering on the tent just above our noses.

Day dawned cold and gray. The rain had ceased, but great masses of cloud hung black over the lake, and rested low upon the mountains. I skillfully cast the fly, but no trout rises to the glittering lure. A great suspense fills the air. Suddenly far up the lake a line of foam leaps across the water from shore to shore. Then comes a roar like a deluge rising gale. But there is neither wind or wave. A deluge bursts over the lake, lashing the water into spray, and with black edge of cloud above, and white edge of foam below, the rain column advances. A bolt of lightning darts through the gloom. The crash lets loose the gale, and we scud back to the landing before a howling thunder-storm.

For four hours the rain fell in torrents. Lightning struck the tall trees all around us; the thunder crashed overhead, echoed from the mountains and reverberated along the distant shores.

We three humans, huddled together in the tent, occupied but a very insignificant position in this grand commotion of nature. But we heartily congratulated ourselves on our tent, for it stood up bravely against the storm, and, save in one little spot, where the corner of a box had passed wool and warp out of line, it never leaked a drop.

The storm drifts away to the east. The thunder dies to distant mutterings; the wind drops; the rain ceases. A strange silence pervades the air; a paddle dropped in the pirogue sends a fish report of a caubon.

We emerge from the tent, stand erect and stretch ourselves.

A bird twitters from the thicket. That means fair weather. We strike tent, bid adieu to the Lake of the Bear, paddle into the swift, glassy current of the outlet, and rapidly glide down stream under a lowering sky.

A spotted sandpiper skims over the water ahead, lights on a rock in mid-river, teeters, tilts and bobs his little little body, runs across the rock, tilts again, then flits away with quickly vibrating wings.

The current is swift, and we shoot gayly along. Now and then on a rocky bar, the pirogue jags against the bottom. Soon we come to a mile of foaming rapids. George kneels in the bow, his projected paddle in the stream, cutting the water with its thin red blade like the out-reaching submerged prow of a marine ram. Jim stands in the stern ready with his setting-pole. George's eyes are intent upon the river, boiling over sunken rocks, which lie in wait, like foaming teeth, to devour us. Safely he pilots us onward, his broad paddle moving through the water with the slow, quiet motion of a trout's tail as he lazily scans the current.

Suddenly George gives a broad quick stroke, like the flip of a trout's tail when he darts away up stream. In the twinkling of an eye, Jim follows up this motion with the setting-pole. The canoe sheers aside like a frightened horse, and slides by a submerged rock, only to plunge on toward another, and be saved again by another sheer. It was quick work, bow and stern, to safely shoot the rapids.

At a turn in the river we come upon a solid jam of old cedar trees, root and logs, extending from shore to shore. This obstacle we cannot get over, or under, or through.

Here we make the only carry on the trip. Landing on the left bank, we transport our baggage through the woods a short distance to where the Gateno flows free again, above across our dug-out, launch her, reload cargo, and are en route once more in less than half an hour.

The brooks that tumbled into the river were swollen and muddy with the recent rains. The Gateno itself was increasing in volume, and we met but the smallest and most foolishly noisy trout to my fly in the rising water.

Some miles down stream another lake opens out before us. A golden-eye duck comes flying swiftly in from the open water. As she specks past us I drop the trout rod, pick up my gun, shoot the duck, and salute the lake with the same discharge.

This sheet of water is three miles long, yet such is the plenty of lakes and paucity of names in this wilderness that the only appellation yet granted to this pretty lakelet is "No. 3."

On the side down the right shore rises Sugar-loaf Mountain. Fires have swept over it, and burned off both timber and soil. Its naked peak of rock, scarred and burned, lifts itself abruptly from the lake, and towers aloft like a gigantic born.

Down the mountain side tumbles a brook. Near its mouth, when the lake is low and the weather hot, the high trout and drink in the cool flood from the hills. Now the brook is a tawny torrent, yellow as Father Tiber, and the trout are off in quest of clear water. At all events, they are not here.

On a plateau, in a grove of giant cedars, we pitched our tent. Sugar-loaf rose behind us; the babble of its leaping brook ever sounded in our ears, mingling with the murmur of the lake along the pebbly shore. Toward evening the clouds part, and the setting sun throws a bridge of gold over the water. Darkness gathers. The moon shines bright over the western hills. I saddle out alone on the silvery lake. Sugar-loaf towers dark and threatening in the east. The smoke from our camp curls up like a column above the air. Sky, lake and mountains are asleep in the moonlight. I seemed poised in infinite silence. Then the wild wail of the loon quivers through the air—voice of the lonely lake. I turn the prow of my canoe, and paddle back to Innawa companionship.

Sunday dawned bright and fair. Since trout had failed us, we breakfasted off bear steak, then leisurely started on our "Sabbath-day's journey." Leaving Lake No. 3, we paddled down a mile of currentless river, in whose tranquility the banks reproduced themselves, on across the mud basin of No. 2, through a thoroughfare, and into Lake No. 1.

We cross No. 1, and drift down stream to the Forks, where the Gateno empties into the rapid Idalto. Here we camp d, and passed a quiet afternoon.

Camping out makes great changes in one's taste and appetite. In a house, I abominate salt pork. After this length of camp life, I crave it. Nothing else seems so good and satisfying; nothing else so comforting as a piece of a column of white edge, bear steak and fried trout—all become a light, frivolous diet, like cake, puffs and tarts. Fried salt pork, and but slightly fried at that, is the only solid, substantial, filling food—the only thing that goes to the right place. I prefer it to all else, have even discarded butter, and placing a dripping out of pork on an inch-thick slice of dark Canada bread, make a meal fit for a king.

One other change. At home, I am a slave to coffee, and so sure was I that I could not get along without it that I brought an ample supply for the trip. My guides drank tea at every meal—black, poor-looking tea, too. Once I took a dipper with them. This led to a second trial. My liking for it increased, and now I prefer tea to any other drink, in the woods.

Next morning we found our pirogue leaking. The guides turned her over on the beach, dried the bottom with flaring torches of birch bark, and carefully poured melted pitch into every crack. Our ship was tight again, and on we paddled down the broad and swift Idalto.

All modes of travel, from the carole to the steamship, I know of none more delightful than paddling down a river through our Northern American forest. The winding stream ever changes the scene before you. Now a mountain, then the blue sky, fills the vista. Expectation is ever on the qui vive. Around the next bend you may come upon a moose, a duck may spring from the water, or a big trout leap into the air. On your gliding through the green forest walls, Nature shows her best along the river-banks. Rivers are not only thoroughfares for men, but for light and air, and toward the sun and the breeze press every green thing. On either side the woods come trooping to the river, *dona ferentes*. Here the forest offers its choicest gifts. Fallen trees lie their length out into the water. Pennants of moss wave from their withered branches. Bushes hang their bright leaves and flowers over the stream. Above, the choke-cherry and mountain ash display their red fruit; overtopping the trees rise the old forest giants throwing their thick-limbed branches and brightest banners athwart the river.

You recline in the canoe, borne on the current, propelled by swift paddles, and without dust, or jar, or noise, slide through the bright heart of the "merrie greenwood."

Thus for two days we dropped down stream, coasted along

the shores of deep lakes, shot turbulent rapids, and paddled on over the deep pools below.

At noon of the seventh day we sailed out of the Idaho upon Grand Lake, the largest of the chain, twenty-seven miles long. On the way the river from whose banks we had strayed into the wilderness, with our progues lashed upon Moreard's lumber-sled. We had "swung round the circle" of a hundred miles of forest, and were back again close to our starting point. On the hills across the lake were the "habitations of bread-eating men," the first we had seen for a week. Among them glistened the tinned steeple of the village church. The hamlet seemed a city to our forest eyes.

We paddle across the lake. The prow of the dug-out grates on the beach for the first time. I take a plunge into the clear water, and wash the camp out of me. Then we each shoulder a pack, bid good-by to our tough little ship of the forest and, striking into a woodland path, climb the steep slope of the lake basin.

As we emerge from the woods single file into a clearing, whom should we see moving in the stumpy field but Moreard the teamster? Since we left him a week ago on the borders of Beaver Pond we had not seen a human being. He swings his jeyn the will eyes bent on the ground and does not see us. Jim holds up the bear's head and gives a growl. Moreard jumps, he laughs heartily. "Aha!" he exclaims; "voila la bonne chance!"

Natural History.

MIGRATION OF SHORE BIRDS.

NAVY YARD, BOSTON, MASS., October 23.

Editor Forest and Stream:

I infer from Mr. Hapgood's paper in your issue of October 20, that he thinks that the *Lincoln* migrate as a body from their northern breeding grounds to South America, stopping only at intervening grounds for food and rest for a few days. That this is a mistake can be easily proven by passing a winter on the coast of Florida or on the coast of the Gulf States. Since my party to which I was attached, reached Charlotte Harbor west coast of Florida, in January, 1890, and remained there and on the coast until the latter part of May. Until the latter part of March great flocks of sand-pipers could be seen on every shoal and flat, and on the outer beach on the sand bars exposed at low tide or during the prevalence of an off-shore wind.

On the mud flats were large numbers of sickle-bills, willets, dough-birds, godwits, etc. On one flat, in a short time, I killed 54 sickle-bills, some dough-birds, and some of the larger sand-pipers. In the early part of April I killed one afternoon 115 dowitchers, and a few days afterward 123 dowitchers, 2 sickle-bills, 3 dough-birds, 1 calico-neck and 2 oyster-catchers. In May, at Tampa Bay, I saw a great many sand-pipers, found some eggs, and found a few blue-winged teal and little black-head ducks. I could not get near enough to the sand-pipers to identify them, but think they were either *pusillus* or *minutilla*. At Mosquito Inlet, on the east coast of Florida, I shot a few willet and grey-backs, and saw large numbers in April. The Keys, or small islands below Key West, especially the Marquesas, afford fine feeding grounds and are frequented by large flocks of *Lincoln*, and a few roseate spoonbills in the winter months. I have been told by officers that the Texan, Mexican and Central American coasts are frequented by an abundance of these birds in winter time. It seems probable that large numbers of all of the *Lincoln* stop on their southern flight and winter wherever they find, in warm latitudes, good feeding grounds, which are not hunted by man with the lead-mouthed and destructive shotgun. The Windward Islands do afford such good feeding grounds, and are more so than over them the vast plains and mud flats of South America. The physical conformation of Patagonia and the southern portion of South America is not such as to make it so favorable a ground either for feeding or breeding as the vast flats and swamps and level tracts of northern North America. That they do not breed during their southern sojourn is supported by analogy, and by the absence of "young of the year" when they come back to us in the spring. Some varieties of the *Lincoln* breed in the United States quite freely, and they probably do so, more or less, before the large game was killed off, and man turned his attention to them for food and sport.

I am of the opinion that the small yellow-legs (*Totanus flavipes*) and the jack-snipe (*Tringa maculata*) breed along the Mississippi in Louisiana; for in April, 1879, I killed a large bag of them and was told that they were "papatote," and were much fatter and more delicious eating in July. My informant thought they stayed all summer and bred in the neighborhood. The yellow-legs, at the time I shot them, were in small flocks, and differed such good feeding grounds, and the others around the edges of the pools in the newly sowed rice fields. The Louisiana French call several birds of different varieties "papatote." I think, for the description that one gave me could only apply to a plover.

I forgot to mention that I have only killed of the plover the common kill-deer, finding a great number of them in a flat, boggy piece of ground with a hundred or more Wilson's snipe. I know, however, of plover being killed at Key West and on the mainland during the winter. M. H. STIMONS.

[The term "papatote" is usually, we believe, applied to the Bartramian sand-piper (*Bartramia longicauda*).]

NEW YORK, Nov. 1.

Editor Forest and Stream:

I think Mr. Hapgood's article on the question of snipe and plover migration carries it about as far as possible. I found them in great numbers on the southern coast of the Caribbean Sea very late in winter, and it is probable that they scatter over a vast territory both north and south of that to winter, but what migrates they may be going further I can't imagine. Who should they cross the equator? My belief is that the birds seen in Patagonia go to that cold region to breed, and, when the propagaing business is over, migrate toward the equator as our birds do, but never cross it, as the temperature is hot enough for them long before they reach it.

They have good snipe shooting at Pernambuco and other places along the South American coast, but if those birds want to get into cooler quarters they would not be likely to come thousands of miles north when they could find the snipe by going a few hundred or a few miles south. I must believe that they fly each way from the equator until we have proof to the contrary, which it will be very difficult to get.

As to the course of our birds in migrating I know but little, but from that little I infer a great deal.

Coming from St. Louis to Chicago, several years ago, in April, I was as much astonished as a man could be by walking through a pigeon roost. Every acre of prairie land between the two cities was literally swarming with plover and snipe. As far as I could see the ground was speckled with millions upon millions of them; and this must have been the case all over the prairie, for there is no reason why they should have collected along the railroad. I have seen a continuous flight of pigeons in Ohio for weeks, but I never had such a conception of limitless numbers as that flight of plover gave me. They all seemed to be resting quietly except those that were flushed by the train.

On another occasion, at Providence, R. I., during a furious northeaster, about the 1st of September—the night being so dark that I could not see the air seemed to be alive with plover and snipe. I remained a long time outside listening to their plaintive calls, but howling it was kept up I cannot say. They seemed to be flying very low, and, judging from their incessant clatter, they must have been as "multitudinous" as they were on the prairie.

I doubt whether their ranks are being decimated to the extent that many suppose, but they are distributed so much on the feeding grounds along their route that I think most of them take advantage of a northeaster when they can, and pass by us in one night, only stopping at wild, unfrequented marshes along the coast, where they are not molested. A friend and myself killed over ninety yellowlegs on the coast of Maryland summer before last, in one day, and we could have doubled that number; but they will give that place, also, the "cold shoulder" very soon. DUDMAN.

FOOD OF THE CALIFORNIA INDIANS.

IN the November number of the *California*, Mr. B. B. Redding has a very interesting article on the "California Indians and Their Food," an extract from which we published a few weeks since. His description of the manner in which the Indians prepare their acorn meal will, no doubt, be new to many of our readers, and we reprint it here:

"The second night after we left Long Bar, we camped on the banks of a small brook, in a valley on the mountains near Coatesville. In the other hand we found that we were near an Indian camp. Curious to learn what the Indians did, I watched the women preparing the morning meal. To the bank of the brook they brought, in conical, water-tight baskets, about two pecks of dried acorns. These baskets, as I subsequently learned, are made from a triangular grass, that grows in the water near the banks of mountain streams, and are frequently ornamented in dark brown patterns, with the outer bark taken from the stems of a fern, *adiantum*, found in great abundance at high elevations in our mountains. The acorns were evidently of the growth of a previous year, as they were thoroughly dried. I have since found that, when readily obtained, the California Indians preferred the acorns from *Q. chrysolepis* or *Q. lobata*, perhaps because large, and yielding a greater supply of food than most of the other oaks.

"One of the women, seating herself on a ledge of rock, commenced shelling the acorns; which she did with great rapidity. An acorn was held with the point upward by the thumb and first finger of the left hand. A slight blow with a small bowlder in the other hand readily drove the kernel from the shell. The kernels were then laid into a basket, when sufficient had been collected, they were carried to a pot-hole in the ledge, which probably had originally been made by the action of the water in whirling a bowlder. Here they were powdered into fine meal, or flour, with one of the stone pestles, which are so frequently turned up by the plow in all parts of California. Upon arriving at the ledge, which was near our camping-place, the first thing the women did was to build a brisk fire, in which they placed small bowlders gathered from the brook. When sufficient acorn-meal had been prepared for their breakfast, a conical hole was made in the dry sand on the shore of the brook, into which the acorn-meal was poured. It was first thoroughly saturated with cold water from the brook, then one of the baskets was filled with water and set in a depression in the ground, the hot rocks were raked out of the fire and thrown into the basket until the water boiled. This boiling water was carefully poured over the meal in the sand, until all parts of the meal were saturated. I concluded that the cold and scalding water acted the double purpose of cooking the food and leaching out the bitter tannin.

"When sufficiently cooked, it was eaten without being removed from the sand; all squatted on the ground and helped themselves, by stirring with the first two fingers, until a mouthful was collected, when it was transferred. A few years afterward, iron pots and kettles became so plentiful that this system of cooking was abandoned.

"Many of the tribes near the southern coast used pots made of soapstone. The quarry from which this was obtained is found on the islands in the Santa Barbara Channel. Mr. Paul Schumacher, of the Smithsonian, has given a description of this quarry, and of the mode in which these pots were patiently quarried out with stone knives and scrapers. At some remote period, there must have been quite a trade or system of exchange between the coast and interior tribes; for I have found broken pots made from this soapstone in graves as far north as the islands in the southern part of Tulare Lake. Some of these pots were made so large that they would contain three or four gallons of water. Their shape was that of an ordinary iron pot. A broken fragment of one that I found at Atwell's Island, in Tulare Lake, showed that it had been quarried so that the mouth flared out, thus enabling it to hold a cover.

"One of these pots, uninjured and capable of holding about two gallons, was recently taken from a mound near the town of Tulare."

A few years since it was our fortune to spend a few months in Southern California not far from Santa Barbara, and being fully aware of the ethnological value of the stone implements and articles which we had met with in the ancient burial places of the aborigines, we devoted some time and money to searching for them.

The collection which we then made was, though not a large one, very typical. It consisted of a number of mortars of basalt and sandstone, pestles, *ollas* or sandstone and soapstone, the only cooking pot with handles that we have ever heard of, pipes and snips of serpentine, fish hooks of abalone shell, small pestles and mortars for mixing paint, flint knives and arrowheads, beads of various materials, *Wiza*, a stone mortar for crushing and increased as dishes, with a number of bones of the former owners of these utensils.

The search for these articles was most interesting, and as we sunk our prospect holes in one place and another on the site of the ancient villages our feelings were akin to those of the gold miner who has struck the color, and only has to go

a little deeper to reach the pay dirt. Had more time been at our command we would have returned with a collection of which we should have been really proud.

—BRAVE.

A FORMER teacher of mine, then and now president of a celebrated institute of learning, sought most earnestly to convince me, during recitation in mental philosophy, when the subject was under consideration, that animals have no faculty at all similar to memory or reason in the human species.

Once when there had been considerable discussion in the class, I attempted to relate an occurrence tending to show that my horse did have a memory, but the good Doctor exclaimed with more than his usual positiveness: "I tell you, sir, an animal never remembers." He then explained, not to my satisfaction, however, that the reason why a horse would take the road over which it had once traveled in preference to a strange one, or manifest fear at a place where it had previously been frightened, etc., was "animal instinct awakened by the law of association."

At another time when I related an incident which showed something wonderfully like reason on the part of a dog, the Doctor broadly intimated that if a puppy did reason it was because nature had made a mistake in the number of his legs.

I do not propose in this article to argue the question of memory or reason in animals, only by the relation of a few facts which have come under my personal observation, and which may prove interesting to those who, like myself, have a special fondness for the canine race.

When I was fourteen years old, and living near the sea coast, in Maline, I became the happy owner of a dog. He was a genial, winsome fellow, a mongrel in breed, black, with shades of buff near his eyes and on his breast, and weighing, when he reached his full stature, about forty pounds, and courageous even to rashness. In consequence of this last characteristic I named him Bravo.

When Bravo was a year old I went to live in a wild, mountainous country town in New Hampshire, and of course my dog went with me. Coons, foxes, hedgehogs, partridges and all sorts of game were plenty, and occasionally a wild animal would make sad havoc in the sheep pen or poultry yard. Bravo and I soon developed a perfect passion for hunting, and many days and nights we spent in the grand old woods.

I have said that hedgehogs were plenty, and as Bravo would unhesitatingly pounce upon any creature he came across in the woods (there were two exceptions after a while), I was not surprised when one evening he came to me with his mouth and head bristling with hedgehog quills. Some of them penetrated his head nearly half an inch, and it required all my strength, with a pair of pliers, to remove them. Could you have seen how well still he held himself during the operation, and how careful to place himself in the most advantageous position, and witnessed his demonstrations of thankfulness when at last he was free from their sting, you would have thought his "instinct" something wonderful.

That he remembered this experience, and, in consequence, exhibited something wonderfully like reason, the following incident will show.

Some weeks after the quill experience, Bravo and I started out for a hunt. We had gone perhaps half a mile into the woods, when, away to my right, I heard him give voice, running a hundred rods or so, guided by his bark, I saw him chasing an unusually large hedgehog. I halted when I saw what he was after, and waited for the beast.

Bravo made no direct attack upon the beast, but contented himself with keeping about six feet in the rear and giving vent to occasional yelps which seemed to express both hatred and disgust.

The hog was making, with its lumbering gait, for a large beech tree, and reaching it, commenced to claw his way upward.

Bravo waited until the hog was some four feet from the ground, and then, making a spring, seized him by one hind leg (a hedgehog's legs to the knee are devoid of quills) and yanked him to the ground, but so dexterously that not a quill touched him. Three times I witnessed this operation, and when, growing myself, hale the dog let the creature alone, and allowing it to climb high up the tree, brought it down with my gun.

For two years we waged a war of extermination upon these pests of the corn-field, but Bravo's wonderful instinct (?) preserved him from quill torture.

That Bravo understood more than the ordinary dog talk I am prepared to assert and prove.

While living in New Hampshire I had a brother residing four miles away, and when I wished to communicate with him, I would write a letter, call Bravo and attach the letter to a neck, and tell him to go to Jacob. Off he would go at railroad speed, and, reaching the house, bark for admission or bound in through an open door or window, manage in some way to call attention to his trust, go to the pantry and by the wag of his tail ask for payment in rations, and, upon receiving an answer to the letter, come directly back to me. Resting at my feet after such a trip his eyes would indicate more intelligence than I have seen in many human faces.

Obedient to my command he would go to any part of the farm, and, when the creature he found trespassing upon forbidden ground.

I remember one incident which demonstrated that he had a remarkable understanding of the English language, or profited by the experience of a disagreeable odor. He came sneaking to me once, acting as though he had taken an emetic, and fairly laced down with the perfume of the skunk.

I scolded him sharply for getting into such a fix, and told him, among other things, that if he couldn't kill skunks without getting his clothing soiled, in that way to let them alone. A few days after I was in the pasture with him, and saw him crawling along with all the stinkiness of a cat, his ears erect and his lips parted exposing his teeth; at the same moment I saw that the cause of his uneasiness was a skunk digging for mice, and totally unconscious of approaching danger. Bravo drew himself cautiously along until within a few feet of the essence peddler, and then, giving a tremendous spring, seized his skinship by the neck, and struck one snap and shake, dropped it and, springing quickly away, came bounding back to me with yelps of satisfaction, leaving the skunk dazed.

He was never known to get scared up afterward. Woodchucks he considered his especial prey, and would even visit neighboring farms hunting for them. If he got one into a hole where, in consequence of rocks or roots, he could not dig it out, he would hide himself a short distance away and patiently wait for the creature to come out; and when it did

Game Bag and Gun.

STATE PIGEON TOURNAMENTS.

MASSON, Mo., Oct. 24, 1881.

Editor Forest and Stream:

I am much pleased to see that you have taken a stand against pigeon-shooting at the annual meetings of State sportsmen's associations, styling themselves Game Protective Associations. I have always looked upon these annual pigeon slaughters as a little out of place, and not in keeping with the claims of the gentlemen indulging in them.

It must be said to the discredit of State associations that they frequently meet and transact no business whatever, except to hold a "grand shooting tournament," elect new officers and locate the plan for holding the next annual meeting. If pigeon-shooting must be done, let it be dropped from the State meeting, instead of being the principal feature. It is my humble opinion that in our own State association there are a large majority of the members against the practice of pigeon-shooting at our State meeting. It is true we have held State shoots in connection with our State meetings, but unlike some other States we have transacted much other business of great importance. It is through the influence and efforts of our local clubs that our State has a first-class game and fish law, and it is the fear of being caught by some of the members of these clubs that deters persons from violating these laws. A member of our State association at the last meeting offered a prize of \$100 in gold to the club procuring the greatest number of convictions for violations of the game and fish law, and at our next meeting we intend to have a fine gold medal prepared to be contested for by clubs in this manner.

Look out for Missouri to take the lead in abandoning pigeon-shooting in connection with State meetings of the Sportsmen's Association.

Keep the same motion, let the subject be discussed, pro and con. The time for a change has come, and the change is virtually made.

BORDER RUFFIAN.

VIOKESBURG, MASS., OCT. 25.

Editor Forest and Stream:

I am gratified to notice the growing spirit of disapprobation all over the country touching the sportsman-like practice of slaughtering sick pigeons in large numbers from the trap as a test of skill in shooting.

The few pigeons which I have participated appeared to me rather the comparative toughness of the birds and shooting qualities of the guns than the skill of the shooters. The poor creatures, being suddenly liberated after long confinement, knew not which way to fly, or whether to fly at all, and in many cases did not fly, but remained perched on the trap, or were thrown off, to tumble on the ground near it. Aside from the question of cruelty, about which a good deal may be said, pro and con, in the abstract, the spectacle of a useless slaughter of this kind on a large scale certainly is very repulsive to the sensibilities of a great many true sportsmen, as well as to the more respectable part of the public at large, whose views and feelings, when invited to witness these contests, and expected generally to manifest some interest in sportsmen's affairs, demand some consideration at the hands of the sportsmen's fraternity.

On the other hand, there are many artificial targets, as the various sorts of glass balls, clay pigeons, etc., which afford much more artistic tests of the skill of marksmen, and are free from the objections urged against murdering invalid birds, besides being less costly.

Let us hope that the incensed feelings of philanthropists will have a rest, as well as the invalids. MAROONER.

From the Sacramento, Cal., Dec. 27. R

We heartily concur with our worthy contemporary, the FOREST AND STREAM, in the opinion, as expressed in its last number, that pigeon-shooting (or any kind of trap-shooting, for that matter) should form no part of the business of the annual meeting of State Sportsmen's Associations. These annual meetings are held ostensibly for the purpose of reviewing the work of the year in upholding game protective laws, bringing the members of the several clubs into closer participation, and cementing the bonds of friendship that are supposed to unite them in a common brotherhood. These conventions should be composed of the more intelligent members of the several clubs in each State, and delegates thereto should, therefore, be gentlemen selected for their appreciation of field sports and their superior knowledge of the habits of game birds and fishes, the protection of which is the alleged first consideration of all, or nearly all, sportsmen's clubs. But the introduction of shooting contests at the annual business meetings threatens to change their character and destroy their usefulness. We find nowadays that the first qualification of a member of a club, to entitle him to become a delegate to his State Sportsmen's Convention, is that he be an experienced trap-shot. The club which has the temerity to send a delegation composed of its best-informed members soon finds itself badly left behind in the great "event" of the year—the shooting tournament—simply for the reason that, as a general thing, this class of gentlemen are not experts at the trap. What, then, the game laws are duly violated in every part of the country, and that the sportsmen's clubs take little or no pains to bring the offenders to account? Indeed, occasionally clubs fall almost entirely under the control of one who shoot for the market and for profit. Fortunately cases of this kind are as yet rare, but they do exist, and we can prove it. So long as pigeon or trap-shooting is properly con-

ducted and not allowed to interfere with the legitimate business of State Sportsmen's Associations, and annual conventions, we shall have no fault to find with it. The notion of cruelty is an open one, and men differ widely upon it. The better plan would be, in our opinion, to have no shooting at the annual business meetings of the associations. Let these be devoted to matters of more importance—to a discussion of the game laws and the consideration of subjects that belong to the higher and better order of sportsmanship. Let them be composed of the wisest and best-informed members of the several clubs belonging to the association. Any time in the year will do for a shooting tournament, and for this particular business the club might well and should select their best marksmen. In short, separate trap-shooting from other and more legitimate affairs of the associations, and let each be conducted by the persons best fitted therefor. To this extent, at least, our Eastern contemporary has our cooperation. Here in California the State Association is not yet a year old, but it has started out on the right road by prosecuting violators of the game laws without regard to their social standing or "previous condition." We would like to see (and believe that it will be done in the future) the end that the wild game of the State may be preserved for a few years more and the reckless greed of some creatures be curbed somewhat. It has yet to put in practice any particular plan for the conduct of its annual business meetings and shooting tournaments, and we therefore commend to the officers thereof the above suggestions. We have other reasons to advance in their support, but will defer them till another occasion.

MAINE WARDENS AND VISITING SPORTSMEN.

Editor Forest and Stream:

After my return from the Maine woods last week, on looking over the copies of your journal, which had accumulated during my absence, I read in your issue of the 13th inst. a letter from the Commissioner of Fisheries in Maine, Hon. E. M. Stilwell.

As I have had the pleasure, for a number of years past, of being one of the "visiting sportsmen from other States" alluded to, I cannot suffer to pass unnoticed the aspersions made by the honorable gentleman, without qualification, upon the character of all tourists and campers who may chance to take game out of season for use at the family tables, and who conscientiously take only what they can use. That the gentleman should term this a "very dirty pail of amusement" causes no little surprise to those of us who have learned to look upon and respect him as a fair-minded man. The adjective he uses in the absence of qualification applies to many persons, who in high-mindedness, conscientiousness and non-esty of purpose are certainly his peers, and who are as much interested as he can be in seeing the game laws fairly interpreted and impartially enforced. The gentleman's conduct with his denunciation the statement that we "become poachers and tempt others to assist" us. I have had guides in the Maine woods, both white and Indian, most of whom in the winter are, or have been, hunters and trappers, and among them some of the most respectable and influential in their several communities, and I never yet saw the time while camping out, but that at sight of game my guides would be the first to say, "Shoot it! Shoot it!" and would take every means in their power to effect its capture, be it in season or out of season. They well know that such a course breaks the law to their shoulders quite as much as it does those of the tourist with them—that their reputation and future capacity to earn their daily bread as guides is enhanced or diminished by their ability or failure to take their employers within reach of game. Nay, I have known instances where guides would be the first to jump for a rifle, and shoot a moose or caribou before the sportsman knew what they were doing, and these guides are by no means "drunken poachers" nor "pot-hunters," but honest, hard working farmers, the home and slayers of the land.

Not many years ago in the month of August a guide in my employment, who now is clad in the rigorous robe of a Game Warden, carried one of the only two rifles in the party, and tried his best to shoot a caribou. That same man is so covered with sins against the game laws committed previous to his appointment to office that he dare not prosecute parties in his own town for flagrant breaches of the law for fear of retribution in kind and rumor says—and she speaks loudly and plainly—that his own carriage breaks the law to-day, and is allowed to ply his vocation undisturbed.

I know of a case, and, unless I am greatly mistaken, this statement is not new to the honorable Commissioner, where, within the past four years, a then noose-warden acting as guide to a party of campers helped them kill two moose together, and in the close season. It is true that this man may not now be a warden, as the Commissioner says, but he was one then. I have never heard of his dismissal from office, and plainly that his own carriage breaks the law to-day. Some few cases there are where inhabitants of Maine have been prosecuted for killing moose, the most notable one in the writer's knowledge being that of a prominent hunter and guide, who was charged with having unlawfully killed several in one season. The conduct of his case happened to be committed to a certain warden, who had in his hands the list of witnesses to be summoned, and other evidence of the offence. Now, what became of this case? Shortly after his indictment the guide went to a third party—a near relative of the prosecuting warden—and told him that if the case were pressed to trial he, the relative, would in turn be prosecuted, as the guide knew several instances where he had broken the law. This relative, who told me the above circumstances, ended his story by remarking, innocently, that "When the court opened and the case was likely to be reached, — was busy down river, and couldn't go to court, so he gave the papers to so-and-so, and asked him to attend to the matter." I don't know how it came out, but I guess it—went off free." As the case involved the slaughter of nearly twenty moose (so I was informed), it is not hard to believe that some pressure had been brought to bear upon somebody.

From these, and many other "straws," it seems to be apparent, and the words of the honorable Commissioner bear out the inference, that it is only "visiting sportsmen from other States" upon whom the wrath of the law is to be poured. Why do not the authorities put down the practice of bounding deer? Why are hunted the slaughter of nearly twenty-seven, as reported to me last week, of moose, allowed to range the woods, driving deer, in one locality or a hundred miles from Bangor? Why are respectable deer-chasers, who keep their bounds near the hunting grounds, in charge of servants, almost the entire season, and use them to drive deer—why are they allowed to break the law thus openly, while we, who bring our money into the State, and

venture to do so, Brave would wait until it was a sufficient distance from cover, and then speedily make it a victim of misplaced confidence. This I did not see him do. I was frightened, furnished the second exception I mentioned of creatures he would not immediately attack. On this occasion I had gone to the post-office, distant four miles, for the mail. I started to return about nine o'clock in the evening. It was a clear moonlight night but when I entered upon the last half of my walk, which was through a dense, unbroken forest, with only a winding and narrow path to follow, I wished it was morning as devoutly as ever St. Paul did.

Having my gun and dog, I plunged into the woods wishing vigorously to keep my courage up. Nearly half the distance had been passed without seeing or hearing anything more formidable than an owl, with its solemn "to-ho, to-ho," when suddenly a large creature started up from its bed of dried leaves, a few yards away, and came toward my path. I could not plainly distinguish it at first, but knew at once from the sounds made that it was a bear. I knew it was no use to think of running, for, in the darkness, there was too much danger of butting my head against a tree or falling over some obstruction in my path; it also occurred to me that if the bear really intended to taste my flavor, my running would only be an expedient to keep me from being eaten. I knew he would be sure to strike a winning gait. As my gun was only loaded with small shot, I decided that it would be folly to fire except as a last resort, and the bear in close proximity. So holding the gun in readiness, I cautiously moved forward, not toward the bear, but toward home. I had taken but a few steps when I stumbled over Brave, whom up to this time I had not thought of. There was an open space among the treetops overhead, at this point, and in the increased light I could see both the dog and bear; could see that the hairs on Brave's back and neck were as erect as were ever hedgehog's quills, and that he was trembling as only a thoroughly frightened animal can quiver.

He looked into my face, gave a low growl which seemed to say, "He is more than my match, Master, but I won't leave you." Had I given the command, I have no doubt but that the faithful fellow would have gone to his death with a spring and ringing cry of defiance; but so great was my attachment for the dog that I preferred keeping myself between him and the bear. Slowly, side by side, we moved forward, and I tried to keep our right feet in the same groove, the dog's under and under his last left foot.

In this way we proceeded about a quarter of a mile, when the bear, changing his mind, or at least changing his course, made tracks for Katocon Mountain. Most willingly Brave and I dispensed with his company and quickened our steps when his could no longer be heard. A few days later a large bear, perhaps our unwelcome escort, was seen in my father's pasture not a quarter of a mile from the house.

Poor Brave! A year later he came home from a ramble suffering terribly, and evidently from poison. The entire family watched and nursed him, doing every thing that affection could suggest for his relief, but all in vain. After two days of suffering, as I sat near him, he looked into my face with the old intelligent look, staggered toward me, and I held him in my arms until he died.

On a sunny, grassy knoll, just back of the house, we dug his grave. I made him a coffin, and the whole family followed as mourners, when in it we carried him to his last resting place.

I have pronounced many funeral orations since, but never one so sadder heart than that uttered at the grave of my dumb companion and friend.

As we turned away, my little sister asked, between her sobs, "Do'nt sink well 'ave dear Brave in 'eaven?" and I answered, "Yes, dear."

Sometimes I think so now. J. FRANK LOCKE.

MUD-INHABITING SWALLOWS.

ABOUT the same period of time which I have referred to above [1870], the small mill-pond in the village of Woodstock was drawn off to repair a leaky dam, and in the mud at the bottom of the pond were found great numbers of swallows, clinging with their bills to fragments of wood, and in the mud of the pond. This did not seem very new, but I heard it testified to by a great number of the people of the village. You are therefore at liberty to believe, or disbelieve, as you please. M.

[The above note, extracted from a private letter written by one of the oldest diplomats now in the service of the country abroad, will be read with interest, we are sure, by Dr. E. Coues. The belief that swallows passed the cold water buried in the mud, just as the frogs and turtles do, is respectable chiefly on account of its great age, but is not believed in by any scientific or prudent man. In fact almost every recent writer on ornithology has, when he felt himself in a combative mood, relieved his feelings by striking a few blows at this ancient and once wide-spread belief. In consequence of the unanimity of these attacks, the whole thing was fast taking a place by the side of the story that the rails turn into frogs, and that the brant geese were engendered from barnacles, when suddenly about three years ago it was slightly galvanized by Dr. Coues, who, in his "Birds of the Colorado" published in October two years ago, was not only the first to give the evidence which had accumulated on the subject could not be ignored. The same author stated at the same time his belief that the chimney swifts hibernate in hollow trees.

We have nothing to say on this subject, for it is one about which we know nothing, and it would be a waste of time to repeat the arguments against the belief. We may hope, however, at some time in the not very distant future, to hear something more from Dr. Coues in regard to the matter.]

SNOWY OWLS.—Specimens of *Nyctala scandiaca* have begun to make their appearance along the Atlantic coast. During the past week in October two were brought into a taxidermian (Wallace). One of these was said to have been killed in Connecticut, and the other in this city, north of Central Park. This date is early for snowy owls, but many collectors will remember that five or six years ago, when they were so common all along the coast, they made their appearance very early—that is, about the last of October and first of November. We have just received from Mr. Chas. Linden, Buffalo, N. Y., a note saying that a large white owl was shot on the 1st of Nov. The bird was the earliest appearance in the latter end of October, which is the earliest instance on record in this vicinity.

ALBINO QUAIL.—Mr. P. Peterson, Little Rock, Ark., has a white quail, which we understand he will dispose of.

pay it out in higher wages than those commonly received for the hardest winter forest work, are not only pounced upon but loaded with abuse in addition? What right have the Wardens to enforce one part of the game law and neglect another? What right have they to see only one class of persons and overlook their own townsmen? Indeed, it is as if we from other States who set a bad example to their farmers and their guides; it is the sons of their merchants, their landowners and their judges who set us the example, and we are made the scapegoats. Is this the way to enforce the game laws?

LUOTUS L. HUBBARD.
Cambridge, Mass., Nov. 1, 1881.

We publish in this connection an extract from a private letter, written to us by a Maine correspondent whose knowledge of the facts and whose motives in writing to us he does not question. He says: "The fact is, visiting sportsmen (?) kill scores upon scores by jacking every summer. In this way they destroy deer, caribou and some moose, and the powers that be wink at it; but let a poor devil of a native go out for meat for his family, and there is a fine made over him. The men come in and tip a guide a big greenback to float them off to the summer house, wonder then, the guides go in for some on their own account? The trouble is, the leading men here are on the make; they wish to reap a harvest of shickels, and so allow it as all right for their patrons to break the law, and the game and fish must be for them alone. Serve all alike before the law."

GAME FOR PHILADELPHIA SPORTSMEN.

PHILADELPHIA, NOV. 2, 1881.

Editor Forest and Stream:
Canvas-back ducks are this year showing themselves in our river. Last week between thirty and forty were shot by a police officer of Philadelphia by paddling on them. My informant had not learned precisely where the ducks had stopped, but thought somewhere near Borden town or in the neighborhood of Duck Island, up the Delaware. This is very unusual, and it has been the cause of much comment in Philadelphia. More rail have been hunted this season, so I am informed at Kriders', than for many years. The crop of seed was immense, which may in great measure account for it.

Quail, everybody who has been looking out for the "left overs" and their broods, tells me are scarce in Maryland and Delaware this autumn. The snows of last winter did destroy numbers, notwithstanding reports of some to the contrary. While some shooting may be expected in the Maryland and Delaware sections that were protected from snow by the thick growth of cedars, it is sure it would be best to let the birds alone this year, even if we are to have an open winter.

From Lehigh Valley, Pa., I receive advice this A. M. that ruffed grouse are likewise decimated in numbers, owing to last winter's severity—in fact, I have met but one gentleman since my return to Philadelphia who reports game of all kinds plentiful. The one gentleman who had been hunting from Moorefield, West Va., where he had been deer hunting with rifle, and says he came across numbers of "pheasants," woodcock and quail. But he was forty miles from a railroad station, in a section where there were no shot-guns nor bird dogs.

I do not wish to be considered a chronic growler, but we are fast coming to the time when our guns will have to be hung on the hook unless steps are taken to protect game of all kinds. The first to be made is to abolish all spring shooting—this will favor the migratory birds, the next should be attention paid to the quail which remain with us all winter.

The flight of woodcock has not come on with us. On my reaching Philadelphia, having observed it had made its appearance in New England, I took special pains to inquire from reliable sources, and am able to write you that long-bills must have tarried on their way and the pleasant weather has favored this tarrying. They may be expected—what there are left of them—the very next cold snap.

Joe Kridler has returned from his ornithological trip to the far West with a varied collection of birds, but I am sorry to say it is much broken in health.

Mr. Franklin Jones, ex-vice-president of the Philadelphia Sportsmen's Club, has just presented to the Philadelphia Library two more complete volumes of the FOREST AND STREAM. The library now has every publication of your journal from its first issue.

JOTTINGS OF A CHICKEN SHOOT.

I'VE been on a chicken shoot. Now I suppose all chicken shoots very nearly resemble each other. Two days and two nights on the cars to get to the grounds in Western Iowa. Five or six days' shooting. The same trip home again, tedious in the heat and dust of September first, and almost unbearable but for the comforts of the dining cars, palace cars and sleeping coaches.

There were four of us in the party, who, together with our seven dogs, made quite a "mob." In our party there were dogs and dogs. I will mention the dogs first as the best behaved, temperate and quietest of nights of the assemblage. First there was "Duke." Duke is a red Irish setter, very fast, wide rafter, an excellent nose and altogether a first-class dog, although some birds were flushed at his wild speed with a reckless and others omitted in the wide sweep of his quartering—scarcely ever trailing—hunting for the body scent only. Quite different was Bazil. Poor Bazil—killed at the hand of a miserable assassin immediately upon his return home. Bazil was not so fast, but a wider rafter at times; his forte seemed to be trailing. From Bazil we learned where birds had been; and the gun had always time to keep up with him while roading out and locating the birds. He retrieved at the command, but preferred to simply point dead. He would repeatedly point a winner in the gun, causing much rejoicing in the dog's eyes, which rushed in to once. "Sticks" was another Irishman, very fast and wild—never on a chicken was, and did not seem to get hold of them right; but among so many dog breaking is almost out of the question. "Grouse," the black giant, was willful and headstrong, working well at times and again breaking all the rules of dog etiquette and his owner's patience. Next came "John" the wild, John the unruly. Whistle nor whip, nor briar nor brake, nor hill nor stream could stop his wild course. The steady old pointer, now but sure and perfect backer, his age and flesh were against him. Last is the pointer "Sport"—borrowed—and, his owner said, "staunch as Hades." He was staunch on gophers. Gophers seemed to be his special game. He ran with a kind of hop, as if he feared every mo-

ment to step on or be bitten by a gopher. His neck was arched and his nose pointed earthward at an angle of forty-five degrees, so also his stern. His eyes bunged out of his head, actually starting from their sockets, in anticipation of the all absorbing gopher. Undoubtedly a good dog and staunch, but, although he flushed many chickens, I doubt if he ever winded or saw or heard one of them. My sides ache and the salt sea-brine stands in my eyes as I think of the picture that dog cut out. We dubbed him "The Bloodhound," and I fear the name will adhere to him.

Of the boys there were four of us, and although the shooting was not extra, we killed all we wanted, fifteen to thirty a day per gun; and gave away birds at all the farm-houses. We had any amount of fun. I doubt if there was ever more side-shaking by so small a party in so short a time. We lay awake nights to laugh, which only ended when White commenced his cornet solo. It was very so(n)orous. Then we all tried to sleep. White was the heavy man of the party—a good fellow to hold the seats from blowing out of the wagon—his constitution being in good running order, it was singular that he rode so much, while the slim Jim of the party followed the heterogeneous pack of dogs before mentioned. Rob was the leader of the party, had been over the grounds several seasons, biggest talker, head laughman and a crack shot. Charley was the young blood of the party, no doubt he regretted the lack of young ladies on the prairie, but he fought nobly, and allowed no sentiment to stand between him and the cackling old chick—it cackled its last cack to the crack of Charley's gun.

Charley was the "old man" of the party; nor blisters on his heels nor blisters on his toes could confine him to the wagon; he hobbled and shot and kept up with the boys.

There were seven dogs, and there were, also, seven guns; and I doubt if a better shooting lot are often carrailed together. A new Wesley Richards' hammerless, and, probably, the best Nichols & Lefever in America, did fine execution in the hands of Rob, who took his time. A new Green, of Rochester, and old Greener in the hands of White were death dealers. Charley's English piece—don't remember the make—and Charley's pair of Parker's made up the lot. Seventy to seventy-six pieces were stepped off several times to the dead prairie chick.

May we meet again with dogs better broken.

ME-HIT-ABLE.

THE MISSISSQUOI BAY MARSHES.

MONTREAL, NOVEMBER 1.

Editor Forest and Stream:
Since the open season began the writer and his chums have shot over a large portion of the St. Lawrence and Missisquoi Bay marshes. We can report fair bags of duck and snipe, but very few woodcock—in fact it is becoming quite a rarity now to get a woodcock where a few years ago we bagged dozens. Of the duck tribe, the black ducks have been the most plentiful, though in some localities the green-winged teal have come in large numbers. Sea ducks and geese have not yet appeared in their usual quantities, which means a late open season.

Contrary to expectation the waters in our rivers and lakes are still very low. Early in the season the muskrat houses were built both numerous and large, which was a sign of early rains and high water, but as "all signs fail in a dry season," we can excuse the "rats" the mistake that they made.

In a few days we will turn our attention to ruffed grouse shooting, and will then soon be able to report as to their plentifulness or scarcity.

The "Malden Gun Club" have leased a portion of the Missisquoi marshes in Swanton and Highgate, Vt., but will, methinks, have difficulty in protecting their grounds until the members of the club themselves learn to respect the game laws of the State. A friend of mine caught some members of the club setting "mink traps" for black ducks, and this outside of the limits of their grounds—both poaching and pot-hunting—but perhaps those pot-hunters were not active members of the club, only honorary members. Vermont has game laws, and if its constables would do their duty, those fellows would be taught to obey the laws of the State.

STANSTEAD.

RUST SPOTS IN GUN BARRELS.

PATAKALA, OHIO, OCT. 31.

Editor Forest and Stream:
I notice in the last few numbers of FOREST AND STREAM that the care of gun barrels has received considerable attention, and various are the opinions advanced—some advocating no care, others expressing strong faith in cleanliness. I have heard old hunters here say they put their old guns away just as they brought it home and did not clean it out or oil it—in fact gave no attention till they wanted it again—and they invariably say it is as bright as a dollar.

It requires only a moment's reflection to see the absurdity of such statements. Any one who has observed the residuum left in gun barrels knows that it quickly absorbs moisture. A gun may stand in the house during warm, dry days, but the first damp, wet day that comes it will not be found so. Simply insert the finger in the muzzle; on withdrawal, it will be found moist, if not wet. When moisture is brought in contact with iron or steel, oxide of iron, or rust, is formed. What would the farmer say, if one were to tell him that the best way to keep his plow in good condition is to leave it in the fence corner, where he finished his work, or to take it to the barn, with the dirt and mud on it, as he turned the last foot of furrow? He would laugh at you for such advice. He takes his implements to his barn, and cleans them, and either paints or varnishes them. When they are wanted, they are ready and as bright as when laid away.

Only a little common sense and judgment is required to keep a gun as nice and bright inside for twenty years as the day it came from the factory, laying aside the chemical action of some kinds of powder, if such there be. I have used guns six years, and they are as bright as when they left the factory. I never allow a gun to stand over night without cleaning and oiling, but I ever so tired. Even if I only take a gun out to shoot a single shot this same rule is invariably observed. During the close season, if my gun is not used, I take it from the case once a week and wipe off the old grease and oil it again. I use an fine sand paper, and I feel satisfied that the above rule is strictly observed, and the barrels are of good material, nothing but most satisfactory results will be obtained. I have no further use for the wire-scrub brush and the horse-hair brush I find sufficient to remove all dirt and lead, and it does no injury to the barrels.

A. O. A.

Oglesburg, N. Y., Oct. 26.—*Editor Forest and Stream:*
I have been much interested in the discussion of late ament rust in gun barrels and the way to prevent it; and I have no doubt any one of the various methods are good and will answer the purpose if properly applied. Is it not due in most cases a want of "elbow-grease" and thorough cleaning, which is the root of the whole trouble? Now, my own method is this: I make it a rule to clean my gun as soon after I am done shooting as possible, first using kerosene to remove the dirt, then the wire brush to take out any particles of lead or dirt which will adhere to barrels, wiping out dry of cotton waste. I then take a square of flannel dipped in hot pure mutton fat, the flannel of sufficient size to cover the light (I always keep a supply of those squares on hand), and with it remove every speck of dirt, wiping dry and oiling lightly with Rangoon oil. I place the gun near the stove all night after cleaning and oiling it outside and the action. I have never used water, no matter how dirty the gun may be. I occasionally use jeweler's rouge, and have found it of excellent service in keeping barrels bright and smooth, far better than emery. When I lay the gun up I give it a good coating of mutton fat and a bayonet and a spoke of rust in the spring. I may add that when duck shooting I apply a light coat of boiled oil over the outside of gun. It forms a skin when dry, will effectually prevent rust, no matter how wet the gun may get, and is easily removed. I never berudge an hour or two in cleaning my gun, and in consequence have never been troubled with rust.—TEN BONE No. 2.

Coming, N. Y.—*Editor Forest and Stream:* Allow me to suggest to those interested in the subject of "rust spots in gun barrels" and how to prevent them, that certain grades of powder is the cause, and the manufacturer thereof could explain if he would. So change your powder; and never be so shiftless or lazy as to let your gun stand over night without a thorough cleaning with a dry cloth. Rub dry with flannel, and never put any water, hot or cold, into a gun barrel, and use no lard nor sperm oil, nor any oil that requires water in its manufacture, as it will certainly leave a red rust if you give it time. Use just a touch of vaseline, which is equally good for the steel cutlery and surgical instruments; and you can put your fine guns in the cellar if you wish without any risk of rust appearing.—J. H. W.

WHERE TO SHOOT RAIL.

Editor Forest and Stream:
In making up the members of your paper to-day I observed that you give some prominence to rail shooting by furnishing the scores made during September upon certain grounds in Pennsylvania and Virginia. I have often wondered why those who like this form of amusement have not had their attention called to the two rivers of Cumberland County, New Jersey, the Cohansey and Maurice. Near Bridgeton, on the former, there is an excellent meadow (the only one on its twenty-mile course overflowed by the tide) of about two hundred acres. A great many rail have been killed there the present year. The highest bag was, I believe, 130; the average bag being from 75 to 100. The shooting every year is called very good upon this meadow, notwithstanding its neighborhood to a town of 10,000 inhabitants, but for the superior attractions of the Maurice River, which, I suppose, furnishes the best rail shooting in the world.

At Mauricetown the "gunner" who likes slaughter may have his fill. The village is a pleasant one, inhabited by an intelligent and cordial people, having a spacious and well-kept hotel, presided over by a landlord who is one of the most unobtrusive of men as well as one of the most obliging. He has the rare quality of justly anticipating his guests' wishes, and at the same time without making any fuss or asking any but a very moderate compensation. The village is situated between two meadows; the upper contains about 250 acres and the lower about 800. Two hundred yards from the wharf takes the shooter to either meadow.

There are good accommodations also at Port Elizabeth, at the upper end of the upper meadow.

During the past season the individual scores ranged in the neighborhood of 200 to the tide. The highest was made Sept. 30, by George Bowen, of Mauricetown, who bagged 412 in a tide of about five hours.

I am satisfied from what I saw the day I was there that I could have bagged 500 birds, if I had had the ammunition.

Any of your readers who fancy this most laborious amusement would do well to make a note of this, and next year write to William Royal, Mauricetown, or Henry D. Paullin, Port Elizabeth, Cumberland County, New Jersey, who are the local keepers above referred to.

NOTES FROM MISSOURI.

JACKSON, MO., OCT. 31, 1881.

Editor Forest and Stream:
On last Saturday our sporting men had a target shooting match, with shot-guns, at a target one foot in diameter, with circles thereon, numbering from one to six—the centre or smallest circle being six, and thus back to one, the outer circle. A shot in 10 counted six times the score, and so on in each of the circles. The shot was at forty yards range, off-hand. Our hardware merchant, S. D. Williams, had gratuitously donated a silver cup as the prize, for which there were twenty contestants, each man having two shots. The score of the six best was as follows:

Daniel Milde, 214; R. P. Wilson (m), 231; D. H. Fil-dreth, 420; J. H. Jenkins, 203; S. W. Brown, 242; F. H. O'brailor (m), 196.

Both muzzle and breech-loaders were used, and the breech-loaders made the best score, although some expressed the belief that they would be "left." In the score I designate the muzzle-loader by an (m) in parenthesis. There were twelve who used breech-loaders, and eight who used muzzle-loaders. The average for breech-loaders was 913, and for muzzle, 70 1-10.

The hunting season is now open here for all kinds of game. Quail hunting is indulged in, but the birds are not very numerous. We noticed a goodly number of robins in one place last week. Squirrels were plentiful a few weeks ago, but are scarce now. Our boys are getting ready for the duck season, and some of them are off for the lakes below here this week, and others will soon follow. We had good snipe and plover hunting here early last spring, and hope for the same again. For deer and turkey we go to the swamp, fifteen or twenty miles south of here, and although our first two trips this fall were not very successful, we had a jolly good time. Game will be more plentiful here later, though squirrels are always numerous.

C. R. H.

SPORTSMEN AND FARMERS.

WORCESTER, MASS., NOV. 3.

Editor Forest and Stream:

At the annual meeting of the Worcester Central County Grange of the Patrons of Husbandry, held in this city to-day, the afternoon was given up to the discussion of the following:

Whereas, the sportsmen of this State have caused a law to be enacted that makes the shooting of game by license on their own lands at certain seasons of the year a criminal offence, and

Whereas, the representative sportsmen in this vicinity have offered a more liberal interference with the natural rights, and by limited legal means keepers of game to which they have not a particle of claim, and

Whereas, the object in view is additional sport to the shooting fraternity, and not the good of society in general, therefore,

Resolved, That the agricultural community should resent this interference with the natural rights, and by united legal action, especially the enforcement of the trespass act, cause its interests to be respected and maintained.

Mr. O. B. Wymann, of Shrewsbury, considered the matter was in the hands of the farmers; a majority of them were in favor of protecting game in its season. There are sportsmen who are gentlemen—some are not; all are too apt to forget the interests of the farmer; they are careful to have the law all on their side. The speaker was in favor of a fine of \$20 for every bird shot on forbidden land. The sportsmen frequently do much damage to farmers and pay but little attention to trespass signs.

Mr. S. P. Perry, of Auburn, cited the law, and pointed out that they made no discrimination between farmers and sportsmen, always being on the side of the sportsman, and show evidence of selfishness on their part. The game, he claimed, belonged naturally to the owner of the land where found, and sportsmen can only obtain it by violating the trespass act. The farmer, redress after posting or giving verbal notice, is a civil and criminal suit. The remedy is for the farmers to enforce the trespass act, thus giving the sportsman a taste of their own style.

Mr. Charles T. Fister, of Holden, did not agree with the wholesale arraignment of the sportsmen. He claimed that the farmer has too much protection. The rights of the sportsman were the natural rights of the public, which had no more been surrendered to the farmer. The birds belonged no more to one than to the other; each were sent into the world with equal rights.

Mr. E. B. Knowles, President of the Worcester Sportsmen's Club, first referred to the membership of the club which he represented; they could be with credit placed side by side with those of any other of equal number. He could not see why the Grange should take up arms against them. The interests of the two are identical. The game was protected for a proper use by the farmer's boys and gentlemen sportsmen. The only legal positive to ensare is the partridge, and that is permitted. The laws of the club has provided for the punishment of any one using improper or insulting language to a farmer. His own relations with the farmers had been pleasant, and he hoped that no feeling of antagonism would be raised between the sportsmen and the farmer.

Mr. S. A. Newton, of Auburn, was glad the subject had been brought to the notice of the Grange. While he had always found the members of the club to be gentlemen, they would see why the farmers felt aggrieved if they knew of the actual damage done by men who call themselves sportsmen. Forest fires are red with careless shooting, herds of cattle are let out by the tearing down of walls for a rabbit or woodchuck. What the farmers complain of is the mischief-making parties who wander from place to place.

Many others joined in the discussion. J. H. Chickinny, of Grafton, thought the wild game belonged to the people; E. W. Wheeler, of this city, believed it was the property of the man who found it; Mr. J. M. Alger, of Auburn, said the time would come when the farmer would be protected even if they had a land tongue to do it. P. H. Moore, of Worcester, did not think the trespass law was of any practical value; D. B. Hubbard, Esq., a Grafton lawyer, claimed the game belonged to the farmer on whose land it was found, because no one else had a right to it—when it goes off of the land the claim ceases. If game is to be taken to sustain human life let it be done in the same spirit as the beef or other animal is slaughtered, and not as sport; J. H. Gleason, of Holden, believed the trespass law as it now stands should be entirely repealed. Mr. James Drake, of the Mass. Grange, in summing up, said he wanted the matter moved yet he organized, in consequence of the discussion, which would result in the framing of laws beneficial to both the farmer and the gentleman sportsman. E.

The Middletown Conn., Association has made a successful attempt to secure better game presentations by enlisting in the work the co-operation of farmers and land owners. The system works well because it recognizes and provides for the mutual interest of farmer and sportsman.

For a certain nominal payment, the owners of the land agree to confer the privilege of shooting over it and fishing in its streams to the members of the Association, of which they are themselves by the terms of the agreement honorary members, having the same shooting and fishing rights as the rest. Each individual belonging to the Association is furnished with a ticket, which serves as a permit to enter the lands under its control; if others trespass, they are intercepted and driven off. The advantages accruing from its expenditure of funds are thus secured to the Association. The game and fish replenished by them are protected from the pothunter and net fisherman.

The Middletown plan appears well in theory, and we are assured by it will work well in practice. It preserves the game, and involves no clashing of interest between sportsman and farmer. We printed in our issue of May 26, 1881, the form of government of the club, and commend it as a model to be adopted elsewhere. The society is incorporated and can bring suit through its attorney, without involving any individual member in the thankless task of prosecuting offenders.

The President of the society, D. J. W. Alsop, writes us under date of November 3.

In Forest and Stream of November 3 notice an article headed "Farmers and Sportsmen." To meet just such cases, at the request of farmers living near our large cities, the accompanying law was passed at the last session of our Legislature. The complaint was that they were overrun by "runners," who would not leave their land when ordered; and by the time a constable and writs were procured the offenders were off to parts unknown. By this act, as you see, each landowner is made a special constable and property owner. The law has had a number of copies of the law printed and distributed among the farmers of this section. The law reads as follows:

"Chapter one hundred and sixteen of the public acts, approved March 23, 1877, is hereby amended by adding thereto the following section, to be known as section eight of said act:

"Section 8. Any person found with a bird, dog or gun upon lands where birds mentioned in section one of this act are known to exist, shall be deemed prima facie to be there for the purpose of pursuing said birds with intent to kill, and the owner of such lands, with such others as he may command to assist him, may arrest the person, while on said land, if he refuses to leave the same at once, and forthwith carry him before a justice of the peace, who, upon a written complaint of such owner, shall proceed to try said person in all respects as if he had been complained against by a grand juror or other proper informing officer."

HAVRE DE GRACE DUCK SHOOTING.

Editor Forest and Stream:

Duck shooting on Havre de Grace Flats opened Nov. 1, according to the law, was a mighty one, with no wind, and consequently few fowl were on the wing. The first ducks that make their appearance at these shooting grounds in the autumn are the blue wing teal, the next the widgeon or baldpate, and the sprigal or gray duck, then comes the bald-head, the red-head, and last of all the canvas back. By the first of November the several varieties have reached the feeding grounds, where shooting is allowed every other day of the week until March 1 following.

Sink-box shooting is followed by quite a number of sportsmen at Havre de Grace, who have outfits in the way of canvas and fitted scows which carry them and their decoys to the ground and furnish snug sleeping quarters at night after work is over. "The Reckless," the largest and best fitted sporting craft at Havre de Grace, owned by a private party, is the property of Messrs. C. Osbourne and John Dumait Polheimus, of your city. She carries one double and one single sink box and five hundred decoys. The "Carriv," is admirably fitted up, and also carries a double and single battery. The owner of the Reckless opened Nov. 1 at Havre de Grace, with a score of 250 ducks. Those from the Carriv, we hear, about 200. On the "Jno. Russell," we understand, Judge Gildersleeve and other knights of the trigger from New York city were sailed to the lower end of the flats and secured nearly 200.

From Philadelphia, the owner of the "Lillie," had capital sport, but we failed to learn the score. Among the other craft that campaigned against the ducks the opening day, were the Widgeon, owned by Messrs. Jos. Earl and Flint, of New York; the Micon, a steam yacht, owned by Col. Stickney, and a second propeller; the Mischief, belonging to Hon. Dist. N. Esq., of Philadelphia. The Mischief's boxes were anchored near the mouth of North East River, and their guns making much noise, we suppose a good score was counted up—we failed to get the number.

Mr. J. G. Watmough, of Philadelphia, whose steam yacht, it will be remembered, burst her boiler while at B. limore last season, is now building, and has nearly completed, a fine shooting and cruising yacht, but this year will hardly see it on the grounds.

It is a great wonder that the continual every other day shooting at Havre de Grace does not decimate the ducks. We learn, notwithstanding the terrible harassing they are subjected to, that this year fowl have made their appearance in good numbers. Other than the pleasure craft mentioned, there are on those waters over one hundred professional sink boxes, and perhaps twenty-five or thirty professionals who follow paddling on ducks for a living.

Notwithstanding the opening day, Nov. 1, was as unfavorable as could be had for shooting, the following professional scores were made (I do not include those of private parties), from which a faint idea can be gained of the immense slaughter that is made when everything is propitious: Wash. Barnes, 340; W. H. Dolson, 250; Perry Barnes, 198; Thos. Kirby, 209; R. T. Clayton, 107. We learn the wild celery crop is profuse this season. Home.

WILDFOWL NOTES.

SHELTER ISLAND, L. I., Oct. 29.

THE wildfowl are beginning to collect on these waters in considerable numbers, such as coot (chiefly), broadwills, alderlarks and loon. A friend of mine here, Captain C., killed eighty of the former fowl in the hattery this week. The fowl now are assembled in numbers, principally in the lower Gardiner's Bay, but will soon be working their way westward into Noyac, Great and Little Peconic bays. I think the shooting club at Robins' Island will have good sport with them off the southwest point of their island, as the fowl fly past this point. I hear the shooting is very good now in Shinnecock Bay. The geese are just beginning their flight, and several flocks passed over here yesterday. So come on with your breech-loaders and plenty of No. 3 shot, which is my favorite number.

I think the fowlers are beginning to learn that numbers 3 and 4 are good numbers for fowl-shooting. The English fowlers on their coast used No. 4 some years since when I followed fowl-shooting for several months yearly. The old gunners would use only No. 1 or BB shot, thinking anything smaller would be useless; but they have changed that opinion now. In shooting at Currituck a few years since, I called at one of the country stores there for a bag of No. 3 shot, but they had no such large number, saying that No. 6 was the right sort, and that I found to be the case on trial.

In your last number you speak of Mr. Cadwell, of Currituck. He was an old experienced gunner with whom I boarded for several months, and often joined him in his fishing expeditions. He was then so disabled with rheumatism that we had to lift him in and out of the boat. He was a good man and brother sportsman, now gone to the better land beyond the river. ISAAC McLELLAN.

ROOSEVELT'S "GAME BIRDS."—No. 11 Commonwealth avenue, Boston, Mass. "Editor Forest and Stream: Every attempt I have made to obtain R. B. Roosevelt's "Game Birds of America" has been completely floored. I have tried at numerous book stores, both modern and antique, and also at five or six publishers, with no success. I have become stubborn now and am determined to get it. If I can get it, [Mr. Roosevelt informs us that the edition of the book is exhausted. Possibly you may hear of a copy through this notice.]

FOOD OF SQUIRRELS.

HOOSIER HALL, RUSH CO., IND.

Editor Forest and Stream:

A special dispatch to the Cincinnati Commercial from Bedford, Ind., October 30, reports: "For several days past the woods in this vicinity have been full of squirrels—more numerous, in fact, than for a quarter of a century back. They seem to be migrating from the southwest to the northeast, no doubt in search of a section of the country where mast abounds. As there is scarcely any mast in this part of the State, the little animals depend upon the acorns of the subsistence. Farmers say that they even eat black walnuts, something never known before."

The writer of this item seems to be profoundly ignorant of the habits and tastes of squirrels, or else the squirrels themselves which are overrunning that section of country, are very unlike their bushy-tailed relatives abounding in these parts, which prefer the nut of the walnut tree to almost any other nut.

Last winter, while the snow was lying upon the earth a foot deep, I noticed where the squirrels had traveled down through the frozen grass in search of the toothsome nut, and their explorations were rarely in vain.

Squirrels are more abundant this fall in this part of the State, than for many years, and when shot in the vicinity of walnut timber, their ebony-stained lips and paws tell only too truly the kind of forage they have been subsisting upon.

Mast of all kinds is very abundant, and the birds and nut-cracking animals will fare well this winter.

The forests are resonant with the racket of the woodpeckers scolding and chattering with each other, as they busily gather and store away, in safe retreat for the winter use, the sweet and nutritious beech-nut.

The long continued cold, deep snows, and practical hawks during the past winter almost exterminated the quail. What few pairs were left over raised fine broods this season, but there will be no quail-shooting in this vicinity this fall.

U. BREKEE.

[So the woodpeckers lay up a winter store?]

GAME IN DUTCHESS COUNTY.

FISHKILL LANDING, NOV. 4, 1881.

Editor Forest and Stream:

As it seems to be in order to discuss the decrease of game birds, I would say that the Dutchess County law this year, prohibiting the shooting for market, has done a vast amount of good in this section—not that there has been any notable increase in the birds, but there has not been any falling off since last season. The poachers do not take the trouble of trapping a lot of birds, as under the present law they have no right to sell them. Last fall our markets were full of grouse and quail; this season there are none, and the game is still in the fields and forests of this vicinity. I am well aware that there are fewer birds now than there were five or six years ago, but it is my belief (although I may be wrong) that the main cause of the decrease has been the poaching. There are more quail about here than last year, and full as many grouse and woodcock. By this I do not mean to convey the idea that they are plenty, for they are not, but I do not hesitate to say that if all our game laws were strictly obeyed, both in regard to trapping and killing out of season, we would soon have an increase of all our game birds. The hawks and owls also destroy a large quantity of young birds, and sportsmen, while out in the fields, should shoot all such marauders as come within reach; it would save enough game to make it worth the while. I very seldom go out for a day's shooting about here that I do not get a shot at a hawk of some sort. The night hawk is an inoffensive bird, and is protected by law. But whatever the cause may be for the decrease of game, I would like to see a law in this State that would prohibit the shooting of any game bird before October 1.—G. F. A.

NEWFOUNDLAND CARBOO SHOOTING—Halifax, N. S., Nov. 1.

Editor Forest and Stream: Being a frequent reader of your interesting journal I have taken the liberty of sending you the enclosed, clipped from one of our evening papers, thinking perhaps that some of your readers in the United States might like to know how a Captain in the Royal Navy feels about being accused of unsportsmanlike behavior. I subjoin his letter to the Evening Chronicle of this city.—D.

"H. M. S. Druid, Halifax, 30th October, 1881.—To the Editor of the Citizen and Evening Chronicle: Sir—I have observed with astonishment that according to several local papers, Sir R. Price has been accused of having slaughtered thirty caribou in Newfoundland paper, and is such a gross exaggeration, I shall be obliged to you to contradict it. If Sir R. Price and I had really been guilty of such butchery, we should be the last persons to boast of it, but, as a matter of fact, we did nothing of the sort. Sir R. Price killed four deer, and I three, all good stags, and I do not think that too much, after working hard for it as we did. I have hunted in Newfoundland three years in succession, and always contented myself with three, or at most four stags. On each of all these occasions, I could have killed birds by the dozen, but I can honestly say that I never shot a hind in Newfoundland. I wish all sportsmen could say as much. As an old deer-stalker, I have naturally been much annoyed at seeing my name in connection with wholesale slaughter, and I know that Sir R. Price would be equally so. In justice, therefore, to us, I beg you to do me the favor to contradict the obnoxious article, and to convey to the author of it that he has been lying under a mistake. For my part I would sooner be accused of forgery or manslaughter than of unsportsmanlike behavior. I am, Sir, your most obedient, humble servant, W. R. KENNEDY, Captain R. N."

TENNESSEE GAME NOTES—Nashville, November 3.

Within the past week a number of large bags of quail have been made about here. Felix Mitchell brought in forty-three, while Ross killed yesterday a very fine section. In Humphrey's County birds are reported in quantities, and turkeys and deer quite plenty. Up in the mountains of East Tennessee bear are said to be in large numbers. Quite a number of snipe and woodcock have been shot about here recently, though they are too scarce to be seen in market. John Buckholz leaves to-morrow for a day with quail. Steinbauer goes along, and if they fail to find birds, (the latter is a notorious rabbit and possum hunter.) they will certainly go to the mountains and hunt for quail. Quail are represented as being abundant. William Hobbs caught and killed a raccoon the other night which he says weighed thirty-seven pounds (a pretty good coon story).—J. D. H.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

FRESH WATER.

Black Bass, Micropterus salmoides and M. paludis.
Mascareno, Esox nubilior.
Pickering, Esox luciae.
Pike-perch, Walrus luciae.
Mud-puppy, Salamander.
Brook Trout, Salvelinus fontinalis.
Whitefish, Coregonus clupeaformis.
Yellow Perch, Perca flavescens.
Striped Bass, Morone chirocentrus.
Blue Bass, Morone chirocentrus.
Rock Bass, Ambleloides.
Brook Trout, Salvelinus fontinalis.
Whitefish, Coregonus clupeaformis.
Brook Trout, Salvelinus fontinalis.
Brook Trout, Salvelinus fontinalis.

Tramping all day through bush and briar, fighting flies and mosquitoes and branches that tangle the line, and snags that break the hook, and returning home late and hungry, with wet feet and a string of speckled trout in a willow twig—this is pure happiness, the like of which a boy will never have again.—C. DUDLEY WARREN.

FISHES OF VERMONT IN 1810.

WE publish with satisfaction the following letter written by an eminent and veteran diplomat now in the public service abroad.

I now wish to make available, if possible, some of my early observations on facts of interest. The Vermont rivers, White River and Water Quechee, are nearly parallel in their general courses, which are about ten miles distant from each other. I had, in my boyhood, a good fish-hook acquaintance with the piscatory population of both, the species being most numerous in White River, whose bed lies some hundreds of feet lower than that of the Water Quechee, and is consequently less liable to severe frost. The Connecticut River salmon in primitive times entered the mouths of both rivers, but their descent was checked at Hartford on the Water Quechee by a natural dam of from seventy to eighty feet of nearly perpendicular height. Only a single salmon was ever taken above this dam. One, however, weighing six pounds was caught above this fall about the close of the last century.

Although this happened before my birth, this rare and important event was a frequent subject of conversation afterward among the elder brethren of the angle, of whom I, like other truant boys, was a reverent follower. Before this "fish story" was related, it was checked at Hartford on the Water Quechee by a natural dam of from seventy to eighty feet of nearly perpendicular height. Only a single salmon was ever taken above this dam. One, however, weighing six pounds was caught above this fall about the close of the last century.

In the summer of 1811 I was sent to school at Royalton, on White River, and I proceeded at once to investigate the truth of the boys' report that Royalton was in a different ichthyological province from that of Woodstock. The very first day I caught several specimens of a fish unknown in the Water Quechee, which the boys called "divis," and I also secured several fresh water clams, a bivalve equally unknown in my native waters. I was taken to a mill-pond in which, as I was credibly informed by a boy, eels were taken. This last surprise was accounted for by the ancient fisheries of the region from the circumstance that the banks of White River were more generally cleared of woods than were those of the Water Quechee, it being a fish of nature, as those hoary sages affirmed, that eels were never found in forest streams, but only in waters whose shores were cleared and brought under cultivation. How far are these observations in accordance with those of others, and do they suggest any food for thought to your inquiring mind?

FISHING ON THE NEVA.

HOW A TURTLE WENT TO ST. PETERSBURG.

YOUR extract from the London Standard, on preserving live fish in Russia, reminds me that I made a note last year intending to bring that subject before your readers. In Cronstadt, which is the great naval and commercial port having two distinct moles or artificial basins, one for the imperial navy, the other for merchant vessels whose draught of water prevents their crossing the bar which obstructs the channel to St. Petersburg, the fish are kept alive in deeked punts, with large halibut, which are removed when purchasers wish to see the fish. The punts being shallow every fish is plainly seen, and the man in attendance catches any you point out with a dip net. But the most curious part of the business is the mode of fishing on the Neva, which I believe is peculiar to Russia, at least I have met with nothing similar in all my wanderings, and I can only speak of one fishery which stood, if I remember rightly, about midway between Cronstadt and St. Petersburg. It was on the left-hand side (port, if you please) of the channel as you ascend the river, and consisted of a triangular-shaped weir.

The sides are formed of timber, solidly driven into the bed of the river, the ends being ten to fifteen feet above the stream. The logs are so placed as to catch that no fish of any size can pass between them. Planks are nailed on the top of the sides, thus forming a roadway to each extremity, so that the men can safely run along each side, for the purpose of driving any fish seen near the ends, where they run into a purse-net and are thus secured. They have long poles to frighten the fish. I can say nothing of the quantity of fish caught during one summer, as I never had an opportunity of visiting the fishery, having merely seen it from the steamer which passes quite close, going up and down, between Cronstadt and St. Petersburg. Having described the Russian mode of fishing, I shall now direct the attention of the reader to one equally novel, no doubt to him as it was to me. Not a scientific or truly sportsmanlike one I admit, but savoring vastly of pot hunting. The result—that's the point! During a voyage from Nantes, in France, to Messina, in Sicily, where we loaded with oranges and lemons for St. Petersburg, the captain died on the return voyage, and his remains were consigned to the deep between Capri Palos and Cape de Gut on the coast of Spain. We were becalmed the whole day after his death, and about 11 A. M. I spied a turtle at a short distance from the vessel, which I proposed to the chief mate we should make an attempt to capture. The boat was soon lowered, and we had the good fortune to secure this one, being the largest I have seen caught in this manner.

On turning the boat toward the vessel we spied two more, which were also captured, and finally we got alongside with five more. The sailors having gone up aloft told us that he could see several of the other six. We therefore took our attention to these, returning in a short time with five more. Several being yet in sight, and the crew anxious to capture them, the mate and I agreed that we had our share, and others taking our places I finally returned with four, making fourteen in all, which, strange to say, was the number of the crew including the deceased captain. Having had our prizes on their backs in and under the launch we considered that we had turtle for all hands for some days. I must explain that the benefit of the unutilized turtles is always kept on their backs when landed to prevent their getting poor. So say the knowing ones. I have had but little experience in turtle catching or keeping, never having caught another, though I have seen many both in the Mediterranean, and outside from the Straits of Gibraltar to Cape St. Vincent. The next morning I thought I would try the weight of No. 1, I found it exceeded 85 pounds. A bappy thought struck me, that it would be a nice present for our agent in St. Petersburg, the celebrated Steiglitz, the Russian Rothschild. I first had the idea of the new captain who objects to Mr. Steiglitz, who had settled the point. Gladly, then, on the second morning after our arrival in port did we man the jolly-boat and remove tub and turtle to the steamer, about to leave for St. Petersburg, but in charge of two officers of customs, who delivered it to Mr. Steiglitz. He caused it to be delivered to the Emperor Alexander, who, I presume, ordered his chef de cuisine to convert it into soup. This must have been in 1825 or 1826. I write from memory, some honest man having purloined my journal, which at the present time would be of no lower of strength, containing many facts and anecdotes lost beyond redemption. Half a century is a long time to look back to, but, thank God, my memory can yet retrace people and occurrences seventy years ago.

I must state for the information of the readers of FOREST AND STREAM, who have not seen the London alderman's tit-bit in his native element, that in warm, sunny days, when the sea is like a mirror, the turtle comes to the surface floating like a buoy. They evidently come up to bask in the sun and bask in the rays of their being so easily caught. But a strange and remarkable fact connected with this aldermanic pet, and which I fully verified on the occasion above alluded to, is that each is accompanied by a small white-grey fish, which sailors call the pilot fish, and which the sea awakens the turtle when any danger approaches. The arc about a foot long, and something like a young shark, but having a smaller body. How far this small fish is or is not the safeguard of the turtle I am not prepared to agree to or deny, but I certainly saw them under most, if not all, of the turtles I assisted in capturing.

Strange that I have never before caused this sporting feat of mine to appear in print, and that it should have been reserved for the pages of FOREST AND STREAM. 'Tis strange! yea, passing strange! But I hope, if I am spared, to fill a few more of those pages with memories of the past. Apropos of memory, it just occurs to me that some of the members of the General Assembly of Virginia may, should they chance to peruse this my reverie, appeal to my superior judgment and well-known experience to be the umpire in that toughly-contested point—'Is the turtle fish or game?' Ye shades of Demosthenes, of Cicero! assist me! One five-long night spent in debating what? Is game fish, or fish game? The first is impossible. A deer or a partridge can't be a fish, but a fish can be game. My turtle was game, or he would never have reached the palace of the Czar of all the Russias! No amount of oratory or special pleading can controvert that; consequently, all turtle must be game. This is my decision, gentlemen; let it be recorded on your state and book. I am anxious to make it publicly known and have it widely circulated throughout the State, let the Clerk of the General Assembly be instructed to order and pay for 1,000 copies of FOREST AND STREAM. Cash, mind you. No truck or trade. PHILIP VIBERT.

"GAME FISHES"—Louisville, Ky., Oct. 29.—Editor Forest and Stream: What is, strictly speaking, a "game" fish, and what are the principal fresh water game fish? Heretofore I have been in my mind as such only salmon, brook trout, white sucker, and muskellunge. I have been to many trout books, and finding nothing of the nature of my so-called game fish, I am put quite at sea, and would like to be set right.—C. W. M.

[This is a question which men answer to suit themselves. Any fish which you catch for sport may be called "game." In fur and feather there are certain fixed rules, or rather an arbitrary standard has been agreed upon, such as birds which will lie to a dog, etc., or animals usually pursued for sport and meat. With the fishes there is no such standard, and the term "game fish" is applied to the constantly changing and any writer puts upon it. Therefore it is an indefinite term, meaning fishes which take the hook and are captured for sport. In Mr. Hallock's "Gazetteer" he includes the suckers and other fresh-water fish, and we see no objection to including sharks in the term.]

The diary of a trip on the Indian River, N. Y., printed last week, should have been credited to our esteemed contributor, Mr. H. H. Thompson, and not to the "Annapolis" correspondent. Our correspondent also claims the spelling "muskannong," which is not the usual form in the section of which he wrote. Printing "Havelton" for Hevelton, "Ropie" for Roese, "head work" for hard work, etc., it is just to Mr. Thompson to explain, was not at all the fault of his manuscript.

A FERRET Muzzle.—Editor Forest and Stream: I received a letter some time ago from a gentleman in Augusta, Ga., saying you had referred him to me as to the proper muzzle for a ferret. I have had a long and varied experience in breeding and handling ferrets, and have tried various devices for muzzling them; but I must admit I have never seen anything in the way of a wire or screen muzzle that I found either useful or ornamental. The head of the ordinary ferret is so delicate altogether to be hampered with anything of this kind. There may be exceptions to this rule, but if so I should be glad to meet with them. The only muzzle that I have used successfully can be made and used with no expense and with very little trouble, and I will herewith append the modus operandi; and as it costs nothing, should it meet the eye of any who differ with my views, they have simply to discard them and adopt another: Take a piece of coarse waxed-cord, about two feet long. Pass through the mouth directly back of the fangs. Pass it down under the lower jaw, and tie with a close knot. Now carry it back up through the mouth and across; then up over the upper jaw in form of figure 8, and tie firmly. Carry the two ends up the forehead back of the ears until you again meet. Next carry the ends down the two sides of the neck and tie again firmly. The muzzle is now complete. There is no cumbersome weight to carry, nor any pain; and when the animal is let loose, if he has been kept properly, he will go to work with a vim. When the hunt is over remove the muzzle with a knife. I have often seen the lips caught together with needle and silk, but I don't believe in resorting to cruelty in the animal without it is very necessary.

Hornsville, N. Y.

BEEB HOLLIS.

CONNECTICUT NOTES.—Southington, Conn., October 31.—I have noticed in two or three last issues of FOREST AND STREAM the loss of all shotguns. Now, to my idea, it is difficult to tell whether the scores were good or not, as the number of shots were not given. I had the pleasure of one day's shooting this year, the first I ever had. In forty-seven shots I captured forty rail. I think that is the correct way to give returns, then we can tell whether the shooting is good or not. Game is scarce in this part of Connecticut; this, I think, owing to being killed off rather close last year. The local sportsmen report quail and grouse scarce.—W. D. C.

CHICAGO NOTES.—Chicago, November 5.—We had quite a flurry of snow here Thursday, November 3, and the weather has continued cold ever since. The duck-shooting is A 1 at present. I bagged forty-two ducks Friday on the Kankakee River. Jerome Marble's shooting-car passed through Chicago last week on the way home. They left numerous buffaloes, elk, antelope, etc., in the hands of Mr. R. A. Tuttle, the Chicago taxidermist, to be tanned and mounted.—TEX BORE.

A SOUTHERN RESORT.—The mountain country of Western North Carolina is annually attracting an increasing throng of health and pleasure-seekers. The scenery is of a character to well repay the tourist, and the climate is most beneficial for bronchial and pulmonary complaints. Asheville is in the central part of this region, two days' journey from New York. Strangers will find good accommodations in the Eagle Hotel, whose proprietor, Mr. L. H. Inness, is among the popular hosts of the South.

A PENNSYLVANIA RESORT.—I have had splendid shooting during eight days in October, plenty of partridges, a great many ducks, some woodcock, a great many snipe; rabbits and squirrels in abundance, besides pheasants, woodcock, and quail to arrive in very large flocks. I stopped at Mr. E. D. Huffman's hotel, where I had every comfort and, besides, his company every day shooting. Mr. H. is an excellent shot. Any gentleman going there will require a steady dog, such as I had myself. I never traveled over finer hunting ground. If I was inclined to go ten miles from Mr. Huffman's house he would show me a great many deer. I prefer small game shooting. Mr. Huffman's hotel is at Marshall's Creek, Monroe county, Penn. By dropping him a line he will meet any one at the depot.—JOSEPH A. MALONE.

OHIO QUAIL.—Waufron, O., Nov. 5.—The quail season opened here the 2d, with all the boys in the field, but generally the birds were small. While the quail are plenty, they seem to be hard to find. The reason is, that they are not on their usual feed grounds, the cornfields, but remain in the woods where seed is plenty. I worked over a forty-acre field, with as good a setter—my own—as can be found in North-Western Ohio, and did not raise a feather, while I know that three covets of quail rendezvous in the neighborhood. There are many of quail this year, but just now I will take a search warrant and several dogs to find any shooting, unless one luckily blunders on them.—W. H. H.

SHOOTING AT PORT JEFFERSON.—Jersey City, November 7.—I have just returned from a week's shooting at Port Jefferson, Long Island, and wish to inform my fellow sportsmen that if they want good duck and rabbit-shooting, that place cannot be beaten. There are some quail but not many. Raynor's Port Jefferson Hotel is the place to stop. He is very moderate in his charges, and has permission from most all the farmers to hunt over their grounds.—H. P.

SNEAK-BOX FOR DUCKS.—Canton, N. Y., Oct. 31.—Editor Forest and Stream: "Sivard" wishes plans of a sneak-box provided that would enable him to approach ducks in open water. A year ago I built a sneak-box for Judge Longworth, of Cincinnati, and have been told by him and his friends that they had killed many ducks from it under sail where they could approach them in no other way. The sneak-box is the boat for duck-shooting in open water.—J. H. ROBINSON.

ILLINOIS DUCKING.—Fulton, Ill.—High water here has brought the ducks by thousands. Gunners here from all quarters. The old Mississippi has been on a boom this fall, nineteen feet above low-water mark. Our fine snipe grounds have, for the last six weeks, been navigable for the largest steamers.—D. N. W.

STOCKHOLM, MASS., CLUB.—Boston, Nov. 3.—The sportsmen of Stockholm, Mass., have organized a club of twenty members. President, H. Horne; Vice President, J. D. Pearce; Treasurer, H. Home; Secretary, B. H. Houghton. The principal object is to prevent the violation of the game laws.

ROWLAND, Pa., Oct. 29.—We have good deer hunting in this section—two killed yesterday. I have the finest location for a club here, and a fine fire lakes. In a circle of five miles, well stocked with fish. We are 113 miles from New York, via N. Y. L. E. & W. R. R.

Kenyon's Gordon setter was by Prince Barotsky's Prince, out of Earl Mount-Edgecombe's famous Cornwall bitch.

C. R. V.—For cabin yacht 30 ft. waterline, give 10 ft. beam and 4 ft. 9 in. deep. Do not cut away too much. Rig as cutter with fixed halyard and jib on stay, but open water, when becalmed, she should be able to run in and jib set flying. Will publish something this winter.

C. T. B., New Bedford.—Please inform me in regard to the pedigree of Frank's gun dog, a 12-gauge in all glass balls, 10 yds. range. Grouse. Ans. on Pinesy (Mr. Edward Howley's Fritz (Ranger II—Fanny II) out of Hancey (Gipsy (Fritz-Nettle). Marbles' grouse by Wakefield's Jack, out of Conslard's Nell, imported from Lord Dunsmore's Kennel.

B. L. I., Frankfort, Kan.—I want fishing and hunting for large game; I have had some experience with deer and bear. Where can I get plenty of deer and bear? I had best use the following for the what part? 2. Would a hunter be allowed to cut timber in or about Middle Park, Colorado, for camp purposes? Ans. 1. You might try Colorado and the adjoining country. 2. Yes.

C. S., Guilford, Ill.—What size charge and what number of shot would you advise for use in a 12-gauge in all glass balls, 10 yds. range, trap trap, which throws a ball 85 yards? Ans. Load with 3 drs. good powder, 7/8 oz. No. 8 shot. We have found this charge effective in our gun. Yours may require a little different loading. Experiment and determine.

T. C. S., White Sulphur Springs, Mont.—1. What will be the effect of a top brace in a Sharp's 44 rifle? 2. How can I make explosive bullets? Can a rifle with takes a No. 44 bullet, be used for the purpose of taking a Sharp's 44 calibre, 11 grain bottle-neck shell with good results? Ans. 1. It will do it on the bullet. 2. They are more dangerous to make than to use; better use bullets split for "mushrooming." 3. No.

C. B. S., Geneva, N. Y.—We have no knowledge of the firm you mention, nor have we seen the advertisement. From the tone of your letter we can infer that it is a case of cheap goods. For our opinion of 55 guns see recent issues. We repeat our caution to the general public, buy of only reputable gun-dealers, and use the common sense in the purchase of a gun that you would in buying a suit of clothes.

E. O., New Orleans, La.—I note your definition of a "bye" in your issue of the 13th Inst., to A. C. L., Philadelphia. I wish to ask if this is the proper definition of a "bye" in the rules of the Eastern Field Trials Club. Ans. The definition is correct, except that the Eastern Field Trials rules say that the dog entitled to a bye is a gun with the same previous series, instead of the first, as has been the practice heretofore.

J. T. L., Dover, Maine.—1. Would it be desirable to use a dog whose sire was bull and dam Irish setter, or Irish setter again? 2. Would breeding the pure breed, and using a pure breed, be a better plan, or in time eliminate the bull blood and leave Irish setter with more grit? Ans. 1. Most decidedly not. 2. We could not say, but can see nothing but evil in the course of such a union. 3. It would be Irish dog, and about the only fault that is found with the breed.

J. W. L., Richmond, Maine.—My pup, eight months old, is very weak in his hind parts, and when he lies down his hind legs twitch and jump. He has a good appetite and does not seem to be ill. Ans. Take equal parts of alcohol and water and apply to hair and hips with gentle friction with the hand, rubbing only with the hair, the plenty of water. When the hair is dry, rub with the hand. Do not do like the twitching as it indicates chills, but should not twitch but paralysis be the trouble be may recover.

A. R. C., Hayesville, Ala.—If convenient please give me process for preparing a salve to rub on the skin of a dog's head. I have a dog named "Honey," and he has a sore on his head. Ans. Take equal parts of oys. each salt and alum, 3 gills water, 1 dram sulphur acid, then, being thickened with flour, stir this to dry on a fire, and give it to the dog. This will cure the skin until it is flexible by folding fur on inside and rolling it. If you want to remove the fur the skin should be soaked for a couple of days in a mixture of water, 5 gallons, slaked lime 4 quarts, wood ashes 4 quarts.

SAMPLE, Rochester.—1. What bore and weight of a gun would you advise to combine duck shooting and partridge and fox shooting? 2. Would a bore of 12 gauge be better than a 10 gauge? 3. What bore and weight for two persons? Ans. 1. The weight of a gun is much a matter of taste, and depends upon the weight of the man using the gun. For ordinary hunting a 12 gauge is better than a 10 gauge. The name you name have an established reputation. We cannot discriminate between different makers. 2. It depends altogether upon what you want it for, size of game, etc. 3. It depends upon the man using it.

A. C. W., Whitesboro, L. I.—I have an old dog broken of the bad habit of "breking shot." My dog, a native English setter about eight years old and powerfully built, has this bad trick of which I am weary of. He has a good appetite and does not seem to be ill. Ans. Try the old remedy of 1/2 oz. of castor oil, 1/2 oz. of turpentine, and 1/2 oz. of kerosene, and eat voraciously. Ans. 1. Try the old remedy of 1/2 oz. of castor oil, 1/2 oz. of turpentine, and 1/2 oz. of kerosene, and eat voraciously. 2. Indigestion may cause the trouble. We should not advise any treatment, as he will probably be cured by the next year.

A. L. S., Smithville, Smithville, N. Y.—The query I made in regard to a dog was this, which is preferable for a red and white English setter, a black or white nose. By declining this you will confer a great favor. Ans. You do not seem to be in a hurry to get the dog, so we give you a proper answer. The end of the nose of the English setter should be black or dark liver white that of the Irish setter should be a solid white. With the English setter the black or white nose of the English setter of an orange and white color that often have spots of pink or flesh-colored markings on the end of nose; if your dog is of this strain it is better.

K. G. H., Kingston, Ont.—Can you from the description below let me know the name of a duck I shot the other day? Size, small, about that of a "nut-bull"; bill, rather wide, and of a bluish-green color; wings slightly drooping; feet, black; tail, broad and flat, with black bars on the breast and throat; tail, black, rather wide, and set like a woodpecker; head, brown, having a narrow white space between the eyes; neck, short and rather stout; and mottled like that of a partridge; neck, short and rather thick; feet, same as bill. Ans. We presume from the description that the bird was a duck (*Erismateres vidua*). It is a nearly ripe plumage.

M. A. T., Washington, D. C.—1. Pointer dog 14 months old has a slight twitching in his foreleg, resulting, I suppose, from distemper, which has been treated. A fair pointer with a good disposition. 2. I saw in one of your numbers a remedy for mange, which I think, was Auriferic acid, 1/2 dram to a quart of water. Was that right? Ans. 1. Undoubtedly a salt bath of chlorea, which is generally incurable, but in young dogs often disappears. Change his diet and give plenty of nourishing food mixed with cooked vegetable, and see that he has plenty of exercise. 2. Yes. This was recommended by a correspondent and has proved successful in several instances where the disease was of a mild type.

J. D. H., Nashville, Tenn.—Are all fish sent to market killed by the fishermen, or do they live? I have seen a fish in a net taken from the water? 2. Is there any reason why a fish so dying should not be eaten? 3. How should fish be killed? Ans. 1. No. Many are dropped from the net, and a few die in the water. 2. No, but fish keep better for being laid and humanly causes many anglers to kill their fish. 3. Small fish may be killed by putting the knuckle of the hand on the gills, or the thumb of the hand on the back of the neck and breaking the neck. Larger fish by cutting the "throat latch," or narrow place below the head which connects the head with the body. Or by cutting the "latch," or by a longitudinal slip in the tail prop above the caudal fin.

E. G. C., Reno, Kan.—1. Can you tell me the correct charge for a 12 bore, 30 inch water, 10 yds. range, trap trap, in England. In England it is used to be 3 3/4 drs. and 1 1/2 oz. chilled shot. The charge we have used here is 4 drs. and only 1 oz. shot. What is the correct charge? 2. Is the English powder stronger than the American? 3. Does chilled shot give better results than regular shot? 4. What is the best powder for the charge of 4 drs. powder and 1 oz. of shot. It gives better penetration. Try different charges at a target and select that one which will give the best penetration. A fair pointer with a good disposition, but a better than a good pointer with fair penetration. 2. There are so many different grades of English and American powder that your opinion cannot be given. It is better to stick to the best powder of American origin will compare favorably with the same grade of English. 3. No.

H. P.—You are right; your 34 ft. boat as a cutter. Think that rig is superior to a run rig in all respects and in all winds from a zephyr up. Opinion gradually working around in favor of that rig. Handle and faster. Cannot furnish sail plans. Should say for boat 17 ft. 7 in. long and 3 1/2 ft. wide. It is a good design. The rig is a moderate rig, but as follows: Mast 2 1/2 ft. from bow, hoist 1 ft., foot of main 1 1/2 ft., head 1 ft. Fore stay from down to stern head, 1/2 ft. from bow, 1/2 ft. from the mast. Fore stay from down to stern head, 1/2 ft. from bow, 1/2 ft. from the mast. Lay out of these dimensions, modify to suit your ideas. Then find geometrical centre or the centre of effort and find that this falls about the centre of longitudinal immersed section, including centre-board.

The Kennel.

FIXTURES.

BENCH SHOWS.

December 14, 15 and 16, at Lowell, Mass., Lowell Dog Show. Entries close December 6. Chas. A. Andrew, West Roxford, Mass., superintendent.

FIELD TRIALS.

November 1, at Gilroy, Cal. Field Trials of the Gilroy Rod and Gun Club. Entries close November 1. H. L. Lavenex, Gilroy, Cal. November 24, Louisiana State Field Trials. Entries close November 24. Edward O'Neil, Secretary, New Orleans, La. November 24, Thanksgiving Day, Eastern Field Trials Club: third annual meeting at Hobart's Island, Peconic Bay, Long Island. Entries closed Oct. 1. Jacob Pritz, Secretary, P. O. Box 24, New York City. December 5, at Grand Junction, Tenn. National American Kennel Club's Field Trials. Jos. H. Dew, Secretary, Columbia, Tenn.

December 10 (or immediately after the close of the National Field Trials at Grand Junction, Tenn.)—Pennsylvania Field Trials. Entries close Dec. 5. Dr. R. H. Seward, Secretary, Pittsburgh, Pa. Address will be Grand Junction, Tenn., after Dec. 1.

TRAINING VS. BREAKING.

IN TEN CHAPTERS—CHAP. I.

NEARLY all writers upon the subject of dog training appear to think that there is but one course to pursue. That all knowledge that is not beaten into a dog is worthless for all practical purposes, and that the whip, check-cord and spike-collar, with perhaps an occasional charge of shot or a vigorous dose of shoe leather, are absolutely necessary in order to perfect his education.

It may appear presumptuous for us to advocate a departure from the beaten path, but as we have had some little experience in the past thirty years as many sportsmen who should be good authority have seen our dogs at work, and have unanimously united in praise of the manner in which they acquit themselves in the field, we have thought that perhaps a description of our method of training might prove interesting. It will be so at least to the new beginner. The main object that we have in view is the amelioration of the present condition of "man's best friend," and should the perusal of these lines cause even but one to follow the course here marked out, we shall feel amply repaid for our labor.

We have ever been in the habit of teaching our dogs the heart for our engine parts, and this love is the main spring that governs all our actions toward them. We do not wish to be understood as meaning that we never use the whip for we believe with the wise king of old that the rod should never be spared when it is needed. What we do mean is this: There is no dog worth the raising—no arspeaking of pointers and setters—that cannot and will not learn all that it is necessary for him to know without a single blow being struck or a single harsh word being spoken. We are very well aware that this humane course will entail a little more labor, and that a vast deal more patience is required than when independence is placed upon the whip and boot-heel to enforce your commands, but the intelligent and cheerful manner in which your pet obeys your slightest word or motion will much more than compensate you for the extra time that you have devoted to his education. There is nothing that so mars our enjoyment when in the field as to see the cringing form of a noble animal cowering in fear of a whipping, which nine times out of ten he does not deserve half so much as his master.

We do not claim absolute perfection for our system nor that you can by adopting it invariably succeed in turning out a well trained, well behaved dog, for we know that with dogs as well as with men we often find one who for lack of brains will never amount to much, no matter what pains we take with him.

In selecting a puppy there are many things to be taken into consideration. In the first place we must be sure that both in the sire and dam are first class field performers. This we consider of the utmost importance. They must also be possessed of endurance, and must be reasonably intelligent. The more ancestors of this type that our pup can boast the better will be suit. He must also have life and audacity; indeed we cannot but now high strain he is, for although he may not submit to restraint quite so readily as his sleepy brother, yet when you once have him under subjection he will not only mind more quickly, but he will do his work better and with twice the speed. Of course he must be well formed, and we should like him to be of good color and coat, but these last are not indispensable as we much prefer good performance to good looks.

Having selected our pup, we will take him home when he is six to eight weeks old, and at once begin his education. Many writers will tell you that your dog should be much older before you begin to instill into his mind even the rudiments of knowledge. If you are going to pursue their system of instruction, we should advise you by all means to put off the evil day as long as possible; but if you are to follow our plan, begin at once—not a moment is to be lost. In the first place you want to secure his affection and entire confidence. This will be the first lesson, and nothing more should be attempted until you have completely won his heart and taught him to place the utmost confidence in you. At this tender age his mind is easily impressed, and will long retain the ideas now formed; and it will take but a few days to teach him to love you with all his heart. If possible, give him a good run over on the ground, with a warm, well-sheltered house or box in which to sleep, and before long he will be very homesome for a few days, and therefore glad to see you often; and you cannot better employ your time than in paying him a visit every half hour for the first day or two. Always, when you go to see him, have a bit of something for him to eat that he will relish. As you approach the pen you should invariably blow upon your whistle the note that you intend to use to call him in. We sound a long note for this purpose, beginning loud and gradually dying away. This with a short, sharp note to attract attention, is all the signals that we ever sound upon the whistle; the last we do not use until his education is further advanced. By associating this long note with something good to eat, it will soon become fixed in his mind that when he hears it he must run to you as fast as he can. We much prefer to have two pups, for it takes no more time to teach them both than it does to teach one, as they will learn from each other; and if one is inclined to be dilatory we withhold his reward, and he, seeing the other one enjoying his customary allowance while he is himself deprived of his share, soon comprehends the true reason and will be on hand the next time.

Do not fail to abundantly cress him and speak kindly words, and never under any circumstances, no matter what the provocation, allow yourself to scold or strike him, as this

is entirely at variance with our system, and is sure to result in the defeat of our plans. Should he jump upon you with his dirty feet, or tear your clothes with his sharp teeth, do not get angry and cuff him, but gently yet firmly place him upon the ground or unclasp his jaws from your garments, consoling yourself with the thought that in a short time you will have him so well in hand that he will know better than to commit these faults. Be very willing with him at all times; cordially study his disposition, and learn all of his ways that you may the more readily understand just how to manage him. You should be in perfect sympathy with him and humor all his whims and notions and endeavor to teach him that you truly love him. In a short time you will find that this love will be returned ten fold, and that he is ever anxiously watching for your coming, and never so happy as when in your presence and enjoying your caresses.

After a few days you may begin to train him, but do not be in a hurry about it, as nothing is gained by haste. Be very careful now, and do not mix all by an undue haste; go very slow, carefully feel your way, and, above all things, exercise an unwearied patience; and if at any time you find the strain upon your nerves growing a little too tense, leave him at once and wait until you are perfectly calm before resuming the lesson.

There is one thing, of the utmost importance, that we wish to particularly impress upon your mind before we go any further. Do not allow yourself under any circumstances to be in any hurry in any of your ordinary tone of voice. There is nothing that is more annoying when shooting than to have a companion continually yelling at the top of his voice to his dog, and generally without any effect. Now, such yelling is worse than useless, for if your dog is properly trained in the first place, he will readily mind your lightest word. For your own comfort, then, and for the pleasure of whoever may accompany you upon your shooting excursions, use nothing but gentle tones when you issue your commands. When this very desirable habit of shouting for once is formed, you will soon find that your lighter tone is demanded, and that you the lungs of a Stentor, it will not be long before your resources will be exhausted, and you will vainly gape for thunder tones to voice your words of command.

The first thing that we endeavor to teach a pup, after we obtain his love and confidence, is to stop at the words "To he." This is a very important point, and comparatively easy to teach him. He should be very hungry when you issue the first lesson, and, if necessary, you should withhold all food until he has learned to stop at the word "To he," and when he understands that as soon as he performs his task his reward is sure, and that he cannot have it before, he will anxiously strive to do whatever you may require of him. You should begin by giving him a taste of a piece of meat, then secure a firm hold upon his collar, and place a small piece upon the ground in front of him. He will struggle with all his strength to get at it, but hold him steadily, and do not say a word until he becomes partially quiet; then move his nose a little closer to the meat, and when he has learned to stop at the word "To he," with a falling accent upon the last syllable. Do not repeat the words just yet, and when you do be very careful that your voice is not strained and unnatural; we always accompany this word with the right hand raised warily, for it may often happen that we wish our dog to come to a halt at some distance from us, and by accustoming him to the gesture he will soon learn to stop as far as he can see you.

Most sportsmen use this signal to mark their dogs charge, but as we should have further to say upon this point, we will plan to say much better. After a few seconds the dog will become more quiet, and you can repeat the words "Now carefully watch him, and as soon as his attention is fixed upon the meat, and he looks at it steadily for a second, release your hold and cluck to him as a signal that he can now have it, and at once praise and pet him, and give him to understand that he has done something wonderful, and that you are pleased with him. We should have stated before that, from the first, whenever you place his food before him you should always cluck to him, as he will thus learn the meaning of the sound, and understand when he hears it that all restraint is removed.

After the first trial do not try him again until the next time that you feed him; for should you force him he may grow weary and fail to respond with that cheerfulness and alacrity that is so pleasing to see. You must be very careful that he does not get at the meat until you give him permission, for he must understand that you mean business every time, and that he cannot have it until you permit him to do so. After a few seconds the dog will become more quiet, and you can repeat the words "Now carefully watch him, and as soon as his attention is fixed upon the meat, and he looks at it steadily for a second, release your hold and cluck to him as a signal that he can now have it, and at once praise and pet him, and give him to understand that he has done something wonderful, and that you are pleased with him. We should have stated before that, from the first, whenever you place his food before him you should always cluck to him, as he will thus learn the meaning of the sound, and understand when he hears it that all restraint is removed.

After the first trial do not try him again until the next time that you feed him; for should you force him he may grow weary and fail to respond with that cheerfulness and alacrity that is so pleasing to see. You must be very careful that he does not get at the meat until you give him permission, for he must understand that you mean business every time, and that he cannot have it until you permit him to do so. After a few seconds the dog will become more quiet, and you can repeat the words "Now carefully watch him, and as soon as his attention is fixed upon the meat, and he looks at it steadily for a second, release your hold and cluck to him as a signal that he can now have it, and at once praise and pet him, and give him to understand that he has done something wonderful, and that you are pleased with him. We should have stated before that, from the first, whenever you place his food before him you should always cluck to him, as he will thus learn the meaning of the sound, and understand when he hears it that all restraint is removed.

After he once understands that he must mind, your task is half accomplished, the rest is comparatively easy, and you will indeed find it a labor of love to perfect his education. In giving these first lessons do not remove him from his pen, as new surroundings will serve to distract his attention from the business on hand, and your task will be all the harder. Indeed it is much better to avoid all training outside the pen until your puppy is well established in what you have taught him. Should it not be convenient to have a pen for him, any good sized room or inclosure that he cannot get out of, will answer for training purposes. Do not allow any spectators in these first lessons, as you want his undivided attention. We know that there is great satisfaction in knowing off the little fellow's accomplishments to one's friends, but do not let this fact induce you to allow them when strangers are near. It is much better to practice him alone than to have him go back on you before folks where you might feel a little delicacy about enforcing your commands.

DOG TRANSPORTATION.

In response to the article in our issue of Aug. 18, upon this subject, we have received a vast amount of correspondence...

The only feasible plea that we can suggest is for every one to furnish his own crate. This, of course, in many instances would be impracticable...

We do not receive so many complaints as formerly, although they are yet far too frequent of the rapacity and selfishness of the baggage-master...

The Chairman pointed out that as the present field trial rules had been passed at a general meeting of the Club, any proposed alteration would have to be submitted in a similar manner...

It was decided to give prizes at the Alexandra Palace Show for pictures and models of dogs, also for specimens of canine taxonomy...

A letter was read from the secretary of the Foxterrier Club, asking whether the committee would allow the competition for the Foxterrier Club's produce stake to take place at the Alexandra Palace Dog Show...

ATLANTA BENCH SHOW.—Detroit, Oct. 13.—Editor Forest and Stream: I have just received a letter from Atlanta, Ga., saying they will give a bench show under my superintendence...

MEADOWBROOK HUNT.—The meet on Tuesday was at Noon's Hotel, Farmegode, L. I. Notwithstanding the nasty weather, several ladies and a score of gentlemen were present...

QUEENS COUNTY HUNT.—On Tuesday the Queens County Hunt enjoyed a fine and very fast run over a very stiff country, accomplishing full ten miles in about forty minutes...

OFF FOR THE SOUTH.—Mr. T. M. Aldrich, of Providence, R. I., started last week for the small game of Tennessee, with him a fine coveal of Mr. Orgil's choicest dogs to complete their education...

KENNEL NOTES. Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notices...

Mike, R.—Claimed by Dr. C. E. (1931), Anlatowoc Wis., for Irish water spaniel dog whelped Aug. 1, 1931, by Mike, winner of 1st New York, 1888, out of Bridget.

Clare.—Claimed by Mr. James T. Walker, Troy, N. Y., for dark red setter bitch whelped July 1, 1931, by champion Berkshire out of Mr. A. A. Sampson's Nora (Eldo-Erie Fly).

Mancheiter.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for black spaniel dog whelped Oct. 19, 1931, by imported Benedict out of owner's Rheia H.

Monitor.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for liver spaniel dog whelped Oct. 19, 1931, by imported Benedict out of owner's Rheia H.

Monia.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for solid black spaniel dog whelped Oct. 19, 1931, by imported Benedict out of owner's Rheia H.

Downland.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for black spaniel dog whelped Oct. 19, 1931, by imported Benedict out of owner's Rheia H.

DOGS IN THE SOUTH.

Editor Forest and Stream: Five years back there were few if any really good dogs in this part of the country. What articles had been taken in that time...

If I were in the business I should ask \$100 to break a dog in a finished manner. Those who have had no experience in educating a dog have little conception of the task and of the time...

The South, too, can now boast of fine stock. For the past few years Mr. A. B. Hayward, of Rock Hill, S. C., Mr. Gibbes of Columbia, S. C., and Mr. Percy, of Union, La., Mr. May, of Augusta, Ga., and others have been gradually getting fine stock...

LONDON KENNEL CLUB.—A committee of the London, England, Kennel Club was held on Tuesday, October 4. Present: Mr. Shirley, Mr. Beaufoy, Mr. George Brewis, Captain Hutton, Rev. F. L. Lister, Mr. W. G. L. G. M. Leigh Pemberton, Mr. Whitehouse and Dr. Forbes Winslow.

Mr. Brewis called attention to the working of the system of judging at field trials of pointers and setters, known as the "heat system," and presented the following petition on the subject:

The judges for the Alexandra Palace Show were selected; their names will be published as soon as the list is complete. It was decided to give prizes at the Alexandra Palace Show for pictures and models of dogs, also for specimens of canine taxonomy...

A letter was read from the secretary of the Foxterrier Club, asking whether the committee would allow the competition for the Foxterrier Club's produce stake to take place at the Alexandra Palace Dog Show...

ATLANTA BENCH SHOW.—Detroit, Oct. 13.—Editor Forest and Stream: I have just received a letter from Atlanta, Ga., saying they will give a bench show under my superintendence...

MEADOWBROOK HUNT.—The meet on Tuesday was at Noon's Hotel, Farmegode, L. I. Notwithstanding the nasty weather, several ladies and a score of gentlemen were present...

QUEENS COUNTY HUNT.—On Tuesday the Queens County Hunt enjoyed a fine and very fast run over a very stiff country, accomplishing full ten miles in about forty minutes...

OFF FOR THE SOUTH.—Mr. T. M. Aldrich, of Providence, R. I., started last week for the small game of Tennessee, with him a fine coveal of Mr. Orgil's choicest dogs to complete their education...

KENNEL NOTES. Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notices...

Mike, R.—Claimed by Dr. C. E. (1931), Anlatowoc Wis., for Irish water spaniel dog whelped Aug. 1, 1931, by Mike, winner of 1st New York, 1888, out of Bridget.

Clare.—Claimed by Mr. James T. Walker, Troy, N. Y., for dark red setter bitch whelped July 1, 1931, by champion Berkshire out of Mr. A. A. Sampson's Nora (Eldo-Erie Fly).

Mancheiter.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for black spaniel dog whelped Oct. 19, 1931, by imported Benedict out of owner's Rheia H.

Monitor.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for liver spaniel dog whelped Oct. 19, 1931, by imported Benedict out of owner's Rheia H.

Monia.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for solid black spaniel dog whelped Oct. 19, 1931, by imported Benedict out of owner's Rheia H.

Downland.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for black spaniel dog whelped Oct. 19, 1931, by imported Benedict out of owner's Rheia H.

Eorl.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for black cocker dog whelped July 6, 1931, by Black Charlie out of Gros Grant.

Late.—Claimed by Mr. Colin Cameron, Brickerville, Pa., for beagle bitch whelped Sept. 13, 1931, by imported Amber out of Glad's Lily.

Holly and Water.—Claimed by Colin Cameron, Brickerville, Pa., for beagle dogs whelped Sept. 13, 1931, by imported Rambler out of Glad's Lily.

Car.—Claimed by Mr. Colin Cameron, Brickerville, Pa., for beagle bitch whelped June 25, 1931, by Riley (King-Bessie) out of Ringlet (Warrior-Hosey).

Travis, Riley H., and Ralph.—Claimed by Mr. Colin Cameron, Brickerville, Pa., for beagle dogs whelped June 25, 1931, by Riley (King-Bessie) out of Ringlet (Warrior-Hosey).

Granger.—Claimed by T. C. Faxon, Boston, Mass., for tri-colored (black, tan and white) Scotch collie pup whelped June 22, 1931, by Fessie, both owned by F. B. Thro, Westwood, Mass.

Water.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for liver cocker dog whelped July 6, 1931, by Black Charlie out of Gros Grant.

Monique.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for black spaniel dog whelped April 20, 1931, by imported Baron out of imported Queen.

Discoon.—Claimed by Mr. Thos. Campbell, Haverhill, Mass., for Gordon setter dog six months old by Look out of Kenza Kit.

Wassinger.—Claimed by Mr. F. B. Thro, Westwood, Mass., for Irish water spaniel dog by imported Mike out of imported Bridget.

Viola.—Claimed by Mr. P. M. Buckley, Niagara Falls, for liver and white pointer bitch whelped Sept. 14, 1931, by champion Dick out of Fan.

Thunders.—Claimed by Mr. R. M. Livingston, New York City, for bulldog whelped Aug. 19, 1931, by Bonnie Hoy (Slenderman-Nettle) out of owner's Gipsy (Young Gully-Rose).

Patience.—Claimed by Mr. R. M. Livingston, New York City, for bulldog whelped Aug. 19, 1931, by Bonnie Hoy (Slenderman-Nettle) out of Gipsy (Young Gully-Rose).

Mike-Briget whelp.—Mr. J. H. Whitman, Chicago, has sold an Irish spangle dog whelped Aug. 16, 1931, by Mike out of Bridget to Mr. C. E. Querey, of New York City.

Nashville Girl.—Red setter bitch puppy by Campbell's Joe, Jr., out of Belle of Nashville by the Nashville Kennel Club to Mr. L. V. Hart, Nashville, Tenn.

Trin, Musie and Zephyr.—Mr. Colin Cameron, Brickerville, Pa., has sold to Mr. J. M. Fisher, Leadville, Col., the beagle dog Trin (Chandlerville) and the imported Musie (Bitch Musie) and the imported Zephyr (Sam-Dolly) and the imported beagle bitch Equity, in whelp to imported Rambler. Trin was repurchased by Mr. Cameron from Mr. Fisher.

Riley H.—Beagle dog whelped June 25, 1931, by Riley out of Ringlet, by Mr. Colin Cameron, Brickerville, Pa., to Mr. Chas. A. Willis, Rockville, Md.

Lade.—Beagle bitch whelped Sept. 13, 1931, by imported Rambler out of Glad's Lily, by Mr. Colin Cameron, Brickerville, Pa., to Mr. B. F. Thro, Westwood, Mass.

Archyrah Laddie-Money whelp.—Scotch collie bitch by Mr. J. Lindsay, Jersey City, N. J., to Mr. Alexander Ramsay, of same place.

Black Cock.—Black and white setter dog puppy by Campbell's Joe, Jr., out of Belle of Nashville by the Nashville Kennel Club to Mr. R. C. Martin, Nashville, Tenn.

Top Terrier whelp.—(Billy-Toots) by Mr. J. Ols Fellows, Hornellsville, N. Y., to Mr. W. H. Holmes, St. Peter, Minn.

Spangle dog whelp.—(Dan-Nelle) by Mr. J. Ols Fellows, Hornellsville, N. Y., to Mr. Chas. A. Rice, Boston, Mass.

Black Cocker whelp.—(Brage-Tony) by Mr. J. Ols Fellows, Hornellsville, N. Y., to Mr. E. P. Tomlin, New York City.

Top Terrier whelp.—(Billy-Toots) by Mr. J. Ols Fellows, Hornellsville, N. Y., to Mr. W. H. Holmes, St. Peter, Minn.

Gordon whelp.—Mr. Thomas Blyth, Langdon, Va., has sold a Gordon setter puppy to Dr. C. E. (1931), Anlatowoc Wis., for Irish water spaniel dog whelped Aug. 1, 1931, by Mike, winner of 1st New York, 1888, out of Bridget.

Black Cock whelp.—(Brage-Tony) by Mr. J. Ols Fellows, Hornellsville, N. Y., to Mr. E. P. Tomlin, New York City.

Top Terrier whelp.—(Billy-Toots) by Mr. J. Ols Fellows, Hornellsville, N. Y., to Mr. W. H. Holmes, St. Peter, Minn.

Spangle dog whelp.—(Dan-Nelle) by Mr. J. Ols Fellows, Hornellsville, N. Y., to Mr. Chas. A. Rice, Boston, Mass.

Black Cocker whelp.—(Brage-Tony) by Mr. J. Ols Fellows, Hornellsville, N. Y., to Mr. E. P. Tomlin, New York City.

DOG DEALING PRINCIPLES. Editor Forest and Stream: What should a honest man do when he gets swindled in buying a dog? The same as any honest man would do with a bad bill or a base coin—destroy it at once, and not pass it to some unsuspecting person...

Editor Forest and Stream: Five years back there were few if any really good dogs in this part of the country. What articles had been taken in that time since the kind I reach above, field trials and the honest work in our kennels, great and small, have been the means of producing stock so superior in fact that exportation has been tried to England...

Car.—Claimed by Mr. Colin Cameron, Brickerville, Pa., for beagle bitch whelped June 25, 1931, by Riley (King-Bessie) out of Ringlet (Warrior-Hosey). Travis, Riley H., and Ralph.—Claimed by Mr. Colin Cameron, Brickerville, Pa., for beagle dogs whelped June 25, 1931, by Riley (King-Bessie) out of Ringlet (Warrior-Hosey).

PITTSBURGH BENCH SHOW.—Pittsburgh, Nov. 1.—Editor Forest and Stream: At a meeting of the Directors of the Western Pennsylvania Poultry Society held here last night it was determined to hold a bench show on this coming spring, commencing April 4 closing on the 7th. Mr. J. Has Lincoln was selected as Manager. We expect to have one of the most interesting bench shows ever held in this country.

Downland.—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for black spaniel dog whelped Oct. 19, 1931, by imported Benedict out of owner's Rheia H.

Spangle dog whelp.—(Dan-Nelle) by Mr. J. Ols Fellows, Hornellsville, N. Y., to Mr. Chas. A. Rice, Boston, Mass.

DEATHS.

Dell.—Mr. Sam Scranton has lost his black and white setter bitch Dell (Old Man-Seg) and ten puppies by Odd (Dash III)-Chicoy. Fred H. Lovell, of New York City, G. C., lost Oct. 23 his Lovell setter dog Prince (Gladsone-Frost).

KENNEL MANAGEMENT.

S. W. B., Irasburg, Vt.—My Irish setter has suffered for the last six or eight weeks from a swelling in his ears. It began in a small blister, size of a silver dollar, on the inside of the ear flap. It soon extended over the entire ear and became the size of a large pear. It was opened and it seemed to contain nothing but blood; next day it became as large as before opening. On the second evening the blood was mingled with a watery substance. It seems to pain him and he cowers when he sees me, and also, once in a while, he shakes his head or opens the ear almost daily and it now discharges matter. Ans. Your dog undoubtedly is canker in the ear and the abscess was caused by the discharge. The consequent swelling of the ear is due to the open scratching with his feet. Wash out his ear thoroughly with warm water and pour into each once a day a mixture of bromo-chloride of potassium, 34; water, 34; and also a little of the same mixture of the ear a few minutes. Put an ear cap if he continues to shake his head. The abscess will heal when the cause is removed.

same time to start a snub of four masts was going against...
yachts made a race also during the year. The sea still will take her place as the record as she has a long run among the racers.

It is now too late to add additional rigging of all sorts, docking...
days after delivery does not prove either the yacht a flat failure...

"THE FISHING LINE."

TAKE THE Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE Front, Grayling & Black Bass Fisheries, AND THE FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK FROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters. THE TROUT season begins May 1 and ends Sept. 1. THE GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, LAKE PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The sportsman can readily secure copies of his skill to his friends or club "at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR BAILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with Hay Fever and Asthma Affections. The hotel accommodations are excellent, and will be largely increased in time for the season of 1882 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen. Dogs, Guns and Fishing Tackle Carried Free at owners risk.

11 is our aim to make sportsmen feel "at home" in this route. For Tourists and Fishermen a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEECH, Gen'l Pass. Agent, Grand Rapids, Mich.

EAGLE HOTEL.

(Altitude, 2,250 feet.) ASHEVILLE, WESTERN N. C. L. N. HASSELL, PROPRIETOR.

Hotels and Resorts for Sportsmen.

TO SPORTSMEN: The Pennsylvania R. R. Co.

Respectfully invite attention to the SUPERIOR FACILITIES afforded by their lines for reaching most of the FAVORITE PARKS and GAME RESORTS in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT PORTS, avoid the difficulties and dangers of re-shipping, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure of injury.

THE LINES OF Pennsylvania Railroad Compy also reach the best localities for

Gunning and Fishing

In Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVIA, BEDFORD, GILES-SON, RALESTON, MINNEQUA, and other well-known centers for Trout Fishing, Wing Shooting and Still Hunting. Also to TUCKERTON, BRADY HAVEN, CAPE MAY, SOFON, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT FISHING AND BATHING.

E. P. FARMER, Gen'l Ass. Agent, FRANK THOMSON, Gen'l Manager.

Chesapeake & Ohio R'y.

THE ROUTE OF THE SPORTSMAN AND ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA.

Comprising those of Central and Piedmont Virginia, Blue Ridge Mountains, Valley of Virginia, Allegheny Mountains, Greenhater and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free. The Route of the Tourist, through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R. Y. is reached by rail at Huppington, w. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsula Extension in the summer of 1881 affords THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL."

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

H. W. FULLER, G. P. & T. A., Richmond, Va.

OLD DOMINION LINE.

THE STEAMERS of this line reach some of the finest waterfowl and upland shooting sections in the country. Connecting routes for Clinch, Cape Fear, Cape Fear, and points on the Potomac, City Point, James River, Currituck, Florida and the magnificent country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday and Saturday. Lewis, Bell, Monday and Thursday.

Full information given at office, 197 Greenworth street, New York.

Bromfield House, Boston.

By a PRACTICAL GUNNER AND AN OLD sportsman. Has always on hand the best of boats, batteries, etc., with the largest rig of framed wild geese decoys on the coast. The best ground in the vicinity of New York for bay snipe shooting of all varieties. Special attention given by himself to his guests and satisfaction guaranteed. Address WM. W. FANE, Good Ground, N. L. Refers by permission to J. H. Shepherd, 891 Broadway, and Wm. Dwyer, 320 Broadway, N. Y.

Tim Pond AND The Seven Ponds.

Parties wishing to visit the Seven Ponds, via Eustis and Tim Pond, can have buck-board teams, guides, boats, camps, with board, in readiness, by writing in advance to KENNEDY SMITH, Eustis, Maine.

GUN POWDER!
Dupont's Rifle, Sporting and
Blasting Powder.

THE MOST POPULAR POWDER IN USE!
DUPONT'S GUNPOWDER MILLS, established in 1802,
have maintained their great reputation for seventy-
eight years. Manufacture the following celebrated
brands of powder:
Dupont's Diamond Grain.—Nos. 1 (coarse)
to 5 (fine) unequalled in strength, quickness and
cleanliness; adapted for glass-ball and pigeon
shooting. Packed in 1 lb. canisters.
Dupont's Electric Blast.—Nos. 1 (coarse)
to 5 (fine); burns slowly, strong and very clean;
great penetration, with a close pattern; adapted
for glass-ball, pigeon, duck and other shooting,
with either muzzle or breech loaders. Packed in 1
lb. and 5 lb. cans (nets and 6 1/2 and 1 1/2 lb. kegs.
Dupont's Choke Bore.—Specially adapted
for "choke bore" guns, and particularly for prairie
and upland shooting. Burns slowly, strong and
modest; does not cake or burn on the barrels, gives
both a good penetration and a close pattern; will
be found well adapted for glass-ball and pigeon
shooting. Made of two sizes, only No. 7 and No. 5,
No. 7 being the coarsest. Packed in 5 lb. kegs and
1 lb. canisters.
Dupont's Eagle Rifle.—A quick, strong and
clean powder, of very fine grain, for pistol shooting.
Packed in 1 lb. canisters and 5 lb. kegs.
Dupont's Rifle P. & S. S. Shooting.—
FFG. and FFG. for long-range rifle shooting,
the FFG. and FFG. for general use, burning
strong and modest. Packed in 1/2 lb., 1 lb. and 5 lb.
canisters, 6 1/2, 1 1/2 and 5 lb. kegs. FFG. fine.
Dupont's Sporting, Mining, Sappers and Blasting
Powders of all sizes and descriptions. Special
Grades for Export. Also Rifle, Cartridge, Mus-
ket, Cannon, Mortar, Mammot, Hexagonal, Cubical
and Pellet Powder, U. S. Government Standard.
Powder manufactured to order of any required
grain or proof.
Agencies in all the cities and principal towns
throughout the United States. Represented by
F. L. KNEELAND, 87 Beaver St., N. Y.
N. E.—Use none but DUPONT'S Fg. or Ffg. for
long-range rifle shooting.

Miscellaneous Advertisements.

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Pierre Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 50 competitors. Send for Catalogue.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.
Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.
Hazard's "Duck Shooting."
Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting. It ranks any other brand and it is equally serviceable for muzzle or breech-loaders.
Hazard's "Kentucky Rifle."
FFG, FFG and "Sea Shooting" Fg in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and modest. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" Fg is the standard Rifle Powder of the country.
Superior Mining and Blasting Powder.
GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.
The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

BEST HEXAGONAL SPLIT BAMBOO FISHING RODS,
As was proved at the Fly-Casting Tournament at Coney Island, June 28.
First prize in Champion Class was won with one of our 10 ft. 9 oz. Bass Rods; length of cast, 75 feet. First prize in Amateur Class was won with one of our 11 ft. 8 oz. Fly Rods; length of cast, 75 ft. The Sea World Special Prize was won with one of our 11 1/2 ft. 10 oz. General Rods; length of cast, 75 ft. Our rods are considered superior to all others by those who have seen or used them. Send stamp for catalogue, with Mass. Fish and Game Law.

ANSWERS TO CORRESPONDENTS..... 318

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

Subscriptions.
 Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newscasters throughout the United States and Canada; and is on sale in Europe by The American Exchange, 49 Strand, W. C. London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.
 Inside pages, nonpareil type, 25 cents per line. Special rates for those six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co., Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, November 17.

THANKSGIVING.—Next week the FOREST AND STREAM will go to press on Tuesday, one day earlier than usual, in order that all our subscribers may receive their paper at the usual time. Advertisers and contributors will please bear this in mind.

CAPT. L. A. BEARDSLEE, whose letters in the FOREST AND STREAM have made him pleasantly known to many of our readers, sailed for Europe from this city yesterday in the steamer France. Capt. Beardslee will be abroad six months; he goes on a pleasure tour, and is accompanied by his wife. True to his instincts he has taken a fishing rod along, and we are promised an occasional line from his pen.

THE BROOKLYN GUN CLUB is one of the five organizations of Long Island. It has been engaged in posting a digest of the game laws in the stations and baggage cars of the Long Island Railroad, and proposes to follow this up by other measures to make these laws known and obeyed. The club is raising a fund for the liberation on the Island of a large number of live quail. The special committee having this in charge are Messrs. Aten, Walter, Post and Creed. In this practical endeavor to increase the game supply of Long Island, the Brooklyn Gun Club is setting an admirable example, which may well be followed.

THE PROPOSED INTERNATIONAL MATCH.

FROM the letter which will be found in another column, there would seem to be a prospect that the shooting season of 1882 will witness a match between the volunteers of Great Britain and the United States; at any rate the subject is fairly launched now, and it remains to be seen whether all the talk which has been had on the subject is more talk, or whether there is a real intention to have a match. Such a contest if held would rouse the interest of the entire public on both sides of the Atlantic.

England is very proud of her volunteer force, and it is really a body of which any nation might be proud. For twenty years or more this great force has been growing, improving and solidifying, until to-day it is the finest body of its sort in the world. From the very start of the movement special stress has been placed upon the importance of rifle practice. It was impossible to have long stretches of camping duty, though there were such great annual concentrations of the force and field movements as are witnessed at the Easter displays, but every company has either its special range or range privileges, and the men pursue their class practice with remarkable assiduity. The force is not well armed, but out of the Snider, such as it is, they have secured all the results that seem possible. The arm to-day is an antiquated one, and the movement has been to so widen the conditions of practice in matches and competitions as to encourage the men by permitting the use of superior arms. The great gatherings at Wimbledon are sustained almost entirely by the effort of the British Volunteer force. The all-comers matches for the small-bore experts, and those competitions in which the regulars appear alone are insignificant beside the mass of individual, company, battalion etc., contests for members of the Volunteer body.

Against all this array of practice, experience and result, the American militia man can only point to a few records running back less than ten years. We have a glorious record in small-bore work, but in military shooting we have very little to show. The State of New York instituted a system of rifle practice, which, if clumsy and exacting in many respects, was at least of value in enabling us to know where we might place the men in comparison with the soldiers of other countries, and just as we were getting something to show the effects of systematic training a sapient governor and a complaisant Adjutant-General conclude that the citizen soldier reaches his highest development when he serves as a tailor's model for the display of gold lace, and the system is broken up. In the other States endeavors, with various degrees of success, have been made. The majority of the States, however, have no systematic home guard at all. In others there is an organization on paper only, and the whole subject is in the worst possible state of confusion. It is to be hoped that the proposed match with the English Volunteers, or the discussions of it if the project should fall through, will direct public attention to this important subject of the cultivation of a great body of armed civilians, a check on internal dissension and a bulwark against invasion from abroad.

The mere fact, however, that we can show only a handful of men against the half million or more belonging to the Volunteer force of Great Britain ought not to discourage at all. We recall distinctly how, without arms, men, or the first requisite of a successful match except pluck, the roving challenge of the then triumphant Irish team was taken up in the fall of 1873 by the Amateur Rifle Club. We are not quite so bad off now. We know a thing or two about rifle shooting in general. We have much to learn yet about military shooting, and we think we can learn it in time to give the English Volunteers in July, 1882, a lively struggle. Pitting the English years of experience and indisposition to profit by them against the American determination and quick subordination of circumstances to a purpose, we should consider the match as outlined a very even one. There is such a wide chance for flukes in such a contest that it is difficult to foretell, even with all the antecedents in one's knowledge, but the probabilities would certainly be in favor of the American team if it be organized with anything like the system which ought to govern it.

A match of this sort would work benefit in a great variety

of ways. In the matter of arms it would provoke a discussion, which would find expression in many improvements. We take it that neither team would shoot with its official arm. The English Volunteers would surely consider themselves handicapped if compelled to use the Snider, and the American shots would hardly care to blaze away with the large calibre Remington, Peabody or Springfield rifles. We would be enabled to see the best work with the best military rifles of to-day, to note their excellencies as well as to have their imperfections made manifest. The match should be an exhaustive one, extending over all the ranges and made to be a test of the men and rifles as comprehensive as the limits of a range will permit. Too much care cannot be taken in the drawing up of the conditions. No steps have as yet been taken, and with a clean slate before them it remains to be shown how satisfactory a schedule of rules and restrictions the directors of the two National Associations may devise. They may assume from the start that there will be a liberal support from the general public to both teams. National pride will be aroused on both sides, and unless gross blundering shall forfeit popular countenance, the projectors of the match may rely upon it.

At any rate it does seem that international small bore shooting has involved itself in such a skein of confusion that there is little prospect of another civilian long range match in the near future. The foreign teams are pretty well satisfied that the Americans are invulnerable on that point, but a military match is as yet an untried venture. It is on one side an inviting new field of conquest for the American rifleman, and on the other a diversion where the British rifleman may wipe away the stigma of small-bore defeat under the eclair of a popular military victory. One of the members of the committee signing the letter published, put the situation very well in the following words, which he wrote on the subject:

National pride, patriotic feeling, and the rivalry which is seemingly inseparable from the rifle field would all be brought into active play in such a match; and to a greater degree similar notions would sway the popular mind, and draw about an international military match an enthusiasm beside which the excitement of the small-bore matches would appear tame. We here at Creedmoor—speaking now of Creedmoor as a representative American range—have had enough of military shooting to carry conviction that, pitted against an All-England team, in match work, we could hold our own, with a fair showing for first place. Our marksmen are armed with American weapons, and these have before now proven a little better than the best on more fields than one. The average match shooting on American ranges, all things considered, is equal to anything shown elsewhere. Even England, in her twenty years' experience in rifle meeting management, and her ranges innumerable, can show no better averages than those of a dozen State shooting fields. America, surely of all nations, has nothing to shrink from in the undertaking of an international military match.

WILD FOWL ON LONG ISLAND.

ONE of the most foolish and short-sighted pieces of legislative action that has recently come to our knowledge is that of the Supervisors of Suffolk county in this State. Some time ago these officers passed a law that ducks should only be shot on alternate days. This change was welcomed by every one who had given the subject any thought for, of course, its tendency was to keep the birds from being harassed from morning until night, to make them more plenty and gentle, and as a consequence to improve the shooting. The greed of some of the baymen, however, has made a change which cannot but work harm to all who derive either pleasure or profit from the fowl-shooting on the South Shore. A short time before the opening of the season the Supervisors got together, and abrogated the provision of the local law protecting the birds on three days of the week, so that at present shooting is permitted every day, and all day. The night before the opening day there were nineteen batteries in position in Shinnecock Bay, all of them on the feeding grounds. The birds not only are tormented all day, but are disturbed at night on the flats, where they go to feed, by the men who are gathering bait for their eel pots. They get no rest.

We have reason to believe that the recent change of the law was made at the request of certain baymen who depend for support on the gunners who go from New York and vicinity to shoot at various well-known resorts along the South

Shore. We had supposed that these men had more intelligence than to advocate any act in which means such certain destruction to their business as this. Can they not see that by discouraging this constant hammering of the birds they are cutting their own throats? When the birds have been driven away where will their occupation be?

We are informed that the prospects for fowl-shooting on the South Shore were never better than at the opening of the season, but that the birds have since been so harassed that the shooting has been unusually poor. We know of a number of men who have been down to Shinnecock, and have come back disgusted. They had the same old story told them of excellent shooting "last week" or "the day before yesterday," but they get no birds themselves.

If the people along the South Shore do not manifest more regard for their own interests they will make that coast so unpopular that no one will go there to shoot, and they will have to amend the Lord's prayer so as to read "give us this day our daily stranger."

A WORD TO THE NEW YORK YACHT CLUB.

WE feel strongly that some notice ought to be taken of the more than questionable course pursued by the owners of the yacht Gracie in starting their boat as a racer in the recent international matches between the Canadian yacht and the champion of the New York Yacht Club, the Mischief. It was a most uncalled for exhibition of ill-feeling such as has never before been witnessed in this country, and we trust never will be seen again.

When the under-king to defeat the Canadian was delegated to Mr. Busk's yacht, it became the duty of every one connected with the New York Yacht Club to do all in their power to aid and assist him, and while we know he is too good a yachtsman and too clear-headed to allow any outside issue to interfere with the task he had on hand, still the mere inducement to drive his boat inferior than there was any necessity for in an attempt to beat the Gracie, and thus incur the risk of a breakdown, was forced in a most indecent fashion. We were much pleased to see, however, in the first day's race that Mr. Busk fully realized the nature of the undertaking, and remembering that he had a "play or pay" race before him the next day, he put himself under easy canvas in his run out to the lightship. As there was the remains of an old head sea on outside, and as he had the Canadian well beaten at that period of the race, he took in his big jib topsail at the point of the Hook, and went out under plain sail only; in fact all through the race the Mischief was sailed against the Atlanta and against the Atlanta only. We fully concur with the opinion expressed in a letter to a daily contemporary that had the Mischief been driven to try and beat the Gracie, and had she broken down in the attempt, the blame would have justly been laid upon Messrs. Flint and Earle. Nor can we acquit the Regatta Committee of all responsibility in the matter, as by agreeing to take the time of the Gracie they, thoughtlessly, no doubt, gave their countenance to an interlop-er, and are in a degree responsible for the unseemly exhibition.

We do not propose here to enter into the merits of the attack made by interested parties on the America Cup Committee owing to the selection they made of a representative yacht. In such matters the selection must be left to some one, and it is impossible for the Committee to please everybody, but this fact affords no excuse or palliation for personal abuse or the suggestion of an unworthy motive. Fortunately, no attacks of this kind can touch the reputation of any member of the America's Cup Committee, composed as it is of gentlemen noted for their practical and theoretical knowledge of yachting, as well as for their uprightness and determination to do what is just without fear or favor. The wisdom of their choice was demonstrated by the result of the races, and we are much mistaken in our estimate of the gentlemen in authority in the New York Yacht Club if they fail to take such steps as may be necessary to officially endorse the action of their Committee.

By so doing the Club will strongly mark its disapproval of the disreputable attacks which have been made anonymously on its Committee, and will prevent in future any recurrence of the exhibition of bad taste which we have now to deplore. Messrs. Flint and Earle should be brought to account by the New York Y. C., and made to substantiate their charges of bad faith against the Committee, or else withdraw their ungentlemanly abuse in as public a manner as they have seen fit to give vent to their unjustifiable attacks.

The club owes this much to itself and to its appointed committee. A proper disciplining of members who have gone beyond the limits observed among gentlemen, and who in their spiteful communications to the daily press have stooped to misrepresentation, will be especially wholesome.

THE INTERESTING ACCOUNT OF THE HERON GULL and the Ring-Bill on Georgian Bay, from the pen of the Rev. J. H. Langille, which we publish in another column, will form one of the chapters of a new work on ornithology soon to appear. We understand that this work will contain some features new to the literature of this description.

THE AMERICAN FLAG IN EGYPT—An American pleasure boat will rendezvous to the motley craft on the Nile this winter. Mr. Rushton has built for Mr. August Belmont, Jr., of this city, one of his famous boats, which will be launched

among the bulrushes of that famous Egyptian river. We saw the craft at the establishment of Mr. Squires before it was shipped, and it was a word of grace and beauty. We venture to say that after this no winter on the Nile will be complete without a Rushton boat.

The Sportsman Tourist.

LEAVES FROM A LOG BOOK.

L.—THE MODERN ARK.

"Y-A-P-E! wake up, boys! Daylight!" called Captain Noah, of the "Modern Ark," as he stood by the stove, raking out the ashes of the last night's fire, his tooth chattering with the cold.

"Jimmy! Noah, how's the thermometer?" came from one bunk, where a noise and a pair of eyes were visible for one second above the thick blankets, and were hastily covered up again as their owner felt the piercing cold.

"Water's frozen in the tea-kettle, Slem; but Brewerton ain't in a gig, and we've got to make Frenchman's Island by noon. So tumble out."

"All right, old man," and in a few minutes all three were busy at work; so while Noah makes the fire, and Shem and Japhet are putting up the bunks and stowing away the blankets, let us take a survey of the odd-looking craft that serves as their habitation.

The Modern Ark is a flat-boat or scow, twenty feet long by eight feet wide, and two feet deep, and decked over at each end for four feet, the remainder being occupied by a house built of light stuff, seven feet in height from the floor, having a bowet, wooden roof covered with painted canvas. In each end of the house are sliding doors and a window one foot square is set into each side. The interior, which is lined with thick draughting paper for warmth, is fitted with long, narrow benches, divided into compartments, and running nearly the whole length on each side of the house. These serve for stowing provisions and plunder, and are used as seats and as rests for the bunks which are hinged to the walls.

Near the after-end is a small wood-burning cook stove, with pots and pans hung around it, and from pegs and hooks in the walls depend hunting garments, guns, rods, a dog whip, a buck saw, ax, hatchet and other necessary utensils. The two dogs, Bowy, a native English setter of small size, and Brin, an Irish water spaniel, occupy the space beneath the forward-deck at night, and beneath the after-deck are stowed decoys, canvas tops, etc. The motive power of the craft is a sail hung on a mast forward of the house, and, when wind fails, a pair of paddle wheels attached to a shaft running across the boat, and worked by a lever within, hand-car fashion. The builders of the craft are its occupants. Soon after its completion some friend dubbed it, "The Modern Ark," and its captain came to be known as Noah, and the other owners as Shem and Japhet. A "Hain" was engaged for one trip, but was soon dispensed with, the owners proving better cooks and smaller eaters (except Shem, who was known as a "Square-meal Shem").

The present trip had been begun in the afternoon of the preceding day, and partly accomplished after dark. The many windings of the Seneca and Oneida rivers had rendered the sail useless, and indeed the doubtful bottom of the Gaskin and Caughdenry "rifls" had made it necessary to send one man ahead into the darkness with a skill. Progress in this way was so slow that it was well along in the night before the point was reached where we find the Ark moored.

"Boys," called Japhet who had opened the door to let the dogs out on the decks, "here's a foot of snow, and snowing yet."

"So there is," said Shem, "but I guess we are near Brewerton, for I can hear a train crossing the bridge."

Soon a comfortable fire was built, and one of Shem's "square meals," consisting of fried bacon, slaajacks and coffee was put away, then the Modern Ark was loosed from shore, and with Japhet and Noah at the "pump" and Shem steering they were soon under way, the paddles thrashing the water as they ate. As at first the wind was rounded Shem shouted, "Brewerton, ho!" and after a half hour more of pumping the Modern Ark floated under the two bridges, and was tied to the breakwater at the river's mouth. Here a consultation was deemed necessary. Frenchman's Island, the objective point, was about five miles distant in plain sight. But to reach it the Modern Ark must be propelled over the open waters of Oneida Lake, which was here from four to five miles wide—against a strong east wind and a heavy sea. It was evident that by working the Ark with her regular gear would be extremely difficult on account of the strong head wind and irregular waves, which would not give a "ho!" for the paddle wheels. On the other hand this same wind made it dangerous to try to make the island by sail in such an unmanageable craft. After some consultation the deciding vote to make the latter attempt was cast by Shem, who would rather risk his life than overwork himself at the "pumps," so the sail being rigged with the reefs tied in, the group of small boys on shore was ordered to "cast off."

"Fasten the lee-board!" shrieked Noah who was holding the sheet with one hand and steering with the other, while his hat, which he could not hold on, went sailing away over the water. "Trim 'em up, boys!" and the stove, anchor, guns, dogs and all the movables were piled up to windward. Even then the Ark careened as she sailed more on her side than on her bottom, and the crew had hard work to keep the heavier articles from rolling over to leeward.

"Ain't you ease her up, Noah?" yelled Japhet.

"No; we've got to make it, or we're Point on this leg."

"Can't help it. Get the sails and bail her out."

"Shakes of Neptune! How the old ark flew! The piercing wind and yet sleek boat bite by against Noah's face, as he held on valiantly to the sheet and tiller, his uncovered hair flying in the wind, while anon a crash from within, or the agonizing yell from a dog, told of the struggles of the crew to keep the last water in it braked, and to preserve an equilibrium in spite of the topsy-turvy condition of the cabin. But the old craft here the storm pretty well, considering all things, and ploughed her way gallantly up to T and Hunt's Point, where some duck-shooters held their blind to get a closer view of the strange, uncouth-looking vessel, and stared open-mouthed as the Ark was put about, and headed away on the lough stretch. It was easier riding now, and

the crew "had time to think," as Shem expressed it; and in a few minutes the Modern Ark was run into the narrow passage separating Frenchman's and Dunham's Islands and beached in a sheltered cove.

While Shem went ashore with the ax to cut some wood, Japhet and Noah haled the water out of the cabin, where it was a kile deep, and reconnected the stove with its pipe. Then a roaring fire was built and the doors closed, and as the genial warmth diffused itself through the little cabin, sending the steam up from the wet clothing of the crew, the three men huddled close around the stove, gave three cheers for the staunch old "Modern Ark," accompanied by such a lusty "tiger!" that the dogs slunk away in the furthest corner of the boat, evidently thinking their masters had suddenly become crazy.

"It's worth all the wet and cold of the sail to enjoy such comfort as this after it," said Noah, as he sipped his coffee hot from the fire.

"May be it is," replied Shem, "but a good deal of money wouldn't hire me to try it over again. Why, Noah, if the Ark had capsized I'd never get out of the cabin in the world with that stove a top of me."

"We'd have all been drowned for the profanity you fired at the dogs," said Japhet slyly.

After a thorough thawing out the three took the duck boats and proceeded to the north side of the island, where brush and bushes were cut and a rough house built, and the decoys set out. Ducks were flying in fair numbers, and soon a bunch of blue-hills were enticed to the blind, and four dropped out at the report of the guns. Then a pair of pintails escaped after six barrels had been emptied at them. Another bunch of blue-hills left three of their number, followed by the killing of two single hirls by Japhet. Eight whistlers out of a flock that huddled together over the decoys completed the bag for the day, and the sportsmen were glad to abandon the freezing atmosphere of the point for the comfort of the warm cabin. "One duck apiece," was the rule on board the Modern Ark, and the crew being experts in preparing them for cooking, three ducks were soon picked, cleaned, headed, well salted and peppered inside and put whole into the oven in a pan. In twenty minutes they were pronounced "done," and served up, one to each man, accompanied by boiled potatoes and fragrant coffee, and even Shem could not complain that anything was lacking to make the repast what he continually prayed for, "a square meal."

"Boys," observed Shem an hour later, as he set a kettle of newly-made mush out on deck to cool for the dogs, "it strikes me that that ark they talk about in the Bible never struck such a squall as we had to-day, or it would have taken more cussin' than Noah and those three sons of his could do to keep all them animals on the windward side of the flat-boat."

SENeca.

AMERICAN SPORTING LITERATURE.

SIXTY-FIVE years ago, when the writer caught his first trout in Massachusetts' streams, there was no sporting literature and few sportsmen.

A man of business or of the professions who should have taken his two weeks in the woods with rod and gun would have been considered unsafe to do business with. There were indeed a few persons who ventured openly upon field sports. Men like Daniel Webster were able to defy public opinion, and enjoy themselves in shooting and fishing, but it is probable that these innocent amusements injured them more in the public mind than more serious indulgences would have done. In the town of Boston, at that period one might count upon his fingers the names of all those who fish and hunted for amusement.

As to books upon these subjects the few we had were English. Walt's Angler, Davy's Salmonist, Kit N. White's Recollections in Blackwood, Hawker on Shooting, and the English Sporting Magazine are all that I remember, the latter mainly devoted to fox hunting and racing. A volume of it I used sometimes to get from a circulating library when my finances permitted, and I dared to face its severe maintenance of Colonel P., the librarian, whom I looked upon as the happiest man on earth, owner of that treasure, a full set of the Sporting Magazine. Two young men of that day, rich and independent, used, I remember, to make an annual visit to Blackland in pursuit of grouse and salmon, but this eccentricity almost fitted them in public estimation for the lunatic asylum.

The first sporting periodical published in America was, I think, edited by John S. Skinner, of Baltimore, and called the American Sporting Magazine, about 1839-30. It appeared in octavo form, was well edited and printed and was illustrated with copper-plate engravings of race horses. It died in a year or two for want of support, being in advance of its time.

Dr. J. V. C. Smith, of Massachusetts, published a work on the fishes of that State, with angling notes, perhaps about 1835 to 1840. Readable to hungry minds, though full of errors.

About 1843 Thos. Doughty, the painter, published a work in quarto form in numbers upon American Natural History and Field Sports, illustrated with excellent original drawings of animals and scenery. I reached, I think, twelve numbers, and as an interesting and valuable work. I am uncertain about the dates of the work, my copies of them having been destroyed in the Chicago fire of 1871.

We are glad of the early part of the century had to get our knowledge of the gentle art of personal enjoyment, not from that of others. With the recense of Arden Forest, we found

"Books in the running brooks."

Sportsmen being few at that period, game and fish were abundant. In Newton, near Boston, where my childhood was passed, quail, ruffed grouse and rabbits were constant residents in the extensive woods. Woodcock, snipe and ducks were always to be found in their season by those who knew where to look, and almost every brook in the town contained trout—well educated fish and not easily beguiled. The last brace killed by me in that town, about 1825, were taken in an almost inaccessible swamp with very light tackle, and weighed two pounds—very large for that region, where I have heard it doubted by an angler whether any trout in the United States weighed three pounds. Maine and Michigan waters were then unknown, and Cape Cod furnished the only extensive woods. Woodcock, snipe and ducks were always to be found in their season by those who knew where to look, and almost every brook in the town contained trout—well educated fish and not easily beguiled. ENGLISH RACES AND AMERICAN TRIUMPHS.

REJOICE for triumphs on the turf, For victories o'er the ocean surf Far as the waves are tost! Our shapely yachts have spread the sail, Have dived the tumults of the gale, The pennants of the waves and hail To anchor by the Britannia's keel.

Along those shores, one summer day, How bright the white-wing'd fleet's display, When England's yachtsmen dar'd the world To meet them with the sails unfurl'd In national sea race.

Now, a more brilliant crown we claim, Won to historic fields of fame; Woo on the English turf renowned; At Epsom and Newmarket won From the best steeds that ever ran; When won the queen's cup was the prize; Dear kibbion, dear to English eyes; Biao o'er all English ground!

For years untold the British breed, Of choicest blood, of rarest blood, Nurtur'd by prince and peer, At Ascot, Don's famous field, Had caus'd all foreign rivals— Yield in the race-car.

And now from realms beyond the sea; From thy vast plains, America! From prairies broad, from pastures green, The steeds of Lottoland and Keene Meet on the British field.

The English nobles as they lead From from the sea the prancing steed, Fear never prize to yield. Ah! little dream they that at last Their miracles, so matchless fast, Shall yield the palm when Trojans Shall lead in van racing war, And glorious Fozall and Parole Shall foremost teach the victor's goal, And win the prize and wear the crown Of grand, illustrious renown.

Look to your laurels! ye that sweep With stately car the ocean deep! Let a new Mægde shall bear away The Conqueror's Cup we hold to-day.

ISAAC McLELLAN.

IN A CHINESE HOUSE BOAT.

Editor Forest and Stream:

An inquiry in your issue of the 3d inst., asking for further information about the pheasant of China and Japan, brought vividly to my mind one of the pleasantest shooting trips I ever took in my life after the same birds spoken of.

I do not believe that I can now furnish you with the kind of information you would like to have about the birds, but I will tell you about my trip after them if you care about that.

I was attached to the U. S. Ship "Kearsage" lying off Shanghai, China, in the month of January, 1876; and as the chances were that the Admiral would let us remain there for a while, I persuaded three of my messmates to join me in our application to the Admiral for ten days' leave to go on our trip.

Our application was granted and early the next morning we had what is called in China a house boat alongside the ship, and began fitting her out. A house boat is very much like a slop yacht. Our boat had four bunks, and a galley in a cock-pit abaft the house. Our crew consisted of two servants, and six Coolies to work the boat.

Going after game in a house boat is the most luxurious sporting I know of. All that part of China back of Shanghai is completely cut up with canals. So if you happen to have a fair wind, you sail; if not, the Coolies do the duties of mules, and tow you along.

Our trip was about one hundred and twenty-five miles up the country. Toward evening, having supplied ourselves with everything we thought we would need, we shoved off, followed by the best wishes of our messmates left behind, and proceeded up country.

In two days we were getting into the heart of the game country, and as this was our first experience after pheasants in China we were all on the qui vive. Our expectations were gratified by seeing one pheasant on the canal bank. Immediately four guns were in line on the forecastle ready to give it to the next one. The first bird we had seen was a beautiful cock pheasant, and when he spread his wings and displayed his handsome plumage in the bright sunlight, you can easily imagine that our sportsman's ardor was at its height.

I will say just here that the pheasants about Shanghai and up the Yangtze River are, I believe, the same as those commonly raised in England. The male bird has a gorgeous variegated plumage, with long, handsome tail feathers, and the female bird is of a dull ash color. The copper pheasant I have only seen in Japan. There is also in Japan what is called there a golden pheasant, but they are not common, and difficult to get. The Chefoo partridge I have shot, and I am under the impression that they are the same as the French partridge. One of our officers bagged a woodcock at Chefoo that weighed the scales at fourteen ounces.

We finally reached the ground which we wished to shoot over, and made fast alongside the canal bank and started out. We shot over a generally level country with occasional ridges and hummocks covered with thick bamboo. Between the ridges and the thick, tall grass, and along the edges of the bamboo is where the pheasant and hog-deer are found. Both the pheasant and hog-deer were in great abundance.

The Chinese never disturb them, so the birds are not at all wild. In fact, I have shot them in a Chinaman's back yard, and just outside the walls of a large city. Once I saw a pheasant flying over the houses in the city of Naukin. The hog-deer are about the size of a goat, and usually lie in the tall grass. We brought them to bag with No. 4 shot, the same as we used for pheasants.

Our daily hag was a godly number of birds and deer, and all sportsmen can easily imagine one's emotions in knocking over a handsome cock pheasant. We saw a few hare, but quite a number of very small quail. I never met them in coveys, but only by single birds, and when they got up they looked very much like a chestnut burr. They flew straight away, and were easy to kill, and sweet and delicious to eat.

When we returned to our boat at night the coolies would track the boat a few miles farther on. So when we started out in the morning we had entirely new ground to shoot over.

Of course we had many amusing incidents, and the usual jokes, which we always taken in good part by the amiable gentlemen of the party.

Thompson shot a deer one day and mortally wounded it. The deer fell into the canal and could not possibly get out of his own strength. Thompson was quietly surveying him, wondering how he could get him out without getting wet, when Sullivan, who happened to be near and heard the shot, came rushing up much excited. When he beheld the deer dying, he hesitated a moment, and would probably have kept on firing to this day if Thompson hadn't brought him to his senses by calling out, "For Heaven's sake, stop firing, Sullivan, or you will fill him so full of shot that he will sink!" Sullivan suddenly realized that he was banging away at a dead deer and ceased firing. The joke was too good, and Jagersoll, who had a happy faculty of working up a good story, and telling it well too, rehearsed it with great glee to our messmates upon returning to the ship.

We found the Chinese very civil, as would every one who would be half-way decent to them. We had but one scare, which was brought about by one of the Chinese servants coming into the cabin just at dusk and telling us that a Chinaman had rapped three times on a coffin which was placed on the bank of the canal, and he thought that was a signal which meant that we would be attacked during the night. As the Irishman said, we thought we would guard against all precautions, and loaded up our arsenal, which consisted of eight shot-guns, four Remington rifles, four heavy revolvers besides our hunting knives, and turned in prepared for earnest work. When morning came, our arsenal had not been disturbed and we were all alive.

At the end of ten days we returned to our ship, and the flattering accounts we gave about our trip so excited our messmates that another party was at once organized and started off.

If one had the time and means I cannot imagine a more pleasurable trip than to go shooting up country from Shanghai in a house boat. During the season periods frequently return with the outside of the boat completely festooned with game—principally deer and pheasant—often numbering several hundred head of game. F. W. DIKINS.

ANIMAL MYTHS OF THE IROQUOIS.

BY REMINIS A. SMITH.

THE whose hearts are fresh and simple Who have faith in God and Nature, Who believe, that in all ages Ever a human heart is human, That in even savage bosoms There are longings, yearnings, strivings For the good that is in God, That the feeble hands and helpless Grooping blindly in the darkness Feel a God's great hand in the darkness, And are lifted up and strengthened, —Listen to these simple stories:

The hieroglyphics and mummy pits of ancient Egypt, the animal mounds of our own country, the myths of all countries and particularly those of the aborigines of this continent, all point to the fact that between the human race in its infancy and the present there existed an undefined closer communion than in this age of civilization when man looks down with contempt on what he chooses, in his "right of might," to term the "lower animals or brute creation." To the untutored Indian mind, nature was the picture book from which he read such of her secrets as served his simple needs; and only the mysterious—that which he could not comprehend—overawed him; hence Thunder, Echo and the Wind were his divinities. The idea of a "Great Spirit" only came later with teachings.

From this connection with wild animals, stories of transformations of men into beasts and beasts into men are numerous and interesting. In nearly all of these wherever the bear is introduced he figures as a pattern of benevolence, while many other animals, such as the porcupine, are always presented as noxious. One of these bear stories, as told me on the Cattaraugus Reservation, by a grandson of a corn-planter, runs as follows:

A party of hunters, encamped a long distance from home, discovered as they were preparing to return that a young boy of the company was missing. After searching vainly for several days they concluded he had been killed, and sadly departed without him. They were, however, no sooner gone than the lost child, in an almost famishing condition, was discovered by a very kind hearted Bear, who reasoned thus: "If I attempt to relieve the child in my present form, he will surely be frightened to death. I will, therefore, transform myself into a woman and take the boy home with me to become a playmate for my little cubs." The boy was accordingly rescued from starvation and, living in the same hollow tree with the Bear family, fed with them upon nuts, corn and berries. But when fall came, and with it the return of the hunters, the good Bear explained her device to her protegee, saying: "My cubs must now take care of themselves, and you can rejoin your friends; but always feel kindly toward the Bear tribe," upon which she resumed her proper shape and disappeared in the woods. The boy never, even when grown, was known to kill a bear, until after his marriage, when his mother-in-law, who was very fond of tender cut meat, so often grumbled and scolded him that at last, ungratefully forgetting his benefactress, he killed a cub; but as he was carrying it home on his back he fell over a sharp stick and died immediately.

In many of these myths speaking animals play a large part and remind one of the German household stories. The origin of the Bear Clan was of this class.

On one occasion a boy was lost in the forest, when some compassionate animals came to his assistance. Among them were a Wolf, a Deer, a Porcupine and a Bear. The Wolf

offered to take the lad to his den and give him plenty of rabbits' flesh and other delicacies; but "No," said the Bear, "you are too greedy. If at any time you should be hungry you will eat up the boy. We cannot trust him with you." Then the Porcupine offered to share with the boy her cave; but the Bear replied: "Your quills would hurt the child and the roots you eat are too bitter and unwholesome." Then the Deer said: "I will take him on my back and carry him where he will find plenty of berries." "No," returned the Bear, "that will not do, you run too swiftly; the boy will be hit by the branches of the trees and will be killed. I will take him myself. I have a comfortable place for him, and he shall have plenty of fruits and honey." So as the Bear was the strongest, and, in his own opinion, the most sensible, the lad went with him. He lived with him until he had grown to be a large and strong youth. One day some hunters came, who set upon the Bear, and, in spite of the youth's attempt to defend him, slew the poor animal. The young man then left the forest and returned to live among men. He became a noted warrior, and in memory of his early protector took the name of Bear, which he bequeathed to his descendants, who have ever since composed the Bear Clan.

The Turtle Clan originated in a simple, straightforward fashion. There were in early times many tortoises of the kind familiarly known as mud-turtles, inhabiting a small lake or pool. During a very hot summer this pool became dry. The turtles, therefore, perched on the banks, waiting the country to look for a new habitation. One of them, who was uncommonly puffy, suffered a great deal from this uncustomed exercise. After a time his shoulders became blistered under his shell from the effect of his exertions in walking, and he finally, by an extraordinary effort, threw off his shell altogether. The process of transformation and development thus commenced went on with a rapidity which would have delighted Mr. Darwin, for in a short time this fat and lazy creature became a man, who was the progenitor of the Turtle Clan.

Curious myths also exist regarding the transformations of favored animals and birds into the stars. A party of hunters were once in pursuit of a bear, when they were attacked by a monstrous stone giant, and all three destroyed. The three, together with the bear, were carried by invisible spirits up into the sky, where the bear can still be seen pursued by the first hunter with his bow, the second with the kettle, and the third, who, farther behind, is wading sticks. Only in the fables of the Inuit does the bear figure, the bear being his dripping blood tinges the autumn foliage. Then for a time he is invisible but afterward reappears.

In place of the time honored man, lamborn and bush, celebrated by Shakespeare and Mother Goose, the Indian can discover in the moon an old woman weaving a forehead sash. Once a month she airs the boiling kettle of hominy before her, during which time the cat, ever by her side, unravels her work, and so it will continue until the end of time.

The Iroquois fables are also numerous, and if found lacking in the "moral" element of those of Europe, they often excel the latter in path and ingenuity. The following was recounted to me on the "Six Nations' Reserve," in Canada, by Ka-an-eh-aw, one of the four surviving grand children of Brant the Mohawk, and might be termed a modern Indian story. It accounts for the tailless condition of the Bear after this fashion: A cunning Fox saw a wagon load of fish and resorted to the following ruse to obtain some of the coveted delicacy. Feigning to be dead, he hid himself in the road by which the fisherman must pass, who, thinking the skin of the Fox worth the price, tossed him over into his wagon and drove on. After throwing out several fish, the Fox slyly crawled out himself, and securing his fish, soon met a Wolf, who was soon informed of his good luck, and advised to try the same experiment. The fisherman had, in the meantime, discovered the trick, and the Wolf received a good thrashing instead of a fish dinner. The Fox next met a Bear, who was also anxious to procure some fish. "Well," replied the Fox, "down at the river you will find a six hole in the ice; just put your tail down into it as I did, and you can draw out the fish as fast as you wish." The Bear followed the directions carefully, but the weather being so cold, instead of securing the fish, his tail was frozen off. Poor bruiser was very angry and proposed to fight a duel with the Fox, who chose as his seconds a Dog and Cat. The Bear chose a Hog and was awaiting the Fox at the appointed hour. As the latter was late in appearing, the Bear clamored into a tree to prospect, and reported that the Fox was approaching with two men armed with guns. Thereupon the Bear, greatly frightened, begged to be covered up with leaves. Having accomplished this, the Bear returned to his post in the tree. The Fox soon made his appearance, but instead of men, his companions proved to be a Dog and a lance Cat.

While awaiting in their turn, the Cat perceiving the slight motion of one of the uncovered ears of the Hog, sprang upon it, whereupon the squeals of the invisible Pig put the whole company to flight and the Bear never but the satisfaction of avenging the loss of his caudal appendage.

A GREEN MARAY.—Last week a large specimen of the green Maray, *Gymnotorax* sp., came to New York alive in a tank from Bermuda, but died the next day. These ferocious fishes are eel-like in general shape, but with a larger mouth and formidable teeth. The specimen which we saw was about five feet long and had a diameter of about six inches at the thickest portion of its body. There are a great number of species of *Muraena* in different parts of the world, and Prof. Goode, in Bulletin of the National Museum No. 5, Catalogue of the Fishes of the Bermudas, thus mentions the speckled maray, *Gymnotorax moringae* (Cuvier). Goode: "Occasional. The species occurs throughout the West Indies, at Bahia and Saint Helena. My specimen measures three feet, and has the vertical fin edged with white. These fishes are said to attain a length of five or six feet, and are considered excellent food by the lower classes. I am told, however, that serious cases of poisoning have been occasioned by their use. The speckled maray is not rare, but by no means as common as the green maray. I saw a single specimen of the latter, but as I could not obtain it for study I was unable to determine its specific relations. It resembles closely the 'moray' of Cuba (Nat. Hist. Carolina Florida and Bahamas, 20, pl. xx—*Muraena moray*, *Muraena*, *Muraena* and *Muraena*). The latter is not identical with his 'black maray,' as is generally supposed." The great specimen attracted much attention by its formidable appearance.

Specimen copies of the Forest and Stream will be sent free to any address upon application.

Natural History.

ARE GROUSE DESTROYED BY SQUIRRELS?

NEW RUSSIA, N. Y., Nov 2, 1881.

Editor Forest and Stream:

I have noticed a number of inquiries in your paper as to what becomes of the ruffed grouse, and why they disappear from certain localities that are not much hunted. Having lived all my life in the edge of the Adirondack wilderness, and being a lover of grouse-hunting, I have studied the subject, and I think I have found out what the trouble is.

I make the assertion that the common red squirrel or chickaree destroys more ruffed grouse and quail than all other causes put together, sportsmen, cats and birds of prey included.

Somebody asks, "Why there are some years in which there are fewer birds than in others?" It is true there are summers that bring us but few birds, but they always follow summers in which the red squirrel is most abundant. This impudent, omnipresent piece of mischief is rambunctious as we all know, and when the birds of the forest and field are hatching he goes bird-nesting. All the boys in Christendom couldn't heat him at it. He is up on the tree, has bitten the birds through the head, and dropped them on the ground before you can reach him. Stones and sticks and shov's from below do not disturb him, and when, in a tearing rage, you shout for somebody to bring your shot-gun you get it just in time to hear a triumphant "Chrr-rr rrr-r," from a tree rods away, where the rascal is gallily combing his whiskers, which he has wet in a newly-drawn bird's eye from another nest.

If the squirrels are plentiful, precious few birds escape, for they glean carefully even the shade trees in large towns. It naturally follows that in succeeding years birds are scarce, and then, fortunately, squirrels begin to be scarce too. If they did not, birds would come near being exterminated in some regions.

To illustrate, I will state a few facts bearing upon the above. Five years ago ruffed grouse were very plenty in this section. I went out a few times; saw them in the woods were full of them. Unfortunately we had two successive years of harsh mast, and the red squirrels increased amazingly. The year following we had a plague of red squirrels. The little pests were everywhere; on the ground, fences and trees.

Under my studio windows a robin had a nest with four young birds nearly grown. Hearing an outcry from the old birds I looked out and saw a red squirrel in the act of killing the young birds, and throwing them from the nest. He killed three before I could drive him away, in spite of the determined resistance of the old birds and of two sparrows who had nests in the same tree. I went for my gun immediately, and while I was gone he killed the fourth. I had the satisfaction of putting my foot on that squirrel, and was only sorry that it was not the last red squirrel in existence.

A short time after that my sister was sketching near a small tree in which was a robin's nest. While she was there a red squirrel made an attack on the nest. The old birds with the help of her dog drove him away. He made several attacks during the forenoon, but was driven away by the dog. When she came back from the dinner she found the old robin dead under the tree with a bite through the head. The poor thing had given up its life in defending its nest.

At the same time there was a phoebe or fly catcher's nest under the porch roof, and another in a shed near by, each containing four eggs. Noticing something wrong with the old birds I made an examination, and found every egg in each nest maned by squirrel's teeth.

The above facts account for the complete destruction of the ruffed grouse by the squirrel, which could and would destroy every egg shot.

In anybody's shooting verified my fears. I succeeded in bagging only thirteen birds. Nine of them were old ones. Great scarcity of grouse was reported all through this region. They have been scarce ever since, although they are coming in slowly again, thanks to the destruction of red squirrels by the hard winters following the two years of mast. Woodcock were so nearly annihilated as to be out of the question in shooting. Of course woodcock and quail would suffer with the ruffed grouse.

It has been suggested that ruffed grouse are sometimes destroyed by being imprisoned under the snow by ice storms forming a crust through which they cannot break. They have a curious habit of diving into the soft snow, where they pass the night. They dive from the air while flying. I have frequently found the holes where they went in. It was very amusing to stir them up and see them break through the snow with a whirr. They strike the snow with the wings closed at about an angle of thirty degrees. Their exact position can be determined by a slight saucer-like depression, caused by the melting of the snow by the warmth of their bodies. This place is generally from four to six feet from where they went in. I have tried to catch them in my hands by creeping up and making a sudden spring. I never quite succeeded. Tip, they would go from under me like a flash of gunpowder. When found in the snow they give you a splendid rising shot.

I do not believe that many perish by being frozen under the crust, for the simple reason that the hole by which they entered is always open to them, though they almost always rise at some distance from the place where they enter.

There is no doubt that the domestic cat does catch some woodcock and ruffed grouse, but very few comparatively, and they only about balance the account by killing quantities of red squirrels.

Yes, brother sportsmen, if we could devise some means to do away with red squirrels we should see a wonderful increase in game birds.

BAIRDREDDER BISHOP.
[The suggestion embodied in Mr. Bishop's letter is entirely new to us, but it is not on that account less interesting and worthy of investigation. It is a well-known fact that the red squirrel is one of the most persistent and destructive enemies against which the nesting small birds have to contend, and the suggestion that this little wretch destroys the young of grouse is, to say the least, very plausible. We should be glad to hear whether any other of our readers have made any observations on this point, and especially as to whether, after years when squirrels have been numerous, grouse have been found to be scarce.]

CHESTNUTS.

BY A. W. ROBERTS.

THE chestnut is undoubtedly one of the most neglected of all our native fruits. In Italy, Spain and France, the chestnut has received great attention at the hands of horticulturists, so that many valuable varieties are now under cultivation. In Europe chestnuts are ground into flour and meal, from which bread, pies, puddings and cakes are made. Large quantities are consumed when roasted, parched, boiled and desiccated. They are also burned and used as a substitute for coffee. In the fall of the year the smaller varieties of domestic cattle are turned loose into the forests to feed and fatten on the "mast" or nut food, which consists largely of chestnuts and acorns. In Europe the wood of the chestnut tree is highly valued, while in America it is thought but little of.

I am of the opinion that our Italian and French adopted citizens will some day take in hand our native varieties and, by careful cultivation, judicious crossing and the grafting of foreign varieties on our native stock will teach our farmers and foresters, not only the great value of the chestnut as a food source, but also to more highly appreciate the beauty of the chestnut wood for all artistic and useful manufactures wherein our native woods are used.

The chestnut tree is of very sturdy and clear growth, harboring but few parasites. In habit it is exceedingly graceful and picturesque, and when in full bloom with its thousands of drooping tessellated flowers it far exceeds in beauty any other of our native forest trees.

(Fig. A.) (Fig. B.)

(Fig. C.) (Fig. D.)

In this country we have three native varieties—viz, the Southern, the Northern and the Chinquapin chestnuts.

The Southern chestnut is a large, handsome nut, fully one-third larger than a full sized Northern nut. It is rich in flavor, the shell soon turns dark, and the nut heats very quickly. The tree of this variety is of very rapid and healthy growth, and a heavy bearer. The Southern Chestnut flourishes in all the States south of the Potomac.

This Southern nut will heat in three days if not ventilated, and becomes entirely unmarketable when in close packages in six days' time.

The Northern chestnut flourishes in all the States north of the Potomac. It is a hardy and vigorous grower, good bearer and a valuable timber. In size it is but two-thirds that of the Southern variety, and is inclined to be round in shape when well-grown. It is a bright-looking nut, comparatively free from worms, don't heat and is a good keeper. It grows true to its seed, which is not the case always with the foreign varieties.

There is no doubt but that the Southern and Northern chestnuts are susceptible of very great improvement, and who knows but that in future time to come, America will be exporting vast quantities of Yankee chestnuts and chestnut flour.

The Chinquapin chestnut is found growing in Ohio to Southern Pennsylvania, and attains a height of from six to twenty feet. In Georgia an individual tree of this variety exists, the top of which is seventy feet in diameter.

The underside of the leaves of the Chinquapin are covered with a white down, and each burr contains but a single nut, which is half as large as the common chestnut of the North. In flavor it is very sweet and agreeable to eat.

The Northern and Southern chestnuts (*Castanea vesca*) are considered by botanists to be the same variety of chestnut, differing only in growth, according to climate and location. The wholesale dealers in New York city handle from ten to twelve thousand bushels of chestnuts a year, the entire bulk of which pass into the hands of the small dealers who retail them by the pint or quart, either roasted, boiled or raw. None, so far as I can learn, are converted into flour, meal or desiccated.

The amount of Spanish, Italian and French chestnuts imported to this country is very small, as they are not a popular nut with the consumers, from the fact that by the time the nuts reach this country their shells have taken on a dark color, quite the reverse of the lively rich brown color of our native nuts. Again they are apt to become very wormy during the voyage over, a single nut often containing as many as twenty worms.

the fall by the squaws and are said to be kept in perfect condition during the winter by some system of storage or curing known to them only.

A lesson might be learned from the chipmunk squirrels, who peel the chestnuts before storing them up for winter use. From four to six chipmunks, constituting what might be called a co-operative society, excavate a large hole or chamber in which to store the nuts. This hole is large enough to contain from a bushel to a bushel and a half of nuts, according to the number of squirrels co-operating together. The excavation is not only of sufficient size to contain the winter's supply of food, but also to afford sufficient room as a sleeping apartment for the squirrels during the long winter months.

Cold storage has been used for the preservation of chestnuts, and to overcome their heating when in bulk, with only partial success. Many of the heaviest handlers of chestnuts are pursuing various lines of experiments with a view to discover some method to prevent the over-heating, shrinkage and drying up of the chestnut, and also the development of worms. Whoever discovers a sure remedy against these evils will undoubtedly be well rewarded. I have been shown by a dealer chestnuts which had become heated within six hours after he had received them, and which were absolutely unsaleable, the Italian vendors detecting them at a glance.

I have lately seen a few chestnuts of very large size which were grown by a gentleman in Pennsylvania, which, if I am not greatly mistaken, are the same variety from Spanish seed which I made a drawing of some twenty years ago, and yet during this interim of time not a single bushel of this trans-Atlantic variety has been thrown on the market.

The prices paid for native chestnuts early this season ranged from eight to ten dollars per bushel, of sixty pounds, the State standard. The prices being paid at the present date range from five to six dollars per bushel.

In the latter part of the last century J. Ferron tried to establish in Virginia the best varieties of the French chestnuts, but nothing seems to have resulted from the experiment. In Southern Europe the chestnut delights in deep and waxy locations it proves a failure.

The chestnut was introduced into the Latin countries by the Romans, who found it in Castanea, a town of Thessaly, and who prized it as an article of diet. The French, Spanish and Italian varieties have all sprung from this early Roman stock. With the French the most highly prized variety is the marron.

When in North Carolina I was both amused and annoyed by the negro method of gathering chestnuts, which was to wait till the chestnuts had fallen to the ground and had become more or less hidden by the dead leaves, and then to "hern dar likes to picky de chest nut," which accounts for the scorched look that many of the Southern chestnuts have, they bringing only two dollars a bushel delivered in New York city, and seventy-five cents per bushel to the negro picker.

In England the chestnut is eaten raw, roasted, stewed with cream, made into soups and gravies, sowed with salt fish or used as a stuffing for fowls and fish. Evelyn speaks of the chestnut as being a "masculine and lusty food for rustics at all times, and of better nourishment for farmers than hie of rusty bacon, yea, or beans to boot."

In the south of France and the north of Italy chestnuts serve in a great measure as a substitute for bread and potatoes. The nuts laid by for winter are those which fall off the trees, while those which are beaten off the trees are sent to the large cities for immediate use.

As a means of depriving the nuts of their burrs, they are trodden under foot by men wearing wooden shoes or "saluts."

Chestnuts are dried in France, and preserved for many years. The methods of curing are by air, sun, also dried, kiln dried, and by partial boiling, according to the uses made of them.

The French make many dishes of them. Salette is a thick, flat cake, made of chestnut meal, milk, salt and butter and eggs (about the same as our wheat or buckwheat cakes), which is cooked on a hot stove or griddle. Valenta is a porridge made by boiling chestnut meal in water or milk till it forms a thick paste not unlike oat-meal gruel. Chatinga is made by boiling the nuts whole (without their husks or shells) in water and a little salt, till they become soft, after which they are broken up the same as mashed potatoes. Marrow-grease is made by dipping the nuts in clarified sugar, and then drying them. The nuts are also frequently cooked by boiling them in water containing celery and sage.

On both sides of the Pyrenees Mountain signs are to be seen at all taverns containing the words, "Vin a marron," in other words, wine and chestnuts, where for three cents you can have all the chestnuts you can eat with good wine to wash them down.

For much of the above information I am indebted to R. T. Sullist, of Washington Market.

ELK AND THEIR HORNS.

THE deer-horn question has been debated a good deal, and perhaps all are satisfied except the fellow who thought the "spike buck" a distinct breed. The generally accepted belief is that deer and elk add a point upon each horn for each successive year of their age. The theory is probably erroneous, the horns depending largely for their development upon the condition and vigor of the animal and the nature of his feeding ground. This note was suggested by seeing a few days ago three tame elk with which I have been somewhat familiar since they were a year old. They were three years old last spring; one is a male. The first year he had short spike horns, the second year longer spikes, the third year each horn had three points. These were shed May 20, this year, when he was probably just about three years old, possibly a month over. They have since been replaced by a magnificent pair of horns four feet high, each having seven points. His age is about three and a half years old. These animals live and thrive in a pasture, where a like number of cattle would long since have starved to death. Last winter was exceptionally severe in the mountains where they are, and they were fed hay, requiring during the winter about 1,000 pounds. The bull will now weigh 700 to 800 pounds, the cows about 200 pounds less. The other day they escaped from the pasture and ranged about the neighborhood until the next day, when they were driven back in company with some cattle.

NEW ENGLAND BIRD LIFE.—The publishers of "New England Bird Life" are Lee & Shepard, Boston, Mass.; Charles T. Dillingham, Broadway, N. Y. The price is \$3.50.

THE HERRING GULL AND THE RING-BILL ON GEORGIAN BAY.

BY REV. J. H. LANGILLE.

THE most characteristic bird of Georgian Bay is the herring gull, *Larus argentatus*. In Collingwood Harbor it sails among the masts of schooners and the smoke-stacks of steamers almost as fearlessly as if no one were present, seeming to understand that that city has a special law for its safety. Every bit of offal is eagerly gobbled up, and even the large quantities of refuse matter cast overboard by the fishermen is devoured by these eager scavengers. As the steamboat starts out numbers follow in her wake to take advantage of anything edible which is thrown into the water, and until the distant port is reached there is scarcely a minute where they are out of sight. One may amuse himself by the hour throwing bits of cracker or meat overboard for them. Though quite a distance away will see a mere crumb on the surface, and, screaming with delight, will pick it up on the wing. If the cook should throw overboard a dish of remnants, a considerable number will alight on the water and take their repast at their leisure. If one discovers a particularly large or desirable morsel he will seize it and rise tele, generally being pursued by several of his esg, squalling comrades. All along on the rocks and shoals they stand like snowy sentinels, here and there float most gracefully on the water, now they fly low over the surface in search of their favorite prey, or they soar most majestically against the clear ether or the sombre cloud, the entire snowy-white figure of their under parts reminding you most forcibly of the purity of the elements around you. Its length being two feet or upward and its spread of wings some four and one-half feet it compares well in size with the larger birds of prey, and its strong, steady stroke of the wings as well as its spiral soaring is very suggestive of the grand flight of the larger buzzards. Pure white in maturity, with yellow bill and red gony, light blue, gray, and black on the neck and wings, ends of the primaries at black tipped with white, feet a delicate flesh-color, this bird is an object of great beauty in whatever attitude one meets it. On a clear sunny day of April I have seen it floating leisurely northward overland, so high up that it appeared at first slight like a bit of stray down in the atmosphere, and only as the eye adjusted itself to the distance could its outline be defined.

The Herring Gull breeds in communities in a number of places about Georgian Bay, sometimes a dozen or fifty appropriate small islands, sometimes a few very large communities taking possession of larger rocky islands and groups of them. One of the most extensive breeding places is the island called the Half-moon, lying between Cape Hurd and the east end of Great Manitoulin. Here the fishermen sometimes obtain hundreds of dozens of the eggs at a time. The nest, generally placed in the most exposed situation on the bare rocks, sometimes under shelter of the bushes, is a promiscuous pile of trash and dirt—consisting largely of mosses and lichens gathered from the rocks, of small sticks and fine grasses, of almost anything to be picked up in the vicinity—practically well heaped up, and with considerable depression in the centre. The eggs—the full complement of which is three—are about 2.75—2.83x1.80—2.00. The color is greenish or brownish drab, the dark brown and light grayish-brown spots, blotches and scratches, extending more or less over the entire surface, but frequently thicker at the large end. The thick and elegant down of the newly hatched young is nearly the color of the egg. As these birds occupy the same site for breeding from year to year, it becomes generally known to the fishermen, and the nests are frequently visited by fishermen and adventurers from a distance, and the nests are robbed most unmercifully, often until late in summer, the gulls continuing to lay in a very prolific manner. The disastrous consequences of this cruel practice, when kept up from year to year, must be very great, rapidly reducing the numbers of these birds, so useful about many of the towns and villages, and so highly ornamental to the landscape. It is probable, in consequence of this continued disturbance, that while colonies about the sea-shore have resorted to the tall trees for nidification, as reported by Audubon and others. Their breeding habitat on the Atlantic is from New England to Labrador.

At their breeding places these gulls are quite noisy. They have a loud, clear note, sounding like chee-ah, every now and then repeated, and a shorter nasal hunk. These notes are uttered in a very spirited manner, as they describe their grand circles high over head when their nests are being disturbed. Then it is also accompanied by a harsh rattling sound, much like that of a rattle.

"How many kinds of Gulls breed on those shores?" I inquired of an old gentleman, as the tug was nearing one of the well known breeding places. "Two," was the answer; "white ones and gray ones." So might any one think who is not acquainted with the history of these birds; but the fact is that the white ones and gray ones are all of the same kind, the young birds in their gray plumage requiring several years to reach the mature coloration. Like the Gull family in general, this bird has two moult, one in the spring and one in the autumn, and during the winter the mature bird has the head and neck streaked with dusky.

From its name one might suppose that the bird subsists, mainly at least, on herring, but it captures with equal readiness almost every fish of proper size, dashing at the surface, or dropping into the water a few moments to secure it, but rarely, if ever, plunging after it. It also feeds on various kinds of mollusks, holding the shell in its claw after the manner of a hawk, and breaking it with its bill in order to secure the contents. Dr. Coues once found remains of marsh hares in the stomach of one of these Gulls. I have seen it pick up the newly-skinned body of a common tern thrown on the water, and gulp it down at a mouthful, scarcely retarding its flight. In fact, it will feed on almost anything, and in certain localities is an excellent scavenger.

In the fall migration, these gulls move southward through the interior, and spread along our whole Atlantic coast, but principally from New England to the Carolinas, where many winter. Dr. Coues gives the following as the changes of plumage in the young. *Immature*—The feathers of the back have gray margins, and the upper wing-coverts are mottled with dusky gray. An imperfect subterminal bar of dusky on the tail. *Young of first winter*—Head, neck and whole underparts more or less thickly mottled with dusky, as are the wing-coverts, secondaries and tertiaries. The gull-blue of the upper parts appears in irregular patches, mixed with gray. Remiges and rectrices brownish-black, with very narrow whitish tips, the former wanting both

apical and subapical white spots. Bill flesh color, its terminal third black. Feet flesh color. *Younger*—Entirely a deep dull brownish, the throat black streaked, and the rump transversely barred with whitish; the feathers of the back with yellowish or grayish-white edges; wings and tail black; bill black; legs and feet, dusky flesh color."

THE RING-BILLED GULL.

In observing the Herring Gulls on Georgian Bay, one will notice certain individuals very much smaller than the rest, while their form and color, as well as their general habits, is precisely the same. On shooting one of these, however, it will be discovered that the bill is greenish-yellow at the base, followed by a broad band of black enclosing it at the gony, while its tip is bright chrome, the angle of the mouth and part of the cutting edges of the bill being red; and that the legs and feet are of a dusky green. On measuring it, it is found to be only 18 to 20 inches long, and some 48 inches in extent, thus being much smaller than the Herring Gull, while the colors of its bill and feet fully differentiate it. From the dark ring around its bill, it is called the Ring-billed Gull, scientific name, *Larus Delawarensis*. It has about the same diet and habitat as its near relative, which it so closely resembles.

About forty-four miles northeast of Collingwood, and somewhat north of the route from that city to Parry Sound, are the Western Islands. They are in two thick groups, the largest containing several acres each, the smallest being mere rocky shoals. One of the largest has a few trees, most of the rest contain a few shrubs, and more or less small vegetable growth and grasses on some of the ledges of rock. They are many miles from any human habitation, resting quietly in the grand solitude of this waste of waters. One of the larger islands of these groups, the Ring-bills breed in immense numbers. As one nears the shores, they are seen to swarm with many hundreds, if not thousands, of these elegant birds. The male and female are alike along the shore are literally white with them. Approaching still nearer they take alarm, and rise like an immense living cloud. The very air rustling with the noise of their snowy wings seems alive with them, and still they rise from the more distant parts of the island until their numbers are overwhelming. Rising high overhead the great mass spreads out somewhat, and describing their graceful circles among themselves form a most complicated and animated figure of large dimensions against the smit ether or the thick veil of dark clouds. Now they become very noisy, their voices being quite similar to that of the Herring Gull. Presently the great excited mass separates into sections. Several large bodies dropping into the water nearby whiten its surface for some distance, others continue their flight further away, while not a few still linger near to watch the fate of their treasures, and keep up an uneasy chattering immediately overhead. The nests on the island are found to be almost numberless, some of them being so close together the sitting birds must almost touch each other. In the style of the nest, the shape, color and number of the eggs, and the color of the newly hatched young there is the greatest resemblance to the nidification of the Herring Gull; only, in accordance with the diminished size of the birds both nests and eggs are much smaller, the latter being 2.07—2.50x1.03—1.70. On the whole the marking of these eggs tends more to blotches than to the case with the eggs of the near but larger relative. Passing by many nests containing newly hatched young, and others with eggs through the shells of which the peeping chicks have thrust their bills, one may gather a sufficient supply of eggs for study scarcely affecting the number on the whole.

The full-grown young, on through its years of gradual change into the maturity of coloration, bears a close resemblance to, in fact, is almost identical in shades and marking with the Herring Gull of corresponding age. The resemblance of these two species also holds good in respect to the mature birds in their annual changes of plumage.

The almost exact likeness of these two gulls, the one being scarcely more than a smaller pattern of the other, finds its counterpart in a number of other cases among American birds. In comparing the Hairy and Downy Woodpeckers, the King and Virginia Rails, Cooper's Hawk and the Sharp-shinned, the Large and Small Yellow-shanks, the Common Crow and the Fish Crow, the Larger and Smaller Scaups or Blue-bills, what is the latter in each but a miniature of the former?

The Gulls proper are a well-marked sub-division of the Gull family in general, the family including Jaegers or Skua Gulls, Gulls proper, Terns and Skimmers. Some of the differentiating characters of the Gulls proper are: the rather long, deep and much compressed bill, well hooked toward the point, with peculiar enlargement at the gony, and sharp cutting edges; tail even, generally; body thick and wings broad as compared with the Terns for instance, while they are generally of larger size; feet and legs stout for birds of their class; the buoyancy with which they float on the water on account of their small bodies as compared with the bulk of their plumage. In form generally, the whole sub-family are so similarly moulded that any eye of moderate discrimination can recognize them. In size and coloration they are subject to great variation in different localities.

HABITS OF REDHEADED WOODPECKERS.

BRADFORD, PA., November 8, 1891.

Editor Forest and Stream:

Last Sunday, while walking in the woods, I came to a small clearing. On one side of this clearing, among the trees, I noticed several redheaded woodpeckers (*M. erythrocephalus*). As I watched them I observed they appeared to be gathering something from the outer branches or twigs. They would keep flying up to these small branches, and would pick something from them, then fly back to some tree in the woods. I walked slowly up and watched them for about thirty minutes. A wood-chopper said they were gathering beechnut for next winter's use, although the trees were so tall I could not say positively that they were doing so, still it looked as though they were. I have never seen it stated that they do this. A friend of mine, who takes care of an old lease near here, saw one perched in the top of an iron smoke stack pounding away, but after a few trials the bird concluded that was not the kind of "tree" he was looking for, and flew away.

[We have seen it stated that the woodpeckers are in the habit of gathering nuts for winter consumption on, but do not remember that such statements have been confirmed by the observations of ornithologists in the case of our common red-headed species. The Pacific *Melanerpes formicivorus* has been reported to do this. The curious habit of drilling small holes in tree trunks, each hole being large enough to contain

a acorn. After drilling a hole the woodpecker selects an acorn to fit it, and by a few taps of his bill settles it so firmly in position that it is in no danger of falling out. We have seen trees in California studded with acorns, some of which seemed to have been there for years. Just what the bird's object is in doing all this work does not appear to be clearly made out. The first thought to occur to one is that the nuts are gathered and stored here as provisions for consumption during the winter, but this is opposed by the fact that the woodpeckers, as a rule, are insect feeders, and that, with a few exceptions, they do not eat vegetable food; moreover, a large proportion of the acorns that are treated as above are disturbed. It has been suggested that they store the nuts for the sake of the grubs that may be in them, and even that they select the nut in which an insect has deposited its egg, and put the acorn away in its hole in the tree until such time as the worm has grown to be large enough to be a savory morsel, but this is crediting the woodpecker with more foresight than we should be willing to attribute to him without pretty strong evidence to support such a claim. So an interesting note was recently read before the California academy of sciences, the purport of which was that the California woodpecker (*M. formicivorus*) was assisted in his labors by the California jay (*Aphelocoma florida var californica*). The woodpecker seems to have made the holes, and the jay to have collected the nuts and carried them to the carpenter, who adjusted them and drove them home.

We would be glad to receive from any of our correspondents facts which may bear on the subject of the habits of this interesting group of birds. Since the above remarks were put in type, the following very timely note has been received, which establishes as a fact that woodpeckers do eat nuts: **LAKES NEST, Delaware County, N. Y., Nov. 14, 1891.**—*Editor Forest and Stream:* When out shooting gray squirrels on a beach ridge the other day, I saw a very large red-headed woodpecker picking beech nuts on the top of a beech tree. I had supposed, and the books say they live solely on grubs and worms, taken from rotten or dry trees and limbs. To satisfy myself that I was not mistaken, I shot the bird and found it carry a most fat and solid nut. Mr. Warner is setting up the bird for me, as it was in splendid plumage and very pretty. Is it not a new thing to find these birds nutting? I ask for information. **NED BUSLINE.**

DIGESTION OF THE ALLIGATOR.

A FLORIDA MONSTER IN A RAGE.

YOUR contributor, who gave us an article on the alligator recently, evidently has "been there." His statement that they carry in their stomachs "light'd knots" though perhaps new to many, is true.

I have heard many affirm it, and have been witness to it myself. I have killed several in the lake in front of my house, ranging from six to eight feet in length, and when I found them empty I shot them up to shooting distance by imitating the whine and howl of a dog. I opened in presence of my neighbor M. to verify the light'd business, when out crept a soft-shelled turtle, "leather-back," six or eight inches in diameter, entirely uninjured, not a scratch upon him. We found the pine knots and bits of pine as we expected, polished like rosewood, perhaps a half dozen pieces, from two to four inches long. My idea was that the gator used them for the same purpose that a fowl does gravel. The gator would eat stones probably if he could find any. Gators and chickens don't have the gravel down here.

I assisted a six-foot gator to a lively scrimmage last spring, unwittingly on my part. It runs somewhat this way: I was the fellow in the lake one morning, and went for my Maynard, crept through the grass and bushes, and put a ball somewhere in his head, as I supposed from the peculiar antics he went, and which generally follow a mortal wound. He came up once or twice, cut a flourish or two, and found it got my head and prodded around in eight or nine feet, but could hit him but once, and finally gave it up, feeling sure he would lose in a day or two.

Near where I shot him the lake has an outlet, a small stream which the road from Sanford crosses near the rear of my place. Two nights afterward Dr. B., a neighbor who lives a couple of miles west, was returning belated at about eleven o'clock from Sanford, in a sultry, pondering in his mind blue mass and quinine, the staple article for those who are so unfortunate as to get the "shaker." It was something of the kind at least, probably, which was whiling away the hours for the Doctor on his lonesome trip. The night was cloudless and moonless. The water splashed from his horse's feet as he drove into the little creek, and the wheel struck something hard that was not there when he drove down. This something hard, dark and undefined in the dim starlight, rose into the air to nearly the height of the wheel, and, grasped the spokes with its teeth in blind fury. The Doctor's horse is quite agile on occasions, and this was one of them. He left that locality on the jump, the gator, for such it was, lost his teeth hold, and the Doctor—well, he never would tell just how he lit, but he didn't go along with the team. Upon resuming his normal position he saw the gator, with dander up, coming for him through the mud and water, in which the doctor was standing. A nice predicament, this, alone and afoot with a hungry gator at eleven o'clock the night, and not a strand of light around him. The gator, behind him as he did so, hoping sincerely every second to find a stick of some sort, for his dander had "ris" now, and he was going to lurt that gator. He had backed off but a few steps when luckily his hand came in contact with a water-soaked pine knot that had been cut out of the road, heavy and just about the size and length for a good weapon. He was bold as a lion now, and awaiting the flourish or two the savage maniac he brought down the root on his head with vigor, and failed to stop the reptile, and it was only after repeated blows that he witted. The doctor now set out after his team, which luckily he found all right not far up the road, and returning he fastened the gator by the hitching strap to the sulky axle and towed him home at a "two-forty" gal, putting him into a compost heap for the benefit of his orange trees.

I have no doubt at all that this was the same gator that I shot two days previous at the ball crated him; he followed the wheel on the road crossing and when the wheel struck the reptile it might be rose in blind rage seizing the first object he touched. The sulky wheel bears the jagged marks of teeth on two spokes as a reminder to the Doctor not to travel after dark.

Twin Lakes, Fla.

THE HOMING INSTINCT.

THAT many animals have some senses more acute and perfect than men well know, especially the senses of sight, hearing and smell. Some of them have still another power of sense, which I have never seen fully and clearly explained that of returning home from a distance by a different route from any they had previously gone.

I was living in the town of Torrey, Yates county, N. Y., and had a cat which I did not want and did not wish to kill. I put her into a sack, placed her into a box beneath the buggy seat, and started for Penn Yan, the county seat, a distance of six miles, going by rail and pack-travelled way, different from the one I usually went; across a large stream, the outlet of Lake Kenos. Over this stream were three bridges.

When about six miles from home I took the cat from the sack and the dark place in which she had been confined, and where it was impossible for her to see out; I let her loose into a small wood and, not near any house, and then drove fast to town, about one mile distant. I returned home by a different route, distant from the one I went from one to two miles.

Next morning the cat was home, much to the surprise of all the family. The readers of FOREST AND STREAM are well aware that similar things have been done by dogs, horses, cats and pigs. — Can any one tell how it is done?

Austin, Texas.

S. B. BUCKLEY.

SHEPHERD'S OSTEOLOGICAL PAPERS.—Two essays of importance have recently been published in the *Bulletin of the Hayden's Survey on the osteology of two interesting groups of birds.* The most notable as it is the most extended of these, relates to the osteology of the North American *Tyrannus*, while the second, a shorter paper, treats of the osteology of *Lanius ludovicianus excubitorides*. The study of the osteology of our grouse certainly deserves more attention than has ever been given to it, and we are glad to see the work undertaken at last by one who is evidently thoroughly in love with his subject, and who is besides fortunately situated for the procuring those immature specimens which are so necessary to an intelligent comprehension of the bony framework of any bird. Many—perhaps most—readers will decline to read Dr. Shepherd's view of some points of the skeleton, since recent investigations have somewhat modified the old fashioned faith in the archetype skeleton. Still all will acknowledge the present paper to be of great value, for too little has been done in this branch of North American ornithology. The paper on the osteology of the grouse is illustrated by eight beautiful plates, and that on the shrub by one. We notice that the proofs have not been read with care, and it is a pity that such excellent papers should be marred by errors that could have been so easily avoided. Dr. Shepherd's investigations of the osteology of *Speotyto cunicularia hypoleuca* and of *Kereuniphila pictaris* are fitly supplemented by the two papers just received, and we may all look forward with pleasure to further contributions from his pen on this most fascinating subject.

Game Bag and Gun.

. For table of game seasons see issue of October 16.

A DAY WITH THE RUFFED GROUSE.

RUFFED grouse are reported very scarce from nearly all sections of the country; yet we venture to say that the sportsman who has carefully studied their habits, and by long experience in their pursuit obtained a knowledge of "the how, the where and the when" to seek these royal birds, can obtain a fair amount of sport even in the sections of country which the ordinary sportsman pronounce to be entirely destitute of this best of all game birds. We do not wish to be understood as intending that even with the best of success in finding, and with the straightest of powder, the bag will be unaccountably heavy, but that the genuine sportsman, to whom "it is not all of sport to kill," and to whom the beauties of nature are a never ending source of pleasure, can abundantly enjoy himself and secure enough of these most wily birds to well repay him for the time devoted to their pursuit.

It was our good fortune last Saturday, in company with the Hon. E. H. Lathrop, of Springfield, Mass., and his celebrated sportsman Dick, to chronicle, except that, with the knowledge from reports of the sportsmen that there were no birds in the low lying covers, we made a break for the mountains, surmising that the birds that were bred in their inaccessible nooks would be found somewhere in the highways, by which they make their annual migrations from the fastnesses of the hills to the better feeding grounds of the valleys. That our ideas were not entirely wrong, our success abundantly proved, for we had followed the downward course of the first little rivulet but a short distance when the welcome sound of whirring wings greeted our ears as an old cock grouse, a very patriarch, suspicious of approaching foe, got from the tangled thicket, a good hundred yards below us, and with unfeeling haste whirled down the narrow gorge, until near its foot, when, with a crafty swing to the left, he disappeared over a knoll. Thankful that our eyes had caught that wicked twist, we calmly followed on and soon had the satisfaction of seeing the sudden departure of three more in the same direction. Although they were a long distance out of reach, we saluted them as an earnest of what they might expect should they seek to escape us by this unsportsmanlike manner, for it is one of the peculiarities of our creed that a game bird should lie to the dog, and we have ever found the warning voice of the gun a most eloquent argument to bring them to a sense of duty in this respect. Our companions carefully marked one of the trio as he settled in an alder thicket, far down the run, and we had one down line in a patch of hazel, toward which we at once proceeded.

We have not mentioned Dick, or as he is appropriately called, "the black whirlwind of the East," as up to this moment there was nothing to chronicle, except that, with the marvelous speed for which he is so famous, he had thoroughly ptered the ground in front, and for a long distance on each side of us, with hardly a break in his tireless stride which, to all appearance, is as far-searching and elastic as when many years ago (for Dick is ten years old) we first saw him cut loose upon the stubble among the quail. But now, as the roar of the swiftly beating wings struck upon his ear, he dropped upon his haunches and, with quivering lip and listening eye, turned his head in the direction of the sound, then with cat-like, stealthy tread, he threaded the mazes of

the thicket, occasionally challenging as the grateful exclamation was wafted to his eager nostrils, "ever with head high in air" ("fleeing") for proof of the presence of any stranger that might seek to escape by lying close; but, soon convinced that all had taken flight, he glances toward his master to learn their course; then he again, but at subdued speed and greatly circumscribed range, he carefully beats every inch of ground in front, until we are near the patch of hazel, when, obedient to a sign from his master—for words are uncalculated here—he takes his place at heel, and silently they steal upward to get the wind, while we, with noiseless tread, take a commanding position upon the upper side. When all is ready, a half wave of the hand sends the eager dog with a flying leap across the little break, where he strikes the bank and seent at the same instant, and all doubled up as he is, he staunchly remains until we, wishing to be in at the death, have taken some twenty steps toward him, when, with a roll of his eye and gentle wave of his stern, that plain-y warns us of a running bird, he takes a step or two right toward us. At the same instant there was a confused tumult behind us that needed no interpreter to explain that this crafty bird had played us a sure trick. Knowing that we were not to be quickly whirled around with gun at shoulder and behold him behind a sapling, the only one in sight, fleeing for his life up the mountain. We did not feel highly honored at the graceful dip with which the sapling acknowledged our salute, but thought it rather a source of sorrow. Sure that we had not with an injudicious defeat, we turned to explain the cause, when a glance at old Dick turns our bitter grief to sweetest joy, for his speaking countenance and rapidly vibrating stern we knew of old as a sure token of successful shot. With a cheery "seek dead," he was off at speed, and soon laid in his master's hand the noble bird with scarcely a feather out of place.

The alder thicket was next in order, and as we neared it Dick came to a point just at its edge. As we could not budge him an inch we walked in, and as the bird rose we both of us gave him a right-and-left, which so demoralized him that he took a bee line for Long Island Sound, and we here give notice that he is our property, and that any vessel plucking him up must return him to our possession. Our next move was for the old fellow, who really turned the corner. Dick soon found his trail in a little run that came down the mountain almost parallel with the one that we had hunted. Clambering up the side we had barely reached a little opening, when we were greatly chagrined to hear this beastly bird burst forth from the thicket a long way ahead, and steer for the top of the mountain. As soon as we caught a glimpse of him we impulsively threw the gun in position, and with a sense of the wrongs he had wrought upon us to nerve our fingers we spitefully yanked the trigger. We were half inclined to think, with Mr. Lathrop, that the bird flew against a tree and killed himself, but we counted him all the same.

There was still one more bird that we had not found, and we started for a likely looking corner that was nearly in the line of flight that he had taken. When we reached the place Dick was told to go on. As an illustrious writer—we are sure that he was a famous grouse hunter—has well said, "silence is golden," so we found it in this instance, for no sooner were the words spoken than out from under a log came not more than thirty yards from Mr. L., came this bird with a terrible racket, steering straight for his highland home. "There was a puff of smoke, a loud report," and, although we could not see the bird, the quick vibrating tail of old Dick assured us that we could complete the quotation with "a fleecy cloud of feathers floating in air." Although the words that were spoken did not lose us the bird, they robbed us of by far the greater part of the sportsman's pleasure—no pleasure that will ever be forgotten that fills us when the bounding fawn suddenly crosses and unerringly indicates the near presence of the game we seek.

The rain which had threatened all the morning now esme down, and we started for the house. As we crossed a little run a brace of birds flushed below us; and just before we reached shelter, Dick pointed still another brace, which rose out of shot, making eight birds that we had found in less than three hours' tramp over ground that neither of us had ever hunted before. This experience was very satisfactory to us, and we were more than ever convinced that a fair sprinkling of these magnificent birds will retain and that the sportsman, who truly loves the glorious excitement that the pursuit of this most gallant bird affords, can yet enjoy many days of sweet sport. — SHADOW.

THE HURLING GROUSE.

McDONALD'S CORNER, N. B., Nov. 2.

Editor Forest and Stream:
It did not occur to me when writing the article on grouse shooting which appeared in your issue of the 20th ult., that I might get thrashed for airing my opinions too freely. Now I do not wish "Oeto" to think that I consider the shooting of a flying grouse difficult because I have failed to do it, for I do not pretend to be a first class shot, but rather because it never done by old sportsmen—good shots who have hunted game all their lives, and who, therefore, have the advantage of the relation to some of us young fellows that the Alma Mater does to college graduates.

A grouse sometimes rises and skims along the ground with the intention of alighting within thirty or forty feet of "the place of beginning," as surveyors say, and I do not dispute that he might easily be killed just as he is about to stop, but when he once resolves "to get up and get it" is no easy matter to induce him to change his mind. Our grouse frequent dense timber, and when hunted have the art of doing just what the shooter does not expect. Sometimes he will make his line of flight at an angle of forty-five degrees, or nearly straight in the air, till he gets above the tree-tops, when he will dart forward like a telegram. At other times his course will be a parabola, the highest point of which does not reach the tops of the trees, then again it is the arc of a circle nearly on a plane with the earth. Often when you think you have killed the drop on an old grayback he will depress his line of flight or dash to the side with such celerity that the charge goes wide of its mark. Now I still think that there are a few men who have "artist" enough in their composition to make a successful flying-shot at a grouse under the circumstances described above, especially if the bird be "crossing their bows." For my part I would as soon try to get a sight, through the teeth of a comb, on an electric current passing along on a wire lying parallel to it. The great trouble is the same as that experienced by Josh Billings in killing a muskrat, "You are too apt to hit the place where he recently was."

If ever "Oeto's" friend wish "Brunswick" we would be pleased "to give him of our highland cheer," and land him over that V when he does his work.

I agree with Mr. McKoon as to shooting grouse with cocks, and if he were here he would make good bags when those of setter and pointer men who shoot on the wing would be like that of the "Indian hunter with unsprung bow" whom Longfellow immortalizes, and if they did not, as he suggests, "become a convert to our faith," unless they were fond of pedestrian exercise, "the hunter would, like the aforesaid Indian, be seen on the hills no more."

I killed an old grayback on the 20th ult. at Kingston, N. B., which weighed twenty-four ounces, and had "Oeto" witnessed his evolutions when sprung he would have considered "the hurling grouse" no misnomer. — L. I. F.

ASHFIELD, MASS., Nov. 2.

Editor Forest and Stream:

I have insufficient time at present to properly discuss this "treeing" business; but I just want to ask those concerned if it ever occurred to them that there is a vast and essentially increasing multitude of youthful aspirants to shooting fun and the pleasures obtained in the field, who are looking to us veterans for advice and example? And a slight weight may turn the balance to make or mar their white future. Our young and honorable minded men are naturally disposed, almost to a unit, to take the only honorable course and make shooting a matter of skill and recreation and a health-giving diversion, instead of a matter of "meat" and indolence and consequent flabby muscle and befogged brain. However, this shooting business is such a new thing to the average American that he naturally looks to the "tree" for his cue. So beware of giving evil counsel, for the "great American sportsmen" is a power not to be trifled with, as from all present indications not many years will elapse ere the "treeing" man will be left so far behind that all the powers that be cannot bring him up even in sight of the rearmost man of the great army of self-respecting wing-shooters. This, to me, disgusting recital of coming up behind and murdering him while sitting on the line a few yards distant, may tell a few "tree-ers" to the man whose belly is infinitely bigger than his soul; but sure retribution will overtake the sinner against the public opinion of the better class; and the man who, a few years hence, can look his fellow-men squarely in the face and honestly declare that he never aided or abetted pot-hunting in any form will be the "coming man," whether it be in selling "cocks" or any other business. Coopers are well enough, when honorably used; but never will believe that they were designed as aids to murderers.

I have shot grouse over pointing dogs all the way from the Eastern seaboard to "beyond the Mississippi," and the "impenetrable thickets" are all cobwebs of the stoutheaded hunter's brain. It is the very skill and nerve required to bag grouse in difficult places that afford the fascination of the sport and build up the muscle and tone up the system. Let us be men, and not a race of lollipops.

The cry of great scarcity of game comes up from all the lands and still the pot-hunter continues to shoot over "tree-ers" and out of season, and while his victims are breeding and drumming, and in any way to get meat to fill his lazy carcass, utterly regardless of the future. To the youthful sportsman I would say: On which side do you enlist? For here it is to be no half way about it. One side surely goes up and the other down, and that soon. On one side stands arrayed all respectable sportsmen's journals and a vast army of respected sportsmen, possessed of health, energy and nerve to fight the pot-hunter's course, but not least, self respect. On the other side is a downy downy down, drizzles along the gang of self-indulgent, unwholesome stomach-worshippers, sneaking along with their "tree-ers," snares and traps, seeking to murder our noble game and bolstering their waning strength with whisky. Be men in your choice. — REEFED GROUSE.

N. B.—Though no personalities are intended in the above article, if any one is conscious that the eat fits him particularly well he is welcome to the use of it.

TWO DAYS AMONG THE BLUEWINGS.

QUINCY, ILL., Nov. 5.

Editor Forest and Stream:

The water is very high here, in some places the old "Father of Waters" is fifteen miles wide, covering the bottom lands, doing great damage to everything except the duck shooting, which it has made grand.

A few days ago the subscriber, with two friends—Major N. a noble-hearted fellow and thorough sportsman, who has hunted over some of the first grounds in the States and Territories, and Frank B., called the Judge for short—started on a two-day trip to duck-land; our camp equipment all arranged at the boat house the night before, where we were to meet the next morning at the hour of 3:30. We all started promptly at 10:30 P. M., with visions of flying feathers heating our already disordered imaginations. Promptly are we on hand, with dogs, gun, ammunition, and are driven to our boat, which lies two miles up the Bay on account of the high water; then, stowing everything, we proceed to row to our ground in Missouri, ten miles away, with a strong wind and current to fight, until we leave the river proper and enter the bottom-land of Missouri.

The Major and I do duty at the bars, while the learned Judge is seated in the stern, with his trusted breacherload, ready for the first blood. Suddenly, in the early morning air, we hear a great fluttering of wings, and Judge, imagining himself in a myriad of fowl of all known varieties, lets drive. There is a splash in the water, and calling to our aid the Ferguson lamp, the property of the Major, we discover the victim, a grouse, floating down stream, within five feet of us, and it is instantly retrieved by the Judge. We then push on to our destination, much to the disgust of the Major, who wants to stay and kill all the rest, if any there be. We arrive at our stands about ten o'clock, and this being late, we feel kinder dubious, but we finally get our hands in, and the morning shooting sums up—for the Judge, seventeen bluewings, nine mallard, six Wilson snipe, and three king rail; for me, twelve bluewings, eight wood-ducks, six snipe, and three brant, with the Major (who is a solitary bird, preferring to range alone) six in all. As the Judge is the only one who is talking over old times, we cannot the Major out. Twenty-seven bluewings and other game in proportion. There is a smile on his countenance that is childlike and bland, and argues but little good to the man who is out fond of a joke, unless it be at "some other" man's expense. He then opens on the Judge with, "I say, Judge, where is that first blood of yours?"

"Why," said the Judge, "I left him in the boat over there." Now it so happened that in the hurry to get to the shooting, the said goose was left under the stern sheets, where he was thrown, when first shot, and the Major, in coming from his stand, had examined it. So we finally started off to the boat, when the bird was found to be a tame one. We thought it odd, at the time, that wild geese could be shot so near the city, in fact, right in it. Of course there was a great launch, and as the Judge, by way of repaying our silence, said, "Boys, say nothing about this and I'll treat you a good oyster supper; it won't do for the story to get abroad, for it does, the whole town will be invaded by an army of sportsmen." The worst of it is, the Judge does not know who is the owner of the geese, and some poor devil of a poacher may have to bear the blame.

In order to give the ducks a chance we then moved over to a piece of pin-oak timber, made camp, and sat down to utilize the while we had brought along "in case of fire." After that, while enjoying the fragrant weed, I proposed to the Major to go over to a large stubble field and try my dog Carl on quail. Carl is a three year old lemon and white English setter, broken by myself, first on snipe, and then on quail and chicken, and works splendidly. We have some good sport, bagging twenty-one quail, then we return to duck shooting, and between 4 P.M. and dark, bagged eighteen teal.

After supper, over our pipes and their accompaniments, the Maj. relates us a history of his deer hunting on the Black River of Arkansas, after which we return to preparing for the next day's battle of the ducks; and so we pass the second day, with the exception that we have better and more shooting. Our total bag was, for the second day, seventy-four ducks, mostly teal, thirty snipe, besides three chicken hawks. The latter we kill whenever we have a chance. I have lived in this handsome little city over twelve years, but never saw the shooting so good as it is now. We very reluctantly returned home after two days of glorious sport, tired, but with the impression that we had renewed our lease on life, whatever we may have done in regard to those of the ducks.

J. A. B.

RUST SPOTS IN GUN BARRELS.

TWIN LAKE, Florida.

Editor Forest and Stream:

The subject of rust spots attracts considerable attention. I attributed mine to Dittmar powder, of which I used some until I became disgusted with it. (How you did squeak that thing) I think much of the trouble arises from neglect to thoroughly dry the gun after cleaning, and then not forcing the oil by great pressure into the pores of the metal. I find nothing so good for this as Brown's cleaner. The rubber cone and disk are brought tightly, and so fill the pores and sprinkle a cotton rag with water, wipe out to order, dry well, and lubricate well the "Brown" with vaseline, which I find by far the best lubricant I have ever used; and my gun stands this trying atmosphere better than by any other plan I have tried. I have tried often the plan of laying the gun away after use without cleaning. If the weather is exceptionally dry, the powder cakes and gives trouble; if moist, all right. Still it is much more satisfactory to me to know how my barrels look. I used the Lafin & Rand Ducking No. 1, for many years. I liked its shooting qualities much better than I think it merits less credit than Dupont No. 1, which is a point in favor of the latter.

Altoona, Pa.—Editor Forest and Stream: I have been both interested and amused in reading letters of parties regarding rust spots or freckles in gun barrels.

The train of thought of the writers has not, in my opinion, been in the right direction. It would take a whole page of your paper to explain fully the cause, as well as the means of preventing or eradicating them. But I will be as brief as possible. They are due to chemical action brought about in this way: The barrels are wet with water, with rays, etc., fastened to a cleaning rod tipped with brass—or it may be brass, nickel or silver-plated—matter, the result is the same. The rod is moved up and down more or less rapidly for some minutes, or until on examination it is seen that the barrels are clean. They may look as clean and bright as it is possible to make them, but the mischief is already done. In using the rod its brass tip is rubbed against the inside of the barrel with sufficient friction to leave a very slight coating of brass in streaks in the barrel, and from the rocking motion given the rod when nearly out of the breech, and held up at arm's length these streaks are more likely to be at the breech than in the middle of the barrel.

No. 3, what have we that will start chemical action? Beginning at the outside we have either iron or steel—the barrels; next, a very thin layer of moisture; next, a very thin streak or layer of brass from the cleaning rod. And then we have all the elements to start chemical action, a perfect galvanic battery on a small scale, whose first and almost instant action is to oxidize the clean, raw and finely finished chamber.

The moisture between the chamber and thin film of brass is not sufficient to keep up the action very long—just long enough, perhaps, to give a slight dullness to the part affected; and this would not be noticeable until the next cleaning is through with it. It is sufficient, however, for at every subsequent cleaning more brass and water are sure to be added to the film until it reaches a point where it is no longer a perfect galvanic battery on a small scale, whose first and almost instant action is to oxidize the clean, raw and finely finished chamber.

If sportsmen will call to memory the fact that any two dissimilar metals supplied with water will start chemical action—and thus oxidation of one of the metals—they will at once see the foundation for the theory here advanced.

As a remedy for freckles throw away brass-tipped cleaning rods, use iron tipped or plain wooden ones, the latter preferable at all times.

He who owns his gun the most with brass-tipped rods is the one who is most troubled with rust spots, streaks, etc.

MARKS.

Wauson, O., Nov. 5.—Editor Forest and Stream: I have read with interest your correspondence on the subject of "gun weasies." I have had a little experience, and that inclines me very strongly to the view that the powder is the most responsible for the trouble. I have a fine Clabrough No. 1 shot for three years with good ducking powder, and up to last spring it never "broke out." In an evil hour I listened to the advice of a friend who insisted that a cheap (40 cent) powder for sale by one of our grocers was equal to that I had been shooting. I tried it; used the same care I

had before in cleaning, etc., and found out at once that it injured my barrels. It was not rust; but something in the composition of the powder eat into the barrels. I firmly believe that if I had never used cheap powder my gun would have been "well" to-day.—W. H. H.

Buffalo, Nov. 6.—Editor Forest and Stream: I own a Fox double barreled gun, which is now as free from rust in and outside as when I purchased it, six years ago. I am unable to decide whether this is due to the admirable finish of the barrels or my own special precautions, which are simple and cause but little trouble. It is well known that salt water is more detrimental to bright barrels than any other agent, and as the gun has been accidentally much exposed to it without suffering thereby, I will give your readers the benefit of the fact. It formed part of my outfit when I started four years ago on a collecting journey to the coast of Labrador, where I was unfortunate and suffered shipwreck, which in its course damaged and deluged more or less all of my baggage with floods of salt water. For over twenty-four hours everything was afloat in the cabin of the schooner, which had been stove in by the breakers, and more or less damage was naturally the result of this occurrence. On leaving Boston I had fortunately taken the precaution of applying to the gun a thick coat of mercurial ointment inside and outside, and when this was removed, after saving the gun from the greasy sea, I was both pleased and surprised to find that not a speck of rust had gathered on it. Since then I simply give the inside of the barrels and other troublesome places the triggers and plungers a good coat of ointment whenever I see inside for any length of time, and have the satisfaction of avoiding the rust difficulty without any of the painstaking labor so many of my friends take with their guns, which, notwithstanding, are always more or less speckled. For cleaning the barrels in the busy season I use alcohol in preference to gasoline or petroleum. The corners around the plungers I always leave left with a thick coating of the mercurial ointment.—CHAS. LINDEN.

Montreal, Canada.—Editor Forest and Stream: Rust spots in gun barrels, my experience has led me to believe, are caused more by the quality of oil used in cleaning the gun than anything else. Some time ago I was greatly troubled to keep the inside of my gun barrels bright. I accidentally left an iron wire in the bottle of Rangoon oil that I was using on my gun, and this wire, in a week or so, became a mass of rust. I was then satisfied that I had discovered the cause of the rust spots, and on mentioning the fact to one of our best gunsmiths, a descendant of the celebrated Manton, my belief was confirmed, and he gave me the recipe for preparing a gun oil that I have used with the best of success. The method of preparing this oil is as follows: Go to a glass manufactory and get a bottle of pure neat-foot oil, put into this some thin strips of sheet lead, then set uncorked, in a light place—in the sun if possible. After a thick sediment has settled, leaving the oil above it clear and transparent, pour off the clear oil and strain through several thicknesses of clean linen, and you have a gun oil free from acids or fatty matters that turn rancid when exposed to the air. Manton says you should keep kerosene oil out of your gun unless the gun is in constant use. Let those who are troubled with rust spots put a bright iron wire into the oil they are using and see how long it remains bright.

STANSTEAD.

THOSE FOUR WILD-CATS WITH ONE BULLET.

FALL BROOK, San Diego Co., Cal., Oct. 24.

Editor Forest and Stream:

I see by your last issue that a paragraph has been going the rounds of the paper about my killing four wild-cats at one shot. The article is true, but I do not know who wrote it. One of his regular correspondents who saw the cats. There was nothing remarkable about the affair, except the flogging of four cats in just the right position, a thing that might not occur again in my lifetime. Finding them so, the rest was easy enough, as any one who has experimented with expansive balls will know. There were, however, some features about it of considerable interest and value perhaps to those using or intending to use expansive balls.

For the past year I have been using round ball in hunting, and as some of my correspondents are foolish enough to be out of the fashion in regard to calibre of my rifle, using one that shoots an ounce round ball, No. 16 shot-gauge, about .65 rifle size, I have been experimenting with round balls, with different sized holes bored in the front, to see if I can make a ball that will expand on the "punch" of a deer, yet pass behind the shoulder or other thin parts without expansion. The results have so far been very satisfactory in general, but very unsatisfactory in some cases, the whole result depending upon the depth and diameter of the hole in the ball. (Just as I said in a letter to Forest and Stream some time since), and not upon velocity. That a round ball, with a big enough cavity, can be made into the most terrific of explosives I have, however, fully proved by experiments outside of the wild-cat affair. That, however, is a fair sample of what it will do. The affair was as follows:

While going after some deer I had the evening before killed too late to bring home, I saw at a distance a bunch of wild-cats on a flat rock. Wild-cats are an institution here, and are always seen straggling about, as well as coyotes, foxes and muskrats. But when not hunting, I often stir up any that happen along my way. The chance to try my expansive round ball was too good to lose, so I started for a sure shot at them. Wearing necessaries, it was an easy matter, having the wind in my favor too, to reach a bush within forty yards of the rock. There I completely saw a motley old set of some thirty pounds weight, and three kittens of about the size of the city Thomas, that with his mellow horn more expressively what time the weary editor's sin would sleep. The old one lay in the form of a crescent, with the three kittens lying in the centre line radii of the arc, roused by the mother, all three vigorously engaged in mutual infidelity.

I weakened most decidedly. Had there been no spurs to prick the sides of my intent those blissful pussies might still be living, and the newspaper editor would be compelled to fall back upon the wild man of the woods covered with hair, etc., the child eaten by the scorpion, or the serpent, or some other standard fillet for a short column. But there were no spurs. The firing was the far-off sound of a friend's flock of sheep with whose tendrilous the feline dame was probably in the habit of preparing the wear and tear of her filly temperament. The other was the fact that they lay in such a position that the neck of the kitten nearest me formed the centre of the bunch—that was too strong a temptation.

Now then, giving a round ounce ball with a flaring hole run-

ning half way through it at three-fourths of an inch wide at the mouth, reducing the weight from 450 to about 400 grains of lead, with about 200 grains of the best powder, coarse and fine mixed, behind it, a No. 16 rough-bore shell filled full, and any one who can use anything of Express rifle and expands the balls can readily solve the problem. At this report there was no getting off the rock no scrambling off, no tumbling off. The rock was seven feet in a twinkling. Nothing was visible but some fine fur floating away from it. On the other side of the rock lay the four, stone dead. The ball struck the nearest one in the neck, expanding at once. The two other kittens were struck in the head, neck, breast and paws with splinters of the ball, while the main portion of the ball, the part behind the hole, struck the old one amidships and passed down toward the tail tearing away half the lower part of the body. There was nothing extraordinary in the affair except the finding of the cats in that position, and in having such a rifle. Wild-cats are rare and found elongating maternal dogs and such a killing shot could not be made with a common rifle. The cats once found and the rifle at hand any lockhead could have done it.

T. S. VAN DYKE.

NOVEL HUNTING METHODS.

NEW YORK, Nov. 9, 1881.

Editor Forest and Stream:

The following paragraph is from the Albany Argus: "A Chautauque hunter scooped the inside-out of a large pumpkin, cut a couple of holes through which he could see, and slipping the shell over his head, waded out to where a flock was swimming, unconscious of danger. Grabbing a goose by the legs he gently drew her under, and so proceeded until some were left to tell the tale."

This is somewhat after the manner in which the negroes in Cuba capture wild ducks, or, as they term them, Florida ducks. A large number of large gourds are placed on the surface of a fresh water pond, and are permitted to float at mid-bay at the same time scattered on the water. The ducks very soon settle among the gourds, for the purpose of procuring the bait. Whatever feat they may at first have in consequence of the unusual appearance of the gourds quickly vanishing, they finally regard the queer old cats as a necessary accompaniment to the much desired food. When the birds have become sufficiently accustomed to their surroundings, a negro goes upon his head, like a cow, but a good deal resembling these floating-pots on the pond, and wading in among the ducks from a distance, with merely his eyes and nose out of the water, captures one or more in the manner above described. As to proceeding until none are left to tell the tale, I have no doubts, as it would probably take a long time to draw a duck, or even to bring its neck under water, and while it lived it could, I think, create such a disturbance as would frighten away any others in the immediate vicinity.

While having last summer in the title bay called Pipe's Cove, near Greenport, Long Island, I noticed a cool, shrewd-looking fellow, who I saw some three hundred yards from me. I knew that he was a wounded or maimed bird, which could not fly. Finally he reached the shore, and stood on the sand, about two feet from the water, and occupied himself in arranging his feathers. Remembering the Cuban custom just mentioned, I resolved to make an effort to capture the solitary wader, although I was, of course, unprovided with any vegetable disguise. So I first waded down the bay, in the water, as much as my head and only being as possible, directly opposite to the shore, and slowly advanced toward the shore. When within about ten feet of the bird, the water began to show to further conceal my body. I arose, and made an effort to "show" him back on the shore. Of course this met with no success. He quickly plunged into the water in front of him, and, after scurrying about from side to side for a second, in sight, darted between my legs, and made his escape. During the period of my approach, or while I remained motionless before him, observing his plumage and actions, my head alone was not the least in fear, although he certainly saw and particularly noticed it.

ALKALI.

NEBRASKA FLY-WAY SHOOTING.

LINCOLN, Neb., Oct. 28.

Editor Forest and Stream:

As you have just appeared in your valuable journal from our promising State of the game question, and a discussion of the latter, occupying three days last week, may have a few of the seekers after fine shooting this way.

To begin: Nebraska is a prairie State, and the Platte River runs the entire length of the State from West to East. Not exactly north-south, but scatters over a great deal of country, leaving numerous sand bars in its bed upon which during the spring and fall millions of geese and ducks pass during the day and night, leaving the river twice each day to flow in the fields.

A party of five or six men—probably no city could furnish an equal number as eager for a hunt—started from Lincoln last week via the B. & M. R. in Nebraska for Juniata, 105 miles west, and our railroad friends put us in charge of Conductor Hutchinson who had been a millionaire, would have his train run itself and gone too, but with due consideration for his family and pocket-book kept in command of his train, and every time he passed I would tell him he would announce to us that he "passed" we would get off at the next station as it made him sick to think of us.

Juniata was reached in time for supper, and next morning we very comfortably sat and ourselves in a spring wagon headed for the Platte River, sixteen miles away.

The ride over was an unusually pleasant one, as "Lord" Hastings, the legal light of our party, had an extremely rare and varied assortment of stories to draw from and he drew, too, amazing y often on account of a number of them concerning persons who had come from the vicinity of "Bach, you know," where our party was no.

At the Platte we were quartered with friend Poole, a model farmer, and husband and father of an interesting family as one would meet with in our State. His home tent is on Elm Island, and I doubt is never known, some quantity is a wealthy man and abundantly surrounded with comforts of life. His estimable wife soon prepared us a dinner to which we did ample justice.

The afternoon was spent in patrolling the river and being the fly-way of the geese, and as we went to and returned from the fly-ways, round up at night with twenty-two geese. The next day set in cold and damp, and the geese left the river at daybreak not to return till late at night, as it was as comfortable for them in the fields as in the river.

Our blinds were all properly constructed on the bars, and the score for that day did not come up to the afternoon previous.

The following day, however, promised to be a good "goose day," and the party tallied ninety-two geese as a result of their prediction.

The next day we were to leave at noon, so we put in a little more powder and aimed closer, thereby bringing our total up to 261 geese, all of which we left the river with.

Our friends at Lincoln were all remembered, and numerous parties immediately organized to follow in our wake, none of which have yet reported.

Quail are unusually abundant this fall, and a little later the sport will be grand.

Our city would be a fine location for a kennel of Gordons, Laveracks and Irish setters, also spaniels for ducking.

C. L. B.

THE LIFE SAVING STATION EMPLOYEES.

Editor Forest and Stream:

I notice in your last number a correspondent mentions that the decrease in wild fowl on Great South Bay, L. I., is due to their being jacked by employees of the Life Saving Stations.

Now, while I have heard of this being done by the men along Barnegat Bay, N. J., they have the reputation of shooting a great deal of them from their stations as the birds fly over, and from the vicinity. Long Beach contains the best shooting grounds, and many stations being on it, the men patrolling carry guns and have excellent opportunities to observe where the most birds are, thus combining business and pleasure, besides selling their game to the market.

That this continual infiltration scares away the birds is self evident. I have also been told that during a flight of fowl the best points were occupied by Life Saving men in sneak boxes, their close proximity to the places enabling them to get there first.

To a city sportsman coming down here, after hiring a man with boxes and decoys, it must be provoking to find a government employee ahead of him in the choicest spot, the report of his double eighteen-pound seven bore spoiling the shooting all around.

Gentlemen that have been served this way once or twice seldom come again, preferring to go to another place where they can be sure of getting a good brace.

The law for shooting only three days a week is kept pretty fairly, but it sometimes happens that parties that those three days prohibiting shooting are the best time, while the other three days scarcely anything can be seen.

If the government prohibited the Life Saving men from shooting at all there would be more attention paid to wrecks and warding off vessels from the shore. Ducks, geese and brant would increase where they are now scarce, and shooting would be allowed every day. Lastly, more money would come into the hands of the baymen furnishing their services to the New York and Philadelphia sportsmen who annually shoot for wild fowl. CORN.

STATE PIGEON TOURNAMENTS.

Boston, Mass., Oct. 31.

Editor Forest and Stream:

We glad to see, in your editorial of Oct. 13, the subject of trap-shooting opened for discussion. Every individual in the community is in some way interested in the wild game of this country, and none will deny their desire to have it protected; but how to check individual greed and avoid extermination is the puzzle of many years' standing. A large class of the public are ignorant of the breeding seasons, and will so consume the bird at any time of year when it can be procured for money. Then comes the huckster who will buy anything which he can sell at a profit to his own pocket, and he calls to his aid his co-worker, who also cares only for the profit of to-day and will shoot the bird any day when he can sell her. Evidently these are men not to be chosen as a committee to tell us how to perpetuate the game interests of our beautiful country. We must have other men, men who would spare the last two birds of the covey, or the mother of the fawn, men who are humane, men who would study the nature and habits of the game and give it protection in the breeding season.

Doubtless all members of our clubs and protective associations will say they are of the latter class, and do exert all their influence to obtain the passage and execution of judicious laws for that professed purpose, but do we ever ask ourselves why we fail to get such stringent laws as we most desire? Why is it that we are so weak? That our influence is feeble no one can deny. We approach the law-maker with carefully drawn document, and we find ourselves confronted by the united forces of the market dealer, professional shooter and the land owner. We can make friends of neither of them, nor bring influence to break their ranks; and are forced to a compromise or temporary surrender, and perhaps, as here in Massachusetts, instead of giving us the law for which we plead, our legislature shows its opinion of the "club sportsman" by passing a law prohibiting trap slaughter of imprisoned birds within the limits of the Commonwealth, which act by them and their constituency is looked upon as cruel, wanton and senseless.

Without bringing up argument to show that it is the least of these three, if it has detracted from the popularity and efficiency of our game protective associations it is proved an evil and should be discontinued. M.

WOOD HATEN, NOV. 3.

Editor Forest and Stream:

First, let me say that I think State sportsmen's associations have been pronounced of much good in the calling together of men of sound minds, men who are well and favorably known, men who are not found in any scheme for the purpose of pocketing the almighty dollar, but men who have a deep interest in the protection of game; and who would not countenance or uphold any measure unfair, unjust or in any way or manner intentionally commit an act which could cause offence to the most humane, moral or fastidious (male or female) who perchance honors the association with their presence at the business meetings of conventions or at the shooting grounds.

I am well aware that a universal feeling of disgust was manifested by visitors at the late tournament at Coney Island. And not only visitors, but I presume every member of the N. Y. S. A. was heartily ashamed to be compelled to stand at the trap and shoot at what were called birds, when wings were indeed wanting to make a show of life. This, however, is I believe the first time the sporting world has ever been called to witness such an exhibition, and it is to be hoped that it will be the last. If real live birds cannot

be found, then let us try the glass ball or clay pigeon. A State convention held for the sole purpose of discussing the (probable) best and judicious method of preserving game and fish, would find few veterans to "rally round the flag" of (birds' and animals') freedom. And as far as the term cruelty may be applied, I really can see no more in shooting first-class birds from the trap than from the open field.

Again let us consider the humane appeals of Henry Bergh and his followers, and carry them to their nesting places, the poor abused and much slaughtered wild pigeon and let them see what wholesale slaughter is. What is a little matter of twenty, fifty or one hundred thousand birds for State conventions compared with the hundreds of thousands shaken from the nests, clubbed to death, packed in ice and sent to tickle the palates of our fastidious game-preserving friends? This custom has prevailed to such an extent that pigeons are no more seen this side of the Mississippi. Their home within the wilds of Pennsylvania last year was invaded by hundreds of lawless beings—cannot say men—who harassed them from early spring to the close of nesting. They left, probably never to return, and now look for homes where humanity and civilization is little known, and they may rear their young in peace. I do not wish to convey the idea that I fully endorse the convention's movements, but I say let us have time for deliberation, let us have full and free discussions on all matters pertaining to the interests and welfare of the noble State we represent. Spend less time at the trap, and give a full, clear and honest expression of sentiment to all that will go forth to clubs and individuals throughout the land, that public opinion may be aroused, that the laws already made may be enforced, and that by full and free discussion and mature deliberation we shall be enabled once more to listen to the warbling songster, when the partridge, the quail, the snipe and the pigeons, the deer, the moose and the elk shall once more roam among us unmolested over hill and plain, and man, game's enemy, shall lay aside his gun and shoot no more. And shall we all be happy? OBSERVER.

From the Newark Sunday Call, Nov. 6.

"It is very evident that the annual meetings held by sporting associations will in future be held without the adjunct of pigeon shooting tournaments. All such societies have, or should have, for their primary object the preservation and increase of game; but heretofore pigeon slaughter has seemed to be the most important business at all their meetings, and but little else has been accomplished."

TRAPPING NESTING PIGEONS.

Editor Forest and Stream:

I am a trapper; I have followed it for years, and have taken a great deal of pains to study the habits of wild pigeons, especially when on their nesting grounds. One gunner will do more harm at a nesting place than one hundred netters, for this reason: the pigeons make but a very small nest, almost flat on the top, and the egg (as they only lay one at a time) is very easily rolled out. The hunter comes along and fires into them, and every bird in hearing of his gun gets off from its nest as soon as it can, and a way goes the egg at the same time, and the nest is abandoned. The trapper makes so little noise that the birds pay but very little attention to him, and he never disturbs them.

Now, my theory is this: If the trappers and gunners are kept out far enough so that the noise will not disturb the birds they will not be driven from their nests nor can both of the parent birds be captured, as they both have their part to do, and so they do. If by any cause one goes out and does not return, the other one, be it male or female, stays in the nesting until the young is reared. Therefore you cannot get both without going in to the nesting or on the nesting ground.

Now to their habits. When the time comes for them to nest they pick a location where there is plenty of timber, water and mast or shuck, build their nests, lay one egg and commence to sit. The female stays on the nest and the male goes for food in the morning. When it returns it takes the nest, and the female goes for food. She comes back and the male goes again, and returns the same day. This is kept up for twenty-eight days (if the birds are not shot), fourteen days to hatch and fourteen days to rear the young.

On the last day, the young are filled up full of feed, and the body of birds is care for and nesting. There are always a few old birds left, and in about two days they commence to whip and pull the young birds out, and take care of them and feed them until they are ready for the journey, when they follow the old ones. A TRAPPER.

Champaign Co., O.

CHEAP GUNS.

New York, Oct. 29.

Editor Forest and Stream:

The writer has, for some time, been on the lookout for a long-range breech-loading single-barrel duck gun, with metal enough in it to prevent its killing at both ends. Search through the principal New York gun stores failed to reveal anything meeting the requirement, except some 4 or 8 bore guns of English make and at high price (\$100 and over), but a really good and well finished long-range ten-bore was not found. Passing up Broadway, attracted by a placard in the window of a presumably respectable firm, advertising a gun, and stating that the gun was the "best single-barrel gun in the world." On entering, the salesman confidently asserted that such was the case, although the price was but \$15. Upon examination, I found a gun of exceedingly rough workmanship. A few minutes conversation induced the salesman to withdraw his assertion of "best," etc. Noticing that there was quite a gap between the barrel and the breech, I passed the ticket bearing the price, etc., into his gap, expecting thus to disconnect the salesman a little. Not at all. He quickly informed me that when the cartridge was in it would be all right.

Now, is it not time to make some effort to discourage apparently respectable firms from dealing in such trash, and by false representations palming it off on the unwary? Is it not time that a proof-house, similar to the English ones, were established in this country? Is it not time that a single ten-bore long-range gun which will offer a first-class 200 yards shot, at a price not to exceed, say, \$50? Greener advertises a single eight-bore "full choked, to kill at 140 yards," for from fifteen to twenty-five guineas. Is it not possible, therefore, to make a ten-bore to kill at 100 yards, of sufficient weight (nine to ten pounds) to stand heavy charges without heavy recoil; and, if so, why is it not done? SINGLE BARREL.

BANGOR, Me., Oct. 29.

Editor Forest and Stream:

The advertisement of the "Saxon" gun I saw in Harper's Young People. It caused some considerable talk, and I know that a number of parties called the attention of dealers in guns and asked why single breach-loaders could not be sold as cheaply by them. I am glad you have told the plain truth about these guns, for I had frequently seen them in the country hardware stores for sale for \$25 or \$30. I am glad to see a paper that is ready to do justice to the public by stating facts.

Ruffed grouse are not plentiful this season. It is thought that the wet spring caused the young to die, if they were well hatched. H. N. F.

HIS FIRST MISS.

Vicksburg, Miss., Nov. 7.

Editor Forest and Stream:

My friend, Capt. Mike Hughes, a railroad contractor, is executing a campaign on the Vicksburg and Ship Island Railroad. He established a construction camp a few miles below here, and has a Irish Jollyman named MacNamara, in charge. When Mac first established his camp he had a fire made under an oak tree on the road side, and his cook suspended a dinner pot over the same.

The whole neighborhood was startled—thought he was blasting rock. Mac had gotten up on a log to get a better view of the tree, and he was laid flat on his back, with a bleeding nose, by the recoil, while the old musket jumped over his head and landed in a pond, muzzle down. Later investigation developed the fact that a negro had loaded it for a Christianus gun last winter and then was afraid to shoot it off.

Mac, with commendable celerity, recovered the position which is characteristic of men, and stood upright. He saw with some surprise that he had killed the squirrel, which, by sprawling in the ashes near the suspended pot. A countryman, who happened to be passing at the time, saw the whole proceeding. Mac, with ready Irish wit, wiped the blood off his nose, and coolly remarked: "Begorra, that's the first time I've missed yet."

The countryman replied: "Why, you didn't miss him, there he lays!"

"'Yis," says Mac, "but I always throp 'em into the pot." MADROONER.

FLUSHING A RATTLER.

SPEAKING of snakes reminds me of an adventure I had with a good sized rattler about three years since. It was late in the shooting season, being the first days in April, and I was out working a young dog that I was anxious might have as much experience as possible before the close season began on the 15th. I had found half a dozen quail in a field, and, after being flushed, they dropped in the swampy ground near by. The foliage on the trees and bushes was far along toward full development, making it hard to see and to penetrate into the thick growth. Arriving at the edge of the swamp I sent the puppy in. After making his way probably thirty feet he pointed. I immediately advanced to flush the birds, and when within a few feet of the dog was alarmed by the vigorous rattle of that terrible reptile, the rattlesnake.

I stopped instant, and so did the rattler's muscle. I examined the ground in front and each side, but could not discover my disagreeable neighbor. Feeling that he could not be very near, I stepped forward again, and again was warned to stay proceedings. With my eye I carefully went over the ground again, but failed to see the snake. By this time the dog was becoming uneasy, and I determined to get him out of the way, fearful lest he should be struck by the snake. Being now within reaching distance of the dog I bent over and lifted him from the ground. The movement alarmed the snake, and he rattled, but this time behind me.

There I was, boxed and thoroughly frightened. I turned about slowly and made one step forward, and again was warned. I looked and looked, and as I could not see the reptile immediately in my path I made a rush and jump and got safely out.

I was now determined, if possible, to kill the ugly thing. Cocking my gun, I advanced cautiously, and soon heard the buzz z-z-z. It sounded some distance in front. I kept him going by striking the low bushes with my foot, in order that I might have less difficulty in locating him. Suddenly I saw something move with great rapidity some ten or twelve feet in front. There he was coiled, head erect and resplendent in his new spring suit. I could not but admire him; he had been good enough to warn me; he really did look beautiful; but the scriptural injunction must be fulfilled, and I determined it was not the heel of man that crushed his head, one ounce of No. 8, backed by 3 1/2 drms. Hazard's No. 4 Duck, did it most effectually. I pulled off his rattles, and counted eight and the button.

During the winter season no danger from snakes attends a tramp through this country. It is only in the warm days of early spring and early fall that the danger is real. In summer the danger is great, hence rambles in the woods and near water courses are not fashionable. Lovers don't take much to sequestered nooks in the woods and Sunday in the fields. The business of courting is conducted on the front porch. DICK SWYLLER.

A FINE MINNESOTA SEASON—Minneapolis, Minn., Nov. 8.

The fall shooting in this State has been unsurpassed for a number of years. Fine birds have been made in the vicinity of the city, a friend and myself making a bag of forty-hick duck in an evening and morning shooting on the bridge pass at the Rice Lakes. The St. Paul sportsmen have made a good good bag to warn me; he really did look beautiful; but the scriptural injunction must be fulfilled, and I determined it was not the heel of man that crushed his head, one ounce of No. 8, backed by 3 1/2 drms. Hazard's No. 4 Duck, did it most effectually. I pulled off his rattles, and counted eight and the button. During the winter season no danger from snakes attends a tramp through this country. It is only in the warm days of early spring and early fall that the danger is real. In summer the danger is great, hence rambles in the woods and near water courses are not fashionable. Lovers don't take much to sequestered nooks in the woods and Sunday in the fields. The business of courting is conducted on the front porch. DICK SWYLLER.

BLOOMING GROVE PARK.

THE new club-house, built to replace the one destroyed by fire, was opened to members and their guests on the 15th of October. It is unique as a specimen of a sportsman's club-house, being furnished throughout with a view to the comfort and convenience of both sportsmen and others who seek a quiet country resort.

There were the following named gentlemen at the club-house during October and November: Thos. E. C. Curtis, President; John Greenough and John Avery, of the Building Committee; A. Da Prato, Superintendent; besides a large party of the members and their families and guests.

The prospects for deer hunting this season are good. The park bounds have started several deer. Two were killed on the Shobola and one near Kleinban's. A driven deer crossed the Millville road on Monday last, and a large buck was seen swimming Lake Giles.

GAME IN SULLIVAN COUNTY.—Monticello, N. Y., Nov. 11.—Editor Forest and Stream: We have at present woodcock, Wilson snipe, ducks and pigeons, with a fair number of ruffed grouse and some quail. Eleven fine deer have been carried through here within the last two weeks. They were captured in the vicinity of Black Lake, eight miles from Monticello, by Orange county sportsmen. Foxes and rabbits are very abundant and owners of trained hare hounds, that are so much talked about, have now an opportunity of trying them in this section. I have no ax to grind, nor do I own a hotel.—CHARLES F. KENN.

WILD FOWL AT CURRITUCK.—Advices from Currituck Sound, under date of 10th instant, report fowl as plenty, though the weather has been so warm that few or none can be shipped. Swans, geese and ducks are on the grounds. A short time since one man killed in one day fifty geese, five of them at one shot. Another man killed forty pairs of redheads November 10. Until the weather becomes colder, we presume that few will care to visit these grounds as it is a pity to kill birds that cannot be used.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Table with 2 columns: FRESH WATER and SALT WATER. Lists various fish species such as Black Bass, Rock Bass, Striped Bass, etc.

For daily blessings most men forget to pray to their patres; but let us not, because it is a sacrifice to pleasing to Him that protects us, and gives us flowers, and showers, and stomachs, and meat, and content, and leisure to go n-fishing.—LEAK WALTON.

A CAPE COD FISHING RESORT.

THE LARGE FISH OF CHATHAM. Editor Forest and Stream: Any of your readers who have perused the various fish stories which I have contributed to your columns, from time to time, since in the first number of the first volume I started on fishing in Africa to the last of my Alaska letters, in which series there were several allusions to halibut, salmon, etc., calculated to test believing power to the utmost, will admit that at the least I claim to have seen some very pretty fish and fishing while knocking about the world, and will therefore be able to appreciate the value of the statement that, five weeks ago at Chatham Cape Cod, I saw the handsomest sight in the way of fish that I have ever seen.

You, in your issue of October 20, described a handsome lot of even-striped bass, the aggregate weight of which was 175 pounds, and of another lot of seven, of which the smallest weighed twenty-six and one-half pounds and the largest sixty pounds.

I thought that about as high as could be expected, but soon after, sitting in a store window at Newport, R. I., a photograph of ten, which had been captured in one day, at one of the Rhode Island Club fisheries—the name I can't recall—and this lot averaged forty-nine and one-half pounds each, and, judging by the picture, ran very uniformly.

Never expecting to see in reality such a sight I only admired the photo and envied the fishermen. A few days after though, at Chatham, I was describing, or rather speaking of this catch, to Mr. Hiram Watts, a veteran angler and keeper of a summer boarding house for anglers, where, if fresh sea bass comes in, he will have a count for anything, they may be had, with the best of fishing thrown in, and an informed comfortable quarters. I didn't enjoy the breeze much, I will admit. A fresh east wind conveys impressions that are very different when the mercury is at forty degrees and seventy degrees. Captain Hiram said that was a "pretty good catch, but wouldn't I take a little walk down the beach with him." I did so, in sand up to my ankles, and reaching a fish house he showed me, side by side, ten striped bass that had been caught the night before, which aggregated 650 pounds, the largest four feet five inches long, weighing seventy-three pounds, and the smallest sixty-two.

Except as to size and beauty of the fish this lot did not, from a sportsman's point of view, come up to those you described, for they were caught in a net which had bagged a school of them so large that, in the effort to get them in, the net expanded and tore, and but ten fish were saved.

Many large ones are caught daily off this beach, but not many of the sizes I have given. Such are undoubtedly hooked, but are cast aside, without a count for anything, because, as a general thing it is the drail that is captured, not the fish. During my two days' stay several good ones were, however, so taken, the largest, I believe, weighing thirty pounds.

is protected from the sea by a long sand spit, and is safe in all weather.

The waters teem with fish of all descriptions, and the boys keep themselves in spending money by contributing to the cargoes of schooners sailing to New York or Boston, quohogs, blue fish, smelt, pickered, lobsters.

Prices are very low for everything, the climate healthy, plenty of churches and, on the whole, I pronounce it a most desirable spot for a summer's visit.

RED DRUM, OR CHANNEL BASS, AT CAPE MAY.

I am never happier than when "Cap." Miespah Smith gets his sail up and the bow of his yacht pointed toward Sewell's Point, for thence we speed out into the briny deep at Cape May in search of mackerel (bluefish J. S. M. calls them), or the festive croaker and the toothsome "gooley."

And when the Preacher saw the sun set, dying in crimson glory as he went down right hesilo to the U. S. Lightship on a late September afternoon, he said: "The boys are hooking red drum off Denizol's Pier." "I never saw one," continued my brother clericus, "but I would faint catch a drum, for Spicer, one of our quaintest and most clever as well as successful sportsmen, with gun, line, or rod, tells me of a spot off Sewell's Point where they most do congregate."

I did not need a second invitation or suggestion, having never caught but one drum fish, and that one (I was a boy) in the unbroke method peculiar to Atlantic City, to wit—baiting with sand-flea and throwing the line out into the surf and hauling the red drum up with the tide.

There is no favor of salmon or trout catching in that; so I caught Baron Von Roden who drives Muncie's Arab team and hid myself, before dark, to Schillinger's landing, to see Miespah Smith, a veteran fisherman who knew heaps about "Sheepsheadin'," or about catching the bounding mackerel twenty miles at sea. "Really," said Miespah, "I don't take no risks, and fishing off'n that bar and the tide's a'in't in a'in't no fun. Mind ye, my friend, old M'eahp him takin' no risks."

But a sight of three dollars brightened up 'Miespah's' ideas somewhat, and he hid his spy-glass.

"Waal you and me old friends say away down to Atlantic City, when Bob Malack was the Big Gun of that ar' bar, and I reckon if in his drummin' you want and the wind ar' nor east, drummin' we'll go."

The Preacher I had hooked or booked for the trip, but I brought me of a certain gay and agreeable soldier named McGrath, who is fond of life in the Ocean Wave, and who edifies the Daily News. I found him in his sanctum, gazing delightedly at a case of old Virginia wine (or, Franklin or Johnson) sent him by the well-known Hinkle, of the celebrated Egg Harbor Viovarars.

When I said "Drum," the sad-eyed McGrath looked up and replied, "Drumming on the surf? Not if the court understands herself; I had four friends drowned that way once." So my well-beloved and spicy friend McGrath had to be courted out.

But by 8 A. M. "Cafay" (as the boys called him) had a dozen mullets, the best bait for drum, in a bucket, ready for action, and we were soon down to Sewell's Point, and thence bathing with the surf trying to get over the "Harbor-bar" that went moaning."

I have been in tight places in swamps and on e-con-logs, lost in Klukey w-o-l-s with only blueberries to cat for thirty hours, but I never felt my hair "rise" like it did when Miespah's little sick left daring skyward between the waves—along or over the crest of a breaker, the Preacher occasionally getting a mouth full of salt water, and an unusually bounding billow spayed us fair in the face.

Just outside of the bar, where the waves were only six feet high, we anchored.

Right ahead we saw a ridge of moss bunkers, and had reason to think there was fun ahead; for in September and October, whenever you find a school of moss bunkers, you may count on the red drum and the snapping mackerel not being far away.

"Cafay" got his lines out with some pride; but I (aid reeling, "Old man, there is but one line worth a darned stocking in his boat."

"Waal, now, said Cafay, "you yonkers think you know a heap. I've been a sheepsheadin' afore you were borned, and I rather guess I know a strong line when I see 'em."

I was snubbed a little, but only waited future events to vindicate superior sagacity over the lone fisherman's ipse dixit. Nor did I have to wait long.

The Preacher, whose recovery from "O the Mys" was rapid, after he had east up his breakfast, and "Cafay" had east down his anchor, began to feel as frisky as a Texas rabbit (the one with big ears). He tested a line like an amateur, and the one striking his fancy had a big horn spear (a mackerel line) at the end of it.

"That will do, he said," and over it went into the deep sea.

Cafay began to hum, when S—said, "H'st! What is that? I had an awful pull. Maybe it's a shark!" He slowly pulled up, to see if his animated mullet still lived and moved. Alas! horn spoon, hook, mullet and all had disappeared, and the line tore from the bait. The Preacher looked as sorrowful as a politician who had not been called on to speak at the last "grand rally."

"Waal now," said Cafay, "them's drum, sure, certain as death and taxis." He whipped on another hook and a second mullet.

Cercus' eyes began to glisten as soon as the quarter pound mullet reached bottom. At that moment the Preacher, elated the Preacher, as his line began to spin out at the rate of ten yards a second. Suddenly, the line caught around his ministerial legs, and things grew very slack; and the line felt and looked as limp as Bunthorpe's legs when "Patience" sings, "Willy, Waly—Waly, O."

"Gone again," he said, as the Preacher sally banled in the line, to find the hook snapped nearly off above the slank. By this time the Preacher's patience out, more especially as he had ascertained that there was but one drum line aboard, and was fishing with that. The Preacher doubled himself up and lay down to pleasant slumbers in the bottom of the boat.

When younger, there were just two things I thought I was no "dabster" at—making a stump speech, and catching fish!

So I persuaded "Cappy" to seek a sunny spot just outside the surf. I put the hook in the mullet's mouth tenderly, as though I loved him, and watching the moss bunners on our ce. I cast over my line. Quicker than I can think it, or write it, something unearthly had started off with our skiff and all, it seemed, before I could get my breath, and I just let the line spin. "Whizz!" she went over the sides of the skiff and across my bleeding fingers, while "Cappy" and the nepeew, Big Bill, (who up to this time had been moodily silent,) began to jump around, exclaiming, "Cappy, ashlik, by golly!"

I give my sea monster full play, for broken hooks and swallowed horn-spoons had taught me how to drum for drum. There was a lull! O! the wild joy I felt. No four-pound bass in the Delaware above Trenton; no five-pound Adirondack trout in Lake Saranac, no jumping twenty-pound salmon at Ha Ha Bay, above the Marquette, ever made my gizzard leap for joy as did the *salmo*, as I thought it was, tugging at my line out in the deep sea in front of Sewell's Point. Active warfare soon began again. I steadily hauled in until I could see something shiny in the water. But whatever it was, it was averse to the sight of man; for like gressed lightning, running down the Switchback R. R., the red drum made a hold rush for the bottom of the deep, wishing to cry, "Give me liberty or give me death." I thought; old fellow, if it is play you want, play you shall have; and as good Isaac Walton said, I toyed with him as if I loved the fish, feeling as good as if I had a grand old nose and an eye. "Ed, we'll haul this big thing in, or bust." "Go it," said the Preacher, and Big Bill leaped over our little shabby craft and with one wild dive, as he saw the red sides of the drum glowing and pouting, he grabbed a fifty pound fish, and with a skillful whirl, lifted him and laid him in the bottom of the boat.

The Preacher's eyes looked as big as a Monday morning's bill at a Cape May Hotel.

"Now, Bro. S," I said, "if you will pronounce a benediction, we will seek the shore;" for our patient spouses were waiting for us, and the crack soup was getting cold and the beefsteak, a la chateaubriand, had been long overdone. We sailed. "Cappy" took one long look at the big red drum half filling up the little boat and said: "Waal now, Bill, I don't like to run no risks, no way, but to catch that 'a' drum I would 'ent mind 'sketchin' through that surf three times a day, and no mistake."

When the big drum got safely laid out on the green grass of the parsonage, Elder Sitters came in with a big hoe and took off the scales, a sign that I had a lot of nonsense and a Dinah Morris, the cook, waited the head for soup, and the neighborhood fed on drum steaks for a week, for it is as tender as a young chicken. Kridler has now rigged me two lines, with luerick hooks, attached to copper wire a foot long. So, Spicer, look out! and if the drum value their peace of mind, they will absent themselves from Cape May next summer. J. M. S.

FISHING IN THE SUSQUEHANNA.

BALTIMORE, Md., Nov. 9. COLONEL T— and your correspondent made a trip to the Susquehanna River, near the mouth of Deer Creek, to fish for bass about the middle of last month. We left Baltimore at 2 P. M., and went to Hyers de Grace on the P. W. & B. R. R. Here we hired a team and driver to take us to Rapidan, where we were to stay all night. After considerable manuvering to pack three carps, sundry valises, bad huckets, r ds, etc., etc., into a carriage meant to carry two, we started. The driver asked us which road we would take—the country road, or the tow-path—at same time expatiating so highly on the beautiful scenery of the latter that we concluded to go that way. We very soon repented that we took that path, and think that we are fortunate to have now to relate our adventures. The canal runs alongside of the river and the tow-path is about six feet wide, with the canal five feet deep on one side, and a rocky, steep bank ten to fifteen feet on the other. We found that the horse had a very disagreeable way of traveling on one side of the road, and we were in constant dread of being pitched either into the water or on the rocks. We had not gone very far before we met a young man carrying two large chormes. We could not see the subjects but our horse did, and evidently did not like them, for he commenced to back and rear. We were about to take the other side of the carriage in the canal. We calmly awaited the ducking we expected to get, as we could not move we were a closely wedged into the little carriage. Our good fortune saved us; the old horse stopped right there, and the driver getting out larraped the old fellow until he pulled us out on the tow path. Both the Colonel and myself vowed if we arrived at our destination alive, we would not try a tow-path again.

We soon arrived at Rapidan and put up at the tavern there. The accommodations were of the very plainest kind, but the men who keep the place did the best they knew how for our comfort. We had written up several days before for bait and boat, and started bright and early to walk up the river about a mile where we expected to find everything in readiness for us. But alas! we were doomed to disappointment. Nothing was ready; no bait and no man to go out in the boat with us, and the boat could not be leant unless the man was there to go in it. Spencer, the lock keeper, was recommended to us as a man to be relied on to have at any time all things ready if given a few days notice. We were thoroughly disgusted and saw no other left for us than to take the boat and try them with the fly. We went to the bank to see how the river looked for wading, when we saw a colored individual fishing from a boat. He had a maple sapling for a rod strong enough to lift a whale, and in a moment when he hooked a fish he threw the rod behind him and yanked the fish in with the line. We hailed him and he came to us and we soon concluded a bargain for him to take us for the day.

We had about fifty crabs, a fish, which we thought would last for a good day, and we soon had our lines baited and over-board. For about two hours we had splendid sport, taking sixteen bass, the largest weighing three and three-quarter pounds and the smallest one pound and one ounce. Our bait, then gave out and we sent Thomas Dulaney, the

afore-said colored individual, ashore for more bait. He was gone two hours and returned with nine crabs, and with these nine we caught six more bass, making twenty-two for our first day. We made arrangements with Dulaney for the next day to have one hundred crabs and one hundred minnows at one cent apiece. T. D. was on hand early and we started full of expectation for a splendid haul. We fished in the same places that we did the day before, and innumerable others, but when the day was done could only count five bass. We tried every fly we had in our books without success; they would not take them.

The Susquehanna at this point—mouth of Deer Creek—is very rocky, making navigation with a boat difficult. It would be impossible to wade for there are innumerable holes which are six or ten feet deep. In a year or two there will be very fine fishing at and around this point. Parties would do much better to go to Port Deposit than to Rapidan, which is just across the river. It is reached by P. W. & B. R. R. or Columbia and Port Deposit branch of P. R. R. The hotel accommodations are very much better than at Rapidan. The great difficulty is in getting bait. Boats are plenty, and if some enterprising fisherman would keep a supply of bait on hand he would do a good business. E. A. R.

NOTES FROM KENTUCKY.

OWENSBORO, Ky., Nov. 7, 1881.

Editor Forest and Stream: Sunday, according to the almanac, gets around to this section of Kentucky just about as often as any other portion of the State, still a stranger, judging from the continual crack of the sportsman's rifle, wouldn't hesitate to affirm that it had the appearance of being anything else than Sunday. The river and surrounding water courses abound with wild fowl and fish, and it is not an unusual sight to see two or three men at almost any hour on Sunday with an interlocking point in their eye and a gun or rod in their hand heading for the river.

For the especial information of those who do not know that there is such a place in existence as Owensboro (and, of course, don't care) we will briefly state that it is a thriving, bustling, rapidly growing little city of 10,000 inhabitants, situated on the south bank of the Ohio, in Daviess county, and has connection with the outside world by both river and rail. Her people are energetic and progressive.

Capt. Shinkle, of the elegant steamer Golden Crown, was the guest last week of the writer. During his stay and fishing-trip, which are now over, Green River enjoyed three weeks' hunt. The party who are now at the camp grounds on Green River are Geo. A. Williams, Roy Hathaway, Frank Conway, Sam Waldron, Alex. Thompson, John Marks, Joe Fugna, Lieut. Conway, Henry Thompson, Dick Taylor, Capt. John Woolfolk, Charles Watkins, Zack Taylor, Phil Watkins, Whit Clarke, Bernard Kelley and Judge Alsop. The party have a dressing tent, three good cooks, two sleeping tents and a stable tent. Up to Thursday they had killed one deer, six turkeys, one hundred and ninety-eight squirrels, eight ducks, one quosom, six quail and had, in the language of Capt. Shinkle, "caught more fish than would load a good-sized steamboat." At last accounts the boys were well and hearty. Roy Hathaway, Frank Conway, Jack and Dick Taylor are the musical men of the party, and nightly the silvery tinkle of the guitar and soft strains of the violin blend harmoniously with their merry voices, and sweep across the winding stream until they die away in faint echoes. Capt. S. has enjoyed a royal time with the club, and extended them an invitation to accompany him to his Arkansas nest spring on a grand hunting and fishing excursion.

Sid Barbour, Seth Palmer and "Sonny" Gumberts caught twenty-five large bass at the "Cut-off" last week. They report the fishing at the "Cut-off" to be A No. 1. Estie Smithers killed two wild geese at one shot Tuesday with a rifle at the distance of 153 yards.

Seth Palmer killed a wild turkey gobbler last week that weighed thirty-two pounds. TENNESSEE.

TENNESSEE FISH NOTES.

IN conversation to-day with Mr. Frank Furman, that gentleman told me that on his last expedition to Caney Fork, in company with Charles B. Hill, that they had some success, though the elements were against them. Besides forty fine black bass they captured a twelve-pound jack. Mr. Furman is one of the most scientific among our anglers, and has the most complete tackle; to these two essentials, when in the field or on the bank of a stream, he is a hard worker, fighting every inch of the way, and as a consequence, he never fails to bring home game.

Capt. Wm. Stockell, Chief of the Nashville Fire Department, is another most distinguished angler, his duties keeping him closely confined to the city, but he has some recreation in the Cumberland River, from which he manages to catch black bass and jack when every one else fails.

The "bass" fisherman, however, is our indefatigable commissioner Col. Akers. It is a pleasure to watch him as he casts his fly or minnow into a rapid, or lands it artistically along side of a log, shelving rock, or in a deep pool; even though they be many yards away, follow the fancies of some three or four pound bass until he has enticed it to seize the bait, and then manuevre it to his feet, when either "Bill Tate" or "Babe" comes along with a net, and the fish is secured in all his expeditions, and it is dexterously with the hands did the Col. with his eight ounce rod and No. 1 Meek, overcome and capture it.

Mr. Driver, a member of our legislature and an ardent friend to fish protection, told me a day or two since that at the extra session of that body he intends to offer an amendment to our fish laws with a view of stopping fly-fishing at night. He says that at this season of the year an expert at this class of fishing can catch more in one night than a broom man could in half a day with light fly-fishing. These flies are made of two or three bright colors and ingeniously fastened to a hook, the flank of which has been passed through a cork to make it float upon the surface. At these the fish bite voraciously and are caught by the hundreds.

I do not see that there is any good ground for the gentleman's objection to this mode of angling, as fly-fishing is tolerated everywhere, and certainly it is more artistic and sportsmanlike than with the hideous gub, seine or trap. I fear that our protective laws are being respected as they should be, but as the commissioners have no fund from which to enforce it, not even to prosecute infringers, nothing can be done except through local organizations and individuals who have courage to bring charges before the proper authorities.

A few days ago I visited the carp pond of Capt. F. W.

Green, near this city. From ten pairs originally placed in it there have been reproduced thousands of them. Two-year olds would weigh from five to six pounds; the year olds about two pounds. Unfortunately for the successful propagation of the fish, the pond is very small, and they are already too much crowded. If, however, the suggestions of H. Hessel were carried out, both as to building and the number of ponds necessary, carp would be cultivated here to an indefinite extent.

The Cumberland Angling Club, have a stocked pond about four miles from town, which they have splended with bass and white perch; they have erected a Swiss Chalet on the bank of the pond for a club house. The members of the club are gentlemen of means, and they propose beautifying their grounds and increasing the dimensions of their pond later on. If these gentlemen would add a private bathery it would pay them, by keeping up their own supply of fish and selling to others desiring to stock ponds with game fish.

The F. A. C. Angling Club are at present enjoying their annual fall sport on the beautiful Buffalo River. They have a complete camp outfit, and always remain away two or three weeks at a time. Our market is less well supplied with fish and oysters than I remember to have known it for some years, owing to the continued warm weather. The usual shipments from Redfoot Lake will begin so soon as the cold spell comes. J. D. H.

Nashville, Nov. 3.

TROUT IN SIBERIA.

THE expedition now on its way to establish a meteorological station of the U. S. Signal Service at Point Barrow, Alaska, was detained for several days at Plover Bay, a deep harbor on the Siberian coast, near the entrance to Behring Straits. While there we were feasted to repletion with quantities of superb trout, which the Esquimaux brought off and sold us for a small price paid in tobacco, needles and such things. These fish were the *Salmo trutta* variety, the common red-spotted trout of the Pacific coast of North America, a fish closely resembling in appearance and habit the common brook trout of the East. They varied in weight from three-quarters of a pound to three or four pounds, and were remarkably fat and fine flavored. The natives caught them in nets, in a fresh water lake four or five miles long, separated from the sea only by a narrow sand beach, and distant from our anchorage about three miles. Bad weather and various duties prevented our visiting this lake, and we were unable to succeed in several similar small lakes and ponds near our anchorage. Trout have been netted in the e-ponds, but it is believed that these fish were washed in from the bay during unusually high tides, which sometimes flow into the ponds. The abundance of this fish in the lake where the natives caught them may be judged from the statement of one of the natives, who, on the suggestion that some of our party should try fishing in the lake, said: "I jun man, small net, plenty; American man, big net, plenty." Point Barrow, Alaska, Aug. 23, 1881. OSKREYER.

SPORT IN KENTUCKY.

ON the morning of October 10, 1881, you might have seen a party of sportsmen busily engaged in loading all the nerful fixtures for a camping trip in a wagon. When all was in, the good-by said, and the baby kissed, we started up the lovely valley of Tygart, a stream which rises in the mountains of Kentucky and flows north to the Ohio River. This stream is justly celebrated for its fine fishing all over southern Ohio and northern Kentucky, and its banks are annually adorned with the tents of visiting sportsmen. We were met at our camp by Mr. Pat J. Walker, and there camped on his farm and so on had some canoe—which we killed while coming along—cooking for our first supper in the woods, and then laid our plans for the morrow. We determined to catch what bait we needed first, and while waiting for bait some fine bass were taken and served for dinner. This day was taken up in getting ready for the next one, and before daylight we were on our way to the Falls of Tygart, one mile from camp. In ten minutes D. was engaged in a fierce struggle with an old pike and his fish was in a first pike you may imagine something of his condition. He was soon master of the situation, however, with the help of W., who got in the water and lifted the pike out on the bank. Its length was four feet one inch, and its estimated weight forty-two pounds.

W.'s luck somehow had deserted him, perhaps on account of the irregularities of Monday, and he had not a nibble yet. D. soon had another rise, this time from a black bass, which he landed without aid. Its length was twenty and one-half inches, and some powder and a paper estimate the weight of this fine fish. D. was five pounds. B. had taken his tackle and gone up stream, but soon the boom of his gun was heard to break the stillness, proclaiming death to the squirrels. At ten o'clock all were in camp. J.'s fish and D.'s squirrels made a full harvest; he had killed a dozen or so of fine ones. W.'s luck still remained the same, and this is about the way we pit in an entire week out in the wilds of Carter county. We did not take any men with us, and we did not eat a meal without game and plenty of it. We fed the birds inside of five miles from our camp there were 800 wild turkeys, but as we did not know the lay of the land well enough we did not bag any of them.

In conclusion, let me say that if any one wants a camping trip let him try Carter county. We were there from the 10th to the 17th, and had an abundance of game all the time. The people were kind, and all tried to make our visit enjoyable, especially Mr. Walker, who put us under many obligations for services rendered for which we would receive no remuneration. We killed about fifty squirrels, some grouse and caught about 40 lbs of dressed fish. There were only two dogs in the camp. Should any one wish to go there would send his address to FOREST AND STREAM he will receive all the information. Our expenses were only \$3.15 each. D.

GROWTH OF CARP IN NEW YORK.—Mr. J. Reynolds, of White Plains, Westchester county, N. Y., recently lost some carp from his pond which were two years old, last August. One of them weighed seven pounds.

GUT—ITS BRITTLINESS BY AGE.

Of all the miseries the angler has to contend with, there are few things more vexatious than one's tackle giving way when a good fish is hooked, or when the hook or hooks have got wedded to a tree or in out of the water. The whipping of the hook may have become slack, the barb may break off, the line may break, or the rod itself may give way, a knot in the cast may slip; but of all the breakages that I know of and that I dislike, it is a godly piece of stout salmon gut to part company, and leave one "alone lamenting."

I do not wish to have to lament on this count, and I desire to lay the interest of all anglers before brother Francis and all lovers of the art, and see if we cannot doctor our gut, so that there will be no more lamenting.

In the first place, as prevention is better than cure, I should like to know if there is any way of preventing the disorder? Is there anything in the preparing of silkworm gut which causes this tendency? It is a fact which I have observed that all gut has not the same amount of tendency to become brittle, if I may so speak. Have the diseases to which silkworms are subject anything to do with it? Or is it the substances used in the staining of it? I may be wrong, but I think I have observed the brittleness more frequently in the light iron-blue stained gut, and much less in unstained gut. So much for the cause and prevention. What of the cure? We are advised to steep it in cold water. This summer I steeped as fine a cast as any one could wish, for about fifteen minutes. I fixed one end on a round nail, and the other on a pin. I attached to it a spring balance. It gave way in the middle between two knots at three and a half pounds. This same cast, which has never been used, and which is a perfect model to look at, was bought in London in 1879 at a first-class house. When tried in a similar way then it withstood a pull of ten pounds, without breaking. I expect my salmon casts, single gut, to stand a dead strain of ten pounds, and my trout casts three pounds. If they do not stand this kind of cast, I do not trust them with a fish of any kind. The cast will hold together in a mass of pink salmon gut, bluish tinted; never break it it is assumed as good, and tapering from end to end. I have about a dozen of them now perfectly useless.

Can Mr. Francis or any one throw any light? Now is the time, when our casts are lying idle and with a strong tendency to become brittle and useless by age.

Had I not tried my cast in the way I always do, even with a fine trout line, I should most certainly have lost my first fish.

By way of cure I have thought of many things; and I am about to institute a number of experiments, in order to ascertain the best color and substance to use as a stain for fishing gut—one or more substances which will have no tendency to lead to this brittleness. As soon as my fishing tackle returns from the North, and which will be in about a week, as it is coming by sea, I shall pace one of my brittle salmon casts in strong vinegar for twelve or fourteen hours, and I shall report with what effect.

The reason why I shall use vinegar by way of a cure here is that I have already twice before this had discovered the worm and drawing it out to form gut, before the caterpillars in strong vinegar for twelve or fourteen hours. The vinegar, I understand, has the property of converting the secretion in the scieria, or silk-vessels, into gut instead of silk. Vinegar or acetic acid has a similar action upon glue and colloidal substances in general. Anyhow, as my cast can hardly be made worse, I shall try a few experiments with them for the benefit of the present and future race of anglers.—Correspondence of London Field.

GAME PROTECTION IN NEW YORK.—State Game Protector S. V. R. Brayton, of Albany, lately returned from making a successful raid upon evil wits in the Delaware, between Hancock and Milford counties. He has discovered the game laws of eight of these unlawful and destructive fish traps, some of them partly destroyed and others in full working order. He has requested District Attorney J. Curtis, Esq., of Callicon, to institute proceedings against Leander Conklin and Lewis Hill, of Damascus, Wayne county, Pa., two evil wretches, who come from the Pennsylvania border to catch New York State fish by wholesale. He has a memorandum in which are recorded the names of trespassers, and it is hoped that he will secure a list of all the game which has for many years persisted in openly violating the game laws of this vicinity. Mr. Brayton says, regarding the difficulties in detecting this class of criminals, that the effectual suppression of illegal fishing and shooting is greatly in the hands of the citizens where the outrages are perpetrated. It being impossible to provide a patrol of constables sufficient to thoroughly canvass the forests and streams, it is the duty of every right-minded and public spirited citizen to report to the game constable and sportsmen's clubs any violation of the game law which comes under his notice. A vigilance of this kind, were it general, would soon abolish the pothunter, and secure good fishing and shooting in the proper season throughout the State. During the past summer Mr. Brayton has been doing some sharp work about Onondaga Lake and other neighboring lakes of the chain in capturing nets and indicting their owners, some of whom are already under the lash of the law.

A TROUT HIDES IN THE MUD.—Putnam, Conn., Oct. 22.—Forty-five years ago trout were abundant in all the clear spring brooks in this county, Mass., and for such was found weigh one-half a pound and upward I usually got ten cents a pound, and often caught so large a string that I would prefer to return home for the wagon than to try to carry them. I recollect that at one time, on my return home with quite a nice string I thought it better to go to the lower mill on Trout Brook, as there were two or three pools below the mill where I usually secured a nice trout. The water was low and the mill had shut down. With carefulness I ascended a big fellow, but in trying to lift him over the line broke. I was determined to secure him, and waded in as the pool was a foot deep or so, and some twelve feet square. I carefully scouted every part of it, and could not see the trout. It could not get out any way, and I waded up and down, and just as I was about giving up I saw a piece of my line, and carefully secured the end and followed it up, and soon found the trout, which had hidden away in the only little spot of mud in the pool. I secured it, and if I recollect aright it was a trout of full two pounds.—Night.—G. P. F.

THE MAMMOTH COD.—A enormous codfish are occasionally taken is not a surprising fact. That one should be the occasion of poem may, however, seem a trifle strange. We have received such a poem, entitled "The Mammoth

Cod," from the pen of Mr. B. Hawes. The verses are faultless in metre and the style is lyrical, and, were they more directly in our line, we would gladly publish them. No doubt the "Fisherman's Memorial," about to be published at Gloucester, Mass., would gladly embalm them in its pages and the writer of "The Mammoth Cod" would go down to posterity alongside our most gifted poets.

THE "BELGIAN DEVIL."—The London *Fishing Gazette* has an illustrated article with this heading. "The devil" is a heavy implement the four or five lower joints being back to back. It is three feet high, and the inside part of the hooks are sharpened. It is claimed that the Belgian fishermen in the North Sea, engaged in trawling, carry such an implement hanging from the bow, which cuts through the English nets and lets the fish into the Belgian trawl. One was recently lost from an Ostend trawler and captured in an English fishing net. If this is practiced, braches of the peace between the fishermen of England and Belgium may be looked for.

HABITS OF TROUT.—We recently published a letter from Judge Caton on the habit of trout hiding in soft bottom, or burrowing. He cited Capt. A. F. Young, of Escocania, Mich., as having seen this strange habit. We now learn from Mr. W. H. Ballou, an observant naturalist of Illinois, who has charged the same thing in the State of New York. We imagine that some peculiar bottom is favorable for this habit, as it does not seem possible that trout would go in mud. The bottom described by Capt. Young seemed like a whitish loam. Who knows more about this?

THE MESADEX FISHERIES.—Surveyor King, of Greenport, L. I., reports the number of menhaden landed in the district during the past season as 80,000,000. This immense quantity of fish yielded 425,000 gallons of oil and 8,500 tons of fertilizer. Long Island fishermen returned from the Chesapeake report a good season. The Virginia season was a failure owing to the scarcity of fish.

Fishculture.

FISHCULTURE IN NORTH CAROLINA.

AS our readers are aware the State work of fishculture in North Carolina is a sub-department of the Department of Agriculture. A monthly bulletin is issued, called "The Monthly Bulletin North Carolina Department of Agriculture," published by L. S. Gating, State printer, Raleigh. Subscription price, one year 25 cents. We have just received No. 9, dated September, 1881, in which Mr. S. G. Worth, Superintendent of Fish and Fisheries, gives a summary of the operations of the Fish-Department of Fish and Fisheries for the years 1878 and 1879 inclusive.

The propagation of fish by artificial methods was undertaken only a few days after the creation of the Board of Agriculture by the Legislature of March 27, 1877. Mr. Frank N. Clark, an expert on the subject of the Fisheries, Fish Culture, was appointed by the Board, and operations of hatchery were immediately undertaken on the Neuse. High water, and other difficulties set at naught all efforts, and the result there and of fry obtained from the Government hatcheries in Massachusetts made a net plant of only 416,000. A number of floating boxes were then used for hatching, the eggs being moved in the process by the natural river current, the box boxes being wire. No hatchery existed in the State, and those boxes were in part a loan from the United States Commissioner. At that time no one in our State knew anything of the theory or practice of fish culture, and such practical knowledge which has spread rapidly in all directions is entirely due to the agency of the Board and a kindly disposed press.

The second step taken was the erection of a salmon hatchery in September following at Swannanoa Park, Duncassee county, making a plant of 234,000 full size fry.

A joint subscription of funds, and the United States and Maryland Commissioners sent their hatchery fleet (of boats) into the Albemarle Sound. They assumed the collecting and hatching, and when the fry were ready for shipment, they were allotted out to the different commissioners for their respective States. The means furnished me were used to best advantage in shipping the fish. The result was 2,243,000. In the season of 1879 we operated on the same plan, merely shipping as many fry as we could secure from the hatchery in charge.

In 1880 the appropriation for the United States Commission was so delayed that no operations were undertaken by them on the Albemarle. We assumed the undertaking of collecting, hatching and shipping, and in part the same plan was followed. We were referred to the Chesapeake Bay and we had no means to build to. Within forty-five days, however, an order was given and a hatchery near-by site was perfected. It contains a four and one-half horse boiler and engine, two powerful force pumps run by steam, and twenty-five hatching tanks, each of 500 gallons, and a capacity of four millions of eggs. The building is of rough plank, twenty-five by thirty feet, single story. All meals are served and eaten in this building, and the corps sleep in hammocks and on cots in simplest style, above the machinery. The hatchery is now ready for shipment, and the engine was steamed up on April 14, and the pumps worked twenty-seven days and nights without an hour's interruption. There was a working force of sixteen men. The hauls occurring every six hours at two fisheries, two miles distant, were attended, and the hatching cages were filled to the utmost capacity, and were empty only at the close. The point at which this work is done is Avoca, the home of Dr. W. R. Capehart. The waters of the Albemarle are here fresh and six miles wide. The scales used for fishing are one and one-quarter to one and one-half long, most of them are shot from two fifty-foot boats, manned by ten oarsmen to each. With long ropes they are then hauled ashore by horse-power and windlasses—some, however, are carried out by steamers and hauled in on drums by two other engines ashore. The annual fish yield of the hatchery is about 2,000,000.

In 1881 the new fish-hatching steamer, Fish Hawk, was sent down by the United States Commissioners to hatch at Avoca. From her cages 800,000 fry were released and the remaining eggs were sent over to us on the eve of her departure, May 15. We had made no preparation to do any hatching, the United States officials having assured me that they would do it all. But on her unexpected departure we began, and with no force except nine men to distribute fry with, and with every disadvantage, we achieved a fine success. With 2,000,000 fish released from the Fish Hawk the North Carolina planting foot up 5,545,000. The work is really twice as good as that of 1880, showing above all things that we are in a line of progression.

No State is more favored in stream-water onna. We are lacking in lake area, however, and need all running waters above the shed limit, there is a very great scarcity of fish. While these localities have engaged thoughtful attention, we have not been able to organize any large work by which we could fully restock them. We have not been able to overcome the scarcity of fish in the headwaters of such streams by the introduction of the Schoodic salmon of Maine and the California trout of the Western slope. Meanwhile I would earnestly recommend persons in the interior to cultivate the German carp in ponds. By far the larger portion of the State is now water, and if we succeed in establishing successful fishways on all the dams in the State, they will yet receive such in only comparative small numbers. The carp grows quickly and almost every farm affords suitable conditions for supplying one or more families with fish.

In 1880 I spawned a large rockfish of fifty-seven pounds and hatched 500,000 fry. I found mid for the impregnation of 700,000 eggs only, but the eggs remaining in the ovaries which were subsequently removed, were to those taken about four to one, making the yield about 3,000,000 in toto. Five spawning and several rods of like size were used in spawning, that spring within four miles of our station. Three of the same, I am informed, were taken last season at Wood's fishery opposite us. Their full period of spawning follows the close of shad-fishing, and we have been compelled from lack of means to close our work without making a special work of it. In 1875 Dr. Capehart made a haul on May 6 (after he had finished his shad-fishing) and took 840 fish; 350 averaged sixty-five pounds, and many weighed eighty to ninety pounds. The total weight of the haul was 35,000 pounds. Though an acute observer, he at first was not much interested in the species of fish taken. It is not known how many may have been ripe, but the spawn of one weighed twenty-eight pounds—over three and nearly four times as much as the spawn contained in the one handled by me in propagation in 1870

"The striped bass," of New York, *Roccus lineatus*.

BLACK BASS IN PENNSYLVANIA.

PHILADELPHIA, Nov. 14.

MR. JAS. W. ORE, Fish Warden of Camden county, N. J., has just finished his report ending Oct. 1, 1879. His work has been forwarded to Fish Commissioner Howell, of Woodbury, Gloucester county, N. J. Mr. Ore states that during the past year there have been many black bass caught in many Camden county ponds, the result of stocking with fish of five years age. Some of the fish weighed four pounds. The following are the ponds which have been supplied with this game fish, two hundred and fifty being placed in each, measuring from four to six inches in length: C. S. Bidway's, at Brown's Mill; Albert Wood's, near Woodstock; Russell's, near Woodstock; and Wagoner's, near Swedesboro. The fish for the latter were carried down on the Woodbury and Swedesboro Railroad yesterday and liberated. The superintendent of stocking all the ponds south of M-reer county has been delegated to Fish Warden Ore. The ponds which were stocked with black bass three years ago, and this year some of them were caught measuring ten and twelve inches in length.

The large pond belonging to Mr. Black at Swedesboro is not mentioned as being stocked. We wonder at this, as the writer in his youthful days used to catch white perch in this pond weighing one and two pounds, the fish having originally been placed there from a tide water creek (Raccoon) running into the Delaware River, and had become land locked.

The writer was once out of four who subscribed to a fund for the purchase of bass for the Swedesboro pond, but the fish brought were nothing but fallsh, a chub—the person doing the buying, being ignorant as to the appearance of the black bass, took what he thought were the fish wanted, as he saw them swimming in the bottom of the pond.

The result of this experiment is the presence by thousands of the fallsh in Swedesboro pond, where they were never known before. Mr. Ore should not neglect this grand sheet of water. The white perch from tide water will live there and thrive. Why will not the bass?

GROWTH OF CARP IN VIRGINIA.

BALTIMORE, Md., Nov. 5.

Editor *Forest and Stream*: I clip the following item headed "Carp in North Carolina" from the *Baltimore Sun* of to-day: "The carp raisers in North Carolina are rejoicing over the success attending the introduction of the German carp into that State. On that State, one of the best fishermen dragged his pond a few days ago, and the result astonished him. The carp that he deposited in January—two months ago, of infinitesimal size and an ounce in weight—are now seventeen inches long and weigh four pounds apiece. The German carp are now a proof of rapid growth in still ponds favorable to their propagation, and it will give you an instance that will be additionally convincing. While on a recent visit to Winchester, Va., I was informed by Mr. Crump, the collector manager of the State, that he had secured a fine specimen of the carp, a small specimen (such as the U. S. Fish Commissioner distributes) on April 15, placing them in a small pond at the mill. July 15, exactly three months after putting them in, he had the water drawn off, and to his amazement found a remarkable length of ten and one-half inches. Any one acquainted with Mr. Crump will accept his statement without question. He is not a disciple of Isaac Walton. N. P."

FISHCULTURE IN TEXAS.

LAWS RELATING TO PROTECTION OF FISH.

Offenses Relating to the Protection of Fish, etc.—Article 423. If any person shall drag or haul any fish net, seine, or set, place or use any fish net, seine trap or other contrivance of any character whatsoever, for the purpose of catching fish (except the ordinary hook, line and pole), in any stream, lake or pool of water within this State after the tide-water, between the fourteenth day of February and the fourteenth day of June of each year, he shall be fined not exceeding fifty dollars.

Article 424. Each day that any net, seine, trap or other contrivance remains set or placed, shall constitute a separate offense under the preceding article.

Article 425. If any person shall catch or take, or attempt to catch or take, any fish in this State by the use of any poisonous substance put into the water, he shall be fined not less than twenty-five nor more than one hundred dollars.—Penal Code, Title XIII, Chap. 1.

An Act for the Preservation of Fish and to Build Fish-Ways and Fish-Ladders.—Be it enacted by the Legislature of the State of Texas, That it shall be the duty of all persons, firms or corporations, who have created, or who may hereafter erect, any mill-dam, water-weirs, or other obstructions, on rivers or streams within the waters of this State, within six months after the passage of this act, to construct and keep in repair fish-ways or fish-ladders at such mill-dam, water-weirs, or obstructions, so that all seasons of their period of season they may be open and free for fish to deposit their spawn. Any person, firm, or corporation, owing such mill-dam or obstructions, who shall fail or refuse to construct or keep in repair such fish-ways or fish-ladders, after having been notified and required by the Fish Commissioner to do so, shall be punished by a fine not exceeding one hundred dollars nor less than twenty-five for every such neglect or refusal. The Governor is hereby authorized to appoint a fish commissioner, who shall serve without compensation, whose duty it shall be to see that the provisions of this act are complied with.

Section 2. All prosecutions under this act shall be commenced within two months from the time when such offense was committed, and the same shall be upon complaint under oath before any justice of the peace, recorder or mayor of any city in the county where the offense was committed or where the defendant may reside or be found; and all fines imposed and collected under this act shall be paid one-half to the complainant.

Section 3. All laws and parts of laws which conflict with the provisions of this act be the same are hereby repealed.

Section 4. This act shall take effect and be in force on and after the first day of July.

Approved April 17, 1879.

By the Legislature amended the law of 1879 of the State in 1881. The Legislature amended the law of 1879 by fixing the pay of the Commissioner at \$1,500 per annum, and also making an appropriation of \$5,000 per annum for the protection and distribution of fish.

Mr. J. H. Dinkins is the only Fish Commissioner ever appointed for Texas and is now serving his second term.

RABIES.

On our issue of July 14 we published an account of the biting by a supposed rabid dog of Mr. Walter H. Beebe's setter bitch...

We are extremely loath to go upon record as dissenting from the opinion of an eminent authority as Dr. Porter is universally conceded to be, and it affords us no more satisfaction that we can...

While admitting that many of the symptoms in Mina's case are such as would be shown by a rabid animal, we fail to discover that they are essentially different from those of other diseases...

Regarding apoplexy, it is to be wondered at, that with a tight collar on her neck and an excited man by the other end of the examination table, she should have died. We know Mr. Beebe as a gentleman who has the appearance of being unexcitable and self-possessed under ordinary circumstances...

We have been called to see many cases where the symptoms were very similar to those of the case in question, where, with an exception, the animals were pronounced to be rabid by the owners and the examination by the veterinary assistants...

It is never yet seen a case of rabies; and so very rare is this dread disease that we never expect to witness its horrors. We have not heard of a case in this country since we have testified under oath that they knew absolutely nothing of this disease...

A CASE OF RABIES.

Reported by William Henry Porter, M. D., V. S.

A dog named Mina, and owned by Mr. Walter H. Beebe, of New York, was a valuable English setter, aged four years and three months...

July 5th Mr. B. saw both dogs, and found them in fine condition, the injuries giving no trouble, and his impression was that the wounds were quite healed, and they appeared to be feeling perfectly well...

Mr. B. talked of bringing the animal to the Columbia Veterinary College, but he was prevented from doing so by the necessity to secure from an early necropsy in a well-watched case.

On Saturday, July 23, the owner went to Morris Plains, with the above stated purpose in view, his keeper, Mr. Parrot, having thought the dog too excitable to handle alone. When Mr. B. arrived at the place he found the dog in a very excited state, and anything but mad, and jumped up to meet him as usual...

It might be well to mention in connection with the above history, that Mina was removed from her kennel among some other dogs, and placed in a pair of the large wire dog house as usual.

Unfortunately, was unable to make the necropsy until forty-eight hours after death. Immediately after the dog was killed, the surrounding area was disinfected with carbolic acid.

Unfortunally, was unable to make the necropsy until forty-eight hours after death. Immediately after the dog was killed, the surrounding area was disinfected with carbolic acid.

Adrenal Gland.—The portal vein, its branches, and their tributaries were displaced, and the gland was enlarged, and its surface was deeply congested, and microscopically the epithelium was very granular, but this may have been in part due to the time which had elapsed between the death and the necropsy.

carefully removed, but it was impossible to harden it sufficiently to make any satisfactory section therefrom.

The question as to the case being one of rabies is somewhat doubtful. But from the fact that the dog apparently died from apoplexy...

THE NATIONAL TRIALS.

Editor Forest and Stream: The meeting of Grand Junction promises to be the largest held by the N. A. K. C. There will be more starters in each event than any trials yet held by the association.

Mr. H. M. Short is in Memphis, on his way to L. Grange, Tenn., and expects to start eight dogs in the various events.

Mr. R. B. Morgan, of Canton, Ohio, is at Milan, Tenn., with a string of dogs.

Mr. D. C. Sanborn, of Michigan, is at Martin, Tenn., with Nellie, Nolla, Dashing Novice, Gladis and Gurdy, and may start East the 20th of November.

Mr. Wannamaker, with some of Mr Moore's kennel, will be at Middleton, Tenn., about the 20th.

Mr. H. Laine, of Boston, and some friends will shoot some in Tennessee before the trials.

Mr. W. Waters, of the St. Louis K. C., is in Aakanas, and comes through by land to Grand Junction.

Mr. Wallace has a string of eight belonging to Memphians that will run the Stake.

Mr. McIntosh, of Pittsburgh, will soon be in Tennessee doing some shooting.

Mr. J. H. Smith, of Stamford, Conn., will be on hand.

Mr. L. H. Smith, of Stratford, Canada, will be represented at the meeting.

Mr. Dew, our efficient secretary, will see that the Mont View kennel is well represented.

Quite a delegation will be on hand from the far South.

Pennsylvania will be well represented by many of her generous sportsmen and good array of fine dogs.

The grounds will be drawn next week and the trials carefully noted.

COMFORTABLE QUARTERS FOR SPORTING DOGS.

Editor Forest and Stream: I have frequently noticed that the owners of setters and pointers in our cities often do not keep them there, because they give as a reason that they can only exercise them a short time every day...

Now, judging from the way most men keep their dogs, I do not wonder that this is the general impression, because the poor animals are fastened by a short chain to a small kennel, giving them scarcely more than room enough to turn around in the open air.

I have tried for some time a plan of fastening setters that gives them plenty of ground to move about and yet keeps them from going out of certain bounds. In an ordinary back yard, twenty feet by twenty-five feet wide, put two staples in opposite fence posts two feet from the ground. Between these stretch, and tie tightly, an ordinary clothes-line, having first put over it a large ring with a chain attached.

The best bedding to keep off fleas is coarse red cedar sawdust, which must also be sprinkled plentifully around the outside of the kennel.

I think if this method of kennel arrangement and of fastening is used more, attention will be able to keep the setters and pointers in a city with very little trouble.

English, Irish and Gordon setters, pointers, large and small, both dogs and bitches, \$25 to \$50, second, both dog and bitch puppies, \$10 to \$15. Cocker, Field and Water spaniels—\$10 to \$15, first, \$15 to \$20. Foxhounds, \$20 and \$10, hedges \$15 and \$5.

DOG STOLEN.—Boston, Nov. 8.—Editor Forest and Stream: Having several times seen in your paper that you express your willingness to assist in finding lost dogs I would report one just now.

DOG STOLEN.—Boston, Nov. 8.—Editor Forest and Stream: Having several times seen in your paper that you express your willingness to assist in finding lost dogs I would report one just now.

ANTIDOTE FOR STRYCHNINE POISONING.—Brooklyn, N. Y.—Editor Forest and Stream: I have had a number of valuable setters and greyhounds poisoned evidently with strychnine.

PENNSYLVANIA FIELD TRIAL JUDGES.—Pittsburgh, Nov. 8.—Editor Forest and Stream: The following named gentlemen, Joseph H. Dew, of Columbus, Tenn.; J. J. Sullenburg, of New Brighton, Pa., and W. S. Bell, of Mansfield, Pa., have been selected to serve as judges at the Pennsylvania State Field Trials...

TRAINING FOR THE NATIONAL.—Memphis, Tenn., Nov. 12, 1881.—Have just come in from the vicinity of Milan. Birds are plentiful, but shall have to have some frost before dogs can be worked to advantage.

AN AMERICAN STUDY DOG FOR ENGLAND.—At the request of several prominent English breeders, among them some of the most influential members of the London Kennel Club, Mr. James H. Goss, of this city, was sent to England for a stud dog in the stud his well-known Duke of Beaufort, who will be limited to ten approved bitches.

DEATH OF PONTIAC.—Mr. J. H. Gondall has met with a sad misfortune in the death of the Laverack setter Pontiac, who was choked with a piece of meat October 21, just one day after he came into his possession.

DOG STOLEN.—We would call the attention of our readers to the advertisement of Mr. Bryer, regarding his Gordon setter dog that was stolen about November 1. Should any one know the whereabouts of the dog, please call on Mr. Bryer at his residence, 117 West 12th street, New York, and receive a suitable reward, by communicating with his owner.

EASTERN FIELD TRIALS.—At the request of many sportsmen we give directions for reaching the grounds where the trials are to be held on. Take the train at Hunter's Point at 8:35 A. M., or 3:35 P. M., for Centonage from there a stage meets every train, which will take you to McKim's Hotel, which is near the grounds.

OFF FOR THE FIELD TRIALS.—Mr. J. J. Sullenburg, of New Brighton, Pa., left yesterday for Tennessee with his May and Prince Laverack to give them a little preparatory work before the trials at Grand Junction.

KENNEL NOTES.

* Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelped, sales, etc., in this column. We make charge for the publication of such notices, but request in each case that the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.

NAMES CLAIMED.

Black Baron, Sir Walter and Frederick Dine.—Claimed by Mr. J. P. Kirk, Toronto, Canada, for black spaniel dogs whelped Oct. 13, 1881, by imported Toronto Bred (Kain's-squaw) out of imported Toronto Jet (Nigger-Bitch).

White Prince and Bramble.—Claimed by Mr. J. P. Kirk, Toronto, Canada, for white and black spaniel dogs whelped Oct. 13, 1881, by imported Toronto Bred (Kain's-squaw) out of imported Toronto Jet (Nigger-Bitch).

White Prince and Bramble.—Claimed by Mr. J. P. Kirk, Toronto, Canada, for white and black spaniel dogs whelped Oct. 13, 1881, by imported Toronto Bred (Kain's-squaw) out of imported Toronto Jet (Nigger-Bitch).

Melawak Club.—Claimed by the Melawak Kennels, Clutham, Ont., for lemon and white setter dog whelped July 10, 1881, by Santora's Count Noble out of Princess Belle (Pilkington's Hulus-Dogge's Bitch).

White Prince and Bramble.—Claimed by Mr. J. P. Kirk, Toronto, Canada, for white and black spaniel dogs whelped Oct. 13, 1881, by imported Toronto Bred (Kain's-squaw) out of imported Toronto Jet (Nigger-Bitch).

White Prince and Bramble.—Claimed by Mr. J. P. Kirk, Toronto, Canada, for white and black spaniel dogs whelped Oct. 13, 1881, by imported Toronto Bred (Kain's-squaw) out of imported Toronto Jet (Nigger-Bitch).

White Prince and Bramble.—Claimed by Mr. J. P. Kirk, Toronto, Canada, for white and black spaniel dogs whelped Oct. 13, 1881, by imported Toronto Bred (Kain's-squaw) out of imported Toronto Jet (Nigger-Bitch).

WHAT RICE LAKE CANOES MIGHT BE.

Editor Forest and Stream:

In your issue of the 31st, "Red Laker" laments the "Commodore and the Cook" to express themselves regarding Rice Lake canoes... I regret to say that neither the "Cherub" nor the "Becky Sharp" survives to vindicate their individual characters.

THE AMERICAN CANOE ASSOCIATION.

Editor Forest and Stream:

In answer to the query of Orange Tracer, in FOREST AND STREAM of Nov. 8, I say that at the last annual meeting of the A. C. A., I took no part in voting on the proposed constitution, and at the same time of the appointment of a regatta committee, playfully announced that there should be no more committees, as he was Commodore and the "Commodore" was boss.

The Executive Committee have been delayed, by illness of one of its members, in the work assigned them, but I am informed that they now have their work about ready for printing, so that we may reasonably expect to hear from them in a short time.

MAINSAILS LOOSE ON THE FOOT.

Editor Forest and Stream:

From the slight notice you make of loose-footed mainsails we infer that they are uncommon in your waters, and for the benefit of any who may afterwards use them I will state a few of their advantages and disadvantages.

the out-haul and set it up taut. Next the halliards were set up till the after leech was snug, then the mizzen halyard was hooked on and set up snug. Result, as "Nat" a mainsail as ever hung over any yacht. When you want to tie down a reef to the out-haul and in-haul...

Michigan, Mich.

QUESTION OF TYPE.

Editor Forest and Stream:

I am greatly interested in your articles on yachts and yachting, especially in the fight you are making for deep boats of moderate beam and double head rig. None others are fit to cruise, in my opinion.

IT is a common remark: "Measure length and then beam and depth regulate themselves." They will not. Beam will regulate depth, and vice versa, depth will regulate beam, but neither will regulate itself in any precise way to length, except that under the ordinary rule of length measurement the maximum of both will be chosen compatible with winning races under that rule.

As a practical illustration of the first charge, we offer the almost total extension from our waters to boat of moderate form, the NASSAU BOAT CLUB, of this city, was held at the St. Cloud Hotel, on Monday evening, 14th inst.

was successful. The officers for year ending November, 1890, are: President, William Brookfield, Vice President, Walter S. Ward, Secretary and Treasurer, J. H. Giffin, Jr., Captain, Wm. A. Leffingwell, Coxswain, Chas. E. Goodhue.

MAP OF LAKE GEORGE.—Canoeists will be glad to learn that a very fine and useful map has been published by S. R. Stoddard, of Glen Falls, N. Y. It is on a large scale, from original surveys and published upon strong lining, very suitable for use in camp and canoe.

CUTTIES.—We call attention to the advertisement of Mr. G. L. Watson in another column. The success of Mr. Watson as a naval architect and yacht designer is known all the world over.

A. C. A.—Commodore Nicholas Longworth, of Cincinnati, writes his seat on the bench as Judge of the Supreme Court of Ohio, on Wednesday, Nov. 9, to serve under appointment of Governor Foster until February 9 next, when his elective term of five years commences.

SMALL YACHT.—A gentleman on Lake George has a small combination sail and rowing boat, only 15 ft. long, weighing 176 lbs. including the centreboard and rudder of 6 lbs.

NEW RIG.—We learn that Oriva, 30 tons, is to be supplied with Laphorn sails for next season.

Answers to Correspondents.

BEING NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

E. A. C., Rodman, N. Y.—See answer to A. H. S.

C. B., Pittsburg, Pa.—See answer to A. H. S. last week.

J. M., Baltimore.—Has the "American Kennel Club Stud Book '90" been issued? What is the price and where can I get it?

W. H., Ithaca, N. Y.—Will you be kind enough to publish a receipt for a dog's name on my registry about two years since, but have heard nothing further of the book.

H. J. S., Oceanonoke, Wis.—A friend has a water-spannet that is as dead as a stone wall. He is not using it as he usually is ever. His ears are constantly running and emit an offensive odor.

A. H. S., Ayer Junction, Mass.—A setter dog, about 15 months old, seems apparently in good condition, but after he has run a couple of hours he will suddenly come into heat and utter sharp barks.

E. A. M., Toledo, O.—I my pointer dog, 4 months old, has scabby sores on his breast and forelegs. What shall I do for him?

NOTICE!

Advertisements received later than Tuesday cannot be inserted until the following week's issue.

Rates promptly furnished on application.

GUN POWDER!
Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE! Dupont's Gunpowder Mills, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

- Dupont's Diamond Grain.**—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 10 cans.
 - Dupont's Eagle Dinking.**—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. cans (see cut) and 1/2, 1/4, 1/8, 1/16 lbs.
 - Dupont's Choke Bore.**—Specially adapted for "choke bore" guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 1/2, 1/4, 1/8, 1/16 lbs. cans.
 - Dupont's Eagle Rifle.**—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. cans and 1/2, 1/4, 1/8, 1/16 lbs. kegs.
 - Dupont's Rifle & C. S. Shooting.**—Fig. and F Fig. 1 for long-range rifle shooting, the Fig. and F Fig. for general use, burning strong and moist. Packed in 1/2, 1/4, 1/8, 1/16 lbs. cans, 1/2, 1/4, 1/8, 1/16 lbs. kegs. Fig. coarse, F Fig. fine.
 - Dupont's Sporting, Mining, Surprise and Blasting Powders** of all sizes and descriptions. Special Grades for Export Also Rifle, Cartridge, Muskets, Cannon, Mortar, Minnie, Hexagonal, Conical and Pellet Powder, U. S. Government Standard. Powder manufactured to order of any required grain or size.
- Agencies in all the cities and principal towns throughout the United States. Represented by F. L. KNEELAND, 87 Beaver St., N. Y. N. B.—Use none but DUPONT'S Fig. or F Fig. for long-range rifle shooting.

The Parker Gun.

Again Victorious at the Late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their powers beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island this year, at the New York State Convention, the PARKER won the Fierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 300 competitors. First prize in Champion Class was won with one of our 10 ft. 9 oz. Bass Rods; length of cast, 75 feet. First prize in Amateur Class was won with one of our 11 ft. 8 oz. Fly Rods; length of cast, 67 1/2 ft. The Sea World Special Prize was won with one of our 11 1/2 ft. 10 oz. General Rods; length of cast, 75 ft. Our rods are considered superior to all others by those who have seen or used them. Send stamp for catalogue, with Mass. Fish and Game Law.

Ammunition, Etc.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 4 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square casters of one pound only.

Hazard's "American Square."
Nos. 1 (fine) to 6 (coarse). In 1 lb. casters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. casters and 6 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. casters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

ANSWERS TO CORRESPONDENTS..... 339

GAME FISHES.

READERS OF FOREST AND STREAM may have seen during the past two years references to a publication by Charles Scribner's Sons, New York, of a work called "Game Fishes of the United States," by S. A. Kilbourne and G. Brown Goode, but no extended notice has been made of it. The work was conceived on a grand scale, and has been faithfully carried out, until it can truly be said that it is the most sumptuous work ever offered to the lovers of angling, and one which will take rank with Audubon's "Birds of North America," Wolf's "Wild Animals," and Gould's "Humming Birds," if it does not exceed them in many respects. The book has never been advertised, but was sold by subscription, and only one thousand copies were printed. The stones have been destroyed and the entire edition sold with the exception of about ten copies. Under these circumstances we feel it to be a duty to our readers in distant parts, who cannot have been reached by the canvassing agents, to give some description of this great work in order that they may avail themselves of the opportunity to secure a copy before the edition is exhausted. As we have said; the work has not been advertised, nor has any newspaper received a copy to review, but the sales have been quietly made by exhibiting the work to those likely to be interested, and have sold readily.

It was published in ten parts, at five dollars each. The plates are twenty in number, and are 22x28 inches, being exact reproductions by lithograph, in water-colors, of the late S. A. Kilbourne, who was acknowledged to be the best delineator of fishes in this, or any other, country. Mr. Kilbourne's drawings were criticised by ichthyologists of the Smithsonian Institution before being finished, and therefore the plates have ichthyological, as well as artistic value; and the form is perfect to the detail of every fin-ray, as truly as the fish is represented in color.

The text which accompanies the plates was prepared by Professor G. Brown Goode, well known to our readers as one of our first ichthyologists, and is original throughout and so far superior to anything which has ever appeared in ordinary angling books that no comparison can be made. It includes biographies of nearly all the important fishes of North America, comprising species not illustrated, and, where a fish is not illustrated by a large plate and has a near relative which resembles it, Prof. Goode gives an engraving of it. Thus, while Kilbourne gives a picture of one of the black basses Prof. Goode supplies engravings, eight inches long, of each species, side by side. The same is true of the pompano, and also the striped bass and its cousin, the white bass, from the Lakes. The text is in large type, on rich-toned, calendered paper, the size of the plates. There is also a map of North America, colored after an original plan, showing the geographical distribution of each species, and a complete list of the game fishes of the continent, nearly one hundred in number, with a synonymy of common names and definitions of their geographical distribution, which greatly add to the value of the work, and will be found of great use for reference.

The large colored plates are: The Atlantic salmon; the Eastern red-speckled trout; the large-mouth black bass; the Spanish mackerel; the striped bass, or rockfish; the red snapper; the bluefish; the yellow perch; the mackerel; the squeteague, or weakfish (Southern sea trout); the seabass, or Southern blackfish; the pompano; the sheepshead; the kingfish; the lake, or salmon trout; the bonito; the grayling; the red drum, or channel bass; the quinnat, or California salmon, and the musquallong.

Mr. Kilbourne's work was only beginning to be recognized as that of a truthful painter of fishes, and he had been asked to accept a position in the Smithsonian Institution, when his last sickness overcame him. He did not survive to see all of his work for Scribner's reproduced. He left a few other paintings of fish, a list of which we gave a short time ago. We feel confident that many of our readers will be glad to know the character of "The Game Fishes of the United States," and also to be reminded that the edition is about exhausted, and the plates are destroyed. We write this purely in their interest, for the work has not been advertised nor has any attempt been made by the publishers to attract attention through the press, and we have had many inquiries concerning it. We unhesitatingly pronounce it the finest work ever presented to the angling world, in any land.

EASTERN FIELD TRIALS.

THE third annual meeting of the Eastern Field Trials Club began on Robbins' Island, this Thursday, Thanksgiving Day. The Island has been greatly improved since last year, large portions of the terrible briar thickets have been cut down, and patches of grain sown in many places, which will more uniformly distribute the birds over the Island. Other great improvements have been made, which we shall notice more fully next week. There is a large number of well grown birds on the grounds that were bred there, besides those that the association have purchased and turned down. One hundred of these will be kept in coop, to be let loose should there be any scarcity toward the close of the meeting.

The club have made arrangements with Capt. Smith, of Springfield, Mass., to be at the meeting with the steam pleasure tug *Calla*, to transport the participants to and from the Island.

The hospitable inhabitants of New Suffolk have generously thrown open their houses, and there need be no fears that all cannot be accommodated. McNish's hotel will be headquarters, and can accommodate a large number. Mr. McNish has lately taken a partner, and will devote all of his time to the care of his guests.

That this meeting will be a memorable one, we have every reason to believe. We have received very many letters from all parts of the country from sportsmen, who will be present; and we can safely say that the attendance will far exceed that of any previous event of the kind that has taken place in this country.

The judges are all well-known as gentlemen of integrity and probity, and, what is of far greater importance, they are without exception sportsmen, whose experience in the field particularly fits them for their responsible positions. Hon. E. H. Lathrop, of Springfield, Mass., is as well and favorably known throughout the country as any sportsman of New England. He has had a large and varied experience in the field in all sections of the Eastern States, as well as in many portions of the West; and both by nature and acquirements is thoroughly competent to intelligently discharge the duties of the position. Mr. Justus Von Lengerke, of New York, who so acceptably performed his duties as judge at the meeting last year, needs no introduction to our readers as his indefatigable labors and display of "hunting sense" was chronicled at the time. Mr. T. F. Taylor, of Richmond, Va., is well-known as a thorough sportsman, and is well qualified for the position. Mr. J. M. Kinney, of Staunton, Va., we have known for years. He has long been a valued contributor to the columns of the FOREST AND STREAM; and some of the best articles upon field sports that we have ever published came from his pen. His long experience affords abundantly qualifies him to acceptably perform his duties.

It is no more than we can expect that the disappointed contestants should feel chagrined at their defeat, but if they will only put themselves in the other fellow's place, or ever view the performances as disinterested spectators, we avo no fears that any serious "kicking" against the decisions the judges will mar the harmony of the meeting; and defeated participants will carefully study the causes that to defeat, and profit by the lesson learned, the great object of field trials will be accomplished.

THE ATLANTA TOURNAMENT.—The managers of the Atlant Cotton Exposition have resolved to put the conduct of the rifle tournament, to be held in connection with the Exposition in the hands of the officers of the Gate City Guard, a battalion of volunteers in the city of Atlanta. This takes the matter out of the hands of the National Rifle Association. This may prove to be a politic move, for the Gate City Guards men have shown energy and will in other directions. They ought to be able to secure the attendance of a team of New York City Guardsmen, if for nothing more than to renew the friendly recollections of the Gate City Guard's visit to this city some months since.

EARLY RISING.—The early bird catches the worm. There are other inducements to early rising in New York city. Some of the tenement houses are so rotten that they fall down early in the morning. It pays a man to get up and out

TO CORRESPONDENTS.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are invited from every part of the country. Anonymous communications will not be regarded. No correspondent's name will be published except with his consent. The Editors cannot be held responsible for the views of correspondents.

Subscriptions.

Subscriptions may begin at any time. The subscription price is \$4 per year; \$2 for six months. Remittances should be sent by registered letter, money order, or draft payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States and Canada; and is on sale in Europe by The American Exchange, 449 Strand, W. C. London, Eng.; and by Em. Terquem, 15 Boulevard, St. Martin, Paris, France.

Advertisements.

Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line—eight words to the line, and twelve lines to one inch. Advertisements should be sent in by the Saturday of each week previous to the issue in which they are to be inserted.

Address: Forest and Stream Publishing Co.,
Nos. 39 and 40 Park Row, New York City.

FOREST AND STREAM.

Thursday, November 24.

DO NOT FORGET

That a year's subscription to the FOREST AND STREAM is a most appropriate holiday gift for a gentleman.

WHAT ARE YOU GOING TO DO ABOUT IT?—In the season, which means from the end of November to the first of February, every steamer to Europe takes out from one hundred to five hundred barrels of game—quail, grouse and partridges—each barrel containing about 250 pounds of game, and stated to be of an average value of \$70. If any one wants to know what is becoming of the game, the answer is here. We are feeding Europe with American game birds. It is a big contract. The supply of birds on this side of the water can hardly be expected to equal the annually growing market for it abroad. Another question of moment is, what measures, if any, can be taken to stop this wholesale exportation of game? Is there any practical movement to abate the destruction of American game? Or, must American sportsmen see the annihilation of quail, grouse and partridge? What can be done about it?

OFF FOR NORTH CAROLINA.—"Jacobstaff," with Capt. R. C. Johnson and Dr. J. B. Burdett, started last Saturday for Currituck, via the Old Dominion line of steamers.

"A DOG IS PERSONAL PROPERTY.—A judgment has been recently rendered in the New York Court of Appeals, which is of interest to owners of valuable dogs in this State, since it establishes the principle that a dog comes within the definition of "personal property," in the Revised Statutes, and may be made subject of larceny. The case, as we find it briefly reported in the "New York Weekly Digest," of Nov. 11, was that of *Mullaly, plaintiff in error, vs. The People, defendants in error*; decided Oct. 11, 1881. The plaintiff in error was indicted for grand larceny for stealing a dog of the value of \$90, and was convicted of petit larceny, the value of the dog being admitted to be only \$25. His counsel claimed that stealing a dog is not larceny. Wm. F. Kintzing, for plaintiff in error. Daniel G. Rollins, District Attorney, for defendants in error. "Held, That while at common law the crime of larceny could not be committed by feloniously taking and carrying away a dog, this rule has been changed by the Revised Statutes. 2 R. S., 690, § 1; id., 703, § 33; 1 Park. C. R., 593; 4 id., 386; 10 Abh. N. S., 182. The definition of 'personal property' in section 33 of 2 Revised Statutes 703, as used in that chapter, as 'goods, chattels, effects, evidences of rights of action,' and certain written instruments, is comprehensive enough to include dogs. It is to be taken literally, and the law makers intended to make it the crime of larceny to steal any chattel which had value and was recognized by the law as property. A system for the taxation of dogs having been at the same time enacted, 1 R. S., 704, it can scarcely be supposed the legislature meant to regard dogs as property for the purposes of taxation and yet leave them without protection from thieves. The definition of personal property found in the statute is not to be referred to the common law, but to the common understanding at the time when the statute was enacted. Judgment of General Term, affirming judgment of conviction, affirmed. Opinion by *Earl, J.* All concur, except *Folger, Ch. J.*, dissenting."

BYE-WAYS OF THE NORTHWEST.

EIGHTH PAPER.

THE usual full day's paddling against both wind and tide brought us to our camp at Struggle Cove about four o'clock. The country here looked better for hunting than any I had yet seen. The woods were open, the ground carpeted, and the trees draped with a luxuriant growth of bright green moss, on which the foot fell as noiselessly as upon a cushion. Higher up on the mountain side there was the usual tangled growth of underbrush, but the little valley that skirted its base was comparatively open. With the Admiral as a companion I started out to look for deer. We took several fresh tracks, all of which, however, led sooner or later into the thick brush, where it seemed useless to follow them. The last one that we took kept up the valley, and, as it had been made but a short time before, I had strong hopes that we should see the deer. We followed it very carefully, and it grew more and more fresh, when, just as we were about entering a low growth of hemlocks, where I confidently expected to see the game, my companion, who was behind me, caught his foot in a root and fell with a loud crash into a pile of dry sticks. As he did so I heard a deer jump not fifty yards away, and heard off up the mountain side. I turned and looked at the nautical here with sad, reproachful eyes, but did not dare to trust myself to speak. He, all unconscious of the mischief he had done, after disentangling himself from the branches among which he had fallen, seemed prepared to advance. But I had no spirit left for hunting, and, as it was nearly dusk, dejectedly led the way toward camp.

The next day was noteworthy, because during a part of it we had a fair wind. We had paddled to the end of the westernmost of the Thurlo Islands, and on reaching that point a fair wind sprang up, and we made sail, ran through a part of Cardero Channel, and up Loughrough Inlet to its head, camping late in the afternoon in Fraser Bay. The scenery was very beautiful, though not so bold as I had expected. Most of the mountains were rounded or dome-shaped, and timbered to their summits, though here and there would be seen one which ran up to a sharp granite peak and was covered with snow. We saw none, however, that seemed permanently snow covered; that is, none which might not be expected to be bare before the summer was over. The hills are from 1,200 to 5,000 feet in height, and stand well back from the shore, being thus much less imposing than if we could look directly up to them. Like all those which we have yet seen on the mainland they are of white granite, often intersected by dykes of basalt, and often spotted and mottled with fragments of darker rock. The rock, thus included in the granite, is perhaps taken up by a molten granite vein, which in its ejection has crushed the strata through which it passed, and has carried with it fragments which, on the cooling and hardening of the granite, have become incorporated with it. Instances of this kind are not very uncommon, but they are rarely seen on so large a scale as among these mountains. Some of the rock slopes on these hills are so steep as to be quite bare of vegetation, but in most cases the ascent is much more gentle, and the Douglas fir, cedar and spruce clothe the hillsides almost to their summits. We had some difficulty in finding a satisfactory camp in Fraser Bay. We did not wish to spend the night on the meadow at the river's mouth as the chances were that the mosquitoes would be too abundant there for comfort, so we decided to camp on

a little flat, barely above high-water mark. Indeed, as I looked it over before deciding to make camp on it, I saw a few fragments of seaweed on the grass and shingle, but they were old and dry, and the fresh meadow grass growing on the flat assured me that it was seldom covered by the tide. Camp made and supper over, the Sergeant with both the Siwash started off to look for game. Not very long after their departure, I observed that the water was rising higher than I had expected, and as I watched it creep up, it became apparent that we should have to move if it rose four inches more. It advanced quite rapidly, and, at last, I was obliged to shout to all hands to help save our equipment from the water. It took but a few minutes to roll up the bedding and carry it to higher ground, the mess outfit was piled on the drift-logs, and the fly hastily torn down. In half an hour we were all snug again in the woods, and our former camp was six inches under water.

The next day we started down the Inlet following the opposite shore. Part way down we came upon two deer standing on the rocks—a buck and a doe—paddled up to within 150 yards of them, and might have got much nearer had not one of the party through a misunderstanding fired a shot at them. This was the signal for a general fusillade, in which both animals were hit, but neither was recovered. It is too apt to be the case that, when half a dozen men are firing at one object, it escapes. There is always a little excitement, each man is anxious to "get his work in," and is a little afraid that some one else will kill the game before he does. The hurry and confusion throws every one a little off his balance, and the result is poor shooting. At the mouth of the Inlet and between that point and the entrance to Phillips Arm, there is a very strong tide. We had a fine sailing breeze with us, and besides worked hard at the paddles, yet were barely able to stem it. The appearance of the current rushing through these narrow channels is very curious. We are accustomed, in looking at any considerable sheet of water, to assume that it is horizontal, since to the eye its surface appears approximately a plane. But, by taking a position somewhat above the hurrying flood of one of these passages, through which the tides ebb and flow with such tremendous force, it is seen that in the direction from which it comes the water is much higher than that toward which it is flowing. We had no appliance for measuring the difference in level, but in some cases it seemed as if it must be several feet. The effect is very odd and unlike anything that I have ever seen elsewhere. Just before reaching Phillips Arm the wind fell, and we landed and tracked the canoe around the last point into the quiet water beyond it. After dinner we resumed the paddles, not camping until after dark. To find a level spot on which to spread one's blankets is not, in this country, always easy, and when the search is continued after dark it becomes difficult. We were lucky enough to find a place near the mouth of a little creek where the ground was moderately smooth, and by the light of a fire, and with the axe and hatchet plied by willing and energetic hands, brush, stumps, and rocks were cleared away, and holes filled up, so that we passed a comfortable night. In fact, as the Sergeant remarks, "Anything better than that would have been scandalous."

From the mouth of Phillips Arm to Amor Point on Bute Inlet is twenty-two miles. We started on through Cardero Channel in the morning with a gentle breeze, which encouraged us to drop the paddles and trust to the sail. But the wind was not steady, and sometimes failed us altogether. There was a good deal of feeble, desultory paddling and some sailing, and our progress was not rapid. The day was the most exciting we had passed up to this time, for we ran two rapids, which were as swift as anything we had yet seen. The shortest of the two was very narrow, less than a hundred yards wide, and the water was white for its whole length. The canoe darted through the channel at such a pace that it seemed impossible for one to work fast enough to feel the water with his paddle. We could do nothing more than keep the craft straight and trust to luck. We had scarcely time to think about the passage before it was over, for I think no express train ever flew faster than our canoe, and the channel was not more than half a mile in length. In the still water and in the eddies at the end of the rapids, we saw a great number of fine trout from ten to fourteen inches long lying close to the bottom, perfectly motionless except when the shadow of the canoe fell upon them. Then they would move slowly away from it into the sunlight. Threading our way along among the many islands of the channel, we passed a point where there had been a fishery for dogfish, and, turning north, entered the passage between the mainland and Stuart Island. The shore here was strewn with the carcasses of dogfish captured by the Indians, and the trees were in some places almost black with the ravens and crows, which had collected here to feed on the odoriferous *sculpin*. So tame were the birds that they declined to move when we passed by them within a few yards, and the Admiral, a second Ancient Mariner, drew his trusty rifle from its case, and shot one of the respectable black birds. I might carry out the parallel to its legitimate end and show you how by this thoughtless and ill advised act of misery and sorrow, in the shape of rainy weather, were brought upon our whole company for the remainder of the trip, but were I to do so I should perhaps add to the sufferings of our comrade, who has already been sufficiently punished for his hasty deed by the stings of conscience.

Just before we came to the rapids we stopped at a Siwash village, where nearly a hundred years ago Vancouver passed a winter. The village is at the head of a deep bay, into which flowed a beautiful stream of clear, cold water. A method of fishing which I had never before seen was practiced here. A long, stout line, about the size of a clothes-line was anchored on the beach at one side of the bay, and supported at intervals of fifty yards by log floats, ran across to the other, at an average depth of from three to six feet beneath the water's surface. At intervals of twenty feet along the main line were tied smaller lines about six feet in length, each of which carried a baited hook. As the line inclosed nearly the whole bay, no fish could enter or leave it without passing close by some one of the hooks.

On Stuart Island is a very noticeable though not very high mountain, the northeastern face of which is almost vertical, and on looking at the island from this direction, it appears as if a high wall were built entirely across it. We ran Arran Rapids at high water, and meeting the eh near the end we had a hard struggle. At one time I thought that our efforts would prove unavailing to carry us through, for the canoe was going backward pretty fast, and all hands were working about as hard as they could. This was evidently the opinion of Hanset, our big Siwash, as well. He was doing splendid work in the low, hut at last he turned to us and splashed to make for the shore, and at the same time reaching down, he caught up a camp kettle, which he said we must give to the water or else we would all be drowned. Happily for our kitchen, a few strokes carried us to an eddy which drew us into the shore, along which we managed to creep until we reached the more quiet water at the mouth of Bute Inlet. Just after leaving the rapids we came upon a camp of a few families of Siwashes, belonging to the Homalco tribe, whose main village is at the head of Bute Inlet. They had some fresh porcupine meat, a few herrings and one twenty-five pound salmon, which we purchased for fifty cents. They told us that the whole tribe was absent from the village fishing, but described its location, as well as that of some of the glaciers, to one of which they said a trail led from the village. Passing on we entered the Inlet, and by hard paddling managed to reach Amor Point just before sundown.

An early start and a fair wind carried us the next day to a point on the Homalco River about two miles above its mouth, and we camped at the deserted Siwash village under the shadow of Mt. Evans, and within hearing of the roaring torrent, which thunders down its steep and rocky slope. Of the wonderful beauties of the day's sail I can give no adequate description. The ever-changing features of the scene each moment presented fresh attractions, and held us spell-bound and amazed as we viewed the marvellous glories of Bute Inlet.

The mountains are surpassingly beautiful. On either side of the Inlet they rise at once from the water's edge. There are no foothills to render the slope more gradual and thus dwarf the main peaks and make them seem less high. There they stand directly above you. Scarcely anywhere in the world can just this state of things be found. Usually, a mountain, whether it be high or low, is surrounded by others rising to a considerable elevation, from one of which it must be viewed. The height of the point where the beholder stands makes the altitude of the mountain at which he is looking seem less, and it is more or less dwarfed by its surroundings. On Bute Inlet, however, we stand on the sea level and look directly up to mountains which rise from 5,000 to 8,000 feet above us. All the more gentle slopes are thickly covered with the dark green Douglas firs, among which the paler cedars are conspicuous, and in the little gorges and valleys which run up their sides the brighter foliage of deciduous shrubs is to be seen. Many of the cliffs, however, rise sheer for one or two thousand feet, and frown down upon us, black and threatening, their smooth vertical faces only occasionally relieved by some stunted fir, whose roots have penetrated a crevice of the rock, and which seems to cling painfully to the dark wall. At many points, mountain streams fed by the melting of the perpetual snows that lie upon the hills, plunge over these precipices in beautiful waterfalls and cascades. Long before the water reaches the rocks below it is broken up into the finest spray, and a white veil of mist wafts to and fro before the black rock in fantastic and ever-changing shapes. Just to the north of Fawn Bluff is the first glacier seen after leaving the mouth of the Inlet, readily distinguished from the pure white snow that surrounds it by the sky-blue color of the ice. Every considerable height on the Inlet is snow covered, and all the higher mountains showed one or more glaciers. From one point of view as we sailed up the Inlet, I counted eleven, and from our camp on the river I could see thirteen. Many of these glaciers are of considerable size, and when examined with a good glass they are seen to be extensively crevassed. Mount Superb, one of the grandest mountains on the Inlet, has three glaciers, one of which is very large. Just north of Superb, separated from it by a low saddle, is Mount Helen, 8,040 feet, probably the highest mountain on the Inlet. Its rounded summit, pure and shining, stands out above all and lovelier than all. The Needle Peaks, a little further north, are not less impressive, though in a different way. High, thin wedges of granite, three in number, the intervals between them filled with snow and ice, and their cutting edges turned toward the north, and thus toward the water, rise to a height of over 7,000 feet, and terminate in delicate pinnacles, which pierce the sky. Black and weather beaten they stand, monuments of past

The Sportsman Tourist.

THE PEOPLE OF THE PINES.

KITTY HAWK BAY, N. C., Nov. 15. I HAVE just returned to what seems like home here in the Bay, where I am lulled to sleep at night by the roar of the sea beating on the shore hard by, and where I can get my fresh fish, venison and fowl cooked in a Christian style. I board with Captain Willett Mott, who is from Long Island, and knows the art of cooking from A to Z. I am told by Mr. Davis, from Boston, keeping a first-class hotel at Kittrell's Station, on the Raleigh and Gaston Railroad, between Weldon and Kinston, where one can get good quail and turkey shooting, a first-class meal and good spring bed and mattress to sleep on. The River View Hotel at Washington, N. C., is also well kept. These two places and Mott's are probably the only ones hereabouts where the frying pan does not reign supreme in the kitchen. I have been on a tramp from Plymouth, on Roanoke River, up the river as far as Hamilton; from there to Tarboro, at the head of Tar River, and down Tar River to Washington; from there along the shore of Pamlico Sound to Croatan Sound; from there I found game and fish in all directions—deer, turkeys, quail, squirrel, coons, opossum and, in some parts, the small common black bear. The waters teem with chub, pickerel, robbin, white perch, catfish, suckers, horse-fish and eels. The country is very rough. No railroads. Every town, however, has a pet railroad scheme by which all the people are to be made bloated bondholders. All they want is the railroad and a little help from Matt Ranson on the way of a few shares in the harbor appropriations. School houses are few, and generally unoccupied. The churches are barn-like structures—generally unpainted. The roads are generally very good, as the only travel is by single "sneer" "creeter," or mule and cart, which does not cut up the road.

The country is mostly a wilderness of pine forests, and cypress and juniper swamps, with here and there a small clearing where the people have a few acres of corn, half an acre in sweet potatoes, a few stocks of bees, a scuppernon grapevine, a small garden with a few stalks of collards (a species of cabbage), plenty of poultry, numerous dogs, and a hen "collars" worth of furniture—and there you have an inventory of their apparent wealth. But, perhaps, the family own one, two or three thousand acres of land, which gives sustenance for numerous cattle, hogs and sheep, besides game. They have at the head of the "run" a small "poessin," where they can make cypress or juniper shingles, which find ready sale at the store "down to the landing," or they can make staves or tar. In the fishing season he is in demand at the fishery at good wages. Wood don't cost him anything. The old woman and the "gals" make the best of clothes out of homespun. The boys bring home at night an armful of "light'ood knots," which make a bright light, and the family sit before the wide fire-place with the door wide open. "so they can see any one passin'." The wells are shallow, curbed with hollow cypress butts. The drainage from house, hog-pen and stable contaminates the water, and so they have "chills," and the doctor is a frequent visitor.

They have droves of a razor-backed, alligator breed of hogs running wild in the woods; and now and then one is caught, penned and fed a few weeks on corn and sweet, and the bacon is lean but sweet and wholesome. Some of the planters near the towns call these wild hogs "third row breed," because they can reach through the fences with their long noses and gather in the third row of corn from the fence.

The family have, perhaps, one hundred head of cattle running wild in the woods, which do right well except in winter, when they fare badly." Very few people outside of the towns have any milk or butter, for the cows don't come up. When they have any cream they whip it in a platter with a spoon into a lard-like looking substance, which they call butter.

These are tough people, and can stand a wonderful amount of exposure. They will work from Monday morning to Saturday night on a ration of four pounds of bacon and a peck of meal, with a quart of black molasses. Many of them walk five or six miles night and morning to and from their work.

The hard-shell Baptist Church is the prevailing religion, and next the Methodists. The women are virtuous. These people are all bright and keen, and can take care of themselves wonderfully well in a bargain.

The men and boys all chew, smoke and drink rife whiskey. The women and girls all dip snuff. The young men go into the woods, gather the tender ribs of the sweet gum, peel the outside bark from them, and then cut them up in a new bundle containing twenty-seven sticks (they thus mystify number no one can tell) with some ribbons off cigar bundles, and present them to their sweethearts with their compliments. This is considered a very genteel thing to do, and the fair maid serenely sucks away on the dip-sticks, and thinks of her J-h-n Henry. When the snuff-sticks are worn out they are called "frizzles," and hence the expression often heard, "I'll wear you out to a 'frizzle.'" When they break a person severely they call it "monicking;" and I thought I had discovered a new word until I ran across it in Shakespeare the other day.

In some parts of this country they measure distances by "hollers," and a man told me one day it was "about a look and a half to Robersonville." I found that it was customary in laying out new roads to blaze a conspicuous place, or in a prominent tree, which one could see from some other tree on the route; and this was a "look," or about five hundred yards.

I met some queer characters in my tramp. One old lady invited me to call again "when the days and nights were longer." Some of the old women are great doctors, and their recipes were something wonderful. At one house I saw a "mad" or "suake stone." This is a porous stone, about one and a half inch diameter and two inches long. This belonged to an old man named Goetzinger, and it had been in his family for generations. It will suck the poison from a snake or a gnat if applied within an hour. I heard accounts of its virtues from so many sources that I must believe in it. They are made, it is said, by Wm. Basnight, of East Lake, for \$25 each, and are said to be made from a certain part of a bear.

I was too late to see many snakes, but I heard all kinds of snake stories. One man told of a joint-snake, and of killing one in the woods, and carrying a piece, or joint, home in his pocket. He was sitting after dinner "in a kind of a

cataclysms and upheavals; time has no appreciable effect on them, they can resist its influence. Opposite the entrance of Pigeon River is a point of land from which a wonderfully majestic view is had up the course of its valley. It is narrow, thickly timbered, and walled in on both sides and toward its head, by most impressive snow and ice-covered mountains. The view is, in fact, almost aerie in its character, the predominant features being the snow-clad peaks and the ice rivers which flow down their sides, while there is only enough of vegetation to set off the whiteness of the wintery scene. Just before reaching this point we pass the wonderful cliffs of House Mountains, which rise vertically from the water's edge to a height of 2,500 or 3,000 feet. Running close to the shore their tops cannot be seen, and the impression of their height is almost awe-inspiring, for they seem to reach up to the very sky. The great gorge of this mountain is a narrow cañon, between it and the height next south of it. The defile is so nearly straight that one can look up it and see the glacier, from beneath which pours the thundering torrent which rushes down with impetuous haste to the level of the Inlet. From beneath the blue mountain of ice the tiny white thread takes its way down the slope, constantly increasing in size as it draws nearer and nearer, its volume swollen by a hundred lesser streams which are added to it on its way. Always a torrent and always milky white, it dashes on, sometimes running along an even slope, at others leaping down precipices a hundred feet in height; now undermining a thin crust of soil, green with spruces, again burrowing beneath an enormous snow-drift, which almost fills the gorge. The roar of its falls may be heard at a distance, and when passing its mouth we could only communicate by signs. Just as the Homalak River is entered we come in view of the strangely beautiful Hat Mountain, which is the most prominent object at the head of the Inlet. It rises very steeply from the water's level; so much so that only on the lower fourth of its height can the trees find a foothold. Above this is a huge amphitheatre of great extent and marvellous regularity, filled with snow and ice, from which pour forth several glaciers. Behind and above all rises a vertical wall of black granite, sharply outlined against the clear sky, and unrelieved by any touch of white. Over the whole hung the roseate light of the setting sun, giving to the scene an indescribable beauty and softness. Viewed by the glare of noonday the picture would have been one of stern—even of harsh—majesty. At the approach of twilight its rugged outlines were blended, its frowning walls softened. The undefined but all pervading pink of the after-glow, the curious shadows cast by peaks, snowdrift and ice mountains, presented a view which exceeded in loveliness anything I had ever conceived of.

We found the Siwash village two miles above the mouth of the river, and pitched ourly close to the water's edge, expecting to spend a day or two in exploring the mountains in the vicinity, and then to travel slowly down the Inlet, climbing Mounts Helen and Superb, and examining some of the larger glaciers. When we awoke next morning, however, the dismal sound of the rain pattering on the canvas told us too surely, even before we looked out, that any attempts at mountain climbing would be useless. The rain fell through a thick, white mist, which hid the mountains and even the opposite shore of the river, with a steady, persistent drip, very depressing to our spirits. All day long we lounged about, eagerly scanning the clouds for signs of better weather and watching for a shift of the wind. It was amusing to note the changes of expression that manifested themselves in the countenances of the different members of the party as the day advanced. Before breakfast they all wore a look of disgust, which altered as the hours wore on, and the clouds at one time partly broke away, to one more hopeful, and then as the rain continued to fall with a steady, unintermitting pour, settled down to a look of confirmed gloom. For three days we remained at this camp, hoping vainly for a change in the weather, and then, despairing of anything better, we started down the inlet. The rain continued and the clouds and fog hung low over the water, so that our glimpses of the mountains were few. Occasionally, however, there would be a break in the clouds, or the mist would partially clear away, so that we could see for a moment the snowy top of a mountain, or a glacier would be visible through a rift in the clouds like a picture in its frame. Perhaps the most superb glacier on the inlet is that on the mountain next north of Granite Peak and just south of Bear Bay. It is apparently of very great extent and thickness, and ends abruptly on the edge of a high precipice. It is broken and fluted on its lower border, and extensively cracked and crevassed at right angles to its course. All the glaciers would be much larger were the sides of the mountains less steep. The ice rivers all terminate abruptly on the edge of almost vertical slopes and, breaking off as they advance, fall over these heights. Many of the deeper ravines contain snow down to within a short distance of the water's edge. On Superb Mountain we saw banks of snow not more than 160 feet from the water; and on the west side of the inlet, somewhat further north, snow was visible only about 60 feet above high-water mark.

During the next two days the elements continued to work against us, and our paddling was done through wind and rain. Camps were made at Clipper Point, on Bute Inlet, and Decet Bay, on Redonda Island. An incident of the third day after leaving Bute Inlet, and just after we had passed Point Sarah, was our being wind bound near White Island by

a heavy gale, which lasted about half a day, and against which we were not only unable to advance, but even to hold our own. As provisions were getting a little low, two or three of us started out to hunt. Deer and bear signs were plentiful, and one of the former was secured. The country was a nice one to hunt in, and was in striking contrast to most of that which we had seen. It consisted of open ridges with brushy ravines between, and a little tall timber on the heights. I was interested in seeing the great size of the stones turned over by the bears in their search for worms, bugs and ants' eggs. One cube of granite recently turned out of its bed by a bear was not less than two feet through, and so heavy that I could not stir it, a good indication of the enormous muscular power of these animals. They were evidently extremely numerous here. Next day we were again wind bound, but happily not until the afternoon was half spent, so that we made some progress. Just before reaching camp we passed some low rocks on which were feeding numbers of the black-headed turnstones (*Stercoria melanocephala*), a large number of gulls, perhaps *L. canus*, var. *brachyrhynchus*, and a pair of black oyster catchers (*Haematopus nigres*). The latter acted much like the oyster eater of the Atlantic coast and had the same sharp whistle. During the day we saw many old squaws (*Harada glacialis*) and a few spotted sandpipers (*Tringoides macularius*). The rain of last week had made the brush so wet that hunting was uncomfortable, so I sent the Siwashes out for a deer, the Admiral lending Jimmy his rifle. Hammet returned without anything, but Jimmy, somewhat later, came in with a piece of meat. He told us that he had killed a big huck which he had packed down to the beach, but had been unable to bring any further. The boy—he was only about 17 years old—was immensely proud of having killed the deer. He explained to us by signs how he had seen the deer, how it had looked at him, and he had fired twice, the last time breaking its neck, and ended up by shouting, with a loud laugh, "*Tyass moontle, mo kill.*" He afterward told the Sergeant privately that "the hearts of his friends were very good toward him, because he had killed a deer that was big and fat."

Coasting along the shore next morning, we saw a blue grouse standing upon a large rock on a small island, and landing found a brood of a dozen well grown birds, a number of which we secured. Later in the day, while working along close to the rocks to avoid the tide, two moving objects were descried upon a low seaweed covered point. We paddled quietly along, and as we approached, I made them out to be black eagles (*H. leucocephalus*). When we were about thirty feet from them, one flew away, but the other waited until the bow of the canoe was within six feet of him before he moved. He then hopped to a large log about fifteen feet distant, where he sat surveying us in the most unconcerned manner. Both birds were young, and had probably never seen a man before. Turning over the fish upon which they were feeding—which proved to be a dog-fish about three feet long—I found that a great hole had been torn in his side, from which the entrails were protruding. The fish was still alive. The young eagle remained on his perch near the fish until Hammet tried to shoot his head off, when he flew a couple of hundred yards to a large pine. Opposite Hardy Island, and just within the entrance of Itoham Sound, are the beautiful Twin Falls, to be visited, we hope, on our return.

The scenery at the mouth of Jarvis inlet is much finer than that at the entrance of Bute, the Inlet being narrower and the hills higher. Marlborough Heights are very grand, rising over 6,000 feet almost vertically, and terminating in sharp pyramids of granite. They have, however, but little snow upon them. Moorsam Bluffs rise in a series of steps to a height of perhaps 3,000 feet. The faces of the cliffs are for the most part bare of trees, and are scored by ravines, of no great depth, but running up the whole height of the Bluffs and casting, at certain hours of the morning and evening, beautiful shadows over the rocks. There is just enough timber to relieve the bareness of the rock-faces, without giving the heavy appearance which a tree-covered slope always has. Just above these bluffs the conical peak of Mt. Churchhill comes into view, beautifully patched with snow, and again, above it, Mt. Spenser, a long wall-like mountain, whose northwestern face rises steeply from a deep amphitheatre-like valley lying inclosed between it and Churchill. This depression is a basin, which looks as though a part of the mountain had sunk out of sight, leaving here a great hole with abruptly steep sides. As we move on up the Inlet we pass one snow-capped mountain after another, most of them of very great beauty. Mount Albert, near the head of the Inlet is grand, with lofty peaks and extensive snow fields. At Desert Bay is an Indian village and the view up the valley behind it opens up another series of whitened mountains.

IT PAYS TO ADVERTISE

IN THE FOREST AND STREAM. An Ontario correspondent writes, under date of October 21: Inclosed please find eight dollars for a two years' subscription to your paper. Although money is scarce where I cannot do without FOREST AND STREAM. When your paper first came here there was only one breech-loading gun in the place, and we now have more than seventeen breech-loading guns and four or five rifles, all bought through the advertisements in your paper. When your articles on Dittmar powder came out we were just about sending for some, but in consequence of that expose we have not, and do not intend to risk our guns in trying the compound. I, for one cannot speak too highly of your paper, and it is eagerly looked for every week.

snore," when he was awakened by something crawling up his leg, and, looking down, "that was that jinn snake crawling into his pocket after his missing jinn." After crawling up his leg about a yard or three tails. These it would braud together and attack its enemy, using its braided tail as a weapon, and could whip all other snakes but the king snake.

I met one old fellow called "Moccasin Joe." He had gained his name from his immunity from snake bites, and was supposed to possess some secret which protected him. I got into his confidence, and he told me something of his snake experience. He said old widow Coit had a cypress swamp on "Devil's Gut," which was full of snakes, and Moccasin Joe would go out like an acorn; but it was also full of snakes, and when the water got down, soil could be worked, the "snakes were so thick that no one would go in there." Moccasin Joe "projected" ever the matter some time, and one day went to the widow and made a bargain with her. He was to have the exclusive right to shingle in the swamp, and was to give the widow one-fourth of all the shingles he made, and to deliver them on the bank. On the next Monday he went to the swamp, carrying with him two pet king-snakes and an old sow, which protected his shingle camp. She had had a flat load made. The moccasins were slaughtered by thousands, and the sow became so fat that she crept lazy. When not ready to take out his shingles to the flat at the landing, he covered his legs and arms with long gray moss, and his hands with sheepskin gloves with the woolly side out, like the breeches of Bryan O'Lynn. This protected him from the snakes as they struck him, and he got out his shingles and made a good thing of it.

In the winter and spring the rains in the mountains in the western part of the State melt the snow and ice, and cause the Roanoke River to overflow its banks; and sometimes the freshets rise at the rate of one foot an hour and cover the swamps on each side for miles. The timber then takes advantage of high water to float out miller for sawing into lumber, and frequently float out logs that make 3,000 feet of lumber to the stock. Cypress is the very best of building lumber, as it never rots. Most of the houses in this country are covered with this lumber and it lasts for generations without paint. Some of the trees grow twenty feet thick through, and keep their size for twenty-five feet with a limb. Six-ck do well in the swamps. Cattle feed on reeds and tender branches, and hogs on oak acorns, swamp walnuts and hickory nuts. When the freshets rise the stock go to the islands in the swamps and remain there until the water goes down; and oftentimes great numbers of deer are killed on the islands. It is said that the old sow will take to a floating tree with her pigs, when she can't reach high land and keep them there for many days floating about in the water. Sometimes these freshets occur in the summer time, and the snakes are driven out of the ground into the water, and can be counted by thousands hanging in festoons among the gray moss on the cypress.

The men who work in these swamps are very healthy, strange to say. They sleep on shavings, with their feet to the camp fire, and drink the dark water that stands at the foot of the trees. The people in the towns are oftentimes cultivated, intelligent, educated people, and the professional men are generally equal to those of any country; but the villages need improvement socially, and a liberal supply of fresh fruit and what was would be a great improvement in most of them. I did not spend much time in the towns, but stopped with the country people, mostly to study their ways and habits. They like all I met, were hospitable and friendly—almost as much so as the clever Irishman who would give you his last potato and thank you for taking it. I only met one cheerful fellow, and he was not a native Tar-heel, but from Tennessee. His face was twisted so that he looked and spit over his shoulder. He said it came so because he spent sleep in the moonshine when a boy and the moon drew his face that way. He began by asking me for a "fladjet of tobacco," meaning what I found to be a very liberal chunk from my plug, which he thrust into his cheek. He then asked me how much I was willing to pay to stay over night, and preferred to have it down and in silver. I had walked all day and was very hungry. He had some cold corned beef for supper, which happened to be very good, and I had a jar of French mustard with me. The milk was good, and the lococake had a nutty flavor. I was making a very fair meal, and was doing just ice to it. Then I met one Jim Shankland—my near me smoking his corncob pipe and spitting over his right shoulder and looking at me with a fixed and steady glance that became embarrassing. At length I looked at him as passantly as I knew how, and said: "Y, u see, Mr. Shankland, that I eat a good deal of mustard with my beef." He did not answer for some time. At last he took his pipe from his mouth, spit over his shoulder at a dog on the hearth and said: "Yes, sir. I also see that you eat right smart of beef with your mustard."

All over eastern North Carolina the country people drink cypress tea. This is the cured leaf of a shrub that grows in all the gardens, and it sells for about thirty cents a bushel. It takes about two gallons of it to make a family drawing. It is very black, and with sugar and cream makes a tolerable fair drink.

I heard a story of a North Carolina captain of a West India trading schooner, who was hailed in the Gulf Stream by a New England captain who had been blown from his course and wanted some stores. He hailed the Tar-heel and asked for bread and spare and about the best "peckoned his mought." Yankee told him he wanted meat, flour and tea. Tar-heel disappeared in his cabin a moment and presently came on deck and said he could spare a little bacon and some meal but no tea, as he had only five bushels and he would use it before he could get any more. The Yankee captain at once cussed the tar-heel from stern to stern and from truck to keel, and went off before the wind to tell strange tales, no doubt, of the stinky captain who would not spare him a few pounds of tea out of five bushels.

Almost every family has a scuppernon vine, covering half an acre and with main vine six to ten inches in diameter near the ground. All kinds of grapes do well in eastern North Carolina, and are generally free from blight or disease, and produce enormously. I have drunk some scuppernon champagne, made by Hunt & Co., of Kittrell, which is sold very black, and is equal, in my opinion, to some of the best French brands. Peaches do not do well here, nor apples, except a native hard, sour apple, called Mananurke, which is a fair winter apple.

I saw in Dare County a fishing machine, or trap, which is something new to me. It was invented by an old negro slave before the war, who belonged to Col. Morning, who lived on Roanoke River about five miles above Jameville. In the spring of the year old Jim was always detailed to fish for herring to supply the plantation. He was very fond of

corn juice, and it was observed one frequently that he had an unusual quantity of fishing and was promptly done. Curious to see his master to his mill watches. One day when he went out to fish with his dip-net they found him about sundown in one of the prongs of Devil's Gut, fast asleep in the stern of a canoe, in a drunken stupor, with a jing of apple jack between his legs, and a queer H-bing machine harl at work picking up the herring. He had taken his own canoe and an old abandoned dug-out and fastened them about six feet apart in the current, and between the canoes had constructed a dip-net, which was fastened to a shaft resting across the middle of the canoes, which had paddles on each side of the shaft outside of the canoes. This was turned by the current and the net was constructed with a shelf or sliding board, so that the fish slipped down into the canoes as the top of the net swung over the shaft. These machines have been used successfully for thirty years in these waters and they have been known to catch 5,000 pounds of fish in one day. I saw about a dozen on Devil's Gut, some of them made with flats four feet wide and forty feet long instead of canoes. If iron shadts and babbit boxes were used and the nets were increased so that one could be opened in a two-mile current.

The first fish hatching done in North Carolina was tried near the mouth of Devil's Gut and was so successful that it was carried on afterward near the mouth of the river on a large scale. Dr. W. R. Capelhart and Edward Wood were the pioneers of the enterprise, and they both own large fisheries on Albemarle Sound near the mouth of Roanoke.

I called down Albemarle Sound on Supperman River with a queer old chap named Neddy Mann, who seventy-five years old and blessed with twenty-five children. He lives on Orateen Sound and I went home with him. He lived in a small, low pitched house with a door taken from some wreck on the ocean beach. He kept me awake until 2 o'clock with his yarns. He is a pillar of the Methodist Church and a great man in revivals. He gave me a history of his religious experience. He was a "tough cuss" when young and his people were anxious for him to mend his ways, and "jinn the church, and he would mend enough, but could not come through." He had been attending a camp meeting on the Lea Banks near Kinakul for ten days and "they had worked over him faithfully but still he couldn't come through." At last he "wore them all out" and went aboard the sloop, on which he was a hand, feeling "unsatisfied" with himself. Soon after leaving anchorage a storm came on, and they ran behind Duck Island for shelter. The captain ordered him to cast anchor, which Neddy proceeded to do. He took the anchor and threw it overboard, but the line caught in his belt and shoulder braces and he went along with the anchor to the bottom. He was soon hauled up by the captain and cork, but was down long enough to have a "change of heart," and came up a Christian and went back to the camp meeting in the morning and "came through," and has been a good church man ever since.

He sat with his back to the fire, saying "sum took liver their breasts and wore flannel and pad, but he aiers left his breast bare and proteed his back," and I think there were "sould chunks of wisdom" in the old man's yarn. He had been alling a short time, and then he said that he had been a saw-trigger which made the old fuse explode. He said he did not believe in doctors; "they killed more men than they saved, and that he always kept coppers on hand, and when ailing took a tablespoonful of it dissolved in a quart of apple brandy; and took a tod night and morning, and that it was the finest thing in the world, and would bring out a dirt-eating boy and make a man of him." A short time before I saw him, however, he got out of coppers, and was "took bad" and died, and he called in an old granny doctor who gave him some Tompkins medicine "to make him swate." He tried to tell me what it was but could not recollect it, and it seemed to worry him. I went off to bed leaving him smoking by the fire and still trying to remember the name of that "sweating medicine." I had just given a sound sleep when I was awakened by a stentorian voice shouting, "Oo, Doctor, oo, Doctor!" I sprang out of bed and tried to open the door, but it was a slip door, sliding in a groove, and I could not open it, not knowing the key of the lock of it. Facing the old patient, who was in trouble I raised the window, jumped out and went around to the front door and found the captain sitting in front of the fire and still calling "Oo, Doctor!" I asked him what was the matter, and he said, "that medicine I was trying to think of—that sweating medicine—I have just thought of it, and reckoned you would like to know what it was. Doctor. It was opildoc, Doctor—opildoc!"

THE WILD FOWL SEASON.

We have had several frosts, and a shooting has commenced. One man and his partner killed 75 pairs of partridges from a battery last Friday, and W. H. Walker killed 50 pairs the same day from a battery. Mr. Sawyer, on Powell Point, killed 50 wild geese on Thursday; 24 of these were killed at three shots. The weather has been so warm, however, that very few ducks have been shipped, as they will not keep. Not many of the chukkers have come down yet, but no doubt they will begin to come this week. Arrangements have been made by which sportsmen can come via Elizabeth City, R., and Swains Island, or Swan's Neck, or to Elward Midgett's, on Church Island, or to Van Slyke's landing, distance about twenty miles. On Mondays, Wednesdays and Fridays, the best way to come is by team from Shaw's Corners to Currituck Court House, where one can take the steamer "Cygnet" at two o'clock p. m., coming via Knott's Island and Midgett's Landing, reaching Van Slyke's about 6 o'clock p. m.

Non-residents can only shoot in Currituck county from points on land, and the possession of the owner. They are prohibited from shooting afloat or from batteries. In Dare county there are no such restrictions, and any one can shoot from boats, batteries, or on land not posted, or wade on shoals. Good accommodation can be found in Dare county at Captain Mott's in Kitty Hawk Bay, convenient to post office, steamboat landing, and telegraph, or at Captain Edward Makin's, W. M. Brinkley, Geo. B. Blyvins and Lewis Mann's, on Roanoke Island. The Old Dominion boats run from Elizabeth City through Croatan Sound twice a week, and a sloop runs from Kitty Hawk Bay to Elizabeth City three times a week. The schooner "Onward" runs from Elizabeth City to Manteo on Roanoke Island twice a week. The steamer "Harbinger" leaves Norfolk on Mondays and Thursdays on arrival of Bay Line, for landings on Powell's Point, which is near Kitty Hawk Bay. Boats, stools, decoys and fishing-tackle can be hired here, also guides and gunners at reasonable rates. The mails arrive three times a week. Ammunition, oil-cloth,

clothing, rubber boots, and all kinds of hunter's traps can be bought here at low prices at the North. Liquor is not allowed to be sold in Dare County, not even branly peaches.

There is not a doctor in Dare county; so those who need medicines must bring such as they require for their ailments. It would be well for those contemplating a trip to write to some of the above-named parties to meet them.

First-class quail shooting can be had near Elizabeth City, and good dogs can be hired there. It is well to have a good rifle to shoot bear, deer and swan. A No. 10 breech-loader is the best size for general shooting. It is well to have a heavy and a light No. 10, or a No. 10 with adjustable ribs for a good thing to have. A good shot will have no trouble in paying his expenses from the sale of his game, as it can be shipped in good order by the steamers, and from Elizabeth City by rail. Fish and game can also be sold to the dealers here and on Roanoke Island. The fare from Norfolk to Elizabeth City is \$2; by the "Harbinger" to landings on Powell's Point, the same. Brant shooting is very good on Pamlico Sound already, and Currituck and Dare are alive with the roar of the wild geese as they feed on the land. There are more fowl in the waters this year than has been known for years, and the season promises to be a good one.

JOHN BRONSON.

AUTOBIOGRAPHICAL FRAGMENTS—II.

BRING EXTRACTS FROM AN EDITOR'S PRIVATE CORRESPONDENCE.

"* * * 'Who am I?' Well, that is rather difficult to answer. To the common eye, I suppose I appear as a poor school teacher or pedagogue, who occupies ten months of the year in teaching the young idea how to shoot, and the other two in wasting time and money in attempting to shoot himself. (The latter part of that sentence, and especially the perhaps the redutive pronoun, immediately followed the participation of the statement would not sound quite so suicidal.)

To myself I sometimes appear as a wild Indian or an old Berserker, masquerading under the disguise of a Nineteenth Century American. When the strait-jacket of civilization becomes too oppressive I throw it off, betake myself to savagery, and there "loaf and refresh my soul."

I suppose I might be called tolerably well educated. Like Shakespeare have "a little Latin and less Greek," know something of the mysteries of the laboratory and the microscope, write belle-lettres and literature are not totally unknown to me.

I have pedagogy in Ohio, "bullwhacked" across the plains, been a silver miner in Colorado, an editor in Missouri, I have hob-nobbed with the Century Club in Boston, and with Indians in Arizona; been a cowboy in Texas, and a "web-foot" in Oregon—in short, a kind of wandering Jew and peripatetic Jack-of-all-trades.

I love a horse, a dog, a gun, a trout, and a pretty girl. I hate a pot-hunter, a trout-land and a whiskey-guzzling sportsman, and Dittmar powder. I smoke and take an occasional glass of wine, and never lie about my hunting and fishing exploits more than the occasion seems to demand.

There! if you have managed to survive this dose of egotism, please to remember that your question pulled the trigger which made the old fuse explode. Will promise not to offend in that line again, till I drop into your sanctum some bright day and asomize you with a sight of my Apollo-like form, Jovian front and Hyperion grace. * * *

A NIGHT HUNT.

LIGOURNEY sat in the bow. He had wrapped his legs in a blanket and curled them up in the narrow space in front of the seat. We had baited his overcoat tightly around him and pulled his large felt hat down around his face. Against his old enemies, the mosquitoes, too, he had carefully guarded, and his face was black and shiny with a doubly thick coat of the ever-present tar-oil. Every precaution for his comfort he had taken; for his face was to be his first hunt, and he had sworn till he got his deer if it took him all night. He had refused the loan of the Professor's beaver hat, on which that old deer-slayer was wont to fasten his jack to prevent it from rubbing against his head and giving him the headache. Ligourney declared that no true hunter ever went out encased in such an apparatus as that, and he was going to tie the jack to his felt hat as he had seen the guides do. In vain the Professor recounted his experience, and told of many a night hunt passed with sore and aching head. It was no use. The jack had been taken from the heater and now lay in the boat. Hank rested one knee upon the stem of the cedar, and pushing upon the bank, sent the light boat out into the stream. Then, with both hands on the rail, he lifted himself lightly over into his seat in the stern, and they glided slowly down the river.

Just before the camp Dead Creek enters the Raquette. It is a brook wide enough for the boat to work easily. Its banks are lined with alders, but here and there the coveau widens, the water spreads out in broad, still pools, and wide natural meadows, covered with tall grass, stretch away to the woods beyond.

Here in these pug-holes, the crane stands dealing death blows with his long, powerful beak, among the mud due to flogs; and here, through the night, come the deer to feed on the tender meadow grass and wallow in the muddy pools. Into the mouth of this stream Hank turned the canoe.

"We'll go up about a mile," said he, "as I lie around until dark. Then we'll hunt down and lie awhile at the pug-holes."

"Halloo! Here's something new since I was here last—a log square across the stream."

"The boat would just about slide under, but the current was so strong that they had to get out on the log and lit it over. Just about dusk they stopped in one of the pools."

"Keep pretty quiet an' traps you'll get a daylight shot."

Just at dusk the deer often come out to feed. The next gets always, they did not come that evening. Lig kept pretty quiet, but they did not see anything.

The midgets are so insect much smaller than a mosquito. It has no tuncful note to warn you of its approach, but makes its presence felt by its quick, sharp bite, which leaves a burning pain behind. It is superfluous, however, to describe their habits to those who have visited the woods.

Lig renewed the tar-oil. It was refreshing. He would show Hank great promise as a hunter—but oh! those hot-footed little creatures—were at work down below his neck. He dashed tar-oil down upon his spot. Then the mosquitoes gathered about him. One bit through his glove. Others lit upon his face as if unconscious that it was smeared with tar-oil. In vain he dabbed on fresh coats. *Queen ad finem!*

They hit worse than ever. It became agony. He turned to the back woodsman, who had cut a path by ones. He was sitting in the stern holding the paddle in one hand and brushing the other swiftly but silently across his face.

"Blank, these flies are awful."

"Brush them," said Hank. "Tar-oil ain't of much use in such a place as this."

Lig brushed awhile in silence and tried to recall what Murray said about going and coming when you please with a small bottle of "the compound."

"It's most far," said Hank.

"Yes, I guess 't will light up."

The jack was produced, lighted and tied to the felt hat.

"Now try it on that clump of alders. You want it over the left eye so that your muzzle sight will show bright, and whatever you aim at will be right in the middle of the big circle of light."

After some adjusting the jack was made to suit.

"Now cap her."

Lig, pu the little leather cap over the bulleye and all was dark as the current carried them on. Suddenly they turned a sharp corner. A low alder bush swept across Lig's face and carried him over backward. Off went jack and hat, and tumbled into the brook. He plunged one arm into the cold water, caught the hat, and pulled it dripping into the boat. The jack was saved, but the cap was carried down stream. Hank ran the bow of the boat into the bank and held it there, while they lit and adjusted the jack again. Hank's skull cap was substituted as a cover, and his head was tied up in a handkerchief. All was dark and still again for a time, Lig was feeling himself in a doze when Hank whispered "The log." They were right upon it. In an instant a plan flashed across Lig's mind. He had studied the laws of inertia. He knew that if he threw himself over the log, the motion that he had in common with the boat would carry him onward, and he would drop into his seat again. Happy thought! He would try it. Hank lay down, and called to his companion to do the same. But to the amazement of the guide Lig, instead of lying down stood up. For an instant he balanced himself, and then, with a wild leap, flung himself overboard.

But alas! his jump over the boat an impetus which sent it flying from beneath him. He grasped the log convulsively and hung there with his feet dangling in the water, while the guide was swept far away from him down the stream. He crawled upon the log, and sat there until Hank could turn the boat about and come to the rescue.

Once more all was still again. No, not exactly that. It cannot be called still when hundreds of muskrats are plunging, diving and swimming in all directions. Our hunters were at the mouth of the creek. At first Lig took every third mouse of a muskrat for the step of a deer, and wanted to start in that direction. After repeated exhortations from Hank to keep still he relaxed into a deep silence, and wondered why that old fanatic, the Professor, could go into ecstasies after a night-hunt over the beautiful calm of a night in the woods. Lig couldn't see it. The trees wreted and shook themselves in the darkness, loons uttered their weird infernal scream, two cranes squallied as they flew over the water, owls hooted in all directions, a fox barked in a neighboring wood, and a bear finally aided in making night hideous with prolonged howling, at which Lig, who had thought each successive noise the scream of a panther, was now sure of it, while all the time huge bull frogs, with the voices of oxen, bellowed an accompaniment without rests, and the muskrats kept up their plunging and scurrying through the water.

"Bat hawk! What was that louder splash just across the creek?"

"A deer!" whispered the excited boy.

Hank turned the canoe. Lig unwrapped the jack and raised the rifle. At first he saw nothing, then, just ahead, something black in the water. He fired. The black thing started directly for the boat.

"A bear!" screamed the boy. "He's wounded," and he made frantic endeavors to load. Hank, however, raised the paddle and laid it smartly over the nose of the swimming animal. The creature rolled obediently over, dead. Then the guide lifted it over the rail. Its weight tipped the boat. It fell heavily upon the bottom. It was an immense hedgehog.

"Never mind, older hunters than you have taken the quill-pipe or bears before this. Load her up."

No, the hunt went on again. Slowly, silently the canoe moved along the shores of the creek and then out into the river. An hour passed and no sound of a deer. Another hour and the boy was only kept from falling asleep by the aches which were traversing his muscles in all directions. Very much of the perty of night-hunting was gone for him; the rest vanishing fast, when a quiver ran along the boat. That is the guide's way of calling attention. He listened and heard away on the opposite shore a continuous splashing in the water. All weariness and pain passed away on the instant. The poetry of the hunt rushed back again, as his heart beat quicker and the warm blood ran faster through his veins. So it is when long afterward we look back upon our hunts in the woods. The toil and care are no longer remembered then; the exciting pleasure of a moment, the fair coloring of the picture alone remains.

The paddle swept swiftly, but noiselessly through the water. The splashing grew louder, then stopped. Another quiver along the boat. The boy uncapped the jack and the light flashed out upon the darkness. It threw a round disk on the shore. There, right in the centre, stood a noble buck, looking straight at the canoe. The boy trembled. The inevitable buck fever was raging. He raised the rifle. The light gleamed full upon the sight. Still the huck stood there, immovable, head brown back, nostrils dilated, and bracing his antlers rising above him. The boy fired. The deer wheeled about, rained the bank at a bound, and disappeared into the bushes. The boy missed him. A moment he sat silent. The deer's shrill "whistle" as he went back into the forest roused them.

"Well, sir, that was about the biggest buck I ever saw."

"I am afraid, Hank, that I had the fever."

"I'm afraid you did."

About two o'clock they reached camp. Wren and the Professor were both asleep. Lig was careful not to wake them, as he declared that if the Professor saw that hedgehog, he would stand a night of no more morning.

Lig was nervous and did not sleep well. In about an hour he was awakened. What was it? A heavy footfall back of the tent. He looked out—even ventured a few feet. A series of leaps into the brush followed. He rushed back.

"Wren—Hank—wake up, quick—panthers!"

All were roused in a moment.

"Did you see one?"

"No."

"Then how do you know it's a panther?"

"How do I know? Didn't I hear him and chase him into the bush? Don't I know that there isn't another beast in the woods that can jump like that?"

The jack was lit and all advanced, armed with rifles.

"Hark! there he is!" cried Lig, pointing to a brush heap. The light was turned upon it, and out jumped a very inconspicuous looking rabbit.

"Sure enough," said Wren. "Praps you'd like to shoot him and carry home his skin to show in the city. Let me tell you now, so yer won't wake this camp again. One rabbit will make more noise than a dozen cats. Does it with his tail. Fact. So to bed."

A WINTER WALK THROUGH BERMUDA.

MY visit to Bermuda was an involuntary one. In fact, I had engaged passage for the West Indies, but contrary winds and some errors of navigation on the part of the Captain had thrown our vessel upon Bermuda reefs. Fortunately for us the weather was not severe, or we should not have escaped as we did with merely a month's detention for repairs. It was the second day after the accident that a friend and myself managed to get on shore, and two weeks after that I was able to return to the mainland.

Bermuda is the name given to a chain of islands, over 300 in number, lying in the Atlantic Ocean, 600 miles east of the coast of North Carolina. They occupy an area of only twenty-three miles by three, but, from the barrier reefs that surround them, present the most dreaded obstacles to navigation in the sea. They are of coral formation, but it would seem, from soundings taken by the English, that beneath this coral are the peaks of a mighty mountain, rising up from the general level of the ocean floor to a height of 23,000 feet!

There are but three or four large islands, the remainder being rocks and islets—all, however, attractive, with beautiful beaches of sand, deep inlets, with grassy banks, great cliffs, the homes of sea birds, and coral ledges covered with an infinite variety of shells of every shape and color, and plants that wave their delicate leaves in the blue waters.

It was off a portion of the group called Somerset, eight miles from shore, that our vessel was stranded, and in a perilous passage the harbor we encountered was a narrow coral shoal, over which the boat passed harshly and ominously. These coral banks that surround the Islands are as beautiful as they are dangerous, and later in my stay, while the vessel was being repaired, I returned in a small boat and examined these wondrous gardens of the sea that lay submerged in the coral caverns.

The coral that reaches up to the north is dead and bleached, but as it is found in the sea, alive and growing, the appearance it presents is so different that you would not recognize it. In the water it is a brown object, branched like a bush, but covered with a disagreeable slimy mass, to remove which it must be buried, and then carefully cleaned, when it will form as beautiful an object as you can find in the sea in any country. Among the corals, of which there are about a dozen varieties, myriads of bright-colored tropic fishes play hide-and-seek. Fish of all kinds are extremely abundant, and are taken alive in nets and fish-pots, and kept in great wells in the boats till wanted.

The great abundance of marine life, both animal and vegetable, is probably owing to the proximity of the Gulf Stream, that great river of warm water flowing through the sea from the Gulf of Mexico to the far-distant North. This current, as you well know, exerts a great influence upon the climate of the eastern coast of the United States, and brings to our shores many stray examples of tropic fishes and sea-weeds. It broadens as it goes north, and weakens until it is finally merged in the other streams that help to form the great system of ocean currents of the world. Its course is constantly changing further eastward, and its influence upon the climate of the north diminishing. But hundred years ago it gave to Greenland the verdant valleys that suggested the name of that now desolate country. Even now its warmth is so great that it dissolves those great masses of ice that float down from the Arctic region, and is aptly called the "grave of the ice bergs." This stream of warm water, then, flowing close to the Bermudas, gives to them a climate so delightful during the winter months—from November to April—that they are then the resort of thousands of invalids, who cannot endure the rigor of northern winters. The temperature in those months is mild and equable, ranging from 60 to 70 degrees; but in summer the heat is very great and quite exhausting.

On that clear, bracing day, I started out from Mangrove Bay, one of the many where snowy beaches are hemmed in between blue waters and green mangroves. Not far from this bay is Ireland Island, the refitting station of the Royal Navy, famous for its great floating dock, said to be the largest in the world, and capable of taking in the largest ship in the English navy. It was towed out from England in 1869 by two men-of-war, with another stern to steer it by, and placed safely in its present position, in an excavation 54 feet below low-water mark. On the other side of the bay is Wreck Hill, where the wreckers congregate to watch for wrecks, upon which they mainly depend for their provisions. These wreckers are a ravenous set, even now, though instead of murdering crews and enticing vessels upon the reefs, they are busy with the price, they extort from the wrecked mariners about the price, through the courts as they used to get from direct robbery, judges, lawyers, and wreckers being in league to despoil poor jack of his last dollar. As I walked along over the smooth roads, between hedges of oleander, and past little houses of shell-rock, I could hardly believe that this peaceful island had ever been the resort of pirates and buccannens, and had given aid to the enemies of our country in the last war. Yet it was at one time a rendezvous for smugglers and blockade-runners, and the people grew rich from ill-gotten gains. The surface of the country, though there are no hills above 250 feet, is agreeably diversified with hill and dale, and the many little islets dotting the numerous bays give all the needed variety to make the entire walk one of delightful surprises and lovely views. The principal trees are cedars (*Juniperus barbadensis*) and the underbrush sage-bush (*Lantana odorata*); there are now and then marshy tracts filled with reeds and rushes, and a palmetto here and there, while some of the bays, with muddy shores, are fringed with curious mangroves. Many tropical trees have been introduced, among them being the silk-cotton, India-rubber and cabbage palm. The latter is the most conspicuous, from its great height, even exceeding the royal palm of Cuba, for which it is sometimes mis-

taken. It is, however, a different species, being the *Oronotus oleacea* of the West Indian forests, where it sometimes reaches a height of 50 feet. There are no springs or wells of pure water in these islands; yet, with now and then a drought, there are raised here those supplies of potatoes, onions and tomatoes that have made Bermuda famous. In some portions arrow-root is raised, which brings a price superior to any other in the world. Though cramped for room and stinted in soil the Bermudians contrive (with the help of the products of the sea, wrecks cast up by the sea, and visitors from over the sea) to secure a very comfortable living.

The natural history of Bermuda is so peculiar that I must call attention to the fact that there are but four native mammals (three rats and a mouse), and ten resident birds—not individuals, but species. You would, I think, recognize the names of nearly all the birds, so I will mention them—the blue bird, cat bird, chick-of-the-village (*vireo*), cardinal bird, crow, ground dove, quail, heron and coot. But added to this list are 160 migratory birds, which visit the islands in the winter season. There is one reptile, a lizard; no snakes, but insects are numerous, corals and sponges in great number, and fish so abundant that above 120 species are enumerated.

There is a lighthouse about midway the island, with a light visible for many miles, 300 feet above the sea. The erection of this light was strenuously opposed by the wreckers, who foresaw it would diminish their profits by warning vessels away from the reefs. From the tower the view of the island is very fascinating, the whole chain being spread out before you upon a map. The tower is on latitude north 32 deg. 15 min. It is built of the white limestone used exclusively in the construction of the houses of Bermuda. The rock quarries, from which this building material is obtained, are worth a visit; there you will see men sawing out the blocks of stone, which is very soft when quarried, but hardens on exposure.

The exclusive use of this white rock for building purposes, and the white stannum laid bare in constructing the roads, produce a painful glare that is too strong for weak eyes to bear without the intervention of colored glasses. Great spaces on the hillsides are also denuded of earth and plastered over for the catching of rain water, upon which the inhabitants entirely depend. This glare is very offensive in Hamilton, the principal town, at which the steamers stop, after a passage of three or four days from New York. The island would be more beautiful without the town, though there is a fine church, an expensive hotel and a public building or two. Leaving the town behind us and our guide on toward our destination, along the north shore, of the bits of rural scenery, the most interesting are the country churchyards; *the church yards* are these of Bermuda, for around the place of worship are scattered the graves of former worshippers, with flowers above them and cedar trees shading them. Conspicuous upon a hill is the signal station, whence vessels are signalled a long time in advance of their arrival. Upon other hills may be seen barracks for the soldiers, for Bermuda is a military and naval station of much importance to England, being so near the American coast, and several regiments of the line are quartered here, while the engineers are constantly building new fortifications and strengthening the old ones.

The sand-hills of Bermuda, like those of other and larger countries, are continually shifting and encroaching upon the more fertile land. Some of them have buried houses and trees many feet deep, leaving only protruding chimneys and branches.

Some changes that have taken place since these islands were discovered! Though not playing an important part in the history of nations, yet this discovery is closely connected with that of the American continent. They were first seen by Juan Hernandez, a Spanish navigator, while on a voyage from Spain to Cuba, in 1515, and next described by an English privateer, Henry May, whose vessel was wrecked here in 1593. At that time every part of the island was covered with cedar, but there were no vegetables fit for food. They found a great store of turtle, and lived upon them until they were forced to leave the island, when a vessel sailed for Nova Scotia, and thence to England. Later on another vessel was wrecked, containing 150 persons, among them Admiral Sir George Somers, who had been appointed Governor of Virginia, and was on his way to that new colony when he was wrecked. It is said that the heart of Sir George was buried in Bermuda—St. George's—he having died there on a return voyage made for the purpose of supplying his colony in Virginia with provisions.

Some of our best Shakespearean "Tempest" will recall his "still vex'd Bermoothes," and the adventures of the King of Naples in this, the abode of Prospero.

Leaving its later history, as not particularly interesting, we shall find Bermuda celebrated in the songs of another poet, who once resided here a while. We shall have completed, perhaps, our third or our fourth walk of 24 miles when we reach the caverns in the limestone rock known as Walsingham Caves. They are deep and dark, and a little colored boy comes out at your call, providing you with candies and leas the way. You find the usual hollows, grottoes, and stalactites, and dark subterranean ponds that doubtless have connection with the sea. Then you emerge into outer air, covered with candle grease, and glad to escape from the dark dungeons, and proceed to search for the localities celebrated in Moore's verses. Near the caves are the remains of a calabash tree, beneath which the lazy poet loved to recline, and from which he wrote some pleasant lines to a friend in England:

"Of such a shade of a calabash-tree,
With a few who could feet and remember like me."

In 1803 the poet was presented with an office here under the English Government, but after a short stay he gave it in charge of a deputy and removed to England. This office he held for nearly forty years, but in the end he was rightfully rewarded for his negligence of trust by being swindled by the deputy in charge of his interests.

The vegetation in this secluded spot partakes of the tropical, consisting of bananas, plantains, coffee-trees and papaws. In one of the caves called Chalk Cave, an old negro lived for several years, but only company a pig, which occupied a sty in the cave's mouth.

There is a great cavern, not far distant, filled with salt water, called the "Devil's Hole," where is a perfect aquarium of the largest fish ever gathered together in captivity. The principal fish there, called "groupers," are very voracious, and will try to swallow anything that touches the water; therefore, around them is a good guard fish, which is being very beautiful sporting colors of blue, green and gold, and moving through the water with a slow and graceful motion.

There remains now only the town of St. George's, named

for the good Admiral Sir George Somers, which we reach after passing a long and costly bridge, walking past some beautiful land-locked lakes of salt water. The town is old and picturesque, with narrow streets and high walls, and ruins overgrown with plants and papaws, with here and there a palm tree. The fort was built on a hill, and here the wrecked vessels are browned for repairs, and here I found my schooner, perched upon the marine railway, receiving a last coat of paint previous to being launched. In this quaint town I ended my winter walk just as the sun went down, nor sorry, on the whole, that I had been stranded here. With the "Bard of Erin" I was ready to say—

"Alas! that a vision so happy should fade!"

ORDER.

TIM POND AND THE SEVEN PONDS.

I NEVER considered myself a first-class shot, but I am surprised that, while aiming at the old game, a stray shot from my rifle in your paper of September 13 hit Captain F. C. Barker. Indeed, had it not been for the fitter, I should have been ignorant of the wound in all future time. In answer to two of his comrades—what I write for, and say, I thought his camp came from all the ponds, and I have had to read with coldness my entire article he could have read my write. And I certainly did not "imagine" the camps were built at Ranglee, and brought to their place, on the shoulders of brawny guides, till this new information. I do not now really think they were. As to the ponds, I have been told by the same brawny guides that the so-called Seven Ponds are a very Mecca for sportsmen; that the trout and the hunting of small and large game in the open season is splendid, and the scenery is grand. As to the matter of how to get there, and who shall go, is the question. It estimates that the family sportsman seems about to do, and have them attended and served by man power. Shall I say no sneers at the idea that the invalid sportsman and worn business man may go? I want such to have the privilege, and the hardy sportsman. We enjoyed the society of both last September. The roughest ones could find plenty of reasons to distant streams, ponds and mountains, and on their return with sharpened appetites never complained that our varied and abundant comforts and stores were brought by horse-power. Well, let us look at the two routes to the seven ponds. First, we take the route of the Captain, which is three miles on strong wagon road, on foot of horse and five miles' pull in a boat down the lake, and one-half up the stream to a little lake, a half mile across this lake, up the inlet two miles further, then eight or nine miles' trail, and the Ponds are reached. If we take the route of the brawny guides, it is eight miles. Now, if I take the aggregate of the same route as given to me by old guides and by trappers and hunters that I have before referred to, by guests just arrived, and by their guides still reeling from the burden of their "packs" of eighty or ninety pounds, we have the aggregate of the same route as the Captain has described, I must put it down at thirty-four or thirty-five miles, for this is what they gave us. To be fair, we will take the average, for I do not question the estimate of one more than that of another. Perhaps the shoulders of the "brawny guides" were still smarting, when the family sportsman sneers about the Captain. I say estimate, for I do not know the distance has been "observed." The average is thirty-one miles, as I take thirty-four instead of thirty-five. If we go to these ponds via Smith's Farm and Tim Pond, we have the route of the brawny guides, and the whole trail will leave us at Smith's Home in Enfield, from the house to Tim Pond it is called—I do not know that it has been measured—six or seven miles, from Tim Pond to the Seven Ponds ten or eleven miles. Using the largest numbers, we have an aggregate of thirty-eight miles. The road from Tim Pond to the Seven Ponds, as the lawyers say, I will "rest my case" with these figures, only remarking that as the Captain has described the mode of transportation, via Ranglee, I will say there has been a backroad from the house to Tim Pond since 1873, and it has been much easier. The road from Tim Pond to the Seven Ponds is a little more than a year ago. The first winter, I think, went through in July last. Smith had men at work on it when I was there, and for the last few weeks he has ten men at work on it, and has been with them himself. The whole distance is good walking, and I call it a fair road for a wagon. One day I saw the whole distance, spending a few days at the Tim Pond cabins, or he can ride the whole distance, or he can walk a part and ride the rest of the way. I like the backroad for a change, and to carry supplies, etc., and am sorry if our friend has such experience on his road as to put it that he "imagines" his spirit cabin has been finished six inches through his caput. It must hurt, and cannot be an ornament to a public man. It does not appear to like now "faugled notions," and therefore sticks to his route because it is the oldest. All right, I am glad you shall enjoy it, with the brawny guides (extra), and with the amiable spirit he manifests, I trust he will graciously allow me and my friends to use the new way. We believe in progress, and prefer the rail car to the stage coach, the telegraph to the post horse, the split bamboo road to the older pole, and the brooch-lander to the old flint gun our grandfathers used.

By the way, speaking of "split bamboo," reminds me of a correspondent of yours, who, a few months since, these words as his *nom de plume*. We participated in was just, if his inference was correct, I heard him say in Hartford, Conn., that the brawny gentleman and a very nice, skillful sportsman. I have not the honor of his acquaintance. I did not think to mention it here, but it may explain why the Captain's "travel to the Seven Ponds increases." Now, I have been told by the same brawny guides that you do repeat it to you, I do so confidentially to the brawny gentleman, "Split Bamboo," speaking of the Ranglee Lake region, said Steve Morse remarked "This fishing note rest." Guides told me he is "correct," and that the same is true of the Kennebec Ponds. One of the best and hardest sportsmen of Maine told me the name, and he had just returned from a tramp to the Seven Ponds, via Kennebec. He added, it is fortunate Kennedy Smith has just at this time made this hunting and fishing bonanza so easily accessible. So if we have been too prodigal with our former lavais, let me suggest a variety of visitations. We are in constant communication with good markets of the outer world. If the lady cooks are there at Tim Pond he shall have salads, poultry, sweetmeats and cake, and while zipping our Java and Mocha, we will talk of the exploits of good Zank Wallou, of our own and through the eyes of our correspondent. The brawny and above us, and will be friends all our days. J. W. T.

New Britain, N. Y., 1881.

THE TAMM PARTRIDGE KILL.—Oakham, Mass., Nov. 17.—About two weeks ago I sent you an account of the tame partridge at Colebrook, near Parker's Mills. The fence of this bird has gone all over the country, but it is no more. A miserable wretch, I would send you his name if I had it, recently visited the location, called the bird to him, picked it up, and knocked its head against a tree. This he did in spite of the protest of a man, who was passing and knew the habits of the bird. This poor hunter has the united hate of grangers as well as sportsmen of Worcester county, and I hope that one would do him the same. F.

[Why don't they kill the man?]

Natural History.

CHANGED IN THE CRADLE.

POCASSETT, MASS., NOV. 3.

Editor Forest and Stream:

I inclose a clipping from the *Worcester Magazine*, and if the article be true I think storks can claim a superior knowledge over all other birds.

"While I was in Hjørring (Denmark) last summer there occurred a tragedy in connection with one of these twiggy households which is here worthy of mention. It was one of the many cases where couubial felicity is wrecked by a malicious act of one unprincipled being. It was a case in evidence that a female's good character, with a careless neglect of a hand, he scattered to the winds, never to be recovered satisfactorily to the world, which thinks itself over-convinced of her guilt, and no one and nothing, save the victim's heart, dares avow innocence. It was one of the cases where a true and loving life partner is, by an outsider to her domestic circle, cruelly wronged, is convicted on circumstantial evidence, and sentenced to death for a crime of which she is not guilty. It was a case where love between the couple is mutual, where it is strong to excess, and a cause for doubt leaves despondent of the betrayed. It was a case that would bring tears to the eyes of a thinker and its termination to this family was ruin, heart-break, orphanage, misery and death. The story is this:—

"While the hen stork was laying, a mischievous neighbor mounted the building one day when she was out frodging, robbed the nest of one of its deposits, left in its place a duck egg, and then descended to watch the effect. The claimants to the nest took no apparent notice of the trick upon their return, and the perpetrator of the deed had almost forgotten the matter when, some weeks later, his attention was attracted to the nest and its quarreling occupants. The quarrel continued, the male chattering to his mate in an excited and angry manner for an hour or more, and then flew away. Two hours passed, and at length he returned with thirteen other males. They all lit upon the house, surveyed the nest's contents critically, and then huddled together for a protracted council. The female was evidently accused by them of unfaithfulness to her lord and master. She was having her trial, and the learned judges, gathered to deal into justice, each and all took part in the lively argument on the subject. The unfortunate one failed to give a satisfactory explanation to the hearers of her case, and the decision grew warmer until she was convicted. A death sentence was pronounced and agreed upon by judgment of jury, and immediately the flock pounced upon and pecked her until she lay dead on the tiles. Then each flew away to his respective home, while the avenged husband and father went in search of food for his motherless offspring."

I have experimented with the eggs of many different birds, changing them from one nest to another of a different species, and, although the spurious eggs were hatched I never knew any disturbance when the pair imposed upon.

While collecting eggs in the spring of 1873, I noticed the habits of some of the smaller birds when their nests were invaded by the cow hunting. This bird, with seeming unconcern in regard to its young, deposits its eggs in the nests of smaller birds and takes no further care of either. I have never been able to catch a cow hunting in the act of laying, though I have often seen them in the thickets and woods where such birds as they impose upon are likely to build. In one instance I found a cow bird's egg in the nest of a vireo, and not any of the latter's, this showing that the hunting can distinguish between an old nest that has been used and a new one. Had I not removed the egg the vireos would have laid and hatched, not their own eggs, but this cow bird's first, then the young hunting would have turned out the others and monopolized the old bird's care; for in most cases the birds imposed upon perform the task of rearing the brood without any complaint. This fact led me into making a few experiments.

I took two eggs from the nest of a barn swallow and exchanged for two from the nest of a red-eyed vireo. I made this choice as their eggs are somewhat alike, and their food being mostly flying insects is similar, so in case the eggs were hatched the young birds would receive their proper food. It happened that the embryos in the swallow's eggs were so far advanced that on the second day there were two young swallows in the vireo's nest. However, the old birds were not at all disconcerted by this forwardness. They began to care for the little swallows at once, and must have fed them with as much solicitude as any parents would. Of this I am certain, for the birds grew rapidly and on the third day after hatching were the sole occupants of the nest, the two eggs having been removed by the parent bird. She must have thought that they would not hatch. Where she carried them I cannot say, and I never could find either eggs or shells in any case where the birds had removed them under similar circumstances. This nest was in the fork of a small, low limb near a cattle path, and this low situation proved its destruction, for when the little birds were nearly large enough to leave it, some cow attacked the bush after the manner of cattle, and with head and horns destroyed a happy home and most interesting experiment. The tracks on the ground about the bush proved the identity of the vandal. The two vireo eggs which I placed in the swallow's nest were not hatched, as the swallows—of which there were three—came out first, and as in the former case the two remaining eggs did not hatch.

I have observed that in most cases when several young are hatched and one or more eggs remain, the old bird turns them out in a few days, perhaps fearing they may break and defile the nest.

It there are any exceptions to this rule they are in favor of the yellow warbler, as I have occasionally found nests of this species with three young ready to fly and one spoiled egg. Several such eggs are in my collection.

My next experiment was with sparrows. I changed the eggs from the nest of a grass sparrow to those of a Savannah sparrow, and, as in this case, there seemed no interruption of domestic affairs. The addition of an egg of the song sparrow to the nest of a grass sparrow was followed by the same results. In the above cases the different eggs were hatched at the same time as those belonging to the nests experimented upon.

I on a placed the egg of a grass finch in the nest of one of the same species, which contained two half-bledged young. As the egg was about to hatch when the change was made there soon appeared a tiny bird with the two larger. The one hatched last, the first, but the small one was cared for by its foster parents.

Some birds leave their nest at once on finding that any one has disturbed it in the slightest degree. One of the most particular is the mocking bird. My brother and I were collecting eggs in Northumberland county, Va., in the spring of 1877. The first mocking bird's nest which we found contained three eggs. This was examined minutely to enter an accurate description of it in our note books. Wishing to obtain the full complement of four eggs we left the nest as it was, and on returning the next day we found that the birds had removed all the eggs. On the same day, May 15, we found another nest with one egg, and although nothing was disturbed at the time, on the following day the nest was empty. MEMOIRS.

[The somewhat apocryphal stork story (quoted by our correspondent is not new, but it is of special interest as calling forth the relation of his experiments with the eggs of some of our small birds. The character of these experiments is quite novel, and we could wish that they had been more extended.]

FISH AND FROG SHOWERS.

PALESTINE, TEXAS, NOV. 3, 1881.

Editor Forest and Stream:

Does it never rain frogs, fish and so forth? I see that "J. C. B.," of Washington city, states it as his opinion, in your issue of Oct. 27, that it never does rain frogs, fish and so forth. "J. C. B.," I believe, is a distinguished gentleman connected with the Smithsonian Institution. Well, now if it does not rain frogs, fish and so forth, nearly every body in the world is laboring under a wrong impression. I have heard all my life that it does rain such things occasionally. It is certainly a common belief all over the United States and, doubtless, also wherever the human race exists. The question is, could there be a doctrine so universal, touching a matter which may be proved to the eye, unless there were foundation for it in fact? I don't believe there could be. For one, I never saw it rain frogs, fish and so forth, but have been told by credible gentlemen that they had seen such things. A gentleman in North Carolina told me that he returned to his home one day from a neighbor's just after a heavy summer shower and found, as he opened his gate, two fine, fresh fish lying before him. I do not recollect that he stated the variety, but I do recollect that he stated that they were large enough to be eaten, and that they were eaten. I was told by another gentleman, since I read the note of "J. C. B.," in *FOREST AND STREAM*, that he once witnessed quite a shower of frogs on Black River, in Michigan. It was raining at the time, and the frogs came down with the rain by hundreds and thousands. Most of them were small, but one—apparently killed by the fall—and some had the appearance of having been dead for some time. Many a time, just after a summer shower, I have seen the ground literally alive with little toads. I did not suppose that they had descended from the clouds, but some of them may have so descended. I see nothing impossible in such a supposition. I have seen volcanic ashes falling in Texas which must have come from volcanoes many thousands of miles away. True, these ashes were little finer than any frogs or fishes I ever saw, but if these ashes could be transported in the aerial currents thousands and thousands of miles, might not frogs and fish be transported a few hundreds of miles at least? It is known that halibuts of large size often ride in the upper regions an indefinite time before falling, and why might not frogs and fish so ride also if they should be taken up in a water-spout, whirlwind or cyclone? Cyclones sometimes take up men, horses, oxen and even houses and transport them a considerable distance. If they can do this why might they not also take up frogs, fish and so forth. You may put me down as a strong believer in it sometimes raining frogs, fishes and so forth, notwithstanding the opinion of "J. C. B."

As for the fish which appear in ponds disconnected from any other water, I think "J. C. B." accounts for them very well. In most cases they are no doubt taken there in spawn which becomes attached to the legs of aquatic fowl that fly from water to water. But they are transported by other creatures also. The ditch in front of my residence in Houston, Texas, becomes a regular fountain several times during the year, yet when it fills up with a rain of fish, it is never filled with little fish. The spawn from which these fish originate was, no doubt, borne from the neighboring bayous by the little black "willow bug" that we see skimming so rapidly over creeks and rivers in the day. In the night it flies away from the larger waters and alights in many ponds or pools may discover, hastening back to the streams before daylight. Thus these ponds and pools become peopled with fish. Wild water fowl would hardly visit our very doors in the cities. N. A. T.

[We ourselves believe in the possibility of occasional showers of living things which may have been taken up in water spouts, whirlwind or cyclones, but these showers take place much less frequently than is supposed, and most of those reported are to be explained on some other ground than this. We differ from our correspondent most decidedly, however, when he says that the universality of the belief in such showers is any argument in favor of their occurrence. A large number of instances might be given of beliefs which have a very wide currency and yet are unconfirmed by any evidence that is of value. The hoopsake story is a case in point, and there are many others. Some of these might cite and others of which would scarcely bear printing.]

WHAT WAS IT?—Chattanooga, Tenn., November 9, 1881.

On looking over a recent number of *FOREST AND STREAM*, I was attracted to an article headed by "G. F. W. who, in speaking of a snake he killed, says: 'I was surprised to see it was a vicious copperhead. He flatted his head and struck at me, but I soon killed him.' I wish to say to G. F. W. that if he will consult the Encyclopedia he will not find any reptile by that name. There is only one species of snake that will flatten his head when disturbed, and that is the spreading adder. There are two kinds of these, the black and the rattlesnake striped. The 'spreading adder' will not only spread his head out when disturbed, but they are not so poisonous as the innocuous rattlesnake. The snake G. F. W. must have meant is the 'copperhead' or 'high-land' moccasin. It is copper-colored underneath, and will quit the water and go on 'high-land.' I have frequently killed the 'copperhead' in my stables, two or more miles from water, and sometimes in company with the adder, the two being, I think, good friends. I write this to enlighten G. F. W.—H. O. MITCHELL, M. D.

[Spreading adder, we believe, one of the many names of the very large *Spizella* of *Zonotrichia* a species which is notorious for its habit of flattening its head and hissing or blowing.]

STRATEGY VS. STRENGTH.

The sand-hornet is the greatest villain that flies on insect wings, and he is built for a professional murderer. He carries two keen cimeters besides a deadly poisoned poniard, and is armed throughout with an invulnerable coat of mail. He has things all his own way; he lives a life of tyranny and feeds on blood. There are few birds—none that care to swallow such a red-hot morsel. It is said that not even the butcher-bird flatters after him. The toad will not touch him, seeming to know by instinct what sort of chain lightning he contains. Among insects this hornet is the harpy eagle, and nearly all of them are at his mercy. Even the cicada, or drumming harvest-fly, an insect often larger and heavier than himself, is his very common victim. Considering these characteristics, it was of especial interest to witness such an incident as I have here related, where one of these huge tyrants was actually captured and slain by the strategy of three black ants.

It had left the meadow, and was ascending a spur of the mountain by the edge of a pine wood, when suddenly I espied the hornet in question almost at my feet. He immediately took to wing, and as he flew on ahead of me I observed a long pendent object dangling from his body. The incumbrance proved too great an obstacle for continued flight, and he soon dropped again upon the path, a rod or so in advance of me. I overtook him, and on a close inspection discovered a plucky black ant clutched tightly with its jaws upon the hind-foot of its captive, while with its two hind legs it hung desperately to a long cluster of pine needles which it carried as a dead weight. No sooner did the hornet touch the ground than the ant began to tug and yell for help. There were certainly evidences to warrant such a belief, for a second ant immediately appeared upon the scene, emerging hurriedly from a neighboring thicket of pine-tree moss. He was too late, however, for the hornet again sought escape in flight. But this attempt was even more futile than the former, for that plucky little assailant again appeared at another impediment, and this time not only the long pine needles, but a single branched stick also, went swinging through the air. Only a yard or so was covered in this flight; and as the ant still yelled for reinforcements, his companion again appeared, and rushed upon the common foe with such furious zeal that I felt like patting him on the back. The whole significance of the scene he had taken in at a glance, and in an instant he had taken a vice-like grip upon the other hind-leg. Now came the final tug of war. The hornet tried to rise, but this second pugilist now laid hold of his foe, he could only buzz along the ground, dragging his load after him, while his new assailant clutched desperately at everything within its reach, now a dried leaf, now a tiny stone, and even overturning an acorn-cup in its grasp. Finally, a small rough stick the size of a match was secured, and this proved the "last straw." In vain were the struggles of escape. The hornet could do no more than lift his body from the ground. He rolled, and kicked d and tumbled, but to no purpose, except to make it very lively for his captors; and the thrusts of that lively dagger were wasted on the desert air, whether or not these ants knew its searching openesses, they certainly managed to keep clear of this busy extremity.

How long this pell-mell battle would have lasted I know not, for a third ant now appeared, and it was astonishing to see him; with every movement of the hornet, he in turn would lay hold of a third stick, and at the same time clutch upon those pine needles to add their impement to the burden of his own body.

Practically the ants had won the victory, but what they intended to do under the cleaving of their hands, I could not seem to see. But it was to them only a question of patience. They had now pinned their victim securely, and held him to await assistance. It came. The entire neighborhood had been apprised of the battle, and in less than five minutes the ground swarmed with an army of reinforcements. They came from all directions; they pitched upon that hornet with terrible ferocity, and his complete destruction was now only a question of moments.—WILLIAM HANCOCK GIBSON, in *Harpers Magazine for December*.

GROUPS SWALLOWING SNAKES.—Some two weeks ago while camped on the Nicasnots stream, a half mile from the Junction with the Passadunkage, in the State of Maine, I took from the intestines of a ruffed grouse, while dressing a pair of these birds for the roasting pan, a striped adder seventeen inches in length. The snake was whole and perfect, except its head which had entered the gizzard. I should have preserved the snake and gizzard had I had any means at hand of doing so. It is a common occurrence for grouse to swallow such food, and I have seen them do so in their way. I have dressed hundreds of grouse and this is the first instance of the kind I ever saw or heard of. These splendid game birds in the State of Maine feed almost entirely on beech-nuts this fall, at least this is the case in the Passadunkage region where we have been on a three-week's trip. The hard-wood forests consist largely of birch and beech, and the bountiful crop of nuts of the latter having fallen to the ground from the action of the heavy frosts upon the burrs, give the grouse a rich and satisfying winter supply, which will cut off this food supply entirely. Nearly every grouse dressed during our trip had fed on these nuts exclusively, no other food having been found in the crop. Grouse are very scarce here this season. We found only single birds, two being the largest number found together with the exception of a single instance. We learned from the settlers that the chicks were nearly all killed by the cold rain storms in the early summer.—H. L. M. Lynn, Nov. 5, 1881.

THIRTY QUAIL IN THIRTY DAYS.—Memphis, Tenn., Nov. 1881.—Editor *Forest and Stream*: I have often heard it doubted if any one could eat thirty quail in thirty consecutive days, but my doubts on that point have been dispelled, a lady in my house having used thirty-four in thirty-four days—a convalescent. They were daintily and cautiously prepared and she did not know they were to be served, and often they were for various meals. I think to kill a *hare* *leg* to eat them, willy nilty, is the reason of failure. Many boarders would like the experiment.

Speaking of Bob Whites I had a unique incident some seasons ago while shooting with Judge S. P. W., on the Quenichet estate. Knowing I would give a salute to every other bird, alternating with him, he wagered me a fine champagne score would exceed twenty-five birds by night. Our game score reported at dawn I had won, as twenty-four was my "head," but near our first shot I was counted positive that I had secured the bird. I was both wrong in the light, and her whisking in with a brace for me cost me a new hat. Couldn't stand the temptation. G. B. G. G. G.

Game Bag and Gun.

THE GAME OF MINERAL MOUNTAIN.

MINERAL MOUNTAIN is in the southwestern part of the great farming State of Missouri; the country included in the following description comprises the counties of Washington and Crawford. The mountains here contain inexhaustible stores of lead ore, while the surface of the ground is covered by nutritious grasses, with abundance of mast, and a grazing range unbounded for hundreds of miles. The valleys teem with fertility, and the farms here are productive. The hills produce a fine growth of timber, consisting of white oak, black oak, post oak, shell-bark-hickory, black hickory, hickory, white and sugar maple, white and black alnut, elm, hackberry, cherry and excellent pine for building purposes and the manufacture of the finer kinds of furniture. Beneath the surface of these hills, below the limestone rock, is deposited a rich store of galena and lead ores.

The numberless chains of gently swelling mountains, which encompass the valleys on each side, are in most parts chockered with cornfields, meadows and green pastures, abounding with cattle and sheep. The valleys for the most part are of rich, loamy soil, producing the finest growth of corn, wheat, flax, hay, oats and tobacco. As a later crop the ground is as profitably as in either Kentucky or Virginia, and equal in quality, producing the price of \$1 per pound. One acre produces 1,000 pounds of this crop, so that ten acres, with proper attention, will annually realize \$10,000.

For stock this country cannot be surpassed. The great mast yearly takes the place of corn in early fall, for fattening all kinds of stock, while the produce of the valleys—corn and hay—need not be used until December. The grazing throughout this entire lumbered region affords nutriment for all stock, on which they are fed. This food is abundant from April until December, and thousands of sheep will subsist all winter on brush, etc., just as do the deer, which abound numerously in every section of hill and dale.

There is great profit in stock raising in this country. Throughout this region good milk cows are bought for from \$15 to \$20 each; yearling steers for from \$5 to \$6 each; two-year old steers, \$8 to \$10; sheep, \$1.75 to \$2, being of the very best breeds for mutton and wool, the latter annually producing a fine grade of the wool.

Dressed beef of the finest quality is sold for from 6 cents to 7 cents per pound; that is when a farmer kills a beast too large for his own family use; but in seasonable weather beefs are weekly slaughtered and sold as above.

Now, take the prices at St. Louis, a distance of sixty-one miles from Potosi, via the Iron Mountain R. R., by which stock can be shipped, or otherwise driven on a good country road, with good pasture all the way. The St. Louis prices are for good milk cows from \$90 to \$95 each; steers, three year old, 1,000 lbs. gross, \$90, and so in proportion to their age and size; fat sheep from \$5 to \$6 each; dressed sheep from fifteen cents to eighteen cents per pound. This shows the great profit in raising stock in this great range of country, and its facilities to the best market in a couple of days. In addition to this, rich mineral deposits of lead are deposited in the Mineral Mountain, which can be prospected and worked in conjunction with farming. In a year or two the poor yielding farmer of the East here attains independence, with peace and plenty around him, and all the beauties of nature for his surrounding, in a climate unsurpassed for health and loveliness. Mineral waters rushing spontaneously from never-failing springs in every direction, emit themselves in the various creeks, as pure as crystal, while clear, sparkling waters abound in fish, comprising buffalo, bass, trout, perch, etc., with abundance of game, as deer, wild turkey, grouse, squirrels, wild pigeons, quail, etc., in surprising quantities, affording in the seasons "dainties of brood of earth and air," the best and to the lover of dog and gun measures exhilarating, healthful and romantic.

The Mineral Mountain and its surroundings presents a scenery of magnificent beauty. On the west side of the mountain is a meadow of some ten acres, gently undulating, at the top of which stands a good log cabin, with outbuildings. This may be used as a sportsman's lodge, while it commands wild mountainous and woodland scenery for miles in extent, and hills of towering hills in their sixty grandeur. Storms in these mountains, and immense forests which cover them, afford a rich and romantic view of wild grandeur as the wind howls through the garbled branches of the old oak and dies away on the mountain tops, with its distant, plaintive sound. The king of the forest, the oak, here stands forth conspicuously in all his majesty, with his fifty arms so strong.

The brave old oak,
That hath ruled in the greenwood long,
And still flourish he, a hale green tree,
When a hundred years are gone.

Below are the valleys, relieved by rich pasture and corn lands, while the sublimity of mountains and forests fills the contemplative mind with awe and reverence. In spring time all is changed to serene loveliness. The clear, sparkling waters of pure, limpid springs, the murmuring rill, and distant gushing sound of the cascade, impart a thrill of music which adds its charms to the lover of nature; while the variety of wild roses, the sweet briar, the huckle-berries of various kinds, the wild grape blossom, the fragrance of the morning, and the rosy tints of the sun, give a new poetry to these fair productions of the earth, as the dew hung in pearls of crystal on all the branches.

This country is the best game region of all the places hitherto visited by the writer, during some thirty years of handling the double gun and bagging game right and left, in various parts of England, Scotland and America, the half of which (fifteen years each) having shot in the two hemispheres, and on the great prairies of Illinois having made some large bags among the "chickens, geese and quail." It would be difficult to imagine finer sport than that afforded in the mountains and forest glens, which abound in deer, wild turkey, ruffed grouse, squirrel, wild pigeon. The valleys are alive with large beves of quail, which may be fully accounted for by the fact that they are not hunted, for you may travel fifty miles and not see a shot-gun—merely the ten or fifteen dollar rifle, carrying one hundred and sixty or two hundred balls to the pound; while the setter and pointer is altogether unheeded.

I have frequently made my double toll at squirrels when they scamper the roadside fence, or on a bevy of quail, or a brood of turkeys as they rise, my gun and self are locked upon with indelible surprise "shooting on the

wing." As dexteros, however, as the flying shot may be, these mountaineers are equally good with their heavy rifles, for they seldom fail of "plugging the squirrel in the eye."

It is a common and every day occurrence on one rides through the hills, to see the deer on the hillside, valley and glen, while in every five miles they cross and re-cross your path in the country roads through the forests—and as these mountains extend for hundreds of miles, thickly grown with heavy timber, the number of deer is immense. During the war, however, the inhabitants had no rifles or guns to disturb them, for neither were allowed to be kept by either farmers or ranches, consequently the deer increased. Beyond doubt this is the finest hunting ground for deer in the United States, at least that portion of the land inhabited by the white man.

The wild turkey, this noble bird, the king of all feathered game, is as plentiful here in proportion, as is the prairie grouse in Illinois. The woods abound with their broods until the leaves begin to fall, when they pack, or gather in large "gangs" (so called here) of sometimes one and two hundred. They are easily approached, and shot both from horseback and on foot. When the trees are leafless, and winter approaches, they appear in the valleys and meadows, may be seen flying across a valley from ridge to ridge to their roosting-place; the outline of them is discernible on a clear, moonlight night against the horizon at a great distance. Here they attain a large growth, having such a feeding range while young. The dewberry, straw-berry, huckle-berry, blackberry, etc., which grow profusely, serve as food in the early season, and when grown this mighty region of mountains fully develops them for the sportsman's gun and table.

The ruffed grouse (pheasant frequently termed) abound in plentiful numbers; on the hillsides and the bottoms you can seldom go far without springing them, and most excellent sport for the dog and gun can be here enjoyed. In the spring time the woods sound both far and near with their drumming. This bird is probably the most gamey bird of America, having more of the epicurean flavor resembling the red grouse of Scotland; the flesh, however, is as white as that of the chicken.

Squirrels to the farmers in this region are most destructive. The gray and fox squirrel abound in thousands in many instances when the crop of mast fails, they destroy whole fields of corn, and farmers employ boys, finding them rifle and ammunition and one cent per scalp for all killed around their fields.

A farmer told me that last spring during corn-planting time, squirrels were to be seen, from fifty to a hundred at a time, on the fences and around the field, scratching up the newly-planted grains of corn. As they are twenty have been treed and killed on one tree; this elm stood alone at one end of the field. The farmers lose fully a fourth of all the corn grown annually, by the squirrels, and a good shot on a squirrel hunt may easily kill in one day from fifty to a hundred. They also grow very large. There are a few black ones to be seen in the fall, but these only occasionally.

Wild pigeons are mostly birds of passage, although they have their pigeon-roosts sometimes in the mountains, where thousands are frequently to be seen. They are killed by clubs alone. The wild pigeons annually appear in the fall about the beginning of October and continue through the winter and spring; they fly in large flocks over and through all parts of the mountains, darting through the air with immense velocity. Frequently from twenty to thirty may be brought down by the double shot; they are also caught in nets in large numbers.

Quail abound chiefly in the valleys, being the more domesticated game bird; they are seldom shot at, and as before remarked, are frequently to be seen in the woods, particularly in corn fields and meadows skirted with the hazel bush, and very plentiful. The sportsman with his pointers or setters and double gun can enjoy a day's shooting, varying his sport to that in the mountains.

Rabbits are seldom seen, in fact I have only seen one rabbit during three months in the mountains and valleys; this, however, is accounted for through the number of foxes and wolves. The fox is here hunted by dogs alone, as it should be, and is frequent to be seen in the woods, particularly in the generally brought to grief by a pack of half a dozen or so of good hounds. The wolf, both black and gray species, are "plugged" by the rifle at all chances, as they prove destructive to sheep, of which every farmer keeps some, the wolf affording consumption for his spinning-wheel, which is seen at every house through hill and dale. When a wolf hunt is decided on, in any vicinity, the hunters join in, and take their stands in various parts of the hills, and are abundant in the woods, which have been hunted; the hounds are well treated their sport and work well at the trail. Deer here are seldom hunted by dogs, being so plentiful that any hunter wanting a deer will "pack" his rifle, and return in an hour or less with a fine buck, with the ball planted in the exact mark behind the shoulder—to me, however, still-hunting has not the pure charms that is afforded by the full cry of the dogs, while each hunter is posted near some branch or ridge the deer is sure to take, then with the double gun lay him in his tracks well on the ground. There are abundant in the creeks, particularly in the cove, which runs at the foot of Mineral Mountain, the water running deeper in this creek than in any others. Otters here attain a larger growth, their skins are remarkably fine and valuable, and in my opinion decidedly the richest fur made up, of either the mink or stone martin. Minks are very abundant and of a darkish color. Coon and opossum are too numerous to be considered valuable, although the coon skin in quantities would well repay the trapper; but they do not like the trouble to catch them, and as abundance are the coons that as many as fourteen were taken one evening from one tree, in a "coon hunt."

I have given the sportsman but a faint idea of actual realizations to be made in these primeval forests, but, well knowing that such pleasures are appreciated ten-fold when fully enjoyed with the keen mountain air and delicious springs at the hunter's camp, while the sportsman can recite the glory of the past day, while the mercenary's cloud rises and vanishes, and the song of the hound resounds through hill and dale.

A fire on the earth, and our tent with a tree,
Coursing by moonlight so meretricious we,
Let the Lord best his soul, as the Baron his ball,
But the house of the sportsman is widest of all.

W. KING.

LOSS OF BIRD FARMERS.—It is reported that the farmers in Quebec County have combined to suppress indiscriminate hunting over their lands. They have agreed to put a stop to the slaying of chickens by hunters and to check the destruction of game.

"SOME OLD GUNS THAT I HAVE SHOT."

LIKE all his articles in the *FOREST AND STREAM*, St. Clair's paper in your issue of Sept. 29th, headed "Some Old Guns That I Have Shot," was good and his touching allusion to the friends and companions of his boyhood days doubtless went home to the hearts of many Southern readers. You see so many of us have been through the same experiences. Like "St. Clair," I was brought up with the other little niggers, and learned to call an old negro woman "Mammy," which I kept up till I was a "great big boy." And when I meet her now (she is a servant in our aunt's family) I take off my hat, offer her my hand and call her "Aunt Lucy," and she calls me Mars William, (as master), as in the good old ante-bellum days.

What a perfect picture "St. Clair" paints of the life of the Southern sportsman before the war!

It carries me back to the good old ante-bellum days of long, long ago, and awakens many fond recollections of the past, and I feel like offering my hand to St. Clair.

As Robert Burns said of the many pleasant moments spent with his "Highland Mary":

Still over those scenes my memory waxes
And fondly broods with miser care;
Time but the impression deeper makes
As streams their channels deeper wear.

I was alike interested and amused with St. Clair's description of his cane-gun. I have "been here," too; but perhaps we had the advantage of St. Clair, as an older brother and myself had access to a set of tools that enabled us to give our guns the finishing touches. We would take a soft piece of poplar timber and soon fashion it in the shape of a pistol. Then we would take a gauge and cut a trench in it the whole length of the barrel, and into this we would put one joint of a cane, which was fastened to the stock with leather strips securely tacked. The idea was not altogether original with us. In an evil hour, our father, to satisfy our craving for a "sure enough" pistol, made us one. Little did he dream of the clandestine raios we would make on his powder canister to keep our pistol booming! Hide it? Yes; but it was useless. We would search the house from cellar to garret till we found it. But a great ambition. A pistol that only shot one would not do—we must have one that would rattle away five or six times. The Colt revolver was just being introduced then, and we said we must have one too that shot five times. And we were not long in getting one up, as the sequel will show. Like "St. Clair," after first selecting with great care the joint of a cane that we thought would bear considerable strain and kick up a big racket, we made a small hole at the bottom of the joint for a touch-hole. Then we put in a charge of powder, then wadding, and then shot and wadding. We then made another touch-hole even with the wadding on the shot, then another load as before, and so on until we put in five loads, by which time our pistol was chucked full from breech to muzzle. Our idea was to prime the first load at the muzzle, apply a live coal to it, discharge it, and so on all the way down. We expected to fire all the loads one by one, with great rapidity. The modern Winchester repeater is a toy compared to our weapon, and our own invention. It would not do to let any one see it. We might get a pistol for it. Who knew? We decided to test our weapon. It would not do to practice with it publicly. People might learn the secret of its mechanism. Then they might want to know where we got powder to load it from breech to muzzle. So we decided to have a strictly private trial behind a negro cabin. I held and pointed it while my brother burned the end of a small stick till a live coal glowed on the end of it, and then touched the priming with it. Dear reader, many, many days have passed since I was staked by the burning of that newly invented weapon, but the recollection of it is vivid and distinct as if it were but yesterday. It roared like a young cannon, and I did not know whether I was struck by lightning or a locomotive. That was the last I saw of it. It flew to pieces. The loud report startled the whole household, and brought our father to the scene instantly.

"Where did you get the powder?" was the first question he asked.

And we forgot our little hatchets—yes, we forgot 'em—and, forgetting our daily visits to the cannister, replied; "I've gave it to us"—Jim being an apprentice in a cabinet shop near by, and a chum of ours.

We found that pistols made of wood would not do. So between us and three companions we raised money enough to buy us a "sure enough" pistol—a second-hand one. The "thumb" on the hammer was accidentally broken off, and it was with great difficulty that we could pull the hammer back to a full cock; and we were compelled to go to a tree or fence and pry the hammer back. When I look back now and think of it, I wonder how a crowd of boys could load and shoot such a mechanism without some of them getting seriously, if not fatally, hurt. We dubbed our newly acquired weapon "Old Growler" and it would growl, too. With the charges we put in it you might hear it roar ten miles away. Sunday was our favorite day to practice with "Old Growler." But we would take to the woods, away from people and houses. We were good Missons, and each one knew the other would not tell. I remember one Sunday we practiced with "Old Growler" at a poplar tree. It would send a ball out of sight in the soft bark of the poplar. We were all greatly excited. We had been firing "Growler" at hard, seasoned timber, and the balls would rebound and pass in close proximity to our heads—zip!

Why did "Growler" perform so well at times—sink a ball at times, and then all of a sudden fail to sink the ball, which would come back among us with more force than "Growler" sent it? We solved the problem eventually by observing that when packing was used, and the ball forced down, it did not come back among us. Finally we were pired to the position of a big hammer. When I look back now and think of the sole owner of "Old Growler," sold him to a companion for the enormous sum of ten cents. We then turned our attention to swimming. We must know how to swim, and then we would all be men. Our hearts were as joyous and free as the mocking-bird's that sits in yonder tree and sings so sweetly this beautiful October morning. His sweet carolings reminds me of the

Little bird with azure wings
And song that sale a thousand things

that cheered the soul and revived the drooping spirits of the lonely Bonnyard.

I could go now right to the spot where we would strip and plunge into the water. Ah! dear reader, the many, many happy memories I have since sent upon the banks of that clear, beautiful little rivulet with rod and reel, and dog and gun.

"I've angled in many waters,
On many a summer's day,
In many a tumbling river,
By many a waterfall,
But the idea of that brook has never
Lost its pathos and charm for me,
As it rippled and ran forever
To its grave in the mighty sea."

Long after the boat-brooks cease that send the blood through the veins in the hand that holds the pen that writes these lines will that continue to flow on and on to thy "grave in the mighty sea." Like the stream described by Byron,

Thy banks are fringed with many a goodly tree,
And flowers the fairest that may raise the bee,
and blossom as upon thy banks do the wild flowers now
and blossom so beautifully—nowhere do the sweet notes
of the mocking-birds—those sweet wood-ud warblers of the
South—sound so sweet and musical as those that inhabit thy
banks. Brio.

Port Royal, Tenn., October, 1881.

THE SQUIRREL HUNT.

WHEREVER they are much hunted there is no game so wild, so sharp in hiding and so hard to kill, even when hard hit, as the large grey squirrel of middle New York. If struck to death, and anywhere near a hole in a hollow tree, they will wait till they can die in the death agony and die there untouched by the hunter's hand. The following lines are a bit of my experience:

Leaves are drifting wild in furries,
Thro' the woodland dark and drear;
Swift the game bird Southward hurries,
Knowing well stern Winter near;
But the squirrel staunch remains;
Tempting all the Hunter's skill;
He from swearing scarce abstaineth,
Shooting oft, but not to kill!

See the banner white, 'n' plifted
O'er the soter tint of grey,
As from tree to tree 's shifted,
Quik as shadows, clond-swept, play—
Hear his taunting laugh re-ounding,
While you search the forest o'er,
He from branch to branch is bounding,
Glances showing—tween no more!

Where the oak-tree, widely spreading,
Cast its arms grotesque abroad;
Ours acorns freely shedding
On the sere and frosty sod—
Where the beech to sycamore towers,
And oaks maples taller grow;

There the top of Satan glowers
On his weary dew below,
From his nest-hole, slyly peeping,
Watches he the Hunter's eye—
Keenest and best he keeps,
For if seen he knows he'll die—
Patience have and seek good hiding,
Till he fancies you have down,
Then, with nerve and skill adding,
Shoot, and bring the rascal down!

Eagle's Nest, Nov. 2, 1881.

NED BENTLINE.

* The long tail, white beneath, looks like a flag of truce at times.

HUNTING RABBITS FOR THEIR MEAT.

THE other afternoon, Col. Houston Rucker, Col. Geo. F. Akers, Charley Hollister, Ralph Dodd and myself were seated together, when suddenly the question of rabbit hunting was brought up by Houston Rucker, with the following recollection of the first time he ever saw Col. Akers. "George," said Houston, "you were sitting on the side of the main road leading from Appomattox C. H. to Lynchburg, the sunset looking like a fire over looked at. The snow lay a foot deep upon the ground, and a cold, piercing wind was howling, yet there you were, with a scanty amount of clothing on your back, and bareheaded. Upon closer investigation I noticed that your old wool hat was being utilized by you as a foot warmer, shoes being a part of your toilet apparently unprovided for. A couple of rabbits lay on one side of you, and on the other your Uncle Archie Moon's famous bound Monroe, and Daniel Whitaker's old dog Bryan. I felt sorry for you, and would willingly have assisted you, but for the snow. I gave me up for the first sentence of my commiserating speech, 'None of your derved business. I have just as much clothes and things as I want.' Do you remember the circumstance?"

"Yes," replied George, "bunting rabbits barefooted in the snow is no fun; but then when you have no other meat at home, it's a clear case, and it was many a time that I had to do it. But now that you have recalled to my mind that day, I'll try and tell you about the chase I had after those two rabbits."

"Daniel Whitaker loaned me his dog, and a better one never tracked puss; when he opened his mouth, the sweetest melody rolled out of it I ever heard, and it not only attracted the people's attention, but the attention, too, of every well-bred bound within its bearing. This accounts for Monroe being along, Uncle Archie only allowing me to hunt him once in a while. The morning of the hunt Aunt Milly told me 'thar was no meat in de house, and dat Miss Bryan expected sun company dat day, sich as Mr. Whitaker, Jish Davenport, Parson Hammerly, Wash Hunter, and their wives, and I ain't know no man no, so you must do bes' you kin. I s'dn't got no shous to len' you, but here is a par'ov my thick wool stockin's, dey'll help you mazin' in de snow.'"

"I got into my clothes as soon as I could, pulled on the good old cook's hose, and after drinking a bowl of corn meal coffee, sweetened with maple sugar, salted forth, followed by Bryan. Hardly had we got into the road than fresh tracks of rabbits were seen everywhere in the snow, and the old dog, in his joy at the abundant sign, sat down on his haunches, stretched forward his neck, with head high in the air, began a solo that many opera singers might have envied. I looked at him in admiration, and wondered what would be his next move. Before getting through with the first part of his chant, two or three half-breeds came up, and joined in the chorus. Looking across the field I saw coming, Monroe. It was then sure of good sport, for with those two dogs no rabbit on earth could get away. Bryan now began moving around, the old dog, with the neck simply waiting for orders to come on. They did not have long to wait, as the leader opened, and with heads down to the snow, the others

fell into line and the race began. Before running five hundred yards they caught one rabbit.

"Oh! how I w'd it had been big enough to do for dinner, as I was nearly half frozen, though as it was not, I patted the dogs and said, 'Now, my lads, George wants more meat; let's go for it.' They seemed to understand me, and began hunting in every direction. But game was scarce, and it was only after scovring several fields that they found scent, and away they went, I hobnobbing along after them the best I could, the snow and ice having already worn the bottoms out of Aunt Milly's stockings. I was absolutely bare-footed. The chase by this time had grown more exciting, and I, in my enthusiasm, became heedless of my bodily sufferings and pushed on as fast as I could. The rabbit, a old steger, proved as wily as reynard. He would turn, run into holes and evade the dogs in every possible way. At last they pressed him so closely that he made directly toward Bill Bocock's schoolhouse and there for a while the dogs lost him; but after diligent hunting found him in a hollow log. They barked and kicked up such a rumpus that the boys in the school began tittering and squirming about upon their seats, irritating old Bill until he came to the door to order me away. Just at this moment the rabbit ran out of his hiding place (being forced out by a long pole I had introduced into the log) and insidiously took refuge inside the schoolhouse. Then followed a scene better imagined than described. Bocock did not fear his hair, as he was bald-headed, and they cut his hair, then the boys and then a dogs and lastly the rabbit, and we finally compelled to give holiday for the remainder of the day. I got the rabbit number two and started for home; and it was going there that you saw me. My feet having become numb with cold I used my old hat as a warmer. I hunted many times after under no more favorable circumstances, for when there was meat in the house I had other things to do; or, in other words, when I went hunting rabbits it was always for their meat." J. D. H.

Nashville, Tenn.

SUBSTITUTES FOR PIGEONS IN TRAP SHOOTING.

Editor *Forest and Stream*:

In the last few years owing to the way in which wild and tame pigeons have been slaughtered from plunge traps at tournaments and club matches, on account of their scarcity it has often been found necessary to use something else for targets in their stead. A few clubs indeed have stopped shooting at pigeons altogether, finding it much sport with balls but they will be better if they had being cheaper and allowing more money to be spent in prizes.

On the Pacific coast and in some parts of the South, the bat has been used from the trap and seems to answer admirably, its peculiar flight making many of the crack shots score quite low at first. These bats are gathered from old barns, caves and hollow trees by men who make a business of it, their profit on the hundred being considerable.

Blackbirds and sparrows can be used by catching them on twigs and hanging them on a wire line. As soon as a case they should be detached, their feet cleaned with sand, and put in large cages or pens. This would be an excellent way to thin out the number of the English sparrows, which at present fill our parks. The bird line can be made from the juice of the holy bark, extracted by boiling, mixed with one-third part olive oil.

"The crow, which covers in countless flocks the fields in winter, has, to my certain knowledge, never been tried, but I know of no particular reason why it should not be used. Every one of our extensive fields is seen going to and from their roosting grounds in a long line that can almost be measured by miles. Any one that has seen a crow's roost at night knows how easily they could be caught, then, no matter how acute their senses may be in the day time. When sprung from a trap, the well-known antipathy of the crow to man's presence would cause it to fly away from the crowd back of the shooter in a style that could only be checked by the best shots with a bad hitting gun. I have occasionally shot from traps, but I think this a practice should be discouraged, because it would soon extend to other game until in time there would be nothing left but crows could point or men shoot in the field, all having been trapped for matches or tournaments. Most of our States have forbidden trapping game birds, besides the idea of shooting them from traps is something which every sportsman should condemn.

Of the list of inanimate objects used as a substitute for pigeons, the iron glass ball is the best. When first used years ago by Carver introduced it here the shooting fraternity regarded it as a big thing and it immediately became popular until at present the numerous designs of traps and hats that were sold at the time have taken a hold on us. Even in England they have used it considerably, the matches shot by Dr. Carver giving many people a chance to see what they were like, who had never heard of them before. It has induced men who would not shoot at pigeons and had no time to go out of the city for field shooting to get guns and take up the practice of breaking the balls, often becoming crack shots when otherwise they would hardly have known the breach of their guns from the muzzles.

Among the different kinds of target balls manufactured, including the slugs, plaster, glass, rubber, suoking, feather-filled and sanded, I think for ordinary purposes the plain glass ball is as good as any; for special shooting, however, the others are often very useful.

In the way of traps, the rotary gives a great variety of shots, the iron glass ball coming back into the face of the shooter, which is unlike any sort of game shooting. There is a knack acquired by skillful shots to watch it as the arm revolves, and to call "pull" in time to give them the ball in any position they wish. The ordinary screened trap that can be set to throw slugs away and quartering shots, is a great deal more like birds in the field, and the new style of using five of them in imitation of English ground traps is a still greater improvement.

Before the iron glass ball came into use, only a stick with paper wings known as the gyro pigeon could take the place of live birds; a modification of this has lately been invented in Philadelphia, that consists of a spring enclosed in a paper representation of pigeon, but which really looks something like a fish; the whole thing is thrown from a suitable trap.

In England, Holland & Holland have brought out on the market an apparatus in the shape of a pigeon, made of a light iron frame; inside of this is a glass ball which breaks whenever the shot strikes it through the frame, the latter of course being made of iron. The frame of course being made of iron also made solid sheet-iron pigeons to be dipped in white-wash after every shot striking them, in order to remove the marks. To make these iron pigeons go, they are at-

tached to a machine consisting of an unstanding rod made to revolve on its axis, at the top of which is fixed at right angles an iron cross-bar which holds a pigeon at each end. Turn the crank arranged on to the revolving rod and the pigeon is at once fast with, forcing a single and double shot. Rabbits made of felt for rifle practice, and of iron for the shot-gun, are hung on an endless cord between two trees or posts, and made to run up and down by turning a wheel, the iron representations being whitewashed automatically by a brush every time they come to the end of their run.

Within the last few months the clay saucer, or pigeon as it is called, has been sold a good deal to clubs, it being a reproduction in another form of a clay bird made some time previous. The principle of the clay saucer has been frequently mentioned in your paper, but to me one who has never seen it work the skimming of a clam shell gives an exact idea of its flight.

In the above list are substitutes for the pigeon at trap shooting I hope some of our sportsmen will continue to use, and others who have hitherto patronized tournaments will take up in place of the wild birds used there, if indeed they really must have an annual State match. Your editorial, published a few weeks ago, I think will convert the ideas of many who have hitherto been its warmest advocates, and in another season or two no more will cause the name of sportsmen to be held in suspicion by the press of the country, as our last tournament at Coney Island did.

SUCCESSFUL ROCHESTER SPORTSMEN.

ROCHESTER, N. Y., Nov. 18.

Editor Forest and Stream:

So many of your correspondents are this year writing about the scarcity of game that I thought something in another tone would be acceptable to many of your readers as an antidote to the gloomy state of mind caused by so many reports of ill luck. In this vicinity the fall shooting of migratory birds has been better in some respects than it had been for years. Woodcock shooting was about as good as could be desired. Among several excellent bags the best I have heard of was one of thirty-seven birds shot north of Brockport, in this county, by one man in a day. He hunted in a region that has long been famous for its fall woodcock shooting. The birds, it is believed, cross Lake Ontario from Canada, and stop in the first favorable cover they find after their long flight. It is thought that every year some lucky fellow has a high shoot in that region.

There was some very good snipe shooting here this fall also, and several bags ranging from fifteen to thirty are reported. One of my friends found them very abundant on corn fields where he had not seen a snipe for years previously.

Neither the four-footed vernal nor the partridge fly, nor the red squirrel, nor man, has killed off all the ruffed grouse in this part of the State yet. Three of my friends came back from a two days' search for ruffed grouse this week, and brought with them forty net grouse.

The most extraordinary shooting of all was performed by three men from the city a few days ago on the wide waters three miles from the Court House. It is an expansion of the Erie Canal containing 30 or 40 acres in which ducks sometimes drop in. Scores of men are constantly firing on its haunts and no day passes that half a dozen shooters fail to make it a visit. The three men in question went out carrying twelve pounds of shot, with muzzle-loading guns. There came to be three ducks on the water and the wild fowls began to blaze at them, and as the birds seemed to be infatuated and would not leave, the shooters discharged all their shot, finally killing two of the ducks. You can calculate how many shots they must have fired.

Three or four successful deer hunting parties from this city have visited Canada and Michigan this fall. Of individuals John C. Lighthouse was most successful, he having killed seven deer and a wolf in Michigan.

MAINE WARDENS AND VISITING SPORTSMEN.

I AM glad Mr. Hubbard has spoken, for it is an important subject and one that interests us greatly in Eastern Maine. We have labored for years to have our game protected; and now to have it the commodity of a class opposed to us, and who have made us all the trouble they possibly could, is a bitter pill. I have no sympathy for an officer who fails to do his duty. I know our county wardens, as a class, are a failure, and am satisfied that the appointment of local wardens is a mistake; yet I am certain it is not so in all cases. That Mr. Hubbard should abuse our Commissioned wardens, in such an ungentlemanly and unspornsmenly manner, is perfectly unjustifiable in a visitor. I am satisfied Mr. Stilwell is a gentleman, and an honorable man; and I have no reason to find fault with him as an officer.

The animus of Mr. Hubbard's communication is apparent. Mr. Hubbard clearly ignores Maine's sportsmen, and can see none save "visiting sportsmen" and "gentlemanly guides" east of the "Hub," and, more, they must be a privileged class, because they, the "visiting sportsmen," have the money—some have whips.

Let us see how the thing stands to-day. Sportsmen of Maine are doing their best to preserve the game, and have done so for years. The sportsmen of Maine are composed of as good material as can be found in any State, and are entitled to respect. We have been for years obliged to contend with "gentlemanly guides," market hunters, middlemen, cheap landlords, whisky smugglers, deer hounders, crust hunters, "visiting sportsmen" and various other undesired specimens of the human race.

At this time we are sensitive, and feel that our "visiting sportsmen" have insulted us. I do not know that Mr. Hubbard is one of the members who came from Massachusetts last month. The facts are as follows: Messrs. Howe, Weymouth Bros. and others from Merrimack and vicinity, numbering eight, with five dogs or hounds, came to Cherryfield; they were met by the Shopper Bros., guides, residents of Redington, who conveyed them to Cranberry Lake, where they found quarters in Isaac Albee's logging camp; and there they were joined by a party from East Machias. A deputy warden appeared and found the hounds chained and in the care of a keeper. The party set at defiance the law, but being watched, were somewhat troubled; but by the aid of the East Machias party, the Shopper Bros. and a Northfield man, who was camped at the Sabor, they eluded the warden and got a few days' run with the dogs into Little Sabor Lake. Report has it they killed six deer.

What has Mr. Hubbard to say of this? It is perfectly impracticable to allow game to be killed out of season to supply the tables of camping parties. It is game protection we wish, and we have it the law must be obeyed to the letter. There can be no such thing as a privileged class; if we do have, game protection is a dead letter, for we cannot enforce laws partially.

We are asked questions I hope to see answered by some one qualified to satisfy all. "Why do not the authorities put down hounding deer?" We are all trying to do it. But why do "visiting sportsmen" persist in breaking our laws? We do not thank you for bringing your money into our State to tempt guides to break our laws, for we believe the receiver cannot give with one hand and take with the other. "What right have wardens to enforce one part of the game law and neglect another?" Is that proved?

"What right have wardens to see only one class of persons and overlook their own townsmen?" I hope Mr. Stilwell will answer this, for we know that an Indian, by the name of Ketchum, has a camp at Mopang Lake and is accused of having hounds, or that he allows Bangor men to keep hounds at his camp for the purpose of running deer into Mopang Lake. I know Mr. Stilwell has had his eye upon these parties. We are constantly watching our law-breakers, and if Mr. H. will look over the Reports of the Commissioners of Fish and Game of Maine, he will find his assertions need qualifications, to say the least.

We sportsmen of Maine think we have a right to make our own laws for game protection, and enforce them; and, more, we think we shall. As "visiting sportsmen" are bound to trample upon us with their hounds, I advocate "no quarter for the dogs."

I hope to see a more efficient system for game protection, and do not doubt we shall.

Let us protect the game—one and all.

Machias, Nov. 15, 1881. Old Tog.

STATE OF MAINE, Department of Fishery and Game, Dixfield, Nov. 15.

Editor Forest and Stream:

In notice in your issue of Nov. 10 an article from Lucius L. Hubbard entitled "Maine Wardens and Visiting Sportsmen," reflecting on the enforcement of the game laws, honesty of Maine Wardens, etc.

I have had the honor of being one of the Commissioners of Fish and Game, for Maine, since 1872, with the exception of a part of the years of 1879 and 1880, and have never allowed my name to appear in print in any controversy pertaining to the fish and game, as generally it is no advantage to the cause. But when the honesty of our guardians of the fish and game is assailed, a word in its defense I do not think amiss. I do not see how any gentleman and sportsman who is in favor of enforcing our laws, can object to my old friend, H. N. E. M. Stilwell's "vigorous letter from Maine," which appeared in your paper a few weeks ago, unless it might be some one who had killed a moose or deer in close time and paid too dear for the whistle. I think the letter expresses the sentiments of every man who has had the honor to be Commissioner of Fish and Game in Maine. There are certainly many. As to the honesty of the Wardens, if there are those who can be hired to break the game laws would it not be better (if not more honorable) to inform the Commissioner so they could get them removed or dealt with as they deserve rather than attack them through the press?

As to the enforcement of the game laws, I do not pretend they are enforced in every case, as there are some which I presume we know nothing about. Maine forests are large—our means are small—poachers, I am sorry to say, are too numerous, though a goodly share come from outside of Maine. But I assure the writer, and also gentlemen and sportsmen interested in the protection of our fish and game in Maine, that we shall do all in our power to convict any person who kills our fish and game in close time, whether he calls himself gentleman or plebeian. And I would earnestly request any gentleman who knows of any violation of the game laws in Maine, to give us the information and name of witnesses, and we will bring the offenders to conviction if possible. So long as we have been convicted for fail for killing moose, deer and caribou. Cases are good for six years past, of which we hope to prove in the near future.

I am sorry to say the writer is correct about the hounds, but am happy to inform him they have not all come out of the woods alive.

To the sportsmen who visit our State, we hid you welcome. Her woods and waters are free and open to you. We are happy to give you all the assistance and information in our power, and are confident that no person entitled to the name of gentleman will willingly catch our fish or kill our game in close time.

HENRY O. STANLEY, Comr. of Fish and Game.

RUST SPOTS IN GUN BARRELS.

NEW YORK, Oct. 27, 1881.

Editor Forest and Stream:

I have seen many inquiries and replies to the above, and probably not one out of twenty has been correct in their use, until in your last issue (Oct. 20) your correspondent from Columbus, Ohio, has been quoted as saying he had it from an old Californian friend. I gave this to Dr. Fords, then of Lafayette, Ind., in 1858, who went to California about 1860—perhaps the same gentleman your Columbus friend alludes to. I wrote to the old Spirit of the Times in 1856 or '57, stating that I had tried all means to prevent rust inside the barrels, and had found that in using Hazard's Electric Powder, and after a day's shooting I could wipe the gun outside dry and after rub over with an oily rag; put it in a dry place, and then not touch it inside for so many days, weeks or months, as you please. Before using it again wipe out the barrel—then of a brownish powdered ash—and they will be as bright as any steel polished with whiting.

A Mr. Baker, of Charleston, S. C., then ridiculed the idea of a fine gun being put away without cleaning, but I replied again to all sportsmen of these United States to try my plan, and I would guarantee the perfect state of barrels, even after any time.

My gun then being a muzzle-loader, this made it almost impossible to often wash it out, and to adopt any kind of oiling to prevent rust; but with muzzle-loaders we had to use water, driving it through the nipples. With the breech-loader I would never use a drop of water. Put your gun away after a day's shooting "in a dry place." Wipe well the outside, as the perspiration of the hands, or salt air, might rust. After thoroughly wiping dry, add a little oil, either coal oil or sperm, and then pass over the barrel a dry

cloth. This for the outside. The inside is protected by the lining of powder, which becomes in a day a fine ash powder. Now to show you a test of this. My barrels, of the finest laminated steel, after having been used twenty-five years, were altered to a breech-loader by Messrs. Read & Sons, who stated on examination (previous to altering them) that they were in perfect condition, and remarkably well preserved, even if for ten years, much more than for twenty-five years. Therefore I recommend all to try this simple but sure cure for rust spots in gun-barrels. As to water, then oil, you can never prevent rust, if you work at them for a week. Therefore, your correspondent of Columbus, O., is right.

WM. KING.

GAME IN NEW JERSEY.

I HAVE been at some pains to ascertain the truth in regard to the amount of game in the central and lower parts of this State, and submit the result. The severe winter told fearfully on the quail. I have been out with good dogs in Middlesex, Mercer, Monmouth and Atlantic counties, and am convinced that the quail were decimated by the prolonged snow fall. I mean by this that not one bevy can be found this year where there were ten last year, but the open summer has made the broods larger. Pheasants did not suffer from the winter, and are plenty in their usual haunts, except that in some sections they are rapidly being exterminated by trapping and snaring, which is openly and extensively carried on. This is particularly true of the shore counties. In one day's tramp in Atlantic county I found as many as twenty quail traps, and this too in the jurisdiction of the famous West Jersey Protective Association. By the way, I find that this association is very unpopular, as the farmers seem to believe that all the organization does is to sell licenses to Philadelphia pot-hunters. Rabbits are very abundant, and many of them are hardly large enough to shoot, the prolonged open weather having apparently brought out late litters. There were no woodcock in the Middlesex swamps in October, their feeding grounds being dry, but a few are found now in the sprouts. English snipe have been plenty in some parts of the State, and I found a few of them last week along the hotbuns near Great Egg Harbor. Squirrels have not been so thick in many years as this season, and, with no drawback, they will furnish unusual sport next year. There are plenty of ducks along shore, but on account of the mild weather they do not "draw," and our runners are in no flight. The pheasant and quail are the only game that need special attention. We should have a close season for a year or two, and close attention to the law-breakers. In many sections the hucksters and store-keepers buy up snared birds as openly as they do poultry and eggs.

PHILADELPHIA NOTES.

PHILADELPHIA, Pa., Nov. 17.

THE duck shooting at Havre de Grace since the opening of fall has been on the average good, but the main body of fowl appear to be redheads. Few cawbacks have arrived on the flats, owing no doubt to the mild weather. I made inquiry this week among the pointers, to whom a great part of the ducks shot at this point are sent, and learned that a very large proportion reaching them are redheads. Black heads, strange to say, are in a minority—the reverse is almost always the rule. Quail are here selling on the streets, in the hands of "hawkers of the curbstone," at \$4 per dozen. I have yet to hear from a returning sportsman that good quail shooting has been enjoyed. One I met this A. M. stated he had been gone a week, and had four coveys, and bagged, after having hunted twenty birds.

The way your journal is talking against the immense slaughter of pigeons at hippodrome tournaments is meeting with favor here. While gentlemen who wish to practice between seasons at pigeons from the trap will still continue to do so, they are, I think, unanimous in favoring the saving of the large amounts of money expended at these shootings by gun clubs and sportsmen's associations, and devoting it to the preservation and increase of our game birds.

Word was sent to Philadelphia last week from Lower Delaware and Maryland, that a large flight of woodcock had reached these points. A number had been killed by resident sportsmen, but we have not heard of any of our Philadelphia makers making any bags.

Would you believe that a few rail birds can still be killed on our flats? The weather has not been severe enough, it appears, to drive the lazy stragglers southward.

Don't the "hays," duck shooters say, the yearly flock of snow geese that appears in the Delaware below Bombay Hook, has not yet shown itself. For the past four years these fowl have regularly presented themselves in our waters, and are little troubled by our market shooters from the fact that there is no sale for them in Philadelphia. Home.

THE DECREASE OF GAME BIRDS.

WESTCHESTER, N. Y.

Editor Forest and Stream:

I have found that my experience in hunting for game birds of all kinds about the city this fall is the same as expressed by Mr. Holberton, in his letter in your issue of Oct. 27. Tuesday, Nov. 1, I tramped through a good part of Westchester county, and although I found excellent cover and suitable feeding places for grouse, quail and woodcock, not a bird did I see. In a while I saw a man, I met plenty of men from the city, however, who were having fine "sport" shooting robins, blackbirds, chipmunks, etc., and tearing down fences and destroying things generally. One party of Italians, eleven strong, marched through the woods blowing tin whistles "to charm the little birds," and shooting at every living feathered creature, from a chippy-bird to a farmer's boss gobbler. SENECA.

Middletown, Conn., Nov. 18.—Editor Forest and Stream: I have been very much interested in the discussion in recent numbers of your paper in relation to the great decrease of game birds. About here, by snaring and especially by the ravages of the "tick," the ruffed grouse had nearly been exterminated. The last severe winter cut off most of the quail, while many of the survivors are believed not to have bred, remaining together in packs during the summer.—ONE OF YOUR SUBSCRIBERS.

Editor Forest and Stream: I've just returned from a two-weeks' sojourn with the ruffed grouse in Northern Pennsylvania. Found the birds very scarce indeed. Almost all of the birds killed were old cocks and "we" found quite a large share of them by listening to their drumming, and then

working them up. In localities where usually I could easily kill from ten to twenty in a day—and all flying—it was impossible to kill more than five or six in a hard day's work, and court in one or two "punches" at that. The farmers say that very few young birds were hatched this spring; and they say that they had the same trouble with domestic fowls.—BUNASA.

Editor Forest and Stream: In your journal I never have seen any intimation that the decrease was ever owing to an epidemic disease, to which I think the Rascals are liable—similar in its speedy work to the flesh without being, though I do not remember but one instance where the bird was found. The farmers say that very few young birds were hatched this spring; and they say that they had the same trouble with domestic fowls.—BUNASA.

Editor Forest and Stream: In your journal I never have seen any intimation that the decrease was ever owing to an epidemic disease, to which I think the Rascals are liable—similar in its speedy work to the cholera," where whole flocks are sometimes found dead in the morning. The only sign evident to the unscientific observer is a lack of blood in the body, and a small clot at or in the heart. Having lived, within the fifty years ago, many dogs, whose ruling passion was to retrieve, would bring me everything that was dead; and when not too ardently engaged, I would examine to see if the birds had been shot or killed by their natural enemies. I occasionally found that there were no marks of either, but that the flesh was without blood, though I do not remember but one instance where the bird was found. The farmers say that very few young birds were hatched this spring; and they say that they had the same trouble with domestic fowls.—BUNASA.

STATE PIGEON TOURNAMENTS.

WATERBURY, Conn., Nov. 16, 1891.

Editor Forest and Stream: The practice of making the annual meetings of your State Association for the Protection of Game the occasion of a pigeon shooting tournament seems to be so generally deprecated by all true sportsmen that I am not surprised that the better class of that association desire that its name be so changed as to indicate its real purpose and business.

I would seem to be obvious that the association is directly responsible for the new practices which result from the offer, at high prices, to buy netted pigeons. Such a market for the birds induces hundreds of professional trappers to follow them to their nesting places, where they bare and net vast numbers of them while rearing their young, which young are of course left to starve. If this is not revolting cruelty what name will you give it?

We should feel reluctant to call that man a sportsman who would deliberately shoot the mother of a brood of young quail, or catch trout from their spawning beds, and worse still, leave a snare trap on the ground; and it ought to be regarded as unsportsmanlike, as well as cruel and barbarous, to kill purely for sport.

I had no intention of obtruding my criticism upon the conduct of your State Association when I commenced this letter, but simply, as I now do, suggest that there is a short way to an effectual remedy for the evil about which so many complain—viz., by enacting a law similar to one passed by the Connecticut Legislature in 1875, which provides, among other things, that "no person shall let loose or suffer to escape from any trap, or other place of confinement, or from any method of restraint, or expose in any way any bird or fowl of any kind, for the purpose of having such bird or fowl shot, or shot at for sport, gain or trial of skill of marksmen, or other purpose, or to be shot or shot at, at any shooting match."

[Such a law would include in its prohibition also small pigeon trap-shoots, which are very different affairs from the immense tournament. There is no call to pass a law against such matches.]

DAKOTA TERRITORY GAME.

LOWER BRULE, D. T., Nov. 7.

Editor Forest and Stream: Ducks, geese and sand-hill, or whooping crane, have been here in countless numbers this year. The farmers who live in the vicinity of Lower Brule, who did not game their corn early, have had it nearly destroyed by the cranes and geese. As fine shooting for them as can be found in this country can be had at Red Lake, about six miles from Chamberlain, the present terminus of the C. & St. Paul R. R., on the Missouri River. Nearly all kinds of ducks are found there, and an Eastern snow fowl is no more to be compared to the mallard or the teal shot here than an old squaw is to their black or dusky duck. I shot teal yesterday that were as fat as butter, and broiled over a good hot fire it was a tidbit for a king. Pintail grouse, called by the people here prairie chicken, are rather scarce. Just about now they are settling down on the river in considerable numbers, and I think will give the boys a chance to try their small-bore rifles shooting them from the trees when winter sets in.

Dear me! be very plenty, judging from the signs which are all about on this side of the river. They have been hunted but very little this fall, and the snow last winter bore so deep that the hunters from going out. I shot a splendid buck while duck hunting on a creek, and wounded a doe with my shot-gun. One of our chiefs has been out and killed fourteen deer and a large number of beaver, which are very plenty on the creeks and along the river banks.

Chamberlain boasts of as good a hotel as can be found on the river, the Brule House, kept by Mr. Austin, who will treat the sportsman to the best that the country affords.

LOWER BRULE.

AN EAGLE CAPTURES A PIKE—Greenwich, Conn., Nov. 16.—Last week Mr. Freeman, of Occum, while standing by a mill pond near that place, saw an eagle take a large pike, or pickerel as they are called here. The bird swooped and took the fish with its claws, instead of diving for it. The pike squirmed and twisted so that the eagle, which had at once flown to land, had to let go its grip. The fish fell and the bird at once flew after it, pounced upon it, and, taking it again in its talons, shot up into the air to a lofty height. The onlookers, seeing the bird in its own accord, the osprey let the fish fall and it flowed it. The long tail of course killed the fish, and the eagle then picked it up and flew away.—W.

WILD FOWL AT MONTAUK.

GREENPORT, L. I., Nov. 14.

Editor Forest and Stream: I have just got information from a captain of one of the fishing steamers that there is now good grass-feed in the Great Pond at Montauk, and that some 300 geese were seen there by him some ten or twelve days since. If this is so, and I have no reason to doubt it, there will again be first-rate shooting at Montauk for ducks and geese.

A dozen years since, and long before that time, Montauk was the greatest resort for wild fowl in the Northern Coast. The waters of the Great Pond (400 acres) were then fresh, and the grass feed abundant, and I have been told by an old gunner here that he always found the pond alive with wild fowl, especially with geese. He says there must have been there some ten thousand geese at a look.

Since that time the pond has been leased to eelers, who have opened an inlet admitting the entrance of the salt-tides of the bay, which has killed out the fresh grass, and of course furnished no feed for wild-fowl.

Montauk has, within a couple of years, been purchased at auction sale by Mr. Arthur Benson, of Brooklyn, for the sum of \$150,000, and we presume the pond has been leased up against the salt-tides by his direction. If so, the merits from all gunners a vote of thanks, provided he allows fowlers free use of the shooting-ground.

We knew a Mr. Arthur Benson in Boston, years ago, and was a college friend of his, but had lost sight of him for a long period; perhaps this is the same. ISAAC McLELLAN.

WISCONSIN NOTES—Menomonee, Wis., Nov. 14.—Just think of a rain-storm that has never once let up since—let's see, since—well, that has hardly ever let up, since the chicken-shooting season opened, Aug. 15. Rain, rain, week in, week out, and snowing now, just think, I say, of that, and then expect sporting news if you can. The ducks have given us the most complete supply of the season. The occasional rain-fall swelled the stream till the Chippewa "river," inundating whole farms and driving families from home to seek safety on higher grounds. Stacks of hay and sheaves of grain floated here and there, while bending and nodding to the surging waters stood fields of ripe corn, in which multitudes of mallards floated and feasted. Many hundreds of mallards were killed. (One incident—Dr. Grannis started merrily, singing cheerily, gazed at the thousands of ducks and waterfowl, stalked through the water bravely, stumbled fearfully, and wetted thoroughly, discharged his gun under water accidentally, it burst immediately, and was ruined completely. The dog poisoner has secured enough victims to satisfy the most exacting. Several valuable dogs have recently been poisoned, of which three have died. Sam McKahan's old pointer, Dick, died lately from the effects of a pistol wound, given by some smart Aleck. Dick had hunted faithfully during ten seasons. Rifles are now in great demand. Deer and bear appear to be plentiful enough to furnish our hunters much sport. Venison is now arriving in market, and last week I saw the carcass of a bear, weighing about 300 pounds, that was killed within a few miles of here. Wolves are killing sheep in this vicinity, foxes are barking and wild cats are squalling. Plenty of sport here for one who has time to seek it.

A PENNSYLVANIA WOODCOCK SCORE—Rush, Pa., Nov. 10.—I break my own dogs and take pride and pleasure in the pastime. Wednesday morning, Nov. 2, dawned, not bright and clear, but with a "mist on the mountain" and a drizzling fog. Nevertheless, an hour's drive took me to an older cove of five miles away, in which I knew a brood of woodcock had been hatched and reared. With Snap, my six-months' old red Irish setter at my heels, who never saw a game bird until last July and who never was out with the gun to exceed a half dozen times in all, I struck for the thicket. In crossing a bridge, just before reaching the main ground, I cut off my dog in a small patch of willows, and was gratified to see him on a dead point almost the instant he crossed the fence. I quickly followed, and as I approached within a couple of rods up sprang a magnificent cock with a defiant whistle, but dropped to my shot and was handsomely retrieved by my setter. I then struck the main ground, and in two hours—viz., from 8 o'clock A. M. to 10 A. M.—bagged in nine consecutive shots nine cock, shooting at every bird that rose, six over points and three flushed by myself, all in thick cover, which here think remarkable shooting. I am glad to see the efforts of sportsmen's clubs and sportsmen generally to do this and to "mist on the mountain" and a drizzling fog. Nevertheless, an hour's drive took me to an older cove of five miles away, in which I knew a brood of woodcock had been hatched and reared. With Snap, my six-months' old red Irish setter at my heels, who never saw a game bird until last July and who never was out with the gun to exceed a half dozen times in all, I struck for the thicket. I then struck the main ground, and in two hours—viz., from 8 o'clock A. M. to 10 A. M.—bagged in nine consecutive shots nine cock, shooting at every bird that rose, six over points and three flushed by myself, all in thick cover, which here think remarkable shooting. I am glad to see the efforts of sportsmen's clubs and sportsmen generally to do this and to "mist on the mountain" and a drizzling fog. Nevertheless, an hour's drive took me to an older cove of five miles away, in which I knew a brood of woodcock had been hatched and reared. With Snap, my six-months' old red Irish setter at my heels, who never saw a game bird until last July and who never was out with the gun to exceed a half dozen times in all, I struck for the thicket. In crossing a bridge, just before reaching the main ground, I cut off my dog in a small patch of willows, and was gratified to see him on a dead point almost the instant he crossed the fence. I quickly followed, and as I approached within a couple of rods up sprang a magnificent cock with a defiant whistle, but dropped to my shot and was handsomely retrieved by my setter. I then struck the main ground, and in two hours—viz., from 8 o'clock A. M. to 10 A. M.—bagged in nine consecutive shots nine cock, shooting at every bird that rose, six over points and three flushed by myself, all in thick cover, which here think remarkable shooting. I am glad to see the efforts of sportsmen's clubs and sportsmen generally to do this and to "mist on the mountain" and a drizzling fog. THE FOWL AT CURTICE.—There was a heavy frost at Curtice on the night of Nov. 14, and gunners all did well the following day. Prospects for getting the birds to market in good order are better than they have been hitherto. Only a few club members had started down up to that time, but the last of last week a number of gentlemen left for the grounds. We hope to hear reports—before long of fair bags.

THAT MICHIGAN DEER HUNT.—East, Saginaw, Mich., Nov. 13, 1881.—We did not meet with great luck owing to continued bad weather, too many licks for the deer to run to, accidents to dogs, etc., but as we didn't go to hunt for meat, but to have a good social time, we had it, and all returned, voting it a very pleasant fortnight in the pines.—H. B. R.

LIVE QUAIL.—Brooklyn, Nov. 17.—Editor Forest and Stream: Mr. David Beck, Carey's Ferry, Indian Territory, writes that he has live quail for sale. Should any of your correspondents desire to obtain any, I cheerfully recommend Mr. Beck to them, as I know him to be a most trustworthy gentleman. C. FREDRICKS.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Table with two columns: FRESH WATER and SALT WATER. Lists various fish species such as Black Bass, Pickerel, Pike, etc., and their corresponding seasonality.

Who hawks doth oft in danger ride; Who hawks lives oft both far and wide; Who uses game shall often prove A loser; and who falls in love Is fetter'd in fond Cupid's snare; My angle breeds me no such care.

WILLIAM BASS.

THE ENGLISH FLY CASTING TOURNAMENT.

LONDON, Nov. 1.

Editor Forest and Stream: On Saturday, the 20th of October, I took a run down to the Welsh Harp to see the casting tournament. The day was a most miserably wet one, and the wind blew very consequently, every one except the enthusiastic anglers was miserable and the attendance was not one tenth what it would have been, had the day been fine. No ladies were present and the prevalence of umbrellas and water-proofs among the lookers on showed that only those who were bound to enjoy themselves despite the miserable weather held their ground, and would not be driven off in any event. This was a source of regret, as the Welsh Harp is to hold a tournament of this kind in England, and was no doubt, stimulated by the great success of the one held last spring on Coney Island by the New York State Sportsmen's Association, under the supervision of Mr. Mather.

The expert wits who are fond, in a jaunty manner, of describing the science of angling as a process in which there is "a fool at one end and a worm at the other" would have been astonished and perhaps enlightened had they been present at the Welsh Harp in the gale of wind and pitiless downpour, watching the competitors in the anglers' tournament. They would have learned that there can be angling without either a worm or a fool. They would also have found out that there are other modes of angling beside sitting on a grassy bank during a summer day, patiently waiting as the hours go by for the disappearance of the gaily-painted float as it travels down its allotted "swim." They might have learned that the exercises, of which specimens were given, demand skill only to be acquired by long practice, and often acquired by that. I said much for the devotion of the fly-cast and anglers who braved the weather that they ventured abroad on such a day, and were not to be daunted by the most adverse circumstances.

The tournament was organized by Mr. Marston, of the Fishing Gazette, for the benefit of the Anglers' Benevolent Society; and while the latter cannot be said to have derived much pecuniary benefit from the tournament, there is no doubt but that it will be of benefit to it indirectly, in the way of attracting attention to the existence of the society, and also in popularizing such contests in the future. It was a grand day for the employment of wading gear on land, and for invoking that spirit of heroic resignation which the angler, more than any other class of sportsman, has so often to put inside his waterproof garments. Indeed, the spectacle of the crowd, ankle deep in mud, outside the streaming tent, rods and coat-tails blown in one direction by the blast, all blue-nosed and puckered in the cold, yet buoyed up by the interest they felt in the proceedings, was impressive and not a little touching. Altogether it was a novel exemplification of how much angling is really the contemplative man's recreation.

Your correspondent was an entire stranger, and simply looked on and got soaked. As a test of skill the tournament which no amount of rain or storm could dampen. The object of the tournament was, namely, the raising of funds for the Anglers' Benevolent Society—could not fail to commend itself; and it was to support it that gentlemen like Mr. Sprockley, the chairman of the Thames Angling Preservation Society; Mr. Bronham, its secretary; Mr. Alfred Jardine, Mr. Whitefoot, Editor of the Sportsman; Mr. R. B. Marston, Mr. A. Allison, Mr. Ransome, Mr. S. Morgan, Mr. Wheelton, of Bell's Life; Mr. Green, Mr. Clegh, of Mortlake;

Mr. "OUI!" Alfred, Mr. Adlington, and others undertook the expedition. The cause is undoubtedly a worthy one. From the very nature of the sport the brotherhood of the angle include a considerable proportion of poor men. Of the ten thousand certified members of the angling clubs of the metropolis probably more than a half are of what is, for the sake of convenience, known as the wage-earning class. They are "populous city spend" during the long hours of the working week, and spend the little leisure they have in a pastime than which none is more innocent, none more refreshing to the overworked, none more associated with the humanizing influences of all that is sweet and soothing in nature. The Anglers' Benevolent Society is intended to aid the needy in their distress, and the thanks of the clubs are due to Mr. R. B. Marston, the proprietor and editor of the Fishing Gazette, for the time and trouble he has usefully devoted to its success. The tournament of Saturday, by which it was hoped to raise a good sum of money for the society, was originated by him, and it is a pity that the weather prevented the sale of thousands, instead of hundreds, of the sixpenny tickets by which admission to the ground was obtained.

A small tent was provided for the judges and a large tarpaulin was stretched out twenty yards in front of it for the competitors to stand on, and a line was stretched from this about eighty yards to a flag. The line had parchment tags at every two and a half yards, for they reckon casting in yards here, instead of feet. The line was guarded from intrusion by hurdles which widened from the tarpaulin to allow latitude in casting, which was on the ground instead of on water. A pistol was fired as a signal to begin, and the first contest was an "amateur one for castuz in the Thames style." There were four entries, and Mr. Powell won at 45 1/2 yards. Mr. T. Hoole was second at 40 1/2 yards, and Mr. Da Coeta third at 40 yards. Next followed an amateur competition in the "Nottingham style," with an artificial bait weighing one ounce, and with a quarter-ounce lead on the trace, cast from the reel similar to our "Cuttyhunk style." Two entries were made, Messrs. Martin and Little, and the latter won at 52 1/2 yards. This was called the best throw of the day and no doubt would have been better under more favorable circumstances. Even the professionals conceded Mr. Little's excellence.

The "Nottingham style" is a handsome one, and far exceeds in beauty the "Thames style," which is coiled at the feet of the fisher in the hand. Messrs. Ned Andrews, Harry Wilder and his son, cast in the latter style. Mr. Wilder won at 50 yards, Andrews second at 45, and H. Wilder, Jr., third, at 24 1/2 yards; they held the line coiled in the hand. Another Nottingham contest was won by W. Bailey, Jr., at 45 yards.

A feature of interest, and one entirely new to me, was the next contest, which was the casting with the forked stick, a style entirely unknown in America, by Messrs. Leland and Sawyer. They used a manufactured reel with a jointed handle about five feet long, instead of a natural crooked stick cut by the stream, as is usually done. They coiled the line at their feet and hung the "trace" over it, and swung the sinker out by a strong throw. I failed to see the advantage of this style of fishing over the Nottingham, or its American equivalent, the Cuttyhunk. This forked stick style is, I believe, peculiar to the anglers of the Welsh Harp, who fish in this manner for pike. The live baits, which are generally used, are small minnows, and are cast in a high, arched, often hurled an immense distance by this contrivance. The line is coiled out on the ground and the rod laid aside. The angler, with a short stick and a brass fork at the end, takes up the line just above the flat, and so slings it out. The forked stickers on Saturday were, however, at a disadvantage. Mr. Leland making but 40 1/2 yards, and Sawyer (the keeper) 44 yards.

Some fly casting matches which were on the programme were abandoned on account of the weather, but Mr. Marston came forward and cast with Mr. Murphy more to fill up the department than in the hope of doing any long or artistic work in the face of the storm. Mr. Murphy won at 24 yards, beating his competitor by one yard. The match excited much interest, and one could see that both gentlemen were experts who would do themselves credit on a better day. Some promiscuous casting then followed by several gentlemen, all of whom seemed to be good ones, and after an exhibit of a professional style of throwing a bait with the line coiled in the hand, by Mr. H. Wilder, the party adjourned to dinner.

In the opinion of your correspondent, it was a great mistake to have the casting take place over grass instead of on water. No man can recover a line from land as he can where he has the resistance of water to pull against, and the recovering of the fly casters was very bad in consequence. The contest was not as well planned as the last American one, nor were the arrangements so complete; but, no doubt, great improvements will be made in future, and for a first contest it was well done.

At the dinner several happy speeches were made, but that of Mr. Marston was the only one which had a practical bearing. He suggested that an organization should be formed for the cultivation of the coarse fish of the British rivers, which would practically resolve itself into the establishment of studd farms for carp, chub, perch, tench, bream, roach, rudd, dace, gudgeon, and pishops pike. De-populated rivers could be stocked with these fish, and the result, a wholesome and little appreciated source of food supply increased. They manage such things better on the Continent, and Mr. Marston promised to get all the information it was possible to obtain from Germany. The idea was taken at once by the assembled anglers, before whom a definite scheme is to be laid at no distant date. Mr. Marston offered to give five guineas as his own subscription toward starting such an association, which was not to be a money-making affair, but to have for its object the good of the river, and ally the angling portion of it. He alluded to the fact that the continent of North America is now being stocked with carp from Germany, while in England little had been done in fish culture except to hatch a few salmon and trout. His remarks were well received, and after a jolly interchange of thought and a renewal of old acquaintance, the meeting broke up. SALVIENTS.

LARGE STRIPED BASS.—The run of striped bass about the eastern end of Long Island has been good this fall. This week the Blackford Fish Co., of Montauk Point, took 4,200 pounds of this fish, three-fourths of which were specimens weighing from fifty to seventy-five pounds each. One opening one of these large fish a mackerel was found inside it which had been split down the back with a knife for salting, and might have been salted for all that is known to the contrary.

DESIGN FOR ROD GRIPS.—Mr. T. W. Chubb, of Post Mills, Vt., a maker of rods, has patented a device for the grip, dated Oct. 31st, 1881. The grip is covered with colored linen thread, braided on, instead of being wound, after the manner of some whips. It is then heavily varnished.

A monster octopus, or devil fish, has been captured near one of the wharves at St. John's, Newfoundland, where it ran ashore. It is thirty-three feet in length from its tail to the termination of the long tentacles.

Fishculture.

CARP RESIST QUICK-LIME IN THE POND.

SARDIS, MISS., Nov. 14.

Editor Forest and Stream: A few weeks ago my father-in-law, while visiting Jackson, in this State, among other places, "took in" the Lusane Asylum and was perfectly carried away by a fish tale related to him by Dr. Mitchell, the highest official of the asylum. It sounds a little "whimsical," but as my father-in-law is quite an gentleman and a strict member of the Methodist Church, and Dr. Mitchell is a man of unimpeachable veracity, I guess it is true. Here it is: There is a small pond on the Asylum grounds, made more for a stock water pond than for fish; nevertheless fish were put therein last December, or about that time, a few carp were also put in. Since that nothing more was thought of them. The past summer's severe and continued drought almost dried the pond—in fact it got so low and the water became so heated by the sun that it was thought that the fish must have died—at least so many of them that two or three barrels of lime were thrown into it to kill the obnoxious odor from the dead fish. The water was not more than twelve or fifteen inches deep. Now, it seems that Dr. Mitchell possesses a buggy, and the tires on the wheels of that buggy became loose and the Doctor had them rolled in the pond that the water might expand the rim of the wheels and tighten the tires. They remained there several days, indeed, sediment of the lime had settled so thickly on them that they had a wicked appearance. When the wheels were being drawn out, fast ways, something flattered by the man drawing them. He was astonished, for he thought the lime had certainly killed all the fish that the heat of the sun had not. But to satisfy his curiosity he waded around in the pond and with his hands caught two lively carp, in good condition, and about fifteen inches long. Remember, these fish had not been in there a year, and had withstood both the heat of the sun and the strong lime water. Ever since my father-in-law heard that wonderful story of the "carp in the lime pond," he has been raved for a fish pond. He complains of supplying his neighbors with fresh carp from almost a "puddle hole." If carp can stand such a treatment as that and do well what would they do in a nice pond fed by springs? W. H. C.

(The fish would not do well in spring water. No water was used only by the sun so hot for carp. If you want to kill them with hot water you must boil them, and boil them hard. The warmer the water the better the carp grow. No wonder that you regard the lime story as a "little fishy.")

THE NEW YORK FISH COMMISSION.

ROCHESTER, Nov. 16.

Editor Forest and Stream: At the New York State Hatchery we have completed during the past summer eighteen new ponds, which were much needed to accommodate our increasing supply of brooding fish.

The ponds are each twenty-one feet long by twelve feet wide and five feet deep. They are built entirely of lumber, both sides and bottom, as they can be kept cleaner and the supply of water can be used to better advantage. We have now a total of thirty-one ponds, twelve of which contain California mountain trout, seven brook trout, three McCloud River trout, two salmon trout, one containing both a coho and a chinook salmon, and one containing a salmon, land-locked salmon and large McCloud River trout. They agree perfectly together.

We have finished taking the spawn from the salmon trout, and are now taking spawn from the brook trout hybrids. All the fish in the hatchery are looking well, and we shall have a large supply of young fish for next spring's distribution.—SETH GREEN.

LAND-LOCKED SALMON IN CONNECTICUT—Sallybury, Conn., Nov. 17.—A fine land-locked salmon was caught in the Twin Lakes, about ten days ago, by Mr. William W. Stillman, Chief Clerk in the Selection Office at the Hall of Records. The fish weighed four and a quarter pounds, and was very gamey, fighting for twenty minutes and only yielding when completely exhausted. This, I believe, is the second of these fishes ever caught in this State. The lakes were stocked with land-locked wild cutthroat salmon commencing about four years ago, and Mr. Stillman's capture may be one of the original stock. On the occasion referred to Mr. Stillman and Capt. Henry Andrus were fishing for black bass, and they captured twenty-four of them which weighed forty pounds.—R.

FISHCULTURE IN NEW YORK.—The assistants to the New York State Fish Commission returned from Lake Huron Nov. 8 with over a million five hundred brook and salmon trout spawn, which will be hatched and distributed this spring.

Answers to Correspondents.

NO NOTICE TAKEN OF ANONYMOUS COMMUNICATION.

S. M. N., New York.—Have written for the information.

W. N. S., Philadelphia, Pa.—The Colt or Smith & Wesson.

Geo. F., Edna, Minn.—The seed is wild rice, but appears to be poor quality. Not too late to sow now.

Brsy.—The gun is of English make. You can procure one through any one of the importing firms.

J. B. E., Belle Vernon, Pa.—See answers to your queries in Natural History columns, issue of Oct. 27.

SALMAA, Bradford, Pa.—The first volume of the N. E. Bird Life is now ready. Price \$2.50. You can furnish it.

H. L. C., Johnsonston, Pa.—Thanks for pedigree. The dogs are very well bred. Duke exceptional.

L. B. K.—Manton's "Taxidermy Without a Teacher" will probably answer your purpose. Price 50 cents; for sale at this office.

C. W., Southport, L. I.—Weight of shot-gun to be chosen depends much upon your own build. Go into one of the New York gun stores and test the various weights.

E. L., Brooklyn, N. Y.—1. Your gun is choke-bore. 2. Would advise you to have your rod re-barreled by one of the makers. They can do it in much better shape than you can.

W., Hackettstown, N. J.—Where can I get a few yearling carp for my pond? I have applied to Prof. Baird but have not heard from him. Ans. Apply to Mr. E. G. Blackford, Fulton Market, New York City.

W. V. P., New York.—Where can I find a Spanish setter? Ans. Do you not mean pointer instead of setter? There is no recognized breed of setters known as Spanish, but the old Spanish pointer is well known as one of the oldest strains.

E. P. D. Boston.—You will find about Allen S. C. a small wild turkey and deer. The quail shooting is said to be very fine; how it seasons. Make inquiries for the "Old Gage," a sportsman's club, whose members will direct you to the game ground.

E. P. W. Dover, N. H.—Where can I obtain a copy of railroad guide containing time tables for the New England States? Please send for the "Traveler's Official Guide," published by the National Railway Pub. Co., 46 Bond st., New York. Price 50 cents.

SUBSCRIBER, Middletown, Conn.—We believe that it is no secret that the author of "The Breeder-Tutor," a book published some years ago in Rome, Thea, is a local sportsman. He is an able lawyer and a first-class sportsman—a combination by no means rare in this day and land.

J. E. Wheatland, Pa.—Please inform me if Columbus, Ohio, dog, by name of "Duke," first imported into Philadelphia in 1870. Ask the small pointer dash, owned by Mr. Thos. D. Hart of Philadelphia, who first in his class. If this is the dog in question he may now be in Cuba.

C. H. Erie, Pa.—I have a setter dog a little over a year old that is afflicted with worms. He stretches a great deal. I have tried cowitch with poor success. He has had sore eyes, but they are now nearly or entirely well. Ans. I see answer to "W. G. R." in our issue of Oct. 21; also read article on rearing puppies in Nov. 5. The guss are of equal grade.

W. H. Coshocton, O.—My cocker puppy, nine months old, has an enlargement of the glands of the throat about the size of a large lima bean. Ans. Probably an incipient abscess, which may be from the effects of acidity or of worms. It is not a permanent condition. Should it increase in size we should recommend a poultice of flaxseed meal to draw it to a head. It should be opened when you can feel a swelling, and the matter should be allowed to run out. It should be painted once a day with tincture of iodine until it disappears.

W. G. London, Ontario.—My Gordon bitch is lame in near hind leg. She would go on well by a certain time, but she returns and has her very lame. She must have twisted herself while chasing. Her "stifle" joint is in the top and the back swells of the thigh are much swollen and smaller than those of the other hind legs. We fear that this will prove a permanent injury. You should consult a competent veterinary at once. The best treatment that we ever tried in such cases consists of a pint of alcohol, 2 oz. camphor. After the camphor has been dissolved in the alcohol, the wine will be well shaken and applied twice a day, using considerable friction.

E. T. L. Chicago.—I have a hare that I prize very highly (having carried it through the war), but during my recent absence from my home it was nearly exterminated by a fox. I have tried every remedy you give me and restore it to its former bright condition? Is it best to leave the oil in the barrel of a rifle after cleaning it or to wipe it out? My custom has been to wipe it out, but I have heard of putting a chambered plug in each end. Please tell me which is the best way? Ans. 1. You can have the barrel restored by emery polishing. Take it to a shop with a good gunsmith, but he is not a specialist in this kind of skilled man. 2. Wipe the oil out.

S. B. P.—I have a double-barreled, 12-bore, breech-loading shotgun, which I want choked. Is this best done so as to have it carry out a given distance with a limited circumference? 2. Does the length of the barrel make any difference in the performance of the gun? 3. Would you hesitate before having this done to a valuable gun? Ans. 1. Yes; give your instructions to the gunsmith. 2. It does not matter, nor the external appearance of barrel. 3. Provided it were desirable to make it so close, and if it were put into reliable hands. Most any of the firms advertising in this paper will do the work for you in a satisfactory manner.

E. P. New York.—Are there any American gunmakers who change breech-loaders to stocks with concealed hammers, or to what are called "hammerless" guns? 2. I am surprised that so few American makers are inventing "hammerless" guns. Think me, would you then would be inclined to buy them, instead of the foreign, if they were made. Are there any reliable English makers who sell the hammerless gun about the same price as the ordinary gun? Ans. 1. We know of no one who can do this, unless it be Clark Snider, Baltimore, Md. 2. You will find hammerless guns at the stores of all the importers. The hammerless guns come at the same price as others of same grade, but they are all high grade guns.

E. G. Baltimore.—I have a new setter bitch that I have used as a brood bitch, and have now some very promising pups out of her. This summer I sent her to a friend of mine in the country to take care of her, and she returned with a litter of five. I do not know if she whelped by a dog. Will this injure her for future use as a breeding bitch? Of course realize that it will to a certain extent, but what I want to know is if she will be good for anything. I have never owned a dog that I hate to think that I cannot get some more good pups from her. I have several friends to whom I have promised pups, as I do not wish to injure my reputation, or hers. I have a pup that I have had for some time, and I think myself have that you have any occasion for any years that the future progeny of your bitch will partake of the nature of the one in any particular. Although this is a logical case, I think I have never before agreed that the evil which you fear ensues only when the accident happens the first time that a bitch conceives. We have in many instances actually seen cases of this kind, and have never before seen a single animal that would lead us to believe that any male transmitted good or evil to any progeny not his own.

H. L. N. Salem, Mass.—It is impossible to fix upon any one pattern as standard by which to judge the goodness of a dog. There is a wide diversity of opinion as to the degree of choke. We have, therefore, selected the two extremes—a cylinder bore and a very full choke—and give you both patterns as good guns of each class should be used with the thin line of a 20-gauge cylinder and 240 for extra close choke most of our readers will probably find their records to accord with the divergence of their views from these two types. A cylinder bore gun loaded with 1 1/2 oz. of shot should put 11 pellets into a 30-inch circle at 40 yards. An extreme choke bore gun, loaded with 1 1/2 oz. of No. 1 shot should put 240 pellets into a 30-inch circle at 40 yards. The same gun loaded with 1 1/2 oz. of shot should put 240 pellets into the same circle under the same conditions. There is a golden mean in between. While the cylinder bore gun is better than the 240 pellet gun, it is a big score with it counts more than with a scattering chamber, the game is terribly maddened and butchered.

The Kennel.

FIXTURES.

BENCH SHOWS.

December 14, 15 and 16, at Lowell, Mass., Lowell Dog Show. Entries close December 6. Chas. A. Andrew, West Boston, Mass., Superintendent.

December 18, 14, 15 and 16, Atlanta, Ga., Dog Show. Entries close Dec. 6. Charles Lincoln, Superintendent. Office at Belmont & Berkeley's, Atlanta, Ga.

FIELD TRIALS.

November 1, at Glynn, Cal. Field Trials of the Glynn Rod and Gun Club. Entries close October 25. Laverley, Secretary.

November 22, Louisiana State Field Trials. Entries close November 31. Edward Gibson, Secretary, New Orleans, La.

December 24, National Field Trials. Entries close December 24. Jacob Reitz, Secretary, P. O. Box 24, New York City.

December 5, at Hampton, Va. Field Trials of the National Field Trials Association. Entries close December 5. J. R. Staylor, Secretary, Pittsburgh, Pa. Address will be Grand Junction Tenn., after Dec. 1.

THE EASTERN FIELD TRIALS ENTRIES.

WE give below a full description, with the pedigree and public performance, of each dog entered for the Eastern Field Trials; also of sire and dam, so far as known. Our readers, especially those who attend the meeting, will find these notes of great value, as by giving them careful attention and comparing the performances of the different animals, they will be able to form a correct estimate of their value as field performers, and perhaps gain some insight into the mysteries of breeding that

will be of practical benefit in the future. We look forward to this meeting with anxious hopes that great good will accrue, not only in this respect, but by the powerful influence it will wield for the elevation and popularizing of the invigorating sports of the field.

The following goodly lot of youngsters are entered for the Derby; and as this is their first appearance in public, their performances will be watched with eager interest, not only by their friends, but by many who are awaiting the result of this test in order to decide the important question of the election of the best blood to introduce into their kennels. We publish the list as it appeared in our issue of Oct. 6:

DR. E. BLACK EPITER'S ST. ELMO II. St. Elmo II.—Black, white and tan English setter dog, nine months old. His sire, St. Elmo, now dead, was so well known that it is hardly necessary to mention his performance here. He achieved the highest honors upon the bench, and was also a grand field dog, as his winnings at Hampton, June, 1877; Robbins' Island, 1879, and Nebraska, 1880, attest. Although not placed at the trials on Robbins' Island last year, he beat Warburton by far the best heat of the meeting. His dam is Sheldon's Prairie Rose, unknown to us.

GAME OWNER'S ST. ELMO III. St. Elmo III.—Blue Belton English setter dog, fifteen months old. His sire, St. Elmo, is noticed above. His dam, Diana, is unknown to us.

SAME OWNER'S ET. MARS. St. Mars—Lemon Belton English setter dog, eleven months old. His sire is the pure Laverack Alderhot and the dam is the celebrated Mrs. E. A. Spooner's Queen. Mr. E. A. Spooner. A dachshund is entered for the trials, and notice of him will be found further on. These three are entered by Dr. S. Fleet Spier, Brooklyn, N. Y.

DR. H. P. ATEN'S DON. Don—Orange and white English setter dog, sixteen months old, by Mr. J. O. Donner's Ranger II. (formerly Macdon's) out of Mr. John White's Daisy. Don has winning blood in his veins, being a grandson of Macdon's famous Ranger, the winner of innumerable stakes and cups in England, while his sire, Ranger II, is by a first class success all upon the bench. Entered by Dr. H. P. Aten, Brooklyn, N. Y.

J. C. HIGGINS' PLANTAGENET. Plantagenet—Lemon Belton English setter dog, whelped July 15, 1880, by Mr. H. Higgins' Dashing Monarch—mentioned below—out of same owner's Petrolina. We understand that Mr. Higgins pronounces Plantagenet the best dog that he has ever bred. He is a very promising performer in the field, and if he goes right will make it interesting for the Derby. Entered by Dr. H. P. Aten, Brooklyn, N. Y.

J. H. GODFREY'S GUYMARD. Guynard—Red Irish setter dog, fifteen months old, by Rover II, who was bred by Macdon's Queen in Fall's Rose of Bradwardine. We hear that he is doing extremely well. Entered by A. E. Godfrey, Guynard, N. Y.; handled by Phil Thurlair.

A. E. GODFREY'S BRUCE. Bruce—Gordon setter dog, sixteen months old, by Moore's champion Bob out of owner's Beauty, first Boston, 1878. This youngster promises well, and if he has had plenty of work, will undoubtedly run a good race. Entered by A. E. Godfrey, Guynard, N. Y.; handled by Phil Thurlair.

SENATION, JR.—Lemon and white pointer dog, about ten months old, by the Westminster Kennel Club's Senation, who ran at the trials last year and divided third and fourth in the all-aged stakes with Dr. Aten's Glen. He has won too many prizes on the bench to recapitulate, and he has never been beaten when shown. He is the sire of Gregory's Belle, winner of first in userey stakes and third in puppy stakes last year, although suffering with a broken toe, caused by a trunk falling upon it in the cage. He is naturally one of the best field dogs, and displays to perfection the traits of a true and capable hunter. His dam, Senation, Jr., has won one second and one first at New York, and is the dam of Gregory's Belle. Grace is also a capital field dog; and Senation, Jr., is expected to do no discredit to his breeding. Entered and will be handled by Dr. H. P. Aten, Brooklyn, Conn.

PERIDA—English setter bitch, sixteen months old, by Ranger II, out of White's Daisy. She is litter sister to Dr. Aten's Don described above.

FOX—Pointer dog. Dead.

Berkley II.—Red Irish setter dog, whelped March 10, 1881, by Mr. Max Wenzel's chief, whose performances will be found below, out of Mrs. W. E. Pinner's Queen, v.h.c., New York, 1880, first Pittsburgh, 1881, and champion London, Oct., 1881. She is a capital field dog, and if Berkley II. does not receive a place it will not be for lack of good blood in his veins. Entered by N. D. Putnam, New York's Queen Elizabeth.

Queen Elizabeth—Red Irish setter bitch, whelped July 2, 1880, by Macdon's Rover II, out of Hall's Rose of Bradwardine. With the blood of Rover II, and Elio in her veins, she should make a good show when shown at the Derby, New York, 1881.

NOTHMAS—Gordon setter dog, nine months old, by Mr. H. Malcom's Malcom, who was matched by his owner against Joe, Jr., just after his celebrated defeat of Gladstone, but the match was declared off at the instance of Mr. Campbell. Malcom has never been shown in public, but is pronounced by all who have seen him at work to be a remarkably good one. Notthmas's dam, Mr. H. Malcom's Dream III, is a daughter of the Toledo Kennel Club's—Royal Willard's Rogers. We shall expect to see this young aspirant for fame acquit himself as becomes his high breeding. Entered by H. Cossand, Baltimore, Md.

J. H. GODDELL'S REDDIE. Reddie—Red Irish setter bitch, seventeen months old. Winner of the 1st prize at the 1878 Derby at New York. She is a son of the well known Elio and Rose, owned by Dr. Jarvis. They are too well known to need a description here. Entered by Mr. J. H. Goodsell, New York; handled by Martin.

DASHING MONARCH—Black and tan English setter bitch, fifteen months old. She ran in the English Derby last May, 80, to be by the well known Dash II, out of Novel, and was imported by her owner, Mr. D. O. Sanborn, who will handle her.

ROYAL DALE—Black and tan English setter dog, seventeen months old, by Harvard Kennel Club's Dash III, out of Daisy Dale, both of whom will be found noticed further on.

GLEN DALE—Black white and tan English setter dog, eleven months old, by Mr. E. Spooner's Daisy, who carried third in puppy stakes, Robbins' Island, 1879, and was h.c. New York, 1880. We understand that this pair are rattling good ones. Entered by Mr. E. A. Spooner, New York.

DEAN—Orange and white setter. Entered by F. H. Wetmore, East Orange, N. J. Dead.

DOND AND DANITIOS—Belton setters, age unknown, by the well known Jersey Blue, 1st New York, 1878, and 1879, and 1880, and 1881. They are also special for best utility, and also winner of five prizes at Pittsburgh, 1879, including first for best setter in the show; also champion New York, 1879. In addition to this Duke has the reputation of being the best setter dog in New Jersey.

THE DAM is Mr. E. A. Spooner's Daisy, who carried third in puppy stakes, Robbins' Island, 1879, and was h.c. New York, 1880. We understand that this pair are rattling good ones. Entered by Mr. E. A. Spooner, New York.

G. ANTHONY'S BEAUTY. Beauty—Pointer dog, seven months old, by Sport out of Flora, which is all that we have been able to learn. Entered by Geo. Snyder, Easton, Pa.

A. Z. HAMILTON'S PONTIAC II. Pontiac II.—Black, white and tan English setter dog, seventeen months old, by Pontiac, who was the winner of Judge (Bob Hoy-Belle), who, we believe, has never been shown. Entered by R. E. Hamilton, Troy, N. Y.

L. SCHUTTER'S CLEMENITA D. Clemenita D.—Black, white and tan English setter dog, whelped May 7, 1881, by the Harvard Kennel Club's Dash III, who won first with Adams' Drake in brace stakes at Nashville Trials, 1878. His bench show winnings are first at Philadelphia, also first for best imported setter dog of any breed, first Boston, 1879, and dividing first in the same class at New York. Gordon setter Gordon and pointer France the \$500 prize for best setter dog on paper; also first whelped 1/2 ounces II. for braces and the Llewellyn special for best field trial winner. Cornelia, the dam of Clemenita D., is a Leicester-Dart, and was awarded a v.h.c. at Philadelphia, 1879, and c. at New York, 1881. The youngster should show good work. Entered by L. Schuster, Jr., Philadelphia, Pa.

J. V. ORTH'S GERTRUDE. Gertrude—Llewellyn set bitch, seventeen months old, by a Gladstone-Nellie, which is all that we had heard of her. Entered by J. V. Orth, Fitzhugh, Pa.

A. G. SLOO'S GLADY. Gladly—Black and white and blue ticked Llewellyn setter dog, whelped June 4, 1880. His sire Gladstone, and dam Nellie, will be mentioned below. We know of no other whelping to Gladly's set that he will have so good an extraordinary good work if he intends to do full credit to his breeding. Entered by Albert G. Sloop, Vicesonnes, Ind.

P. Z. HARDY'S POLLY. Polly—Black and white ticked set bitch, whelped May 1880, by the Harvard Kennel Club's Dash III, whose winnings are not below, out of owner's Diana, who won second Boston, 1877, v.h.c.; Philadelphia, 1877, v.h.c. imported sleek, and h.c. in native class, Baltimore, 1878. He is in the hands of Capt. McMurdo, who will handle on the bench. He is in the hands of Capt. McMurdo and Grand Junction. Entered by P. Z. Hardy, Boston, Mass.

The remaining entry in this stake, said to be made by Mr. G. B. Reeder, we have been unable to obtain the slightest information about, and shall therefore omit him out of one of the "dark horses."

Peonies Strives.

We now come to the Peonico or all-aged stakes. Judging from the well-known reputation of many of the entries, and the consummate skill of the handlers, we can safely promise our readers that the results will be well worth the attention of every true and ever taken place upon this continent, if not in the world, and that those who are so fortunate as to witness the running will go home with broader views and an enlightened knowledge as to the qualifications and capabilities of the companions of our woodland sports.

A. E. GODFREY'S CROXTETH. Croxteth—Dark liver and white ticked, large sized pointer dog, whelped January, 1879. Winner of 2d prize at International Show, New York, 1879. His sire—Colburn's Duke—was known far and near as a grand field dog. His dam was also a grand field dog. Entered by E. E. Hardy, Boston, Mass.

The remaining entry in this stake, said to be made by Mr. G. B. Reeder, we have been unable to obtain the slightest information about, and shall therefore omit him out of one of the "dark horses."

DR. ATEN'S GLEN. Glen—Black and tan Gordon setter dog, 7 years old. Winner with Ned, in brace stakes, Robbins' Island, 1879, divided 3d and 4th with Sensation in all-aged stakes, Robbins' Island, 1880, and v.h.c. New York, 1880. His sire is the well known and famous far and near as a grand field dog. His dam was the well known bitch "Mullin's Belle." With his good breeding and experience he should make a good record. Entered by Dr. H. V. Aten, Brooklyn, N. Y.

MAX WENZEL'S CHIEF. Chief—Red Irish setter dog, whelped Aug. 20, 1879. Winner of 1st in puppy stakes, Robbins' Island, 1880. His bench show winnings are 2d in puppy class, New York, 1880, and 1st in open class, New York, 1880. His sire is the well known and famous far and near as a grand field dog. His dam was the well known bitch "Mullin's Belle." With his good breeding and experience he should make a good record. Entered by Dr. H. V. Aten, Brooklyn, N. Y.

J. C. HIGGINS' DASHING MONARCH. Dashing Monarch—Black and white Llewellyn setter dog, whelped Aug. 20, 1879. Winner of 1st in all aged stakes at Robbins' Island, last year; and h.c. at New York bench show, 1881. Monarch will be remembered by those saw him last year as a level gated, grand moving dog, who only lacked experience to become a star. He is a capital field dog, and in North Carolina, who will undoubtedly bring him out in good form, and we may expect to see some capital work from him. Entered by Mr. Higgins.

E. A. HERTZBERG'S EMPEROR FRED. Emperor Fred—Orange and white Laverack setter dog, whelped Feb. 14, 1877. Winner of many prizes on the bench in England, and 1st New York last spring. His sire, Blue Prince, is well known as the sire of field trial winners, while his dam, Blue Daisy, is equally well-known. We hear that he is going grandly, and will astonish some of the best dogs on the bench.

E. A. HERTZBERG'S ALDERHOT. Alderhot—Lemon belton Laverack setter dog, whelped September 11, 1878. Has never been shown. His sire, Emperor Fred, is noticed above. His dam is Robinson's Nellie, and is expected to be a fine field dog of good form and is expected to give a good account of himself. Both of those are entered by E. A. Hertzberg, Brooklyn, N. Y.

R. M. LINDELL'S JUNO. Juno—Lemon and white pointer dog, three years old. We "discount" the name of her sire and venture to call him viscount, who won nearly thirty prizes and cups before he came to this country. Vic, the dam of Juno, we do not know. Entered by R. M. Lindley, Saratoga, Pa.

R. M. LINDELL'S GLEN. Glen—Lemon and white pointer dog, whelped May 29, 1879, by Snapshot, winner of six cham. lion prizes, five of them in England. We believe that he was never broken to the field, although full of point, and of grand action and style. His dam, Gyp-y, was h.c. in the open class at the Philadelphia trials, and 1st in the class of Munn's Payole, and a good fielder. His sire was trained by Mr. A. Winter, of Cairo, Ga., and is said to be a good one. Entered by H. Hall, Marlboro, N. Y.

ALDERHOT—Lemon Belton Laverack setter dog, whelped October 11, 1878. Has never been shown. His sire, Emperor Fred, is noticed above. His dam is Robinson's Nellie, and is expected to be a fine field dog of good form and is expected to give a good account of himself. Both of those are entered by E. A. Hertzberg, Brooklyn, N. Y.

J. C. HIGGINS' DASHING MONARCH. Dashing Monarch—Black and white Llewellyn setter dog, whelped Aug. 20, 1879. Winner of 1st in all aged stakes at Robbins' Island, last year; and h.c. at New York bench show, 1881. Monarch will be remembered by those saw him last year as a level gated, grand moving dog, who only lacked experience to become a star. He is a capital field dog, and in North Carolina, who will undoubtedly bring him out in good form, and we may expect to see some capital work from him. Entered by Mr. Higgins.

E. A. HERTZBERG'S EMPEROR FRED. Emperor Fred—Orange and white Laverack setter dog, whelped Feb. 14, 1877. Winner of many prizes on the bench in England, and 1st New York last spring. His sire, Blue Prince, is well known as the sire of field trial winners, while his dam, Blue Daisy, is equally well-known. We hear that he is going grandly, and will astonish some of the best dogs on the bench.

Winner of 1st in all aged stakes at Robbins' Island, last year; and h.c. at New York bench show, 1881. Monarch will be remembered by those saw him last year as a level gated, grand moving dog, who only lacked experience to become a star. He is a capital field dog, and in North Carolina, who will undoubtedly bring him out in good form, and we may expect to see some capital work from him. Entered by Mr. Higgins.

THE FOREST AND STREAM CUP.

also well known as a good one. Entered by Wm. Tallman, Providence, R. I. Jennie will be remembered as winner of the first prize in all aged stakes at Robb's Island in 1879. She has also won on the beach as follows: First in puppy class, Providence, 1875; second in native class, Boston, 1878; first at Worcester, 1879, and at Brockton, 1880; and second in native class, New York, 1880. She is a grand field performer and we shall look for some good work from her.

WM. TALLMAN'S JENNIE II.

Jennie II.—Black and white setter bitch, whelped March 9, 1880, by Scrauton's Patch, and mother of Copland. She is one of Jennie, winner of all aged stakes the first meeting on Robb's Island. She was second in the nursery stakes last year, when but nine months old and sick with distemper. She only weighs twenty-two pounds, but this does not indicate of merit, as she showed last year wonderful qualities for so young an animal, and if she fulfills the promise then made she will make it warm for her competitors. Entered by Wm. Tallman, Providence, R. I.

VINIE.

Vinie—Liver and white pointer dog, two and a half years old, by Dilley's Ranger out of Corcoran's Bessie. Entered by S. T. Hammond, Springfield, Mass. Withdrawn.

G. R. WATKINS' TOM.

Tom—White, with orange ears, setter dog. Whelped November 1878. Winner of cup in 1880 and of cup in 1881. By Royal Dnke, whose many winnings on the beach are too well known to be recapitulated here. His dam, Bessie, we believe, was never shown. Entered by G. R. Watkins, Brooklyn, N. Y.

D. C. SANBORN'S NELLIE.

Nellie—Black and white setter bitch, five years old. Winner of puppy stakes, Hampton, Pa., 1877, and the free-for-all at same meeting. She divided third with Countess, at Nashville, 1877, and divided second with row, at Patoka, 1879; also won in brace stakes with Dan at same meeting. She is by Belton, winner of first and special at Pueblo, 1877, out of Dimple. She comes a long way to contest for the honors of victory, and will undoubtedly put her best foot foremost. Entered by D. C. Sanborn, Downing, Mich.

D. C. SANBORN'S COUNTY NOBLE.

County Noble—Black, white and tan English setter dog, two years old; winner of the Derby at Vincennes, Ind., last year. He was shown, but unplaced, at New York, 1881. His sire, Count Wind'em, and dam, Nora, are too well known to need a description here. This Count is not unworthy his famous ancestors his performance at Vincennes attests; and we should not be surprised to see his colors well to the front in the coming contest. He will be run by his owner, Mr. D. C. Sanborn, Downing, Mich.

F. BRUNIGER'S LEO.

Leo—Red Irish setter, about four years old, pedigree unknown. He has never appeared in public; is now suffering from a severe cut on his foot which may prevent his putting in an appearance. Entered by Mr. F. Bruniger, Newark, N. J.

Sandstone—Lemon and white native setter dog, whelped Feb. 19, 1880. He is by Mr. P. H. Bryson's Gladstone, whose many winnings, both on the beach and in the field, have given him a world wide reputation, and are so well known to our readers that it is needless to repeat them here. His dam, Nellie, comes from a winning strain. Her sire is Seller's Dash, and dam, Alice, is a litter sister of Sanborn's Nellie, and if there is anything in breeding Sandstone should show well to the front. He will be handled by Mr. W. W. Titus, Entered by S. W. Weir, New Albany, Ind.

H. C. HAMILTON'S MACE.

Mace—Setter dog, two years old, by Frank out of Post's Ross. This is all we have been able to learn of him. Entered by H. C. Hamilton, New York.

DR. S. F. SPIER'S MAIDA.

Maida—Black, white and tan English setter bitch, four years old, by owner's Dick out of Robert O. Gates' Chit. Maida ran at the trials last year, and worked exceedingly well until an ill-advised chip put an end to her chances. We shall expect to see her retrieve her fortune this year.

LIZZIE LE.

Lizzie Lu—Black and white ticked English setter bitch; winner of the Nebraska Trials, 1880, with a score of 98 out of a possible 100 points. She also ran at the trials last year, but was hardly given a fair chance, being declared beaten before she realized that she was hunting. We trust that she will at least have a chance to show her quality, as we believe her to be as good as she is handsome.

DR. S. F. SPIER'S PRINCE HAL AND CHANCELLOR.

Prince Hal and Chancellor—Black and white English setter dogs, by St. Elmo out of Maida, both mentioned elsewhere. Prince is a little over two years old, and has been doing good work on quail. Chancellor is twenty-one months old, and is thought exceedingly well of by his owner. All four of the above are entered by Dr. S. Fleet Spier, Brooklyn, N. Y., who has entered no less than six.

W. O. PARSONS' GUS.

Gus—Orange and white setter dog, two years and seven months old by F. Forman Taylor's One-eyed Sanchez (now dead) whose reputation as a grand field dog was world-wide. His dam is a native of unknown pedigree. Entered by W. O. Parsons, Jr., New Brunswick, N. J.

D. T. WORDEN'S CHATELAINNE.

Chateleine—Black white and tan English setter bitch, nearly two years old, by St. Elmo out of Maida. Both of them have already been described. We learn that she has been doing very well, and will undoubtedly show us some good work. Entered by D. T. Worden, New York.

C. CASHDAN'S TIP.

Tip—Setter by Knapp's Cap out of Lambert's Peg. We can learn nothing of this dog, or bitch, as the case may be. Entered by C. Cashdan, New York.

J. STEINER'S BELL.

Bell—English setter bitch, also unknown, entered by Jacob Steiner, Brooklyn, N. Y.

P. R. KING'S BOSS.

Boss—Pointer. All the information that we can obtain of this dog is, that Senatus is his sire and that he is said to be a chip of the old block. Entered by P. R. King, Sparkill, N. Y. Handled by Martin.

S. D. HIBLEY'S SUE.

Sue—Red Irish setter dog, three years old, winner of second in puppy class, New York, 1879; and second open class, New York, 1880. Sue ran in the trials last year but was not placed, winning one heat only. Her sire, Duke, is a son of Hamilton Thompson's old Duke. Her dam is Harrison's Belle, unknown to us. Entered by S. D. Hibley, New York.

J. H. CLARK'S PRINCESS DRACO.

Princess Draco—Black and white English setter bitch, whelped Aug. 1877. Her sire, Rob Roy, won first champion stakes at Brewster's, and second in the trials last year. Her dam, Fiddie Trials, Her dam, Lily, was bred by Mr. Lewellin and is a daughter of his celebrated Dan. Entered by J. H. Clark, Philadelphia, Pa.

W. O. CORNELL'S MATCH.

Match—Liver and white ticked pointer dog, nearly two years old, only winner at New York, 1881. His sire, Sensation, and dam, Grace, are noticed above. Match is now in Virginia, being handled by Mr. Luke White. We learn that he is going splendid, and displays much of the style of his sire. Entered by Robt. C. Cornell, New York.

BOY HAN.

Don Juan—Lemon and white pointer, two years old, by Sensation, out of Psyche II. Withdrawn.

W. A. BUCKINGHAM'S GROTTO DALE.

Grotto Dale—Orange Dale, three years old. His winnings are first in puppy stakes, Robb's Island, 1879; and second with Aldrich's Sunat at same meeting. He has been shown on the beach but once at New York, 1880, getting v.h.c., his sire, Waters' Grotto, securing first in same class. His dam, Dora, was won by her owner at the trials last year, and is a good fielder. Three of her progeny are entered for the trials. Grotto Dale ran a capital race at the meeting last fall, in fact so well did he perform in his heat with Gladstone that we looked

upon him as sure to win, until he made an ill-advised and most inopportune chase, which at once destroyed all chances. He is going very nicely now, and Tallman, who has him in charge, will do his level best to bring him to the score in good form. Entered by W. A. Buckingham, Norwich, Ct.

J. H. GOODELL'S DAISY LAVATERACK.
Daisy Lavaterack—Lemon Belton English setter bitch two years old. Winner of second in Derby, National Trials, 1880; v.h.c., at Pittsburg; and third New York, 1881. Her parents are the well known Thunder, of Mr. A. H. Moore, and Mr. L. H. Smith's Princess. Daisy, although but one, will take a deal of beating before she surrenders. Entered by Jas. H. Goodsell, New York. Handled by Martin.

RACKET.
Racket—Black, white and tan English setter dog, two and a half years old, winner of third New York, 1881. He is by Bar out of Leoda, whose performances we have not at hand. Entered by Mr. Goodsell. Handled by Martin.

J. H. GOODELL'S DON JUAN.
Don Juan—Blue Belton English setter dog, two years old, winner of cup, New York, 1881. Sire is by Pam O'Shanter out of La Reine, also entered by Mr. Goodsell. Handled by Martin.

H. W. LIVINGSTON'S BARONET.
Baronet—Lemon and white pointer dog, whelped Nov. 24, 1879. Winner of v.h.c. and medal for best pointer dog with field trial record, New York, 1881; and third in puppy stakes at Robb's Island last year. His sire is the well known Rush of Mr. Orgill, whose many winnings on the beach are well known. His dam, Livingston's Rose (champion Sapsnot-Gipsy), won second New York, 1880. Baronet is thought well of by his owner, and will undoubtedly show some good work. Entered by H. W. Livingston, New York. Handled by A. L. Titus.

H. A. ROSENTHAL'S FLORA, PRINCE BALM AND PILOT.
Flora, setter bitch, nine years old, by Sport out of Flora I.; Prince Balm, setter dog, three years old, by Nick out of Flora I.; and Pilot, setter dog, two years and nine months old; are all unknown to us. Entered by H. A. Rosenthal, New York. This completes the entries for the Peonic or all-aged stakes, and a grand lot they are. Should we be blessed with good weather we shall expect to see at thirty starters out of the forty-three entries, and to witness some of the grandest performances that have ever graced the field.

Members' Stake.
Open to members of the Club only, each entry to be owned and handled by the nominator.

ST. GLEN.
Spy, entered by S. D. Ripley, is mentioned above; as is also the Glen of Dr. Aten.

ST. PATTI.
St. Patti—Black and white English setter bitch, five years old; c. at New York, 1877, the only time shown. Her sire, Pride of the Border, is too well known to our readers to need description here. Her dam, Herzberg's Jessie, won second at Springfield, 1875; and special for best bred bitch to be shown with one of her

THE FOREST AND STREAM CUP.

progeny, having the best field trial and bench show record, New York, 1871. St. Patti is litter sister to St. Elmo. She should show good work, as her breeding is the best. Entered by E. A. Herzberg, Brooklyn, N. Y.

BROOK, COUNTESS, CHIEF.
Brook and Countess, entered by G. T. Leach, New York, are noticed above, as is Chief, of Max Wenzel.

J. O. DONNER'S BESSIE.
Bessie—White, with lemon ear, setter bitch, three years, by owner's Ronger II. (Champion Ronger-Wonder) out of Dr. Mallard's Belle. This bitch was second in puppy stakes, Robb's Island, 1879, when less than ten months old. She did some excellent work at the trials last year, beating St. Elmo and Raleigh, but was not placed. We think her a good one and if shown at her best it will be no soft thing for her competitors. Entered by J. O. Donner, New York.

GROUSE DALE.
Grotto Dale, entered by Wm. A. Buckingham, will be found described above.

CHAS. H. RAYMOND'S AMI.
Ami—English setter, two years old, by Morford's Don. Winner of first Springfield, 1876; second St. Louis, 1878, and was a capital dog in the field. Ami's dam was the well known Fairy, whose history is familiar to all. Entered by Chas. H. Raymond, Morris Plains, N. J.

MAX HARKAWAT.
Max Harkawat—English setter, three and a half years old, by Guy Mannering, who won the Centennial prize at Philadelphia, 1876, and special for best setter, New York, 1877. His dam, Quinby's Rosie, we do not know. Also entered by Mr. Raymond.

TOM.
Tom, entered by Mr. Geo. W. Watkins, is mentioned above. We had hoped that this stake would have brought out a larger number of entries, and that the members of the club would have come forward and made this the most interesting event of the meeting. We trust that next year we shall see such an improvement in this respect as will give this event the prominence that it deserves. We shall give our readers next week full details of the summing up to the latest possible moment.

SOME months ago we offered the Eastern Field Trials Club a cup to be competed for at the coming meeting by amateur handlers, and the offer was accepted by the association. The importance to his owner of a knowledge of how a dog should be worked is not likely to be overated, and we were inclined to think that the offer of such a prize as this would have a tendency to induce owners of well-bred animals to run them in the coming trial.

The cup which is to be competed for is of sterling silver and nine inches in height. On its face it bears an excellent portrait of a well-bred setter dog, for one of the best known blue bloods—say if we may be allowed the expression. The artist by whom the accompanying cut was engraved has not done justice to this portrait, as the dog is here represented as badly undershot, while in the engraving on the cup his head is excellently drawn. On the opposite side of the cup is the inscription:

FOREST AND STREAM

TO THE BEST AMATEUR HANDLER,

(Space for Winner's Name).

EASTERN FIELD TRIALS.

1881.

The prize was designed by Mr. C. B. Wilkinson, of Wilkinson & Lemon, and can be seen for a few days in the window of E. S. Harris' Sportsmen's Warehouse, 177 Broadway.

Mr. J. C. Donner, President of the Eastern Field Trials Club, has presented to the association an elegant and valuable piece of plate to be awarded to the breeder of the winning dog in the all aged stakes.

New York, Nov. 22.—Editor Forest and Stream: Messrs. Tatum and I have shot manufacturers, of New York, have presented to the Eastern Field Trial Club, through the hands of Mr. T. Leach, Esq., \$50, to be used to help to defray the expenses of the coming Eastern Field Trial, which commences on Robb's Island on Thursday of the present week. JACOB PRITZ, Sec.

CLASSIFICATION AT FIELD TRIALS.

LAMAR, Mo., Nov. 7.

Editor Forest and Stream: If the system of classifying dogs at field trials were changed, it would, I think, add greatly to the number of entries in the National and State trials. In the nursery and puppy stakes the system is the same. After eight months old it is not eligible for the puppy stakes, and if it does not wish to enter in the all-aged stakes, it must be kept at home; and just for those reasons, the want of time, money, age and experienced men to educate it, to compete with the champions. This education must be the first class in every sportman knows. We occasionally find pups that are very apt at training, but they are, like hens' teeth, scarce and far apart. To accomplish that amount of education at that age is, as a general rule, too severe on the youngster. Sportsmen will know that a pup should not have hard labor work even at the age of twelve months; and should be not be whipped at the proper season, may at the age of thirteen months be obliged, if entered, to compete against those who might be only one day less than eighteen months old. There will be found plenty of amateur sportsmen, who are lovers of the dog and gun, who would gladly enter in field trial sports if there was a proper class for them. Look at our bench shows, and see the different classes we have. We find them far better patronized than our field trials. The brace stakes in our field trials could be abandoned, and also the nursery stakes, as all dogs are run in braces. This would leave room for two classes—a champion class and a class for young dogs between the puppy and free-for-all class. At present the all-aged stakes are left open until the evening of the trial, and who knows until he is there how many of those champions his pup will have to contend with? Just think for a moment! A pup nineteen months old, with six or seven months of moderate field work, must run with that of three or four years' experience. Would any one think of taking a two-year-old colt and enter it in a heavy harness race, best three in five? Oh, no! Why not? Simply because its age, education and experience are not sufficient. If we wish good, strong, well-formed and lasting field dogs, make room for them, so they can be weaned before training them for field trials, and then we shall have some reward for our labor. The nursery stakes as present is the most inhuman practice ever put upon the canine family. Just think of taking a pup in its childhood and putting it to field labor and teaching it to point stanchly, dropping to bring and hold, and to enter in a heavy harness race, best three in five? Oh, no! Why not? Simply because its age, education and experience are not sufficient. If we wish good, strong, well-formed and lasting field dogs, make room for them, so they can be weaned before training them for field trials, and then we shall have some reward for our labor. The nursery stakes as present is the most inhuman practice ever put upon the canine family. Just think of taking a pup in its childhood and putting it to field labor and teaching it to point stanchly, dropping to bring and hold, and to enter in a heavy harness race, best three in five? Oh, no! Why not? Simply because its age, education and experience are not sufficient. If we wish good, strong, well-formed and lasting field dogs, make room for them, so they can be weaned before training them for field trials, and then we shall have some reward for our labor. I have had the pleasure of shooting over the dog upward of twenty-five years, and have stepped out in field trials, I speak only from experience and what I have seen. Old Foot.

HE HAD A HANG-DOG LOOK.

CLEVELAND, O.

AT different times I have bought dogs "sight and unseen," as the boys say when trading jack-knives, and each time very luckily, got all I bargained for—fully as good or better than I had expected. Not so fortunate a friend of mine, who, a few weeks since, sent sixty or sixty-five dollars to a Western town in answer to an advertisement, and in due season received a very fair looking dog, except that he had a "hang-dog" look, neither lively nor cheerful—none of those sleekish brutes that are not at all pleasing.

Of course, a "trial trip" was the first thing in order. My friend put up his team at a farm-house, and induced the farmer to accompany him. Some rough ground was fixed over a fair point one of which fell to the gun. The dog dropped to shot, and, at the command, started to retrieve. Our sportsman began to think he had a prize, and blamed himself for thinking meanly of the dog at first sight; but at this moment, and with the bird under his feet, he discovered that he had a "hang-dog" look, and that his thoughts of retrieving "partridges" were dismissed. In an instant the dog seemed transformed from a mild-eyed, subdued snook to a fierce wolf. His lips were drawn back, and his teeth looked as molting as those of a hungry shark to the man over-board. He sprang over the fence, took the nearest sheep by the throat and killed it in a twinkling; also two more. By this time the owner had him by the collar, and the excited owner of the sheep was trying to take a hand in the fray. But the bloodthirsty creature, being loose, snatched his master's arm, and sprang on and killed the fourth sheep.

It was now high time for the shot-gun to take a hand in the melee, which it promptly did, "trying for a double" on this beating party. If buzzards will feed on so mean carrion, boys—and the man who sold him—are all there is left of this highly advertised sixty-dollar dog.

Eight dollars made peace with the farmer, and my friend again has his eye out for a (non-sheep killing) setter. MZ-HIT-ABLE.
ATLANTA BENCH SHOW.—Everything points to a most successful show. Entries are coming in and the gentlemen having the matter in charge are working like beavers to make this the first show of the kind ever held in this State—something worthy the name. May abundant success crown their efforts.

TRAINING VERSUS BREAKING.

IN TEN CHAPTERS.—CHAP. III.

WHILE teaching our pup to charge, his other lesson must by no means be neglected, but plenty of practice must be sandwiched in until he appears to thoroughly understand the meaning of To ho, and will readily stop at the word or upraised hand. When he is reasonably perfect in this, you can vary the lesson by placing the food upon your knee, as you sit by him, and bringing his nose very close to it, and after a while, as he improves, you can lay the morsel upon his nose and he will soon learn to hold perfectly still and retain any attitude that you may place him in. As he advances in knowledge, you should take a piece of meat of good size, that he cannot swallow, and carefully open his mouth—this you can do by clasping your hand around his muzzle and gently forcing the thumb and fingers between his jaws—and placing the piece therein, at the same time commanding him to To ho. Do not remove your hand from his jaws, but hold him lightly yet firmly; for although the chances are in favor of his understanding what is wanted, and obeying readily, still it is necessary to retain the grasp as we are not through with him yet; and should the taste of the meat prove too tempting and he undertake to bolt it, you, having a good hold of him, can at once open his mouth and secure the meat. As soon as he comprehends what you require and remains perfectly quiet, gently force open his mouth and take the meat from him, at the same time telling him to "drop," and at once reward him with a piece of some other kind of meat, thus teaching him that he cannot eat the first piece, nor even a bit of it, but must deliver it safe into your hand. We generally use a piece of tough, parily-cooked beef for the trial, and are very particular in our first lessons of this kind to reward him with a bit of liver or something entirely different from the large piece. The utility of this lesson we will explain further on, only remarking here that we consider it of vital importance that our pupil should be thoroughly trained in this, for we think it to be one of his most necessary lessons, and too much time cannot be expended in perfecting him in this branch of his education. He should become so perfect in this that he will take the smallest bit of meat in his mouth and hold it perfectly still, without the slightest movement of his jaws, and deliver it readily into your hand without reluctance.

You should accustom him to the restraint of the chain very early in his career, for the longer you wait the harder will be the task; he should be chained up two or three times each day, for a little while only at a time, taking care that he is perfectly quiet when you loose him. Should he be very restless and uneasy, you must soothe him with kind words and pet him until he becomes quiet, and on no account unfasten him until he ceases his struggles and remains calm for a little while, thus teaching him that howling and struggling will not win freedom. Be very careful to see that he cannot break his collar nor slip it over his head, nor break his chain, for it is of the utmost importance that your lessons should be thorough, and that at no time should he get the idea into his head that there is any possible course except implicit obedience to your wishes. Great care must be taken at all times, in all his lessons, that he is not kept under restraint for too long a time, but the increase of time must be none the less, although very gradual and almost imperceptible. Much will depend upon his disposition in this respect, so that he shall not become disgusted and be an unwilling pupil. At the slightest indication that he is getting weary of instruction, you must let up a little and proceed slower, but with such care and good judgment that he shall not mistrust the reason; and if you pursue the proper course and manage him rightly, you will be amply repaid when he comes to maturity in witnessing the intelligent and obedient manner in which he will obey your commands and submit in long continued restraint without a murmur.

We accustom our pup from the first to the society of fowls, and if possible procure a brood of chickens for him to associate with. We greatly prefer game fowls for this purpose, for we think they are possessed of stronger scent, thus being more attractive to him, and making him all the more eager to investigate them, while the mother being much more brave in their defense than a common dunghill will at his first attempt to chase or worry them give him a lesson that he will never forget. Upon the occasion of his introduction to the poultry, let him be instructed that you have planned the interview, but he himself accidentally come upon them while at play; he may not chase, but the chances are that he will make a rush for them. Do not stir, but calmly say, To ho, and leave the rest to the old hen. Should he hear you and stop, you must caress and praise him. Should he "point" them, do not encourage, neither must you prevent him, but take no notice of it, for should he find that it was pleasing to you he might form the habit that would not always prove satisfaction. Upon the other hand, should you prevent him, he would perhaps think it was wrong to point, so that the best way is to leave him alone, and let him point to his heart's content, thankful that he has the instinct, and content to patiently await the proper time to so direct this wonderful gift that its display shall minister to your pleasure and afford you abundant enjoyment.

There is no other point to which we wish to call your attention while we are upon the subject. If you have hunted much you have undoubtedly seen dogs that would point rabbits and partridges to chase them. Now, that our pupil may not be guilty of such indiscretion, when old enough to take the field, we will proceed to so train him that he will never pay them the slightest attention. We always obtain, if possible, a pair or more of our common wild rabbits; if these cannot be had the tame variety will answer. Then we build them a hut alongside the puppy's pen, with a hole communicating just large enough for them to pass through, that they may visit him at their pleasure and readily escape should he be too familiar, and our work for that day is never done for that year, if the dog is permitted to hunt. We once purchased for catching a magnificent dog, which was entirely worthless from this cause. Although he had an excellent nose, and was perfectly staunch, he would point every rabbit that came in his way, and would "draw" on his trail, and you could never make sure but he was leading you after one of these pests instead of a bird. We took him home and placed him in a large yard, with several of his hot-tailed friends, and left him to his fate. He pointed them steadily all the afternoon, and refused to leave them to

eat his supper. What he did during the night we cannot say, but when we visited him in the morning, although he was lying down, his eyes were keenly pointing, but apparently very tired. He did leave them to go to his breakfast, but as soon as it was down he immediately resumed his work. This went on for nearly a week before he appeared to weaken, and before the close of the second week he evidently had had enough of it. We then took him into the field, taking pains to go where rabbits were plenty, but not once did he pay them the slightest attention, nor was he ever known to notice them again. For the same reason we like to have cats about the house that our pup may become well acquainted with them before he commences hunting.

We should have mentioned before that the pup should be let out of his pen for a good run, at least twice a day, and if he will remain about the house and not stray away, we should much prefer to let him run all the time, for the more exercise that he gets the better will it be for his strength and endurance in the future, and the less he is confined the better will it be for his courage and confidence.

While our pup is yet young he should be taught to love the sound of the gun. This can be easily accomplished if the proper course is pursued. In the first place, we take a couple of old tin pans, and while his attention is attracted by something that interests him we strike them together, lightly at first; and if he appears to be afraid we are very careful not to add to his fright by a repetition of the noise anywhere near him, but take the pans to quite a distance from his pen and leave them, and wait awhile before trying again. When it is time to feed him we go to the pans, and while sounding our whistle, as before described, to let him know that we are coming, we give a strike just loud enough for him to hear plainly, and at once proceed to his pen and give him his feed. By pursuing this course for a few days, and gradually giving a little closer every time, he will become accustomed to the sound, and learning that the noise is connected with our coming, and also his dinner, he soon gets used to it, and in a short time will stand the racket without flinching. When he has become so accustomed to the noise that he shows no signs of fear at quite a loud crash it is time to try him with the gun. In order to do this we carefully load with a light charge of powder and stand at some little distance—say forty or fifty yards away—and be ready at your signal to fire. You will now enter his pen, and after he gets a little quiet call him to you and put a piece of meat before him and bid him To ho, at the same time raising your hand as a signal for the gun. Carefully watch him, and should he display any sign of fear the experiment must be repeated as with the pans. There is no need of your presence only to notice how he behaves, and you can distance with your assistant, unless, as will probably be the case, he does not mind the report when the gun can be brought nearer, and you can make another trial. Great care must be taken not to frighten him with too loud a discharge, nor should it be too close to him, until he gets used to it. By paying close attention to him when under fire, you can readily tell how far it will do to go, and by properly conducting your experiment you can soon teach him to love the sound of the gun, even when fired over his head; indeed we have cured in this way some of the worst cases of gun-shyness that we ever saw. Compare a few dogs are gun-shy, and it is with these only that these precautions are necessary. After your pup has been carefully accustomed to the noise do not lay the gun aside as soon as you have accomplished your object, but let him hear the sound occasionally until his education is complete, taking good care that the discharge of the gun is at once followed by something pleasing to him—his dinner, for instance—or let it be a prelude to giving him his liberty, thus giving him to understand that the noise means something, and soon the noise, even the sight of the gun will cause him pleasurable emotions that he will never forget.

THE FLEA.

BELOW will be found what the current number of Vero Shaw's Illustrated Book of the Dog has to say about the flea. The last paragraph is worth our attention, and we will retain the gist of the whole matter, and should be printed in large type and hung in a conspicuous place in every kennel:

The flea, the *Pulex irritans*, is by far the most common of hair parasites, although by no means the most dangerous and troublesome. They are found on all warm-blooded animals, very difficult to get rid of; for not only must those actually on the animal himself be destroyed, but the animal's bed, the carpet, and everything, in fact, on the dog may have lain for any length of time, and be thoroughly chaste and disinfected.

In long-haired dogs they are usually principally to be found along the spine, in the neck, and behind the ears. Here, then, they exist in colonies, and lay most of their eggs, and lead altogether a very active life. They are generally found in pairs, the male and female, together bearing their nests, however, and often bite, black and hard and numerous, will be found at no great distance, adhering to hairs. Warm weather, a too hot kennel, and filth in general are all favorable to the multiplication of these pests.

Fleas on dogs, we believe, are more injurious than many people suppose; from the constant biting and irritation they render the dog nervous and excitable, and this, combined with the loss of sleep, often causes indigestion, loss of tone and emaciation, and paves the way for the incoming of dangerous and, perhaps, fatal diseases.

By biting himself and scratching himself the poor dog, oftimes so disfigures his skin that he is supposed to be suffering from mange, is taken to some so-called "dog doctor," is dressed—saturated if you prefer—in some irritating paste, however, and often scorcht so quickly—and so "cured" by being sent to his long home.

There are many ways of getting rid of fleas in the dog, but we shall only mention the most simple, and not the dangerous class of remedies.

We have found powderd flowers of *Pyrethrum roseum*, sometimes called Kew's insect powder, very efficient. The hair must be lifted up, and the powder blown in. Little pups of below are sold for this purpose, but are empty, it is cheaper to get the powder in bulk, and to have it produced by means of an india-rubber puff-ball. Next morning the dog must be washed and have a good run, and the process will wait repeating. If a dog is much troubled with fleas, the powder should be mixed with lard or tallow, put in a tin, and the insects are more often driven off than killed.

Olive oil or warm cast oil may be used. If so, we must thoroughly soak the animal's coat with the oil, and we have to take care he does not catch cold in the morning. If we soak the dog at night he will sleep him next morning. This process also will wear repeating.

There is a remedy which is better suited for long-haired dogs. We refer to the quassia wash. With this the dog's body must be thoroughly washed, and he may then be turned out to shake himself, and dry and have a scamper.

There are many other remedies, but we think we have named sufficient. Mr. Gamge recommends the oil of anisee-seed mixed with common oil. We have not tried it, but should think it would do good.

Carbolio acid and tobacco juice, to which we may add corrosive sublimate, are all fatal to flea life, but may destroy the dog as well as the pest.

Why is it that people find it so difficult to rid a dog of fleas? We may keep on poisoning the fleas and washing the dog, and a few days thereafter find he is as bad as ever. This is the reason: he gets a new stock of fleas from the place he lies in, and fleas are wonderfully prolific. The only point, then, is to give the dog a perfect clean kennel. Change his bed from straw to pine shavings, sprinkled with a little turp., and thoroughly clean out and disinfect his kennel. We may also dust a little of the powdered pyrethrum flowers in the place where he lies. You will thus get to the very root of the evil.

NATIONAL TRIALS.—We have received a letter from Mr. T. M. Aldrich, who is at Milan, Tenn. He reports a plenty of quail but is mildly expostulative against the sportsmen and weeds, and fairly eloquent in his denunciation of the burrs and ten-rail fences. He only wishes that he had shot them, clipped and grassed, so as to make a wonderful profit. This is the point, then, is to give the dog a perfect clean kennel. Change his bed from straw to pine shavings, sprinkled with a little turp., and thoroughly clean out and disinfect his kennel. We may also dust a little of the powdered pyrethrum flowers in the place where he lies. You will thus get to the very root of the evil.

THE NATIONAL TRIALS.—Special dispatch to the Forest and Stream: We spent about five hours to-day drawing part of the week-end, and secured a total of twenty-four quail, averaging eighteen birds each. Another draw will be made Thursday. P. H. Bryson.

This confirms other advices received that the supply of birds is all that could be desired to insure a successful meeting.

GONE SOUTH.—Mr. Fred A. Taft, of Dedham, Mass., has gone to North Carolina with a string of fine dogs for a three or four months hunt.

KENNEL NOTES.

* * * Breeders and owners of dogs are invited to send memoranda of names called, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notices; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.

NAMES CALLED.

Irish Set.—Claimed by Mr. A. A. Hayward, South Norwalk, Conn., for Irish setter bitch whelped Aug. 5, 1881, by Champion R. O'More out of Callender's Gay (champion Elcho-champion). Irish.—Claimed by Mr. Frank A. Bond, Jessup, Md., for bitch, whelped by imported Benito Boy (A. Imported) by Dog's Baiter, out of Lutin. Myrtle.—Claimed by Gen. Frank A. Bond, Jessup, Md., for black and white spaniel bitch whelped April 18, 1881, by Dog's Baiter, out of Lutin.

Black.—Claimed by Mr. Chas. H. Paley, New York, for red Irish setter bitch whelped Aug. 15, 1881, by Mr. A. W. Miller's Gray (distinguished) out of Mr. A. E. Atwater's Braut (Dandy-May II).

Fennu.—Claimed by Mr. Wm. H. Hamersley, St. Leonard, P. O., for bitch whelped by imported Benito Boy (A. Imported) by Dog's Baiter, out of Lutin.

Lorna Doone.—Claimed by Dr. S. M. Nash, New York, for lemon and white English setter bitch whelped June 4, 1881, by Mr. R. T. Charles' Royal (Royal-Nia) out of Mrs. F. S. Savage's Madge (Distinguished).

Crickle II.—Claimed by Mr. D. P. Bosworth, New York, for liver and white ticked cocker spaniel dog whelped July 23, 1881, by Mr. F. F. Fitcher's Feather-Boots.

WHELPS.

Ohio.—Gen. Frank A. Bond's (Jessup, Md.) bench legged beagle bitch whelped Oct. 5, 1881—two dogs and four bitches, by Dyce (Imported) Sable (Imported) by Dog's Baiter, out of Lutin.

Norak.—Gen. Frank A. Bond's (Jessup, Md.) bench legged beagle bitch Noran whelped Oct. 21, 1881—four dogs and two bitches, by Dyce (Imported) Sable (Imported) by Dog's Baiter, out of Lutin.

Little Nell.—Dr. H. F. Ates's (New York) black and white pointer bitch Little Nell (champion Snaphop-champion Rose) whelped Oct. 13, 1881—eight dogs and two bitches, by Mr. A. E. Goletroy's Croftley. Four of the dogs have since died.

July.—Mr. Chas. Morgan's (Baldwinton, N. J.) imported collie bitch July (No. 1) whelped No. 11, nine—by Mr. J. Lindsay's (Jersey City) No. 1, Arville Laidie.

July.—Mr. F. W. Rother's (New York) cocker spaniel bitch Lon whelped Nov. 11, 1880—six dogs and six bitches—two dogs and six bitches since dead.

Waggon.—Mr. M. J. Norton, Greenbush, N. Y., writes to say that Peggy's pedigree should read "London and Henry's Dash-Bury's Kate" instead of "London and Henry's Kate," as published last week.

Tigress.—Mr. Chas. E. Wallace's (New York) imported mastiff bitch Tigress, K. C. S. B. 10,646 (champion Colonel-Luna) whelped Nov. 18, 1881—by champion Salsbury (S. C. S. B. 9,330).

BRO.

Lilly-Rocket.—Baltimore Kennel Club's pointer bitch Lilly to Mr. E. O'ryll's Rocket (Clarend-Round).

John.—Mr. J. McCann's pointer bitch Gertrude to Mr. E. O'ryll's Rocket (Clarend-Round).

Vella-Toronto Gene.—Mr. Burr Hollis, Hornellsville, N. Y., has bred his new spaniel bitch Vella, imported from England to Toronto Gene (Kain-Squay) Nov. 18, 1881.

SALES.

Rory O'More-Guy Whelp.—Mr. Wm. N. Callender, Albany, N. Y., has sold to Mr. A. Raymond Smith, Norwalk, Conn., a red Irish setter bitch whelped Aug. 9, 1881, by his Rory O'More out of owner's Guj (Elcho-Wirely).

Belco.—Red Irish setter whelped by his 15, 1881 (Gronse-Braut), by Mr. Wm. W. Hamersley, St. Leonard, P. O., by his Belco (Imported) by Newell's Cub out of Hagne's Ruby, by Mr. Wm. W. Hamersley, St. Leonard, P. O., to Mr. R. M. Livingston, New York.

Corvetton.—Mr. Wm. F. Duerr writes that there were only two dog puppies instead of four, in his Sensation-Gipsy letter of Nov. 5, 1881. Sensation-Gipsy Whelp.—Mr. Geo. W. Halliday, Washington, D. C., has sold to Mr. Thomas Love, Washington, D. C., a black and white ticked English setter bitch to Mr. Anthony Eton, same place, a liver, white and tan dog, to Mr. E. W. Allen, Boston, Mass., a black and white ticked bitch, to Mr. Jacob Egan, Cleveland, O., a black, white and blue ticked bitch, to Mr. R. W. Cowan, Warren, Pa., a two ton and white bitch, to Mr. John S. Bodsweil, Paxton, Mass., a black and white bitch, all pedigreed July 10, 1881, by owner's Felton out of owner's Jessie Turp.

Gronse.—Liver litter spotted dogs whelped by Mrs. Burr Hollis, Hornellsville, N. Y., by Mr. A. Sloss, Union, N. Y.

Boy—Lemon and white pointer dog (Snaphop-tuby) by Mr. E. O'ryll, Brooklyn, N. Y., to Mr. Jos. Lewis, Apollo, Pa.

Chic.—Black and white pointer bitch whelped July 10, 1881, by owner's Orgill to Mr. T. W. Grylls, Brooklyn, N. Y.

IMPORTATIONS.

Vorigger and Lilly II.—Mr. E. Lever, Philadelphia, has imported from England the black and tan setter dog Vorigger, K. C. S. B. 10,647, and the bitch Lilly II. Their weights are 15 and 12 pounds, the latter *Stoke Newington* variety of Vorigger that he is one of the best stud dogs living.

DEATHS.

Sensation-Gipsy Whelp.—Mr. Wm. F. Duerr, Watessing, N. J., has lost two dog and one bitch puppies whelped Nov. 5, by sensation out of Gipsy.

January.—Mr. Burr Hollis, Hornellsville, N. Y., has lost his black head spaniel bitch Rosalind whelped Oct. 9, 1881, by Benedict out of Rheia II.

CHOICE GORDONS FOR SALE.—Having too many dogs, I offer for sale one field and one brush-brind Gordon, Fox-Gait, Flona. These dogs were choice selections from litters raised by myself. Are sold for no fault, and offer a rare opportunity to obtain an extra fine pair of birds. For particulars address L. C. Mullins, Annapolis, Md.—Ad.

Ohio, Washington, Nov. 19.—Shooting is very good here. I was out on the afternoon of 16th, with my dogs Felton and Jesse Turner, and killed twenty-three quails and one grouse. G. W. B.

[Extract from FOREST AND STREAM, July 7, 1881, p. 448.] " * * * This flight so nearly resembles the actual motions of birds that the Clay Pigeons afford excellent practice for wing shooting." We commend all sportsmen to test its merits."

3 KINGS CIGARETTES MILD, FRAGRANT, RICH WROUGHT, AND Particularly Agreeable. 9 FIRST PRIZE MEDALS.

By WILLIAM S. KIMBALL & CO.,

Peerless Tobacco Works, ROCHESTER, N. Y.

BRAIN AND NERVE FOOD. VITALIZED PHOSPHITES.

Composed of the NERVE-GIVING principles of the ox brain and wheat germ. It restores to both brain and body the elements that have been carried off by disease, worry, overwork, excess of nervousness. It promotes digestion and strengthens a failing memory; it prevents debility and consumption. Best regulates the brain, gives good sleep, and recovers after excesses. Physicians have prescribed 300,000 packages. For sale by druggists or mail, \$1.

F. CROSBY, 663 and 666 Sixth Avenue, N. Y.
